TACHOGRAPH
would have saved this...

The accident pictured here could have been avoided if the vehicle had been fitted with an Yenkey VDO Tachograph. This all-recording instrument would have flashed a red light to warn the driver he was overspeeding and saved him from this tragedy. The Tachograph chart also records in detail:

- The start and return of the vehicle
- Miles covered and at what speeds
- Time taken on all detentions

The Tachograph is the friend and guide of both the owner and the driver. It reduces road risks, wear and tear on tyres and fuel consumption. Fit an Yenkey VDO Tachograph on your vehicles—buses or lorries—NOW!

Manufactured by
INTERNATIONAL INSTRUMENTS PRIVATE LTD., BANGALORE-2.
Sole Selling Agents

ASSOCIATED TRADES, TOOL HOUSE, 7/3, PATULLOS ROAD, MADRAS-2.

1962—1963

1962 was an interesting enough year and, for us perhaps, painfully so. If Gandhiji on occasion confessed to an Himalayan blunder Mr Nehru was compelled to admit, after China's naked aggression, that we had perhaps lived in a world of unreality and had but lately had our eyes opened. Why did China spurn our friendship? What reason for its assault on our borders? China's immediate objective may have been the few thousand square miles of wasteland but which nonetheless possessed strategic importance. But the real motivations may have been deeper.

Undoubtedly China has been watching with envious eye the progress of our development plans. What made Indian success even more galling was China's own failure to march ahead through regimentation. The hundred flowers did not bloom; industry did not thrive; agricultural crops were a failure, and the millions did not get adequately fed. A symptom of China's malaise had already been evident some time before September 1962, when Chinese refugees clamoured to get into Hongkong. In the race with India, China was losing, was lagging far behind. Face was being lost, and diversionary tactics were called for.

Skirmishes on the borders were intended to win back self-respect for China in one of various ways. If India gave in too easily, if we showed ourselves eager to negotiate and compromise, we would never again have hoped to aspire for the leadership of Asia; but Indian weakness to meet the aggression must have been a possibility that the Chinese would have considered. If on the other hand we did resist, China may have hoped we would take the easy way out of military alliances with the west, a line of action which would have made us suspect in Asian eyes. This, too, was a pitfall that we avoided. Last of all, China may have reasoned that if we chose ourselves to bear the burden of defence, then inevitably we would have to prune our plans; hence the pace of our progress would be slowed down. The third way in which China may have thought to undermine the Indian economy has also been thwarted.

For now the defence effort is in full swing. What was far from China's intention, its aggression evoked a sense of unity and single-minded purpose all over the country. The only pity is, that the various economic indicators do not reflect the gearing of industry to the war effort, but instead suggest that there has been a slackening in the rate of growth and the beginnings of diffidence.

Diversionary also in character was China's action, in the sense that attention was sought to be diverted from its own internal difficulties. Then, it may be that Russia was made in this wise to choose decisively between India and China. And in fact Russia was seriously embarrassed, especially since what had just preceded was its ill-fated adventure in Cuba. But here too China has been foiled as Russia, while apparently lending it support, has nevertheless stated that it would go through its Mig deal with India.

But Indian Stock Exchanges have been seriously affected; prices have plummeted down, more, we fancy, in the apprehension that

the next Budget will impose a considerable tax burden than in any fear of any immediate war-like entanglement. As a consequence the new issue boom also came to an end, and there is much hesitation before an entrepreneur dares approach the investor. This bear phase does not accurately reflect prospects before Indian industry. For a number of reasons industrial profits are likely to be better than ever in 1963. In the first place production has been palced on a war footing. In the second place the Third Plan is not to be scuttled, and instead every attempt is to be made to ensure adequate supplies for civilian consumption. In the third place the shortage of foreign exchange resources will increasingly call for indigenously manufactured substitutes. However, the bug-bear is the next Budget, and we cannot therefore expect any sustained recovery in stock exchange sentiment until Mr Morarji Desai's proposals for new taxes at the end of next February are got out of the way.

The Government made an attempt to mobilise the idle gold hoards in the country, but it has turned out to be rather less successful than we had hoped. While the idea of gold bonds had in the past been repeatedly suggested in the columns of Indian Finance, and while the Finance Minister has offered certain inducements, in one important respect the Government's scheme differed from ours. An exceedingly attractive interest coupon—8½ per cent—has been offered; immunity both from Wealth Tax and Capital Gains Tax has been promised; and no questions are to be asked as to the source of the gold. But we had suggested that the nominal value of the bonds should be in terms of quantity, that is ounces (now grammes); whereas the face value has now been defined as Rs 100 worth of gold at the international price. Moreover we had asked for bearer bonds so that some kind of anonymity could be maintained. We fear that Government's inducements have not been sufficient, and the lurking apprehension of harassment or re-opening of cases has prevented any worth-while subscriptions to the gold bonds.

Other measures in the economic sphere have also regrettably been fruitless. The National Defence Loans have not had much of a market but this could have been expected in as much as banks are hard enough pressed to provide finance for industry, whether for civilian or defence production. Since the turn of the year bank rate has been raised, and the prospect of Government's open market borrowings has accordingly become more bedimmed.

Meantime while we are slowly getting over our embarrassment of surplus in sugar, cotton textiles are in glut, raw jute is not getting sold at minimum prices and there are other areas in the economy where production seems to be in excess of demand. We have thus the paradoxical situation of Government's main economic objective being one of holding the price line while in strategic sectors of the economy already the trend in prices is downward.

From the money market point of view, therefore, our task in 1963 will be to maximise production in every way while at the same time providing "carry-forward" finance for what may be termed the "surplus" industries. Holding the price line has as much relevance to preventing a precipitate fall (which would affect production) as to ensuring that prices do not rise too much.

Annual Reviews

STOCK EXCHANGES
CALCUTTA1962—Year of
Shock for
Investors

AFTER presenting a more or less cheerful appearance till the middle of May, Lyons Range was in the grip of a weak spell during the remaining part of the year although there were signs of the market returning to life from the middle of December. The market finished at slightly above the lowest levels for the year.

In general, the year under review was not particularly pleasing from the point of view of investors and speculators alike. It was a fact that there was an anxiety on the part of investors to take advantage of the lively conditions that prevailed in the capital market during the first half of the year. For, they found it comparatively cheap to invest their funds in good new shares, especially when companies offering new shares often had an assured demand due, among other things, to the incidence of import restrictions. But the main factor contributing to their apathy during the latter half of the year was, that the growth prospects of several industries were being re-assessed in the light of the present difficulties. They felt that developments in the corporate sector were not entirely encouraging except that here and there the corporate horizon was brightened by bonus and right issue announcements.

Fears with regard to the disproportionate growth of industries in certain sectors, particularly those relying more on imported machinery and raw materials, prompted further thought on the extent of idle capacity that would result from the scarcity of foreign exchange. Moreover, their confidence in the market was rudely shaken since the declaration of a state of emergency in the country following Chinese aggression. As a matter of fact, they were in tears to find that a number of their investments in blue chips were quoted below par. Despite the fact that prices came down to attractive low levels, they were not inclined to enter the market as they preferred to wait and see how the stress on defence production would exercise its influence on the economic pattern. The major factor responsible for the reluctance on their part was the almost certain load of taxation to come, especially when the failure of the Gold Bond issues implied that a larger amount of money would have to be raised by tax-

ation than was previously contemplated. They were also inclined to await the outcome of the Indo-Pakistani talks. They were even under the feeling that the improvement in prices, noticed during the closing week of the year, was not one of any durable significance.

As far as the professional operators were concerned, they remained active in the initial part of the year; but they were inclined to lighten their commitments when the downward trend in equity values during the second half of the year created a feeling of gloom. It was clear that political uncertainty figured prominently, which paralysed their capacity to go "short" or "long". They felt that the existing industries would have to undergo much travail on the production front, especially when a bigger portion of the foreign exchange allotment had to be used for importing defence equipment. The worry to then became the greater when the chances of fresh funds flowing into the stock markets were reduced because of the tremendous response from the public to the call for donations to the NDF. They feared that the heavy fall in the price of gold would have an unsettling effect in many directions and that the heavy loss sustained by the bullion dealers would have its effect on the stock markets as well.

The trend of prices during the year can be divided into distinctive phases—bullish and bearish. The bullish phase lasted till the second week of May. It had been earlier feared that the Budget proposals for 1962-63 might have a depressing effect on the stock markets. Although there was an increase in the tax burden, it was mainly of an indirect nature. In fact, the budget proposals were well received by the market. It was felt that all well-managed industries would be able to bear the additional burden without any cut in dividends. Besides, the incentives given to exports of tea by way of a cut in export duty and a rebate in excise duty and the reduction of tax on inter-corporate dividends were welcomed by the market. In fact, near buoyant conditions prevailed from the beginning of May when the buying support was extended even to several non-speculative shares—a development which caused some surprise even to market observers.

The period beginning from the last week of May to the middle of December was, however, a memorable one. This left behind a disastrous period of trading. In spite of many encouraging factors which helped the market to recover slightly at intervals, the fall in prices was so precipitous that the stock exchange authorities had to take various measures—curtailment of trading hours, fixation of minimum prices, suspension of day-to-day jobbing business, banning of fresh sales, the

imposition of margins and the compulsory carryover of all accounts—to prevent an onslaught by the bears. To make matters worse, activity in the market was further curtailed following the Government decision to stop forward trading in shares.

But the sudden turn in market sentiment from the middle of December was provided by the news about the withdrawal of Chinese forces from some areas and the gradual setting up of Indian administrative posts. The hesitancy of the operators gave way to a feeling of expectancy that the worst was perhaps over.

Some of them nibbled at selected shares and this tendency spread slowly. As a matter of fact, sentiment brightened up to such an extent that the authorities were able to remove the minimum price regulations in respect of preference and jute shares. It was also decided that there would be no compulsory carryover in respect of certain cleared shares. Naturally, bear operators, who were sitting on the fence for many days, were forced to cover their sales.

Following were the opening, highest, lowest and the closing rates of a few selected shares:—

BOMBAY

A Disappointing
Year for Investors

THE year 1962 proved to be the most disappointing one for investors whose gains were wiped out overnight following a landslide in the prices of shares in the forward as well as cash lists. Apart from the psychological shock given by the Chinese aggression which necessitated a shift in planning to a war-time economy, the sentiment was adversely affected by fears of stringent measures by the Government to hold the price line; further cuts in the imports of raw materials and fresh taxation. Many important new issues shed their huge premia and a few were quoted at a discount. The authorities were even obliged to come to the rescue of the market by taking immediate measures. The relieving feature was the fact that sentiment was influenced favourably by the gradual withdrawal of the Chinese from the Indian soil and the re-occupation of these areas by the Indian civil administration.

Activity in the market during the year can be divided into two distinct phases. The first—a continuation of the bull market—ended in third week of May, while the second phase—from June onwards—marked the beginning of the bear market.

The year resumed on a confident note, thanks to encouraging corporate news, purchases of the blue chips by the LIC and the relaxation of the minimum margin on bank advances against shares from 50 per cent to 40 per cent by the Reserve Bank. Sentiment thereafter was influenced for a while by fears of evil effects of "Aahatagraha". Then the reaction of the market to the Budget proposals was generally bullish as the new imports were generally in line with the expectation of the market. It was thought that well-managed industries should be able to bear the additional burden without any cut in dividends.

Thereafter, there was a reaction in mid-May and June, which was largely attributed to the debacle in Wall Street, the uncertainty regarding the quantity of foreign aid and apprehensions of a dearer money policy. The subsequent recovery, which was proved to be short-lived, was mainly based on the stepping up of aid by the Aid-India Club for the second year of the Third Plan.

The downward trend in prices was resumed in September. The main damper was the Government announcement of a lower retention price for steel which induced a feeling that the Steel companies in the private sector would reduce the dividend for the year. However, this did not materialise since the companies decided to maintain the level of distribution.

* = X.R.

From November onward, sentiment was demoralised by the reports of the Chinese invasion across the Himalayan borders, resulting in equities tumbling down over a wide front due to nervous liquidation. Thanks to the subsequent withdrawal of the Chinese forces, there was a remarkable recovery in prices during the closing week of the year due to hectic bear-covering and some replacement buying.

MADRAS

Major Ups and
Downs

THE year 1962 opened on a promising note with moderate activity and selective buying on the Madras Stock Exchange. Early in February, the panic associated with the conjunction of the eight planets had immobilised activity in the market. Following the anticlimax of the eight-planet combination, bear-covering and the emergence of bull support lifted prices on a wide front in mid-February. There was a general pick-up in values in March. The market also reacted favourably to the Central Budget proposals.

The improvement in sentiment lasted only up to the third week of May. A series of bearish factors reversed the trend again in June. July witnessed a further drift in values. Selling pressure continued unabated in the most popular issues and in the absence of fresh incentives, even the removal of the power-cut in mid-July failed to interest buyers.

The slight rally in August was, however, short-lived. A reactionary trend developed in September on fears of changes in official policy in the matter of price control, distribution of profits and the debacle in steel shares. After the prolonged spell of dullness and inactivity throughout September, confidence was slowly returning to the market with the announcement of a satisfactory dividend.

All hopes of a revival were, however, dashed to the ground by the unexpected invasion by the Chinese in the third week of October. As a matter of fact, the market was faced with a major crisis

in the last quarter of the year with values toppling down to fresh lower levels. Even the stock exchange authorities had to take measures to arrest the steep decline in prices.

The reports of the cease-fire by the Chinese in November did not impress the market, as the operators entertained fears with regard to heavier taxation and the political situation. Towards the close of the year, however, small interest was shown in a few selected shares on considerations of yield.

JUTE

Irregular Trends
in Prices

ALTHOUGH price movements were rather irregular on alternate buying and selling, conditions in the Jute Goods market were fairly stable during the year just ended. Except for a brief spell in the middle of the year, the Raw Jute section remained generally depressed with prices quoting below the prescribed minimum levels.

The dominant feature of the market was the scarcity of ready delivery manufactured goods the demand for which was not satisfied till the middle of the year. Even the IJMA was anxious to step up production to the maximum extent possible by maintaining the extra production resulting from the 2½ per cent unsealing of looms from mid-November 1961 and the further

2½ per cent. looms from the beginning of the year.

In spite of the high level of production and the reluctance on the part of overseas buyers to follow the rise in prices, there was still a reduction in stocks, which was considered to be a clear proof that the increased production was not sufficient to keep pace with the rise in consumption. Thus, the scarcity of ready goods induced activity on the part of the speculators who tried to corner all the available goods.

Even the Finance Minister's proposal, made at the end of April, to levy an excise duty of Rs 250 per tonne on hessian and Rs 125 per tonne on sacking had only a temporary effect on sentiment, as it was thought that the purpose of the levy was only to discourage internal consumption and promote exports. Moreover, the overall demand continued to outstrip the production of the mills, who had little to offer for near delivery. With the result, a scramble for the available quantity of goods led to a steady and sharp rise in prices, touching the highest levels for the year in May.

In contrast, trading in the second half of the year was generally dull with the tendency for prices to sag slowly. Apart from a general feeling that the price levels were already taken up too high, the widening of the gap between raw jute prices in India and Pakistan and the advantages enjoyed by the jute mills in Pakistan gave rise to a fear that the outlook for the exports of Indian jute goods was not encouraging. Although the market displayed a smart recovery again in November on the hope that India as well as foreign buyers had to make substantial purchases in view of the uncertainties in the political situation, it proved short-lived.

As a matter of fact, since the announcement of the production figures for November, conditions in the market turned quiet. Apart

Annual Reviews

from the lack of buying interest from overseas buyers, there was a general feeling that the demand would remain at a low ebb in view of the approaching holidays for Christmas and the New Year.

RAW JUTE

Except for a brief period in the middle of the year, the Raw Jute section passed through a crisis, as the problem of disposal was a complicated one. One of the main difficulties was that the percentage of low quality jute was unusually large, while the demand for the classes of goods for which this fibre could be used had fallen.

It should be said to the credit of the industry that, through the institution of the quota purchase scheme, the mills had been supporting the fibre market regardless of the heavy financial outlay and the difficulties over securing adequate storage space. With a bumper crop to deal with and wagon facilities being inadequate, stocks piled up in various godowns, resulting in distress sellers being compelled to accept any price to get rid of their stocks.

Immediately after the official indication that the Government would lend support to the market, the Jute Commissioner announced that the Buffer Stock Agency would mop up all the surplus jute and that permission to export low grade jute would be granted. But this had little effect on the market; but the Government was determined to maintain the price at Rs 30 per maund on the basis of Assam Bottoms.

There were, however, certain factors contributing to a slightly steadier tendency in prices during the closing month of the year. Mainly amongst these were the effective measures taken by the Government and the industry to step up purchases in Assam at reasonable prices; growers in Assam being advised not to sell jute in distress; increase in the number of wagons made available for transport and the steps taken to buy jute through the co-operative agencies for supply to the State Trading Corporation.

STATISTICS

Following were the production and despatch figures for the eleven months ended 30 November 1962 as compared with the corresponding period of the previous year and the stock figures as at the end of November (figures in metric tons):

	1962	Hessian Sacking	Total*
Production	436,500	505,900	1,082,600
Despatches	426,300	481,500	1,039,500
Stocks	27,700	50,400	91,300

	1961	1962
Production	315,700	430,700
Despatches	329,800	442,300
Stocks	17,700	29,600

*Includes also other varieties.

TEA

Good Performance

THE Tea market gave, on the whole, a good performance during the year just ended. The demand was generally strong with prices of almost all descriptions maintaining the upward trend and touching the highest levels in November. Towards the close of the year, however, there was a slight reaction following the improvement in supplies.

The early sales of the 1962-63 season yielded excellent prices for the best teas; but the common and low medium varieties fetched prices which were lower than the corresponding figures in the last two years. This trend continued up to the later sales of second flush teas and there were signs of recovery in the prices of the cheaper descriptions. In fact, more buyers appeared to be actively participating in the sales which were in sharp contrast to 1961 and which were perhaps indicative of a feeling of uncertainty about the scope of future supplies. While this improved demand was encouraging to the producers of common and low medium teas, it was, nevertheless, inadequate to raise prices to 1961 levels.

A significant feature of the market was the absence of any indication of a glut of teas in the various consuming countries despite an unprecedented increase in world supplies. While a buyers' market prevailed during most part of the year, no country was reported to be holding unusually large stocks. It was, however, realised that the world's production was also increasing at a rapid rate and consumption in this country, although a portent factor, had not yet assumed sufficient magnitude to transfer a buyers' into a sellers' market.

It was, therefore, with some optimism that the trade circles received the changes announced with the 1962-63 Budget proposals. It was proposed to reduce the export duty by 19 nP per kilogram and refund the excise duty to the extent of 15 nP per kilogram on all tea exported. In order to compensate for the loss arising from the refund, it was proposed to increase the excise duty by 5 nP to 10 nP per kilogram—zone I to IIIA will have to pay 5 nP more, while zones II and IIIB will have to pay 10 nP more. These changes in levies were expected to make Indian tea more competitive on the world market and should provide a welcome fillip to exports.

Although a favourable climate was thus created for the expansion of exports, there was a considerable speculation as to the effect of Britain's entry into the ECM would have on the imports of Indian tea to the six countries of the European Community, especially if

Good Assam CTC Dust	6.40	7.10	6.10	6.60

some of the African countries were to be treated as associated members and their produce was allowed free entry into Britain. While some circles felt that this only could put India at a great disadvantage in her trade with the UK, others felt that the entry of Britain into the Common Market could have beneficial effects. In this respect, the decision taken by the ECM deputies, at the end of July, to abolish the common external tariff in tea was considered to be a distinct gain. Moreover, it was felt that the removal for the present at least, of the threat to tea exports was regarded as a temporary reprieve, allowing the Tea Board and the industry to consolidate their recently-initiated efforts to promote exports more actively.

Meanwhile, the demand for the majority of teas on offer, was well maintained till the end of November when prices reached the peak levels due to disruption and delay in the movement of the commodity from Assam. Quite apart from the operational uncertainties created by the Chinese advance, the pipeline was blocked by the strike of the Pakistani staff of the Joint Steamer Companies, which linked the North Indian supply point to Calcutta through East Pakistan. Only small quantities were coming into Calcutta by other means of transport since rail bookings were interrupted owing to the national emergency, while air and road transport was scarce. As the strike had already lasted for a month, it was feared that, if the strike continued, the Calcutta tea auctions might have to be suspended.

The return of confidence in the market was, however, evident from the beginning when the trend of prices was slightly downward, thanks to the news of the strike being called off and the declaration of cease-fire by the Chinese. Buyers operating from overseas were also found to be much more hopeful of being able to meet their commitments.

The softer trend in prices has, however, caused little concern as a reaction had been expected. But the outlook for the next year's crop is considered to be uncertain. Gardens, especially in Assam, are finding it difficult to obtain financial accommodation from banks for the new season. It is generally

felt that, although the Government has persuaded the banks to maintain their advances to gardens, more vigorous measures need to be taken to ensure an adequate supply of credit to the industry during the present emergency, if production is not to suffer.

COFFEE

Downward Revision of Crop Estimate

ALTHOUGH the prospects of 1962-63. Coffee crop seem to be brighter as compared to the previous year, the estimates seem now require a further revision. The previous estimates were placed in September 1962, at 54,800 tonnes, comprising of 34,300 tonnes of Arabica and 20,500 tons of Robusta varieties. The present indications are of the order of 53,035 tonnes comprising of 32,820 tonnes of Arabica and 20,215 tonnes of Robusta varieties.

In the first week of December, there were unseasonal rains in some parts of the Mysore State including the Coorg area as a result of which damages are reported to the standing crop. It is feared that there may be a further downward revisions in the 1962-63 crop and it is also feared that the production of Arabica Plantation coffee may go down. The exact damage is being assessed.

The releases of coffee in the internal market amounted to 31,454 tonnes during the period January to November 1962, as compared to 31,213 tonnes during the corresponding period of last year. The total internal releases for the calendar year 1962 are likely to reach a figure of 34,600 tonnes, thus exceeding the quantity of 33,873 tonnes during 1961. Of this, Robusta is expected to reach 18,000 tonnes as against 16,580 tonnes and this exceeds 50 per cent of the total internal releases in India in 1962. Apart from these factors, the efforts of the Coffee Board to augment the internal consumption in general and of Robusta in particular have, no doubt, resulted in a very good demand for Robusta in the internal market. With a larger production in 1962-63, the Board may

make a larger provision for the internal market during 1963.

The average prices realised in Pool sales during the year period under review were generally higher than those obtained in 1961. Though the prices for certain types/grades showed a tendency to rise in Pool sales in the recent months, the Board took timely measures to bring them to reasonable levels by increasing the quantities to be released in the internal market. This was in line with the policy of the Government to hold the price line.

A very important change in the method of export sales during the year was the conduct of open auctions for exports. Out of 20,000 tonnes allocated for export out of the 1961-62 crop, more than 90 per cent was sold by the end of November. The Marketing Committee also decided to allocate 21,300 tonnes for export out of the 1962-63 crop, keeping in mind the quota restrictions and various other factors.

After years of agitation, it was at the beginning of the year that the open auction system was adopted. The opponents of open auctions felt that the system did not help all participants to share in the coffee offered, as the highest bidder used to walk away with the whole lot. Those who opposed the reversion, felt that the open auctions did not prove a failure. Thus, the half-hearted open auction system could not possibly succeed, because sufficient distinctions in qualities and grades did not exist in a bulked, grade-wise sale of a limited quantity. With the result, the Coffee Board has now decided by a majority to return to the closed bids or tender system for coffee sales for export.

But, an event of great importance during the year in connection with exports of coffee was the Government decision to join the International Coffee Agreement which was assured, for four years, of an annual export of 21,000 tonnes to countries who were members of the Agreement. According to the Agreement, the basic export quota, fixed for India, is 21,600 tonnes (360,000 bags) exclusive of our exports to the non-quota countries like the USSR, etc. In 1961, India exported nearly 30,000 tonnes. But, with increasing competition in the world market and with the universal shortage of foreign exchange in developing countries, the Agreement ensures the trade against sudden adversities for four years.

In the context of the deteriorating foreign exchange position, it is natural that there should be a sense of urgency in maximising the export of every exportable commodity—traditional and non-traditional. One such commodity, which calls for optimum effort, is Coffee, not only because of the dire need to augment foreign exchange, but also because of the continually mounting surplus stocks

at our disposal. From a careful analysis, it will be found that the quantum of our export trade can still show an improvement if only two of these factors—and they are very important—are taken serious cognisance of and effective measures launched to rectify them. These are, first, the quality of the goods and secondly, marketing policy. The vital need is the improvement in quality. "Let us take care of the quality and the price will take care of itself."

SUGAR

Crisis of Surplus

The year 1962 seemed to have started with a lot of uncertainties so far as Sugar was concerned. With the failure of the Geneva Conference of the International Sugar Council to agree on export

quotas for sugar producing countries on the free market for the year and the next, there was a growing fear that a price war might develop in the world sugar market. So far as India was concerned, a dilemma had been posed. It was, no doubt, true that she could export sugar to any country outside the USA without any quota restrictions imposed by the International Sugar Agreement. But by the same token, she had to take account of her ability to face competition in the free market and the preparedness of the Government as well as the Indian Sugar Mills Association to bear the heavy losses involved in sugar exports in a falling world market. It was felt that, in view of the serious competition likely to emerge from other sugar producing countries, India would not be able to benefit to any appreciable degree from the absence of quota restrictions. There were also indications that any improvement in export per-

Annual Reviews

formance would be only marginal in character.

As a matter of fact, the situation was worse from the commencement of the year when the fall in prices was steep and the factories were finding it difficult to continue cane payments. Releases of sugar by the Govt. for free sale were in excess of the actual requirements. It was even feared that some mills might be compelled to stop work. The finance of the mills was strained greatly due to the large accumulation of stocks. Apart from the difficulty of storing, large funds had been blocked in stocks. As these stocks were financed by borrowed funds, mills had to pay heavy interest charges.

At this juncture, the Government announced its new sugar

a helping hand...

As far back as 1921, Tata Steel established a Technical Institute in Jamshedpur to develop a cadre of fully qualified technical personnel to take up positions of responsibility in India's first steel works. Subsequently, the Company instituted training courses for skilled artisans and other categories of employees.

During the last four years, the Jamshedpur Technical Institute has planned and provided special training programmes to meet the urgent needs of Hindustan Steel. Over 1,800 technicians from the Government steel plants at Rourkela, Bhilai and Durgapur have availed themselves of the accumulated training experience and facilities placed at their disposal by Jamshedpur, where industry is not merely a source of livelihood but a way of life.

Annual Reviews

policy of linking sugarcane price with the recovery of sugar. This was based on two main considerations, viz. ensuring uniformity throughout the country in sugarcane prices and providing an incentive to production. The policy was to take effect from the 1962-63 crushing season. In this respect, the suggestion made by the ISMA, that sugarcane recovery slab schedule should be operated between the limits of 8.5 per cent and 11 per cent, was rejected by the Government.

Then came the announcement that there would be no restrictions on the production of sugar in the 1962-63 season and that the sugar mills would be free to utilise their capacity to the maximum extent. The increasing exports of sugar and the brightening prospects were the factors which appeared to have gone into the Government's calculation. But it was felt that the withdrawal of the cut, though welcome, would be helpful in increasing production. In this connection, the industry stated that the acreage under cane and cane production had considerably been reduced in anticipation of the continuance of the cut.

Apart from the downward slide in prices, the slow offtake financially embarrassed the factories. As the 1962-63 season started in November with a carryover of as much as 945,000 tons, the financial strain of the mills was great. It was stated that some wholesalers were unwilling to fulfil purchase contracts and the trade, in general, slashed orders mainly because of the lack of financial accommodation. Moreover, the industry's production programme was upset by the reduction in the supply of cane—the principal raw material. It was feared that the outturn of sugar would be 200,000 tons less than last season unless suitable measures were taken by the Government.

It is, however, encouraging to note that the 1962-63 season has started well. The output in November was 173,000 tons as against 120,000 tons in November 1961. It is, however, feared that it may not be possible to maintain the output at the 1961-62 level on account of a large-scale diversion of cane for conversion into jaggery.

RUBBER

Gap Between Production and Consumption Persists

IN 1962, for the sixth year in succession, it was estimated that the natural rubber industry would again sell more rubber than it produced. Figures issued only recently by the International Rubber Study Group estimated world natural production at 2,110,000 tons and sales at 2,190,000 tons, leaving a demand-over-supply gap of some 80,000 tons. A portion of this excess will be absorbed by about 66,000 tons of the Government stockpile sales, still leaving a 14,000-ton lag to come from commercial stocks.

For the January-October period, production was 1,705,000 tons; deliveries from stockpiles 56,900 tons and consumption 1,792,500 tons, including imports into Russia of 280,500 tons and into China of 9,500 tons. Stocks of natural rubber, at the end of October, were 730,000 tons—down by 12,500 tons since 1 January. Synthetic rubber production, for the January-October period, was 1,845,900 tons, while consumption was 1,777,500 tons. Stocks at the end of October were 7,500 tons up, at 395,000 tons.

In India, however, the rubber supply position showed some improvement. According to the figures released by the Rubber Board, total supplies of natural rubber in the country increased from 16,747 tons in September to 17,496 tons in October. Consumption, however, declined from 4,024 tons to 3,579 tons. With a strong supply position and a lower offtake, stocks of natural rubber with the estates, dealers and manufacturers were higher at 13,917 tons at the end of October as compared to 12,723 tons at the end of September. Besides, there were 3,562 tons of synthetic rubber in stock as against 3,023 tons at the end of September.

Despite the large shortage in domestic production of rubber against demand during the past few months, stocks were reported to be accumulating with the producers. This was mainly due to the fact that the manufacturers became choosy and quite a serious

accumulation problem had risen in estates. Another confusing element in the situation was the relatively small size in reported production as against the marked progress in yield and output individually recorded by most planting companies.

If demand in India is maintained at the established rate of progress, there should be a short-fall of 40,000 tons. Estate reports show production moving at an annual rate of around 29,000 tons. The consumption of rubber is growing at a fast rate. Besides, established factories will be expanding their capacity, while the output of tyres and tubes may record an increase. At the same time, the output of rubber goods of various kinds—industrial belts, foam rubber components, cycle tyres, etc.—is increasing in volume.

Luckily, the plant for producing synthetic rubber, at Bareilly, is expected to be in operation early in 1963. This unit may probably provide about 15,000 tons of synthetic rubber in 1963. But, it will still be necessary to import about 45,000 tons of rubber, as indigenous production of natural rubber and synthetic rubber cannot be expected to be more than 40,000 tons, while the total consumption is estimated at 85,000 tons.

The Chinese aggression has emphasised the need for intensive production of rubber, which is a strategic war material. In this hour of trial, the industry has to perform a duty the importance of which cannot be exaggerated. It is, therefore, necessary not only to produce more rubber, but to see that it reaches the right place in time and at the fair price fixed by the Government.

For some reasons or other, the Indian industry has not been able to step up its output and the planners have failed to adopt the necessary measures, which will enable the rubber estates to increase their yield significantly. It is regrettable that, in spite of the offer of a subsidy of Rs 1,000 per acre and the inclusion of Rs 9 in the scheduled price of rubber, the area planted under the subsidy scheme up to the end of 1961 was not more than 20,000 acres. At least another 80,000 acres are required to be re-

planted by 1970. The importance of improving the yield per acre is being only now realised and the replantation programmes are being executed more vigorously.

BULLION

Violent Fluctuations

VIOLENT fluctuations in prices characterised trading in the Bombay bullion market during the year under report. Both Gold and Silver ruled around their peak levels during the second half of the year, while bottom levels were also touched at the close of the same period.

Firmness in Gold was attributed to several factors. Mainly amongst these were the shortage of floating stocks in Bombay, the ever-growing demand and less supplies of the smuggled metal. Silver also followed the footsteps of the yellow metal. Chinese invasion also helped "longs" in lifting up the prices of both the metals.

The firmness in the price of Gold was noticed till the end of August, but declined thereafter. Following the proclamation of emergency, prices suffered a sharp setback on fears of Government action to bring out hoarded gold. After the announcement of Gold Bond issues on 3 November and a ban on forward trading in gold subsequently, prices tumbled down.

In Bombay, ready gold, which had risen from Rs 119.50 to an all-time peak of Rs 129.90 by 29 August, fell to Rs 86 by 24 November—a net decline of about Rs 44. Subsequently, however, it recovered to Rs 110 on support at lower levels and the emergence of consumer demand.

The price of Silver rose from Rs 211.70 per kilogramme to Rs 221.65 by early May; but declined to Rs 212.05 by the end of July. Subsequently, it touched an all-time peak of Rs 224.55 on 1 November; but suffered a setback, in sympathy with gold, to Rs 188.25 by 24 November. Again, there was a revival of demand, resulting in the price moving up to Rs 214. On 30 December, silver stood at Rs 209.70 and gold at Rs 100.75.

The following were the highest and lowest prices touched during the year:—

	Gold Settlement		Silver Settlement	
	High	Low	High	Low
1962:				
January	Rs 121.30	116.20	Rs 215.25	211.10
February	123.15	118.75	214.60	212.40
March	123.30	120.70	219.35	214.15
April	121.95	119.75	220.80	216.60
May	123.65	119.95	219.25	215.85
June	126.60	122.20	217.30	215.00
July	125.90	124.15	216.85	212.80
August	129.90	124.60	220.25	213.00
September	129.10	120.10	222.40	216.70
October	123.20	115.75	224.20	217.40
November	121.65*	86.00*	225.55	192.10
December	119.00	96.00	214.00	194.80

*Spot rate.

Import Policy

THE import policy statement for the half year October 1962—March 1963, which was announced after nearly three months of the license period had elapsed, will have to be regarded more as an unavoidable gesture in the present situation than as a measure to effect substantial economies in the import bill. It cannot be otherwise, for commercial imports have been reduced to such an extent as a result of progressive cuts announced at every successive announcement of import policy, that the scope for further paring is minimal. However, the deterioration of the balance of payments position during April-September, as compared with the previous half year, and in the context of the emergency, has made a further attempt to reduce imports inescapable. The adverse balance during the April-September 1962 amounted to Rs 162.1 crores as compared with Rs 119.5 crores during October 1961—March 1962.

Total commercial imports covered by import licensing, during the first half year have been estimated at Rs 156 crores, including Rs 30 crores against non-project aid available under the Colombo Plan and through the United States Agency for International Development. As a result of the cuts now imposed, it is expected that the total of commercial imports will be reduced to Rs 148 crores including Rs 35 crores against non-project aid. The total saving that may be expected is thus of the order of Rs 8 crores.

While the cuts will be applied in the quotas of both Actual Users and Established Importers, they will weigh more heavily on the latter. The reduction in their quotas is expected to contribute more than half of the total savings expected to result from the cuts. Imports by Established Importers, estimated at about Rs 13 to 15 crores during the first half year, will be reduced to about Rs 8 to 10 crores during the second half.

In response to the persistent demand from trade and industry, which was endorsed by the Mudaliar Committee, the system of annual licensing was introduced in the case of certain items in April last, but with important qualifications. According to the conditions of annual licensing, the quota was announced for one full year and the licensee was entitled to utilise 50 per cent of the annual quota during the first six months of the validity of the licence. At the expiry of this period, the licence was to be presented to the authorities for endorsement or revalidation for the second half year subject to such changes as might be decided upon by Government in view of the prevailing situation. In regard to the items for which licensing was not on an annual basis, quotas were indicated for a full year, but licences were to be issued in two instalments, the supplementary licence for the second half year being subject to such cuts as might be decided upon by Government. In view of the deterioration in Government's foreign exchange position, it was decided in June last to impose a general cut of 50 per cent in the licences granted to Established Importers as well as Consumer Co-operative Societies. Cuts were also imposed, according to the merits of each case, in the licences granted to actual users from free sources. Subsequently the cuts in the licences issued for particular items like, carbons, X-ray films, wattle bark etc were fully or partially restored.

Under the new policy announced on December 24, a large number of items, totalling about 350 have been placed on the banned list.

Validation of annual licences, where applicable, or the issue of supplementary licences for the second half year will not be made in respect of these items. It has also been announced that supplementary licences will be issued only in respect of items considered to be of specific importance to the economy. In the case of most of the items for which supplementary licences will be issued to Established Importers, the cut of 50 per cent imposed in June has been retained, on the quota announced in April and applicable to the second half year. The cuts have been increased in the case of eight items, the cuts ranging from 70 to eighty per cent of the quota. In the case of some other items, however, the cuts have been reduced or totally restored. The items, on which there will be no cut in the portion of the quota announced in April and applicable to the second half year, include Carbons, wattle bark and extract, other bark used for tanning, hides and skins, and X-ray films. The extent of the cuts has been reduced in the case of books and cinematographic films.

The validation of licences issued to actual users for import of components and raw materials will also be subject to cuts. But it has been claimed that industrial production will not be adversely affected by the reduction in imports which will be selective in its impact. Industrial production during the first half year, it is pointed out, has increased by eight per cent, and this tempo is expected to be maintained. It has also been pointed out that the cuts in the licences issued to Established Importers for import of drugs has been more than balanced by increased allotment for import of materials by drug manufacturers, and that, therefore, there should be no justification for rise in prices.

The list of banned items for which licences will not be issued includes industrial materials for which it is claimed that adequate indigenous capacity has been set up, as well as a number of consumer goods which are obviously regarded as luxuries which it should be possible to do without, even though indigenous production is not adequate to meet the requirements. This latter category includes items as diverse as milk food for infants and the luxuries of the rich and the poor. Oilman's stores and groceries of all kinds, cardamoms, cloves and other spices, as well as foreign liquor and betelnut are included in the banned category. While the ban on liquor may step the subterranean demand for diplomatic hooch, the poor man will have to cultivate a dental conscience and give up chewing altogether, or will have to pay more for his betel nut. In either case, the loss in customs revenue will be many times the saving in foreign exchange. But the much larger number of items whose import has been banned come under the category of industrial materials and components. And their inclusion in the banned list bears impressive testimony to the growth and diversification of Indian industry.

The Commonwealth in 1962

By Harry Miller

Britain's negotiations for membership of the European Economic Community (the Common Market) made 1962 a critical year in the history of the Commonwealth.

Britain's decision to seek entry into the Common Market had been regarded by many as a watershed in Commonwealth history: there was uncertainty not only over the future pattern of Commonwealth trade, but also the future political ties between Britain and the other members.

However, misunderstandings of the practical issues involved were cleared when the Commonwealth Prime Ministers met in September, and since then Britain has continued negotiations with the Six. At the same time, it has kept the Commonwealth countries fully informed of every phase of the negotiations.

The meeting of the Prime Ministers was undoubtedly the highlight of the Commonwealth year in Britain, and it proved once again the underlying strength of this association of nations—its ability to discuss differences of policy frankly and to respect individual viewpoints.

Toward the end of the year, however, a development took place which seriously affected one Commonwealth country: China attacked India along the northern frontier. Commonwealth countries considered how they could assist India.

Britain's own response to an Indian request for assistance was immediate. It despatched urgently needed small arms. Shortly afterwards, Mr Duncan Sandys, Secretary of State for Commonwealth Relations and for the Colonies, himself visited Delhi and also Rawalpindi.

In the constitutional sphere, there were notable features: Uganda, Jamaica, and Trinidad & Tobago became independent members of the Commonwealth.

In July, the British Government agreed in principle to the creation in 1963 of a Federation of Malaysia, embracing the Federation of Malaya, Singapore, North Borneo, Sarawak and Brunei. Britain's agreement to this unique, bold and imaginative concept was subject to certain safeguards for North Borneo and Sarawak. Toward the end of the year, a cloud put a shadow over the inter-governmental discussions on the constitutional details, when a revolt against the project took place in Brunei, whose Sultan had been told that his country's membership in the proposed federation would be welcomed.

The British Government took the initiative in grappling with the critical problem of the future of the Federation of Rhodesia and Nyasaland and its member territories. Just before Christmas, it announced that Nyasaland would be allowed to secede from the Federation, and that the First Secretary of State, Mr R. A. Butler, who is also the Minister responsible for Central African affairs, would visit the territories in January to consult all governments on the question of continued association between them.

The Ministers of the Federation of South Arabia and of Aden, a colony, agreed on a merger next year.

Malta became self-governing again after a lapse of four years.

Nine constitutional conferences were held in London and took most of the territories concerned (Jamaica, Trinidad & Tobago, Kenya, Uganda, Aden and Nyasaland) through further or final stages of political progress. Only two of them (British Guiana and Zanzibar) achieved no advance for internal political reasons. The conference of eight governments in the Eastern Caribbean discussed the possibility of their federating.

What of 1963? It is likely to repeat in more intensive form the pattern of 1962.

Britain's negotiations with the Common Market will be prosecuted vigorously: the year will begin with two week-long ministerial meetings in Brussels in January.

The question of solving multi-racial problems in Kenya and Southern Rhodesia will be much to the force.

The spotlight is also likely to turn increasingly on the future of the remaining small British dependencies scattered over the world. For some, at least, of the islands in the Pacific, the Atlantic and Indian Oceans, a form of federation may have to be considered.

SOUTHERN BANK LIMITED

(Scheduled Bank)

Head Office: 24, NETAJI SUBHAS ROAD, CALCUTTA-1.

Phone: 22-5989 & 22-5989

Branches:—Burrabazar, Shyambazar, Bhowanipur, Basirhat & Khulna.

Interest on Savings Deposit @ 3% p.a. Any of our offices is ready to help you solve your financial problems.

S. N. BANERJEE, M.A., General Manager.

Commonwealth highlight will be the visit of the Queen and the Duke of Edinburgh to Australia and New Zealand during the next few weeks.

In the constitutional field, the focus will be on:

1. The future status of the Federation of Rhodesia and Nyasaland and its member territories. For Nyasaland itself, a self-governing constitution is to be introduced during 1963.

2. A new constitution for self-government in Kenya, should the political parties reach agreement on important constitutional policy. It is considered unlikely that elections could be held before the middle of 1963. Consequently, it is difficult to speculate on Kenya's independence date.

3. Federation of Malaysia: It is not expected that the recent rebellion in Brunei will delay the establishment of the federation by the agreed date of 31 August 1963.

4. Independence for Malta will be discussed at a forthcoming conference.

5. British Guiana: The conference held in London in October was adjourned to an indefinite date because the three political parties were unable to reach agreement. If, after an interval of discussions among themselves, they cannot find an agreed solution, the British Government may have to consider imposing a settlement on their own authority so as to enable the territory to go forward to independence.

6. The question of whether a new federation of the islands in the Eastern Caribbean will solve the future of these comparatively small units.

7. The Gambia: the only remaining British dependency in West Africa, will have to decide whether it can link up with its neighbour, Senegal. If a satisfactory basis of a federation can be worked out, Britain will grant independence to the Gambia to enable it to conclude an agreement with Senegal.

The Outlook For 1963

By Paul Einzig

While in India the economic prospects for 1963 are obscure because they depend extensively on the outcome of the conflict with China, in the Western world it is possible to foresee the trend of development with a reasonable degree of clarity. The international political outlook is much less uncertain, owing to the improvement of relations with the Soviet Union. No major crisis in Foreign Exchanges or on the Stock Exchanges is likely to be caused by war scares. Ruling out that disturbing factor, it is safe to predict that unemployment in the Western countries will decline appreciably as a result of the increase of consumer demand, which will lead also to an increase of demand for capital goods. This result will be produced by a fundamental change in the attitude of Western countries toward creeping inflation.

As a reaction to deflation scares of 1962, resistance to inflation is likely to be relaxed in most Western countries. In particular disinflationary efforts in the form of high bank rate and credit squeeze have caused to be fashionable for the time being. In their absence the revival of demand for raw materials will tend to improve the position in raw material producing countries. Industrial output is likely to increase as and when unused capacity comes to be reemployed.

There is no likelihood of any major speculative attack against any of the major currencies. The balance of payments position of both Britain and the United States has improved, and in any case there are now much more external facilities avail-

able in the form of additional drawing facilities at the International Monetary Fund and assistance from Central Banks. With the aid of such facilities there will be a good chance to resist purely speculative attacks or the speculative exaggeration of temporary adverse trends, though they are of little use against chronic deficits.

As a result of inflation, profit margins will be wider and this is likely to result in an upward trend in equities. Investment demand is likely to be, however, more selective than it had been before the setback of May 1962. In any case, investors are not likely to accept low yields which discount possible expansion of profits many years ahead.

As to the trend of gilt-edged securities it will be under the conflicting influence of progressive inflation and lower bank rates. While hopes for a gilt-edged boom which were entertained before the Governments decided to abandon resistance to inflation have proved to be unfounded, the absence of a deliberate dear money policy is likely to offset, and possibly more than offset, the adverse effect of inflation, at any rate in 1963. Later the reduction of yields in real terms on fixed interest bearing securities by advancing prices is bound to produce its effect on medium and long-term loans. But in 1963 the bond market is likely to take a short view and enjoy lower interest rates while it can.

The decline of unemployment will strengthen the bargaining power of the trade unions and they are certain to misuse it to the utmost limit of their capacity. Employers will be in a better position to concede wage increases and will no doubt do so. They will be also under pressure to concede shorter hours, a demand which the trade unions are bound to press in the light of their experience with higher unemployment in 1962. Trouble will accumulate for the future, but 1963 will be a year of prosperity.

World of Finance

The High Road to Dear Money

BANK rate has been raised. Though not wholly unexpected the snock from the money market point of view is still there, because there had been the lurking hope that the Reserve Bank would be able to convince the powers that be that bank rate as monetary weapon was futile in Indian conditions. It may be said at the outset that the Reserve Bank has been appreciative of the problems that a raising of bank rate would have posed to the banking system. For, by deferring into the beginning of the year its raising of bank rate by $\frac{1}{2}$ per cent to $\frac{1}{4}$ per cent the Reserve Bank has seen to it that banks' problem in the matter of providing for depreciation in the value of gilt-edged holdings in their 1962 accounts is a smaller one. It may be recalled that similarly when the Government borrowed at higher rates of interest last year, it did so with a nice care for the half-yearly closing of accounts by banks: the fact that higher interest coupons were being offered did not affect banks' position on 30 June 1962.

Bank rate has been raised, but we are once again left with the impression that changes in the primary interest rate of the country follow upon and are to be reckoned as an adjustment in the wake of other changes that have already taken place in the general structure of interest rates. That was the case in 1957, when de facto increase in bank rate (in February) preceded by three months a de jure raising of it. At that time, as on this occasion, there is implicit admission of the "formalisation" of the existing structure of interest rates by means of an increase in bank rate. But what is sought to be sidetracked is how exactly it happened that an uptrend was given to interest rates.

In 1957 it was the severity of the 1956-57 busy season combined with unbridled competition on the part of banks for new deposits that caused banking interest rates to rise. Also the imposition of stamp duty around the beginning of the busy season on borrowings against usance bills had to be "formalised" by the Reserve Bank: the cost of borrowings against Government securities could not be lower than the cost of advances secured against usance bills, and so, though bank rate continued to be at $3\frac{1}{2}$ per cent, effective early February 1957 banks could borrow from the Reserve Bank against gilt-edged only at 4 per cent.

Even so, it has happened that the existence of the multiple-tier bank rate, and the application of the second tier from about the middle of December owing to the onset of the current busy season, have naturally forced interest rates higher. If banks were not compelled to pay 5 per cent (or more) for their borrowings from the Reserve Bank, the inter-bank call money rate would not have much exceeded 4 per cent. The monetary authorities cannot therefore claim that an increase in bank rate was thrust upon them; it is they who caused the upward spiral to happen.

Why has Government though the Reserve Bank thus sought to implement a dear money policy? For it is obvious enough that judged by Indian conditions an increase in bank rate is very far from what was warranted or desirable. Let us consider what the implications of the raising of bank rate are.

Firstly, an already moribund Government securities market has now been rendered almost extinct. It cannot be the official objective to reduce the scope for Government's borrowings. On the contrary over and above the requirements for putting through the Plan endeavours we have now the cost of defence to be met; if inflationary spending was to be avoided—and we regret to say that aside from an increase in tax revenues the only recourse left now to Government's deficit financing—then obviously Government had more than ever before to maximise subscriptions to its loans. With the increase of the interest coupons last July, the market for gilt-edged, always narrow, became tighter than ever. And now securities are unsaleable. Already, as at 31 December 1962, that is prior to the raising of bank rate, banks had to provide for not insignificant depreciation in the worth of Government securities. The further erosion that has taken place in values means that banks cannot seek to replenish their resources through sales of gilt-edged—granting for a moment that sales could be effected—except at considerable loss. Whether for purposes of liquidity ratios or adding to their first line of defence we may be sure that banks are anxious supporters of the gilt-edged market; they have, too, the responsibility they recognise of aiding planned endeavours; and in view of the national emergency their inclination to invest in Government securities would be the greater. But banks have been twice bitten (in 1951 when bank rate was raised to $3\frac{1}{2}$ per cent and now in 1963) and will not be able to bear further capital losses. So, the increase in bank rate means that subscriptions of the banking system will suffer—unless Government takes care to address a loan specifically to the banking system each year, one with a short period of maturity.

Secondly, it cannot be Government's intention to discourage the growth of industry and employment or the expansion of export earnings. But these precisely are what are likely to happen in the wake of the raising of bank rate. For banks will not be slow to enhance the charges that they extract from their constituents; costs of production will rise; export prices will be even more uncompetitive. And all this comes on top of the already increased burden on industry in the form of the emergency risks insurance.

Thirdly, even as the gilt-edged market takes a beating, the capital market generally (already in the doldrums after the national emergency) will be completely paralysed. Industry will have to place greater reliance on bank finance, and the debt/equity ratios will rise.

We hark back to the question: Why? We fear that external pressures rather than local conditions have motivated the Government taking the high road to dear money.

Let us explain: it has been an open secret that from time to time we have been advised by the International Monetary Fund that money was too cheap in India. We withstood such pressures as long as we could. But almost coinciding with the standby credit secured from the IMF last year, Government (a) offered higher interest rates on its borrowings and (b) made the multiple-tier bank rate even more costly. We fancy that a further drawal on the standby (we have so far used up only \$25 million of the \$100 million arranged for) is imminent. The price we apparently have to pay is a higher bank rate.

The Reserve Bank for its part has already striven as far as possible to soften the blow. With a view to avoiding a larger increase in bank rate, some form of the multiple-tier bank rate has been retained, with the second tier of borrowings chargeable at 6 per cent.

That which has been done cannot be undone. But there is still time to effect some correctives at least that will minimise the damage that the raising of bank rate will generally inflict upon the economy. Government can still (relatively that is) encourage production and exports. For the fact is that the re-alignment in interest rates that will take place will be based, not on bank rate being $4\frac{1}{2}$ per cent, but on central banking credit costing (at the normal upper limit) 6 per cent. The higher tier of 6 per cent is, we submit, unnecessary. At most banks borrow from Reserve Bank at the penal higher limit for a period of two months or even less. Surely, such marginal borrowings should not set the pace for the whole structure of interest rates.

It is unfortunate, bank rate has been raised to $4\frac{1}{2}$ per cent, and we can do nothing about it.

The monetary authorities, however, still have left to them the opportunity to minimise the magnitude of the havoc by eliminating both the quota for borrowings and the 6 per cent tier. We call upon them to act now.

+

SMALL INDUSTRIES

Credit Guarantee Scheme

The scheme for the guarantee of advances granted to small-scale industries was introduced as an experimental measure from 1 July 1960; and has been in operation in 52 selected districts. The Government of India has, with immediate effect, placed the scheme on a permanent basis and extended its area of operation to cover the entire country. The scheme will continue to be administered by the Reserve Bank of India, which has been designated as "Guarantee Organisation", in its Industrial Finance Department at Bombay.

The object of the scheme is to enlarge the supply of institutional credit to small-scale industrial units by ensuring a degree of protection to the lending institutions against possible losses in respect of their advances. The scheme provides for the sharing of such losses between the lending institutions and the Government of India.

The maximum amount of loss recoverable against the guarantee issued under the scheme in respect of any one advance will be Rs 1 lakh. Advances made to small-scale units by ninety-three selected credit institutions in the country are eligible for guarantee under the scheme. These include 49 scheduled banks, 21 State co-operative banks, 14 State Financial Corporations and the Madras Industrial Investment Corporation Ltd., besides the State Bank of India and its 7 subsidiaries.

STEEL

Leading British Executives to Attend Symposium at Jamshedpur

Led by their president, Mr M. A. Fiennes, delegation of members of the Iron and Steel Institute in London will be visiting India in January at the invitation of the Indian Institute of Metals and the National Metallurgical Laboratory, Jamshedpur.

The visit, which will last into February, will form one of the Institute's "special meetings", which have been held almost every year since its foundation in 1889.

Many of the members will be accompanied by their wives, and the opportunity will be taken to tour a number of Indian steelworks and institutions before attending a symposium at Jamshedpur from 4 to 8 February.

The delegation will be composed of approximately 74 members, most of them from Britain, but some from France, Spain, Germany, Belgium, and the Netherlands. Members resident in India will also join the party. Mr Fiennes, the president, is chairman and managing director of Devy-Ashmore Ltd., a firm with many associations with India.

Among leading members of the delegation will be Lord Clydesmuir, director of Colvilles Ltd; Sir Charles Goodeve, director of the British Iron and Steel Research Association and former president of the Institute; Mr A. Jones, MP, director of Guest, Keen & Nettlefolds Ltd; and Sir Julian Pöde, Chairman of the Steel Company of Wales Ltd, President of the British Iron and Steel Federation and a vice-president of the Institute.

The tour opens in New Delhi on 20 January with an inaugural meeting which will be attended by senior representatives of the Indian Government, the Indian iron and steel industry, the Indian Institute of Metals, and the National Metallurgical Laboratory.

On 28 January, the party will split into two sections. One section will visit Agra and the steelworks at Bhilai, Rourkela and Burnpur; the sections will link on 2 February for a visit to Durgapur. The following day the visitors will reach Jamshedpur for four-day symposium.

The members will also be able to take part in the 16th annual technical meeting of the Institute of Metals. The symposium, organized jointly by the Indian Institute of Metals, the National Metallurgical Laboratory and the Iron and Steel Institute, will be on "Recent developments in iron and steel-making, with special reference to Indian conditions."

Eight papers will be presented at the symposium by members from Britain, some of whom will be present to read them. They include "Iron-making under Indian conditions" by Mr E. W. Voice, assistant director of the British Iron and Steel Research Association; "Physical processes in sintering and pelletizing of iron ores" by Dr P. A. Young, director of research, Head, Wrightson & Co Ltd; "Acceptance tests for steelworks refractories" by Dr J. H. Chesters,

deputy director of research, United Steel Companies Ltd; "The 100,000-ton integrated steelworks" by Mr M. F. Dowling, managing director of Davy & United Engineering Co Ltd, and Mr A. N. Whiting, general manager of the firm's steel processing division; and "The management of civil engineering aspects of plant construction" by Mr M. D. J. Brisby, of W. S. Atkins & Partners.

During their stay in Jamshedpur, the Iron and Steel Institute members will visit the National Metallurgical Laboratory and the works of the Tata Iron & Steel Co Ltd, the Tata Engineering & Locomotive Co Ltd, the Indian Tube Co Ltd, and Indian Steel & Wire Products Ltd.

After the Jamshedpur visit, concludes on 8 February, the party will go to Calcutta, where they will be invited to visit a number of industrial plants. The tour officially ends on 12 February.

This will be the first time the Iron and Steel Institute has held one of its "special meetings" so far afield. Meetings have been held twice in the United States, but otherwise the venue has always been in Europe.

The Iron and Steel Institute was founded in 1889 to make it possible for those engaged in the industry in Britain to discuss technical problems of common interest. The headquarters were originally in Middleborough, Yorkshire, the home of many of the ironmasters who took a

leading part in its formation, but since 1873 they have been located in London.

From the start, the Institute's objects were attained primarily by publishing papers and holding meetings at which the papers were discussed.

Since 1947, its journal has been published monthly. It contains papers on all aspects of iron and steel-making and on scientific subjects.

Membership of the Institute is confined to individuals, and there is no company membership. Although the Institute is centred in London and has specially close connections with the British steel industry, its membership—totaling nearly 5,500—is international in character.

The council of the Institute has at its disposal a number of awards and medals, including the Andrew Carnegie research grants and the medal of the Iron and Steel Institute.

For many years, the Institute has played an important, and sometimes a pioneer, role in encouraging technical and metallurgical education.

It also operates what is undoubtedly the chief metallurgical library in Britain. This is a joint library with the Institute of Metals. It covers the whole field of metallurgy, the metallurgical industries, and connected technologies.

Other banks and credit institutions may also avail themselves of the guarantee facility in respect of advances granted by them, provided a selected credit institution either participates in such advances to the extent of not less than 25 per cent of the amount or undertakes to share not less than 25 per cent of the losses arising out of such advances. It will also be permissible for two or more selected credit institutions to grant an advance jointly.

For the purpose of the scheme a small-scale industrial unit means an undertaking engaged in manufacturing and processing (not trading) the capital investment of which like land, buildings, machinery, equipment, etc., together with the capitalised value of rented premises, if any (excluding the amounts spent on housing and amenities for workers) is not in excess of Rs 5 lakhs. In computing the total capital investment, land and buildings owned by the industrial unit and machinery and equipment used to do business should be evaluated on the basis of original cost incurred by the owner (and not their written down value) and for rented premises, value should be calculated by capitalising the rent at the rate of 8% per annum. All advances sanctioned after 30 June 1960 whether for acquiring fixed assets or equipment or for providing working capital and repayable on demand or on the expiry of a fixed period, will be eligible for guarantee. It is an essential condition of the guarantee that the advance shall not be utilised for a purpose other than that for which it was granted.

Maximum period for which guarantee will be issued will be seven years.

A charge at the rate of $\frac{1}{4}$ per cent per annum on the maximum amount of advance (or limit) as sanctioned is levied for providing the guarantee cover. The charge has been kept low in order to provide an added incentive to credit institutions for enlarging finance to small-scale industries.

In operating the scheme the Guarantee Organisation will, as far as possible, ensure that delays and formalities are reduced to the minimum and claims made under the guarantee are paid within 30 days of receipt of the required supporting evidence. The responsibility for collection of the debt after the invocation of guarantee will be that of the credit institution which should take such steps for recovery as may be necessary or required by the Guarantee Organisation. The recoveries will be shared between the Guarantee Organisation and the lending institution in the manner prescribed under the scheme. The institution will furnish such information or returns in respect of the guaranteed advances as may be required by the Guarantee Organisation.

Although the scheme does not prescribe any procedure for grant of advances by the credit institutions and leaves questions regarding the terms and conditions, such as the type of security, margin, rate of interest, etc., to the discretion of the lending institutions, it is expected that the protection afforded by the scheme will enable them to liberalise their lending criteria and thus assist a larger number of small units than they would have done otherwise.

RFC

Export Credits

The Study Group on Credit Facilities for Exporters constituted by the Ministry of Commerce and Industry, Government of India in April 1960 had recommended *inter alia* that the Refinance Corporation should extend the scope of its activities by taking up refinancing of medium-term export credits, i.e., credits for periods exceeding six months, but not exceeding five years. Pursuant to this recommendation the Corporation has introduced a scheme for refinancing of medium-term export credits. The facility will be limited to exporters in the private sector, who are manufacturers, recognised export houses or other exporters of standing and will be ordinarily extended in the case of exports of capital or engineering goods. The question of extending the facility in respect of other goods will also be considered by the Corporation subject to Exchange Control agreeing to the receipt of sale proceeds thereof within a period exceeding 180 days initially. The refinance facilities will be available to banks which are authorised dealers in foreign exchange and otherwise eligible for refinance facilities from the Corporation. The scheme provides for refinancing of pre-shipment credit also where it is combined with post-shipment credit. The total period of credit excluding pre-shipment credit should not be less than six months and more than five years. The minimum amount of a loan in respect of which refinance may be sought will for the time being be Rs 1 lakh and the total amount of export credits refinanced in respect of any one exporter will not exceed Rs 50 lakhs. The loans eligible for refinance will relate to exports against firm contracts and will ordinarily be covered by appropriate policies of the Export Risks Insurance Corporation Ltd. (ERIC). A down cash payment to the extent of 20 per cent or a letter of credit or guarantee providing for payment to that extent against delivery of shipping documents should ordinarily have been obtained from or on account of the importer before the loan is refinanced. This condition may be waived by the Corporation where the period of credit is short, say, not exceeding one year or in other deserving cases. An order from the Reserve Bank granting the necessary exemption under Rule 6 of the Foreign Exchange Regulation Rules, 1952 has to be obtained and a copy furnished to the Corporation. The form in which the application for exemption is to be made may be had from the eligible banks, whom the exporters may approach for further information.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills were opened on Wednesday 2 January 1963. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.410

per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.355 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday 7 January 1963. Successful tenderers should make payment on Friday 11 January 1963 at all centres. Other conditions are as usual.

During the week ended 28 December, 1962, Government of India Treasury Bills for Rs 143,03,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 3 January to 15 January 1963 at Rs 99.426 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 24 December to 29 December 1962 amounted to Rs 3,00,00,000.

Common Market Uncertainties

By Paul Einzig

The negative result of Mr Macmillan's talks with President de Gaulle has made it obvious to all but the most dogmatic supporters of Britain's entry into the Common Market at all costs, that the difficulties of overcoming the French veto are almost unsurmountable. Moreover, the dispute with the United States over the production of the Skybolt missile has now made it less likely that the United States Government would be able to persuade Britain to join regardless of terms. Understandably, the Washington Administration wants to reduce the excessive cost of foreign military aid. That being so, its influence on the beneficiaries of that aid is bound to decline. He who wants to call the tune must pay the piper. In other words if the United States Government does not wish to contribute its present share to Western defences, those who are expected to increase their respective contributions will have a higher degree of independence from American policy. As a result the United States may not be able to persuade Britain to join the Common Market on unfavourable terms and may not be able to persuade France to improve the terms on which Britain would be admitted.

The change in the prospects resulted in a number of suggestions from various quarters as to an alternative to joining the Common Market. Nothing very constructive has emerged so far either in Britain itself or from the Commonwealth countries. Yet this would be the psychological moment for the latter to put forward proposals of their own about ways in which Britain could benefit if it abstained from joining the Common Market. But the attitude of Commonwealth Governments and peoples has been almost entirely negative. How can they expect the idea of reverting to the Commonwealth to inspire enthusiasm in Britain if it has failed almost completely to inspire any enthusiasm in the Commonwealth? There is hardly any public pronouncement by Commonwealth statesmen or others whose words command respect which anti-Common Marketeers in Britain would be able to quote in support of their contention that failure of the Brussels negotiations could lead to a Commonwealth revival. If, in spite of everything, Britain should feel compelled to accept such terms as are obtainable the Commonwealth countries would have only themselves to blame for their utter failure to produce an imaginative and inspiring alternative.

Notes

COTTON TEXTILES
Indian Exports
Not "Sanforized"

The declining trend of cotton textile exports is a problem that brooks no delay as already much ground has been lost in world markets. Exports of mill made cloth fell to 574.30 million yards in 1961 as compared to 694.83 million yards in 1960. The performance in the first ten months of 1962 was much more disappointing as exports were only 406.49 million yards as compared to 481.76 million yards in the corresponding period of 1961. Thanks, however, to the scheme of compulsory exports initiated in last May, it is expected that exports would have considerably increased during the past ten months. Under the scheme each unit of the industry is required to export a minimum of 12 per cent of its value-wise production.

While it is gratifying that the industry has generally responded to the call for boosting exports at a considerable sacrifice, this is no solution to the problem of declining textile exports. There is urgent need for initiating fresh vigorous efforts toward removing the handicaps that render our cotton textiles uncompetitive in overseas markets. The most important factor that militates against larger exports is the high price of our cotton textiles while other exporters such as

Japan and Hongkong are able to quote more attractive rates. With the cost of production steadily going up Indian manufacturers are in no position effectively to compete with other low priced goods. This is the crux of the problem of our declining exports. Speaking at the annual general meeting of the Cotton Textiles Export Promotion Council a few days ago Mr Neville N. Wadia has called upon the Government actively to assist the industry in reducing costs of production if cotton textile exports are to be maximised.

Among the factors that inflate the cost of production, cost of labour has come to occupy an important place. Mr Wadia has pointed out that productivity is low and labour costs are uneconomic but demand from labour and recommendations from the Wage Board and Government tend to further increases. It is high time that a close relationship is established between demand for wage increase and better amenities and labour productivity. The fact that the Indian industry has to pay on an average 50 per cent higher prices for its stores than its competitors and the increasing load of direct and indirect taxation on the industry, leave little scope for control on cost of production.

Mere exhortation to maximise exports without effective action to remove the handicaps which have made our cotton textiles unpopular in world markets cannot bring about the desired objective. There is no use shutting our eyes to the stark fact that unless our goods combine quality with competitive prices they have no chance of strengthening their position in world markets. World trade in cotton textiles has become extremely competitive, and Japan and Hongkong do not hesitate to cut down their prices just to maintain their position. It is only when our industry is enabled to bring down at least its export prices considerably by means of suitable drawback of duties and taxes and is assured of the co-operation of labour in increasing productivity that there is hope for our cotton textile exports regaining their lost ground in world markets.

BICYCLES
No Free-wheeling
Ahead

For a comparatively new entrant, the bicycle industry has grown fast. The organised sector of the industry alone produced 1.05 million bicycles in 1961 against 114,000 in 1951, 660,000 in 1956 and 990,000 in 1959. From the trend of production in the first half of the year, it can be safely assumed that output in 1962 would have reached a level of 1.2 million

or even surpassed that figure. Progress is not confined to the production of complete cycles as significant headway has been made in the production of components, the value of which more than doubled between 1956 and 1961. Sufficient capacity has now been built up for the production of components and before long the entire requirements of components as original equipment will be manufactured within the country.

The demand for bicycles in the country is steadily going up and naturally further increase in production is envisaged in the Third Plan. The Tariff commission has estimated that demand will go up at an annual rate of 200,000 in the next few years. The industry is to produce 2.5 million bicycles by the end of the Third Plan. The share of the organised sector in the target is put at 2 million while the balance of 500,000 is to be accounted for by the small scale sector which has also been growing steadily in recent years. The installed capacity of the organised sector is at present 1.45 million and Mr M. G. Vohra has suggested in his presidential speech at the recent annual meeting of the Cycle Manufacturers Association of India that the organised sector should be allowed to reach its target of 2 million by working multiple shifts. It may well turn out that production required by 1965-66 is much less than 2.5 million as the current level of offtake is much below earlier expectations.

The ability of the industry to step up production to any appreciable extent in the near future will, however, depend to a large extent on the continuing availability of adequate supplies of raw materials. Already there appears to be considerable difficulty in obtaining certain components, consumable stores and steel. Although sufficient capacity has been built up, indigenous manufacturers of bicycle ancillaries are not in a position to meet the demand in full. The position in regard to the supply of steel has not shown any appreciable improvement even after the new steel mills have been commissioned. The difficulty in respect of certain consumable stores which are used in the finishing department of cycle factories is that their quality is substandard and hence adversely affect the finish of the end product. Another drawback that needs to be urgently set right is the non-availability of the right kind of tools in sufficient quantities. The demand for tools is going up as production rises. But the difficulties are by no means insuperable. A more flexible import policy as applied to the industry will remove the major ills. The suggestion of Mr Vohra that imports of essential components for which productive capacity is yet inadequate should be allowed is reasonable and deserves serious consideration. The steel shortage can be minimised by bringing about better co-ordination between the various departments of Government responsible for fixing steel quotas.

Although the industry has already made a debut in the export field, its contribution is as yet very insignificant. As a matter of fact the trend in 1962 has been extremely discouraging since, upto October of that year, only 2,400 bicycles had been exported. It is not surprising that our bicy-

cles are unable to make headway in foreign markets: they are high in price, and the general preference in these markets is for long-established brand names. It is gratifying that the industry has agreed to attain an export target of 50,000 bicycles for 1962-63 under an export subsidy scheme. The task is obviously not an easy one but sustained effort in popularising our brands is bound to pay dividends in the long run.

SCINDIA

Coasting Along

The downward trend in the quantum of freightable cargoes, failure to get an increase in the westbound rates of freight in UK-Continent trade and the pressure further to bring down rates of freight on some important commodities cloud the outlook for the Scindia steam Navigation Company. However, the past year has not been without its good features. Despite a drop by about 91,000 tons in the quantity of cargo carried, and the consequent reduction in freight earnings to Rs 16 crores from the previous year's level of Rs 17½ crores the company's profits sizably increased from 4½ lakhs to Rs 48½ lakhs. The increase in profit despite lower freight earnings has been made possible by rationalised berthings, reduction in number of days per voyage and similar economies. The 10 per cent increase in the rates of freight, eastbound in the UK-Continent services from 1 October 1961 has also helped to a certain extent in improving the working results during the year. A similar increase in the westbound rates is necessary to compensate the increasing cost of operations. The continuing pressure to bring down freight rates to uneconomic levels on important commodities does not augur well for the success of the company's efforts at rationalisation of services. Manager: S. F. T. B. LEVER.

Mr Khatau has pointed out in his Chairman's statement at the 43rd annual general meeting the company last week Government should take the initiative in bringing about an amicable settlement in this matter between the parties concerned.

Among other significant developments during the past year is the success of the efforts to increase the share of Indian shipping in the India/UK trade. Joint effort by the three Indian Lines operating in the India/UK trade, viz., Scindias, India Steamship and the Shipping Corporation, has borne fruit. These Indian Lines' share in the trade has now been increased to 39.475 per cent from 30.25 per cent. There is also a provision for an annual increase of 1 per cent ensuring ultimate parity with UK Lines. The agreement between the three Indian Lines to provide for equal sharing on a pool basis of a number of trades from India is a happy augury for better co-operation in the future between these lines in other trades and matters of common interest as well.

The position of coastal shipping leaves much to be desired and when

Mr Khatau says that he doubts whether coastal steamer tonnage can be maintained at the level of current national need unless early steps are taken to place it on an economic footing, he is basing his conclusion on a close study of the present state of coastal shipping. The present coastal freight rates do not provide a reasonable return on capital employed and it is rather strange that Government is reluctant even to allow the small increase of 15 per cent in full reeferment by the Abhi Commission. The industry had asked for a 37 per cent increase.

KOLHAPUR SUGAR Spirited Performance in 1961-62

The Kolhapur Sugar Mills Limited has had one more satisfactory year of operation in the year ended 30 June 1962. The

total production of sugar in the 1961-62 season, however, slipped down to 269,890 bags in striking contrast to 316,777 bags in the preceding year. Similarly there was a slight fall in the average recovery which is marked down at 12.45 from 12.57. There is no need to take an alarmistic view of the decline in production as it was largely owing to the Government of India's imposition of 10 per cent cut in production and partly due to the lower per acre yield consequent on the unpropitious climatic conditions and the devastation caused to the crop by the floods.

The working of the company's distillery, with the augmented capacity, on the contrary, has been extremely encouraging and the production at 731,580.3 gallons stands in admirable comparison with 280,202.9 gallons in the preceding year. It should also be specially mentioned that, apart from the company's molasses, the distillery utilised 4,642.918 tons of molasses procured from three

neighbouring factories. Another noteworthy aspect is that the company is at present in a position to realise a daily capacity of approximately 7,000 gallons and it is well poised to become a central distillery for the Kolhapur region.

The Chairman of the company, Seth Ramnivas Ramnarain Rula, also touched some other aspects which have vital bearing on the company. The Land Ceiling Act of the Maharashtra Government, for instance, has thrown up a host of intricate problems like the valuation of standing crops, movable and immovable properties, etc., and it is expected that the company's interests will be safeguarded by arriving at an amicable settlement with the Government. It is also heartening that Government has assured a steady supply of cane to the mills from the area taken over by it.

Another important development is the introduction of price linking formula aimed at improving the quality of the cane. The new measure is viewed with disconcert by both the mills and cultivators. The mills apprehend that the formula will be a disincentive to the mills purchasing cane during the earlier and latter parts of the season, when recovery is bound to be lower than the basis fixing the cane price. The measure may even affect the sugarcane grower as his cane may not be accepted, being either too early or too late.

Situated in the heart of the cane-belt in the Kolhapur district, the factory has been closely associated with cane development in more than one manner like the dissemination of technical advice, distribution of modern implements, improved seeds, manure and cash advances to the cultivators.

NICKEL Consumption Stays Steady

The year-end review of Mr Henry S. Wingate, the Chairman of the Board of Directors of the International Nickel Company of Canada, Limited, gives a comprehensive picture of the nickel industry in 1962 with special accent on the pattern of consumption, production and outlook for the metal in future. Consumption of nickel in the US, the principal market in the world, showed a considerable increase. From a high level in the first quarter, consumption in the US slipped down at mid-year and rebounded in the last quarter. On the contrary, the overall free world consumption declined by about five per cent and a similar fall in consumption in European markets was also noticed. However, the rate of nickel consumption in 1962, at 100,000 tons, is the highest in the

approximated at 80 per cent of the free world's present production capacity, excluding Cuba. According to the latest estimates free world consumption of nickel in the year under review was placed at nearly 480 million pounds against 504 million pounds in the preceding year.

The nickel producers of the free world, excepting Cuban sources, continued to augment production capacity, achieving a high in 1962. As usual Canada continues to be the largest supplier of nickel to the free world, presently accounting for over 75 per cent of the total production capacity of free world.

The over-all supply of nickel in the year under report brought with it stepped-up sales and marketing campaigns and research efforts by nickel producers. International Nickel vigorously pursued these activities including intensified reasearch and the broadening of market development programmes.

Mr Wingate is optimistic of the future of the metal. The total consumption of nickel in the free world in the past several years has remained at an encouraging level, the long term prospects for increased consumption of nickel continue to be excellent, and it is anticipated that the use of nickel will equal or exceed the levels of recent years.

IIC 25 Joint Ventures Mature

A spokesman of the Indian Investment Centre has stated that 25 projects for setting up industrial enterprises with foreign collaboration, which were assisted by the Centre, have matured into Government approved joint ventures. Collaboration agreements between Indian and foreign entrepreneurs for an additional 16 joint enterprises have either been submitted to Government for approval or are likely to be submitted shortly.

105 other proposals are in varying stages of progress. In 30 cases, the Centre has been able to interest foreign firms in respect of enquiries from Indian entrepreneurs seeking assistance from abroad; in 45 proposals from Indian parties, the Centre is in correspondence with foreign firms; in regard to 10 enquiries from foreign entrepreneurs, negotiations are in progress with some Indian firms and 20 firms from abroad are assessing information given to them in connection with their enquiries for specific proposals.

Of the foreign collaboration in the joint ventures which have matured, 10 are from the USA, 4 from Japan, 3 from France, 2 each from Canada, the UK and West Ger-

many and 1 each from Belgium and Switzerland.

The Indian Investment Centre was established in 1961 to assist the Government of India in the implementation of its policy of rapid industrialisation and to undertake programmes aimed at encouraging and promoting the inflow of foreign private capital into India.

The Centre's New York Office was inaugurated by the Union Finance Minister, Mr Morarji Desai, in October 1961. The Commercial Counsellors of Indian Embassies are the IIC's representatives in other countries.

Since September 1961 when the Indian Investment Centre was fully organised, it has received nearly 1,900 enquiries of various kinds from Indian and foreign businessmen upto the end of December 1962. Of these 1,500 were from Indian entrepreneurs and the remaining from abroad. These enquiries were of various types, ranging from seeking information on some aspect of invest-

ment to specific proposals for joint ventures. Of the latter, only about 100 proposals had been satisfactorily drawn up and had secured the necessary industrial licences. After being processed by the IIC's technical experts, 90 proposals were forwarded to Australia, Belgium, Canada, France, Japan, the Netherlands, the UK, the USA and West Germany. The remaining 10 proposals are being processed and will be sent to the capital-exporting countries in due course.

The 90 proposals already processed cover a wide range of industries such as tools and alloy steel, castings and forgings, steel pipes, machine tools, small and hand tools, wire ropes, ball-roller bearings, cables, electric lamps, precision and scientific instruments, various items of industrial machinery, chemicals, rubber tyres and tubes, laminated sheets, paper and pulp, glass and ceramics, and H.T. & L.T. Insulators.

From a total of 400 enquiries received from foreign entrepre-

neurs, 150 are from foreign firms and corporations interested in setting up joint ventures in India. Of these about 130 relate to manufacturing enterprises and 20 for setting up consultancy firms. These were received either directly through the New York office or through Indian Embassies and High Commissions in other capital-exporting countries. Many of these foreign enquiries were in some stage of negotiation with one or more Indian firms and the Centre's assistance was sought in obtaining information on Indian parties, the licensing position. Government policy towards foreign private investment, availability of raw materials and export possibilities. In many cases these enquiries from abroad were followed by visits of representatives of prospective investor-corporations who held detailed discussions with the officers of the Centre and received extensive guidance on their investigations.

Enquiries from abroad cover many industries including elec-

To give authentic and up-to-date information of the investment, the Indian Investment Centre has brought out 4 publications (i) Indian Investment Centre: Objects and Functions (ii) Exchange Control (iii) Basic Facts of the Indian Economy, and (iv) Taxation.

The first publication has already run into three editions and the second into two. The last two brochures have just been published. The IIC publications are made available to Indian and Foreign investors, from whom there is a steadily rising demand.

SNIPPETS

English Electric

An indication of the extent to which India is becoming self-sufficient in engineering and planning its industrial development is given in an announcement that the English Electric Co is to begin the manufacture of complex control panels in its Madras factory.

This stage has been reached within five years of the company beginning to make a range of low-voltage distribution fusegear at the factory, which is built on a 27-acre site on the outskirts of Madras city.

Demand for this type of fusegear for new factories, such as the Heavy Electricals plant at Bhovani, increased very rapidly. By 1950 the production area had been extended to four times the original size. Manufacture of protective relays and of a wider range of fusegear equipment was undertaken to supply industry and electricity boards who were having to expand their supply services very rapidly to industrial and domestic users.

Of the 600 men and women now

employed in the Madras factory, all but a few senior engineers are Indians; among them are 45 women who have proved to be particularly adept at making fuse cartridges. British staff have been appointed for limited periods only for the main task of training local labour and establishing high-quality production and control, or for those jobs for which no Indians are available. The products now being turned out are in every way comparable with similar goods made in the parent company's works in Britain.

Among the processes now established in the Madras factory, in addition to assembly work, are plastic moulding and electric plating. The build-up of local manufacture and reliance on Indian-made components have already made a substantial contribution to India's foreign-exchange position.

Kutkona Colliery

The National Coal Development Corporation has approved the plan for its ninth new colliery in Madhya Pradesh. This underground Project which will be at Kutkona in Sarguja District will have an annual output of half-a-million tonnes, though by the end of the Third Plan a production rate of only 0.15 million tonnes will be reached. The area has a minable reserve of 30 million tonnes of Grade I coal.

On an estimated outlay of a little over Rs 2.6 crores, the project will yield an annual return of 13.56 per cent.

Kutkona will be the Corporation's first project to use the Duck-bill loader for loading coal. This type of loader is specially suited for the peculiar working conditions obtaining here. One peculiarity of the project will be that both the seams from which coal is to be extracted will be approached by a pair of drifts with a rising incline instead of a dipping one as is usually the case in underground mines.

The coal is expected to be of the blendable variety, suitable for use in metallurgical plants. If this is conclusively approved, a washery may, in due course, be set up in that locality to treat the coal produced from this and another mine, Bhaskarpara, which is likely to come up soon in the adjoining area.

Agfa

Of the 10,000 Indian-made Agfa Synchro Box Cameras exported the world over, each and every camera was found perfect by the importers. The fact that not a single complaint was received attests to the quality control exercised by New India Industries Limited who manufacture these Agfa cameras at their Baroda factory. It is hoped to step up the production and exports of these cameras during 1963.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

The end of the year festivities had a much more sober air about them, and the reason undoubtedly was the national emergency, though of course the well-timed announcement on the banning of imports of wines and spirits may also have at least partly contributed. And yet I don't see why joie de vivre should have fallen casualty. There is room even in the emergency for happiness and for entertainment; and in any case I am not one of those who believe that a stern countenance and austerity in any way could help the war effort. Again, it's going to be a long haul to drive the Chinese aggressors out, so that the sustained hard work that will be called for has necessarily to be interspersed with relaxation. I see, however, that the Madras Chief Minister's mother has predicted that the dispute with China will be settled during the course of the year; it would be a miracle if 1963 were to be so fortunate a year.

Not that 1962 was too bad, in fact in retrospect it may prove to be a turning point in India's fortunes. We need to be grateful to the Chinese for having discovered what had eluded us since independence, a sense of national unity and purpose. The clarification that the defence efforts will not allow of any slackening in our planned endeavours has in fact imbued the latter with greater urgency. Our attitudes are no longer coloured by doctrinaire considerations. A case in point is oil. The latest press reports have it that the private sector oil refineries are at long last being permitted to raise their throughput; and this represents a volte face from Mr Malaviya's earlier stand wherein, to put it bluntly, he tried to bludgeon the private sector companies into many a reluctant concession. Furthermore, the increased pressure upon foreign exchange resources, in correspondingly reducing the quantum available for private sector imports, should provide a powerful fillip to the growth of Indian industry. (For example the indigenous distilleries!) The search for indigenously procurable raw materials or substitutes will be intensified; and idle capacity in industry will not

be allowed to languish. As Paul Einzig says in a special article this week, it seems safe to predict that 1963 will be a year of prosperity—though it may create problems that will have to be taken care of in the future.

The Chinese aggression again may ultimately prove to bring about more cordial relations between India and Pakistan, though the initial trend of events in 1962 pointed to a contrary conclusion. Pakistan's misguided reliance on expediency has exposed it to be a hypocrite in international affairs, and its nibbling at Chinese overtures for a border pact came as a shock to its western friends. That nonetheless pressure was brought to bear upon us for a settlement of the Kashmir issue is an indication of how woefully we have failed to present our case in this regard. The Indian commitment is only to discuss and negotiate; but our hands have been strengthened by Pakistan's near 'betrayal', and it is just barely possible that we shall in future have a more sympathetic understanding of our stake and case in Kashmir. There has equally been clarification about Russia's stand as between us and the Chinese: we are friends, but they are allies, and there is a degree of difference between the two definitions.

But the Chinese perfidy and Russia's "neutrality" will not compel us to give up our policy of non-alignment; indeed our objective is to sidetrack, as it were, Russia from taking sides in the dispute, and it is our western friends who have been insisting that the fact of our obtaining from them supplies of military equipment does not in any way affect our non-alignment. However, in the sub-conscious at least a change has occurred in our attitudes. Too often in the past we have seemed to lean over backwards to explain away misdeeds emanating from the Communist countries, and to rush forward to condemn any the strayest act with which we did not agree from the other camp; and this appeared to discover a bias in favour of the Communist countries in our policy of non-alignment. Henceforth our non-alignment will be seen to be so as well.

In the international sphere the India/China border crisis was eclipsed in importance by the confrontation over Cuba between the United States and Russia. Why Mr Khrushchev should have adventured so far away from home base as Cuba remains a mystery to many a Sovietologist: if he wanted to test whether or no America was prepared to meet a threat, he obviously had a much nearer battle-ground in Berlin where already the existence of the Wall had nurtured a crisis mentality. In the event President Kennedy made plain US determination in announcing the screening of any Cuban-bound Russian ships. And after some tortuous hours when tempers it was feared might reach up to the nuclear fission point, Russia called off its bluff. As quickly as the crisis mounted so swiftly did it recede. The danger of a world-wide conflagration had been avoided, at least for a time, and the west was now ready to consider the real threat to peace, the confrontation between India and China.

The promptness with which the west responded to India's predicament is at once an index of the crucial importance it attaches to India in Asia and the world and of the genuine sympathy it has for us. High power missions came to New Delhi both from Washington and Whitehall. What was on the agenda was not only the immediate defence requirements but also the efforts that would need to be taken to persevere with our plans. I learn for example that the Federation of British Industries has professed some interest in assisting British firms to expand in India in the light of our sparse foreign exchange reserves; and foreign private sector interest in industry in India is attested to by the proposals dealt with by the Indian Investment Centre.

One more event of importance in 1962, that has got obscured by the threat to Indian borders, was the holding of the third general elections. The party position did not offer much change, but the Swatantra party emerged as a possible power to reckon with in the future. Oddly enough almost all the leaders of so called "opposition" parties were defeated by Congress candidates—and some of these were political unknowns. The most crushing defeat occurred in the most publicised election, in the contest between Mr Krishna Menon and Acharya Kripalani. But Mr Krishna Menon's triumph proved to be short-lived. Within a matter of months he was seriously embarrassed by China's per-

fidy, and a powerful attack was mounted upon him, in Parliament as in the Congress hierarchy, for his removal. His ouster had certainly to be acquiesced in by Mr Nehru; for Mr Krishna Menon had become much too unpopular, and at least because of "constitutional" responsibility his continuing in office became impossible. History alone will determine whether Mr Menon was the sacrificial scapegoat or whether he was in fact to be faulted. But the manner of his going makes it almost certain that his political career, and with it any ambitions he might have had to higher office, has once and for all ended.

Half a world away another political career also ended with a whimper. The American mid-term elections for only the third time in this century produced a status quo (instead of a loss) in the strength of the party in power. Undoubtedly Mr Kennedy's resolute handling of the Cuban crisis was of timely help to the Democratic party, and with this success the hair's-breadth mandate that the President secured in 1960 has been considerably reinforced. But the success at the 1962 polls withal, there still seems doubt whether Mr Kennedy's New Frontier programmes will be pushed forward with vigour. What is not in doubt at all is Mr Richard Nixon's political future. In 1960 Mr Nixon lost by a heartbreakingly small margin, and any one of half a dozen reasons, ranging from the late start of Mr Eisenhower's campaigning for him to the decisive drubbing he received from Mr Kennedy in the Television debates, could alone have meant the difference between triumph and disaster. But the closeness of the defeat was clear indication that Mr Nixon was not to be written off; and the comeback trail took him to old California: a governorship won here could have been the stepping stone to the White House. But an inept and puerile campaign could end only in defeat; and the manner of his exit, graceless and whining, has put paid to Mr Nixon as a contender for any public office of an elective nature.

It remains to add, as we end this round-up of 1962 that quite expectedly the end of the year has been less fruitful and bountiful as far as concerns calendars and diaries. What with scarcity of imported art paper depreciation in quality has also followed as a consequence. No such cheapening has, however, taken place in respect of the Air India and Panam calendars; but the special word of praise is for Travancore Rayons whose album of Indian jewellery has very fine settings indeed. And as for the diaries, as for so many years past the handy one to have around is the Tatas one.

EAVESDROPPER

A highly refractory mortar for all furnace constructions

ACCOSET-50

is composed of finely ground plastic clays, high alumina burnt refractory materials and special chemicals. Once it is dried and burnt, ACCOSET-50 becomes one with the bricks.

Power Survey

DECEMBER in Delhi heralds the onset not only of the cold weather but also of the season of conferences. But so far, probably on account of the emergency, activity on the conference front has been subdued as compared with previous years. But the year 1962 did not, however, end without its weighty quota. During the concluding days of the year, the Prime Minister was called upon to address three important functions: the annual meeting of the Engineering Association of India, the National Institute of Sciences and the inaugural meeting of the Power and Energy Study Group. The last, which consists of eminent economists, power experts and administrators from India and abroad, has been set up by the Government of India to survey the long-term power requirements in the broad perspective of the next 15 or 20 years. A study of this type, which was originally suggested by the World Bank Team which visited this country in September, 1961, took concrete shape following the visit early in 1962 of Mr Walker Cislser, President

of the Detroit Edison Co, under the aegis of the United States Agency for International Development. As a result of the discussions of Mr Cislser with the Ministry of Irrigation and Power, the Atomic Energy Commission and members of the Planning Commission, a small technical team was sent out to the USA, for a short period, to study the latest techniques of survey of power loads, the sales policy for improvement of load factor of power systems and presentation of statistical data on power development. Following further discussions between the officials of the Ministry and of the Indian Embassy in Washington with Mr Walker Cislser and the authorities of the Agency for International Development of USA, the Ministry in consultation with the Planning Commission and others concerned, decided to appoint a team of Indian and foreign experts to carry out a long-term power and energy survey of India. Besides Mr Walker Cislser, other foreign experts participating in the survey are Prof. A. Robinson, UK, Mr Jacques Desrousseaux, France, and Mr De Heem, Belgium.

The Minister for Irrigation and Power, who detailed the steps leading to the appointment of the Survey Group (with which it is proposed to associate leading economists like Dr Lokanathan and Dr V. K. R. V. Rao, who have done valuable work in the sphere of energy surveys and allied problems), also gave an indication in his address of the tentative terms of reference. It is expected that, in the course of the next nine months or a year, the Survey Group would prepare a blueprint for the whole of India, giving for the next fifteen years or so, a full picture of the availability of power and energy resources vis-à-vis our requirements, the facilities for the manufacture and fabrication of equipment necessary for power development, the extent of imports that will be required, the cost involved and other matters. The terms of reference will also cover the pattern of development of regional grids, the location of main generation centres and the establishment of an all-India super-grid.

The future pattern of power generation, the Minister said, has to be on a regional basis, so as to ensure the most economical use of our hydro, coal, lignite oil and atomic resources. Future thermal stations, he said, will have to be established close to pitheads to eliminate transport of coal to long distances and to reduce the strain on the transportation system. We have also to make use of middlings from coal washeries. There is the question of rates for power supply which has given rise to some difficulties in certain areas. Allied with these is also the question of return on investment on power projects.

These last were among the topics raised when a delegation of the Federation of Indian Chambers of Commerce and Industry met the Planning Commission and were further discussed at the conference on Power and Transport organised by the Federation.

The need for taking an integrated approach to the problem of development of power resources, taking into account the extent, location and quality of coal and oil reserves, was emphasised by Mr K. D. Malaviya, Minister for Mines and Fuel, when he addressed the Group on the second day of the meeting.

The rational development of power resources is of the greatest importance to industrial progress. While the Survey will no doubt provide the guide lines for a long-term programme, the problem is also of immediate urgency. Shortage of electric power is one of the principal reasons for the underutilisation of existing industrial capacity, both directly and, indirectly, through its effect on coal production.

Engineering Association

In his address to the annual meeting of the Engineering Association of India, which was inaugurated by the Prime Minister on December 28, Mr K. L. Chowdhury, the retiring President, made an eloquent plea for making full use of the capacity that has been built up in the Engineering Industry, of which at present only 50 per cent is being utilised. Referring to the current shortages of materials and services which are responsible

DALMIA IRON & STEEL LIMITED

NOTICE IS HEREBY GIVEN THAT THE SEVENTH ANNUAL GENERAL MEETING OF THE COMPANY WILL BE HELD AT THE REGISTERED OFFICE OF THE COMPANY AT RAJGANGPUR (DIST: SUNDERGARH, ORISSA STATE) on Thursday, the 21st February, 1963, at 3 P.M. to transact the following business:—

- (1) To receive and consider the Directors' Report, the Auditors' Report and the audited Statement of Accounts for the year ended 30th September, 1962.
- (2) To declare dividend.
- (3) To elect a Director in place of Shri J. Dalmia who retires by rotation and is eligible for re-election.
- (4) To elect a Director in place of Shri B. P. Khatian who retires by rotation and is eligible for re-election.
- (5) To elect a Director in place of Shri B. D. Goenka who was appointed as an Additional Director on 23rd October, 1962 and who holds office as such upto the date of the Seventh Annual General Meeting. Notice has been received from a shareholder under Section 257 of the Companies Act, 1956 proposing his candidature for the office of Director.
- (6) To appoint Auditors and to fix their remuneration.

By Order of the Board of Directors
For DALMIA IRON & STEEL LIMITED

G. KEJRIWAL
Managing Director.

18th December, 1962.
NOTES:

- (a) Every shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a shareholder. The proxies should, however, be deposited at the Registered Office of the Company not later than 48 hours before the commencement of the meeting.
- (b) The Register of Members & Share Transfers of the Company will remain closed for accepting Share Transfer Applications from 16th January to 31st January, 1963 both days inclusive.
- (c) The dividend when sanctioned will be paid to those shareholders whose names would appear in the Register of Members on 31st January, 1963. Dividend Warrants are expected to be posted by 15th March, 1963.
- (d) Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 for item No. 5 of the Agenda is being forwarded to the Members of the Company.

and services which are responsible for the under-utilisation, Mr Chowdhury suggested that, in regard to our immediate requirements of iron and steel and non-ferrous metals and stores, Government should negotiate with friendly foreign countries to obtain supplies of these materials on 'lease-lend terms'. Stock-piling of these metals and stores, he said, should be regarded as an important link in the chain of defence needs.

Regarding power and transport, Mr Chowdhury urged that efforts should be made to economise consumption and to make alternative arrangements. While implementation of power projects is speeded up, industrial units having diesel generating sets should put them to the best use as a short-term measure. Mr Chowdhury also suggested that a study should be made of tool room capacity in the country for its effective utilisation and further development.

Though an encouraging beginning has been made in the export of engineering products, Mr Chowdhury said that we have not yet been able to export to any significant extent. Among the inhibiting factors, Mr Chowdhury listed want of adequate production and diversity of products, foreign competition and increasing cost of production which priced Indian goods out of foreign markets. Costs in the Engineering Industry, said Mr Chowdhury, had been rising over a long period. Input as percentage of output has risen from 61.6 in 1956 to 67.5 in 1961.

Climate for Collaboration

The President of the Engineering Association has drawn attention to the need for manufacturing industrial plant and machinery and, especially, the development of the machine tool industry to include every type and every standard size in the range. While heartening progress has been made in machine manufacture—the account given by Mr C. Subramaniam, Minister for Heavy Industries, of the schedules of the projects under the Heavy Engineering Corporation is particularly encouraging in this context—development in many lines of manufacture is dependent on the availability of foreign technical and financial collaboration. As far as the private sector is concerned, this means readiness of foreign entrepreneurs to participate in joint enterprises. In this field, the emergency created by Chinese aggression has not been without its impact. It would be surprising if the position had been otherwise. It is only natural that foreign firms which have displayed interest in joint ventures earlier in the year should pause to take stock of the situation, at least in so far as the emergency is likely to affect the supply of goods and services required for the manufacture of their products as well as the demand. But according to persons who can speak with authority on the subject, what is taking place is not so much slackening of interest as change in the field of interest and of parties interested in joint ventures in India. There is now a shift from production for civilian use to items of defence equipment, and bigger firms are coming forward. One of

the notable developments in recent months is the comparatively greater interest shown by British firms in new joint ventures.

Indian Investment Centre

In this context it is encouraging to report that the Indian Investment Centre, during the short period of about a year it has been functioning, has been able to make substantial progress. A spokesman of the Centre stated here last Monday that, so far, 25 projects for setting up industrial enterprises with foreign collaboration which were assisted by the Centre, have matured into Government approved joint ventures. Collaboration agreements for an additional 16 joint enterprises have either been submitted to Government for approval or are likely to be submitted shortly. Of the 25 joint ventures which have been approved by Government, 10 are from the USA, four from Japan, three from France, two each from Canada, UK and West Germany and one each from Belgium and Switzerland.

As at the end of the year, 105 other proposals were in varying stages of progress. In thirty cases, the Centre has been able to interest foreign firms in respect of enquiries from Indian entrepreneurs seeking assistance from abroad; in 45 cases, the Centre is in correspondence with foreign firms; in regard to ten enquiries from foreign entrepreneurs, negotiations are in progress with some Indian firms and 20 firms from abroad are assessing information given to them in connection with their enquiries for specific proposals.

Since the Centre started functioning in September 1961, it has received a total of 1900 enquiries of which 1500 were from Indian parties. The enquiries were of various types, ranging from requests for information on some aspects of investment to specific proposals for joint ventures. Of the latter, only about 100 proposals had been satisfactorily drawn up and had secured the necessary industrial licences. After being processed by the IC's technical experts, 90 proposals were forwarded to Australia, Belgium, Canada, France, Japan, the Netherlands, UK, USA, and West Germany. The remaining ten proposals are being processed and will be sent to the capital-exporting countries in due course.

The ninety proposals already processed cover a wide range of industries such as tools and alloy steel, steel castings and forgings, steel pipes, machine tools, small and hand tools, wire ropes, ball-roller bearings, cables, electric lamps, precision and scientific instruments, various items of industrial machinery, chemicals, rubber tyres and tubes, laminated sheets, paper and pulp, glass and ceramics, and HT and LT Insulators.

Out of the total of 400 enquiries received from foreign entrepreneurs, 150 are from foreign firms and corporations interested in setting up joint ventures in India. Of these about 130 relate to manufacturing enterprises and 20 are for setting up consultancy firms. Many of the proposals were in some stage of negotiation with one or more Indian firms. In many cases the inquiries were followed up by visits of representatives of prospective investor corporations who held detailed discussions with extensive assistance in their investigations.

I AM 'HAPPY'!

Yes, 'Happy' is my name, and I am known to thousands of motorists in the many countries of the world.

Now I am here in India—a symbol of that Esso service which has been built up during the past half-century, and which today is a proud tradition of Esso.

From now on you're going to see a great deal of me for you'll find me wherever you see the Esso sign—the sign of Happy Motoring. I, 'Happy', symbolise that efficient, prompt and courteous service—which reflects progressive leadership.

ESSO STANDARD EASTERN, INC., (Incorporated in U.S.A. with Limited Liability)

The Challenge

Defence effort necessitates development of a great ability to produce weapons and equipment and to transport them. At the same time, adequate supplies of essentials for civilian consumption must be maintained. All this involves tremendous finance. But to meet the requirement, the less we have to depend upon deficit financing the better for our economy.

The resources of the nation must be mobilised to feed the various needs for production and distribution. Bank is the most suited agency for this purpose. Put all your money in your bank account and make your payments by cheques. That will be your yet another direct contribution to the nation's defence effort.

REGD. OFFICE: 4, CLIVE GHAT STREET, CALCUTTA-1

The Kolhapur Sugar Mills Limited

Satisfactory Results, Inspite of Imposition of 10% cut in Production

Increased Production in the Distillery

Seth Ramniwas Ramnarain Ruia, the Chairman, on Land Ceiling Act.

The following is the speech by Seth Ramniwas Ramnarain Ruia, Chairman of The Kolhapur Sugar Mills Ltd at the 29th Annual General Meeting held on Wednesday, 26th December 1962:

Gentlemen,

It gives me great pleasure to welcome you at the 29th Annual General Meeting of the Kolhapur Sugar Mills.

Gentlemen, we are meeting, this afternoon, in the midst of a crisis. I refer to the unscrupulous and the wanton Chinese aggression in the North East Frontier and in Ladak. We trusted the Chinese for being implicit supporters of Peace and Panchshila, as much as ourselves. It has been a great disillusionment to our leaders and to the people and has awakened both to a new sense of realism about the profession and practice of the imperialistic expansionism of Communist China.

Whatever the Chinese did, and are doing or will do, and whatever prestige India may have lost in its weakness in armed strength, I am sure, the whole episode will mean a great boon in disguise, to our country, in spite of its trials and tribulations, and in the long run, India will become really a great nation and completely united in both body and spirit. At the same time, our leaders have and will realise even more, how to deal with whom and whom to consider what, and also what should be our country's strength, and realise what type of leadership is necessary to make our country strong enough to defend ourselves. This sort of realisation has to come to us by finding our weak spots in our total set up and not just by speech and talk, because no country in the world's history has gained and maintained its freedom for long unless it was prepared and strong enough to defend it. Today, more or less, for the first time, we are really a united nation. Thanks to China!

We all realise that the Defence of the country and the preparations for a protracted and long-drawn war have become the major issue before the country today. The choice of Shri Yeshwantrao Chavan as Defence Minister has been so widely acclaimed and is so assuring that in his able hands, the country feels completely safe. Yeshwantrao, since his early days has been an able and successful leader and administrator. I have

a feeling that he will prove himself much more successful as Defence Minister, by his tact, statesmanship, resourcefulness and intuitive judgement of men and events.

At this time of our national emergency, it is gratifying to notice the heartening response of the sister countries of the Commonwealth and of the Western Democracies who have rushed to our assistance expeditiously.

Gentlemen, you will be pleased to note that the employees of our Company have contributed very handsomely to the Defence Fund by collecting Rs. 25,000/- from their earnings. Your Directors too have decided to contribute Rs. 1,00,000/- on behalf of the Mills.

While thinking of the contribution to war effort, it is clear that the significance of the role of Industries lies in unhampered maximisation of production. Modern military history shows that wars in these days are all-out wars and the country which possesses industrial superiority ultimately wins. We in the Sugar Industry have, naturally, to play our role in this respect. Sugar is not only an every-day necessity but has become an earner of Exchange. Your Company, it is estimated, will crush an all-time record of more than 3 lac tons of cane in the present season. This should be considered most gratifying.

Coming to the business of this Meeting, the Accounts for the period ended 30th June 1962, along with the Report of the Directors, for the statutory period, have been already in your hands, and with your permission I shall take them as read.

Though the financial working of the Mills, for the accounting year has been satisfactory, I may be allowed to refer to some of the salient features.

The production of sugar in 1961-62 was 2,69,890 bags as against 3,16,777 of the preceding year. The average Recovery was 12.45 as against 12.57. The fall in production during the year was due mainly to the imposition of the 10 per cent cut in production by the Central Government and also due to lower yield of cane per acre, due to unfavourable climatic conditions and also due to damage to crops by floods. However, the working of the Distillery, with

the increased capacity, has been very satisfactory, the production during the year being 7,31,580.3 Gallons as against 2,80,202.9 in the previous year. We have been able to fully utilise not only our Molasses but also 4,642.918 Tons of Molasses from the three neighbouring factories. During the ensuing year, we hope to utilise still larger quantities of Molasses from the neighbouring factories. The actual capacity realised in our Distillery with the new plant is between 5500-6000 gallons per day. In addition, with the old plant we can produce 1000 gallons of Absolute Alcohol per day. Thus we may be able to realise a daily capacity of about 7000 gallons per day. With this capacity your Distillery will be able to handle the Molasses of the two neighbouring Co-operative factories under construction along with the three old Co-operative Factories, thus becoming a Central Distillery for the Kolhapur Region.

I may also refer to the Land Ceiling Act of the Government of Maharashtra by which Government will assume the estates of Mills. For taking over these lands Government have appointed an Advisory Committee, on which both Government and the Industry have been represented. In this taking over of lands from Factories various complicated problems such as valuation of standing crops, movable and immovable properties etc. are involved. With mutual good-will and understanding all such problems, it is hoped, will be amicably solved. There will be specific problems of our factory in this regard and your management will try their utmost to safeguard the interest of the factory. I may add that the Government of Maharashtra have assured a guaranteed cane supply to the Mills from the area taken over by them.

Another feature of the year is the introduction of the Price Linking Formula. This formula is intended to improve the quality of cane. In the Maharashtra region, a common-sense method for paying for cane in relation to quality, was already in vogue and this had worked to the satisfaction of both the cultivators and the Factories. We are proud to say that because of the Recovery we are among the highest priced group for cane price that is paid by any Factory to the farmers and growers. A feature

of the newly evolved formula of the Central Government is the fixing up of the cane price on the Recovery of the previous season, during the period from December to end of March. The old Maharashtra Formula was based upon average Recovery of the previous season. I do not see how it could be just to fix the price of cane on the basis of Recovery for a limited period and that too of the highest. This especially is unjust for Maharashtra where the Season starts much earlier than December and closes much later than the end of March.

This measure may prove to be a disincentive to the Mills buying cane during the earlier and the later parts of the season, when the Recovery is bound to be lower than the basis taken for fixing the cane-price. I should not wonder if this measure leads to a short-fall, to some extent, in production. It may also affect the cultivator adversely as his cane may not be accepted being either too early or too late. It may be recalled that on occasions, the Governments in the North had to persuade the Factories to crush cane in later months by reducing the price and also by giving other concessions.

I am happy to inform you, that it is reported only yesterday, that the recovery taken for Maharashtra is for the period November to March, thus accepting my contention to a large extent, though not fully.

The recommendations of the Central Wage Board for employees of the Sugar Factory were also applied to farm labour from November 1961.

Gentlemen, I have already mentioned that the estimated crushing for the present season will be more than 3 lac tons. Our factory is situated in the heart of the cane-belt in the Kolhapur District and with the cane development work, the Factory is doing, to help cultivators to grow cane by giving technical advice, implements, improved seed, manures and cash advances, the supply of cane to the Factory is increasing. Even for the present season there are offers for more cane supplies. But we had to decline the same for want of adequate crushing capacity. The possibilities of supply of 3,50,000 to 4 lac tons of cane to our Factory are quite evi-

dent now and there is an urgent necessity of expansion to 2,500 tons per day, at least. Your Directors have already moved Government for the same and it is hoped that Government may accede to our request.

The Acetic Acid Plant is expected to be installed by June, next year. The completion of the project has been delayed for various reasons, chief amongst which is the delay in the supply of Power by the Maharashtra Government. We are now assured that the supply will be available by June 1963.

I have pleasure also in intimating to you that your Board has already approached Government for a Licence for the production of Ethyl Acetate, Carbon Dioxide and Dry Ice. We have been on the alert for the new projects of Alcohol-based industries and I believe I am expressing your wishes when I say that we have before us the prospect of making this area a beehive of such allied chemical industries.

Gentlemen, you are aware that the management has been particular in looking after also the cultural and physical well-being of the employees. I have great pleasure in saying that the Jeevan Kalyan has presented cultural programmes of drama, music, and such other cultural entertainments in keeping with its high traditions, at the Ganapati Festival. Its Annual Number is in print and its publication is awaited. The Institution has given educational aid to the children of the employees, in cash and books, amounting to Rs 3,000 during the year.

In sports, the record of the Gymkhana of the Mills is very flattering. In Table Tennis we won the Maharashtra Gymkhana Championship. Our Tennis Team annexed the Ruia Shield for Tennis. We conducted the Lohia Open Table Tennis Tournament. We also conducted the Maharashtra Bridge Association Tournament, in which our team won the Roll-Ing Trophy. In the Ruia Sports,

in Bombay, we lost to our Head Office Team in which myself and Sushilkumarji were participants.

I have very great pleasure in recording our special appreciation for the admirable manner of conducting the Annual Dinner, at the end of the Season, in honour of the Satyanarain Puja. About 11,000 persons partook of the Mahaprasad last year. It was as usual, a very orderly, well-disciplined function, in which Officers, staff and employees heartily co-operated and achieved an efficiency which I most admire. I almost feel, it is a part of the social education of the masses and a lesson in social integration.

I take this opportunity to thank my colleagues on the Board of Directors who have all along given me their guidance, advice and support. I am equally thankful to you all for your keen interest in the affairs of the Company.

As Chairman of the Company, I desire to express my feelings of thankfulness to the managements

of the Co-operative Factories, the cultivator-suppliers and contractors with whom our relations have always been very cordial, and of whose invaluable co-operation I am very sensible.

Finally, I desire to record our warm appreciation of the very efficient and devoted work of our General Manager, Shri M. B. Lohia, the loyal and earnest co-operation of his colleague officers and for the never failing and hearty co-operation of the staff and workers in the discharge of their duties. Mentioning names will be invidious.

Gentlemen, it has been my very great pleasure to be in your midst this evening and for having had this opportunity of placing some of my thoughts about the Industry and the progress of our Mills before you.

Thank you,

JAI HIND.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

The Scindia Steam Navigation Company Limited

Chairman's Statement

Summary of the Statement of Shri Dharmsey M. Khatau Chairman, The Scindia Steam Navigation Co. Ltd. made at the 43rd Annual General Meeting of the Shareholders on Wednesday, the 26th December, 1962, at Scindia House, Ballard Estate, Bombay.

In his opening remarks the Chairman observed:

"This statement comes to you at a time of national emergency created by the Chinese invasion of India. The shipping industry as a whole has pledged its whole-hearted support to the Government of India in their present stupendous task of successfully facing this emergent situation. Our Company has donated a sum of Rs 5 lakhs to the National Defence Fund. I deem it my duty to assure the Government, on behalf of you all and of myself, of all the assistance and co-operation that we can give in this hour of crisis."

He referred to the drop in the quantum of cargo carried and corresponding drop in freight income, despite which the Company made a profit of nearly Rs. 48½ lakhs as against approximately Rs. 4½ lakhs in the previous year. The Company declared a dividend of 60 p.p. per share after transferring Rs. 48 lakhs from General Reserve and providing for a further proportion of the Statutory Development Re-bate of 1960/61.

Regarding Overseas trades, the Chairman attributed good results to rationalisation of services and partial effect of 10% increase in the rates of freight in the east-bound services from U.K./Con-

tinents. He expressed the hope that the Company would secure the co-operation of the shippers in maintaining rates of freight at a reasonable level. The Chairman referred to the increase in the share of the Indian Lines from 30.25% to 39.475% in the India/UK trade as from 1-9-62 and a provision for an annual increase of 1% ensuring ultimate parity between the three Indian Lines and the U.K. Lines. He also referred to the equal sharing by the three Indian Lines of the trades, on a pool basis, between India and Poland, India and East Germany, India and Soviet and Rumanian ports, India and Egypt and Adriatic ports.

Regarding Coastal shipping, the Chairman endorsed the request of the industry for examination of its case by the Tariff Commission to enable Coastal steamer tonnage to remain at the level of current and future national need. He pressed for restoration of the cut of 5% in freight rate on coal from Calcutta to ports upto Cochin.

The Chairman specially urged the extreme urgency of introduction of a War Risks Insurance Scheme by the Government of India so as to ensure adequate insurance protection to Indian vessels against war risks.

Regarding tonnage position, the Chairman observed that the Company was facing difficulty in its replacement and new construction programme because of acute foreign exchange position and other factors.

The Chairman referred to the increase in operating expenses as a result of changes in conditions of service of crew members of the

floating staff, and of a fresh Agreement concluded between the Company and the Maritime Union of India representing the Officers of the Floating Staff.

Regarding future prospects, the Chairman said that it was difficult to visualise any improvement in the freights sufficient to cover the costs and to provide a reasonable return on capital. The Company is, however, continuing its efforts at rationalisation and economy in operations and is taking steps to improve the level of freight rates.

The Chairman referred to the Konkani services of B.S.N. (1953) Ltd. in the following terms:

"Subsequent to our negotiations with the Government of India, they agreed to pay for the years 1961-62 and 1962-63 a subsidy in lieu of 8% increase in fares as also a subsidy of about Rs. 6 lakhs being the excess of repair cost over Rao Committee's estimates; they further agreed to reimburse the excess repair cost for the year 1961-62, subject to a maximum of Rs. 14.50 lakhs, all these payments being subject to scrutiny of the Government Department. The Government had also agreed in October 1961 to grant an interest-free loan to cover the entire cost of the three new ships and an annual subsidy in this behalf.

While the Company has been writing to the Government from time to time regarding new tonnage, it was not until October 1962, when the Government advised the Company, that in view of certain offers received by them for the operation of the Konkani services with new ships without increase in fares and without pay-

ment of loan or subsidy, the Government saw that no useful purpose will be served by permitting the Bombay Steam (1953) to build new ships. It may be noted here that the Rao Committee had recommended an additional subsidy as also an interest-free loan to acquire new ships to maintain the services on the same pattern as before on the basis of Rs. 40 lakhs as the cost of each ship. It is, therefore, not understood how these very same services could be operated without any increase in fares or other assistance when the cost of these new ships has gone up to Rs. 60 lakhs each and when there have been further increases in cost of operations. The Company has replied to the Government that it would continue to run the Konkani services with the existing ships till 31st May 1966 if the present terms of the Government assistance are continued till then, whereafter the position will be reviewed in the light of the Government giving permission for new tonnage.

Shri Khatau thanked Shri Jagjivan Ram, Minister of Transport and Communications, Shri Raj Bahadur, the Minister of State for Shipping and other officials of the Transport Ministry for the interest shown by them in promoting the cause of Indian Shipping. He also appreciated the services rendered by the Officers and Staff and the Company's Agents abroad and in India and thanked the ship-owners and consignees for their continued support.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

Company Reports

Profits of Loyal Textiles Nearly Maintained

Loyal Textile Mills Limited has been able to show a distinct improvement in the working during the year ended 30 June 1962 despite adverse factors like the increase in wage bill, higher cotton prices, etc. Sales are shown at Rs 1.34 crores against Rs 1.30 crores, while the net profit, before providing for Depreciation and Taxation, is only slightly lower at Rs 17.11 lakhs against Rs 17.45 lakhs for 1960-61.

Apart from providing Rs 3.65 lakhs for Taxation, the Depreciation amount is raised to Rs 6.49 lakhs from Rs 6.26 lakhs. The provision for Development Rebate Reserve is, however, lower at Rs 2.02 lakhs against Rs 7.10 lakhs. The dividend on the Ordinary shares is raised from 6 per cent to 7.5 per cent, subject to tax.

The first stage of rehabilitation scheme is expected to be completed shortly. Seventy-six automatic looms under the expansion scheme have been commissioned. Four Howa Simplex Fly Frames will be installed soon.

Standard Batteries Pay Less

Standard Batteries Limited has reported a substantial decline in net earnings for the year ended 30 June, 1962, reflecting the keen internal competition. While sales have declined to Rs 1.15 crores from Rs 1.21 crores, the net profit, before providing for Depreciation and Taxation, amounts to only Rs 14.46 lakhs as against as much as Rs 19.35 lakhs for the preceding year.

The provision for Depreciation is raised to Rs 4.41 lakhs from Rs 3.73 lakhs, while that for Taxation is reduced to Rs 5.80 lakhs from Rs 7.35 lakhs. After transferring Rs 1.15 lakhs from Dividend Equalisation Fund, the directors have been able to provide 67,703 (Rs 82,404 for Development Rebate Reserve. No provisions are made for General Reserve and Plant Modernisation Reserve as against 15,000 and Rs 2.00 lakhs respectively set apart in the previous year. The dividend is reduced from 15 to 10 per cent, subject to tax.

The directors state that new and better equipment in some of the departments have been installed in the latter part of the year to meet the increasing demands of the products of the factory.

Balrampore Sugar Pays 4% on Doubled Capital

In spite of a substantial rise in the cost of production on account of higher wage bill, stores, huge borrowings to finance heavy stocks of sugar and loss in compulsory exports, the Balrampore Sugar Company Limited has reported only a small decline in the net profit from Rs 3.33 lakhs to Rs 2.85 lakhs for the year ended 30 June 1962.

Sales are higher at Rs 1.11 crores against Rs 90.42 lakhs. The Depreciation amount is raised to Rs 1.75 lakhs from Rs 1.58 lakhs, while Taxation provision is lower at Rs 7.750 against Rs 52,000 and Development Rebate Reserve at Rs 32,500 against Rs 56,500. The directors have proposed to pay a taxable dividend of 4 per cent on the ordinary capital which is doubled as against a taxable dividend of 8 per cent paid previously.

The directors state that the prospects of the coming season do not appear to be encouraging.

Gobind Sugar Repeats

The decline in sales from Rs 1.48 crores to Rs 1.28 crores is reflected in the working results of the Gobind Sugar Mills Limited for the year ended 30 June 1962. The net profit, before providing for Depreciation and Taxation, is substantially lower at Rs 10.44 lakhs as against Rs 20.24 lakhs for the preceding year.

Naturally, all allocations have been reduced:—Depreciation from Rs 3.14 lakhs to Rs 2.95 lakhs; Taxation from Rs 6.98 lakhs to Rs 4.57 lakhs; General Reserve from Rs 5.25 lakhs to Rs 1.50 lakhs and Development Rebate Reserve from Rs 2.08 lakhs to Rs 6,000. The dividend is, however, maintained at Rs 2.00 per share, subject to deduction of tax.

The quantity of cane crushed by the company's factory is lower at 151,958 tonnes as against 169,160 tonnes, while the recovery percentage is also lower at 9.64 against 9.66.

Higher Profits for New India Sugar

The New India Sugar Mills Limited has reported a higher net profit of Rs 10.78 lakhs for the same year as against Rs 6.61 lakhs for the previous year thanks to the rise in sales from Rs 1.10 crores to Rs 1.60 crores.

In respect of allocations, Depreciation is raised to Rs 2.54 lakhs from Rs 2.50 lakhs and Taxation to Rs 4.62 lakhs from Rs 45,000. The provision for Development Rebate Reserve is lower at Rs 8.119 against Rs 31,977 and Contingency Reserve at Rs 7,200 against Rs 9,193. The dividend on the Ordinary shares is repeated at Rs 3.65 per share, subject to tax.

The company's factory surpassed the record crushing of the previous year and crushed 197,540 tonnes of sugarcane as against 196,980 tonnes, although the recovery percentage was lower at 9.00 against 9.11.

Tulsiapur Sugar Skips

The directors of the Tulsiapur Sugar Company Limited have stated that the expansion and renovation of the sugar mill caused heavy capital outlay and had to be largely financed by borrowing. Due to increased fixed block and loans and advances to the company, a great deal of depreciation and interest had to be provided for. An additional and most unexpected cause of loss was the unforeseen slump in the sugar market.

The company's accounts, after providing for Depreciation, reveal a net loss of Rs 28,448 for the year ended 30 June 1962 as against a net profit of Rs 3.26 lakhs for the preceding year. The Depreciation amount is higher at Rs 2.64 lakhs as against Rs 1.92 lakhs. No provision is made for Development Rebate Reserve as against Rs 2.07 lakhs previously. The dividend is skipped as against a taxable dividend of 8 per cent paid previously.

Anapara Estates Pay 10%
Against 15 per cent

The coffee crop realised by Anapara Estates Limited for the year ended 30 June 1962 was lower at 468 tonnes as against 551 tonnes for 1960-61 and the points award for coffee, submitted to the Coffee Pool for the year, was 576,959 as against 664,453. The basic points awarded to

the various grades was reduced by the Coffee Board for the current year. The estate expenses also have increased. The profits for the year are, therefore, lower than that of the previous year, mainly due to these factors.

The net profit, before providing for Depreciation and Taxation, amounts to Rs 2.36 lakhs as against Rs 2.82 lakhs. The sum provided for Depreciation is raised to Rs 44,756 from Rs 40,808, while that for Taxation is reduced to Rs 74,000 from Rs 85,000. The directors have proposed a taxable dividend of 10 per cent for the year as against a taxable dividend of 15 per cent for 1960-61.

Mercara Rubber Maintains

Earnings

The Government of Mysore has imposed the Agricultural Supertaxes for companies on a slab system and, on account of this, the amount to be appropriated by the Mercara Rubbers Limited towards liability for payment of agricultural income-tax had to be raised to Rs 30,000 from Rs 20,000, though the net profit remains more or less the same, at Rs 1.05 lakhs as against Rs 1.06 lakhs. The Depreciation amount is lower at Rs 7,958 against Rs 8,575. The dividend on the ordinary shares is reduced from 20 to 15 per cent, taxable.

Mysore Plantations Skip
Again

The decline in sales from Rs 3.40 lakhs to Rs 3.25 lakhs is reflected in the working results of Mysore Plantations Limited for the year ended 31 March 1962. The net profit, before providing for Depreciation and Taxation, is substantially lower at Rs 17,126 as against Rs 47,827 for 1960-61. Taxation is raised to Rs 20,645 from Rs 15,000, while no provision is made for Depreciation against Rs 22,504. The dividend is again passed for the year.

Who but Pan Am gives you free representatives in 114 world trade centres?

Pan Am's new World-Wide Marketing Service is a concept as dramatic as the recent reductions in air shipment cost. **WWMS** gives you on-the-spot representation in 114 world markets... helps you find new markets and new sources of supply!

Air cargo rates have never been cheaper! More commodities than ever may now be shipped on a straight-weight basis... and rates are down as much as 63%!

Low air cargo rates mean you can have more markets! And Pan Am's World-Wide Marketing Service helps locate prime markets for you, virtually anywhere in the world.

Pan Am's more complete cargo service really amounts to a revolution in the distribution of goods. Virtually any

commodity now may be shipped economically by air. You save time, so your money turns over faster. Insurance rates are lower than by surface means, because pilferage, damage, and loss are minimized. Packing, crating, handling costs are lower. Your packing and shipping

WORLD'S LARGEST AIR CARGO CARRIER
WORLD'S MOST EXPERIENCED AIRLINE

are even faster and safer when you use Pan Am's family of containers.

Pan Am advises you on such things as packing, international rates, insurance, local cartage, routing—and simplifies documentation for you, too.

Pan Am has more specialists working solely on cargo than any other airline—1357 specialists who can help you build a solid business in other parts of the world. For tips about new markets for your products, call your Cargo Agent or Pan Am in:

INVESTOR'S SUPPLEMENT

Late Recovery in December

After ruling dull most of the time, the stock markets ended the month of December on a steadier note following the emergence of some buying support. The technical position of the markets had been considerably helped by the purchase by the Life Insurance Corporation of large blocks of pivotal shares both in Bombay and Ahmedabad Stock Exchanges. Although a similar deal in Lyons Range earlier did not materialise, the LIC was reported to have bought small lots of prominent shares in that centre also later in the month. The sizable reduction in floating shares considerably lessened selling pressure and the fact that the principal stock exchanges took steps to enforce the strict observance of the minimum prices contributed a great deal to the revival of confidence. The cumulative effect of the developments was to induce nervousness in bears who earlier appeared to be quite confident that prices would sag further and that the stock exchanges would be compelled to revise minimum prices downward. The renewed interest in cash shares that was noticeable seemed to have stemmed mainly from the apparent improvement in the political situation consequent on the return of NEFA administration to parts of India vacated by the invading Chinese according to their unilateral cease fire effective from the beginning of the month.

For most of the time during the month, however, business in the stock markets had been at a standstill in cleared shares while transactions in cash scrip were few and far between. The ban imposed on forward trading in shares toward the end of the previous month did not have much adverse effect on sentiment as trading had been put under heavy strain by the voluntary restrictions imposed by the various stock exchanges. For all practical purposes, forward trading in shares even before the official ban was imposed, was reduced to a trickle. The ban however did not reduce the selling pressure to any appreciable extent and pivotal shares were quoted in official deals much below the minima. There was a general feeling earlier in the month that the then prevailing minima should be further reduced if investment interest were to be attracted. In the meantime the LIC made it quite plain that it was not bound by the minima but was prepared to conclude transactions on the basis of supply and demand. That imparted further strength to the bears. When the news came that the LIC was not prepared to accept the price offered by brokers in Calcutta and later on it was announced that the Corporation had concluded a

deal for the purchase of a large block of TISCO shares in Bombay and Ahmedabad at much below the official minimum for that share, the market was expecting that various stock exchange committees would be persuaded in course of time to reduce the minima.

The investors' reluctance to extend commitments despite the very attractive levels at which a number of shares were quoting was due to apprehensions about fresh taxation and the adverse effect the national emergency would have on a number of industrial units which were considered to be not very essential to war effort. While addressing the Associated Chambers of Commerce early in the month Mr Morarji Desai, the Finance Minister, made it clear that additional taxation would be necessary to meet the increased outlay on defence. Some time later six prominent economists entered a plea for immediate effort to mobilise adequate resources to meet the mounting defence expenditure. In their view a supplementary budget was essential to take advantage of the tremendous enthusiasm in the country to fortify our defences. Referring to the need for stepping up war effort in the country Mr Morarji Desai had pointed out that defence expenditure would have to

be doubled from 2½ per cent national income hitherto to 5 per cent if the country were to meet effectively the Chinese threat. He said that even if there was no further aggression there could be no slackening on building up our defences.

Business during the month was at a very meagre level as both operators and investors were reluctant to extend commitments in view of the various uncertainties in the economic and political spheres. Most of the time the scrip in the forward section were neglected as buyers were scarce at the minimum prices. However there were reports of transaction in unofficial trading but the rates quoted were much below the minimum prices. The expectation that the minima would be reduced further seemed to have been responsible for the lack of interest. As for cash scrip, the inhibiting influences were fears about fresh heavy taxation and an increase in the idle capacity of companies not connected with defence production. Toward the close of the month sentiment markedly improved, with quite a few shares crossing the minimum levels in active trading. Cash scrip came in for good enquiry at advancing prices indicating the revival of investment support. Presumably, the lull in the border fighting had inspired confidence and investors were encouraged by the attractive levels at which many shares were available.

'ALL A
BLOWING
ALL A
GROWING'

What keeps blowing and growing in Burnpur is IISCO Steel and in fact there is about a million tons of steel ingots a year, not to talk of finished steel, blooms, billets, bars, sheets, rails and structurals—coming out ceaselessly from the integrated steelworks. These, the end products of Burnpur 'blowing and growing', help to shape many a thing which form part of our daily life and part of our industrial life.

Indeed, in every sphere of the country's endeavour at present, IISCO Steel is playing a very substantial part.

A Ten-Year Programme for West Bengal

It is a pity that the National Council of Applied Economic Research was commissioned to carry out a techno-economic survey of West Bengal too late for its conclusions to be available when the Third Plan was on the anvil. If the Survey had been initiated earlier, the claim for a larger outlay on the State's Third Plan for which the State Government and the late Dr B. C. Roy put up a strenuous fight would have been powerfully reinforced by the conclusions of the National Council. In the face of the findings of an independent body of economists and technicians, the Planning Commission would not have been able to scale down the total outlay to the meagre level for which provision has been made in the Third Plan.

The NCAER was asked by the State Government to undertake the Survey in 1959-60, and the team of NCAER experts associated with the project has carried out its assignment with exemplary thoroughness. The report, which is informed by broad outlook and generous understanding of the State's problems will remain an authoritative document providing the guidelines for the development of the State for many years to come.

The report reviews the familiar problems of this 'problem State'—the violent disruption of the social life and economy caused by the Partition, the intolerable pressure on land, the heart-breaking problem of unemployment, the wide disparities and imbalances—to build up an unanswerable case for massive industrialisation.

Calcutta used to be described in the past as a city of palaces and hovels. In recent years the palaces have ceased to be palatial, but the slums are all-pervasive. However, the sharp contrasts in ways of living suggested by this description apply to all sectors of the economy. Though National Income accounts show that West Bengal has the highest per capita income among the States of the Indian Union, the majority of the population do not earn enough to assure a reasonable standard of living. The distribution of incomes is highly uneven and the masses live in abject poverty.

Again, though West Bengal is the most highly industrialised State in India, agriculture is still the main occupation of 50 per cent of the population. West Bengal had the benefit of an early start in industrialisation. But the growth of industry has not resulted in the integrated development of the economy of the State. The regional disparities within the State are as glaring as the disparities in personal incomes. The industries are concentrated in and around the Calcutta conurbation. But except for the tea plantations in the hill districts, the rest of the State has no industries to speak of and has suffered as a result of the lop-sided development of the State's economy. Though West Bengal leads the rest of India in Power development, the regional imbalances are as marked as industry. The pressure of population on land is so great, with 1031 persons living in one square mile, that no conceivable programme of agricultural development could absorb all the working population of the rural areas. The possibilities of extension of cultivation are limited. At present about 60 per cent of the geographical area of the State is under the plough, 15 per cent more than the all-India average. The net sown area per head of the agricultural population is only 0.90 acres and the land-man ratio continues to deteriorate. Adoption of improved techniques in agriculture, animal husbandry, and fish culture, may increase rural incomes, but is not likely to do much to increase employment opportunities.

The NCAER Study drives home the point, made often in the past, that additional employment opportunities could be created only through a programme of industrialisation based on modern techniques. The revival and resuscitation of village arts and crafts cannot do much to relieve under-employment in rural areas. The Study points out that, unless the techniques of cottage industries are modernised, this sector may act as a drag on the economic development of the State.

Even for the better organisation and functioning of the industrial complex around Calcutta, now handicapped by limitation of space and strain on transport facilities and civic amenities, a planned dispersal of industries designed to ensure balanced regional development is indispensable. Such a dispersal will have to be supported by programmes for balanced development of power and a transport network to improve communications in rural areas and to link up the new centre of industrial activity.

For a balanced programme of development which would ensure for the State a rate of growth of 7.4 per cent per annum and an average rate of increase of 3.7 per cent in capita income, the National Council has suggested a number of detailed programmes in different sectors, involving a total investment of Rs. 2000 crores over the ten year period 1961-71. The report points out that, though this order of investment may appear too high, the rate of growth envisaged is technically and economically feasible and that it is a worthy goal to be kept in view.

The total investment will be distributed over the different sectors as shown below.

	Rs crores
Agriculture, sericulture, animal husbandry	
Fisheries and forestry	129.2
Mining	126.0
Industry	704.5
Power	320.0
Transport	300.0
Housing, public health, and education	435.8
Total	2,015.5

More than half of the total investment will be in the sector comprising Industries Mining and Power. Out of the total investment in this sector, 68 per cent will be for factory industries, and most of it will be on metallurgical, metal-based and chemical industries. In connection with future development, the National Council has emphasised that the State's prospects of achieving a fast rate of growth will very much depend on its ability to disperse industrial activities over wider regions by creating a chain of industrial townships with full complements of overhead facilities. And a number of new industries in the different categories as well as expansion schemes are suggested in the report.

Out of the total investment over the decade, the share of the State sector will be Rs 644.9 crores, but it is estimated that the State Government will be able to make available only about Rs 243 crores. The main problem in carrying out the proposed programme of development will be to find resources to fill this gap and to create conditions for investment in the private sector of more than double the amount suggested for the State sector. The effort has to be made, for the Study makes it clear that even with this programme of development, the State will be left with over a million unemployed at the end of the decade.

AGRICULTURE

Ingredients of a Policy

Mr Tarlok Singh's presidential address at the All India Agricultural Economics Conference recently held in Ahmedabad is a brilliant survey of the entire range of problems connected with our agriculture. Of particular interest is his identification of the areas of failure in a decade's performance. The primacy of agriculture in the strategy of our planned economic development is avowed often enough. The newer burdens of a massive defence effort have made the agricultural urgencies even more pressing. The need for a clearly articulated agricultural policy is paramount and as a first step it is necessary to know the areas where we have failed so far.

Mr Tarlok Singh enunciates three tests to judge the efficacy of agricultural policy under planning. The first is whether the agricultural economy has attained a degree of vitality that automatically provides the requirements of food and raw materials in accordance with the estimates of the Plan. Secondly, has there been a steady increase in production and yields in all parts of the country, especially in areas better endowed with irrigation and assured rainfall? Thirdly, has there been a progressive sophistication in the modes of agriculture, better cultural practices and productivity leading to progressive reduction of the unit cost? On all these counts, the performance of the decade of planning has fallen short of expectations.

The goal of self-sufficiency in food is still elusive. Of commercial crops, oil seeds and tobacco have not shown any appreciable increase in yield per acre and though the output of cotton has increased, it is still below our requirements. In the methods of cultivation and in the use of new technology in agriculture, surveys have shown that there have been few radical improvements. Utilisation of irrigation has been lamentably behind availability, only 9 million out of a potential twelve million acres making use of the facilities. As Mr Tarlok Singh observes, this problem needs a many-sided attack involving removal of organisational defects in community effort, extension services and administration. Often, it is the unwillingness or inability of the villagers to make the connecting channels to the field that has allowed the water to run to waste. This under-utilisation of communal assets created at great cost is certainly a "critical weakness" of the present situation and needs elimination.

On a broader front, Mr Tarlok Singh draws four main conclusions. First, future planning in agriculture will have to assign a more "central role" to price policy and to the organisation of marketing. Secondly, agricultural administration in the States, especially in relation to the community development and extension services is fast becoming unequal to the demands of the times. Thirdly, both for the narrow purpose of increased agricultural production and for effecting a basic revolution in the social and economic pattern in our village life, the fullest potentialities of community action have to be realised. And lastly, as a cumulative effect of the foregoing, larger investment in agriculture will be most certainly called for. Such investment will not be the dubious gamble it has been so far but a viable economic proposition like investment decisions in industry.

As regards the first, ad hoc alternation between price ceiling and price support should yield place to a definition of the range of price movements announced in advance of the season. As regards marketing, the various schemes now under way for marketing and warehousing should get stream-lined. As regards the second, the Community development scheme has ceased to be the unique experiment it was originally. In saying this, we are not thinking so much of the disap-

pointments of our too eagerly pitched hopes in this new instrument of development, but of the paradoxical result of the extension idea becoming a part of the rural scene and psychology. In other words, the very success achieved by the community in drawing itself out of the slough of stagnation has imposed new demands on the community project administration. The demands of the developed rural areas are becoming more sophisticated and higher levels of skills and technical expertise are to be provided to see that the momentum gained is not lost. Experience gained over the years has also helped to identify a large number of progressive agricultural practices that yield results and making these practices the norms of rural life is an endeavour on which money would be well-spent. This naturally involves rethinking on the administrative and organisational pattern of community development.

The third point made by Mr Tarlok Singh is perhaps the most challenging and one which is tied up with the qualitative changes that we seek to bring about in our rural pattern. At its lowest, it has the aim of a fuller utilisation of the rural man-power, wholly or partially idle for seasonal and other reasons. Such man-power has no chance of full utilisation in anything like the full measure of its potentiality in the fragmented state of our agriculture. But consciously directed for creating new community assets, it will be a tremendous force for good. It is ironic that the same village should have idle men and no field channels that will use the irrigation potential created. Besides extending irrigation, these men can be also used in undertaking soil conservation, dry farming, land reclamation and afforestation etc. This would make the whole village be involved in a meaningful way in the community and its welfare. There is no doubt that ingrained habits of thoughts of centuries and customs and caste prejudices may offer some resistance but these can and must be overcome.

As these hydra-headed changes gather momentum, investment in agriculture would not be the haphazard coping with food and other deficiencies from which we hope for the best and are satisfied with minimal returns. It would have strict economic criteria. Areas that are agriculturally progressive would have more than the normal funds only allocated on a roughly equitable basis among the various regions of the country and the State. In such areas, conscious direction could be given to community action by submitting all decisions on land utilisation, cropping pattern, input of capital, labour and fertilisers, processing and marketing to the entire community.

For as far ahead, as we can see, Indian economy is likely to be predominantly agricultural. And it is one of the adventitious blessings of our relative industrial backwardness that we still have the opportunity to create a social life in which the chasm that divides the town from the village will not be so wide. But if this opportunity is to be turned into account, detailed thinking on a rational disposition and development of resources, locational choices and ordering of economic and social overheads should be done. Inevitably, there will have to be a massive shift of the rural population to urban areas, but these need not necessarily be the squalid slums they are now. At the rural end, a fair degree of prosperity ushered in by better agriculture can be reinforced by a certain amount of industrial activity pyramidally connected with the more complex urban industry. A rapid increase in agricultural production, expanding opportunities for non-agricultural occupation in the rural areas and institutional and psychological props to make these two possible—these should form the ingredients of a rational agricultural policy.

Defence Production

The Chinese invasion has radically altered our ideas of the defence of the country. So long the emphasis has been on the revitalisation of the economy so that it may become self-sustaining as early as possible. Although our

defence expenditure has not been insignificant preparations for meeting defence needs have been proceeding at a leisurely pace. It has now been realised that despite a policy of non-alignment there is no alternative to national preparedness to the greatest degree possible so long as forces inimical to the peaceful coexistence of different political ideologies exist just across our borders. This is not however to say that our five year plans are to be abandoned. On the contrary the orderly fulfilment of the plans should also form part and parcel of our war effort because any serious setback to our planned progress will be indirect victory to the Chinese whose main purpose in mounting the invasion of our territory is to disrupt our rapid economic progress. The Third Plan, therefore, is to be carried forward but the priorities are to be changed. Preference is naturally to be given to defence industries and efforts should be directed toward reorienting industries wherever necessary to the war effort. The supreme task that faces the country is to reach a position militarily where no potential aggressor will be able easily to challenge our sovereignty again as happened in October last. Till that stage is reached there can be no slackening of effort no matter what the outcome of the present conflict with the Chinese is. The war with China can by no means be considered over because of its unilateral cease fire and the subsequent withdrawal from some of our regions. We cannot afford to be taken unawares a second time.

The task of building up our defence in adequate measure, enormous though it is in view of the strength of the aggressor, should be gladly borne by the people of this country. Happily for us, in this we are not without powerful friends who have unstintingly and expeditiously made available to us valuable armaments at the time of our dire need when the Chinese invaders were overrunning our territories and who have also expressed their willingness in unmistakable terms further to assist us. Continuing assistance from friendly countries is necessary if we are to have a modern war machine. Our ultimate aim however should be self-sufficiency in armaments and in other defence production. And no effort should be spared to reach this objective as quickly as possible.

Armaments production is at present the close preserve of the public sector. This restriction is longer relevant in the present context of the continuing threat of Chinese aggression. It matters little now who in the country produces the required armaments and ordnance stores. Speed is the essence of the task that faces us and what is important is how quickly we be come fully prepared. It is gratifying that Mr Raghuramiah, Union Minister of Defence Production, has made it clear that Government will not hesitate to utilise the services of private industry in mobilising defence requirements. That this welcome change in government policy is not still in the realm of consideration but has already been translated into action is borne out by the fact that the Ministry of Defence Production has prepared a scheme to help the manufacture of certain items required for defence in the civil sector.

The private sector can make a sizable contribution toward maximising defence production especially in view of its large idle capacity. Large investments have been made by the private sector during the first two plans in building up diversified industrial capacity but due to a chronic shortage of imported raw materials and equipment, much of this capacity has been rendered idle. This idle capacity can be easily switched over to defence production provided the necessary facilities are made available. Such assistance has already been promised to defence based industries. When the idle capacity in industries which can be conveniently switched over to defence production is made defence oriented, it too becomes defence based and there should not be any difficulty in extending to it all the necessary facilities.

World of Finance

GOLD

Further Measures

THE Gold Control Rules, the Finance Minister has stated, constitute the "further measures" that Government had announced, at the time of the issue of Gold Bonds, it would take in the near future. The primary objective is to make smuggling of gold less easy. The Rules call upon all possessors of gold in forms other than ornaments and in quantities above specified maxima to declare the magnitude of their holdings within one month; and the possession thereafter of undeclared gold will be an offence. The acquisition of gold by the general public after that date can only be in the form of ornaments, and that too of a purity not exceeding 14 carats.

We sense that the GCR have been made more strict than perhaps had earlier been envisaged because of the extremely poor response to the Gold Bonds. Now Hobson's choice faces the owners of gold bought from tax-evaded incomes. If they do not declare their holdings before the specified date, their gold will be illegally held and illicitly hoarded. The sweeping powers that the Central Excise officers will have to search, seize and confiscate can mean that, if enforcement is strict enough, their hoards are not safe. If they do declare, then all the weapons in the armoury of the Income-tax Department can be brought to bear against them, for explanations regarding the origin of their gold and for the ultimate levy of taxes on incomes that had long evaded them. Thus, undeclared gold runs the risk of confiscation; declared gold will be exposed to the gamut of tax harassments.

And yet there is some relief. The subscription lists for the Gold Bonds will be open for one month more. There is still therefore the opportunity for illicit gold to be transmuted into legitimate resources; and no questions will be asked by the Income-tax Department as regards the origin of the gold, no wealth tax, nor capital gains tax, will be levied in regard to such subscriptions.

But then, again there is the mystifying clarification that, even in regard to declarations of gold, no explanations are necessary as to origin. We do not for a moment suppose that declarants will be let off scot-free or even easily. Declarations will mean inevitably that in due course the Income-tax authorities will ask for searching explanations. For while Gold Bonds are exempt from Wealth Tax, declared gold will not be so exempt; the latter would need to be included in wealth-tax returns, and it is the scrutiny of these which will involve declarers of gold in the embarrassment of having to explain how they acquired the gold.

On the other hand, if consequent upon declaration the gold is itself tendered for subscription to Gold Bonds, then the risk of harassment by taxing authorities is minimised. But the trouble seems to be that, the assurances from the Finance Minister withal, those con-

fessing to owning gold bought from tax-evaded incomes will expose themselves to a series of gruelling sessions with the Income-tax Department. This apprehension could be one reason why the response to the Gold Bonds has been something less than lukewarm.

The reason could also lie in present estimates of hoarded gold being greatly exaggerated. We have had, it is true, two "high-power" estimates of the stores of gold in the country; and both are more or less agreed that the value of such stocks would, at the then ruling prices in India, be placed at around Rs 4,000 crores, or roughly Rs 1,800 crores at the international prices. This part of the guessimate may not be altogether incorrect. But the question is, how much of this amount of Rs 1,800 crores is constituted by tax-evaded gold in the form of sovereigns and bars. One opinion is that there are negligible such stocks. According to this source tax-evaded money is almost wholly in the form of currency. But even this is not quite relevant to the issue at hand: Will the GCR succeed in that it will evoke in any magnitude of declarations of unaccountable gold?

We fear that we shall discover there to be hardly any declarers of gold. No one of his own volition is going to court a dispute with the Income-tax authorities. And we are afraid that no kind of assurance from Government appears likely to unearth gold. Hoards will find deeper and less accessible sanctuaries.

Does this mean that the GCR are a futile exercise? If the purpose is, in combination with the Gold Bonds, to secure gold for meeting our import bills, then the answer must be in the affirmative. But if the objective is the more limited one, in one sense, of reducing the potential for smuggling, it is likely to be a worthwhile and successful exercise. But the GCR will have done most good of all, if as a result of its prescription of a maximum of 14 carat fineness, we shall have the beginnings of change in the very attitude to ornamental gold.

BANK RETURNS

Large Dose of Deficit Financing

The turn of the year has involved very considerable expenditure for the Central Government, and there is consequently recourse to deficit financing in very large amount.

According to the returns of the Reserve Bank for 4 January 1963 Active Note Circulation has jumped up by Rs 33.76 crores to Rs 2,154.05 crores, and there has been outflow of Rupee Coin for Rs 2.23 crores. Foreign Securities are unchanged at Rs 88.08 crores, and currency has been expanded for Rs 25 crores against Rupee Securities, the latter rising to Rs 1,843.44 crores. Cash in the till

moves down by Rs 10.99 crores to Rs 16.96 crores.

On top of the expansion in Rupee Securities, Investments in the Banking Department have moved up by Rs 22.46 crores to Rs 203.49 crores. Of the total increase of about Rs 47 crores in the rupee holdings of the Reserve Bank an element of about Rs 14 crores can be traced to sales effected by the State Bank in the same week. The balance roughly may be said to represent the recourse to created money in the week under review.

Part of the proceeds from deficit financing was utilised by the Centre to make payments to the States, whose balances have improved by Rs 9.67 crores to Rs 15.79 crores on top of a reduction of Rs 3.92 crores to Rs 12.45 crores in their ways and means borrowings from the Reserve Bank. The Centre's own Deposits are nominally higher by Rs 0.51 crore at Rs 53.79 crores, indicating heavy outside payments, which may in due course be expected to make their impress felt upon Deposit resources of banks.

With the turn of the year Scheduled Banks, despite beginning of the month disbursements, have apparently felt slightly lesser strain. Their Reserve Balances have gone up by Rs 5.92 crores to Rs 75.26 crores, and their borrowings from the Reserve Bank are lower by Rs 1.25 crores at Rs 19.45 crores. Perhaps the governmental payments have flowed even more quickly into the banking system.

It remains to add that Balances Held Abroad show a fractional rise of Rs 0.09 crore to Rs 8.79 crores; and foreign assets held by the Reserve Bank are just under the Rs 98 crore mark.

BANKS

First Working Results

The first bank results to be released for 1962 are encouraging and indicate that the costs of the Desai award have been taken in stride. Dena Bank has been able to increase appropriations by the simple expedient of reducing its carry forward. United Bank has reported a nominal increase in profit. United Commercial has, it is true, reduced its transfer to reserve, but the reduction is almost

BUY
NATIONAL
DEFENCE
BONDS

exactly offset by contributions to the national defence fund and by a higher allocation to staff bonus. Thus the published results are satisfactory, but we shall have to wait for the balance-sheets to see whether inner reserves have been sufficient to meet the depreciation in gilt-edged holdings. And we hope of course that some part of the 1962 banking profits will have been conserved and taken to inner reserve instead of being included in the published profit. Bank results follow.

United Commercial

The net profit of United Commercial Bank Limited for the year ended 31 December 1962, after taxes, subject to audit, including the sum of Rs 2,07,428=02 brought forward from the previous account amounted to Rs 2,15,000 to the National Defence Fund and Dr B. C. Roy Memorial Fund, transferred Rs 25,00,000 to the Reserve Fund, raising it to Rs 2,60,00,000, allocated Rs 4,00,000 to the Gratuity Trust Fund, and provided Rs 16,50,000 for bonus to staff. In respect of the balance amount the Directors propose to recommend to the shareholders at the next annual general meeting the payment of a dividend of 12 per cent (i.e. Rs 6 per share) less tax at 30 per cent on the old shares and proportionate dividend at the same rate less tax on the new shares which together will absorb Rs 24,49,902=50 and to carry forward to the next account the balance of Rs 3,25,151=41.

The comparative figures for 1962 and 1961 are as under:

	1962	1961
Net Profit	73,32,625=89	72,60,557=04
Brought forward from previous account	2,07,428=02	1,46,870=98
Amount available for disposal	75,40,053=91	74,07,428=02
Appropriations:		
Donation to the National Defence Fund & Dr B. C. Roy Memorial Fund	2,15,000=00	
Reserve Fund	25,00,000=00	30,00,000=00
Gratuity Trust Fund	4,00,000=00	4,00,000=00
Bonus to Staff	16,50,000=00	14,00,000=00
Proposed Dividend (12 per cent)	24,49,902=50	24,00,000=00
To be carried forward	3,25,151=41	2,07,428=02

Bank of Maharashtra

The net profit of the Bank of Maharashtra for the year ended 31 December 1962 is higher at Rs 8.44 lakhs as against Rs 8.24 lakhs in the previous year. The ordinary dividend is maintained absorbing Rs 3.89 lakhs.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

(Incorporated in Hong Kong with limited liability)

Capital Authorised	...	Hong Kong \$ 100,000,000 (Std. Eqv. £ 4,250,000)
Capital Issued and Fully Paid Up	...	Hong Kong \$ 79,046,125 (Std. Eqv. £ 4,940,383)
Reserve Fund (Including Share Premium account)	...	£ 15,000,000
Banking and Exchange Business of every description transacted with the principal commercial centres of the world.		
16, Veer Nariman Road, Fort, Bombay-1.	...	31, Dalhousie Square, Calcutta-1.
Manager: T. S. Wright.	...	Manager: S. F. T. B. LÉVER.

United Bank

The United Bank of India has earned a profit for the year ended 31 December 1962 of Rs. 21.20 lakhs against Rs 20.50 lakhs after providing for taxation. The ordinary dividend is maintained at 6 per cent subject to tax and this absorbs Rs 16.08 lakhs. A sum of Rs 4.26 lakhs has been allocated to Statutory reserve.

Dena Bank

The net profit of Devkaran Nanjee Banking Co. Ltd., for the year ended 31 December 1962 after providing for taxation and including Rs 13,51,096.09 brought forward from last year's account amounts, subject to audit, to Rs 37,59,418.26. Out of this, the Directors have made the following appropriations:

	Rs.
To Ad-Interim Dividend paid for the half-year ended 30 June 1962 at the rate of Rs 2.00 per old share	2,00,000.00
To Reserve Fund (Raising the Reserve Funds to Rs One Crore) and propose to appropriate the balance as under:	23,00,000.00
To pay a Final Dividend for the half-year ended 31 December 1962 at the rate of Rs 3.50 per old share (making in all 11% (Eleven) per annum, subject to deduction of tax	3,50,000.00
To Pay a proportionate Dividend of Rs 1.40 per new share (subject to deduction of tax)	1,40,000.00
To Pay bonus to staff	4,50,000.00
To Carry Forward	3,19,418.26
Total Rs.	37,59,418.26

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills were opened on Tuesday 8, January 1963. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.410 per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.355 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 14 January 1963. Successful tenderers should make payment on Friday, 18 January 1963 at all centres. Other conditions are as usual.

During the week ended 4 January, 1963, Government of India Treasury Bills for Rs 54,27,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 9 January to 12 January 1963 at Rs 99.426 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 3 January to 5 January 1963 amounted to Rs 5,00,00,000.

British Exchange Guarantees

By Paul Einzig

Central Banks holding foreign balances suffered heavy losses on various occasions as a result of unexpected devaluations of the currencies concerned. It is no wonder that many of them are reluctant to increase their Foreign Exchange reserves beyond a certain limit. When in recent years pressure developed on sterling or on the dollar they were requested to abstain from aggravating the pressure by withdrawing their balances and even to support these two currencies by increasing their holdings. They were prepared to do so, but they demanded a guarantee against losses arising from a devaluation. In the case of the dollar such guarantee would have required approval by Congress. There was no such legal obstacle in the case of sterling and in 1961 the British Government did in fact guarantee a large part of the sterling acquired by the European Fund and by Western European Central Banks under the Basle arrangement. The rest of the sterling balances was secured by means of swap transactions.

The granting of a dollar guarantee for the benefit of a Western European official sterling balances caused some resentment among Sterling Area countries whose sterling balances were given no such guarantees. One or two of them demanded the application of the principle of non-discrimination. This attitude was understandable but not reasonable. There is a difference between sterling holdings of Sterling Area countries and of countries outside the sterling area. If sterling is devalued the Netherlands Bank, for instance, suffers a loss in terms of guilders on its holding of sterling, as in fact it did in 1931. Central Banks and Treasuries of Sterling Area countries would suffer no such losses, provided that their currencies are devalued simultaneously and to the same extent as sterling. It is true, they could argue that they stand to lose the profit they would make on the devaluation of their currencies if instead of holding sterling they held gold or dollars. But the loss of such profit is not nearly as painful as an actual loss.

On the occasion of the re-negotiation of the European Monetary Agreement the British Treasury insisted that the dollar guarantees given in 1961 should now be discontinued. This was strongly opposed by the monetary authorities holding sterling, especially by France. Eventually a compromise was reached under which part of the sterling holdings of Western European Central Banks would remain guaranteed in terms of dollars of the present parity but the European Fund would relinquish this guarantee. In any case the Central Banks concerned have found an alternative solution in the form of swap transactions which effectively safeguard them against exchange risk. The same device has been applied extensively also in respect of official dollar balances. Indeed the United States Treasury has gone even further by raising short-term loans abroad in terms of foreign currencies. That device is decidedly preferable to granting exchange guarantees.

Notes

IDLE CAPACITY Monstrous Anomaly

In the context of the need for attaining self-sufficiency in defence production as quickly as possible, unutilised productive capacity is a monstrous anomaly. Earlier reluctance to utilise private sector capacity for ideological and strategic reasons is reportedly disappearing. The private sector, for its part, has shown itself to be quite keen on shouldering whatever responsibility it is given in meeting the challenge of the Chinese aggression. There is no doubt that there is idle capacity in industry in general in consequence, among other reasons, of the drastic cuts in imports.

In the engineering industry alone the idle capacity is estimated to be about 50 per cent of the installed capacity. It should not be difficult to utilise the idle capacity in the engineering industry in full for defence production. It is necessary to make a quick assessment of the capacity that can be conveniently switched on to defence production.

Even during the last war, the engineering industry had played an important role in defence production although at that time it

was much smaller in size than what it is today. Mr T. R. Gupta President of the Engineering Association of India has pointed out that it should be the endeavour of the Defence Department to put to fullest use the idle capacity in the engineering industry before thinking of asking units to divert any part of their capacity already engaged in the production of civilian stores. This would not only enable the putting of existing capacity to the maximum use; it will also not interfere with production of civilian stores. In consequence prices are kept in check—another important objective in the present national emergency.

A brief survey conducted by the Engineering Association of India has revealed the existence of large idle capacity in the engineering industry in a number of specialised fields. Information was received by the Association from 78 firms and the total idle capacity is estimated at the staggering figure of 3,41,852 machine hours per month. (This does not take into account casting and galvanizing capacity). Out of this 97,454 machine hours per month are idle for lathes and automatics; 11,810 machine hours for boring; 19,908 machine hours for milling; 11,179 machine hours for shaping; 39,341 machine hours for drilling; 35,735 machine hours for grinding; 31,435 machine hours for pressing; 39,143 machine hours for welding, etc.

The actual availability of capacity for such work in the industry will be much more than a quick survey may disclose because working in the industry is not uniform, and others besides the 79 firms that had furnished the necessary information, have evinced interest in undertaking defence work. Again even now, a number of units work only one or two shifts. On the basis of a three shift working by the industry as a whole, quite a good deal of engineering capacity will be available for defence production. Considering how our needs in this regard are nowhere near actual internal production, a coordinated programme to use all available capacity is an immediate imperative.

SCIENTIFIC RESEARCH Paucity of Industrial Use

In the course of an illuminating address on the occasion of the convocation in Jadavpur University recently, Sir Jehangir Ghandy touched on some important aspects

of the problem of scientific research. The importance of scientific research to national economic development has come to be recognised only in recent years but progress toward building up facilities for research has been quite fast. This upsurge has stemmed from the growing realisation that national economic progress at a rapid pace is possible only when industrialisation is linked to modern technological development. There are now 27 national laboratories employing thousands of scientific workers. Large facilities for scientific research have been built to meet the ever-growing needs of the situation created by the planned development of the economy of the country. In the Second Plan Rs 73 crores were allotted for scientific research and allocation during the Third Plan is Rs 133 crores, over and above another Rs 75 crores toward the cost of maintenance of facilities already created during the Second Plan.

It is not however enough if facilities are created for scientific research and a large number of scientists are assembled to undertake various kinds of scientific projects. These undoubtedly highly useful endeavours will become meaningful only when the results of research are fruitfully utilised by industry. It has been often complained that in India the industrialists do not care much for the work in the laboratory while the scientists in the laboratory go on working on their problems quite regardless of what happens to the results of their research. Instances of close co-operation between research and industry are so few in number that one gains the impression that industry seems to think that it has no use for research. One also hears the argument that neglect of research by industry stems from the fact that the latter knows that it will have no competition from more efficient industrial units in foreign countries. Sir Jehangir however thinks that the initiative in our country for bringing the fruits of research to industry should be properly taken by the scientists themselves. As Sir Jehangir has emphasised there is need for the setting up of specialist laboratories by groups of industries in order to utilise more fruitfully the results of research. Such specialist laboratories, wherever they have been established, have brought immense benefits to the industries concerned. Sir Jehangir's plea for the planning of scientific research on a long term basis instead of limiting it to five year periods deserves earnest consideration because scientific research by its very nature is time consuming.

Another point made by Sir Jehangir needs underlining. Despite the fact that our country can draw from the experience of industrially developed countries for our own industrial develop-

ment, there is all the same need for undertaking independent research, both basic and applied. In the course of our industrial development we come across problems that are peculiar to us and these can be tackled efficiently only by our own independent research. The results of industrial research in other countries cannot be applied wholesale in India because the problems are not the same in both the cases. The aim of western scientific research as applied to industry is mainly to grapple with the problem of shortage of labour and it is not very much concerned with capital employed because it is in plentiful supply. In India, on the other hand, capital is scarce while labour is plentiful. Similarly, it will be a long time before large scale production will be the dominant economic characteristic of our economy. So, the main problem in India is how to make the small units efficient and the answer for this must be found not in Western experience but in independent research in India.

RIHAND DAM

Boon to UP

The Rihand Dam which has been formally inaugurated this week by the Prime Minister marks a significant milestone in the country's march toward a self-sustaining economy. The dam is of very great importance to the state of Uttar Pradesh which has been eagerly awaiting the day when it will be fully commissioned. For this State's economic progress has been greatly hampered in the past by paucity of power and irrigation facilities which the Rihand Dam

General Manager.

will supply in ample measure. The dam is one of the largest river valley projects in the world and has been constructed at a cost of Rs 46 crores. The installed capacity of the power station is 2,50,000 Kw with an ultimate capacity of 3,00,000 Kw. Though the dam has been formally inaugurated only now the power station was commissioned for commercial production of electricity early last year.

Much needed power and irrigation facilities will now become available to over 30,000 square miles which comprise the poorest eastern districts of Uttar Pradesh, which have long remained industrially backward for want of these essential facilities. Power from the dam will be available to 800 rural and urban localities while 14 lakh acres of land in this region will come under the plough by means of power driven tube wells.

While the dam will solve to a great extent what appeared till now an intractable problem, viz. the development of the eastern districts of the State, it will also

give a great fillip to the industrialisation of the State as a whole. As much as 60 per cent of the power generated at the dam will be consumed by large and heavy industries while the remainder will be shared in more or less equal measure, by small scale industries, railway track electrification, irrigation and urban and rural electrification. Among the large industries using the power from Rihand are the Churk cement factory, the Hindustan Aluminium factory, the Soda Ash factory and the Integral Coach factory at Varanasi.

TOBACCO Better Cultural Practices

For maximising the yield of cigarette tobacco, various treatment combinations were tried by Central Tobacco Research Insti-

tute, Rajahmundry, from which the following appeared beneficial:—
(a) Irrigating the crop 50 days after planting, and

(b) Application of either farmyard manure at 7.5 tonnes/ha. plus a combination of ammonium sulphate, superphosphate and potassium sulphate to supply 40 kg. N, 100 kg. P₂O₅ and 100 kg. K₂O per hectare respectively or groundnut cake to supply 20 kg. N/ha. plus a combination of ammonium sulphate to supply 30 kg. N/ha. and superphosphate and potassium sulphate.

For flue-cured tobacco, green manuring of the crop grown in situ was not beneficial as it depressed the yield and quality of the leaf by depriving the tobacco crop of the conserved soil moisture for its decomposition. However, green leaf manuring on the basis of supply of 20 lbs. N/acre appeared beneficial in improving the yield as well as quality.

Where facilities exist for irrigating the crop, the yield and

quality of the crop could be considerably improved by giving one irrigation on the 40th or 50th day from transplanting. Under these conditions, it is enough if the crop is fertilised with 100 lbs. of ammonium sulphate per acre. However, there is no harm in adding 600 lbs. of superphosphate and 200 lbs. of potassium sulphate also, though they do not give any advantage either in improving the yield or quality appreciably.

For fertilising flue-cured tobacco, any kind of easily available nitrogenous fertiliser could be safely used for supplying 20 lbs. N/acre.

The integrated recommendation on the improved cultural practices evolved at the Central Institute for flue-cured tobacco, consisting of (a) deep ploughing to a depth of 9" or crowbarring in summer, (b) deep application of complete fertiliser consisting of 100 lbs. of ammonium sulphate plus 300 lbs. of superphosphate plus 100 lbs. of potassium sulphate, (c) using the newly introduced and successfully acclimatised variety Delcreet, (d) using Dieldrin 50% W.P. at 20 oz./acre in 100 gallons of transplanting water, and (e) topping when about 1/10th of the inflorescence open when compared with the corresponding farmers' practices in cultivator's fields gave an increased return of Rs 250 per acre.

For improving the yield and quality of natu tobacco, farmers could successfully adopt the improved method evolved at the Cigarette Tobacco Research Sub-Station, Guntur, consisting of topping high at flower head and harvesting the leaf by priming as in flue-cured Virginia tobacco, as against the practice of topping, low and harvesting at one time now in vogue with the farmers. The improved method when compared with that of the farmers in district trials gave an increased monetary return of Rs 308 per acre.

For chewing tobacco, combination of the following manurial and cultural practices could be adopted by the growers for successfully getting increased yield consistent with quality:—

(a) Application of 20 cartloads of farmyard manure plus 100 lbs. N/acre in the form of ammonium sulphate, half at the time of transplanting and the other half seven weeks after planting during deep digging;

(b) Spacing of 30" between ridges and 24" between plants, and

(c) Topping at eight leaves.

Where chewing tobacco is preceded by a ragi crop, the optimum level of nitrogen for tobacco was found to be between 75 and 112 lbs. N/acre.

The Hookah and Chewing Tobacco Research Station, Pusa, has found that the damages due to earthworms in seed-beds could be successfully controlled by the application of Aldrin 50 per cent dust at the rate of about 88 lbs./acre just before sowing.

KERALA Techno-economic Possibilities

The pace of industrial development in Kerala during the past decade of planned growth has been unsure. This was largely owing to lack of entrepreneurial talent in the State, limited financial resources and reluctance of industrialists from other areas to invest their capital in industrial ventures in the State because of political unrest and trouble on the labour front. The report of Dr P. S. Lokanathan, Director General of National Council of Applied Economic Research, recommending an investment of Rs 1,000 crores in the next ten years to lift the State from its economic backwardness to a level at a par with other States unfolds the magnitude of the task. Dr Lokanathan has pointed out that the Centre should assume maximum responsibility to stimulate economic progress which alone can solve the vexatious problems currently bedeviling the State.

The report makes many valuable suggestions. Among them are a better system of crop priorities, expansion of rubber plantations at a rapid rate, wider use of technology in the industrial sphere, modernisation of the industrial sector and better provision of public works. The Centre's responsibility arises in providing adequate capital from its coffers. Private capital from outside the State must also be attracted to set up industrial ventures, preferably in the medium and small scale sectors for which Kerala is eminently suited. The report indicates that top priority should be accorded to crops which serve as raw materials for industry and those that earn valuable foreign exchange. For this purpose the NCAER report suggests that the present emphasis on attaining self-sufficiency in food grains should be shelved for the time being for facilitating enough land for plantation and cash crops.

Basic to any development is enhancement of productivity in the State. Productivity in agriculture is impeded by the pressure on land and resources. Productivity in secondary sectors is depressingly at a low level when compared with all India level. In the circumstance introduction of latest technological practices in the industrial sector and a bold and vigorous policy to modernise agricultural practices are indicated.

INDUSTRIALISATION The German Contribution

Indo-German co-operation in the industrialisation of the country covers a fairly wide range. It spans both

the public and private sectors and assistance has come from both private and official German agencies. The following survey gives a bird's eye view of the collaborative ventures.

STEEL PRODUCTION

Rourkela: Complete construction of a plant for the production of one million tons of crude steel a year. Construction has been the task of 36 German enterprises with over 4,000 sub-contractors. The order included the setting up of a by-products and a fertilizer plant.

Durgapur: For this steel plant, built by British firms, a coke-oven plant, a by-products plant, a tar distillation plant and a steam-power plant have been supplied.

Mysore Iron and Steel Works at Bhadravati: The annual production of the plant, built in 1937 (by DEMAG of Duisburg), is being expanded from 100,000 tons to 130,000 tons (DEMAG, AEG, Ofu. Zublin).

Tata Iron and Steel Works at Jamshedpur: The plant has been expanded by the supply of steel-producing and rolling mills installations (DEMAG, Krupp) electrical installations (AEG), and an iron ore sintering plant (Lurgi).

Indian Iron and Steel, Burnpur, and Steel Company of Bengal: Steel-producing and rolling mill installations have been supplied by firms in the Federal Republic of Germany.

Supply of a large-diameter pipe welding plant to Hindustan Steel Tubes Ltd. (Mannesmann). Supply of a pipe welding plant with pickling house and galvanizing line to Zenith Steel Pipes, Bombay (Mannesmann).

POWER PRODUCTION

Federal German firms have taken part in the construction of the following dams and power plants: Hira-kud Dam (Rhein Stahl-Union-Bruck-enbau, DEMAG); steel constructions for the Mayurakshi, Sengulam, Mach-kund and Bhakra dams (Rhein Stahl-Union-Bruck-enbau & MAN); Koyna Dam & power plant (Salzgitter, AEG, GHH, DEMAG, power plants at Pathri (AEG), Basin Bridge (Lurgi, AEG), Madras, Trombay, Mardugani, Arma-kantak, Periyar and Bokaro (all AEG), hydro-electric power stations, Mathon (Siemens), Panchet Hill (ANG), steam power plants at Chola (Siemens), Khaperkheda (Siemens, AEG), Korba (Siemens), power supply for Delhi Electric Supply Undertaking (AEG).

ELECTRICAL INSTALLATIONS

Transformer stations at Tenu Boduvara and Garividi (AGE), State duplicating licence for Mysore; the construction of the new Government electric factory for the production of transformers and switchgear (AEG), carbonizing and briquette plants (Lurgi) and complete electrical equipment (Siemens) for the Neyveli Lignite Corporation briquette plant; a cable factory of the CCI (Cable Corporation of India) for the production of cables under a Siemens licence has been built by Siemens in Borivili.

Rourkela fertilizers plant, coke-oven plant for the Fertilizers Corporation at Sindri (Still). One pilot plant each for the coke-oven and by-products recovery plants at Jaalgora near Dhanbad (Still). Plant for the manufacture

of lake pigmen and acramine binders (Bayer, Hoechst). Plant for the manufacture of photographic papers (Bayer).

MOTOR CAR INDUSTRY

Co-operation between Daimler-Benz and Tata Engineering and Locomotive Co. Previous annual production of 12,000 units is to be increased to 24,000. About 60,000 trucks and chassis have been produced so far. Equipment of a complete training workshop in the Tata-Mercedes works at Jamshedpur (Daimler-Benz).

RAILWAYS

Supply of thirty diesel hydraulic engines for the Indian State Railways and 25 electric locomotives (Krauss-Maffei). Electrical equipment for 100 locomotives of the Indian State Railways (Siemens), 90 locomotives for the Indian State Railways (Krupp). Supply of signal boxes and signal installation for the Indian State Railways (Siemens), 24 driving trailers for overhead line multiple-unit trains (Salzgitter). Electrical equipment for sixteen suburban trains (AEG).

Planning and construction work for the Kandla and Karanja ports (Hochtief). Supply of crane installations for the Bombay, Calcutta and Madras harbours (DEMAG, Krupp).

CEMENT FACTORIES

Cement sintering plant at Srinagar (Lurgi). Construction of 3 cement factories (Krupp). Electrical equipment for the Dalmia Daddi cement factory (AEG). Electrical equipment for the Mysore cement factory (AEG). Construction of a factory for the production of 100,000 tons of refractory bricks (Otto).

Electrical installations for Birla jute, Calcutta (ADG).

ELECTRICAL LAMPS Price Probe

The Tariff Commission's probe into the cost structure of the electric lamps and fluorescent tubes industry consequent on the complaints of the consumers, will be widely acclaimed. The complaints relate mainly to the high prices of these goods and their short supply. Inaugurating the enquiry Mr K. R. P. Aiyangar gave a comprehensive review of the supply and demand position and called upon the manufacturers to increase production both quantitatively and qualitatively by which the goods can be made available to the consumers at fairly competitive prices. In the light of the present growing demand for its products, the industry should step up production and reap the economies of large scale production.

Tracing the origin and growth of the industry in India which can be dated back to 1933, Mr Aiyangar stated that post Independence years witnessed a rapid growth in both capacity and output. Total annual capacity looked up from 13 million pieces

in 1946 to 23.05 million in 1951, 43.08 million in 1956 and 47.52 million in 1961 while throughput rose smartly from 8 million in 1946 to 15.52 million in 1951, 29.84 million in 1956 and 45 million in 1961. In 1952 the industry started production of fluorescent tubes and since then production and capacity showed a sustained uptrend. The capacity for production of fluorescent tubes went up from 0.04 million pieces in 1952 to 1.20 million in 1961, while output rose from 0.08 million to 1.89 million. There are at present 19 units in the organised sector engaged in the manufacture of electric lamps, fluorescent tubes and miniature bulbs and 16 units in the small scale sector. Most of these factories are concentrated in West Bengal, UP, Delhi, Maharashtra and Bihar.

It is also encouraging that imports of certain special types of lamps declined sharply while exports showed a steady increase. The imports of special brands, for example, fell down to Rs 34.13 lakhs in 1961 from Rs 63.92 lakhs in 1957 where as exports went up to Rs 2.16 lakhs in 1961 from Rs 0.27 lakh. Similarly the imports of raw materials and components have also been considerably slashed thanks to their indigenous manufacture.

The complaints from consumers pertain to high prices, shortage of fluorescent tubes, low wattage GLS lamps, high pressure mercury vapour lamps and the unusually long delivery periods. As in many other industries in the country, the key to price reduction is rationalisation of production and increased efficiency in the use of resources. With the increases in electrical power and extension of rural electrification, the long-term hopes of the industry are immense. The economies of scale and mass production should make possible the reduction in cost.

AVIATION Pan Am and TWA to Merge

Pan American World Airways and Trans World Airlines are filing with the Civil Aeronautics Board a merger agreement following approval by the Boards of Directors of the two companies. The new company will be known as Pan Am World Airlines Inc. and will operate the routes and aircraft fleets of both Pan American and TWA, utilizing for a period of years the service marks and trade names of both companies.

The new operating company will exchange stock with TWA share for share. The present Pan American World Airways Inc. will continue as a holding company

The NEW SAFFIRE LIGHT WEIGHT BLOWPIPE

Big automobile garage or small workshop, the new Saffire blowpipe is ideal for welding light gauge sheet metal. Its low weight of 283.50 grams (10 ozs) and the easy-to-grip fluted aluminium shank lessen operator fatigue in repetitive work.

Gas valves of advanced design and six sizes of copper welding nozzles ensure sensitive flame control and peak performance throughout the welding range of mild steel—from 9/16 mm. (20 s.w.g.) to 4.76 mm. (3/16") thickness.

The forward mounted gas controls and light weight mixer all contribute to give trouble-free performance over a long safe life.

INDIAN OXYGEN LIMITED

with 11,346,063 shares of the operating company stock, or 1.7 times the 6,674,155 shares owned by TWA shareholders. In addition, the holding company will receive 150,000 shares of dollars 100 per value convertible preferred stock in Pan Am World Airlines and will retain other assets including dollars 6,500,000 cash, 463,988 shares of common stock in National Airlines and certain interests in the Pan Am Building. The Board of Directors of Pan Am World Airlines Inc. will be nominated in part by TWA and in part by Pan American. The merger is subject to approval by both Pan American and TWA stock holders. Final approval rests with CAB and the President of the United States.

Even after the merger, the domestic airline route pattern will remain unchanged. TWA operates Trans-continental and other domestic routes wholly within continental United States. Pan Am's only domestic routes connect West Coast cities with Hawaii and Alaska and East Coast cities with Puerto Rico, routes which TWA does not fly.

The principal aim of the merger is to increase the competitive strength of the US lines and wrest once again a substantial portion of the transatlantic passenger and Cargo traffic now diverted to non-U.S. Airlines. The merger will also enable the combined lines to originate more international flights from inland points within the United States. Some ten years ago, the two U.S. airlines carried 63% of all transatlantic passengers. Today the American share has been cut almost in half. The desire to increase "invisible exports" because of the current US balance of payment difficulties has also imparted an urgency to increasing by merger the competitive strength vis-a-vis other international airlines. As is well-known, competition among international airlines is becoming more and more keen and more international airlines are combining their resources by co-ordinating their fleets and providing common sales offices, unified time-tables, joint ground facilities and a single common front toward other airlines. Already in operation is the Commonwealth group of BOAC, Air India and Quantas with 170 turbine aircrafts in operation and 48 more on order. Air Union, the common market consortium of the Government-owned airlines of France, West Germany, Italy, Belgium and probably the Netherlands is in the organizational stage. Larger than these and the new American combine is Aeroflot, the Soviet Airline, which today operates in sixteen capitals of Europe, Asia and Africa and expects soon to extend service to the Western Hemisphere with 350,000 route miles and with its 250 turbine-powered aircrafts.

WEST COAST PAPER

Expansion Programmes

The year ended 30 June 1962 for the West Coast Paper Mills Limited was a difficult one. Though production was almost maintained at the previous year's level (production in the year under review totalled 25,604 metric tons as against 25,770 metric tons in the preceding year) the gross profit realised slipped down owing to the concatenation of factors like increased cost of raw materials, stores, spares, chemicals, and transport charges and the increase in electricity duty from 1 nP to 2 nP per unit on power generated by the company's own power generation plant and the enhancement in the duty levied on power supplied by the Mysore State Electricity Board from 0.07 nP to 1.5 nP per unit.

The company's expansion programmes are proceeding smoothly in the expected directions so far. The company's negotiations with an American firm for the manufacture of rayon grade pulp and other specialties are in progress and Government has already given the green signal for negotiating the foreign exchange requirements of Rs 6.5 crores for the speedy implementation of the project. But the uncertainties in the capital market in the wake of the emergency and the conditions imposed by the Mysore government would have their inevitable repercussions.

The finalisation of orders for Caustic Soda/Chlorine Plant with Messrs. Kerbs and Co, Paris, is another notable development as far as expansion plans are concerned. The plant will be supplied by the Paris firm under French credit on a long term basis and the cost of the project is estimated at Rs 1.5 crores. The Government's approval of the scheme and the consent to issue import licence of Rs 80 lakhs for importing plant and equipment which forms part of the total requirements of foreign exchange also augurs well for smoothening the company's efforts.

The company has made considerable headway in research work for augmenting resources of alternative raw materials like tops and tops of various species of hardwoods and the utilisation of cotton linters and rags, particularly to tide over the situation created by flowering of bamboos. The launching of extensive plantation programme of eucalyptus, paper bulberry and other fast growing species of wood and bamboos found rarely in Dandeli forest is another step which testifies to the company's progressive outlook in raising adequate raw materials from the State itself. The State Forest Department's efforts to step up production of these raw materials will considerably assist in ensuring

the industry a steady and sufficient flow of them.

PREMIER AUTO Geared to Defence

Addressing the annual general meeting of the Premier Automobiles Limited, Bombay, Mr Lalchand Hirachand struck a note of guarded optimism about the company's future. The Chairman observed that the Government will consider favourably the proposal for launching an expansion programme based on production of 15,000 Fiat cars and 15,000 trucks annually on two shift operation and also allocate requisite quantum of foreign exchange. He prefaced his speech with a reference to national emergency and the automobile industry's voluntary offer to gear its entire resources to the war effort. For its part, Premier Auto, has pledged expeditious manufacture of such vehicles for defence purposes as Government may require along with catering to civilian needs.

The company's turnover during the past year totalled Rs 2,14,761, 789 only as against Rs 2,27,386,793 in the previous year. The number of cars and trucks sold in the year under review is placed at 7,193 and 5,324 respectively. The decline in profit was ascribed to less turnover, rise in overheads, especially in the wage bill which included an amount of Rs 1,508,034 paid to the employees as bonus for the year 1959-60, and a larger provision for taxation owing to the high incidence of taxation. Besides, in pursuance of the new agreement with Fiat, the company had to pay higher fees for technical assistance. The reduction in price of Fiat car in 1960 also was responsible for the lower margin of profits.

The company's programme for production of components and spare parts is proceeding apace. The scheme for installing a complete press plant for pressing the sheet metal parts is forging ahead, for which the company obtained a loan of \$7.2 million from DLF and a loan of \$3 million from Agency for International Development of Washington for purchasing dies, jigs and other equipments. Another significant development is the agreement with Messrs Henry Meadows Limited, England, under which the company got the exclusive right and licence to produce and sell in the country some Meadows engines and components. The agreement is of five years duration in the first instance subject to a further renewal for five years and terminable by six months notice on either side. After installation of the machinery production of such engines is expected to reach 250 units every month.

Mr Hirachand brought into sharp focus the burdensome taxation the

industry has to shoulder. It is taxed as a luxury industry, though in fact it is one of the basic industries in the country. For every Fiat car sold at a retail price of Rs 10,651 the incidence of customs and excise duty comes to 24.43 per cent and for a truck worth Rs 28,610 to 21.43 per cent. Over and above this, sales tax at the rate of 10 per cent levied on the price. These apart, there are additional State levies on diesel oils gasoline and a variety of other items. These throw a burden on the industry that inhibit a quicker realisation of the hope of rapid development of road transport.

SNIPPETS

McNally-Bird

McNally-Bird Engineering Company Limited, a Joint Indo-American collaboration, set up in 1961, is playing an important part in the development of coal and basic industries. Set up with an authorised capital of Rs two crores, McNally it is presently engaged in the manufacture of Coal Washeries, Coal & Ore Handling Plants vital to the Heavy Industries, Steel Mills, Power Plants and allied industries. McNally-Pittsburg, who have built more than 300 Coal Preparation Plants all over the world, and have experience in the field well over 70 years, are the Senior Partners in this joint venture, and are a leading designing and manufacturing concern for coal washing equipment in the world. Under this collaboration, McNally-Pittsburg have already sent their technical experts in engineering, design, manufacturing techniques and shop know-how, to train the Indian personnel. American personnel are also available in India to provide the consultant services and assist in the operation of complex basic industries.

The plant of McNally-Bird is located at Kumardhubi in Bihar where all the facilities of the existing industrial complex are available to the new company. This plant is capable of serving India's industries with a variety of engineering services. Some of the equipment to be manufactured by this Company are Heavy Medium Washeries, Jig Type Washeries, Heavy Medium Cyclones, Crushers, Screening Plants, Belt Conveyors, Bins, Car Hauls, Chair Conveyors, Structural and Tipplers. Under the present phased programme of manufacture, it is anticipated that 70% of the coal washery will be manufactured indigenously, and in the course of 5 years it is planned that the entire production will be carried out in India. This represents a considerable saving in foreign exchange which, at a rough guess, will amount to Rs 4 to 5 crores during the Third Plan period.

The approximate production of iron and steel at the Steel Works at Jamshedpur during the month of December 1962 was:

	In Metric Tons
Iron	161,800
Steel Ingots	158,200
Saleable Steel	128,000

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

At the end of his recent Press Conference Mr Nehru wished the correspondents present a "Happy New Year"; and even as he did so, he was assailed by a characteristic doubt whether he should. Of course, his misgivings had nothing to do with the timing of the wish: a Happy New Year was a particularly sensible thought, especially when the year to come need not be any the less strenuous and dedicated for being also happy. Mr Nehru's doubts were more fundamental. He seemed to wonder whether happiness was after all such a satisfactory state to find oneself in. What is it anyway? Such questions are not trivial. Happiness is no laughing matter. Semantic difficulties are not the least of the problem. What is it that you wish those you send those cards—happiness, gladness, joy, bliss, felicity or the hundred others that Roget lists together with such happy abandon? Each one of these means a different thing and if the primary sense of the word is any indication, happiness means nothing more than a stroke of luck. (Indeed, if the Concise Oxford Dictionary is any guide, the equation of happiness with joy is a little far-fetched!) What Mr Nehru probably had in mind when he expressed his faint distaste for happiness was the rather enervated and exhausted sense of placidity that sometimes passes for the happy state. Or maybe he was thinking of the smug self-sufficiency of those who do not even know what they lack. Knowing the man, I should also imagine that the "happies" passeth understanding" will leave Mr Nehru rather cold. By the same token, it is fair to assume that Mr Nehru would respond eagerly to anything that will make one "dizzily happy". Anything that would involve a full-blooded engagement of the senses, active and alert should meet with his approval. At a different level, Mr. Nehru may also find himself sympathetic to Wordsworth's Happy Warrior despite his being a trifle priggish. He should have no difficulty in understanding the mood of one "who, if he be called upon to face/Some Awful moment to which heaven has joined/Great issues, good or bad for human kind/Is happy as a lover." In a nostalgic yearning for something that has never been his, he may see the possibilities of the quieter modes

of happiness that arise in being farthest from "great issues", but I fear that he will soon tire of them if, by some miracle, they should be his for the asking. However all this may be, of one thing I am fairly certain: I cannot see Mr Nehru asking himself at any time whether he is a happy man. That, I should imagine, is pretty conclusive of the fact that he is.

It is not often that opportunities to congratulate Mr Pratap Singh Kairon, the Punjab Chief Minister, have presented themselves in the past. It is therefore a genuine pleasure to give him his due on having cut his cabinet to a seemlier size. By all accounts, it was not an easy thing to do, obstacles coming from the oddest places. I recall that the eventual reduction in size that came about last week was bruited soon after the Emergency was declared but contradictory reports cancelled each other out leaving us all, if anything, more cynical than before about such matters. It seems only the barest decency to admit such judgments hasty, for Mr Kairon has shown remarkable pertinacity in seeing his intention through. He has thus more than made retrospective amends for his original gigantism: If memory serves me right, Mr Kairon's was the largest cabinet in relation to the strength of his State's legislature, every fifth member and every fourth Congress legislator being in the government. The compulsions behind the original size may have disappeared under the Emergency but not everyone in a position to take advantage of the Emergency in this way has done so. Indeed, hints that the austerity dictated by the Emergency may take the form (to begin with and by way of example) of smaller cabinets have not only not been taken but dismissed as petty-minded cheeseparing at a moment when we should be thinking of more important things. Unfortunately these people who would in any case have resisted suggestions that involve such self-effacement have been provided with support from high places. For instance it is a great pity that Mr Nehru should have been so loftily off-hand about this matter. In one of his speeches in Lok Sabha, Mr Nehru even implied that large

cabinets were in some way indicative of our democratic affiliations even in times of stress. I do find this line of reasoning rather odd considering how other more meaningful gestures to democracy have been quietly jettisoned in the name of the Emergency. One of the first casualties of the Emergency has been bye-elections and yet Great Britain held a total of about forty bye-elections between 1941 and 1945. There is no doubt whatever that most of the cabinets (including the one at the Centre) that came into being in the wake of the general elections last year could be drastically pruned with no loss of efficiency. The Emergency did offer an opportunity,—if indeed it did not dictate it—to do so. At a Press Conference recently, Mr Nehru was told of some junior ministers who confessed to having not enough work. Mr Nehru suggested that they should see him so that he could relieve them of their office. This, considering everything, is hardly likely to happen. But this ought to set Mr Nehru thinking. I am afraid that the psychology of thrift is yet to seep into Government, though it is unctuously peddled to others. We still find odd ministers fitting across the country to open a light-house here and to preside over a not particularly important meeting there. Apart from the expense, these ministerial perambulations are a strain on the transport system.

I find myself in ready sympathy with the New Yorkers who find that their morning coffee doesn't taste quite the same without their newspaper to spill it on. A month-old strike has been depriving them of their morning's ration of murder and mayhem, not to mention all the news that is fit to print. We are, God be thanked, better served, but on the rare occasions—as, for example, on the Republic Day—when all the papers patriotically call it a day, I find the day after hard going. But a month without my paper would be a nightmare. I have heard it said that the printed word is on its last legs, so to speak, what with television and other gimmicks meant to fill our vacant, if not exactly pensive, hours. But I have never believed it. I am told that New Yorkers have been reduced to such desperate straits as to pay black-market prices for out of town newspapers and beg for any reading matter in much the same way that drug addicts would give anything in the world for a shot of heroin. People who normally never stray beyond baseball

scores are, I am told, now lapping up Albert Camus and puzzling their way through "Waiting for Godot." (They may, in some obscure way, get the feel of the play in their present predicament.) But, though any printed word is all very well as a substitute, it is not quite the same thing as your morning paper. You may tell me that here is the opportunity to catch up with those great masterpieces which I have always meant to read, the mighty tomes that look reproachfully at me every time I pass them by. But it is no use. Even out-of-town newspapers is but a poor substitute. Why, though professionally, I read quite a few papers I find that it is never the same thing as getting the news from your own paper. Consequently, when out of town, I am compelled to take a paper different from mine, I don't get the feeling that the day is complete. Habit, perhaps bad habit: but how much of us is left without our habits?

Didn't the Tribune (of London not Ambala) know that tyrants never laugh? They may smile, for as Hamlet remarked rather unoriginally, one may smile and smile and be a villain, but laugh? Never. For if you laugh, others may and at you and soon even you may be laughing at yourself and that will never do. (Half of Khrushchev's trouble seems to arise from his readiness to laugh. I don't think Mao ever laughs except perhaps with the corner of his mouth). As hoaxes, I have seen many that deceived better and as parodies many that amused more than the Tribune letter from Chou En-lai invoking "death to the peace-mongers." Indeed, I rather suspect that in order to make the joke transparent even to the most humourless comrade, the Tribune threw away some of the subtler comic possibilities of this sort of thing. None would have seriously believed in a Chinese initiative in restoring Calais to Great Britain or Goa to Portugal. (I am not, come to think of it, so confident about the latter, considering China's opportunism in the friendly noises, it has recently been making to Pakistan. And yet none can seriously think that China wants to restore to the "great Portuguese people" Goa which India took at the instigation of its "American masters" who wanted it as a base against China). Time may yet come when Chou may describe Khrushchev as "a lackey of Anglo-American imperialism", but it hasn't yet. It is therefore hardly conceivable that Peking didn't see the point of the letter. To consider a harmless seasonal jeu d'esprit that contains such deliberate absurdities as mischievous trouble-making is to make yourself even more ridiculous.

(From Our New Delhi Correspondent)

NCAER Survey of Demand for Energy

Closely following the appointment by the Government of India of the Power and Energy Group which held its first meeting here on 29 December, the National Council of Applied Economic Research has released a detailed study of the "Demand of Energy in Southern India." The NCAER has pioneered the investigation of energy resources and trends of demand in this country and has already brought out a number of comprehensive studies dealing with different aspects of the subject. Among its first publications was a study of "Utilisation of Primary Energy in India" in 1958 which dealt with the production, consumption and utilisation of heat and power from primary sources, namely, coal, water power and oil. This was followed by a publication titled "Domestic Fuels in India" in which the future requirements of household energy were assessed and the ways and means of replacing the wasteful secondary energy sources by fuel of primary sources were examined. In January 1960, the Council published a third volume titled "Demand for Energy in India" in which India's demand for coal, electricity, petroleum and nuclear power for five-year periods from 1960 to 1975 were estimated.

While these studies were concerned with the overall requirements of a country, it was felt that a detailed study of the regional demands is necessary for the balanced development of all parts of the country. The latest study, sponsored by Burmah Shell, accordingly lays stress on this regional aspect as required by the sponsors. In this publication the energy requirements of the four Southern States of Andhra Pradesh, Kerala, Madras and Mysore, individually and regionally, have been assessed in the light of known and contemplated developments in industrial and other sectors for the period up to 1976. The study relating to the Eastern region is nearly completed and is expected to be published shortly. The Western and Northern regions will be taken up successively. In preparing the study of the Southern Region, the Council had the benefit of the advice and help of Mr Nathaniel B. Guyol of the Standard Oil Company, California who was attached to the project for a period of seven months. After Mr Guyol left, Mr S. Balakrishna took charge as Project Director and was assisted by Mr G. Katragada.

All India Pattern

Apart from a detailed study of the supply and requirements of energy

in the four States comprising the Southern Region, a broad survey of the energy economy of the country as a whole is also included in the introductory chapters. The survey draws attention to the predominance of non-commercial sources (such as power of draft cattle and farm wastes as fuel), which contribute 67 per cent of the energy-mix. It is emphasised that non-commercial sources, though apparently cheap, are among the most expensive. In reckoning the cost, the depletion of the fertility of the soil through the removal of plant nutrients and organic matter essential for plant growth, must also be taken into account. The extent to which commercial sources replace the power of draft animals and energy from non-commercial source, will be an index of the development of the economy, not only in industry, but also in agriculture.

The study also highlights another disturbing factor, namely, the difference between the supply and the effective utilisation of energy. It has been estimated that only 20 per cent of the energy available to the economy is converted into work. The rest is wasted. In the case of non-commercial fuels, 85 per cent is wasted. Fuel used in transportation, the Study points out, is particularly inefficient. Steam locomotives consume a third of the total production of coal; but the net output is equivalent to only 4.5 per cent of the total calorific value of the coal used. The trend of Railway demand will depend, above all, on policy and practice in respect of dieselisation and electrification.

Viewed in the light of current practices, the outlook, the Study says, is depressing. Energy instead of serving as a hand-maid of development has become a burden on the Indian economy. The Study, however, points out that the country's untapped reserves of energy are large enough to meet the nation's energy requirements for many generations, and so accessible, as to provide energy at very low cost—among the lowest in the world. There are other favourable factors to which also attention is drawn.

The legal and the institutional framework for development of energy sources are already there. Much of the energy economy has been brought under the control of the Government. Practically all the factors that can influence the economics of energy are determined by Government policy. This should help in the coordinated development of the country's energy resources.

Southern Region

The pattern of energy supplies and consumption in the Southern Region, with which the Study is mainly concerned, underlines the industrial

backwardness of the region. The Region has been a net importer of commercial energy from other States and from abroad, the imports being nearly 150 per cent of the regional production as against 20 per cent for the country as a whole.

The bulk of the energy consumed in the Region goes to the domestic sector and 97 per cent of this energy is obtained from non-commercial fuels. It is necessary, the Study points out, to arrest this trend in the consumption of non-commercial fuels in the domestic sector. The problems of such substitution and the consequent demand on the commercial fuels for the various five-year periods up to 1976 have been assessed in the Study.

In the light of the anticipated developments in industry and agriculture, the total consumption of energy, which was estimated at 281 billion kWh in 1959, is expected to increase to 611 billion kWh in 1976. The share of commercial energy will grow from the present level of 18.8 per cent to 64.5 per cent, but non-commercial sources will still continue to play a part in the total energy picture.

At present the total commercial energy required in the Southern region is met only to the extent of 40 per cent from the resources available within the four States, the rest being met from imports, either from other regions or abroad.

The hydro-potential of the region has been assessed at 8 million kWh at 60 per cent load factor. This is adequate to generate 40 billion kWh per annum against estimated requirements of 48 billion kWh of hydro-power in 1976. The demand beyond 1976 is bound to increase sharply. Development of conventional thermal power in Andhra and Madras, and full development of hydro-power in all the States, the Study points out, is essential. The Study also calls for the development of nuclear power in places far away from the coalfields.

According to the Study, the anticipated increase in the demand for coal and lignite can be met entirely from resources within the region. The estimated resources of these minerals are large and represent nearly 150 to 200 times the level of anticipated demand in 1975-76. The lignite resources of Madras will be almost entirely utilised within the State, which will still continue to be net importer of coal from Andhra along with Mysore and Kerala. Except for hydro-electric power, Mysore and Kerala will have to depend on other States for all other forms of commercial energy. Kerala could export hydro-electric energy as it is very advantageously placed in respect of hydro-potential.

The requirements of foundry grade coke will have to be imported from outside the Region, as none of the four States has metallurgical coal. Prospects of oil resources are also poor in the Region, and the Study considers that it is essential to establish additional refining capacity of 3 million tons in the South by 1976.

The need for a proper understanding among the four States in exploiting and utilising all available sources of energy in the region, is obvious enough. A full and proper exploitation of the available energy sources of the Southern Region can help to pull

out the Region from its relative backwardness in industrial development, increase the share of commercial energy in the total consumption from 18.6 per cent to 64.5 per cent and reduce its dependence on imports from other States and abroad of commercial energy, from the present level of 85 per cent to about 10 to 12 per cent in 1976.

Eastern Region

In contrast to the Southern Region, the Eastern Region will continue to be a net exporter, according to the Study of this region which is nearing completion. The resources of this region, which comprises Orissa, West Bengal, Bihar, Assam & Uttar Pradesh, according to the findings of the Study, are adequate to meet its own requirements as well as for it to continue to be an exporter of energy mainly in the form of coal and coke. It is, however, added that the magnitude of the future demand is high and calls for urgent action in bringing about co-ordinated planning for the development and exploitation of the available resources. It is estimated that the total demand will increase from 568.7 billion kWh in 1959 to 1002 billion kWh in 1976. The National Council also estimates that the resources of the region are such that it would be possible to develop about 23.7 billion kWh of hydro-power and 32.2 billion kWh of thermal power which are the estimates of the demand for these categories of energy in 1976.

Survey of Rural Savings

The National Council of Applied Economic Research will be conducting a survey of Saving in Rural India during the first four months of the year, it was announced by the Director General of the Council Dr Lokanathan last Saturday. One of the purposes of the survey is to collect data which will be useful in refining the country's statistical estimates of income, saving and investment. A second purpose is to throw light on the economic, social and motivational factors which lead some households to save, while others with similar incomes do not save.

The Rural Saving Survey is the third in the series of studies on savings undertaken by the National Council. One of the earlier studies was concerned with the estimates of aggregate saving in the country during 1948-58 on the basis of available records and data. The second was a Survey of Saving in Urban India, based on a household survey. The present survey will round off the Council's studies in an area where lack of adequate data is keenly felt.

The Survey of Rural Saving, Dr Lokanathan said, will be more comprehensive in the scope of the information collected than any similar study in India to date. To advise and guide various phases of the Survey, a special committee has been set up which consists of representatives of the Planning Commission, Reserve Bank of India, Central Statistical Organisation, National Sample Survey and the Ministry of Food and Agriculture. Apart from the staff of the Council, foreign consultants who had experience of similar surveys conducted in the United States are also associated with the NCAER project.

The Defence of the Dollar

[The following article appearing in the issue of December 1962 of the Morgan Guaranty Survey, will be of interest to our readers. The attention of readers is also drawn to Dr. Paul Einzig's article appearing elsewhere in this issue.—E.D.]

Begun just twenty-one months ago by the Treasury, and subsequently broadened by participation of the Federal Reserve System, the government's policy of dealing in foreign currencies has quickly become a key weapon in the defence of the dollar. Transactions have been carried out in at least half a dozen currencies, and preparations have been laid down for undertakings in others as well if need should arise. The operations to date are credited with helping to slow the country's gold losses, and the terms in which they have been reported and discussed by official spokesmen make it clear that further applications are intended.

While there is hardly warrant as yet for suggesting that 'foreign exchange policy' may some day rank with monetary or fiscal policy as an instrument of government influence in economic affairs, the scope of operations to date and the potential for further activity leave no doubt that an important element has been added to the international financial context.

Over the years, United States government policy has generally been not to engage in exchange market dealings. There have been departures, but none so significant as the series of ventures that began in the spring of 1961. In this current break with tradition, one of the participating agencies has gone beyond the scope of activity normally associated with official intervention—even as practiced by countries long and consistently active in exchange operations. Whereas foreign official agencies normally concentrate their activity in the 'spot', or current transaction, markets, the US Treasury has been dealing also—in fact principally—in the "forward" markets, where currencies are bought and sold for future delivery.

OUT OF THE WOODS

The decision of the American authorities to enter the exchange markets was a response to immediate—and urgent—circumstances. More remotely, the move finds its background in the kind of international monetary code that was fashioned some eighteen years ago by the experts from 44 countries who met at Bretton Woods. The new US approach to currency stabilization can best be sketched in the perspective of Bretton Woods, and can perhaps best be understood if viewed as an important change in the arrangements made at that meeting.

The group that gathered at the New Hampshire resort that summer of 1944 and worked out a plan to stabilize postwar international currency relationships assigned to

the US a role that was central but essentially passive. They designated the dollar as the fixed point of reference in the international monetary system. The currencies of the other member countries of the International Monetary Fund, which grew out of the Bretton Woods meeting, were arrayed around the dollar. Each country was required to establish a par value for its currency in terms of either gold or the dollar—meaning, for all practical purposes, the dollar. Each also was bound thereafter to maintain the established dollar parity of its currency in the market where banks and others trade back and forth in the various moneys of the world.

This rule means an obligation on the country's central bank or other agency to buy its own currency if necessary in order to keep the market price in dollars from falling more than 1 per cent below par. It also means an obligation to sell its own currency, and buy dollars, if that should be necessary to prevent the market price in dollars from going more than 1 per cent above par. Leeway to change the par value of its currency—by devaluation or upward revaluation—is afforded each member country—by the IMF rules but only when needed to correct a fundamental disequilibrium in its balance of payments, and only after consultation with the Fund.

As for the dollar itself, the Bretton Woods conferees envisaged that its value would be maintained by the US Treasury's readiness to purchase and sell gold at a fixed dollar price upon request by foreign governments and central banks. Thus the agreements made it mandatory for other countries to intervene in the markets for their respective currencies but implied—without specifically providing—that the US would not intervene.

MEANS OF SUPPORT

Most of the leading industrial nations, after fixing par values for their currencies, made the permissible ranges of market fluctuation even narrower than those called for by the IMF rules. Today the typical range is about 2 per cent on either side of par. The West German mark, for example, with a par value of 25 cents, is allowed to vary from a low of 24.814 cents to a high of 25.189 cents. Should the mark weaken and threaten to fall below a value of 24.814 cents, the Bundesbank would move to prevent the breakthrough by selling dollars in exchange for marks and thus affecting the supply-demand relationship between the two currencies.

Conversely, should the mark strengthen in relation to the dollar and threaten to rise above a value of 25.189 cents, the Bundesbank would sell marks in exchange for dollars.

In practice, many foreign central banks intervene to 'touch up' the market well before the rate has approached one of the margins. They do this as a preventive measure, designed to head off more erratic movements in exchange rates. It is easier to defend a currency well inside the permitted range than at the extreme edge.

The commitment to maintain parity applies only to spot markets. Bretton Woods imposed no obligation to stabilize exchange rates for forward transactions. Not all currencies have active forward markets, but most of the major ones have in response to the needs of commerce and finance for a means of hedging trade and investment transactions against the possibility of exchange rate fluctuations.

Leaving the monitoring of exchange rates to foreign central banks posed no problems for the US until recently. Even in the middle 1950's, when dollars had for some time been flowing copiously into the hands of foreigners as a result of the US payments deficit, private parties abroad were for some time content to retain a substantial portion of the dollars they earned. Hence exchange markets were not subjected to heavy dumping of US currency, which would have tended to depress the dollar in relation to foreign units of money. Where such pressures did occur and foreign central banks had to absorb dollars in living up to their commitment to maintain the parity range, they too were usually satisfied to hold them instead of turning them in for gold at the US Treasury.

DOLLAR DOWN

The willingness of foreigners to add to their supplies of dollars, however, was not without limit. This became evident in 1958. The US payments deficit that year was especially large; additionally, interest rates in the US fell sharply, discouraging investment by foreigners in US money-market instruments and impelling some US funds to go abroad for investment. Foreign central banks and governments took \$2.3 billion of US gold in 1958, dramatizing the imbalance built into this country's international financial position by heavy commitments to overseas military and economic-aid expenditures.

In this setting the exchange markets began to reflect uneasiness as to the future of the dollar in relation to other currencies. Then, at the end of 1958, fourteen European nations agreed to make their currencies convertible for

nonresidents. This meant that the dollar's uniqueness as a medium for investment was seriously diminished; it also foreshadowed a vast increase in the country-to-country mobility of liquid funds a development that was to hit the dollar hard.

There was a brief respite in 1959, when rising interest rates in the US drew in funds to mask a payment's deficit worse than 1958's, but the full force of the European currencies' new strength struck the dollar in 1960. Recession in the US brought interest rates down, inviting withdrawals of funds as rates rose in the United Kingdom and on the Continent. Pressure on the dollar reached a symbolic climax in the frenzy of the London gold market in October.

A relative calming followed President Kennedy's reaffirmation of US resolve to maintain the dollar's value in gold, but it was nevertheless clear that the screws were on the dollar to stay until substantial improvement could be achieved in the balance of payments. Thus the problem became one of buying time while doing the necessary things to right the balance. Since the gold stock, even though it totalled \$17.8 billion as 1960 ended, could not be counted on all by itself to buy enough time, other means had to be improved. One of them, dictated by events of early 1961, was the venture into foreign exchange operations.

THE TROUBLE WITH 5%

In March 1961 the whole framework of international currency relationships was badly shaken by upward revaluations of both the German mark and the Dutch guilder. These adjustments—approximating 5 per cent in each case—were too small to convince onlookers that further changes in the parties of the two currencies would not be made; additionally, they aroused widespread anticipation that the par values of other currencies would be changed. In effect the revaluations of early 1961 jolted the international financial community into realizing that, although the US was unswervingly committed against devaluation of the dollar, the equivalent of devaluation with respect to a particular currency might occur at any time by the action of some other major-currency country.

In this environment, a huge flow of funds to the Continent began, dwarfing any previous movement in the postwar period. At first the heaviest movement was out of sterling, which—because of deterioration in the United Kingdom's balance of payments—had begun to show weakness even before the revaluations. But the pressure quickly affected the dollar as well. For one thing, the Bank of England had to sell substantial quantities of dollars in

support of the pound. Also, the dollar figured as a "swing" currency in many of the private switches out of pounds, with pounds being sold for dollars and the dollars then being sold for marks or other currencies. This sequence of transactions strengthened the dollar against the pound but weakened it against Continental currencies.

With holders growing increasingly uneasy, there was heavy selling of dollars beyond that related to the movement out of sterling. The market pressure forced the dollar toward its support level against some European currencies, especially the mark. This required heavy purchases of dollars by the foreign central banks to keep the dollar from falling below the lower limit of the parity band.

HEDGERS AND SPECULATORS

In the forward markets, where foreign governments are under no obligation to maintain parity, the weakening of the dollar proceeded in full view. It was here that the pressure became critical. Europeans who had dollars coming in the future—from export proceeds, dividend payments, maturing investments, or whatever source—rushed to sell them forward to protect themselves against the capital losses they would suffer if their domestic currencies should be upvalued—or, in the case of the mark and the guilder, further upvalued. At the same time, non-Europeans who were going to have to make future payments in Continental currencies sought protection against a possible pricing-up of those currencies by buying them forward.

In addition to these hedging measures undertaken for specific commercial and financial purposes, there was considerable speculative buying of Continental currencies for future delivery by people who expected further exchange-rate adjustments to occur and were playing for a profit on them.

With the scramble to hedge—and to speculate—flooding the market with forward dollars, their price in terms of such currencies as the German mark and the Swiss franc was forced sharply down. The result was a widening gap between exchange rates in the forward market, where the dollar was on its own, and those in the spot, or current transaction, market, where official intervention by the foreign authorities was supporting the dollar. At one point in early March, it cost about two-tenths of a cent more to buy a German mark for delivery in 90 days than to buy one for immediate delivery. This extra cost represented a premium on the forward mark—or, conversely, a discount on the forward dollar—equivalent to annual interest at a rate of more than 3½ per cent.

A spread of those proportions advertised the weakness of the

dollar and thus gave speculation a further impetus. It also made hedging extremely expensive. The European selling dollars forward was getting a very poor rate for them, while the non-European buying Continental currencies forward was paying dearly. In response, European holders of dollar receivables due in the future soon began to seek protection, not by buying forward marks or francs, but rather by borrowing dollars and then selling them spot for their own currencies. Non-Europeans, including Americans, began to buy Continental currencies spot in anticipation of their future needs.

This switch in defensive methods transferred some of the dollar selling from the forward market to the spot, where it met supportive buying by the foreign central banks under terms of their IMF and other commitments. But the support was not without a price to the US. As they gathered in the dollars streaming on to the spot market, the European central banks were accumulating potential claims on US gold. Sooner or later, national policy as to the composition of reserve holdings would compel them to present some of those claims to the US Treasury for settlement in gold. It was against this disturbing prospect that American authorities began to fashion a programme of intervention in foreign exchange markets.

SELLING SHORT

If the US had possessed substantial quantities of Continental currencies at the time, it could have sold them in the spot market to absorb the dollars that private parties were unloading. This would have been the same kind of support procedure followed by other nations in defence of their currencies under the Bretton Woods agreements. This technique was not available to the US, however, since virtually all of its international reserves were in the form of gold, supplemented by only very small amounts of foreign currencies. The US had to make its main thrust in forward markets, where it could operate—at least for a while—without any actual inventory of Continental currencies.

Besides being the more available approach, action in the forward markets also had the virtue of going to the place where the trouble was concentrated. Furthermore, the US authorities could be reasonably confident that their actions in forward markets would have effect in spot markets as well. The two are linked not only by the shuttling of hedgers from one to the other but also by the tendency of commercial banks to even out their foreign exchange positions through compensating transactions in one of the other of the two markets.

The first operation undertaken by the United States was in the

market for forward German marks. This campaign—and the partly concurrent, partly subsequent programme carried on in forward Swiss francs—have taken on something of the character of "classic" cases, establishing patterns likely to recur. With the further unfolding in recent months of the official record of the transactions, it is possible to construct a play-by-play insight into the process of intervention.*

RIGHT ON THE MARK

In the German situation, the shift of commercial hedging from forward to spot markets, causing the Bundesbank to amass dollars, was the most urgent problem. Hence the US objective was to provide an ample supply of forward marks on terms that would draw hedgers back to the forward market to secure their cover, thereby checking the heavy flow of dollars to the Bundesbank and the threat of conversions into gold. The accompanying reduction in the discount on the forward dollar would have the added benefit of allaying fears of a further change in the official dollar-mark parity.

Accordingly, the US authorities began on 13 March to sell substantial quantities of marks for future delivery. Before the month was over, forward sale contracts totaling more than 450 million marks were outstanding. By mid-June, at the peak of the operation, the total was well in excess of one billion marks. Under the influence of these offerings, the premium on the forward mark, which had gone above 3½ per cent, was quickly pushed down to between 1½ per cent and 1½ per cent, lessening the tendency of hedging pressure to spread to the spot market.

The crucial phase of the operation came in the latter part of June as the first of the forward contracts began to mature. At that point some of the parties that had sold forward dollars to the Treasury found it necessary to go into spot markets for the dollars they were bound to deliver. The Treasury, for its part, was able to get the marks it needed without going into the market place. It had acquired some 400 million marks directly from the German government in April as part of a large debt prepayment. Additionally, the Bundesbank had committed itself to supply directly any marks the Treasury might need to meet its obligations, the price in dollars to be the same as specified in the Treasury's forward contracts.

The Treasury's ability to get its marks outside the market at a time when the demand for dollars

*A report entitled "Treasury and Federal Reserve Foreign Exchange Operations," by Charles A. Coombs, Vice President of the Federal Bank of New York, appeared in the September 1962 issue of the *Federal Reserve Bulletin* and in the October 1962 issue of the *Monthly Review* of the Federal Reserve Bank.

was rising helped to produce the first definite improvement in the spot dollar rate. The Treasury and the Bundesbank prodded the tendency along by coordinated intervention in the spot market, and by midsummer the Treasury could look forward hopefully to the orderly liquidation of its forward commitments.

Actually, the episode ended sooner than anyone expected. In August the eruption of the Berlin crisis curbed the inflow of short-term capital to West Germany and heightened the improvement in the spot dollar rate. The need for new forward sales of marks by the Treasury disappeared, and the existing commitments were cleaned up handily.

MEANWHILE, IN SWITZERLAND

The Treasury's venture into the market for forward Swiss franc also was occasioned principally by the aftermath of the Marc 1961 revaluations. The flow of speculative funds to Switzerland was heavy, and the Swiss National Bank acquired dollars in considerable volume in fulfilling its obligation to maintain dollar franc parity under terms of the European Monetary Agreement (neutral Switzerland was no joined the International Monetary Fund). The threat of large conversions into gold—in line with Swiss national policy of holding its reserves chiefly in that medium—was temporarily averted when the Swiss central bank lent a substantial portion of its dollar to Britain under the "Bastle agreements," but the threat revived in midsummer as the UK repaid the Swiss with dollars drawn from the IMF.

In contrast to the German situation, where high premiums on the forward mark had diverted commercial hedging transactions from forward to spot markets, the Treasury's Swiss problem was that high premiums on the forward franc were discouraging investment in dollar media. It was too expensive for commercial banks and others in Switzerland to make short-term investments in the New York money market and buy the return trip into francs.

Short-term interest rates at the time were 1% to 1½% higher in the U.S. than in Switzerland, but the spread was more than offset by the then existing premium of 1½% to 2% on an annual basis on the forward franc. On those terms, Swiss accounts acquiring dollars were likely to dump them on the market from which they would find their way to the Swiss National Bank—and subsequently to the United States Treasury for redemption in gold.

As it had done in the case of the mark, the Treasury attacked the forward market. Beginning in July, it sold forward francs at first on a relatively limited

prompted a new flow of funds to Switzerland, the Treasury stepped up its pace. The Swiss National Bank provided a sizable line of credit to help meet the forward commitments as they came due. This help, which was utilized to the extent of 200 million francs in October, greatly facilitated the operation.

As the Treasury kept pushing out forward francs, the premium over the spot rate came down, making hedged investment in dollar assets once more profitable to Swiss parties. By autumn the Treasury had forward commitments totalling some 650 million francs, and the premium had fallen to ½%. Developing weakness in the Swiss trade balance eventually reinforced the Treasury's efforts, and in the early part of 1962 the spot dollar rate improved sharply. The Treasury then was able to unwind its position comfortably and repay the francs it had borrowed from the Swiss National Bank.

The pattern set in the German and Swiss operations was repeated, on a much smaller scale, in the Treasury's intervention in early 1962 in the market for forward Dutch guilders. The Swiss franc demanded attention again last summer, principally because devaluation in Canada and falling stock prices in the U.S. prompted a flow of funds into Switzerland and sparked demand for forward francs. The Treasury made some forward sales, but they did not approach in size the operation of 1961.

THE FED'S DRAWING ROOM

The Federal Reserve System first gave notice last February of its decision to put some of its resources into the exchange stabilization effort. Even before that, however, Federal Reserve officials played an important consultative role in the Treasury's exchange operations, and they have continued to do so. The collaboration is natural: this country's central banking system has close ties with its counterparts abroad; also, the Federal Reserve Bank of New York, as fiscal agent of the United States, carries out the Treasury's foreign exchange moves as well as those of the Federal Reserve System.

In the more direct role it assumed last February, the Federal Reserve has followed an approach generally different from that of the Treasury. Staying out of regular forward markets, it has concentrated principally on negotiating, and utilizing, "swap" arrangements with central banks of other countries. These are reciprocal credit facilities entitling either party to draw specified amounts of the other's currency for a limited period of time. Such swaps have been made with the central banks of nine countries (Austria, Belgium, Canada, France, Italy, the Netherlands, Switzerland, United Kingdom West

Germany) and with the Bank for International Settlements, sometimes called the central bank for central banks. The drawing rights gained add up to the equivalent of \$900 million, matched by dollar drawing rights extended to the partners in the swap arrangements.

At various times this year the Federal Reserve has availed itself of the swap facilities to draw Swiss francs, Dutch guilders, and Belgian francs. Drawings have occurred characteristically at times when the dollar was under pressure in the exchange markets and foreign central banks were taking in more dollars than they were likely to retain. The Federal Reserve has used the currencies obtained by swap to buy from the respective central banks dollars they otherwise might have presented as claims for Treasury gold. By this device the Federal Reserve presumably has been able to hold attrition of the U.S. gold supply to less than it otherwise would have been. As pressure in a given exchange market has eased, and foreign private parties have become more willing to hold dollars, the Federal Reserve has been able to sell dollars in the open market and thus get the foreign currencies in which the drawings at the foreign central banks must be repaid.

With its network of reciprocal arrangements, the Federal Reserve has the means of coping, at least initially, with temporary pressures on the dollar from any of the principal foreign currencies. It used these resources actively, for example, against exchange disturbances set off by the Canadian devaluation and by the sharp drop in stock prices in the U.S.

A SPECIAL DOLLAR

When the Federal Reserve makes a swap drawing, the other side of the transaction gives the foreign central bank an equivalent dollar credit on the Federal Reserve's books. This might appear to undo the effect of the Federal Reserve's purchase of dollars from the foreign central bank, since it leaves the latter's total dollar holdings unchanged. There is an important difference, however, between the ordinary dollar holdings of a foreign central bank and those created by a swap. The dollars carry, by the terms of the deal, the Federal Reserve's commitment to replace them at a set future time with the foreign currency which was drawn and to do so at the same rate of exchange as prevailed at the time of the drawing. Thus the foreign central bank can hold swap dollars without incurring any risk.

This ability to create a special kind of dollar, more attractive to foreign official holders, makes the swap an ingenious and peculiarly useful device. Although it falls short of providing the gold guarantee which a number of foreign commentators have suggested the

US should attach to the dollar for the reassurance of foreign central banks—a suggestion properly rejected by US officials—it affords a near-equivalent so far as swap dollars are concerned.

SUCCESS WITHIN LIMITS

Exchange intervention by official US agencies has had its moments of triumph, aided by circumstances that must be called fortuitous. It has been most successful when the difficulties to be dealt with were clearly of a temporary nature—as in the German and Swiss operations. Official themselves have cautioned that there are limits to the effectiveness of intervention affecting relationships between national currencies under conditions of currency convertibility. Eloquent testimony to the limitations can be drawn from developments in the authorities' current undertaking directed at strengthening the dollar in relation to the Italian lira.

A programme of selling forward lire, and of intervening in spot markets as well, was begun last January. There was no speculative flare-up to contend with, but the dollar had been "on the floor"—that is, at the bottom of its parity range—against the lira in the spot markets for more than eight months. In those circumstances the Bank of Italy was acquiring substantial quantities of dollars in support operations, and the Italian office of foreign exchange—which deals in forward as well as spot currency—was experiencing unusually heavy demand for forward lire.

The extent of the Treasury's operations in lire has not yet been made a matter of public record. It is known that at the beginning of the operation the Treasury took over a substantial block forward lire contracts from the Italian foreign exchange office, and indications are that US authorities have made sizable additional sales of forward lire in the interim. The Treasury has disclosed that it has drawn Italian lire worth \$200 million under a line of credit extended by the Bank of Italy, presumably for use in executing spot transactions.

Despite the Treasury's operations of apparently substantial size, the spot rate for the Italian lira is still very close to the permitted upper limit. The stubbornness of the situation is further attested by the Treasury's recent announcement that its borrowings from the Bank of Italy, made originally on a three-month basis, are to be converted into a series of fifteen-month obligations, and by the Federal Reserve's disclosure that its swap with the Bank of Italy had been increased from \$50 million to \$150 million.

Some slight improvement in the spot dollar rate has occurred in very recent weeks, reflecting in part a change in Italian banking regulation on 1 November which permits Italian commercial banks

to borrow more liberally abroad. But whether this recent development marks a significant and lasting improvement can not be judged as yet. Doubtless the Treasury action has had some effect in impeding accumulation of dollars by the Bank of Italy. Unless the dollar improves materially in the spot market, however, the flow of dollars to the Bank of Italy is only being postponed, not averted.

There are striking differences between the Treasury's Italian operation and the earlier major ones in German marks and Swiss francs. In both the German and the Swiss cases, improvement in the spot rate came fairly soon after the Treasury's intervention in the forward market began. In both cases there were obvious reasons, besides the Treasury's action, for the improvement. Principally there was a subsidence of the speculative fever that had been kindled by the revaluations of March 1961. With this temporary factor removed, and with the added help in one case of Berlin tension and in the other of a weakening in the Swiss balance of payments, the two potential crises were headed off.

No such accommodating turn of events has come in the Italian situation. More importantly, the pressure on the dollar in terms of the lira has its chief source not in temporary psychological factors but in the continuing surplus in the Italian balance of payments. Thus the lira operation clearly illustrates that official intervention in the exchange market—successful as it has been in coping with sudden strains and distortion—is by itself of limited force in striking at persistent trouble in a country's payments position.

Neither is it a dependable escape from the consequences of interest-rate differentials between countries. Under some circumstances, to be sure, a sizable and timely operation in the forward market may help deter the outflow of funds that an adverse differential tends to induce. Certainly the foreign currency dealings of US official agencies in the past twenty-one months may be presumed to have encouraged the makers of monetary policy to try defending the dollar without resort to the standard defensive of a general rise in interest rates. But intervention in foreign exchange is not a substitute for needed actions in the field of monetary policy. The forward exchange market directly affects only those capital flows that involve hedging. If an investor going out of dollars to earn a higher rate is willing to take the risk that getting back into them may involve some capital loss, he is not concerned with the price of forward dollars, and official intervention to drive that price up (by forward sales of the foreign currency) will not dissuade him from making the switch.

Inevitably the involvement of the government and the central

banking system in foreign exchange dealings provokes questions as to the risk of incurring capital losses. The risk is greatest in the forward markets, where parity maintenance commitments do not apply. The Treasury's typical forward operation thus far, however, appears to have been risk-free. In most if not all cases, the foreign currency has been sold forward at prices higher than the peak it can be allowed to reach in the spot market under IMF and other stabilization rules. There has been assurance, in other words, that maturing forward contracts could be covered at a profit by purchases in the spot market. An upward revaluation of the foreign currency in the interim would spoil the game, of course; but if the central banks, as has been intimated, have some form of understanding against such surprises, the forward sale is indeed a safe one so long as it is made at a price above the spot ceiling.

But if the Treasury makes forward sales of a foreign currency at prices below the spot ceiling—as it presumably might find reason to do under some circumstances—there is always a possibility that the covering purchases ultimately may have to be made at higher prices and a loss thereby incurred.

TWO-WAY STREET

Another potential cost of currency dealings by official agencies must be counted. The programmes as carried out have relied heavily on the co-operation of foreign governments and central banks. A willingness to reciprocate when the hole is in the other fellow's shoe is at least implied in the arrangements that have facilitated US operations in foreign currencies. Indeed, the Federal Reserve entered into a \$250 million swap arrangement with the Bank of Canada last June, which the Canadians drew upon to assist them through the period of intense strain on their dollar. In this instance no risk of loss to the US from a possible devaluation of the Canadian dollar was involved, since repayment in US dollars at the established rate was assured. But reciprocity could on some future occasion take a different form.

What this may eventually involve is too broad a question for meaningful conjecture, and in any case the US is likely for some time to be more beneficiary than benefactor in the workings of monetary alliance. For the longer run, however, it is important to recognize that official involvement of the US in foreign exchange activity is not likely to end when this country gets the better of its own balance-of-payments problem. The broadening which has occurred in the monetary role originally assumed by the United States at Bretton Woods seems almost certain to become a permanent one.

Markets

JUTE

Steps to Stabilise Jute Prices

Concerted measures are being continued to stabilise jute prices. During the past few weeks the question of ensuring a fair return to the cultivator has been raised in Parliament and some State Legislatures. Government efforts are mainly directed toward giving support to the raw jute market by increased purchases by the industry in particular and other official bodies like the State Trading Corporation. Jute Mills have been directed to buy 700,000 bales of jute in the current month while the Jute Buffer Stock Association has been asked to lift another 50,000 bales. Purchases by the industry (both the mills and the Buffer Stock Association) have been running at a high level during the past few months. In the last two months the industry had accounted for 1.9 million bales. According to the Jute Commissioner, of the total production of 7 million bales in 1962-63, a little over 4.5 million bales had already been lifted. He has, however, pointed out that for the success of the price support operations, mill stocks which were equivalent to 16 weeks consumption at the end of October should

ultimately reach the level of 22 weeks. It would appear that the acceleration of purchase of jute is not to be confined to the jute industry. The State Trading Corporation is taking active steps to increase its purchase of raw jute in all the jute growing regions. The State Governments which have sizable acreage under jute are said to have been told by the STC that adequate funds will be made available for their purchases of raw jute at the minimum price.

It has been pointed out that with the accelerated purchase of jute by a number of agencies in the course of the current month and in the coming months, the pressure from unsold stocks will considerably lessen. The cumulative effect of the corrective measures is already apparent in some jute growing regions. Report from Assam indicates that jute prices there are firming up consequent on the lifting of the bulk of the crop. The assurance that what ever that remains after the purchase by the mills and other agencies will be lifted by the State Government seems to have helped sentiment a good deal. In other regions also there has been some improvement and generally sellers are not too ready to discount prices. Even so, the ruling prices are still below the minimum levels. Further improvement in sentiment may be expected

when the impact of the accelerated buying is fully felt. This is a happy augury at this time because this is the time of the year when jute cultivators will begin thinking about sowing operations for the next season. The vigorous price support measures that are now being implemented will convince the jute cultivator that his interest will not be jeopardised if he continues to grow jute.

The jute goods market however has not been very active during the past week although in later dealings prices have rallied. The earlier dullness was due to absence of foreign enquiries. The belief is gaining ground that overseas buyers of jute goods are no longer hard pressed for supplies as they have built up some stock through sustained buying during the best part of last year. It is therefore to be expected that buyers will pay more attention than hitherto to the price factor. The fact that Indian jute mills' production is being kept up at the maximum level coupled with the plentiful supply of raw jute will also encourage this trend.

The sharp recovery in prices toward the close of the week mainly stemmed from indications of fresh foreign enquiry. Sudan was reported to have shown some interest while rumour had it that a large Government order was in the offing. Fresh encouragement to the bullish sentiment came from the figures relating to stocks of jute goods at the end of December, 1962. There has been a substantial decline in total stocks by 8,400 tons to 83,000 tonnes as compared with 91,400 tonnes at the end of November. The two principal sections have contributed to the fall: hessian stocks at 22,800 tonnes are lower by 4,900 tonnes while stocks of sacking at 46,600 tonnes are down by 3,900 tonnes. Only other varieties are up by 400 tonnes at 13,600 tonnes.

Maximum Output Extended

At their meeting on 10 January the Committee of the Indian Jute Mills Association considered the market situation in the light of the stocks of manufactured goods held by the mills at the end of December 1962. They noted that the stocks of both hessian and sacking had declined and they agreed that the present maximum level of production in the industry should be extended for a further period of one month to the end of February 1963.

STOCK OF JUTE GOODS AT THE END OF DECEMBER, 1962.

TEA

Good General Demand

TEA prices have been ruling firm since the beginning of the year although buyers appear to be concentrating on quality. In the export sale held this week, offerings were 70,981 packages. There was a good demand. Plain orthodox descriptions came to a firm market although Fannings were sometimes easier. "Teas for price" were strong. The better liquoring Doosars and Medium Assam descriptions were irregular, but tended dearer. The brighter Assams often registered considerable advance.

Medium CTC types were firm with BPS again meeting with more enquiry than similar Fannings. The best liquoring sorts were generally dearer. The better liquoring leg-cut descriptions met with useful enquiry at firm prices. Whole Leaf grades and Tippy sorts were keenly competed for and were often appreciably dearer.

Darjeeling teas again followed a dearer trend with improved autumnals registering considerable advances. The following table shows the trend of prices (per kilo) from the beginning of the year:—

	Week-ended 2 January Rs	Week-ended 7 January Rs
Export Sale:		
Clean Plain Pekoe ...	4.60 to 4.90	4.70 to 5.00
Plain BP ...	3.80 to 4.10	3.90 to 4.20
Plain Fannings ...	3.90 to 4.40	3.80 to 4.40
Medium Assam CTC BP ...	5.50 to 5.80	5.50 to 5.90
Medium Assam CTC Fannings ...	5.50 to 5.80	5.50 to 5.90
Best Assam CTC BP ...	6.10 to 6.40	6.20 to 6.60
Best Assam CTC Fannings ...	6.10 to 6.40	6.20 to 6.60

Tea interests in Calcutta have suggested the removal of levies, including the State and Central sales tax on tea and their replacement by a single all-embracing tax. In a representation to the Union Finance Ministry, they have stated that a single levy will simplify the existing tax procedure and add that, at present, taxes on tea at different points entail the filling up of a numerous forms which cause considerable delay.

The present system of levying cess at the point of export makes the overseas buyers feel that the levy is primarily on the overseas consumer. As a measure of export promotion, it is essential that this levy should be collected at the garden. It is also suggested that the quantum of levy should be reduced from the present rate of Rs 4.40 per 100 kg to Rs 2.50.

In the Internal Sale, offerings were 29,149 packages of dusts. There was a strong general demand. Medium

CTC teas received good support and realised fully firm to dearer rates. Good CTC teas received keen competition and were considerably dearer. Plain orthodox teas were sold well with the cleaner lines advancing in value. The poor descriptions, however, realised firm levels. Medium orthodox teas came to an irregular market with buyers' emphasis on the smaller descriptions. Leg-cut teas were sold readily at irregular and generally dearer rates. Following rates were quoted:—Plain Orthodox Dust Rs 3.90 to Rs 4.20; Medium Assam Dust Rs 4.30 to Rs 4.80; Leg-cut Dust Rs 5.10 to Rs 5.30; Medium Assam CTC Dust Rs 5.70 to Rs 5.95 and Good Assam Dust Rs 6.50 to Rs 6.80.

In the Colombo market, offerings were 7,616,130 pounds. There was good demand. At the opening, Dimbula/Dickoya brokens were dearer, especially where quality showed improvement. Prices were irregular with quality, plainer liquoring sorts being 10 to 20 cents per pound lower. Brighter Uvas were about steady, but plainer descriptions were 5 to 10 cents lower. Useful colour medium brokens from western districts were

steady; but plainer sorts were about 10 cents lower. Low-growners were on average steady. BOP Fannings followed the general trend of their respective brokens.

The Pakistan Government has announced its decision to stop further exports of tea this season except what remains to be exported out of tea sold in the previous export auctions. It has also decided to import one million pounds from abroad and this import will be arranged on barter basis against suitable export commodities.

According to the latest report, the production of tea in East Africa has recorded a sharp increase in recent years. In the first nine months of 1962, Kenya increased production by 1.48 million pounds. Uganda by 2.06 million pounds and Tagnanyika by 555,750 pounds, making an overall increase of 10.09 million pounds over the January/September 1961 period.

Production of tea in British East Africa increased to 6.2 million pounds in October 1962 from 4.9 million pounds in the previous month. In the first ten months of last year, 72.9 million pounds were produced as against

only 63.8 million pounds in the corresponding period of 1961.

In London, buyers appeared to be concentrating on quality teas when auctions were resumed after the Christmas break. Prices ruled steady for quality teas, while the market for other descriptions was generally easier. Price indication for plain teas was 2sh 11d to 3sh 9d per pound as compared with 3sh 1d to 3sh 11d prior to Christmas. Among the North Indian and other miscellaneous kinds, better quality invoices were about steady at rates ruling before the holidays; but for other kinds prices were irregular. South India teas were well supported, but at rates which were irregularly 1d to 2d lower for all except the best kinds.

Tea stocks in London, as on 28 December 1962, were 141.63 million pounds as against 139.61 million pounds in the previous week. The total quantity to be landed on the same date was 14.40 million pounds. Total afloat was 37.37 million pounds including 21.57 million pounds from Calcutta; nil from Chittagong, 278,000 pounds from Ceylon; 13.49 million pounds from Ceylon and 2.04 million pounds from other Ports.

Viewing the world through glass

With GLASS it's more view and more room too! Wherever it goes Glass opens up exciting new possibilities. Gone is that cramped, confined, closed-in feeling. The bright, cheerful, open look is in.

And glass goes everywhere. To homes, hotels, hospitals—to offices, schools and stores. In windows and doors, in buses and cars.

Manufactured in India by Hindusthan-Pilkington Glass Works Limited, quality tested sheet glass is available in a wide variety of sizes and thicknesses to suit every purpose.

For the finest,
most durable
glass you can
depend on

COTTON Irregular Trend

The Bombay cotton futures market during the past week depicted an irregular trend owing to alternate spells of buying and selling induced by weather reports and reports of devastation to the standing crop. The ruling Jarilla March 1963 contract initially moved upto Rs 687.50 per three quintals and after sharply slipping down to Rs 678.75 in the mid-week went upto Rs 684.25 before finally closing at Rs 682.50. The market opened the week on a steady note and the initial spurt in the contract was ascribed to the short covering induced by fresh buying support. But the rise could not be sustained on account of the absence of follow up support consequent on the reports of increased arrivals. On Wednesday, the market rebounded obviously due to the damage to the crop in certain areas in Gujarat. The rally proved shortlived and prices again suffered a setback following the increase in bank rate by half per cent to 4½ per cent which acted as a dampener.

The market showed no regard to the assurance given by Maharashtra Chief Minister that the Government would guarantee extra loans to the industry to skip over the crisis. However, toward the latter part of the week prices staged a moderate recovery. The tendency throughout the week was erratic.

Easy conditions prevailed in the spot market at Sewri. Spinner demand was few and far between. Vijay, Digvijay and other varieties met with some demand at lower levels. Prices of Kalyan remained steady thanks to sustained mill buying. Arrivals from Amravati and Berar had stopped due to the trade protest against survey results.

In the export section, good enquiry was reported for Bengal Deshi cotton from shippers. Out of the export quota of 2 lakh bales approximately 1.5 lakh bales were reported to have been sold and 1.19 lakh bales registered for shipment.

In the import section stray enquiry for Sudan, African and American growths was reported. Business is expected to pick up following the import allocations of the US cotton.

The Textile Commissioner on 4 January announced the allocation of the first instalment of US long staple cotton valued at Rs 10.2 crores, to be imported under PL 480. The allocation is on the basis of consumption of imported cotton of stapling 1-1/16 inches and above in the calendar year 1960. It needs to be recalled that for the first time in recent years, cotton of time 1-3/16 inches and above stapling is being imported from America under PL 480. The US cotton will

be subject to the usual rates of premium as applicable to each of the two staple groups. Consumers are given the option to utilise the value allotted for the import of cotton stapling 1-1/16 inches and above but below 1-3/16 inches in which case the premium applicable to that staple category will alone apply.

The Textile Commissioner has instructed the actual user mills to inform whether they are prepared to import the allocations proposed, and, if so, the staple length group required (in case mills have a basic consumption of 1-3/16" and above) so that regular quota letter may be issued incorporating the correct rates of premium. Those mills who are not desirous of availing themselves of this allocation on the basic consumption are requested to inform the office any day not later than 19 January 1963 which will enable the redistribution of cotton so refused to other needy mills who may be willing to accept. It has also been stated that once the quota is issued it will be obligatory on the mills to take it. The last contracting and shipment dates are 31 May and 30 June respectively.

PIECEGOODS:

The Bombay cotton piecegoods market during the week under review presented lively conditions. Activity in the market broadened and the movement of cotton goods looked up considerably. The up-country centres were active and started covering their requirements and the overseas centres showed greater enthusiasm in Indian piecegoods.

Calcutta, Kanpur and Bihar figured as the prominent up country buying centres, though offtake did not turn upto the expected level. It is reported that the mills have adjusted the price of their goods to the existing conditions. And the prospects for lifting the accumulated stocks with the mills within a month or so are rated bright.

Saris, dhoties and bleached long-cloth met with encouraging demand, obviously due to the proximity of muslim festival. Grey sheetings changed hands at slightly reduced prices. Some of the mills have entered into forward business with upcountry centres. Poplin and shirtings too met with good demand. Superfine mill made clothes, mainly owing to the short supply maintained a steady price trend. Due to the improved demand, prices of grey mulls manufactured by powerlooms rose by about 3 nP per yard.

On the export front, enquiries from Sudan and the UK flowed on an encouraging level. Sudan was satisfied with a moderate quantum of the usual varieties apprehending levy of customs duties on textile imports by the Government. Demand from the UK broadened particularly after the Christmas recess, though the booking was

small. On the other hand shipments to the USA declined on account of the complaints of excessive exports. Burma bought a small quantity of printed voiles and a moderate quantum of blankets was shipped to East Africa. There was a decline in the prices of grey drills during the week under review.

Copper and Zinc in 1962

BOTH Copper and Zinc ended the year 1962 with a measure of uncertainty. Although both the metals recorded net gains over the first nine months of the year, they experienced wide fluctuations. Copper wire-bar shot up from Rs 316 per 50 kg in April to Rs 410 by the end of July. In the next two months, the price dropped to Rs 350. Again, there was a recovery to Rs 400 in October, to decline towards the close of the year to Rs 360, showing a net rise of Rs 43 since April.

Zinc advanced from Rs 240 per 100 kg to Rs 300 from April to July. Then, there was a fall of Rs 36 until September. The price gained by Rs 36 to reach Rs 280 by the end of October. November again saw a reaction to Rs 240. A moderate rise in December brought it to end at Rs 284—a clear gain of Rs 8 only since April.

The extreme shortage of foreign exchange has acted as a stimulant to the firmer tendency in prices. The delay in the issue of licences or obtaining shipments from abroad have tended to push the prices forward, while reports of increased arrivals or better prospects of imports have led to a sharp downward reaction.

The import policy for the current licensing period has further aggravated the problem of supply of copper, zinc and brass. In the context of the acute supply position with regard to copper, the Government has adopted a policy of encouraging the use of aluminium, whose supply position is not entirely dependent on imports.

On account of plans for increasing the production of aluminium in the country, the price of aluminium scrap has declined steadily during 1962. From the high levels of Rs 362 in January/February, the price dropped to the lowest point of the year, at Rs 260 in the first week of December. The weak trend continued until the middle of the month, after which a steadier trend developed. Larger arrivals and heavy sales due to credit stringency accounted for sharp fall, particularly in December. Thanks to the increased use of aluminium by the small industries due to the continued shortage of copper, zinc and brass, aluminium prices registered a steady recovery from the middle of December.

PEPPER Violent Fluctuations

PRICE movements in the Pepper market were irregular during the year just ended. At the beginning of the year, the demand for

the commodity was poor owing to the low offtake by Russia. There was a diversion of Russian interest to Singapore where stocks had accumulated to the tune of 6,000 tons. There was a consequent price advantage, too, in going in for Singapore pepper as compared to the Indian commodity.

But, in February, the market showed signs of a revival due to the reduced arrivals of the new crop against the anticipated world shortage. There was also a keen demand from the USA. The squeeze for spot delivery pepper induced the grinders there to buy on a substantial scale. Small offerings from Singapore were also a contributory factor. Farmers and stockists were, therefore, unwilling to liquidate their holdings on expectation of a further rise in prices. The upward trend in prices was maintained till the middle of July when the market developed a slightly reactionary tendency on prospects of an upward revision of the crop estimate.

The weaker tendency of the market during the later half of the year was mainly due to the price disparity. Two factors were mainly responsible for this price disparity against India. Firstly, arrivals were smaller owing to the delay in the crop. Secondly, enquiry from the Communist countries, which used to buy on rupee terms, kept the market steady. As a result of the disparity, enquiry from the USA had been very small.

Production of black pepper during the current season is officially placed between 27,000 tons and 28,000 tons as against 31,000 tons in the previous season. The fact, that it takes a long time for the plants to bear fruits, has been a limiting factor against increased production. Again, India's normal consumption is placed around 10,000 tons a year. The lower consumption even in the midst of lower prices is explained by the brisk demand for export purposes.

The export outlook for the 1962-63 season is, by and large, considered to be good. But ultimately, everything depends on the export policy to be adopted by Indonesia, the second largest producer in the world and India's chief competitor in the international markets. A vigorous export promotion drive; stressing product quality, service and strict weight specifications should enable India to increase her shipments.

For instance, pepper is not grown in Australia and all her requirements are met through imports. There has been a steady increase in the use of pepper by Australian consumers, especially for the purpose of seasoning. Moreover, imports of pepper into Australia are exempt from controls. But India has a 10 per cent price advantage from present tariffs which can be offset by Indian cost advantages or trading practices. The market survey has shown a definite, sure and expanding mar-

ket for black pepper in Australia. It is suggested that, through specialised advertising, by sending goods as per samples and through direct selling, India can raise her exports to Australia.

Meanwhile, the Italian Spices and Coffee Dealers' Association at Genoa has suggested the need for the Spices Export Promotion Council at Ernakulam supplying necessary information regarding harvests, production, exports and prices of Indian pepper and other spices, besides improving the standard quality of Tellicherry pepper by abolishing the extra bold quality. This suggestion was made to an Indian Spice Trade delegation by the representatives of the Italian spice trade in the course of discussions the latter had with the former during its visit to Italy recently. The Italian traders had also proposed that a minimum quantity of 2½ tons each should be fixed for shipment of Malabar and Tellicherry quality pepper in the interests of both exporters and importers.

Following were the price trends during the year:—

	(Rs per quintal)
January	285.50 to 317.50
February	304.00 to 311.00
March	315.00 to 327.00
April	309.50 to 317.00
May	305.00 to 322.50
June	307.50 to 317.50
July	307.00 to 312.00
August	283.50 to 310.00
September	300.00 to 334.00
October	299.00 to 320.00
November	259.00 to 305.00
December	261.00 to 273.50

The pepper market opened the New Year on an uncertain note with prices tending to ease as overseas advices were absent. Except for some scattered buying support from Bombay and Calcutta, the market was noted for a lack of fresh developments. Trading was considerably restricted and arrivals were reported to be fair.

The quality control scheme for exports of pepper had a good start at Bombay. The fears of shippers that the scheme would add to their difficulties have proved baseless. The promptness with which the inspecting unit in Bombay works has set at rest the fears entertained by the trade earlier. Under the scheme, the specified gradations are given and there is no question of rejection on the ground of the goods being sub-standard. For, the gradations will be for the information of the buyers. Even the sub-standard goods will be allowed to be exported; but such shipments will be classified as sub-standard ones.

CASHEW Exports Up

India's exports of Cashew kernels to East European countries increased appreciably during the year just ended. In the first nine months, exports amounted to about 7,900 tons as against 4,700 tons in the corresponding period of 1961. Total exports in 1961 and 1960 were of the order of 5,900 and 6,200 tons respectively.

India, which has enjoyed a virtual monopoly in the exports of cashew to the United States, is likely to face competition from East Africa and South America in the coming years.

The Indian cashew industry will have to examine this problem seriously.

India's cashew exports to the USA occupy a place second only to her exports of jute goods. Without any progressive publicity campaigns, that usually motivate product sales in the USA, cashew consumption in that country has risen from about one lakh pounds in 1923 to about 54 million pounds in 1961 and there is excellent scope for further improvement of this trade.

SHELLAC STC to Buy Seedlac

The Indian Lac Cess Committee has announced that the State Trading Corporation will be accepting Seedlac from the first week of January 1963, at their offices in Gondia, Daltonganj, Ranchi, Balarampur and Bilaspur, subject to certain conditions. Only grades in IB and IIB and Fine Katki will be accepted. The price will be not less than Rs 34 per maund for Grades IIB and Fine Katki and Rs 42 per maund for Grade IB. The seedlac should be tendered in new single jute bags standardized to 74.40 kg.

Fifty per cent of the value will be paid through the branch of the State Bank of the Centre on receipt of a satisfactory test report from the Regional Analytical Laboratory. The balance will be paid on confirmation of the quality. A price not below Rs 34 for seedlac has been fixed by the State Trading Corporation. Lac cultivators should ensure that they receive a corresponding appropriate price for their sticklac.

CHEMICALS & DYES

Conditions in the Bombay Dyes and Chemicals markets remained quiet. Poor demand at higher levels and improved supplies were the main contributory factors to the current state of the market. On the other hand, sellers were reserved, especially in certain items, on expectation of an improvement in prices.

GOLD & SILVER

Bullion prices have been displaying a firmer tendency from the commencement of the year, thanks to the absence of any official measures to bring down prices. Bulls extended their support again to gold due to buying by operators from the South. Arrivals amounted 7,000 tolas as against an offtake of 5,000 tolas. Ready rates moved between Rs 105.75 to Rs 107.50, while sovereign ruled quiet at Rs 81.

Silver prices a smart recovery on frantic bear-covering on reports of good offtake locally and of a sharp rise in the price of the metal in London and New York. Arrivals amounted to 25 bars as against an offtake of 12 bars. Ready (below .996) changed hands at Rs 211.25 to Rs 211.85.

According to a leading bullion firm of London, the price of silver is expected to reach new record levels during the current year. In New York, it will approach 129 cents per

ounce while in London, it may even exceed the sterling equivalent of this figure. The highest ever spot price for silver was touched on 22 October last, when it went to 104½d in London and 122 cents in New York.

With regard to gold, the report, issued by the same firm states that the experience of the gold market during last year indicates that in the future the price is likely to remain between limits of \$35.05 and \$35.20 for as long as the principal central banks remain technically co-operative and the gold policy of the US administration appears to private buyers to be in line with its other economic and fiscal policies.

OILS & OILSEEDS

Prices on the Bombay Oilseeds Exchange suffered a sharp setback during the past week and the market sentiment was mainly guided by the sustained weakness in groundnut. Andhra and Madras reported large

receipts of the ready materials. Crushers and vanaspathi manufacturers were, therefore, not inclined to enter the market for making their purchases. Moreover, conditions were quiet on the export section where no enquiries were received from abroad for groundnut extraction. Groundnut Bold ready was quoted at Rs 40 and Groundnut Oil at Rs 16.50.

The imminent arrival of the new crop and the lack of overseas enquiries had an adverse effect on the Castorseed section. Again, the marketing of the new crop was expected to gather momentum after "Makara Sanskranti". Prospects for the new crop were also considered to be high. Castor ready was quoted at Rs 32.12 and Castor Oil, commercial quality, at Rs 12.95.

Trading in the Linseed section was insignificant. Price movements were mostly influenced by the activity in the groundnut and castorseed sections. Linseed ready was quoted at Rs 27.75 and Linseed oil at Rs 15.25.

For the Investor

INVESTMENT GOSSIP Lack of Support

Conditions on the stock markets have been easy since the turn of the year as both operators and investors have once again become chary of extending commitments. The confident note on which the markets closed the old year has turned out to be a temporary phase brought about mainly by covering operations by bears who were somewhat unnerved by revival of investor interest and the long Christmas holiday. It has now become clear that the broadening of business noticeable at that time in cash scrip had not stemmed from any sustaining influence. Although the new year has not brought any unforeseen development in the political situation, there is no inclination to take things for granted. The Chinese have yet to indicate clearly that they accept our conditions unreservedly and so long as this does not happen there is no question of direct negotiations. However, there is cautious hope that the Colombo proposal may pave the way for an ultimate settlement of the conflict with China. Even so, it is firmly accepted in this country that there can be no slackening in war effort till full preparedness is achieved so that the country is not caught napping a second time. The thought that the war with China is not over and that defence expenditure will continue to increase in coming years has been mainly responsible for the present subdued trend in shares.

In the meantime, there have been other developments which have usurped the market men's attention. The rise in the Bank Rate has not caused much surprise because, as an official explanation puts it, it is only a move to formalise what has already been in vogue. Even so, investors interpret it bearishly because it will mean an increase in the cost of credit to industry. There have been further re-

laxations on trading in stock markets, but in the absence of support, these steps have not made much difference to the volume of business passing. It is evident that what with the threat of fresh taxation to come in the next budget investors are in no mood to extend commitments. There is no doubt about additional taxes as the Finance Minister has repeatedly pointed out that the country has to mobilise large resources in order to meet the mounting defence expenditure. Investors are also worried about the existence of large unutilised capacity in industry. It has been pointed out by the President of the Engineering Association of India that in the engineering industry alone nearly 50 per cent of the installed capacity is idle. Indications are that only defence based industries will receive all the necessary facilities for full production. The apprehension persists that other industries will continue to be left with idle capacity.

NEW ISSUE NOTES TELCO

THE Tata Engineering & Locomotive Company Limited has convened an extraordinary general meeting on January for securing approval of the shareholders for the proposed rights issue, for financing the expansion programme of the company. The authorised capital is to be raised from Rs 10 crores to Rs 15 crores by the creation of 5,00,000 ordinary shares of Rs 100 each, for which the necessary sanction has been obtained. An agreement has been finalised with the Agency for International Development, Washington, for extending 13.7 million (Rs 6.5 crores) for meeting the foreign exchange component of the project. The company will have to raise additional capital before the expiry of March 1963 in accordance with the terms of the loan agreement.

The Price Line

The price line must be held. This is as much the responsibility of the State as of every citizen. Idle money, in the form of cash in hand, is the devil in the price spiral.

Money put in a bank remains active in the service of production and distribution of goods and facilitates keeping the price line under control.

Use less cash; make your money transactions through your bank account. You will thus make a direct contribution to the effort in holding the prices under check.

Export Prospects

Export trends, insofar as they are indicated by the figures now available, are not such as to bring cheer to the Board of Trade which is holding its sixth meeting this week. The constitution of the Board of Trade itself was the response to the challenge posed by the export target set up in the Third Plan and the realisation that the target could not be reached without special efforts to step up exports over and above the promotional and incentive schemes already in force. The situation was difficult enough when the Board was set up. Since then the position has been further complicated by the Emergency. The impact of the export target is two-fold. On the one hand, the Emergency has greatly increased the requirements of free foreign exchange, if not for purchase of arms abroad, for the import of materials required to keep industries related to the defence effort working at capacity levels. And, on the other, the exportable surplus of commodities is reduced by the increased demand for defence requirements.

Official reviews in recent years have consistently emphasised the conclusion that exports have got stuck at the level of Rs 600 crores plus. As against the actual exports of about Rs 662 crores in 1961-62, the target for the current year, the Second year of the Plan, has been fixed at Rs 720 crores. What is known of export performance, so far, does not hold any promise that the total exports for the current financial year will reach anywhere near the target, unless there is some slick window-dressing, such as smuggling in the export of iron ore from Goa into the all India totals.

To judge, by the provisional figures for the period April to November, exports during 1962 have just maintained a narrow lead of Rs 13 crores over the previous year. Total exports during April-November 1962 amounted to Rs 451 crores against Rs 438 crores during the corresponding period of 1961. But it is not possible to derive much satisfaction from contemplating this small increase. For, during the same period, exports have decreased to all trading regions, except the trade with East European countries which is carried on under special payment arrangements. Considering the special conditions under which trade with these countries is organised, on a self-balancing basis, the increase of about Rs 15 crores in exports to these destinations cannot be of much direct assistance in correcting the imbalance in the country's foreign trade. Export to the different well defined regions is shown in the table given below.

	(Rupees crores)			
	April to September			
	1961-62	1960-61	1962	1961
Asia & Africa	193.62	183.96	60.99	72.38
EEC	52.12	51.75	22.27	26.78
UK	161.15	172.48	76.10	76.63
Other EFTA countries	6.98	5.68	3.74	3.47
USA	116.74	102.53	53.21	57.79
Canada	17.40	17.61	11.99	7.87
Cuba & Chile	7.08	8.79	1.22	2.12
Australia	16.03	22.38	10.09	8.21
New Zealand	7.40	7.40	3.74	4.30
East European countries	63.70	49.55	44.34	29.69

The most disappointing development is the sharp decline in exports to Asian and African countries during April/September 1962 as compared with the corresponding period of the previous year. Afro-Asian solidarity seems to be as tenuous in the field of trade as in other respects.

Exports have declined to most of the countries in this region, the most notable being the fall of over Rs 7 crores in exports to Japan. India's adverse balance with EEC countries is an old grievance. The figures for the first half of 1962 do not hold any promise that the position will be corrected in the near future.

The United Kingdom continues to be the largest market for India's exports, and the decline of Rs 11 crores in the exports for the year 1961-62, as compared with the previous year, is cause enough for anxiety, even apart from what may be in store when Mr Macmillan decides to take the plunge in the cold waters of the Common Market. The declining trend continued in the first five months of 1962-63. But there has been a welcome improvement in the figures for September, so that the total for the six months April to September, 1962 is almost level with the figures for the corresponding period of 1961.

On the other hand, exports to the United States show a decline of Rs 4 crores during the half-year, though the exports for the year 1961-62 were better as compared with 1960-61. The most encouraging feature is the improvement in exports to Canada and Australia, but this is offset by the decline in the off-take of Indian goods by New Zealand.

Despite some bright patches here and there, the country's exports on the whole present a dismal picture. Exports of traditional items have not made much headway nor have exports to our traditional markets. On the other hand, exports of individual items and the off-take of important markets have registered notable decreases. The ground lost in either case has not been made up by development of new markets or of exports of non-traditional items.

At its Madras meeting the Board of Trade is expected to undertake a review of exports to different countries. This is easily the most important item on the agenda. While a general survey of exports to different destinations leads nowhere, it is doubtful whether the Board of Trade, at its meeting lasting for a day or two, will be able to get down to the details of the difficulties encountered by particular commodities and in particular markets and suggest remedial measures. The resulting feeling of melancholy is not mitigated by the realisation that the poor showing cannot be attributed to lack of organisational development.

Apart from the numerous bodies that had been already set up to deal with different aspects of exports before the Board of Trade was established in June last year, the Board itself has given birth to a numerous progeny of committees and the process of multiplication has already reached the second generation. Among the offspring of the Board of Trade may be listed the Committee on Cost Reduction, the Committee on Trade Fairs and Exhibitions, the Committee on the Export Sector, the Committee on Shipping, the Committee on Foreign Trade Conference and the Committee on Castor Oil.

The Committee on Trade Fairs and Exhibitions has recommended the formation of a Council for Trade Fairs and Exhibitions, and action to set up and register the Council is in progress. The Committee on Export Sector has done one by appointing five Study Groups as well as a Steering Committee to review the recommendations submitted by these Study Groups.

While it may be readily conceded that the work assigned to these Committees is of the greatest importance and cannot be done by any other means, the public will be more impressed if there is more to show for their pains and the expansion of the organisational set-up for export promotion is matched to some extent by the expansion of exports.

World of Finance

MONEY MARKET

Cheap Money in the Offing?

There are a number of ways in which, we submit, money market conditions this year are analogous to those obtaining at the beginning of 1957. The cost to banks of central banking credit is, as then, higher. Private sector imports have been restricted as to scope. Industrial production, after rising satisfactorily, appears in sight of a plateau. And the Central Government's recourse to deficit financing is far exceeding budgeted estimates.

It may be recalled that, in February 1957, there was de facto raising of bank Rate to 4 per cent with the announcement that banks would be permitted to borrow against Government securities only at that rate, though bank Rate officially at the time was $3\frac{1}{2}$ per cent. This announcement was made in the wake of the decision taken toward the end of 1956 to levy stamp duty in respect of borrowings against usance bills. Similarly, 1963 has started with raising of bank Rate—de jure this, time, and not merely de facto—to $4\frac{1}{2}$ per cent.

Secondly, after the heavy imports in 1956 on private sector account restrictions were imposed some time at the end of the year to conserve the fast-depleting foreign exchange resources of the country. It was again toward the end of last year that, with foreign exchange reserves at a very low level indeed and with the added burden of emergent defence imports, further restrictions have been placed.

Early in 1957 it is possible to suggest that the rate of growth of industrial production began to suffer. For in the previous year the smart rise in output was enabled mainly by commissioning idle capacity, and the new projects started in 1956 would take some time before they would become productive. Even so, but now with the additional difficulty of securing industrial raw materials (particularly imported ones) it is possible that the rate of growth in industrial production is at the moment in the process of slowing down.

Last of all 1956-57 was a year of heavy deficit financing. Thus it happened that though the busy season was productive of very stringent monetary conditions the banking system was greatly relieved firstly by the heavy governmental disbursements of March 1957 and secondly by the impact during the busy season upon Deposit resources. As at the end of December 1962 deficit financing during the current fiscal year already substantially exceeds the recourse to created money that had been written into the Budget for 1962-63. Inescapably there is more deficit financing to follow in March this year; and undoubtedly such large expenditure by Government will be reflected in an increase in bank Deposits.

Furthermore, there is presently the selective credit control wielded by the Government. Borrowings from the Reserve Bank in excess of 160 per cent of quota (that is, the total represented by the statutory reserves) will attract a penal rate of interest at $6\frac{1}{2}$ per cent. Besides there has been the exhortation to banks that while maximising production both for defence and for civilian supplies, they should ensure that banking finance is not available for other purposes, especially the

speculative withholding of stocks. It may thus happen that in the next few months the demand for advances will be moderated.

The result in 1957 was that, after a particularly stringent busy season had drawn to its close and after bank Rate had been raised, the banking system found itself with resources that it was unable to utilise remuneratively. Consequently there was an emerging appetite for gilt-edged. The Reserve Bank, in addition to the successful governmental borrowing programme of that year, was able to sell week by week large parcels of securities through the tap. In fact there was such a gilt-edged famine that the monetary authorities took the unusual step of issuing a third tranche of the loan, a $3\frac{1}{2}$ per cent 1962, in November for Rs 30 crores.

We believe that events in 1963 will prove analogous. There is likely to be a surplus of resources with the banking system. Such resources will avidly seek gilt-edged for investment. We suggest that the Reserve Bank, is understanding what prospects in the money market are, should soon begin to initiate the measures to take full advantage of the emerging conditions.

This means that the money market has soon to be groomed, the recent rise in bank Rate notwithstanding, for some kind of return to cheaper money. For it would be patently absurd for Government to continue offering a high interest coupon on its borrowings at a time when gilt-edged is likely to be in substantial demand. So, as a first step, a scrapping of the second (or 6 per cent) tier in bank Rate is on the cards. But quite possibly the repeal of the second tier will be announced only after the current busy season peak has been left behind. Hence we think it likely that a declaration of this nature would be made by, say, the end of April. With bank Rate both de jure and de facto at $4\frac{1}{2}$ per cent the way would then be clear for Government to borrow from strength later in the year.

We have thus a paradox. The raising of bank Rate in 1957 was immediately thereafter followed by the beginnings of a cheap money period; and the raising of bank Rate in 1963 seems almost certain similarly to presage a return to cheaper money in the offing.

BANKS

Higher Expenses: What they Mean

Bank results for 1962 have so far made mixed showing. But the general impression that one is left with is that the profit, experience has not been altogether satisfactory. Such a phenomenon is not in any way unexpected or a surprise. For there were a number of items of expenditure which went up during last year, and these increases have had a cumulative impact upon the balance of profits of banks.

There is, firstly the charge of premium on Deposit Insurance which had to be met. While in the larger context of banking generally Deposit Insurance is a strengthening factor, there is a cost to be paid, and what it will be will become known in the 1962 accounts.

Secondly, the Desai Award announced in the middle of last year with its abolition of an area and of a classification of banks has

also involved a considerable increase in expenditure. At the time of the announcement of the Award its repercussions could not correctly be gauged, but banking circles now believe that the additional burden they are being called upon to shoulder will not be small. Furthermore there was the attendant increase in wages to staff not covered by the Award, a rise which most banks felt compelled to give.

Thirdly, the tax provision during 1962 will necessarily have been larger. On the one hand tax provided against 1961 profits would have been at 45 per cent, and since the rate has been stepped up to 50 per cent, an additional provision for the previous year will have to be made. On the other hand fully half of the profit for 1962 will have to be provided as tax.

Fourthly, at around the end of the 1961-62 busy season, rates on Deposits were raised. Accordingly the cost of interest paid should generally show increases. This is one more item of expenditure which will have cut into the balance of profit for 1962.

Lastly, with the listless drift in gilt-edged prices last year, following upon the larger interest coupons that were offered by Government in respect of its borrowing programme during the year, there would be depreciation in the values of gilt-edged portfolios which would need to be met by banks. The magnitude of depreciation would depend upon the maturity pattern of securities held; but once again it would be safe to suggest that it would be the general experience of banks that they needed to write off losses on gilt-edged either from inner reserves (or, in the event of these being too meagre) or from 1962 profits.

Of the factors which we have enumerated, one alone is likely, as can be gauged at the present moment, not to be repeated in the 1963 accounts; and that is the provision needed to be made in regard to the tax liability for a previous year. Since, early this year, bank Rate has been raised, it is almost certain that the problem of providing for a further fall in gilt-edged values will be faced by banks at the end of this year.

The operation of this set of factors means that banks will be thinking in terms of safeguarding their profit margins. Already thought is being paid to the desirability of raising the rates charged for Advances. But we are surprised that the question of reducing expenses, by bringing down the maxima of interest payable on Deposits, is not being seriously considered.

BANK RETURNS

Advances Touch New Peak

A further sharp increase in currency circulation, a heavy dose of deficit financing and the increasing pressure of the busy season requirements as causing an expansion in Advances are the highlights of the latest banking returns.

According to the returns of the Reserve Bank for 11 January, there has been a steep rise of Rs 29.74 crores to Rs 2,183.78 crores in Active Note Circulation, and outflow of Rupee Coin is placed in the amount of Rs 1.35 crores. While this currency expansion may partly reflect spillover into the second week of beginning of the month disbursements, as also of the progress of the busy season, a contributory cause has also been the Centre's heavy expenditure. Currency has been expanded for Rs 25 crores against Rupee Securities which consequently are placed higher at Rs 1,868.44 crores; and there has moreover been a rise of about Rs 9 crores to Rs 212.91

crores in Investments in the Banking Department. The sum of these two, or roughly Rs 35 crores, may be said to represent the Centre's recourse to created money during the week under review.

Foreign Securities, in the return for the Issue Department, are unchanged at Rs 88.08 crores, while Balances Held Abroad have moved up slightly by Rs 0.55 crores to Rs 9.32 crores. The Reserve Bank's cash in the till has been drawn down by Rs 6.09 crores to Rs 10.89 crores.

The deficit financing notwithstanding, the Centre's balances are lower by Rs 1.34 crores at Rs 52.45 crores; and some part of the Centre's payments has found its way into the coffers of State Governments, whose Deposits are higher by Rs 9.91 crores at Rs 25.89 crores. However, some of the States have nevertheless had need of greater assistance from the Reserve Bank, whose ways and means advances to State Governments have risen by Rs 2.59 crores to Rs 15.04 crores.

Scheduled Banks have also felt the pressure: Reserve Balances aer down by Rs 1.89 crores at Rs 73.37 crores, though this is mostly on account of the State Bank; and borrowings from the Reserve Bank have risen by Rs 5.60 crores to Rs 25.04 crores.

It may be mentioned, lastly, that the Reserve Banks portfolio of Treasury Bills Purchased and Discounted has declined by Rs 6 crores or so, to Rs 66.37 crores, and this maturing liability must also in part have accounted for the Centre's need to replenish balances through deficit financing.

The State Bank's return for 11 January shows that progress of busy season and spillover of beginning of the month disbursements have caused both a decline in Deposits and an increase in Advances. The Deposits of the Bank are shown lower by Rs 6.07 crores at Rs 550.27 crores, and the total of Advances has expanded by Rs 3.97 crores to Rs 281.80 crores. The State Bank has disinvested (presumably with the maturity of Treasury Bills it held in its portfolio) for Rs 3.70 crores, and holdings now are reduced to Rs 239.88 crores. Cash balances, including money at call and short notice, have been run down by Rs 3.41 crores to Rs 24.65 crores.

The return of Scheduled Banks for 4 January reveals that the total of Advances, in rising by Rs 21.65 crores, has now touched a new peak of Rs 1,452.21 crores and has exceeded the previous high touched during the week ended 8 June 1962. About one-fifth of this rise is traceable to the State Bank. Net Demand Deposits have improved by Rs 3.59 crores to Rs 922.55 crores, but net Time Deposits are substantially lower by Rs 12.42 crores at Rs 1,241.90 crores; it is necessary to add that the decline in the latter type of Deposits appears mainly due to loss of resources reported by the State Bank in the relevant week. While there has been a fractional increase in borrowings from the State Bank, indebtedness to the Reserve Bank has been cut by Rs 2.48 crores to Rs 18.56 crores. Disinvestment in gilt-edged is reported for Rs 11 crores, but this again is wholly attributable

to the State Bank's decline of Rs 14 crores reported during that week. Lastly, cash balances, including money at call and short notice, have been run down by Rs 11.30 crores to Rs 204.49 crores.

BANK PROFITS

Bank of India

The profit of The Bank of India Limited for the year ended 31 December, 1962, after providing for income-tax and super-tax and making the usual provisions for contingencies and subject to audit, including the sum of Rs. 29,16,350=83 brought forward, amounts to ...

Transferred to the Reserve Fund Interim dividend paid on the Paid-up Capital of Rs. 3,00,00,000 at the rate of 8.00%, subject to deduction of tax at the rates in force, absorbed ...	22,50,000=00
The balance available for distribution is Rs. 94,19,847=75.	24,00,000=00
The Directors propose to pay a final dividend on the increased Paid-up Capital of Rs. 4,05,00,000 at the rate of 12.00%, subject to deduction of tax at the rates in force, making 20% for the year	48,60,000=00
And to carry forward, subject to the payment of a bonus to the staff ...	45,59,847=75
	1,40,69,847=75

Indian Bank

Subject to audit, the Net Profit of The Indian Bank Limited, Madras, for the year ended 31st December, 1962, after providing for contingencies and meeting all expenses and after providing for taxation is Rs 17,32,192.48 as against Rs 22,12,400.18 last year.

An interim dividend at the rate of 5% and a bonus of 2½% (subject to deduction of tax at prescribed rates) has been paid. The Directors now propose to recommend to the next Annual General Meeting payment of a final dividend of 5% and a bonus of 2½% (subject to deduction of tax at the prescribed rates) thereby making the dividend and bonus for the year amount to 15%.

The transfer to Reserve Fund is Rs 4 lakhs as against Rs 5 lakhs last year.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills were opened on Tuesday, 15 January 1963. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.410 per cent and above were accepted in full. Total

amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.355 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 21 January 1963. Successful tenderers should make payment on Friday, 15 January 1963 at all centres. Other conditions are as usual.

During the week ended 11 January, 1963, Government of India Treasury Bills for Rs 2,06,97,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 16 January to 19 January 1963 at Rs 99.426 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 9 January to 12 January 1963 amounted to Rs. 5,00,000.

More Reflation in Britain

By Paul Einzig

The New Year began with an accentuation of the reflationary drive in Britain. The Bank rate was reduced to 4 p.c. in spite of widespread misgivings about the recent deterioration of the balance of payments and about the accentuation of wage inflation. Other recent reflationary measures included further cuts in Purchase Tax, increases of certain pensions and the granting of substantial wage increases to several categories of employees in the public sector of the economy. It is expected that, in order to discourage saving and encourage spending, interest rates on Post Office Saving Certificates and on other forms of investment popular with the small investor will be reduced. Unless the economic trend should change by April the Budget is likely to be deliberately unbalanced by tax reductions to encourage capital expenditure and by increases of social service benefits.

In spite of these and other possible measures, businessmen, investors and speculators entertain doubts about the results of this reflationary drive. There are as yet no indications of any trade recovery and the response of the Stock Exchange to the Bank rate cut was rather lukewarm. The explanation of this lies largely in the uncertainty of the prospects of the negotiations for Britain's admission to the EEC. The prospects of the outcome of the Brussels talks have their ups and downs. Pending a definite decision to join or to stay out, the prevailing uncertainty tends to discourage capital investment both by industries which would stand to benefit by the success of the negotiations and by those which would stand to benefit by their failure. Since practically all industries are likely to be affected one way or another it is no wonder that capital expenditure continues to proceed at a reduced rate.

The Government intends to supplement its reflationary measures by an accentuation of its drive to cure local unemployment in the north of England and in Scotland. Owing to the growing reluctance of industrial firms to establish themselves in northern districts, it would require an exceptionally high degree of all-round reflation before those districts came to benefit by it. To the extent to which the special devices now under consideration will prove to be effective the extent of general reflationary measures can be moderated. There would indeed be little gain if, for the sake of helping the north, the authorities were to provoke exaggerated inflationary conditions in the south, calling for a reversal of expansionary measures for the sake of safeguarding the balance of payments.

Notes

QUALITY CONTROL

Essential for Exports

INAUGURATING the first meeting of the Export Inspection Advisory Council here last week, Mr Manubhai Shah, Minister for International Trade, expressed the hope that, in the history of India's trade development, the year 1963 would register itself as a "Quality Control Year". The Council was set up in July last year in pursuance of a recommendation of the Ad Hoc Committee on Quality Control and Pre-shipment Inspection. This Committee had suggested that the task of improving the quality of export goods and establishing a lasting reputation for Indian products abroad would be greatly facilitated if the Government of India had available to it the advice of a council of individuals and officials who are intimately concerned with the day-to-day problems of quality control of indigenous products and export promotion generally. The Council was set up in consultation with the Board of Trade to advise the Government on all matters relating to quality control and pre-shipment inspection and, in particular, to prepare an operational programme for the quality

control of export goods with priority for pre-shipment inspection.

Maintenance of accepted standards of quality is absolutely essential for the steady development of the export trade of the country and its importance is widely acknowledged. But doubts have been expressed by spokesmen of the Trade whether compulsory quality control, as recommended by the Verman Committee, was the answer to the problem raised by the small number of traders who spoiled markets abroad with sub-standard exports. The Import and Export Policy Committee had noted that, by and large, the Trade was opposed to any measure of compulsion in this behalf. It was argued that the specifications of various buyers the world over vary so much that imposition of any rigid Indian Standards would be of no avail. It was also argued that, in view of the keen competition in world markets, it was unthinkable that Indian exporters would not, in their own interest, take care of the quality of their goods. The Mudaliar Committee, however, emphasised the great importance to the question and said that if Government intervention in this behalf were to be avoided, the Trade Associations must organise their own inspectorates to effect quality control and pre-shipment inspection.

Considering the reactions of the Trade to the recommendations of the Verman Committee when its report was published, it is matter of considerable satisfaction that the Minister for International Trade was able to state that Industry and Trade were now fully appreciative of the need for quality control and that many organisations had come forward to enforce quality control for their commodities. Moreover several Export Promotion Councils had also approached the Government for starting quality control programmes.

A system of pre-shipment inspection is now in operation for all textile products including handloom goods. Under the provisions of a Bill which is now before Parliament, the Cotton Textile Fund Committee will be charged with the responsibility of pre-shipment inspection of all varieties of textiles of cotton, wool, silk and other fabrics as well as of the entire range of textile machinery. From this year, the Government has also brought spices like cardamom, black pepper etc under quality control. The Minister said that the Trade had

found that the working of the scheme was on the whole satisfactory. Recently the Cashew Export Promotion Council had also evolved a scheme for quality control and pre-shipment inspection.

With the inauguration of the Council, the work of quality control and pre-shipment inspection is expected to be expanded in a big way. The work of the Council would cover the implementation of a broad-based programme, spread over a number of years, through a net work of official, non-official and trade agencies. These agencies would be charged with the responsibility for quality control and pre-shipment inspection in regard to the commodities for which these organisations may be best suited.

MACHINE TOOLS

In Defence Context

The machine tool industry bids fair to hit its Third Plan target well ahead of schedule. As it is, its performance is very encouraging, the industry having achieved an increase of 25 per cent in 1961-1962 is expected to show far better results: an increase of 90 per cent appears to be quite on the card. This tremendous rate of progress has however been achieved without any special treatment being meted out to it. As a matter of fact the industry has its full quota of problems in the shape of severe shortages of coke, foundry grade pig iron, and transport difficulties not to speak of the inordinate delay in obtaining import licences for essential raw materials and components and the severe curtailment in value of imports. Although its progress in the past few years has been quite rapid, it has to go a long way still before it will be in a position to meet the entire requirements of the country in machine tools. At present it is able to meet only a part of the rapidly growing domestic demand, the bulk of which is met by imports. In 1961 over Rs. 24 crores worth of machine tools were imported.

With rapid progress of industrialisation, the demand for machine tools is increasing at fast pace: it is estimated that Rs. 65 crores worth of machine tools will be required annually by 1965-66. In the present context of the national emergency, earlier estimates of demand for such essential articles as machine tools cannot hold good. The highest priority is being given to defence production and consequently, the demand for machine tools will considerably increase. It will therefore be necessary to initiate measures to boost machine tool

production to the maximum extent possible. Not only will large numbers of machine tools be required, but new types of machine tools have to be produced within the country as the defence-based industries as well as other industries can ill-afford to depend on imported machine tools for any length of time.

The machine tool industry however can play its new role efficiently only if the obstacles that are now retarding its growth are removed as best as possible. Now that it has been brought under the category of high priority industries for the allotment of foreign exchange, some of its major worries will be eliminated and to that extent, production will be facilitated. Expeditious steps are to be taken to remove other militating factors as well. The industry is experiencing great difficulty at present in getting Government's approval to the terms of collaboration with foreign firms and sanction of import licences for capital goods. As Mr S. L. Kirsoskar, President of the Indian Machine Tool Manufacturers Association has pointed out, the industry itself should try its utmost to attain cent per cent indigenous manufacture of its products and thus save that amount of foreign exchange that will otherwise be expended in importing some parts of their products. According to him "development of techniques in India has reached a stage where most parts required in the machine tools could be and are being produced in India."

If the growing civil and defence demands for machine tools are adequately to be met from indigenous sources, the installed capacity of the industry has got to be increased sizably. As the indus-

try takes a long time to develop, it is essential that conditions are made conducive for the establishment of new units in the industry from now on. But this does not appear to be an easy task as entrepreneurs are chary of taking to machine tool manufacture, partly because of unattractive return and partly because of the difficulty in attracting foreign collaboration. Mr Kirloskar has suggested a doubling of the tax holiday for the industry, the withdrawal of restriction on the royalty payments and other minor terms of the collaboration agreements and removal of restrictions under the Companies Act and Capital Issue regulations. Not

all of these suggestions are likely to find ready acceptance at the hands of Authority, but it would be short-sighted to dismiss them off-hand. There are indications that Government is already worried by the number of revocation of industrial licences it has had to make recently. Important and well-established firms like Messrs. Mysore Kirloskar, Britania Engineering and Telco have reportedly been obliged to give up licences of difficulties of imports and obtaining suitable collaboration arrangements. In view of the emergency in which the machine tool industry has a central role to play, the matter requires urgent consideration.

SUGAR EXPORT Need for Streamlining

The need for streamlining sugar exports programme has been brought to sharp focus by Mr S. S. Kanoria, Chairman of the Export Agency Division of the Indian Sugar Mill's Association, last week in Calcutta. According to Mr Kanoria, sugar exports in 1961 would have far exceeded the actual shipment of 2.68 lakhs, but for the official rigidity in the mechanism of exports and avoidable delays. Sugar export programme should be finalised well

in advance as the importing countries like the USA, the UK, Canada and Japan cover their requirements far ahead of the year. Japan, for instance, has already covered most of its requirements till March 1963 and the Cuban example of entering into long term arrangement for sugar exports to East European countries highlight the importance for formulating a bold and effective policy for export promotion.

There are other factors that call for urgent consideration and detailed official thinking. The preference shown by leading importers for raw sugar to white sugar which will be again processed in their refineries will have to be looked into. Though a modest start to manufacture raw sugar of 1.50 lakhs in 25 factories in the country has been made, Japan's insistence on procuring sugar with polarising below 98 per cent places us in a distinctly disadvantageous position to enter into Japanese markets in a big way as our sugar has a polarisation of 99.8 per cent. Before embarking on such a programme the industry's stability will have to be considered and selected incentives should be provided by the Government, if necessary, to the factories taking up new line of production.

A reorientation of Government policy with regard to transport concessions, rebate on Central excise duty, simplification of procedural matters and other facilities will have to be provided for bolstering our sugar exports. In India, railway freight comes to about 20 per cent of export price which considerably enfeebles the competitive capacity of Indian sugar vis-a-vis other countries. The Export Agency Division suggests a flat rate of Re 1 per maund irrespective of the distance to be carried is worth considering as it will reduce the high cost of sugar.

The present policy of allowing rebate on Central excise duty on sugar exports also needs a modification. Though the Government permits rebate, the absence of any statutory arrangement for the refund of cane cess or purchase tax on cane is a serious snag. The Government of India's recommendation to the State Governments to arrange the refund has failed to evoke adequate response much to the embarrassment of the interested parties. This anomaly needs to be remedied, by legislation binding on an all India basis.

Sugar handling cost too can be curtailed if separate and permanent berths are allotted in every port. Besides, the present practice of storing sugar in godowns prior to shipment involves an expenditure of 5 per cent at the ex-factory realisation. Adequate storage facilities should be provided for stocking sugar for emergent shipment. Thus the time lag can be eliminated and ready supply of sugar to meet overseas demand ensured.

The quality consciousness evinced by the sugar industry is heartening but there is scope for further improvement. Sugar manufactured in India is broadly categorised into three colour grades i.e., 27, 28 and 29 the latter being the best quality. Some of our factories are in a position to produce sugar higher than 29 colour and they should be encouraged to manufacture higher colour like 30 and with prescribed price differential, for the said colour. This will naturally enhance the prestige of Indian in the eyes of consumers abroad.

Apart from these, procedural difficulties will have to be removed and excise procedure simplified. Bulk of sugar for export is procured from factories which entail them automatic rebate. Occasionally sugar will have to be purchased from market and though rebate of excise duty is granted as an ex-gratia payment, it is worth while to permit such rebate as a rule. Sugar exported from Bombay port is subjected to a town duty of Rs 1.50 per bag. Though rebate to the extent of 93 3/4 per cent is allowed on sugar exported, the marking of bags before entry into town limit is time consuming and the bags are defaced thus giving an ugly look. These markings along with the dirt accumulated in transit give out an impression that the bags are old and second hand which has often led to complaints from abroad.

The Government should view these complaints sympathetically as conditions in the international markets for sugar are congenial to boost our exports. The fall in word production and the increase in sugar prices are definitely favourable developments as far as Indian sugar is concerned. This situation offers a challenge and opportunity to India to increase its share of sugar exports.

SPECIAL STEEL The Whole Truth

In Madras early this month, Mr P. C. Sethi the Union Minister for Steel and Industry made an

intriguing statement about the special steel projects in the offing. He said that there will now be only two such projects and both of them in the public sector, one at Bhadravathi and the other at Durgapur. Incidentally, he mentioned the TISCO project for special steel and said rather casually that it had been abandoned. In fairness to the company, it was incumbent on the part of the Minister to have given the reasons that prompted the country's most experienced steel makers to give up a project so closely allied to its present activity. In a detailed statement issued last week, Sir Jehangir Ghandy, Director in charge of TISCO has pointed out that far from wanting to abandon the project, the company is still as keen as ever to undertake it. The main points made by Sir Jehangir are as follows:

The company was granted a licence for the project 17 months after the application was made in February 1960. One of the main conditions of the licence was that the foreign exchange component of the project should be provided by the foreign collaborators (foreign exchange component in this case amounted to half of the total cost). Despite this severe condition, TISCO entered into negotiations with a Canadian company which however later on withdrew from the negotiations as Government sought the collaboration of the self-same company for its own project on terms which did not require the collaborator to invest capital in the venture. Next came the negotiation with an American company which too withdrew because of the inordinate delay in the issue of licence to TISCO. Thereupon, the company went round the world, as it were, seeking a collaborator on the terms specified by Government but without success. Sir Jehangir has pointed out that the failure of the company to get a suitable collaborator stemmed from the stiff condition imposed by Government and the generally unsatisfactory investment climate in India. During this tortuous global search for collaborators, the company was keeping Government fully posted with the progress of its efforts. Finally, the company appealed to the Government to withdraw the onerous condition but got no favourable response. Then came the cancellation of the licence to the company. The reason given by Government for such cancellation is that the company has failed to take effective steps to implement the terms of the licence!

Sir Jehangir's statement raises grave issues and Government owes the public a satisfactory explanation. It is inconceivable that Government did not know before

it started negotiations with the Canadian company in question that TISCO had already entered into negotiations with it. It is not clear why Government specified that the foreign exchange component in the case of TISCO's project should come from the collaborators while for the public sector project the same collaborator is freed from such a condition. There are more such points that need to be adequately explained. On the basis of Sir Jehangir's statement, the rather off-hand manner in which the company's entrepreneurial seriousness and competence was denigrated seems inexcusable.

ILMENITE Bungling

The current crisis in ilmenite industry in Kerala exposes the myopic policy that the authorities have been following so far. The closure of several mineral concerns and the threatened shut-down of other units in Kerala which was the sole supplier of this rare earth with sixty per cent of titanium content to the world till recently has brought serious dislocation. Government seemed to have been nurturing the idea that by dint of the monopolistic position it could easily dictate terms to the consumers abroad. The reluctance of the former Communist Government in Kerala to enter into a five-year contract with the USA cost the country dear. Naturally the US was compelled to explore fresh avenues for meeting its requirements and other countries producing this mineral like Canada, South America and Ceylon gradually emerged as competitors and have now elbowed India out of several international markets.

The situation has not shown much improvement after the removal of the Communist Government from office. Both the State and Central Governments have not adopted a realistic policy which would have averted the after effects. Result: loss in foreign exchange and the disruption of the economic structure in centres of this industry. Thousands of employees are confronting unemployment consequent on the closure of the factories. The STC's attempt and the reduction of royalty by the State Government have failed to entice purchasers so far. The reported indifference of British firm in not honouring the contract for one lakh tons (only 80,000 tons were lifted and compensation to the remaining 20,000 has been given) only worsened the alarming accumulation position. Concentrated attempts should be made to capture lost markets and seek new ones. The Government should, also provide alternate employment for those labourers who were already thrown out.

AVIATION

Air India's Jet Overhaul Plant

The commissioning of Air India's Rs 50 lakh jet overhaul plant at Santa Cruz, Bombay, last week marks an important milestone in the history of aviation in the country. Built on the most modern lines, the plant will service and overhaul Air India's fleet of six Boeing 707 inter-continental jets and thus eliminate the cumbersome and expensive procedure of sending all the Rolls-Royce Conway jet engines to England for overhauling and servicing. The drain of foreign exchange on this count was estimated at nearly Rs 35 lakhs annually. The overhauling capacity will be of the order of 12 machine engines a month.

Speaking on the occasion Mr J. R. D. Tata, Chairman of the Air India, stated that the plant will be in a position to service and overhaul the jet Carvelles that were soon to be acquired by the Indian Airlines Corporations provided the Government permits. The preliminary discussions with Rolls Royce on the installation of this plant took place in 1959. From the very outset emphasis has been on obtaining the latest equipments and on providing clean and congenial working conditions for obtaining maximum efficiency. The overhaul plant is housed in two spacious buildings. The complete process of stripping, cleaning and inspection and re-assembly of engines will be done in the main building which is air conditioned and dust proof spanning about 60,000 sq feet. The engine test house which was declared open simultaneously was specially designed and constructed to suit Air India specifications.

3 TOP-QUALITY
ACC
PRODUCTS

ACCOCID

(ACID-RESISTING CEMENT)

Containing silicates of high purity, ACCOCID is proof against all strengths of inorganic and organic acids. ACCOCID is recommended for setting acid-resisting bricks for acid storage and pickling-tanks, acid towers and furnace stacks, reaction-vats and tanks, laboratory bench-tops etc.

ACCOSET-50

(MONOLITHIC REFRACTORY CEMENT)

Composed of finely ground plastic clays, high alumina refractory materials and special chemicals, ACCOSET-50 gives good bonding strength and high heat resistance. Once it is dried and burnt ACCOSET-50 becomes one with the bricks. Recommended for jointing, bonding, monolithic and rammed linings etc.

FIREBRICKS

With medium, high and super alumina content, firebricks are made to the required shape, size and quality. They resist spalling, abrasion and the various stresses induced by heat.

The New Priorities in Oil

By K. U. MATTHEW

Before attempting to delineate new priorities in oil industry, it will be useful to take a look at how we are placed in relation to China. Since China has created the emergency that calls for the new priorities, this is an important element in our calculations for the future. The Chinese oil imports are heavily Soviet-orientated and out of a total consumption of 9 million tons in China in 1962, about a third was provided by the Soviet Union valued at 103 New Roubles f.o.b. (2.52 NR=£1) representing almost exactly one-third of the value of Russia's total exports to China, of some 330 million New Roubles. The Chinese economy is geared to a low use of petroleum products but China has immense coal resources and the latest estimate available assessed production at about 425 million tons annually, compared to our 65 million tons. Roughly, two-thirds of China's crude oil production of about six million tons a year consists of natural crude, and most of the remainder of shale oil. The largest refineries in China are the two one-million ton plants at Lanchow and Shanghai and the new Nanking plant whose designed capacity (possibly not yet reached) was at one time stated to be 3 million tons. It is thus clear that a modernising economy requires a far greater permeation of oil in the system. At present China's per capita consumption is perhaps one of the lowest in the world at 3 gallons annually. But a desire to bring under its direct control additional areas of oil cannot be ignored as a factor of some importance in our own policy making.

In oil, as in the economy as a whole, defence and development are the twin aspects of the same problem. They are not only not contradictory but actually identical in their basic inspiration. While we continue to defend what we have, the need for development of oil resources, perhaps in less vulnerable areas, assumes added urgency. What about the Ganges? The Cauvery Basin? The current position in India is that there are two oil producing regions-Assam and Gujarat. The reserves in Assam are of the order of 50 million tons, with reasonable prospects of finding more, and they will be capable of sustaining a production of 3 million tons a year. No firm official figures are yet available for the Gujarat region but since the Government of India is planning the construction of a three-million ton refinery, we must assume that the known reserves are similar to those in Assam. A total production of 6 million tons of crude

oil per year is envisaged for 1966 which will meet about 1/3rd of total demand. This demand is expected to rise to some 30 million tons by 1971 and there is thus an urgent need to find more oil in India. Apart from Assam where the long-established Burmah Oil Company is working in partnership with Government through Oil India Limited, the Government's policy so far has been to go it alone in exploration and all work in this field is being carried out by the Oil and Natural Gas Commission. While there is much good work and not a little good fortune to their credit, it is clear that in the new priorities which we are establishing for the Oil Industry, there is urgent necessity for this activity to be speeded up. Outside the Sino-Soviet sphere, none of the major industrial countries and developing countries consider diversion of scarce national capital resources to oil exploration, as a rational economic operation; most countries having come to the conclusion that with the resources, expertise and manpower available to the International Oil Companies, reliance on purely internal resources can retard the growth of development.

In the manufacturing side of the oil business, the new priorities of the emergency emphasise the widening gap between consumption (estimated at 17 million tons in 1966 and about 30 million tons in 1970) and refining capacity. We must face this problem squarely in the face, as we are indeed doing in other sectors of the economy, aided as we are by the sense of ruthless realism which the national emergency has brought about. We cannot afford to slur over figures and targets nor can we indulge in the luxury of imprecise calculations about dates of commissioning our industrial units-including refineries. With paper and pencil, this exercise must be done with meticulous care and the result of my own calculations is that unless decisions are arrived at and implemented with speed, the gap between refining capacity and actual demand will remain alarmingly large in terms of foreign exchange liability.

Quick decisions are not easy. For instance, it has been said, with understandable concern, particularly at a time when defence is uppermost in the minds of every Indian patriot that the addition of refining capacity in Bombay will be strategically unsound. How sound is this objection? Now large scale industries units are by their very nature location-intensive. You start an industry, it grows, and ancillary industries

come to exist in the neighbourhood. Not to face this common pattern of development, and not to take advantage of the economies of scale inherent in this pattern, would be to deny wittingly the advantages of industrialisation, to which our country is committed. The concentration of steel in the Ruhr District, in Germany, the large motor works in Paris, France, and the heavy refining capacity in Pernis in Holland would all seem to indicate that dispersal of large-scale industrial units is not treated seriously as an essential defence strategy and as far as oil is concerned, strategic dispersal is achieved more by diffused stocking rather than dispersed production.

Would additional refining capacity in Bombay aggravate inland distribution problems? I doubt it. The Bombay refineries at the moment supply the entire on shore requirements of the Bombay economic supply area and the balance is moved by coastal shipping. Any increase in the capacity of the Bombay Refineries would thus be an additional call on coastal movements which is inevitable in any circumstance, when a refinery's production is not totally taken up by on shore demand.

Madras, is not said to be an all-weather port, and with the complications of broad gauge and metre gauge, Cochin has its own special problems. Calcutta (pending the development of Haldia) must remain unattractive from many points of view. For all these reasons, it is too early to reject Bombay as an effective and economical focal point for the oil refining industry in India. The speed and economy of local expansion would acquire a new significance under the new pressures on the economy.

All this does not, however, mean that additional refining capacity in Bombay constitutes no problems. There are the problems of berthing, pipelines etc., but these very problems or very similar ones, exist in any port in India and the problem of oil movement, both coastal and inland, would require to be studied before a decision can be taken on comparative merits.

There is an understandable tendency to compare the present emergency with the last war and while the comparison may have a certain validity it should be stressed that the priorities of a total war are different from the priorities of a limited conflict. In this state of non-emergent emergency that we are living, not only must economic activity go on, but should be accelerated to support the front-line effort. What is required is "defence in depth" which is another name for industrial production and therefore it is clear that distribution plans for the Oil Industry must have a total look. This total look must embrace the

requirements of the defence forces as well as the life of the economy. This means that while current defence requirements and stockpiling should have the highest priority, the full requirements of Indian industrial development must also be additionally met. Only then can we have a balanced and integrated approach to the requirements of the emergency. Mobilisation of resources both for defence and development is not easy, but oil is the one sector of the economy where the two should go hand in hand.

Hard figures arising from the present emergency are not yet available to determine trend lines but one may assume that the fourth quarter in 1962 will see pressure on Aviation Fuels for obvious reasons. In this matter of supply of Aviation Fuels, much planning has yet to be done; while the flexibility and preparedness of companies like Burmah Shell did much to cope with the emergency, complicated issues of blending different type of fuel, the type of aircraft to be used, the design of fuellers for mercy operations, the manner of holding reserve stocks to meet a real emergency, the provision of railway sidings at airports—these and a number of other problems must receive high priority attention.

In view of the inherent properties of oil, namely its liquid stage and its inflammability, transport is not an external item but an inherent problem to be solved within its own orbit by the Oil Industry or through agencies which offer specific services to the Industry—such as the Railways. India has its own special problems of oil storage and distribution. Whereas in a country like Holland, any market can be reached within a matter of hours, the leads from the supply base in India are very long indeed; to quote a few, Kandla feeds Pathankot and Srinagar, Bombay's limit extends to Delhi and beyond, while Moradabad is in Calcutta's orbit. It requires no detailed arguments to show that the transport system in India is under strain.

The emergency has highlighted the weaknesses in the transportation system. The average turn-around time for a tank-wagon from Bombay to Delhi is 12 days which is made up of 3.5 days in Bombay marshalling yards, 2 days in Shikharbasti and 6.5 days in transit and it is clear that the decantation and unloading capacity of the system needs as much improvement as the timing of the transit itself. An ordinary goods train traverses on an average 40 miles in 24 hours but the special achievements of the tank-wagons carrying crude from Ankleshwar to Bombay in 24 hours as against the normal four days have demonstrated that improvements are in fact possible.

While defence stockpiling behind the area of combat must continue,

it must be stressed that meticulous planning is necessary, involving among other items, adequate distribution facilities to meet the full assessed requirement both current and reserve—civil and military. From the oilfield to Ladakh or NEFA, there is the tanker, the tank-wagon, the tank-lorry, not to mention non-physical obstacles like the import licensing apparatus. The new priorities of the situation demand that there should be no hiatus anywhere both for defence requirements and civilian consumption. Here the country can do no better than rely on the well-tryed distribution organisations which exist in the country. The emergency has demonstrated that wherever State authorities took advantage of the know-how available in the Oil Industry—particularly upcountry—the size of local shortages which inevitably developed under the emergency was held firmly under control.

In the new priorities which are beginning to be clearer, it is clear that the road system of the country will have to be used with more flexibility. Here we immediately come up against the fear of road-rail competition, and restrictive measures enjoined by RTO's which have no longer much validity. In Bombay, the movement of road lorries is restricted and probably this applies equally to other places. Road transportation should be given full freedom and the present pricing system for petroleum products based on rail freight prevents the full use of alternative means of transport.

To sum up, we have seen that our military preparedness is linked more than ever to our industrial preparedness, and if this is accepted, we must wish to achieve it in the shortest possible time at the most economic cost—particularly in foreign exchange. Thus the new priorities for oil emerge unambiguously in some such items as the following:—

- (1) The paramountcy of self-sufficiency in the various petroleum products to meet the full civilian and defence requirements by 1966.
- (2) Consequential plans for added refining capacity up to the full product requirements.
- (3) The inevitable urgency to achieve this target in the shortest possible time—improving, if possible, previous records of refining construction.
- (4) New capacities at the lowest possible cost—and if foreign expenditure can be totally avoided by the country—a higher priority being given to such proposals.
- (5) On the operational side, streamlining movements and removing bottlenecks,—physical, psychological and ideological.

FOREIGN AID

Colombo Plan

By far the greater part of the assistance under Colombo Plan comes from the six member countries outside the areas—Australia, Britain, Canada, Japan, New Zealand and the United States. Brief details of some of the major items of capital aid and technical assistance given by these countries are as follows:—

AUSTRALIA

During the year, Australia's expenditure on capital aid and technical assistance under the Colombo Plan amounted to £A 3,999,000 bringing the total Australian contribution since the beginning of the Colombo Plan to £A 43,621,000. The arrival of another 543 Colombo Plan students in Australia during 1961-62 brought the total number of Australian training awards to 4,071.

In 1961/62, 237 awards were granted under the correspondence scholarship scheme, inaugurated by Australia in 1955, which brought the total number of awards to 2,766. The cost of the training programme to 30 June, 1962, was £A 6,195,000, including about £A 995,000 last year. On 30 June, 1962, 65 Australian experts were in the field, bringing the total of Australian experts and advisers since the beginning of the Colombo Plan to 668.

Australian expenditure on technical equipment during the year was £A 297,000 which brought the total since the inception of the Colombo Plan to £A 1,905,000 and the number of projects implemented, or in the process of being met, to some 530 in 15 countries.

Expenditure of £A 2,232,000 on capital aid during the year brought Australia's contribution in the field to £A 33,027,000 spread over 110 projects in 14 countries. In addition to the above, Australia has contributed aid to the Colombo Plan area through the Indus Basin Development Fund.

BRITAIN

The British Government spent £30.97 million on capital aid and technical assistance for development in South and South-East Asia, bringing the total of such expenditure since the beginning of the Colombo Plan in 1951—to £213.8 million. Additional commitments of the Government at 30 June, 1962, amounted to £108.4 million, including Britain's £20.8 million contribution to the Indus Basin Development Fund, which will be paid over the period up to 1971-72.

During the year ended 30 June, 1962, the British Government spent £29.4 million capital aid; bringing the total of such expenditure since 1951 to £205 million. Additional capital aid commitments at 30 June, 1962 amounted to £107.1 million. British companies and private investors continued to be active within the Colombo Plan

area. The total of British private investment in the area in 1961 is estimated to have been £25 million.

During the year ended 30 June, 1962, the British Government expenditure on technical assistance totalled £1.57 million, bringing the total of such expenditure since 1951 to £8.67 million. Commitments at 30 June, 1962 totalled £1.28 million on 30 June, 1962, there were 611 Asian students in Britain undergoing training, bringing the number who have received instruction in Britain under the Colombo Plan since 1951 to 4,530, during the year ended 30 June, 1962, 50 experts were provided compared with 42 in the previous year, bringing the total provided since 1951 to 471. Equipment for training and research was provided during 1962 to the value of £362,568 bringing the amount spent since 1951 to a total of £2,417 million.

Out of the total of £130,000 of aid promised by Britain for the Mekong project, £58,000 had been spent by the end of June, 1962. During 1961-62 the British Government spent £1.5 million from the grant of £20.3 million which it has agreed to subscribe to the Indus Basin Development Fund over the period from 1960 to 1972.

CANADA

Canada has made available a total of \$381.7 million for capital and technical assistance to member countries of the Colombo Plan, all in the form of grants. In each of the past three years \$50 million has been appropriated annually by the Canadian Parliament for Canadian contribution to the Plan.

In the ten years since the Colombo Plan came into operation, approximately 47 per cent of Canada's contribution has been expended on participation in construction projects (chiefly power stations, transmission lines, ground and aerial surveys) and the provisions of industrial or agricultural equipment. The provision of commodities, including foodstuffs, metals, woodpulp and fertilizers, represents roughly 47 per cent of Canadian expenditure in this period. Technical assistance has taken about 3.4 per cent of the Canadian contribution and the remainder has been devoted to capital equipment. In addition to its Colombo Plan contributions, Canada has in the past ten years made available to certain member countries loans and grants totalling \$100 million for the purchase of wheat and flour.

A substantial part of Canadian capital assistance in 1961-62 was again provided in the form of industrial or agricultural commodities, continuing a trend which has been apparent now for several years. During the current year several major projects to which

Canada has contributed were formally inaugurated in Ceylon and Pakistan.

In addition to continuing grant aid under the regular Colombo Plan programme, Canada offered long-term export credits for the purchase of capital goods by countries in the Colombo Plan area for the first time during 1960-61. \$25 million of such credits have now been committed to India and \$15 million to Pakistan.

The total Canadian cost of the aerial surveys of the Lower Mekong River is \$1.3 million.

In 1959 Canada undertook a special programme to supply \$2,500 worth of textbooks for each recognised medical school in the Colombo Plan area. The funds for this programme were increased in 1960 from \$196,000 to \$220,000 to allow for the inclusion of additional schools.

Canada's two-year programme of supplying of textbooks (\$220,000) for recognised medical schools in the Colombo Plan area, is now drawing to a close, with books having been supplied to a total of 86 medical schools in South and South-East Asia.

Since the inception of the Colombo Plan to 30 June, 1962, training has been provided in Canada for a total of 1,868 persons from sixteen member countries of the Plan. The number of trainees in Canada at the end of June 1962 was 323. A total of 220 individual Canadian experts or advisers excluding Canadian technical personnel on capital projects, had been sent to the Colombo Plan area on technical co-operation assignments up to the end of June 1962.

JAPAN

Since its participation in the Colombo Plan in 1954, Japan's contributions to the Colombo Plan countries have steadily increased year by year. During the period between fiscal years 1954-55 and 1962-63 inclusive, budgetary appropriations for technical assistance to the Colombo Plan region have totalled 3,024 million yen.

During this period Japan sent 478 experts (including 53 for technical co-operation centres) to Colombo Plan countries and received 835 trainees for training in Japan. In addition, 1,090 participants from Colombo Plan countries came to Japan under the Japan-United States Third Country Training Programme. On 30 June, 1962, the actual disbursements since 1956 under Japan's economic assistance to Colombo Plan countries amounted to 47,842 million yen and the outstanding balance of commitments to 134,978 million yen, including grants under the Agreements for Economic and Technical Co-operation with Cambodia and Laos and loans and lines of credit supplied to India, Indonesia, Pakistan, the Philippines and Vietnam.

During the period from 1 July, 1961 to 30 June, 1962, Japan provided the services of 118 experts. Japan's total expenditure on the

Mekong River Development project amounted to 59 million yen during the period.

PRIVATE INVESTMENT

Japanese private investment in the areas as of 30 June, 1962, amounted to 6,355 million yen, while the payments made under reparations agreements for development in the Colombo Plan area amounted to 132.4 million yen.

NEW ZEALAND

New Zealand has made available, up to 31 March, 1962, a total amount of £11,144,063 for capital and technical assistance under the Colombo Plan. A further £1,000,000 has been appropriated during the current financial year, bringing New Zealand's total contribution for Colombo Plan purposes to £12,144,064 as at 31 March, 1963.

During the year ended 30 June, 1962, New Zealand's expenditure on capital aid and technical assistance amounted to £753,452 which brought the total expenditure on Colombo Plan activity since 1951 to £9,137,176. New Zealand had, however, entered into firm forward commitments of £1,384,085 in respect of capital aid projects as at 30 June, 1962, together with indeterminable amounts in respect of experts already in the field and trainees undergoing courses in New Zealand.

The expenditure of £278,575 during 1961-62 brought the total of New Zealand's contribution in the form of capital equipment and cash grants to £6,815,653. This amount has been expended on 49 projects in the 15 area countries. It also includes New Zealand's

contribution to the Mekong River Survey and to the Indus Basin Development Fund: Most of New Zealand's capital aid has taken the form of direct transfers of overseas funds.

New Zealand's technical assistance expenditure during the year amounted to £474,877 bringing the total expenditure since 1951 to £2,321,523.

The arrival in New Zealand during 1961-62 of another 218 students brought the total number of New Zealand training awards to 1,113. At the end of June 1962 there were 371 Colombo Plan fellows and students studying in New Zealand.

New Zealand's expenditure on aspects of the Mekong River Survey to 30 June 1962 amounted to £57,168. A further contribution

of £100,000 was transferred during 1961-62, bringing New Zealand's total to the Indus Basin Development Fund to £200,000 to date.

UNITED STATES

United States Government obligations and commitments for capital and technical assistance to members of the Colombo Plan totalled \$1.67 billion in 1962. Under the Foreign Assistance Programme, \$954 million was provided through the Agency for International Development in the form of loans, grants and technical assistance. Under the Agricultural Trade Development and Assistance Act, \$500 million equivalent was provided in local currency derived from the sale of agricultural commodities and additional assistance provided for emergencies and voluntary relief agencies. The Export-Import Bank provided \$99.5 million in long-term credits. Since 1, July 1951, the United States Government has provided approximately \$10 billion to member countries to assist in their economic development.

During 1962, 472 Peace Corps members were sent to Colombo Plan countries and an additional 270 volunteers were in training.

The United States also provides support to such international organizations as the United Nations Special Fund, the United Nations Expanded Programme of Technical Assistance, United Nations Specialised Agencies, the IBRD, and the International Development Association, which extend assistance to Colombo Plan countries. In addition, private United States Organizations, business and philanthropic, assist in increasing both the economic and technical resources of the Colombo Plan members.

A total of 2,739 persons from Colombo Plan countries were trained under US Government auspices between 30 June, 1961 and 30 June, 1962. Of these 1,593 came to the US and 1,141 were sent to other countries for training. The third-country training programme is a co-operative training programme in which other countries share in the training and its costs for US sponsored participants.

The US investment guarantee programme is designed to stimulate the flow of private capital to these areas. During fiscal year 1962, guarantees were written for \$6.8 million in the Colombo Plan countries which have Investment Guarantee Programme bilateral agreements with the US. At the end of 1961, direct private investment from the US to Colombo Plan countries totalled \$901 million.

THE WORLD BANK

Up to 30 June 1962 the International Bank for Reconstruction and Development made available over US \$1,300 million to member countries in the area of which about US \$200 million was provided in 1961-62.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

Mrs BANDARANAIKE and her fellow peace-makers have left New Delhi after having explained their proposals for bringing India and China to the conference table. Presumably, besides elucidating points in their proposals that India found imprecise, they also were able to give information on China's understanding of them. After all, Mrs Bandaranaike came to Delhi after she had been to Peking and she has also committed herself to the view that communist China's response has been "positive", whatever that may mean. The exact terms of the Colombo proposals are still officially a secret—Mr Nehru was reportedly reluctant to let even some MPs who met him into his confidence saying that he wished the Ceylon Prime Minister to make it public. But the broad implications of the proposals have been knowledgeably discussed in the press for sometime now. If the assumptions made in such discussion are correct, it would seem that the area of difference between Chinese and Indian stands is narrowed almost entirely to dispute about dispositions in the Ladakh area. China would move—substantially, but not totally—behind the 8 September 1962 line. But—herein lies the snag—India cannot move in consequence to positions she held on September 8. For, grafting the Chinese notion of an area of "disengagement", the Colombo proposals would wish us to stay where we are now. In other words "restoration of the status quo ante 8 September" is conceded insofar as the Chinese positions are concerned but not insofar as Indian positions are concerned. The policing of the disengaged area is a matter on which there are either no definite proposals or if there, still a secret. The terms of such policing may well turn out to be crucial and such as to make it difficult for either side to reject the substance of the Colombo proposals without seeming to be too rigid. Well, we shall know soon enough.

None can say that President de Gaulle doesn't know his mind or is coy about giving a piece of it. "Our mutual headache" was how Roosevelt described him to Churchill in one of his not infrequent moments of exasperation with the general. The former Naval Person, despite a certain romantic admiration for the Frenchman, was disposed to agree calling him a "most difficult man." Mr Kennedy and Mr Macmillan are roughly the same predicament as

their respective predecessors, will be even readier to agree. If any thing, de Gaulle on the top of the world, well-pleased with himself after Algeria out of the way and politicians put in their ineffectual place, is even more of a headache than de Gaulle sulking at imaginary slights. Mr Kennedy is too young to be able to make this comparison but Mr Macmillan has had exceptional opportunities to do it. As Churchill's deputy at the Allied Forces Headquarters, Mediterranean command, it was his duty in 1943 to try to persuade de Gaulle out of a conviction to which he probably owes all his success—the notion that he was, in a sense that is at once literal and mystical, France. Events were not propitious to de Gaulle's notion of himself and of France then and he retired in dudgeon. Much water has since flown down the Seine and all that is dim history today. The things he said on Monday and their timing. A harassed Mr Heath returns to Brussels to take up the threads of negotiations with the Six, and in Paris, bang goes the door on his face. There can hardly be any doubt that de Gaulle knew what he was doing: for de Gaulle's views on Britain's desire to join the EEC were hardly a secret and that he should have thought it expedient to air them just on the day negotiations were resumed is significant. Britain, he said in effect, should drop her "insular and maritime" attitudes, empire affiliations and loyalties if she was really anxious to join the European community. Almost derisively, he offered an "associated status" should Britain find it difficult to cut herself free from her shackles. (Later in the week, he professed himself surprised at the sharpness of the reaction to his views. He couldn't understand, he said, why people should get worked up because he called Britain an island.) He also took a dim view of an EEC that will accommodate the EFTA within it, since an Europe of such dimensions will be a "colossal Atlantic community dependent upon and controlled by the USA which would tend to absorb it". Which led him on to tell the US where it got off. He rejected with barely concealed contempt the offer of Polaris and went out of the way to bring in the "gigantic fact" of Russia's nuclear strength "sufficiently powerful to call the life of America in question." It was more a snub than an argument. It is clear, if it ever were in doubt, that de Gaulle has very definite notions about the kind

of Europe he wants. Mr Kennedy, who is credited with a recently acquired desire to give American leadership of the "free world" greater content has his work cut out for him in Europe.

As for Mr Macmillan, he can take such comfort as he can from the fact that certain other members of the EEC have been prompt in dissociating themselves from de Gaulle's views. Indeed, it is even possible to argue that the conditions that the French President listed for Britain's qualifying to join the EEC have already been fulfilled. (Hazarding a none too rash prophecy, I will say that the next issue of the Economist will do so.) The question that de Gaulle wanted Britain to answer was: "can Britain really place herself inside a common continental tariff, abandon preferences in regard to the Commonwealth, cease to claim that her agriculture needed privileges and cease to insist on the admission to the market of the other European Free Trade Association countries?" The answer to this question can, in a narrow technical sense, be in the affirmative. The common external tariff, (which incidentally is one of the unlovely features of the EEC, making it a inward looking protectionist set-up,) is, except to the extent that exemptions are allowed for specific commodities under the several schedules to the Rome Treaty has already been accepted by Britain. Such exemptions as she has won are not a special concession to her, for even existing members have agreed on nil or low tariffs for many commodities of special interest to each. Secondly, Britain is to take no more time in erecting the common external tariff than what the present members are allowing themselves, (which, incidentally, disposes of the pretence that some favour has been conferred on India in phasing the increase in tariff against her textiles.) As for British Agriculture, the quarrel now is not so much on "special privileges", which were never solicited, as on the mode of phasing the transition and in this, the six, particularly France and Germany, have a few bones of their own to pick. And as for EFTA, the Brussels negotiators have not yet got round to it, but it is doubtful if Britain has any intention of insisting on automatic membership of the EEC for the members of the EFTA. Thus, on the four crucial economic issues, Britain's other loyalties are unlikely to be serious obstacles to entry. Nevertheless, as the whole tenor and certain other specific parts of de Gaulle's Press Con-

ference showed, there is a profound chasm that divides Britain's and de Gaulle's conception of an European community. How far the other members of the Six will succeed in "containing de Gaulle" is a difficult question to answer. To Mr Macmillan, hard pressed at home with the election not too far off, de Gaulle is more than a headache: he is a pain in the neck.

The Katangan imbroglio is probably getting sorted at long last, but keep your fingers crossed. Too often in the past have hopes, too eagerly entertained, been tragically deferred. Indeed, the real attempt to force Katanga into the Congo started only as the UN had optimistically announced in September 1961 that the Katangan secession had ended. Mr Hammarskjöld was caught in the big-power cross purposes that in effect set the UN will at naught and never lived to escape the tangle through which he tried to pick his way carefully. The effort, as Mr C. C. O'Brien, the Irish diplomat who was the UN representative in Elizabethville at the time and who resigned in protest, recalls in his brilliant book on the affair, seriously tarnished the shining image of himself that Mr Hammarskjöld had otherwise projected in his life-time. U Thant has been luckier. Though much the same kind of dilemma that troubled his predecessor pursued him too, it didn't overwhelm him. We shall probably have to wait for the time when the present becomes history before we know the whole truth about the affair. But allegations of local UN officials exceeding instructions and of a "generals war" made in connection with the present series of operations in Katanga bear a family resemblance to the events of 1961. The Secretary General was described as "embarrassed" by the UN troops taking Jadotville but fortunately Tshombe's antics were too much even for his supporters. There was a note of panic in the Union Minière announcement of Tshombe's plans to blow up installations in Kolwezi and the Katangan leader's alternate cringing and blustering was becoming altogether too embarrassing for his friends. There was therefore no great ardour behind the protests against the alleged defiance of instructions by the local UN authorities. According to the latest indications, Tshombe is returning to Elizabethville to "co-operate with the UN in carrying out the U Thant plan for unification of the Congo." One can never be too sure of Tshombe, but this time it looks as though he has thrown in the towel. This doesn't automatically mean the end of all trouble in the Congo, but it looks as if the UN can get out of the Congo before it becomes completely insolvent, thanks largely to the operations in the Congo.

INSTALMENT CREDIT FOR EQUIPMENT OR MACHINERY

The State Bank of India

have pleasure in announcing the introduction of 'Instalment Credit Scheme', to cater to the needs of industrialists. In approved cases, the purchase of equipment or machinery will be financed by loans repayable in monthly or quarterly instalments spread over a period up to five years on easy terms.

For details, please contact the nearest Branch of the Bank.

(From Our New Delhi Correspondent)

Programme for the Current Year

At its first meeting the Council drew up a working programme for the current year to cover some of the important commodities like vegetable oils, fish and sea foods, coir and coir products, ginger, pulses, turmeric and onion. For manufactured articles, four study groups were constituted—one each for chemicals, engineering products, jute and jute products, and for some selected handicrafts. These study groups will report to the Council the programmes, procedures and specifications for different products for pre-shipment inspection and quality control in consultation with the concerned industry and trade interests.

The draft of the Export (Quality Control and Pre-Shipment) Bill, 1963 was also endorsed at the first meeting of the Council. The draft Bill, it is learnt, follows the international pattern of such

legislation prevailing in most countries.

In his address the Minister for International Trade also stressed the need of maintaining price stability which is as important as quality control. Violent fluctuations in prices had disrupted foreign markets and, as a result, many Indian commodities had lost their export outlets. Government, he said, had initiated several measures to ensure price stability such as price support schemes, schemes of floor and ceiling prices and canalisation of exports.

Agricultural Prices

The success of measures to ensure stable prices will call for the co-operation, not only of the trade and trade organisations but also of different ministries of the Central Government as well as of the State Governments. It is necessary to ensure that policies adopted by different Government agencies do not work at cross purposes as has occurred sometimes

in the past. Stability of the prices of agricultural commodities is basic to any programme for stabilisation of export prices. For, agricultural prices influence export prices both directly and indirectly; directly because agricultural commodities form a large proportion of the country's exports, and indirectly because the prices of commodities like food-grains govern the cost of production of manufactured articles.

The success achieved in maintaining the price line in regard to food prices was noted with satisfaction by Mr S. K. Patil, Minister for Food & Agriculture, at a meeting, last week with the Ministers of the three States of U.P., Rajasthan and Punjab. The meeting, it is understood, considered measures to accelerate their production programmes both for food grains and cash crops. Considerable attention it is learnt was also devoted to the question of resources and promotional campaigns relating to fertilisers, seeds etc. Mr Patil is understood to have stated that the question of resources was under study and that efforts were being made to earmark additional funds for agricultural programmes.

The outlook for increased use of fertilisers, is said to have improved to a considerable extent in recent months. As the price differential between Ammonium Sulphate and Calcium Ammonium Nitrate has been increased to Rs 50 per ton, there is increased demand for the latter. In a special

promotional campaign launched recently in Punjab, about 50,000 tons of fertilisers were distributed in a fortnight.

Arrangements are under consideration for increased use of road transport to move fertiliser stocks from Nangal. In Uttar Pradesh the State Agricultural and Co-operative Departments propose to improve the set-up for the distribution of fertilisers. A high power Committee has also been set up in U.P. to prepare a scheme for increasing per acre yield of sugarcane in and around sugar mills by increased use of fertilisers and irrigation.

Cane for Sugar Mills

The meeting, it is understood, also discussed the difficulties faced by sugar mills in getting adequate supplies of cane. It was noted that these difficulties had arisen because of diversion of cane from mills to the manufacture of gur. At some places the gur manufacturer was able to give a better price to the cane-grower than the sugar mills. The whole position is being examined by the Government and remedial measures, including steps to divert more cane to sugar and incentives to cane-growers to increase production by raising per acre yield, are under consideration. The Central Government's proposal to set up a Sugar Marketing Board and an Agricultural Commodities Board was also discussed at the meeting.

Firestone

World's Leading Producer of Rubber

Nobody builds tyres like Firestone, world's leading producer of rubber. Nobody tests tyres like Firestone—and millions of punishing tyre miles each year prove it. In fact, no part of a car is more thoroughly proved than its Firestone tyres. Motorists everywhere in the world, trust the tyre that's built, tested and backed by the Firestone name. It's their surest sign of value. They know what they are getting when they buy Firestone.

Indian Oxygen Limited

Chairman's Statement

The following is the statement circulated by Sir John Douglas Keith Brown, Chairman, Indian Oxygen Limited to the Members of the Company with the Annual Report for the year 1962. The 28th Annual General Meeting of the Company is to be held in Calcutta on the 8th February, 1963:—

This review deals with a period which ended before the proclamation of the present emergency. Nevertheless, I feel that it is appropriate that I should begin it with a reference to the situation created by the attack launched by Chinese Government Forces on Indian territory. While armed conflict between nations is rightly to be deplored by all thinking people at any time for the loss of life which it inevitably involves, and for the suffering which it entails for bereaved families and those who are rendered homeless, it is indeed tragic that at a time when such vast efforts to raise the admittedly low standards of living of the mass of the Indian people were being made by means of planned industrial development, a part of that effort—possibly a substantial part over a period of years—must now be diverted to increasing and modernising the country's defences.

For industry, the task to-day is to mobilise our total resources to ensure that, so far as it is humanly within our power, every demand of the Armed Forces is met without any avoidable delay; that where possible we should indeed anticipate these demands, and contrive by our ingenuity to overcome the shortages and the bottlenecks to production which are inevitable features of a situation such as that in which we now find ourselves. This involves the maximum degree of co-ordination; not merely between the various Ministries of Government, but within industry as a whole, and more particularly between Government and industry. Your Company is engaged in an industry which, in the context of defence production, is vital and I am sure I need hardly tell you that we have already assured the Government of India of our readiness to do whatever may be required of us to meet defence production demands.

PROFITS, TAXATION AND DIVIDEND

The final outcome of the year's trading, after providing for depreciation and all taxation, is a profit of Rs. 80,82,869 as compared with the previous year's figure of Rs. 71,30,284. This may appear at first sight to be somewhat disappointing in a year in which gross income increased from Rs. 7.58 crores to Rs. 8.90 crores; but if the

accounts are examined in detail it will be found that in fact the net profit, before charging taxation, increased from Rs. 1,07,55,284 to Rs. 1,35,49,869 despite the fact that the charge for depreciation alone increased by practically Rs. 5 lakhs as compared with the previous year. The fall in net profits after taxation is accounted for by the fact that in addition to the necessity of providing for taxation at an increased rate this year, we have also had to provide for the shortfall in the previous year's taxation provision. This is an unavoidable adjustment in the case of a company such as ours, closing its accounts at 30th September, in any year in which the rate of tax on corporate profits is increased by the Finance Bill, which is not normally introduced until a date subsequent to the date of our Annual General Meeting. To aggravate the disparity in the taxation charge we have this year had to provide Rs. 13 lakhs, being the tax payable at 12½% on the bonus issue of share capital made in September, 1962—a heavy price to pay for a very necessary adjustment to our capital structure. While there can be differing views regarding the equity of taxing bonus issues which have been made out of accumulated taxed profits which might otherwise have been distributed to shareholders as dividends, I am myself quite unable to see the justice of levying an additional tax on the capitalisation of premiums which have been paid in cash by shareholders on subscribing for additional shares in a company. Personally, I feel that it is only right and proper that companies should be encouraged to issue additional capital at a proper premium; but I am sure that the practice would be much more acceptable to the investing public and to company managements if it were not for this inequitable tax on capitalisation of premiums which have been subscribed by the shareholders themselves in cash, possibly out of their own taxed savings.

We continued to be faced during the year with rising costs in a number of directions. In terms of the recommendation of the Tariff Commission, the price of indigenously produced calcium carbide was increased from January, 1962 and the consequent further rise in the cost of production of dissolved acetylene compelled us to raise our selling prices from 15th February, 1962. Mild steel rods and core wire required for producing electrodes had to be largely imported at substantially higher prices, which forced us with reluctance to raise the selling prices of electrodes with

effect from 1st November, 1961 to cover some part of the increased cost of production. Generally speaking, however, increasing costs in other directions were absorbed by the expanded scale of our operations, which is the direct result of the heavy capital expenditure incurred in recent years and it was this which largely contributed to what I and my colleagues regard as a very satisfactory increase in turnover and trading profits.

At the time when the proposal to capitalise Rs. 1.04 crores out of the Company's reserves was announced in April, 1962, it was made clear in a statement in the Press and to the Calcutta Stock-Exchange that the proposed issue of bonus shares did not signify an intention to maintain the same rate of dividend on the increased capital, or indeed to increase at all the total amount distributed as dividends. In fact, in consideration of the increase in trading profits, your Directors have recommended a small increase in the distribution and you will see from the Profit and Loss Appropriation Account that the 12% dividend proposed will absorb Rs. 43,68,000 as compared with the previous year's disbursement of Rs. 39,00,000 in respect of the 15% distribution for that year on the smaller capital.

SALES

Sales, which last year were at a level of Rs. 7.56 crores, rose this year to Rs. 8.87 crores; an increase of Rs. 1.31 crores or 17%, which I am sure you will agree is extremely satisfactory. These successful results have been achieved in spite of a number of difficulties. The Finance Bill which was introduced in the Lok Sabha on 23rd April, 1962 provided for the imposition of an excise duty on oxygen. This development created quite a few administrative problems which, however, have since been satisfactorily resolved. On account of the foreign exchange shortage, procurement of adequate quantities of raw materials was never easy and shortages were particularly felt during the year in supplies of mild steel core wire used in electrode making and ammonium nitrate used in producing nitrous oxide. Continued power shortages at most of our operating centres again interfered with production and raised operating costs. It is a matter for satisfaction, however, that in spite of these difficulties the rising trend in our turnover over the past few years was successfully maintained. I may point out that in the last five years our turnover has shown a steady rate of increase of 16% to 17% per annum compound.

Substantial increases were achieved in sales of pipeline oxygen to the steelworks at Jamshedpur and Burnpur as well as in the sales of liquid oxygen explosives used largely in open-cast mining, while sales of liquid and compressed oxygen also improved appreciably. Sales of dissolved acetylene again rose this year, as did our sales of electrodes and gas-user equipment, which were produced in greater quantities.

SHARE CAPITAL AND FINANCE

Just before the close of the year, the share capital was increased by Rs. 1.04 crores by the issue of 10,40,000 new ordinary shares as a capital bonus on capitalisation of Rs. 48 lakhs standing to the credit of share premium account and a sum of Rs. 56 lakhs forming part of our undivided profits standing to the credit of general reserve. As a result of this operation, the paid-up capital of the Company is now Rs. 3,64,00,000 and the opportunity of the general meeting which was held at the end of September was therefore taken to increase the authorised capital from Rs. 4 crores to Rs. 8 crores to provide for further issues of capital, which will inevitably be required to finance some part of the future development of our business, although I should make it clear that there is no immediate intention of issuing further capital.

Capital expenditure incurred during the year amounted to Rs. 1,32,35,506; this covered a number of projects all over the country, which are referred to in some detail hereunder. Most of our capital imports were arranged against foreign exchange entitlements already in our hands so that no new scheme for foreign exchange loan financing was involved, although you will have observed that our overdraft with our Bankers in India increased further during the year. We have reached a stage, however, where, in order to finance further large scale developments, which we believe to be urgently necessary, we shall have to seek further substantial loans in foreign currencies. Negotiation of such loans with the financial institutions and the procurement of the relevant import licences inevitably involves much delay, and in view of the relative urgency of implementing some of our development projects, we are particularly grateful to The British Oxygen Company Limited for having agreed in principle to make further advances by way of loan, up to a total of £500,000. I shall refer to this matter in more detail later in this statement.

DEVELOPMENT AND EXPANSION

At a meeting of shareholders held on the 27th September last, it was agreed to incorporate in our Memorandum of Association certain additional clauses dealing with the objects of the Company and we are now seeking the consent of the High Court in Calcutta thereto. As was explained in the statement which accompanied the notice convening the meeting referred to, it is proposed to undertake the manufacture and installation of, and to deal in, plant and machinery for producing and using gases and for manufacturing electrodes, gas using equipment, welding transformers etc. Ours being a capital-intensive industry and most of our plant having previously been imported from abroad, you will appreciate that the implementation of this scheme will result in substantial savings of foreign exchange. Apart from manufacturing plants for our own use, we intend to undertake to install such plants and render technical assistance to others.

I had indicated last year that in step with increasing oxygen requirements in the Jamshedpur area, the Company had taken in hand a programme to install three additional 400M³ oxygen plants in our factory there. I am happy to report that all three plants have now been installed and have commenced commercial production.

The installation of a new dissolved acetylene producing plant at Gauhati was completed during the year and is now in commercial production. This supplements the oxygen producing facilities installed at our own site there last year and provides a local source of supply of Assam's requirements of oxygen and acetylene, which in the light of subsequent and recent events in that part of the country can only be described as a most timely development.

Considerable progress was made during the year with our development plans at the Bombay Factory. Civil work mainly centered round a new bay to accommodate the nitrous oxide plant and a new oxygen filling deck with an attached despatch office. The second 400M³ oxygen plant which was licensed for Bombay last year is now under erection and is expected to be on stream in February next year. The nitrous oxide plant was installed and has been in commercial production since October, constituting our second source of supply in the country of this important anaesthetic agent.

Land was purchased during the year at Hyderabad, and plans are now being laid for erecting a factory to manufacture oxygen and dissolved acetylene there.

An extension to the Electrode Factory building at Khardah, near Calcutta, was completed during

the year and an additional electrode producing machine installed. The newly licensed wire mill has also just been erected and preliminary runs have already been made in drawing our own wire for electrode making. Additional machines were installed in the Equipment Factory at Beliaghata, which was reorganised along new lines some months ago.

Land has been purchased at Ranchi for building a modern factory to produce 'Loxite' cartridges, a component of liquid oxygen explosives. This activity has hitherto been carried on at Burnpur, where the available facilities have, however, now become outmoded.

COMPETITION

In the same way that availability of electric power is indispensable to the development of the economy generally, so is an increasing supply of industrial gases essential if the output of the engineering industry is to expand. And just as in the case of electric power supply, the availability of industrial oxygen and dissolved acetylene particularly has to be planned and capacity installed well in advance of current requirements. In my statement last year, I discussed the need for perspective planning in the context of the Government of India's proclaimed industrial policy. Your Company has at all times endeavoured to keep its production facilities one step ahead of demand but in pursuing this policy it has been necessary from time to time to take account of industrial licences issued to potential competitors during the past few years. Unfortunately, in a number of cases where licences have been issued, implementation of schemes for the setting up of oxygen and dissolved acetylene plants has been delayed through various factors, such as the shortage of foreign exchange or the difficulty in finalising terms for technical collaboration. This is particularly unfortunate in the context of the present emergency, which has already thrown up pressing or potential additional demands which, with the best will in the world, can hardly be met from existing productive capacity. The present situation emphasises the necessity in an industry of this kind to have in reserve a margin of capacity to meet unexpected demands. The actual position is that the plants installed in the country are generally working beyond normal capacity and the margin which preferably should exist between that capacity and peak demands is simply not there.

Our own assessment of the position over the next ten years, made before the present emergency gave rise to potential increased demands from industries concerned with the defence of the country, shows that there is room for newcomers, whose emergence as competitors we in fact welcome:

but I would utter a warning against retarding the sound development of existing concerns pending the coming on stream of the newer units. Whatever the justification from the point of view of the building up of a socialistic pattern of society, which in the case of this particular industry seems very doubtful, such a policy has grave dangers so far as the development of strategic industries generally is concerned.

MANAGEMENT AND PERSONNEL

The six-year agreements with our various Labour Unions covering the bonus payable to the Company's employees other than officers terminated with the bonus payable in relation to the year ended 30th September, 1960. The bonus payable for the year ended 30th September, 1961 had to be determined during the year under review and I am happy to report that this was achieved amicably under an agreement reached with the Unions covering the quantum of bonus payable for the two years, 1961 and 1962. The amount agreed was higher at five-twelfths of the basic earnings during each year, regulated within certain minimum and maximum limits.

I had referred in my statement last year to the selection of four members of the staff for intensive management training. These trainees have since been appointed officers and the results achieved fully justify the experiment. Officers of the Company continued to be trained, both inside the Company and outside at the Administrative Staff College of India at Hyderabad and through several other organisations as well as at Chartridge Lodge, a residential Staff College of The British Oxygen Group situated near London.

I have once again to record our particular gratitude to our Managing Director, Mr. A. K. Sen, who has not spared himself in directing the Company's activities. To him, to his colleagues in the management and to all staff and workpeople at our installations throughout the country, I once again offer on your behalf our grateful thanks. Having worked closely with Mr. Sen for over three years now I would assure you that this expression of thanks is no mere formality but signifies our sincere appreciation for a job well done.

Mr. C. Hawkins, who joined the service of the Company in 1952 and who was appointed a Technical Director in 1956, is severing his connection with us at the end of this month and I welcome this opportunity of extending to him our best wishes for the future along with our thanks for his services during the past ten years.

We have learnt only very recently of the death in the United Kingdom at the end of last month of Mr. D. B. A. Carty, who was appointed a Director and General Manager of the Company in 1937,

and who was Managing Director from the end of 1942 until his retirement at the beginning of 1951. Mr. Carty played a most important part in building up this Company during its formative years and he continued to take a great interest in its welfare after his retirement. It is only appropriate that we should recall at this time his contribution to the growth of the Company and also that we should extend to Mrs. Carty our sympathy in her bereavement.

TECHNICAL COLLABORATION

We have been privileged recently to receive a further visit from Mr. J. S. Hutchison, the Chairman of The British Oxygen Company Limited. In company with your Managing Director and myself, Mr. Hutchison visited Delhi at the height of the fighting on the northern frontiers last month. Mr. Hutchison lost no time in pledging the full support and technical backing of The British Oxygen Company Limited, not only to your Board but also to the Government of India, through the Finance Minister, in meeting on a priority basis whatever demands might be placed on them. While this is most heartening, it is by no means all that Mr. Hutchison had to offer us when he was here. Appreciating the delays which might be involved in arranging for the necessary foreign exchange to meet the cost of the imported components of certain urgently required developments, he was in a position to offer on behalf of the parent company to make advances in sterling to your Company up to a limit of £500,000 on terms to be approved by the Government of India. I need not tell you that this is a most valuable gesture which should greatly assist us in implementing without delay demands for additional productive capacity which, it seems to us, must be placed on us before long. I might add that in addition to this offer and while Mr. Hutchison was still with us, the Board of The British Oxygen Company Limited undertook to contribute the sum of £15,000 in sterling to the National Defence Fund. The British Oxygen Company Limited is basically a Commonwealth enterprise and I welcome this opportunity of expressing publicly on your behalf our heartfelt thanks to Mr. Hutchison and his colleagues for the speed and the extent of their response to India's needs at this critical juncture in her history. Incidentally, a measure which you will surely approve—your Board has authorised a contribution of Rs. 3 lakhs to the National Defence Fund out of the funds of the Company; while contributions on a notable scale have been made directly by employees, who have authorised deductions from their wages and salaries for this purpose.

Apart from their generous response at the height of the present

emergency, our Technical Consultants have continued throughout the year to meet all demands made upon them for technical advice, for the training and provision of staff and in various other directions. With our projected entry into plant manufacturing field we shall undoubtedly be making additional calls upon them while building up this side of our business. On your behalf, I extend to them our grateful thanks for their contribution in achieving the satisfactory results of the past year.

PROSPECTS

Company Chairmen are notoriously vague in advising their shareholders in regard to future prospects. This, in my opinion, is a wise attitude born of caution and, in many cases experience. The present emergency conditions

prevailing in this country make it particularly difficult to venture an opinion on prospects for the current year. If I had been addressing you before the declaration of the emergency, I would have said that growth prospects continued to be favourable but that, being about to enter on another cycle of fairly massive capital expenditure, I should not expect to see the same spectacular increase in trading profits in the next year or two as we have seen in the accounts which are submitted with this statement; in other words, while long term growth prospects remain favourable, because of increasing debt repayment obligations arising out of continuing capital expenditure, shareholders could not expect a further increase in dividend for another few years. While it is too early

yet to make any pronouncement as to the effect of the changed conditions which now obtain, our tentative conclusions are that it will probably be necessary to accelerate certain of our development projects in order to meet the demands of many of our customers who will be involved in the expansion of the country's defence industries. There are, however, so many imponderables connected with, for example, supplies of our own and our customers' raw materials, electric power and other items that I cannot usefully say more at this juncture. Your Company will, I assure you, do its utmost to meet whatever demands may be placed on it by the Defence Services directly or by industry generally and I am confident that with the country-wide organisation which

has been built up and with the invaluable technical backing of The British Oxygen Company Limited, we shall not fail.

PERSONAL

As this is the last occasion on which I expect to address shareholders as Chairman of the Board, I take this opportunity of extending to my fellow Directors my thanks for their unflinching support, not only in the past year but throughout the period during which I have been privileged to be associated with the Company.

Calcutta,
20th December, 1962.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

Markets

JUTE

Raw Jute Steady: Goods weak

The raw jute market continues to trade steady with sellers reluctant to discount prices. The improvement had stemmed from the sustained mill purchases. As buying however is only selective, some stages continue to be available below the minimum levels. Earlier in the week, offtake had been substantial as mills bought both on their account and on behalf of the Jute Buffer Stock Association. Toward the close of week under review sentiment became subdued in sympathy with the easier trend in the goods market. The fact that jute prices have not reached the minimum levels despite various measures taken in recent months to boost the raw jute market has aroused wide public interest. Suggestions continue to be made for bringing about a sizable improvement in sentiment. It has even been suggested that the Prime Minister should directly intervene to improve matters. According to the Chairman of the Indian Jute Mills Association, however, the task of bringing about any marked improvement is beset with two main difficulties. One is the sizable increase in the quantity of jute on offer as a consequence of smuggling and the other is the lower than in India, large scale smuggling of jute is reported to have taken place. The second militating influence mentioned by Mr. Bajoria is the weakness of the goods market where prices have declined by

several points over the past few months.

Difficulties notwithstanding, it is admitted on all hands that all concerned in the Indian world of jute should urgently address themselves to the task of stabilising jute prices. For the lasting prosperity of the industry, production of jute should not be allowed to fluctuate widely from year to year as hitherto. This will become possible only if the jute grower is convinced that his crop will yield

an equitable return. Unfortunately during this season, many things have happened to make him think twice before sowing his land with jute. It is essential that his confidence is not further impaired and this will be possible only if jute prices atleast from now on are not unduly depressed. Energetic measures have already been initiated towards stepping up the offtake of raw jute. The jute mill industry and the buffer stock association have between them bought 1.9 million bales in the last two months and they will be buying another 750,000 bales during the current month. Other agencies, notably the State Trading Corporation are also taking an active interest in the market by effecting increased purchases. These steps already appear to have

brought about a welcome change in sentiment as will be evident from the reluctance of sellers to discount rates. The improvement should be maintained by further large scale purchases atleast for another month.

Earlier firmness was not maintained in the jute goods market as in later dealings prices developed a distinctly easier trend. Reports of a substantial order for hessian from Russia pushed up prices all along the line on the opening day. The rest of the week except the last day was barren of any fresh foreign enquiry. Even the enthusiasm generated by the Russian order diminished considerably in later dealings as doubts were raised as to the exact quantity of the order. Only toward the close came the rumour about a fresh Government tender in A Twills. This helped the market to record a slight improvement at the lower levels but over the week prices have substantially declined both in hessian and sacking.

Production of jute goods during December had touched the high level of 104,200 tonnes comprising 48,200 tonnes hessian, 45,900 tonnes sacking and 12,100 tonnes other varieties. It is evident that during the month mills' working had been quite efficient as with the same number of working hours (208) mills produced only 101,400 tonnes in the previous month. The number of hours worked in December 1961 also totalled 208 but production in that month had been lower at 97,600 tonnes.

TEA

Output and Stocks

ACCORDING to the figures released by the Indian Tea Association, production of tea in North-East India has increased to 10.29 million pounds in December 1962 from 7.88 million pounds in the corresponding month of 1961. Total outturn during the current season, up to the end of December 1962, amounts to 578.11 million pounds as against 603.15 million pounds in the similar period ended December 1961, thus showing a fall of about 25 million pounds.

Production in Ceylon is expected to top an all-time high of 460 million pounds in 1962 as against 455 million pounds in 1961. As per figures released so far, production for the first ten months of 1962 amounts to 385.25 million pounds as compared with 378.69 million pounds in the corresponding period of 1961.

The world crop has also been smaller at 1,307.0 million pounds up to the end of December 1962 as against 1,320.4 million pounds in the corresponding period of 1961. Meanwhile, there has been a modest rise in world consumption. Hence, the supply of tea, during the current season, is expected to be in close balance with demand. Although the trend of prices is expected to remain steady in the coming months due to the shortfall in the North Indian crop, prices are unlikely to improve much considering that there has been the usual seasonal deterioration in the quality.

In the Export Sale held in Calcutta this week, offerings were 72,555 packages. There was a good general demand, which improved as the sale progressed. Plain orthodox broken and exportable fannings were dearer, while the remainder came to a barely steady market. "Teas for price" were well supported and realised fully firm to slightly dearer rates. The better liquoring Doars and medium Assam broken came to a good market and were firm to dearer. Equivalent Fannings eased in value. The brighter Assams were well competed for and were sold at enhanced levels with quality.

Medium CTC BPs were sold well at fully firm to dearer rates although their Fannings were irregular and slightly easier. Best CTC types were in demand at irregular rates. The more fibrous descriptions eased in value. Strong support was forthcoming for the legg-teas which were generally dearer, particularly the fibrous kinds.

Whole Leaf grades were keenly competed for at generally dearer rates. At the commencement of the sale, Tippy sorts received only fair enquiry and, at the close, they were dearer. Darjeeling teas were sold well with buyers following quality. Following rates were quoted (per kilo):—Clean Plain Peakoe Rs 4.80 to Rs 5.10; Plain Fannings 3.90 to Rs 4.40; Plain BP Rs 4.00 to Rs 4.30; Medium CTC BP Rs 5.60 to Rs 6.10; Medium Assam CTC Fannings Rs 5.40 to Rs 5.80. Best Assam CTC BP Rs 6.20 to Rs 6.60 and Best Assam CTC Fannings Rs 6.20 to Rs 6.60.

Stocks in the Calcutta warehouses, at the end of 1962, were higher at 787,496 chests as against 547,787

chests at the close of the previous month. The larger stocks were the result of increased arrivals of tea by river route following the resumption of work by the Steamer crews, who were on strike. Stocks in public warehouses increased from 321,975 chests at the end of November to 527,549 chests at the end of December, 1962 as did those in private warehouses from 225,812 chests to 256,947 chests. At the end of December, 1961, tea stocks totalled 1.09 million chests of which 708,627 chests were in the public warehouses and 384,441 chests in private warehouses. Teas afloat, at the end of December, were 183,483 chests as against only 76,536 chests on the corresponding date of 1961.

In the auction held in London this week, offerings were 25,446 packages including 23,682 packages from Northern India and 108 packages from Pakistan. The market opened with a little irregularity, but the demand strengthened as the sales progressed with prices ruling fully firm at the last week's rates.

Stocks in London, as on 4 January 1963, were slightly higher at 141.81 million pounds as against 141.16 million pounds in the previous week. The total quantity to be landed on the same date was 15.11 million pounds. Total afloat was 35.47 million pounds, including 18.39 million pounds from Calcutta; 26,000 pounds from Chittagong; 1.81 million pounds from Cochin; 13.90 million pounds from Ceylon; and 137,600 pounds from other ports.

COTTON

Wide Fluctuations

Trading in the Bombay cotton futures market during the past week was characterised by marked fluctuations owing to alternate bouts of buying and selling. The market opened the week on a steady note and the ruling Jarilla March 1963 contract smartly moved up from Rs 682.25 to the week's high of Rs 693.95 consequent on the reports of a steady improvement in cloth offtake and the proposal to constitute a Government sponsored corporation to take over the closed textile mills. The sentiment was also aided by large scale purchase of Vijay and Digvijay by the mills. It was feared that supply position would not pick-up in the immediate future as the US cotton against recent import allocation under the PL-480 would not be available before mid-March and the import of cotton under the global quota would take place only after July.

At higher levels, however, the contract met with stout resistance and sharply receded to Rs 679.00 per three quintals. The decline was brought about by large scale selling obviously due to the reports of a possibility of getting additional US cotton under a barter deal. Sentiment was rudely shaken by the heavy arrivals in the terminal markets. The market, toward the close of the week, turned considerably easy.

An important feature during the week was the complete absorption of the Bengal Deshi export quota of 200,000 bales. The speed with which the ceiling was reached created sur-

prise among the exporters in view of the conflicting reports in the market about the actual registrations and the temporary slackness in demand from Japan. The export demand for this growth particularly from Japan suddenly spurted during the last few days. It needs special mention that it has taken only just over four months for reaching the ceiling.

The spot market at Sewri reported sustained mill demand. Mill interest was prominent in 197/3, L-147 and CO-2. Bulk trading was also done in Digvijay and Vijay cotton. In the import section spinner demand for American cotton broadened.

★

The US Department of Agriculture has estimated the world cotton trade in 1962-63 nearly at 16.4 million bales as against 15.3 million bales in the previous season. The increase in cotton trade is partly due to the expected continuation of world cotton consumption near the record of 48 million bales set in recent years. Relatively large volumes of foreign cotton have moved in international trade or are committed for export to meet the needs of the importing countries.

Cotton price declines in import markets of upto 2 cents a pound strengthened the competitive ability of cotton vis-à-vis man-made fibres. Practically all of the improvement in world trade in this season will be in foreign free world countries where output is high and export availabilities are estimated at 1.25 million bales larger than in the previous season. Crop and exportable surplus are larger in Brazil, Colombia, Egypt, Syria, Mexico, Uganda and Central America. Exports from free world countries as a group are likely to reach a new peak of about 10 million bales. Net exports from free world countries to communist bloc are also expected to move up to 1.7 million bales from 1.5 million bales in 1961-62. Supplies of cotton in China are still short and imports of raw cotton are increasing. Exports from the USSR are likely to ease from last season's 1.4 million bales, if consumption is maintained. This season's production is placed slightly under last season's seven million bales.

Cotton exports from the US in 1962-63 are expected to reach 5 million running bales. Below average exports are indicated by smaller export movement in the early months of the current season, smaller registrations under the current payment-in-kind programme and record cotton production in other countries.

Cotton exports from the US in 1962-63 are expected to reach 5 million running bales. Below average exports are indicated by smaller export movement in the early months of the current season, smaller registrations under the current payment-in-kind programme and record cotton production in other countries.

PIECEGOODS

The Bombay cotton piecegoods market last week showed improved activity. In the domestic sector demand for both powerloom and mill-made goods broadened and on the export front tempo of offtake was well maintained. With a substantial business transacted by a leading local group of mills the downward swing in prices seemed to have curbed.

Mainly owing to the proximity of Ramzan business in mill-made cloth was confined to medium and coarse qualities. Fine and super-fine varieties were totally neglected. Grey

dhoties, medium coatings, shirtings, chintz and bleached longcloth were eagerly sought after by upcountry purchasers. Bihar, UP, MP, Delhi and Kanpur were the prominent consumers. The prices ruled steady. In view of the depressed conditions during the past two months the trade is optimistic of a further improvement in demand.

Activity in the powerloom sector continued to be good and prices of uncalendared grey dhoties and saris showed a slight uptrend thanks to the local offtake. Upcountry demand, on the other hand, was not so brisk. The larger turnover was also ascribed to the apprehension of further increase in the excise duty on the mill-made cloth in the coming Budget, though prominent dealers dismiss the idea as the excise duty is pretty high.

Transactions on the export front did not come upto the expectations. Sudan was satisfied with a moderate quantity of bleached mulls and grey sheetings. Exports to the UK were restricted. Business with the USA fell down to a trickle due to the uncertainties regarding the Government's import policy.

The agreement concluded between India and the USSR for the export of three million metres of Indian cotton textiles in the current year to the latter was gratefully greeted. Besides, negotiations are underway for exporting an additional quantity of two million metres. It is also reported that about 2.5 million metres of cloth would be exported to the East European countries. Burma accounted for a small quantity of usual varieties and exports to that destination is expected to pick-up future as the country has invited tenders for the supply of 75 lakh yards of shirting and poplin.

Business with Ethiopia was restricted to yarn and grey chaddar. Enquiries from East Africa for blankets, coatings and shirtings flowed on an encouraging level. Singapore was satisfied with a small quantum of mull and bleached longcloth.

★

Silver Spurts:
Demand for Gold
Persists

THAT the Government of India banned forward trading in Silver including non-transferable specific delivery contracts throughout the country, is a known fact. All outstanding contracts in the white metal were directed to be closed at the rates prevailing at the close of business on Wednesday last week. These steps were taken to prevent undue speculation in the metal.

Following the announcement of the ban, there was hardly any business on last Thursday and Friday and ready silver was nominally quoted around Rs 214. The market, however, developed a firmer tendency from the commencement of the week due to buying by Madras and Delhi parties. The market was so sensitive that even small buying orders caused spurts in values. Traders anticipated an upsurge in buying orders by way of diversion from gold where acti-

vity was virtually at a standstill following the enforcement of Gold Control Rules. Apart from this, demand was expected to broaden due to approaching marriage season. Although arrivals were much less at only 10 bars, the offtake was higher at 20 bars. With the result, the rate moved up to Rs 222 from Rs 214 on Tuesday. In the Calcutta, the ready position was quoted at Rs 215.

In the Gold section, business was at a standstill as the full implications of the Gold Control Rules were being carefully studied. Some of the bullion brokers were reported to have applied for licence to trade in ready gold under the Gold Control Rules. Since licences have not so far been issued to the dealers, they cannot officially buy gold from the public. Even after licences are issued, it is feared that the dealers will be reluctant to purchase gold on a large scale from the public. Meanwhile, ready bullion gold was placed around Rs 105. Outside sellers cannot, however, realise this rate. They are offered only Rs 95. Even at this rate, dealers are not inclined to buy larger quantities.

According to an estimate of the US Bureau of Mines, world production of gold rose, for the ninth successive year in 1962, reaching a new record level of 49.5 million ounces. World output of silver was estimated at 235.2 million ounces, showing an increase of 1.5 million ounces over 1961.

The US price of silver was raised, for the seventh consecutive time, by eight-tenths of a cent to 123.8 US cents per ounce. The rise followed the increase at London where the post price of the metal went up by 7/8 penny to 106 1/4d. This is equal to about 124.2 US cents.

SUGAR

Shortage of Cane
Supplies

There was a problem of disposing of the heavy accumulation of sugar stocks until recently. It is now felt, however, that, in the absence of measures to ensure adequate supplies of cane to the sugar mills during the current season, the output will not even be 2,500,000 metric tons.

Sugar mills in Northern India are apprehensive that it will be necessary to close down for the season even by the end of next month if steps are not immediately taken to prevent a diversion of cane supplies from areas, which are serving the factories. In Western Uttar Pradesh particularly, the diversion of cane has assumed alarming proportions and it has been represented to the Central and State Governments that the output of sugar will be affected to the extent of 200,000 tons.

In the Punjab, the manufacture of gur and khandisari has been banned in areas where factories are operating. The increase in prices of gur and khandisari has come about on account of a low, level of stocks. The mills are unable to pay higher prices for cane due to the difficult financial position. If the output of factory sugar cannot be maintained at a high level there is the danger

of a sharp rise in prices in the latter half of the year.

To check the diversion of cane, it is suggested that all power crushers producing gur in factories should be brought within the purview of licensing by the State Government. Furthermore, there should be uniform rate of cess levied on cane. At present, the rate of cess on cane is only 4 nP per manud when the cane is used for khandisari production against 19 nP per maund when it is used to produce sugar.

Fortunately, there are enough sugar stocks on hand and no difficulty will be felt in meeting internal consumption freely. But, it is apprehended that the export drive may suffer a setback if steps are not taken in time to increase output and it is also not made sure that there will be effective use of the existing capacity during 1963-64.

RUBBER

Demand Exceeds
Supply

Malaya's Natural Rubber Bureau has announced that world demand for natural Rubber outpaced supply by some 80,000 tons during 1962, the sixth year out of the past seven that sales have been bigger than production. It gave demand as 2,190,000 tons with supply as 2,110,000 tons. The Bureau states that a portion of the excess will be about 66,000 tons of Government stockpile sales, leaving a 14,000-ton lag to come from commercial stocks.

Rubber experts in Kuala Lumpur are convinced that future sales will depend on "producing and selling more at reasonable prices". At the present rate of replanting, it is hoped that Malayan rubber will be 100 per cent replanted within a decade.

PEPPER

Lower Production
in 1962

The US Department of Agriculture has estimated world production of Black and White Pepper, during 1962, at 160.7 million pounds. This is lower as compared with 168.8 million pounds produced in the preceding year. Increases were recorded by India, Sarawak and the Malagasy Republic, while smaller crops were harvested in Indonesia, Brazil and Cambodia.

World production for 1963 is however, expected to be higher, as larger crops are forecast for India and Indonesia, which together account for two-thirds of the world's supply of pepper.

★

NON-FERROUS METALS
Mixed Trends in
Prices

Prices in the Bombay Non-Ferrous Metal market showed a mixed trend last week. Better enquiry and less

offers caused the prices of Copper Conductor and Ingots to look up. Tight supply against more demand resulted in the price of Copper Scrap hardening to some extent. Owing to increased selling pressure in other copper forms, their prices declined.

There was heavy selling in Zinc at the higher levels, which proved unattractive for the time being in view of the tight money conditions. Profit-taking caused a slight decline in the price of Tin which, however, maintained its underlying strength.

On the London Metal Exchange, the demand for Copper has remained small despite the upheaval in Katanga, which must affect supplies from that area. Over the past year, copper producers have reduced their output and they have also bought heavily to reduce the surplus. Despite this, there still seems to be too much copper about and the day when the balance between supplies and demand is restored appears to be some way off.

The situation in Tin is basically strong, as world consumption of the metal is outstripping production by a sizable margin and seems likely to go on doing so. The trouble is, however, that the market is being kept at an artificially low level by sales from the American stockpile.

The Lead section seems to be a little more happily placed than it was. There have been some substantial production cut-backs and the previous heavy surplus is estimated to have been converted into a small deficit last year. For the first half of this year, production and consumption are expected to be in balance.

Similarly, while prospects for a growth in the demand for Zinc seem good, there is more than enough metal around at the present time to satisfy all buyers.

OILS & OILSEEDS

Overall Sentiment
Subdued

The overall sentiment on the Bombay Oilseeds Exchange remained subdued. The only exception to the general trend was Castor, the prices of which remained more or less steady.

In the Groundnut section, a wide gap of Rs 14.50 between spot and forward rates induced operators to take a pessimistic view of the situation. The sustained weakness in the spot position was due to heavy pressure of arrivals of the new crop. Moreover, exports of groundnut extraction tended to subside owing to lower advices from the UK, the chief buyer of Indian product. Shipments of groundnut expeller, HPS groundnut and groundnut oil were hardly noticeable. Ready Groundnut Bold was quoted at Rs 40 and Groundnut oil at Rs 16.30.

The relative steadiness in Castor was due to improved export prospects of Castor Oil. The reports of damage to the castor crop also imparted strength to the section. The crop in Brazil was also reported to be lower than that expected. Castor ready was quoted at Rs 32.19 and Castor Oil, commercial quality, at Rs 12.80.

Trading in the Linseed section was subdued, partly owing to the weakness in major seeds and partly owing to lower advices from the North Indian markets in regard to mustard. Linseed ready was quoted at Rs 37.40 and Linseed Oil at Rs 14.8.

★

CHEMICALS & DYES

Quiet Conditions

Conditions in the Bombay Dyes and Chemicals markets continued to remain quiet. Except Caustic Soda in Chemicals, all other popular items tended to move down on lack of sustained demand and the increased supply of goods. In the Dyes section, the offtake was poor, while there were good arrivals under the export promotion scheme.

The improvement in Caustic Soda was attributed to the revival of demand from the upcountry markets. There was an overall rise of a rupee in different qualities. But, at higher levels, support was meagre and prices did not show any further rise.

SHAW WALLACE & COMPANY
LIMITED.

Notice is hereby given that an Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 4 Bankshall Street, Calcutta on the 13th day of February, 1963 at 3 p.m. to consider and, if thought fit, to pass with or without modification the following Resolution: As an Ordinary Resolution:

"That approval be and is hereby accorded to the under-noted investments.

- 25 Equity Shares of Rs 100/- each in Matheson Bosanquet & Co. Ltd. at a cost of Rs 14,403.75 nP.
- 247 Equity Shares of Rs 10/- each in Wallwood Plantations & Agency Ltd. at a cost of Rs 3,539.51 nP and
- 1666 Equity Shares in Cruickshank & Co. Ltd. at a cost of Rs 15,493.80 nP.

The Share Transfer Register of the Company will be closed from the 6th February to 13th February, 1963, both days inclusive.

By Order of the Board
S. M. SMITH
Managing Director

Calcutta, the 14th
January, 1963

Note:—

- A member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote on a poll instead of himself and the Proxy need not be a Member of the Company.
- In connection with the business to be transacted, an Explanatory Statement under Section 173 of the Companies Act, 1956 is being sent to all shareholders.

Company Reports

ACC Earns More

THANKS to a substantial rise in sales from Rs 30.04 crores to Rs 34.37 crores, the Associated Cement Companies Limited has been able to report an increase in earnings for the year ended 31 July, 1962. The net profit, before providing for Depreciation and Taxation, is higher at Rs 7.57 crores as against Rs 5.75 crores in the preceding year.

In respect of allocations, the provision for Taxation is raised to Rs 2.79 crores from Rs 1.38 crores, apart from providing a sum of Rs 17.47 lakhs for Development and Rehabilitation Reserve. All other allocations have been reduced:—Depreciation from Rs 2.76 crores to Rs 2.57 crores; Development Rebate Reserve from Rs 29.28 lakhs to Rs 18.99 lakhs and Amortisation Reserve from Rs 1.11 lakhs to Rs 55,704. The dividend is, however, maintained at 12 per cent, subject to tax.

The directors state that, while the increase allowed in the retention price of cement has yielded a larger profit than last year, the same has not been sufficient to permit of distribution of even a gross dividend of 12 per cent. Governmental action has also been instrumental in raising the pit-smooth price of coal, railway freight rates, corporate taxation, etc. It is largely because of these factors that the company could not reach capacity production and the operating results fell short of expectations.

Production of "Slag" cement at Chaibasa has not yet reached its full licensed capacity. The transport of granulated slag from Jamshedpur to Chaibasa now constitutes the major bottleneck and there is no improvement in the supply position of wagons for transport.

With regard to Jamul factory, orders for all the machinery and equipments have been placed. The manufacturing programme has, however, suffered a very serious setback due to non-receipt of steel plates ordered out from the Rourkela plant. In the circumstances, the Government has granted a special import licence to import boiler quality and other plates required for the manufacture of cement machinery. These plates are expected to be received early next year. The target date for completion of Jamul Works has, therefore, had to be advanced to the middle of 1964.

The progress on the extension of the Dwarka Works has been well maintained.

Civil engineering construction work in connection with the White Cement plant at Kymore has almost been completed. Here, too, on account of the delay in receipt of boiler quality plates, the manufacture of machinery for this plant at the workshop has been delayed. The plant is now expected to go into commission by early 1964.

The Engineering Works Project at Shahabad, in Mysore State, is making steady progress.

In addition to the investment in the equity capital of ACC-Vickers-Babcock Limited of 199.2 lakhs, ACC has taken up 7 per cent Third Mortgage Debentures of the value of Rs 101 lakhs of that company out of a total issue of Rs 2.02 lakhs in lakhs to finance further capital expenditure. The balance of Rs 101 lakhs has been subscribed by Messrs Vickers Limited and Messrs Babcock & Wilcox Limited in equal proportions. This issue will commence to earn interest from 1 April, 1964.

Negotiations for the sale of the company's undertaking in Pakistan had to be abandoned on account of various difficulties faced by the entrepreneurs, which had not been foreseen earlier.

Associated Hotels Repeat

Although the gross turnover reported by the Associated Hotels of India Limited remains the same, the net profit, for the 15 months ended 30 June 1962, works out to only Rs 10.34 lakhs as against Rs 10.39 lakhs for the full year ended 31 March 1961. This difference is due to the revision of the pay scales allowances, the Provident Fund scheme being also made applicable to the hotel industry and the enhancement of the corporation tax. In this

connection, it may be mentioned that, in view of the proposed scheme of amalgamation of Chowringhee Properties Limited (a wholly-owned subsidiary of this company), which was expected to take effect before 30 June 1962, the directors have decided to extend the financial year from 31 March to 30 June.

Apart from providing Rs 80,000 for Debenture Redemption Sinking Reserve, the Depreciation amount is raised to Rs 2.72 lakhs from Rs 1.77 lakhs. The provision for Taxation is, however, lower at Rs 2.85 lakhs against Rs 6.57 lakhs and Development Rebate Reserve at Rs 16,271 against Rs 16,718. The dividend on the Ordinary shares is, however, repeated at 10 per cent, less tax.

Champarun Sugar Incurs Loss

The loss of about Rs 5.66 lakhs suffered through export, substantial increase in bank and other charges due largely to accumulation of stocks and the drop in the averages recovery — all these factors are reflected in the working results of the Champarun Sugar Company Limited for the year ended 30th June 1962. Although sales are higher at Rs 2.44 crores against Rs 1.63 crores, the accounts, after providing for depreciation, reveals a loss of Rs 9.51 lakhs as against a net profit of Rs 8.94 lakhs for the preceding year.

In respect of allocations, the Depreciation is raised to Rs 2.27 lakhs from Rs 1.78 lakhs, while Development Rebate Reserve is reduced to Rs 27,820 from Rs 84,844. No provisions are possible for Taxation General Reserve and Rehabilitation Reserve as against Rs 3.75 lakhs; Rs 60,000 and Rs 1.4 lakhs respectively, set apart in 1960-61. The dividend is skipped against a taxable dividend of 13 per cent paid previously.

The total quantity of cane crushed at the Barrah factory is lower at 13,97,590 quintals against 15,00,456 quintals, while that at the Chapatia factory is slightly higher at 14,58,429 quintals against 14,43,745 quintals.

Kirlampudi Sugar Skips Again

During the year ended 30 June 1962, the Kirlampudi Sugar Mills Limited crushed 1,05,147 tonnes and produced 1,05,080 bags which is the highest so far for any year. Though the recovery has been very satisfactory, the profits of the company have not shown any of sweet commodity, implementation of the wage Board Award and the provision of all Cement Companies Limited has been able to report arrears of depreciation.

The profit for the year, after depreciation, is substantially lower at Rs 45,336 as against Rs 1.08 lakhs for the preceding year. The provision for Depreciation is lower, at Rs 3.73 lakhs against Rs 4.00 lakhs and Development Rebate Reserve at Rs 14,720 against Rs 38,788. The dividend is passed again for the year. In this connection, the directors state that they are unable to recommend any distribution from the available surplus due to the unascertained liability to accrue due to any deferred payment payable to the Cane Growers under the Price Linking Formula from the year 1958-59 onwards.

Lower Profits for Hindusthan Building Society

The directors of the Hindusthan Building Society Ltd. have, in their report, stated that the remain- ing portion of the Society's land at New Alipore continues to be under military occupation and, as a result, there were no sales of plots during the year ended 31 July 1962. It is learnt that the Army authorities have decided to release the land early next year.

Meanwhile, the company's account, reveals a lower net profit, after providing for depreciation, of Rs 11,377 as against Rs 52,582 for the previous year. The Depreciation amount is slightly higher at Rs 2,717 against Rs 1,616, while no provisions are made for Taxation and General Reserve against Rs 45,696 and Rs 15,000 respectively set apart in 1960-61. The directors have not recommended any dividend for the year.

For the Investor

INVESTMENT GOSSIP

Apathetic Conditions

The present dull phase of the stock market may not show any marked change for another six weeks or so. The Central Budget may be expected to provide the guide lines both for the investor and the operator. Expectations are that the heavy taxation which is almost certain to come will not be of the direct type as direct taxation is already onerous. Even so, the general tendency seems to be not to make any move before the new taxation proposals are known.

It is, however, difficult to foresee a buying spree even if the budget does not bring any rude shocks to the stock market. For one thing share buying has become unattractive what with the rising trend of interest rates and the declining yield pattern. The dividend experience of the recent past cannot be taken as a criterion because industrial profits may not be maintained what with the rising cost of production and fall in output due to various shortages, including shortage of foreign exchange. It is true that the private sector has been told that its productive capacity will be utilised for defence production; but in the absence of a clear indication of how this is going to be translated into practice, the anxiety about the growing idle capacity in industry persists.

So long as the uncertainty in the political situation persists, a hesitant trend will continue to characterise trading. But since the present apathy stems from other

inhibiting influences also it would appear that if the stock market is to play its role effectively conditions should be made a little more conducive to a broadening of investment interest. With the dear money policy now more or less confirmed by the rise in the Bank Rate, equity yields should become much more attractive than they are now to draw sizable funds to the stock market. Moreover, largely because of the decline in equity values since the Chinese invasion, investors have come to experience considerable difficulty in obtaining enough funds in the shape of advances against their share holding. A more liberal policy on the part of banks in this regard will go some way in reviving confidence in the share market. The reasonable suggestion of the committee of stock exchange presidents in this connection should commend itself to the authorities. At their meeting last Saturday, the standing committee of presidents of the seven stock exchanges in the country decided to request scheduled banks to give advances on securities on the basis of market rates at 70 per cent instead of 50 per cent as at present. The committee's other suggestion that the Life Insurance Corporation should be requested to support the smaller stock exchanges in arranging its investments in securities is quite reasonable and if adopted by the LIC will considerably strengthen the smaller stock exchanges.

NEW ISSUE NOTES International Hotel

International Hotel Limited, Calcutta, will raise capital of Rs 1 crore in 1,00,000 equity shares of Rs 100

each for cash. Fortynine percent of the capital will be offered for public subscription by the issue of a prospectus.

Hope's Metal Windows

Hope's Metal Windows (India) Limited, Calcutta, is issuing capital of Rs 14,57,070 divided into Rs 12,01,070 in equity shares for cash and Rs 2,56,000 in equity shares for consideration other than cash, to be issued to Messrs Henry Hope and Sons Limited, UK, against supply of plant and machineries.

East Indian Coal

The East Indian Coal Limited is to issue capital of £144,000 in 144,000 equity shares of £1 each, at a premium of 13 shillings per share. The consent is valid up to 30 April 1963.

Bharat Cement

Bharat Cement Works (Private), Limited, Bombay, is to issue capital Rs 97,46,800 in equity shares of Rs 100 each for cash, at par.

Teksons

Teksons (Private), Limited, Bombay, is raising Rs 20 lakhs capital in shares of Rs 1,000 each, to be issued for cash, at par.

Boehringer-Knoll

Boehringer-Knoll Limited, Bombay, is raising Rs 15 lakhs in equity shares of Rs 100 each for cash, at par.

Delhi Oxygen

The Delhi Oxygen Limited, a new company, to be established near Delhi, is issuing capital of Rs 40 lakhs for the manufacture of oxygen, acetylene and other gases.

Gannon, Dunkerley

Gannon, Dunkerley & Company (Madras), Private Limited is issuing capital to the value of Rs 2,25,000, divided into 22,500 equity shares of Rs 10 each, to be issued as fully paid-up to the holders of 1,50,000 Deferred shares of Re 1 each (15,000 equity

shares on conversion of the deferred shares into ordinary shares and the balance of 7,500 shares as consideration for alteration of the rights of the deferred shareholders so as to bring them on par with the rights of the ordinary shareholders, by capitalisation of the company's general reserve to the extent of Rs 75,000).

Mysore Electrical

The Mysore Electrical Industries Limited, Mysore, is issuing further capital of Rs 18 lakhs equally in equity and 9.3 per cent (subject to tax) preference shares of Rs 100 each, in addition to Rs 9.5 lakhs already issued.

Sir Shahdildal Sugar

Sir Shahdildal Sugar & General Mills Limited is to issue further capital of Rs 8 lakhs, divided into 8,000 equity shares of Rs 100 each, to be issued as bonus shares on capitalisation of the company's reserves to a like extent.

Indian Detonators

Indian Detonators Limited is to issue further capital of Rs 15 lakhs (in addition to Rs 5 lakhs already issued in 1 December, 1962), divided into equity shares of Rs 100 each for cash, at par.

Globe Motors

Globe Motors Limited proposes to issue right shares of the value of Rs 10 lakhs to the existing shareholders in the ratio of one share for every five shares held, after making existing shares fully paid-up by making a final call of Rs 25 per share. This will raise the paid-up capital of the company to Rs 60 lakhs. The additional capital is required for investment in the company's subsidiary, Luk Auto Ancillary (India), Private Limited.

INVESTMENT NOTES

Usha Mills

Usha Spinning & Weaving Mills Limited hopes to go into production by the end of the month. Although the production is intended to meet the

An encounter with victory

Our will to win is worth only as much as our will to work. Increased output means self-sufficiency. It means relieving the Government of economic cares—leaving it free to concentrate all its efforts on throwing the Chinese out. An honest day's work, done in the spirit of self-dedicated duty, is an encounter with victory. In farm or factory, at the work-bench or the office-desk, it can be given to one and all of us to grasp the fuller meaning of this encounter.

The National Development Council had to keep in view the twin objectives of economic development and national defence when it met last week to approve the annual plans of the Centre and the States for 1963-64. The choice was not open to it of curtailing developmental expenditure in order to divert funds for the defence effort. This, the third year of the Plan, is of crucial importance when large scale commitments have to be undertaken in respect of major projects. The achievement of Plan targets in the sectors of vital importance to the defence of the country depends on the programmes initiated and carried out during this year.

The magnitude of the additional defence expenditure will be known when the budget of the Central Government is presented to Parliament in another five weeks. As regards developmental expenditure, the National Development Council has approved the Annual Plan for 1963-64, involving a total outlay of Rs 1,744 crores. Out of this total, the outlay proposed for the plans of the Central Ministries amounts to Rs 944 crores, for the State Plans Rs 750 crores and for Plans of Union Territories Rs 50 crores.

Apart from agriculture and power develop- ment, most of the major programmes con- cerned with the defence effort are in the Central Sector. From the table it can be seen that the outlay on the Central Plan has been raised by Rs 232 crores over the antici- pated expenditure during 1962-63. The breakdown of the outlays in the Central sec- tor shows that about 85 per cent of the total is under Industries, Minerals, Transport and Communications. Implementation of the full programme will also depend on the success of efforts to secure foreign assistance for pro- jects whose foreign exchange costs have not yet been covered by aid agreements.

The total outlay on State Plans is only mar- ginally higher than the anticipated expendi- ture during the current year. Nevertheless, the outlay is higher than what was considered feasible two months ago when the National Development Council took stock of the posi- tion. Provision has also been made for addi- tional outlays on Power and agricultural development which are essential in the present context.

When the National Development Council met on November 4, it was estimated that resources available for the State Plans would be of the order of Rs 675 crores including Central assis- tance of Rs 400 crores. Later assessment of the State Plans has indicated that the total outlay could be stepped up to Rs 692 crores. But, even at this level, it would not have been possible to make adequate provision for "continuing" power projects or for achieving the extra targets proposed for agriculture, minor irrigation etc. An additional outlay of Rs 58 crores has been proposed under these heads bringing the total outlay on State Plans to Rs 750 crores. At this level the out- lay during 1963-64 will represent 19.5 per cent of the total for the five year period com- pared with 20 to 21 per cent envisaged in the original phasing of the annual outlays.

The increase in the outlays in the State Sector leaves a gap in resources which will

have to be filled by adopting appropriate measures including additional taxation. To see the Plan through, the State Governments will have to undertake a more strenuous tax effort than what they have shown themselves ready to do so far. Even before the Emer- gency, the additional taxation at State level that was visualised for 1963-64 was of the order of Rs 60 crores. But so far, the new taxes raised by State Governments add up to only Rs 35 crores.

As for the Centre, the budget next month will indicate the precise pattern of the way in which resources of this order will be raised. It should be remembered that the increase in the non-plan expenditure, especially under the head of Defence will also be massive. Borrow- ing (centralised for both the State and Union Governments) may go some way, but the main hope and burden will be additional taxes.

Though additional taxation, is unavoidable in the present circumstances, it will be neces- sary to achieve a balance between direct and indirect taxes. The requirements of the situation are so large that it will not be possible to do without either. Under the pre- vailing system of direct taxes, the scope for additions which will bring in substantial revenue is limited.

In this context it is necessary to clear some misconceptions about the impact of indirect taxes. Indirect taxes will, no doubt, result in increased prices. But when the main objec- tive is to restrain consumption in order to release resources for development and defence expenditure, it is preferable that this is done by a controlled increase in prices which does not hit the vulnerable sections of the popu- lation. It cannot be contended that prices would remain stationary during a period of larger investment outlays if no fresh excise or customs duties were imposed. The shortage that are likely in any case will lead to infla- tionary prices and windfall profits to traders and manufacturers. A controlled price in- crease brought about by increased taxation, which is selective in its impact, would be preferable to an uncontrolled price inflation. It should not be impossible to take effective action to ensure that the price increases that actually take place are not higher than war- ranted by the additional taxes. Moreover, the regressive element in indirect taxes can be counter-balanced by higher rates on articles consumed by the richer classes.

PRIVATE COMPANIES

Performance in 1960

With the study published in the latest issue of the Reserve Bank of India Bulletin of the finances of 333 private limited companies in the year 1960 a fairly complete picture of the finances of the corporate sector as a whole for that year emerges. For studies pertaining to the finances of 1001 large and medium sized public limited companies and 1017 small public limited companies for 1960 have already appeared in earlier issues of the Bulletin. From these studies it is evident that the financial position of the corporate sector has recorded all round improvement in the year reflecting the sizable expansion in industrial production that was achieved in that year.

Studies of the finances of 333 private limited companies for the past few years as a complementary to the annual studies on the finances of public limited companies are now regularly issued, and the latest, fifth in the series, deals with the year 1960. Companies included in the study have paid up capital of Rs 5 lakhs and over, and are confined to non-government and non financial private limited companies. But there are important variations between this series and that pertaining to public limited companies. While the paid up capital of 1001 public limited companies account for more than 78 per cent of the total paid up capital of all companies in that group as a whole, the paid up capital of the 333 companies included in the study of private limited companies is estimated to constitute only about 33 per cent of the paid up capital of all non-government and non-financial private limited companies. This aspect considerably reduces the validity of conclusions deducible from these studies. Again in the case of the public limited companies' studies where detailed data relating to all important industrial sub-groups are given, the studies of private limited companies give only data for six main industrial groups, the reason being that some of the sub-groups are not adequately represented by the companies included in these studies.

Production and sales of the private limited companies recorded significant increases in their value in 1960. The big upsurge in industrial activity in the year is reflected in the steep increase in production. The value of output rose sharply to Rs 452.76 crores in 1960 from Rs 384.21 crores in 1959, showing an annual growth rate of 18.2 per cent as compared with 8.3 per cent in the previous year. Sales show a closely similar pattern, having amounted to Rs 449.33 crores as compared with Rs 379.15 crores, the rate of increase being 18.5 per cent as against 7.3 per cent. Sales over the previous four years show an uneven pattern. After 1956 when sales recorded a high rate of increase at 20.1 per cent, there was a sharp fall in the next year to 3.3 per cent and yet another drop was recorded in 1958 to touch a low of 3 per cent. Thereafter there had been a recovery with the percentage improving to 7.3 in 1959 and a further sharp upsurge in 1960 to 18.5 per cent. The rise in income is spread more or less evenly among the six groups.

If income has sharply risen, expenditure has also been quite high. Raw materials consumed and other manufacturing costs contributed by far the biggest single item and this has risen by about 20 per cent to Rs 311.13 crores from Rs 259.37 crores in the previous year. Next

in importance both in its quantum and the rate of rise is Salaries and Wages which item accounts for Rs 47.74 crores as compared with Rs 42.48 crores. Expenditure as represented by Excise duty also shows a fair rise to Rs 17.06 crores from Rs 13.48 crores. The bulk (Rs 11.58 crores) of this excise duty is accounted for by the group, foodstuffs textiles, leather products thereof. All other items on the expenditure side except two recorded increases. Employees welfare expenses rose from Rs 3.85 crores to Rs 4.25 crores, interest charges from Rs 3.77 crores to Rs 4.66 crores, other expenses from Rs 35.75 crores to Rs 37.97 crores. Provision for depreciation rose from Rs 5.75 crores to Rs 6.48 crores. Among the two items that recorded a decline is managing agents' remuneration which has declined to Rs 43 lakhs from Rs 47 lakhs. The overall position is that the rate of rise in expenditure is slower than rate of rise in income, thus leading to a slightly higher profit margin in 1960.

Profits before tax at Rs 30.20 crores as compared with Rs 24.49 crores in the previous year shows a sharp rise of 23.3 per cent as against a rise of 18.4 per cent in 1959. The increase is shared by 5 groups. Profits before tax rose in the case of agriculture and other activities from Rs 1.37 crores to Rs 1.61 crores, in foodstuffs, textiles, and leather from Rs 2.47 crores to Rs 4.94 crores in metals and chemicals from Rs 10.16 crores to 11.85 crores, in the group 'not classified elsewhere' from Rs 2.19 crores to Rs 2.61 crores and other industries from Rs 8.16 crores to Rs 9.09 crores. Only mining and quarrying shows a reduced profit before tax at Rs 9 lakhs as against Rs 15 lakhs in 1959. The sharp decline in profit before tax in this group is despite a sizable increase in sales from Rs 1.62 crores to Rs 1.78 crores.

Dividends distributed by all the companies increased to Rs 10.01 crores from Rs 8.16 crores. Dividend as a proportion of profits before tax shows only a small variation at 33.1 per cent against 33.3 per cent but as a proportion of profits after tax is very much lower at 62.7 per cent as compared with 66.2 per cent in the previous year. Dividend as a proportion of profits before tax is higher in the case of four groups only. Excepting the group foodstuffs, textiles, leather and products thereof in whose case 47.4 per cent of the profits after tax was distributed as dividend, in all other groups dividend ranged from 60.8 per cent to 75.1 per cent with the group "not elsewhere classified" claiming the highest proportion.

Retained profits for all the companies together at Rs 5.95 crores in 1960 is only higher by Rs 1.78 crores whereas in 1949 the rise was much higher at Rs 2.56 crores. Retained profits as a proportion of profits after tax for all the companies was higher at 37.3 per cent against 33.8 per cent in 1959. At 52.6 per cent the proportion is highest in the group under foodstuffs, textiles, leather and products thereof. In the case of all other groups the proportion varies between 24.9 per cent and 39.2 per cent.

Only the foodstuffs, textiles, leather and products thereof group shows a significant rise in retained profits having gone up from Rs 87 lakhs to Rs 1.38 crores. Higher retention of profit has been made possible by the big increase in profits in this group.

Profitability of the 333 private limited companies has recorded an improvement in 1960. Gross profits as percentage of total capital employed has gone up by 1 point to 11.1 per cent while gross profits as percentage of sales is slightly higher at 7.9 per cent as compared to 7.6 per cent. However only half the number of groups—agriculture and allied activities,

foodstuffs, textiles, leather and products thereof; and the group "unclassified elsewhere" record increases in both the profitability ratios. The ratio of gross profits to sales is higher for three groups while the ratio of gross profit to total capital employed is higher for four. Both the ratios are lower for Mining and Quarrying. While "other industries" has a lower ratio of gross profits to sales, it has a higher ratio of gross profits to total capital employed.

The study also reveals that the private limited companies have recorded a remarkable headway in assets formation. Total assets formation was Rs 37 crores in 1960 as compared with Rs 21.8 crores in 1959. This works out to a rate of 11.1 per cent as against 7 per cent in the previous year.

The articles has attempted a comparative study of the performances of the private limited companies and the public limited companies during the year 1960. It has however been made clear at the outset that the comparison is subject to several important limitations because of the wide difference in the representative character of the samples for the two groups of companies. As mentioned earlier one of the important differences is the wide disparity in the percentage of paid up capital represented by the two groups. Subject to such limitations, the comparison reveals that although both the groups have done very well during the year in many important respects, the improvement is relatively more marked in the private limited companies sector, the rate of growth in the value of production and sales being 18.2 per cent and 18.5 per cent respectively for the private limited companies, as against 15.1% and 11.1% for the public limited companies. The improvement in the profitability ratio was much higher in the case of private limited companies than in the public limited companies.

Strengthen The Nation

The vitality of the national economy supplies the real strength to the Nation. That means more and quicker production and distribution of goods. Banking service is indispensable for promoting the higher pace in industry and commerce.

Your banking transactions directly contribute towards development efforts. Spending or saving, do it through a banking account and help us increasingly to help raise the tempo of economic activity, so very essential for strengthening the Nation.

United Bank of India Ltd.

World of Finance

BANK RETURNS

Continued Rise In Advances

A further expansion in bank credit, an additional dose of deficit financing and some small loss of foreign exchange are the highlights of the latest banking returns.

Active Note circulation, according to the returns of the Reserve Bank for 18 January is more or less unchanged at Rs 2,184.17 crores, and even so Rupee Coin at Rs 120.13 crores. With Rupee Securities and Foreign Securities unaltered at Rs 1,868.44 crores and Rs 88.08 crores respectively, the Reserve Bank's cash in the till has been slightly run down by Rs 0.35 crore to Rs 10.54 crores.

The return for the Banking Department shows that Investments have been marked up by a shade under Rs 5 crores to Rs 227.69 crores; and we also have to bear in mind the fact that the State Bank has in the latest week figured as a purchaser of giltedged for Rs 7 crores; so probable magnitude of created money during the week is Rs 12 crores. Such deficit financing was mostly necessary to meet the maturing liability in respect of Treasury Bills Purchased and Discounted by the Reserve Bank, which are lower by Rs 0.81 crores at Rs 59.56 crores. The Centre's balances are also slightly higher by Rs 1.42 crores at Rs 53.87 crores, and this may be in part due to receipts from the State Governments, whose Deposits are shown to have declined by Rs 5.32 crores to Rs 20.37 crores. Also, State Governments' indebtedness to the Reserve Bank for ways and means advances has risen by Rs 2.53 crores to Rs 17.57 crores.

The position of banks presents a mixed picture. On the one hand Reserve Balances of member banks (including State Co-operative Banks) have risen substantially by Rs 15.52 crores to Rs 90.65 crores; on the other the Other Loans and Advances of the Reserve Bank have been marked up by Rs 1.88 crores to Rs 165.16 crores.

The increase of Rs 6.06 crores to Rs 54.58 crores in the Other Liabilities of the Reserve Bank may be ascribable to interest receipts on its holdings of giltedged.

Lastly, Balances Held Abroad, after holding steady for some time now, have fallen by Rs 1.78 crores to Rs 7.54 crores, but the Rs 1.78 crores in the possession of the Reserve Bank continue nevertheless to exceed, though barely so, the Rs 95 crore mark.

The return of the State Bank for 18 January discloses a welcome rise of Rs 7.91 crores to Rs 558.19 crores in Deposit resources. The fresh accretion came in useful in that the total of Advances expanded by Rs 2.61 crores to Rs 284.41 crores. This left a surplus still for adding to cash balances (up by Rs 2.48 crores at Rs 27.13 crores) and to the giltedged portfolio (higher by about Rs 7 crores at Rs 246.89 crores).

The return of Scheduled Banks for 11 January reflects the impact of the spillover into the second week of beginning of the month disbursements as also of expanding busy season demands. Net Demand Deposits are found to have declined by Rs 9.89

crores to Rs 912.66 crores, clearly the result of constituents' drawing upon their balances. On the other hand, net Time Deposits show little change at Rs 1,241.92 crores. It needs, however, to be added that the State Bank accounts for about two-thirds of the decline in Deposit resources during the week. The total of Advances, which broke through to a new peak in the week ended 4 January, shows a further rise of Rs 11.32 crores to Rs 1,463.53 crores. Consequently borrowings, both from the State Bank and the Reserve Bank have gone up, the former by Rs 1.90 crores to Rs 17.60 crores and the latter by Rs 6.46 crores to Rs 25.01 crores. Cash balances, including money at call and short notice, have moved up by something less than Rs 3 crores to Rs 207.36 crores.

EEC Prospects in Sterling

By Paul Einzig

The worsening of the prospects of an agreement on Britain's entry into the Common Market was followed by an immediate weakening of sterling. It did not last, however, and before the day was over sterling recovered most of the lost ground. Its initial weakness was the natural consequence of the exaggerated Government propaganda with which British opinion had been sought to be influenced in favour of joining the Common Market. To that end official spokesmen had been working overtime in emphasising the "disastrous" consequences of remaining outside the Common Market. In the circumstances the prospects of a failure of the Brussels talks were bound to produce an unfavourable psychological reaction.

On second thoughts, however, dealers came to remember that after all even if agreement were to be reached it would take many months before any actual changes would be made which would affect the British balance of payments and that in any case such changes would probably be to the detriment of sterling during the initial period of the new arrangement. They also came to remember that there had been frequently recurrent rumours about a devaluation of sterling being considered if Britain should join the Common Market in order to bring it into equilibrium with the Western European currencies. Unfounded as such rumours have been it would have been logical for the Foreign Exchange

market to react favourably to General de Gaulle's speech. But then logic has never been the characteristic of the Foreign Exchange market. Quite conceivably there will be now frequently recurrent rumours about a devaluation resulting from the failure of the attempt to join the Common Market.

At the moment sterling is basically sound, owing to the improvement of the balance of payment, as indicated by the figures of December. If and when its basic position should deteriorate, there is no doubt that the very same rumour mongers who had busily predicted a devaluation in case of Britain joining the Common Market would be equally active in predicting a devaluation for the opposite reason—because of Britain's inability to join the Common Market. In reality no spectacular change in the situation is likely to arise from a failure. Even if those in favour of joining the Common Market prove to be right and the failure should work out to Britain's disadvantage, the process is bound to be gradual. And the Foreign Exchange market need only concern itself with the next six months or at most the next twelve months.

BANK PROFIT

Punjab National

The Directors of the Punjab National Bank Ltd. propose to maintain the final dividend for the year 1962 at Re 1/- per share of Rs 10/- each, i.e., 10 per cent subject to tax, making a total distribution of 20 per cent for the whole year absorbing a sum of Rs 40 lakhs. The Bank's working in 1962 has, subject to audit, resulted in a profit of Rs 124.17 lakhs including the carry forward of Rs 10.38 lakhs, as against Rs 122.63 lakhs including the carry forward of Rs 4.23 lakhs for the previous year, after providing for taxation and Rs 15.64 lakhs for transfer to Gratuity Fund (as against Rs 12.28 lakhs) and making other necessary provisions. This profit has been arrived at after absorbing a heavy burden of establishment charges owing to the latest Bank Award, increased rate of interest on Savings Fund accounts, about Rs 8 lakhs on Deposit Insurance started from 1 January 1962 and Rs 3.36 lakhs more for gratuity to the staff. The balance of Rs 84.17 lakhs is proposed to be utilised as under:—

Rs 25 lakhs (Rs 45 lakhs last year) to be transferred to Reserve Fund and Rs 4 lakhs (Rs 1 lakh last year) to Charity and Donations leaving a balance of Rs 55.17 lakhs to be carried forward subject to payment of Bonus to staff.

Notes

COAL MOVEMENT World Bank to Study

The projected study of the world bank team on coal movement in India will evoke country-wide enthusiasm and interest though coal movement has recently showed signs of slight improvement. For quite some time now, coal transport has been a sticky element in our planning and the problem will assume even more alarming proportions with the increase in output and the mounting demand from coal consuming undertakings. The team is to submit two reports: an interim one suggesting measures to relieve the transport problem in the Bengal and Bihar regions and a final report incorporating steps to evolve a sound coal-handling programme. Naturally the team will have to consider the merits and demerits of the various modes of transport already available in the country before thinking of new ways of carting coal. As regards rail movement, the most important mode so far, the position tends to be confusing owing to the lack of a clear indication of wagon allocation for coal transport. It should be noted that demand for wagons is estimated to go up from 8,561 in

1962-63 to 12,339 by the end of the Third Plan. Though the railways have promised to allot adequate wagons to carry 90 million tons out of 97 million tons the subsequent upward revision of coal production target to 104 million tons raises serious doubts about orderly movement of coal from pit heads to consuming centres through rail. A study of railway's performance in the past raises serious misgivings. For instance, in the first half of 1962, actual loading of coal amounted only 6,049 wagons against the target of 6,995 wagons and the gap between actual requirements and availability will only widen when coal production is stepped up.

In fairness, it needs to be mentioned that the railways are exerting themselves to improve their wagon supply and turnover. But their other solutions like "coal dumps" and movement in block rakes create more difficulties than they solve. Alternative methods of transport by road and river have their technical and other problems. Opposition from consumers, particularly those situated in far flung places from coal pits, on account of inflated cost makes road movement an unworkable proposition unless it is subsidised by Government. In view of the unsatisfactory condition of bridges and connecting roads, coal movement by river would probably call for heavy capital expenditure for repairs and maintenance of work. Flushing through pipe lines pulverised coal is an interesting suggestion whose technical and financial feasibility is yet to be examined.

Coal movement assumed the proportions of crisis in the last two years and it may yet prove intractable if the tempo of development increases. Expert guidance obtained in time would thus be invaluable.

★

RURAL MARKETING Agencies at Cross Purposes?

The question of co-ordinating the functions of warehousing corporations and the marketing societies in the country has been discussed at length at the nineteenth meeting of the Standing Advisory Committee on Agricultural Credit. Reserve Bank of India. The topic was taken up at the request of Mr G. Parameswara Pillai, Chairman of the

Kerala State Co-operative Bank, who expressed concern at the confusions created by the lack of a well defined policy governing these two important organs. The issues raised were roughly: i) the co-ordination of the activities of the marketing societies with those of warehousing corporations with regard to storage of agricultural produce and ii) the question whether warehousing corporations should also undertake the distribution of agricultural requisites like fertilisers, seeds, manure etc. The Committee of the Rural Credit Survey suggested the setting up of a) an all-India organisation to develop storage and warehousing facilities at strategic places; b) a series of State organisations concerned with centres of State or district importance and c) co-operative units at the taluka or village level. Besides, the committee envisaged the organisation of apex-co-operative marketing societies at markets or "mandi" centres to provide marketing facilities for agricultural products and the distribution of agricultural requisites.

Experience has shown that i) the warehousing corporations are not attracting enough business by way of deposit of produce for storage, at least in the initial periods, to make the warehouses pay, (ii) in utilising the opportunities private traders and merchants preponderate over agriculturists or co-operatives for whose benefit they are created, iii) utilisation of such facilities is partial and there is overlapping in the functions discharged by the two agencies. The need for a clear and distinct allocation of functions and for co-ordination of activities has therefore become pressing and it is necessary to see that their respective functions do neither overlap nor run along parallel lines. Accordingly to the Rural Credit Survey report, the primary duty of the warehouses is to help evolve and popularise the warehouse receipt which would be another useful instrument to expedite credit and movement of produce facilities. On the contrary the marketing societies would be responsible for the orderly marketing of the agricultural products of the members as well as for the distribution of seeds, fertiliser etc. Such agricultural requisites should be procured by apex marketing society in each State to be made available to the consumers through regional and primary marketing societies. While the function is entrusted to the co-operatives there might be some areas where warehousing corporation can step in purely as a transitional arrangement until the marketing societies were in a position to take over the charge. However, if the warehousing corporation were to consider the absence of a network of marketing societies an excuse for their working on a permanent basis the co-operative sector would be deprived of one of its predominant func-

tions. This can ultimately be avoided only by the marketing society acquiring rapidly vitality and momentum. Meantime, temporary expedients like warehousing agencies stepping in the breach is unavoidable. Since warehousing endeavours have by no means made spectacular progress the danger from it to co-operative is easily exaggerated. In any case co-ordination of efforts of different agencies is always welcome.

★

TAX INCENTIVE A Valuable Extension

Two tax incentives of great practical importance have been recently announced by a circular of the Central Board of Revenue. Development rebate, as is well known, is normally available only for machinery or plant "newly installed". There have been instances in which machinery imported from abroad is not new in the strictest sense of the term, being second-hand or reconditioned machinery. Representations were made to Government that the requirement of the law would make such machinery technically ineligible for the rebate. It was argued that machinery not already used in India but imported from abroad may be technically "second hand" but coming for the first time into the country, it would represent an accretion to the industrial potential in the country. This argument has apparently been found persuasive. Government has decided therefore to allow development rebate on second hand

machinery imported from abroad provided the machinery has not been used previously for any purpose at any time in India and no persons assessed in India has used it previously for any purpose abroad.

Similar concession has been extended to tax holidays for industrial undertakings under section 84 of the Act. Even as it is now worded, the section does not insist on a "brand new" set-up in that new industrial undertaking (and hotels, in the interests of tourism) will qualify for exemption even if only 80 percent of the machinery or plant of the undertaking was new in the sense of not having been used before at all. Under the circular now issued, in the computation of the minimum 80 per cent "new machinery", second-hand machinery imported from abroad will be included, provided they have not been used in India by anyone or abroad by an Indian assessee before.

The practical importance of these concessions can hardly be exaggerated. At the stage of development in which we are situated, we can profitably use a good deal of machinery that has been reconditioned after some use abroad. The first advantage is cost, both in absolute and foreign exchange terms, used machines costing good deal less than new ones. This would be a particularly attractive proposition in cases where we need heavy and expensive machines, with a long working life. Indeed, the principle has been recognised in tax contexts in respect of ships, where a second-hand ship qualifies for exemption under certain circumstances. Secondly, machines that have become obsolete for technical reasons of relevance only to the exporting country, may be extremely useful to us precisely for the same reason. For example, labour intensive machines may be jettisoned in advanced countries under the compulsion of the logic of comparative costs. But in our economy where the problem is to find work for idle hands, rendered obsolete by capital machines intensive automation still have a long and useful life. The entrepreneur who has a keen sense of such opportunism has now a valuable inducement in the form of tax concession to do well by himself and the country.

★

TEA Export Performance Improves

The hope that the tea industry will be able to earn progressively large foreign exchange for the country is strengthened by its improved performance in the export field last year. The total quantity of tea exported in the ten months ended October 1962 was

165.8 m kgs against 150.9 m kgs during the same period in 1961 with the foreign exchange earned increasing to Rs 96.2 crores from Rs 92.7 crores. Exports had been adversely affected in November and early parts of December because of the Emergency and the steamer strike, but conditions have considerably improved since thanks to the energetic steps taken by the authorities to maintain a smooth flow of tea from Assam. With the calling off the steamer strike, normal movement of supplies has been restored. It is estimated that exports during 1962 would have touched a level of 214 m kgs valued at Rs 124.9 crores against 205 m kgs valued at Rs 124.6 crores in 1961.

The improved export performance last year has not however come about without considerable effort. The reduction of the tea export duty by 34 nP per kg in the last budget has certainly gone a long way towards making Indian tea cheaper in world markets. The Tea Board is also carrying on sustained propaganda in a number of countries. In his speech at the recent annual general meeting of the Dooars Branch of the Indian Tea Association, Mr A. S. Bam, Chairman of the Tea Board, has drawn attention to a welcome change in the trend of exports. Exports to some important markets e.g. USA, Egypt, Afghanistan, Irish Republic, West Germany, Netherlands and Australia have been much better in 1962 than in 1961. Exports to Australia have been very good indeed, having increased by over 200 per cent.

In order, however to maintain this improvement, concerted steps should continue to be taken in a number of directions. In the first place, Indian production of tea should be increased. Last year the output of tea has declined as compared with the previous year. Production was affected by unfavourable weather in northern India. Though this may be offset to some extent by the higher production in South India, the total production in the country during 1962 is expected to fall short of 1961 output by about 10 m kgs. Indian tea production has still a long way to go if it has to hit its third plan target of 900 million lbs. as according to the figures released recently by the Indian Tea Association, total output during 1962 is in the environs of 578 million lbs. only. While the export performance last year is gratifying, it should not lead to complacency. For world tea trade has become highly competitive and producers are vying with one another to increase the quantum of their exports. Unless Indian tea is of a high quality and at the same time competitive in price, exports may not show any marked increase in coming years. This is increasingly being realised by Government who has initiated a number of export promotion

measures in the course of the last one year to make our tea competitive in world markets. The tea industry's problems are also receiving expeditious attention. As Mr Bam has pointed out, various steps have been taken to help the industry during the present Emergency when tea gardens had to face new problems. The Tea Board's propaganda abroad has considerably helped exports last year and this useful work must be further expanded to cover new regions. Mr Bam has said that Indian Tea is widely appreciated for its quality. This is no mean gain and special steps should be taken to consolidate this. A factor of immense encouragement to the Tea industry is the readiness of the ECU countries, otherwise stiff and unbending, to have 'nil' tariff for Tea. Traditional items of export, as Mr Manubhai Shah said this week, are still the backbone of our export effort and Tea is the most important of our traditional exports.

★

CHINA Decline in Trade with Communists

China's trade with the Communist World has recorded a sharp decline of as much as 40 per cent during the three-year period 1959 to 1961.

Trade statistics show that, as against this 40 per cent fall, China's trade with other countries, put together, recorded a nominal fall of eight per cent during the same period.

In 1959, trade with Soviet Union and Eastern Europe totalled £1020 million (about Rs 1,360 crores) accounting for 68 per cent of China's total foreign trade. In 1960, this declined to £866 million (about Rs 1,154 crores) or 63 per cent of China's total trade. Trade statistics now available show that in 1961, there has been a further decline to £600 million (about Rs 800 crores) or 58 per cent.

This fall, according to analysts, fits into the emerging pattern of a polarisation within the Communist-world, particularly noticed, of late, in Sino-Soviet relations.

Significantly, the only country in Eastern Europe, which recorded increased trade with China during this period was Albania, which has aligned itself with China in the current Sino-Soviet ideological conflict.

During this period, India's trade with the Soviet Union and Eastern Europe, rose from Rs 81.08 crores (Rs 810.8 million) to Rs 123.97 crores (Rs 1239.7 million), a rise of 83 per cent. Taking China's trade with the Soviet Union alone, this recorded a fall from 593 million (about Rs 790 crores) in 1960 to £313 million (about Rs 424 crores) in 1961. A categorywise break-up shows that Soviet exports of machinery and industrial equipment to China fell from £180 million (about Rs 240 crores) in 1960 to £39 million (Rs 52 crores) in 1961. Similarly, export of complete industrial plants from Soviet Union to China was valued at £28 million (Rs 35 crores) in 1961, as against £134 million (Rs 179 crores) in the previous year.

This presents a striking contrast with the Indo-Soviet trade trends. Between 1960 and 1961, Soviet Union's trade with India rose by Rs 31.72 crores (Rs 347.2 million). Machinery exports from Soviet Union to India actually rose five times from Rs 2.1 crores (Rs 21 million) in 1960 to Rs 11.64 crores (Rs 116.4 million).

An interesting feature of China's exports to the Soviet Union in 1961 was that there were no shipments of rice and soyabean to Soviet Union, reflecting, perhaps, China's acute food conditions. In the case of footwear, Chinese exports to the Soviet Union amounted in 1961 only to one-third of the previous year.

★

INDUSTRIAL GASES Vital for Industry

Demand for industrial gases has considerably gone up with the rapid progress of industrialisation, but as yet supply and even adequate installed capacity is lagging far behind. It is not that the rate of growth of demand has not been properly assessed by our planners but all the units that had been sanctioned had not been put up as scheduled. To the normal pressures of increased pace of industrialisation has been added the pressure of the emergency. As pointed out by Sir John Douglas Keith Brown, Chairman of the Indian Oxygen Limited, "the actual position is that the plants installed in the country are generally working beyond normal capacity and the margin which preferably should exist between that capacity and peak demands is simply not there." It is unfortunate that such a position has been allowed to develop in this strategic industry.

In such a context, it is some comfort that the premier industrial gases manufacturing company, the Indian Oxygen Limited, has been going ahead with its expansion plans with commendable speed. During last year the company has completed the installation of three additional oxygen plants at its factory in Jamshedpur and all the three plants have commenced commercial production. With the completion during the past year of a new dissolved acetelene producing plant at Gauhati, supply of industrial gases in Assam has been considerably augmented. In the Bombay area, work in the second oxygen plant has reached an advanced stage and the nitrous oxide plant installed some few months back has further augmented the supply of this important anaesthetic agent in the country. Further additions have been made to the company's factory at Khardah and Beliaghata. The company is to put a factory to manufacture oxygen and dissolved acetylene in Hyderabad and a factory to manufacture Loxite cartridges a component of liquid oxygen explosives at Ranchi. The company also proposes to undertake the manufacture and installation of, and deal

in, plants and machinery for producing gases and also the manufacture of electrodes, gas using equipment, welding transformers etc.

Further expansion of the manufacturing capacity of the company will require additional capital largely in the form of foreign exchange. This is however not likely to present any great difficulty as the British Oxygen Company Limited has agreed to make available to the company sterling to the extent of £500,000 on terms to be approved by the government of India.

The working of the company during last year has been quite satisfactory. Sales rose by 17 per cent to Rs 8.87 crores. The net profit for the year is lower at Rs 60,82,869 after providing for depreciation and all taxation. This compares with the previous year's figure of Rs 71,30,284. The apparent decline in net profit is due to the fact that provision has been made for the shortfall in the previous year's taxation provision.

RESEARCH

TRANSISTORISED POWER SUPPLY DEVELOPED

A transistorised instrument which can conveniently be used as a constant voltage of constant current source has been developed by the Central Electronics Engineering Research Institute, Pilani.

When used as constant voltage source, its output voltage can be continuously varied from 3 to 24 V. in two ranges. The maximum current which can safely be drawn through it is 1 amp and the output impedance is 0.1 ohm. The output voltage variation is within + 0.5 per cent for a line voltage of + 10 per cent.

When used as a constant current source, it can deliver any predetermined value of current from 100 to 500 ma, into a load of 0 to 10 ohm. The variation of current in the load is negligible if line voltage changes by + 10 per cent.

ALGINIC ACID FROM BROWN SEA-WEEDS

Fifteen species of Sargassum collected from Saurashtra coast have been analysed for their alginic acid content by the Central Salt and Marine Chemicals Research Institute, Bhavnagar.

A method for the extraction of alginic acid from these seaweeds has also been developed. It consists in extracting the seaweeds with sodium carbonate, bleaching the extract with sodium hypochlorite and precipitating the acid at pH 2-3 using 1N hydrochloric acid.

The product is superior to the imported material in regard to its colour, purity and viscosity of its solutions.

NEW DEVICE ELIMINATES CAR EXHAUST FUMES

A small and cheap device has been invented by a young Indian police officer which can, it is claimed, eliminate carbon monoxide, soot and unburnt fuel from petrol engine exhaust gases while raising mileage without loss of power.

Essentially an improved carburation device it supplements the ordinary carburettor and ensures better fuel evaporation as well as more even fuel/air mixing. It is also said to be capable of permitting cars to be run on much lower grade fuels than they are designed for, without knocking.

A major point in its favour would appear to be the elimination of crankcase oil dilution, responsible for the reduction of engine life in cars used for repeated short trips.

With the device, the car engine does not run hotter, the exhaust gas is cooler and the rate of carbon deposition in the engine is considerably reduced. No modification of the engine, valve clearances, or carburettor setting required.

The Autocar magazine of London to whom the inventor took the device for a test reported: "The test vehicle was a 1958 Hillman Minx, the 1,390 c.c. engine being in standard trim with a compression ratio of 8.0 to 1. After checking its standard performance, the engine was fed with a mixture of 75 per cent T.V.O. (a paraffin fuel used for farm tractors) and 25 per cent premium fuel; this was fed from a separate tank, the contents of which we saw mixed, and we checked the feed through a plastic fuel pipe.

"On this mixture there was no measurable drop in performance; there was detonation only if the engine were allowed to labour and the plugs showed no signs of overheating after a run of several miles. The inventor claims that fuel consumption at a constant 40 m.p.h. in top is 41.5 m.p.g."

SOLAR RADIATION

Research on the distribution of sunshine over the Indian sub-continent and its day to day variations are of great interest in a study of spatial distribution of solar energy over India and of the energy available in ordinary sunshine for utilisation as sources of power in the arid and semi-arid regions of the country.

Maps showing the duration of sunshine over the country for the different months have been prepared by the Indian Meteorological Department as well as isopleths of duration of sunshine in each hour and charts showing the mean number of days with different duration of bright sunshine in each month for 15 stations in India.

Since direct observations of total incoming solar radiation from a satisfactory network of stations in India are yet not available, maps showing the areal distribution of solar radiation computed from values of duration of sunshine have also been prepared by this Department.

BETTER YIELD FROM COTTON, GROUNDNUT AND JOWAR

Experiments conducted at the Amravati Centre of the Indian Council of Agricultural Research to control the different diseases of cotton, groundnut and jowar have shown that the blackarm of cotton could be checked by seed treatment followed by two sprays of Bordeaux mixture, Blitox or Perenox. Incidence of Tikka in groundnut could be reduced by two sprays of Fytolan, Blue Copper 50+Thiorit or Bordeaux mixture 7 and 10 weeks after sowing. In jowar loose and grain smut could be controlled by treating the seed with 10 per cent mercurial seed dresser, sulphur or Tillex @ 6 ozs. for 60 lbs. of seed.

Comparative studies on different pesticides at this centre have shown that most of the cotton pests can be effectively controlled

by spraying a mixture of DDT-BHC(1:1) 5 to 8 times, or alternatively with 0.02 per cent Endrin. In case of groundnut, Telodrin as soil insecticide is quite effective. Though none of the pest control methods have been very effective against stem borer of jowar but 0.02 per cent Endrin at 15 days interval is quite useful in checking the damage. Studies on biological basis of pests control is also in progress at the centre.

Problem of conservation of moisture by using Polyethylene film mulch has been taken up at this centre and it has been found mulched plot yield 69 per cent more as compared to controlled plots.

It has been observed that in cotton 40 to 60 lbs. of Nitrogen/acre, depending on climatic conditions, gives higher yield than control. Also the sulphate of ammonia proved to be the best form of Nitrogen.

A NEW ADHESIVE

A new type of adhesive which also acts as a filler and sealer has been introduced by Berry Wiggins and Company, a British manufacturer. It is a concentrated polyvinyl acetate emulsion adhesive, which provides a strong bond for a wide range of materials including brick, stone, plastic, glass, metal, and fabric; it is particularly suitable for joinery work. The emulsion develops its bond progressively, allowing plenty of time for the accurate positioning or adjustment of the materials being fixed. A reasonably strong bond is obtained in a few hours, and full strength is reached over 24 hours. On uneven surfaces, or to repair cracks, it is diluted with water and mixed with plaster or sand and cement. As a sealer it can be applied to porous or bituminous surfaces before painting, diluted with five times its own volume of water. The mixture can also be used as a dustproofing on existing concrete floors, and for new floors, it can be added to the sand and cement mix to produce a non-dusting grease-resistant screed.

NEW CABLE SHEATH

By blending synthetic rubber with two thermoplastics, Grengate and Irwell Rubber Co., a British firm has produced a cable-sheathing material of unusual strength for use in hazardous conditions. The new material is claimed to have particular value in heavy industries such as steel, shipping and building because it provides very high electrical insulation and protection to the cores against possible damage from internal friction. It has already been widely applied industrially in Britain, both for single and multi-core cables. In a large dockyard it has been specified for use in the general wiring of the lairages where it is subjected to obnoxious gases.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

LABOUR leadership in the Affluent Society is an unenviable political prize and it is a measure of Gaitskell's moral toughness that he should have desired and won it. With bread lines but a memory for the old and not even that for the young, he had no martyrdom to offer and no inequity to denounce. Instead, he had on the one hand, to take seriously the grouches of those whose deprivation was not livelihood but lollipops. On the other, he had to pacify the "angries" who were smugly indignant that they had no further causes to fight for. (Not that they hadn't, of course, as they could have easily round out, if they were less self-absorbed). In other words, Butskellism was easier for Butler to profess than for Gaitskell. Under it Butler would be asking the rich (and getting, up to a point,) for sacrifices, whereas Gaitskell had to do it of the till-lately-poor, who were not unnaturally loath to part with their recently acquired well-being. Explaining the economics of cost inflation is harder work than denouncing capitalist rapacity and it required intellectual toughness and honesty both of which Gaitskell had in bountiful measure. Middle class, intellectual, and even donnish—he taught for some time Economics in the London University—Gaitskell did not choose either of the two escape routes that were open to him. He could easily have affected the condescending leftism of men like, say, Kingsley Amis, (whom the Spectator, in a recent spoof on the Establishment called Kingsley Aimless). You know the sort of thing: you save your conscience, if that is the word I want, by lending your car for Labour electioneering and, if it isn't too much trouble, even voting Labour and for the rest treat the whole lot of them with faint distaste. At a more mature level, he could easily have been, like Richard Crossman, the rogue elephant of the Labour Party, always brilliant, constructive sometimes, as when he prepared the scheme on pensions, but basically anarchic. Office will probably elude Crossman always and Prime-Ministership certainly. Gaitskell, however, has had the first before and the second was well within his grasp when he died. During the bitter struggle for leadership between them, Bevan once called Gaitskell a dissipated calculating machine. This is true only in the sense in which Bevan was a quivering mass of radical jelly. Neither description

does justice to the complementary qualities of the two—the warm if somewhat abstract humanity of Gaitskell and the considerable practical ability of Bevan. Bevan lived to eat his words and came near enough Gaitskell not only to accept his leadership but to share his views on foreign policy. His unwillingness to send a British Foreign Secretary naked to the Conference Table (a diverting sight, by the way) shocked his friends: but it signified his conversion to Gaitskell's views on the need for an adequate nuclear wardrobe for Britain. Gaitskell's tenure as leader of the Labour Party also saw what perhaps was something of a unique paradox in the party's history: the party leadership denounced often in the past as a prisoner of the TUC, fell foul of it over unilateral renunciation of nuclear weapons. For a brief period, roles were comically reversed; Mr Cousins was speaking like the Tribune and Mr Gaitskell on the TUC might well have been the New Statesman. Mr Gaitskell kept his word about fighting and fighting till he got the party to reverse its decision, which it did the next year. That done, his leadership of the party was never in jeopardy. In the last two years, he was steadily growing in stature and looked all set to become the next Prime Minister of England. He would have made, as Earl Attlee said, a Great Prime Minister. England and the Labour Party, to whom his death is a terrible blow, is infinitely poorer for his passing away.

The booing of Mr Wu Hsin-Chuan, the Chinese delegate to the Communist get-together at Berlin last week began, it will be noted with satisfaction in this country, when that worthy started calling Mr Nehru names. When nothing daunted, he went on to slang Yugoslavia, he had the whole pack of them fairly after his blood. All this so discouraged the poor man that he sat down after half an hour's struggle to get heard. Thirty minutes, even if uninterrupted, would have been too short for a man with as difficult a case to explain as Mr Wu, especially since it is a poor ration for any communist speaker who, as a rule, says a little at great length. In fairness, we have to remember that every communist speaker gets only half, if that, the effective time, that a non-communist similarly placed does: the other

half has to be used in invoking the Communist Trinity—Chinese communists having to add, so the voice in international communist contexts, two other names. Moreover, their cuss words—'Yugoslav Revisionism' and 'Albanian Sectarianism', for example—are a mouthful. (It is a curious fact that communist 'dirty words' are not four-lettered). On the whole, I consider it rather unfair that Mr Wu should not have been allowed to say his piece and belabour by proxy Yugoslavia. After all, Mr Khrushchev—who, interestingly didn't stay to listen to Mr Wu, whether as a snub or for reasons of tact, it is difficult to say—had his chance to flay Albania. True, Mr Khrushchev spoke sense for the most part, but China couldn't be expected to appreciate it. It is enough of a nuclear gambler to risk what Mr Khrushchev shuddered from—the unleashing, in Europe of the super-bomb that would rain poison on East Europe, Russia and even China. Mr Khrushchev's apparent reservation about damage to China would, if anything, have made China even more ready to have it dropped. Building socialism in an atomic graveyard does not appear as appalling a prospect to China as it does to Mr Khrushchev or to any right-thinking man for that matter. The other figure mentioned by Mr Khrushchev, the 40,000 nuclear warheads in American possession, that could kill about 800 million people, may chill Cuban hearts and even Castro's but not Mao's. Perhaps, Mr Wu had an answer for Mr Khrushchev, which he would have given, if he had been allowed to get the obligatory abusive exordium out of the way, before he launched on his real task. By the way, Mr Wu can derive such comfort as he can from the fact that his friends in Calcutta treated Mr Dange in much the same fashion that he was treated by his European comrades. By the same token, those among us inclined to crow at Mr Wu's discomfiture may reflect on the meaning of the reception that Mr Dange got from his fellow communists. The Berlin and the Calcutta incidents have subterranean connections that can be disregarded only at our peril. Comforting conclusions about world communist support to our stand will (or should) be more than neutralised by the Calcutta incident. After all, "Pro-Peking Indians" are a menace that a thousand anti-Chinese Czechs cannot blot out.

The Santhanam Committee inquiring into corruption in the services is reported to have made certain interim recommendations involving the amending of the

Constitution. Article 311 of the Constitution guarantees that no public servant shall be dismissed, removed or reduced in rank until he has had a reasonable opportunity of showing cause against the action proposed, unless the appropriate authority records its reasons for holding that it is unreasonable to give such an opportunity. Presumably these reasons are justiciable like other executive acts. Reports aver that the Committee has suggested restrictions of this "reasonable opportunity." Earlier reports seem in retrospect to have exaggerated the extent of the diminution of rights recommended, though, of course, it is possible to argue against even such deprivation as has been actually considered expedient. As far as can be gathered from scrappy reports, the recommended restriction relates only to the opportunity at the time of imposition of the actual penalty after the charges themselves have been brought home by earlier inquiries. Presumably, at this earlier stage, the fullest opportunity to defend himself would have been given to the public servant whose conduct has been impugned. What has evidently commended this dispensing of formalities to the Committee is the feeling that procedural stalling gives the corrupt official advantages he is not entitled to. Once guilt has been established (under procedures conformable with a liberal jurisprudence) the formality attendant on the declaration of the punishment may be curtailed with no great loss of fairplay. It is certainly a persuasive argument. And yet I should imagine that in the nature of things, more time is likely to be taken in the establishment of guilt than in making up one's mind, with or without the assistance of the accused, about the nature and quantum of the punishment. To jettison formality at this stage for saving time, is to strain at a gnat after having swallowed the camel. It has also the disadvantage of earning an illiberal reputation for a comparatively minor gain. The Committee is also apparently of the opinion that reduction in rank is not as calamitous a prospect as dismissal and would suggest an even more summary procedure for pronouncing it. I am not so sure of the reasoning behind this view. I can fancy vindictiveness or arbitrariness timid enough to prefer the meting of the lesser punishment precisely because it saves it from the procedural rigours of the more drastic punishment. Apart from all this, I should have thought that the more substantial preoccupation of the Committee would be the prevention of corruption which I have no doubt it is getting ready to grapple. If we have not heard much about it so far, it is obviously because it is not a subject on which interim recommendations are possible.

EAVESDROPPER

STATE BANK OF INDIA

A Meeting of the Central Board of Directors of the State Bank of India was held at Calcutta on Monday, the 21st January 1963.

The following is a note of the net profits declared at the Meeting for the year ended the 31st December 1962 and their distribution:—

	Rs.
Net profits for the year	269,25,300
Brought forward from last year	50,41,300
	319,66,600
Dividend to Shareholders at the rate of Rs. 23 per share, subject to deduction of tax (made up of Interim Dividend at the rate of Rs. 10/- per share Rs. 86,25,000 and final dividend at the rate of Rs. 13/- per share Rs. 73,12,500)	129,37,500
Transferred to Reserve Fund	55,00,000
Transferred to Pension Funds	7,61,700
Bonus to Staff	72,00,000
Transferred to Staff Welfare Fund	5,00,000
Transferred to Staff Co-operative Housing Fund	5,00,000
Carried forward	45,67,400
	319,66,600

(From Our New Delhi Correspondent)

Defence Production

The steps that were being taken to increase defence production were explained by the Defence Minister at the third meeting of the National Defence Council held here on January 19. All Ordnance factories were already working full time. Teams of experts had visited them to advise on the best methods of augmenting production. He also referred to the efforts which were being made to get full assistance from civil industries.

A broad indication of Government policy in regard to the role of civil industries in defence production was given by Mr K. Raghuramiah, Minister for Defence Production, in his inaugural address to the Third Quarterly meeting of the All India Manufacturers' Association, in Bombay. The Minister had stated: "so far as Defence Production is concerned, at the moment, we have only one ideology—to produce whatever is necessary for the Defence of the Country and to take every assistance from every sector to the extent we needed it."

The policy indicated by the Minister of Defence Production has been criticised in some quarters on the basis of incomplete press summaries of his address, so that it will be useful to put the record straight. While stating that it was the policy of the Government to get as much co-operation as possible from the private sector, the Minister had also indicated the limitations. Government's intention is to farm out manufacture of components to the extent possible. In respect of arms and ammunition this will be subject to security considerations. In regard to ammunition, the lack of filling capacity in the civil sector is an obvious difficulty. In the case of arms, he pointed out, there are a few critical items which, in the interest of security, must always remain with the State. But in the case of other items, such as for instance, motor vehicles and electronic equipment, the civil sector could come forward to co-operate to a larger extent. While some vehicles are manufactured in the Ordnance factories, the requirements of defence are so vast that Government has already decided to take the rest from the civil sector and to encourage them to produce whatever they can without any

inhibition or restriction. Similarly with regard to electronic equipment, Government would heartily welcome such assistance as the civil sector could give for manufacture of the various electronic components. That would also apply to all kinds of general stores, clothing and any other equipment.

The major difficulty in utilising the capacity existing in the private sector is not lack of readiness on the part of the Government to take their co-operation, but the fact that many units of the engineering industry are not equipped to manufacture the items required to the standards of precision, and quality of material, required for defence purposes. These difficulties were brought to light when the Minister of Economic and Defence Co-ordination recently called a few leading industrialists to discuss what they could do to supplement the production in Ordnance factories.

The Defence Ministry has also various schemes of helping firms in the private sector in establishing new items of production which the defence services may require. The Research & Development organisation of the Ministry has a wing which will give educational orders on new items and help with the planning where an existing item has to be modified to suit defence requirements.

Apart from utilising manufacturing capacity in the private sector, the Defence Ministry is also indenting on the capacity of Railway workshops as was done during the Second World War. The Minister for Defence Production stated, during question hour in the Lok Sabha, that discussions have been held with Railway authorities as a result of which certain orders for tools, jigs and gauges needed for armament production have been placed on railway workshops. In addition, the Railways have also undertaken to manufacture the components of ammunition. They have also offered to build bodies for army vehicles and this is being processed.

In his address Mr Raghuramiah had also emphasised the importance of stepping up the indigenous manufacture of arms and equipment for our forces. "A nation of 400 million," he said, "cannot always depend on others for basic defence equipment and it is therefore our endeavour to make the country self-sufficient."

Ordnance factories, as already indicated above, are now working multiple shifts to manufacture the equipment required by our forces. Production in December 1962, in many items, it is learnt, was two and a half to three times the output in September. The factories are confining themselves almost exclusively to the production of arms and ammunition apart from a few other items for which there is capacity. The Ordnance factories, it is learnt, are also now manufacturing semi-automatic rifles, and long-range mortars.

Apart from stepping up production in the existing Ordnance factories, there are proposals, it is learnt, for setting up four or five new factories, including an alloy steel plant of 50,000 tons capacity in addition to the one at Ishapore. The project for the manufacture of tanks at Avadi is being expedited. There are also programmes for manufacture of Caribou transport planes and helicopters. The helicopters will be manufactured with French assistance regarding which negotiations are now under way. Arrangements for manufacture of M.I.G. jet fighters have already received much publicity. A technical team from Russia is expected to arrive shortly in that connexion.

British Steel Delegation

A 74 member delegation of the British Iron and Steel Institute has arrived in India, to participate in a symposium organised by the Indian Institute of Metals and the National Metallurgical Laboratory, in Jamshedpur on February 1. The symposium will be inaugurated by Mr C. Subramaniam, Minister for Steel and Heavy Industries, who will later visit Sindri and Bokaro.

The team of British steel experts will be in India for three weeks, when there will be an opportunity for exchange of ideas on the development of the steel industry in this country. The delegation is led by the Institute's President, Mr M. A. Fiennes, who is the Chairman and Managing Director of Davy-Ashmore Ltd. The firm trains Indian graduates at its Sheffield works and has constructed steel mills in India and has been responsible for a good deal of work at Durgapur. Davy-Ashmore is now engaged in building a fertilizer factory in Kerala.

The delegation includes Sir Charles Goodve, O.B.E., D.Sc., F.R.S., Past President of the British Iron and Steel Institute and Director of the British Iron and Steel Research Association; Mr K. Headlam-Morley, O.B.E., Secretary of the Iron and Steel Institute; Sir Julian Pote, a Vice President of the Iron and Steel Institute and President of the British Iron and Steel Federation.

The visit of the delegation of British steel experts is of great significance at this juncture, when

India is striving to achieve a break through in the field of Iron and Steel manufacture. The leader of the delegation, Mr Fiennes, spoke in eulogistic terms of the progress that India has already achieved in troubling steel production in a matter of three or four years which, he said, no other country has ever attempted to do. But, still, capacity and production will be short of the target at the end of third plan. The delay in getting started on Bokaro project has upset the schedule.

Apart from steel, there are also shortages in regard to pig iron to which the Minister for Steel and Heavy Industries referred in his address to the Electrical Manufacturers' Association. Many firms to whom licences had been issued in the private sector for pig iron plants have not been able to make progress. The Ministry, it is learnt, is now considering steps to meet the deficiency. It is proposed to set up pig iron plants attached to the existing public sector steel plants which will be capable of using nut coke produced by the coke ovens which, at present, has no profitable avenue of utilisation.

The special meeting at Jamshedpur is concerned particularly with the technical aspects of steel manufacture and exchange of views with British experts, who have experience of different aspects of the iron and steel industry in Britain, should be particularly helpful in throwing up suggestions which could be profitably utilised in India. The visit of the delegation is an index of the growing interest of Great Britain in India's development and, especially, in the key sector of iron and steel, and it is hoped that the visit will pave the way for collaboration covering a wide range of projects.

Coal Mining

Different aspects of the development of India's Coal mining industry were discussed at a meeting last Monday between Mr Rapacki Polish Foreign Minister, and Mr K. D. Malaviya, Minister for Mines & Fuel. Also present at the meeting were Mr K. R. Damle, Secretary of the Ministry of Mines and Fuel, Mr Chedilal, Joint Secretary, and Mr A. B. Guha, Chief Mining Adviser. Mr Rapacki was accompanied by the Polish Ambassador.

India is already getting technical and financial assistance from Poland in the development of deep mines in the public sector. Poland has special experience in the development of deep mines. Poland has also experience of development of lignite for the generation of power, a topic of considerable interest, to India, especially in the South. Poland, the Foreign Minister is reported to have said, was using lignite for power in a big way replacing hydro power as they found that construction of dams was too costly.

Ashok Leyland Limited

Satisfactory Financial Results

Expansion in Production Continues

Greater Demand for Comet Vehicles

Sir A. Ramaswami Mudaliar, the Chairman, on Non Availability of Special Raw Materials

Speech delivered by Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.), Chairman, Ashok Leyland Limited to the Shareholders at the Fourteenth Annual General Meeting of the Company held on 16th January, 1963 at Ennore, Madras.

GENTLEMEN,

I have great pleasure in extending to you a cordial welcome to the fourteenth annual general meeting of your Company.

The Directors' report, audited balance sheet and profit and loss account for the year ended 30th September 1962 have been circulated to you and, with your permission, I shall take them as read.

As the balance sheet and profit and loss account have disclosed, it has not been an unsatisfactory year from the financial point of view, in spite of difficulties regarding foreign exchange allotments for materials which have to be imported. Sales for the year exceeded Rs. 13 crores compared with Rs. 11.5 crores approximately in the previous twelve months from 1st October 1960 to 30th September 1961.

PHASED PROGRAMME

In my speech last year, I referred to the phased programme of expansion which we have undertaken to produce 6,000 Comets and in addition 1,200 Heavy Duty engines per annum. Accordingly during the year under review, buildings of a total cost of Rs. 31 lakhs have been completed and plant and machinery of a value of Rs. 104.5 lakhs have been installed. Additional plant and machinery of a value of Rs. 21.5 lakhs are either in transit from suppliers or awaiting installation. These figures represent roughly a total increase of Rs. 135 lakhs in the gross block capital during the year on account of buildings, plant and machinery. You will have noticed that, after making appropriate provision for depreciation, taxation and other charges and for the normal dividend of 8 per cent subject to tax, there is very little surplus which can be transferred to general reserve. We have therefore been expanding our production and for the purpose investing money in plant, machinery and buildings almost exclusively from equity capital. There has been little

scope for surplus earnings which normally are utilised to a considerable extent in financing expansion programmes.

When I state, as I did last year, that the selling price of our Comet Chassis has remained constant since 1955 and that any additions made to the 1955 prices represent the additional duties levied by the Government from time to time, it will be realised that we have been obliged to absorb all the rising costs of materials, power and labour in the selling price. No other automobile unit has, I hope, been placed in such a difficult position. I trust that Government will take into consideration the handicaps we have thus been subjected to and give the necessary relief in agreeing to a fair increase in price, corresponding to rising costs—a relief for which we made a request last year.

There is another problem which we are facing and probably it is one which faces all automobile manufacturers in India. Until the latter part of 1961, on the assumption that the foreign exchange allotted would remain reasonably constant, it was the policy of the Company steadily to increase the indigenous content of its products and, utilising the same amount of foreign exchange, decrease the value of imported material per chassis thereby increasing their annual output.

FOREIGN EXCHANGE

During the first half of 1962, however, not only was the foreign exchange allotment reduced appreciably but, on more than one occasion, the issue of import licence even for the reduced foreign exchange allotment was seriously delayed. While I do appreciate the problems of Government in this regard, I would like to emphasize that the raw materials or components required by automobiles of particular types are not readily available in the open markets abroad. They have to be specially produced in the

automobile factories or by ancillary manufacturers. The effect of these two factors—decrease in foreign exchange and delayed issue of licences—was experienced when, in October last, your Factory had to close down its assembly section for a considerable period for want of the imported components. It was inevitable, though regrettable, that nearly 500 employees had to be laid off for two weeks.

This is not intended to be a catalogue of grievances that I have mentioned but my object is to present to the authorities the actual position which automobile companies generally are facing today. The demand for our products is continually on the increase but we are unable to meet it. We are gradually entering the export market, so much needed for earning foreign exchange. Industries are constantly urged to increase production and productivity councils are giving valuable advice. And yet factors beyond our control are compelling us to reduce the working week to five days. The sense of frustration among enthusiastic workers is not the least of our anxieties. Fully aware of the emergency period through which we are passing, we and indeed all connected with the industry are desirous to be of the utmost help during this period. I would earnestly plead that this industry specially needs the removal of the handicaps to which I have referred.

Your company was formed with the object of producing a heavy duty vehicle, for which at the inception the demand was necessarily limited on account of the restrictions on gross vehicle weights placed by the Highways authorities. Over the years, the demand has increased and a number of expansions have been undertaken involving large capital expenditure. There is every indication that the restrictions imposed by Highways authorities in some States will progressively disappear so that there will be a greater demand for the Comet vehicles and it may become practicable to produce heavier vehicles and thereby increase the company's turnover. The present emergency is likely to

accelerate this demand either directly or indirectly. Apart from any needs of the Defence services, transport of heavy loads and of mineral ores by road will increase. There will also be an increasing demand for industrial engines and, as you are aware, the expansion programme which is nearing completion provides not only for the production of the Comet chassis but also, in addition, the industrial version of the Comet engine. The plan further envisages the production of 1200 engines per annum of the 600/680 type which have a considerably greater power than the Comet. These heavier engines will be largely utilised for industrial applications.

During the year 1963, we hope to produce at least 3,600 Comets instead of the 5,000 that was our target and with a little help in the form of foreign exchange, to produce both the heavy duty vehicle and the corresponding engines to which I have referred. This will mean careful planning and great attention to increase the factory's efficiency while completing the expansion programme which is now in progress. I have every assurance from our resourceful staff that, in spite of all handicaps, progress will be maintained. It has been the policy of the company to give the greatest priority to means for increasing the indigenous content of the chassis and planning to this end has been in progress for some time, so that its benefits may be secured in the immediate future. More vigorous steps are therefore being taken to locate Indian sources of supply for all ancillary materials which are not normally produced by automobile manufacturers; and, in some cases, if absolutely necessary, we propose to undertake the manufacture of such ancillaries in your factory. Additional items, the deletion of which from the Import schedule was not contemplated till 1964, will now be brought into the 1963 production in your factory. Our British collaborators, sharing completely our views on the subject, have shown a remarkably co-operative spirit to achieve this end. They have arranged for a Planning Controller from Leyland Motors to

complete these plans in consultation with your company's executives. I would like therefore to assure you that, rather than becoming despondent or helpless in any unexpectedly difficult conditions, the organization will accept these conditions as a challenge to overcome them so that the success, which has so far been achieved, will continue.

ENNORE FOUNDRIES

Since I last addressed you, Ennore Foundries Limited, in which your Company has 25% of the capital, has made further progress and the import by your Company of iron and aluminium castings has been completely discontinued, all such demands now being met by Ennore Foundries Limited. This has made a considerable contribution to the reduction of the foreign exchange required per chassis. After some initial "teething" troubles, the quality of the castings has become quite satisfactory, with a very low level of scrap in the machine-shop. The Foundries' capacity has reached a stage at which it is possible not only to meet the full demand of your company but also to supply

castings to other manufacturers, thus both directly and indirectly saving foreign exchange.

I have reserved to the last a statement on the situation that has suddenly confronted the country by the unprovoked and unjustified aggression of our land by China. I am convinced that this aggression is not merely the result of a dispute over our borders. It poses a threat to democracy and the democratic way of life in our country; but it also consequentially poses a threat to neighbouring democracies which have recently become self-governing independent States. In the emergency that has arisen, your Company is determined to play its part worthily and well. The donation of a lakh of rupees, which your Company has made to the Prime Minister's Defence Relief Fund, is a bare expression of that determination in a tangible form. The very programme of production that I have outlined above will indicate our resolution to do whatever is necessary in the present emergency; and the collaboration of our British colleagues in the planning and expansion of this programme is an indication of their complete iden-

tity of views with ourselves on the subject.

Leyland Motors continue to give us every assistance and we are greatly indebted to Sir Henry Spurrier and his colleagues for the valuable work they have done on our behalf in undertaking all the planning for our expansion project.

Since I last addressed you, we have had a visit from Mr. West, Chairman of West Yorkshire Foundries and a Director of Leyland Motors, Mr. Grimshaw, Leyland's Engineering Consultant, and Mr. Tattersall, their Chief Engineer. We are looking forward to another visit in the near future from Sir Henry Spurrier, Chairman of the Leyland group, who will be accompanied by Mr. West. These visits have been of incalculable assistance to us in organizing and regulating our productive capacity. I am sure you will wish to convey to the Leyland Directors and particularly to Sir Henry Spurrier our thanks for all their assistance.

Our relations with our employees have remained cordial throughout the year and the results which were obtained, in spite of many difficulties, were in no

small measure due to the co-operation which the officers, staff and work-people of your company have extended to your Directors. The agreement with the Employees' Union, which was executed sometime back, expired at the end of 1961 but remained current while a new agreement was being negotiated. This new agreement was executed recently, effective from 1st July 1962 till 31st December 1964. I trust it will ensure a continuation of the happy relations between the management of your Company and its employees. I have already referred to the enthusiasm which our officers and workers have shown in the progress of our Company but I would like specially to refer to one of my colleagues on the Board, as I did last year, whose contribution again has been outstanding. I refer to the Managing Director, Mr. Collins, who has been a tower of strength to his colleagues in the workshop and to his colleagues on the Board.

NOTE:—This does not purport to be a record of the proceedings of the Annual General Meeting.

There are, however, indications that Government will be initiating further concerted measures to ensure an equitable return to the grower. These steps are expected to be directed mainly towards eliminating the middlemen in the trade so that the jute cultivator

is not deprived of his due share of the price, by bringing him in direct touch with the co-operative societies. Already the jute cooperatives are buying jute on behalf of the STC but the quantity lifted so far appears to be quite small. Even so the entry

of the cooperative societies in the picture has restored the confidence of the cultivator in some regions. Government is now planning in terms of setting up a large number of co-operatives adequately to cover the growing regions. Already, steps are in train to maintain purchases by all the agencies at a fairly high level. It is believed that if large purchases continue to be made for another month or so, there will be a marked improvement in jute prices. In this connection, it is expected that minimum purchase quotas will soon be issued to the jute mills as well as the JBSA for the next month.

Conditions in the jute goods market have continued to be quiet in the absence of sustained buying interest. Though enquiries from a few countries were reported now and then for hessian, the quantity involved seems to be of small proportions only. Foreign buyers are not expected to be in any great hurry to purchase their requirements in view of the continued large production of hessian. In December output of hessian in LJMA mills reached a high level by transferring further sacking looms to hessian production. It is also anticipated that mills' output will be maintained

at current maximum level for some months. The news that US burlap consumption in December was lower at 73.8 million yards as compared with 77 million yards in the previous month has not been conducive to high price levels. The fact that stocks of burlap in that country had increased to 277.3 million yards from the previous level of 261 million yards has discouraged speculative support to the section. As for sacking the trend is downward in the absence of fresh interest in the section.

TEA More General Demand

IN the export sale held at Calcutta this week, offerings were 67,173 packages of Leaf tea. Demand was more general than in the previous week. Plain orthodox descriptions met with useful enquiry and were sold at firm prices with clean exportable Fannings often realising dearer rates. "Teas for price" were well supported and fully firm to dealer. The better liquoring Dooars and medium Assam descriptions were readily absorbed at often dearer levels, particularly BOPs, which were a strong feature. The brighter Assams were sold at enhanced rates where quality showed improvement.

Medium CTC descriptions were well supported, particularly BPs, which were generally slightly dearer. Similar Fannings tended lower except where quality showed improvement. The best sorts were sold readily at firm to dealer levels. Fibrous CTC teas with bright liquors were keenly competed for and registered an advance. Legg-cut teas were irregular and sometimes slightly easier, although the brighter lines were occasionally considerably dearer.

Whole Leaf grades came to a firm market and were sold at about last rates, while Tippy types were dearer. Darjeeling tea met with good enquiry with selected lines selling at dearer rates following quality. Following rates (per kilo) were quoted:—Clean Plain Pekoe Rs 4.80 to Rs 5.10. Plain BP Rs 4.00 to Rs 4.30. Plain Fannings Rs 3.90 to Rs 4.40. Medium Assam CTC BP Rs 5.70 to Rs 6.20; Medium Assam CTC Fannings Rs 5.40 to Rs 5.90; Best Assam CTC BP Rs 6.30 to Rs 6.60 and Best Assam CTC Fannings Rs 6.20 to Rs 6.60.

In the Cochin market, a quantity of 234,000 kilogrammes of Dusts was offered for internal consumption. Against fair demand, Low Medium and Medium sorts were irregularly 10 nP to 20 nP a kilo easier, while coloury Wynaad teas were 30 nP to 40 nP lower. Highgrows and unorthodox types were irregular and lower.

According to a report, production of tea in Pakistan was slightly higher at 2.8 million pounds in December 1962 as against 2.7 million pounds in the corresponding month of 1961. Total outturn, during April/December 1962, was, however, lower at 51.5 million pounds as against 59 million

pounds in the corresponding period of the previous year.

Production of Tea in East Africa increased to 5.57 million pounds in October 1962 from 4.12 million pounds in the previous month and 5.05 million pounds in October 1961. Total production, in the first ten months of 1962, was also higher at 48.49 million pounds as against 37.88 million pounds in the corresponding period of 1961. Out of the total outturn in the period under review, Kenya accounted for 29.25 million pounds; Uganda for 11.38 million pounds and Tanganika for 7.86 million pounds against 21.26 million; 9.06 million and 7.56 million pounds respectively in January/October 1961.

The market for Ceylon tea in some of the principal buying countries is reported to be in danger. Iran has stopped the import of Ceylon tea, because Ceylon has not been able to buy the stipulated quantity of goods specified in the trade pact between the two countries. The Government of Iraq has informed the authorities in Ceylon that not enough goods are being imported from that country and that, if the present low rate of imports continues, it will be forced to curtail the import of Ceylon tea. The tea trade in Ceylon fears that South Africa, too, will impose restrictions on the import of Ceylon tea, because of certain political considerations.

In the auction held in London this week, offerings were 27,312 packages including 22,107 packages from Northern India and 736 packages from Pakistan. Buyers followed quality closely. Prices showed a decline of

1d to 3d per pound except for teas under four shillings. There met with a good demand and remained about steady at last week's rates.

Tea stocks in London, as on 11 January 1963, were higher at 145.55 million pounds as against 141.81 million pounds in the previous week. The total quantity to be landed on the same date was 19.83 million pounds. Total afloat was 36.08 million pounds including 27.68 million pounds from Calcutta.

COTTON Futures Weak

The Bombay cotton futures market turned distinctly weak last week and towards the close there was a precipitous fall in prices. The selling pressure which developed on Wednesday gathered momentum as the week progressed and pushed down the prices of the ruling Jarilla March contract by nearly 20 points. At this low level official trading in futures was suspended as the contract touched the week's marginal low of Rs 660.00 per 3 quintals. The landslide in the market was ascribed to the sharp break in values in the terminal markets, where brisk arrivals were reported. Sentiment was also adversely affected by the reports of heavy accumulation of stocks in the uncountried centres.

The market opened the week on a steady trend and the Jarilla March contract edged forward to Rs 680.00 per three quintals from the previous week's closing of Rs 679.00. How-

NOTICE

THE UNITED COMMERCIAL BANK LTD.

Regd. Office: 2, India Exchange Place,
CALCUTTA.

Issue of new 2,00,000 ordinary shares of Rs. 100/- each, Rs. 50/- per share paid up for cash at a premium of Rs. 25/- per share.

Shareholders are hereby reminded that the sum of Rs. 37-50 per share towards the nominal value payable on allotment on the Right Shares is required to be paid on or before the 31st January 1963. No extension of time whatever will be given for payment of the sum payable on allotment.

Interest at the rate of 9% per annum from 1st February 1963 to the date of actual payment will be charged on the amount payable on allotment if the same is not paid on or before the 31st January 1963.

By Order of the Board of Directors
S. T. SADASIVAN
General Manager

Calcutta,
Dated 24th January, 1963.

Markets

JUTE Decline in US Burlap Consumption

ALTHOUGH the raw jute market continues to rule steady, lower quality jute is still selling below the minimum prices. Mills are showing increased interest only in quality jute which however seems to be in short supply. Mill purchases during the past few weeks were at a fair level but it would appear that mills are yet to complete their January quota while they appear to have fulfilled their quota on behalf of the Jute Buffer Stock Association. In the meantime, concern continues to be expressed over the next season's crop. It is felt that in view of their not very happy experience this season, jute growers will be hesitant to take to jute cultivation in the next season. According to Mr P. D. Khaite, member of the Indian Central Jute Committee, there is extreme resentment among growers. He has also referred to the reported move by a large number of growers in West Bengal, Bihar and Orissa to reduce their acreage under jute in the coming season. Mr Khaite has also

pointed out that if a sizable reduction in jute acreage takes place, it will be disastrous both for the grower and the jute goods industry. He has therefore suggested that the STC should buy 10 lakhs bales of jute with a view considerably to relieve the pressure of sales.

A suggestion often heard in jute circles is that exports should be stepped up if stability to the jute market is to be brought about. It has been pointed out that as much as 10 lakhs bales should be allowed to be exported. This however does not appear to be a proper solution of the problem because foreign buyers who manufacture quality jute goods may want a large proportion of good quality jute. Already good quality jute appears to be in short supply and in recent months mills have been steadily increasing their production of quality products to meet the growing requirements of the US market. In the face of the growing demand for quality jute from our mills, it will be unwise to allow the export of such jute in quantity. Moreover, this will also jeopardise our export trade in jute goods as with more jute obtained at competitive price from India, foreign manufacturers will be enabled to increase the competition to our goods in world markets.

ever, the trend was reversed toward the middle of the week and the contract sharply receded to Rs 669.00 at which level official trading came to a halt. The downward swing continued even after the suspension of official transactions and the contract slipped down to Rs 660.00 in unofficial dealings. The sentiment remained extremely feeble and it is doubtful if the market could be sustained even at present levels unless Government steps in to its rescue.

The spot market at Sewri also depicted depressed conditions. The reports of heavy arrivals in terminal markets and the expectation of a bumper crop in Gujarat sent prices of Vijay, Digvijay & Kalyan sagging to the tune of nearly Rs 30 per candy. The mills were reluctant to cover their requirements as they anticipate further fall in prices. Scattered business was reported in CO-2, L-147 and 197/3.

With the completion of export quota for Bengal Deshi cotton the export section was devoid of any activity. In the import section moderate trading in the US cotton was reported.

Gujarat is likely to face a glut in cotton, if there is no marked improvement in mill offtake. The mill's apathy to enter into the market has already created panicky conditions and they prefer to wait in order purchase cotton at bargain prices. Out of the estimated cotton crop of 1.6 million bales in Gujarat only about 200,000 bales have been sold so far.

The US Textile Economics Bureau reports new gains in production and mill consumption of synthetic fibre in 1962. Several categories of products touched new levels last year and virtually all share in the gains over previous year level. The Textile Organon states that particular strength was shown by rayon staple and acetate filament yarn in the cellulose fibre sector. Throughput in the first eleven months of last year showed an increase of 28 per cent in the former and 25 per cent in the latter compared with relevant period in 1961.

According to the Finance Ministry, exports of cotton textiles from Japan, including ten major items, in 1962 reached \$1,256,528,000 in value, an increase of about 9 per cent over 1961. On the contrary, imports of main textile items in the year under review amounted only to \$742,042,000 in value, a fall of 22 per cent from 1961.

The British "Cotton Board" reports that the downturn in cotton textile industry became more pronounced and more widespread in the third quarter of 1962. According to the board world trade in cotton piecegoods in the quarter under review was 4 per cent less than the corresponding quarter in 1961. Exports of cotton textiles in this quarter fell down to 54 million sq. yards from 58 million sq. yards in the previous quarter and 68 million sq. yards in the third quarter in the previous year. Almost all the important continental cotton textile industries continued to experience depressed conditions. Only Italy and possibly Portugal succeeded in more or less maintaining last year's production. Barring Portugal and Belgium all leading exporting countries are re-

ported to have exported a smaller volume of cotton piecegoods than a year earlier.

World Coffee Estimate

ACCORDING to a circular issued by the US Agriculture Department, world total Coffee production for the 1962-63 crop is estimated at 65.5 million bags—8 per cent less than the 1961-62 crop and 17 per cent below the record set in 1959-60. Exportable production for 1962-63 is estimated at 51.1 million bags, while calendar year 1962 exports were placed at 46 million bags. The Department, however, says that carryover stocks were at an all-time high of about 81 million bags.

For Africa, the circular predicts the highest crop in history, estimated at 14.5 million bags of which 14 million bags are exportable. Increased or record crops were estimated for Angola, Cameroon, Ethiopia, Ivory Coast, Kenya, Tanganyika and Uganda. Malagasy Republic is expected to maintain its present production level of about 800,000 to 850,000 bags.

The Indonesian crop is estimated at 1.6 million bags with favourable coffee prices there expected to result in further increase. The North American production is estimated at 10.4 million bags with 7.8 million exportable. South American production is placed at 37.1 million bags of which 38.3 million bags is exportable. Brazil and Latin American will account for 27 million bags.

Brazil has an export quota of 18 million bags under the International Coffee Agreement and the producers, supported by the Brazilian State Coffee Institute, have launched a campaign which can undermine rival coffees. It was known for sometime that free ports like Singapore and Hong Kong have been used for stocking sizable quantities which could be shipped out to the Far East and South-East Asian markets outside the quota areas at much shorter time than it would take any other producing country.

Meanwhile, according to the figures released by the India Coffee Board, receipts of coffee into the Pool out of the 1962-63 crop, up to the end of December 1962, amounted to 6,242 tonnes as compared with 2,768 tonnes out of the 1961-62 crop. Out of the total receipts during the period under review, Plantation accounted for 5,849 tonnes; Arabica Cherry for 308 tonnes and Robusta for 85 tonnes as compared to 2,599 tons; 57 tonnes and 112 tonnes respectively up to the end of December 1961.

The quantum of coffee, released for internal consumption during December 1962, amounted to 3,122 tonnes as compared with 3,300 tonnes in the previous month and 2,660 tonnes in December 1961. This brings the total release, in 1962, to 34,576 tonnes as against 33,873 tonnes in the previous year. Out of the total release last year, Plantation variety accounted for 12,230 tonnes; Arabica Cherry for 4,046 tonnes and Robusta for 18,300 tonnes as against 12,501 tonnes; 4,792 tonnes and 18,580 tonnes respectively in 1961.

Including the sale held on 9 January this year, the coffee sold for export from the 1961-62 crop amounted to 19,829 tonnes made up of 11,286 tonnes of Plantation; 3,511 tonnes of Arabica Cherry and 5,032 tonnes of Robusta. Exports in the 1961-62 season, however, compare very unfavourably with the previous season, when sales for export, up to the end of December 1961, totalled 30,341 tonnes consisting of 17,921 tonnes of Plantation; 4,596 tonnes of Arabica Cherry and 8,024 tonnes of Robusta.

SHELLAC Decline in Katki Crop Production

According to the final estimate of the Indian Lac Cess Committee, production of Katki crop in India declined to 290,000 maunds in 1962 from 392,000 maunds in the previous year. The decline is attributed to low prices, which made it unremunerative even to harvest the crop. It is estimated that at least 40 per cent of the crop was not harvested last year.

Excepting Madhya Pradesh and Maharashtra where lac production was maintained at the previous year's figure of 136,000 maunds and 40,000 maunds, respectively, output in all other States showed a marked decline. The production in Bihar fell sharply from 156,000 maunds to 87,000 maunds last year as did the output in West Bengal from 35,000 maunds to 15,000; in Uttar Pradesh from 12,000 maunds to 5,000 maunds; in Gujarat from 3,000 maunds to 2,000 maunds; in Assam from 3,000 maunds to 1,000 maunds; in Orissa from 2,000 maunds to 1,000 maunds and in all other States from 5,000 maunds to 3,000 maunds.

The preliminary estimate places the Aghani lac crop in '62 at 125,500 maunds against the final estimate of 50,000 maunds for the previous year. The increase in production is shared by all the States with output in Bihar rising from 22,000 maunds in 1961 to 62,500 maunds last year; in Western Bengal from 2,500 maunds to 27,500 maunds; in Madhya Pradesh from 17,000 maunds to 22,500 maunds; in Orissa from 6,000 maunds to 10,000 maunds and in all other States from 2,500 maunds to 3,000 maunds. The condition of the crop, 35 per cent of which has already been marketed, is reported to be good.

RUBBER Improvement in Supply Position

With an opening stock of 13,917 metric tons, a production of 3,644 tons and imports of 2,370 tons, total supplies of natural Rubber in India increased to 19,931 tons in November, '62 from 17,496 tons in the previous month. The improvement in the supply position is the result of increases in both production and im-

ports of natural rubber, not to mention a larger opening stock.

On the other hand, consumption of natural rubber by the industry rose from 3,579 tons in October to 4,872 tons in November. Natural rubber stocks, at the end of November, 1962, too, were higher at 15,059 tons as against 13,917 tons at the close of the previous month. Besides, there were 3,006 tons of synthetic rubber in stock at the end of the month under review as against 3,582 tons at the close of October.

CASHEW Rise in Exports

Exports of Cashewnuts from India rose to 1,513,096 cases in the first nine months of the last year from 1,424,268 chests in the corresponding period of the previous year. Earnings from such exports have, however, declined to Rs 13.69 crores from Rs 15.08 crores in the January-September 1961. While exports to Russia, East Germany and the Netherlands increased, those to all other important consumer countries registered a decline.

Shipments to Russia rose from 158,069 cases in January-September 1961 to 207,983 cases in the period under review as did those to East Germany and the Netherlands from 51,390 cases and 12,570 cases to 110,914 cases and 20,892 cases respectively. On the other hand, exports to the USA, the largest buyer of Indian cashewnuts, declined from 883,872 cases to 849,611 cases as also those to the UK from 117,117 cases to 82,302 cases; to Australia from 52,190 cases to 50,405 cases; to Canada from 59,107 cases to 42,311 cases and to West Germany from 37,994 cases to 33,08 cases.

Study of Market Behaviour

For formulation of appropriate price policies for agricultural products and their effective implementation, it is necessary to have accurate data of the movement of prices. The Food & Agriculture Ministry's programme for expansion of schemes for study of market behaviour, which was drawn up following the Seminar of Agricultural Statisticians, is relevant in this context. At present market prices and other related information are obtained from 850 markets in the country. It is intended to increase this number to 1500 markets, that is, to about 50 per cent of the total number of markets in India. The Ministry of Food & Agriculture has set up eight Regional Office—in Calcutta, Bombay, Madras, Delhi, Jaipur, Bhopal, Shillong and Lucknow—to supervise the operations.

In addition to wholesale prices, the scheme will also include study of retail prices. The Ministry has also recently organised studies of market 'margins'. Accurate knowledge of these 'margins' is necessary for any policy for controlling prices without hurting either the consumer or the producer.

INVESTMENT GOSSIP

Welcome Recovery: But Undertone Still Cautious

ing the existing procedure of fixing the retention prices of steel as it does not adequately provide for the replacement of plants. An immediate revision of the steel retention prices seems unlikely though, because it has been indicated by Government that it will await the final report of the Committee before making the question.

The belief, however, persists that new retention prices may be fixed later in the year in the light of the findings of the Committee as embodied in its final report. In the meantime the undertone of the stock markets has become steadier with the steel shares leading the uptrend. Indian Iron has recorded a smart rise from its revised minimum price level. It is possible that operators have derived encouragement to extend their commitments from renewed hopes of an early improvement in the political situation. Earlier in the week, however, prices tended to be depressed following the announce-

ment of further relaxation in trading. Minimum prices have been abolished in the case of most shares and the minimum prices of 4 shares in the cleared list have been further reduced. The immediate reaction to these measures has been renewed selling pressure from weak holders with the result that prices developed a reactionary tendency.

As a result of the reduction in floating shares following the selling pressure in earlier dealings, the technical position of the market has improved somewhat and this may prove to be conducive to fresh interest being evinced. But in view of the fact that the investment situation continues to be adversely affected by a number of factors, an expansion of business may not come about at least

for some time. This is the period before the Central Budget, when rumours about the shape of things to come will be distracting the attention of market men. This year it would appear that there is no uncertainty about the heaviness of the taxation. Operators and investors will naturally be cautious in extending their commitments pending the announcement of the budget proposals. Corporate news in general is also not every encouraging and the rise in the interest rate on advances against shares is not being helpful to an expansion of interest in equities.

EIC-Parry Limited has earned a consolidated net profit of £648,473 for the year ended 30 September 1962 as against £686,060 for the previous year. The directors have proposed a final dividend of 14-2/7 per cent, making a total of 21-3/7 per cent, taxable, on the increased ordinary capital. The same dividend was paid, subject to tax, in the previous year on the old capital.

Watch-Dog Writes:

STOCK markets have generally exhibited a slight improvement in sentiment, thanks to expectations of an upward revision in steel retention prices. Business completed, however, remains small due to a cautious policy adopted by the operators.

The important development on Lyons Range was the decision made by the authorities to remove the minimum price restrictions on all but six shares in the cleared list and tea shares in the cash list.

Expectations of an upward revision in steel retention prices led to some buoyancy on Dalal Street. Selective buying was noticed on the Madras Stock Exchange.

On the Delhi Stock Exchange conditions remained steady.

Unsettled conditions prevailed on the London Stock Exchange where prices drifted lower in response to small sales.

Trading on Wall Street was at a reduced pace.

LYONS Range remained closed on Tuesday and Saturday due to holidays. During the period it remained open, trading was restricted in view of the economic and political uncertainties. Although the selling pressure was not heavy, the drifting process was due to a lack of buyers.

Initially, the market was getting worried over the growing shortage of funds. Holders found it difficult to avoid selling their shares as banks were trying to curtail overdrafts against shares, not to speak of the decision made by some banks to raise their interest rates on advances.

The hesitancy of the operators became the greater since the conduct of corporate enterprise was getting more and more difficult. In spite of increased turnover, profits had been generally squeezed by heavier taxation and rising production costs. It was, therefore, feared that the forthcoming Central Budget would have an extremely depressing effect on market values. As the State Governments were also anxious to implement the Plan schemes without any radical changes, the feeling was gaining ground that the Central and State taxes would be heavy and that the corporate profits would be seriously affected.

On the political front, there was a good deal of concern over the Kashmir situation. Although there was the possibility of negotiations to settle the Sino-Indian border dispute, it was felt that the emphasis would continue to be on spending large sums on the Defence Services. Naturally, restrained by various uncertainties, the professional operators as well as investors were not inclined to enter into any commitments.

The withdrawal of the minimum price restrictions was, therefore, greeted with a further fall in prices. It looked as if the operators were keenly awaiting the official announcement to enable them to unload their holdings. The only significant feature was a good expansion in turnover, because of the freedom given to sellers.

The minimum prices in respect of the following shares have, however, been revised:—Indiar Iron from Rs 22 to Rs 21.50; Guest, Keen, Williams from Rs Rs 34.45 to Rs 34; Kesoram from Rs 22 o Rs 21.50 and Rohtas from Rs 12 to Rs 11.75. Again, the existing minimum prices in respect of Shree Gopal and Orissa Cement are to remain in force. The minimum prices in respect of the remaining 12 cleared shares are removed.

Moreover, the authorities have decided not to make compulsory carryovers in Shree Gopal, Orissa Cement and Guest, Keen, Williams from Clearing No. 380 to No. 381. But, there will be compulsory carryover in Indian Irons.

Kesoram and Rohtas and the satta charges have been fixed at 8½ nP, and 4½ nP respectively.

But the sudden turn in market sentiment from Thursday was influenced by the Raj Committee's interim report, recommending a readjustment of the steel retention price taking into account the current replacement costs of plant and equipment. Moreover, with the removal of minimum prices, the market could attain a measure of stability.

Despite the revision of the minimum price from Rs 22 to Rs 21.50, the scrip was freely offered in the kerb market at as low as Rs 21.10. Even at this price, investors were hesitant to buy as they feared that the company might find it difficult to raise the dividend in the near future. Jessop changed hands at Rs 22.62 to Rs 22.75 with Binani Meta hovering idly around Rs 10.37. Braithwaite were, however, a firm feature at Rs 36.25. TEXMACO were quiet at Rs 19.55 against Rs 20.

Although pressure had declined in Jute shares, support was not forthcoming despite the satisfactory interim dividend announcement by some companies. This was mainly due to the absence of foreign enquiries for jute goods. Birlas were on offer at Rs 28.8! against Rs 29.62; Ganges at Rs 13.25 against Rs 13.56 and Howrah at Rs 18.25 against Rs 18.37. New Central eased off further to Rs 13.06 from Rs 13.12, while Megna were better at Rs 13.37 against Rs 13.12.

Coal shares were practically neglected. Amalgamated were cheaper at Rs 24.75 against Rs 25 with Western Bengal maintained at Rs 8.94.

Little or no interest was shown in the Tea section. Operators seemed to be getting worried over the shortfall in the North Indian crop during the year just ended. Doubts were also expressed with regard to the outlook for profits.

Sugar shares continued to remain depressed in view of the fear that the profits of the various companies might have been adversely affected by the fall in cane crush, larger export losses and the increase in manufacturing costs. Carew were on offer at Rs 13 to Rs 13.12 against Rs 13.25.

Miscellaneous steady issues ruled comparatively steady, thanks to the absence of further selling pressure. Following were the price trends of a few selected shares:

See the U.S.A. THE PAN AM \$15-A-DAY- WAY

San Francisco's Golden Gate Bridge, one of the world's great bridges, has a central span of 4,200 ft.

Pan Am now introduces a unique low-cost way to visit any one or all of 32 major U.S. cities.

Have you always wanted to see the USA but thought it far too expensive? If so, Pan Am's \$15-a-day-way is your way to the USA.

Here's how: You may spend 3 days and 2 nights in any of 32 major U.S. cities and pay only \$15 for your hotel room with bath and, in most cities, a full sightseeing tour. Average cost for each full 24 hour stay—only \$7.50!

Food? You'll be free to dine where you like, at your own expense. However,

Pan American has surveyed every one of the 32 places included in this plan and can assure you that 3 substantial meals at popular restaurants need not cost more than \$7.50 per day through the entire USA.

Result: \$15 a day for room with bath, meals and sightseeing in any or all of 32 fabulous U.S. cities.

Fares? No extra fare on a Pan Am 'round-the-world trip for many of these U.S. cities. Only Rs. 6053 economy class from Calcutta for Europe and the Pacific, and North America as well!

Travel a New World—See the U.S.A.

DONATE LIBERALLY TO THE NATIONAL DEFENCE FUND

But for a temporary improvement in sentiment toward the end of the third week of the month, conditions in the stock market during January were depressed. The short-lived steady trend had stemmed from hopes of a revision of the steel retention prices following the publication of the preliminary report of the Committee on Planning and Distribution of iron and steel. The committee has opined that the existing procedure of fixing the retention price of steel does not adequately provide for the replacement cost of plants. Initially the report engendered optimism but subsequently sentiment once again became depressed following the indication that Government was unlikely to reconsider the matter in the near future.

The month ended on an easy note as conditions akin to panic prevailed on the last day of the month following press reports to the effect that Government had banned bank advances against shares and gold. The report however was subsequently found to be baseless. In a communique issued on that day the Reserve Bank pointed out that no new directives had been issued to the banks as regards advances against shares and that the last one issued was in November asking banks not to allow advances against shares that were likely to aid speculative activity.

Equities Depressed in January

In the absence of incentives buyers were conspicuous by their absence most of the time during the month. Moreover, there were a number of adverse developments which effectively curbed enthusiasm. In the first place the raising of the Bank rate by ½ per cent to 4½ per cent will have a serious impact on the credit requirements of industries. The promulgation of the Gold Control Order was also interpreted bearishly. The political uncertainty is another important inhibiting influence. Although it was hoped intermittently that the border question would be amicably settled, the fact that China had not accepted the Colombo proposals in toto indicated that there would be no early settlement. Fresh interest was also discouraged by apprehensions about heavy taxation in the coming Central Budget. The Union Finance Minister has made it clear that defence expenditure would increase sharply and that additional resources have to be found through fresh taxation to meet the mounting cost. It has therefore been generally believed that the taxation proposals would show heavy additional imports. Although the general feeling is that fresh taxation would be in the form of excise levies, there is a lurking fear that direct taxation may also be resorted to.

Such a prospect can only be expected to deepen the gloom on the stock market. For already corporate profits have been squeezed between high cost of production and heavy taxation.

It is not surprising therefore that further relaxations in trading effected by the Calcutta Stock Exchange had failed to improve sentiment. Quite early in the month the authorities of the Exchange decided to remove compulsory carryover in respect of four more cleared shares. But this evoked little interest. Later when the minimum prices of four shares in the forward list were revised downward and the minimum prices of 12 cleared shares were removed, prices instead of improving, eased further. Minimum price restrictions were removed in respect of all cash shares except those in the tea group. Towards the close of the month further reduction in minimum price levels was effected in four cleared shares. The relaxations were of no avail and sentiment continued to be depressed.

Sectionwise, jute shares were initially better following announcement of some satisfactory interim dividends. Sustained interest was however did not materialise as operators were worried over the outlook for the industry in view of

the continued lack of overseas interest for jute goods, especially sacking. It was feared that because of the steadily growing competition from Pakistan, it would be increasingly difficult to maximise our exports of sacking.

Elsewhere interest was at a meagre level in the absence of fresh buying. Tea shares were neglected as it was feared dividend for 1962 would not be on a satisfactory level in view of the lower production of North Indian tea. Likewise the sugar section lacked support because it was believed that due to shortage of cane, mills would not be able to work to their capacity.

Coal shares were neglected as investors were reluctant to make fresh commitments in view of the uncertain outlook for the industry. While there is dissatisfaction as regards selling price of coal, the fact that transport difficulties continue to retard coal movement has been a discouraging factor. Textile shares were depressed following reports of accumulation of stocks in mills. In the Engineering section sentiment was subdued on reports of increasing idle capacity in the industry as a whole. It was reported that in the previous year a number of engineering companies could not work to capacity on account of shortage of power. Indian Irons the leader of the market failed to evoke interest despite relaxation of restrictions on trading in the scrip.

(a) After transferring Rs 20,638 from General Reserve No. 1.

(b) After transferring Rs 80,000 from provisions for contingencies.

(c) It is proposed to capitalise Rs 2,125,300 from General Reserve and issue Bonus shares.

(d) After transferring Rs 50,000 from General Reserve.

(e) After transferring Rs 151,000 from General Reserve.

(f) After transferring Rs 80,100 from Dividend Equalisation Reserve.

(g) After writing back Rs 645,151 being excess provision in previous years.

(h) After transferring Rs 500,000 from Rehabilitation Reserve; Rs 281,943 being excess provision for depreciation; Rs 41,042 being excess provision for bonus and including Rs 18,428 being refund of income-tax.

(i) After transferring Rs 250,491 from General Reserve.

(j) After transferring Rs 250,000 from Dividend Equalisation Reserve.

(k) After transferring Rs 200,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 300,000 from General Reserve.

(m) After writing back Rs 750,000 from Reserve for Rehabilitation and writing back Rs 7,927 being excess of Excise Duty and Rs 6,946 being excess provision for rates and taxes.

(n) After transferring Rs 1,400,000 from Dividend Equalisation Reserve.

(o) After transferring Rs 1,137,451 from Contingency Reserve.

(p) After transferring Rs 500,000 from Reserve for taxation and Rs 201,988 from General Reserve.

(q) After transferring Rs 580,170 from General Reserve and Rs 47,990 from Investment Reserve.

(r) After transferring Rs 1,207,838 from General Reserve.

(s) After writing back Rs 289,747 being provisions made in previous year.

(t) After transferring Rs 200,000 from General Reserve.

(u) After transferring Rs 320,000 from General Reserve No. 1.

(v) After transferring Rs 98,240 from Dividend Equalisation Reserve.

(x) After transferring Rs 113,089 from General Reserve.

(y) After writing back Rs 65,163 being excess provision in previous years.

(z) After transferring Rs 450,000 from Dividend Equalisation Reserve.

(a1) After transferring Rs 1,078,000 from General Reserve No. 1.

(a2) After transferring Rs 100,000 from General Reserve and Rs 125,000 from Dividend Equalisation Reserve.

(a3) After transferring Rs 387,627 from General Reserve and Rs 300,000 from other reserve.

(a4) After transferring Rs 300,000 from General Reserve.

(a5) After transferring Rs 308,000 from General Reserve.

(a6) After transferring Rs 40,000 from Dividend Equalisation Reserve and writing back surplus provision of Rs 86,529.

(a7) After transferring Rs 780,000 from General Reserve and Rs 45,088 from excess provision for Bonus.

Steel Ti

The chief merit of the week-long deliberations in Jamshedpur on steel making is that it has gathered compendiously all the relevant, though sometimes opposing, arguments. Pat answers it will be in vain to look for in them but of starting points for discussion on policy there are plenty. First, there are a number of points, mostly of a technical character, on which there is no difference and these could be incorporated into policy without more ado. Where there is disagreement and such disagreement is one of emphasis, there is no difficulty in reconciliation. And even where the difference is fundamental, as that between those who see "no rebate in caution" and those who counsel the futility of "reaching for the stars," the study of the opposing arguments should make for a less strident dismissal of the other point of view.

Not that the difference in approach was one of simple opposition between gigantism and realism or between imaginative planning and chicken-heartedness. Not all who thought "big" thought of the same thing. For instance, Mr Subramaniam, obviously in favour of bold planning, was also the one to advocate a series of small plants along the coast. His gigantism apparently is confined to the need for producing more steel and not to the size of the unit, on which there were others who thought more grandiosely. The technoeconomic implications of ambitious steel-making in the former and in the latter senses are not the same. On the former, there cannot be much room for difference of opinion. Even Mr Fiennes, who appeared to counsel caution did so on grounds of paucity of technical personnel rather than on that of doubts about either probable demand or our basic endowments to produce steel in large quantities. Quite apart from our other industrial ambitions the circumstance of having China as our neighbour makes minimal ambitions in steel making quite out of the question.

Granted this, it still is possible to quarrel about the size of the units to be erected in order to produce this quantity of steel. Among the papers presented at the symposium was one by Dr Dastur and Mr Lalkaka which favoured plants of four to five million tons of ingot capacity on an assumption of annual increases of steel demand as of now. Two British papers, on the other hand, argued for smaller units of 100,000 tons and even 50,000 tons to meet local demands. There were also Indian voices in favour of smaller plants. Apart from Mr Subramaniam who wanted coastal plants using imported coal, Sir Jehangir Ghandy suggested that small units operating on fuels that standard blast furnace practice finds inefficient can conveniently relieve big steel makers of some of the responsibility for producing foundry grade pig iron. This idea has several merits. Bigger plants can concentrate on the more complex task of steel making without being called upon to meet the demand for pig iron from others. Secondly and more importantly, in the context of shortage of high grade coking coal in which even steel mills are driven to desperate devices like coal washeries, the prospect of using less efficient fuel for production of pig iron is a welcome relief of pressure on a scarce fuel.

Big or small, creation of new units involve huge investment, especially in foreign exchange, and the finding of it must impose its own limitations on our steel ambitions. From this point of view, the plea, among others by Mr Fiennes, for exploring possibilities of expanding the capacity of existing

units, cogniti, it does, announce, pansion, had giver, now is on, ingot steel, short of the, Company has, pansion of exte, unready ear.

Imagination in D also come to terms, pect. It is in respect, the producers are allowe, is likely to arise in the, no less than in the case of, If anything, it is likely to, form in the case of the forme, increased production the gross, will be far higher in its case tha, calculating prices. The Raj Com, recently reported on the subject has, finding that the present retention price, allow adequately for even current or price, replacement costs. Addition to capacity is, less provided for in the present price policy.

The purely technical aspects of steel making, discussed at the symposium are of vital importance from the point of view of increased efficiency of production. Ideas like ore-benefication, blending of superior with inferior coal, decreasing the pressure on blast furnace for pig iron manufacture not intended for steel making are ideas that will repay the closest attention. Incidentally, Dr. Lahiri of the Central Fuel Research Institute, made the point that our parlousness in the matter of high quality coking coal is exaggerated. This is not a new view and does not alter the importance of looking for substitution.

To judge by reports, the problem of alloy and special steels got but marginal attention. Sir Jehangir Ghandy mentioned it in his Pandya Memorial Lecture and Mr Subramaniam held out some hopes from Bhadravathi. At the modest estimates written into the Plan, we shall be needing anything like 200,000 tons by 1965-66 against which the prospect of production in the country is no more than 50,000 tons. Foreign exchange is the real problem, though official clumsiness and cross purposes, as over the Telco scheme, had their share of blame.

Mr Fiennes raised some important questions of policy in regard to foreign collaboration in steel making. Some of his suggestions like equity participation of foreign capital were predictably received coolly by Mr Subramaniam. Mr Subramaniam was readier to agree about the paucity of technical experts especially at the higher level and came out with the suggestion of "steel cadets". A cadre of dedicated steel men caught young and imbued with a sense of mission has obvious long term attractions. It is also tied up with the larger question of technical man-power. On a short view, technical knowledge has a price and though it is no use haggling about it, yet it is possible to make full use of available talent in the country. As Sir Jehangir Ghandy suggested, it is possible to make fuller use of facilities and talents for design work already in India. Even where we have to obtain basic designs from abroad, we can depend on Indian engineers and technologists for designing details. The outstanding success in designing the crucial parts of the plant and equipment of the fertiliser project in Rourkela by Indian personnel is an encouraging sign.

economic development of the water resources of Kerala would be greatly facilitated if the political considerations which stand in the way of joint action with the neighbouring State of Madras could be put aside.

The need for a regional pattern of development which cuts across State boundaries is not confined to hydro-electric power or inter-state rivers. The programmes for thermal power in future will have to be based on large power stations situated near the coal fields. This will be necessary both to relieve the pressure on rail transport as well as to make use of inferior varieties of coal and washery middlings. The country is not so richly endowed with high grade coal that it can afford to be prodigal in their use for power generation for which inferior grades could be profitably employed. Carrying the coal of high ash content to generating stations in consuming centres will not be economical and will inevitably add to the cost of power for the consumers. It will be cheaper to generate power near the sources of coal and transmit to the consuming centres.

Mr Nair has indicated that thermal stations have to be planned for capacities of up to one million kW each, and could be located at Kothagudem in Andhra, Pench Valley in Madhya Pradesh, Talcher in Orissa, and in the Bengal Bihar Coal fields. The establishment of such large power stations will be justified only by the combined demands of the region served by them and can be executed only if the States concerned are prepared to pool their resources. The requirements of nuclear power also point in the same direction. A nuclear power according to experts can be economically employed to provide the base load as part of a system with a large demand. No single State will be able to provide the total demand to justify the establishment of a nuclear power station.

The case for regional development is also reinforced by the economies that could be achieved by the interconnection of power systems, which will ensure co-ordinated operation of hydro, thermal and nuclear plants. The economies will arise from the diversity of the peak loads in different parts of the region. If each State system is to be able to meet the demand during peak periods, it will have to establish extra generating capacity which will remain idle at other times. Interconnection of the transmission systems will result in reduction in standby generating capacity for the region as a whole and will enable creation of additional load carrying capacity in a shorter time and at much less cost without establishing

new separate generating units. The President of the Central Board of Irrigation and Power has estimated that the interconnection and integrated operation of the four systems South India—a beginning has been made in this direction—will result in a saving of 265 MW in installed capacity. Allowing for the cost of constructing inter-State links, the associated grid sub-station equipment, and a Central Load Frequency Control Station, the net saving will be Rs 22.73 crores in capital outlay and Rs 2.60 crores in the annual running charges. Similarly in the Eastern Region, interconnection and integrated operations of the DVC, West Bengal Bihar and Hirakud Talcher systems, it is estimated, will result in saving of 350 MW in equivalent generating capacity, of about 27.15 crores in the capital outlay and Rs 4.8 crores in the annual running charges. In this connexion, Mr Nair has also drawn attention to the mitigation of power shortage in Bihar DVC area as a result of the inter-connection of the DVC and Rihand Stations.

For the rational and economic development of power resources and their utilisation the Perspective Plan drawn up by the Central Water & Power Commission has adopted the regional pattern under which the country is divided into seven regions. The effective implementation of this Plan will require that, in future Five Year Plans, the programmes for power development will have to be considered separately from the rest of the State Plans. Mr Nair has made out a convincing case for entrusting the responsibility for power generation and transmission to a Regional Agency made up of representatives of the States concerned. The State Electricity Boards will still have their hands full which the task of distributing power to the ultimate consumers.

Development on these lines will call for vision on the parts of the State Governments concerned to see where their common interest lies and readiness to give up mistaken views of local interest. But the record so far has not been very impressive. Mr T. T. Krishnamachari, for instance, has referred to his fruitless efforts some years ago to persuade the Southern States to set up a Regional Board for Power Development. It remains to be seen whether the new urge to national integration, which we owe to the Chinese, will result in a change of hardened attitudes. A programme for regional development of power and water resources will be a more effective instrument of national unification than any number of amendments of the Constitution designed to counter fissiparous forces.

US PAYMENTS BALANCES

Prepayments Ease Position

IT was announced in December that the United States' rather sombre balance-of-payments figures for 1962 were being brightened a little by the French government's payment of \$116.6 million against its debt to the U.S. Treasury several months ahead of the due date. This was the fifth prepayment by a foreign government during the year, and the third by France (Italy and Sweden made the others).

The total amount prepaid by the three countries was \$664 million, a substantial sum in a balance of payments which, without the advance remittances, would have been in deficit by something like \$2.7 billion. The experience in 1961 was much the same: prepayments totalled nearly \$700 million (\$587 million by Germany and smaller amounts by Italy, the Netherlands, and the Philippines), reducing a potential deficit of \$3.2 billion to an actual one of \$2.5 billion.

Regularly scheduled principal repayments on foreign-country debt are presently running about \$600 million a year. Thus the early arrival of instalments from well-heeled countries in recent years has made the balance-of-payments benefit from debt paydown approximately twice what was expected.

These helpful unscheduled receipts prompt the question: How much more of the same is there like to be? The fiscal 1961 annual report of the Secretary of the Treasury lists a total of about \$33 billion owed to the US government by some 80 foreign countries. A breakdown of the total, however, soon deflates any grandiose hope that prepayments offer a long-term reprieve from balance of payments discipline.

Foreign indebtedness to the U.S. Treasury is a mixed bag of obligations. It includes debts old and new, acknowledged and contested, honoured and repudiated. Well over half of it shows scant likelihood of ever being paid at all.

Some \$19.4 billion carried on the Treasury's books as indebtedness traceable to World War I would have to be included in this category. A century of controversy—domestic and international—for a decade and a half after the war, these debts of dormant for thirty years. Each annual report of the Secretary of the Treasury duly notes their existence and adds a year's interest to the arrears. Otherwise they are largely forgotten. Yearly payments of about \$400,000 are received from Finland, but these have been committed since 1949 to land, but these have been committed since 1949 to use in financing educational exchange programmes between that country and this. Ten of the countries included among the debtors, accounting for 8% of the entire amount, are now part of the Communist world.

The total advanced by the U.S. to its allies for the prosecution of World War I and for postwar relief and rehabilitation was \$10.4 billion. About 41% of the total went to Great Britain (which made large wartime advances to other allies), 33% to France, 16% to Italy, and the remaining 10% to other countries.

Within a few years after the armistice of 1918, it was recognized that the provisions of the war loans—generally calling for 5% interest and no payment on demand or at short term—could not be met. The reconstruction needs of war-damaged Europe, plus the high-tariff policy of the U.S., severely limited the debtors' ability to get up dollars for principal repayment or even interest charges. Concurrently, the status of the debt became further blurred by questions raised on both sides as to equitable division of the costs of the war.

In this context, a major adjustment was made during the 1920's, calculated by the U.S. to represent cancellation of 43% of the debts. The fund-

ing settlements worked out at that time stretched repayment periods out to 62 years and set interest rates considerably lower (the new rates ranged from 3.327% for Czechoslovakia to 0.405% for Italy).

World depression and its consequences in the 1930's brought payments to a virtual halt. By 1934 only Finland was still remitting. Subsequent years of depression, world war, and dollar shortage made discussion of resumption academic. Officially the debts still stand, but any question of reactivating them is so bristly with international implications that a reopening of the matter is unlikely.

Besides the loans to allies, the Treasury still carries on its books \$1.3 billion due from Germany for World War I occupation costs and war damage claims, with accrued interest. A partial settlement of the original claims was effected as recently as 1953, when the West German government issued \$97.5 million in 26-year serial bonds, on which regularly scheduled payments are being made.

More recent debt

Comparatively little foreign debt to the U.S. resulted directly from World War II. The \$47.8 billion worth of goods provided under wartime "lend-lease" (that triumph of semantics as well as of logistics) did not involve billing or borrowing. ("Reverse lend-lease"—goods and services supplied free to the US by its allies—totalled \$7.8

DEBT OWED TO US GOVERNMENT BY SIX FOREIGN COUNTRIES (millions)

	Total Borrowed	Outstanding Dec. 31, 1961	Principal	Interest
France	\$2,541	\$1,422	\$ 77	\$38
W. Germany	1,357	237	595	18
Italy	573	207	64	8
Japan	991	285	37	12
Netherlands	477	153	54	4
UK	5,469	4,147	69	90

1Includes prepayment of \$587 million.
2Includes prepayment of \$44 million.
3Includes prepayment of \$36 million.

Data in table exclude obligations arising from World War I, include amounts owed by private debtors. Part of debt total for some countries is owed in foreign currency, included here as dollar equivalent. In 1962 France prepaid \$470 million and Italy \$180 million against their debts, and Japan agreed to pay \$490 million for postwar assistance.

billion.) For surplus property and "lend-lease" goods shipped or usable after the end of hostilities, the allied countries signed notes for about \$5 billion, of which all but \$1.6 billion has been paid.

The bulk of the \$13.6 billion owed the US by foreigners at the end of 1961, apart from debt originating in World War I, has been generated by foreign-assistance programmes carried out since World War II. Through 1961, foreign-aid loans had been made in the total amount of \$20.8 billion; repayments had brought back \$7.9 billion. Net outright grants had totalled \$29.3 billion in military supplies and services and \$36.7 billion in economic aid.

The outstanding "live" debt falls into five main categories: \$3.7 billion lent by the Export-Import Bank; \$3.3 billion remaining from a special loan made to the United Kingdom in 1946; \$3.3 billion in various other aid loans; \$1.8 billion chiefly for lend-lease and surplus property settlements; \$1.5 billion from sales of surplus farm products. Receipts from interest and commissions in 1961 indicate that the annual rate on the total debt averages a little less than 3 per cent. Average rates range from about 4 per cent on Export-

Import Bank loans to less than 2 per cent on foreign-currency holdings derived from sales under the farm surplus disposal programmes.

Who can prepay?

At such rate, interest savings alone are not necessarily an incentive to prepayment by debtor countries that are in a position to spare the dollars early. Prepayments made thus far perhaps should be attributed to willingness to help the United States with its balance-of-payments difficulties, and it is primarily on such an obliging spirit that hope for additional advance remittances must rest.

Except for the United Kingdom, which still has a balance-of-payments problem even as does the US, most of the countries of Western Europe are now in a strong reserve position and well able to whittle away at their outstanding indebtedness—some of them, at least, in advance of the scheduled due dates. It is from these Continental countries that the great bulk of prepayments has been received in recent years, and it is from them that any additional ones are most likely to come.

The potential for prepayments thus rests on a much slimmer base than the book total of foreign-owed debt. In fact, prepayments on the scale of 1961 and 1962 would use up in three or four years the whole \$2½ billion or so owed by the countries presently in the strongest financial position—omitting from this calculation the debts of World War I origin.

Nevertheless, early remittances are still a prospective source of help for the US in its international financial status, and they should be utilized to the extent possible. Treasury Secretary Dillon's warning that the nearly \$700 million prepaid in 1961 was "a much larger amount than can be expected year after year" was a proper caution. Yet 1962 approximately equalled it, and there is still room for advance payments large enough to afford substantial relief while the US balance of payments remains in deficit—provided it does not remain in deficit too long.

—Morgan Guaranty Survey.

The Challenge

Defence effort necessitates development of a great ability to produce weapons and equipment and to transport them. At the same time, adequate supplies of essentials for civilian consumption must be maintained. All this involves tremendous finance. But to meet the requirement, the less we have to depend upon deficit financing the better for our economy.

The resources of the nation must be mobilised to feed the various needs for production and distribution. Bank is the most suited agency for this purpose. Put all your money in your bank account and make your payments by cheques. That will be your yet another direct contribution to the nation's defence effort.

United Bank of India Ltd.

REGD. OFFICE: 4, CLIVE GHAT STREET, CALCUTTA-1

After three years of intensive investigations, the Mekong project is moving from the stage of planning to that of execution. The project, a unique co-operative effort under UN auspices aims at developing the potentialities of one of the mightiest rivers of Asia in its Lower basin over a length of 1400 miles from Luang Prabang in Laos to the sea. The main-stream and tributaries of the river span the four riparian countries Laos, Cambodia, Thailand and Viet-Nam and the attempt to enlist and co-ordinate international co-operation at the widest range for developing the potentialities of the river is one of the most imaginative tasks that the UN has undertaken. Hydro-electric power, irrigation, flood control, drainage, navigation and water supply schemes are to be undertaken in a phased programme.

In Vientienne last month, the Mekong Committee met in session to consider the progress made and approve future programmes. The Mekong Investigation pro-

MEKONG PROJECT

On To Execution

gramme drawn up by an UN technical assistance mission under Lt. Gen. Raymond A. Wheeler in 1958, has made rapid progress and the investigation has been concluded ahead of schedule by about two years, the collection of basic data, the overall planning of the development of the basin and the planning and design of individual projects are nearly complete.

At the vientienne meeting, a new benefactor, Viz, joined the ranks of those who have already lent their assistance to the project. In December last, West Germany had granted a 11 million dollar loan for the construction of a dam and power plant at Nam Pong in north-east Thailand. Thailand itself is to provide the equivalent of 6 million dollars for the project. The gigantic nature of the

particular project will be evident from the fact that the initial feasibility survey itself cost the UN special Fund 230,000 dollars. As a result of the West German loan and other increases agreed upon, the resources of the project have sharply increased from 14 million to 33 million dollars.

Besides appropriation by the four riparian countries directly concerned in this co-operative venture, funds and technical assistance have come from fifteen (sixteen, including Italy, who is joining the "Mekong Club" from UN Agencies January this year) countries including India, eleven UN agencies and three Foundations and two private companies. India's aid, as that of other Colombo Plan countries has been routed through the Colombo Plan. Details of contributions are as follows:

Government	US dollar equivalent
Grants	
United States*	4,700,000
Canada*	1,365,000
France*	700,000
Japan*	652,000
Australia*	409,500
United Kingdom*	364,000
India*	282,000
Philippines*	235,294
Israel	201,240
New Zealand*	183,000
Netherlands	138,000
China	105,500
Pakistan*	100,000
Iran	77,000
Government Loans	
Federal Republic of Germany	11,000,000
Participating Riparian Countries	8,309,075

World of Finance

THE BUDGET

Taxes or Loans?

A considerable effort by the Finance Minister for fresh revenues is, in his Budget proposals at the end of this month, inevitable. It is now generally accepted that the minimum target will be Rs 100 crores. But there is wonderment as to how Mr Morarji Desai will be able to think up new tax measures such as could raise such a large amount. New and additional excise levies are inescapable; wealth tax rates may be higher; the rate of corporate taxation may be increased; and there is apprehensive talk about the possibility of some form of Excess Profits Tax being revived.

It is unfortunate that little heed is being paid to the practicability of augmenting resources through borrowings. The trouble seems to be that recent experience, not excluding the period since the emergency started, does not hold out much promise of satisfactory realisations from a borrowing programme. As we had reasoned out in a recent article, we believe that the money market is headed for relatively easy conditions; this slack season, and consequently the gilt-edged market is likely to tone up. We would suggest here that there is another aspect of borrowing that Government should seriously consider.

Instead of expropriating moneys through taxation from individuals—a measure that, in the current context of already high rates, is bound to diminish enthusiasm for national effort—we propose that Government could implement a scheme for compulsory savings. A stated percentage of all individual incomes could be required to be invested in Government loans; and these loans could be repayable at the end of the emergency. Individuals would be building up "tax credits", which could be set off against incomes in later years as and when the loans can be repaid by Government.

The idea of compulsory savings will not be attractive to individuals; but at least it will be greatly preferable to fresh and heavier taxation.

+

BANK RETURNS

Strain on the Banking System

Beginning of the month disbursements have scarcely exerted any impact upon currency circulation, but the strain upon the banking system appears to have been considerable.

Active Note Circulation has, according to the returns of the Reserve Bank for 1 February, risen by Rs 1.83 crores to Rs 2,166.68 crores, and also there has been outflow of Rupee Coin in an amount of Rs 0.73 crore. Both Foreign Securities and Rupee Securities are unchanged at Rs 88.08 crores and Rs 1,850.42 crores respectively, and the result is a drop of Rs 2.56 crores to Rs 18.32 crores in the Reserve Bank's cash in the till.

Central Government receipts have been heavy and one reason may be payments made by the States, whose balances are lower by Rs 6.43 crores at Rs 13.58 crores; but it is necessary to add that the State Governments have reduced their ways and means borrowings from the Reserve Bank by Rs 3.24 crores to Rs 16.55 crores. Deficit financing is not responsible for adding to the Centre's Deposits: Investments, it is true, are higher by Rs 5 crores at Rs 241.68 crores and the Reserve Bank's portfolio of Treasury Bills Purchased and Discounted has gone up by about Rs 4½ crores to Rs 52.39 crores; but both these latter changes reflect the sale of Rs 10 crores of securities by the State Bank during the week under review. Other receipts, possibly tax in nature, account for the rise of Rs 17.43 crores to Rs 79.17 crores in the Centre's balances.

Constituents' demand upon Scheduled Banks has been heavy. Reserve Balances of member banks have gone down by Rs 1.57 crores to Rs 74.20 crores, and borrowings from the Reserve Bank have risen substantially by Rs 12.53 crores to Rs 36.10 crores. It may be noted that banks' borrowings against usance bills have alone jumped up by Rs 8.23 crores to Rs 23.67 crores. No doubt month-to-month disbursements coming on top of expanding busy season needs are responsible for putting the banks to strain.

Balances Held Abroad have again slightly slid back, by Rs 0.29 crore to Rs 7.09 crores. The foreign assets in the holding of the Reserve Bank continue to exceed the Rs 95 crore mark, though barely so. The export season has passed its mid-way mark, and the expected (or hoped for) improvement in reserves has not taken place. The half-year from May 1963 is consequently likely to witness even greater stringency in the foreign exchange position of India; a further drawing on the standby with the International Monetary Fund is inevitable—possibly before April.

+

The return of the State Bank for 1 February also reflects the impact of beginning of the month disbursements combined with busy season demand for funds. There has been a drain of Rs 8.42 crores to Rs 560.10 crores in Deposit resources, and this has been accompanied by a rise of Rs 6.95 crores to Rs 294.66 crores in the total of Advances. It is certain that during the week ended 8 February the credit extended by the State Bank will hit a new high—and there is also the

prospect that the Rs 300 crore mark in Advances will be pierced for the first time. To meet the demand for funds, the banks have disinvested for Rs 10 crores, with the gilt-edged portfolio being shown lower at Rs 244.63 crores. The end result is a drop of Rs 3.28 crores to Rs 24.55 crores in cash balances, including money at call and short notice.

Two interpretations are possible in respect of the changes in the Deposit resources of Scheduled Banks as disclosed in their return for 25 January. The bald facts are that net Demand Deposits have declined by Rs 4.60 crores to Rs 922.99 crores, whereas net Time Deposits have picked-up by Rs 10.33 crores to stand at Rs 1,260.81 crores, thus indicating some element of switch-over. The State Bank in the same week is known to have added to its head of Deposits by over Rs 10 crores, the implication being that other Scheduled Banks experienced a drain of over Rs 4 crores in their Deposits. But the State Bank's increase in Deposits came about as a result of the transfer from Other Liabilities of the accrued profit for 1962. So, it is also possible that other Scheduled Banks have had an accretion of about Rs 6 crores. The expansion in Advances is a more moderate one of Rs 6.94 crores to Rs 1,479.80 crores—the Rs 1,500 crore mark is certain to be touched during February. Borrowings from the Reserve Bank are lower by Rs 3.30 crores at Rs 23.96 crores, and indebtedness to the State Bank has also been reduced by Rs 1.66 crores to Rs 15.03 crores; this could mean that our hypothesis of an increase in Deposits of Scheduled Banks other than State Bank could be right. The rise of Rs 7.83 crores to Rs 649.83 crores in gilt-edged investments is wholly on account of the State Bank. The end result is a drop of Rs 6.07 crores to Rs 194.90 crores in Scheduled Banks' cash balances, including money at call and short notice.

+

BANK PROFIT

Bank of Rajasthan

The deposits of the Bank as on 31 December, 1962 stood at Rs 6.27 crores as against Rs 6.24 crores as on 31 December 1961, and the working funds of the bank have gone up to Rs 7.67 crores as compared to the last year's figure of Rs 7.42 crores.

The profits of the Bank of Rajasthan for the year ended 31 December 1962, including the amount Rs 1,484/64 brought forward from the previous year is Rs 2,35,743-72 nP. The following appropriations have been made.

To Reserve Fund under Section 17 of the Banking Companies Act 1949 ... Rs 47,475/-
To provision for Income-tax ... Rs 90,000/-
As in last year, the directors have recommended to declare a dividend @ 10% subject to income-tax.

+

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills were opened on Tuesday, 5 February 1963. Total amount offered was Rs 2,50,00,000. Tenders at Rs 99.410 per cent and above were accepted and allotted approximately 80 per cent. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.360 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 11 Feb. 1963. Successful tenderers should make payment on Friday, 15 February, 1963 at all centres. Other conditions are as usual.

During the week ended 1 February, 1963, Government of India Treasury Bills for Rs 87,33,75,000 were sold in favour of Reserve Bank of India.

Notes

MILITARY SPENDING

China Tops the List

The relationship between per capita income and per capita military expenditure of a country offers an insight into the nature of its rulers. Such a comparison for fourteen underdeveloped countries in the different parts of the world yields interesting results. Besides China, the other countries covered by the study are India, Argentina, Brazil, Burma, Ceylon, Chile, Federation of Malaya, Indonesia, Mexico, Pakistan, Spain, Turkey and Thailand.

The results of the comparison

Name of the Country	Per capita Income (in dollars)	Military Expenditure (in mil. dollars)	Per capita Military Expenditure (in dollars)	4 as Percentage of 2	Military Expenditure as % of National Income
1	2	3	4	5	6
1. China	50	2,358	3.5	7.0	8.0
2. India	64	520	1.5	2.3	1.7
3. Indonesia	50	196	2.1	4.2	4.3
4. Pakistan	53	203	2.0	4.0	4.2
5. Thailand	80	66	2.6	3.2	3.2
6. Ceylon	120	17	1.7	1.4	1.4
7. Turkey	179	127	4.5	2.5	2.6
8. Federation of Malaya	207	51	7.3	3.6	3.7
9. Spain	261	227	7.5	2.8	2.9
10. Brazil	107	201	3.0	2.7	3.1
11. Mexico	278	87	2.5	0.8	0.9
12. Argentina	288	188	9.4	3.2	3.2
13. Chile	485	106	15.0	3.1	2.9

NOTE:—The figures relate to 1969, but in some cases to 1960.

are summarised in the accompanying table prepared from different sources. Complete accuracy is not claimed for either the figures or the percentages, for statistics in a majority of these countries suffer from some degree of imperfection. China's in particular, is to be used with great caution, for it is a country with rather unconventional notions on the subject. Mr Chia, the Head of the State Statistical Bureau said once, "Statistical work is a weapon of class struggle and political struggle; our statistical reports must reflect the great victory of the party's general line and the progress of all the works guided by the party. They certainly should not be a mere display of objective facts".

It will be seen from the table that China comes almost at the bottom of the list in per capita income. But its per capita military expenditure as percentage of per capita income is the highest. Its military expenditure as percentage of national income is also the highest and more than four times of India. China's military expenditure of 8 per cent of its estimated national income compares with the USSR's 6.4 per cent; Yugoslavia's 7.7 per cent; Canada's 6.1 per cent; Sweden's 5.3 per cent; Netherlands' 5.0 per cent; Portugal's 4.7 per cent; West Germany's 4.3 per cent; Belgium's 4.2 per cent; Poland's 3.8 per cent; Italy's 3.5 per cent; Australia's 3.4 per cent and Hungary's 2.4 per cent.

*

COTTON TEXTILES

The US Market

The report of the cotton textile export promotion council on the US market for Indian cotton textiles based on a survey by the Economic Intelligence Unit Ltd; London, is of topical interest in

the context of the US Government's decision to reduce the import quota for Indian textiles. Restrictions of this sort are no doubt discouraging, but the long term prospect of liberal trade are good. Bulk of our exports consists of unbleached fabrics which are purchased by converters, for finishing in the USA. The primary reasons for the inroads made by these goods in the US markets are the lower prices than Japanese or Hongkong merchandise and the quota restrictions inhibiting exports from these countries. Among finished goods, handloom fabrics of Madras type are exported in substantial quantities. As these goods fall outside the purview of mill made items, strictly speaking they were excluded from the survey. But the report gives some useful tips which should be studied with utmost care as the demand for these goods is largely due to the favourable fashion trend which may wane at any moment. Thus up-to-date designs should be introduced to cater to the needs of the consumers whose fashions change at frequent intervals. Two useful suggestions are given for maintaining the hold and for the furtherance of exports. The first demands strict supervision in building up colour combinations in order to avert the possibility of the design "bleeding" into a "faded" or smudged effect. The other refers to the easy susceptibility of Madras variety to crease and wrinkle. In the circumstance efforts are necessary to make wash-and-wear and crease-resistant fabrics for enhancing the prestige of the goods. The success of Indian goods, notwithstanding the competition from other countries, is a clear tribute and further headway can be made if the manufacturers adhere strictly to the rules of production and manufacture.

is a grim reminder that unrestricted wave of imports is unlikely in the near future. While improving the quality of our goods, care should also be taken to diversify our items of exports.

*

TECHNOLOGY

The Basic Revolution

The forthcoming United Nations Conference on the Application of Science and Technology for the Benefit of the Less Developed Areas is meeting in Geneva from 4 to 20 February 1963. It is obvious that no plan for accelerated economic and social development can be formulated without taking into account the quantity and the quality of the necessary scientific and technical personnel of a country. This is not a problem for the less-developed areas only. The increasing demand for the training of personnel in our contemporary world, concerns the most advanced countries also. It calls for a combined effort by psychologists, pedagogues, scientists and policy-making educators.

If the education system is to meet the demands of the scientific revolution of our time, it must take into account the following factors: (1) the complexity of modern technology; (2) the accelerated development of technological tools and methods and the continuous emergence of new technologies; (3) the permanent interaction between science and technology.

The problem to be faced is so complex that it calls for an attack

on a broad group. Thus in engineering and the technical professions, schools, institutes and universities cannot teach "everything" and even if they could, what they teach today will be outdated in a short time. They should aim at providing a solid groundwork of knowledge, especially in the basic sciences, which will make self-development possible after graduation. The training of technicians and engineers will have to continue at the place of work if it is to continue at the place of work if it is to achieve this aim: in our time workshops and industries have also to be classrooms; every technician and engineer should teach the lower level techniques.

The groundwork of scientific knowledge referred to above will have to be modern to be effective. What is, in fact, needed is a thorough revision of science teaching as a whole, and of mathematics in particular, from the kindergarten to the university. An important problem is the training of new teachers acquainted with modern methods.

The active participation of the people as a whole is indispensable for the transformation of a country with a low level of production, poor sanitary conditions and a backward social structure. The importance of general education should be stressed, for the eradication of illiteracy is not enough. Among other things, a basic understanding of the new patterns of life in which science and technology play an important part, a critical attitude towards prejudices and are most necessary. In the advanced countries, a child is brought up in an environment where a number of ideas, concepts and attitudes become familiar to him in the nature of things even before he reaches the elementary school. In a less developed society, his school has to make up for the shortcomings of his environment.

Long-range educational planning is imperative, since the time scale involved in the training of all types of fully qualified personnel is of the order of fifteen to twenty years. Thus we find that a country can build roads, install a factory or construct a dam in a much shorter time than it takes to train an adequate number of school-teachers.

Primary school education is essential. Nevertheless, to make it compulsory and to try to extend school attendance into or beyond adolescence is not a procedure that can readily be adopted in most less-developed countries without disruption of the traditional pattern of availability of labour. Educational planning has thus to be related to the economic and social conditions prevailing within the society.

In practically all countries, the problem of training scientific and technical personnel can be tackled

"from both ends." A selected minority, however small, can be taken very quickly through advanced education at home or abroad and can then form a nucleus for incipient universities or high-level institutes. In thus training elites, it should never be forgotten, however, that the long-range planning of education must allow equal opportunities to all members of the community.

Governments should clearly recognise that investment in education, when rationally planned, far from being a luxury, is an economically sound investment and, in fact, a prerequisite of prosperity.

COCONUTS

Fall in Production

Speaking at the annual general meeting of the Indian Central Coconut Committee at Madras Mr A. D. Pandit expressed concern at the shortfall in coconut production in the country and pleaded for "new lines of thinking" for quickening our march toward self-sufficiency. The considerable leeway that has to be made is easily discernable from the fact that indigenous production hardly comes to one-fourth of our requirements and the import of coconut products account for nearly Rs 10 crores per annum. The vulnerability of the existing trees to diseases and attacks of pests, the dearth of quality seeds, the inadequate progress made in the research field are some of the primary causes attributable to the low yield. In the circumstance, as Mr Pandit has stated, a new approach to the problem on the lines suggested by the FAO is eminently suited for India. A vigorous warfare against pests and diseases all over the cultivating areas should be launched in a coordinated and scientific way in order to save the existing trees. Apart from this, the disease resistant varieties available in Andaman and Nicobar should be popularised on a country-wide scale particularly where extension of area and replanting are to be carried out. Simultaneously research centres should be opened in important places in collaboration with the FAO for disseminating information regarding modern modes of coconut tree planting. Besides, nursery farms should be established in convenient places so as to ensure the supply of quality seeds to the cultivators. The present practice of growing cocoa as an inter-crop in the coconut grooves should be discouraged as it is not established that is not harmful. Financial assistance to the growers, as in the case of rubber plantation, will be of incalculable help to the cultivators. Though India ranks second in coconut production, there has been recently decline in output. The production in the Second Plan amounted only to 315 million nuts as against the target of 775 million nuts. Only

systematic and efficient efforts can reverse the prevailing downtrend and make the country self-sufficient in coconuts in the foreseeable future.

NEYVELI

Progress Report

Continued progress on all the projects based on lignite deposits at Neyveli was recorded during the year 1961-62, according to the Annual Report of the Neyveli Lignite Corporation.

Conventional as well as specialised mining machinery was being utilised in the earth-moving operations from above the seam of the lignite reserves. The seam was exposed in August 1961 and by the end of November 1962 a quantity of 1,35,849 metric tons of lignite had been mined out of which 1,33,344 metric tons were supplied to the first unit of the thermal power station.

The total volume of overburden to be removed before the target of 3.5 million tons of lignite is achieved, is 27 million cubic yards. Full production at the targeted rate is expected to be achieved in the last quarter of 1965 when all the lignite consuming units of the Integrated Project—thermal power station, the fertiliser plant and the briquetting and carbonisation plant—would be in operation.

Meanwhile, for increasing the annual production of lignite from 3.5 million to 4.8 million tons, in order to enable the expansion of the capacity of the Thermal Power Station from 2,50,000 KW to 400,000 KW during the Third Plan period, a project report has been prepared and global tenders have been floated for the procurement of the additional machinery required. Tenders have since been received and are under scrutiny of the Corporation.

The first 50,000 KW unit of the Thermal Power Station was put on trial run in May 1962 and commissioned for commercial production in June same year. It was formally declared open by the President of India on August 5, 1962. The power generated up to the end of November, 1962, was 107 million units. After meeting the requirement of the Corporation, the balance quantity of 62 million units was fed into the Madras Grid. The erection of equipment of the second 50,000 KW unit is in an advanced stage of progress.

Erection work relating to the remaining three units is in various stages of progress. Meanwhile, a scheme to increase the capacity of the Thermal Power Station from 2,50,000 KW to 4,00,000 KW is under examination.

Civil works relating to the fertiliser scheme are in progress. A part of the equipment for the Fertilizer Plant has already been received at Neyveli. Erection

work is expected to be commenced by March, 1963.

Preliminary civil works such as construction of storage sheds and temporary water supply for the briquetting and carbonisation programme have been completed. A part of the equipment has been received from the suppliers. The Clay Washing Plant was commissioned in December, 1961. Up to the end of November, 1962, a total quantity of 1,017 metric tons of washed clay has been produced. The capacity of the Plant is being gradually built up. It is expected that full capacity, viz. 6,000 tons of washed clay per annum, will be reached in 1963-64.

NML

A New Tool for Metallurgists

With the inauguration of the Integrated Mineral Beneficiation Pilot Plant at National Metallurgical Laboratory this week an important step will be taken towards conservation of the country's mineral resources and their optimum utilization. The pilot plant set up at a cost of Rs. 50 lakhs would help collect valuable data, both technical and economic, on the process of separating valuable minerals from worthless impurities and their implementation on industrial scale.

India possesses substantial ore reserves of different metals except those of some important non-ferrous metals, steel-making flux quality lime stone, metallurgical grade of cooking coals etc. However, most of the minerals including even rich Indian iron ores, may require some optimum treatment or beneficiation for their full economic utilisation on industrial scale.

Selective mining of high grade ores over the years has depleted the reserves of high grade deposit. Comprehensive investigations have proved that most low grade Indian ores are fully amenable to suitable beneficiation techniques.

Wherever research results have established the economic and technical feasibility of upgrading processes, industrial blueprints have been worked out on the basis of which some important ore upgrading plants are being planned or installed both in the public and private sectors.

Though the plant has been secured from the U.S.A. through U.S. Exim-Bank Credit Scheme, the engineering design and layout, erection and installation of this pilot plant was undertaken exclusively by the National Metallurgical Laboratory.

In the absence of earlier of suitable pilot plant facilities for continuous trials of beneficiation

process in India, it was a common practice to send heavy tonnages of ore samples for pilot plant investigations to overseas laboratories. This situation has now been largely rectified by indigenous availability of such specialised facilities including those provided by the Mineral Beneficiation Pilot Plant now under inauguration at the National Metallurgical Laboratory.

These pilot plant facilities provided by the National Metallurgical Laboratory, it is hoped, will be fully used by the Indian mineral and metal industries for the conservation and effective utilization of the country's mineral wealth.

DEVELOPING NATIONS

Capital Needs

Enormous amounts of capital funds are available for investment in developing nations, but they are being invested mainly in industrialized areas with rates of return less than those in developing countries. This problem was discussed in Geneva this week in a paper submitted by a US expert to the UN conference on the application of science and technology for the benefit of the less developed areas.

The study on the 'provision of adequate capital for industrialization' points out that factors other than capital play equally essential roles in the process. 'Capital, management, labour, and markets are as essential to successful industrialization as four legs to a horse,' the study emphasizes. It adds that 'just as a horse may require a road to run with any speed, stable and efficient government providing a good investment climate is required.'

The paper was written by Alfred C. Neal, President of the Committee for Economic Development, New York City, a private organization. It was one of the 195 papers from 43 countries and two specialized agencies dealing with industrial development that were presented to the conference. The meeting seeks to advance the objectives of the UN's development decade.

Mr Neal says there is no paradox in the fact that most investment is concentrated in developed countries with rates of return less than those in developing countries. He says this phenomenon is a consequence of rational calculation and not necessarily of differences between economic systems.

Mr Neal lists the following factors governing investment of capital for industrial development:

1. Reasonable stability in those conditions which affect the prospective rate of return on capital—political and foreign exchange stability, and good government administration. He points out that many of the developing countries cannot now assure these conditions. These make up what is

often called 'the investment climate.'

2. Good management. Mr Neal says many authorities on international lending are 'convinced that lack of management in less developed countries is a more important obstacle to progress' than the lack of capital.

3. An adequate supply of trained workers receiving a level of wages that bears a reasonable relationship to the level of productivity in the country.

The study points out that in developed countries financing for new and rapidly growing enterprises is most difficult to supply. He says that because this type of industry is more likely to predominate in less-developed countries special attention must be paid to this type of financing. He suggests that the so-called 'development bank's in the more developed countries should be considered by the developing areas.

Mr Neal says that recent estimates of net investment that might be made productively in the less-developed countries indicate that about 75 per cent can be financed from domestic savings and about 25 per cent from foreign sources. Thus domestic, not foreign, sources are expected to supply the major part of the capital required for development.

The US authority notes that resource-oriented industries, aluminium and copper for example, are likely to be undertaken only with extensive foreign capital, management, and marketing assistance. He suggested that developing countries establish development-financing institutions that concentrate upon smaller plants capable of earning a high domestic rate of return on capital.

Mr Neal says the need of capital for industrialization cannot be determined by statistical measures relating volume of investment to gross national product or by relating the volume of foreign capital available or used to some measure of need.

'Condition largely within the control of the developing countries would appear to determine whether larger supplies of capital can be made available and can be effectively used,' he says.

JAPAN

Advertising is Big Business

Total advertising expenditure in Japan has shown a marked increase over prewar days. In 1961, it reached 211,000 Yens million as compared with 1,500 Yens million in 1947.

Annual growth rates are very impressive. In 1955, advertising expenditures represented a rise of 11 per cent over the preceding year; in 1956, 22 per cent; in 1957, 26 per cent; in 1958, 13 per cent; in 1959, 37 per cent; in 1960, 20

per cent, and in 1961, 20 per cent. (The 1961 figure accounted for 1.56 per cent of the national income.

TABLE I
National Income vs. Advertising Expenditures
(Unit one million Yen)

Year	National Income (A)	Advertising expenditure (B)	(A)/(B)
1951	4,535,300	24,300	0.54%
1952	5,195,400	38,500	0.74
1953	5,822,400	49,100	0.84
1954	6,123,500	55,000	0.90
1955	6,534,800	60,800	0.93
1956	7,386,300	74,500	1.01
1957	8,269,400	94,000	1.14
1958	8,359,100	106,500	1.27
1959	9,666,000	145,600	1.51
1960	11,430,800	174,000	1.52
1961	13,513,700	211,000	1.56

ADVERTISING BUDGETS INCREASE

Almost all industries have been spending greater sums than before for advertising, but the home electrical appliance, machinery and equipment (including automobile) industries have registered particularly striking increases.

As far as the four major advertising media—newspaper, magazine, radio and television—are concerned the biggest advertisers are machinery and equipment manufacturers (33,090 million Yens purposes increased 1.3 times. Television 19.9 per cent of the total), fol-vision, although a late starter, is followed by foodstuffs and beverage increasing its share of the advertisement market at a spectacular 13.6 per cent). A breakdown, in pace.

order of importance of other advertisers is as follows: medical and therapeutic goods makers (20,140 million Yens or 12.1 per cent), cosmetics companies (12,550 million Yens or 7.5 per cent), sundries makers (11,370 million Yens or 6.8 per cent), financial institutions and insurance companies (9,740 million Yens or 5.8 per cent), textile makers (7,490 million Yens or 4.5 per cent) publishing companies (7,370 million Yens or 4.4 per cent), department stores (6,420 Yens million or 3.9 per cent), amusements (4,660 million Yens or 2.8 per cent) and communications and transportation (1,500 million Yens or 0.9 per cent).

MAJOR ADVERTISING MEDIA

In respect to the degree of advertisement diffusion, Japan's four major advertising media—news paper, magazine, radio, and television—can be favourably compared with the highest international standards.

Purchases of space and time continue to show a steady annual increase. Over the past five years appropriations for newspaper advertising have risen about 1.6 times, and those for magazine advertisements, 2.1 times.

For radio, the gross total of are machinery and equipment hours contracted for advertising manufacturers (33,090 million Yens purposes increased 1.3 times. Television 19.9 per cent of the total), fol-vision, although a late starter, is followed by foodstuffs and beverage increasing its share of the advertisement market at a spectacular 13.6 per cent). A breakdown, in pace.

Scindia's
Fast
Cargo Service

In recent years we have expanded our cargo service to cover the major ports of the world. We are thus enabled to offer importers and exporters throughout the world a fast and frequent service which is backed by a world-wide organization.

THE SCINDIA STEAM NAVIGATION CO., LTD. Scindia House, Colaba Estate, Bombay 9

All mass communication media, notably the four already mentioned, have been taking an increasing share of the advertising market. Newspapers continued to head the list with total appropriations of 82,400 million Yens in 1961, followed by television with 53,900 million Yens radio 17,800 million Yens and magazine 12,500 million Yens.

Particularly noticeable is the rapid growth of the broadcasting media. Radio scored a sharp rise after 1951 and television, from 1953. But the ratio of radio ad-

vertisement is on the wane, where-as television is steadily expanding its share of the market. The

news paper is also finding its share of the advertising market shrinking rapidly.

ADVERTISING EXPENDITURES BY MEDIA

Year	News-paper	Magazine	Radio	TV	Others	Total
1951	180	10	3	...	50	243
1952	270	18	22	...	75	385
1953	320	25	45	1	100	491
1954	322	30	74	4	120	550
1955	337	35	98	9	130	609
1956	405	40	130	20	150	745
1957	510	50	150	60	170	940
1958	525	55	157	105	223	1,065
1959	618	80	162	238	358	1,456
1960	684	100	178	388	390	1,740
1961	824	125	178	539	444	2,110

Other advertising media include. Outdoor media (neons, posters, billboards, etc.), inserts (1,500 million inserts in newspapers by department stores, other retail stores, financial institutions and securities dealers), direct mail (mainly by department stores), transportation advertising (posters, hangers, etc. in railway cars, streetcars, buses, ferries, etc.), films and slides, and the like.

Japanese advertising agencies do not limit their business activities to the domestic market. Toward the end of 1960, Dentsu Advertising Ltd., which claims to be the world's fifth largest in terms of scale of operations, set up an office in New York in an effort to pave the way for expansion into the American market. On June 19, 1961, it signed a working agreement with Young and Rubican, Inc., a leading American advertising agency.

In January 1961, Hakuhodo, another large advertising company in Japan, set up McCann Erickson—Hakuhodo, Inc., jointly with the McCann Erickson, Inc., of the US. It is under the joint management of the two companies. Daiko Ad Agency also entered into an agreement for joint advertising activities with the McCarthy Organization of the United States in May 1961. At the same time it succeeded in establishing a network of contracts with advertising agencies in 11 European countries with which McCarthy has relations.

RISKS, INSURANCE Clarification

In response to a representation from the Federation of Indian Chambers of Commerce and Industry seeking clarification on the mode of valuation of insurable property under the Emergency Insurance Scheme, the Ministry of Finance in a communication to the Federation has made the following clarification:

The value for which the insurance is to be taken should be the actual value at prevailing prices after due allowance has been made for depreciation. This implies replacement cost at prevailing prices of buildings, plant and machinery as nearly as possible of the same description, standard, specification or design

as the property insurable insured under the scheme reduced, where the replacement cost is for a new acquisition, by depreciation at a reasonable rate. The value in conformity with this method can be arrived at in practice by taking the insurable value to be the market value of the property in the present circumstances and situation in its depreciated form wherever such market value may be available. In respect of items for which there is no recognised market value, the replacement cost should be reduced by such rate of depreciation as a loss assessor can be expected to allow when he is deputed to value the property. It is for the applicant for insurance to decide on such a rate of depreciation as will not unreasonably under-state or over-state the value. If an insurer follows the above formula in a reasonable manner there should be no difficulty. In case where there is a serious difference in approach between the Government's agent and the applicant for insurance, it will be decided by Government.

SNIPPETS

Indian Cable

The Commonwealth Development Finance Co. Ltd. (CDFC) and the Industrial Credit and Investment Corporation of India Ltd. have agreed to subscribe £262,500 each to the Indian Cable Co. Ltd., of Jamshedpur, in which British Insulated Cables Ltd. is the largest shareholders. These sums are required to meet the foreign-exchange requirements of the Indian Cable Co.'s current modernization and expansion programme.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

The headlines preferred, as headlines would, the thunder, but practical steel-makers will find of greater interest the technical papers presented at the Steel Symposium at Jamshedpur this week. The argument between the levitationists and the 'feet-firmly-on-earthers' is never likely to end. It is the sort of argument about Romanticism and Classicism that has kept the world garrulous since people learnt to talk. But what about the actual problems of steel making, in large quantities or small, in big plants or pocket-sized ones? Practising steel-makers, looking for answers to them in the papers presented at the symposium will not look in vain. Ash in coal, alumina in iron ore and insolubles in limestone are greater head-aches than estimates of consumption of steel in 2000 AD. Answers for these, not necessarily new, were discussed at Jamshedpur this week. The technical implications of these answers may no doubt involve you in arguments about size: For instance, poor coal may lead you on to the idea of small units for foundry iron using carbonised coke in low-shaft furnaces. But poor coal has relevance in the context of big units too. For example, it has been suggested that blending of coal of poor quality with that of high quality, imported if necessary, will greatly diminish the troubles that blast furnaces are currently facing from large ash content in the coal now used. What I mean is that part of the discussion at Jamshedpur that concerned itself with what might broadly be called problems of productivity are far more valuable than those relating to size and targets. The latter have their natural limitations stemming from variables not taken into account in academic contexts. For example, the discussion of the relative merits of one plant of four million-ton capacity and forty of one hundred thousand tons is somewhat unreal without bringing in the question of the money, especially foreign exchange, for either. Not that such discussion is futile, but, it has, to my mind at least, less

value than the discussion of, say, the use of oxygen to improve blast furnace efficiency or of pre-treatment of hot metal for better performance. And this for excellent economic reasons rather than because of any morbid absorption in technology. Indian steel is no longer the low cost wonder that made mouths water in advanced countries and thinking on cost reduction by technological innovations is more important than logic chopping about size. For the rest the Jamshedpur Symposium threw up enough ideas to keep a whole lot of people busy for quite some time. 'Coast-based units' using imported coal, widely dispersed low-cost units producing by using local fuel foundry iron for local use, beneficiation of ores and a whole lot of other ideas too numerous to mention were discussed. At the managerial level, Mr Fienne's valid point about 'room at the top' has made Mr Subramaniam come out with the notion of "steel cadets" caught fairly young and indoctrinated with a passion for steel-making. Mr Fienness looked nostalgically back to days when Sir Jamshedji Tata turned for his capital requirements instinctively to the London money market rather than to foreign governments, and thought in terms of equity capital rather than loans. It is unlikely those golden days will ever return, however persuasive the arguments in favour of foreign equity participation in steel making. But these and other ideas of Mr Fienness and others would no doubt set a whole lot of people thinking. On the whole, this week in Jamshedpur was a most useful busman's holiday.

★

High priority for engineering industries in our scheme of economic development needs no special pleading. If our economy develops at anything like the rate we hope it would, our industrial ambitions would justify themselves twenty times over. And yet some arguments overstate the case. Take, for example, the notion of an Asian Common Market, in

which India will be an industrial big brother. The export ambitions involved in this hope are certainly worthy, but in detail the idea may not measure up to practical requirements. The complementarity of Asian nations is by no means self-evident and the idea implies a degree of self-abnegation and lack of industrial ambition on the part of others that may not be forthcoming. One of the paradoxes of the present situation is that, for several reasons, we may have to turn to the more industrialised countries for our exports of intermediate manufactures in some scheme of global division of labour of the sort recommended by Mr Kennedy. Such a scheme is not necessarily a perpetuation of technological backwardness, if development is conceived, as Prof Galbraith once put it, as a linear progress. Indeed, in such a scheme, we may figure as an exporter of the more complex manufactures to Asian and African nations. Something of this kind is already happening. Package deals with countries like Malaya and Ghana in which we export material and skill, as in railway engineering, for example, offer great scope for us. Likewise, export of producer rather than consumer manufactured goods, diesel engines, rather than, say, electrical gadgets, offer a more secure future. Not that all this is a counsel of despair about prospects for exports to African and Asian countries of our minor manufactures. If we attend to cost and quality, we may successfully hold our own against others.

★

Another argument that overstates our industrial ambitions is the vision sometimes conjured up of India as the workshop of the East in the sense in which Britain was of the world in early nineteenth century, exporting industrial goods in return for food. Here again, apart from practical considerations—after all we cannot wish Japan out of existence, which we shall have to do if we are to be the sole workshop of the East—my objection is psychological. It is not that part of the analogy that spurs industrial ambition that I object to but to that which blunts the edge of agricultural purpose. For a country in whose national accounts agriculture will figure prominently in the foreseeable future, it is a species of escapism to indulge in dreams of industrial leadership of Asia and in the very act abdicate the necessary and possible agricultural duties. Our geography, especially our size, not only precludes, but makes unnecessary the kind of

industrial specialisation that insular Britain with a small land surface practised (and practises). Japan, similarly placed, followed much the same path. We India neither can nor need follow them.

★

Hard words break no bones they say, and it is doubtful whether ITK's plain speaking last week about how frustrating his job was being made by one and all wrung any withers. From time to time, Mr Krishnamachari has been half-humorously taking the country into his confidence about his vexations. He had difficulty in getting his salary on time—some bit of co-ordination to be done here. Then it was his having no place to work in: another reason for the urgency of an office such as his. One assumes that he licked these problems. But it is difficult to be continually amused, especially when more serious things get bogged. Some of the crosses he has to bear were enumerated by him last week, but not with noticeable sense of the comic. Squabbling States, Ministers that cut the ground under each other's and his feet and a Planning Commission that allocates funds as a Grandma ladles a limited quantity of gruel to a cackle of clamant children—how on earth does one coordinate so many people so strenuously at cross purposes? There was lack of understanding at all levels of the immensity of the task that faces the country and what it calls for in terms of intelligently planned and coordinated effort. Economic and Defence Coordination, Mr Krishnamachari said, is still in the realm of thinking. Why, he cannot even get the information he wants. Mr Krishnamachari may have felt the better for having got it all off his chest, but one cannot be sure that it was found equally enjoyable by his colleagues in Government and the Planning Commission. And where do we go from here? Surely, a comprehensive slating like this from one in the very seat of authority cannot just be shrugged off as ill-tempered grouching. We are all supposed to have had the grossness in our nature purged by the emotional shock of the Chinese onslaught and yet here is the Minister for Coordination almost throwing in the towel, because he finds that people are still thinking and acting in the old ways. Those in authority hold forth readily enough about the need for sacrifice and austerity and yet, if reports are to be believed, some of them would not cooperate even in small things like saving power. The Prime Minister spoke the other day of the danger of our slipping back into old ways of thought and behaviour, now that the physical danger from China is in abeyance. Among those who are to be saved from such backsliding are some who are near to him.

(From Our New Delhi Correspondent)

Sir Norman Kipping

The visit of Sir Norman Kipping, the Director General of the Federation of British Industries, has provided a rare opportunity for an objective assessment of industrial prospects in this country. Sir Norman, who spent four weeks in India, visiting different industrial centres, told reporters in Delhi, on the eve of his departure for London, about a change in the complexion of the relations of British business in India, and the problems that it has brought in its train. This change and the problems arise from the shortage of foreign exchange and the import restrictions which affect all industrial concerns in this country.

Shortage of foreign exchange has led to the restrictions regarding the sources of industrial supplies, and this has affected the business of British firms in India, who are cut off from their normal source of supplies, probably to a greater extent than others. Sir Norman said that, what was formerly an export problem for British Business Houses, has become an investment problem, and this will require periodic surveys of investment prospects in this country. The type of representation of the FBI in India will therefore, have to be changed to fit in with the requirements of the present situation. The Bombay office of the Federation which deals with trade problems will be closed down shortly and, instead, two senior members of the FBI executive will make long visits every year to provide the members with up to date information about conditions in India. Sir Norman, who himself has carried out an analytical study, does not think that the prospects are not attractive, though a slight falling off has been noticed in recent months.

Sir Norman, however, drew attention to some of the handicaps under which industries in this country have to make headway, such as excise duties on industrial materials which price Indian goods out of foreign markets, unrealistic trade policies such as the frequent exhortations to export even at a loss and to recoup losses from the home market, and a high level of personal taxation which stands in the way of getting technical assistance which is even more important than financial aid. Sir Norman's report to the FBI, which he has promised

to make available in this country, should give valuable points to industrialists as well as to those responsible for the formulation and implementation of economic policies.

Spotlight on Shortfalls

On three different occasions in the last few days, attention has been forcibly drawn to the inadequacies of planning and implementation of plan programmes. A note prepared a few months ago by Mr U. N. Dhebar for the Congress Parliamentary Party, on the conditions of living of the lower strata of society and on the ameliorative measures required, was discussed in detail by the Planning Commission a few days ago. The conclusions reached by Mr Dhebar, on the basis of data assembled by the Perspective Division of the Planning Commission, present a dismal picture of present conditions and the prospects in store for nearly 60 per cent of the population. At the rate of growth that is currently envisaged, there is no hope of ensuring a minimum income of Rs 25 per capita before 1990-91. Mr Dhebar has suggested that the rate of growth should be stepped up so as to ensure minimum standards to all citizens within a reasonable period and has also made a number of detailed recommendations.

The rate of growth is determined, not only by the total volume, but the pattern of investment that is adopted. So long as investible resources remain limited, the only way to bring about a change in the rate of growth will be to change the pattern of distribution of outlays. The Third Plan programmes were based on what was agreed to be the best possible arrangement to sustain a steady rate of growth in successive plan periods. It is not clear how the Plan could be reoriented at this stage to ensure a higher rate of growth, when the rate of growth actually achieved is far below the target. The Planning Commission has done what it usually does in such circumstances: a Working Group has been set up to study the problem in all its aspects and to draw up a long-term plan to improve the conditions of people in the lower income brackets.

Agriculture and animal husbandry are vital areas of development where it should be possible to achieve larger rates of growth without corresponding increase in capital outlay. But it is in regard to agricultural production that the

progress that is claimed is mostly illusory and the failure to hit the targets has upset all calculations about the growth of national income.

FICCI Broadside

The delay in getting on with the urgent tasks on hand has also been examined from a different angle by the Federation of Indian Chambers of Commerce and Industry. The Committee of the Federation which met on 31 January, to review the economic situation in the country, has delivered a broadside aimed at dilatory procedures, indecision and slackness of administration which act as impediments to economic growth. A statement issued by the Committee points out that, neither the enthusiasm of the people nor the opportunities which the challenge has presented have been as urgently and fully utilised as ought to have been done. To the best knowledge of the Federation which covers the entire Indian industry and trade there has been little evidence of the authorities taking advantage of the cooperation so readily offered by industrial establishments in private hands to galvanise the defence effort. There is a virtual freeze on plans of expansion and development of industries. Even at this critical juncture, Governmental policy seems to be hampered by ideology.

The Committee has also pointed out that there does not seem to be any measurable heightened activity in the public sector enterprises either. In the opinion of the Committee the benefits of planning and concerted efforts of people and Government accruing over the years will get a set-back, unless immediate corrective measures are taken. It is imperative that expansion in every front should be initiated forthwith. Otherwise, as defence expenditure mounts, the Committee points out, the nation will be faced with a dual problem: there may not be enough defence equipment to match the enlargement of our armed forces; neither will there be adequate consumer goods, resulting in excessive pressure on demand and higher prices, for which the business community will be blamed, although the situation will be beyond its control. The Committee has, therefore, appealed to the authorities to take all these into account and to revise their policy appropriately, beginning with gearing the administration to a sense of urgency over the present economic situation.

The Committee has focussed attention on the following disturbing trends in the national economy: Agricultural production has remained almost stationary; the pace of industrial development has slackened. There is stringency of finance, the credit policy of the Reserve Bank continuing to be restrictive. The Stock Exchanges are in a poor state. There are many signs of uncertainty and depression in the economy, pre-

cisely when it should have been invigorated to assist the defence effort.

Czechoslovak Trade Delegation

A trade delegation from Czechoslovakia led by Mr V. Novacek, Director of the Asian Department of the Ministry of Foreign Trade, is now in this country to explore the prospects of increasing Czechoslovak imports from India. The composition of the Delegation, which includes experts in different sectors, indicates the wide range of commodities in which they are interested. The members are: Mr J. K. Jiracek, Deputy Managing Director of the Foreign Trade Corporation Koospol, who will study Indian export possibilities in agricultural and plantation products, foodstuffs etc., Mr Volf, Director of Chemapol, Prague, who is interested in chemicals and allied products, Mr Mastny, Director of Centrotex, Praha, who will study the possibilities in textiles, leathers, and textile raw materials, Mr Spurny and Mr Hosek, of Ferromet Praha, who intend to explore the possibilities of import of metallurgical products from India.

The main aim of the Delegation, as its leader explained at a press conference, is not to conclude contracts for purchase of goods from India. That will be done through usual channels. The Members of the delegation will carry out a detailed study of the Indian market with a view to finding out new commodities which would be of interest to Czechoslovak industry as well as to the internal trade organisations, in order to ascertain the suitability for consumption of such new Indian products which might be indicated by the survey.

The scope for expansion of trade between the two countries was explained at the press conference addressed by the leader of the Delegation as well as by Dr Ivan Rohal-Ikiv, Ambassador of the Czechoslovak Socialist Republic. While the Ambassador explained the background of Czechoslovak foreign trade, and the special attention paid to development of trade with emergent countries, Mr Novacek dealt with the trade between India and his country.

The total foreign trade of Czechoslovakia is of the order of Rs 2000 crores per year of which thirty per cent is with the USSR, another 30 per cent with other Socialist countries and the rest with other countries of the world. The total turnover of trade between India and Czechoslovakia has increased from Rs 11 crores in 1960 to about Rs 34 crores in 1962. Mr Novacek said that besides traditional imports of Indian products it will be necessary to look for other commodities which could be used either for industrial purposes or for the enrichment of the consumer goods market in Czechoslovakia.

E.I.D.—Parry Limited

Never Ending Problems of Sugar Industry

Financial Position should Improve with Ennore Fertiliser Factory

Sri H. V. R. Iengar, Chairman, on British Investment in India

The following statement has been circulated to Shareholders of E.I.D.—Parry Limited by the Chairman, Mr. H. V. R. Iengar.

When I accepted the Chairmanship of the E.I.D./Parry group in May of last year, I was moved by three main reasons. In the first place, the group has, for generations, played a notable part in the industrial and commercial development of South India, and the name PARRY has become a household word, dating back to as long ago as 1788. I felt it would be an honour to be associated with a firm of this vintage and repute. Secondly, the late Mr C. R. Srinivasan, the first Indian Chairman of the group, whom I knew well as a colleague on the Board of the Reserve Bank of India, and for whom I had great respect, was very keen that I should succeed him. Thirdly, the late Mr Wonfor, who had been Chairman of the group for several years and was, at the time, Vice-Chairman in London, and also the two British Managing Directors, Mr Noel-Tod and Mr Hadfield told me, on behalf of the British interests in the group, that they would welcome my appointment. Now that I have been functioning as Chairman for some months, I would like to say that I am very happy at the decision that I took to join the group not merely because of its reputation and the fact that it is expanding its activities in tune with the rising tempo of economic development in the country, but also for the reason that, by a combination of trading and structural relationship with the United Kingdom, it forms a pattern of Indo-British collaboration which can only be of great benefit to both countries.

Historically, the E.I.D./Parry group was always British, ever since Thomas Parry landed on the shores of Madras in 1788. Many of you have probably read Hilton Brown's fascinating story of Parry and Company's fortunes during the British regime. The Directors, however, were keenly responsive to the winds of change that were sweeping across the country and, in 1947, two important steps in the Indianization of the group were taken.

Firstly, Parry & Company Limited (then the Managing Agents of this Company) which was whol-

ly owned by British nationals, converted itself into a Public Limited Company by an offer of shares made to the Indian public in February 1947, as a result of which 25 per cent of the Ordinary Share Capital came into Indian hands. Secondly, immediately after independence, the control of this Company which had up to that time, remained in London, was transferred to India; the circular issued to shareholders on this occasion explicitly stated that, the change was felt to be in accordance with the changes in the Indian Political scene. In addition to the change in the seat of control, the Board was re-constituted. In 1947, the Board consisted of five British and no Indians. The re-constituted Board consisted initially of 2 Indians and 3 British and now consists of 5 Indians and 3 British.

Further, in 1955, Mr C. R. Srinivasan was appointed as the first Indian Chairman of this Company and, shortly thereafter, in March 1956 this Company acquired financial and executive control of Parry & Company Limited by the purchase of the whole of its Ordinary Share Capital.

The structure of the Board is broadly in accordance with the structure of capital holding as between India and the U.K. Taking both the Preference and Equity capital into account, some 73 per cent of the capital is in India and 27 per cent in the U.K. It would not be correct, however, to think that the transfer of shares from U.K. to India has resulted in a reduction of the U.K. stakes in the group. In 1947 the U.K. investment in terms of nominal value of share capital held amounted to about £228,000, representing some 82 per cent of the total share capital. Today, this has increased to about £362,000. In other words, although there has been a decisive structural change in that the majority of the share capital, nearly 73 per cent, is held by Indians, the interest of the U.K. group in terms of the amount of capital investment has actually increased by some £134,000.

This should not be a matter for surprise, because it is in accordance with the whole tenor of the changes that have been taking place in the pattern of British investment in India since 1947. Naturally, the rapid development of industry that has been taking place

in accordance with the Plans is, to a large part, attributable to Indian effort in terms both of capital formation and entrepreneurial effort. As a corollary, in terms of percentage of total business investment in this country, British investment has recorded a drop. But the point of interest is that this drop is not indicative of any slackening of interest in Indian industrial development by British interests. On the contrary, British investment has recorded a substantial rise since 1947. According to the figures published by the Reserve Bank of India at the end of June 1948 the outstanding foreign investment in the private sector amounted to Rs. 256 crores, of which the British share was over 75 per cent. At the end of December 1960, the corresponding figure was Rs. 567 crores excluding investment from official sources such as the World Bank; in other words, the investment in India by private individuals and groups overseas had more than doubled over the period. Of the total investment at the end of December 1960, including investment in the private sector by official institutions, the investment of the U.K. was far and away in the lead, being just about two-thirds. It is worth noting that the figures given are those of investment and not of market value, which, in many cases, has recorded a considerable increase over the actual investment.

An annual meeting of shareholders is scarcely the time to generalize on problems of international relationships, but I will permit myself two observations. In the first place, I cannot help recalling that, during the grave crisis created by the Chinese invasion of our northern frontiers, the response of the U.K. was both immediate and unqualified, showing that in the U.K. there exists an instinctive emotional feeling for the security of India. It is necessary that in the task of economic reconstruction as well, this feeling should be mobilised to the maximum extent. We are at a stage of economic development where we are in need both of foreign capital and of technological assistance. I do think that in this situation the existence of companies such as E.I.D.—Parry, which have roots in both India and the U.K., must continue to provide a link which should be of great be-

nefit, both politically and economically, to both countries. My second observation relates to the total quantum of capital attracted from abroad. Although, expressed as a percentage of rate of growth, the increase since 1948 is impressive, in absolute terms the quantum of foreign investment in India is almost insignificant. The average annual net outflow of long-term private capital in the last few years, from the main capital exporting countries, has been of the order of Rs. 1,750 crores. Out of this, India has been able to attract, net, only a little over Rs. 21 crores per year on the average barely over 1 per cent. How to attract a larger inflow without creating, in future years, a serious imbalance in our external payments position is one of the important issues which Government would have to consider.

GENERAL POLICY

A change in chairmanship offers a suitable opportunity for re-assessing the policies of the Company and its organisational efficiency for the carrying out of these policies; and this I have naturally done. In the speech delivered two years ago at the annual general meeting, Mr. C. R. Srinivasan stated as follows:—

'Progressively the emphasis on the Group's expansion has been on the industrial sector and more and more, the pattern of our business is changing. As a result of this policy, we have been forced with great regret to disperse with some of our agency representations, in order to concentrate more of our finance and management resources on the administrative problems which are tide to the Group's industrial progress.'

This policy of growing emphasis on manufacturing activities is undoubtedly correct, but I think it requires a little elaboration in so far as the trading sector is concerned. Sound trading is one of the essential requisites for the smooth running of our economy—it is unfortunately not as common in India as would be supposed—and it would be a great pity if the expertise acquired over generations by our group was to be lost to the country. I visualise therefore that, although our manufacturing activities will increase—and, I hope, increase rapidly—our

trading activities will be maintained at a satisfactory level. Necessarily, there will be a reduction in the trading of imported commodities, but I see no grounds for any reduction in the current level of our over-all trading activities. Taking the figures for the last three years, the sales of merchandise produced outside the group were as follows:—

1960	£4.8 million.
1961	£6.0 million.
1962	£6.3 million.

These figures are, of course, exclusive of the sales pertaining to the managed companies. The figures are also exclusive of sales upon which we merely earn a commission, that is to say, of goods which we sell on a consignment basis; and it is of interest to note that those sales in 1962 were approximately £5 million. Considering that we abandoned a number of agencies, the increase in our merchandising figures seems to be highly satisfactory. In regard to the sales of goods manufactured within the group, the figures are:—

1960	£6.4 million.
1961	£6.8 million.
1962	£6.8 million.

When Ennore is in full production, a point to which reference will be made subsequently, the sales of our own manufacture should record a very substantial rise. With the first phase of Ennore, the rise should be of the order of £2 million, and when we complete the second phase the increase should be of the order of £4 million. We are now actively engaged in the consideration of the problem of expanding the Ennore Fertiliser Factory; we have also under consideration certain other projects. We have already applied for an industrial licence for the manufacture of cryolite, making use of one of the by-products at Ennore. Shareholders will remember the reference in the Chairman's speech last year to the expansion of our pottery works in Ranipet and to our collaboration agreement with Doultons. This is going well. Although the financial investment, relatively to Ennore, is small, the profits from the pottery expansion should be substantial. Altogether, therefore, the pattern I visualise is that, while our own manufactures will show a substantial rise and therefore the sale of our own group products will form an increasingly large proportion of our total sales, our actual sales of merchandise produced outside the group, either on a commission basis or otherwise, should continue to be maintained at a satisfactory level.

CHANGE OF NAME

This is the first Annual General Meeting under the new name of the Company, E.I.D.—Parry Limited. The old name suffered from the disadvantages that it did not adequately reflect the diversifica-

tion of the Group's interests into the manufacture of Fertilisers, Pottery and Sanitaryware and its close association with Parry & Co., Limited under whose trade mark "Parry's" the Company's sugar, chemicals, sanitaryware and fertiliser products are marketed.

The change of name to E.I.D.—Parry Limited involves no change in the constitution, management and policies of the Company or in that of Parry & Co., Limited.

PROFITS

In the year 1960 the group net profit before taxation amounted to £774,536. In 1961 this came down to £690,130 and in 1962 it has been further reduced to £648,473. As was explained last year, the reason for the reduction in the trading profit is primarily due to the expenses, including interest, in connection with the Ennore fertiliser project. This situation was always anticipated; and, in fact, out of the profits of the year 1958-59 a dividend equalisation reserve was expressly created to enable the maintenance of dividend at a satisfactory level. It is gratifying that dividends have been maintained without the necessity to utilise any portion of the dividend equalisation reserve in spite of the fact that the rate of corporate taxation was increased last year from 45 to 50 per cent.

In the normal course, our financial position should improve substantially with the commissioning of the Ennore fertiliser factory and the completion of our pottery expansion. It is necessary, however, to utter a word of caution, at this stage, in regard to the level of future profits. A new situation has been created in the country by the invasion of our northern frontiers by China. Although, at the moment, there are no precise indications of the magnitude of extra liabilities in the field of defence, it appears, from statements made by responsible ministers, that the increase in defence expenditure would be very substantial and that the country must be prepared for substantial increases in taxation. Quite clearly, Government are in a difficult position, and all sections of the community must be prepared to bear additional burdens. I can only express a hope, however, that in regard to direct taxation, Government will not be moved merely by the immediate considerations of rising additional revenue, ignoring long-term effects on the economy. It is particularly important, for example, that in the matter of taxation of companies engaged in industrial production, the fiscal burden is not so heavy as to discourage capital formation, that is to say, the accumulation of adequate profits and ploughing them back into business. There is a danger that, in the pressure of a crisis, steps may be taken which might place in serious jeopardy the long-

term strategy of industrial development. I will only add, in this context, that I hope Government, in deciding on their taxation policy, will also take into account the fact that the burden imposed on companies by the Emergency Risks Insurance Acts is itself quite substantial.

SUGAR

It would seem that the problems of the sugar industry are never ending. Hardly is one set of difficulties solved before other problems, not of the industry's making, arise.

In his speech last year Mr. Noel-Tod referred to the cut of 10% in production imposed just before the start of the 1961-62 season. Your Company represented to the Government of India that the quota fixed for the Company would leave about 70,000 tonnes cane in the field without any means of disposal. In the event, the quota was increased to accommodate this cane and the Nellikuppam factory produced 35,395 tonnes sugar, incidentally, the highest on record for your Company. Since Government determine what quantity of sugar shall be sold each month and their policy was to release a season's production over 14 to 16 months, the carrying of this large stock together with the balance of the 1960-61 season's production posed problems of storage and finance. It was accordingly decided to offer for export 8,000 tonnes, over and above the export quota of 4,835 tonnes. The price realised on this voluntary export of 8,000 tonnes was approximately the controlled price fixed for U.P. and Bihar at which the Export Agency was then buying for export. Some other factories in the South, placed in the same position as ourselves, followed our example.

While this problem was solved reasonably satisfactorily, others have either not yet been solved or their solution is causing more difficulties.

The Government of India published the Tariff Commission's findings on the Price Linking Formula. The Tariff Commission has condemned the Formula. The Government of India have, nevertheless, decided that it would be "more appropriate, equitable and reasonable to apply the existing formula in a modified form with a more precise determination of the share of the cultivator." The matter rests there and the industry is yet to be told how much more is to be paid to the grower in the four years from 1958-59. The Tariff Commission, after urging the abolition of the formula, recommended in its report that in future payment for cane should be made on the basis of its quality. Accepting this recommendation, the Government of India issued a Press Note on 3rd July that for the sugar year 1962-63 it had been decided to maintain the cane price at Rs. 1-62

per maund and to link it to a recovery of 9.8 per cent. A discount or premium as the case may be would be allowed on this price at the rate of 1.5 nP. for every 0.1% fall or rise in the average recovery for a prescribed duration during the 1961-62 season, subject to a minimum price of Rs. 1.50 per maund for a recovery of 9% or less. The words "prescribed duration" were ominous and I regret to say that the fears of the industry—at any rate in the South—were confirmed when Government finally notified the price payable by each factory. The actual duration of the season at your Nellikuppam factory in 1961-62 was 201 days, from the start of the season on 19th November 1961 to its close on 7th June 1962. Instead of taking the recovery of 9.23% over a duration of 201 days, in which case the price would be Rs. 41.12 per tonne, the Government of India has taken the best part of the season—121 days from December 1961 to March 1962—as the 'prescribed duration'. The recovery for this period is 9.8% and the cane price works out to Rs. 43-40 per tonne. This bias in favour of the grower at the expense of the industry goes by the name of payment by quality. In effect, it means that the grower supplying low quality cane before December and after March gets the same price as the grower supplying the highest quality in the peak of the season. To your Company it means an extra cost of Rs. 7.5 lakhs on the anticipated crop in the 1962-63 season.

Concurrently, the Government of Madras has increased the rate of cess on cane from Rs. 2 to Rs. 5 per tonne, the ostensible purpose being development of cane. Considering that only a fraction of even the present revenue from cess is spent on cane development I cannot help feeling that the industry is being taxed once again without justification, for the purpose of increasing the general revenues of the State. With a sales tax of 3 per cent *ad valorem* and a cess of Rs. 5 per tonne, Madras has the distinction of charging the highest tax on cane in the country in terms of its incidence on the cost per tonne of sugar.

The cumulative effect of these imposts can well be serious and may compel us, at Nellikuppam, to consider restricting our crushing season. It would be with the greatest reluctance that we could take any such step because it would cause hardship to agriculturalists and reduce the income of our own labour force. Other companies may well find themselves in the same position. I do hope that this situation will not arise, but that would all depend on a more flexible approach by Government.

Representations have been made to the Government of India on the question of cane price and to the Government of Madras on cane cess and it remains to be seen what relief, if any will be offered.

Now turning to the All-India picture, the cut of ten per cent resulted in a production of a little over 27 lakh tonnes in 1961-62 against 30 lakh tonnes in the previous season. Together with the carryover of 12 lakh tonnes on 31st October 1961, 39 lakh tonnes were available of which 25.5 lakh tonnes went for domestic consumption, 3.3 lakh tonnes were exported, leaving a balance of 10.2 lakh tonnes as carryover on 31st October 1962. A situation has now arisen whereby large-scale diversion of cane to jaggery and khandasari is taking place in U.P. and Bihar and in some places in the South. As a result, production in 1962-63 is expected to be not more than 25 lakh tonnes. The available quantity will therefore be 35 lakh tonnes of which 25 lakhs will be required for internal consumption, the country is committed to export 4 lakh tonnes and the balance 6 lakh tonnes will be the carryover. This is the normal carryover; and with judicious releases and distribution I see no reason why there should be any shortage of sugar, provided Government do not commit themselves to larger exports in 1963-64. Some statements made by those in authority have been very ambiguous on this point, and I hope Government will not commit themselves to additional exports before a reasonably accurate estimate of production in 1963-64 can be made.

You will see from this review how the fortunes of the industry can fluctuate from year to year and how difficult it is to plan for the future when the various factors influencing the industry are beyond its power to control. I

have already indicated that we may have to pay an extra Rs. 7.5 lakhs for cane. The increase in cess will cost your Company another Rs. 10 lakhs. The cost of the compulsory Emergency Risks Insurance is likely to be Rs. 3.5 to Rs. 4 lakhs to be added to the cost of sugar as there is as yet no way of recovering it as a separate charge. While thus the picture is somewhat gloomy, I can only hope that we will be able to absorb these shocks by realising a higher price for sugar in the coming months. The prices we have been realising in the last few months have been even below the erstwhile controlled price as a result of heavy releases in quick succession and competition among factories anxious to unload on a market unwilling to commit itself except on a hand-to-mouth basis.

FERTILISERS

In his speech at the Annual General Meeting last year, Mr. Noel-Tod referred to the new ammonium phosphate factory at Ennore and indicated that the factory would be contributing in full measure to the Group's profits in 1962-63. This hope has not been wholly realised. The factory, as is well-known, is a complex unit, incorporating many new features in the manufacture of compound fertilisers and as is not uncommon with a highly complex modern chemical process, teething troubles have been encountered during the commissioning and running-in period. In no small measure these have been further aggravated by the inconsistent supply of electrical power, and, repeatedly, just as certain of the processes were about to be brought

into balance, an interruption in electric supplies has upset conditions and almost a fresh start had to be made. As a result, instead of the Works being in full production at the commencement of the present financial year, as anticipated, there has been delay, but I am pleased to be able to tell you that the major problems appear to have been overcome and the factory is now in full production and will make a substantial contribution to the earnings of the group during the current year.

In Mr. Noel-Tod's speech last year, he referred to the issue of a licence by the Government of India to a consortium of two well-known American companies and your Company to erect a fertiliser factory at Visakhapatnam. This project is progressing as well as can be expected under the present conditions; there are still some matters on which Government's decision is awaited. I hope that these will be settled at an early date. It is essential that the Visakhapatnam project, which is one of the major projects included in the Third Plan, gets off to as early a start as possible.

STAFF AND LABOUR

Our relations with Staff and Labour have been good and I should like to thank all the employees of the Company for their co-operation during the year. As anticipated in the Chairman's speech last year, I am glad to be able to record that, after a series of direct negotiations with the Unions concerned, satisfactory long-term settlements have since been concluded, covering Terms of Service and Bonus, which will be effective until the end of 1965.

MR. NOEL-TOD

Mr. Noel-Tod is retiring from the Managing Directorship of E.I.D.—Parry Limited with effect from the 1st of April this year. I take this opportunity of paying a tribute to him for his distinguished service to the Company over the last 30 years. Some of the shareholders may be aware of the fact that his grandfather was Chairman of the Company when its headquarters was in London. Hilton Brown, in his book on Parry's, quotes this as "yet another example of Kipling's devoted families, since Noel-Tod's father and three of his uncles spent their service lives in India." I am glad to be able to say that Mr. Noel-Tod will continue to be a Director and Vice-Chairman of the Company and will also be Managing Director of our London subsidiary, Parry Murray & Co. Limited so that his vast knowledge of the Company's affairs and his experience will be available to the group for some more years to come. I am sure the shareholders will wish to congratulate him on his being honoured with a C.B.E. in the recent Honours list. It is an unusual occurrence that in the same year Mr. Edwards has also been honoured with an O.B.E.

Mr. M. J. Edwards, Deputy Managing Director, will become Managing Director, and Mr. John. K. John, Deputy Managing Director, with effect from the 1st April.

The above statement is no report of the proceedings of the Annual General Meeting, which will be held on 27th February 1963.

Markets

JUTE

Sackings Steadier

STEADY conditions prevailed in the jute goods market during the past week following revival of speculative interest, especially in heavy goods. Early in the week there were reports of a Government tender for 20,000 bales of B Twills for February-March delivery. The news imparted steadiness to the sacking section and prices began to look up. Towards the close of the week again there were reports of fresh business in heavy goods to the extent of 10,000 bales, and prices recorded further improvement. The spurt in prices of heavy goods on the strength of the considerable business reported in one week suggests that operators expect supplies to be reduced in view of the increasing emphasis placed on hessian production by mills. Hessian, however, continues to be rather dull and what im-

provement has taken place during the past week has been in sympathy with the sacking section. The outlook for jute goods exports is not considered to be very bright partly because foreign buyers are slowing down their buying as they have accumulated adequate stocks during the past year and partly because competition from Pakistan is stiffening. While pointing out that conditions for a sellers' market may soon be disappearing, the Jute Bulletin, however, says that export prospects for the current year appear quite reassuring. According to the Bulletin one primary requisite is a steady stream of supply of jute goods at the primary manufacturing source. One of the main factors that had contributed to the improvement in the working of the jute industry last year was the high level of production of jute mills. Discussing the outlook for hessian exports, the Bulletin says that though stocks of burlap at the end of December have

PRICE TRENDS

sizably increased, buying by the US is likely to continue as the import trade in the country appears to have decided to operate on fairly heavy stocks. The Bulletin also believes that while Argentine buying may increase in the current year in view of the lower prices now obtaining, the outlook for hessian exports has considerably improved by the emergence of Russia as a regular buyer in recent years.

The jute goods market ruled steady during the past week largely because of revival of interest in sacking. Although production of heavy goods showed a declining trend as compared with hessian, considerable anxiety was felt as regards the export prospects for this category of goods. The two powerful adverse influences affecting exports of heavy goods are the growing competition from Pakistan and the move in importing countries to set up indigenous jute industries for the manufacture of sacking. The revival of buying interest therefore was greeted with a rise in rates. First there was the report of a sizable order from the Government of India. Then a few days later came the report that Indonesia had shown interest both in A Twills and Heavy Cees. Sentiment further improved on these reports and prices recorded some more useful gains. Hessian on the other hand continued to be neglected but the price of this category also showed some improvement in sympathy with sacking.

The raw jute market continues to rule steady with quality jutes quoting above the minima. Low quality, however, is sold at below minimum levels, but it is generally believed that in course of time this will also gain in price. In marked contrast to their mood some time ago, sellers generally are reluctant to discount rates. This is largely the result of the concerted measures taken by Authority to maintain the minimum prices. The announcement that the operational price for jute will be announced well in advance of the new season has imparted confidence in growers and holders. In the meantime indications are that further active steps will be taken to increase the purchase of jute in the current season by the STC and other agencies. During the week mills have been buying against their recently issued quota. It has been indicated by the West Bengal Chief Minister that the State Government may be setting up an agency to buy jute at the operational price. The fact that Shriram Narayan, Member of the Planning Commission has indicated in Calcutta this week, that the STC and JBSA between them may be absorbing one million tons of jute has engendered optimism among holders that minimum prices will be maintained.

TEA Good General Demand

IN the export sale held in Calcutta this week, offerings were 60,150 packages. There was a good general demand. Plain orthodox descriptions received good enquiry, especially the broken. Clean ex-

portable Fannings often registered considerable advances. Better liquoring kinds from all districts were well supported and were generally dearer, particularly the Fannings with brighter liquors although the BOPs tended easier.

Medium CTC broken were sold well; but Fannings grades from Assam received only limited support and were 20 nP easier with some withdrawals. There was good demand for the best liquoring sorts and those showing a seasonal improvement in quality were sometimes dearer to buy. The fibrous kinds received less demand than last week and were irregularly easier. Legg-cut teas, on offer, were irregular and generally dearer.

Whole Leaf grades received good enquiry and were sold at firm to dearer rates, while Tippy teas were well supported and registered advances. The limited enquiry of Darjeeling teas, on offer, were sold well. Following rates were quoted: Clean Plain Pekoe Rs 4.90 to Rs 5.10; Plain BP Rs 4 to Rs 4.30; Plain Fannings Rs 3.90 to Rs 4.40; Medium Assam CTC BP Rs 5.70 to Rs 6.10; Medium Assam CTC Fannings Rs 5.40 to Rs 5.60; Best Assam CTC BP Rs 6.20 to Rs 6.40 and Best Assam CTC Fannings Rs 6.00 to Rs 6.30.

Internal sale, offerings were 30,120 packages of Dusts. There was a better general demand. Medium CTCs received good competition and, while the brighter liquoring kinds were sold at dearer rates, the remainder of the offerings were irregular and generally easier. Good CTCs were the pure ones and the offerings were sold at enhanced levels following quality and some attractive prices were realised. The fibrous kinds again eased in value.

Plain orthodox teas came in for keen competition and were firm to dearer with the exportable kinds selling at a premium. Medium orthodox teas received fair support and were irregular and easier with the exception of the brighter liquoring kinds, which were dearer. Legg-cuts were sold well at firm levels, the few selected lines realising higher prices. Following rates (per kilo) were quoted:—Plain Orthodox Dust Rs 4.00 to Rs 4.30; Medium; Assam Dusts Rs 4.30 to Rs 5.00; Legg-cut Dust Rs 5.00 to Rs 5.40; Medium Assam CTC Dust Rs 5.50 to Rs 6.10 and Good Assam CTC Dust Rs 6.70 to Rs 7.10.

According to the latest figures, exports of tea from India, in the first eight months (April to November 1962) of the current season, increased to 319.36 million pounds from 304.01 million pounds in the corresponding period of the previous season. While exports to the UK, the large single buyer of Indian tea, declined from 188.85 million to 186.15 million pounds, those to all other out-markets increased from 115.18 million to 133.21 million pounds.

The production of tea in South India amounted to 14.3 million pounds in December 1962 as against 14.9 million pounds in the previous month and 14.2 million pounds in December 1961. The total outturn of South Indian tea, in the whole of last year, came to 175 million pounds against 176.7 million pounds in 1961.

Production in Ceylon increased to 42 million pounds in the same month from 39 million pounds in November and 38.6 million pounds in December 1961. This puts the total outturn in 1962 higher at 466.3 million pounds as compared to 455.2 million pounds in the whole of 1961.

An official of the Ceylon Tea Propaganda Board is leaving for India shortly to have discussions with the Indian tea authorities on the extension of joint tea publicity campaigns by the two countries. India and Ceylon are already carrying on a joint campaign in the USA, Canada and West Germany. But in countries such as Australia, New Zealand, Iraq, Egypt, Denmark and Italy, each conducts its publicity campaign separately.

Tea traders in Ceylon are perturbed at the declining prices of medium and low-grown teas over the past three years. The net sale average of medium tea dropped by 11 cents and lowgrown tea by 18 cents a pound last year. The former declined from Rs 1.72 to Rs 1.61 and the latter from Rs 1.74 to Rs 1.56 per pound. In view of this drop, the net sale average of all varieties of tea sold at the Colombo auctions last year fell by 8 cents a pound—from Rs 1.83 to Rs 1.75 a pound—despite improvement in high-grown tea by 1 cent—from Rs 1.99 to Rs 2.00.

According to the figures released from London, tea stocks in London and provincial warehouses, as on 25 January, were slightly higher at 144.52 million pounds as against 143.06 million pounds in the previous week. The total quantity to be landed on the same date was 12.09 million pounds. Total afloat was 30.99 million pounds including from Calcutta 15.85 million pounds; from Chittagong nil; from Cochin nil; from Ceylon 12.44 million pounds and from other Ports 2.69 million pounds.

COTTON New Cotton Contract

The Jarilla May contract opened its career on Saturday 2 February at a premium of 12 points over the ruling Jarilla March contract. Trading in the new contract has been allowed on more or less similar conditions as applicable to the ruling contract. The Jarilla May contract, however, failed to make further headway in view of the bearish trend in the futures market and after com-

mencing at Rs 684.25 per three quintals closed at Rs 682.25 in the absence of follow up support. Though the near-term outlook for the new contract appears to be unpromising owing to the brisk movement of new crop, the long term prospects are considered to be very encouraging, and the contract is expected to register sizable gains early next month.

The Jarilla March contract during the week moved in a narrow groove. After the initial rise to Rs 684.00 from Rs 676.25 per three quintals, the contract on Wednesday slipped down to the week's stipulated low level of Rs 666.25 owing to the lack of follow up support. The share market operators were leading buyers. However on Friday the contract staged a moderate recovery to Rs 673.75 before finally closing the week at Rs 672.25 per three quintals.

Generally dull conditions prevailed in the spot market at Sewri during the past week. There was a revival of activity in the latter part of the week. Good demand was reported in Co 2 obviously due to the rising trend in American cotton. Scattered enquiry was in evidence in Vijay, Digvijay, L 147 and 197/3 but the price trend was generally easy.

In the import section moderate mill interest was noted in American, Egyptian Giza, Sudan and African cottons. Though the mills received individual allotments there was no broadening of interest in American Cotton as the prices were high.

The stocks with the mills at the end of November 1962 amounted to 5.83 lakh metric bales of indigenous cotton and 2.95 lakh bales of imported growths. This corresponds to 10.47 lakh bales of Indian cotton and 3.95 lakh bales of foreign cotton a year ago.

Consumption of cotton by the Indian mills in the first quarter of the current season totalled 11.04 lakh metric bales of domestic crop and 2.82 lakh bales foreign cotton as against 11.47 lakh bales and 2.83 lakh bales respectively in the relevant period in the previous season.

The announcement of the export quota for Bengal Deshi is expected to be made by the end of this month. An immediate announcement is considered to have a morale boosting effect in the spot market.

The Punjab Government has selected four villages of Karnal, Kaithal, Nissang and Rajaund in the Karnal district for intensive campaigning to grow long staple cotton with improved methods. About 82,000 acres of land in this area will be covered by this plan. For this purpose the State Agricultural Department has stored 400 maunds of foundation seed and 700 cotton seeds (pure variety).

Experiments in breeding American cotton strains in the Jullundur district are reported to be progressing well. Similarly extra long staple cotton is being sown on an experimental basis in Ferozepur district.

PIECEGOODS

The offtake in the Bombay piece-goods market during the past week was restricted to bare requirements. The purchasers were cautious before making any commitment in view of the coming Central Budget.

Thanks to the proximity of Ramzan, brisk activity was evident in seasonal varieties. Delhi, Calcutta and the South Indian centres were active while Kanpur was quiet. The upcountry centres are reported to have changed their buying tactics and at present instead of bulk purchases they are buying small lots at different intervals. Bleached longcloth, saris, dhoties and bleached mulmul met with moderate demand. In the powerloom section uncalendared grey dhoties and saris met with good demand from local dealers and processors.

Activity in the export section was better though the prices realised were slightly lower. Stray bookings for the UK in grey goods were reported. Ethiopia and Eritrea enquired for bleached mulms, bleached dhoties, and gadlapat though the offake was small. East Africa was interested in coatings, grey leopard cloth and grey chaddars. Singapore accounted for a moderate quantum of bleached mulms, bleached longcloth and grey sheetings. Sudan focused its attention mainly on bleached and dyed superfine voiles. But bookings in a moderate scale in bleached dhoties, bleached mockleno cloth and gadlapat for immediate requirements were reported.

Prospects for Pepper

AFTER suffering early reverses, the Pepper market is now showing signs of firming up as advices from New York have tended to improve. The dealers and grinders in the USA, who were disinclined to buy any substantial quantity for some time until recently for anything except at their own prices, are now forced to reappear in the market and take the available quantity. These purchases are urgently needed to replenish their stocks. It is further expected that continued desultory purchases by East European countries and North Indian buyers will keep pepper firm in the near future. In the Cochin market, the rate is quoted around Rs 250 per quintal.

Exports of black pepper this year are likely to touch record levels even though actual foreign exchange earnings may be less owing to lower prevailing prices. With the Spices Export Promotion Council making efforts to introduce

quality control, exports will also be maintained at stable levels. It is also felt that, if we can retain our competitive level with Singapore and if we are prepared to make some sacrifices to win over the foreign buyers, exports of Indian pepper will make a smart recovery.

Current forecasts are that the 1963 world production of pepper will be larger than last year's 160.7 million pounds. Increased crops are to be harvested in India and Indonesia which together account for two-thirds of the world supply of the commodity. Larger crop is expected from Sarawak also in view of the coming into production of the new plantings made in 1958-59 and the more widespread use of organic manures.

Meanwhile, the Pepper and Ginger Merchants' Association in Bombay has been accorded permission to conduct futures trading in pepper and forward trading in the commodity will be inaugurated by the Chairman of the FMC on 7 February. These facilities are expected to be helpful to exporters in Bombay, which accounts for more than 60 per cent of the total export of pepper from the country. There will be eight transferable specific delivery contracts in a year. Not more than two contracts will be trade simultaneously in the market. Trading will start in Chaitra and Vaishakh contracts. The unit of trading will be 25 quintals or multiples thereof and the quota will be for 100 kg. The contract will be for Malabar ungarbled black pepper.

CASHEW

According to a report issued from Ernakulam, exports of Cashew kernels from India, in the ten months of 1962, increased in quantity to 1,697,745 cases, each containing 50 lbs net from 1,560,704 cases in the corresponding 1961 period. Despite the increase in quantity, however, the value of the exports was lower at Rs 15.4 crores in the period under review as compared to Rs 16.35 crores in the January/October 1961.

Exports to the USA, the largest buyer of Indian cashew kernels, rose from 955,039 cases to 955,473 cases in the period under review. Supplies of cashew kernels to the UK during the period under review were, however, lower at 94,273 cases as against 130,076 cases in January/October 1961.

RUBBER

The provisional estimates issued by the International Rubber Study Group reveal an increase of 10,000 long tons in the world production of natural rubber in November although there is a decline in consumption by 15,000 tons.

Output in November, at 195,000 tons, brings total production, for the first eleven months of 1962, to 1,905,000 tons. Consumption, during the month, totalled 180,000 tons, bringing the 11-month figure up to 1,980,000 tons.

SEEDLAC

Control over the export of refuse lac has been lifted with effect from 2 February 1963. The exporters of refuse lac will not hereafter be required to produce a certificate at the time of shipment to the effect at seed lac equivalent to 50 per cent (by weight) of refuse lac to be exported.

The State Trading Corporation has decided to open a seed-lac procurement centre at Bilaspur and start the purchase of lac produced in Madhya Pradesh. The Corporation, which has taken this decision following a suggestion by the State Industries Minister has already made necessary arrangements including godowns for the centre. The Indian Lac Research Institute, Ranchi, has also decided to set up a regional testing laboratory at Bilaspur for analytical test of lac to be tendered to the State Trading Corporation by the manufacturers.

SUGAR

Sugar markets have continued to display a firmer tendency, thanks to brisk buying support. Expected fall in production in 1962-63 season to about 2,500,000 tons against 2,700,000 tons and expectations of higher excise duty on the commodity in 1963-64 have acted as main bullish factors. To check the rising trend in sugar prices, special release of 20,000 tons has been made by the Government of India to factories in Maharashtra.

Cane supply position to the factories, despite increase of 12 nP a maund in purchasing prices, has not very much improved and most of the factories on the Uttar Pradesh side are not getting even two-thirds cane supplies to their requirements. It is feared that, if cane supply position does not improve, the factories will terminate their crushing season in mid-February.

Japan has agreed to purchases 77,800 tons of raw sugar from India for shipment during January-May 1963. The purchase has been made by seven Japanese firms. This is the first time that raw sugar has been purchased by Japan from India and the importers, it is stated, are naturally very anxious about quality. The experience with the first consignment will determine future imports.

GOLD & SILVER

On the Bombay Bullion Exchange, the Silver section displayed a quieter tendency. Sentiment was adversely affected by reports of continued arrivals of unrefined silver. There were also indications that the seasonal demand had not set in. Consequently, prices gave way from the high level touched early in the week. Silver of .996 fineness eased to Rs 225 from Rs 226, while that of .916 purity was lower at Rs 223.

Unofficial deals continued in the Gold section. The rate is nominally quoted at Rs 98 to Rs 101.

OILS & OILSEEDS

Prices on the Bombay Oilseeds Exchange suffered a sharp setback due to speculative selling.

The spurt in Groundnut prices, witnessed recently, proved to be short-lived. The downward trend was attributed to hectic unloading on reports of increased arrivals in the terminal centres and poor off-take. Besides, the export front was quiet. The exports of HPS groundnut and groundnut oil were at a stand-still. Buying of groundnut extraction by Japan also came to an abrupt end. The failure of negotiation for British entry into the Common Market was also considered to be unfavourable for Indian exports of groundnut products. Groundnut Bold was quoted at Rs 39.50 and Groundnut Oil at Rs 16.30.

Oilseeds Liberalisation of Credit

The Reserve Bank of India has recently liberalised credit facilities to exporters of HPS groundnuts on the introduction of free licensing of exports of the commodity. So far, every scheduled bank was permitted to maintain in respect of every registered exports of HPS groundnuts an additional level of credit against the security of groundnuts to the extent of two-thirds of the value of the unutilised portion of the quota so registered. In view of the discontinuance of the system of registration of export sales contracts, the earlier provision in regard to the additional credit limits has been modified. The revised additional limits for the two-month period January-February 1963 have been fixed at 200 per cent of the additional limits permitted to banks in the corresponding period of 1962. Besides, banks have been asked to meet any further credit requirements of exporters, on a priority basis, within their general permissible limits of lending against groundnuts.

The price variation in the Castor-seed section more or less followed the pattern set by groundnut. While shippers were inclined to cover their requirements of castor oil against previous export commitments, fresh business was at a low ebb. The movement of the new crop in Andhra was also reported to be picking up. Castor ready was quoted at Rs 31.87 and Castor Oil, commercial quality at Rs 12.70.

Trading in the Linseed section was largely of a speculative nature. But reports, that the prospects for the new crop of rapeseed had improved with the favourable turn in the weather, induced the operators to press heavy sales at higher levels. Ready was quoted at Rs 32.75 and Linseed Oil at Rs 13.50.

Company Reports

Expansion Programme of Indian Oxygen

INDIAN Oxygen Limited has taken in hand a programme to install three additional oxygen plants in Jamshedpur. The installation of a new dissolved acetylene-producing plant at Gauhati has been completed and is now in commercial production. Considerable progress is also made with the development plants at the Bombay factory. The second oxygen plant, which was licensed for Bombay last year, is now under erection and is expected to be on stream in February next year. Plans are now being laid for erecting a factory at Hyderabad to manufacture oxygen and dissolved acetylene. An extension to the electrode factory building at Khardah, near Calcutta, has been completed. Land has been purchased at Ranchi for building a modern factory to produce "loxite" cartridges—a component of liquid oxygen explosives.

Meanwhile, the company has reported a substantial decline in earnings for the year ended 30 September, 1962, reflecting the rising costs in a number of directions. Despite a rise in sales from Rs 7.57 crores to Rs 8.88 crores, the net profit, after providing for Depreciation and Taxation, amounts to only Rs 60.83 lakhs as against Rs 81.80 lakhs for the preceding year, although the latter figure includes Rs 2.50 lakhs being refund of tax on profits for a previous year and Rs 8 lakhs being taxation over-provided in previous years.

In respect of allocations, Depreciation is raised to Rs 49.84 lakhs from Rs 44.96 lakhs; Taxation to Rs 74.67 lakhs from Rs 36.25 lakhs and Fixed Assets Replacement Reserve to Rs 1.10 lakhs from Rs 51.976. The provision for Development Rebate Reserve is, however, lower at Rs 6.50 lakhs against Rs 13 lakh and General Reserve at Rs 10 lakhs against Rs 25 lakhs. The directors have proposed a taxable dividend of 12 per cent on the ordinary capital increased by the issue of bonus shares as against a taxable dividend of 15 per cent paid on the old capital. The dividend is payable on or after 5 March to those shareholders registered as on 8 February, 1963. Transfer Books of the company will be closed from 22 January to 8 March, 1963.

Decline in Mysore Sugar's Profits

From the point of view of both production as well as sales, the working of the Mysore Sugar Company Limited has continued to be satisfactory. Sales have risen from Rs 3.22 crores to Rs 3.28 crores; but the fall in the net profit (after depreciation, but before providing for taxation) from Rs 20.07 lakhs to Rs 12.10 lakhs is mainly due to the lower level of price realised on sale of sugar subsequent to the removal of controls in September 1961 and to the loss of Rs 12.41 lakhs sustained on export quota.

In respect of allocations, Depreciation is raised to Rs 8.45 lakhs from Rs 8.42 lakhs, apart from providing Rs 4.00 lakhs for Rehabilitation Reserve and Rs 25,000 for fluctuations in the value of Investments. The provisions for "Arrears of Employees Retiring Gratuity" and Stores Depreciation Reserve are maintained at Rs 1.00 lakh and Rs 50,000 respectively. Taxation is slightly lower at Rs 10 lakhs against Rs 11 lakhs. The dividend is, however, maintained at 30 per cent, subject to deduction of tax.

The directors state that the amended Price Linking Formula for payment of deferred price for sugarcane is expected to throw a heavy burden on the company in respect of the past four seasons, commencing from 1958-59 despite the modifications it has undergone at the hands of the Tariff Commission and the Government.

During the period from 14 July 1961 and 27 April 1962, the company crushed 385,016 tonnes of sugarcane and produced 38,056 tonnes of sugar with an average recovery of 9.77 per cent.

Associated Battery Repeats

The Associated Battery Makers (Eastern) Limited has reported a reasonable rise in sales from Rs 2.18 crores to Rs 2.28 crores for the year ended

31 August 1962 despite some reductions in selling prices. But the increase in costs and expenses is reflected in the net profit which, after providing for Depreciation and Taxation, is lower at Rs 21.67 lakhs as against Rs 24.85 lakhs for the preceding year.

The Depreciation amount is raised to Rs 10.05 lakhs from Rs 7.47 lakhs. After transferring Rs 1.64 lakhs from General Reserve, a sum of Rs 12,700 (nil) is provided for Stock Reserve and Rs 1.64 lakhs (nil) for Capital Reserve. Taxation provision is raised to Rs 29.10 lakhs from Rs 21.58 lakhs and Development Reserve to Rs 1.36 lakhs from Rs 69,967. The provision for Fixed Assets Replacement Reserve is, however, lower at Rs 3.55 lakhs against Rs 3.99 lakhs. The dividend is maintained at 15 per cent, subject to tax. The dividend is payable on or after 12 February to those shareholders whose names are registered as on 28 February, 1963.

Samastipur Central Sugar Incurs Loss

Despite the increase in the quantity of cane crushed from 905,276 quintals to 1,254,283 quintals and in the sugar manufactured from 82,151 quintals to 108,523 quintals, the Samastipur Central Sugar Company has reported a loss, after providing for depreciation, of Rs 3.99 lakhs for the year ended 30 June 1962 as against Rs 2.42 lakhs for the preceding year.

The Depreciation amount is lower at Rs 65,077 against Rs 1.03 lakhs. The dividend is skipped again for the year. The debit balance carried forward to next year is as much as Rs 5.50 lakhs.

several industries has been seriously disrupted as a result of the drastic cut in imports of essential components in the latest import licensing period.

NEW ISSUE NOTES Universal Tyres

The Universal Tyres Limited, Calcutta, has been given consent to the issue of capital of Rs 250 lakhs, divided into Rs 200 lakhs in equity shares and Rs 50 lakhs in 9.5 per cent preference shares.

The company has obtained financial collaboration of Delta Metal Company Limited of London. The foreign collaborator will participate in the share capital and supply the needed machinery.

Mukund Iron

Mukund Iron & Steel Works Limited, Bombay, has decided to issue further capital of the value of Rs 91,89,225, divided into 9,18,900 equity shares of Rs 10 each for cash, at a premium of Rs 1 per share, to be made to the existing shareholders in the ratio of one new share for every share held.

Investa Machine

Invests Machine Tools & Engineering Company Limited will issue capital of Rs 25 lakhs in equity shares of Rs 100 each for cash, at par, to be made to the existing shareholders in the ratio of one new share for every two shares held.

Usha Forgings

Usha Forgings & Stampings Limited, a new company, will issue capital of Rs 20 lakhs for the manufacture of forged hand tools, etc. The factory will be established at Badarpur in Delhi.

Ayyappan Textiles

Ayyappan Textiles Limited, Madras, is to issue capital of Rs 15 lakhs in the form of equity shares of Rs 50 each for cash, at par. The capital will be used for the establishment of a spinning mill with an initial spindleage of 6,000.

Magadh Textiles

The Magadh Textile Mills Limited, Calcutta, will issue capital of Rs 35 lakhs, divided into Cumulative Redeemable Preference shares of the value of Rs 8.75 lakhs and equity shares of the value of Rs 26.25 lakhs. The capital is required for the establishment of a spinning mill with 25,000 spindles at Chakradharpur, Bihar.

BONUS ISSUE NOTES Kingsley Golaghat Assam Tea

Kingsley Golaghat Assam Tea Company Limited, Calcutta, will raise capital of Rs 5,40,000, divided into 5,400 equity shares of Rs 100 each, to be issued as fully paid-up bonus shares, on the capitalisation of company's General Reserve to a like extent, in the proportion of three shares for every two equity shares held.

INVESTMENT NOTES HISCO

According to the figures released by the Indian Iron & Steel Company Limited, the output of Pig Iron has risen to 120,068 metric tonnes in January from 118,804 tonnes in December last year and Saleable Steel to 68,972 tonnes from 66,444 tonnes. The output of Steel Ingots is, however, lower at 66,248 tonnes against

91,175 tonnes. Despatches are shown lower at 70,408 tonnes against 80,395 tonnes and, in this respect, it is stated that 8,400 tonnes of finished steel could not be despatched due to railway's failure to supply required number of wagons.

TISCO

The Tata Iron & Steel Company Limited has reported a decline in the output of Saleable Steel from 128,000 metric tons to 126,500 tons in the month of January and Pig Iron from 161,800 tons to 151,700 tons. The output of Steel Ingots have, however, improved to 159,100 tons from 158,200 tons.

Speciality Papers

The Chairman of the Speciality Papers Limited has stated that the company's factory will go into production by the end of June. The company has been negotiating with the ICICI for a foreign exchange loan of Rs 4.99 lakhs for procuring additional machinery required for imparting flexibility to the main project, enabling it to produce a wider range of speciality papers. In the course of time, the company will be able to manufacture tracing paper, impregnated paper and many others. It is also indicated that there is a possibility of the capital outlay of Rs 20 lakhs exceeding the estimate which the Chairman considers as definitely advantageous to the shareholders, the company and the country.

Amalgamated Electricity

The Amalgamated Electricity Company Limited's plant at Chalisgaon has just gone into production. The plant is now processing groundnut cakes at the full rated capacity of 100 tons a day. Additional equipment for extracting rice bran has also been installed. It is estimated that major portion of this production will be exported.

STOCK EXCHANGES

Stalemate Continues

Watch-Dog Writes:

THERE has been no material change in the pattern of trading in stock markets during the week under review. Sentiment is largely influenced by the uncertain political situation and the forthcoming Central Budget.

Quiet conditions prevailed on Lyons Range where prices showed little change in a moderate turnover.

Budget uncertainties checked fresh interest and rendered operators cautious on Dalal Street.

The Ahmedabad Stock Exchange continued to show a mixed pattern of trading. There was a complete lack of support on the Delhi Stock Exchange where prices lost further ground.

On the Madras Stock Exchange, sellers were seen for a number of shares, while the traded scrips generally closed lower.

On the London Stock Exchange, conditions remained quiet and prices showed small irregular changes.

Wall Street, however, gave a good show despite some deterioration in the news background.

CALCUTTA

THE local stock exchange started the week on a dull note and, with interest lacking, price movements were negligible. In general, professional operators were still not in a mood to enter the market, while the investors had doubt whether all the adverse factors had been discounted.

On the economic front, the market had reconciled itself to the possibility of heavy additional taxation. But the main uncertainty related to the manner in which the Finance Minister might make his tax effort. It was feared that any imposition, which might accentuate the difficulties of the corporate sector, would have a demoralising effect on the investment climate for a long time to come.

On the political front, operators did not seem to be holding any hope of the present uncertainties being eased as a result of India's acceptance of the Colombo proposals in toto. There was also an anxiety to await the outcome of the Indo-Pakistani talks, now being held in Karachi over the Kashmir issue.

There were also other factors contributing to the stand-still policy adopted by the marketmen. Mainly amongst these were the reports of postponement of the Aid-India Club meeting, the reduction in textile exports to the US and the earnings of companies being presently squeezed by rising production costs. With the result, professional operators as well as investors had no inclination to shake off their lethargy and make commitments. Prices, therefore, moved within a narrow groove in the absence of any aggressive buying or selling.

The gilt-edged section was dull and quiet. The tendency was for prices to sag owing to lack of any support. Prices of State Loans showed a decline in the absence of any business. 3 per cent 1986 Conversion Loan was quoted at Rs 63.06.

Steel shares were neglected. Despite the fact that the authorities took a further long step in the direction of freer trading, transactions in the kurb market were taking place at below the minimum rates. For instance, in the case of Indian Irons, the rate was quoted at Rs 20.50. Operators had a general fear that, in spite of the company's proposal for expansion being favourably considered by the Government, the earnings might be squeezed by rising production costs coupled with the low retention price of steel. Officially, the rate for the scrip was nominally quoted at the revised minimum price of Rs 21.

Among other engineering shares, Braithwaite received sustained support up to Rs 36.25 from Rs 36.19 and so also Binani Metal up to Rs 10.50 from Rs 10.19. Dalmia Iron moved narrowly between Rs 11.44 and Rs 11.56 with Guest, Keen, Williams being quoted at the new minimum rate of Rs 33. Jessop were rather sticky at Rs 22.

The flow of encouraging working results by some companies seemed to have no effect on jute shares, which received only limited support. This was mainly due to a rising doubt whether the increased output of the mills would be absorbed in the coming months in view of the obscure outlook for exports. Birlas were on offer at Rs 28.37 against Rs 28.87 and New Central at Rs 12.50 against Rs 12.81. Ganges changed hands at Rs 13.10 to Rs 13.25; India at Rs 17.75 to Rs 17.81 and Megna at Rs 13.19 to Rs 13.31.

Coal shares ticked support. The reports of an early World Bank investigation into the problems of the industry were ignored by the operators. Bengal eased off to Rs 288 from Rs 295, while Amalgamated were almost maintained at Rs 24.31. Burrakur were nominally quoted at Rs 15 with New Beerbhoom closing better at Rs 20.12 against Rs 19.75.

Except for scattered enquiry, Tea shares were practically neglected owing to the uncertainty about the new crop and the dividends for 1962.

Sugar shares continued to remain depressed. Dyer Meakins touched a new low of Rs 28.50 from Rs 28.62 due to further liquidation. SKG were quoted at Rs 8.00.

The obscure outlook for cloth and yarn was reflected in the Textiles section where dealings were few and far between. Cawtex changed hands at Rs 6.56 to Rs 6.69; Jay Shree at Rs 13.87 to Rs 14 and Elgins at Rs 19.87 to Rs 19.94. J. K. Cotton were nominally quoted at Rs 13.25 and so also Kesoram at the revised minimum rate of Rs 21.

Miscellaneous issues were generally quiet in the absence of buyers. The only exception to the general trend was Indian Copper, which met with consistent support up to Rs 4.27 from Rs 4.20. Orissa Minerals met with business at Rs 15 to Rs 15.19; Jaipur Udyog at Rs 10.19 to Rs 10.37; Bengal Paper at Rs 31.44 to Rs 31.56; Titagur at Rs 16.50 to Rs 16.69; Sirpur at Rs 10.87 to Rs 10.84; Indian Cable at Rs 33 to Rs 33.12; Dunlop Rubber at Rs 35.50 to Rs 35.75; Hindustan Aluminium at Rs 13.44 to Rs 13.69; Hindustan Motor at Rs 16.47 to Rs 16.50; Asiatic Oxygen at Rs 9.10 to Rs 9.31 and Indian Oxygen at Rs 25 to Rs 28. Shree Gopal were fairly steady at Rs 22.37, while India Carbon came in for some business up to Rs 21.06 from Rs 20.87. India Steamship were neglected at Rs 5.94.

USA
The **PAN AM**
\$15-A-DAY
WAY

Niagara Falls — one of the world's most spectacular natural attractions in the U.S.A.

Pan Am now introduces a unique low-cost way to visit any one or all of 32 major U.S. cities.

Have you always wanted to see the U.S.A. but thought it far too expensive? If so, Pan Am's \$15-a-day-way is your way to the U.S.A.

Here's how: You may spend 3 days and 2 nights in any of 32 major U.S. cities and pay only \$15 for your hotel room with bath and, in most cities, a full sight-seeing tour. Average cost for each full 24 hour stay—only \$7.50!

Food? You'll be free to dine where you like, at your own expense.

However, Pan American has surveyed every one of the 32 places included in this plan and can assure you that 3 substantial meals at popular restaurants need not cost more than \$7.50 per day through the entire U.S.A.

Result? \$15 a day for room with bath, meals and sightseeing in any or all of 32 fabulous U.S. cities.

Fares? No extra fare on a Pan Am 'round-the-world trip for many of these U.S. cities. Only Rs. 6053 economy class from Calcutta for Europe and the Pacific, and North America as well!

Travel a New World—See the U.S.A.

IISCO-STANTON Cast Iron Spun Pipes

Made to BSS 1211 of 1958 and Vertically Cast Pipes to BSS 78 of 1958.
IISCO pipes are used throughout the length and breadth of the country.
Among the big projects that have already used IISCO pipes are: the
Mattanchery Project at Ernakulam, 8,62,000 Rft; the Water Supply and
Drainage Scheme in Madras State, 48,02,000 Rft and the Ajmer Water
Supply Scheme, Rajasthan, 3,69,000 Rft. Today, IISCO pipes are being
again employed at:

Patrati Water Supply Project A/c. Chief Engineer, P.H.E.D., Bihar, Patna.	4" to 30" Spun Pipes	1,36,050 ft.	5355 tonnes approx.
Coal Mines Water Supply Scheme A/c. National Coal Development Corporation Ltd.	14" to 27" Spun Pipes	1,25,591 ft.	5456 "
Municipal Corporation of Delhi.	24" to 36" Spun & V.C. Pipes	53,613 ft.	11943 "
Ahmedabad Municipal Corporation.	60" V.C. Pipes	5,676 ft.	2345 "
Fertilizer Corp. of India Ltd., Namrup Project.	16" to 24" Spun Pipes	22,874 ft.	1461 "
The Chief Engineer, L.S.G.E.D., Lucknow.	15" to 27" Spun Pipes	25,695 ft.	1448 "
Corporation of Madras.	21" to 33" Spun & V.C. Pipes	23,766 ft.	2135 "
The Executive Engineer, P.H., Visakhapatnam.	14" to 18" Spun Pipes	16,405 ft.	196 "
The Public Health Engineer, M.P. Bhopal.	30" to 36" Spun & V.C. Pipes	10,454 ft.	1375 "
Maharashtra State Electricity Board.	21" Spun Pipes	21,000 ft.	1761 "

The Three Desiderata

Familiar problems were provided with new per-
spectives by Sir Jehangir Ghandy in his Pandya
Memorial Lecture of the Indian Institute of Metals
last week in Jamshedpur. A high priority for en-
gineering industry in our scheme of economic deve-
lopment needs no special pleading. Once the priority
is conceded, the question is one of how best one
can set about pursuing a programme of vigorous
development of these industries. Sir Jehangir
lists four desiderata that are throwing awry our
somewhat unco-ordinated efforts at the moment:
these are the shortfalls in materials, men, techni-
cal knowledge and capital. The last lack has been
discussed often enough. It is worth while con-
sidering the implications of the other in some detail.

Basic shortage of essential materials is a serious
obstacle in the way of realising our industrial
hopes. Production of metals, both ferrous and
non-ferrous, the base on which any engineering
hope has to be built, has despite enormous in-
creases made in a perspective of over ten years,
been lagging far behind the needs that have grown
in the last ten years. The prospect too is of
irksome continuance of difficulties. Metals produc-
tion rose by 17 per cent between 1951 and 1956,
whereas production in engineering industries rose
by 118 per cent during the same period. The for-
mer no doubt registered an increase of over 136
per cent as at the end of the Second Plan
owing to the emphasis on mining and metal-
lurgical industries in the Second Plan. But,
during the same decade, engineering indus-
tries registered an increase of 320 per cent.
The last year has seen an encouraging pick-up of
production in the steel plants, but even if produc-
tion catches up with rated capacity, the gap will
be a yawning one.

Two specific suggestions made in this con-
nection by Sir Jehangir are worth the serious
consideration of Authority. One is expansion of
existing units including those in the Private
Sector: the other is the creation of less ambitious
and more numerous "non-integrated units" for
production of pig iron. The need for expansion of
existing steel units has been partially recognised
in the sanction accorded to the first phase of IISCO
expansion programme. Pig iron production
divorced from steel making can reduce the pressure
on the integrated units that are currently making
pig iron expensively for general consumption. To
the extent the steel projects make pig iron not
meant for steel making, they are deflecting their
energies from their true function. With production
of steel picking up, integrated units can afford less
and less to do so. Fortunately, research carried on
in the National Metallurgical laboratory by Dr
Nijhawan and his associates has proved the feasi-
bility of pig iron production by using fuel that blast
furnaces find inefficient. The plant and equipment
required would involve a mere 15 per cent import
content and can easily be manufactured. The idea
is worth pursuing earnestly for foundries all over
the country are starved for pig iron.

As regards non-ferrous metals, nature has not
been as bountiful to us as we could wish and
except for aluminium for which we have substan-
tial reserves of bauxite, we are ill-provided. Tin
and nickel are not part of our mineral wealth at
all and ore-availability in lead, zinc and copper
is nowhere near our needs of the refined metals.
We are therefore driven to the expedient of
more or less unsatisfactory substitution. Use,
where possible, of aluminium for zinc and copper
for certain kinds of industrial purposes like cable
making and even galvanising, is one kind of sub-
stitution. Another is a species of import substitu-
tion. For example we can import concentrates or
ore instead of the refined metal itself, thus saving
substantial foreign exchange. (This would inci-

dentally be the reversal of existing practice in
zinc, i.e., sending concentrates made out of indige-
nous ore for smelting in Japan). This naturally
involves creation of refining capacity in which
some beginnings have been made. A zinc smelter
is to be established at Udaipur: additional capacity
for smelting imported concentrates has been ap-
proved. In lead, existing refining capacity of 6,000
tons is to be expanded to 11,000 tons besides
creating additional capacity of about 12,000 tons
using imported concentrates. Copper too is to be
produced from imported blister copper. A
most useful suggestion is the winning of copper
from imported "secondary scrap", for as pointed
out by the productivity team that made the sugges-
tion, the US reclaims as much copper from scrap
as from primary ore.

The second uncertainty dogging our ambitions of
becoming an industrially sophisticated nation is
the serious shortage of skilled manpower. Though
nominally our schools turn out a large number
of possible entrants into industry—Sir Jehangir
gives some flattering figures in this respect—the
proportion qualifying as industrial manpower is
negligible. It is estimated that for every
graduate, there should be three diploma holders
if the optimum should be obtained from industry.
The present proportion in India is two for one.
There has therefore to be a sizeable expansion of
facilities for creating more technicians by increas-
ing polytechnic strength, and putting through
rigorously apprenticeship schemes in which some
statutory beginnings have been made. Practical
training is important even for the more expen-
sively educated graduates, and facilities for this
are also woefully inadequate. There is also obvi-
ous need for re-thinking about the content of
engineering education. Failures at examinations
are distressingly large and Indian students have
often been found by foreign teachers as more
absorbed in garnering details than in training the
mind to think out problems with the help of basic
ideas.

This takes us on to the question of the serious
paucity of personnel at the higher levels of tech-
nology. The problem was raised in the context of
steel making last week and one of the solutions
suggested was not unlike that followed in ancient
times for the creation of an intellectual elite:
promising students should be caught young and
put through an intense novitiate in a particular
line so that we have a cadre of experts who would
have learnt all there is to learn of the subject by
the time they are in their late twenties. A indus-
trial mandarin would then run over industries
for us. The idea has obvious attractions and
dangers that would repay study.

Meantime, part of the assistance we get from
abroad will have to be in the form of expert and
exclusive knowledge described by the ugly word,
—"know-how". It is not much use grudging the
price it demands, especially when it is true that
its acquisition is a long, arduous and expensive
proposition. But here again, the principle of sub-
stitution that we found applicable in materials will
be found useful. Import substitution here may
consist in getting, where possible, the analogue of
raw materials instead of the finished prod-
ucts. There is also room for economy in several
kinds of imports. As in materials, there have been
sometimes imports of expertise of the useless kind,
especially on the so-called managerial side. Often
this comes as part of "package deals" and "Med-up
aid" which we are not able to reject. But even
after making allowance for these, we fear there is
all too common a tendency to fall for cer-
tain kinds of skills, which are the product of
Parkinson's law even in the countries exporting
them.

BIHAR BUDGET

No
New Taxes

FULL details and related papers of the Bihar's budget recently presented to the State legislature are not available to us yet and our comments have therefore necessarily to be based on reports in the press. The most outstanding feature of the Bihar State Budget for 1963-64 presented to the State Assembly last week by Mr Bir Chand Patel, the Finance Minister, is the conspicuous absence of any fresh dose of taxation. The Budget shows a nominal surplus, the revenue receipts are being estimated at Rs 162.33 crores and expenditure at Rs 162.20 crores. It is evident that in his efforts to balance the Budget the Finance Minister was more concerned with austerity in spending rather than raising additional funds by dipping his hands deeper into the people's pockets. The immediate relief which the tax payers derives from Budget, though they were prepared to burden additional imposts ungrudgingly in view of the national Emergency, may well be of short duration as the balance between income and expenditure can tilt at any time if the assumed receipts did not come upto the expected level. Besides, the Budget makes no provision for civil defence and other related requirements. Further Mr Patel has refrained from imposing additional levies despite Mr Morarji's plea at the Finance Ministers conference to raise maximum resources from within the States for the successful implementation of the Plan programmes. Though he has indicated that he may come with supplementary Budget if new im-

BUDGET AT A GLANCE		
Receipts		Rs crores
Revenue receipts including grants from the Centre	...	87.85
Central receipts including recovery of loans and ways and means advances from the Reserve Bank	...	74.48
Total	...	162.33
Expenditure		
Non-plan expenditure	...	112.22
Plan expenditure	...	49.98
Total	...	162.20
Net surplus	...	.13

posts become necessary, the impression that unpleasant but essential tasks are being shirked is difficult to resist.

The revenue receipts are made up of Rs 87.85 crores being revenue receipts including grants from the Central Government and Rs 74.48 forming Central receipts including recovery of loans and ways and means advances from the Reserve Bank. Non-plan expenditure accounts for Rs 112.22 crores and Plan expenditure Rs 49.98 crores, leaving a net surplus of Rs 13 lakhs. This nominal surplus is also illusory in that the outlay on plan expenditure at Rs 49.98 crores falls short of the allocation for the year by about Rs 48 lakhs.

The abstinence from taxes is even more curious in the light of the admitted position regarding the ways and means position. The budget year is expected to open with a negative cash balance of Rs 50.77 crores and the receipts for the year is taking credit for "ways and means advances" from the Reserve Bank the extent of which is not very clear from the reports. It is to be hoped that the

Minister's appeal for whole hearted co-operation in realisation of outstandings will meet with success.

As was to be expected agriculture, industry, power, irrigation and education receive sizable allocations. Though the plan outlay for this year has been pruned down to Rs 50.46 crores the high priority given to agricultural production is quite in accordance with the Centre's directive to step up agricultural production. At the National Development Council last month, there was much disappointment expressed about the slow progress in agriculture despite the urgencies imparted by the new situation created by the Chinese threat. There is obvious need for much organisational streamlining of the co-operative as well as community project administration for increasing agricultural production and productivity.

After Brussels

By Paul Einzig

Even though British spokesmen were in recent months at pains to argue that Britain's entry into the Common Market would in the long run benefit the Commonwealth, people in India and other Commonwealth countries would be more than—or perhaps less than human—if they were not be delighted about the failure of the Brussels talks. The inevitable consequence of General de Gaulle's act of sabotage will be an effort to revive an interest in closer co-operation within the Commonwealth and with the European Free Trade Association and the United States. After all, if the Common Market presents such economic advantages to its member countries there is no reason why similar advantages should not be derived from closer economic association between other groups of countries, even if they are not geographically contiguous. After all, a group that would include the highly industrialised countries of Great Britain, the United States, Scandinavia, Switzerland and Austria on the hand and the vast raw material producing areas of the Commonwealth on the other, would be more complementary than the countries of the EEC which are all highly industrialised.

It is by no means certain whether the sanguine hopes attached to the economic advantages of joining the Common Market had not been altogether too sanguine. It is true, recent years witnessed a spectacular recovery in Western Europe. But this was due to the fact that France, Germany, Italy etc. had suffered a grave setback during and after the War and there was scope for their recovery. The "German miracle" and the other Western European "miracles" conveyed a misleading impression and gave rise to the anticipation of non-stop progress at the same rate, even though what actually had happened was to a large extent a once-for-all non-recurrent spurt. It seems more than probable that, apart altogether from the present recession which is world-wide, the rate of progress in Western Europe in the "sixties" will be incomparably less spectacular than it has been during the "fifties". These remarks may have the flavour of "sour grapes". Even so, such considerations have to be borne in mind to avoid excessive pessimism about the prospects.

The slamming of the door to Europe is not the end of everything and historical experience shows Britain as resilient and tough. When in September 21, 1931, Britain went off the Gold Standard it was seriously feared abroad, and also in some British quarters, that the shock might trigger off some disastrous chain reactions. Instead, Britain took the change in its stride without any major upset. The same experience repeated itself in September, 1949, when sterling was suddenly devalued after repeated professions of determination not to do it. When it became evident in January that the Brussels negotiations for Britain's entry into the Common Market were liable to break down the prophets of gloom painted the consequences in very dark colours. Nevertheless, the

British public has taken the shock once more in its stride.

This is good as far as it goes. But this traditional and characteristic British cold-blooded attitude has its disadvantages. A shock is exactly what would be needed to stir-up action that might bring about a regeneration. It was hoped, for example, that under the impact of the failure immediate action would be taken to cement Commonwealth relations. The response to this idea was, however, far from enthusiastic on the part of the Commonwealth in general. Nor does London appear to be over-keen on taking any immediate action to that end. It seems that British official circles place too much reliance on the sympathy they have encountered in Germany, Italy and the Low Countries in face of General de Gaulle's hostile attitude. They appear to prefer to wait and see whether that sympathy would translate itself into effective action enforcing a change in French policy. Pending developments in that direction Britain does not appear to be pressing for an alternative arrangement to joining the Common Market, beyond expressing vague support for the policy of reciprocal tariff cuts in general.

From a psychological point of view this delay in responding to the change in the situation—indeed in accepting the change as final—is to be deplored. The iron ought to have been hit while it was hot and the longer we wait the cooler it will become. Possibly under the impact of the Brussels failure it might have been practicable to produce at least the broad outlines of an arrangement with the Commonwealth. This might still be possible, but the longer the necessary approach to that end is postponed the more the psychological effect of the Brussels failure is liable to lose its force. After a while any agreement, no matter how limited its scope, would have to be preceded by endless haggling involving an effort out of proportion to the result that it could hope to achieve. It is a great pity that the present opportunity has been missed for lack of enthusiasm and imagination on the part of all the governments concerned.

—Copyright.

THE PRICE LINE

The price line must be held. This is as much the responsibility of the State as of every citizen. Idle money, in the form of cash in hand, is the devil in the price spiral.

Money put in a bank, remains active in the service of production and distribution of goods and facilitates keeping the price line under control.

Use less cash; make your money transactions through your bank account. You will thus make a direct contribution to the effort in holding the prices under check.

World of Finance

MONEY MARKET

Conjecture on
Impending Budget

Conjecture is rife about new proposals that the Finance Minister probably will carry in his briefcase on the last day of this month. Strangely rumour has it that a number of likely measures will directly affect the money market. We may examine these, and seek to find out whether the expectations in this regard are likely to materialise.

There is talk of an impending levy on bank deposits. We may rule out this possibility straightaway. As it is, the banking system is experiencing difficulty in securing new resources for meeting the expansion in Advances; and as it is, not only are operating costs high, but as it is, not only are the specific liability on Deposits banks also have the specific liability on Deposits banks. A new tax of the insurance premium they pay. A new tax on Deposits would not merely further eat into bank earnings; banks' incentive for mopping up new Deposits would be reduced.

On the other hand, the Finance Minister may be considering a tax on borrowings (save those of banks themselves). For collection of these taxes could be made by the banks themselves—say a one per cent surcharge to be levied on all bank Advances and to be remitted thereafter by the banks. Government could try to justify such a levy by reasoning that thereby industrial borrowers would increasingly be persuaded to rely on equity or preference capital rather than on bank credit; and it is 'apparent enough that Government would like to bring about a reduction in the debt-equity ratio of industry.

Another possibility that is going the rounds is a levy on bank cheques. Since this would also be a tax easy for Government to collect, there would be great temptation for Mr Morarji Desai to include the measure in his new proposals. We would warn against the adoption of any such levy. The banking habit is by no means spreading rapidly, anything that tends to retard its progress must be avoided. We must abjure any measure which will lead to an enlargement of the cash "un-organised" money market. And in any case the levy cannot bring in much in new revenues.

The raising of new taxes in an amount exceeding Rs 100 crores—which is the minimum that Mr Desai will seek—will in itself entail a considerable drain upon the Deposit resources of the banking system and hence on the money market so the Finance Minister would do well to reduce to the barest minimum the levies that will directly affect the money market.

BANK RETURNS

Three New Levels
Touched

The latest banking returns are highlighted by three new highs recorded.

The returns of the Reserve Bank for 8 February show that Active Notes, in rising by Rs 44.14 crores, have pierced the Rs 2,200 crore mark in being placed at Rs 2,210.82 crores. Outflow of Rupee Coin has also been in the substantial amount of Rs 3.17 crores. Spillover of beginning of the month disbursements and busy season

pressures are responsible for the currency expansion, which has been adjusted by the transfer of Rs 45 crores from Investments to Rupee Securities, which are now at Rs 1,903.42 crores. With Foreign Securities unchanged at Rs 88.08 crores, the Reserve Bank's cash in the till is lower by Rs 2.31 crores at Rs 16.01 crores.

In the Banking Department, Investments, reflecting the transfer to the Issue Department, are lower by Rs 44 crores at Rs 197.26 crores; and the rise of Rs 23 crores to Rs 75.14 crores in the Reserve Bank's portfolio of Treasury Bills Purchased and Discounted is linked to the disinvestment in gilt-edged by the State Bank in the relevant week. So there has been no deficit financing; and inter-governmental payments may be responsible for the rise of Rs 10.14 crores to Rs 89.31 crores in the balances of the Central Government, on the one hand, and for the fall of Rs 5.60 crores to Rs 7.99 crores and the increase of Rs 7.96 crores to Rs 74.51 crores in the balances and borrowings respectively of the State Governments, on the other.

Continued pressure on the banking system is attested to by the small fall of Rs 0.78 crore to Rs 73.42 crores in Reserve Balances of Scheduled Banks and even more in the rise of Rs 7.62 crores to Rs 43.72 crores in their borrowings from the Reserve Bank.

After several weeks of fall, Balances Held Abroad show a welcome rise of Rs 3.57 crores to Rs 10.66 crores; and foreign assets in the holding of the Reserve Bank are very near the Rs 100 crore level.

The strain upon the State Bank has also been severe during the week ended 8 February. Advances, in rising by Rs 8.20 crores to Rs 302.86 crores, have crossed the Rs 300 crore mark for the first time. Constituents also drew substantially on their balances, Deposits falling by Rs 8.53 crores to Rs 551.58 crores. The State Bank has accordingly had to disinvest in gilt-edged for Rs 21 crores, and as an end result cash balances, including money at call and short notice, have improved by Rs 1.57 crores to Rs 26.12 crores.

The return of Scheduled Banks for 1 February records the crossing of the Rs 1,500 crore mark in Advances, the latest week's expansion being one of Rs 23.05 crores to Rs 1,502.85 crores. While net Demand Deposits are higher by Rs 4.40 crores at Rs 927.39 crores, this increase is more than offset by the fall of Rs 9.01 crores to Rs 1,251.80 crores in net Time Deposits. However, if regard is had for the State Bank in that week reporting decline of Rs 8.42 crores in Deposits, it is clear that other Scheduled Banks added to theirs by about Rs 4 crores. The disinvestment of Rs 12.80 crores in gilt-edged is mostly on

account of the State Bank. The pressure on banks has entailed an increase of Rs 11.97 crores to Rs 35.93 crores in borrowings from the Reserve Bank. Cash balances are higher by Rs 2.10 crores at Rs 197.00 crores.

BANK PROFIT

Canara Bank

The Balance Sheet and the Profit and Loss Account of the Canara Bank Limited for the year ended 31st December, 1962, reveal that the deposits of the Bank have crossed the Rs 50 crore mark to reach Rs 50.88 crores showing an increase of Rs 13.32 crores over last year's figures. The percentage increase under deposits is 35.5% (last year 21.9%). The Bank in consequence has entered the category of major scheduled banks of the country.

Total advances at Rs 26.93 crores have shown an increase of Rs 6.54 crores (32.74%). The ratio of advances to deposits works out to 52.93% indicating the high liquidity position traditionally maintained by the Bank. The Bank's investments in Government and other securities appear at Rs 17.80 crores as against Rs 14.38 crores in the previous balance sheet. The net profit for the year at Rs 20.58 lakhs shows a slight fall from Rs 21.24 lakhs in 1961, in spite of the sharp rise in working costs under the impact of implementation of Bank Award, the burden of the deposit insurance premium and higher rates of Corporate tax, not to mention handsome contributions to National Defence Fund.

With the last year's carry forward of Rs 0.47 lakh, a sum of Rs 21.05 lakhs is available for distribution. An amount of Rs 5.50 lakhs is proposed to be transferred to Statutory Reserves as against Rs 6.70 lakhs last year. Inclusive of Rs 13.80 lakhs under Share Premium Account, the Statutory Reserves will now stand at Rs 76 lakhs and the paid-up capital at Rs 75 lakhs as against Rs 63 lakhs and Rs 50 lakhs respectively at the end of 1961.

Other appropriations recommended are Rs 0.59 lakh for payment of Preference Dividend at 5% (Rs 0.62 lakh last year), Rs 8.29 lakhs for payment of 15% dividend to Equity shareholders (Rs 5.40 lakhs last year), Rs 1 lakh for Contingency (Rs 4.50 lakhs last year) and Rs 5.14 lakhs for bonus to staff (Rs 4 lakhs last year), leaving a balance of Rs 0.53 lakh to be carried forward.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills were opened on Tuesday, 12 February, 1963. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.405 per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.365 per cent per annum.

Notes

HOUSING Ingredients of a Policy and—

The two-day deliberations of the State Housing Ministers at Bombay last week have served to focus attention on the considerable leeway the country has to make in housing programme, especially in the provision of accommodation to the low-income and medium-income groups of the population. It is unfortunate that the Centre's allocation for housing for 1963-64 will be slashed to Rs 14 crores from Rs 20 crores allotted for 1962-63. But considering the Emergency which necessitates a shift in economic priority for stepping up defence efforts a cut in the provision for housing was perhaps unavoidable. In the circumstances it is welcome to have the assurance of the Chairman of the Life Insurance Corporation that not only the sum of Rs 50 crores already earmarked by the Corporation for this purpose will be made available but also the possibility of raising additional funds will be explored.

In the first flush of the Emergency, building was naturally the one activity that was thought expendable. Many State Govern-

ments made drastic reductions in their programmes of housing assistance and co-operatives which had taken a leading part in housing schemes in some parts of the country, found themselves suddenly left high and dry. Second thoughts, partly on exhortation from the Central ministry for housing have intervened in some cases. The sensible thing to do would be to review the priority of the kinds of buildings, and to do away with prestige construction and expensive frills. There is a case for going slow with public buildings but none for lessening the pace of building for residence. The other kind of economy will be in enforcing austerity standards in specifications, making do with second best in materials and generally showing ingenuity and scientific resourcefulness in substitute materials. Selective deployment of funds, greater resourcefulness and economy in the use of available material rather than blanket ban on new construction should be the policy.

The conference's decision to accord priority for industrial housing in view of its close bearing on the health and efficiency of the workers was natural. To carry out this scheme, it has been suggested that the employers should be encouraged to the possible extent to start construction by utilising 75 per cent aid from the Government or alternatively they should extend their contribution of 25 per cent to the Government for completing specific house building programmes. This approach is constructive as the State Governments will have to give the lead and their tendency to attribute failures to the uncooperative attitude of employers will be eliminated. The funds deployed on housing under various schemes should be recovered from the allottees as soon as possible and it should be ploughed back for proceeding with new house construction. Other suggestions were that all major projects whether in the public sector or private sector should provide for workers' housing and new industrial ventures should be allowed only after acquiring sufficient land for housing purposes. There are obvious snags in such strident conditions. The suggestion that purchase of enough land for housing should be a prerequisite for granting licences for new industries is also an impractical suggestion as such a con-

dition may decelerate the tempo of industrial development.

A Broader Perspective

If in Bombay the discussion on housing centred round immediate details, the question was viewed in a broader perspective in Calcutta last week. In the third session of the forum on Metropolitan Planning problems organised jointly by the Calcutta University and the USIS, Dr S. Wellisz, Economics Consultant on the CMPO Ford Foundation Consultant Team, raised some fundamental problems that are associated with housing programmes all over the world. The equity and practical wisdom of control of rents, especially when it is half-hearted, the economic good sense of subsidising housing and other related subjects were dealt with by him with a certain provocative freshness. Dr Wellisz made no bones about the "free-enterprise" basis of his housing philosophy and though we may demur on details, there was a certain refreshing freedom from cant in many of his comments.

For instance, rent controls in most countries are in effect only in respect of old buildings. This leads to all kinds of anomalies. In the absence of direct rationing of all available space only black market in housing thrives. As far as tenants are concerned, old tenants are protected by rent controls but new ones are put to lot of harassment. The old tenants enjoy the privilege of occupying more space than what would have been allowed under market rates. This naturally deprives the new entrants of their legitimate share of space. Moreover the latter will have to pay "key money" or "pagadi" or "salami." From the landlord's point of view, a rental out of tune with general economic conditions, perpetuates the owner, doesn't enable him to carry out even essential repairs. Landlords develop a propensity to allow the old buildings to deteriorate partly because of lack of incentive and partly because of high costs of repairs. He finds that it will be a better proposition to invest in new houses outside the scope of rent control. If to get out of this quandary rent control is uniformly imposed on both the new and old buildings, new construction will automatically slacken.

Dr Wellisz arguments against subsidising housing, though theoretically plausible do not take note of the fact that the alternative to subsidised housing is no housing at all. Moreover, the argument that subsidising means that the poor are made to have their shelter at the expense of their food (presumably because of greater taxes, especially indirect ones on essentials, that subsidy is paid out of) is exaggerated factually as well as in its emphasis. Excise levies, so far as any rate, have not yet caught up with essential food articles. Indeed the widespread demand for imposition of tax on salt is being resisted. Thus, the alternatives are not so stark as Dr Wellisz make out. Subsidy is also equitable for the reason that a good part of the taxes out of which the

poor have their housing subsidised is contributed by the rich.

Dr Wellisz has also made another controversial suggestion. He advocates a "filtering down process" which envisages the construction of new buildings for higher income groups which will leave out the old buildings for the middle income groups. This may not work out quite this way at all, apart from the objections to it on grounds of democratic sentiment. His suggestion to popularise cheap houses by employing modern techniques, however, is sound.

THE METALLURGIST The New Challenges

In a thought provoking address at the inaugural function of the international symposium in Jamshedpur last week, Dr D. P. Antia, President of the Indian Institute of Metals, has discussed in some detail the challenges the future metallurgists in India will have to face. The next twenty to thirty years are expected to witness great progress in industrialisation in the country. The magnitude of the progress envisaged calls for concerted national effort in mobilisation of technical manpower. It has been estimated that by 1981-82, 600,000 engineers in all branches of technology will be needed while the strength of diploma holders is to be increased to about a million. On the basis of the ratio obtaining in most industrially advanced countries, Dr Antia thinks that one metallurgical engineer will be required for every twenty engineering graduates. The task is not going to be easy as the progress so far in the country is not very satis-

factory. One problem that has lately come to be noticed is the high rate of waste in technical education. This arises from not relating the training imparted to the needs of the situation. For instance, as emphasised by Dr Antia, the major challenge for the metallurgists in the coming years will be in the field of substitution by available metals in inadequate quantities within the country. For instance, Aluminium will have to be the mainstay in the field of non-ferrous metals. Engineering education and technical training which do not take note of metal availability in the country will be largely a waste. Looking ahead and planning in detail is necessary in no field so urgently as in technical education.

OIL Expansion of Refining Capacity

Mr K. D. Malaviya, Union Minister of Mines and Fuel, told the annual meeting of the Geological, Mining and Metallurgical Institute of India that with a little luck, indigenous production of crude oil may take care of about half of our requirements by the Third Plan. So far oil has been found to occur in commercial quantities in Naharkotya and Moran in Assam and Ankaleswar in Gujarat. Prospecting is in progress in several regions all over the country. The report that oil has been struck in Bihar a few days ago is the latest among many that encourage the hope that intensified search for oil will prove rewarding. It will be a very good thing indeed to have all the crude oil we require within the country but present indications are that we may have to depend on outside sources for a good part of our requirements of petroleum products, the consumption of which is going up at an accelerated pace during the past decade. In 1962 consumption of petroleum products reached a level of 9.6 million tons as against about 2 million tons per annum before Independence. The demand is expected to go up to 17 million tons by the end of the Third Plan. It is quite possible that requirements of certain petroleum products may far overreach the anticipated level of demand in view of the present national emergency.

Shortage of indigenous crude is not our only lack. Against an estimated consumption of 17 million tons, refining capacity to date is about 10.1 million tons, comprising 7.1 million tons in the private sector and 3 million tons in the public sector. It is expected that by the close of the Third Plan another 5 million tons of refinery capacity will be put up in the public sector. On a

rough calculation therefore the total refinery capacity that will be available by the end of the current plan period will reach a level of 15.1 million tons. As demand is expected to rise to about 30 million tons by 1971, there is need for quickening the pace of refinery building in the country. Plans for refineries should be got ready well in advance of the time when they are needed to go on stream because oil refineries are at once time consuming and capital intensive.

The ultimate objective should be complete self sufficiency in petroleum products. For this we must locate more oil resources within the country itself. We may or may not fully succeed in this. But the search for oil should continue and if preliminary surveys are encouraging, the search should be intensified and it is for the Government to decide whether it will not be advisable to seek outside assistance. In the meantime

we can build up sufficient refinery capacity so that all the petroleum products needed are processed within the country itself, even if we have to import the bulk of our crude oil requirements. For by processing crude ourselves we stand to save considerable foreign exchange. As it is we are importing considerable quantities of petroleum products which cost us quite a good deal in foreign exchange. If we have sufficient refinery capacity a sizable portion of this can be saved as according to one Authority there will be a net saving of Rs 35 per ton in refining imported crude within the country. It is true that if all planned public sector refineries come up as scheduled, the outflow of foreign exchange will be reduced. But as noted above even if the capacity of public sector refineries reaches the planned level of 8 million tons, there will still be need for importing sizable quantities of

petroleum products, say a minimum of 2 million tons. If the public sector refineries do not reach the targeted capacity on time, the gap will be much larger than 2 million tons. It will be only prudent to take steps from now on to fill this gap.

It is known for some time that at least two private sector refineries are anxious to expand their capacity and have offered to scrap the old agreement to facilitate Government sanction. There are more than one reason why Government should see their way to allowing such expansion. In the first place, the cost of expansion of an existing refinery by another two million tons is estimated to be half of what a new refinery of like capacity will cost. Secondly, expansion of a refinery will not take as much time as a new refinery will take. If the objection to expansion is that more profit will have to be repatriated out of the country, such outgo will be com-

Office space seems to grow when cumbersome partitions are replaced with glass. Rooms look lighter, brighter and so much more elegant. It's not surprising glass is finding its way into more and more homes, stores, schools and restaurants — wherever light and space are important considerations.

Glass is so practical too. It keeps out noise and dust and lets in natural light. And keeping glass clean is the easiest thing in the world.

Available in a wide variety of sizes and thicknesses, and quality tested at every stage of manufacture, there's an HPG sheet glass to suit every purpose.

US

A Letter from Washington

President Kennedy's announcement that he is reappointing William McChesney Martin to another four-year term as Chairman of the Federal Reserve Board (FRB) underscores the general agreement on basic economic issues that prevails among the nation's chief policy makers. Mr. Martin has served in his present capacity for 12 years under three presidents—Truman, Eisenhower and Kennedy. Before being appointed to his present post by Mr. Truman back in 1951, he had served the US Government in such responsible posts as Assistant Secretary of the Treasury, Head of the Export-Import Bank, and US Director of the World Bank.

The fact that Mr. Kennedy has now chosen to extend Mr. Martin's tenure indicates that the Federal Reserve Board and the economic agencies of the administration have maintained that degree of cooperation and confidence which is essential to effective policy formulation and implementation. It cannot be expected, of course, that Martin always will see eye-to-eye with the administration on every problem. Basically, however, the FRB head appears to take much the same broad view of economic policies and problems as do the President and his aides. This involves the recognition that monetary policy cannot work in isolation, but must be geared to other considerations, foreign as well as domestic.

In the US, analogous to the practice in India, it is the President and the Congress and not the Federal Reserve Board, that makes the decisions on government programmes and expenditures at home and abroad, in the light of their appraisal of national and international requirements. But as regulator of money and credit conditions, the FRB can play a pivotal role in the way these decisions are carried out.

Essentially, as he disclosed in recent testimony before the joint Economic Committee of Congress, Mr. Martin sees three basic problems facing the FRB as 1963 gets under way. One is to finance the federal budget deficit in a way that will not disrupt money and capital markets, but will meet legitimate needs in a non-inflationary manner.

Another is to pursue policies that will help encourage economic growth and employment. It is significant that the FRB head is on record as subscribing to the sub-

tance of President Kennedy's tax revision programme to accelerate economic activity, even though the federal budget already is running a large deficit. Mr. Martin points out that the banking system played a considerable part in supplying the financial needs of the nation in 1962, when financing was made available in record volume, and he sees it in a favourable position to extend further credits in 1963. The posture of monetary policy, he notes, has been and remains "easy," but not so easy as to encourage speculative excesses.

Thirdly and finally, Mr. Martin recognizes full well that monetary policy can contribute to further reducing and eventually eliminating the deficit in the nation's balance of international payments, which was brought down to \$4,000 million in 1960. He also recognizes, however, that this is not a goal to be pursued apart from domestic considerations. "The objective of payments equilibrium," he told the joint Economic Committee, "must be achieved at the same time we are achieving orderly and vigorous economic growth domestically."

The aim of FRB policy will thus continue to be the meeting of all legitimate credit needs in a growing economy, without inducing excessive rises in costs and prices, to the possible detriment of export capabilities, or excessive capital outflows to other countries.

INDO-BRITISH TRADE Export Surplus in 1962

Figures of Indo-British Trade for 1962 gleaned from the UK Trade Navigation Accounts reveal that India had a trade surplus for the year 1962 as against a trade deficit from 1961. Not much comfort can be derived from this fact, for the export surplus of £19,545,000 for the year 1962 has been achieved not by increase in exports but by a sizable reduction of over £35 million in imports. Exports have actually fallen from £144,927,000, in '61 to £135,983,000 in 1962 thus registering a fall of nearly 9 million pounds. Imports, on the other hand, fell from £151,811,000 in '61 to £116,440,000 in 1962 registering, as noted earlier a fall of about £35 million. In consequence, a trade deficit of nearly 7 millions in 1961 has been converted into a trade surplus of over 19 million in 1962.

Of our exports, except for a sizeable increase of £3 million in oilseeds cake and meal (excluding husk meal) all the other items have registered decline. Notable failures are cotton yarn and woven fabrics the value of whose exports fell by nearly £3 million and tea whose exports fell by £2 million. As regards imports from Britain, an increase of import of about a

million pound worth of non-electrical machinery was partially off-set by decrease in the import

of electrical machinery. Among the other notable reductions import are iron and steel and road vehicles and air-craft.

TECHNOLOGY

What is New?

A new oil heater, which combines the advantages of cylindrical heater and convector heater, has been developed by a British firm, Valor Co., Ltd.

The chimney is insulated from the outer casing by a sheet-steel baffle, which ensures that the outside of the heater is never too hot to touch. Safety features include an arrangement that makes it impossible to close the heater door unless the chimney is locked in position, and a device that automatically extinguishes the flame, when the door is opened.

A new type of air chamber for smoothing out the pulsations of reciprocating pumps has been developed by a British firm, William R. Sellwood Ltd. It is based on a laminar flow principle that preserves the air cushion indefinitely and is effective over the whole range up to full vacuum. In general, air chambers gradually lose their air into the water, and either have to be topped up from an air pump or fitted with a float, which tends to jam when there are solids in the pumped liquid. They also have to be matched to the load, the air bottle being replaced by another of a different size when the load changes. The new unit needs neither topping up with air nor adjusting for varying loads.

A new coal-face communication system, designed by British scientists, is to be installed in coal mines

throughout Britain. It was originally developed for use during underground trials on coal-winning machines. It proved so valuable during normal face working that it was decided to develop a model for permanent installation.

The system consists of a battery box, interconnecting cabling and a number of telephone units positioned along the coal faces and other points. When the telephones are used, the call is broadcast from all other loudspeakers and the voice of anyone answering can be heard throughout the system.

A prototype 2,700 h.p. diesel-electric locomotive designed by the well-known British firm English Electric Co. has now covered over 100,000 miles (160,000 km.) without incident since it entered service with British Railways last May.

The experience of British Railways with two hundred 2,000 h.p. locomotives supplied by the same firm showed the need for an increase in rating and the company, which is Europe's largest supplier of diesel and electric locomotives and equipment, built the new version to allow the Transport Commission to assess its performance. The new locomotive undertook daily scheduled passenger operation on six days a week, covering approximately 4,000 miles (6,400 km.).

The firm, which has delivered a total of 579 main line diesel-electric locomotives to British Railways in the past seven years, has also supplied locomotives and equipment to 42 railway systems in 24 countries.

A new floor surfacing compound designed to provide hard wearing qualities is being produced by a British firm, J. H. Sankey and Son Ltd. Applied as a dry powder to the face of wet, freshly laid concrete, it is trowelled to a smooth surface. It bonds to the base concrete to form a finished floor claimed to be comparable in appearance and hardness with granolithic flooring, but without the faults sometimes associated with it.

If an oil grease resistant finish is required a penetrative sealer is simply brushed on. The material can be broken up the existing surface.

RICE

Promising Prospects

The Commonwealth Economic Committee's Rice Bulletin for January rates the prospects for the current Asian rice harvests generally promising.

Reviewing production prospects for 1962-63, the bulletin says: "The first Indian estimate for 1962-63 shows an acreage almost identical with the corresponding estimate last year, while the third estimate for Pakistan, too, gives the acreage at little less than last year; on a smaller scale, the acreage in Malaya shows little change. A new record output of 16,004,000 tons is reported in Japan, although this total is slightly below earlier estimates. The first forecast for Burma gives the sown area at nearly 11,700,000 acres. The crops in South Viet-Nam and Cambodia are reported to be very good, and both countries expect to have approximately 300,000 tons available for export the harvest in South Korea, however, is expected to yield only about 80 per cent. of the average yield in recent years."

Discussing exports the bulletin says that they were somewhat lower in 1962 than those in the corresponding period of 1961, mainly due to the sharp decline in shipments since the middle of the year. While consignments from Burma and Thailand declined, shipments from Pakistan made some advance on the previous year, while those from China also showed some recovery.

Burma's rice exports in October declined further and totolled only 60,100 tons although total shipments during the first 10 months of 1962, at 1,635,400 tons, were still well above those during the corresponding period of the previous year. Rice exports from Thailand in November, at 45,800 tons, were somewhat smaller than in the previous month, says the report. Shipments during the first 11 months of the year totalled 1,164,100 tons and were well below the level of those in the corresponding period of the previous year, this decline occurring in shipments since the middle of the year.

Exports of rice from the United States in October, at 82,600 tons, showed a recovery from the average of the third quarter of 1962. This may be attributed to the resumption of substantial shipments to India and the maintenance of supplies to Indonesia.

Book Reviews

Income Tax: PAST AND PRESENT: By K. B. JINDAL. Publisher: Kitab Mahal (Wholesale Division) Pvt. Ltd., Allahabad. Price: Rs. 35/-.

The law relating to Income tax was until about two years ago a statutory jungle in which the unwary got lost easily. Over the years, much deadwood had accumulated and piece-meal legislative amendment had left the old Act probably the most untidy enactment on the Statute Book. The Income Tax Act of 1961 has succeeded in a large measure in bringing about some orderliness in this confusion by a better arrangement of subject matter and a clearer enunciation of legislative intentions. Basing itself largely on the recommendations of the Law Commission and the Direct Taxes Administration Inquiry Committee, the New Act has made extensive changes in the content and mode of presentation of the law. Obviously, a complicated piece of legislation like this would require expert commentary even for professional lawyers and accountants. The last year or so has seen many efforts in providing it. The volume under review, among the best that has come the reviewer's way, has certain special features that make it particularly useful.

Unlike the general run of commentaries, its approach is historical, but not mustily so. It traces, as far as possible, the development of the law from 1939, in stead of, as is usually the fashion, dealing with the provisions as they are with only incidental historical comment. The advantage of this method is two-fold: first, such a historical perspective clarifies the concepts embodied in the latest enactment by giving a connected account of the vicissitudes of particular provisions. Often, lacunae in the law brought out by judicial decisions had to be repaired. At other times, the change in the climate of opinion, as for example, on the taxability of certain classes of income, made amendments necessary. Above all, the unending battle of wits between the assesses and the tax-gatherers has introduced new refinements in concepts. These are best studied historically.

But the more practical raison d'être of the book consists in the fact that for many years to come the old law will have to be consulted. It is well-settled that on all substantial questions of law the law applicable to a particular assessment year will be the law as it stood on the first April of that year. That being so, the old law will have to be looked up for determining particular points re-

lating to years earlier than 1962-63. From this point of view, the book will be of immense practical use to practitioners and departmental officials.

Commentaries on law, especially in India, have a tendency to be padded with much otiose learning and needless discussion of recondite points on which the highest court in the land has declared itself unequivocally. Citation of cases is often for the purpose of intimidating rather than illuminating the reader. One of the merits of the volume under review is that it avoids this particular irritation. Its citation of authority is discreet and to the point. The approach being the eminently practical one of providing guide posts rather than detailed mapping, it explains the basic concepts and provisions in a brisk business-like manner with the minimum of fuss. Laymen and professional users alike will find all their reasonable doubts resolved on a reference to this work.

Two New Journals

COMPANY LAW JOURNAL: Editor K. Venkoba Rao, Publisher: N. Ramaratnam, Madras 4. Published fortnightly. Annual Subscription: Rs 25.

Company Law Journal is a new endeavour of the Madras Law Journal office which has established an enviable reputation for the accuracy of its law reports and the comprehensive usefulness of its other legal publications. The editor of the new journal is a well-known authority on company law and on the Editorial Advisory Board are many who have intimate knowledge of the involutions of company law. The first issue of the journal before us gives promise of a progressively indispensable guide to the maze of company law. The arrangement of subject matter in the journal takes note of the fact that company law has ceased to be the exclusive preserve of lawyers. It is no longer possible for anyone even remotely connected with our economic life to go through life without encountering, perhaps a dozen times in the course of a day, with company law. The Act of 1956 and its subsequent amendment have made the law relating to the corporate endeavour not only the longest and the most complex in the statute books: it imposes such a variety of duties on managements at the peril of a variety of penal consequences for default or delay that it may be necessary to have an almanac all to itself! (The issue under review has attempted such a calen-

dar for January 1963). Besides reports on cases and texts of Statutes, there is an interesting article on the role of company secretary, and a feature entitled Question and Answers which will be found very useful by the lay public which wants guidance on specific points.

INCOME-TAX JOURNAL: Editor: V. Balasubrahmanyam. Publisher: N. Ramaratnam. Published fortnightly. Annual Subscription: Rs 25.

This is a companion to the Company Law Journal by the same publisher. The presentation of matter is analogous, with special articles on specific problems (there is one on the change in the constitution of firm from the tax point of view in this issue) and reports of decided cases and texts of statutes and notifications. Tax payers and consultants will both find it an useful adjunct in their battle with the tax gatherer.

42 Projects Approved

The Governing Council of the United Nations Special Fund approved last month an allocation of \$43,673,500 for 42 projects for assisting 36 less developed countries and territories in Asia and the other to cover 12 countries and territories in the Caribbean area.

The new allocation will bring total Special Fund commitments to about \$254 million for aiding 288 projects affecting some 90 countries and territories. The total value of the projects assisted including Government counterpart contribution amounts to about \$388 million.

INDIAN PROJECTS

Indian projects for which assistance has been announced is the Institute of Tropical Meteorology and International Meteorological Centre. The Special Fund allo-

cation for this project will be \$873,500 and assistance will be spread over a period of 3 years and the counterpart contribution of Government of India is estimated at the equivalent of \$1,130,000. The Executing Agency for this project will be the World Meteorological Organization.

The objective of the project is the establishment, over the next three years, of an Institute of Tropical Meteorology at Poona as part of the Indian Meteorological Department to carry out research in the different fields of applied meteorology. A temporary division of the Institute will be established at Bombay to function as an International Meteorological Centre for coordinating and supporting the activities of the International Indian Ocean Expedition until the conclusion of its activities in July 1964 when

the equipment and personnel will be transferred to Poona.

The Special Fund will provide over a three-year period fifteen man-years of experts to advise on setting up and operating of the Institute and the Centre and to train the principal counterpart personnel, at a total cost of \$325,500. Seven fellowships of one year's duration will be awarded for training certain counterpart personnel abroad at a cost of \$35,000; equipment worth \$438,500 for meteorological research and the purchase of an electronic computer for data processing will also be provided.

The Government will contribute land, buildings, equipment, including miscellaneous meteorological instruments, and salaries of the staff for three years, as well as all other operating expenses at a cost equivalent to \$1,130,000.

ALTOGETHER 20 PROJECTS FOR INDIA

During the various previous sessions of the Governing Coun-

cil the Special Fund has approved 19 projects for India at a total allocation of about \$17 million, this being the largest both with regard to number of projects and the Special Fund contribution allocated to any single recipient country. The above 19 projects cover three major fields of the Special Fund contribution allocated to any single recipient country. The above 19 projects cover three major fields of the Special Fund activity viz. 8 projects for training, 3 for surveys and 5 for applied research and 2 for training and research combined.

ASIAN INSTITUTE OF ECONOMIC DEVELOPMENT

The Regional project in Asia will be for the Establishment of Asian Institute of Economic Development at Bangkok to provide training, research and advisory services to Asian countries viz. Burma, Ceylon, China, Federation of Malaya, India, Indonesia, Japan, Republic of Korea, Philippines, Thailand, Viet-nam and the United Kingdom (on behalf of Hong Kong, Sarawak and Singapore) in the field of development planning and implementation. The United Nations acting through the Economic Commission for Asia and the Far East will be the Executing Agency for this project and the Special Fund assistance will be for a period of 5 years.

As regards training, which is to be the primary function of the Institute, two types of courses are proposed:

(a) An annual regular training course in Bangkok of ten months' duration, giving instruction in development problems and policies, overall programming, sector programming, project formulation and evaluation, advanced techniques of development planning, etc. The budget provides for 30 fellows in the first year of operation, increasing to 40 in the second year and to 50 from the third year onward.

(b) Short-term courses of generally not more than three months' duration to be conducted in countries of the region other than Thailand, providing for on-the-spot training of substantial numbers of personnel from the requesting countries and based on their specific needs. The Institute will enlist the co-operation of the specialized agencies as appropriate in connection with training programmes in their respective fields of competence.

The total Governing Council earmarking will be \$3,536,300 over five years, of which \$2,200,000 will be its contribution from the Special Fund and the rest will be contributed by nineteen governments. The Government of India has pledged to contribute an amount equivalent to \$200,000.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THESE are bellicose days as well as hypocritical and nations talk of disarmament even while they spend their substance on arming themselves to the teeth. It is pleasant therefore to read of a country with a defence budget of five dollars. Before you come out with your crack about a five dollar defence representing fifty per cent of a ten dollar total budget, I had better tell you that on a rough calculation, the five dollar outlay on defence represents 0.0006 per cent of the total budget of this blessed spot. Again, most of the five dollars is for purchase of ammunition for the ceremonial salute of VIPs. (I don't know what our outlay in such courtesies is but I should think that five dollars would not last us a morning, our weakness for VIPs being what it is.) What a country! No wonder it is not in the United Nations and I did not find it on the first map I laid my hands on. "Happy the people", declaimed Carlyle, "whose annals are blank in history books." For all practical purposes, Andorra have not disfigured history books after 1278. I had vaguely heard about Andorra before and if memory serves, last year this tiny republic figured as a haven of dubious money along with Swiss banks and Tangiers. It lies in the Franco-Spanish border in the Pyrenees surrounded on all sides by mountains and is the size of, shall we say, Greater Calcutta. Its greatest length is about 18 miles and at its broadest it measures about 17 miles. It is not even a republic in the strict sense of the term. Its semi-independence, by tradition secured by Charlemagne, is guaranteed by both France and Spain and it is quasi-republican and quasi-ecclesiastical in its Constitution. Its income is mostly from tobacco, sold,—"mostly contraband", says the Encyclopaedia Britannica—in Spain and France. For the rest, Andorra has no income tax (a characteristic that, among others, Andorra shares with Monaco), no roads to speak of, except bridle paths and probably no Jazz, though I am not so sure of the last. Silver and iron ore are stated to be among its endowments but these are not noticeably mined. I don't know that those who look at it longingly for its freedom from income tax would also be content to let the iron ore well alone. You see these go together. There is no

income tax only where there is no income. Such is the contrariness of life.

Why won't politicians let well alone? What is Mr K.K. Shah, the Congress general secretary thinking he is doing by bringing up at this time the notion of a merger of Kerala with Mysore or Madras? If it is party-political opportunism, it is most outrageously ill-timed. The communists, a touchy lot these days, are only too ready to suspect plots everywhere to ditch them. Therefore their conclusion that Mr Shah's kite flying is an attempt to sabotage their chances in Kerala may be no more than mere persecution mania. Considering in what bad shape their party is, I don't think that desperate remedies such as these are needed to oust them from popular favour, such as it is. If Mr Shah was thinking that he was solving inter-state disputes by this expedient, he was being naive. Among the first to be stung by the stirring of this particular hornet's nest is the Congress itself: already Congressmen in Kerala, notoriously a set of people ready to quarrel among themselves at the drop of a hat, are speaking with two voices on the proposal. (The anxiety of the neighbours to consummate this marriage of convenience is by no means obvious. Above all, the objection to such scaffler-brained ideas is that it upsets people from settling down to a particular pattern of States alignment. Having put through, against much valid criticism, the idea of linguistic States, it is wanton disruption of normalcy to come out with a suggestion that negates this principle. I am sure that Mr Shah could employ his time better than the way he has been doing.

The Indo-Pakistani talks on Kashmir are moving slowly but inexorably toward the one solution that has long appeared to me the only possible one: partition. It is true that both delegations have spoken gloomily to the gulf that separates them and it will never do to be too hopeful about a dispute that has soured relations for fifteen years. But it is something that a fourth round of talks has been agreed upon. The gains of the third round were also not inconsiderable. It saw the lifting, however, tentatively, of the incubus

of plebiscite. It may be premature to assume that the idea has been interred for ever, for Pakistan was quick to deny such obsequies having taken place. But in the much publicised interview with the correspondent of the NBC, President Ayub Khan appeared not only to abandon plebiscite as a solution but even to envisage a phased partition. Subsequent denials, the alleged clumsy attempt at tampering with the tape and the banishment of the correspondent do not alter the fact that something along the lines reported by the correspondent was said by the President. It is conceivable that even the clumsiness was contrived, for President Ayub may have been flying kites. A deliberate confusion of what they are thinking is part of the softening process that rulers with unpopular ideas to implement have to adopt. The denial of intentions that the populace is opposed to satisfies it for the moment and when ultimately they are put through, it is no longer fighting mad. Having lived, however unconsciously, with the possibility of partition, it may acquiesce in it. Anyway, though the negotiators carefully adopted hypothetical stances, the pretence that "the political solution of partition" was a mere academic exercise deceived none. Nor do evasions like discussing the "principles" of such a solution pass muster, especially after maps were brought out by both sides. Hard bargaining is at long last about to begin and this was indicated by the lines drawn on the maps by the two sides. The fact that though each thought that the other's claims were extravagant, the talks didn't end in confusion shows that the lines have been drawn with an eye on having to move them. The Calcutta talks will therefore be crucial, since for the first time, the negotiations have got away from generalities to brass tracks.

The Indian delegation to the Moshi Conference has not exactly covered itself with glory by extorting by a "walk-out" a resolution on Sino-Indian dispute. The resolution finally adopted was not the triumph for our cause it was claimed to be and there were unseemly allegations subsequently about unauthorised changes in the draft and so forth. And of the items of export available to us, the institution of "walk-out" is one we can afford to do without especially since what it earns is scorn and not foreign exchange. Excuses are somewhat shamefacedly being made for the farcical goings on on the ground that the delegation had no official status.

This only makes its being sent at all a great mistake. If the Moshi get-together had a certain official status, some question of offence at Indian stand-offishness would have arisen. And I should imagine that the Emergency that we invoke in a variety of implausible contexts, would have provided the excuse for declining the invitation. If we think we can get Afro-Asians, especially of the sort that consorted at Moshi, to declare themselves unequivocally on our side, we are labouring under a pathetic illusion. Most Afro-Asian nations have a certain ambivalence in their attitude towards us whereas their attitude to China is clearer: where they are not definitely pro-Chinese, they fear China and render her such respect as fear always wins. India they do not fear and where they have no specific quarrel with us, there is an unavowed hostility that stems from a variety of reasons: until recent months, jealousy of India's international status quite disproportionate to her conventional strength was almost certainly a part of it; real or imagined slights at the hand of Indian diplomats and the alleged Indian condescension to Afro-Asians is another. Even otherwise, Afro-Asian nations are a terribly touchy lot. On the whole it remains true that we are inclined to try to be nice to those that are less ready with their sympathy for us than those that are quicker in expressing their support to us in our quarrel with China.

Besides, I see no reason whatever for any but minimal involvement in international affairs, especially Afro-Asian affairs, especially at the present moment. The pretence of a community of interests among Afro-Asians is being increasingly difficult to sustain: Afro-Asian solidarity was shown up even at Moshi to be anything but solid consisting mostly of windy denunciation of "imperialism and colonialism." On all question of practical interest to Asians and Africans conflict in the conference was avoided either by leaving the subject alone or by keeping certain delegations away. It is bad enough our having to declare ourselves on other peoples' disputes officially without gratuitously seeking opportunities for having to do so on unofficial occasions. Take, for example, the dispute between Malaya and Indonesia. I doubt whether we shall officially bring ourselves to side with Malaya in the forthright manner in which Malaya did with us against China. I shall be told that the two disputes are not at all alike, which they probably are not; but Malaysians will be less or more than human if they were to see it that way and did not make the comparison between their attitude and ours.

RAVESDROPPER

He never looked back...

In 1920, P. K. Chatterjee, a young man just out of school, joined Tata Steel as an apprentice draughtsman.

Full of ambition and zeal to learn, he entered the Company's Technical School which afforded the opportunity to study during leisure. Young Chatterjee was among the first to complete a three-year course in engineering.

Over the years, Chatterjee has worked his way up in the Engineering Department, and blast furnaces have been his enduring interest. He has helped to rebuild the blast furnaces in the Jamshedpur Works, including a 1,000-ton-a-day blast furnace which was rebuilt to his design—the first such attempt in India.

Now an Assistant Chief Engineer in charge of special projects, Chatterjee is widely travelled and highly esteemed by blast furnace designers all the world over.

He is yet another example of how creative talent is recognised and developed in Jamshedpur, a city where industry is not merely a source of livelihood but a way of life.

Machines from Czechoslovakia

The range of engineering products that Czechoslovakia has been supplying for the industrial development of this country was indicated by Mr E. Maiwald, Vice President of Messrs Strojexport of Czechoslovakia at a press conference in Delhi last Friday. The Strojexport is the trade organisation which represents a number of important branches of the Czechoslovak engineering industry in foreign markets. It exports machinery and industrial equipment manufactured by 120 engineering works. Strojexport, Mr Maiwald specially emphasised, was keen on developing trade with those countries which are at present building up their economies, on a mutually advantageous basis without any political or economic reservations. The Strojexport, which was hitherto concerned exclusively with exports, has also recently taken over imports of certain categories of industrial goods, so as to strengthen the basis of mutual exchange. Reference was made in this connexion to discussions on import of machine tools

and electric motors from India to Czechoslovakia. India, Mr Maiwald said, ranks among those countries in which there are the best conditions for systematic strengthening of friendly and commercial contacts.

Imports of machinery and engineering equipment from Czechoslovakia have increased rapidly since the start of Second Plan. Since 1955-56 imports have grown nearly four-fold by 1962. Strojexport has supplied machinery and equipment to a large number of undertakings both in the private sector and in the public sector, including Railway Wagons and Locomotives of which a large consignment was delivered in 1957, Diesel Engines and Diesel Generating Sets, Excavators and other Construction Equipment, Cableways, Trolley Buses, complete Plants for Flour Mills and for Brick Manufacture, besides a large group of ancillary equipment required by engineering industries in this country. While the traditional range of imports of engineering goods will continue, Mr Maiwald specially emphasised the scope for increased deliveries of Trolley Buses, and complete brick factories for the production of standard and

special bricks and tiles. He mentioned in this connexion the proposal of the West Bengal Government to introduce a fleet of Trolley Buses to relieve traffic congestion in Calcutta suburbs, especially Howrah.

In recent years Strojexport has supplied India with plant for brick manufacture valued at Rs 2.40 crores. The first automatic brick factory in India, Mr Maiwald said, was supplied and put into operation by Strojexport in Kashmir. Another brick factory is under construction in Madras, while deliveries of further brick factories are under way and others are being negotiated.

Trade with Czechoslovakia is regulated by rupee payment agreements under which all payments are made in Indian rupees. Complaints are sometimes heard that supplies from rupee payment sources are not competitive in terms of price and specifications. It is also said that lack of after-sale service and arrangements of supply of spares is a disadvantage of getting supplies from these countries. Mr Maiwald said that, as far as Strojexport was concerned, they have not received any complaints from their customers. Mr Maiwald also mentioned in his statement that Strojexport was setting up technical centres in different areas to ensure effective installation and operation of the equipment and machinery supplied by them to the developing countries. These centres should be able to dispose of the complaints regarding the lack of after-sales service.

Mr Maiwald also referred to the reputation for quality established by Czechoslovak products in all parts of the world, and the high technical

standard of their machinery which has often won for them first place in international competitions in which they participate with the foremost manufacturers in the world. On the list of world exporters, Strojexport holds first place in the export of electric locomotives and third in export of railway vehicles in general. It comes fourth, behind U.S.A., Great Britain, and Federal Republic of Germany, in several branches such as diesel engines and diesel sets, excavators etc. In regard to export of industrial valves and fittings, Strojexport ranks fifth. In regard to flour mill equipment, they rank among the first six exporters in the world.

School for Planners

One of the shortages brought to light by the Emergency is a strange one—the shortage of trained economists and personnel for planning and economic research. In ordinary times the shortage would not have been readily believed. Sometime back there was even talk of India exporting planning experts to other developing countries! With the gap in resources identified, the National Council of Applied Economic Research has stepped to fill the breach. A 10-week training programme in Economic Development, organised by the Council, and to be inaugurated by Mr Morarji Desai, Union Finance Minister, will commence on February 15.

When considering the shortage of economists and planners, it may be noted, that the accent is on training. The NCAER which has conducted numerous research projects, and technoeconomic surveys has reason to

be keenly aware of the shortage of trained personnel to carry out the surveys at different levels. The training programmes are intended for University teachers, Government officers engaged in planning and development, business executives concerned with problems of management and staff members of the Council.

The main subjects covered in the training programme will be (1) National Income and National Accounts, (2) Consumption Saving and Investment, (3) Economic Growth and Development, (4) Long-term Economic Projections, (5) Sample Surveys for collecting Economic Data, (6) Indian Planning—A Decade of Planning Perspective, and (7) Regional Development and Planning.

What is most impressive is that this formidable programme including perspective is to be completed in ten weeks. For those who cannot afford to spare even ten weeks for this programme, arrangements are also being made for taking trainees for specific subjects in which they may be interested. The number of trainees is limited to 27 of which seven are from universities, seven from business organisations, three from State governments and the rest are members of the Council's staff.

Dr P. S. Lokanathan, Director General of the National Council of Applied Economic Research, will head the Faculty, which will include Indian and foreign experts. Dr Lokanathan will be in charge of the programme and will be assisted by Prof. Irwin Friend of the Pennsylvania University and Prof. Gerhard Kade from Germany.

The trainees will also have the benefit of listening to the advice of the doyen of Indian Planners, Mr V. T. Krishnamachari, President of the Council, who will be one of the guest speakers for the programme.

A Model Industrial Estate

A remarkable industrial complex, which is growing up in the vicinity of Ghaziabad, was formally inaugurated by Mr C. B. Gupta, Chief Minister of Uttar Pradesh last week. The Chief Minister was inaugurating the Mohan Nagar Industries, being built by Dyer Meakin Breweries Limited. The Company has established an unrivalled name for itself in the manufacture of fermentation products. The advent of Governments wedded to a policy of Prohibition, has not left the Company unaffected. But the eclipse that might have been feared a few years ago has not occurred. The Management has shown great resource and resilience in using the fermentation industries as the base for variegated industrial expansion.

The Company, which till recently confined itself to the fermentation industries, has extended its activities to a wide range of related and new industries which they have established in a well laid-out industrial estate at Mohan Nagar, over an area of one hundred acres. Eventually, the total investment on this industrial complex, which includes the manufacture of soft drinks, fruit products, glass, ice, malt and malted products, abrasives, apart from the fermentation indus-

tries, will be over four crores of rupees. Construction of nine important units, including maltsters, malt extract factory, fruit utilisation factory, malt vinegar factory, brewery, cold storage, ice factory, distillery, yeast factory and a well-equipped modern workshop, has been completed in the record period of two and a half years.

The achievement, remarkable by any criterion, has not been made without facing grave difficulties in regard to the supply of machinery, equipment and materials, which every new venture has to face. And, in establishing these various industries, the Company has been thrown almost entirely on its own resources. They have succeeded to a great extent in beating the foreign exchange shortage by fabricating many items of complicated machinery in their own workshop.

Apart from the units mentioned above, plans are under way to install an automatic glass factory involving investment of one crore of rupees, which will be the biggest in this region. The National Abrasives Fac-

tory at Ghaziabad is being run by the Company. In addition, its Managing Director, Mr N. N. Mohan, has sponsored a new Company named John Oakley & Mohan Limited, in collaboration with Messrs John Oakley & Sons, London, to operate a modern Abrasives Factory which is nearing completion on the estate.

The financing of this numerous group of industries by the parent company, and without any assistance from Government of other sources, should be a lesson in economic development to those who are inclined to take a jaundiced view of the fermentation industries. Incidentally, it should also draw attention to the role of fermentation industries in accelerating, what used to be called in discussions on planning as, the "take off". A Rostow should not be required to find ample material to demonstrate how the fermentation industries, by mobilising resources, have laid the foundations of industry in many countries including India. Mr N. N. Mohan, Managing Director of Dyer Meakin, did not deal with this large aspect. But he did well to remind the authorities of the valuable con-

tribution that these industries could make in relieving foreign exchange shortage. Dyer Meakin Limited have entered the export market and they find the prospects are encouraging.

A feature of the Mohan Nagar Industrial Estate, that will strike even a casual observer, is the aesthetics of the construction. The Mohan Nagar Industries constitute a convincing demonstration that Art in Industry, is something quite different from business artifice.

Another pleasant feature, which entitles Mohan Nagar to claim the title of Model Industrial Estate, is the happy relations subsisting between management and workers. The parent Company has an excellent record in this respect which has been recognised by the Government of Uttar Pradesh. Mr N. N. Mohan mentioned that the Government had awarded a Gold Medal to his company as the best employer in the State. He also drew attention with justifiable pride to the fact that not a single labour dispute has arisen during his period of stewardship in any of the factories.

... IS

ORGANISATION'S GREATEST ASSET!

Any one who searches deeply into the reasons for business success comes to realise this. The greatest asset Management has is the ability continually to bring fresh thinking into business problems, because it can reaffirm past decisions, confirm past policies or detect need for change.

With a business background and experience of over 150 years, the J.K. Organisation has always applied Fresh Thinking with sound judgement and have given to the people varied commodities for use. Today its single-minded devotion to the cause of India's industrial prosperity is the GREATEST ASSET.

Markets

JUTE

Mixed Trend

PRICE fluctuations were rather wide in the jute goods market last week mainly because of speculative activities. With the release of the figures for stocks of jute goods as at the end of January, sentiment was a little subdued at the beginning. Total stocks were 90,400 tonnes showing a rise of 7,600 tonnes over the previous month. While stocks of hessian rose by 2,500 tonnes at 25,200 tonnes, those of sacking rose by 3,500 tonnes to 50,000 tonnes. Stocks of other varieties were also higher having risen by 1,600 tonnes to be placed at 15,200 tonnes. Production of jute goods during the month has been slightly lower than in December 1962 though the number of hours worked in the two months is the same at 208. Mills' total output amounted to 103,100 tonnes as against 104,200 tonnes in the previous month. Output of both the principal categories of goods has declined but that of other goods shows a rise by more than 1,000 tonnes at 13,300 tonnes. The increase in the output of other goods is presumably in response to the growing demand for specialties such as carpet backing hessian mainly from the US. As in the previous month, production of hessian is again higher than the production of sacking. The statistical position with regard to hessian continues to be quite satisfactory as stocks are only slightly higher than half a month's output. As for sacking, stocks are much higher than a month's production.

The market opened the week on a steady note mainly due to covering business in both hessian and sacking. With the release of stock figures sentiment was subdued but by mid-week renewed support was noticeable with prices in both the sections moving up. The revival of active interest in the market followed rumours to the effect that a fresh

order for hessian had been received from Russia. The higher levels attained in Monday's trading however could not be maintained the next day despite the report that a Government of India order for 5,500 bales of A Twills for February-March delivery had been placed on that day. Although part of the gains made during the week were retained till the end of the week under review, sentiment at close remained subdued. This is probably because the industry has decided to continue the full working of mills for another month from February to the end of March. The raw jute market continues to show a steady trend with sellers reluctant to offer big lots mainly because prices in upcountry markets continue to be above Calcutta parity. During the past few weeks holders have been slowly but surely regaining confidence as Government has been evincing sustained interest in the behaviour of the raw jute market. The indication that between them the State Trading Corporation and the Jute Buffer Stock Association would account for one million tons of jute had been an encouraging influence.

TEA West Bengal Entry Tax

IN a communication addressed to the Government of West Bengal, Finance Department, the Tea Association of India, Calcutta, has drawn the attention to the difficulties faced by the tea industry as a result of the continuance of the West Bengal Entry Tax on the commodity. The industry has been pleading for abolition of the tax so as to enable it to meet the stiff competition in foreign countries.

The Association has pointed out that India has been losing ground to other producing countries in the world tea markets; and the most important reason for that was that Indian teas had to bear the burden of various taxes and duties levied both by the Central and State Governments. In this connection, the Association has stated that two years of continued slump had hit the industry in West Bengal so much that many gardens had been finding it a problem to procure necessary finance from commercial banks for tea cultivation. The Association has, therefore, requested the Government to abolish the Entry Tax on tea, so that the industry can pursue its efforts without much hindrance from the burden of taxes in achieving the target fixed for export under the Third Five-Year Plan.

Meanwhile, in the export sale held in Calcutta this week, offerings amounted to 79,921 packages of Leaf grades. Demand was less general than in the previous week and prices followed an easier trend. Plain orthodox descriptions met with useful enquiry and were sold at fully firm rates, while "teas for price" were generally firm to dearer. The brighter Dooars and medium Assams came to an easier

market, as did the better liquoring Assams, their BOPs being a weak feature and often withdrawn. Orange Fannings declined by up to 40 nP per kilo.

Medium CTC descriptions met with less enquiry and BPs dropped by 20 nP. Fannings were a weak feature and withdrawals were quite heavy. Best sorts were lower by 20 nP to 30 nP while fibrous kinds were very irregular. Legg-cut descriptions met with a fair enquiry at irregular and sometimes easier rates. Whole Leaf grades were about steady. The more stylish kinds and tippy sorts were irregular and easier with a number of those kinds being withdrawn.

The small weight of Darjeeling teas on offer met with a fair demand at irregular rates. Following rates were quoted (per kilo inclusive of excise duty):—Clean Plain Pekoe Rs 4.80 to Rs 5.00; Plain BP Rs 4.00 to Rs 4.30; Plain Fannings Rs 4.00 to Rs 4.40; Medium Assam CTC BP Rs 5.60 to Rs 5.90. Medium Assam CTC Fannings Rs 5.20 to Rs 5.50; Best Assam CTC BP Rs 6.00 to Rs 6.20 and Best Assam CTC Fannings Rs 5.80 to Rs 6.10.

In the Internal Sale held today, offerings amounted to 30,033 packages of Dusts. There was a good general demand. The brighter medium CTCs were keenly competed for and were sold at fully firm to dearer rates, while the lesser kinds were irregular and easier, particularly the fibrous kinds. Good CTCs were readily absorbed at slightly easier rates.

Plain and medium orthodox teas were well supported at around last prices; the smaller descriptions selling at a premium. Legg-cut teas continued to be readily absorbed at irregular and slightly easier rates with the bright lines selling well. Darjeeling teas were sold at dearer rates following improved quality. Following rates (per kilo) were quoted:—Plain Orthodox Dust Rs 4.00 to Rs 4.20; Medium Assam Dust Rs 4.30 to Rs 5.00; Legg-cut Dust Rs 5.00 to Rs 5.30; Medium Assam CTC Dust Rs 5.50 to Rs 6.10 and Good Assam CTC Dust Rs 6.60 to Rs 7.00.

According to the latest monthly bulletin, issued by Messrs J. Thomas & Company, the total Indian crop, till the end of December 1962, shows a short-fall of 11.5 million kgs as compared to the previous year, while exports of tea from India, during the first eleven months of 1962, are ahead by 8 million kg. It appears unlikely that any carryover from 1961 will be sufficient to offset the overall shortfall of 19.5 million kg. in the availability for home consumption.

It is reported that shipments of North Indian teas have been particularly heavy in recent weeks. Exports of tea from India, in the first eleven months of 1962, increased to 416.62 million pounds from 398.65 million pounds in the corresponding 1961 period and

370.5 million pounds in the corresponding 1960 period. While exports of tea to the UK declined from 238.52 million pounds in the period under review, shipments to all other destinations increased from 160.13 million pounds to 181.81 million pounds. There is, therefore, every reason to anticipate that exports in 1962 from India will be ahead of the last season, thereby justifying the relief measures granted to the industry to stimulate exports in the last Budget.

In the Cochin market, offerings were about 291,000 kg of dusts. Medium qualities met with keen enquiry and advanced irregularly by 10 nP to 20 nP with more emphasis on colour Wynaad descriptions. Residuals were well supported and registered advances. High-grown were sold steady around last week's rates. Clean black grainy descriptions showed an upward trend. Unorthodox types were firm.

Also 6,21,000 kilogrammes of Leaf grades were offered for export. Against good general demand, low medium and medium brokens were easier, while Fannings were irregularly dearer. Good mediums and high-grown were steady following quality, while unorthodox descriptions were fully firm.

In the Colombo market, offerings were 7,460,995 pounds. These met with strong general demand. Best quality Dimbula/Dickoya brokens were irregularly dearer following quality, while those below the best were generally about 5 to 10 cents per pound dearer except for light liquoring sorts which were about steady. Uvas were 5 to 10 cents dearer and more so for the brighter types which were in strong demand. Medium brokens from eastern districts and Uvas were irregularly 5 to 10 cents dearer. Low-grown brokens were slightly easier. Best liquoring high-grown BOP Fannings were irregularly dearer with quality, while those below the best and mediums were slightly easier. Low Mediums and low-grown were fully firm.

Production of tea in Indonesia is well maintained at 7.3 million pounds in September 1962 as compared to the previous month and 5.8 million pounds in September 1961. Production in British East Africa amounted to 6.5 million pounds in the previous month and 7.2 million pounds in November 1961.

A somewhat less-assured tone was evident at Mincing Lane auction where a slightly smaller quantity of around 73,000 packages was put up for sale. Bright liquoring teas and the cheaper kinds among the North Indian and other miscellaneous teas on offer held steady in the earlier stages; but other kinds were irregular and easier. In the closing stages of the sale, this trend applied to the market generally. Better quality South Indian teas

were usually 1d to 2d per pound better, while the balance of these growing met with a fair enquiry at around previous rates. The demand for Ceylonese teas was quieter and prices were often easier. Low-grown sorts were about steady.

Tea stocks in London, as on 1 February, were slightly lower at 143.26 million pounds as against 144.52 million pounds in the previous week. The total quantity to be landed on the same date was 18.30 million pounds. Total afloat was 42.17 million pounds including from Calcutta 23.99 million pounds; from Chittagong 28,940 pounds; from Cochin 2.10 million pounds; from Ceylon 10.82 million pounds and from other Ports 52.22 million pounds.

COTTON Irregular Movement

The cotton futures market in Bombay displayed an irregular trend during the past week on account of alternate bouts of buying and selling. The undertone, toward the end of the week, however, ruled steady and both the new contract and the maturing contract recorded some gains over the week.

The futures market which commenced on a steady tone as a result of the renewed short covering stirred by congenial spot advices. The Jarilla March 1963 contract moved forward from the previous week's closing of Rs 672.25 per three quintals to Rs 679.50. The rally was attributed to the fact that with the close proximity of delivery period there would not be adequate tenders in futures market and also to the encouraging reports from the cloth market. But this phase proved short-lived and the contract receded to Rs 671.50 in the mid-week. The apprehension of heavy dose of taxation in the coming Budget was the main dampening factor. The operators from upcountry centres also unloaded obviously due to the increased arrival of new crop. But at the end of the week the contract staged a smart recovery and rose to Rs 683.50 before finally closing at Rs 682.25 per three quintals.

The new contract, Jarilla May, also fluctuated in sympathy with the maturing contract. After rallying from Rs 682.25 to Rs 686.00 in the initial deals, the May contract declined to Rs 680.00 and short up smartly to Rs 692.50. The volume of business was however considerably meagre.

The spot market at Sewri presented relatively cheerful conditions. Spinner interest was pronounced in C02, L147, Vijay, Digvijay, Surti and 197/3 growths. Consequently the prices of all

these growths went up by 25.30 points. Transaction for nearly 25,000 bales was reported to have been done in Vijay, Digvijay and Surti varieties.

In the import section mill interest in American Cotton broadened to same extent, but offers from shippers were not encouraging owing to the reported damage to the US Crop. Scattered business was done in Sudan and African growths.

PIECEGOODS

The Bombay cotton piecegood is market during the week under review depicted divergent conditions. The domestic sector was cheerful while activity on the export front was rather subdued.

Speculation on the imposition of heavy excise duty in the forthcoming Central Budget was strong in the market. This was the most influencing factor particularly in the power-loom section. Processors were frantically trying to make their goods ready before the presentation of the Budget so that they could escape the new levies. The revival of demand from upcountry centres for the Muslim festival and marriage season also assisted the sentiment. Grey on-calandared dhoties and saris met with good demand from upcountry centres like Bihar, UP and West Bengal. Prices of these varieties remained firm. Centres like Rajasthan and Saurashtra showed

keen interest in grey and bleached mulls.

In the mill-made sector almost all the seasonal varieties attracted good demand, especially bleached longcloth, haircord printed poplins, shirtings and dyed and bleached poplins. As a result of the improved demand the stocks with the mills are reported to have been lifted considerably. All the important upcountry centres were active in the market. Encouraging business with UP, Kashmir, Bihar and South India for immediate delivery was reported.

On the export front only small business was transacted with the UK obviously due to the keen competition from other exporting countries. East Africa was satisfied with a moderate quantity of coatings, dyed drills and grey sheetings. Fair enquiries from countries like Sweden, Norway, Iraq and Germany were reported for bed sheets, furnishings, canvas and tarpaulins.

Forward Trading in Pepper

WITH the permission now granted by the Forward Markets Commission for forward trading in black Pepper in Bombay, after a period of about four years, a long-felt

HIRJI & CO., PRIVATE LTD.

and other factories.

need of the traders in Bombay has been fulfilled. Cochin is the only market where forward trading in the commodity is conducted so far. The opening of the ring in Bombay will be the second market in the country.

The Pepper and Ginger Merchants Association, Bombay, came into being in 1937 and forward trading was provided until 1959. With the commodity crisis of 1959, the Association was compelled to close down forward trading by voluntary deciding to square up outstanding positions.

The first trading in Bombay took place on Friday last for a token quantity of 25 quintals for Chaitra delivery. The rate was quoted at Rs 259 per quintal. Futures price at the Cochin market, the first to be recognised for forward trading six years ago, was Rs 269. Margin is payable on the net outstanding position on a particular day. The first 50 quintals are, however, exempted from the payment of margin. Since Bombay alone accounts for about 60 per cent of India's exports, hedging facility is expected to prove beneficial to the pepper trade.

In view of the poor export demand prevailing at present, however, trading is likely to be very much restricted; but will gather momentum with the revival of export enquiry. In fact, signs of a revival of export enquiry are not wanting, as already prices have staged a modest recovery, thanks to encouraging advices from Cochin. Sentiment is also influenced by the recent reduction in freight rates on shipments of pepper from Cochin to US Atlantic Ports, which has brought forth revival of enquiry from America. Reports suggest that stocks with grinders are running out and they will have to enter the market any time now. Political uncertainty at Sarawak is an important factor in favour of Indian pepper.

SUGAR Subdued Conditions

Sugar markets have shed their bullish conditions and are rather subdued during the week, as demand from the South is at a low ebb following the release of a further quantity of 225,000 metric tons of sugar for sale by the factories in the open market.

It is learnt that the factories in Bihar are still facing shortage of cane supplies even after increasing the purchasing rate by 12 nP

per maund. It is feared that the crushing season will end this month. In the Hapur market, the rate for the sweet commodity is quoted at Rs 110.25 per quintal.

In Uttar Pradesh, too, the industry is reported to be passing through a critical period due to the unhealthy growth, particularly of khandsari and gur units within the areas reserved for the sugar mills. Apart from low yield of cane and its poor sucrose content, the unhealthy competition for the purchase of cane have combined to make the working of the industry uneconomic.

Representatives of the sugar industry have, therefore, expressed deep concern over the definite signs of declining production arising out of many factors, including the uneconomic ex-factory realisation and large-scale diversion of cane to gur manufacture. They have pointed out that while the price of cane and wages, including gratuity, have been statutorily fixed, the ex-factory realisation for the commodity is far below the "fair price".

The inevitable result is, that the imbalance will adversely affect the current season's production. The estimated output in 1962-63 is much below that of the previous season. It is urged that the fall in production should be viewed in the context of the increasing consumption and export needs to meet the long-term contract for nearly 400,000 tons for export in 1963.

NON-FERROUS METALS Mixed Trend

Prices in the Bombay Non-Ferrous Metal market have continued to show a mixed trend. Barring Tin, which has reacted to a moderate extent following the reports that the State Trading Corporation has received a quota for the amount of about Rs 70 lakhs to Rs 80 lakhs, other metals have tended to harden on renewed support. There are rumours that the excise duty on semi-products may be enhanced from 20 nP to 40 nP per kilo. There is also a feeling that there will be an increase in the import duty.

The advance in prices is more marked in Zinc and Lead due to persistent covering. Offerings are scarce due to increased offtake, while stockists are reluctant to part with their stocks. Zinc has forged ahead to Rs 132.50 per 50 kgs and so also Lead to Rs 170 per 100 kgs.

CORRIGENDUM

In the notification of State Bank of India, published in Indian Finance dated 26th January 1963 on page No. 144 the amount of Interim Dividend should be Rs. 56,25,000 and not Rs. 86,25,000

Among other metals, Brass sheets are neglected around Rs 560 per 100 kgs, while brass cuttings have advanced to Rs 455 per 100 kg. Copper wire bars are marked up to Rs 364 and conductor wire up to Rs 560 per 100 kgs.

CHEMICALS & DYES Sentiment Depressed

Conditions in the Bombay markets for Chemicals and Dyes remained dull and depressed. Demand was at a low ebb, while stockists were anxious to liquidate their holdings.

The main contributory factor to the depressed sentiment in the market were the tight money conditions, not to speak of the availability of smuggled goods. This was true especially of Menthol and Camphor. The uncertainty about the forthcoming budget also restrained large-scale buying on the part of consumers and dealers.

YARN Decline in Prices

In the Bombay Yarn market, prices developed a downward trend due to the absence of satisfactory demand. As the supply position was comfortable, the spinners started expediting deliveries in view of the nearing Budget date.

A modest decline of about 10 nP a pound was registered by both Staple-Fibre yarn and indigenous Art Silk yarn. The market for Cotton yarn was, however, steady owing to the increased ceiling prices announced by the Indian Cotton Mills Federation. There was, however, no consumer resistance to the new prices.

GOLD & SILVER Silver Steady: Gold Quiet

In Bombay, the Silver market continued to rule steady. Although business was restricted, the tone was maintained on expectations of an increased offtake during the busy season. The metal was in demand up to Rs 230 from Rs 228.50, while .996 purity was two points lower at Rs 228.

Conditions in the Gold section remained quiet. Although licences were obtained, members refrained from doing business officially. The rate for the metal, therefore, remained nominal. The time limit for declaring non-ornament gold held by the public with a view to

facilitate investment in gold bonds was welcomed though the price fell slightly from the highest level of Rs 102 to Rs 99 nominal.

OILS & OILSEEDS

Conditions on the Bombay Oil-seeds Exchange remained generally steady.

In the Groundnut section, trading reflected a significant improvement following frequent reports of commitments for the export of groundnut oil on a better basis. The withdrawal of the additional freight for shipments of groundnut oil from India to Barcelona contributed substantially to the market's optimism in connection with the exports to Spain. It was felt that the freight relief of the olive crop in Spain would pave the way for further business with that country in the near future. Bold ready was quoted at Rs 40.10 and Groundnut Oil at Rs 16.60.

In the Castorseed section, prices displayed a steadier tendency, mainly due to reports that the outlook for the export of castor oil had improved recently. Although no business was reported to have taken place, the news, that an American importer had been investigating the possibility of buying castor oil from India made a visible impact on the market. The firmness in groundnut prices had also a sympathetic effect. Castor ready was quoted at Rs 32.37 and Castor Oil, commercial equality, at Rs 12.80.

In the Linseed section, price movements were confined to narrow limits. Ready closed at Rs 32.50 and Linseed Oil at Rs 13.35.

Company Reports

Disappointing Results of Rallis India

The reduction both in the volume of business and the margin of profit earned in the cotton division is reflected in the working results of Rallis India Limited for the year ended 31 August 1962. While sales are shown lower at Rs 17.91 crores against Rs 19.90 crores, the net profit, after providing for Depreciation and Taxation, amounts to only Rs 21.83 lakhs as against Rs 30.12 lakhs for the previous year.

In respect of allocations, Depreciation is raised to Rs 5.27 lakhs from Rs 4 lakhs, while Taxation is reduced to Rs 21.97 lakhs from Rs 24.33 lakhs and Development Rebate Reserve to Rs 7,500 from Rs 13,500. No provisions are possible for General Reserve and Contingency Reserve as against Rs 5 lakhs and Rs 2 lakhs respectively set apart in 1960-61. The dividend on the Ordinary shares is, however, maintained at 8.5 per cent, less tax.

The extension to the factory of Ralliwolf has been completed. The new range of tools, as well as increased output of the existing range should be coming off the production line by the end of the current financial year. In the case of Rallifan the company has achieved an economic level of production. Teddington Chemical Factory Limited has been merged with Rallis India. This merger is expected to improve the profitability of the company. With regard to Hemalatha Textiles, the directors state that the prospects for the current year are less favourable, although the company has received a licence for the addition of 6,000 spindles. Although the completion of Ralli Chemicals Factory was delayed, commercial production was started in September 1962. In the case of Boehringer-Knoll, the first stages of production of chloramphenicol are now in operation.

Dalmia Iron Repeats

DESPITE a rise in sales from Rs 1.44 crores to Rs 1.80 crores, the Dalmia Iron & Steel Limited has not been able to report a proportionate increase in profits for the year ended 30 September, 1962 due to the implementation of the Third Engineering Tribunal's award, appointment of more technical personnel and payment of profit-sharing bonus to workmen.

The net profit, after providing for Depreciation and Taxation, is lower at Rs 15.44 lakhs as against Rs 21.11 lakhs for the previous year. Apart from providing Rs 5 lakhs for General Reserve, Depreciation is raised to Rs 10.71 lakhs from Rs 10.50 lakhs and Taxation to Rs 7.50 lakhs from Rs 1.50 lakhs. The provision for Development Rebate Reserve is however, lower at Rs 3 lakhs against Rs 11.50 lakhs. The dividend is repeated at Rs 1 per share, subject to tax.

The output of Grinding Media is lower at 3,560 tonnes against 3,879 tonnes, while that of Steel Castings is higher at 1,006 tonnes against 927 tonnes and Spun Iron pipes at 18,473 tonnes against 15,207 tonnes. The directors have convened the annual general meeting on 21 February. The dividend is payable to those shareholders whose names are registered as on 31 January, 1963.

The expansion of steel foundry could not be taken as envisaged in view of the fact that the import licence for the plant and machinery has been granted only this month. The necessary arrangement to place orders in consultation with the company's technical collaborators is being made. As soon as the imported equipments are received and installed, production of steel castings and grinding media will attain its rated capacity from 1,500 tonnes and 3,000 tonnes to 3,600 tonnes and 6,000 tonnes per annum respectively. The company expects to attain the mentioned capacity by the end of this year.

Nellimarla Jute Pays More

THANKS to the rise in sales from Rs 1.89 crores to Rs 1.96 crores to Rs 1.96 crores, Nellimarla Jute Mills Company Limited has produced encouraging working results for the ended 31st July 1962. The net profit, after providing for Depreciation and Taxation, amounts to Rs 6.92 lakhs as against Rs 2.90 lakhs for the previous year.

Apart from providing Rs 2.50 lakhs for General Reserve, Taxation is raised to Rs 7.10 lakhs from Rs 2.50 lakhs. Depreciation is reduced to Rs 4.20 lakhs from Rs 5.33 lakhs and Development Rebate Reserve to Rs 7,800 from Rs 77,100. The dividend on the Ordinary shares is raised from 60 nP to Rs 1.50 per share, subject to tax.

The directors state that the cost of obtaining suitable highgrade fibre for the manufacture of broad hessians was found to be uneconomical and difficulties are being experienced for technical reasons in producing the cloth to the required standard. As numerous complaints are received from overseas consumers, they have decided to close the broad-loom installation at the mills. The machinery has now been leased to the Kelvin Jute Company Limited in the same managing agency group.

Higher Profits for Presidency Jute

Although the Presidency Jute Mills Company Limited has reported a decline in sales from Rs 1.55 crores to Rs 1.40 crores, the net profit, for the year ended 31 July 1962, after providing for Depreciation and Taxation, amounts to as much as Rs 4.00 lakhs as against only Rs 1.37 lakhs for 1960-61.

Taxation provision is increased to Rs 3.56 lakhs from Rs 1.00 lakh and Development Rebate Reserve to Rs 17,233 from Rs 5,400, apart from providing Rs 1.00 lakh for General Reserve. Depreciation is, however, reduced to Rs 2.77 lakhs from Rs 3.04 lakhs. The directors have raised the dividend from 6 to 10 per cent, less tax.

Empire Jute Fares Well

In spite of a decline in sales from Rs 1.70 crores to Rs 1.62 crores, the Empire Jute Company Limited has been able to report a higher net profit of Rs 3.09 lakhs for the year ended 31 July 1962 as against Rs 2.01 lakhs in the previous year.

In respect of allocations, the Depreciation amount is reduced to Rs 3.55 lakhs from Rs 4.52 lakhs, while Taxation is raised to Rs 4.80 lakhs from Rs 1.70 lakhs and Development Rebate Reserve to Rs 39,000 from Rs 19,700. The dividend on the Ordinary shares is increased from 75 pP to Rs 1.25 per share, subject to deduction of tax.

The prospects for the foreseeable future are quite favourable although good quality jute is in short supply.

For the Investor

INVESTMENT GOSSIP
Steady Trend

The steadiness noticed in the stock market during the past week stems from the belief that although the Union Finance Minister has perforce to collect a good deal of money from the people through fresh taxation, he will so frame his proposals that corporate enterprise is not unduly retarded. The effect of imposing additional taxation on companies will not be conducive to increased industrial production—a very important objective in the present emergency. It is pointed out that in view of the heavy burden that the corporate sector is already bearing in the shape of the taxation already in effect, the high cost of production, new imposts such as the premium on War Risk Insurance etc., the Finance Minister should look elsewhere for collecting the additional money needed. According to the Indian Chamber of Commerce, Calcutta, even at the existing rates of taxation more than Rs 200 crores of additional revenue can be obtained by the Centre in the Budget year by enabling industries to use to a greater extent than now their installed capacity. In the present context of the acute shortage of foreign exchange, it becomes necessary to attract increased foreign capital. The high level of taxation in India is already having a restraining influence and additional levies on the corporate sector will further reduce the flow of foreign capital into the country.

The belief has gained ground in the past few days that the Union Finance Minister may rely largely on excise duties and some new imposts hitherto unknown in the country, leaving the corporate sector free of further taxation or imposing on it some small additional burden which it will be able to absorb in its stride. The basis of this optimism can only be the conviction that with the urgent need for stepping up industrial production in the country Government cannot afford to slow down the pace of progress in the private sector; and that is what will happen if this sector is made to shoulder further burden in the shape of new taxation.

STOCK EXCHANGES Slow Revival of Confidence

Watch-Dog Writes:

CONFIDENCE in stock markets seems to be reviving slowly. There is a growing feeling that fresh taxation may not after all be very regressive in character. It is also felt that no tax or fiscal measures, which may have an adverse effect on investments and production incentives, may be introduced. Again the decision made by the authorities of the Bombay Stock Exchange to remove the minimum prices in the four remaining shares on the forward list as well as the proposal by the authorities in Calcutta to remove the minimum prices of all the cleared securities except Indian Irons, has also contributed to the change in sentiment.

The week's session on Lyons Range witnessed a smart recovery in the prices of a few selected shares from the recent low levels.

With offerings remaining mild, prices on Dalal Street were readily responsive, particularly in those shares where outstanding loads had been sizably reduced.

The emergence of support coupled with bear-covering induced a moderate rally in shares on the Ahmedabad Stock Exchange.

A better feeling prevailed on the Delhi Stock Exchange although the turnover remained moderate.

Small and selective buying was noticed on the Madras Stock Exchange.

On the London Stock Exchange buying was stimulated by hopes of tax-cuts as recommended by the National Institute, but the best levels were not held till the close.

CALCUTTA

FOR the first time since the commencement of the year, Lyons Range exhibited a cheerful sentiment. During the week under report, business was more extensive and buyers were keen to pick up the shares at the current levels. With the result, both the clearing and cash groups benefited from the upsurge in demand.

A significant feature of trading was the complete absence of any selling pressure. Although the uncertainties over the border situation continued to act as a deterrent to any sharp recovery in values and the market was slowly getting into the grip of tax fears, a feeling was steadily growing that the worst was over.

It was thought that the Government might not do anything to thwart the industrial effort needed for the country's defence and the fresh imports were likely to be selective and equitably distributed. In this respect, the news of the decision taken by the Bihar State Government not to impose any tax and increase the existing level of taxation gave rise to

a feeling that other States might follow suit, although a certain section held the view that it could not be taken as a guide.

But, most of the operators continued to entertain the hope that the new taxes could be framed in such a way that they were not unduly rigorous and efforts might be made to raise large sums only by way of loans in order to minimise the severity of additional taxation. There was, therefore, a general disposition among the bears to square up their short positions before the budget. Moreover, with offerings limited, even small buying orders were found to be sufficient to lift up prices.

Gilt-edged securities tended to stabilise around the levels reached recently. While the long and medium-dated loans were on offer around the quoted rates, short-dated issues found some support from institutional buyers. On the other hand, State Loans were subdued as a result of modest realising. 3 per cent 1986 Conversion Loan moved narrowly between Rs 63.05 and 63.15.

Thanks to the decision made by the IJMA to continue the maximum level of production and the hope of the companies making substantial profits for the current year, Jute shares came in for increased attention, resulting in an expansion in turnover. After the lapse of many weeks, Anglo-India came in for business up to Rs 223 from Rs 217, while Birlas were taken up to Rs 29.69 from a low of Rs 28.50; New Central up to Rs 13.56 from Rs 12.56; Kelvin up to Rs 204 from Rs 192 and Howrah up to Rs 18.50 from Rs 18.31.

Coal shares came in for selective enquiry. Bengal hardened to Rs 290 from Rs 288, while Amalgamated changed hands at Rs 24.12 to Rs 24.75 and Western Bengal at Rs 8.75 to Rs 8.91. Central India were a steady feature at Rs 9.81 and so also New Beerhoom at Rs 19.94.

Except for scattered enquiry, Tea shares remained neglected. Although the marketing outlook for the commodity during the next few weeks considered to be fairly encouraging, operators were found to be a bit cautious in entering into commitments due to budget uncertainties. A certain section of the operators, however, held the hope that no fresh burden might be put on the industry in view of the commodity facing keen competition in foreign markets. Brooke Bond were almost unchanged at Rs 11.65, while Hantapara were better at Rs 104 against Rs 102 following the decision made by the Birpara Tea Company to amalgamate with this company.

Sugar shares remained depressed. It was feared that many units would be obliged to suspend the crushing of cane even before the end of this month due to a large-scale diversion of cane for manufacturing gur.

In the Textiles section, support was confined to Cawtex and Jay Shree, which were taken up to Rs 6.75 and Rs 14.56 from Rs 6.37 and Rs 13.94 respectively. J. K. Cotton scored half a point at Rs 13.91 with Kesoram moving narrowly between Rs 21 and Rs 21.25.

For the first time in several weeks, the market's barometer - Indian

Irons - were lifted fractionally above the minimum price of Rs 21, to quote up to Rs 21.40. It was thought that when the scheme of expansion would materialise and the expansion of the company's colliery would come into fruition, the Indian Iron & Steel Company might likely stand on a very sound position of profitability. Among other engineering shares, TEXMACO were pushed up to Rs 21.40 from a low of Rs 19.55; Jessop to Rs 22.56 from Rs 22.25 and Binani Metal to Rs 10.56 from Rs 10.19. Guest, Keen, Williams were nominally quoted at Rs 33. Britannia hardened to Rs 10.31 from Rs 10.06 and so also Dalmia Iron to Rs 11.75 from Rs 11.50.

The Miscellaneous section provided several firm features in the absence of any selling pressure. Dunlop Rubber met with business at Rs 35 to Rs 35.75 (Rs 35.31); Goodyear at Rs 37.50 to Rs 38.50 (Rs 37.87); Indian Copper at Rs 4.30 to Rs 4.39 (Rs 4.26); Orissa Cement at Rs 15.12 to Rs 15.50 (Rs 15.06); Jaipur Udyog at Rs 10.50 to Rs 11.31 (Rs 10.37); Titagur Paper at Rs 16.56 to Rs 17.25 (Rs 16.50); Sirpur Paper at Rs 11.69 to Rs 11.94 (Rs 11.06); Orient Paper at Rs 35 to Rs 35.35 (Rs 34.40); Hindustan Aluminium at Rs 13.50 to Rs 14.06 (Rs 13.50); Indian Aluminium at Rs 30.15 to Rs 33 (Rs 29.69); Hindustan Motor at Rs 17.12 to Rs 17.37 (Rs 16.75); Asiatic Oxygen at Rs 9.37 to Rs 9.56 (Rs 9.25); Rohtas at Rs 11.50 to Rs 11.56 (Rs 11.50) and India Steamship at Rs 6 to Rs 6.25 (Rs 6.12). Figures shown within brackets were the closing rates for the previous week.

BALANCE-SHEET BRIEF

The South Karanpura Coal Company, Limited, has reported a net profit, after providing for depreciation and taxation, of Rs 2.46 lakhs for the year ended 31 August, 1962 as against a loss of Rs 1.74 lakhs incurred in the preceding year. The dividend is, however, passed again for the year.

The Ravalgaon Sugar Farm Limited has made a gross profit of Rs 17.65

lakhs for the year ended 30 September, 1962 as against Rs 10.19 lakhs for 1960-61. The dividend is maintained at 10 per cent, subject to tax.

The net profit of the Electric Construction & Equipment Company Limited has improved from Rs 14.93 lakhs to Rs 19.35 lakhs for the year ended 31 October, 1962. The dividend is repeated at 10 per cent, subject to tax.

Damp-Proof Wall

A new polythene damp-proof wall course—successfully tested at Britain's Building Research Station—has been developed by British Cellaphane Ltd. The new product is claimed to be light, clean and easy to handle—it weighs only 3½ lb 1.5 kg.) per roll of 4 sq. yds. (3.3 square metres)—retains its flexibility under extremes of temperature, will not crack or extrude and is rot proof and chemically inert.

With a tensile strength in excess of 2,000 lb. per sq. in. (140.6 kg. per sq. cm.) it requires only one-quarter of the storage space needed for traditional damp course materials.

In addition to new housing units it can also be used as a damp course insertion in existing older structures.

STEEL TISCO Production in January

The approximate production of iron and steel at the Steel Works at Jamshedpur during the month of January 1963 was:

	In Metric Tons
Iron	151,700
Steel Ingots	159,100
Saleable Steel	126,500

An adventure with austerity

Little things count a lot. A small self-denial here, a certain measure of austerity there, and we have the moral weapons that it takes to throw back the Chinese aggression. Even sitting at table for lunch or dinner can in itself turn out to be a quaint adventure with austerity. To feel the presence of an unknown, nameless, but nevertheless courageous jawan sitting with us to share our meal can be an exalting experience. Even if we personify our entire defence effort in one such individual, feel his presence intensely, realise the lengths to which he is prepared to go to safeguard our freedom, our hearth and home, our way of life, we have begun to press into service our secret weapon—*austerity*.

The outstanding impression made by Mr Swaran Singh's speech introducing the Railway Budget for the year 1963-64 and by the subsidiary papers circulated along with it is the gratifying one of improved financial performance and operational efficiency. The actuals for the year 1961-62 have exceeded the expectations of the revised estimates for that year by providing a net surplus of over Rs 24 crores against the anticipated Rs 16 crores. The Revised estimates for 1962-63 put the receipts at about Rs 4 crores higher than the budget estimate but working expenses have also gone up by over Rs 6 crores, partly because of the demands of the Emergency and partly because of some post-budget decisions on establishment expenses. The net result, however, is a surplus not significantly different from the one envisaged at the time the budget was drawn up, because of economies elsewhere. For the coming year, receipts are expected to go up by about Rs 50 crores and working expenses by over Rs 18 crores. But because of certain departures in appropriations, to be more fully discussed presently, the net surplus for the year is put at Rs 31 crores. It will be seen that traffic receipts have gone up by Rs 100 crores between 1961-62 and 1963-64 and working expenses by Rs 57 crores.

There has been a gratifying improvement in the basic financial position of the Railways as can be seen from the appropriations and final balances in the various funds. Taking the Development Fund, first, to which the balances from revenue accounts are yearly transferred, the Railway Conventions Committee, 1960, considered that an average of Rs 23 crores per year is the desirable appropriation to this fund considering the demands likely to be made on it by the Third Plan needs. Mr Swaran Singh himself considers that the average should be about Rs 30 crores. From this point of view, 1961-62 had made a modest beginning. In the immediately three preceeding years, this fund had to take loans to the tune of Rs 29 crores from General Revenues. These loans have been repaid in 1961-62, the appropriation to this fund for the year of Rs 24 crores meeting part of it. The current year's revised estimate of surplus transferred to this fund is just about the desirable average and about covers the withdrawal from the fund during the year. The budget year, however, makes an allocation to this fund nearer Mr Swaran Singh's idea of the optimum and despite withdrawals during the year, leaves the fund with a net accretion of over Rs 5 crores and the final balance at Rs 16 crores against the highest balance in the fund of Rs 27 crores in 1952-53.

The Depreciation Reserve Fund from which part of the Railways' 'capital' programmes are carried out has also been strengthened. At one time this was a hefty fund the maximum balance in it being Rs 124 crores at the end of 1950-51. It got rapidly depleted in the fifties with the balance standing at a low as Rs 20 crores at the end of 1960-61. Here again, on the recommendations of the Railway Conventions Committee 1960, the fund was consciously nursed by increased appropriation. The Committee's recommendation was a progressive stepping up of annual appropriation from Rs 65 crores in 1961-62 to Rs 75 crores in 1965-66. In 1961-62, the appropriation was stepped up by about Rs 21 crores over Rs 47 crores of the previous year. The revised estimate for 1962-63 puts the appropriation for that year at Rs 69 crores but the withdrawal from the fund for that year is of a slightly higher amount. The budget year's contribution is stepped up to Rs 80 crores for reasons stated in full by the Minister

in his speech. The withdrawal from the fund is expected to be Rs 68 crores leaving a net accretion of Rs 14 crores and leaving the fund with a closing balance of about Rs 43 crores against the lowest of Rs 20 crores at the end of 1960-61.

Mr Swaran Singh has explained his increases in freight and parcel rates designed to net a revenue of Rs 19 crores as necessitated by two considerations. The first is the decision to increase the percentage of the Railways' contribution to General Revenues from 4.25 per cent of the Capital-at-Charge to 4.50 per cent for the duration of the Third Plan. The reasons given by Mr Swaran Singh for this increase range from patriotic gesture from the 'largest and oldest' commercial undertak- ing of Government to the increase in the bank rate. It is an excellent idea in every way.

The other reason in extension of the new levies is the need for strengthening the railways' own resources for its development programme. The case for increased appropriation to the Depreciation Reserve Fund and the Development Fund is unassailable in the light of the balances in the funds, of the developmental effort considered in- escapable in accordance with the targets of the Third Plan and the capital employed by the Rail- ways. The Railways Third Plan outlay has been revised upwards from Rs 1,325 crores to Rs 1,440 crores and Mr Swaran Singh expects the approval of an additional allocation of Rs 65 crores for Rolling Stock, making the Railways' outlay Rs 1,535 crores. Therefore, the Railways are under an obligation to find more from own resources for meeting the increased commitments. Secondly, though it is possible that his colleague, the Finance Minister may feel that the Railway Minister mentioned the fact with embarrassing insistence, the additional allocations to both funds would ease the ways and means position of General Revenues in so far as the fund is not drawn upon by the Railways for their own development programme all at once.

With neither of the two reasons for the new levies that the Railway Minister advanced is it possible to quarrel on principle. Indeed, on the question of the need for enabling an enterprise to find out of its own resources the funds needed for further development, it is possible to commend the Railway Minister's admirable logic to the Finance Minister who is reportedly contemplating measures that will make this more difficult for the industry in the private sector.

As for the Railways operational performance, during the year, Mr Swaran Singh was able to report heartening improvement. Freight movement in particular, details of which were given at some length by him with every appearance of gratifica- tion, has shown welcome improvement. What is more important, the improvement is due less to increase in outlay (though it also contributed to it) than to greater operational efficiency. What is striking is that the increase in freight traffic of about 13.42 million tons during the period April 1962—January 1963 over that of the corresponding period in 1961-62 does not take into account the emergency movement of men and materials, especially in Assam. The fact that an increase in traffic of the order of 65 per cent in the North East Frontier Railway was coped with at short notice without any significant disruption of normal traffic is certainly a matter for gratulation. But it is also a matter for concern and sorrow in that it has made clear that there is a vast potential of increased efficiency that can be activated under the stimulus of external threat but not by prospects of economic betterment.

Tangible Wealth

The estimates of tangible wealth in 1960-61 prepared by the Department of Statistics of the Reserve Bank of India and published in the January issue of the Reserve Bank of India Bulletin fill one of the gaps in the picture of the basic economic pattern of the country. The only previous estimates of tangible wealth had been made by Uma Dutta and Vinod Prakash and by Mukherjee and Sastry and both of them refer to the year 1949-50. The present estimate is for the year 1960-61 and is arrived at by two different methods. Total tangible wealth (TTW) is obtained by adding the value of land to the Reproducible Tangible Wealth (RTW). The two estimates differ in the methodology adopted in arriving at the RTW. In one method, the RTW is arrived at by obtaining the RTW of each of the various sectors in the economy separately for the year 1960-61 and adding them up. In the second method, the RTW is arrived at by adding together the estimated RTW for 1949-50 made by Mukherjee and Sastry and the price adjusted net capital formation during the period 1950-51 to 1960-61 as worked out by the Central Statistical Organisation. The methodology of arriving at the land value is common to both the estimates. The sectors in the economy whose RTW added up give the RTW of the economy as a whole are grouped under seven main heads, viz., Agriculture, Animal Husbandry and Allied activities; Mining and Metallurgical (Large Scale); Small Enterprise; Transport and Communications; Capital Outlay in Government Administration; Trade and Commerce; and House property.

The study does not define the notion of tangible wealth and this leads to some difficulties. Prima facie, tangible wealth would mean all assets capable of a palpable form and possessed by a definable entity. On this basis and in the light of topical preoccupation, the notable omission is gold. The absence of a household sector that enters into classification of "Savings" is also a pointer. The tangible wealth computed in the study would thus appear to be restricted to such wealth as directly enter the economic activity.

The present estimate of tangible wealth cannot however be taken as a basis for firm conclusion about trends in the national economy despite the fairly close agreement between the two sets of figures arrived at by two practically independent methods. The estimate and the figures relating to the reproducible tangible wealth pertaining to the various sectors in the economy are however useful as rough indicators of the growth of the economy during the past 12 years or so. The tentative character of the estimates will become evident from the fact that calculations of RTW and even of the value of land are based on a number of assumptions and the sources of data in a number of instances are of varying degree of reliability. The RTW of the agricultural sector are mainly based on the reports on the Follow up Rural Credit Surveys conducted by the Reserve Bank of India which cover only a few selected districts. The All-India figures have been obtained by blowing up the data thrown up by these follow up surveys. The estimate of RTW of agriculture, animal husbandry and allied activities has been obtained after a series of assumptions. The starting point has been the average expenditure per family on agricultural implements and machinery etc., obtained for the selected districts each year, weighted suitably and blown up to obtain the all India average annual expenditure for the four years 1956-57 to 1959-60 on these items. Thereafter a large number of assumptions enter into the calculation such as the assumption that half of the expenditure goes toward acquisition of implements and machinery, that the annual rate of expenditure holds good

for the entire period, etc. In estimating the live stock, again an assumption has become necessary regarding the percentage addition of livestock used for transport purposes. The absence of precise data as regards capital assets in the fishery sector render the RTW of this sector also very tentative. How vital information on some important aspects of the economy can still be only intelligent guesses is brought out by the estimates of RTW in regard to small enterprises. Thanks to the interest taken by Government small enterprises have grown considerably in the past few years but it would appear that it will be futile to try to precise data about the working of this sector. The RBI study itself says that practically no data are available on the capital stock in small enterprises. The Planning Commission has also noted in its publication "Third Five Year Plan" that basic statistical data for small industries for the country as a whole are lacking. Estimate of RTW for the sector represented by Trade and Commerce is also vitiated by the fact that data relating to distributive trade are sparse and scanty. For the rest of the sectors however the estimates can be taken to be fairly reliable for the simple reason that in respect of most of these sectors precise and up-to-date data are available. For instance as regards the mining and manufacturing sector which covers the private corporate sector, cooperative, non-credit societies engaging in processing and manufacturing activities, unincorporated factory establishments and Government companies, comprehensive data are available in annual balance sheets and periodical studies of the RBI based on them.

While estimates of RTW suffer from the many drawbacks noted above, estimate of the value of land also does not appear to lend itself to precise assessment, again for want of relevant data. The starting point for the estimate is the estimate of the value of the land as on March 1950 obtained by Mukherjee and Sastry. In order to arrive at the estimate of the value of the land as on March 1961, it is essential to know the change in land value during the interregnum. But no statistics on change of land value are available. The study therefore has assumed that the land values would have changed in proportion to the charges in price level of agricultural commodities. As the estimate makes no allowance for the possible rise in the value of both agricultural and industrial land as a result of improvements in irrigation and the like and the rapid growth of industries, it cannot be taken to denote the correct valuation of land in 1961.

Subject to the above obvious limitations, total tangible wealth in India in 1960-61 is Rs 52,405 crores and shows a rise of Rs 17,485 crores over the estimate for the year 1949-50. As is to be expected, the bulk of the rise has been accounted for by reproducible tangible wealth which has almost doubled over the period to Rs 32,164 crores from Rs 17,086 crores. Value of land shows comparatively a small rise at Rs 20,241 crores against Rs 17,854 crores in 1949-50. Of the sectors contributing to reproducible tangible wealth, the share of mining and manufacturing (large scale) has gone up sharply from Rs 186 crores to Rs 5,642 crores reflecting the big strides taken by the country in industrialisation. The period 1949-50 to 1960-61 roughly corresponds to the first two five year plans during which planned economic progress has taken place. The sizable increase in the group agriculture animal husbandry and allied activities to Rs 8,783 crores from Rs 5,236 crores is indicative of the emphasis placed in the five year plans on agricultural development. The first two five year plans have also witnessed great strides in transport of all kinds and transport industries, and it is not therefore surprising that the share of the transport and communications sector has almost doubled to Rs 4,218 crores from Rs 2,387 crores. There has been vast expansion in trade and commerce and the estimate of tangible wealth of this sector is higher at Rs 3,398 crores. The value of house property shows a sizable rise at Rs 7,113 crores from Rs 4,405 crores.

Thinking on Taxes

THE economic implications of the Emergency, in respect of financial and economic policies, are examined in a comprehensive study prepared by the National Council of Applied Economic Research, which has been released just a fortnight before the Budget. An analysis in terms of broad economic aggregates in the first part of the Study is followed up by a review of the sectoral developments in the mobilisation of resources for meeting the requirements of defence in addition to the achievement of Third Plan target of investment.

The order of effort required, as brought out in the Study, may be broadly indicated in these terms:

achievement of cumulative rate of growth of the national economy of seven per cent;

increase in the rate of saving of the community over the five year period from 8.5 per cent to 12 per cent and of the marginal rate of saving from 17 to 25 per cent in 1963-64

the ratio of aggregate investment to income to be stepped up to 15 per cent instead of 14 per cent envisaged in the Third Plan;

increase of Rs 753 crores in the Third Plan target of additional taxation; and

a rise in per capita consumption of 11.4 per cent over the five years, 1961-66, as compared with the 17 per cent anticipated in the Plan.

It has been estimated that the expansion of the defence forces will involve an annual additional expenditure of Rs 550 crores. The Council endorsed the now familiar and accepted thesis that defence and development are complementary goals. While diversion of resources for defence is necessary, long term-development goals have to be safeguarded as much as the frontiers, for the success in mobilising resources depends on the maintenance of an adequate rate of growth of the national economy.

Against a rate of 5.4 per cent envisaged in the Plan, the increase in national income during the first year of the Plan was only 2.2 per cent. The assessment of prospects for the current year is more encouraging and, over the first two years, the increase in national income may be a little over 7 per cent. But, to achieve the Plan target, national income will have to increase at 7 per cent in each of the following three years. Considering the different sectors, the cumulative rates may have to be of the order of five per cent in agriculture and allied activities, 14 per cent in industry and 6 per cent in the tertiary sector. Achievement of this rate of growth will involve more rather than less investment. The Council has therefore emphasised that, in considering the additional investment requirement in the following three years, an overall Plan investment of Rs 10,900 crores has to be kept in view and not the lower amount of Rs 10,400 crores.

While problem of finding finance of this order is serious, it is not beyond the capacity of the people or the economic and social institutions built up during the last few years. Taking into account the additional requirements of defence, and allowing for foreign assistance that may be available for the current expenditure on defence account, the total current expenditure on defence outlays for the outlay on investment and current outlays for the Plan period has been estimated at Rs 13,600 crores. This comprises: Plan investment of Rs 10,900 crores, plan current outlay of Rs 1200 crores, defence investment of Rs 450 crores and current additional expenditure on defence Rs 1050 crores. Assuming that the foreign exchange component of the additional net investment would be in the same ratio as indicated in the Third Plan, the total domestic resources required for the Plan and for meeting the defence needs have been estimated at Rs 8550 crores, of which Rs 4750 crores will be in the public sector and Rs 3800 crores in the private sector.

Economies in investment and current expenditures are expected to result in savings of Rs 100 crores under each item. Allowing for these savings, the total financial resources that Government will require to meet all its Third Plan commitments as well as defence needs will be of the order of Rs 6800 crores as shown below:

	Rs crores
Plan investment	4,350
Defence investment	300
Plan current expenditure	1,100
Defence current expenditure	1,050
Total	6,800

The total foreign assistance required by the public sector will be Rs 2,650 crores of which Rs 2,350 crores will be for the Plan and Rs 300 crores for defence.

Out of the total of Rs 6,800 crores of domestic resources required, Rs 5,430 crores will be for the Plan as against original provision of Rs 5,300 crores and Rs 1,350 crores for defence. Against requirements of this order, total resources raised by the Centre and State Governments over the past two years are estimated at Rs 2,346 crores. Of the balance of Rs 4,454 crores, the amount that is required in addition to the Third Plan provision is Rs 1,500 crores, of which Rs 150 crores will be for achieving plan targets and Rs 1,350 crores will be available for defence. For raising the extra resources of Rs 1,500 crores, additional receipts as compared with Third Plan estimates are indicated under the different heads as shown below:

	Rs crores
Balances from current revenues	5
Contributions of Railways	(—)50
Surplus of public enterprises	150
Loans	150
Small savings	192
Provident fund, etc.	753
Additional taxation	300
Deficit financing	1,500
Total	1,500

More than half the additional resources are to be raised by additional taxation. The Third Plan target of Rs 1,710 crores has been raised to Rs 2,463 crores, of which Rs 1,705 crores is the target proposed for the Centre and Rs 758 crores for the States. Against these targets, the estimated yields over the plan period of the new taxes introduced during the first two years are Rs 850 crores for the Centre and Rs 354 crores for the States, leaving a balance of Rs 855 crores at the Centre and Rs 404 crores in the States to be met by additional taxation during the next three years. The Council has suggested new levies to bring in additional yields under different heads as shown below:

	Rs crores	Rs per annum crores
Centre:		
Excise	155	465
Income-tax	50	150
Corporation-tax	35	105
Salt-tax	35	105
Tax on Bank advances	6	18
Tax on advts.	4	12
Total	285	855

	Rs crores	Rs per annum crores
States:

The detailed analysis of requirements prepared by the Council provides the background for a comprehensive tax policy, though it is possible to have doubts about some of the estimates and also

on whether new taxation should be as heavy or as extensive as the Council has indicated. For instance, the Railway Budget presented on Tuesday last has shown that the Railways' contribution to the additional resources of Rs 1,500 crores will be Rs 4 crores in 1963-64 alone against Rs 5 crores for three years taken credit by the study. The Council evidently does not share the view that there is little scope for increasing the rates of direct taxation. It has suggested increase in the income-tax rates on incomes between the exemption limit and Rs 20,000, a ten per cent increase in corporation-tax with a twenty per cent surcharge on the super-tax group. The Study recognises that there is considerable evasion through expense account and other means and that the progressiveness of the tax structure is vitiated if the income levels at the top are able to evade their responsibility. A broadening of income-tax returns required from higher income groups to provide cross-checking information has been suggested, though the Council remains doubtful whether the administration of income-tax could be sufficiently strengthened in the next two years to stop evasion. As regards indirect taxes, the Council has asked the Finance Minister to cast his net far and wide to bring in as large a catch as possible. Upward revision of rates has been suggested in the case of cement, diesel, oil, tobacco, motor vehicles, motor spirits, paper, sugar, vegetable products, cotton fabrics (superfine and fine), electric fans, radios, bicycles and cosmetics. The list of new commodities recommended for levy of excise includes items like sewing machines, steel furniture, telephones, aerated waters, watches, pencils, stainless steel utensils and, of all things, razor blades.

The Council's recommendations imply a massive initial dose of additional taxation of over Rs 250 crores at the Centre. Even if the Finance Minister is inclined to be more considerate and to explore other ways of raising the required resources, the analysis made by the Council of the requirements of the situation would have served the purpose of softening the opposition to anything that may be in store on 28 February.

Strengthen The Nation

The vitality of the national economy supplies the real strength to the Nation. That means more and quicker production and distribution of goods. Banking service is indispensable for promoting the higher pace in industry and commerce.

Your banking transactions directly contribute towards development efforts. Spending or saving, do it through a banking account and help us increasingly to help raise the tempo of economic activity, so very essential for strengthening the Nation.

World of Finance

FOREIGN ASSETS

Prospect of Untied Loans?

After the pause of very many months indeed the foreign exchange holdings of the Reserve Bank, in the course of a single week, have registered a commendable increase that cannot straightaway be put down to a special transaction such as purchase of currencies from the International Monetary Fund; it may be that foreign aid is involved, but in as much as the bulk of assistance so far has been linked to specific projects, it seems more probable that we have had the good fortune of having experienced a substantial export-surplus week. It would appear that the defence effort so far has not involved any significant drain on foreign exchange reserves, in that the import cost in this respect has been covered by the help from friendly countries. But now that the first flush of the emergency has been left behind, we cannot expect as ready and spontaneous a flow of assistance of this sort. Again, industrial production for civilian supplies, which had tended to be affected since last autumn, has to be stepped up if the price situation is to be controlled. Lastly, to the extent that the private sector is also engaged in making equipment for defence, some quantum of imported raw materials will be called for.

Accordingly moves are afoot, but advanced with more urgency this time, to secure some part of foreign assistance in the form of untied loans. There are indications that we may at last have persuaded the United States as to the essentiality of "free" foreign exchange. Non-ferrous metals, components for industrial production and fertilisers for augmenting agricultural production will all require to be paid for from free resources. There seems now the prospect that we shall be able to get about \$240 million in untied loans, though linked to purchases from America. Such aid, we may infer, will be routed through the Export-Import Bank.

This will mean that our foreign exchange reserves, as shown in the returns of the Reserve Bank, will not reflect the receipt of such assistance. But the important thing is that the cost of maintenance imports in the value of \$ 240 million will be met from foreign aid.

We presume that we shall have a clear indication in the Budget next week of the value of foreign aid for defence that we have had since the emergency began. More than ever before we need a foreign exchange section of the Budget, for, the picture here is confusing in the extreme. It is known that the quantum of assistance vouchsafed to us so far does not materially fall short

of our needs for putting the Third Plan through. But to what extent the picture has changed as a result of the emergency; how far cut-backs in the Plan will reduce our needs of foreign exchange; and why in other directions an upward revision of some of the targets will entail larger amounts of foreign exchange, are all questions to which we should expect to have the answers in the Budget. The Explanatory Memorandum, it is true, is replete with references to foreign aid. But it is equally important to know why in particular instances utilisation of aid lags far behind credits approved.

BANK RETURNS

Foreign Balances: Over Rs 100 Crores

The highlight of the latest banking returns is the extremely satisfying increase of some Rs 7 crores in the foreign assets in the possession of the Reserve Bank, a rise which enables holdings once again to be on the right side of the Rs 100 crore mark.

According to the statement of the Reserve Bank for 15 February, Active Note Circulation has receded slightly by Rs 2.28 crores to Rs 2,208.55 crores, though Rupee Coin shows a somewhat contrary trend by moving out into circulation in an amount of Rs 0.17 crore. Accretions to foreign exchange holdings have enabled a transfer of Rs 7 crores to be made to Foreign Securities in the Issue Dept. now shown at Rs 95.08 crores. Countervailing transfer of Rs 7 crores has been effected against Rupee Securities, which are consequently lower at Rs 1,896.42 crores. The net result is a rise of Rs 2.11 crores to Rs 18.12 crores in the Reserve Bank's cash in the till.

Balances Held Abroad, as shown in the return for the Banking Department, are found to be lower by Rs 0.66 crore at Rs 10.01 crores, but regard must be had for the transfer of Rs 7 crores to the Issue Department.

The Centre continues to be most comfortably placed as to cash, its Deposits showing only a small drop of Rs 2.93 crores but still placed at an unusually high level of Rs 86.38 crores. It may be that in the emergency conditions the Government believes that its cash balances should be at a minimum of Rs 75 crores rather than the traditional minimum of Rs 50 crores. On the other hand, the State Governments appear to be hard pressed. Though their Deposits are up by Rs 0.96 crore at Rs 8.94 crores, their indebtedness to the Reserve Bank for ways and means advances has risen steeply by Rs 16.77 crores to Rs 27.43 crores;

and the last weeks of March, with their quota of heavy end of fiscal-year payments, have still to be faced.

There is some reduction of pressure upon Scheduled Banks. Their Reserve Balances have been added to by Rs 5.64 crores to Rs 79.05 crores, though this may in the main be due to the State Bank; on the other hand the fall of Rs 6.17 crores to Rs 37.55 crores in borrowings from the Reserve Bank is to be ascribed wholly to Scheduled Banks other than the State Bank.

The busy season expansion in bank credit continues as attested to in the return of Scheduled Banks for 8 February; though the rise may also in part be due to spillover of month-early disbursements into the second week and the demand for funds that these would involve. The total of Advances has risen, steeply, for the second week in succession by Rs 19.17 crores to Rs 1,522.02 crores; and the State Bank's share of the increase is Rs 8.20 crores. Beginning of the month pressure for money is also reflected in the fall of Rs 13.80 crores to Rs 913.79 crores in net Demand Deposits; this is partly offset by a rise of Rs 2.94 crores to Rs 1,254.74 crores in net Time Deposits. But it is necessary to add that the bulk (Rs 8.53 crores) of the net fall (Rs 10.66 crores) in the net Deposits is owing to the State Bank. Disinvestment in gilt-edged is placed at Rs 15 crores, but it is intriguing to find that the State Bank in the relevant week reported a fall of Rs 21 crores in its portfolio—the implication being that other Scheduled Banks added to their holdings by about Rs 6 crores. Indebtedness to the State Bank is more or less unchanged at Rs 15.77 crores, but borrowings from the Reserve Bank have gone up by Rs 8.20 crores to Rs 43.13 crores. In addition, in order to meet the demand for funds, cash balances, including money at call and short notice, had to be drawn down by Rs 11.45 crores to Rs 185.55 crores.

BANK PROFIT

Allahabad Bank

The result of the working of the Allahabad Bank Ltd. for the year ended 31-12-1962, including the balance from former Account, and after making allowance for taxation and depreciation	Rs. n.p.
Out of this has been paid Dividend and Bonus on the Ordinary Shares and Dividend on Preference Shares at the rates of 12 per cent plus Bonus 6 per cent and 7.80 per cent per annum respectively (both subject to deduction of tax in accordance with the provisions of the Indian Income-tax Act) for the six months ended 30th June, 1962, absorbing	28,69,494 90
Leaving an available balance of	4,63,500 00
	24,05,994 90

which your Directors recommend should be disposed of as follows:

In payment of a Dividend (subject to deduction of tax in accordance with the provisions of the Indian Income-tax Act) on the Preference Shares for the six months ended 31st December, 1962, at the rate of 7.80 per cent per annum	58,500 00
In payment of a Dividend (subject to deduction of tax in accordance with the provisions of the Indian Income-tax Act) on the Ordinary Shares for the six months ended 31st December, 1962, at the rate of 12 per cent per annum	3,37,500 00
Transfer to Reserve Fund	4,50,000 00
Provision for Bonus to Staff	9,30,000 00
Carry forward to next Account	6,29,994 90
	24,05,994 90

Notes

UP BUDGET

Rs 5 Crores Deficit

The UP Budget for 1963-64 which shows a deficit of Rs 4.97 crores is notable for the absence of any proposal for fresh imposts, though the Finance Minister Mr Kamalapati Tripathi has hinted at implementation of fresh taxation in the course of the next financial year and the intensification of the drive to realise the outstanding dues to the State.

The Budget for the next fiscal year placed the estimated revenue receipts at Rs 201.82 crores and the revenue expenditure at Rs 206.79 crores. The estimated revenue receipts include Rs 17.00 crores as subvention from the Centre for the Plan projects and Rs 13.17 crores accruing from additional taxation and other measures adopted in the current budget year. The estimated revenue expenditure consists of Rs 34.79 crores on State Plan and Rs 7.09 crores for deploying on items arising out of the Emergency such as civil defence, home guards, Prantiya Raksha Dal and strengthening of the State police force. When compared to the current year, the

1963-64 Budget indicates an overall improvement of Rs 19.44 crores in the estimated revenue receipts (accounted largely by an anticipated increase of Rs 10.10 crores in tax collections) and a rise of Rs 15.41 crores in the estimated revenue expenditure (bulk of which is covered by Emergency needs). If the subvention and expenditure on Plan are excluded the estimated receipts would work out to Rs 184.84 crores and expenditure to Rs 172.00 crores leaving a surplus of Rs 12.82 crores.

The total Plan expenditure (revenue and capital) for the next fiscal year included in the Budget amounts to Rs 90.64 crores. The outlay for State Plan is Rs 92.64 crores which in addition to the provision in Budget will include Rs 2.0 crores as State Electricity Board's contribution. Fiscal assistance from the Centre will be of the order of Rs 57.64 crores the balance being shared by the State and the Electricity Board. Though the Budget is defence-oriented, sizable allocation has been provided for sustained effort for enhancing agricultural output, accelerating industrial development, increasing the supply of power and skilled manpower and the like for the stabilisation of the nation's economic base. The seed centres would be provided with a subsidy of Rs 3 per maund through co-operatives as a premium for the supply of pure seeds. Besides seed growers producing green manure seed will be given a premium of 12.5 per cent subject to a maximum of Rs 2 per maund.

The agricultural supply organisation, established recently, will also undertake the distribution of four lakh tons of fertilisers through co-operatives and directly in areas not served by co-operative set-up. In addition to foodgrains, greater attention will also be paid to the production of oilseeds, jute, cotton and sugar both quantitatively and qualitatively. There are also proposals to bring an additional area of 4.56 acres under irrigation and expediting the work of rural electrification. The building up of industrial complexes in Ghaziabad, Kanpur, Hardwar, Bareilly, Banaras, Gorakhpur and Mirzapur, the expansion of educational facilities by setting up new institutions the allocation of Rs 5 lakhs for giving stipends to the deserving students seeking admission to medical and engineering colleges, the scheme for modernisation of roads are other features that require special mention.

EXPORT VISTAS

Oilseeds And—

Several suggestions for boosting exports of oilseeds, oilcakes and oils from India are embodied in a note submitted by Mr Devji Ratansi, Vice-President of the Grains and Oilseeds Merchants' Association, Bombay, to the Indian Central Oilseeds Committee. Among them are listed the stepping up of oilseeds production, particularly groundnuts, offering of attractive incentives, putting the crushing industry on a sound footing and providing better storing and shipping facilities. Though the Government has formulated different incentive schemes for exports, the results obtained are far from encouraging. The disparity in prices is one of the major obstacles that keep down the export at a low level. And there is also a tendency for world prices to sag while prices in India show an upward trend. This trend can be arrested only by producing more and more oilseeds which should not only meet internal requirements but also leave enough exportable surplus.

According to Mr Devji Ratansi, there are great chances for expanding exports of HPS groundnut if due care is taken to improve its quality and maintain the present competitive price level. The growing preference for bolder and cleaner Indian kernels weighing 38 to 42 and 40 to 45 in each ounce against the standard count of 55 to 60 brings home the need for popularising those varieties of oilseeds on a progressive scale in the country. Besides, India can also introduce peanut to the markets abroad if special stress should be laid on evolving and conserving strains of large sized nuts and kernels. Along with these, measures should be implemented to intensify research work which is an essential prerequisite to increase quality as well quality of oilseeds.

The note also advocates attractive incentives for exporting more oil by enhancing import entitlements against the export of crude groundnut oil to 60 per cent of f.o.b value. Similarly the import entitlements of linseed oil and castor oil should be raised to 30 per cent and 10 per cent respectively of the f.o.b value of exports. Another suggestion is to link export of groundnut expeller with the export of minor oilseeds and make obligatory for exporters to export minor seeds such as sesame, niger, kardi and mustard in specific quantities.

The scope for promoting exports of groundnut extraction is also rated high provided more trading facilities are allowed to the industry. Other important suggestions relate to the setting up of adequate storage facilities at important ports, speedy transportation of these commodities from the pro-

ducing centres to the exporting points, reduction of duties like octroi, town duty, sales tax etc, and preventing the prevalent practice of adulterating goods for exports with substandard products which will adversely affect the prestige of Indian goods.

Engineering Goods

Exports of engineering products from India have shown gratifying progress recently thanks to the vigorous efforts of the Engineering Export Promotion Council. We are at present exporting more than 150 engineering goods to neighbouring countries like West Asia, South East Asia and Africa and the products are finding everincreasing markets in the highly industrialised countries like the USA, the UK, West Germany and Canada. The export earnings from engineering goods amount approximately to Rs 11 crores a year and there is substantial scope for expanding exports to the foreign countries. The rapid progress of the indigenous iron and steel and non-ferrous metal industries will increasingly facilitate abundant supply of basic raw materials for the production of engineering goods in the near future at comparatively advantageous prices which will further impart momentum to our exports. Besides, the economic growth of the developing countries in Asia and Africa will offer further opportunities for stimulating exports of engineering goods from the country.

motion Council which left last Saturday on a tour of West European countries presages hopeful prospects for stepping up exports of engineering products from India. The team will visit Rome, Milan, Munich, Frankfurt, Dusseldorf, Berlin, Hamburg, Amsterdam, Brussels, Paris, London, Coventry and Birmingham in order to study the specific requirements of the European countries for engineering industries, to establish contacts with importing houses and if possible to enter into long term arrangements for the export of Indian goods. Preliminary investigations made by the Council reveal a good market for machine tools, jigs, fixtures, iron and steel castings (items like pipes or components or parts of machinery), producer goods like marine diesel engines, weigh bridges, garage tools, automobile components and parts, consumer items like sewing machines, cabinet hardwares, folding furniture, cabinets and safes.

The Council was responsible for boosting exports of engineering goods to West European countries from Rs 1,790,298 in 1958 to Rs 3,367,118 in the first eleven months of last year. It is evident that not only the volume of exports has gone up with corresponding increase in value but also new goods were introduced in the export schedule. While in 1958 export comprised mainly metal artware in 1962 about Rs 50 lakhs worth of export is accounted for by other items like sewing machines, padlocks, cutlery, textile machinery, machine tools, wood screws and E.P.N.S. ware.

India's engineering products are exported to as nearly 75 countries in the world. The incentives provided by the Government for exporters in every stage have been of incalculable help for good export performance. The Government is already permitting replenishment quota for pig iron and steel at the rate of 133 1/3

per cent in addition to the rebate granted on import duty on raw materials imported for manufacturing engineering products meant for exports.

FOREIGN INVESTMENT Britain Still Leads

Britain's share of the total foreign private investment in India was about 78 per cent according to the latest available figures from the Reserve Bank of India. It had risen from Rs 206 crores in 1948 to Rs 443 crores in 1960. More recent figures from British official sources show that British industry is continuing to play a vigorous part in India's expanding economy. In 1961, new investment by private firms was well maintained and British firms were concerned with about one in every three of the new industrial collaboration agreements approved in the last 3 1/2 years.

Net investment from British sources in 1960 rose to Rs 44.5 crores. About Rs 30 crores of this went into the oil industry, but even if this is left aside, the net increase of British private capital was Rs 14.5 crores, which is higher than in any year since 1956. British official statistics suggest that the net rise in 1961 (excluding the oil industry and insurance) was about Rs 16 crores.

The distribution of total British private investment in estimated as follows:—

	Rs. crores		Change
	1960	1955	1955-60
Plantations	98.6	86.2	+12.4
Mining	13.0	9.3	+3.7
Petroleum	102.0	79.1	+22.9
Manufacturing	129.2	100.9	+28.3
Services	100.5	101.3	—0.8
Total	443.3	376.8	+66.5

Due to various special circumstances, the net British private investment in India has been relatively small in recent years. It fell from Rs 6.3 crores in 1957 to an actual disinvestment of Rs 2.0 crores in 1958, but rose to a net total of Rs 1.5 crores in 1959.

The main reason for this was that certain British firms were repatriating substantial sums. For example, life insurance companies whose business was nationalised had the proceeds of compensation to remit. There were also adjustments in the balances of the oil companies in 1958. In gross terms, new investment in both 1958 and 1959 was well maintained at Rs 20 crores and Rs 16 crores respectively. This included a net addition of over Rs 12 crores in manufacturing industry in the two year period.

About half the net increase in British private investment comes from profits which are ploughed back into the Indian activities of the companies concerned. In 1960, retained profits of all foreign private investment in India amounted to Rs 14.5 crores, of which profits from companies with British interests accounted for about two-thirds.

The main sources of foreign private investment in India are Britain, the USA, Switzerland and West Germany. Britain leads with a total investment of Rs 443 crores, followed by the USA with Rs 72.6 crores, Switzerland with Rs 8.9 crores and Western Germany with Rs 6.8 crores. Canada, Japan, Pakistan and Malaya together account for a further Rs 14.1 crores.

Official investments from abroad in the private sector in India amount to Rs 124.1 crores, of which Rs 78.1 crores is from the World Bank, Rs 40.1 crores from the USA (mostly DLF, and EXIM Bank long-term loans), Rs 3.1 crores from Britain and Rs 2.8 crores from other sources.

Most of the new foreign private investment has been channelled into manufacturing industry. Britain has provided almost all the

existing private foreign investment in plantations, mining and services and two-thirds of the investment in the oil industry. In manufacturing industry British private investment stands at Rs 129.2 crores, as against Rs 21.5 crores from U.S.A., Rs 7.0 crores from Switzerland and Rs 6.9 crores from Western Germany. The World Bank and U.S. official sources have provided long-term loans in this field totalling Rs 104.7 crores.

A useful indication of the trend in foreign business interest in India is provided by the Indian Government figures of new industrial collaboration agreements approved between Indian and foreign firms. There has been some decline in the number of schemes approved in 1962 as compared with previous years. This is probably due partly to uncertainties arising from the foreign exchange difficulties and partly to the more exacting tests now being applied by the Indian authorities to ensure that these agreements are of the maximum value to the country's economy and accord with the present priorities for development. The following table shows the total number of schemes approved and the share of the main investing countries in them:—

	Total*	UK	USA	West Germany	Japan	Others
1959-60	171	51	27	29	15	49
1960-61	428	137	69	85	38	99
1961-62	425	129	97	62	31	106
1962-63	123	36	16	19	12	40
April-Sept.						
Total	1,147	353	209	195	96	294

*Schemes Approved.

British firms have, therefore, been concerned in over 31% of all collaboration agreements approved in the past three and a half years.

EID-PARRY

Bright Outlook

It is a measure of the complexity of the problems facing the sugar industry that it is not free from some serious worry or other for long. It was only a couple of years ago that over production posed a serious problem. Export of excess production is not proving to be an easy task mainly because the price of our sugar is much above the world price of this commodity. It has also been found that the kind of sugar we manufacture has practically no market abroad. Energetic steps have been taken to foster exports and plans have also been drawn up for the manufacture of raw sugar which however, unlike crystal sugar, has a widening world market. Simultaneously, a ten per cent cut on production was imposed last year with a view to bringing domestic production within manageable proportions. Some of these measures have hardly taken effect be-

fore the industry has been overtaken by the fear of production lagging behind demand. There are reports of closure of sugar factories in the UP and Bihar. The reason is said to be large scale diversion of sugar cane to jaggery and kandsari production. Sugar factories are not getting enough cane to keep going. The obvious explanation is that cane growers are finding it not profitable to sell cane to sugar factories especially after the coming into effect of the new formula linking price of cane to the recovery of sugar. It is feared that because of the shortage of cane to factories, there may be a serious shortage of sugar supply. In a statement circulated to the share holders of the EID-Parry Limited, the company's Chairman, Mr H. V. R. Iengar, however thinks that there is no need to feel unduly concerned over the fall in sugar production. He has pointed out that provided no fresh export commitments are made and distribution of sugar is judiciously carried out even the anticipated short production should be adequate to meet the domestic demand, export commitments and leave a fairly comfortable surplus to be carried over into the next season. Assuming that the current season's production at 25 lakh tons, there will be available a total quantity of about 35 lakh tons as there is a carryover of 10.2 lakh tons from the previous season. As against this 25 lakh tons will go for domestic demand and another 4 lakh tons will have to be kept apart to meet the export commitment. There will thus be a balance of 6 lakh tons and, this quantity is the normal carryover.

Cane supply however is not the only difficulty confronting the sugar industry. The EID-Parry sugar factories may be obliged to restrict their crushing season, for entirely different reasons. The new sugar cane price arrangement has increased the cost of cane in the South by virtue of the interpretation that Government has chosen to place on the term "prescribed duration." Furthermore, the Madras Government has imposed a cess of Rs 5 per tonne of

cane besides the sales tax of 3 per cent ad valorem. These imposts have added to the already existing burden.

The reduced profit of the group is due to the expenses in connection with the Ennore Fertiliser project. Even so the dividend has been maintained without recourse to the dividend equalisation fund expressly created for such a contingency. The outlook for profits of the group appears fairly bright now that the Ennore fertiliser project is in full production. The factory, which has been recently inaugurated by the Union Minister of Steel and Heavy Industry, is a complex unit, incorporating many new features in the manufacture of compound fertilisers. With the commissioning of the fertiliser factory and the completion of the pottery expansion, the earnings of the group should considerably improve. Mr Iengar has however cautioned against over-optimism in view of the possibility of heavy taxation being imposed on the corporate sector in the coming central budget.

Look what you get with HONEYWELL instrumentation

Far more than just instruments, you get a complete control system, custom designed for your specific needs, by men who know your processes.

You get expert, interested assistance every step of the way, with your initial planning and long after your instruments are installed. Blue Star assume full responsibility for the engineering, installation and start-up of your system.

You get training for your instrument technicians in the most up-to-date

maintenance methods at the tuition-free Blue Star-Honeywell Instrumentation Education Centre at Bombay. You get prompt, competent service from your nearest Blue Star office and immediate replacement of emergency repair parts.

These are but some of the plus-values that comprise instrumentation by Honeywell...and they apply regardless of whether you buy a single instrument, a replacement part or a complete control system.

HIGHLIGHTS OF THE RAILWAY BUDGET

Railways and the Third Plan

The original estimate of the cost of the Railways development programme during the Third Plan was fixed at Rs 1,325 crores on the assumption, among others, of an originating freight traffic of 24½ million tons. Since then, there has emerged a more detailed picture of the fieldwise production and directionwise movement of coal. Allowing for the increase in coal traffic and also general traffic and for certain preparatory work for larger movement of general goods, an additional outlay of Rs 145 crores with a foreign exchange content of Rs 19 crores has been approved by the Planning Commission. Of this additional outlay, Rs 120 crores are for increased coal movement and Rs 25 crores are for movement of general goods and certain preparatory tasks of the Fourth Plan. With an additional allocation of Rs 65 crores for the acquisition of rolling stock anticipated by the Railway Minister, the Railways outlay on the Third Plan will go upto Rs 1,535 crores and this is expected to create a capacity for an originating freight traffic of 260 million tons per annum at the end of the Third Plan, instead of 245 million tons per annum originally envisaged.

Capital Outlay

Expenditure on the works, machinery and rolling stock programme during 1961-62 worked out to Rs 233.88 crores. The revised estimate for the current year is put at Rs 307.74 crores as against the original budget estimate of Rs 295.0 crores and minor supple-

mentary token demands voted later in the year. The increase is mainly under the head track renewal and electrification including electrical rolling stock. The Budget estimate for the year 1963-64 under the head is fixed at Rs 325 crores. This is to be found, as to Rs 218.5 crores from "capital," as to Rs 68 crores out of Depreciation Reserve Fund, as to Rs 26 crores out of Development Fund and as to Rs 12.5 crores out of revenue account expenditure on open line works.

Operation-Cum-Efficiency Index

An approximate overall operating-cum-efficiency index has been worked out in the Review of performance of the Indian Railways circulated with the Budget papers. This takes into account the average indices worked out for 15 criteria of performance among which are engine-kilometres per engine-day, wagon-kilometres per wagon-day, tonne-kilometres per goods-train-hour, kilogram-consumption of fuel ton-kilometre. A composite figure for both gauges is arrived at in the proportion of the sum of passenger kilometres and net tonne kilometres, on each gauge, to the total. Very rough operating-cum-efficiency index figures with 1938-39 as base are as follows:

1938-39	..	..	100
1950-51	..	..	98.8
1951-52	..	..	100.6
1952-56	..	..	105.2
1956-57	..	..	107.2
1957-58	..	..	109.7
1958-59	..	..	109.0
1959-60	..	..	112.7
1960-61	..	..	115.1
1961-62	..	..	114.3
1961-62 (April-Dec.)	..	..	115.4
1962-63 (April-Dec.)	..	..	117.5

RAILWAY BUDGET AT A GLANCE

	Actuals 1961-62	(Rupees in crores) Budget 1962-63	Revised Estimate 1962-63	Budget 1963-64

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

WITH the Budget but a week away, the air is thick with rumours of impending doom (and some small mercies). Some of the ideas that have been conjured up in a dither of anticipatory panic may not have occurred even to the Finance Minister who may now proceed to confirm one's worst fears by gratefully examining them. At least one friend of mine refused to be drawn into a discussion of the possibilities for fear that the levies his frenetic fiscal imagination can think up will be promptly seized upon by Mr Desai. Anyway, the much advertised inevitability of new burdens has made for a more than usually varied catch of fiscal novelties. Consensus, within a narrow range of variation, on some of the basic expectations, there is. The defence outlay is expected to be roughly twice the current year's (inclusive of the supplementary demand voted in November last) which means that an additional Rs 400 crores will have to be found. The Plan outlay for the year has been put at over Rs 944 crores for the Centre, which is over Rs 232 crores more than of last year. Both have their foreign exchange and the capital budget aspect which we need not go into at any great length here. Suffice it to say that the general expectation is that the new tax effort that is generally envisaged is between Rs 100 and Rs 150 crores, though I have seen some theoretical projections (based on defence expenditure as a percentage of national income) which put the annual additional tax effort at more than Rs 200 crores.

The optimists who hope for the lower figure point to buoyancy of revenue in recent years which will bring much more than the budgeted yield of Rs 61 crores in the current year and therefore even more in the coming full year. (Latest indications, however, are that at least in respect of some items of direct taxation, this hope may turn out to be somewhat exaggerated). They point also to some windfall receipts in the outgoing Budget. The Railways, for example, are giving the General Revenues about Rs 81 crores, Rs 4 crores of which is the result of increase in the rate of dividend. Secondly, the increased dividend as well as the higher allocation of Rs 10 crores to the Depreciation Reserve Fund will considerably ease the ways and means position of Government. More importantly, the pre-

mia for Emergency Risks Insurance are, unless there is resumption of active hostilities, likely to put sizable sums—some estimates put it as high as Rs 40 crores—in Government's hands. This amount is not, of course, a revenue receipt. It would presumably figure in accounts as a fund like, say, the Provident Fund of Government servants.

Of the anticipated taxes, the most feared and most spoken of as inevitable is an increase in corporate taxation. A five per cent increase is freely mentioned. I myself think that such a blanket increase would be wrong for at least two reasons. First, the tax on companies was raised only last year despite earlier representations that the change-over to a 45 per cent tax plus the abolition of grossing up did not leave companies where they were before as was assumed when the change was made. Secondly, the lower corporate earnings feared this year would also belie the expectations that last year's increase would be taken in stride. Further increase would cut more sharply into the available resources of the companies who have had (and are having) massive burdens laid on them by the Centre (like the Emergency Risks Insurance) and by the State Government's (like West Bengal's levy on industrial power). The revival of the Excess Profits Tax, which is also mentioned as a possibility, has very little revenue attraction, since the standard profit computation like the one in vogue during the war years would leave little excess profits to tax. On the other hand, there is something to be said for a selective increase in corporate tax which will have some of the characteristics of the Excess Profits Tax without its conventional mechanism. For example, a five per cent levy on profits in excess of what the Tariff Commission considers reasonable return in some of its price-fixing formulae, would in effect be Excess Profits Tax, with even socialistic pretensions. I cannot say offhand how much such a tax would net. It will, of course be less than what a blanket increase of five per cent on all companies would fetch which is estimated at anything between Rs 15 crores and Rs 20 crores, on the assumption that last year's Budget estimate of a yield of Rs 10.50 crores on a similar five per cent increase may prove an under-estimate.

Incidentally, some among those who think that a five per cent increase is inevitable hope, rather naively, that the increase would be allowed to be passed on to the shareholder by an increase in the deduction from dividend payable. This can be done by the increase being in income tax rather than in corporation tax (super-tax on companies). This was not how it was done last year and it is very unlikely this year for the net tax result of this arrangement would be nil (or almost nil) since Government will have to give credit for the tax deducted in the shareholder's assessment. The net receipt to the Government would therefore be only the tax deducted that is not claimed by the shareholder in his own assessment. (By the way, the extent of such unclaimed windfall is sometimes suspected to be considerable, but that can hardly be a matter for gloating for Government: People who are content to lose money due to them have usually good reasons for being so!)

For the rest, the changes in direct taxation considered most likely are marginal adjustments in Wealth Tax (whose yield up to December has been very disappointing) and Estate Duty, increases in the middle reaches of income tax and possibly a lowering of the limit of non-taxable income. This last is, in my view, best done more in the form of compulsory saving rather than tax, for several reasons. Contribution from the poorer sections of the people to defence and developmental effort should, in my opinion, be grafted to a scheme of small savings rather than tax. After all, a man who gets, say, two hundred rupees a month is really a poor man in the eyes of the law, considering how little a hundred rupees buy these days. On the other hand, adopting this Keynesian notion of a compulsory saving would be a form of eating the cake and having it too. The sum is available to Government, excess purchasing power is withdrawn, money that would probably have been consumed is made to earn an income for the individual and finally he is providing himself with a nest-egg. There is also another psychological advantage. At the moment small savings are voluntary but complaint about subtle and not so subtle forms of pressure is widespread. A well-thought-out scheme of compulsory savings in the form of defence certificates would make the element of compulsion respectable by making it formal, instead of furtively illegal as it sometimes is now. If the scheme is extended to

all incomes, both agricultural and non-agricultural, I have no doubt that small savings would take care of a substantial portion of our requirements. I should imagine that the agencies of collection of various taxes that now exist can take charge of the collection in the form of savings, though the details need working out. Government's intentions in this regard so far bruited, however, are more modestly confined to compulsory savings by Government servants or at best other kinds of salary earners as well. There was, if I remember right, during the war years, a scheme of "funding" involving some sort of compulsory "refundable" levy on salary earners. This, however, was not tied up with small savings. But the entire idea of compulsory saving on a wide scale is worth examining.

Among the other levies suggested is a tax on bank Deposits, which the Finance Minister will do well to dismiss out of his mind, if it has entered it at all. Any discouragement to putting money in the bank should be avoided, for monetary and tax reasons, especially when there is a lot of it about. Tax on cheques, an exciseism sought to be imported from Ceylon, is again capable of driving money outside the banking and tax-paying systems, with no good to anyone. Tax on Advances may more plausibly be presented as a fiscal supplement to monetary measures to curb excessive expansion of credit and to bring about a more desirable debt-equity ratio. Here again, the objection to blanket curbs on credit instead of selective ones that I have advanced for monetary reasons from time to time holds good in the fiscal context. A tax on import licences—some have even suggested their auction—is sometimes mentioned as a desirable fiscal and economic measure. Imports on private account are estimated at about Rs 300 crores annually and a levy that will roughly absorb the premia at which these licences are openly hawked in the market will put into Government's pocket moneys now going into private ones. The argument that costs will be pushed up by the levy doesn't hold water since the premia paid does it anyway and no new burden will be cast by the tax.

Finally, excise levies will almost certainly be increased both in range and depth, especially on luxury items. One only hopes that the Finance Minister will spare industrial raw materials. And if Mr Desai is too much of a Gandhian to scrap prohibition—and anyway the beneficiary of such a decision will be principally the States rather than the Centre—he is enough of a realist to overcome reasons of sentiment for imposing a levy on salt. Anyway, we shan't have to wait for long to know the worst.

Railway Performance

The account of the striking improvement in Railway performance during the current year is the most heartening feature of the statement made by Sirdar Swaran Singh while presenting the Railway Budget for 1963-64. The various indices of operating efficiency, regarding the usage of rolling stock etc., are presented in the review brought out by the Directorate of Statistics and Economic Advice Branch of the Railway Board. But as far as the general public are concerned, the most convincing evidence of the Railway's achievements will be found in the improvement in freight loading generally and, in particular, the figures of coal loadings to which the Minister has drawn attention in his budget address.

During the first ten months of the current year the daily average loading shows an increase of 1853 wagons on the broad gauge and of 177 wagons on the metre gauge as

compared with the corresponding period of 1961-62. The increase is of the order of ten per cent on the broad gauge and of about five per cent on the metre gauge. The movement of coal, to which industry is particularly sensitive, also shows steady improvement. The daily average loading in 1961-62 was 5999 wagons as against 5668 wagons in 1960-61. The daily average loading in Bengal-Bihar coalfields rose from 4481 wagons in 1960-61 to 4799 wagons in 1961-62, an increase of about seven per cent.

The improvement has been maintained during the current year. During the first ten months of 1962-63 the daily loading from Bengal-Bihar coal fields at 5199 wagons shows a rise of 8.7 per cent over the corresponding period of the previous year. The daily loading from all coal fields has averaged 6552 wagons as against 5976 wagons in the previous year, an increase of 9.6 per cent.

The Minister has pointed out that the requirements of coal for the Steel Plants and the Washeries continued to be met in full. The

Railway Plan was drawn up primarily to meet the requirements of the Steel Plants which, moreover, have not come up to expectations. The fact that the requirements of Steel Plants have been met in full cannot therefore be counted as a major achievement. The real test of the Railways' performance as regards movements of coal is the improvement in supplies to 'Other Consumers.' It is gratifying that Railways are able to report progress in this field also. Movement to 'Other Consumers' during the first ten months of the current year from Bengal-Bihar coal fields has been of the order of 3725 wagons a day as against the daily average of 3580 wagons in the previous year, and it is expected that the rate of increase will be progressively stepped up in the remaining years of the Plan. Movement of coal to destinations to the West of Moghalsarai has also shown improvement, an average of 1986 coal wagons being moved during the period April 1962 to January 1963 as compared with 1891 wagons in the corresponding period of the previous year.

The improvement in the movement of coal indicated by these figures does not mean that the requirements of consumers are being met in full. But it cannot be denied that complaints of shortage of wagons for coal movement are now much less frequent than they were even a few months ago. Further improvement in coal movement should be possible if the difficulties in the way of transporting coal in block rakes to selected destinations are overcome. Immediate improvement in the transport of coal, as well as of other goods, should be possible, if industry and trade are able to ensure that there is no interruption of loading on Sundays and holidays. The shortfall in loading on Sundays is estimated at about 850 wagons per day for coal alone, while the overall shortfall is of the order of 1800 to 2000 wagons.

The total goods loading during the first ten months of the current year has registered an increase of 13.2 million tons. The target of additional freight to be carried by the Railways during the year is 15 million tons, and by present indications, there is a reasonable expectation that actual performance will be above rather than below the target set. The figure of 15 million tons includes about 7.5 million tons on account of the Steel Plants. But requirements of the Steel Plants have not developed to the expected level and the additional freight carried by the Railways during the year includes about 3 million tons of general goods more than was provided in the Plan. The facilities created for Steel Plants cannot be transferred elsewhere to cater to other traffic, and the actual performance would

have been far better if Steel Plant traffic had been up to expectations. For the coming year, the target for additional traffic has been set at 17 million tons, which includes two million tons of coal from Bengal and Bihar for 'Other Consumers.' To judge by performance during the current year, the Railways should be able to achieve this target for additional traffic and availability of coal for 'Other Consumers' during 1963 should show a distinct improvement.

The performance of the Railways stands out in clear relief when viewed against the background of the Emergency which has made heavy demands on the Railway system. It is relevant to point out in this context that the increased goods traffic discussed above is additional to the emergency movements of men and material (included in the category of coaching traffic, which the Railways have undertaken at short notice. It is a matter of the greatest credit to all concerned with running the Railways, that the additional traffic resulting from the Emergency an increase of 65 per cent on North Eastern Railway—has been carried with practically no interruptions or curtailment of normal passenger services and movements of civil supplies.

If the tempo of improvement in Railway traffic and, especially, of industrial materials is maintained, industry will not grudge the increase in freight rates announced by the Railway Minister, though the incidence on costs and prices may not be as insignificant as he tried to make out. The opposition to the freight increase, which have been the natural reaction in normal circumstances, will be subdued, especially as the proceeds of the surcharge are intended immediately to provide additional resources to the general revenues towards the defence effort. Out of the additional revenue of Rs 19 crores proposed to be raised during the current year, about Rs 4 crores will be for increasing the dividend to the General Exchequer, Rs 10 crores for additional provision for Depreciation Reserve and the balance of five crores will strengthen the Railway Development Fund. The total provision for Depreciation Reserve is Rs 10 crores more than the average contribution of Rs 70 crores which was recommended by the Railway Convention Committee for the Third Plan period. Apart from all other considerations, the very low level of the balance in this Fund justifies the larger allocation, which still remains inadequate when viewed against the needs of replacement. The additions to the Depreciation Reserve and the Railway Development Fund, besides serving the long-term purpose of strengthening the finances of the Railways, will also provide immediate additional funds for general revenues.

Markets

JUTE Easier Trend

Prices of jute goods declined rather sharply during the past week due to selling pressure in the futures market following continued absence of fresh business of any importance. Earlier expectations of sustained foreign enquiries in hessian and further Government of India orders for sacking did not materialise while the trends of exports, and US burlap consumption last month did not engender enthusiasm. Despatches of jute goods from Mills in January 1963 amounted to only 94,900 tonnes as compared to 11,900 tonnes in the previous month. Despatches for export were sharply lower at 63,700 tonnes against 81,400 tonnes. The decline is shared by all the categories. While despatches for exports of hessian are lower by 9,100 tonnes at 37,900 tonnes, those for sacking are down by 8,100 tonnes at 18,300 tonnes. In the case of other goods also despatches are lower by 500 tonnes at 7,500 tonnes. There has however been a slight improvement in despatches for internal consumption with the total at 31,200 tonnes as compared with 30,500 tonnes. The setback in sentiment was accentuated by the disappointing news about burlap consumption and stocks in January in the US. Burlap consumption has declined by 6 million yards to 68 million yards in January while stocks have nearly increased by 29 million yards to stand at the end of the month at 306 million yards. The steep rise in stocks has engendered the apprehension that US buying of hessian in coming weeks will be poor. Neither the trend of export nor the decline in burlap consumption last month should unduly depress sentiment. Because as far as hessian is concerned the statistical position is quite satisfactory. Exports of hessian in the first five months of the current jute season have been on a high level. Burlap consumption in US has also been well maintained. Moreover, stocks of hessian with mills as at the end of January are only slightly more than a month's output. Even in the case of sacking, shipments have been higher than in the previous year though the rising trend in stocks is a matter for some concern. It is only to be expected that foreign buyers will not be in any undue hurry to buy because for one thing they are comfortably stocked and for another in spite of rising trend of stocks jute mills in India are continuing capacity production.

The jute goods market commenced the week on a steady note with 40"X10 oz ready at Rs 51.20 and the price even gained some further ground in the course of the next two sessions, to be placed at Rs 51.30 on Saturday. Thereafter, however, sentiment deteriorated with the rates developing a declining tendency. By close on Wednesday the rate came down to Rs 49.80 largely because of the disappointment caused by the rather sharp rise in burlap stocks in the US and the fall in burlap consumption during last month. The reaction tendency was however well pronounced in the case of sacking. B Twills Ready showed a sharp loss over the week having been pushed down to Rs 113.25 from Rs 116.40 last Thursday. In the future section, Hessian February receded to Rs 49.32 from Rs 51.00 with Hessian May almost a point lower on balance at Rs 48.50. B Twills February futures eased to Rs 112.85 from Rs 116.70, while the May position came back to Rs 113.55 from Rs 115.50.

The raw jute market also developed a slightly easier trend which was in marked contrast to the steady improvement in prices of those varieties of jute which till recently failed to attain the

minimum price levels. During the past week, although holders continued to be reluctant to discount rates, the number of sellers was larger than in the previous week.

TEA Better Demand at Easier Rates

IN the Export Sale held in Calcutta this week, offerings were 73,030 packages of Leaf grades. There was a better demand than in the previous week; but prices again followed an easier tendency. Plain orthodox descriptions were sold readily at slightly lower rates, although exportable Fannings were sometimes dearer. The plainest kinds came to a firm market. The brighter Dooars descriptions and medium Assams were readily absorbed, but shared in the general decline in prices. Selected better liquoring Assam BOPs and Orange Fannings were sometimes dearer.

Medium CTC descriptions met with good enquiry, but declined by 10 NP to 20 NP per kilo with Fannings stronger than the previous week. The few best teas were sold well although at slightly easier rates. BPs came in for more competition than their equivalent Fannings. Legg-cut teas were sold readily, but followed the easier trend of the market.

Whole Leaf grades and Tippy sorts met with useful demand. Though irregular, they generally registered a slight decline in prices. The few end-of-the-season Darjeeling teas, on offer, were readily absorbed. Following rates were quoted:—Clean Plain Pekoe Rs 4.70 to Rs 4.90; Plain BP Rs 4.00 to Rs 4.20; Plain Fannings Rs 4.00 to Rs 4.30; Medium Assam CTC BP Rs 5.50 to Rs 5.70; Medium Assam CTC Fannings Rs 5.20 to Rs 5.50; Best Assam CTC BP Rs 5.90 to Rs 6.10 and Best Assam CTC Fannings Rs 5.70 to Rs 5.90.

In the Internal Sale, offerings consisted of 28,806 packages of Dusts. There was a good general demand. Medium CTC were sold readily, but were irregular with the selected lines realising higher prices. The fibrous descriptions received better support and were dearer. Plain and medium orthodox types commenced selling at firm rates, but demand improved and, towards the close, were dearer. Legg-cut teas were the strongest feature of the sale and were absorbed readily at firm to dearer rates. Following rates were quoted:—Plain Orthodox Dust Rs 4.00 to Rs 4.40; Medium Assam Dust Rs 4.40 to Rs 5.00; Legg-cut Dust Rs 5.00 to Rs 5.40; Medium Assam CTC Dust Rs 5.60 to Rs 6.20 and Best Assam CTC Dust Rs 6.60 to Rs 6.80.

Measures for increasing the export of Indian tea to Japan are under consideration of the Tea Board. At present, India's share in Japan's tea imports is negligible. About 85 per cent of the black tea imported into Japan is obtained from Ceylon and India's share is less than two per cent. Last year,

the wrong level of oil can make tempers boil

If the oil level in your Car is low by the dipstick don't just lose your temper. An Tenkay Oil Pressure Gauge will help you read the oil pressure easily and accurately and thus prolong engine life.

MARTIN BURN LOOK BACK TO OVER 180 YEARS OF SERVICE TO INDIA

... TO BE ABLE TO COMPUTE THIS SERVICE BY DECADES, not by years alone ... to recall that our *cre* has consistently been the development of our country's resources through engineering and allied enterprises ... to take pride in planning that makes the many units in our organization fall into a rational and complementary group and each one a leader in its particular field, a position which some of them, early pioneers in India, held even in the last century. For us looking back is a worthwhile proposition—an incentive to move forward.

AMONG THE COMPANIES IN THE MARTIN BURN GROUP ARE :

THE INDIAN IRON & STEEL CO. LTD. : With a million ton integrated steel plant at Burnpur, the largest dry in the Commonwealth at Kulti, its own collieries and iron ore mines, IISCO has an enviable record in production efficiency.

BURN & CO., LTD. HOWRAH WORKS : Pioneers in foundry practice in India, in structural steelwork fabrication and the manufacture of rolling stock—the origins of the Company date back to the year 1781.

BURN & CO. LTD., REFRACTORY & CERAMIC GROUP : Apart from stoneware pipes and chemical stoneware, the works of this group—eight in number and located in four states—manufacture nearly all types of refractory to meet the requirements of Indian steel industry, power undertakings, railways, ordnance factories—in any industry requiring refractory material for the maintenance of furnaces.

THE INDIAN STANDARD WAGON CO. LTD., SANTA CLARA : The oldest Indian unit started for the specific purpose of manufacturing rolling stock—has been mainly responsible for building up the wagon manufacturing industry. Also manufactures forgings, pressings and stamping heavy industry as well as automobile components.

THE HOOGHLY DOCKING & ENGINEERING CO. LTD. : Established in 1819, the Company has a shipbuilding yard, a dry dock and extensive workshops at Salkia.

ROBERT HUDSON (INDIA) LTD. : A premier concern in its own field, the Company devotes itself to all types of light railway engineering—has important connections with the mining industries.

LIGHT RAILWAY COMPANIES : Some of the first feeder light railways in India, with six systems in five states.

ELECTRIC SUPPLY COMPANIES : Pioneers again in the generation and distribution of domestic power in India—serve 45 towns in Uttar Pradesh and Madhya Pradesh.

THE VAUGHAN BURN CRANE COMPANY LTD. : A collaboration with The Vaughan Crane Company Ltd. of Manchester—manufactures hand operated and electric overhead travelling cranes and chain pulley blocks.

MARTIN BURN LIMITED Calcutta New Delhi Bombay Kanpur Patna

Calcutta supplied 10,136 pounds of tea and Cochin 3,775 pounds to Japan.

Indian tea was paid a higher price, because of its superior quality. Consumption of black tea in Japan, which had increased by about four times in recent years, is expected to rise further by about 10 per cent each year in the next few years. The present per capita consumption is 0.78 kg. The Tea Board also proposes to conduct an intensive publicity campaign to popularise Indian tea in Japan.

Meanwhile, the President of the

Calcutta Tea Merchants' Association has urged the Government of India to abolish the export duty on tea as an incentive to boost tea exports. He has stated that the reduction in the export duty in the last year's budget has resulted in an increased shipment of Indian tea by 8.7 million kilogrammes despite a poorer crop. The President has also pleaded for changing the present system of assessing levies on tea at different points by different authorities into a single all-embracing tax levied at the source.

According to tea circles from Ceylon, tea exports from that centre have shown an improvement and the shipments, in the first eleven months of last year, have totalled 419.16 million pounds as against only 396.16 million pounds in the corresponding period of 1961.

Tea production in East Africa has increased to 5.81 million pounds in November 1962 from 5.57 million pounds in the previous month and 5.36 million pounds in November 1961.

In London auction, offerings were 22,855 packages including 18,834 packages from Northern India and 715 packages from Pakistan. There was less demand at the auction and the market was irregular and often easier except for the bright liquoring teas which remained fully firm. Rates remained unchanged.

★

Sugar Spurts

DESPITE the release of 225,000 tons for February against 200,000 tons in January for free sale, Sugar prices have shot up owing to the reluctance of factories to sell their stocks. In the Hapur market, the rate is quoted at Rs 112.50 per quintal for spot delivery.

Apart from fears of a likely shortage in the near future, demand has been on the increase with the approach of the hot season. There is a general feeling that the market may continue to rule firm until the announcement of the Central Budget. If the excise duty is not increased as speculated keenly by the traders, the price of the commodity is expected to react by only Re 1 or Rs 2 per quintal. This is mainly due to the definite signs that the production will be lower for the current season.

The trade expectations are that the output will not exceed 2,300,000 tons as compared to the last season's level of 2,700,000 tons. The output of sugar for November 1962/January 1963 quarter is estimated at 1,225,000 tons. February is a peak month for the production of sugar and the preformance during the month will be a decisive factor so far as the overall production is concerned. Moreover, the quantum of production depends upon the duration of the crushing season. It is likely that the crushing will cease by the end of March. Normally, it lasts up to the beginning of May.

★

GUR

Good Offtake

Gur markets are ruling steady owing to good buying support from the consuming areas. In the Hapur market, the rate for the superior variety is quoted at Rs 50.91 and the average quality at Rs 50.24. Trade circles in Bombay are intrigued by the unusually

large offtake by Gujarat this season. It is apprehended that the commodity is perhaps finding its way beyond the country's borders.

Kolhapur is not the only source of gur supply for Gujarat. Heavy purchases by Gujarat are also reported from the South and from Uttar Pradesh. Such a big quantity is not normally consumed by Gujarat. There are reasons to believe that gur is being smuggled to Pakistan.

★

NON-FERROUS METALS

Scramble for Supplies

Prices of Non-Ferrous Metals have suffered a further setback, which is attributed to the dwindling demand influenced by the prevailing high prices. Copper and Zinc are the worst to suffer, while Tin and Lead are fairly steady. Copper coil, which was marked up to Rs 378 per 50 kg, has declined to Rs 372. Zinc touched the peak of Rs 278 per 100 kg in its recent upward march from Rs 250 on 7 February. But the metal has now lost Rs 8 from the highest level. Tin and Lead have, however, managed to maintain their levels of Rs 300 (per 10 gram) and Rs 176 (per 100 kg) respectively.

Market circles are surprised that the tendency, which ought to be bullish in view of the shortage of stocks and the impending burden of the likely increase in the duties, is just the contrary as reflected by the decline in prices.

★

COFFEE

Export Sale

The Coffee Board has released 1,188.90 tonnes of coffee for export by "closed tenders" from the 1962-63 crop to non-bilateral quota countries and bilateral quota countries at Mangalore, consisting of the following:—

	Non-bilateral countries	Bilateral countries
Plantation A ..	307.60	399.30
Plantation ..	184.50	Nil
Plantation Triage ..	77.70	199.80
Total ..	569.80	599.10

According to a trade report, it will be difficult for Indian coffee to find a market in Japan unless the Coffee Board shows some special concession to that country. Coffee consumption is reported to be fast increasing in Japan. Japan's total import of coffee was 250 million bags in 1962 as compared to only 197 million bags in 1960. As Japan is considered to be a new market for coffee, the International Coffee Committee is offering coffee to Japan at 5 per cent below the world price.

GINGER Prices Up

Ginger has recorded a sharp rise in prices on hectic purchases by shippers both in Bombay and at terminal markets. Heavy purchases are being reported against the previous export commitments. According to trade circles, more than 5,000 bags have been covered at Cochin. A similar quantity has been bought at Calicut, too. The Bombay market has also reported business to the extent of about 2,000 bags.

The rush for the commodity has been inspired by the latest business with Jeddah and London. Shippers are, therefore, compelled to cover their requirements from the producing areas. The rise in prices in Bombay is about Rs 10 per 50 kg in a week. At Cochin, it is about Rs 15 per 50 kg. Export demand apart, the general shortage of supply has also contributed to the rise in prices.

★

GOLD & SILVER

Hectic Buying in Silver

Silver is again in the news. With the continued firmness of the London and New markets, new high levels have been touched in the Bombay market. The suspension of forward trading in all the centres has not been helpful in checking a further rise in prices, as the general feeling in the international markets is bullish. With the increasing demand for the white metal for industrial purposes and a widening gap between supply and consumption, it had been anticipated by leading bullion brokers in New York and London that throughout 1963 the upward trend in prices would remain in evidence. Unless there is disgorging of hoarded stocks and an unexpected increase in output, this trend may not be reversed. In the Bombay market, the rate has moved up further to Rs 238 from Rs 236. The offtake is said to be 15 bars against an arrival of 20 bars.

In the Gold section, the unofficial rate was quoted at Rs 102 for gold bars and Rs 99 for gold ornaments. Sovereign is quoted around Rs 73.

★

OILS & OILSEEDS

Generally Weak

Conditions on the Bombay Oilseeds Exchange remained generally weak and prices movements were irregular. In the Groundnut section, bull operators became nervous as a result of the sustained inflow of ready supplies. Even the reports of business done in refined groundnut oil with Spain failed to arrest the setback in prices. Estimates of business with Spain

varied considerably from shipper to shipper; but the total business appeared to be around 1,200 tons on the basis of £107 per ton in barrels. This business was put through on a barter basis, the item to be imported being copra. The demand for groundnut extraction remained sporadic, prices being £34½ for spot supplies and £34½ for February delivery. Locally, the rate for Groundnut Bold quality was quoted at Rs 40.12 and Groundnut Oil at Rs 16.50.

In the Castorseed section, trading was devoid of interest. The conditions in the export trade in castor oil remained dull with the UK prices being indicated nominally at £111 for the BSS grade and £105 for the commercial quality. Castor ready was quoted at Rs 31.62 and Castor Oil, commercial quality, at Rs 12.75.

In the Linseed section, prices displayed an easier tendency on favourable reports of the new crop of rapeseed. Ready was quoted at Rs 32.40 and Linseed Oil at Rs 13.25.

★

COTTON

Export Quota for Bengal Deshi

The Government of India has released a further quota of 75,000 bales of Bengal Deshi for exports. The press note issued in this connection by the Textile Commissioner states that 20 per cent of the quota will be reserved for the co-operative societies. Exporters in Bombay acknowledged the announcement gratefully and the speed with which the quota has been released has come as a surprise to them. Along with the quota for Bengal Deshi, the Government has also released a quota of 25,000 bales of short-staple cotton having a staple length not above 1½" for export. Both these quotas will be available for shipment by 31 August. A particular section of the trade thinks that the quota for Bengal Deshi will be exhausted within a month of two while the completion of quota for other short staple growth may take some more time.

The Bombay cotton futures market showed an irregular trend during the past week. The market opened on a steady tone consequent on the reports of sustained free buying by mills located in upcountry centres. The maturing Jarilla March contract edged forward to Rs 686.50 from the previous week's level of Rs 682.25 per three quintals. However in subsequent deals the contract turned distinctly easy largely on account of lack of follow up support and on Wednesday it went down to Rs 672.25. The reports of heavy arrivals of new crops led to bear hammering from upcountry operators. The sentiment was also depressed by the reports of a possibility of receiving US cotton under barter deals. Toward the

close of the week the contract rallied smartly to Rs 681.50 thanks to short covering and support from spot houses before finally closing at Rs 677.50.

The Jarilla May contract also fluctuated in sympathy with the maturing contract. After an early rise to Rs 696.00 from Rs 692.50 the new contract slipped down to Rs 680.00 but recovered to Rs 689.50 before closing at Rs 685.00 per three quintals.

The spot market at Sewri presented generally cheerful conditions with prominent mill groups accounting for large scale purchase of growths like Surti, Digvijay and Vijay. The buying spree was attributed to the desire of the mills to select quality cotton at the current cheaper prices. Scattered enquiries were also reported in CO 2, L 147 and 197/3 cottons.

In the export section the Bengal Deshi varieties moved up by about 40 points owing to the release of export quota of 75,000 bales. In the import section a steady demand for the American cotton was reported. East African and Sudan high quality cottons also met with good spinner interest during the week under review.

Addressing the annual general meeting of the East India Cotton Association Mr Madan Mohan Ruia entered a strong plea for stepping up cotton production and increasing the per acre yield so as to meet the mounting requirements of cotton textile industry in the country. The extreme dependence of the crop on the weather conditions, the lack of adequate irrigation facilities and the failure to adopt modern methods of cultivation are the main factors that keep down the production level. The allegation of Mr A. D. Pandit, the president of the Indian Central Cotton Committee, that the implementation of cotton development schemes by the State Governments had been far from satisfactory is also relevant in this connection. It is a pity that a few States have not implemented the package programme so far. Mr Pandit also suggested that the States Governments should simplify the procedure for the supply of fertilisers to the cotton cultivators. The Government should also undertake a probe to find out whether there has been any diversion of land from cotton to groundnut which is more remunerative and if necessary to arrest this trend.

PIECEGOODS

The piecegoods market continued to depict divergent conditions during the past week also. The offtake in the domestic sector was far from from encouraging while good business was reported in the export section. The wholesale traders were reluctant to enter into any new commitments beyond the end of the current month while some of the leading overseas buyers preferred to wait for the budget proposals before renewing their

purchases. The purchase for Ramzan also tapered off. In the powerloom sector, grey goods met some demand from West Bengal, UP, MP and Bihar. Demand for bleached goods was far from encouraging.

Good demand for superior varieties of mill made goods was reported last week. But the mills were disinclined to dispose of their goods in view of the coming Budget and the Government's decisions on the recommendations of the Tariff Commission.

On the export front the UK accounted for a moderate quantum of the usual varieties. Sudan evinced keen interest in sheetings and voiles though the offtake was not up to the expected level. East Africa accounted for a limited quantum of sheetings and drills while demand from West Africa was restricted to towels and coatings.

Ceylon was very active in the market with brisk enquiries for prints and tussore coatings. The trade is optimistic of substantial business with that destination in the immediate future.

BIRDS INVESTMENTS LIMITED.

NOTICE is hereby given that the Twenty-sixth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office, 4, Lyons Range, Calcutta, at 11:15 a.m. on Tuesday, the Nineteenth day of March, 1963, for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 30th September, 1962, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the dividends recommended by the Directors.
3. To elect Directors in place of Mr. N. D. Bangur and Mr. B. P. Ray who retire at the Meeting.
4. To appoint Auditors and fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company..

The Share Transfer Registers of the Company will be closed from 5th March, 1963, to 19th March, 1963, both days inclusive.

By Order of the Board,
LOVELOCK & LEWES,
Secretaries.

Registered Office:
4, Lyons Range,
Calcutta-1.
18th February, 1963.

NOTE:—Dividends, if declared, will be paid to registered Shareholders or their mandatees only.

Company Reports

Shree Changdeo Sugar Repeats

DESPITE a rise in sales from Rs 1.18 crores to Rs 1.39 crores, Shree Changdeo Sugar Mills Limited has made a net profit of only Rs 11 lakhs for the year ended 30 September 1962 as against Rs 13.19 lakhs for the preceding year. This lower profit is due to the provision for higher tax and depreciation.

In respect of allocations, Taxation is raised to Rs 12 lakhs from Rs 9.90 lakhs, while Depreciation is reduced to Rs 2.92 lakhs from Rs 2.78 lakhs; General Reserve to Rs 3.02 lakhs from Rs 5.28 lakhs and Development Rebate Reserve to Rs 5,269 from Rs 6,061. The dividend is however, maintained at Rs 2.50 per share, subject to tax.

The company's factory crushed 1,14,951 tonnes of cane during the season and achieved a production of 1,34,446 bags, resulting in excess production of 352 bags above the production quota fixed by the Government after taking into account the 10 per cent cut on the average production of the last two years. The final recovery percentage is 11.706 against 11.618 and this is responsible for exceeding the quota fixed by the Government.

Shree Sitaram Sugar Skips

The decline in the quantity of cane crushed from 15,87,000 quintals to 13,04,950 quintals and the rise in stocks of sugar accumulated with the factory are reflected in the working results of Shree Sitaram Sugar Company Limited for the year ended 31st August 1962. Although sales are shown higher at Rs 1.35 crores against Rs 1.05 crores, the accounts reveal a net loss of Rs 87,090 as against a net profit of Rs 1.42 lakhs for the preceding year.

In respect of allocations, Depreciation is reduced to Rs 1.22 lakhs from Rs 1.28 lakhs and Development Rebate Reserve to Rs 11,000 from Rs 13,000. No provision is made for Taxation against Rs 2.05 lakhs. The directors have passed over the dividend as against a taxable dividend of 75 nP paid previously.

Bhopal Sugar Pays Only 3% Against 15%

The decline in sales from Rs 51.68 lakhs to Rs 43.80 lakhs is reflected in the working results of the Bhopal Sugar Industries Limited for the year ended 30 September 1962. The net profit, after providing for Depreciation, Taxation and Development Rebate Reserve, is shown at only Rs 7,856 as against Rs 2.30 lakhs for the preceding year.

The Depreciation amount is raised to Rs 2.71 lakhs from Rs 2.48 lakhs, while Development Rebate Reserve is reduced to Rs 62,500 from Rs 88,400. No provision is made for Taxation against Rs 1.25 lakhs. After transferring Rs 66,000 from General Reserve; Rs 50,000 from Dividend Equalisation Fund and adding Rs 15,270 being the final realisation from ISMA in respect of 1960-61, the directors have been able to recommend a dividend of 3 per cent, less tax, on the ordinary shares as against a taxable dividend of 15 per cent paid previously.

The quantity of cane crushed is lower at 84,516 tonnes against 95,659 tonnes and the sugar manufactured at 80,595 tonnes against 87,347 tonnes.

Indian Aluminium Pays More

The directors of the Indian Aluminium Company, Limited have proposed a final dividend of Re 1 per share on fully paid-up shares, making a total of Rs 1.75 per share, subject to tax, for 1962. This compares with a taxable dividend of Rs 1.50 per share paid previously. They have also recommended a taxable dividend of 50 nP a share on partly paid-up shares.

According to a preliminary report, sales have increased from Rs 8.39 crores to Rs 10.50 crores. The net profit, after providing for Depreciation and depletion, Taxation and Development Rebate Reserve, amounts to Rs 1.26 crores as against Rs 1.05 crores in the previous year. Depreciation and

depletion are raised to Rs 1.06 crores from Rs 0.61 crore and Development Rebate Reserve to Rs 0.62 crore from Rs 0.46 crore. The provision for Taxation is slightly lower at Rs 0.53 crore against Rs 0.59 crore.

The integrated expansion programme was completed during the year. The expansion of the smelter at Hirakud in Orissa to a capacity of 20,300 tonnes of ingot per annum, which had been completed in November 1961, was fully commissioned on July 1, when full additional electric power was made available to the smelter. The expansion of sheet rolling facilities at Belur in West Bengal was completed in September, 1962 and the expanded facilities of the company's alumina plant at Muri in Bihar and its bauxite

mines at Lohardaga in Bihar were commissioned by March and April 1962 respectively. Installation of the new extrusion press at Alupuram in Kerala had been previously completed in October 1961. The entire integrated expansion programme has been carried out within the originally estimated budgeted figures and well ahead of schedule.

The company embarked on its latest expansion project in 1962, which will provide for the doubling of smelter capacity at Alupuram in Kerala to 10,850 tonnes of ingot per annum and the establishment of an aluminium foil rolling mill at Kalwa in Maharashtra with a capacity of 2,500 tonnes per annum. These expanded facilities are expected to go into operation in 1964 and 1965 respectively.

to note the trend of revenue collections in the current financial year. Latest indications appear to be that after all government revenue may not prove to be as buoyant as generally expected.

INVESTMENT NOTES

Seshasayee Paper

It is understood that the first paper machine of Seshasayee Paper and Boards Limited has been working successfully since November and that even the rated capacity was exceeded on occasions. The factory is now using only imported pulp. It is expected that the Chipper section, pulp section and soda recovery section will be commissioned before the middle of next month and full production with pulp-manufactured from indigenous raw materials will be achieved some time later. The company is also generating its own power.

STOCK EXCHANGES

Recovery in Prices Sustained

Watch-Dog Writes:

IT looks as if the stock markets have already got over from the slight deterioration in sentiment, which was touched off by the Prime Minister's hints of fresh taxation. Although the political picture is uncertain and corporate news is not very encouraging leading operators have thought it prudent to enter the market before the announcement of the Budget. This is mainly due to a growing feeling that the new taxation proposals may not be such as to disrupt the investment climate. The markets have finished the pre-Budget week on an optimistic note.

After showing a reactionary tendency early in the week, prices on Lyons Range firmed up towards the close owing to the emergence of bull support.

Dalal Street presented a distinctly improved appearance although the cash counter was more active than the forward list.

Sentiment on the Ahmedabad Stock Exchange continued to remain buoyant.

Although the overall trading pattern remained cautious, the Delhi Stock Exchange presented a

fairly steady appearance.

On the Madras Stock Exchange, activity was restricted; but there were larger enquiries for Plantation shares.

It was a fairly satisfactory week on the London Stock Exchange. Sentiment was helped, to some extent, by the unemployment figures, the rise being smaller than expected.

On Wall Street, the feeling remained that the highs for the current rally had yet to be witnessed. This was fortified by the still largely encouraging news background.

CALCUTTA

THE local stock exchange started the week on a disappointing note with operators reacting bearishly to the Prime Minister's warning about the prospect of heavy tax burden in the forthcoming budget. All the share groups were subjected to selling pressure which was, however, quickly absorbed. Even the rise in

MARTIN BURN LIMITED.

NOTICE

The Board of Directors of Martin Burn Limited has today recommended payment of dividend at the rate of Rupees Two and Fifty nP. per share on the Ordinary Share Capital of the Company for the year ended 30th September, 1962. This dividend awaits the sanction of the Shareholders at the ANNUAL GENERAL MEETING to be held on Wednesday, the 27th March, 1963, at 12 noon. The dividend if declared will be paid under deduction of tax at the prescribed rates on or after the 1st April, 1963, to the Ordinary Shareholders whose names are on the Company's Register of Members on the 27th March, 1963 or to their mandatees.

The Ordinary SHARE REGISTER and TRANSFER BOOKS of the Company will be closed from the 14th to 27th March, 1963, both days inclusive.

By Order of the Board,
MARTIN BURN LIMITED,
A. G. GIDLEY
Secretary.

Registered Office,
12, Mission Row,
Calcutta.
15th February, 1963.

For the Investor

INVESTMENT GOSSIP

Smart Recovery

The close proximity of the Budget has not stood in the way of the recovery movement on the stock market gathering momentum. Equity values have generally improved on a wide front although not all the stock exchanges have displayed equal enthusiasm. Dalal Street has maintained steadiness with a progressive expansion in the volume of business while conditions have almost become buoyant in Ahmedabad. Though Calcutta and Madras show a steady undertone, activity in these centres has been brisk only intermittently. There is however no mistaking the revival of confidence in the outlook for equities. Despite much speculation about the shape of things to come next

Thursday afternoon, stock market sentiment is remarkably steady. Optimism stems from the growing belief that the Union Finance Minister will let off the private sector lightly in the sense that it will not be made to shoulder much additional burden in the shape of direct taxation. It would appear that those who think that the corporate sector should not be asked to pay more than what it is already paying to the exchequer have built up a convincing case. It has been pointed out that if Government is really serious in maximising industrial production, fresh taxation on the corporate sector will become untenable. For any additional burden will only result in further slowing down corporate enterprise which is already under a cloud on account of the various shortages it has to cope with after the emergency. In this connection it is notable that Government has been urged to think in terms of reducing the burden on the corporate sector in view of the need for attracting foreign capital.

While the stock market seems to be quite hopeful of a favourable budget as far as the corporate sector is concerned the market place is humming with rumours of how the finance minister will seek to net the additional revenue he needs. Guestimates of the tax effort that will be needed to meet the increased expenditure on defence range from Rs 100 crores to Rs 150 crores and a wide variety of novel levels have been conjured up. The list includes such taxes as a levy on bank advances and deposits and some sort of tax on cheques and excess profits tax.

Some believe that a further rise in corporation tax is a strong possibility. It would appear that those who believe that with a determined pruning of government spending, the growth of revenue as a result of the taxes so far imposed would take care of the additional resources now needed on account of the emergency have not cared

THE CHAMPDANY JUTE CO. LIMITED

Notice is hereby given that the Share Register of the Company will be closed from 16th March, 1963 to 31st March, 1963, both days inclusive, for the purpose of returning to members paid-up capital to the extent of Rs. 50/- per share.

Repayment will be made to the registered shareholders whose names appear in the Share Register on 16th March, 1963 or to their mandatees. The members are being individually advised in regard to the return of capital and regarding the issue of new certificates of Rs. 10/- each in exchange for the existing share certificates of Rs. 100/- each.

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

2 Netaji Subhas Road,
Calcutta, 1,
14th February, 1963.

Year ended Sept

the railways freight and parcel rates, announced by the Railway Minister, did not have any marked impact on trading. As a matter of fact, the phase of recovery was extended further due to fresh buying in select counters.

The main factor contributing to the sustained support to the market was the growing feeling that

the overall burden might not be as heavy as had been feared at one stage. Moreover, the five State Budgets, presented so far, confirmed the earlier indications that the State Governments might be reluctant to raise fresh taxation of any worth while measure. The decision made by the stock exchange authorities to remove the

minimum price of Indian Irons—the last one in the forward list—with effect from 23 February also helped to inject more life into the market.

Naturally, the bull operators continued to lend support freely, while the bears were prompted to cover their short sales as they were afraid of keeping their posi-

tions open before the Budget. Genuine investors, however, preferred to proceed with caution and confined their purchases to only those shares offering a good yield with adequate dividend cover. Apart from the prospects of a further depression in corporate profits due to rising production costs, rumours about a tax on bank deposits, advances or cheques seemed to be the restraining factor in their decisions. There was, therefore, a general disposition on their part to wait and see.

The market for Giltedged securities was devoid of interest. It lacked institutional support, presumably because of tight money conditions. Demand was selective to the extent that it was concentrated on a limited number of issues. State Loans were neglected. 3 per cent 1986 Conversion Loan hovered narrowly around Rs 63.15.

An outstanding feature of the week's trading was the remarkable recovery in Indian Irons, which was marked well above the minimum price of Rs 21, at Rs 21.65. The closing rate was slightly easier at Rs 21.45 due to modest profit-taking. TEXMACO were taken up to Rs 21.90 from Rs 21; Guest, Keen, Williams up to Rs 33.06 from Rs 32.37; J.K. Steel up to Rs 15.62 from Rs 14.19; Jessop up to Rs 23.31 from Rs 22.87 and Britannia up to Rs 10.37 from Rs 10.12.

Although trading in the Jute section was restricted on lower advices from the gunny market, prices moved up in sympathy with the general trend of the market. Moreover, there was a feeling that the mills might be making good profits during the current season. Birlas changed hands at Rs 29.4; to Rs 29.87; India at Rs 18.25 to Rs 18.75; Megna at Rs 13.44 to Rs 14.12; New Central at Rs 13.69 to Rs 14.06 and Ganges at Rs 13.7 to Rs 13.94.

Coal shares came in only for selective support. Burrakur were pushed up to Rs 16 from Rs 15.56, while Centra India were enquired up to Rs 10 from Rs 9.81. Western Bengal were quoted better at Rs 8.97 against Rs 8.81.

There was little doing in the Tea section. Even the removal of minimum prices seemed to have no effect on the section. Brooke Bond receded further to Rs 11.50 from Rs 11.65, while Hasimara came in for offer at as low as Rs 12.75 against Rs 13.37.

Sugar shares continued to remain depressed. The only exception to the general trend was Raza/Buland, which were supported up to Rs 9.75 from Rs 9.19. Cawnpore were on offer at Rs 11.12 to Rs 11.25 with SKG being cheaper at Rs 7.75 against Rs 8.00.

Among Textile shares, Kesoram were quiet at Rs 21.25 against Rs 21.56 with J.K. Cotton moving narrowly between Rs 14 and Rs 14.19. Jay Shree, however, met with sustained support up to Rs 15 from Rs 14.62.

Member, Local Advisory Committee of the Bank at Bombay notwithstanding his appointment as a Director of the Company."

10. "Resolved that in view of general revision of the Grades and pay scales of Officers introduced with effect from 1st July, 1962, consent of the Company pursuant to provisions of Section 314 of the Companies Act as amended in 1960 be and is hereby accorded to the fitting-in of the undermentioned officers who are relatives of Directors of the Company at the appropriate stages in the Revised Grades and Scales of pay corresponding to the previous grades in their respective appointments, as mentioned against their names, with retrospective effect from 1st July, 1962, together with the usual allowances, benefits, amenities and facilities applicable to other officers in the respective grades and scales of pay or occupying similar posts."

AS SPECIAL RESOLUTION

To consider and, if thought fit, to pass the following resolutions as Special Resolutions:—

Who but Pan Am gives you free representatives
in 114 world trade centres?

Pan Am's new World-Wide Marketing Service is a concept as dramatic as the recent reductions in air shipment cost. **WVMS** gives you on-the-spot representation in 114 world markets... helps you find new markets and new sources of supply!

Air cargo rates have never been cheaper! More commodities than ever may now be shipped on a straight-weight basis... and rates are down as much as 63%!

Low air cargo rates mean you can have more markets! And Pan Am's World-Wide Marketing Service helps locate prime markets for you, virtually anywhere in the world.

Pan Am's more complete cargo service really amounts to a revolution in the distribution of goods. Virtually any

commodity now may be shipped economically by air. You save time, so your money turns over faster. Insurance rates are lower than by surface means, because pilferage, damage, and loss are minimized. Packing, crating, handling costs are lower. Your packing and shipping

WORLD'S LARGEST AIR CARGO CARRIER
WORLD'S MOST EXPERIENCED AIRLINE

are even faster and safer when you use Pan Am's family of containers.

Pan Am advises you on such things as packing, international rates, insurance, local cartage, routing—and simplifies documentation for you, too.

Pan Am has more specialists working solely on cargo than any other airline—1357 specialists who can help you build a solid business in other parts of the world. For tips about new markets for your products, call your Cargo Agent or Pan Am in:

A Valorous Effort

With the Chinese threat looming so large and our defence equipment so palpably inadequate no one would expect the Budget for 1963-64 to be of the routine kind with small changes in rates and modes of assessment. The nation was keenly aware of the pressing need to raise the scale of public revenue and expenditure to levels commensurate with the Government's new responsibilities. But readiness for new burdens cannot by itself simplify the problem of finding the sources of additional revenue which will produce the requisite amounts but will have no undesirable consequences on the tenor of the people's economic life and the pace of the nation's economic progress. The task is not easy because our system of taxation bears the marks of facile expedients and political convenience far too much to admit of changes which are both healthy and immediately profitable to Exchequer on the scale now needed. There is no denying, however, that, whatever the measures that may be resorted to, the old familiar evils of inflationary finance or a cynical readiness merely to soak the rich should be carefully avoided. To keep off the former, new taxation should lean heavily on the side of direct taxes since indirect taxes are bound to push up prices and direct taxes cannot yield enough unless lower incomes are taxed with little or no cost of collection. While it is a matter of political education for the common man to prefer a tax on his income to miscellaneous levies on all his articles of consumption, for the Government it is a matter not only of courage but of judgement to decide how far such education of the common man has proceeded. While

It is inevitable therefore that Mr Morarji Desai's defence and development Budget of last Thursday should be the most taxing one that has ever been presented to this country. The revenue deficit, on the basis of existing taxation, is staggeringly large, and the new proposals, seeking as they do to cover almost the whole of this deficit, clearly call for a contribution from rich and poor alike. The Finance Minister can claim to have roused a sense of urgency in the people; for the unilateral cease-fire by the Chinese carries with it the danger of a progressive diminution in the enthusiasm for the war effort. So Mr Desai's is a realistic Budget and while we may have some criticism of such proposals as may be unduly harsh in their incidence, credit is due to the Finance Minister for an honest, if relentless, effort to place the economy on a war footing.

We may as well begin this assessment of the Budget with the proposal that is missing. We cannot for our part understand why we do not have the reappearance of the salt tax. Is it mere sentiment that accounts for the absence? Or is it that politically speaking, the light of courage failed? These alone are the possible explanations, since in every other respect Mr Desai has been valourous.

The corporate sector has, apart from the higher excise and surcharges, been hard hit. A straight increase in the rate of taxation to 55 per cent would perhaps not have been as burdensome as the innovation of the super-profits tax. But we are sorry to see that Mr Desai, in his framing of the tax, has "crimed" the profit motive. For the new levy is payable only by such companies as show a profit of better than 8 per cent net on their reserves and capital. Perhaps the intention was to secure for Government a share of "windfall" earnings made possible by the present phase of shortages. But this is to overlook the fact that efficient enterprises with an eye to economy are going to be unfairly penalised. Thrift will no longer be the virtue it was, especially for companies with high

earnings on small capital. What is more, the effective limitation on the distributable surplus of companies will mean that, with an almost certain prospect of a decline in dividends, the capital market will be more hard to tap than before. Expansion of plant and increase in production, both so necessary for the progress of this country, will be retarded; and there will be greater dependence upon bank finance for such purposes, with the result that the strain on the money market will intensify. It is thus the rationale of the super-profits tax that we disagree with; we would much rather that corporation tax itself had been raised to 55 per cent.

The other major innovation is the scheme for compulsory savings; and a measure of this nature had been as surely expected as an increase in the burden on companies. But here too there is an element of surprise. The scheme is in particular directed at those sections of the population which are not liable to payment of income-tax. While it is just that the nation as a whole should contribute to the defence effort, it is only fair that the masses lend moneys rather than lose their scant earnings through tax. Nor, for that matter, are the tax-payers let off scot-free. There is to be an additional surcharge on the incomes after taxes of individuals, Hindus undivided families, unregistered firms and associations of persons. And registered firms for their part will also have imposed on them a surcharge on their tax bill.

As we had anticipated, the Budget proposals include a measure that has, in today's context of acute foreign exchange stringency, a two-fold objective. A general surcharge of 10 per cent is to be levied on all import duties. This differs somewhat from our expectation that a levy of 25 per cent would be imposed on import licences for maintenance goods; but the realisations from the tax proposed by the Finance Minister will be larger than would have been the case if our suggestion had been adopted in its form. Obviously, imports are sought to be discouraged and the search for indigenous substitutes encouraged. In this context, there are two points to note. On the one hand the cost of the plan projects, no less than that of production, will rise automatically, though such increases will involve rupee, and not foreign exchange, finance. On the other hand, to the extent that the import bill is on Government account, the receipts from the general public will not be very considerable. Also, the "consumer resistance" sought to be built up by the surcharge on import duties will be nullified by rises in the prices of Indian material, and with not much change in the differential it is quite possible that the demand for imports will not be whittled away.

With the best of plans at Budget-time the co-ordination of the revenue and capital Budgets is a matter of progressive accomplishment in the course of the financial year. In a time like the present, one must be content with a scheme of taxation and new borrowing which will maximise the chances of such co-ordination. Doubtless with a Budget in which the Finance Minister has perforce cast his net so wide, changes and adjustments during the passage of the Finance Bill through Parliament are inevitable. But the essential elements of sound modernism in public finance inclusive of the sound principle of compulsory savings having been provided, one can look forward to wholesome changes which will satisfy the Government and the public and speed the country on the path alike of economic development and military strength.

(*) Effect of Budget proposals.

West Bengal Budget

The West Bengal Budget for 1963-64 reflects the growing strain imposed by plan programmes on the State's finances. Mr Sankardas Banerji has a difficult task before him because of the diminishing quantum of assistance from the Centre. The picture of the State's finances, however, is not without its redeeming features. Revenue receipts are showing a welcome upward trend. The total revenue receipts in the Budget estimates for 1963-64, are placed at Rs 117.05 crores as compared with Rs 105.74 crores in the revised estimates. With revenue expenditure showing a decline of as much as Rs 5.48 crores to Rs 109.79 crores in the Budget year from Rs 115.27 crores in the revised estimates for the current year, there is a surplus of Rs 7.27 crores on revenue account. But this is more than completely offset by the large deficit of Rs 17.99 crores outside the revenue account, with the result that there is left an overall deficit

of Rs 9.22 crores. The revenue surplus in 1963-64 is brought about partly by increased receipts as a result of some new measures of taxation in respect of non-judicial stamps and motor vehicles adopted in the current year, and the smaller revenue expenditure in next year's plan outlay. As against Rs 19.10 crores of revenue expenditure in an estimated plan outlay of Rs 57.16 crores in the revised estimates for the current year, the revenue expenditure in the next year's plan outlay of Rs 64.53 crores is estimated to be only Rs 16.21 crores. The total Central assistance assumed in the estimates for 1963-64 amounts to Rs 28.40 crores although according to the pattern of financing the State Plan, Central assistance should be of the order of Rs 35.24 crores. As the State resources are placed at Rs 26.91 crores, the total resources in sight amount to Rs 55.31 crores as against the State's Third Plan outlay of Rs 64.53 crores.

The Finance Minister proposes to cover a part of the overall deficit by yield from additional taxation measures to be undertaken during the year 1963-64. The total additional revenue proposed to be collected amounts to Rs 3.50 crores from certain change in the sales-tax and electri-

city duty. It is evident that Mr Sankardas Banerji hopes to avoid, if possible, imposing too many taxes, though he seems to think that the limit of taxation has not been reached. For a person who feels that there is still reasonable scope for further taxation, the Finance Minister has shown too little enterprise. Such levies as he has indicated are confined to old liabilities like sales-tax and electricity. These sources are tapped the more for being the more acquiescent and uncomplaining. On the other hand, the rural sector, which, even in the estimation of the Planning Commission (not to mention the ECAFE) is too lightly taxed at the moment, is still a politically explosive fiscal target. The very idea of an increase in land revenue evokes loud protests and the argument that the rural sector has benefited considerably from development activities under the plans, but is not paying much by way of taxes does not seem to make any impression on the State Finance Ministers. If the Third Plan of the State is to be carried through according to schedule (Mr Sankardas Banerji has indicated that the target of Rs 293 crores will prove to be quite inadequate considering pressing claims for the inclusion of some urgent schemes), he will have to take courage in both hands and make the agricultural sector play its fiscal part.

The tasks before Mr Banerji have been rendered difficult by the reduced quantum of central assistance in respect of the distribution of the State's share of income-tax, excise duties and also in respect of the distribution of grants-in-aid. The Award of the Third Finance Commission and the decision of the Central Government thereof do not appear to have taken due note of the needs of West Bengal which, by virtue of its position as a highly industrialised state, has perforce to shoulder grave responsibilities. In the course of his Budget speech Mr Banerji has made a masterly analysis of the recommendations of the Third Finance Commission to show that the just claims of the State have not been met. It has also failed to take note of the special needs of highly industrialised States such as West Bengal which have to face multifarious social and other problems mainly because of the concentration of industries in their regions.

Despite the continuing difficulties in balancing the Budget, the developmental activities in the state are going on apace. In the Budget for the next year a provision of Rs 64.53 crores for the State Plan has been made, thus bringing the plan outlay for the first three years to Rs 160.89 crores out of a total Third Plan outlay for the State of Rs 293 crores. This is to be considered a satisfactory record for a State which has been under continuous financial strain for the past many years. At this rate there is every reason to hope that the targeted amount will be utilised on additional projects of development are continually coming up before the Government for inclusion in the State plan. The total amount of such demands is estimated at about Rs 45 crores. The State Electricity Board has a proposal for additional power projects involving the outlay of Rs 22.19 crores, while expenditure to the tune of Rs 5.54 crores is envisaged in respect of the Durgapur Highway. The total of Rs 45 crores also includes a sum of Rs 10 crores representing pay increase of school teachers already sanctioned by Government. The national emergency has necessitated the adoption of new priorities in the execution of development programmes. Accordingly high priority has been given in the next year's Budget for development of power, intensification of agricultural production, expansion of roads and road transport and realisation of the full production potential of industries. It is unfortunate that because of the need for reduction in revenue expenditure, the allocation for education has had to be minimised.

On the agricultural front the current year has not been very satisfactory in so far as rice production is concerned. The Finance Minister has

referred to the possibility of food production this year being below normal. The State suffers from a chronic deficit in foodgrains and one of the main aims of the State's Third Plan is to attain self-sufficiency in foodgrains. This is amply reflected in the very large provision made in the State Plan (24.3 per cent) for agricultural and community development. Now that the major river valley schemes have been completed the outlook for food production is improving. Even so considering the growing food requirements of the State, concentrated measures are being initiated in the direction of minor irrigation (as major irrigation potential has been almost fully tapped already).

Side by side with improvement in agriculture, increased attention is also given to industrial development. But further expansion of industry in the State depends to a large extent on availability in adequate measure of power. It is therefore only in the fitness of things that the State Budget has made substantial allocations for power projects. The State Electricity Board had asked for an allocation of Rs 20 crores, but a provision of only Rs 17.5 crores could be made. In the State's Third Plan of Rs 293 crores the provision for power is as much as Rs 48.6 crores. Additional programmes of power development involving an expenditure of Rs 22 crores have been taken up for completion during the current Five-Year Plan. In the next financial year alone the total expenditure on power is expected to be about Rs 25.17 crores. By deciding to accelerate power production the State will be laying a firm foundation for further rapid industrial progress, the scope for which, despite the fact that the State has already a heavy concentration of industries, is immense in view of the wide variety of industrial raw materials it has and the large facilities it is able to offer.

A Floating Pound?

By Paul Einzig

The idea of abandoning fixed parities is rearing once more its ugly head. It is always tempting to advocate taking the line of least resistance and it is humanly understandable that Mr Nicholas Kaldor, whose name is not unfamiliar to Indian readers, should deem it expedient to agitate in favour of a policy of exchange dumping cloaked in the respectable guise of a system of floating exchanges. That term conveys exchange movements in both directions. In reality the application of the device would mean a succession of depreciations. Mr Kaldor seems to have overlooked the fact that in existing conditions the system

would not operate symmetrically, because, while wages and prices are very elastic upward, they are very rigid downward. Any depreciation of sterling could only bring temporary relief, because the advantages of its undervaluation to exporters would soon be cancelled out by a rise in cost of production. On the other hand, in the complete absence of a reduction in wages following on an appreciation of sterling, exports would be gravely handicapped by the resulting overvaluation of sterling.

The reason why the depreciation of sterling in 1941 did bring some relief was that it was not followed by any increase in wages. That experience would not repeat itself in the sixties. Indeed, the chances are that the rising trend in wages would become accentuated once the idea that the stability of sterling must be defended by wage-restraint is abandoned. During the whole post-war period such resistance that was displayed to wage increases in excess of productivity was entirely due to the realisation that sterling must be defended. Should it become fashionable to hold the view that we need not lose any sleep over a depreciation of sterling—indeed that such a depreciation is actually a Good Thing—the floodgates would be thrown open to an inflationary exaggeration of wage increases.

Last but by no means least, any temporary relief the British balance of payments would be able to secure through resorting to exchange dumping could only be achieved at the expense of our friends and allies. A 'beggar my neighbour' policy would be highly detrimental to the interests of the free world as a whole. For this reason alone it seems utterly unlikely that statesmen holding responsible positions would yield to the temptation of following Mr Kaldor's advice. The repetition of the orgy of devaluations and depreciation experienced during the thirties would gravely weaken the democratic countries and would provide the Communists with ample opportunities for fishing in troubled waters.

Reflation in Britain

DURING recent months hardly a week passed without the adoption of some new reflationary measure by the Government in order to reverse the rising tide of unemployment. Unfortunately these measures were adopted piecemeal and as a result their psychological effect remained negligible. Had all the various measures been introduced simultaneously, their sum total could not but impress the public with Government's determination to bring about a trade revival. As it is, each measure, taken in isolation, was judged to be of small consequence—"too late and too little"—and failed to create any deep impression.

By the time the next step was taken the previous step faded into oblivion. Much more pronounced effects could have been attained at the cost of much less reflation if only the various measures had been timed to coincide instead of being served up at the rate of one tablespoonful at a time. It is widely hoped, however, that Mr Maudling will take the opportunity of his Budget statement for announcing a more impressive set of measures.

The worst of it is that all along wages have been increasing, so that cost inflation continues unabated. In the absence of an expansion of production that should accompany inflation, the country is liable to get the worst of both worlds. Fortunately from a purely British point of view cost inflation has been proceeding in other leading industrial countries so that Britain is able to hold its own at present in the sphere of foreign trade. It would not be safe to assume, however, that this must necessarily continue to remain so. So long as industries are working considerably below capacity, the increase in the wages bill cannot be spread over a sufficiently large quantity of manufactures to keep down the cost per unit.

One of the basic causes of the present recession is due to the mistaken policy adopted by trade unions and employers alike during the period of over-full employment. In my book *The Economic Consequences of Automation* I warned them seven years ago that it was hopelessly shortsighted to retain redundant workers at a time when they could easily find alternative employment. I predicted that the manpower which was hoarded and feather-bedded during the period of over-full employment will have to be released during a period of recession when it would be incomparably more difficult for them to find other jobs. This is exactly what is happening now. As a result of the prolonged recession many employers are no longer able to afford to carry superfluous labour which they retained in employment under trade union pressure. It is to be hoped that this experience has taught a lesson which will not be forgotten.

Strengthen The Nation

The vitality of the national economy supplies the real strength to the Nation. That means more and quicker production and distribution of goods. Banking service is indispensable for promoting the higher pace in industry and commerce.

Your banking transactions directly contribute towards development efforts. Spending or saving, do it through a banking account and help us increasingly to help raise the tempo of economic activity, so very essential for strengthening the Nation.

World of Finance

CAPITAL BUDGET Continued Recourse to Deficit Finance

Despite a stupendous new tax effort of Rs 266 crores deficit financing during 1963-64 will, save to the extent of improvement in revenues, be placed at a considerable figure; and the target for market borrowings, on the other hand, is predictably faint-hearted. In 1961-62 the net receipts from Treasury Bills (net of the transaction whereunder Rs 50 crores of ad hocs were funded) amounted to Rs 119 crores; the revised estimate for 1962-63 expects the increase in outstandings of Treasury Bills to amount to Rs 240 crores, without taking into account the funding of a further Rs 50 crores of ad hocs in that year; and in 1963-64 net receipts from Treasury Bills, before taking credit for realisations from the new tax proposals,

Owing to the pressure on space, the reviews of the Allahabad Bank and United Bank of India accounts are being held over to the next week.

are shown at Rs 454 crores. Thus, deficit financing in the first three years of the Third Plan would work out to just under Rs 600 crores, or a figure that already exceeds the limit set for the quinquennium as a whole. No doubt, the emergency since last autumn has involved defence expenditure which could not wholly be met from increase in revenue receipts. Again, in the Budget year the tax effort could scarcely have been bigger. But we would emphasise, as we have often stressed in the past, that resources whether for the plan or (as now) for defence could more surely and less painfully be found from a better thought out borrowing programme.

Market loans fetched Rs 329.87 crores in 1962-63. This sum stands reduced by the funding operation of Rs 50 crores and by Rs 183.25 crores as to discharge of debt. Thus net new cash raised during the current year worked out to no more than Rs 106 crores; and even this amount includes Rs 23 crores gathered in by the 4th National Defence Bonds 1972. For the Budget year the target for new loans is Rs 393 crores.

To enable them to comply with this requirement, authorised money changers situated at air and sea-ports have been authorised to sell foreign currency notes and coins up to the value of Rs 40 per person to travellers whose passages have been approved by the Reserve Bank or who have been released necessary foreign exchange.

BANKS

National and Grindlays

The Directors of National and Grindlays Bank Limited have recommended final dividend for the year to 31 December, 1962 of 7 per cent less income-tax at 7s 9d in the £ payable 5 April, 1963. The Directors also recommended payment of centenary bonus dividend of 2 per cent less income-tax at 7s 9d in the £ payable 5 April, 1963.

RBI

Rupee Restrictions

Travellers proceeding out of India have so far been permitted to carry with them Indian currency notes and coins up to Rs 75 in value per person at any one time under a general permission granted by the Reserve Bank of India. A similar general permission had also been granted by the Reserve Bank of India for travellers to bring into India, Indian currency notes and coins up to Rs 75 in value per person. It has now been decided to withdraw this general permission. With immediate effect, the taking out and bringing in of Indian currency notes and coins except to the limited extent specified below would be prohibited. The special Gulf Indian rupee notes and Haj rupee notes may, however, continue to be brought in freely without limit provided they are declared to the Customs on arrival in the prescribed form.

To enable them to meet their embarkation/disembarkation expenses, deck passengers to Burma, Malaya, Singapore, Persian Gulf Ports and East Africa and passengers travelling to Ceylon and Pakistan are permitted to take with them Indian currency notes and coins up to an aggregate amount of Rs 20 per person at any one time. It has been decided to grant to these travellers this limited facility to take out Indian rupee notes to obviate any inconvenience if they are left with these notes at the time of embarkation. This amount will not, however, be available for exchange en route and will be permitted to be re-imported into India to the extent of Rs 20 per person against evidence of its export being produced.

Travellers other than those referred to above proceeding out of India hereafter will have to arrange that after meeting all their embarkation expenses they are not left with any rupee notes and coins, when they actually leave the country.

SYNDICATE BANK REPORTS

All-Round Progress

The Balance Sheet of the Canara Industrial & Banking Syndicate Ltd., as on 31 December, 1962 presents a picture of overall progress achieved during the course of the year. The total deposits of the Bank which were Rs 24.60 crores as on 31 December, 1961 increased to Rs 32.65 crores, the rise being 37% over last year's figures. The total advances have increased to Rs 18.27 crores. The Paid-up Capital of the Bank stands at Rs 76.64 lakhs and Reserves including share premium have risen to Rs 66 lakhs, a rise of 24% over last year's figures. The net profits of the current year amount to Rs 30.33 lakhs after donating Rs 1.51 lakhs to the National Defence Fund and an amount of Rs 6½ lakhs out of the profits have been transferred to statutory reserves and Rs 3 lakhs has been set apart for bonus. An amount of Rs 8.4 lakhs is required for payment of dividend which is being paid at the same rate as in last year, i.e. 8.57% and 7.15% on Preference Shares of Rs 100 and Rs 10 each respectively and 20% on Equity Shares (A, B, and C Class). An amount of Rs 12 lakhs is set apart for payment of taxes and Rs 77,782 is being carried forward to next year as against Rs 34,750 last year.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills were opened on Monday, 25 February, 1963. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.405 per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.365 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 4 March, 1963. Successful tenderers should make payment on Friday, 8 March, 1963 at all centres. Other conditions are as usual.

During the week ended 22 February, 1963, Government of India Treasury Bills for Rs 17,44,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 27 February to 2 March, 1963 at Rs 99.426 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 20 February to 23 February, 1963 amounted to Rs 5,75,000.

Notes

THE ECONOMY Emergency's Opportunities

The national emergency has imposed severe strain on the resources of the country but there are hopeful indications that the supreme task on hand will be carried to a successful conclusion. The need of the hour is a marked increase in both agricultural and industrial production and Government policy should be reoriented toward fostering the rapid growth of the economy as a whole. How best this objective can be reached has been lucidly indicated by Mr H. Mackay Tallack President of the Bengal Chamber of Commerce at the annual meeting of the Chamber last week. Industrial production in the eastern region which by the way is the most vital section of the country's economy as a whole, has been quite satisfactory. The outlook for the jute and tea industries which between them earn the bulk of the country's foreign exchange has considerably improved during the past year. Production of coal and steel has also been showing a welcome upward trend and despite shortage of diverse kinds production of the engineering industry has also reached a high level. What is more, the transport situation has considerably improved while vigorous action seems to be in the offing to increase electric power supply. Shortages of essential raw materials for industry continue and perhaps will further increase when the full impact of the successive import cuts is felt. This situation should be speedily remedied. With the growing need for foreign exchange, export promotion assumes especial importance. Although export earnings last year has shown some improvement, the trend is not very encouraging. Mr Tallack has rightly emphasised that the real strength of our exports should spring from the high quality and competitive price of our products which go abroad. In this there is much leeway to be made.

STATE BUDGETS Andhra

While presenting the budget estimates for 1963-64 in the State Assembly Mr R. Brahma-nanda Reddi, the Andhra Pradesh Finance Minister, made known his intentions to bring forward measures for taxation calculated to raise an additional revenue of Rs

6 crores during the next fiscal year. The Government's intention to introduce a Bill in the Assembly during its current sitting on the basis of Dr Lokanathan's report for streamlining administrative machinery and rationalising the scope and rate of structure of sales tax and the changes introduced in the motor vehicle taxation are expected to net Rs 2 crores. The balance of Rs 4 crores is sought to be raised by other measures like the reorganisation and tightening of the arrangements for the sale of neera shops and by imposing a suitable levy on non-agricultural lands in the urban areas.

The budget estimates, which show a surplus of Rs 10 lakhs, put revenue receipts at Rs 118.36 crores and revenue expenditure at Rs 118.26 crores. The revenue receipts for the budget year indicate an increase of Rs 1.93 crores from the revised estimates of Rs 116.43 for the current year while the expenditure is up by Rs 2.25 crores from Rs 116.01 crores. The enhanced revenue receipts will be due to the net result of increases and decreases expected under taxes on income other than corporation tax where as the increase under expenditure head is accounted by an increase under appropriation for reduction or avoidance of debts etc.

The State's Plan outlay for the year at Rs 55.27 crores is smaller by about Rs 9 crores than originally envisaged obviously due to the emergency cut in assistance from the Centre. But as Mr Reddi has observed the cut will have to be tolerated ungrudgingly as "the plan has now been identified with our national effort" and its fulfilment is a national necessity. The Centre's contribution to the Plan outlay will be of the order of Rs 34.40 crores while the remaining Rs 20.8 crores will have to be found from within the State.

How far the State will succeed in this effort remains to be seen. The State is faced with a heavy programme of old loans falling due for repayment involving Rs 27.50 crores. Moreover the State is not allowed to enter the market with borrowing programmes as it is reserved entirely for the Centre out of which the State will receive Rs 11 crores. This amount, however, will not be available for plan programme as it has been diverted for repayment of the maturing loans. It is also distressing that the ways and means position of the State had not been quite happy for the past few years on account of the rising tempo of development scheme involving, sometimes, the

spending of large quantum of money at a faster than that of the collections from various sources.

Maharashtra

The Maharashtra State Budget presented to the Assembly by Mr S. G. Barve last week marks a welcome departure from those of Bihar and UP in that it contains new taxation measures, though only on modest scale, which are expected to yield Rs 95 lakhs in the next fiscal year. The Budget estimates for 1963-64 show revenue receipts at Rs 159.71 crores and revenue expenditure at Rs 160.47 crores and an additional charge of Rs 15 lakhs in the supplementary budget. But the additional revenue to the exchequer through new taxes will more than cover the deficit of Rs 91 lakhs and convert it into a small surplus of Rs 4 lakhs. The bulk of the additional revenue will derive from the new levies on electricity. Sales tax on bulk purchases of electricity made by distributing licensees and users of electric energy exceeding five million units per day will fetch Rs 55 lakhs in the next fiscal year. The increase in electricity duty applicable to low tension industrial consumers from 0.8 nP 1 nP per unit is expected to yield Rs 10 lakhs and certain other changes in electricity duty schedule for the removal of anomalies will bring in Rs 8 lakhs. The proposal to enhance the levy of sales tax on goods entering into inter-state trade and commerce to ten per cent will give additional revenue of Rs 15 lakhs while the enforcement of the tax on goods carried by road in private carries will mean another Rs 7 lakhs.

The estimated revenue receipts at Rs 159.71 crores are up by Rs 14.58 crores over the current year's revised estimates. Similarly the revenue expenditure shows an increase of Rs 15.74 crores to Rs 160.47 crores. The increase in expenditure is largely owing to the rise in debt service charges, increases in administrative charges and provision for unforeseen expenditure arising out of present Emergency.

The State's outlay for the third year of the Plan at Rs 81.25 crores works out to nearly 21 per cent of the total outlay of Rs 390.20 crores for the entire Third Plan. There has been a progressive rise in expenditure on plan schemes and this year's outlay of nearly 21 per cent stands in comparison with 31.4 per cent fulfilled in the first two years of the Plan. A section-wise break up shows that largest allocation goes for irrigation with an outlay of Rs 38.72 crores. Agricultural programmes also receive a sizable allocation of Rs 11.37 crores and social services including the provision for educational concessions to backward classes account for Rs 16.08 crores.

The development programme on revenue account amounts to Rs 24.70 crores but the estimates provide only Rs 24.55 crores as some of the projects to be taken up have yet to undergo financial scrutiny before they are included. Although the capital component of development programme for 1963-64 works out to Rs 56.55 crores, only Rs 51.26 crores have been provided as programmes of Rs 4.88 crores on transport and power schemes are to be financed by the State Electricity Board and the State Transport Corporation from their own resources. Central assistance will be Rs 36.47 crores and the uncovered gap of Rs 15.20 crores on capital account will be met from miscellaneous capital receipts, by raising open market loans and by withdrawal from reserves.

US AID Timely Non- Project Loan

The agreement signed in New Delhi this week between the Government of India and the United States providing for an American loan of \$240 million (Rs 114 crores) to finance non-project imports couldn't have been more timely to activate the growing idle capacity in industry. The drastic cut in imports is having serious repercussions on even essential industrial production and the present loan comes not a day too soon. The loan is the largest dollar loan without interest ever made by the United States, and is a part of the US commitment of \$435 million made in the context of the "Aid India" consortium for the second

year of the Third Plan. The broad commodity import groups for which the loan funds will be used are: non-ferrous metals, steel, chemicals, fertilizer, sulphur, lubricants, rubber, tire cord, carbon black, DDT, machinery, earth-moving equipment, rolls and refractories, and vehicle and other components. The loan has been channelled through the US Agency for International Development. Like other loans granted by USAID it is free of interest and carries a credit fee of three quarters of one per cent per annum on the outstanding balance of the loan. Repayment in dollars will be spread over forty years after the first disbursement, with no payments for a period of ten years.

Non-project imports contribute to India's developing economy by providing machinery and capital equipment for expanding industrial capacity in areas where totally new projects are not as economical. In addition, with the progressive diversification of India's industrial structure, the requirements of component and spare parts to keep existing plants operating have also increased. Finally, such financing enables existing facilities to get raw materials necessary to operate at or near capacity.

During the last two years non-project loans granted by the US total \$460 million, and comprise 47 per cent of US commitment of \$980 million (Rs 467 crores) during the first two years of the Third Plan.

STEEL

Prospects for Coming Years

The recent international symposium on steel held in Jamshedpur and attended by as many as

74 steelmen overseas has served to highlight the present and future outlook for the steel industry in the country. Although it has been long realised that unless indigenous steel production is stepped up considerably, the required speed of industrialisation is hard to achieve, actual performance even at the end of the Second Five Year plan in respect of steel production has not come to planned expectations. If increased steel output is essential for implementing plan programmes according to schedule, the present national emergency which calls for a quick strengthening of our defences has placed renewed emphasis on the need for attaining targeted production of steel. It is however gratifying that under the compelling pressure of the emergency, official thinking is beginning to acquire a sense of realism and this is prominently in evidence in problems relating to steel. Output of steel in the public sector plants is fast catching up with targets. Even so, it is doubtful if the Third Plan target of 10 million tons of saleable steel will be hit on time. For, to date the installed capacity of the industry is only 6 million tons, one million each in the three public sector plants, two million tons at Tata steel and one million at Indian Iron. Although decisions have been taken to bring the installed capacity to 10 million tons, by expanding the capacity of the public sector factories and by putting up a new unit at Bokaro, implementation of the programme has so far been slow. Orders for additional plants at Bhilai and Rourkela have only been recently placed while orders are yet to be placed for Durgapur expansion. Bokaro is still in the preliminary stage of negotiation with the American collaborators. In the circumstances one cannot dispute the estimate of steel production, that may be attained by the end of the Third

Plan, of between 6.5 million tons to 7 million tons made by Sir Jehangir Ghandy.

In an address to the Defence Staff College at Wellington, Ootacamund a few days ago marked for its realistic approach to steel production in the country, Sir Jehangir has brought into sharp focus the problems to be confronted and has indicated how best to solve them if the central aim of stepping up steel production is to be attained. Roughly speaking steel production has to be doubled during the Fourth Plan. Sir Jehangir has pointed out that in the future expansion of the steel industry an important consideration will be the availability of raw materials. We have plenty of iron ore alright but we do not have the necessary quantity of metallurgical coal. If future steel planning ignores this vital factor, there is going to be trouble of a serious character. Fortunately official thinking seems to have been seized of this as the Minister for Steel and Heavy Industry has recently been talking of coast based steel plants. The idea is to locate plants in places like Goa and Vishakapatnam and work them with imported coal. This is nothing new as Japanese steel industry depends for both the important raw materials, iron ore and coal, on imports. Sir Jehangir thinks that the idea is sound and workable. He is also for putting up small steel plants as such plants have been found financially feasible even in countries like the US known for its giant plants of several million tons capacity. The Jamshedpur symposium has shown that small plants are a practicable proposition.

Things have changed quite a good deal since the national emergency which has demonstrated clearly that a nation which is not strong in every sense of the word has no chance of survival in

a world where ruthless forces like the Chinese exist. The supreme task before the nation is to step up industrial and agricultural production as never before. This cannot be done by clinging to ideas which seemed quite reasonable in peace time. We are in a State of Emergency which cannot and should not end before the nation has attained 100 per cent preparedness. In such a context therefore the continued reluctance of the powers that be to give an increased share to the private sector in steel production is untenable, especially expansion of existing plants can be achieved at less cost and time than a new plant of similar capacity. It is happy augury that the Indian Iron and Steel Company has been given the green signal to go ahead with the first stage of its expansion programme. It is time the remaining inhibitions in this regard are firmly removed and the private sector steel plants are allowed to expand to their fullest capacity.

SFCs

Wider Usefulness

State Financial Corporations are playing an increasingly important role in providing term finance in small and medium industries. As at the end of September 1962 the corporations had sanctioned loans to the tune of Rs 49.25 crores as against Rs 37.30 crores on the corresponding date of the previous year. Total loans outstanding as on 28 December 1962 amounted to Rs 28.88 crores as against Rs 21.32 crores at the corresponding date of the previous year, showing an increase of Rs 7.56 crores. Correspondingly the financial position has also been improving. During their last accounting year, three of the corporations have paid the guaranteed minimum dividends from their own funds without recourse to subvention from the Central Government. Illustrative of their expanding activity is the fact that one of the corporations has underwritten equity shares of the value of Rs 5 lakhs and indications are that more will follow suit.

But viewed from the growing need for term finance required by small and medium industries, the quantum of assistance is to be increased considerably. The present national emergency makes it imperative that industrial production is stepped up sizably. This is possible only if conditions conducive to a rapid growth of industry are brought about. Speaking at the ninth annual conference of the representatives of State Financial Corporations held on Calcutta recently, Mr P. C. Bhattacharyya, Governor of the Reserve Bank of India, has pointed out that the State Financial Corporations have to shoulder added responsibilities as purveyors of term credit to industry. Among the factors governing the growth of industries, the facilities offered by financial in-

stitutions occupy an important place. In this view the State Financial Corporations have to play a more active part than hitherto in the industrial development of the country. As has been emphasised by Mr Bhattacharyya, the need of the hour is a more decentralised location of medium and small scale industries, especially those with a defence aspect and the SFCs should pay special attention to fostering the growth of such industries.

Now that conditions have been made more conducive to expanding their activity, the State Financial Corporations should be able to increase their usefulness. The lending power of the corporations has been enhanced from Rs 10 lakhs to Rs 20 lakhs in the case of public limited companies and co-operative societies. Loans granted by the corporations can now be refinanced by the Refinance Corporation. Since the guarantee scheme for loans to small scale industries has been extended to the whole of the country the risk element in granting loans to small industries by the corporations has been greatly reduced. The increase by half per cent in the lending rates of the corporations is another favourable factor. If the proposals currently under consideration with regard to facilitating the financing of the development of coal industry by the State Financial Corporations and commercial banks fructify the scope of operations of the corporations will be further enlarged. This is not however to say that all that is possible has been done to increase their usefulness and improve their efficiency. The Working Group of the Reserve Bank of India which is now studying the problems facing the corporations may be expected to indicate further steps that may be necessary to make them the spearhead of rural industrialisation.

TEA PACKETERS

Disparities in Taxation

The anomalies in the present pattern of taxation on tea in which the incidence is heavy on packeters while the loose tea trade is let off with a comparatively minor burden, was highlighted by Mr J. G. Robinson, President of the Tea Packers' Association recently. Duty varying from 15 nP to 45 nP per kg according to zone is to be paid on tea leaving the gardens. If such tea is exported a flat 15 nP rate of rebate is granted. If the tea is consumed internally a marked difference in taxation takes place. If the tea is packed in a container of less than 21 kg a further extra tax of 40 nP is to be paid by the packeters. Tea sold loose however does not have to bear further central tax.

Emphasising the need for levelling up of internal taxation on

loose and packet tea, Mr Robinson has pointed out that the argument that packet tea catered to the needs of the upper strata of society while loose tea is mainly consumed by the lower strata is not borne out by facts. Both types of tea cover the entire range of quality. The very fact that loose tea trade is of the order of over 72 million kg should convince anyone that this trade is not too small to the same amount of taxation as packet tea.

There is also need for removing or at least modifying some of the onerous taxation on tea. Tea interests in West Bengal have been long urging that the Bengal Entry Tax be abolished. Mr Robinson has pointed out that the tax had already checked the growth of Calcutta auctions. Because of this tax, an estimated 22 million kg of tea had been sold directly from the gardens. The loss is not only that of the State Government but also of the country as a whole because a good part of this quantity could have been exported. Perhaps the State Government may not be willing to forego the income from this tax. A way out has been indicated by Mr Robinson who has pointed out that even while removing the present difficulty created by the Entry Tax the State's revenue from this levy can be realised. His suggestion is to permit movement of tea in bond from gardens to Calcutta and Cochin and impose an all-embracing tax into which the Bengal Entry Tax can be easily merged.

NATIONAL INCOME

Marginal Increase

According to the tenth issue of the annual White Paper on the national income released by the Central Statistical Organisation the national income in India registered a 2.1 per cent rise in 1961-62

from the 1960-61 level. The national income at 1948-49 prices rose to Rs 13,020 crores in 1961-62 from Rs 12,750 crores in 1960-61 and from Rs 10,480 crores in 1955-56. Expressed at current prices the national income amounted to Rs 14,630 crores and Rs 14,160 crores in 1961-62 and 1960-61 respectively against Rs 9,980 crores in 1955-56. The larger increase at current prices than at constant prices was obviously owing to the increase in prices.

The per capita income, however, has stagnated at the same level in 1961-62 and even fell slightly at 1948-49 prices. It is put at Rs 293.4 in 1961-62 and at Rs 293.7 in 1960-61 against Rs 267.8 in 1955-56. Expressed at current prices the per capita income shows a sizeable increase to Rs 329.7, Rs 326.2 in 1961-62 and 1960-61 respectively against Rs 255.0 in 1955-56. Here also the increase is ascribed to the rise in the prices.

Revealing these figures the White Paper states that the estimates for 1960-61 are based on the detailed methods of estimation adopted in the preceding years and indicate an upward revision over the preliminary estimates published last year. The upward revisions are, as indicated in the paper, due to the incorporation for the first time, of the results of random sample crop-cutting conducted in UP in sugarcane. The estimates for 1961-62 are, on the contrary, preliminary as they rely entirely on partial material. However they show a slight upward change in contrast to the quick estimates released by the CSO in October 1962.

Compared to the all-round increase registered in both agricultural and non-agricultural production in 1960-61, the total national income in 1961-62 shows only a nominal increase of Rs 270 crores. This is attributed largely to the fall of 0.6 per cent in agri-

cultural production as a result of which the total contribution from agriculture to the national income has been marked down by Rs 30 crores from that of 1960-61. This decline has been, however, more than offset by a total improvement of Rs 300 crores in the contribution from all other sectors taken together. It is also evident that after adjusting for purely statistical differences between the crop output estimates of 1955-56 and 1960-61 the rise in both national income and per capita income in real terms aggregates 20.4 per cent and 8.6 per cent respectively during the whole of the last Plan period.

Though the national and per capita incomes figures indicate a steady growth they fall short of the target set by the Plan. The gloomy picture painted by the Planning Commission a few days ago in which at least a third of the country's population will continue to remain below the bread level at the end of this century is a grim reminder of the present state of our economy. The pace of progress toward a square meal for every citizen has been painfully slow and needs further acceleration. Another deplorable factor is that despite our avowed aim of bringing about an egalitarian society, more than a third of the national income is concentrated in the hands of the top ten per cent of the population.

FOREIGN CAPITAL

Increased Flow into Asia

The volume of foreign aid given to Asian countries has increased much more rapidly than assistance provided to other parts of the world, but it still remains disproportionately small. The total flow

INDIA'S LEADING BANK

SISTA'S-SB-45A

of long-term capital and donations that reached Asia's less developed countries is estimated to have amounted to some 13,000 million dollars in the decade 1951-60. This represents an annual amount of 1,300 million dollars as against nearly \$4,000 million for all the under-developed countries of the world and an average estimate of 3,000 million dollars representing Asia's capital requirements.

These estimates are quoted from an analysis of the flow of foreign capital in the latest issue of the Economic Bulletin For Asia and the Far East, published by the ECAFE.

Capital aid to Asian countries, excluding military aid, about doubled from first to the second half of the 1951-60 decade. Encouraging as this increase is, it must be viewed against the fact that three-fifths of the people of the poorer parts of the world live in the countries of the ECAFE region (Iran to Japan). From this point of view, the regional distribution of the international flow of funds

was "highly uneven and far from being in favour of the ECAFE countries as a group."

The largest recipients of foreign aid in Asia, were the Republic of Korea (\$2.3 billion in the 1951-60 decade and India (\$2.1 billion), followed by Viet-Nam (\$1.3 billion in the 1955-60 span), China (Taiwan), Pakistan, the Philippines and Iran.

Comparable information about the assistance received by the centrally planned economies in Asia is lacking. However it appears that the cumulative total of commitments, as distinct from the actual flow of capital, reached about \$1,700 million (at official rates) in the period between 1947 and 1960. This was close to half of the world-wide commitments amounting to \$3,200 million. Recipient countries were Mongolia, North Korea and North Viet-Nam. By the end of 1957 the commitments to mainland China are reported to have exceeded 400 million dollars; but during the same period mainland China is stated to have sanc-

tioned 800 million dollars for assistance to other countries.

The United States have been the principal source of long-term funds for the ECAFE countries. Of the total flow to Asia of \$1,400 million in 1960, about \$1,200 million came from the United States. Other sources were: United Kingdom \$93 million, Canada \$42 million, the Netherlands \$22 million, France \$16 million, Australia \$10 million, New Zealand \$2 million, Denmark, Norway and Sweden under \$1 million each.

This pattern has interesting variations. For instance, reparation payments from Japan have played an important part in the flow of capital to Burma, Indonesia and the Philippines. In the case of Indonesia, moreover, the largest part of funds received came from the centrally planned economies, chiefly from the USSR. In India, too, assistance from this source has risen in recent years, though it has remained far less than the capital and grants from the United States.

OIL

Pipeline to Siliguri

On 1 March 1963, will start the laying of the 260 mile (approx.) Products Pipeline between Gauhati and Siliguri for carrying the refined products of the first public sector Refinery at Noonmati. The throughput capacity of the refinery is about .75 million tonnes per annum and the new pipeline is being constructed to carry aviation spirit, petrol, kerosene and Diesel Oil in a continuous stream, a technique which is being undertaken in this country for the first time.

The necessity of laying the pipeline was to avoid difficulties of transport and distribution, the carrying capacity available at Gauhati being very low with the metre gauge line booked to the point of bursting. The new railroad of the broad-gauge line at Siliguri provides sufficient carrying capacity and is a convenient link with the rest of the country.

The main drawback to the development of pipelines in India has been the huge drain on foreign reserves. Foreign currency is involved in bringing consultants from abroad and in importing material and machinery. The situation has been considerably eased because India is now able to produce the bulk of the material—pipes and pipeline coatings—required for these projects.

The pipeline which is the property of India Refineries Ltd., is being constructed under the Advice of Bechtel Corporation of San Francisco, the actual laying being done by SAIPEM. It will be recalled that Saipem collaborated in the construction of the 720 mile crude oil pipeline from Nahorkatiya to Barauni.

A feature of the new pipeline is that the pipes have been produced at the HSL plant at Rourkela and the coating material manufactured by Shalimar Tar Products (1935) Ltd, at their new plant at Lodna, Jharia, which was installed during the middle of last year.

In an earlier report appearing in June 1962, the collaboration between Shalimar Tar Products and South Eastern Tar Distillers London, had been announced. The pipeline coating is the result of that collaboration. It will be the first use of the local product which is being produced to AWWA and API Specifications.

From the pipeline coating alone the country has saved Rs 14.5 lakhs in foreign exchange and from the pipes the saving must be considerably more.

It can be assumed that with the completion of the Products Pipeline, Indian technicians will have been sufficiently trained to tackle the proposed lines between Barauni and Delhi and Barauni and Calcutta, thus adding another avenue of employment and another industry to the growing economy of this country.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

TIME and again when some particularly outrageous folly in our national behaviour has oppressed me, I have taken heart from the quality of our highest leadership. Surely a country that had as comrades men of the calibre of Gandhiji, Sardar Patel, Rajendra Prasad, Jawaharlal Nehru and Rajagopalachari has no serious cause for worry about its future. For their contemporaneity could not have been a historical "sport" so that we may not be as luckily provided with men of their integrity and intellectual and moral excellence to guide us in the years to come. Rajen Babu (for that is how his grief-stricken countrymen would like to think of him) had a life-span wider than what the psalmist allowed and they were years rich in fulfilment. His baptism of fire in politics was in the Champaran investigations of Indigo labour in the late twenties. Even men approaching middle age today have but a faint glimmer of the emotion that that obsolete dye-plant once inspired in Indian hearts. To meet Gandhiji was to surrender to him and since then Rajen Babu subordinated his personality, as did many others with equally strong individualities, to the daemonic demands of Gandhian politics. The years that followed are already history. With independence came new demands on our leadership and as the first President of the Republic of India, Dr Prasad, (as he came to be increasingly called) rendered the nation a service that constitutional historians will consider as more important than anything else he did. Here again, our good fortune to look at what is happening in newly independent countries to realise the political maturity of our own leadership. Some efforts were made to involve him in misguided controversies about Presidential powers vis a vis the Cabinet. But both Dr Prasad and Mr Nehru refused to be ensnared into them, their instinctive sense of democratic propriety no less than their personal relationship saving them from the kind of mistakes made elsewhere. Behind an almost rustic simplicity, Rajen Babu hid an intellect that was both massive and complex. His natural dignity owed nothing to the pomp and circumstance of his office, both of which, were quietly put in their places by him. Above all, his country men will remember him

as a gentle spirit full of generous affection for them.

To have one's budget prophecies fulfilled is an equivocal pleasure, especially when what one had foretold is taxes. So I was not particularly thrilled when I found Mr Desai coming forward with a super profits tax, (a not so elegant variation of excess profits tax) roughly similar (but significantly different in detail) to the one I had suggested last week. I have not had the time to get all the implications of this levy worked out, but some rough calculations I made on the basis of figures for 1961-62 were staggering. Corporate giants will, of course, have to disgorge quite a lot but even small companies, especially "under-capitalised" trading companies, will get stung for tidy sums. All this arises from a notion of both what constitutes a reasonable return and capital that has little relation to reality. Who would wish to float a company for a six per cent return less tax when he can get a tax-free return of over four per cent on certain forms of small savings? Is the risk and bother worth it? And as for the definition of capital, one would imagine that besides the reasons for the tax that Mr Desai assigned he had another: the restoration of a better debt-equity ratio to which he is reputedly greatly attached. The point is that after Mr Desai had dipped his hand in the profit to take his share, precious little will be left for ploughing back and dividends. A more realistic definition of super profits is called for, especially when the yield estimated on current definition is like much else in Mr Desai's arithmetic, an under-estimate. Again, when I suggested marginal adjustments in income tax, I did not anticipate that Mr Desai will come out with a fiscal freak—a surcharge on income after tax. It is somewhat similar to and far more objectionable in principle than the other tax monstrosity—"tax on tax" known to some tax payers. On the indirect taxes I shall say nothing except that I wish I shared the Finance Minister's optimism about their effect on prices. The compulsory saving scheme is nearer my own notions on the subject, especially in its recognition that it is really for the poor and that for the rich compulsory saving may well be a substitute

for voluntary savings. I am glad that Mr Desai has firmly resisted—as I had hoped he would—the blandishments of novelties like tax on cheques and so forth. Salt tax, I see, is still taboo, for no particular reason I can appreciate. But more of the budget next week, when I have really had a go at it, though I fear, Mr Desai's proposals, unlike blondes in jokes, don't seem likely to improve on further acquaintance.

I dare say President Ayub Khan is imagining that he is playing a cool hand but what he has in fact done is to chuck the whole game away. If ever he was near getting a solution of the Kashmir dispute he could have presented to his people without any loss of face, it was in the present negotiations with India. This hope is now dashed. After all that has happened, the Calcutta talks are hardly likely to lead anywhere. In the past it was possible for Pakistan's rulers to find a ready ear for their whine that India was being cussed over Kashmir. This time, however, they would be running in vain to their friends who are both embarrassed and annoyed at the way they have been let down. Too often in the past these good people had persuaded themselves that India was thwarting a settlement because she was sitting pretty and therefore had a vested interest in the status quo. They did not say so, of course, but their newspapers did it for them. Now perhaps they would know better. India has always been ready to resolve the dispute at a political level but

knew that Pakistan was a difficult country to do business with. Quite a few people in the country thought that a settlement of the Kashmir dispute on terms that would satisfy Pakistan was an odd preliminary for fighting Communist China better, which was the reason offered for asking India to agree to talk to Pakistan. For, if the result of the talks was India agreeing to hand over Kashmir on a platter to Pakistan, why, we would have no boundary dispute with China to speak of, for with Kashmir, we would have handed over to Pakistan the real crux of our quarrel with China. Of course, this is not what the British and the American interceders had in mind and in any case we would be as short-sighted as Pakistan now is if we thought that a threat to Pakistan is no concern of ours. But Pakistan's recent conduct towards China knocks the bottom out of the argument that was urged on India for resuming talks with Pakistan.

Anyway India's good faith has been amply proved as also the fact that it has been grossly abused by Pakistan. Almost the first thing that the Indian Delegation to the first round of talks learnt on arrival in Pakistan was the calculated leak about agreement between China and Pakistan on the border question. At that time, it was put out that this was the doing of someone exceeding instructions and playing a lone hand of his own. This story, never very convincing, is now shown up to be totally silly for Mr Bhutto ostentatiously goes to Peking to sign the agreement on the eve of Calcutta talks. We are upset, of course, but not particularly surprised.

In Parliament Last Week

The walk-out staged by Socialists while the President was reading his inaugural address to the joint session of Parliament has earned them the disapprobation of members of all other parties, but has left them undismayed. Their act has also served to draw attention to the ambiguities of Government's policy on the Official Language. The expectation that English will continue as associate official language after 1965 rests entirely on the assurances given by the Prime Minister. The delay in enacting legislation to give effect to the undertaking has naturally led to misgivings that strong opposition in the Congress party has to be overcome before this could be done. The anxieties are heightened by the feeling that Socialists form only the visible part of the iceberg on which the declared policy could get wrecked. The Official Language Bill did not find a place in the agenda for the budget session. For about three years the introduction of the Bill has been put off from one session to the next on the rather thin excuse that more urgent business had to be given priority and that, in any case, there was time enough till 1965. The Prime Minister is understood to have given an assurance, when some members from South India raised the question at the meeting of the Congress Parliamentary party before the session started, that the Bill would be introduced later in the session, possibly sometime in May. The Socialist walk-out has underlined the need for early action to end the uncertainty in a matter of vital consequence for national integration. The policy of drift is only likely to exacerbate feelings on either side.

Gold Control

Among the measures taken by the Government following the declaration of Emergency, the Gold Control Rules have come in for a good deal of critical attention in the House and outside. The Finance Minister has agreed to a debate on the subject at an early date while, at the same time, making it clear the rigours of Gold Control could not be relaxed without defeating the main objective. Last Monday he stated in Rajya Sabha, during question hour, that the Gold Rules would not be re-

laxed even for "thalis" and "tirumangalyams", on which opinion in the South is particularly sensitive. He also gave details of the total quantity of gold declared so far, the number of licences issued etc.

The returns from refiners and dealers required to be licensed under the rules, and the declarations from individuals and others received up to 26 February 1963 indicate that approximately 1,56,84,150 grammes have been declared. The actual issue of licences will be undertaken as soon as certain details are settled. The number of applications received up to 26 January 1963 from refiners and dealers was 3234 and the number of applications which were expected to be received before the expiry of the time limit prescribed for this purpose was 17,675. The detailed break-up of these figures Statewise was not available, as the jurisdiction of the Collectorates from which this information has been obtained does not exactly correspond to those of the States or Union territories.

On the same day the Finance Minister placed on the table of the Rajya Sabha a statement showing contributions to the National Defence Fund received through the Branch Accounts at each State Headquarters up to 19 February, 1963. The State-wise breakup of the figures is given below:

Name of State	Gold/Gold ornaments cash in lakhs in grams	Amount in rupees
Andhra Pradesh	48,516	2,65.09
Assam	13,689	28.59
Bihar	69,324	1,36.44
Gujarat	56,980	2,28.85
Jammu & Kashmir	212	0.41
Kerala	26,064	1,45.59
Madhya Pradesh	2,67,504	2,45.76
Madras	73,508	2,23.31
Maharashtra	1,89,327	5,34.88
Mysore	55,375	2,27.68
Orissa	88,055	1,52.79
Punjab	188,814	31.30
Rajasthan	96,816	1,50.54
Uttar Pradesh	46,942	32.36
West Bengal	1,49,534	4,37.17
Delhi	1,32,053	15,38.76
Other Union Territories	6,908	25.13
Total	15,09,621	44,04.65

It is learnt that the low figures of cash collections shown against some important States where popular response has been very good is due to incomplete returns from State Governments.

Committee for Collaboration

To speed up projects involving foreign collaboration which come against numerous procedural hurdles, Government has decided to set up a committee of senior officials for guiding the negotiations with foreign parties in regard to major projects in the public and private sectors. The Finance Minister who gave this information in Rajya Sabha last Monday, said that the Committee would consist of the Cabinet Secretary, the Secretary of the Ministry concerned, a representative of the Finance Ministry and representatives of other ministries concerned with the project. No additional expenditure is involved as a result of setting up this committee which will function till the Government decides otherwise. The main object of setting up the committee is to bring about greater co-ordination and uniformity of approach between various Departments of the Government of India in their negotiations with foreign parties relating to the establishment of major industrial projects in the country, the pooling of information in their possession and better co-ordination between public and private sector enterprises.

Defence Production

While questions about the details of military assistance in the shape of equipment offered by friendly countries were met by the answer that disclosure of the information would not be in the public interest, Government spokesmen are more forthcoming about the progress of ordnance factories and other establishments under the Defence Ministry. Mr K. Raghuramiah, Minister for Defence Production told Lok Sabha last Monday that a plan for establishing more Ordnance Factories had been finalised. A team of officers had made a survey of suitable sites and their recommendations are under consideration of Government. He also indicated that proposals are under consideration for advancing the date for the manufacture of tanks at the Avadi Factory scheduled to commence in 1965.

In answer to question about the Ishapur Rifle Factory, he gave details of non-defence stores that were being manufactured in this establishment till the declaration of Emergency, when the manufacture of these items was stopped. The profits from the manufacture of non-defence stores amounted to over Rs 10 lakhs in 1962-63 up to January. It was explained that production of Service stores in the Ordnance Factories is undertaken only against firm demands from the Services. Owing to lack of orders, manufacture of rifles in the Ordnance factories was discontinued from 1955. Manufacture of rifles has since been started.

Bharat Electronics Ltd.

Transistors manufactured by Bharat Electronics will shortly be made available to the Radio manufacturing industry. The Minister for Defence Production who gave this information in Lok Sabha last Monday also gave details of the progress made by BEL in the manufacture of standard electronic devices like Radio Receiving Valves, Crystals, Mica and Ceramic Capacitors. The types of valves and transistors taken up for manufacture at BEL so far are related to the requirements of the Civil Industry. The plan of production of capacitors and crystal covers the civil requirements in addition to meeting defence requirements.

Search for Oil in West Bengal

The question of starting drilling operations in the West Bengal Basin, where Standard Vacuum had earlier drawn blank, was considered at an emergent meeting of the Oil & Natural Gas Commission held in Dehra Dun. It was felt that ONGC should resume drilling in this area at an early date. The Commission also discussed the possibility of offshore drilling in South Indian coasts, and it was decided to start exploratory activity in the Cauvery basin and also in the Cochin area where popular beliefs about oil and gas have been prevalent for a considerable time.

The meeting which was held under the chairmanship of the Minister for Mines and Fuel, Mr K. D. Malaviya, also decided on major changes in the organisational set-up involving a large measure of decentralisation of authority which, it was felt, would speed the work of exploration in the field. Administrative and discretionary powers will be transferred to exploration and production authorities at each project site. The existing project areas will be further sub-divided for efficient deployment of equipment and personnel and each technician assigned a specific work-load so that responsibility could be firmly fixed. The details are appreted to be finalised by the Chairman within a fortnight.

The Proprietors of Indian Patent No. 51027 "Synthetic reactor for the hydrogenation of carbon monoxide in a liquid medium" desire to conduct negotiations for the grant of a manufacturing licence with respect to or for the disposal of the above-mentioned Patent. Anyone interested should apply to EDWARD EVANS & CO. Chancery House 53/64, Chancery Lane London, W.C. 2.

UNITED BANK OF INDIA LIMITED

Regd. Office: UNITED BANK BUILDINGS, 4, CLIVE GHAT STREET, CALCUTTA-1.

ANNUAL REPORT

To be placed before the Shareholders at the Annual General Meeting to be held at the Registered Office of the Bank at 4, Clive Ghat Street, Calcutta on Monday the 25th March, 1963 at 11 A.M.

ANNUAL REPORT OF THE DIRECTORS FOR THE YEAR ENDED 31st DECEMBER, 1962

The Directors beg to submit to the shareholders the Audited Balance Sheet of the Company as at 31st December, 1962 and Profit & Loss Account for the year ended 31st December, 1962 together with the Auditors' Report thereon.

The Profit for the year after making provision for taxation and including the balance of Rs. 2,39,694.16 brought forward from the previous year's account amounts to Rs. 23,60,006.24

Out of this amount the following appropriations have been made: To Reserve Fund under Section 17 of the Banking Companies Act Rs. 4,26,000.00

Leaving an available balance of Rs. 19,34,006.24

Out of the above, the Directors recommend the payment of a Dividend to the shareholders @ 6 per cent per annum, subject to deduction of tax at the prescribed rates in accordance with the provisions of the Income Tax Act, absorbing Rs. 16,08,000.00

Balance to be carried forward to next year's account Rs. 3,26,006.24

The Bank's business during the year made satisfactory progress.

During the year under report, one branch at Naha-katia (Duliajan) in the State of Assam was opened.

Sri J. M. Dutta, Sri K. C. Das, Sri M. J. Vaidya and Sri S. Gupta retire by rotation and being eligible offer themselves for re-election.

The Directors report with deep regret the demise on the 15th of April, 1962 of Sri Narendra Chandra Datta, a revered member of the Board and the founder of The Comilla Banking Corporation Ltd., one of the amalgamating units. The Board has placed on record its high appreciation of the valuable services rendered by him to the banking industry, as a pioneer in the eastern region of undivided India, as also to the Company.

The Bank During the year under report, made contributions of Rs. 1,50,000/- to the National Defence Fund and Rs. 25,000/- to Dr. B. C. Roy Memorial Fund.

The shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

Sri M. J. Vaidya, being out of India, could not sign the Report and Accounts.

AUDITORS' REPORT

We have audited the annexed Balance Sheet of United Bank of India Ltd. as at 31st December, 1962 and also the annexed Profit & Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Branches audited by other Auditors. The reports on the accounts of the branches audited by other Auditors have been dealt with in preparing our report in the manner considered necessary by us.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of section 211 and sub-section (5) of section 211 and section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit & Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

- (a) we have obtained all the information and explanations, which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory,
- (b) the transactions of the bank which have come to our notice, have been within the powers of the Bank;
- (c) in our opinion, proper books of account as required by law, have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank;
- (d) the Bank's Balance Sheet and Profit & Loss Account dealt with by this report are in agreement with the books of account and the returns;
- (e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1982, and the Profit & Loss Account gives a true and fair view of the Profit for the year ended upon that date.

ALLAHABAD BANK, LIMITED

(AFFILIATED TO THE CHARTERED BANK)

DIRECTORS' REPORT

The Directors of the Allahabad Bank, Limited, have pleasure in submitting the Accounts, duly audited, showing the position of the Bank's affairs as at the 31st day of December, 1962, together with their report.

The result of the working for twelve months, including the balance from former Account, and after making allowance for taxation and depreciation, is a profit of ...

Out of this there has been paid Dividend and Bonus on the Ordinary Shares at the rate of 12 per cent and 6 per cent per annum respectively and Dividend on the Preference Shares at the rate of 7.80 per cent per annum (both subject to deduction of tax in accordance with the provisions of the Indian Income Tax Act) for the six months ended 30th June, 1962, absorbing ...

Leaving an available balance of ...

which your Directors recommend should be disposed of as follows: In payment of a Dividend (subject to deduction of tax in accordance

with the provisions of the Indian Income-tax Act) on the Preference Shares for the six months ended 31st December, 1962, at the rate of 7.80 per cent per annum ...

In payment of a Dividend (subject to deduction of tax in accordance with the provisions of the Indian Income-tax Act) on the Ordinary Shares for the six months ended 31st December, 1962, at the rate of 12 per cent per annum ...

Transfer to Reserve Fund ...

Provision for Bonus to Staff ...

Carry forward to next Account ...

The Bank's business showed satisfactory expansion during 1962, but, unfortunately, this has not been reflected in the profit figure owing to enhanced operating costs. As hitherto, investments are shown in the Balance Sheet at less than the actual market value.

The Bank made a donation to the National Defence Fund amounting to Rs. 1,15,000.

The issued and fully subscribed Capital of the Bank was increased during the year to Rs. 82,50,000 by a 'rights' issue of 22,500 Ordinary Shares of Rs. 100 each to the existing equity

shareholders in the proportion of one new share for every two shares held, at a premium of Rs. 50 per share. The premium received on the 'rights' issue, amounting to Rs. 11,25,000 has been added to Reserves. The new Capital will participate in the proposed final dividend of 12 per cent per annum for the three months ended 31st December, 1962.

During the year a new branch of the Bank was opened on the 11th October, 1962, at Brabourne Road, Calcutta, and the remaining five pay offices were upgraded to full branch status. Exemption from the requirement of compulsory audit was obtained from the Central Government for 39 branches in respect of their accounts for 1962 and the remaining offices were either by Bank's Statutory Auditors, Messrs. A. F. Ferguson & Co. or by firms of Chartered Accountants appointed in consultation with them.

Under Article 115, two of the Directors, Mr. I. G. Thomson and Mr. M. J. Maclaren, retire from office by rotation but are eligible for re-election.

Auditors will have to be appointed for the year ending 31st December, 1963.

Mr. M. R. Das being absent from Calcutta has not signed the accounts.

By order of the Board,
I. G. Thomson,
Chairman.

M. J. Maclaren,
General Manager.

Calcutta,
The 20th February, 1963.

W. RITCHIE, Directors.

LOKNATH, Directors.

AUDITORS' REPORT TO THE MEMBERS

1. We have audited the foregoing Balance Sheet of the Allahabad Bank, Ltd., as at 31st December, 1962 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns of all the Branches, of which 28 Branches have been audited by us, 24 Branches by other auditors and 39 Branches unaudited.

2. We report that:

(a) we have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purposes of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns therefrom have been received from all the Branches of the Bank;

(d) the reports on the accounts of Branches audited by other Auditors have been considered by us and the same have been taken into account in preparing this report;

(e) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(f) in our opinion and to the best of our information and according to the explanation given to us, the said accounts give a true and fair view of the financial position of the Bank as at 31st December, 1962, and of the Profit and Loss Account for the year ended upon that date.

Indirect Taxes

CUSTOMS: Increase in import duties on a number of articles including mineral oils, machinery, iron and steel products, raw cotton, rubber, palm oil, cinema films, tobacco, dyes, hardware, electrical and other instruments and motor vehicles parts. Excise duty on most petroleum products increased substantially and import duty correspondingly increased. Yield Rs 65.98 crores.

A general surcharge of 10 per cent. on all import duties Countervailing duty calculated on the landed cost inclusive of basic duty. Yield Rs 26.79 crores.

Export duty on tea abolished and refund of excise duty discontinued. Loss of customs revenue Rs 5.38 crores. Net effect of Customs changes yields Rs 87.39 crores.

EXCISE DUTIES: Duty on motor spirit increased from Rs 325.10 to Rs 410, on refined Diesel oil from Rs 305.25 to Rs 390, on superior kerosene from Rs 79.88 to Rs 210 and on inferior kerosene from Rs 64.20 to Rs 180, all per kilo litre. Corresponding increase in duty on vaporising oil from Rs 283.95 to Rs 370 per kilo litre and on Diesel oil (not otherwise specified) from Rs 117.70 to Rs 195 per tonne. Additional revenue Rs 48.40 crores.

Excise duty on unprocessed vegetable non-essential oil including ordinary edible oils removed. Loss Rs 10.25 crores.

Duty on vegetable products, paints and varnishes and soap increased.

Duty on cigarettes increased on a graded scale by amounts varying from 70 naye Paise per thousand on the cheapest to Rs 8.70 per thousand on the costly varieties.

Duty on unmanufactured tobacco other than flue cured and not used for the manufacture of cigarettes, biris, etc. increased by 40 naye Paise per kg.

Duty increased on copper by Rs 200 per tonne.

Duty on strawboard increased where the production is more than 1500 tonnes per annum.

The Proprietors of Indian Patent No. 56558 "Process for the Pre-treatment of oxidic iron catalysts" desire to conduct negotiation for the grant of a manufacturing licence with respect to or for the disposal of the above-numbered Patent. Anyone interested should apply:

Calcutta-14

Tax Proposals in Brief

The structure of duty on rollers of steel revised without any effect on revenue.

Duty of Rs 30 per tonne on blooms, billets, slabs, steel bars, tin bars and hoe bars in addition to the duty at ingot stage. Further duty will not be charged on bars, rods, wires, forgings, structurals and other products if they are made from semi-finished steel which has paid the duty of Rs 30 per tonne.

Duty on plates, sheets, hoops, strips and skelp reduced by Rs 30 per tonne.

These will yield an additional excise duty of Rs 60.28 crores, of which Rs 9.60 crores will go to States.

No new excise duties levied this year.

Selective surcharges on Central excise duty on several articles, to give revenue exclusively for the Centre:

10 per cent. surcharge on synthetic dyes, printing and writing paper, jute manufactures, glass other than plate and sheet glass, chinaware and crockery, tin-plate, internal combustion engines, electric storage batteries, electric bulbs, motor spirit and diesel oil.

20 per cent. surcharge on tea, coffee, unmanufactured tobacco, cigarettes, vegetable product, paints and varnishes, soap, cosmetics, plastics, cellophane, tyres, rubber products, paper other than printing and writing paper, cotton yarn of less than 35 counts, woolen fabrics, art silk fabrics, cement, plate, and sheet glass, electric motors dry electric batteries, electric fans, motor vehicles other than motor cars, films and aluminium.

33-1/3 per cent. surcharge on cigars, rayon and woollen yarn, cotton yarn of 35 counts and more, silk fabrics, refrigerators and air-conditioning machinery and their parts, wireless receiving sets, radiograms and motor cars.

All surcharges yield Rs 55.93 crores.

Net additional revenue through Central excise Rs 106.61 crores.

Direct Taxes

INCOME-TAX: An additional surcharge rising from 4 to 10 per cent. on the incomes after tax, of individuals, Hindu Undivided Families, unregistered firms and associations of persons. A part of this additional liability can be discharged through a compulsory deposit. Total collections from Rs 65 to Rs 70 crores.

A surcharge of 20 per cent. on the income tax payable by registered firms. Additional yield from these measures Rs 45 crores.

Regarding surcharges of income-tax, the higher exemption limits

of Rs 15,000 for certain Hindu undivided families and Rs 7,500 for individuals, unregistered firms etc. abolished.

Effect small.

In order to speed up collections, a new provision will be introduced in Income Tax Act giving a credit for one per cent. of the tax for prompt payment. Defaulters to pay interest at two per cent. on the tax found due.

Deduction for expenditure on account of remuneration and perquisites restricted to Rs 60,000 per annum for an individual employee.

These rationalisation measures yield Rs 12 crores.

WEALTH TAX: Exemption upto Rs 25,000 allowed for jewellery in wealth tax act withdrawn. Yield Rs 40 lakhs.

CORPORATE TAXATION: A super profits tax to be imposed. This tax will operate when the income of a company, after deducting the income tax and super tax payable by it exceeds 6 per cent. of its capital and reserves except for such amounts of reserves which have been allowed as deduction in computing the total income for income-tax.

The rate of tax will be 50 per cent. when that income is above 6 per cent. but not above 10 per cent. and 60 per cent. on incomes above ten per cent. This tax is expected to act as a disincentive to excessive profits and help keep down prices. Yield Rs 25 crores.

COMPULSORY SAVING: A comprehensive scheme of compulsory saving is to be introduced to supplement the effort by way of additional taxation and voluntary savings. Deposits under this scheme cannot be withdrawn for 5 years and will carry simple interest at 4% per annum. Yield Rs 40 crores.

The additional resources from all direct levies, including compulsory savings, will be Rs 110.4 crores Rs 40 crores will come by way of compulsory savings, Rs 33 crores by way of Union surcharge on income-tax, Rs 25 crores by way of super profits tax and Rs 12.4 crores by way of rationalisation.

Postal Rates

Post card made 6 nP. Reply post cards made 12 nP. Local cards abolished.

Rates increased from book, pattern and sample packets, parcels registration fee, acknowledgement fee, certificate of posting, insurance, business reply permits and post box rentals. Additional revenue Rs 3.15 crores.

Inland telegram rates, greetings telegram charges, rates for express telegrams increased. Local telegrams concession abolished. Yield Rs 95 lakhs.

Concession on urgent trunk telephone calls reduced to 25 per cent. and that on priority calls withdrawn. Yield Rs 50 lakhs.

Changes in postal telegraph and telephone rates yield Rs 4.6 crores.

EMERGENCY INSURANCE: For the quarter commencing April 1, 1963, premia reduced from 25 naye Paise to 15 naye Paise in respect of factories and other installations and from 15 naye Paise to 10 naye Paise for goods.

Markets

JUTE Improving Quality of Jute

PRICES in the jute markets further eased during the past week in the absence of buying support. In the goods market conditions were generally dull as there was no sustained interest. Scattered buying mostly of a speculative character was however noticeable especially in early dealings. Activity was mainly confined to the hessian section where prices moved both ways under conflicting rumours about fresh US business. The sacking section was devoid of much interest most of the time during the week. In earlier dealings prices of sacking too fluctuated both ways on alternate bouts of buying and selling. Though mills were sellers not much business was put through as buyers in later dealings were reluctant to accept higher rates. With the result that prices all along the line were easier on balance at the end of the week. Hessian 40"x10 oz Ready closed lower on Wednesday at Rs 48.70 as against Rs 49.80 a week ago. B Twills ready

was likewise finished one point easier at Rs 112.25.

The raw jute market was also easier in spite of the fact that purchase quotas for March at 500,000 maunds for LJMA mills and 30,000 bales for other mills have been announced. Arrivals of jute were lower than in previous weeks. The declining trend in supplies is also evident in the lower arrivals in January. According to authoritative quarters the jute that remains with the cultivators or holders cannot be much. And there are four or five months to dispose this as new jute will begin to arrive in the market only sometime in July next. Moreover, there can be no anxiety regarding an equitable price to be obtained by the jute grower. The steps so far taken to stabilise jute prices at the minimum price of Rs 30 per maund basis Assam Bottoms have already begun to yield encouraging results. During the past few weeks sellers in the raw jute market have gained confidence in jute. There are now a number of agencies to support the market by lifting jute in quantity at the minimum prices levels. While the jute industry has been allotted purchase quotas almost all through

the current season, there are other bodies supporting the market such as the Jute Buffer Stock Association and the State Trading Corporation. These agencies have been concentrating on the buying of low quality jute as over-supply of such jute has been the main cause of the recent weakness of the raw jute market. It is however increasingly being realised that if the future jute crops comprise a large quantity of low quality jute, the present arrangements for price support will become untenable before long. In the current season it has been noticed that while low quality has been a drag on the market, quality jute has all along been getting handsome prices. In recent weeks an acute shortage of quality jute has developed with the result that such jute is now fetching a premium. The need for improving the quality of jute grown in the country has gained new importance because our jute goods have to compete with those from Pakistan whose industry has the advantage of having a plentiful supply of jute of good quality. It is therefore gratifying that Government has decided to pay special attention to an improvement in the quality of jute grown in the country. Steps in this direction have already been taken. The Jute Commissioner is currently having discussions with the Chief Ministers of States where jute is being grown in large quantities with a view to taking special measures necessary to improve cultivation of better quality jute.

Meanwhile, in the export sale held in Calcutta this week, offerings were 70,962 packages of Leaf grades. There was a strong and improved demand. The plainest orthodox kinds, on offer, met with keen competition and were sold at dearer rates, while plain sorts and the better liquoring Dooras descriptions were about steady with selected lines, particularly exportable Fannings, appreciating in value. Assam teas were sold well and were generally firm although this was dependent upon their liquoring properties.

Medium and best CTC descriptions came to an irregular market with the brighter lines selling well at, sometimes, dearer prices. Fibrous CTC teas and the few leg-cut sorts were sold well. Whole Leaf grades were firm with dearer prices being paid for the lesser sorts. Tippy teas met with a good enquiry although often selling at a slight discount. Following rates (per kilo) were quoted:—Clean Plain Pekoe Rs 4.80 to Rs 5.00; Plain BP Rs 4.10 to Rs 4.30; Plain Fannings Rs 4.10 to Rs 4.40; Medium Assam CTC BP Rs 5.50 to Rs 5.80; Medium Assam CTC Fannings Rs 5.20 to Rs 5.50; Best Assam CTC BP Rs 5.90 to Rs 6.10 and Best Assam CTC Fannings Rs 5.70 to Rs 6.10.

According to trade sources, arrivals of tea into the Calcutta Port increased to 669,406 chests in January from 534,809 chests in the corresponding month of last year. Total arrivals in the ten months ended January 1963 are, however, lower at 4,801,480 chests as against 4,843,738 chests in the similar period ended January last year. While arrivals by rail and road rose from 1,371,206 chests and 353,787 chests in April/January 1962 to 1,577,428 chests and 461,003 chests respectively in the period under review, arrivals by river and air fell from 2,981 chests and 136,979 chests to 2,459,389 chests and 103,660 chests respectively.

In the Colombo market, offerings were 6,132,560 pounds. There was a strong and general demand. Best Dimbula/Dickoya Brokens were irregularly dearer following quality, while the prices for below the best types advanced. Uvas and Pusselawas were about 5 cents per pound dearer. Coloury medium Broken Orange Pekoes from western districts were fully firm and low mediums and Uvas 3 to 8 cents dearer. Low-grown flowery broken orange pekoes were irregular, but other Middle East types were strong and were up to 5 cents dearer. Small leafy Broken Orange Pekoes were 5 to 10 cents dearer, particularly brighter liquoring sorts. Broken Orange Pekoe Fannings met with strong demand with prices following the

dearer trend of their respective brokens. Low-grown flowery BOP Fannings, however, met with less demand at lower rates.

Ceylon's tea production in 1962 hit a highest-ever record with a total 467,049,062 pounds. Total production has exceeded the figure for the previous year, which was only 455,200,000 pounds. The difference is over 11.85 million pounds. Exports have also shown an improvement. Shipments from Ceylon, in the first eleven months, totalled 419.16 million pounds as compared to 393.16 million pounds in the corresponding period of 1961. Exports to the UK, the largest buyer of Ceylon tea, and America, the second largest buyer, rose from 147.72 million and 50.33 million in January/November 1961 to 164.48 million and 56.04 million pounds respectively in the period under review.

Pakistan, which has been a tea-exporting country since its formation 15 years ago, has become a tea-importing nation this year following its Government's recent decision to import one million pounds of tea on barter basis against chrome and Desi cotton from any source. Imports have been decided by the Government to meet internal shortages and to fight the high prices in the country. The price of tea has more than doubled since the price control on it was lifted in May 1962 in anticipation of a bumper crop of 59 million pounds.

In London auction, offerings were 21,323 packages including 17,554 packages from North India and 480 packages from Pakistan. A weaker tone was evident and buyers showed less interest than of late. Bright liquoring teas were occasionally easier, but most other descriptions were irregular and decidedly lower.

Tea stocks in London, as on 15 February, were higher at 146.36 million pounds as against 144.96 million pounds in the previous week. The total quantity to be landed on the same date was 17.82 million pounds. Total afloat was 37.25 million pounds including from Calcutta 18.21 million pounds; from Chittagong nil; from Cochin 810,600 pounds; from Ceylon 12.58 million pounds and from other Ports 5.65 million pounds.

COTTON Futures Firm

The Bombay cotton futures market during the past week ruled firm on account of a combination of a host of congenial factors which gave a boost to the morale. The maturing Jarilla March contract which opened the week at Rs 677.50 edged forward to Rs 701.50 per three quintals in initial dealings. The rally, however, proved shortlived and the contract receded to Rs 688.00 before finally closing at Rs 689.25. Over the week, the contract registered a net gain of Rs 11.75.

The forward market which commenced on a firm trend gathered stability mainly due to the approach of the delivery period and the prospects of meagre tenders for the maturing contract. The sentiment was also fanned by the rumours of the imposition of import duty on foreign cotton and the levy of a cess on the domestic crop. In addition to these, the firm advices from the spot market at Sewri consequent on the warning by the Union Minister for Food and Agriculture to the textile mills to cover their requirements by the end of next month and the possibility of enhancing the floor prices also aided the bullish trend. The nominal reaction in the close of the week was mainly technical.

The May contract after opening at Rs 685.00 per three quintals moved forward to Rs 703.50 before finally reacting to Rs 697.00 toward the close of the week under review. The premium held by the new contract over the ma-

turing contract narrowed down from Rs 7.50 at the close of the preceding week to Rs 3.00 during the middle of the week but again widened to Rs 7.75 toward the close.

Brisk activity was noticed in the spot market as the mills were active to cover their requirements in bulk quantities. About 80,000 bales of Vijay, Digvijay and Surti cottons were reported to have been purchased by the mills at the terminal markets. Mills also showed interest in CO 2, L 147 and Kalyan growths. As a result the prices of these varieties went up by about Rs 40 per candy and the turnover continued to be very encouraging.

Fair business in fine and superfine varieties of Bengal Deshi was transacted on the export section. Out of the export quota of 75,000 bales released for this growth approximately 25,000 bales were reported to have been registered for shipment. On the contract

trading in the other short staple cotton was totally lacking.

In the import section American cotton met with renewed demand even at advancing prices. Scattered business was also reported in higher grade Sudan cotton during the week.

The textile industry in the country accepted a voluntary obligation to export high priced cotton textiles in order to step up the export earnings from cloth. But the industry did not accept the compulsory percentages for export as desired by the Government of India. The textile delegation led by Mr Bharat Ram which met Mr Manubhai Shah, the Minister for International Trade, and senior officers of the ministry discussed the problem of increasing export earnings from textiles and resolved the long standing deadlock over imported staple fibre. The industry has consented to buy imported fibre provided the Government phased the imports in such a manner so that the

49 years... not even a scratch

The rate of industrial accidents in India has increased from about 24 per thousand workers in 1938 to about 44 in 1959. Every year, over 93,000 workers are involved in accidents and 250 lives are lost. Also wasted annually are a million man-hours—enough to produce 170 broad gauge locomotives or 700 coaches for the Indian Railways.

Safety has always been Tata Steel's watchword as efficiency is hardly possible without it. 'No-accident month' as an annual feature, safety exhibitions, training in safety, safety awards, safer working conditions, a continuing campaign under the direction of joint councils to turn safety into a habit... these are some of the means adopted in Jamshedpur to prevent accidents in the Plant.

Safety, however, depends largely on the worker himself because about 75 per cent of industrial accidents are found to be caused by human negligence. This is where men like Jamuna Dube, the oldest employee in Tata Steel, come in. He has worked for 49 years without ever sustaining an injury, not even a scratch.

The importance of safety was one of the first things that Jamshedpur taught Dube when he arrived in the Steel City half-a-century ago... a city where industry is not merely a source of livelihood but a way of life.

TEA Export Prospects

IT is learnt that under a new protocol recently signed in New Delhi, Indian exports of Tea to the United Arab Republic will go up by 25 per cent during 1963-64. During 1962-63, exports to the same country were valued at Rs 120,000,000 and are now likely to exceed the Rs 150,000,000 mark by the end of the next twelve months. The protocol extends the validity of the Indo-UAR trade agreement of 1963 by three years. Though the agreement envisages a balanced trade between India and the UAR, it provides that excess purchases by either side will be settled in free currency.

The UAR will import Indian tea worth nearly Rs 105,000,000 as well as large quantities of jute goods. India, on her part, has agreed to buy from Egypt slightly increased quantities of cotton and 100,000 tons of rock phosphates, valued at nearly Rs 6,000,000.

Again, Indian tea continues to be in good demand in Iran. The letters of credit for the first 3,000 tons of tea had been opened by the first week of December 1962 when the Government of Iran authorised the second quota of 3,000 tons. This quantity was fully booked within a period of four

weeks from the date of its authorisation. It is expected that the actual quantity of 6,000 tons will be imported into Iran well before the expiry of current trade agreement on 15 August, 1963.

mills were not compelled to purchase it bulk at one time. The Government has also permitted the mills the option to resell it in case they do not require it.

Exports of cotton from Pakistan during the first four months of current season totalled 398,579 bales as against 242,491 bales shipped between September 1961 and 31 January 1962. Japan was the leading purchaser accounting for 117,134 bales against 37,863 bales in the relevant period last season. Other main consumers were Hongkong with 47,756 bales, China with 31,000 bales and the UK with 11,380 bales. Total arrivals of cotton in Karachi during the period under review aggregated 768,515 bales consisting of 450,248 bales from Sind, 260,333 bales from Punjab, 54,226 bales from Bhawalpur, and 3,703 bales from other cotton growing tracts.

PIECEGOODS

The Bombay piecegoods market depicted a subdued trend as most of the operators adopted a "watch and wait" policy obviously due to the approaching Budget. The export front, on the other hand, maintained a steady tone.

In the domestic sector superfine varieties, particularly dhoties and lawns, were in the limelight. But owing to the tight supply position the prices looked up by 1 nP. Grey markings also met with fair demand at ex-mill prices. Good demand for shirtings was reported while poplins and prints were totally neglected. Postal enquiries were received in superfine cloth from some of the North Indian centres. UP, Bihar and West Bengal were the prominent upcountry centres during the week under review. In the powerloom section both local and upcountry centres showed keen interest in grey uncalendared dhoties and saris. Stockists however were reluctant to make forward transactions pending the presentation of the Union Budget. The grey mulls were devoid of any purchasers.

Export section reported fair business with the UK, Sudan and Singapore. The UK accounted for a moderate quantum of furnishings and sheetings. Brisk enquiries from Sudan for dorais, dhoties and voiles were reported but business transacted was moderate as the mills were firm in their prices. Small business in bleached sheetings and coatings was done with Singapore. West Africa was contended with a restricted quantity of towels and East Africa purchased small quantum of sheetings. Burma remained quiet during the week under review.

Foreign Demand for Pepper

THANKS to active foreign buying demand and sellers' hesitancy to commit at lower levels, Pepper

prices in the Cochin market have made a further spurt during the week under review. The rate for the ready position is quoted at Rs 280.50 per quintal, while that for March delivery is quoted at Rs 284 to Rs 288.

The main inspiration for the speculative operators has been derived from the broadening of demand from America. About 400 tons to 500 tons have already been bought and more orders are expected to be placed shortly. Prices paid by the USA range from 30½ cents to 32½ cents per pound. Renewed buying interest shown by the USA is attributed to the tight supply position and the consequent rise in prices in America.

America is interested in Indian black pepper at present, because of the high prices prevailing at Singapore—India's main competitor in the world market. The rate for Singapore pepper is one cent above the Indian rate and the higher price has thus diverted American buyers to India. It is also felt by the American importers that Singapore may not be able to meet the American demand to the extent it does normally since the Indonesian crop—which is re-exported by Singapore—of the current season is not satisfactory. Moreover, pepper exports are handed by the Government in Indonesia. The export policy of Indonesia for the commodity has not been laid down as yet and foreign buyers are, therefore, not willing to transact any business.

Communist countries have also entered the Indian market for the purchase of black pepper. They have placed orders for 300 tons and more orders are expected shortly. Operators having outstanding sales to their credit are, therefore, obliged to cover their commitments as they fear that the market will improve further, while the ship- pers are inclined to hedge the export commitments. This apart, the spot section has received a good deal of attention of late. North Indian dealers have put through a sizable business. The decrease in arrivals has also contributed to the buoyancy in the market.

COFFEE

The US Department of Agriculture has estimated supplies of Robusta Coffee in the 1962-63 season at 686,500 tons. This is comfortably above the 630,000 tons expected to be consumed. But the crucial point is that the combined exports of the Robusta production under the International Coffee Agreement amount to only 617,000 tons. What will happen, the coffee market is asking itself, if and when these quotas are exhausted?

The problem may be resolved by a partial switch from Robusta coffees to Brazilian Arabicas especially now that there is only a

small price difference between Robustas and the cheapest Brazilian coffees; but the "instant" manufacturers are not likely to be anxious to make the change unless they can be sure that the new price realisation is likely to be permanent and the taste for cheap Brazilian coffee would need to be propagated.

Meanwhile, according to the figures released by the India Coffee Board, receipts into the 1962-63 Pool, up to 31 January 1963, amounted to 19,466 (14,189) tonnes, made up of 16,358 (12,657) tonnes of Plantation; 2,069 (1,143) tonnes of Arabica Cherry and 1,039 (389) tonnes of Robusta. Figures within brackets indicate the corresponding receipts into the 1961-62 Pool last year.

Releases for the internal market, during the same month, amounted to 2,484 (2,642) tonnes. Including the sale on 6 February 1963, the coffees sold for export from the 1961-62 Pool amounted to 19,829 tonnes, made up of 11,286 tonnes of Plantation; 3,511 tonnes of Arabica Cherry and 5,032 tonnes of Robusta. A quantity of 566 tonnes of Plantation was also sold for export in the export sale held on 6 February out of the 1962-63 crop.

SUGAR

After the recent sharp advance due to continued buying support from Gujarat, Madhya Pradesh, the Punjab and Delhi, sugar markets have developed a slightly reactionary tendency. This is attributed to the declaration by the Government that adequate sugar stocks will be released for sale to bring down prices. The enforcement of licensing system for sugar dealers in Delhi has also a bearish effect on prices. Rumours, however, persist that the excise duty on the sweet commodity will be enhanced in the coming Budget. Mills are, therefore, hesitant, while stockists are expecting better prices. [At the time of going to press, it is learnt that there will be no further increase in excise duty.]

According to the latest report, many factories in west Uttar Pradesh have closed their cane-crushing season and the rest will be forced to do so by the end of this month. Sugar production in the State is expected to be 20 per cent less than last year's.

Total sugar production in January—the third month of the 1962-63 season—was 582,000 tonnes as against 547,000 tonnes in the corresponding period of last season. This brings the total production in the 1962-63 season till January 31 to 1,203,000 tonnes as against 1,080,000 tonnes in the corresponding period of the previous season.

YARN

In the Bombay market, Yarn prices also showed a moderate improvement on fears of an increase in excise duties. Traders generally

refrained from extending their commitments. The notable developments were the deliveries of new products in superfine Art Silk yarn by the National Rayon Corporation. The prices of imported superfine yarn tended to decline as a sequel to the deliveries of 75 denier yarn by the indigenous manufacturers.

The Baroda Rayon Corporation's production of 150 denier art silk yarn was also received by the market. The BRS yarn realised a higher price of Rs 5.37 as compared with the prices realised by other varieties of indigenous art silk yarn.

GOLD & SILVER

The silver section on the Bombay Bullion Exchange continued to rule buoyant and the rates established an all-time high. The rate was quoted at Rs 234.50. The demand for the metal continued to persist at a time when the stock position was tight and the rate of arrivals was low. Diversion of funds from gold to silver coupled with the belief that the demand would increase further owing to its use in the manufacture of ornaments of 14 carat gold were additional stimulants. Sellers were, therefore, reserved.

The Gold section staged a recovery after a quieter phase in the week. The rate was quoted at Rs 103 for 10 grams.

OILS & OLSEEDS

Prices on the Bombay Oilseeds Exchange displayed generally a steadier tendency. In the Groundnut section, trading reflected an irregular tendency in view of the comfortable supply position and the inspiring reports from the export front. As there were strong rumours of an increase in the excise duty on groundnut oil, the demand from crushers and vanaspati manufacturers continued to be active throughout the week. Groundnut ready was quoted at Rs 41.50 for Bold and Groundnut Oil at Rs 17.00.

In the Castor section, price movements were rather erratic in the absence of fresh developments on the export front. The supply position remained fairly comfortable. Ready Castor was quoted at Rs 32.12 and Castor Oil, commercial quality, at Rs 12.65.

The Linseed section ruled quiet with prices displaying an easier tendency due to liquidation, inspired by the sustained fall in prices in the producing areas. With the rising inflow of the new crop, the operators were eager to switch over their purchases from the current contract to the distant position. Trade estimates the new crop at about 475,000 tonnes. The larger output is expected to bring down the prices substantially in view of the continued absence of foreign demand for linseed oil. Ready Linseed was quoted at Rs 30.25 and Linseed Oil at Rs 12.55.

For the Investor

INVESTMENT GOSSIP Too Exacting Budget

Although the reaction of the stock market to the staggering tax proposals announced by the Union Finance Minister for the next year has been favourable, indications are that much of the fervour will ebb away as the full implication of the various tax measures is assimilated. The initial confidence seems to have stemmed mainly from the fact that out of a total tax of Rs 275.50 crores direct taxes amount to only Rs 70 crores. However the fact remains that all guesses about the magnitude of the tax effort that would be undertaken by Mr. Morarji Desai for the Budget year had been wide off the mark.

Contrary to expectations the corporate sector has not been spared. A super profits tax on companies has been imposed. This tax, which will operate when the income of a company, after deducting the income tax and super tax exceeds 6 per cent of its capital and reserves except for such amount of reserves which have been allowed as deduction in computing the total income for income tax, is expected to net Rs 25 crores annually. It would appear that this tax will make serious inroads into the after tax profits of almost all prominent companies. In this view the tax will prove to be a harsh measure as it will considerably reduce the available funds for re-employment into the business and for paying a reasonable dividend to the shareholders. The proposed method of computing the excess profit for the purpose of this tax will adversely affect companies with small reserves and those which are employing sizable borrowed finance.

The general surcharge of 10 per cent on all import duties together with the increase in the import duties of quite a few industrial raw materials will increase the cost of production of industry. The export duty on tea fulfils a long-felt demand and will certainly go to increase the export of tea. But the effect is considerably offset by the imposition of 20 per cent surcharge on the commodity. The ten per cent surcharge on jute manufactures will adversely affect the internal offtake of sacking, the stocks of which are steadily rising over the past few months on account of falling export demand. While enthusiasm for investment in equities cannot be expected to grow, a large portion of funds which is likely to find its way into the corporate sector is being mopped up by means of the additional surcharge on incomes. This measure will hit the middle income group hard as the amount of income taxes payable will go up considerably as compared to the existing level. This section of the community has been evincing increasing interest in equities in recent times but hereafter little support from this section can be expected.

ted to grow, a large portion of funds which is likely to find its way into the corporate sector is being mopped up by means of the additional surcharge on incomes. This measure will hit the middle income group hard as the amount of income taxes payable will go up considerably as compared to the existing level. This section of the community has been evincing increasing interest in equities in recent times but hereafter little support from this section can be expected.

NEW ISSUE NOTES Hindustan Allied Chemicals

HINDUSTAN Allied Chemicals Limited (proposed), Andhra Pradesh, will raise capital of Rs 6 crores—Rs 4.5 crores in equity shares and Rs 1.5 crores in 9.3 per cent preference shares for cash, at par, except equity shares of Rs 47.5 lakhs which will be offered for consideration other than cash to the foreign collaborator, Allied Chemical Corporation, USA, against supply of technical know-how, in addition to equity shares of Rs 1.425 crores for cash. The proceeds will be utilised for undertaking the manufacture of fertilizers.

Flender Macneill Gears

Flender Macneill Gears Limited, Calcutta, is issuing share capital of Rs 30 lakhs in equity shares of Rs 10 each. Of this, Rs 15 lakhs will be offered to Macneill Barry Limited for cash. The balance of Rs 15 lakhs will be subscribed by Flender and Company of West Germany up to Rs 13.13 lakhs in cash and Rs 1.87 lakhs for consideration other than cash. The new company will manufacture reduction gears and couplings.

Hindustan Teleprinters

Hindustan Teleprinters Limited, Madras, a Central Government undertaking, is to issue further capital of Rs 7.80 lakhs, divided into 7,800 equity shares of Rs 100 each, to be subscribed privately by the Central Government for cash, at par. The proceeds will be used for the manufacture of teleprinters and ancillary equipment.

Indo-American Electricals

10 to 20 shares and allotments of 5 shares each have been made in respect of 35 per cent and 66.6 per cent of such applications of the above groups respectively. An allotment of 5 shares has also been made to all applicants for 30-50 shares, while the allotments in other cases are 10 against 60-110 shares; 15 against 120-160 shares; 20 against 250-260 shares; 30 against 300-360 shares; 40 against 450-550 shares; 75 against 1,000 shares and 150 against 2,500 shares.

INVESTMENT NOTES TRAYONS

It is learnt that Travancore Rayons Limited will be receiving the machinery for increasing the capacity by 1.8 tons per day, making a total of 10.4 tons of viscose filament yarn per day by the end of May. With this additional capacity and 12 tons of cellulose film per day, the total production of the factory will be about 22.4 tons per day. The rayon-grade pulp, produced from cotton linter for the first time in this country by the company, has been tried on a commercial scale and it is stated that the quality has been found to be eminently suitable for being used in the viscose industry. Travancore Rayons itself is using this pulp for producing rayon yarn and cellulose film.

McKenzies

The Chairman of McKenzies Limited has stated that the company was sanctioned a substantial expansion in its manufacturing capacity of railway wagons by 800 wagons to 2,000 wagons a year on a three-shift basis. The company is already busy with its expansion programme. The company has also received an industrial licence for the manufacture of fork lifts. Negotiations are already under way for technical collaboration with leading foreign manufacturers in the line.

STOCK EXCHANGES Markets React Soberly to Budget

Watch-Dog Writes:

PRE-BUDGET sentiment in stock markets disclosed a measure of buoyancy, which was attributed to hopes that the overall tax burden might not be as heavy as had been feared at one stage. But, when the budget proposals were actually announced, they seemed to have been accepted with a courageous heart on the feeling that fresh burdens were inevitable in the national emergency. The declines in equity prices are only moderate, although trading in the next few days will only decide the trend of the markets which have chosen to be complacent this time.

Lyons Range reacted fairly well to the announcement of the Budget. As no special Budget session was held in Bombay, the full reaction of Dalal Street was not known.

There was moderate activity on the Madras Stock Exchange where prices remained generally steady.

CALCUTTA

Friday Evening.

ON the whole, Lyons Range reacted fairly well to the announcement of the Union Budget proposals for 1963-64. There was a moderate decline in prices from the pre-Budget levels and the volume of business remained restricted. The full impact of the budget will be revealed in the next few days, as the market remained closed on Friday due to the death of Dr Rajendra Prasad.

An encouraging feature of trading early in the week was, that the market discounted all bearish factors and was well set to face the challenge. As a matter of fact, the market remained unusually firm even in the pre-Budget session. This was mainly due to hopes entertained by the operators that the Union Finance Minister's tax efforts would be such as to leave sufficient encouragement for the corporate sector to attain maximum level of output and plan

for future growth. There were also hopes that the bulk of the increased taxes would be indirect.

But, when the budget proposals were actually announced, they seemed to have been accepted by most of the operators with a courageous heart on the feeling that the budget was not as bad it might have been, especially when the surcharge on personal income-tax and the super-profit tax in the corporate sector was more or less modest considering the amount to be raised by indirect taxation. Certain others felt that the imposition of a super-profit tax on all profits beyond 6 per cent might affect development in the private sector, particularly in the case of old companies with comparatively small capital structure. Naturally, buyers turned rather reserved, resulting in modest profit-taking at the pre-budget levels.

Although the proposals appeared to be unprecedented in their range and incidence, the market continued to present a steady appearance on second thoughts that the present budget was justified in the circumstances prevailing today. Even, the increase in import duty on machinery and the imposition of a surcharge on imports in general, which are likely to enhance both the capital costs and the cost of raw materials for industries, did not affect sentiment.

On the other hand, consolation was drawn from the fact that the revenue, to be raised by compulsory saving, was considered to be theoretically better than the same revenue, if raised by straightforward taxation. Again, the abolition of the export duty on tea, the absence of any tax on advances and deposits or cheques as was earlier feared, the grant of export incentives and the reduction in the rates for Emergency Risk Insurance were interpreted bullishly. For obvious reasons, sellers also remained equally reserved.

Except for some enquiry in Punjab National up to Rs 19.25 from Rs 19, Bank shares were generally neglected. After initial firmness in sympathy with the general trend of the market, Jute shares turned quiet. Apart from the quieter phase in the gunny market following the fall in overseas demand, the announcement of a 10 per cent surcharge on excise duties on jute manufactures had an adverse effect on the section.

Coal shares came in for only selective enquiry.

Although the abolition of the export duty on the commodity was welcomed, the discontinuance of the refund of excise duty did not enthuse the operators in the Tea section to enter into new commitments. Thanks to the absence of any further increase in the excise duty on the sweet commodity, Sugar shares were held steady. Textile shares were rather subdued on account of the increase in the import duty on raw cotton.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons, which moved irregularly between Rs 20.90 and Rs 22.00 in the Budget session. On Friday, the rate was unofficially quoted at as low as Rs 20.75.

Miscellaneous issues moved in sympathy with the trend of the market.

MARTIN BURN LIMITED.

NOTICE

The Annual General Meeting (being the Seventeenth Ordinary General Meeting) of the Company will be held on Wednesday, 27th March, 1963, at 12 noon at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:

1. To receive and adopt the Audited Accounts for the year ended 30th September, 1962 and the Directors' and Auditors' Reports thereon.
2. To declare a Dividend on the Ordinary shares in the Company.
3. To appoint a Director in place of the retiring Director Sir N. R. Pillai.
4. To appoint Auditors and to fix their remuneration.
5. Special Business.

To consider and if thought fit, to pass the following resolution as a Special Resolution—

"That pursuant to Section 314 and other applicable provisions of the Companies Act 1956, consent be and is hereby accorded to Mr. Thomas Acquin Martin, a relative of a director of the Company, holding or continuing to hold for a period of five years as from 1st April, 1963, an office or place of profit under the Company as an Assistant on a higher remuneration, namely, a basic salary of £3,000 per annum, fixed, plus such other allowances, benefits, perquisites, bonus, gratuity, leave, etc., as are usually admissible to the senior covenanted staff of the same status serving in the United Kingdom."

The Ordinary Share Register and Transfer Books of the Company will be closed from 14th to 27th March, 1963, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,
A. G. GIDLEY
Secretary.

NOTE—The Dividend, if sanctioned, will be paid on or after 1st April, 1963, to those Shareholders so entitled whose names appear in the Company's Register of Members for Ordinary Shares on the 27th March, 1963, or to their mandatories. An Explanatory Statement annexed to the convening notice as required under the Companies Act, 1956, has been forwarded to the members of the Company.
