55.96 crores; and the result of last year's fall in the prices of Government securities is to bring about a shortfall of about Rs 26 lakhs as between the book and market values of Central Bank's gilt-edged holdings. As a result cash balances, including money at call and short notice, have been drawn upon by Rs 3.53 crores to be placed at Rs 20.38 crores, and borrowings have also increased slightly by Rs 2.71 crores to Rs 8.86 crores.

The gross income of the bank rose by Rs 1.53 crores to Rs 13.77 crores, the lion's share in this regard being ascribable to income and interest earning Rs 1.18 crores more at Rs 11.35 crores; commission, exchange and brokerage also fetched Rs 34 lakhs more at Rs 2.30 crores. But interest paid, both on account of the new Deposits and their composition largely as Time liabilities, has mounted by Rs 73 lakhs to Rs 5.99 crores. Secondly, the Desai Award's implications are partly reflected in salaries and allowances costing Rs 56 lakhs more at Rs 4.59 crores. The first full year of Deposit insurance has, thirdly, meant an expenditure on premia amounting to Rs 10.87 lakhs. Finally, other expenditure has, owing to the payment of Rs 9 lakhs to the National Defence Fund, shown a like increase. Consequently, the balance of profit has been shaded to Rs 1.79 crores from Rs 1.82 crores.

The interim dividend, as before, takes up Rs 30.24 lakhs; the transfer to Reserve Fund is Rs 6.91 lakhs lower at Rs 38.71 lakhs; but then there is compensation of a sort in the transfer of Rs 58 lakhs to Special Reserve; the staff gratuity fund gets the slightly larger allocation of Rs 10.44 lakhs against Rs 10 lakhs; and bonus to staff gets Rs 5 lakhs more at Rs 65 lakhs. After payment of the final dividend for 1961, the amount brought into 1962 was Rs 23.37 lakhs. But the 1962 allocations and appropriations as enumerated above leave a balance of only Rs 0.93 lakh. Thus, the question is, where is the final dividend absorbing Rs 32.76 lakhs going to be paid from?

We are of the view that the payment of final dividend will be made from the Special Reserve, which apparently has been newly created in order that the surplus carried forward (which in the case of Central Bank has been in the environs of Rs 20 lakhs) could be eligible for being reckoned as capital and reserve for purposes of the super profit tax. For, Central Bank's profit is at a high enough level so that it would attract SPT; and the special transfer made from the 1962 profit could mean a savings in the SPT liability to the extent of about Rs 1½ lakhs—a saving that, certainly, was worth having.

It may be added, finally, that the relief from SPT recently announced by the Finance Minister will be quite considerable for Central Bank.

BANK RETURNS

Continued Rise in Deposits

Continued accretion to Deposits arising from governmental end of fiscal year payments and reduction in debt of the banking system to the Reserve Bank are the highlights of the latest money market returns.

The statutory figures of the Reserve Bank for 19 April show a small contraction of Rs 11.01 crores to Rs 2,317.22 crores in Active Note Circulation and Inflow of Rupee Coin in the amount of Rs 0.54 crore. With Foreign Securities and Rupee Securities both unchanged at Rs 105.08 crores and Rs 1,996.42 crores respectively, the Reserve Bank's cash in the till has gone up by Rs 11.55 crores to Rs 19.78 crores.

The maturing liability of Rs 23 crores on account of Treasury Bills purchased and discounted by the Reserve Bank is reflected by

the fall of Rs 30.62 crores to Rs 63.40 crores in the balances of the Central Government; but there would appear to have been deficit financing for about Rs 10 crores since Investments, despite purchase of Rs 13 crores of securities by the State Bank during the week, are lower only by Rs 2 crores at Rs 198.83 crores. The pressure upon State Governments continues, with their Deposits declining by Rs 0.76 crore to Rs 3.98 crores and their ways and means borrowings from the Reserve Bank being marked higher by Rs 7.21 crores at Rs 60.12 crores.

On the other hand there is a sharp reduction in the strain upon Scheduled Banks. Although the Reserve Balances of this category of banks have receded by Rs 7.14 crores to Rs 78.56 crores, its indebtedness to the Reserve Bank has been cut by a third by Rs 17.57 crores to Rs 30.23 crores.

Balances Held Abroad have once again been drawn on, though only nominally by Rs 0.07 crore, and are now shown at Rs 8.99 crores. We repeat that, with the export "season" now near its close, the prospect is one of considerable strain upon foreign exchange resources over the next six months. However, the securing of untied credits from the USA and the availability of \$75 million of standby credit from the International Monetary Fund both may mean that a foreign exchange crisis as such will be tided over, at least during the current year. But a real effort has now to be made to augment earnings during the next "export season" commencing in September.

Except for the recording of Rs 13 crores of securities purchased during the week, the return of the State Bank for 19 April is largely featureless. Deposit resources are higher by Rs 0.83 crore at Rs 564.39 crores, while the total of Advances is lower by Rs 2.45 crores at Rs 316.91 crores. Other Assets have been drawn on to the extent of Rs 13 crores for the acquisition of gilt-edged, which portfolio is now higher at Rs 227.42 crores. Cash balances, including money at call and short notice, have improved by Rs 2.61 crores to Rs 26.48 crores.

It was during the week ended 15 March that the impact of governmental disbursements relating to the fiscal year end first began to be noticed. Week by week since then the accretions to Deposits have been of satisfactorily large proportions. In the week ended 12 April, though net Demand Deposits have gone down by Rs 6.02 crores to Rs 1,004.93 crores, it is obvious that the fall is due to switch-over to Time Deposits, which have risen substantially by Rs 10.67 crores to Rs 1,216.40 crores. Indeed, with the State Bank in the relevant week reporting a fall in Deposits of Rs 7 crores odd, the net increase of other Scheduled Banks (attributable as to the rise almost certainly to governmental payments) have mounted steeply by Rs 66.96 crores. Thus, borrowings from the Reserve

Bank, shown at Rs 84 crores (in round figures) as on 8 March, have been cut to Rs 47 crores; and in the week ended 19 April, as noted in the returns of the Reserve Bank for that date, there has been a further fall in the relevant figure to Rs 30 crores. The total of Advances has, however, shown a small rise of Rs 6.55 crores to Rs 1,609.39 crores; and prospects are, as we had, remarked on an earlier occasion, that though the peak pressure or strain for the banking system has now passed, thanks to the impact of governmental payments, the busy season peak as indicated by the highest figure touched for bank Advances is likely to be registered in the first Friday in May. During the week under review, the gilt-edged holdings of Scheduled Banks, due almost wholly to sales by the State Bank, have declined by about Rs 5½ crores to Rs 591.84 crores. Cash balances, including money at call and short notice, have improved slightly by Rs 2.07 crores to Rs 198.23 crores.

It is understood that negotiations have reached an advanced stage between the managements of Pandyan Bank Ltd. and the Canara Bank Ltd. on the question of a transfer of the Banking Business of the former to the latter.

Depositors and other constituents of Pandyan Bank Ltd. will be benefitted by the greater facilities and resources of the Canara Bank Ltd. and needless to say there will be no interruption of any kind in the day to day running of the Bank.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills were opened on Tuesday, 23 April, 1963. Total amount offered was Rs 2,05,00,000. Tenders at Rs 99.415 per cent and above were accepted in full and those at Rs 99.410 per cent were allotted approximately 95 per cent. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2,349 per cent per annum approximately.

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 29 April, 1963. Successful tenderers should make payment on Friday, 3 May 1963 at all centres. Other conditions are as usual.

During the week ended 19 April, 1963, Government of India Treasury Bills for Rs 1,49,14,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 24 April to 27 April, 1963 at Rs 99.431 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 17 April to 20 April 1963 amounted to Rs 34,00,000.

INTERLOCKING

Marketing and Manufacturing Companies

By RAJ K. NIGAM & N. D. JOSHI

[The views expressed in this study are the personal views of the authors and the Department of Company Law Administration is in no way committed to them.]

OBJECTIVE OF THE STUDY

The objective of this study is twofold: firstly, to find out the extent of inter-company connections between trading and manufacturing companies through common directors and secondly, to find out how many of the interlocks forged through common directors can, at the maximum, be ascribable to the desire of integrating marketing and manufacturing policies. Thus, in other words, it means that the purpose of this study is simply to present the data on interlocking of directorships from a particular angle, viz, the relationship between manufacturing and trading companies, the importance of which is discussed in the following paragraph.

RELATIONSHIP BETWEEN MANUFACTURING AND TRADING COMPANIES.

Despite the numerous channels through which goods and services are marketed, the inherent stake of manufacturing company in the marketing of its products cannot be totally denied because the growth, prosperity and even the sheer existence of manufacturing company in the ultimate analysis depends very much on the extent to which consumers are satisfied with its products. This means that manufacturing companies will be interested in seeing that its consumers receive goods of standard quality, at reasonable price and in sufficient quantity. The extent of such interest may vary depending on marketing conditions, that is to say, in sellers' market it may not be as great as it would be in buyers' market. Therefore it is no wonder that in buyers' market manufacturers are greatly interested in establishing their own exclusive marketing channels right down to the final consumer and/or in advertising the quality and price of their products, in imposing restrictions on the final traders and on their distributors and stockists through whom the goods are channelled, relating to their margins, charges for servicing etc. These efforts will be facilitated if the policies of manufacturing companies and the marketing company are integrated—may be through interlocking of directorships.

Such integration of policies of manufacturing and marketing companies in buyers' market has thus an economic justification as it secures better satisfaction for the consumers. But in the conditions of sellers' market, this integration of policies may lead to many a misuse. For example, if the financial interest of management in the manufacturing company in the form of dividends remuneration etc. is considerably less than what it is in the marketing company then the above integration

may result in securing higher profit margin for trading company than that charged by the manufacturing company on the same production. Even if the managements' interest in the manufacturing and marketing companies is more or less the same, there may be situations such as the need to oppose the demand of labourers to pay higher wages or to obey the price regulations confined to merely ex-factory price of the product, a higher profit margin may be retained by trading companies. This, however, does not mean that situations described above will not be used by management having more interests in trading company than in manufacturing company. Further, in sellers' market, the potentiality of trading company in securing higher profits by resorting to price discrimination or by creating artificial scarcity of supply of products etc. cannot be minimised.

Both the above contrasting aspects of interlocks of manufacturing and marketing companies will have to be borne in mind in valuing the importance of such relationship between manufacturing and trading companies against the background of Indian conditions. The good aspect of the inter-connections is of great importance in India's efforts in boosting her exports in foreign markets which are essentially buyers market. The potentiality of the harm that may flow from such integration cannot, however, be under-rated particularly when internal market for many products due to the inadequate transport, restrictions on imports etc. is essentially a sellers' market.

Here, before passing on to discuss the statistical results of our inquiry, it may be mentioned that this study which is mainly factual, does not go into the various ramifications of the relationship between manufacturing and trading companies.

COVERAGE

A full-scale examination of the above issue requires study of interlocking of about 4,500 trading companies engaged in wholesale business with over 10,000 companies engaged in manufacturing and processing industries. In terms of paid up capital, these trading companies accounted for about 7% of the total paid up capital of the entire corporate sector and for 10% of the paid up capital of non-Government corporate sector. The number of trading companies being large, we have collected information in respect of 70 trading companies which did not in any way combine manufacturing or other investment and finance activities as the nucleus of companies for our study. The State-wise distri-

bution of these 70 companies is as follows: 54 belong to Maharashtra (paid up capital: Rs 8.7 crores), 4 to Gujarat (paid up capital: Rs 0.2 crores), 3 to the State of Madras (paid up capital: Rs 2.7 crores) and 9 to West Bengal (paid up capital: Rs 3.6 crores). The total paid up capital of the 70 companies covered in our survey aggregated Rs 15.2 crores which as related to total paid up capital of the total number of trading companies worked out as 15%. Our study, it may be mentioned, is over-weighted with the Maharashtra companies (because of the over-active response from them and the number of West Bengal companies being reduced as a result of the screening done to sort out the genuinely trading companies from those which combined trading operations with other forms of activity as well.) However, the lopsided regional distribution of trading companies is not expected to vitiate the results as much as would happen by an uneven distribution of companies belonging to the various size strata. But in regard to the size distribution of companies the authors have taken due care to segregate the results of big and giant size companies from the others, i.e. those belonging to the lower strata. A study of the distribution pattern of companies according to the size strata reveals that 43 companies are small-sized having paid up capital between Rs 25 lakhs and 50 lakhs each and another 6 companies Rs 50 lakhs and above.

SIZE OF THE BOARD

Coming to the general statistical results got after processing the data gathered for the 70 companies as on 31.3.1962, it is seen that in all, the boards of directors of these companies comprised 324 directorships held by 315 directors. Further, these 315 directors held in all 1547 directorships of which as stated above 324 were in the 70 trading companies covered in the survey and 1223 in other companies. From these figures, it will be seen that the average size of the board of directors of the trading companies works out as 5 directors. Further, 49 out of 70 companies have a board of 2 to 5 directors and out of these, ten companies have a board of 2 directors each, 14 companies of 3 directors each, 13 companies of 4 directors each and another 12

companies of 5 directors each. 9, 6 and 2 companies are seen to have boards of 6 directors, 7 directors and 8 directors each respectively. The number of companies having a board of 9 directors is 3 and only one company is found to have a board of ten directors. Companies belonging to the size stratum of Rs 5 lakhs to 10 lakhs paid up capital have a board of directors of the average size of 4.2 directors whereas the companies of the size of Rs 10 lakhs to 25 lakhs paid up capital have a board of the average size of 4.6 directors and companies of the size of Rs 25 lakhs to 50 lakhs paid up capital, of 4 directors. The average size of the board in the case of top class companies having paid up capital of Rs 50 lakhs and above is found to be 7 directors. Thus compared to the all India average size of the board of 7 directors observed in the case of the big and giant-size companies studied in the earlier paper by the authors entitled 'Pattern of Company Directorships in India', the average size of the board in the case of trading companies is also found to be the same.

PLURALITY OF DIRECTORSHIPS

From our present study, we find that the average number of directorships held by a person serving on the boards of trading companies studied in this paper is 4.9. In the case of directors serving on the big-sized and giant-sized trading companies the average number of directorships held by them works out as 6.8 as against the average of 8 held by persons serving in the boards of big-sized companies belonging to the various industrial groups. Our investigations regarding the prevalence of the practices of multiple directorships among the directors of the trading companies reveals that about one-third of the directors of these trading companies hold only one directorship in the trading companies but when all the directorships both in the trading and in other companies held by these directors are taken into account, only 6.5% of the total directorships numbering 1,547 are held by them whereas 51% are held by persons holding between two to ten directorships, 23% directorships are held by persons holding 11 to 20 directorships and 19.5 per cent by persons holding more than 20 directorships.

TABLE I
FREQUENCY DISTRIBUTION OF DIRECTORSHIPS

Number of directorships	No. of persons holding the directorships	Percentage	Total directorships held	Percentage
1	101	32.1	101	6.5
2 to 10	175	55.6	789	51.0
11 to 20	25	7.9	355	23.0
21 and above	14	4.4	302	19.5
	315	100.0	1547	100.0

Notes

COAL

A Succession of Good News

It has been a great week for coal. Mr Morarji Desai's decision to enhance the development rebate for the industry from 20 per cent to 35 per cent for a period of three years commencing from the current financial year is bound to inject fresh blood into coal mining activities. Similarly the cut to be effected in the import duty on machinery and equipment employed by collieries is equally encouraging. The guarantee scheme by the Refinance Corporation, announced last week to assist the private sector collieries is calculated to enlarge the prospects of institutional credit to private collieries by granting a substantial degree of protection to lending institutions against possible losses on their advances. The Reserve Bank has also liberalised recently the terms of credit to the scheduled banks financing collieries. All these measures undoubtedly make the way clear for eliminating the serious obstacles experienced by the coal industry in raising matching rupee finance for the World Bank loan for rehabilitation, modernisation and expansion of collieries. All these developments augur well for the rapid

expansion of the coal industry in the country and with the completion of the rehabilitation and modernisation of the collieries not only the throughput should be increased but also the quality should be enhanced to a considerable extent. The recent support the investors evinced in coal shares is a valid point testifying to the bright outlook of coal industry.

However the accumulation of coal at pit heads has reached alarming proportions during the past couple of months. Reliable information aver that coal consuming industrial undertakings have sizable stocks with them, the railways, one of the bulk consumers, have reduced their coal requirements by switching over to diesel and electric locomotion and some power houses are reported to have resorted to furnace oil in lieu of coal. The position is bound to become acute as the collieries have to work round the clock during the period of the present Emergency.

Another problem that is causing concern to the coal industry is the uneconomic price fixed by the Government for that commodity. An economic price for coal, which is also under consideration by Government would complete the good work. The substantial shot in the arm has been undoubtedly given by this fortnights' policy decision.

IDLE CAPACITY

Incentives for Use

A distressing anomaly in the present emergency is that considerable industrial capacity continues to remain idle, while increased production is an urgent need. Production has been stagnant in the agricultural sector while it has been officially admitted that the pace of output in the industrial sector too is not upto expectations. Only lately Government seems to have realised that something more than mere exhortations is required if production is to move up. Mr Naval H. Tata, president of the Employers Federation of India has pointed out that incentives they ask for will not cause much difference to Government revenue but the benefit in the shape of increased production will be considerable. Speaking at the recent annual session of the Federation, he has said that "a rebate of, or exemption from, excise duty or some tax concession on additional output, with corresponding benefits to workers, would create an atmosphere of earnestness and enthu-

siasm much more effectively than ministerial appeals and sermons." Actually by such tax relief there won't be any loss of revenue as there will be increased income from corporate taxation on the rise in output.

Mr Tata has made an important point while referring to the shortage of foreign exchange. Full utilisation of industrial capacity is no doubt being interfered with by the shortage of foreign exchange but there is no reason why the available quantum is put to the maximum possible use. Mr Tata has pointed out that a right phasing of projects and an intelligent programme of coordinating the requirements of industry should considerably help to maximise the utilization of installed capacity of industry. Significant results can also be obtained by effective co-ordination between the various departments which have some thing to do with commerce and industry and each one of which now seems to be doing things without reference to the other concerned departments, thereby leading to duplication in production and considerable delay in the implementation of production programmes.

Effective action is also necessary towards minimising the shortage of power, transport and raw materials, as these facilities are basic to industrial production. For example power shortage has once again taken a serious turn in the industrial regions of West Bengal and production in vital industries in and around Calcutta is adversely affected by the power shedding embarked upon by the Calcutta Electric Supply Corporation. Although the transport situation has shown some improvement lately the shortage of wagons is still a serious problem for industry.

CHEMICALS

Export Prospects in South East Asia

A four-man delegation of the Chemicals and Allied Products Export Promotion Council, which recently toured South East Asian countries like Singapore, Thailand, Burma, Indonesia and the Federation of Malaya, has reported a huge potential market for a wide variety of Indian chemicals, pharmaceuticals and allied products. All the countries covered by the delegation have evinced keen interest in pharmaceutical items such as surgical dressings, patent and proprietary medicines. In regard to chemicals and allied products demand was pronounced in acids, alum, alumina ferric, zinc oxide, calcium carbonate, naphthalene balls, bleaching powder, insecticides etc. But during these years the quantum of exports of these items from India was at a precariously low level. For example out of Burma's total imports of chemicals and pharma-

ceuticals valued at approximately £10 million annually our share is placed roughly at £370,000. Similarly exports of these items from India to Thailand, the Federation of Malaya and Singapore constitute only an insignificant trickle taking into consideration of their aggregate imports on an annual basis. The primary contributing factors are the uncompetitive prices of Indian goods, the lack of adequate propaganda abroad and the haphazard manner in which attempts have been made to win these markets.

The delegation has suggested a host of measures for making further inroads in the countries covered by the tour. A sustained and systematic drive should be launched for tackling the problems of freight, prices, publicity and trade arrangements for facilitating further flow of Indian goods to these countries. Some countries like Burma and Indonesia have suggested that Indian manufacturers should register their products with the appropriate Government authorities as they import only Government approved goods. Malaya, Thailand, Singapore and Indonesia favoured the starting of factories for manufacturing these goods with Indian collaboration for which facilities and incentives are promised on an abundant measure. Besides, India should enter into trade agreements with those countries in the South East Asia incorporating special provisions for the import of specific quantities of chemicals and allied products from India. Tours of experienced salesmen should be encouraged to explore the scope for setting up overseas branches and carrying out continuous propaganda for their goods. Above all strict vigilance should be exercised to maintain the quality of goods exported which should endear Indian products to the consumers abroad.

SUGAR

Controls Once Again

It is a sad commentary on the Government's sugar policy that it has to promulgate the sugar control order under the Defence of India Rules whereas till the other day it has been grappling with the problem of the disposal of the surplus production of the industry. By all estimates there is no scarcity of the sweet commodity in the country at the present time although last year's production was much below than that in the previous year. The sugar supply position appears to be somewhat like this: Production in 1962-63 is expected to be of the order of 21 lakh tons only in view of the acute shortage of cane. Since the season has started with a carry over of 945,000 tons, the total availability in the current season will be about 31 lakh tons only. As

against this domestic demand is expected to reach about 27 lakh tons as consumption has been steadily increasing over the past few years. There is also the Government's export commitment of 3 to 5 lakh tons. Thus the position at the end of the season will be that there will be practically no carry over into the next season. Such a prospect cannot be viewed without concern. The traders have not been slow to grasp the implication of the declining trend in production and have been steadily pushing up the price of the commodity ever since the turn of the year. In the first three months of the year Government has been frequently assuring the people that the rising trend in sugar prices will be arrested as they have been releasing enough stocks in the market but all along prices have continued to keep their uptrend. Reviewing the sugar situation Mr S. K. Patil attributes the rise in price of sugar to the abnormal buying indulged in by traders just before the Central Budget on fears of an increase in the excise duty on the commodity, and to what he calls the exploitation by interested persons of the psychology of under production.

It is quite possible that the Sugar control order brings about conditions which it seeks to prevent. For, the general tendency will be to assume that the commodity is really in short supply. Already in parts of the country sugar is not available freely and despite vigilance of the State Governments ways will be found by unscrupulous traders to set up a blackmarket. Perhaps the next move on the part of the Government, rationing, is not far off. In the meantime the control order has been given a mixed reception. The mills in northern India have represented to Government that the price fixed is not commensurate with the cost of production of mills in east UP and north Bihar.

The present predicament has largely stemmed from Government's decision to curtail production in 1961-62 in a bid to reduce the high level of carryover from the 1960-61 season when production touched a record level of over 30 lakh tons. It is unfortunate that during the last crushing season there has been a setback to cane production partly on account of the high price for gur and partly on account of unfavourable weather conditions. Since Government policy is now to encourage cane cultivation while sugar factories are to work to their full capacity, it is to be hoped that next season sugar production will be large enough to leave sufficient surplus to be carried over to subsequent season. Meantime there is no cause to be unduly perturbed over the rather tight supply position at present. What is needed is firm action from Government so that hoarders and profiteers are unable

to carry on their nefarious activities.

IFC

Imbalance in Assistance

The Estimates Committee's report on the Industrial Finance Corporation presented to the Lok Sabha makes three points. The first one relates to the inadequate loans extended to the comparatively underdeveloped areas like Assam, Madhya Pradesh and Rajasthan while areas like Madras and Maharashtra have been recipients of larger assistance. Second the IFC is alleged to have deviated from the broad pattern set out by the Planning Commission in financing industrial concerns. While the Planning Commission accorded precedence to industries like iron and steel, heavy chemicals and other producer goods like cement and aluminium, the IFC

was more concerned with financing sugar, paper and cotton textiles industries. It has also been pointed out that large scale industrial ventures have received greater assistance and the flow to small ventures was meagre. Out of the total of Rs 130.27 crores sanctioned by the Corporation till 30 June 1962 only Rs 35.33 crores went to concerns receiving less than Rs 50 lakhs each the balance being allotted to those getting more than Rs 50 lakhs many of which could have raised funds from the market on their own.

The Committee has stressed the paramount need for closer coordination between the various lending institutions like the LIC, IFC, ICICI for avoiding misuse and overlapping of financial assistance and for reducing the time lag between loan approval and disbursement so that more industries can avail themselves of the facilities afforded by these agencies. The proposal to form a consortium for financing large projects is an interesting suggestion. The Cor-

poration's failure in not taking up more extensive underwriting operations should be remedied if the tempo of industrial growth is to be assisted further.

Obviously the lack of entrepreneurial initiative from the less developed areas might have restricted the flow of financial assistance from the Corporation to these areas for which the IFC could not be blamed. We can also presume that for the same reason quite contrary to wishes of the Planning Commission industries like sugar, paper and cotton textiles received greater assistance than iron and steel, heavy chemicals, producer goods such as cement and aluminium. Another plausible explanation to this is that the financial needs of industries in the former category were greater than that of the latter. However it is worthwhile on the part of the Corporation to take utmost care that the loans disbursed by it should go to the deserving industries and they are put into the best possible use.

let your
garden
come into
your home

through clear, transparent

Glass

For the finest,
most durable glass
you can depend
on HPG

Rainy? Windy? Cold? You can still enjoy your garden sitting snug and comfortable in your favourite armchair! And that is only possible with glass. It is not only easy but economical and attractive as well.

Strong, functional—yet so very elegant—glass gives a room extra dimensions. It lets in natural light but shuts out noise and dust and draughts. And with all that, it is so easy to clean!

Glass is versatile too and has many uses in offices, schools, hospitals and stores. Available in a wide variety of sizes and thicknesses (and quality tested at every stage of manufacture) there's an HPG sheet glass to suit every purpose.

INDIAN ALUMINIUM The Jubilee Year

Special significance attaches to the twenty-fifth annual general meeting of the Indian Aluminium Company Limited held at Calcutta in that the company has completed twenty five years of useful service and is making preparations for celebrating its silver jubilee. Tracing the growth of the company from modest beginnings to its present stature, Mr H. V. R. Iengar, the Chairman, struck an optimistic note of its future also. In the sphere of production, from a nucleus of a small 2,500 tonne rolling mill at Belur in West Bengal, the company has turned out to be a completely integrated aluminium industry. Besides, it has at present on stream an alumina plant possessing an annual capacity of 55,000 tonnes, two aluminium smelters with a capacity of 26,000 tonnes, two extrusion presses with capacity of 3,760 tonnes and a powder and paste plant and the rolling mill at Belur.

has been expanded to a capacity of 16,800 tonnes of rolled products per annum. Appropriately enough, the sales also showed a progressive increase from Rs 7 million in 1944 to Rs 105 million by the end of 1962. This apart, the company has endeavoured to create a new consumption pattern for aluminium which is put into numerous industrial applications.

Another noteworthy aspect is the company's consistent efforts to forge ahead with expansion programmes aided by the Aluminium Limited of Canada which holds 59.7 per cent of the preference shares and ordinary shares together and provided the requisite training for the Indian staff in Canada with the result that with the exception of the managing director the entire technical staff consists of Indian engineers.

Equally impressive is the company's efforts to develop at a rapid pace and also to employ the existing facilities and resources to the maximum extent possible.

From the current trend it is evident that the aluminium production in the country is bound to go up, the pace and extent to be determined partly by the requirements of electrical conductor industry and partly by development of the use of this commodity as a substitute for other scarce metals. It is refreshing to note that the company's efforts are aimed at reducing the cost of production to the maximum extent, employing all the resources at its disposal to obtain the economies of production and to take particular care in planning new projects on sound economic grounds.

Mr Iengar's suggestion to form an Aluminium Development Association in order to co-ordinate the activities of the various units in the industry is a valuable one as such an association can render immense assistance for not only disseminating the technical knowledge but also for developing economic uses for aluminium and its further substitution for other imported materials.

DUNLOP RUBBER Successful Year

The Dunlop Rubber Company (India) Limited has had a satisfactory period of operation in 1962. The sales of all the categories of tyres continued to be at an encouraging level, constituting the highest ever achieved. The company is still the major supplier of vehicle manufacturers' original equipment tyre requirements and supplies to the State Transport Organisations were of a higher order consistent with the rapid expansion of transport facilities all over the country. With the recent expansion implemented in the Sahaganj factory the company is in a position to manufacture belts upto 1524 mm width and as Mr M. L. Bexon, the Managing Director, has pointed out the country has become self sufficient in this particular commodity warranting a total ban on their import. Apart from these, the company has developed a wide range of cotton/nylon ducks which will be absorbed by the large industrial under takings. Further progress was registered on the export front thanks to the co-operation of its associates abroad. It is interesting to point out that not only the value of exports has gone up but the company has achieved the distinction of developing new foreign markets for its products.

The raw material supply position, as far as the company was concerned, was comfortable during the year under review. It requires special mention that company continued to patronise indigenous production and it is solely depending on local sources for cycle rim strip and valves. Both the Sahaganj and Ambatur factories have produced excellent working results and the technical training imparted to candidates from the adjoining countries and to the public sector personnel is a feature of these two units. The Managing Director drew attention to the increase in the costs of production consequent on the higher excise and import duties and these together with the change to Letter of Commitment method for AID items will impose a severe strain on the company's finances.

SNIPPETS

A three year trade agreement between India and Indonesia has been signed in New Delhi this week. A large number of commodities are covered by the agreement. While India will buy mainly from Indonesia petroleum products, copra, rubber, palm oil, metal concentrates and some agricultural products, Indonesia will buy from India engineering equipment, machinery, textiles, jute goods, paints and varnishes, chemicals and drugs and other manufactured articles.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

MOST Indians, at least those among them that could read English, made their acquaintance with the New Statesman (celebrating its jubilee this month) long before they set eyes on it. It was so with me at any rate. At school, the only British MPs of any importance in my eyes were Brockway and Sorensen. Their very resourceful use of the Question Hour to needle the British Government on our behalf is among my earliest vicarious parliamentary thrills. And to my rather myopic eyes the British Press comprised the New Statesman, the News Chronicle and the Manchester Guardian and none else. Our papers missed no opportunity to quote extensively, if somewhat selectively, the vigorous editorial support of these journals to our cause. Reading these extracts used to keep us exhilarated for days with renewed faith in our ultimate triumph. It was only in the early forties that I stumbled on a copy of NS & N and there burst upon an undergraduate horizon a new and many splendoured world. Since then I have been reading it with greater regularity than what I have managed in the rest of my fairly disordered life. An Indian's attitude to the New Statesman partakes something of the love-hate bond- age that keeps the New Statesman and the British Labour party tethered together in uneasy partnership. I have read enough about the thirties to be outraged at the New Statesman's ambiguity, if not actual equivocations during that period. (The Jubilee Number contains a fairly scathing attack on this phase of the New Statesman's life by C. C. O'Brien.) But despite all this, there is the drug addict's compulsiveness about reading the New Statesman. It is not the same thing as reading, say, the Spectator. I have a theory about it. For reasons that have nothing to do with class, most educated Indians (especially those who didn't go abroad) were intellectually placed roughly in the same position as the English working class lad who made good. They were, like Richard Hoggart, Penguin-educated (both actually and metaphorically) and wore the New Statesman as a badge of their emancipation. In some extreme cases, there were even emotional overtones to the whole business which I have no space to explore

here. Anyway, the New Statesman taught many in India, as elsewhere, to think, though, unfortunately, it also taught many what to think. The New Statesman-snob is a more odious creature in India than he probably is elsewhere. But such things are the inescapable hazards of the intellectual life of our times. They take nothing away from the immense and continuous intellectual stimulation it has provided to generations of readers. Indians find it's politics (including its rather unsure pacifist-non-conformism) sympathetic and its literary pages have also been lapped up avidly here. I cannot take its anti-establishment pose very seriously, for the British have a way of taming their rebels, whom they make part of the Establishment by the same technique that makes the Leader of Her Majesty's Opposition part of the ruling apparatus. Unlike in India, dissent is part of England's tradition and the fact that it is predominantly a protestant country no doubt helped. British upper classes have provided quite a few of the more colourful of England's radicals and the New Statesman founded by the Webbs and Shaw had as its base one of Shaw's shrewdest maxims (I quote from memory): "In England you can always get away by doing conventional things the unconventional way or unconventional things the conventional way, but woe betide you if you try to do the unconventional thing the unconventional way." Though the New Statesman likes to think of itself as an intellectual rogue elephant, it is far too well-bred and well-educated to be merely rowdy.

The Radcliffe Tribunal has cleared Mr Galbraith, former Civil Lord at the British Admiralty of the several unsavoury charges made against him last autumn. The brief report in the Press and in the BBC news broadcast does not give all the details, but on two important points, the Tribunal's findings are clear enough. Mr Galbraith was not guilty of any treasonable intention or behaviour. The mass of scarcely veiled innuendoes about his relationship with Vassal, the convicted spy, was false. (The BBC reported that the Tribunal had "some harsh words to say" about the newspapers that printed many false stories about these things). The inference that Mr Galbraith

knowingly harboured a traitor in his department because of alleged sexual aberrations and even planned a defection with Vassal has been held to be untenable. Mr Macmillan is sure to feel a certain quiet satisfaction at the outcome: it will be recalled that he changed his original idea of a discreet inquiry by a senior civil servant to one by a Tribunal because he was infuriated by the slanderous gossip that did the rounds and he was determined to have the truth. If, as he thought (rightly, as it now turns out) there was no substance in the tittle-tattle retailed, he wanted to discredit those that indulged in this sort of nasty game. The Press has a few tricky weeks ahead. It is already on the defensive, with the Times pleading for introspection and mending of the fences to get a reader ear from the public on the case of the Press in such matters. Apart from the merits of the sanctity of the sources of information, on which it is easy to get muddled, the Press will now have the embarrassment of having to justify its conduct towards one who will now wear the crown of a martyr, whom gossip pursued even after he had paid the conventional price for political ineptitude, if that. All this has several important lessons for India. On the whole the Press in our country is less ready to risk official displeasure than in England. Even so, a clearer conscience about the real motivation behind such exposures as there are, wouldn't come amiss. From the point of view of Authority, reluctance to have a Tribunal of the sort suggested by Mr Deshmukh to examine charges against men in high places owing perhaps to a timid uneasiness about the outcome seems hardly justified.

Time was when the Congress used, for old time's sake, to let Acharya Kripalani get elected unopposed. (The poor man has never had much luck with elections). All that is changed after the decisive North Bombay battle. Even so, the lengths to which the Congress has apparently gone to frustrate the Acharya's plans to get back to Parliament are a little shocking. At the very last minute for filing papers, it has changed its mind about its candidate to oppose him and put up Hafeez Mahammad Ibrahim. Now, Mr Ibrahim was safely berthed in the Rajya Sabha, where, indeed he is the Leader of the House. He did not have to get elected to the Lok Sabha by any constitutional compulsion and should he be defeated, he will find himself in the wilderness for having resigned from the Rajya Sabha to contest the election, he will have nowhere to go. Why then has he been dragged, reluctantly according to some, into this? The suspicion is not far-fetched that the constituency has a sizable Muslim vote and the Congress apparently wants a candidate that would pull them. It is difficult to explain otherwise the last minute replacement of the candidate whose name had already been announced. Such anxiety to keep the Acharya out of Parliament seems a little excessive to me. I am not so naive as to expect political parties deliberately to lose elections or not take advantage of adventitious factors in the situation. It is also true that other parties are in no position to throw the first stone for they too take into account the caste and community affiliations of potential voters in naming their candidates. Elections are not for the squeamish and these things will happen. But what nauseates me is that the same set of people lecture me about the need for eschewing communal, caste and linguistic narrowness. Let them win their elections any way they like, but for God's sake let them shut up.

EAVESDROPPER

IN THE TWIN TASKS OF DEFENCE AND DEVELOPMENT...

Carrying the output of fields and factories across the length and breadth of the country, men and material to build mighty projects, the Indian Railways have always played a vital role in speeding up the country's economic development. Bringing people together from far-flung regions, the Railways are also serving the cause of national integration.

Today, in the movement of troops and munitions and in keeping pace with the rising tempo of the nation's defence build-up, the Railways are out to meet a challenge bigger than any they have faced in their 110 years of dedicated public service.

The Emergency has found the one million and more railwaymen setting up new records in movement of traffic vital to the nation's defence and development.

Import Quotas

Half-yearly import quotas are usually announced on the day preceding the relevant licensing period, that is, on September 30 and March 31. But on two recent occasions the announcements have been delayed. The "Import Policy", as it is grandiloquently described, was originally scheduled, this time, to be announced on April 20. The announcement was delayed by another two days, when Mr H. V. Kamath raised the point in Lok Sabha last Saturday and asked the Speaker whether the import policy should be announced before it was placed before Parliament. The Ministry of Commerce & Industry took some time to deal with this unexpected pincer and, as Lok Sabha's hands were full with the Finance Bill on Saturday the announcement was postponed. History was made last or Monday when the Red Book embodying the import quotas and other miscellaneous matter was placed on the table of the House by the Minister for International Trade at 3 P.M., half an hour before it was released to the press. It is doubtful if Mr Kamath's attention would have been drawn if the announcement of quotas had been called by its proper name instead of being misleadingly labelled as import policy. In any case, Mr Kamath's punctilious regard for maintaining formal proprieties has served to revive interest in what had become a dismal ritual.

With imports pared to the bone on account of the shortage of foreign exchange, and the quotas for Established Importers which make up the bulk of the Red Book, so attenuated that the total imports on their account hardly amounts to one eighth of the total commercial imports, the half-yearly announcement has lost much of its old glamour. Every successive announcement only brought forth additional restrictions. This time, however, the authorities have loosened the screw by a fraction of turn. And the relaxation is barely perceptible.

The spokesmen of the Ministry of Commerce & Industry estimated that, as a result of the restoration of some of the cuts which had been effected when, in the wake of emergency, import quotas were drastically curtailed last year, the total imports by established importers would increase by about 1.6 crores, from Rs 11.3 crores last half-year to 12.9 crores in the current licensing period. The allocation for Small Scale industries which had been reduced to Rs 4.5 crores last half-year would get about another crore. The spokesmen also explained that the quantum of overall commercial imports, which include imports by Actual Users, would depend on the amount of free foreign exchange

that is available for the purpose. Until the pattern of aid that will be approved by the World Bank Consortium next month is known, it would not be possible to indicate the overall limit for commercial imports. These amounted to Rs 146 crores last half-year, and he thought they would not be lower during the current half-year.

The list of quotas that have been sanctioned for established importers for the current licensing period includes 170 items as against 91 items last half-year. This is another indication of the more liberal approach that has been possible to adopt this time. In formulating the changes, it has been explained that the Government had regard not only to the foreign exchange position, but the priorities called for by the present emergency. The grant of quotas to established importers has been confined to specific items of special importance to the economy or items that have an export promotion angle. In this matter Government, it is claimed, have given due weight to the suggestions made by members of the Import Advisory Council, Chambers of Commerce, Trade Associations etc. A restrictive change that has now been introduced draws attention to a new development in the field of book production. Quotas or supplementary licences for books, it has been stated, will not be valid for import of foreign titles which are reprinted in India in collaboration with import of foreign publishing houses. The list items will be endorsed on the licence. This provision, it is expected, will result in the saving of foreign exchange and also provide additional employment to the indigenous printing industry.

Sugar Control

While there is a change for the better in the outlook for imports and the Ministry of Commerce & Industry has been able to relax the restrictive policy to a slight extent, the Minister for Food and Agriculture, whose aversion to controls is well-known, has been obliged to reimpose Sugar Control on the lines that were in force prior to September 1961 when the controls were lifted. Explaining the circumstances leading to this step, Mr S. K. Patil told Lok Sabha last week that, on account of a short crop and diversion of cane to gur production, the output of sugar during the current season had been adversely affected, and the system of regulating prices through releases of sugar to the market would no longer avail in dealing with the situation. Government had therefore decided to issue orders, under the Defence of India Rules, to prescribe the quotas for the various States and to secure that these quotas

are released at ex-factory prices. These prices will be determined having regard to the estimated cost of production according to the Tariff Commission formula, with adjustments in relation to increased costs, as well as the ex-factory prices prevailing during the appropriate time between January 1 and March 31, 1963. The State Governments would be empowered to prescribe, in accordance with instructions from the Central Government, the margin of the wholesale traders and will also be in a position to ensure, within their allotted quotas, equitable distribution at reasonable prices within their jurisdiction. Mr Patil did not consider that rationing of sugar would be necessary, but it was not ruled out if price proved refractory.

The Controls that have now been introduced follow the pattern of the system in force till September 1961, when the controls were lifted and Government sought to regulate market prices through periodic releases of sugar. But a spokesman of the Ministry explained that loop-holes had been plugged and a better system of accounting and an unbroken link from the factory to the consumers had been provided under the new set of regulations which also empowered Government to take drastic action, such as seizure of stocks. While the ex-factory prices will be fixed by the Central Government on the basis of the criteria indicated by the Minister, the States had the discretion in the matter of fixing wholesale and retail prices, after taking into account transport costs, wholesaler's margin etc. The Central Government had also indicated that the maximum margin for the wholesale trader should be one rupee per maund.

Indications of a likely shortfall in the production of sugar were evident even as early as December last and the question may be raised why Controls were not imposed earlier. Mr Patil had indicated in his speech that action had been initiated in December 1962 and the States had been instructed to license wholesale traders. But, apparently, the State Governments took their own time, and it was not till the beginning of this month that the regulatory machinery was working throughout the country.

Mr Patil has also referred to the discussions undertaken by some State Governments with the trade interests to evolve a system of voluntary controls, as well to the attempts made for the same purpose by the Indian Sugar Mills Association. The levels at which prices were sought to be stabilised under these arrangements, Mr Patil said, were found to be in excess of what was justified with reference to the two criteria which he had indicated for fixing prices. Moreover, the territorial coverage of these schemes would not be adequate to meet the needs of the entire country. Another reason why voluntary arrangements could not be made to regulate supplies and prices of sugar, was indicated by an official spokesman. The sugar trade in the country is not as well organised as the wholesale trade in foodgrains and the arrangements that are working satisfactorily in the case of foodgrains cannot be adopted in the case of sugar.

Regarding estimates for the future and the prospects of cane supplies, the Ministry's spokesman said that, as compared with the production of 27.5 lakh tons in the last season, production so far was over 20 lakh tons and the factories were still functioning. The supplementary season is still to come. But it was difficult to arrive at a firm estimate of the total output for the season. Provision has been made this season for export of five lakh tons which, he said, would earn Rs 25 crores in foreign exchange against a subsidy of Rs 15 crores paid to the sugar mills. Last year exports fetched only Rs 15 crores of foreign exchange against subsidy of Rs 15 crores. About supplies of cane he indicated that, with the annual production of 90 million tons of cane, it should be possible to meet the requirements of the mills, of about 30 million tons, if diversion to gur and khandasari could be regulated. One of the difficulties in maintaining a steady level of output was the lack of irrigation for cane in UP, and Bihar. Supplies to the mills were also affected by delays experienced by cane growers in getting payment from the mills. The spokesman indicated that Government were now thinking in terms of extending the practice in vogue in the South, of linking the cane-growers in an area to a mill in that locality. As regards creation of new capacity, Government had decided that licences would be issued only in those areas where the State Governments could guarantee the cane supply. Government have also under consideration the proposal to set up a Sugar Marketing Board on the Australian model. The Secretary of the Ministry of Food, Mr V. Shankar, is proceeding to Australia to study the working of the Sugar Marketing Board in that country.

Recent Price Trends

Mr Gulzarilal Nanda, Union Minister for Planning, Labour & Employment, told the Rajya Sabha on Thursday that the latest data relating to the wholesale price indices for April 13, 1963, which had become available since he made a statement on April 23, 1963, showed that an increase of the order of 1.7 per cent occurred between the end of March and the second week of April, 1963. A good part of this increase was on account of the upward shift in the index for the food articles group—from 123.0 on March 30, 1963 to 126.7 on April 13, 1963. The main increases were on account of steep rise in the index for sugar and gur and an appreciable increase in the price index of cereals. In most other cases changes were of small magnitude as for instance in the case of edible oils, milk and ghee.

As regards the consumer price index, the latest data available relate to the month of February for the all-India consumer price index. This represented the position as it was two months ago. The index for later months would become available only some time hence. However, some of the information collected directly from the consumers did indicate that some times higher prices were being paid by the consumer than what the quotations based on data collected from the retail shops indicated.

In Parliament

ANOTHER STC SOON

Government would very soon establish a second State Trading Corporation that would deal exclusively with the export and import of minerals. The various formalities in connection with the establishment of the Corporation were now under the active consideration of the Government. The new Corporation will handle about Rs 250 crores of annual trade—import and export of minerals.

TEXTILE MACHINERY MANUFACTURE

A proposal to set up a high power committee to advise the Government on the development of the textile machinery manufacturing industry was under consideration. The target as well as requirements were estimated at Rs 22 crores worth of textile machinery every year during the current Plan period. In 1961-62, indigenous production amounted to Rs 12.67 crores and in 1962-63 over Rs 14 crores.

EXPORT OF MACHINE TOOLS

Government has so far earned foreign exchange worth Rs 8.85 lakhs by exporting three lathes and 22 milling machines. The principal buyers were West Germany, Switzerland and Nepal. Though the internal demand was not being fully met a certain portion of the production was being exported to earn foreign exchange.

As regards the cost of production, the prices of Indian machines compared favourably in the foreign markets. Internally the machines were sold at ten per cent less than the landed cost of similar machines.

FARM IMPLEMENTS PLANT.

The Government is considering a proposal to set up a factory in Orissa for the manufacture of agricultural implements in collaboration with a Japanese firm. It envisages the production of power tillers with matched equipment and implements. Negotiations with the Japanese firms have not been concluded yet.

STEEL TARGET FOR FOURTH PLAN

The report of the steering group set up to formulate the Fourth Five-Year Plan production target for iron and steel is expected to be received by the Government by the end of this year. The steering group is working on the basis of a tentative production target of 13 to 19 million tons of steel ingots. A decision regarding the target as well as the break-up between the public and private sector will be taken on receipt of the recommendations of the steering group.

ALUMINIUM INGOTS OUTPUT

Production of aluminium ingots at the Mettur aluminium plant is expected to commence by the end of next year. The plant has been licensed for a production capacity of 10,000 metric tons. Neither the Centre or the State Government has participated in the project. The foreign exchange requirements of the venture are being met partly by equity participation by the foreign collaborator and the balance by a long-term loan from Italy negotiated by the party.

SUPPLY OF ELECTRICAL SHEET

It has been decided to accept the tender of Messrs. Demag for the supply of the electrical sheet mill included in the expansion of Rourkela steel plant. The mill will be

capable of producing about 50,000 tonnes of hot rolled electrical steel sheets per year.

AUSTRALIAN WOOL SUPERVISORS

The Australian Government has been requested to make available for four months the services of one project supervisor and four wool grading instructors. The request is under the consideration of the Australian Government. The services of these experts will be offered to the Government of Rajasthan to help in training personnel in wool grading and supervising initial grading work.

CEMENT QUOTA

The requirements of State Governments for cement cannot be met in full. The effective demand for cement far exceeded actual production and as defence works have to be given priority. As much as 95,850 metric tonnes of cement has been allotted to Madras State for the January-March quarter against the State Government's requirements of 3,45,267 metric tonnes.

WHOLESALE PRICES

The official wholesale price index (with the year ended March 1953 as 100) stood unchanged at its earlier week's level of 126.8 during the week ended March 30, 1963. The index was, however, higher by 0.4 and 3.2 per cent respectively when compared with that of a month ago and that of the corresponding week of the previous year. The monthly average for March 1963 worked out to 126.9 as compared with 126.6 (revised) for February, 1963 and 123.5 for March 1962. The financial year average for 1962-63 stood at 127.9 as against 125.1 for 1961-62.

The index for 'Food Articles' was lower by 0.2 per cent to 123.0, while the index for 'Tobacco' remained stationary at its earlier week's level of 110.4. The index for the 'Fuel Power, Light and Lubricants' group worked out to 135.0 as against 135.1 for the previous week. The index for 'Industrial Raw Materials' was up by 0.2 per cent to 135.3. The index for 'Intermediate Products' registered a fall of 0.3 per cent to 136.3 as against 136.7 (revised) for the earlier week. The index for 'Finished Products' rose by 0.2% to 127.9 as compared with 127.6 (revised) for the previous week.

NGE/MC

Chairman's Speech

INDIAN ALUMINIUM COMPANY LIMITED

The following is the address to members of the Company delivered by the Chairman, Mr. H. V. R. Iengar, at the twenty-fifth Annual General Meeting of Indian Aluminium Company, Limited held in Calcutta on Friday, April 26th 1963.

I have particular pleasure in welcoming you to this Annual General Meeting of the Company because this is the year when the Company will be celebrating the Silver Jubilee of its founding. The occasion is also a special one for myself because I am meeting you for the first time. I feel that this is an appropriate occasion for making a review of the past and probing a little into the future.

During the twenty-five years of its existence the Company has grown from small beginnings to one of the major business enterprises in India. In the field of production facilities it has, from a nucleus of a small 2,500-tonne rolling mill at Belur in West Bengal built up a completely integrated aluminium industry. We have now on stream an alumina plant with an annual capacity of 55,000 tonnes, two aluminium smelters with a total capacity of 26,000 tonnes, two extrusion presses with a capacity of 3,760 tonnes and a powder and paste plant; and the rolling mill at Belur has been expanded to a capacity of 16,800 tonnes of rolled products per annum.

In keeping with the growing range of its production facilities, the Company has maintained very satisfactory results in sales. These increased from Rs. 7 million in 1944 to Rs. 105 million in 1962. It is to be particularly noted that the Company has devoted a great deal of attention to the encouragement of new uses of aluminium and, in fact, we can justifiably claim that the acceptance of aluminium in a variety of industrial uses has, to a large measure, been attained through planned and persistent development work carried out by the Company. In doing so, it has helped to create a new consumption pattern for aluminium in this country which is more consistent with those obtaining in other industrially advanced countries.

A survey of the Company's activities which I, as a newcomer, can perhaps do very objectively reveals one dominant feature more than anything else viz. the consistent and continuous policy of expansion followed by your Company since its establishment twenty-five years ago. Such a policy would not have been possible but for two factors—the faith the shareholders have always had in the future of the industry and their restraint in the matter

of dividend. Since the Company became a public limited company in 1945 it has earned a total profit, after taxes, of Rs. 64 million. Out of this, Rs. 22 million or 35% has been paid in dividends to the ordinary shareholders. After accounting for the usual dividend to preference shareholders, Rs. 40 million or 62% has been ploughed back into the business and utilized for further expansion of the production facilities. This in itself is impressive but we should not forget that the broader equity base created by the ploughing-back of profits into the business has helped the Company in raising loan capital to finance its several expansion programmes. Nor must it be forgotten that for seven years between 1945 and 1954 no dividend was declared for ordinary shareholders and their confidence over this period made possible the subsequent growth and development of the Company.

In the context of the Company's expansion over the years, particular mention has to be made of the role played by the principal shareholder, Aluminium Limited of Canada who hold 59.7% of the preference and ordinary shares together. Our spectacular growth would not have been possible but for the faith and confidence shown by Aluminium Limited in the economic future of India. Some of you will be able to recall that in 1950 when there was a certain hesitancy in the minds of many foreign investors in India, Aluminium Limited demonstrated their confidence in India's economic development and the future of your Company by purchasing a large block of shares which became available at that time. The equity participation and loans from Aluminium Limited have gone a long way to meet the foreign exchange requirements of our expansion projects which have also benefited greatly from our technical collaboration with the Aluminium Limited Group of Companies. In my opinion, there should be more awareness in our country of the value of equity participation of foreign shareholders, as many a project in India today would be stillborn were it not assured of an adequate foreign exchange base to build upon and technical assistance to launch it. That we have been fortunate in having an overseas shareholder which has provided more than a base for our development, merits attention. I may add that I was in Canada a short while ago during the present emergency and I was greatly struck by Aluminium Limited's favourable reaction to the Company's further development programmes and the confidence they expressed in the Company's future.

Foreign technical assistance, valuable as it is, cannot be a substitute for our own efforts in the field of technical development and research. It has been the consistent policy of Aluminium Limited that the Indian Company should be self-reliant to the maximum possible extent. To this end they have thrown open their own facilities in Canada for the training of Indian personnel with the exception of the Managing Director consists of Indian nationals. The greater part of the technical work in connection with the recent expansions of the Company's activities has been carried out by the Indian staff but, wherever they felt it necessary, they were able to rely on the resources of Aluminium Limited which, because of its vast resources and experience gained in operating in many countries, has unrivalled opportunities of remaining in the forefront in aluminium technology. It would be useful and relatively extremely cheap for us to continue to have the benefit of Aluminium Limited's research facilities and this, of course, will be our policy. At the same time there are a number of directions in which we feel that more and more research should be carried out in India itself. We are therefore in the process of strengthening our technical development departments so that more local research can be carried on in the field in which the Company operates. Our association with the Aluminium Limited Group of Companies help us in avoiding duplication of effort.

No review of the past activities of the Company, in particular its whole approach to the problem of development and Indianisation of its technical department, would be complete without a reference to my predecessor, Mr. K. C. Mahindra. Over a period of 14 years he has played a distinguished part in guiding the affairs of the Company and I take this opportunity of paying him, on your behalf, a tribute and our hope that he may long be spared to play his role as an elder statesman in the industrial sector of our economy.

Impressive as our record of development is, we cannot rest with past achievements. India is developing rapidly and, even to maintain our share is contributing to the national economy, we have further to expand our activities. In the context of the present emergency we must do so with a sense of urgency. This sense of urgency is not only to be directed towards further expansion but also towards better utilisation of our present facilities and resources. We have to co-ordinate our efforts with the Government and the new aluminium

producers so that idle capacity in the plants imposed by artificial circumstances can be eliminated; so that the industry is able to offer metal and fabricated products in a form matching the demand; and so that a soundly based industrywide programme of development can be pursued. I will illustrate the need for such co-ordination by mentioning an instance in 1962 when there was a national surplus of metal in ingot form concurrently with a shortage of metal in the form of wire-bar, rod and billet. Similarly, there are other areas in the planning of the growth and development of the aluminium industry where close co-ordination between the Government on the one hand and the industry on the other will bear fruit.

On the future growth of the industry I will content myself by expressing two thoughts. It is quite clear that there would have to be a further large scale expansion of aluminium production in the country, the pace and extent of such increase being determined partly by the needs of the electrical conductor industry and partly by the development of the use of aluminium as a substitute for other scarce metals. But it is not enough that we aim only at a large scale expansion of aluminium production in the country. A stage has been reached in our development where we must endeavour to reduce costs of production. We are conscious of the factors influencing the industry's high cost of production, particularly the high incidence of the cost of electric power and some of the other locally procured raw materials, but nevertheless we should employ all means at our disposal to achieve maximum economies of production. Latest management methods must be adopted, means of increasing productivity must be developed, and care must be taken to plan new projects on the soundest economic grounds possible. The size of new units must be planned bearing in mind the economies of quantity production. Their location must take into consideration such basic economic factors as transport requirements for raw materials and finished products, local availability of supplies and services, and potential for future expansion. The co-operation of Government authorities at both the Centre and State levels is also essential in viewing these efforts in the light of national rather than regional needs. It is also imperative that we secure the co-operation of trade unions and industrial workers in order to achieve a standard of productivity which is comparable to those outside India. This is essential in the overall interest not only of the Company and its

employees but also of the national economy. It is only through the fullest efforts of all concerned that the aluminium industry will ultimately achieve this goal of reducing costs of production.

Since we last met Hindustan Aluminium Corporation Limited has gone into production. The Madras Aluminium Company Limited is expected to go into production next year and we gather a company may soon be formed for exploiting the bauxite reserves of North Kolhapur with the help of power from Koyana. I am sure the industry will be served more fully by the establishment of the new companies, and as the oldest in the field we welcome them. In our view it will be a great advantage if all the aluminium producers found and operated on a comprehensive basis an "Aluminium Development Association" entrusted with the task of developing the use of aluminium and improving the manufacturing techniques of our customers. Such an Association could assist in the dissemination of technical knowledge and in developing economic applications of aluminium and of its further substitution for other materials currently being imported.

Turning now to the financial results of your Company's operations in 1962, you will have noted from the Annual Report which has been circulated to you that the Net Profit of the Company increased to Rs. 12.6 million from Rs. 11.1 million in 1961. This increase in profit was realized in spite of an increased provision for Development Rebate of Rs. 6.1 million against Rs. 4.5 million in

1961, and in spite of unavoidable disruption of operations while new production facilities were installed and started up to complete the integrated expansion programme initiated in 1959. Thus the results of 1962 although showing only a modest increase in Net Profit compared to the heavy investments made over the past three years, bore the brunt of the costs of starting up the new production facilities of which the benefits will be felt only over future years. Bearing these points in mind, the financial results of 1962's operations can be considered satisfactory.

Members are aware that the Directors have proposed a final dividend of Re. 1.00 on each fully paid Ordinary Share, a dividend of Re. 0.50 on each partly paid Ordinary Share and a dividend of Rs. 6.25 (subject to Income-tax payable by the Company) on each Preference Share. I now have pleasure in announcing that, as in the two preceding years, the benefits of Sections 85 and 101 of the Indian Income-tax Act 1961 (corresponding to Section 15C of the 1922 Act) arising out of profits from new industrial undertakings will be available on these dividends. Accordingly, 42% of all the aforesaid dividends will be exempt from income-tax and super-tax payable by the respective shareholders.

I also have pleasure in informing you that the new Ordinary Shares issued this year qualify for the exemption provided under Section 99 of the Indian Income-tax Act 1961 (corresponding to Section 56A of the 1922 Act) and divi-

dends on these shares, if payable to a company, will be exempt from payment of super-tax.

The meeting of the Directors to consider the Accounts for 1962 and to recommend dividends was held, in accordance with normal procedure, in the month of February. It was believed at the time that Government would be compelled to impose additional taxation and that this taxation might press heavily on all sections of the community. No one, however, was prepared for the proposal that was actually put forward by the Finance Minister through the Super Profits Tax Bill. The total quantum of additional tax required to be paid by the Corporate Sector, namely Rs. 25 crores, was not unexpected; and indeed if this had been met by means of an Emergency Surcharge on corporate profits, industry would have had little cause for complaint. The Surcharge would have been of the order of some 6½%. The Super Profits Tax Bill introduced, however, an innovation in fiscal philosophy. I do not propose at this meeting to traverse the various grounds on which responsible business opinion in India has characterised this philosophy as based on a misconception of the structure of business corporations, and as certain to lead both to a discouragement of efficiency and to progressive inability of the Corporate Sector to plough back adequate profits for expansion. If the Bill had gone through in the form in which it was originally presented to Parliament it is estimated, on the basis of forecasts of earnings for the year 1963, that

the Company might have to pay in respect of the profits for that year a Super Profits tax which would have been equivalent to a Surcharge of over 20%. On the basis of the changes which the Finance Minister has recently announced, the Super Profits Tax payable by the Company will be reduced to an equivalent Surcharge of some 12½%. The charges proposed do make an improvement and it is a matter of gratification that Government have responded so quickly to the representations made to them by the business community. Nevertheless, the additional burden on the Company still continues to be high and the basic objections to the Bill continue to be valid. It is hoped that an early opportunity will be taken by Government to abandon this Legislation.

The country is passing through a very difficult period and I am sure that I speak for all of you when I assure the Government of our fullest co-operation in carrying out any task allotted to us.

Before I conclude, I am sure that the shareholders would wish me to convey their thanks to the Company's workers and staff who have served the Company ably during the past year. 1962 has been a year of considerable activity for the Company and I am glad to inform you that the employees have ungrudgingly fulfilled the tasks allotted to them.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

Managing Director's Speech

THE DUNLOP RUBBER CO. (INDIA) LTD.

The following is the speech delivered by Mr. M. L. Bexon, M. C., Managing Director of The Dunlop Rubber Co. (India) Ltd., at the 37th Annual General Meeting of the Company held in Calcutta on the 24th April, 1963.

I have much pleasure in welcoming you to the 37th Annual General Meeting of the Company. The Directors' Report and Accounts have been in your hands for some time, and with your permission I should like to take them as read.

THE YEAR'S TRADING

During the year under review, our sales of all categories of tyres continued at a satisfactory level, constituting highest yet achieved, which resulted in our factories not only working to full capacity but also extra days to meet the urgent defence requirements.

We continued to supply a major share of the vehicle manufacturers' Original Equipment tyre requirements and we were able to maintain our position in the

Replacement field with the aid of our widespread dealer organisation which has been built up over the years. Supplies to State Transport Organisations increased during the year in line with the expanding transport networks throughout the country.

Since the emergency, we have had to divert additional supplies for Government purposes but this has been accomplished without a significant effect on the retail trade.

Sales of our large Earthmover tyres continue to make a worthwhile contribution to our turnover in addition to playing an important part in the National Projects which are so vital for development and industrial progress.

The popularity of the Dunlop Cycle tyre has been maintained and we lead the market in this field with our sales limited only by capacity.

In the Industrial Rubber Products field demand continued to

outpace production in most of our items.

In the case of Conveyor Belting, demand during the year did not show any appreciable rise over the 1961 figure. With the expansion recently implemented in our Sahaganj factory, we are in a position to manufacture belts up to 1524 mm width. We feel that the capacity now available in the country is fully adequate to meet the all-India demand and that a ban on imports is warranted, particularly having regard to the large-scale influx of belting from Rupee payment countries.

As an addition to our existing range of Conveyor Belting, we have now developed a range of cotton/nylon ducks, which we are confident will find a wide acceptance in Heavy Industrial Projects. We are already manufacturing our first order for 6,000 metres of this belting for a Mining Project.

Dunlopillo sales were strictly limited by our production capacity. There has been a marked

increase in the usage of latex foam cushioning for industrial applications, and it would therefore be a misnomer to rate latex foam cushioning as a luxury product.

EXPORTS

Further progress was made in the export field and with the help of our Associates abroad, we were able to increase our export achievement for the year to a substantial figure. The value of this amounted to over two and a half times the equivalent figure for 1961. New markets were developed, and I am pleased to say that we are now selling our products in Asia, Africa, Europe, North America, South America and Australasia.

Cycle tyre exports again showed a substantial increase and registered an improvement of over 60% on sales in the previous year.

Our efforts to expand our export business met with a sharp setback towards the end of the year, when

an export ban was imposed by Government on most types of tyre. Whilst appreciating the circumstances which brought this about, I must tell you that we were placed in a very difficult position with our customers overseas through having to cancel offers that had been made and withdraw delivery promises. Although the ban has been gradually relaxed, it has made an impact on our relations with foreign buyers and time will be needed to rectify the position.

RAW MATERIALS

I am glad to report that we were able to obtain raw materials during 1962 to maintain full production at both factories, although the delay in receipt of import licences caused us some worry.

We are playing a full part in supporting indigenous production of a number of raw materials required by us, and are already obtaining our entire requirements of cycle rim strip and cycle valves from local sources. During 1962 we shall be taking large quantities of indigenous rayon, carbon black and synthetic rubber, although their higher costs will have a serious impact on our cost of production.

A most important point is that all our raw materials should be fully up to specification and we are engaged on a planned test programme to ensure that this transition to indigenous materials is carried through without endangering the quality of our finished products.

Recent increases in Excise and Import duties will substantially enhance raw material costs, and these, together with a change to the Letter of Commitment method for AID items, will throw a heavy strain on our finances.

PRODUCTIVITY

Although productivity was affected by power cuts, it is pleasing to record that at both factories the year's output was a record.

At Sahaganj, severe power cuts were experienced but the co-operation of the labour force in altering hours of work and the close team work between management and labour have minimised losses which would otherwise have occurred. Targets for increased production have been set for 1963 and we are hopeful of achieving these through the cooperative effort of all concerned with corresponding reward to our workers.

At Ambattur productivity has improved considerably, although the power shortage in Madras State caused by the late arrival of the rains affected output in the middle of 1962. I am glad to tell you that output has now risen by about 15 per cent following successful negotiations for increased incentive rates.

It is a source of satisfaction that the principle of increased productivity for increased wages has been

accepted by our factory Unions and the results of this co-operative approach are apparent in the increased output being achieved at both factories.

The history of your Company's operations in 1962, then, shows higher productivity, higher sales and higher profits—up to this point a sound and satisfactory year's trading. But now I must turn to the Budget proposals. No one doubted the necessity for enhanced revenue to meet defence requirements and, indeed, some additional taxation was anticipated. The original Budget proposals, however, went far beyond all our worst expectations and imposed a crippling levy on efficient and expanding companies such as yours.

The proposed super-profits tax is bad in theory and worse in practice and although some relief has now been given which we welcome it is still a heavy burden, particularly following the higher tax imposed by the Finance (No. 2) Act 1962. These increased taxes are a direct drain on liquid funds required by companies to support new expansion, increased productivity arising from improved efficiency, and the financing of increased costs arising from enhanced Import and Excise duties.

The effect of the new tax has been stagnation on the Stock Exchanges and a pause for further considerations on the part of companies with substantial expansion plans. We ourselves must review our own expansion schemes and for that reason I am not in a position to give you any positive report on their progress at this time.

PROFIT AND LOSS ACCOUNT

The profit for the year after providing for depreciation and interest was Rs. 3,30,38,375, an increase of approximately Rs. 53,00,000 over the corresponding figure for 1961.

Taxation estimates are, however, higher by approximately Rs. 1,12,00,000 of which Rs. 63,00,000 represents the super-profits tax contained in the original 1963 Budget proposals. However, this is now some Rs. 24,00,000 in excess of what will be required as a result of the later amendment to the Budget and this amount if confirmed will be brought to credit in 1963. The Finance (No. 2) Act 1962, promulgated after our 1961 Accounts had been approved by the shareholders, resulted in extra tax on 1961 profits of Rs. 16,00,000 which has had to be included in the 1962 taxation provision, together with an under-provision of Rs. 7,00,000 in respect of the previous year.

Excise duty continues to absorb an ever increasing amount of working capital and to date we have found no ready-made solution for this unremunerative burden on the Company's finances.

Contributions to Provident and other Funds are up by approximately Rs. 10,00,000, the main reason being that the Company introduced during 1962 a non-contributory Pension Scheme for officials.

Advertising was less than in the previous year, which had included our expenses in connection with the Indian Industries Fair.

The net profit for disposal after tax, Rs. 95,59,317, is lower than last year by approximately Rs. 69,00,000.

The compulsory transfer to Development Rebate Reserve is only Rs. 3,00,000 for the year.

The proposed transfer for General Reserve is Rs. 20,00,000 as compared with Rs. 62,50,000 last year.

The Directors recommend a dividend for 1962 of 15% subject to tax as opposed to 20% paid in respect of 1961. This reduction is very much regretted but is entirely due to the heavy impost of additional taxation.

BALANCE SHEET

On the Assets side both Inventories and Debtors are higher, this being in line with the higher level of output and sales. Advances Recoverable in cash and in kind show a substantial increase, the main reason being amounts advanced in respect of the new depot premises at Calcutta and Madras.

The Capital and Liabilities require no special comment.

EMPLOYEE RELATIONS

The improvement in labour relations mentioned last year was maintained. At Sahaganj a two-unit level Workers' Education Scheme has been started and the results have been very gratifying. At the Union's request, the factory worked on two holidays, the entire wages paid for these days at overtime rates being presented to the National Defence Fund.

In the Ambattur factory, the past four years' experience of joint consultations have proved successful, and relations are good. This is of particular interest as the factory was started with a new and young labour force with little or no industrial experience, and the results achieved reflect great credit on all concerned. This factory also worked extra days to aid the Defence effort and the overtime earnings were also contributed to the National Defence Fund.

The Head Office and Depots continued to operate satisfactorily.

I am sure that you would like to join the Directors in thanking the employees for their loyalty and hard work, which has contributed to the successful year's trading.

NOTE:—This does not purport to be a record of the proceedings of the Annual General Meeting.

Markets

JUTE Progress of New Crop

THE jute goods market ruled steady during the past week mainly on the belief that production in the current month will record a decline as a result of power shortage. Early in the week the market firmed in all the sections on the news that the Calcutta Electric Supply Corporation has decided to impose cut on all classes of consumers. The CESC has informed industrial units including the jute mills that their power supply is subject to interruption between midnight and noon on three days in the week. It may be recalled that jute mills have been already adversely affected in so far as they have been obliged to go without power supply for two hours in the evening everyday, from the beginning of the month. But surprisingly, there has been no interruption of power supply since last Saturday. It is reported that as a result of steps taken to supply the needed quality of coal to the CESC the Corporation has been enabled to reach its rated capacity.

Supply has also been augmented by continuous flow of bigger inflow from the DVC. Although no one is prepared to assert, that the position has become so comfortable as to rule out the possibility of a deterioration in the power supply position, the hope has strengthened that no serious interruptions will occur hereafter. The position may however be expected to show marked improvement only when the generator at Durgapur and the CESC's generator are commissioned next October.

Earlier in the week sentiment had been aided by the figures for despatches for export of jute goods in March. Despatches for export abroad were higher at 69,900 tonnes against only 61,100 tonnes in the previous month. Despatches of hessian were slightly higher at 35,000 tonnes while despatches of sacking were sizably higher at 23,000 tonnes as compared with 15,300 tonnes. Despatches of other goods were however marginally better at 11,600 tonnes. Total despatches during the month were lower at 95,200 tonnes against 102,100 tonnes and the decline is mainly due to the sharp fall in despatches for internal consumption to 25,300 tonnes

from 41,000 tonnes in February. Around midweek there were reports of business in hessian bags with Russia while the sacking section derived some encouragement from a Government tender for near delivery position. On most days however sentiment remained dull in the absence of fresh foreign enquiries. It would appear that the indication of an improvement in the power supply position had also some sobering effect on speculative activity as earlier expectation of a sizable decline in output as a result of prolonged power cut now looks like being falsified. From all accounts the outlook for the next jute crop appears to be good. The rains in the growing areas early in the sowing season and the subsequent fall of rain are expected to be quite beneficial to the growing crop which has already made quite good progress in most of the regions. For a time his week it was feared that the cyclone which has caused heavy damage in parts of West Bengal and Assam would have adversely affected the jute crop elsewhere also. But it is now reported that though the damage to crops has been very heavy the affected regions are small in extent and hence the jute crop as a whole may not suffer much diminution. Another factor which has been expected to have reduced the acreage under jute is the present shortage of rice in West Bengal and Orissa. It has been believed that sizable land which had been under jute last year would have been diverted to paddy cultivation in view of the present high price for rice. But

it would appear that such diversion is not likely since sowing of jute has been completed quite early this season. Many believe that encouraged by the announcement that the current year's minimum price for jute with the same differentials will be maintained, cultivators have gone ahead with sowing of jute. Indications therefore are that another bumper jute crop is in the offing.

Conditions in the raw jute market continued to be quiet in the absence of buying interest. For obvious reasons mills are disinclined to buy large quantities of inferior grade jute. Though arrivals have been dwindling over the past few weeks, holders continue to be keen for business and in the absence of buying interest are anxious to conclude deals even at discounted rates. Reports of beneficial rains in the growing regions and the good progress of the new crop have further accentuated the reactionary trend.

TEA Marketing Outlook for 1963-64 Crop

IN the latest monthly review, Messrs Carrit Moran & Company Private Limited has stated that the future outlook for Tea is uncertain. They add that, although it is too early to forecast the world crop for 1963 at the present stage, they think that it may show an increase of 20 to 30 million kilograms over the 1962 figure, provided the weather is favourable. They have added further that, despite the rise, the balance between the supply and demand is not expected to be seriously disturbed if consumption especially in India continues to rise.

But the worry is that the domestic consumption has been discouraged by two factors. The first is that the excise duty has been increased by a 20 per cent surcharge. Hence, the price of the commodity should move up. To what extent the increase will promote consumer resistance remains to be seen. The second is that the tea-drinking habit is being discouraged in India on the plea of increasing exports. It is felt that, if the domestic demand declines, the outlook especially for Common tea will suffer. It is, therefore, suggested that the excise duty should be paid on the basis of a deferred payment system.

In the Internal sale held in Calcutta this week, offerings were 30,344 packages of Dusts. Demand was good and general with a tendency for prices to harden as the sale progressed. Although medium CTCs opened on an irregular and generally easier note, they improved considerably and were often dearer towards the close. Throughout the auction, good CTC types were keenly competed for at fully firm to dearer rates.

Exportable orthodox dusts continued to sell readily around last levels with "tea for price" a strong feature. Good liquoring invoices from Assam were well absorbed. The limited quantity of legg-cut dusts maintained their level with the selected lines coming in for strong enquiry. Following rates (per kilo) were quoted:—Plain Orthodox Dust Rs 4.25 to Rs 4.50; Medium Assam Dust Rs 4.50 to Rs 5.30; Legg-cut Dust not quoted; Medium Assam CTC Dust Rs 5.50 to Rs 5.90 and Good Assam CTC Dust Rs 6.70 to Rs 7.20.

According to trade sources, arrivals of tea in the Calcutta port increased to 20,840 chests in March from 20,562 chests in the corresponding month of last year. In the whole of the 1962-63 season (April to March) however, the total arrivals were lower at 4,795,526 chests as against 5,004,999

chests in the previous season. While the arrivals by rail and road rose from 1,394,546 chests and 398,330 chests in 1961-62 to 1,596,860 chests and 492,121 chests respectively in the 1962-63 season, arrivals by river and air fell from 3,059,720 and 152,393 chests to 2,595,340 chests and 111,205 chests respectively.

Stocks in Calcutta warehouses were lower at 418,037 chests at the end of March as against 725,925 chests at the close of the previous month. Stocks in public warehouses fell sharply from 433,093 chests at the end of February to 228,072 chests at the end of March as did those in private warehouses from 292,882 chests to 189,965 chests. Besides, afloat stocks of tea at the end of last month amounted to 863 chests. There were no afloat stocks at the end of February this year.

Reports from Cochin have indicated that production in South amounted to 15.4 million pounds as against only 9.8 million pounds in the previous month and 16.7 million pounds in March 1962. In the first quarter of the year, the South Indian outturn of tea was lower at 35.5 million pounds as against 36.6 million pounds in January/March 1962.

In the auction held at Cochin at the end of last week, offerings were 314,000 kgs of tea dusts. Against a strong general demand, medium teas met with keen enquiries and advanced irregularly by 5 nP to 10 nP per kilo. Coloury mediums particularly from Wynaad district were better supported and sometimes registered further advances. There was useful support for high-grown, which were sold at around last week's rates. Clean black grainy descriptions met with good competition and were the strong feature of the sale. Unorthodox descriptions were sold well; but prices for these categories were offered for sale at Coonoor at the end of last week. Dust teas met with good demand at easier rates; but Leaf grades were firm to dearer.

According to reports from New York, tea imports into the USA were higher at 15 million pounds in February as against 8.86 million pounds in the corresponding month of last year. Total arrivals, in the first two months of the current year, were, however, lower at 18.83 million pounds as against 20.41 million pounds in January/February 1962. Imports from India were lower at 6.16 million pounds against 6.18 million pounds, while those from Ceylon, the principal supplier, declined from 7.35 million pounds to 6.61 million pounds.

In London auction, offerings were 28,517 packages including 25,177 packages from Northern India. The good demand was continued; but the opening prices were not always maintained. Medium kinds were a little irregular and sometimes easier to buy. Rates were unchanged.

COTTON Floor Prices Raised

THE long awaited decision of the Government of India on raising the floor price of cotton has at last been taken and the floor price of basic cotton has been increased by Rs 100.00 per candy without any corresponding increase in the ceiling price. The upward revision of the floor price has been effected in response to the persistent demand by the cotton cultivators for a higher floor price in order to create some confidence in the farmers that even when the prices slump they should not be deprived of a reasonable return for the produce. Only academic importance can be attached to this decision because the announcement came after the commencement of sowing in some parts of

India and that according to the present trend the price of cotton has evinced a tendency to hover around the ceiling rather than the floor level. As such the psychological boost that might have been given to cotton cultivators will be nullified and past experiences have proved that a mere upward revision of floor price would result in greater production.

The cotton futures market presented bullish trend during the past week also. The sentiment was fanned by the tightness in the overall cotton supply and the uncertainty regarding imports of cotton in the current season. The Jarilla May contract started the week on a firm note but gave way on profit realising liquidation by prominent buyers who switched over to the August contract. However this phase proved short-lived and the contract staged a smart recovery toward the close of the week and finished at Rs 743.50

per three quintals from the week's low of Rs 730.50. The rally was also helped by the concern expressed by the Chief of the Mill-owners' Association over the acute scarcity of cotton and the inadequate steps initiated to enhance the supply position. The increase in the floor price also aided the sentiment.

The August contract also fluctuated in sympathy with the May contract. The contract which commenced the week at Rs 736.00 slipped down slightly to Rs 735.00 in the initial trading but rallied upto Rs 748.00 before finally closing at Rs 745.00.

There was a revival in the demand for Bengal Deshi cotton for exports and as on 19 April the total sales aggregated 56,395 bales. It is reported that the trade has entered a strong plea with the authorities for converting the share of 25,000 allotted to the co-

operatives into a general quota so that both the societies and the trade can participate therein on first-come-first-served basis.

Report from reliable quarters suggest that the Government of India is likely to issue a global quota of 175,000 bales within a few days. The shipments of cotton under this global quota are to be effected from July onward. Out of this, 55,000 bales are likely to be set against the retention quota, 45,000 bales resulting from the restoration of a cut effected earlier and 25,000 bales for defence purposes.

The Government of India is understood to have been negotiating for importing 60,000 bales of staple cotton for meeting the growing demand from the cotton textile mills in the country. At the meeting of the Indian Cotton Mills' Federation held in Bombay recently the topic of import of staple fibre in future was taken up for discussion and it seems that the Federation is in favour of importing staple fibre of 1.5 inches staple length in lieu of 1.25 inches staple length as had been decided earlier. It should be noted, however, that there had been some opposition to the utilisation of staples fibre even as a partial substitute for cotton and it is understood that spokesmen of the industry in Bombay have pressed for stopping additional staple fibre units in the country obviously on account of the progressive deterioration in the demand for staple fibre yarn and fabrics. It was also pointed out that any large scale addition to the present supply either by enhancing domestic output or by imports would precipitate a virtual glut in the market. At the conference, however, no final agreement has been reached as to the question whether allotment of staple fibres should be done by the Textile Commissioner or by the Indian Cotton Mills' Federation.

PIECEGOODS

Trading conditions in the Bombay cotton piecegoods market presented a mixed trend. The activity in the export section was on the whole sluggish while in the domestic sector there was a broadening of demand.

The activity in the wholesale mill manufactured textile section was fairly encouraging and demand was pronounced in the seasonal goods. Popular varieties such as lawns and cambrics were quoted at high premium. Demand in poplins was comparatively poor. Printed saris, blouse piece, bleached longcloth and other fancy items also met with encouraging demand from upcountry centres mainly due to the marriage season.

The export section was devoid of any important development. Burma was the leading purchaser and a bulk order was reported to have been placed with the Indian exporters by the Burmese Government. Routine bookings were reported for Sudan in superfine voils, poplins and grey sheetings in small quantities. Ceylon was practically inactive and Ethiopia was satisfied with a small quantum of selected goods. Sweden enquired for grey sheetings, but no business was reported.

An All-Time High for Tin

TIN prices in the country have recorded an all-time high. The average price has shot up by about Rs 175 per 100 kg in the last three weeks. The price rose from Rs 2,495 per 100 kg in October 1962 and to Rs 3,054 in March 1963. This month, it has risen further to Rs 3,220. Apart from meagre stocks and a sustained demand which have been mainly responsible for this rise, sentiment has been aided by buoyant advices from the overseas markets. Prospects of any immediate improvement in the supply position are considered to be bleak, because no fresh imports are allowed. Imports are now made through the State Trading Corporation.

On the London Metal Exchange, consumers, who had earlier held off the market and let their stocks run down because there seemed no danger of prices moving against them, are reported to have resumed purchases with a vengeance. Even if prices do come back somewhat as is thought likely in some circles, there is now a far greater degree of confidence in the metal than there has been for some time.

The statistical position of tin has been exceptionally strong for about three years and it was only the American stockpile sales policy which depressed prices so much before. According to figures published recently, world tin production rose last year and world consumption fell. Despite this, however, there was still a deficit between supplies and demand of 14,000 tons. With every indication that consumption will be higher this year, especially in the U.K., the deficit will probably increase.

In addition to tin, both Lead and Zinc have been in growing demand recently and have made a good recovery from the low prices of last year. At just below £80 per ton, lead is almost £10 dearer than it was at one stage in 1962, when mines were forced to close, because it was no longer profitable to continue operations. Zinc is up by roughly the same amount, at around £75 a ton. Both metals, which are mined together, were in heavy surplus at one time. But, as a result of reluctant but nevertheless effective co-operative action among the producers, these excessive stocks were slowly reduced. As a matter of fact, a stage has now been reached when lead is said to be in balance and may even be in slight deficit, while the surplus in zinc is small.

In the above connection, the British Metal Corporation Limited has stated, in its latest annual review, that the price line in all the non-ferrous metals will be maintained in the current year. In the case of copper, world production in 1963 will amount to about 4,600,000 tons at full capacity; but in practice this will not be achieved even if there is no voluntary curtailment. As regards consumption, it seems likely that, aided here and there by inflationary measures, industrial activity will expand in several countries. Bearing in mind that the overall world consumption of the metal made only a

small advance in 1962, it seems reasonable to assume that it will go ahead to a rather greater extent in 1963.

In the case of Tin, the review states that, in 1963, production and consumption may reach increase by about 5,000 tons and, if so, there will again be a deficit of some 14,000 tons, or, say, at least 1,000 tons a month. Stocks throughout the industry are now on the low side and give little scope for further reduction.

The current year may be another testing time for Zinc. Even though consumption may continue to grow at a good rate—say, 100,000 to 150,000 tons a year—it will take time for this forthcoming bulge in supplies to be fully absorbed.

In the case of Lead, US output will pick-up when the major strike in Missouri is settled; but otherwise the present level of lead prices offers little inducement to expand the output much beyond the volume now reached. In this situation, a quite modest rate of growth of demand—about 2 to 2½ per cent per annum is often assumed in respect of this metal—should suffice at least to hold the market.

COFFEE

Receipts and Releases

According to the figures released by the Coffee Board, the receipts into the Pool out of the 1962-63 crop up, to the end of March, amounted to 45,230

(37,236) tonnes, consisting of 23,872 (21,268) tonnes of Plantation variety; 7,368 (5,688) tonnes of Arabica Cherry and 13,990 (10,280) tonnes of Robusta. Figures within brackets indicate the corresponding receipts into the 1961-62 Pool last year.

During March 1963, the releases in the internal market amounted to 2,660 (2,184) tonnes. A total quantity of 4,443 tonnes consisting of 4,399 tonnes of Plantation and 44 tonnes of Arabica Cherry was sold for export out of the 1962-63 crop up to the end of March.

SUGAR

Price and Distribution Controls

The persistent rise in the price of Sugar has led to the imposition of control on the commodity. As the mills have already sold out the quota released during early March, no trading took place during the past week in the mill delivery section. A few factories, which had a little stock left, were able to fetch fancy prices. In the spot section, prices spurted sharply as supplies from the factories had stopped and as stocks with the dealers were limited. The current crushing season is nearing its end and, according to the latest reports, 2,000,000 tons of sugar has been produced. It is expected that the total for the season may be 2,100,000 tons. As mentioned earlier, the Union

Government has returned to a system of price and distribution controls in a bid to bring down the present "abnormally high" gur prices under conditions of reduced production. For the first time, the States other than those in the northern region have been brought within the purview of statutory price control. At the same time, the State Governments are being empowered to prescribe, in accordance with the Centre's instructions, the margins of wholesale trade. They will also be in a position, as before, to ensure that within the quota allotted there is an equitable distribution at reasonable prices within their jurisdiction. Under the prescribed formula, the new ex-factory price is expected to be Rs 40.50 a maund for Uttar Pradesh and North Bihar against the ex-factory price of Rs 37.85 at the time of decontrol in September 1961.

In the above connection, the factories of East Uttar Pradesh and Bihar have expressed concern over the Government announcement of control over the movement and prices of sugar. They have stated that the prices fixed for the northern region are highly uneconomical and inequitable and that they do not fully provide even for costs. They are of the opinion that, with such uneconomic prices, the factories, who are already facing an extremely precarious situation, will be put to further hardships, ultimately affecting production. They have requested the Government to reconsider the matter in view of the far-reaching effects the present step will have on the economy of their regions.

We can help EXPORTERS to expand their business by providing pre-shipment finance. We can advise EXPORTERS of trade enquiries, put them in touch with foreign buyers, and obtain credit information and status reports on foreign buyers. We can give to EXPORTERS effective Letters of Introduction on our Foreign Branch Managers and Correspondents, provide them with Travellers' Cheques, Foreign Currency Notes, and Letters of Credit—when they travel. We can collect and negotiate for EXPORTERS all types of foreign bills; give Excise guarantees where necessary and guarantees under Export Promotion Schemes; and buy various foreign currencies, at the finest rates, both "spot" and "forward". We can advise EXPORTERS on matters concerning import restrictions, duties, etc. in foreign countries. With our 14 branches overseas and correspondents in almost all parts of the world, we are well equipped to handle FOREIGN EXCHANGE BUSINESS of any description.

For the Investor

INVESTMENT GOSSIP

The Outlook

ALTHOUGH the undertone continues to be steady, equity prices have not made much further headway in the second half of the week. Earlier optimism has stemmed from the further concessions announced by the Union Finance Minister at the end of last week. A serious defect in the original SPT was that it did not make provision for the carry forward of deficiency in profits for the purpose of this tax. It has been pointed out that the absence of such a provision will adversely affect industries in general and in particular industries such as jute and tea whose profits are subject to wide fluctuations. New companies will be able to carry forward and set-off deficiency in a particular year against the net amounts of

profits liable to SPT for the next three years. Two other concessions apply to the coal industry. The development rebate of the coal industry has been increased from 20 per cent to 35 per cent. This concession is however available for three years only. Describing this as a specially generous treatment Mr Desai has pointed out that this is intended to accelerate investment in the industry. The import duty on certain items of machinery needed by the industry has also been reduced. The outlook for the coal industry has improved as a result of these concessions. The industry has recently been enabled to take full advantage of the World Bank Loan for modernisation of its plants by a scheme of credit guarantee. During the past week there has been broadening of activity in the coal sector but as yet interest is mainly confined to selected shares. Perhaps the reason for the still subdued optimism about coal shares is that even with all these concessions, coal companies will not be able to pay a reasonable dividend so long as the selling price of coal is not adequately raised. Despite the report that the Minister of Mines and Fuel is favourably disposed toward a rise in the price, investors are unlikely to extend their commitments in the sector till an actual increase is officially announced.

The provision in respect of carryover of deficiency will benefit the jute and tea industries and the slightly improved tone in these sections indicates revival of investment interest. Even so, the support is still halting probably because as far as the jute industry is concerned the outlook for sacking exports remains obscure in view of the growing competition from Pakistan. The declining trend in sacking exports can be arrested only by some sort of subsidy to our industry. Although it is reported that the expert committee which has made a study of the problems of the industry is reported to have made it clear that Pakistan is adopting unfair practices in promoting its sacking exports, Government has not indicated what steps it proposes to take to stem the Pakistani erosion of our traditional markets.

The stock market no doubt continues to be quite enthusiastic, but it is doubtful if it can go on scaling fresh heights. For one thing, dividend outlook cannot be said to have improved generally although for the last year there may not be any serious setback in view of the fact that no condition is attached to the 10 per cent deduction. But

there is no gainsaying the still heavy liability of the corporate sector as a result of the fresh taxations imposed in the budget for 1963-64.

*

NEW ISSUE NOTES

Lakshmi Machine

The Lakshmi Machine Works Limited, Madras, has been allowed to issue equity capital of Rs 250 lakhs for cash, at par. Of this, shares of a value of Rs 28.11 lakhs (equivalent to Swiss francs 2.6 million) will be offered to Reiter Machine Works Limited, Switzerland. This is in supersession of the previous consent for the issue of capital for Rs 250 lakhs.

Mysore Lamp

Mysore Lamp Works Limited, Bangalore, has been authorised to issue capital of Rs 6,30,520 in 63,052 equity shares of Rs 10 each for cash, at a premium of Rs 25.07 per share, to the General Electric Company, USA. This is in supersession of the previous consent for the issue of capital of Rs 4,37,500.

Bank of Maharashtra

The Bank of Maharashtra Limited, Poona, is to issue further capital to the value of Rs 50 lakhs, divided into one lakh equity shares of Rs 50 each, to be fully paid-up for cash, at par, on rights basis.

TCPM

The Tamilnad Cardboards & Paper Mills Limited, Madras, will issue further equity capital of Rs 20 lakhs in shares of Rs 100 each, for cash, at par.

Estrela Batteries

ESTRELA Batteries Limited are issuing 20,000 new equity shares of Rs 50 each, at par. Out these, 4,278 shares are being allotted to their French collaborators with whom agreements have been entered into for technical services and supply of know-how. Also, 15,000 equity shares are offered to the existing shareholders in the ratio of one share for every two shares held. The shares rank pari passu in all respects with their existing shares save and except that such new equity shares shall rank for dividend from 1 April 1963 in proportion to the amount paid thereon.

Baroda Electric

Baroda Electric Motors Limited has made the first call the equity shares of the company, making the shares paid up to the extent of Rs 75 per share. Production of single-phase meters is expected to commence by September 1963.

Hindustan Times

The Hindustan Times Limited, New Delhi, will raise capital of Rs 85 lakhs in Debentures of Rs 1,000 each, carrying an interest not exceeding 7 per cent.

Saraswati Sugar

The Saraswati Sugar Syndicate Limited has been allowed (in supersession of a previous consent) to issue privately Debentures of the value of Rs 60 lakhs carrying an interest of 7 per cent, for cash, at par.

Kerala SIDC

The Kerala State Industrial Development Corporation Limited, Trivandrum is to issue further capital of Rs 1 crore for cash, at par, divided into 10,000 equity shares of Rs 1,000 each, to be issued privately.

Maharashtra SFC

The Maharashtra State Farming Corporation Limited, Bombay, a State Government undertaking, is raising capital of Rs 75 lakhs, divided into 7,500 equity shares of Rs 1,000 each, to be subscribed privately.

S. B. Joshi

Messrs S. B. Joshi and Company Limited, Bombay, is issuing capital of Rs 19,35,750 in equity shares of Rs 10 each for cash, at par, to the public.

Ahmedabad Jupiter

The Ahmedabad Jupiter Spinning, Weaving and Manufacturing Company Limited, Ahmedabad, will issue further capital of Rs 36,40,750 divided into 13,126 equity shares of Rs 125 each and 23,000 preference shares of Rs 100 each. All the shares will be allotted as fully paid to the shareholders of the Hind Mills Limited, Bombay, in terms of the scheme of amalgamation, to be approved by the High Court.

Venkata Ratnamba

Venkata Ratnamba Textiles Limited, Madras, is issuing capital of Rs 30 lakhs consisting of equity shares of the value of Rs 25 lakhs and 9.6 per cent preference shares of Rs 5 lakhs, both for cash, at par.

INVESTMENT NOTES

Hindustan Lever

The Board of Hindustan Lever Limited announce the results for the year to 31st December, 1962.

The total turnover and profit before tax of Hindustan Lever for the year ended Dec. 1962 were both records at Rs 53.85 crores and Rs 4.77 crores respectively; the turnover and profit before tax recording rises of 8 per cent and 14 per cent respectively over 1961. Exports rose from Rs 74 lakhs in 1961 to Rs 201 lakhs in 1962.

The net profit for the year at Rs 2.35 crores was, however, only marginally higher than the previous year because of the increase in corporation tax from 45 per cent to 50 per cent. In addition to this, the Company had to provide

a further Rs 33.4 lakhs for tax on the Bonus Issue of 12 shares for every 25 existing shares made in 1962 and Rs 6.5 lakhs for tax adjustment of previous years, leaving a balance of Rs 1.95 crores.

The exact liability for the super-profits tax will be known only after the Bill becomes law; but the Board of Directors consider it expedient to transfer Rs 70 lakhs to reserve for super-profits tax out of the net profit of Rs 1.95 crores.

The Company paid an interim dividend of 60 NP per share, subject to deduction of tax, in November last. The Board of Directors have resolved to recommend to the Annual General Meeting a final dividend of 60 NP per share, subject to deduction of tax, payable on 13th June, 1963, on the capital as increased in May 1962, bringing the total dividend for the year to Rs 1.20 per share (12 per cent). The 1961 dividend of Rs 2.60 per share (26 per cent) would be equivalent to Rs 1.76 per share (17.6 per cent) on the increased capital.

INVESTMENT BRIEFS

The Century Spinning & Manufacturing Company Limited has recommended a final dividend of 18 per cent for 1962, thus maintaining the overall distribution for the year at 30 per cent. It must, however, be noted that the interim distribution of 12 per cent was on an increased capital as raised by the bonus shares, issued in October 1961.

Mahindra & Mahindra Limited has recommended a taxable dividend of Rs 1.25 per share for the year ended 31 October 1962 as against a taxable dividend of Rs 1.50 per share (inclusive of a bonus of 25 NP) paid for the previous year. The new shares will get pro rata dividends.

India United Mills Limited has proposed a gross dividend of Rs 1.10 per share on Ordinary shares and 254 NP per share on Deferred shares, for 1962. These compare with Rs 1.40 and 374 NP respectively paid in the preceding year.

Nonsuch Estates Limited has declared an interim dividend of 5 per cent, taxable, for the year ended 30 June 1963.

BALANCE SHEET REVIEWS

WIMCO Does Well

DESPITE the difficulty experienced by the company to meet the increasing demand for matches on account of the ban imposed by the Government on installing additional capacity and in the supply of raw materials, the Western India Match Company Limited has reported a significant rise in sales from Rs 18.04 crores to Rs 18.76 crores for the year ended 31 December 1962.

The net profit for the year, before providing for Depreciation and Taxation, amounts to Rs 168.74 lakhs as against Rs 151.98 lakhs for the previous year. It has been

found necessary to provide a large sum for taxation and the allocations to reserves have also been not on the same scale as previously.

In respect of allocations, a sum of Rs 21.87 lakhs (Rs 20.52 lakhs) is set aside for Depreciation; Rs 1.35 lakhs (Rs 1.56 lakhs) for Development Rebate Reserve; Rs 5.96 lakhs (Rs 3.23 lakhs) for Gratuity Reserve; Rs 3 lakhs (Rs 10 lakhs) for General Reserve and Rs 68.60 lakhs (Rs 57.10 lakhs) for Taxation. There is an additional provision of Rs 6.50 lakhs (nil) in respect of taxation for previous years. The amount set aside for SPT is Rs 25.50 lakhs. After all these appropriations, it has not been possible to transfer any sum to the Contingency Reserve against Rs 15 lakhs formerly. The dividend on the Ordinary shares is maintained at 16 per cent, subject to tax.

A paper mill was installed sometime back. Some difficulty has been experienced in getting the required supplies of imported pulp from indigenous sources. As some difficulty has also been experienced in getting potassium chloride of the desired purity, the capacity of the potassium chlorate factory could not be fully utilised. It is now felt that potassium chloride should be made from sea water. Study of the scheme to extract salt and other chemicals from the sea has now reached an advanced stage. It has, therefore, been decided to start a pilot project. The memorandum of the company is being the current year.

Escorts Limited Earns More

Escorts Limited has shown a profit of Rs 37.29 lakhs for 1962 as against Rs 23.33 lakhs in the preceding year. After providing for Taxation, including the SPT, of Rs 18.31 lakhs (Rs 10 lakhs), the net profit is Rs 18.98 lakhs as against Rs 13.33 lakhs. The directors have recommended a dividend of 11 per cent on the increased equity capital. But for the SPT, the dividend would have been higher than 13 per cent declared last year.

The net profit has been arrived after providing Rs 10 lakhs (Rs 4.56 lakhs) for Depreciation and Rs 5.86 lakhs (Rs 63,000) for Development Rebate Reserve. A sum of Rs 3.20 lakhs has been provided for the SPT and Rs 3.53 lakhs (Rs 2.58 lakhs) for managing agents' commission. Total sales for the year have reached Rs 3.45 crores, showing an increase of Rs 1.52 crores. Sales of products of the company's own manufacture account for Rs 1.29 crores against Rs 80 lakhs.

The company has added new industrial units for the manufacture of additional products like motor cycles, electric medical equipment, shock absorbers and heating elements. These are expected to further increase the company's own production and sales during the current year.

Encouraging Results of Kohinoor Mills

The Kohinoor Mills Company Limited has produced excellent working results for 1962. While sales of cloth, yarn and waste, have risen by Rs 42 lakhs to Rs 7.23 crores, the gross profit has moved up to Rs 81.10 lakhs from Rs 55.35 lakhs. After providing Rs 18.51 lakhs (Rs 17.01 lakhs) for Depreciation; Rs 12.62 lakhs for Taxation (Rs 15.68 lakhs) and Rs 4.93 lakhs for Development Rebate Reserve (Rs 4.90 lakhs), the net profit has been more than doubled to Rs 44.99 lakhs from Rs 17.93 lakhs for the preceding year.

The directors have, however, maintained the overall distribution at Rs 18 per share, subject to tax.

BHARAT NIDHI LIMITED

Regd. Office: 5, Parliament Street, New Delhi

NOTICE

The Annual General Meeting of the shareholders of Bharat Nidhi Limited will be held at The Punjab National Bank Building, 5, Parliament Street, New Delhi, on Monday the 27th day of May 1963 at 3.30 P.M. to transact the following business:—

	...	11-62	15%	17-5 to 28-5-63
	...	12-62	8%	21-4 to 5-6-63

This is because a substantial portion of the profit has been provided for bonus for the years 1957, 1959, 1960 and 1961 amounting to Rs 36.71 lakhs. In fact, the directors have been obliged to withdraw Rs 10 lakhs from the Machinery Reserve to meet a part of the distribution to the shareholders.

Jaya Shree Textiles Repeat

Jaya Shree Textiles & Industries Limited has reported satisfactory working results for 1962. The gross profit has gone up from Rs 33.31 lakhs to Rs 42.77 lakhs, while sales are shown higher at Rs 220.23 lakhs against Rs 173 lakhs. After providing Rs 1.77 lakhs for secretaries' and treasurers' remuneration (Rs 1.70 lakhs); Rs 8.10 lakhs for Depreciation (Rs 3.19 lakhs) and Rs 8.60 lakhs for Development Rebate Reserve (Rs 0.50 lakhs); the net profit has gone down to Rs 24.30 lakhs from Rs 27.92 lakhs in the previous year.

With Rs 87.266 brought in and adding Rs 23,521 being surplus provision made in previous years, there is a distributable amount of Rs 25.41 lakhs. From this, a sum of Rs 18.55 lakhs (including Rs 1.4 lakhs for previous years) is provided for Taxation as against Rs 11.95 lakhs. General Reserve gets Rs 1.25 lakhs (nil). The directors have proposed a taxable dividend of Rs 1 per share on the increased capital as against Re 1, taxable, paid on the old capital.

The directors state that the existing units of the company are working more or less satisfactorily. Efforts are being made to diversify and enlarge activities of the company. They, therefore, look forward to the future of the company with optimism although the latest Central Budget proposals will affect profitability.

The cotton spinning plant of 15,000 spindles installed at Rishra started production. Due to non-delivery of certain indigenous as well as imported machineries in proper time and some teething troubles associated with the new plant, production was low during the period under review. However, the plant is expected to reach full production in the next few months.

The company has received permission for starting a cotton spinning mill at Midnapore in West Bengal with a capacity of 12,000 spindles. This scheme is expected to cost Rs 80 lakhs. The scheme for the manufacture of synthetic rubber oil seals has been dropped and the industrial licence has been returned to the authorities. The scheme for the manufacture of malleable castings and steel forgings is being carefully investigated.

Higher Profits for Malhati Tea

The Malhati Tea Syndicate Limited has reported a higher net profit of Rs 2.76 lakhs as against

Rs 1.57 lakhs for 1961. A sum of Rs 1.15 lakhs (Rs 1.14 lakhs) is set apart for Depreciation; Rs 2.50 lakhs (Rs 81,000) for Taxation; Rs 1.80 lakh (Rs 80,000) for General Reserve and Rs 1,004 (Rs 5,137) for Development Reserve. The dividend on the equity shares is raised from 80 p to Rs 2.00 per share, subject to tax.

BALANCE-SHEET BRIEFS

Mim Tea Company has reported a net profit, after providing for depreciation and taxation, of Rs 72,555 for 1962 as against Rs 46,616 for 1961. The dividend is raised from 20 to Rs 27.50 per share, subject to deduction of tax. Transfer books will remain closed from 30 April to 13 May 1963.

Murphulani (Assam) Tea Company Limited has made a net profit of Rs 1.94 lakhs against Rs 1.48 lakhs. The directors have proposed taxable dividends of Rs 2.50 (Rs 1.50) per share on the Ordinary shares and Rs 3.063 (Rs 2.063) per share on Prefd. Ord. shares, both subject to tax. Transfer Books will remain closed from 4 to 18 May, 1963.

The directors of the New Asiatic Insurance Company Limited have, in their 1962 report, stated that the permission to start other business has still not been received from the Controller of Insurance. It is expected that the necessary permission will be shortly received. Meanwhile, the net loss incurred in 1961 has now been reduced by Rs 13,311. The dividend is skipped again.

STOCK EXCHANGES Initial Firmness Not Maintained

Watch-Dog Writes:

STOCK markets have, on the whole, given a satisfactory performance. Although prices have suffered a technical setback from the high levels touched early in the week, they have steadied up again towards the close on replacement buying. There is, however, a general disposition to await the Government decision on the resumption of forward trading.

Price movements on Lyons Range were rather irregular; but the undertone was steady.

A mixed trend was noticed on Dalal Street in narrow and irregular dealings.

With selective buying in favoured scrips at market rates, the basic undertone of the Madras Stock Exchange was one of steadiness rather than buoyancy.

There was not much business on the Bangalore Stock Exchange.

Equities on the Delhi Stock Exchange exhibited a firmer tendency and turnover was good.

Prices on the Ahmedabad Stock Exchange showed a mixed trend.

Another week of indecision was experienced by the London Stock Exchange where there was a case of widespread irregular movements.

Hedgie trading was noticed on Wall Street where prices rose under the lead of the Rail group.

CALCUTTA

LYONS RANGE witnessed cheerful trading on the opening day of the week when prices recorded fresh higher levels. Despite the fact that the tax concessions, announced by the Union Finance Minister were not up to market expectations and would not enable companies to raise their dividends, the additional concessions given to the coal industry in the form of an increase in development rebate from 20 to 35 per cent as well as reduced import duties on machinery and equipment created a favourable impression, resulting in a boost to buying activity.

A feeling was also gaining ground that there was no likelihood of a fresh invasion of the country by China and that the high level of development and defence expenditure would release new forces, which might result in a further broadening of the base of the industrial structure. There was also a view that, with the wind once again blowing favourably for the investment climate of the country, some companies, which had earlier deferred their right issues, might reconsider their decisions. Naturally, with sellers reserved and the emergence of buying support in some shares, the recovery in prices was pronounced in some directions.

But, in view of the steady and sharp rise in prices within the space of only a few days, operators were generally inclined to consolidate their position before entering into fresh commitments. Investors were also inclined to adopt a cautious attitude on the feeling that, if prices were boosted by speculative influences, the health of the market was likely to suffer. Another important factor, which induced sustained profit-taking, was the fear that, if the Government would decide to remove the ban on forward trading, it might lead to excessive speculative dealings and a consequent setback in prices. Nevertheless, there was resistance to renewed offerings.

Gilt-edged securities continued to be subdued. Enquiry was limited to selected short-dated issues. The market had already started speculating over the prospect of a loan flotation since the move of the Reserve Bank to stop selling securities, was interpreted as a step for grooming the market for a new issue, 3 per cent 1966 Conversion Loan was nominally quoted at Rs 63.30.

Satisfactory dividends, announced by the Andrew Yule group of companies, induced some steadiness in the Jute section although support was selective. Birlas were taken up to Rs 30.19 from Rs 28.31; Howrah up to Rs 18.62 from Rs 17.56; Ganges up to Rs 13.75 from Rs 13.26; Megna up to Rs 13.87 from Rs 13.44 and New Central up to Rs 12.75 from Rs 12. India were, however, marked back to Rs 17.68 from the recent high of Rs 18.25.

Coal shares were a special feature of the week's trading, being influenced by two main factors—the increase in the development rebate for the industry and the Government decision to cut the import duties on machinery and equipment to be imported by the coal and fertilizer industries. Although there was a sharp rise in prices, higher levels could not

be retained till the close due to profit-taking on the feeling that the above concessions would not encourage the collieries to raise production unless they were accompanied by a rise in the price of the commodity. Burrakur were at one time pushed up to Rs 17.87 from Rs 16.19; Bengal to Rs 310 from Rs 290; Central India to Rs 11.12 from Rs 10.28 and Western Bengal to Rs 10.10 from Rs 9.05. quote finally at Rs 17.37; Rs 303; Rs 10.81 and 10.81 respectively. Beerbloom were quoted at Rs 26.12 with Equitable changing hands at Rs 26.50 to Rs 26.87.

There was little doing in the Tea section. Operators did not seem to be happy over the absence of any concession in the case of the tea industry. They felt that the capital-reserve base was small, not to speak of the fact that its fortune would fluctuate from year to year. Reports of severe hailstorm having caused some damage to the tea leaves in some of the gardens around Darjeeling also caused some anxiety. Brooke Bond met with business at Rs 11.50 to Rs 11.62; Hasimara at Rs 13 to Rs 13.44; Tezapore at Rs 14.82 to Rs 14.94; Betjan at Rs 30.37 to Rs 30.69 and Grib at Rs 7.31 to Rs 7.40.

Sugar shares were practically neglected. Apart from the fact that the latest results of the companies had been disappointing, the new sugar policy enforced by the Government gave rise to a fear that the factories especially in UP and Bihar might find it difficult even to recover their production costs. Doubts were, therefore, expressed whether the companies would give a better performance during the 1962-63 season.

Textile scrips moved up slightly in sympathy with the general trend of the market. Bharat Commerce were done at Rs 22.69 to Rs 22.87; Elgin at Rs 18.87 to Rs 19.06 and Jaya Shree at Rs 15.25 to Rs 16. J. K. Cotton were enquired up to Rs 14.00 from Rs 13.50.

Engineering shares were moderately active under the influence of Indian Irons, which touched a new high of Rs 22.74 from 22.14, to quote finally at Rs 22.60. G. K. Williams changed hands at Rs 34.31 to Rs 35.12; TEXMACO at Rs 23.40 to Rs 24.10; Britannia at Rs 10.12 to Rs 10.56 and Jessop at Rs 22.37 to Rs 22.87.

Miscellaneous issues forged ahead to record fresh higher levels; but profit-taking erased some of the extreme gains. Dunlop Rubber were done at Rs 35.44 to Rs 35.75; Hindustan Motor at Rs 17.37 to Rs 17.56.

Indian Aluminium at Rs 33.50 to Rs 34.25; Indian Cable at Rs 32.37 to Rs 32.62; Indian Copper at Rs 11.00 to Rs 11.19; Jaipur Udyog at Rs 11.00 to Rs 11.19; Kesoram at Rs 33.50 to Rs 34.31; Orient Paper at Rs 11.00 to Rs 11.19; Orissa Cement at Rs 14.44 to Rs 14.62; Rontas at Rs 11.00 to Rs 11.19; Shree Gopal at Rs 23.50 to Rs 24.25; Hindustan Aluminium at Rs 13.62 to Rs 14.26; J. K. Synthetics at Rs 11.62 to Rs 12.37; Star Paper at Rs 12.18 to Rs 12.62; India Steels at Rs 6.2 to Rs 6.44; Aditya Oxygen at Rs 11.00 to Rs 11.19; minimum Corporation at Rs 14.00 to Rs 14.12; Bengal Paper at Rs 23.50 to Rs 30.50; Titagarh Paper at Rs 17.00 to Rs 17 and Universal Electric Rs 9.31 to Rs 9.56.

THE E.I.D.-PARRY GROUP
1963

35th Year of Publication

DARE HOUSE at PARRY'S CORNER

Soon after he had founded his business in 1788, THOMAS PARRY acquired a site for his office and godowns at the corner of Esplanade and First Line Beach, strategically situated, as close as it was then possible to approach Fort St. George. It was not long before this corner became known as Parry's Corner, which name it bears to this day.

On January 1, 1819, PARRY took into partnership JOHN WILLIAM DARE—"not only a fine businessman but also a great character."

DARE HOUSE, the Head Office of the E.I.D.-PARRY GROUP, is named after him.

One-hundred and thirty-five years have passed since JOHN DARE'S death in 1838. Eventful years of steady progress for PARRYS!

JOHN DARE

THE E.I.D.-PARRY GROUP, MADRAS.
PLAY YOUR PART IN THE NATIONAL DEFENCE EFFORT

The E.I.D.-PARRY GROUP of today consists of E.I.D.-PARRY LTD., PARRY & CO., LTD., and a number of subsidiary and associated concerns, in all nine companies of substance, contributing to the country's economy through the manufacture of sugar, confectionery, fertilisers, light railway equipment, industrial and potable alcohol, acids, chemicals, carbonic acid gas, sanitaryware, etc.

The GROUP provides employment to more than 10,000 people. The strong position it has achieved today has given it courage and confidence further to increase and broaden its activities to keep in pace with the country's Five-Year Plans.

Corporate Morals

Window dressing of the balance sheets by switching assets from one company to another (facilitated by different accounting years of the companies) can be dealt with by executive vigilance and use of existing provisions. The scandalous habit of claiming receipt of subscriptions for capital in cash whereas only adjustments in accounts have been made is capable of being dealt with if auditors were more wide awake and asked the relevant questions. Benami transactions are notoriously part of the Indian business traditions with obliging relatives, employees and hangers-on as willing tools. What is even worse, shares are often held in fictitious names and the commercial respectability attaching to 'blank transfers' facilitates unfortunately this fairly wide-spread abuse. The blank transfer system has its obvious justification in the ease in marketability and reduction in paper work and expense that it facilitates. It is for this reason worth retaining. But stringent precautions to see that it does not get misused should be provided by law. Both the Bose Commission and the jurists' memorandum have made detailed recommendations on the subject and these should be implemented expeditiously.

The conduct of some of the auditors connected with the companies inquired into by the Bose Commission revealed a shocking lack of professional ethics and good conscience. Manipulation in accounts by means of fictitious purchases and expenses, loans and advances made to sister concerns to the detriment of the shareholders of public companies, obscuring of such facts by bogus book adjustments are all the legitimate sphere of inquiry by the auditor, who should look for the substance of the transactions behind the form. Personal expenditure charged to the accounts of limited companies can only be at the expense of shareholders and revenue and the auditor has a statutory duty to the former and a professional duty to the latter to see that they are not mulcted of what is legitimately theirs. The Institute of Chartered Accountants has obviously an onerous responsibility in instilling a high sense of professional probity among its fellows and in exposing misdemeanours on the part of any of their confreres without any fear or favour.

Another recommendation of the jurists' memorandum is concerned with the preservation of books and papers. The Bose Commission was seriously impeded in its tasks by the destruction of relevant documents. The present law relating to preservation of papers does not cover all cases. This omission should be made good. The memorandum also suggests that the destruction of records should be possible only after an independent officer has satisfied himself after scrutiny that there is nothing in them likely to incriminate anyone.

These and other safeguards against corporate dishonesty are no doubt likely to increase the vexations of the honest businessman. But that is a price we have to pay for the general laxity in standards of corporate behaviour. The law, with all the new teeth now provided, may still prove not the terror we hope it will be. But then morality can never be ensured by law. But if businessmen wish to be heard in national counsels, they should collectively ensure that they adhere to the highest standards of business ethics.

Our India

THE river waters dispute in the southern half of the country is, I think, the counterpart of the language controversy in the economic sphere. Both show a basic incapacity to take a synoptic view of the national interest, to gauge the extent of the conflict between the national and to remove it by building up a consensus of opinion in support of a fair compromise. These defects are clearly seen in the development of the language controversy, in the growth of the serious differences in the face of fundamental agreements which could not normally be expected and the widening of these differences even to the point of bringing into doubt the desirability of having Hindi as the common official language even at a distant date in the future. In the case of the river waters the differences may conceivably be sharper, because they spring from concrete economic interests of the various parties concerned. The interests may or may not be misconceived. But once the interests are thought of in a particular way, it is not easy to accede to a course of action which can have adverse effects on those interests. The trouble in the case of the waters of the Godavari and the Krishna is that three, four and even five States are interested in their utilisation and it is assumed that no one State can have more except to the detriment of some other. This is true to some extent of the waters of the Krishna. It may also be true of the Godavari in so far as there is plenitude of waters flowing through it only if you take into account the flood waters during the monsoon. Taking the year as a whole, the flow is so uneven that a fair division of the waters on the basis of the annual flow is well-nigh impossible. In other words, a fair division satisfactory to all is possible only if all the waters are utilised in full. If we are powerless to prevent or avoid the present waste, we shall be equally powerless to prevent or avoid squabbles between the States concerned. Another fertile source of trouble is that the river basin and the catchment area are not identical and, what is more, the fertility of the two areas is widely different and the claim of the more fertile areas to having their requirements met in full must seem to the average man to be more weighty than the claim of other areas based only on their having a little more of the rainfall. A third cause of the distracting nature of the controversy is that no settlement of these disputes has been attempted over a long period and not only the conditions of these different areas but also the identities of, shall I say, the high contracting parties have changed sufficiently to affect the practical results of earlier agreements. With our agricultural programme as it is now, the old arrangements by which the waters which should flow eastward were turned westward to waste themselves in the Arabian Sea though not before generating electric power must seem somewhat inequitable to those who are in a position to make effective use of those waters for growing much needed food. At the same time the rise in the need for electric power will give a fairly high priority to Koyna. In all the multifarious arguments for and against allotments of water to particular schemes or areas, the fact that Andhra Pradesh has a high proportion of irrigated to total land resources must appear to prejudice the State's case in all these disputes. But it is Andhra Pradesh and not Mysore or Maharashtra that is our rice bowl, and one of the biggest strides toward our rice target will be taken when Nagarjunasagar is completed and 1.5 million tons of foodgrains will be added to our annual output.

I have taken care to state a balanced case not because I want to take the easy line of saying much on both sides, but because I want to point to the fact that the means of making an amicable settlement lies outside the brief for each party. The brief that must win finally is that of the nation as a whole which up to the moment is not represented at all or is inadequately represented. If we accept all the limitations of the present, then we must resign ourselves to the

prospect of endless bickerings. The bickerings can cease, as I have already indicated, only when the nation as a whole shows itself determined and able to make the fullest utilisation of its water and other resources. The target for food production and the target for electric power must be properly correlated so that water will be seen to be economically utilised whether you look at it from the viewpoint of the one or that of the other. It is very significant that one of the vital differences between the States in regard to basic assumptions concerns the question of the percentage of reliability. It is significant because it shows not only the lack of basic data but also the range in which the availability of water may be said to vary. All this shows that rather than attempt to resolve the differences by any kind of adjustment of the conflicting claims, we must aim at the fullest utilisation of the waters of the two rivers in the first instance and the water resources of the whole country later on by stages. It is only when we take that all-India view and plan to maximise the benefit to the whole nation through maximum development of all its resources that the interests of each section will be seen in proper perspective.

In this context, it is pertinent to refer to the possibility of having water-grid so to say for the whole country of connecting all the river systems in the same way as different electric power sources are connected so that shortages in one section may be made up from the surplus of other areas. At first sight, it seems fantastic. But I have talked with experts who are so convinced of its practicability that they wax eloquent over the benefits that may be expected to flow from such water-grid. Of course, the cost may be prohibitive at present. But the economics of any such scheme must change with circumstances. One day its "cost" must be well within our means. If from now we can put across to the people in all parts of the country the picture of full utilisation of all our water resources, we shall have done something to rub the edge of current conflicts. The same is the case with the language controversy. We think of any one language as involving special advantages for some and special handicaps for others. The growing generation, we forget, already bears the loan of heavier school curricula. They may conceivably be equal to mastering three or even four languages. If we remember that, working compromises would be easier at every stage.

Recovery in Britain

By Paul Einzig

THE British Government has certainly more luck than it deserves. Having presented a Budget which, while not sufficiently inflationary to bring about a boom, is just sufficiently inflationary to threaten to reverse the prevailing better trend in the balance of payments, it suddenly finds itself confronted with a series of gratifying indices. They refer to past periods so that the Budget cannot claim credit for it. There is the sharp reduction of unemployment and the sharp increase in the output. There is also the sharp improvement in the balance of payments in March. Even before these indices appeared, sterling became remarkably firm and so did more recently, the Stock Exchange.

All this is very gratifying, though it remains to be seen how far the inflationary effect of the Budget, moderate as it is, will cause a decline of the gold reserve. At the moment the trend is very much in the opposite direction. Sterling has been firm and the authorities have been able to recover some of the dollars they had to sell recently in support of sterling. What is particularly significant is the narrowing of the discount on forward sterling. It indicates that

speculators, who staged an attack as a result of the failure of Common Market negotiations and of ill-advised and irresponsible devaluation talk, have at long last realised that for the present they are doomed to disappointment.

What is amazing is that not the speculators have realised this but that it has taken so long for them to concede defeat. After all, the moment the Chancellor of the Exchequer announced that the Government was prepared to run down the gold reserve and to make use of external credits if necessary, in defence of sterling, it should have become obvious even to considerably less shrewd observers that in the short run at any rate sterling is absolutely safe.

Yet speculators in Paris continued to carry forward their short positions incurred mostly through selling spot sterling, in the hope that, by the time it becomes due to be delivered in two days, sterling would be devalued. An alternative device to speculate against sterling was to borrow Eurosterling deposits subject to two day's notice and sell the spot sterling without covering the forward. Both these devices would have been a very cheap way of being short compared with the wide discount on forward sterling for longer periods on the assumption that devaluation was imminent. But since these short transactions had to be renewed again and again for two or three months their cumulative cost must have been fairly considerable.

Considerable optimism prevails in many quarters as a result of this rout of the bears, and it is hoped that their losses would teach them a lesson which would long be remembered. Long experience has shown, however, how easily such losses are forgotten. It would be a mistake to rely on the long memories of speculators. Nevertheless it seems probable that they will have no temptation or opportunity for renewing their attack with any chance of success for some time to come.

—(Copy Right)

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

NEW LOAN

Prospect for Further Tranches

THE New Loan announced early this week offers two surprises. Why has a 4 per cent coupon been presented on a six-year loan? Secondly, was it really necessary that the subscription lists had to be kept open for ten days? We fear that both these aspects of the New Loan announcement are indicative of borrowing from weakness, a weakness that, we may add, is altogether absent. For it is certain that the bulk of the maturing loans is held by the Reserve Bank and conversion of this parcel can be taken for granted. The unpalatable truth seems to be that the monetary authorities want to convert the firm that, after raising of bank Rate with the turn of the year, a dearer money era has come to stay; and there is also the implicit confession that public holders of the maturing loans may not be too enthusiastic about taking up the conversion offer.

A 4 per cent 1969 is, it may be pointed out, a godsend for the banks. A six-year loan is short enough; five years' maturity might have been preferable, but there can hardly be complaints. The interest coupon has been fixed rather high—too high in our view—and therefore should normally ensure adequate support from the banking system. Unfortunately one result of the terms and conditions attached to the new loans will be to depress the prices of existing loans; and to that extent the depreciation thereon should produce what we may call consumer resistance. But we would stress that banks should not miss the opportunity of converting their holdings; even if further increases in bank Rate should be in the offing, the safest investment possible at the moment seems to be the 4 per cent 1969.

The success of the 4½ per cent 1966 is guaranteed. The Life Insurance Corporation will find the diet ideal; what matters if the loan matures in 23 years, when the interest coupon is worth a fat 4½ per cent? Provident Funds, too, may be interested, as would be other institutional investors—saving always, of course, the banks. The Reserve Bank itself may choose to convert part of its holdings into the 1966 loan, since there would be a limit upon the marketability of the 1969 loan that it takes up. By and large we would hazard the guess that conversion subscriptions to the 4 per cent 1969 loan would add up to around Rs 100 crores; another Rs 60 crores should find their way into the 4½ per cent 1966; and—inclusive of the maturing Hyderabad loans—the Central Government's liability for repayment in cash to holders of maturing loans who do not opt to convert may work out to around Rs 25 crores.

But at this stage we may state that it is absurd that the subscription lists are to be kept open for 10 days. With Reserve Bank and LIC conversion assured, the quantum of other holdings that had to be enticed into the new loans should be rather small; not more, we fancy, than Rs 35-45 crores. For the sake of this element, subscription lists are to be kept open for an additional week; is this not borrowing from a sense of great weakness? We should rather have thought that the lists would be open for 1 day only; and then would we have seen a scramble from the other public holders for conversion.

Thus, of the Rs 183 crores of loans maturing this year, our belief is that holders as to some Rs 25 crores would have to be repaid in cash. This means that further tranches of Central Government borrowing must bring in, in new cash, about Rs 235 crores. For, the Budget assumes Rs 393 crores from new loans, an element of Rs 100 crores of this being set apart for the State Governments. It is greatly to be doubted if cash for such a large amount can be raised at one stroke. So, the Centre would be well advised to split its cash new loans into two tranches. The first tranche should be announced around the beginning of July, when banks will have sufficient surplus resources for which they will be looking for gilt-edged to invest in. The second tranche could be made when the State Governments would have come on the market, or perhaps a little later. We have in mind the third or fourth week of August; and it may even be that the second tranche should comprise an issue that in the first instance should be sold to the Reserve Bank, so that it could be available on tap from August-end onwards. The target for the first tranche of the cash loan should, we suggest, be in the environs of Rs 135 crores—say, Rs 125 crores with Government having the usual right to hold on to 10 per cent excess subscriptions. Automatically the second tranche would be for the balance, or even Rs 100 crores.

But if the cash loans are to succeed, the monetary authorities had best decide to borrow from strength; any further show of weakness will serve merely to depress further the gilt-edged market—with ruinous implications for subscriptions to the new loans.

CENTRAL BANK

The Burdens on the Banking System

For Sir Homi Mody the super profit tax is the last straw. At this week's annual general meeting of the Central Bank of India Limited, Sir Homi has built up a logical and consistent case for special treatment for the banking system. First of all, the demand for funds whether from industry or from trade is relentlessly on the rise; and Sir Homi feels that the increase in Deposit resources is not satisfactory, particularly as viewed against the background of larger expenditure for defence purposes and the resultant increase in the volume of currency with the public. The pressure upon the banking system would have been severer still, except that the rise in Deposits outpaced expansion in Advances during 1962. But we have to plan on a longer-term perspective: and as far ahead as we can see, especially in view of the impact of the Budget proposals on the capital market, industry will need increasingly to rely upon bank finance. So, in turn banks have to seek new Deposits; and the view of interest rates held by the Indian Banks' Association is such that new Deposits come dear, and such accruals more often take the form of higher-costing Time Deposits. Meantime, in order to restore confidence in banking, the Deposits Insurance Corporation was thought of and has begun operation. For Central Bank alone the burden of insurance premia exceeded Rs 10 lakhs for 1962; and with the "switch" to Time Deposits, interest paid absorbs more of the gross earnings of a bank. "Above

all," says Sir Homi, "the implementation of the Dessai Award . . . substantially pushed up the establishment expenses of the banking industry."

Again, another step taken by the monetary authorities to strengthen banking will have precisely the contrary effect in one way: the prescription under the Banking Companies Act of a higher liquidity ratio as from September next year will mean that more assets of a bank will be tied up in the non-earning or lower earning cash balances and Government securities. In short, Sir Homi fears that "the profitability of the banking industry is indeed threatened from many directions".

The Central Bank Chairman's speech was apparently drafted before the Finance Minister disclosed the relief he had from super profit tax for the banking system. But Sir Homi apparently would not be satisfied with such small relief; what he would want is the elimination of a tax which is "thoroughly unsound and unusual." It is true, that the older banks (whose earnings and profits are high compared with their capital) will still be liable to the super profit tax; it is true that in their case dividend payments will be affected and that raising of new capital through rights issues would be hard. All this, as Sir Homi rightly points out, "comes at a time when banks are expected to play a much more purposeful role than before in the development of the country." We therefore support his plea that at the earliest possible opportunity banks at least should be exempted from the super profit tax—a tax which, we may add, is greatly unlikely to be permanent.

We may add that, as we had surmised in last week's review of the accounts of Central Bank, the dividend payment is to be made from the Special Reserve; the balance of just over Rs 25 lakhs in that Reserve would constitute, in our view, a dividend equalisation fund—to be added to and drawn upon so long as banks are liable to pay the super profit tax.

CBC

Credit Ratio Cut Sharply

The accounts of the Canara Banking Corporation Limited for 1962 show that, though Deposits rose, the total of Advances has been reduced slightly with the result that the credit ratio has come down from what for Indian banking is a quite normal 60.6 per cent in 1961 to an unusually low 50.6 per cent.

Deposits and other accounts have been marked up by Rs 1.49 crores to Rs 11.61 crores, the bulk of this, or just over Rs 1 crore, being under the head of Fixed and other Time Deposits, now placed at Rs 7.71 crores. As already remarked, the increase in resources notwithstanding, the total of Advances has contracted by Rs 0.29 crore to Rs 5.87 crores. The resources so released, together with the new accretions, have instead been used to add Rs 0.52 crore to the gilt-edged portfolio (higher at Rs 4.37 crores—again, an unusually high proportion to Deposit liabilities) and to increase cash balances, including money at call and short notice, by Rs 1.03 crores to Rs 2.08 crores.

The gross income of the Corporation shows a welcome rise of Rs 11.38 lakhs to Rs 79.18 lakhs, the major share as expected flowing from interest and discount, which fetched, at Rs 63.30 lakhs, some Rs 9.37 lakhs more than in the previous year. But expenditure, as the banking system found last year, was rising as sharply. Interest paid, in the case of Canara Banking Corporation, absorbed Rs 4.58 lakhs more at Rs 37.28 lakhs, and salaries and allowances cost Rs 4.46 lakhs more at Rs 22.76 lakhs. Nonetheless, the balance of profit still rose by Rs 0.32 lakh to Rs 8.55 lakhs.

The transfer to Reserve has been stepped up from Rs 1.65 lakhs to Rs 1.75 lakhs; and taxation also gets the slightly higher provision of Rs 4 lakhs against Rs 3.90 lakhs. With new capital (for Rs 12.50 lakhs in equity shares, over-subscribed) issued during the year, the amount absorbed by dividends has gone up slightly from Rs 2.63 lakhs to Rs 2.80 lakhs. The carry forward at Rs 0.15 lakh shows little change from the amount brought forward.

What is crystal clear about Canara Banking Corporation's accounts is the very high liquidity the bank maintains; the directors obviously have prudence as their watch-word.

BUSY SEASON

Broad Conclusions

The 1962-63 busy season has drawn to its close, and while a study of the relevant statistics will have to be deferred to the next week, when the statutory return of Scheduled Banks for the last Friday in April will become available, certain broad conclusions may be noted here.

First of all, it was an extremely busy busy season. The expansion in the Advances of Scheduled Banks has set a new record. Partly it may be that agricultural production is on the rise and hence the demand for a larger quantum of bank accommodation. Partly also it may be that industrial production is showing resurgence, such that the reliance on bank credit is automatically on the increase. Yet another factor that must be borne in mind lies in the fact of the defence effort.

Secondly, with the Reserve Bank's raising of bank Rate early this year and the punitive interest it set for borrowings above the specified quotas, the Scheduled Banks will have, it may be assumed, exercised the greatest possible caution in approving any new credit lines. As such, indeed, the peak of borrowings from the Reserve Bank was lower than it was last year. It is here that we come upon the third point. Fortunately for the banks, and though it was only toward the tail-end of the busy season, the magnitude of governmental disbursements connected with the end of the fiscal year was of such considerable proportions, and their impact upon the resources of the banking system so immediate, that Deposits of banks showed a welcome rise and to that extent reduced the need for borrowings.

Fourthly, the expansion in currency circulation has also been enormous; and we suspect that deficit financing resorted to by Government during the last year was much larger than had been originally budgeted for. The implication of such currency expansion is that in due course banks may expect another bout of increase in Deposit resources.

Fifthly, with the export season more or less coinciding with the busy season, it may have been expected that foreign exchange reserves would during this period be built up; in fact we had anticipated such an augmentation to reserves taking place; that anticipation has failed to

materialise. Whether exports were sluggish, or imports heavy, it does not make much difference; the impact upon bank Deposits would have been contractionist, and so the next conclusion is that we may have had, if the last export season had been satisfactory, a better increase in Deposit resources.

In the next week's issue we shall study the 1962-63 busy season in some detail.

BANK RETURNS

Deposits Continue to Rise Sharply

The Deposit resources of the banking system have continued to show a substantial rise as recorded in the latest returns; and these new accretions can again be put down to receipt of governmental payments relating to the end of the fiscal year.

According to the returns of the Reserve Bank for 26 April—which incidentally represents the last week notionally of the current busy season—Active Note Circulation has declined by Rs 12.88 crores to Rs 2,304.34 crores, and Rupee Coin has also returned from circulation in an amount of Rs 0.68 crore. There is a minor adjustment in Rupee Securities, now shown at Rs 1,996.43 crores, and Foreign Securities are unchanged at Rs 105.08 crores. So, the Reserve Bank's cash in the till has moved up by Rs 13.56 crores to Rs 33.32 crores.

The return for the Banking Department is largely featureless, though there is some evidence of State Governments having received some payment from the Centre. The Central Government's Deposits are lower by Rs 1.29 crores at Rs 62.11 crores, while those of the States have moved up by Rs 5.19 crores to Rs 9.16 crores; and in addition the latter have reduced indebtedness to the Reserve Bank for ways and means advances by Rs 2.22 crores to Rs 57.93 crores.

The Reserve Balances of Scheduled Banks show a drop of Rs 3.96 crores to Rs 74.60 crores, and their borrowings from the Reserve Bank are also slightly higher by Rs 0.93 crore at Rs 31.16 crores. Hence, it would appear that the last notional week of the busy season has imposed some strain upon the banking system.

The Reserve Bank's holdings of Treasury Bills purchased and discounted have been marked down by Rs 3½ crores to Rs 58.11 crores. Investments show little alteration at Rs 198.78 crores. Finally, there is again a drop, though again a nominal one, in Balances Held Abroad the decline is one of Rs 0.16 crore to Rs 8.83 crores. Thus, the foreign assets in the possession of the Reserve Bank are still skirting around the Rs 115 crore mark—but such a level of reserves can hardly be considered adequate, since the import surplus season is just about to start.

The return of the State Bank for 26 April is also generally featureless: the sole point of im-

portance to note is that with the ushering in of the 1963 slack season from the next week, the total of Advances already discloses signs of contraction, in falling by Rs 5.43 crores to Rs 311.58 crores. Deposits, too, have declined by Rs 4.37 crores to Rs 560.02 crores. The State Bank has, during the week under review, added to its gilt-edged portfolio by Rs 3 crores to Rs 230.51 crores. The end result is a decline of Rs 3.4 crores to Rs 23.08 crores in cash balances, including money at call and short notice.

During the week ended 19 April a further spectacular increase has been recorded in the Deposit resources of Scheduled Banks as revealed by the latest statutory statement. Net Demand Deposits have gone up by Rs 5.48 crores to Rs 1,010.41 crores and net Time Deposits have marked an even larger increase of Rs 11.64 crores to Rs 1,228.04 crores. The portion of the increase ascribable to the State Bank is negligible. At the same time with the falling off of busy season pressure the total of Advances has contracted by Rs 4.25 crores to Rs 1,605.14 crores. The improvement in resources has been utilised by the banks to reduce debt to the Reserve Bank by Rs 15.07 crores to Rs 32.06 crores; and indebtedness to the State Bank is also shown nominally lower by Rs 0.59 crore at Rs 19.93 crores. Interestingly, gilt-edged holdings are higher by Rs 14.24 crores, though Rs 13 crores of the increase are on account of State Bank purchases. But the end result is a drop of Rs 2.60 crores to Rs 195.63 crores in cash balances, including money at call and short notice.

The following press communique was issued last week by the Reserve Bank:

The prices of sugar have shown a rising trend recently and Government are taking steps to bring the sugar trade under stricter direct control. Also, bank advances to parties other than those manufacturing sugar have shown an unusually large rise in the last two months and some pressure on sugar prices is liable to arise owing to a high level of bank advances to the trade. It has, therefore, been decided to regulate bank advances against stocks of sugar by prescribing a minimum margin of 45 per cent on credit limits or advances granted to parties other than those manufacturing sugar and on those granted to parties manufacturing sugar in respect of stocks which have left the factory or mills premises and on which excise duty has been paid. Banks are accordingly being directed to maintain minimum margin on advances to the sugar trade and to exercise caution in extending credit against stocks of sugar by confining it to genuine dealers in the commodity and ensuring that speculative holding of stocks of sugar is not assisted in any way.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills were opened on Tuesday, 30 April, 1963. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.410 per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.350 per cent per annum approximately.

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills will be received at Kanpur up to the close of business on Saturday, 4 May, 1963 and at other centres (Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi) up to the close of business on Monday, 6 May 1963. Successful tenderers should make payment on Friday, 10 May 1963 at all centres. Other conditions are as usual.

During the week ended 26 April, 1963, Government of India Treasury Bills for Rs 59,77,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills sold from 24 April to 27 April 1963 amounted to Rs 1,45,00,000.

Notes

THE ECONOMY

Obstacles to National Objectives

In his presidential address to the annual general meeting of the Indian Chamber of Commerce, Calcutta, Mr S. T. Sadasivan has highlighted the obstacles in the way of the attainment of national objectives in the present emergency. Strengthening of the country's defences is of paramount importance and it is equally important that the development of the economy proceeds apace. As a matter of fact the efficient building of the former depends to a larger extent on the rate of expansion of the latter. But although the emergency is several months old, there has been hardly any sign that production in the various sectors is picking up. In the two vital sectors of agriculture and industry the record is quite unsatisfactory, if not dismal. This is not the opinion of any interested section but the finding of the Planning Commission itself. Government is loud in emphasising the need for increasing production but there is as yet no evidence to show that it is taking effective steps to bring about conditions for such a consummation. On the contrary, as the new fangled SPT has so clearly shown, the national objectives are still subservient to ideological dogma. Mr Sadasivan has not minced words in pointing out that if the threat to national security is to be effectively countered there cannot be a slowing down of the country's economic progress and that the only way of averting this is to bring about a reorientation of the economic policies. The need of the hour is the maximum utilisation of the existing capacity and effective expansion of industrial capacity in all key sectors. It is the duty of Government to find out the factors that are obstructing the growth of the economy and weed them out without delay.

The taxation policy is considered by Mr Sadasivan as a serious deterrent to industrial growth. Progressively increasing taxation has already depleted savings and the new taxes imposed by the current Budget have struck at the root of the corporate sector. Besides the crippling nature of taxation, there is little incentive for the entrepreneur to undertake new ventures. For instance the monetary policies pursued by the Reserve Bank have

made it difficult for industries to expand production or to set up new units. The severe restrictions placed on the banking system, instead of containing inflation, are most likely to increase the inflationary pressure on the economy as owing to lack of funds for productive purposes, shortages will tend to grow. Referring to exports, Mr Sadasivan has pointed out that while highly developed countries should come forward to help the trade of under-developed countries such as India, in the long run the developing countries should try to produce quality goods and to sell them abroad at competitive prices. But this can be done by our industries only with the active help of Government whose policy should be governed by "no consideration other than economic".

PRICE SITUATION

Deterioration in West Bengal

It is a matter for grave concern that rice prices in West Bengal continue to show an upward trend even after the announcement by the Centre that 75,000 tons of rice will be released from the Central Reserves for supply to the State. It is no use saying now that the present situation could have been easily averted by timely action both on the part of the Central and State Governments. Although the general public has been feeling the pinch all the time, the authorities have been complacent in the belief that prices can be kept under control. And it is to be noted that the State Government at one time had no better solution than to ask people to make up the shortage in their quota of rice with increased consumption of wheat. The State Government presumably was satisfied that by explaining the shortage of rice, it had done its duty. There has been a fall in production and the shortage has further been aggravated by the decline in the imports from the usually surplus State of Orissa.

According to the Price Vigilance Committee for the Eastern Zone set up by the Federation of Indian Chambers of Commerce and Industry the shortfall in production in the State is of the order of about 11 lakh tons, almost about 25 per cent of the normal requirements. Of the available crop, a substantial portion has not come into the market as it is being held back by big producers in the expectation

of higher price for paddy. The supply position has been rendered further stringent as high prices have to be paid to the limited quantity that is coming from Orissa.

Any further procrastination on the part of the authorities will only deepen the distress. The need of the hour is speedy action so that confidence is restored in the ability of the authorities to keep the position under control. The steps recommended by the Price Vigilance Committee for holding the price line are sound and practical and should be given effect to without delay. The Committee has suggested that import of rice and paddy should be permitted from other surplus States while big cultivators and jotedars in West Bengal should be persuaded to disgorge their hoarded stocks. As suggested by the Committee, pressure on rice will be to some extent reduced if habitual rice eaters are encouraged to substitute wheat in their diet as far as possible. The Committee has rightly pointed out that the success of the present efforts at holding the price line will to a great extent depend on the quality of the rice released by the Centre and the speed with which such releases are made. If the Central supply is not of an acceptable quality, or does not reach the consumers in time, its effect will be largely nullified. It is also important that people should be told that the Centre will make available further supplies till the situation becomes normal.

OILSEEDS & OIL Imperfect Competitive Capacity

Addressing the annual general meeting of the Bombay Oilseeds and Oils Exchange held in Bombay last week Mr Ramdas Kilachand stressed the need for stepping up the production of groundnut and oilseeds and for increasing the quantum of exports. The problem of enhancing the output of these seeds to a level commensurate with the mounting internal consumer demand and also for exports is a sizable magnitude when viewed in the background that the production declined from 6.92 million tons in 1958-59 to 6.32 million tons in 1961-62. This fall in production is particularly alarming when during the same period the total area under cultivation moved upto 34.3 million acres from 31.3 million acres. The high price of these commodities is an inhibiting factor on the export front and our goods are not easily gaining ground in international markets. The disparity in the price of groundnut oil, for example, is so wide that the international

price is approximately Rs 1,300 per tonne while Indian price is in the environs of Rs 1,750. Therefore, as Mr Kilachand has suggested further incentives in the shape of refund of sales tax, both on raw materials and finished products, and of excise levy and concessions in railway freight should be provided to the industry. Another useful suggestion is the one relating to currency retention schemes under which exporters are permitted to retain a part of their export earnings, a practice which is prevalent in many of the foreign countries. The proposal to set up an export promotion council for oilseeds, oils and oil cakes should be implemented with a view to intensifying the export promotion drive.

Referring to the curbs imposed on hedge trading by the Forward Markets Commission Mr Kilachand observed that the fixation of maximum price and a ceiling limit on the weekly price rise were enough regulatory measures and the limit on the net open position that could be held by a member is redundant. However, if the Forward Markets commission wants to retain this restriction, it should effect an upward revision in the present limit. While welcoming the incentives granted to the exporters of castor oil and linseed oil in the form of import licences for copra and palm oil Mr Kilachand has pointed out that to obtain the maximum results all the exporters irrespective of his being a manufacturer or not should be favoured with incentives. The policy of incentives to exporters should also be extended to exporters of vanaspati products, refined vegetable oils, cotton seed and cakes for the same purpose.

PAPER INDUSTRY Self-sufficiency Still Far

Considering the slow pace of progress noticeable during the past two years in the setting up of new units and the expansion of capacity of existing units, it is unlikely that self sufficiency in paper and paper boards will be attained even during the current plan period. The demand for paper and paper board was estimated at 400,000 tons in 1960-61, the last year of the Second Plan. The Planning Commission has estimated the demand at the end of the Third Plan at 700,000 tons on the basis of a progressive increase of 12½ per cent per annum. For achieving this level of production the Commission has placed the Third Plan capacity target at 820,000 tons. There had been a shortfall in annual capacity at the commencement of the Third Plan as the capacity of the paper and paper board industry stood at only 410,000 tons on 1 April 1961 as against the capacity target of 450,000 tons envisaged for the last year of the Second Plan. With a view to quickening the pace of expansion of the industry during the Third Plan, a large number of schemes were expeditiously sanctioned and the necessary industrial licences were also given. It was expected that when all the sanctioned schemes materialised, the capacity of the industry would increase to about 1,145,000 tons. But even at the end of the second year of the Third Plan there is still a large gap between the envisaged and the actual capacity. This is largely because Government has been obliged to cancel quite a few of the licences granted earlier. According to Mr I. A. Macpherson, Chairman of the Indian Paper Makers' Association, the production target of the industry will fall short of its target of 700,000 tons at the end of Third Plan by some 150,000 tons as a direct consequence of these cancellations.

The enthusiasm for setting up paper mills has considerably diminished in recent years because of the stringent price policy adopted by the Government. Almost everything the industry has to buy has gone up in price (and the uptrend shows no sign of slackening) but the price it can get for its products is kept at a fixed level. The result is a very low profitability of the industry with consequent neglect of paper company shares by investors. Existing paper companies and newcomers in the field are not able to launch new capital issues with confidence. Without adequate finance for expansion and for new units, additional capacity has not grown as fast as expected. The industry has been persistently asking for a reasonable increase in selling price of its products but so far it has got only a meagre ad

hoc increase which has already been far outstripped by the continued rise in the price of raw materials, chemicals etc. The recent Central Budget while making difficult for them to get adequately pushed up the cost of production.

One of the important problems faced by the industry pertains to its raw material. The main raw material now used by our mills is bamboo but it is becoming increasingly difficult for them to get adequate supplies at reasonable prices. The price of bamboo is steadily increasing mainly owing to the fact that the State Governments who control the forests are more interested in obtaining increased revenue from their forests than in the growth of the paper industry. Moreover, bamboo supplies in the country are by no means abundant and before long paper mills have per chance to use unconventional raw materials such as bagasse. Such a changeover throws up fresh problems as before thinking of using unconventional raw materials mills have to be remodelled at considerable expense foreign exchange.

US INDUSTRY Rising Efficiency

Rising industrial efficiency has long been a hallmark on US economic activity. But the extent to which technological advances and constantly improved management have combined to hold costs in check has too often been matter of surmise.

Now, Wall Street Journal, has come up with a study that subjects this matter to the cold eye of statistical measurement. What it shows is that prices on consumer durable goods, as a group, are just about where they were five years ago, despite a 15 per cent climb since 1958 in the average factory wage level to a record \$2.43 an hour.

With the 1957-59 average as a base, the government's index of consumer durable goods prices now stands at 100.6, and it actually has declined a little in recent months. This price record has been achieved without any noticeably untoward effect on profit margins. These have been historically low in the United States anyway, particularly in those mass-production industries catering to the vast and growing US consumer market.

After-tax earnings per sales dollar of US manufactures came to about 4.5 per cent in 1962. Actually, that is slightly higher than the 4.3 per cent of the year before. Back in 1958, a year in which the early months were affected by a business dip, earnings were only 4.1 per cent.

In absolute terms, however, the profits picture is much more favourable. Manufacturers earned a record \$27,600 million before taxes

in 1962, up 17 per cent from 1961 and 51 per cent from 1958. This indicates what over-all economic growth and expanding market can mean even when margins are low.

In the past five years, American consumers have bought 30 million new cars, more than 31 million television sets, 18 million refrigerators, 19 million washing machines, and large quantities of other products. The output and sales trend of the past year, and currently, is up on most of these items.

Not so the price trend, however. New automobiles, have gone up in price only two per cent over the 1957-59 average. Sporting goods and furniture have gone up three per cent. But in almost every other item, the price trend clearly is down:

Vacuum cleaners, for instance, are down 15 per cent; washing machines down 10 per cent; radios down nine per cent; television sets down seven per cent; stoves, tires and toasters down five per cent; toys down one per cent.

Helping to hold the prices of manufactured goods in check is the fact that technological gains have increased worker productivity and cut company capital costs per unit of output. In 1962, about 12.4 million workers produced a 27 per cent larger quantity of manufactured goods than 11.7 million workers turned out in 1958. This means that six per cent more workers produced 27 per cent more goods.

Official figures show that production per man-hour in US manufacturing has risen a little faster than have factory wages in the past half-dozen years. This indicates that labour costs per unit of production actually have declined slightly, being estimated now at about 98 per cent of the 1957-59 average.

At the same time, studies by the national industrial conference board, a private research organization, show that for every 29.7 cents of capital equipment, Americans of capital equipment, Americans of a dollar's worth of goods. Back in 1957, board estimates show, it took 34.5 cents of equipment to account for a dollar's worth of output.

Technological and operating advances also enable companies to hold down the costs of materials, to conserve space, and to operate with small inventories than used to be carried. These factors further contribute to industrial efficiency and a stable price level.

All this represents the other and more favourable side to the much-publicized economic impact of automation. Its effect on employment admittedly is a serious matter, and to which public and private policy is giving much thought and attention.

But technology's benefits to the American consumer and to the economic structure in general are not to be overlooked, either.

AUTOMOBILES Adverse Impact of New Levies

The present emergency has brought in its wake several difficulties to the members of the Motor Industries Association. The Government's requisition of specific makes and models of automobile production came as a severe blow to the dealers as many of them were thrown out of employment or were rendered underemployed. The financial position of the dealers during the past six months showed signs of weakening. Though the Tariff Commission has recommended in 1957 to fix dealer margins at 10 per cent in the case of motor cars and 7.5 per cent in commercial vehicles the present gross dealer margin ranges between 7.8 per cent and 8.3 per cent in the case of cars and between 5.7 per cent and 5.9 per cent in the case of commercial vehicles. The operation cost is also progressively rising while the unit-wise earning is diminishing. Therefore Mr R. R. Aiyer, the Chairman of the Association, has requested the Government to implement the Tariff Commission's recommendations in order to facilitate development and efficiency.

Mr Aiyer also drew attention to the adverse impact of the new fiscal levies on the automobile industry and the users. Though the Finance Minister has subsequently provided some relief the claims of the automobile industry were totally ignored. The incidence of taxation on motor vehicle in India is so staggering that an average vehicle pays taxes including that of fuel totalling over Rs 3,200 per annum against Rs 1,300 in the UK, Rs 820 in France and Rs 500 in the US. Apart from these, the cost of operation per bus/truck mile is estimated to go up by 15 per cent. Over and above this comes the imposition of the SPT which not only discourages the fresh capital formation but also dampens the initiative. The introduction of the emergency risk is another financial burden thrown upon the already groaning industry. Some reliefs in the form of tax concessions should be granted to the industry to play its pivotal role in the nation's economic development.

New Companies

Eighty-nine new Limited Companies with a total authorized capital of Rs 13,55,10,000 were incorporated in the Eastern Region, comprising the States of West Bengal, Bihar, Orissa and Assam during the quarter ended 31 March 1963. 14 companies went into liquidation and the names of 30 companies were finally struck off. Of the total 74 companies were registered in West Bengal, 10 in Bihar, 2 in Orissa and 3 in Assam. All the 14 companies that went into liquidation are from the State of West Bengal.

INTERLOCKING

Marketing and Manufacturing Companies

By RAJ K. NIGAM & N. D. JOSHI
(Continued from previous issue)

EXTENT OF INTERLOCKS

As regards interlocking of the marketing or trading companies with other companies, it is noticed that 61 out of the 70 trading companies covered in this paper are connected with 1068 companies through 214 directors. In this total of 1068 companies, there are some cases of duplication inasmuch as two or more marketing companies happen to be connected with the same company. If this duplication is removed, the total number of interlinked companies comes to 854.

Size and Interlocks—(a) Size by paid-up capital

On going deeper in to the question of the extent of interlocking, it has been found that out of the 70 marketing and trading companies, only 9 companies are completely 'free' as they do not have directors common with any other companies. Of the remaining 65 companies, 8 are found to be connected with 40 or more companies, 23 trading companies are connected to between 11 to 39 companies and 30 companies to between 1 to 10 companies. Among the marketing companies studied, one of them is found to be connected with 80 other companies through common directors. Thus, the data available with regard to the extent of interlocking of marketing companies with others disclose that most of the trading companies are interlocked with quite a large number of other companies through common directorships. The average number of companies with which the 61 marketing companies are interlocked is 14, if duplication as between companies is removed. As expected, the extent of interlocking is more marked in the case of the big-sized trading companies. The small companies having a paid up capital between Rs 5 lakhs and 10 lakhs are found to be connected to 7 other companies on an average through common directorships whereas the next bigger class of trading companies (having paid up capital between Rs 10 lakhs and 25 lakhs) are seen to be connected, on an average, to 19 companies. The medium-sized trading companies with a paid up capital between Rs 25 lakhs and 50 lakhs on an average were connected to 23 companies. The top class trading companies (of Rs 50 lakhs and above) are found to be interlocked to 42 companies each on the average.

(b) Size of the Board

In this connection, it may be mentioned that the phenomenon of "bigger the size of the company,

larger the number of inter-connections" is largely due to the size of the board of directors which, in the case of trading companies, has been found to increase with the size of the company. Earlier, it is noted that in the case of the

BOARD SIZE AND INTERLOCKING OF MARKETING COMPANIES		(No. of trading companies)				
No. of Interlocked companies	Size of the Board	(No. of directors)				Total
		2	3-5	6-8	9-10

40 and above	...	—	—	—	—	—
		10	39	17	4	70

INTERLOCKS: MARKETING AND MANUFACTURING COMPANIES

Another important point of our investigation is to find out the extent to which marketing companies specialise in the products of the companies with whom they happen to be connected through common directors. The authors of this paper, however, do not intend to investigate what positive benefits accrued to the companies or the directors concerned. The paper merely presents some statistical facts in respect of them. It may be possible, after some detailed case studies of such interlocks, to find out the underlying motivation and the mechanics of carrying them out. It might also be mentioned here that as the problems of the trading companies are likely to be different as between the different sizes of those companies, a study of this question has been made for each of the four size groups of the trading companies.

Our investigations reveal that 29 of the 70 trading companies have either no connections with the other companies or are essentially import and export companies. The break up of these 29 companies is as follows: 9 are completely 'independent' trading companies having no common directors with other companies. Two companies are such trading companies who have interlocks with other trading companies only. One company is dealing with products of a foreign company. Though the main business of the remaining seventeen companies is not found to be related to the products of related manufacturing companies, yet it is complementary to the business of such manufacturing companies. (This is to say, fourteen of them are doing import and export business and three are partly associated with such manufacturing companies. Excepting these 29 companies, the other 41 companies are

small-sized companies having paid up capital of Rs 5 lakhs to Rs 10 lakhs, the average size of the board works out to 4.2 directors and the number of inter-connections was 7. As against this, the average size of the board of directors in the case of the big-sized and giant companies having paid up capital of Rs 50 lakhs and above works out to 7 directors and the number of inter-connections was found to be 42. The following Table gives the distribution of the companies interlocked with the marketing companies according to the size of their board of directors.

whole, with 61 out of the 70 trading companies are connected with 854 companies. Further out of the 854 companies, only 157 companies are such whose products are presumably traded in by the 70 trading companies covered in the study.

INTERLOCKING BETWEEN TRADING AND MANUFACTURING COMPANIES

No. of Manufacturing companies connected	Trading companies according to paid-up capital size groups					Total
	5-10	10-25	25-50	50 & above

*Out of the 29 companies, 9 companies are not connected with any other manufacturing companies, two are connected only with trading companies 14 companies are importers and exporters. Three are doing business complementary to that of related manufacturing companies.

†Figures in lakhs.

Thus the study relating to inter-connections of trading and manufacturing companies through directors brings out the wide prevalence of interlocking of directorships. This finding was also arrived at in the previous study of the authors entitled "All India Survey of company directorships pertaining to big-sized companies". Though in both these studies, we have not gone into the motivation of the interlocking, on a priori grounds, it can be stated that they arise out of several considerations such as financial stake in the form of share-holdings, parent and subsidiary company relationship, managing agency and managed company relationships etc. The fact that out of the total of 854 companies with whom the 61 trading companies have connection through common directorships, only 157 are those whose products are presumably traced by these 61 companies with perhaps mean that the extent of interlocking that can be ascribed to vertical integration of trading and manufacturing company is about one-fifth. It must, however, be mentioned here that this conclusion is merely tentative and will have to be confirmed only by going into the complex mechanism of the working of the companies and the way in which they tackle the problem of marketing their products through connected companies.

CASE STUDIES

As we have said earlier, the case studies are likely to throw up some

useful material for formulating views on the motivations of having common directorships and the resultant inter-company connections between trading and manufacturing companies. In a limited sense, we have a tempted the case studies of six big-sized trading companies, viz. the Binny and Company (Madras) Ltd., Greaves Cotton and Company Ltd., Kilachand Devachand and Company Private Ltd., Parry and Company Ltd., Rallis India Ltd. and Spencer and Company Ltd. The paid up capital of each of these six companies is above Rs 50 lakhs. The total number of directors of these six companies is reckoned to be 46 of which 35 directors are holding directorships in other companies. The total number of directorships of these 40 directors comes to 289 and after excluding duplication among the 6 companies, the total number of directorships comes to 274.

BINNY & COMPANY (MADRAS) LIMITED

The paid up capital of this company as on 31 December 1961 was Rs 1 crore and the total assets Rs 2.8 crores. The turnover worked out to Rs 1.05 crores. This company has four subsidiaries, viz. Buckingham Carnatic Company Ltd., Bangalore Woollen Cotton and Silk Mills Company Ltd., Binny Engineering Works Ltd. and Giovanola-Binny Ltd. Apart from these 4 subsidiaries, the company also acts as managing agent for the first two of them. It has a board of 7 directors and six of them have directorships in 27 other companies. Of the 27 companies, thus inter-connected with it, 23 are connected through one director, and two companies each through three and four directors. Further, it is seen that out of the 27 companies, 4 belong to the same group as the company, whereas the other 23 are outside the group. The industrial pattern of the inter-connected companies is that there are two cotton textile companies, 5 jute companies, 2 plantation companies, 8 trading companies, 2 electricity supply and generation, one each of engineering, coal, banking, metal and chemical products and 4 miscellaneous industries companies. Binny and Co. (Madras) Ltd. is reported to be trading in cotton, woollen silk, electrical goods, engineering shipping etc. Taking into account the business in which it is directly engaged and the businesses of the companies with which it is connected, it is seen that it is interlocked with 5 companies whose products are being traded by it.

GREAVES, COTTON & COMPANY LIMITED

This company belongs to the Karamchand Thapar group. Its paid up capital, total assets and turnover figures as on 31 March 1961 were Rs 1.8 crores, 5.73 crores and 6.61 crores respectively. It has four subsidiary companies viz.

Ruston and Hornsby (India) Ltd., Kenyon Greaves Ltd., Greaves Foundry Services Ltd. and Greaves Cotton and Co. (Pakistan) Ltd. It has a board of 8 directors and is connected to 74 companies through them. Out of these 74 companies, 54 companies are connected to the company through one director, 15 and 5 companies through two and three directors respectively. Twenty companies are reported to be the company, whereas the other 54 are outside the group. Of the 74 companies, 7 are cotton textile companies, 6 engineering, 7 coal, 17 trading, 3 sugar, 4 paper, 4 insurance, 2 each cement and banks, 13 metal and chemical products, 1 electric generation and 8 miscellaneous. Greaves and Company Ltd. is reported to be trading in cotton textiles and engaged in the servicing of heavy machinery etc. From our study, it is noticed that of the 74 companies connected to this company through common directorships, 20 companies have this company as their agents.

KILACHAND DEVACHAND & COMPANY PRIVATE LTD.

The paid up capital of the company which is registered in the State of Maharashtra and belongs to the Kilachand group, is Rs 75 lakhs as on 31.3.1961. The total assets of the company is Rs 2.99 crores and being a private company, its turnover figures are not available in the published balance sheet. This company has two subsidiaries, viz. Ginnars and Pressers Private Ltd. and Baroda Commercial Corporation Private Ltd. It has a relatively small board of directors who connect it to 36 other companies through common directorships. Of these 36, it is connected to 25 through one director, to 8 companies through 2 directors, to one company through three directors and to two companies through four directors. Eleven of the 36 companies connected to this company fall in the same group while the other 25 are outside the group. The industrial pattern of the connected companies is thus: 1 cotton textile, 2 banks, 14 trading, 11 metal and chemical products, 1 electric generation, 1 sugar, 2 cement, 2 insurance and 2 miscellaneous companies. The company is reported to be trading in sugar, textile goods plastic goods, chemical and pharmaceutical goods, synthetic rubber products and engaging in insurance business. Our study reveals that of the 36 inter-connected companies, the company is acting as agents for or selling the products of 9 companies.

PARRY & COMPANY LIMITED

The paid up capital of the company as on 30 September, 1961 was Rs 70 lakhs. The total assets and turnover were Rs 4.26 lakhs and Rs 6.61 crores respectively. It has a subsidiary company, viz. Mofussil Warehouse and Trading Company Ltd. and acts as managing agents for Deccan Sugar and

Abkari Co., Travancore Sugar and Chemicals and Parrys Confectionary Ltd. It also acts as secretaries and treasurers for Cauvery Sugars and Chemicals Ltd. It is served by a board consisting of 7 directors, five of whom hold directorships in nine other companies. Out of these 9 companies, six are connected to the company through one director, 2 companies through 2 directors and one company through 3 directors. Further, 3 companies connected with the company belong to the same group while the other six fall outside it. Further, six of the 9 companies are engaged in the production of metals and chemical products and 3 are sugar companies. Messrs Parry and Company is reported to be trading in sugar and sugar products, chemical and pharmaceutical goods, fertilisers and acts as agents for engineering, shipping and transport companies and corporations. They are also the sole distributors for the products of the East India Distilleries and Sugars Ltd. Considering the wide range of business activities that it engages in, the number of companies with which it is interlocked through common directors is strangely small. Notwithstanding this, it is seen that the products of six of the nine companies with which it is connected, are sold by this company.

RALLIS INDIA LIMITED

The paid up capital, total assets and turnover as on 31 August 1961 of this company were respectively Rs 3 crores, 5.95 crores and 19.09 crores. The company is served by a board of 7 directors and through them, it is connected to 57 other companies. It has 8 subsidiaries, viz. Teddington Chemical Factory Ltd., W. T. Suran and Co. Ltd., Rallifan Ltd., Ralliwolf Ltd., Hemalatha Textiles Ltd., Ralli-Hoyland Ltd., Boehringer-Knoll Ltd. and Ralli Chemicals Ltd. Of these, 57 companies with which it is connected, 50 companies are connected through 1 director, 4 companies through 2 directors, 2 companies through 3 directors and 1 company through 4 directors. Further, 7 of the inter-locked companies are reported to be belonging to the same group as the company, while the remaining 50 are outside the group. The industrial pattern of the inter-locked companies is as follows: Cotton Textile 4, Jute 8, Plantations 2, Coal 2, Trading 20, Metals & Chemical products 8, Insurance 2, Investment and finance 4 and miscellaneous industries companies 7. Rallis India Ltd. like the Parry & Company, engages in trading the wares and products of a large number of companies, such as raw cotton, piece goods and yarns, wool, jute, oil & oil-seeds, grain and flour, fertilisers, insecticides, tanning materials, crushed bones and sinews, sugar, tallow, electric tools being the principal among them.

A close study of the industrial pattern of the companies with

which this company is connected and the main lines of business in which the company itself engages, it is seen that out of the 57 companies, the products of 17 companies are either sold by this company or it acts as their agents.

SPENCER & COMPANY LTD.

The paid up capital of the company as on 30 June, 1961, is Rs 1 crore. Its total assets and turnover figures are Rs 3.27 crores and 4.54 crores. It has a board of 7 directors, five of whom bring the company into contact with 46 other companies. Forty-three of them are connected through one director, two are connected through 2 directors and one, through 4 directors. Three of the 46 companies are in the same group as the company while the rest are outside the group. The company has one subsidiary, viz. G. F. Kellner & Co. Ltd. The industrial pattern of the 46 interlocked companies is as follows: Cotton textile 1, plantations 4, banks 2, trading 8, metals and chemical products 10, electricity generation 1, paper 1, investment and finance 4, and miscellaneous industries 15. It engages in engineering, tobacco and manufacture of tobacco products and hotel industry. It is acting as agents for or sells the products of two of the inter-connected companies.

CONCLUSION

In brief, the conclusion that may be drawn from the above analysis are:

Most of the trading companies studied above are interconnected with manufacturing companies through common directors and most of them are dealing in goods manufactured by them. It is, however, noted that the nature of marketing arrangements (may be in written agreement or verbal understanding) as between manufacturing and trading companies along with the sharing of the overall profit margin as between them etc. have not been studied here due to the non-availability of information on the nature of such arrangements. Many of them are believed to be highly complicated. For instance, a trading company even though not purchasing and selling the product of interlocked manufacturing company, may, by entering into agreement forbidding itself to enter a particular market, help the manufacturing company in marketing its products.

Out of the total interlocks forged by 70 trading companies, about 20 per cent may at the maximum be ascribed to vertical integration between trading and manufacturing company. Whether this conclusion will apply to the generality of interlocks of directorships in the corporate sector as a whole, will depend upon the variation as to the plurality of directorships of directors.

(Concluded)

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

OUR Parliament has been making laws for over thirteen years now, but I don't suppose there has been any session so much given to technical conundrums as the present one. This is all to the good, since the impression was getting around that many of our law-makers didn't know much about the mechanics of the thing. The Official Languages Bill gave rise to a situation that must have had many laymen puzzled. Government found that it had to argue what must have sounded to untrained ears as two contradictory cases. At the earlier stage, it argued that the word "shall" meant "may". Later, it argued that "may" meant "shall." So far so good, for this would have merely meant that the words were interchangeable. But the trouble is there are occasions when "shall" means, not altogether oddly, "shall". Likewise, "may", one supposes, can mean "may" without eyebrows being raised. It is not the slightest use invoking Nesfield, for a lawyer would pit Wharton and Maxwell against the grammarian and the courts will listen to the latter more readily than to the former. Not that Mr Asoke Sen's nimble legerdemain will necessarily get past a court of law, for the test is yet to come. But he certainly made the gallant attempt to prove that "shall" meant "may" when it suited the Government. And without turning a hair, he (or rather his colleague, advised presumably by him,) argued that "may" meant "shall". At the earlier stage, the President's sanction to the Bill was challenged on the ground that the provisions of article 344 required the appointment of a second Commission at the end of the tenth year from the commencement of the Constitution to go into the question of the progress made in the use of Hindi for official purposes and it was only after taking into account the recommendations of such a commission that the President could have given his sanction to the Bill. The operative auxiliary in Article 344 is "shall". This, Mr Sen explained, did not impose a mandatory duty but merely implied a permissive act. This seems to me somewhat dubious reasoning, but then I am no expert. Of course as the Speaker pointed out, the sanction of the President under Article 349 to the Bill may have been properly given even if the

word "shall" in Article 344 meant "shall." But when it came to justifying the use of the word "may" in the Bill for the continued use of English after 1965, Government argued that it meant "shall". This may well be so, for as Lord Cairns put it in the leading case on the question (Julius vs. Bishop of Oxford), "where a power is deposited with a public officer for the purpose of being used for the benefit of persons (1) who are specifically pointed out and (2) with regard to whom a definition is supplied by the Legislature of the conditions upon which they are entitled to call for its exercise, that power ought to be exercised and the Court will require it to be exercised." Lord Blackburn also laid down in the same case the principle that enabling words should be construed as compulsory whenever the object of the power is to effectuate a legal right; and if the object of the power is to enable the donee to effectuate a legal right, then it is the duty of the donee of the power to exercise the power when those who have the right call upon him to do so. All this is rather involved and, as behoves judicial pronouncements, carefully circumscribed. But I presume it is possible to argue that in the provision for the continued use of English, a right is conferred, though there may be some argument whether the persons for whose benefit the power is to be used "are specifically pointed out" or not. But from Lord Blackburn's observations, it would seem that any Indian Citizen can ask for the use of English and get it enforced, at least in his case.

The other legal issue fought out in the Lok Sabha itself was the constitutional validity of the Compulsory Deposit Scheme. The attempt to get this clarified gave rise to another issue: Can Parliament ask the Attorney General to appear before the House to give his opinion on any point that might be raised? Mr Desai, rather tactlessly, but probably correctly, said that this cannot be done. The question was not answered one way or the other, because Government decided on second thoughts, to request the Attorney General to appear before the House—the Government's right to do so not being in question. On the question of constitutional validity of the CDS Bill itself, the

the States' rights because the "pith and substance" of the legislation was not land revenue but compulsory saving. None of these opinions is final and we may still have the matter thrashed out in the Courts by constitutional pundits. There may be some difficulty in doing this on the question whether the provisions offend Article 19, in view of the suspension of certain of the guaranteed fundamental constitutional rights for the duration of the Emergency.

Bokharo is living up to its hoodoo reputation. Again hopes of a steel mill there with American assistance have got deferred. I cannot altogether escape the feeling that the economics of the proposition has less to do with the indecision than its politics. I also fear that there is much interested lobbying in the US against it. I remember that about a couple of months ago when crucial decisions were about to be taken, highly tendentious despatches appeared in the American Press in which the dead horse of the public and private sectors in Steel was resurrected and flogged ceremonially. In the light of the latest statement made by Mr Subramaniam on the subject, it is clear that the mischief that such reports might have done in queering the pitch for American public opinion is incalculable. By all means, let our American collaborators assure themselves on technical points like uninterrupted supply of raw materials and suitable technical personnel. One also understands their anxiety to avoid unflattering comparisons with Bhilai. But, it seems to me that an early decision in principle of American assistance to a public sector Steel project in India is absolutely necessary if feelings on either side are not to turn sour.

Bokaro Report

THE summary of the Report of the US Steel Team on the Bokaro Project, which was released last Saturday, raises many questions to which satisfactory answers must be found before Government of India is able to take a decision to go ahead with the project as envisaged in the Report. On the other hand, the problems on which the Report focusses attention should induce a proper understanding and appreciation of remarkable achievement of the Ministry of Steel in setting up three integrated steel plants of one-million tons capacity each, and bringing them to capacity production. The Team, which made an independent assessment of the demand and supply of steel in India, agrees that India needs greater steel making capacity, even taking into account the planned expansion of the existing mills. The estimates of demand, supply and deficit of steel products in general (without Bokaro) is shown below:

Year	(In thousand metric tons)		
	Demand	Supply	Deficit
1966	6916	5595	1321
1971	11235	8684	2551
1976	17000	11075	5925

Bokaro, the Report says, can partially fill the needs by a three-step programme providing 1.4 million metric tons of ingot producing capacity by 1971; 2.5 million tons by 1975, and 4.0 million tons by 1980. Flat steel products tonnage from these ingots will be one million tons in 1971; 1.8 million tons in 1975 and 2.9 million tons in 1980. Even after the Bokaro plant has been expanded to its maximum capacity, the deficit in terms of the specific things it will make, namely flat products, will be of the order of two million metric tons in 1980.

The Report devotes special attention to the requirements of successful operation of the plant at Bokaro, which are listed as under:

- Qualified operating personnel, Indian and American, be assured.
- Supplies of several important raw materials be available and brought under ownership control of Bokaro management.
- Provision be made, in some cases by other Agencies than the Ministry of Steel and Heavy Industries, for:
 - adequate rail transport;
 - adequate supplies of power and water;
 - expansion of coal mining/washing facilities;
 - adequate area highways;
 - a township to support both labourers and managers.

In emphasising the importance of advance planning in regard to these essential requirements, the Report

incidentally throws light on some deficiencies in current planning for steel.

As regards manpower requirements, it is estimated that twenty Americans would be needed immediately, increasing to 670 in 1968, the expected year for starting production, and decreasing to 40 in 1977. The peak figure includes 270 management and supervisory personnel and about 400 production and maintenance workers. Indian work force is expected to be about 8,200 for Step I. Construction would involve about 20,000 men.

A ten-year American management contract is assumed, although some technical help would be necessary for a longer period. The American management contract, the Report says, is a pre-requisite to attaining 100 per cent capacity four years after start-up and to maintaining the relatively small and efficient work-force.

In regard to raw materials the Report says: "It became apparent to us at an early stage in our investigation that wholly insufficient consideration was being given to the raw materials aspect of the Bokaro project. This deficiency appears to be due primarily to the fact that present plans are for the three principal raw materials to be supplied by three separate Government entities. No individual or group with overall steel-making raw materials experience has been made responsible for co-ordinating Bokaro's raw materials programme. We do not believe that any modern integrated steel project should be undertaken today in any country without such co-ordination of raw materials planning."

The Report also mentions that, in addition to this lack of co-ordination, work in respect of raw materials has lagged behind planning of other aspects of the Bokaro project. Arrangements regarding iron ore and coal sources are still undergoing important changes, and exploration work on the proposed source of limestone is only just beginning. The Team, therefore, found it necessary to make certain major assumptions regarding raw materials and have emphasised the importance of verifying the reasonableness of these assumptions or developing adequate alternatives. The work of verification, it is further pointed out, will be a considerable undertaking in terms of personnel, time and funds; from the standpoint of time alone, for example, it would take two years or more to find satisfactory long-term solutions to the basic raw materials problems.

Similarly, in regard to transport, the Report says that the adequacy of the transportation system is far from assured and that fulfilment of present plans for construction of

track and supply of rolling-stock is a pre-requisite for efficient and fully productive operation of Bokaro. The Report further says that there will be very little point in granting steel mills top priority if the rest of the economy has to suffer such shortages of transportation that the steel produced cannot be further processed and distributed for consumption, and second, that steel, power and transportation development programmes are absolutely interdependent and must proceed *pari passu* at equal pace.

In regard to power and water, the Report has emphasised the need for timely implementation of the investment and construction programmes envisaged which must be closely co-ordinated with the construction and step by step expansion of the steel plant.

The most crucial part of the Report, which should lead to a re-examination of the economics of the entire steel programme, is the section dealing with cost estimates. The cost of the project, as estimated by the US Steel Team, diverges widely from the assumptions of the Third Plan. In the Third Plan, the total investment under public sector steel plants is estimated at Rs 525 crores (including Rs 200 crores for a one-million ton plant at Bokaro). As against this, the US Team estimates that Step I alone for a capacity of 1.4 million ton ingot capacity will need an investment of \$919,423,000 of which the foreign exchange share will be \$512,588,000. For the purpose of its analysis, US Steel has assumed a 20-year loan at 5.75 per cent interest. Total investment over a period of years would be \$1,504,766,000 of which \$891,522,000 would be from external sources and \$613,214,000 from Indian sources. Other items, for supply of ancillary services like power water, etc, would involve an investment of \$133,857,000 of which the foreign exchange share is not yet determined. Including railway facilities, road net work etc, the total investment involved, it is estimated, would substantially exceed one and two-third billion dollars on completion of Step III.

As regards the cost estimates, the Report points out, that heavy initial capital expenditure is characteristic of construction of 'flat products' steel mills. There is a rapid capital expenditure decrease as production capacity is increased. Thus plant

	Step I	Step II	Step III	Total
Foreign exchange expenditure	512,588	162,367	216,597	891,552
Rupee expenditure	314,653	75,488	100,346	490,487
Capitalised interest, deferred charges, etc.	92,187	7,300	23,240	122,727
Total	919,428	245,155	340,183	1,504,766

(The above figures do not include cost of ancillary facilities).

Regarding profitability, the Report clearly states that Bokaro will not be profitable in the first Step. It would become and remain so with full production in Step II.

Operations of the Plant at Step 1, the Report says, would be unprofitable, even though operations are projected at full capacity following completion of start up. Each year of the projected period produces a cash deficit which reaches \$270 million in ten years of an average annual deficit

costs for Step I are higher than experienced on worldwide basis. Chiefly this reflects the fact that plant layout and mills themselves are designed for their ultimate capacity of four million metric ingot tons annually. In the case of Bokaro, costs are also raised by its location, which dictates ocean freight and customs expenses as well as overseas employment of Americans. Additionally, the Report adds, Indian conditions cause abnormally long construction periods and impose characteristics of general remoteness.

In this connexion it will be interesting to compare the costs of the Rourkela plant which is also designed to make flat products. According to the latest estimates, the total investment of the first stage for a capacity of one million ingot tons is about Rs 233 crores. The cost of the expansion to 1.8 million tons of ingot steel, is estimated at Rs 90 crores, so that the overall investment on an 1.8 million tons plant for flat products will be about Rs 320 crores (or 640 million dollars approximately). The total investment on Bokaro will be more than two and a half times the investment on Rourkela. The cost of the first stage alone will be fifty per cent higher. When allowance is made for the larger capacity planned for Bokaro, the estimates of costs are definitely higher. Or, it may be that the cost of Rourkela expansion will have to be scaled upwards as happened in the case of the existing plant whose cost increased by stages to the extent of Rs 105 crores over the original estimate of Rs 128 crores.

Step I spending on the Bokaro plant, the Report says, will be spread over a period of 5.5 years, with operation commencing four and a half years after start of construction. Step I ratio of long-term debt to equity is 56 per cent to 44 per cent. Disbursements are projected as shown in the following table.

	(In thousand dollars)	Total cost	Foreign exchange share
1963	3,925	1,950	
1964	100,491	53,392	
1965	298,602	182,765	
1966	280,953	190,597	
1967	118,968	75,207	
1968	24,282	8,147	

The Report has also made an appraisal of the estimated investment for the entire three-step project with an ultimate 4 million ton capacity, assuming capacity operation and constant cost and price ratios.

	Step II	Step III	Total
Foreign exchange expenditure	162,367	216,597	891,552
Rupee expenditure	75,488	100,346	490,487
Capitalised interest, deferred charges, etc.	7,300	23,240	122,727
Total	245,155	340,183	1,504,766

of \$27 million. These, it is presumed, will be covered by the Government of India. The Report also points out that the heavy burden of excise duties and large interest payments on loans are the greatest influences on the results. Production costs, on the other hand, indicate that Bokaro could be a low cost steel producer based upon the facilities proposed and the assumptions made with respect of raw materials, manpower and managerial personnel.

This is an Announcement and not a Prospectus

Announcement regarding the Proposed Issue of 18,000 9.5% (without deduction of Tax Payable by the Company on its Profits, but subject to deduction of tax at source under Section 194 of the Income-tax Act 1961) Redeemable Cumulative Preference Shares of Rs. 100/- each.

(Redeemable at par at the option of the Company at any time after 31-3-1976, but not later than 31-3-1979). Applications are invited on the basis of the Prospectus Copies of which may be obtained from the Registered Office of the Company, its Bankers, Underwriters or Brokers mentioned hereunder:

A copy of the Prospectus, together with the documents specified therein has been duly filed with the Registrar of Companies in Mysore, Bangalore, in terms of Section 60 of the Companies Act 1956.

The Subscription list will open at the commencement of Banking hours on the 15th day of May, 1963, and will remain open until the close of banking hours on the 30th day of May, 1963, or later at the discretion of the Board of Directors. But, if the entire issue is subscribed for before 30th day of May, 1963, the list will be closed immediately, but not earlier than the close of banking hours on 18th day of May, 1963.

THE DAVANGERE COTTON MILLS LIMITED

(Incorporated on 22nd June 1936, under the Mysore Companies Regulation VIII of 1917).

REGISTERED OFFICE: 'Hanumanthappa Buildings' Chitradurga Road, DAVANGERE.

HISTORY AND PROSPECTS:

The Company started working in 1939 with 9,000 spindles and it has now 40,832 spindles, a waste spinning plant of 360 spindles and 300 plain looms with modern bleaching unit.

After the proposed expansion the installed capacity of the Company will be 52,832 Ring spindles, 360 waste spinning spindles, 518 plain looms and 500 automatic looms.

PROFITABILITY:

Competitive prices, coupled with high quality, have contributed to an ever growing demand for the company's products. The progress of the Company has as fully described in the Prospectus been quite steady.

From the very inception i.e. 1939/40, the year when the Company started production, it has been declaring a fair dividend without any break. The dividend declared by the Company, during the last five years, is: 1957-58 9% free of tax, 1958-59 9% free of tax, 1959-60 12%, 1960-61 12% and Cash Bonus of 5% and 1961-62 12%.

Though the Company has agreed to export its products on the automatic looms at internationally competitive prices, it is expected that, in the absence of any unforeseen circumstances, the Company would make reasonable profits not only for payment of dividends on the Preference Shares, but also to maintain the dividend level on the Equity Shares and to build up reserves for future developments.

BOARD OF DIRECTORS:

- Sri S. LAKSHMANAN, Industrialist, 'Sarada Home', 13, Periasami Road, R. S. Puram P. O., Coimbatore.
- Sri B. S. DODSANKARAPPA, B.A., Cotton Merchant, 12, Cottonpet, Bangalore-2.
- Sri CHANNAGERI RANGAPPA, Industrialist & Banker, Chitradurga Road, Davangere.
- Sri K. V. NARAYANA SETTY, Cotton Merchant, 13/82, Ponnuramang Road, R.S. Puram P.O., Coimbatore.
- Sri M. SRINIVASARANGIAH, Merchant, Kadur.
- Sri V. S. YARDI, Srihariprasad, Talakwadi, Belgaum.
- Sri R. RAMA SETTY, Industrialist, Maruthi Mansions, Davangere. (Ex-Officio-Nominee of the Managing Agents).
- Sri R. R. SREENIVASA MURTHY, Industrialist, Maruthi Mansions, Davangere. (Ex-Officio-Nominee of the Managing Agents).

MANAGING AGENTS:

Messrs R. HANUMANTHAPPA & SON, 'Hanumanthappa Buildings' Chitradurga Road, Davangere.

SHARE CAPITAL:

	Rs.
AUTHORISED:	
Divided into: 57,000 Equity shares of Rs. 100/- each and ...	57,00,000
18,000 9.5% (without deduction of tax) Redeemable Cumulative Preference Shares of Rs. 100/- each ..	18,00,000
...	75,00,000
SUBSCRIBED CAPITAL: 44,002 Equity shares of Rs. 100/- each	44,00,200
CALLED: (Fully called up) ..	44,00,200
PAID UP: ..	34,50,945
PRESENT ISSUE: 18,000 9.5% (without deduction of tax) Redeemable Cumulative Preference Shares of Rs. 100/- each ..	18,00,000
Out of the above issue, Directors and their friends including some Insurance Companies have agreed to take 7,500 shares, which will be given full allotment. ..	7,50,000
NOW offered for Public Subscription: 10,500 9.5% (without deduction of tax) Redeemable Cumulative Preference Shares of Rs. 100/- each at par ..	10,50,000
...	18,00,000

The Amounts payable in respect of the Redeemable Cumulative Preference Shares as follows.

With application Rs 25/- per share, within 30 days of date of allotment Rs. 25/- per share, and the balance of Rs. 50/- per share in two calls of Rs. 25/- each at intervals of two months between each call, the first of such call being not earlier than three months from the date of allotment of shares.

FINANCIAL REQUIREMENTS FOR EXPANSION SCHEME:

The total cost of the Expansion Schemes referred to in the Prospectus is estimated at Rs. 182.66 lakhs. An application has been made to Messrs Industrial Finance Corporation of India for a loan of Rs. 70 lakhs and to Guarantee deferred payments to an extent of Rs. 53 lakhs. The Company has offered on 25-1-1963 15,000 Equity shares of Rs. 100/- each at a premium of Rs. 25/- per share. Together with the present issue of Preference shares, the Company will raise Rs. 36.75 lakhs to partly finance the schemes. The Balance requirements will have to come from out of the future profits of the Company.

APPLICATION FORM AND COPIES OF PROSPECTUS

Application forms and copies of Prospectus setting out relevant details relating to the proposed issue of Preference Shares can be had from the Registered Office of the Company, its Bankers, Underwriters or Brokers, whose names are given below:

UNDERWRITERS:

M/s. P. R. SUBRAMANYAM, Members, Bombay Stock Exchange, 70-A, Stock Exchange Building, Apollo Street, Fort, Bombay, are the sole underwriters for a sum of Rs. 10.5 lakhs now offered for public subscription.

In the opinion of the Directors of the Company the resources of the said underwriters are sufficient to discharge their obligation.

BROKERS:

AHMEDABAD:	DELHI:
1. M/s. CHINUBHAI CHIMANLAL DALAL, Manek Chowk, Ahmedabad.	1. M/s. M. R. DHAWAN & Co., 4/8, Asaf Ali Road, New Delhi-1.

INSPECTION OF DOCUMENTS

Copies of the Prospectus and other documents mentioned therein are open for inspection at the Registered Office of the Company during business hours of the Company on any working day until the subscription lists closed.

Central Bank of India Limited

Sustained and Keen Demand for Bank Credit

Sir Homi Mody on Central Budget and New Taxation

The following is the summary of the Speech delivered by the Chairman, Sir Homi Mody, at the 23rd Annual General Meeting of the Shareholders of the Central Bank of India, Limited.

During his speech at the Annual General Meeting of the Central Bank of India on Monday, the 29th April, 1963, Sir Homi Mody discussed at length the impact the recent Budget proposals of the Central Government were likely to have on the economy of the country. No one could dispute the urgent need for substantial resources at a time of crisis like the present, but one had a right to enquire whether the levy of new additional taxes adding up to the colossal figure of Rs. 275 crores—now reduced to Rs. 260 crores—was really warranted and necessary. There were three main reasons for questioning the validity of the enormous additional burden. Firstly, it had been repeatedly proved that the annual estimates presented to Parliament by the Government were largely inaccurate. For the financial years 1959-60, 1960-61 and 1961-62, as against the budgeted revenue deficits of Rs. 59 crores, Rs. 61 crores and Rs. 6 crores respectively, there had actually been surpluses of the order of Rs. 43 crores, Rs. 51 crores and Rs. 125 crores! Secondly, the public had a right to question whether, as the experience of the last few years had shown, it would at all be possible to spend, fruitfully and to good purpose, the amount which was sought to be obtained for additional Plan and Defence expenditure. Had we the organisation, material and resources, to achieve such highly inflated targets of expenditure? Thirdly, had the public no justification for demanding that the public enterprises, on which the Government had spent such vast sums, should be run with sufficient care and competence? The Reports of the Public Accounts and Estimates Committees of Parliament must be regarded as sufficient condemnation of the way in which the Public Sector was being run.

Taking up the question of Super Profits Tax, Sir Homi said "that there could be no justification whatsoever for imposing on the Banking industry, a tax so thoroughly unsound and unusual. The steady level of dividends paid by the banks for several years past proved that their profits had never been abnormal, and to regard them as 'Super Profits' hardly made sense. The dividends paid to the shareholders, a large

proportion of whom were men of very modest means, were bound to be affected, with the result that share values would be depressed. The raising of fresh capital so necessary for increasing the credit deposit ratio from the present 3½ per cent to the stipulated target of 6 per cent would become even more difficult. Bonus payments to the staff also would have to be curtailed. Also, the capacity of the banks to play a more purposeful role than before in the development of the country by mobilising the savings of the people would be seriously impaired, particularly as a sizable proportion of savings was likely to be drained away by way of compulsory deposits."

Turning to the agricultural front, Sir Homi drew attention to the fact "that the total agricultural production as at June 1962 had remained more or less stagnant. The output of foodgrains declined by 1.1 million tons and it looked as if for the current year foodgrains production might be no higher than 80 million tons—which was almost the same as for 1960-61. In other words, the output of foodgrains for the first two years of the Third Plan had shown no improvement, while the population had increased by 16 millions'.

Continuing, Sir Homi said that "on the industrial front the index number of production during the first six months of the year recorded an increase of 6 per cent over the monthly average of the corresponding period of the previous year. There was a notable increase in the production of coal, jute manufactures, iron and steel and aluminium and in power generation. Sugar production recorded a fall of 5 per cent and cotton mill cloth of 2 per cent. The output of cement remained practically unchanged. What was, however, disquieting was the fact that a substantial part of the installed industrial capacity still remained unutilised. A recent survey conducted by the Government of 103 industrial units covering a wide cross-section disclosed that in 74 industries the capacity utilisation was below 63 per cent, while in 29 other industries the utilisation varied from 65 to 75 per cent."

"The country's foreign trade," Sir Homi regretted to note, "continued to show an adverse balance with total foreign exchange reserves propping from Rs 316 crores at the beginning of the year to Rs 243 crores at the end. There was no marked improvement in the ex-

port trade in spite of the tall talk about it. The sterling balances had continued to decline and now stood at Rs 117 crores."

Sir Homi then analysed some of the difficulties faced by the banks during the year. "The total deposits of Scheduled Banks had moved up steadily during the first 9 months of the year, but thereafter the pace had slackened perceptibly, with the result that at Rs 2,035 crores at the end of the year, the increase over the 12 months was only Rs 210 crores. On the other hand, there had been a steep increase in the volume of Scheduled Bank credit from Rs 1,276 crores to Rs 1,421 crores. This slackening in the growth of deposits coupled with the insistent clamour for more bank credit had imposed an unduly heavy strain on the banking system as a whole. Banks, therefore, had to lean more heavily on the Reserve Bank for augmenting their resources with which to meet the genuine demands of trade and industry. However, the Reserve Bank had freely employed the monetary weapon in its armoury with the object of putting a curb on an unbridled expansion of bank credit. The Bank Rate had been raised from 4 per cent to 4½ per cent in January this year. Simultaneously, the Reserve Bank had effected a further drastic revision in its policy concerning the grant of advances to Scheduled Banks by placing a ceiling on the borrowing limit of banks even if the latter were prepared to pay penal rates of interest. It was not surprising therefore that the call money rate had risen to an unprecedentedly high level of over 6½ per cent in recent weeks. The Reserve Bank have since liberalised their lending policy and granted 'ad hoc' additional facilities to the banks which needed them."

Turning to the working of the Deposit Insurance Corporation, Sir Homi said that while "there could be no two opinions about the usefulness of this institution as an instrument for inspiring public confidence in the banking system and for spreading the banking habit, the fact remained that the larger banks were required to shoulder an additional heavy burden as a result. Owing to the fact that the increase in Time Deposits had been of a higher order than that in Demand Deposits, the load of interest charges had also weighed more heavily. Above all, the implementation of the Desai Award and the payment of large sums as arrears of pay and allo-

wances with retrospective effect had substantially pushed up the establishment expenses of the banking industry. Banks, however, had agreed to abide by the Award in the hope that it might lead to more harmonious relations between management and the staff."

Sir Homi then dealt with the important amendment made to the Banking Companies Act which made it obligatory on banks to maintain with effect from September, 1964, a higher liquidity ratio of 28 per cent in place of the existing ratio of 20 per cent. "Banks would accordingly have to divert a part of their funds from normal business advances to investments in Government Securities on which the yield would be substantially lower. Also, with the deposits failing to keep pace with an insatiable demand for larger bank credit, with the Reserve Bank adopting a more restrictive leading policy, and with operating costs mounting up abnormally, the profitability of the banking industry was being threatened from many directions. It was unfortunate that this should have come about at a time when the banks were expected to strengthen capital structure, assist industry with working capital as well as with medium-term finance, and establish branches in rural and semi-urban areas."

Sir Homi then referred to the working of the Central Bank for the year under review. "The Controller of Capital Issues had sanctioned on certain terms the Bank's proposal to increase the Authorised and Subscribed Capital; but due to the declaration of the national emergency and the consequent deterioration in the conditions of the capital market, as also to the terms laid down by the Controller of Capital Issues which were considered unfavourable in the then conditions of the market, the Directors had been obliged to postpone the issue of further capital. Thanks to the budget proposals, which had made the climate more inhospitable, the Bank would have to wait for a more favourable opportunity of raising fresh capital."

Consequent on the sustained and keen demand for bank credit throughout the year, Sir Homi said, the Bank's Advances remained fairly high, the increase of Rs 14 crores corresponding more or less to the increase of Rs 16 crores in deposits. Out of the total Advances, about 41 per cent was absorbed by industry, 42 per cent

by Commerce and 17 per cent by other categories. The portfolio could, therefore, be said to be well-balanced.

Sir Homi went on to point out that the gross earnings of the Central Bank had been improving from year to year; "there had been an addition of Rs 5.26 crores or 62 per cent between 1958 and 1962. During the same period, the establishment charges had also mounted up, the increase, exclusive of bonus, being of the order of Rs 1.53 crores, or 50 per cent. During the year, the increase was as much as Rs 56 lacs of which Rs 24 lacs represented arrears paid to the clerical and subordinate staff retrospectively for eleven months under the adjustment formula of the Desai Award." Attention of the shareholders was then drawn by Sir Homi to two new items on the expenditure side of the Profit and Loss Account. One was the sum of Rs 10,87,000 being the premium paid by the Bank to the Deposit Insurance Corporation, which started its operation in January, 1962, and

the other was the Bank's contribution of Rs 9 lacs to the Prime Minister's National Defence Fund—the largest single contribution to the Fund from amongst banking companies. As far as the Deposit Insurance Corporation was concerned, Sir Homi said that with every addition to deposit resources, the premium payable would correspondingly increase. This item, therefore, was expected not only to be a recurring feature, but also to assume higher and higher dimensions.

Even though the total earnings over the year recorded an improvement of Rs 1.54 crores, the net profit, on account of the above factors, had been less than that of the previous year by Rs 3 lacs.

Out of the declared net profit of Rs 203 lacs, a sum of Rs 38,71,500/- had been transferred to the Reserve Fund, taking its total to Rs 4 crores. Even so, the ratio of Capital and Reserves to Deposits lagged behind the target of 6 per cent prescribed by the Reserve Bank.

Sir Homi then referred to the

nationalisation by the Government of Burma of the 24 banking institutions operating in that country. The Rangoon Branch of the Central Bank which had served the people of Burma for many years had accordingly been taken over. Though the terms were not yet settled, the Bank had every hope that the Burmese Government would adopt a reasonable and equitable basis for the valuation of assets, payment of compensation and settlement of other outstanding matters.

Before concluding, Sir Homi made a touching reference to the impending retirement of Mr N. K. Karanjia. Though as a fitting testimony to the confidence and respect he had earned for himself by his meritorious services for 45 years, the shareholders had, at the last Annual Meeting, unanimously approved of his appointment as Managing Director for a period of three years, Mr Karanjia had been urging the Board for a long time to relieve him of his exacting office. But the Directors had kept on asking him to carry on as long

as he could. In the course of this year, Mr Karanjia repeated his request and in view of the fact that he had lately been feeling not too well, the Board could not but accede to his request. No one, observed Sir Homi, could have served the institution for the best part of his life as ably, devotedly and unsparingly as Mr Karanjia had done. While, therefore, the Board greatly regretted his retirement, they were hoping that even after he laid down his office, he would make available to the Bank in an advisory capacity the benefit of his rich experience, mature judgment and wise counsel.

Sir Homi concluded by expressing the hope that though difficult times were ahead, if the Bank continued to enjoy the confidence and co-operation of the public, it would maintain its position as the largest banking institution in India in the Private Sector.

Note: This does not purport to be a record of the proceedings at the Annual General Meeting.

JESSOP & COMPANY LIMITED

Pace of Progress Improved Upon Persistent Demand for Company's Products

Statement of the Chairman, Mr A. K. Chanda

Jessop and Company Ltd., Chairman, Mr. A. K. Chanda's Address to the Shareholders at the Thirty-first Annual General Meeting held on 29th April 1963.

The Board of Management's Report and Accounts for the year ended 31st October, 1962 are being circulated with this statement. Your Board feels that it would be an advantage if the statement usually made by the Chairman at the Annual General Meeting, were to be incorporated in the report. It would give you a clearer picture of the trends in the year under review and also of the future plans and prospects of the company.

The unprovoked invasion of India's territory by the Chinese and the cease fire proposals made by them later clearly stress the need for us to be in a state of preparedness to meet any future aggression. This would not, however, deflect us from the task of building up our economy, and of bringing employment and prosperity to our people.

Immediately after the commencement of hostilities I wrote to Government offering the fullest support of your company in the manufacture of any equipment required for defence purposes. This offer has been well received. Your company has made also a

donation of Rs. 3,00,000 to the National Defence Fund, and in addition the staff and workmen have contributed Rs. 48,635.

SALES

Sales for the year under review reached Rs. 12,82.28 lakhs against the previous year's sales of Rs. 12,00.85 lakhs. There is thus an increase of Rs. 81.43 lakhs, or 6.78%. This figure does not take into account Rs. 42.98 lakhs being the sale value of completed stock which could not be despatched for lack of transport. Had we been able to despatch this stock the increase in sales would have been over 10%.

PROFIT, TAXATION AND DIVIDEND

After providing for depreciation and all taxation including liability for the new super profits tax, the profit will be Rs. 50.42 lakhs as compared with Rs. 70.20 lakhs in the previous year. The details of the various tax provisions are contained in the Board of Management's report. It should, however, be noted that although the gross profit before taxation for the year exceeds the previous year's profit by Rs. 38 lakhs, or 32%, there is a drop in the net profit from Rs. 70.20 lakhs in 1960-61 to Rs. 50.42 lakhs in the year under

review. This is due to the additional provision for super profits tax of Rs. 27.12 lakhs, which by itself works out to 17.32% of the gross profit.

Your company has thus not only maintained but has improved upon the pace of progress in the year under report. This is in no mean measure due to the diligence and devotion to duty of the staff and workmen and I am sure you will join me in offering them our congratulations.

You are aware of the serious deprecations in the past on the financial resources of the company and the investments made by those then in control in spurious shares of some other companies. This led to intervention by Government

which appointed a Board of Management to manage the affairs of the company. The uphill task of rehabilitating its finances, and re-equipment and modernisation of its works have been ably handled by the Board under the wise counsel and guidance of the late Sir Bejoy Prasad Singh Roy. The company has now definitely turned the corner and has regained its position as one of the leading production units in the country. All this has called for the mobilisation of its exiguous resources in rebuilding its production potential.

It has thus been necessary and will continue to be necessary for some time to come to utilise the profits largely for the purpose of expanding and diversifying the production of your company.

The net profits of the company has also been reduced considerably as a result of the additional taxation imposed as an emergency measure. In these circumstances, I consider it only prudent to recommend that the dividend should be left at the same level as in the last year. The financial picture is, however, encouraging and you can look to the future with faith and confidence.

MODERNISATION AND EXPANSION OF DUM DUM WORKS

During the year under review the 130 ft. extension to the Coach Works was completed and is proving of great assistance in handling the extra work involved in the manufacture of bogies for E.M.U. coaches which were previously imported.

A start was made towards the rebuilding of the main machine and assembly bays of the Wagon Works by the construction of two 80 ft. bays each 225 ft. long. Only one of these bays could, however, be commissioned due to shortages of corrugated sheets, cement and stone

chips. The final stage of rebuilding is in hand.

The new Bogie Works was completed and this unit has functioned most successfully.

The completion of the new Works to specialise on the manufacture of diesel road rollers was greatly delayed due to shortages of corrugated sheets, cement and stone chips. I am happy to inform you that these difficulties have now been overcome and this works has been commissioned for operation from the 6th February, 1963. The decision to build this works has indeed proved to have been a wise one. The demand for our rollers has increased considerably, as a part of the defence programme. We are stepping up production and expect to double the previous rate of output to 450 per annum.

The capacity freed in the Mechanical Works where road rollers were previously produced is being utilised to increase output of mechanical components for cranes and sluice gates. The congestion in the Mechanical Works of manufacturing road rollers, cranes and sluice gates has now been removed.

The extension of the two 80 ft. assembly bays in the Structural Works had to be delayed due to shortages of cement and stone chips, but I am glad to tell you that we are now making a start and the driving of the concrete piles has just commenced.

PRODUCTION

After an interval of 12 months we resumed despatches of electric multiple unit trailer coaches for the Western Railway in Bombay in August, 1962. This order, together with a second and the promise of a third order which is now under negotiation with the Railway Board, will keep us fully occupied on this line of production until the end of 1966.

Production of fully furnished metre gauge passenger coaches was maintained. Orders in hand for the present design of rivetted coaches will keep us busy until April 1965 when we will take up production of an all-welded integral design which is now under preparation. We thus have two years in which to plan and re-equip for manufacturing coaches to the new design.

The production of BOX wagons reached the target of 80 Nos. per month.

The output of electric overhead travelling cranes and wharf cranes improved. Fabrication and erection of the vertical wheel gates for the Kosi Barrage were however retarded for a time due to shortage of matching steel.

Production of road rollers increased from 229 to 250 numbers. During the year we commenced the complete manufacture of the transmissions for our road rollers which were previously imported. This has saved valuable foreign exchange.

Fabrication of steelwork for the Foundry Forge at Ranchi has been delayed due to non-receipt of steel.

FUTURE PROSPECTS

The demand for the full range of your company's products continues to be large and with the many large projects now being taken in hand I feel our resources will be fully employed for the next five years provided the problem of the supply of matching steel, to which I refer separately, can be solved.

FURTHER EXPANSION OF ACTIVITY AND NEEDS FOR ADDITIONAL FINANCE

I regret to advise that our plans to acquire approximately 100 highas of land at Tiaghur have had to be abandoned as there were no prospects of our obtained vacant possession of the land in the near future because of legal proceedings between the owner and the West Bengal Government over ownership of the land. Negotiations are in progress for the purchase of an alternative site which is admirably suited to our needs.

Delay in the acquisition of land has come in the way of our undertaking construction of the new foundry and other works for making machine tools, steelworks duty cranes, etc. Even were the land available, the present burden of taxation, however inevitable it may be, is likely to make it difficult for us to pursue the scheme of expansion actively. It is too early to forecast the future trends in the money market and the reactions of the investing public to the new proposals for taxation. We have, therefore, to wait and see. I do hope the period of uncertainty will be over in the near future and we will be able to resume our programme of rationalisation and expansion.

MATCHING STEEL

The shortage of matching steel continues to be a source of great anxiety and it is the single factor limiting any substantial increase in output. The shortage of matching steel has created a difficult situation not only for us but for other fabricators also. As a result, your company is unable to make the contribution it is in a position to make to the acceleration of other programmes in the fields of transport and production. Government have been made aware of this bottleneck which has rendered installed productive capacity idle and I trust that they will take necessary steps immediately to remove this imbalance in supplies.

WELDING ELECTRODES

Yet another serious shortage has developed in the supply of hand welding electrodes, the main reason for this being the supply of low carbon rimmed steel for the core wire. Here again I hope positive steps are being taken by the Government of India to solve this problem as the electrode shortage

is affecting almost every branch of engineering in India.

POWER SUPPLY

Restrictions on the use of electricity for industrial purposes still continue between 7 a.m. and 5 p.m., but it is expected that there will be a progressive improvement towards the end of the year when the new 50 MW Generator of the Calcutta Electric Supply Corporation goes on load, to be followed by the commissioning of the Bandel Power Station in mid-1964.

COAL AND COKE

Shortages continued through the year under review but I am happy to report an improvement in supplies. The quality of the coke with its high ash content has shown no improvement.

APPRENTICE TRAINING SCHOOL

You will be glad to know that the nucleus of the apprentice

training school has now been established. We have recruited 82 new trade apprentices who are undergoing training in the basic workshop under the new Apprenticeship Act. The second and final stage in the construction of the training school to include lecture halls, etc., will be taken in hand by the middle of this year and completed as expeditiously as possible.

Before I conclude, I should like to reassure you, if indeed this is necessary, that your company has recovered fully from the setback of mismanagement and is now pursuing a progressive policy of modernisation and expansion, the effect of which is being increasingly reflected in the annual accounts presented to you.

NOTE: This does not purport to be a record of proceedings of the Annual General Meeting.

Markets

JUTE Quiet Trend

THE continued quiet trend of the raw jute market stems from the fact that holders are anxious to dispose of their stocks as quickly as possible in view of the improving outlook for the next crop. Even otherwise, neglect of the market by principal buyers is inevitable because for one thing mills are well stocked and for another a large proportion of jute that is on offer is not in much demand because of its poor quality. It cannot be said that there is excessive pressure from stocks as arrivals have been steadily dwindling over the past few months and there has been a substantial decline in arrivals during March as compared with the previous month. Notwithstanding the already heavy load of stocks that the industry is carrying, Authorities have evidently thought it necessary to continue their efforts at stabilising raw jute prices. The Jute Commissioner has issued compulsory purchase quota for the current month. The total quantity to be lifted in this way is placed at 3.25 lakh bales of which the IJMA mills have to fulfill 2.5 lakh bales while other mills have to take the balance. The order has also enjoined on the mills to hold a minimum jute stock equivalent to 20 week's consumption. There has however been no change in market sentiment so far as a consequence of the compulsory purchase quota.

It is doubtful if the attempts at maintaining the price at the

minimum levels will be successful for the simple reason that holders very well know that with a bumper crop in the next season it will be difficult to get the prescribed prices as mills will continue to show preference for quality jute. The present depressed condition in the jute market only pertains to low quality jute for which there is no demand because the supply of such grades is already far in excess of requirements of mills. Weather conditions so far have been extremely favourable to the new crop and the general expectation is that it will be a bumper one. By the same token, it is to be expected that the new crop jute will be on the market quite early in the next season. It would appear that encouraged by the fact that the price of jute will be maintained at the current year's minimum level of Rs 30 per maund basis Assam Bottoms with the differentials unchanged, the cultivator has taken to jute growing in right earnest. It is therefore unlikely that there is any reduction in the area under jute as expected earlier. Perhaps another bumper crop will not pose too great a problem but it will certainly give an anxious time to the authorities despite the fact that some valuable experience has been gained this year having to cope with a situation in which there has been too much of jute with no ready buyers. Of course during the current season there has been much talk on the need for educating the cultivator to plant good quality jute so that both he and the industry are bene-

fited: the cultivator by good price for his quality jute production and the industry because it will have enough quality jute to go confidently ahead with its production of hessian and carpet backing which have good overseas markets unlike sacking whose outgo now depends on our ability to stem the tide of Pakistani competition. Some good work has also been done in providing the grower with improved seeds and more efficient implements. But it is doubtful that the improvements in farming practice have been such as to bring about a marked change for the better in the coming year's crop.

Extremely dull conditions prevailed in the jute goods market during the past week in the absence of business. While foreign buyers were conspicuous by their absence, there had been little enquiry from local interests also. It would appear that contrary to earlier expectations, the US has slowed down its purchases presumably in view of the heavy stocks in that country. This is not surprising because there is no threat of a shortage of supplies in the near future as production of mills is kept up at a high level. Overseas buyers of sackings have been only taking small quantities as they are convinced that there will be plenty of supplies what with the combined production of Pakistan and India and each competing with the other to sell its products. It is also quite on the cards that overseas consumers generally are encouraged to slow down their purchase in view of the very good prospects for the next year's jute crop both in India and Pakistan. The next season,

will start with a large carry-over of raw jute from the current season, and if it is going to produce bumper crops in both the countries, there will be a plethora of raw jute supplies and the natural expectation will be that raw jute should be available at low rates.

During the past week prices fluctuated within a narrow groove in the absence of fresh buying. On most days very dull conditions prevailed as no business of any importance was reported, and the week was also devoid of rumours to enliven the speculative fraternity. That explains the dull conditions in the futures also.

TEA Exports

ACCORDING to official sources, exports of tea from India have declined to 14.1 million kgs in March from 15.9 million kgs in the previous month. As a consequence, the value of such exports have fallen from Rs 9.09 crores in February to Rs 7.85 crores in the month under review. In March last year, 13 million kgs of tea worth Rs 7.37 crores were exported from India.

In the first quarter of the current year, however, exports are higher at Rs 53.5 million kgs, valued at Rs 30.87 crores, as against 44.3 million kgs valued at Rs 24.98 crores in the corresponding period of 1962.

In the Internal Sale held in Calcutta this week, offerings were 30,261 packages. The market

opened on a healthy note; but thereafter as the sale progressed a weakening in demand for medium CTC types became apparent. Medium CTCs opened up to 20 nP a kilo easier; but towards the close of the auction, they declined further. Good CTC types, however, fully maintained their level and were readily absorbed at firm rates.

Exportable orthodox dusts came to a good market at slightly easier rates; but "tea for price" was firm. The liquoring Assam invoices were well supported and the selected lines were fully firm. The limited quantity of legg-cut teas were irregular and were generally easier by about 20 nP. Following rates (per kilo) were quoted:—Plain Orthodox Dust Rs 4.25 to Rs 4.35; Medium Assam Dust Rs 4.50 to Rs 5.30; Legg-cut Dust not quoted; Medium Assam CTC Dust Rs 5.40 to Rs 5.80 and Good Assam CTC Dust Rs 6.70 to Rs 7.20.

In the Cochin market, offerings were 204,000 kilograms of tea dusts for internal consumption. Against good general demand, Low Medium and Medium categories were easier by 10 nP a kilo at the beginning; but as the sale progressed, prices hardened and closed fully firm and sometimes dearer. Good Medium sorts met with useful enquiry and were irregularly dearer by 5 nP a kilo. High-grown teas attracted less demand and were generally lower. Clean black grainy descriptions were well supported at around last week's rates, while there was useful support for unorthodox descriptions the prices of which quoted about steady.

In London auction, offerings were 35,545 packages including 28,724 packages from North India. A falling off in demand was noticed for the Assam teas and prices for these were an irregular penny per pound lower. Legg-cut Doars remained about steady; but the CTC kinds were inclined to be easier. For the plain teas, the market ruled fully firm to dearer.

COTTON Set-back in Futures

THE cotton futures market in Bombay turned distinctly easier during the past week, reversing the uptrend noticed in the market during the past three weeks. The primary dampening factor was tendering differences fixed by the East India Cotton Association for the Jarilla May contract. The subdued trend was also attributed to the slackening mill demand in the spot market and the upward revision of room rates of certain varieties by the appeal committee of the EICA. The upshot of all these was that the Jarilla May contract during the week under review lost 7.5 points against a rise of 36 points in the previous three weeks and the August con-

tract shed nearly 15.5 points against a rise of 30 points.

The May contract which commenced the week at Rs 739.00 per three quintals edged forward to Rs 742.50 in the initial deals but slumped steeply to Rs 725.75. The contract, however staged a smart recovery to Rs 735.00 as the lower levels met with resistance. The rally proved short-lived and the contract slipped down to Rs 728.25 before closing the week at Rs 731.50 per three quintals.

The August contract also moved in sympathy with the maturing contract and throughout the week it displayed a weak trend. After touching Rs 746.00 on the opening day the contract drifted to a low of Rs 729.50. The slump in the contract was ascribed to the bright prospects of imports and the development of bear selling. Another important development of the week was that the contango of Rs 6.00 was erased and the August contract was put at a discount of Rs 2.00 against the maturing contract. Judged by the trend in the market it is evident that the near term outlook has apparently changed with the sentiment becoming increasingly easier.

The sluggish trend in the spot section is obviously due to the fact that several mills have already covered their requirements. The high spot prices also turned out to be deterrent to mill support. The enthusiasm was also blunted by the authorities decision to extend cotton control with the same rigid features and also the apprehension of large tenders against the maturing May contract.

Two important developments have taken place during the past week as far as the cotton trade is concerned. The Textile Commissioner has announced the cotton policy for the coming season which closely follows the broad pattern from that of the current season. The new policy incorporates all the existing features of the cotton control, such as zonal system of compulsory survey and the supervisory scheme will be continued in the next season also. The only departure from the current policy is that farmers interests will be represented by their representatives in both the zonal survey committees and the Textile Commissioner's appeal committee. In addition to the enhancement of floor prices to Rs 702 from Rs 602 per candy for Moglai Jarilla Fine 25/32" with similar increases in the floor prices of other growns the Government has decided to make an upward revision of the ceiling prices and staple length of certain growths.

The shippers' export quota for Bengal Deshi has been completely exhausted and the trade is not optimistic of an immediate release of this growth owing to the tight statistical position of Bengal Deshi. The aggregate quotas released for Bengal Deshi during the current season come to 275,000 bales.

Trading in the spot market at Sewri was generally sluggish. In the domestic section transactions were few and far between. Varieties such as L 147, CO 2, Kalyan and Surti met with some spinner interest.

In the foreign section ready lots of imported growths met with encouraging spinner demand. Mili demand was pronounced in varieties like Sudan and Egyptian cotton and prices of these growths firmed up steadily.

The current situation in world cotton and the prospects of the immediate future will be taken up for discussion at the general meeting of the International Cotton Advisory Committee which met at Bangalore last Monday. A comprehensive review of the developments in world cotton situation since the last plenary meeting will be made by the chairman of the standing committee. As far as India is concerned during the period there was a steady improvement in the tempo of cotton consumption by the cotton textile industry. With a view to conserving the foreign exchange the Government adopted a host of measures to step up domestic cotton output. Increased cotton production is expected to be achieved by employing modern methods of cultivation extending irrigation facilities and bringing more and more land under cotton crop.

At the inaugural meeting of the ICAC on Monday attention was focussed on the threat of artificial fibres to cotton and on the over-production of cotton with lesser consumption leading to a marked increase in the world carryover in lieu of the usual stock liquidation. Mr S. K. Patil, the Union Minister for Food and Agriculture, in his inaugural address discounted the fears of over-production and the competition from man-made fibres. The high cost of most of the man-made fibres would defini-

tely eliminate the possibility of man-made fibres replacing cotton on a substantial scale for a pretty longtime.

According to the research conducted by the Cotton Textile Fund Committee, Bombay, the wholesale dealers in cotton textile goods monopolise certain qualities of certain mills and occasionally these monopolies are misused by the dealers in hoarding stocks in order to create artificial scarcity in the market. Graver still is their practice in exploitation the dependence of mill on them as they occupy a predominant place in chain of distribution. The findings of the Committee are embodied in its publication "Study of Distribution Pattern of Cotton Textiles in India." As the study reveals there are six different links in the chain of distribution from the mills to the ultimate consumer, namely, mills, selling agents, wholesale dealers, semi-wholesale dealers, commission agents and retail shops. Out of the total flow of cotton cloth from Bombay city mills to various places 51 per cent is distributed directly from mills to selling agents, 32 per cent to local wholesale dealers and 7 per cent to industrial users. Most of the mills have complained of inadequate transport facilities especially in busy seasons. As the study has rightly pointed out, there is a pressing need for a closer link between the consumer and the mills since wholesale dealers in Bombay are cut off from outstanding consumers and mills are unable to assess rightly the consumer preference through their selling agents.

Imports of cotton into India from 1 September 1962 to 30 March 1963 totalled 387,154 bales against 584,887 bales in the same period in 1961-62.

	1961-62	1962-63
American	275,846	239,120
Sudan	80,046	71,163

Price Support Policy for Cereals

THAT the Government of India has been following a policy of price support for various agricultural

commodities is well known. The object of this policy is to provide a much-needed incentive to the farmer by assuring that the price of his produce will not be allowed to fall below a certain minimum level. Such an incentive will enable the farmer to undertake measures for increased production with full confidence that the higher level of production will not result in an undue fall in prices.

The Government made a beginning with this policy for cereals last year when, in March 1962, a minimum support price of Rs 34.83 per quintal (Rs 13 per maund) was announced for while variety of wheat with suitable differentials for other varieties. Later, in December 1962, price support was extended to Rice through the procurement system, which served the dual purpose of assuring the producer against an undue fall in prices and of helping the Government to build reserve stocks from indigenous production.

It is now decided to continue this policy of price support both for rice and wheat for the rest of the Third Plan period. The levels of prices have been reviewed and suitable upward adjustments have been made. The price at which the Government will be prepared to purchase wheat in selected markets in producing areas will now be Rs 37.50 per quintal (Rs 14 per maund) for white variety.

For rice, the procurement prices have been raised for most regions, such increases varying from 67 nP per quintal to Rs 2.68 per quintal, according to varieties. With these adjustments, procurement prices will, for 1963-64 and subsequent crops of rice, vary from Rs 16 to Rs 22.50 per maund, according to varieties, in Andhra Pradesh and Madras; from Rs 16 to Rs 16.50 in Mysore; from Rs 15.50 to Rs 23.50 in Madhya Pradesh; from Rs 17 to Rs 29.25 in the Punjab; from Rs 16 to Rs 25.50 in Uttar Pradesh and from Rs 16.70 to Rs 19.70 in Orissa. Further details for giving effect to these decisions are being worked out.

CAMPHOR Tight Supply Position

Supply position in Camphor is reported to have deteriorated. With the result, the price for the commodity has registered a substantial improvement in the Bombay market. The commodity, which was available at Rs 14 per pound a few days ago, is now difficult to find even at Rs 16.50. A further rise in prices is generally expected.

The tight supply position is stated to have been caused by a sharp break in the supply of smuggled goods. This apart, the State Trading Corporation, the only source of supply for the actual users, has stopped the release of any quota for quite some time.

The imports of the commodity through the established importers has been banned since long. As against the scarce supply, the demand from the tablet manufacturers has broadened recently. The tablet manufacturers have no other course except to pay higher prices to meet their demand. It is, therefore, felt that the STC should make fresh arrangements for the supply of camphor. In the absence of any such arrangements, the price is expected to scale a new high.

SUGAR Prices Touch New High

Since the imposition of control, Sugar is out of stock as the old stock is reported to have been exhausted. New monthly quota has not been released and a part of the old stock has gone underground. Again, the seasonal demand coupled with the marriage season support is on the increase. In the Hapur market, the rate for the sweet commodity has gone up to Rs 135 per quintal as against the pre-control price of Rs 122 per bag.

An important factor contributing to the high price is that the cane price has always been fixed at a high level following political pressure. If the price of sugar is to be held down to a reasonable level, it is essential to ensure an adequate supply of cheaper cane. This can be done by concentrating attention on improving its yield and quality. There is also a great scope for improving the output of sugar. The equipment of several factories should be modernised if production costs are to be kept down.

The US Agriculture Department has authorised the purchase and import of 204,341 additional tons of sugar from 12 countries, including India, under a so-called global

STATE BANK OF INDIA

NOTICE IS HEREBY GIVEN that a Local Meeting of the shareholders of the State Bank of India on the Branch Register of Shareholders kept at the Calcutta Local Head Office of the Bank will be held at the Calcutta Local Head Office, No. 1, Strand Road, Calcutta, on Wednesday, the 19th day of June 1963, at 4-00 P.M. (Standard Time) for the purpose of electing one person to be a Member of the Local Board at Calcutta in pursuance of Regulation 48 of the State Bank of India General Regulations, 1955, in place of Shri V. V. Parekh, a Member of the Local Board, whose term of office will expire on the 30th June 1963.

B. Venkatappiah,
Chairman.

Bombay, 10th April 1963.

quota. It has fixed India's quota at 11,923 tons. The global quota is the amount being reserved for future use of Cuba when and if normal diplomatic and trade relations are resumed with that country.

CASHEW

Business in raw Cashewnuts is reported to have come to a standstill, because of differences between buyers and sellers on the new contract terms. The differences relate to new standard contract the Government has introduced from 1 April 1963. Under the new scheme, import licences are issued to only those actual users who produce a contract duly signed by the buyer and seller.

The Government has introduced the new method of licensing with a view to eliminating that wasteful use of foreign exchange by importing defective or sub-standard goods. Sellers are unwilling to transact on the new standard forms. The crux of the problem centres round immature nuts. Sellers point that differences are bound to arise in the assessment of immature nuts, as even experts would have varying views on whether a nut is immature or not. Under the previous system, sellers paid claims to the buyers only in case when totally damaged nuts exceeded 10 per cent.

Again, the recent upward spiral in raw nut prices has also created a near-stalemate in the market. The present price of Rs 675 for the African nut is said to be an unworkable rate, because the price of processed kernel has not registered a matching increase. The foreign buyer is not willing to pay more than 44 cents per pound. When the kernel price was ruling at 42 cents per pound some time back, raw nut was available at Rs 540 a ton.

The ostensible provocation for the unhealthy increase in raw nut price was the report that the Indian crop will be 50 per cent down this year. The crop is late and the recent rains in the cashew-growing belt on the West Coast of India is believed to have done some damage to the crop. But the large section of processors in Quilon, who are the principal buyers of the raw nut, do not agree with the forecast that the loss will be as big as 50 per cent of the country's average crop of 60,000/65,000 tons. They are not prepared to expect a loss exceeding 10,000 tons. There are, however, processors even in Quilon, who are prepared to pay higher prices and stock raw nuts. This is said to be speculative buying of an unhealthy type.

YARN

Divergent trends continued to characterise trading in the Bombay

Yarn market. Prices of Art Silk yarn continued to rule easy, as buying interest was lacking, while spinners were reported to have accumulated large stocks. Prices were, therefore, depressed.

There was not much selling pressure in the Staple-fibre yarn section; but the trend was easy. In the cotton yarn section, higher counts continued to be in good demand and realised better prices as compared to the previous week. The demand for coarse counts was small.

In the Coimbatore market, prices of 60s and 80s moved up by 50 nP to Rs 2 per pound, according to quality, although hank yarn did not show any erratic rise. In lower counts, 40s went down below the ceiling level. The market for 30s and 32s remained weak. In the staple-fibre yarn section, 40s and 2/40s recorded, however, a further rise in prices.

OILS & OILSEEDS Mixed Pattern of Trading

Prices on the Bombay Oilseeds Exchange showed a mixed trend. The bullish fervour generated by the grant of incentives for the export of groundnut oil, castor oil and linseed oil proved to be temporary with the realisation that those measures had not succeeded in bridging fully the disparity between the Indian prices and the world levels. It was pointed out that the Indian prices of groundnut oil continued to be higher than the world parity by £8 to £9 per ton and those of linseed oil by £12 per ton. The disparity in respect of castor oil was stated to be around £3 per ton.

The persisting disparity in prices continued to stand in the way of exports. While the exporters continued to explore fresh avenues for Indian vegetable oils, the actual business put through was stated to be very small. A few transactions took place with the UK for commercial castor oil at £101 per ton. Fresh business for groundnut extraction was placed at about 2,000 tons. In the circumstances, operators were anxious to reduce their commitments at higher levels.

In the Groundnut section, prices gained some ground to quote Rs 44.75 for the ready bold quality and Rs 17.10 for ready groundnut oil. In the castorseed section, ready was quoted at Rs 31.62 and castor oil, commercial quality, at Rs 12.85.

The sustained weakness in North Indian rapeseed acted as a major bearish influence in the Linseed section. The demand for ready linseed and linseed oil was subdued and the operators were inclined to press sales. Linseed ready was quoted at Rs 36.60 and Linseed oil at Rs 14.40.

For the Investor

INVESTMENT GOSSIP

Cautious Trend

The recession in equity values noticeable this week is not unexpected. For the recent uprend has not been backed by genuine investment buying but has largely been sustained by speculative fervour. Perhaps a token rise in prices could have been in order in response to the concessions announced by Mr Morarji Desai in the Super Profits Tax. But bulls seemed to have concluded that with the modification of the SPT, the outlook for the corporate sector had become so good as to admit of enthusiastic lifting of industrial equities to any level. Since the technical position of the market was also in their favour they could proceed on their assumptions without much opposition for some time.

As pointed out in this column last week, the market cannot thrive on speculative support alone. Genuine investors have ample reasons to be cautious about extending their commitments. Though the concessions in the SPT have been generally welcomed, the investor has not omitted to note that the SPT even in its present form will render it difficult for the corporate sector to find adequate funds for the payment of a reasonable dividend. Growth prospects are equally obscure as companies may not be able to find much free funds after paying all taxes and other levies that the new Central budget has imposed. One also cannot be quite sure that the working of industrial units will not be retarded owing to shortage of essential facilities such as power, transport and fuel. Units in the Calcutta and industrial regions are to reckon with the threat of power cut. The position is far from satisfactory as regards the supply of raw materials for some of the important industries such as engineering.

These are relevant factors for the investor if not for the speculator. Even the latter has been somewhat subdued this week by developments which are not conducive to bullish enthusiasm. The Central Loans that have already been announced and in the offing will reduce the funds for investment and the stock market may not hope to attract any sizable part of the available funds in view of the uncertain prospects for dividend and corporate growth. That hard times are ahead for everybody has been hinted both by the Finance Minister and the

Prime Minister in recent days, and it is difficult to expect that the stock markets will remain unaffected.

NEW ISSUE NOTES

Dr. Paul Lohmann

Dr. Paul Lohmann (India) Limited has obtained the consent from the Controller of Capital Issues to the issue of fresh capital for Rs 60 lakhs. Out of this, shares for Rs 53.04 lakhs only are issued now as rights shares. The remaining shares for Rs 6.96 lakhs are being kept reserved for the collaborators, subject to the approval of the Reserve Bank of India and will be made in compliance with the provisions of the Companies Act, 1956. There is no compulsion on the part of the shareholders to accept the offer and it is open to them to renounce their rights. If any of the shares is not taken up by the existing shareholders, the Board of Directors may dispose of such shares in accordance with the provisions of the Companies Act and the conditions of the consent of the Controller of Capital Issues. The right shares will be issued in the ratio of two new shares for every one share held. The present issue is to finance the expansion schemes of the company.

Out of the capital of Rs 60 lakhs sought to be raised now, Rs 30 lakhs will be required to finance the additional capital cost of the Fine Chemicals Project with expanded capacity as well as part working capital for it. The balance of Rs 30 lakhs will be invested in the Basic Chemicals Project for which industrial licence has been obtained. The construction of the Fine Chemicals factory is nearing completion. The licensed capacity of the factory is 1,500 tons per annum. Apart from better economy in production for the international market, the company also proposes to export its products in the international market at competitive prices.

Phillips India

Phillips India Limited, Calcutta, is to issue capital of Rs 16.68 lakhs in equity shares of Rs 10 each, at a premium of Rs 5 per share. Fifty per cent of the capital will be issued to the existing non-resident shareholders and the balance to the existing Indian shareholders.

Borosil Glass

Borosil Glass Works Limited, Bombay, is to raise Rs 1.49, 99,100 in equity shares of Rs 10 each, at

par, partly for cash and partly for consideration other than cash. Of this, shares of the value of Rs 73.50 lakhs will be issued to Corning Glass Works of the USA.

Napco Bevel Gear

Napco Bevel Gear of India Limited, a public company to be floated for the manufacture of bevel gears, etc., in collaboration with Napco Industries Inc. of USA has been consent to issue capital of Rs 126.70 lakhs, divided into 12,67,000 equity shares of Rs 10 each. Of this issue, equity shares of the value of Rs 47.50 lakhs will be offered to the foreign collaborators and the balance will be issued to Indian nationals, at par. The foreign participation will be made into Rs 23.75 lakhs against part payment of the price of equipment to be transferred and Rs 23.75 lakhs against supply of technical know-how.

Singh Engineering

The Singh Engineering Works Private Limited has been given consent to issue further capital of Rs 10 lakhs, decided into 10,000 equity shares of Rs 100 each, to be issued as bonus shares on capitalisation of the company's reserves to a like extent.

INVESTMENT NOTES

Bank Merger

The Canara Bank Ltd., a major Bank from the South, has taken over the assets of Sree Poornathrayeesa Vilasom Bank Ltd., Tripunithura, and has assumed the liabilities of the said Bank to its Depositors and Creditors, with effect from 29th April, 1963, as per the provisions of the agreement executed between the said two banks. This is the fifth Bank that joined the Canara Bank since 1961. In the year 1961, in Kerala, the Bank took over the Bank of Kerala Ltd., and the Seasia Midland Bank Ltd., and assumed the selective assets and liabilities of the Trivandrum Permanent Bank Limited. In the same year the Bank also took over the G. Raghunathmull Bank Ltd., Hyderabad.

IISCO

According to the figures released by the Indian Iron & Steel Company limited, the output of all categories has shown a marked decline in April as compared to the previous month. The output of Pig Iron is shown at 109,650 metric tons against 116,303 metric tons; Steel Ingots at 80,807 metric tons against 93,288 metric tons and Saleable Steel at 55,282 metric tons against 87,400 metric tons. Despatches are substantially lower at 46,374 metric tons against 106,182 metric tons.

INVESTMENT BRIEFS

Nenmeny Rubber and Produce Company Limited has maintained the dividend at 15 per cent, less tax, for 1962.

Travancore Cements Limited has raised the dividend from 6 to 7 per cent, taxable, for 1962.

Southern Industrial Corporation Limited has skipped the dividend for 1962 as against a taxable dividend of 5 per cent paid for the previous year.

BALANCE-SHEET REVIEWS

NARAYON Pays Less

NATIONAL Rayon Corporation Limited has recorded a small increase in sales to Rs 8.33 crores for the year ended 31 December 1962 from Rs 8.14 crores in the previous year. There is actually a drop in sales of yarn and waste but there is an increase under

other heads like chemicals and miscellaneous items. The difficulties in running the tyre cord plant have obviously been responsible for the absence of any increase in sales.

As working expenses are higher and a higher rate of excise duty had also to be paid, the net profit, before providing for Depreciation and Taxation, has declined to Rs 218.56 lakhs from Rs 234.67 lakhs in 1961. In respect of allocations, Depreciation is raised to Rs 128.40 lakhs from Rs 85.81 lakhs, while the transfer to Development Rebate Reserve is lower at Rs 25.10 lakhs against Rs 39.25 lakhs and Taxation at Rs 37.50 lakhs against Rs 53 lakhs. Additionally, Rs 6.25 lakhs had to be paid in respect of taxation for the previous year. No provision is made for Debenture Redemption Reserve against Rs 10 lakhs previously. Even the reduced dividend of 16 per cent, taxable, on the Ordinary shares against 22 per cent, taxable, previously can be paid only with the transfer of Rs 26.10 lakhs (Rs 12 lakhs) from Deferred Taxation Reserve.

It appears that the teething troubles in the tyre cord plant are over and the plant has attained commercial production. Discussions between the Government and the tyre manufacturers are going on various matters connected with the production of tyre cord. The company expects that a regular offtake would be ensured as a result of these discussions.

Of current interest, the company has switched over to production of finer deniers, which should be more remunerative. Further, the bull benefit of the two-stage expansion, which has been completed, is expected to be reflected in the current year. The company may fare well during the current year.

Century Spinning Repeats

Despite lower earnings, the Century Spinning and Manufacturing Company Limited has decided to maintain the total dividend at Rs 30 per share, subject to tax, for 1962. The directors have been obliged to draw upon the Dividend Equalisation Fund to the extent of Rs 2.38 lakhs to make up for the distribution.

The gross profit for the year is lower by Rs 25.71 lakhs at Rs 366.87 lakhs as compared with Rs 387.58 lakhs. In respect of allocations, the directors have provided Rs 116.61 lakhs (Rs 86.15 lakhs) for Depreciation; Rs 87 lakhs (Rs 135.59 lakhs) for Taxation and Rs 41.23 lakhs (Rs 13.62 lakhs) for Development Rebate Reserve.

The company has to provide Rs 77 lakhs in respect of bonus for previous years. This has been met by withdrawing from the Contingency Reserve Rs 40 lakhs and the balance of Rs 37 lakhs from the profits of the year. A sum of Rs 43.50 lakhs goes to Dividend

Equalisation Reserve against Rs 19 lakhs last year. The overall distribution for the year is made on the increased capital. Transfer Books of the company will be closed from 8 May to 1 June, 1963. The annual general meeting will be held on 4 June.

Disappointing Results of INDU Mills

The India United Mills Limited has reported disappointing results for 1962. The gross profit has gone by nearly Rs 95 lakhs to Rs 86.62 lakhs. Consequently, the distribution on equity as well as Deferred shares has been reduced from Rs 1.40 to Rs 1.10 a share and from Rs 37.25 to Rs 25.25 a share, respectively, less tax.

With Rs 4.20 lakhs brought in and taking in Rs 12.89 lakhs being provision no longer required and interest received on advance payment of tax and Rs 13.75 lakhs being provision of bonus for previous years 1959 and 1960, there is an available sum of Rs 117.47 lakhs. From this, the directors have set apart Rs 13.54 lakhs (Rs 14.91 lakhs) for Depreciation; Rs 3.26 lakhs (Rs 3.72 lakhs) for Development Rebate Reserve; Rs 4.30 lakhs (nil) for short provision of bonus for 1961; Rs 15 lakhs (Rs 62 lakhs) for Taxation; Rs 41.91 lakhs being bonus paid for 1959 and 1960 and Rs 82,607 being taxation for the previous year.

Runglee Rungliot Pays 7½% Against 20%

A substantial loss of crop due to hail storm and the unfavourable climate conditions are reflected in the working results of the Runglee Rungliot Tea Company Limited. The accounts for the year 1962 reveal a loss of Rs 3,382 as against a net profit of Rs 32,976 for the preceding year. The depreciation amount is raised to Rs 24,126 from Rs 14,125.

After transferring Rs 50,000 from Hail Reserve, adding Rs 5,000 being excess provision for taxation no longer required and Rs 8,809 being in arrears received and profits on sales, the directors have been able to set apart Rs 50,000 for General Reserve against Rs 1.90 lakhs and Rs 8,500 (nil) for Development Rebate Reserve. The dividend is reduced to 7½ per cent from 20 per cent, subject to tax.

The crop output is lower at 85,234 kgs against 105,192 kgs; but the average price realised is higher at Rs 6.64 against Rs 6.02 per kg.

Bijohnagar Tea Pays More

Despite an increase in the crop output from 783,367 kgs to 847,662 kgs as well as in the average price realised from Rs 4.35 to Rs 4.82 per kg, the Bijohnagar

Tea Company Limited has made a net profit of only Rs 2.83 lakhs for 1962 as against Rs 3.84 lakhs for the preceding year.

In respect of allocations, Depreciation is raised to Rs 1.78 lakhs from Rs 1.68 lakhs and Taxation to Rs 3.45 lakhs from Rs 2.62 lakhs. General Reserve is lowered to Rs 2.25 lakhs from 2.50 lakhs, while no provision is made for Development Rebate Reserve against Rs 3,658. The dividend on the equity shares is, however, raised from Rs 4 to Rs 5 per share, taxable, payable on or after 10 May, 1963.

BALANCE-SHEET BRIEFS

The United Commercial Bank Limited has reported a net profit of Rs 73.33 lakhs for 1962 as against Rs 72.61 lakhs for the preceding year. The directors have proposed a taxable dividend of Rs 8 per share (same) on the old ordinary shares; Rs 0.375 per share, less tax, on the new 79,220 shares in respect of which application moneys were received on or before 1 October 1962 and at Rs 0.25 per share, less tax, on the new 80,780 shares in respect of which application moneys were received after 1 October 1962.

Jay Shree Tea and Industries Limited has reported a slight decline in the net profit, after providing for depreciation, taxation and Development Rebate Reserve, from Rs 19.03 lakhs to Rs 18.50 lakhs for 1962. The dividend on the equity shares is, however, maintained at Rs 1.25 per share, subject to tax.

The working of the Orissa Cement Limited has resulted in a decline in the net profit from Rs 1.13 crores to Rs 95.45 lakhs for 1962. The dividend is reduced from Rs 1.50 to Rs 1.00 per share, less tax.

Kumardhubi Engineering has made a net profit of Rs 8,47,405 after providing Rs 5,97,980 for Depreciation, Rs 11,50,527 for Taxation and Rs 1,65,000 for SPT. The dividend is raised from 35 pP to 45 pP per share, subject to deduction of tax.

The net profit of Binny and Company Limited, Madras, has shown a sharp decline from Rs 65.85 lakhs to Rs 37.93 lakhs for 1962. The directors have proposed a final dividend of 13 per cent, making a total of 21 per cent, taxable, as against 25 per cent, taxable, paid previously.

According to the preliminary figures issued by Dalmia Cement (Bharat) Limited, the profit, before providing for tax, is more than doubled at Rs 116 lakhs for 1962 as against Rs 54 lakhs in the preceding year. The dividend is, however, maintained at Rs 1.20 per share, less tax.

The net profit of the Buckingham and Carnatic Company Limited, Madras, is slightly lower at Rs 102.53 lakhs for 1962 as against Rs 106.60 lakhs for 1961. The dividend on the Ordinary shares

is, however, maintained at 18 per cent, subject to tax.

The Mafatal group of textile mills has announced the following results—

CROSS PROFIT (In Lakhs Rs)		
	1962	1961
Standard Mills	117.62	174.75
Mafatal Fine	70.26	63.88
Sassoon Spinning	71.65	80.97
Ambica Mills	150.00	160.00

DIVIDEND (Per Share)		
	Rs	P
Standard Mills	20	25
Mafatal Fine	30	30
Sassoon Spinning	1	2
Ambica Mills	40	Nil

*Paid on the increased capital. The company, which skipped dividend in 1961 in view of the bonus issue, paid Rs 50 per share for 1960.

STOCK EXCHANGES

Retreat

Watch-Dog Writes:

AFTER the recent sharp rise in prices recorded by the stock markets of all the principal centres

following the tax concessions announced by the Union Finance Minister, there has been some realising at the higher levels. Apart from lack of fresh incentives, the absence of any encouraging news with regard to the outcome of the Kashmir talks kept the buying interest subdued. There is, however, a general feeling that there are preparations for the resumption of the onward march.

With activity restricted, Lyons Range witnessed a dull and featureless session during the week under review.

A minor recession in prices was witnessed on Dalal Street.

On the Madras Stock Exchange, bids and offers were well sprinkled showing the investment preferences and decisions of the marketmen.

There were only a few dealings on the Bangalore Stock Exchange.

Prices on the Delhi Stock Exchange gave way under selling pressure.

A reactionary trend developed on the Ahmedabad Stock Exchange where all the speculative scrips closed with sizable losses.

The possibility of an early general election had an unsettling influence on the London Stock Exchange.

Prices on Wall Street, however, showed a majority of fractional gains under industrial leadership.

CALCUTTA

ACTIVITY on Lyons Range was at a low ebb last week when prices declined on a broad front due to tired liquidation. It looked as if the market was in the process of consolidation after recording a sharp rise in the preceding week. No anxiety was however, shown, by the operators to get away from the market, as it was expected that, with a gradual return of confidence, there might be a disposition to take a more hopeful view of the future outlook after sometime.

In general, the excitement, that followed the announcement of the tax concessions by Mr Morarji Desai, died down. This was clear from the widespread profit-taking at the recent high levels. Of course, this recession in values was influenced by some adverse factors. Apart from the fact that support from genuine investors continued to be still restricted, professional operators were not inclined to go too far, presumably owing to the doubts about the market's ability to withstand any selling pressure in the event of a resumption of normal forward trading.

Political factors seemed to have dominated the sentiment in the market. The Prime Minister's speech at Digha regarding the border dispute gave rise to a fear that the settlement between India and China might be delayed longer than was thought earlier. Again, the outcome of talks over the Kashmir issue for the fifth time was considered to be disappointing.

On the economic front, it was thought that there would be a scarcity of investible funds and the shortage of credit would be aggravated during the coming months following the issue of two new loans and the prospect of more loans to be floated later. Doubts were also expressed whether those companies, which had postponed the expansion and diversification programmes, would be in a position to take their schemes. With the result, the efforts taken by the bulls to lift up the prices successively failed.

Gilt-edged securities showed a mixed pattern in limited turnover. While the prices of short-dated issues ruled steady, those of medium-dated loans softened on account of the offer of a new medium-dated loan, which carried a higher rate of interest than what

was available on the existing comparable securities. 3 per cent 1988 Conversion Loan changed hands at Rs 63.30 to Rs 63.50.

Bank shares remained generally steady. Punjab National changed hands on the cum dividend basis at Rs 19.69 to Rs 19.87 with United Commercial quoting around Rs 71.

Despite the flow of satisfactory dividend announcements, Jute shares failed to evoke much buying interest in view of the poor enquiries for jute goods. As the near-term outlook was considered to be bearish rather than bullish, there was a general disposition to restrict commitments. An exceptional feature was Anglo-India, which were enquired up to Rs 224 from Rs 201, while Ganges changed hands at Rs 13.56 to Rs 13.62; India at Rs 18 to Rs 18.25 and New Central at 12.06 to Rs 12.25. Reliance, after being pushed up to Rs 11.81 from Rs 10.12, closed quiet at Rs 11.12 as the cornering operations had been over. There were

rumours of a change-over in the management of the company.

Coal shares were subjected to modest profit-taking at the recent high levels. Central India eased off to Rs 10.47 from Rs 10.87; Western Bengal to Rs 9.44 from Rs 10.62 and South Karanpura to Rs 9 from Rs 9.44.

The Tea section fared moderately well, thanks to the announcement of satisfactory dividends by the Andrew Yule group of companies. Hopes were entertained that other companies might follow suit. Brooke Bond forged ahead to Rs 12 from Rs 11.56; Tezpur to Rs 15.37 from Rs 14.87 and Gohpur to Rs 14.75 from Rs 13.50. Hasimara met with business at Rs 13.25 to Rs 13.69; Betjan at Rs 30.25 to Rs 30.69 and East India at Rs 13.62 to Rs 14.

Business in Sugar shares came almost to a standstill. It was found difficult to locate buyers even at reduced prices. Concern was expressed over the new sugar policy which, it was feared, would affect several fac-

tories especially in UP and Bihar. Darbhanga were almost maintained at Rs 7.37, while Cawnpore were on offer at Rs 10.06 against Rs 10.62.

Textile shares were quiet on lack of buying interest. Bharat Commerce were done at Rs 22.75 to Rs 22.94; Cawtex at Rs 7.37 to Rs 7.44 and Elgins at Rs 18.69 to Rs 19. J. K. Cotton came in for offer at Rs 13.62 against Rs 14.75 quoted in the previous week.

Engineering shares were less active than in the previous week, mainly due to a steady setback in Indian Irons following the disappointing production figures released by the company for April. Against the week-end closing of Rs 22.64, Indian Irons opened lower at Rs 22.56 and receded gradually to Rs 21.92, to finish the week at Rs 22.04. In sympathy, TEXMACO moved down to Rs 23.20 from Rs 24.00 and Guest, Keen, Williams to Rs 33.50 from Rs 34.75. Dalmia Iron turned cheap at Rs 10.30 against Rs 11 with J. K. Steel steady at Rs 15.

Miscellaneous issues followed the general trend of the market. Fol-

lowing were the price trends of a few selected shares:

Read how Pan Am's World-Wide Marketing Service can increase your overseas sales

Recently, Pan Am announced its unique new service for businessmen, the World-Wide Marketing Service. Already shippers have discovered that this service gives them accurate, up-to-date information that may mean the difference between standing still in international markets or getting the jump on their competition.

You can share in the benefits of Pan American's world-wide experience, too. Here's the kind of information Pan Am can give you on any one of 114 trade centres throughout the world:

Expert advice on overseas shipping—on packing, rates, insurance, cartage and routings.

Free marketing facts on economic conditions, customs procedures, currency exchange, and other special information.

Latest news on world markets—with "Horizons," the monthly Clipper Cargo

magazine, published just for shippers.

Simplified documentation—from one source speeds your product all along Pan Am's delivery chain (manufacturer to air-port, overseas, to consignee).

Information about drastically reduced rates. On one route air cargo rates have

been slashed 63%. Attractive new low rates put you into new markets—for new profits—faster!

World-wide representation at no extra cost. Wherever you ship, Pan Am representatives give your product individual attention.

An international viewpoint on the spot! Pan Am personnel, trained to international business methods and local markets, provide world-wide contact service.

One phone call puts you in business abroad! Call your Clipper Cargo agent or local Pan American office in:

Calcutta:
42 Chowringhee, Tel. 44-3251 (5 lines)
New Delhi:
Imperial Hotel, Tel. 47135
Bombay:
Taj Mahal Hotel, Tel. 211063, 211064

INVESTOR'S SUPPLEMENT

Smart Recovery in April

EQUITY prices displayed a steady trend during April with a marked revival of interest especially after the announcement of tax concessions. From the very beginning of the month sentiment rallied on confident expectations that the Finance Minister would abolish the more stringent features of the Super Profits Tax. The concessions were announced in two instalments by Mr Morarji Desai. A major concession pertains to the determination of the capital base for the purposes of the SPT. The development rebate reserves have been allowed to be added to the capital and the next important gain is the decision to allow a deduction on profits chargeable to super profits tax a sum equal to 10 per cent of the total income before payment of any tax in order to meet resources necessary for new development as well as such committed obligations as debt repayments. Such items as now enjoy exemption from income and super tax and the amount of tax saved on account of relief in respect of export profits and manufacturers' sales for export have been allowed to be deducted. Other deductions that have been allowed are dividends, royalties, interests on foreign loans and fees paid to non-residents for technical services. While banking companies have been allowed to deduct amounts credited to reserves, electricity companies have been exempted from the con-

dition regarding creation of reserves. Small companies have been allowed a deduction of a minimum of Rs 50,000 even where this amount is higher than 6 per cent of capital plus reserves. To these concessions were added another concession to the effect that companies will be allowed to carry forward deficiency in profits for the purpose of the SPT in the next three years. The surcharge on income tax on registered firms has been reduced to 10 per cent from 20 per cent while limitation of Rs 5,000 per month allowed as expenses has been made inapplicable to non-Indians. The Finance Minister has also given special concessions to the coal industry with a view to enabling it to forge ahead with its modernisation programme. The development rebate of the industry has been increased from 20 per cent to 35 per cent while the import duty on items of machinery imported by it has also been reduced. Already the Government had announced a guarantee scheme to be operated by the Refinance Corporation to enable the industry to obtain matching rupee finance to take advantage of the World Bank Loan granted to it for the purpose of mechanisation of mines. Although the tax concessions did not fully come up to expectations, the stock market operators greeted

them with enthusiasm and equity prices were pushed up. Bullish fervour had been fanned by the belief that the amended SPT contained several useful concessions that considerably improved the financial position of companies with higher profitability. In the meantime there had been encouraging news from the private sector steel companies in that production during March touched record levels. Moreover, towards the close of the month there were indications that the retention price of steel would be favourably revised. The statement of the Minister for Steel and Heavy Industry to the effect that the private sector steel companies would be allowed to expand during the Fourth Plan period imparted fresh strength to steel shares. It was believed that as no conditions are imposed on the utilisation of the 10 per cent deduction from gross profits in the assessment year 1963-64, the chances of maintenance of dividends for the last year had improved. The fact that all restrictions on trading except the ban on forward trading had been removed also helped freer trading though the rise in equity values was brought about mainly by speculative fervour with the genuine investors remaining on the sidelines.

Sectionwise, coal shares were very prominent as operators were inclined to the belief that with the increase in the development rebate and other concessions recently shown to the industry, the outlook for coal shares had improved. Sentiment had also been aided by the indication that the selling prices of coal would be increased and that an announcement would be made in the near future. Selected jute shares were also in demand following satisfactory dividend announcements by the Andrew Yule group of companies.

Unlike the jute section, the tea section continued to be subdued with no fresh interest. While the concession as regards carryover of deficiency should be of some benefit to the tea industry also, it would appear that investors are unconvinced that prospects for the tea industry have improved even with all the interest evinced by Government in maximising tea exports. As far as the investors are concerned they are mainly interested in the return on their investments and in this respect tea shares offer little encouragement as tea prices are low and the industry is already heavily burdened with a multiplicity of taxes and duties. The sugar section was also in the doldrums with only scattered interest shown in some selected shares for special reasons.

(a) After transferring Rs 162,500 from Dividend Equalisation Fund.

(b) After transferring Rs 385,000 from Dividend Equalisation Reserve and writing back Rs 29,468 from provisions.

(c) After transferring Rs 281,261 from General Reserve.

(d) After transferring Rs 784,586 from General Reserve No. 2; Rs 522,000 Reserve of exempted profits and Rs 358,750 from Dividend Equalisation Reserve.

(e) After transferring Rs 60,000 from Development Rebate Reserve and Rs 90,940 from Rehabilitation Fund.

(f) After transferring Rs 9,800,000 from General Reserve.

(g) Includes Rs 628,716 being provision for contingencies written back.

(h) After transferring Rs 62,000 from General Reserve.

(i) After transferring Rs 1,200,000 from Development Rebate Reserve.

(j) After transferring Rs 329,164 from General Reserve and Rs 41,811 from provision for taxes.

(k) After transferring Rs 400,000 from Development Reserve.

(l) After transferring Rs 142,000 from profit on sale of capital assets.

(m) After transferring Rs 407,298 from General Reserve.

(n) After transferring Rs 150,000 from Deferred Taxation Reserve and Rs 129,559 from provision for taxes made in previous years.

(o) After transferring Rs 1,150,000 from Special Reserve.

(p) After transferring Rs 100,000 from General Reserve.

(q) After transferring Rs 2,500,000 from Dividend Equalisation Reserve; Rs 3,042,276 from provision made in previous years and Rs 1,613,458 from General Reserve.

(r) After transferring Rs 250,000 from Reserve for Deferred Income-tax.

(s) After transferring Rs 4,800,000 from General Reserve and writing back Rs 718,587 from provision in previous years.

(t) After transferring Rs 3,699,880 from General Reserve.

(u) Dividend in the form shares in The Punjab National Bank at one share for every 20 shares held in Bharat Nidhi.

(v) After transferring Rs 110,000 from Reserve Fund.

(w) After writing back Rs 37,643 being provision for taxation and Rs 10,000 being Reserve for Bad and Doubtful debts.

(x) After transferring Rs 114,000 from Reserve for Doubtful Reserve; Rs 31,138 from Investment Reserve and including Rs 129,735 being balance refunds capital from Baraboni Tea Co. and Rs 135,113 being refund of Income-tax.

(y) After transferring Rs 228,256 from Rehabilitation and Expansion Reserve.

(z) After transferring Rs 300,000 from Rehabilitation Reserve; Rs 123,920 from Reserve for taxation and writing back Rs 135,815 from Depreciation Reserve.

(a1) After transferring Rs 500,000 from General Reserve and Rs 1,950,000 from Dividend Reserve.

(a2) After transferring Rs 110,000 from Investment Reserve and including Rs 62,392 being refund of tax and unclaimed balances amounting to Rs 7,585.

(a3) After writing back Rs 32,015 being over provision in previous years.

(a4) After writing back Rs 116,059 from provision for taxation.

(a5) After writing back Rs 315,185 from Fleet Depreciation Reserve.

(a6) After writing back Rs 122,090 being excess provision of Development Rebate Reserve.

(a7) After writing back Rs 1,123,473 being depreciation excess provided in previous years.

(a8) After writing back Rs 300,000 being excess provision for taxation and including Rs 54,971 being refund of pension fund.

(a9) After writing back Rs 300,000 being excess provision for taxation and including Rs 54,971 being refund of pension fund.

(a10) After transferring Rs 1,000,000 from General Reserve; Rs 1,380,000 from Dividend Equalisation Reserve and Rs 540,000 from Deferred Tax Liability.

(a11) After writing back Rs 1,369,956 being excess depreciation provided during previous years.

(a12) After transferring Rs 475,000 from Staff-welfare Reserve and writing back Rs 48,212 being over provision for taxation.

(a13) After transferring Rs 375,000 from Deferred Taxation Reserve.

(a14) After writing back Rs 145,000 being tax provision in previous years and Rs 338,639 being depreciation over provided.

(a15) After transferring Rs 359,000 being surplus in Reserve for Bad and Doubtful Debts.

(a16) After transferring Rs 112,000 from General Reserve and writing back Rs 7,604 being excess depreciation.

(a17) After writing back Rs 550,000 being excess provision for taxation.

(a18) After writing back Rs 983,600 being depreciation excess provided and Rs 166,000 excess provision for liabilities.

(a19) After transferring Rs 700,000 from Dividend Equalisation Reserve.

(a20) After writing back Rs 300,000 being excess provision for taxation and including Rs 54,971 being refund of pension fund.

(a21) After writing back Rs 300,000 being excess provision for taxation and including Rs 54,971 being refund of pension fund.

(a22) After transferring Rs 175,000 from Reserve Fund and writing back Rs 279,283 being Fleet depreciation.

(a23) After transferring Rs 300,000 from General Reserve No. 1.

(a24) After transferring Rs 500,000 from General Fund.

(a25) After transferring Rs 2,400,000 from Mortgage Loan Redemption Reserve.

(a26) After transferring Rs 162,500 from Dividend Equalisation Fund and writing back Rs 1,400,000 from Development Rebate Reserve.

(a27) Includes Rs 105,403 being excess provision written back and Rs 76,246 being Refund of Taxation.

(a28) After writing back Rs 235,503 being taxation over provided in previous year.

(a29) After writing back Rs 322,984 being excess provision in previous years.

(a30) After writing back Rs 1,000,000 being excess development Rebate and Rs 250,000 from Reserve for Deferred Income-tax.

(a31) After transferring Rs 530,000 from General Reserve.

(a32) After transferring Rs 200,000 from Reserve.

(a33) After transferring Rs 700,000 from General Reserve; Rs 250,000 from Dividend Equalisation Reserve; Rs 1,100,000 Revaluation of Stocks Reserve; Rs 700,000 from Development Rebate Reserve; Rs 6,600,000 from Reserve for new mall-project; Rs 3,641,000 from Tax Contingency.

(a34) After transferring Rs 103,930 from General Reserve.

(a35) After writing back Rs 139,449 being Depreciation Rebate and Rs 41,789 being depreciation in respect of previous years.

(a36) After transferring Rs 400,188 from General Reserve No. 2 and writing back Rs 91,865 from excess provision for taxation.

(a37) After writing back Rs 246,263 being excess provision for wealth-tax.

(a38) After transferring Rs 295,102 from Quarry over hang expenses.

(a39) After transferring Rs 500,000 from General Reserve.

(a40) After transferring Rs 200,000 from Bad and Doubtful debts reserve and Rs 708,595 from provision for taxation.

(a41) After transferring Rs 300,000 from provision for taxation.

(a42) After writing back Rs 235,503 being over provision for taxation.

(a43) After transferring Rs 700,000 from General Reserve; Rs 250,000 from Dividend Equalisation Reserve; Rs 1,100,000 Revaluation of Stocks Reserve; Rs 700,000 from Development Rebate Reserve; Rs 6,600,000 from Reserve for new mall-project; Rs 3,641,000 from Tax Contingency.

(a) After transferring Rs 20,638 from General Reserve No. 1.

(b) After transferring Rs 80,000 from provision for contingencies.

(c) It is proposed to capitalise Rs 2,125,300 from General Reserve and issue Bonus shares.

(d) After transferring Rs 50,000 from General Reserve.

(e) After transferring Rs 151,000 from General Reserve.

(f) After transferring Rs 80,100 from Dividend Equalisation Reserve.

(g) After writing back Rs 645,151 being excess provision in previous years.

(h) After transferring Rs 500,000 from Rehabilitation Reserve; Rs 281,943 being excess provision for depreciation; Rs 41,942 being excess provision for bonus and including Rs 18,428 being refund of income-tax.

(i) After transferring Rs 250,491 from General Reserve.

(j) After transferring Rs 250,000 from Dividend Equalisation Reserve.

(k) After transferring Rs 200,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 300,000 from General Reserve.

(m) After transferring Rs 1,425,000 from General Reserve.

(n) After writing back Rs 750,000 from Reserve for Rehabilitation and writing back Rs 7,927 being excess of Excise Duty and Rs 6,946 being excess provision for rates and taxes.

(o) After transferring Rs 2,509,800 from Dividend Equalisation Reserve.

(p) After transferring Rs 1,207,838 from General Reserve.

(q) After transferring Rs 500,000 from Reserve for taxation and Rs 201,988 from General Reserve.

(r) After transferring Rs 580,170 from General Reserve and Rs 47,980 from Investment Reserve.

(s) Includes Rs 947,178 being depreciation adjustment in respect of additional depreciation provided in previous years and Rs 3,100 being excess of Secretaries Remuneration.

(t) After writing back Rs 289,747 being provisions made in previous year.

(u) After transferring Rs 200,000 from General Reserve.

(v) After transferring Rs 320,000 from General Reserve No. 1.

(w) After transferring Rs 113,089 from General Reserve.

(x) After writing back Rs 65,163 being excess provision in previous years.

(y) After transferring Rs 450,000 from Dividend Equalisation Reserve.

(z) After transferring Rs 1,078,000 from General Reserve No. 1.

(a1) After transferring Rs 100,000 from General Reserve and Rs 128,000 from Dividend Equalisation Reserve.

(a2) After transferring Rs 387,627 from General Reserve and Rs 300,000 from other reserve.

(a3) After transferring Rs 300,000 from General Reserve.

(a4) After transferring Rs 308,000 from General Reserve.

(a5) After transferring Rs 40,000 from Dividend Equalisation Reserve and writing back surplus provision of Rs 88,529.

(a6) After transferring Rs 750,000 from General Reserve and Rs 45,088 from excess provision for Bonus.

(a7) After transferring Rs 750,000 from General Reserve and Rs 45,088 from excess provision for Bonus.

The Busy Season That Was

An extremely severe, but not intolerably stringent, busy season has drawn to its close. The mitigating factor has been an upsurge in the Deposit resources of banks, which enabled them to make do with rather less of central banking credit than would have normally been the case. The expansion in Scheduled Banks' Advances in the period between the last Fridays of October and April worked out to over Rs 200 crores, but the burden fell mainly upon banks other than the State Bank. We may infer that not only was the demand for seasonal finance maintained, but that there was an increase in industry's requirements of banking finance, as also that the defence effort would have evoked a further demand upon banks' resources. Fortunately for the banks, there were other developments during the last six months whose cumulative significance was that banks' Deposits rose considerably.

There was, firstly, the governmental expenditures, both for furthering the Third Plan and for

export surplus has an expansionist influence on Deposit resources, especially if the exchange earnings are on private sector account. Since, during the last six-month period, the import restrictions have been very rigid, it is fair to conclude that the increase in the Reserve Bank's foreign assets reflects a rise in foreign exchange earned by the private sector; and bank Deposits would have correspondingly benefited.

In the third place, with the introduction of the scheme for insurance of bank Deposits, confidence has been restored, and resources of banks therefore resumed their uptrend.

As already noted, bank credit expanded by more than Rs 200 crores. We shall here consider separately how the State Bank, on the one hand, and the other Scheduled Banks, on the other, were able to 'finance' such expansion in Advances. The State Bank apparently did not benefit from the Government expenditures. For, while its Advances went up by Rs 43 crores, its Deposits fell by Rs 22 crores. But here we have to remember that the State Bank has been in process of refunding Public Law 480 funds to the Reserve Bank. This phased transfer, which began in July 1960, has meant that the State Bank's normal increase in Deposit resources has been camouflaged by, because it was offset by, the repayment of counterpart fund Deposits. But the transfer during the last busy season is unlikely to have exceeded Rs 30 crores, and hence it would appear that the net rise in Deposits (that is, excluding PL 480 transactions) was not even Rs 10 crores. It therefore became necessary for the State Bank to disinvest in gilt-edged in a big way. The relevant portfolio shows a drop of Rs 68 crores, and so the State Bank can be seen to have found the resources for the expansion in Advances and the repayment of counterpart funds from sales of gilt-edged.

The other Scheduled Banks experienced a rise of Rs 160 crores in the total of their Advances. Though borrowings from the Reserve Bank rose in the middle of the busy season, by its end, thanks to the inflow of Deposits arising from Government's disbursements at the end of the fiscal year, such credit obtained from the central banking institution had been greatly reduced. For, the gross Deposits of the other Scheduled Banks went up during the busy season by Rs 88 crores. Thus, after disinvestment in gilt-edged for Rs 29 crores, the increase in borrowings from the Reserve Bank was no more than Rs 22 crores.

The credit ratio of the State Bank went up from 46.2 per cent at the beginning of the busy season to 55.6 per cent. The increase in the case of the other Scheduled Banks was a more moderate one, from 38.8 per cent to 73.5 per cent. Obviously, the accretions to Deposits prevented the rise in the credit ratio from being too marked in the latter case. But it is important to note that even at the eve of the busy season the credit ratio of the other Scheduled Banks was high.

Credit contraction was already in evidence in the last week of April. So it is possible that the Advances of Scheduled Banks will fall fairly sizeably during the 1963 slack season.

However, we do not know as yet what the impact of the defence effort is going to be on the progress of the slack season. If it exaggerated currency and credit expansion during the busy season, it stands to reason that, equally, the demands of defence will be such that the seasonal contraction in bank Advances will be offset by the rising need to finance defence production.

THE 1962-63 BUSY SEASON.

defence needs. These stand reflected in a record increase of Rs 255.12 crores in Active Note Circulation. That expansion in currency circulation was caused predominantly by governmental disbursements can be inferred from the rise of Rs 314 crores in the Reserve Bank's holdings of Rupee Securities. Part of this increase in the Reserve Bank's investments in gilt-edged was due to sales of securities by banks (in particular the State Bank) for adding to resources with which to meet the busy season demand for Advances. The disinvestment in gilt-edged of the Scheduled Banks added up to Rs 96 crores. But the extent of deficit financing was still heavy, and should have been around Rs 220 crores. Central Government expenditure of this order, through recourse to deficit financing, could not but have an immediate impact upon the Deposits of Scheduled Banks.

In the second place, foreign aid plus exports more than covered the cost of imports during the busy season. As a result the foreign assets held by the Reserve Bank rose by Rs 22 crores. An

Re-Rollers Under Partial Decontrol

THE difficulties faced by units of the steel re-rolling industry, under a system of partial and selective decontrol, have been highlighted by the chairman's speech to the annual meeting of the Steel Re-rolling Mills Association of India held in Delhi last Sunday. While the basic controls are likely to remain, the trend is towards relaxation of the controls and distribution of the materials required by the industry and its finished products. Re-rollable scrap has been decontrolled, even though the Scrap Committee which reported last year had recommended that the control over price and distribution should continue as there was shortage of these materials. The Minister for Steel and Heavy Industries has also indicated that further measures of decontrol are under consideration.

Spokesmen of industries in the private sector should normally be expected to welcome any move towards relaxation of controls. But so long as decontrol cannot be complete and the market economy, which is to take the place of controls in determining production and prices, is subject to various restrictions inherent in a planned economy, partial decontrol is likely to be selective in its impact and may work to the disadvantage of particular sectors of industry.

So we have the paradoxical spectacle of spokesmen of the affected industry opposing particular measures of decontrol. To remind them of the philosophy of free enterprise may be a good debating point, but is no answer to their difficulties. The units of the steel re-rolling industry apprehend that some measures of decontrol would impose severe handicaps on their functioning. For instance, the difficulties would materialise if the price of billets is raised while the price of finished products continues under present restraints. The re-rolling industry would also be handicapped if it is not treated on the same footing in regard to rail freight, Central sales tax etc as the main producers.

Mr Viren J. Shah, who has been elected Chairman of the Steel Re-rolling Mills Association, has pointed out in his speech how the price differentials between the raw materials of the industry and its finished products have worked to its disadvantage. During the last seven years the conversion charge allowed to the industry has been cut on three occasions with the result that it has been reduced from Rs 140 per ton in 1956 to Rs 111 at present, while there has been no change in the price of billets. It has also been pointed out that, when the price of tested billets was raised, there was no corresponding increase in the price of finished products with the result that the margin has been reduced by another two rupees per tonne. Again, when the Excise Duty on billets was increased, no corresponding allowance was made in reckoning the wastage on the higher priced billets. This has led to a further loss of Rs 3 per tonne. In spite of the various handicaps faced by the industry in regard to the availability of materials and prices, the industry has made a good showing. It is expected that the total production during 1962-63 would be of the order of one million tonnes. While it is possible to derive satisfaction from the performance of the industry in difficult conditions, this does not mean that the difficulties faced by the units engaged in re-rolling are not of much account.

Apart from the formal assurance that these difficulties would be considered by the Minis-

try of Iron and Steel, Mr C. Subramaniam did not deal with these specific points in his inaugural address. Nor, in existing circumstances could the industry derive much comfort from his advice to adopt improved technology in order to maintain its position in the steel economy of the country. As the Chairman of the Association has pointed out, the inhibiting conditions of a controlled economy, under which the industry has functioned for over two decades, have prevented extensive modernisation of equipment or effective expansion. The industry has also been severely affected by the persistent shortage of raw materials. Lacking an effective selling organisation, and unable to quote uniform F.O.R. prices, the re-rollers are at a grave disadvantage vis-a-vis the main producers.

It stands to reason that, in a planned economy, Government policy in regard to the re-rolling industry and its response to the representations made on its behalf, should depend on an objective assessment of the role of independent re-rolling units in the steel economy of the future. On this point, Mr Shah has made out an effective case to show that steel re-rollers have a significant role to play, as is borne out by the experience of advanced steel producing countries. He has conclusively shown that, even with the development of the integrated steel plants already in existence, or proposed to be set up, to the limit of their potential, small re-rolling units will still have an important function to perform.

The advantages of the re-rolling units are, low initial capital cost, greater flexibility in operations, a more variegated product-mix than large plants can offer, facility of regional dispersal making for economy in transport and balanced industrial development. Apart from the low initial investment involved in setting up re-rolling units, part of the capital equipment could also be fabricated indigenously saving expenditure of foreign exchange. It will also not be necessary to get costly foreign technical personnel, as the country has sufficient know-how for the operation of re-rolling mills.

The trend in largescale production of steel is to concentrate on a limited range of products which are in wide demand, for with every increase in plant size, the size of the minimum order which the plant could undertake also tends to increase. On the other hand, with growing industrialisation, the demand for steel becomes more diversified. The re-rolling mills have thus an important role to play in meeting the demand for special steels and sections which they can do more economically than the integrated plants, if they are not handicapped by discriminatory measures. In this context it is also necessary to emphasise that, at the present stage when demand for special sections is limited, the re-rollers will not be able to achieve economic working if their operations are confined to the production of special sections. Therefore, as Mr Shah has argued, it is also necessary that re-rollers should be enabled to manufacture merchant sections as well. The future of the re-rolling industry will depend not only on the adoption of improved technology, though that will certainly help, but on the formulation and implementation of an equitable price policy in regard to the materials required by the industry and its products.

Rigid Deposit Rates

By Paul Einzig

In a recent speech the Governor of the Bank of England, Lord Cromer, deplored the inadequate growth of British bank deposits and attributed it to the unduly low deposit rates allowed by the clearing banks. Under a 'gentlemen's agreement' they pay 2 per cent below the Bank rate of the day. It was high enough when the Bank rate was at 7 per cent but it is not very attractive at present. No wonder non-resident depositors prefer to re-deposit their sterling abroad where they can get much higher rates. While in the United States there is a statutory limit to deposit rates, in Bri-

tain the banks would have the remedy in their own hand. They are not very keen on applying it, however, because an increase of their deposit rates would entail a narrowing of their profit margins—unless they raised the rate on their advances to the same extent. That would not suit the official policy at the moment, for the Government wants to stimulate trade expansion with the aid of cheap and plentiful money.

It would of course be possible to retain the rigid rates for domestic deposits and apply more flexible rates to non-resident deposits. During a great part of the inter-war period there was very keen competition for foreign deposits and the rates allowed on them left practically no profit margins, especially during the cheap money period when the yield on Treasury bills was $\frac{1}{2}$ per cent only. Few banks would like to return to that state of affairs, but most foreign managers of clearing banks would welcome some more flexible arrangement in order that they should be able to compete, not so much with each other as with the Euro-sterling market.

In the United States, too, there is a controversy between those who want to retain the official limit to time deposit rates and those who want to remove it. But while in Britain official quarters are for elasticity, in America they are for rigidity. The arguments put forward by American banks in favour of removing Regulation have only been met as far as official foreign deposits are concerned. Privately-owned deposits, domestic or foreign, are paid an artificially low rate and the Government shows no inclination for yielding to pressure by American banks to allow them to raise their deposit rates.

Generally speaking it is true to say that the basic trend is towards more flexible deposit rates, in accordance with ever-changing supply-demand relationship. The emergence and expansion of the Euro-dollar market and of other markets in foreign currency deposits represents a revolt of the banks against official interference with market trends.

World of Finance

UCO BANK

Another Massive Transfer to Reserve

The accounts of the United Commercial Bank Limited for 1962 show that the Rs 100 crore mark in Deposits has been crossed, that profits have been maintained and that the transfer to reserve, though a shade lower than in the previous year, is still massively high.

Deposits and other accounts rose by Rs 6.83 crores to Rs 105.74 crores. This rise has taken place mainly under the higher-costing Fixed Deposits and Savings Bank Deposits. Fixed Deposits have been marked up by Rs 2.83 crores at Rs 57.77 crores, and Savings Bank Deposits have risen by Rs 2.10 crores to Rs 12.99 crores. Current Accounts, etc, show a smaller increase of Rs 1.91 crores to Rs 34.97 crores.

The increase in resources enabled UCO Bank to expand its accommodation to constituents, the total of Advances having risen by Rs 6.87 crores to Rs 71.08 crores. In the process, the credit ratio has been marked up from 64.9 per cent in the 1961 balance-sheet to 67.2 per cent.

The gilt-edged portfolio has also been augmented by Rs 0.69 crore to Rs 33.65 crores. As a result, borrowings rose by Rs 1.43 crores to Rs 4.12 crores, and cash balances, including money at call and short notice, have been added to by Rs 2.58 crores to Rs 11.24 crores.

The gross income of UCO Bank for 1962 rose by Rs 0.72 crore to Rs 6.33 crores. This was made possible wholly by the increase of Rs 0.73 crore to Rs 4.84 crores in the income fetched by interest and discount; and commission, exchange and brokerage earned slightly less at Rs 1.39 crores. But, reflecting the additional expenditure that banks had to incur during 1962 (on salaries and wages, consequent upon the Desai Award; on interest paid, thanks to the increase in Deposits mainly being in the form of Time Deposits; and on rents, taxes and insurance, in respect of premium payable on Deposit insurance), three heads of expenditure have so risen as to wholly offset the rise in income. Interest on Deposits has been marked up by Rs 0.40 crore at Rs 3.01 crores; salaries and allowances have absorbed Rs 0.27 crore more at Rs 1.83 crores; and rents, taxes and insurance have cost Rs 6.15 lakhs more at Rs 24.95 lakhs. As a result, the balance of profit has risen by only the small margin of Rs 0.72 lakh to Rs 73.33 lakhs.

The transfer to the Reserve Fund is Rs 2 lakhs lower at a still massive Rs 28 lakhs, and the Reserve now stands at Rs 3.03 crores against the paid-up capital of Rs 2.33 crores. With the capital issue during the year, and with the transfer to reserve from profit, the capital ratio of UCO Bank has improved substantially from 4.4 per cent to very nearly 5 per cent at 4.98 per cent.

The gratuity trust fund gets Rs 4 lakhs, as in the previous year. The extraordinary expenditure, relating to the donations to the National Defence Fund and the Dr B. C. Roy Memorial Fund totalling Rs 2.15 lakhs, has been shown in the appropriation account. Bonus to staff has been stepped up by Rs 2.50 lakhs to Rs 16.50 lakhs. The dividend is maintained, but, with the pro rata dividend on the new shares, the amount involved in the distribution has risen

slightly from Rs 24 lakhs to Rs 24.50 lakhs. The carry forward at Rs 0.25 lakh is much smaller than the amount brought in of Rs 2.07 lakhs.

It is thus clear that, in a year, when increases in expenditure greatly eroded banks' earnings, UCO Bank has done very satisfactorily indeed.

BANK RETURNS

Sudden Increase in Banks' Borrowings

While the busy season ends notionally with the last Friday in April, the peak of Advances taken from the banking system is usually experienced in the first week in May. That such may have been the case is suggested by the latest banking returns.

Active Note Circulation has, according to the returns of the Reserve Bank for 3 May, risen by Rs 15.90 crores to Rs 2,320.24 crores, and outflow of Rupee Coin has also been sizeable at Rs 2.86 crores. Foreign Securities and Rupee Securities are unchanged at Rs 105.08 crores and Rs 1,996.44 crores respectively, so that the Reserve Bank's cash in the till has been drawn down by Rs 18.76 crores to Rs 14.56 crores.

Pressure upon the banking system is suggested by the rise of Rs 10.69 crores to Rs 41.85 crores in the loans and advances of the Reserve Bank to Scheduled Banks. Beginning of the month expenditure has also meant that the Centre's balances have fallen by Rs 10.62 crores to Rs 51.49 crores. Paradoxically, the State Bank was in a position to effect purchase of securities for about Rs 3 crores; so, the rise of about Rs 4 crores to Rs 202.70 crores in Investments, together with the State Bank purchase, may mean that there has been some deficit financing. Such recourse to deficit financing was apparently of a countervailing nature, in that about Rs 11½ crores of Treasury Bills purchased and discounted by the Reserve Bank matured during the week.

The State Governments' Deposits were also lower by Rs 1.08 crores at Rs 8.08 crores; and besides they added to their borrowings from the Reserve Bank by Rs 4.52 crores to Rs 62.45 crores.

Balances Held Abroad have fallen again, by Rs 1.23 crores to Rs 7.60 crores. Foreign assets in the holding of the Reserve Bank now barely exceed Rs 110 crores.

Notwithstanding the beginning of the month pressure for money, the return of the State Bank for 3 May shows a drop of Rs 3.94 crores to Rs 307.64 crores in the total of Advances. This is accompanied by a fall of Rs 2.00 crores to Rs 558.02 crores in Deposits, thus indicating that constituents drew down their balances. The gilt-edged portfolio has been added to by Rs 3.20 crores, so that the end result is a small increase of Rs 0.36 crore to Rs 23.44 crores in cash balances, including money at call and short notice.

The busy season ended on a satisfactory note for the Scheduled Banks as indicated in their return for 26 April. Though net Demand Deposits were lower by Rs 2.76 crores at Rs 1,007.65 crores this fall was more than offset by the rise of Rs 4.17 crores to Rs 1,232.21 crores in net Time Deposits. If regard is had for the fact that, in the same week, the State Bank suffered a fall of Rs 4.37 crores in Deposits, it will be clear that the accretions to the resources of other Scheduled Banks totalled almost Rs 6 crores. The total of Advances has shrunk by Rs 8.21 crores to below the Rs 1,600 crore mark at Rs 1,596.93 with the quantum traceable to the State Bank being Rs 5½ crores. The gilt-edged portfolio is marked up by Rs 5.74 crores at Rs 614.81 crores, about half being attributable to the State Bank. While borrowings from the Reserve Bank have been cut nominally by Rs 0.70 crore to Rs 31.36 crores, indebtedness to the State Bank stands reduced by Rs 2.74 crores at Rs 17.20 crores. Cash balances, including money at call and short notice, have gone up as a result by Rs 2.12 crores to Rs 197.75 crores.

But the next return of the Scheduled Banks is likely to show a fairly steep increase in the total of Advances.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 7 May, 1963. Total amount offered was Rs. 2,04,00,000. Tenders at Rs. 99.415 per cent and above were accepted in full and those at Rs. 99.410 per cent were allotted approximately 97 per cent. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.354 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 13 May, 1963. Successful tenderers should make payment on Friday, 17 May, 1963 at all centres. Other conditions are as usual.

During the week ended 3 May, 1963, Government of India Treasury Bills for Rs 85,77,25,000 were sold in favour of Reserve Bank of India.

91 days Intermediate Treasury Bills sold from 1 May, 1963 to 4 May, 1963 amounted to Rs 11,25,000.

Notes

ICAC Spotlight on Productivity

The meeting of the International Cotton Advisory Committee held in Bangalore is of topical interest to our country which is presently grappling with the problem of ensuring adequate cotton supply to the textile mills. The deliberations focussed attention on current and prospective cotton situation on an international basis with particular bearing on per acre output, total production, consumption, stocks and prices of cotton. Though some representatives expressed concern at export difficulties, increasing accumulation of stocks and competition from man-made fibre, India's problem hinges on low productivity despite its superiority over others in regard to the area under cotton cultivation. Out of the world's aggregate production of nearly 49.5 million bales from an area of about 84 million acres, India's share hardly comes to about one-tenth though it accounts for approximately one-fourth of the acreage. Further, the per acre yield in India is deplorably at a low of about 112 lbs against the world average of 285 lbs. This poor performance is evidently the result of sticking on to the outmoded agricultural practices. Not that efforts are lacking in modernising

cotton cultivation but the progress made is so insignificant that much remains to be traversed before introducing modern farming operations on a country-wide scale. The dependence of the crop on the vagaries of monsoon is another serious handicap in stepping up production.

Countries like India faced with low productivity can learn a good deal from the proceedings of ICAC as the committee has conducted a probe into the pattern of output, consumption, marketability and the like. Israel delegate's startling statement of his country's record output of two bales of cotton from one acre has evoked the representatives' admiration. This achievement is no doubt obtained by efficiency in productivity which other countries can profitably emulate. While reviewing the cotton situation in India the Textile Commissioner has struck an optimistic note of the feasibility of hitting the Third Plan target of 7 million bales of cotton. The average per acre yield has showed a heartening increase from 83 lbs in the First Plan to 94 lbs in the Second and to 112 lbs in 1960-61. The progress in this sphere has been retarded considerably owing to the difficulties in implementing the package programme. The determination of the authorities to proceed with the scheme in a big way in the remaining years of the current Plan is encouraging. The Government is also contemplating an increase in domestic output of staple length to bridge the gap between the supply and mill demand. Side by side with these programmes, steps should be introduced to grow extra-long staple cotton on a large scale as the bulk of Indian goods exported is manufactured out of this particular variety.

*

HIRE PURCHASE Slow Progress

Hire purchase finance is only playing a very minor role in the economy but it will gain in importance as industrialisation gathers momentum. As it is, it is mainly serving the transport industry with the bulk of credit going to it. Though in recent years more and more articles have been brought within its purview the total credit involved is estimated to be not more than about Rs. 50 crores. Indicative of its growing importance is that hire purchase associations have been formed at a number of centres to tackle common problems faced by financiers. Perhaps it will be a long time before it can reach the dimensions it has reached in some of the western countries. In the UK

hire purchase has taken rapid strides in recent years and during the past one decade hire purchase debt has quadrupled to £1000. A major portion of this debt is on account of household goods, though a sizable portion goes toward acquiring productive facilities. With the improvement in the standard of living of the people in India, the demand for hire purchase finance may grow in coming years. Hire purchase however can even now confer lasting benefit on the community by expanding its facilities to cover the needs of the productive endeavour of the people. It is gratifying to note that it has already made some headway in the sphere of road transport. There is urgent need for increasing road transport facilities as the railways alone cannot be expected to carry the entire tonnage that will have to be carried during the Third Plan. But among the factors that militate against the rapid development of road transport, finance occupies an important place. With necessary finance small operators will be encouraged to enter the road transport business with profit to themselves and the nation at large. It is here that hire purchase can play a valuable role. Hire purchase will be a boon to small entrepreneurs by making it possible for them to acquire the necessary machinery to start their business without much initial capital outlay. Conditions conducive to the vigorous growth of hire purchase agencies, however, are yet to be created. This type of business now largely depends on its own resources and there is little help from Government either. As Mr R. P. Patodia, president of the Hire Purchase Association, Calcutta, has pointed out that the real difficulty is the exact nature and potential of hire purchase have not been appreciated well. Some classify it as a purely credit sale system while others prefer to look upon it as a purely monetary transaction. As a matter of fact, hire purchase is a combination of both credit and financing. It is however encouraging to note that banks are slowly tending to take a helpful view of hire purchase.

It will be idle therefore to expect the private sector to expand production to the extent needed while it is denied the necessary facilities. While the concessions announced by the Finance Minister have certainly reduced the rigour of the original levies, the tax burden continues to be crippling. Mr Wilcox has pointed out that many companies, taking income tax and super profits tax together, now have to part with as much as 70 per cent of their profits. Considerable relief will therefore be needed if the working of the private sector is not to stagnate. Although at one time it appeared the Finance Minister had conceded the demand that the SPT should be scrapped with the Emergency, his subsequent statement that the SPT and compulsory deposits scheme should not be considered as purely emergency measures has revived apprehensions. It is however some consolation that the Finance Minister has made it clear that he will not hesitate to abolish the SPT if it is found to retard corporate expansion.

COCHIN REFINERY
Salient Features

The agreement between the Government of India and the Phillips Petroleum company of US for setting up a refinery at Cochin marks a new stage in the development of the oil industry in this country. Mr K. D. Malaviya, Union Minister for Mines and Oil has made it clear that the private sector will not be allowed to set up new refineries. Evidently what is intended is that further expansion of the oil industry is to be under Government auspices. For, although the Cochin refinery will have private capital participation it is essentially a public sector project.

appear that in framing its policies Government has not paid sufficient attention to ensuring that the private sector is enabled to mobilise resources necessary for its development and expansion. The new taxes together with Government borrowings, contributions to the National Defence Fund and the emergency risk insurance will siphon off an estimated Rs 930 crores from the public and the private sector is understandably concerned about its ability to raise the funds it needs from the already seriously depleted general pool of savings. The fact that allocations to some of the financial agencies such as the Refinance Corporation and the Industrial Financial Corporation have been reduced will make its task further difficult. Besides the stringency of finance, the foreign exchange shortage and the shortage in basic industrial facilities such as power, coal, transport etc. have already resulted in the under utilisation of installed capacity.

COCHIN REFINERY
Salient Features

The new refinery will have a capacity of 2.5 million tons per annum but is capable of expansion upto 3.5 million tons. It is expected to be ready for operation within about 30 months from now. The share capital of Cochin Refineries Limited will be subscribed by the Government of India (51 per cent), Phillips Petroleum (25 per cent) and by its Indian partners, Duncan Brothers Company Limited, Calcutta and the Indian public (24 per cent). The fact that the Government of India will be having the controlling interest is not the only salient feature of the new refinery agreement. In the first place the Cochin refinery is expected to cost much less, Rs 17 crores, than other existing refineries both in the public and private sectors. Besides subscribing its share of the equity capital in dollars, Phillips Petroleum will be responsible for finding the balance of the foreign exchange required to finance construction and operation of the refinery, under terms and conditions acceptable to the Government of India. Other advantageous features of the agreement are that Phillips Petroleum will supply crude at a much cheaper rate than the private sector refineries. It has also agreed to hand over all products other than those for export to the Government of India for internal distribution through its own agencies. It has further undertaken to export the surplus products of its refinery at the best prices available in the world market.

COTTON TEXTILES Problem of Modernisation

The address of Mr D. C. Kothari at annual general meeting of the Southern India Mill-owners' Association held in Coimbatore last week covered familiar ground, but two points raised by the President deserve careful consideration. They relate to the need of rehabilitating and modernising the textile industry and to the insufficient spindle quota allotted to the mills located in the Southern region. The complaint about the spindle allotment to Madras calls for immediate action as the Southern region has specialised in operating medium-sized spinning units to cater to the requirements of handloom weavers. Another disturbing factor to which attention was drawn was the curbs imposed on the consumption of electricity by the textile mills which had culminated in the non-utilisation of the installed capacity to its fullest extent. The imposition of a 30 per cent surcharge on the electricity utilised by the mills, as Mr Kothari has pointed out, will only inflate the cost of production.

On the contrary the problem of rehabilitation of the cotton textile industry is of all-India import and the aspiration for boosting exports

IFC

Investment in India

The International Finance Corporation, an affiliate of the World Bank and Norma-Hoffmann Bearings Company, a division of Universal American Corporation of New York, have agreed to join with Indian and European interests to establish a new industrial company in India. The company, Precision Bearings India Ltd. of Bombay, will manufacture a wide variety of anti-friction ball and roller bearings and components for use in industrial machinery, tractors and vehicles, pumps, motors and other types of engines. The output of the company will help meet the rising demand for bearings in India, occasioned by the growth of manufacturing industry in recent years, and will be a positive element in India's international balance of payments by saving foreign exchange that otherwise would have to be spent on imports of bearings.

The Precision Bearings investment agreement was signed last week in New York, by Martin M. Rosen, Executive Vice President of the International Finance Corporation, by Francis S. Levien, President of Universal American Corporation of New York, and by Dr. Harry M. Day, Chairman of the Executive Committee of Norma-Hoffmann Bearings Company, acting in his capacity as a member of the Board of Precision Bearings India. Harry E. Gould, Chairman of the Board of Universal American Corporation, was present for the occasion.

The originator of the Precision Bearings project is K. P. Joshi & Co. of Bombay, a family partnership established in 1931 which is an importer and distributor of ball and roller bearings in India. The third sponsor, in addition to Norma-Hoffmann Bearings Company and the Joshi company, is East Asiatic India (Private) Ltd., of Bombay, a wholly owned subsidiary of East Asiatic Company Ltd. of Denmark. Additional financing will be provided by the International Finance Corporation, by the privately-owned Industrial Credit and Investment Corporation of India, by the United States Agency for Interna-

tional Development, and by the proceeds of a share offering to the Indian public. Irving International Financing Corporation, an affiliate of Irving Trust Company of New York, is participating in part of the IFC investment.

The Precision Bearings plant will be situated at Baroda, about 300 miles north of Bombay, and is expected to come into operation early next year. Norma-Hoffmann Bearings Company technicians will assist in the planning and construction of the plant, and the American company also will provide an eight-man management and production staff for an initial period of operations. The whole output will be sold in India. Plant capacity will amount to 800,000 bearings a year on a single-shift basis. After the start-up period, however, the plant will run on two shifts, and once the operating personnel has acquired the necessary skills, the plant's output may reach as much as 2,400,000 bearings annually. The plant is designed to produce bearings of ABEC Class 1 quality, the United States standard.

The total cost of the Precision Bearings project is estimated at \$4,800,000, of which \$2,200,000 will be share capital. Norma-Hoffmann Bearings Company will participate in the shares of the new company to the extent of \$630,000, East Asiatic will participate to the extent of \$240,000 and Joshi & Co. \$160,000.

IFC will invest \$900,000 in the new company—\$380,000 in shares and \$520,000 in the form of a loan repayable over a 10-year period. ICICI will invest \$835,000, of which \$105,000 will be in shares, \$520,000 equivalent in a rupee loan and \$210,000, derived from a loan from the United States Agency for International Development, in a foreign-exchange loan. ICICI will also manage the offering to the public of \$590,000 worth of rupee shares, and together with a group of Indian brokerage firms, will underwrite the offering. Short-term loans and an AID loan of rupees from PL 480 counterpart funds will complete the financing.

of cloth will be mere wishful thinking unless our mills are equipped with latest machinery and are able to manufacture goods which could compete favourably in both quality and price in the international markets. The obstacles in the path of modernisation are of an abnormal magnitude. Indigenous manufacture of machinery is considerably restricted and imports on a level commensurate with our requirements are rendered difficult owing to the precarious foreign

exchange position. The estimated cost involved in the modernisation programme amounts to the staggering figure of approximately Rs 1,000 crores and the mills' capacity to undertake such a gigantic programme is evidently limited. At the same time the domestic textile machinery manufacturers are handicapped by the non-availability of sufficient financial resources. The fear expressed by Mr Kasturbhai Lalbhai at Ahmedabad last week about the future of the industry

and its profitability in view of the cost inflation and the pegging of prices will be widely endorsed. Unless sufficient funds are made available to the mills by Government either through the National Industrial Development Corporation or some other financial institutions for rehabilitating and modernising the textile mills they will be compelled to plod on with the rickety and outmoded machinery which will cast adverse repercussions not only on the quality and cost of production but also on export performance.

US

Price Stability

An apparent setback often underlines how well off one really is. This is eloquently exemplified in the latest official report on consumer prices in the United States. This report shows that the consumer price index last month rose to a new high, at 106.2 per cent of the 1957-59 average—a fact that is receiving wide publicity. But this very publicity also is calling attention to the essential stability of US price trends.

The index for March was only one-tenth of one per cent over February's 106.1. This means that a typical assortment of goods and services cost \$10.61 in February and \$10.62 in March. This is hardly a significant drain on consumer budgets—particularly when it is considered that the average weekly earnings of American factory workers rose more than 50 cents during the month. In terms of longer-range trends, moreover, the index has been relatively stable for some time. It stood at 106.1 as long ago as last September, and the March 1963 reading was only 1.1 per cent higher than that of March 1962.

In fact, there has been a remarkable stability of price levels throughout the current economic expansion, dating back to February 1961. In this time, consumer prices have risen little more than two per cent—and this has been due largely to continuing increases in the costs of services rather than goods. The narrow range within which the prices of goods has moved in the past two years is indicated by these figures: Since February 1961, the index of crude non-food materials has risen 1.6 per cent, while the index of wholesale prices, other than farm products and food, actually has declined about 0.5 per cent.

All this indicates the extent to which the inflationary pressures of the early postwar years have eased. In none of the previous upturns since World War I have prices generally held as steady over a two-year period as during this one. With each postwar economic upswing, moreover, the price level has shown an increasing stability. Even the much-noted rise in service costs has been slowing down. The essential stability of present

price trends reflects elimination of the goods shortages that marked the early postwar period, and the existence of abundant productive capacity in the United States. Also acting as restraints on prices are healthy competition for markets at home and abroad, as the American economy and the economies of other free countries have grown substantially, and the increasing "choosiness" of consumers, with their rising incomes and large discretionary buying power, as to value received.

Faced with these factors and with a much-publicized "profit squeeze," American companies have been making considerable progress in increasing their efficiency and providing quality goods at reasonable prices. Even with price levels relatively stable, aggregate business earnings in the United States set a record last year, and are still on the rise. Prices cannot be expected to hold steady all the time, of course, and some fluctuations are bound to occur. But a

two per cent rise over a two-year period hardly qualifies as inflation or as a threat to stability. There is reason to believe, moreover, that the current price trends will continue. US Labour Department officials, for instance, see no further consumer price rise in prospect for April.

JESSOP Fruitful Operation

Jessop and Company Limited can look back upon the past year as one of fruitful operations. Sales during the year under review went up to Rs 12,82.28 lakhs from Rs 12,00.85 lakhs in the previous year. The increase in sales would have been higher but for the non-despatch of goods worth Rs 42.43 lakhs owing to transport difficulties. The profits of the company, after providing for depreciation and taxation were placed at Rs 50.42 lakhs as against Rs 70.20 lakhs. The decline in profits is

evidently due to the additional provision of Rs 27.12 lakhs for super profits tax, which works out approximately to 17.38 per cent of the gross profit. Apart from this, the company which had serious deprecations in the past on financial resources has turned the corner and has regained its position as a leading manufacturing unit in the country. This achievement, as the Chairman of the Company Mr A. K. Chanda has stated, should largely be ascribed to the mobilisation of its exiguous resources in reconstructing its production potential. However the shareholders will find financial position quite encouraging.

During the year under review the 130 ft extension to the Coach Works in Dum Dum was completed. Jessop is now engaged in the manufacture of bogies for EMU coaches which had hitherto been imported. The progress of new works to specialise on the production of diesel road rollers was retarded considerably owing to the

paucity of essential materials like cement, corrugated sheets and stone chips. But the works went into production on 6 February this year thereby increasing the company's production capacity. Besides, the tempo of production of completely furnished metre gauge passenger coaches was well maintained. Similarly the production of Box wagon reached the target of 80 numbers per month and the throughput of electric overhead travelling cranes and wharf cranes also went up.

However the company has had its own difficulties. The expansion programme is clouded by the burdensome taxation and the shortage of matching steel is posing a grave problem to the production schedule. In addition to this, the shortage of welding electrodes is not only adversely affecting the company's production but also all engineering concerns. Unless Government adopts suitable measures a good per centage of installed capacity will be rendered idle.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

A gasp of relief is in order, now that a memorable session of the Lok Sabha has drawn to its close. We have had excitement a-plenty, but unfortunately it has all been of the undesirable sort, with blood pressures reaching unhealthily high levels. I have little appetite to hash over what happened in Parliament during these past few months, but it is a chore, however reluctant I may feel about doing it, that cannot (or should I say, may not?) be avoided. For a start, at least as regards the ground I hope to cover this week, we may consider the furore over the super profit tax. A more dispassionate view can now be taken, what with the concessions and reliefs the Finance Minister announced in this regard. After all debate is done, the unpalatable truth remains that even in its amended form the tax is bad: by levying the tax on all profit above specified limits, Mr Desai causes the greater sufferers to be the more efficient amongst us. By implication there is a premium on the spendthrifts rather than on the thrifty. The urge to venture-someness in the corporate sector will have been dulled. Foreign investors, always a shy breed, may even become an extinct species (almost) in this country. I know personally that when the tax was proposed in its original form some foreign enterprisers were not only disposed to jettison expansion programmes but also, like the Arab, to fold up their tents and steal silently away. What may sustain the development is the hope that the super profit tax will be purely temporary. Did not the Expenditure Tax disappear? Weren't the taxes on dividends repealed? Wasn't a cut effected in the taxation of bonus issues? Why not, therefore, anticipate that so undesirable in every way a tax as super profit tax will almost certainly be an ephemeral levy?

I rather suspect, unfortunately, that we may have to bear with the SPT for some time longer than just a year or two. It is easy enough for new taxes to be proposed; but, like bad habits, they are hard. There is, for example, the amour propre of the proposer of such taxes; there is, again, the mood and sentiment of a Parliament which apparently believes that the so-called rich can be soaked for ever. A furore greets every tax concession in favour of industry—as indeed we saw when Mr Desai declared the reliefs he

intended to provide in respect of the SPT. The trouble is, bad taxes never die; but of course they sometimes fade away.

How is it that there was such a gross error in the Finance Ministry's estimate of realisations from the SPT? The various figures appertaining to collections under this tax are bewildering in their range. The Budget estimate was Rs 25 crores; the stock markets were quick to suggest figures from Rs 70 crores (the most conservative) to Rs 125 crores. Later on the Finance Minister himself gave the impression that he expected Rs 30 crores to Rs 35 crores. And, finally, we have the concessions after which, it may be emphasised, the tax is expected to fetch Rs 20 crores. So, what is the extent of the concessions? Not, obviously, the Rs 5 crores constituted by the difference between Budget estimate and the figure announced by the Finance Minister at the time he yielded the concessions. Not even, I think, a figure of Rs 10 crores to Rs 15 crores that we could get by subtracting his final estimate of Rs 20 crores from his revised and earlier expectation of Rs 30 crores to Rs 35 crores. Much nearer the mark will be something like Rs 40 crores to Rs 50 crores. But this relief is wholly on paper. Receipts that Government in its Budget had not anticipated to get will, as a result of the concessions, just fail to materialise. The second bit of unpleasantness, thus, is the chronic habit that the Finance Ministry has got into of underestimating revenues. If miscalculations are responsible, there is little to be said—except perhaps that the calibre of accountancy leaves much to be desired. But if the underestimation is deliberate, I am afraid the whole thing merely engenders irritation and indignation all round.

Then we have had the Sera-juddin shock. Not connected, but on similar lines, we have had the dirty linen washed with pomp and ceremony in the matter of the Vivian Bose study of the Dalmia-Jain affairs. Was all this a sign of the waning of the sense of urgency about the emergency? For, how else are we to interpret this preoccupation of Parliament with unpalatable matters far removed from the defence of the country and the effort needed in this behalf? Where there is con-

State Government departments, please note: don't be in a hurry to appoint translators and interpreters. With or without Parliament's blessing, we may take it that English may (in the meaning, again, of shall) continue.

Are Mr Nelson Rockefeller's aspirations, to be the next Republican Presidential candidate, now kaput? It did not much help 'Rocky' when he was divorced some time ago, but in getting re-elected Governor of New York last November by a handsome margin, he showed that he was still capable of attracting the popular vote, that divorce did not necessarily mean that the Republican nomination would be denied to him. After all, there was the precedent already set, with Mr Adlai Stevenson as one whose marriage had ended in divorce twice getting the Democratic nomination. But Mr Stevenson did not re-marry, and that precisely is what Mr Rockefeller has done; and to complicate matters his new bride herself is a divorcee. What Mr Rockefeller may have counted upon, in taking what was undoubtedly a calculated risk, is the changed mood of America. In 1962 for the first time a Catholic was elected President; divorce is not so uncommon in that country; and he may consider that he will not have greatly alienated the electorate. Mr Kennedy used his mass popularity, together with a brilliant series of political tactics, to gain both the Democratic nomination and later his election to the highest office in America. Mr Rockefeller will need to do some politicking of his own, if he is to achieve, as Mr Kennedy did, a break-through. But he would do well to remember that for Edward VIII abdication and Mrs Simpson went hand in hand.

(From Our New Delhi Correspondent)

Accent on Technology

The question of ownership has ceased to have relevance to the efficiency of production of steel: what matters is Technology, said Mr C. Subramaniam, Minister for Steel & Heavy Industries, while inaugurating the annual meeting of the Steel Re-rolling Mills Association of India here, last Sunday. He was led to this conclusion by what he had seen of the progress of the steel industry under two different systems during his recent visit to Austria and West Germany. The experience of Austria he said, was of great significance. All steel plants in this country except one were in the public sector. Most of the coal requirements were being imported from neighbouring countries. The industry was also importing coal of low ash content from America to the extent of 10 per cent of its requirements for blending with other coals, as they found it advantageous to do so for efficient operations. As regards iron ore, the maximum iron content of the local ore, of which there were ample supplies, was only 28 per cent. In spite of all these handicaps, the steel industry in Austria had made good progress, and was competing with the steel industries of West Germany, France etc in European markets.

The steel industry in the public sector, said Mr Subramaniam, was functioning effectively and efficiently in Austria. On the other hand, in West Germany there was a free market economy. There was no public sector at all in steel. Here also the steel industry was functioning efficiently and growing more and more. What impressed him most during his visit was the rapid growth of steel technology and the advanced techniques adopted in both countries, which was the secret of their success. This impression was reinforced by his visit to the Hanover Fair which showed the direction in which the world was moving. In India also, he said, we should take lessons from the countries that have developed their steel industry and adopt advanced techniques. Unless we have the latest technology, he said, we cannot progress either in the private sector or in the public sector. The fact that a country is underdeveloped does not mean that it should follow underdeveloped techniques. There was no special advantage in choosing out-of-date methods in preference to the latest technology. In either case it would be neces-

sary to train the workers. And he exhorted the steel re-rolling industry to be on the alert to adopt new techniques even if they were more costly. In future, the rolling mills will have to compete with the integrated steel plants, and their survival therefore depended on their readiness to adapt their techniques to modern requirements. The Minister was speaking with reference to a point raised in the Chairman's address about the place of re-rollers in the steel economy of the future. And he suggested that the units in the industry should pool their resources to create the conditions for the adoption of improved techniques.

Regarding the decontrol of scrap and the difficulties which the industry is facing as a consequence, to which also a reference was made in the Chairman's address, Mr Subramaniam said that it was an experimental measure. Government was trying to move in the direction of decontrol and it was its view that it may be advantageous in the present circumstances. With a large number of re-rolling units coming up in different parts of the country, it had become difficult to ensure equitable distribution of the available supplies of re-rollable scrap under a system of controlled prices. Decontrol, he felt, would act as an incentive to greater efficiency, though some of the less efficient units may be forced to close down. He could not agree to a system which, in the effort to make supplies available at controlled prices, would deny supplies to units which are not members of the Association. He, however, added that Government had an open mind on the question, and gave the assurance that, if it was found that decontrol had created serious difficulties for the industry, prestige would not stand in the way of re-tracing the step.

Progress of Steel Expansion

In a written answer to a question in Rajya Sabha last week, the Minister for Steel and Heavy Industries gave details of the progress made in the implementation of the programme for expansion of steel producing capacity. For the operation of the expansion programmes of the steel plants in the Public Sector, it is estimated that 614 engineers and 10,500 Operatives and Skilled Workers are required. Out of 10,500 Operatives and Skilled Workers, it is expected that fifty per cent might be drawn from amongst the construc-

tion personnel with little or no training. The remaining fifty per cent technical personnel will be recruited and trained for which arrangements are in hand.

As regards the progress of the expansion programmes of individual plants, it was stated that a credit contract has been signed with the USSR organisation for supply of equipment, structural steel works, refractories etc from USSR for the Bhilai plant, whose capacity is being expanded to 2.5 million tons. Government approval for the award of civil engineering contracts has already been given. Consignments of equipment etc are arriving progressively from USSR under the credit contract. At present 35 Soviet experts have arrived at Bhilai to assist in the construction of the expanded plant.

The capacity of the Rourkela plant is to be expanded to 1.8 million ingot tons. Tenders for all additional plant and equipment required for expansion of the plant have been received and examined. In respect of nearly all major items, letters of intent have been issued to the successful tenderers. Firm contracts will be concluded by Hindustan Steel with these firms shortly.

The capacity of the Durgapur plant is being expanded to 1.6 million tons. Tenders for all items have already been invited. Tenders for all except one item have been opened. It is expected that all orders, except for sintering plant, would be placed by the end of this month. The expansion work is expected to be completed by the end of 1965.

The production capacity of the Mysore Iron & Steel Works Ltd. is being expanded from 35,000 to 100,000 tonnes per annum. Most of the equipment required for the expansion has already been imported. Government has also decided in principle to convert the Mysore Iron & Steel Works for the production of Alloy & Special Steels. The capacity of the special steels production will be about 77,000 tonnes. The conversion programme is expected to be completed by the end of the Third Plan period.

In the private sector Government has approved proposals for the phased expansion of steel production of the IISCO at Burnpur from one million tonnes to 1.3 million tonnes.

Bokaro Hopes

A detailed answer made by Mr C. Subramaniam to a short notice question in Lok Sabha last week about the Bokaro plant indicates that he is still hopeful that the plant will be set up in the public sector and with American assistance. So far as he had been able to ascertain from authoritative sources, there was no statement by AID that a decision on Bokaro had been postponed indefinitely, as reported or interpreted by some newspapers in India. The U.S. Team's report, he said, is generally favourable and provides the basic data on which the Agency for International Development can take a decision on the project. He also said that, prima facie, the estimated capital

costs are high and the phasing too prolonged. These, however, were matters for which he felt that satisfactory answers could be found after discussion. As matters stand, he said, there is no room for pessimism. He had no doubt that, with the goodwill that exists on both sides, satisfactory solutions could be found for many questions that have been or will be raised. In any case, so far as the Government of India is concerned, Bokaro is an urgent necessity and it has taken a final decision that the plant will be in the public sector. Mr Subramaniam expressed the hope that 'realising this, our American friends will communicate to us very early their final decision regarding this project.'

Trade Agreements

Indo-Yugoslav trade talks, which commenced here on April 24, concluded with the signing on May 4 of a Five-Year Trade Agreement which provides for increase of trade between the two countries from the present level of Rs 30 crores both ways to approximately Rs 60 crores by the end of 1966, i.e., in the first three years covered by the agreement. The trade plan for the remaining two years of the agreement and any increase in each of the first three years will be under continuous review by official representatives of the two countries.

A five year trade agreement with Soviet Russia will be signed by Mr Manubhai Shah, Minister for International Trade, when he visits Moscow early next month. The details of the agreement have already been finalised in discussions with the Russian Trade Delegation which came to Delhi last month. It is expected that the Indo Soviet Trade agreement will be programmed for raising the present level of Indo Soviet trade to Rs 100 crores each way, and India will be able to export for the first time a large volume of Indian manufactured goods.

Before going to Moscow, Mr Manubhai Shah will be spending three days, from May 29 to June 1, in Budapest to negotiate the broad framework of the Indo Hungarian Five Year Trade Pact for which preliminary discussions have been held in Delhi over the last few weeks. The agreement is expected to be signed in New Delhi after the detailed discussions have taken place in Budapest.

The visits to Budapest and Moscow will occupy the last lap of Mr Shah's European tour. He will be leaving Delhi this week to attend the four-day Commonwealth Trade Ministers' Conference in London. He will later attend the Gatt Ministerial Conference in Geneva between May 16 and 22. He will also take the opportunity of his visit to Europe to meet representatives of the European Common Market Commission and also visit the capitals of the member countries to meet the government representatives for discussions on the problems of India's trade with the Common Market. Mr Shah shared with newsmen last week his impression that Dr Hallstein's visit to this country had done a lot of good in creating a helpful atmosphere for appreciation of India's problems and aspirations.

Markets

JUTE Outlook for Hessian

Active conditions prevailed in the jute goods market last week with interest mainly concentrated on ready delivery positions. Of the two principal sections, hessian was prominent encountering sustained covering presumably on account of the recent business in hessian bags with Russia. Part of the earlier enthusiasm appeared to have stemmed from the expectation that jute goods stocks at the end of April would show a sizable decline over the previous month's figure. But the stock figures released by the IJMA on Wednesday showed that there had been only a nominal overall fall. Total stocks at the end of April are placed at 90,900 tonnes as against 91,000 tonnes at the end of March. The fall has solely been in hessian stocks which are lower by 700 tonnes at 29,000 tonnes. Sacking stocks are higher by 200 tonnes at 45,000 tonnes while stocks of other goods have gone up by 400 tonnes to be placed at 16,900 tonnes. Although the stock figures have come as a disappointment to the market, the undertone continues to be steady as the expectation is that hessian will find good support

in coming weeks. It is believed that the prospects for an expansion in hessian exports are quite bright. The Jute Bulletin of the Indian Central Jute Committee in the course of a review of the jute goods trade during April has pointed out that demand for hessian especially has every chance of going up. It says that Russia which is already taking active interest in the Indian market is likely to increase its offtake of hessian in the future under the new Indo-Soviet trade agreement. There is every possibility that Russia will sooner or later emerge as a major buyer of Indian jute goods and in this regard it is to be noted that now that our jute industry is planning to participate in Soviet industrial exhibitions our jute goods will be known better in that country than hitherto.

The Jute Bulletin has also pointed out that India's hessian sale prospects in the UK may also improve in view of the recent abrogation of the British trade price agreements. The cancellation of the common minimum selling prices will, according to the Bulletin, stimulate a degree of free competition never known in Dundee and district since the War. The higher efficiency associated with competition will make for lower prices of Dundee goods if also some contraction of the industry due to the eventual weeding out of the inefficient units. With a downward adjustment of prices on free

market and a drop in the internal manufacture, opines the Bulletin, some relaxation of the import control along with appreciable reduction of the current 'mark up' on landed prices of imported Hessians is considered possible. The Bulletin however notes that a great deal will depend on how the British Board of Trade fashions its protective apparatus in the light of the Restrictive Trade Practices Court's verdict.

Trading during the past week in the jute goods market was marked by brisk covering especially in the ready and near delivery positions. With the business in hessian bag from Russia, there had been small enquiries from the US and Argentina. With the proximity of the publication of the stock figures operators were quite optimistic about the business done during April. But the stock figures somewhat chilled the enthusiasm but earlier gains in rates did not suffer much diminution. This is presumably due to expectations of further business from Russia. It is also possible that operators have taken into their calculation the revival of apprehensions about power cut in the Calcutta and industrial regions as a consequence of fall in output at the CESC. While Hessians were a strong feature throughout the week sacking too improved somewhat in sympathy.

The recovery noticeable in the raw jute market in earlier dealings proved shortlived as sustained interest from mills was not forthcoming. The earlier steadiness stemmed from mills' purchase on account of the compulsory purchase quota issued by the Jute Commissioner for the current month. The main weakness of the jute market is based on the fact that much of the jute that is on offer is of low quality and hence not wanted generally by the mills who are however in need of quality jute. Demand continues to be good for good quality jute and the prices are also above the prescribed minima. It is only with regard to the low quality jute there is difficulty in finding buyers at the minima. Holders are understandably anxious to dispose off their low quality jute stocks in view of the growing belief that the next jute crop will be a bumper one. Conditions have been exceptionally favourable for the new crop so far and although some concern has come to be felt lately about the progress of the crop on account of the continued untimely rains in the growing regions, the outlook for the coming crop is assessed to be quite good. It will not be surprising if the next jute season also has plentiful supply of jute.

TEA

Good Demand

IN the Dust sale held in Calcutta this week, offerings were 29,445 packages. There was a good demand at easier rates. Medium CTC descriptions were quite well supported at prices, which were generally easier except for the selected small and powdery teas which were sold well. The strong enquiry prevalent in recent weeks for good CTC types was somewhat weaker and, although well absorbed, this category was irregular and often easier. Selected lines were, however, firm to dearer.

Plain orthodox dusts opened at a discount and eased further as the sale progressed. Towards the close, however, a hardening trend was evident. "Tea for price" was once again a strong feature. The Assam varieties were well supported; but prices were again easier. The good liquoring invoices were firm and sometimes dearer. The limited quantity of leggcuts, on offer, were sold at generally easier rates. Following rates were quoted:—Plain Orthodox Dust Rs 4.25 to Rs 4.45; Medium Assam Dust Rs 4.50 to Rs 5.30; Leggcut Dust not quotable; Medium Assam CTC Dust Rs 5.30 to Rs 5.70 and Good Assam CTC Dust Rs 6.60 to Rs 7.20.

In the Cochin market, a quantity of 270,000 kilograms of Dusts was offered for internal consumption. Against a fair general demand, Low Mediums and Mediums were well supported; but they were irregularly 10 nP to 15 nP a kilo easier at the beginning of the sale and declined further towards the close. Coloury mediums met with good enquiry and were sold at firm rates. High-grown met with less support and were generally lower, while clean black-leaf descriptions were sold around last week's rates. Unorthodox descriptions were irregular and were sold at lower rates, particularly CTC types.

In the Coonoor market, a quantity of 55,774 kilograms of tea from 57 estates in Nilgiris were offered. There was fairly good demand at rates easier by 20 nP to 30 nP a kilo.

Tea stocks in London, as on 26 April, amounted to 166.35 million pounds as against only 163.30 million pounds in the previous week. The total amount to be landed on the same date was 11.87 million pounds. Total afloat was 22.45 million pounds including from Calcutta 3.46 million pounds; from Chittagong nil; from Cochin 2.90 million pounds; from Ceylon 12.81 million pounds and from other Ports 4.09 million pounds. The average price realised at the auction during the week under review was 47.93d per pound as against 47.85d in the previous week and 52.62d a year ago.

Reports from Pakistan show that the opening of the 1963 season is about normal. Outturn during March was given at 422,000 pounds as compared with 290,000 pounds in the corresponding month of last year.

Tea sold at the Chittagong auctions during March was recorded at a little over 3 million pounds; but the quantity despatches to West Pakistan alone during that month was reported at nearly 4½ million pounds.

THE UNITED

COMMERCIAL BANK LIMITED

Regd. Office : 2, India Exchange Place, Calcutta-1

THE UNITED

COMMERCIAL BANK LIMITED

Regd. Office : 2, India Exchange Place, Calcutta-1

The Directors have pleasure in submitting their Twentieth Annual Report together with the Accounts of the Bank for the year ended 31st December, 1962.

The net profit for the year, after providing for taxes and for all known and anticipated charges and including Rs. 2,07,428=92 brought forward from the previous account, amounts to

Rs. 75,40,063=91

The Directors have contributed Rs. 2,00,000 to the National Defence Fund, Rs. 15,000 to Dr. B. C. Roy Memorial Fund, transferred Rs. 20,00,000 to the Reserve Fund and Rs. 4,00,000 to the Charity Trust Fund and provided Rs. 16,50,000 for bonus to staff. They now recommend the payment of dividend as follows:

On 4,00,000 Old Shares at Rs. 6=00 per share, less tax

Rs. 24,00,000=00

On 79,220 New Shares in respect of which application moneys were received on or before 1st October, 1962 at Rs. 0=375 per share, less tax

Rs. 29,707=50

On 80,780 New Shares in respect of which application moneys were received after 1st October, 1962 at Rs. 0=25 per share, less tax

Rs. 20,195=00

1. CAPITAL:

Authorised Capital: 8,00,000 shares of Rs. 100 each

8,00,00,000 00

Issued Capital: 6,00,000 shares of Rs. 100 each

6,00,00,000 00

Subscribed Capital: 5,60,000 shares of Rs. 100 each

5,60,00,000 00

Amount Called up: 5,60,000 shares at Rs. 50 per share

2,80,00,000 00

Less calls payable on or before 31-1-1963 in respect of new shares

56,66,062 50

2,23,33,937 50

2. RESERVE FUND AND OTHER RESERVES:

(a) Reserve Fund

2,63,00,000 00

(b) Share Premium Account

all of which have run off by 20-4-1963.

(v) Forward Exchange Contracts outstanding for the purchase and sale of Bills and Telegraphic Transfers

Rs. 21,06,58,809 38

of which upto 24-4-1963 Rs. 15,22,37,593=36 have been delivered.

NOTES: (1) There is a liability for outstanding bills, not certified by the architects, in respect of the Bank's buildings.

(2) Provision in full for gratuity accruing on retirement of staff has not been made.

Carried over

1,59,39,11,624 07

REPORT OF THE DIRECTORS

which will absorb Rs. 24,49,902=50, leaving an unappropriated balance of Rs. 25,151=41 to be carried forward.

Pursuant to the Resolutions passed at the General Meeting of the Shareholders held on 11th July, 1962, 2,00,000 shares of the Bank were offered for subscription in cash at a premium of Rs. 25 per share.

Applications were received for 1,60,000 shares which were allotted in full. After crediting the premium of Rs. 40,00,000 to the share premium account, the Reserve Fund and other Reserves of the Bank stand at Rs. 2,23,33,937=50. The Paid-up Capital stands increased to Rs. 2,23,33,937=50 and will further rise to Rs. 2,80,00,000 when the allotted moneys payable on or before the 31st January, 1963, are received.

The working of the Bank during the year was satisfactory with deposits totalling the Rs. 100 crore mark to stand at Rs. 103,74 crores. Since the close of the financial year to which this report relates banking business in the Union of Burma has been nationalised with effect from February 23, 1963 and the branches of the Bank at Rangoon, Mandalay and Moulmein have been taken over by the Banking Business Nationalisation Committee. The Government have authorised the repayment of foreign Head Office capital of K.500,000 originally brought into Burma and have announced that compensation will be given for buildings and fixed assets taken over after deduction of liabilities, if any.

During the year branches of the Bank were opened at Bangalore Cantonment, Sandhurst Road (Bombay), Defence Colony (New Delhi), Jamshedpur, Chornu, Nadiad, Chetput (Madras) Advay (Madras), Mirza Ismail Road (Jaipur), Sikar, Rohik and Hissar and the office at Chittagong (East Pakistan) was closed.

The Directors are thankful to the Shareholders and the clients of the Bank for their continued support. They also express their gratitude to the Bank's Advisers and Advisory Committees for their able help and guidance.

The Directors place on record their appreciation of the services of the General Manager and the Officers and Staff of the Bank during the year.

Mr. Surenk Kasturbhai, who was appointed an additional Director under Article 84 of the Bank's Articles of Association and, being eligible, offers himself for election. Mr. M. L. Shah re-enters by rotation under Article 92 of the Bank's Articles. Association Mr. G. D. Kothari and Mr. M. R. Ruia, being eligible, offer themselves for re-appointment. Mr. G. L. Bangur and Mr. M. L. Shah, who have attained the age of 66 years are not seeking re-appointment. The Board accepted their decision with regret and wish to place on record their appreciation of the valuable services rendered by them during their period of office.

Notices have been received from some members of the Board to propose at the forthcoming Annual General Meeting that Mr. Rang Nath Bangur and Mr. Govardandas Binani be appointed Directors in the vacancies thus caused and the Directors recommend their appointment.

The Shareholders are requested to appoint Auditors for the current year and to fix their remuneration.

On behalf of the Board,

G. D. BIRLA,

Chairman.

Calcutta, 22nd April, 1963.

REPORT OF THE AUDITORS'

TO THE MEMBERS OF THE UNITED COMMERCIAL BANK LIMITED.
We have audited the attached Balance-sheet of The United Commercial Bank Limited as at 31st December, 1962 and the Profit and Loss Account of the Bank for the year ended upon the date annexed thereto, in which are incorporated the Branch returns audited by the Statutory or other Auditors. The reports on the accounts of the Branches and other Auditors have been forwarded to us and dealt with in preparing our report in the manner considered necessary by us.

We report that:

- (a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- (b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
- (c) in our opinion, proper books of account, as required by law, have been kept by the Bank so far as appears from our examination of those books, and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank; the Bank's Balance-sheet and Profit and Loss Account, dealt with by this report, are in agreement with the books of account and the returns;
- (d) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and, on such basis, the said Balance-sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1962, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

**COTTON
Sharp Break in
Futures**

The Bombay cotton futures market suffered further reverse during the past week consequent on heavy bull liquidation. The sharp break in futures can also be attributed to the upward revision of the current season's crop estimate to 54 lakh bales and the slackness in mill demand for ready cotton. The apprehension of more tenders being issued to the maturing May contract also adversely affected the sentiment. All these led to sizeable switch over of business from the maturing contract to Jarilla August contract with the latter quoting at a premium of Rs. 7.00. During the week under review the May contract slipped down by Rs. 17.00 to Rs. 715.00 per three quintals and the August contract by Rs. 10.00 to Rs. 722.00.

The May contract which opened the week at Rs. 718.00 ruled somewhat steady in initial deals. Subsequently it drifted downward to Rs. 710.50 when 450 bales were tendered on the first notice day. Besides the transfer of business from May contract to August contract also pushed the prices down. However, toward the close of the week it staged a recovery to finish at Rs. 715.00 per three quintals.

Conditions in the spot market at Sewri were quiet with the spinner interest tapering off to a great extent. Spinner covering was confined to immediate requirements and the prices tended to be relatively easy. Scattered business in quality cotton on a restricted scale was reported.

In the import section moderate enquiry was noted in Egyptian and Sudan growths for July shipments. Stray business was done in East African and American cotton for prompt and nearby shipments.

According to a provisional estimate the current season's cotton production in Uganda has gone up by 9,200 bales. The report of the Agricultural Department puts this season's crop at approximately 347,500 bales and the figure may be higher when the final report will be published toward the end of this month. Purchases of cotton at ginneries and stores by the end of March were placed at 332,715 bales and the grade of cotton was found generally satisfactory.

The import of cotton textile by the UK from China is progressively increasing. In March 1963 total imports of cotton amounted to 4,146,000 square yards compared with 984,000 in the same period last year. Import of cotton cloth from countries like Pakistan, Hongkong and Taiwan also showed an upturn. Shipment of grey cloth and finished goods to the UK went up

smartly from 2,159,030, 5,982,000 and 819,000 square yards respectively in March last year to 4,521,300, 7,386,000 and 1,722,000 square yards. Total import to the UK at 55,604,000 square yards in March showed little variation from the February figure.

Export of cotton yarn and thread from the UK during the month under review looked up to 1,996,471 lbs from 1,35,000 lbs in the previous month and 1,816,366 lbs in March 1962. Shipments of cotton fabric at 20,916,000 square yards worth 2,919,099 sterling were lower than 21,815,000 square yards valued at 3,086,565 sterling in the same month last year.

The production of cotton textiles by the mills in India during the first quarter of 1963 amounted to 1,181 million yards as against 1,249 million yards in the relevant quarter in the previous year. The manufacture of yarn in the quarter under review also showed a slight decline to 466 million yards from 476 million yards produced in the first quarter of 1962. On the contrary, the stocks with the mills have increased to 332,000 bales. Unsold stocks went up to 191,000 bales from 180,800 bales while stocks sold but not lifted rose to 141,300 bales from 120,300 bales. Similarly the unsold stocks of yarn registered a sharp increase to 37,600 bales of 400 lbs each from 32,800 bales.

Export of cotton piecegoods in the first quarter of this year totalled 132.1 million yards worth Rs. 9.3 crores against 127.27 million yards valued at Rs. 10.02 crores in the corresponding quarter in 1962. These figures indicate that the average price realised has fallen down from 80 nP per yard to 70 nP in the first quarter of this year. Shipments in March 1963 are provisionally put at 44.75 million yards worth Rs. 3.4 crores compared with 39.52 million yards worth Rs. 2.5 crores in February last and 34.59 million yards valued at Rs. 2.8 crores in the same month in 1962.

**Pepper Market
Weak**

LACK of foreign enquiries and local buying support are reflected in the prices of Pepper in the Cochín market, where the rate is quoted lower at Rs. 290 per quintal for ready position and Rs. 298.00 Rs. 303 for May delivery. There are hardly any indications either from New York or from the Communist countries of a revival of imports. The American importers continue to quote 32½ cents per pound against the offers at 33½ cents from the Indian shippers. The rate in Singapore is quoted around 32½ cents. It may be noted that Singapore is continuously quoting lower and securing good business

from America, while India is raising its prices without putting through any business. This apart, the local demand, too, is at a low ebb. Even the stray enquiries that used to pour in from North Indian traders, are not noticed lately.

Indian shippers are, however, hopeful that American buyers will again enter the market and that, too, in a big way as the present stock position in the USA is not reported to be satisfactory and the chances of that country getting its supplies from Indonesia and Sarawak are uncertain in view of the recent political developments and some other factors including a smaller crop in Sarawak.

Market circles believe that Russia and its allies in East Europe may take larger quantities of pepper from India in view of the upward revision of mutual trade between these countries and India. According to some trade estimate, more than 50 per cent of the Indian crop has already been marketed. Exports during the first five months of the current season are placed at 9,000 tons. The current Indian crop is slightly less than last season's at 30,000 tons.

COFFEE**Shipments Up**

Reports from Cochín indicate that the 1963-64 Coffee crop may be better than this season's, but may not reach the 1960-61 record of 67,000 tonnes. Unless the weather upsets present calculations, planting opinion believes that a crop of 56,000 tonnes may be harvested. It may have been even more but for the premature blossom showers in parts of Mysore.

Exports of coffee from India rose sharply to 900,000 kg in March from 500,000 kg in the previous month. Earnings from exports also increased from Rs. 12.9 lakhs in February to Rs. 37.33 lakhs in March. In March last year, 1 million kg of coffee, valued at Rs. 39.99 lakhs, were exported. In the first quarter of this year, however, exports are lower at 2.4 million kg, valued at Rs. 84.54 lakhs, as against 3.5 million kg worth Rs. 1.26 crores in the corresponding period of last year.

The proposed meeting of the Coffee Agreement countries will be held on 16 or 17 May 1963 to consider the latest position of the International Agreement. Ratification may take a little longer, especially by importing countries. Some complaints have risen on the ground that Brazil is violating the spirit of the Agreement by offering bonuses and discounts. A short-term quota may be agreed upon before the long-term agreement is ratified by all countries and long-term quotas are fixed. There is some likelihood of coffee from Commonwealth countries being allowed into ECM countries duty free for reciprocal concessions for associated members of the ECM in Britain. India stands to gain much by this arrangement, as Indian coffee will have a better chance to compete with African growers in Western Europe.

**NON-FERROUS METALS
Mixed Trends in
Prices**

A mixed tendency in prices was noticed on the Bombay Non-Ferrous Metals market. Tin shot up to scale a new peak of Rs. 330 per 10 kg. Continued tight supply position and increasing offtake from mofussil centres are the contributory factors. The entire needs of the country are being met through imports. The progressive cut in the quotas to established importers, the imposition of a 3½ per cent margin of profit over the landed cost since April 1962, the blanket cut of 56 per cent since the first week of June last year and the canalisation of imports of the metal through the State Trading Corporation—all these factors led to a steep upward trend in prices.

The world situation of tin has also shown the same upward trend. Although world production has improved, consumption has gone up faster and the deficit has now widened from 3,000 long tons in 1958 to 14,000 long tons in 1962. This is expected to continue this year also. Naturally, the rate for the metal, which was quoted at £734.9sh in 1958, has now reached a level of £900 per ton.

Among other non-ferrous metals, Lead maintained its strength. There was, however, a marked tendency on the part of dealers in copper and zinc to unload their stocks, mainly under the stress of monetary stringency. Scraps and sheets also displayed weakness owing to more offerings and less enquiry for purchases.

SUGAR**Temporary
Shortage**

According to the Union Deputy Minister for Food and Agriculture, the shortage of sugar, now experienced in various parts of the country following the promulgation of the Sugar Control Order, will only be temporary. He says that, when new stocks from the factories reach the shops and greater control over distribution is exercised, the situation will improve. He points out that there is more than a lakh tons of sugar with the trade when the Control Order was issued last month and this had been purchased at higher prices than the controlled rate fixed by the Government. Quick steps are, therefore, taken at the State level to ensure proper distribution of sugar at the controlled price.

The US Department of Agriculture, Washington, has estimated that world consumption will probably exceed this year's production by about 3 million tons. Stocks at the beginning of the 1963 crushing season are likely to be about 3 million short tons lower than those a year earlier. In 1962-63, consumption exceeded production for the first time since

the 1956-57 season. This trend is to continue in the 1963-64 season.

YARN Better Trend

In the Bombay market, Yarn prices have registered a moderate improvement. Almost all the indigenous and imported yarns have appreciated moderately owing to encouraging demand. The market for Staple-fibre yarn rules steady. Demand is, however, far from satisfactory and traders anticipate a fall in prices in the absence an improvement in demand. In the cotton yarn section 30s and 40s remain unchanged, although 60s and 80s have gained about Rs 1.50 per pound.

Spinners of Art Silk yarn have urged the Textile Commissioner to remove the distribution and price controls on their product. Spinners are, however, willing to supply to actual users, as at present, one-third of their production at reduced prices under the Export Promotion Scheme. This idea finds favour with a section of the weaving industry. Decontrol is considered in these quarters as a remedy to the distribution problem.

Spinners are reported to have pointed out to the Textile Commissioner that the production of finer deniers is not possible unless the industry is provided with the necessary balancing and other equipment. In this connection, the Textile Commissioner is understood to have called upon the supply data on requirements of foreign machinery.

GOLD & SILVER Gold Prices Shoot Up

The recent upward trend in Gold prices has gathered momentum with the prices rising to a new high level of Rs 115 per 10 gms. The total gain, during the past one month, has amounted to about Rs 15 per 10 gms. Sovereign has advanced from Rs 69 to Rs 81 during the same period.

The sharp spurt in the metal is attributed mainly to the sustained pressure of demand on the limited stocks. The swift increase in the production of ornaments of 14-carat gold has generated a steady pressure on the market. The making of 14-carat ornaments is believed to yield a high level of profit and this has induced a larger offtake. The general opinion in the market is, that the present firm spell may well continue till the end of June by which time the marriage season is expected to end.

World prices for silver, now dearer than at any time since 1920, are expected to go still higher in London this year unless the United States steps in to

check the boom. Leading bullion dealers in London have, in this connection, stated that American action is now inevitable and silver will be sold out of official United States hoards at a good deal above the present price.

OILS & OILSEEDS Groundnut Firm: Castor Quiet

Divergent trends were witnessed on the Bombay Oilseeds Exchange. While the prices of Groundnut improved modestly, those of castor and linseed were seeking lower levels.

Trading in the Groundnut section was highlighted by aggressive support in the spot section where a prominent manufacturer of vanaspathi figured as a consistent buyer of groundnut oil. Ready Bold was quoted at Rs 45.50 and Groundnut Oil at Rs 17.40.

Trading in the Castorseed section reflected a hesitant tendency, as arrivals were fairly large at 1,000 to 1,200 bags a day. On the other hand, the export trade continued to be listless with Indian prices maintaining the disparity in relation to the foreign levels. Ready Castor was quoted at Rs 31.50 and Castor Oil, commercial quality, at Rs 12.85.

According to the final forecast, the estimated total area and production of castorseed for 1962-63 in the Mysore State are 96,000 acres and 11,000 tons respectively as against the revised estimates of 97,000 acres and 10,000 tons for the previous year. Tumkur, Mysore and Chitaldrug districts account for more than 50 per cent of the area and production in the State. The All-India estimates of area and production, during 1962-63, are 1,097,000 acres and 101,000 tons. Mysore State accounts for 8.75 per cent in area and 10.29 per cent in production.

In the Linseed section, price movements were mostly influenced by North Indian advices in respect of rapeseed. The supplies of new linseed were somewhat inadequate in the beginning; but there were indications towards the end of the week that the producers were gradually releasing the new crop. Linseed ready was quoted at Rs 35.80 and Linseed Oil at Rs 14.

The Government of India has decided to release limited quotas of linseed oilcake and coconut oilcake for export outside India to all permissible destinations excluding South Africa, South-West Africa and Tibet region of China during April 1963 to March 1964. The exports against these quotas will be licensed freely by all shippers without any restriction on maximum shipment by an individual shipper. Licensing will continue to be done on shipping bills supported by documentary evidence of valid firm sale contract.

JESSOP & CO. LTD.

Notice is hereby given that in compliance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, the Board of Management has sanctioned the payment of an Interim Dividend on 5% Cumulative Preference Shares for the half year ending 30th April, 1963, at the rate of Rs 3.25 per share subject to deduction of tax in accordance with the Finance Act currently in force.

The Preference Share Transfer Register will be closed from 20th May 1963 to 23rd May 1963 both days inclusive.

Dividends will be paid only to the Shareholders whose names are registered in the Books of the Company on the 23rd May, 1963 or to their Mandatees.

By ORDER OF THE BOARD,

K. S. BASU
 SECRETARY

63, Netaji Subhas Road,
 Calcutta, 6th May, 1963.

For the Investor

INVESTMENT GOSSIP Recession

Even as the recent buoyancy has been the making of speculative fervour, the current subdued phase is largely due to the unloading by tired bulls. The belief that the Government will shortly lift the ban on forwarding trading in shares in response to the recommendation by some of the stock exchanges, is supposed to be main motive force behind the present recession but it is not difficult to discern the fact that the recovery movement lacked from its very inception the support from genuine investors who find no great attraction in equities in view of the removal of the ban on forward trading in shares. For one thing there may be speculative selling and it is anybody's guess what will happen to the market if there is excessive short selling—a development that cannot be entirely ruled out in view of the sharp rise in equity values since the announcement of the tax concessions. For another, many operators have deemed it prudent to adopt a cautious attitude in view of the proposals to make available to the public certain important information about the fortnightly settlement and to accord official recognition to the badla rates.

Contributory influences to the reactionary trend are the stringent conditions in the money market following the announcement of the Central loans and the diminishing enthusiasm in some of the recently active sections. Encouraged by the higher dividends from some companies, the jute section has lately witnessed some expansion in business with selected shares in the lime light. The outlook in the current year for the jute industry is still rather obscure although indications are that atleast hessian goods will have a good foreign market what with the entry of Russia as a big buyer and the possibility of increasing business from the UK. It is also expected that the US will maintain its offtake atleast at last year's level in view of the attractive price of hessian. But both opera-

tors and investors are finding it difficult to take an optimistic view of jute mills' earnings in the current year as there is no knowing how sacking exports will fare in the context of the growing competition from Pakistan. Similarly, the interest in coal shares has also proved shortlived as the main interest of the investor lies in assessing prospects of increased return. While the assistance that has been recently given to the industry will certainly go a long way toward aiding it to expand production, its profits will be determined mainly by the price at which it is allowed to sell coal to consumers. On this score there has been no news so far.

NEW ISSUE NOTES Jay Shree Tea

Jay Shree Tea & Industries Limited has been implementing a programme of expansion for the past few years and it is expected that there will be a further increase in earnings when the new units come into production. In order to find the necessary funds for completing the expansion schemes and to reduce borrowings from the bankers, the directors of the company have decided to issue additional capital for Rs 24.80 lakhs in Preference shares of Rs 100 each, carrying interest at 9.3 per cent gross. The whole of the issue has been underwritten. These shares will be redeemable, at par, on 31 December 1973. The subscription list will open on 17 May and close on 24 May or earlier, but not before 21 May, 1963. A sum of Rs 50 a share is payable on application and the remaining Rs 50 in such call or calls to be made not earlier than three months after the date of allotment. Considering the company's past record and present earning capacity, the present issue should merit the attention of the investing public. An industrial licence has been obtained for putting up a hardboard plant in Madhya Pradesh and efforts are being made to get the approval of the Central Government for the import of plant and machinery for this project.

Phosphate Company

The phosphate Company Limited will soon issue further capital of Rs 9 lakhs, divided into 9,000 Ordinary shares of Rs 100 each, at par, as rights shares to the existing shareholders in the ratio of two new shares for every five shares held. These new

shares will be issued to those shareholders whose names stand on the register of the company as on 25 May and will rank pari passu in all respects with the existing shares except that they shall not participate in the dividend for the financial year ended 30 June 1962. A sum of Rs 50 is payable on application and the balance in two instalments of Rs 25 each.

South India Steel

In supersession of consent accorded previously, the South India Steel and Sugars Limited Madras, will raise capital of Rs 73,83,000/- consisting of equity shares of the value of Rs 57,33,000/- and 9.3% preference shares of Rs 16,50,000/-. All the shares will be issued for cash, at par, to the public.

Madras Rubber

MADRAS RUBBER FACTORY LIMITED is to issue further equity capital of Rs 62,50,000/- for cash, at par.

Kashmir Ceramics

Kashmir Ceramics Limited, incorporated in Jammu and Kashmir State, is issuing share capital of Rs 50 lakhs in equity shares of Rs 100/- each, partly for cash and partly for consideration other than cash. Out of this issue,

JENSON AND NICHOLSON (INDIA) LIMITED.

NOTICE is hereby given that the Annual General Meeting of Members of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Tuesday, 21st May, 1963 at 11 a.m., for the following purposes:—

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December, 1962 and the Balance Sheet as at that date.
2. To declare Dividends.
3. To elect a Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 15th to 21st May, 1963.

By Order of the Board,

K. S. REGUNATHAN??
 Secretary.

2, Fairlie Place,
 Calcutta, 9th April, 1963.

NOTE: A member entitled to attend and vote at the above Meeting may appoint a proxy to attend and vote instead of him. A proxy need not also be a Member of the Company.

49% of the issue will be subscribed by the State Government of Jammu & Kashmir.

True Tools

True Tools Limited, Madras, is raising equity capital of Rs 50 lakhs in shares of Rs 100/- each for cash, at par.

J. & P. Coats

J & P Coats (India) Private Limited, Bombay, will issue further capital of Rs 36 lakhs in equity shares of Rs 100/- each for cash, at par. The entire issue will be allotted to J & P Coats Limited, Glasgow.

OOFL

Ownership Offices & Flats Limited, a company proposed to be incorporated in West Bengal, is to issue capital of Rs 70 lakhs, divided into 3,00,000 equity shares of Rs 10/- each, 1000 Mortgage Redeemable Debentures Stock 1974 in stocks of Rs 1000/- each at 7% interest and 30,000 Non-mortgage debenture stock in stocks of Rs 100/- each at 7% interest with right of conversion into into ownership of flats.

INVESTMENT NOTES TISCO

The production figures, released by the Tata Iron & Steel Company Limited for April, are not satisfactory, perhaps due to the shorter working month. The output of Saleable Steel has declined to 122,000 metric tons from 133,100 tons in March, while Steel Ingots to 161,700 tons from 164,800 tons. The output of Pig Iron is slightly higher at 161,600 tons against 154,400 tons.

Jeewanlal

Jeewanlal (1929) Limited has done better in the year 1962. The net profit, before taxation and after depreciation, has risen to Rs 16.14 lakhs from Rs 14.15 lakhs. The provision for Taxation is higher at Rs 8.82 lakhs against Rs 6.36 lakhs. The Ordinary dividend has been maintained at 10.5 per cent, subject to tax. An interim dividend of 5½ per cent, taxable, has already been paid.

Philips India

Philips India Limited has produced excellent working results for 1962. Following the increase in the profit from Rs 68.20 lakhs to Rs 1.20 crores, the company has been able to raise the dividend from 12 to 13 per cent, subject to tax. The company has been permitted by the Government to manufacture tungsten and molybdenum wire and tungsten coils, which have been entirely imported. In order to obtain funds, the company has been authorised by the Government to issue rights Ord-

nary shares for Rs 16.66 lakhs at a premium of Rs 5 per share. The non-resident shareholders will be offered to the existing shareholders and the balance will be offered to the existing shareholders.

*

INVESTMENT BRIEFS

The United Flour Mills Company Limited has reduced the dividend from 10 to 7.5 per cent, taxable, for the year ended 30 November 1962.

Kumergode Estates Limited has proposed to issue bonus shares to the existing shareholders in the ratio of one share for every two share held, subject to the sanction of the Controller of Capital Issues.

Manimala Estates Limited has again skipped the dividend for the year 1962.

The British India Corporation Limited has raised the dividend from 35 nP to 45 nP per share, taxable, for 1962.

Aspinwall & Company (Travancore) Limited has skipped the dividend for 1962 as against a taxable dividend of 4 per cent paid for 1961.

The New India Industries Limited has announced one equity bonus share for every 10 shares held.

Virudhunagar Textiles Limited has reduced the dividend from 10 to 6 per cent, taxable, for 1962.

Thamarapally Rubber Company Limited has reduced the dividend from 18 to 16 per cent, taxable, for 1962.

Alcock Ashdown Company Limited has proposed a net dividend of Rs 14.59 per share for 1962 as against a net dividend of Rs 16.92 per share, for the preceding year.

*

BALANCE-SHEET BRIEF

The working of Guest, Keen, William Limited has resulted in a lower net profit of Rs 71.96 lakhs for 1962 as against Rs 73.76 lakhs for the preceding year, mainly due to a higher provision for taxation. The total dividend is maintained at Rs 1.40 per share, subject to tax. This is payable on or after 18 June, 1963.

Dharamsi Morarji Chemicals Company Limited has reported a higher net profit before providing for depreciation and taxation, of Rs 29.74 lakhs for 1962 as against Rs 22.64 lakhs for the preceding year. The directors have proposed to pay a dividend of Rs 8 per share on the equity capital out of General Reserve No. 2, which is credited with tax-exempted profits. It is, therefore, expected that no tax will be payable on the whole of the dividend that will be distributed to the shareholders.

The net profit of Kothari Textiles Limited is slightly lower at Rs 26.26 lakhs for 1962 as against Rs 29.41 lakhs for 1961. The dividend is, however, maintained at 8 per cent, taxable.

Adoni Spinning & Weaving Company Limited has reported a net profit of only Rs 16.62 lakhs for 1962 as against Rs 18.66 lakhs. The dividend is, however, maintained at 8 per cent, taxable.

*

BALANCE SHEET REVIEWS Textile Results

Mafatlat Fine Spinning & Manufacturing Company Limited has been able to report a small increase in the net profit, before depreciation and taxation, to Rs 62.15 lakhs for 1962 from Rs 58.04 lakhs for the previous year, thanks to the rise in sales from Rs 2.84 crores to Rs 3.09 crores. The amount set aside to Depreciation is higher at Rs 17.58 lakhs against Rs 15.51 lakhs; Taxation at Rs 18.65 lakhs against 16.63 lakhs and Development Rebate Reserve at Rs 4.30 lakhs against Rs 4.30 lakhs against Rs 3.97 lakhs. There is an additional provision towards Taxation in respect of 1961 to the extent of Rs 86,088 (nil). The transfer to Dividend Equalisation Reserve is Rs 75,000 (Rs 1 lakh). The dividend on the Ordinary shares is maintained at Rs 30 per share, subject to tax.

Although the Sassoon Spinning & Weaving Company Limited has shown a rise in sales from Rs 6.41 crores to Rs 6.86 crores, the net profit is lower at Rs 64.49 lakhs against Rs 75.87 lakhs. In respect of allocations, a sum of Rs 27.36 lakhs (Rs 23.17 lakhs) is provided for Depreciation; Rs 15.97 lakhs (Rs 20.54 lakhs) for Taxation; Rs 1.75 lakhs (Rs 41,439) for additional taxation; Rs 8.39 lakhs (Rs 10.61 lakhs) for Development Rebate Reserve and Rs 3.75 lakhs (Rs 6.00 lakhs) for General Reserve. It is decided to issue bonus shares in the proportion of two shares for every 29 shares held, while the dividend on the Ordinary shares is reduced to Re 1 from Rs 2 per share, subject to deduction of tax.

The Standard Mills Company Limited has, however, reported a marked decline in the net profit from Rs 166.51 lakhs to Rs 112.08 lakhs despite a rise in sales from Rs 9.50 crores to Rs 10.05 crores, mainly due to higher working expenses. In respect of allocations, Depreciation is raised to Rs 38.49 lakhs from Rs 34.04 lakhs and Development Rebate Reserve to Rs 13.73 lakhs from Rs 7.76 lakhs. Taxation provision is, however, lower at Rs 36.15 lakhs against Rs 64.05 lakhs. An additional provision of Rs 6.49 lakhs is set apart for taxation in respect of 1961. Previously, the General Reserve got Rs 10 lakhs and Dividend Equalisation Reserve Rs 15 lakhs. Even for making the latest appropriations, it has been found necessary to transfer Rs 12.50 lakhs from Development Rebate Reserve against Rs 3.81 lakhs, being refund of income-tax, etc., on the last occasion. The dividend on the equity shares has been reduced to Rs 20 per

share from Rs 25 per share, subject to tax.

Shri Ambica Mills Limited of Ahmedabad has recommended a dividend of Rs 40 per share, less tax, for 1962. The proposed dividend is payable on the capital increased by the issue of bonus shares. The company, which skipped dividend last year in view of the bonus issue, paid Rs 50 a share, less tax, for 1960. The gross profit is lower at Rs 1.50 crores against Rs 1.60 crores in the previous year, as sales have declined by Rs 34 lakhs to Rs 5.55 crores. Taxation gets Rs 68.20 lakhs, including Rs 7 lakhs for SPT, against Rs 65.20 lakhs. Other allocations are:— 7.73 lakhs for managing agents' commission (Rs 8.34 lakhs); Rs 15.15 lakhs for Depreciation (Rs 14.49 lakhs); Rs 4.67 lakhs for Development Rebate Reserve (Rs 2.70 lakhs); Rs 6.80 lakhs for donation (Rs 1.46 lakhs); and Rs 13.53 lakhs for General Reserve (Rs 53 lakhs).

The Buckingham & Carnatic Company Limited has not been very badly affected by SPT, because of a large capital base and a fairly high exemption limit for purpose of chargeable profits. Even so, with slightly lower earnings, it has been necessary to provide a much large sum of Rs 55.29 lakhs (Rs 46.60 lakhs) for Taxation. As the liability towards SPT has been calculated on the basis of the Bill, the actual charge may be less.

The net profit of the company for 1962, before providing for Depreciation and Taxation, is slightly lower at Rs 150 lakhs against Rs 151.74 lakhs. The provision for Depreciation is higher at Rs 47.48 lakhs against Rs 45.14 lakhs, while Development Rebate Reserve is lower at Rs 5 lakhs against Rs 6.52 lakhs. Provisions for Debenture Redemption Reserve is lowered to Rs 5 lakhs from Rs 6.50 lakhs and General Reserve to Rs 8 lakhs from Rs 12.80 lakhs. The dividend is maintained at 18 per cent, taxable. Sales are shown at Rs 13.23 crores against Rs 12.36 crores.

During the year, Debenture stock to the face value of Rs 19.63 lakhs was purchased and cancelled and an amount equivalent to the face value of stock cancelled was transferred from Debenture Redemption Fund to General Reserve.

Sivananda Mills Limited has done very well in 1962, there being a sharp increase in the net profit, before depreciation and taxation, to Rs 18.31 lakhs from Rs 11.65 lakhs in the preceding year. The provision for taxation is sharply higher at Rs 12.60 lakhs against Rs 5.3 lakhs. The transfer to Reserve is only Rs 2 lakhs against Rs 3.50 lakhs. The dividend is maintained at 26 per cent, taxable.

Andhra Cement Pays Less

Andhra Cement Company Limited has reported a higher net profit of Rs 23.81 lakhs (before providing for depreciation and taxation) for 1962 as against Rs 20.66 lakhs for 1961. The allocation to Depreciation is

lower at Rs 9.39 lakhs against Rs 9.86 lakhs, while that for Taxation (including SPT) is raised to Rs 7.88 lakhs from Rs 3.50 lakhs. In order to pay even a lower dividend of 9 per cent, taxable, against 10 per cent, taxable, the directors have been compelled to transfer a sum of Rs 1.05 lakhs from Reserves. On the last occasion, the appropriations were facilitated by the refund of income-tax relief under Section 150 in respect of previous years and transfers from Reserves, amounting in all to Rs 4.85 lakhs.

Rajgarh Tea Earns More

Thanks to a record crop of 2,307 quintals against 2,166 quintals and the rise in the average price realised from Rs 5.31 to Rs 6.35 per kg, the Rajgarh Tea Company Limited has been able to report a net profit, after providing for depreciation and taxation, of Rs 1.38 lakhs for 1962 against Rs 1.05 lakhs for the previous year. The Depreciation amount is raised to Rs 71,147 from Rs 63,633; Taxation to Rs 2.25 lakhs from Rs 80,000 and General Reserve to Rs 40,000 from Rs 25,000. The provision for Development Rebate Reserve is lower at Rs 330 against Rs 614. The dividend is raised from Rs 1.35 to Rs 1.75 per share, subject to tax.

Basmatia Tea Pays Rs 2 Against Rs 2.50

The working of the Basmatia Tea Company Limited has, however, resulted in a lower net profit of Rs 1.52 lakhs against Rs 2.69 lakhs, reflecting the drop in the crop output from a record of 3,136 quintals to 2,868 quintals. The net profit would have been much lower, but for the increase in the average price from Rs 6.01 to Rs 6.60 per kg. Depreciation is raised to Rs 1.09 lakhs from Rs 89,311 and Taxation to Rs 2.42 lakhs from Rs 1.70 lakhs, while Development Rebate Reserve is lower at Rs 600 against Rs 4,586. The dividend is reduced to Rs 2.00 from Rs 2.50 per share, subject to tax.

Lower Profits for Bharat Nidhi

According to the directors' report, the working of Bharat Nidhi Limited has been affected by the cessation of receipt of insurance agency commission, the company having confined its principal business to that of an investment company. Income from investments is shown at Rs 19.30 lakhs against Rs 21.16 lakhs, while the profit, after depreciation and taxation, works out to only Rs 13.48 lakhs against Rs 16.90 lakhs. Apart from providing Rs 13 lakhs for General Reserve, Depreciation is lowered to Rs 914 from Rs 1,312. Taxation provision is also lower at Rs 3.18 lakhs against Rs 4.10 lakhs. Provision has not been made for SPT in view of the company's pending application to the Central Board of Revenue for exemption from this special levy. The dividend on the ordinary shares is reduced from 8.58 per cent to 6 per cent, less tax.

STOCK EXCHANGES

Lethargic Conditions

Watch-Dog Writes:

STOCK markets have been ruling generally quiet during the week under review. In the absence of any incentive, operators are reluctant to go in for new commitments and prices have remained vulnerable owing to the tendency to take short-term profits.

Lyons Range presented a subdued appearance with prices recording fresh lower levels for the week.

On the eve of settlement, Dalal Street ruled quietly steady.

Turnover on the Ahmedabad Stock Exchange was restricted and the undertone remained subdued.

Prices on the Indore Stock Exchange declined sizably due to heavy liquidation.

Quiet conditions prevailed on the Delhi Stock Exchange.

On the Madras Stock Exchange, prices showed a mixed trend. Selected planting scrips received better enquiry.

The Bangalore Stock Exchange passed through another dull session.

After a promising start, prices on the London Stock Exchange gave way under the influence of the rail strike threat and the Council election results.

The firmness of a few shares was the feature of trading on Wall Street.

CALCUTTA

LYONS RANGE witnessed quieter conditions during the past week in the absence of encouraging developments, while lower Bombay advices also depressed sentiment. Even encouraging corporate news such as the excellent results of the jute mills in Andrew Yule group, higher dividend recommended by Philips India and the interim from Alkali Chemicals failed to stimulate sentiment. As a matter of fact, turnover showed further contraction, especially in the clearing shares.

Apart from the fact that the recent upward trend was not backed by support from genuine investors and that sentiment was rather upset over the near-term political outlook, bull operators thought that any further lifting up of prices by them would be dangerous for the market. They were, therefore, inclined to consolidate their position before entering into fresh commitments.

Moreover, there was no tangible evidence to suggest that the tax concessions would enable the companies to pay even a reasonable dividend. In this respect, the latest reports of several com-

panies had revealed that their capacity to plough back funds into the business was considerably retarded. Doubts were also expressed about the market's ability to withstand any selling pressure in the event of a resumption of normal forward trading. It was also feared that the shortage of credit would be aggravated during the coming months in view of the recent Government loans. Above all, developments on the political front were not considered to be conducive to bullish enthusiasm.

Gilt-edged securities ruled generally steady with short-dated loans having a strong demand; but sellers were rather reserved. The demand, especially for securities with maturity up to 1967, was reported to have remained unsatisfied. Interest was shown in some of the State Loans, which also showed a rising tendency. The volume of business was, however, restricted owing to reduced offerings. 3 per cent 1966 Conversion Loan moved narrowly between Rs 63.45 and Rs 63.55.

Bank shares remained generally steady with Punjab National changing hands at Rs 19.12 to Rs 19.25. UCO were taken up to Rs 72.

Jute shares came in for only selective support. As the near-term outlook was considered to be bearish rather than bullish, there was a general disposition to book profits at bulges. An exceptional feature was Anglo-India, which hardened further to Rs 228 from Rs 225. Delta were enquired up to Rs 157 following the excellent results produced by the company. Ganges changed hands at Rs 13.37 to Rs 13.69; India at Rs 18 and New Central at Rs 11.69 to Rs 12. Reliance, after touching a low of Rs 9.50 from Rs 10.44, recovered towards the close to Rs 11.50 on rumours of a possible change-over in management.

Coal shares developed a slightly reactionary tendency from the

recent high levels on fears that the overall demand for the commodity had started declining. Bengal touched at one time a high of Rs 299; Amalgamated Rs 23 and New Beerbhoom Rs 19.50, to close finally at Rs 286; Rs 22.81 and Rs 19.37 respectively. Western Bengal were rather cheap at Rs 9.19 against Rs 9.44.

There were only few dealings in the Tea section. Operators seemed to be inclined to await the working results of some more tea companies before entering into fresh commitments. Hasimara turned quiet at Rs 12.56 against Rs 13.25, while Gohpur were taken up to Rs 14.81 from Rs 14.50 and Huldibari up to Rs 12.75 from Rs 12.62.

In the absence of encouraging advices from the cloth front, Textiles met with only limited interest. After a long time, Cavtex came in for business at Rs 6.75 with Elgins moving between Rs 18.56 and Rs 18.87 and J. K. Cotton between Rs 14.81 and Rs 14.94.

Sugar shares were neglected. Activity in the Engineering section was mostly influenced by the price movements in Indian Irons which, in turn, were subjected to alternate buying and selling. After opening steady at Rs 22.42, the scrip receded gradually to Rs 21.96 before finishing the week better at Rs 22.08. TEXMACO moved down to Rs 23.45 from Rs 24.10 and G. K. Williams to Rs 33.69 Rs 34.62, to quote finally at Rs 23.55 and Rs 33.75 respectively. Binani Metal came in for offer at Rs 10.16 against Rs 10.56 with Britannia almost maintained at Rs 16. Jessop were taken up to Rs 22.32 from Rs 21.69, although the closing rate was slightly lower at Rs 22.12.

Miscellaneous issues followed the general trend of the market, as will be clear from the price trends:—

Bokaro Prospects

President Kennedy's unequivocal declaration in favour of US aid for a public sector steel plant at Bokaro should hearten those in India and the US who were beginning to wonder about the prospects of such aid. There have been many in both countries who have been predicting with, in the words of Ambassador Galbraith, "something almost approaching pleasure" the unlikelihood of US assistance for publicly owned enterprises. President Kennedy's declaration shows that, whatever the views of the US Congress, the US Administration is convinced of the sound logic of this Indo-American venture. There has been a general impression in recent months that the first fine careless rapture of New Frontier Idealism has lost some of its elan in the several inconclusive encounters with Congressional obduracy. In Bokaro two of the most inveterate Congressional prejudices—that against foreign aid and that against the public sector—combined. It was therefore feared the Administration may, as in its pursuit of many other Kennedy ideas, buckle under. In the event, however, Mr Kennedy has come out clearly in favour of the project.

Mr Kennedy's arguments should dispel much of the interested polemical smokescreen clouding the issues. The Clay Committee's report has been used by some to blast the chances of US aid to Bokaro. It was argued that the idea offended the principle enunciated therein to the effect American aid should not be extended to any large-scale public sector undertaking likely to compete with similar enterprises in the private sector. He has pointed out that as far ahead as one can foresee demand for steel in India is likely to be so insatiable that there is no danger of public sector steel plants becoming a serious cause for worry for the private sector plants. The American team that reported on the feasibility of Bokaro has found that the demand for steel would be nearly seven, eleven, and seventeen million metric tons in 1966, 1971 and 1976 respectively; and without Bokaro the shortfalls in supply would be 1.3, 2.6 and 5.9 million metric tons respectively. Even after the Bokaro plant attains its maximum capacity, the deficit in terms of the products it is designed for—flat products—will be about two million tons in 1980. Thus, the fantasy of Bokaro starving the shareholders of IISCO and TISCO is too ridiculous to be entertained in serious discussion. The position has been accepted even by leaders of the private sector steel plants in this country.

Mr Kennedy pointed out that Bokaro does not involve the nationalisation of existing private sector plants, in which case, there may be something to be said against the US assisting a process so much against its avowed economic philosophy. Indeed, the US, already aiding nationalisation of existing industries in Canada should not jib at something that does far less violence to its principles in India.

In the light of Mr Kennedy's statement, India should emulate the example of Mr Subramaniam in showing greater patience and understanding in dealing with the practical problems arising out of the proposed collaboration. Mr Subramaniam said in Parliament recently that he could not, on the basis of authoritative information in his possession, draw the conclusion that the project was indefinitely postponed. The US team's report is no attempt at providing excuses for backing out but an appraisal of the problems to be faced. As a matter of fact, it is concerned solely with technical questions. It makes no recommendation as to whether the US

should assist financially in the project though it does say, however, that a mill erected and operated under American management for a limited number of years will begin to show a profit at the end of the second step in operation. Step one is spread over 5½ years with operations beginning 4½ years after start of construction. According to the report, the projected expansion in step two with operations beginning four years after start of step one production will result in profitable operation and will remain profitable thereafter. It is wholly infantile to consider unreasonable the seeking of assurances about manpower, transport, power and raw materials supply and managerial freedom. The proper attitude would be to examine the extent of the deficiencies and dovetail our transport, raw materials and manpower planning to fit in with the requirements. It is an admitted fact that except in the broadest terms of desires and hopes, the technical requirements of the allied and ancillary sectors of the economy, like transport and raw materials availability have not been worked out in any detail. The need for this has been emphasised by the report. However, this task need not entail any delay, since planning for these can go on side by side with negotiations with the US authorities. By the time the final agreement is signed, a far clearer picture of the needs and availabilities will be ready.

On one point of the report there is considerable room for difference of opinion. The cost estimates made by the US team are so far out compared to those written into the Third Plan, that it is necessary to have a quick attempt at locating the reason for such wide divergence. This is a matter that calls for detailed technical investigation. The team itself is reported to have indicated its willingness to take a second look at its estimates. The cost for the first phase of the programme is admittedly higher than what current world experience would seem to indicate, but this is explained as due to the nature of the Bokaro products which involve progressively decreasing capital outlay for expansion. The ultimate capacity is for four million tons and the cost of the third stage at 340 million dollars is about two fifths of the cost of the first stage at 920 million dollars. Moreover, locational factors of Bokaro are mentioned as responsible for increased cost.

At least one item of cost as worked out by the US study team seems capable of substantial reduction in the light of what Mr Galbraith is reported to have said last week. The team has assumed, for the purposes of its analysis, a twenty year loan on which an interest of 5.75 per cent is payable. The US Ambassador to India, on the other hand, is reported to have indicated that US assistance to Bokaro would be "on the same easy terms as other recent loans—no interest, but only a service charge of three quarters per cent and repayment spread over a long period." Considering the magnitude of the loan envisaged, the latter basis would reduce considerably the cost of the projects. Moreover, as Mr Galbraith pointed out, part at least of the cost of the project would be indirectly reimbursed by the receipts from imports and excise duties accruing to the exchequer on the imports for the projects.

Responsible people on both sides are doing everything in their power to make possible the conclusion of an agreement for American assistance for the project. The least that others standing on the sidelines can do is not to queer the pitch by tendentious interference in their efforts.

Agencies Aiding Development

Seven United States and international lending agencies, operating more than a dozen programmes, directly or indirectly help to finance greater foreign trade and economic development in the free world.

The lending agencies are the International Bank for Reconstruction and Development (World Bank), the International Monetary Fund, the International Finance Corporation, the International Development Association, the Export-Import Bank of Washington, the US Agency for International Development, and the Inter-American Development Bank.

This array of financing institutions may seem complex, but they often complement or supplement each other. Each emphasizes a different banking function. One concentrates its efforts in a distinct geographical area.

All are designed, however, to foster expanded world trade and increased economic activity and development abroad, either by commercial-type "hard" loans, by so-called "soft" loans at low rates of interest for extended periods and repayable in local currencies, by guaranteeing loans and credits from private sources against commercial and political risks, or by helping countries deal with foreign exchange and balance of payments problems.

The purpose and character of these lending agencies and their operations can be briefly summarized as follows:

US LENDING AGENCIES

1. **Export-Import Bank of Washington.** This is the principal agency of the US Government engaged in international finance. First established on February 2, 1934, its present statutory authority derives from the Export-Import Bank Act of 1945, as amended. According to this Act, "the objects and purpose of the Bank shall be to aid in financing and to facilitate exports and imports and the exchange of commodities between the United States and any foreign country or the agencies or nationals thereof."

The Bank's operations fall generally into four categories: Development project loans, exporter credits, medium-term (six months to 5 years) comprehensive guarantees or insurance, and short-term (up to 180 days) comprehensive insurance.

The Bank's financial help can be applied for by US or foreign firm, or friendly foreign government, US exporter, or US bank. A US exporter can apply directly for insurance to the Foreign Credit Insurance Association (FCIA), a group of private insurance companies which issue export credit insurance written jointly by them and the Export-Import Bank.

The Export-Import Bank also makes long-term (5 to 20 years) loans for large development projects, sometimes in conjunction with other lending agencies as part of an economic stabilization or development programme. The amounts are usually in multimillions of dollars.

The Bank's credit facilities tend follow commercial practice as to terms, but are non-recourse—that is, the US exporter is not liable in case of default by the importer. The loans are made in US dollars and must be repaid in US dollars. Also, the money

loaned must be spent in the United States for goods and equipment.

The Export-Import Bank is a profit-making agency, having earned more than \$800 million in its loans and other operations thus far in its history. It has a capital of \$7,000 million, comprised of \$1,000 million in capital stock subscribed to by the US Treasury, and \$6,000 million in borrowing authority from the Treasury.

As on December 31, 1962, total authorized loans and guarantees amounted to \$14,830 million, disbursements to \$9,200 million, and repayments were \$6,100 million.

During the calendar year 1962 the Bank made \$676 million in development loans and greatly expanded its part in the drive to increase US exports.

Though the Foreign Credit Insurance Association, a group of private insurance companies, the Bank provided insurance against credit and political risks on sales of US goods abroad. In 1962, the first year of the programme, 1,043 such policies were written on a total of \$471 million in short-term export credits, and 135 policies and \$11 million in medium-term export credits.

The Bank also provided guarantees to commercial banks covering the financing of \$346 million in export transactions. This system of guarantees, started late in 1961, almost entirely replaced direct financing of export transactions. Direct export credits in 1962 amounted to only \$30 million.

Further aids to US exporters provided by the Bank in 1962 included \$117 million in credit guarantees to exporters, insurance covering \$9 million worth of consignments, and \$30 million in loans to finance exports of agricultural products.

Altogether the Bank approved 2,358 loans, guarantees and insurance policies totalling \$2,090 million in 1962.

At the start of 1963, the Bank had \$5,600 million of its \$7,000 million capital committed. President Kennedy has asked the 1963 Congress to increase the Bank's capital, and hence its lending resources, from \$7,000 million to \$9,000 million.

2. **Agency for International Development (A.I.D.).**

This US Government agency administers US foreign economic assistance, substantial part of which is in the form of development loans for less-developed friendly countries.

Dollar loans are made to governments, to provide US and foreign firms, and to intermediate financial institutions such as development banks in the recipient country. The loans must be related to the development plans or needs of the country concerned.

In general, A.I.D. development loans are made only if financing on reasonable terms is unavailable elsewhere. Dollar funds loaned by A.I.D. originate in appropriations by Congress under the Foreign Assistance Act.

Terms of the credits are based in large part on an estimate of the country's ability to service long-term foreign debt. Conventional or market repayment requirements are usually not appropriate, and recent dollar loans have often had maturities of up to 40 years, with grace periods of 10 years and service fees of 3/4 of 1 per cent.

Where the ultimate user of the funds is a revenue-producing institution or enterprise, a

two-step procedure is often used. Under this procedure the borrower repays its government in local currency on terms appropriate to the character of the project, and the government is then obligated to repay A.I.D. in dollars on terms set in relation to its debt-service capacity and development needs.

In order to encourage private enterprise and capital in the less-developed countries, A.I.D. also administers the "Cooley" loan programme. Under Section 104(e) Title I of the PL 480, up to 25 per cent of the proceeds from the sale of US agricultural surpluses in each country may be loaned to US firms, or their foreign subsidiaries and affiliates, for business development and trade expansion in that country, and also to US and local firms for use in expanding markets for US agricultural products. Interest is based on local rates and on the nature of the project.

These funds are available for lending in about 25 countries, principally India, Egypt, Pakistan, Turkey, Israel, and Taiwan.

The foreign currency funds available for lending can be spent locally, but US dollar loan funds must be spent for US goods and services.

INTERNATIONAL LENDING AGENCIES

1. **International Bank for Reconstruction and Development (World Bank)**

Established as part of the 1944 Bretton Woods Agreement, the World Bank finances public and private projects to develop the productive facilities and resources of its 82 member countries. The bulk of its loans, mostly long-term (15 to 25 years), are for so-called "infrastructure" projects such as electric power, transportation facilities, heavy industry, and irrigation.

The Bank obtains its funds principally through the sale of bonds, and interest rates on its loans, currently 5½ per cent, are based on cost of money to the Bank in capital markets where its bonds are sold, plus 1 per cent commission and 1/4 of 1 per cent for administrative expenses. Repayment is in currencies loaned. Competitive bidding is required in use of funds.

Member governments, and public and private entities which are guaranteed by member governments, may apply for loans. The World Bank does not extend loans if private capital is available on reasonable terms.

Member countries have increased their capital subscriptions to \$20,660 million, of which about \$2,300 million is paid in and \$18,000 million is callable if required by the Bank to meet its obligations. The US share is \$6,350 million (about 31 per cent), of which \$5,700 million is callable.

Between 1947, when it actually began operations, and December 31, 1962, the Bank made 333 loans. Loan commitments during this period amounted to \$6,700 million and disbursements were \$5,100 million. Loan commitments in the calendar year 1962 were \$646 million, and disbursements were \$570.

From 1947 to the start of 1963, the Bank showed a profit on its operations of \$515 million.

2. **International Monetary Fund (IMF)**

IMF, the other institution established as part of the 1944 Bretton Woods Agreement, is closely associated with its twin, the World Bank. It serves somewhat as a clearing house for its 33 member countries if they find themselves in need of temporary assistance to overcome

balance of payments problems. As such, its contribution to economy development is indirect rather than direct.

IMF's overall objectives are to promote stability of currencies and contribute to international monetary cooperation.

Acting as a banker's bank, IMF may provide member governments with technical assistance in their foreign exchange problems. Member nations may draw (borrow) currencies of another member nation for 3 to 5 years to meet balance of payments difficulties.

Current interest charges are about 2 per cent, increasing annually according to the amount outstanding and the length of time borrowed. There is also a service charge of ¼ of 1 per cent. Loans are repayable in gold or convertible currencies.

The Fund's transactions are with member governments through their central banks, finance ministries or similar fiscal agencies.

The IMF's resources were increased recently and now consist of gold and currencies of member countries totalling \$15,300 million. The US share is \$4,125 million.

From the start of operations in 1947 to December 31, 1962, drawings (borrowings) have amounted to \$6,745 million, repayments to \$5,100 million. Drawings during the calendar year 1962 amounted to \$548 million while repayments were \$1,300.

All of its members, with the exception of Cuba, also belong to the World Bank.

INTERNATIONAL FINANCE CORPORATION (IFC)

The IFC, an affiliate of the World Bank, is a unique public agency—a corporation owned by governments to further economic development in the less-developed areas by encouraging investment in private enterprise.

This agency invests in non-voting capital stock and other equities of private companies, particularly businesses operating in less developed countries. Industrial undertakings are preferred. Although IFC shares the financial fortunes of the enterprises in which it invests, it does not take part in their management.

As the enterprises become established, IFC will sell all or part of its investment, and reinvest the proceeds in other enterprises.

IFC was formed in 1956. All its 72 member countries also belong to the World Bank. Its capital is comprised of member country subscriptions of \$98 million, its interest rate currently runs about 7 per cent for loans. Repayment is in currencies invested, usually US dollars.

From its start in 1956 to December 31, 1962, IFC made commitments of \$80.4 million, disbursements of \$56.3 million. During the calendar year 1962, it made commitments of \$18.5 million.

INTERNATIONAL DEVELOPMENT ASSOCIATION (IDA)

IDA was established in 1960 as a World Bank affiliate to meet the problem of financing sound, much-needed economic and social development projects in countries unable to assume the foreign exchange debt on the conventional loan terms required by the World Bank.

IDA differs from the World Bank in these respects: its credits extend as long as 50 years, twice the maximum length of World Bank loans; there is a 10-year period of grace, following which the credit is repayable at the rate of 1 per cent per year over the next 10 years, and 3 per cent per year over the next 30 years; it charges no interest only a ¼ of 1 per cent service charge. Its credits may be used to finance social projects (schools, sanitation, etc), as well as economic projects.

IDA has capital subscriptions from its 68 member nations amounting to \$947 million, of which the US share is \$320.3 million. From its start in 1960 to December 31, 1962, its commitments amounted to \$367.5 million and disbursements to \$25 million. The rate of disbursement will increase in the near future as many projects financed by IDA come under construction.

INTER-AMERICAN DEVELOPMENT BANK (IADB)

As its name implies, this bank is a regional institution, formed in 1960 to accelerate the economic development of the American Republics. Its members include the United States and all Latin American countries except Cuba.

The Bank operates three lending "windows": (1) conventional loans to member governments and private enterprises for economic development projects; (2) so-called 'soft' loans made from the Bank's Fund for Special Operations; and (3) Alliance for Progress loans in four categories which the Bank administers for the US Government.

Conventional loans are made for terms of 10 to 20 years. Interest rates are currently 5½ per cent. Repayment is in the currencies in which the loan is made.

'Soft' loans are also made for economic development projects; their financing and repayment terms are more liberal than for conventional loans. Terms are up to 50 years, interest rates currently are about 4 per cent, and repayment frequently is made in local currencies.

IADB opened its third window—the Social Progress Trust Fund, or Alliance for Progress, financing—on 19 June, 1961. Loans are made in four areas: Housing, community water-sewage facilities, land improvement, and higher education.

Terms generally are for 15 to 30 years, interest and service charges run about 2½ per cent and repayment is in local currencies.

President Kennedy has asked the 1963 Congress for another \$200 million to increase the bank's Social Progress Trust Fund.

Capital resources of IADB amount to \$959.5 million, of which the US share is \$450 million. This does not include the \$394 million special Social Progress Fund.

The capital structure is divided into \$813.2 million for Ordinary Operations (No. 1 above), and \$146.3 million for Special Operations (No. 1 above). Total loans authorized by the bank from its inception in 1960 to 31 December, 1962 amounted to \$617.6 million, and disbursements were \$65.3 million.

Our India

OUR efforts at export promotion, I am afraid, are acquiring a somewhat pathetic look. As if it is not bad enough that we have to plead before each nation for special treatment for our exports, we have started to manufacture for exports goods which we have denied to ourselves more or less completely. Not that the latter is altogether new. In the immediate post-war years Britain sent abroad its whole output of toys making martyrs of its own children. What is new about the export of gold jewellery of more than the normally permissible 14 carat is that the effort at encouraging exports comes on top of the half-hearted and ill-conceived measures for tackling the craze for gold hoards and jewellery at home. What reason has the Government to think that the Gold Ordinance is the best or about all that we can do to prevent the wasteful abuse of gold and that all has to be done is to relax the restrictions in the interests of exports. There are far too many facile assumptions behind the scheme for exports of jewellery to make it sound or reliable. I shall not question the faith that the workmanship of Indian jewellers is something which has no parallel abroad and that foreign tourists will jump at any chance to possess samples of such superb skill. But I would ask nevertheless whether it is only gold jewellery that they are dying for or whether jewellery with precious stones would not be better evidence of the Indian jeweller's mastery of his art? I doubt very much if in mere gold jewellery the Indian goldsmith excels the European or the American. If gold jewels set with precious stones can find lucrative markets abroad more readily, should we not attempt to encourage that taste by according to it some freedom to function effectively.

What purpose is the 14 carat rule supposed to serve? To economise the use of gold in jewellery and divert a part of the gold flowing into reserves into the coffers of the Reserve Bank? Or to impose a measure of austerity on our own vain and self-indulgent womanfolk? If we want to tackle our gold problem as it has come down to us through the ages, we must restrict the quantum, and not alone the quality, of the gold used in jewellery and encompass a reclamation of gold from hoards for our monetary reserves. This, the Government has dared not do. It has debased the gold in new jewellery but has left old jewellery untouched. What can these measures accomplish? But since they have sufficed to drive goldsmiths to starvation and suicide they have raised the fear of extinction of this master race and blasting of all prospects of an export trade in Indian jewellery. Where the Finance Ministry lays a ban on 22 carat gold, the Ministry of International Trade asks for a relaxation in the interests of its charge. Are not both equally ill conceived? Is not the second as sure to prove fatuous as the first? Should we overlook in this case as in others that the surest basis of an export trade is a sound internal trade.

It is not so much what is sought to be done for exports of jewellery that depresses me. That is depressing enough, because it smacks of the impoverished aristocrat taking special steps to turn his precious heirlooms into cash. What is more depressing is that we regard export promotion as something to be done at the sales end and not as a life-and-death matter in which we take care of the needs of the export trade over the whole line, at every stage of production. For every other nation export promotion comes on top of endless endeavour to produce economically to preserve competitive capacity. Only in our India do we regard export promotion as a miracle to be performed at the end, like "Sankara's name on dying lips," as we say in Tamil, a desperate effort to gain God's grace after a whole lifetime of wilful sinning!

"JNAN"

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

BANK RETURNS

Busy Season Peak Touched?

The latest banking figures suggest that the busy season peak has probably been touched during the week ended 10 May.

The returns of the Reserve Bank for that week show that Active Note Circulation has risen smartly by Rs 23.84 crores to Rs 2,344.09 crores, and that outflow of Rupee Coin has taken place in the largest amount of Rs 2.65 crores. While Foreign Securities are unchanged at Rs 105.08 crores, Rupee Securities are higher by Rs 30 crores at Rs 2,026.44 crores, reflecting the transfer from the Issue Department for covering the currency expansion. As a result, the Reserve Bank's cash in the till has moved up slightly by Rs 3.51 crores to Rs 18.07 crores.

The pressure upon the banking system is suggested by the further rise of Rs 4.12 crores to Rs 45.97 crores in the loans and advances of the Reserve Bank to Scheduled Banks; the Reserve Balances of the latter, however, have improved somewhat by Rs 0.44 crore to Rs 79.53 crores. The States have also felt the strain: their Deposits have gone down by Rs 1.01 crores to Rs 7.07 crores, and, what is more significant, their ways and means borrowings from the Reserve Bank have mounted by Rs 7.65 crores to Rs 70.11 crores. The Central Government, on the other hand, still enjoys a relatively comfortable position, with Deposits only slightly lower by Rs 0.67 crore at Rs 50.83 crores; nor was there apparently any need for deficit financing, since Investments, in being marked down by Rs 30 crores at Rs 172.37 crores, merely reflect the transfer to the Issue Department.

The Reserve Bank's holdings of Treasury Bills purchased and discounted have risen by Rs 9 crores to Rs 55.27 crores, and this increase appears to be linked with disinvestment for more or less the same amount by the State Bank during the week.

Balances Held Abroad have kept relatively stable, in showing a fall of a fractional Rs 0.11 crore to Rs 7.49 crores. Foreign assets in the possession of the Reserve Bank are still, though uneasily, just above the Rs 110 crore mark.

The return of the State Bank for 10 May indicates that the busy season peak has involved drawing down of their Deposits by consti-

tents. The Deposit resources of the State Bank have fallen by Rs 3.43 crores to Rs 554.59 crores, while the total of Advances has registered a most modest increase of Rs 0.27 crore to Rs 307.92 crores. The strain has necessitated disinvestment in gilt-edged for about Rs 12½ crores, and the inference to be gleaned from the returns of the Reserve Bank is that Treasury Bills may have been discounted. Finally, cash balances, including money at call and short notice, are marked up by Rs 1.96 crores to Rs Rs 25.40 crores.

Ups and Downs of Sterling

By Paul Einzig

THE first week of May witnessed some perplexing movements in sterling. During the greater part of April it was very firm, largely as a result of the covering of short positions created by speculators earlier in the year as a result of the wave of pessimism that developed after the breakdown of the Common Market negotiations and following on irresponsible devaluation talk. Judging by the decline of the discount of forward sterling, the speculative positions must have been liquidated more or less by the beginning of May. The support to spot sterling resulting from the covering operations came thus to an end.

This in itself would not have been an adequate reason for a relapse of sterling but it facilitated the operation of other adverse influences. Foremost amongst them was the revival of speculation about an autumn election this year. Until recently it was taken for granted that there would be no election before the spring of 1964 and conceivably not before the autumn of 1964. The growing evidence of an improvement in the economic situation for Britain gave rise to doubts, however, whether Mr Macmillan would wait until next year. Many people take the view that the improving trend is likely to develop to its full extent by the autumn, and any delay in the general election would entail the risk of a subsequent relapse or of the development of a balance of payments crisis calling for restrictive measures. So it was argued that the Prime Minister would hit the iron while it was hot.

Fears of an early election were greatly stimulated by a meeting held during the first weekend of May by the Members of the Cabinet with the declared object of discussing election plans. This was deliberately publicised by the Government, with the result that many quarters came to look upon an early election as a practical certainty. Whether this interpretation was correct or not, the Government was thoroughly ill-advised in allowing it to get into circulation. Apart altogether from its adverse effect on sterling on the Stock Exchange, the anticipation of an early election is liable to discourage business revival. Many businessmen would have been willing to proceed with investments plans on the assumption that the Conservative Government would remain in office for at least twelve months. They will hesitate to increase their commitments now that they think they have reason to fear that a Socialist Government might assume office within six months.

After a few days of weakness, during which sterling declined below its parity in relation to the dollar, a recovery occurred. The market came to realise that apart from the political factor the position of sterling is at the moment by no means unfavourable. A very large proportion of seasonal dollar requirements by importers was covered during the early months of the year under the influence of the devaluation scare so that the autumn pressure on sterling is likely to be moderate. The balance of payments has improved and is believed to be still improving. Above all, conditions in both France and Germany seem to be changing for the worse. Wages in both countries are now rising faster than in Britain so that their relative competitive position seems to be deteriorating.

To some extent recent pronouncements by the new Socialist leader Mr Harold Wilson should go some way towards mitigating the effect of these fears on sterling. After all, he most emphatically repudiated any intention to devalue or to adopt the floating pound. Even after discounting the value of such disclaimers, it is better from the point of view of sterling that they should have been uttered. It will be remembered that the reason for the dollar scare during the period that preceded the last Presidential election was the unaccountable delay that preceded Mr Kennedy's reassuring declaration on the subject.

Notwithstanding Mr Wilson's disclaimer, it is certain that when the general election date is announced a sterling scare will develop. In the past such sterling scares provided help to the dollar because the funds withdrawn from London usually found their way to New York. It seems doubtful whether that experience will repeat itself on the present occasion. By now everybody must realise that, should the advent of a Socialist Government lead to a depreciation of sterling, a devaluation of the dollar and of many other currencies would follow. The international currency front has become indivisible, and the breakdown of any major currency is liable to be followed by the abandonment of defences of other currencies.

In the circumstances it seems probable that notwithstanding the death of Mr Per Jacobsson there will be no difficulty in securing the renewal of the British standby credit with the International Monetary Fund. Rumours of a possible refusal to review the arrangement that followed Mr Per Jacobsson's death, were among the causes of sterling's temporary weakness. On second thought, however, it seems unlikely that anybody would seriously advocate a course which would weaken the defences of sterling during the critical period of the election.

Notes

SUGAR

Problems Galore

It is unfortunate that when the outlook for a steadily increasing output of sugar is improving, the spectre of shortage has come to haunt the industry. Only this time last year, the main preoccupation of the industry had been the disposal of its production because exports were difficult to negotiate and internal consumption was stagnant. On both counts, there has been remarkable improvement during the past few months. Internal consumption has sizably increased while export commitments have gone up to 5.4 lakh tons as against a meagre 50,000 tons two years ago. Thanks to the concerted efforts put forth by the industry and Government, there is confidence now that Indian sugar will be able to compete successfully in world markets. A significant development is that mainly to cater to the needs of the export market, within a short time the industry has been able to produce as much as 2,50,000 tons of raw sugar which is generally preferred to crystal sugar by overseas importers.

But unless the industry succeeds in attaining a measure of stability in respect of its production, the gains made on the export front will be of little avail. For instance this year an extraordinary situation has arisen necessitating the imposition of controls and the industry is worried lest controls, as they have invariably done in the past, affect production adversely. Speaking at the annual meeting of the Indian Sugar Mills Association, Mr M. N. Pittie has deplored the fact that Government has hastened to take the extreme step of control without giving a fair trial to the voluntary control scheme of the industry. Moreover, in fixing the prices, certain sections of the industry have been discriminated against Mr Pittie has pointed out that the lowest prices have been fixed for those regions which have a high cost of production, and that the control prices will cause great hardship to a large section of the industry in East UP, Bihar, Punjab and Meerut Division. It is however gratifying that Mr S. K. Patil, Union Minister of Food and Agriculture, has assured the industry that if there is any room for readjustment it will be done. It is also to be hoped that as Mr. Patil himself believes, the controls will prove to be temporary. For it cannot be denied that controls do have a stifling effect on production. The need of the hour is increased production and it is a happy augury that the industry aims at a production target of 33 lakh tons for 1963-64 and that it is also confident of achieving it. Mr Patil

thinks that even this target is modest and that a still higher target should be attempted. From Mr Patil's speech at the ISMA meeting it is evident that at long last Government is on to fashioning a long-term policy for sugar. While emphasising the need for increasing production by two to three lakh tons every year, he has revealed that Government is thinking in terms of building up a buffer stock of 5 lakh tons to obviate fluctuations in production. He has also asked the industry to proceed on the assumption that demand is steadily rising. It should be a matter for gratification to the industry that the quality scheme is to be extended to 30 more factories and that effective measures will be taken to deal with the problem of diversion of cane.

A problem that brooks no delay is cane development. Though India has the largest acreage under sugarcane in the world, its yield per acre is one of the lowest. It stands to reason that the sugar mills should be able to get good value in terms of sugar content for the price they pay for cane. Yield can be increased only by the intensive application of science to sugar cane agriculture. It cannot be pleaded that the State Governments have not got sufficient funds for undertaking cane development programmes. Cane cess which the State Governments levy is supposed to be earmarked for cane development and, yet most States have no compunction in diverting the receipts from cane cess to general revenues. Sugar cane growing States in Northern India should pay special attention to this question because both yield per acre and the sugar content of the cane are particularly low in these regions. If the Punjab has been able to utilise cane cess collections solely for cane development, there is no reason why UP and Bihar should find it difficult to do so.

It is also time that serious attention is paid to the removal of the structural weakness of the industry. The 61 factories in East UP and Bihar represent roughly a third of the industry as a whole and they are also the weakest units. According to a ISMA study, during 1961-62, 33 per cent of the companies in this region incurred a loss while 50 per cent of them declared no dividends. These units are in a sad plight this year because of inadequate cane supplies. A resolution passed at this week's annual meeting of the ISMA has demanded Government subsidy for unmandated Government subsidy for unmandated Government units. But Mr Patil himself has admitted that there is no escape from a scheme of rationalisation of these units and has urged the ISMA to draw up a scheme in this regard so that Government may render financial assistance to them as soon as practicable.

OIL

Another Milestone

The laying of the foundation stone of Rs 37 crore "Gujarat Refinery" in Koyali village by Prime Minister Mr Nehru last week constitutes an important landmark in the development of oil industry in the country. The refinery to be constructed by the Oil and Natural Gas Commission with Soviet technical and financial aid will have a two million tons capacity in the initial stage which will subsequently be stepped up to three million tons. The construction of the refinery is phased in two stages of one million tons each; the first stage will be completed by the end of 1964 while the second stage will be finished by the middle of 1965. The refinery will process crude piped from the oilfields of Ankleshwar and Kalol. The entire plant is designed in such a manner as to meet the shortage of middle distillates such as kerosene and diesel oil. According to present estimates the refinery will produce, among other items, 536,000 tons of liquefied petroleum gas, 371,400 tons of motor gasoline, 422,000 tons of fuel oil and 80,000 tons of refinery gas. A notable feature of the Koyali refinery construction is the maximum utilisation of indigenous talent, materials and manufacturing expertise in the constructional stage. Apart from this, its demand for refractories and insulation materials, structural steel plates, mild steel rounds and workshop equipment will be fully met from domestic sources.

Speaking at the function Mr Nehru highlighted the important role oil has to play in the country's economy particularly in its industrialisation. The progress in the development of oil industry was accelerated with the setting up of Oil and Natural Gas Commission which, during the past seven years, has made good progress in this field. The Koyali refinery will give a boost to the industries located in Gujarat. In addition to the impetus that it will give to Gujarat's industrialisation, the refinery will provide gainful employment to quite a large number of both skilled and unskilled persons.

POWER

No Early Relief

Power supply has further deteriorated in Calcutta and its neighbourhood in the past few days following the breakdown of a turbo-alternator at the New Cossipore station of the Calcutta Electric Supply Corporation. Power cut in this region has become an annual occurrence and industrial as well as other consumers have been obliged to put up with considerable inconvenience. This year

from early April power shedding has had to be resorted to by the CESC. About the end of the month, however, the supply looked like improving with the successful arrangements to supply the correct grade of coal to the Corporation's power stations. The consequent relief has proved shortlived now that power generation has declined by as much as 50 MW on account of the damage to one of the units of the CESC. It is said that it will take a month for the disabled plant to start functioning again.

In the meantime, it has been apprehended that the overall supply position in the region would further deteriorate in view of the indication given to the DVC that the power supply it is getting from Rihand is likely to be reduced following the drop in the level of the reservoirs serving that power project. It may be recalled that it is with the additional supply obtained from Rihand and Hirakud that the shortage is being minimised. If on top of the shut down of one unit in the CESC, the supply from Rihand is also reduced the position will pass beyond control. Thanks to the assurance of the UP Electricity Board that the supply from Rihand to the DVC will be maintained at the present level, a serious power crisis has been averted.

Even the industries served by the New Cossipore Station have been placed in an unenviable position having been obliged to go without power supply for about eight hours three days in the week. This will have an adverse effect on industrial production and it is feared that even the jute mills which have been given a preferential treatment in the matter of power supply during periods of power shedding will have to cut

PRO/HB-2

down their working hours by half as long as the present scheme of restricted power distribution is in force. Indications are that even when the damaged CESC turbo-alternator is put back into commission there will be need for enforcing a power cut because it would appear that the supply from Rihand may not continue at the present rate beyond the end of the month. Though it is hoped that the position may improve towards October when a new 50 MW unit of the CESC is expected to be commissioned, it is unlikely that supply will match demand even then. This is because power generation in West Bengal as a whole is lagging behind supply on account of the inordinate delay in finalising new projects. It has been estimated that even if all the originally proposed projects are completed according to schedule, there will still be a shortfall in supply at the end of the current five year plan. It is to be hoped that the additional projects proposed by the State Government will be

sanctioned without much further delay so that at least in the Fourth Plan period, power supply becomes adequate to meet the demand in full.

PLAN Slow Progress

In a review of the progress of the Third Plan in the first two years, the Planning Commission has pointed out that while there has been no significant increase in agricultural production, industrial production in general has recorded an increase of 8 per cent. Referring to the sluggish pace of agricultural production, the review has however revealed that the Ministry of Food and Agriculture and the Planning Commission are trying to ensure that all the bottlenecks in the way of rapid agricultural development are removed. The series of steps that have been initiated in recent weeks suggest that expeditious

remedial measures may be on the way. The recent decision of the Planning Commission that a State agency should procure foodgrains directly from farmers at guaranteed minimum prices may go some way towards stimulating increased interest in farming. But for real improvement in the agricultural situation much more needs to be done. The very fact that the actual trend in agricultural production has come to be correctly assessed only now at least in official quarters indicates complacency on the part of the responsible Ministry as to the progress of agriculture. Even now the tendency to attribute the shortfall in agricultural production to the vagaries of the monsoon persists though the Planning Commission has made it quite clear that the rate of growth in agriculture is still at a disappointing level even making allowance for adverse weather conditions. The situation calls for a radical change in the official attitude to agriculture so that the farmer who after all is to deliver

the goods gets all the facilities he needs and is also ensured of a reasonable return for his produce.

Although industrial production has been comparatively better, here again there is no room for complacency. There is no point in blinking that the pace of growth in industry has slowed down in the first two years of the current plan as compared with the record of the previous Plan. The stagnation in agriculture no doubt has had its repercussions on industry, but it cannot be claimed that conditions have been particularly conducive to the smooth working of the industrial sector. If the past two years had put undue strain on the corporate sector, the latest Central Budget has made it extremely difficult for it to embark on expansion programmes. The fact that in respect of some of the important economic overheads such as power and transport, there is continuing shortage does not also augur well for rapid industrial development in the coming years. Just at present one of the most important industrial regions in the country is in the grip of a power famine and it would appear that the power shortage in the Bengal-Bihar region will continue throughout the current plan period.

EDUCATION Need for Reform

The meeting of the Central Advisory Board of Education held at Pachmarhi brought to sharp focus the various loopholes in the educational system prevailing in the country. Speaking on the occasion, the Union Minister for Education Dr K. L. Shrivastava highlighted the alarmingly high percentage of failures at every stage of education. There is urgent need for a thorough reorientation of the educational system at the different levels of education if tragic waste of human resources is to be reduced. The teaching staff is partly to be blamed for this, but it will be well to remember that largely because of the inadequate remuneration offered the profession is not attracting the best talents in the country. The unrestricted admission of students in educational institutions particularly in the higher stages and the continuation of the outmoded examination system should have to be suitably altered if the percentage of failures is to be kept to the lowest possible level.

Another problem that requires urgent tackling is the growing number of educated unemployed and underemployed in the country. Dr Shrivastava apprehended that a situation of "utmost gravity" is likely to be created "if this is allowed to drift unchecked should lead to immediate rethinking by the concerned authorities. The present system of education is not only not purposeful but there

is no correlation between education and employment. Many of the graduates, especially arts graduates, passing out of the colleges only swell the ranks of unemployed and are left to fend for themselves. To rectify this anomaly greater stress should be laid on technical education. The demand for technical personnel will only increase with the speedy industrialisation of the country and to meet this, reorientation right from the secondary level should be brought about.

CONSUMER STORES A Welcome Step

Government's decision to organise a network of stores all over the country for the distribution of essential articles to the people has come not a day too soon. It is reported that the articles that will be handled by these stores will be food grains, textiles, kerosene oil and drugs and medicines. There is need for ensuring that essential consumer articles reach the general public in fairly sufficient quantities and at equitable prices. For already there are disturbing developments in parts of the country in respect of the availability of rice and sugar. In the eastern States, for instance, there are reports of acute scarcity of rice in several places. The affected States are West Bengal, Assam and Orissa. The difficulty has primarily stemmed from shortfall in rice production in these States. West Bengal is a chronically deficit State in foodgrains production but this year even the usually surplus State of Orissa has recorded a serious shortage with the result that there are not enough foodgrains even to meet its own needs. The Central Government has belatedly come to realise the gravity of the position and has initiated certain steps. But there has been no marked improvement in the food situation in these States even after the despatch of supplies from the Central stocks. If however as the Central Food Minister claims there is enough stock of foodgrains in the country, the defect should be in distribution. In some other parts of the country there is shortage of sugar and it is quite possible that scarcity items may tend to increase in their number. It is a happy augury, therefore, that the proposed stores will cover some essential consumer articles like textiles besides foodgrains. It is, however, not clear how the stores are going to cope with the distribution of rice. Presumably in the States where there is already food scarcity there will be also separate shops for the distribution of foodgrains. That the scheme will have the support of the business community is indicated by the fact that the textile mills have agreed to issue 10 per cent of their production to the stores at the ex-

mill prices while several private sector concerns have offered rebate in the supply of common drugs and medicines.

PRICE TRENDS FICCI's Review

The current price trends and the tendency on the part of the authorities to resort to price and distribution controls, particularly in the case of items like rice and sugar etc., were reviewed at a meeting of the Standing Advisory Committee of the Federation early this week. According to the Committee, the rise in prices may be attributed by the public to the business community, whereas, in actual fact, the causes lay either in wrong policies or faulty implementation of policies by the authorities.

It was decided that the Federation should appropriately take up the matter after a detailed study, so that all sections of the public, and also the authorities, may have a correct view of the situation, more especially on the taxation and ex-

penditure programme of Government at the Centre and in the States. Every tax that is levied has repercussions on the economy which need to be investigated and appraised, and the same is true of every item of public expenditure. As early as the 1st February 1963, the Committee of the Federation had issued a statement pointing out that the rate of growth was showing a declining tendency, with agricultural production remaining stationary and the pace of industrial development slackening. It is unfortunate, says the Committee, that even today there are many signs of uncertainty and depression in the economy. Unless expansion is initiated forthwith on every front, the nation will be faced with many problems.

Engineering Exports

The scope for stepping up the export of Engineering goods was highlighted at the conference of Exporters of Engineering goods in the Northern Region, held in Delhi last

week. Government of India has fixed a target of Rs 20 crores for the year 1963-64 for the export of engineering goods which is nearly double the exports during the previous year. Government has also announced a number of concessions to enable the manufacturers-exporters to push the sale of their products abroad at competitive prices. The procedure for claiming the payments under the incentive schemes has also been streamlined to a great extent. The achievement of the targets depends a great deal on the readiness with which the industry becomes export-oriented. The development of an export trade will strengthen and stabilise the position of the industry, besides enabling it to import materials and components which would not otherwise be available.

Mr S. L. Kirloskar, the Chairman of the Engineering Export Promotion Council, who made an impassioned appeal to the manufacturers in the Northern region to augment exports, also told the conference about the impressions gathered by the Delegation sent out by the Council to West Europe. The Delegation had found that there were immense possibilities

for precision welding and cutting 'B' type 2 stage regulators

Indian Oxygen offer a wide range of regulators to meet the growing needs of industry.

'B' series two stage regulators are unrivalled for use under conditions demanding close control of working pressures.

INDIAN OXYGEN LIMITED

for exports of CI Castings to Europe. Crankshafts were being exported to Holland and Sugar Machinery to France. India, he said, could become a huge foundry for Europe. The European Market being a sophisticated market, it is necessary that exports are handled carefully, and only reputed firms who are in a position to offer quality products should be encouraged to export to these countries.

As Mr Kirtoskar has pointed out, the exporting firms will have to send out representatives abroad to explore and survey the possibilities of export as results could not be achieved by correspondence alone. But the availability of foreign exchange for the purpose of such tours remains uncertain, though the Minister for International Trade has recently stated that no bonafide developmental effort of this sort would be denied foreign exchange. The processing of applications for release of foreign exchange is an arduous and time-consuming operation, and even if it is ultimately made available, the export opportunities which prompted the application could not be expected to remain open for an indefinite period. In exports, as in manufacture, it is necessary to strike while the iron is hot. The difficulty, however, can be overcome to some extent if early action is taken to establish offices of the Engineering Export Promotion Council one in England and another in Europe, which have been sanctioned by the Government. These offices can carry out the work of preliminary exploration and survey of export prospects which individual firms may not be in a position to undertake.

HOUSING More Funds Needed

It is saddening that in the wake of national emergency the Government was compelled to resort to drastic pruning of the financial allocations on projects such as health, housing and education. The concern expressed by the members of the Parliamentary Informal Consultative Committee attached to the Union Ministry of Housing and Rehabilitation at the slash in the outlay for housing schemes in the current year's budget will be widely endorsed. This is particularly disconcerting as population is increasing at a rapid rate. The allocation for housing is slashed down from Rs 13 crores in 1961-62 to Rs 12.33 crores in 1962-63 and to Rs 6.66 crores in 1963-64. Apart from this axing, the practice of the State Governments of diverting funds earmarked for housing schemes for other purposes has further slowed down the progress in house construction. Mr Mehr Chand Khanna's directive to the State Governments not to indulge in this sort of diversion of funds is timely. At the same time the Centre cannot put the blame entirely on the States for the lethargic progress of housing activity as there been progressively scaling down of the allocation for this project. The Informal Committee is reported to have stressed

the need for earmarking additional funds for housing schemes. The Union Minister has enumerated the steps that will be taken to maintain the tempo of house construction in the country. At the same time Government should ensure that this activity does not suffer due to want of adequate finances.

MAN-MADE FIBRE Price Revision

The Government of India's decision to ask the Tariff Commission to conduct a thorough probe into the cost structure of man-made fibre and recommend fair prices for both the consumers and manufacturers is a measure which is long overdue. The current prices fixed voluntarily as early as 1957 are uneconomic in view of the progressive rise in the cost of raw materials, electricity charges, maintenance expenditure, wages, salaries and bonus to staff etc. Despite the repeated representation of the trade, there has been practically no change in the price structure except the upward revision in differentials for finer deniers made in November last. The Tariff Commission is required to cover the entire synthetic fibre industry (cellulosic and noncellulosic) including staple fibre and recommend a suitable revision in the prices. However, acetate rayon will be kept outside the purview of the Commission's enquiry. While mak-

ing its recommendations the Commission will have to consider the need for fixing a concessional price for the quantum of yarn made available to the manufacturer-exporters instead of the surrender of a percentage of their import entitlement guaranteed under the export promotion programme. The press note issued in this connection makes it clear that Government is convinced of the need for reviewing the cost structure and other related factors with a view to supplying synthetic fibre to the consumers and consuming industry at reasonable prices and to ensure the industry a fair return.

While welcoming the decision, the rayon yarn spinners have expressed doubts about the ultimate benefits that will accrue to the consumers of rayon fabrics unless the weaving sector is also brought under control. Moreover, the present price structure is likely to continue for at least another year pending the Tariff Commission's recommendations. It is therefore reasonable and legitimate that Government should effect an ad hoc price increase. Alternatively the spinners have sought the removal of price and distribution control on yarn. In case the Government is firm in continuing control they suggest that the weavers and other consumers should be asked to lift yarn on a compulsory basis. During the investigation the Commission should view the spinners' demand on a broader perspective before arriving at its conclusions.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

The Indo-Pakistani talks at the ministerial level on Kashmir have predictably and dismally failed. A decade and a half has elapsed since the aggression by Pakistan itself took place, and though we have had a variety of confabulations since then we are, I am afraid, no nearer a solution. That is to say, the recent round of discussions by no means can be said to have yielded any unfreezing in attitudes, such that, with greater flexibility, a modus vivendi can be found. But I wonder whether Mr Krishnamachari's almost off hand remarks in Canada can lend themselves to the interpretation that we at least, for our part, are willing for such compromises as will make possible an early settlement of the issue. The fitness of Mr Lester Pearson to assume the office of arbitrator there can be no question about; but TTK seemed, in the same breath that he suggested Mr Pearson as a sort of adjudicator, to imply that Mr Pearson was much too busy. Time alone is perhaps to be expected to allow a compromise to be effected; and I am, I hope, not being pessimistic in thinking that for the settlement of the Kashmir issue we shall (in the meaning of may?) have to wait another decade.

Gordon Cooper's 22-orbit space flight has been, to use the relative jargon, A-O-K. A postponement here, a little delay there, a contretemps about relay of the television cast to Europe are all of little moment when we consider the kind of achievement that America in the person of Gordon Cooper has chalked up. In the harsh glare of publicity, with disturbingly advance notice, the American astronauts have one by one made their allotted trips round earth. Though in the matter of progress in space technology Russia still leads, the fact is that America can now be deemed to have more than made up the psychological leeway. The Cooper orbit could not have been better timed. America has been receiving an unkind press, what with the ugly racial troubles it has been having in Alabama. A hundred years have passed since the Civil War, and it is perhaps this fact that makes the Negro impatient for the equality that the US Constitution promises him—but which in effect is denied to him in the deep south. At this distance it seemed possible that the fight for

freedom, like India's, could have been won through in the non-violent way. But the segregationists are a determined lot, and as I said impatience is mounting. Two weeks or so ago, a one (white) man's pilgrim's progress to the south ended in his death. More recently acts both overt and covert have taken on an ugly aspect especially in Birmingham, Alabama. President Kennedy, for his part, has taken all firm steps that lie in his power, but the response from the hard-core south, without which integration is impossible, seems to be missing.

The Sunday Times (of London) recently published a study of changes in the choice of parties of the British electorate. This was well before the borough elections, and indeed one factor that was not covered was the passing away of Mr Gaitskell. The unmistakable trend the study pointed to was in a considerable gain of strength by the Labour party; this in itself is no earth-shattering discovery, for the discontent with the party in power was long before that and quite openly patent. Bye-elections have had a sorry habit of going in favour of the opposition—and even sometimes to a Liberal candidate. What was significant about the study was its assertion that the defections from the Conservative party were drawn mostly from the newly enfranchised; and the voting intentions of those about to exercise their franchise for the first time have also been in favour of the Labour party. So, it is not alone that the immediate prospect is for the Labour party to be swept into power at the next elections; the inference to be gained from the Sunday Times study is that, once in power, Labour is likely to retain it for maybe some considerable time. The Tories therefore appear to be placed today exactly where the Republicans in America were in 1932: the loss of power is imminent, and the return to power of the Conservatives may prove elusive in the short term. Churchill has nicely timed his retirement. He has decided he will not seek re-election in a general election that might produce a landslide for the Labour party. On a sense the grand old man's retirement it appears will also mark a retirement from power of his party.

Persistent rumours about a change in the ownership of The Statesman have at last been laid to rest. Gossip had it that many an Indian industrial house was negotiating for its outright purchase. I am relieved to see that

the changes are of a kind that will ensure the continued independence of The Statesman; and in particular the constitution of the Board of Trustees promises integrity of an unimpeachable order. The "Indianisation" that is in evidence will not, I fancy, reflect itself in any the slightest difference in the editorial attitude. And of course, the news will be presented as heretofore, the Times crossword will continue to bedevil us daily, and for Sundays an aspirin tablet, or even two, will be recommended together with the Manchester Guardian effort.

The stock markets obviously consider that the concessions in the matter of the super profit-tax have been sufficient. For the new issue market is once again active, and though it may be some several months before boom conditions as such manifest themselves, the investor is likely to withhold his support for the many fine issues being placed on the market. But stock exchange prices have not quite fully recovered from the doldrums into which they were driven by Mr Morarji Desai's Budget in February. And I do not see that any worthwhile improvement in stock exchange prices is likely or possible; even in its present form the SPT will cause dividends to be cut; and stock markets could scarcely present a cheerful front. But we should be having, simultaneously and paradoxically, an active and booming new issue market.

The "foreign" airlines have bested the American Civil Aeronautics Board, and the transatlantic fares are to rise despite US opposition to any such development. The "jet" age has ushered in its own problems, one such being that air traffic has not ex-

panded as fast as the carrying capacity of the very much larger number of airlines that do "ferry" service across the Atlantic. While, with the larger capacity of the jets, a reduction in the unit cost of transporting a passenger may have been expected, in the short-run apparently—and paradoxically—for the profitable working of the airlines an upward revision of fares has become necessary. I don't suppose that the impact of such increase on passenger traffic will be anything more than marginal; but it seems to me that the scope for rising business, as distinct from tourist, traffic is limited; and so if the "payload" of the jets is to improve, a lowering rather than a raising of fares is called for. Over the short-term it does not much matter; but I hope the moment that traffic picks-up, the international airlines will be as enthusiastic about and insistent upon a reduction in fares.

We are face to face with the prospect of costlier air traffic within the country itself. The Union Deputy Minister of Civil Aviation has indicated that domestic air fares are likely to go up by 10 per cent. He has nicely passed on the buck to the Finance Minister, whose Budget, enhancing the duty on aviation fuel, is held to be responsible for the official intention to put up the air fares. Here, too, the impact on the quantum of traffic is likely to be marginal. Travelling is now prohibitive, whether as to cost (for first class or air conditioned or for an air ticket) or to comfort (the "Gandhi" class was never more crowded). This may perhaps be a good thing. The discouragement of travel will mean that to corresponding extent the potential for the carriage of freight will be enlarged—provided, of course, we have the wagons. Again, any occasion in the past has been reasonable enough excuse for an employee to seek and obtain leave: less man-days will now, I trust, be lost in attending marriages of "near" relatives.

Plan Reappraisal

THE Planning Commission has of late stepped up the tempo of its activities. The preparation of the Fourth Plan has to be taken in hand from now onwards, and 14 study groups have been formed for the purpose. The first step in the formulation of the Fourth Plan is the determination of the base line from which it has to start. The Third Plan targets cannot automatically serve as the starting points for the development programmes of the Fourth Plan. The Commission has, therefore, been engaged in a review of the progress so far made in the implementation of the Third Plan in order to be in a position to make a close estimate of the extent to which the targets in different sectors are likely to be fulfilled and to make the adjustments that may be necessary in the light of the actual situation. At the same time it has been examining the impediments in the way of the completion of projects in time.

Case studies have been undertaken of a number of projects in the public sector to identify the whole range of factors responsible for delays, shortfalls etc. A closer look at the progress of plan projects has shown the need for checking the assumptions on which the plans were drawn up. In many public enterprises it has been found that original estimates were too optimistic in regard to costs and time schedules. Evaluation of progress has also been difficult, because, frequently, the programmes have not been mapped out in sufficient detail. For the same reason a lot of time is consumed in the pre-construction stage in the preparation of detailed project reports etc. For these reasons it has become necessary to strengthen the technical organisation of the Planning Commission, so that it may be in a position to formulate programmes in sufficient detail, and to watch their implementation more effectively than at present. In the next three months the Planning Commission expects to be in a position to make an assessment of the extent to which the Third Plan targets are likely to be realised within the plan period and undertake a reappraisal of the Plan as a whole in the light of this assessment.

The review of the progress of the Plan in the first two years has shown that the rate of growth of the national economy has not been good enough in relation to the target set. Agricultural output has remained more or less stationary. Though the index of industrial production has registered an annual increase of the order of about eight per cent in these two years, the progress in certain crucial sectors such as cement, fertilisers etc. has not been up to the required extent in relation to the Third Plan targets. On the

other hand, there are also encouraging features. A definite improvement is evident in the transport situation and the position regarding power supplies is also considered more hopeful. The Deputy Chairman of the Planning Commission told newsmen last week that the original Third Plan power target would be fully achieved and though there may be some delay in reaching the revised target, the needs of industry would have been fully provided for by the end of the Third Plan.

The stalemate on the agricultural front and its impact on price trends is a matter for concern. Together with the Union Ministry of Food and Agriculture, the Planning Commission has been examining the problem of increasing agricultural production and productivity. The surveys carried out by the high level teams sent out by the Commission and the Ministry have shown the need for greater co-ordination in the implementation of the programmes at ground level. Attention has been drawn to the lack of effective co-ordinating agencies and the States have been asked to set up Planning Boards to perform this essential function. The surveys have also revealed that, in a number of States, fertiliser stocks are accumulating, showing that utilisation of fertilisers has not kept pace with their availability.

The Government and the Planning Commission have recognised the need for the effective implementation of the policy for support of foodgrain prices. It has been decided to extend price support to paddy in addition to rice. State Governments have been advised to set up organisations for purchasing surplus stock from the farmers at the floor prices if there is a tendency for prices to fall below the minimum. Besides supporting farm prices, this will enable the State Governments to build up stocks for distribution to fair price shops and co-operatives. The Deputy Chairman of the Planning Commission also stated that the Government was fully armed with powers to control supplies and prices.

Aid and Trade

The climate for private foreign capital coming in was not bad, but at the same time, it was not what it might be, said Mr Bharat Ram, President of the Federation of Indian Chambers of Commerce & Industry, at a press conference which he addressed immediately on his return from a three-week tour of New York, Mexico City, London and Brussels. He led a seven-man Indian Delegation to the XIXth Congress of the International Chamber of Commerce, which was held in Mexico City from 20 to 27 April, 1963. Speaking about India's image abroad, he said that there was both sympathy

and appreciation of our efforts to meet the twin challenge of development and defence. While the new tax measures have been generally viewed in this light, foreign entrepreneurs are naturally concerned over some aspects of thinking on the part of Indian authorities which seek to place regulations on profitability, personal income and the like. "On the one hand there is need for widely making it known abroad that the growing and protected market of India is a safe and profitable one; on the other hand our Government too must more fully appreciate the impulses and expectations of foreign capital that we ourselves want." In this connection he referred to the inadequate arrangements for disseminating information regarding Government's policies to those interested in foreign countries. For instance, he found that, for three days after the Finance Minister announced tax concessions, our consulates and embassies which he contacted were not in a position to give any information on the subject.

At the ICC Congress, as well as in his discussions with businessmen in New York, London and Brussels and with the authorities of the European Common Market, Mr Bharat Ram emphasised the need for removing tariff and non-tariff barriers to the trade of developing countries such as India. The potential import demand of India is not being met because of foreign exchange difficulties, while the import demand of developed countries, especially for new products produced in India, is capable of expansion. In Mr Bharat Ram's view, the developed countries have to think in terms of differential tariffs for faster and expanding trade between developed and under developed countries.

Developing countries like India, he said, have also got to go a long way to meet the challenge of world markets which are growing more and more sophisticated. Not only greater attention must be paid to prices and quality of our exports, but there must also be a keener awareness of the techniques to create additional demand abroad for all our goods. "I cannot help feeling," said Mr Bharat Ram, "that we are not responsive and sensitive enough to the changes that are taking place in the world markets and it should be remedied as quickly as possible."

Amplifying this point in answer to questions, the President of the Federation said that, while there was resistance from the established industries abroad to import conventional manufactures, like textiles, there was vast scope for introducing new items which have not so far figured in our export trade and building up flourishing markets for these goods in the affluent societies of the west. What was required was enterprise, and ingenuity in identifying the items for which demand could be built up in western countries. While cost was an important consideration in regard to traditional and competitive items, it did not apply to novelties which may catch the fancy of the public in foreign countries.

Referring to the European Common Market, he said that, though the conditions in South East Asia were different, it would be worth-

while for an organisation like the ECSC to study and imbibed the imperatives that animate the successful working of the Secretariat which runs the ECM. As for India, he said, we are having a massive deficit in our trade with the Community and that is also having an inhibiting effect on the expansion of India's imports from the Community and on the expansion of India's plans for economic development. Speaking as a businessman, he expressed his concern over the delays in working out of "comprehensive solutions between Governments".

There was general recognition of the problems and aspirations of the developing countries, but this does not itself provide a solution. "The real problem," said Mr Bharat Ram, is how to evolve programmes appropriate to the objectives. It would appear, he said, that the tax concessions, particularly for new industries, offered by India were being negotiated in the absence of similar concessions in the capital exporting countries. "This is a handicap which foreign entrepreneurs face and the remedy lies in the hands of their Governments. In point of fact, the Governments of the capital exporting countries will be doing a great service if they go further and offer positive tax concessions to their capital seeking investments in developing countries."

Mr Bharat Ram said that during his visit to Brussels he discussed with members of the Belgian Chamber of Commerce the prospects of collaboration in Indian industries. It has been agreed that the Federation will be sending a list of industries that could be set up with Belgian collaboration. Later the Belgian Chamber of Commerce may send a delegation of businessmen interested in these proposals.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England)

5% RUPEE DEBENTURE STOCK, 1970

INTEREST FOR THE HALF-YEAR ENDING 30TH JUNE, 1963

Notice is hereby given that interest at the rate of Rs. 25/- (less Indian Income Tax) per Rs. 1,000/- of Stock will be paid on 1st July 1963 to Debenture Stockholders registered in the books of the Company on 21st June, 1963. Applications for transfers received at the Company's Office at Victoria House, Post Box 304, Chowringhee Sq., Calcutta, upto 21st June, 1963 will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above interest.

Debenture Stock Transfer Books will be closed from 22nd June, 1963 to 29th June, 1963 both days inclusive.

By Order of the Board,
D. P. M. KANGA
Victoria House, Agent,
Calcutta 13th May, 1963.

THE PUNJAB NATIONAL BANK LIMITED

All-round Progress in 1962

Increase in Deposits and Advances

Chairman Shri R. N. Goenka's Review

The following is the summary of the speech of the Chairman Shri R. N. Goenka at the 116th General Meeting of the Bank on Friday, the 10th May, 1963:

Gentlemen,

You will have observed from the Statement of Accounts that your Bank continued to make allround progress during the year 1962. After providing for contingencies and taxes and after providing Rs. 15.64 lakhs to the Employees' Gratuity Trust Fund and Rs. 1.43 lakhs to the Superannuation Scheme your Bank earned a profit of Rs. 124.21 lakhs, including Rs. 10.38 lakhs brought forward. A sum of Rs. 20 lakhs has already been utilised for payment of ad-interim dividend of Re. 1 per share subject to tax, leaving a balance of Rs. 104.21 lakhs for appropriation. Consistent with the policy of strengthening the capital base of the Bank, Rs. 25 lakhs have been transferred to Reserve Fund. A sum of Rs. 40 lakhs has been provided for Bonus to staff compared to Rs. 37.50 lakhs last year and Rs. 4 lakhs have been contributed to charity and the National Defence Fund, leaving a balance of Rs. 35.21 lakhs. Your Directors have recommended a final dividend of Re. 1 per share, subject to tax, making a total of 20 per cent, the same as last year. The balance of Rs. 15.21 lakhs has been carried forward to the next year's account.

INCREASE IN DEPOSITS

During the year under review, your Bank shared in the general development of the banking industry. The deposits of your bank during 1962 increased by Rs. 16.84 crores to Rs. 167.52 crores and advances by Rs. 6.32 crores taking the total to Rs. 99.54 crores. Throughout the year most banks maintained a high level of advances compared to the previous year. The rate of interest on advances was also generally raised by one half of one per cent. As a result of the increase in advances and the rate of interest charged it was clear that the earnings of banks in general would be higher during 1962 than in 1961. However, the rise in expenses has been much more than the increase in income. Expenses of banks increased due to various factors like a sharp increase in the volume of time deposits bearing higher rates of interest and stepping up of interest rates. The most im-

portant factor, however, was the Desai Award which had retrospective effect from January 1, 1962, Premium on deposit, insurance was also an additional expense. Taking such expenses into consideration the banks in general have shown some what lower profits in 1962 than in 1961.

During the year which has elapsed since we met last there have been developments of much more than ordinary importance in the economic and political life of the nation. Our very freedom and security have been threatened from across the northern borders and a challenge of great magnitude has been posed.

CHALLENGE TO DEVELOPMENT PLANS

Pursuing a policy of peace, goodwill and friendship towards all nations irrespective of the economic and political ideologies followed by them we have since Independence planned for our economic development on the assumption that we are not likely to get involved in a shooting war with any nation. Having been primarily concerned with the supreme task of eradicating the mass poverty in our country we were caught unprepared in a shooting war with an aggressive northern neighbour. The emergency that has thus arisen poses a formidable challenge to our development plans. Against this situation the stagnation in the economy during the first two years of the Third Five Year Plan has been rather disheartening. This poor increase in national income has been due mainly to stagnant agriculture and a lower increase in industrial output.

The dilemmas facing the development of the Indian economy infested with shortages and low level of consumption have become more acute with the inevitable diversion of India's scarce resources to defence efforts. Considerable help from friendly countries has come to India in her hour of need and is expected to follow. Yet, a great deal of effort has to be made within the country as ultimately we must prepare ourselves to become strong enough to deter any future aggression.

GOVT. DECISION WELCOMED

While it is imperative to build up India's defences, the supreme task of economic regeneration to eradicate mass poverty cannot also be ignored. If the Chinese

are able to divert India's attention from her programme of development they will have achieved at least a partial victory. India must, therefore, prepare on both defence and economic fronts. Whether or not we can maintain the tempo of economic development in the face of a high level of defence expenditure has become a fateful question. I welcome the decision of the Government of India not to slacken developmental efforts during the emergency in spite of the sharp rise in defence expenditure.

The defence expenditure of Rs. 867 crores when compared to the total planned expenditure of the Central Government of Rs. 1,226 crores seems indeed formidable. But, there is no escape.

The major characteristic of defence spending is that it is by and large inflationary in character. As it is, inflationary tendencies of developmental in India increase from year to year and have been a constant worry for us all. The inflationary potential of increased non-developmental military expenditure will naturally be an additional cause of worry especially when a large volume of deficit financing has been found necessary in spite of the rapid rise in taxes and anticipated compulsory savings. Adequate and effective steps to control inflation will thus become one of the major problems of our future economic policy.

PRODUCTION MUST INCREASE

The crux of the problem, however, is that production must increase at a faster rate. Immediate steps would seem necessary to increase agricultural production. It is true that the present emergency implies an expansion of output in defence-oriented industries but this must be accompanied by an expansion on an increasing scale of export industries so as to meet the heavier demands on foreign exchange for development and defence industries. Production in consumer goods industries must also increase so as to keep prices from rising.

In this regard the consideration shown by the Finance Minister in providing relief in the Super-Profits Tax proposals is to be welcomed, and the business community must willingly bear the additional burden in the interest of the country. It is only to be hoped that the Super Profits Tax

will be purely temporary for the duration of the emergency.

The banks in view of the necessity of building up their capital base and internal reserves certainly had a strong case for total exemption from this imposition like the Life Insurance Corporation. But the concessions given to banks have considerably reduced their burden.

Another important disturbing feature of India's development has been that considerable industrial capacity remains unutilised in a large number of industries. The major bottleneck in this sphere has been the lack of availability of free foreign exchange to be spent on raw-materials and spares. We have been trying to get such materials to the extent our foreign exchange position has permitted us.

SERIOUS PARADOX

We face a serious paradox in the field of international finance, in that while on the one hand our foreign exchange reserves have come down to a bare minimum, on the other hand we have considerable amounts of unutilised foreign aid. This has been due to the fact that most of the foreign aid has been tied to definite projects and to countries. The recent untied loan from the United States of Rs. 114 crores should be a considerable help. We may, thus, have to urge all friendly countries to include substantial amounts of untied aid in their total aid commitments for a long time.

Rupee finance at times has also become a bottleneck in our productive activity. Here banks have a crucial role in financing production—agricultural, industrial as well as defence during the present emergency. Our past experience shows that in our growing economy bank credit has expanded at a faster rate than deposits resulting in an over-extended loans portfolio of most of the banks. Banks have also, therefore, to borrow from the Reserve Bank at penal rates of interest. For banks to maintain a comfortable position in the face of increased demands made on them it would be extremely important that deposits grow at a faster rate. It can never be over-emphasised that the extension of bank credit shall have to be increasingly linked with the productive activity so that it does not contribute towards inflation but supports an efficient control of speculative activity. Banks must

also increasingly invest in Government securities when considerable finance will be required by the Government for defence purposes. It is, therefore, imperative that bank deposits rise in proportion to the increase in demand for bank finance.

NEW BRANCHES

In order to mobilise financial resources the banks may not only have to utilise their existing capacity more efficiently but also open many new branches for popularizing and inculcating the banking habit. For this both the managements and the workers have to rise to the occasion. The productivity of workers in the banking industry must therefore increase rapidly. It is only the increase in efficiency which can lower the costs essential for meeting considerable expenses and losses in opening new branches in the already unbanked areas. On the other hand bank managements shall have to set aside a significant portion of their earnings for meeting the losses of new branches and for strengthening the reserves (both statutory and secret) which would become very essential in order to provide for risks involved in financing new types of production both for defence and civilian uses. In the present emergency the banks shall also have to make certain that their scarce resources are not utilised for antisocial

purposes of hoarding and speculative activity.

The growth of bank deposits depends not only on the capacity of the banks to tap them but also, and in the main, on the ability of the economy to generate deposits in the banking system. Under the first two five-year plans, the aggregate deposits of scheduled banks rose at an annual rate of 11.47 per cent but the volume of bank credit grew at an annual rate of 14.43 per cent. True, the pace of expansion of bank credit was larger than that of industrial production which rose annually at an average of 9.43 per cent but the disparity is to be attributed mainly to the process of monetisation of the economy in the rural sector where the economic activity is not fully financed by the co-operative banking structure.

DEPOSIT GROWTH SLOWED DOWN

For reasons which are of course outside the control of the banking system, the growth of deposits has slowed down and the demand on the resources of banks has grown. As a result, the resources of the banks have been already strained considerably.

In the current financial year, the Government has decided to make larger demands by way of higher taxation and compulsory deposits on that sector of the

economy which has a propensity to save. On top of it the growth of new industries is expected to make heavier demands on long-term capital. In such a situation, the banking system will have to qualify for a share in the available volume of savings which may be augmented in the event of the economic activity being stimulated. However, even assuming that the heavy expenditure on defence and development will accelerate the tempo of economic activity, the resultant growth of savings will have to be preceded by the financing of the economic activity at a higher level. Since the banking system has already lent to its maximum capacity it will have to be enabled to raise the additional resources by liquidating its investments or alternative institutional channels will have to be explored for financing the growth of the economy. Technically, at any rate, the obligation of providing adequate credit facilities for financing the legitimate economic activity rests on the Reserve Bank and the Government and not on the banks. I only hope that an appropriate solution will be carved out before it is discovered that the economic development is hampered by the paucity of adequate credit facilities.

CONTRIBUTION TO N.D.F.

Under these circumstances, our task is to mobilise funds from the

public on as increasing a scale as possible and channel them for productive purposes. I assure you, gentlemen, that we will leave nothing undone which will enhance the capacity of our Institution to undertake the responsibilities inherent in the present national emergency. Apart from this job which we intend to perform to the best of our ability and capacity, I am happy to report to you that your bank contributed Rs. 4 lakhs to the National Defence Fund. As a token of our affection for our armed forces defending our difficult frontiers we have offered them and their wives general banking facilities free of any charge. Our staff has also risen to occasion and many of our staff members have contributed one month's salary to the National Defence Fund.

In the end the Chairman expressed his gratitude to the Directors of the Bank for their help and cooperation and acknowledged the hard work put in by Shri R. L. Tuli, General Manager, assisted by Sardar Mohan Singh, Deputy General Manager. He also thanked officers and the staff at all levels for their work and co-operation during the year.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

CANARA BANK LIMITED

A Year of Outstanding Progress

Attained the Status of a Major Bank

The Chairman, Shri K. P. J. Prabhu on Training of Personnel

The following is the text of the speech delivered by the Chairman of Canara Bank Ltd., Shri K. P. J. Prabhu at the 57th Annual General Meeting of the shareholders of the Bank held at Mangalore on Wednesday, 13th March, 1963.

Gentlemen,

The year 1962 being the year under report has been of special significance to us. You will be pleased to know that your bank has crossed another important milestone on its onward march of progress. We have crossed the Rs. 50 Crore mark under deposits and have attained the status of a Major Bank. The deposit performance of your bank during the year has been remarkable. As against an increase of 11.1% in the deposits of Schedule Bank as a whole, our deposits went up by about 35.5 per cent.

With such an impressive growth in deposits, we have been able to avoid an over-extended position despite a marked increase in our

advances. Under foreign business also we have been able to register substantial progress.

WORKING RESULTS

As you will see from the Accounts and the Directors' report circulated to you, our gross earnings have gone up from Rs. 197.25 lakhs to Rs. 264.87 lakhs during the year. Apart from a very large increase in our business turnover, the lending rates were also slightly enhanced during the year in keeping with the upward tendency in all lending rates.

Despite this impressive growth in total earnings there has been a slight decline in the level of net profits as compared to the previous year. This is due to a more than proportionate rise in working expenses. The biggest single item of increase in expenses was the addition to the wage bill resulting from the implementation of the new scales of pay recommended by the Bank Award Tribunal. The new scales were given effect to retrospectively from 1st January

1962. Consequent upon the adoption of new scales of pay in respect of clerical employees, pay-scales of officers had also to be revised upwards. The premium payable to the Deposit Insurance Corporation was an additional item this year and absorbed Rs. 2.03 lakhs. The bank also donated a sum of Rs. One Lakh and One to the National Defence Fund. Besides, to encourage the employees to donate liberally to the National Defence Fund, the bank has contributed an additional amount of Rs. 19,080/- equivalent to the employees' contribution.

While the progress achieved so far is quite satisfactory, we are aware that during the years ahead, the bank will have to undertake still greater expansion in order to mobilise Savings on a large scale. In order to achieve maximum mobilisation, more branches will have to be opened in those areas where banking facilities do not exist at present.

As new branches take at least 2 to 3 years to reach the break-

even stage, only the stronger banks can afford to shoulder this responsibility. While these banks should voluntarily bear the cost of rapid small branch expansion in national interest, to facilitate their task the Reserve Bank could perhaps liberalise its licensing policy about opening of branches in major cities to counteract the cost trend of branches in small centres.

The branch licensing policy of late seems to be guided by the regional standing of the particular bank. While in respect of smaller centres this approach seems satisfactory, it would be unfair to apply the regional test to branches in important cities and expanding industrial centres, which serve a very large hinterland. More branches in these bigger centres are necessary as essential links for up-country branches so that these could together give more effective service to their clients. A liberal licensing policy in respect of bigger centres is all the more necessary in respect of those banks which are

willing to undertake rapid branch expansion in unbanked areas.

In view of the rapid branch expansion envisaged during the coming years, your Directors have taken steps to strengthen the Bank in every respect.

STRENGTHENING OF CAPITAL STRUCTURE

As you are aware, we have already started a phased programme of the issue of capital and substantial transfers to reserves to bring about an improvement in our Capital and Reserves. This year our statutory Reserves including share premium account have increased from Rs. 63 Lakhs to Rs. 76 Lakhs. The Paid-up capital has also moved up from 50 Lakhs to 75 Lakhs. To bring about a further strengthening of Capital structure, we propose to issue additional capital sometime during 1963.

EFFECTIVE SUPERVISION

Our spreading net-work of branches has made it necessary to strengthen the inspection machinery. We already have two Regional Offices for Tamilnad and Kerala. This arrangement has been very useful in ensuring better supervision of and guidance to branches in respective areas. A Regional Office for the Andhra Region is to be set up soon.

TRAINING OF PERSONNEL

During the year two more senior managers have undergone specialised training abroad. In addition, 8 Officers were deputed to the training courses organized by the Reserve Bank authorities. Your directors have also been alive to the problem of training bank personnel at almost all levels to meet the demands of additional branch expansion. Accordingly, the exist-

ing facilities for imparting training to the bank staff are being expanded and strengthened. We are confident of meeting all the requirements of trained personnel in respect of our future branch expansion.

I would like to add a few words about the bank's scheme of imparting practical training in banking to commerce graduates. As you may be aware, in the industrial sector, training of apprentices has become a statutory obligation of industrial units. In the sphere of banking such a scheme does not exist at present. The banking industry cannot, however, delay the introduction of training schemes of apprentices for long. Both in the interests of the banking industry and in the interests of the national economy, it is time that we bankers thought of doing something about it. You may be pleased to know

that we have been experimenting with this idea for the last two years. At present, training facilities are extended to some selected commerce students during their summer vacation. The trainees are also paid a stipend during their training period. It is to be hoped that more and more banks will come forward and introduce this as a regular feature of training within the industry, so that a pool of trained apprentices will always be available to serve the needs of expansion.

Mangalore,
13th March, 1963.

(Note: This does not purport to be a report of the proceedings of the Annual General Meeting of the Bank held on 13th March, 1963.)

INDIAN SUGAR MILLS ASSOCIATION

Need for a Progressive Approach to step up Sugar Production— Controls no Solution

In his Presidential address at the 30th Annual General Meeting of the Indian Sugar Mills Association held at New Delhi on the 15th May, 1963, Shri M. N. Pittie said:—

SUGAR SITUATION

Events on the sugar front have moved rather briskly. Last year, when we met, the industry was grappling with the problem of surplus. Today we are faced with the problem of inadequate supplies. The principal reason leading to this situation has been an unprecedented rise in offtake on the one hand and a precipitous fall in production on the other. The Annual offtake for internal consumption had stagnated around 20/50 lakh tons for four consecutive years prior to decontrol in 1961. The outlook for exports then was equally bleak—the International Sugar Agreement was in operation and the prospects of any increase in our export quota of 50,000 tons were extremely poor. Therefore, while sugar output in 1960-61 reached the peak level of 29.8 lakh tons, there was no outlet for the surplus production and stocks were piling up. Sugar was decontrolled in September 1961 and the offtake for internal consumption rose to about 25 lakh tons. Meantime the International Sugar Agreement also broke down and restrictions on exports ceased. The net effect was the increase in total offtake from 21/22 lakh to about 31 lakh tons.

In the background of this increased offtake, the industry was looking forward to higher production but to our disappointment

production has registered a precipitous fall and is now estimated to be around 21.50 lakh tons. Unfavourable weather conditions, and the resulting poor cane crop brought in its wake increased diversion of the limited cane supplies to gur and khandasari. But such fluctuations are inherent in an agro based industry. The decline in production is therefore a natural phenomenon and we should take it in that spirit rather than be weighed down by the occurrence.

VOLUNTARY REGULATION

With the fall in production and the apprehension that prices might rise the industry conscious of its responsibilities initiated voluntary measures such as fair price shops in various zones such as Bengal, Bihar, U.P., Punjab, South and the Deccan. Fair price shops had already started functioning in New Delhi. We were eagerly awaiting release of a quota so that the entire scheme could be put into full operation, but meanwhile statutory controls were imposed by the Government on the 17th April, 1963. I wish the Government had given at least a month's trial to the voluntary control scheme of the industry. Had the opportunity been given, it might well have been that the necessity of statutory controls and all the repercussions thereof could have been avoided.

CONTROL INHIBIT PRODUCTION AND CONSUMPTION

The history of Sugar vis-a-vis controls is indeed enlightening. The history of sugar is one of control, decontrol, re-control, partial control and control again. Controls

as a rule have stifled consumption and reduced production. Production of gur and khandasari which remain uncontrolled is promoted at the cost of sugar. The consumer too usually is not able to get his full requirements at the prices envisaged. In sharp contrast to this, the policy of decontrol and incentives whenever followed has stimulated both production and consumption. Therefore the ultimate answer is increased production and not controls.

CONTROL PRICE

The level at which Control prices have been fixed this year has caused great hardships particularly to a large section of the industry is the North where even a fair price has been denied to the units situated in East U.P., Bihar, Punjab. It is an accepted and time honoured principal of price fixation that the prices fixed should be such as to take into account the cost and provide for a reasonable profit margin.

Much of the hardships could have been avoided had separate prices been fixed for East U.P., South Bihar, North Bihar, Punjab and Meerut Division. One finds it difficult to understand when separate prices have been fixed for smaller number of factories in regions like Rajasthan, West Bengal, Assam etc. where the number of factories is hardly one, two or three, why such large sections of the industry in sub regions of the North have been denied separate prices. It is indeed paradoxical that the lowest prices have been fixed for these regions having the highest costs of production.

Unless the prices are revised, factories would be adversely affected. Equity demands that they should be atleast given fair prices so as to ensure that they meet their cost of production and are left with reasonable profit margins. Such a step would inspire confidence in the large section of the industry and enthruse them to plan for higher production next year.

1963-64 SUGAR PRODUCTION

All out efforts should be made to increase sugar output to atleast 33 lakh tons in 1963-64 which is the absolute minimum we need to produce in order to meet the requirements of internal consumption and exports. I am convinced that the production target can be achieved provided cane price is suitably increased within the framework of the recovery linking formula. The industry should also be given incentives to start early and maximise production. Coupled with these measures, steps should be taken to ensure that the Sugar-cane produced within the Sugar factory areas is crushed by the factories alone. Bonding of cane should be strictly enforced and those failing to fulfil commitments should be penalised.

LOW PROFITABILITY

Profits are the very life blood of any industry and their importance in the sugar industry cannot be overlooked in the context of the need to step up sugar production. Unfortunately, the level of profits presently obtained in the sugar industry are far from satisfactory. Studies made by the Wage Board regarding profits during 1955 (when

controls were imposed in the North). the analysis of 1961-62 financial results carried out by the Association, the decision of the Tripartite Committee in U.P. and the latest Reserve Bank Study published in its Bulletin of June 1962 all very clearly point out that the sugar industry is making extremely meagre profits and if it has to meet its requirements for rehabilitation, modernisation, expansion etc., which in the ultimate analysis would benefit the consumer, profits have to be raised to reasonable levels.

PRICE POLICY

Although it has been the declared policy of the Government to maintain fair prices in the interest of the growers, the industry and the consumers, in actual practice the industry is not able to realise a fair price. When there is over-production, the prices decline and the industry does not realise the "fair" price. Again, in years of shortage, if the prices tend to rise slightly say by 5% or so, over the fair price, controls are clamped and prices fixed at levels, which in several cases are, not commensurate with fair price level.

SUGAR PRICELINE

The three principal elements that constitute the price of sugar are: the cost of cane, State and Central taxes and the manufacturing charges. Usually cane costs account for 46%, taxes 35% and manufacturing charges 20%, of the ex-factory price of sugar. It would thus be seen that over 80% of the price, the industry has no control. Of the balance 20%, costs towards manufacturing, such as salaries, wages, repairs, renewals, interest, stores etc., account for 18% leaving about 2% as gross profit which is further taxed, leaving less than 1% as net profit to the industry.

Since the last Tariff Commission Enquiry of 1957-58, costs have gone up. The emergency risk insurance alone would entail an additional burden of Rs 1.75 crores and the incidence of the Wage Board Award would be around Rs 4.5 crores. Further, costs of materials such as coal, firewood, lime, filter cloth, chemicals etc., have gone up by 17; 47; 30; 12 and 17 percent respectively. Interest rates and railway freight have gone up by 25% and 10% respectively. Moreover due to the steep decline in production, the incidence of overheads is bound to rise. No doubt the manufacturing expenses have increased, but the rise in these is relatively much less compared to increase in cane costs and taxes. Thus, over 1952/53 cane costs have increased by over 25% and taxes by over 155%. Exclusive of excise duty, the rise in sugar price over 1952/53 level is hardly 15%, against an increase of over 26% in the general price level.

EXPANSION

An important remedy that could go a long way in curing many ills

of the sugar industry is the increase in volume of production per factory. This should be achieved in a two fold manner—by expanding the existing factories and ensuring that sufficient cane is made available to them to start early in November and close by the middle of May. Just like the yield of sugarcane per acre, production of sugar per factory continues to remain very low in India compared to other countries. The daily crushing capacity in India is extremely low—about 1100 tons per day against over 3,000 tons in most of the other countries. Though during the last decade the installed capacity in India increased by about 100%, the daily crushing capacity of the factories increased hardly by 25%. The number of factories increased from 139 in 1951-52 to 183 in 1962-63. Increased volume of production per factors would reduce the cost of production and lend economic stability to existing units.

CANE DEVELOPMENT

Over 30 years have lapsed since the establishment of the industry, but the yield of sugarcane has remained stagnant around 15 tons per acre and the sugar content has also not shown any significant improvement though several crores of rupees have been collected by way of excise duty, cane cess and co-operative commission etc. The Punjab Government have recently decided to utilise the entire cane cess collections for cane development. Other States like U.P. and Bihar should emulate this fine example.

The intensive cane development scheme evolved by the High Power Committee appointed in U.P. is a step in the right direction and such schemes should be taken up in other States as well. Steps should be immediately taken to increase the irrigation facilities, especially in the East U.P. and Bihar, where they are almost non-existent. Vigorous efforts should be made not only to breed indigenous varieties, but to give fair and extensive trials to foreign varieties as well. In the matter of research I am convinced that autonomous Research Board would greatly improve the working of our Research stations and will go a long way in bringing the grower, industry and the Research institutions closer. Facilities of rail and road transport around factory areas are extremely poor. These need to be improved considerably and the factory areas should be saturated with a net work of good roads.

For achieving success in the work of cane development it is of paramount importance that the agency responsible for the various schemes should be suitable for the purpose. Small committees at the factory level consisting of the representatives of the growers, Government and the factory should be set up. The

entire funds for cane development, which should be at least 50% of the cess collected from the factory, should be placed at their disposal to be used at their discretion.

LAND CEILINGS

In the context of this compelling need to increase cane productivity, it is really unfortunate that Governments of U.P. and Maharashtra are thinking of taking over farms attached to sugar factories, under Land Ceilings Act. These farms do useful extension service and have promoted an industrial outlook in Agriculture. It will, therefore be a retrograde step to take over these farms.

RECOVERY LINKING

The scheme of payment of cane price based on the recovery was enforced from the current season in replacement of method of paying for cane on the basis of weight. Though much opposition and apprehension was voiced at the time of the introduction of the scheme in practice, it has worked out very well and has been even welcomed by a large number of growers.

GUR AND KHANDSARI

In India 35% of the cane produced is converted into sugar and about 50% finds its way to gur and khandsari. Conversion of a given quantity of cane into sugar, yields about 50% more sugar than its conversion into gur and khandsari. Sound economic considerations therefore demand that production of gur and khandsari is not encouraged. Under the present set up, due to the inequitable levy of taxes on factory sugar, a fillip has been provided to the production of gur and khandsari. If sugar production is to be freed from this problem, the disparity of taxes should be removed.

EAST U.P. AND BIHAR

The Industry in East U.P. and Bihar which comprises of 61 sugar factories is the weakest link in the chain of the sugar industry and representing such a big segment, it certainly impairs the health of the industry in general. It is not an impossible task to improve the conditions of these factories, if steps are taken to merge, shift and expand the existing factories, improve road and rail communications and provide irrigation facilities, fertilizers etc.

EXPORTS

The emergence of India as an exporter of sugar has been a most welcome development during recent years. In 1962, we exported 3.73 lakh tons, and during 1963 our exports are expected to be about 5.00 lakh tons. The foreign exchange earned during 1962 amounted to Rs. 14.82 crores and is expected to be around Rs. 30.00 crores during 1963.

For the first time in the history of Indian Sugar Industry, raw sugar was produced to meet ex-

port requirements. In all, about 2.50 lakh tons of raw sugar is expected to be produced by 39 factories. Our success in producing raw sugar opens a vast field for export in future.

INDIAN SUGAR IS CHEAP

India is one of the World's cheapest sugar producers. The impression that Indian sugar is costly results from the fact that exports of sugar from India have to be normally subsidised, but this is not due to high cost of Indian sugar but due to the extremely low prices which usually prevail in the "Free" markets. Comparing the cost of production of various countries it emerges that India is one of the cheapest sugar producers in the world.

FUTURE NEEDS

The set-back in production this year and the imposition of Controls need not cause any apprehension about the long term prospects of the Industry. The Industry looks forward to increase in production with the hope that it will bring additional payments to the cane grower, increased benefits to the worker, larger revenue to the exchequer, greater foreign exchange earnings to the country, plentiful supplies of sugar at reasonable prices to the consumer and an equitable return to the industry.

NOTE: This does not purport to be a record of proceedings of the Annual General Meeting.

BALMER LAWRIE & CO. LTD.

The Board of Directors of the Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a final dividend of 18 per cent for the year ended 31st December, 1962.

BALMER LAWRIE & CO. LTD.

D. MANSON
Managing Director.
21, Netaji Subhas Road,
CALCUTTA, 11th May, 1963.

THE CHAMPDANY JUTE CO. LIMITED.

The Directors, at a Board Meeting held to-day, decided to recommend to the Shareholders in General Meeting the payment of a final dividend at the rate of 35% or Rs. 3/50 per each share of Rs. 10/-. The dividend will be subject to deduction of tax.

A notice calling the Annual General Meeting on 11th June, 1963, will be published shortly.

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

Calcutta, 14th May, 1963.

Markets

JUTE Satisfactory Offtake

After hectic trading in the first half of last week marked by a sharp rise in prices, the jute goods market has become rather subdued. As the week progressed, the initial firmness stemmed from apprehensions about a fall in output in the current month following the power cut imposed by the Calcutta Electricity Corporation in some of the regions served by its New Cossipore Station. With the going out of commission of a turbo-generator at the New Cossipore Station since last week power supply to jute mills as well as other industries has been curtailed. At one time it was feared that the supply position would show serious deterioration as the DVC itself had been told by the Rihand authorities that the additional supply that the Corporation was getting from Rihand would be reduced on account of a fall in the level of the reservoirs serving that power station. But thanks to the timely intervention of the West Bengal Government, the UP authorities have now indicated that in view of the difficult situation in Calcutta Rihand power will continue to be made available to the DVC at the usual rate. In the

meantime, it has been stated that the damaged unit of the CESC will be repaired within the next two or three weeks. It was during the period of uncertainty about the continued availability of power from Rihand that the jute market became buoyant with the prices scaling new highs. For the operators' calculation appeared to be that with the supply from Rihand also reduced production in jute mills would suffer serious diminution. Now that the Rihand supply will continue, power shortage will be limited to the temporary reduction in the supply from the CESC necessitated by the damage to one of its units, and consequently production of jute mills may not be adversely affected to the extent earlier feared. This perhaps explains the fall in prices in the second half of the week. There has however been some recovery on Wednesday following further foreign enquiries. With the publication of the figures pertaining to production of jute goods of IJMA mills during last month, the undertone of the market has slightly improved as the figures indicate that despatches in April have been on a satisfactory level. Total output during the month amounted to 105,400 tonnes as compared with 104,500 tonnes though the hours worked in both the months were the same at 208. The total production in April of 105,400 tonnes comprised 43,800 tonnes of hes-

THE NATION NEEDS YOUR SAVINGS

sian, 43,200 tonnes of sacking and 18,400 tonnes of other goods. As compared with the previous month output of hessian has declined by 600 tonnes while that of sacking has risen by 500 tonnes. Production of other goods is also higher by 1000 tonnes. It will be evident that despatches during April have totalled approximately 105,500 tonnes or in other words the outgo is as much as

the month's output. As has been noted in this column last week, the outlook for hessian exports seems to be quite bright as besides the USA, Russia, the UK and Argentina are expected to increase their offtake in the coming months. It is expected that the US may also evince increased interest soon enough to keep the undertone steady for many months to come. In this connection it would

appear that hessian supply may not continue on the same level as in the last few months. For the decline in the output of hessian during April and a rise in sacking may be indicative of a shortage of quality fibre for the manufacture of light goods. Trade circles seem to be satisfied with the trend of burlap consumption in the US, though during April burlap consumption in the first four months of the year is higher at 319 million yards as against 311 million yards during the comparable period of 1962. The fact that burlap stocks at the end of April have declined by 4 million yards to stand at 300 million yards is also a favourable factor.

The raw jute market has also relapsed into a subdued mood after earlier steadiness. Though mills are continuing purchases in respect of their May quota, the quantum of offtake on this account has not been such as to make any impression on the price trend. Once again holders are becoming anxious to dispose of their stocks as it is not expected that the new crop will suffer any serious damage on account of the continued scattered rainfall in the growing regions.

TEA Demand at Lower Rates

IN the Dust sale held in Calcutta this week, offerings were 29,648 packages. There was a good general demand at lower rates. Medium CTCs came to an irregular market and were up to 30 nP a kilo easier and sometimes more. The powdery good CTCs were sold well, while others in this category were absorbed at a discount of up to 50 nP. Plain and medium orthodox descriptions, suitable for export, were generally up to 20 nP easier. "Teas for price" were, however, sold well at around last prices. Legg-cut tea followed the easier trend of the market. Following rates (per kilo) were quoted:—Plain Orthodox Dust Rs 4.20 to Rs 4.40; Medium Assam Dust Rs 4.40 to Rs 5.20; Legg-cut Dust unquoted; Medium Assam CTC Dust Rs 5.20 to Rs 5.60 and Good Assam CTC Dust Rs 6.40 to Rs 6.80.

In the Dust sale held in April, the quantity sold in four auctions was larger at 116,147 chests as

compared to 109,798 chests in the corresponding month of last year. At the end of last month there was an estimated balance of a little over 100,000 chests of 1962-63 season's dusts awaiting sale. The bulk of this quantity is expected to be sold by May 22, while the remainder will be catalogued in a clearing sale, to be held on 5 June 1963.

Once again, a good demand prevailed during April 1963 and the price levels were well maintained for the time of year. The UAR continued to operate actively and black exportable Dusts, were well supported with little change in the price levels. Enquiry for small powdery kinds with bright liquors was active and these often advanced in value. The first Leaf sale of the new season will be held on 20 May and will consist of teas from all districts.

In the Cochin market, a quantity of 347,000 kilogrammes of dusts was offered for internal consumption. The market met with less general demand than in recent weeks and prices were easier for most descriptions. All medium categories met with only small support and declined irregularly by 20 nP to 30 nP a kilogramme. Highgrowns met with less support and were easier up to 50 nP. Clean black grainy descriptions were sold readily; but these also shared in the downward trend of the market. Unorthodox descriptions registered a decline up to 20 nP a kilo, particularly CTC types and legg-cuts.

Also, 927,000 kilogrammes of Leaf tea were offered for export. Quality in general showed a further seasonal decline. There were, however, still some useful invoices available from Nilgiris. In spite of good general demand, prices were easier for most descriptions. Quotations for 1963 are given with those for 1962 in brackets:—Low Mediums Rs 4.10 to Rs 4.30 (Rs 3.90 to Rs 4.20); Mediums Rs 4.35 to Rs 4.70 (Rs 4.20 to Rs 4.80); Good Mediums Rs 4.70 to Rs 5.40 (Rs 4.25 to Rs 5.65); Nilgiris BOP Rs 4.60 to Rs 8 (Rs 4.50 to Rs 7.40). Quotations given are the minimum and maximum average prices respectively for each category of tea offered in the sale.

In London auction held this week, 24,229 packages, including 14,413 packages from Northern India, were offered. Bidding was less keen and the market for all descriptions ruled irregular and slightly easier. Rates remained unchanged.

Tea stocks in London as on 4 May, 1963 totalled 165.39 million pounds as against 166.38 million pounds in the previous week. The total amount to be landed on the same date was 8.06 million pounds. Total afloat was 26.61 million pounds, including from Calcutta 4.51 million pounds; from Chittagong nil; from Cochin 1.63 million pounds; from Ceylon 18.07 million pounds and from other Ports 2.41 million pounds.

COTTON Recovery in Futures

In striking contrast to the set-back in cotton futures market during the past few weeks the cotton futures staged a recovery last week. The maturing contract closed the week with a net gain of 11.5 points against a loss of 16.5 points in the preceding week and the Jarilla August contract gained approximately 4 points in contrast to a loss of 6.5 points in the previous week. The rally was largely attributed to the short-covering in the Jarilla May contract. The contract however met with stout resistance at lower levels. This phenomenon was mainly owing to the relatively high prices quoted for ready cotton and the general shortage of selected qualities required by the spinners. Toward the close, however, a subdued trend developed and closed the week at Rs 726.50 per three quintals. Tenders issued during the week under review were 900 bales taking the aggregate tenders against May contract to 1,350 bales, against 1,050 bales in tenders attracted by the May contract 1961.

The Jarilla August contract ruled fairly steady throughout the week and after opening the week at Rs 719.50 per three quintals it touched a low of Rs 715.50 before finally closing at Rs 725.75.

The spot market as Sewri remained featureless with many of the mills staying away from the market. Needy mills from upcountry centres covered their seasonal requirements of selected growths like Digvijay, Surti, Co 2, and L 147. Prices of almost all the available varieties tended to ease obviously due to the lack of any active spinner demand.

In the import section, consequent on the issuance of the allotment of global quota to the mills for shipment from 1 July scattered buying in Sudan and Egyptian cottons were reported. In the export section, some business of the order of nearly 4,000 bales of new crop Bengal Deshi is reported to have been done.

According to the International Cotton Advisory Committee the outlook for cotton for 1963-64 may be more reassuring than during the current season. It should be recalled that during the 1962-63 season cotton throughput has reached a new peak and prices have so far evinced a reasonable degree of stability although at a slightly lower level than that of a year ago. With a record world cotton crop and the anticipated decline in world consumption a sizeable increase in the world carry-over at the close of the current season becomes imperative. World stocks too show a rise and by August 1963 they are likely to cross the 2 million bales mark to reach the highest level since 1959. Nevertheless this trend cannot be construed as the correct index of the cotton stock position. Stocks with many of the producing countries are reported to be at the minimum level and a similar situation is also

visible in cotton importing countries which were buying cotton on a hand to mouth basis culminating in a further depletion of the stocks with them.

However it should be noted that world cotton surplus will largely be concentrated in the US where stocks are expected to rise up to 11 million bales. Other cotton producing countries need not take an alarmistic view as the delegate from that country has given the assurance that in evolving its cotton policy the US Government will bear in mind the interest of other countries and try to avert any possible disruption in the cotton market. Although according to the consensus the slight fall in cotton consumption is to some extent cyclical it is to be admitted that the consumption of synthetic fibre has moved up to record levels.

The ICAC has accepted the suggestion that the committee on cotton output and research problems should be constituted on a permanent basis as one of the committees of the plenary session. The plenary session has also adopted a report of its cotton research and development sub-committee requesting the Governments of cotton producing countries to send information on legislation pertaining to insect and disease control.

The current shortage of foreign cotton which has posed a baffling problem to the cotton textile mills in India may prove beneficial in that the Government and the industry are giving serious thoughts to find a substitute which will prove economical, easy to blend with the natural fibre and strengthen the export potentiality of textile commodities. Despite natural fibre's several advantages over that of man-made fibre some of the synthetic fibres, by dint of their crease resistance power, are largely used in industrial uses. As far as India is concerned, the problem is not competition from man-made fibre but to get a material which can be easily blended with cotton owing to the foreign exchange difficulties in importing foreign growth on an adequate level. The bleak prospects for raising cotton production to a level commensurate with the demand textile industry should do well to plan in such a manner as to take a good admixture of staple fibres and cheaper man-made fibres.

The Government of India is reported to have decided to import additional quantities of foreign growth. Mills are understood to have been informed that imports of 175,000 bales will be permitted on a global basis for July-December 1963. The distribution of imported cotton will be as follows: 55,000 bales of cotton will be allotted for distribution to retention quota holders against entitlements for the quarter upto and including January-March 1963, 50,000 bales to actual consumers of 13/16" and above cottons and new mills and 25,000 bales against defence requirements. The balance of 45,000 bales will be earmarked for distribution against import quota issued for shipment before 30 June 1963 but postponed for shipment from 1 July having been liveried to meet defence requirements.

Consumption of cotton by the Indian mills from 1 September 1962 to 31 January 1963 declined by 76,318 bales to 2,340,158 from 2,416,476 bales consumed in the same period in 1961-62.

Prospects of Foodgrains Production

DESPITE unfavourable weather conditions, the overall prospects of foodgrains production touching the 80 million-ton mark—or slightly higher than the bumper crop of 1960-61—are bright. The outlook for both kharif and rabi crops appears to be fairly satisfactory except in the case of rice. The output of rice may be down by much more than 2 million tons and be around the 30.9 million-ton level of 1959-60.

The rice crop has suffered a severe damage everywhere except in Madras and Andhra. The first estimate is expected in a few days. Trade circles fear a loss of about 3.5 or 4 million tons. The Planning Commission has taken a policy decision to the effect that the Government may, if necessary, procure entire stocks of rice with the rice mills at specified maximum prices. This step has been proposed to check the rise in prices. Already, many States procure rice from mills in varying percentages, and the new decision will enable the State Governments to buy the entire stocks. The necessary powers will be taken under the Defence of India Rules.

In the case of Wheat crop, the loss is estimated at 1.5 million tons. Last year's record output of 11.6 million tons is likely to be maintained. But for the weather, it is stated that the production would have jumped to an all-time record of 13 million tons.

A bumper millet crop is expected. The output will exceed 14 million tons—more than 2 million tons higher than last year. Maize is likely to jump to about 4.9 million tons from last year's 4 million tons. Rag will maintain last year's level of 3.5 million tons. Barley is expected to hover around last year's 2.7 million tons.

A general round-up of available data will suggest that this year's foodgrains production should have normally exceeded the 83-million ton target, but for the adverse conditions in several parts of the country, which were responsible for a loss of 1.5 million tons of wheat and 3.5 million tons of rice. It is,

however, stated that the position in regard to rice may be difficult in the year ahead owing to the estimated low output. Plenty of wheat and millets are, however, available to make up for any shortage of rice.

SUGAR Short Supply

The supply position of the sweet commodity has deteriorated further during the week. The commodity has already been rationed in Uttar Pradesh and available to the consumers through recognised dealers. Because of the summer and the marriage season, there has been a good demand.

With a fall in production and internal scarcity, there is a fear

that the export of sugar this year will have to be curtailed. This prospect has upset the industry more than anything else, especially as the present time is considered to be most opportune to export sugar and earn foreign exchange. The price of refined sugar in London is quoted at £70 per ton, which is regarded a good price.

The overall tight supply position of sugar in the country is due mainly to a shortfall in production of 500,000 tons. Added to this the earlier commitment of 500,000 tons of sugar export to countries like the USA, UK, Malaya and Japan. The export of sugar, as at present scheduled, will end by June and if the supplies are not adequate to meet internal

demand, there is no possibility of export.

While the fall in sugar production can be attributed to an agricultural cycle, sugar industry sources feel that this is also due to the uncertainty created by the Government's restrictive policy. There is also diversion of cane supply to gur and khandasari due to Government interference.

GUR Prices Fixed

The Maharashtra Government has asked traders in Bombay to sell Gur at Rs 100 a quintal for the superior quality; Rs 90 for medium and Rs 80 for interior

Cut down your lubricants Cut out your paper-work

Help your Purchase Officer to eliminate the stacks of paper that collect in his office...the unnecessary flood of Purchase Orders. When each department in a plant specifies a lubricant without reference to the purchases of other departments, there is bound to be duplication and waste. The Caltex "Stop-Loss" programme can do away with this lubrication waste...can cut a great deal of Purchase Order paper-work. Caltex "Stop-Loss" is a complete plan for organising lubrication on an efficient basis. There is no other programme like it.

It will be worth your while to find out specifically how Caltex "Stop-Loss" can help to ease the problems in your plant. Help your operation to greater profit with the Caltex "Stop-Loss" programme.

CALTEX (INDIA) LIMITED Bombay · New Delhi · Calcutta · Madras

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex Office.

varieties. These rates are lower by about Rs 10 than the current market rates. Traders have, however, stated that, unless prices are reduced proportionately at the producing centres, it will not be possible to sell gur at the prescribed rates.

The above measure is taken to check the rising trend in Bombay where prices have gone up in sympathy with the sustained firmness at the terminal markets of Kolhapur, Sangli, Poona and Sholapur. Production in Maharashtra this season has declined considerably. Kolhapur alone accounts for a deficit of 800,000 lumps. The floating stock in Bombay is just sufficient to meet the requirements for a week.

Following the decision of the authorities to bring down prices, the producing centres have displayed an easy trend. Prices have fallen by Rs 3 to Rs 4 per quintal. Presently, gur superior is available at Rs 85 to Rs 90 at Kolhapur and Sangli. Expenses in the shape of transportation, warehousing, etc., work out at Rs 10 per quintal. This means that the Bombay traders can supply gur at the prescribed rate of Rs 100 without incurring any loss. This also suggests that the flow of the commodity to the market will be maintained. The pace of arrivals will not be slowed down, because of the reduction of gur prices in Bombay.

THE BENGAL FLOUR MILLS CO. LTD.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting (being the one hundred and twenty-ninth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, 7th June, 1963, at 12.30 p.m. to consider the Accounts of the Company for the year ended 31st December, 1962, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 23rd May, 1963 to 7th June, 1963, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.
D. MANSON
Managing Director
Managing Agents.
21, Netaji Subhas Road,
CALCUTTA, 1st May, 1963.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

COFFEE Incentives for Exports

The Chief Marketing Officer, Coffee Board, has stated that the Government has proposed to provide incentives to exporters of coffee at the rate of one and a half per cent for non-bilateral countries and two and a half per cent for the United States up to the end of June 1963 in the form of chicory imports. There will be no import of chicory for distribution to actual users.

Coffee prices have been ruling steady and the Coffee Board will take all steps to maintain the present levels. Production during the current season is expected to be higher. The Chief Marketing Officer has disclosed that the Board is contemplating to centralise the holding of all export auctions at Bangalore in the newly-constructed building which is expected to be ready by the middle of June.

The export of coffee from India to quota countries, during the international coffee year (October 1962 to September 1963) has been fixed at 21,360 tonnes and a minimum of 2,000 tonnes for non-quota countries. The total, so far released, was 10,615 tonnes and 150 tonnes for quota and non-quota countries respectively. It is stated that the Government will be in a position to fulfil its commitments for the current international coffee year.

The Coffee Board is presently engaged in transporting cured coffee from the West Coast centres to internal areas like Karamadai to preserve the quality of seeds. It has been programmed to shift nearly 5,000 tonnes of all surplus Plantation and Cherry. More than a third of this quantity has already been moved under this scheme. This step is being taken to prevent stocks from being affected by monsoonish conditions.

TIN Boom Conditions

In the Bombay market, Tin prices have risen by another Rs 15, to quote Rs 355 per 10 kg. The meagre floating stocks are reported to have been cornered by one or two dealers and they are in a position to dictate prices. The bigger industrial units are granted import licences by the Government and the smaller units get their requirements from the imports of the State Trading Corporation.

It is now learnt that the Government has a proposal to supply tin to the consuming units

directly in accordance with the recommendation of the State Directors of Industries. In Bombay, the Directorate of Industries has already started the inspection of units with a view to ascertaining their needs of the metal.

The current market price of the metal is about three times the c.i.f. value of the metal. Fresh imports by the State Trading Corporation may also cost more in view of the boom conditions prevailing in the international markets.

SILK

In the Bangalore Silk market, the prices of filature raw silk 20/22 Dv continued to be steady between Rs 93.20 and Rs 100.30 per kg. Cottage basin silk rose to range between Rs 93.69 and Rs 101.41 kg. The prices of charka raw silk of superfine and 1st quality increased to rule between Rs 90.40 and Rs 94.80 and 88.29 and Rs 90.40 per kg, respectively.

Spun silk yarn remained steady during the week.

The prices of mulberry reeling cocoons at Siddaghatta and Channarayana markets shot up to fluctuate between Rs 8.00 and Rs 8.50 and between Rs 5.00 and Rs 6.00 per kg, respectively, whereas the prices at Mugur market had a fall in the minimum and a rise in the maximum to range between Rs 4.50 and Rs 6.00.

As regards seed cocoons, the foreign race rose to vary between Rs 6.00 and Rs 15.00, whereas the Mysore race declined to range between Rs 6.00 and Rs 13.00 per thousand.

Prices in the Bhagalpur Silk market remained unchanged during the week ended 3-5-1963.

In the Malda Silk market, Cottage basin and charka raw silk remained steady. The prices of matka yarn varied between Rs 24.00 and Rs 40.72 per kg. Silk waste remained firm between Rs 1.61 and Rs 2.00 per kg.

OILS & OILSEEDS Bull Support for Groundnut

Brisk activity in the Groundnut section was the main feature of trading on the Bombay Oilseeds Exchange. Following rumours that vanaspati prices would be raised, bulls appeared to have supported Groundnut contracts. Prices of other seeds also moved up slightly in sympathy.

Trading in the Groundnut section continued to be fairly brisk with prominent vanaspati manufacturers lending a consistent support throughout the week. While the overall comfortable supply position in res-

pect of the seed induced operators in the futures section to take a bearish view of the situation, the sustained firmness in the spot section deterred them from pressing sales. Groundnut Bold ready was quoted at Rs 45.75 and Groundnut Oil at Rs 17.50.

Groundnut expeller displayed a marked firmness with the spot prices shooting up from Rs 382 to Rs 400 per tonne on sustained support from the manufacturers of groundnut extraction. The tendency in groundnut extraction also remained upward, the prices rising from Rs 352 to Rs 360 per tonne on account of the reported business with Poland for about 10,000 tons at prices ranging from Rs 371 to Rs 375 per tonne f.o.b.

In the castorseed section, trading was, however, dull in the absence of fresh incentives. The demand for castor oil from abroad continued to be subdued. On the other hand, the domestic supply position remained favourable with the market receiving sizable quantities of the new crop from Andhra. The inflow of castor oil from Gujarat was also satisfactory. Castor ready was quoted at Rs 30.87 and Castor Oil, commercial quality, at Rs 12.85.

Business in the Linseed section was devoid of new factors. Price movements were confined to a narrow range and were influenced by North Indian advices in respect of rapeseed. A gradual increase in the arrivals of the new crop tended to exercise a softening influence on the market. Linseed ready was quoted at Rs 35.62 and Linseed Oil at Rs 13.85.

STEEL CONTAINERS LTD.

NOTICE is hereby given to the members of the above-named Company that the Fifth Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, 7th June, 1963, at 3.00 p.m. to consider the Accounts of the Company for the year ended 31st December, 1962, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 23rd May, 1963 to 7th June, 1963, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.
D. MANSON
Managing Director
Secretaries.
21, Netaji Subhas Road,
CALCUTTA, 10th May, 1963.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

Tata Mills:

For the Investor

INVESTMENT GOSSIP

Lack of Incentives

The continued quiet trend in stock markets indicates that there is not much in the investment situation to enthuse either the operator or the investor. Being primarily interested in corporate prospects, the investor finds that dividend news is far from encouraging. The lower dividend announced by Indian Copper has come somewhat of a shock to the market: since the expectation has been that the dividend would be maintained. The results of some prominent companies published in the course of the past few days leave no doubt that even the modified Super Profits Tax will have a crippling effect on corporate working. Just at present the immediate outlook for industrial production in its Calcutta and its neighbourhood is rather gloomy. For, power shortage looms large over this region following a sizable cut in power production by the Calcutta Electricity Supply Corporation. Vigorous efforts are however being made to avert a major crisis but it would appear that it will be some weeks before power supply is augmented. In the meantime, even normal output in factories is being seriously affected and it is feared that the current month's production of jute mills will show a sharp fall. The engineering industry in this region has been hard hit because of shortage of power and inadequacy of raw materials and stores. While the new taxation has seriously jeopardised expansion programmes, the prospect for industrial units to reduce their idle capacity also appears to be none too bright: what with the continued acute shortage of foreign exchange.

While the investors find little that is encouraging in the present situation, operators too are not finding it possible to extend commitments. Besides the stringency of money, the belief that Government may soon remove the ban on forward trading of shares is acting as an effective restraining influence. With free trading, there is the danger of wide fluctuations in rates and naturally no operator will like to be caught napping. Perhaps the authorities are not averse to removing the ban but it is not improbable that they are also anxious to ensure that resumption of free trading does not encourage undue speculation.

INVESTMENT BRIEFS

New India Assurance Company Limited has maintained the Ordinary dividend at Rs 4.50 per share, taxable, for 1962. A bonus of Rs 1.20 per share, taxable, is also to be paid, making a total of Rs 5.70 per share, same as in the previous year.

The Travancore Rubber & Tea Company Limited has maintained the dividend at 10 per cent, taxable, for 1962.

Lucky Vally Tea has also maintained the dividend at 10 per cent, taxable, for 1962.

Kannapiran Mills Limited has proposed a taxable dividend of 6 per cent for 1962 as against a taxable dividend of 12 per cent paid previously.

Ceat Tyres Limited has again passed over the dividend on the ordinary shares for 1962.

Maharashtra Sugar Mills Limited has reduced the dividend from Rs 21 to Rs 14 per share, taxable, for the year ended 30 September, 1962. But the company has decided to issue bonus shares in the ratio of two for every five shares held. The necessary sanction has been obtained from the Government.

*

BALANCE-SHEET REVIEWS

GKW Repeats

DESPITE a marked rise in sales from Rs 10.66 crores to Rs 13.06 crores, the working of Guest, Keen, Williams Limited has resulted in a slight decline in net earnings for 1962, mainly due to a higher provision for taxation. Sales include Rs 16.37 lakhs, representing an additional excise duty introduced by the Government on 24 April on rolled and forged iron and steel products. The net profit, after providing for Depreciation and Taxation, works out to Rs 71.96 lakhs as against Rs 73.76 lakhs for the preceding year. Apart from providing Rs 1.20 lakhs for additional Taxation Reserve, Depreciation is raised to Rs 57.27 lakhs from Rs 51.43 lakhs and Taxation to Rs 55.60 lakhs from Rs 30.50 lakhs. Taxation Equalisation Reserve is reduced to Rs 9.12 lakhs from Rs 10.09 lakhs.

After making the above appropriations, there is a surplus of Rs 61.64 lakhs (Rs 63.07 lakhs). Adding to this Rs 2.32 lakhs (Rs 1.34 lakhs) being the income for earlier periods and transferring Rs 6.15 lakhs (Rs 11.24 lakhs) from General Reserve, there is an available sum of Rs 70.60 lakhs (Rs 72.97 lakhs). From this, the directors have provided Rs 2.60 lakhs (Rs 24.420) for Taxation in respect of previous years; Rs 1.45

lakhs (nil) for Taxation Equalisation Reserve; Rs 5.55 lakhs (Rs 12.21 lakhs) for Development Rebate Reserve and Rs 5 lakhs (same) for Debenture Sinking Fund. They have proposed a final dividend of 80 nP per share, making a total of Rs 1.40 per share less tax, same as in the previous year. The dividend is payable on or after 18 June. Transfer Books will remain closed from 14 to 31 May, 1963.

GKW is now manufacturing passenger car wheels with technical aid from Joseph Sankey Sons Limited of the UK. In order to ensure more economic production and save foreign exchange, it is proposed to manufacture two types of wheels under a combined scheme. Hence, it is proposed to form a new company in which GKW will be substantially interested. Sankey will be the foreign collaborator. The name of the new company is Sankey Wheels Limited, which holds the licences of the two separate schemes.

Marshall Skips for Third Time

For the third year in succession, Marshall, Sons & Company (India) Limited has skipped the dividend for the year ended 30 June 1962. The last dividend was 10 per cent, taxable, paid for the year ended 30 June 1959. Despite the sales being nearly maintained at Rs 2.68 crores against Rs 2.69 crores, the gross profits has decreased considerably, which has contributed largely to the net loss of as much as Rs 12.45 lakhs for the year as against a net profit of Rs 3.50 lakhs for 1960-61, these figures being arrived at before providing for Depreciation.

Apart from providing Rs 14,500 for Taxation in respect of previous years, the Depreciation amount is raised to Rs 1.05 lakhs from Rs 1.01 lakhs. No provision is made for Development Rebate Reserve against Rs 5,086. After paying Rs 3.42 lakhs as gratuities to the retired staff and making sundry adjustments, there is a debit balance of Rs 18.08 lakhs, which is carried forward to next year.

The directors have announced the formation of an associate company, Messrs Marshall, Sons & Company (Manufacturing) Private Limited, in Madras. This company is at present negotiating with foreign manufacturers and the Government of India for manufacturing rights in India, of essential machinery required by the Government, PWD and other organisations. By agreement, Marshall will be selling agents throughout India of all products manufactured by the new company.

The directors state that the formation of the new company will relieve Marshall, Sons of a considerable financial burden and, in addition, will be able to obtain much-needed engineering products

for sale at competitive prices. They add that many tea estates have cancelled or delayed placing orders for new or replacement machinery owing to the uncertain conditions prevailing in North-East India. These will be reflected on the current year's trading despite the fact that a good order book has been maintained by Marshall, Sons.

Kumardhubi Engineering Pays More

Despite the substantial drop in the structural shop output, the working results of the Kumardhubi Engineering Works Limited have shown a considerable improvement in the year ended 30 November 1962, thanks to the increase in foundry output by about 27 per cent. Although sales are lower at Rs 1.73 crores against Rs 2.02 crores, the net profit, after providing for depreciation and taxation, is nearly doubled at Rs 8.84 lakhs against Rs 4.15 lakhs for the preceding year.

Apart from providing Rs 3.35 lakhs for General Reserve, Taxation provision is raised from Rs 3.65 lakhs to Rs 13.15 lakhs (including Rs 1.65 lakhs for SPT) and Statutory Development Rebate Reserve from Rs 38,300 to Rs 77,100. The Depreciation amount is, however, lower at Rs 5.98 lakhs against Rs 6.20 lakhs. The directors have proposed a taxable dividend of 45 nP per share as against a taxable dividend of 35 nP per share previously. The dividend is payable on or after 20 June.

INDUSTRIAL CONTAINERS LTD.

NOTICE is hereby given to the members of the above-named Company that the Fifth Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, 7th June, 1963, at 3.15 p.m. to consider the Accounts of the Company for the year ended 31st December, 1962, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 23rd May, 1963 to 7th June, 1963, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.

D. MANSON
Managing Director
Secretaries.

21, Netaji Subhas Road,
CALCUTTA, 6th May, 1963.

Note—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

1963 to these shareholders whose names are registered as on 31 May.

The directors state that the shortage of steel sections including machine steel has resulted in some idle capacity in the structural shop. They, however, add that, as a result of the vigorous sales, the order book of the company is very satisfactory.

Good Performance of Escorts

Escorts Limited has produced a good balance-sheet for 1962. The various expansion plans are taking shape and it is expected that there will be a significant increase in the output of the new ventures. Sales of the company's own products and those of its subsidiaries rose to Rs 1.29 crores from Rs 80 lakhs. The turnover of the trading departments also is satisfactory. It is, however, expected that, during the year, on account of the foreign shortage, there will be a drop in sales of imported goods; but the turnover of products from the company's sources is expected to increase to about Rs 3 crores.

The new units at Faridabad for manufacturing X-ray equipment, railway shock absorbers and heating elements have been in production during the past few months. The output has steadily increased, while a licence has been received for manufacturing automotive shock absorbers, which can be produced with the existing machinery without much difficulty.

The assembly and partial manufacture of motor cycles was recently undertaken though the separate factory to house this project is still under consideration. It is expected to be completed before the end of the current year and it may be possible to produce about 4,000 motor cycles. The scheme for manufacturing scooters has, however, been postponed under Government advice till the end of 1964.

In order to meet the expenditure on various schemes, a loan of Rs 35 lakhs has been received from the IFC. An application has also

been made for a further loan of Rs 65 lakhs from the same source for the motor cycle and scooter factory at Faridabad and Rs 7 lakhs in West German currency for the import of plant and machinery to manufacture piston pins in the piston factory. The factory for producing pistons and other items has been functioning well at Patiala. Arrangements are being made for implementing this scheme for installing the additional capacity.

Tensile Steel's Progress

Tensile Steel Limited has made satisfactory progress during 1962. Construction work has nearly been completed. The entire plant and machinery imported from Japan has been erected. The indigenous machinery and equipments have received and are being commissioned. The whole plant is ready and trial run is on. The company has received an import licence for Rs 6 lakhs under DLF. The necessary order for high carbon wire rods to be imported under this licence has been placed and the first assignment is due to reach the site some time in May.

The company has earned Rs 11,901 by way of interest and Rs 581 as miscellaneous receipts. The total expenditure amounts to Rs 1,97,785. This leaves a debit balance of Rs 1,85,303, which is added to the last year's debit balance and the entire balance of Rs 2,91,233 is transferred to the expenditure during construction account.

The revised project estimate is Rs 1 crore against the original estimate of Rs 88.40 lakhs, leaving a total shortfall of Rs 12.91 lakhs. The company is negotiating for the financial accommodation needed to cover the shortfall.

Premier Tyres Incur Loss

The working of the Premier Tyres Limited has resulted in a loss of Rs 15.70 lakhs for 1962 as against a gross profit of Rs 2.38 lakhs in the preceding year. After providing Rs 19.18 lakhs for depreciation (Rs 22,325); Rs 24.85 lakhs for Development Rebate Reserve (nil) and Rs 40,000 for managing agents' remuneration (same), the overall loss amounts to Rs 60.13 lakhs. After adjusting Rs 1.85 lakhs brought in from the previous year, the net loss that is being carried forward is Rs 58.23 lakhs.

The company is in arrears of preference dividend up to the end of the year, which amounts to Rs 9.51 lakhs. The company went into commercial production late in September 1962 and sold goods worth Rs 25.70 lakhs till the end of the year. The company is now producing 425 tyres a day. This will be raised to 700 tyres as soon as the power cut is restored. Plans are under way to attain the rated

capacity of 1,000 tyres a day after three or four months.

Philips India Earns More

Philips India Limited has reported a higher net profit, after providing for depreciation and taxation, of Rs 34.62 lakhs for 1962 as against Rs 30.20 lakhs in the previous year. The directors have proposed to raise the dividend from 12 to 13 per cent, less tax. The provision for taxation is raised to Rs 85.50 lakhs from Rs 36 lakhs.

The Government of India has given consent to the company for taking early steps to manufacture tungsten and molybdenum wire and tungsten coils, which have hitherto been entirely imported by the Indian lamp industry. The manufacture of these vital components will be undertaken at the company's factory in Bombay in technical collaboration with a Holland firm. To facilitate early implementation of this project, the Government of India has already authorised the company to issue fresh capital of Rs 16.66 lakhs in equity shares of Rs 10 each, at a premium of Rs 5 a share. Fifty per cent of the capital to be raised will be offered to the existing non-resident shareholders and the balance to the existing shareholders.

Bangalore Woollen Fares Well

The Bangalore Woollen, Cotton and Silk Mills Company Limited was not able to report a larger turnover during the year ended 31 December 1962 on account of the accumulation of process stocks in the final quarter of the period under reference. There has since been a pick-up in sales. The output in the Silk section was encouraging as a result of the easier availability of filature and spun silk yarn. The company has agreed to supply large quantities of shirting to the Defence Services.

The net profit for the year, before providing for depreciation and taxation, is actually higher at Rs 84.98 lakhs against Rs 74.80 lakhs, because of the profit derived on the sale of assets of Rs 17.45 lakhs. The provision for Taxation includes the liability towards SPT on the amended basis and the total charge amounts to Rs 32 lakhs against Rs 27 lakhs previously. The transfer to Development Reserve is Rs 4.40 lakhs (Rs 1.90 lakhs) and General Reserve Rs 9 lakhs (nil). On the last occasion, there was a transfer of Rs 8 lakhs to Work People's and Clerks' Gratuity Reserve. As the allocations to the reserves have been made possible by the profit on sale of assets, it has been decided by the directors to maintain the dividend on the Ordinary shares at 18 per cent, subject to tax.

Lower Earnings for Shreeniwas Cotton

The Shreeniwas Cotton Mills Limited has reported lower earnings for the year ended 31 December 1962. The gross profit has gone down from Rs 83.49 lakhs to Rs 63.29 lakhs. As a result, the dividend has been reduced to Rs 14 per share from Rs 20 per share paid in 1961, but on the increased capital.

The setback in profits is attributed to the payment of retrenchment compensation and gratuity amounting to Rs 11 lakhs. The provision for Depreciation is raised from Rs 15.09 lakhs to Rs 23.77 lakhs while that for Taxation is reduced from Rs 21.75 lakhs to Rs 13.40 lakhs. The provision for managing agency commission is reduced to Rs 3.15 lakhs from Rs 6.04 lakhs. The company has also to provide Rs 2.40 lakhs for taxation for 1961 and Rs 7.62 lakhs for bonus paid in excess of provision for the years 1957, 1959 and 1960.

COMPANY NOTICE.

INDIAN COPPER CORPORATION LIMITED.

(Incorporated in England)

DIVIDEND NO. 37.

NOTICE IS HEREBY GIVEN that at the Thirtieth Annual General Meeting to be held in Committee Room No. 2 (2nd Floor) of the Bengal Chamber of Commerce and Industry, Royal Exchange, Calcutta, on Wednesday, the 14th August, 1963 at 11-30 A.M. the Directors will recommend payment of a Dividend (No. 37) for the year ended 31st December, 1962 of 18% (4.32 pence i.e. 24 Naye Paise per unit of stock) subject to deduction of Tax, in respect of the Issued Capital of £1,371,300. Subject to confirmation of members, the dividend will be paid on the 6th September, 1963 to all members registered in the books of the Company at the close of business on the 15th June, 1963.

The Registers of Members will be closed from the 17th June, 1963 to the 6th July, 1963, both days inclusive.

By Order of the Board,
E. A. JOHNSTON,
Assistant Secretary.

Gillander House,
Netaji Subhas Road,
Calcutta-1.
Dated the 15th May, 1963.

Note: Profit and Appropriation figures have not been given in this Notice in view of Rule 52 of the Defence of India Rules which inter alia prohibits a mining undertaking from publishing such figures.

In fact, to meet the distribution, the directors have been obliged to draw upon the Investment Reserve to extent of Rs 3.50 lakhs. The company has received the sanction for 20,000 additional spindles. Of this, 5,000 have already been installed and the remaining will be installed in stages during the current and next year.

STOCK EXCHANGES Lack of Vitality

Watch-Dog Writes:

ALTHOUGH the overall trading pattern has continued to remain extremely cautious, stock markets have developed a slightly steadier tendency during the closing days of the week, thanks to the absence of further liquidation.

Lyons Range witnessed another week's dull session when price movements remained anarrowly irregular. Favourite counters ruled slightly higher on Dalal Street owing to some scattered buying support.

On the Ahmedabad Stock Exchange, industrials finished on a mixed note with limited turnover and narrow fluctuations.

The Delhi Stock Exchange displayed lack of vitality and attempts at recovery were foiled by the absence of professional support.

Business on the Madras Stock Exchange were mostly confined to Planting scrips, which showed a mixed trend.

There were no transactions on the Bangalore Stock Exchange.

The London Stock Exchange gave a disappointing performance with early firmness giving way to irregular conditions later.

CALCUTTA

EXCEPT for a slight recovery in prices noticed in a few selected shares during the second half of the week, conditions on the Calcutta Stock Exchange remained generally dull and price movements remained narrowly irregular due to lack of sustained support. Turnover was also restricted. The only relieving feature was the revival of interest shown in the Jute section.

On the whole, the expectation that the market would soon be in a position to absorb the corrective profit-taking and stage a renewed movement for recovery did not come true. Although selling pressure was not pronounced, fresh support was poor. In other words, operators were reluctant to enter into new commitments in view of various uncertainties. It was felt that, with an increase in Government expenditure on defence and development, taxation would remain high and the SPT might not be abolished at an early date.

It was thought that the SPT would be in force only during the period of emergency. But the repeated statement that was being made by Mr Morarji Desai that the levy was not an emergency measure and that there would have to be an increase in the proportion of tax revenue to the national income, gave rise to a fear that the special levy would act as a

heavy burden on growing companies. Again, operators seemed to be taking a cautious view about the near-term outlook, because of the prospect of forward trading being resumed under certain restrictions. In such an eventuality, it was feared that the present prices would decline further. As the Government announcement in this regard was considered to be imminent, investors refrained from buying, while some of them were actually pressing sales on an unwilling market.

On the political front, too, there was little to boost sentiment. The chances of China accepting the Colombo proposals in toto were not in sight as yet. As far as the Kashmir issue was concerned, both India and Pakistan admitted their failure to reach an agreement. Above all, the breakdown of a generator of the CESC caused a good deal of concern with regard to the availability of power supply and the growing idle capacity in industries.

With demand for short and medium-dated issues maintained at a fairly high level, Glitged securities ruled generally steady. Selected long-dated loans also found some

buyers. 3 per cent 1986 Conversion Loan changed hands at Rs 63.50 to Rs 64, to finish at the former level.

Bank shares were a steady feature with PNB changing hands at Rs 19 to Rs 19.25 and UCO at Rs 70.50 to Rs 71.75.

Jute shares came into limelight owing to the flow of encouraging dividend announcements from various companies. It was also believed that the power-cut might not seriously affect the output of the mills as was apprehended earlier. An outstanding feature was Champdany, which spurred to Rs 24.12 from a low of Rs 18.12 following the news of a substantial increase in dividend from 5 per cent to 35 per cent for the year ended 31st March, 1963. Birlas improved to Rs 29.25 from Rs 28.25 touched early in the week and Howrah to Rs 20.25 from Rs 20. Ganges met with business at Rs 13.25 to Rs 13.44 with New Central quoting better at Rs 12 against Rs 11.81.

Coal shares were neglected, pending the Government decision with

regard to the fixation of a fair selling price for the commodity. Bengal were the only bright spot, having support up to Rs 286.

Although Tea shares met with stray buying, there was not much improvement in prices. Dufflaghur met with business at Rs 26.87 to Rs 27.12; Gohpur at Rs 15.19 to Rs 16 and Sungma at Rs 13.12 to Rs 13.44.

Except for some enquiry in Raza/, Buland at Rs 9.31, sugar shares continued to be neglected.

The uncertain outlook for marketing of cloth here and abroad induced cautious trading in Textile shares. The only bright spot were Bowraah, which were enquired up to Rs 23.25 from Rs 23. Cawtex were on offer at Rs 6.50 against Rs 6.75.

Engineering shares were moderately active under the influence of Indian Irons, not to speak of the encouragement derived from the

announcement of dividends by certain companies, such as TEXMACO and Binani Metal. Indian Irons opened lower at Rs 21.98 and improved steadily to Rs 22.40 before finishing the week at the same level. G. K. Williams met with business up to Rs 34.03 from Rs 33.62 and TEXMACO up to Rs 23.80 from Rs 23.50, to close finally at Rs 33.81 and Rs 23.80 respectively. Binani Metal were enquired up to Rs 10.37 following the maintenance of the dividend at 10 per cent for 1962. Jessop were done at Rs 22.25 to Rs 22.37 with J. K. Steel steady at Rs 15.

Miscellaneous issues were generally dull due to lack of enquiry. The weakness was more pronounced in Indian Copper, which were on offer at as low as Rs 3.98 against Rs 4.14 following the news of the reduction in dividend from 36 p p to 24 p p per unit of stock, subject to tax, for 1962.

INDIANOIL SIGNIFIES PROGRESS

Every drop a vital raw material

Oil is the most important raw material in the world, so much so that it is known as 'black gold', and without oil no modern country can survive. Take the role oil plays in transport alone. Without this vital material aeroplanes, trucks, trains and ships would cease to run and all the wheels of industry would grind to a standstill. Even the humble kerosene lamp swinging at the tail end of the village bullockcart would cease to glow!

A national venture

Indian Oil Company Ltd., a 100% Government venture established in June 1959, had specific objectives: to supply quality petroleum products; to effectively market these products throughout India, even to the remotest village; and last, but certainly not least, to conserve foreign exchange reserves.

INDIANOIL is completely free to obtain, at the most advantageous rates, the best petroleum products for India and even to import these on a Rupee-payment plan.

a 100 per cent
national venture

INDIANOIL markets and distributes: high speed and light diesel oils, motor spirit, kerosene, high grade lubricants, transformer and axle oils, furnace and fuel oils and petroleum coke. The Indian Oil Company is also the sole distributor in India of Mobil industrial and automotive lubricants.

Yes, wherever you see the INDIANOIL symbol, you witness a company in the active service of not only the individual but also the entire nation.

DURABLE FIREBRICK JOINTS INCREASE PRODUCTION and lower maintenance costs

ACCOSET-50

HIGH TEMPERATURE REFRACTORY CEMENT

produces strong joints, as impermeable to the action of furnace gases as the best firebricks. Consequently, air infiltration is reduced and the thermal efficiency of the furnace improved.

Bricks jointed with ACCOSET-50 are not easily dislodged and remain bonded together throughout the whole temperature range of the furnace.

ACCOSET-50

- * has air-setting properties * produces thin strong joints
- * allows only the minimum shrinkage * is highly refractory
- * is economical in the long run

Technical literature sent free on request.

Ready stocks of ACCOSET-50 available from

GATT and the Developing Nations

The meeting of the contracting parties to the General Agreement on Tariffs and Trade in Geneva from the 11th of this month is probably the first in which the developing nations did not feel poor relations. None of their specific problems of international trade is any nearer solution in consequence, (at least, as reported so far.) But the problems themselves had a better and more articulate airing than at any time before in this forum. This was due to the fact that a seven-point programme of action prepared by 21 developing nations (including India) was presented for adoption by the contracting parties. At the moment of writing, the programme has been referred to a working party of 25 members who would evolve a draft resolution for consideration by the meeting. It remains to be seen how the specific suggestions, especially a rigid time-table for phased reduction of restrictions within three years, are accommodated in the resolution in a form acceptable to all.

The seven point-programme itself is the result of the intense discussion towards the end of last year in GATT Committee III, which broke up the problem of trade of developing nations product-wise and studied the specific obstacles (like high tariffs, quota restrictions, internal excises, etc) to exports of developing nations. The principle that developing nations have special problems that require accommodation has been long recognised in GATT sessions as elsewhere. But in practice, restrictions of various sorts continue. Impatience at the continuance of the restrictions and the ineffectualness of the GATT in dismantling them found expression at the London meeting of the Commonwealth Economic Consultative Council. Afro-Asian members of the Commonwealth felt impelled to voice the need for a new organisation under UN auspices. It is doubtful whether another organisation would advance the interests of under-developed nations better or whether the entities that indulge in restrictive trade practices will be better persuaded by the new organisation than by the GATT. With, for example, General de Gaulle's unconcealed contempt for the UN, it is difficult to see how France will be reader to listen to the new UN organisation than to the GATT.

In strict theory, it is arguable that what the under-developed countries ask for is not liberalisation of trade as such but discrimination in their favour. For example, it may be said that the under-developed countries are not prepared for reciprocal removal of barriers of imports into their countries and the ideal of multi-lateral free trade is not what they ask for. The argument is never put in this extreme and unrealistic form except by those with inveterate prejudices. The relative inequality in economic strength, historical and theoretical arguments about 'infant industries' are recognised and the broad equity and reasonableness of special claims of underdeveloped countries are conceded in principle. The GATT declaration on the Promotion of Trade of the Under-developed countries has made this the accepted and even orthodox principle of international trade. But even so, reciprocity is demanded in disguised and oblique forms in practical contexts. For example, some sections of American and EEC opinion would seem to take the view that import restrictions even by under-developed countries for other than balance of payments reasons unfair. Fortunately, such a position is not pressed very hard.

Apart from reciprocity, the other reasons for reluctance for rapid dismantling of barriers

against goods from undeveloped countries are the conflict of interests, first, among undeveloped countries themselves (as for example, between the African Associates of the EEC and other undeveloped countries vis-a-vis the EEC and secondly between domestic manufacturers in advanced countries and the exporters of the same manufacturers from under-developed countries. The low or nil tariff enjoyed by an associate of the EEC gives it a competitive edge over other under-developed countries who have no special relations with the EEC. In fairness, it must be conceded that under-developed associates of the Commonwealth are reluctant to agree with Britain's suggestions that it should lower tariffs against non-Commonwealth under-developed countries. There is good reason for this. Mr Manubhai Shah pointed out at the London Conference that the gains in other markets possible by an all-round reductions of tariffs would be offset by the loss of preferential markets, to which 30 to 35 per cent of our present trade is directed. This would be so, at least in the short run. Here again, the historical inequality in competitive ability makes us appear to take a position at variance from our general demand for reduction of barriers in other contexts. The only solution is a strict time-table of a comparatively short duration in which all the developed countries would more or less simultaneously rationalise their tariffs and quota restrictions. This, of course, is a counsel of perfection not easily practised. The demands of the domestic manufacturer for protection against alleged low-cost imports are even more difficult to resist for political and other reasons. Indeed, the demands of domestic interests are snarling the process of reciprocal reduction of tariffs even between developed countries with more or less equal economic and technical strength.

The other pre-occupation of this GATT session is with the preliminaries of the so-called "Kennedy Round", scheduled to start functioning next year. The Trade Expansion Act, 1962, authorised the US administration to negotiate with the EEC for "across-the-board" mutual slashing of tariffs on items in which the US and the EEC accounted for 80 per cent of the world trade. This provision was enacted with an EEC with Britain in it in mind. With Britain denied entry in the EEC, the items covered are comparatively few. Even so, the EEC and the US are finding it difficult to agree on "linear cuts", because of the present disparities in the actual rate of duties. There is also the problem of the EEC agreeing to the inflow of American farm products without being shut out by domestic agricultural interests in the Community.

The consequences of the Kennedy Round negotiations for the undeveloped countries will be mainly indirect. Under the GATT rules, any reduction in tariff agreed to between individual members bilaterally, get extended on the "most-favoured-nation" principle to other contracting parties to the GATT. So, if in the across-the-board reductions to be agreed, assuming that it is agreed—no exceptions are made of items of interest to India—cotton textiles, for example—then Indian exports of such items will enjoy the lower tariff.

One further comment may be made. Apart from restrictions, the price factor of commodities of interest to developing nations is something on which international agreement is of great importance. Notoriously, terms of trade play havoc with the fortunes of the foreign trade of developing countries.

116, LOWER CIRCULAR ROAD, CALCUTTA

With the commencement of the ministerial meeting in Geneva of the General Agreement on **Tariff** and Trade (GATT), interest is mounting in the issues and principles involved in conducting the next round of multilateral tariff-cutting negotiations.

Many of the crucial decisions, of course, may be made behind the scenes, as is often the case with international deliberations. But the US position on the scope and nature of the forthcoming negotiations seems clear enough, having been set forth on several occasions in recent months.

One of the principal points in the US position is the need to include agricultural as well as industrial goods in the GAIT talks. Actually, there are several categories of farm goods which may be involved.

There is a feeling in Washington that it may actually be possible to start agricultural discussions in advance of next year's projected GATT negotiating round, perhaps by this June. Possible subjects for early discussion might be the examination of commodity agreements and the setting up of interfilm access arrangements.

It is recognized, of course, that special problems may exist or arise that may make it advisable to adopt a measure of flexibility in the approach to agricultural negotiations, as to other GATT issues. But the Washington belief is that reasonable understanding on basic principles can be obtained.

Another point on which Washington sees no basis compromise possible concerns the method

As in agriculture, it may be possible to take a somewhat flexible approach on this question, too, in the interests of achieving a reasonable and effective negotiating session. This flexibility might be particularly applicable in cases where over-cretement appears to make sense because of especially wide discrepancies in tariff rates. One possibility mentioned in this connection would be to negotiate on broad categories of products instead of across-the-board where this seems feasible and desirable.

It should be stressed, however, that these would be special and unusual cases, each of which have to be considered on its merits. Erection as a general principle remains unacceptable to the United States.

The United States also wants the GATT talks to encompass non-tariff barriers, such as quotas, special taxes and arbitrary regulations of one kind or another that discriminate inordinately against imports.

Admittedly, the United States also has some restrictions of this type. But it is willing to submit them to negotiation, even though the belief is that they are not as severe, as wide-ranging or as generally restrictive as those of other countries. If agreement can be reached on discussing these barriers, moreover, it may be possible for the United States to take steps, administratively or through congressional action where required, to reduce or eliminate at least some of those it now maintains.

One restriction that appears to have excited considerable interest at the moment is the buy American concept, which gives preference to the purchase of US goods in US Government or Government-supported operations. Many officials in Washington oppose this concept as an economic principle, although it also has its counterparts in other countries. By and large, however, they defend buy American as justified and understandable under present circumstances—mainly the continuing deficit in the US balance of international payments.

It is to be recalled that the United States agreed to all sorts of extraordinary trade and exchange restrictions by West European countries when they were in balance of payments difficulties not too many years ago. A number of these restrictions are still on the books, although the need for them has largely disappeared by now.

Another US measure which has been of concern abroad is the so-called escape clause, which has permitted the United States to modify existing tariff concessions under carefully delineated circumstances when the national interest has seemed to require such action. The fact that other countries may use similar devices, or that it is permissible under the rules of GATT, does not completely answer the misgivings to which it has led.

It should be borne in mind, however, that the escape clause mechanism was applied sparingly in the past, despite the apprehensions it excited, and it is much less likely to be applied under

the more stringent terms of the new trade expansion act. In no case brought before it, under the new act, has the US tariff commission agreed to invoke the escape clause and withdraw or modify an existing concession.

In fact, the new criteria are such that the tariff commission conceivably could move to nullify past modifications and thus in effect reduce tariff rates. This would be an unusual procedure, but it is nonetheless possible.

No discussion of GATT operations would be complete without taking up the increasing attention that is being paid to the interests of the less-developed countries, who now make up a majority of its 50 participating nation. This is a far cry from the eight industrial nations who were the original contracting parties some 15 years ago.

The belief in Washington is that GATT offers the less-developed lands a positive and unparalleled opportunity to advance their economic progress through the widening of trade channels. This involves both direct participation in the work of GATT, and application of the most-favoured-nation principle, under which concessions granted to one trading partner are as a general rule extended to all.

It is noteworthy that the United Nations conference on Trade and Development, set up to examine world trade problems generally, will be in progress during the multilateral GATT negotiations next year. In fact, the preparatory commission for this UN conference meets soon after the GATT ministerial meeting this month. This coincidence in timing makes it especially important that the GATT negotiations proceed and succeed, lest the developing nations be led into extreme positions which might undercut the work of GATT, to its and their own detriment.

Aid policies have an important bearing on these interrelated problems of international trade. It does little good to help less-developed areas, in their diversification efforts, to build up industries which are not likely to be competitive and which tend to require extraordinary degrees of protection to insure their continued existence. The mushrooming of textile industries throughout the world is a case in point.

Rather, the sentiment in Washington leans increasingly to the view that sensible aid and development efforts should be directed at seeking out and building up competitive export industries that will help developing lands earn their way in the world's growing markets.

There also is another side to this "trade with aid" idea one that already has been the subject of much discussion. It is that industrial nations should not establish or maintain unreasonable trade restrictions that tend to shut out the exports of the very developing lands they are trying to help. This idea has received the explicit endorsement, for instance, of the 20-nation Organization for Economic Cooperation and Development (OECD), made up of the United States, Canada and the countries of Western Europe.

All things considered, the Washington belief is that most countries wish to go ahead with the GATT talks, from which all have so much to gain. If there is a political will to reach agreement on the negotiations, agreement will be reached. An important question is the extent to which the industrialized nations are convinced that through trade they can pursue their common goals for stronger alliances and of better relations with the less-developed lands.

it is always possible to obstruct progress if that is the aim. But such a move, aside from its impact on GATT, might only incite demands for retaliation and lead to resurgent protectionist devices around the world. These would be developments no nation really wants, and from which none can benefit in the long run.

While the Government of India has decided to set up a separate company to run the Bokaro Steel Plant, the question of management, which had been highlighted by the American Steel Team, still remains open, and discussions are proceeding on some alternative proposals. As much was indicated by Mr C. Subramaniam, the Minister for Steel and Heavy Industries, at a press conference last Wednesday. Government of India does not consider that the question is whether the management of the Bokara Steel Plant should be American or Indian: it is how to manage the plant effectively. To that end it will have to examine how many Americans would be needed to run the plant, in what positions and for how long, and also take measures to recruit the required number of personnel to the extent that trained Indian personnel are not available to man the posts. The US Steel Team's report has, however, stated categorically that a ten-year management contract is an essential condition for bringing the plant to efficient and economic working. Though the US Administration is not committed to everything that is stated in the report there is still the possibility of further delay while the question is thrashed out. It will be a great pity if divergence of views on this issue is allowed to hold up a firm decision on US aid for Bokara. The Minister has already expressed his view that, with patience and understanding, this, as well as other points, could be settled to the satisfaction of both sides. For the rest he has said enough at his press conference to show that the Government is well aware of the problems regarding supply of raw materials, power, water, transport, etc., which had been pinpointed in the Steel Team's report, and these are being taken care of.

It would appear, therefore, that Mr Galbraith has, almost as his last act as Ambassador to India, seen the Bokaro project through. But it remains a question mark whether the negotiations in this regard can be expected to be completed before he completes his term of office. For, obstacles seem to be met with dismal frequency at every turn in the consideration of US participation in the Bokaro project. That, in the face of the Clay Committee report on foreign aid, we can still think of the possibility of US aid for Bokaro speaks of the determination with which Mr Galbraith went about his task (self-appointed, it may be noted) of having an American 'show-piece' in this country. But the fourth or Bokaro steel plant is still, unfortunately, very much in the stage of wishful thinking. It is possible that even for the Fourth Plan it will make no contribution in the form of finished steel.

All this is not to deny Mr Galbraith's efforts for that matter; however energetic Mr Chester Bowles may be, the trend of discussion and negotiation so far clearly shows that, before Bokaro comes into being (and that it will, with or without benefit of American assistance, is a decision that Government has taken firmly), a decade will need to pass. For meeting steel requirements during the Fourth Plan, and also perhaps some way into the Fifth Plan, we shall perforce have to rely upon expanding capacities at the existing steel plants.

By Paul Einzig

Mr. Wilson created a very good impression when on the occasion of his visit to Washington.

he declared himself most emphatically against devaluation and the floating pound. His second major pronouncement in the international monetary sphere is not nearly as statesmanlike. He comes out heavily in favour of the issue of international currency by the International Monetary Fund and suggests that an unlimited amount of this paper money would be placed at the disposal of Governments whose currency comes under pressure. It would mean that, while until now the fear of a perennial balance of payments deficit has to some extent moderated post-war inflation, under the Wilson scheme Governments would be able to inflate with impunity. There would be much less inducement for checking inflationary pressure, and the rise in prices would become accelerated. It is because prices today are more than three times higher than before the war that the amount of international liquid resources is not sufficient to finance the expanded world trade. With the rise in prices gathering momentum, the increased volume of liquid resources would soon become inadequate. More and more would have to be issued and the international vicious spiral would produce its inevitable effect.

Where Mr Wilson makes a mistake is that he does not link his proposal with steps to safeguard against inflation or at any rate to mitigate it. He could have reinforced his reputation gained by his rejection of devaluation by proposing that, in connection with the reform on the lines he suggested, the trade unions should undertake to play their part in the efforts to expand without inflation. They could do so by agreeing to a wage policy to prevent leap-frogging wage increases, by relinquishing demands for wage increases in excess of increases of productivity, by agreeing to a better utilisation of labour through doing away with restrictive practices and unofficial strikes, and by abstaining from excessive equalitarianism which has reduced profit margins to an extent that discourages capital investment and is the main cause for the increase of unemployment. If only organised labour were willing to contribute its share to the solution of the problem of expansion without inflation the problem would no longer be incapable of solution. It would then become possible to adopt measures if necessary to increase international liquidity without running undue risk of stepping up inflation.

Doubtless it is tempting to favour a solution by which it would be possible to overcome our difficulties by a stroke of the pen. Unfortunately it is not given to mankind to earn happiness and prosperity in such easy way. Progress has to be deserved through the adoption of policies leading to harder and more efficient work. It cannot be deserved nor achieved by means of monetary conjuring.

—(Copyright).

By N. C. Maitra

About five years ago, on one of my earlier visits to the Royal Monastery at Gangtokh, Sikkim, I met a European at the gate. He was wearing a 'baku', the local Himalayan tunic, and he had two lovely Tibetan young women with him. We exchanged greetings and introduced each other. He was a Frenchman. I asked him if he knew enough of the Monastery to take us round. He looked rather amused at my question and said he was a practising Buddhist. It was then my turn to look amused. "A practising Buddhist?" I asked. We became friends immediately, for as long as

we were together. Some months later, I was told that the "practising Buddhist" had been killed in an air crash, while attempting to smuggle gold.

Another man I met on the same trip who lost his halo later was "Late" Lama of the Tirpa Hill Monastery, just above the notorious tenth mile of Kalimpong. His photograph is reproduced in Rene Von Nobesky—"Wojkowitiz"—"Where The Gods Are Mountains" (published in 1956). He had a tower of coiled-up, matted hair on his head, which was his celebrity.

We called on him just after dusk, with a local policeman as guide. The inside of the Monastery was an uncanny, macabre twilight and, like all monastic insides, full of curiosities. The chief curiosity, however, was the Lama himself. He peered at us, taking pulls at his "chang" and rattling his dice, but his manner was quiet almost affectionate. In the prevailing atmosphere, with his strange contours, he looked a granite boulder coming to life. He should have been seen at his best, from below or at an angle of seventy-five degrees. A divine brute, I thought, and a vigorous one. Next year, when I was at Kalimpong, I had to go to the local Hospital to meet him. There had been small-scale religious war between two sectarian factions on Tripal Hill in which the "Late" Lama had been thoroughly beaten up and the Hospital was now his penitentiary. He was almost unrecognisable in his new "mild-mannered" looking weak and emaciated and speaking only with considerable difficulty. And gone was the tower of coiled-up, matted hair—he had been shorn of it all. As I stood at his 'bed-side' Whittier's line from a different context came back to me: "the glory from his grey hair gone for evermore."

"Sic transit gloria mundi"

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

Banks Need More Resources

"Technically, at any rate, the obligation of providing adequate credit facilities for financing the legitimate economic activity rests on the Reserve Bank and the Government and not on the banks".

The sentence is Mr Ramnath Goenka's, and it has been extracted from his speech as Chairman of the Punjab National Bank Limited. Torn out of its context, as has been done here, the implication is almost that, at least in Mr Goenka's view, the best that banks can do, in the face of inadequacy of Deposit resources, is to shrug their shoulders when called upon to extend fresh credit. What Mr Goenka in fact has done is to pose in its proper perspective the emerging problem that banks are being confronted with: already fully extended, how are they to take on the additional responsibilities that the combination of defence and plan production will entail?

For, the fact is that, should we in pre-occupation with defence, allow the progress of the plan to be affected, we shall then have played into China's hands. Industrial production must maintain its rate of growth; inflationary though such expenditure might be, we have equally a responsibility and a duty to enhance defence production; and, finally, to ensure that price behaviour is reasonably stable, we have to produce goods for civilian consumption as well. The trouble is, as Mr Goenka points out, that the rate of growth of Deposits has not kept pace with the rate of expansion in the demand for bank credit.

The alternatives are three in number. It would be self-help if the banking system sought to find the resources through a branch expansion programme. But this entails losses in the initial years—in the printed speech an oversight relates these losses to new branches in the "already unbanked" areas, instead of, of course, the "as yet unbanked" region. So, here self-help would need to be buttressed by an enlightened labour force, that tried its best to improve productivity, so that in some small measure such losses could be offset by the gains from productivity.

The second possibility is to secure "external" assistance. Mr Goenka would that the central banking institution were a liberal purchaser of gilt-edged in busy season conditions. We here reiterate our suggestion, that banks would be helped considerably if, during the busy season

and in order to meet the demands of finance in that period, the Reserve Bank was able to arrange a series of transactions with banks whereby it refinanced against Government securities over six-month periods. But, unfortunately, monetary policy today is such that banks are but reluctant investors in gilt-edged; they can't sell what they have, when they need the money; and even if they wanted to borrow, the rate of interest they were called upon to pay was often penal.

The third alternative is inaction: "alternative institutional channels will have to be explored for financing the growth of the economy", says Mr Goenka. The Re-finance Corporation is perhaps one such institution—but the banks have not made much use of its facilities.

Of course, the real solution would lie in a judicious combination of all three. The banks for their part must try to mop up moneys through branch expansion plans; the Reserve Bank must be a less unwilling lender against or purchaser outright of Government securities; and institutional facilities must be built up, so that banks have as their duty the provision only of short-term accommodation for working capital.

BANK RETURNS

Pressure Eases Considerably

Considerable easing of pressure, signifying the start of the 1963 slack season, is indicated in the latest banking figures.

According to the returns of the Reserve Bank for 17 May, Active Note Circulation has contracted by Rs 22.13 crores to Rs 2,321.96 crores, though the inflow of Rupee Coin is in the nominal amount of Rs 0.15 lakh. With Foreign Securities unchanged at Rs 105.08 crores, currency has been contracted against Rupee Securities for Rs 20 crores by transfer to the Banking Department, and the Reserve Bank's cash in the till accordingly has moved up by Rs 2.28 crores to Rs 20.35 crores.

Easing of the strain upon the banking system is made clear by the steep drop of Rs 21.05 crores to Rs 24.92 crores in the Reserve Bank's loans and advances to Scheduled Banks, who have, moreover, increased their Reserve Balances by Rs 3.99 crores to Rs 83.52 crores. Furthermore, such was the surplus resource with the State Bank that it has purchased securities through the Reserve Bank tap for Rs 11 crores.

Investments in the Banking Department are higher by the large amount of Rs 54½ crores at

Rs 226.84 crores. Of this, Rs 20 crores could be ascribed to transfer from the Issue Department. But the balance of about Rs 25 crores, together with the sale to the State Bank of Rs 11 crores of gilt-edged, constitutes deficit financing resorted to by the Centre in the week under review.

Created money was necessary because of large payments that had to be made by the Centre to the States. The Centre's balances, higher by Rs 3.29 crores at Rs 54.11 crores, do not quite obviously reflect the quantum of deficit financing. Instead, the Deposits of State Governments, which have been the recipient of large moneys, show a rise of Rs 5.12 crores to Rs 12.19 crores—and their ways and means borrowings have been cut substantially by Rs 20.89 crores to Rs 49.21 crores.

Another noteworthy feature of the latest Reserve Bank figures is the rise of Rs 6.58 crores to Rs 14.05 crores in Balances Held Abroad; and foreign assets in the possession of the Reserve Bank are now very near the Rs 120 crore mark. With the export "season" already ended, it cannot be that an export surplus was responsible for this acquisition to foreign exchange reserves. Obviously there has been a special transaction involving foreign assistance.

The return of the State Bank for 17 May shows a slack season contraction of Rs 9.73 crores to Rs 298.19 crores in the total of Advances. What is more, Deposits have increased by Rs 1.75 crores to Rs 556.33 crores. This two-fold improvement in the resources position has provoked the State Bank to add Rs 11 crores to its gilt-edged portfolio, which is now placed at Rs 232.13 crores. Cash balances, including money at call and short notice, have also benefited, in rising by Rs 1.54 crores to Rs 26.94 crores.

RBI

Advances Against Foodgrains

In terms of directives issued by the Reserve Bank in January 1963 and March 1963, overall ceiling limits were prescribed for advances by banks, both against warehouse receipts and other advances, in respect of paddy and rice and other foodgrains (excluding wheat). It was observed that the inclusion of warehouse advances within the system of overall ceilings tended to result in a disproportionate contraction of advances against warehouse receipts while other advances were comparatively maintained. In the interest of steady and orderly growth of warehousing facilities in the country and the recognised advantage of a security of this type, it is considered necessary to avoid an undue impact on advances against warehouse receipts. Under a revised directive issued to banks, therefore, ceilings have been placed, within the overall ceilings prescribed in earlier directives, on banks' advances other than those against warehouse receipts. These lower ceilings are equal for each two-month period, to the actual levels of such advances in the corresponding period of 1962. The balance will be available for advances against warehouse receipts. Further, as these lower ceiling limits apply to advances other than those against warehouse receipts only banks can if they wish to do so make advances against warehouse receipts, out of the limits fixed for other advances.

Moreover, in order to avoid the incidence of credit control on the use of new warehouses, the Bank has decided that advances against warehouse receipts of those warehouses which were established by the Central and State Warehousing Corporations on or after 1 April, 1962 shall be exempt from the operation of ceilings. The requirement of a 25 per cent margin would, however, continue in respect of such advances.

Notes

FOOD FRONT Energetic Measures Needed

In the course of a comprehensive review of the food situation, Mr S. K. Patil, Union Minister for Food and Agriculture, has pointed out that it will be wrong to come to any valid conclusion about production trends on the performance of one year. In this view the decline in rice production this year should not cause undue concern. Rice production has been adversely affected because weather has been unfavourable for wet crops like rice. As for wheat the prospects are good and according to Mr Patil the crop will be even better than last year. And he goes on to express the hope that given normal weather conditions in the remaining three years of the current plan the average of food production during the Third Plan will be higher than the Second Plan's. The Food Ministry cannot be blamed if the weather refuses to oblige. As for minimising the effects of the vagaries of weather on food production, it is of course the responsibility of the States.

Even so, the Food Ministry thinks that there is absolutely no reason why the situation that has developed in the eastern region of the country should cause any alarm. There is no doubt a shortage of rice in this region due largely to a decline in production in West Bengal and Orissa. But effective steps have already been taken by the Centre by rushing supplies from the Central pool and imports. The affected States have been given the assurance that they will be given all the rice they will need. To ensure that a similar situation does not recur, the Centre is building up a buffer stock of two million tons of rice. The ultimate aim is to make the buffer stock as big as 4 million tons. Mr Patil has indicated that further imports of rice under PL 480 may be negotiated mainly with a view to augmenting the buffer stock.

It however remains to be seen whether it would be possible for the Centre successfully to keep the situation under control. For a marked improvement in the situation in the affected States is yet to ensue. In the meantime there are reports of scarcity conditions in other States also. Latest press reports show that scarcity of foodgrains has come to be experienced in a big town in Bihar.

Now that the Centre seems to think that it is doing its part by despatching sizable quantities of rice to the needy States, any continuance of the scarcity conditions will be blamed on the States and their distribution systems. But it is time a lasting remedy to the shortage of rice supply is found. It is not important who is at fault but what is relevant is that steps are no longer deferred to ensure that energetic measures are taken to minimise the fluctuations frequently caused by the vagaries of the weather. It is to be hoped that the high level teams that are presently visiting the various States will help identify the weaknesses in our agricultural situation so that remedial steps can be taken expeditiously to bring farm production to the desired level.

SUGAR

Timely Action

Government's decision announced last Friday to raise the price of sugar cane should help in increasing the supply of cane to the industry in the coming season. The move will be welcomed by the industry also as in the course of his presidential address to the Indian Sugar Mills Association last week, Mr M. N. Pittie himself has pointed out that one of the ways in which higher production can be achieved is by suitably increasing the cane price within the framework of the recovery linking formula. The existing formula is in force only from the current season in replacement of the old system of payment by weight. The new method has been found to work quite satisfactorily and has the support of both the sugar industry and the growers. The revised formula will allow a price of Rs 1.62 per maund for a recovery of 9.4 per cent as compared with the existing percentage of 9.8. It is to be expected that with the price for his cane increased, the cultivator will not only evince active interest in cane production but will also show a preference to supplying cane to the sugar factories. But it appears however that the effect of the price increase may not be reflected fully in cane production this year as even according to Mr A. M. Thomas, Union Deputy Food Minister, planting has been completed in most of the States.

While the supply of adequate quantities of sugarcane is an important prerequisite to the hitting of next year's sugar production target of 33 lakh tons, it is incumbent

on Government to ensure that the factories also get some incentives. In this view suggestion of Mr Pittie that the incentives schemes prevailing in 1959-60 and 1960-61 should be revised merits the attention of the authorities. Mr S. K. Patil has indicated that the problem of sugar cane diversion is receiving the attention of Government, but it is important to remember as pointed out by Mr Pittie that conversion of a given quantity of cane into sugar, yields about 50 per cent more sugar than its conversion into gur and khandsari.

FREIGHT

Unwarranted Rise

The proposed move to effect a 15 per cent increase in freight rates on cargoes shipped from India to the UK and the Continental countries has understandably enough given a rude jolt to the shippers all over the country and their resentment against it is but quite natural. For our country the proposal is wrought with serious economic repercussions as any increase in freight rates would considerably enfeeble the competitive stability of Indian merchandise abroad which are already facing fierce competition from other exporting countries. Generally sea freight accounts for nearly 10 per cent of the value of our exports; but our shipping earns only one-fifth of freight bill totalling about Rs 150 crores per annum. The changes in freight rates undertaken in the recent past do not warrant an immediate upward revision. For instance, in June 1958 there had been a lowering of rates either overtly or by raising the deferred commission and last year rates on jute and jute manufactures were curtailed further. Viewed in this background the soundness of the complaint that shipping companies are face to face with uneconomic operation can be challenged.

It is reported that the Indo-UK and Continental Conference is willing to accept a slight ad hoc increase in the rates provided the further revision will be considered within one year. But we should not ignore that such a step will contravene the agreement entered into by the Government and the Conference stipulating that there will be no increase for the next two and a half years once a general revision is brought about. It may be mentioned, in this context, that the ECAFE Committee on Trade at the Bangkok conference spotlighted the significance of procuring competitive and equitable rates to augment exports from the region. It may also be recalled that the UK Conference Line's proposal to step up the rates on exports from India and Pakistan was withdrawn owing to the strong opposition of these

countries. The case for opposing the contemplated increase is stronger for seeing through our export promotion programmes. A large section of the exporters whose profits are less than 15 per cent will be thrown out of the market if the new tariff rates are to be introduced. At present the Government is subsidising many export items to maintain the tempo of exports. The proposed move will throw additional financial burden on the Government in that it will be called upon to step up subsidies on a corresponding level for stimulating our exports.

SOUTHERN REGION

New Companies

A fair indication of the pattern of growth of industrial and business activity in the southern region comprising the States of Andhra Pradesh, Kerala, Madras and Mysore is provided by the review of the working of the Companies Act in the region for the quarter ending March 1963. The total investment by way of increase in paid up capital of companies is of the order of Rs 762.73 lakhs but the bulk of the increase is accounted for by one company in the public sector which has raised its paid up capital during the period under review by nearly Rs 40½ lakhs. Of the newly floated companies in the region, there are 7 giant floatations, with the pride of place going to a company in the Kerala State by name Kerala Heavy Electricals Limited with an authorised capital of Rs 220 lakhs for the manufacture of heavy electrical equipment. During the first quarter of 1963, 90 companies with an authorised

capital of Rs 949.90 lakhs were registered in the region. Out of them 18 are Public Companies with an authorised capital of Rs 672.50 lakhs and 71 are Private companies with an authorised capital of Rs 277.40 lakhs and one is a public company limited by guarantee.

Statewise, Madras accounted for 8 public and 41 private companies, Andhra for 3 public and 14 private companies, Mysore for 4 pub-

lic and 10 private companies and Kerala for 4 public and 6 private companies. Industry-wise, Processing and Manufacture (metals and chemical and products thereof) tops the list with 22 companies with companies under the classification Commerce (trade and finance) coming next with 20. The (Transport, Communications and Storage group is the third with 17 companies. The fourth place is held by the group classified as

Processing and Manufacture (foodstuffs, textiles and products thereof) with 14 companies with the group Processing and Manufacture (not elsewhere classified) accounting for 10 companies. The remainder is distributed among companies classified under Agriculture and Allied Activities, Mining and Quarrying, Construction and Utilities, Community and Business Services and Personal and Other Services.

IDLE CAPACITY

A Survey

The country wide complaint about idle capacity and its alarming increase in the recent years have led the Union Ministry of Commerce and Industry to undertake a survey of the actual capacity existing in the different industrial ventures and to make a correct assessment of the under-

utilised and unutilised capacity. The survey will be the first scientific analysis which will gather relevant data for giving a correct picture of the actual position. The lack of relevant data is one of the prominent obstacles in securing existing idle capacity adequate foreign exchange for importing requisite raw materials and components for ensuring the maximum utilisation of installed capacity. Another reason ascribed is the slackness that has set in exports of industrial products. This apart, the time lag and difficulties in bringing new capacities into full effective operation also resulted in rendering a good portion of installed capacity idle.

Regarding industrial units operating on a continuous basis the study will calculate the capacity on the basis of triple shift while the rest will be reckoned on the score of maximum production that can be obtained through double shift. The major industries that are faced with high incidence of underutilisation are ferro-manganese, railway wagons industrial boilers sugar mill machinery, paper machinery, bare copper conductors, glass and glassware and woollen textiles. The shortage of raw materials such as coke and steel is responsible for the low production of railway wagons whereas many of the engineering concerns complain about the non-availability of imported raw materials or components to the required level. The shortage of foreign exchange and our limited foreign exchange earnings do not permit of adequate imports of these materials. Even the aid from friendly countries is practically of no avail as they are largely tied up loans. Our ability to employ the full installed capacity will largely depend on the availability of foreign assistance in the form of untied loans.

COTTON TEXTILES

Effect of Cotton Scarcity

In the statement circulated to the shareholders along with the annual report and accounts Mr C. H. Campbell, the Chairman of the Finlay group of textiles, focussed attention on the impact of cotton scarcity, high prices of cotton and reimposition of import levies on the cotton textile mills in general. The reliance of our mills on large scale imports will only result in entailing a heavy drain of foreign exchange. A permanent remedy is the stepping up cotton production on a progressive scale by employing modern agricultural practices on an all-India basis.

Equally baffling is the prospects of expanding foreign exchange earnings through larger exports of cotton cloth. The main inhibiting factor is the prohibitive cost of our cotton textiles which needs immediate tackling if the third

Plan target of 850 million yards is to be hit. It may be recalled in this connection that India's cloth exports in 1962 amounted only to 508 million yards worth about Rs 40 crores against 570 million yards valued at Rs 46 crores in the previous year. Our exports would have been of a lesser order but for the export obligation imposed on the mills. But as Mr Campbell has pointed out there is evidently a serious snag in the export scheme in that owing to the competition among the mills for attaining their targets the foreign purchasers are exploiting the situation and hammering down the prices. This is evidenced by the fact that as against 84.6 nP per yard earned in July last, the average realisation careened down to nearly 71 nP in November and 70.3 nP in December.

The efforts of the Finlay group at increasing exports have met with only "moderate success" and

progress so far registered is far from encouraging. This apart, the group was compelled to "purchase export performance" from other mills under the scheme in order to escape penalty for non-fulfilment of export target. A probe into the working of other mills in India will lead to the conclusion that this particular phenomenon is endemic. Unless a vigorous drive to modernise the textile mills is launched we will be hard put to extricate ourselves from this muddle.

MAN-MADE FIBRES

Help Needed

Addressing the annual general meeting of the Association of Man-made Fibre Industry in Bombay Mr A. R. Ramanathan, the Chairman, entered a strong plea for allowing adequate foreign exchange to the industry for

helping its healthy growth. Because of the shortage of foreign exchange man-made fibre industry in India is experiencing great hardships to expand its output on the desired level. Though the cotton textile mills consider the keen competition from man-made fibres with concern it cannot be contradicted that of late synthetic fibres are making greater inroads into the consumers' taste thanks to their lightness, durability non-creasing, non-staining and quick drying characteristics. The world production of man-made fibre has smartly gone up from 49 million lbs in 1921 to 8,665 million lbs in 1962 and its share in the total of all fibres has surged to 25 per cent from 1 per cent during the last 40 years. In India also output of man-made fibre went up from 5 million lbs in 1951 to 57 million lbs of viscose filament yarn and over 70 million lbs of staple fibre in 1962.

25

years of progressive Banking Service

DENA BANK

1938-1963

SOUNDNESS · INTEGRITY · EFFICIENCY · SERVICE
On these four principles laid down by our founder the late Shri Pranlal Devkaran Nanjee, stands our edifice.

With unfailing loyalty to these principles we have served men, industry and commerce, and our growth is a part of the all-round progress of India.

While we look ahead to greater co-operation from all our clients in the years to come, we, on this auspicious day, rededicate ourselves to the principles that have always distinguished us for our service.

BUY NATIONAL DEFENCE CERTIFICATES

As Mr. Ramanathan observed side by side with specialisation and diversification steps are adopted to make them cheaper. However, the prices of synthetic fibres had been frozen at the 1957 level despite all-round increase in the cost of production. In the meantime, as the Chairman pointed out, the prices in the market are showing a declining tendency. On account of this and other related factors like financial stringency yarn is left unlifted culminating in huge piling up of stocks. It is gratifying that the Government is appreciative of this situation and is considering an expeditious way out of this problem. The industry should be assisted to maximise output, stabilise prices and meet a substantial portion of internal requirements. As stepping up cotton production is time consuming the production of synthetic fibres should be enhanced for which raw materials such as bamboo and cotton linters are available on an abundant measure internally.

SNIPPETS

Railway Electrification in West Germany

Soon the last steam locomotive will have done its job in Germany, and move into a museum. The Federal German Railways are at present engaged in a gigantic project: the electrification of the North South trunk lines. When the new annual timetable enters into force in spring, 1965, the entire line from the South of Germany to Hamburg in the North will be converted to electrical service. One of the main arguments used by the Federal Railways in support of electrification is that of rationalization. For electrically operated long-distance passenger trains can travel at higher speeds, while goods trains can carry higher pay loads. At present goods trains on an average comprise sixty wagons and carry approximately 1,500 tons, after the conversion

their length will be increased to 75 wagons and their carrying capacity to approximately 2,000 tons. Moreover, there will be considerable savings in railway personnel.

MINERALS

Production in 1962

India produced minerals worth Rs 1,868 million during 1962, according to the Indian Bureau of Mines. The value of production during the preceding year was Rs 1,662 million.

The increase of 12 per cent in value was due to the higher output of coal, gold, gypsum, limestone and salt. Bihar continued to be the leading State and produced minerals valued at Rs 721 million which was about 38.6 per cent of the total value of mineral production in India during 1962.

West Bengal and Madhya Pradesh followed with their shares at 21.6 per cent and 11.3 per cent respectively.

Next in the order of value were Orissa (6.4 per cent), Andhra Pradesh (5.6 per cent), Mysore (4.6 per cent), Maharashtra (3.4 per cent) and Gujarat (3.1 per cent).

BHILAI

Production in April

The production of ingot steel in the Bhilai Steel Plant during April 1963, totalled 89,850 tonnes which was more than nine per cent above the monthly projected capacity of the Steel Melting Shop. Production of pig irons during the month was 97,034 tonnes which was also more than six per cent above the projected capacity of the Blast Furnace Shop.

PRICES

Further Advance in Index

The official wholesale price index (with the year ended March 1953 as 100) advanced further by 0.7 per cent to 131.1 during the week ended 27 April, 1963 as compared with 130.2 for the earlier week. The index was also higher by 3.0 and 5.1 per cent respectively when compared with the corresponding week of the previous month and that of a year ago. The monthly average for April 1963 stood at 129.7 as against 127.1 (revised) for March 1963 and 124.2 for April 1962.

Higher prices of Turmeric (+9%), Arhar at Madras and Oranges (+8% each), Wheat at Rajkot (+5%), Mung Masur and Milk (+4% each), Bajra, Cashewnuts and Betelnuts (+3% each), Potatoes, Groundnut Oil, Gingelly Oil and Eggs (+2% each) and Rice, Barley, Urad, Coconut Oil, Meat Gur and Black Pepper (+1% each) raised the index for 'Food Articles' by 1.4 per cent to 130.3 although the prices of Wheat at Chandausi (-7%), Onions (-3%), Fish (-2%) and Gram, Coffee and Cardamoms (-1% each) showed declines.

The index for 'Tobacco' advanced by 1.1 per cent to 111.6 due to a rise in the prices of Tobacco raw.

The index for the 'Fuel, Power, Light & Lubricants' group remained stationary at its earlier week's level of 137.2.

The index for 'Industrial Raw Materials' receded by 0.5 per cent to 136.3 as a result of a fall in the prices of Groundnuts (-3%), raw Silk and Gingellyseed (-2% each) and Rapeseed (-1%). The prices of raw Wool (+3%), Linseed (+2%) and raw Jute and Castorseed (+1% each), however, moved up.

(+2%) was neutralised by a decline in the prices of Zinc (-2%) and the index for 'Intermediate Products' stood unchanged at its previous week's level of 138.2.

The index for Finished Products worked out to 128.9 as against 128.8 (revised) for the earlier week. The prices of Jute manufactures (+1%) showed a rise during the week under the review.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

What exactly was Mr T. T. Krishnamachari's mission to Washington? I think it may have been primarily to give assurances that, though we have so far been slow to use up the "limit" of sanctioned amounts for military assistance, we are mindful of the continuance of the emergency and that we are anxious further to buttress our defences. For, the trouble is that with the "shooting" war ended, the threat on our northern borders not only appears to be less immediate but is even seen (in some quarters at least) to be non-existent. In such a situation, after the swift air-lifts in the first flush of the emergency, our failure to "contract" for the import or purchase or securing of other military equipment to the extent of the financial assistance promised or extended to us, has naturally been interpreted as a lagging in our own sense of urgency. For, the thaw has set in, and there is no sign of a revival of hostilities. But preparedness for a second treacherous attack is essential, and the next three years are therefore going to entail the re-equipment of our army and the building up of our defence potential.

Both TTK's press conference, and Mr Kennedy's reference to the talks in this context, would suggest that the mission has been a successful one. TTK's talks in London would presumably be with a similar purpose, and chances are that he will be persuasive here, too. Has TTK thus found his metier? After months of agonising sitting on the side-lines, with not infrequent reports of an alleged wish on his part to quit office simply because there was little for him to do, TTK would appear to have assumed the responsibility for gearing up the defence effort. And I think we can count on him simultaneously to have a care for production for civilian consumption, so that prices are kept steady. So, the next chore he could take up could be: what to do with the sizeable idle capacity in industry today, starving mostly for lack of imported raw materials?

Here indeed is the crux of the problem that we shall be called upon to deal with, not merely over the rest of the Third Plan period but

well beyond it. The sad thing is that for putting through the plan projects we are able without much difficulty to arrange for the financing of the foreign exchange component therein. But in order to run industry, whether existing or whether relating to additional capacity in process of being set up, we need to make maintenance imports, and these have to be paid for from our own scant foreign exchange reserves. What though we are striving strenuously to expand exports, the fact remains that the bill for maintenance imports is steadily getting bigger, and we simply do not have enough money in the foreign exchange coffers to afford such larger bills. Cut-backs in maintenance imports have consequently highlighted policy in the past two, three years, and industrial production, though it is rising, is not maintaining the rate of growth necessary for attaining national income targets under the plans.

There is a time-lag between the establishment of new industry and our capacity to export its manufactures. This is firstly because of the indigenous demand itself, and secondly because it takes time for newly produced Indian goods to be competitive in world markets. During this interim, and we are in it at the moment, all we can do is to rely upon the "traditional" export items to bring in foreign exchange. There is clearly a limit to expanding sales abroad of such goods. So, during this interim, we have either to hope for untied foreign loans or to be prepared for relative industrial stagnancy. Our foreign friends, and in particular America, are slowly beginning to appreciate the role of untied loans in plan endeavours generally, but the magnitude of such loans that we get is still far short of our needs.

I think an assessment of capacity in the country now unutilised for want of imported raw materials should be taken in hand. Once that assessment is made, we shall know more clearly and precisely our continuing need of foreign exchange to keep such industrial units working to capacity. And then it becomes a matter of seeking a new form of loan, one not for the financing of specific projects but for securing supplies of raw materials. At that stage the foreign assistance could even partly be 'tied', in the sense of our being required to buy the raw materials from the country which extends the loan. If the industries

involved have some export potential, it may even be that banks could be called upon to arrange commercially short-term foreign exchange credits, with the understanding that upon export the debts in this regard would be liquidated. In other words a category of maintenance imports could be arranged for if as a sort of contra exports were possible to pay soon thereafter for the imported raw materials.

But the fantastic thing is that new industry, which in the main would save us foreign exchange but which nevertheless would result in more of maintenance imports, continues to be encouraged. For example, in the Lok Sabha recently, Minister for Mines and Fuel had indicated that the report of Dr Henney of the French Petroleum Institute, on petrochemical industries, had been received by the Government and was under consideration. He also laid a statement on the table of the House which dealt broadly with the topics covered by the report and the recommendations. The main recommendation related to the establishment of five petrochemical complex in different parts of the country. It is quite obvious that, with the growing industrialisation of the country, the demand for petrochemicals, such as plastics, synthetic rubber, synthetic fibres and certain important solvents, has been increasing. It is learnt that, according to Dr Henney, the yearly import bill could amount to Rs 150 crores by 1970 unless their manufacture is established in the country. The French expert is equally emphatic in regard to the positive role of the public sector in this field. Thus, on grounds of economic viability, he has recommended establishment

of large complexes under the umbrella of a single entity rather than small units owned by small companies. The complexes in India could be located in Maharashtra, Gujarat, South India and eastern India. In Maharashtra, it has been suggested that Bombay is the most suitable site because of the existing refinery complex, a large consuming centre and availability of trained personnel and potential foreign partners. No particular places in South, East or Gujarat, have been recommended by Dr Henney. He has, however, indicated the extent of the availability of raw materials and markets in these zones. The report has suggested the production of only aromatics at Barauni in Bihar, in view of the small quantity of naphtha availability and the distance from consuming centres.

Dr Henney has estimated that the cost of establishment of the petrochemical complexes would involve expenditure of Rs 262.9 crores, including the foreign exchange component of nearly 65 per cent. As regards foreign participation, he is hopeful of wide response if such collaboration is actively sought and provided well-informed staff are available to assist the foreign companies. Discussing co-ordination between the public and private sectors, Dr Henney has suggested that after serving the scheme for the public sector, offers from the private sector could be invited for various other schemes of the complex. A revolving fund placed in the hands of the authorities, he has said, could assure the timely realisation of the different schemes. He has also suggested the creation of a special agency to co-ordinate and expedite the development of petrochemical industries complexes in addition to a co-ordinating agency for contractors and general overall supervision of the installations.

Olympus

(From Our New Delhi Correspondent)

Food in Proper Perspective

THE food situation in the country was placed in proper perspective when Mr S. K. Patil addressed a press conference in New Delhi on the eve of his departure for the United States to attend the World Food Congress. The comprehensive statement he made on the occasion, covering all aspects of the problems—production, stocks, market arrivals, price trends—should serve to correct the misapprehensions likely to be aroused by the confusing and rather alarming reports that have recently hit the headlines in the daily press. Some of these appear to reflect the ideas that are being discussed at different levels in the Planning Commission rather than any considered decision of the Commission itself.

Mr Patil did not claim that the food problem had been completely licked. But he was confident that

it was under control, despite prices breaking loose in some areas. There was no cause for alarm; Government had sufficient stocks of grain, both rice and wheat, to meet the requirements of the areas where the fall in the production of rice this year had created a shortage, as in the eastern region.

Mr Patil made the point that fluctuations in output were unavoidable in agricultural production which was conditioned by the weather; but the shortages of bad years were evened out by bumper harvests in succeeding years. Therefore, it was not correct to conclude that, because agricultural production had been stationary in the first two years of the Plan, the plan targets could not be achieved. For a proper appreciation of the trend of foodgrains production, it is usual to take the average of the period of an agricultural cycle, say, five years. On this basis, foodgrains production in India has registered considerable improvement from quinquennium to quinquennium. For the pre-Plan

quinquennium ending 1950-51, the average production of foodgrains was 58.1 million metric tonnes. In the First Plan quinquennium ending 1955-56, the average rose to 65.8 million metric tonnes; in the Second Plan quinquennium ending 1960-61, the average further rose to 74.9 million metric tonnes. The production in 1961-62, at 79.8 million tonnes, has been definitely higher than the average of the preceding quinquennium, in 1962-63 also, the production is expected to be higher than the average of the Second Plan quinquennium. In spite of the fact that 1961-62 and 1962-63 were successively bad years in respect of weather conditions, the foodgrains production in these years has been higher than the average of the Second Plan. Given normal weather conditions in the subsequent three years of the Third Plan, the average of the Third Plan quinquennium will, no doubt, register a new peak.

Though final estimates for 1962-63 are not yet available, it is evident that output of rice has been affected by bad weather in some regions. Though other cereals for which climatic conditions were not so unfavourable appear to show some rise in production, the shortfall in rice, to a large extent, reduces that advantage. The present indications are that the wheat crop would be better than normal. Mr Patil also pointed out that the achievements, in relation to the targets set, should be assessed in terms

of the totality of the efforts put in relation to the Plan outlay. It has been generally found, he said, that for various reasons, such as diversion of funds by State Governments from agricultural plans and difficulties in means position in some States, the financial and physical effort has not yet kept pace with what was envisaged in the Plan.

Mr Patil drew attention to the significant fact that wheat prices in 1963 have been lower than last year in practically all States. For rice, however, the general level of prices in 1963 has been higher than that in the corresponding period of the previous year. But this rise is mainly confined to the eastern States of Assam, Bihar, Orissa and West Bengal and also to Madhya Pradesh. In all these States the rice crop this year has suffered damage owing largely to delayed monsoon and drought. But prices in the Southern States of Andhra Pradesh, Madras, Mysore and Kerala in 1963 have generally been lower till March whereafter the seasonal rise has begun. The prices of millets and other cereals have also behaved generally satisfactorily as compared to last year. In this connection the Minister also stressed the need for taking into account the effects of taxes levied by Central and State Governments which affect price trends directly and indirectly.

The market arrivals of rice in the country as a whole were higher in 1961-62 (October-September), than those in 1960-61 despite the fact that the rice crop in 1961-62 was some-

what lower. In 1962-63, so far, the market arrivals of rice have been even with those in the corresponding period of last year. If this trend continued, it is likely to have a sobering effect on market prices. Market arrivals of wheat in the country as a whole in 1962-63 (April-March) have been 10 per cent higher than those in 1961-62. The new wheat crop has started coming and the arrivals so far have been somewhat higher than in the corresponding period last year.

The Minister deprecated talk of curbs on consumption of rice or similar expedients which would be self-defeating. It is true that the Ministry of Food has a programme to

bring about a change in prevailing food habits. But it was a long-term programme determined by nutritional considerations and had nothing to do with the present situation.

The stock position, the Minister said, also continued to be satisfactory. Wheat stocks with the Centre were nearly two million tons and rice stocks with the Centre and States totalled 800,000 tons. According to available returns, stocks with licensed foodgrain dealers totalled, in March 1963, nearly two million tons in rice and 370,000 tons in wheat. This is quite a satisfactory position as compared with last year and should set at rest any apprehensions on this score. In the Eastern region parti-

HOPE'S METAL WINDOWS (INDIA) LTD.

NOTICE is hereby given to the members of the above-named Company that the Fifth Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Thursday, 13th June 1963 at 3.30 p.m. to consider the Accounts of the Company for the year ended 31st December 1962, to transact other ordinary business and the undernoted special business:

SPECIAL BUSINESS.

NOTICE is also hereby given of the following Resolutions:—
(To be proposed as Ordinary Resolution)

1. "That 1,20,107 ordinary shares of Rs. 10 each (ranking for dividend in the manner mentioned in Resolution No. 2 set out below and in all other respects pari passu with the existing issued shares of the Company) be issued and offered for subscription for cash at par in the first instance to the members of the Company as at 14th June, 1963 in the proportion of one new share for each ordinary share in respect of which the members of the Company are respectively registered on that date with the right to renounce all or any part of the shares so offered and upon the footing that the full amount of each share taken up shall be paid to the Company on application and that applications for the said new shares be invited by notice specifying the number of shares for which members may apply, and limiting a time not being less than 15 days from the date of the said notice within which applications accompanied by remittances in payment for the shares applied for must be received by the Company failing which the invitation will be deemed to have been declined, and that the Board of Directors
2. That the said new shares shall be entitled to participate in the dividend, if any, which may be declared on the shares of the Company in respect of the year ending on the 31st day of December, 1964."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 11th June, 1963 to 20th July, 1963, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.

D. MANSON
Managing Director,
Secretaries

21, Netaji Subhas Road,
Calcutta, 14th May, 1963.

Note:—

A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, has been forwarded to the members of the Company.

INSTALMENT CREDIT FOR EQUIPMENT/MACHINERY

The Plan is specially designed to meet the needs of small and medium sized businesses engaged in approved productive operations, for financing purchases of equipment/machinery.

If you require credit for purchases of equipment/machinery to increase production or for other worthwhile purpose, please contact the nearest branch of the Bank, who will be pleased to furnish you with details and endeavour to tailor credit to your requirements.

cularly, the stocks at present with the State Governments, it was stated, are sufficient to last for some months even on the basis of an accelerated rate of consumption at fair price shops. These Governments have also been assured that additional quantities required to maintain supplies through fair price shops would be made available.

During his visit to the United States to attend the World Food Congress, Mr Patil will also take the opportunity to have discussions with the US Administration in regard to the review of the working of the PL-480 agreement for the current year and the future programme. Mr Patil said that, nearly half of the total quantity of 16 million tons of wheat contracted in 1960 had yet to be imported. The talks would include the question of covering the program-

me of imports for 1963-64 and the arrangements for the balance of the quantities of wheat and rice that would remain after the expiry of the agreement on 30 June, 1964. The talks would also cover the question of further imports of rice in order to build up, along with indigenous procurement, a buffer stock of two million tons. Soundings would also be made in regard to the possibilities of import of further quantities of wheat, should that be necessary, to build a reserve of 4 million tons.

Mr Patil also made two important announcements regarding Government's decision to increase the minimum price of sugarcane and to extent price support to jowar which, after rice and wheat, is the most important cereal crop in this country.

THE UNITED COMMERCIAL BANK LIMITED

Progress Maintained in Difficult Year

Banks' Problem: Securing New Deposits

Statement of Shri G. D. Birla, Chairman, circulated to the members at the Twentieth Annual General Meeting held on Friday, the 24th May, 1963.

Gentlemen,

The Directors' Report and the accounts of the Bank for the year ended 31st December 1962 have been in your hands for some time and it is a matter for satisfaction that the progress of the Bank has been maintained in a somewhat difficult year for banking. There has been some delay in the presentation of the accounts, but this has been due to the understandable desire of the Board to finalise the Balance-Sheet only after the Super Profits Tax proposals adumbrated by the Finance Minister in his Budget speech had taken final form so that any liability to the new tax to which the Bank might become subject could be squarely faced and taken into account.

You would have noticed from the report of the Directors that Mr. G. L. Bangur and Mr. M. L. Shah who retire by rotation this year are not seeking re-appointment as Directors by reason of their having attained the age of 68 years. Mr. Shah joined the Board in December 1946 and Mr. Bangur in January 1948. The Bank has benefited greatly by their long association and I wish to acknowledge on your behalf the valuable services rendered by them. Mr. Shrenik Kasturbhai was invited to join the Board as an additional Director during the year and you will be asked to confirm his appointment. I am confident that his participation as a Director will continue to be of great value to the Bank.

THE EMERGENCY

The Finance Minister's inclusion of such an innovation as the Super Profits Tax in an unprecedented Budget was, of course, directly in consequence of the dastardly Chinese aggression upon Indian soil. Faced with this challenge to the nation's integrity, the people have responded magnificently and, what is far more important, unitedly. Spontaneous contributions have been forthcoming both in the form of money and in greater productive effort. Banks for their part have had an even more responsible role in the functioning of the economy. On the one hand in the front-line areas there has been the need to finance stocks and distribution of essential consumer supplies. On the other hand defence production has also necessitated suitable accom-

Statement of the Chairman, Mr G. D. Birla

modation from the banking system. It is satisfactory to record that banks rose to the occasion and were not found wanting when essential financing endeavours were called for. Indeed, they took more care than ever before in the screening of requests for advances, for in the conditions created by the emergency they had to make doubly sure that their facilities were not abused for the speculative withholding of stocks.

DEPOSITS

Resuming the review of the Bank's affairs, I am happy to state that during the year the Deposits of the Bank crossed the Rs. 100 crore mark and stood at Rs. 105.74 crores at the close of the year. This figure compares with Rs. 98.90 crores a year previously and thus showed a rise of Rs. 6.84 crores, or 6.9 per cent.

CASH AND SECURITIES

Cash on hand and with banks and money at call and short notice were Rs. 11.24 crores and represented 10.6 per cent of Deposits. As the proportion of the Bank's holding of Government securities to its Deposits was already higher than the ratio for the banking system as a whole the addition to the securities portfolio is only of the order of Rs. 1 crore, the rest of the accretion to our Deposits being utilised for meeting the rising demand for credit from our industrial and commercial borrowers. Nevertheless, our quick assets consisting of cash on hand and with banks, money at call and short notice and unencumbered Government securities totalled Rs. 46.84 crores forming 44.3 per cent of Deposits, the corresponding percentages for the two previous years being 43.31 and 43.80.

PROFIT & LOSS ACCOUNT

The net profit of the Bank has shown a slight rise from Rs. 72.61 lakhs to Rs. 73.33 lakhs but in judging this figure it should be borne in mind that apart from the normal increase in working expenses the Bank had to bear an additional burden resulting from the implementation of the Desai Award, make provision for depreciation in the value of holdings of Government securities and pay the Deposit Insurance premium, all of which in the aggregate substantially eroded the increase in gross earnings during the year. We did not seek to off-set these charges by reducing our liquidity

ratio and increasing our Advances; we preferred throughout the year to adhere to our conventional standards of a high degree of liquidity. As stated in the Directors' Report the Board have transferred out of the profit Rs. 28 lakhs to the Reserve Fund and Rs. 4 lakhs to the Gratuity Trust Fund. After allocating Rs. 16.50 lakhs for bonus to the staff the Directors have recommended the maintenance of the dividend of 12 per cent, less tax on the old shares and the payment of a pro rata dividend on the new shares. The Directors have contributed Rs. 2 lakhs to the National Defence Fund from the 1962 accounts and a further sum of Rs. 2 lakhs early in January 1963, thus making our total contribution stand at Rs. 4 lakhs.

CAPITAL DEPOSITS RATIO

In my statement last year I had informed you that the Board had decided to increase the capital of the Bank by the issue of 200,000 ordinary shares at a premium of Rs. 25 per share and that an application had been made to the Controller of Capital Issues for sanction of the proposals. This sanction was obtained on 14th April 1962, but a condition of approval was that the issue should be made only after 31st August 1962. When the issue was actually made conditions in the capital market had changed, and the Chinese aggression aggravated the situation therein. Notwithstanding these adverse factors applications were received for 160,000 shares which were allotted in full. The share premium of Rs. 40 lakhs realised, together with the year's allocation of Rs. 28 lakhs to the Reserve Fund, has brought the total of published Reserves of the Bank to the impressive figure of Rs. 3.03 crores.

The amount called-up on the new share, on capital account is Rs. 80 lakhs the bulk of which has since been paid in, with the result that the capital base of Rs. 5.83 crores, comprising Rs. 2.80 crores in paid-up Capital and Rs. 3.03 crores in Reserves, gives an equity-deposits ratio of 5.5 per cent against the target of 6 per cent. I think it will be generally conceded that our Bank for its part has spared no effort, whether by way of the quantum of transfer to the Reserve Fund or in the form of raising fresh capital through right issues, in striving to increase the ratio of equity plus Reserves to

Deposits. Indeed, had the capital market been slightly better even the target of 6 per cent would have been hit.

OPERATING COSTS

The Desai Award has imposed a heavy strain upon the banking system inasmuch as the number of categories of banks, and the classes of areas have been reduced from four to three (though with some measure of relief), the salary structure has been radically revised and new burdens like leave-fare concessions and accumulation of medical benefits, for all workmen, have been introduced.

Although banks in their need to add to the Reserves, both inner and published, can ill afford such increases in operating costs, with a view to ensuring cordial relations and in the hope of this, in turn, effecting an improvement in labour productivity, the Award has been accepted in its entirety and implemented. Also, with the coming into being of the Deposit Insurance Corporation, the premium payable in this regard constitutes a new and not inconsiderable item of expenditure in the Profit & Loss account. The increase in costs on account of the premium is, however, of small consequence when set against the background of increased confidence in banks which was one of the factors which made it possible for bank Deposits to rise more than sufficiently to cover the expansion in Advances during 1962.

The Deposit Insurance scheme now covers six million accounts with balances not exceeding Rs. 1,500 each, which form 77.6% of the total number of accounts in banks. The Reserve Bank is to be congratulated on the speedy implementation of this scheme; for, the restoration of public confidence in banking is now complete.

In passing, I may mention that mechanisation has often been suggested as a solution to counteract the ever-increasing establishment charges. If the present day ultra-modern electronic accounting machines are to be used profitably, they need a vast volume of business transactions for processing and no branch of any bank in India has such a volume of business. The import policy of the Government of India at present is such that it does not permit import of even ordinary adding or calculating machines, not to speak of sophisticated accounting machines. The sugges-

tion of mechanisation in banks in a big way is, therefore, at present impracticable and uneconomical.

INTER-BANK AGREEMENT ON INTEREST RATES

In the meantime, an important development during the year, which may go some little way to compensate for the increased expenditures to which I have just referred, was the adoption of the inter-bank agreement on interest rates on Advances. It was unfortunate that almost immediately after the agreement came into force an automatic upward revision of the prescribed minimum took effect by reason of the raising of bank rate, but the fact remains that we have now made a beginning towards evolving an orderly structure of interest rates for the banking system. For, despite minor and infrequent complications in its working, the inter-bank agreement on deposit rates has been operating satisfactorily. The small and medium banks have been seen to benefit in a fairly big way from the differential they were permitted to offer. The subsidiaries of the State Bank of India who are signatories to the Inter-bank Agreement have had a double advantage. They were naturally in a position to quote the enhanced rates on Deposits allowable for the "small" and "medium" categories of banks. Apart from the differential in interest rates, the fact is that the subsidiaries have enjoyed the other differential stemming from their status as subsidiaries of the State Bank. In the same way, I regret to say that, recently, the State Bank of India increased its deposit rates to bring them on par with those in the Inter-bank Agreement.

Does the State Bank of India really need to offer the lure of interest rates on a par with the commercial banks, particularly with the privileged position which it enjoys? Surely, the State Bank of India already has an inherent edge over the commercial banks, even as the old Imperial Bank used to; and the Imperial Bank never felt obliged to be on par with the commercial banks. Does this departure from the old policy on the part of State Bank of India signify an all-out effort being launched to capture a greater share of Deposits, which till now the other Scheduled Banks were able to get? Or are the authorities of the State Bank thinking on the same lines as the Governor of the Bank of England, who very recently, in the context of a somewhat slow growth of bank Deposits in the U. K., questioned the wisdom of the rigidity of the British banks' structure of interest rates on Deposits and suggested the advisability of competing in terms of flexible interest rates to attract Deposits? The situation now, of course, is that the pace of growth of Deposits of the commercial banks is in jeopardy.

The crux of our problem is the need to attract new Deposits and potential bank customers as much from among those enjoying newly generated income in industrialised areas as from rural areas and to attract into the banking system a substantial part of the currency in circulation so that the cheque may replace currency as the normal mode of payment. Under present Indian conditions there is much to be said in favour of the recent agreement on interest rates. Fortunately, so far, nothing has been done to precipitate a rate war, and the commercial banks have shown commendable restraint, but there is the distinct possibility of a new and unhealthy spiral of interest rate increases through competition for Deposits.

AVOIDANCE OF REGIMENTATION

It is, let me make it clear, unhealthy competition for Deposits that I would deplore. On the other hand, over the range of banking facilities and services, banks should be entirely free to vie with one another in a healthy spirit of competition; and it is the satisfaction they proffer to constituents which will be a telling factor as far as winning of new customers and retaining of existing ones are concerned. Thus, we should at all costs, avoid any regimentation of the banking system. There should be guidelines, naturally; and one such that I would suggest is the linking of banking interest rates with bank rate, as is the practice in the United Kingdom. Whereas such a firm link is established through convention in that country, we have perforce to rely upon agreements. But if through the inter-bank agreements on both Deposit and Advance rates we do succeed in building up a structure of interest rates vis-a-vis bank rate, then we shall have ensured satisfactory margins for banks earning in an orderly manner to consolidate our position and strengthen ourselves. In this connection it is a matter for consideration by the authorities whether the yields on Three Months' Treasury Bills should not be brought closer to the bank rate to enable banks to build up really liquid assets from which they are now deterred by the current very low rate of discount.

ENCOURAGEMENT OF INVESTMENT IN GOVERNMENT SECURITIES

Orderly interest rates obviously require that the anomaly of the three-tier bank rate be set right. I am afraid that all the devices we have had woven in and around the bank rate, possibly with a view to avoiding a straight increase in it, have served merely to add to the complexity of our interest rates. For example, at a time when the bank rate, de jure was 4 per cent and borrowings

from the Reserve Bank and also inter-bank call money cost as much as 6 per cent maximum, the monetary authorities still prestimably expected support for Government's borrowing programme offering a yield around bank rate. This constitutes a real deterrent to investment in Government securities and has caused a considerable narrowing of the securities market. The fact is, that there is little or no justification for charging more than the bank rate for borrowings against Government securities. Although the higher tiers of interest rates have only marginal and seasonal applicability, nevertheless the fact remains that there is reluctance to invest in Government loans which give a return of say, 4 per cent, but borrowings against which could cost 6½ per cent. If for no other reason, the elimination of the penal tiers is essential for Government's borrowing programmes to succeed. A revised interest rate policy would encourage the banks to invest more in Government securities than the bare minimum which, from the autumn of 1964, they would have to in terms of the new liquidity standards effective from that time.

NO DIRECT BORROWINGS BY STATE GOVERNMENTS

A wise decision in regard to the Governmental borrowings is that, this year and until the emergency is over, the State Governments will not come individually to borrow from the market and only the Central Government will resort to market borrowings for itself as well as for the State Governments. For, the gilt-edged market is extremely narrow; and it has happened almost without exception that each year the State loans have been quoting at discounts even before their subscription lists had opened. Understandably, the States, anxious as they were to secure resources for putting their development plans through, used all the persuasion they were capable of; and many companies and individuals, who were not habitual investors in Government securities, were obliged, though reluctantly, to take up parcels of State loans—but their clear intention was to dispose of their holdings as swiftly as possible notwithstanding any loss they would suffer. In one sense, therefore, the very persuasive tactics of the States was responsible for the market for State loans being perennially in the doldrums, and this, in turn, has meant a loss for the banks year after year, since they, from a sense of duty, subscribe substantially to the State loans. With the State Governments desisting from direct borrowings there is hope of a relatively stable market for Government loans and of firmer gilt-edged prices—and the realisation of this hope will be assisted by the penal tiers being done away with.

SUPER PROFITS TAX

The emergency has also been responsible for an unprecedented Budget. Our defence estimates have risen from Rs. 350 crores to over Rs. 850 crores. From 2½ per cent of our national product, that we spent on defence formerly, its cost now goes up to nearly 6 per cent. The Finance Minister proposes to find the resources for this massive effort by a stiff dose of taxation and not by resorting to the printing press. He has shown conservatism in discharging his responsibilities in an orthodox manner. The tests of the soundness or otherwise of any taxation proposals are, however, firstly, whether they would help or retard development and progress of industry and secondly, whether they would not usher in an era of diminishing returns. The Super Profits Tax, as originally proposed, did not stand up to these tests well. This tax is bad in principle in so far as it imposes a penalty on efficiency, rides rough-shod over the claims of industry for self-financed expansion and disregards the right of the shareholder to a reasonable dividend on his investment. It is, however, a matter of satisfaction that the rigorous of this tax have been modified though not to the full extent the situation called for and a concession has been made in favour of banks by exempting from liability to Super Profits Tax the transfers to the Reserves made by them. Another implication of the Budget is that with its vastly higher tax demand and the novel and comprehensive scheme of Compulsory Deposits there may now be a powerful contractionist influence at work upon the Deposits of the banking system. Partly, banks would be able to derive a benefit in the sense that higher governmental disbursements would after a time-lag, find themselves re-appearing as Deposits. But the time-lag may very well mean that they will again have to prepare themselves for considerable strain and pressure, particularly if industrial production for civilian needs and defence should both, as they should, show signs of increase.

To hark back to the Super Profits Tax, I may mention that repercussions will be felt by the banking system in other ways. First of all there can be little doubt that the distributable surpluses of companies will be adversely affected. Dividends in many, if not all, cases will have to suffer cuts; a generality of dwindling dividends will depress stock exchange sentiment. Listlessness of the stock markets will cause capital to turn shy. But for none of these reasons can the growth of industrial production be allowed to suffer: whether from the standpoint of the emergency or of planning endeavours generally, it would be retrograde—and therefore unthinkable—even to consider the prospect of stagnation in the

industrial sphere. Our entrepreneurs, with their sense of participating in the nation's progress, will continue to advance with their new schemes. But their reliance on borrowed as distinct from equity capital will increase in proportion.

GROWTH OF BANK DEPOSITS

A factor that in recent years has aggravated the problem of resources for the banking system deserves to be mentioned. For quite a number of years now, the Budget estimates of revenue have been wide of the actual receipts. There have recurrently been large revenue surpluses. The mopping up of moneys by Government through taxation has meant that to a corresponding extent the growth of the Deposit resources of banks has been inhibited. Nor does Government spending immediately or even automatically get reflected in an augmentation of banks' Deposits. This is because a considerable proportion of the planned disbursements of Government flows to the "unmonetised" sector and gets lost there; and though currency circulation expands, it is the parallel money market in cash—and not the organised money market constituted by the banking system—which benefits. Then, too, the continuing import surplus effects a drain on Deposits; and with Government reducing the quantum of deficit financing, Deposit growth has decelerated. Furthermore the theory that loans create Deposits has only very limited applicability in Indian conditions. In a highly industrialised country where the banking habit is widespread one man's cash credit gets immediately transformed into another man's deposit. But in India the loans obtained from the banking system are not, upon their disbursement, certain automatically to find their way as Deposits. The loans may be taken for financing import of capital goods; there is in this case quite clearly no question of new Deposits being created. On the other hand, the industrial borrower may be making large payments towards construction or even as wages to factory labour; and the expenditure in these two categories are in the "cash" or parallel money market. By a slow and tortuous process there is some element of seepage back to banking; i.e., as and when consumer goods are purchased, the trader—if he is large enough—and, in any event, the industry receives back the money involved in such transactions and banks it. But, broadly speaking, it will be seen that loans, in Indian money market conditions, cannot be expected, per se, to create new Deposits. One more point in this context is, in the present state of the money market, the banks are already fully extended. Can they really be expected, for the sake of "creation" of new Deposits to in-

crease further their already high credit ratio? Thus, the growth of Deposits would appear to depend quite squarely on increased industrial production, on improvement in the balance of payment position, deficit spending by Government and upon a non-deflationary open market policy of the central banking institution.

BRANCH EXPANSION

While, therefore, for a number of reasons the rate of growth of bank Deposits has not vis-a-vis the needs of the economy, been sufficiently high the industrial and other demand for bank finance shows no signs of becoming moderated. Pending the spread of education, which is the crux of our economic problems, and the emergence of the banking habit among the rural population all that the banks can do—and this at first sight appears a trite solution—is to formulate and execute more ambitious branch expansion programmes for the development of the banking habit. The Reserve Bank of India have therefore rightly asked the banks to formulate their programme for expansion of branches during the next two years, both in banked and unbanked areas. By taking banking to the countryside, they can hope that more of the economy will become "monetised" and "organised" and that, in due course, there will be a diminishing time-lag between Government expenditures and accretion of banks' Deposits. Personal Deposits constitute about 50% of the total Deposits of banks and it is this aspect of the economic structure of the country which deserves more attention on the part of banks. Banking should be taken to the doors of depositors so as to give personalised service and with this end in view a wide network of branches in urban areas should be built up. Opening of branches by banks cannot be governed by means of geographical or mathematical formulae. What is important is to ensure that there would be competition among the banks for better service to depositors and the policy of branch expansion should be devised on this basis. Unbanked sectors in rural areas will have to be tapped by the banks but the inherent difficulties of these areas such as lack of transport, meagre postal facilities, inadequate security arrangements, and the reluctance on the part of staff to go there due to lack of educational and medical facilities are some of the dampers for such development which would require to be remedied with the co-operation of the Government. I am sure the banks are aware of their responsibility in the new context. Given a flexible policy they will be able to fulfil this objective with missionary zeal.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

HERCULES INSURANCE COMPANY LIMITED

(Incorporated in India)

Registered Office:
16, HARE STREET, CALCUTTA.

NOTICE IS HEREBY GIVEN that the TWENTY-EIGHTH ANNUAL GENERAL MEETING of the Hercules Insurance Company Limited will be held at the Registered Office, 16, Hare Street, Calcutta on Friday, the 21st June, 1963 at 3 P.M. for the purpose of:

1. Considering the Accounts, Balance Sheet and the Reports of the Board of Directors and Auditors for the year ended 31st December, 1962.
2. Declaring a Dividend.
3. Appointing Directors in the place of those retiring.
4. Appointing Auditors and fixing their remuneration.

AS SPECIAL BUSINESS

5. To appoint a Director in the place of Mr. L. V. Apte who holds office as a Director of the Company only up to the date of this general meeting. The Company has received notice under Sec. 257 of the Companies Act, 1956, from a shareholder of his intention of moving the following resolution: "Resolved that Mr. L. V. Apte be and is hereby appointed a Director of the Company."
6. To appoint a Director in the place of Mr. W. Harpham who holds office as a Director of the Company only up to the date of this general meeting. The Company has received notice under Sec. 257 of the Companies Act, 1956, from a shareholder of his intention of moving the following resolution: "Resolved that Mr. W. Harpham be and is hereby appointed a Director of the Company."

7. To appoint a Director in the place of Mr. A. D. Mango who holds office as a Director of the Company only up to the date of this general meeting. The Company has received notice under Sec. 257 of the Companies Act, 1956, from a shareholder of his intention of moving the following resolution: "Resolved that Mr. A. D. Mango be and is hereby appointed a Director of the Company."
8. To consider and if thought fit to pass with or without modifications the following resolution which will be proposed as an Ordinary Resolution: "That subject to the approval of the Central Government this meeting approves that Mr. E. K. Srinivasan, Managing Director of the Company, be admitted to the

benefits of the Company's Executive Staff Superannuation Scheme introduced with effect from 1st January 1963 and that the agreement dated 9th May 1962 containing the terms and conditions of the appointment of the Managing Director be amended in accordance with the Supplemental Agreement dated 7th May 1963 made between the Company of the One Part and Mr. E. K. Srinivasan of the Other Part (a copy of which was produced at the meeting and signed by the Chairman hereof for purpose of identification) or on such other terms as may be agreed between the Central Government and Mr. E. K. Srinivasan and the Board of Directors of the Company."

9. To consider and if thought fit to pass with or without modifications the following resolution which will be proposed as an Ordinary Resolution: "Resolved that the Board of Directors in consultation with Messrs. Lovelock & Lewes, the auditors of the Company shall appoint to audit the accounts of the Branches of the Company at Karachi, Nairobi, Penang and Singapore such person or persons as are qualified for appointment as auditors under Sec. 226 of the Companies Act or are accountants duly qualified to act as auditors of the accounts of the Branch Office in accordance with the laws of the Country in which the Branch is situated on such terms and conditions together with such remunerations as may be fixed by the Board of Directors."

The Share Transfer Books will be closed from the 14th June, 1963 to the 21st June 1963, inclusive. By Order of the Board:
E. K. SRINIVASAN,
Managing Director.
362, N.S.C. Bose Road,
Madras 16th May, 1963.

NOTE: A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

2. The dividend when declared will be paid only to those shareholders whose names appear on the Company's Register on the 21st June, 1963.

Explanatory statement as required by Sec. 173 of the Companies Act, 1956, has been forwarded to the members of the Company.

Markets

Need for Unceasing Effort

Though the overall picture of despatches during the last month is quite encouraging, the performance of sacking on the export front cannot but cause some concern. The present trend of the gunny market is rather misleading for, of the two principal sections, sacking appears to be steadier. This is of course to be attributed to persistent reports of a large impending Government tender. Already the main outlet for sacking is internal consumption which in April absorbed as much as 22,600 tonnes as against that month's production of this category of goods of 43,200 tonnes. Despatches for export purposes, on the other hand, during April amounted to only 13,500 tonnes. Total despatches have been lower than that month's output. As far as hessian, it has been a very good month as total despatches at 45,100 tonnes are higher than the output during the month. As against 35,300 tonnes despatched for export during March, April despatches on this account have

energetic steps to expand its industry. Indications are that, by the end of the current year Pakistani industry's jute loomage will have increased by a considerable number. In this connection it is also to be noted that while competition on world markets is increasing, erstwhile importing countries are also one by one starting their own jute manufacturing units. It has been reported that Nepal which is growing jute is wanting to put up its own jute mills and in this regard it is negotiating with Pakistan for technical and financial collaboration.

That export promotion even in the newly developed market for carpet backing cloth is not easy is underlined by an expert review of the American carpet scene made on behalf of the Indian Jute Mills Association. At present jute enjoys nearly all of the primary backing usage of 100 million square yards. Since jute is also sharing about 60 per cent of the added backing, and since 65 per cent of tufted rugs is processed with added backings, this yields another 39 million square yards of current jute cloth consumption. The potential for expansion in the "added" field now is 61 million square yards if kraft-cord can be replaced and if secondary backings are used on all tufted rugs. The potential for increased usage of jute in added backings thus becomes approximately 111 million square yards in 1965. But it is not as though jute is having a monopoly in the added backing and tufted rugs field. Producers of synthetic yarns and film, of paper yarns and non-woven textile fibre products, of foam rubber and synthetic foams and laminated structures of knitted fabrics are already competing in this field quite successfully. The review has pointed out that although jute backing cloth continues to dominate the US tufted rug market, the desire for improvement, changes in style and consumer tastes and efforts to lower costs will mean that jute's future will be constantly threatened. So it is clear that if jute is to hold this market and make further headway, the Indian industry has to put in unceasing effort to improve the quality of their products.

After ruling generally quiet with prices developing a reactionary tendency, the market for Jute Goods showed a smart recovery during the latter half of the week. The initial weakness of the market was attributed to the emergence of mills as sellers at the recent high levels. As a matter of fact, some mills were reported to have sold fair quantities of both hessians and heavy goods in all forward deliveries. Holders were also inclined to liquidate their stocks.

But the subsequent recovery in the market was mainly influenced by the reports of enquiries received from overseas buyers by shippers and on the news of business done in B. Twills to the extent of 5,000 bales

with Algeria. There was also heavy covering in ready hessians, by prominent operators in the futures market owing to the approaching due date. With the result, the recovery in prices was more pronounced in hessians than in sackings.

The raw jute section was devoid of interest with prices showing little change. Except for scattered business done in high-grade jute to meet their day-to-day requirements, the mills remained out of the market for all practical purposes. On the whole, business done was small and restricted to odd lots.

TEA New Season's First Export Sale

THE first Export Sale for the new season was held in Calcutta on Monday this week. Offerings were 17,723 packages of Leaf grades. Although the market opened on a weak note, demand improved somewhat with the progress of the sale. The majority of the offerings comprised Darjeeling teas and prices for these were irregular. Flavoury types came to a selective market and, with the exception of a few selected lines, were sold below brokers' expectations. All broken and fannings were a strong feature and were readily absorbed with some attractive prices being realised for the Fannings.

Orthodox teas from all other districts were well supported, particularly those with flavour with buyers' emphasis on Whole Leaf grades and stylish BPSs. A good support was forthcoming for the limited number of CTC teas with the broken generally realising much better prices than their corresponding Fannings. Owing to the limited quantity of suitable teas on offer, no rates were given.

In the Internal Sale, offerings were 30,290 packages of Dusts. There was a fair general demand at easier rates. CTC teas, once again, came to an irregular market and were up to 30 nP lower and sometimes more. The few selected lines were, however, sold well. The fibrous CTC teas were well supported at irregular and lower rates. Plain and medium orthodox descriptions, although readily absorbed, were easier by up to 30 nP. 'Teas for price' received better support and were sold around last rates. Following rates (per kilo) were quoted:—Plain Orthodox Dust Rs 4.20 to Rs 4.35; Medium Assam Dust Rs 4.35 to Rs 5.00; Leg-cut Dust not quoted; Medium Assam CTC Dust Rs 5.10 to Rs 5.40 and Good Assam CTC Dust Rs 6.20 to Rs 6.60.

Trade circles are taking a cautious view of the marketing prospects. They feel that the most important factor influencing the price level in the new season will be the size of the North Indian crop, which is too early to predict at the present stage. Provided normal growing conditions prevail, they expect that the crop will be larger than in 1962.

Despite disquieting trends in the UK, consumption is expected to make further progress in many markets and the trade circles see no reason why tea prices should not be maintained at reasonable levels during the coming season. They are looking forward to the general improvement in the standard of manufacture of the last few seasons being maintained during the current year.

Reports from London, however, indicate that the outlook for the world's major tea-producing areas so far this year is fairly mixed. Pakistan, South India and notably Ceylon are among those experiencing bigger output though the North Indian crops, regarded as highly important in the trade in the West are coming along less well than was hoped. Trade circles in London accept that, apart from any weather considerations, disruptions due to the Sino-Indian dispute must be taken into account in considering the Assam gardens' performance. Politics are thought to have played some little part in lower output in Nyasaland too. East Africa, how-

ever, is moving a somewhat bigger total output.

Meanwhile, the Tea Board is considering applications for aid totalling Rs 1.10 crores from the industry for the purchase of machinery and irrigation equipment under the hire-purchase scheme. The number of applications under consideration is 52, while 136 applications for assistance totalling Rs 1.96 crores have already been sanctioned. Some amount has been advanced by the Board to a marginal tea garden in Cachar area for repairs, replacements, renovation of machinery and construction of a tea factory. No loan has yet been taken by marginal tea gardens in Tripura, Kangra and Mandi.

The scheme for aid to marginal tea gardens is applicable to gardens up to 300 acres. The maximum limit of loan to individual gardens is Rs 70,000. The loan is covered by one surety or personal security of the approved borrower or an annual guarantee from banks or approved brokers or approved agents. The loan carries an interest of 4½ per

cent and is repayable in ten equal instalments.

A quantity of 877,000 kilograms of Leaf tea was offered for export in the Cochin market. Quality from all districts showed a seasonal decline. A good demand, however, prevailed throughout the sale though prices for all descriptions were generally easier, particularly towards the close. Plainest sorts were easier by about 15 nP to 20 nP a kilo, while best highgrown teas dropped considerably. Although teas of unorthodox descriptions were well supported, they registered a decline. Tippy sorts met with better support.

In London auction offerings were 29,590 packages including 14,472 packages from North India. Good liquoring coloury Assams met with a strong demand and prices moved up by about a penny to two pence. Meduims were, however, less wanted and most kinds were only about steady at the last week's prices. Doars teas were strong with the possible exception of a few thin liquoring sorts. Plain teas were sold in buyers' favour.

According to a report, direct exports of North-East Indian tea to the UK amounted to 15.95 million pounds in February. Of this, total shipments to London auctions accounted for 13.73 million pounds and those against private sales and forward contracts for 2.22 million pounds. In the first 11 months (April to February) of the 1962-63 season, direct exports of tea to the UK from North-East Indian gardens were higher at 169.49 million pounds as against 167.86 million pounds in the corresponding period of the previous season.

COTTON Erratic Trend in Futures

The cotton futures market in Bombay depicted an irregular trend during the past week. Both the maturing contract and the distant contract fluctuated widely in unison with alternate bouts of buying and selling and recorded net improvements of Rs 8.00 and Re 1.00 respectively.

The maturing Jarilla May contract which opened the week at Rs 727.50 per three quintals slumped down to Rs 722.00 but moved up to Rs 735.00 due to short-covering induced by the unprovisionary survey valuations. The operators in the market also expected that there would be further tenders for May contract. The contract finished the week lower at Rs 733.50. The tenders issued against the contract so far totalled 2,100 bales.

The Jarilla August contract after commencing the week at Rs 726.75 per three quintals slipped down to Rs 718.50 in initial dealings mainly because of the selling by spot houses and bulls. The sentiment was also affected by the strong rumours that New Delhi would release quota in the immediate future for large scale import of cotton under PL 480 and from global areas. Dampening advices from the spot market and the phlegmatic conditions in the piece-goods market also weakened the sentiment. At lower levels, however, the contract encountered stiff resistance and pushed the prices gradually up to Rs 722.50. This phase proved short-lived as in the subsequent trading the market sustained a set-back on bull liquidation and scattered selling by share market operators and the contract receded to the week's low of Rs 716.25. Later the contract rallied up to Rs 725.50 on account of bear covering before finally finishing the week at Rs 726.25. Encouraging reports that emanated from groundnut market also fanned the sentiment.

By and large trading in the spot market at Sewri was devoid of any fresh developments. Spinner interest continued to be on a very restricted scale. Limited business was reported in Laxmi, CO 2, Buri, Kalyan and Khandesh. Total turn-

over was thin and the prices of almost all the available lots tended to ease obviously due to the lack of active mill demand.

In the import section mill interest was pronounced in Sudan and Egyptian growths for distant shipment. Mills are reported to have been experiencing immense difficulties in getting extra long staple cotton on an adequate scale to carry out the production schedule without disruption. Stray interest in American and African cottons was also reported in the week under review.

The Government of India is likely to act speedily on the Tariff Commission's recommendations regarding fixation of fair price for cotton cloth. Though the Commission has submitted its report as early as December 1962 it was announced that Government will not take up the issue until April 1963. Though it will be difficult to anticipate Government's decision Mr Manubhai Shah's assurance that no step will be taken which is detrimental to the industry is comforting.

The Sudan Gezira Board has announced that about 3,700 bales of new crop will be released for auction this week. Of the total 1,000 bales will be of Nuba 2F, 900 bales of Bar G6S, 600 bales each of Lambert XG4L Nuba 1B and 200 bales of Lambert XG4L and Bar G6S.

According to a recent estimate of the United States' Agricultural Department cotton production in the country in 1962 will be the largest record since 1953. The estimates put the crop at 14.86 million bales against 14.31 million bales in the previous year. The annual average for the past quinquennium has been placed at 12.92 million bales. The record cotton output in 1962 is evidently the result of improvement in per acre yield, though there has been a slight fall in the total acreage under cotton cultivation.

Sugar Output in 1963-64

ACCORDING to the statement made by the Union Deputy Food Minister, Sugar production in the country is expected to reach 3,300,000 tons during the 1963-64 season, as the planting of the cane crop has been completed in most of the States and weather conditions are favourable. He has also mentioned that more sugar factories are likely to come up in the course of this year, mainly in the co-operative sector.

The current year's export commitments, including the carryover of last year, will be 400,000 to 500,000 tons. The demand for the commodity at present is about 200,000 tons per month and this quantity is now being released by the Government. In

this connection, the Indian Sugar Mills Association has stated that the production target of 3,300,000 tons can be achieved provided the cane price is suitably increased with the framework of the recovery linking formula. He states that the industry should also be given necessary incentives to enable them to start early and achieve highest production. He has urged the revival of the incentive scheme prevalent in 1959-60 and 1960-61 with certain modifications that may be necessary in view of the changed circumstances. Coupled with the above measures, steps should be taken to ensure that the sugarcane produced within the sugar factory areas is crushed by the factories and not allowed to be converted into gur and khandasari.

Meanwhile, there are reports that sugar is not available in the open market at Hapur. The quantity supplied is limited and the increasing summer demand and marriage requirements are being met mostly by khandasari. In

various parts of Uttar Pradesh, there is large-scale dissatisfaction among millers, traders and consumers with regard to the distribution arrangements. There is an all-round scarcity in the commodity throughout Meerut, which is the biggest producing area in the country with about 20 factories.

Wholesaler sugar dealers blame the authorities for licensing a large number of wholesale sugar dealers. Consumers also complain that they waste a lot of time in buying sugar from the fair price shops. Millers accuse the Government for not imposing taxes on the manufacture of gur and khandasari. As a result of competition, a major portion of the cane produce is being diverted for manufacturing gur and khandasari.

The tight world statistical position of sugar is also having its effect on the London market, where the rate is reported to have risen to £101 per ton. This increase has been caused by a fire, which destroyed some sugar stocks in Aus-

tralia and by the US Government's decision to increase its import quota in an effort to keep domestic prices down. But, a primary reason for the present sharp rise in prices is mainly due to a report that Cuban production this year may be only about 3 million tons as compared with her export last year of over 5 million tons.

There is actually a scramble on the New York Coffee and Sugar Exchange to buy sugar. Refined sugar prices have advanced steadily and, at \$14-20 cents (about £5 sterling) per 100 pounds are up \$4-40 cents (about £1½ sterling) on the price at the beginning of the year.

CASHEW Decline in Exports of Kernels

There was a sharp fall in exports of Cashew kernels during the past month. Shipments from the Ports of Cochin and Quilon amounted

The framers of India's Third Five Year Plan have put targets of development in black and white and the J.K. Organisation strives to show them reality's light through varied lines of activities, ever increasing, and always expanding.

to about 1,32,000 cases—nearly 30 per cent less than in April 1962. As a result of the fall in shipments, the export performance, in the first four months of the current year, is only slightly better than in the corresponding period of last year..

Exports to the USA during the period January/April were reported at 3,46,851 cases. Sales to Russia continues to rise. Total exports to that country amounted to 1,17,665 cases as against 1,44,851 cases in January/April 1962. Shipment figures for other countries are:—Canada 17,367 cases (15,981); West Germany 11,622 cases (7,770); East Germany 61,838 cases (41,951) and Australia 27,627 cases (19,503). Figures shown within brackets are for the corresponding period of 1962.

COFFEE Export Auction Results

In the auction for export held at Mysore, 17,00,600 kg of coffee were sold out of a quantity of 20,92,500 kg offered and the remaining 3,91,900 kg were withdrawn. Following are the details of the quantity sold and price per 50 kg:

For non-bilateral countries:—Plantation AAA 28,800 kg sold at price range Rs 188.50 to Rs 200.50; Arabica Cherry 6,900 kg at Rs 170; Robusta Cherry AAA, BBB 26,401 kg, at Rs 119 to Rs 121 and Robusta Parchment AAA, BBB 36,000 kg, at Rs 125.50.

For bilateral quota countries:—Plantation AAA 600,300 kg at Rs 187 to Rs 191.50; Plantation BBB 100,200 kg at Rs 178.50 to Rs 180.50; Plantation Triage 125,000 kg at Rs 165 to Rs 166; Arabica Cherry AAA, BBB 99,600 kg at Rs 170.50 to Rs 171; Robusta Cherry AB 196,200 kg at Rs 118 to Rs 121.50.

For non-quota countries:—Plantation AAA 369,000 kg at Rs 187 to Rs 188.50; Plantation BBB 63,600 kg at Rs 177.50 to Rs 178.50; and Robusta Cherry AAA, BBB 48,600 kg at Rs 117 to Rs 120.

GINGER Fall in Prices

The rising trend in Ginger prices, noticed on the Bombay market since Diwali last, has been checked. The commodity has registered a fall to the extent of Rs 10 to Rs 12 per 50 kg. A further fall is expected.

The reversal in the trend is caused mainly by weaker advices from Cochin and Calicut—the major terminal markets. In the Cochin market, the rate is quoted at Rs 245 as against Rs 270 per quintal in the last week of April. In Calicut, too, the price has declined to Rs 245 from Rs 265 per quintal.

Although there are enquiries from overseas buyers, they are only at lower levels. Traders have pointed out that the present slackness in demand, domestic as well as foreign, is due to the current high level of prices. Demand from overseas is not likely to revive unless Indian shippers are able to quote substantially lower rates. There is, of course, scope for exports to the UK and West Asian countries, as the ginger crops in Nigeria and Jamaica—India's main competitors in the world market—are placed lower this season.

CARDAMOM Export Control

The Government of India has imposed control over the export of Cardamom in all forms, effective from 16 May, 1963. Certain grades of the commodity will be licensed freely, provided the consignments tendered for exports conform to the floor and ceiling prices fixed by the Government for these grades.

The following are the grades, minimum and maximum export prices per kg, f.o.b.:—Alleppy green grade AGS/2 Rs 13.50—Rs 18; AGS/1 Rs 15.50—Rs 20.68; AGS Ls 16.50—Rs 23; AGS bold Rs 17.50—Rs 23.33 and GS (extra bold) Rs 19.50—Rs 26.

For Coorg varieties:—Clipped Grade CC/3 Rs 13.50—Rs 18; CC/2 Rs 15.50—Rs 20.68; CC/2 bold Rs 16.50—Rs 22; CC/1 Rs 17.50—Rs 23.33 and CC/1 bold Rs 19.50—Rs 26. These prices will continue to be in force until the end of August, 1963.

In respect of cardamom in all forms other than the grades mentioned above, exports will be allowed freely against shipping documents without any other restrictions.

TOBACCO

In view of the minimum export prices fixed by the Government of India for flue-cured virginia tobacco, Japan is reported to have

decided to divert her purchases of flue-cured variety to Rhodesia and South America.

There is, however, a general feeling that Japan may purchase Indian air-cured tobacco in increasing quantities, the export prices of which are not controlled. The Indian prices for this variety are considered to be quite competitive in the international markets. A clear picture of the Japanese purchase programme for the current year will, however, be available after a few days when the shippers expect to receive their orders.

GOLD & SILVER Narrow Price Movements

On the Bombay Bullion Exchange, the Gold section ruled quiet. The demand for the metal was much less pronounced and prices displayed a slightly easier tendency. Although reports of seizure by the authorities of some undeclared gold imparted a measure of steadiness for a while, there was hardly any enquiry. The rate for the metal was quoted at Rs 113.50, while Sovereign was placed at Rs 83.

The Silver section also ruled quiet, being influenced by reduced demand and lower upcountry advices. There was a general feeling that the seasonal demand would taper off soon. Selling from upcountry centres also persisted. Rates for the metal moved between Rs 234 and 234.50.

OILS & OILSEEDS Fractional Gains

A modest improvement in prices was the main feature of trading on the Bombay Oilseeds Exchange. Trading in the Groundnut section was characterised by a steady demand for groundnut and groundnut oil, which tended to abate towards the end of the week. Vanaspati manufacturers figured as the main buyers on expectation that the Government would shortly announce an increase in the prices of vanaspati. Ready Bold was quoted at Rs 46.50 and Groundnut Oil at Rs 17.80.

Trading in the Castorseed section was a dull affair in the absence of foreign demand for castor oil. Operators were also reluctant to enter into fresh commitments on the fear that ready supplies, delivered against the previous contract might be tendered against the June position. Ready was quoted at Rs 31.25 and Castor Oil, commercial quality, at Rs 12.55.

The volume of business in the Linseed section was much smaller than usual. Turnover was, however, satisfactory, thanks to the periodical support extended by the paint manufacturers.

NEW INDIA INVESTMENT CORPORATION LTD.

NOTICE is hereby given that the twenty-sixth Ordinary General Meeting of the share-holders of New India Investment Corporation Ltd. will be held at the Registered office of the Company at 9, Brabourne Road, Calcutta, at 3.00 P.M. on Tuesday the 18th June, 1963, to transact the following business:—

- (1) To receive and adopt the Directors' Report and Audited Profit and Loss accounts and Balance sheet for the year ended 31.12.62.
- (2) To declare dividends as recommended by the Directors.
- (3) To elect Directors in place of those retiring.
- (4) To appoint Auditors and fix their remuneration.
- (5) As special business to consider and if thought fit to pass with or without modification the following resolution:—

(i) As an ordinary Resolution "Resolved that Rai Bahadur Moongtu Lal Tapuria, a Director of the Company, retiring by rotation, who has attained the age of 76 years be and is hereby re-appointed a Director of the Company and that the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to him.

(ii) As a Special Resolution "Resolved that Mr. K. P. Goenka, a Director of the Company retiring by rotation, who is an associate of the Secretaries and Treasurers be and is hereby re-elected a Director of the Company."

The share transfer register of the Company will be closed from 10th to 18th June, 1963 both days inclusive.

By Order of the Board
Sd. RAMDUTT RAMKISSENDAS
Secretaries & Treasurers.
Calcutta,
14.5.63.

- Note:
- (a) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.
 - (b) The dividends if declared will be paid on or after 2nd July, 1963 to those shareholders whose names appear on Company's books on 18th June, 1963 or to their mandatees. No application for dividend warrants will be necessary.

(The explanatory statement u/s 173 in respect of special business will be sent separately to individual shareholders.)

For the Investor

INVESTMENT GOSSIP

Rumours and the Market

Which rumour would you believe? That the whole rigmarole of retention prices and selling prices for steel is being done away with? Or that an increase in retention prices of steel is imminent? For, this is the kind of gossip that was being talked about on Lyons Range during the middle of the week, and the result was that a semblance of steadiness was discernible with, as could be expected, Indian Irons showing the way.

That uniform retention prices will act detrimentally as far as State-produced steel is concerned, has long been an open secret. The capital base of the Government steel plants is so huge, that the charge of depreciation adds considerably to the unit cost of production. But some years ago Government took the decision that differential retention prices should no longer obtain, and if now they were to insist upon re-adopting that system, there would be an outcry against what was obviously intended to spare the Government steel plants of embarrassment.

Such a line of reasoning would indicate that there may be some

substance to the market gossip in this regard: the private sector steel plants would obviously be beneficiaries—but, with the super profit tax, the capacity of the companies to retain profits or of having any significantly larger disposable surplus seems limited.

Credence can also be attached to the other inspired view of the markets, that Government will soon announce an increase in the retention prices. On the last occasion Government chose to disregard the recommendations of the Tariff Commission in important particulars, and there can be no doubt at all that costs of production, as they actually are, bear little resemblance to what Government would want to allow them to be. Representations have already been made for recompense for increases in costs beyond the control of the steel companies, and with a view to fostering production nearer capacity it is likely that Government should decide upon dangling the carrot of more reasonable retention prices.

For the rest of the news: after a long period during which it was moribund, a period that started with the outbreak of the emergency last autumn, and a lassitudinous that became the worse for the Budget that Mr. Morarji Desai thrust upon the country in February, the capital market is now in better fettle. New issues daily make their appearance, and it can be taken for granted that support will not be wanting. Over-subscriptions, it is possible, will not be as spectacular as we knew them to be during the boom of the post-1958 period; but at least there will be evidence of investors' preparedness to support what they hold to be worth while new ventures. As in the past, greater interest will naturally be evinced in issues where the foreign collaboration is promising; but then most of today's new issues have this important what I may call "foreign" component.

But a more cheerful new issue market cannot by itself be expected to improve the tone of the stock exchanges generally. Indeed, paradoxical as it may seem, the new issues are doing well despite a somewhat uncertain trend in the stock exchanges. Unless specific good news is forthcoming say, for the steel industry, prospects are that we shall have a continuance of the present trend of a well-functioning capital market side-by-side with dull stock exchange behaviour.

NEW ISSUE NOTES

English Electric

The English Electric Company of India Limited has announced the basis of allotment in respect of the recent public issue of 2,50,000 equity shares of Rs 10 each. A total of 6,892 applications was received for a total of 5,90,475 shares. Applicants for 25 shares will get 20 shares; for 50 shares—30; for 75 to 100 shares—50; for 125 to 200—70; for 225 to 375—80; for 400 to 500 shares—100; for 525 to 800 shares—120; for 925 to 1,525—150; for 2,000 to 2,025—200; for 4,025 shares—350 and for 5,000 shares—480. Allotment letters with refund pay orders for the amount refundable will be posted on 25th May, 1963.

Hindustan Steel

Hindustan Steel Limited, Ranchi, will raise capital of the value of Rs 100 crores, divided into 10,00,000 equity shares of Rs 1000 each, to be issued privately for cash, at par. The proceeds will be utilised for construction, expansion and operation of public sector steel projects and coal washery projects.

Khatau Makanji

The Khatau Makanji Spinning & Weaving Company Limited, Bombay, is to issue capital of Rs 59.85 lakhs, divided into equity shares of Rs 100 each, to be issued as fully paid bonus shares on capitalisation of the company's general reserves to a like extent in the ratio of one such share for each equity share held.

Arrangements are being made to underwrite fully the offer to the public.

Atul Products

Atul Products Limited is issuing Rs 3 crores capital comprising of 1,00,000 equity shares of Rs 100 each to be issued for cash, at a premium of Rs 25 per share and Debenture stock of the value of Rs 2 crores, to be placed with the State Bank of India as collateral security for a loan or advance to be obtained from them. The proceeds of the issue will be utilised on various expansion projects of the company.

Plantation Corporation

The Plantation Corporation of Kerala Limited, Kottayam, will issue capital of Rs 125 lakhs, divided into 12,500 equity shares of Rs 1,000 each, to be subscribed privately for cash, at par.

Estrella Batteries

Estrella Batteries Limited will be issuing new 20,000 equity shares of Rs 50 each, at par. Out of this issue, 4,878 shares will be allotted to the French collaborators with whom an agreement has been concluded for securing technical assistance and know-how. Besides, 15,000 new shares have been offered in the proportion of one new share for every two shares held. The new shares will rank equally in all respects with the existing shares except that such equity shares will be eligible for dividend from 1 April 1963 in proportion to the amount paid-up thereon.

Travancore Chemical

The Travancore Chemical & Manufacturing Company Limited proposes to issue 50,000 equity shares of Rs 10 each, at par, to holders on 12 August 1963 at one share for every four shares held. The last date for the receipt of applications and renunciation is 30 September 1963.

INVESTMENT NOTES

Omega Cables

Omega Insulated Cables Company (India) Limited will be having its factory at Ambattur, near Madras. The foundation-stone for this factory has been laid. The project is estimated to cost Rs 1.05 crores. It is proposed that 45 million crores yards of VIR and PVC cables should be manufactured initially. An application has also been made for permission to produce 3,000 tons of ACSR conductors and all-aluminium conductors. The company will be having the advantage of collaboration with a leading Canadian firm. There is already an issued capital of Rs 20 lakhs. Out of the total equity capital of Rs 70 lakhs, the directors and their friends will be taking shares for another Rs 10 lakhs and the balance of Rs 40 lakhs will be offered for public subscription.

Arrangements are being made to underwrite fully the offer to the public.

BALANCE SHEET REVIEWS

Disappointing Results of Phillips Carbon Black

As the commercial operation of the company's plant began early in December 1962, the directors of Phillips Carbon Black Limited have thought it best to prepare future annual reports as at 30 November instead of 31 March. Although the unit for conversion of raw material was operating from last October, it was not until the closing weeks of the year that the full plant could be brought into production.

With the result, the accounts, for the eight months ended 30 November 1962, reveal a loss, after providing for depreciation, of Rs 3.25 lakhs as against a loss of Rs 3.01 lakhs for the full year ended 31 March 1962. The depreciation amount is lower at Rs 69,351 against Rs 75,495. Naturally, the dividend is skipped again.

The directors state that the battery of reactors was brought successfully "on stream" on 5 December 1962 when production began to gather momentum. Good progress is being made in regard to the raw material conversion unit and it is anticipated that production at the full rate of 30 million pounds annual capacity will be achieved before the end of the current year.

Meantime, the Government of India has licensed a further expansion of 10 million pounds annual capacity. Negotiations are also in progress for securing additional borrowing facilities, so that in spite of a delayed start, the company may be assured of an ample supply of working capital to meet all eventualities during the early months of operation.

BALANCE-SHEET BRIEFS

Braithwaite & Company (India) Limited has reported a net profit of Rs 1,06,44,579 for 1962 as against Rs 68,11,44 in the previous year. Taxation liability is shown at Rs 75,17,526. The directors have proposed a taxable dividend of Rs 1.40 per share as against Rs 2.50 per share, less tax, previously; but the latest distribution is made on a larger capital. The dividend is payable on or after 27 June to those shareholders registered as on 20 June 1963. Transfer books will be closed from 6 to 20 June 1963.

The Textile Machinery Corporation Limited has reported a gross profit of Rs 143.33 lakhs for 1962 as against only Rs 76.39 lakhs. The directors have proposed to raise the dividend from Re 1.00 to Rs 1.25 per share, subject to tax.

Balmer Lawrie & Company Limited has decided to pay a final dividend of 18 per cent, making a total of 25 per cent, taxable, for 1962, same as in the previous year.

THE CHAMPDANY JUTE COMPANY, LIMITED

NOTICE is hereby given that an Annual General Meeting (being the Seventy-third Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 2, Netaji Subhas Road, Calcutta, on 11th June, 1963, at 12 noon to transact the following business:—

- To receive and consider the Audited Accounts for the year ended 31st March, 1963, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
- To confirm the Interim Dividend paid on 26th September, 1962.
- To declare a Final Dividend.
- To appoint a Director in the place of Mr. R. N. Bangur, who retires by rotation.

AS SPECIAL BUSINESS:

- To consider, and if thought fit, to pass the following Special Resolution for which special notice as required under Section 261(2) of the Companies Act, 1956, has been received by the Company.

AS A SPECIAL RESOLUTION:

- "That Mr. N. S. Coldwell, a retiring Director and an employee of James Finlay & Co., Limited, the Managing Agents, be and is hereby re-appointed to the Board.
- To consider, and if thought fit, to pass the following Resolution as an Ordinary Resolution—

"That the Board of Directors of the Company be and is hereby empowered to borrow moneys for the purpose of the Company's business in excess of the aggregate of the paid-up Capital of the Company and its free reserves but not exceeding Rs. 90 lacs and excluding temporary loans from the Company's Bankers in the ordinary course of business."

- To appoint Auditors for the current year and to fix their remuneration.

The Share Register of the Company will be closed from 1st to 11th June, 1963, both days inclusive.

Dividend Warrants will be issued and posted to Registered Shareholders only. Persons who have acquired shares are advised to effect registration of scrip in their names before 1st June, 1963.

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

2, Netaji Subhas Road,
Calcutta, 16th May, 1963.

NOTES:

- (1) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member. The instrument appointing the proxy

shall be deposited at the Registered Office of the Company not less than 48 hours before the time for holding the meeting.

- (2) The dividend, if declared, will be paid on or after 11th June, 1963, to those shareholders so entitled, whose names appear in the Company's books on 11th June, 1963 or to their mandatees.
- (3) EXPLANATORY STATEMENT REGARDING ITEM (5) AND ITEM (6).

Item (5):
Mr. N. S. Coldwell was appointed a Director of the Company by a Special Resolution of the Shareholders passed at the Annual General Meeting of the Company held on 16th June, 1961. He retires at the Annual General Meeting to be held on 11th June, 1963, and special notice dated 10th May, 1963 of the intention to propose the above resolution as a Special Resolution has been received by the Company. Special notice has been given in order to comply with the provisions of Sections 190 and 261 of the Companies Act, 1956, as Mr. N. S. Coldwell is an officer in the employment of the Managing Agents.

Item (6):
Under Section 293 of the Companies Act, 1956, the Board of Directors has powers to borrow moneys (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) only to the extent of the aggregate of the paid-up capital of the Company and its free reserves. With the recent reduction of Capital by Rs. 29,58,200, the limit is found to be short of the requirements of the Company's business and an Ordinary Resolution is necessary to give the Board of Directors the authority to borrow moneys in excess of the limit placed by Section 293. The limit of Rs. 90 lacs has been proposed in accordance with the Shareholder's resolution dated 18th November, 1925 as it is considered that the same requirement applies to-day.

INTEREST OF DIRECTORS & MANAGING AGENTS

The Directors and Managing Agents of the Company are interested to the extent of their shareholdings as set out below:—

Mr. A. I. Murison..	50 Shares
" N. S. Coldwell	55 "
" B. Gill	50 "
" R. N. Bangur	275 "
" D. N. Kapur	50 "
James Finlay & Co. Limited	1,36,575 shares.

NATIONAL DEFENCE CERTIFICATES

Inserted by Brooke Bond India Private Limited

The working of the Peermade Tea Company Limited has resulted in a slightly lower net profit of Rs 9.33 lakhs for 1962 as against Rs 12.90 lakhs. The directors have proposed to pay a total dividend of 20 per cent, taxable, as against 25 per cent, taxable, paid previously.

Bengal Flour Mills Company Limited has earned a net profit of Rs 4.05 lakhs for 1962 as against Rs 4.03 lakhs. A final dividend of 15 per cent is recommended, making a total of 25 per cent, taxable, for the year (same as in the previous year).

STOCK EXCHANGES Listless Conditions

Watch-Dog Writes:

APART from a slight improvement recorded in the prices of a few se-

lected shares, trading in stock markets has been generally dull and featureless. Operators are cautious and have preferred to keep their commitments light.

Lyons Range put on a better appearance, especially during the latter half of the week when prices of several scrips showed a smart recovery from the recent low levels.

With the exception of Steel shares, Dalal Street was rather dull on the eve of settlement.

The Madras Stock Exchange remained extremely dull with the turnover shrinking further.

The Bangalore Stock Exchange passed through a blank session without transacting any business.

Price movements on the Delhi Stock Exchange were confined to narrow limits.

The softening tendency continued to prevail on the Ahmedabad Stock Exchange.

In spite of a further fall in unemployment interest, activity on the

London Stock Exchange remained restricted with prices generally drifting to lower levels.

CALCUTTA

EXCEPT for a few selected shares which met with some support at the far-end of the week, conditions on the Calcutta Stock Exchange continued to remain generally dull. The professional operators as well as investors were still unable to take a definite view. With the SPT having already jeopardised the expansion of various companies, the prospects for industrial units to reduce their idle capacity appear to be none too bright.

It was thought that even the modified SPT would have a crippling effect on corporate working. Those companies having a better profitability had been less affected while companies, whose turnover and profit had been much larger than the capital plus reserve, had suffered the most. In any case, the special levy made it difficult to pay satisfactory dividends. The uncertainty about the resumption of forward trading also exercised a restraining influence.

Sentiment in the market was also disturbed by the turn of political events. The failure of Indo-Pakistani talks rendered foreign aid prospects uncertain. There were even talks that the prospects of foreign aid should not be considered as optimistically as was done before. Reports about the concentration of Chinese troops along the Ladakh and NEFA borders also caused concern.

Above all, it was thought that the money supply was not going to be easy this year, while interest rates had been maintained at a high level. In the circumstances, investors, too, found little that was encouraging in the present situation. But for the reports of the Government considering proposals to abolish both price and distribution of controls on all categories of steel and the rumour of an increase in retention prices of steel, the market would have recorded further losses from the previous week's levels.

The Giltedged market ruled steady. Although demand was restricted to short-dates loans, selected medium and long-dated issues came in for request. State Loans found buyers at rates quoted. 3 per cent 1966 Conversion Loan moved narrowly between Rs 63.30 and Rs 63.40.

Bank shares were a steady feature with Punjab National changing hands at Rs 18.97 to Rs 19.12 and United Commercial at Rs 72 to Rs 72.50.

Jute shares continued to remain active, being influenced by the news of the power supply position having considerably eased and the flow of good dividends. There was, however, a general disposition to book profits at the higher levels, as doubts were expressed in certain quarters whether the increased production would be absorbed during the coming months at remunerative prices. Champdany were a bright spot, having consistent support upto Rs 24.50 from Rs 23.50, thanks to the excellent working results and the substantial rise in the dividend. Ganges improved to Rs

13.69 from Rs 13.37 and New Central to Rs 13.12 from Rs 11.87. Anglo-India were rather quiet at Rs 224 against Rs 226 with Reliance fluctuating between Rs 11.44 and Rs 11.56.

In the continued absence of any news with regard to the fixation of price for the commodity, Coal shares were practically neglected. Burrakur, Central India and Western Bengal were almost maintained at Rs 16.81; Rs 9.94 and Rs 9.19 respectively.

Although a few dealings were recorded in the tea section, there was not much improvement in prices despite the declaration of some good dividends for 1962. Investors seemed to have been disappointed over the results of the first export sale for the new season. There was an anxiety to know whether the average price realised for the commodity would turn out to be better than that in the 1962-63 season. Hasimara were well maintained at Rs 12.56, while Gohpur where enquired up to Rs 16.50 from Rs 16 and Sungma up to Rs 13.75 from Rs 13.37. East India met with business at Rs 14.25.

Sugar shares continued to be a neglected counter, as the problems facing the industry remained unsolved.

Textile shares came in for cautious trading on reports that the manufacture of medium and coarse cloth had become unprofitable. Jay Shree were better at Rs 14.25 against Rs 14.06, while Cavtex came in for offer at Rs 6.31 against Rs 6.50.

Engineering shares continued to rule moderately active for reasons stated earlier. Although Indian Irons opened lower at Rs 22.12 the scrip improved steadily to Rs 22.64 due to sustained shortcovering, before finishing the week at Rs 22.52. G. K. Williams met with business up to Rs 33.94 from Rs 33.50; Texmaco up to Rs 23.95 from Rs 23.50 and Binani Metal up to Rs 11 from Rs 9.94, to close finally at Rs 33.75; Rs 23.90 and Rs 10.75 respectively. Britannia were almost maintained at Rs 9.69 and Jay Engineering at Rs 21.75. J. K. Steel were, however, quiet at Rs 14.87 against Rs 15.

Miscellaneous issues displayed a slightly easier tendency in the absence of support. Latest reports about the squeeze of corporate profits by heavier taxation also weakened sentiment. Following were the price trends of a few selected shares:—

A GREAT STEP FORWARD TO MAKE INDIA SELF-SUFFICIENT IN

**Government of India
Phillips Petroleum Company, U.S.A.
Duncan Brothers & Company Limited**

join hands to set up the new

oil refinery at Cochin

This project, the first venture in which, public and private sectors, and a foreign collaborator are associated, marks another great effort towards national self-sufficiency in oil. The tripartite agreement signed in New Delhi on 27th April, 1963 between the Government, Phillips and Duncans, provides for the establishment of an oil refinery at Cochin which is expected to go into production within 30 months. This refinery will initially produce 2.5 million tons of products.

The authorised capital of the Company will be Rs. 17 crores of which Rs. 7 crores will be

issued and paid up. The Government of India will hold 51% share, Phillips 25% and the balance of 24% by Duncans and Indian Investors. Phillips Petroleum and Duncan Brothers will raise a loan of Rs. 10 crores in dollars from independent sources in the U.S.A., the cost of the project being estimated at Rs. 17 crores.

This is the second joint Phillips/Duncan promotion, the first being Phillips Carbon Black Ltd.—India's first Carbon Black Plant now operating at Durgapur, West Bengal.

SPECIAL FEATURES:

- 1) The capital cost based on barrels per day of refined oil produced by this refinery will be the nation's lowest.
- 2) The Cochin refinery will mean a nett saving of over Rs. 9 crores per annum after allowing for crude oil imports, debt repayments, interest, royalty and dividends to foreign participants.
- 3) 75% of the shares will remain in India, with Government of India holding a majority.
- 4) Phillips will export all the motor spirit produced surplus to the current requirements of the country, thus earning considerable foreign exchange for India.
- 5) Phillips have agreed to raise the foreign exchange required in excess of their 25% equity participation through bank loans in the United States.
- 6) Phillips and Duncans have agreed to supply petroleum products in conformity with Dangle Formula, which will be of considerable advantage to the country.
- 7) Phillips have also agreed to supply crude oil for refining at a lower price than that being paid by other refineries operating in India.

NPC Report on Steel

The report of the* NPC Team on the Iron & Steel Industry in USSR and Czechoslovakia is of topical interest in view of the continuing discussion on Bokaro. The team which was representative of all sections of the industry undertook the study of productivity in the steel industry in these two countries with special reference to techniques which could be adopted in India. The comprehensive review of the Soviet and Czechoslovak steel industries emphasises those aspects which are of importance in the Indian context. The experience of these countries which have achieved phenomenal expansion of steel production in a comparatively short period, has many lessons for India, though the Team recognizes that some of the techniques employed, especially for raising labour productivity, may not be quite suitable in Indian conditions.

The development of the Soviet steel industry has been planned for achieving economies of scale to the maximum extent possible. There are about a dozen plants in operation with capacities of one to two million tons and one plant at Magnitogorsk is approaching ten million tons per annum. The report also points out that Soviet designers are preparing blue prints for a steel plant with an ultimate capacity of 25 million tons a year. Despite the difficult raw materials position and a complex pattern of demand for steel products, Czechoslovakia is installing a new steel works at Kosice with an initial capacity of four million tons and provision for expansion to eight million tons.

The Team considers that India, too, must depend on large steel complexes for the bulk of its requirements, though there is also room for small steel plants to cater to regional demands. In view of the steady increase in the demand for steel in India and the favourable concentration of raw materials in the eastern region a good initial size for a flat products steel works, according to the Team, would be about three to four million tons, to be achieved in phases over a five to seven year construction period. Further the Team points out, such a plant should be capable of expanding by at least four times to a possible future capacity of up to fifteen million tons in the next two decades.

Such large plants could, however, be established only in a few locations where the availability of raw materials and other conditions are suitable. Smaller plants, starting with a capacity of 100,000 to 500,000 tons, with lay out and space provisions for future expansion to two to four million tons, it has also been suggested, could be useful in areas in the south, west and north of India.

Regional dispersal of iron and steel manufacture is one of the characteristic features of the Soviet industry. The objective of the Russian planners is to make each region largely self-sufficient in steel products so as to minimise long haulages. Dispersal of the industry, the Team observes, will be a desirable aim for India also. The main centre of the steel industry in India is the eastern region which has four out of the five steel plants. A second base has been set up at Bhilai, which the Team says, should be further expanded by setting up steel plants in the Bailadilla-Chandia area. The Team has also drawn attention to the need for establishing the nucleus of a third base in the south, with large and small plants based on the rich Bellary ores

*Iron & Steel Industry in USSR and Czechoslovakia (Report of the Indian Productivity Team). Published by the National Productivity Council of India, 35, Golf Links, New Delhi. Price Rs. 5.

and Salem magnesites. The Team is also of the view that sea-based plants at Goa, Visakhapatnam and other suitable coastal sites, utilising local ores and imported coke are viable propositions that need to be investigated.

In regard to plant size and dispersal, the conclusions of the Team are in line with the perspective plans for the expansion of the steel industry in India, though the time schedule envisaged for the different stages may have to be stretched out, having regard to the availability of resources. Quite apart from the heavy investment cost, the principal limiting factor is the time required to train personnel for the technical cadres as well as for top managerial positions. One of the most striking facts brought out by the study is the high positions occupied by technical men in the Soviet system, both in the management of steel works as well as in the highest planning bodies. Contrasting the position in India, the report underlines the fact that decision-making is bound to be slow when top management positions at the steel plants and in the bodies controlling the industry are held by non-technical men.

The report on Bokaro prepared by the US Technical Team, has focussed attention on the problem of raw materials. The summary of the report that has been released, which devotes considerable space to the inadequacies in this regard, may give rise to the impression that raw materials pose a formidable problem and that rapid expansion of the steel industry is not a practicable proposition in Indian conditions. The NPC Team's report makes it clear that there is no justification for such apprehensions regarding the prospects of the Indian steel industry. According to the Team, the raw materials position in India is far more favourable than in the Soviet Union which has stepped up production of steel from less than a million tons in the twenties to more than 70 million tons and expects to achieve a target of 250 million tons by 1980. The Soviet Union, says the report, is solving its problems of inferior iron ore and coal by utilising proven beneficiation techniques which can also be adopted in India to overcome the difficulties, provided advance planning and development is initiated without delay.

Contrary to the general impression that is prevalent in the outside world, the Soviet steel industry is not indifferent to considerations of cost. The Team found that the Soviet steel plants appeared to be using extensive cost accounting and budgetary control practices, which permeate right down to the operatives on the shop floor.

Though Labour productivity in the Soviet Union was estimated by the Team to be only 55 to 60 per cent that of the United States, it is double that of the Indian steel industry and rising at the rate of five per cent per year. The Team also found that equipment productivity and capital output ratios were some of the best in the world. The problem in India, according to the Team, is not that labour productivity is low, but that its rate of improvement is slow in spite of massive infusion of capital. Managements have also to be convinced that attention to productivity is important even in the initial stages of that operation. The Team has also noted that, while Russian blast furnace practice is among the finest in the world and steel-making techniques are equally impressive, comparable technological advances were not evident in the Rolling Mills which form the least developed section of the steel industry, both in the USSR and in Czechoslovakia.

BANKS

Perspective, as the Reserve Bank sees it

The statistical data have disappeared, and so Trend and Progress of Banking becomes a commentary upon banks; no longer is it the comprehensive assessment of the banking situation it used to be. We are promised, however, that the statistics which have been dropped from Trend and Progress will make their re-appearance in the other publication concerning banks, Statistical Tables. The latter book did not in the past duplicate the efforts of Trend and Progress; but now the facts and figures have been, as it were, isolated one from the other. In due course we may expect the two to be joined together, but that may take some years yet.

More or less coinciding with the beginning of the Second Plan the Reserve Bank stopped being merely a chronicler of the banking situation; Trend and Progress gained a page of commentyclept "Perspective"; and here the central banking institution felt free to make its own assessments and projections. Inescapably sometimes analyses proved wrong.

The highpoint of the chapter this year (which is reproduced in full below) is that, despite the higher liquidity ratios coming into force from next autumn, banks are many of them overlent. At the same time there is the remark to the effect that the strain upon the banks results from the defence and development efforts; and presumably such financing will have to be continued, though denied to other and less essential demands. So, a high credit ratio and a low liquidity ratio, are both inevitable.

Another interesting point is that the Reserve Bank considers that while the short-term impact of the emergency is contractionist as far as bank Deposits are concerned, in the long run it expects banks to benefit. The first flush of contributions to the National Defence Fund; the heavy taxation revenues collected by Government; and perhaps imports as well for the defence effort may all retard the growth of Deposits. But the Reserve Bank reasons that, as defence expenditure steps up, such moneys will find their way back to the banking system. There may be a time-lag; but the time-lag may not be too long, if the recent experience of rise in Deposits is a pointer.

The following is the full text of "Perspective":

In the last two years, banking in India has made impressive advance. Deposits have shown a high rate of increase which, even allowing for the role played by deficit financing, is indicative of a degree of success in banks' efforts at Deposit mobilisation. Branch expansion programmes have played a notable part in it. The process of weeding out inefficient and uneconomic units and merging the weaker units with stronger ones has also helped to strengthen the banking structure. The introduction of a scheme of Deposit insurance has given a measure of protection to the depositors which may be expected to sustain and increase public confidence in the banking system.

The accelerated growth in Deposits referred to has, however, not been adequate to enable the banking system to meet all the demands for bank credit comfortably, and the credit-deposit ratio has steadily tended to rise. The average for the banking system during 1962 was 70 per cent and the peak 73 per cent. For some individual banks the figures have been much higher, ranging above

80 per cent. Correspondingly, the proportion of liquid or near liquid assets has declined. This decline has occurred in face of the higher liquidity requirements prescribed under legislation recently enacted, due to come into effect from September 1964. The problem of phasing conformity to the liquidity goals is thus thrown into relief and will pose special difficulty for certain banks with over-extended resources positions.

The onset of the emergency has, for the present, heightened the acuteness of the problem. On the one hand, Deposit growth has slowed down somewhat while, on the other, the pressure on banks for credit has increased. A major explanation of the current pressure on the banking system lies in the magnitude and complexity of the adjustments which the economy has to undergo to gear itself to a substantially higher defence effort while maintaining the rate of development. In this process Government has inevitably to claim a larger share of the total resources available for consumption and investment in the economy. Patterns of income distribution, consumption, and savings and investment have to undergo significant changes. In the initial phase, which is what the country is currently in, the flow of savings to the banking system has been reduced as a part of it has been diverted to Government through various contributions such as to the National Defence Fund and the Defence Bonds. As the tempo of defence and other expenditure rises, the liquidity position of banks and the flow of Deposits should improve. The situation, however, will call for a review of banks' policies and efforts at Deposit mobilisation, as the problem of channelling the widely dispersed savings occasioned by the pattern and scale of public expenditure during the phase ahead will present net facets. There is also the need for banks to so orient their credit policies that while adequate finance is assured for defence and defence-related and developmental activities, demand for less essential purposes is curtailed.

The recent introduction of gold control by the Government should also assist in diverting fresh funds from investment in gold and gold ornaments into more fruitful channels, and bank Deposits should claim their due share of these. A properly planned policy of branch expansion can go a long way in increasing bank Deposits at this juncture. This calls in particular for extension of banking facilities to the unbanked areas of the country. In such areas, intensive drives through imaginative publicity which is responsive to particular local requirements would, pay good dividends. For, the ability to attract Deposits is intimately linked up with the range and efficiency of services offered, which have to be adapted with increasing ingenuity and resourcefulness, to cater to the customers' needs.

Aid to Developing Countries

By Paul Einzig

There has been lately a subtle change in the attitude of the governments of underdeveloped countries receiving financial assistance from Britain. The money is always accompanied by sound advice. Until comparatively recently, even if the latter was not welcomed with quite as much enthusiasm as the former, it was received in the right spirit and was often acted upon. The governments of new independent States in Africa had shown no obvious resentment when they were advised, for instance, that instead of spending the money, say, on luxurious cars for ministers and senior officials, they should spend it, say, on paying up arrears of teachers' salaries. Indeed, those ministers and officials who were in favour of sound policies welcomed the opportunity of this support received

from Britain for their attitude which would otherwise be unpopular in influential circles.

During the last year or so, however, there has been a distinct change in the atmosphere. The money is still welcomed and more than welcomed, but if it is accompanied by advice the reaction to the advice has become increasingly unfavourable. In more than one recent instance the British Government department concerned was told that the recipient country is now, after all, independent, and that it resents interference with domestic matters. It is for its government and no one else to decide how the money received in aid should be spent. Indeed, in some instances the friendly advice offered from London was rejected with much show of indignation, synthetic or otherwise.

Yet, owing to their lack of experience in administration, the new countries should have welcomed advice given them from more experienced quarters. It may be recalled that when, during the twenties a number of European countries received assistance through the Finance Committee of the League of Nations, it was invariably accompanied by elaborate plans for reconstruction the adoption of which was the condition on which financial assistance was forthcoming. Although the recipient governments were incomparably more experienced in administration than the government of former African Colonies, they did not think it offended their dignity and self-respect to accept advice from highly authoritative outside quarters. Indeed, there is every reason to believe that the reconstruction schemes, which they carried out in accordance with the advice of the League of Nations Finance Committee, helped them much more than the financial assistance they had received. The governments of the new countries would be wise in discarding false pride and in adopting an attitude more in accordance with the true interests of their countries.

World of Finance

SLACK SEASON

What are the Prospects?

Notionally the slack season has been in existence for a month now. The available evidence would go to show that contraction both of currency and of bank credit may be unusually large. Can the experience of the month of May be expected to continue until October? If so, why? And if it so happens that money conditions turn extremely easy—and if they stay that way—what are the implications, particularly from the standpoint of what Government should do?

A significant factor, in the credit contraction, that we have to take into account is the sugar situation. Stocks are being run down, the crushing season this year is likely to be shorter, and advances against sugar are on the decline; and meantime, of course, some quantity of sugar has been exported. Even so, with demand steadily on the rise, but with production or supplies failing to keep pace, stocks generally will, it may be argued, tend to be on the low side. Stocks of imported raw materials will be practically non-existent, with industries so concerned being compelled, in view of the scarcity of our foreign exchange resources, to live a hand-to-mouth existence. Power shortage is now fairly widespread, and the result is that the rate of growth of industrial production has been affected. For all these reasons, the seasonal contraction in bank credit will not be offset to the same magnitude as has happened in recent years by an increase in industrial advances. So, the fall in bank credit during the current slack season may turn out to be larger than the norm of the recent past.

Simultaneously, however, the defence effort and defence production are not being allowed to lag. For this purpose, despite the vast new taxes raised this year, the Government nevertheless is having recourse to the Nasik printing press. Deficit financing inevitably means that the Deposit resources of the banking system will be immediately benefited. So, side by side with credit contraction banks are likely to experience a not inconsiderable and fairly sustained accretion to Deposit resources.

If such happens to be the progress of the 1963 slack season, banks will be in a helpless position. Deposits cost dear, and cash earns no interest. So willy-nilly keen enquiry for gilt-edged should be evinced. Government should welcome such a situation, in that it would enable an increase in its market borrowings. But we would take this opportunity to emphasise the need for a short-term loan for the banks. We would again repeat our plea for a five-year loan carrying an interest coupon of 3.5 per cent.

The advantage to Government of course lies in the fact that to the extent realisations from market loans can be increased recourse to deficit financing can be reduced. And both the mopping up of resources through borrowings and the minimisation of created money are distinctly non-inflationary. It is therefore why a loan addressed specifically to the banks can be particularly fruitful. Hence also our suggestion that the new (or cash) loan that Government announces should include a 3½ per cent 1968. A second, and related, suggestion is that something should be done about the multiple-tier bank Rate; the something to be done is to do away with it, as we have

argued in our comment upon Mr Birla's statement to UCO Bank shareholders. The very fact that banks may have to borrow at 6½ per cent against securities that would yield no more than 4 per cent acts as a powerful disincentive to purchase of gilt-edged. Banks' reluctance in this behalf would be dispelled only if de facto and de jure bank Rate are not one and the same—a condition that, unfortunately, we have not had for a long time.

UCO BANK

Away with the Multiple-tier!

The central point in Mr G. D. Birla's statement circulated to the shareholders at the annual general meeting of the United Commercial Bank Limited relates to what he has termed the "anomaly of the three-tier bank rate". He concedes that the penal tiers are leviable only over short periods and that their impact upon banks' liability to interest paid is perhaps only marginal. But, at a time when bank Rate is, say, 4½ per cent; when however, credit sought from the Reserve Bank could cost as much as 6½ per cent; and when the yield on a Government new loan is just short of the bank Rate, how can Government expect any measure of support for its borrowing programme? If for no other reason, says Mr Birla, "the elimination of the penal tiers is essential for Governments borrowing programmes to succeed." This has long been this journal's view on the matter, but it would appear that if only to keep up the facade of a tough and dear money policy the Government will persist with its system of multiple-tier bank Rate.

But we are not without hope that wisdom is beginning to dawn. We have, for example, succeeded in persuading our foreign friends that a certain quantum of untied foreign loans is essential for seeing the Plan through. Even so it should be possible, we suggest, to impress upon the international financial institutions that, in Indian conditions, bank Rate as a monetary weapon has limited—if that—applicability and value. Raising of it does not bring about an improvement in balance of payments; nor does such increase in bank Rate cause a shrinkage in investment expenditure—which, in any case, is the last thing this country would wish. The current slackness in the money market, and the impending borrowing programme of Government (in behalf, let it be added, of the States as well), may both possibly provoke the monetary authorities into taking the correct and pre-requisite step of scrapping of the multiple-tier bank Rate; we trust our views in this regard will turn out to be something more than merely wishful thinking.

Not, it may be noted, that Mr Birla is against high interest rates as such. Indeed, in his remarks on the working of the inter-bank agreement on interest rates, he has, while deploring the State Bank of India's decision to bring its rates on Deposition a par with those of commercial banks, hinted that for attracting new Deposits banks may have to think in terms of an increase in Deposit rates. This is to be inferred from his reference to a speech made by the Governor of the Bank of England wherein there had been criticism of a too rigid attitude

to interest rates on the part of British banks. But here, we hope that such an inference would be erroneous on our part; for we do not believe that a higher rate on Deposits per se is going to bring in new resources to the banking system. Deposit growth depends, as Mr Birla has quite rightly pointed out in his concluding remarks, Government's monetary and fiscal policy and also, though to a lesser extent, upon banks reaching out, through branch expansion programmes, into the countryside.

BANK RETURNS

Deposits Swell, Advances Contract

A further easing of the pressure and strain upon the banking system is noteworthy as far as the latest banking returns are concerned.

With the onset of the 1963 slackseason, Active Note Circulation has, according to the returns of the Reserve Bank for 24 May, contracted sharply by Rs 26.21 crores to Rs 295.75 crores, and there has been inflow of Rupee Coin for Rs 0.90 crore. A transfer of Rs 5 crores from Balances Held Abroad raises Foreign Securities in the Issue Department to Rs 110.08 crores, and currency has been contracted against Rupee Securities for Rs 30 crores by transfer to the Banking Department. Consequently, the Reserve Bank's cash in the till shows only a minor increase of Rs 2.10 crores to Rs 22.45 crores.

The progress of the banking system toward a comfortable position is indicated in the substantial fall of Rs 16.16 crores to Rs 8.76 crores in the Loans and Advances of the Reserve Bank to the Scheduled Banks, which, however, report a slight decline of Rs 0.92 crore to Rs 82.60 crores in their Reserve Balances.

The States, on the other hand, seem to have been confronted by large-sized liabilities for payment. On the one hand, their Deposits are lower by Rs 2.14 crores at Rs 10.06 crores; on the other, their ways and means borrowings from the Reserve Bank have taken a sharp jump upwards by Rs 25.77 crores to Rs 50.70 crores. It is unlikely, in this regard, that payment has been made to the Central Government, whose balances are higher only by Rs 3.06 crores at 57.18 crores. Deficit financing, except of a countervailing nature, has apparently not been resorted to. By dint of the transfer from the Banking Department, Investments are marked up by Rs 30 crores at Rs 256.79 crores; but the State Bank is known to have purchased securities for Rs 11 crores, so the implication is that deficit financing of this magnitude stands concealed. But this is only a countervailing transaction, in that the Centre had a maturing obligation in respect of Treasury Bills Purchased and Discounted by the Reserve Bank, whose portfolio in this respect has dropped by Rs 12.68 crores to Rs 43.92 crores.

The transfer to Foreign Securities in the Issue Department stands reflected in the drop of Rs 4.65 crores to Rs 9.39 crores in Balances Held Abroad. But there has nevertheless been a net accretion, though in a nominal amount, during the week under review. Foreign assets in the possession of the Reserve Bank continue to be placed just below the Rs 120 crore mark, and the steadiness lately in balances must be ascribed, not so much to a good performance on the export side, but to timely receipts of untied foreign assistance. Perhaps it is the untied element in the latest American appropriation that is now beginning to show up in the free reserves of foreign exchange held by the Reserve Bank. The big question is, will such receipts of untied foreign loans be of sufficient magnitude to cover the import surplus which will inevitably arise during the course of the next few months? We hope that such indeed will be the case, but we must constantly be prepared

for a further drawal on the standby credit arranged with the International Monetary Fund.

The return of the State Bank for 24 May offers further testimony to the gathering strength of the 1963 slack season. There has been a two-fold augmentation of resources. On the one side, Deposits have risen by Rs 3.34 crores to Rs 559.68 crores. On the other, the total of Advances has, for the second week in succession, gone down substantially by Rs 7.25 crores to Rs 290.95 crores. The contraction from the 1962-63 busy season peak already exceeds Rs 30 crores, and the current slack season has barely got under way. The resources thus found have been utilised by the State Bank to add to its gilt-edged portfolio, which is shown higher by about Rs 11 crores at Rs 243.04 crores. The end result is a small increase of Rs 0.45 crore to Rs 27.39 crores in cash balances, including money at call and short notice. The prospect quite clearly is that each succeeding week will witness State Bank purchase of securities through the Reserve Bank tap. It should not be long before the level of the State Bank's Advances is exceeded by its holdings of Government securities.

The week ended 17 May has been a bountiful one for the Scheduled Banks. Net Time Deposits have jumped up by Rs 13.62 crores to Rs 1,252.32 crores, and this is offset only to the extent of a fall of Rs 1.31 crores to Rs 992.24 crores in net Demand Deposits; furthermore, it is a small proportion—Rs 1.75 crores, to be precise—which represents the share of the State Bank in the Deposit growth during the week under review. Simultaneously, the total of Advances of Scheduled Banks has greatly contracted by Rs 18.50 crores to Rs 1,579.26 crores, though in this respect it needs to be pointed out that a little more than half of the drop is attributable to the State Bank. While the increase of Rs 10½ crores to Rs 617.42 crores in gilt-edged holdings is wholly on account of the State Bank, the other Scheduled Banks have seized the opportunity offered by the two-fold growth in resources to reduce debt. Borrowings from the State Bank have been cut by Rs 0.50 crore to Rs 17.22 crores; and recourse to central banking credit is sharply lower by Rs 20.81 crores at Rs 25.02 crores. The end result is an increase of Rs 3.70 crores to Rs 202.77 crores in cash balances, including money at call and short notice.

As it is, the return of the Reserve Bank for 24 May shows that the Scheduled Banks are practically out of debt. In the coming weeks, therefore, the banking system may be embarrassed by a plethora of resources. Advances will presumably continue to contract; and there is no reason why the recent uptrend in Deposits should not be maintained. Banks can hardly afford to keep such high-costing resources idle. With the outlet of Advances closed, there will inescapably greater interest evinced in gilt-edged. Just as the State Bank has done, the other Scheduled Banks might find no alternative to week-by-week purchases of gilt-edged through the

Reserve Bank tap. Conditions are, therefore, becoming propitious for the issuance of its cash loan by the Central Government. We may perhaps anticipate such an issue being made, say, toward the end of June, with the loan announcement a fortnight before that. Here, the important question is, will the monetary authorities take advantage of bank's interest in gilt-edged, by including in their new loan programme a short-dated loan addressed particularly to the banking system?

RBI

Trend and Progress of Banking in 1962

According to the Report on the Trend and Progress of Banking in India during 1962, published recently by the Reserve Bank of India, the position of banks showed further expansion in resources, credit and investments. The growth of deposits, which set up an all-time record, enabled banks to meet the increased demands for credit and to add to their gilt-edged portfolios. Towards the end of the year, however, the effects of the National Emergency made themselves felt on the banking system and the trends underwent shifts.

Deposits with scheduled banks (excluding P. L. 480/665 funds) rose during 1962 by Rs 233 crores (13.7 per cent) as compared to Rs 168 crores (11 per cent) during 1961. Several factors contributed to the higher rate of growth of deposits, notably the greater volume of deficit financing in 1962-63, the raising by banks of the rates of interest on time deposits in March 1961, the progress of branch expansion, and the measures taken in 1961 to strengthen the banking system, which were further reinforced by the enactment during 1962 of legislation designed to improve the capital and liquidity base of banks. The expansion in credit during 1962 amounted to Rs 146 crores or 11.5 per cent as compared to an increase of Rs 106 crores or 9 per cent in 1961. As a result of the satisfactory growth in deposits and the operation of the tier-system of lending rates by the Reserve Bank, scheduled banks reduced their recourse to the Bank in 1962.

In the context of the steady pressure on prices during the year, a sharper edge was given to the policy of overall restraint of credit pursued by the Reserve Bank. As a first step, the Bank introduced in July 1962 a four-tier system of lending rates which raised the cost of borrowing from it by about ½ per cent. The inadequate contraction of credit during the 1962 slack season and the attack by China coupled with the inflationary implications of a possible rise in deficit financing consequent on increased defence expenditure emphasised the need for greater vigilance in credit policy. It was in this context that on the eve of the 1962-63 busy season, for the first time, a normal limit equal to a bank's average statutory cash reserves during the previous quarter was set on the total amount which

a bank could borrow from the Reserve Bank. At the same time, the Bank indicated its willingness to grant special accommodation to banks beyond this limit, though at a higher rate of interest, when the grant of such assistance was considered justified. Accordingly, appropriate special limits of borrowing were granted to banks which applied for additional limits.

Following the declaration of the Emergency, the Governor of the Reserve Bank also appealed to banks to consider recalling in suitable cases advances against gold, shares and unsecured advances and to refuse advances which were likely to be utilised for hoarding and speculation. The success of the appeal and the spirit of co-operation displayed by banks were evidenced in the reduction in credit to the sectors indicated to banks. There was some liberalisation in selective credit controls early in the year, in keeping with the supply and price situation in the controlled commodities.

The Report also examines the problem of liquidity of the banking system in the light of the recent amendments to the Banking Companies Act, 1949 and draws attention to the impact on the costs of the banking industry as a result of expansion of branches, the increase in establishment expenses arising from the periodical awards of Industrial Tribunals/Commissions and the raising of interest rates on deposits. Available data for 32 Indian Scheduled Banks indicate that the balance of profit after taxation declined from Rs 11.2 crores in 1961 to Rs 10.7 crores in 1962 or by 4.5 per cent.

In the concluding chapter on 'Perspective', the Report deals with the problems confronting banks in the context of the Emergency. A major explanation of the current pressure on the banking system lies in the magnitude and complexity of the adjustments necessary for the economy to gear itself to a substantially higher defence effort while maintaining the rate of development. The Report states that as the tempo of defence and other expenditure rises, the liquidity of banks and the volume of deposits should improve. Banks will have to see that, while adequate finance is assured for defence and defence oriented and development sectors, demand for less essential purposes is appropriately curtailed. Simultaneously, efforts at deposit mobilisation, in particular the extension of banking facilities to the unbanked areas of the country, will have to be kept up.

The Report contains, as usual, a series of appendices giving particulars of the action taken by the Reserve Bank under the Banking Companies Act, compliance by banks with the various sections of the Act, Indo-Pakistan banking arrangements etc. The Report, however, does not contain the usual appendix on banking statistics most of which we understand, will be included in the 'Statistical Tables relating to Banks in India' 1962, to be published during August 1963.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 28 May, 1963. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.410 per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2,350 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at centres (Bangalore, Bombay, Calcutta, Kanpur, Nagpur and New Delhi) upto the close of business on Saturday, 1 June 1963 and at Madras upto the close of business on Monday, 3 June 1963. Successful tenderers should make payment on Friday, 7 June 1963 at all centres. Other conditions are as usual.

During the week ended 24 May, 1963, Government of India Treasury Bills for Rs 18,56,50,000 were sold in favour of Reserve Bank of India.

91 days Intermediate Treasury Bills sold from 22 May, 1963 to 25 May, 1963 amounted to Rs 80,00,000.

Notes

COTTON TEXTILES Price Revision Urged

The numerous problems afflicting the Indian cotton textile industry such as shortage of cotton, the crippling levies, the high cost of production and the uneconomic operation of the textile mills were given close scrutiny at the annual general meeting of the Indian Cotton Mills Federation held in Bombay last week. Speaking on the occasion Mr Bnarat Ram, the outgoing Chairman, touched on these vital aspects of the industry at great length and suggested some remedial measures to assist putting the industry on economic lines. As the chairman stated the mill industry would no longer be able to operate under the 1961 price level owing to the progressive increase in the cost of production. In the circumstance the plea for making an upward revision in the price structure seems to be pertinent. But before arriving at such a decision the Government should bear in mind the chain reaction that may be let loose in its wake particularly from the consumers' point of view. Even now there is some sort of consumer resistance to the current price levels. Besides, the strong competition mills are facing from handloom and powerloom sectors is a grim reminder that a rise in prices may, in the long run, reduce the rate of consumption of mill made cloth. Further the industry should embark on long-term measures like rationalisation and modernisation of the mills with a view to effecting considerable economy in their cost of production.

Other matters on which the chairman dwelt are familiar enough. The formidable financial burden imposed on the industry by several taxes and other levies, the higher freights and cost of raw materials and other charges considerably enfeeble the industry's fiscal stability. This necessitates the streamlining of the tax structure for reducing the multiplicity of taxes. At the same time the Government should adopt positive measures to increase indigenous cotton output through scientific and modern agricultural practices for which immense scope exists in the country. The per acre yield in India is at a low level of 112 lbs in contrast to world average of 285 lbs, 450 lbs in the USA and 580 lbs in the Soviet Union. Moreover unorganised cultivation of extra long staple cotton has resulted in our dependence on import of this variety from which the bulk of exportable cloth is manufactured.

Referring to the exports of cloth Mr Ram has given credit to the obligatory export scheme which has

successfully stopped the falling trend in cotton exports witnessed in 1961. In fact in the latter part of the previous year exports have looked up and scope for making further progress will depend on improving the quality of cloth and reducing the production cost.

POWER

Zonal Grids

At long last Government seems to be getting to grips with the power problem. For, a high level-committee which includes well-known foreign experts is presently engaged in drawing up a master plan for power development in the country in the next decade with a view to eliminating once and for all the recurrent power shortage. In the meantime, Government is likely to take active steps to make regional grids a reality. As the recommendations of the special committee set up to suggest organisational pattern and functions of the regional agencies for planning and operating zonal power grids leading eventually to an All India Grid System has already been accepted, the next step is to establish such agencies. The committee has recommended demarcation of the country into seven zones for establishing regional agencies. It has been accepted by the participating representatives (Central Water and Power Commission, Planning Commission, the various State Electricity Boards, the DVC, the Delhi Electric Supply Undertakings and Federation of Electricity Undertakings of India) that the functions of the regional agencies should include planning of generation and major transmission programme in the region so as to ensure efficient integrated operation of the constituent systems in such a manner that at any given time the total amount of electricity generated and transmitted shall give optimum benefit to the region as a whole.

Since all State Governments have accepted that planning of power on regional basis will prove advantageous to all the constituents of a regional agency, there should not be any difficulty in bringing these agencies into being at an early date. With zonal grids the overall cost of power generation in the country as a whole can be substantially reduced. It has been estimated that when the four southern systems are interconnected and operated on an integrated basis, there will be a saving of 265 MW in installed capacity resulting in a saving of Rs 22.73 crores in capital outlay and Rs 2.60

crores in annual running charges. The saving in the Eastern region will be even higher—350 MW in generating capacity involving Rs 27.15 crores in the capital outlay and Rs 4.8 crores in the annual recurring expenditure. The benefit of interconnections between different systems is already being reaped by the eastern region where a serious power crisis has been averted mainly because Calcutta and industrial area has been able to get power from Rihand and Hirakud.

TRANSFORMERS

Cost Factor

Speaking at the public enquiry on the continuance of protection to the power and distribution transformers industry, Mr K. R. P. Aiyangar, Chairman of the Tariff Commission, has pointed out that while the progress of the industry has been quite impressive, there is need for bringing down the cost of its products. With the rapid development of power generation in the country, the demand for transformers is also going up and this trend will be further accentuated in coming years as new plans for power production are being implemented. It is therefore of special importance that the cost of transformers is kept at a reasonable level as they form part of the power projects. As Mr Aiyangar has noted the high cost of transformers will go to swell the cost of the power projects and also inflate power charges. But it would appear that the cost factor is at present largely beyond the control of the manufacturers as raw materials which constitute roughly three-fourths of the total exworks cost of a transformer are mostly to be imported. For as yet there is no indigenous production of transformer grade sheet steel. The Rourkela Steel Plant is expected to produce some quantity of this grade sheet but even so the industry will have to depend on imports for some time since Rourkela's programme envisages only the manufacture of 50,000 tonnes of different grades of sheet steel per annum. However, the industry does not seem to have been inconvenienced for want of sufficient quantities of sheet steel as it has no idle capacity. This is not how

ever to say that the cost of production of the industry should continue to remain high. According to Mr Aiyangar certain economies are possible by changing over to cold-rolled, grain-oriented sheets. The industry should consider this suggestion seriously as by reducing its cost of production it will be enabled to participate in exports for which there is said to be considerable scope.

The rapid progress of the industry has been made possible mainly by the fact that it is enjoying tariff protection for a decade now. Except for ad hoc licences to actual users, import of trans-

formers have been stopped. Production of transformers had increased from 1.291 million KVA in 1960 to 1.796 million KVA in 1961 and 2.296 million KVA in 1962 and is expected to reach three million KVA in the current year. This is exclusive of the capacity of Heavy Electricals, Bhopal which will have an annual capacity of 6 million KVA when it goes into full production. As against the original estimate of requirement of transformers during the Third Plan period of 30 million KVA, the latest assessment puts the requirements at 60 million KVA of double the quantity originally estimated for the whole period of the current plan period, in view of the upward revision of generating capacity by 2½ per cent.

US

Coal Makes a Comeback

The upsurge in the American economy has its counterpart in an industry which some experts were beginning to relegate to a permanently distressed category. Now the American coal industry appears to be making a notable comeback, following sharp slippage due to rising competition from oil and natural gas, and producers have been raising their estimates of both production and consumption this year.

In addition to the improved demand for coal for electric power production and other industrial uses, the industry's ability to adjust to changing conditions has been a prime factor in its current recovery. Price lines have been held, and some remarkable advances have been registered in production and marketing methods. All of this has contribu-

PHS/MS-2

ted to putting coal in a sounder position than it has occupied for some years, and to making it more competitive with other energy sources.

The National Coal Association, a private industry group, has now boosted its estimate of coal consumption for 1963 to 433 million short tons (one short ton equals 0.91 metric tons). This is some four million tons above the estimate of 429 million tons above last year's usage. Exports are expected to hold at about last year's level of some 30 million tons.

Production has been rising in tune with the increased demand, and also is expected to approximate 433 million tons this year. While a far cry from the early postwar years, when output totalled as much as 630 million tons, it represents a substantial improvement over the 400 million tons or so used in the past few years.

So far this year, output stands at 157.2 million tons, up slightly from the 156.7 million tons produced in the like period of last year. But some idea of the current upward trend can be gathered from the fact that production last week topped 9.3 million tons, as against 8.9 million the week before and 8.1 million in the corresponding week of 1962.

Mechanization and other technological gains have contributed greatly to coal's improved performance in the market-place. Largely as a result of the industry's heavy investments in new equipment, the average price of coal at the mine last year was actually 34 cents less than in 1948, despite an increase of more than 10 per cent in wage rates. The 1962 average at-the-mine price was \$4.99 a ton, and there have been reports of further reductions in some places since then.

Reflected in all this has been a truly staggering increase in productivity, which is continuing to rise. Using modern mechanized equipment, the American coal miner produced 143 tons per working day in 1961, more than twice his output of ten years earlier.

Further economies in production and marketing are in store. Power companies, for instance, are planning to build generators at large new mines, and to transmit the power over wide areas by wire.

Railroads, seeking ways of keeping themselves competitive with other transport means, have been slashing rates on coal. One recent measure has been the development of extra-long all-coal trains to reduce transportation costs. The full effects of these rate cuts may not be felt until next year, when they conceivably could contribute to further gains in coal consumption.

Another transportation economy may be achieved through the use of pipelines to carry coal—a development that is still in its infancy, to all intents and purposes. So far, the reductions in rail rates have tended to hold back the largescale construction and use of these coal-carrying

pipelines, but they still hold out a bright promise for the future.

The improvement in coal is taking place despite a declining usage by the steel industry. While the outlook for steel production this year also has improved considerably, new technological developments have cut back on the need for coking coal in blast furnaces.

The latest estimate is that 72 million tons of coking coal will be needed this year. That is one million tons less than was estimated only four months ago, and 2.3 million tons less than the actual consumption in 1962.

These interrelated developments in coal, power, transportation and steel underscore the continuing gains in industrial efficiency and productivity which have traditionally been associated with American economic activity.

IDA Credit for Electric Power in India

The International Development Association, an affiliate of the World Bank, has extended a credit equivalent to \$20 million to India for electric power development in the State of Andhra Pradesh. The credit will cover about half the cost of building a 120,000-kilowatt steam power station at Kothagudem, a reservoir to supply cooling water and a 150-mile transmission line to connect the station with other power facilities. The project is part of a programme being carried out by the State to relieve the chronic power shortage which has for many years hampered the development of industry and agriculture.

Andhra Pradesh, with an area of about 107,000 square miles and a population of some 36 million, is the fifth largest Indian state in area and the fourth in population. Progress in the development of electric power there was begun with the launching of India's First Five-Year Plan. During the 10 years of the first two Plan periods, installed generating capacity was increased from 43,000 to 213,000 kilowatts, and the number of communities receiving electricity rose from 212 to 3,213, out of a total of 26,500 for the whole State. Per capita power consumption in Andhra Pradesh is however still well below the national average.

Construction of the Kothagudem power project is one of a series of steps being taken by the State during the Third Plan period to increase capacity by about 380,000 kilowatts. It is estimated that demand in the State will reach 500,000 kilowatts by 1966; the present rate of increase is expected to continue thereafter. With this rapid growth in prospect, the Kothagudem station has been designed to allow for a doubling of capacity in the next stage of development and for an ultimate capacity of 1,000,000 kilowatts or more. Over two-thirds of the demand is expected to come from industry, among which are plants producing iron and steel, ferro manganese, textiles, jute, rayon,

rubber, fertilizers and chemicals, and engineering industries.

The new thermal power station will be located near Kothagudem in the center of the large Singareni coal fields in northern Andhra Pradesh. Low grade coal will be transported from existing collieries over an aerial ropeway. Make-up water to compensate for evaporation losses in the cooling towers will come through a six-mile canal from a reservoir formed by an earth dam to be built on the nearby Kinnerasani River. A double-circuit transmission line 150 miles long will be built to connect the Kothagudem station with the Ramagundam station to supply power to the western part of the State. It will also supply power to the industrialized coastal region through its connection with the State grid.

The project will be built and operated by the Andhra Pradesh State Electricity Board, which will be assisted by consultants during the construction period. The Kinnerasani dam will be built by the State Government, which is responsible for public works of this kind. All equipment will be purchased on the basis of international competitive bidding. The total cost of the project is estimated at the equivalent of \$41 million and it is scheduled for completion in 1966.

The IDA credit to India is for a term of 50 years. Repayment of principal will begin on December 1, 1973. Thereafter 1% of the principal will be repayable annually for 10 years and 3% will be repayable annually for the final 30 years. The credit is free of interest, but a service charge of 3/4 of 1% per annum on the amount withdrawn and outstanding will be made to meet IDA's administrative costs.

The Government of India will relend the proceeds of the IDA credit to the State of Andhra Pradesh in accordance with its usual method of financing power and other major projects; repayment is expected to be over a period of 20 years, after a grace period corresponding to the construction period, at an interest rate of 4% annually. The State Government will in turn make the proceeds available to the State Electricity Board on the same terms with an additional 1/2% charge.

Today's credit increases the total amount of IDA credits to India to \$300 million. The projects financed have been for the development of port facilities, highways, railways, telecommunications, electric power, irrigation, drainage and flood protection.

PRICES Further Rise in index

The official wholesale price index (with the year ended March 1953 as 100) rose further by 0.3 per cent to 131.8 during the week ended May 11, 1963 as compared with 131.4 for the earlier week. The index was higher by 1.9 and 4.4 per cent respectively when compared with the correspond-

ing week of the previous month and that of a year ago.

Higher prices of Gur (+4%), Masur, Groundnut oil and Black Pepper (+2% each) and Rice Barley, Mung, Urad, Milk and Meat (+1% each) raised the index for 'Food Articles' by 0.4 per cent to 131.3 although the prices of Potatoes and Chillies (—6% each), Jowar at Nagpur (—5%), Onions (—4%), Arhar (—2%) and Wheat, Maize, Bananas, Coconut oil, Fish, Eggs, Coffee and Betelnuts (—1% each), showed declines.

The index for 'Tobacco' remained stationary at its previous week's level of 111.6.

The index for the Fuel, Power, Light & Lubricants group also stood unchanged at the earlier week's level of 137.3.

The index for 'Industrial Raw Materials' advanced by 0.3 per cent to 136.8 as compared with 136.4 (revised) for the earlier week due to an increase in the prices of Cottonseed (+2%) and raw Silk, Groundnuts, Linseed and Rapeseed (+1% each). The prices of Copra (—3%) and raw Wool and Tanning Materials (—1% each), however, moved down.

The index for 'Intermediate Products' stood higher at 138.3 as against 138.2 for the previous week. Items which showed variations during the week were: Tin (+7%), Zinc (+1%), Aluminium (—2%) and Rayon Yarn (—1%).

An increase in the prices of Jute manufactures (+1%) was responsible for a rise of 0.2 per cent to 129.3 in the index for 'Finished Products' during the week under review.

SNIPPETS Processing Units

The Union Ministry of Community Development and Co-operation has requested the State Governments and Union Territories to encourage the growth of large-scale co-operative processing units. In this connection, the Ministry has pointed out the significant progress made by the co-operative sugar factories. These factories now account for nearly 70 per cent of the total production of sugar in the country. One of the major factories that contributed to the rapid progress is the existence of satisfactory arrangements for financing the block capital requirements of these co-operatives.

The Industrial Finance Corporation has been giving long-term loans to co-operative sugar factories to the extent of 60 to 65 per cent of the anticipated block capital expenditure subject to guarantees by the Central and State Governments on a 50:50 basis.

EPFS

The Central Government has accepted the recommendation of the Central Board of Trustees of the Employees' Provident Funds Scheme to increase the rate of interest from 3 1/2 per cent to four per cent per annum.

This interest would be credited to the account of members, including members of the Staff Provident Fund, for the year 1963-64.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

THE week's election result will surely have filled the hearts of Congressmen with dismay. Each of three important bye-elections to the Lok Sabha has gone in favour of Opposition parties—indeed the Swatantra Party could claim all the credit for itself. Rajaji will no doubt particularly have rejoiced in Acharya Kripalani's victory, especially since it followed upon, though after a time-lag, Mr Krishna Menon's ouster from Government. I should think that Mr Masani's triumph at Rajkot is not the less important since now the Swatantra party can now be articulately represented in Parliaments. Not the least of the reasons why I have personally welcomed the Opposition successes is the hope that forthcoming sessions of the Lok Sabha will provide more spicy fare. Then again parliamentary government works better when the Opposition can in fact oppose, as Mr Wilson has been spectacularly showing in the House of Commons recently. If, at some future date, India is to have a Government that offers an alternative to the Congress, then the recent results are to be greeted as perhaps signifying that India will not long remain a single-party country.

One sequel of the Opposition victories is the reported decision of Mr Hafiz Ibrahim to resign from the Cabinet. There are indications that the Minister of Irrigation and Power (who holds a Rajya Sabha seat) is quite dissatisfied with the election as it was run. I don't think we can write off such mutterings as merely being sour grapes. In fact he has been a good loser, but if the Congress Party machinery functioned inefficiently and rather less than whole-heartedly for him, Mr Ibrahim is entitled to seek an explanation. There have unfortunately been injections of overtones of communalism in the post-mortem debates, and if the whispers in this regard have any element of truth to them, then Amroha should be reckoned either a shoddy victory or a shameful defeat, depending upon which party it is that was responsible for making religion an issue in the elections. I trust, however, that Swatantraites are not greeting with glee the impending exit of

another Cabinet minister, holding it to be another scalp.

There can be no doubt that, at least in Rajkot, the Congress candidate was quite completely outclassed. Even the eleventh-hour interventions by bigwigs failed to sway the significant vote. Swatantra meetings were popularly attended, and Rajaji (speaking, presumably, in English) was an enviable orator to have on one's side. One might say that his retort to Mrs Indira Gandhi was not exactly courteous, but the chuckle that follows cannot be smothered. I am far from being a Swatantraite myself, but I fancy that Rajaji will be remembered by posterity for two of his deeds—the opposition to Hindi and the creation of an Opposition.

Durgapur gas, I see, is at long last to be connected up with the city's distributive system. The long era of suspended supplies or pressure going down will now, I hope, come to an end. The inconveniences that the housewife has had to suffer have been partly mitigated by the "janata" stoves; but industry that depended upon gas for power more than once had to cease working. Then of course there were the ill-lit streets, Calcutta in the dark is not the safe place it used to be. There was the tragic experience of an old school-friend, who is now with ICI; the hour was not late, it still lacked midnight, but he was set upon and was lucky to escape with assorted fractures. But this is very much by the way: when are we going to reserve gas only for domestic or industrial purposes? The waiting list of intendant consumers under both categories is, I am sure, forbiddingly long. A start can now be made with the extension of Oriental Gas' facilities. There is one small rub: next Sunday no gas whatever will be available from 8 o'clock in the morning till 5 o'clock in the evening.

Among his other accomplishments President Kennedy can now include the title of "Father of the Year", which was bestowed on him last week. It is a fertile year for the Kennedy clan in that three brothers were expecting additions to the family, but one pregnancy has gone awry. The President

low; and so long as the "P form" offers little hope of the Indian venturing abroad there is scant prospect of Air-India carrying more passengers. The absence of passengers was one reason why Indian Airlines have been allowed to use Boeing craft on their Delhi-Bombay run, though as it presently stands the arrangement will shortly come to an end. Naturally we can expect that a renewed agreement of some sort will be approved. I suggest that on the Calcutta-Bombay run, too, we should be able to make use of Boeings, thus making available the Viscounts for other routes, which in turn could release Friendships or replace Dakotas. India presents a picture of strange contrast at the moment: the giant jets travel empty; the Viscounts and Friendships travel full; and the Dakotas cry aloud for replacement. Load-wise, the Viscount should suffice for the Air-India and the Boeing fully used internally, but prestige-wise the wise thing cannot be done.

There have always been communities where there has been the tradition of what I might perhaps call "reverse dowry": the bridegroom it is that pays. A few head of cattle and such other material wealth, to be handed over to the Father of the Bride, paved the way for the acquisition of a wife. But for the bachelors of a country, I shall not name, matrimony is to involve hazards other than the bride herself and the ubiquitous mother-in-law. It has been stipulated that no application can be made unless it is accompanied by the carcasses of two dozen rats. Cattle, yes; money, perhaps; but rats? Rats! may be the exasperated reaction. The rat law, no doubt, will soon be repealed.

Coal Movement

MEASURES for improving the movement of coal were discussed at a meeting of the Planning Commission, the concerned ministries and representatives of the Industry at a meeting held here last week. The meeting, it is understood, agreed that it was essential to work out, and set up, an operational plan to provide ancillary facilities at loading and unloading points to enable movement of coal in full rakes of box wagons according to the programme drawn up by the Railways. The meeting decided that a technical unit should be set up in the Coal Controller's Office to carry out, in cooperation with the Railways and the Industry, a survey of the loading facilities required and also draw up recommendations to be implemented by the Industry. It was also decided that three tripartite committees, consisting of representatives of the Coal Controller's Office, the Zonal Railways and the collieries concerned should be set up in (a) Bengal-Bihar coalfields (b) Pench Valley-Chanda coalfields and (c) Korea-Rewa coalfields. These committees will draw up and implement a phased programme for improvement of facilities at individual collieries. In the first phase, collieries with monthly output

of 20,000 tons and above will be taken up. In the second phase collieries with output of between 10,000 and 20,000 tons will be taken up, and the remaining collieries with monthly output below 10,000 tons will be dealt with in the third phase.

The meeting also discussed measures for strengthening "assisted sidings" and "private sidings." The question will be further discussed at a meeting of the Industry with the Railways which is expected to be held in Calcutta early in June. As regards the Railway sidings, necessary action is being taken according to the programmes drawn up by each Zonal Railway.

The improvement in Railway performance generally and, particularly in regard to coal movement, was responsible for one of the few bright patches in the sombre report on the progress of the Plan which was presented to Parliament during the last session by the Minister for Planning. Earlier, while presenting the Budget for the year, the Railway Minister had anticipated that the increase in loading during 1962-63 over the previous year would exceed the original target of 15 million tons. According to latest statistics available, this expectation has been borne out by actual performance. During the year, the Railways carried 17 mil-

lion tons more than what they did in 1961-62, the highest increase ever achieved in a single year during the last 110 years—a most encouraging record, especially when viewed in the context of the Emergency which imposed extra strain on the Railways for carrying military traffic on a priority basis.

Analysis of the loadings according to the different railway lines reveals another interesting feature. It is found that all the broadgauge railways have exceeded their targets except for the Southeastern Railway. Even in the case of the latter, it is no fault of the Railway if the loading fell short of the target. The steel plants account for the major portion of the traffic carried by this Railway whose development programme is oriented accordingly. Since the steel plants were not able to keep to the production schedule originally envisaged, there was a corresponding decrease in the steel plant traffic, as compared with the target on the basis of which the Railway Plan was drawn up, accounting for a shortfall of two million tons in loading. If the steel plants had been able to reach the original targets, the increase in railway loadings as compared to the previous year would have been higher than the 17 million tons actually achieved.

While the record set up by the Railways last year is certainly encouraging, steady improvement in loadings from year to year, and in particular of coal, which is necessary to achieve the Third Plan target, does not depend entirely on the Railways own efforts. This will require the co-operation of the coal industry and the consumers, in bringing about

a change in the pattern of movement which the Railways consider essential, if they are to carry 200 million tons in 1965-66, including about 90 million tons of coal. For this purpose Railways are concentrating on pushing ahead with their programme for switching over the movement of bulky commodities, like coal, iron ore, etc from four-wheelers in trains of 1600 to 1800 hundred tons to block rakes of 55-ton box wagons of 3400 to 3600 tons hauled by Diesel or Electric locomotives.

While this change is essential from the Railways' point of view, for the general run of railway users, it creates many intractable problems, both at the loading and the receiving ends. These problems have been under discussion for the last two years. Some of the measures which are necessary for progressively increasing the use of block rakes for coal movement were discussed at the meeting of the Planning Commission with representatives of the Industry and Ministries concerned last week.

The change in the pattern of movement calls for corresponding change

BALMER LAWRIE & CO. LTD.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, 28th June, 1963, at 12-30 p.m. to consider the Accounts of the Company for the year ended 31st December, 1962, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 8th June, 1963 to 28 June, 1963, both days inclusive.

By Order of the Board,
D. MANSON
Managing Director,
21, Netaji Subhas Road,
Calcutta, 22nd May, 1963.

Note: A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

BRITISH INDIA ELECTRIC CONSTRUCTION CO. LTD.

The Board of Directors of the Company has decided to recommend to the forthcoming Annual General Meeting the payment of a dividend of 15 per cent for the year ended 31st December, 1962.

BALMER LAWRIE & CO. LTD.
D. MANSON
Managing Director,
Managing Agents.

21, Netaji Subhas Road,
Calcutta, 22nd May, 1963.

in loading and unloading facilities. There is no difficulty in regard to steel plant traffic, because the facilities at the steel plants have been designed to receive materials in bulk. Power houses which consume large quantities of coal, as well as some other large consumers, are also supplied in block rakes. But other industrial consumers who have been accustomed to receive their consignments in one or two four-wheelers at a time find considerable difficulty in adapting themselves to this change.

As far as coal is concerned, one of the solutions worked out by the Planning Commission, the Railways and the Ministry of Mines and Fuel, in order to meet the requirements of small consumers, is to set up dumps at convenient places to which coal will be carried in block rakes. The scheme is not without its drawbacks. Critics have called attention to the increased transport cost involved and the risk of deterioration and pilferage at the dumps. Nevertheless, the scheme has been accepted by the State Governments as the only practical one in the circumstances. But implementation has

been halting. There is an interesting reason for this delay in implementation which is laying up problems for the future. As a result of improved Railway performance last year, coal shortage has practically disappeared and, along with it, the sense of urgency for creation of the coal dumps.

At the loading end, the coal industry is also finding difficulty in adapting itself to the new pattern of railway movement. Many collieries are not equipped with sidings which can receive full rakes of box wagons. And there have been delays in taking the necessary measures to strengthen the existing sidings because of the controversy as to who will foot the bill.

The coal industry contends that, since the box wagons have been designed for the convenience of the Railways, they should bear the entire cost. On the other hand, the Railways argue that use of box wagons is inescapable for dealing with the heavy traffic generated by the rapid industrialisation of the economy, and the beneficiaries of this industrial expansion should not grudge the incidental cost involved. It is also pointed out that Railways in many advanced countries, including the Soviet Union have found it necessary to use heavy wagons for bulk movement of commodities. Although the controversy over box wagons has arisen in respect of coal movement, the Railways seem to be fast moving in the direction of extending their use for carriage of other commodities in bulk. Experiments have already started in moving cement, iron ore etc in block rakes of box wagons.

As far as the Railway sidings are concerned there is no dispute, the entire cost being borne by the Railways. The dispute is over what are called "assisted sidings" and "private sidings." For the former, the principle now adopted is that the cost of the sub-grade work and grading will be borne by the colliery while the Railways provide the sleepers, rails and filling. It is said that in many cases no sub-grade work may be actually required. Collieries will have to bear a small additional charge on account of interest and maintenance. In the case of private sidings, the entire cost of strengthening them will be on the collieries. Railways, it is said, will be willing to consider allowing payment in instalments where sizeable amounts are involved. A mutually acceptable basis for sharing of costs is one of the problems that will have to be sorted out at the Calcutta meeting.

Whatever the inconveniences in the transitional stage, it can be forecast that the future pattern of rail movement of commodities in bulk will be in heavy trains of block rakes hauled by Diesel or Electric traction. It may be noted in this connection that a substantial part of the loan, negotiated with the World Bank by the Chairman of the Railway Board on his recent visit to the United States, will be utilised for import of Diesel locomotives and for their manufacture in India. It is also pointed out that if bulk traffic is switched over to box wagons, a large number of four wheelers will be released for general goods movement relieving the chronic shortage of wagons for this category of goods.

COMPANY NOTICE

THE INDO-BURMA PETROLEUM COMPANY LIMITED

Registered Office
Gillander House, Netaji Subhas Road, Calcutta-1.

Notice is hereby given that the Fifty-fifth Annual General Meeting of the Members will be held at the Registered Office of the Company on Friday the 21st June, 1963, at 11 a.m. to transact the following business:—

1. To receive and adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1962.
2. To sanction the declaration of a dividend.
3. To appoint a Director in place of Mr. S. M. Wahi who retires by rotation and being eligible, offers himself for reappointment.
4. To appoint Auditors including Branch Auditors and to fix their remuneration.

Notice is hereby given that the Ordinary Register of Members of the Company will be closed from the 3rd June, 1963, to 21st June, 1963, both days inclusive.

By Order of the Board
STEEL BROTHERS AND COMPANY LIMITED.
Managing Agents.

Calcutta-1.
20th May, 1963.

NOTE:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and, on a poll, to vote in his stead. Such proxy need not be a member.

FOREIGN AID

US Contribution

During the US fiscal year 1963 the United States has continued to play an important part in furthering India's industrial development US loans for the Indian Railways, power projects and for financing the import or capital goods, components and industrial raw materials announced since 1 July, 1962 now total \$411.4 million (Rs 196 crores). This compares with a total foreign exchange assistance of \$1,704 million (Rs 811 crores) for the development of these key sectors of the Indian economy since the United States began its aid programme to this country in 1951.

The adequate expansion of electric power generation and the development of transportation facilities constitute primary requirements for increasing the pace of industrialisation. Large segments of US assistance have been devoted to these two needs. The United States has given dollar grants and loan totalling \$362 million (Rs 172 crores) for power development. Rupee loans and grants totalling Rs 252 crores have also been extended. The grand total of US assistance for power development comes to Rs 424 crores. This is nearly three times the investment in power facilities in India during the entire period prior to the commencement of the First Plan.

The total of US aid commitments for the modernization and expansion of Indian railways now stands at \$258 million (Rs 123 crores).

The United States has provided a number of grants and credits to the Government of India for the purchase of machinery and raw materials abroad to foster the growth of Indian industries. These have included steel worth \$146 million (Rs 69 crores). US aid commitments for the financing of imports of capital equipment required by a wide variety of industries, non-ferrous metals, components and industrial raw materials total \$438 million (Rs 447 crores).

Almost every major industry in benefiting from US aid. Capital equipment has provided, among others, to jute, cement, textile, paper, rayon, aluminium, automobile, and mining industries. Components and raw materials furnished by the United States include zinc, aluminium, copper, synthetic tyre cord yarn, sulphur, carbon black, wood pulp lubricants, synthetic rubber, automobile components and spare parts, machine tools, rollers for steel plants, and caustic soda.

Most of this non-project aid has been given to the Government of India which has issued import licences to industries in the public and private sectors. The United States has also given loans to the Industrial Finance Corporation, the Industrial Credit and Invest-

ment Corporation of India and the National Small Industries Corporation, which are playing an important role in stimulating industrialization.

A number of leading Indian firms have secured dollar loans directly from US government agencies such as the US Export-Import Bank, the US Agency for International Development and its predecessor, the US Development Loan Fund. These include Premier Automobiles, Hindustan Motors, Tata Engineering and Locomotive Co., Delhi Cloth Mills, Hindustan Aluminium, Orient Paper Mills and National Rayon Corporation.

The United States has also been helping American firms operating in India and Indian firms associated with them by extending them rupee loans from the Cooley Fund. The Cooley amendment to US Public Law 450 (named after Congressman Harold D. Cooley, Chairman of the Committee on Agriculture of the US House of Representatives) provides that a portion of the local currency proceeds from the sale of American agricultural commodities can be used for this purpose. To date 22 firms have received loans totalling Rs 19.2 crores from the Cooley Fund.

Goodyear Tyre and Rubber Co. of India has received a large loan from the Cooley Fund for its huge rubber tyre factory at Ballabgarh near Delhi. Two other rubber tyre factories, Madras Rubber Factory and Premier Tyres, both with plants in South India, have also received credits.

Synthetic and Chemicals, which is establishing India's largest synthetic rubber factory at Bareilly, Uttar Pradesh, is the recipient of the largest loan (Rs 6.5 crores) so far extended from the Cooley Fund. Other firms who have received credits include Mysore Cements, Hindustan Aluminium, Seshasayee Paper and Board, Carrier Airconditioning and Refrigeration, and Ex-Cell-O (India).

BRIDGE & ROOF CO. (INDIA) LIMITED

The Board of Directors of the above Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a dividend of 30 per cent for the year ended 31st December, 1962.

By Order of the Board,
BALMER LAWRIE & CO. LTD.
D. MANSON
Managing Director,
Secretaries.

Branches in London, Nairobi, Mombasa, Moshi, Mbale, Mwanza, Jinja, Kampala, Kisumu, Dar-e-salaam, Narainjanj (E. Pakistan), Port Louis (Mauritius), Suva (Fiji Islands), and correspondent banks acting as agents in all the other principal cities of the world.

CHAIRMAN'S SPEECH:

The Buckingham & Carnatic Company Limited

CHAIRMAN'S SPEECH

Presiding at the Forty-second Annual General Meeting of the Shareholders held at the Company's Office at Madras on Monday, 27th May, 1963, Mr. D. W. Law said:—

Gentlemen,

It is my pleasure to welcome you to the Forty-second Annual General Meeting of The Buckingham & Carnatic Co. Ltd. Since you have had an opportunity to study the Directors' Report and the Accounts for the year ended 31st December, 1962, I shall, with your permission, take them as read.

TRADING CONDITIONS AND THE HOME MARKET

Trading conditions were generally satisfactory and gross sales were again a record. This is an encouraging indication that production continues at a high level and that the quality of your Company's products attracts a full measure of consumer demand. On the other hand, the accounts before you show that the proceeds of an increased turnover have been entirely absorbed by cost increases and it must be remembered that the selling prices of your Company's products for the home market are controlled. The margins your company can earn are, therefore, under greater pressure from rising costs than would be the case in a free market. This factor, coupled with the further costs arising from emergency legislation, will inevitably affect the results of the future.

EXPORTS

Your Company has continued to be a substantial earner of foreign exchange, but there was increased competition from other exporting countries for a gradually shrinking world market. As a result export sales fell to Rs. 1.64 crores, which is Rs. 38 lakhs less than in 1961. A severe blow, not only to your Company's export trade but also to that of many other Indian Mills, was the almost complete closure of the Ceylon market during the last five months of 1962. A resumption of exports to Ceylon on the scale previously established depends upon factors beyond our control and particularly upon the acute shortage of foreign exchange being experienced by Ceylon at the present time. Demand from Malaya and Burma has also fallen off and every effort is being made to obtain orders from these markets. I am glad to report, however, that exports to the United Kingdom increased to Rs. 24.78 lakhs, as against Rs. 19.00 lakhs in 1961.

Export incentive schemes have proved useful, but however desir-

able it is to create a reliable indigenous textile machinery manufacturing industry, it is still more important that sufficient quantities of the most modern machines from overseas are available for import. I therefore doubt the wisdom of Government's decision to permit only 50% of the machinery incentives earned by exporting mills to be used for importing plant and equipment.

While the export incentive schemes applicable to cotton dyestuffs and chemicals operate successfully, greater freedom should be given to mills, which export finished goods, by permitting them to use a greater proportion of their incentive licences for their own dyestuff and chemical requirements; otherwise, although the indigenous dyestuff industry provides your Company with a considerable part of its requirements, the absence of imports of equivalent products will result in lack of competition, which in turn will result, and has already resulted, in excessively high prices being charged by the indigenous industry. The growing necessity to export finished as against grey goods makes it increasingly essential that manufacturers are able to obtain dyestuffs and chemicals at prices comparable with world price levels.

With regard to the future of exports, I expect that in normal conditions the size of the export market will continue to shrink. If, therefore, India is to retain her position as an exporter of cotton piecegoods, it is vitally necessary for the industry to lower its costs and improve the quality of its products. To achieve these objectives the industry must be equipped with modern machinery and be encouraged to increase the productivity of its labour force. Only low cost and high quality goods will sustain the interest of overseas buyers. During 1962 the ceiling prices of Indian Cotton fixed by Government were raised almost to world levels for equivalent varieties and the industry is therefore losing a valuable differential in support of the export drive.

COTTON

The 1961/62 Indian cotton crop was disappointing and the carry-over at the end of August was about 14½ lakh bales, which is 4 lakh bales less than in 1961. In spite of the introduction of a compulsory survey system by Government with the object of keeping prices below ceiling, Mills had difficulty in purchasing cotton at reasonable levels. However, this situation changed for the better in

September when Government introduced a further supervisory scheme to improve cotton marketing.

There are encouraging reports of the current crop which is estimated at 53½ lakh bales. It is therefore to be hoped that the crisis conditions which have often occurred in the past will not recur this year, although, as against this guarded optimism, the offtake by Indian Mills has grown in proportion to the installation of new spindles.

A steady and adequate home crop is of first importance to the industry and efforts to increase the yield per acre should be vigorously maintained. Yields per acre today are still far below those of other major cotton growing countries and improvement can only be achieved by intensive and scientific farming and the proper use of fertilisers. There are encouraging signs that the authorities are aware of this urgent need.

FINANCIAL INFORMATION

You will observe a substantial decrease as compared with 1961, in the Company's borrowing position on Loan and Overdraft Account, which is mainly due to stocks of cotton and finished goods being lower at balance sheet date than in 1961. The financial position of your Company continues to be strong and the modernisation and rehabilitation of the Mills proceeds as planned, being only limited, as far as imported equipment is concerned, by the extent to which machinery incentive licences can be earned.

As mentioned in the Directors' Report, Rs. 5 lakhs has been allotted to the Debenture Redemption Fund, bringing the total amount now set aside to Rs. 55.43 lakhs. With nine years remaining before the final redemption date, the Debenture Redemption Fund is being built up as planned. During the year the balance of the Fund Account was largely utilised in the purchase and cancellation of debenture scrip.

LABOUR

Proposals for the rationalisation of the Spinning Department were negotiated during the year with Labour representatives and I am glad to report that early in 1963 a settlement was signed, whereby labour productivity was improved and the savings achieved shared with the workpeople. Negotiations for rationalisation in other departments are in progress.

There has been a disturbing tendency in recent months for

minor Unions to attempt to upset the good relations which exist between the Company and its recognised Unions, by raising demands on matters which either have been settled or are under negotiation with a recognised Union. The activities of these small groups can only be classed as irresponsible and constituting a danger to production and efficiency, as well as being contrary to the Code for Discipline in Industry and the Industrial Truce Resolution. This regrettable state of affairs is not confined to your Company alone but exists throughout Industry and I hope Government will take cognisance of this threat to industrial peace and curtail the activities of these elements.

The problem of absenteeism remains with us and I regret to report no improvement in this respect in your Mills. Although certain departments carry generous leave reserves those are often exceeded and there was an appreciable loss of production due to this cause.

The manner in which the Employees' State Insurance Scheme is administered has much to do with excessive absenteeism because, in spite of representations to the authorities, workers are still granted long medical leave for minor ailments and even obtain medical leave on frivolous grounds. If does not seem to be realised that the granting of excessive medical leave increases the cost of everything the public buys. Absence from work disrupts production and increases industrial overheads.

DIVIDEND

Your Directors have recommended a final dividend of Rs. 12/- per share, which brings the total Ordinary Dividend for the year to 18% gross and maintains the increased dividend of 1961. Your Directors consider they are justified in repeating an 18% dividend as the Company has had another successful year in which shareholders should participate to the extent declared for 1961.

FUTURE PROSPECTS

1963 is expected to be a year of substantial cost increases. Not only do prices of consumable stores and materials continue to rise but the Company will be obliged to meet certain specific increases as a result of the Emergency Legislation. The first of these is in respect of the Emergency Insurance Fund and will cost over Rs. 8 lakhs per annum. Secondly, the import duties levied on various commodities have been increased and this means a fur-

ther burden of over Rs. 7 lakhs in a full year. Thirdly, the increase in excise duties will cost your Company an additional Rs. 9 lakhs.

The Tariff Commission appointed by Government to investigate, among other things, the Industry's selling prices, is expected to issue its report shortly. It is to be hoped the Commission will have given due weight to rising costs when making its recommendations for selling prices.

THE EMERGENCY

In October 1962, this great and peace-loving country was the victim of an unprovoked assault on its Northern and North-Eastern borders. The immediate and sustained response of the Indian people to this attack has evoked

the wide admiration and the cordial support of all free peoples. Requests for donations in kind and in money were made to your Board and to your Company's workpeople. Appeals to industrial workers not to raise disputes were headed. I am proud to report that the workpeople of the Buckingham & Carnatic Mills, on their own initiative, contributed to the Defence Fund the sum of Rs. 1,04,000/-. Your Company gave Rs. 1,50,000/- and collected donations from its Distributors amounting to Rs. 2,70,000/-.

As a result of the Emergency, a larger portion than usual of your Company's production is being supplied to the Defence Forces and, with other mills doing likewise, the quantum of cloth avail-

able in the market will not be as large as in previous years. Caution and prudence in consumer purchasing and in the use of cotton cloth during the Emergency are necessary if all are to obtain their fair share at reasonable prices. It is to be hoped the great efforts now being made in all industries and in all parts of the country to build up the strength of the Defence Forces will shortly reap their reward, and that India will soon be able once more to devote her entire energies to creating wealth for the benefit of her people thus providing the tools for the further expansion of her industrial structure.

ACKNOWLEDGMENT

The 1962 results would have been impossible of achievement

without the continued loyalty and efforts of the Officers and staff of your Company who, in spite of new problems and difficulties, have continued to serve with that efficiency and steadfastness which we have come to expect. I am confident you will wish to join me in expressing our thanks to them for the services they have rendered during the year.

In conclusion, I would like to record my thanks to my colleagues on the Board for their loyal support and co-operation.

NOTE:—This document does not purport to be a report of the proceedings of the General Meeting.

The Bangalore Woollen, Cotton & Silk Mills Co. Ltd.

CHAIRMAN'S SPEECH

Presiding at the Eightieth Annual General Meeting of the Shareholders held at the Company's Office, Agharam Road, Bangalore City on Tuesday, the 28th May, 1963, Mr D. W. Law said:—

Gentlemen,

I have pleasure in welcoming you to the Eightieth Annual General Meeting of The Bangalore Woollen, Cotton & Silk Mills Co. Ltd. The Directors' Report and the Accounts for the year 1962 having been in your hands for the prescribed period, I shall, with your permission, take them as read.

TRADING CONDITIONS AND THE HOME MARKET

Throughout the country the demand for your Company's products was well maintained and once again gross sales exceeded Rs. 6 crores, an achievement that reflects the continuing desire for quality textiles. However, the accounts record increasing costs and the results would not have shown an improvement but for the sale of the Hebbal plant.

In the Cotton Section selling prices are controlled and thus profit margins gradually shrink as costs rise. The products of your Union plant—"Cotswol" and "Angola", now household names throughout India—were available in larger quantities and sales rose by 28% compared with 1961, which proves the increasing popularity of these special cloths. As a result of the Emergency, Angola is being manufactured in bulk for the Defence Services; thus supplies of Cotswol for the civilian market will be reduced in 1963.

"Vaisity"—a Terylene Woollen Suiting—was introduced and in spite of teething troubles, satisfactory sales were made. The output of this fabric was limited only by processing capacity which

is our intention to enlarge as supplies of Terylene staple fibre become more readily available, for I am confident an excellent future awaits this new development.

In the Silk Section looms worked to capacity and sales were 20% higher than in 1961. While much progress remains to be made by the indigenous sericulture industry, it was possible by careful and discriminating selection to obtain from Mysore State adequate supplies of spun and filature silk, to augment the limited allocation of imported spun and filature silk granted to your Company.

EXPORTS

Shipments of cotton textiles overseas were slightly less than in 1961 and were on the whole disappointing. There is no doubt that the closing of the Ceylon market during the latter part of the year affected our business.

To the extent the specified export target of 12½% of sales value was not achieved, your Company was penalised, having to contribute Rs. 1.73 lakhs to the Indian Cotton Mills Federation. Overseas competition is becoming more severe each year and it will be difficult to maintain exports at present levels, especially if the Ceylon market continues as a minor importer instead of a substantial one as in the past. Efforts to increase sales in other markets will be intensified.

Healthier results were achieved by the Union Section as exports of Cotswol and Angola increased from Rs. 4 lakhs in 1961 to Rs. 7 lakhs. Soviet Russia placed repeat orders, and at last efforts to break into the Canadian and American markets are showing signs of success.

Incentive schemes proved of value, but I consider exporters of finished goods should be more

liberally treated and should be able to obtain their dyestuff requirements at prices approximating to world rates, which after all are those enjoyed by their competitors overseas.

COTTON

In 1961/62 the Indian cotton crop did not come up to expectations and the carry-over was below that of the previous year. Measures were introduced to keep prices below ceiling and towards the end of the year as a result of Government introducing a further supervisory scheme, the situation improved. I am happy to report the current crop is estimated to be 53½ lakh bales, which should suffice. If due importance is attached to measures designed to increase the cotton yield per acre, there is no reason why, in spite of the growing demand for Indian cotton by spinners and weavers, recurring shortages should not be avoided.

IMPROVEMENTS.

For balancing purposes your Company has been permitted to install another 5200 spindles in the Cotton Section and orders for the necessary Spinning frames have been placed with indigenous manufacturers.

Two imported Sizing machines were installed during the year. These machines have considerably improved the productivity and efficiency of the section concerned.

In replacement of the 61 Woollen looms rendered inoperative by the sale of the Hebbal plant, an equivalent number of looms will be added to the Union Section; 27 looms have already been installed and a further 34 looms are expected during 1963.

Modernisation plans for the Carding and Spinning Sections are in hand. New equipment is

on order for the Dyehouse so as to maintain the efficiency and modernity of this most important department.

For some years now difficulties in obtaining adequate supplies of coal have caused repeated inconvenience and the risk of production being interrupted. In 1961 it was decided to convert the Mill boilers from coal to oil firing. By the end of 1962 this conversion was virtually completed and now all boilers are oil fired.

FINANCIAL INFORMATION

The Company's financial position continues to be excellent.

DIVIDEND

A final dividend of Rs. 12/- per share has been recommended, bringing the total ordinary dividend for the year to 18% gross, which is the same as that declared for 1961. Your Board considers a repetition of the previous year's dividend is justified by the results.

FUTURE PROSPECTS

The Emergency, and legislation which has followed, has resulted in cost increases in many items, including contribution to the Emergency Insurance Fund and additional Excise and Import duties. It is thus to be hoped that the Tariff Commission, whose report is shortly expected, will have taken special note of rising costs when making its recommendations for cotton piecegoods selling prices.

Nevertheless I am confident your plant will work to capacity this year. It is hoped Government will find it possible to issue Import Licences to provide raw materials for the manufacture of a reasonable quantity of Cotswol and Angola for civilian consumption. These fabrics have now established themselves as necessities, especial-

ly during the cold weather months in Northern India.

LABOUR

I am happy to report cordial relations with labour have persisted but, as in other mills, excessive absenteeism remains a problem; in fact it is a grave social problem and it is retarding India's advance by losing to the country untold man-hours.

THE EMERGENCY

Much has already been said concerning the unprovoked attack on India's borders which took place towards the end of the year. The response of all sections of the community has been remarkable and much admired by all free peoples. The Company's employees spontaneously donated Rs. 34,000, the Company contributed Rs. 1,00,000 and the dealers in Mysore State Rs. 20,000 to the Defence Fund.

ACKNOWLEDGEMENT

In conclusion, I am sure you will wish to join me in expressing thanks to all the Officers, Staff and employees who have contributed to the satisfactory results. I would also like to express my appreciation to my colleagues on the Board for their support and co-operation throughout the year.

NOTE: This document does not purport to be a report of the Proceedings of the General Meeting.

BRITISH INDIA ELECTRIC CONSTRUCTION CO. LTD.

NOTICE is hereby given to the members of the above-named Company, that the Annual General Meeting (being the seventy-ninth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Thursday, 27th June, at 3.15 p.m. to consider the Accounts of the Company for the year ended 31st December, 1962, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 13th June, 1963 to 27th June, 1963, both days inclusive.

By Order of the Board.

BALMER LAWRIE & CO. LTD.

D. MANSON

Managing Director,
Managing Agents.

21, Netaji Subhas Road,
Calcutta, 22nd May, 1963.

Note: A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

Braithwaite & Co. (India) Limited

STATEMENT By Mr J. V. JARDINE PATERSON, CHAIRMAN

TO THE

Thirty-third Annual General Meeting of Members to be held on 20th June, 1963

PROFITS, TAXATION AND DIVIDEND

The profit for the year, after providing Rs. 9,96,276 for depreciation and transferring Rs. 4,60,976 to Development Rebate Reserve amounted to Rs. 1,06,44,579. This is indeed a satisfactory increase over preceding years and again reflects the benefit to be obtained from the policy which the Company has pursued of ploughing back money for the continual modernization and expansion of production facilities. It is unfortunate that this excellent result has been offset to a large extent by the Super Profits Tax introduced in 1963, and it will be noted that in addition to Taxation of Rs. 58,42,526 the Company will be liable for Super Profits Tax of Rs. 16,75,000.

As explained in the Chairman's Statement last year, it is necessary to build up again the Company's reserves to provide for the amortisation of the foreign exchange loans which are being finalised and for the rupee requirements of the expansion plan. It is in these circumstances, therefore, and taking into account the former provision no longer required and the changed accounting procedure with regard to the provision for gratuities, that the Directors have recommended the transfer to General Reserve of Rs. 28,80,217 leaving available for payment of dividends the sum of Rs. 14,90,000. The amount available for payment of the Ordinary dividend is approximately the same as last year and the first interim dividend on the Redeemable Preference shares amounting to Rs. 90,000 has already been paid. It is the Directors' intention that in accordance with normal practice the Preference dividend should be payable half-yearly at the end of June and December.

PRODUCTION AND DEVELOPMENT

CLIVE WORKS: In spite of the shortages referred to in the Directors' Report, total output was 27,479 tons, which was some 16% above the best previously achieved in 1957. It will be remembered that the available capacity in the Structural Shop was not fully booked in 1961 and it is to be regretted that in spite of an increase in output of nearly 50% in 1962, there was still idle capacity. This situation has, however, been general throughout the industry and has been the subject of many reports in the Press and elsewhere. With the further demands that are being made as a result of the National Emergency and the determination that the industrial development of the country should

not be slowed down, it is now more than ever essential that Government should establish an efficient organisation to lay down priorities for orders that are placed and that all the necessary raw materials should be made available as soon as these priorities have been decided.

Notable contracts that have been booked during the year for the Structural Shop either directly or as a constituent of the Braithwaite, Burn and Jessop Construction Company Limited are:—
1,800 tons for extensions to the Indian Tube Company's plant at Jamshedpur.
2,000 tons for the double track main line girders for the Yamuna Bridge, New Delhi.
7,000 tons for the Alloy Steel plant at Durgapur.

Wagon building capacity is fully booked for a further eighteen months.

ANGUS WORKS: Reference is made in the Directors' Report to the delay experienced in receiving from Government the import licences required for the machine tools and equipment necessary for the Company's expansion. It will be remembered that the Chairman referred last year to the application which had been made for these licenses and expressed the hope that they would be forthcoming shortly after our foreign exchange requirements had been provided for. Owing to procedural delays, the final sanction of the Reserve Bank of India was not received until March this year since when there has continued to be an unfortunate delay in issuing of the required licences.

Progress in the Works has been greatly restricted by the limitations of the foundry caused by the shortage of pig iron and coke. There was a virtual shutdown in that department for three months on this account and throughout the year the quality of coke received has resulted in considerable increases in costs. Some improvement is hoped for, following allocations under priority for orders linked to defence requirements. The housing development and expansion of essential services that has been undertaken is handicapped by the shortage of cement and steel and this position is unlikely to improve.

Despite difficulties, however, satisfactory progress is being made and it is hoped that turnover will show an increase of at least 50% during the current year.

EXPORTS

The Company's exports continue to be limited to Pressed Steel Tanks and we are grateful to our Technical Consultants, Braithwaite and

Co. Engineers Limited who have continued to co-operate closely with us in the development of the South-East Asian markets. I would again suggest that there is scope for the expansion of exports of other engineering products if the raw materials required by the industry are made available. This obviously can only be achieved through imports but it could be expected to result in a net gain in foreign exchange if not in a profit for the exporting company.

LABOUR

Relations with labour have continued to be good and the workers have been able to earn high rates of pay through production bonus. The quantum of annual bonus to be paid was settled under a bipartite agreement and the Company has made every effort to ensure implementation of the Code of Discipline. It is to be hoped that no disputes will disrupt these cordial relations which must be recognised as being the basis for the continued prosperity of the Company and all its employees.

MANAGEMENT AND DIRECTORS

I would like again to pay tribute to our Managing Director, Mr. J. E. Birgham, who has worked tirelessly throughout the year to further the interests of the Company. The results of his work are to be seen in the increasing prosperity of the Company and to him and his senior executives, Messrs. Sawtell, Tayal and Morley must go the gratitude of all shareholders for what has been achieved. Our thanks are also due to the other executives and members of the staff of the Company, who have all played their part in producing the satisfactory results which are now before you.

Finally, I have to record the retirement from India of Sir John Brown who for the last five years has been Chairman of the Company. We are most grateful to him for his invaluable work during those years in guiding the development and expansion of the Company. We were particularly fortunate to have his specialised knowledge at our disposal at a time when the lease of the Angus Works was finalised, the Company's capital was re-organised and very large foreign exchange loans were negotiated. I am pleased to be able to tell you that he will be visiting India from time to time in the years ahead and that his valuable experience and advice will be available in the interests of the further development of the Company.

Note: This does not purport to be a record of the Proceedings of the Annual General Meeting.

Markets

JUTE Easy Trend

The jute goods market has been showing an easier trend last week and price movements have been dictated most of the time by speculative interests. Foreign enquiries were few and far between while internal offtake too was on a meagre level although from time to time there had been rumours of a large Government tender for B Twills. Bull operators have been considerably subdued since the marked improvement in the power supply position. Contrary to earlier expectations, the disabled generator at the CESC has been recommissioned in record time and consequently power supply has improved. This has upset calculations of the speculators who are now convinced that production in May will not show much diminution. It would appear that shippers are also not in a mood to extend commitments in view of the various difficulties they have come to encounter recently. It has been pointed out that shippers are put to considerable financial strain under prevailing procedures, and regulations relating to exports as well as the system of levying excise duty on all goods including those intended for export. Another develop-

ment which pertains to freight is also causing concern to shippers as well as exporters of jute goods. The indication of a 15 per cent increase in freight rates on cargoes shipped from India to the UK and the Continental countries has come as a rude shock to shippers all over the country and to the jute industry in particular because it is mainly an export industry with a sizable trade with the UK and the continent. In these regions Indian jute goods are already in a difficult position what with the growing competition from Pakistan and the indigenous industries. But it is not the competitive aspect that is important. For if the increase in freight will adversely affect India, it will be equally detrimental to Pakistan and the European jute goods industry which has to get its raw material from Pakistan. What is likely to happen in the event of a rise in the freight of westbound cargo is that European consumers of jute goods will find them too costly and consequently will tend to switch over to substitutes. Such a development will have repercussions on the jute industry as a whole.

The Indian jute industry and trade are worried over the continued silence of the authorities regarding the ever growing competition of Pakistan in the sacking markets. It has been urged by the spokesmen

of the industry that Government should take early remedial steps to place the Indian industry on a par with the Pakistan industry in the matter of competitive capacity. Rumour has it that Government is averse to giving a subsidy in view of the fact that it has itself represented to the GATT and World Bank that Pakistan's export bonus scheme is a violation of international conventions. It is believed however that a subsidy scheme that will have to be operated by the industry itself is the only solution pending negotiations with Pakistan as suggested by the Shrivatsava Committee.

Conditions in the raw jute market continue to be quiet in the absence of sustained mill buying. Even the fact that arrivals have markedly diminished in the course of the past few weeks has failed to improve the underone. Quality jute however is in good demand at enhanced price levels but it would appear that low

quality jute holders are having difficulty in disposing of their stocks even at discounted rates. Interest is now centred on new crop jute, trading in which however is yet to commence. Despite the recent cyclone in parts of Pakistan and stormy weather conditions in some of the jute growing regions in India, the outlook for the new crop is believed to be good. It has been officially indicated that sowing this season has been on a larger scale than in the previous year. Weather has also been exceptionally good so far though here and there a larger amount of rain or sunshine would have been helpful.

*

Move to Rationalise Quality and Grading of Jute

Streamlining of the jute purchase machinery to maintain the minimum operational price next season

SHREE GOPAL PAPER MILLS LTD.

NOTICE

Notice is hereby given that the 26th Annual General Meeting of the shareholders of the Company will be held at the Registered office of the Company at 'Thapar House', 25, Brabourne Road, Calcutta, on Wednesday, the 26th June, 1963 at 3-00 P.M.

1. To receive and adopt the directors' report and the audited accounts of the Company for the year ended the 31st December, 1962.

2. To declare dividends. The directors have recommended dividends at the following rates:

(i) 7.80% plus 2% per annum subject to tax on First Preference Shares.
(ii) 9.10% per annum subject to tax on Second Preference Shares.
(iii) 17.67% per annum subject to tax on Ordinary Shares.

3. To elect directors in place of those who retire, Seth H. P. Poddar, Seth B. P. Poddar and Seth R. K. Jaidka directors of the Company, being longest in office, retire and being eligible, offer themselves for re-election.

4. To appoint auditors and to fix their remuneration. The present auditors, M/s. Price, Waterhouse, Peat & Co., retire and are eligible for re-appointment.

5. (a) Special business: To pass the following resolution with or without modification as an ordinary resolution:

RESOLVED: "That subject to the approval of the Central Government sanction be and is

hereby accorded to the investment by the Company in Kulu Valley Development Co. Limited, to the extent of Rs. 1,25,000/- in 1,250 shares of Rs. 100/- each at par."

5. (b) To pass the following resolution with or without modification as a Special resolution:

RESOLVED: "That payment of commission to the directors under Article 126(c) of the Articles of Association of the Company for the period, 25.6.61 to 31.12.61 be and is hereby approved, confirmed and ratified."
6. To transact any other business that under the Articles may be transacted at the Annual General Meeting.

NOTE:—

(i) The Share Transfer Books of the Company will be closed from 17-6-63 to 26-6-63, both days inclusive.
(ii) A member entitled to attend and vote at the meeting, is entitled to appoint a proxy who need not be a member, to attend and vote, instead of himself.
(iii) The Explanatory note pursuant to section 173 of the Companies Act, 1956, in respect of the above resolutions has been sent to all the shareholders along with the notice.

SHAW WALLACE & COMPANY LIMITED

NOTICE is hereby given that a General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 4, Bankshall Street, Calcutta on the 28th day of June, 1963 at 3 p.m. to consider and, if thought fit, to pass with or without modification the following Resolutions:

As an Ordinary Resolution:

"RESOLVED that approval is hereby given to a proposed scheme of arrangement for amalgamation with Walker & Greig (Coonoor) Ltd. whereby the whole undertaking, property and liabilities of Walker & Greig (Coonoor) Ltd. shall be transferred to this Company"

As a Special Resolution:

"RESOLVED that the following new sub-clauses be inserted in Clause 3 of the Memorandum of Association of the Company and numbered as sub-clauses (3A), (3B) and (3C):

(3A). To carry on all or any of the business of constructional engineers, structural engineers, mechanical engineers, iron masters and iron foundries, galvanisers, smelters, public works and general contractors, masons and masonry and building contractors, electrical engineers and electricians, suppliers, generators, accumulators of electrical energies, power, etc. general engineers, civil engineers, tool makers, brass foundries, metal workers, boiler-makers, millwrights machinists, iron and steel converters, smith, woodworkers, builders, painters, metallurgists, crane makers, water supply engineers, shipbuilders, shipwrights, dredgers, tug owners, wharfingers, gas generator and suppliers, framers, printers, carriers and merchants, salt refiners, manufacturers of chemicals and chemical engineering equipment, oil refiners, colliery proprietors and coal masters, coal and coke merchants, miners, smelters engineers, lime-burners and the businesses of forging pressing stamping structural and rolling works of all kinds.

(3B). To carry on all or any of the businesses of manufacturers, importers, exporters, buyers, sellers, repairers, converters, manipulators of and dealers in electrical and constructional and mechanical machinery, iron ore, plants, other machinery, structurals

and rolling works of all kinds, iron and steel rails, bars, apparatus, tools, implements, appliances, accessories, ores and metals, salt hard iron, agricultural implements of all kinds, cranes, bridges, and steel frame buildings, iron and steel structures of all kinds and other articles, steel sleepers goods or commodities of all kinds necessary or convenient or conducive to the attainment of the above objects of the Company and the business of forging.

(3C). To acquire mines, mining leases, mineral rights and mining claims, mining rights and to prospect for, to search for, crush, win, get, quarry, smelt, calcine, refine, dress, amalgamate, manipulate and to carry on any business relating to coke, coal and coal products, ore, metal stones and mineral substances of all kinds, and to carry on the production, distribution, consumption, manufacture, preparations of any other materials minerals, and any other prospecting, mining or metallurgical operations, which may be usefully or conveniently combined with any business herein mentioned or any contracts undertaken by the Company, and either for the purpose of such contracts or as an independent business, and to buy, sell, manufacture, conveniences, provisions, and things capable of being used in connection with prospecting, mining or metallurgical operations or required by workmen or others employed by the Company.

By Order of the Board,
S. M. Smith
Managing Director.

Note: (i) A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote on a poll instead of himself and the Proxy need not be a Member of the Company.

(ii) In connection with the business to be transacted an Explanatory Statement under Section 173 of the Companies Act, 1956 has been forwarded to all shareholders of the Company along with the notice.

was among the subjects discussed by the reconstituted Central Supervisory Body for Jute at a meeting in Calcutta this week. It was announced that sowings for the new crop in West Bengal, Bihar and Orissa were slightly higher than last year's. The decision was taken to set up an Export Committee with Mr G.C.L. Joneja, the Jute Commissioner, as chairman to evolve a more scientific basis for the quality classification and grading of jute that would be acceptable to all interests. With a view to providing adequate retting facilities to jute growers in areas with uncertain rainfall, the question of sinking shallow tube-wells along with retting tanks was considered. The Supervisory Body favoured the intensification of jute development efforts in Orissa's Sambalpur area to take advantage of its natural facilities for obtaining a very high acre yield.

TEA

Output Improves

ACCORDING to the latest figures, Tea production in South India has increased to 21.5 million pounds in April from 15.4 million pounds in the previous month and 20.9 million pounds in April last year. This put the total output, in the first four months of the year, higher at 167.1 million pounds as against Rs 160.3 million pounds in January-April, 1963.

Ceylon has finished the first quarter of the year with an increase in production of over 4.5 million pounds over the figure for the same period of last year. Total production, in the first quarter, is 115.67 million pounds as compared with 111.12 million pounds in the corresponding period of last year.

Production in East Africa increased to 5.76 million pounds in February from 5.39 million pounds in the corresponding month of last year. In the first two months of the year, however, the East African tea output is lower at 11.76 million against 11.98 million pounds in the similar 1962 period.

In London auction, offerings were 25,839 packages including 14,850 packages from Northern India. Good liquoring Assams continue to dominate the sale and prices for these ruled steady for medium descriptions. The market met with very little support and a falling away of 1d to 3d was recorded. Teas from the Doars were also somewhat neglected and prices were a full penny per pound below those ruling last week. The rate for Plain Broken Pekoe was quoted at 2sh 10d.

A peculiar feature of the tea sales in London this year was that South Indian averages improved for the sales from January to 10 May 1963, whereas the averages for North Indian and Ceylon teas declined. North India with a smaller crop increased the offer-

ings in London, while Ceylon followed suit. South India offered less and offers of East African teas were markedly below last year's. But the increase of offers through Mincing Lane has been achieved by a greater depletion of stocks at home in Calcutta.

With arrivals of 57.11 million pounds in March 1963, total tea imports into the UK, during the first quarter of the year, increased to 163.79 million pounds from 158.76 million pounds in the corresponding period of the previous year. With exception of Pakistan which supplied only 644,370 pounds in the period under review against 5.78 million pounds in January/March 1962, imports from all other sources showed an improvement. Arrivals from India and Ceylon increased from 87.32 million pounds and 40.91 million pounds in January/March 1962 to 89.06 million pounds and 41.36 million pounds respectively in the period under review.

With larger arrivals of 15.11 million pounds in March 1963, tea imports into the USA, during the first quarter of the year, were higher at 33.94 million pounds as against 31.07 million pounds in the corresponding period of last year. Tea supplies from Ceylon—the major supplier—declined from

SHAW WALLACE & COMPANY LIMITED

NOTICE is hereby given that the Seventeenth Annual General Meeting of the Members will be held at the Registered Office of the Company, 4, Bankshall Street, Calcutta on 28th June, 1963 at 3-30 p.m. for the following purposes:—

- (1) To consider the Profit & Loss Account for the year ended 31st December, 1962, the Balance Sheet as at that date and the Reports of the Directors and the Auditors
- (2) To declare a Dividend on the Ordinary Shares.
- (3) To appoint Auditors and to fix their remuneration.
- (4) To elect Directors in the places of three Directors retiring.

The Share Transfer Register of the Company's Ordinary Shares will be closed from 19th June to 28th June, 1963, both days inclusive.

N.B.—A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,

D. A. HOUGHTON
Calcutta Director & Secretary.

4, Bankshall Street,
Calcutta.

Dated, 15th May, 1963.

12.06 million to 11.84 million pounds. Arrivals from India, on the other hand, increased from 7.51 million pounds in the first quarter of 1962 to 9.33 million pounds in the period under review.

Sugar—From Surplus to Scarcity

THE turnaround in sugar from a state of surplus to one of acute shortage has been so sharp that it may be worth recalling how it has occurred. Over the past few years, the growing of sugar has been subsidized in many countries, either as a result of direct Government action as in Europe or as a result of bilateral buying arrangements. This led to a general overproduction of sugar. At the same time, when the US severed its relationship with Cuba, the Cubans turned to Russia to buy their sugar. Other countries in the Communist bloc also found that they had surplus supplies, perhaps because Russia was buying less from them and they likewise unloaded it in the West at cut rates.

The result was that the world market was forced down to extremely low levels and consumption rose sharply, especially in the poorer countries where sugar is still something of a luxury. The next development was, however, a sharp drop in world supplies. This arose in two ways. First, bad weather has hit the European beet crops. Secondly, and more important, sugar production in Cuba has fallen away rapidly. The present situation in Cuba is not one that can be easily rectified.

Thus, on present evidence, sugar looks like remaining in short supply for as long ahead as can be foreseen. Looking further ahead, it seems likely that the current high price of the sweet commodity will encourage higher production in a number of countries and it can also lead to a fall in consumption. The British Sugar Board, sole importer of sugar into the British Isles, has quoted a price of £101 per ton—marking an increase of another £1 a ton in the rapidly spiralling sugar price following a general world shortage. It is understood that the British Government is examining ways of preventing the rise in prices from causing a rise in retail prices. Trade circles in London have a feeling that it may be difficult to see sugar fall much below £70 a ton over the next year or so.

Naturally, there have been large enquiries for sugar exports from India. But, on account of a sharp decline in output during the current season, it has not been possible to take advantage of the high prices in the international market. Even if sugar can be sold on a

very profitable basis in the present market, it will be risky to step up exports in the absence of a clear indication that the output in 1963-64 will be very satisfactory.

Efforts should, therefore, be made to start early crushing in Northern India and also give encouragement to the mills in the Deccan and the Southern states to produce larger quantities. If these are done, it will be possible to secure larger foreign exchange earnings by effecting larger exports while prices remain at a high level. Apart from the fact that a serious shortage of sugar in the next season can be avoided only with an increase in the output to near 3,500,000 tons, the opportunity afforded for stepping

up exports of sugar should not be missed. If world prices remain around even £80 per metric ton later in the year, Indian mills may be tempted to sell larger quantities for export as a greater margin of profit will be available than on internal sales. The developments in the next few months will have great significance.

The rise in the cane price may not by itself produce the target set for sugar production. The producers in Uttar Pradesh, Bihar and the Punjab have been disappointed, because the exfactory price of the commodity for these territories has been fixed below the level of a fair price which was recommended by the Tariff Commission. Judging by the excellent

output in 1959-61, it looks as if an incentive for producing more needs to be offered. Steps should also be taken to stop the diversion of cane to the manufacture of gur and khandsari.

This may probably be the reason that the Uttar Pradesh Government has decided not to issue any new licences for the manufacture of khandsari in the whole of the reserved areas this year with a view to boost sugar production in the State. The existing units of khandsari will, however, continue to function. It is understood that sugar production in the State, during the year 1963-64, cannot be expected to be greater than 10 to 12 per cent of the 1962-63 season's production.

BRAITHWAITE & CO. (INDIA) LIMITED

NOTICE

NOTICE is hereby given that the Thirty-third Annual General Meeting of the members of Braithwaite & Co. (India) Limited will be held at the Registered Office, 4, Clive Row, Calcutta-1, on Thursday, 20th June 1963 at 11 a.m. to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1962.
2. To confirm the interim dividend on the Preference shares and to declare a dividend on the Ordinary shares.
3. To elect Directors in place of those retiring and in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required by section 281 of the Companies Act, 1956, has been received by the Company:—

"That pursuant to the provisions of section 281 of the Companies Act, 1956, Sir Asoka Kumar Roy, who has attained the age of 76 years and who retires from the Board by rotation, be and is hereby re-appointed a Director of the Company and it is hereby specially declared that the age limit for directors prescribed by section 280 of the Companies Act, 1956, shall not apply to him."

4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and if thought fit to pass with or without modification the following resolutions of which numbers 5, 6 and 7 will be proposed as ordinary resolutions and number 8 as a special resolution.

5. (As an ordinary resolution)
"That pursuant to the provisions of section 294 of the Companies Act, 1956, the

appointment of Marshall, Sons & Co. (India) Limited in terms of an agreement executed by the Company on the 25th day of February, 1963, as the Company's sole selling agent for the Overhead Travelling Cranes, Level Luffing Cranes, Locomotive Steam or Diesel Cranes and Spare Parts for such cranes manufactured by the Company for the whole of the Union of India be and is hereby approved."

6. (As an ordinary resolution)
"Resolved that in variation of the ordinary resolution passed at the annual general meeting held on 29th March, 1957 and in compliance with clause (d) of sub-section (1) of section 293 of the Companies Act, 1956, the Company do hereby consent to the Board of Directors of the Company borrowing from time to time any sum or sums of money which together with moneys already borrowed by the Company (part from temporary loans obtained from the Company's Bankers in the ordinary course of business) exceeds the aggregate for the time being of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose, provided that the total amount of moneys borrowed by the Board in excess of the limit prescribed by clause (d) of sub-section (1) of section 293 of the Act shall not exceed Rs. 1,50,00,000/- at any one time."

7. (As an ordinary resolution)
"That consent be and is hereby accorded to the creation of first legal mortgages of all present and future immovable pro-

perties of the Company in favour of the Commonwealth Development Finance Company Limited and the Industrial Credit and Investment Corporation of India Limited so far as and to the extent (if any) that the creation of such mortgages may be deemed to be a disposition of the undertaking of the Company within the meaning of section 293(1)(a) of the Companies Act, 1956."

8. (As a special resolution)
"Resolved that the regulations contained in the printed document submitted to the Meeting and for the purpose of identification signed by the Chairman thereof be and the same is hereby approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of all existing Articles thereof."

The Transfer Books of the Company in respect of the ordinary shares will be closed from the 6th June 1963 to the 20th June 1963, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and the proxy need not be a member.

Payment of such dividend as may be declared on the ordinary shares will be made on or after 27th June, 1963 to those members whose names are on the Company's register on the 20th June, 1963.

By Order of the Board,
Y. S. TAYAL
Secretary.

4, Clive Row CALCUTTA,
9th May, 1963.

"Note: The Explanatory Statement pursuant to section 173 of the Companies Act, 1956 has been forwarded to the members of the Company."

PEPPER

Fall in Prices

The steady decline in Pepper prices has perturbed a section of the trade. In the Cochin market, the rate for the ready position is quoted around Rs 287 per quintal. The fall in prices has not only failed to attract overseas buyers; but has actually induced them to keep out of the Indian market in anticipation of a further fall in prices.

The present weakness of the market in the face of smaller current crop and a general shortage of supply is mainly explained by the complete absence of export demand. American buyers are interested in Singapore goods only, which are available to America at 31½ cents per pound, while the Indian shippers are quoting 32½ cents. The Communist countries, too, are reluctant to make any purchases when the prices are steadily going down. The export of black pepper from India, so far, is estimated to be 13,000 tons. The performance is not bad in itself; but the prospects for the season are considered to be bleak.

CASHWEE

There has been an improvement in the American demand for Cashew kernels. Latest offers from the USA indicate that there are buyers offerings 45 cents per pound. In contrast, the raw nut market in India is showing a declining trend. The Angoch variety, which was quoting as high as Rs 680 on 20 April, has declined to around Rs 538 today.

Buyers are not inclined to enter the market even though transactions to the tune of 40,000 to 50,000 cases had taken place during this week with the USA. Sellers in Portuguese East Africa are not interested in selling raw nut on account of the provisions of the new standard contracts, which were formulated in January last. The vagueness with which "immatures" has been defined under the contracts is said to be main reason for holding the sellers back.

Meanwhile, there are reports that the Portuguese Government are extending all facilities to exporters there towards the erection of cashew kernels processing factories. If these factories are established, it will mean a serious blow to the Indian cashew kernel interests, as India will no longer have a monopoly in the field.

COFFEE

Crop Prospects

According to reports from Cochin, most of the coffee districts in the South have received satisfactory follow-up rains and the 1963-64 crop prospects appear to be brighter. Including 15 May export sales, only 8,600 tonnes out of the 1962-63 crop were sold for

export. The total for the year was fixed at 21,640 tonnes under the International Coffee Agreement.

Internal consumption of coffee does not seem to rise as rapidly as was expected. During January/April 1963, the Board's internal release increased by 310 tonnes or by 3 per cent. A rise in annual consumption at this rate will leave a smaller surplus than will be needed to meet the export quota this year, but is still small as a rate of progress.

NON-FERROUS METALS

Mixed Trend of Prices

Prices on the Bombay Non-Ferrous Metal market showed a mixed trend. While the various forms of Copper did not disclose a definite pattern, Zinc ruled generally easy. This was due to increased selling and the absence of buying as a result of reports of larger arrivals from abroad.

The market for Lead, however, continued to rule firm on inadequate supplies and stocks against larger buying pressure. With a further rise in prices, Tin reached a new peak level of Rs 390 per 10 kg. A regular scramble for the metal, particularly in the context of defence requirements, has been witnessed. Retailers and stockists are in no mood to come forward with their offers. In view of the tight supply position in the face of all-round demand, it is felt that tin prices will continue to scale new heights in the days to come.

SILK

During the ended 17 May, in the Bangalore Silk market, flature raw silk of 20/22 Denier and cottage basin silk were quoted at their previous levels. The prices of charka raw silk showed a considerable downturn in the minimum with the exception of dupion (charka) which increased to rule between Rs 35.27 and Rs 39.68 per kg. Prices of superfine quality recorded a nominal fall to rule between Rs 88.18 and Rs 92.59 per kg. The first, second and third qualities of charka raw silk ranged from Rs 81.57 to Rs 86.00, Rs 74.96 to Rs 81.67 and from Rs 66.14 to Rs 74.96 per kg respectively.

The prices of spun silk yarn remained stationary and were quoted at their previous levels of Rs 74.96 (for 210/2s) Rs 68.35 (140/2s) and Rs 61.73 (100/2s) per kg respectively.

As regards mulberry reeling cocoons the prices at Sidlaghatta market fluctuated between Rs 4.75 and Rs 8.50 per kg, at the Channapattana market between Rs 5.00 and Rs 6.50 per kg. The prices at the Mugur market, however, remained steady between Rs 4.80 and Rs 6.00 per kg.

Though the prices of foreign race seed cocoons maintained their

previous level of Rs 6.00 to Rs 12.00 per thousand, Mysore race staged a smart recovery to increase from Rs 4.00 to 8.00 per thousand to Rs 5.50 to Rs 11.25 per thousand.

In the Bhagalpur Silk market, the prices of all the varieties at the Bhagalpur market remained steady during the week.

In the Malda Silk market, the prices of matka yarn ruled between Rs 20.00 and Rs 34.00 per kg against the price of Rs 20.00 to Rs 38.00 per kg recorded in the previous week. The prices of reeling cocoons were quoted at Rs 5.37 per kg. The prices of other varieties remained unchanged during the week.

GOLD & SILVER

Sharp Setback in Silver

In Bombay, the Silver market suffered a sharp setback on account of reduced offtake, reports of heavy arrivals and lower advices from up-country centres. There was a general feeling that the seasonal demand would be much reduced. The rate for the ready position began much lower at Rs 225.50 and, with increased offerings, dropped to as low as Rs 224. Arrivals increased to about 30 bars a day, while the offtake remained low at about 6 bars.

The Gold section was comparatively steady. Reduced offerings and continued demand though on a small scale helped not only to sustain but improve the level of prices. The tight supply position also aided sentiment. Gold was quoted at Rs 112.50 with Sovereign shedding two points at Rs 82.

OILS & OILSEEDS

Prices on the Bombay Oilseeds Exchange displayed generally a firmer tendency. The Government's decision to remove the statutory price ceiling on vanaspati sparked off a boom and rates soared to new high levels. The crushers and vanaspati manufacturers figured as sustained buyers of groundnut and groundnut oil, not only in the local market, but also in producing areas such as Saurashtra and Madras. Ready Bold was quoted at Rs 47.75 and Groundnut Oil at Rs 18.50.

Conditions in the Castorseed section remained, however, dull in the absence of incentives. There was absence of foreign demand for castor oil. Ready castor was quoted at Rs 31.50 and Castor Oil, commercial quality, at Rs 12.75.

In the Linseed section, sentiment was bullishly influenced by the sharp advance in groundnut. Higher rapeseed advices from North India and active conditions in the spot section lent further support to the market. Linseed ready was quoted at Rs 36.50 and Linseed Oil at Rs 14.50.

COTTON

Futures Rule Easy

THE cotton futures market ruled generally weak during the past week with price movements however confined to a narrow range. Lack of interest stemmed from indications that the cotton crop will be larger than estimated earlier as also from the growing belief that further imports were imminent. According to trade estimates the 1962-63 cotton crop is expected to be of the order of 55 lakh bales. With the upward revision of the crop, it is expected that the total availability of cotton will be over 80 lakh bales. It would appear that the market sentiment has also been influenced by suggestions about building a buffer stock of cotton to obviate recurrent scarcity conditions and consequent shooting up of prices. However the market seems to have ignored the decision of the Indian Cotton Mills Federation that ordinary viscose staple fibre manufactured in the country will not be suitable as a substitute or as a supplement to cotton. As a consequence of this decision, the ICMF is to request the Government not to permit the expansion of production capacity for ordinary viscose staple yarn. According to the outgoing President of the ICMF, Mr Bharat Ram, that viscose staple yarn is not suitable for blending with cotton. He has suggested that some investigation should be made as to whether the investment made in materials for producing viscose staple might not result in the production of a much larger quantity of cotton.

During the week under review the Jarilla May contract before it went off the board on Saturday last showed an irregular trend with the undertone showing a marked weakness towards the close. The Jarilla August fluctuated rather widely and developed an easier trend towards close encountering selling pressure. The contract lost several points on Wednesday to touch a low of Rs 712.75 before slightly recovering to close at Rs 713.75.

Conditions in the spot market were dull in the absence of mill interest. It would appear that in view of their comfortable stock position mills are in no hurry to extend commitments.

Except for stray enquiries from Bihar and Southern States, interest in the piecegoods market has been generally dull with demand confined to a few lines. Overseas enquiries have been few and far between. It is expected that overseas enquiries will look up following reports of an upward revision of cloth prices by Japan.

The cotton textile mills' production in April 1963 is provisionally placed at 72 million kg. of cotton yarn and 368 million metres of cotton cloth.

For the Investor

INVESTMENT COSSIP

Forward Trading

Forward trading in cleared securities may be resumed before long as some of the stock exchanges in the country have decided to accept the conditions on which Government will give permission for such resumption. The conditions suggested by Government mainly relate to margin requirements and the by-laws governing the inclusion of listed shares into cleared securities. A significant feature of the new margins is that these would be levied on total outstanding purchases and sales and not on net positions. The margins on total position have been in effect since last November. It would appear that the new regulation regarding margins is intended to be a permanent one. Although the Bombay Stock Exchange has accepted the conditions, it has represented to the Government that the conditions will be too irksome to permit of normal activity and has therefore asked for some modification. The Calcutta Stock Exchange authorities are yet (Thursday) to communicate to the authorities their acceptance. The conditions proposed by Government are evidently designed to prevent unbridled speculation. While the resumption of forward trading even under the new restrictions may help expand activity on the stock markets, there is also the possibility that free trading may encourage bears to take advantage of any temporary weakness to dominate proceedings.

That the stock market has not derived much encouragement from the Government's intention of permitting forward trading only under severe restrictions is evident from the easier trend noticeable during the past few days. Even otherwise, conditions are far from being conducive to an expansion of activity. For one thing, reports of massive build-up of the Chinese army on the northern borders has dampened sentiment and both operators and investors are, inclined to lighten commitments. For another, corporate news is not of a variety that encourages optimism. While there have been stray instances of higher dividends, the fact remains that a number of companies have been obliged to reduce dividends mainly because of the increased tax burden. The prospects of industries utilising their installed capacity in full are still uncertain what with the continued shortage of foreign exchange for essential imports. Power shortage is another impediment in the way of rising industrial production. Above all, there is the growing apprehension that the current plan projects will suffer a setback if foreign aid of the required measure is not made available for

the third year of the Plan. It would appear that, in view of the large military aid that India is seeking from the western countries, the Aid India Club at its meeting next week to decide the quantum of aid to be given may be obliged to name a figure that may be below our expectations.

★

NEW ISSUE NOTES

Bahri Automobiles

Bahri Automobiles Corporation Private Limited, Bombay, a new company, will issue capital of Rs 75 lakhs in equity shares of Rs 100/- each for cash at par. The proceeds of the issue will be used for the manufacture of bevel gears, universal joints, excel shafts, speed reduction gears, spur gears for automobiles, tractors, earth moving machines, cranes etc.

Andhra Cotton

Andhra Cotton Mills Limited (Protdatur (Andhra Pradesh), is to issue capital of Rs 25 lakhs, divided into 25,000 equity shares of Rs 100/- each, to be issued for cash, at par, of which shares worth Rs 18.50 lakhs will be offered for public subscription. The money will be used in the establishment of a cotton spinning mill with a capacity of 12,000 spindles.

National Seeds

National Seeds Corporation Limited, a Central Government undertaking, is issuing capital of Rs 20 lakhs, divided into 2,000 equity shares of Rs 1,000/- each, for cash, at par. The company was registered last March to promote production of improved seeds in the country by giving financial assistance etc.

National Buildings

National Buildings Construction Corporation Limited, Delhi, another Central Government undertaking, will raise further capital of Rs 12 lakhs, divided into 1,200 equity shares of Rs 1,000/- each, for cash, at par.

New India Spinning

New India Spinning & Weaving Mills Limited, a new company, will issue capital of Rs 40 lakhs, divided into 3,20,000 equity shares of Rs 10 each and 8,000—9.3 per cent Cumulative Redeemable Preference shares of Rs 100 each, for cash, at par. The money will be used for setting up a cotton spinning mill.

Hindustan Aluminium

Hindustan Aluminium Corporation Limited is raising further capital of Rs 400 lakhs, divided into 40,00,000

equity shares of Rs 10 each to its existing shareholders in the proportion of 33 new shares to 50 shares held, for cash, at par. The proceeds of the rights issue will be utilised for financing installation of the fabrication plant and meeting cost of the smelter expansion.

A. K. Cements

A. K. Cements Limited (proposed), a company proposed to be incorporated in Andhra Pradesh, is to issue capital of Rs 1.50 crores, divided into 1,50,000 equity shares of Rs 100 each and 25,000 cumulative preference shares of Rs 100 each, redeemable after nine years at the option of the company and carrying a dividend of 9.3% (free of company's tax but subject to deduction of taxes at source at prescribed rates) to be issued for cash at par. The proceeds will be utilised in setting up a new industrial undertaking at Bhongir (A. P.) for the manufacture of cement.

IDC of Orissa

The Industrial Development Corporation of Orissa Limited, Bhubaneswar, will issue further capital of Rs 1 crore, divided into equity shares of Rs 100 each, to be subscribed entirely by the Government of Orissa.

Otis Elevator

Otis Elevator Company (India) Limited, Bombay, is to issue Rs 15 lakhs capital in equity shares of Rs 100 each for cash, at par, of which shares of the value of Rs 9.83 lakhs will be subscribed by Otis Elevator Company Limited of USA. The proceeds will be utilised on the company's expansion programme for the manufacture of lifts.

Hooghly Docking

The Hooghly Docking & Engineering Company Limited has proposed to issue right shares, at a premium of Rs 25 per share, to those shareholders whose names are registered in the books of the company as on 26 June 1963, in the proportion of two such shares for every five shares held.

Air Control & Chemical

Air Control and Chemical Engineering Company Limited is offering, for public subscription, Rs 49 lakhs in equity shares of Rs 100 each, at par. The subscription list will open on 30 May and close on 10 June, but not before 5 June. The entire public issue is underwritten. A sum of Rs 25 per share is payable with application; Rs 25 on allotment and the balance in subsequent calls. The issued and subscribed capital is Rs 10 lakhs. Out of the present issue of Rs 90 lakhs, Rs 5 lakhs is taken up by Sheldons Engineering Company Limited of Canada; Rs 50,000 by Air and Refrigeration Corporation of the USA; Rs 35.50 lakhs by the directors, their friends and their associates. The company is setting up an engineering unit with an up-to-date sheet metal shop and machine tool shop

and foundry at Devdi, near Ahmedabad.

Borosil Glass

The Borosil Glass Works Limited is offering, for public subscription, 38.25 lakhs in equity shares of Rs 10 each. The subscription list will open on 27 May. A sum of Rs 2.50 per share is payable along with the application and the balance on allotment. The authorised capital is Rs 2 crores and the issued capital Rs 1.5 crores. Corning Glass Works Limited of the US, foreign collaborators in this project, will hold 49 per cent of the equity capital. Apart from the supply of technical know-how and assistance, they will also provide machinery and equipment valued at Rs 58.50 lakhs. The factory is situated at Marol, near Bombay and construction work is progressing. The plant is expected to go into production in December. The new factory is so planned as to provide for future expansion.

Hindustan Polymers

Shree Ram Mills Limited will be sponsoring a new company, Hindustan Polymers Limited, for constructing a big plant in Visakhapatnam for the manufacture of 7,500 tons of polystyrene and its copolymers annually. The raw material required will be alcohol from molasses. A refinery having a capacity of 1.5 million gallons annually is proposed to be set up for this purpose. The cost of the project this purpose. The cost of the project The new company will have the advantage of technical collaboration with Distillers Company Limited of UK. Technical assistance will be provided by Universal Oil Products Company Inc., of the USA, while Power Gas Corporation of the UK will supply plant and equipment on a turn-key basis. The Central Government has granted the necessary licence and also approved the terms of collaboration with foreign interests. The foreign exchange outlay is expected to be Rs 2.36 crores inclusive of all charges.

The factory is expected to be completed in the next two years, while the required capital from the public may be raised towards the end of the year. The issued capital will be Rs 3 crores in equity shares of Rs 100 each, out of which 20,000 equity shares will be allotted to Distillers Company of the UK. The public may be asked to subscribe for shares of the value of Rs 1.27 crores.

Seshasayee Wire Ropes

Seshasayee Wire Ropes Limited has come on the market for raising Rs 27.80 lakhs in equity shares of Rs 10 each, at par, from the public. This part of the issue is completely underwritten. Out of the issued capital of Rs 50 lakhs, shares of the value of Rs 15.25 lakhs have been subscribed by the directors and their friends, while 67,000 shares have been reserved for allotment to the Japanese collaborators. Two Japanese firms will be helping the company to establish the factory in Kerala for producing steel wire ropes of various kinds. The plant and machinery will be supplied by one of the Japanese collaborators.

INVESTMENT NOTES

Andhra Cement

It is learnt that the Andhra Cement Company Limited has a scheme for establishing a sponge iron plant in two stages by making suitable modifications to the existing rotary kilns. An industrial licence has been obtained from the Government for this purpose. In the first stage, a capacity of 40,000 metric tons will be installed and, in the second stage, an additional capacity of 40,000 metric tons, making a total of one lakh metric tons. The negotiations for purchasing the required capital equipment are being carried on. Details of the scheme will be made known after the arrangements have been finalised.

★

INVESTMENT BRIEFS

Tata Mills Limited has reduced the dividend from Rs 5.50 to Rs 5.00 per share, taxable, for 1962.

Svadeshi Mills Company Limited has reduced the dividend from Rs 19 to Rs 17 per share, taxable, for 1962.

Ahmedabad Advance Mills Limited has reduced the dividend from Rs 12 to Rs 11 per share, less tax, for 1962.

Modern Mills Limited has maintained the dividend at Rs 6 per share, less tax, for the year ended 31 October 1962.

Cambodia Mills Limited, Coimbatore, has reduced the dividend from 12 per cent to 9 per cent, less tax, for 1962.

Indian Standard Wagon Company Limited has announced a taxable dividend of 20 per cent (including a bonus of 5 per cent) on the increased capital, for the year ended 31 March 1963 as against 28.5 per cent, taxable, paid on the old capital.

Bowreah Cotton Mills Company Limited has proposed a taxable dividend of Rs 1.50 per share, taxable, on the increased ordinary capital as against Rs 2.00 per share, taxable, on the old capital.

Dunbar Mills Limited has reduced the dividend from Rs 2.00 to Rs 1.50 per share, less tax, for 1962.

Vijayeswari Textiles Limited has raised the dividend from 7½ per cent to 10 per cent, less tax, for 1962.

Devashola Tea has reduced the dividend from 20 to 15 per cent, taxable, for 1962.

Highland Produce Company Limited has repeated the dividend at 15 per cent, less tax, for 1962.

Gnanambika Mills Limited has reduced the dividend from 10 per cent to 7½ per cent, less tax, for 1962.

Karur Vysya Bank Limited has decided to revise the dividend on the ordinary shares from 12 per cent to 8 per cent, taxable, for 1962 due to the heavier liability towards taxation.

★

BALANCE-SHEET REVIEWS

Textile Sheets

Swan Mills Limited has reported big increase in its net profit, before providing for depreciation and taxation, for the year 1962, to Rs 47.20 lakhs from Rs 32.26 lakhs. But the benefit is derived by the Exchequer as the provision for taxation is as much as Rs 19.69 lakhs (9.35 lakhs). The amount set aside to Deprecia-

tion is Rs 11.51 lakhs (Rs 11.92 lakhs) and Development Rebate Reserve Rs 1.92 lakhs (Rs 3,000). There is additional provision for taxation in respect of previous years amounting to Rs 1.23 lakhs and towards bonus shares for Rs 3 lakhs. It has, therefore, been necessary to reduce the Ordinary dividend to Rs 21.60 per share from Rs 36 per share, taxable. The dividend amount is, however, unchanged at Rs 12.96 lakhs on account of a higher capital ranking for dividend. Thus, it has not been possible to transfer any sum to reserves in spite of an increase in profits by nearly 50 per cent.

The net profit of the Finlay Mills Limited is also higher Rs 55.01 lakhs as against Rs 41.20 lakhs in spite of the fact that sales are not very changed at Rs 3.03 crores. The company has experienced great difficulty in securing the required quantities of imported cotton, because of the foreign exchange shortage and the allotment of available supplies to a larger number of consumers. Also, for a time, some of the spindles had to be kept idle.

In respect of allocations, Taxation provision is raised to Rs 22.56 lakhs from Rs 14.35 lakhs and Development Rebate Reserve to Rs 73,000 from Rs 46,000. Depreciation is, however, lowered to Rs 10.02 lakhs from Rs 10.11 lakhs. The bonus in respect of the previous years claimed the large sum of Rs 8.08 lakhs (Rs 13,994), while there is allocation against under-provision towards taxation amounting to Rs 2.09 lakhs (Rs 40,000). It has, therefore, been not possible to transfer any amount to General Reserve No. 1 against Rs 3 lakhs previously. The dividend on the ordinary shares is maintained at Rs 23 per share, taxable.

The gross profit of the Gold Mohur Mills Limited has gone up from Rs 20.81 lakhs to Rs 33.61 lakhs, thanks to the rise in sales from Rs 2.26 crores to Rs 2.58 crores. After providing Rs 2.50 lakhs (Rs 1.67 lakhs) for managing agents' remuneration; Rs 6.76 lakhs (Rs 3.95 lakhs) for Depreciation; Rs 4.51 lakhs (Rs 3,300) for Development Rebate Reserve and Rs 8.80 lakhs (Rs 7,07 lakhs) for Taxation, the net profit is higher at Rs 11.24 lakhs as against Rs 8.09 lakhs in 1961. After transferring Rs 1.50 lakhs from General Reserve No. 1, a sum of Rs 1.82 lakhs has been provided for expenses in respect of previous years, while under-provision for taxation in respect of previous years absorbs 93,833 (Rs 20,000). The dividend on the Ordinary shares is reduced from Rs 26.50 to Rs 19.50 per share, subject to tax.

The Ambika Silk Mills Company Limited has reported encouraging results for 1962. The gross profit has gone up from Rs 19.22 lakhs to Rs 28.53 lakhs in view of the rise in the net sales from Rs 1.24 crores to Rs 1.71 crores. After providing Rs 3.02 lakhs (Rs 2.71 lakhs) for Depreciation and Rs 17.31 lakhs (Rs 8.40 lakhs) for Taxation, the net profit works out to Rs 8.20 lakhs against Rs 8.10 lakhs. With Rs 4,492 brought in and making certain adjustments, there is an available sum of Rs 8.23 lakhs (Rs 8.13

lakhs). From this, the directors have set apart Rs 42,000 (Rs 38,000) for Development Rebate Reserve; Rs 5,000 (Rs 15,000) for Goodwill partly written off and Rs 3.50 lakhs (Rs 3.55 lakhs) for General Reserve. The dividend on the Ordinary shares is maintained at Rs 20 per share, subject to tax.

Despite the increased turnover, the Mahendra Mills Limited, Gujarat, has reported lower earnings for 1962. The gross profit is Rs 38.66 lakhs as compared with Rs 39.02 lakhs. Sales have risen from Rs 2.33 crores to Rs 2.70 crores. In respect of allocations, a sum of Rs 20.16 lakhs (Rs 20.19 lakhs) is provided for Depreciation; Rs 57,057 (Rs 2.39 lakhs) for Development Rebate Reserve; Rs 1.74 lakhs (Rs 1.65 lakhs) for managing agents' remuneration and Rs 11.02 lakhs (Rs 8.20 lakhs) for Taxation including SPT. The directors have proposed a taxable dividend of 14 per cent. This is payable, subject to the approval of the IFC. The company has received a cence for the installation of 500 automatic looms with preparatory machinery and processing equipment.

Jeewanlal's Progress

The directors of Jeewanlal (1929) Limited have stated that, although the company's order books remain in satisfactory condition, the supply position of raw materials is more difficult and the fabricating plants are working at much reduced capacity. Owing to the delay in negotiations for foreign exchange requirements, extension has been applied for the consent order for the fresh capital issue and opportunity has been taken to increase the

issue from Rs 54 lakhs to Rs 78 lakhs to cover additional needs. Suitable consent order is awaited.

Meanwhile, the slight decline in the company's sales from Rs 2.24 crores to Rs 2.19 crores is reflected in the working results for 1962. The net profit, after providing for Depreciation and Taxation, amounts to Rs 7.70 lakhs as against Rs 7.86 lakhs for the preceding year. All allocations have been raised:—Depreciation from Rs 1.53 lakhs to Rs 1.91 lakhs; Taxation from Rs 6.36 lakhs to Rs 8.82 lakhs (including Rs 30,500 for SPT) and Development Rebate Reserve from Rs 6,731 to Rs 38,475. The directors have proposed a final dividend of 50 nP, making a total of Rs 1.05 per share, taxable, same as in the preceding year. The dividend is payable on or after 26th June to those shareholders whose names are registered as on 12th June, 1963.

Excellent Results of Jute Mills

The National Company Limited has done exceedingly well during the year ended 31 October 1962. Sales have risen from Rs 6.58 crores to Rs 6.79 crores. The net profit, after providing for Depreciation and Taxation, is Rs 27.75 lakhs as against a loss of Rs 6.32 lakhs in the previous year. Apart from providing Rs 5.50 lakhs for Taxation; Rs 11.75 lakhs for General Reserve No. 2 and Rs 11.95 lakhs for Development Rebate Reserve, Depreciation is raised to Rs 16.41 lakhs from Rs 12.77 lakhs. The directors have proposed a taxable dividend of Re 1 per share, taxable, as against nil. They state that in

COMPANY REPORT

The Sterling General Insurance Company LIMITED

EXCELLENT RESULTS—REMARKABLE PROGRESS

INCREASE IN PREMIUM, PROFIT & RESERVES

Extract from the Chairman's Speech and Directors' Report placed before the Annual General Meeting of the Company held in New Delhi on May 25, 1963.

1962 has been a good year for the Company, in fact the best year for sometime. The business has shown an all-round progress, and the steps taken during the last few years to improve the organization and internal controls, including drastic reduction in motor premium, have enabled the Company to further consolidate its position and show very satisfactory results.

INCREASE IN PREMIUM—REDUCTION IN CLAIMS

Gross premium has increased from Rs. 101.31 lacs in 1961 to Rs. 107.69 lacs in 1962 while Net premium increased from Rs. 30.54 lacs to Rs. 31.83 lacs. Simultaneously, there has been a sharp decline in claims from Rs. 24.23 lacs in 1961 to Rs. 18.48 lacs in 1962.

REDUCTION IN MANAGEMENT EXPENSES

Despite the increase in premium, commission and management expenses have also been reduced, and amounted to Rs. 10.13 lacs during the year, as against Rs. 11.72 lacs in 1961.

INCREASE IN RESERVES

Underwriting Reserves including additional reserves have increased from Rs. 15.80 lacs in 1961 to Rs. 17.22 lacs in 1962; and a General Reserve has been started with a transfer of Rs. 75,000 from the Profit & Loss Account. The percentage of capital and reserves to net premium has increased successively from 71.3% in 1956 to 102.4% in 1961, and to 104.9% in 1962.

INCREASE IN PROFIT AND DIVIDEND

After providing for all expenses claims and reserves, the profit subject to tax amounted to Rs. 4,04,662 (Rs. 1,34,486 in 1961) and after providing for tax and making appropriations for General Reserve, Gratuity Fund, etc. the Company has declared a dividend of 10% subject to tax on Preference capital and 5% subject to tax on Equity capital (5% in 1961).

NOTE:—This does not purport to be a record of proceedings of the Annual General Meeting.

pursuant to Sections 84 and 101 of the Income-Tax Act 1961, a portion of the dividend will be exempted from tax deduction. The exact percentage of the dividend will be announced at the annual general meeting on 31 May. The State Bank of India has granted a medium-term loan of Rs 65 lakhs for the mill's modernisation and expansion.

In Andrew Yule group, the Delta Jute Mills Company Limited has reported a substantial rise in sales from Rs 1.73 crores to Rs 3.24 crores for the year ended 30 November 1962. The net profit, after depreciation and taxation, amounts to as much as Rs 26.42 lakhs as against a loss of Rs 9.12 lakhs incurred in the preceding year. Apart from Rs 13.65 lakhs (including Rs 1.75 lakhs for SPT) for Taxation; Rs 1.84 lakhs for Capital Reserve and Rs 7.62 lakhs for Development Rebate Reserve, the Depreciation amount is raised to Rs 12.20 lakhs from Rs 5.51 lakhs. The directors have proposed a final dividend of Rs 8, making a total of Rs 12 per share, subject to tax. No dividend was recommended in the preceding year.

In the same managing agency group, the Budge-Budge Jute Mills Company Limited has made a net profit of Rs 19.09 lakhs for the year ended 31 October 1962 as against a loss of Rs 9.36 lakhs previously, thanks to the rise in sales from Rs 2.16 crores to Rs 2.61 crores. In respect of allocations, Depreciation is lowered to Rs 6.09 lakhs from Rs 6.30 lakhs and Capital Reserve to Rs 9,000 from Rs 67,844. A sum of Rs 19.40 lakhs (including Rs 5.30 lakhs for SPT) is provided for Taxation; Rs 2.37 lakhs for Development Rebate Reserve and Rs 1.46 lakhs for General Reserve. No provisions were made in the previous year against these items. A final dividend of Rs 6, making a total of Rs 12 per share, taxable, is recommended as against nil in 1960-61.

Similarly, the Cheviot Mills Company has recorded a rise in sales from Rs 2.05 crores to Rs 2.71 crores. The net profit amounts to Rs 29.61 lakhs as against a loss of Rs 16.01 lakhs in the previous year. Apart from Rs 12 lakhs for Taxation; Rs 3,120 for Capital Reserve and Rs 12.49 lakhs for General Reserve, Depreciation is raised to Rs 7.87 lakhs from Rs 6.87 lakhs and Development Rebate Reserve from Rs 2.58 lakhs to Rs 6.73 lakhs. The directors have proposed a taxable dividend of Rs 1.75, making a total Rs 2.50 per share, subject to tax. This compares with only 50 p per share, taxable, paid previously.

Union Carbide Pays Less

The substantial increase in sales from Rs 9.50 crores to Rs 12.26 crores is reflected in the working results of the Union Carbide India Limited for the year ended 25 December 1962. The gross profit is Rs 2.50 crores against Rs 1.84 crores. The net profit, after providing for depreciation and Taxation, is, however, substantially lower at Rs 64.85 lakhs as against Rs 126.92 lakhs, mainly due to a higher provision for taxation. Taxation alone absorbs Rs 129.19

lakhs (including Rs 35.65 lakhs for SPT) against only Rs 21.73 lakhs. Depreciation is raised to Rs 56.39 lakhs from Rs 34.94 lakhs, while General Reserve is provided Rs 60 lakhs against nil. Development Rebate Reserve is lowered to Rs 7.80 lakhs from Rs 65.50 lakhs. The directors have proposed a final dividend of 5 per cent, making a total of 12½ per cent, taxable, for the year as against a taxable dividend of 18 per cent paid previously.

Although the two battery plants in Calcutta and Madras have worked satisfactorily, their output has been restrained by the shortage of imported raw materials. The working of the Eveready flashlights plant in Lucknow has been further improved. The zinc rolling mill at the Metals and Ores Company has diversified its activity. The production of polyethylene film at Trombay is reported to have been diversified. It is proposed to extend the chemical and plastics facilities at Trombay. The company has also been licensed to instal a plant for the production of the projector carbons and to produce midge carbon electrodes. The expansion project may involve loan expenditure of about Rs 8 crores for which the company is reported to be negotiating two long-term loans.

Hindustan Lever Does Well

Hindustan Lever Limited has reported excellent results for 1962. Turnover has risen by nearly Rs 4 crores to Rs 53.85 crores. Sales of soaps, detergents and toilet preparations have gone up from Rs 23.72 crores to Rs 24.84 crores and those of vanaspathi, margarins and other foods from Rs 23.06 crores to Rs 24.69 crores. Sales of glycerine and other bye-products have increased from Rs 3.10 crores to Rs 4.31 crores. The directors hope to make further progress in sales of toilet preparations in the coming year following the reorganisation of this division.

The profit before tax has gone up from Rs 4.18 crores to Rs 4.77 crores. The tax provision amounts to Rs 2.42 crores (Rs 1.92 crores), leaving a net profit of Rs 2.34 crores against Rs 2.25 crores in the previous year. From this, the directors have provided Rs 6.50 lakhs for tax adjustments of previous years and Rs 33.42 lakhs being tax on the scrip issue. This leaves a surplus of Rs 1.94 crores. No provision has been made for additional tax payable under the 1963 budget proposals. Pending clarification of the exact liability for the SPT, the directors have set aside Rs 70 lakhs as a specific reserve. They have recommended a final dividend of 60 p per share, making a total of Rs 1.20 per share.

The directors are taking practical steps to proceed with some of the expansion plans, which are already in hand with the assistance of a proposed loan from Unilever Limited of about Rs 20 lakhs in sterling to cover urgent foreign exchange needs. In the field of exports, the company has made considerable progress with an increase in sales from Rs 74 lakhs in 1961 to Rs 2.01 crores.

British Paints Pays 10% Against 12½%

Despite a marked rise in sales from Rs 2.11 crores to Rs 2.36 crores, British Paints (India) Limited has reported a decline in earnings for 1962, mainly due to a higher provision for taxation including the SPT, not to speak of the rise in manufacturing expenses. The net profit, after providing for depreciation and taxation, works out to Rs 5.28 lakhs against Rs 7.99 lakhs in the preceding year. Salaries, wages, and bonus to workers are shown higher at Rs 42.58 lakhs (Rs 39.47 lakhs) and other expenses at Rs 44.88 lakhs (Rs 39.73 lakhs). Apart from providing Rs 20,000 for Development Rebate Reserve, Taxation is raised to Rs 13.08 lakhs (including Rs 4.70 lakhs for SPT) from Rs 6.82 lakhs. Depreciation is reduced to Rs 2.75 lakhs from Rs 2.88 lakhs. No provision is made for General Reserve against Rs 1.75 lakhs. The directors have proposed a final dividend of 3½ per cent, making a total of 10 per cent for the year, taxable, as against 12½ per cent, taxable, paid previously.

STOCK EXCHANGES Subdued Conditions

Watch-Dog Writes:

SUBDUED conditions have continued to prevail in stock markets during the week under report. As many operators are not inclined to enter into commitments till a clearer economic and political picture is available, there is a general disposition to liquidate holdings, resulting in a further decline in values from last week's levels.

With activity further restricted, prices on Lyons Range sought fresh lower levels on tired liquidation.

The downward trend in prices on Dalal Street was extended further on scattered selling pressure.

There was moderate absorption on the Madras Stock Exchange though cleared shares showed an easy trend due to more selling.

Business was dull on the Bangalore Stock Exchange.

On the Ahmedabad Stock Exchange, all the selected equities finished with moderate gains or balance.

Quiet conditions were witnessed on the Delhi Stock Exchange.

The recent unsettled conditions became more pronounced and widespread on the London Stock Exchange.

CALCUTTA

CONDITIONS on the local stock exchange remained generally dull during the week under review. There was a considerable shrinkage in the volume of business as operators were unwilling to extend commitments in view of several uncertainties.

If the market could not show any sign of making a headway, that was due to the general anxiety over the impact of the super-profits tax on

the working of industrial undertakings, as revealed by the annual reports and accounts released by leading companies during the past few weeks.

Sentiment was also disturbed by other factors. There was an anxiety over the concentration of the Chinese troops on the NEFA and Sikkim borders. The prospect, that the Third Plan might be pruned, also induced some caution in the minds of the operators. Again, the shortage of funds was aggravated, while substantial funds had been siphoned off by the recent new issues.

Above all, operators seemed to be busy in examining the restrictions under which the Government would permit the resumption of forward trading in cleared shares. There seemed to be a general feeling that the conditions, laid down by the Government, were rather harsh, not to speak of the fact that opinion was divided on the likely effects.

Some operators had a feeling that forward trading might offer great resistance to a further decline in equity values, while many others felt that it would encourage short-selling, resulting in a further decline in values. Thus, leading operators preferred to keep away from the market.

Gilt-edged securities ruled quietly steady. Support was mainly confined to the short-dated issues. The market is now awaiting the announcement of the second instalment of the official borrowing programme. After opening at Rs 63.10, 3 per cent 1966 Conversion Loan eased off towards the close to Rs 62.95.

In sympathy, Bank shares turned quiet with United Commercial dropping down to Rs 58 from Rs 72.50. Punjab National were quoted nominally at Rs 19.06.

Despite the declaration of good dividends, Jute shares met with only limited support. There was a general fear that, if the super-profits tax continued for long, it would not be possible for many of the mills to maintain this year's dividends. There was also a feeling that the profitability of the mills might be affected if the downward trend of jute goods prices continued in the absence of foreign enquiry. The only steady features were Champdany, India, Reliance and Kelvin, having sustained support upto Rs 24.62, Rs 18; Rs 11.50 and Rs 185 respectively. Ganges were on offer at Rs 13.81 against Rs 14 and also New Central at Rs 12.87 against Rs 13.44.

Coal shares were practically neglected in the absence of any announcement with regard to the fixation of price for the commodity. Western Bengal eased off to Rs 9 from Rs 9.19.

Dealings in the Tea section continued to be limited. Apart from the fact that investors seemed to have been disappointed over the results of the first export sale for the new season, there was an anxiety to know whether the average prices to be realised for the commodity during the new season would turn out to be better than those obtained in the preceding season. Hasimara were on offer at Rs 12.31 against Rs 12.56 although Gohpur were well maintained at Rs 16.56.

Except for some enquiry in Dyer Meakins upto Rs 25.62, Sugar shares were generally neglected. The sharp

rise in the international price of the commodity did not enthuse the operators to go in for commitments, as the outlook was considered to be bleak since the Government fixed the ex-factory prices.

Textile shares came in for cautious dealings on reports that it had become difficult for the mills to produce medium and coarse cloth at a profit. Dunbar came in for offer at Rs 27.44 to Rs 24.62 following the dividend

being reduced from Rs 2 to Rs 1.50 per share, less tax, for 1962. Elgins had sellers at Rs 18.12 against Rs 18.69 with Jay Shree well maintained at Rs 14.37.

Activity in the Engineering section came to a halt in the absence of any government decision with regard to the retention prices of steel which was eagerly awaited. Against the previous week-end closing of Rs 22.74, Indian Irons opened lower at Rs 22.66

DIVIDENDS DECLARED & FORTHCOMING MEETINGS

and receded further to Rs 22.24 before closing better at Rs 22.38. G. K. Williams were marked back to Rs 32.81 from Rs 33.69 and TEXMACO to Rs 23.85 from Rs 24.05. Binani Metal were, however, a steady feature at Rs 10.50 due to the publication of encouraging working results. Indian Standard Wagon, after touching a high of Rs 33.12 from Rs 29, receded at the close to Rs 32.37 on reports of the company have declared a taxable dividend of 20 per cent (including a bonus of 5 per cent) on the increased ordinary capital as against 28.5 per cent on the old capital and of the profits being affected by the super-profits tax. Calcutta Steel eased off to Rs 13.06 from Rs 13.31 and J. K. Steel to Rs 14.06 from Rs 14.75.

Miscellaneous issues were extremely dull and the turnover showed a considerable shrinkage as the latest reports, released by some of the leading companies, revealed that the corporate profits had been squeezed by heavier taxation. The only relieving feature was Indian Coper, which hardened to Rs 4.32 from Rs 4.10 on rumours of the possibility of a bonus issue. The following table shows the extent of the decline in the prices of a few selected shares:—

BOMBAY Reactionary Tendency

After a steady opening the Bombay stock exchange has developed a reactionary tendency

Commodity Prices in March

Wholesale prices as measured by the official index (with the year ended March 1953 as 100) registered a rise of 0.4 per cent to 127.1 during the month of March 1963 as against 126.6 for February 1963. During the month under review, 'Tobacco' rose by 12.2 per cent to 107.4, Fuel, Power, Light and Lubricants' by 9.3 per cent to 135.4, 'Industrial Raw Materials' by 1.1 per cent to 135.2 and Manufactures by 0.3 per cent to 129.6 while the index for 'Food Articles' receded by 0.6 per cent to 123.4.

'Food Articles'

The sub-group index for 'Cereals' declined by 0.4 per cent to

102.0 owing to a fall in the prices of wheat, jowar, barley and ragi although the prices of rice, bajra and maize exhibited advances. The index at this level was lower by 0.2 per cent when compared with that of a year ago. Lower prices of gram, arhar, mung and masur brought down the sub-group index for Pulses by 3.2 per cent to 99.9. A rise of 0.2 per cent to 133.4 in the sub-group index for 'Fruits and Vegetables' was caused by an increase in the prices of oranges and cashewnuts although there was a fall in the prices of potatoes, onions and bananas. Higher prices of milk raised the sub-group index for Milk and

Sectionwise, Steel shares encountered profit taking while textile shares were subdued in view of the discouraging prospects of the industry. Apart from declining exports, the cotton textile industry is faced with diminishing profitability on account of ever-rising cost of production. In this connection it is significant to note that the Indian Cotton Mills Federation has pointed out that an upward revision of cloth prices is a necessity. According to the ICMF, the industry had pegged the prices to the levels that obtained on 1 January, 1961, though since then there had been a sharp increase in the cost of production in the shape of cotton prices, wages, stores, power and taxes.

Ghee by 2.4 per cent to 124.8 despite a fall in the prices of ghee. The sub-group index for 'Edible Oils' recorded a fall of 3.0 per cent to 141.8 due to a decline in the prices of all the edible oils, except for vanaspathi (Dalda) which witnessed a rise. Increased prices of fish and meat pushed up the index for Fish, Eggs and Meat by 2.1 per cent to 137.5; the prices of eggs, however, moved down. Prices of sugar went up while those of gur moved down and the index for 'Sugar and Gur' receded by 0.2 per cent to 147.5. Lower prices of chillies, turmeric and salt brought down the index for 'Other Food Articles' by 3.0 per cent to 172.9; there was an increase in the prices of tea, coffee, black pepper, cardamoms and betelnuts.

Tobacco

Prices of both tobacco raw and tobacco manufactured moved up due to the enhancement of excise duties and as a result the combin-

ed index for 'Tobacco' advanced by 12.2 per cent to 107.4.

Fuel, Power, Light and Lubricants: The index for this group advanced by 9.3 per cent to 135.4. A rise in the price of coal was permitted by the Government. Prices of kerosene oil, diesel oil, petrol and aviation spirit also went up due to increase in the excise levies.

Industrial Raw Materials:

Higher prices of cotton raw, jute raw, hemp raw and silk raw raised the sub-group index for 'Fibres' by 2.5 per cent to 133.5; there was, however, a fall in the prices of wool raw. The sub-group index for 'Oilseeds' rose by 0.6 per cent to 143.0 due to a rise in the prices of groundnuts and cottonseed although the prices of linseed, castorseed, gingellyseed, rapeseed and copra witnessed declines. 'Minerals' stood unchanged at the earlier month's level of 93.4. A

fall of 0.1 per cent to 126.6 in the sub-group index for 'Other Industrial Raw Materials' was attributable to a decline in the prices of raw skins and lac although there was a rise in the prices of raw hides tanning materials and bamboos.

Intermediate Products

Lower prices of linseed oil, coir yarn and tin brought down the index for 'Intermediate Products' by 0.1 per cent to 136.2 despite a rise in the prices of cotton yarn, rayon yarn, semis, zinc, brass, copper and lead.

Finished Products.

Lower prices of jute manufactures (-3.1 per cent to 102.1) brought down the sub-group index for 'Textiles' by 0.2 per cent to 127.0 despite a rise in the prices of cotton manufactures (+0.1 per cent to 134.1), woollen manufactures (+0.8 per cent to 142.4) and silk and rayon manufactures (+2.5 per cent to 139.2).

Among cotton manufactures, both mill-made and handloom cloth exhibited a rise. 'Metal Products' remained stationary at the previous month's level of 161.0. Higher prices of dyeing materials, paints, soap and drugs and medicines raised the sub-group index for 'Chemicals' by 1.2 per cent to 117.3; the prices of general chemicals, however, showed a decrease. 'Oilcakes' registered a fall of 2.8 per cent to 157.8. The sub-group index for 'Machinery and Transport Equipment' went up by 3.5 per cent to 122.4 owing to a rise in the prices of machinery, cycles, vehicles and rubber tyres and tubes. A rise of 1.4 per cent to 127.2 in the sub-group index for 'Other Finished Products' was brought about by an advance in the prices of paper and newsprint, cement, bricks and tiles, pottery goods and glass. On the whole, the index for 'Finished Products' rose by 0.4 per cent to 128.5.

**Read how Pan Am's World-Wide Marketing Service
can increase your overseas sales**

Recently, Pan Am announced its unique new service for businessmen, the World-Wide Marketing Service. Already shippers have discovered that this service gives them accurate, up-to-date information that may mean the difference between standing still in international markets or getting the jump on their competition.

You can share in the benefits of Pan American's world-wide experience, too. Here's the kind of information Pan Am can give you on any one of 114 trade centres throughout the world:

Expert advice on overseas shipping—on packing, rates, insurance, cartage and routings.

Free marketing facts on economic conditions, customs procedures, currency exchange, and other special information.

Latest news on world markets—with "Horizons," the monthly Clipper Cargo

magazine, published just for shippers.

Simplified documentation—from one source speeds your product all along Pan Am's delivery chain (manufacturer to air-port, overseas, to consignee).

Information about drastically reduced rates. On one route air cargo rates have

been slashed 63%. Attractive new low rates put you into new markets—for new profits—faster!

World-wide representation at no extra cost. Wherever you ship, Pan Am representatives give your product individual attention.

An international viewpoint on the spot! Pan Am personnel, trained to international business methods and local markets, provide world-wide contact service.

One phone call puts you in business abroad! Call your Clipper Cargo agent or local Pan American office in:

Flagging Enthusiasm for Foreign Aid

At the moment of writing, the Aid-India Consortium has been able to pledge assistance to India of about 1,000 million dollars for the third year of the Third Plan. This is against India's indication of a figure of 1,255 million dollars as the likely order of its requirements for the year and the actual commitments of 2,365 million dollars for the first two years of the Third Plan. Though the figure committed roughly corresponds to earlier expectations following the meeting at Washington early last month, it is disappointing that our friends abroad should not have persuaded themselves to meet more fully India's minimal requirements of foreign assistance at the most crucial moment of its national life.

To say this is not to be insensible of the generosity of our benefactors or to underrate their difficulties. The administrations concerned have to reckon with domestic reaction to spending on such a stupendous scale abroad for purposes whose immediate beneficial impact on domestic well-being or urgencies is not very apparent. To add to this, Parliament's traditional suspicion of the Executive, especially in matters involving spending, imposes its own restrictions on the governments concerned. The Clay Committee's report, for example despite the many admirable things it has had to say on the subject, is a document that will be found extremely useful by Senators with inveterate prejudices against spending abroad. And when such spending is to be substantially done by governments and not by private interests one of the hoariest American ideals appears to them to be outraged. The difficulties over Bokaro stem not a little from this fact.

There perhaps is little to be gained by running away from the fact that popular as distinguished from instructed enthusiasm for assistance for developing nations by the more luckily placed nations—never very warm—has demonstrably cooled. Years of persuasive education in favour of the moral and economic justification of aid on a large scale to developing countries had made some change in public attitude to the subject. Mr Kennedy played a significant role in effecting the change in the climate of opinion both as Senator and as President. In the latter capacity he made a memorable enunciation of the principles that should govern such aid: some of them, like the need for long term loans at negligible rates of interest and the need for some assurance of continuity in assistance, have become accepted as part of the philosophy of such assistance. It is from the enlightened opinion in advanced countries, of which Mr Kennedy's is but an example, that the concept of the 'Decade of Development' took shape. The sixties are but three years old and therefore it is perhaps too early to assess the impact of the ideas summarised compendiously in that phrase. But the experience of the last year and a half would seem to suggest that a far more intense awareness of the importance of the idea will have to be created among the lay public of the advanced nations if performance is to measure up to the expectations from the programme.

Another important factor in the cooling of the ardour for foreign assistance is the perceptible changes in the cold war stances. In the last two years or so, anti-communism has lost much of its driving power with the result that the kind of people who could be persuaded to foreign assistance by the argument of its effectiveness in combating or at least containing

communism are no longer capable of being so persuaded. Ironically India, which was once inclined to be somewhat sceptical—for good reasons—of the effectiveness of aid thus oriented is now finding it difficult to persuade certain foreign countries, notably Britain, of the need for military assistance to India in combating Chinese designs of aggression. The arguments, of course, were in different contexts, since what we are now asking for is aid in a specific situation soon after actual aggression and one in which the menace is very real, with evidence of massed troops across the border. But the psychological impediments in both cases are the same.

To be fair to the donor-countries, it must be admitted that even with the best will in the world, they may find it difficult for various reasons to satisfy fully our requirements. Apart from the need to obtain consent from the law-making bodies of the countries concerned and by an extension, from the public at large, there are specific economic and monetary difficulties in the way of commitments of big overseas spending. The balance of payments position of the US in the last few years, in consequence of which the Dollar became less almighty than it had been before, was not the result of a trade deficit but of commitments for largely unrequited spending, particularly for military purposes. It is hardly realistic to expect money for foreign assistance to be found out of lesser tax receipts consequent on tax cuts designed to stimulate a sluggish domestic industry. Of course, foreign aid itself may be a form of stimulation of domestic industry, but it leaves the balance-of-payments position unchanged. The UK is similarly placed.

More than even these specific difficulties, the general dreariness of the international situation makes for idealism to be muted and calculation to be fussy. No specific improvements in East-West relationship is in sight. The European dream lies in a heap of ruins and there is little inclination to look beyond one's nose. As the GATT session proved enthusiasm for lending a helping hand to the poorer nations by positive commitment to trade policies that will meet their special needs could not easily be worked up. The same is true of aid.

In the special context of India, there are certain other difficulties. Pakistan's sensibilities are being considered a trifle too solicitously, especially in the context of military aid. There are others who feel that India is playing up the Chinese threat and are complacently falling in with tendentious explanations of China's present quiescence. And in the context of economic aid, the commitments for military aid are quietly being taken into account, with the result that the urgencies of development are ignored.

Despite this somewhat depressing aid-picture, there are certain reassuring reports. Among them is the fact that the Aid-India Club is acutely aware of the fact that more important than the quantum of aid is its nature. With acute lack of raw materials and increasing idle capacity in industry owing to such a lack, there is every danger of our losing the gains of past investments. Free foreign exchange for feeding the industry already in existence is a more urgent necessity than creation of fresh industrial assets. The World Bank is keenly aware of the importance of this form of aid. The disappointment over quantum of the aid may yet be practically assuaged, if it is untied and free in a substantial measure.

US

International Trade Policy

By Leonard Weiss*

Part I :

The Three Fundamental Elements

LAST year the United States Congress passed the most far-reaching piece of US foreign trade legislation since the original enactment of the Reciprocal Trade Agreements Act in 1934. It has been considered as one of the most important achievements of the Kennedy Administration to date.

The original Reciprocal Trade Agreements Act was itself a landmark in the foreign economic policy of the United States. It turned the tide of depression-born protectionism and initiated a world-wide movement for the reduction of tariffs and other international trade barriers.

This program did noble service for more than a quarter of a century, but like any program it began to peter out and became inadequate to meet the new circumstances and challenges which had arisen. While the basic policy thrust of the Reciprocal Trade Agreements Act was more relevant than ever, the tools it provided were no longer sufficient for the task. A new approach was required. The Trade Expansion Act was thus enacted to do the job.

Before discussing the new Trade Expansion Act, perhaps it would be best to consider some fundamentals of US foreign trade policy.

US foreign trade policy has been based—and still is today—on three essential elements: non-discrimination, the reduction of tariffs, and the elimination of quantitative barriers to trade.

The policy of non-discrimination—of "most-favoured-nation" treatment—has been consistently applied in one form or another since the beginnings of the Republic. It is a policy that was written into the Reciprocal Trade Agreements Act in 1934 and has been continued in every piece of successor legislation since then, including the new Trade Expansion Act.

The reduction of tariffs is, of course, the most direct expression of the old foreign trade legislation as well as the new. The central feature of this legislation has been the provision of authority to the President to negotiate on a reciprocal basis the reduction of tariff barriers to trade.

It has always been recognized, however, that the potential benefits from foreign tariff reductions must be protected through commitments assuring that our exports will be given non-discriminatory treatment—that is, most-favoured-nation treatment—and that they will not unnecessarily or unjustifiably be subjected to quantitative import restrictions.

Thus, there is a close interrelationship among the three basic elements of our international trade policy.

Through the years quantitative restrictions have been viewed as the most undesirable of possible methods of limiting foreign trade.

*Condensed from Mr Weiss' address at Pennsylvania State University on 5 April 1963.

While resort to them might sometimes be necessary, they have always been considered as exceptional and temporary devices to restrain trade. Tariffs have been regarded as the preferable technique where domestic protection might be needed.

Behind the three basic elements which I mentioned lay certain political, economic and philosophic conceptions. These policies were based on the notion of the desirability of maximizing the influence of the marketplace and minimizing the intervention of the government, in the conduct of international trade.

They assumed that an international trading system based on such principles would reduce international political friction, contribute to the more efficient use of economic resources, encourage an increase in living standards, and in all these ways generally promote the interests of a free world community.

Although the three fundamental elements of American trade policy have been generally adhered to through the years, they have been occasionally qualified to meet practical realities.

Quantitative restrictions have been accepted for exceptional protective, security and other purposes; tariffs have sometimes been raised to avoid serious injury to domestic industry; and even non-discrimination—perhaps the most sacred of American international trade policies—has on occasion been breached.

Some of these departures from basic policy were of major importance. Nonetheless, the main thrust of American policy continues on the basis of the three principles I have described, and, indeed, the departures from them have provided the flexibility and resilience necessary to make the policies work and to adhere to the general direction they prescribe.

There is no intention to change this general direction of US international trade policy. In some respects, for example as regards the lowering of tariffs, the intention is to intensify efforts along this line. Departures may occur, but if they do, they should be appraised against the over-all picture so as to avoid undue distortion as to the general direction of American policy.

British Labour Prospects

By Paul Einzig

There are optimists who believe it possible that the successful resistance of the British Ford Co. to trade union pressure to re-engage the 'troublemakers' who were dismissed some months ago might prove to be a turning point in the relationship between employers and employees in Britain. The Ford Co. was prepared to risk an official strike rather than yield, at a time when the demand for motor cars is rising, so that the output lost during a strike would have been a dead loss. But those responsible for the decision to call the unions' bluff felt that if they yielded on this occasion they would never be able to restore discipline in their works. So taking a long view the risk of a major strike appeared to them the smaller evil. It is true, the number of those dismissed has been reduced to 17 against the original number of 70. Even so, the principle that a firm is entitled to dismiss employees who disrupt production has been firmly upheld. Because the 17 men now find it difficult to find other jobs, their example might deter other employees of Ford from causing trouble

by being too trigger-happy about unofficial strikes and undermining discipline in the works.

Had the 17 men been re-engaged it would have given the maximum of encouragement to troublemakers, because they would have felt that, whatever they did, they would be under the supreme protection of the allpowerful trade unions. Even as it is, the lesson taught by this experience is not likely to be heeded by employees of other firms whose managements may or may not follow Ford's example when facing the threat of a major strike. In any case, the trend is still towards a further weakening of industrial discipline rather than towards a reassertion of the managements' authority. There have been lately any number of unofficial strikes because of dismissals of inefficient workers, or even because of their transfers to other departments. Managements are prevented from taking action against shoddy workmanship.

Moreover, even such highly responsible quarters as the editorial columns of *The Times* have come out in support of the idea that workers should have the right to appeal against their dismissal to some outside authority. Yet if this were conceded industrial discipline would receive a mortal blow. As it is, foremen find it extremely difficult to uphold their authority and encounter defiance when they attempt to do so. Hence the difficulty of ensuring that the increase of the output keeps pace with the increase of wages. Trade unions and their members appear to ignore completely the elementary fact that it is not wage increases that raise the standard of living but increases of production. They resent any attempt on the part of the management to secure an increase of the output to justify an increase of wages. So long as such a spirit prevails an expansionary policy is bound to lead to inflation and an adverse balance of payments.

—(Copyright).

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

MONEY MARKET

Why the Sudden Stringency?

In the first few days of June inter-bank call money rate has inched up to very nearly the first penal tier at which central banking credit is available. The last week in May had already given some signs of the shape of things to come: apparently pressure on the banking system had suddenly made itself manifest, Scheduled Banks' borrowings from the Reserve Bank rose. Furthermore, it would appear that Government was in receipt of large-scale payments from the public in the week to the last Friday in May.

Why the sudden stringency? It is understandable that beginning of the month disbursements should have occasioned an element of pressure upon the banking system in June, but what is mysterious is the public payments at the end of May. The progress of the 1963 slack season has in this wise been halted, and with the prospect of the cash new loan being placed upon the market in another week or two, the outlook is for money to continue to be tight throughout the month.

Again, there is at the moment not much evidence of banks being in receipt of moneys against the maturing loan early in June. Of course, the parcels that banks hold of maturing loans always tend to be small, since Reserve Bank policy is to buy up all available floating stock prior to maturity. Besides, it may be that the short-dated that was offered as part of the conversion loans proved too alluring for the banks to resist. Be that as it may, the result is that an anticipated accretion to banks' resources, flowing from holdings of the maturing loans not tendered for conversion, has failed to materialise.

The implication is that, though the slack season has proceeded satisfactorily with both an increase in Deposits and a contraction in Advances, the capacity of banks to subscribe for the cash loan will be limited. At the same time with the needs of the States (for whom, it may be recalled, the Centre will be borrowing, too) the cash loan cannot long be delayed. So the best surmise is that the cash loan will also fall into two tranches, with the more "ambitious" one deferred until, say, the end of September.

BANK RETURNS

Advances Fall Again, Steeply

SCHEDULED Bank credit has, according to the latest banking returns, again contracted substantially, and the seasonal return of moneys advanced against crops appears to be more pronounced this year.

The returns of the Reserve Bank for 31 May disclose a further fall of Rs 14.30 crores to Rs 2,281.44 crores in Active Note Circulation, as also an inflow of Rupee Coin for Rs 0.30 crore. This is wholly reflected in the Reserve Bank's cash in the till rising by Rs 14.61 crores to Rs 37.06 crores. For, the increase of Rs 1 crore to Rs 1,977.44 crores in Rupee Securities represents a countervailing transfer against the drop of Rs 1 crore to Rs 109.08 crores in Foreign Securities.

The position of both the Central and State Governments shows improvement. Balances of the Centre are up by Rs 16.58 crores at Rs 73.76 crores; Investments are lower by Rs 2 crores at Rs 254.43 crores, owing to the transfer to the Issue Department, there is little indication of sales of gilt-edged by the Reserve Bank during the week and hence the inference is that there was no recourse to deficit financing. The Centre's affluence is therefore due to other receipts—and it was not the States which paid. For, the Deposits of State Governments are higher by Rs 1.55 crores at Rs 11.61 crores; and their indebtedness to the Reserve Bank for ways and means borrowings fell by Rs 5.05 crores to Rs 45.64 crores.

Possible public payments to the Central Government, possibly resulting in some pressure upon the banking system, stand duly reflected in the latest Reserve Bank figures. The Reserve Balances of Scheduled Banks have dropped by Rs 4.18 crores to Rs 78.42 crores, and their borrowings from the Reserve Bank have slightly more than doubled, in rising by Rs 8.84 crores to Rs 17.60 crores. The Reserve Bank's advances against usance bills have also risen by Rs 1.42 crores to Rs 8.70 crores.

The last point to note in the statutory returns of the central banking institution is that foreign assets held by the Reserve Bank have declined by a little over Rs 2 crores during the week. Notwithstanding the transfer of Rs 1 crore from the Issue Department, Balances Held Abroad are lower by Rs 1.05 crores at Rs 8.34 crores. The announcement by the Aid-India Club, that we can expect more of untied foreign loans could not be more welcome.

The unseasonal pressure on banks is hinted at in the return of the State Bank for 31 May. The total of Advances, after steady declines, is slightly higher by Rs 1.80 crores at Rs 292.74 crores. To more or less corresponding extent the State Bank has disinvested in gilt-edged, the port-

folio being shown lower by Rs 2 crores at Rs 240.85 crores. Deposit resources on the other hand have improved by Rs 1.58 crores to Rs 561.26 crores. So, the end result is a fractional rise of Rs 0.45 crore to Rs 26.94 crores in the State Bank's cash balances, including money at call and short notice.

The statutory statement of Scheduled Banks for 24 May discloses another substantial contraction in bank credit. In the latest week, the total of Advances has fallen by Rs 17.75 crores to Rs 1,561.52 crores, and of the decline some Rs 7.25 crores are on account of the State Bank. Thus Scheduled Bank credit has fallen by about Rs 48 crores from the season peak touched during the week ended 12 April. At the same time Deposit resources have continued their uptrend. Net Demand Deposits are higher by Rs 7.23 crores at Rs 999.47 crores, though this improvement is partly offset by the fractional fall of Rs 0.12 crores to Rs 1,252.20 crores in net Demand Deposits. The share here of the State Bank was Rs 3.34 crores. The two-fold inflow of resources has enabled considerable reduction of debt. Borrowings from the Reserve Bank have been cut by Rs 15.30 crores to Rs 9.72 crores, while indebtedness to the State Bank is lower by Rs 0.85 crore at Rs 16.87 crores. There is an increase of about Rs 13 crores to Rs 630.25 crores in Scheduled Banks' holdings of gilt-edged, but the bulk of the increase during the week (or Rs 11 crores) is traceable to the State Bank. The end result is a small increase of Rs 2.72 crores to Rs 205.49 crores in cash balances, including money at call and short notice.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 4 June, 1963. The amount offered was Rs 2,00,00,000. Tenders at Rs 99.410 per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2,350 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 10 June, 1963. Successful tenderers should make payment on Friday, 14 June, 1963 at all centres. Other conditions are as usual.

During the week ended 31 May, 1963, Government of India Treasury Bills for Rs 30,83,25,000 were sold in favour of Reserve Bank of India.

91 days Intermediate Treasury Bills sold from 29 May, 1963 to 1 June, 1963 amounted to Rs 50,00,000.

Notes

WORLD ECONOMY

Trends in 1961

That world economic activity reached a new post-war peak in 1961 is revealed by the figures contained in the latest issue of the United Nations Statistical Year Book. A closer look at the figures will however show that economic development continued to be lopsided with the industrialised countries still accounting for the bulk of the improvement recorded. In vital sectors like population the overall picture is quite satisfactory in that the average annual rate of increase in population between 1950 and 1961 was 1.3 per cent, while the long-term growth of primary commodity output in agriculture, forestry and logging, fishing and mining continued in 1961. Food production which accounts for about two thirds of primary production, has increased at a rate of 2.5 per cent per year since 1948. Although 1961 was not a particularly good crop year, the world production of wheat was still 38 per cent greater than the annual average for the period 1948 to 1952. Over half of the total wheat production was accounted for by the USSR (66 million metric tons), the United States (34 million metric tons), India (11 million metric tons), and France (10 million

metric tons). In 1961, the world produced 213 million metric tons of corn (55 per cent more than the average crop for the year 1948 to 1952), 87.7 million metric tons of barley (49 per cent more), 242 million metric tons of potatoes (14 per cent more). Brazil produced almost one-half of the world's supply of coffee which, in 1961, was 88 per cent bigger than the 1948 to 1952 annual average. The world's cotton crop of 11 million metric tons was 43 per cent larger.

In the industrial sphere, the high level of activity in 1961 was due mainly to manufacturing, which accounted for more than 90 per cent of the total industrial output. Among the industries which registered new highs in 1961, the greatest increase was in crude petroleum and natural gas, which rose by 8.5 per cent. The next were chemical and paper products. Mineral production has increased rapidly in recent years, with the effect of bringing the gross rate over the whole period to 3.5 per cent per annum. The increased tempo of industrial activity in the world is also reflected in the statistics for steel production during the year. In 1961, the world production of steel amounted to 354.8 million metric tons, which quantity is more than in any previous year. The United States with 89 million metric tons was still the largest producer despite a decrease in output. The USSR with 71 million metric tons, was the next largest producer. Other important steel producers are the Federal Republic of Germany with 33 million metric tons, Japan with 28 million metric tons, the UK with 22 million metric tons, France 18 million metric tons and mainland China 15 million metric tons. It will be seen that the bulk of steel produced in the world is accounted for by half a dozen industrialised developed countries. Though some progress, as in India, is being made by the developing countries in steel production, the progress is still slow.

That the wide disparity in industrialisation of the developed and developing countries continued to manifest itself in 1961 also as in previous year will be evident from figures for electric energy production. World production of electric energy was over 2,450 thousand million kilowatt hours in 1961. This was an increase of 7 per cent over the 1960 figure and nearly three times as much as the 1948 level. The distribution of this output by continents was as follows: North

America—42 per cent, Europe—30 per cent, USSR—13 per cent, Asia—10 per cent, South America—2 per cent, Africa—2 per cent and Oceania—1 per cent. In was in 1961 that coal for the first time accounted for less than half of the world's production of energy, the major sources being crude petroleum, natural gas and hydro-electricity. Africa showed the largest percentage increase of crude production, and for the first time it surpassed the production of Western Europe.

CO-OPS.

New Props

The Third Plan programme for development of co-operative processing is an elaborate one which envisages the setting up of 783 units comprising 48 cotton ginning and pressing units, 36 rice mills, 29 jute baling plants, 33 oil mills, 63 groundnut decorticators, 77 fruit canning units, 411 rice hullers and 86 other units. Considering the slow progress made in this field, the programme was drawn up on an optimistic basis. The committees set up from time to time by the National Co-operation and Warehousing Board have emphasised the essential role of processing units for the integrated development of the co-operative movement, especially in view of the support they could offer to co-operative marketing societies. The establishment of the latter is an essential part of the official strategy for holding the price line, which has assumed added importance in the present context when rising prices pose the problem of effective implementation of price control. But so far co-operative sugar factories have remained the lone example of successful endeavour in the field of co-operative processing.

The rapid headway made by sugar cooperatives, which at present account for 20 per cent of the total output of sugar, is attributed to satisfactory arrangements for financing their requirements of long-term capital. Under a directive of the Central Government, the Industrial Finance Corporation has been giving loans to cooperative sugar factories up to 65 per cent of their anticipated block requirements. Government has apparently come to the conclusion that similar facilities should be afforded to other large co-operative processing units in order to ensure their rapid development for achieving the targets set out in the Third Plan. Some suggestions regarding the arrangements that may be made for financing the block capital requirements of co-operative processing units have been put forward by the Ministry of Community Development and Co-operation, in consultation with the Planning Commission the Ministries of Finance, Food and Agriculture and the Industrial Finance Corporation.

It has been suggested that requirements of processing units requiring up to Rs 20 lakhs may be met by the State Financing Corporations under the guarantee of the State Governments. Applications for loans exceeding Rs 20 lakhs will be considered by the Industrial Finance Corporation. It has also been stated that the Central Government would be prepared to consider, on merits, requests for sharing with State Governments the guaranteeing of loans in excess of Rs 20 lakhs on a fifty fifty basis. The question of sharing by the Centre will arise only in respect to industries or commodities, the main decisions about which are controlled by the Central Government, and will be subject to arrangements being made for automatic repayment of loans.

The proposals to inject finance in bulk into "cooperative processing" may certainly encourage the proliferation of co-operative units. But the reports on co-operative processing, on paddy for instance, suggest that there are other obstacles besides lack of finance that have to be overcome before co-operative processing units could be established on a firm basis.

TECHNICAL PERSONNEL

New Facilities

The details given by Dr M. S. Thacker, Chairman of the Technical Manpower Committee, of the steps Government has taken to facilitate recruitment of persons with technical qualifications for the defence of the country, add to the attractions of a career in the Armed Forces for young Doctors and Engineers. Protection of lien, civil pay and other service interests of doctors and engineers in Government service who join the armed forces, have already been assured by orders issued in December 1962. Similar protection has also been given to their employees joining the services by public undertakings as well as by all major employers in the private sector. To encourage those not in employment to join the armed forces, Government has also decided to reserve 50 per cent of the vacancies in Class I and Class II engineering services of Government, which are filled by direct recruitment, for graduate engineers who are commissioned on a temporary basis and are released in due course. Holders of Short Service and Emergency Commissions will also be entitled to be considered for Permanent Commissions at the appropriate time.

Among the other inducements are "ante-date" of service, of two years for graduate engineers and up to a maximum of 6½ years in the case of doctors depending on qualifications and experience in the profession, and the exemption of young medical graduates from compulsory internship. The "ante-date" means that a graduate engineer who is thus recruited will get

the pay and seniority of a Commissioned Officer in the third year of service. A medical specialist who is eligible for 6½ year "ante-date" could be directly taken in the acting rank of Major.

Of particular importance is the University Entry Scheme for final year students in engineering and medical colleges. Candidates will be commissioned in the rank of Second Lieutenant carrying a pay of Rs 400 per month. Engineering students in the pre-final year will also be selected and commissioned from the date of their joining the pre-final class. After final selection by the Services Selection Board, which is expected to be completed within three months of their provisional selection, the successful candidates will be offered short Service Regular Commissions.

During the period of rapid industrial expansion the country is passing through, there is shortage of technically qualified personnel of every category. It is only fair that those who answer the call of patriotic duty should not find themselves at a disadvantage when they return to civilian life. If the facilities that are now offered are effectively publicised in University campuses all over the country, the response will not be disappointing. The shortage of technical personnel that may be experienced by civil establishments can be relieved to a substantial extent if timely action is taken to correct the maldistribution and under-employment and under-employment of persons with technical qualifications which is a disheartening feature of the employment situation in our country.

CEMENT

Inadequate Recompense

After protracted delay the Government of India has acceded to the legitimate demand of the cement industry faced with the problem of spiralling costs for an upward revision in cement prices. But the industry considers the increase of Rs 2.75 per tonne—the rise works out actually to Rs 2.56 per tonne taking into consideration the reduction in selling agent's commission to Rs 1.25 from Rs 1.50—inadequate as it does not commensurate with the rising manufacturing cost since 1 November 1961 when Government revised the prices on Tariff Commission's recommendations. Those who have been closely observing the fortunes of the cement industry can vouchsafe the fact that more than 75 per cent of cost inflation is accounted by steady increase in cost of fuel, higher railway freights and emergency risk insurance which are beyond the control of cement manufacturing concerns. In addition to these, the higher electricity charges, wage bills and taxation are imposing

additional financial burdens on the industry.

It has to be admitted that there has been a slight increase in the domestic cement output last year. But there is nothing to gloat over as the present level of manufacture is well below the target of 13 million tons by 1965-66 corresponding to an installed capacity of 15 million tons. Judged by the current trend in demand it would appear that the target has erred definitely on the lower side. As the implementation of plan projects and those for strategic purposes gather fresh momentum the actual gap between demand for and supply of cement will widen greatly to the consumers' embarrassment. Viewed in this context, the need for an adequate rise in cement prices is more pressing. It may be recalled that it is largely owing to these disincentives there has not been any smart increase in production in the existing factories and for that matter in the implementation of licensed projects and those for expanding the installed capacities. Moreover under the existing condition, the industry would find it difficult to invite encouraging response from the investors for additional capital for expansion programme. According to a recent estimate the industry requires machinery worth nearly Rs 7 crores per annum for fulfilling the current Plan production target and the domestic machinery manufacture has not so far shown any significant improvement. The inadequate increase in retention prices could prove to decelerate the tempo of cement production in the country.

SILK

Assistance Needed

The progress registered in raw silk production and exports of silk fabrics during the past year is an encouraging evidence of greater attention being paid in fostering the development of our sericulture industry. Production of raw silk went up sharply to 18.16 lakh kilograms from 16.56 lakh kilograms in the previous year. Our export performance was even more impressive as exports of pure silk fabrics rose to Rs 86.07 lakhs last year, an improvement of approximately 28 per cent over that of the relevant figure in the preceding year. But if we want to maintain the buoyancy in exports greater efforts are required to increase production without impairing quality.

But official assistance for this industry leaves much to be desired. For instance, the suggestion of the Day Committee for an integrated programme for facilitating the systematic development of domestic flature industry is yet to be implemented. Another disturbing factor is that the financial

allocations for sericulture remains largely unutilised testifying to the leisurely manner in which the programme is being handled. The price trend is another embarrassing point which when once goes beyond control can bring serious repercussions on the industry. The cost of production of flature silk is also edging forward and will have deleterious effect on the industry and our export promotion programme.

In the circumstance, it becomes imperative that concrete measures should be adopted for reducing the manufacturing cost and for improving the quality of our goods for making them attractive to the consumers abroad. The decision of the Central Silk Board to go in a big way for exploiting the export potential of several varieties of silk fabrics is to be welcomed. Besides, the scheme for liberalisation of export incentives for the industry which is under the consideration of the Government should be implemented without delay for boosting exports of silk fabrics. The State Governments should adopt a sympathetic attitude toward the industry and offer incentives for a speedy development of this important foreign exchange earning industry.

MINERALS

Boosting Output

The deliberations of the Central Mineral Advisory Board at its eleventh session held in Bangalore have served to shed much light on mineral development in the country. There was a general consensus for launching a vigorous drive for expeditious mineral development and boosting mineral exports in the current Plan period. The production pattern during the past few years has shown a heartening trend. Production has surged from nearly Rs 716 million in 1959 to Rs 944 million in 1955 and sharply rose to Rs 1,662 millions in 1960 while in 1962 it reached Rs 1,868 millions. In quantitative terms the mineral output has registered an upward trend and the quantity index of production in 1962 went up to 146.1 from 135.1 in the preceding year. As Mr K. D. Malaviya, Union Minister for Mines and Fuel, has stated the increase in the index number was shared by all major groups and the index numbers for coal and metallic minerals were marked up by 13.3 points and 2.7 points respectively. The index number of non-metallic minerals moved up by 12.9 points. Though our production not only met the rising demand from growing industrial complex and earned sizable foreign exchange it has to be conceded that we have to go a long way still to tap the varied resources for both industrial and economic development. It is also equally essential that we set up research centres at selected places to ensure

that our mineral resources are put to the best industrial applications.

Side by side with stepping up production, measures have to be taken to stimulate mineral exports. In this regard we have certain advantages in that our resources of minerals like iron ore and mica are of the best grades and are far in excess of our requirements. But as in the case of other items the cost of production is the main determining factor in mineral export promotion. In a competitive world market the success of an exporting country depends solely on offering its goods at competitive prices. We will have to be in constant vigil on the various developments in the international mining and translate them into practice in our mineral development programme so that production cost can be slashed down to some extent. Reduction in freight rates, some tax concessions to the industry and the like can considerably enhance the competitive strength of Indian minerals abroad. The adoption of a long term export promotion programme by the State Trading Corporation in consultation with the industry will be a welcome step in this direction.

INDUSTRY

Handicaps in West Bengal

Speaking at annual meeting of the Bengal National Chamber of Commerce and Industry Mr J. N. Mookherjee has pointed out that industries in West Bengal have been placed in an enviable position in regard to the supply of coal. In this region, under the new system of block movement, consumers requiring less than 1500 tons of coal per month are compelled to take their supplies either from the dumps or by making their own arrangements for supply by road. The system has adversely affected industries in and around Calcutta because transport of coal by road to Calcutta is costly and is also subject to the limitation of the availability of suitable roads from the coal-fields to the consuming centres. On the other hand, industries in the South and West where movement of coal by coastal ships is being subsidised from a fund to which consumers of coal from every part of the country, including West Bengal, are contributing. Thus while the disadvantages of other distant States on account of higher freight charges have been removed, West Bengal industries are still suffering from other handicaps because of certain locational handicaps. So if the West Bengal industries are also to be placed on a par with their counterparts elsewhere in the country, it is essential that the road system in West Bengal is improved. Mr.

W. H. JACKSON
Manager.

Mookerjee has noted that a good road system will go a long way towards reducing the cost of moving coal. For it will then be possible to arrange for trailer truck movement of coal with the aid of diesel. This will have the double advantage of ensuring larger supplies of coal and a reduction in the cost of coal transport by almost 50 per cent.

Another problem that industries in West Bengal have to grapple with is power shortage. Inadequate power supply has been dogging the steps of industries in this region for the past two years and indications are that there will not be any substantial improvement in the position for another eighteen months. Mr Mookerjee attributes this unsatisfactory position to the inability of the Planning Commission to correctly assess the demand for power that would be generated as a result of the developmental programmes initiated and approved by the Commission itself. The present position is that not only new industries are not getting power but also existing industries are having their programmes dislocated because of the frequent load shedding that is being resorted to in the Calcutta Industrial area by the Calcutta Electric Supply Corporation, often without notice. Recently, industries in the northern part of the Calcutta Industrial Area faced with a power cut of about 40 hours a week. The power crisis has made it clear that power planning should be such as to ensure that supply is always somewhat in excess of demand. For this view it is necessary that having correctly assessed the quantum of demand during the Fourth Plan period, steps are taken sufficiently in advance for providing adequate power. The Bengal National Chamber of Commerce and Industry jointly with three other Chambers in Calcutta, has made an assessment of power demand in West Bengal at the end of the Fourth Plan. According to this estimate the demand for power will be of the order of 2120 MW over and above the expected availability of 1000 MW at the end of the current Plan.

US

Trend of Commodity Prices

IS the long slide in world commodity prices coming to an end? This question is beginning to intrigue the experts, although they do not as yet appear to have reached any firm agreement on an answer.

Prices by and large are still well below their level of a decade ago, when inflationary pressures brought on by the Korean conflict pushed them to extraordinary highs. But there may be telltale signs of a new trend in the making, in the steady rise of prices for some materials—

such as metals, fibres and food—in the past few months.

Commodity experts observe that prices historically have tended to move up or down in long swings, or cycles. World markets tended to grow relatively slowly during the 1950's, they note, and expanding productivity capacity in mining and agriculture proved more than enough to meet the demand. This had its effect on prices, which moved into a general decline.

Now, many of the experts believe that a better long-term balance is shaping up between supply and demand, which may reflect the beginning of a long-range improvement in price levels.

A number of factors are cited. One is the likelihood that growing populations and rising living standards around the world will be pushing up demand and lending firmness to commodity prices. Also, cutbacks in supply, along with diversification efforts by developing lands, may have improved the outlook for many commodities. Not to be overlooked, in addition, is the growing interest in international arrangements, such as the new coffee agreement which the US Senate has just ratified, as a means of price stabilization where desirable and feasible.

Of particular interest is the strong upswing in the US economy. This is proceeding at a more vigorous pace than generally anticipated, with industrial output soaring to record highs and still rising leading to unexpectedly heavy US demand for many commodities. Looking further ahead, many economists are expressing a growing confidence in the long-range future of the American economy, which they envisage as an important source of strength for commodity markets for a number of years to come.

It should be noted, however, that these price judgments are not necessarily unanimous. Some experts lean to the view that what is happening now may be largely a short-term fluctuation.

Nor should anyone leap to the conclusion that another inflationary binge in commodity prices is in prospect. For one thing, not all prices are behaving in the same way. Some, such as sugar, cacao and silver, have gained sharply; others have moved up moderately or held steady; some, such as aluminum and rubber, are below last year's levels. Also, advancing productivity and efficiency in industry and agriculture which is basic to economic progress, could hold any price rises to relatively moderate dimensions.

But even a moderate rise would be a welcome improvement over the record of the past decade. It would be especially welcome to developing areas that are important raw materials producers and exporters, whose economic growth may have been slowed somewhat by the past decade's slide in commodity prices. Increased foreign exchange earnings resulting from better demand and firmer prices could help them stabilize their finances and accelerate their economic progress.

Developments in Latin America offer an interesting example in this connection. Last year higher commodity prices brought a five per cent jump in Latin American export

earnings, and for the first time since 1957 gains in export volume were not cancelled out by declining prices.

One possible disruptive element in the agricultural sector was eliminated last week. President Kennedy issued a directive designed to prevent any dumping of US wheat on world markets as a result of the rejection by American farmers of the 1964 production control programme. As a result of the directive, US wheat will not enter the international market at less than \$1.62 a bushel. This move should effectively ease any international apprehension over the possibility of large quantities of low-priced US wheat entering world markets.

MAINTENANCE NPC Report

With the accelerated pace of industrial progress, the problem of maintenance of plant and equipment has assumed special importance. Since most of the machinery are imported, their continued efficient functioning depends on the availability of essential spares for the import of which additional foreign exchange is required. It is therefore imperative that such machinery is well maintained so that the expenditure on spares is minimised. Although the importance of maintenance in India is well recognised, there does not as yet appear to be any organised approach to this problem. It is therefore gratifying that the National Productivity Council has focussed attention on this vital aspect of industrialisation. A productivity team on industrial maintenance sponsored by the Council recently visited a number of industrial units in the

number of industrial units in West Germany, the UK and the USA and has now prepared a report embodying observations on plant maintenance techniques and practices in vogue in the various industries visited by it. The report points out that for our industries to function efficiently and produce quality products, it is of utmost importance that concerted attention is paid to building up a sound

work is paid to building up a sound maintenance organisation. It is of the view that it is more a combined responsibility of the State, the industrialists, the engineering associations, the National Productivity Council and the Local Productivity councils to contribute severally and together to the promotion of a sound maintenance programme in every industry, founded on rational principles, sound techniques and local experience. The following paragraphs give a summary of some of the Team's recommendations:

The type of maintenance will have to be tailor-made to suit the particular needs of each industry, depending on its local conditions traditions, etc. The basic fact, however, remains identical; namely, that for any maintenance to be effective, it has to be systematic. Equally important is the strict follow up of the programme.

Managements both in the public and private sector industries need enlightenment on the desirability of adopting modern techniques of maintenance in their set-up as a prerequisite to quality production at scheduled rates of output and at competitive prices. A sound maintenance

programme can only be evolved gradually and is best achieved by covering smaller units at a time.

As the objective of maintenance is to keep the plant running at a required level of productivity and at the lowest cost, scientific management techniques such as method study, scheduling and planning, process study, work study and statistical controls, should be adopted. Good maintenance aims at reducing the volume of maintenance work and reducing the inventory of spares. This can be achieved by expert scrutiny at the time of purchase by the maintenance engineer.

Preparation of rigid standard specifications for products that are indigenously produced is also essential. Such strict enforcement of standards will go a long way in obviating the numerous difficulties that have to be faced by the maintenance engineer by having to deal with sub-standard and non-standard products. Our industries still depend on imports for a number of small spare parts. These can be manufactured within the country and active steps should be taken to interest small industries for taking up the manufacture of these small spares. Budgeting and cost control are essential to keep down maintenance expenditure. Our planners must take note of the steadily growing automation in industry and design their technical personnel training programme accordingly. Future maintenance personnel will be required to be highly skilled and well versed in the maintenance of mechanised and automatic industries. Since maintenance is of paramount importance to industry, our universities should develop proper curricula to include industrial maintenance in their teaching.

The needs of small industries in respect of maintenance should be given serious consideration. Action may be in the direction of providing common maintenance personnel for groups of small industries. There is need for bringing about close contact between the Universities and industry as obtaining in West Germany, UK and US.

In view of the acute shortage of foreign exchange, salvaging of spare parts should be undertaken on a systematic basis. Since salvaging plays an important role, the creation of a separate section within the maintenance organisation, where possible, to attend to salvaging work is strongly recommended. Another important aspect of economic maintenance is control of wastage. This means developing cost consciousness among workers and supervisors.

The maintenance organization should give top priority to the problem of safety by interesting its personnel in safe practices and by maintaining equipment in safe operating condition. Greater use of portable tools should be encouraged as this will save time. The tools should be taken to the job and not the job to the tools.

In the opinion of the Team, the practice of contracting out certain types of maintenance work will be quite economical. In the countries visited by it, there are specialised agencies to undertake such work. Exchanging ideas and experience about maintenance is beneficial in every way and the Team has proposed the formation of a Society of Maintenance Engineers with a view to providing a common platform for discussing maintenance problems and techniques.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

THE New Frontier has these past few days been exposed to the old in the person of Dr Radhakrishnan. By all accounts the encounter has been beneficial to both. The love of culture and art that has characterised Mr Kennedy's Washington will have responded eagerly to the erudite scholar; and India's President, for his part, will have been enabled to learn at first-hand the sincerity of the present Administration, though in the last Congressional session no major breakthrough in policy could be achieved. By a happy coincidence the aid-India Club made known its pledges for the current year of the Plan, and here was available one more piece of evidence testifying to the US Administration's anxiety to help us as best it can. On the Chinese threat I am not sure whether there was any call upon Dr Radhakrishnan to educate his hosts; but the philosophy underlining our Plans, the objective behind them and the need to sustain our endeavours at progress would all have been matters that needed to be emphatically elucidated.

But as with all such visits we would be mistaken if we were to expect any transformation in American opinion generally, whether as voiced on the floor of the Congress or as printed in the editorial columns of the newspapers. Except that a visit by Mr Nehru has had the effect of mesmerising people, little tangible has come of the many goodwill tours that our leaders have made. Indeed, Dr Radhakrishnan's trip to Washington has been hard on the heels of the one made by Mr T. T. Krishnamachari, and to that extent one might say that there has been duplication of effort on the public relations front. And yet such is not quite the case. TTK's was a mission, mainly relating to military and defence matters. If at all the Indian President can be said to have had a mission, it is, I should think, an attempt to know more closely the New Frontier and to understand the implications of such policy for us.

It must have been doubly amusing for Dr Radhakrishnan to hear Mr Kennedy's gaffe, that no Professor had become President in America. Woodrow Wilson had been quite overlooked; and there as chief guest was a Professor who had been elected President, though

of another country. In the audience was Mr Galbraith, and an Ambassador who is soon to revert to being a Professor might have ambitions of his own. But Mr Galbraith must keep in check his hopes, for a few days ago Mr Kennedy made clear (if such was necessary) that he was available to run for the Presidency again in 1964. If I remember right, no President in America seeking a second term has been defeated. Mr Kennedy is secure, and I should rather have thought that those with Presidential hopes in the Republican party would be biding their time, looking to 1968 when Mr Kennedy would be ineligible to be again a candidate. But no: Mr Rockefeller, blighted though his chances appear to be as a result firstly of his divorce and secondly of his marriage to a divorcee, appears to have begun a vigorous campaign; and Mr Romney with frequent visits to Washington, seems very like an aspiring candidate.

Dr Radhakrishnan's visit has also coincided with an intensification of satyagrahic efforts on the part of the American negro to win the equal rights that his Constitution has long promised him but which that Southern States in particular have long denied him. The non-violent submission to brutality, sometimes from mobs and not infrequently from the police forces themselves, must have been a forceful reminder of India's own fight for independence. Children have been recruited into the ranks of the non-violent army, but I am not sure that this is a good thing. The indiscipline of students in this country, and especially in West Bengal, owes not a little to the tradition of disobedience to authority that had unfortunately been learnt in the late forties. Juvenile delinquency is already a problem that Americans are beleaguered by; and the sit-in strikes, the marches down streets, the truancy from school and studies are all improper training for impressionable youth.

A revolution is in the making in America, and "civil disobedience" disturbances are not restricted to the Southern States alone. In Chicago, in Philadelphia, and in other cities in the North, too, the contagion of protest against constitutional rights denied has spread. Integrated schools; buses where all may travel and sit where they will; lunch counters that will feed not just one species of customer with a particular

pigmentation; and job opportunities that are fair and equal—these are what, in this centenary year of the emancipation proclamation, the negro is non-violently fighting for and in the non-violent way his triumph in the battle is assured.

Half a world away another battle drew to its close; bravely Pope John XXIII withstood the rigours of approaching death; and when it came, by the manner of his resolute defiance of pain, John XXIII had proved his had been a rarely paralleled papacy in recent times. In the five short years that he was Pope, John XXIII has to his credit what can best be called a modernisation of not merely Catholicism but, more importantly, of religion generally. It was in his time that the papacy in Rome became, in America, a political issue: would John F. Kennedy, a Catholic, prove to be "sub-servient" to the Vatican? This was what in the final analysis the Presidential campaign of 1960 degenerated into, but Mr Kennedy as head of State, and John XXIII as head of the Church, have laid at rest the unfounded apprehensions of American Protestants in this respect. It is not the Catholics alone who mourn the passing away of John XXIII; world religion has lost a leader of change.

Death in mass struck holiday-bound tourists in India; and the bulk of the tourists were foreigners. The Dakota wending its way to Kashmir never did reach its destination: all passengers, all crew, were killed in an accident that struck down the plane in flames. As usual there was no lack of the poignant story. Two wives waited in vain for a lunch at which their husbands, the pilot and co-pilot, were to join them.

A head of the family, using his diplomatic influence, sent to their deaths his wife and children; and when told the news he could no more than shout: "No, it's a lie!" I am reminded of the time when S. Sadanand, founder and editor of Free Press Journal, at the last moment changed his mind—and sent in his stead one Samuel by the night plane to attend a newspaper editors' conference in Calcutta—a plane that never reached Dum Dum. Sadanand was never the same again, his health rapidly failed him, and he passed away soon after. The Dakota is a reliable breed, and of course there is no question of grounding the IAC's fleet of this type of aircraft. But old age is creeping up upon the Dakota, and its replacement by other craft may merely be expedited by this unfortunate accident.

Exit Profumo, followed as he was by a tenacious press. The bravado, that he would not hesitate to sue for libel when his name was connected with that of Miss Keeler, is all gone. What remained was a peevish and sheepish explanation, that he wished to shield his family. Miss Keeler herself has been let off lightly, and that she was away in Spain when she should have been in the witness box as the chief prosecution witness has cost her no more than the £40 she had to put up as bond. I wonder whether it was not her absence—contrived as it might have been—which first occasioned the rumour-mongering in the London press, a journalistic digging after the truth that in due course involved Mr Profumo—though not by name in this unsavoury matter. The too prompt denial then could only pave the way, when some facts became known, for his resignation. One more shock for Mr Macmillan and one more reason why the Tories' chances at the next elections have gone down appreciably. The Labour party has wisely refrained from comment. Mac is not all right, Jack, and Labour never had it so good.

POWER PROGRAMMES Tempo Stepped Up

The prospect of early improvement of power supplies was one of the encouraging features to which attention was drawn in the report on Plan progress presented to Parliament last month. According to the authorities, the difficulties of power shortage belong to a passing phase which is nearing its end. Additional plant capacity for generation of over a million kilowatts is expected to be set up during 1963-64, resulting in a substantial improvement all over the country. By the end of the Third Plan the supply position is expected to be comfortable in most of the States. Some may even have a surplus to be shared with neighbouring States.

Since the Third Plan was finalised, modifications and additions to the power programme to the extent of one million kilowatts have been sanctioned, of which fifty per cent of the benefits are expected to accrue during the Third Plan period. Unless unforeseen difficulties upset the programme, it is expected that generating capacity of over 13 million kilowatts would have been set up before the end of the Plan period.

Apart from the increase in generating capacity which is part of the power programme, there is an interesting reason for the easy supply position that is now anticipated. According to a reassessment of the road demands in all the States which was recently undertaken by the Electric Power Survey Committee, there is a considerable fall in the requirements of power in many States during the Plan as compared to earlier estimates. This is attributed to the slowing down of the pace of industrial development as a result of the foreign exchange shortage and its consequences. Additional requirements of defence production have been taken into consideration in making the reassessment. There may be further demands on this account, though, it is considered that these may not be of a very large magnitude.

According to an assessment made about a year ago, it was reported that there would be an overall shortage of 0.5 million kilowatts in the country at the end of the Third Plan and additions to the power programme were made on this basis. With a reduction of 1.5 million kilowatt in demand as now anticipated and the benefits remaining practically the same, it is stated that a number of States will have some surplus power in 1965-66. This does not however mean that the position in every State will be easy. Supplies will be short of requirements in a number of States such as Andhra Pradesh, Gujarat, Jammu & Kashmir, Maharashtra, Punjab, Rajasthan and

Uttar Pradesh. Steps are also being taken to mitigate the difficulties likely to be experienced in these States to the extent possible, by providing inter-connections for transfer of surplus power from neighbouring States.

The annual increases in installed capacity and totals at end of each year as envisaged in the Plan and as now anticipated are as follows:

(In million kilowatts)			
As originally assessed in the Plan			
Addition during the year			
	the year	Total	
At end of II Plan	...	5.70	
1961-62	0.60	6.30	
1962-63	0.73	7.03	
1963-64	1.05	8.08	
1964-65	2.07	10.15	
1965-66	2.50	12.69	
According to the latest assessment			
Addition during the year			
	the year	Total	
At end of II Plan	...	5.60	
1961-62	0.58	6.18	
1962-63	0.60	6.78	
1963-64	1.22	8.00	
1964-65	2.00	10.00	
1965-66	3.00	13.00	

The outlays on power programmes which amounted to 12.5 per cent of the total in 1961-62 and 18 per cent in 1962-63 will be stepped up to 23.8 per cent in 1963-64. Following the declaration of the Emergency, the power programmes were examined in detail with a view to accelerate their completion ahead of schedule. The Central Water and Power Commission had recommended the speeding up of a number of projects already included in the Third Plan, as well as starting of advance action on some Fourth Plan projects. The Central Government had also undertaken to speed up the procedures for release of foreign exchange for power projects as well as to ensure supply of essential materials. The procedures for release of foreign exchange have been simplified.

The Neyveli extension, Pathratu Thermal Station, Singrauli Thermal Station, Delhi 'C' station and the Chandrapura and Durgapur Thermal plants of the DVC are expected to be completed ahead of schedule as was indicated some time back in answers to questions in Lok Sabha. Earlier it was feared that some of these projects would not be completed before the Fourth Plan, on account of the delays in the supply of plant and equipment from the USSR. As a result of high level discussions with Soviet authorities, arrangements have been made for advance delivery of equipment for these projects. According to the later assessment, it should be possible to Commission by the end of the Third Plan all units under the Neyveli extension and all but one unit under Pathratu extension and three out of five units at Singrauli. The Chandrapura first and second 140 MW units are also

expected to be commissioned earlier by about three months each. The Durgapur 140 MW unit, which was expected to be commissioned early in the Fourth Plan, is now expected to be commissioned in 1965-66.

As indicated earlier, the Central Water and Power Commission had recommended taking up of some Fourth Plan Schemes in the Third Plan itself, in order to meet the requirements of power expected to develop by 1968. The proposals for speeding up of Third Plan schemes which were expected to yield benefits in the Fourth Plan, and the Fourth Plan schemes on which advance action has been recommended, are under discussion with State Governments. These envisage the increase of total generating capacity to 17 million kilowatts by the end of the second year of the Fourth Plan. The implementation of these proposals will involve additional expenditure during the Third Plan of Rs 160 crores over the Plan provision of Rs 1039 crores.

Besides speeding up construction of projects, action has also been recommended to ensure optimum use of existing facilities, such as building up loads so as to improve plant load factors, reduction of distribution and transmission losses, fuel economy and other measures to improve efficiency of operation. Staggering of industrial holidays and supply of industrial and other loads during off-peak periods have also been suggested to bring down peak demands and also to generate more electricity per unit of installed capacity. Action has also been initiated to provide link lines between neighbouring systems so as to enable exchange of power from surplus to deficit regions. Provision has been made for four such links in the annual plans for 1963-64, namely, Raigarh-Korba; Hissar-Khetri-Jaipur; Chanda-Bhusaval; and Ghaziabad-Delhi.

To keep power and industrial development in balance, and to ensure that industry does not race ahead of power development only to be brought to a halt by power shortage a little later, it has been arranged that a representative of the Ministry of Irrigation & Power would be attending meetings of the Licensing Committee. State Governments have also been invited to express a definite opinion regarding availability of power, whenever, any new undertaking or substantial expansion of an existing undertaking involving consumption of 2000 kw or more of power, is sponsored.

Captive Power Units

As regards the sanctioning of captive generating units which could solve many of the difficulties in the way of industrial expansion, the official view appears to be that the Industrial Policy Resolution of 1956 is sufficiently elastic to accommodate these within the framework of the overall plan for power. But individual proposal will have to be considered on merits and sanctioned subject to certain conditions. It is pointed out that if all such proposals were freely sanctioned, it may create serious difficulties of foreign exchange for import of equipment. Supply of coal to such power stations sited away from coal fields will also add to the strain on

transport. A third reason that has been advanced is that larger-sized plants, such as form part of the public supply system, use coal more economically than the smaller plants. At the same time there is appreciation of the reasons for the anxiety of private industries to have their own power plant. The ever present fear of power shortage and the economics of self generation are sufficiently obvious, though official thinking seems to be that these can be met by completing the power programme according to schedule and by fixing electricity tariffs taking into account alternative costs of self-generation. But there are also cases where technical considerations, and the need for overall economy in the utilisation of resources, reinforce the case for 'captive power plants.' For instance, the manufacturing processes in some industries may yield as by products fuel gases which can be economically utilised for generation of power. Again some industries require 'process' steam in addition to electricity. In such cases, installation of bleeder turbines, which can provide both steam and power may be economical. Industries operating round the clock also require standby power plants for emergencies. In such cases applications for import of power plants are usually, granted. It is also learnt that, where the State Government is not in a position to supply the power required, sanction for 'captive plants' may be granted having regard to economic size, location from the standpoint of facility of transport of coal, and the party's readiness to arrange for the necessary foreign exchange. The State will also reserve the right to acquire the plant after a specified period.

BRIDGE & ROOF CO. (INDIA) LTD.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting (being the seventy-ninth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, 28th June, 1963 at 12-15 p.m. to consider the Accounts of the Company for the year ended 31st December, 1962 and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 21st June, 1963 to 28th June, 1963, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.
D. MANSON
Managing Director
Secretaries.

21, Netaji Subhas Road,
CALCUTTA, 30th May, 1963.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

Markets

JUTE Marketing Problems

THERE is every indication that the jute industry will have in the jute season commencing from next month, yet another period of plentiful jute supply. Right from the sowing time weather has been exceptionally favourable for the crop with sufficient rain at the right time. During the past two months weather conditions have been generally conducive to the healthy growth of the plant and now that contrary to earlier expectations the monsoon will not be long delayed, the progress of the new crop will not be unduly hampered. As for the acreage under jute, if anything, cultivators seem to have planted more land with jute than last year. So if nothing untoward happens in the next few months, the 1963-64 crop will be as big as that of the previous year, if not bigger.

Assuming that the next crop will be of the same size as the current season's, there will be plenty of jute during the 1963-64 jute season. For the current season commenced with the large carry over of 25.33 lakh bales while the crop is estimated at 68.89 lakh bales. Thus the total availability of jute this

season may be placed at about 97 lakh bales including exports from Pakistan. Of this mill consumption will absorb about 70 lakh bales and exports and other domestic consumption about 3 lakh bales, leaving a balance of 24 lakh bales to be carried over into the next season. This calculation however does not include the sizable quantity of jute that had been smuggled into India from Pakistan during the latter part of the current season. It has been estimated that some 10 lakh bales of jute had been moved across the border. When this quantity is added, the total carryover into the next season will be in the environs of 34 lakh bales. Latterly it has been apprehended that the next crop will have been adversely affected by the cyclone which has wrought havoc in parts of Tripura. Some set-back to the normal growth of the plant is also feared in parts of Assam, Bihar and Orissa—in the first State owing to floods and in the other two as a result of continuous hot weather. It is how-ever believed that these adverse conditions have not been such as to make necessary a drastic revision of the earlier estimates. But even supposing that the next crop is smaller than the current year's, there will still be need for evolving a satisfactory plan for the

smooth disposal of the available jute because the large carryover from this season will go to swell the total availability of jute next season.

It is gratifying that the Authorities are seized of the need for initiating early steps to ensure that marketing of jute proceeds on orderly lines. Since Government has fixed the minimum operational price of jute at the current season's level of Rs 30 per maund, it is essential that there are ready buyers at any given point to lift jute at the operational price. In this regard the experience this season has not been very happy. There were complaints against not only the middlemen but also the industry that unfair advantage had been taken of the plight of the cultivator. One of the subjects discussed at the reconstituted Central Jute Supervisory Body for Jute last week in Calcutta was the streamlining of the jute purchase machinery to maintain the minimum operational price next season. There are of course the Jute Buffer Stock Association, and the State Trading Corporation to give support to the market. Central Warehousing Corporation is also to function as a second buffer stock. It would appear that further steps will be in the direction of making the cooperatives active agents for the marketing of jute so that the price paid by the ultimate consumer reaches the grower without any intermediary to claim a share in it. The decision to constitute an expert committee to evolve a more scientific basis for the quality classification and grading of jute will be welcomed by the industry as it is the standing complaint of consumers that owing to lack of proper arrangements for classifying jute according to quality, they are often obliged to take low quality jute even though they pay the price of a higher quality.

TEA Exports to ECM

THE annual report, issued by Messrs J. Thomas and Company, expresses the view that there is nil tariff on Tea in the European Economic Community and India should, therefore, be able to expand its tea exports and compete on equal terms with trade rivals. The report says that consumption in West Germany and the Netherlands, the principal importers among the Six, are absorbing about 15 to 16 million kgs of tea each year. In other words, imports have slowly come back to pre-war levels.

Further expansion in these markets will depend on the price relationship with coffee, which is the nil tariff will give tea a competitive edge. The advantage is to be consolidated by a publicity effort which the Tea Board is sponsoring.

India's share of the ECM's tea import is around 4 per cent of the total, which can be further increased. But her best chances lie in increasing the total consumption of tea in this market. Last year, there was some improvement in the import of tea by most of the West European countries, France having increased the quantity from 3.8 million pounds to 4.2 million pounds; West Germany from 14 to 17 million pounds and Netherlands from 24.5 to 26.7 million pounds.

On the industry's financial outlook, the report says that producers should be allowed to make and retain sufficient profits. It argues that the industry can hardly be expected to plough back funds on a scale sufficient to achieve the high production target set under the Third Plan unless reasonable after-tax profits are assured.

The industry has to make an equal effort to improve the quality of manufacture in the highly competitive trade that tea has now become. It is conceded that rationalisation and increased productivity can provide a partial remedy against the squeeze of profits.

Meanwhile, in the second export sale held in Calcutta this week, offerings amounted to 18,811 chests. The majority of the offerings were from Darjeeling district and these received only a limited demand. The remaining teas auctioned, however, met with useful competition in the face of a good demand. Prices for the better Darjeeling descriptions were irregular and generally much easier. Broken and Fannings, however, particularly those from lower elevations were sold readily around or a little below last rates. The remaining orthodox teas were again well supported.

Although the more stylish and higher-priced descriptions were irregular, better liquoring types were dearer, while medium and plainer sorts were about firm. CTCs met with useful competition at firm rates, Broken receiving better prices than similar Fannings. Legg-cut teas were irregular.

In the Internal Sale, offerings consisted of 15,313 packages of Dusts. Medium CTC dusts were quite well supported at prices, which were generally around 20 nP below last levels. Exportable orthodox dusts came in for good competition at slightly lower rates, while the better liquoring Assams were generally 15 nP to 20 nP easier. There was a total of 5,255 packages of new season's teas in this week's sale.

The small quantity of Assam CTCs were generally sold at a drop of 20 nP with a few withdrawals in this category. Other CTC types, however, came to a good market and were sold well. Orthodox and legg-cut dusts oper-

THE UNITED INDUSTRIAL BANK LIMITED

Registered Office : 2, WELLESLEY PLACE, CALCUTTA-1

Chairman,
The Directors present to the Shareholders the Audited Balance Sheet of the Company as at 31st December, 1962, together with the Profit & Loss Account for the year ended 31st December, 1962, annexed thereto. The Auditors' Report is also attached.

It is regretted that despite favourable working results during the year under review, the Profit & Loss Account discloses a loss of Rs. 23,792.48 nP arising from adjustments which the Directors deemed necessary to make, for the following purposes—

- (i) Bad Debts in Pakistan written off ... Rs. 29,519.15 nP.
(ii) Reserve for Taxation in Pakistan on account of Profits made by Natarlungunge Branch in 1962 ... Rs. 15,690.00 "

The loss thus incurred in 1962 together with the balance of loss standing at Rs. 1,35,834.98 nP as per last Account aggregates Rs. 2,08,627.46 nP to be carried forward.

Negotiations for a scheme of amalgamation of certain other banks with this Bank are in progress in consultation with the Reserve Bank of India. It is hoped that if this scheme goes through, the profit-earning position of the Bank will considerably improve.

Due to absence or inadequacy of profits during the years following the year when gratuity first became payable to the staff in accordance with the provisions of the Sastri Award, no specific provision for that purpose has been made, but payments on that account had

Directors' Report for the year ended 31st December, 1962

been made, when occasions arose, by direct debits to Charges Account. The Directors are alive to the Bank's liability in this respect and propose to create a suitable fund for meeting the charge with the consent of the shareholders when necessity arises.

Income-tax assessments for the years 1959, 1960 & 1961 are under appeal before the Income-tax Tribunal and the Directors have reasonable grounds to believe that relief would be afforded by the Tribunal. The Directors propose to take such action in this respect as is prescribed by law.

The Auditors of the Company in their report to the Shareholders have remarked that in their opinion a sum of about Rs. 1.82 of the total advances as at 31st December, 1962 is doubtful of recovery and that no provision has been made in the accounts. They have also expressed their inability to form an opinion as to the realisability in full of certain advances, which are the subject-matters of suits pending in various Courts of law. The Directors, before pursuing the suits and decrees before the Courts of law, had in each case, weighed the prospects of recovery and hold the view that given due care and perseverance in piloting the cases, most of the dues from the defaulting borrowers are likely to be recovered sooner or later. These advances under suits and decrees are mostly connected with real estates in urban area which the Bank had either obtained as security under adverse circumstances or had

attached in execution proceedings. The value of urban real properties has since appreciated and the Directors feel that a major portion of the advances about which the Auditors have expressed apprehension will be realised in course of time. We referred you to the Explanatory Note dated the 19th April, 1963 circulated to you by way of addendum to the Board's Report for the year ended 31st December, 1961 wherein the Directors have also given their reason for not considering the amount as being doubtful of recovery.

Sir D. N. Mitra, who is 72 years of age and was appointed a Director in the casual vacancy caused by the resignation, before the expiry of the term, of Sri Jadu Nath Roy, Director and Chairman, by the shareholders of the Company at the General Meeting held on 21-2-63, in accordance with the provisions of Section 281 of the Companies Act, 1956 retired under the Articles but has consented to continue in the office of a Director and the Chairman, if so resolved by the Shareholders in General Meeting.

Dr. Satya Churn Law, who is now 71 years of age and was also appointed a Director in 1960 by the Shareholders in accordance with the provisions of Section 281 of the Companies Act, 1956 also retires under the Articles, but has consented to continue in the office of a Director, if so resolved by the Shareholders in General Meeting. Auditors of the Company will have to be appointed for the year ending 31st December, 1963.

For & on behalf of
The Board of Directors
D. N. Mitra
Chairman,
Calcutta,
the 19th April, 1963

THE UNITED INDUSTRIAL BANK LIMITED. BALANCE SHEET—Contd.**AUDITORS' REPORT TO THE SHAREHOLDERS**

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit and have found them to be satisfactory. In our opinion proper books of account have been kept by the Bank as required by law so far as appears from our examination of those books. We have visited all the Indian Branches and proper returns adequate for the purposes of our audit have been received from these Branches as well as from the Narainunge Branch, Pakistan, which has not been visited by us. The Pakistan Branch accounts have been audited by other auditors and the report on the accounts of this Branch has been forwarded to us and the same has been considered in preparing this report.

We have examined the Balance Sheet of the United Industrial Bank Limited, as at 31st December, 1962, and the annexed Profit and Loss Account for the year ended on that date, which are in agreement with the books of account and returns.

The transactions of the Bank which have come to our notice have been within the powers of the Bank.

Advances include an amount of Rs. 1,82,000/- approximately which, in our opinion, is doubtful of recovery and which has not been provided for in the accounts. In view of several cases pending in various courts relating to the recovery of certain advances, we are unable to form an opinion as to the realisability of those advances in full. Subject to the foregoing, in our opinion and to the best of our information and according to the explanations given to us, the accounts of the Bank, together with the Notes thereon, are properly drawn up so as to disclose, in the case of the Balance Sheet, a true and fair view of the state of the Bank's affairs as at 31st December, 1962, and in the case of the Profit and Loss Account, a true and fair view of the loss for the year ended on that date so far as is required by the provisions of the Companies Act, 1956, and the Banking Companies Act, 1949.

ed slightly easier, but hardened as the sale progressed and closed firm to dearer. The new season's Darjeeling dusts came to a very strong market and were sold at much enhanced rates. Due to insufficient quotable teas on offer, no rates were given.

In the Cochín market, offerings were 822,000 kilogrammes of Leaf tea. The market opened with good demand, which continued throughout the sale. Quality of teas in general, however, showed a further seasonal decline. Low Medium and Medium Broken were well supported; but these were slightly easier, while cleaner types under this category were sold at around last week's rates. Fannings were sold readily, but eased by 5 nP to 10 nP a kilo.

There was some enquiry for good mediums; but prices were lower. There was better support for high-grown than last week though a majority of the descriptions continued to meet with good demand at firm rates, while Whole Leaf grades met with good support though a little irregular, particularly flowery Pekoes. Orange Pekoes and Pekoes were sold well.

In the Colombo market, offerings were 7,887,883 pounds. These met with good general demand. At the opening, best available Dimbula/Dickoya BOPs met with strong demand at dearer rates. Those below best were irregular and generally rather dearer except for very plain liquoring sorts. Colour medium broken from western districts were irregularly easier and very plain sorts were 2 to 5 cents per pound lower.

Brighter Uvas were fully firm to slightly dearer; but plainer teas were 3 to 8 cents easier. Low-grown broken opened slightly below last rates, but prices tended to rule firm. Dimbula/Dickoya BOP Fannings were irregular, but generally easier. Mediums were easier, while Uvas followed the trend of their BOPs. Low-grown BOP Fannings opened rather lower, but firmer later in sale.

Production in Ceylon increased to 50 million pounds in April from 44.2 million pounds in the corresponding month of last year. In

the first four months of the year, the outturn is higher at 165.6 million pounds as against 160.3 million pounds in the corresponding period of 1962.

Production in Pakistan amounted to 2.9 million pounds in the same month, same as in April last year. Up to April this year, however, the outturn in Pakistan is lower at 2.3 million pounds as compared to 2.4 million pounds in the corresponding period of 1962.

Tea stocks in London, as on 25 May 1963, totalled 156.83 million pounds as against 157.81 million pounds in the previous week. The total amount to be landed on the same date was 9.57 million pounds. Total afloat was 20.43 million pounds including from: Calcutta 838,080 pounds; from Chittagong 2,000 pounds; from Cochín 2.10 million pounds; from Ceylon 11.49 million pounds and from other Ports 6.00 million pounds.

COTTON Set-back in Futures

THE Bombay cotton futures market turned distinctly easy during last week and prices tumbled down consequent on the reports of better supply position. The Jarilla August contract which moved upto Rs 717.75 per three quintals on the opening day slumped to Rs 709.00 toward the close of the week on sustained selling pressure and lack of buying support. The weakness stemmed from the estimates relating to the improvement in this season's cotton output and the better prospects of large scale imports of American cotton under the PL 480. The market outlook is quite discouraging and according to the consensus this downward trend is likely to continue for a considerably long period unless some significant development occurs.

The spot market at Sewri remained featureless. Stray business was reported in popular domestic varieties. Most of the mills are reported to have covered

their requirements for the current season and the turnover was limited. Only needy mills entered the market for ready lots such as L147, CO2, Kalyan and Digvijay.

Brisk trading was reported in the import section for American cotton. The Indian Cotton Mills' Federation was reported to have purchased from the US nearly 5,000 bales of American cotton during the week under review. In addition to this, there was a scramble from many of the mills for fulfilling their allocations due to the proximity of the contracting period. Spinner interest was also pronounced in Egyptian and Sudan growths. The Government has allowed earlier shipments against import licences for cotton stapling 1 1/16" and above on global basis which were valid from 1 July to 31 December 1963. But the actual shipment against this licence should commence only on or after 1 July.

According to a latest estimate of the Indian Cotton Mills' Federation our cotton requirements in the current year will be in the environs of 85 lakh bales. Out of this approximately 60 lakh bales would be consumed by the mills, 3 lakh bales would have to be allocated for exports and the remaining 22 lakh bales would have to be earmarked for carry-forward stocks. The annual report of the ICME points out that the supply position including the carry-over stocks would be about 70 lakh bales, leaving a gap of 15 lakh bales. It may be recalled that the Government has so far announced import licences for 4.8 lakh bales, which, along with the balance of 3.3 lakh bales to be imported against last year's licence amount to nearly 8 lakh bales. The remaining 7 lakh bales are to be found through imports under PL 480.

The report has highlighted the need for obtaining cotton at ceiling prices, falling which the domestic textiles would be at a disadvantage in the international markets. It is also encouraging that under the obligatory export promotion scheme, there has been a slight improvement in the total export.

India's exports of cotton textiles during 1962 amounted to 598.36 million yards. The pattern of our exports reveal that the country fared better obviously due to the fact that the prices were comparatively attractive. Another noteworthy point is that our exports to the USA and Sudan registered a sharp rise. Exports to African, Asian and European markets on the contrary declined further. India's exports of textiles to the US rose by 282 per cent from 6.99 million yards in 1961 to 26.73 million yards in the year under review. The prices of unbleached goods were found to be attractive in the US markets when compared to that offered by Hongkong and Japan, two important competitors in the field. However the scope for stepping up exports to that destination is somewhat bleak in view of the restrictions imposed by the US under the long term arrangement on imports of certain categories of cotton piecegoods from India. International competition in cotton textile trade is increasingly becoming keener and the establishment of textile industries in many of the developing countries has reduced the overseas demand for cloth. This necessitates the speedy rehabilitation and modernisation of our textile mills to produce more cloth at reduced costs for stimulating our exports.

PIECEGOODS

The Bombay cotton piecegoods market during the past week depicted dull conditions. The stringency in the money market kept the total turnover down at a low level.

In the mill sector trading was meagre obviously on account of the declining trend in the upcountry demand particularly from Calcutta and Kanpur. The proximity of the monsoon also acted as a damper. Some superior varieties ruled steady during the week under review. The reports that the mills had entered a strong plea for an upward revision in cloth prices did not generate any development in the market. The trade was disinclined to reduce the prices despite poor demand. The stocks with the mills and trade are re-

ported to have been lifted to a great extent recently.

In the powerloom sector demand was negligible and prices of dhories and saries, particularly of bleached items, slipped down. There was a slight improvement on the export front and moderate business was transacted with the United Kingdom in sheetings, furnishings, and a few other items. East Africa was generally inactive owing to the enhanced excise duties, though scattered transactions in drills and sheetings were reported. West African interest was strictly confined to a small quantum of towelling. Australia accounted for a restricted quantity of longcloth and sheetings according to the availability of import licence. All other destinations were quiet during the week under review.

Rubber Supply Improves

ACCORDING to the figures released by the Rubber Board, total supplies of natural rubber in India increased slightly to 18,336 metric tons in March from 18,356 metric tons in the previous month. Similarly, consumption of natural rubber by the industry was also marginally higher at 4,813 metric tons in the month under review as against 4,477 metric tons in February this year. Stocks of natural rubber with the estates, dealers and manufacturers, at the end of March 1963, were 13,485 metric tons, showing a fall of 391 metric tons over the February-end figure.

In March last year, total supplies of natural rubber amounted to 15,628 metric tons of which 4,389 metric tons were consumed by the industry, leaving a stock of 11,439 metric tons at the end of the month. Besides, there was a stock of 2,857 metric tons of synthetic rubber.

Production of natural rubber during 1963 is estimated by the International Rubber Study Group to be less than demand. The demand is placed at 2.19 million tons and production at 2.18 million tons. Deliveries from stockpiles in the UK and USA are expected to provide an additional 85,000 tons. Production of synthetic rubber is estimated at 2,393,963 tons as against a demand totalling 2,310,000 tons. The demand for synthetic rubber is more than that for natural rubber by 115,000 tons.

According to a report from Cochín, some doubts are being raised about the move of tyre manufacturers for increase in prices for their products consequent on the increase in the import duty on raw materials and excise levy on tyres and tubes. Both are subject to an informal price control. The increased duty on raw rubber imports will not apply so long as the

world price of rubber is well below the statutory Indian price. The duty will be absorbed by the margin available to the Rubber Board's Pool Fund. There is, however, a feeling in a particular section of the industry that higher costs should be passed on to the consumers.

PEPPER Steady Decline in Prices

Pepper prices have suffered a further setback. In the Cochín market the rate for the ready position is quoted around Rs 278.50. The fall in prices has not only failed to attract overseas buyers; but it has actually induced them to keep off the Indian market in anticipation of a further fall in prices.

The persistent fall in prices is attributed to continued discouraging overseas reports. Singapore has further reduced its quotation from 30 cents to 29 cents per pound. The Indian shippers, on the other hand, are not in a position to quote less than 31 cents.

Besides, an afloat consignment of about 1,500 tons from Indonesia has kept the American buyers off the Indian market. The Communist countries, too, are reluctant to make any purchases when the prices are steadily going down.

SUGAR Further Exports Considered

The Government of India is considering the possibility of exporting 50,000 tonnes of sugar in addition to the 450,000 tonnes already decided upon in order to take advantage of the high ruling prices in world markets. The additional quantity for export is likely to come out of the production in the supplementary season that will start in the Madras region in July.

The Government is also preparing a scheme which will enable sugar mills to start production in early October. Development schemes calculated to secure intensive improvement in the economy of sugarcane cultivation had already been in force in some areas. It is decided to intensify these efforts further in the main sugar areas of Uttar Pradesh, Bihar and the Punjab. These schemes will be linked with the availability of cane exclusively to the factories concerned and thus a significant step will have been taken towards meeting the problem of diversion. The Government has also proposed to take measures to deal with the problem of equitable distribution of cane supplies between the different users.

There are now signs that the tremendous upswing in world

sugar prices is over. Over the past few days, prices have slipped down. On the London market, the rate has come back to £95 a ton after touching a high of £101 in bare three weeks. However, people close to the market have emphasised that sugar supplies are still tight and prices may easily go back to their recent levels. How long the latest uptrend will be sustained, they say, and how much force there is behind it are both doubtful points.

In the meanwhile, the Soviet Union has allowed Cuba, this year, to divert one million tons of sugar to the world market to take advantage of rising prices. As a major concession, Cuba was allowed to sell sugar to 18 countries in Europe, Africa, Asia and Latin America at an estimated value of \$140 million in foreign exchange. Since 1961, Cuba's entire production has been consigned to the Soviet bloc under a barter arrangement.

CHEMICALS & DYES Divergent Trends

Prices showed a mixed trend on the Bombay market for chemicals and dyes. Chemicals were generally firm with some popular items in prominence, because of tight supply and increased demand. On the other hand, dyes were subdued as a sequel to regular supplies through the State Trading Corporation and the arrivals of unauthorised goods.

In the Chemicals section, Hydro-sulphite of Soda was better, because of reports that some foreign manufacturers had increased the prices of their products. Bleaching Powder was in good demand. While the small packing moved up to Rs 100, big packing was not available at all with no quotation.

The State Trading Corporation is understood to have issued, in favour of its agents, licences for import of substantial quantities of dyes, intermediates and chemicals from the Rupee-payment countries. Goods worth about Rs 14 lakhs will be imported from Russia under these licences.

Import licences are also issued for getting the goods from Poland, Rumania and Hungary. Important chemicals like Phenol, benzoic acid, potassium carbonate, beta naphthol, sodium nitrite, sodium hydride, methanol and aniline oil will be imported from these countries. The prospect of large imports have naturally a bearish effect on the market for both chemicals and dyes.

OILS & OILSEEDS Subdued Sentiment

After the flare-up in the previous week, the Bombay market for Oils and Oilseeds suffered a set-

back. Groundnut ready has not been able to maintain its prices, which were recently pushed up by aggressive buying by crushers and vanaspati manufacturers in anticipation of a substantial increase in vanaspati prices. With the realisation that the Government is not likely to give a sizable rise in vanaspati prices, the buying spree has subsided. Contrary to expectations, offerings of ready material have all along been large enough to meet the demands. The pressure of offers at times was so heavy that the buyers could only meet them by reducing the rates.

In the Castorseed section, trading was highlighted by strong reports of a recovery in the export trade in castor oil. Some shippers were stated to be negotiating exports of oil to East European countries under the recently-announced export incentive scheme and a section of the trade took an optimistic view of the efforts. Bulls operators were, however, on the guard in view of the persisting disparity between Indian and foreign prices.

Linseed prices suffered a substantial setback due to selling pressure on fears that the burden of the new crop would weight adversely on the maturing June contract. Lower North Indian advices in respect of rapeseed and the subdued local demand for linseed and linseed oil also aided the downward trend.

ORISSA CEMENT LIMITED RAJGANGPUR

The Thirteenth Annual General Meeting of the Shareholders of the Company will be held at Rajgangpur, the Registered Office of the Company on 28th June 1963 at 2.00 P.M. Notices of the meeting setting out the Agenda and Explanatory Statement on the special business to be transacted thereat have been sent by post.

TEZPORE TEA COMPANY LIMITED

Notice is hereby given that the Forty-fifth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Thursday, the 27th June, 1963 at 3-30 P.M. for the following purposes:—

- (1) To receive and adopt the Directors' Report and Audited Accounts for the year ended 31st December, 1962.
- (2) To declare Dividends.
- (3) To elect a Director in place of one retiring.
- (4) To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS:

- (5) To consider and if thought fit to pass with or without modification, the following resolution of which Special Notice has been received from a Member under Section 261(2) of the Companies Act 1956, which will be proposed as a Special Resolution:—

'RESOLVED that Mr. C. I. M. Arnold be and he is hereby appointed a Director of the Company whose period of office shall be liable to determination by retirement of Directors by rotation.'

Special Notice as required by Section 261(2) of the Companies Act, 1956 has been received by the Company from a member of his intention to propose as Special Resolution the Resolution for the appointment of Mr. C. I. M. Arnold as a Director. It is stated in the Special Notice that the sanction by Special Resolution is required for the appointment of Mr. Arnold as a Director since he is a Director of Shaw Wallace & Co. Ltd., Managing Agents of the Company and the Managing Agents are authorised by the Company's Articles of Association to appoint Directors to the Board of the Company.

The Transfer Register will be closed from the 23th June, 1963 to 27th June, 1963 both days inclusive.

- N.B.:—
- (1) A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a Member of the Company.

- (2) In connection with the business to be transacted, an Explanatory Statement under Section 173 of the Companies Act, 1956, has been sent to the Shareholders along with the notice.

By Order of the Board
SHAW WALLACE & COMPANY, LIMITED
Managing Agents.
Calcutta, 28th May, 1963.

For the Investor

INVESTMENT GOSSIP
Resumption of Forward Trading

It is expected that forward trading which remains suspended from the end of November last will be resumed from early next week on the Bombay and Madras Stock Exchanges as Government has now announced its decision to permit these two stock exchanges to resume forward trading in shares. Although the Government's announcement detailing the terms and conditions under which it would permit forward trading in shares had been communicated to the various stock exchanges more than a week ago, most of the stock exchanges while accepting the regulations in principle had requested Government to effect some modifications in the terms as it was generally felt that the conditions were too harsh. Subsequently however it has been reported that the Bombay and Madras Stock Exchanges have intimated to the Government their acceptance of the conditions in their entirety. Since then some other stock exchanges have decided to accept the conditions in toto. Of the major Stock exchanges, the Calcutta Stock Exchange is yet to accept the conditions as proposed by Government. It would appear that Government is not willing to effect any modifications to its original conditions. It is reported that Mr. Motarji Desai, the Finance Minister, has made it clear that far from altering the conditions Government wants to make them permanent features of forward trading.

In the meantime, sentiment in the stock market has become subdued in the absence of interest. It is only a question of time for the resumption of forward trading under the new conditions on the remaining stock markets, now that most of them have accepted the conditions as laid down by Government without waiting for modifications. The resumption of forward trading will go a long way in normalising trading on the stock market. The prospect of the commencement of free trading has naturally induced caution among the speculative fraternity in view of the possibility of short selling. Even so, since forward trading will be hemmed in by the new conditions such as margins it is unlikely that wide fluctuations in price movements will be witnessed.

NEW ISSUE NOTES
Sankey Wheels

Sankey Wheels Limited, a new company incorporated in Maharashtra, has been granted consent to the issue of capital of Rs

1,69,99,000 in equity shares. The capital is required for the establishment of a factory in Durgapore (West Bengal) for the manufacture of automobile wheels in collaboration with Joseph Sankey & Sons Limited of the United Kingdom.

Phoenix Tubes

Phoenix Tubes Limited, Maharashtra, is to issue capital of Rs 125 lakhs (inclusive of Rs 18,000 already issued and subscribed), divided into 1,00,000 equity and 25,000 redeemable cumulative preference shares of Rs 100 each, carrying dividend of 9.5 per cent per annum, taxable, for cash, at par. The capital will be utilised for putting up a steel tube mill.

Indian Oil Company

Indian Oil Company Limited a Central Government undertaking, with a paid-up capital of Rs 322.25 lakhs, is raising further capital of Rs 60 lakhs, divided into 6,000 equity shares of Rs 1,000 each, to be issued privately for cash, at par. The capital is needed for the construction of main oil installations and depots.

Colaba Textile

Colaba Textile Mills Private Limited, Bombay, will raise Rs 25 lakhs equity capital in shares of Rs 100 each, to be issued for cash. The money is intended for reducing the loan liabilities of the company.

Madras Forgings

Madras Forgings & Allied Industries (Coimbatore) Limited, a company registered on 1 February 1963 in the Madras State, has been given consent to issue capital of Rs 15 lakhs, divided into 15,000 equity shares of Rs 100 each, for cash, at par. The proceeds will be utilised for establishing a factory for the manufacture of steel forgings and cast iron castings.

Bagla Alloy

Bagla Alloy Steels Limited, a new company formed to set up an alloy steel plant in Kanpur in collaboration with Messrs Compagnie Des Ateliers Et Forges De La of Paris, proposes to enter the capital market shortly. The authorised capital is Rs 2.5 crores and the issued capital Rs 1.5 crores. The promoters, directors and their friends and French collaborators will take up shares worth Rs 50 lakhs. The Uttar Pradesh State

Industrial Corporation Limited has agreed to underwrite shares for Rs 30 lakhs. The total capital outlay on the project is Rs 3.11 crores. The plant will have an annual capacity of 19,800 tons of silico manganese alloy steels and other special steels required for manufacturing springs. The project will save Rs 2.37 crores in foreign exchange a year. Production is expected to start in 1965.

*
INVESTMENT NOTES
TISCO

There has been an increase in the production of iron and steel plants in the private sector, due mainly to a longer working month. The Tata & Steel Company Limited has reported a considerable improvement in output in all departments. The production of Pig Iron is higher at 168,400 metric tons as against 161,600 metric tons in April. Steel Ingots have risen to 164,800 metric tons from 161,700 metric tons and Saleable Steel to 122,900 metric tons from 122,200 metric tons.

HISCO

Likewise, the Indian Iron & Steel Company Limited has done well during the period under reference. The output of Saleable Steel is higher at 65,105 metric tons against 55,282 metric tons in April. The production of Steel Ingots has risen sharply to 91,208 metric tons from 80,807 metric tons and Pig Iron to 116,102 metric tons from 109,650 metric tons. Despatches are higher at 60,978 metric tons against 46,374 metric tons.

*
INVESTMENT BRIEFS

Coimbatore Murugan Mills Limited has reduced the dividend from 12 to 10 per cent, taxable, for 1962.

Nilambur Rubber Company Limited has reduced the dividend from 15 to 10 per cent, taxable, for 1962.

United India Fire & General Insurance Company Limited has reduced dividend from 12 to 10½ per cent, taxable, for 1962.

Spencer & Company Limited has proposed an interim dividend of 6 per cent, taxable, for the year ended 30 June, 1963, same as in the previous year.

Coimbatore Kamala Mills Limited has reduced the dividend substantially from 19 to 6 per cent, taxable, for 1962.

*
BALANCE-SHEET REVIEWS
Hindustan Aluminium's Progress

THE year 1962 marked the successful completion of the company's programme of setting up an integrated alumina plant with an annual rated capacity of 20,000 metric tons of aluminium ingots, including the necessary facilities for producing the required quantity of alumina. Both sections of the plant, Reduction and Alumina, are now working to full capacity.

Production of ingots since the start-up in May 1962 totalled 8,333 tons of which the major portion was electric Reduction plant, alumina was partly

grade. For initial operation of the purchased from the Indian Aluminium Company, but mainly imported from America. However, the company's alumina plant was started in October and the company's own factory was able to produce 3,375 tons up to the end of 1962.

Provisional orders for almost the entire fabrication facilities, that have to be imported, have been placed. The directors now report that the Export-Import Bank has approved of the company's application and the import licence is under issue by the Government.

An application has been made to the Government for expansion of the present primary aluminium capacity from 20,000 to 50,000 tons per annum and for setting up of its own thermal power station for the additional requirement of power. In order to meet part of the financial requirements for the expansion programme, the directors have already proposed to make a right issue to the existing shareholders in the ratio of 33 new shares for every 50 shares held, at par.

The accounts, released by the company for 1962, reveal a loss of Rs 1,99,12,122, which includes a provision of Rs 1,56,40,048 for depreciation for the year under review and for previous years. Thus, the actual working loss for the year is Rs 42,72,174, which is mostly incurred during the first few months of the start-up. Full production was attained from December 1962 since when the plant has been working at a profit.

The directors state that it is not possible to make provision for Development Rebate Reserve, because of the debit balance. However, as the Development Rebate Reserve is allowed to be carried forward for income-tax purposes, the reserve, estimated at Rs 2,13,54,000, will be created during the year in which there will be an assessable income.

Duncan Brothers' Expanding Activities

Duncan Brothers & Company Limited has been expanding its activities at a fast rate in recent years. Apart from the substantial interest in the tea and jute industries through their associate companies, the new activities relate mainly to the development of production facilities needed by the tyre industry. The first plant for manufacturing carbon black in this country has been erected at Durgapur by Phillips Carbon Black Limited, which is being managed by Duncan Brothers. Commercial production started early this year and a licence has already been granted for increasing the installed capacity by 10 million pounds to 40 million pounds. It is stated that the increased production of carbon black will be useful in reducing imports. The principal raw material is coal tar, which should be made available in the desired quantities mainly from Government sources.

Another company has been started for manufacturing tyre tube values in conjunction with American interests. The first stage of construction has been completed and initial raw material import licence has been

received. Import licence for capital equipment in respect of the second stage has been obtained and orders for machinery have been placed. The tyre tube value plant is the first of its kind in this country.

Another company sponsored by Duncan Brothers has been formed for manufacturing Bead Wire. National Standard Duncan Limited will be having its factory near Bombay and import licences are expected to be received shortly. The building should be ready by the end of July while actual production can be commenced, if the schedule is adhered to, before the end of the year.

The biggest achievement of this managing agency concern is its partnership with American interests and the Government of India in the scheme to establish an oil refinery, which will be located in Cochin. Duncan Brothers will be participating in the equity capital of Cochin Refineries Limited to the extent of 24 per cent, while Phillips Petroleum Company Limited will be taking up 25 per cent of the equity capital.

Thanks to satisfactory working of various companies and subsidiary companies under their management, Duncan Brothers have been able to report a rise in sales from Rs 1.89 crores to Rs 3.41 crores for 1962. The net profit, after providing for Depreciation and Taxation, is, however, slightly lower at Rs 19.82 lakhs as against Rs 22.85 lakhs, mainly due to the increase in "purchase" account from Rs 1.86 crores to Rs 3.38 crores.

In respect of allocations, Depreciation is raised to Rs 1.35 lakhs from Rs 1.07 lakhs and General Reserve to Rs 5 lakhs from Rs 3 lakhs. Taxation is, however, lowered to Rs 16.75 lakhs from Rs 17 lakhs; Development Rebate Reserve to Rs 13,000 from Rs 20,000 and Contingency Reserve to Rs 80,000 from Rs 5.50 lakhs. The dividend on the Ordinary shares is, however, maintained at Rs 14 per share, subject to tax. Transfer Books of the company will be closed from 12 to 21 June 1963.

Meanwhile, the company's application to the Controller of Capital Issues for raising additional capital has been approved. It has been indicated that equity capital for Rs 18 lakhs in new shares of Rs 100 each will be raised, at a premium of Rs 10 per share. This issue is expected to be offered to the existing shareholders by the end of next month. It is also proposed to raise preference capital for Rs 10 lakhs in 6 per cent Redeemable Preference shares of Rs 100 each.

Braithwaite Fares Well

Despite a larger provision for taxation, Braithwaite & Company (India) Limited has produced excellent working results for the year ended 31 December 1962, thanks to production being maintained at a high level. Although the output from the Structural shop continued to be limited by the shortage of matching steel, the satisfactory increase achieved in the Wagon shop was greatly facilitated by the compre-

hensive reorganisation carried to provide independent production lines for each of the three types of wagons under construction.

"Contracts Invoiced" is shown higher at Rs 6.43 crores against Rs 5.04 crores, while the net profit, after providing for Depreciation and Taxation, works out to Rs 41.28 lakhs as against Rs 38.23 lakhs for the preceding year. In respect of allocations, Depreciation is raised to Rs 9.96 lakhs from Rs 5.73 lakhs; Taxation (including Rs 16.75 lakhs for SPT) to Rs 75.17 lakhs from Rs 32.25 lakhs and Development Rebate Reserve to Rs 4.61 lakhs from Rs 2.37 lakhs.

After transferring Rs 7.00 lakhs from Gratuity provision, the directors have raised General Reserve to Rs 28.80 lakhs from Rs 24.50 lakhs and recommended a taxable dividend of Rs 1.40 per share on the Ordinary shares increased by the issue of 4,34,021 bonus shares vide resolution passed on 10 May 1962. The dividend is payable on or after 27th June to those shareholders registered as on 20 June. Transfer Books will be closed from 6 to 20 June, 1963.

According to the directors, the company's order book remains well-filled. Despite shortages of almost all commercial sizes and qualities of steel and an acute shortage of welding electrodes, it is expected that production will show a further increase during the current year.

Steady progress is reported to have been made at Angus Works. Import licences in connection with the company's expansion programme have not yet been received from the Government; but a Letter of Intent has been issued and arrangements are in hand to secure the required equipment. Manufacture of Electric Overhead Travelling Cranes has started. It is expected that about 20 cranes will be completed during the current year.

BIC Pays More

The substantial rise in sales from Rs 7.81 crores to Rs 9.28 crores is reflected in the working results of the British India Corporation Limited for the year ended 31st December 1962. The net profit, after providing for Depreciation but before Taxation, amounts to as much as Rs 134.26 lakhs as against Rs 106.65 for the preceding year.

In respect of allocations, Taxation alone absorbs Rs 75 lakhs against Rs 48 lakhs, while Depreciation is raised to Rs 8.62 lakhs from Rs 8.50 lakhs. Development Rebate Reserve is lower at Rs 87,527 against Rs 1.29 lakhs. In addition, a sum of Rs 20 lakhs is proposed for General Reserve. Even after these increased allocations, the directors have found it possible to raise the dividend from 35 p to 45 p per share, subject to tax, for the year.

According to the directors' report, the working results of the two woolen branches have been satisfactory. With regard to the scheme for the rehabilitation and modernisation of the two branches, licences have been obtained to the value of Rs 20 lakhs.

The results of the Cooper Allen branch have been disappointing due

to various factors. The Boot factory of this branch, which was lying closed for several years, has started operating recently to meet defence requirements.

Kamani Engineering Earns More

Kamani Engineering Corporation Limited has done very well during the year 1962 with a jump in sales to Rs 4.65 crores from Rs 2.68 crores in 1961. The production of galvanized and painted steel structure rose further to 20,363 metric tons from 14,360 metric tons. Orders on hand for towers and structures at the end of the year were 34,810 metric tons against 24,021 metric tons.

In view of the growing demand for the various products, it has been considered advisable to expand production facilities. A licence has been received for increasing the capacity for manufacturing transmission line towers to 2,500 tons per month from 1,500 tons per month. A licence has also been received for the fabrication of heavy structurals to the extent of 500 tons per month and high tensile unit bolts to the extent of 500 tons per month. These schemes are being implemented. Many railway electrification projects are also being executed in association with other units.

The net profit for the year, before providing for Depreciation and Taxation, has risen sharply to Rs 36.45 lakhs from Rs 23.21 lakhs in the preceding year. The provision for Depreciation is Rs 8.01 lakhs (Rs 5.85 lakhs). The company has, however, not benefited by the increase in its earnings, because the provision for Taxation is very much higher at Rs 15 lakhs (Rs 7.50 lakhs). A sum of Rs 5.35 lakhs (nil) has also been transferred to Reserve for Super-profits Tax. On the last occasion, there was a provision of Rs 1.75 lakhs towards Taxation for the previous year. The allocation to Development Rebate Reserve is Rs 35,000 (Rs 40,000) and Gratuity Reserve Rs 30,000 (Rs 10,000). General Reserve gets Rs 1.15 lakhs (Rs 1.00 lakh). The dividend on the Ordinary shares has been raised to 9½ per cent, taxable, from 9 per cent, taxable.

Polsons Pay Less

Polsons Limited has reported an increase in sales during the year ended 31 December 1962 to Rs 167.97 lakhs from Rs 154.30 lakhs in 1961 in spite of the fact that considerable difficulty was experienced in maintaining the export trade, because of increasing restrictions in importing countries which were hitherto served by the company.

The net profit, before depreciation and taxation, has risen to Rs 17 lakhs from Rs 15.84 lakhs but the provision for Taxation is sharply higher at Rs 7.78 lakhs against Rs 5.90 lakhs, while the charge on account of SPT is Rs 2.19 lakhs. The amount set aside to Depreciation is Rs 2.64 lakhs (Rs 2.69 lakhs). The transfer to Development Rebate Reserve is Rs 29,284 (Rs 62,671). In spite of higher profit, the dividend on the Ordinary shares has to be

reduced to Rs 14 per share, taxable, from Rs 17 per share, taxable, previously.

Good Working of Dharamsi

The Dharamsi Morarji Chemical Company Limited has reported encouraging results for 1962. Sales have risen from Rs 1.65 crores to Rs 2.31 crores. The gross profit is up from Rs 23.84 lakhs to Rs 31.27 lakhs. The Ordinary dividend is Rs 8 per share, free of tax, by virtue of the said dividend coming out of the profits of new industrial units exempt from tax.

After providing Rs 1.45 lakhs for managing agents' remuneration (Rs 1.20 lakhs); Rs 15.36 lakhs for Depreciation (Rs 11.66 lakhs); Rs 1.62 lakhs for Development Rebate Reserve (Rs 5.25 lakhs) and Rs 4 lakhs for Taxation (Rs 60,000), the net profit is Rs 8.75 lakhs. To this is added Rs 9,125 brought in from last year, Rs 1.57 lakhs being excess provisions for previous years no longer required and Rs 5.09 lakhs transferred from General Reserve No. 2 for payment of dividend, making a total of Rs 15.32 lakhs. From this, the directors have provided Rs 5.17 lakhs for General Reserve No. 2 (Rs 4.30 lakhs) and Rs 5 lakhs to General Reserve No. 1. The carryover is Rs 25.675.

A significant feature of the operations during the year was that exports of alumina sulphate were made to Egypt. Further substantial orders have been secured for export during the current year. The company's expansion programme has been making satisfactory headway. Construction work on the 300-ton per day contract sulphuric acid plant has commenced. The ICICI has agreed to provide a loan of Rs 30 lakhs to meet a part of the indigenous financial requirements of this project.

With regard to alumina sulphate, the company has reached a production capacity of 50 tons a day at its Ambarnath factory. The company has taken up the work of raising the capacity of alumina sulphate at its factory at Kumhari, Madhya Pradesh, from 10 tons to 50 tons a day. A separate public limited company will be floated for the manufacture of 17,000 tons of borax and 3,000 tons of boric acid soon.

The directors have the intention of participating with the Khatau group in establishing an undertaking for the manufacture of industrial explosives. A licence has already been issued in the name of Mr Khatau and negotiations are in progress for technical and financial collaboration with foreign parties.

Lower Profits for Kothari Textiles

Despite higher sales realisation, there has been a slight setback in the gross profit of Kothari Textiles Limited for 1962. While sales of cloth, yarn and waste move up from Rs 1.90 crores to Rs 2.14 crores, the gross profit has gone down from Rs 30.83 lakhs to Rs 27.40 lakhs. The directors have, however, maintained

the dividend at 8 per cent, subject to tax.

After providing Rs 5.75 lakhs for Taxation (Rs 7.20 lakhs); Rs 1.15 lakhs for managing agents' remuneration (Rs 1.42 lakhs); Rs 15.51 lakhs for Depreciation (Rs 15.96 lakhs) and Rs 1.88 lakhs for Development Rebate Reserve (Rs 2.12 lakhs), the net profit amounts to Rs 3.11 lakhs as against Rs 4.13 lakhs for the preceding year.

With Rs 29,146 brought in and transferring Rs 3.50 lakhs from General Reserve (Rs 2.50 lakhs), the total available is Rs 6.90 lakhs. The proposed dividend absorbs Rs 5.37 lakhs. The carryover is Rs 12.617. The decline in gross profit is attributed to higher operating expenses. With regard to the programme of renovation of Ring frames embarked upon last year, the Chairman of the company states that there has been considerable delay on the part of the manufacturers in fulfilling their commitments.

Radhakrishna Mills Earn Less

There is a drop in sales of Radhakrishna Mills Limited during the year 1962 to Rs 2.07 crores from Rs 2.26 crores on account of the voluntary price control scheme and the sluggish conditions prevailing in the cloth and yarn markets.

The net profit, before providing for Depreciation and Taxation, has declined to Rs 21.89 lakhs from Rs 25.40 lakhs in the previous year. The provision for Depreciation is Rs 5.70 lakhs (Rs 5.38 lakhs), while the transfer to Contingency Reserve is lower at Rs 8.47 lakhs against Rs 11.52 lakhs. Development Rebate Reserve is raised to Rs 1.40 lakhs from Rs 81,172. The dividend on the equity capital is reduced from 12½ per cent to 10 per cent, taxable.

IMTEC Does Well

Investa Machine Tools & Engineering Company Limited has done well in the year ended 31st December 1962 with a sharp rise in the net profit, before depreciation and taxation, to Rs 9.58 lakhs from Rs 4.46 lakhs. Depreciation is raised to Rs 4.58 lakhs from Rs 1.85 lakhs, while there is no provision for taxation as previously. The transfer to Development Rebate Reserve is raised to Rs 3.39 lakhs from Rs 2.08 lakhs apart from providing Rs 1.33 lakhs for General Reserve. The arrears of dividends on the preference shares for two years 1947 and 1948 are proposed to be paid. There is an increase in sales to Rs 58.92 lakhs from Rs 45.09 lakhs.

STOCK EXCHANGES Dull Session

Watch-Dog Writes:

EXCEPTING one or two isolated bright spots, trading in stock markets has failed to disclose any feature during the week under review. It looks as if the marketmen are reluctant to make any commitments either way until

they have a clearer view of the prospect of investment. Prices, therefore, wherever changed, are slightly lower than last week's levels.

Past week's session on Lyons Range was again devoid of interest. Lacking any support, prices displayed an easier tendency.

Except Steel shares which continued in the limelight, trading on Dalal Street was generally dull.

Business continued to be restricted on the Madras Stock Exchange.

Trading on the Ahmedabad Stock Exchange was dull with price movements confined to narrow limits.

In dull and featureless trading, equity values on the Delhi Stock Exchange showed little or no change.

Conditions on the London Stock Exchange turned rather quiet following the disappointing April

retail trade figures and the further fall in machine tool orders. In Wall Street, selected industrials developed gains up to several points, some reaching new 1963 high.

CALCUTTA

TRADING on the local stock exchange was of a quiet nature. Except for a couple of shares which ruled comparatively steady, prices in other counters sought fresh lower levels on renewed liquidation. Turnover remained restricted.

In general, sentiment continued to remain subdued in the absence of any driving force. While the professional operators were inclined to liquidate their holdings rather than enter into new commitments, genuine investors preferred to keep aloof being disheartened by the capital erosion and widespread cut in dividends.

In the circumstances, even small offerings had a depressing effect on the share values.

Various factors contributed to the present state of the market. The anxiety over the impact of the super-profits tax, as disclosed by the annual reports and accounts of most of the leading companies, continued unabated. Political uncertainties and the difficulty in predicting the intentions of the Chinese also aided the bearish sentiment.

Above all, opinion was divided on the likely effects of forward trading. The permission given by the Government for the Bombay and Madras stock exchanges to resume forward trading under certain conditions induced a hope that forward trading on the local stock exchange might also be started at an early date, possibly after the coming settlement. In such an event, it was feared that forward trading might encourage

INVESTOR'S SUPPLEMENT

Dull Conditions in May

Dull conditions characterised trading on the stock market in May as both operators and investors were reluctant to extend commitments in view of the various uncertainties in the investment situation. The main development of the month was the communication sent to all the recognised stock exchanges detailing the conditions under which Government would be prepared to allow resumption of forward trading in shares remaining suspended since 29 November 1962. The conditions mainly relate to margin requirements and the bye-laws governing the inclusion of listed shares into cleared securities. A feature of the new margin regulations is that these would be levied on total outstanding purchases and sales and not on net positions. The margins on total positions have been in effect since last November. In addition there would be carryover margin at the rate of two per cent on the basis of two making-up prices. The reaction to the communication of the stock markets was not very enthusiastic as it was generally felt that the conditions stipulated by Government were very irksome and if forward trading was to be normal there should not be so many restrictions. The Government however appeared to be of the view that resumption of forward trading could be allowed only under restrictions so that

the chances of unbridled speculation rearing its head were considerably reduced. Since no stock exchange had accepted the conditions in toto till the end of the month, forward trading was not resumed.

While the resumption of forward trading was favoured as it would help expand activity, there was also the lurking apprehension that free trading would also encourage short selling thereby depressing sentiment. Even though some believed that with conditions once again normalised with the resumption of forward trading, there would be resistance to selling pressure, the general reluctance to extend commitments was nevertheless there presumably because of the fact that equity value, were already high.

Fresh interest was also hesitant because for one thing, the outlook for the corporate sector was far from encouraging. The impact of the Super Profits Tax was becoming apparent with the publication of more and more company reports for the year ended 1962. While several companies have been obliged to cut their dividends their expansion programmes have also been jeopardised. Contrary to earlier expectations, the modified SPT was found to be having

a crippling effect especially on companies with a small capital base. Perhaps the worst feature of the SPT is that it has come to stay. Originally it was expected that it was an emergency measure but the Union Finance Minister has made it clear that the new measure has nothing to do with the emergency although he has also said that he will not hesitate to scrap it if it is found to retard capital formation.

There had been little encouragement from the political front. Considerable anxiety had come to be felt over the concentration of Chinese troops on the NEFA and Sikkim borders. The failure of the Kashmir talks was another inhibiting influence as it was feared that the continued stalemate between India and Pakistan over the Kashmir problem would have an adverse effect on foreign aid both military and economic. Sentiment had been disturbed by the growing belief that foreign aid for the third year of the Third Plan would fall far short of our expectations. India had asked for a total of \$1255 million but indications were that the Aid India Consortium would find it difficult to make up the amount. The basis of this belief was the US Congress's opposition to massive aid and the balance of payments

difficulties of some of the important countries forming the Consortium. A reduction of foreign aid would mean pruning of the Third Plan and all that goes with it. If some of the Third Plan projects are shelved, the private sector projects will also feel the pinch of the foreign exchange shortage.

The continued stringency of money is also discouraging speculative interest. The shortage of funds had been aggravated further by the absorption of substantial amounts by the new issues. The fact that interest rates were high was naturally being taken into account by investors when going in for fresh purchases of equities. Even at the month's lower price levels equity yields were not quite attractive compared with the prevailing interest rates.

For some time during the month, the stock market was preoccupied with the possible repercussions on industrial production in the Calcutta and industrial region of the power shortage. With the breakdown of a generator of the Calcutta Electric Supply Corporation, industries in the northern section had to accept a power cut. However, thanks to the expeditious recommissioning of the disabled plant and the vigorous efforts taken by the authorities concerned to obtain additional power supply from other sources, the power cut did not last beyond a few days.

(y) After transferring Rs 226,256 from Rehabilitation and Expansion Reserve.

(z) After transferring Rs 300,000 from Rehabilitation Reserve; Rs 123,920 from Reserve for taxation and writing back Rs 135,815 from Depreciation Reserve.

(a1) After writing back Rs 941,488 from provision for development and Rs 98,243 from development Reserve.

(a2) After transferring Rs 110,000 from Investment Reserve and including Rs 62,392 being refund of tax and unclaimed balances amounting to Rs 7,585.

(a3) After writing back Rs 32,015 being over provision in previous years.

(a4) After writing back Rs 116,059 from provision for taxation.

(a5) After transferring Rs 105,000 from General Reserve and Rs 190,725 from Rehabilitation Fund.

(a6) After writing back Rs 315,185 from Fleet Depreciation Reserve.

(a7) After writing back Rs 122,090 being excess provision of Development Rebate Reserve.

(a8) After transferring Rs 112,000 from General Reserve and writing back Rs 7,604 excess depreciation written off.

(a9) After writing back Rs 1,123,473 being depreciation on Mining Leases and Rs 56,833 being depreciation excess provided in previous years.

(a10) After transferring Rs 1,000,000 from General Reserve; Rs 1,800,000 from Dividend Equalisation Reserve and Rs 540,000 from Deferred Tax Liability.

(a11) After writing back Rs 1,369,956 being excess depreciation provided during previous years.

(a12) After transferring Rs 475,000 from Staff welfare Reserve and writing back Rs 48,212 being over provision for taxation.

(a13) After transferring Rs 375,000 from Deferred Taxation Reserve.

(a14) After writing back Rs 145,000 being tax provision in previous years and Rs 338,639 being depreciation over provided.

(a15) After transferring Rs 250,000 from deferred taxation Reserve and Rs 282,454 from tax provision.

(a16) After transferring Rs 359,000 being surplus in Reserve for Bad and Doubtful Debts.

(a17) After transferring Rs 112,000 from General Reserve and writing back Rs 7,604 being excess depreciation.

(a18) After writing back Rs 550,000 being excess provision for taxation.

(a19) After writing back Rs 983,600 being depreciation excess provided and Rs 166,000 excess provision for liabilities

(a20) After transferring Rs 700,000 from Dividend Equalisation Reserve.

(a21) After writing back Rs 300,000 being excess provision for taxation and including Rs 54,971 being refund of pension fund.

(a22) After transferring Rs 175,000 from Reserve Fund and writing back Rs 279,283 being Fleet depreciation.

(a23) After transferring Rs 725,000 from General Reserve and Rs 11,855 from Development Rebate.

(a24) After transferring Rs 509,328 from General Reserve No. 2 writing back Rs 157,633 being excess provision for taxation.

(a25) After transferring Rs 230,000 from Reserve for Rehabilitation and Rs 155,832 from provision for Gratuity.

(a26) After transferring Rs 300,000 from General Reserve No. 1.

(a27) After transferring Rs 2,610,000 from Deferred Taxation Reserve.

(a28) After transferring Rs 500,000 from General Fund.

(a29) After transferring Rs 2,400,000 from Mortgage Loan Redemption Reserve.

(a30) After transferring Rs 162,500 from Dividend Equalisation Fund and writing back Rs 1,400,000 from Development Rebate Reserve.

(a31) Includes Rs 105,403 being excess provision written back and Rs 76,246 being Refund of Taxation.

(a32) Afted writing back Rs 235,503 being taxation over provided in previous year.

(a33) After writing back Rs 322,964 being excess provision in previous years.

(a35) After transferring Rs 530,000 from General Reserve.

(a37) After transferring Rs 200,000 from Reserve.

(a38) After transferring Rs 103,930 from General Reserve.

(a39) After writing back Rs 139,449 being Deploiment Rebate and Rs 41,789 being depreciation in respect of preious years.

(a40) After transferring Rs 400,188 from General Reserve No. 2 and writing back Rs 91 865 from excess provision for taxation.

(a41) After writing back Rs 246,263 being excess provision for wealth-tax.

(a42) After transferring Rs 295,102 from Quarry over hang expenses.

(a43) After transferring Rs 500,000 from General Reserve.

(a44) After transferring Rs 200,000 from Bad and Doubtful debts reserve and Rs 708,595 from provision for taxation.

(a45) After transferring Rs 300,000 from provision for taxation.

(a46) After writing back Rs 235,503 being over provision for taxation.

(a47) After transferring Rs 700,000 from General Reserve; Rs 250,000 from Dividend Equalisation Reserve; Rs 1,100,000 Revaluation of Stocks Reserve; Rs 700,000 from Development Rebate Reserve; Rs 6,600,000 from Reserve for new mail-project; Rs 3,641,000 from Tax Contingency.

(a) After transferring Rs 20,638 from General Reserve No. 1.

(b) After transferring Rs 80,000 from provision for contingencies.

(c) It is proposed to capitalise Rs 2,125,300 from General Reserve and issue Bonus shares.

(d) After transferring Rs 60,000 from General Reserve.

(e) After transferring Rs 151,000 from General Reserve.

(f) After transferring Rs 80,100 from Dividend Equalisation Reserve.

(g) After writing back Rs 645,151 being excess provision in previous years.

(h) After transferring Rs 500,000 from Rehabilitation Reserve; Rs 281,943 being excess provision for depreciation; Rs 41,942 being excess provision for bonus and including Rs 18,428 being refund of income-tax.

(i) After transferring Rs 250,491 from General Reserve.

(j) After transferring Rs 250,000 from Dividend Equalisation Reserve.

(k) After transferring Rs 200,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 300,000 from General Reserve.

(m) After transferring Rs 1,425,000 from General Reserve.

(n) After writing back Rs 750,000 from Reserve for Rehabilitation and writing back Rs 7,927 being excess of Excise Duty and Rs 6,946 being excess provision for rates and taxes.

(o) After transferring Rs 2,509,800 from Dividend Equalisation Reserve.

(p) After transferring Rs 1,207,838 from General Reserve.

(q) After transferring Rs 500,000 from Reserve for taxation and Rs 201,988 from General Reserve.

(r) After transferring Rs 580,170 from General Reserve and Rs 47,990 from Investment Reserve.

(s) Includes Rs 947,178 being depreciation adjustment in respect of additional depreciation provided in previous years and Rs 3,100 being excess of Secretaries Remuneration.

(t) After transferring Rs 200,000 from General Reserve.

(v) After transferring Rs 320,000 from General Reserve No. 1.

(w) After transferring Rs 350,000 from General Reserve and including Rs 3,378 being Agents remuneration.

(x) After transferring Rs 113,089 from General Reserve.

(y) After writing back Rs 65,163 being excess provision in previous years.

(z) After transferring Rs 450,000 from Dividend Equalisation Reserve.

(a1) After transferring Rs 1,250,000 from Development Rebatet Reserve.

(a2) After transferring Rs 387,627 from General Reserve and Rs 300,000 from other reserve.

(a3) After transferring Rs 300,000 from General Reserve.

(a4) After transferring Rs 308,000 from General Reserve.

(a5) After transferring Rs 40,000 from Dividend Equalisation Reserve and writing back surplus provision of Rs 88,529.

(a6) After transferring Rs 400,000 from General Reserve.

Facts & Figures	

FORWARD trading in shares has been resumed in all the important stock exchanges (except, at the moment of writing, at Calcutta) in the country. This brings to an end the ban on such dealings imposed in the wake of the emergency in November last. This ban, total at first, was relaxed from time to time, but speculative extension of commitments and trading in "differences" was not permitted. For sometime now, it has been felt generally, that listlessness of the markets may be somewhat relieved by the resumption of an activity, which, when all was said and done, used to lend the spice to stock market activity. With the Chinese threat losing some of the attributes of a sharp crisis and becoming a peril to live with, for ever, normalcy in stock exchange life is being restored. This is as it should be.

Government has taken the opportunity to introduce some procedural reforms that will cramp the more reckless speculative ardour of the operators. The conditions that Government announced toward the end of last month for permitting the resumption of forward trading in shares were at first not received with enthusiasm in the stock exchange circles. But on maturer consideration, most of them have chosen to accept them as the price they have to pay for having any forward operations at all. Half-hearted attempts to get the conditions modified were received coldly by Authority. In the result the resumption of forward trading is substantially on the conditions imposed by Government.

For our part, we are not disposed to consider these conditions as unduly harsh in the circumstances except on one or two points to which we shall refer presently. The stock market is by intention—and to a large extent in practice—the mechanism for facilitating the orderly conduct of the genuine investment in joint-stock enterprise. Forward trading is justified only to the extent to which the interest of such investors is facilitated. Ignorant prejudices against the stock exchanges would be only too well-justified if this were not the case. Government, be it said to its credit, has shown a clear awareness of the function of the stock exchange in an economy such as ours. It has also shown considerable political courage and good sense in allowing a fair measure of autonomy to the exchanges to fix their conditions in their own way. And in order their affairs in their own way. And in the conditions now imposed, it has shown itself solicitous of the investor in that they are designed to frustrate over-trading by fixing a stiff price on it. It is to the credit of stock exchange authorities in the country that they have understood the validity of the Government's case and accepted the conditions despite some of its practical drawbacks.

Briefly and without going into too great technicalities, the new requirements are in respect of carry-over margins imposed on those desiring to extend commitments without settling. The opportunity has also been availed of for broadening the qualifications of scrip aspiring to the forward list. Under the old dispensation, the forward list, under the net position and margins were imposed on the net position and place in the market. From now on, margins will have to be paid, firstly for both the purchases and the sales. Secondly, carry-over margins will also be levied on transactions with clients and on transactions put between two clients by a member. A member of the exchange will have to collect a 2 per cent margin from his clients on the latter type of transaction. This, at least, is a reform that the member will be disposed to welcome because of the insurance

Stock Exchange Health

it provides against unreliable clients. Besides the 2 per cent margin (on both purchases and sales) the present system of overall margin will continue on a different basis. Besides, the scheme of daily margins now in operation will continue but, of course, will be made applicable, not only to the net position, and to broker to broker transactions but to both purchases and sales and to transactions with clients and inter-client deals. There will be no daily margin on business upto Rs 3 lakhs but business over Rs 10 lakhs will have a margin of 40 per cent and transactions between Rs 3 lakhs and Rs 10 lakhs, varying margins in between. The overall margin, however will be lower under the new system. Members of the stock exchanges may feel that these requirements would tend to dampen the enthusiasm of operators. The bigger exchanges may feel that considering the volume of their trading and their long cleared list they should be allowed a higher exemption limit for margin requirements. This probably explains the delay in Calcutta's making up its mind. The special position of the older and bigger exchanges at Calcutta and Bombay is tacitly recognised in the fact of a higher exemption limit for daily margins allowed for these two exchanges. The same considerations should apply for overall margins also.

The changes in the listing regulations are on the whole unexceptionable. Under the new system, cleared securities should be fully paid-up equity shares of the company other than a banking company. A scrip can achieve the forward list status only after having been quoted as a non-cleared security for at least three years, a period by which its attractions to the wider public will have been established. Duplication of the scrip on the forward list or simultaneous presence in the lists of several exchanges at the same time is to be discouraged in future. This rule does not apply to scrip already on the forward list. This reform suggested by the Committee of Presidents of stock exchanges early this year, is again designed to broaden investor interest and to discourage the concentration of attention on a few favoured scrip on which speculative ardour is too often directed. This will also give the regional exchanges a status and personality and stability and strength to local enterprise. A company aspiring to the cleared list eminence should have a subscribed capital of at least Rs 25 lakhs, whose current market value should be over a crore of rupees. At least forty-nine per cent of capital should be held by the public on as wide a scale as possible. In other words, only genuinely public limited companies of importance in which there is wide public interest would qualify.

Conditions in the stock market have been hardly conducive to flights of speculative extravagance last year or so. So the new freedom, cribbed as it is, is hardly likely to be wildly abused. The emergency and the more recent fiscal shocks have coincided with a period of falling profits in the corporate sector consequent on power and raw material shortage leading to many industries working under capacity. A shot in the arm to business activity will doubtless be provided by the resumption of forward trading. This in itself will not, of course, increase production. But it will make an immense psychological difference to the mood of those engaged in business. Government has appreciated the value of this stimulus and reintroduced forward trading, which may well prove the beginning of the cure of a sick stock market.

Food Situation

THE food situation in general, and especially in the eastern region, has been for some weeks the subject of anxious discussion and enquiry. To these must now be added street demonstrations which one had hoped had become an outmoded technique for spotlighting economic problems. The markets have provided an earlier and more reliable estimate of production trends than official statistics which are still being put together. According to estimates so far available, the output of kharif cereals during 1962-63 season has been about one million tons less than last year. But markets did not wait for any indication of the official estimate to mark up prices, though any official confirmation of shortfalls is invariably followed by a further rise. Prices had started rising even in April, causing acute distress in the Eastern States where there was significant shortfall in production. At present anxiety is heightened by the fact that we are now entering the lean months of the year, usually a difficult period both for the people as well as the administration. When the position is so sensitive persons occupying positions of authority or influence—in this category we include members of the Opposition as well as of the Government party—have to be particularly careful that what they say, or do, does not start a scare. Every year more people die of snake-fright than of snake-bite.

Though the actual shortage in production cannot be wished away, or hidden by pep talk and morale boosters, the position regarding the availability of supplies to meet local shortages is certainly more satisfactory than may be supposed from the behaviour of prices in the open market. Attention may be drawn in this context to the authoritative statement made by the Deputy Minister for food, that the stock of rice at the disposal of Government, which can be deployed where needed, is now about eight lakh tons and is being maintained at that level through internal procurement. Arrangements have also been made for import of additional quantity of 150,000 tons of rice from the USA. Moreover, the shortage in respect of kharif cereals is expected to be made up by an increased output of rabi cereals, so that the overall production of food-grains will be at about the same level as last year's.

The actual dimensions of the problem which remains will be more clearly appreciated if it is broken down into its components, in terms of regions as well as of food-grains, as was done by Mr A. M. Thomas last week. From what he has said it is clear that, as far as wheat is concerned, the position is quite satisfactory through out the country. Movements of prices have been within reasonable limits. The wholesale price index for wheat in May was 87.8 as compared to 88.7 in the corresponding period last year.

In an overall assessment of the food situation, it is also necessary to take into account the output of jowar which plays a more important role in the food economy of the country than is generally appreciated. It is only very recently that the Food Administration has given tangible evidence of recognition of the crucial role of this cereal in determining the prices of rice and wheat. Production of jowar this year, it is estimated, is about one and a half million tons more than last year; and Government a few weeks ago came forward with a programme for extending price support for this grain, as prices were ruling at levels well below last year's.

The position regarding rice is not so uniformly satisfactory as in the case of the other two stable cereals. Regionwise the position in the Southern Zone where the prices have been lower than last year's presents no problem. In the Western Zone, price movements are uneven. The

up-trend is marked in the surplus state of Madhya Pradesh, where the harvest was adversely affected by drought. But fall in prices has also been reported from some centres in the Zone. In view of the fact that no State in the Zone has approached the Centre for assistance, it is assumed that the overall position is satisfactory. Price movements in the Northern Zone, comprising the Punjab, Himachal Pradesh and the U.P., are considered normal for the season.

In all the States in the eastern region there are shortfalls in production. As far as Bihar is concerned, the slight increase in rice prices is not expected to cause any hardship, as the population can easily switch over to wheat. Orissa, which usually has a surplus of three to four lakh tons of rice, which is exported to West Bengal expects a shortage this year. The preliminary estimates of the Orissa Government indicate a shortfall of three lakh tons as compared with last year. In West Bengal, production this year has been estimated at 43 lakh tons as compared with 47.2 lakhs last year. The position regarding supplies in West Bengal has been aggravated by the ban on exports imposed by Orissa.

The Chief Ministers of these two States who went to Delhi to discuss the food problem in their States have returned with the assurance that the supplies they consider necessary will be made available out of Central reserves. In the case of Assam, in addition to despatching the quantities required to maintain supplies through fair price shops, the centre has also decided to build up a reserve stock of 20,000 tons.

The analysis of the position is sufficient to indicate that the shortage is not unmanageable and need not be allowed to develop into a crisis. The localisation of the problem should also facilitate the adoption of appropriate measures in the affected areas. Government's strategy for countering the up-trend in prices is to increase supplies through fair price shops. This serves the two-fold purpose of meeting the requirements of vulnerable groups of the population at cheap prices, while at the same time relieving the pressure of demand on the open market. The strategy will succeed to the extent that the free flow of rice to the open market is not interfered with by raising a scare leading to adoption of ill-considered policies.

Sterling Dollar Swap Arrangement

By Paul Einzig

The American policy of reinforcing the defenses of the dollar with the aid of a series of reciprocal swap arrangements with a number of countries has made considerable progress as a result of the recently concluded agreement with Britain providing for an increase of the maximum of these standby facilities from \$50 million to \$500 million. It brings the grand total of these arrangements to \$1,550 million. In addition United States Treasury has also sold bonds running for periods of between 18 and 24 months to various European Central Banks and Treasuries. This means that pressure on the dollar can be met to a considerable extent with the aid of using these facilities before it would lead to loss of gold.

The increase of the British share in this arrangement is interpreted as a welcome indication of closer monetary co-operation between London and Washington, and as an indication that the monetary authorities in both countries have realised that their interests in resisting pressure on both sterling and the dollar are identical. It is true, the arrangement is of no practical use if sterling and dollar are attacked

at the same time, as they were in the spring and early summer of 1961. There are, however, many instances in which sterling is sold or bought against dollars. In such instances the swap arrangement should go a long way to protect the gold reserves of the country whose currency is attached. Such situations are particularly liable to arise owing to London's special position as the most important market in dollars. Whenever there is strong buying or selling pressure on spot or forward dollars most operations find their way there, even if they originate abroad because owing to the large turnover in the London market big amounts can be bought or sold without unduly affecting the exchange rates. When continental speculators sell forward dollars in London they cause a depreciation of forward sterling unwarranted by sterling's inherent position. The result is outward arbitrage, leading to loss of gold. When continental speculators sell forward dollars in London the result is an appreciation of forward sterling equally unwarranted by sterling's inherent position leading to inward arbitrage and loss of gold by the United States.

The swap arrangement of \$500 million seems eminently suitable for counteracting such unjustified tendencies which, if allowed to continue, are liable to create their own subsequent justification through giving rise to pessimism toward sterling or the dollar respectively. The reason why it is right that the British share in the American swap arrangements is much larger than that of any other country is because of the special position of sterling as an intermediary currency extensively used by continental speculators in their operations in dollars. Even if the Anglo-American swap arrangement serves no other purpose than that of coping with pressure arising from triangular operations it would amply justify the arrangement.

UIB

The Hardships of a Small Bank

The accounts of the United Industrial Bank Ltd. for 1962 offer clear evidence of the hardships that confront a small bank in India these days.

Deposit resources have gone up from Rs 1.58 crores to Rs 1.69 crores. But there is a much more than proportionate rise in the cost of interest paid, an item which is marked up by Rs 0.50 lakh to Rs 3.83 lakhs. Similarly, salaries and allowances have absorbed Rs 0.24 lakh more at Rs 4.69 lakhs.

Consequently, though gross income has risen by more than Rs 1 lakh from Rs 9.24 lakhs to Rs 10.30 lakhs, the bank has reported a loss of Rs 23,792; this, it may be remarked, is, however, an improvement in that the loss in 1961 added up to nearly Rs 1 lakh.

The improvement in gross earnings, owing no doubt to higher interest rates, has been achieved despite a decline in the total of Advances from Rs 98.32 lakhs to Rs 92.27 lakhs. The position is that the 1962 balance-sheet shows a debit carry forward of Rs 2.10 lakhs against Rs 1.86 lakhs in the previous set of accounts.

It is important to note, however, that, as the Directors' Report makes clear, the loss for 1962 is mainly due to adjustments occasioned by the transactions of the bank in Pakistan in that year. Bad debts in Pakistan written off and reserve for taxation on profits originating in Pakistan together have aggregated nearly Rs 50,000, and this, therefore, can be deemed to be the reason for the loss as such.

One more point that has to be taken note of is the remark of the auditors that a sum of about Rs 1.82 lakhs of the total Advances is in the hands of doubtful of recovery. The Directors say that the bulk of such Advances are subject matters of suits pending in various courts of law; and that the suits are many of them connected with real estate in the urban area. In netted with real estate in the urban area, the appreciated considerably in recent years, the Directors feel that the major proportion of such Advances will be recovered.

But the solution for a bank such as United Industrial is amalgamation. The Directors' Report asserts that negotiations are in progress for a scheme of amalgamation. Prospects should then be better for the Bank's shareholders.

BANK RETURNS

Sudden and Sharp Currency Expansion

Beginning of the month disbursements aided and abetted by tax payments, are perhaps responsible for the sudden and sharp currency expansion that is revealed in the latest banking figures. The returns of the Reserve Bank for 7 June disclose an increase of Rs 32.54 crores to Rs 2,313.99 crores in Active Note Circulation

and outflow of Rupee Coin in the substantial amount of Rs 3.02 crores. With Foreign Securities unchanged at Rs 109.08 crores, currency has been expanded against Rupee Securities for Rs 20 crores by transfer from Investments in the Banking Department, and the consequence is that the Reserve Bank's cash in the till has moved down by Rs 15.57 crores to Rs 21.49 crores.

Investments in the Banking Department are shown lower by Rs 20 crores at Rs 234.38 crores, and this of course reflects the transfer to the Issue Department. But regard must be had for the fact that, in relevant week, the State Bank has purchased securities for about Rs 9 crores. So, the implication is that the Centre has had recourse to deficit financing for about Rs 10 crores. But still the Centre's balances have been marked down by Rs 2.81 crores at Rs 70.95 crores. State Governments have fared no better in consequence of the beginning of the month disbursements. Their Deposits are lower by Rs 4.49 crores at Rs 7.11 crores; secondly, they have borrowed Rs 3.77 crores more by way of ways and means advances from the Reserve Bank, which now stand at a shade under Rs 50 crores at Rs 49.41 crores; and thirdly, the rise of some Rs 9 crores to Rs 56.99 crores in the Treasury Bills purchased and discounted by the Reserve Bank must be put down to some of the States seeking in this wise to replenish their balances.

Even so, the pressure has been felt by the banking system. Reserve Balances of member banks are down by Rs 3.72 crores at Rs 74.70 crores. Again, borrowings from the Reserve Bank have risen by Rs 6.93 crores to Rs 24.53 crores. The State Bank purchase of securities is a thing apart, and the general conclusion must be that banks were, in the first week of June, exposed to some strain.

Balances Held Abroad are again down, this week by the not too small an amount of Rs 2.93 crores, to be placed now at Rs 5.42 crores. Foreign assets in the possession of the Reserve Bank have consequently slipped below the Rs 115 crore mark, and the coming months will undoubtedly witness an intensification of our balance of payments difficulties.

The return of the State Bank for 7 June is chiefly noteworthy for the purchase the institution has made of gilt-edged during the week. Deposit resources improved by Rs 2.75 crores to Rs 564.01 crores, and by running down cash balances by Rs 7.01 crores to Rs 19.93 crores, the State Bank was enabled to increase its gilt-

edged portfolio by Rs 9 crores to Rs 249.94 crores. The total of Advances has marked merely a fractional change in having declined by Rs 0.55 crore to Rs 292.19 crores.

+

The return of the Scheduled Banks for 31 May discloses that, already, pressure consequent upon tax payments and the month-early expenditure was beginning to build up. Constituents drawing down their balances have apparently caused total net Deposits to fall by about Rs 10 crores. Net Demand Deposits are shown lower by Rs 4.95 crores at Rs 994.52 crores, and net Time Deposits have similarly fallen by Rs 5.13 crores to Rs 1,247.07 crores. It may be noted that in the same week the State Bank reported a rise of about Rs 1½ crores in its Deposits. The total of Advances has inched up by Rs 1.78 crores to Rs 1,563.30 crores—but this is wholly on account of the State Bank. Even so, the fall of Rs 2 crores to Rs 628.18 crores in the gilt-edged holdings of Scheduled Banks is to be wholly ascribed to the State Bank. As a result of the strain, banks had to borrow more, though indebtedness to the State Bank has been cut slightly by Rs 0.53 crore to Rs 16.34 crores. Borrowings from the Reserve Bank have risen by Rs 6.65 crores to Rs 16.37 crores. Finally, cash balances, including money at call and short notice have been drawn down by Rs 10.37 crores to Rs 195.12 crores—this mainly on account of a decline in money at call, what with banks being in need of funds.

+

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 11 June, 1963. The amount offered was Rs 2,10,00,000. Tenders at Rs 99.415 per cent were accepted in full and those at Rs 99.410 per cent were allotted approximately Rs 93 per cent. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.354 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 17 June, 1963. Successful tenderers should make payment on Friday, 21 June, 1963 at all centres. Other conditions are as usual.

During the week ended 7 June, 1963, Government of India Treasury Bills for Rs 25,39,00,000 were sold in favour of Reserve Bank of India.

91 days Intermediate Treasury Bills sold from 5 June, 1963 to 8 June, 1963 amounted to Rs 1,35,25,000.

Notes

BOKARO

Enough of Surveys

The anxiety, bordering on impatience, that is felt all over the country at the prolonged discussions over the Bokaro project, was underlined by Mr C. Subramaniam when he told correspondents last week that even a negative decision by the US Congress would be helpful if it were taken at an early date. The anxiety has been heightened by the vague suggestions afloat that a commitment regarding assistance for the project may be further delayed by interposing another survey, this time regarding the availability of raw materials.

As the Minister for Steel has emphasised in his talks with press correspondents, such a survey at this juncture is totally unnecessary. Surveys of raw materials for Bokaro were made in greater detail and on a more comprehensive basis, and arrangements for their supplies to the project are also more advanced, than they were at a similar stage in the planning for the three existing steel plants in the public sector. The experience of Rourkela has not always been encouraging, but the lessons have been learnt. The

production figures of the three public sector plants which have been maintained for some time at capacity levels suggest that the initial difficulties have been overcome.

It is not merely the needs of Bokaro that have to be provided for in the programme for raw materials. The Ministry has to take in its stride the expansion programmes of the three public sector plants, during the current plan period, their further expansion in the fourth plan, as well as the expansion of the private sector plants. The country can take heart from the Minister's assurance that all the facilities would be available in time for the different phases of the Bokaro project. It is also interesting to note his view that the phasing suggested by the US Survey Team is too long and that capacity production could be reached much earlier.

There is a general feeling that ideological considerations regarding ownership may not affect the US Administration's views regarding the eligibility of the project for assistance, though the Congress has yet to be convinced. It would be unfortunate if, at this stage, a decision on the main issue is sought to be postponed by suggesting a new raw materials survey. Four valuable years have already been lost in exploring the possibility of getting American assistance for Bokaro. Further delay may be too costly Mr Subramaniam's assertion that the project would be completed irrespective of chances of American aid, should be viewed in this context, though he was not prepared to divulge what alternative plans he had in mind.

EDUCATION

Cut Restored

One of the casualties, happily not fatal, of the Emergency was the programme for expansion of primary education, which was hit just when it was gathering momentum. Under the Third Plan, programmes had been drawn up for introducing compulsory primary education during the plan period. It was expected that 80 per cent of children in the age group six to eleven would be attending school by 1965-66. The Plan had provided a sum of Rs 209 crores to meet the expenditure on opening new schools required for the purpose. The progress achieved during the first two years of the Plan is reported to be very

encouraging, especially in the regions where a special drive had been undertaken. And throughout the country there has been evidence of great enthusiasm among the common people for starting new schools. But the programme of expansion had to be revised in the wake of the emergency.

When the Plan was reoriented last November, to accommodate the vastly increased needs of defence, it was decided to cut the allocation for primary education by Rs 6 crores in the annual plans for 1963-64. A cut was, perhaps, unavoidable in the circumstances, but it is clear that the slowing down of the programme of education at the base would affect prospects of development in all sectors and re-examination is necessary when defence build-up is a long term affair.

Dr Shrimali's announcement that Government had decided to restore the cut that was imposed six months ago will, therefore, be received with satisfaction. It is hoped that the States would be able to find the funds required out of their own resources, especially as they will be getting about Rs 64 crores as their share of the additional taxation introduced in the last budget. The Central Government have also, decided to make additional Central assistance available where, a State finds itself short of funds to meet the additional expenditure. The States have also been asked to go ahead with the programme for expansion of primary education. But opening of additional schools by itself will not go far unless at the same time attention is also devoted to the problems of wastage and stagnation at the primary stage, and the high percentage of failure at the secondary level.

EXPORTS

Uphill Task

Speaking at the annual general meeting of the Indian Council of Foreign Trade, Mr P. C. Bhattacharyya, Governor of the Reserve Bank, has pointed out that a satisfactory solution of the problem of viability of our balance of payments is to come from exports. The immediate task, according to him, will be to ensure that the value of exports keeps pace with the rate of expansion in payments for imports necessary to enable proper utilisation of the country's growing industrial capacity as well as for meeting the growing interest payment liabilities. In the long run, the growth of exports should be such as to enable the debts that are being contracted in the present phase of development being rapid and a satisfactory rate or growth being maintained. Even what the Reserve Bank Governor has termed, the immediate requirement, is not proving to be an easy task. For as against an average of Rs 740 crores of exports to be attained during the Third Plan, the actual growth of exports so far has been at a disappointingly low level.

As Mr Bhattacharyya has noted, for a developing country like India which has yet to diversify its manufactures to such an extent as to leave a sizable surplus for exports, it is indeed an uphill task to attain a sustained upward momentum for exports. Inevitably therefore we have to depend for the bulk of the export earnings on the traditional primary commodities and simple manufactures. Even in regard to the export of these, growing competition is being encountered from other producing countries equally anxious to increase their export earnings. The setback to India's export earnings has come mainly from cotton textiles, exports of which have suffered because of their inability to compete in the matter of quality and price with products from Japan and Hongkong. Though last year our jute goods exports have been quite satisfactory and we have been able to increase our tea exports despite a fall in northern Indian tea production, there is no room for complacency as competition in world markets in these commodities is on the increase. Just as present the Indian jute goods industry is faced with the gloomy prospect of its sacking export dwindling to a vanishing point in view of the several advantages enjoyed by the Pakistani jute industry. The Indian jute goods industry has therefore been asking for some sort of subsidy to offset the advantages of the Pakistani industry. Referring to the question of subsidy, Mr Bhattacharyya has pointed out that these measures should not be viewed as anything but short-term programmes. He however concedes that special aid can justifiably be given in certain circumstances, for strictly limited periods. The incentive schemes should however be framed so as not to harm the interests of other countries.

But the crux of the problem of export promotion is that our products are of good quality and are competitive in price. So long as these two essential pre-requisites remain unfulfilled, no amount of export promotion efforts will be of any avail. It is by reducing costs, paying attention to quality and by following modern methods of sales promotion that countries like Japan have been able to make resounding headway in the export field. It is undeniable that expansion of exports is no easy task, but it does not mean that industries in our country have done all they can to promote exports. As pointed out by Mr Bhattacharyya, for the domestic producers there will be no escape from the need to reduce costs and improve their quality, since only those who succeed in the export markets will in the long run be successful in the domestic market also.

MACHINE TOOLS

Big Strides

The big strides made by the machine tools industry in recent years is an indication of the rapid pace of industrialisation in the country. An idea of the increase in the demand for machine tools can be had from the fact that whereas during the last World War, demand had been of the order of about Rs 8 crores, it is estimated that during the current five year plan period machine tools of the value of Rs 173 crores will be needed. Although machine tools worth about Rs 20 crores were absorbed by the various industries during the first year plan, indigenous production continued to be rather stagnant with the bulk of the machine tools obtained from imports. There had however been a sharp upturn in the output during the Second Plan period when indigenous production shot up with the value of machine tools produced reaching about Rs 19 crores. But it is to be noted that the Second Plan period also witnessed a spurt in industrial activity with the result that the absorption of machine tools more than trebled to about Rs 73 crores. The demand during the Third Plan period is also expected to record a similar rate of growth with the demand during the last year of the plan showing a sharp upturn to Rs 49 crores. The indigenous production of machine tools during the current plan period will also go up sizably as there are now a number of units both in the public and private sectors engaged in the manufacture of machine tools of all grades and kinds. Perhaps the most outstanding performance in the public sector is the rapid growth of the Hindustan Machine Tools Ltd established in Bangalore during the first five year plan period. The HMT has now built a second unit from within its own resources. But despite the rapid growth of the machine tool industry, the demand far outstrips supply and hence there will be need for substantial imports even at the end of the Third Plan. It is expected that out of machine tools worth Rs 49 crores that will be needed in 1965, indigenous production will reach only a level of Rs 30 crores in that year, leaving as much as Rs 19 crores of machine tools to be obtained through imports. Since machine tool manufacture, especially the production of specialised tools, is a highly skilled job, the progress so far made is quite impressive indeed. At this rate it may not be long before the bulk of internal requirements in various machine tools will be met from indigenous production. It is also gratifying that machine tool merchants in the country have formed an All India Association since such an association will apart from providing a common platform

for discussion of the problems of importers and distributors of machine tools can act a useful liaison between the manufacturer and the consumer.

COFFEE

Good Outturn

Coffee production in the country during the 1962-63 season registered a steady rise facilitating the building up of a substantial export trade and meeting the growing demands for internal consumption. The latest estimates of the 1962-63 crop place coffee output at approximately 54,000 tonnes, surpassing the previous expectations of 52,000 tonnes and the receipts of robusta are showing signs of crossing the 20,000 tonnes mark. The prospect of a bumper crop of 60,000 tonnes in the 1963-64 season is an heartening evidence of the sustained efforts of the Indian Coffee Board to step up production.

The release of coffee for domestic consumption during 1962 totalling 34,651 tonnes comprising 12,303 tonnes of plantation, 4,048 tonnes of arabica cherry and 18,300 tonnes of robusta. The rise of 1,000 tonnes in internal consumption during the year under review is no doubt gratifying but to attribute it, as the Board Chairman Mr Sitarama Reddi has claimed at its 56th general meeting at Bangalore, to its propaganda machinery is to be totally oblivious of general rise in our living standard. There has been a general complaint that domestic consumers are given inferior variety as quality coffee is earmarked for export purposes. This is a legitimate grievance which should be looked into without delay. The growing preference of foreign buyers for plantation variety should serve as an incentive for boosting production of this type so as to meet the requirements both of exports and domestic needs.

The Board has also to address itself in real earnestness to the vital functions of assistance to the growers, propaganda and research for increasing coffee output both quantitatively and qualitatively. The procedure of disbursing loans to the needy cultivators is haphazard as small planters are kept out of the purview of this scheme. Regarding research for improving the quality of crop and warding off the depredations of pests and plant diseases there is much ground to be covered, though lately there has been an encouraging improvement in this sphere. The set-up of the Coffee Board is partly to be blamed for these anomalies. The repeated plea of the planters' associations for a bigger representation in the Board should be duly acted upon to infuse new blood and energise its activities in a practical way with proper consideration shown to the needs of the planters and the trade. The popularisation and

distribution of improved needs, financing the small planters for acquiring spraying equipments and the adoption of latest agricultural methods can go a long way in transforming coffee cultivation in a scientific manner and raising production without impairing quality.

INDUSTRIAL GASES

New Plant in Bombay

The inauguration of the plant of Bombay Oxygen Corporation Limited by Mrs Vijayalakshmi Pandit the Governor of Maharashtra, last week is the consummation of a long cherished dream conceived by a group of leading industrialists led by Mr Madanmohan R. Ruia and Mr Babubhai Chinai as early as 1960. From the very inception the project got sympathetic consideration from the authorities and on 3 October 1962 the Bombay Oxygen Corporation Limited was incorporated. The inauguration of the plant constitutes an important step in our industrial growth as oxygen is put into a multiple uses such as the manufacture of iron and steel and other basic and defence oriented industries. The current pattern of consumption of oxygen also augurs well for the promising future of the industrial gas industry in India. A noteworthy aspect of the Bombay plant is that it is purely Indian owned and managed by Indian personnel. Apart from this, it is fully equipped with most modern and up-to-date machinery supplied by the collaborating firm, the Chemietechnik, Berlin (GRD) who also supplied the technical know-how for the construction stage. The annual production of the plant is estimated at 50 lakh cubic feet. The authorised capital of the unit is Rs 3 crores.

Mr Madanmohan Ruia, the Chairman of the Corporation, struck an optimistic note about its operational success and the financial results. Industrial gases are closely linked with a country's industrial development particularly in such industrial activities like shipbuilding aircraft factories, steel fabricating units, forge shops and foundries. As industrial growth gathers fresh momentum gases like oxygen and acetylene would be increasingly in demand and the industrial gas industry has tremendous scope for expansion. The Bombay plant, though modest by itself, is an important contribution to attain self-sufficiency in this direction.

ALLOY STEEL

Durgapur Plant

After much official vacillation and uncertainty the Rs 67 crores alloy steel plant at Durgapur got off to a sound start last Saturday

when Mr C. Subramanian, the Union Minister for Steel and Heavy Industries, laid the foundation stone of its steel melting shop. Largely on account of indecision at official levels the work at the project was inordinately protracted though it received official sanction as early as March 1961. Though financial aspect was a debating point at one stage the actual scale of the unit emerged as a controversial point which consumed much of the time. Nevertheless, it is gratifying to learn that there is every possibility of making up much of the time lost in the initial stage if the programme is expeditiously implemented by the Hindustan Steel Limited and other parties involved in the enterprise. The project is expected to go into production by the end of the current Plan period and is expected to go into full commission in the first year of the Fourth Plan. Mr Subramanian's assurance to the gathering that official procedural delays and red tapism should not be permitted to slacken the work is a welcome evidence of Government's earnestness to forge ahead with the project in a speedy manner.

The Minister also paid tributes to the foreign friendly countries associated with the project in one way or other particularly to Japan which is providing foreign exchange component of Rs 20 crores. The steel melting shop produces carbon alloy, tool and engineering equipment, special quality steel, including stainless and heat resisting sorts and other grade alloys. The Durgapur project's estimated capacity is 50,000 tons of special steel per annum and when in full production it will be the largest of its sort in our country. It should be noted in this connection that our requirements of special steel by the end of the Third Plan will be of the order of 200,000 tons and the Durgapur project is a major step toward self-sufficiency for this type of raw material. Besides providing immediate employment to a large number of people, the project is calculated to help the country save a considerable amount of foreign exchange after it goes into full steam.

ICICI

\$ 30 Million

World Bank Loan

The World Bank has made a loan equivalent to \$30 million to The Industrial Credit and Investment Corporation of India Limited. Like four earlier bank loans to ICICI aggregating \$60 million, this loan will be used to meet the foreign exchange requirements of projects financed by the Corporation. In its 8 years of operation the ICICI has approved financial assistance for 200 industrial projects involving 183 firms for a total amount of Rs 601 million. Of this total

nearly half is accounted for by foreign exchange loans, a fourth by rupee loans and the balance by underwriting operations and direct equity investments.

ICICI has been successful in mobilising both local and foreign private participation in its financing operations and in assisting the expansion of the capital market. It is estimated that its operations have resulted in mobilising a total capital investment equivalent to some \$650 million. An important feature of ICICI's contribution to the Indian economy has been the quality of its investments. They have come to be more concentrated in newer manufacturers such as paper and paper board, wire ropes, electric cables and steel tubes. Also many of ICICI's recent investments have been in such basic industries as engineering and heavy chemicals which stimulate further industrialisation. It is in these industries, new to India, where the high standard of appraisal carried out by ICICI has been particularly valuable in developing sound projects and it is often through them that foreign capital and technical knowledge have come to India. In its early days ICICI set the pace for other institutions in underwriting but recently ICICI has been joined by others in underwriting large issues. ICICI has also aided the development of the capital market by making available for purchase a small but attractive selection of securities from its own portfolio.

Including \$30 million loan made today and the \$60 million lent earlier by the World Bank, ICICI's total resources amount to Rs 723 million. These resources include Rs 50 million of paid-in share capital, 71 6/10 per cent of which is held by Indian shareholders and the balance by British, American, German and Japanese private interests; Rs 175 million of advances and credits from the Government of India; lines of credit amounting to \$5 million from the United States Agency for International Development and DM 25 million from Kreditanstalt für Wiederaufbau; and surplus and reserves of about Rs 16 million.

ICICI's financial operations are expected to continue at the high level of the past few years and the Corporation consequently will have to increase both its foreign exchange and rupee resources. The Bank loan of \$30 million together with the balance still available from existing loans should meet ICICI's foreign exchange requirements until the early part of 1965. ICICI is also making arrangements to obtain some additional Rs 100 million of rupee funds.

Under the terms of the Bank loan, interest charged on each part of the loan will be at the Bank's current rate when that part is committed for one of ICICI's projects. At that time the Bank and ICICI will agree on an amortiza-

tion schedule for repayment of that part of the loan. These amortization schedule will provide for semi-annual repayments and for final repayment of the entire \$30 million loan not later than December 1, 1978. The loan is guaranteed by the Government of India.

★

US

Machine Tools

At a recent meeting of the National Machine Tool Builders Association, a leading official of this private group ventured the prediction that the industry's new business this year will top last year's by 10 to 15 per cent. What is more, as he acknowledged, this could turn out to be a conservative estimate.

Whether it does or not, this kind of confidence is amply justified by the heartening upturn in the industry's operations. Since last August, there has been a steady rise in orders for the machines that make machines—the tools that cut and shape metal in manufacturing plants—and the rise could well continue through 1964.

For the first quarter of 1963, total orders for both cutting and forming tools came to \$206 million, a gain of about 20 per cent over the same period of 1962. Now the report for April, published within the past week, shows a continuation of the basic trend, as total orders rose again \$77.7 million from the \$74.4 million of March. All in all, the month-to-month gain has approximated \$3 million or more, and the volume actually booked this year has exceeded earlier expectations by a considerable margin.

The industry attributes this year's showing to several factors, not the least of which are the improvement in business activity generally and the growing confidence in the American economy that has accompanied it. But there are other special factors also at work.

There are, for instance, the efforts of industry and government leaders to encourage expansion and modernisation of industrial plants. Helping to spark the upward trend in machine tools today, which is to all intents and purposes the industry's first sustained strengthening of new orders since the capital investment boom of 1955-56, is a need for new machinery to replace obsolescent equipment, keep production costs in line, and speed industrial growth. The machine tool upsurge thus reflects progress in accelerating the US economic expansion and in strengthening the competitive position of American products in world markets.

The industry estimates that nearly two-thirds of the nation's existing machine tools are obsolete—that is, they are more than 10 years old and are therefore regarded as out of date in design and

performance under optimum conditions of efficient use. Furthermore, some 600,000 of all American tools, or nearly one out of five, are 20 years old or older.

Concern over this situation is an important element in the effort to speed up replacement as well as expansion of industrial tools. It undoubtedly has been a factor in spurring orders from American buyers, who are starting to replace their older equipment.

Underlying this effort are government programme aimed at stimulating investment and modernization—the seven per cent tax credit on new equipment and the liberalized depreciation guidelines which were adopted last year. Further easing of taxes on corporate and personal income, now under Congressional consideration, would further stimulate investments and machine tool ordering, according to industry sources.

Spurred on by rising demand and the government's investment incentives, American manufacturers have been expanding and modernizing their facilities at a rapid clip—and this has been a significant contributing factor in the rise in machine tool orders. Auto makers, who are on their way to what could be their best year ever and are spending more for new plant and equipment this year than in any year since 1956, have played a particularly important part in the machine tool improvement. But the gains are not confined to this one industry by any means; they are general, and they extend to a wide variety of industries.

It follows that the main source of recent improvement in the U.S. machine tool industry have been domestic customers, and this trend is likely to continue. However, foreign buyers, who have been noticeably active in the American machine tool market, also will continue to make their presence felt as they continue to seek new American equipment to help expand and improve their own operations. Indeed, much of the April rise in orders resulted from increased foreign bookings.

AUSTRALIA

Big Bauxite Project

Australia's rapid march of industry took another step forward recently. At Weipa, the nation's loneliest mining "frontier" on rugged, remote Cape York Peninsula in the State of Queensland, a multi-million pound bauxite project came of age.

For Queensland, Australia's rich, northern-most State, it was a dream come true . . . and for Australia it opened a fresh chapter in the remarkable post-war programme of mineral progress.

For the first time—after six years and £A4,000,000 of pre-

paration and development—the giant field is capable of full-scale mechanised production.

Weipa, with untapped reserves of more than 3,000,000 tons of high grade ore, is the centre of one of the world's largest bauxite deposits. It is situated in the Gulf of Carpentaria, on the western coast of Cape York Peninsula, 1250 air miles north west of Brisbane, Queensland's capital.

The developing group is known as COMALCO—a company combining Conzinc Rio-Tinto and Kaiser Aluminium of America.

Bauxite is the raw ore which is refined into alumina, a white, sugary substance. This, in the final process, is smelted into the metal aluminium. Weipa yields one ton of aluminium for every four tons of bauxite. Recently, a party of Government leaders, industrialists, and churchmen flew into Weipa on an historic two-fold mission: officially to open the port of Weipa—a man-made undertaking which has meant the gouging of a seven-mile, 27ft-deep channel at a cost of £1,360,000 over the past two years, and officially to announce another milestone in Queensland's future—the decision to build a £35,000,000 alumina refinery (for Weipa bauxite) at Gladstone, a coastal town 377 miles north of Brisbane.

At Weipa today, in spite of the bonanza that is bauxite, only the hum of well-oiled conveyor belts and the drone of bulldozers breaks the eerie silence that is northern Australia. But it is a sound that already is echoing around the world's aluminium markets. Japan has contracted to buy 600,000 tons of Weipa ore over the next three years while trial shipments are being examined by several European countries. Australia today is vitally aware of its rich north. In Government and industrial circles there is an awakening of the need for great, speedy, development.

Swedes Construct Tunnel for Indian Power Plant

The Stockholm firm of civil engineers and contractors SENTAB have been awarded a Kr. 30,000,000 (£2,000,000) contract by the government of Rajasthan, for carrying out tunnelling work of a large power plant project.

The assignment includes the driving and concrete lining of a 1.5 km discharge tunnel for the power station to be built at Chambal River, 50 km from the City of Kota. Of horse-shoe shape, the tunnel will be 12 m high and 13 m wide. The work will also comprise blasting operations for the power station proper and for an open tailrace canal between the plant and the tunnel opening and from the tunnel outlet to the river bed.

Swedish Engineers and technical staff will conduct the work, which will take more than three years. Swedish equipment will also be used to a large extent.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

RAIDS aplenty in Clive Street: names are not named, but no one is in the dark about the identities involved. What are the authorities up to? Are these searches being conducted at random, or has there been some information received? Those on the Street that I have talked to, are bitter about it all. Reputations are being smashed, often needlessly; and the clutter of publicity that accompanies each sortie is unwelcome to say the least. But then, some of the searches, from the Government viewpoint, have been fruitful; contraventions of foreign exchange law have been exposed, with a view to checking the under-invoicing racket I suppose the hunt has been turned on. Here again the guilty few have caused the innocent many to be exposed to harassment. I do wish, however, that there could be more departmental inspection about such forays.

★

The trouble, I suppose, is that because enforcement of law is so hard most of the time there are many who get emboldened to break the law. We have had for these many years the spectacle of wholesale evasion of income-tax; as a result the tax rates, in order to bring in more revenues, have been stepped up from time to time; but in turn merely serves to make evasion more profitable—and more attractive. The absurdity of prohibiting tax-payer then gets into the neck; a harried income-tax department finds this species of evasion to be brought to bear to make the department desist. At the moment under-invoicing is the preferred sport, once again because of the Government's own restrictive policies. Apart from the business trips, for which, too, sanction from the Reserve Bank is best reluctantly forthcoming, there are the "P" form visits; these involve ostensibly no release of foreign exchange, since the would-be traveller readily produces a host of invitations to prove that he is on his sojourn away from India will be met by kindly and philanthropic friends. But amour-propre, self-respect and "dignity" quite that such hospitality is paid, which costs foreign exchange, which means an illegal built up for just such a contingency. Austerity in foreign travel has already affected the earnings of Air-India—and a side-issue is

the interest shown in black-market foreign exchange by "P" form travellers.

★

Only one newspaper (The Hindustan Standard) carried, as far as I know, the report of President Ayub Khan (a camera fiend) being present at a Profumo party. Nor have I seen so far any reactions in the Pakistani Press. But l'affaire Keeler already has international overtones. There was the Russian who allegedly secured for himself State secrets; the West Indian accused of assault; the Englishman (of noble Italian lineage) who lost his Cabinet seat; and the Pakistani who apparently filled out one more album of photographs. Where it will end, ultimately, we shall not know for some more time, till perhaps next Autumn. MacTrouble appears to have wriggled out of this one, all right, and no Cabinet shake-up is expected. And naturally now is the time for all good Conservatives to come to the aid of their party. Between now and next autumn, when presumably the elections will be held, strenuous effort has to be put in, if the Conservatives are not to suffer a calamitous landslide. The roster of scandals that have erupted in recent months anent the Conservative Government is long and disquieting. Any one of them would be sufficient so to have alienated the affections of the electorate, that Labour can now depend upon being swept into power by the votes against the Tories. I have suspicion, incidentally, that we have not quite heard the last of Miss Christine Keeler and of her impact upon British politics.

★

From scarcity to plenty, and back to scarcity again: that describes the violent fluctuations in the sugar situation over the past few years. Who has bungled? Industry asserts that it is Government that is to blame. When we were embarrassed by too much sugar, policy that was adopted did nothing to ensure that production thereafter would continue to be in balance with demand. Sugarcane has got diverted to khandasari and to gur. Crushing seasons have got shortened, as far as the mills are concerned; the balance-sheet, whether for the mills or for the country, indicates a loss. It is all very well to talk in terms of improved species of sugarcane, or a better yield per acre. But surely

ponents. A beginning, it is true, has been made to secure so-called "untied" aid, from America. But I fancy that what has been arranged for is but a fraction of our needs. Preoccupied as we lately have been with the defence effort, inadequate attention has been paid to sustaining the rate of industrial growth. And, with the end of the export season, there is evidence enough of a slow corrosion of our foreign exchange reserves.

★

It seems to me that Dr Radhakrishnan did not get such a good "press" as we might normally have expected: I refer here not to the editorial comments, which have been all that we could have hoped for, but to the coverage of his trip as such. This was because his trip coincided with news much more basic as far as the American was concerned, that is to say, the new "civil war" in the Southern States. I dare say the popular press in America was so taken up with the gory pictures that emanated from such cities as Birmingham, Alabama, that it gave but little room to the meeting of the two Presidents. Dr Radhakrishnan's luck, at least in this regard has not much improved as he touched down in England. L'affaire Keeler and the Cabinet crisis have been front page news, and for all the pomp and pageantry with which the Indian President (coached down to Buckingham Palace with Queen Elizabeth, the fact remains that Television coverage of such extragavanza was poor. Poor press or no, we can be content in this, that the impress of Dr Radhakrishnan's visit, upon the American Administration and the British Cabinet, would be profound. Our relations with these two countries will be touched by this understanding that Dr Radhakrishnan would have re-awakened.

(From Our New Delhi Correspondent)

Economics of Khadi

A case for expanding the activities of the Khadi and Village Industries Commission was made out by Mr U. N. Dhebar, the new Chairman of the Commission, when he met pressmen last week. The basic arguments are not new; they are as old as the inception of the Khadi movement in the country by Mahatma Gandhi. Though in those days, khadi had strong political overtones, Gandhiji was always particular to emphasise the economic aspects. The country has opted for a form of economic organisation different from what Gandhiji advocated. But the arguments for khadi and village industries have not lost their validity in the context of the plans for rapid industrialisation. That khadi and associated industries are not considered by the Planners to be inconsistent with industrialisation is clear from the fact that an important place has been assigned to this sector in all the three Plans. A statutory organisation, with extensive powers and a large budget was set up for the development of khadi and village industries. But doubts persist both regarding the actual achievement as well as the future role of Khadi in the national economy.

There are those who consider that the country is being called upon to shoulder a heavy burden in trying to perpetuate primitive techniques for sentimental reasons. The working of the Khadi Commission as well as the political activities of its Chairman have also come in for critical attention. To such questions Mr Dhebar has given effective answers.

In a poor country like India with its wide disparities in levels of living, a theoretical approach to the problems of economic growth can be very misleading. One of the unpleasant facts of the present economic situation, to which Mr Dhebar has drawn attention, is that, in spite of more than a decade of planned development, more than fifteen per cent of the population are existing below the starvation level. Per capita levels of consumption of this fifteen per cent—a population as large as that of Japan—range between Rs. 9 and Rs. 11 per month. A fifty per cent increase in the earnings of the people at this level could bring about a revolutionary transformation of the outlook for economic development. And that

is precisely what the Khadi Commission is trying to bring about through the creation of opportunities of productive employment for the submerged classes of society.

Employment in khadi, during the last ten years, has increased from 2.79 lakhs to 17.46 lakhs. Including the employment provided in the other village industries being developed by the Commission, such as manufacture of hand made paper, matches, leather, pottery, soap, etc., total employment is near about 23.6 lakhs of people. It is admitted that wages are low, especially for spinners. But a programme has been drawn up to ensure a minimum income of one rupee a day for eight hours of work, by improving the efficiency of tools and cutting overheads. The Khadi Commission it has been made clear, is not averse to the use of modern techniques and machines. But these should be such as can be worked by persons spread out over thousands of villages, whose technological level is not high. Taking the Amba Charka as the basis, efforts are being made to evolve a standard spinning wheel with much higher productivity which will serve the purpose in view.

Another proposal under consideration is replacement of the rebate of about 20 per cent on sales of khadi by a production subsidy in the form of payment of the weaving charges incurred by production centres, or "free weaving" as it is called. This change, it is expected will provide the basis for spread of khadi in the villages. At present the khadi movement is dependent on urban markets which have been built up by a system of sales subsidies. The villagers, even the spinners among them, find that khadi is too costly. With "free weaving", it is pointed out that the agricultural labourer who is rarely fully employed and spins during his spare time, will be able to get cloth practically for the price of cotton. On this basis, in terms of money, Khadi, it is claimed, will be cheaper to him than mill cloth. For non-spinners, khadi will be available at the cost of cotton plus spinning charges.

Under this scheme it is possible to envisage a more rapid increase in the volume of production of khadi and the consequent employment. So long as production is for sale in urban markets, the amount of the subsidy involved in the "free weaving scheme" will work out more or less to the same level as the rebate on sales. But, if most

of the increased consumption is in the villages as anticipated, it will be possible to effect substantial savings in transport and distribution costs, so that the amount of subsidy is not likely to rise in the same proportion as production.

Nevertheless, so long as the subsidy, in whatever form, remains an essential element in the propagation of khadi, there is a limit beyond which no Government would be able to bear the burden of its development. At present the amount of subsidy is about Rs 7 crores. The practicable limit to the increase in the amount of subsidy also limits the employment that can be provided through khadi and associated activities. But Mr Dhebar is not without hope that, with improved tools of the type that are being developed, productivity could be increased to a level when the subsidy will be no longer required. And khadi will have an assured place so long as there is no alternative employment at higher wages available to those engaged in its production.

★

More for Schools

A review of the progress of primary education by the Union Ministry of Education has shown that this essential programme is suffering due to a variety of reasons. On the one hand, the enrolment has exceeded the targets in the first two years of the Plan period, and this trend is likely to be maintained, and even intensified, during 1963-64. On the other hand, the financial provision made for Primary education in the State budgets for 1963-64 shows only a small increase of 6.1 per cent over the provision made in 1962-63. This will be just sufficient to maintain the status quo and is considered inadequate to meet the normal expansion that is now taking place.

Following this review of the educational programme, the Government of India, it is learnt, has decided, in principle, that accelerated Central assistance should be made available to the States for the programme of expansion and improvement of primary education during the current year.

★

General Insurance in 1961

The net premium income in India in all classes of general insurance business of Indian insurers increased to Rs 23.50 crores in 1961 from Rs 18.59 crores in 1960. In 1961, Rs 7.49 crores were earned from Fire insurance, Rs 3.89 crores from Marine insurance and Rs 12.12 crores from Miscellaneous insurance business. In the case of Non-Indian insurers, the net premium income in India in all classes of general insurance business also increased to Rs 8.44 crores in 1961 from Rs 7.90 crores in 1960. The

Non-Indian insurers earned in 1961 Rs 3.51 crores from Fire insurance, Rs 2.63 crores from Marine insurance and Rs 2.88 crores from Miscellaneous insurance business.

SNIPPETS

Toward Low Cost Building Materials

A new research programme to use petroleum-based products for building low-cost houses may provide a solution to one of the most urgent and difficult international problems—housing shortage. This project is jointly sponsored by Esso Research and Engineering Company and the Pan-American Union. Although the immediate goal of the new research project is to help ease the critical housing shortage in Latin America, it may in the long run bring hope to millions of people in developing nations. According to UN estimates, 10,000,000 new houses a year will be required during the next two decades throughout the free world to fill the need created by rising population and inadequate housing facilities.

The materials to be investigated under the project are petroleum-based products ranging from asphalt to plastics. A principal potential advantage of the oil-based products is that the raw materials are plentiful and relatively inexpensive. The project may involve the building of tire houses or parts of houses with materials now being formulated in the laboratories.

Mobile Laboratories

Two mobile laboratories, designed for use in the worst conditions of climate and terrain, will be used in various parts of the world, including India, by geologists of a British Petroleum company.

Samples of rock strata will be washed, sorted and dried in one compartment and analysed and recorded in another. Each laboratory is 32 ft. long and 10 ft. wide, is mounted on skids and has rubber dust-proofing, false roof sun canopy, metal window shields, fly screens and air conditioners.

Higher Education

An interesting proposal has been put forward by the Dutch Professor of Economics, Dr J. Andriessen, to encourage more people to go on to higher education with a view to increasing the number of personnel available for research of all kinds. In addition to expanding the number of scholarships and grants, he proposed that "study salaries" be paid to outstanding students in the universities. At the outset this project could cost the Government about 50 million guilders a year, but in course of time some of the cost could be shared by industries which would benefit from an influx of new research workers. Moreover, the professor ingeniously points out that this would make the universities still more democratic, although he insists that such wage payments to students should be accompanied by controlling their study efforts.

The British India Corporation, Limited

CHAIRMAN'S ADDRESS

The following is an extract from the address by the Chairman, Shri Satish Chandra, to the Shareholders of the British India Corporation Limited, at the Forty-third Annual General Meeting of the Corporation held in Kanpur on Saturday, 8th June, 1963.

Gentlemen,

The year under review was an important one in the Corporation's history. It was marked by the restoration of a Shareholders' Board, after periods of receivership and judicatory control, following a much-publicised crisis which occurred some years ago in the affairs of your Company. Many complicated problems arose, and until the Corporation could revert to a normal Shareholders' Board, its management was meantime delegated to a Committee appointed by the Allahabad High Court. That Committee dutifully fulfilled the obligations of a transitory care-taker Board, but ceased to function last year, when having regard to the ensuing circumstances, a further order was passed by the Court, directing the election of a Shareholders' Board. The new Board which was duly constituted on an elective basis, met for the first time on 1st November, 1962. The appointment by the Board of Mr. B. P. Bajoria as Managing Director for a period of 5 years, was subsequently sanctioned by the Central Government, and a resolution in that regard will be considered later in this meeting. I myself had the honour to be appointed Chairman of the new Board, as from 1st November, 1962, and a resolution concerning this appointment will similarly be placed before you today. For a period of some three months immediately preceding the first meeting of the new Board, I also served in new Board, I also served in accordance with the Court's orders, as Chairman of the out-going Committee of Management, my predecessor, Mr. H. S. Chaturvedi having earlier relinquished his charge, and requested to be relieved of his responsibilities.

I should like to take the opportunity at this meeting to pay a tribute to Mr. Chaturvedi, who from May 1958 to July 1962, guided the affairs of the B. I. C. with wisdom, dignity, and patience. Soon after he assumed office, the Corporation's financial and trading position improved and the confidence of the market in the stability of the B. I. C. was largely regained. It was perhaps inevitable that an interim Board, should by its very nature function within a restricted sphere, and confine itself primarily to regenerative management, rather than engage in any long-term reorganizations and development schemes calling

for major policy decisions. The interim Board, however, rendered other necessary and useful services, which not only preserved the credit and reputation of the Corporation, but paved the way for a smooth change-over at the appropriate time. I am now optimistic enough to hope that the new Board will by virtue of the wider discretion it can exercise, not only adopt bolder methods to tackle many pre-existing problems, but be in a position to plan far ahead, and venture forth into new fields of industrial enterprise and development. This will naturally entail some reorganisation, a certain amount of which is already in hand, chiefly in respect of production programmes and sales policies. Side by side with development work on the existing range of products, it is hoped that the search for new products will enlarge the scope of the Corporation's activities, and materially improve its prosperity in the coming years. As you all know, the B. I. C. Group, which has a work force of nearly 27,000 employees, ranks among the leading industrial establishments of Northern India. The total turnover of the Corporation and its Managed Companies for the year under review was approximately Rs. 25 crores.

Of greater concern than the immediate problems of the B. I. C. in 1962, was the declaration of an emergency in the country, following the use of military force by China to settle a border dispute. As was to be expected, most industrial houses made substantial contributions to the National Defence Fund, and you will be glad to know that in keeping with our past record of timely service to the defence forces, the B. I. C. Group were among the first to come forward with their contributions. A sum of Rs. 7 lakhs was donated to the N. D. F. by the Corporation and its managed companies, besides gifts in cash and kind through the Red Cross, Air Headquarters, and local agencies. Voluntary contributions of various kinds were also made by our staff and workmen.

A swift change was effected in the manufacturing programmes of our woollen textile and leather units, and to a lesser extent of our cotton textile units. Needless to say our entire productive capacity was at the disposal of the Government of India. Government has utilised our productive capacity to a very large extent, and until military requirements are satisfied, it will be necessary for us to curtail production of woollen materials for the civilian market.

I shall now turn your attention to the trading results for the year, which have been satisfactory. The Accounts show an improvement in profit. As compared with Rs 105.36 lakhs in 1961, the profit for the year under review amounted to Rs 133.38 lakhs, reflecting an increase of Rs. 28.02 lakhs. As a result of higher profits and the introduction of the Super Profits Tax, provision for taxation is Rs. 75 lakhs as against Rs. 48 lakhs last year. This absorbs approximately 60 per cent of the profit. After including items relating to previous years and the credit balance brought forward from 1961, there is a surplus of Rs. 60,20,654.

Certain percentages will be of interest in appraising the current financial strength of the Corporation, which is greater than in any other year. The ratio of profit to turn-over is 14 per cent, and of profit to net worth, 21 per cent. I would also draw your attention to the table of graphs showing net worth, sales, and net profit in the Annual Report for 1962, wherein an upward trend continues to be maintained.

Having regard to this position, and to the general level of production now obtaining, the Board feel justified in recommending payment of dividend at 45 nP. per share on the equity capital as compared with 35 nP. last year, representing an increase of 2 per cent.

Trading results in various parts of the Group have been mixed, and I shall briefly review, in accordance with past practice, the results shown by our branches and managed companies.

Despite certain handicaps due to restricted import, licences for raw materials and machinery, the woollen branches have shown good results. The total sales of the two woollen branches manufacturing the well-known Lal-Imlil and Phariwal products, reached a new record figure, and the entire production of the mills was sold. There was no increase over the previous year in the value of licences issued to the two Branches for imported wools, but the licensing policy which was altered to a yearly basis proved to be very helpful, in so far as a definite assessment could be made of the total raw materials to be made available during the year.

Since the declaration of the emergency, production for military and civil requirements is in the ratio of 80 to 20 per cent in our woollen branches, as against the reverse ratio in previous years of 20 to 80 per cent. Production against defence orders has been in full swing during the current

year, but civil production has been marking time. It is hoped that the manufacture of fine worsted fabrics and other products for which there is a good demand in the civil market, will not be unduly delayed.

Trading results in the leather branches, I regret to say, again served as a painful reminder of the need for concentrated reorganisation, in all departments of the tannery and shoe factory. Despite higher levels of activity in some sections such as the sole and industrial leather departments; tanning extract, and leather board departments, these were offset by losses incurred in the manufacture of chrome leather.

Exports of civilian shoes to the value of Rs 11.17 lakhs were made to the U.S.S.R. and of chrome leather to the value of Rs 1 lakh to the United Kingdom. The decline in exports to Russia was largely due to the increasing popularity of hand-made shoes, offered at competitive prices by cottage industries, as against the machine-made products of factories handicapped by out-dated plant.

The Cooper Allen Boot Factory which was closed for several years, has now been re-opened to meet defence needs. Efforts are also being made to explore the possibilities of diversifying the activities of the Branch into other low-priced lines of popular footwear, and negotiations with prominent manufacturers are expected to materialise in the near future.

On the cotton side, turnover was maintained, but the net profits of the two Managed Companies owning three Mills, i.e. the two Elgin Mills and Cawnpore Textiles, fell short of expectations. This was on account of difficulties in the cotton textile industry as a whole. Due to overall increases in the cost of raw cotton, stores, power fuel, dyes and chemicals etc., there was a disproportionate shrinkage in profit margins. With further increases by 10% to 15% in 1963 prices of raw cotton, it is feared that unremunerative prices may continue to affect profits adversely unless there is a suitable revision of internal selling prices, which since 1960 are still governed by the voluntary selling agreement with the Indian Cotton Manufacturers Federation, Bombay. An enhanced wage bill has also to be met in accordance with the Wage Board and Dr Sampurnanand Awards.

Nearly 60 per cent of Elgin products such as drill, cellular shirting and canvas are at present being manufactured against defence orders. The production of the

week under review. The piecemeal market received distressing reports that some of the upcountry purchasers have cancelled their orders and bills were returned unhonoured. On the contrary transactions for the goods for the coming season were done on an encouraging level. Blankets and flamelettes met with good enquiry at handsome prices while coatings and malasia changed hands at current prices. On the other hand the prices of gadlapat looked up slightly while longcloth remained unaltered. Higher medium dhoties and saris ruled fairly steady. On the whole the prices did not show any variation during the week under review though the trading in the market was restricted. Mills are said to have accepted orders up to September.

The export front was devoid of any fresh developments. Moderate business was done with the UK while East Africa was satisfied with a small quantum of drills, coatings and gadlapat. Singapore's fancy was focussed on canvas and bleached mulis, though the offtake did not come to the expected level.

Coffee Crop Estimate

THE prospects of the coming year's crop seem to be better than last year. The present estimate of this year's crop has exceeded the previous expectations and now stands roughly at 54,000 tonnes. Until 15 May, the actual receipts into the Pool totalled 52,766 tonnes comprising 24,119 tonnes of Arabica; 8,735 tonnes of Arabica Cherry and 19,912 tonnes of Robusta. Originally, the estimate of the 1962-63 crop was placed at 52,200 tonnes.

With regard to exports, a total quantity of 9,952 tonnes has been sold, comprising 8,648 tonnes of Plantation; 498 tonnes of Arabica Cherry and 806 tonnes of Robusta. The internal releases of coffee, during 1962, totalled 34,651 tonnes—a record figure.

The Coffee Board has released 2,857 tonnes of coffee for export by closed tenders from the 1962-63 crop to quota countries consisting of the following:—Plantation A 1,454 tonnes; Plantation B 327.6 tonnes; Plantation Triage 201.9 tonnes; Arabica Cherry 615 tonnes and Robusta 258.6 tonnes. The tender will take place at Mysore on 26 June.

According to trade sources, the East European countries dominate the coffee auctions in India and, as a result, the UK has been unable to get a sufficient quantity of Indian coffee. Last year, the open auctions for Indian coffee were started mainly on the insistence of the UK market as the latter was interested in certain district growths and wished to bid higher to get them. But the UK has not been able to procure sufficient coffee from India, because bidings from the East European and other Communist countries were much higher.

It is stated that these countries are utilising, for their coffee purchases, large rupee balances due to them and are so able to bid higher prices, which are considered fanciful by Western roasters. Import of coffee into the UK from India in 1962 was 12,651 cwt, valued at £167,496 (1 per cent of the total) as compared with 29,905 cwt, valued at £404,235 (2 per cent of the total) in 1961.

PEPPER Fall in Prices

The hopes, entertained earlier that an improvement in the Singapore and New York markets would help black pepper in India to recover part of the ground lost recently, have now been belied. Though Singapore continues to quote 29 cents to her American buyers, it is likely that she will adjust the quotation. Indian shippers are not, however, in a position to sell at lower than 31 cents a pound. In the Cochin market, the rate for the ready position is quoted around Rs 276.50 per quintal.

The Communist countries, which used to lend support, seem to have withdrawn from the scene, apparently awaiting a further decline in prices. There has been persistent rumours of a possible change in the exchange rate of the Indonesian currency. It appears that Singapore is quoting 29 cents a pound, while Indian prices work out to 30.5 cents a pound. This disparity in export prices makes it difficult for the Indian shipper to make any headway in foreign markets.

CASHEW

There has been a further decline in the price of Cashewnuts owing to the continued absence of buying support. The rate was quoted at Rs 600 per ton for Angoche, representing a fall of more than Rs 30 over the week. Although there are only a few licence-holders, they neither have enough stocks nor are reluctant to enter a declining market.

The African sellers in Bombay are understood to be considering certain modifications to the new standard contract. They are likely to sound the Quilon manufacturers on these modifications through the Bombay Cashewnut Merchants' Association.

The kernel market has also been ruling quiet. Overseas enquiry has been absent while the manufacturers are reluctant to sell in view of the uncertainty about raw nut purchases.

There has almost been no export business during the past week. The previous commitment with the overseas buyers was at 45 cents a pound. Although there have been no indications from the foreign buyers, business may be possible at 44 cents; but sellers are not forthcoming.

Exports of cashewnuts, during the first two months of the year, have risen to 374,338 cases (each of 50 lbs net) valued at Rs 3.36 crores from 306,540 cases worth Rs 2.79 crores in the corresponding period of last year. The USA was the leading buyer of Indian cashewnuts during the period under review with an

offtake of 196,224 cases followed by Russia, East Germany and the UK, which lifted 61,739 cases; 39,908 cases and 19,844 cases respectively.

SUGAR Firmness Persists

Sugar markets in all the principal centres have continued to rule firm due to tight supply position. In the Hapur market, the rate for the commodity is quoted at Rs 165 per quintal.

The President of the Indian Sugar Mills' Association called for an increase in the price of cane from the very start of the crushing season coupled with concessions in the excise duty and cane cess or alternatively the Government should permit the industry to sell sugar over and above the current season's output of 2,200,000 tons in the free market. He has stated that the steps taken so far by the Government to increase sugar production to 3,300,000 tons are half-hearted. He doubts whether the target can be achieved under the present conditions.

Hoping that the next crop will be normal and satisfactory, the question arises whether the industry will be able to get sufficient cane to achieve the target. There are three main consumers of cane—gur, khand-sari and vacuum-pan factories. Cane will be converted into gur so long as it pays the cultivator to do so. Khand-sari manufacturers attract cane by paying a higher price. The sugar industry, being controlled, cannot afford to pay any price higher than fixed by the Government.

On account of the high price of Khand-sari this year, power crushers and gur manufacturers will start crushing early in October; but the sugar factories, on the other hand, will not find it possible to start before the cane gets partly matured so as to give an yield of at least 8 per cent. By the time the sugar factories will start, most of the cane in northern India would have been converted into gur and Khand-sari. Similarly, when the cane got fully matured, some time in the third week of February, the Power-crushers will be able to pay higher prices for cane, even as high as Rs 2.50 a maund against Rs 1.62 that the factories will pay. In the circumstances, while the cane will remain standing around the factories, it will not be available to the factories for crushing and they will be bound to close down by the end of February. If this is going to be repeated, it will lead to a fall in production.

CHEMICALS & DYES

Conditions have continued to remain dull in the Bombay market for Dyes and Chemicals. With the onset of the monsoon, the demand from the upcountry centres has tapered off, while the offtake is also restricted due to paucity of funds.

In the Dyes section, Napthols and Base colours are marked down in the absence of buying support. Direct colours are, however, slightly better.

In the Chemicals section, prices of certain items have turned firm on shortage of supplies and the absence of sellers at the current levels. For instance, Caustic Soda, has hardened as supplies are reported to be small. On the other hand, Bleaching Powder and Hydrosulphite of Soda have tended to move down due to increased arrivals. Trading in Rongalite is listless.

GOLD & SILVER Quiet Conditions

Conditions on the Bombay Bullion Exchange remained generally quiet. Business in the Silver section was reduced to small dimensions, as sellers were seen at every small rise. Upcountry advices were also not conducive to activity. The rate for silver (below 996) was quoted at Rs 223 to Rs 223.50.

After a firmer spell, Gold also turned quieter. Enquiry for the metal from the makers of 14 carat jewellery and other consumers was on the increase, while the supply position remained tight. Higher advices from South India accentuated the upward movement in prices. The rate for ready gold was quoted at Rs 113.50, the highest rate touched being Rs 114.50. Sovereign was quoted around Rs 84.

OILS & OLSEEDS Narrow Price Movements

The Bombay Oilseeds Exchange remained generally quiet. The imminent outbreak of monsoon in Western India provided the main bearish influence to the market. Operators were, therefore, inclined to press sales at higher levels, while there was a good deal of unloading.

In the Groundnut section, price movements were rather erratic, reflecting a conflict of various influences. Buyers tended to await the setback which is registered usually with the onset of the monsoon. Even in the spot section, conditions were rather subdued in the absence of fresh support from vanaspathi manufacturers. Ready Bold was quoted at Rs 47 and Groundnut Oil at Rs 18.25.

Although there were reports of business done in castor oil to the extent of 500 tons with the East European countries, trading in the Castorseed section remained dull. This was mainly due to fears of delivery of spot supplies against the maturing June contract, while the downward trend in groundnut prices induced the operators to be cautious in their dealings. Ready Castor was quoted at Rs 31.37 and Castor Oil, commercial quality, at Rs 12.75.

Business in the Linseed section was featured by steady selling pressure from Uttar Pradesh and Madhya Pradesh. Price movements were confined to narrow limits. Ready Linseed was quoted at Rs 36.25 and Linseed Oil at Rs 14.10.

For the Investor

INVESTMENT GOSSIP Discouraging Factors

The resumption of forward trading in the course of this week on four stock exchanges has brought active conditions after an interval of more than six months to these markets. As the Calcutta Stock Exchange authorities have intimated their acceptance of the rules and regulations stipulated by Government for granting permission for removal of the ban on free trading this week, it is expected that forward trading will be resumed on Lyons Range also from next week. Although the revival of forward trading has been greeted initially with enthusiasm especially on Dalal Street, subsequent trading has been characterised by profit-taking with the result that earlier gains have been almost completely erased. It would appear that the fact that operators have before long long been reminded of the severe restrictions under which they have to carry on forward trading has been a discouraging factor affecting expansion of business.

It is now becoming increasingly evident that so long as the investment situation continues as at present, it will be idle to expect a marked improvement in sentiment. The investor is discouraged on the one hand by the declining trend in dividends and on the other by the continued obscure outlook for the smooth progress of the expansion programmes of industrial units. For various reasons and mainly because of the drastic cut in imports, existing industries are not even able to utilise their installed capacity in full. For instance, the engineering industry continues to have a large proportion of its installed capacity idle for want of essential raw materials. According to the President of the Engineering Association of India, 50 per cent of the installed capacity of the industry is idle. Idle capacity is not the only worry of the private sector industries. Industries such as cement, paper, coal, etc. are placed in an unenviable position because while they have no control over the cost of production, their selling prices are subjected to control. These industries have long been asking for an adequate increase and whenever an increase has been sanctioned it is far below the level anticipated by the industry concerned. The continued stringency of money is likely to discourage speculative support to the stock market. Despite the end of the busy season, there is no indication of the return of easier conditions in the money market. The fact that tax payments will be higher coupled with the diversion of funds

to compulsory deposits, will go to reduce the flow of fresh money for investment in equities.

The outlook for equities may, however, be said to have improved somewhat since the full details of the Paris meeting of the Aid-India Club have become available. It is no doubt a bear point that the Club has only approved a total of \$915 million as against \$1,255 million asked for by India. But it is some consolation that the Club is to meet again next month with a view to deciding what further amount can be approved. What is more important is that the Consortium has considered it to be of the greatest importance that a substantial part of its commitments should be in the form of non-project aid which could be used to finance imports required for the maintenance of the Indian economy. This will mean that more of essential imports will become possible. Another encouraging point for the stock market is that according to the Union Finance Minister the Government will take a decision shortly on the proposal to set up an investment trust.

NEW ISSUE NOTES Hoist-o-Mech

Hoist-o-Mech Limited, a new company for the manufacture of electric hoists from $\frac{1}{2}$ to 10 ton capacity, in collaboration with Munck (International) of Bergen (Norway), will shortly enter the capital market with a public issue of Rs 35 lakhs. Of this, Rs 25 lakhs will be the actual offer to the public. The balance will be taken up by the directors and their friends. The ICIC has already agreed to grant the company a loan of Rs 15 lakhs. The Western Mechanical Industries Private Limited are the promoters.

Century Flour

Century Flour Mills Limited has been given consent, in supersession of the previous consent order of 11 May 1962, to the issue of Rs 27 lakhs capital, to be issued for cash, at par. The money will be used for the establishment of a Biscuit factory.

ICTIM

The International Computers & Tabulators Indian Manufacturing Company Limited, a new company recently incorporated in Maharashtra for the manufacture of data-processing equipments in India in collaboration with the International Computers & Tabulators Limited, London, has been allowed to issue capital of Rs 50 lakhs, divided into 50,000 equity shares of Rs 100 each, at par. Out of this, shares of the value of Rs 30 lakhs will be offered to the UK company against the import of machinery and plant, technical know-how and/or cash, at par.

Tiwac

Tiwac Industries Limited, Dharam, Mysore State, is raising capital of Rs 28 lakhs, divided into 28,000 equity shares of Rs 100 each, at par, of which 2,200 shares will be allotted to foreign collaborators for consideration other than cash and the balance will be offered to Indian nationals for cash. The money will be used for setting up an industrial undertaking for the manufacture of one-day alarm time pieces.

Stock & Company

Stock & Company Limited, Calcutta, a new company, will issue capital of Rs 50 lakhs in equity shares of Rs 10 each for cash, at par. The capital will be used for the manufacture of steel structurals and steel storage tanks.

Citric India

Citric India Limited has decided to issue equity capital of Rs 10 lakhs as right shares in the ratio of one equity share of Rs 100 each for every five shares held.

INVESTMENT NOTES Madras Aluminium

It is learnt that the construction of the plant of Madras Aluminium Limited, in the Mettur area, has been considerably delayed on account of the difficulties encountered in financing the purchase of plant and machinery. These have now been concluded and it is stated that orders for major items of equipment have been placed with various suppliers. Orders for the remaining equipment are expected to be placed shortly. It is hoped that the erection of the plant will be completed sometime in the latter half of next year. Part of the plant and machinery will be fabricated within the country and Italian experts are now supervising the manufacture of these items as well as the construction of the factory buildings.

INVESTMENT BRIEFS

Janardhana Mills Limited has reduced the dividend from 9 to 6 per cent, taxable, for 1962.

Travancore Electro Chemical Industries Limited has skipped the dividend on the ordinary shares for 1962.

National Ekco & Engineering Company Limited has reduced the dividend from Rs 20 to Rs 15 per share, taxable, for 1962.

Karikode Rubbers (1945), Limited has maintained the dividend at 7½ per cent, subject to tax, for 1962.

Seshasayee Industries Limited has skipped the dividends, both on the ordinary and preference shares, for the year 1962.

Brunton & Company Engineers Limited has passed over the dividend for 1962.

Ruby Rubber Works (Madras), Limited has skipped the dividend for 1962.

Gokul Rubber & Tea Plantations Limited has maintained the dividend at 10 per cent, taxable, for 1962.

Pankaja Mills Limited has passed over the dividend for 1962.

BALANCE SHEET REVIEWS Increased Dividend from Bhartia Electric

Thanks to the increase in the value of production from Rs 111.90 lakhs to Rs 155.83 lakhs and the success of the company's efforts to reduce the value of goods in stock and progress from about Rs 32 lakhs to Rs 19 lakhs, the Bhartia Electric Steel Company Limited has been able to report a marked rise in net earnings for the year ended 31 December 1962.

Sales have risen to Rs 168.68 lakhs from Rs 105.31 lakhs, while the net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 12.13 lakhs as against Rs 8.21 lakhs for the previous year. The net profit would have been still higher, but for the fact the company has to pay nearly 70 per cent by way of taxes including the super-profits tax.

In respect of allocations, Depreciation is raised to Rs 5.69 lakhs from Rs 5.60 lakhs from Rs 5.60 lakhs and Taxation to Rs 22.30 lakhs from only Rs 4.65 lakhs, while Development Rebate Reserve is reduced to Rs 30,000 from Rs 2.74 lakhs. After transferring Rs 6.00 lakhs being excess provision for taxation written back, the directors have proposed to transfer Rs 12 lakhs to General Reserve and recommend the payment of an increased dividend of Rs 1.25 per share, taxable. This compares with a taxable dividend of Rs 1.00 paid on the old capital. Transfer books of the company will be closed from 18 to 28 June, 1963.

Encouraged by the trend in demand for castings, the company has applied for licence for expansion of capacity to 12,000 tonnes per annum. The plan for expansion envisages the setting up of a new works within 15 to 20 miles radius of the existing Ballygunge Works where the finishing operations of production shall be transferred.

Tentative estimate, made in respect of the expansion programme, indicates the need for investment of about Rs 50 lakhs in fixed assets. Besides this, an equal amount shall be needed for working capital purposes. The directors are now considering the ways and means for providing the required finances for the expansion programme.

Meanwhile, the directors state that the Steel Foundry division is fairly well-booked and there will be no shortage of work. A large contract for the supply of centre Buffer Couplers is being negotiated at present and the company hopes to get a fair share of this business.

Excellent Results of TEXMACO

The Textile Machinery Corporation Limited has produced excellent working results for the year ended 31 December 1962, thanks to the marked progress in all divisions. While sales have shown a substantial rise from Rs 7.44 crores to Rs 9.28 crores, the net profit, after providing for Depreciation and Taxation, is substantially higher at Rs 53.56 lakhs as against Rs 32.85 lakhs

for the preceding year. The net profit would have been still much higher, but for the higher provision for taxation.

Apart from setting aside Rs 13.75 lakhs for General Reserve, Depreciation is raised to Rs 25.37 lakhs from Rs 24.37 lakhs; Taxation to as much as Rs 70.90 lakhs (including Rs 4.75 lakhs for earlier years) from only Rs 19.81 lakhs and Contingency Reserve to Rs 6.50 lakhs from Rs 64.711. The provision for Development Rebate Reserve is, however, lower at Rs 3.18 lakhs against Rs 5.80 lakhs. The directors have proposed a taxable dividend of Rs 1.25 per share on the Ordinary shares as against Re 1, taxable, paid previously.

The directors have, in their report, stated that the progress of the Textile division is at a satisfactory level. The production of Ring Frames has increased by 15 per cent, and that of Carding engines by 25 per cent over the previous year. It is gratifying to note that the company, for the first time, has entered the European market for the sale of ring frames.

With the progress of No. 3 Ward Capstan Lathes, endeavours to undertake the manufacture of the more complicated No. 7 Combination Turret Lathe have been intensified. The working of the Steel Foundry division has registered further improvement and, apart from a sizable increase in the quantitative output, the manufacture of some of the most intricate castings, required for rolling stock and milling plant of the sugar mills, has been successfully developed.

The company has also in hand scheme for a substantial expansion of the Steel Foundry division. The working of the Heavy Engineering division has shown considerable progress. The production of Water-Tube Boilers has nearly doubled. For the Cast Iron Spun Pipe project, a suitable site has been acquired in the Maharashtra State; but the arrangement of foreign exchange for the import of plant and equipment is presenting some difficulty and this has been responsible for the delay in the implementation of this project.

Hooghly Docking Fares Well

The Hooghly Docking & Engineering Company Limited has fared well during the year 1962. The net value of completed work billed was only Rs 77.24 lakhs as against Rs 1.34 crores. The drop in the figure is due to the fact that no major new construction work was completed during the year under review. The company's workshop, however, remained fully occupied, the "work-in-progress" at the end of the year having increased to Rs 1.30 crores from Rs 60.12 lakhs at the beginning. The gross profit earned is Rs 8.08 lakhs against a loss of Rs 16.35 lakhs incurred in 1961. The net profit, after providing for Depreciation, amounts to Rs 3.80 lakhs as against a loss of as much as Rs 20.18 lakhs. In respect of allocations, a sum of Rs 94,167 (Rs 92,674) is provided for Depreciation; Rs 2.99 lakhs for General Reserve and Rs

5,000 (Rs 6,000) for Development Rebate Reserve.

The directors have proposed a taxable dividend of 12½ per cent as against nil. The last dividend paid was 12 per cent, paid for 1959. Meanwhile, the company has proposed to issue right shares at a premium of Rs 25 per share, in the ratio of two shares for every five shares held, to those shareholders registered as on 26 June 1963. Annual general meeting will be held on 26 June when the question of right issue will be considered.

Hope's Metal Incurs Loss

Hope's Metal Windows (India) Limited has incurred a loss, after provi-

ding for depreciation, of as much as Rs 2.70 lakhs during the year 1962 as against a loss of only Rs 44,842 in the previous year despite a rise in sales to Rs 1.36 lakhs Rs 13,857. The present loss is carried forward to next year.

The directors state that, in pursuance of the agreement with Henry Hope & Sons Limited, a hot-dip galvanizing plant has been supplied to the company and the process of installation is now almost complete. This plant is expected to be in operation in the next few weeks and the shares in the company, in payment thereof, will shortly be allotted to Henry Hope & Sons Limited.

To finance the initial capital expansion incurred in setting up the company's factory and to provide

working capital, it is proposed to make an issue of shares. (The meeting was held on 13 June 1963). It is proposed to increase the issue share capital to Rs 24 lakhs from the present Rs 9.45 lakhs.

Bridge & Roof Repeats

The rise in sales from Rs 2.92 crores to Rs 3.86 crores is reflected in the working results of the Bridge & Roof Company (India) Limited for 1962. The net profit, after providing for Depreciation and Taxation, is substantially higher at Rs 11.92 lakhs as against Rs 8.30 lakhs.

Except Taxation which is reduced to Rs 9.60 lakhs from Rs 10.66 lakhs, all other allocations have been raised:—Depreciation to Rs 9.40 lakhs

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex Office.

...if you are trying to dent high costs, here is something to get your teeth into! By making use of the Caltex "Stop-Loss" Programme you cut costs by proper lubrication. Programmed maintenance practices will help you to keep your equipment and your machinery in top condition and will also boost profits.

It is not a mere question of more oil or more grease. The Caltex "Stop-Loss" Programme will help you to select the proper lubrication practices, to train your personnel to proper maintenance procedures. Help your operation to greater profit with the Caltex "Stop-Loss" Programme.

CALTEX (INDIA) LIMITED - Bombay - New Delhi - Calcutta - Madras

SAVE FOR SECURITY

from Rs 9.30 lakhs; General Reserve to Rs 6.20 lakhs from Rs 3.62 lakhs and Development Rebate Reserve to Rs 3.94 lakhs from Rs 1.14 lakhs. The dividend is, however, maintained at 36 per cent, subject to tax.

Decline in Bengal Paper's Profits

DESPITE a rise in sales from Rs 3.43 crores to Rs 3.98 crores, the Bengal Paper Mills Company Limited has reported a decline in the net profit, after providing for depreciation and taxation, to Rs 16.54 lakhs for the year ended 31 December, 1962 from Rs 22.41 lakhs for the preceding year, mainly due to the rise in the cost of production as a result of increased prices of raw materials, chemicals and stores, increase in railway freight and duty on self-generated electricity and premium on Emergency Risk Insurance. The amount paid as excise duty alone amounts to Rs 57.18 lakhs as against Rs 47.51 lakhs.

In respect of allocations, Taxation is raised to Rs 30.73 lakhs (including Rs 5.08 lakhs for SPT) from Rs 19.30 lakhs and General Reserve to Rs 2.50 lakhs from Rs 1.23 lakhs. Capital Reserve is maintained at Rs 10,000, while depreciation is reduced to Rs 12.85 lakhs from Rs 13.62 lakhs and Development Rebate Reserve to Rs 1.26 lakhs from Rs 4.36 lakhs. The directors have proposed a taxable dividend of Rs 2.00 per share on the Ordinary capital increased by the issue of 1,80,000 shares at a premium of Rs 12 per share, apart from paying a taxable dividend of 50 pP per share paid on the partly-paid shares. This compares with a taxable dividend of Rs 2.75 per share paid previously on the old capital. The annual general meeting will be held on 28 June. Transfer books will be closed from 13 to 28 June, 1963.

Production during the year increased to 21,588 metric tonnes from 19,627 tonnes. The directors hope that the new paper machine may be expected to go into production by the last quarter of this year.

Shree Gopal Paper Repeats

Thanks to the shortcoming in the Pulp mill and soda recovery sections being successfully overcome and the rated capacity of the mill being fully achieved, Shree Gopal Paper Mills Limited has produced excellent working results for the year 1962. While the total sales have risen to Rs 8.07 crores from Rs 6.46 crores, the net profit, after providing for Depreciation and Taxation, amounts to as much as much as Rs 66.08 lakhs from Rs 37.73 lakhs for the preceding year.

After providing Rs 6.177 for Capital Reserve, Taxation is raised to Rs 60 lakhs from Rs 22.50 lakhs. The provision for Depreciation is lower at Rs 58.10 lakhs against Rs 62 lakhs and Development Rebate Reserve at Rs 2.90 lakhs against Rs 6.75 lakhs. The dividend on the Ordinary shares is however, maintained at 17 6/7 per cent, subject to tax.

The directors state that efforts are continued to be made to increase production still further. Production

tion, in the first four months of the current year, are higher at 12,154 tonnes as against 11,272 tonnes in the corresponding period of 1962. The Vanaspati factory worked satisfactorily and sales for the year are substantially higher at 3,739 tonnes against 1,869 tonnes.

New Schemes of Binani Metal

Of the new schemes sanctioned by the Government to the Binani Metal Works Limited, the Tool Room has made further progress and its production is considered to be satisfactory. This unit has not attained its full stature yet, because delivery of some of the machines to be added to this are very protracted and, for few more special purpose machines, sanction is still awaited from the Government. The Solder Resin Cored Unit has also been commissioned and trial orders have been executed satisfactorily.

In the current year, the production of the above unit also will make itself felt. So far as the Milling Machine project is concerned, the scheme is kept in abeyance for the time being due to the growing competition and the very heavy capital cost involved.

Kanknarrah Resumes Dividend

The prosperity generally enjoyed by the jute industry last year is reflected in the working results of various jute mills. In the Jardine Henderson group, Kanknarrah Company Limited has reported a rise in sales from Rs 3.72 crores to Rs 3.91 crores for 1962. The net profit, after providing for depreciation and taxation, works out to as much as Rs 60.84 lakhs as against a net loss of Rs 16.01 lakhs incurred in the preceding year.

The Depreciation amount is lower at Rs 5.41 lakhs against Rs 6.13 lakhs. The net profit is adjusted against the debit balance of Rs 30.80 lakhs brought forward from 1961, leaving an available sum of Rs 30.04 lakhs. From this, the directors have set apart Rs 2 lakhs to General Reserve; Rs 4.706 to Development Rebate Reserve and Rs 2 lakhs to Debenture Sinking Fund. The directors have proposed to recommend a final dividend of 10 per cent, making a total of 15 per cent, taxable, for the year. No dividend was recommended for the last few years. Transfer books of the company have been closed from 5 to 18 June, 1963.

Kamarhatty, Tso, Does Well

In the same managing agency group, Kamarhatty Company Limited has reported a net profit of Rs 53.85 lakhs for 1962 as against a net loss of Rs 17.61 lakhs, despite a slight decline in sales from Rs 4.32 crores to Rs 4.16 crores. The net profit is adjusted against the debit balance of Rs 17.21 lakhs brought forward, leaving an available sum of Rs 36.75 lakhs. To this is added Rs 1.00 lakh transferred from Debenture Sinking Fund; Rs 2 lakhs from

General Reserve and Rs 35,706 from Debenture Redemption Reserve, making a total of Rs 42.10 lakhs.

Out of this, the directors have provided Rs 1.36 lakhs for General Reserve; Rs 3.00 lakhs for Land Development Reserve; Rs 2 lakhs for Debenture Stock Sinking Fund and Rs 96,816 for Development Rebate Reserve. The directors have also proposed a final dividend of 15 per cent, making a total of 20 per cent, taxable, as against nil for 1961. The last dividend was 5 per cent, taxable, paid for 1960.

Soorah Jute Pays Same

The increased incidence of taxation with the introduction of super-profits tax is reflected in the working results of the Soorah Jute Mills Company Limited. Despite a rise in sales (including loom-hours) from Rs 1.26 crores to Rs 1.29 crores, the net profit, after providing for depreciation and taxation, works out to only Rs 5.88 lakhs for 1962 as against Rs 6.47 lakhs for the previous year, although the latter figure includes Rs 3.19 lakhs being excess provision for depreciation no longer required.

In respect of allocations, Taxation is raised to Rs 9.90 lakhs from Rs 2.60 lakhs and Development Rebate Reserve to Rs 27,545 from Rs 2,200. The Depreciation amount is, however, lower at Rs 2.37 lakhs against Rs 2.40 lakhs and General Reserve at Rs 1.00 lakh against Rs 2.00 lakhs. The dividend on the Ordinary shares is, however, maintained at Rs 2.50 per share, subject to tax.

Bowreah Cotton Earns Less

Following the decline in sales from Rs 2.75 crores to Rs 2.68 crores, the Bowreah Cotton Mills Company Limited has been able to report a net profit, after providing for depreciation and taxation, of only Rs 14.97 lakhs for the year ended 31 December 1962 as against Rs 24.24 lakhs in the preceding year.

In respect of allocations, a sum of Rs 7.00 lakhs is provided for Taxation including super-profits tax while Development Rebate is raised to Rs 3.97 lakhs from Rs 3.75 lakhs. The Depreciation amount is, however, lower at Rs 14.55 lakhs against Rs 18.81 lakhs (including Rs 6.50 lakhs for earlier years) and General Reserve at Rs 5.00 lakhs against Rs 13.50 lakhs. The directors have proposed a taxable dividend of Rs 1.50 per share on the Ordinary capital increased by the issue of 96,000 shares, at par. This compares with a taxable dividend of Rs 2.00 per share paid on the original capital.

Machinery to the tune of Rs 18 lakhs has been installed for replacement, modernisation as well as diversification of production; and orders worth about Rs 32.20 lakhs are outstanding for further modernisation of the mills. Transfer books of the company will be closed from 17th to 28th June, 1963.

Dunbar Mills Reduce Dividend

The working of the Dunbar Mills Limited has resulted in the net pro-

fit being nearly maintained at Rs 13.15 lakhs for 1962 as against Rs 13.34 lakhs for 1961, sales being shown higher at Rs 3.22 crores against Rs 3.07 crores.

Apart from providing Rs 2.50 lakhs for Debenture Sinking Fund, Development Rebate Reserve is raised to Rs 2.29 lakhs from Rs 1.11 lakhs. The provision for Depreciation is lower at Rs 8.40 lakhs against Rs 15.36 lakhs (including Rs 6.50 lakhs for earlier years); Taxation at Rs 20 lakhs (including SPT) against Rs 20.75 lakhs and General Reserve at Rs 3.92 lakhs against Rs 4.50 lakhs. The dividend on the Ordinary shares is reduced from Rs 2.00 to Rs 1.50 per share, subject to tax.

Machinery to the tune of Rs 15.84 lakhs has been installed for replacement, modernisation as well as diversification of production; and orders worth about Rs 10 lakhs are outstanding for further modernisation of the mills. Transfer books of the company will be closed from 17 to 28 June 1963.

J. K. Cotton Pays 9% Against 12 1/2%

Despite a slight rise in sales from Rs 1.64 crores to Rs 1.67 crores, J. K. Cotton Manufacturers Limited has reported a net profit, after depreciation and taxation, of only Rs 4.97 lakhs for the year ended 30th September 1962 as against as much as Rs 9.48 lakhs for the previous year, mainly due to a higher provision for taxation.

Depreciation is raised to Rs 3.30 lakhs from Rs 2.84 lakhs and Taxation to 15 lakhs (including SPT) from Rs 6.85 lakhs. The provision for Development Rebate Reserve is, however, lower at Rs 42,540 against Rs 1.20 lakhs and General Reserve at Rs 2.40 lakhs against Rs 4.00 lakhs.

The name of the J. K. Cotton Manufacturers Limited has now been changed to J. K. Manufacturers Limited under certificate of incorporation received from the Registrar of Companies, Uttar Pradesh, under dated 15 January 1963. Transfer books of the company will be closed from 22 to 28th June, 1963.

STOCK EXCHANGES Restricted Activity

Watch-dog writes: ACTIVITY in stock markets has continued to be restricted in the absence of any buying interest. The Government decision to permit resumption of forward trading in five stock exchanges (Bombay, Madras, Delhi, Ahmedabad and Indore) seems to have no effect on sentiment. Professional operators are reluctant to enter into any commitments due to various uncertainties, while investors prefer to keep aloof.

Barring one or two bright spots, trading on Lyons Range failed to disclose any feature.

A very indecisive pattern of trading was witnessed on Dalal Street. Although the Madras Stock Exchange maintained fair activity, the trend of prices was mixed.

Trading conditions on the Hyderabad Stock Exchange were dull.

Although the Bangalore Stock Exchange opened the week on an encouraging note, prices eased towards the close on lack of support.

Prices on the Delhi Stock Exchange should a mixed trend.

The Ahmedabad Stock Exchange depicted an easy tone with a moderate volume of business.

The London Stock Exchange remained very sensitive to political developments.

Despite encouraging domestic news, Wall Street met with no success in repairing some of the price damage suffered early in the week.

CALCUTTA

THE local stock market witnessed another uninspiring session during the week under review. Except Indian Copper showing a sharp advance on reports of the company's proposal to make a bonus issue in the ratio of 1:2 and engineering shares ruling generally steady under the influence of Indian Irons, price movements in other counters were restricted in the absence of any driving force.

But, the most important factor, which exercised a dominant influence on the general market psychology was the decision made by the stock exchange authorities to resume forward trading under the terms and conditions stipulated by the Government. A communication in this respect had already been sent to the Government for formal approval. It is expected that forward trading will be started from Monday, 17 June.

In the circumstances, operators were anxious to watch the effect of resumption of forward trading. Moreover, there was a general feeling that prices could not record any appreciable improvement in the absence of a significant reduction in the tax burden and better dividend declarations by the leading companies. Trading was, therefore, cautious, not to speak of the uncertainty regarding political developments and the prevailing tight money conditions.

As far as investors were concerned, they were not inclined to take any risk on the fear that the shareholders might not be able to derive any tangible benefit out of the higher level of profits consequent on the implementation of the expansion schemes. Even the hope of further aid being given by the donor countries when they would meet again next month, seemed to have been ignored.

Gilt-edged securities ruled generally steady, mainly due to official support. Despite interest being shown in short-dated issues, turnover was small, because of the shortage of sellers. 3 Per cent 1986 Conversion Loan opened steady at Rs 63.25 and improved further to finish at Rs 63.70—the highest touched for the week.

Bank shares evoked no interest. Punjab National moved narrowly between Rs 18.81 and Rs 19, while United Commercial came in for offer at Rs 64.50 against Rs 68.

There was little doing in the Coal section. Bengal, after a long time, came in for business at Rs 280 against

the last-quoted level of Rs 286. East Indian were well maintained at Rs 31.87 with Central India ruling better at Rs 10.06 against Rs 9.87.

Jute shares lacked fresh support in view of the absence of business with overseas buyers in jute gods. Champdany changed hands on the ex-dividend basis at Rs 20.25 against Rs 22.75 and while India and Ganges were barely steady at Rs 18.25 and Rs 14 respectively. New Central were, however, on offer at Rs 12.87 to Rs 13.06.

Little or no interest was shown in the sugar section in view of the obscure outlook for the industry.

There was cautious trading in the Textiles section, reflecting the absence of any incentive from the cloth front. J. K. Cotton receded further to Rs 12.56 from Rs 12.75 due to further liquidation, while Dunbar met with some offerings at Rs 27. Bharat Commerce were quoted at Rs 19.62 x.d.

In the Tea section, only stray business was possible. Operators seemed to be reluctant to enter into commitments following developments on the northern border. The only steady featured were Hasimara at Rs 12.50. Dufflaghur were better at Rs 27.50 against Rs 27 with Nagri Farm maintained at Rs 29.50. Banarhat came in for some enquiry upto Rs 233 and Hantapara upto Rs 105.

Thanks to consistent support lent to Indian Irons at every setback in prices, Engineering shares were generally steady. Against the previous week's closing of Rs 22.68, Indian Irons opened higher at Rs 22.75 and, after touching a low of Rs 22.54, improved again to Rs 23.00 before closing at Rs 22.96. TEXMACO fluctuated narrowly between Rs 23.70 and Rs 24 and G. K. Williams between Rs 32.62 and Rs 32.75. Dalmia Irons were a steady feature at Rs 10.56; Calcutta Steel at Rs 12.75 and Binani Metal at Rs 10.50. Jay Engineering were rather quiet at Rs 21.06 against Rs 21.75 with Britannia hovering idly around Rs 9.81.

Trading in the Miscellaneous section was generally dull. The only exception to the general trend was Indian Copper, which met with keen demand at enhanced levels following the news of the company having applied to the Government as well as to the UK Treasury, London, for issuing bonus shares in the ratio of one for two. Following were the price trends of a few selected shares:

Cleared List:	As on Week's As on		
	8 June	High	14 June
Hind. Motor	16.94	17.00	16.78
I. Aluminium	34.12	34.12	34.06
I. Copper	4.52	4.96	4.81

Facts & Figures

AID TO INDIA Consortium

The Consortium of governments and institutions interested in development assistance to India held its eighth meeting in Paris on June 4 and 5, 1963 under the chairmanship of the World Bank. The meeting was attended by representatives of the Governments of Austria, Belgium, Canada, France, Germany, Italy, Japan, the Netherlands, the United Kingdom and the United States and by representatives of the World Bank and the International Development Association (IDA). The International Monetary Fund sent an observer.

The purpose of the meeting was to discuss aid for India during 1963/64, the third year of India's Third Five-Year Plan. The Consortium had held preliminary discussions on the same subject in Washington on April 30-May 1.

At the beginning of the Third Plan the Government of India assessed the total requirement of external assistance from all sources, including non-Consortium countries and private foreign investment, at \$5,460 million. Against this, the members of the Consortium have already pledged \$2,365 million of aid to India for the first two years of the Third Plan. At the meeting just concluded, they undertook to make additional aid available for commitment during the third year of the Plan in the amount of about \$915 million, subject as appropriate to legislative action or other necessary authorization. The new pledges for 1963/64 are as follows:

Countries	Pledges (\$ million equivalent)	
Austria	..	3.85
Belgium	..	10.00
Canada	..	30.50
France	..	20.00
Germany	..	65.35
Italy	..	35.00
Japan	..	60.00
Netherlands	..	11.10
United Kingdom	..	84.00
United States	..	375.00
World Bank and IDA	..	220.00
Total		914.80

ment, it was accordingly agreed that the meeting should be reconvened in Washington in July to consider additional pledges for 1963/64. Depending on the amount of additional pledges forthcoming from other sources, the United States representative indicated that his Government would be prepared to raise its own pledge for the year up to a maximum of \$450 million.

The Consortium considered it to be of the greatest importance that the pledges announced at the meeting should be translated into firm commitments as soon as possible, and that a substantial part of these commitments should be in the form of non-project aid which could be used to finance imports required for the maintenance of the Indian economy. The Consortium also recognized the need to extend as much of the aid as possible in the form of grants or long-term loans at low rates of interest. Several members of the Consortium announced that their aid for 1963/64 would be on more favourable terms than in previous years.

UK

Britain's contribution in 1963-64 to India's third Five-Year Plan will be \$84,000,000 (about £30,000,000). This was announced in Paris on 5 June, at the meeting of the Aid India Consortium. The British contribution is thus second only to that of the United States (\$375,000,000) among the 10 member-nations of the Consortium.

The other contributors are: West Germany, \$65,350,000; Japan, \$60,000,000; Italy, \$35,000,000; Canada, \$30,500,000; France, \$20,000,000; Holland, \$11,100,000; Belgium, \$10,000,000; Austria, \$3,850,000; the World Bank and the International Development Association; \$220,000,000—making a total of \$914,800,000.

This year's contribution brings the total of Britain's commitments during the first three years of the current Five-Year Plan to £125,000,000.

Tea Scientific Research

Tea was introduced to South India in the '30s of the last century. Today, South India has about 184,000 acres under tea, approxi-

Some members of the Consortium said that they might be in a position to increase their pledges later in the year. On the initiative of the United States Govern-

mately 22½ per cent of the area under tea in India.

Between 1947 and 1962, both years inclusive, South Indian tea production increased from 98,07 m. lbs. to 179,04 m. lbs. or 82.6 per cent over 1947. Much of the credit for this remarkable achievement must go to the quiet, patient and devoted work of the scientists engaged in research.

The earliest known interest in agricultural research into plantation crop production in South India was that initiated by a Coffee company in Coorg in the '40s of the last century. The initiative for setting up an industry-wide research organisations came with the founding of the UPASI in 1893. Within ten years the UPASI was successful in interesting the various State and Provincial Governments of South India. Financial and other assistance was forthcoming from all of them and Madras, in addition, placed one of its officers

from the Agricultural Service at the disposal of the Association. Mr Anstead, who became UPASI's Scientific Adviser, laid the foundation of the Scientific Research Department of the Association. This, barring the Tea Scientific Research Centre at Toklai, Assam, is the oldest non-Government organisation in agricultural research in the country.

After the initial financial support from the South Indian Governments, the UPASI had to raise the necessary resources from among its members for the maintenance of industry's Scientific Departments. Rubber research was carried on at an experimental station in Mundakayam till the world depression forced the UPASI to close it down. Coffee research was carried on till the war years and then it was taken over under the reconstituted Coffee Board. Tea research continues under the UPASI Tea Scientific Research Department and is still fully sup-

ported from the proceeds of a levy imposed by the UPASI on its members.

In 1948 the Government of India proposed to use part of the tea cess to help tea research and requested the UPASI to put up a scheme. By 1950 the Tea Board was prepared to offer a capital grant to the UPASI for expanding its research facilities and this was placed before the Government of India for sanction which came forth in 1957. In 1958 the Government of Madras agreed to sell 150 acres of land in the Cinchona Plantations in the Anamallais for the setting up of a new centre. Possession of the said land was given early in 1960. Work has been in progress since then.

The Anamallais Station will have an Agronomy Division with Co-ordination and Botany Sections, a Chemistry Division with general and Bio-Chemistry Sections and Plant Pathology Division with Entomology and Mycology Sec-

tions. The capital outlay is expected to be more than Rs 16 lakhs, (including sub-station) and tea grower members of the UPASI will meet the recurring expenditure by accepting a levy of Rs 1.25 per acre. The work on this station is continuing. The construction of the Vandiperiyar Sub-station is almost over and work is to be commenced shortly.

The Devashola Station was founded as an experimental centre in 1925 and the UPASI Scientific Department has been located here for 38 years. In 1948, with the new plans in the air the Chief Scientific Officer's headquarters were moved to Coonoor, but research on ad hoc problems and field experimentation have continued to be done here. In order to facilitate dispersed experimental work appropriate to regional characteristics, UPASI hopes to maintain this station even after the central station begins to work in the Anamallais.

THE WARP AND WOOF OF THE FABRIC OF STRENGTH

Greater textile production is vital for India at this moment. Cloth for uniforms, blankets, knapsacks—all the army textiles from socks to helmet liners, from bandages to tents. Cloth for home consumption. Cloth for sale in the world markets to earn foreign exchange.

The textile industry can help build India's fundamental financial strength by enabling her to export at a profit. This she can only do if her goods are competitive in quality as well as price. And the competition India faces in world markets is tough, intelligent, aggressive.

To meet this competition, Indian

mills will be managed with maximum efficiency and run at top capacity. Selling effort will be brought to bear with intelligence, imagination and energy.

For many years, the 'Sanforized' organisation has been a working partner in India's textile industry, helping to improve the quality and enlarge the variety of cloth produced by Indian mills.

The trademark 'Sanforized' can be of further, inestimable help by boosting exports. An international name, denoting not only a uniform standard of shrinkage control but synonymy with quality, 'Sanforized' is known and trusted the world over. It is respected on every continent, America, Asia, Europe, Africa, Australia. And for years the trademark 'Sanforized' has been a strong selling aid to the Indian textile industry, both at home and abroad.

In worldwide advertising and promotion, the 'Sanforized' organisation stands shoulder to shoulder with India's textile industry in helping to weave the fabric of her strength.

SANFORIZED
REGD TM MK

Issued by Cluett, Peabody & Co., Inc. (Incorporated in the U.S.A. with limited liability) proprietors of the registered trademark 'SANFORIZED'. The trademark proprietors use the trademark 'SANFORIZED', or permit its use by authorised registered users, only in respect of tested fabric which meets the trademark proprietors' strict requirements as to residual shrinkage.

talking
about
banks

There is more in banking
with the
STATE BANK OF INDIA
than the mere possession
of a bank account—first
class service, security and
safety and ability to obtain
friendly and helpful advice
and information when
required.

The wide experience of the State Bank is at the disposal of the customers whether their accounts be large or small. The State Bank can be of assistance to your business and its problems. If the business covers a small-scale industry, you will find special attitudes aimed at earnest desire to help. In the co-operative sector too, the Bank has similar attitudes with schemes offering special facilities. Every kind of foreign exchange business is transacted. Why not contact the nearest office?

You will always find a friend at
THE STATE BANK OF INDIA
India's Leading Bank

THE CENTRAL BANK OF INDIA LTD.

A Fruitful Trip

Mr Manubhai Shah who returned home after an extended tour of Europe has reason to be satisfied with the results of his labours over a month. His formal tasks were participation at the Commonwealth trade conference and at the annual session of the Gatt. Apart from these ostensible duties that kept him busy abroad, he has been strenuously furthering our trade interests both in the western and eastern halves of Europe. Clearer understanding of India's predicament in all the important capitals of Europe, and particular agreements, like the Trade Pact with the Soviet Union, are among the other gains of his visit.

As we pointed out on an earlier occasion in these columns, Mr Shah's brief at the formal conferences was not an easy one. To a purely logic-chopping mind, there were certain contradictions between the stands taken by him at the two meetings. Mr Shah who pleaded for his fellow commonwealth trade ministers to hold in check the ardour to demolish preferences, had to argue at the Gatt the case for the pulling down of barriers to free trade. He also had to—and did very persuasively—present the historical anomalies that made under developed countries ask for a kind of one-way traffic in free trade. It is a measure of his success that this seemingly unfair proposition in which there was no reciprocity, has found acceptance as inescapable in the situation now obtaining in the world.

Back home, Mr Shah has argued with his country men that the abolition of commonwealth preference—on which he had pleaded caution in London—was justified in the circumstances. Here again, it would be superficial to discover irreconcilable contradiction. There is a limit to our persuasiveness in these matters. Though Mr Shah did not seem too impressed with that argument in London, he now sees a certain amount of truth in the contention that the loss, for example, of 5% commonwealth preference on tea, would be compensated by larger sales of Indian tea in countries which have now agreed to reduce their tariff against tea. In any event, the winning of the nil tariff on tea from the ECM countries—though of less consequence with Britain out of the ECM—imposes certain obligations on us in respect of less privileged non-commonwealth countries who are at a disadvantage vis-a-vis commonwealth countries. Moreover, this kind of clinging to protectionism shows a certain timidity even in respect of commodities in which we are in relative positions of strength. On the whole we agree that we should take in good part the abolition of commonwealth preference in principle, though we may argue for an orderly phasing of the reduction.

Orderliness indeed, is the essence of the whole problem of tariff reduction. In other words, what is needed is an overall reduction of tariff by all the developed countries of the world in respect of commodities exported by under-developed countries with a co-ordinated time-table that eliminates dilatoriness on the part of the unwilling developed countries on the one hand and unintended hardship on particular under-developed countries now in enjoyment of some form of protection. This, in substance, was what urged by the resolution originally sponsored by the under developed countries in the Gatt and now adopted only partially by the session.

The other gains of Mr Shah's visit abroad have been in his ability to put across the special problems of India's foreign trade to the EEC countries. The collapse of the negotiation for Britain's entry in the EEC did take away some of

the earlier urgency about the comprehensive arrangements about Indian exports to the EEC, because of the fact that our trade with Britain is still a substantial percentage of our foreign trade. But in the context of our export ambitions, the specific obstacles to Indian goods in the EEC as they exist even today are serious enough. Therefore a comprehensive agreement with the EEC is still a necessity. Meantime, bilateral agreements with the individual members of the EEC would be an important step. There is no necessity to tie up these negotiations either with the comprehensive pact with the EEC as a whole or with the Kennedy Round of the Gatt. Already about twelve commodities are to enjoy "nil tariff" and reduction of tariffs on other items of manufacture like coir mats, leather footwear and jute goods are rated good. Mr Shah has had fruitful discussions both with West Germany and France, the major partners of the EEC and countries substantially equipped to help us and indeed doing so. Mr Shah claims "broad understanding" with these countries on the need for putting an end to the stagnancy of India's trade with them. Secondly, attempts should be made to increase the volume of trade and technical and economic co-operation in the field of steel, engineering, tools, chemical and other "complex industries". Lastly, India should export light manufactures and semi-finished goods in larger measure to these countries. The last is a substantial gain in that it argues that well-entrenched protectionist prejudices in these countries against this from of exports from the under-developed countries are likely to be removed. It is gratifying in particular that France has agreed to make a study of the possibilities of removing quantitative restrictions on textiles and engineering goods.

Mr Shah has been more tangibly successful in his tour of Eastern Europe. The most important event of this part of his tour was the signing of the trade agreement with the Soviet Union in Moscow. Indo-Soviet trade has increased in quantitative terms spectacularly in the last ten years. From about a crore of rupees both ways in 1953, it has risen to about Rs 100 crores this year. The agreement signed in Moscow aims at a doubling of this by 1966. What is more important than the financial scale of the trade, is the diversification of the pattern. Already manufactures are a substantial part of our export to the Soviet Union, but the agreement envisages a further increase of this to about 40 to 45 per cent of the total. Items like light and medium engineering goods, chemical products and plastics are to go to Soviet Union for the first time under the new agreement. Increased Russian offtake of textiles, jute goods and shoes etc is also envisaged. More importantly, efforts are to be made to find new products to the extent of ten per cent of the total trade thus making for further diversification. The scope for consumer goods exports to the Soviet Union is considerable in the light of the known shortages of these in that country and the desire of the Soviet authorities under Mr Khrushchev to bring to their people better creature comforts than has been found possible under the rigours of forced development.

In the other East European capitals that Mr Shah visited, he was able to further trade prospects for India. Both Hungary and Czechoslovakia have shown themselves receptive to Mr Shah's ideas and trade with these countries is expected to double by 1966. Five year trade agreements are likely to result early from Mr Shah's endeavours.

Planning Perspectives

The Deputy Chairman of the Planning Commission indicated at a press conference early last month that work on the preparation of the Fourth Plan had already been taken in hand and that Working Groups had been set up to prepare development programmes for the different sectors. It is recognised that the development of any one sector, in industry or in agriculture, cannot be viewed in isolation from the rest, as the problems of development are inter-related. In order to facilitate the work of the technical groups, the Perspective Planning Division has drawn up the broad framework of the Fourth Plan, indicating the rate of growth that is envisaged, as well as the targets of investment and output for the different sectors.

Earlier, as stated by the Deputy Minister for Planning in Rajya Sabha in March, the Perspective Planning Division had undertaken some important studies. One of these related to the implications of stepping up the minimum income target to be achieved by 1975, to the overall rate of growth, the pattern of production, employment, investment requirements, mobilisation of resources and so on. The conclusion of these studies, as well as other studies on projection of demand for selected agricultural and industrial products, fuel, electricity, transport etc., have been utilised for drawing the tentative outlines of the Fourth Plan which are intended to serve as guide lines for the Working Groups. It has been emphasised that the magnitudes indicated are purely provisional and are not intended to provide any rigid direction or to put forth firm conclusions. When the Working Groups have gone into the problems allotted to them in greater detail, it may well turn out that the outline has also undergone substantial modification.

The target of growth of national income which determines all other targets has been fixed with reference to the minimum required to come within measurable distance of one of the basic objectives of planning, namely to provide a minimum level of income that will ensure tolerable living standards. A recent study of the growth and distribution of national income suggests that even to attain, by the end of 1975-76, a modest target of minimum consumption of Rs 20 per capita per month—it has been estimated that a minimum consumption of Rs 35 is required for balanced diet with reasonable provision for clothing etc.—the national income in 1975-76 will have to be at least Rs 38,000 crores at 1960-61 prices. This implies, assuming that the Third Plan target is achieved by 1965-66, a rate of growth of 7 per cent in the subsequent decade as compared with the rate of six per cent indicated in the earlier projections included in the Third Five Year Plan.

On the assumption that the Third Plan target of 25 per cent increase in national income will be realised and that an average rate of growth of seven per cent will be maintained during the Fourth Plan period, the national income in 1970-71 is estimated at Rs 26,000 crores, as compared with the level of Rs 25,000 crores indicated in the Third Plan. It is also postulated that the net rate of investment at the end of the Fourth Plan should be adequate to maintain 7 per cent rate of growth beyond 1970-71. This will call for rapid increase in investment during the Fourth Plan, from about 14 per cent of the net national product assumed for the last year of the Third Plan to 20 per cent in 1970-71.

Along with increased investment, a progressive reduction in the dependence on foreign aid is also envisaged. It is estimated that foreign aid would be reduced to about half of its present level in the Fourth Plan and virtually eliminated in the Fifth. The proportion of net invest-

ment financed by foreign investment is expected to decrease from about 20 per cent in the Third Plan to 10 per cent in the Fourth Plan and to a negligible proportion in the Fifth Plan.

The achievement of the proposed net investment programme of Rs 22,000 crores in the Fourth Plan would call for rapid stepping of the rate of domestic saving far beyond anything that has been achieved so far. The target projected for exports is comparatively modest—the value of exports in 1970-71 is placed at about Rs 1000 crores. The Planners do not consider that exports will increase at a rate faster than five per cent per annum in the coming fifteen years.

In view of the reduction in foreign aid and comparatively slow increase in exports that are envisaged, the expansion of the economy will call for diversification of the productive structure for the indigenous manufacture of most of the equipment and intermediate products required for the programmes of development. The Plan has accordingly provided for substantial expansion of machine-building as well as of the chemical industries. Provision has also been made for expansion of social services and for increases in both private and public consumption, the latter increasing at a faster rate than the former.

The following table gives an indication of the disposition of the gross national product at 1960-61 prices that is envisaged at the end of the Fourth Plan (1970-71)

	Rs Crores
Net National Product at factor cost	26,800
add Depreciation	2,150
Gross National Product at factor cost	28,750
add Indirect taxes, and miscellaneous receipt, net of subsidies	1,950
Gross National Product at market prices	30,700
Less Exports	1,020
add Imports and interest payments	1,220
Gross domestic expenditure of which	30,900
Gross capital formation	Rs 6,800
Public consumption	2,800
Private consumption	21,300

Within the framework defined by overall magnitudes of final consumption, investment, exports and imports, production targets have been worked out for all major branches of the economy. The target suggested for food grains is 120 million tons. Among other agricultural products, a target of 9 million tons has been suggested for cotton, 7.5 million bales for jute, 12 million tons for oilseeds and 13.3 million tons (in terms of gur) for sugar cane. The target suggested for coal is 180 million tons; for petroleum products 27 million tons; finished steel 12 million tons; alloy steel 5 lakh tons; pigiron for sale 3 million tons; cement 23 million tons; paper 1.5 million tons; textiles (cotton) 6400 million metres; and electricity 76,500 million kwh. The programme implies an increase of 27 per cent in the net output of agriculture, 60 per cent in organised industry and manufacture, 45 per cent in small industry and manufacture and approximately 40 per cent in other sectors.

Out of the net investment of Rs 20,000 crores that is proposed, the share of power, manufactures, transport and communication will be Rs 13,000 crores, representing 65 per cent of the total, same as in the revised Third Plan allocations. A total investment of Rs 5900 crores has been proposed for the sector comprising Mining and Manufactures, which is broken down as under:

	Rs Crores
Mining including Oil Exploration	800
Metal	1,700
Machinery including Electrical machines	1,300
Chemicals, paper, rayon, glass, cement	1,600
Others including textiles	500
	5,900

Taking into consideration the investment of Rs 750 crores in small scale industries, three-fourths of the industrial investment, it is assumed, will go into capital and intermediate goods.

As may be seen from the foregoing table, considerable emphasis is placed on the development of the chemical and allied industries. Investment of Rs 1806 crores has been provided to this sector, the highest next to Metals which has been allocated Rs 1700 crores. The value of the overall output of the chemical industries at the end of the Fourth Plan period will be nearly double that at end of Third Plan.

Gross value of production and the corresponding net output have been worked out for each major sector. Growth of the contribution of the different sectors to the national income at 1960-61 prices, over the years 1960-61, to 1970-71 is shown in the following table.

Sectors	(Rs Crores)	1960-61	1965-66	1970-71
Agriculture & allied activities		6,826	8,369	10,638
Mining		163	315	560
Factory Establishments		1,340	2,716	4,521
Small enterprises including construction		1,140	1,634	2,356
Communications and Transport, other than railways		1,850	2,442	3,580
Railways		360	482	751
Organised Banking & Insurance		152	221	330
Professions etc.		950	1,188	1,591
Government services		900	1,138	1,540
House Property		530	591	753
Total		14,211	19,096	26,620
(Say)		(14,200)	(19,100)	(26,600)

US International Trade Policy

By Leonard Weiss*

Part II Why A New Approach Was Needed

I should like now to sketch some aspects of the development of the US foreign trade program under the old reciprocal trade agreements legislation so as to assess its accomplishments and also its shortcomings and thus provide a better understanding of the new approach in US international trade policy.

There are four aspects of the old foreign trade program:

- (1) The authority available for tariff reductions.
- (2) The policy of avoidance of serious injury.
- (3) The selective, item-by-item type of negotiation.
- (4) The advance from bilateral to multilateral techniques of negotiating.

To turn to the first aspect, the original Reciprocal Trade Agreements Act, enacted on 12 June, 1934, authorized the President to reduce duties by 50 per cent of the existing level. These duties were those of the high Smoot-Hawley Tariff Act of 1930. In 1945 the President received authority to reduce duties by an additional 50 per cent of the level existing as of 1 January, 1945. In 1956 and 1958 he obtained further grants of authority to reduce duties by another 15 per cent and 20 per cent, respectively.

If the full tariff reduction authority had been used on an item, the duty would have been reduced in total by 83 per cent by 1 July of this year. Thus a duty of 100 per cent in 1934 would go down to 17 per cent on 1 July of this year, and a duty of 50 per cent in 1934 (not much above the average at that time) would be brought down to 8½ per cent.

The fact is that the actual decrease in US tariffs since 1934 has been almost as dramatic. As measured by the ratio of duties collected to the over-all value of dutiable imports, the aver-

US trade with the rest of the world keeps booming along. Despite the depressing statistical effect of the Atlantic and Gulf Coast port shutdowns in January, both the export and the import trade of the United States have already recovered to the point where they are outrunning last year's record pace.

Through April of this year, commercial merchandise exports hit an annual rate, seasonally adjusted, of about \$20,100 million, approximately one per cent above the comparable 1962 rate. Imports, at a seasonally adjusted annual rate of about \$16,500 million, were up some three per cent from the first four months of last year.

The rapidity of the recovery from the low January totals is particularly heartening to analysts. With economic activity continuing strong in the United States and other free countries, they see no reason why US exports and imports should not continue to run ahead of 1962 and set further new highs this year.

There also is a rising trend of optimism with regard to the US balance of payments position, in which trade is the major compo-

Trade Boom

nent. Last year, the US trade surplus—the excess of exports over imports and hence an important addition to the plus side of the payments ledger—finally wound up at about \$4,500 million. So far this year, US trade seems to be moving toward a surplus of similar, and perhaps even higher, proportions.

Large as that surplus is, American exports would like to see it even larger in the interest of balance of payments equilibrium. They recognize, of course, that a nation also must import if it is to export—hence the interest in trade expansion generally.

Data for the first quarter of this year showed a slight deterioration in the US balance of payments position, as yet unpublished preliminary data through May are said to disclose a ten per cent improvement compared with the balance of payments situation during the first five months of last year.

If this trend should continue through 1963, it would mark the third consecutive year of balance

of payment. From 1958 through 1960, the deficit averaged \$3,799 million a year, but it dropped to \$2,460 million in 1961 and to \$2,200 million in 1962.

In addition to this important trend, there are other persuasive arguments for balance of payments clear. But at that same Atlantic City meeting support for this view came from a rather unexpected source, underscoring the broad endorsement which Americans in general have given to President Kennedy's trade expansion act and to the cause of liberalized and expanded world trade to which it is dedicated.

A spokesman for the chemical industry which was a vociferous opponent of the Trade Act, spoke out in favour of that act and the cause of liberalized trade. Howard S. Bunn, chairman on Union Carbide Corporation's executive committee, told his audience of top businessmen that the EEC and the United States, by working with open minds toward practical trade agreements, can achieve worthwhile gains.

Much could depend, of course,

on the policies pursued by other nations, particularly those of Western Europe, and more particularly those of the European Economic Community (EEC), or Common Market. On this score, an expert from Belgium, one of the six EEC countries, had some cogent comments to offer last week.

US interest in successful GATT negotiations has been made amply clear. But at that same Atlantic City meeting support for this view came from a rather unexpected source, underscoring the broad endorsement which Americans in general have given to President Kennedy's trade expansion act and to the cause of liberalized and expanded world trade to which it is dedicated.

A spokesman for the chemical industry which was a vociferous opponent of the Trade Act, spoke out in favour of that act and the cause of liberalized trade. Howard S. Bunn, chairman on Union Carbide Corporation's executive committee, told his audience of top businessmen that the EEC and the United States, by working with open minds toward practical trade agreements, can achieve worthwhile gains for all involved.

Other countries found it increasingly difficult to do business this way.

Another important aspect of experience under the old legislation was the advance from the bilateral to the multilateral technique of negotiation.

The United States originally negotiated under the Reciprocal Trade Agreements Act with one country at a time. This approach was an extremely slow one and prevented the most effective use of the available bargaining power. It prevented bringing to bear in a particular negotiation the benefits which the other country concerned might gain from concessions that might be granted in a subsequent bilateral negotiation with some third country. As a result, the scope of the possible exchange of tariff concessions was reduced under the bilateral process.

The United States broke away from this approach in 1947 and adopted a multilateral technique in the negotiations that led to the conclusion of the General Agreement on Tariffs and Trade (GATT). In these negotiations the United States bargained simultaneously with 22 countries and concluded exchanges of tariff concessions in less than seven months as compared with the conclusion of bilateral agreements with 29 countries over the previous 13 years.

Part III The Trade Expansion Act Provides New Tools

As regards the authority for tariff reductions, the Trade Expansion Act of 1962 made a major, and in one respect revolutionary, step forward.

With authority under the old Trade Agreements Act practically exhausted, the new Act gave the President very substantial new powers. It authorized him to reduce tariffs in trade agreements with any free world country by 50 per cent of the level existing on 1 July, 1962.

Important as this power is, the Act granted the President an additional type of authority never before extended in the legislation, namely the authority to eliminate a duty completely.

To be sure, this authority was carefully defined, but it established a significant new principle in the history of the trade program. The President had previously been authorized to impose a duty where none had formerly existed, but the Trade

Critics of the program then argued that it was unreasonable to wait until the damage was done; instead the damage should be prevented in the first place.

Thus was born the so-called "peril point" provision under which the Tariff Commission was required by law to establish the precise point below which a tariff reduction would cause serious injury. If a duty were reduced below this point, an accounting had to be made to the Congress. Like the "peril point," the escape clause was also embodied in the trade agreements legislation by the Congress and increasingly restrictive standards and procedures for its application were developed.

This process of refining the no-serious-injury policy and embedding it into law under standards and procedures to discourage tariff reductions exerted an increasingly debilitating effect on the program. Tariff reductions became more and more difficult to make.

As a consequence, in the last round of tariff negotiations the Executive Branch and the Tariff Commission, in conformity with the legislative requirements and the policies they reflected, so pruned the list of potential US tariff concessions that the United States was able to put on the bargaining table offers of tariff concessions amounting to less than 20 per cent of its imports from the countries with which it was negotiating. In the case of some countries, the United States as a result of this process had practically nothing to offer.

The United States was able to conclude the negotiations only by making concessions on a substantial number of items below the rates established by the Tariff Commission under the peril point procedure. The concessions so granted were those on which the possibility of serious injury was judged to be unlikely or minimal.

This experience demonstrated the bankruptcy of this approach to the process of tariff-making. It clearly would not be possible to mount another tariff negotiation on the old basis and procedures.

Another characteristic of negotiations under the old trade legislation was that they were conducted on an item-by-item basis. This procedure was most laborious and time-consuming. The last round of tariff negotiations took more than three years to prepare for and complete.

age US tariff on dutiable goods dropped from 46.7 per cent in 1934 to 12 per cent in 1961.

While a substantial part of this reduction has been the direct result of tariff negotiations conducted under the trade agreements authority, much of the decrease is attributable to the not all of the decrease is attributable to the program. A significant part of the decrease has resulted from the effect of price increases through the years on the ad valorem incidence of those duties—of which we have many—that are assessed on a specific basis.

Under the old trade agreements legislation the United States concluded tariff-reducing negotiations with 54 countries. In 31 countries the United States negotiated two or more tariff-reducing agreements in the period 1934 to date. This is an impressive performance.

As time went on, however, tariff reductions were becoming increasingly difficult to make on the basis of existing policies and procedures. Earlier reductions were to a considerable extent squeezing water out of the tariff. Protective and domestic pressures grew. The policies and procedures for tariff reductions became increasingly restrictive.

As a result, the authority for tariff reduction granted in the legislation was not being fully used. The United States was having less and less to put on the negotiating table and the trade program began to sputter badly in later years.

This brings us to the second important aspect of the US foreign trade as it has thus far been conducted, namely the policy of avoidance of serious injury. From the very beginnings of the program, the policy of the Administration, both Democratic and Republican, has been to avoid serious injury to domestic industry in making tariff reductions.

Over the years this policy became more and more refined and hardened. At first the "no-serious-injury" policy was reflected simply in declarations by the Administration of its intention to avoid serious injury in making tariff reductions. Then, in response to expressions of concern that tariff reductions had already gone too far, an Executive Order—the forerunner of the escape clause—was issued to assure that tariff reductions in particular cases were withdrawn if increased imports were causing or threatening injury to the domestic industry concerned.

* Condensed from Mr. Weiss' address at Pennsylvania State University on 5 April 1963)

Expansion Act for the first time permits the President to eliminate a duty completely.

Specifically, the Act authorizes the President to eliminate a duty in any of the following four circumstances:

- (1) He could eliminate a duty on an industrial product in a category where the United States and the European Economic Community (EEC), also known as the Common Market, supplied more than 80 per cent of free world exports.
- (2) He could in an agreement with the EEC eliminate the duty on an agricultural product where he determined such action would tend to assure the maintenance or expansion of US exports of the like product.
- (3) He could eliminate the duty on a tropical agricultural or forestry commodity not produced in significant quantities in the United States, provided the EEC took comparable action on an essentially non-discriminatory basis.
- (4) He could eliminate the duty on products where the rate is 5 per cent or less.

The first authority, the so-called 80 per cent or "dominant supplier" authority, was so written as to be largely contingent on the accession of the United Kingdom to the European Economic Community. The collapse of the UK-EEC negotiations reduced this authority to only a few categories. The other zero authorities remain unimpaired.

In toto, notwithstanding the impairment of the dominant supplier authority, the power granted to the President in the new Act to reduce and eliminate duties is most impressive. For the first time since 1945, the President now has major bargaining authority to use to open up markets for American goods and to advance other American interests, including greater access to markets for the less developed countries.

The Trade Expansion Act makes another notable advance in the handling of the serious injury problem. It gives the President a new tool to deal with such problems—trade adjustment assistance. It provides means to enable domestic firms and workers to adjust to foreign competition either by becoming more competitive in the same line of production or by moving into other fields of activity.

To the firms, it provides loans or guarantees of loans, tax assistance in the form of special carry-back of operating losses, or technical, marketing or other assistance.

To the workers, it provides readjustment allowances in the form of unemployment compensation, retraining of workers for other types of employment, and relocation allowances to assist families in moving to an area where employment may be available.

This approach to the problem of import competition is in the best American tradition and spirit. Instead of fighting change, it accepts it and provides a means for new advances. It deals with competition by meeting it, not running away from it. It stimulates technical innovation and the development of new skills. It makes the most of our resources and provides higher returns to the businessman and worker alike. It encourages the future dynamic development of our economy.

This new approach also promotes a sounder international trading system and contributes to healthier international political relations.

While providing a new facility for dealing with import competition, the Trade Expansion Act still retains an escape clause permitting the imposition of restrictions to correct problems of serious injury. The new escape clause, however, is a major improvement over the old one by providing sounder standards for its application.

Under the new Act, escape clause relief is available only when the injury relates to the industry as a whole, rather than merely a segment of it as under the old act. Furthermore, before relief can be granted under the new escape clause, there must be increased imports resulting "in major part" from tariff concessions, and such increased imports must in turn be "the major

factor" in causing or threatening the serious injury.

Under the old act it was not necessary in order to obtain relief to show that the tariff concessions were the cause of the increase in imports, or that the imports were the major cause of the injury.

The new Act also eliminates the requirements for the Tariff Commission to establish perit points, that is, the points below which duties allegedly cannot be reduced without doing serious injury to domestic industry. Instead, the Act spells out in detail the type of information which the Tariff Commission must provide the President in order to inform him as to the probable economic effect of tariff concessions which the United States might offer other countries.

In making a judgment on tariff concessions to offer, the President would take into account not only the information provided by the Tariff Commission but also that available within the Executive Branch.

The Trade Expansion Act also envisages an advance in the technique for negotiating tariff reductions—an "across-the-board" technique of negotiation instead of bargaining product-by-product as was done under the old legislation.

The precise form which the across-the-board technique of negotiation will take is yet to be worked out. It is clear, however, that it involves at least two characteristics: one, it involves the reduction of tariffs on a comprehensive basis; two, it involves the adoption of some mutually agreed rules pursuant to which tariffs can be reduced without individual commodity negotiation.

The new Act also envisages a continuation of one of the best features developed under the old legislation, namely negotiations on a multilateral basis. The United States intends to continue to negotiate on this basis.

Consistently with the most-favored-nation requirement written into the Trade Expansion Act, the United States will extend to all free world countries the concessions it makes to the EEC or any country and will, in turn, receive comparable treatment from other countries.

In summary, the Trade Expansion Act has corrected some major deficiencies in the old program while retaining its better features.

It has increased the President's authority to reduce duties and given him new powers to eliminate them.

It has provided additional means to deal with problems of import competition.

It has foreseen new and more effective techniques of negotiation while continuing the multilateral approach.

It has strengthened the internal organization for conducting the trade program.

Dearer Money in US

By Paul Einzig

The gradual rise in Treasury bill rates in New York seems to have opened a new phase in American monetary policy. Although trade revival in the US is well on its way, it is still far from having reached the stage at which the monetary authorities should feel impelled to damp it down with the aid of dear money. Unemployment is still abnormally high in the United States and the Administration is indeed very keen on encouraging the upward swing of the trade cycle rather than discouraging it. Nevertheless, in view of the persistent gold outflow the American authorities feel impelled to reverse the cheap money policy even if in doing so they are bound to slow down the much-desired trade revival and might even check it or reverse it. It is probably felt in Washington that the United States can in existing circumstances ill afford a thoroughgoing trade revival and has to apply the brake already at the present stage.

On the other hand, it is equally possible that the reason for the change of monetary policy lies in the realisation that, after all, the level of interest rates is not nearly as effective in re-

gulating the economy as it had been generally assumed. The maintenance of interest rates at a low level has failed to reduce American unemployment to within more manageable proportions. From that point of view any additional loss of gold suffered in consequence of low interest rates was to a large extent a waste of ammunition. The extent of the loss of gold was kept down partly by the manipulation of the forward dollar rate in order to discourage an outflow of funds through interest arbitrage and partly by the expansion of the Euro-dollar market which, by offering higher interest rate than those obtainable in New York, must have induced many foreign holders of dollars to abstain from transferring their funds into some other currency. But now the expansion of the volume of Euro-dollars has levelled out and their mere change of ownership as distinct from an increase in their volume does not divert pressure from the dollar exchange.

Whatever the cause, the effect is likely to be felt well beyond the shore of the United States. Any hope of a lower Bank rate in London within the foreseeable future has to be abandoned. The international trend towards lower interest rates has been halted and possibly reversed. Monetary policy outside the United States may be influenced by the fact that the American monetary authorities seem to have lost their faith in the far-reaching effects of cheap money. In this respect they have merely followed the example of British monetary authorities which, on their part, have lost their former implicit faith in the all-curing effect of dear money. In must have been realised in official circles both in London and in Washington that in existing circumstances the refinements of sophisticated monetary policy device count for next to nothing. For all practical purposes we are on a wages standard and the value of our monies as well as the trend of our economies are determined by the trend of wages.

BANK RETURNS

Sharp Decline in Banks' Indebtedness

THE latest banking figures show that the Scheduled Banks have been able largely to recover from the considerable strain that, owing to tax payments, they have been subjected to in the early part of June.

According to the returns of the Reserve Bank for 14 June Active Note Circulation has declined by Rs 6.91 crores to Rs 2,307.08 crores, and there has also been return of Rupee Coin from circulation in an amount of Rs 0.58 crore. Both Foreign Securities and Rupee Securities are unchanged at Rs 109.08 crores and Rs 1,997.44 crores, so that the currency contraction during the week is wholly reflected in cash in the till moving up by Rs 7.49 crores to Rs 28.98 crores.

After the strain flowing from tax payments, a sharp improvement has taken place in the position of Scheduled Banks as at the second Friday in June. Their borrowings from the Reserve Bank have been cut almost to a nominal level of Rs 6.91 crores, a reduction during the week of Rs 17.62 crores. Apparently the inflow of new deposits has been satisfactory, or perhaps slack season contraction of advances has been in a worth while amount. Accordingly the call money market has turned easy, with the rate once again below bank rate. Besides, the Scheduled Banks have added to their Reserve Balances by Rs 4.34 crores to Rs 79.04 crores—but it should be remarked that this is almost wholly on account of the State Bank. Again, in this regard, it needs to be pointed out that it is State Bank disinvestment in gilt-edged which contributed to an improvement in its cash position. That the disinvestment related to Treasury Bills is indicated by the rise of Rs 5½ crores in the relevant portfolio of the Reserve Bank. Thus, it seems probable that in the weeks before the cash loan is announced by Government, the banking system will, provided the progress of the slack season is not again for some other reason interrupted, in possession of fair free resources for supporting the borrowing programme.

The Centre's net disbursements have been heavy. Its balances have gone down by Rs 12.01 crores to Rs 58.94 crores. The States may have benefited, though in point of fact their Deposits are higher only fractionally by Rs 0.85 crore at Rs 7.96 crores, and this in turn has been accompanied by an increase of Rs 1.38 crores to Rs 50.78 crores in their ways and means borrowings from the Reserve Bank.

It may be mentioned, lastly, that we have had a fortuitous rise in Balances Held Abroad, which have improved by Rs 1.58 crores to Rs 6.96 crores. Foreign assets in the possession of the Reserve Bank once again exceed Rs 116 crores.

The State Bank's return for 14 June, as already indicated, shows disinvestment in gilt-edged for Rs 6 crores, the relevant figure going down to Rs 243.82 crores. There has at

the same time been an increase of Rs 2.65 crores to Rs 566.36 crores in Deposits and a contraction of Rs 7.04 crores to Rs 285.15 crores in the total of Advances. This liquefaction of assets is reflected in an increase of Rs 4.49 crores to Rs 24.42 crores in cash balances, including money at call and short notice, and in a rise of Rs 11 crores to Rs 33 crores in Other Assets.

The strain on the banking system during the week ended 7 June is duly recorded in the return for that date. The total of bank credit has gone up by Rs 8.34 crores to Rs 1,571.63 crores, wholly on account of Scheduled Banks other than the State Bank. In fact, the State Bank in that week added to its gilt-edged holdings, which figure for Scheduled Banks as a whole rose by Rs 9 crores to Rs 637.32 crores. Fortunately for the banks, Deposit resources marked some small improvement. Though net Demand Deposits were lower by Rs 0.91 crore at Rs 993.61 crores, this was more than offset by the rise of Rs 4.71 crores to Rs 1,251.78 crores in net Time Deposits. Hence, borrowings from the State Bank rose by Rs 2.75 crores to Rs 19.00 crores and from the Reserve Bank by Rs 7.81 crores to Rs 24.18 crores. Cash balances, including money at call and short notice, as a result went up by Rs 5.74 crores to just pass the Rs 200 crore mark at Rs 200.86 crores.

CURRENCY & FINANCE

Large Foreign Aid

Rising industrial production, a larger inflow of foreign aid, a nominal fall in foreign exchange reserves and Government measures to hold the price line were the highlights of the Indian economic developments in 1962-63, according to a Reserve Bank report on Currency and Finance released this week.

The report reviewing the developments following Chinese aggression, says that with the introduction of the 1963-64 budget the country has been provided with a combination of measures which will enable it to meet in a realistic fashion the entirely changed economic situation since the commencement of the emergency.

"An unprecedented programme of taxation was put through in an effort to meet the massive increase in expenditure resulting from a huge programme of defence buildup and larger deve-

lopmental outlays. This foreshadows an era of austerity which should strengthen the foundation of both national security and rising living standard," the report says.

The development of the Indian economy in the year falls into two phases with Chinese invasion as the dividing line. The first phase coincided with the seasonal slacks in finance and was marked by bottlenecks arising from shortages of steel, power and other essential commodities. In the second phase, the industrial production went up perceptibly under the impact of the emergency. The pressure on the balance of payments also eased during this part of the year.

The index of agricultural production which rose by 8.9 per cent to 139.9 in 1960-61, in 1962-63, despite adverse weather conditions as in 1961-62, the overall prospects for agricultural output appear to be satisfactory.

During the major part of the year 1962, industrial production expanded at a somewhat slower rate than in the corresponding period of 1961, but in the last months of the year there was a distinct improvement in the rate of growth; on balance for the year as a whole, industrial output rose at about the same rate (7.3 per cent) as in 1961.

The average general index of industrial production base: 1956=100) rose from 129.8 in 1960 to 139.3 in 1961 and to 149.5 in 1962.

The Reserve Bank's monetary policy continued to be tightened during the year both in regard to the cost of credit and more latterly its availability. The growth of deposit resources of scheduled banks was impeded with the onset of the emergency and for the year as a smaller rate than in the previous year (Rs 192 crores as against Rs 225 crores).

But bank credit expanded sharply from Rs. 88 crores in 1961-62 to Rs 180 crores in 1962-63 and resulted in a small accretion to their investment portfolio (Rs. 59 crores) as against 1961-62 (Rs 98 crores).

External assistance authorised by various friendly countries (excluding the aid authorised by international institutions) aggregated to Rs 3,488 crores as at the end of March 1963. Countrywise, the US accounted for 63 per cent of the total, followed by the USSR (11 per cent), West Germany (eight per cent) and the UK (seven per cent).

The most noteworthy feature of the assistance made available during 1962-63 was that about two-thirds of the loan assistance authorised were extended on more favourable terms than hitherto. Except for a small service charge of 3/4 of one per cent per annum, all the loans extended by AID and IDA aggregating Rs 319 crores and Rs 83 crores respectively carry no interest, and are repayable over a period of 40 to 50 years, including the grace period.

Another important feature of the AID loans authorised during 1962-63 was that about two-thirds were for non-project imports. Loans authorised by a few other countries were also on relatively more favourable terms and conditions than before.

Notes

GOA Economic Development

The economic development of Goa has been engaging the attention of the authorities ever since the erstwhile Portuguese pockets were integrated with the mainland. Immediately after liberation of Goa, Government has adopted several measures for its industrial advancement but they are, as Lt. Governor Tumkur Sivasankar has noted in the forward to the official publication entitled "Goa, Daman & Diu—A Review of Activities of the Government in 1962-63" are inadequate. The transformation of an essentially trading economy to meet the requirements of a welfare state is a long process necessitating sizable capital expenditure. The report of the National Council of Applied Economic Research submitted to the Government of India puts the total investment potential for speedy industrial growth of Goa at approximately Rs 395 crores during the period 1963-75. The report, while elaborating the potential sources to be exploited, sets a broad pattern on which the industrial development has to be fostered. The

major industries recommended by NCAER are the steel and pig iron plants involving an investment of Rs 2.8 crores. This is a valid suggestion as even during the Portuguese regime the mining industry has been the mainstay of the territory's economy. Other industries whose setting up has been suggested are paper industry, cotton textiles, and explosives with a total investment of Rs 2.20 crores. The small scale and cottage industries will also be promoted for which a sum of Rs 3.65 crores has been allocated. The industries recommended include rice milling, cereal milling, oil milling, solvent extraction of oil cake and rice bran, air industry, fruit preservation, tanning footwear bone mills, roofing tiles, paints and varnishes, steel plants and pig iron, soap, structural fabrication, bolts and nuts and other small scale ventures.

Apart from these, programmes for the speedy development of transport and communications, electricity, development of port and banking facilities will have to be implemented for nurturing industrial development. Development of fisheries and forestry should be encouraged for supplementing the resources of the area and for providing gainful employment to the people.

ENGINEERING INDUSTRY Problem of Idle Capacity

The Engineering industry has taken big strides during the past decade and now it is not only meeting a sizable part of internal demand but has come to participate increasingly in the country's export trade as well. It is estimated that currently the total value of production of all units in the industry, both in the private and public sectors, is to the tune of Rs. 500 crores. The industry's performance on the export front is equally impressive. The value of exports of engineering goods has gone up from Rs 4 crores in 1956 to about Rs 12 crores last year. Indian engineering goods have found profitable markets abroad and the various delegations sponsored by the Engineering Export Promotion Council in recent years have returned to report favourable conditions for the sale of our goods on a number of markets including markets in some of the highly

industrialised countries of the West. According to the President of the Engineering Association of India, Mr T. R. Gupta, the value of exports of engineering goods can easily be increased to Rs 50 crores by the end of the current Plan.

But lately the industry's progress is being hampered on account of shortage of raw materials. A large section of the industry is further handicapped by inadequate availability of electric power. The inevitable result of these shortages is that a large percentage of the installed capacity of the industry has become idle. A recent survey carried out by the Engineering Association of India has revealed that nearly 50 per cent of Engineering industry's capacity is idle. Contrary to expectation Government has made little effort to utilise this huge idle capacity even in the context of the present emergency. There is urgent need for stepping up defence production and one would expect the large idle capacity in the engineering industry to be geared to this important national effort. But despite the commendable initiative shown by several engineering units to undertake defence production, the share of these units continues to be meagre. Referring to the problem of the idle capacity in the engineering industry, Mr Bharat Ram, President of the Federation of Indian Chambers of Commerce and Industry, has pointed out, in the course of his speech at a meeting in Calcutta last week of the Engineering Association of India, that the full utilisation of installed capacity of the industry depends on the sufficient availability of iron and steel. The present difficulties have arisen mainly from the fact that domestic production of iron and steel is still inadequate. Though internal output is of the order of 4 million tons, about one million tons of steel at a value of Rs 100 crores is being imported annually. There is therefore need for stepping up internal production of iron and steel. In this view the establishment of another steel plant at Bokaro gains importance and Mr Bharat Ram has made it categorically clear that private enterprise in the country is quite anxious to see that the project comes into being as early as possible.

GENERAL INSURANCE Good Progress in 1961

The Insurance Year Book 1962 just published as usual gives information pertaining mainly to the previous year. The data relating to 1961 are confined to information regarding the number of companies in business at the end of the year. Thus the report

shows that at the end of December 1962, there were 148 insurers registered under the Insurance Act, 1938, for transacting one or more classes of general insurance business. Of these, 78 were Indian and 70 non-Indian. 45 of the Indian and 40 of the non-Indian insurers were registered for all the three classes of general insurance business; 9 Indian and 10 non-Indian insurers were registered for two of the three classes and the remaining, i.e., 24 Indian and 29 non-Indian insurers were registered for only one class. The total figure of 148 for 1962 compares with 155 insurers registered at the end of 1961 and 166 registered at the end of 1960.

There has been a big increase in net premium income in India in all classes of general insurance in 1961 of Indian insurers. Total business in India of Indian insurers has increased to Rs 23.50 crores from Rs 18.58 crores in 1960. Earning from Fire Insurance increased from Rs 5.97 crores to Rs 7.49 crores, while income from Marine Insurance increased from Rs 3.11 crores to Rs 3.89 crores. There has been a sizable increase in income from Miscellaneous insurance as earnings are placed at Rs 12.12 crores as against Rs 9.50 crores in 1960. Indian insurers have also made good headway in respect of stepping up their income from business from outside India. The net premium income outside India of Indian insurers which was also higher in 1961 than in 1960, amounted to Rs 15.97 crores in 1961 of which Rs 7.72 crores related to fire, Rs 2.64 crores to Marine and Rs 5.61 crores to Miscellaneous insurance business.

Of the three classes of insurance business, Miscellaneous insurance is conspicuous by its higher rate of increase in the gross premium. The proportion of Fire insurance business in the total gross premium written in India by Indian insurers has fallen from 45 per cent in the year 1956 to 34 per cent in the year 1961. Likewise, the proportion of Marine insurance business has fallen from 24 per cent to 20 per cent during the same period. The proportion of Miscellaneous insurance business, on the other hand, has gone up from 31 per cent to 46 per cent. Another indicator of the upturn in general insurance business in India is the fact that the index number of general insurance business in India has outstripped the general index number of industrial production in 1961. The index number of industrial production has gone up by 19.5 during the year 1961 as compared to an increase of 17.6 in the year 1959 and an increase of 12.4 in the year 1960 and an increase of 12.4 in the year 1959. As against this, the index number of general insurance business has also shown a rise of 21.4 in the year 1961 as against a rise of 21.3 in the year 1960 and a rise of 11.1 in the year 1959.

TRADE 5 Year Pact with Russia

The five-year trade pact entered into between India and the USSR in Moscow last week which envisages the doubling of the value of trade exchanges between the two countries by 1966 is an event of far reaching consequence to us for more than one reasons. It may be recalled that the volume of trade between the signatory countries in the past decade or so has expanded progressively from less than Rs 1 crore in 1953 and is expected to reach Rs 100 by the end of the current year. And the newly signed trade treaty contemplates an enormous increase of Rs 100 crores each way by the end of 1966 with a provision for finalising the exact quantum of trade in the last two years of the period covered by the agreement at a later stage.

Compared to its predecessors the latest agreement is of great significance to India in several respects. In addition to the smart surge in the volume of trade, it envisages a deliberate effort to bring more and more parity between exports and imports and thus narrow our adverse balance of trade with the Soviet Union. This new angle is particularly to be greeted in the present context of our depleted foreign exchange resources. Another noteworthy aspect is the accord on raising the percentage of exports of manufactured goods to the USSR from 30 per cent to approximately 40 to 45 per cent. Under this pact our imports will consist largely of machinery, equipment for oil and power projects, aeroplanes, chemical goods, newsprints etc while our exports will, apart from the traditional items like cotton textiles, hides and skin, leather goods, include goods like tea, pharmaceuticals and insecticides which will undoubtedly break new grounds. Moreover with the growing diversification of our manufactured goods there is encouraging prospects for large scale purchase by the USSR of our goods. Incidentally it should be noted that Indian pavilion at the Moscow Fair provided ample opportunity for the Soviets to take cognizance of the multiplicity of goods they can procure from our country. Besides, as suggested by Mr Manubhai Shah to the Soviet trade organisations to sent their special representatives to specialised exhibitions to be conducted in India, if acted upon, can help them for obtaining a comprehensive picture of our products and other goods from which they can pick and choose. We can legitimately anticipate that the new trade pact will pave the way for developing the trade connections between India and the USSR on a sound basis for their mutual benefits.

STAPLE FIBRE ICMF's Findings

The recommendations of the staple fibre sub-committee of the Indian Cotton Mills Federation should set at rest the idea that staple fibre can be used as a substitute for cotton. The sub-committee has rightly indicated that the real solution for our cotton problem is not blending viscose fibre with cotton but to augment the per acre yield of cotton by adopting scientific modes cultivation. The idea of blending viscose fibre with cotton was taken up for consideration consequent on the suggestion of the Indian Cotton Mills Federation to the Tariff Commission that for reaching the current Plan targets of cotton production we should rely more on staple fibre and other artificial fibres rather than lean on imports which will result in a serious drain of our foreign exchange resources.

The sub-committee has arrived at this conclusion after examining intricate technicalities of the issue. After considering the merits and demerits of blending it has been convincingly proved that the advantages far out-weigh the disadvantages. The technical characteristics of viscose fibre like its low wet strength, poor resistance to caustic soda treatment and poor abrasion resistance render such a blending process unremunerative for the industry and from the consumers point of view such products will be costlier. At the same time the sub-committee has suggested the import of 100 bales polynosic fibre for conducting experiments for ascertaining its intrinsic merits to employ as a substitute or for supplementing cotton. Results obtained in other countries make this proposition attractive and this polynosic fibre is technically considered as the most cotton-like rayon available at present. Another advantage is that the manufacture of polynosic fibre can be easily undertaken by those plants now engaged in the production of rayon filament yarn with minor mechanical replacements at comparatively negligible expenditure. Side by side with such experiments cotton cultivation should be carried out on scientific lines for enhancing the per acre yield. The committee's suggestion for investigating into the possibilities of extending the cultivation of medium and long-staple cotton in the country merits serious consideration.

RESEARCH New Centre

Industrial research is an essential pre-requisite for the stimulation of industrial growth in any country on scientific lines. This is particularly so for the developing countries with meagre financial resources for expediting the pace

of industrial development without entailing considerable expenditure in the process. Viewed in this background the laying of the foundation stone by Prime Minister Nehru of the Rubber Research Centre sponsored by the Madras Rubber Factory in Tiruvottiyur near Madras is a unique event in the annals of rubber industry in India. The Centre, the first of its kind in the country, aims at conducting research in rubber technology and to train personnel for equipping them for translating the fruits of the research into industrial applications.

While speaking at the occasion the Prime Minister underscored the imperative significance of recording greater strides in research for accelerating the tempo of our industrial activity. The locale of the Centre in Madras is a fitting tribute to the State which has earned the enviable distinction of being the "paradise" for private entrepreneurial activities. As Mr Nehru stated the State's example of dynamic enterprise and growth is worthy of emulation by other States for the rapid expansion of India's industrial base.

In his welcome address Mr K. M. Cherian, the Chairman of the Madras Rubber Factory, highlighted the urgency for enhancing the facilities for research to reduce our reliance on imported research and technical know-how. This is especially pressing for the rubber industry as rubber is put into numerous applications and rubber goods are acquiring greater popularity. It will be appropriate to mention in this context the pivotal role played by the Malayan Rubber Research Institute for fostering the country's rubber industry. The existence of the advisory services in that country serves as a connecting link between the Institute and the planters for disseminating the results obtained in that institution. Therefore it can be naturally expected that the Rubber Centre at Madras is bound to introduce revolutionary changes for helping it in assisting the country's economic development and defence.

SFC Andhra

The Andhra Pradesh State Finance Corporation which has completed the seventh year of its working in March this year could pay the annual guaranteed dividend of 3½ per cent to its shareholders only after getting a subvention from the State Government to the tune of Rs 1.75 lakhs. The applications sanctioned during the year were sharply lower at 41 as compared with 105 in the previous year. However the total amount involved is at Rs 80.50 lakhs as against Rs 98.82 lakhs in the year ended March 1962. This is because out of the 41 companies which received loan assistance,

four are textile mills with the sanctioned amount totalling Rs 24 lakhs. Two companies manufacturing electrical machinery, apparatus, appliances and supplies have been given a total of Rs 15.95 lakhs. The statement showing the amountwise classification of the loans sanctioned also shows that during 1962-63, the amounts of five loans were each between Rs 4 lakhs and Rs 5 lakhs. The amounts of two loans were each between Rs 4 lakhs and Rs 5 lakhs. The amounts of two loans were each between Rs 5 lakhs and Rs 10 lakhs. One loan was for an amount of Rs 15 lakhs. It is therefore clear that during the year under review more medium-sized industries have been set up in the State with assistance from the Corporation than in the previous year. Since its inception the Corporation had sanctioned loans to 349 companies totalling Rs 4.20 crores. It is interesting to note that the only loan totalling Rs 15 lakhs during the entire period was sanctioned during 1962-63.

Gujarat

The Gujarat State Financial Corporation continues to make satisfactory progress, and during its last accounting year both the number of applications sanctioned and the loans disbursed have been higher. The Corporation which is only three-years old has sponsored quite a number of industries, small, medium and large scale. Of the 101 applications involving a total loan amount of Rs 1.59 crores sanctioned since its inception, 69 are small scale industries, 23 fall under the classification, medium scale and 10 are large scale industries. The steady expansion of the Corporation's business is brought out by the fact that while only 13 applications were sanctioned in 1960-61, the number increased to 42 the next year and to 46 during the last year. Disbursements are also on a satisfactory level, as much as Rs 91 lakhs having been disbursed out of the total sanctioned amount up to date of Rs 1.59 crores. The resources of the Corporation stand fully committed and it is now considering the question of replenishing resources by availing of refinance facility from the Refinance Corporation for Industry and also by tapping other sources available to it under the provisions of the State Financial Corporation Act. A striking feature of the loan assistance is that there are a large number of new enterprises among the recipients.

With the expansion in business, the profits of the Corporation have increased. Even so, after making the various statutory reserves and making a considerably increased provision for taxation the amount left over at Rs 1.55 lakhs is not sufficient to pay the guaranteed dividend at the rate of 3½ per cent, without recourse to subvention from the State Government.

LETTER TO THE EDITOR

Is the Rupee Over-Valued?

During my speech on the Finance Bill on the 25th April, 1963, I argued that the over-valuation of the rupee in relation to sterling and dollar was one of the persistent causes for India's unfavourable balance of trade. The following is the text of my remarks on the subject:—

"There is also another element which has upset our balance of payments and which is making our export drive largely ineffective. It is a fact that our rupee is over-valued in terms of foreign currency. If we take the price indices of 1933 and 1963 and find out how much a dollar or a pound bought in terms of ordinary goods before the World War and how much they buy today, and similarly if we calculate how much a rupee bought in 1933 and how much it buys today, we find that today the dollar and the pound buy a proportionately greater quantity of goods than the rupee. Therefore, our rupee is over-valued, because the same 1 shilling 6 pence continues, while its internal value has deteriorated; our rupee is highly over-valued, and unless it is brought on par with other currencies, there will be a fundamental disequilibrium in our economy, which cannot be remedied. It has been the experience of all the countries of the world that an over-valued currency is like a burden which one carries when one is waking up a hill. Therefore, I suggest that this matter should be seriously examined by experts of the International Monetary Fund, and I have no doubt that their experts will

advise our Government to devalue the rupee. If we can have one shilling as the rupee equivalent, then our economy will be on a more even keel than it is today. It is quite true that on account of exchange control and import control we are prevented from reaping the full disadvantages of this over-valuation they are partly counter-balanced—but still it makes our economy permanently sick and I do not believe that all the efforts and concessions in relation to the export drive will succeed. Over-valuation means that our exports are proportionately more costly and our imports are proportionately less costly. Therefore, it makes for a greater disequilibrium in the balance of payments."

After making the speech I had gone away on a tour to Maharashtra in connection with the Study Team for Panchayati Raj Finances. The Finance Minister replied next day and he vehemently repudiated my contention that the rupee was over-valued. He argued that between 1949 and 1963, the depreciation of the rupee was not much greater than the depreciation of other currencies including the sterling and dollar.

To be fair to the Finance Minister, the reporter of the Rajya Sabha had made a mistake in my speech by putting the year 1949 instead of 1939 and if the whole-sale price index of 1949 were taken as a base, there was some justification for his contention though even during this period the rupee deteriorated to a greater extent than the sterling and the dollar. The following indices of whole-

sale prices have been taken from the Report on Currency and Finance of the Reserve Bank of India for the year 1961-62:—

Base 1953=100

	India	U.K.	USA
1953	105	85	94
1955	88	103	109
1956	99	107	104
1957	104	110	107
1958	107	111	108
1959	111	112	109
1960	118	113	109
1961	121	116	108

It will be seen that between 1953 and 1961 Indian whole-sale prices increased by 21 points as against 16 points in U.K. only 8 points in USA.

But my main contention was based on the relative values of 1939 and 1960. With the same base index of 1953 equal to 100, the following figures have been calculated from the statistical year books of the United Nations:—

	India	U.K.	USA
1939	27	31	46
1948	93	67	95
1955	90	104	101
1960	118	102	109

From this it will be clear that the prices in USA increased by 240%, and UK 330%, while in India the increase was as much as 440%. On 18th September, 1949, the sterling was devalued by 30.5 per cent so that it was brought into pre-war parity with the dollar. The Indian rupee also was devalued simultaneously to the same extent but there was a wide gap between the depreciation of the rupee and the sterling which was not made up in any manner. It is this disparity that has been weighing down our economy. As I pointed out, owing to our stringent controls or imports and foreign exchange the disadvantages of over-valuation were partly counter-balanced. This is a kind

of artificial respiration which cannot be continued indefinitely.

The Finance Minister protested that anyone who talked of over-valuation of the rupee or the need for its devaluation was doing harm to the country. I agree with him that this is a delicate issue on which it is wrong to speak or write without due sense of responsibility. But I am convinced that Indian economy is not in a healthy condition and this is the reason why, in spite of all the herculean attempts at planning and injection of a thousand crores of rupees a year, national income is not rising appreciably. I feel that one of the causes of this sickness is the lack of proper relation between the rupee and the principal foreign currencies of free countries which are dominated by the dollar and sterling. At the present rate of exchange of the rupee at one shilling six pence, the cost of production in India is so high in relation to international prices of almost all manufactured articles that exports of our industries cannot be increased without heavy subsidy, direct or indirect. The Finance Minister is not in a position to provide the requisite subsidy in the form of sacrifice of taxation, reduction of railway freight etc. Hence all the highly advertised export promotion schemes are not likely to yield satisfactory results.

K. SANTHANAM

PRICES

Slight Rise in index

The official wholesale price index (with the year ended March 1953 as 100) worked out to 132.8 during the week ended June 1, 1963 as against 132.7 (revised) for the earlier week. The index was higher by 1.0 and 4.9 per cent respectively when compared with the corresponding week of the previous month and that of a year ago.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It

What has detracted from Valentina's (and Russia's) achievement is, I am afraid, the kind of messages that she sent forth from space. The Russian speech-writer appears to be a poor breed, for there is nothing spontaneous about what the first cosmonette (the word was coined, naturally, by Time) had to say. And, again in no sense trying to disparage the "first" that Russia can claim to, the dialogue between "Hawk" and "Skylark" (as well as the very appellation) has sometimes been bettered by, for example, the "B" class Hollywood picture. Poor Mr Kennedy. The Cooper flight and its glory has been rendered somewhat tarnished. And in all conscience he has enough problems of his own from the deep South. The superiority of Russia in space at least is hard to refute. The moon, in the first instance at any rate, is likely to be in the nature of yet another Communist satellite. Cautiously, American reaction has been slow, almost grudging. After all, what is there to say?

Two years is too young an age for cherry brandy, even if he who quaffeth it is Prince Charles. The headmaster of Gordonstoun has announced that fitting punishment will be meted out. But how come the first press report, what was the reason for the denial? Shades of Profumo, perhaps. The Prince of Wales clearly takes after the father, and Gordonstoun may have been chosen precisely because of the iron discipline imparted there. But still and all, (though I am doing it), I deplore this preoccupation with royalty on the part of the British press; for it must have been a leakage that inspired the report. And also in the Keeler affaire there have been insinuations that royalty is somehow involved. Under the British constitution the monarch is, as an article in the New Statesman once pointed out, a magnificent cipher. With the press busy ferreting out "facts" it will not be too long before the adjective magnificent gets replaced by the word "plain".

Another private sector scandal is responsible for the ouster of another Cabinet Minister; and in order that it may be a "double-header" Mr Hafiz Mohammed Ibrahim (who was defeated in his fight for a Lok Sabha seat) makes his exit at the same time as Mr Malaviya. With the President out of India Mr Nehru merely announced that

the two resignations have been forwarded; and this means that the acceptance will be formal. It has long been anticipated that the Serajuddin affair would spell kaput for Mr Malaviya, but it is a great pity that it should have happened. As a strong oil Minister Mr Malaviya secured for this country increasingly favourable terms and conditions of working from the oil companies; what perhaps was unfortunate was that he often seemed to have preferred the blunt instrument to a weapon more subtle. Consequently he made not a few enemies. He was a known "nehruite", and therefore the Prime Minister's will be a more personal loss. But it seems doubtful if Mr Malaviya can hope to return to the Cabinet in some other capacity, such has been the manner of his being forced out. The lesson should be clear: the baiting or taunting of the private sector, which was Mr Malaviya's forte, is a political exercise fraught with great risk. Sooner or later—and sooner rather than later—some sort of retribution strikes. Mr Ibrahim is the victim of power politics. The negative desire to keep out a contestant for a Lok Sabha seat made of the Power Minister an unwilling sacrificial scapegoat.

Meantime the great search continues in Clive Street. One company in particular seems to have been singled out for tenacious investigation, and a new record of some sort has been set by the duration of the search. There is nothing to suggest that anything incriminating has been found, though what the Customs are looking for is evidence of under-invoicing. But, as I said last week, there have been known to be cases of contravention of law, and mere suspicion may alone be responsible for the investigations. Reports have it that few export-import houses can hope to avoid a "shake-down" of this sort. I don't doubt that foreign exchange lost by this country, and incomes which have escaped taxation, both amount to enormous sums. But what I quarrel with is the method employed. With less fanfare or fuss, in the manner of routine checks, the searches could have been conducted. The Reserve Bank in this regard makes its periodic inspections of banks' affairs, but never once, though many a time minor infringements of the Banking Companies Act stand revealed, has it

Government policy in sugar has been harmful in more ways than one. What with the international sugar prices as they till recently obtained, if only (as Mr Kanoria said) we had had the sugar, our foreign exchange earnings would have added up to a tidy windfall.

The Bokaro controversy is on again. Testimony before the US Congress purports to suggest that not only has there been no commitment so far on America's part but also that it may be only two years hence, when further studies can be completed, before any decision on US assistance for India's fourth steel plant can be taken. Mr Galbraith has been quick to mollify the Indian public. But I am afraid there will be few of us convinced that America in this regard is committed, or that we can hope to have Bokaro blast furnaces at work before the end of the Fourth Plan.

Mac can be termed Super again for having survived the Commons debate. But it is a dear price he has had to pay, if political commentators read the situation aright. In order to ensure that Government did not get defeated on this issue, Mac has apparently promised that he would lay down office within the next two months, so that some length of time will be available for his successor to rally round the party before, next year, going to the electorate. Strangely anti-climactic though the Macmillan regime has been, I should say that by and large he has been a good Prime Minister. The constitutional responsibility is his, whether for the Vassal or for the Profumo affair, both with their overtones of official secrets made known to the "enemy", but his fault largely consisted in the fact that he got complacent, a complacency that he in turn infused the country with. Two rude shocks, and now it is for a Labour Government to win back renown and honour for Britain.

Markets

JUTE Quiet Trend

The undertone in the jute markets is quiet in the absence of sustained fresh interest. Except for scattered business, the Jute goods market has been devoid of interest during the past few days. Even so hessian prices have been only fractionally lower in view of reports of moderate shipping instructions for this category of goods. The subdued trend in hessian seems to have stemmed partly from the rather disappointing level of burlap consumption in US during the past month. Burlap consumption in US in May totalled only 76 million yards as compared with 77 million yards consumed in the previous month. But taking the trend during the first five months of the current year, burlap consumption in US shows a satisfactory level as the total consumption during this period is higher than in the corresponding period of last year. Another favourable indication is the fall in burlap stocks in that country during May by 3.7 million yards. Indications are that the offtake of hessian in coming months will be on a satisfactory level in view of a sizable order from Russia earlier in the year. It is expected that despatches against

this order will be fairly heavy from the coming month onwards. It is also quite on the cards that US purchasers will show increasing interest in hessian especially since it is reported that the apparently heavy stocks have already been sold to consumers. However, the market appears to be governed by the immediate prospects. In this connection the figures for despatch of jute goods from LJMA mills during May have been interpreted bearishly. Despatches of jute goods during May were 99,900 tonnes as compared with 104,800 tonnes in the previous month. The total is made up of 75,300 tonnes for export purposes and 24,600 tonnes of despatches for internal consumption. The decline in despatches has occurred both in regard to exports and internal consumption but the bulk of the decline in total despatches is accounted for by despatches for internal consumption which have been placed at 24,000 tonnes as compared with 28,700 tonnes in the previous month. The fall is due to the fact that during May there has been a sharp decline in the offtake on Government account of sacking despatches of which during the month were only 18,800 tonnes as compared with 22,600 tonnes in April. As for despatches for export purposes the fall is only to the tune of 800 tonnes. Despatches

of hessian have declined to 37,760 tonnes from 41,600 tonnes while those of sacking are higher at 23,200 tonnes against 19,500 tonnes.

It is evident that market men are concerned over the fact that while offtake is showing a declining trend, production will be kept up at maximum capacity of mills. The comparative steadiness of hessian is to be explained by the hope that in view of the increasing interest evinced lately by Russia in Indian hessian coupled with the fact that a new trade agreement between the two countries have recently been signed, overseas demand for hessian will be well maintained. There are also indications to show that burlap consumers in US have regained their confidence in Indian hessian and consequently will be increasing their offtake in coming months. It is also probable that the UK may be showing increasing interest in Indian hessian.

The position of sacking in the export market continues to be shaky in view of the growing competition from Pakistan. It has been reported that in recent weeks some big orders have been won by Pakistan. The fact of the matter is that Indian mills will be able to get foreign orders only when Pakistan is oversold. The following extract from Pakistan's Economic Survey for 1962-63 brings out clearly why Indian mills are unable to compete with Pakistan. "Bonus vouchers are transferable and the export bonus may be used for the import of a stated range of goods either by the exporter who first earned it, or, except for one-half of the bonus earned at the rate of 20 per cent on the export of jute manufacturers, by anyone who has bought the voucher. Bonus vouchers command a premium in the market because they make possible imports of goods which are in short supply, as being either on the restrictive licensable list or not licensable at all. The premium thus earned enables the exporter to sell his goods abroad at competitive prices even if his costs are higher than the prices at which he sells abroad. He is thus enabled to export goods which he would not have been able to export in the absence of the bonus."

TEA Good Demand

IN the third Export Sale held in Calcutta this week, offerings amounted to 22,146 packages. There was a good general demand. Prices of plain and medium orthodox types were about firm, while any teas with bright liquors met with good support and were generally dearer. Bright liquoring CTCs were a strong feature of the sale and these were generally dearer. There was less competition for the remainder, which were often sold below last rates.

Legg-cut teas were easier by up to 15 nP per kilo. There was a more general demand for Darjeeling teas, which again comprised a large proportion of the offerings. Prices were generally easier with quality except at lower levels where there was more support. Whole Leaf teas were generally firm to dearer. With only a limited quantity of suitable teas on offer, no rates were given.

In the Internal Sale, offerings consisted of 5,973 packages. There was a strong general demand for the new season's dusts. CTC descriptions were keenly competed for and sold at much dearer rates, particularly the bright liquoring types. Plain Orthodox dusts found ready buyers at irregular, but generally slightly easier rates. Legg-cut descriptions were sold at discounts of 10 nP to 20 nP. The small and powdery teas of this category were, however, better supported. There was keen enquiry for flavoury Darjeeling dusts and prices for these were generally much dearer. Due to insufficient quotable teas on offer, no quotations were given.

Meanwhile, production of tea in North-East India has fallen slightly to 36.55 million pounds in May from 38.69 million pounds in the corresponding month of last year. In the current season up to the end of May 1963 also, total production is lower at 49.29 million as against 53.77 million pounds in the corresponding period of last year.

According to trade sources, stocks of tea in Calcutta warehouses, at the end of May 1963, declined sharply to 120,037 chests from 241,286 chests at the close of May last year. Stocks in public warehouses fell from 127,074 chests at the end of May 1962 to 49,819 chests at the close of the month under review as did those in private warehouses from 114,212 chests to 70,218 chests.

Direct exports of North-East Indian tea to the UK rose sharply to 5.43 million pounds in May from 495,960 pounds in the corresponding month of last year. During the whole of the 1962-63 season (April to March) also, exports were higher at 174.97 million pounds from 168.36 million pounds in the previous season.

Out of the total exports in 1962-63 shipments to London auctions accounted for 158.76 million pounds and those against private sales and forward contracts for 16.11 million pounds as compared to 154.26 million and 14.12 million pounds respectively in the previous season.

With arrivals of 45.04 million pounds in April 1963, total imports of tea into the UK, in the first four months of the year, were higher at 208.83 million pounds as against 195.48 million pounds in January/April 1962. While tea supplies from India rose from 97.29 million pounds in January/

April 1962 to 111.3 million pounds in the period under review, imports from Ceylon and Africa fell from 53.33 million and 29.06 million to 52.87 million and 25.53 million pounds respectively.

With an export of 3.65 million pounds in April 1963, India increased her tea supplies to the USA, in the first four months of the year, to 13.03 million from 10.03 million pounds in the corresponding period of 1962. Ceylon and all other supplying countries, too, were able to increase their tea shipments to the USA from 15.31 million and 15.38 million in January/April 1962 to 17.77 million and 17.2 million pounds respectively in the period under review.

Tea auctions in London were resumed after the Whitsun break. Almost 83,000 packages were put up for sale and some irregularity was apparent. The North Indian and other miscellaneous growths met with a only a fair demand. Better liquoring Assams ruled fully steady as did African teas up to 5sh 6d per pound; but prices for other descriptions showed declines of 1d to 3d per pound. African teas, too, finished the sale with falls of 1d to 3d per pound.

The better highgrown Ceylon invoices and the best of the mediums met with good buying interest at often dearer rates; but the less attractive sorts and the plainer mediums were irregular by 1d to 2d per pound down. Last week's price indication for Plain teas was 2sh 6d to 3sh per pound as compared to 2sh 7d to 3sh 2d in the previous week.

Tea stocks in London, as at 7 June, totalled 149.81 million pounds as against 154.56 million pounds in the previous week. Total float was 23.12 million pounds including from Calcutta 345,320 pounds; from Chittagong nil; from Cochín 6.19 million pounds; from Ceylon 14.95 million pounds and from other Ports 1.64 million pounds.

COTTON Easy Trend in Futures

THE downward trend in the cotton futures market in Bombay gathered fresh momentum during the past week and the ruling Jarilla August contract went down further to touch the season's low level of Rs 698.25 per three quintals. The slump in the market was attributed to the beneficial rainfall in cotton growing tracts such as Khandesh, Berar and Saurashtra. The sentiment was also affected adversely by the reports of possible large scale imports of cotton from the United States and exchange for manganese ore and from Pakistan under a bartel deal to be finalised soon. Along with this the bumper crop in the current season mean that there will be a better supply position. The

demand from the mills slackened during the week as most of them are reported to have covered their requirements. All these factors led to heavy bull liquidation and selling by share market operators as a result of which the contract fell down the season's low level.

Towards the mid-week the contract staged a feeble recovery aided and abetted by bear covering and moved up to Rs 706.00 per three quintals on Friday. This phase, however, proved short-lived and the contract slipped down to Rs 700.75 owing to heavy selling pressure before finally closing the week at Rs 701.00. The market closed the week on a meek note.

The market which is waiting for the commencement of trading in the new contract was agog with protests from the cotton cultivators against the introduction of alteration in the terms of the new contract.

The spot market at Sewri witnessed moderate trading activity. Spinner interest was however confined to selected items like L147, CO2, Kalyan and Laxmi. Inferior quality cotton continued to be neglected.

In the import section stray enquiry was reported in Egyptian and Sudan cotton. The market has noted with interest the recommendations of the staple fibre sub-committee submitted recently.

World production of cotton during the current season has been estimated at 48.3 million bales which is 2.5 million bales or five per cent above the preceding season's output. The 1962-63 cotton crop will be the largest on record and will surpass total world cotton consumption for the first time since 1955-56. The total acreage during the current season under cotton cultivation is put at 81 million acres. A notable aspect of this season's record crop is the unusually high average yield of 286 pounds of lint per acre thanks to the congenial weather conditions in most of the cotton growing countries.

Lower production of cotton in countries like Brazil, Sudan, Iran and the Soviet Union were more than offset by the increased output in countries like the United States, Mexico, Central America, Egypt and Uganda.

Estimates of cotton output in India during the current season are also heartening as a bumper crop of 55 lakh bales is indicated against 46 lakh bales in the previous season. The smart rise in production was facilitated by the favourable weather throughout the current season.

PIECEGOODS

Trading in the Bombay cotton piecegoods market during the past week was dull and drab and the demand from upcountry centres was at a low ebb. Even postal enquiries were disappointing and business with overseas countries was limited.

In the powerloom section the downward swing appeared to have been stopped. The prevailing low levels attracted good response from the processors culminating in an encouraging turnover of these goods.

Only sporadic transaction was reported in the mill sector. Seasonal goods met with only restricted enquiry. Flannelettes, however, attracted good enquiry while malasia was totally discarded. Demand for poplin and mull was very poor while superior longcloth met with scattered enquiry. Despite the tight supply position the offtake in saris and grey dhoties was thin.

On the whole there was no noticeable variation in the price trend as the mills were reluctant to make any downward revision in the price schedule obviously on account of the comparatively higher cost of production. Other factors that can be attributed to their firm stand are the compulsory export promotion programme and the demand from the defence department. Meanwhile they are eagerly awaiting the Government of India's decision on the Indian Cotton Mills Federation's plea for making an upward revision in the cotton prices.

The export front during the week under review was devoid of any fresh development. The total turnover was restricted to immediate requirements. Business with the United Kingdom was infinitesimal due to the absence of licences. East Africa accounted for a moderate quantum of usual varieties. Other countries were inactive.

No Plan to Raise Sugar Exports

IT is understood that, notwithstanding the boom in the world sugar market, India has no plans to increase her sugar exports for the current year beyond what she has already contracted for. The price of the sweet commodity has now risen nearly four times this year from last year's price of £22 per ton; but, in view of low production and rising internal consumption, India will be unable to export more, whatever the additional foreign exchange earnings involved. It is, however, learnt that some benefit arising from the unexpected rise in world sugar prices will accrue to the Indian sugar exporters.

India has programmed to export about 5.3 lakh tons of sugar for 1963 of which only about 0.85 lakh tons have been exported so far. A balance of about 4.45 lakh tons still remains to be shipped to various countries including Malaya, the UK, Canada, Japan and West Asia. It will be sold at the increased prices. Next year's export will depend on the sugarcane

crop to be harvested by the end of this year.

It cannot be denied that the present shortage of the commodity has been aggravated by exporting sugar. Although alternate glut and shortages of the commodity have been recurring features during the past few years, the target set by the Government will be almost impossible to achieve. If the output of sugar is to be increased on a permanent basis, it is necessary to enforce a vigorous cane development policy. It is also necessary to take steps to rationalise the working of several inefficient mills.

Although the need for earning foreign exchange is not questioned, there is no logic in promoting the export of the commodity by starving the domestic market. Since the present rise in the international price of the commodity is considered to be temporary, the export of Indian sugar will involve losses due to the high production costs. For the time being, the domestic shortage must be overcome as quickly as possible.

GINGER Supply Position Tight

Following firm advices from the producing centres and improved export demand, Ginger prices have developed an upward tendency during the last few days. In the Bombay market, the rate has moved up by Rs 5 per 50 kg to Rs 140 for the bleached variety and to Rs 148 for the unbleached quality. The market, it is reported, carries about 4,000 bags of ginger presently in stock and the daily receipt is around 200 bags. The quantity is considered to be small to meet the demand from the North, which is likely to come forth in next month.

The supply position at the terminal market, too, is far from encouraging. Arrivals are reported to be negligible. The entire demand has, therefore, to be met by the existing stocks.

CARDAMOM Limited Stocks

The Kirana Merchants' Association, which met in Bombay at the end of last week, decided to gather all the details of the stock position of Cardamom before urging the officials to liberalise the export policy in special cases, if need be. Of the estimated crop of 2,230 tons in 1962-63, the Bombay market is stated to be holding a stock of about 100 tons. Similarly, unsold stock at Mysore is placed at 200 tons; 100 tons at Mangalore and around 150 tons at Alleppey.

From the stock of 100 tons in the Bombay market, 25 tons are likely to be sold in a week's time. It is expected that the quantity will be shipped to Jeddah. There will be no difficulty in disposing of another 25 tons. Thus, the exporters in Bombay will have only 50 tons of cardamom for which they may have to seek the help of the authorities.

It is reported that the Cardamom Development and Marketing Advisory Committee has assured the Bombay exporters that they will assist in the speedy disposal of the stock. As the remaining stock with the exporters is of inferior quality, it is not known in what way the Committee will tackle the problem.

CLOVES Decline in Prices

Prices of Cloves in the Bombay market are reported to have declined by about Rs 7 to Rs 10 per 10 kg during the last one week owing to reduced offtake. The rate is now quoted at Rs 315 per

10 kg against Rs 322 to Rs 325 in the previous week. Stocks, estimated at about 3,000 sukas, are considered to be comfortable. The supply of smuggled goods to the market is also said to be substantial.

But, the reported grant of an imported licence of the value of Rs 13.3 lakhs to the State Trading Corporation for the April/September 1963 period has not accentuated the bearish trend. For, imports in accordance with the licence would result in a substantial increase in the supply of nearly 5,300 surkas, which would meet the demand till the end of February; but the goods are not likely to arrive before August.

CAMPBOR Revival of Demand

The demand for Camphor, which had been slack for quite a long

time, has revived in the Bombay market. Although at present only southern interests are in the market, the local demand is also expected to manifest shortly. Moreover, trading in the commodity is likely to be active in the next few months in view of several religious festivals.

On the other hand, the supply position is reported to be far from satisfactory, because of the reduced flow of smuggled goods. As a matter of fact, the position in the South is reported to be worse. Although the actual users in Bombay have received about 3,000 kg, the quantity is considered to be too small to meet the heavy demand of the next two months.

Imported camphor is quoted at Rs 14.50 per pound; but the traders expect that the price will go up in the next few weeks, especially when receipts from Pakistan have stopped due to floods there. The vigilance on the part of the authorities here has also checked the inflow of the contraband commodity.

SILK

The prices of filature raw silk in the Bangalore Silk market continued to be steady this week also. The price of cottage basin silk had a rise only in the minimum to rule between Rs 99.20 to Rs 108.03 per kg.

The prices of all varieties of charka raw silk had shot up to rule as follows:—

Rs 92.59 to Rs 97.00 per kg for superfine; Rs 85.98 to Rs 90.39 per kg for 1st quality; Rs 79.37 to Rs 83.77 per kg for 2nd quality and Rs 72.75 to Rs 77.16 per kg for 3rd quality. However, the prices of Dupion (charka) and all varieties of spun silk yarn remained steady.

The prices of mulberry reeling cocoons showed a mixed trend. At the Siddaghatta market, there was a rise in the minimum and a fall in the maximum to range between Rs 6.50 and Rs 7.75 per kg at Channarayana market it ranged between Rs 5.00 and Rs 8.00 per kg and at Mugur Market between Rs 4.20 and Rs 6.00 per kg.

As regards seed cocoons, the foreign variety had a steady minimum and a drop in the maximum to range between Rs 5.00 and Rs 10.00 per thousand, whereas the Mysore variety had a rise in the minimum and a drop in the maximum to range between Rs 6.00 and Rs 7.00 per thousand.

At the Bhagalpur Silk market, varieties of silk products remained steady at their previous levels.

The prices of all varieties of silk products at the Malda Silk market ruled at their former levels.

COFFEE Higher Receipts

COFFEE receipts into Pool out of the 1962-63 crop up to 31 May 1963 amounted to 54,252 (44,046) tonnes, consisting of 24,257 (21,904) tonnes of Plantation; 8,925 (6,457) tonnes of Arabica Cherry and 21,070 (15,685) tonnes of Robusta. Figures shown within brackets are the corresponding receipts into the 1961-62 Pool last year.

During May 1963, the releases in the internal market amounted to 2,953 tonnes, bringing the total, for the first five months of the year to 13,502 (13,518) tonnes, made of 5,074 tonnes of Plantation; 1,175 tonnes of Arabica Cherry and 7,253 tonnes of Robusta. The figures within brackets indicate corresponding releases in the internal market last year.

Including the sale on 4 June, a total quantity of 9,952 tonnes of coffee out of the 1962-63 crop has been sold for export, comprising 8,649 tonnes of Plantation; 498 tonnes of Arabica Cherry and 805 tonnes of Robusta.

Tenders have been invited for a total quantity of 3,189 tonnes

(1,983 tonnes of Plantation, 615 tonnes of Arabica Cherry and 591 tonnes of Robusta) and are due on 26 June, 1963.

GOLD & SILVER Prices Steady

Thanks to the revival of demand from the upcountry centres, the Silver section on the Bombay Bullion Exchange developed a firmer tendency. Although there was profit-taking at bulges, it was easily absorbed. Silver (below .996) moved between Rs 227 and Rs 227.50, to finish at the former level.

Prices in the Gold section showed some irregularity. After initial enthusiasm, the demand for the metal fell off. Sellers were, however, few. The rate moved between Rs 114.50 and Rs 115. The price of Sovereign was quoted at Rs 84.50.

OILS & OILSEEDS Spurt in Groundnut

A buoyant undertone was noticed on the Bombay Oilseeds Exchange where prices rose sharply under the lead of groundnut.

As was expected, the July Groundnut contract has touched the ceiling rate of Rs 236, prescribed by the Forward Markets Commission. The spurt in prices is traced to heavy covering by the shorts with sizable outstanding commitments to their credit in the July contract. In view of the mutual understanding that seems to exist between powerful operators ruling out the tenders in a substantial quantity, the less resourceful shorts have no other alternative than to cover their sales commitments. Moreover, while some areas in Andhra and Gujarat have reported favourable weather conditions, their Liarish impact on the market is more than nullified by the brisk demand for ready groundnut and groundnut oil. Crushers and vanaspathi manufacturers are also figuring as consistent buyers despite a sharp increase in prices. Reports of business done to the extent of 7,000 tons of groundnut extraction with East Germany have also imparted a firm tone to the market. Groundnut Bold ready is quoted at Rs 49 and Groundnut Oil at Rs 19.25.

Though there is hardly any new development in the export of Castor oil, prices in the Castorseed section developed a firmer tendency in sympathy with groundnut. Ready is quoted at Rs 31.50 and Castor Oil, commercial quality, at Rs 13.20.

The Linseed section also reflects a bullish fervour due to keen demand for linseed oil from the paint industry. Ready is quoted at Rs 36.85 and Linseed Oil at Rs 14.30.

For the Investor

INVESTMENT GOSSIP Steel Retention Price

THE increase in steel retention prices announced this week has understandably brought no lasting cheer to the stock market. The initial favourable reaction is presumably due to the expectation that now that the long-awaited increase in retention prices has been announced, the steel companies will be able to come to an early decision about the dividends payable to the shareholders. But once the fact has been grasped that the increase of Rs 28 will cover only the increase in costs that has occurred since the last announcement of the retention price in September 1962, the initial enthusiasm has been found quickly to evaporate, resulting in the erosion in values of steel shares. Under the latest announcement, the retention prices are increased with higher escalation elements as well as a further element to compensate the companies in respect of the liability on account of war risk insurance. For the year 1962-63, escalation elements of Rs 10 per tonne and Rs 6 per tonne would be allowed on the 1960-62 retention price of saleable steel and pig iron, respectively. From 1 April 1963 onward a further increase in escalation of Rs 8 per tonne in the case of steel and Rs 4 per tonne in the case of pig iron would be allowed. From 1 July 1962, the steel retention price would be increased by a further sum of Rs 10 per tonne for the payment of emergency war risks insurance. This sum would however be finally adjusted with the equalisation fund on the basis of the actuals of each Steel Works.

It may be recalled that last September Government had granted an increase in the retention price of Rs 10.50 only as against a general expectation of Rs 30 and the recommendation of the Tariff Commission for an increase of Rs 38. With the present increase, the retention price will come to Rs 550.59 only fractionally higher than the level indicated by the Tariff Commission. In effect therefore while the increase in costs since last September may be said to have been covered, the steel companies' contention that they should be given compensatory increase to offset the higher cost of production has not been conceded. In computing the increase in retention price Government has pointed out that the steel plants should work

at 100 per cent of capacity. The Tariff Commission has indicated that the costs of production must be based on the plants working to 90 per cent of capacity.

NEW ISSUE NOTES CIEL

A new company called the Commercial and Industrial Exports Limited has been formed by Tatas for the active promotion of traditional and non-traditional exports of Indian goods. The company has been accepted by the Government as a recognised export house under the scheme formulated by the Ministry of International Trade. The authorised capital of the company is Rs 25 lakhs, divided into 2,500 shares of Rs 1,000 each. The initial paid-up capital is Rs 10 lakhs, divided into 1,000 shares of Rs 1,000 each, which has been wholly subscribed for by Tata companies and a few other organisations interested in the export trade of the country.

Canara Bank

Canara Bank Limited has proposed to raise the issued capital from Rs 75 lakhs to Rs 1 crore by the issue of 50,000 equity shares of Rs 50 each, at a premium of Rs 15 per share. Out of the present issue, 41,000 equity shares will be offered to the existing shareholders in the proportion of one share for every three shares held. The employees of Poornathrayeesa Vilasom Bank, recently taken over by Canara Bank, will be offered 3,000 equity shares and the balance of 6,000 shares to the constituents. An application has been made to the Controller of Capital Issues for necessary permission.

SI Steel and Sugars

The South India Steel and Sugars Limited is offering for public subscription 4,10,000 equity shares of Rs 10 each and 1,43,000 cumulative redeemable preference shares of Rs 10 each carrying a fixed dividend of 9.3 per cent per annum. The subscription list was opened on 17 June and will be closed on 27 June or later at the discretion of the directors. The entire issue, offered to the public, is underwritten.

The company, established as far back in 1944 dealing on controlled categories of steel, is now diversifying its activities and will produce sugar. Its sugar factory is located at Mundiyanbakkam, South

Arcot district, Madras. Preliminary work on the factory has already started. Production is expected to begin by October 1964.

APV Engineering

The A.P.V. Engineering Company Private Limited is issuing capital of Rs 24.49 lakhs, divided into:— (1) 7.94 lakhs as fullypaid bonus shares; (2) Rs 3.50 lakhs in equity shares to be issued to Messrs A. P. V. Holdings Limited of Sussex, England, partly for cash and partly against supply of plant and machinery and (3) Rs 13.50 lakhs in equity shares for cash, at a premium of Rs 2 per share to be issued in India.

Associated Iron & Steel

Associated Iron & Steel Industries Limited, Ranganjmandi, Rajasthan is issuing fresh capital of Rs 40 lakhs, divided into 30,000 equity and 10,000-9 per cent cumulative preference shares, both of Rs 100 each, for cash, at par.

Assam Gas

Assam Gas Company Limited, Shillong, a State Government undertaking, is to issue further capital of Rs 9 lakhs, divided into 9,000 equity shares of Rs 100 each, to be subscribed privately by the Government of Assam.

Hindustan Photo

Hindustan Photo Film Manufacturing Company Limited, Ootacamund, wholly-owned by the Central Government, has been given consent to issue further capital of Rs 90 lakhs, divided into 9,000 equity shares of Rs 100 each, to be subscribed by the Central Government, in cash at par.

John Fowler

John Fowler (India) Limited, Bombay, is to issue Rs 15.97 lakhs in equity shares of Rs 10 each, of which 53,000 shares will be issued to Vokes Group Limited, UK, and Streamline Filters Limited, UK. The balance shares will be offered to the public for cash, at par.

New India Industries

New India Industries Limited, Baroda, has been allowed to issue further capital of Rs 3,99,800, divided into 3,998 equity shares of Rs 100 each, as bonus shares on capitalisation of the company's reserves to a like extent. Out of this, bonus shares of the approximate value of Rs 1,03,700 will be allotted to the company's three non-resident shareholders.

Elpro International

Elpro International Limited has been sponsored under influential auspices and the foreign exchange required for importing plant and

In 1971 the Calcutta Port is estimated to carry roughly 14 million tons of traffic against about 10 million tons in 1961 in order to meet the demands of the pace of our national progress.

Conscious of its vital role of handling 45% of India's exports and 40% of her total imports, the Calcutta Port has to marshal her resources and plans in men and machines to meet the exacting demands of to-day and to-morrow.

men and machines
in pace with the
growing demands of
national progress at

CALCUTTA PORT

Issued by the Commissioners for the Port of Calcutta.

machinery will be made available by the subscription to the equity capital by the foreign collaborators, General Electric Company of USA together with its subsidiaries. The issued capital is Rs 84.65 lakhs, entirely in equity shares of Rs 100 each out of which General Electric and/or one of its subsidiaries will be taking up equity shares for Rs 42.50 lakhs. The employees of International General Electric Company (India) Private Limited and others have taken up shares for Rs 8.50 lakhs and Investment Corporation of India, its associates, directors and their friends, shares for Rs 12.40 lakhs. The balance of Rs 21.25 lakhs is offered for public subscription and this portion of the issue is not underwritten. The company has a programme of manufacturing lightning arresters, pellet and thyrite types, X-ray equipments for medical and industrial applications and other electrical apparatus.

Parmanent Magnets

Permanent Magnets Limited has issued the following statement:— "We have read the announcement regarding the proposed issue of Elpro International Limited. In the para "Business Prospects and Profitability", we noted that "Presently, India does not have a local Magnet industry....". It is fairly known that we have a plant in Borivli, Bombay, with much bigger capacity than Elpro International Limited and our plant is already in commercial production".

★

INVESTMENT NOTES

Ceat Tyres

There is a scheme for expanding the capacity of the factory of Ceat Tyres of India Limited. The Industrial Credit & Investment Corporation has agreed to give a loan of Rs 50 lakhs for this purpose. In order to meet the needs of working capital, an arrangement has been concluded with the Bank of Baroda Limited for a clean cash credit of Rs 25 lakhs.

Tak Machinery

After some delay, Tak Machinery Limited has acquired the necessary land in the industrial estate at Ambernath and the construction of the factory buildings is expected to be completed by the end of next month. The erection of machinery will be undertaken shortly, while trial production will commence some time later. It is now proposed that additionally air hoists and hand-operated overhead travelling cranes should be produced. The necessary permission has been obtained from the Government, while an agreement has been concluded with another British firm for producing air hoists.

Rohit Pulp

Rohit Pulp & Paper Mills Limited has obtained an industrial licence for raising its production to 6,000 tons per annum. The company hopes to receive the necessary import licence for the import of machinery. The company went into production in May last year.

★

BALANCE-SHEET REVIEWS

Another Successful

Year for Philips India

PHILIPS INDIA Limited had another successful year in 1962 with a rise in sales as well as earnings, reflecting the steady growth of turnover. Sales have risen to Rs 8.85 crores from Rs 6.82 crores. Despite a substantial increase in the profit before tax, there has not been a corresponding rise in the profit after taxation due to the heavy incidence of the super-profits tax. The net profit, after providing for depreciation and taxation, works out to Rs 43.71 lakhs as against Rs 36.70 lakhs. In respect of allocations, Depreciation is raised to Rs 20.96 lakhs from Rs 19.44 lakhs; Taxation to Rs 85.50 (including Rs 20 lakhs for SPT) from Rs 36 lakhs; Contingency Reserve to Rs 5 lakhs from Rs 1.50 lakhs and Development Rebate Reserve to Rs 6.15 lakhs from Rs 3 lakhs. Gratuity Reserve is maintained at Rs 3 lakhs, while Reserve for Debtors and Stock Risk is halved to Rs 1.00 lakh. The directors have proposed to raise the dividend from 12 to 13 per cent, subject to tax.

According to the directors' report, the completion of a new building at Loni near Poona is another milestone in the realisation of the company's scheme to manufacture components on a big scale to meet the demands of both large-scale and small-scale radio manufacturers as also its own requirements.

The Government has also given consent to the company for taking early steps to manufacture tungsten and molybdenum wire and tungsten coils, which have hitherto been entirely imported by the Indian Lamp industry. The manufacture of these vital components for lamps will be undertaken at the company's factory in Bombay in technical collaboration with N. V. Philips' Gloeilampenfabrieken, Holland.

In order to facilitate early implementation of the above project, the Government has already authorised the company to issue fresh capital of Rs 16.66 lakhs in equity shares of Rs 10 each for cash, at a premium of Rs 5 per share. The matter will be placed before the shareholders in due course.

Goodyear Skips

The results of Goodyear India Limited, for the year ended 31 December 1962, have come as a disappointment to the shareholders. As a result of the power problems experienced at the new factory at Ballabgarh and also due to the normal high start-up costs, operations for the year have resulted in a loss. Sales are shown lower at Rs 2.06 crores against Rs 8.27 crores, while the loss for the year, after providing for depreciation, amounts to Rs 57.13 lakhs as against a net profit of Rs 28.05 lakhs for the preceding year.

The Depreciation is raised to Rs 31.94 lakhs from Rs 10.87 lakhs. No provisions are made for General Reserve and Development Rebate Reserve as against Rs 1.00 crore and Rs 24 respectively set apart against these items in 1961. The directors have not proposed any dividend.

The directors state that the Government approval has been received for further expansion of the new factory. Although the Controller of Capital Issues had already given consent to raise capital by a further issue of shares, they have decided to postpone the proposed issue of capital.

Usha Martin's Progress

The year 1962 marked the successful completion of the Usha Martin Black (Wire Ropes) Limited's first-phased programme of setting up a steel wire and wire ropes plant with a rated capacity of 3,600 tons of wire ropes per annum. During the year, both the wire-drawing and ropery sections were brought into operation successfully.

Within a short period of eighteen months, the company has overcome its teething troubles. The production of about 1,000 tons of wire ropes, which were fully marketed, augurs well for Usha Martin for a bright future. The company's import application for completing the second phase of the project to manufacture 7,200 tons per annum of steel wire and wire ropes has been approved in principle by the Government, subject to the satisfactory foreign exchange arrangement to be made by the company.

The profit and Loss Account for the year shows a debit balance of Rs 1,42,070, which includes the provision of Rs 2,39,181 for Depreciation. After adjusting last year's debit balance of Rs 1,46,130, the total loss comes to Rs 2,88,200.

Mukand Iron Fares

Better

Mukand Iron and Steel Works Limited has done better during the year ended 31 December 1962, there being an increase in the net profit, before depreciation and taxation, to Rs 67 lakhs from Rs 61.44 lakhs in 1961. The charge

on account of Depreciation is higher at Rs 15.25 lakhs against Rs 11.52 lakhs and Development Rebate Reserve at Rs 4.25 lakhs against Rs 4.00 lakhs. There is no allocation to Gratuity Reserve against Rs 1.50 lakhs, while the provision for Bad and Doubtful Debts is Rs 26,411 (nil). Taxation claims as much as Rs 29.75 lakhs (Rs 25 lakhs).

After writing back from Gratuity fund Rs 8 lakhs and other excess provisions amounting to Rs 4.81 lakhs, there is a transfer of Rs 15.30 lakhs to General Reserve against Rs 6.55 lakhs previously. The dividend on the old Ordinary shares has been maintained at Rs 1.20 per share, less tax. The new Ordinary shares fully-paid will get 60 nP per share, taxable. The Deferred shareholders will receive about Rs 29.94 per share, taxable, against Rs 26.64 per share, taxable.

ISW Does Well

The Indian Standard Wagon Company has done exceptionally well during the year ended 31 March 1963. As a result of the completion of some large orders, there is a considerable increase in sales to Rs 8.05 crores from Rs 4.89 crores in the preceding year. As there is also a decrease in the unit cost of production, the net profit, before depreciation and taxation, has jumped to Rs 180.80 lakhs from Rs 81.81 lakhs. The results of the last accounting period perhaps constitute a record in the history of the company.

Unfortunately, however, the shareholders do not derive any appreciable benefit from the higher level of production. As a matter of fact, the directors have pointed out that the dividend has to be reduced to 15 per cent, taxable, from 28½ per cent, taxable, for the previous year. This reduction is, however, notional, because a larger capital is ranking for dividend purposes on account of the issue of bonus shares. The shareholders will get besides a cash bonus of 5 per cent, taxable, making the distribution for the whole year 20 per cent, taxable.

On account of the difficulties in getting supplies of matching steel and electrodes, the production has been affected to a certain extent; but, it is felt that the results may not be unsatisfactory.

Elphinstone Spinning

Pays Less

The Elphinstone Spinning and Weaving Mills Company Limited has reported a setback in its working for 1962. As a result, the directors have been obliged to reduce the dividend from 22 to 18 per cent, subject to tax. Even to pay this dividend, they have to draw upon the Reserves.

The gross profit has fallen from Rs 48.46 lakhs to Rs 33.74 lakhs. The provision for Depreciation is higher at Rs 9.82 lakhs against Rs

8.08 lakhs. The Taxation Provision is substantially lower at Rs 60,000 against Rs 16 lakhs. Development Rebate Reserve gets Rs 3.07 lakhs against Rs 2.26 lakhs. Development Reserve takes away Rs 1.02 lakhs (Rs 75,421). The provision for bonus to employees inclusive of Rs 12.76 lakhs for years 1959, 1960 and 1961, absorbs Rs 19.76 lakhs. As sum of Rs 12,500 is set aside for Doubtful Debts. No addition has been made to General Reserve against Rs 6 lakhs.

After bringing in a surplus of Rs 1.37 lakhs from the previous year, there is a balance of Rs 70,844 for distribution against Rs 9.72 lakhs. The directors have, therefore, transferred Rs 6.50 lakhs from General Reserve to meet the distribution.

Excellent Results of

Dalmia Cement

Thanks to a sharp increase in the output of clinker and cement and the better working of the Ceramic division, Dalmia Cement (Bharat) Limited has produced excellent working results for 1962. There is also an increase in the sales of Iron Ore, though the share of profits received from the Magnesite business is lower. Sales of all products amount to Rs 5.18 crores against Rs 4.11 crores.

Clinker production has risen to 4.58 lakh metric tons from 4.15 lakh metric tons and cement output to 4.95 lakh metric tons from 4.06 lakh metric tons. Despatches are shown at as much as 5.02 lakh metric tons against 4.08 lakh metric tons. The introduction of the production bonus scheme is said to have been responsible for the higher output of cement, which is in short supply at the present moment.

In the Ceramic division, while the output has recorded an all-round increase, it is emphasised that production of RCC pipes particularly has risen by 45 per cent. Sales of Iron Ore are higher at 1.50 lakh metric tons against 1.17 lakh metric tons.

There is some uncertainty regarding future exports to Japan from the Bellary-Hospet area. Negotiations are in progress with the Japanese buyers for finalising a fresh high-grade iron ore contract for 1963-64. If these negotiations prove successful, the company can expect to receive further contracts for supplies of high-grade iron ore. In the meantime, the expansion plans are kept in abeyance.

Higher Profits for

Digvijay Cement

Shree Digvijay Cement Company Limited has done better in 1962, thanks to an increase in output of cement to 471,577 metric tons from 404,104 metric tons in 1961. The production of clinker has recorded

only a small increase to 426,025 metric tons from 423,025 metric tons. Despatches are very much higher at 474,804 metric tons against 402,905 metric tons.

The net profit, before providing for Depreciation and Taxation, has risen to Rs 72.23 lakhs from Rs 61.57 lakhs. The provision for Depreciation is raised to Rs 21.75 lakhs from Rs 18.86 lakhs and Development Rebate Reserve to Rs 11.21 lakhs from Rs 6.24 lakhs. The transfer to Rehabilitation Research and Development Reserve also is higher at Rs 4.95 lakhs against Rs 77,150. The provision for Taxation is raised to Rs 17.65 lakhs from Rs 14.50 lakhs.

The shareholders may feel satisfied that the dividend on the Ordinary shares has been maintained at 10 per cent, taxable. As a proportionate dividend is also to be paid on the equity shares allotted to the foreign participants, the amount brought in is utilised to some extent for paying the ordinary and preference dividends.

Sone Valley Cement

Pays More

The Sone Valley Portland Cement Company has been able to report a substantial rise in sales from Rs 2.11 crores to Rs 2.73 crores for the year 1962, reflecting the production and despatches being the highest in the last ten years. But the benefits of improved production are not reflected in the working results, as they have been completely offset by increases in costs, mainly in the price of coal, railway freight and the Wage Board Award.

The net profit, after providing for Depreciation and Taxation, is lower at Rs 8.03 lakhs against Rs 12.59 lakhs for the preceding year. Apart from providing Rs 2.35 lakhs for General Reserve No. 1, Taxation provision is raised to Rs 8.80 lakhs (including Rs 60,000 for SPT) from Rs 3.70 lakhs. Depreciation is, however, reduced to Rs 4.50 lakhs from Rs 4.74 lakhs, while no provision is made for General Reserve No. 2 against Rs 8.50 lakhs. The dividend is raised from 6 to 8 per cent, subject to tax.

According to the directors' report, production and despatches, during the current year, have, so far, been maintained at a satisfactory level. They add that the financial results will, however, depend on the price increase that may be given by the Government.

Orissa Cement—Net

Earnings Lower

The full impact of the increase in retention price of cement allowed by the company with effect from 1 November 1961 is reflected in the working results of the Orissa Cement Limited for 1962. Gross sales are shown higher at Rs 590 lakhs as against Rs 534

lakhs; but the earnings are lower due to all-round increase in costs and lower production in the Refractory division.

The net profit, after providing for Depreciation and Taxation, amounts to only Rs 47.75 lakhs as against Rs 71.66 lakhs for 1961. Taxation is raised to Rs 51 lakhs from Rs 44 lakhs; Development Rebate Reserve to Rs 3.30 lakhs from Rs 2.91 lakhs and Rehabilitation and Development Reserve to Rs 4.08 lakhs from Rs 69,841. Depreciation is, however, lowered to Rs 36.62 lakhs from Rs 36.82 lakhs; General Reserve to Rs 13.50 lakhs from Rs 30 lakhs and Gratuity Reserve to Rs 1.19 lakhs from Rs 1.35 lakhs. The dividend on the Ordinary shares is reduced from 15 to 10 per cent, subject to tax.

South India Viscose—

Prospects

South India Viscose Limited has, at last, got into its stride. It can be expected that there will be a significant increase in turnover in the current year. A larger number of spinning frames will be in operation continuously, while the Staple-fibre section may also be expected to work on a more profitable basis. But, in the year ended 31 December 1962, the company was not able to report satisfactory results, as the output of rayon yarn could be stepped up significantly only in the latter half of the year and the cost of imported pulp rose sharply because of the necessity to pay heavy premium under the export incentive scheme.

There was also some difficulty in obtaining adequate supplies of Caustic Soda. The prices realised on staple fibre were not remunerative because of the heavy imports permitted by the Government. It is felt that, as a result of a fresh increase in working expenses in the past few months, it will not be possible to earn satisfactory profits without higher selling prices. Representations in this regard have been made to the Government and a favourable decision is awaited.

Meanwhile, the company's net profit for the year 1962, before providing for depreciation and taxation is higher at Rs 127.12 lakhs. But even the higher level of earnings is not adequate to meet depreciation charges fully. The amount set aside for this purpose is only Rs 159.23 lakhs as against Rs 17.96 lakhs in 1961. It has been found necessary to provide additionally Rs 53.09 lakhs in respect of arrears of depreciation. With the result, there is a debit balance of Rs 84.09 lakhs, which is carried forward against a credit balance of Rs 1.10 lakhs brought in. The company will necessarily have to provide Development Rebate in the coming years given adequacy of profits.

Better Working of Enfield India

Enfield India Limited has reported better working results during the year ended 31st December 1962, sales constituting a record at Rs 133.09 lakhs against Rs 130.59 lakhs in 1961. There would have been a further rise in sales, but for the dislocation in production in the last quarter of the year on account of the emergency.

The net profit, before providing for depreciation and taxation, has risen to Rs 15.60 lakhs from Rs 11.13 lakhs—more than in proportion to the increase in sales. It is explained that, on account of the completion of the phased programme for manufacturing motor cycles, the ratio of profits to turnover is higher at 10.19 per cent against 8.60 per cent.

The provision for Depreciation is Rs 8.57 lakhs against Rs 6.83 lakhs and Development Rebate Reserve Rs 1.16 lakhs against Rs 69,847. Taxation provision is higher at Rs 2.93 lakhs against Rs 1.23 lakhs. It has not been possible, however, to raise the dividend on the equity capital. Besides the larger provision towards Depreciation and Development Rebate Reserve, a larger effective capital is ranking for this purpose. Also there was an issue of equity shares for Rs 3.30 lakhs to Villiers Engineering Company of UK, which is collaborating with the company in the manufacture of Industrial engines.

The Scooter project was completed during the year and it was scheduled that regular production, after pilot plant operations, should be commenced in the last quarter of the year. A capital expenditure of about Rs 25 lakhs had been incurred in this connection. A loan of Rs 14 lakhs has been obtained from the Industrial Finance Corporation for financing the second stage of the scooter project.

It is learnt that the company is now busily engaged in the manufacture of heavy-weight cycles in large number for the Defence Services. The pattern of production has been reorganised to meet defence needs. With the additional production facilities and rationalisation of the methods of working, it is expected that there will be a sizable increase in sales during the current year. A few types of industrial engines are expected to be placed on the market later in the year.

Jenson & Nicholson (India) Earns More

The working of Jenson and Nicholson (India) Limited has resulted in a higher net profit, after providing for depreciation and taxation, of Rs 4.81 lakhs for 1962 as against Rs 4.07 lakhs, thanks to the rise in sales from Rs 2.27 crores to Rs 2.44 crores.

All allocations have been increased:—Depreciation to Rs 2.88 lakhs from Rs 2.56 lakhs; Taxation (including Rs 13,500 for SFT) to Rs 5.69 lakhs from Rs 3.30 lakhs and Development Rebate Reserve to Rs 24,000 from Rs 9,000. A sum of Rs 6.00 lakhs (nil) is also provided for General Reserve. Even after these increased allocations, the directors have found it possible to raise the Ordinary dividend from 6 to 7 per cent. subject tax, for the year.

The directors state that the Government has granted a manufacturing licence for the erection of a new manufacturing unit in the Panvel area of Colaba district in the Maharashtra State. It is expected that the construction of the new factory will commence before the end of this year.

Decline in Sales of National Tobacco

The decline in sales from Rs 8.74 crores to Rs 8.44 crores is reflected in the working results of the National Tobacco Company of India Limited for the year 1962. The net profit, after providing for depreciation and taxation, amounts to only Rs 8.53 lakhs as against Rs 14.00 lakhs for the previous year, though the latter figure includes Rs 3 lakhs being excess provision for taxation no longer required.

In respect of allocations, Depreciation is raised to Rs 7.86 lakhs from Rs 6.96 lakhs and Taxation to Rs 8.99 lakhs from Rs 7.45 lakhs, apart from providing Rs 7.51 lakhs for General Reserve. The dividend on the Ordinary shares is, however, maintained at 7 per cent. subject to tax.

The directors state that the recent budget announcements have imposed a further steep increase in the burden of taxation and, though they have been obliged to increase the prices of most of their products, these increases have not reflected the full impact of the additional levies.

Clive Row Investmet Repeats

The Clive Row Investment Holding Company has nearly maintained its earnings for the year 1962. The directors state that small increases in income from jute and miscellaneous companies are offset by decreases in dividends from the tea companies.

Income by interest and dividends on investments is shown slightly lower at Rs 16.47 lakhs against Rs 16.60 lakhs. The net profit, after providing for Taxation, amounts to Rs 10.39 lakhs as against Rs 10.38 lakhs in the preceding year. The provision for Taxation is raised to Rs 4.70 lakhs from Rs 4.25 lakhs. The directors have proposed a final dividend of 50 pP, making a total of 75 pP per share, less tax, same as in the preceding year.

BALANCE-SHEET BRIEFS

Metal Box Company of India Limited has reported a higher net profit, before taxation and after depreciation, of Rs 123.60 lakhs for the year ended 31 March 1963 as against Rs 113.75 lakhs for the preceding year. The directors have proposed a total dividend of Rs 1.90 per share, taxable, for the year as against a taxable dividend of Rs 2.50 per share paid previously.

The working of the Hyderabad Asbestos Cement Products Limited has resulted in a sharp rise in net profit, before providing for depreciation and taxation, to Rs 39.31 lakhs for 1962 from Rs 13.98 lakhs for the preceding year. A maiden dividend of Re 1 per share, taxable, is recommended.

STOCK EXCHANGES Initial Recovery Not Maintained

Watch-Dog Writes:

THE announcement relating to the revision of retention prices had generally a favourable reaction in the stock markets. But, the latest developments on the northern frontier and the complete absence of any support from investors had a depressing effect during the latter half of the week, resulting in a steady setback in prices and a considerable shrinkage in the volume of business.

With interest at minimum, apathetic conditions prevailed on Lyons Range.

Dalal Street finished the week on a subdued note with selected shares declining sharply.

Though the turnover on the Madras Stock Exchange was poor, there was selective buying interest.

Trading continued to be dull on the Bangalore Stock Exchange.

Nervous feeling prevailed on the Ahmedabad Stock Exchange where selected industrials lost further ground on distress selling.

A sharp decline in Delhi Cloth Mill on persistent liquidation was the main feature of the week's trading on the Delhi Stock Exchange.

On the London Stock Exchange, operators preferred to hold off for the time being in view of the uncertain political situation.

Prices on Wall Street showed a mixed trend.

IN the complete absence of any buying interest, conditions in the local stock market remained generally stagnant during the week under review. The tendency for prices was to sag slowly owing to tired liquidation coupled with bear pressure. Whatever business done, was mainly of a speculative

nature, as investment support was practically lacking in view of the none-too-bright prospects for dividends in the coming year.

No doubt, the market opened the week on a steady note and prices showed a smart recovery from the recent low levels following the announcement of increased retention prices for steel and pig iron. But, the recovery could not be retained till the close of the week due to sustained selling pressure on the feeling that the revision of retention prices would only compensate the rise in the cost of production and would not help in increasing the distribution to the shareholders.

There were also other factors contributing to the depressed sentiment in the market. First, there was a general anxiety over the growing shortage of funds, as substantial funds had already been mopped up by the recent new issues. It was thought that the higher tax payments coupled with the diversion of funds to compulsory deposits would go to reduced the flow of fresh money for investment in equities.

Secondly, the drastic cut in dividends by many companies in recent weeks and considerably reduced allocations to Reserves had a depressing effect on market psychology. In this regard, it was thought that there would not be a recovery in prices without a radical modification of the super-profits tax and that further industrial development and inflow of foreign capital was bound to be retarded.

Above all, investors were reluctant to enter the market although they considered the present level of prices to be fairly attractive. There was a tendency on their part to postpone investment decision, pending better clues to the prospects of business earnings. With the result, bears dominated the entire scene and exploited the situation to their advantage.

Giltedged securities were a steady feature, thanks to official support. Short and medium-dated securities continued to meet with good support with only few sellers in evidence. 3 per cent 1986 Conversion Loan improved further to Rs 64.10 from the previous week-end level of Rs 63.75.

Bank shares were, however, neglected. Punjab National came in for offer at 18.75 against Rs 19, while United Commercial changed hands up to 66 from Rs 64.

Jute shares lacked sustained support in view of the absence of business with overseas buyers in jute goods. Doubts were even expressed in certain quarters whether the industry would be able to dispose of its goods at the present rate of maximum production. Delta were better at Rs 159 against Rs 154.50 and Champdany at Rs 20.94 against Rs 20.25. Ganges were rather quiet at Rs 13.87 against Rs 13.94 and so also

New Central at Rs 12.50 against Rs 13. Birlas were on offer at Rs 23.69 against Rs 29.37 with Howrah having sellers at Rs 18.75 following the disappointment over the 10 per cent dividend.

There was little doing in the Coal section. There was some enquiry for Central India up to Rs 10 from Rs 9.87 with Western Bengal hovering idly around Rs 8.94

In the Tea section, only stray business was possible despite the improvement in the prices obtained at this week's auction. Operators seemed to be reluctant to enter into commitments following developments on the northern border. Grob changed hands at Rs 6.94 to Rs 7.19; Hasimara at Rs 12.75 to Rs 13 and Nagri Farm at Rs 29.12 to Rs 29.25. Tezpur were a steady feature at Rs 15.37. Sugar shares continued to be practically neglected. Darbhanga met with some enquiry up to Rs 8.06 from Rs 7.94 and Raza-Buland up to Rs 9.37 from Rs 9.25

There was cautious trading in the Textiles section. J. K. Cotton receded further to Rs 12.37 from Rs 12.56 and Elgins to Rs 17.94 from Rs 18, although Dunbar met with some support up to Rs 27.62 from Rs 27.

In the Engineering section, price movements were mainly influenced by the speculative activity in Indian Irons which, after an initial spurt to Rs 23.16 from Rs 23.09 following the news of the increased retention prices, receded gradually to Rs 22.70 before finishing the week better at Rs 22.76. TEXMACO moved down to Rs 23.70 from Rs 24; G. K. Williams to Rs 32.25 from Rs 33 and Jessop to Rs 23.50 from Rs 24.25. Dalmia Iron were, however, well maintained at Rs 10.56, while Calcutta Steel closed better at Rs 13.06 after touching a low of Rs 12.75. Braithwaite improved to Rs 31.19 from the recent low of Rs 29.75 with Binani Metal ruling rather quiet at Rs 10.50 against Rs 10.87.

Trading in the Miscellaneous section continued to remain dull in the absence of buying interest. The entire list closed with minor losses on balance, as will be clear from the following price trends of a few selected shares:—

**I am a born optimist
—what about you?**

If a man can look at the bills his wife runs up and say: "Thank heavens she has not spent more!"—then he is an optimist. AND THAT'S ME.

Even when it comes to paying more through taxes and compulsory deposits, I grin and bear it. It's not that I'm some kind of heroic nut. I know that some day it's all going to pay dividends, if not for me, for my kids—and they are all that I'm concerned about. Of course, it means tightening the old belt a bit.

Not that I never groan, of course. I groan when the postman brings those premium notices on my Life Insurance. But I pay up and say: "One payment less; one more chunk saved; one step nearer maturity." It *does* make for peace of mind. The thought of my wife and the children having this little security feeds my optimism.
I AM AN OPTIMIST—I think.

Central Machine Tool Institute

Starting practically from scratch, the machine
tool industry in India has made notable progress,
both in the public and the private sectors, during
the last twelve years. From about Rs 26 lakhs,
mostly in the form of simple, primary types of
machine tools, output increased to about Rs 9
crores in 1960 and further to about Rs 11 crores
in 1962, covering a wide range of machine tools
including heavy and high precision types. The
plans have accorded high priority to the program-
mes for development of this industry. In addi-
tion to achieving a fair measure of diversification
of production, the manufacture of heavier ma-
chine tools was taken up during the Second Plan.
The achievement of Hindustan Machine Tools,
Bangalore, is a well-known story. The expan-
sion in the public sector has been matched by the
development of a number of units in the pri-
vate sector. Including the production of small
scale units, the total production in 1960 was Rs
9 crores to which the contribution of Hindustan
Machine Tools was Rs 3.1 crores. During 1962,
the public sector units manufactured machine
tools worth Rs 5.8 crores, and the output of the
organised units in the private sector is estimated
at over Rs 5.5 crores. The total production of
machine tools and small tools during the year
was about Rs 18 crores.

The total demand for machine tools and allied
workshop machinery during the Third Plan period
has been estimated at Rs 170 crores. The Third
Plan had originally envisaged a capacity target
of Rs 30 crores of machine tools for 1965-66 (Rs
16 crores in the public sector and Rs 14 crores
in the private sector). In view of the rapidly
growing demand for machine tools which has
been accentuated by the Emergency, the pro-
gramme has been stepped up. It is now ex-
pected that by 1965 the country would be in a
position to produce machine tools and allied
workshop machinery worth Rs 60 crores. The
programme of development that has been drawn
up envisages not only increase in overall output,
but manufacture of machines of improved design
and their elements, as well as provision of faci-
lities for the development and testing of proto-
types.

Manufacture of machine tools is a highly special-
ised business. The progress achieved so far has
been on the basis of technical collaboration with
well-known foreign firms. While dependence
on foreign technical know-how and designs was
necessary, and unavoidable, in the initial stages,
it cannot be said that the industry has been
well-established until the necessary knowledge
and skill for designing machines tools have been
developed within the country. The Central
Machine Tool Institute, Bangalore, whose founda-
tion stone will be laid by Mr C. Subramaniam,
Minister for Steel & Heavy Industries, on July
5, is expected to make a substantial contribu-
tion for the development of a self-reliant ma-
chine tool industry.

The establishment of an institute for prepara-
tion of designs and training design personnel,
which had been recommended by a technical
committee set up early in the Second Plan, was
seriously taken up when the Government of
Czechoslovakia made a generous offer of Rs 60
lakhs for the purpose. A committee with Prof.
M. S. Thacker as Chairman was constituted in
March 1960 for working out the details regard-
ing the scope and location of such an Institute.
The Committee, after considering the prelimi-
nary report submitted by Messrs. Technoexport,
Prague, recommended the setting up of a Ma-

chine Tools Research Institute as an auton-
omous body and that it should be located in the
vicinity of a well-developed Machine Tool Fac-
tory. Bangalore was chosen as the site in view
of the proximity of the Indian Institute of
Science as well as of the Hindustan Machine
Tool Factory. In accordance with these recom-
mendations Government decided to set up the
Central Machine Tools Institute as an indepen-
dent body in Bangalore.

Under the agreement signed in May 1962 with
Technoexport of Prague, and the supplementary
agreement signed in December 1962, the Govern-
ment of Czechoslovakia will supply machinery
and expert technical staff within the gift value
of Rs 60 lakhs for setting up the Institute.
Twenty-three Indians will be trained in Czecho-
slovakia for periods ranging from twelve to
twenty-four months. Technical documentation,
research reports and Czech Standards on Ma-
chine Tools and their elements will also be made
available to the Institute free of charge. The
cost of land, buildings etc will be met by the
Government of India, as well as the cost of other
machinery that may be required for the Institute
besides what is supplied by Czechoslovakia

The Government of Mysore has made avail-
able 32 acres of land on the outskirts of Banga-
lore for the construction of the workshops and
administrative buildings of the Institute. The
Government of Mysore has also agreed to sup-
ply 100,000 gallons of unfiltered water per day
from Soldevanahalli Main which passes near
the site of the Institute. Construction of ad-
ministrative and workshop buildings, recruit-
ment of staff and arrangements for preliminary
training of the technicians who will be deputed
to Czechoslovakia, and arrangements for receipt
and installation of machinery from Czechoslova-
kia as well as arrangements for procurement of
equipment from other sources are expected to
be completed in 1963-64. During the year, the
Institute will also initiate technical activities
such as implementation of Indian Standards of
machine tool elements, and also provide techni-
cal assistance to the Industry for upgrading the
quality of its products.

The Institute which was registered as a So-
ciety in March 1962, with Headquarters in Ban-
galore, is under the administrative control of
the Ministry of Steel & Heavy Industries. The
management will be in the hands of a Govern-
ing Council appointed by Government and consist-
ing of representatives of both the private and
public sectors of industry, with the Director-
General of the Council of Scientific and Indus-
trial Research as President.

The major functions of the Institute will com-
prise development of machine tools, training of
personnel, research and documentation. The
Institute will organise and conduct research for
the development of machine tools, undertake
the design, manufacture and testing of prototype
machine tools and train designers for the machine
tool industry. The research activities will cov-
er methods of calculations used in the design
of machine tools, behaviour of machine tools and
their elements, Hydraulic, Electrical and Elec-
tronic control systems and metal cutting. The
Institute is not expected to replace the normal
design facilities that should form part of major
industrial units. It is intended to serve as a
clearing house for technical information and as
a centre for solving the common problems of
the industry as a whole.

Sterling and Politics

By Paul Einzig

When the Profumo crisis suddenly flared up at the beginning of June it was feared that sterling would be affected by the feeling of political uncertainty it had created. Actually, while the Stock Exchange suffered a setback—especially as far as equities were concerned—sterling weathered the storm remarkably well. It remained most of the time a shade above its parity with the dollar, without requiring any official support to steady its tendency. Yet there was, to say the least, possibility that the crisis might lead to an early general election, and in any case it has certainly increased the Government's unpopularity in the country. On second thoughts, however, the foreign exchange market has reached the conclusion that the scandal has actually improved sterling's position in the near future. While until May an autumn election was, to say the least, a possibility, in the changed circumstances the Government is likely to defer it until some time in 1964. So holders of sterling may breathe freely for at least twelve months, possibly for as long as sixteen months.

Moreover, while the political situation has changed from bad to worse, the economic situation has at long last begun to benefit by the various reflationary measures adopted by the Government during the last twelve months. Unemployment has declined—even though it is still above 500,000 for the whole United Kingdom—and the balance of payments has improved. It is true, consumer demand is still sluggish in most spheres and capital expenditure by industry leaves also much to be desired. But there is progress, and if the Government gives itself time instead of rushing into an early election it stands a chance of benefiting politically by the economic improvement. Industry views the economic prospects, especially those of export trade, with growing optimism.

Another reason why the strengthening of the chances of the Labour Party to win the election has not affected sterling is that the foreign exchange market is now inclined to view the prospects of another Socialist Government in Britain with less alarm and despondency. While it is still probable that the announcement of the election date will be followed by heavy selling pressure on sterling, many people are now inclined to hold the view that a Labour Government would not embark on policies that might lead to a devaluation. Mr Wilson committed himself against devaluation or a floating exchange rate. He would have to moderate his expansionary zeal and the adoption of measures hostile to capital

in order to be able to live up to his declaration. For history is not likely to repeat itself. In 1945 the Labour Government received a huge long-term loan from the United States, and in subsequent years it received gifts under the Marshall Plan. Although a Labour Government of 1964 could depend on receiving external support to bolster up sterling against a speculative attack that is bound to accompany and follow the general election, it will be in the form of short-term facilities by the International Monetary Fund and by a number of Central Banks. To ensure the renewal of such credits the Labour Government will have to conform to certain principles of sound economy and finance as interpreted by its foreign creditors. This is likely to put a brake on reckless expenditure, ambitious nationalisation and other anti-capitalist measures and will go some way toward assisting in the maintenance of a stable sterling.

US International Trade Policy

By Leonard Weiss*

Part IV The Next Step

The next step for the United States obviously is to carry out the authority in the new Trade Expansion Act and to negotiate the tariff and trade agreements it contemplates. The process will be a long and difficult one. It will require careful preparation at home and internationally.

What we have to contend with is a very wide gamut of trade matters going far beyond tariffs alone. The development of the Common Market has upset long-established trading patterns and relationships at the same time as it has created new ones. In addition, we face many problems which would have existed and which would have had to be met even if there were no Common Market.

Trade in agriculture, for example, has always been a most difficult issue in international trading relationships. The development of the Common Market has dramatized the issue. The problem, however, is an old one and the time is overdue for coming to grips with it.

In dealing with this problem, we shall have to take a hard look at our own policies and practices. We can expect from others no more than we can expect of ourselves.

There is also the problem of the trade of less developed countries.

The need of these countries to expand their exports and earn the foreign exchange to support their development is growing more, rather than less, acute. The terms of trade of these countries have been increasingly unfavourable, and the gap between their foreign exchange earnings and their import requirements is continuing to grow.

In addition to this general problem, there are special difficulties as a result of the favored position which some less developed countries have over others in access to the Common Market.

Ways and means must be found to meet these various problems.

There is also the whole area of non-tariff barriers to which we must give attention.

The United States is concerned about quantitative restrictions against its trade, particularly those applied inconsistently with international commitments. The United States is likewise concerned about other burdensome restrictions

against its trade. The Trade Expansion Act took specific note of unjustifiable restrictions against American commerce and directed the President to do everything practicable to obtain the easing of such restrictions.

Other countries are similarly concerned about US policies and practices.

They are fearful that the escape clause might be used to nullify tariff concessions which they may negotiate with the United States. They find that US valuation for duty purposes of certain products on the basis of American selling price renders tariff concessions on such products meaningless and are unwilling to exchange tariff concessions in this area unless the United States takes some steps to deal with this problem.

They are worried about the operation of US antidumping legislation and about increasingly restrictive application of "Buy American" laws and practices. They wish matters such as these to be considered in the coming tariff and trade negotiations.

A great new enterprise is in the making. The difficulties which lie ahead should not be minimized. The problems which will have to be solved are many and complex. They will raise difficult economic and political issues for the countries concerned. The differing views of the countries participating in this enterprise will have to be reconciled.

Nothing less than a broad general movement of tariff and trade liberalization is required.

The collapse of the negotiations for the accession of the United Kingdom to the European Economic Community makes this need even more urgent.

It is to be expected that the trading countries of the free world, out of self-interest if for no other reason, will respond to the needs of the situation and reach constructive solutions to the problems ahead.

It is to this task that we must now all turn.

(Concluded)

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

United Bank of India Ltd.

offers complete banking service

* Condensed from Mr. Weiss' address at Pennsylvania State University on 5 April 1963

World of Finance

NEW LOAN

Imminent

MONEY has turned so easy, that the new loan announcement can be expected at any moment. The slack season so far has been extremely satisfactory, and Deposit growth has not been inconsiderable. The two-fold accretion to the banking system has meant that, once the pressure consequent upon tax payments at the beginning of June was over, banks are comfortably placed. Nor should the compulsory deposit scheme involve any drain on Deposits. Indeed, with the announcement that a few of the Scheduled Banks will also be allowed to receive such compulsory deposits, it is likely that the banking system on balance stands to gain. For, who are the compulsory depositors to be? Save for property holders, they will be drawn mainly from the non-tax paying population. Those not liable to tax do not normally have the banking habit either. So, money which would have disappeared into the unorganised money market has now been secured for the monetised sector of the economy to the extent of such compulsory deposits.

It is therefore possible that Government will be thinking in terms of a more ambitious borrowing programme. The second tranche—the first consisted of conversion loans purely—may seek the entire balance of the targeted amount in the Budget. While the money market will not have the capacity to absorb so large an amount of the new loan, the intention may be that the Reserve Bank should in the first instance take up large parcels, in the knowledge that in due course, and in the next few months, such holdings can be passed on through the tap to the banks. The States are pressed for money; they are under obligation not to borrow on their account from the market. The Centre has considerable liabilities in respect of the defence effort. For both these reasons we may expect a maximum cash borrowing effort in the next fortnight. Again, because the objective is to pass on parcels of gilt-edged to banks, a special short-dated loan to attract such custom may be expected.

BANK RETURNS

Banks Almost Out of Debt

That the time is propitious for the cash loan being announced by the Central Government is clearly indicated in the latest banking returns. According to the figures of the Reserve Bank for 21 June, Active Note Circulation has contracted sharply by Rs 31.88 crores to Rs 2,275.19 crores. Return of rupee coin from circulation has also been considerable at Rs 2.06 crores. For butressing Balances Held Abroad, a transfer of Rs 3.50 crores from Foreign Securities in the Issue Department became necessary, and the

relevant figure has consequently moved down to Rs 105.58 crores. Thus, contraction of currency has taken place against Rupee Securities for Rs 26.50 crores, reducing such investments held in the Issue Department to Rs 1,970.94 crores. As such the Reserve Bank's cash in the till has been marked up by Rs 3.94 crores to Rs 32.93 crores.

The progress of the slack season has been such that banks have now got over all the strain and pressure that they were subjected to on account of the 1962-63 busy season. Borrowings from the Reserve Bank have been repaid to the extent of Rs 5.61 crores and now stand at the nominal figure of Rs 1.30 crores; and the Reserve Bank's Advances against usance bills are also at the fractional level of Rs 0.46 crore. In addition, during the week the Scheduled Banks have added Rs 10.12 crores to their Reserve Balances, which are now shown at Rs 89.16 crores; and it may be remarked that this increase, as also the fall in indebtedness to the Reserve Bank, is on account of banks other than the State Bank. The State Bank, incidentally, purchased about Rs 6 crores of securities from the Reserve Bank, and thus the rise of Rs 35 crores to Rs 269.82 crores can almost wholly be explained away as having been owing to transfer from the Issue Department and to sale of gilt-edged to the State Bank. Deficit financing, thus, is unlikely to have been resorted to.

And yet the Centre must have been in receipt of considerable income. For the States have obviously been paid something by way of grants or loans. The latter's Deposits have improved by Rs 4.32 crores to Rs 12.28 crores on top of a reduction of Rs 10.56 crores to Rs 40.22 crores in the ways and means Advances of the Reserve Bank to the States. Furthermore, the Centre had a maturing liability in respect of Treasury Bills Purchased and Discounted by the Reserve Bank; this ran to Rs 6 crores, and so we cannot exclude the possibility of deficit financing having got obscured by open market sales of securities by the Reserve Bank.

It remains to note that Balances Held Abroad, despite the transfer of Rs 3.50 crores from the Issue Department, are shown higher only by Rs 0.08 crore at Rs 7.04 crores. The heavier week by week drain upon our foreign exchange reserves, symptomatic of the slack season for exports, has started.

The return of the State Bank is largely featureless, except for the fact, as already noted, of acquisition of gilt-edged for Rs 6 crores. This was possible because, in true slack season fashion, the total of Advances has receded by like amount of Rs 5.83 crores to Rs 279.32 crores. Deposits show little change in being lower by Rs 0.48 crore at Rs 565.54 crores. So, cash balances, including money at call and short notice, are higher by Rs 1.42 crores at Rs 25.84 crores.

+

That banks were blessed with considerable new resources is revealed in the statutory statement of Scheduled Banks for 14 June. Net Demand Deposits have moved up by Rs 1.09 crores to Rs 994.70 crores, and there is a more pronounced rise of Rs 11.76 crores to Rs 1,263.54 crores in net Time Deposits. About Rs 11 crores of this increase are on account of banks other than the State Bank. Simultaneously, the demand for funds has slackened, and the total of Advances has plummeted down by Rs 22.75 crores to Rs 1,543.88 crores. Naturally the banks repaid borrowings. Indebtedness to the State Bank is lower by Rs 2 crores or so at Rs 17.14 crores as compared with Rs 19.09 crores in the previous return; and central banking credit has been cut sharply by Rs 16.21 crores to Rs 7.87 crores. The gilt-edged portfolio, largely on account of State Bank transactions, has declined by Rs 5 crores to Rs 632.44 crores. So, the improvement in resources is also somewhat reflected in cash balances, including money at call and short notice, moving up by Rs 4.49 crores to Rs 205.35 crores. Judging by the Reserve Bank returns for 21 June, there has been further increase in bank's Deposits and a further contraction in bank credit.

+

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 25 June, 1963. The amount offered was Rs 2,00,00,000. Tenders at Rs 99.410 per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.345 per cent annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 1 July, 1963. Successful tenderers should make payment on Friday, 5 July, 1963 at all centres. Other conditions are as usual.

During the week ended 21 June, 1963, Government of India Treasury Bills for Rs 61,42,75,000 were sold in favour of Reserve Bank of India. 91 days Intermediate Treasury Bills sold from 19 June, 1963 to 22 June, 1963 amounted to Rs 4,62,00,000.

Notes

TEA Vast Scope for Export

Inaugurating the new tea auction chamber of the Calcutta Tea Traders' Association, Mr Manubhai Shah, Union Minister for International Trade, struck an optimistic note of future of tea exports from India. The nil tariff allowed for Indian tea in the countries belonging to the European Economic Community, the vast potential markets existing in countries in West Asia and Africa and the growing demand for quality tea in international markets are favourable factors for bolstering up tea exports from the country. For exploiting the situation concerted action is needed for increasing production of tea particularly of quality tea which is eagerly sought after by the consumers abroad. The assurance given by the Minister that the Government will offer liberal financial aid and release adequate foreign exchanges to the trade is timely to energise the activities of the planters and the trade. As Mr Shah has emphatically suggested the industry should embark on an intensive propaganda drive in all the export markets for tapping the existing potential. Initiative

on the part of individuals will also be beneficial for pushing our products in commercially speaking, virgin markets. The Minister's suggestion for deputing trained personnel to foreign countries to obtain a correct assessment of the market pattern, marketing problems and potentialities needs prompt action. A significant drawback in our present export campaign is the outmoded and unattractive packing of Indian tea. This complaint is not confined to tea alone as the packing of goods like cotton textiles have more often than not failed to catch the eye of overseas customers. Therefore stress should be laid on making packing in line with the changing fashions of the day. The tea industry should also organise demonstrations in selected centres abroad for displaying the correct method of preparing good tea.

While recounting the eminent role played by the city's tea centre in serving the industry's requirements Mr A. N. Sircar, the Chairman of the Calcutta Tea Traders' Association assured that the newly opened centre will continue its activities with renewed vigour. The Government of India's decision to establish four tea research centres in Assam, Calcutta, Madras and Dehra Dun is a step in the right direction and will go a long way toward modernising tea manufacture and for developing improved varieties.

distressingly enough there was a somewhat dampening of the enthusiasm of some of the aid giving countries which was evidenced at the Aid-India Club meeting held at Paris. This explains in part the fall in aid promised by the Federal Republic of Germany for 1963-64 to about \$65 million from \$139 million bequeathed in the preceding year. This cannot by any manner of reckoning be rated as a fortuitous development as the fault obviously lies to a considerable extent on our failure to fully use aid promised or received.

In fairness it should be mentioned that the scant utilisation of external assistance can be attributed to the tardiness in aid processing at various stage. Further large chunks of aid have been tied up to one project or the other with stipulations that the specified aid cannot be deployed for any other purpose or projects. There has been greater awareness on the part of the donor countries to extend larger part of their assistance as untied loans for assisting India to utilise them for whatever project or purpose the planners deem most urgent. The remarkable increase in the range and scale of external aid operating in our country warrants a speedy and efficient deployment of the available quantum for rapid expansion of the country's economic base.

* SFC West Bengal

The working of the West Bengal State Financial Corporation during the past year reflects its growing importance as a financial institution catering to the needs of industries in West Bengal. With the passing of the State Financial Corporations (Amendment) Act of 1962, the WBSFC has been enabled to extend the scope of its business as will be evident from the fact that during the year ended March 1963, disbursements touched a new high of about Rs 90 lakhs since its inception. The amount of applications pending with it as at the close of the year aggregated Rs 2.20 crores. The Corporation's present commitments in respect of loans sanctioned but not disbursed amount to about Rs 2 crores. Over and above this, it has an underwriting commitment to the extent of Rs 15 lakhs. As against these the resources in hand is only Rs 10 lakhs. Although the corporation issued bonds in November last for Rs 50 lakhs, resources have been quite inadequate to meet the commitments. Speaking at the ninth annual general meeting of the Corporation recently, Mr B. M. Birla, Chairman, has pointed out that resources have been one of the major problems for the WBSFC as they have been for all financing institutions in the country. In order to be in a position to meet its commitments, the corporation is exploring all avenues

for raising resources and as a first step has submitted applications to the Rannance Corporation for Industry for loans. It has been reported since that sanction has been received for the first instalment of this loan. As regards raising finance by issue of bonds, it is expected that the Central Government will itself float loans on behalf of the State Financial Corporations. It has also been indicated that the State Government is expediting sanction of the Corporation's application for an ad hoc issue of bonds.

Although engineering industries form the majority of the Corporation's clientele, the number of other industries receiving assistance has also been increasing steadily. As the State Financial Corporations are included in the Government sponsored scheme for the grant of matching rupee loans to collieries for the purpose of taking advantage of the World Bank loan, the WBSFC can participate in the scheme provided it can mobilise enough resources. It is a tribute to its bold policy that it has already sanctioned loans to two collieries. The disbursements of these loans however has not yet taken place because certain necessary sanctions have not been received from the State Government. A feature of the business of the corporation last year is the sizable assistance extended by it to cold storage units. Potato production in the State is fast increasing thanks to an ambitious scheme sponsored by the State Government and consequently there is a growing demand for the establishment of cold storages.

The WBSFC has become viable since the last two years in as much as it has been able to pay the guaranteed dividend without having to take a subvention from the State Government. During the last year the balance of profit for distribution has been just sufficient to meet the dividend liability. The steady progress of the Corporation is shown by the rising trend of profits. From Rs 1.24 lakhs in 1954-55, profit has risen steadily over the past eight years to stand at Rs 7.49 lakhs in 1962-63.

* GLASS INDUSTRY Rapid Progress

Despite difficulties the glass industry has been making good progress with production of different types of glass and glassware increasing from 92,000 tons in 1950-51 to 2.25 lakh tons in 1960-61. It was set a target of 2 lakh tons in the Second Plan but it achieved the stipulated level of output well before the end of the scheduled period. The current plan has fixed a target of 4.40 lakh tons for which a capacity target of 6.15 lakh tons is envisaged. As at the end of the Second Plan, the capacity stood at 383,000

tons, schemes have been drawn up to build an additional capacity of 316,000 tons during the Third Plan period. The rapid progress of the industry has mainly been due to considerable mechanisation that has taken place during the Second Plan period, when the capacity of the mechanised sector rose from about 85,000 tons to 150,000 tons. During the period production in this sector doubled to 92,000 tons. The trend has further strengthened since then as demand for containers made on automatic machines is steadily increasing. Apart from the fact the industry is enjoying tariff protection, it has considerably profited by the recommendations made by the technical survey team which studied the needs of the industry with the assistance of foreign technical experts. The industry has also achieved considerable success in diversifying its production and during the last plan period the indigenous industry produced for the first time a number of items that had not been manufactured in the country before. It is expected that before the end of the current plan the country will attain self-sufficiency in glass and glassware.

The industry occupies a prominent place in West Bengal where at the end of the Second Plan 24 out of the all India total of 97 glass factories were situated. From the point of annual capacity, the West Bengal glass industry heads the list of glass and glassware producing States. Speaking at the recent annual meeting of the Bengal Glass Manufacturers Association, the outgoing president Mr P. P. Chandra has referred to the difficulty faced by the units in the State in obtaining raw materials and fuel. Contrary to expectations, their proximity to the coal fields far from conferring any special benefit has come to mean additional expenditure in moving coal supplies because they are perforce to use the costlier road transport. As regards the supply of soda ash which is an important raw material for this industry, the position is not very happy because the units in this State depend on outside sources for the supply of this chemical. It has rightly been emphasised by the West Bengal units that early steps should be taken to set up a soda ash factory in the State so that their dependence on outside sources can be considerably reduced.

* AUTOMOBILES

Good Progress

The production of automobiles in the country is progressing steadily but as the annual report of the Association of Indian Automobile

Manufacturers for 1961-62 shows the progress is not fast enough. Manufacture of motor vehicles in the past year at 56,967 records an improvement of six per cent from that of the preceding year. According to official estimates the demand for cars by the end of the Third Plan is expected to go up to 30,000 from 19,000 for jeeps to 10,000 from 5,500 and for commercial vehicles to 60,000 from 28,000 adding up to 1 lakh vehicles. Out of the three different categories of vehicles the chances for meeting the requirements of commercial vehicles are slender for the actual production of such vehicles in 1961-62 comes to about 26,000. This aspect calls for urgent rethinking as the emergency has undoubtedly occasioned a greater demand for such vehicles for moving men and material to the border areas. It is to be acknowledged that at the commencement of this year the Government of India is reported to have decided for allotting nearly Rs 32 crores of foreign exchange

for the automobile industry for assisting it in implementing the expansion programmes.

One arresting feature of the report of the Association is the remarkable improvement of nine per cent in the year under review of the indigenous content of motor vehicles. The major task facing the planners and the automobile industry is the stepping up of indigenous content to 90 per cent from 60 per cent by the end of 1965-68. Sustained efforts are required for registering a surge in the production of indigenous content to meet the growing demands of the industry and reduce our reliance on imports at the loss of considerable foreign exchange. For this purpose a speedy development of the ancillary industries becomes imperative because of their vital position as suppliers of spare parts. Closely linked with the development of these ancillaries is the need for bringing down the cost of manufacture and enhancing the quality of domestic production.

US Rising Investments

In anticipation of continued favourable economic conditions in the United States, American businessmen have been boosting their investments in new plants and equipment—investments that will, in turn, provide an additional stimulus to the entire economy. Projected plant and equipment outlays for 1963, according to the latest government survey, will reach a record \$39,200 million this year, up more than five per cent over last year's record total. The previous government survey, reported this past March, indicated a capital investment rise in 1963 of just under five per cent.

Even this latest government survey could prove an underestimate. Several private surveys have been pointing to a 1963 investment increase of seven per cent or better.

AID Delay in Utilisation

The constitution of a special committee by the Government of India under the chairmanship of Dr V. K. R. V. Rao, Member of the Planning Commission, to enquire into the question of delay in the utilisation of foreign assistance and to recommend measures for its expeditious use has not come a day too soon. Admittedly a substantial amount of foreign aid pledged for financing various projects still remains unutilised. According to a statement by the Finance Ministry released in last March, out of the total aid excluding PL 480 funds from abroad for the first year of the current Plan amounting to Rs 1122.46 crores only Rs 284.74 crores were absorbed leaving an unemployed balance of over Rs 873 crores. There was, therefore, a slackening in the pace of economic development in the first two years of the Third Plan and

In line with the upward trend, the second half of this year promises to be the bright one for capital spending. Outlays in the current (second) quarter are estimated at a seasonally adjusted annual rate of \$38,500 million. This is expected to climb to \$40,500 million in the third quarter and to \$41,300 million in the fourth quarter, which would represent a substantial 8.5 per cent rise from the fourth quarter of 1962.

Adding luster to these trends is the fact that first quarter outlays this year actually dipped below earlier expectations. Generally, severe winter weather and the January dock strike are blamed for holding back capital spending in the early part of this year.

But the sun is shining now and the nation's ports are busy, and increasingly favourable sales figures undoubtedly figures prominently in the rising investment plans of American industry. These plans underscore the growing con-

fidence in the continued strength of domestic markets for automobiles, appliances and other consumer durables.

A number of experts recall that in the 1954-56 period consumer activity was abetted by a record-breaking investment surge. Plant and equipment spending helped bolster employment and incomes, particularly in durable goods lines, and contributed to peak sales of such items as automobiles and appliances.

Now that capital spending appears to be entering a new growth phase—it set a record last year and will set another this year—manufacturers believe that their industries will continue at record levels.

As an example, automobiles sales, which set a monthly record in May and are on their way to another peak in June, figure to top seven million units again this year, marking the first time that the industry would be sustaining this sales level for two consecutive

years. Auto makers are generally optimistic, moreover, about the chances of maintaining the pace in 1964, leading many experts to conclude that the seven-million car year is becoming the norm rather than the exception.

Construction activity, which had been somewhat disappointing earlier in the year, is beginning to show the effects of the upsurge in economic activity and the spurt in business investment. April construction contracts added up to the best monthly showing since May of last year. Residential contracts topped all previous monthly records, and industrial building also was strong making up 42 per cent of total April books. Reflecting this trend, new orders for structural steel were the largest for the month since April of 1957.

Steel output as a whole has been rising steadily this year. It reached 11.5 million short tons in May the highest total since March 1960. This compares with 10.4 million

tons in April of this year and with 7.5 million tons in May 1962. Output for the first five months of this year rose to 48.9 million tons from 47.4 million in the corresponding 1962 period.

While there has been some stockpiling of steel pending the outcome of the labor-management talks in the steel industry, it does not appear to have been as heavy as in other years when similar talks were scheduled. Most industry officials expect steel output this year to rise well above last year's 98 million tons, and to top the 100-million ton mark for the first time since 1957.

Another industry providing a boost to steel is the railroad industry, in which a shortage of freight cars is beginning to show up. The shortage is the result largely of the rising level of business activity, combined with five years of what now are deemed to be inadequate expenditures for new railroad equipment.

Railroads plan the largest proportionate increase in capital spending this year of any industry grouping. Iron and steel producers also have scheduled a sharply rising rate of investment outlays.

PRICES

Rise in Index

The official wholesale price index (with the year ended March 1953 as 100) advanced by 0.3 per cent to 133.3 during the week ended June 8, 1963 as compared with 132.9 (revised) for the previous week. The index was higher by 1.1 and 5.0 per cent respectively when compared with the corresponding week of the previous month and that of a year ago.

Higher prices of Fish (+8%), Rice at Ranchi and Cardamoms (+7% each), Gur at Muzaffarnagar and Oranges (+5% each), Chillies (+4%), Arhar (3+), Jowar, Barley, Maize, Ragi and Eggs (+2% each) and Bajra and Masur (+1% each) raised the index for 'Food Articles' by 0.5 per cent to 133.6 as compared with 133.0 (revised) for the earlier week. The prices of Wheat and Abohar and Cashew-nuts (-5% each), Gingelly oil (-2%) and Potatoes, Coconut oil and Batelnuts (-1% each), however, moved down.

The index for 'Tobacco' stood unchanged at the previous week's level of 115.8.

The index for the 'Fuel' Power, Light and Lubricants' group also remained stationary at the previous week's level of 137.1.

The index for the 'Industrial Raw Materials' group rose by 0.2 per cent to 138.7 due to an increase in the prices of Lac (+4%), Groundnuts and Gingelly seed (+3% each) and raw Silk (+1%) although the prices of raw Wool (-5% each) and raw Jute (-1%) showed declines.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

DR RADHAKRISHNAN is back, and evidence is not now wanting that both in America and in Britain his visit got obscured by events of national importance. (It is significant that neither Time nor Newsweek found the space to take notice of the visits). We may be sure no slight is intended President Kennedy at last took executive action, and in a message to Congress has pleaded for justice for the Negro. He has also asked for forbearance and tolerance, but it seems to me that in the new civil war the Negroes do not want to desist from their militancy. One after another the white Governors of the segregationist southern states have capitulated. But the seeming non-violent battle of the Negroes continues. It is inescapable that in due course, and that shouldn't take long either, the "integrationists" will win out. For Mr Kennedy, with his personal intervention of ten days ago or so, it will be an achievement in the realm of civil rights; the achievement, however, is likely to be paid for dearly. It will be to support that the President will be able to put through his measures and automatically the southern states, already bitter at previous Federal interventions, will range themselves more strongly against Mr Kennedy. But the President can take comfort in his continuing mass popularity and perhaps also in the Republicans being unable to find a candidate who can effectively oppose him. Otherwise with the aftermath of Cuba; with de Gaulle's rebellion; with Russia further ahead in the space race; and, finally, with the disturbances in the wake of integration in the south, Mr Kennedy's prospects of re-election next November should be considered to have been bedimmed. With his trip abroad at least in foreign affairs it may be that Mr Kennedy will be able to win back some prestige. No such restoration of prestige can, however, be expected by Mr Macmillan.

As with the Republican party the trouble that the Conservatives face is one of leadership. If Mac should resign, who is to be Prime Minister till next autumn's general election? Self-professed candidates are not a-wanting, but the four in the field hardly seem to possess the personality that, before September next year or so,

can be relied upon to turn the tide against Labour once again. Nevertheless, Mr Macmillan will be obliged to lay down office soon. If not to hold power, at least to be an effective opposition, it is necessary that a new leader of the party emerges. The guessing game has commenced in the London press. The list of entrants will be larger if, as is expected, Parliament moves to permit renunciation of hereditary titles. But at the moment all those entered into the race have an equal chance, and all are outsiders.

A friend tells me that he was not surprised by Mr Profumo falling for Miss Christine Keeler. Two or three years ago, at the cabaret in which she was then employed, he saw her, as it were, in the flesh. I learn that her superstructure was incredible; and the law of gravity, as far as she was concerned, was suspended. I do not want to moralise; but Miss Keeler has profited as much as both Mac and Mr Profumo have lost. There was the windfall of £15,000 from the News of the World for the ghost-written recollections of her past. There are the offers from the entertainment world. A little bit of notoriety adds to market value; and for tax purposes Miss Keeler has formed a limited company. Labour MPs were aghast that Miss Keeler should be in sight of earning rather more than does the Prime Minister, or Members of Parliament. And I read somewhere the plea that the revenue authorities should not permit Miss Keeler's income from her writings to escape tax on the grounds that they (her memoirs) constitute casual income. Sour grapes? The moral, if any, is that in Britain the politician's lot is a perilous one, but I'm all right, Jack, in the entertainment world.

Not quite all right is royalty in Britain. Though we in India are not as courted with rumours in Britain, the Daily Mirror finally took the plunge a week ago, and revealed that the Duke of Edinburgh's name had been bandied about in the Keeler affaire; and the purpose of this revelation was to deny it vehemently. Merely because the Duke had sat for his portrait by Dr Ward the whisper-mongers got busy with their poison tongues. More or less simultaneously Prince Charles got into the scrape concerning the brandy. And now we have the

we shall not get the best men. We have had trouble enough on account of language, in the formation of the new States of Andhra, Gujarat and Maharashtra. We shall be courting even greater perils if, in order to pander to parochial pressures, the Central Cabinet were to be composed also on the basis of regional or communal representation. Is the man fit for the job? If he is, it does not matter what the State of his birth was. A little over fifteen months have elapsed since the formation of Government after the general elections; and that Government has not fared too well, what with the rush of enforced resignations we have had. Mr Nehru, I hope, will now at least build up a strong Cabinet at the Centre.

The Cabinet re-shuffle, of major significance as it is, should, I feel, be taken advantage of for another bit of spring-cleaning. For some years now, targets set by the planners have necessarily had to be revised from time to time. It seems to me that, with the experience of a decade of planning, we should find it possible to make fewer errors in this sort of calculations. For example, the Third Plan steel target will not be hit for two inadequacies. Bokaro may not even be producing in the Fourth Plan, not to speak of production being enabled within the next 2½ years. In the second place, the slower than planned progress of the heavy Engineering plant, means that we will not be able to secure therefrom any addition to our steel making capacity. Even so with targets for sugar or for raw jute. Perhaps the Prime Minister will now also take up the question of the strengthening of the Planning Commission.

EAVESDROPPER

a challenge well met

On the 3rd January, this year, the 'E' blast furnace at the Jamshedpur steel works was blown out for relining and enlarging. It was a big job involving 2,100 tonnes of refractories, 1,700 metres of piping, 7,600 metres of electric cables and 1,100 tonnes of steelwork and castings.

When the original schedule was halved from 180 days to 90, many thought it to be impossible. But a team of Tata Steel engineers, technicians and workers took up the challenge and completed the operation in 84 days, 6 days ahead of the drastically revised schedule.

The 'E' blast furnace, with an original capacity of 315 tons a day, was bought second-hand from

the U.S.A. 45 years ago. Its rated capacity has now been stepped up to 660 tonnes of pig iron a day without sinter burden, or to 725 tonnes with sinter and sized iron ore.

The record-breaking achievement is another demonstration of efficient team-work, technical know-how and sustained efforts to attain greater productivity with the minimum outlay that characterize a city like Jamshedpur, where industry is not merely a source of livelihood but a way of life.

(From Our New Delhi Correspondent)

Extension of PL 480

Mr S. K. Patil, Union Minister for Food & Agriculture, spoke with obvious satisfaction when he addressed a press conference soon after his return from his recent tour which took him to the USA, Europe and Japan. And he has good reason to be satisfied. Though he himself deprecated the use of the word 'achievement' in this context, the tour has been exceedingly fruitful. The Government of India is now assured that the assistance generously extended by the United States, which has enabled it to remain at the top of the food situation, will continue after the expiry of the current P. L. 480 agreement. From Japan he has secured promise of assistance in the development of fisheries and help, in the most effective form, for improving the techniques of rice cultivation. His investigation of export prospects has revealed the scope for increased export of agricultural commodities like sugar to the United States and to Japan and of bananas to the latter country. The joint statements he has issued with the US. Secretary of Agriculture, in Washington, and with the Japanese Minister for Agriculture, the Hon'ble Mr Seishi Shigemasa, in Tokyo express in the formal language of official texts the results of their discussions.

He had gone to Washington to attend the World Food Congress as leader of the Indian Delegation. This provided him with an opportunity of presenting to the President of the United States and his top officials, the views of the Government of India on India's Food and Agriculture situation in relation to the United States aid programme. He took the occasion to point out how the aid extended by the United States and, particularly, the P.L. 480 programme which he had signed on May 4, 1960, had been of inestimable value to the development efforts of India, in helping to raise agricultural production, in the build-up of buffer stocks and in stabilising prices of agricultural commodities. He also indicated that, with the progress made, assistance can now begin to taper off, so that in the next five to ten years, India would require no more food aid from the United States.

The offtake of wheat under the current P.L. 480 agreement has been less than anticipated. Against

16 million tons to be imported over four years, imports so far during the first three years total only eight million tons. Owing to increased production, requirements for current consumption have been lower than anticipated; and it has not been practicable to build up larger buffer stocks on account of lack of adequate warehousing facilities. It will not be possible to import the balance of eight million tons in the course of the remaining one year of the agreement. The unutilised balance will lapse on the expiry of the agreement, unless the period of time for shipments of wheat under the agreement is extended for another year beyond June 30, 1964.

As regards rice, Mr Patil said that, though the deficit is only marginal—imports at present being only about one and half per cent of the annual output—it still causes disproportionate price increases when seasons are unfavourable. The Government would be in a better position to keep prices in leash, if they had a stockpile of about two to three million tons of rice. He had discussed the matter with the US authorities and, while details of the agreement had to be worked out later, it had been agreed that the United States would supply up to half a million tons of rice a year for stock-piling purposes, over four years beginning from the expiry of the current agreement. To meet immediate needs it was also agreed that shipment of about 150,000 tons under the current agreement would be made available, with the shipments to begin soon.

There has been some discussion in India on the need for further imports of wheat after the expiry of the present agreement. And some stories have been put out about so-called differences between the Planning Commission and the Ministry of Food & Agriculture over this matter. Though production may be adequate, Mr Patil for his part would not like to take risks over the question of food supplies. At present the discussion is rather academic as the question of further imports will not arise until after the commitment under the current agreement is carried out. But the ground for a new agreement has to be prepared even now, as one year later it will be election time when every one in the United States will be too preoccupied to have time for anything else. While the details of the future programme of wheat imports have to be decided later, Mr Patil said that the indications were that the United States

would be willing to consider renewal of the agreement at the appropriate time if further imports were necessary.

Mr Patil's assessment of prospects of further exports of sugar to the USA and Japan are also encouraging. Though there was no formal agreement, the United States, said Mr Patil, would be prepared to buy more Indian 'raw sugar' and would also be willing to give a permanent quota of about half a million tons. From Japan Mr Patil has brought the impression that the exports of raw sugar could be developed up to one million tons a year, if supplies were available and at competitive prices. Mr Patil emphasised that, at present, it was not a question of finding markets but one of supplies. His Ministry, he declared, was doing everything possible by way of providing incentives, to step up the production of cane and, hence, of sugar. He firmly turned down suggestions that the price of cane may be increased to provide a further impetus. During this year, India had exported 90,000 tons of raw sugar to Japan and Mr Patil hoped that exports would rise to a quarter of million tons in another two or three years.

Mr Patil did not consider that the restrictive policy adopted last year was the sole reason for the fall in sugar production. It was a world-wide phenomenon. In any case, the production curbs then imposed were justified by the embarrassing stock position when godowns were full and bank credit had been extended up to the limit. He also made it clear that exports were made against commitments entered into last year against old stocks. They did not cut into the current year's production or reduce the quantity available for internal consumption, which was sufficient for all reasonable requirements.

In Japan Mr Patil was also impressed by the prospects of exporting bananas to that country. Japan is at present importing bananas from eight countries and India could also get a share of the growing market. Mr Patil mentioned a figure of ten crores for export of bananas to Japan, which should make banana growers and the Ministers of Agriculture in the banana-growing States sit up and take notice.

The Japanese authorities, Mr Patil said, also responded with enthusiasm to his suggestions regarding assistance in developing the Indian fishing industry and in setting up model farms, run by Japanese farmers in the rice-growing districts. There are now four model Japanese farms which have shown impressive results in the short period of one year and it was agreed a lot more could be done in this direction. The Ministry of Food & Agriculture has a programme of setting up, over a period of two or three years, two

model farms in each of the forty rice growing districts in the country. Mr Patil was assured that the Japanese Government would give the maximum co-operation in carrying out this programme.

In the course of his press conference Mr Patil also mentioned the striking results that have been achieved in France by applying nuclear science for agricultural development. French scientists had succeeded in altering the genetical characteristics of rice by irradiating the seeds with radio isotopes, with the result that the yield had increased by fifty per cent. A team of Indian experts would be shortly going to France to study the technique adopted and to find if the improved seed could be used in India.

Coal Loading Facilities

The Calcutta conference of representatives of the Railways and the Coal Industry has not been able to find all the answers to questions about the strengthening of coal loading facilities which had hampered the Railways' programme for introducing heavy box wagons for coal transport. As indicated earlier in these columns, the dispute is confined to private sidings, that is, the sidings built entirely by the collieries. The Railways have the support of the Planning Commission for their contention that they should not be called upon to bear the expense of these sidings which remain the private property of the collieries and can be disposed of as they like. This category of sidings, however, constitute less than ten per cent of the total of about 700 sidings of all categories in the coal fields. It is understood that a number of collieries have accepted the responsibility for strengthening the sidings and work has already started in some places. In the public sector, the NCDC have their sidings built according to the Railways' specifications and have strengthened them where necessary. The dispute, according to a Railway spokesman, is confined to a small number of collieries.

Apart from this dispute about strengthening sidings, there is also the question of 'weigh bridges' which the Railways want the collieries to provide. The existing weigh bridges at Railway Marshalling Yards are not designed to take box wagons. In order to ensure correct loading, the Railways have adopted the practice of putting a loading mark on the side of the wagon. But this has not stopped complaints of under-loading. The Railways have suggested that the collieries should install weigh bridges which will save time by speeding up the movement of wagons. As an incentive for setting up weigh bridges, the Railways have been giving a concession of 6 nP in the freight rate. A proposal is now under consideration to increase the rebate to 10 nP.

The Metal Box Company of India Limited

Review by the Chairman, Mr M. K. Vellodi

The Thirtieth Annual General Meeting of the Metal Box Company of India Ltd will be held on Wednesday, the 17th July 1963 at 59C Chowringhee, Calcutta.

The following is a copy of the Review by the Chairman, Mr M. K. Vellodi, which has already been circulated to members.

SALES

This is rather a special occasion for me as this is the first time that I am meeting you. It is therefore with very real pleasure that I am able to report another successful year of business for your Company with an increase in Product Sales from Rs 10.50 crores in 1961/62 to Rs 11.85 crores or an increase of 13%, an achievement which, in the conditions that prevailed during the year—uncertainty in the supply of raw material, increased excise duties and so forth—must be regarded as highly satisfactory. Constant vigilance and the never-ceasing search for substitutes for tinplate and the adoption of more and more progressive methods of production and sales are the factors that contributed to this result which, in normal circumstances, would have been passed on to the shareholders in the shape of increased dividends; but the times are not normal and taxation of an unprecedentedly heavy nature has denied to the shareholders these benefits that should have legitimately accrued to them. For as long as our marginal rate of tax is 74% in all, such denial is likely to continue.

The year 1962/63, particularly in the early months, has repeated in many respects the features of the preceding years, features that have become increasingly familiar: a steadily dwindling foreign exchange reserve resulting in ever stricter restrictions on imports even of essential raw materials and the efforts of a much harassed Finance Minister to balance his budget, resulting in fresh imposts. However, as the year progressed, not only were the resultant problems solved, but the shock of the Emergency gave a new impetus to industrial effort in the country, production generally increased and, with it, the demand for the Company's products.

Prospects for the year ahead are not easy to forecast. It is the avowed object of the new taxes to cut expenditure on consumer goods but to what extent they will achieve this object is still a matter of conjecture. Direct defence supplies are bound to form a substantial part of the Company's activity during the year. The steady increase in the sales of

non-tinplate products which contribute some 25% of our total sales is an encouraging feature. Your Company's fortunes, however, depend in the last analysis, on those of trades we serve: in most of these, conditions are at present buoyant, but this may prove to be the consequence of short-lived optimism when the impact of the Union Budget has its full effect on consumer spending.

DEFENCE

Our industry adapts itself rapidly to a war situation. Within one year of the commencement of World War II, 80% of your Company's output was devoted to war purposes of which 50% represented direct supplies of war stores and 30% indirect supplies, namely packages for war supplies. In the current Emergency we have already supplied the latter by the million: the need to supply the Armed Forces in the forward area with canned foods required a very rapid build-up in the supply of Open Top cans which was met on a basis of top-most priority until stocks of the specialised imported tinplate required were exhausted. I shall have more to say on this later. As to direct defence supplies, within one month of the outbreak of hostilities, the authorities, with commendable promptness, placed orders on us. Your Company's response to the Emergency was thus immediate and our resources were placed unreservedly at the country's disposal.

Your Company is better equipped for defence production than it was in the 1940's. Not only is its normal process capacity of press tools and can-making plant larger than it was, but in the Industrial Components and Machinery Buildings shops at Calcutta No. 2 there is both equipment and specialised engineering knowledge, which are particularly well suited to the manufacture of many urgently required defence supplies. Our newly established Paper Products Group will be able—though they have no orders as yet—to manufacture many of the special spirally-wound containers required by Kirkee and our Flexible Package Works in Calcutta can produce many of the specialised packing materials used in modern war. Our capabilities and past performance have been recognised by the Defence Purchasing and Ordnance Authorities in collaboration with whom we are tooling up on a priority basis for a wide range of defence stores. We hope in these diverse ways to make a notable contribution to the re-equipment of the country's Armed Forces.

EXPORTS

Economic stresses and strains arising from political changes have affected our markets in South-East Asia and as a consequence, our direct export sales at Rs 21.37 lakhs fell short of last year's level. Ceylon placed restrictions on imports, Burma's Defence Services bought less and there was intense international competition in crown corks. We, therefore, looked elsewhere in our drive for sales particularly to the markets of West Asia. As a result, machinery exports were nearly doubled; sales in East Africa and Hongkong were increased and our goods broke into four new markets: Afghanistan, Jamaica, Taiwan and Trinidad. Our success in the distant markets of Taiwan and in the Caribbean area mark a significant achievement for our and, therefore, India's engineering exports.

But it is by supplying exporters with containers and packaging materials made to international standards of quality that we make our main, though indirect, contribution to the country's exports—principally in America. Sales under this heading increased substantially, particularly in the shape of Open Top cans for the Kerala prawn packing industry. We now have two factories almost entirely devoted to servicing exports: the Mangalore Factory supplying the cashew trade and the Cochin Factory the prawn packers. We estimate that the value of goods exported in our containers is as much as Rs 8 crores and we believe that much of these exports has been made possible by the provision of packing to international standards by your Company: an impressive indication of the contribution which sound packaging can make in the effort to diversify India's exports into non-traditional fields.

RAW MATERIALS

Throughout the year we were in difficulties with our major raw materials (tinplate, aluminium sheet, aluminium foil, sheet steel) and we ended it with depleted stocks. Until Rourkela's five-stand mill is delivered and commissioned presumably in 1965 or 1966, the country, and hence your Company, will depend to an uncomfortable extent on tinplate imports. Not surprisingly then, the provisioning of tinplate was a cause of continuing anxiety throughout the year, particularly as regards the special qualities for processed food containers (Open Top cans), the import of which has to be planned many months in advance of the packing seasons in various parts of India. Supplies ordered this year on the assumption of a brisk, though not

mal, rate of growth proved to be quite inadequate for the requirements of the Emergency. Immediately the accelerated demands became known, both we and the canning industry represented urgently to Government the need to license additional imports. The initial delay in responding, understandable as it was in the circumstances of the recently declared Emergency, was nevertheless the cause of an unhappy, though temporary, interruption in supplies to the Defence Services.

The significance of tinplate as an important industrial raw material has been represented vigorously at the highest appropriate levels of Government. Some 150,000 tons of tinplate, with an imported element amounting to only Rs 6.50 crores, enable approximately Rs 360 crores of consumer goods to be distributed. There is undoubtedly some limited scope for the introduction of substitute packing materials, but substitutes are frequently more expensive and functionally less efficient. I am glad to say that notwithstanding the many competing demands of high priority for all available foreign exchange, the Government has shown an awareness that a shortage of tinplate would not only have an adverse effect on Defence provisioning but that it would have damaging and inflationary consequences for the economy as a whole. At the same time, in their anxiety to reduce imports, Government is contemplating restrictions on the use of tinplate. It is to be hoped that when deciding about these, the authorities will bear in mind that, while the foreign exchange saved would be marginal, seriously dampening the demand for tinplate products now could have an unhappy effect on the large market required to support Rourkela's new tinplate mill in 1965/66.

Any new mill for secondary steel products will take time to build up the quality and quantity of its production. Rourkela is no exception to this rule: it has had plenty of teething troubles, culminating in a serious breakdown early this February. The damage has been repaired and this mill, it is hoped, will now be brought up to full production with the commissioning of further hot-dip tinning capacity, which should enable tinplate production in 1963/64 to be stepped up appreciably.

Supplies of deep-drawn steel for Industrial Components were adequately maintained throughout the year notwithstanding the commandeering for defence production by the Ordnance Authorities on its arrival, of a consignment we had purchased against a barter deal from Japan.

We have been very careful in our use of aluminium with the result that availability has broadly met requirements, although there was a serious shortage of foil which your Company uses widely for pilferproofing purposes. In successive annual reviews in the past my predecessor had stressed the importance of pilferproofed consumer packaging. I would like to suggest to the authorities concerned that when all materials are scarce, it is more important than ever to ensure that goods reach their destination in first-class condition. Pilferproofed packaging is one of the most effective means of beating the racketeer who adulterates or substitutes the genuine article by the spurious. Your Company has on every possible occasion represented to the authorities the essential role of consumer packaging in any national drive against adulterated commodities. It is understood that the Health Ministry of the Government of India has under consideration several legislative measures which are designed to penalise the adulteration of food, but the contribution of sound marketing and distribution, of which packaging is an essential part, is still inadequately appreciated.

In common with most industries the cost of virtually all our raw and ancillary materials continues to rise, due to increased duties and excise; in fiscal budgets. As the cost of materials represents such a large proportion of the total cost of manufacture, we have had no option but to increase selling prices.

RESEARCH, DESIGN AND DEVELOPMENT

Our efforts under this heading have been devoted principally to taking the pressure off the demand for tinsplate by designing and developing alternative packages; to evaluating new sources of raw materials; and latterly to problems connected with Defence supplies.

PAPER PRODUCTS. Your Company received its manufacturing licence for making "treated and laminated papers and boards, and containers made therefrom" on March 27th 1962 and was granted import licences for the equipment nine months later on January 14th 1963. No time was lost: the first shipment was made on February 2nd and by March 31st, 50% of the plant had been shipped. By the end of March, short-term specialist staff were already in the country engaged in training staff and installing and commissioning the machinery. It has recently started production. Against the possible break-down of tinsplate supplies under Emergency conditions, our Paper Products Group has already developed a series of superior composite containers. Due to the disproportionately high cost of Indian board, however, it seems unlikely that these will displace tins except to the extent that tinsplate is not available.

BOMBAY NO. 2. Last year your Chairman referred to the acquisition of a fine factory site nine miles from Bombay No. 1, namely at Deonar. There the construction of the 90,000 square-foot Bombay No. 2 factory has made most satisfactory progress: production should commence this July. The private railway siding makes the premises well suited for the reception, storage and printing of tinsplate and the manufacture of Open Top cans of which tinsplate represents a particularly large fraction of cost. The removal of stocks and machinery from Worli will make room for the Paper Products Group, leave sufficient space to lay out anew the metal container plant there and thereby improve operational efficiency.

COCHIN FACTORY. In order to improve our service to the prawn canning industry the Service Installation at Cochin has been expanded into a fully-fledged manufacturing operation. Not only have we been able to pass on freight savings, but the new factory serves as a base for engineering and scientific staff needed to support this highly promising export industry.

FLEXIBLE PACKAGES. During the past year, your Company continued to implement its policy of developing its range of packages manufactured from indigenous raw materials, to international standards of appearance and functional performance both for the home market and intending exporters. New plant has now been commissioned to supply printed polyethylene bottles and a variety of printed and laminated Flexible Packages and Flexible Packaging Materials made both by heat-lamination and extrusion-coating processes.

Work at our RESEARCH DIVISION during the year has progressed satisfactorily in all aspects including those of protective and decorative finishes made from indigenous materials; the evaluation of cold-reduced tinsplate from Roumelia and Russia; and the general compatibility testing of a wide range of pharmaceutical containers, including printed flexible packages. The Emergency has given impetus to the Canning Advisory Service and close cooperation is being maintained with Defence laboratories in all aspects of canning technology, with particular reference to the rigid requirements for food-stuff supplies to the Armed Services.

THE TECHNICAL DEVELOPMENT DIVISION has again had a successful year making a valuable contribution by designing new products and new customers' closing machinery. The plant modernisation programme has progressed satisfactorily with the emphasis on material economy and higher manufacturing speeds.

MACHINERY BUILDING. Lastly, the range of machinery built by your Company was extended by the addition of a Double Seamer for

cannery operation which is faster and more sophisticated than any that has been previously manufactured in India. I wish to stress again that each extension of your Company's machinery building activities means a directly corresponding saving in foreign exchange.

VISITS FROM ASSOCIATES

Towards the end of the year we had the pleasure of welcoming Mr K. D. Brough, Managing Director of The Metal Box Company Overseas Limited, accompanied by Mrs Brough. During his tour Mr Brough was able to see for himself the progress in the Company's establishments throughout the country and, representing our Technical Consultants, was able to give valuable advice and assistance in connection with the Company's development requirements and the financing of them.

BOARD CHANGES

It was with real regret that your Board accepted the resignation of Mr K. C. Mahindra both as its Chairman and as a Director of the Company. For five eventful years which began with the foreign exchange crisis of 1958 and ended with the declaration of the Emergency, Mr Mahindra had placed unreservedly at the service of the Company and of the Board his deep and wide experience of business and industry. The Board will miss his wise counsel and his human approach to all problems. I feel it is a great privilege to succeed him as your Chairman. Mr Mahindra has been in the front rank of Indian industrialists for well over a quarter of a century. He has now decided to retire and I am sure that all of you will join me in conveying to Mr Mahindra in his retirement our very good wishes for his health and happiness.

EMPLOYEE RELATIONS

With one exception, relations between management and employees continued to be satisfactory throughout the Company. Agreements covering terms of service were successfully concluded with monthly-rated staff at Calcutta No. 1, Calcutta No. 2, Mangalore, Research Division, Technical Development Division and Head Office and with both monthly-rated and daily-rated employees at Faridabad. An agreement on retirement age was reached with Research Division employees. The exception I referred to is the daily-rated men in Calcutta. The restlessness reported last year has continued into this year. An attempted bipartite settlement on conditions of service, wages and dearness allowance failed and the dispute has now been referred by the union to conciliation.

Soon after the declaration of the Emergency, the Company announced its policy of dealing with the release of men called up for service in the Armed Forces; as a

result nine men were able to join the forces without loss of pay. The employees' support of the National Defence Fund has been impressive: the Company's donation of Rs 3 lakhs during the year was supplemented by donations and voluntary deductions from salaries and wages amounting to Rs 1,55,000.

Your Company is a strong believer in keeping employees "in the picture"—a difficult exercise in communications which is more easily enunciated than executed. To this end, an employees' handbook, "Metal Box and You", dealing with the Company's policy as well as its rules and regulations, was published in English, Marathi, Bengali, Hindi and Tamil and was well received.

Training at all levels in the organisation continues vigorously. Ten Indian officers were trained by Metal Box in the U.K. One senior manager was sent to the Administrative Staff College at Henley-on-Thames and another attended the Advanced Management Programme organised by the All-India Management Association at Srinagar. A further thirty-six managers have undergone the Company's residential management course in Calcutta: four of these came from our Associates in Malaya and Pakistan. Arrangements for the training of supervisors and apprentices and participation in workers' education programmes have been further strengthened.

I thank all the employees of the Company for their contribution to the past year's progress and their ready response to the increased demands made upon the Company as a result of the Emergency.

THE COMING YEAR

Demand continues to be buoyant and we believe we shall be able to meet it, but the shadow of the Chinese incursion is still over us and high taxation both personal as well as corporate, direct and indirect, is such as must daunt even the most ardent and progressive man not only amongst our employees at all levels but also amongst you, our shareholders, in India, the United Kingdom and the U.S.A. The difficulties and disincentives are considerable, but I have every confidence in our management and employees who, I am quite certain, will continue to surmount them.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

Markets

JUTE Pakistani Competition

Conditions in the jute goods market continue to be weak with prices daily giving way in the absence of fresh overseas enquiries. Operators in the futures market especially seem to have taken a gloomy view of the prospects for jute goods at least in the immediate future. With mills also showing eagerness to sell even for distant deliveries at current low prices the downtrend has been accentuated. There has however been a slight improvement on Wednesday following rumours of business with Indonesia in sacking for July-August shipment and some business in hessian with the US.

The present lack of buying interest may be attributed to the fact that, while overseas buyers are not pressed for supplies in view of their comfortable stock position, output will continue to be maintained at a high level. Moreover, for the third season in succession raw jute will be in plentiful supply as indications are that the new jute crop will be a bumper one. The continued disappointing performance of sacking on the export front is also dampening

enthusiasm and it is by no means certain that in the current year exports will be able to touch the same level as last year. Speaking at the annual general meeting of the East India Jute and Hessian Exchange this week at Calcutta, Mr William Ure, the Chairman, has pointed out that while the industry had done well last year, there are now some disquieting features which may affect its future. One of these is the declining trend in sacking exports. Heavy jute goods from India are meeting with stiff competition from similar goods from Pakistan whose jute industry is able to underquote them in foreign markets because it gets its raw jute at a much cheaper price than its counterpart in India and it has the advantage of the bonus voucher scheme which helps it to sell its goods at below cost price. Mr Ure has pointed out that though the competition now affects mainly our heavy goods, it will not be long before a threat develops to our hessian also because the Pakistani industry is also steadily expanding its hessian production.

Jute Marketing Cooperatives

Bihar, Orissa, Uttar Pradesh and Andhra Pradesh and the Union Territory of Tripura purchased nearly four lakh maunds of jute during 1962-63. This was valued at Rs 1.15 crores. The co-operatives in Orissa had the highest turnover of 1,72,500 maunds of jute.

Nearly 600 cooperative marketing societies are now functioning in the jute growing States of Assam, West Bengal, Bihar, Orissa, Uttar Pradesh, Andhra Pradesh and the Union Territory of Tripura. These societies have been strengthened, by way of Government share capital contribution and subsidies for staff and godowns etc. It is expected that the price support scheme will enable these co-operatives to play a much more significant role in the marketing of jute in the coming years.

Under the price support scheme, the jute co-operatives are likely to procure some 17.50 lakhs maunds of jute during 1963-64.

In order to protect the interest of the jute growers, the State Trading Corporation was allowed to enter the market in 1962-63 and make purchases of jute from cooperative marketing societies of the eastern region on the basis of Rs 30 per maund for Assam Bottom varieties. The State Trading Corporation while making the purchases worked in close collaboration with the National Agricultural Cooperative Marketing Federation and the apex marketing societies of the concerned States. The State Trading Corporation advanced to the marketing societies 90 per cent of the value of jute they supplied and the remaining 10 per cent was paid within 45 days of delivery.

Since cooperative marketing societies needed continuous revolving funds, the State Trading Corporation also provided special financial assistance of Rs 50 lakhs to the Assam Government and Rs 5 lakhs to the Tripura Administration to enable them to finance cooperative undertakings jute procurement operations. Such special financial assistance was provided to arrest the fall in jute prices because of lack of purchase by the traders. West Bengal and Bihar were also given assistance to the tune of Rs 40 lakhs each and Orissa was given Rs 20 lakhs. The total of such assistance came to about Rs 1.55 crores.

The price support scheme is not something new. In 1959, the jute cooperative marketing societies purchased nearly 64,850 maunds of jute on account of State Trading Corporation. These purchases, though not large, had the desired effect of arresting a drop in prices of jute. During 1959-60 and 1960-61, the cooperative hardly undertook any marketing of jute, as there were no price support measures in force.

In 1961-62, however, the Buffer Stock Agency of the Indian Jute Mills Association agreed to pur-

chase jute from the National Agricultural Cooperative Marketing Federation at a minimum price of Rs 30 per maund. Under this arrangement, some 1,21,000 maunds were sold by the Federation during the 1961-62 crop season. Besides, the co-operatives in West Bengal, Bihar and Orissa also sold another 1,24,000 maunds of jute directly to jute mills.

The Ad-hoc Committee of the National Agricultural Cooperative Marketing Federation which met recently, while reviewing the progress of the price support scheme during 1962-63 season, recommended some measures which are necessary for the successful working of the scheme. These include the provision of adequate revolving finance to the co-operatives participating in the price support scheme, priority in the allotment of wagons to co-operatives and arrangements regarding weighing, inspection and storage of jute stocks. It also asked the National Agricultural Cooperative Marketing Federation to play an increasing role in imparting guidance and supervision to their staff.

TEA Strong Demand

IN the Export Sale held in Calcutta this week, offerings amounted to 23,758 packages of Leaf grades. There was a strong and general demand. Plain liquoring descriptions were steady on last rates. Medium Assam and Doars were sold readily at prices which were dearer according to quality. The brighter liquoring orthodox teas were a strong feature and showed a marked advance. There was strong competition for the best CTCs, which were dearer. Medium and poorer kinds were, however, easier. Early CTC invoices with poor liquors were a weak feature.

Darjeeling teas were sold well; but the higher grades again registered a decline. The rates for the lower-priced grades were firm and sometimes dearer. Whole Leaf and selected Tippy teas were dearer. With only a limited quantity of suitable teas on offer, no quotations were given.

In the Internal Sale, offerings consisted of 8,995 chests of dusts. There was a strong demand. Medium CTC types opened irregular and generally easier. The small and powdery teas received keen support. Good CTCs were strongly competed for and were fully firm to dearer. Orthodox dusts opened irregular, but strengthened as the sale progressed and closed fully firm and sometimes dearer. The good liquoring Assams were sold well. There was a useful enquiry for leaf-cut types and this category came to a good market. Darjeeling dusts continued to sell extremely well. Due to insufficient quotable teas on offer, no quotations were given.

Associated Rubber—(18th) 85.50.
Ceat Tyres—(17th) 137.50; (19th) 135,
(20th) 13

For the Investor

INVESTMENT GOSSIP

Flash in the Pan?

With the resumption of forward trading, conditions on the Calcutta Stock Exchange have become somewhat steadier and pivotal scrip have gained some useful ground. The conditions under which forward trading has been permitted by Government in Calcutta are identical with those applied to the exchanges which have been earlier allowed to resume forward trading. Under the new regulations, on each business day, members have to submit statements in respect of business done by them on the previous day, indicating their total aggregate purchase and sales separately, both on account of their constituents and on their own personal account. In a note the Calcutta Stock Exchange has briefly indicated for the guidance of its members the various regulations that will come into force with the resumption of forward trading. The undertone elsewhere however continues to be rather quiet in the absence of sustained buying interest. Perhaps the steadiness of Lyons Range will also prove to be a flash in the pan if the behaviour of the other stock exchanges is any guide. The main reason why the recovery after the resumption of forward trading in other centres has failed to gain momentum is that investors have continued to keep aloof. Moreover, once forward trading has been resumed, operators have come fully to realise under what severe conditions futures trading has to be carried on.

The fact of the matter is that in the absence of genuine incentives any recovery in sentiment will prove to be shortlived. The operators had been quite optimistic about the quantum of increase in steel retention price but when the official announcement however showed that consideration had been given only to the rise in costs since the last announcement, all enthusiasm vanished. For some time bulls were playing up the prospects of decontrol of steel both in respect of distribution and selling price but such arguments have fast lost their force in view of the various difficulties involved in such sweeping changes. The fact that the time of the announcement of dividend for Indian Iron is drawing near has failed to enthuse operators is indicative of the general lack of enthusiasm for equities.

The continued anxiety over the border situation apart, marketmen have perforce to be cautious in view of the impending reshuffle of the Central Cabinet. The easier trend in the money market has been ignored because Central Government will be shortly announcing its second instalment of loans.

NEW ISSUE NOTES

Engel India Machines

For the first time in India, specialised machine tools will be produced by Engel India Machines and Tools Limited at its factory at Taratala Road, Calcutta, where the construction work has commenced. The company has an authorised capital of Rs 1 crore, out of which Rs 50 lakhs is being issued in the first instance. Out of this Rs 50 lakhs, the directors and their friends and foreign collaborators will subscribe shares Rs 20 lakhs. The remaining shares worth Rs 30 lakhs will be issued to the public and the entire public issue is underwritten by the Industrial Finance Corporation of India, West Bengal Financial Corporation, Jardine Henderson Limited and the LIC. The company has also recently been granted a loan of Rs 25 lakhs by the Industrial Finance Corporation of India. The total cost of the project, after its full implementation, will come to about Rs 1 crore. The company has secured the technical collaboration of Maschinenfabrik Ludwig Engel K. G. of Austria—a leading manufacturer of machine tools for the plastic industry in Europe. The technical collaborators will deputise experienced technicians to India during the initial stages in order to run the plant.

The company's expected turnover, during the initial period, will come to about Rs 1 crore. The company has also got exclusive export rights to neighbouring countries and it is hoped that export selling will commence from almost the beginning of operations of the company. The plastic industry in India will thus be able to obtain the latest type of machines locally and thereby will be in a position to export plastic goods in increasing quantities. Union Carbide India Limited, who are a part of a world-wide organisation and have considerable experience in the field of plastics, have been appointed as the sole selling agents of the company for both the home market and for exports.

Allied International

Allied International Products Limited, a company registered on 11 October 1962 for the manufacture of automobile and aircraft general spares in collaboration with a US company, has been accorded consent to issue capital of Rs 75 lakhs, divided into 7,50,000 equity shares of Rs 10 each, to be issued as to Rs 25 lakhs to the US company against import of plant and machinery to the extent necessary and in cash through inward remittance in foreign exchange and the balance to Indian nationals for cash at par. The proceeds will be utilised for financing the manufacture of automobile and aircraft general spares.

Gopichand Textile

Gopichand Textile Mills Limited will issue Rs 40 lakhs—Rs 30 lakhs in equity shares of Rs 10 each and Rs 10 lakhs in preference shares of Rs 100 each. The shares will be issued for cash, at par, and the proceeds will be utilised in the establishment of a mill at Sirsa (Punjab) with 12,000 spindles for the manufacture of cotton yarn.

Meameco

Meameco Limited, Calcutta, is to issue capital of Rs 33,81,900 in equity shares of Rs 10 each for cash, at par. The capital is required for liquidation of debts. The company is engaged in business as manufacturers of mining and mechanical handling equipments at Dhanbad.

Deepak

Deepak Industries Limited, Calcutta, is to issue capital of Rs 29,38,500, divided into 199,850 equity shares of Rs 10 each and 10,000 cumulative redeemable preference shares of Rs 100 each for cash. The capital is required for the expansion of the company's new Allenberry Works for the manufacture of gear boxes.

The Ordinary share register and transfer books of the Indian Iron & Steel Company will be closed from 27 July to 17 August 1963 (both days inclusive) for the purpose of payment, in due course, of dividend on the Ordinary shares for the year ended 31 March 1963. The dividend when declared, will be paid to those shareholders whose names appear on the company's Register for ordinary shares as on 17 August 1963 or to their mandatees.

Heavy Electricals

Heavy Electricals (India) Limited Bhopal, a Central Government undertaking, has been given consent to issue further capital of Rs 2.88 crores, divided into 28,800 equity shares of Rs 1,000 each for cash, at par. The proceeds will be utilised in financing the projects under the control of the company.

NIDC

The National Industrial Development Corporation Limited is to issue further capital of Rs 5 lakhs, divided into 5,000 equity shares of Rs 100 each, to be issued privately for cash, at par. The proceeds will be utilised for giving assistance to one of its subsidiary companies.

Leiner-Knit Issue

The subscription list for the public issue of Leiner-Knit Gelatine Company Limited will open on 1 July and close on 13 July or earlier, but not before 3 July, 1963. The company, which was incorporated in January 1961 as a private limited company and converted into public limited company in January 1962, has an authorised capital of Rs 50 lakhs, all in equity shares of Rs 100 each. The company has already issued shares of the value of Rs 6.62 lakhs to the promoters, directors and friends and Rs 1.87 lakhs to the

foreign collaborators. It is proposed to issue a further capital of Rs 16.50 lakhs of which shares of the value of Rs 1 lakh have already been allotted to the directors, their friends and associates. The foreign collaborators will be allotted shares of the value of Rs 3 lakhs against the supply of machinery. It is proposed to offer, for public subscription, 12,500 shares of Rs 100 each. The entire public issue has been underwritten.

BONUS ISSUE NOTES

Burn

Burn & Company Limited has applied to the Controller of Capital Issues for sanction to issue bonus shares in the proportion of one share for every ordinary share held by capitalising free reserves. Meanwhile, the company has reported a higher net profit of Rs 1.43 crores for the year ended 30 April 1963 as against Rs 1.40 crores for the preceding year, after transferring Rs 32.46 lakhs (Rs 24.26 lakhs) to Depreciation. The provision for Taxation is raised to Rs 98.25 lakhs from Rs 92.50 lakhs and Reserves to Rs 22.18 lakhs from Rs 20.99 lakhs. The dividend is, however, reduced from 28.5 to 25 per cent, subject to tax.

Sassoon Spinning

The Sassoon Spinning and Weaving Company Limited, Bombay, is to issue capital of Rs 5.20 lakhs, divided into 52,000 equity shares of Rs 10 each, on capitalisation of its Share Premium Account to a like extent, to be issued as fully paid-up bonus shares to the existing shareholders in the proportion of two such shares for every twenty-nine shares held.

NPC

Navinchandra Purshotamdas & Company Limited, Bombay, is issuing further capital of Rs 50,688, divided into 50,688 shares of Rs 1 each, on capitalisation of the company's Reserves to a like extent, to be issued as bonus shares to the existing shareholders of the company.

INVESTMENT NOTES

Indian Iron

The Ordinary share register and transfer books of the Indian Iron & Steel Company will be closed from 27 July to 17 August 1963 (both days inclusive) for the purpose of payment, in due course, of dividend on the Ordinary shares for the year ended 31 March 1963. The dividend, when declared, will be paid to those shareholders whose names appear on the company's Register for ordinary shares as on 17 August 1963 or to their mandatees.

INVESTMENT BRIEFS

Bararee Coke Company Limited has maintained the dividend at Rs 1.50 per share for the year ended 31 March 1963. The dividend is payable on or after 24 August 1963. Trans-

fer Books of the company will be closed from 1 to 14 August, 1963.

The Ogale Glass Works Limited has revised the dividend on the ordinary shares to 8 per cent, taxable, from 10 per cent, taxable, for 1962.

Forest Industries (Travancore) Limited has reduced the dividend from 15 per cent to 12 per cent, less tax, for the year ended 31 March 1963.

Ramnarayan Mills Limited has reduced the dividend from 10 per cent to 7½ per cent, taxable, for 1962.

BALANCE-SHEET REVIEWS

Kettlewell Bullen Repeats

Kettlewell Bullen & Company Limited, a well-known managing agency concern, has reported a slight decline in its agency commission from Rs 10.60 lakhs to Rs 10.19 lakhs for the year ended 21 December 1962. Sales of cloth and yarn are shown at only Rs 79,134 as against Rs 1.23 lakhs; but the net profit, after providing for depreciation and taxation, is higher at Rs 11.28 lakhs as against Rs 9.37 lakhs for the preceding year, although the former figure includes Rs 2.29 lakhs being excess provision for taxation written back.

In respect of allocations, Depreciation is lowered to Rs 34,373 from Rs 35,631, while Development Rebate Reserve is increased to Rs 7.00 lakhs from Rs 3.50 lakhs. Taxation is maintained at Rs 5.50 lakhs. The dividend on the Ordinary shares is maintained at Rs 10 per share, subject to tax.

Macneill & Barry Pays 7½% Against 8%

The unfavourable trading conditions experienced by some of the old established companies, the resultant drop in income from agency commission especially from jute and steamer companies and the reduction in the income of dividends—all these factors are reflected in the working results of Macneill & Barry Limited. The net profit for the year ended 31 December 1962, after providing for Depreciation and Taxation, amounts to Rs 20.45 lakhs as against Rs 29.61 lakhs. As the present profit is for the full year and the previous one being only for a period of nine months, the profit and allocation figures cannot be compared.

In respect of allocations, a sum of Rs 1.50 lakhs (Rs 2.31 lakhs) is provided for Depreciation; Rs 13.25 lakhs (Rs 14.50 lakhs) for Taxation; Rs 6.50 lakhs (Rs 4.00 lakhs) for General Reserve and Rs 1.00 lacs (Rs 75,000) for Pension Reserve. The directors have proposed a taxable dividend of 7½ per cent as against 8 per cent, taxable, previously.

During the year, the company acquired for development purposes, the leasehold tenancy of

the land in Calcutta owned by Kilburn Properties Limited and Majerhat Properties Limited. The company has disposed of its holdings in three companies with gardens in Pakistan (viz., Oodaleah, Kodala and Kornafull Association). The dividend is payable on or after 1 July to those shareholders registered as on 21 June, 1963.

Shaw Wallace—Dividend Halved

Shaw Wallace & Company Limited has, however, reported an increase in agency and other commissions and allowances from Rs 51.39 lakhs to Rs 56.78 lakhs for 1962. The net profit, after providing for depreciation and taxation, works out to only Rs 19.48 lakhs as against as much as Rs 25.28 lakhs for the previous year.

Apart from providing Rs 13 lakhs for General Reserve, Depreciation is raised to Rs 12.35 lakhs from Rs 12.02 lakhs and Taxation to Rs 23.13 lakhs (including Rs 2.02 lakhs for SPT) from Rs 22.50 lakhs. The provision for Development Rebate Reserve is lower at Rs 55,000 against Rs 1.20 lakhs. The dividend is halved to 7½ per cent, subject to tax.

In the above connection, it may be recalled that the company, for the first time, has made such a drastic reduction in dividend, mainly due to the increase in taxation and with a view to setting aside adequate finance to meet the company's financial commitments.

Balmer Lawrie Earns More

Following a substantial improvement in the trading results of all the subsidiary companies under their management, Balmer Lawrie & Company Limited has reported a rise in the net profit, after providing for depreciation and taxation, from Rs 27.20 lakhs to Rs 29.40 lakhs for the year 1962 despite a decline in sales from Rs 9.56 crores to Rs 9.12 crores.

All allocations have been increased:—Depreciation to Rs 3.03 lakhs from Rs 2.12 lakhs; Taxation to Rs 22.22 lakhs from Rs 14.08 lakhs; General Reserve to Rs 14.12 lakhs from Rs 7.00 lakhs and Development Rebate Reserve to Rs 70,579 from Rs 44,747. Even after these increased allocations, the directors have found it possible to maintain the total dividend for the year at 25 per cent, subject to tax.

Bengal Potteries Fare Well

The rise in sales from Rs 1.97 crores to Rs 2.16 crores is reflected in the working results of the Bengal Potteries Limited for 1962. The net profit, after providing for Depreciation and Taxation, works out to Rs 9.25 lakhs as against Rs 7.66 lakhs in the preceding year.

The Depreciation amount is reduced to Rs 10.51 lakhs from Rs 10.62 lakhs and Taxation to Rs 5.50 lakhs from Rs 6.80 lakhs. The provision for Development Rebate Reserve is higher at Rs 2.01 lakhs against Rs 1.03 lakhs, apart from setting aside Rs 60,000 for General Reserve. The dividend is maintained at 12 per cent, subject to tax.

The third Gas plant started operation in November 1962 and the kiln, which was lying idle due to shortage of gas, was also started. It is, therefore, expected that increase in production from this added capacity will be available in the current year.

Isaac Holdens Skip Dividend Again

Isaac Holdens (India) Limited has reported sales at Rs 9.25 lakhs for 1962 as against nil in the preceding year. The net profit, after providing for Depreciation, amounts to Rs 19.70 lakhs as against a loss of Rs 8.29 lakhs. The Depreciation amount is raised to Rs 8.63 lakhs from Rs 5.16 lakhs.

From the present profit, accumulated loss of Rs 14.19 lakhs is deducted, leaving a balance of Rs 5.51 lakhs. Out of this, the directors have provided Rs 5 lakhs to General Reserve and Rs 31,500 for Development Rebate Reserve, leaving Rs 19,207 to be carried forward to next year.

The directors state that the first French combing plant, installed in February 1962, was brought on a treble shift basis and has continued to run at full production. The installation of the Grease plant has been delayed due to shortage of materials.

The company has been granted an industrial licence to expand capacity to 13 million pounds of wooltops per annum. An allocation of Rs 67 lakhs against French credit has been negotiated, which will be sufficient to purchase abroad machinery to produce a further 5 million pounds, while the acquisition of machinery to produce the balance of 1.5 million pounds to bring the plant up to its full licensed capacity is under consideration. With the Technical consultants, the French credit has been negotiated on favourable deferred payment terms and the machinery is planned to be installed by early 1964.

IBP Pays Less

Despite a rise in total sales from Rs 12.91 crores to Rs 14.24 crores, the Indo-Burma Petroleum Company Limited has reported a decline in net earnings for 1962, mainly due to the increase in the amount from Rs 8.90 crores to Rs 9.17 crores, payable in respect of sales of productions on consignment account.

The net profit, after providing for depreciation and taxation, works out to Rs 22.39 lakhs as

against Rs 31.02 lakhs for the previous year. In respect of allocations, Depreciation is raised to Rs 6.01 lakhs from Rs 5.25 lakhs and Development Rebate Reserve to Rs 78,471 from Rs 58,073. Taxation provision is slightly lower at Rs 31.28 lakhs against Rs 31.33 lakhs, while no allocation is possible for General Reserve against Rs 2.00 lakhs previously.

A sum of Rs 81.65 lakhs, transferred from Capital Reserve, is adjusted against loss arising due to revaluation of investment in Burma Oil (1954) Limited. The directors have proposed a final dividend of Rs 1.25, making a total of Rs 2.25 per Ordinary share, less tax. This compares with a taxable dividend of Rs 2.50 per share paid previously.

The directors state that lower margins of profit will continue in the light of governmental measures and competitive conditions in the oil industry. In the UK, the company is participating with British and American associates in the drilling of a further exploration well.

Lower Profits for NIIC

The New India Investment Corporation Limited has made a net profit of only Rs 2.83 lakhs for 1962 as against Rs 3.99 lakhs for the preceding year despite the rise in sales from Rs 32.29 lakhs to Rs 20.55 lakhs. After transferring Rs 1.08 lakhs from Taxation Reserve, the directors have provided Rs 80,000 (Rs 2.25 lakhs) for Taxation and Rs 2.25 lakhs (Rs 2.00 lakhs) for General Reserve. The dividend is reduced from Rs 6.50 to Rs 5.60 per share, subject to tax.

National Screw—Dividend Maintained

The National Screw and Wire Products Limited has reported a higher net profit of Rs 3.27 lakhs for 1962 as against Rs 2.85 lakhs for the preceding year. In respect of allocations, Taxation is raised to Rs 5.60 lakhs from Rs 2.55 lakhs and General Reserve to Rs 1.50 lakhs from Rs 1.00 lakh. Depreciation is lowered to Rs 76,240 from Rs 81,018 and Development Rebate Reserve to Rs 10,500 from Rs 26,248. The dividend is maintained at Rs 1.50 per share, less tax.

The directors state that the copper conductor capacity of the company has now been diversified into aluminium conductor capacity and an industrial licence for the manufacture of a new item—Aluminium Rods—has also been received.

Delhi Safe Deposit Does Well

The Delhi Safe Deposit Company has shown a small increase in income from rental lockers, etc., from Rs 1.72 lakhs to Rs 1.75 lakhs for 1962. The net profit, after

providing for Depreciation and Taxation, amounts to Rs 20,851 against Rs 19,797 in 1961. Depreciation is reduced to Rs 34,562 from Rs 37,132 and Taxation to Rs 28,000 from Rs 29,000.

After transferring Rs 14,000 (Rs 21,000, from General Reserve, the directors have proposed dividend of 50 pF per share on fully-paid shares, 35 pF per share on shares (Rs 7 paid-up) and 25 pF per share on shares (Rs 5 paid-up), all subject to tax.

National Tannery Pays 4½% Against Nil

A satisfactory rise in production as well as increased consumption of the company's productions is reflected in the working results of the National Tannery Company Limited for the year 1962. Sales are shown higher at Rs 45.25 lakhs as against Rs 44.04 lakhs, while the net profit, after providing for depreciation and Taxation, amounts to as much as Rs 86,218 as against only Rs 28,940 for the previous year.

All allocations have been increased:—Depreciation to Rs 79,869 from Rs 52,725; Taxation to Rs 38,000 from Rs 28,670 and Development Rebate Reserve to Rs 40,100 from Rs 14,603. Even after these increased allocations, the directors have found it possible to recommend the payment of a taxable dividend of 4.5 per cent on the Ordinary shares as against nil previously.

BALANCE-SHEET BRIEFS

The Metal Box Company of India Limited has reported a net profit, after providing for depreciation but before taxation, of Rs 1.24 crores for the year ended 31 March 1963 as against Rs 1.14 crores for the preceding year. The directors have proposed a final dividend of Rs 1 per share, making a total of Rs 1.90 per share, taxable, as against Rs 2.50 per share, taxable, paid previously.

The net profit of Bajaj Electricals Limited is significantly higher at 27.20 lakhs for the year ended 31 March 1963 as against Rs 16.74 lakhs. The directors have proposed to pay a taxable dividend of 10 per share on the increased capital as against a taxable dividend of Rs 9 per share paid on the original capital.

Devashola (Nilgiri) Tea Estates Company Limited has reported a net profit, before providing for depreciation and taxation, of Rs 2.80 lakhs for 1962 as against Rs 2.73 lakhs. The directors have proposed a taxable dividend of 15 per cent on the increased capital as against 20 per cent, taxable, paid on the old capital.

The working of the Titumurti Mills Limited has resulted in a sharp decline in the net profit from Rs 6.64 lakhs to Rs 3.82 lakhs for 1962. The dividend is, therefore, reduced from 15 to 6 per cent, subject to tax.

The Travancore Rubber & Tea Company Limited has earned a net profit of only Rs 12.21 lakhs for 1962 as against Rs 14.08 lakhs. The divi-

dend is, however, maintained at 14 per cent, less tax.

Mettur Industries Limited has reported a sharp decline in the net profit from Rs 39.24 lakhs to Rs 23.32 lakhs for the year ended 31 March 1963. For the second year in succession, the dividend has been reduced to 20 per cent, taxable from 22½ per cent, taxable, previously.

STOCK EXCHANGES Unsettled Conditions

Watch-Dog Writes:

STOCK markets have continued to present a gloomy appearance. Leading equities have declined further due to persistent liquidation and bear hammering in view of the political and economic uncertainties. Although a slight recovery has been noticed towards the close of the week, the undertone is still hesitant.

After an initial sharp recession in prices, Lyons Range witnessed a modest recovery in a few selected shares, thanks to the news of the resumption of forward trading. Last week's weakness spread to early dealings on Dalal Street; but lower levels attracted heavy short-covering, resulting in a mild recovery at the close.

Trading on the Madras Stock Exchange continued to be restricted. The price trend was softer with values, drifting in general.

The Bangalore Stock Exchange experienced a blank week without transacting any business.

Prices on the Ahmedabad Stock Exchange showed a mixed trend. While several counters improved to some extent on profit-covering, rest of the list closed on a subdued note.

Sellers predominated on the Delhi Stock Exchange where there was a further sharp break in equity values.

On the London Stock Exchange, good company news and encouraging economic pointers were offset by the uncertain political outlook.

Wan Street showed a mixed pattern of trading. While some Rails advanced further, Steels were lower with the industry expecting July to show better than average shipments but sharply curtailed ingot output.

CALCUTTA

LYONS RANGE was in the doldrums in the early part of the week under review. The lack of any incentive and discouraging advices from outside led to a drying-up of professional support for cleared shares. As such, even sr: all selling resulted in an under-depression in prices, especially when nervous holders rushed to unload on an unwilling market.

Reports of Chinese intrusions in NEFA and Ladakh borders, appre-

hensions of a power-cut to industries in some of the States, discouraging corporate news, the rise in the industrial cost structure, and lack of investment support for new capital issues, were the principal bearish factors affecting the general sentiment in the market. Thus, with operators and investors keeping away from the market, panicky sales brought down prices. The market, however, showed signs of a partial recovery towards the close due to some replacement buying and short-covering.

After a lapse of nearly seven months, forward trading was resumed on Thursday. From the behaviour of the market during the past few weeks, it was amply borne out that forward trading by itself would not lead to the desired expansion of turnover unless there was a positive approach to the many problems confronting the stock markets.

Conditions in the Gilt-edged market continued to remain firm. The demand for loans, which was confined to near and medium-dated securities, spread to medium-long also and prices rose further in the absence of enough offerings. State Loans also attracted considerable attention, 3 per cent 1988 Conversion moved up further to Rs 64.25 from the previous week-end closing of Rs 63.90.

There was not much business in the Banking section.

Jute shares continued to be neglected in view of some anxiety being felt in the matter of the ability of the industry to dispose of the increased output in a comfortable manner. Champdany continued to be offered at Rs 20.87 and New Central at Rs 12.75 against Rs 21 and Rs 12.94 respectively. Nuddea met with some support up to Rs 52.50 and Kamarhatty up to Rs 185. Megna were nearly maintained at Rs 13.12.

Except for scattered enquiry in Equitable up to Rs 24.69 and New Beerbhoom up to Rs 19.12 x.d., Coal shares were generally neglected.

Despite the improved trend at the auctions, the Tea section continued to record only a few dealings. Operators seemed to be disturbed by the developments along the north-eastern borders. Hasimara were on offer at Rs 12.69 to Rs 12.81 against Rs 12.94 with Hantapara well maintained at Rs 106. Ranicherra changed hands at Rs 13.50 to Rs 13.62.

In the absence of any encouraging developments, Sugar shares continued to be neglected. Cawnpore, after a long internal, came in for business at Rs 9.37 to Rs 9.56, while Raza-Buland were well maintained at Rs 9.31.

Except for J. K. Cotton which came in for offer at Rs 11.25 to Rs 11.50, Textile shares met with little or no interest.

Apart from activity noticed in Indian Irons, Engineering shares

were generally dull with prices drifting downwards. Reports of a bonus issue by Burn and Company induced a hope that the Indian Iron and Steel Company Limited might also follow suit, as both the companies were managed by Martin-Burn. For obvious reasons, Indian Irons moved up to Rs 22.52 from the week's opening level of Rs 22.18. Lack of follow-up support, however, caused the scrip to slip down to Rs 21.84 before finishing the week better at Rs 22.38, thanks to the resumption of forward trading. TEXMACO were neglected at Rs 23.65. G. K. Williams moved irregularly between Rs 31.37 and Rs 32 and Jessop between Rs 22.87 and Rs 23.35, to close finally at Rs 31.62 and Rs 23.25 respectively. Dalmia Iron were rather quiet at Rs 10.56 and so also Binani Metal at Rs 10.25.

Miscellaneous issues moved in sympathy with the general trend of the market. Following were the price trends of a few selected shares:

	Week's High	Week's Low	Week's Closing
Dunlop Rubber	30.87	30.75	30.87
Hind Motor	16.37	15.53	15.78

Bhilai Production During May 1963

The Bhilai Steel Works produced 22,987 tonnes of rails during May 1963. The rails production was more than the monthly rated capacity of Works. On the 28 May 1963, the Rail and Structural Mill rolled 1,798.4 tonnes of 90-lb rails in one day, which was the highest production record for one day so far. Production of rails and structurals during the month totalled 29,077 tonnes.

The mills rolled 87,596 tonnes of ingot steel during May, 1963. The production of blooms during the month totalled 75,984 tonnes. Some 39,907 tonnes of billets were produced. The Merchant Mill rolled 21,110 tonnes of finished steel products during May was 90,094 tonnes which was six per cent above the monthly projected capacity. The production of pig iron during the month totalled 89,011 tonnes. Production of gross coke (dry) during the month under review totalled 91,737 tonnes, including 84,258 tonnes of blast furnace coke.

now made in India UNBREAKABLE INDUSTRIAL POLYTHENE CONTAINERS

For more economical transport, safer and more
convenient handling of hazardous acids and
chemicals.

POLYTHENE CONTAINERS made from Polyethy-
lene withstand a wide range of corrosive acids
and chemicals. Available in various sizes and
shapes to suit your requirements.

POLYTHENE CONTAINERS are:

ECONOMICAL

... Being light, cut down
tare weight and freight.
Can be used over and
over again.

SAFE

... Don't leak or break.

CONVENIENT

... Have specially shaped
spouts to pour out
contents.

For full particulars please contact manufacturers:
