An arsenal of sacrifice

Indian women have been noted for their bravery and courage. Padmaja of Chittor, Chand Bibi of Ahmednagar, the Rani of Jhansi, Sita, Damayanti and Sushila are glorious examples followed by Indian womenhood. Whenever the need arose, Indian women willingly sent their sons, brothers, husbands to the battlefield, and a blessing to them, a "tilak" on their brow, with a smile on their own lips, a prayer in their hearts. Today again they are facing a new threat. The Chinese have attacked our motherland, and our brave sons are fighting them. But they need more arms, more equipment, more warm clothes to help them defeat the enemy. While many women have given their gold, their jewellery, their valued possessions to help us convert them into an arsenal, greater sacrifice is needed. This is everyone's struggle... and all of you have to join in to help protect our honour, our freedom.

A Second Look at the Central Budget

A recent article in Encounter described Mr Morarji Desai as a man of 'Cromwellian integrity'. It is a description that few will question for more than one reason. The budget that Mr Desai presented last week confirms, if anything, the puritan streak of doing unpleasant duties with gusto that Mr Desai shares with Cromwell. But even as we concede the excellence of the motives behind the Finance Minister's impositions, it is necessary to point out that they add up to a massive burden and that they could be lightened without a significant diminution of his expectations. Secondly, it is necessary to draw his attention to some of the objectionable features of the levies he is imposing and to suggest possible modifications.

As regards the first, it is obvious that the habit of under-estimating revenue has become so ingrained that any fiscal qualms that might once have troubled Authority seem to have been quietly laid at rest. To take but the current year, against the revenue receipts of Rs 1381 crores originally estimated in May last, revised estimates for the year put them at Rs 1500 crores—a difference of about Rs 121 crores. The budget year's expectations are that even without the new taxes, receipts will go up by about Rs 86 crores. This may well be an under-estimate. Besides, there are other built-in cushions in the coming year's budget that are not very obvious to the lay public. For example, the compulsory savings scheme introduced this year is expected to yield Rs 65 to Rs 70 crores of which the Centre hopes to retain about Rs 40 crores. No credit is taken for this amount either in the revenue account or in the capital account. The yield from higher postal rates also does not figure in the estimates. It is also not easy to locate the receipts from the premia for Emergency Risks insurance estimated to be of the order of Rs 33 crores. Thus on a conservative estimate a total of about a hundred crores of rupees have not entered the picture at all, except as eventual reducers of the extent of deficit financing now anticipated.

Secondly, it seems that the yields estimated from many of the specific levies are gross under-estimates. In this connection, it is necessary to draw attention to certain ambiguities about the computation of the super profits tax. At least three different ways of calculating the 'tax' to be deducted for arriving at the 'chargeable profits' for purposes of super profits tax are to be gleaned from different sources. The Finance Minister's speech refers to the profits "after deducting the income tax and super tax payable by a company" as the target of this levy. The statement of Objects and Reasons of the Bill speaks of a desire to levy a special tax on the income and profits of a company as "reduced by the income tax and super tax chargeable thereon". Thirdly, the first schedule to the Bill (text of which appears elsewhere in this issue and to which we would refer our readers for following our reasoning) says that from the total income for income tax purposes (after sundry adjustments) will be deducted income tax and super tax calculated at the rates in force in the financial year as if such income has been the total income etc."

Now the italicised words in the last sentence lend themselves to a possible interpretation that what is to be deducted from the total income for determining the chargeable profits is a no-

tional tax on it at the rates in force. Now, the supertax on companies is expressed in the Finance Bill (as also in all previous Finance Acts) as consisting of a 'basic rate' (of 55 per cent) from which various 'rebates' for different kinds of companies are allowed. It is therefore possible to argue (though there are some difficulties that we do not propose to go into here) that the reduction for purposes of ascertaining the super profits is 80 per cent (25 per cent income tax and 55 per cent super tax) and not the actual tax paid by the companies (50 per cent in the majority of companies.) Some plausibility is lent to this interpretation by the fact that some rough calculations have shown that the yield of Rs 25 crores from this tax estimated by the Finance Minister would be realistic only on the assumption of a larger allowance for tax in determining the chargeable profits. (Incidentally, the schedule is not happily worded even otherwise. For instance in rule 2 of the first schedule, there is a reference to "such income", but there is no suitable antecedent for the word "such". What is probably meant is such "balance".)

However this may be, it is patent that the impact of the Super profits tax on the corporate finances will be disastrous not only from the point of view of individual fortunes but also from the point of view of the economy as a whole. It is quite obvious that efficiency would receive a rude setback because the tax penalises it. Companies would much rather they had a lesser profit by improvident and unnecessary expenditure than show a better profit and lose most of it in tax. It is true that the Super profits tax bill provides for disallowance of expenditure on commission, entertainment and advertisement that may be considered excessive by the income tax officer. But this provision may not by itself be sufficient for among other reasons, there are other items of expenditure besides those listed in the section which may be wastefully incurred. Productivity, of which we hear much unctuous profession from official quarters will be the first casualty of the new levy.

We would therefore strongly urge on the Finance Minister to give serious thought to modifying the proposals. The best way to do it would be to make a more realistic estimate of what constitutes a reasonable return on capital (which again could do with a less restrictive interpretation) and to reduce the rate of tax on such super profits. He should also consider introducing, on the analogy of the Excess Profits Tax Act, provisions for refund in subsequent years in respect of any deficiency from the standard profits.

With the second novelty in the Finance Minister's proposals viz compulsory savings, we have no serious quarrel. But to the idea of taxing residual income after taxes, we have our objections on grounds both of principles and its inequity in operation. One result of the levy, especially in the lower brackets, is that the surcharge on residual income is more than the regular tax. For instance a person with a salary income of Rs 5000 will pay a regular income tax of Rs 42 but his surcharge on residual income would be Rs 199. The Compulsory deposit scheme offers him but limited immunity since he would get a maximum relief of Rs 149. It does seem to us that a surcharge that is more than the tax it is supposed to supplement is something of a freak.

President Kennedy's recommended programme for the nation's youth, embodying expanded efforts to fit young people into productive socio-economic roles, is designed to meet problems that already are pressing in the United States and could become even more acute in the years ahead.

The simple fact is that economic trends have been reducing job opportunities for young workers at the very time that young workers are beginning to enter the labour force in increasing numbers. A Labour Department study prepared for the President's advisory committee on labour-management policy, indicates that between 1960 and 1970 the number of working youngsters aged 14 to 24 will be increasing by more than six million. This compares with a rise of about 400,000 during the decade of the 1950's.

This is expected to bring the total number of workers in this age group to about 26 million. Yet the unemployment rate for workers in this group already is more than double the national average.

This is a reflection, in the first instance, of the nation's burgeoning population growth. But it also reflects the fact that economic trends are operating to the disadvantage of young workers.

US

A Domestic "Peace Corps"

In keeping with the continuing shift from the production of goods to services in the US economy, there has been a related shift from production, or blue-workers, to professional and technical, or white-collar workers. While the total number of workers has continued to increase as the economy has expanded, the proportion of all workers in goods-producing industries has fallen in the past five years from 51 per cent to 42 per cent.

At the same time, there has been a shift from unskilled to skilled jobs within the blue-collar group, as technological advances have tended to upgrade job requirements. There also has been a shift from farm to urban jobs—a result of the nation's agricultural abundance and productivity, coupled with widespread urban opportunities.

What this all boils down to is a growing scarcity of semi-skilled and unskilled jobs of the kind traditionally open to untrained or inadequately trained young people just entering the labour market. The situation is even more serious for those youngsters who

drop out of school before completing their high-school education. These young people—especially the school drop-outs—pose many sociological as well as economic problems. Their situation is commanding increased attention not only from government leaders in Washington but from community leaders throughout the country. It is at these youngsters that the President's youth employment programme is particularly aimed at though it can be useful to all young people.

In essence, this programme would have two parts. It would create a youth conservation corps to work in national and state forests, parks and recreation areas, and it would provide half the wages for young people to work in non-profit community service institutions. Both programmes would be open to youngsters 16 to 21 years of age, and would offer valuable and useful on-the-job training while fostering responsible work and social attitudes.

Supplementing this phase of the programme would be a national service corps, a sort of domestic counterpart to the peace corps,

which would be open to qualified volunteers of all ages. They would work in hospitals, schools and other institutions, particularly in economically distressed areas, transferring skills and hope to young people interested in finding a place for themselves in the variegated society of the United States.

These programmes cannot be expected to do the entire job of coping with complex problems of employment, population growth, and economic change. There also is the need to promote a faster rate of growth which would make possible the creation of the 13 million more jobs that will be required by 1970, to say nothing of the 2,000 million additional jobs needed each year to offset the effects of technological advance. The government's basic fiscal and monetary policies, such as the tax cut proposed by President Kennedy, figure prominently in this effort.

But the President's youth programme has an important part to play. It would help qualify young people for the jobs that open up, and it represents a significant start on which further progress can be based. It underscores the government's determination to meet its vital responsibilities to the young people of the nation.

tailed considerable strain for the banking system, with borrowings from the Reserve Bank rising by more than fifty per cent, or Rs 18.57 crores, to a high level of Rs 57.17 crores. However, their Reserve Balances are holding steady at Rs 77.57 crores.

Balances Held Abroad once more reveal the continuance of a satisfactory though small uptrend. Foreign assets held by the Reserve Bank have risen over the week by Rs 1.24 crores, and are now inching up toward the Rs 110 crore mark.

The return of the State Bank for 1 March shows that beginning of the month disbursements, aggravating busy season pressures, have had a two-fold impact. Deposit resources have been drawn down by Rs 6.23 crores to Rs 551.05 crores; and the total of Advances has further risen by Rs 3.37 crores to Rs 312.31 crores. There is investment in gilt-edged for Rs 4 crores, and cash in hand, including money at call and short notice, shows an improvement of Rs 4.04 crores to Rs 28.40 crores.

The return of Scheduled Banks for 22 February indicates a welcome rise in Deposits. Net Demand Deposits are higher by Rs 6.84 crores at Rs 920.93 crores, and this is only partly offset by the fall of Rs 1.59 crores to Rs 1,254.75 crores in net Time Deposits. A little more than half of this rise is ascribable to the State Bank. Even so, of the rise of Rs 9.85 crores to Rs 1,537.70 crores in the total of Advances, well over half is on account of the State Bank. With pressure on resources in that week relatively small, Scheduled Banks added to borrowings from the Reserve Bank by a meagre Rs 1.19 crores to Rs 38.89 crores; however, indebtedness to the State Bank is higher by the larger sum of Rs 2.55 crores at Rs 19.21 crores. The increase of Rs 11 crores in the gilt-edged holdings of Scheduled Banks is wholly in respect of acquisition by the State Bank. Lastly, cash balances, including money at call and short notice have receded by Rs 6.40 crores to Rs 179.29 crores, and two-thirds of this fall is due to the State Bank.

Notes

STATE BUDGETS

A General Review

In the last few weeks, we have been commenting on the budget proposals of the States as and when they were being presented. The budgets of eight other States are discussed in this issue. A detailed examination of the fiscal impact of the proposals of all the States will have to await the receipt of the complete budget papers from all the States. But some tentative conclusions are possible on the basis of reports in the daily Press.

In the first place, there has been a certain element of confusion introduced by the decision of some States with revenue deficits to leave it uncovered. In itself this is not unusual, because hopes of greater receipts and possible windfall receipts are not, especially in the last few years unjustified. And the Reserve Bank is always there to lend a helping hand over "ways and means", though this particular line of least resistance will be less readily open in future.

The Reserve Bank rightly feels that its good nature is being sorely tried by the States' improvidence. But the really unusual part in this year's procedure is that many States have indicated that they will come forward with appropriate taxation proposals later in the year. Thus, the impact of taxes to come is not felt, as was usual in the past, during the budget season. This has no doubt certain advantages, psychological and tactical, for the government's concerned, but it leads to a certain untidiness in the fiscal picture and uncertainty in the minds of the tax payers. Moreover, it leads to a certain lack of discipline on the part of the fiscal authorities and a tendency to get a tax measure in by the backdoor so to speak.

The second interesting point in this year's State Budgets is the repetition by more than one Finance Minister of the intention to collect back-log of arrears of taxes and loans due to government. It is no doubt the necessity to scrape the bottom that has led to this sudden awakening to elementary responsibilities.

Thirdly, expect for Bihar, Madras and Mysore, all the other States (except Assam, whose budget is still to come) have indicated, in however tentative and vague a fashion, additional taxation measures. Latest reports indicate that the Bihar Government is bringing forward taxation propo-

sals that will fetch the State a total of Rs 8.45 crores. It is evident that the States had some expectation of sizeable windfalls from the Centre. This expectation has not been belied, for the Centre's budget for the year contains measures which will put in the hands of the States a total of about Rs 50 crores in the form of their share of compulsory deposits and central sales tax. Even so, it is to be remembered that the States insisted that their plan outlay for the coming year, reduced to Rs 690 crores in the first flush of Emergency austerity, (against Rs 723 of the current year) was put up later to Rs 750 crores at the recent meeting of the National Development Council. It is difficult to see how they are going to find the fund for an outlay of this order. They will most probably follow the example of Mr Morarji Desai who has provided for an outlay of Rs 901 crores only against the recommended Rs 944 crores by the NDC. (Some have already done so.)

The States' additional tax effort under the Third Plan had been put at Rs 610 crores. According to the estimate of the NCAER, the yield from additional taxes levied by the States in the first two years will be Rs 354 crores for the entire plan period. The current year's effort may fetch an additional Rs 50 crores for all States, including such taxes as may be levied in the course of the year. If other things remain equal and the full impact of under estimate of revenue is felt in the coming years also, it is likely that the States may have the benefit of an inflationary economy in larger revenues. But whether they will be able to find all the funds they need for their new tasks is difficult to answer with assurance.

One other aspect of the State budgets require mention. The taxes levied are on entities that the States have found by experience easy to squeeze. Road Transport and electricity are easy game for them but when it comes to taxing rural prosperity for which a good deal of the States' expenditure are incurred their political courage fails them.

Orissa

The proposals for fresh taxation indicated by Mr B. Patnaik while presenting the budget estimates for 1963-64 cannot bring any surprise to the tax payers of Orissa State in view of its continued diffi-

cult state of finances and the inadequacy of resources to meet its requirements. The new proposals are not however of sizeable dimensions as they were resorted mainly to balance the budget rather than to enhance the yield to such a level that would have been possible. The State's finances no doubt show an improvement when compared to the revised estimates for the current year. The revenue receipts for 1963-64 are estimated at Rs 6,75,960,000 and expenditure at Rs 6,71,488,000 leaving a nominal surplus of Rs 4,472,000. The revised revenue receipts for the current year estimated at Rs 6,56,871,600 show an improvement of Rs 35,827,000 from the original estimates of Rs 6,21,044,000 while the revised expenditure is expected to outstrip the budgeted figure by Rs 57,601,000. It is evident that in his efforts to balance the budget the Chief Minister leaned heavily on reducing the expenditure rather than on raising the yield by additional levies. The additional taxation measures include an increase in State's sales taxes on specific items of luxury goods from 7 per cent to 10 per cent, a toll on new roads and bridges and a change in the motor vehicles tax according to the ladenweight of trucks and buses. The revenue estimates for the budget year include a provision for Rs 6.1 crores on account of enhanced receipts from additional taxation measures already introduced or to be taken by the Government such as irrigation rates, taxes on motor vehicles State trading in tendu (bidil) leaves electricity duty, increase in registration fee etc. Provision has also been included in the estimates to obtain a special loan of Rs 7 crores from the Centre as the borrowing programmes are reserved exclusively by it.

The allocation for the plan schemes for the budget year has to be fixed at Rs 29.5 crores, same as during the current year, owing to the cut in Central assistance. This will naturally slow down the plan progress which will have to be warded off due to its adverse impact on the State's economy. This is particularly disappointing in view of the State's backwardness which requires a speedy industrialisation to forge ahead with development schemes. The Centre's assistance will be Rs 21.7 crores in the shape of loans and grants Mr Patnaik is optimistic of enhancing the outlay in the course of next year provided sufficient resources are available. As the shortage of technical personnel had been a main obstacle to the rapid industrialisation, steps have been included to make up this leeway. In the industrial sector, the production of pig-iron, ferro-alloys, steel ingots and metal for casting showed encouraging rise. The production of rice, however, registered a small fall owing to unpropitious climatic conditions and the destruction caused by pests. Liberal assistance from the Centre becomes incum-

bent to foster the economic growth of the State.

Punjab

While presenting the budget estimates for 1963-64 at the State Vidhan Sabha, which show a revenue deficit of Rs 10.24 crores, Dr Gopichand Bhargava, the Punjab Finance Minister, disclosed his intention to introduce new imposts in the course of next year to cover the deficit. The revenue receipts for the budget year are estimated at Rs 95.11 crores and expenditure at Rs 105.35 crores. The budget indicated an overall deficit of Rs 3.17 crores, the income and expenditure being estimated at Rs 155.48 crores and Rs 148.01 crores respectively. This deficit is symptomatic of the additional expenditure involved in the repayment of Bhakra Nangal loans, and interest thereon, civil defence measures and various proposals for assisting the defence personnel who were disabled in action and to the families of jawans who lost their lives on the war front.

The estimated receipts for 1963-64 are marked up by Rs 5.48 crores over the revised estimates for the current year. The increase is primarily due to the additional yield of Rs 1.69 crores under sales tax consequent on the upward revision in the rate of inter-state sales tax and a rise in the grant-in-aid from the Centre by Rs 1.15 crores. The budget estimates of expenditure at Rs 105.35 crores show an increase of Rs 20.41 crores over the revised estimates of Rs 84.94 crores for the current fiscal year. The additional expenditure

will be deployed on heads like labour and employment, police, education, irrigation, agriculture, national emergency, technical training, transport, community development, animal husbandry and other miscellaneous items.

It is gratifying to note that thanks to the timely measures by the Government, the price level in the State had been kept in control. The general index number of the wholesale prices in the State (unweighted) was 123.2 on 21 December 1962 whereas it stood at 129.4 on 19 October, just before the Chinese aggression. The index of agricultural production in 1961-62 stood almost at the same level as in the preceding year.

Madhya Pradesh

The quest of the State Finance Ministers for raising additional sources of revenue, as evidenced by the budget proposals for the coming year so far announced, is still going apace. The directive to this effect from the Union Finance Minister and the additional burden of seeing the plan programmes put through might have spurred them to embark on this path. Mr Mishrilal Gangwani, the Madhya Pradesh Finance Minister, who has proposed to introduce measures calculated to bring in an amount of Rs 1.53 crores is thus not an exception.

The revenue receipts for 1963-64 are estimated by the Finance Minister at Rs 94.70 crores and revenue expenditure at Rs 95.19 crores. The overall deficit is shown at Rs 3.91 crores after taking into account transactions under capital and loan sections and also public accounts.

The taxation measures proposed by the Finance Minister to cover the deficit include a levy of 1 per cent first point sales tax on foodgrains (excluding grains like kodon, kirti, sawan etc) enhancing the general rate of tax on the sale of luxury articles and the rate of sales tax on petrol and motor spirits. Bills would be introduced to the Assembly in order to charge

water rates as recommended by the Water Rates Committee, to regularise the trade of tendu leaves by the creation of a State monopoly and to raise a small revenue from betterment levy in respect of lands enjoying irrigation facilities.

Among these, the levy of sales tax on foodgrains is expected to yield about Rs 1 crore and the upward revision of the rates on luxury goods would augment the revenue by Rs 12 lakhs. The proposal to increase the sales tax on petroleum and motor spirits would earn another Rs 25 lakhs during year. Other main sources of additional revenue are Rs 20 lakhs from the regularisation of trade of tendu leaves and Rs 30 lakhs from the proposed introduction of water rates and Rs 5.76 lakhs from the betterment levy to be imposed under MP Irrigation Act after requisite modifications. These measures indicate that the Finance Minister was contented with small doses where additional taxes would have been in order for balancing the budget.

Madras

The Rs 2.74 crore deficit budget for 1963-64 presented by Mr M. Bhaktavalsalam, Madras Finance Minister, to the Assembly is noticeable for the reason that it contains no proposals for additional taxation to cover the substantial deficit. No doubt, the Finance Minister expects to wipe out the deficit partly from additional tax yield expected to accrue from the increase in the Central sales tax, readjustment in State's sales tax on certain luxury goods needed to bring uniformity in rates in the various States and also from full operation of the tax measures already approved. The State's finances will also be materially augmented by the compulsory savings scheme the proceeds of which are to be shared between the Centre and the State.

The State's finances are however showing buoyancy and the revenue receipts for the budget year are estimated at Rs 124.45 crores against the revised estimates of Rs 117.10 crores for the current year. The revenue expenditure is placed at Rs 127.19 crores as against Rs 120.02 crores for 1962-63. It is gratifying that the Plan schemes will be implemented without much pruning laying stress on increasing production in both agricultural and industrial spheres. The Government has also taken steps to accelerate the schemes for training of technical personnel required for defence and defence oriented industries. Apart from an investment of Rs 20.75 crores in the power programme the State had on hand a big capital programme of Rs 18.87 crores. It is also heartening to note that despite the reduction in Central

assistance adequate provision has been made for all important schemes. The power projects will be implemented vigorously, irrigation schemes will be proceeded with speed. Encouragement of industries in the private sector for which Madras has an enviable reputation has been promised. But the maintenance of the tempo of industrial development is understandably going to be difficult in view of the heavy burden imposed by Mr Morarji Desai. A rigorous drive to collect the dues outstanding to the State, economy in administration, austerity in spending and an all out effort to eliminate avoidable waste of money can considerably help to realise more revenue for meeting the growing demands for plan schemes and other measures.

Mysore

Judged from the budget estimates for 1963-64 presented so far, the reluctance of State Finance Ministers to impose additional levies rather than an exception. To this category falls the budget estimates for Mysore presented to the Assembly by Mr B. D. Jatti, the Finance Minister, though they show a deficit of Rs 40 lakhs. The revenue deficit is however sought to be covered by increased receipts which, as the Minister stated, usually accrue from the share of Central taxes, Central sales tax and the like. While announcing his intention to refrain from fresh taxation, Mr Jatti has disclosed the proposal to make some adjustment in the rates of sales tax on certain items recommended by the Select Committee last year. The enhancement of the rates of sales tax on certain items on luxury articles is also indicated.

The budget estimates placed revenue receipts at Rs 99.12 crores and revenue disbursements at Rs 99.52 crores. The revenue receipts are made up of the State's share of Central taxes of Rs 5.81 crores, taxes collected by the Centre and allotted to the State Rs 6.44 crores, ad hoc grants Rs 6.75 crores, grants toward Plan projects, Centrally sponsored schemes and for other purposes Rs 10.48 crores and State taxes and other non-tax revenues Rs 69.64 crores. A section-wise break up of the revenue expenditure reveals that a sizable amount of Rs 66.60 crores has been allocated for development heads including forests, irrigation, and public works. Rs 20.41 crores for non-development head, Rs 11.01 crores for debt service charges and Rs 1.50 crores for extra cost on account of D.A. The budget estimates also take into account a receipts of Rs 7 crores under public debt which is expected to accrue to the State as its share from the Centre's borrowing programme that will be introduced during the budget year.

The State's outstanding balance for recovery has been increasing year by year obviously due to increased disbursements. But as the ways and means position is becoming difficult the Finance Minister has effected reductions in the provisions for loans to government servants but loans to agriculturists have been spared any pruning.

Kerala

Judged from the comparatively heavy doses of taxation measures introduced for 1963-64 expected to yield Rs 4.85 crores in Kerala Mr R. Sankar, the State Chief Minister, who also holds finance portfolio, has achieved the distinction of complying with the request of Mr Morarji Desai to make a vigorous tax effort for the coming years. The budget estimates presented to State Assembly on 4 March envisages revenue receipts at Rs 71.67 crores and expenditure at Rs 70.87 crores showing a modest surplus of Rs 80 lakhs on the revenue account. According to the new imposts electricity, education, entertainment, transport and some of the consumer goods are made dearer. Among the new taxation measures are an electricity duty on all classes of consumers ranging from 10 per cent to 20 per cent (expected yield Rs 30 lakhs), an entertainment tax at the rate of 10 NP on every ticket not exceeding Re 1 and 20 NP on

every ticket over Re 1 (Rs 30 lakhs), levy on school fees in standards six, seven and eight, and an enhancement of fees in arts, science and engineering colleges (Rs 125 lakhs), upward revision in the sales tax of selected commodities from 7 to 10 per cent and multipoint tax on certain other items from 2 to 3 per cent (Rs 140 lakhs), introduction of a tax on passenger and goods carried by motor vehicles and increase in motor vehicles and increase in and the increase of bus fare (Rs 40 lakhs). These additional measures are to result in a cash balance of Rs 20 lakhs at the close of the budget year.

As against these harsh measures from the point of view of the tax payer, Mr Sankar has also announced certain concessions and some economy measures to reduce the expenditure to a more seemly level. Among the concessions to be effected are included a 25 per cent electrical pumping subsidy for cultivators, a fishermen's relief fund scheme, a Rs 5 lakh scheme for pension for destitute widows, increased grants to orphanages, a scheme for financial assistance to the disabled and handicapped, financial aid to tuberculosis patients and a loan scheme for the benefit of deserving students aspiring for higher technical education. A ban on the creation of new posts and filling the existing vacancies in Government service, restriction on the tours of Government officers, and the prohibition

on new building construction and capital expenditure which can be shelved are listed under the austerity measures. Most of these steps are long overdue. The impact on job opportunities of reduction in construction work may be adverse in a State already burdened with economic unemployment.

Referring to the ways and means position in the State, Mr Sankar, stated that the surplus is partly the result of the overall economy in expenditure introduced by the Government. The total allocation for the Plan schemes for the coming year is put at Rs 32.8 crores which excludes the Centre's contribution of Rs 3.93 crores for Centrally sponsored schemes.

Kashmir

The budget estimates for 1963-64 presented to the Jammu and Kashmir Assembly by Mr Giridhari Lal Dogra, the State's Finance Minister, disclose an overall deficit of Rs 277.22 lakhs, revenue receipts being put at Rs 3,421.62 lakhs and revenue expenditure at Rs 3,698.84 lakhs. This deficit would be narrowed down to Rs 132.29 lakhs by raising Rs 1 crore through new proposals for taxation or by enhancing the rates of existing taxes and by withdrawing cash reserves of Rs 44.93 lakhs. The new measures are introduced

One Purchase Officer with a headache cut his inventory down from 30 products to only 3!

The Caltex "Stop-Loss" plan was the headache antidote... When each department in a plant specifies a lubricant it wants without reference to the purchases of other departments, there is bound to be a lot of waste and costly over-lapping. The Caltex "Stop-Loss" programme helps to eliminate this waste of lubrication by effectively reducing the total plant lubricant inventory. Caltex "Stop-Loss" is a complete plan for organising lubrication on an efficient basis. There is no other programme like it.

Find out today how Caltex "Stop-Loss" can specifically stop the problem in your plant. Help your operation to greater profit with the Caltex "Stop-Loss" Programme.

THE BANK OF BARODA LIMITED (Estd. 1908)

Head Office: Baroda

in fulfilment of the State's duty to raise additional resources for meeting the Plan targets and strengthening the country's defence.

Giving details of fresh taxation, Mr Dogra revealed that tax would be imposed on all passenger fares on routes other than those on which such tax was being levied at present. The scope of sales tax would be extended, the prevailing rate on luxury items would be raised, and more goods would be subjected to this tax and a duty would be charged on electricity consumption. Besides, the rates of tax on agricultural income would be revised upward and a uniform rate of 10 per cent will be levied on all commercial properties.

As Mr Dogra indicated on the capital side the receipts were expected to aggregate Rs 996.16 lakhs of which Rs 92.83 lakhs represented the State's share in small savings collections and net receipts under unfunded debt. After providing for a sum of Rs 69.07 lakhs which was estimated to be the cumulative effect of transactions under debit head, the State's capital receipts would total Rs 900.09 lakhs. Against this the expenditure not charged to revenue including disbursement of loans and advances under the Plan was put at Rs 1,314.05 lakhs. The coming year is expected to open with a balance of Rs 144.93 lakhs.

The outlay for the Plan for the budget year is fixed at Rs 1,605.83 lakhs out of which Rs 73.28 lakhs represented provisions for schemes outside the State Plan ceiling. The plan outlay on revenue account amounts to Rs 431.34 lakhs and the outlay on capital account to Rs 1,174.49 lakhs.

Gujarat

Gujarat is another State which has made a bold determination to maintain the tempo of increased taxation in the country by introducing additional imposts for 1963-64 which are expected to yield Rs 4.05 crores. The magnitude of this exercise can be best appreciated by taking into consideration the unprecedented and exacting taxation programme introduced by Mr Morarji Desai and the additional burdens imposed on the tax payers of the State in the current year. The budget estimates for the next year presented to the State Assembly by Dr Jivraj Mehta, the Chief Minister, place the revenue receipts at Rs 30.39 crores and expenditure at Rs 75.06 crores, showing a surplus of Rs 1.33 crores. The estimated expenditure does not, however, take into account extra expenditure on account of the introduction of the Panchayati Raj nor the burden likely to be borne in view of the Emergency during the budget year.

After taking into consideration the provision required for the implementation of Panchayati Raj and the unforeseen items for the emergency and the net capital expenditure on the one hand and the receipts on capital account on the other, there will be an overall gap of Rs 6.29 crores in the resources for next year. This deficit is expected to be reduced by Rs 1 crore that will accrue from the proposed increase in the inter-state sales tax. Apart from this, Dr Mehta also takes credit for Rs 2.92 crores from the new levies which will be operative over only a part of the budget year thus leaving an uncovered gap of Rs 2.37 crores.

Among the various additional levies to be introduced, the proposal to raise the revenue from land at the rates varying from 10 per cent to 35 per cent is worthy of plaudits as it is generally accepted that the agricultural sector carries only a light burden and offers scope for additional imports. Other important measures are higher non-agricultural assessment based on the market value of land, increases in passenger tax, motor vehicles tax, entertainment tax, sales taxes, stamp duty and electricity charges.

ECAFE

Wide Range of Activity in 1962

1962 saw the translation into action of the theme of the ECAFE regional co-operation as a means of accelerating the growth of the economies of Asia. One institutional consequence of this recognition has been the Asian Institute of Economic Development to be set up with assistance from the UN Special Fund. The Institute will function in Bangkok and conduct a nine month course on such subjects as development problems and policies, organisation, administration and budget, project formulation, evaluation and techniques of over-all planning. During the year, planning techniques were also discussed by some of the subsidiary bodies of the Commission: "The Third Group on programming techniques" met in Bangkok and discussed practical procedures for projecting the major variables in economic growth and the best way these projections can be made to subserve long term planning.

The working party on Economic Development and Planning which also met during the year had a less-theoretically oriented pre-occupation: Measures to facilitate further the rapid inflow of foreign capital. The assumptions behind the Secretary General's extremely valuable programme for a "Development Decade" were of obvious relevance in the discussion.

Also in 1962, a Seminar on Basic Statistics for Economic and Social

Development was held at Wellington, New Zealand, from 12-30 November.

INDUSTRIES

In the industrial field, the work of ECAFE in 1962 was centred on two main areas: field work and research. At the request of governments of the region, ECAFE's Division of Industries and Natural Resources has helped in pre-investment surveys, in order to determine what types of industry can most usefully be established or expanded.

The first international Seminar on the Development of Basic Chemicals and Allied Industries in Asia and the Far East was held in Bangkok from 3-13 October 1962. This will be followed by regional conferences in other key industries such as fertilizers, petro-chemicals and pharmaceuticals.

In the field of electric power, 1962 saw the establishment of a Panel of Experts on Rural Electrification, which has already visited seven countries at the request of their governments, and has submitted concrete recommendations for their consideration.

Progress was also made during the year in the fields of geological surveys and mineral resources. Following the completion of the first Geological Map of Asia and the Far East, an Oil and Natural Gas Map for the region was issued in September 1962, and another regional map, showing the distribution of known mineral resources will soon be ready.

In the field of metals and engineering, the Division continued to prepare technical studies, disseminate information and provide advisory services. As regards housing and building materials, 1962 saw the successful conclusion of the United Nations Mission to Survey and Evaluate Self-Help in Housing Methods and Practices in South-East Asia. A Seminar on Essential Services in Relation to Urban and Rural Housing and the seventh session of the Working Party on Housing and Building Materials were held in September, and measures were adopted to strengthen the regional housing centres in India and Indonesia.

TRADE

Regional trade co-operation was the theme underlying the year's activities of ECAFE's Trade Branch. With regard to problems of commodity stabilization, ECAFE in 1962 took limited regional initiatives in connection with coconut and coconut products, pepper, and jute and jute products.

As a result of the recommendations of the Working Party of Experts on Commercial Arbitration, which met in Bangkok in January 1962, a Centre for the promotion of Commercial Arbitration was set up this year within the ECAFE Secretariat.

The ECAFE Working Party on Customs Administration, which held its third session from October

25 to November 2 in Bangkok this year, has framed further recommendations on such subjects as mutual administrative assistance, the prevention of smuggling, parcel post, and air cargo. It also adopted an expanded framework for the ECAFE Code of Recommended Customs Procedures, which has been accepted and implemented by most countries of the region. A Training Centre and Seminar in Customs Administration is scheduled to be held in Bangkok in 1963.

TRANSPORT AND COMMUNICATIONS

The project for an Asian Highway connecting Iran from the Turkish border with Saigon, Singapore and Indonesia came nearer realization in 1962.

The Railway Sub-Committee held its Seventh session from 29 May to 6 June 1962, in Melbourne, Australia, simultaneously with the meeting of its Working Party of Railway Signalling and Operating Officials.

In the field of inland waterways it was decided to set up advisory teams which would help member countries in solving specific problems. The Inland Waterway Sub-Committee, meeting in November, had on its agenda such subjects as fast passenger craft, the Regional Marine Diesel Training Centre in Rangoon, dredging in navigable waterways, and the development of transport on shallow rivers.

ECAFE's Bureau of Flood Control and Water Resources Development continued in 1962 to bring together experts from the region to discuss various problems of water resources development, and to render advisory services to countries requesting such aid.

From 24 April to 8 May a regional seminar was convened to discuss the development of ground water resources with special reference to deltaic areas. A Regional Conference on Water Resources Development was held in Bangkok from 20 to 26 November, the fifth in the series organized biennially by the Secretariat since 1951.

As a prelude to a Symposium on Flood Control, Reclamation, Utilization and Development of Deltaic Areas, which is to be convened in July 1963, the Secretariat organized in November 1962 a study tour of government experts from the Netherlands, Japan and the Republic of China to Burma, China (Taiwan), India, Japan, Pakistan and Thailand.

The Bureau has continued to co-operate closely in all phases of the Mekong Project with the Mekong Coordination Committee. Work on this project continued to make steady progress in 1962, and Mekong Committee delegates from the four riparian countries (Cambodia, Laos, Thailand and Vietnam) continued to work together in complete harmony, despite political differences dividing their countries.

The Central Budget

Some Salient Features

Mr MORARJI DESAI'S financial proposals for the coming year include two novel measures: A scheme of compulsory savings and a Super-profits Tax. Details of these as well as the amendments to the Income-tax Act proposed in the Finance Bill are summarised below.

Provisions of the Finance Bill, 1963

I. RATES FOR THE ASSESSMENT YEAR 1963-64 ON INCOMES OTHER THAN CAPITAL GAINS

I. Assessee other than companies (a) Individuals, Hindu undivided families, unregistered firms and associations of persons etc.

(i) Income-tax and super-tax: No change is proposed to be made in the existing rates of income-tax and super-tax.

(ii) Surcharges on income-tax: The existing surcharges for purposes of the Union and the special surcharge are proposed to be continued at the rates applicable for the assessment year 1962-63. However, the total income limits of Rs 15,000 in the case of Hindu undivided families which satisfy certain conditions and of Rs 7,500 in other cases upto which these surcharges were hitherto not

leviable are proposed to be abolished.

It is proposed to levy an additional surcharge for purposes of the Union which will be calculated on the residual income, viz, assessee's total income (exclusive of capital gains, if any) reduced by the income-tax and super-tax thereon. For this purpose the gross income-tax and super-tax will be deducted from the total income and not the tax leviable after allowing any rebates. The rates fixed for this additional surcharge rise progressively from four per cent. to ten per cent, on successive slabs of residual income. The additional surcharge shall not be taken into account in calculating any relief, rebate or deduction e.g., rebate on provident fund contributions made out of total income.

(iii) Surcharges on super-tax: These surcharges, viz., surcharge for purposes of the Union and the special surcharge are proposed to be continued at the existing rates. The comparative table given below sets forth total amount of tax (income-tax, super-tax and surcharges) payable by a married individual with more than one child at certain levels of income at the rates applicable for the assessment year 1962-63 and the rates proposed for the assessment year 1963-64:

Income	Income from salaries only		Wholly earned income other than salaries		Wholly unearned income	
	1962-63	1963-64	1962-63	1963-64	1962-63	1963-64
1	2	3	4	5	6	7
5,000	42	241	42	242	42	248
10,000	479	930	490	940	560	1,006
15,000	1,171	1,881	1,199	1,907	1,370	2,068
20,000	2,272	3,270	2,328	3,322	2,660	3,627
25,000	4,044	5,300	4,142	5,390	4,734	5,935
40,000	11,065	12,979	11,334	13,224	12,954	14,698
70,000	30,745	33,588	31,495	34,270	35,994	38,364
1,00,000	53,039	56,625	54,332	57,789	62,094	64,815
2,00,000	1,34,601	1,40,031	1,37,707	1,42,826	1,49,094	1,53,075

(b) Registered firms: No change is proposed to be made in the rates of income-tax applicable to registered firms. It is, however, proposed to levy on them a surcharge for purposes of the Union at rate of twenty per cent, of the income-tax payable by them.

2. Companies:

In the case of companies, the rate of income-tax chargeable on their total income, and the effective rates of super-tax on inter-corporate dividends and other income are proposed to be fixed at the rates as were applicable for the assessment year 1962-63.

3. Export Incentive:

It is proposed to continue the existing rebate of one-tenth of the amount of rebate of the amount of income-tax and super-tax attributable to income derived from exports out of India in the case of all assesseees other than foreign companies which have not made the prescribed arrangements for declaration and payment of dividends within India. In addition to this rebate, it is proposed to allow a further rebate of tax to a manufacturer who after 28.2.1963 either himself exports, or where the first purchaser from him exports himself any articles manufactured

by the former in any of the industries (other than certain specified industries e.g., textiles, cement, sugar etc.) listed in the First Schedule to the Industries (Development & Regulation) Act, 1961. The additional rebate of tax will be calculated on an amount equal to two per cent. of the turnover. The total amount of the rebate will of course not exceed the tax payable by the assessee.

II. Rates for deduction (including super-tax) at source from interest on securities etc.

The rates for deduction of tax at source from interest on securities, dividends etc., remain the same as in the financial year 1962-63.

Amendments to the Income Tax Act

Restriction over excessive expenditure on remuneration and perquisites of employees of companies

It is proposed to provide that in the case of any company, the expenditure incurred by it on the remuneration and perquisites for an individual employee in excess of Rs 5,000 per month for any period after the 28th February, 1963, shall not be allowed as a deduction in the computation of the company's total income.

Reduction or waiver of interest chargeable for delay in submission of returns in certain circumstances.

It is proposed to provide that where an assessment has been modified as a result of any order of rectification or an order on appeal, reference or revision, the amount of interest payable by an assessee on account of the delay in submission of returns shall be reduced consequently and that the excess amount of interest, if any, paid shall be refunded. It is also proposed to enable the Income-tax Officer to reduce or waive the interest chargeable for the delay in submission of returns in such circumstances as may be prescribed. Relief to be given to and interest to be recovered from assesseees in certain cases:

It is proposed to provide a discount of one per cent on the tax, if paid before the 1st January of the assessment year. This discount will also be available on the amount paid on the basis of the income disclosed in the return though an assessment may not have been made before the said 1st of January. Further, it has been provided that if an assessee does not file a return of his total income by the 31st December of the relevant assessment year or having filed the return does not pay the tax due on the basis of such return by that date, he shall be liable to pay interest on the amount of tax payable by him at two per cent per annum calculated from the first day of January of the relevant

assessment year to the date on which an assessment—provisional or regular, whichever is earlier—is made.

Revision of the demand of advance tax:

It is proposed to make a provision enabling the Income-tax Officer to revise an earlier order for payment of advance tax, on the basis of the total income determined in a provisional assessment for a later year. The existing provision requiring a compulsory revision of the original demand of advance tax in the event of a regular assessment being made for a subsequent year on a smaller amount of total income is proposed to be omitted.

Reduction of interest chargeable for non-payment of tax in due time, in certain circumstances:

It is proposed to provide that where the tax payable by an assessee has been reduced as a result of an order of rectification or an order on appeal, reference or revision, interest payable by the assessee for failure to pay the tax in due time shall be consequentially reduced and the excess amount paid, if any, shall be refunded.

IV. Amendment to the Wealth-tax Act, 1957.

It is proposed to withdraw with effect from the assessment year 1963-64, the exemption which was hitherto available to wealth-tax assesseees on the value of jewellery to the extent of Rs 25,000.

It is proposed to include amongst the Government securities in respect of which assesseees are exempt from wealth-tax, Ten-year Defence Deposit Certificates and Twelve-year National Defence Certificates which have been issued recently in replacement of Twelve-year National Plan Savings Certificates. It is also being provided that for purposes of assessment to wealth-tax for the assessment year 1963-64, an assessee shall be entitled to exemption on the value of the aforesaid certificates even though they were held by him for a period of less than six months prior to the relevant valuation date.

Computation of Super Profits Tax

THE FIRST SCHEDULE

In computing the chargeable profits of a previous year, the total income computed for that year under the Income-tax Act shall be adjusted as follows:—

1. Income, profits and gains falling within the following sub-rules shall be excluded from such total income, namely:—

(i) any income chargeable under the Income-tax Act under the head "capital gains";

(ii) any compensation or other payment as is referred to in clause

(ii) of section 28 of the Income-tax Act;

(iii) profits of any business of life insurance.

2. On the balance of the total income, income-tax & super-tax shall be calculated at the rates in force in the financial year, as if such income had been the total income; no portion of which had been exempt from the payment of income-tax or super-tax and on no portion of which any deduction of income-tax or super-tax had been admissible under any provisions of the Income-tax Act or the annual Finance Act; and the tax so calculated shall be deducted from the amount of the income aforesaid.

3. The net amount of income calculated in accordance with rule 2 shall be increased by any expenditure incurred on account of commission, entertainment and advertisement, to the extent such expenditure, in the opinion of the income-tax Officer, is excessive having regard to the circumstances of the case:

Provided that the previous authority of the Inspecting Assistant Commissioner is obtained for holding such expenditure to be excessive.

★

Surcharge on Residual Income

THE SECOND SCHEDULE

(See Section 2(8)).

Rules for computing the capital of a company for the purposes of super profits tax.

1. Subject to the other provisions contained in this Schedule, the capital of a company shall be the sum of the amounts, as on the first day of the previous year relevant to the assessment year, of its paid up share capital and of its reserves in so far as the amounts credited thereto have not been allowed in computing its profits for the purposes of the Indian Income-tax Act 1922 or the Income-tax Act, 1961 diminished by the amount by which the cost to it of the assets the income from which in accordance with the First Schedule is not includible in its chargeable profits, exceeds any money borrowed by it which remains outstanding.

Explanation 1.—A paid up share capital or reserve brought into existence by creating or increasing (by revaluation or otherwise) any book asset is not capital for computing the capital of a company for the purposes of this Act.

Explanation 2.—Any premium received in cash by the company on the issue of its shares standing to the credit of the share premium account shall be regarded as forming part of its paid up share capital.

2. Where after the first day of the previous year relevant to the assessment year, the paid up share capital of a company is increased or reduced by any amount during that previous year, the capital computed in accordance with rule 1 shall be increased or decreased, as the case may be, by a portion of that amount which is proportional to the portion of the previous year during which the increase or the reduction of the paid up share capital remained effective.

3. Where a part of the income, profits and gains of a company are not includible in its total income as computed under the Income-tax Act, its capital shall be the sum ascertained in accordance with rules 1 and 2, diminished by an amount which bears to that sum the same proportion as the amount of the aforesaid income, profits and gains bears to the total amount of its income, profits and gains.

THE THIRD SCHEDULE

Rates of Super Profits Tax

Super profits tax shall be charged on the amount by which the chargeable profits exceed the amount of the standard deduction, at the following rates namely:—

(i) on an amount equal to four per cent of the amount of capital as computed in accordance with the Second Schedule, 50 per cent.

(ii) on the balance 60 per cent. The Government of India has clarified the position in regard to the proposed levy, for the assessment year 1963-64, of an additional surcharge on income-tax in the cases of individuals, Hindu undivided families, unregistered firms, associations of persons etc.

This surcharge, which will be for the purposes of the Union, will be calculated on the residual income, viz., the total income (exclusive of capital gains, if any), as reduced by the income-tax or super-tax chargeable on it. For this purpose, the gross amount of income-tax and super-tax will be deducted from the total income and not the net amount after allowing any rebates e.g. rebates on life insurance premia and provident fund contributions etc.

The rates of this additional surcharge, which rise progressively on higher slabs of residual income, are as follows:—

On the first Rs 6,000 of the residual income 4 per cent:—

On the next Rs 9,000 of the residual income 6 per cent;

On the next Rs 12,000 of the residual income 8 per cent;

On the next Rs 15,000 of the residual income 9 per cent;

On the balance of the residual income 10 per cent.

In the case of income from salaries, this additional surcharge will be deductible at source from

the payments made during the financial year 1963-64. It will, however, not be charged on the salary income during the financial year 1962-63 because that income is assessable to tax at the rates in force under the Finance No. (2) Act, 1962. In the case of income other than salaries, the additional surcharge will be levied in making assessments for the assessment year 1963-64.

It has been provided in the Compulsory Deposit Scheme Bill, 1963 that an assessee who makes a deposit under its provisions will be entitled to a certain deduction from the amount of additional surcharge payable by him. This deduction is at the rate of 3 per cent on the first Rs 6,000 of the residual income and at the rate of 2 per cent on the balance amount. If the deposit made is smaller in amount, the deduction will, of course, be restricted to that amount. The deposit bears an interest at the rate of 4 per cent per annum and such interest is proposed to be exempted from tax.

The tables given below show the amount of tax payable by a married individual with more than one child at various levels of total income at the rates proposed for 1963-64 on (I) income from salaries, (II) earned income other than salaries, and (III) wholly unearned income. The amount of the maximum deduction from additional surcharge which will be admissible on making a deposit under the Compulsory Deposit Scheme Bill, 1963 is also shown in these tables.

TABLE I
Married individual with more than one child. Wholly unearned income.

Income.	Total tax including additional surcharge.	Max. Deduction admissible.	Net tax after Max. Deduction for deposit under C.D.S.
Rs. 3,600	Nil	Nil	Nil*
Rs. 4,200	186	125	60
Rs. 4,800	228	143	84

Rs. 3,00,000	2,23,438	1,737	2,21,701

*But will have to make a compulsory deposit at 3 per cent under C.D.S.

Note:—In all three cases, the maximum deduction admissible from the additional surcharge on making a deposit under C.D.S.

In all three cases, a married individual with more than one child will pay no tax, but will make a compulsory deposit at three per cent, i.e., Rs 108 under C.D.S.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

On Monday last, Stalin had been dead ten years and if anniversary thoughts are being sent up from anywhere, they are most likely to be from China and Albania and possibly from some of the murkier cells of Asian Communist parties. For Stalin has come down a great deal in the world since the days he asked Nikita to do the Gopak and even his grave has been rendered unquiet by an attempt to get even with him after his death. I disapprove of such grisly business but horrid though it sounds to say it, the world has been a better place for Stalin's absence. Clever and good people have deceived themselves about him during his life-time but I wonder if there are any today, including those that swear by him, who are not relieved that he is no longer alive. What precisely would have happened to the world if he had not died when he did—or, as ugly rumour has it, been eased into doing so—is anybody's guess: but I doubt whether it would have been anything good. (I hate, for example, to speculate about the course of the Sino-Indian quarrel, had he been there to take a hand in it). To the Russians themselves his death was the lifting of an oppressive miasma of nameless terror. It is true that Edward Crankshaw reports in the Observer that one Valeri Tarsis has recently been certified and sent to an asylum on no other apparent symptom than that of wanting to have his novel printed outside the Soviet Union. In Stalin's time this would have constituted conclusive clinical evidence of insanity. And it is a measure of the changes that have since come over the Soviet Union that we are not only shocked by it but harbour doubts about the adequacy of the diagnosis. Of course, it is difficult to say which is the worse fate—to be simply erased out of existence as in Stalin's time or to be incarcerated in a looney bin with all your wits intact. But such aberrations apart, Khrushchev has by and large been an immeasurably more spontaneously acceptable leader to the Russians. Apart from everything else, he casts no long shadow and even if they still look over their shoulders before doing or saying anything, they don't always find the caution justified. Khrushchev no doubt throws his weight about but he does not let it fall too heavily on anyone or for too long. He no doubt lays down the law on all and sundry, from art to agriculture. But he does it more as a bluff hearty than

as the dread voice of God. His views on art, the I-know-what-i-like-self-sufficiency of a beefy philistine is widely shared by people outside the Soviet Union. Anyway, the "thaw" since Stalin's death has been real enough and though there have been sticky patches, the flow of life has been easy enough, all things considered.

The normal reaction of Calcutta's citizenry to the farcical goings on in the municipal buildings is a comprehensive shrug. If more than usually roused, somebody makes a poor pun about corpora-tion and corruption. Editorial indignation makes fine reading but does little else. No wonder we get the kind of municipal administration we have for that is the kind of municipal administration we deserve. Everybody knows why the Calcutta Corporation has not been superseded all these years though it deserved to be at least a dozen times. And yet what have we done about it? Even now all that the government is doing is try to save the Corporation from an act that is too absurd even for that bizarre body. It wants to express its "want of confidence" in an executive, in itself an oddity. It is as though the Lok Sabha wanted to pass a vote of no confidence in a Secretary to the Government. And all that the Commissioner has done to bring down the wrath of the Councillors on his head is to want to hire a few more lorries to remove garbage. Last year, in an access of civic remorse, this very necessary—and in well ordered civic communities, unnoticed—job was ceremoniously taken on by the Corporation. Volunteers were drafted and even the Prime Minister was told about it. Now with-adequacy of the high resolve, garbage is allowed to accumulate the while the councillors are nursing their amour propre. It seems to me cynical to bully the illiterates to get themselves inoculated and vaccinated at the peril of the law while not getting the rubbish that breed the diseases removed. After all, the wisdom of creating anti-bodies in the human system as safeguards against diseases is not entirely free from controversy, whereas that of environmental hygiene is. I don't think the kind of patchwork legislation that tinkers with the problem of municipal democracy is going to help at all. We simply don't seem to be able to run a city even half as competently as we are to run a State or a whole

country. That being the position, it is better to let it be done by an official till such time as we are.

★
Fears that a second look at Mr Desai's Budget was unlikely to endear it to us have only too dismally proved right. His speech in the Rajya Sabha have squelched what hopes there were. The levy on kerosene was justified by him on grounds of foreign exchange shortage. My hope that he might prove enough of a realist to overcome Gandhian scruples to taxing salt has not materialised: salt, said Mr Desai unctuously, should be as free as air and water—which are about the only three things he has left untaxed. On the super-profits tax (see Leading Article) Mr Desai has so far been unbending. Less sure of himself on the effect of his proposals on prices, Mr Desai has enlisted God's support for negotiating any slippery patch. The uproar of criticism at the Budget proposals is said to be responsible for the stiffening of Government's attitude. This, if true, is silly. If there had been no protest, there would have been no need for changes; and if (as has happened) protests there are, that also is held to be reason for not changing. This is hardly government by consent.

★
Sir Walter Michelmores is shortly leaving India after over thirty years of distinguished service in the land of his adoption. As an executive of the Bird group of companies, he has had exceptional opportunities for industrial and commercial leadership in India and Bengal. Before the second world war, coal was his speciality and

part of his war service consisted in directing movement of coal. It is a subject on which the World Bank Mission currently investigating the problem would have benefited by his advice. After the war, his sphere of activity enlarged. As the managing director and later as vice-chairman and still later as chairman of the Bird group, he played a significant role in the modification of attitudes and relationships that followed independence. The resilience of British commercial interests no less than the Indian freedom from ex-colonial truculence has been the subject of wonderment to many. Of course there was more to it than commercial opportunism of a country seeking markets and of a country wanting foreign aid. It certainly had something to do with the national characters of the two peoples. Conservative politicians who made blood-curdling predictions of expropriation following independence were surprised at the complete absence of any breach in continuity. Indeed, since independence, British capital has flowed in in even readier measure. The credit for this belongs to men like Sir Walter, under whose guidance many new endeavours involving new inflow of capital and skill have taken shape. Sir Norman Kipping quipped recently that "he who invests in India is a sucker and he who doesn't is an even greater sucker." I have no doubt that this rather exasperating attractiveness of Indian opportunities has been the distillation of a life-time's experience of men like Sir Walter. I have also no doubt that like so many other Britons who had spent a life-time in India and who are now in Britain, Sir Walter will continue to exert his influence for greater Indo-British collaboration in industry.

(From Our New Delhi Correspondent)

Impact of Budget Proposals

COMMENTS on the Budget are generally agreed on the need to find adequate resources for defence without giving up development programmes. But opinion is divided on whether additional taxation should be as heavy as proposed by the Finance Minister or whether it will help in achieving the twin objectives. The need to cut down non-development expenditure and to eliminate waste and extravagance was highlighted during the budget discussions in Rajya Sabha which commenced last Monday. The Committee of the Federation of Indian Chambers of Commerce and Industry has called upon the Finance Minister to have another look at his own tax proposals and revise them so as to ensure that they do not impede the pace of development. It is vain to expect, says the Committee, that the growing claims of defence and development can be met on the basis of an expanding volume of production if the taxation, monetary and credit policies are not refashioned to serve as instruments of growth.

While congratulating the Finance Minister for taking note of the nation's desire and will to simultaneously accelerate both our defence and economic capacity the Committee apprehends that the tax proposals relating to company taxation may well defeat this objective. In the considered opinion of the Committee, it would be possible to gear ourselves to defence effort only if the entire economy, and specially the industrial sector that is already subjected to heavy taxation, is placed on a firmer footing. The Committee regrets that the Finance Minister has not clearly indicated the way in which avoidable expenditure at the Government end could be eliminated.

The overall deficit of Rs 454 crores, the Committee says, could have been minimised if expenditure on civil items unrelated to economic development or to essential programmes in the Third Plan were curtailed. On the other hand, the revenue account shows an increase in civil expenditure of more than Rs 73 crores, wholly unrelated to Plan programmes. The impact of the defence expenditure could have been reduced at least to that extent if civil expenditure were kept within last year's level, not that which is not by any

means the irreducible minimum under the present circumstances. After a recent study made by the Federation, it was suggested that economies to the extent of Rs 103 crores on revenue account and about Rs 96 crores on capital account could have been achieved without affecting the programmes of development in the Third Plan. Of these amounts grants and loans to States constitute Rs 146 crores. The Committee finds it disconcerting that during 1962-63, the Central Government had to go to the assistance of some State Govern-

ments to clear then overdrafts with the Reserve Bank.

Referring to the large differences between estimates of revenue and actual yields, the Committee points out that, during the last few years, actual revenue has, on an average, exceeded budget estimates by over Rs 40 crores and that the yield from the new tax proposals will be far more than the estimate of Rs 275 crores. The under-estimation of revenue distorts the budget perspective and tends to result in unplanned and wasteful expenditure.

Regarding the Super Profits tax, the Committee says that no deeper injury to the corporate sector could have been thought of than the imposition of a progressive rate of taxation on profits. So far as the corporate sector is concerned, the principle of progression will virtually mean a tax on efficiency of the more well-managed companies. The levy, whose incidence

will be uneven and iniquitous, will make it very difficult for the companies to repay borrowed amount or to raise fresh capital for expanding the capital base as suggested by the Finance Minister. The Committee has also emphasised that the basis of 6 per cent yield on capital, assumed for the standard deduction, is unreasonably low in relation to present interest and borrowing rates and also taking into account that preference shares are not attractive unless they yield roundabout 9 per cent. A tax system which frowns on earnings above 6 per cent, and penalises efficiency, will be more than unpopular to foreign capital which is badly required. The combined effect of all this, in the Committee's view, will be that the expansion of the corporate sector will come to a halt.

Discussing the economic effects of indirect levies, the Committee says that, to the extent that the

increase in import duty may give a fillip to indigenous production, it is welcome. But the development of indigenous substitutes including availability of foreign exchange and on how far Government is able to streamline the administrative machinery to expedite the disposal of applications for undertaking domestic manufacture. While conceding that we have to depend more and more on indirect levies, the Committee has warned against their inflationary impact on prices. Although such kind of taxation is theoretically deemed to be anti-inflationary, after a certain point they constitute the most inflationary potential, more so in a developing country. A vicious circle of rising prices and falling production will defeat the objective of holding the price line and hamper the export drive, in spite of the financial and other incentives that are sought to be given. The question is also raised why the proposed financial incentive of

a further rebate of income-tax and super-tax on a sum equivalent to 2 per cent of the value of exports made after 28 February depends on a number of factors, should not be granted to industries like textiles, sugar, vegetable oils and vanaspati etc. The aforesaid rebate, it is pointed out, is likely to be more than offset by the super-profits tax that may be payable.

The impact of the budget proposals was also considered at a meeting of the price committee of the Congress parliamentary party when several members expressed apprehensions of the undue rise in prices as a result of the new levies. An indication that Government was considering measures to deal with such a situation was given by the Minister of Planning who also said that the Planning Commission was now working out the effect of the budget proposals on the cost of living.

Hindustan Steel

Government's review on the annual report of Hindustan Steel Limited for the year ended March 1962, says that there was an increase in the output of all steel plants, the largest proportionate increase being in finished products. Some difficulties experienced by the steel plants in regard to the procurement of raw materials are also mentioned in the review. Rourkela and Durgapur had to face some difficulties in getting the high quality of iron ore. Beneficiation of iron ore is now planned. The shortage of developed sources of limestone, however, is a common problem for all steel plants, and will continue to cause anxiety to the public sector steel plants. Transport of raw materials and finished goods had presented its own problems, particularly because of difficulty of obtaining the right type of rolling stock. A series of measures was

planned and initiated during the year to adjust the works to the new facts of transport requirements and availability.

During the year, gross sales amounted to Rs 793 million as against Rs 442 million during 1960-61. Exclusive of the provision for depreciation, Hindustan Steel Ltd. made a profit of Rs 9,584 crores during the year under review. Bhilai and Durgapur made profits of Rs 6,618 and 3,242 crores respectively. Rourkela suffered a loss of Rs 27.6 lakhs. A provision of Rs 26,199 crores—Rs 20,607 crores on account of steel plant assets and Rs 5,592 crores on other assets—has been made on account of depreciation for the year under review. The whole of the arrears of depreciation amounting to Rs 17,741 crores has also been provided in the accounts for the year 1961-62.

After taking into account the extra income resulting from the increase in retention prices, the cumulative loss would be Rs 35,656 crores. Since April 1962, Government has subscribed an amount of Rs 58.5 crores to the share capital which now stands at Rs 365.5 crores. The Memorandum and Articles of Association of the Company were amended during the year raising the authorised capital of the company from Rs 300 crores to Rs 600 crores. During 1961-62, the Company drew a loan of Rs 51 crores from the Central Government raising the total loans drawn till the end of March 1962 to Rs 357.1 crores. The working capital for the operation of the three steel plants increased from Rs 28.9 crores at the end of March 1961 to Rs 436 crores at the end of 1961-62. The capital expenditure during the year amounted to Rs 49.87 crores against Rs 84.58 crores incurred during the year 1960-61.

Trend of Exports

The trend of exports during the current year and the promotional measures were discussed when the Informal Consultative Committee of Parliament of the Ministry of Commerce and Industry met the Ministers concerned. In spite of a decline of nearly Rs 7 crores during the first quarter, that is, April to June, the total exports for the first ten months (from April to January) at Rs 572.5 crores were higher by Rs 16.5 crores as compared with the corresponding period of last year. Another satisfactory feature to which the attention of the Committee was drawn is that, though the increase is not very considerable, it was by and large due to an increase in the quantum exported rather than a significant rise in the price of any major commodity. Jute manufactures constitute the single important item showing a noticeable increase of Rs 16 crores followed by oilcakes Rs 11 crores, tobacco Rs 5 crores, tea Rs 4 crores, vegetable oils Rs 4 crores and iron ore Rs 3 crores.

**YOURS:
THE
WHOLE
WIDE
PAN AM
WORLD**

*-and it
costs less
than you think!.*

Have you ever thought about travelling around the world—and then decided the cost was too high?

But did you know that a Pan Am economy ticket 'round-the-world costs very little more than the return first-class fare from Calcutta to London?

True, your Pan Am ticket to London can include stopovers in the great cities of Europe and the Middle East at no extra fare. But those added rupees give you fabled places like Bangkok, Hongkong, Tokyo—plus beautiful Hawaii, and as many as 25 exciting American cities on your global trip!

Pan Am and your Travel Agent can suggest reasonably-priced hotels, low-cost sightseeing tours, good places to eat and wonderful places to shop. And here's a new travel bargain: the Pan Am-Sheraton-Greyhound plan for seeing the USA...

...in more than 30 leading cities of the USA and Canada, one person sharing a double-room pays only \$6 a day to stay at a world-famed Sheraton Hotel, and only \$6 a day more for three delicious Sheraton meals, taxes and tips included! Add the moderate cost of sight-seeing tours in these cities, and your total expenses will be well within \$15 a day!

...Greyhound Lines, the nation's largest, permits you to travel the length and breadth of America for 99 days for only \$99. That's \$1 a day for unlimited luxury-coach travel!

Getting there on Pan Am will be a pleasure. Warm, friendly, multilingual cabin attendants. Superb cuisine by Maxim's of Paris. Most important of all, the contentment that comes from Pan Am's Priceless Extra of Experience.

See your Travel Agent or Pan American about a Pan Am 'round-the-world trip—soon!

Markets

JUTE Dull Phase

Conditions in the jute goods market continue to be dull largely owing to absence of fresh business. The pre-Budget trend was rather quiet because operators anticipated a further rise in excise duty on jute goods. As the tax proposals envisage only a 10 per cent surcharge on excise duty and as this had been fully discounted, prices in post-Budget trading tended to be somewhat upward in response to speculative activity. Of the two sections, sacking was steadier mainly on account of rumours about fresh Government tender in B Twills. A slight improvement in hessian was noticeable now and then on reports of foreign enquiries. Even so, the undertone was dull throughout the week as actual business passing was meagre.

The outlook for jute goods exports in the current calendar year appears to be mixed. It is to be expected that exports of sacking will meet with increasing competition from Pakistan whose jute industry is expanding fast. As that country's mills output is predominantly heavy goods the volume of sacking goods that will be placed on the world market will progressively increase. But the outlook for increasing imports by consuming countries is not very bright because of two reasons. In the first place, owing to acute shortage of foreign

exchange the African countries and countries in South Asia are already trying to produce jute goods they require internally either by putting up jute mills of their own or by utilising their own production of raw jute in an increasing measure to step up their output of jute goods. Such developments will adversely affect our sacking exports. As for hessian, although in the long run, it is to be expected that Pakistani mills may be able to put sizable quantities on the world market, there does not appear to be any immediate threat to India's position in the hessian trade. Though for some time now fresh enquiries for hessian have been few and far between, the expectation is that despite of heavy stocks, the US may continue to buy steadily if only to ensure that it is not caught napping as in 1961 and early 1962. Even so, it is quite possible that US consumers will steadily develop a resistance to higher price levels. Competent market analysts point out that while there is considerable scope for stepping up hessian exports to the US, increased burlap consumption in that country will largely depend on the extent of price stability that is achieved. It is emphasised that wide price fluctuations will tend to encourage the shift to substitutes and bulk handling which have already made a serious dent in burlap consumption in US.

The need for placing the accent in next season's jute crop on quality

rather than on quantity has been emphasised by the Deputy Chairman, Mr I. S. Boyed, at the annual general meeting of the Calcutta Jute Brokers and Dealers Association held this week. In Calcutta, tracing the developments in the jute market last year, he has pointed out that as a result of the large crop, the market was very easy and except for some of the higher grades there was an abundant supply. The trouble was that there was far too much raw jute available in the lower grades and had it not been for the concerted efforts of Government and the IJMA through the medium of minimum purchase quotas and the JBMA the market would undoubtedly have collapsed. The position was aggravated towards the end of the year by the incidents in the border areas and also by the strike of the Joint Steamer Companies' crews. But thanks to co-operation of all parties concerned serious disruption was averted. The maintenance of price in the raw jute market has been made possible largely because the State Trading Corporation entered the market for the first time and export of pucca bales was permitted for the second time since partition. Although the quantity of jute involved in both these transactions was not much, there is no mistaking their contribution towards improving market sentiment. But in the coming season, according to Mr Boyed, it will be difficult to continue the policy that has worked satisfactorily so far. Because it will not be possible for mills to go on building up stocks of raw jute both for reasons of finance and space. Moreover it is essential that the quality of our jute production is improved because both on account of the increased manufacture of specialities and in view of the growing competition from Pakistan, our mills should be provided with better quality jute.

Orthodox descriptions were well supported, selling at firm to dearer rates with the plainest sorts again a strong feature, registering an advance in price. The better liquoring Dooars and Assam BOPs were generally easier, while similar Fannings were irregular with exportable types often dearer. CTC descriptions met with useful enquiry; but they were generally slightly lower although selected liquoring lines were sold at dearer rates. Fibrous sorts met with keen competition, often selling at considerably higher prices. Legg-cut sorts were fully firm to dearer.

Whole Leaf grades came to a strong market; but Tippy sorts were generally easier. Following rates (per kilo) were quoted:—Clean Plain Pekoe Rs 4.80 to Rs 5.00; Plain BP Rs 4.20 to Rs 4.40; Plain Fannings Rs 4.20 to Rs 4.40; Medium Assam CTC BP Rs 5.40 to Rs 5.70; Medium Assam CTC Fannings Rs 5.20 to Rs 5.50; Best Assam CTC BP Rs 5.80 to Rs 6.00 and Best Assam CTC Fannings Rs 5.60 to Rs 5.90.

In the Internal Sale, offerings amounted to 29,359 packages of Dusts. There was a strong demand. Medium CTCs came to an irregular and generally easier market with the selected smaller descriptions selling well. Good CTCs were sold well and were readily absorbed at around last prices. Plain orthodox teas were well supported at dearer rates. The bright liquoring medium Assams were a strong feature and generally dearer, while the remainder were sold at last rates. Legg-cut teas were well supported at about firm rates with some attractive prices being realised at the close of the sale. Following rates (per kilo) were quoted:—Plain Orthodox Dust Rs 4.10 to Rs 4.50; Medium Assam Dust Rs 4.50 to Rs 5.10, Legg-cut Dust Rs 5.10 to Rs 5.70; Medium Assam CTC Dust Rs 5.60 to Rs 6.10 and Good Assam CTC Dust Rs 5.60 to Rs 6.10 and Good Assam CTC Dust Rs 6.60 to Rs 7.00.

In the Cochin market, offerings were 389,000 kilogrammes of Leaf tea. Against fair demand, Low Medium and Medium sorts were steady with brighter types under this category quoted dearer. Good medium teas showed a firmer tendency, while high-grown were irregular. Unorthodox descriptions tended easier.

The Ceylon Government has decided to increase by 5,000,000 pounds this year the quota of high-grown teas to be shipped directly for sale at the London auctions. Last year's quota was 45,000,000 pounds. The Commissioner of Tea Exports has called for applications from the estate-owners, who have no existing quota for allocations for the increased amount of tea.

All Ceylon tea sold to world buyers has either to pass through the Colombo tea auctions or the London tea auctions. At present, the amount of high-grown teas

passing through the London auctions is restricted, while medium and low-grown teas are freely shipped. In 1960 and 1961, the amount of top quality teas allowed to be sold in Mincing Lane was confined to 37,500,000 pounds. But, in 1962, it was raised to 45,000,000 pounds and, this year, another 5,000,000 pounds have been added to the quota.

According to a report from Nairobi, production of tea in British East Africa amounted to 9.5 million pounds in December 1962 as compared to 6.5 million pounds in the previous year and 9.6 million pounds in December 1961. Production for the whole of last year was higher at 88.9 million pounds as against 80.5 million pounds in 1961.

In London, offerings were smaller at 69,000 packages; but the market had a weaker tone. Among the North Indian and other miscellaneous growths submitted, bright liquoring teas were occasionally easier, while most other descriptions showed a more marked decline in prices. Plain mediums, in particular, were a weak market.

Demand for the South Indian teas was fairly general; but prices were irregularly lower except for teas selling below 4sh a pound, which were about steady. African teas encountered less active competition and were irregularly lower apart from the better liquoring invoices, which tended easier. Apart from a few of the best invoices which were sold comparatively well, less demand was noted for the Ceylon offerings and the market was weaker. Low-grown teas fell by 1d, while medium and high varieties were often 1d to 3d per pound lower.

SUGAR Budget and Commodity Markets

It would be recalled that the pre-Budget sentiment in commodity markets had been dull with no inclination on the part of traders to extend further commitments nor were they in a mood to release stocks freely for sale. The consensus of opinion in market circles was, that there would be a general rise in excise duties wherever feasible and also fresh duties on those which had escaped the impost so far.

In the case of sugar, bulk despatches were made during the last fortnight to the main consuming centres of Saurashtra, Gujarat and other areas in anticipation of an enhancement of the excise duty, while the traders had stocked the commodity to their fullest capacity. But, when it was made known that the excise duty on the sweet commodity and khandasari was not enhanced, the mills and the dealers became anxious sellers.

Moreover, the Union Food Minister's announcement that the Government would take further severe measures depressed the prices. The prices of almost all varieties of sugar registered a decline of a rupee per bag immediately after the announcement of the Budget proposals.

Wholesalers were unwilling to effect supplies at the current rates, while buyers were equally unwilling to make their purchases, obviously in the expectation of a further drop in prices, at least by a rupee further, in the near future. As a matter of fact, D grade sugar has dropped to Rs 115.50; C grade to Rs 115.75 and B grade to Rs 116.50 per quintal.

Meanwhile, the Agriculture Department, Washington, has announced an additional quota of 200,000 short tons of sugar for India. India is among the ten countries which is provided with this additional quota. The other countries, which are given allotments, are Argentina 28,797; Australia 49,190; Dominican Republic 3,730; Ecuador 10,300; France 12,153; Mauritius 28,400; Peru 74, South Africa 18,788 and Southern Rhodesia 16,878. All figures are given in "short" tons.

According to the International Sugar Council, world sugar consumption is expected to exceed production in 1962-63—for the second year in succession. While consumption is expected to rise from 54.27 million metric tons, production is estimated to have increased from 51.97 million to 52.59 million metric tons. Thus, the estimated shortage of 3.31 million metric tons in the world market in the current year has imparted firmness to sugar markets all over the world in recent months.

NON-FERROUS METALS

Although dealings were few and far between in the Bombay Non-Ferrous Metal market, a good deal of stir was created by the Budget proposals. The increase in the duty on copper by Rs 200 per tonne created confusion among the traders. Manufacturers of copper products are getting rebate of the duty paid on copper from the excise payable on these products. The existing excise on copper is Rs 100 per tonne. In the case of certain products, therefore, the manufacturers will not be entitled to claim any rebate now as the proposed increase is Rs 200 per tonne. It is, however, felt that, in the case of those products where the excise is lower, the manufacturers will have a credit balance with the Government. A clarification on this point whether the increase in the duty is of the order of Rs 200 or Rs 100 is expected by the trade. But, following the announcement of the increase in excise duty, Copper Coil spurted to Rs 382 from the pre-budget level of Rs 370; Copper Pig to Rs 322 from Rs 318 and

Copper Wire to Rs 370 from Rs 366.

Trade sources feel that, despite various schemes to increase the indigenous production, the scarcity of copper will continue for some years. India's imports of virgin copper in 1962, estimated on the basis of the figures available for the first ten months, are placed at around 67,430 metric tons, valued at Rs 21.7 crores as compared to 63,600 metric tons, valued at Rs 19.73 crores in the previous year. If the domestic output of 9,780 metric tons is added to the imports, the total availability of copper, last year, works out to 77,180 metric tons, while the present need is estimated at over 100,000 metric tons on the basis of the consumption growth envisaged.

The absence of any surcharge proposal for Zinc led to a fall in its price from Rs 268 to Rs 256 per 100 kg. Those, who had feared an increase in its excise, had bought the metal on an increasing scale. They unloaded their holdings. Owing to tight supply, however, Tin continued to maintain a steadier trend, at Rs 304 per 10 kg even though no fresh impost had been proposed. Trading in the Lead section was dull and featureless, being quoted around Rs 440 per 100 kg.

CHEMICALS & DYES

The Bombay market for Dyes and Chemicals displayed firm conditions in the pre-Budget session on the expectation that the excise duties would be levied. There was actually a scramble for the available supplies, while stockists were hesitant to part with their holdings. This had a bullish effect on the prices of most of the items, especially of Caustic Soda and Soda Ash.

After the announcement of the new levies—a surcharge on excise duty and an increase in import duty—the market remained more or less at the previous week's levels on the argument that prices had already gone up, though there were a few items which showed a further rise. On the other hand, the impact proved rather heavy for Dyes, especially for Vat Pastes and Naphthols. In some cases, prices moved up by 5 to 10 per cent.

It is, however, felt that once the stocks, built up in the past few days, get depleted, the trend will again be reversed. It is believed that the increase in the duty will be easily passed on to the consumer. Except for a few items of which there are large stocks in the market, the general price trend is likely to be steadier.

CLOVES

Prices of Cloves have virtually been unaffected by the imposition of the 10 per cent surcharge on import duty. The prices have

risen by only Rs 4 per 10 kg as against the proposed impost of Rs 15.20. The trade has had to absorb a major portion of the levy owing to the lack of demand and the bearish effect of smuggling. Considerable quantities of cloves are being smuggled into the country through the Calcutta Port and are priced very low.

Imported cloves are now quoted around Rs 312 against the pre-Budget price of Rs 308 per 10 kg. Cloves are subject to an import duty of Rs 152 per 10 kg and the fresh surcharge will be Rs 15.20. The trade has been unable to pass on the burden to the consumers.

Cloves are imported mainly from Zanzibar through the State Trading Corporation. The STC was licensed to import cloves worth Rs 20 lakhs for the April/September 1962 licensing period. Of this, cloves worth Rs 3 lakhs are yet to be imported. No licences have been issued for the current October 1962-March 1963 period.

OILS & OILSEEDS

While the decision to abolish the excise duty on edible oils, which was received as a pleasant surprise by the trade, exercised a two-fold effect on the market. While prices of Groundnut oil declined sharply by about a rupee per 10 kgs at Rs 16.10 immediately after the Budget, ready and forward groundnuts showed an upward trend. The picture in respect of the abolition of the duty was, however, confused as a section of the trade wondered if filtered groundnut oil would benefit from the Government measure. It was also doubted whether the oil produced by the larger units would be exempted from the duty.

Although the larger units have all along been agitating against the favour shown to small units, they have never pleaded for putting the small and large units on the same footing. The have pleaded that small units can be favoured only to the extent of Rs 20 per ton. Meanwhile, the confusion about the excise duty has resulted in a stalemate in trade. The Bombay Oilseeds Crushers' Association and the Central Organisation for Oil Industry and Trade have urged the Government of India to clarify the position. At the close of the week, Groundnut Bold was quoted at Rs 41.87 and Groundnut Oil at Rs 16.60.

In the Castorseed section, trading was largely of a speculative nature. The outlook for the export of castor oil continued to be bleak with prices in the UK and other foreign markets showing an easy tendency. Castor ready was quoted at Rs 32.50 and Castor Oil, commercial quality, at Rs 12.80.

Price movements in the Linseed section were irregular in the absence of sustained buying interest. Ready was quoted at Rs 35.37 and Linseed Oil at Rs 12.20.

TEA Withdrawal of Export Duty Welcomed

ALTHOUGH the present enhancement of the excise duty has not enthused the tea traders, the proposal to completely withdraw the present export duty has been welcomed. There is a general feeling that the abolition of the export duty may put the Indian tea at a greater advantage in the world markets and help to increase exports, especially when exports from India have shown a decline to 23.5 million kg in January from 23.7 million kg in the previous month. The earnings from such exports have also dropped to Rs 13.93 crores from Rs 14.28 crores. In January last year, only 20 million kg of tea, worth Rs 11.17 crores, were exported from this country.

Meanwhile, there was a good general demand in the Export Sale held this week when offerings amounted to 70,757 packages. Plain

COFFEE

Details of Second Export Sale

Following are the details of the second coffee export sale, held in Mangalore at the previous weekend, on the basis of closed tenders: To non-bilateral quota countries from 1962-63 crop:—

Type and Grade	Exposed (kilos)	Sold	With-drawn
Plantation—			
A	807,600	386,820	420,780
N	184,500	95,700	88,800
Triage	77,700	Nil	77,700

To bilateral countries: Plantation—			
A	399,300	399,300	Nil
Triage	199,880	199,880	Nil

Following were the range of prices per 50 kilos, ex-bag, ex-curing Works, exclusive of all taxes and duties:—To non-bilateral quota countries—Plantation A Rs 190 to Rs 210; Plantation B Rs 178 to Rs 190; Plantation Triage entire quantity withdrawn and no prices were quoted. To bilateral quota countries—Plantation A Rs 193 to Rs 201 and Plantation Triage Rs 173.50 to Rs 174. The third export sale will take place at Mangalore on 22 March, 1963.

It is learnt that 28 coffee-exporting countries will meet in Washington on 25 March to extend the length of their present quota agreement. The original extension, adopted when the International Coffee Agreement was signed last October, will expire on

31 March. The International Agreement is not yet in force. The exporting countries are extending the old quotas until all countries involved ratify the agreement reached under the auspices of the United States, which alone consumes 95 per cent of all coffee exports. The US Senate is expected to hold a hearing on this; but the date has not been set.

PEPPER

Rosy Outlook

Conditions in the Pepper market have continued to remain firm, as the outlook for the commodity is considered to be rosy, thanks to the prospects of early entry of the US in the market. New York dealers are still offering to make purchases at 31½ cents per pound, while sellers in Cochin are not inclined to enter into commitments at anything less than 33 cents.

Sellers' reserved attitude has been influenced by a belief that America will have to meet its requirements from here following decreased arrivals in Singapore due to unsettled political conditions in the Far East over the Malaysia problem. The outlook for the Sarawak pepper is considered to be gloomy for the same reason. In the Cochin market, the rate is quoted at Rs 277 per quintal.

GOLD & SILVER

Silver Quiet

Conditions in the Silver section of the Bombay Bullion Exchange were rather quiet on lack of fresh activity. Reports of increased

unrefined silver also made for hesitation and prices fluctuated within narrow limits. Ready (1996) was placed around Rs 234 to 235.

The Bombay Bullion Exchange Association has sent a fresh memorandum to the Union Finance Minister requesting him to lift the ban on forward trading in silver. The Association says that the forward market acts as a shock absorber when the demand and supplies are unequal, while it restricts the range of price fluctuations.

The demand for Gold slowed down to a marked extent and the price of declared gold declined rather sharply. The dealer-to-dealer price for the ready metal was around Rs 100, while Sovereign was in demand at Rs 73 to Rs 74 per piece.

COTTON

Steady Trend

The cotton futures market during the past week ruled steady and the Jarilla March contract went up by Rs 13 and the new contract moved up by Rs 9.25 per three quintals. The sentiment was aided by the imposition of an import duty of 10 nP per kgs on cotton and the absence of any excise duty on piecegoods and a cess on domestic cotton. The release of the last 25 per cent quota for Indian cotton to the mills also extended support from the spot market at Sewri.

The market commenced the week on a firm note. The Jarilla March contract edged forward to Rs 695.50 from the previous week's closing of Rs 689.20 obviously due to bear covering. In the pre-budget session on Thursday the maturing contract declined to Rs 690.50 before closing at Rs 691.00 per three quintals. In the budget session it slipped down to Rs 685 suspecting that tenders on the first notice day would be heavy. The reported revision of the on and off allowances of varieties like Kalyan, Surti, Ankaleshwar and Cambodia A and B induced some selling. Afterwards the contract went up gradually to finish at Rs 704.00 per three quintals.

The new contract showed a steady trend from Rs 697.00 it went up to Rs 708.00 thus narrowing the discount of the March contract over the May contract to Rs 4 from Rs 7.75.

The spot market presented cheerful conditions. Mills were reported to have made substantial purchases on account of the rumours about the possibility of imposing some duties on cotton in the form of either duty or cess. Mill interest was particularly pronounced in ready lost of L.147, CO 2, Surti, Vijay and Digvijay.

In the import section American cotton met with good spinner interest. Scattered business was also reported in African and Sudan

cottons. In the import section demand for Bengal Deshi tapered off. Out of the quota of 75,000 bales of cotton 29,844 bales were registered for shipment till 27 February.

The other short staple cotton released for exports has not so far attracted any purchasers from abroad.

Total exports of cotton piecegoods from India in 1962 estimated at 508.31 million yards show a decline of nearly 12 per cent from 574.30 million yards exported in the previous year. Earnings also declined by approximately Rs 6.21 crores to Rs 39.96 crores from Rs 46.17 crores. The exports during the year under review is the lowest on record during the past twelve years. India's exports of cloth to the Asian zone in 1962 are provisionally placed at nearly 1,400 million square yards against 1,412 million square yards in the previous year. Exports to the UK are also marked lower by 52 million square yards at 235 million square yards. Exports to Africa aggregate 143 million yards against 185 million in the preceding year. Exports to Europe showed a decline of 14 million yards to 146 million yards. On the other hand our exports to America and Oceania showed heartening increase. Exports to the American zone in the year under review totalled 49 million yards against 30 million yards to 42.93 million.

PIECEGOODS:

The Bombay cotton piecegoods market during the week under review presented a sluggish trend. The total turnover in the market was comparatively moderate because of the intervention of the two holidays and the Union Budget. Compared to the preceding week's brisk buying in anticipation of an increase in excise duty, the actual transaction in the early part of the week was restricted. The buyers were however anxious to dispatch stocks to their respective centres before the announcement of the excise duty. But knowing that there was no upward revision in excise levy the market turned distinctly dull. The expectation of a further decline in prices toward the week-end and the approach of the holi festival adversely affected the sentiment.

Medium saris, dhoties and superfine goods met with good demand during the week. Purchasers from the upcountry centres remained almost inactive. North Indian centres stayed away from the market while scattered business was reported with South India.

The export front was almost neglected. The overseas buyers preferred to wait the outcome of the Central Budget. Stray enquiries were reported from the UK for grey sheetings and furnishings and the US showed some interest in grey sheetings. Singapore accounted for a moderate quantum of voiles and canvas while East Africa was contented with a small quantity of bedtickings and gadlapat.

For the Investor

INVESTMENT GOSSIP Depressed Mood

The severe jolt administered by Mr Morarji Desai's budget proposals is now fully manifest in the stock markets. In earlier dealings this week prices nosedived to touch new lows and further decline was averted only by the imposition of minimum prices. The position now is that though markets are officially open, no business has been transacted in some of the stock exchanges just because there are no buyers. It is not difficult to guess what would have happened to equity values if minimum prices have not been imposed almost simultaneously by all stock exchanges. All are agreed that some of the new taxes especially the super profits tax, will so adversely affect the financial position of companies that most of them will not be able to pay a decent dividend to shareholders. An inkling of the shape of things to come has already been provided by the fact that some companies have made known their intention substantially to reduce the dividends previously announced. It is felt that unless the SPT is suitably modified to enable companies to retain a major portion of their surplus after tax profits, the outlook for the corporate sector will be bleak. With the prospect of receiving a meagre dividend or no dividend at all, investors will find little attraction in the stock market. From the influential representations that are being made to the Government there is a faint ray of hope that considering the enormity of the damage the SPT will entail, the Finance Minister may be persuaded to minimise the rigour of the measure. But the tenor of Mr Desai's speech in reply to the four-day debate in the Rajya Sabha on the Central Budget seems to have already belied such an expectation.

STOCK EXCHANGES Activity Paralysed

Watch-Dog Writes: ACTIVITY in stock markets, during the week, has been paralysed by sustained bull liquidation, as serious apprehensions are entertained in financial and industrial circles about the disastrous effect of the Super-profits Tax on company finance. The fall in equity prices has been so sharp and wide that the stock exchange

authorities in most of the centres have been compelled to re-fix the minimum prices to arrest the downward trend. Even then, business at all the stock exchanges has been at a standstill.

Although Lyons Range remained officially open, operators were in no mood to transact any business in view of the prevailing uncertainties caused by the Budget proposals.

Dealings on Dalal Street were largely restricted as operators continued to be cautious. Sentiment on the Madras Stock Exchange continued to be depressed as evidenced by the offers at lower levels in many industrials.

CALCUTTA

CONDITIONS akin to panic were noticed on the local stock exchange during the week under report, reflecting the full impact of the Union Budget proposals. Operators seemed to be worried more about the outlook for corporate profits which, it was feared, had undergone a radical change after the budget.

First, it was considered that the proposal for a Super-profits Tax might affect the dividend-paying capacity of various companies, not to speak of the fact that it was likely to frighten away even foreign capital and unnervingly the domestic market, too. Secondly, it was thought that the additional surcharge on personal income-tax would greatly reduce the savings of the salary-owners, who were at present the main prop of the stock market.

Thirdly, it was feared that the raising of import and excise duties on machinery and spare parts and some industrial raw materials might undermine India's ability to compete in export market and might have far-reaching repercussions on the price level. It was felt that the additional import duties would raise the cost of establishment, expansion and development of corporate enterprises. Lastly, the increase in excise duty on petrol, diesel oil and automobiles was expected to lead to higher transport charges.

In the midst of the staggering budget proposals, the news of some companies having intimated that their dividend announcements had been cancelled and revised dividends would be notified, gave rise to a feeling that many companies would have to reduce the quantum of dividends in the light of subsequent developments. For obvious reasons, sellers predo-

Following table shows the extent of the decline in the prices of a few selected shares and the mild recovery noticed towards the close of the week:

INVESTMENT NOTES

TISCO

The production of Saleable Steel at the Works of the Tata Iron & Steel Company Limited amounted to 113,100 tons in February 1963 as against 126,000 tons in the previous month. The smaller output is accounted for by the fact that there were fewer working days in February than in January. The production of Pig Iron was 136,000 tons against 151,700 tons and of steel ingots 143,500 tons against 159,100 tons.

Tata-Finlay

The Government of India have permitted Tata-Finlay Private Limited to undertake the manufacture of 1,500,000 pounds of "instant tea" for export. Instant tea, which is in powder form, is to be manufactured by a patented process invented by James Finlay

and Company Limited, UK, and will be soluble in hot and cold water. The new factory will be located in the Kerala State and is likely to go into production early next year.

East Anglia Plastics

According to a circular issued by East Anglia Plastics (India) Limited, letters of rights, offering new shares for Rs 1 crore to the existing shareholders in the ratio of one new share for every share held, have been posted. The last date for the acceptance of the offer is 31 March. In this connection, it may be added that apart from the sanction of the Controller of Capital Issues for the issue of further capital of Rs 2.125 crores, the balance requirement of rupee capital for the company's integrated project, has also been obtained. Out of this, fully-paid shares for Rs 12.5 lakhs are to be allotted to the foreign collaborators in payment of the balance for their technical know-how fee.

In view of the national emergency and consideration that the entire sanctioned amount of Rs 2 crores will not be required immediately, the directors have decided for the present to enter the capital market with the rights issue of Rs 1 crore only. There is, however, no compulsion on the part of the shareholders to accept the offer and it is open to them to renounce their rights. If any of the shares is not taken up by the existing shareholders, it is open to the directors to dispose of such shares in accordance with the provisions of the Companies Act and conditions of the consent of the Controller of Capital Issues.

Atul Products

The directors of Atul Products are understood to have decided in favour of a rights issue in the ratio of three shares for one share held, at par, and also issue Debentures to the tune of Rs 3 crores

to meet the expansion programme of the company. The Debentures are underwritten by a leading bank.

Mulchandani Electrical

Mulchandani Electrical & Radio Industries Limited is already manufacturing Bush radio in agreement with Rank-Bush Murphy Limited, at the factory at Andheri. But a new unit is being constructed in Thana in order to meet the growing demand for the company's products.

INVESTMENT BRIEFS

The Industrial Credit & Investment Corporation of India Limited has proposed to maintain the dividend at 8.50 cent per share, subject to tax, for 1962.

Martin-Burn Limited has reduced the dividend from 27½ to 25 per cent, subject to tax, for the year ended 30 September 1962.

Our technical experts keep a constant check on all mills licensed to use the internationally-known label 'Sanforized'. Such vigilance ensures that material bearing this label is up to specifications laid down by us, and that it will not shrink even after many, many washings.

Month after month and throughout the year, these experts visit the licences, carefully examining fabrics both from the warehouses as well as off the processing machine

From each mill, they take an extensive random sampling of various fabrics. Each must be a quality fabric before it can be stamped with the label 'Sanforized'

These samples are catalogued; measured and submitted to rigorous wash and minimum shrinkage tests both here and in the U.S.A. in fully equipped technical laboratories

The catalogued samples are then re-examined and re-measured. The results of our experts' findings are recorded, each mill having its own dossier

A copy of these reports, together with their samples, are sent to the home office in New York. This multiple checking ensures that all cottons marked 'Sanforized' will not shrink out of fit

Make certain you get the full measure of value of the material you buy—

Look for **'SANFORIZED'** on the label and your clothes will never shrink out of fit

THE LITRE

From April 1963, metric capacity measures will be compulsory in trade throughout the country. • The kilogram and the metre became compulsory last year; thus the metric system of weights and measures is now the only legal system in India. • The simplicity of the metric system will be obvious if you use the units (litre, metre and kilo) as they are, for their intrinsic value. • Do not equate metric measures to old units like seer, viss or ollock.

For quick service and fair dealing—use

Using Foreign Aid

The Ministry of Finance has released the customary brochure on "External Assistance", from which the latest information about the amount of aid committed by friendly foreign countries and about the pace of its utilisation can be gleaned. Assistance authorised by 18 countries, the UN Special Fund, the World Bank and its associate the IDA, and the Ford Foundation upto the end of 1962 totals to Rs 2,636 crores of which Rs 2,333 crores are in the form of loans and Rs 303 crores in the form of grants. These figures understate somewhat the generosity of our benefactors, for they do not include some important items. For instance, the value of the agricultural commodities supplied by the US under Title I of PL 480 amounting to Rs 1,156 crores and of the supplies under PL 665 amounting to nearly Rs 32 crores are not included in the above total. Nor do sundry other forms of assistance figure here. For example, technical assistance in the form of experts, ad hoc grants of equipment, certain suppliers' lines of credit, and above all, emergency assistance by the US President under Title II of PL 480 in the form of food commodities (Rs 2.29 crores) and under title III of PL 480 consisting of donations of food commodities (Rs 71.5 crores) to voluntary agencies are not included in the above total of Rs 2636 crores.

The pace of utilisation of this quantum of aid, except for some interesting variation from the general pattern has not been as unsatisfactory as was widely feared at one time. For example, out of the total authorised loan assistance of Rs 2,333 crores the balance unutilised as on 1 January 1963 is Rs 1,248 crores, and of this Rs 406 crores were authorised between April and December 1962. The authorised grants remaining unutilised is Rs 51 crores out of a total of Rs 303 crores, which is not a bad showing at all considering that of this Rs 51 crores, an amount of Rs 15 crores was authorised only in 1961. Of the unutilised loans that had been committed before 1 April 1962, the largest is that of the USSR amounting to Rs 284 crores. It must be admitted however, that of this, Rs 226 crores have been specifically earmarked for the Third Plan and will in due course be used. The unutilised US credit as on 1 April 1962 amounts to Rs 211 crores of which Rs 83 crores were authorised only in 1961-62. Generally speaking, credits from the East European countries have tended to remain unused for a long time. For example, the credit from Yugoslavia of Rs 19 crores authorised even before the end of the Second Plan period is still unutilised. The same is the case with the Czechoslovakian credit of Rs 23 crores. Polish credit of Rs 14 crores (though despite this non-utilisation, Poland has agreed to give further assistance of over Rs 15 crores in 1962), and the Swiss credit of Rs 7 crores.

In terms of the loans repayable in foreign currency and in rupees, the picture of utilisation is somewhat as follows: Out of a total of Rs 2041 crores of loans repayable in foreign currency authorised upto the end of December 1962, the amount remaining unutilised on 1

January 1963 is Rs 946 crores, of which Rs 769 crores were authorised after 1 April 1962. Loans repayable in rupees (excluding loans out of counterpart rupee funds of US PL 480 and PL 665 assistance) authorised till the end of December 1962 add up to Rs 296 crores of which Rs 92 crores remain unused as on 1 January 1963 (of which Rs 50 crores are funds authorised after 1 April 1961.) Assuming that loans repayable in foreign currency are broadly identical with loans utilised for imports from abroad, it is evident that the use of foreign assistance for furthering our industrial ambitions has not been as dilatory as was at one time feared.

But the word "utilisation" is somewhat ambiguous as will be evident if we examine the position regarding the assistance under PL 480. There are a number of stages between broad commitment of aid and its actual use. First comes the agreement in principle of the nature and order of aid. Eight agreements under title I of PL 480, have been concluded so far under which surplus farm produce of the value of Rs 1156 crores are to be imported by us over a period of years. But of these only Rs 672 crores worth have actually arrived in the country till the end of October last. Plainly, it would be pointless to complain of tardy use of this form of aid, since a slow rate of imports of farm products (even on easy terms and with subsidiary benefits from the funds so generated) is a sign of comparative economic health in that the indigenous production is to that extend equal to the needs.

But the position is slightly different in regard to the utilisation of the counterpart funds created by the rupee payments actually made to the US Government. These are, as is well known, to be re-lent to the Government of India, used (under the Cooley amendment) to extend loans to US firms for investment in India or kept for use by the US government itself. Measuring the efficacy of this form of aid—in terms of the pace of its use—is rather involved. First, out of the total accrual of Rs 672 crores, agreements have been signed for the use of Rs 518 crores. This is not too slow considering that it represents over 77 per cent of the funds available. But this gives a rather flattering picture of the pace of spending, for of the amount agreed to be spent, only a little over Rs 214 crores (of which Rs 47 crores are grants) have actually been drawn by the government. (The figures for the utilisation of funds under the Cooley amendment are not available)

Of course, in one sense, all this is somewhat academic. The counterpart funds are available (at least from July 1960) in full to Government the moment the shipments of commodities arrive. For the payments to the US are invested by the latter in special non-transferable Government securities. Therefore all that happens when Government makes a formal request for reimbursement of expenditure incurred on agreed projects is that the special securities are cancelled and the "more permanent" debt to the US Government is marked up.

STATE BANK

Variegated Operations

When the Imperial Bank was nationalised, one of the main reasons for criticism was that a source of normal commercial banking finance might not any longer be available—at least to the same extent as had been earlier provided. And in fact in the first few months of existence of the State Bank there was a tendency for the institution to lose Deposits. The prospect then was that the State Bank, in its commercial operations, would look after the needs of public sector corporations side by side with its principal objective of aiding rural marketing through the provision of agricultural credit. But then followed a period of great stringency for Indian banking generally coinciding with the start of the Second Plan. The State Bank had to meet a larger demand from constituents, and was enabled to do so with less difficulty than it might otherwise have had, thanks to the depositing of Public Law 480 counterpart funds with that institution. Also, the institution persisted with its branch expansion programme, fulfilling designated targets. Today, there are variegated facets to the operations of the State Bank, and these have been enumerated by Mr B. Venkatappiah at the eighth annual general meeting in his speech as Chairman of the institution.

The situation in Assam following upon the emergency threw up a challenge in the matter of distribution of commodities and in keeping production running smoothly. In both a certain responsibility devolved upon the State Bank. The State Government, which had to assume the chore of distribution of foodstuffs on a large scale, was helped with loans against hypothecation of stocks; and with a guarantee from the State Government, apex co-operative banks secured funds for the financing of some of the small tea gardens. Mr Venkatappiah reports that the "main objective was to assist in restoring the normal functioning of commercial credit." That the banks in Assam, with the example shown by the State Bank, responded promptly to the emergent condition was one of the factors which prevented undue panic or loss in production.

The State Bank's Chairman has greatly been exercised over the need to foster exports, and he has taken steps to make available some impetus and incentive. Firstly, the State Bank gives a rebate of one half of one per cent on all Advances with an export motif. At a time when almost every official action seems to be adding to our exports' costs, it is refreshing that the State Bank should have reduced one of the elements of cost—that of money. Secondly, a recent amendment of the State Bank of India Act has cleared the way for the institution to provide medium-term finance for exports. We do not have the details, but presumably credit of this nature falls into the same category as the assistance given by such institutions as the American Export-Import Bank for its own exporters. Thirdly, though only on a small and trial basis, the State Bank is seeking to provide guarantees in respect of foreign currency loans for the import of raw materials; the understanding, of course, is that in due course exports would be effected of manufactures from such imported raw materials, and the proceeds utilised to repay the foreign currency loans.

It is intriguing to learn from Mr Venkatappiah that the State Bank now has in hand

a programme for opening branches "in the metropolitan areas." Excluding PL 480 Deposits the rate of growth of the State Bank's resources has in recent years lagged behind that of other Scheduled Banks. We may infer that the State Bank Chairman is of the view that new Deposits are easier to be found in the urban areas. What is paradoxical is that the other Scheduled Banks, which so far have picked and chosen branches in industrial centres, will now be compelled to supplement the State Bank's efforts in covering the countryside with banking facilities.

The State Bank's responsibility for providing finance for small industries and co-operatives is rightly defined by Mr Venkatappiah as "two important aspects of the Bank's development activity." In both satisfactory progress has been recorded during 1962.

One final point to be noted is Mr Venkatappiah's reference to a proportionate (vis-à-vis the rise in bank wages) and substantial increase in staff bonus. As the review of the State Bank's balance-sheet for 1962 (see World of Finance) shows, the bill in this regard rose by Rs 27 lakhs, and could be paid for only by reducing the transfer to Reserve. This increase the State Bank Chairman justifies as a measure of goodwill to the staff. While in no way raising a voice against the current year's round of increases in bonus to staff (almost every bank has so declared), we would urge that apart from solicitude for bank labour, care must also be had to strengthen banks through transfers to reserve, both published and internal, and to pay a reasonable dividend to shareholders, such that rights issues can be successfully put through.

FOREIGN MONEY MARKET

Euro-Dollar Prospects

By Paul Einzig

The market in foreign currency deposits, especially in the so-called Euro-dollars, whose existence has been ignored for years outside the foreign exchange market, is now receiving the attention that it deserves. It now seems to have settled down, after five years of spectacular expansion in its activities. Opinions differ widely about the future of the market. Whenever it experiences a relatively quiet period and deposit rates and profit margins are lower, many quarters are inclined to believe that it is the beginning of a period of decline that would end with the eclipse of that market. Experts never tire of predicting its demise.

When last year the United States Congress passed legislation removing the limit of interest rate paid on time deposits in the United States owned by Treasuries and Central Banks, it was widely believed that this would mean a decline of the market. It was expected that, as a result of the change, Central Banks and Treasuries would withdraw their funds from the Euro-dollar market to take advantage of the higher deposit rate paid in the United States. And since official Euro-dollar deposits are estimated to represent something like two third of the total of such deposits, it was expected that the turnover in that market would necessarily decline sharply. Actually, it increased further during 1962, presumably because the rates American banks actually allowed were not sufficiently attractive to divert large amounts of deposits from the Euro-dollar market.

The latest suggestion is that since the United States is expected to balance its balance of payments, the Euro-dollar market would then cease to be fed by additional foreign holdings of dollars resulting from the adverse trade balance. Those who hold this view overlook the fact that most of the large foreign dollar holdings had been accumulated during the long period when the United States had a chronic export surplus and when confidence in the dollar was attracting large foreign balances.

I am convinced that markets in foreign deposits have come to stay, because they fulfil essentially constructive purposes and meet very genuine requirements. Investors of short-term funds find its facilities very conveniently flexible, while borrowers of short-term funds find the terms obtainable in that market very conveniently adaptable to their requirements. Profit-margins between borrowing and lending rates are much narrower than those between local borrowing and lending rates in any country. The facilities provided by that market went a long way towards solving the difficulties of inadequate credit supply in a rapidly expanding country such as Japan, Germany and Italy. In these and other countries the competition of Euro-dollar facilities went a long way towards lowering the level of domestic interest rates by forcing the local banks to reduce their charges in order to meet the new competition. The snag is, that benefits from the system are confined largely to countries which have no exchange restrictions, at any rate as far as international funds are concerned.

The Challenge

Defence effort necessitates development of a great ability to produce weapons and equipment and to transport them. At the same time, adequate supplies of essentials for civilian consumption must be maintained. All this involves tremendous finance. But to meet the requirement, the less we have to depend upon deficit financing the better for our economy.

The resources of the nation must be mobilised to feed the various needs for production and distribution. Bank is the most suited agency for this purpose. Put all your money in your bank account and make your payments by cheques. That will be your yet another direct contribution to the nation's defence effort.

BANKS

1962: Rise in Operating Costs

THE second batch of bank balance-sheets is published in this issue of Indian Finance. Already, the fundamental fact about banks' working in 1962 has clearly been brought out. That is, that while there was nothing wrong about banks' capacity to earn, all such enlarged earnings were fully absorbed by higher operating costs.

Banks had many crosses to bear in 1962. Some, such as the premium chargeable in respect of Deposit insurance, were justified; and others, in particular the cost of interest paid, are quite reprehensible. Let us enumerate what these special factors were.

Deposit insurance entailed premium payable from the 1st of January last year and accordingly represented an altogether new item of expenditure for the banking system. Of course such expenditure is by no means wasted, in that the introduction of the scheme was essential for restoring public confidence in banking, a confidence that had been shaken by the closure of Palai Central.

The second factor lay in the implications of the Desai Award. Made retrospective as from 1 January 1962 in respect of most of the decisions, banks faced a two-fold increase in their cost structure. One category of banks their cost structure. One category of banks was abolished; and one so called "area" was also eliminated. As a result scales of pay for bank labour rose automatically; and most banks had simultaneously perforce to announce increases for supervisory staff. This, too, is an item of expenditure (additional, that is) which was unavoidable. In the long run banks will reap dividends in the form of a more contented—or at any rate a less resentful—labour force. But the immediate implication, as faithfully reflected in the profit and loss accounts for 1962, has been another increase in operating costs.

Most of the 1962 profit and loss accounts reveal yet another item of extraordinary expenditure, contributions to the National Defence Fund. To the extent of such contributions once the emergency is over we may expect an element of recovery in the balance of profit of banks. But this, again, is an expenditure that was inevitable and can hardly be begrudged.

It would also appear that the general campaign for attracting new savings bank accounts has been responsible for enlarged advertisement budgets. For, just as rents, taxes and insurance is a head of expenditure that, presumably reflects the Deposit insurance premia, the increase, almost uniformly noticed, under the head of stationery, printing and advertisements would or could relate to the third.

We now come to the last of the factors. Increase in the cost of interest paid. This is an item of expenditure that has been going up relentlessly from 1956. The beginnings of a Deposits war in that year have, we venture to suggest, led to the present situation wherein, for the sake of interest available,

large moneys that are really current account in nature lie camouflaged as Time Deposits. High interest rates on Deposits represent an unnecessary burden for banks. We would welcome action by the banking system, once the 1963 slack season gets off to its start, to effect economies under this important head of expenditure—an item which, it may be added, is subject to their control.

BANK OF INDIA

Sharp Rise in Deposit Resources

The gross income of the Bank of India Limited rose in 1962 by a steep 31.8 per cent, but again the special factors operating in that year have clouded the earnings such that the balance of profit marks merely a nominal improvement.

Deposits of the bank went up by Rs 32.14 crores, representing a 25.7 per cent increase over the previous year, to Rs 157.16 crores. The bulk of this was under the head of Fixed Deposits, which have gone up by Rs 19.02 crores to Rs 79.81 crores. Savings Bank Deposits and Current Accounts also show increases of Rs 7.74 crores and Rs 5.38 crores to Rs 28.22 crores and Rs 49.13 crores respectively.

Almost the whole of the accretion to resources has been utilised by Bank of India to expand the Advances portfolio, which has gone up by Rs 28.67 crores to Rs 127.00 crores. In the process the credit ratio has inched up from 78.8 per cent to 80.9 per cent. At the same time, however, Bank of India has taken care to add to its gilt-edged portfolio which, in rising by Rs 7.28 crores to Rs 25.83 crores, now works out to 16.4 per cent of Deposits against 14.8 per cent in the 1961 balance-sheet. Cash balances, including money at call and short notice, have also been increased by Rs 2.05 crores to Rs 13.64 crores, but recourse had to be had to borrowings for Rs 4.77 crores against nil in the previous set of accounts.

As noted, gross income has gone up sharply by 31.8 per cent, or Rs 1.94 crores, to Rs 8.03 crores. The income by interest and discount at Rs 6.83 crores contributes the major share of Rs 1.73 crores of the increase. Commission, exchange and brokerage have also been shown to have fetched about Rs 14 lakhs more at Rs 1.04 crores.

But interest paid is marked up by Rs 0.91 crore at Rs 3.55 crores; salaries and allowances by Rs 0.44 crore at Rs 2.05 crores; rents, taxes and insurance cost about Rs 14 lakhs more; stationery, printing and advertisements absorbed about Rs 12½ lakhs more; and other expenditure, which includes Rs 5.5 lakhs contributed to the National Defence Fund, has gone up by Rs 2½ lakhs. Such rise in operating costs means inevitably that, despite the considerable increase in earnings, the balance of profit has shown little change at Rs 1.115 crores against Rs 1.103 crores.

The appropriations account shows that the transfer to Reserve has been stepped up by

50 per cent to Rs 22.50 lakhs; bonus to staff takes up Rs 32.50 lakhs against Rs 19.00 lakhs; a maintained dividend on the increased capital requires Rs 72.60 lakhs against Rs 60.00 lakhs; and the result is that the carry forward has been pruned to Rs 13.10 lakhs from Rs 29.16 lakhs brought in.

During 1962, the paid-up capital of Bank of India increased by Rs 1.05 crores to Rs 4.65 crores; and the Reserve Fund, including a transfer in the latest year of Rs 12.50 lakhs from inner reserves, also shows a sizeable rise of Rs 83.50 lakhs to Rs 4.115 crores. But, despite the addition to capital and reserves to such considerable amounts, it is to be noted that, because of the sharp accretion to Deposits during the year, the capital ratio has moved up but slightly from 5.02 per cent to 5.19 per cent. The experience of Bank of India in this regard underlines the fact that it will be very difficult for banks to achieve a 6 per cent capital ratio—unless rebate from tax is available on transfers to reserve.

DENA BANK

Reserve on Par with Capital

Despite the issue of rights shares on the basis of one for one during 1962, raising the issued and paid up capital to Rs 1 crore, Dena Bank, by dint of a transfer to Research Fund of Rs 23 lakhs, is able to report in its 1962 balance-sheet that its Reserve Fund is on a par with capital.

An increase of Rs 7.91 crores, or 18.3 per cent, takes Deposit resources to a figure of Rs 51.07 crores; and Dena thus is no longer a "medium" bank. It is a rise of Rs 4.93 crores to Rs 24.70 crores under Fixed Deposits which is importantly responsible for the increase in Dena Bank's Deposits; but Savings Bank Deposits (up by Rs 2.20 crores at Rs 12.91 crores) and Current Accounts (up by Rs 0.78 crore at Rs 13.46 crores) have also participated in the increase.

As with the State Bank, the accretion to resources has mainly been used to augment holdings of gilt-edged, which are up by Rs 3.20 crores (or a spectacular rise of over 25 per cent) at Rs 15.19 crores. The expansion in the accommodation to constituents is a small one of Rs 1.69 crores (or 5.6 per cent) to Rs 31.74 crores; and the result is that the credit ratio has been brought down from 69.7 per cent in the 1961 balance-sheet to 62.1 per cent in the latest accounts. Cash balances, including money at call and short notice, have been added to by Rs 1.94 crores to Rs 6.72 crores.

The gross income of Dena Bank went up by Rs 40 lakhs, representing a rise of 17.8 per cent over the figure for 1961, to Rs 2.65 crores; and the additional earnings were predominantly contributed by interest and discount, higher by Rs 34 lakhs at Rs 2.17 crores; commission, exchange and brokerage brought in about Rs 5 lakhs more at Rs 36.21 lakhs.

In common with the experience of the banking system in 1962, operating costs have so risen as to nullify the increase in earnings. Interest paid cost Rs 23.74 lakhs more at Rs 1.22 crores, while salaries and allowances absorbed Rs 9.76 lakhs more at Rs 74.90 lakhs. Rates, taxes and insurance mounted by about Rs 3 lakhs, and there was the extraordinary expenditure of Rs 1½ lakhs in connection with the contribution to the National Defence Fund. Consequently, the balance of profit

has declined from Rs 26.15 lakhs to Rs 24.08 lakhs.

The transfer to Reserve Fund, in order to make it on a par with the enlarged capital, has been stepped up smartly from Rs 15 lakhs in 1961 to Rs 23 lakhs. Bonus to staff gets Rs 4.50 lakhs against nil. The dividend is maintained at 11 per cent, and there has also been proportionate payment on the right's shares issued during 1962. The net result is that the carry forward has been sharply pruned to Rs 3.19 lakhs from Rs 13.51 lakhs brought in.

STATE BANK Profit Just Maintained

Although the State Bank of India has reported a sizable increase in gross earnings, the special factors that were responsible for rises in operating costs last year have had the effect of leaving the balance of profit for 1962 more or less unchanged.

Depository resources of the State Bank rose in 1962 by Rs 36.04 crores or 6.8 per cent to Rs 567.37 crores. This improvement is equally shared by Time and Current accounts. On the one hand, Current accounts have gone up by Rs 19.30 crores to Rs 249.46 crores; on the other, Fixed Deposits and Savings Bank Deposits show increases of Rs 8.73 crores and Rs 8.01 crores to Rs 260.03 crores and Rs 57.85 crores respectively. The Report of the Central Board of Directors itself throws some additional light on this matter. But the figures given herein are not strictly comparable with the balance-sheet figures, because the former confine themselves to business in India. The Report puts the increase in Deposits at Rs 41.4 crores to Rs 496.4 crores, as contrasted with a decline in 1961 of Rs 52.0 crores; and the rise is further stated to be Rs 56.7 crores if transactions connected with Public Law 480 are kept out of the purview.

It is not Advances, but gilt-edged holdings, which have most benefited from the augmentation of resources. Investments in Government securities, in rising by Rs 26.72 crores to Rs 241.96 crores, represented 42.6 per cent of Deposits as compared with a ratio at the end of 1961 of 40.5 per cent. The total of Advances has risen more moderately by Rs 15.17 crores to Rs 270.48 crores, the credit ratio in the process falling off slightly from 48.1 per cent in the 1961 balance sheet to 47.7 per cent. Cash balances, including money at call and short notice, have been run down by Rs 12.07 crores to Rs 57.25 crores.

Gross earnings in 1962 shot up by Rs 2.84 crores or 14.4 per cent to Rs 22.59 crores.

The income by interest and discount rose by Rs 2.07 crores to Rs 16.19 crores, while commission, exchange and brokerage contributed Rs 0.75 crore more at Rs 6.15 crores. The main rises in expenditure are under interest paid (up by Rs 1.03 crores to Rs 7.91 crores) and under salaries and allowances (higher by Rs 1.44 crores at Rs 9.42 crores). Besides, rent, taxes and insurance cost about Rs 21 lakhs more; law charges absorbed an amount higher by Rs 3½ lakhs; and other expenditure rose by Rs 6½ lakhs. The net result is that the balance of profit is shown at Rs 2.69 crores against Rs 2.71 crores.

The transfer to Reserve has been cut by Rs 20 lakhs to Rs 55 lakhs, and Reserve Fund is now placed at Rs 8.75 crores against the capital of Rs 5.625 crores. The transfer to Pension funds is a shade higher at Rs 7.62 lakhs against Rs 7.42 lakhs. The transfers to Staff Welfare and Cooperative Housing Funds have each been cut by Rs 5 lakhs to Rs 5 lakhs each. It is interesting, but also disquieting, to note that the reduction in the transfer to Reserve has been wholly because of an increase of Rs 27 lakhs to Rs 72 lakhs in the amount set apart for bonus to staff. The maintained dividend of Rs 23 per share, subject to deduction of tax, takes up Rs 1.29 crores, leaving Rs 45.88 lakhs to be carried forward against Rs 50.41 lakhs brought in.

BANK RETURNS

Peak Pressure on Banking System

The peak of the pressure upon the banking system is this year probably touched during the week ended 8 March. Spillover of beginning of the month disbursements into the second week and busy season's demands have both combined to exert very considerable pressure upon the resources of the banking system, but with the Government's end of fiscal year payments expected to be made in the remaining weeks to 31 March 1963, banks will be more comfortably placed, and therefore less reliant upon central banking credit, though it may be added that the peak of banks' Advances will probably be touched later, quite conceivably as at the second Friday in May.

Sharp currency expansion has been reported by the Reserve Bank in its returns for the week ended 8 March. Active Note Circulation has jumped up steeply by Rs 41.90 crores to Rs 2,235.86 crores, and there has been outflow of Rupee Coin in the unusually large amount of Rs 3.50 crores. Currency has been expanded both against Rupee and Foreign

Securities. The former has moved up by Rs 40 crores to Rs 1,916.42 crores, while the latter has risen to Rs 100.08 crores thanks to a transfer of Rs 5 crores from Balances Held Abroad in the Banking Department. Accordingly, the Reserve Bank's cash in the till has been drawn down by Rs 0.40 crore to Rs 12.42 crores.

The Central Government, which has received another sharp rise of Rs 19.99 crores in its Deposits to Rs 123.90 crores, apparently continues to believe in a high level of cash balances. Partly, more working capital may be necessary for the defence effort; partly, it may be that the Centre is keeping its resources ready for its usual end of fiscal year payments. State Governments, on the other hand, have little to rejoice about: though their Deposits have improved by Rs 3.57 crores to Rs 16.43 crores, their ways and means borrowings have shot up by Rs 12.29 crores to Rs 35.92 crores.

The rise of Rs 21 crores to Rs 87.74 crores in Government of India Treasury Bills Purchased and discounted by the Reserve Bank is linked with disinvestment in gilt-edged by the State Bank in the same week. Balances Held Abroad have declined by Rs 1.08 crores to Rs 12.12 crores, but this is after transfer of Rs 5 crores to the Banking Department. Thus, foreign assets in the possession of the Reserve Bank went up by nearly Rs 4 crores during the week under review. The fall of Rs 33 crores to Rs 193.49 crores in Investments is similarly on account of transfer to the Issue Department.

Lastly, the pressure upon Scheduled Banks is indicated in the fall of Rs 7.83 crores to Rs 69.75 crores in their Reserve Balances and in the substantial rise of Rs 26.22 crores to Rs 83.40 crores in their borrowings from the Reserve Bank. As already indicated, the pressure may now start to diminish.

There has been considerable spill-over of beginning of the month disbursements into the second week as revealed by the return of the State Bank for 8 March. As in the last week, the impact is once again two-fold. On the one hand, Deposit resources have been drawn on to the tune of Rs 6.07 crores and are now placed at Rs 544.98 crores. On the other, the total of Advances has further risen sizeably by Rs 9.72 crores to Rs 322.03 crores. So, the State Bank has been compelled to disinvest in gilt-edged for Rs 19½ crores, reducing Liabilities falling by Rs 8 crores and Other Assets rising by Rs 6 crores, the net result is a sharp drop of Rs 8.91 crores to Rs 19.49 crores in cash balances, including money at call and short notice.

The return of Scheduled Banks for 1 March shows how the intensification of busy season pressures, as aggravated by beginning of the month demand for money, has strained banks' resources. Net Demand Deposits are lower by Rs 2.91 crores at Rs 924.02 crores, and there is a much sharper fall of Rs 12.43 crores to Rs 1,242.32 crores in net Time Deposits. Berry way upward, and in the latest week has expanded by Rs 14.70 crores to Rs 1,552.41 crores. Inescapably, borrowings have gone up. Indebtedness to the State Bank is higher by Rs 1.46 crores at Rs 20.67 crores, and central higher in rising by Rs 18.05 crores to Rs 56.74 crores. The disinvestment in gilt-edged for about Rs 4½ crores is due mainly to the State Bank. The end result is a small drop of Rs 1.29 crores to Rs 178.00 crores in cash balances, including money at call and short notice.

Notes

ICICI

A Heartening Message to Industry

Industry, staggering under the impact of the new budget proposals has had a timely message of succour from Mr G. L. Mehta, Chairman of the ICICI. He has pointed out in the course of his speech at the annual general meeting of the shareholders of the Corporation early this week that "the dull conditions prevailing in the stock markets now is basically a crisis of confidence induced as a result of the Emergency and does not reflect upon the inherent strength of the Indian economy and the long term prospects of industry." That this is the firm belief of the Corporation is borne out by Mr Mehta's declaration that it "will be prepared to finance projects found viable on our examination, whatever the immediate conditions of the capital market in the country."

The considerable expansion of the activities of the ICICI during the short period of eight years since its inception in 1955 reflects in good measure the rapid pace of industrialisation in the country during this period. As more and more industries are planned, the demand for financial assistance also proportionately increases. It is largely because of the ICICI's bold and imaginative policy that the quickened tempo of industrial activity has been sustained. The total of net operations sanctioned from its inception till the end of 1962 amounted to Rs 60.16 crores to 183 companies of which 83 were new undertakings. Last year both sanctions and disbursements were at an all time high at Rs 19.60 crores and Rs 9.85 crores respectively. A remarkable feature of the working of the corporation is that it has successfully attained its policies to the changing needs of the capital market. In its earlier career it was called upon to provide mainly rupee resources while the capital market was shy of new ventures. The ICICI came forward to underwrite shares even though indications were that in so doing it had to take up a considerable number of these shares. Since then the investment habit has considerably expanded but then the pattern of demand for industrial financial assistance has also changed. While previously rupee resources were in

great request, in the past few years largely owing to the acute shortage of foreign exchange in the country, applicants for assistance have increasingly begun to look upon the ICICI as a provider of loans in foreign currency also. And the corporation has risen equal to the occasion, and at present the quantum of foreign currency loans far exceeds its rupee loans. While in 1955-58 it sanctioned rupee loans for Rs 3.4 crores and foreign currency loans for Rs 3.14 crores, in 1959-61, rupee loans amounted to only Rs 6.73 crores while foreign currency loans were as much as Rs 16.28 crores. Its foreign exchange resources at present total (Rs. 30.94 crores) \$65 million comprising \$60 million from the World Bank and \$5 million from the Agency for International Development. Of this more than \$8 million has been sanctioned as loan. Now that indications are that the shortage of foreign exchange in the country will continue even more acutely than before—the Emergency making even more serious inroads on our slender foreign exchange resources—the demand for foreign currency loans from industry will increase. The Corporation has already taken steps to augment its foreign exchange resources, by negotiating fresh lines of credit totalling DM 25 million (Rs 2.98 crores) from the Reconstruction Loan Corporation of the Federal Republic of Germany and a further line of credit of \$30 million from the World Bank. It is a tribute to its efficiency that it has been asked to assist the Mauritius Government on the reorganisation of the Mauritius Agricultural Bank to enable it provide industrial finance to industry in Mauritius. As a further acknowledgement of its merits as a Development Bank may be cited the fact that there have been enquiries from overseas institutions regarding the possibility of buying its shares.

Among the factors that are retarding industrial production at the moment, perhaps the most important is the lack of adequate maintenance imports. A number of newly started industries, some of them with assistance from the ICICI, are now handicapped for want of imported raw materials and components because they have been designed to work with a certain portion of imported materials. Owing to the acute shortage of foreign exchange, these industries have been asked to get on with import substitution. Vigorous efforts at finding acceptable indigenous substitutes have to be made—

Mr Mehta is himself the Chairman of an Expert Committee exploring the possibilities in this regard—both in order to reduce the dependence on foreign exchange and to give depth to our industrial sophistication. But there are limits to this endeavour. It will be neither economically feasible nor prudent to seek to manufacture every thing in India. Moreover, the maturer an economy, the greater its dependence on imports, especially of intermediates. In a growing economy also, as development proceeds apace, demand for machinery at first and later for maintenance imports will have to be provided for. As Mr Mehta points out over the past few years value of imports has remained more or less stagnant indicating that import content of industrial production is being progressively reduced.

US ASSISTANCE

Two New Loans for Power Projects

Agreements in pursuance of the aid obligated by the US as part of its assistance for the first two years of the Third Plan are being announced in quick succession. Against the first year's assistance of 545 million dollars, 21 loan agreements totalling 550.5 million dollars have been signed under the AID and EXIM Bank programmes, the excess of 5 million dollars being adjusted towards the 435 million dollars obligated to the second year of the Third Plan. Up to December 1962 agreements for a total value of 31.8 million dollars have been signed. Last month came the announcement of a massive aid of \$240 million for maintenance imports. Last week were signed two agreements for loans, both in dollars and in rupees (out of PL 480 counterpart funds) for two power projects, one in Delhi and another in Madhya Pradesh.

The loan for the Delhi project is in the sum of Rs 15.7 crores of which Rs 7.6 crores will be in the form of foreign exchange i.e. 16 million dollars. The dollar loan will finance most of the foreign exchange costs of adding 180,000 kilowatts to the capacity of the Delhi "C" Thermal Power Station. This is equivalent to nearly four times the present power generation capacity installed in the Capital.

At present, the major portion of the power generated in Delhi is produced at the 'A' and 'B' thermal stations located near Rajghat. The 'C' station is nearing completion at an adjacent site and is expected to be commissioned next June when it will begin generating 36,600 kilowatts. In 1957 the United States made a grant

of \$4 million (Rs 1.9 crores) to the project. Thus, total US assistance for the expansion of power generation in Delhi will amount to Rs 17.6 crores (\$37 million).

When the three 60,000 kilowatt generators financed by the American loans are installed, the 'C' station will have a total capacity of 216,600 kilowatts and will become the largest thermal power station in Northern India. It will help in meeting the rapidly growing power needs of Delhi and the Punjab. The Delhi power stations have been integrated with the Bhakra Nangal hydroelectric system by a high voltage transmission line.

A number of industries including light engineering, machine tools, electronics, cycles, rubber and tractors have been established in and around Delhi in recent years. It is estimated that the existing shortage of power in Delhi will grow to 45,000 kilowatts by 1965 and that the power deficit in the Punjab in that year will rise to 303,000 kilowatts unless additional power generating capacity is installed.

The other loan is for the financing of the 300,000 kilowatt thermal power station at Satpura in Madhya Pradesh. Like the loan for the Delhi Power Station, there is both a foreign exchange and rupee content in the loan. 25.1 million dollars are to be provided to finance the foreign exchange cost of the plant. Rs 14.6 crores will be provided out of the PL 480 counterpart funds for meeting the rupee expenditure on construction in India. The total US assistance will thus come to Rs 26.8 crores or 56.1 million dollars.

PRO/HS-2

Power from the Satpura thermal station will be shared by Rajasthan and Madhya Pradesh and will meet the rapidly growing energy needs of a region rich in natural resources. The area to be served by the project is undergoing a rapid process of industrialisation. A number of new paper, textile, cement and fertiliser factories are under construction. Existing units are being enlarged but shortage of power has slowed down economic growth. The construction of one of the largest power stations in the country will assist industrialisation, provide increased employment and contribute to a betterment of the standard of living.

The Satpura plant will be linked by a grid with the Chambal Hydro-electric Project in Rajasthan which ultimately will have a generating capacity of 320,000 kilowatts. Apart from the supply of heavy earthmoving and other equipment, the United States has extended credits totalling Rs 27.2 crores to the Chambal Project from US PL 480 funds.

Satpura is adjacent to the Pathakheda coal-fields and is situated 12 miles east of the Ghoradongri Railway Station on the Betul-Tarsi section of the Central Railways. A dam will be built across the Tawa River, which flows nearby, to provide adequate reservoir capacity to sustain a perennial supply of water to the power plant.

The thermal station will consist of five 60,000 kilowatt turbo-generator units each served by a high pressure boiler. The project will be complete with a coal handling plant, cooling system, water treatment plant and the necessary civil works.

Like other recent USAID loans, the dollar loans for the two projects are on extremely favourable terms. They are repayable over a period of forty years with a grace period of ten years. There is no interest payable except for a service charge of three quarters of one per cent.

★

STATE BUDGET

Assam Levies New Taxes

The budget estimates for 1963-64 presented to the Assam State Assembly by Mr Fakhruddin Ali Ahmed, the Finance Minister, put revenue receipts at Rs 5,12,560,000 and revenue expenditure at Rs 5,09,661,900 showing a modest surplus of Rs 28,99 lakhs. There is a substantially larger surplus of Rs 1.19 crores outside the revenue account. However, with an opening deficit of Rs 4.37 crores these surpluses have been converted into an overall deficit of Rs 1.27 crores after adjustment of the expected Rs 1.62 crores from the new taxation proposals. The proposed taxation measures include an increase in the rates of

agricultural income tax, an increase in the existing rates of public transport vehicles, a new levy on the immovable property in the urban areas, higher rates of levy on agricultural income, higher rates of sales tax on luxury goods, kerosene and petrol, an increase in the rates of stamps and a further increase of excise duty on country-made liquors and a higher loyalty on timber. The anticipated yield from these measures would amount to Rs 1.74 crores out of which an amount of Rs 12 lakhs would go to the municipal boards and town committees.

The revenue receipts for the budget year estimated at Rs 5,12,560,000 are marked higher by over Rs 5.8 crores from the revised estimates of the current year and expenditure shows an increase of over Rs 3.6 crores. The capital receipts for the same year are expected to aggregate Rs 3,248.85 lakhs which includes loan of Rs 320 lakhs from the Centre as part of its share of the borrowing programme, Rs 320 lakhs from the Centre as loans against the amount which would be collected by Assam through Small savings collection and sale of Prize Bonds. The capital expenditure is placed at Rs 3,178.17 lakhs. The figures of revenue and capital expenditures include Rs 29.5 crores for the State's annual plan for the coming year and a sum of over Rs 17 crores for the centrally sponsored schemes.

Assam has had to bear the brunt of China's predatory propensities last year and the coming year will add the tribulations of an already sorely tried border province. The budgetary position as revealed by the Finance Minister is by and large, not bad, but should any large scale offensive be mounted by China, the tentative calculations written into the budget may go awry. But, the Centre has more than once affirmed its special responsibility to Assam and we may be sure that should the occasion arise, assistance in unstinted measure will be forthcoming.

★

REFRACTORIES

The Problem of Excess Capacity

The refractory industry in the country has made tremendous progress during recent years and its installed capacity which stood at nearly 4 lakh tonnes in 1957 surged up approximately to 8.5 lakh tonnes in 1962 and the indications are that with the licences under active implementation and plants under construction the figure is likely to jump to 14 lakh tonnes by the end of 1965. The impressive growth, however, is accompanied by fresh problems like over production and idle capacity in the industry. The inadequate demand for its products

compelled many of the manufacturing units to curtail their production of fireclay refractories. The crisis was precipitated primarily by the slow progress of the steel industry which is the predominant consumer accounting for nearly 75 per cent of the refractories produced, and the low consumption of refractories per tonne of ingot steel owing to the improved techniques and greater efficiency in the steel making process. According to the present trend the idle capacity in the industry is likely to continue throughout the Third Plan period and it may even increase obviously due to the rise in production with no prospects of corresponding improvement in demand. The position will deteriorate further on account of the possibility of steel plants changing their open hearth furnace to an all basic construction ahead of schedule which will result in the rapid decline in demand for silica bricks and rendering the recently built silica plants idle. The scope of utilising these plants for the basic brick manufacture is remote as the existing capacity and the expansion programmes on hand for brick manufacture will be more than sufficient to meet future requirements. Besides the future of basic brick is shrouded by the growing preference for LD and other oxygen processes for the manufacture of steel which do not require the conventional basic refractories.

To help the industry to avert the economic disaster the Government will have to adopt a realistic approach. As Mr D. Gopalakrishnan, the Chairman of the Indian Refractory Maker's Association, has stated the Government should give up the idea of establishing new units for the manufacture of steel plant refractories involving considerable foreign exchange. Another matter to which attention was drawn was the Government's decision to import 82,000 tonnes of refractories from the Soviet Union for the constructional requirements of the Bhilai steel plant's expansion programme. This may be due to technical (i.e. relating to specifications of requirements) reasons or the exigencies of a "package deal" with the Soviet Union.

The transporting of coal, raw materials and finished products continue to be another source of worry. The difficulty in procuring the right type of raw materials for the industry's needs is another embarrassing element. The Panel on the Refractories and Raw Materials Sub-Committee who are studying the problem are expected to make suitable recommendations to the Government to eliminate these obstacles to facilitate the steady progress of the industry. Adoption of Indian standards of shapes and sizes of bricks by the steel plants would ensure manufacture and supplies by the domestic industry. The

assurance from Director of production of the Hindustan Steel Limited to adopt Indian standard specification and the growing interest shown by Bhilai and Rourkela plants for Indian specifications are welcome augury for the future.

★

PAPER

Rate of Progress Slows Down

Addressing the twentieth annual general meeting of the Indian Paper Mills Association held in Calcutta last week Mr Umashankar Bajoria, the President of the Association, drew attention to the slow progress of the paper industry in the first two years of the current Plan period. This is a disappointing development in view of the steady progress made by the industry during the first two plans. Increase in the manufacture of paper and paper boards was much less in 1961 and 1962 than that in 1958, 1959 or 1960. Mr Bajoria ascribed the lethargic progress to the unrealistic price formula recommended by the Tariff Commission which does not allow the building up of any internal resources. However it is encouraging that the installed capacity of the industry which stood at 410,000 tons at the end of the Second Five Year Plan has risen to 480,000 tons. It is also heartening that despite increases in the cost of production the industry was able to maintain the price line and Mr Bajoria's assurance that the industry would continue to hold price line is to be welcomed in the context of the general rising trend of prices.

Referring to the foreign exchange allocation to the paper industry the President focussed attention on the inadequate allotment and the resultant dislocation to the industry. Many companies holding industrial licences for expansion or installing new manufacturing units were unable to proceed with their schemes. The paper consumption in India when compared to that of the advanced countries is still at a low level and any rise in prices may restrict consumption which would impede the progress of the industry. The reduction of cost production by employing modern methods of production, modernisation of the existing plant and machinery and fuller utilisation of capacity becomes imperative. The difficulty experienced by the industry in procuring adequate raw materials is another dampening factor. The sources of bamboo in the country are limited and many areas are still inaccessible owing to absence of road and rail links. Regular supply of coal to the sugar factories would go a long way in making available large quantities of bagasse consumed by the factories to the paper mills to meet their raw material requirements.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

FLEET Street is in a rare flap. Immunity of the journalist at all times from being compelled to reveal the sources of his information which many had assumed as a self-evident attribute of a democracy has now been declared as non-existent in law by the Court of Appeals in England. Leave to appeal to the House of Lords has also been refused to the two journalists cited and convicted for contempt. I do wish the question had arisen in a worthier case, from the journalists' point of view, in which event, paradoxically, the question would not have been forced into the open. And that is how I would have liked the question to be. As it turned out, the stakes involved in the Radcliffe Tribunal's inquiry (the relationship between the First Lord of the Admiralty and a subordinate who was subsequently gaoled as a traitor and the First Lord's alleged knowledge of the presence in his department of a spy—who eventually turned out to be the same subordinate—for a longer period than he led people to believe) were high and the kind of information retailed by the journalists were essentially scandalous innuendoes. The Tribunal's finding that the disclosure of source was essential to public interest does tend to impale one on the horns of a cruel dilemma. The authority for the proposition that the privilege of the journalist is unreserved is, not unnaturally, to be found for the most part in the utterances of journalists themselves. "The Press lives by Disclosure" thundered the Times when it really was the Thunderer and so, if sources of information were to dry up because they are no longer protected, the Press will cease to live. If washing the dirty linen in public is in public interest in certain circumstances, it stands to reason that you should not inquire too closely how access to the closet was obtained. This is particularly so when modern governments (not to speak of modern businesses) have so much to hide. The Press and—remembering the BBC vis-a-vis Bidault—other news gatherers have often to come perilously near cutting a corner or two in the discharge of their chosen function. Of course, there is a certain element of hypocrisy in the pose that it is public interest and not, to put it least offensively, the thrill of the chase, that drives us all to get at

the truth. Anyway, the remedy is not, as some including the Times have suggested, a change of the law and statutory declaration of the privilege. I can imagine (as the Times commented) many Governments quietly gloating over the judgment, but a statutory safeguard, if Parliament could be persuaded to grant one, is not worth having. A Press statutorily allowed to pry is second cousin to a Press statutorily suffered to exist. It still seems to me that, as before, the best thing for the Press is to do its duty according to its lights and when conscience (and not convenience) dictates the refusal to disclose the source, to obey it and face the consequences.

★

Reports aver that Mr Morarji Desai is impressed enough with the arguments against the Super Profits Tax in its present form to be having second thoughts on it. But he is also reportedly unwilling to abandon the principle of such a tax and is only willing to consider some changes. If so, I should like to commend one to him. In computing the Super Profits, I would suggest the deduction, besides taxes, of amounts appropriated to reserves. Should a ceiling be considered necessary for such appropriations, (though why it should be, I cannot fathom, except in the case of 23 A companies which, in any case, Mr Desai would wish to exclude for obvious reasons from this concession), I would suggest that it should be the 20 per cent of the taxed profit that section 17 of the Banking Companies Act prescribes as the quantum of the annual statutory appropriation to reserves. Incidentally, this change will set right the probably unintended discrimination against banks the present provisions involve. Since no special allowance for statutory transfers to reserves is to be made in computing the Super Profit of banks, they will not only be paying taxes on them: they will also have to find the funds for such transfers from the residue after SPT. Other companies will no doubt pay SPT on profits less income tax, but they at least have the satisfaction of being able to use the residue as they like. But more importantly, the viciousness of the present provisions consists in that they are indiscriminate in their fiscal targets, penalising alike the prudent

rent as of funds for liquidating past commitments like loans taken for expansion. From every point of view therefore, this change appears to me to be the most useful one that Mr Desai can make.

★

The occupational hazards of Kremlinologists are both numerous and unpredictable. God knows I don't set up to be one, but I do permit myself an occasional obiter on the subject. Last week, for example, I was disposed to be rather casual about Mr Khrushchev's strength of feeling over such things like abstract art. I now find that there is probably more to it than jolly philistinism, unless, of course, Mr Khrushchev is doing one of his about-turns that so confound his friend and foe alike. Meantime, Mr Khrushchev, the art critic, has increased his following. It is perhaps, only to be expected that the political correspondent of Izvestia should think that abstract art and novels like Lolita are as deadly as guided missiles and are so conceived by Western imperialists. But Mr Khrushchev has other less obviously partisan supporters. For example, the director of the zoo in Baltimore provided a donkey with paint and canvas and sure enough, the result was a work of abstract art that the canny director was able to sell for fifty dollars. This, of course, proves nothing and proves everything, including that even an ass can paint, which is not another way of saying that man cannot. The question is still open whether the result of the donkey's labour was or was not a miracle of art. The picture that Mr Khrushchev saw may have been painted with an unconventional brush. But was it, qua painting, great?

THE EMERGENCY NCAER Symposium

Top-ranking industrialists, economists and members of the Planning Commission took a day off last week to discuss the economic implications of the Emergency. The occasion was the annual day of the National Council of Applied Economic Research which had prepared a substantial paper on the subject to serve as basis for discussion to which spice was added by the budget proposals. It was a busman's holiday for most of the participants, and especially to the members of the Planning Commission who have been engaged for

THE VICTORIA JUTE COMPANY LIMITED

The Directors of this Company have declared:—

- (1) On the ordinary shares a dividend of 7% making, with interim dividend, 10% for the year ended 31st December 1962; and
- (2) On the preference shares the dividend at the rate of 6% per annum for the half-year ended 31st December 1962.

These dividends will be paid on 2nd April 1963, less Income Tax at 7/9 per £, and the Transfer Books will be closed from 19th March to 2nd April 1963, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December 1962.

Preliminary figures for the year ended 31st December 1962 show Trading Profit £287,212 (Loss £59,922), Income from Investments £17,600 (£14,989), Depreciation written off £45,000 (£10,000), net profit after Taxation £174,277 (loss £92,489), net interim dividends already paid £10,106, net dividends now declared £19,906, transfer to General Reserve £85,000 (from General Reserve £85,000), Transfer to Modernisation of Machinery Reserve £20,000 (Nil), and estimated carry forward £44,079 (£4,814).

Trading conditions for the current year continue favourable.

P. WILLIAMS,
Secretary.

DUNDEE, 12th March, 1963.

the last six months in working out the implications of the Emergency. The Emergency has been with us so long that, as Dr C. D. Deshmukh, who initiated the discussions said, it had ceased to be an Emergency in the literal sense. Dr Deshmukh confined his remarks to elucidation of the nature and magnitude of the effort required to deal with a situation in which 'we will be perpetually exposed to danger from a particular ideology'.

Increase in production and the level of savings, as well as tightening up of the administrative machinery were the points stressed by Dr Deshmukh. Regarding the last, Dr Deshmukh suggested the appointment of a Commission to examine the working of the machinery of administration and to recommend measures to step up its efficiency. Attention to the administrative machinery, he said, would be actually more valuable than taxation. Apart from saying that "a large element of taxation was ineluctable," Dr Deshmukh did not choose to comment on the specific proposals of the budget, on the ground that, as a former Finance Minister, it would not be proper on his part to do so when the proposals were being considered by Parliament. Other speakers fortunately did not share his inhibition.

The implications of the Super Profits tax received as much attention as the implications of the Emergency. The point of view of Industry was effectively presented by Mr J. R. D. Tata, Sir John Brown, Mr A. R. Foster, Mr H. V. R. Iengar and Mr Niwatia. The economists who participated in the discussions were Prof Irwin Friend of Pennsylvania University, Dr V. K. R. V. Rao and Dr Lokanathan. The Planning Commission was ably represented by Mr Chandulal Trivedi, Mr T. N. Singh and Mr Shriman Narayan. Mr V. T. Krishnamachari, President of the Council, presided.

Impact on Industrial Production

There was striking unanimity on the need to raise resources for defence without slackening essential development and on the need to improve administrative efficiency. But the differences, which relate to the way in which resources are sought to be raised by the budget, were more interesting. Sir John Brown drew attention to the serious implications of the Super-Profits tax for industrial production, especially in the coal and jute industries. By the very nature of the coal industry, expansion of production depends on its ability to plough back profits. As a result of the new tax, this has be-

come practically impossible, even if the coal companies cut dividends. There was also the problem of repaying the World Bank Loan for expansion of private sector collieries and of finding the matching rupee finance. The last year was a good one for the coal industry; but, as a result of the tax proposals, a large part of the profits already expended on expansion schemes have now to be paid in taxation.

The Jute industry, Sir John said, was obliged to hold excessive stocks of jute in order to maintain raw jute prices, and had entered into special arrangements with Banks in order to finance their purchases. Banks have now been directed to reduce the ratio of advances. The repayment of loans was an urgent problem. "What will happen this year if there is a good jute crop," asked Sir John. He said that wider considerations relating to the economic effects of the tax proposals were not clearly understood. "The taxation measures, he said, would have serious impact on these two industries in their efforts to reach the targets set for them which, moreover, have now to be stepped up in view of the Emergency.

The same point was further elucidated by Mr H. V. R. Iengar who said that the budget proposals were going directly contrary to the requirement that there should be a spurt in industrial production. As a result of the proposals, in a number of industries it will be impossible to maintain the rate of dividends or to plough back profits; and consequently it will become more difficult to plan for expansion.

It was not merely a question of profits, said Mr Iengar. Industrialists were anxious to contribute to the defence effort and were prepared to pay more. But they were concerned about the manner in which this was done. The measures adopted should be such that industry takes a leap forward. About the scope for deficit finance, Mr Iengar said that the nature of the agricultural season determined the extent of deficit finance that could be resorted to without causing inflation. The means that are adopted to mobilise resources, Mr Iengar said, should be co-ordinated with the long-term strategy for development. It is difficult for a layman to take a view about the size of the defence effort that is required. But Mr Iengar did not agree that all this has to be met by taxes and savings.

Plan Reappraisal

Raising the question whether the country could tackle the development programmes as envisaged in the Third Plan together with the defence of the country, Mr Iengar urged that there should be a reappraisal of the Plan and of priorities. He felt that this was not being done. In reappraising the Plan, two important considerations were that there should be no slackening in agricultural development and that the basic industrial pro-

gramme should go ahead. The rest of the Plan should be jettisoned if necessary.

The point made by Mr Iengar about the need for reappraisal of the Plan was taken up by the members of the Planning Commission who described how the Plan was re-examined and reorientated to deal with the Emergency. Mr Chandulal Trivedi said that less important schemes have been postponed and outlay had been stepped up in the vital sectors of Agriculture, Industry & Minerals, Power, Transport and Technical Education.

Mr T. N. Singh said that examination of the Plan had shown that scope for curtailment was extremely limited. There were hardly two or three public sector projects that could be postponed, but certain changes had been effected in the Social Services. Considering the requirements of the situation, Mr T. N. Singh said that they could not think of a lower order of effort than envisaged in the budget.

Mr Shriman Narayan, who is Member for Agriculture in the Planning Commission, conceded that the achievement in agriculture

THE SAMNUGGUR JUTE FACTORY COMPANY LIMITED

The Directors of this Company have declared:—

- (1) On the Ordinary Shares a dividend of 7% making, with the interim dividend, 10% for the year ended 31st December 1962; and
- (2) On the Preference Shares the dividend at the rate of 6% per annum for the half-year ended 31st December 1962.

These dividends will be paid on 2nd April 1963, less Income Tax at 7/9 per £, and the Transfer Books will be closed from 19th March to 2nd April 1963, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December 1962.

Preliminary figures for the year ended 31st December 1962 show Trading Profit £471,356 (loss £58,238), Income from Investments £22,174 (£19,073), Depreciation written off £30,000 (£10,000), net profit after Taxation £115,879 (loss £77,715), net interim dividends already paid £13,781, net dividends now declared £28,481, transfer to General Reserve £65,000 (from General Reserve £65,000) and estimated carry forward £13,397 (£4,780).

Trading conditions for the current year continue to be favourable.

P. WILLIAMS,
Secretary.

DUNDEE, 12th March, 1963.

in the first two years of the Plan was extremely disappointing. But, he added, that of the total cultivated area of 320 million acres, only about 70 million acres were irrigated, and in such conditions the level of agricultural output depended on the vagaries of the seasons. He also referred to the special programmes that have been taken up to increase output of items like cotton, sugarcane, oilseeds etc.

Functional Efficiency

The highlights of the discussions were provided by the speeches of Dr V. K. R. V. Rao and Mr J. R. D. Tata. Dr Rao prefaced his enthusiastic endorsement of the budget proposals with some pointed remarks about the scope for improvement of administrative efficiency and for reduction in public expenditure without affecting efficiency. There was need, he said, for a National Expenditure Commission, which would examine the public expenditure from the standpoint of 'functional efficiency.' Every item should be examined to see how far it was essential to achieve the end in view. At the same time, he said, that the public and its representatives should be prepared to make allowances for honest mistakes. There was room, he felt, for education of the public, and the makers of public opinion, in this matter.

The Emergency, said Dr Rao, was not an emergency of finance, a matter of finding an additional Rs 300 crores for defence. It went much deeper and its nature was made clear in the Economic Survey for 1963 which should be considered along with tax proposals. The basic problem he said arose from the fact that the necessary tempo of development was not in evidence. And, secondly, there was the problem of the balance of payments. The aim of the budget, he said, was to deal with these basic problems. It was intended to depress the demand for things other than the bare necessities and consequently their production. The budget he said should be judged from this point of view. Regarding Super-Profits tax Dr Rao put forward the argument that the need for equitable distribution of taxes could not be overlooked and that it was necessary to balance the much larger burden of indirect taxes which hit all classes of the people. He was not prepared to accept that, in a controlled, guaranteed economy that exists in India, profits constituted a reliable index of business efficiency or that the tax would penalise efficient managements.

Tata on Taxes

The powerful impact of Dr Rao's eloquence was, however, completely neutralised by Mr J. R. D. Tata who opened his speech with the remark that, after hearing Mr Rao's speech, he felt that policy-makers and economists should do a stint in business. The problem for the policy makers in Government, Mr Tata said, was similar to that of a panel of doctors who were required to prescribe drugs and vitamins for an athlete which would increase his speed and endurance. In the budget proposals we had a prescription which would certainly accelerate the heart-beat but would paralyse the legs.

What the country now required was increased production. But the tax proposals would put an end to expansion. As a result of the proposals, there was no possibility of ploughing back profits, fresh capital issues or foreign collaboration. The scale of depreciation allowances was not enough for maintenance of existing plant. As a result there would be not merely stagnation but gradual decline.

Mr Tata, however, did not wish to end his speech on this negative note. He said there was no difference regarding objectives. Industrialists feel frustrated, not because they are overtaxed, but because they are thwarted in their desire to contribute to the maximum extent to the defence effort. He had no doubt that industries would rise to the occasion and that their co-operation would always be available.

The effect of the super profits tax on prospects of foreign collaboration was also referred to by Mr A. R. Foster, who made the useful suggestion that in order to reassure foreign collaborators a clear statement should be made to the effect that

this tax would be limited to the period of the Emergency and would not become a permanent part of the tax structure.

Inter-Action on Taxation and Savings

Professor Irwin Friend of Pennsylvania University said that the budget was on the whole a good document, but it did not pay sufficient attention to the effects of the tax proposals. Some of the ways recommended for raising resources for the Five Year Plan and Defence would not represent additions to resources but merely diversion from one form to another. Compulsory savings, for instance, would result in a reduction in voluntary savings, while super profits tax would reduce savings in the corporate sector. The Professor estimated that the marginal propensity to save in the corporate sector was 75 per cent. But the proportion of the increased earnings that would be saved by corporations would be reduced to the extent of the super profits tax.

Utilisation of Resources

Dr Lokanathan agreed that the interaction of taxation on other forms of savings must be taken care of.

The Emergency, he said, had created the need to adjust the scale of thinking in economic matters. And increase in the level of savings to 15 per cent was necessary to meet the challenge. But savings of 15 per cent of national income would not be possible at the present level of national income. Success will depend on how national income grows and this posed a gigantic problem for Planners. Dr Lokanathan also referred to the lack of utilisation of industrial capacity, personnel etc and to avoidable administrative delays which were to a large extent responsible for inefficient utilisation of resources.

Bringing the discussions to a close, Mr V. T. Krishnamachari expressed gratification at the unanimous support for the major objective, and the readiness to bear increased burdens that was in evidence. The Emergency, he said, was not a temporary one, but a permanent fact of life to which we have to adjust our ways of thinking. Mr Krishnamachari stressed the need to get the best return out of investments already made. He felt that much better returns than obtained hitherto were possible. The key to growth of the economy, Mr Krishnamachari said, lay in Agriculture, and there was need for detailed studies of agricultural problems.

A DRIVE TO FULL EMPLOYMENT AND ECONOMY THROUGH INDUSTRIALISATION!

Though only 31.7% of India's 438 Millions constitute the Labour force, J. K. has proudly contributed to a very commendable percentage for this employment.

THE STATE BANK OF INDIA

Medium Term Export Credit Available

Creditable Performance in the Traditional & Developmental Operations

Bank's Role in National Emergency

Mr B. Venkatappiah, the Chairman, on the Impact of National Industrial Tribunal's Award

The following is the speech of the Chairman, Shri B. Venkatappiah, delivered at the Eighth Annual General Meeting of the shareholders held on 7th March, 1963 at Bombay:—

Gentlemen.

I am glad to welcome you here today.

The Report of the Central Board of Directors is before you. Along with it have been circulated the Bank's Profit and Loss Account for the year 1962 and the Balance Sheet as at 31st December, 1962.

ACCOUNTS

It is usual to divide the operations of the State Bank of India into two categories: the traditional and the developmental. In time, of course, the developmental becomes the traditional. But the distinction is useful and I will come back to it presently. Meanwhile, I am happy to tell you that the Bank has during the year 1962 made progress in both these respects and therefore also in its operations as a whole. The average level of the Bank's advances in India rose from Rs 244.2 crores in 1961 to Rs 267.0 crores in 1962; and the peak from Rs 267.8 crores in 1961 to Rs 289.1 crores in 1962. At the same time the Bank's investments rose by Rs 29.3 crores over the year. As a result of these and other factors, income rose from Rs 19.7 crores in 1961 to Rs 22.6 crores in 1962. The Bank's lending rates, it may be mentioned, were substantially the same as in 1961.

INCOME AND EXPENDITURE

The rise in income was more than offset by a rise in expenditure. The increase in expenditure was largely in establishment expenses. In turn, the main item of increase in establishment expenses was that pertaining to the wage bill of our workmen staff. In pursuance of the Award of the National Industrial Tribunal, the salaries and allowances of this category of our employees were raised with retrospective effect from January 1, 1962. Moreover, we sanctioned a proportionate—and substantial—increase in their bonus. May I add that your Directors felt that this increase was

justified as a measure of goodwill to the staff though in no way obligatory under the Award? During the course of the year, we also effected an improvement in the pay scales of our Sub-Accountants and Head Cashiers. Further, we introduced more liberal terms, including a running pay scale, for our Staff Assistants and Probationary Assistants, now re-designated Staff Officers and Probationary Officers respectively. An additional item of expenditure was the premium paid by the Bank to the Deposit Insurance Corporation which started functioning in January 1962. Also, the amount of interest paid by us on our deposits was larger this year than in the previous year. Mainly as a result of these items, the Bank's total expenditure rose from Rs 17.0 crores in 1961 to Rs 19.9 crores in 1962.

The net profit of the Bank, after due provision had been made for the usual and necessary items, amounted to Rs 2.69 crores as against Rs 2.71 crores last year. The dividend retains its previous level; it is Rs 23 per share, subject to deduction of tax. For the reasons I have stated, there is a large increase in bonus to workmen staff. It was Rs 45 lakhs in 1961. It is now Rs 72 lakhs. An amount of Rs 7.62 lakhs has been transferred to the Pension Funds as compared with Rs 7.42 lakhs in 1961. To the Reserve Fund has been added Rs 55 lakhs; this is less than last year's Rs 75 lakhs, but more than the corresponding figure for any of the 6 years preceding. Rupees 5 lakhs, as compared with last year's Rs 10 lakhs, have been transferred to the Staff Welfare Fund. Similarly to the Staff Co-operative Housing Fund has been transferred an amount of Rs 5 lakhs, as against Rs 10 lakhs in 1961. The balance carried forward at the close of 1962 is Rs 45.68 lakhs as compared with Rs 50.41 lakhs the previous year.

NATIONAL EMERGENCY

Before I proceed to other matters, I should like to refer to the National Emergency and make a brief mention of the part we played in the grave situation which followed the Chinese invasion of Indian territory. There was a certain degree of dislocation of the usual channels of credit; there

was also some threat to normal production, especially of tea in the frontier districts of Assam; and in a few instances, particularly of food articles, it became necessary for the State Government of Assam to enter more largely into the business of distribution. We collaborated promptly with both Industry and Government, including the Tea Board, and in so far as it fell within the sphere of the State Bank, did all we could to help restore normality. On the hypothecation of stocks, we granted loans to the State Government for the purpose of distribution of certain foodstuffs; on their guarantee, we made funds available to the Assam Co-operative Apex Bank for the financing of some of the smaller tea gardens; and we took upon ourselves the financing of a certain number of the bigger tea gardens, especially in those areas where such a course would have the greatest effect psychologically, since, as I have said, our main objective was to assist in restoring the normal functioning of commercial credit. In regard to industries of importance to the defence effort, we are in close touch with the authorities and interests concerned. It is now generally recognised that small industries too have a great deal to contribute to such effort. Since the biggest institutional scheme in the country for the financing of small industries especially their requirements of working capital, is that which has been developed over the last few years in the State Bank, we are at the moment conducting a review of its working in order to gear it to such tasks as small industry may be called upon to undertake in the new context. A Study Team consisting of two officers of the Bank has visited various centres of small industry in different parts of the country and we hope to have before us in the near future its suggestions for action. Meanwhile, the State Bank's Installment Credit Scheme, of which details will be found in the Report of the Directors, is of special relevance to those small and medium entrepreneurs who, in connection with defence production or otherwise, desire to purchase machinery or equipment on suitably easy terms. May I add,

before I pass on from the subject of Emergency, that the State Bank and its Subsidiaries through their very wide network of offices—now numbering more than 1,500—have been playing a very active part in all work connected with the National Defence Fund. Defence Bonds and so forth? I would also add that, as a gesture of goodwill to the members of the armed forces, the Bank has extended certain special facilities to them during the present Emergency. These facilities include the waiving of charges for maintaining accounts and free remittances in settlement of children's school or college fees or for maintenance of dependents. Further, the Bank has agreed to collect free of charge, for members of armed forces, cheques drawn on any of our offices? These facilities are available to all officers and other ranks of the Army, Navy and Air Force as well as for Special Armed Constabularies set up for frontier duties and members of the Army Nursing Services.

FOREIGN EXCHANGE AND EXPORT PROMOTION

Among the problems to which a new dimension of gravity has been added by the Emergency is that of foreign exchange; and an important facet of the problem is the need to step up exports. In so far as export finance has a bearing on this, we are of course intimately concerned; and accordingly we have been in touch with the relevant interests such as Jute, Textiles and Engineering Goods. As to help, we have taken a number of steps. Three specific items may be mentioned. We have introduced, subject to certain conditions, a concessional rate of interest in the form of a rebate of 1 per cent on advances utilised for financing exports. We have made use of the scope offered by a recent amendment of the State Bank of India Act to make available medium term export credit in suitable cases. Lastly, in collaboration with Government and within the framework of existing import policy, we have initiated a small and purely experimental scheme whereby, against the Bank's guarantee, a company may get a loan in a

foreign currency for importing raw material on the understanding that repayment will be made out of the proceeds of the export of the finished product.

ADVANCE & DEPOSITS

The Bank's normal or traditional business, as reflected in its advances and deposits, continues to expand. Since the close of 1962, advances have further risen and now stand at Rs. 293.4 crores (on February 22, 1963). With the increased demand for credit, especially from industry, the problem of raising resources has become all the more important. This of course is a problem for all banks and for the country as a whole. We on our part have been taking several steps to increase our deposits. We have now a programme of opening new branches, not only in the rural and semi-urban centres already selected or added to our list from time to time, but also in the metropolitan areas, cities and bigger towns, which in recent years have developed so rapidly. We are endeavouring at the same time to improve the facilities and services we offer to our customers, whether these be borrowers or depositors, large account holders or small ones. One such facility is the Credit Transfer System. As you are aware, this was introduced last year; and advantage is being taken of it by an increasing number of our customers. We have introduced certain new facilities for savings bank depositors. The minimum balance on cheque-accounts has been reduced from Rs. 200 to Rs. 100. The maximum amount that can be deposited by a savings bank depositor in a year is also the maximum balance at any given time have been substantially raised. Withdrawal facilities have been increased from once a week to twice a week.

PILOT DEPOSITS SCHEME

We have been working a Pilot Deposits Scheme in a few selected branches in each of our Circles. Under this scheme, we endeavour to establish closer contacts with our customers, present as well as prospective, and also seek, as far as possible, to tailor our services to their needs. The deposits we aim at getting are mainly those outside the banking system. We are still in the process of learning from the experiment, for it is only six months old, but the results in some of the pilot centres have been encouraging. In one particular town, for example, a few months' effort led to the opening of more than 500 savings bank accounts by relatively small depositors.

INCREASED DEPOSITS

You will be glad to note that our deposits increased by Rs 41.4 crores to Rs. 496.4 crores in 1962. This was after allowing for a transfer of Rs. 20 crores of U.S.P.L. 480 Funds to the Reserve Bank. The transfer was in pursuance of

an arrangement whereby an amount of Rs. 10 crores per month for five months is to be credited to the Reserve Bank, beginning from November 1962. Our deposits now stand at Rs. 487.1 crores (on February 22, 1963).

DEVELOPMENTAL ACTIVITIES

I turn next to the developmental activities of the Bank. As mentioned in the Annual Report, we opened 25 new branches during 1962 under the Second Expansion Programme, bringing the total number of these branches to 50 during the first 2½ years of the Programme and leaving 95 branches yet to be opened. As you are aware, the pace of branch expansion has, in pursuance of the recommendations of the Committee which went into this question, been deliberately slowed down in order that various arrangements concerning recruitment and training might be completed and the results of the previous expansion consolidated. We have at present before us a proposal to open a large number of branches at centres not hitherto on our list but where Treasuries and Sub-Treasuries are located. We are examining the proposal in consultation with the Reserve Bank of India. I may mention here that, of the 416 branches opened during the period 1955-60, a large number is now working at a profit.

SMALL INDUSTRIES AND CO-OPERATIVES

I pass on to small industries and co-operatives which represent two important aspects of the Bank's developmental activity. The Bank's Scheme for financing small scale industries has been making further progress. As mentioned in the Report, the number of units assisted, the credit limits sanctioned and the corresponding outstandings have all increased from 2811, Rs. 1,012.9 lakhs and Rs 507.0 lakhs in 1961 to 3153, Rs 1,81.8 lakhs and Rs 597.8 lakhs respectively in 1962. Similarly, in regard to our Scheme for financing co-operatives, the Bank continues to show progress. The total credit limits sanctioned by the Bank to all types of co-operatives and the corresponding outstandings increased from Rs 24.6 crores and Rs 6.6 crores on September 30, 1961 to Rs 33.4 crores and Rs 8.5 crores respectively on September 30, 1962. Finally, our advances against warehouse receipts issued by the Central and State Warehousing Corporations have continued to rise; the credit limits sanctioned by the Bank and the corresponding outstandings have risen from Rs 445.5 lakhs and Rs 155.4 lakhs to Rs 505.9 lakhs and Rs 180.1 lakhs respectively.

PROGRESS OF SUBSIDIARIES

I am glad to be able to tell you that all our Subsidiaries have recorded further progress in their commercial banking business as well as in the developmental

sphere. There was an increase in their total deposits, advances and investments. Their aggregate net profits, however have declined to some extent, mainly because of the additional cost pertaining to three items: the Desai Award, the revision of pay scales of officers, and the payment of deposit insurance premia. The State Bank of Bikaner, the State Bank of Hyderabad, the State Bank of Indore the State Bank of Mysore and the State Bank of Travancore have, nevertheless, all declared the same dividend as in the previous year. I should add that, as from January 1, 1963, the State Bank of Bikaner has been re-named the 'State Bank of Bikaner and Jaipur', having taken over the assets and liabilities of the State Bank of Jaipur under Section 38 of the State Bank of India (Subsidiary Banks) Act. The State Bank of Patiala and the State Bank of Saurashtra did not find it possible to declare any dividend.

STAFF TRAINING

We have nearly doubled the capacity of our Staff Training College at Hyderabad and, to a limited extent, made the facilities available to our Subsidiaries as well. As mentioned in the Directors' Report, there are Staff Training Schools and Zonal Training Centres in each Circle for the training of clerks and cashiers including those newly recruited. We are expanding these arrangements. It is on the standards of our recruitment and training that the quality of our customer service will ultimately depend. It also depends on a contented staff and good staff relations. I welcome from that point of view the cessation of uncertainty as to the service conditions of clerks and other workmen staff consequent on the publication of the Desai Award to which I have already made a brief reference. The Tribunal has authoritatively fixed the terms in regard to almost all the important conditions of service of workmen staff, such as scales of pay, dearness and other allowances, hours of work, over time, leave privileges, medical benefits, travelling and halting allowances, retirement age and so on. The way is therefore clear for what I sincerely believe can be an enduring and harmonious relationship between staff and management; a relationship that will be of benefit to the staff, to the Bank, to the Bank's customers, and indeed to the community generally. The subject is one we propose to keep under constant review for the purpose of taking suitable steps to consultation, where necessary, with the relevant organizations of the employees. Meanwhile, I should like to compliment all categories of the staff on the good work they have put in during the year and thank them for the devotion they have shown to the interests of the institution.

BURMA

Before I conclude, I should like to make a passing reference to a very recent development, namely, the nationalization of banks in Burma. The order issued by the Burmese Government on the 23rd of February covered 24 banks, of which 10 were Burmese and 14 foreign included in the latter category was our branch at Rangoon. Our business there has not been large—it has dwindled in recent years, more especially after the establishment of the State Commercial Bank of Burma in 1954—but of course that in no way alters the fact that the nationalization came upon us as a complete surprise. The Union Finance Minister has already made a statement on this subject in the Lok Sabha. I have little to add to the particulars he has given. I am sure all of us share with him the hope that the Burmese Government will take a fair and reasonable view regarding valuation of assets, payment of compensation and other related matters and settle all dues promptly to the satisfaction of those affected.

APPRECIATION

Lastly, may I on behalf of the Board of Directors, including myself, place on record our high sense of appreciation of the valuable services rendered to the Bank by Shri P. C. Bhattacharyya who relinquished his office as Chairman on February 28, 1962? We are grateful to him for the progress made by the Bank during his stewardship. We are also grateful to Professor D. G. Karve for the guidance available from him on more than one Committee; we record our high appreciation of the valuable services he rendered to the Bank as Vice-Chairman, and are glad that he remains associated with the Board as a Director nominated by the Reserve Bank. I would also place on record our high appreciation of the services rendered to the Bank by those who during the year ceased to be Directors of the Central Board or Members of the Local Boards.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

The Industrial Credit and Investment Corporation of India Limited

Underwriting Policy Justified by the Results Achieved

Sanctions and Disbursements at an All-Time High in 1962

Mr G. L. Mehta, the Chairman, on the assistance sanctioned for the new projects

The Annual General Meeting of the Shareholders of the Corporation will be held at the Registered Office of the Corporation, 163 Backbay Reclamation, Bombay-1, on Thursday, April 11, 1963, at 4 p.m. The following is the Statement by the Chairman, Shri G. L. Mehta, circulated to the Shareholders with the Directors' Report and Accounts for the year ended December 31, 1962.

1. I have great pleasure in welcoming you and placing before you the Eighth Annual Report of the Board of Directors of the Corporation for the year ended December 31, 1962.

2. You must have noticed that over the years, ICICI's business has undergone changes not only in size but also in its content. When ICICI was set up eight years ago, conditions in the capital market were very different from what they are today. The capital market was less developed, and facilities for obtaining finance, particularly for obtaining underwriting, were much less adequate. On the other hand, the country still had considerable foreign currency resources, and the foreign exchange scarcity was still not evident. The problem then was to obtain rupee resources while it was much easier to come by foreign currency resources from the Government.

3. It was natural, therefore, that the demand on this institution, in the early (1955-1958) years of its existence, was for rupee resources, and more particularly for underwriting. In keeping with ICICI's objectives, we took up such business even when we knew that in the conditions then prevailing, we would have to take up a substantial portion of what we underwrote as, in fact, did happen. Such underwriting was done on an analysis of the long-term prospects of the company whose shares were underwritten, which we found to be favourable. The reason for under-subscription to such shares was, as mentioned above, the restricted nature of the Indian capital market as a result of the less developed investment habit of the public as well as the uncertainty about the profit-earning capacity of industrial concerns.

4. Anticipating a little, I might say that, in fact, our judgment of

industrial prospects did prove sound, and many of the industrial concerns which we helped with underwriting have done well after going into production. Moreover, the investment habit, as shown by the happenings on stock exchanges since 1960, has become more widespread, and ICICI itself has made available to the market securities from its portfolio in order to develop the capital market and to be able to spread its assistance over as many concerns as possible.

5. Going back, you might recall that we had, right from the start in 1955, a foreign currency loan of U.S. \$10 million from the International Bank for Reconstruction and Development, which we were unable to utilise until 1957. In 1957-1958, shortage of foreign exchange began to be felt which, among other things, led to an appraisal and a re-appraisal of the Second Plan. One of the consequences of that situation was that industrialists, unable to obtain industrial exchange from the Government for their projects, increasingly turned to ICICI. Consequently, ICICI's foreign currency business has grown considerably over the years; and by now, we have already sanctioned almost the whole amount of U.S. \$60 million obtained by way of four lines of credit from IBRD. In addition, we have also sanctioned a substantial amount out of the lines of credit obtained from the U.S. Development Loan Fund (now Agency for International Development) and from Kreditanstalt für Wiederaufbau of the Federal Republic of Germany.

6. I would like to illustrate what I have stated above by reference to the following figures showing the trend of ICICI's business:

ICICI SANCTIONS, 1955-1961			
	(Rs. in Crores)	1955-58	1959-61
Underwriting	...	5.25	4.97
Direct Subscription	...	1.48	1.38
Rupee loans	...	3.48	6.73
Foreign currency loans	...	3.14	16.28
Total	...	13.35	29.36

7. Conditions in the Indian capital market have recently become more difficult, and these are reflected in the figures of ICICI's business in 1962—both in respect of the total amount as well as its

distribution between various forms of assistance. Towards the end of 1962 particularly, the share markets were in a dull state. I would like to affirm that this is basically "a crisis of confidence" induced as a result of the emergency, and does not reflect upon the inherent strength of the Indian economy and the long-term prospects of industry in India. ICICI has to take a longer view of investment and we shall be prepared to finance projects found viable on our examination, whatever the immediate conditions of the capital market in the country.

8. I have already alluded to the response of ICICI to the changing requirements of our economy. The foreign exchange shortage, which I referred to earlier, has been with us for a considerable time, despite an increase in the pace of industrial development and the substantial rise in indigenous production. This, I would say, is not unexpected.

9. Over a period, we have developed a large number of industries, and, as a result, have been able to dispense with the imports of their products. I may mention as instances paper and paperboard, wire ropes, electric cables, steel tubes, electric lamps, and many other goods. As you will observe from our operations, ICICI has played a significant part in the development of several of these industries.

10. I believe this policy is justified by the results achieved. The most effective means—within limits—of conserving our foreign exchange resources is through import substitution, and this for various reasons: the import policy is strictly of our making and so lies within our discretion; moreover, when defined in advance, it provides a guideline to industrialists for their planning.

11. I have already mentioned that the policy is sound within limits. The most important limit I have in mind is the fact that it may not be economically feasible to undertake the manufacture of everything in India while this is obvious in relation to agricultural products whose growth depends upon climatic conditions, it is no less true of manufactures. In accentuating the pace of import substitution, I feel that the Government should

keep this limitation in view. Even advanced countries have not found it economic to manufacture everything themselves, and it would not be prudent for us to seek complete self-sufficiency.

12. Even apart from this, imports are likely to continue in India, and for a long time. For one thing, our requirements for machinery tend to increase in volume as the total development effort expands. Besides, development leads to maintenance imports—imports required for operating the industries which have been set up. This is most evident when a phased programme of manufacture is undertaken, that is, when it is officially recognised that not all the items included in a final product are taken up for manufacture at the same time. It is no less so when raw materials, components and basic chemicals are required to be imported, so as to sustain the industrial capacity set up in the country.

13. I would like to illustrate this aspect of import requirement from ICICI's operations. The assistance sanctioned by ICICI in 1962 was Rs. 14.09 crores in respect of 40 new projects. The total cost of these projects was estimated at Rs. 76.38 crores (capital cost of Rs. 55.84 crores plus working capital requirement of Rs. 20.54 crores). Of the capital cost, Rs. 22.06 crores would be required in foreign exchange. But this is not all. The cost of goods produced by these projects would amount to Rs. 49.05 crores, of which about Rs. 7 crores would be required in foreign currencies (excluding the amount required to service the ICICI loans in foreign currencies for these projects). This will constitute a recurring demand for foreign exchange over the future until indigenous capacity is developed for the required raw materials, components and basic chemicals. I might add that many of our constituents undertake increasing fabrication of machinery internally in their own workshops when they undertake new projects or expand existing ones.

14. What, therefore, happens is that in the process of development, both the demand for final products (including capital and consumer goods) increases while at the same time, the demand for

the final products gets transformed into a demand for intermediate and basic goods. Over the past five years, while industrial production, as measured by the official index of production, has increased by about 40 per cent, our total import bill (partly through rigid import control measures) has been kept constant at about Rs. 1,000 crores. Moreover, the import of intermediate goods has also remained constant being about 35 per cent of the total imports. While, apparently, our import bill has remained constant over, say, the last five years, imports today sustain a much larger volume of industrial production than five years ago: which means that the proportion of import content in the consumption of industrial products has gone down over the period. And imports have changed in content from more finished goods to raw materials, components and basic chemicals.

15. I would like also to refer to the nature of industries to which ICICI has provided funds. From the Table given with the Directors' Report, it will be noticed that ICICI's assistance is concentrated in what might be called non-traditional industries like engineering and chemicals. It is, to some extent, the result of a deliberate policy. Qualitatively, therefore, the impact of ICICI on industrial development has been much larger than what the figures of finance provided might lead one to assume. This approach has involved a more careful appraisal of the long-term prospects of projects, to which I had occasion to refer last year. It also requires a more careful watch on the projects both during construction and after they go into production: cost estimates tend to go awry at times, difficulties arise in establishing production and in reaching full capacity, and problems of setting up distribution channels and developing a market for the products have to be tackled. We are conscious of the risks involved in these matters for a financing institution like ours; we have, therefore set up a separate division for follow-up under a senior officer, which will be concerned with keeping track of the progress and problems of companies assisted by ICICI.

16. I have mentioned these various aspects because they concern vitally the evolution of a development bank like ICICI. The functions of a development bank, however moulded by the changing conditions of an economy, are rooted ultimately in the long-term needs of an industrial economy. We envisage that the industrial structure in the country will not only grow larger in size, but, as a result, will also become increasingly complex in nature. The financing needs of industry will increase and become more sophisticated. We hope that with the continued support from the

Government and from institutions like the World Bank, this Corporation will continue to play an increasing role in meeting these needs.

17. You will notice that the total assistance sanctioned by ICICI in 1962 amounted to Rs. 19.60 crores. Of this, Rs. 14.09 crores was in respect of new industrial projects. The total cost of these projects, when completed, would amount to Rs. 76.38 crores (Rs. 55.84 crores for fixed assets and Rs. 20.54 crores for working capital) we estimate the total turnover of these projects, when they reach full production, at Rs. 58.69 crores. The financing of these projects is proposed to be met by share capital of Rs. 25.05 crores (Rs. 24.13 crores in ordinary shares and Rs. 0.92 crores in preference shares), long-term loans of Rs. 21.92 crores, and bank borrowings and cash accruals of Rs. 29.41 crores. The total foreign exchange requirement of these projects on capital account amounts to Rs. 22.06 crores, of which Rs. 7.47 crores is being provided by ICICI.

18. I had referred last year to a line of credit being arranged from Kreditanstalt für Wiederaufbau of the Federal Republic of Germany. I am glad to report that a further line of credit of DM 20 million (about Rs. 2.40 crores) is now under negotiation with this institution, and we hope to complete soon the formalities relating to it.

19. The year 1962 was notable in the Corporation's activities. Both sanctions (at Rs. 19.60 crores) and disbursements (at Rs. 9.85 crores) were at an all-time high. The year's operations included the floating of the largest debenture issue, that of Oil India Ltd. (a company of which 50 per cent of the capital is held by the Government and half in the private sector) in the country, in which the Corporation played an active part.

20. Reflecting the increased operations, the Corporation's receipts from interest, dividends and underwriting commission for industrial assistance increased. Profit before tax amounted to Rs. 78.92 lacs in 1962 against Rs. 74.27 lacs in 1961. The Corporation made a contribution of Rs. 2.5 lacs to the National Defence Fund, and, after providing Rs. 32.54 lacs for taxation, the balance carried to reserve appropriation account is Rs. 40.38 lacs against Rs. 46.52 lacs in 1961. Of this, Rs. 11.60 lacs is transferred to Special Reserve; further, the entire capital gain of Rs. 23.10 lacs has been transferred to Capital Reserve Not Available for Dividend. The Directors recommend a dividend of 6.5 per cent, same as last year.

21. I had mentioned in my last year's Statement to you about the holding, under the auspices of ICICI, of a Regional Conference of Development Banks in Asia.

The Conference was held on March 29-31, 1962, and was attended by delegates from development banks from 13 countries in Asia. External delegates from international and foreign lending institutions such as the International Bank for Reconstruction and Development, the International Finance Corporation and the International Development Association, the Commonwealth Development Finance Company Limited of the U.K., Kreditanstalt für Wiederaufbau of the Federal Republic of Germany, also participated along with officials of the Government of India, the Reserve Bank of India and some of the State Finance Corporations. The Conference helped us to exchange views, identify common problems and also develop contacts with similar institutions in other countries. I am glad to say that the idea of holding the Conference has been generally appreciated, and arrangements are already being made to hold, in the latter part of 1963, a second Conference in Teheran under the auspices of the Industrial and Mining Development Bank of Iran.

22. We have also tried to develop relations with other development banks through visits. Mr. Nguyen-Huu-Hanh of Societe Financiere Pour le Developpement de L'Industrie au Viet-Nam, visited ICICI in October, 1962, to study our procedures. Two officers of the Nepal Industrial Development Corporation came in December, 1962, to study various aspects of appraisal and follow-up work at ICICI. In January, 1963, Mr. Yom Tantsethi, General Manager of the Industrial Finance Corporation of Thailand, visited us for a week to discuss general problems of development banking and ICICI's operations. We expect to have, later in the year, a trainee from an African country under the U.N. Technical Assistance Programme. We also expect visits from senior officials of development banks in South East Asian countries. These are all examples of practical co-operation between institutions at operational levels and we are glad to be able to make a contribution to it.

23. Before concluding, I would like to refer to the change in the stewardship of the International Bank for Reconstruction and Development. Mr. Eugene Black retired as President of the Bank on December 31, 1962. The World Bank, as it is popularly known, followed an active policy of helping under-developed countries during Mr. Black's term and it also helped to set up a large number of development banks including this Corporation. We are deeply indebted to this far-sighted economic statesman for his sympathetic insight and his keen interest in the working of this institution.

24. In the Directors' Report, you must also have seen a reference to the resignation of Mr.

George Woods from your Board, consequent upon his appointment as President of the IBRD. Mr. Woods was associated with this Corporation even before its formal inception, and had been a Director on its Board since June 25, 1959. His guidance has been of considerable help in the progress of this Corporation. We trust that in his new capacity we shall continue to receive his friendly advice in our work.

THE TITAGHUR JUTE FACTORY COMPANY LIMITED

The Directors of this Company have declared:—

- (1) On the Ordinary Shares a dividend of 10% making, with the interim dividend, 13% for the year ended 31st December 1962; and
- (2) On the Preference Shares the dividend at the rate of 6% per annum for the half-year ended 31st December 1962.

These dividends will be paid on 2nd April 1963, less Income Tax at 7/9 per £, and the Transfer Books will be closed from 19th March to 2nd April 1963, both days inclusive.

At the Annual General Meeting the Directors will not recommend payment of any further dividend for the year ended 31st December 1962.

Preliminary figures for the year ended 31st December 1962 show Trading Profit £307,242 (loss £40,302) Income from Investments £31,915 (£27,003), Depreciation written off £30,000 (£10,000) net profit after Taxation £215,034 (loss £57,609), net interim dividends already paid £13,781, net dividends now declared £39,506, Transfer to General Reserve £65,000 (from General Reserve £65,000), Transfer to Modernisation of Machinery Reserve £30,000 (Nil), and estimated carry forward £73,365 (£6,618).

Trading conditions for the current year continue favourable.

P. WILLIAMS,
Secretary.
DUNDEE, 12th March, 1963.

The Proprietors of Indian Patent No. 64,403 "Improvements in or relating to Aryl Phosphates" desires to conduct negotiations for the grant of a manufacturing licence with respect to or for the disposal of the above-mentioned Patent.

THE BANK OF INDIA LIMITED

ANNUAL REPORT

To be submitted to the Shareholders at the Fifty-Seventh Annual General Meeting to be held at the Kishinchand Chellaram College Hall, Dinshaw Vachha Road, Bombay-1, on Friday, the 22nd March, 1963, at 4 o'clock in the afternoon.

Directors' Report for the year ended 31st December, 1962

The Directors submit to the Shareholders the BALANCE-SHEET and PROFIT AND LOSS ACCOUNT for the year ended 31st December, 1962. The Auditors' Report is also annexed.

The transactions for the past year after provisions for income tax and Super-tax have resulted in a profit of Rs. 1,11,53,496.92. To this has been added the balance of Rs. 29,16,350.83 brought forward from the previous year, making a total sum of

Rs. nP.
1,40,69,847.75

An interim dividend was paid at the rate of 8.00 per cent., subject to deduction of tax at the rates in force, on the Paid-up Capital of Rs. 3,00,00,000 which absorbed

Rs. nP.
24,00,000.00
22,50,000.00
32,50,000.00

Transferred to the Reserve Fund
Bonus to Staff
The Directors now propose:—
To pay a final dividend at the rate of 12.00 per cent., subject to deduction of tax at the rates in force, making 20 per cent. for the year, on the increased Paid-up Capital of Rs. 4,05,00,000 which will absorb

Rs. nP.
48,60,000.00
13,09,847.75

Total Rs. 1,40,69,847.75

The business of the Company continued to function satisfactorily.

The Bank Rate remained stationary at 4 per cent. during the year.

During the year, increases in the capital structure of the Company took place as follows in accordance with resolutions passed by the Shareholders in general meeting:—

(a) The Authorised Capital was increased from Rs. 5,50,00,000 to 10,00,00,000.00
(b) The Issued and Subscribed Capital was increased from Rs. 5,50,00,000 to 7,60,00,000.00
(c) The Paid-up Capital was increased from Rs. 3,00,00,000 to 4,05,00,000.00

The increase of Rs. 1,05,00,000 in the Paid-up Capital is made up of:—

New rights issue to Shareholders in 1962 of 2,00,000 shares of Rs. 100 each, Rs. 50 paid-up per share, at a premium of Rs. 20 per share 1,00,00,000.00
Issue of 10,000 shares of Rs. 100 each, Rs. 50 paid-up per share, to the Shareholders of the Gadodia Bank Ltd. on the amalgamation of that Bank with the Company 5,00,000.00

Total Rs. 1,05,00,000.00

The Reserve Fund and other Reserves have increased during the year from Rs. 3,28,00,000 to Rs. 4,11,50,000. The increase of Rs. 83,50,000 is made up of:—

Premium of Rs. 20 per share on the new rights issue to Shareholders of 2,00,000 shares 40,00,000.00
Premium of Rs. 50 per share on 10,000 shares issued to the Shareholders of the Gadodia Bank Ltd. in terms of the Scheme of Amalgamation of that Bank with the Company 5,00,000.00
Transfer from internal reserves to the Reserve Fund before the close of the year 12,50,000.00
Transfer from the profits of the year 22,50,000.00
Transfer to Development Rebate Reserve before the profit has been struck 3,50,000.00

Rs. 83,50,000.00

BALANCE SHEET AS AT 31st DECEMBER, 1962

AUDITORS' REPORT TO THE MEMBERS

(1) We have audited the foregoing Balance-Sheet of The Bank of India Ltd. as at 31st December 1962, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited returns from all the Branches, of which 46 Branches have been audited between us and 53 Branches by other Auditors.

(2) We report that:—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit and have found them to be satisfactory.

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from all the Branches of the Bank;

(d) the reports on the accounts of Branches audited by other Auditors have been forward to us and the same have been considered in preparing this report;

(e) the Bank's Balance-Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the audited returns;

(f) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance-Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1962, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

THE BANK OF INDIA LIMITED

Statement pursuant to Section 212 of the Companies Act, 1956

The Profit and Loss Account of The Bank of India Ltd. for the year ended 31st December, 1962, does not include any profit or loss of its subsidiary. The Bank of India (U.K.) Nominees Ltd. (a nominee company incorporated and operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by The Bank of India Ltd. The shares of the subsidiary are wholly owned by the Bank.

Having regard to the fact that no Profit and Loss Account of the said subsidiary is prepared in the circumstances aforesaid and that its Balance-Sheet and the Reports of its Board of Directors and Auditors are drawn up in accordance with the law in force in the United Kingdom, an application was made to the Central Government under sub-section (8) of Section 212 of the Companies Act, 1956, and, in exercise of the powers conferred by the said sub-section (8) of the Companies Act, 1956, the Central Government, being satisfied that it is necessary so to do, have directed that in relation to The Bank of India (U.K.) Nominees Ltd., a subsidiary of the Bank, the provisions of Section 212 of the said Act shall apply only to the extent that The Bank of India Ltd. shall be required to attach to its Balance-Sheets copies of the Balance-Sheets and of the Reports of the Board of Directors and of the Auditors of the said subsidiary made out in accordance with the provisions of the English Companies Act for the time being in force in the United Kingdom and that The Bank of India Ltd. is exempted from attaching to its Balance-Sheets a copy of the Profit and Loss Account of the said subsidiary.

Capital Authorised and fully Paid-up: ...	Cash at Bankers ...	£100.0.0	
100 Ordinary Shares of £1 each ...		£100.0.0	
		£100.0.0	£100.0.0

Signed on behalf of the Board,
S. C. KOTHARI
S. H. BRADFORD
Directors.

REPORT OF THE AUDITORS

We have obtained all the information and explanations which we have required and which to the best of our knowledge and belief were necessary for the purpose of our audit. In our opinion proper books of account have been kept by the Company. We have examined the above Balance-Sheet which is in agreement with the books of account. In our opinion such Balance-Sheet gives the information required by the Companies Act, 1948, in the manner so required and is properly drawn up so as to exhibit a true, correct and fair view of the state of the Company's affairs at 31st December, 1962, according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

London, 1st January, 1963.

Report of the Auditors

TO THE PRESIDENT OF INDIA,

We, the undersigned Auditors of the State Bank of India, appointed under Section 41(1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1962.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretaries and Treasurers of the Local Head Offices at Madras and New Delhi, by the Manager, Pakistan Branch of the Bank, which Returns have been incorporated in the above Balance Sheet and Accounts, and find that the Branch Accounts are correct and true and that the Balance Sheet and Accounts are true and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (ii) that where we have called for any explanation or information of the Bank which have come to our notice have been within the powers of the Bank; (iii) that the Returns received from the Local Head Offices at Madras and New Delhi and from the Branches of the Bank have been found adequate for the purpose of our audit; (v) that the Profit and Loss Account shows a true balance of Profit for the period covered by such Account; (vi) that, in our opinion, the Balance Sheet & Profit and Loss Account are drawn up in conformity with the law; and (vii) that, in our opinion, Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray & Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. B. Billimoria & Co and at Calcutta by Messrs. Ray & Ray.

12th February, 1963.

S. B. BILLIMORIA & CO.
RAY & RAY,

B. VENKATAPPIAH, Chairman. **H. M. SFERVAI, Vice-Chairman.**

Steel in Parliament

Mr. C. Subramaniam, Minister of Steel and Heavy Industries said in the Rajya Sabha last week that there was now "greater optimism" about economical production of iron with Neyveli lignite and Salem iron ore based on the electric smelting technique. A detailed project report on a steel plant in the South based on lignite was under preparation by the consultants already appointed, and it was expected to be ready by the end of this year.

The Minister gave the House details of the findings of the team of observers who had gone to East Germany, Norway and West Germany to watch the tests being carried out on Neyveli lignite and iron ore from Salem.

The main observations of the team were:

(I) The tests in the experimental low shaft furnace at Unterwellenborn with sintered Salem iron ore and Neyveli lignite high temperature coke, have demonstrated the technical feasibility of applying the low shaft furnace technique to the production of steel-making iron based on these materials. Due to the high price of lignite coke, it is, however, doubtful whether the production of iron on an economic level could be achieved on Neyveli lignite and Salem ore with the low shaft furnace technique.

(II) Indications are that with a moderate price for 3 to 10 mm. grain size lignite temperature coke and a reasonable price for power consistent with the high load factor and power factor which electric smelting involves, there is a prospect of economical production of iron with Neyveli lignite and Salem iron ore based on the electric smelting technique with pre-reduction.

Mr. Subramaniam also said that the question whether any further expansion in private sector steel plants was "either called for or practicable" during the Fourth Plan period was under consideration.

PRIVATE SECTOR EXPANSION
During the Third Plan, the TISCO did not propose to undertake any further expansion while in the case of the Indian Iron and Steel Company, a proposal for increasing the production by 300,000 ingot tonnes a year had been approved of recently in principle. Detailed financial implications of the IISCO's expansion programme had been called for.

When Mr. Bhupesh Gupta asked whether the Government would consider the advisability of asking for participation in the equity capital of the IISCO before sanctioning the expansion, the Minister replied that the Government would not be justified in compelling the companies to accept Government

participation in equity share. The participation by the Government was possible only if the Companies agreed. Under the law, in the initial stages any expansion in the equity would have to be offered to existing shareholders. Unless the law was changed, the Government could not get participation. All these matters were under the consideration of the Government.

Mr. S. N. Misra asked whether the IISCO had sought loan from the Government for their expansion programme or had come to some arrangement for foreign collaboration.

Mr. Subramaniam replied that he did not think the company had arranged for foreign collaboration, nor had they asked for any assistance from the Government so far.

RECOVERY OF LOANS

Mr. Bhupesh Gupta enquired why no steps had been taken to recover the loan of Rs. 10 crores each advanced to the TISCO and IISCO in 1959.

Mr. Subramaniam said the firms had not paid the interest also yet. The recovery, he said, was governed by the terms of the agreement entered into when the loans were advanced. One of the terms of agreement was that there should be a special element in the retention price for purpose of repayment of the loan to the Government. The Tariff Commission had recommended a small addition of Rs. 8 per tonne in the retention price for this purpose but the Government had not accepted it. The whole matter was under consideration.

PIG IRON PLANT FOR GOA OR VIZAG

The Government of India is considering the prospects of setting up a pig iron plant in a coastal area like Goa or Visakhapatnam to augment the production of pig iron within the shortest possible time. A preliminary report about Goa was already under consideration. It was not however possible at this stage to indicate the cost, location or capacity of the plant.

The Minister for Mines and Fuel, Mr. K. D. Malaviya, said in reply to a question that the total amount of investment in the integrated Neyveli Lignite Project up to the end of January 1963 was Rs. 90,73,89,333.00.

The estimated cost of lignite when the mine went into full production at the rate of 3.5 million tons was expected to be about Rs. 13.3 per ton. The average price per ton of Singareni coal was almost double the price of lignite, but on the basis of the heat value the effective price of Singareni coal and that of lignite would be about the same. Since Jharia coal had a still higher heat value its average effective price would be about 2/3rds of the effective price of lignite.

DIRECTORS' REPORT FOR THE YEAR ENDED 31st DECEMBER, 1962

To THE MEMBERS OF DEVKARAN NANJEE BANKING CO., LTD.

1. Your Directors beg to submit herewith the audited Balance Sheet and the Profit and Loss Account of the Company, hereinafter called the Bank, for the year ended 31st December 1962. The Auditors' Report is also annexed.

2. The Bank has, during the year, made generally good all-round progress. The Bank's deposits, at the end of the year have increased to over Rs. 50½ crores, the total working funds to over Rs. 55½ crores, and the number of accounts to over 2,50,000. Five branches were opened during the year—all in Greater Bombay, at Jogeshwari (East), Mahim, Malad (East), Santa Cruz (East), and Wadala—bringing the total number of Bank's branches to 112 at the end of 1962. Five Safe Deposit Vaults were opened—at Jogeshwari (East), Malad (East), Santa Cruz (East), Tardeo, and Wadala—bringing total number of Safe Deposit Vaults to 34. Steps were also taken to expand the activities of the present branches.

3. During the year, after obtaining the necessary consent from the Controller of Capital Issues, Government of India, the issued, subscribed and paid-up Capital of the Bank was increased to Rs. 1 crore from Rs. 50 lakhs, by issuing 1 lakh equity shares of Rs. 50 each, at a premium of Rs. 2 per share. The newly issued shares rank for dividend with the existing equity shares to the extent of 25 per cent of the dividend to be declared for the year ending 31st December 1962 and in all other respects *pari passu* with the existing shares.

Your Directors are happy to state that the Reserve Funds of the Bank have also now reached the figure of Rs. 1 crore, which is equal to the present paid-up capital of the Bank.

4. In the context of the present national emergency caused by the Chinese aggression, the Bank has been doing its mite in support of the Government's defence effort. The Bank has contributed Rs. 1½ lakhs to the National Defence Fund and subscribed Rs. 50 lakhs to the National Defence Loan. The Bank has placed the services of all its 112 offices for receiving contribution to the National Defence Fund free of any charge. The Bank is also extending the required facilities to the employees who wish to join the Territorial Army and the Lok Sahayak Sena.

5. The Bank has made a net profit, after providing for taxation, of Rs. 24,08,322.17, which, together with the sum of Rs. 13,51,096.09 brought forward from last year's account, amounts to Rs. 37,59,418.26. Out of this your Directors have made the following appropriations:

To Ad-Interim Dividend paid for the half-year ended 30th June 1962 at the rate of Rs. 2.00 per old share ...	Rs. 2,00,000.00
To Reserve Fund under Section 17 of the Banking Companies Act ...	Rs. 23,00,000.00
To Pay bonus to staff ...	Rs. 4,50,000.00
and propose to appropriate the balance as under:	
To Pay a Final Dividend for the half-year ended 31st December 1962 at the rate of Rs. 3.50 per old share (making in all 11 (Eleven) per cent per annum, subject to deduction of tax) ...	Rs. 3,50,000.00
To Pay a proportionate Dividend of Re. 1.40 per new share (subject to deduction of tax) ...	Rs. 1,40,000.00
and To Carry Forward ...	Rs. 3,19,418.26
	Rs. 37,59,418.26

6. Shri Laxmikant S. Dabholkar had attained the age of 65 on 29th July 1962 and, as such, under Section 280 of the Companies Act 1956, he will vacate his office as a Director at the conclusion of the ensuing Annual General Meeting. The Board of Directors have received the requisite notice from members proposing his re-appointment as a Director. Shri M. A. Master, who is aged 78, also retires at the ensuing Annual General Meeting. The Board of Directors have received the requisite notice from members proposing his re-appointment as a Director. In accordance with Article 100 of the Articles of Association, Shri Natvarlal S. Choksey and Shri Harshadrai B. Parekh retire from the Board of Directors by rotation, but being eligible offer themselves for re-appointment.

7. You are requested to appoint Auditors for the ensuing year and to fix their remuneration.

Yours faithfully,

For the Board of Directors,

LALITCHANDRA C. D. NANJEE,

Chairman.

NOTE:—

- (1) Remuneration received by Three Directors for their own use from other companies by virtue of nomination by the Bank on the Board of other companies amounted to Rs. 1,765.00 during the year.
- (2) Includes Allowances calculated in accordance with the Income Tax Rules.
- (3) The Balance Sheet has been prepared in conformity with Form 'A' and the Profit and Loss Account in conformity with Form 'B' of the Third Schedule to the Banking Companies Act, 1949.
- (4) Owing to regrouping of the Accounts certain figures of the previous year have been recast; the provision for bonus has been made in the Appropriation Account this year.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the DEVKARAN NANJEE BANKING COMPANY LTD. as at 31st December 1962 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns from 41 Branches audited by us, 24 Branches are incorporated the returns from 46 Branches. Exemption obtained by other Auditors and unaudited returns from 46 Branches, has been obtained from the provisions of Section 228 of the Companies Act, 1956, has been obtained from the Central Government for all the unaudited Branches.

We report that:

- (a) we have obtained all the information and explanations, which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory.
- (b) the transactions of the bank which have come to our notice, have been within the Powers of the Bank;
- (c) in our opinion, proper books of account as required by law, have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank;

(d) the Bank's Balance Sheet and Profit & Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) the reports on the accounts of the Branch offices audited by other Auditors, so far as were received till the date of our audit, have been dealt with in the manner considered necessary by us; and

(f) in our opinion and to the best of our information and according to the explanations given to us, the said accounts, together with the notes thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December 1962, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

Markets

JUTE Quiet Trend

The jute markets continue to rule dull mainly because there has been no fresh foreign business. Even the news of a sizable decline in jute goods stocks as at the end of February has failed to improve sentiment probably because the fall in stocks has already been discounted. Total stocks at 83,400 tonnes are 7000 tonnes lower than they were at the end of January. The bulk of the decline has taken place in sacking stocks which are now placed at 44,900 tonnes, 5,100 tonnes lower than at the end of last month. Hessian stocks have declined only by 600 tonnes to be placed at 24,600 tonnes while stocks of other goods have come down by 1,300 tonnes. While it is encouraging to find that stocks of heavy goods have declined sizably last month, the fact remains that stocks of this category of goods are as high as mills' output of sackings in a month at the present rate of production. The statistical position of hessian continues to be quite satisfactory in as much as stocks are no more than about half a month's output of the industry. But despite the overall satisfactory statistical position the goods market has not been displaying much enthusiasm. This is probably because of two factors: In the first place, there is the lur-

king doubt that foreign buyers, especially the USA, may not show much buying interest in the near future in view of the large stocks in that country. The second factor that may be contributing to the dull trading conditions is the decision of the Indian Jute Mills Association to continue the full working of mills for another month. At their meeting early this week, the Committee of the IJMA considered the market situation in the light of the stocks of manufactured goods held by the mills at the end of February. They noted that the stocks of both hessian and sacking had declined and they agreed that the present maximum level of production in the industry should be extended for a further period of one month to the end of April.

Production of jute goods during February has declined to 94,400 tonnes, from 103,100 tonnes in the previous month. The fall in output has been mainly due to the reduction in the working of mills from 208 hours to 184 hours in February. Of the total output, hessian accounts for 40,700 tonnes, sacking 39,800 tonnes and other varieties 13,900 tonnes.

Prices of jute goods have been steadily declining over the past few days in the absence of fresh enquiries. While foreign enquiries have been too few to influence the trend of prices, even pecula-

tive interest was quite subdued. Hessian Ready lost more than a point during the week's trading to be finally placed at Rs 48.85. The decline in stocks of heavy goods was completely ignored by the market and B Twills Ready reacted to Rs 112.30 by Wednesday from its opening rate of Rs 113.70. In the futures section Hessian May eased to Rs 47.66 from Rs 48.53 while B Twills May was sharply marked down to Rs 112.75 from the week's high of Rs 114.45. Assam Bottoms June was also easier at Rs 31.40.

Conditions in the raw jute market were also quiet although mills continued to buy against their quotas. Reports from the upcountry markets indicated that arrivals were dwindling. Even so sentiment in the raw jute market was quiet and sellers were inclined even to discount rates to conclude business. It is evident that jute holders have been influenced by the fact that beneficial rains have fallen in jute growing areas during the past few days. The rainfall will be helpful to cultivators for preparing the land for the next crop.

TEA Damaging Impact of SPT

The numerous problems plaguing the Indian tea industry have been presented in a lucid manner by Sir Richard Duckworth in his speech at the annual meeting of the Indian Tea Association held in Calcutta last week. Sir Richard devoted much of his time on the financial burdens imposed on the industry on several occasions and their enervating impact on the industry. While acknowledging the Government's decision to abolish export duty for which the industry had been pressing for a considerably long period the Chairman stated that the benefits that would accrue to the industry had been neutralised by the 20 per cent increase on excise duty. To this list of woes can be added the introduction of SPT by Mr Morarji Desai which will damage corporate profit and dividend outlook and dampen new capital formation and expansion. The tea industry, as is well known, is an under-capitalised industry which carried out the bulk of its expansion programmes by ploughing back the profit rather than raising additional resources by new capital formation. Though the reserves thus created enter in the calculation of the capital for SPT purposes, the additional burden will be crushing to the industry, particularly to those companies whose capital structure remains unaltered though they have extended the acreage under tea plantation. At any rate, the new burden will sharply reduce available profits for plough-back into the industry.

The Chairman also analysed the implications of the effects of the Wage Board and Bonus Commission on the industry as a whole. As Sir Richard stated the industry had never been convinced that the interim wage award was necessary and any increase in wage bills would result in loss to a good number of estates. Referring to bonus, he pointed out that as the fortunes of the tea companies varied so much, the imposition of a uniform rate will be ruinous to many companies and it may ultimately lead to the extinction of several estates.

The tea industry has also shown keen interest in providing good living accommodation to its employees and it has so far rebuilt or constructed 118,000 houses in conformity with the prescribed specifications. However the exclusion of the industry from the provision of industrial housing scheme which envisages a 25 per cent subsidy and loan is arbitrary which would only slacken the pace of house building programme.

The urgent need for improving the lines of communications in North-East India has been heightened by the recent steamer strike. To overcome the difficulties of communication the industry is arranging to introduce an air transport system in Assam. Schemes are also being finalised for the installation of a teleprinter service and improving telephone service. These proposals should be submitted to the Government of India for its approval. The Council of Scientific and Industrial Research's decision to share the expenses of the Tocklai research institute will be of immense value for the furtherance of research in tea. Considering the pivotal role of the industry in earning foreign exchange adequate incentives should be provided to strengthen the competitive ability of Indian tea.

That the Union Finance Minister has abolished the export duty on tea but at the same time has withdrawn the refund of the excise duty are well-known facts. There is now a growing feeling that the total effect of the readjustments will be that the relief that the tea industry gets will be only nominal. It is also felt that it may be too much to expect that exports will increase as a result of the abolition of the export duty, because in the ultimate analysis it will be seen that the cost of our tea will not get reduced.

On the other hand, chances are bright for the cost going up. As a matter of fact, it was the high cost of our tea that was affecting its exports. What the industry asked for was some substantial relief to improve the capacity of Indian tea to compete in the world market. It is felt that the present concession is far short of its requirement.

The Finance Minister in Ceylon does not share the pessimism of

the tea trade in Colombo regarding the cut in the export duty on tea. He says that the trade circles should not be unduly alarmed by India's abolition of her export duty and it would not affect Ceylon's position.

According to trade circles, however, high-quality tea fetching the usual export duty and the ad valorem duty will have now to compete with Indian high quality teas, which will not be subject to an export duty. High-quality Ceylonese tea, which fetches a price over Rs 1.85 per pound, has to pay an ad valorem duty of 50 per cent of the excess price, along with the export duty of 35 cents per pound.

Meanwhile, in the export sale held in Calcutta this week, offerings were 44,861 packages of Leaf grades. There was a good general demand. Plain Orthodox teas were readily absorbed at firm rates with exportable Fannings selling at dearer prices. "Teas for price" were keenly competed for and sold at higher levels. With the exception of Fannings descriptions which were sold at enhanced rates, the better liquoring orthodox teas were irregular and easier, particularly the medium BOPs which received only limited enquiry and there were many withdrawals.

Medium CTC teas were well supported at irregular rates and generally realised prices equivalent to those prevailing last week. Best CTCs came to a firm market, while the fibrous CTC descriptions were keenly competed for and sold well at dearer rates. Whole Leaf and Tippy teas were sold well at higher prices. Following rates were quoted:—Clean Plain Pekoe Rs 4.90 to Rs 5.10; Plain BP Rs 4.30 to Rs 4.40; Plain Fannings Rs 4.20 to Rs 4.40; Medium Assam CTC BP Rs 5.50 to Rs 5.70; Medium Assam CTC Fannings Rs 5.20 to Rs 5.50; Best Assam CTC BP Rs 5.90 to Rs 6.10 and Best Assam CTC Fannings Rs 5.60 to Rs 6.10.

In the Internal Sale, offerings were 30,695 packages of Dusts. There was a good general demand. Medium CTCs were well supported at irregular and generally easier prices with the better liquoring descriptions selling well. Good CTCs came to a strong market and were sold at firm to dearer prices. Fibrous teas with strong liquors realised enhanced levels, while the remainder eased in value.

Plain and medium orthodox descriptions were sold readily at slightly easier prices. Legg-cut teas came to a fair market and were irregular and generally slightly easier. Following rates were quoted: Plain Orthodox Dust Rst 4.10 to Rs 4.50; Medium Assam Dust Rs 4.50 to Rs 5.10; Legg-cut Dust Rs 5.10 to Rs 5.60; Medium Assam CTC Dust 5.50

to Rs 6.10 and Good Assam CTC Dust Rs 6.70 to Rs 7.10.

In London auction, offerings were 69,179 packages. An overall average price of 3sh 11.92d per pound was realised. In this connection, the Tea Brokers' Association has given the following average prices, calculated on packages sold:—

Northern India 31,878 packages, average 4sh 2.59d; Southern India 9,056 packages, average 3sh 3.64d; Pakistan 959 packages, averages 3sh 4.44d; Ceylon 17,341 packages, average 4sh 1.09d; Indonesia nil; Africa 9,147 packages, average 3sh 4.9d; Mauritius 384 packages, average 3sh 7.47d; and Malaya 224 packages, average 3sh 7.03d.

Prices for African teas were analysed as follows:—Nyasaland 3,810 packages, 3sh 2.45d; Kenya 2,127 packages, 4sh 1.50d; Portuguese East Africa 2,166 packages, 2sh 10.59d; Tanganyika 462 packages.

2sh 9.63d; Uganda 552 packages, 2sh 8.8d and Rhodesia 30 packages, 3sh 9.68d.

SUGAR Lower Production Estimate

THE Sugar industry has further slashed the production estimate and it is now put at 2,082,000 tons. Of this quantity, about 20 per cent is to be diverted to export markets and the balance of 1,662,000 tons will be available for internal consumption. So far, thirty sugar mills in west Uttar Pradesh have stopped working for the season since they cannot find enough cane for crushing.

The Indian Sugar Mills Association has, once again, pressed the Government for a fair ex-factory price of sugar in respect of northern region (Uttar Pradesh and

Bihar) and has submitted a memorandum. In calculating the fair price, the ISMA has included the incidence of premium to be paid by the factories for the Emergency Risks Insurance Scheme. The fair ex-factory price for the northern region now works out to Rs 42.12 per maund of sugar.

The ISMA is of the view, that, in working out the fair price, northern region should comprise South Bihar and the Punjab also. If they are included, the estimates of duration and sugar recovery will work out to 95 days and 9.35 per cent respectively and the fair price for the region will calculate to Rs 42.34 per maund.

The ISMA feels that the loss on exports on the entire 420,000 tons, when spread over the balance quantity of 1,662,000 tons available for internal consumption, will come to Rs 1.39 per maund of sugar. Therefore, a further provision of Rs 1.39 per maund of

a helping hand...

As far back as 1921, Tata Steel established a Technical Institute in Jamshedpur to develop a cadre of fully qualified technical personnel to take up positions of responsibility in India's first steel works. Subsequently, the Company instituted training courses for skilled artisans and other categories of employees.

During the last four years, the Jamshedpur Technical Institute has planned and provided special training programmes to meet the urgent needs of Hindustan Steel. Over 1,800 technicians from the Government steel plants at Rourkela, Bhilai and Durgapur have availed themselves of the accumulated training experience and facilities placed at their disposal by Jamshedpur, where industry is not merely a source of livelihood but a way of life.

sugar should be made in the fair price to provide for the loss on export if the price for export sugar is not raised as indicated. In the event, the price for the northern region will work out to Rs 43.73 per maund.

Meanwhile, slackness in demand accounted for an easy trend in the Hapur sugar market during the past week. The release of a further quantity of 225,000 tons for sale in the open market was also a contributory factor. Mills were, therefore, anxious sellers as they were keen to dispose of the released quota, not to speak of the fact that the demand from the consuming areas of the Punjab, Gujarat and Maharashtra was slack.

Many factories of west Uttar Pradesh have closed their cane crushing season as supplies of cane have fallen short of their requirements. Sowing of cane for the next season is being going on. The total acreage being planted is reported to be 5,680,000 acres, the corresponding figure for last year being 5,588,000 acres. Following rates (per quintal) were quoted: Amroha Rs 108.50; Dhampur Rs 108.20; Meerut Rs 110.50 and Simbhauli Rs 109.75.

CHEMICALS & DYES

Conditions in the Bombay market for Dyes and Chemicals were quiet with prices developing an easier tendency. The fall was more marked in Caustic Soda, Bleaching Powder, Soda Ash and Menthol in chemicals and AS-LB and AS in Naphthols and Red RC crystal in base dyes.

Increased arrivals of caustic soda and bleaching powder and the balance of demand, especially from the textile mills, accounted for the easier tendency in prices. Most of the mills were reporting to be nursing large stocks of dyes and chemicals, which had been purchased before the Union Budget. The availability of unauthorised goods in the upcountry centres at comparatively low prices induced the dealers and the stockists from those centres to keep away from the Bombay market. Stringency in the money market conditions was also a restraining factor.

NON-FERROUS METALS Mixed Trend in Prices

Prices on the Bombay Non-Ferrous market showed a mixed trend. A downward tendency was noticed in Copper and Zinc due to selling pressure and the withdrawal of support. Reports of higher receipts from the upcountry centres were said to have effected the trend. The underlying sentiment remained, however, steady in view of the impending import policy at this month-end.

Cuts in imports were feared by the traders. Prices of Tin and Scraps were, therefore, pushed up as the stock position in these metals was said to be tight.

According to the International Tin Council, tin production of the free world fell short of consumption by about 12,000 tons in 1962 as compared with a deficit of 20,000 tons in 1961. World smelter production is estimated at 143,000 tons for the whole of 1962 against 139,000 tons in the previous year, while consumption fell from 159,000 tons in 1961 to 155,000 tons in 1962.

YARN Fall in Prices

Despite increased excise and import levies proposed by the Finance Minister, the Art Silk yarn prices continued to rule easy last week. Turnover was small. In view of the comfortable supply position, buyers were inclined to wait in anticipation of a further fall in prices.

The stringency of money and offerings in coming goods had a depressing effect on the market. Those who had stocked yarn in anticipation of a price-rise following the budget proposals, were eager sellers. The premium of art silk yarn import licence was nominally quoted at 200 per cent. Buyers were, however, reluctant.

The markets for Staple-Fibre and Cotton Yarns remained dull with the tendency for prices to sag slowly in the absence of buying interest.

SILK

The Bangalore Silk market showed an upswing during the week ended 1 March. There were changes in Government Filature silk rates. At Kollegal and Kankapura, the rates were revised to Rs 98.00 per kg. Prices in T. Narasipur market were revised from Rs 91.50 and Rs 95.90 per kg to Rs 96.00 and Rs 98.00 per kg. Cottage basin silk increased significantly to rule between Rs 91.49 and Rs 99.20 per kg. Charka raw silk increased slightly to vary between Rs 68.34 and Rs 88.73 per kg.

Spun silk yarn of 2/210's was firm at Rs 74.96 per kg.

Cottage basin and charka silk waste were steady between Rs 9.35 and Rs 10.45 and Rs 6.80 per kg respectively.

Reeling cocoons ranged from Rs 4.00 to Rs 6.50 per kg. Foreign face seed cocoons fluctuated between Rs 3.00 and Rs 10.00 per thousand. Mysore race seed cocoons remained quiet between Rs 5.00 and Rs 6.00 per thousand.

The Bhagalpur silk market remained steady during the previous week. Tasar raw silk, silk waste as also spun silk yarn remained unchanged. Eri cocoons and yarn prices were steady. Daba and

Eogai varieties of reeling cocoons ruled easier between Rs 80.00 and Rs 85.00 and Rs 100.00 and Rs 110.00 per kahan respectively.

Cottage basin and Charka raw silk in Malda market remained firm between Rs 78.00 and Rs 83.00 and Rs 72.00 and Rs 81.00 per kg respectively. Matka yarn varied between Rs 25.00 and Rs 40.72 per kg.

The f.o.b. price and landed cost of Japanese raw silk of 20/22 Dr were Rs 65.63 and Rs 100.55 per kg respectively during July, 1962.

PEPPER Demand Continues

Although the American buyers are keeping off the Pepper market with a view to depress the rates, Indian shippers believe that there is no scope for a fall in prices and buying will revive soon. Now the difference between the rates of American importers and the Indian shippers is minor—India offers at 31 cents per pound, while America quotes 30½ cents. It is expected in some quarters that the American importers will revise upward their price ideas. They may do so, not because that they want to supplement their dwindling stocks, but because they may not be able to get goods even at the ruling rates.

The Indian commodity has already received support from other directions. The Communist countries have revived buying from India. Only last week, Bulgaria was reported to have purchased 200 tons of black pepper. There is also a report that Russia is negotiating for the purchase of 500 tons. The emergence of this support has strengthened the market sentiment.

Meanwhile, exporters have now realised the utility of quality control and pre-shipment scheme for black pepper. Their initial resistance is no longer there. The Spices Export Promotion Council, in close collaboration with the Directorate, has taken all precautionary measures to ensure smooth working of the scheme.

GOLD & SILVER No Silver Futures?

The Silver section displayed a firmer tendency during most part of the week; but turned quiet towards the close on fears that the authorities might turn down the trade's request to start futures trading in the white metal. The rate was officially quoted lower at Rs 241.50.

There is little prospect of the resumption of forward trading in silver. The Union Finance Minis-

ter is believed to have turned down the request at a meeting with the delegation of the Bombay Bullion Association on Monday.

The Gold section ruled steady and the rate was quoted firm at Rs 106.50. Sovereign was quoted at Rs 77.

OILS & OILSEEDS Weak Sentiment

Sentiment on the Bombay Oilseeds Exchange continued to remain weak with prices recording an all-round decline under the leadership of Groundnut.

Various factors contributed to the easy tendency in prices in the Groundnut section. Apart from the fact that the Saurashtra and the share market operators figured as prominent sellers in a market which had already become hollow with the abolition of the excise duty on groundnut oil, apprehensions of heavy tenders against the maturing contract and rumours that a prominent buyer was not in a position to absorb the expected delivery tended to undermine the sentiment. Spot Bold was quoted at Rs 41 and Groundnut Oil at Rs 15.80. Reports from the export front were also not encouraging, while the demand for groundnut oil from Spain remained subdued in view of the forthcoming increase in the import duty on the commodity.

In the Castorseed section, trading was devoid of any enthusiasm. Although shippers claimed business with Britain and France for about 600 tons of castor oil at £107/108 for the commercial quality and £114 for the BSS variety, the overall outlook was considered to be bleak. The pessimism was accentuated by the sustained inflow of the new crop from Andhra and Gujarat. Castor ready was quoted at Rs 31.37 and Castor Oil, commercial quality, at Rs 12.55.

In the Linseed section, prices displayed an easier tendency as buyers were inclined to reduce their commitments in view of the steady increase in arrivals of the new crop in the producing areas. Linseed ready was quoted at Rs 29.87 and Linseed Oil at Rs 11.90.

COTTON Mixed Trend in Futures

The Bombay cotton futures market during the past week flared up and the maturing contract moved up smartly to Rs 729 three quintals from Rs 704.00 before finally closing at Rs 724.00. A special clearing had to be declared in the March contract at Rs 728.50 and the May contract at Rs 710.00.

The market opened the week on a steady trend and the Jarilla

March contract rose steadily from Rs 704.00 to Rs 714.50 per three quintals in the initial dealings. The sentiment was fanned by good encouragement from the spot market. The market developed a subdued tendency on Wednesday on account of the panicky conditions in the stock markets. However this spell was of a short duration and the contract rallied to Rs 728.50 at which level special clearing was introduced.

The May contract also moved in sympathy with the March contract and it fluctuated between Rs 712.25 and Rs 703.25 before finally closing at Rs 712.25 per three quintals.

The spot market at Sewri depicted cheerful conditions and a marked rise in prices of many popular growths was reported. Mills were found active buyers of all the available ready lots of cotton as they were determined to cover their requirements before the end of this month. The release of the remaining balance of 25 per cent to the mills also aided the bullish sentiment in the market. Of the crop of nearly six lakh bales of Vijay and Digvijay cottons, approximately 4.5 lakh bales were reported to have been sold so far. Fresh arrivals of cotton from Khandesh and Vidarbha were restricted.

In the export section nearly 32,000 bales of Bengal Deshi were reported to have been registered for shipment. The price of this growth remained unchanged. No registration was reported for the other short staple cotton. In the import section Egyptian and American cotton met with scattered interest.

The United Arab Republic is reported to have offered to the Indian cotton mills 28,000 bales of Egyptian cotton against rupee payment. The offer from the UAR is under the consideration of the Textile Commissioner in consultation with the Indian Cotton Mills' Federation. The Government decision on this cotton is expected to be made very shortly.

A slight decline in the consumption of cotton by the mills in India during the last four months of 1962 has been reported. Total consumption during the month of December was 3.71 lakh metric bales of domestic growth and 1.04 lakh bales of imported crop against 3.99 lakh bales and 0.96 lakh bales. Consumption during the period under review totalled 18.61 lakh bales as against 19.25 lakh bales.

Mr. Bharat Ram, Chairman of the Indian Cotton Mills Federation, has expressed concern at the rise in cotton prices as it would inflate the cost of textile production. Prices of several varieties of cotton have pierced the ceiling though there was an upward revision in the ceiling. Traders were reluctant to take

an alarmistic view as the present spurt in prices was obviously owing to the frantic mill covering. Though the cotton growers should be ensured a fair return for their crop an increase in prices would adversely affect the domestic consumers and exports. The Planning Commission is also understood to have recommended to the Union Government for ensuring stable prices of agricultural products and also announce the floor prices of all competitive commodities well in advance of the season. It should also be noted that the Government of Maharashtra has requested the Centre to ensure maxima prices to cotton cultivators in the State for a period of three years.

PIECEGOODS

The Bombay cotton piecegoods market during the past week presented a generally sluggish trend. Demand from the upcountry centres was far from encouraging and the local traders who have accumulated large stocks apprehending

an increase in excise duty rate the immediate outlook for the market as dim. The export front also remained subdued.

Seasonal varieties like voiles, mulls, lawns and cambrics during the week under review met with only limited interest. The offtake in goods such as longcloth, poplins and prints dwindled into an insignificant trickle. The superior varieties of cloth were in short supply as a result of which their prices ruled firm. Traders from South Indian centres were prominent in the market while all the other centres stayed away.

The export front was almost devoid of fresh enquiries from overseas. But some booking against previous contracts were reported. Moderate quantum of grey sheetings and furnishings was booked for the UK. The US was satisfied with a restricted quantity of grey sheetings. Iraq accounted for a limited quantum of mill made mulls and bleached longcloth. Scattered shipments of

grey sheetings were reported to have been made for Sudan. The reduction in the offtake of piecegoods by that destination is attributed to the keen competition from Japan and Pakistan. East African interest was confined to coatings and sheetings and the business transacted was only meagre. All other destinations remained quiet.

THE ROAD TO BURNPUR

A detour at 200 km. on the trunk route from Calcutta. Less than forty years ago it would have led to a cluster of sleepy hamlets, named severally—Hirapur, Santa, Narsingband, Napuria and Dharampur. The same road today takes you instead to a purposeful steeltown—Burnpur.

There, at the million-ton integrated steel-works, production records are quickly being set and excelled and production efficiency is currently the highest among all steel units in India. For us it is all in the day's work and we seldom talk about it. Where there is a challenge to be met, IISCO takes it naturally, in its stride.

LEAD AND ZINC

World Trends

The International Lead and Zinc Study Group has placed on sale its Monthly Bulletin of Statistics which has been in the course of development for 18 months and has hitherto been restricted to Member Governments of the Group.

The February 1963 number, released in New York on 1 February, contains data on mine and metal production, metal production, metal consumption, producers' and consumers stocks, prices in American, European and Far Eastern markets and international trade in lead zinc ores, concentrates and metal.

The Bulletin is in three parts:

Current Trends, showing: (a) Monthly figures of lead and zinc metal production and consumption and stocks for three groups of countries, Europe, the United States and other countries for individual months of 1960, 1961 and 1962 and (b) Monthly average prices in the same period in London, New York and East St. Louis, together with the most recent daily prices in these markets.

Detailed Statistical Series, showing for individual countries: (a) Mine and metal production and metal consumption in the years 1958 through 1961 and months of 1962; (b) Monthly average prices in Canada, France, Italy and Japan since mid 1959; and (c) Total exports and imports in the principal trading countries of lead and zinc ores, concentrates and metal in the years 1959 through 1961 and months of 1962.

Special Tables, showing for the first and second quarters of 1962 the direction of world trade in lead and zinc metal.

The Bulletin shows that: In lead, metal production—excluding the centrally planned economies—was about 3 per cent less in 1962 than in 1961, while mine production was about 4 per cent higher. Consumption of lead metal in the first 10 months of 1962 was almost 5 per cent more than in the corresponding period of 1961. World producers stocks declined by 61,500 metric tons between the end of December 1961 and the end of November 1962.

In zinc, the publication indicates, world metal production in 1962 exceeded that of 1961 by about 3 per cent. Consumption in the first 10 months also expanded compared with the corresponding period of 1961, but at a slower rate—somewhat less than 2 per cent. There was a slight increase in world producers' stocks of about 3,300 tons between the end of December 1961 and the end of November 1962, largely due to the rise in European stocks. Mine production in the first 11 months was more than 6 per cent higher than in the corresponding period of 1961.

For the Investor

INVESTMENT GOSSIP
Hesitant
Undertone

The hope that the Union Finance Minister can be persuaded to jettison the Super Profits Tax or at least to soften its rigour has dimmed in the last two days. In earlier dealings sentiment was greatly encouraged by press reports about indications being given to the numerous representations made to the Government in regard to the crippling nature of the Super Profits Tax. The consensus is that the measure will leave the corporate sector so utterly impoverished that even payment of dividends will be made impossible. So Government has been strongly urged to give up this levy in the interest of the continued growth of industries. The Super Profits Tax will seriously retard capital formation as investors will be scared away by the prospect of little or no return when almost all the available funds from companies will be mopped up by the new taxation. Consistent with its policy of stepping up industrial production, Government should not put further hurdles in the way of private enterprise. If however Government is determined to get the Rs 25 crores that the Super Profits Tax is expected to yield, there are ways of collecting the money without demoralising the capital market. Even a straight 5 per cent increase in the corporation tax will be preferable to the Super Profits Tax. After last week's visit of Mr. Morarji Desai to Bombay the belief strengthened that the representations made to him would result in some modification to the SPT. But the denial in the Lok Sabha by the Deputy Finance Minister that there is lingering hope that influential representations that continue to be made will ultimately succeed in modifying the SPT to some extent. It is however clear that unless the measure is so changed as to enable companies to retain a sizable part of their after tax profits, there is no chance of a revival of stock market sentiment in the near future.

NEW ISSUE NOTES
English Electric

The English Electric Company of India Limited, a subsidiary of the UK company, will enter the capital market shortly with a public issue of

of companies and L. & C. Steinmuller of West Germany.

Penguin Textiles

Penguin Textiles Limited, Madras, will issue capital of Rs 15 lakhs consisting of equity shares of the value of Rs 10 lakhs and 9 per cent preference shares of Rs 5 lakhs for cash, at par.

STOCK EXCHANGES
Markets in Better
Shape

Watch-Dog Writes:

For the first time after the budget, stock markets have been in better shape. Vigorous representations have already been made to the Union Finance Minister against the regressive character of the Super Profits Tax. It is hoped that the Finance Minister may agree to a modification of this onerous levy. Although no distinct improvement in sentiment is visible, it is clear that the decline in prices has been arrested for the time being.

Conditions on Lyons Range took a slight turn for the better although the failure to arrive at a settlement even in the fourth round of Indo-Pakistani talks induced some profit-taking at the close.

Impetus for a steady rise in prices was lacking on Dalal Street as buyers were scared away by the wide spread between forward and cash quotations.

Even the prospect of some modification in SPT failed to enthuse the operators on the Madras Stock Exchange.

There was a distinct change for the better on the London Stock Ex-

Dr Paul Lohmann

Dr Paul Lohmann (India) Limited, Calcutta, is raising capital of Rs 60 lakhs in supersession of an earlier consent of Rs 30 lakhs. The capital will be issued to the existing shareholders for cash in the ratio of two shares for every share held.

Binny

Binny & Company (Madras) Limited will issue 7 per cent Debenture stock of the value of Rs 30 lakhs for cash, at par, in multiples of Rs 1,000.

Thapar SBC

Thapar Steinmuller Boiler Company Private Limited, a new company incorporated in West Bengal is issuing capital of Rs 64,95,000, to be subscribed privately by the Thapar group

change following a sharp recovery in sterling.

Selective buying was responsible for a moderate recovery in popular shares on the Delhi Stock Exchange.

The Ahmedabad Stock Exchange displayed slightly steadier condition; but turnover was limited as operators preferred to wait and watch.

CALCUTTA

Friday Evening.

LYONS RANGE presented distinctly improved appearance during the week under review, thanks to the absence of fresh selling and the emergence of some replacement buying. There was, however, a general disposition to book profits at the higher levels.

In general, there was a fair recovery all-round; but the turnover had not broadened to that extent. Most of the recovery was attributed to improvement in sentiment, which was largely based on the interpretation that the Finance Minister would not hesitate to modify some of the taxation proposals if they would hamper industrial development.

The Finance Minister ruled out the possibility of imposing the basic principle of imposing a super-profits tax on companies. But, he seemed to have appreciated the difficulty of certain companies in the matter of repayment of loans already raised by them, which were to be met from the future profits.

But with some slight improvement in sentiment, covering of open positions led to a slight rise in the prices of popular shares.

Bank shares were quietly steady.

After initial firmness, jute shares turned quiet toward the close despite the news of a sharp fall in production and stocks of jute goods with the mills during the month just ended.

Coal shares were practically neglected.

Despite removal of export duty, dealings in the Tea section were few and far between.

Sugar shares came in for selective enquiry.

After initial firmness under the lead of Indian Irons on encouraging advices from Bombay, Engineering

shares displayed a slightly easier tendency towards the close on lack of follow-up support. Indian Irons were at one time pushed up to Rs 20.15 from the minimum level of Rs 19.70; Guest, Keen, Williams to Rs 30.75 from Rs 29.94 and TEXMACO to Rs 20.60 from Rs 19.10, to close finally

at Rs 19.75; Rs 30.00 and Rs 20.20 respectively. Jessop were almost unchanged at Rs 22.06 with Britannia ruling better at Rs 10 against Rs 9.56.

Miscellaneous issues followed the general trend of the market. The following table shows the price trends of a few selected shares:

	Previous Week	Week's High	Week's Closing
	Rs	Rs	Rs

INVESTOR'S SUPPLEMENT

Late Recovery in February

STOCK market sentiment made a smart recovery during the second half of February following revival of confidence in the outlook for equities. The optimistic reappraisal stemmed from the belief that though fresh taxation in the Central Budget would be heavy, the additional burden that the corporate sector would be asked to shoulder would be comparatively light. The consensus was that the Finance Minister would seek to collect an additional sum not exceeding Rs 150 crores and that most of it would come from indirect and some other entirely new measures such as a levy on bank deposits, advances and cheques. The worst that could happen to the corporate sector, it was thought, would be an excess profits tax and a further increase in the corporate tax. The reason why such an expectation passed muster was perhaps the belief that consistent with its main objective of fostering the growth of industries, Government could ill afford to heap further burdens on the corporate sectors and thus smother its onward march. It was pointed out that if Government was really serious in maximising industrial production, fresh taxation on the corporate sector would become untenable. The optimism was further strengthened by the fact that some of the State Budgets which announced at that time did not propose much at all in the way of fresh taxation. Even the rise in railway freight and parcel rates announced in the Railway Budget failed to dampen sentiment which continued to be quite constructive till the Budget Day. The steady undertone

was further aided by the gradual return of normal trading conditions on the various stock exchanges during the month. The minimum prices were one by one removed and the last scrip on the forward list in the Calcutta Stock Exchange that was freed from the restriction of a minimum price was Indian Iron. The revival of interest was, however, confined to the more speculative counters and was largely the result of nervous bear covering. Although indications were that investors were also veering round to the view that the outlook for equities would not be as bad as earlier feared because of the Central Budget, they were in no mood to enter into fresh commitments in a hurry because of the continued political and other uncertainties that were dogging the steps of corporate working. The apprehension about a worsening of the political situation any time continued to worry the investor. Although there were indications that the suspension of armed conflict would continue, the fact remained that the Chinese were yet to accept the Colombo proposals in toto as Indian had demanded as a precondition for the start of negotiation between the two countries. Further there was no doubt that defence preparations would continue till complete preparedness was achieved. That would mean the greatest priority for defence and defence oriented indus-

tries. Since it was not clear to what extent private sector industrial units would be geared to defence production, the uncertainty as regards the possibility of many of the units working to their capacity had persisted. In the first half of the month, the stock market was in a depressed mood as at that time the apprehension centred round the shape of things to come in the Central Budget. Government spokesmen made no secret of the need for mobilising large funds for meeting the mounting defence expenditure. The Finance Minister had indicated that defence expenditure would double itself. There was no mistaking the heavy imposts that were in store for the country as a whole. Even if the additional taxation came mainly in the form of indirect taxation, the cumulative effect of the levies was bound to affect all sections of the population. In the meantime the flow of funds into the stock market suffered a serious diminution on account of the changed situation in the country consequent on the declaration of Emergency and the general move to gear national resources to defence effort. Soon after the proclamation of the Emergency, banks were instructed to refuse advances which are likely to be used for speculation and hoarding as also to recall advances against gold, unsecured securities and shares in suit-

able cases where such advances were not in pursuance of promotion of essential productive effort. With the promulgation of the Gold Control Rules, advances against undeclared stocks of non-ornamental gold had been prohibited. At the beginning of the month, conditions akin to panic prevailed on the stock markets for a short while following some press reports that the Reserve Bank banned bank advances against gold and shares. Although the report was soon thereafter found to be depressed as holders of shares continued to experience increasing difficulties in obtaining bank advances against shares in view of the serious erosion in equity values that had taken place since the promulgation of the Emergency.

Sectionwise, Jute shares found selective support for some time as sentiment was encouraged by the flow of good working results from some companies. It was also believed that the profitability of the jute industry would be maintained in the current year as production continued to be at capacity level. Except for sporadic enquiry for selected shares, the coal section was generally featureless. Business in the tea section was at a low ebb owing to the uncertainty about the new crop and the dividends for the past year. Even the removal of minimum price restriction failed to improve sentiment in the section. While Sugar shares were neglected, textile shares found little support in view of the obscure outlook for exports.

(a10) After transferring Rs 1,000,000 from General Reserve; Rs 1,380,000 from Dividend Equalisation Reserve and Rs 540,000 from Deferred Tax Liability.

(a11) After writing back Rs 1,369,956 being excess depreciation provided during previous years.

(a12) After transferring Rs 475,000 from Staff-welfare Reserve and writing back Rs 48,212 being over provision for taxation.

(a13) After transferring Rs 375,000 from Deferred Taxation Reserve.

(a14) After writing back Rs 145,000 being tax provision in previous years and Rs 338,639 being depreciation over provided.

(a15) After transferring Rs 359,000 being surplus in Reserve for Bad and Doubtful Debts.

(a16) After transferring Rs 112,000 from General Reserve and writing back Rs 7,604 being excess depreciation.

(a17) After writing back Rs 550,000 being excess provision for taxation.

(a18) After writing back Rs 983,600 being depreciation excess provided and Rs 166,000 excess provision for liabilities.

(a19) After transferring Rs 700,000 from Dividend Equalisation Reserve.

(a20) After writing back Rs 300,000 being excess provision for taxation and including Rs 54,971 being refund of pension fund.

(a21) After transferring Rs 175,000 from Reserve Fund and writing back Rs 279,283 being Fleet depreciation.

(a22) After writing back Rs 150,617 being provision for taxation.

(a23) After transferring Rs 80,000 from General Reserve No. 1.

(a24) After transferring Rs 300,000 from General Reserve No. 1.

(a25) After transferring Rs 500,000 from General Fund.

(a26) After transferring Rs 2,400,000 from Mortgage Loan Redemption Reserve.

(a27) After transferring Rs 162,500 from Dividend Equalisation Fund and writing back Rs 1,400,000 from Development Rebate Reserve.

(a28) Includes Rs 105,403 being excess provision written back and Rs 76,246 being Refund of Taxation.

(a29) After writing back Rs 235,503 being taxation over provided in previous year.

(a30) After writing back Rs 322,964 being excess provision in previous years.

(a31) After writing back Rs 1,000,000 being excess development Rebate and Rs 250,000 from Reserve for Deferred Income-tax.

(a32) After transferring Rs 530,000 from General Reserve.

(a33) After transferring Rs 200,000 from Reserve.

(a34) After transferring Rs 103,930 from General Reserve.

(a35) After writing back Rs 139,449 being Depreciation Rebate and Rs 41,789 being depreciation in respect of previous years.

(a36) After transferring Rs 400,188 from General Reserve No. 2 and writing back Rs 91,865 from excess provision for taxation.

(a37) After writing back Rs 246,263 being excess provision for wealth-tax.

(a38) After transferring Rs 295,102 from Quarry over hang expenses.

(a39) After transferring Rs 500,000 from General Reserve.

(a40) After transferring Rs 200,000 from Bad and Doubtful debts reserve and Rs 708,595 from provision for taxation.

(a) After transferring Rs 20,638 from General Reserve No. 1.

(b) After transferring Rs 80,000 from provision for contingencies.

(c) It is proposed to capitalise Rs 2,125,300 from General Reserve and issue Bonus shares.

(d) After transferring Rs 50,000 from General Reserve.

(e) After transferring Rs 151,000 from General Reserve.

(f) After transferring Rs 80,100 from Dividend Equalisation Reserve.

(g) After writing back Rs 645,151 being excess provision in previous years.

(h) After transferring Rs 500,000 from Rehabilitation Reserve; Rs 281,943 being excess provision for depreciation; Rs 41,942 being excess provision for bonus and including Rs 18,428 being refund of income-tax.

(i) After transferring Rs 250,491 from General Reserve.

(j) After transferring Rs 250,000 from Dividend Equalisation Reserve.

(k) After transferring Rs 200,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 300,000 from General Reserve.

(n) After writing back Rs 750,000 from Reserve for Rehabilitation and writing back Rs 7,927 being excess of Excise Duty and Rs 6,946 being excess provision for rates and taxes.

(o) After transferring Rs 1,400,000 from Dividend Equalisation Reserve.

(q) After transferring Rs 500,000 from Reserve for taxation and Rs 201,988 from General Reserve.

(r) After transferring Rs 580,170 from General Reserve and Rs 47,990 from Investment Reserve.

(t) After writing back Rs 289,747 being provisions made in previous year.

(u) After transferring Rs 300,000 from General Reserve.

(v) After transferring Rs 320,000 from General Reserve No. 1.

(w) After transferring Rs 98,240 from Dividend Equalisation Reserve.

(x) After transferring Rs 113,089 from General Reserve.

(y) After writing back Rs 65,163 being excess provision in previous years.

(z) After transferring Rs 450,000 from Dividend Equalisation Reserve.

(a1) After transferring Rs 1,078,000 from General Reserve No. 1.

(a2) After transferring Rs 100,000 from General Reserve and Rs 125,000 from Dividend Equalisation Reserve.

(a3) After transferring Rs 387,627 from General Reserve and Rs 300,000 from other reserve.

(a4) After transferring Rs 300,000 from General Reserve.

(a5) After transferring Rs 308,000 from General Reserve.

(a6) After transferring Rs 40,000 from Dividend Equalisation Reserve and writing back surplus provision of Rs 86,529.

(a7) After transferring Rs 750,000 from General Reserve and Rs 45,088 from excess provision for Bonus.

The Fiscal Obstacles to Growth

This year's annual session of the FICCI was held under the shadow of grave events for the country and for the interests represented by the Federation. If the Chinese aggression has elicited spontaneous response to the defence effort and made the business community more keenly aware of its responsibility to the nation, the budget has cast a damper on its enthusiasm and raised doubts whether the private sector will not be crippled by the unprecedented tax levies from making its maximum contribution to the common endeavour. These facts lent unusual interest to the session.

Since independence it has been the tradition for the Prime Minister to inaugurate the annual session of the Federation. On this occasion, he made a pointed reference to the difficulty he had in deciding to go through with his engagement. There will be wide-spread satisfaction that, in the event, he decided to do so. His decision showed that he made the necessary distinction between individuals and organisations. Nevertheless, it was inevitable that he should have felt compelled to draw attention to certain unlovely features of the industrial scene that have received wide publicity in the recent past. But he did this in terms that were the more effective for their studied moderation. The industrial elite can play its legitimate role in shaping national policy or even get heard on matters pertaining to its interests only if the wide-spread impression of its venality (however unjustified in individual cases) is removed by its observing the highest standards of probity and integrity.

For the rest, Mr. Nehru, as usual with him, placed the special problems of industrialists in the broader perspective of national regeneration, and in the changed context, survival. He invited his audience to consider the budget, which was obsessively on everybody's mind, in that light. He made the valid point that the external danger, which will last a considerable time, cannot be effectively met if there was any let up in technological, scientific and industrial growth. This is a proposition that his audience had no difficulty in accepting. As a corollary to the proposition, Mr. Nehru gave the assurance that every assistance should and will be given by Government for strengthening the forces of growth in all the sectors of the economy. In return, he asked for co-operation in the task of building up the nation's economic strength. This task, once conceived as a high adventure, has now become the very condition of survival. Co-operation must indeed come in unstinted measure from industry for the twin tasks of defence and development. Mr. G. D. Birla, in a characteristically forthright speech, joined the Prime Minister in demanding it.

The speeches and the resolutions that followed left no doubts about the business community's readiness to extend this co-operation. But they did examine at some length how such co-operation can best be used in national interests. The main resolution averred that the new challenges to the nation and the economy can best be met by changes in our planning techniques. It asked for greater responsibilities and opportunities and the creation of conditions for discharging the former and the effective use of the latter. The fiscal and monetary obstacles in the way of this very desirable end came

up for adverse notice. In a key sentence, the FICCI summarised its basic quarrel with present policies: "The preoccupation with taxation as the key to development must give place to a purposive programme of financial and fiscal encouragement to private industry." Pointing out how the siphoning off of the major part of the community's savings into Government hands left little for use by the private sector, another resolution said that large areas of economic activity of proven potentiality for growth will be allowed to languish in stagnation as a consequence. The Super Profits Tax, in particular, will greatly reduce the sources of finance for such units as are already there, and scare away others (especially those from abroad) who were planning to take a hand in our economic development.

The urgency of export promotion in the context of the Emergency was emphasised in another resolution which indicated the responsibilities of the authorities as well as of businessmen in the matter. Those who are disheartened by the expert appraisal of the Director-General of the Federation of British Industries, that it was impossible to rate highly India's prospects of overtaking the burden of debt in the short-term by expansion of her exports and that, in the ordinary course of events, the precipice was near and her cheques might bounce at any moment, can draw comfort from the no less authoritative assessment of the incoming President of the FICCI that India could easily increase her exports to Rs 1,000 crores a year, if only the annual exports of nearly a dozen major commodities could be established at the peak level attained in the last ten years. Mr. Bharat Ram has done well to emphasise that, while the business community was justified in demanding export subsidies on the lines given in other countries, there was still a lot they could do, even at the present level of costs, without waiting for the adoption by Governments at the Centre and the States of the various measures that have been recommended for bringing down the cost of production. Even if businessmen exported ten per cent or their production, they would incur a net loss of not more than five per cent on their sales.

The dialogue between industrial leadership and Authority is a continuing one and formal utterances on public occasions will have to be reinforced by much quiet discussion and mutual appreciation of problems that bedevil the other. There has been such mutual interaction, especially since the Emergency was declared. The FICCI has been in close touch with Government and has taken active steps on its own initiative in assisting Authority in vital tasks like holding the price line and generally disciplining the business community. On larger issues like power shortage and transport difficulties, it has attempted to obtain a consensus that would be of inestimable value to policy makers. In a sense, there was nothing startlingly new in the points made at the Delhi session, but the disposition to think that the business community is merely "crying wolf" should be resisted because the levies announced by the Finance Minister are truly formidable. This imperviousness to persuasion may also be most plausibly rationalised as an austere refusal to be taken in by protests from allegedly self-interested quarters. If so, it would be most unfortunate.

JUTE INDUSTRY

Grim Outlook

Thanks to Mr Murrarji Desai, the task of assessment of industrial prospects in the country has been greatly simplified: the Super Profits Tax in one big sweep has rendered the outlook for the corporate sector as a whole bleak. After paying this tax, companies will be left with so little funds that it will be possible for them neither to pay a decent dividend nor to embark on expansion programmes which in many a case are halfway through. Perhaps some companies may yet manage to survive by the simple expedient of abandoning their plans for expansion or modernisation. But the plight of industries such as the jute industry whose very existence now depends on increasing their efficiency through modernisation is too dismal to contemplate. It is ironic that New Delhi announced only a few days ago, that the modernisation of the spinning department of mills will be given a hefty push forward. How this is going to be achieved in the present context of the impending impoverishment of the jute companies by the SPT is a mystery that only the Union Finance Minister can solve.

It may not be generally known that behind the current prosperity of the jute industry, there are ominous forebodings of a progressive loss of markets for half of its production. But this is no secret to those who are in close touch with the working of the industry. And certainly the industry itself has no illusions about its prosperity. In his speech at the annual meeting of the Indian Jute Mills Association last week, Mr C. L. Bajoria, the Chairman has not minced words in laying bare the serious threats that the industry is now faced with. The biggest of them all is, however, of recent origin. If the SPT is put on the Statute Book in its present form, it will be the end of all hopes of strengthening the competitiveness of the industry. But as Mr Bajoria has pointed out the outlook for the industry is far from encouraging even otherwise. It is not surprising that Mr Bajoria rates the growing threat from Pakistan as the most serious problem that the industry has encountered in the whole of its long career. For already the competition has assumed serious proportions and the present position of sacking exports is that if we are still able to export this category of goods it is only because Pakistan is not able to supply the entire requirements of the world market. As a result of the Pakistani competition, 60 per cent of the market in Burma, 37 per cent in Australia and 63 per cent in Peru have already been lost for our sacking goods. If Pakistan is able to make such tremendous headway in the export markets, it is because of the several advantages it has over the Indian industry. Low cost raw material, low wages and an export bonus scheme have all combined to give the Pakistani industry a tremendous cost advantage—Mr Bajoria estimates such advantage at Rs 400 per ton of sacking goods. It is obvious that in this extremely unequal competition Indian jute industry will get eliminated.

What is more disturbing is that the Pakistani industry is expanding fast and it is expected more than to double its production in the next couple of years or so. It is difficult to believe that world demand will also grow so fast that it will absorb the combined production of India and Pakistan because of the growing popularity of bulk handling methods, continuing competition from substitute packaging materials and the steady growth of jute manufacturing capacity in some of the Asian and African countries. The position therefore brooks no delay as every day passes adds to the strength of Pakistan. It is naive to assume that Government is unaware of the alarming situation when facts and figures are plain enough even for a layman. The immediate remedy, as Mr Bajoria has pointed out, is the enabling of our industry to stand on level terms

with Pakistan in foreign markets. It is experienced enough to do the rest to stem the onrush of Pakistan.

Much of the present handicap of our industry can be considerably reduced by energetic action on the raw jute front. The yield per acre in India (2.9 bales against Pakistan's 3.5 bales) is perhaps the lowest among jute producing countries. Recent experiments have shown that an yield of 4 acres is not difficult to attain. Secondly, though production has increased by leaps and bounds despite this low yield per acre, largely by extension of the area of cultivation, qualitatively there has been considerable deterioration. This has brought serious problems in its wake especially when Government is determined to ensure an equitable return to the grower. The net result is that there is a plethora of low quality jute which nobody wants. It should not be forgotten that the jute industry has to sell more than 70 per cent of its production in overseas markets. The Indian jute industry will be needing more and more quality jute in view of the steady growth of the broad looms and the shift of more and more sacking looms to the production of hessian for which there is still a good market.

Progress in Agriculture

Land reform in India was taken up immediately after Independence and has been pursued vigorously for the last fifteen years. But the transformation of the agricultural system that was expected is far from complete and both policy and implementation remain subjects of controversy. In the early stages, land legislation was mainly concerned with the abolition of intermediaries or 'receiving tenures' but, even while this process was under way, it became clear that its completion would not eliminate all elements of exploitation and injustice, provide security to the tiller of the soil or assure equality of status to all sections of the rural population. Legislation conceived for achieving these objectives became more complex and controversial as it was extended to tenancy reform including reduction and regulation of rent, conferment of ownership rights on cultivating tenants and reduction of disparities of land-ownership through limitation of land holdings. The progress achieved in these different directions has been summarised in the annual report of the Ministry of Food & Agriculture for the year 1962.

Abolition of intermediary tenures has been completed except for a few minor tenures like land held by religious and charitable trusts which are also being eliminated where they survive. Legislation for ensuring security of tenure has been enacted in all States except Madras, Andhra and Bihar. Proposals for comprehensive tenancy reform are under consideration in Madras, while in Andhra a tenancy bill which lapsed has been reintroduced. Security for tenants is sought to be provided in Bihar under the provisions of the Land Ceiling Act, which came into force in April 1962. Likewise, all States have enacted legislation of rents and a number of them like Gujarat, Maharashtra, Uttar Pradesh, Rajasthan and West Bengal have reported substantial progress in bringing cultivating tenants into direct relationship with the State. Legislation placing a ceiling on landholdings has also been enacted in all States except the Punjab, where the legislation, while fixing no overall ceiling, empowers the Government to settle ejected tenants on surplus lands above the permissible limits of the owners. As a result of land ceiling legislation, 4.5 lakh acres of land have been taken over by the States and distributed in Jammu and Kashmir. In West Bengal three lakh acres of surplus land are being leased out to share-croppers and landless workers on yearly basis pending final disposal. In several other States, steps are being

taken for taking over from the owners land in excess of the ceiling and distributing the surplus land among landless workers and owners of uneconomic holdings. The legal framework for carrying land reforms to the stage when the vast majority of cultivators would be peasant proprietors is in place and implementation is also far advanced. The question now is: where do we go from here?

It has become abundantly clear that, though land reforms may have succeeded in eliminating historical injustices, they are not by themselves enough to improve the economic status of the rural population. In fact, as the Planning Commission has pointed out in the Report on the Third Plan, the impact of tenancy legislation on the welfare of tenants has been, in practice, much less than was hoped for. Inadequacies of legislation and implementation, though they undoubtedly exist, do not provide a complete explanation of the economic stagnation of rural areas. Land reforms have been even less successful in creating conditions for improving the levels of efficiency and productivity of agriculture.

The most disheartening feature of the working of the programmes of development in the last two years has been the failure of agriculture to respond to the incentives offered or the stimulus of the growth achieved in other sectors. This has reacted on the rate of growth of the economy as a whole. As against the annual rate of increase of 6 per cent required to reach the Third Plan target, foodgrain production during the first two Plan years has remained stationary at about 80 million tons. The difficulties of increasing the output of cotton and oilseeds have become matter of serious concern to the Government as well as Industry. The slow pace of advance in agriculture acts as a drag on the development of the economy as a whole, for, agricultural production determines the level of industrial production as well as the level of exports. The stagnation in agriculture has led to a slowing down of the pace of industrial growth. The presidential address to the annual meeting of the Federation of Indian Chambers of Commerce and Industry has drawn attention to the facts that, during the last two years, industrial production increased only by about 7 per cent as against 10.8 per cent in 1960, and per capita income did not register any notable increase during the year 1961-62.

It is not, therefore, surprising that organisations that are mainly concerned with problems of industry and trade should devote increasing attention to the problems of agricultural production. These have been examined in a brochure brought out by the Federation on the occasion of the annual meeting. The brochure, which has been prepared by a sub-committee of the Federation consisting of leading industrialists with Mr S. S. Kanoria as Chairman, has also made some concrete suggestions for increasing the productivity of agriculture. What they have to say about the impact of land policy of agricultural productivity may be examined in this context.

The Committee of industrialists has emphasised that the progress of land reforms should be considered in the context of the need to increase agricultural production and raising productivity per acre, which would be possible only if modern methods are used in agriculture. The policy of land ceilings, according to the committee, runs counter to this objective. This policy, it is pointed out affects agricultural productivity in two ways; firstly, production per acre is less in the case of small holdings than large farms; and, secondly, the break-up of large farms results in the transfer of land to persons whose capacity to invest in agricultural operations is very limited. The FICCI Committee has therefore recommended that, in place of the present policy of imposing ceilings on agricultural holdings, thus present policy of imposing ceilings on agricultural holdings, thus depriving agriculture of the economies of scale, it would be desirable, on an experimental scale in the first instance, to

permit joint-stock companies to undertake agricultural production of foodgrains and commercial crops.

The assumptions on which the recommendations are based require more detailed examination than can be attempted here, except to point out that there is a tendency to identify 'scientific farming' with large scale cultivation and mechanization of agricultural operations. Japan, as is well known, has been able to achieve very high yields on small holdings. Moreover, it is a moot point whether the extension of the capitalist system of organisation to Indian agriculture would make for social stability and economic progress. What is the meaning of 'economies of scale' in relation to agriculture, unless it is displacement of the large population that now derives its subsistence from land? And what is the order of investment that would be required if Industry is to absorb the displaced agricultural population? Can the country reach this level of investment within the lifetime of one generation? The answers to these questions will determine whether joint-stock companies engaged in farming operations spark off an agricultural revolution or a social explosion.

Slow Progress of Soil Conservation

OUT of the total cultivated area (net) of 320 million acres, the irrigated area at the beginning of the Third Plan was estimated at 70 million acres. This is expected to increase to 90 million acres by the end of the Plan period, if all the projects, major, medium and minor, are completed in time and the irrigation potential created is fully utilised. The achievement of increased agricultural productivity in the rain-fed areas, which account for more than two-thirds of the cultivated areas, depends on the timely adoption of measures for conservation of soil and soil moisture and of dry farming techniques. The nature of the terrain and distribution of water resources indicate that nearly half the cultivable area will continue to depend on these measures even after irrigation has been developed to the fullest extent possible.

An indication of the increased yields that may be expected to follow the adoption of the conservation programme was given by Dr Ram Subhag Singh, Minister for Agriculture, at the meeting of the Central Soil Conservation Board held in Delhi early this month. In the district of Sholapur (Maharashtra) contour bunding alone resulted in an increase of 35 per cent in the yield of jowar. In Madras the increase ranged from 16 to 32 per cent. Near Lucknow the yield of mixed crops of wheat, barley and gram recorded a spectacular increase of between 86 and 139 per cent. Substantial increases have also been reported from other areas. In the case of groundnut, yields have increased by ten per cent in Coimbatore and by 25 per cent in Ahmednagar. While these figures indicate the scope for increasing agricultural production, the problem of extending the soil conservation programme to all the regions which can benefit from it is staggering in its magnitude. Against the 200 million acres and more which steadily lose fertility as a result of soil erosion, the area expected to be covered by soil conservation programmes by the end of the Third Plan is hardly 11 million acres.

Apart from the improvement of cultivation and yields in the rain-fed areas, soil conservation are also of the greatest importance for the effective maintenance of the irrigation

system. Lack of proper watershed management exposes the dams and reservoirs of the multipurpose projects to sedimentation hazards. The problem is assuming increasing importance on account of heavy silting from the catchment areas. It has been estimated that the Bhakra reservoir will lose 10 per cent of its live storage and 20 per cent of the dead storage during the next fifty years unless remedial action is taken for afforestation of the catchment area. The benefits of irrigation projects are also adversely affected by the rise in the water-table in the command area and consequent development of saline and alkaline lands, which now extend to about 12 million acres. There is also the problem of the ravine lands covering an area of more than 6 million acres in the States of Uttar Pradesh, Madhya Pradesh, Rajasthan and Gujarat, which could be reclaimed by appropriate measures like afforestation and pasture development.

The progress that has been achieved in the last ten years, since the Central Soil Conservation Board was set up, has served to set off by contrast the magnitude of the problem that remains to be tackled. During the First Five Year Plan, a sum of Rs 1.6 crores was spent on soil conservation projects, mostly on contour bunding of 700,000 acres of agricultural land in Maharashtra and Madras. The expenditure in the Second Plan was Rs 18 crores covering about two million acres. To provide the basic data required for drawing up soil conservation programmes, an integrated Soil and Land Use Survey was taken up and a programme of 40 projects for demonstrating dry farming techniques was initiated during the Second Plan.

The provision for soil conservation has been stepped up to Rs 72 crores in the Third Plan including Rs 11 crores for measures in the catchment areas of 13 major river valley projects. It has been estimated that only 1200 square miles of the 22,000 square miles which require treatment would have been covered by the end of the Third Plan if the entire provision is utilised. The review of the work so far done shows that progress can be regarded as satisfactory only in the catchments of DVC projects, Bhakra and Machkund where work was taken up in the Second Plan. In other projects only a beginning had been made towards the end of 1961-62 and further progress in the second year of the Plan was held up by administrative delays. However, an improvement in the tempo of work has been reported since the middle of 1962-63 and it is anticipated that about 50 per cent of the provision of Rs 11 crores would be utilised by the end of the third year, if financial sanctions are made in time.

The programme falling in the State sector includes a large variety of schemes such as contour bunding and levelling of agricultural land, afforestation, reclamation of saline, alkaline and waterlogged lands, reclamation of ravines, control of coastal sand dunes, control of stream bank erosion, flood control schemes, torrent control, dry farming, soil conservation in the catchment of river valley projects etc. The major programme for conservation in agricultural lands accounts for 65 per cent of the total allocation. Fifteen per cent has been allotted for river valley catchments, 12 per cent for afforestation and related works and the balance for other projects, research and demonstration.

Up to the end of March 1963, the coverage of the programme for agricultural lands would be about 21.4 per cent of the targeted area of 11 million acres. In terms of the financial allocations envisaged in the proposals of the State Governments, 43.7 per cent of the provision would be utilised by the end of 1963-64.

However, it appears that State Governments have indicated that, at the present level of allocations, only eight million acres out of the target of eleven million acres could be covered, and that additional allocation of 50 per cent over the amount originally envisaged would be required to cover the entire targeted area.

An assessment based on the allocations made for the programmes for agricultural lands indicates that, while progress may be considered satisfactory in Madras, Maharashtra, Mysore, and not bad in Bihar, Gujarat, Madhya Pradesh, Orissa, Punjab, Rajasthan and Uttar Pradesh, there is very little to show in West Bengal, Assam and some of the Union Territories. The scheme for agricultural lands has yet to be sanctioned in West Bengal, though though the State has a better record in regard to afforestation, having achieved over 50 per cent of the Plan target during the first two years.

Though the Third Plan outlays have been increased fourfold as compared with the Second Plan, even the full achievement of the targets will cover only a small fraction of the area needing attention. In regard to the reclamation of ravine lands, afforestation and pasture development are the measures recommended. But it seems that the State Governments concerned are reluctant to invest on these schemes which bring no immediate return. Considering the progress so far achieved with the different schemes, it is clear that the fulfilment of the modest targets will call for much greater concentration of effort than has been forthcoming so far. Expansion of the programme on a significant scale will depend on the farmers taking it up on their own. A good deal of publicity and educational effort would be required to impress the farmers about the advantages of soil conservation and to make them acquainted with the techniques.

Strengthen The Nation

The vitality of the national economy supplies the real strength to the Nation. That means more and quicker production and distribution of goods. Banking service is indispensable for promoting the higher pace in industry and commerce.

Your banking transactions directly contribute towards development efforts. Spending or saving, do it through a banking account and help us increasingly to help raise the tempo of economic activity, so very essential for strengthening the Nation.

Notes

COAL

Changing Pattern of Problems?

The annual meeting of the Indian Mining Federation held last week has a special significance for the organisation and the coal industry in that it commemorates fifty years of useful service to the industry. Mr Sen Gupta, its Chairman, looked back with a legitimate sense of pride and some nostalgia. He also took the occasion to draw the moral that many problems of the industry that we feel with particular keenness today are by no means new. The transport problem, for example, mercifully mitigated in some of its basic intractability, (needing the assistance of the World Bank for expert guidance) has been with the industry from the beginning. Principally, it arises from the difficulty of accommodating what Mr Sen Gupta called the "mystique" of railways operational needs and that of the mining. Less metaphysically, the question is whether coal movement should be ordered to suit the needs of the operational convenience of railways or the requirements of producers and consumers. Put this way, the question is loaded and

unnecessary. Surely it is not beyond the ingenuity of transport economists to reconcile the not necessarily conflicting interests of the two.

Mr Sen Gupta drew attention to the many other familiar aspects of the problems besetting the coal industry. From the point of view of production, shortage of essential requirements like power and explosives were a continuing source of frustration. The capital needs of the industry, recognised by the arrangement for a World Bank loan are nevertheless not being met because of the difficulty of finding matching rupee finance. Help in securing this was promised by Government but not much progress has been made with the result that after two years of the loan being agreed to, it is still largely unutilised. The industry's own ability to raise the finance required is limited, partly because of the state of the capital market that didn't evince much interest in coal even when it was buoyant and now is even less likely to do so. Internal resources are equally unequal to the occasion because of the notoriously uneconomic price for coal that has been fixed. Rises granted from time to time (like the most recent one of 80 naye paise per ton to meet the increased labour cost consequent on the Wage Board award) do not even compensate the particular liability for which it is ostensibly granted.

During the last few months, there have been some indications that the problems of the coal industry may be under going some change. Thus, it is quite freely being mentioned that excess rather than shortage of coal may be the worry at the end of the Third Plan, because in the last few months, some industrial consumers are stated to be embarrassed with more coal than they need. It is too early to say that this is a definite trend necessitating revisions of our ideas about the plan for coal. If the tempo of industrialisation gains the momentum that the Plan has envisaged, the present phase may well disappear.

EQUALISATION FUND PAC'S Comment

In our editorial comment last November on Sir Biren Mukherjee's address to the IISCO shareholders, we had occasion to comment as follows:

"In the post-war years, the system of differential between

the selling price and the retention price was at least partially conceived as a mode of subsidy for the consumer who would pay a uniform price both for high cost imported and low cost indigenous steel. The element of consumer subsidy has since become progressively insignificant....In the light of this circumstance, it is difficult to resist the conclusion that the principal beneficiary of the niggardly retention price is Government itself. Neither concern for the consumer nor even socialist zeal for restraining profit margins of giant industries, but the more tangible (though not necessarily overt) motive of obtaining funds for Government indirectly would appear to be at the back of the pegging of retention prices at low levels. Some colour is lent to this hypothesis from the fact that the Third Five Year Plan takes credit for a net accrual of Rs 105 crores in the Steel Equalisation Fund in reckoning the resources for the public sector outlay. A by no means inconsiderable sum."

We have quoted at some length from our earlier comment because the hypothesis tentatively advanced then has been confirmed by the findings of the Public Accounts Committee which had the advantage of access to the accounts. According to press summaries of the findings (we have not, at the time of writing, received the copy of the report) the Steel Equalisation Fund had an opening balance of Rs 17.77 crores in April 1957. Accretions to the fund during the four financial years following are put at Rs 88.10 crores while the outgoing during the same period were of the order of Rs 65.74 crores. This has left a balance of Rs 40.13 crores. During 1961-62, there was considerable accretion to the fund with little outgoing in consequence of which the actual balance at the end of 1961-62 is put at Rs 52.70 crores. The Public Accounts Committee have commented that it is not "correct in principle" that the Fund "should serve as a medium for accumulating large surplus funds by the fixation of selling prices at a level higher than necessary for the real purpose of the Fund." This is precisely the point we had made. As it is, the consumer continue to subsidise development without knowing it, whereas, ironically, the fund was created to subsidise him. A more insidious perversion of a fund it will be difficult to imagine. Meantime, the producers are made to assist the swelling of this fund at the other end by being allowed to keep a price much lower than what equity no less than economics would dictate. The Public Accounts Committee's recommendation that the entire constitution, scope and working of the Fund should be reviewed has not come a day too soon.

EXPORTS

Seven Point Programme of Assistance

The precarious foreign exchange position and the rude shock administered to the country's economy by the Chinese aggression have rendered the stimulation of exports a dire necessity to strengthen our defence and expedite the pace economic development. Though during the past three years there has been a steady improvement in exports there is much leeway to be made to meet the plan targets. The export earnings in the current fiscal year estimated at Rs 695 crores record a rise of Rs 33 crores over the preceding year's level but are short of the target by Rs 35 crores. The yawning gap between the actual performance and the target level will be evident from the fact that export earnings during the first two years of the Third Plan add up only to Rs 1,357 crores leaving a gap of over Rs 2,340 crores to be covered to fulfil the plan target of Rs 3,700 crores. There is however one encouraging factor to be taken into account that the increase in foreign exchange earnings was mainly owing to the rise in the quantum of goods exported rather than any notable improvement in the prices of any important commodity. But the gravity of the foreign exchange position in aggravated by the mounting burden of servicing foreign loans, and the additional expenditure to be incurred on developmental projects and defence. In its effort to balance the payment position the Government had to resort to stringent slashes in imports, severe restrictions on foreign travel and a stand-by arrangement with the International Monetary Fund. Mr Morarji budget speech gives some indications of the policy that will be pursued by the Government in future.

The Union Finance Minister stressed the need for the elimination of obstacles in the shape of levies on the exports and extending financial help and other incentives to the export oriented industries. The seven-point programme for giving cash assistance drawn by the Ministry of Commerce and Industry for giving cash assistance to promote exports is an immediate outcome. It should be noted that this programme has been made possible by the inclusion of a provision of Rs 3 crores in the budget proposals for creating a new market development fund. Apart from this amount, the Finance Ministry has allotted Rs 80 lakhs representing the unutilised portion of the special provision made last year for export promotion for 1962-64. The seven-point programme envisages the extension of loans to entrepreneurs to assist them estab-

lishing export oriented undertakings and assistance to exporters of difficult goods which are heavily priced out of foreign markets. The procedure for the selection of goods and determining the quantum and form of cash assistance is being processed by the Department of International Trade. Under this scheme enhanced grants will be provided to export promotion councils and commodity boards to finance their promotional activities intensify market research, publicity, survey and other related activities that are primary prerequisites for bolstering exports.

EXPORT CREDIT

A New Reserve Bank Scheme

The Reserve Bank of India is introducing as from 23 March an "export bills credit scheme" which will add substantially to the ability of scheduled banks to provide finance for exporters. The scheme is the result of the experience of the comparative failure of the earlier scheme for export that the Reserve Bank was operating and whose shortcomings were brought out by the Kapur Committee that went into the question of export credit. On the recommendations of this committee, the Reserve Bank of India Act was amended last year to make possible the granting of credit to Scheduled Banks by the Reserve Bank against promissory notes by Banks with the export usage bills merely as a sort of "collateral".

The credit thus provided to banks against export usage bills (drawn either in rupee or any foreign currency) will nevertheless be subject to the present restrictions on borrowing from Reserve Bank in regard to ceiling, tiers and rates of interest. Thus, the overall limit of ordinary borrowing (100 per cent of their statutory reserves, 50 per cent of which at the bank rate of 4½ per cent and the rest at 6 per cent with borrowing above the limit being subject to special charges and available only in exceptional circumstances) will be applicable to the borrowing against export usage bills. But the Reserve Bank has announced, presumably as a short term concession, that upto 30 September of this year, it will grant additional quotas for banks' borrowal against rupee export bills: what is more important, such lending will be at the bank rate irrespective of whether the bank has otherwise moved into the 6 per cent tier or not in its other borrowings from the Reserve Bank. The implication of this concession as indicative of the Reserve Bank's interest in export promotion is obvious enough.

There is one important reservation that the Reserve Bank has made for eligibility for this concession. It is that the borrowing bank

should not in its turn charge the borrowing exporter a rate that is more than 6 per cent, that is to say, 1½ per cent more than what the bank itself pays for its borrowing. This reflects once again the Reserve Bank's interest in export promotion in that it desires that the cost of export credit should not put up too high by the banks. It has very rightly therefore insisted that the new facility should not be utilised by banks as an adventurous addition to their earnings by charging what the market would bear to the exporters.

ESTABLISHED IMPORTERS

Elimination of a Useful Class

An indirect repercussion of the acute shortage of foreign exchange has been the virtual elimination of established importers as an organised body well versed in the

intricacies of the import trade. This is inevitable but it does not stand to reason why their services should not be utilised for the good of the country as a whole even in the present context of shrinking imports. The present policy of progressively reducing the number of the established importers licences and distributing more and more licences to actual users and the State Trading Corporation does not ensure that the little available foreign exchange is utilised in an economic way. Speaking at the annual general meeting of the Calcutta Import Trade Association last week Mr L. R. Patel, the chairman, has shown how the change in the practice entails waste of precious foreign exchange. He has illustrated his point by the following example: "An actual user who imports his own equipment and also imports spares for that equipment must, of necessity, keep a full range of all the necessary spares. If a hundred actual users import a hundred similar

items together with a hundred items of spares for these items, then the duplication of many of the spare parts, some of which may only be needed in the most obscure circumstances, entails a very high and totally unnecessary drain on the country's meagre foreign exchange resources. The State Trading Corporation, through which more and more imports are routed, like all government machinery does not keep the same personal touch with the buyer as the established importers do. The buyer from the STC has to take what he is given and is rarely able to get any help from it in solving technical and other problems that he comes up against while setting up the equipment for the simple reason that the STC does not have the necessary facilities or experience.

If the change in the issue of import licences is done with a view to preventing trafficking in such licences, it cannot be asserted that by increasing the number of actual

users licences this unhealthy practice has been put an end to. As a matter of fact trafficking in import licences is as rampant now as ever. There are obvious advantages in routing imports through established importers by virtue of their having specialised knowledge of the equipment that is imported. They also know the best methods of obtaining this equipment at the most advantageous terms to the consumer as a result of their having the sole distribution rights. It seems a pity to waste the talents of a body of men who have acquired over a period of time both specialised knowledge and valuable contacts abroad by gradually eliminating them as a class.

RUBBER INDUSTRY

Needs of Technical Personnel

Judged by the phenomenal progress made by the rubber industry in the past decade the representatives of the industry can be justified in the satisfaction expressed by them at the annual meeting of Indian Section of the Institute of Rubber Industry (London) in Calcutta last week. By dint of its applicability to the manufacture of multifarious goods indispensable to the modern times like tyres and tubes, belting and cables, rubber has attained a strategic importance to the country's economy. As Mr P. C. Sen, the Chief Minister of West Bengal, has rightly pointed out, the Third Plan which envisages rapid expansion for railways, transport and power generation with which the rubber industry is closely connected augurs well for a bright future for the industry.

The domestic production of rubber, however, is far short of the actual requirements. For instance the consumption of raw rubber went up to 62,000 tons last year from 58,000 tons in preceding year. On the other hand the production of rubber remained more or less static at 30,000 tons and the country had to import more than 30,000 tons of natural and synthetic rubber valued at Rs 10 crores. This huge drain of foreign exchange from the country will have to be arrested by stepping up production of rubber internally. Mr J. Vyoral, the Chairman of the Institution, also drew attention to the fact that the rubber industry was now able to produce locally more and more materials like carbon black. The country will also start producing synthetic rubber and accelerators. But the prices of such indigenous raw materials are higher than that of imported counterparts which will only inflate the cost of production. Referring to the valuable contribution of West Bengal's rubber industry Mr Vyoral observed that its pro-

ducts, especially footwear, were making greater inroads into the highly competitive markets of the world such as the USA, the UK and Canada.

But the insufficient facilities for training technical personnel in rubber technology is a serious impediment to the rapid progress of the industry. Apart from the post graduate course in the Indian Institute of Technology at Kharagpur there is practically no other facility in this sphere. Considering the need of a high degree of technical skill for modernising production and reducing the cost of production the Institution should extend its activities in such a way as to facilitate greater scope for training and research in rubber technology and narrow the gap in the field. Assistance, particularly financial, from the Government would be welcome.

TOURISM

Languishing

Inaugurating the business session of the convention of the Travel Agents Association of India in Hyderabad recently Mr Raj Bahadur, the Union Minister for Shipping, expressed concern at the downward swing in the country's tourist trade. The fall in tourist traffic was to a great extent aggravated by the Emergency but there are other forces in operation which constitute a real threat to the future of the industry. The lack of adequate hotel accommodation is a serious deterrent to tourist promotion. The hotel industry which is largely confined to the private enterprise has to make considerable headway to cater to the needs and standards of the foreign tourist arriving on pleasure trips. The initiative should emanate from private sector and as stated by the Minister the failure of private limited companies to take full advantage of the incentives offered by the Government in the shape of tax holiday for establishing new hotel enterprises and financial aid from fiscal corporations is disconcerting. The industry's appeal to State Governments for greater monetary participation in the betterment of accommodation facilities has met with little success.

The absence of proper psychological climate for fresh investment in the hotel industry is a major dampening factor. The stringent and vexatious customs procedures prevalent in the country need some modifications to induce a growing flow of foreign tourists. Many of the hill stations, seaside resorts, game sanctuaries and other centres of tourist attractions like development projects are devoid of tourist facilities and proper transport and communication arrangements. All these have contrived up to a decline in the foreign exchange earnings of the tourist industry in 1962. The Government's decision to set up a high

level committee to conduct a probe into the problem is a step in the right direction. The decline in tourist spending on shopping is attributed to the malpractices indulged by majority of shopkeepers. The State Governments should step in with appropriate legislation to protect the tourists from the avaricious hoteliers and shop

owners. The constitution of a working group for finalising a comprehensive programme for fostering an integrated development of selected tourist attractive spots all over the country was suggested some time ago but due to unknown reasons the scheme has been shelved. In view of the industry's important role as a foreign ex-

HOW TO ORDER ABOUT 2476 PERSONS WITHOUT BEING AN EMPEROR

The moment you open a current account with Union Bank, you acquire the right to order about 2476 fully trained banking personnel in its many branches. "Pay my children's school fees regularly," you say. (Yes, Sir). "Pay my car taxes every quarter." (Yes, Sir). "Remit my insurance premiums yearly." (Yes, Sir). "Collect the dividends on my shares." (Yes, Sir).

Prompt, unquestioned and never-failing obedience to your wishes. Open a current account with Union Bank and feel like an Emperor.

US

A Letter from Washington

One of the more significant measurements of personnel well-being in the United States has been the steady upward shift of families along the income scale. A report just issued by the US Department of Commerce shows that this pattern continued in 1961, the latest year for which definitive data on the subject are available.

The average (medium) income of American families in 1961 was about \$5,700, higher by \$120, or two per cent, than in 1960. This means that since 1947 average family income has about doubled.

With this substantial gain has come a notable restructuring of family income relationships. While the number of families in the United States was growing steadily from 37 million in 1947 to 46 million in 1961, the proportion of families with incomes of less than \$5,000 a year was being cut in half—from 80 per cent to 41 per cent.

The proportion of families in the lowest income range of under \$3,000 a year decreased from 49 per cent in 1947 to 21 per cent in 1961. On the other hand, the proportion with incomes of \$10,000 and over rose from three per cent to 16 per cent. Whereas the greatest concentration of families in 1947 was in the under \$3,000 group, it now is found in the \$5,000-\$10,000 group.

Of course, consumer prices also have risen during the postwar era. But even after taking this rise into consideration, there has been a significant upward movement of family income, and hence a marked rise in family purchasing power. Figured in constant (1961) dollars, the average family income increased from about \$4,100 in 1947 to the \$5,700 level of 1961.

In terms of this adjusted, or real, income, the proportion of families earning less than \$5,000 a year declined by about two-fifths, the proportion earning between \$5,000 and \$10,000 increased by about one-half, and the proportion earning \$10,000 and over more than doubled.

This shift of families up the income ladder is not confined to particular years but has continued generally throughout the postwar period. In terms of current dollars, the increase in median family income has averaged \$190 a year. In terms of constant dollars, it has averaged \$120 a year.

These figures give some indication of the extent to which American families benefit economically from the operation of their society,

and in a sphere that has particular meaning—the ability to purchase more and better goods and services. This mobility of families up the income scale also has been cited as statistical evidence of the essential classlessness—economical as well as political—of American society, which is characterized by an abundance and a wide distribution of goods and services.

In any free society, of course, some people benefit more than others, depending on various influences, such as talent, ability, or mere circumstance. The Commerce Department study reveals what is probably the most basic of these influences: education.

Average family income, the study shows, tends to rise as the educational attainment of the family head increases. Families headed by elementary school graduates had an average income of \$4,800 in 1961; secondary school graduates, \$6,300; college graduates, \$9,300.

An indication of the rising educational levels in the United States is the disclosure that one-fifth of all families are headed by persons with some college background. As might be expected, these families are more heavily represented in the upper income than in the lower income brackets.

Still, there is no hard and fast rule on this. About five per cent of the families with incomes in the top brackets of \$15,000 or more were headed by persons who never completed their eight years of elementary schooling.

One may venture a guess, however, that this will become an increasingly rare occurrence as the years go by. The growing complexity of modern economic society and its advancing technology, are placing greater demands than ever on the education and training of young people, more of whom are going on to college each year.

It is reasonable to assume, therefore, that the rise of families up the income scale is going to continue, and perhaps to accelerate, in the years ahead.

HEAVY ENGINEERING

Progress in 1962-63

Annual reports of the various departments of Government have started coming in. Among the more heartening of these is the report of the Department of Heavy Industries. The year has been notable for strain of foreign exchange leading to restrictions of imports of capital equipment and essential raw materials. Nevertheless, the impact of the plan's emphasis on rapid basic industrialisation is visible in the progress achieved in several machine making and engineering industries.

The report records that the production of almost all machine-building and other heavy engineering industries has gone up during 1962-63. The Emergency

has given further momentum to the pace of production. Improvements were particularly gratifying in the manufacture of machine tools, railway wagons, electric motors, power transformers, sugar mill machinery, automobile ancillary industries and conveyors. New items like high speed centrifugals and heavy duty gears for the milling plant, electro-static tea leaf stalk extractors, shovels and bulldozer scraper attachments, were produced for the first time during 1962-63.

A number of projects designed to build up and fabricate a wide variety of machines and equipment have been taken up in the public sector.

SUGAR MILL MACHINERY

The sugar mill machinery industry has made commendable progress during the last few years and the indigenous manufacturers are in a position to meet the country's entire requirements for complete sugar plants. The production increased from approximately Rs. 9.20 lakhs in 1951 to about Rs 420 lakhs in 1961. The present capacity can take care of 14 new standard plants annually and the equivalent of nine plants by way of expansion and replacements.

As a result of progress achieved so far in the indigenous manufacture of machines, the foreign exchange component of a complete plant of 1,000 to 1,200 tons costing Rs 84 lakhs has come down to Rs 16 lakhs.

Six new firms for manufacturing chemical and pharmaceutical machinery went into production during the year under review, bringing the total to 72, with a total licensed capacity worth Rs 18 crores approximately. The production in 1962 is estimated to be Rs 284 lakh against Rs 216.73 lakh in 1961.

TEA PROCESSING

The entire range of tea processing machinery is produced in the country now. The annual production is now worth Rs 1.68 crores.

As regards boilers, in addition to the present six licensed manufacturers, three more schemes have been licensed and three more approved. The present licensed capacity of the industry is Rs 13.43 crores per annum and the present production worth Rs 2.5 crore.

Agricultural machinery like persian wheels, chaff cutters, sprayers, sugar-cane crushers, worth Rs 104 lakh was produced during the current year.

Four licensed firms have accepted orders for the supply of complete cement plants of 600 tonnes capacity per day. With the progress now made, there would be a capacity of fabrication of nine plants per year. The annual value of indigenous manufacture by 1965-66 would be about Rupees eight crores. The foreign exchange component of each plant costing between Rs 1.3 and Rs 1.5

crores would be between Rs 40 and 50 lakhs.

Like machine building industries, the production of other heavy engineering industries also showed an upward trend during the year under review. The capacity of steel structurals rose from four lakh tonnes in 1961 to about 4.19 lakh tonnes in 1962.

MACHINE TOOLS

Both the private and public sectors in the machine tools industry increased their production during the year under review. The total production of the public sector units during 1962 has been estimated to be of the order of Rs 5.8 crores against Rs 4.4 crores in 1961. In the private sector the production in 1962 exceeded Rs 5.5 crores while it was Rs 4.1 crores in 1961. Several new items like flash butt welding machines, flexible shaft machines, magnetic chucks and rolling mills were produced for the first time during 1962. The production of grinding wheels and abrasives maintained an upward trend. The production of cutting tools reached an all-time high level of Rupees seven crores during 1962 as against Rs 4.6 crores.

In Parliament

INDUSTRIAL TRUCE

The Union Labour and Planning Minister, Mr G. L. Nanda, expressed concern over the "deterioration in the implementation of the industrial truce resolution of November 3 last year. The excellent results of the first two of three months after the adoption of the resolution had not been maintained. There had been deterioration last month. It had been agreed that industrial disputes would not be referred to adjudication but would be settled through arbitration. The progress to this end had not been enough. The Government's policy was to take strong action if there was an infringement. Employers had not behaved up to expectations. It was necessary to have tripartite discussions on the subject.

Manufacture of Warships: The question of foreign collaboration for the manufacture of warships in India is under the Government's consideration. Negotiations are going on with two or three countries.

Manufacture of Helicopters: The Government has entered into a licence agreement with two French firms for the manufacture of helicopters. Under the agreement, components of helicopters will be progressively taken up for manufacture in India. The manufacture of both the helicopter and the engine under the agreement has been entrusted to Hindustan Aircraft Limited, Bangalore.

Special Steel Plant: The question of an alloy and special steel plant in the defence sector sanctioned recently by the Government is being re-examined "due to the changed circumstances."

A FREE MERCHANT LANDS IN MADRAS

The Madras Presidency of 1788 consisted of Fort St. George, the surrounding hamlet of Madras City and the Northern Circars. It was in that year that Thomas Parry completed his five month voyage from England and set foot in Madras and established himself as a Free Merchant, trading in various commodities.

Could he have dreamt then that, 175 years later, the firm founded by him would be contributing so much to the economy of the country, being engaged in the manufacture of fertilisers, sugar, confectionery, industrial and potable alcohol, chemicals, acids, essences, sanitaryware and light railway equipment, in the formulation of plant protection product, in the distribution throughout India of light and heavy machinery, pharmaceuticals and consumer goods, and in insurance, and shipping.

THOMAS PARRY

The E.I.D.-Parry Group of today consists of E.I.D.-Parry Ltd., Parry & Co., Ltd., and a number of subsidiary and associated concerns, in all nine companies of substance, providing employment for more than 10,000 people.

The Group continues to increase and broaden its activities, to provide employment to increasing numbers, and to play its full and responsible part in the country's drive to achieve economic independence and raise the standard of living.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

SURPRISINGLY little notice has been taken in India of China's oblique territorial claims against the Soviet Union made for the first time two weeks ago. The Guardian of London thought the news important enough to splash it as the main lead story for the day, but we are for some obscure reasons more coy in these matters. If nothing else, it was excellent propaganda. It is true that the claim was advanced in a parenthetical context in the great debate over Cuba. In Berlin last December Mr Khrushchev twitted China for calling the Soviet Union cowardly in not having used force over Cuba. He had jeeringly asked why the Chinese comrades did not forcibly retake Hongkong and Macao. This, the People's Daily considers a cheap jibe (which it may be, at that.) But it provided the paper an opportunity to list twelve countries and nine treaties that had filched territory from China in the past. Among these are Tzarist Russia and the treaty of Aigun (1858) and the treaty of Peking (1860). Territories lost in consequence of these "unequal treaties" include a good thousand miles along the Pacific north of Vladivostok. The editorial portentously announces that China has every intention of "recognising, abrogating, revising and renegotiating" these treaties. Cartographic loopholes like the one we are only too familiar with exist, should China wish to convert its ideological quarrel with the Soviet Union into a territorial one. Chinese maps, for example, are showing the border along Kazakhstan as undefined. It is possible that the latest twist is but part of the massively mounted editorial war (with an estimated ammunition of 20,000 words) against the Russian thesis about coexistence and nuclear wars. Oddly, these polemical onslaughts are conceived as a prelude to the world communist conference to set finally at rest their doctrinal differences. Mr Khrushchev, who was originally scornful of a "summit", has since been making conciliatory noises and even collateral gestures like soft-peddling on Stalin. He must be disconcerted by the latest turn of the Chinese screw.

"The thawing season," said Mr Khrushchev at the now famous meeting of 8 March, "is the season when it is hard to foresee snow and in what direction the weather will turn." Is it entirely fanciful to say that Mr Khrushchev was

telling this as much to himself as to his audience? I see a note of warning as well as of regret in this reflection. While Mr Khrushchev feels that he had turned the heat of destalinisation too powerfully for his own comfort, he also seems to be rueful that things couldn't have turned out otherwise. Anyway, whatever may be Mr Khrushchev's own feelings, his audience, some of whom had presumed too much on the first tentative signs of better weather, must be feeling "How true!" Ehrenburg, whose novel "The Thaw" came in for much sardonic comment from Mr Khrushchev, must also be feeling that the thaw is indeed treacherous. Mr Khrushchev ticked off Yevtushenko also, taunting him with his western nickname of Russia's Angry Young Man. There is, of course, more to all this than the assertion that "there can be no coexistence in art"—a silly thing to say anyway. Mr Khrushchev's partial rehabilitation of Stalin at this meeting as "essentially Marxist" and his assertion that not everything that happened in Stalin's time was bad have compulsions that have nothing to do with art criticism. In part at least it is Mr Khrushchev defending his flank from snipings from Mao. The trouble is, Mao finds it easier to find texts from the canon to support his case than Mr Khrushchev does to support his. Poor man, he is often driven to fetch up obscure passages from the Apocrypha to support his far more sophisticated brief. But as yet he cannot repudiate the fundamentalist position of the inerrancy of the communist scriptures. Secondly, Mr Khrushchev is also troubled by the unasked but by no means unthought question of what he was doing when Stalin was being the tyrant that he denounced. In answering it, Mr Khrushchev is tying himself in knots by protesting too much. Like the lawyer in the joke, he is trying to prove that the murdered man is not dead; if dead, not murdered; if murdered, not by his client, and so on. Stalin was a tyrant only towards the end of his life and yet as early as 1933 his friend, Michael (And Quiet Flows the Don) Sholokhov had protested against excesses in collectivisation. (By the way, this kind of innocence by association is the best that Mr Khrushchev is able to think up in his defence and hence the chronological distinction between the late and early Stalin periods.) Despite all this, I should like to forbear from being too hard on him and allow him to get

out of these undoubted awkwardnesses. If only he had a better harvest at home and some detente with the West, I rather think he will tell Stalin, rather superfluously, to go to blazes.

Equivocation about the use of English for official purposes of the Union after 1965 continue confirming the worst suspicions of those whose mother tongue is not Hindi. Mr Lal Bahadur Shastri, for example, is reported to have said the other day that the bill making Hindi the official language is ready. This mode of referring to a bill that is said to provide for the continued use of English for official purposes beyond 1965 is rather odd. Mr Shastri is also reported to have referred to the status of English in the new set-up as "additional language", whereas the correct expression, I believe, is "associate language". This perhaps is a mistranslation, which again shows the hazards of use of Hindi in contexts that require exactitude. Mr Shastri's way of putting the whole thing was no doubt due to the audience he was addressing, who were Hindi journalists. Even so, this way of describing a bill whose avowed purpose is to reassure non-Hindi regions merely serves to increase misgivings. We can, no doubt take heart from Mr Nehru's assertion about the same time that "Hindi cannot be adopted at the Centre as a medium of official work as that would affect the interests of those people who do not speak Hindi." But why should the interests of a large number of people depend solely on the good sense of one man? Meanwhile, Mr Rajnarain, Chairman of the Socialist

Party, whose representatives behaved like rude urchins in Parliament is going about saying that he will fight the bill "tooth and nail". These no doubt are his only weapons in rational argument.

The British pride themselves on the anti-metaphysical strain in their make-up and with good reason. Their philosophy is empirical and their politics Benthamite with the result that their revolutions are bloodless and their socialism Fabian. Even their glamour girls (Beatrice Webb) and stormy petrels (Richard Crossman) are happiest pottering about blue books and devising pension schemes. The British hero is the civil servant who produces, as the late Lord Beveridge did, a report on social security. Lord Beveridge lived long enough to see his ideas become commonplaces at least in his own country but elsewhere, as in India, we have not even touched the fringe of the problems for which he provided answers for use in his country. I remember the animated but somewhat unreal discussion in the country in the immediate post war years of the four pillars of social security that he had enunciated. Curiously, he was a Liberal rather than a Labourite and yet it is not so curious since the first beginnings of social security legislation in England were made by a Liberal Government before the first World War. India could do with a number of disinterested experts like Lord Beveridge, men who would find congenial the not very exciting tasks of thinking in detail on our economic problems and produce solutions for specific ills. Our celebrated metaphysical streak and—let us face it, laziness—find such preoccupations exceedingly dreary and make us plump for total solutions that are no solutions at all.

Budget Debate

NO Finance Minister, as Mr V. K. Krishna Menon said in Lok Sabha during the Budget debate, could be expected to revise his tax proposals immediately after the discussions. Equally, no Finance Minister could hope to escape a severe mauling once every year, when he asks the House to approve the Budget. Mr Morarji Desai has been luckier in this respect than his predecessors, for both the House and the country have treated him with the greatest consideration. Many wondered whether his luck would hold this time also when he had taxes for all and concessions for none. All things considered, Mr Desai has reason to be satisfied with the tenor of the debate in Lok Sabha which, more than anything, has highlighted the overwhelming support for the major objectives and magnitudes of expenditure incorporated in the Budget proposals. Only the leader of the Swatantra party suggested that the tax burden could have been reduced if Government were prepared to shed their inhibitions about accepting generous offers of aid from friendly countries.

Massive support was also forthcoming for the view consistently taken by the Government, that additional defence expenditure should not be at the expense of development, though some members spoke of dropping non-essential schemes, and Mr M. S. Aney asked whether all that goes under development is related to defence. On the other hand, Mr V. K. Krishna Menon regretted that the provision for plan programmes for 1963-64 had been reduced by about Rs 88 crores from the figure indicated by the National Development Council. Even as a member of the Planning Commission, he confessed, he could not understand the distinction made between physical and financial targets.

Another point on which there was unanimity was the need for economy in Governmental expenditure. Most of the speeches elaborated the point neatly made by Mr Nath Pai, that the moral basis of the fiscal effort demanded of the people was matching effort in the administration to curtail expenditure. That austerity should be visible was suggested by more than one speaker and Mr R. K. Khadiolkara asked: "Why not make austerity conspicuous as far as Government is concerned?" In this atmosphere, it was inevitable that the sorry business of Ministers' electricity and water bills should get a further airing. Not many were prepared to be as magnanimous as Maharajah Karni Singh of Bikaner, who felt that Ministers should live according to their station. The

Finance Minister was obliged to devote a good part of his reply to the debate to dealing with this prickly question and finally sought to satisfy the House by taking the entire blame on himself, for, he said, it was his business to look into the matter as the bills were passed by his Ministry.

The imperative necessity of holding the price line was stressed by most speakers and many were sceptical about Government's ability to carry out its undertakings. Mr Indrajit Gupta related the question of price stability to the Industrial Truce Resolution adopted by the tripartite conference immediately after the declaration of Emergency which, he said, imposed a responsibility on the Government to ensure that prices did not rise.

Despite the impressive support to the Budget as whole, none of the tax proposals escaped attack. And the criticism that were advanced cut across party lines. It was to be expected that concern for the 'Common Man', which all members share should find expression in a vigorous onslaught on the indirect levies, but it made no visible impression on the Finance Minister. In contrast there was sharp difference of views on the Super Profits Tax, which, however, did not conform to party alignments. Members from both sides of the House who supported the principle of the tax for consideration of the difficulties of small and medium units. Criticism of the tax was, however, pitched in a lower key than those voiced in other forums. Views pro and con of business magnates on the Congress benches who spoke on this tax were evenly balanced. While Mr P. D. Himmatsingha and Mr Rameswar Tanti were sure that the tax would deplete the funds available for expansion, two other industrialists, Mr Murarka and Mr D. D. Puri, considered that the scheme of the tax was justified and that it was necessary in the situation facing the country. Mr Puri suggested that the tax base should be the capital employed and not capital and reserves. He also said that the exemption limit should be raised from 6 per cent to 10 per cent, or 8 per cent, and that if in any year a company did not make profit up to this limit, the scheme should allow the shortfall to be carried over to subsequent years on the analogy of business losses. Banking companies, he said, would be affected by the tax and this was a matter which should be looked into.

Mr Murarka who extended wholehearted support to this tax measure pointed out that, after payment of the tax, companies are likely to face difficulties as a result of shortage of working capital as very little retained profits would be available for the purpose.

Mr Baliram Bhagat, Deputy Minister for Finance, who spoke on

Friday dealt with many of the detailed points of criticism and gave a reasoned explanation of the disparity between estimates of revenue and actual collections which has been a regular feature of the budgets for the past several years and had drawn a good deal of critical attention in the House and outside. For one thing, yields of Excise and Customs levels which are introduced in the middle of the financial year could not be anticipated when the estimates are prepared. Moreover, budget proposals for a year are announced on the 28 of February in the preceding financial year and the additional Excise and Customs duties come into force from the First of March. The collection for the month of March are included in the actuals of the respective financial year. There is no possible way by which the additional collections in March could be included in the relevant budget estimates which are prepared fifteen months earlier. During a period when the coverage of Excise Duties is being progressively extended and rates are increased, the 'revised estimates' and 'actuals' are bound to be higher than the budget estimates. For the rest, Mr Bhagat said, greatest care is taken in preparing the estimates. There was not deliberate attempt to understate revenue on the part of Government, though it was true that if there was uncertainty, they preferred to err on the side of caution.

The Finance Minister, in his reply, to which interruptions lent interest and excitement, did not announce any tax concessions or even hold out any hope in this regard. He was firm in rejecting demands for reducing the duty on kerosine and other articles of common consumption and firmer still in regard to suggestions to scrap prohibition or to impose the salt tax. He regretted that a scare was sought to be raised that the Super Profits Tax would deter foreign participation in joint ventures, and considered that replacement of this tax by raising the rate of corporation tax would not be equitable. He indirectly conceded that the tax may impede capital formation when he said that proposals were under consideration to set up an Investment Trust which would extend facilities of investment in equities to a growing number of small investors. (It is learnt that the proposals are likely to be finalised before the middle of next month and it is surmised that these will include an element of tax concession to small investors).

While the Finance Minister made it clear that Government would not give up the Super Profits tax he indicated that the difficulties that are likely to arise are being studied. This has strengthened hopes of some modifications of the scheme on the lines suggested by representatives of industry whose views carry great weight with Government. He also indicated that Government was studying the suggestions that had been made for improvement of the Compulsory Savings Scheme which was a favourite target of criticism.

Many speakers had drawn attention to the drawbacks of the scheme and the hardships it would cause to the lower income groups. But only Mr Sezhan of the DMK cared to buttress this claim with statistical data which cannot be easily brushed aside. Drawing upon the findings of a Survey of Savings carried out by the National Council of Applied Economic Research, he made the point effectively that, as far as households with disposable incomes below Rs 3,000 per year were concerned, far from saving they were actually dis-saving. The extent of dis-saving ranged from Rs 125 in the case of households with income below Rs 1,000 to Rs 24 to the income group Rs 2,000 to Rs 2,999. Mr Sezhan pointed out that the lower income groups are unable to save and that what savings are effected are heavily concentrated in the higher brackets. So far as the lower income groups are concerned they have nothing but their indebtedness to offer and they are not able to save under the present conditions. Mr Sezhan also suggested that payment of salaries above Rs 5,000 per month should be subject to Government's sanction and that the compulsory savings scheme should be applied to salary increments above Rs 2,000 per mensem, or at least fifty per cent of such increments should be put in compulsory savings to be repaid five years later.

Mr Sezhan is a young member who speaks on economic topics fortifying his arguments with relevant information. Earlier, during the debate on the Gold Control Order, he drew attention to the pitiable plight of the large community of jewellers in Trichinopoly who specialise in the manufacture of synthetic stone jewellery. There are about 50,000 people engaged in this trade. Mr Sezhan said that about Rs 90 lakhs worth of synthetic stone jewels are lying as dead stock with wholesalers and retailers following the Gold Control Order. To convert the jewellery made of 22 carat gold into 14 carat gold would involve financial loss, for apart from the labour the stones are fragile and will break if removed from their setting entailing a loss of forty to forty-five per cent of their present value of the ornaments. Mr Sezhan told your correspondent that these people are prepared to hand over all the stock of 22-carat jewels to Government or any Government controlled organization and accept the international value of the gold content. But conversion to 14 carat would cause financial ruin. The business is run on credit, and they have to pay heavy rates of interest on the value of the unsaleable stock.

In this context it may be mentioned that the Finance Minister informed Rajya Sabha on Monday, in a written answer to a question by Mr Dahyabhai Patel, that the export of jewellery and ornaments is permitted under certain conditions. It is open to dealers, where the cost involved is not very high to convert items into 14-carat ornaments. The answer also stated that the question, whether any other action should be taken to facilitate the disposal of jewellery ornaments, was under consideration, but the value of the items still remaining unsold is not very high.

Markets

JUTE Outlook for Sacking

The jute goods market has developed a quiet trend during the past few days as overseas enquiries are few and far between. Following the statement of the Chairman of the Indian Jute Mills Association at the annual general meeting of the Association last week that the present phase of prosperity in the jute industry is likely to be only transitory in view of the growing competition to our sacking exports from Pakistan sentiment has been adversely affected. The jute mills industry in Pakistan enjoys a number of advantages over the Indian Mills. In the first place it is getting good quality raw jute at a much cheaper price than the Indian industry. Secondly, the wages in Pakistan are lower than in India and the Pakistani industry has an export bonus scheme to give it tremendous advantage in the export field. Mr Bajoria has pointed out that these advantages together give the Pakistani jute mill industry a cost advantage of about Rs. 400 a ton. With these favourable factors, the Pakistani industry is able to under-quote Indian Jute goods in the

export market and the result is that foreign buyers place their orders first with Pakistan and come to India only when Pakistan is not able to supply their entire requirements. Encouraged by its success on the export front, the Pakistani industry has launched an ambitious expansion programme and it is expected that by 1965 it will have a large exportable surplus. This will mean that more and more of our sacking markets would be usurped by Pakistan and consequently our exports of sacking would progressively diminish.

The position has already deteriorated considerably as will be evident from the fact that since 1957, 60 per cent of the market in Burma, 37 per cent in Australia and 63 per cent in Peru have been lost as a direct consequence of the growing competition from Pakistan. During the past year which has been quite a good year for the industry, sacking exports have tended to be downward from the middle of the year. Prices in sacking have declined rather sharply and from the large stocks of this category of goods with mills at the present juncture it is clear that sacking goods are not moving fast. Mr Bajoria has pointed out that unless some temporary help is given to the industry to neutralise the advantages of Pa-

DESPATCHES OF JUTE GOODS FROM MILLS—February 1963.

kistani industry in the export markets, exports of Indian sackings will continue to fall. While the position of hessian exports is comparatively better as there is no immediate threat of much competition, even here exports can be maintained only if our products are at once cheap and of good quality. The threat here is from substitutes and bulk handling. The Indian Industry has made substantial headway during the past year in the production of carpet backing for which there is an expanding market in the US. But even while the number of broad looms are being rapidly increased, the industry has to take note of the fact that efforts are being made in the US to develop a synthetic substitute for carpet backing. Such threats can be countered effectively by our jute industry only if its programme of rehabilitation and modernisation is completed with speed. But it looks as though Government is not mindful of this urgent need for increasing the efficiency of the industry because the Super Profits Tax in its present form will make it impossible for jute companies to find any funds to plough back into the business.

The jute goods market started the week on an easier undertone following indications by the

Chairman of the Indian Jute Mills Association that the outlook for exports is not very encouraging in view of the growing competition from Pakistan. In later dealings however sentiment slightly rallied and this was due mainly to some scattered enquiries in hessian prices for which as a consequence tended to be steeper. It was reported that following a rise in burlap consumption in February as compared to January buying interest from US might revive. Scattered enquiries for hessian from Argentina were also reported during the week. Conditions in the sacking section however continued to be quiet in the absence of fresh foreign enquiries. Conditions in the raw jute market were also quiet in sympathy with the goods section. Although indications were that arrivals were declining, holders were keen to sell even at discounted rates.

Around midweek it was reported that burlap consumption in US in February had touched a record level. Consumption was up by 21 million yards to be placed at 89 million yards. As was to be expected the news imparted steadiness to the hessian section, but there was no follow through support partly because as against the sizable increase in consumption there has not been a corresponding fall in stocks in that country. As a matter of fact stocks had declined only by 2 million yards to be placed at 304 million yards as at the end of February. It is evident that the smart rise in consumption in February is not due to any natural rise in consumption, but is a result of the disruption caused to normal movement of supplies during January to consuming points in US on account of the dock strike. Although there have been some fresh enquiries during the past week, sentiment relapsed into a quiet trend after a short interval of rising prices immediately after the news of the rise in burlap consumption in February was received. While it may not be correct to say that fresh US buying would sizably decline in coming months in view of the heavy stocks of burlap in the country, it is at the same time to be expected that the rate of buying will not be as fast as in the past year. Moreover this is the time of the year when generally burlap offtake slows down.

COTTON Sharp Set-back

The Bombay cotton futures market during the past week sustained an unanticipated set-back though the market ruled initially firm. The weakness was attributed to a break in spot prices due to the lack of renewed mill demand. Another significant factor which contributed to the downturn was the general depression in other commodity markets consequent on the burdensome levies imposed by the Union Finance Minister. Mills are also faced with an acute financial stringency which had telling effect on the offtake in the

market. The cumulative effect of all these was a sharp fall in May contract by about 18 points in the week under review and the maturing March contract recorded a net loss of Rs 4.50.

The Jarilla March contract fluctuated narrowly between Rs 725.00 and Rs 715.00 per three quintals before finally closing at Rs 720.50. There were no tenders even on the fifth notice day. The Jarilla May contract on Thursday slipped down to Rs 694.00 from Rs 712.00 but on Friday it recovered to Rs 697.75 thanks to bear covering and congenial advices from the oilseeds market, before finally closing the week at 695.00.

In the spot market at Sewri some growths like Wagad lost about Rs 15.00 per candy. Stray buying in Digwaj, L 147, 197/3, CO 2 and Kalyan was reported in the week under review.

In the export front the demand for Bengal Deshi has broadened. Total sales registered for export have gone up to 36,310 bales against the quota of 75,000 bales released recently. The other short staple variety released for exports has not so far met with any demand.

In the import section American cotton met with good demand. All other import growths were practically neglected.

Consumption of cotton by the domestic cotton textile mills during the first four months of the current season amounted to 18.61 lakh bales

against 19.25 lakh bales in the relevant period of the previous season. The stock with the mills at the end of December 1962 stood at 8.40 lakh bales against 12.70 lakh bales at the end of September. The supply and distribution of cotton in the current season disclose a surplus of 21.61 lakh bales at the end of season assuming a supply of over 80 lakh bales of both domestic and foreign growths. The estimated cotton crop for the season is put at 53.50 lakh bales which along with the carry-over of 17.43 lakh bales and the imported 9.68 lakh bales add up to 80.61 lakh bales.

The February-March review of the world cotton situation published by the International Cotton Advisory Committee in Washington last week reveals that supply of raw cotton has reached a peak level. On a world basis, supply is estimated higher by nearly 15 million bales at 690 million bales. Excluding the communist countries, total supply this season is placed approximately at 53 million bales against 51 million bales in the 1961-62 season. As the review states "it is becoming increasingly evident that prospects are for a lower total consumption this season with the most marked reduction in the United States where, at its present rate, consumption is estimated at 8.3 million bales against 9.0 million bales in 1961-62." The expectation, however, is that the international trade in raw cotton will be maintained at nearly the 1961-62 level. Demand from the Soviet

Union, Formosa and Eastern Europe has been running ahead of the previous season's rate.

The anticipatory relatively high volume of total export demand should offer many countries good prospects for expanding exports but this, in turn, is likely to impinge on the market for the American growth. The US authorities have recently scaled down the estimates of exports this season and the general feeling is that despite the expanded facilities provided under the several government programmes exports are unlikely to amount to the present estimate of 4.5 million bales. This would be third successive fall in the United States exports since 1959-60 peak.

On the contrary, the review discloses that the exports from most of the other major cotton producing countries will be larger this season, especially from Mexico, Central America, and the Middle East.

Under the influence of a very heavy movement of cotton into the Government loan and symptoms of improved demand, the trend in cotton prices in the United States has looked up recently. Earlier in the season prices of American growths in the overseas markets generally followed the US trend. This has the effect of reducing the discounts under comparable US grades and staples and has eventually tended to improve the competitive position of American cotton.

Prices of extra-long staples rule firm. Egyptian selling rates remain

unaltered but prices of these varieties in the foreign markets have shown a modest improvement. Prices of Sudan cotton hover around the reserve level.

PIECEGOODS

The cotton piecegoods market in Bombay continued to present a subdued trend during the past week also. The anticipated revival of demand in the domestic sector failed to materialise while the export sector maintained a somewhat steady trend.

The trade is viewing with concern the failure of upcountry demand to pick up even after the holi season. It was reported that owing to the heavy accumulation of cloth with the upcountry traders and local merchants those centres were disinclined to make any commitments. The stringent conditions in the monetary market was another disturbing factor. The remittances from the upcountry centres were also irregular. The mills, on the contrary, were firm in prices for immediate delivery obviously due to the depleted stocks with them. But some of the mills were reported to have made commitments for future delivery at slightly reduced prices.

Stray demand in seasonal goods like mulmul, cambrics, lawns and bleached longcloth was noticeable. The prices of these goods remained firm due to short supply. Grey goods tended to slip down as the demand from the processors was conspicuously absent. Prices of other varieties remained unaltered.

Moderate business in usual varieties was transacted with the UK at slightly reduced prices. Sudan accounted for a small quantity of dorais, printed and dyed voiles. East Africa's interest was confined to sheetings, gadlapi and blankets though the offtake did not come up to the expected level. Scattered transaction with Ceylon was reported against licences released recently. Singapore accounted for a limited quantum of canvas, drills, sheetings and bleached longcloth. Restricted quantity of shirtings and coatings was booked for Australia during the week under review. Despite good enquiry, trading with Burma was only a trickle. A sizable quantum of bleached mull was booked to Iraq.

TEA Replanting Subsidy Suggested

WHILE welcoming the abolition of the export duty on Tea, the Chairman of the Tea Trade Association of Cochin has stated that the surcharge on excise duty, payable by the producers, will mean a further inroad into estate profits. He has suggested that a small portion of the cess collected from export should be spared towards replanting subsidy, since many estates are just not able to afford the interest on the replantation loan offered to the Tea Board.

It is stated that as most of the tea estates in the South are old and of poor quality and low yielding, something has to be done to keep abreast of the situation. It is added that any delay in replantation will impair the competitive position of South Indian tea in the world market.

Regarding the 5 per cent sales tax levied on tea in Kerala, it is said that it is acting as a real drag on the development of Cochin as an auction centre. It is also added that this levy is too great and, therefore, a simplified single point collection will be advantageous to all concerned.

Meanwhile, questions have been asked as to why South India is fetching a price for its tea about 25 per cent lower than Ceylon's in the world market. According to a report released from Cochin, the various explanations given seem to have not satisfied those who have put the questions. Some producers have admitted that South India has gone more for a bigger crop than a higher quality in order to spread the increasing cost. But a more pertinent reason may be that nearly 40 per cent of the tea offered by Ceylon in London consists of high-grown, whereas the only high-grown offered by South India in London are Nilgiris and some Kanan Devans, the total of which is only about 15 per cent.

According to the Secretary of the Ceylon Chamber of Commerce, the immediate effect of India's decision to abolish the export duty on Ceylonese tea will not be very adverse. The Secretary adds that, although Ceylon has agreements with the Middle East, the position may be different in the long run, as Indian competition can make West Asian countries review their agreements with other countries. With shipments of 32.47 million pounds in December, exports of tea from Ceylon increased to 451.63 million pounds in 1962 from 425.72 million pounds in 1961.

Meanwhile, no Export Sale was held in Calcutta this week. In the Internal Sale, offerings amounted to 28,539 packages of Dusts. There was a strong demand, which eased slightly towards the close. Medium CTC were well supported at easier rates although the better liquoring sorts were sold well. Good CTCs were a strong feature and were well competed for with some attractive prices being realised.

Plain and medium orthodox teas were the strongest feature and met with keen competition and realised considerably dearer rates, although, at the close, medium orthodox descriptions were generally firm. Legg-cut teas were also sold well at higher rates. Following rates (per kilo) were quoted:—Plain Orthodox Dust Rs 4.30 to Rs 4.70; Medium Assam Dust Rs 4.80 to Rs 5.40; Legg-cut Dust Rs 5.20 to Rs 5.70; Medium Assam CTC Dust Rs 5.50 to Rs 6.10 and Good Assam CTC Dust Rs 6.70 to Rs 7.10.

Arrivals of tea in the Calcutta Port increased to 173,206 chests during the past month from 140,599 chests in the corresponding month of last year. In the eleven months ended February 1963, however, total arrivals were lower at 4,774,686 chests as compared to 4,984,337 chests in the similar 1962 period. While arrivals by rail and road, increased from 1,390,259 chests and 394,596 chests in the eleven months ended February 1962 to 1,593,620 chests and 483,380 chests respectively in the period under review, those by river and air declined from 3,051,909 chests and 147,573 chests to 2,588,840 chests and 108,846 chests respectively.

In the Cochin market, a quantity of 330,000 kilogrammes of Leaf tea was offered for export this week. Against good demand, Plain and low Medium teas were tending easier, while Medium and Good Mediums were strong and dearer. High-grown broken were easier, while Fannings were about steady. Unorthodox descriptions were firm to dearer.

In London auction, offerings were 78,390 packages. Demand for the better quality invoices was considerably improved and prices realised were mostly dearer; but the poor and lower quality descriptions from all the producing

centres attracted less attention and generally ruled irregular and often easier. This was particularly noticeable in the British African offerings, where prices fell by up to 3d per pound during the final stages of the sales.

Tea stocks in London, as on 9 March, totalled 152.71 million pounds as against 150.98 million pounds in the previous week. The total quantity to be landed on the same date was 25.76 million pounds. Total afloat was 32.78 million pounds including from Calcutta 19.35 million pounds; from Chittagong nil; from Cochin 811,530 pounds; from Ceylon 10.53 million pounds and from other Ports 2.08 million pounds.

Coffee Prospects

ACCORDING to a report from Cochin, the untimely rains in Mysore, Coorg and the Nilgiris have spoilt Coffee prospects for the coming season. They have prematurely brought out the blossom on coffee trees while picking of the old crop was not wholly completed. Coffee-growers are looking forward to a good crop next season, as they had picked a poor crop in 1961-62.

The Marketing Committee of the Coffee Board has placed the estimate of the 1962-63 crop at 53,050 tonnes, comprising of 33,000 tonnes of Arabica and 20,050 tonnes of Robusta. The deliveries in to the Pool out of the 1962-63 crop up to 1 March 1963 amounted to 32,239 (24,129) tonnes, consisting of 22,176 (18,577) tonnes of Arabica Cherry and 4,950 (2,163) tonnes of Robusta. Figures within brackets indicate the corresponding receipts into the 1961-62 Pool last year.

A total quantity of 2,517 tonnes of coffee was released in the internal market during February 1963. The total internal releases, till the end of February 1963, amounted to 5,001 (5,143) tonnes. A total quantity of 1,649 tonnes of Plantation variety was sold for export out of the 1962-63 crop up to 1 March 1963.

CASHEW Keen Export Demand

The markets for the Cashew-kernel and the raw nut have been ruling firm. There are now buyers around 44 cents a pound, while sellers are reluctant to release stocks at this level. The United States is said to be in the market, though its purchases have not been substantial. But the firmness in prices is attributed to the keen enquiry from the Communist countries. East Germany is reported to have bought substantial quantities at the Leipzig Fair.

The raw nut market has firmed up correspondingly maintaining a rather unusually high disparity as compared with the kernel market. Business in raw nut has been done around Rs 655 a ton as against Rs 625 quoted a few days ago.

Following were the 1962 exports to the major buyers in the Communist bloc with the corresponding figures in brackets for 1961 (in cases of 50 pounds):—USSR 231,581 (174,642); East Germany 160,363 (88,100); Bulgaria 34,037 (negligible) and Yugoslavia 17,650 (1,022).

Exports to the major buyers outside the Communist bloc were all lower and these were as follows:—USA 1,110,850 (1,124,341). UK 108,874 (149,498); Canada 62,816 (70,147) and West Germany 43,853 (52,161). Australia and Japan bought slightly more. Australia bought 63,173 cases in 1962 as against 59,264 cases in 1961. Exports to Japan amounted to 12,387 cases against 10,482 cases.

NON-FERROUS METALS Mixed Trend in Prices

Prices on the Bombay Non-Ferrous Metal market continued to show a mixed trend. Prices of Copper, coil and wirebars showed only small changes, although support to the inferior varieties was lent, presumably due to the tight supply position of the superior descriptions. Dealers, however, preferred to await the import policy announcement, expected at this month-end.

After early steadiness, Zinc declined on increased offerings due to monetary stringency. The market for Tin, however, continued to rule firm, induced by the tight supply position and higher advices from the upcountry centres. Lead prices were well maintained.

YARN Imported Variety Firm

Mixed trends were witnessed in the Bombay Yarn market. Indigenous Art Silk yarn continued to rule easy, while the imported variety was firm. Certain deniers of indigenous art silk yarn were quoted even below the mill rates. This was attributed to the buyers' apathy. The recent fall in prices has reduced the margin of the actual users, who normally sell their quotas in the free market. They are, therefore, reluctant to take deliveries from the mills who, in their turn, are faced with the accumulation of stocks.

Since the mills are reported to be trying to get the permission from the authorities to dispose of the unlifted stock in the free market, traders have developed a

cautious attitude in extending their commitments. It is felt that the offers by the mills will pull down the prices further.

Imported Art Silk yarn was steady. The prices of certain deniers of Bemberg yarn showed a moderate improvement over the previous levels. In the case of cotton yarn, coarse counts have appreciated by about 37 nP per pound, while the improvement in the finer varieties was of the order of about 12 nP.

SUGAR Prices Steady

Despite the recent release of 225,000 tons for sale in the open

market, Sugar markets have continued to rule steady. This is mainly due to a feeling among the traders that a sizable fall in prices may not be possible as the production during the current season is substantially lower.

The present attitude of not lowering their prices by the stockists, especially in Bombay, has stemmed from their fear that Maharashtra may not be allotted a larger quota this time. The overall tight supply position resulting from the lower production this season has also emboldened them.

Meanwhile, the Government feels that the sugar industry's production estimate of 2,082,000 tons is inaccurate as the recent trends in output have not been taken into

consideration by the industry. The Government is believed to have asked the ISMA to reconsider the season's estimate and calculate production up to 15 March. The ISMA Committee is scheduled to meet sometime towards the end of the month.

CHEMICALS & DYES Sluggish Conditions

Conditions in the Bombay market for Dyes and Chemicals continued to remain dull with prices displaying a downward tendency. The weakness of the market was attributed to paucity of funds and

the absence of demand from the upcountry centres. Supplies from the State Trading Corporation were also reported to be regular. On the other hand, there was a selling pressure from the stockists.

It was, however, encouraging to note that, while the overall tendency was downward, certain items such as Bleaching Powder showed a slight improvement in prices, thanks to a revival of demand and shortage of goods.

GOLD & SILVER Silver Depressed

After ruling initially firm, prices of Silver on the Bombay Bullion Exchange displayed an easier tendency following increased supplies. Arrivals were as much as 32 bars as against an offtake of 16 bars. The initial firmness of the market was attributed to the Finance Minister's reported refusal for permitting forward trading and the higher advices from London and New York. The rate for the spot position in Bombay was quoted at Rs 239.

In New York, silver touched a new high level of 1.28 dollars per fine ounce. The proposals of the Kennedy Administration to alter the US silver legislation found general support from producers of silver and from users of the metal. The proposed changes in the law will allow the Government to switch its one-dollar paper currency from silver certificates to Federal Reserve Notes.

The Gold section remained generally steady with the rate quoting around Rs 102. Sovereign was placed at Rs 74.

OILS & OILSEEDS Modest Improvement

The Bombay market for Oils and Oilseeds recorded slight improvement in prices under the lead of Groundnut following the buying by vanaspathi manufacturers. Bold Ready was quoted at Rs 41 and Groundnut Oil at Rs 16.10.

In the Castorseed section, the bullish turn in the situation was accentuated by the revival of optimism in connection with castor oil exports. There were reports of increased enquiries from the East European countries and some shippers claimed fresh business too, although the quantity and the prices realised were not released. Castor ready was quoted at Rs 31.75 and Castor Oil, commercial quality, at Rs 12.50.

Speculative support from North India was mainly responsible for a moderate advance in linseed. The turnover in the spot section was somewhat better following the periodical purchases by the paint manufacturers. Linseed ready was quoted at Rs 30.87 and Linseed Oil at Rs 12.25.

The Chartered Bank

The One Hundred and Ninth Annual General Meeting of The Chartered Bank will be held on April 3rd at Bishopsgate, London, E.C. 2

The following is an extract from the Statement by the Chairman, Mr V. A. Grantham, which has been circulated in the report and accounts for the year 1962.

THE BANK'S BALANCE SHEET

In 1961, because our balance sheet total had shown a very substantial increase over that of 1960 after rapid progress in previous years, I felt bound to warn that there were factors that might affect our further progress although I hoped that increased business resulting among other things from the opening of new branches and the increase in our capital and reserves would outweigh these factors. In the event we have had another good year and our Balance Sheet shows an increase of no less than £40 millions, standing at the record figure of £402 millions.

The Consolidated Balance Sheet total of £468 millions, which includes of course the figures of The Eastern Bank shows an increase of £60 millions over that of last year and is an all-time high.

In view of these figures we have deemed it wise to increase our allocation to Reserve Funds.

CONSOLIDATED PROFIT AND LOSS ACCOUNT

The profit we show for 1962 of £1,076,748 is up £86,510.

While we are doing all we can to increase our efficiency by the introduction of mechanisation, this much larger business of ours has entailed increases in overseas staff and in all parts of the globe costs, and in particular salaries, have risen and still show a tendency to rise. We are fortunate so far that our income has enabled us to keep pace with these increases and I think it will be agreed that the result achieved in this not altogether easy year is satisfactory. Our stockholders have benefited by the increased dividend distribution arising from the rights issue made at the end of 1961. The total distribution is £50,531 higher.

With the balance brought forward from the previous year of £540,648 the amount available for allocation totals £1,617,396 out of which we have transferred £450,000 to Reserve Funds which now stand at £7,700,000. The interim dividend of 7½ per cent. less income tax paid in September last, absorbed £303,187 and it is now proposed to pay a final dividend of 7½ per cent. less income tax costing £303,188. This leaves a balance of £561,021 to be carried forward, an increase of £20,373 on last year's figure.

THE IRANO BRITISH BANK

The business of our associate in Iran continued to expand though perhaps, due to a general slowing down of the internal economy, less

rapidly than we had hoped. The results of operations during the bank's third full year, which ended in March last, justified the declaration of a small dividend similar to that of the previous year and it is confidently hoped that this will be maintained.

A report on Iran is included in the overseas survey.

OVERSEAS SURVEY

Our sphere of operations is largely in what are known as the developing countries and it was gratifying that the Managing Director of the International Monetary Fund, at the 1962 meeting, should give such a direct assurance of the Fund's intention to help overcome their difficulties in earning sufficient foreign exchange for their needs. These difficulties arise largely from the fact that the developing countries are in nearly every case primary producers and as such are at the mercy of world commodity prices. For some time the terms of trade have been getting steadily more unfavourable for primary producers, because the trend of commodity prices has been downward, while manufactured goods have been becoming more expensive.

As I pointed out last year, export earnings are the main source of foreign exchange for economic development in Asia, because external aid however generously given can only be marginal to total requirements. The first task therefore, is to see that violent fluctuations in commodity prices are avoided, if necessary by such means as international commodity agreements and stockpiles, and that a reasonable return on the cost of production and shipment is obtained. The second is to ensure that the markets of the industrial countries are kept open to the products of the developing countries, which means multilateral rather than regional trading. World trade has been expanding, but the greater part of this increase has been shared among the industrial countries and little benefit has accrued to the developing countries. A high level of business activity in the industrial countries is of obvious importance to the developing countries because it stimulates demand for the raw materials the latter produce. Many Asian countries, however, are now developing manufacturing industries of their own and as output grows and quality improves, their manufactured products are entering world markets. A heavy responsibility lies on the industrial countries to ensure that their trading policy does not dis-

criminate against manufactures from Asian and other developing countries, for those countries must export to survive and the best aid they can be given is to buy the goods and commodities they produce.

Fortunately there is now a distinct trend in the world towards freer foreign trade and the lowering of tariff barriers, but if the developing countries want to take full advantage of this, their own commercial and financial policies will need revision in some important respects. It would seem that those countries which are wedded to state trading and inter-governmental barter agreements must permit more freedom and allow more scope to the private sectors of their economies, because recent experience has shown that in such conditions a more rapid improvement in living standards is possible. In those parts of the world which our Bank serves, Malaya and Thailand have long enjoyed the benefit of a free economy and now the Philippines has successfully lifted exchange and import restrictions, while Hong Kong remains a shining example of how the process of economic development can be accelerated by conditions favourable to business enterprise.

The abrupt conclusion of the Common Market negotiations must compel some urgent reconsideration of their position by the developing countries. We can only hope that in the absence of Britain's influence, the Community in Europe will not lose sight of its moral obligations to these countries.

CYPRUS

The Republic's first five-year economic development programme, announced in 1961, is slowly getting under way and there have been encouraging offers of aid from friendly governments and industrial groups. For the mining industry and fruit growers it was an average year but, notwithstanding an unexpected windfall from the high price of potatoes in foreign markets, there was again an adverse trade balance of approximately £22 millions. This will be partly offset by the expenditure of about £15 millions by and on behalf of the armed services in the bases. With the government adopting a liberal attitude towards imports there seems little chance of an improvement in the position and Cyprus, with this balance of payment problem, must still look mainly to increased agricultural output to pay for the extra machinery and manufactured goods to be imported.

LEBANON

The year was politically uneventful and trading conditions, though far from buoyant, showed some improvement. Beirut is no less vulnerable than other centres of entrepot trade and in recent year various disagreements between the Arab States have reinforced the usual tendency for foreign traders to bypass the entrepot. The transit trade of the Lebanon is relatively unimportant to the national economy and fortunately what there is consists mainly of oil flowing through the pipe-lines, for the merchandise transit trade is now only one-fifth of what it was five years ago. It is hoped that the tourist trade, which is now said to yield L£150 millions per annum, can be substantially improved.

IRAQ

It is too early yet to say whether the new government of Field-Marshal Arif, which has now received general recognition, will be able to settle the Kurdish trouble and also restore friendly relations with some of its neighbours, but at least there is an indication that it will take a realistic view towards the oil industry. This is of paramount importance for Iraq's economic stability still depends largely on the maintenance, and even increase, of its oil shipments. Oil production and oil revenue showed a modest increase in 1962 but an unknown factor so far is the operation of the Iraqi National Oil Company, which was set up during the year with wide powers, including the exploitation of areas allocated to it by the government.

One can, however, be optimistic about Iraq's future as its economy is fundamentally sound and has great scope for development.

THE GULF

Bahrain. Bahrain remained quiet during the first year of the Ruler's reign and had on the whole a fairly prosperous year. The local production of oil was once more steady and the refinery throughput, which includes crude from the mainland, again showed a considerable increase.

Doha. The Qatar State continues to make progress. The public works mentioned in my last statement were continued and the chief new activity in 1962 was road construction. Exports of crude oil again showed an increase and off-shore production is expected to begin within two years.

Sharjah. The signing in June of an agreement between the Ruler

EXPERT ATTENTION TO YOUR EXPORT PROBLEMS

We can help EXPORTERS to expand their business by providing pre-shipment finance. We can advise EXPORTERS of trade enquiries, put them in touch with foreign buyers, and obtain credit information and status reports on foreign buyers.

We can give to EXPORTERS effective Letters of Introduction on our Foreign Branch Managers and Correspondents, provide them with Travellers' Cheques, Foreign Currency Notes, and Letters of Credit—when they travel.

We can collect and negotiate for

EXPORTERS all types of foreign bills; give Excise guarantees where necessary and guarantees under Export Promotion Schemes; and buy various foreign currencies, at the finest rates, both "spot" and "forward".

We can advise EXPORTERS on matters concerning import restrictions, duties, etc. in foreign countries.

With our 14 branches overseas and correspondents in almost all parts of the world, we are well equipped to handle FOREIGN EXCHANGE BUSINESS of any description.

THE BANK OF INDIA LTD.
T. D. KANSARA, General Manager

B/C/147

and an independent American oil company has given local encouragement to hopes for Sharjan's future, though the search for oil has yet to begin. Market conditions improved a little, with a growing demand for building materials. Various development projects, including one for a piped water supply, are under consideration.

Abu Dhabi. Orderly development of the town area is now beginning. A modern hotel has been built and opened; contracts have been awarded for the first stage of the town plan, which included the construction of a jetty and certain roads; and projects for a power station and a water distillation plant are under consideration. Not surprisingly there is a shortage of labour and wages and costs have risen sharply. Shipments of oil from Das Island began during the year and increasing interest is being shown in Abu Dhabi as an important oil State. An office of The Eastern Bank was opened at Al Ain (Buraimi) on 15th December 1962.

HADHRAMAUT

Mukalla. The search for oil continues and drilling may start early in 1964. In the meantime various development plans are being considered by the Qaithi government, and it is understood that a five-year programme costing nearly £2½ millions may be undertaken with assistance from the Colonial Development and Welfare Fund.

Seiyun. The Eastern Bank's new branch at Seiyun in the Kathiri State opened for business during the year in temporary premises. Like the Qaithi government the Kathiri government is deeply interested in the current search for oil. The State has old trading connections both with Aden and with the Far East, but its own natural resources are relatively small, and a new source of revenue would be most welcome.

ADEN

Last year I mentioned that a closer association was probable between Aden Colony and the Federation of South Arabia, the latter comprising most of the states in the Western Aden Protectorate and one from the Hadhramaut. A treaty providing for the accession of Aden to the Federation was signed in January 1963 and took immediate effect.

Whilst economically there are obvious advantages in welding Aden and the hinterland into one unit, these advantages are by no means all on the side of the States. Aden Colony, in marked contrast to the interior, is at the moment immensely prosperous but that prosperity is largely dependent upon expenditure in connection with the British armed forces stationed in the Colony. If the investment in the British military base is not maintained at its present level the Colony might lose its

comfortable economic position and, in the absence of any worthwhile local industrial development, would have to rely more and more on the development of the States in the interior into prosperous trading partners. Aid from the British government to provide adequate roads in the Federation, and thus facilitate further trade and development, should help a smooth change in the emphasis of wealth within the area and a broadening of the economic basis of the Federation.

IRAN

Economic issues have been overshadowed by political news in the last few months and two events of particular importance have occurred. H.I.M. the Shah has taken the issue of reform directly to the people and significant changes have been announced in the land reform and the election laws. The cost of these far reaching reforms will, in the absence of any substantial diminution in the Forces expenditure, fall on the oil revenue. Fortunately this is being maintained and crude production and refinery put-through figures were considerably up on the previous twelve months. It is mainly to the oil revenue too, that recourse will have to be made for the third five-year plan, although local and foreign borrowing is also required.

Thanks to measures taken by the Central Bank to curb foreign exchange expenditure the external position is probably healthier now than it has been for some years, but efforts to stimulate the internal economy by increasing the credit available to the private sector have not, so far, proved successful and conditions in the bazaar remain dull.

INDIA

Already painfully beset with economic difficulties, India was given by the events of October and November, a stark and unwelcome reminder of the harsh political realities of the modern world. Even before increased spending on the armed forces became necessary it seemed that lack of foreign exchange was likely to cause some revision of the third five-year plan (1961/66).

The reduction in the reserves has been gradual, but has continued steadily and in July a standby credit from the International Monetary Fund was arranged, part of which has since been drawn. If then, as hoped, the equipment now required from abroad for the armed forces will be either on lease-lend terms or under aid, the country's basic economic problem is still to earn enough foreign exchange to meet the inescapable needs of its people and to keep its new industries going. It was anticipated that the export of manufactured goods would increase and make a valuable contribution to overseas earnings but manufac-

turing costs are generally too high for open competition in world markets. It would seem then that any betterment of the exchange position is more likely to come from the gradual rise in agricultural production, but even an appreciable rise in exports will not meet an import bill already cut to the minimum. In these circumstances it was not unexpected that official thought again turned to the country's hoarded gold and at last official action has been taken to mobilise it for the national benefit.

Defence orders, industrial expansion, a soft home market and generous labour tribunals all point to one thing—inflation—and our sympathies must be with the monetary authorities who require dearer money and restricted credit to combat the danger and yet are under departmental pressure to keep interest rates low to finance development plans as cheaply as possible. All the foregoing, I am sure, points to the necessity of the economy of India and its industry being consolidated in preference to further industrial expansion.

We have recently received permission from the Reserve Bank to extend our branch organization to Vasco de Gama in Goa and arrangements are now in hand for the opening of the new office.

PAKISTAN

The economic picture is one of slow but steady progress in the agricultural and the industrial sectors. The latter is, however, partially at the expense of the vital export trade and, with a continuing deficit balance of payments, concern must be felt at the low level of the foreign exchange reserves. The government is at present committed to a policy of liberal imports and it is difficult to see how exports can be expanded to cover the cost, even with the addition of external aid. Finally perhaps increased exports of manufactured products will restore the balance but finding and increasing overseas markets is in itself difficult, and the emphasis on industrialisation, in East Pakistan in particular, is switching exportable raw materials to local manufacture. In the meantime, it may well be to the agricultural sector that the government will have to look for its increased export earnings and here one major difficulty to be overcome is the effect of water logging and salinity, caused by defects in the canal system, which are reducing the fertility of large tracts of agricultural land.

One can be optimistic about Pakistan's future for financial stability and a determination to succeed should ensure continued, but perhaps slow progress.

CEYLON

Ceylon has natural riches in agriculture which, efficiently used and developed, should ensure a rising standard of living for its people, and yet again in 1962

there was further deterioration in the economic position and it is doubtful if the national income is expanding fast enough to maintain existing standards let alone improve them. Understandably, further import restrictions became necessary although export earnings remained steady notwithstanding a decline in the prices of tea, rubber and coconut.

As, however, deterioration has largely taken place because of policies rather than economic ills there is the possibility that recovery, once started, could be rapid and effective, but it will take strong leadership to convince the public that the position is so critical that only improved agriculture and an adjustment in the rice subsidies can avoid increased external exchange problems and internal inflation.

BURMA

The coup d'état which returned General Ne Win to power last March was received by the population who had good reason to remember the marked improvement in conditions the General's 'caretaker government' had brought about during his previous tenure of power.

It has been a good year for the country's overseas trade. Rice shipments, the main source of export earnings, were substantially higher than in 1961. Beans and pulses were in strong demand in foreign markets and the issue of import licences as an incentive to exporters of agricultural produce to step up their overseas sales has helped to stimulate a higher volume of oil cake exports.

Since this report was written there has been a further change in the political position and we have been told that all private commercial banks in Burma have been nationalized. We were the first of the exchange banks to commence business in Burma when we opened our office in Rangoon just over one hundred years ago. Our business there was not large, but we must regret that so old an association has been brought so abruptly to an end.

FEDERATION OF MALAYA

The merging of the Commonwealth territories in South East Asia in the proposed Federation of Malaysia has been the main topic of political interest during the year and it is evident that the bold and imaginative initiative taken by the Prime Minister of the Federation of Malaya, Tengku Abdul Rahman, should bring the merger into being barring unexpected political complications of major importance. The creation of Malaysia will bring with it added responsibilities as well as the more obvious advantages. As the Federal Finance Minister pointed out when introducing his budget in November, there will, for example, be additional defence commitments, notably in respect of the

Borneo territories. Then, too the peoples of the various states which are to form Malaysia will look to the merger for improved living standards and this will entail some self-denial on the part of the Federation, whose own development programme has now reached the stage where rising expenditure will have to be financed to an increasing extent by running down accumulated reserves and by raising loans at home and abroad for it seems undesirable economically to change the present level of taxation.

SINGAPORE

The referendum promised by the Prime Minister of Singapore to ascertain the conditions under which the electorate would be prepared to join Malaysia has assured Singapore's entry into Malaysia provided there is no sudden political upheaval. The merging of the territories which are to form the new Federation of Malaysia will involve many economic problems and much will depend upon the tariff arrangements within the merger and whether or not the free trade area of Singapore is to be maintained. It would obviously be to Singapore's advantage, and would aid, its industrial development, if the tariffs imposed by the other territories in Malaysia could be abolished, or even reduced, but it might be difficult to achieve this and still obtain the advantages at present derived from its entrepot trade. That is why the recommendations of the Commission headed by Monsieur Rueff will be awaited with special interest, but it is logical to assume that Singapore will be encouraged to prosper in order to enable it to make concessions to aid economic development in the other States in Malaysia.

NORTH BORNEO

The report of the Cobbold Commission published in August was of the greatest political importance to North Borneo for it revealed the broad measure of agreement on the major recommendations for the inclusion of the Colony, and that of Sarawak, in the projected Federation of Malaysia.

That trade has expanded progressively in recent years owes much to the government's soundly conceived development programme and its success in creating conditions favourable to commercial enterprise. Overseas trade figures have again reached record levels, with imports and exports approximately in balance.

BRUNEI

The armed revolt in Brunei in December was an unexpected threat to the Malaysian merger. Although the general situation in the State is now almost back to normal, business conditions in Brunei Town and Kuala Belait remain very quiet, but continuing opposition to the government and

support for any political organisation that will promise better conditions seems likely, unless the development projects now under consideration and other schemes to raise the standard of living are quickly brought into effect. Finance still presents no difficulty for the interest the government receives on its substantial investments abroad compensates for the steady reduction in the oil royalties.

SARAWAK

Only by reducing imports did Sarawak come near to balancing its overseas trade, for notwithstanding increased shipments of timber and pepper lower world prices for these commodities, and for rubber, reduced export earnings. The lower world prices for staple exports, particularly rubber, also means lower revenue and for the first time since 1949, the Colony finished the year with a budgetary deficit. Nevertheless in an effort to accelerate the rate of economic growth, spending is to be raised to a record level and will be partly financed by drawing on surplus balances.

INDONESIA

Of the three great tasks which President Sukarno set himself two have now been completed, the West Irian dispute has been settled and internal security throughout Indonesia has been restored to the extent that it has been announced that the state of emergency will be terminated on 1st May next. These two major achievements have enhanced the already high prestige of the President, who remains as ever the unopposed and popular leader of his people. The third task that of providing more food and clothing must now be faced and it is to be hoped that the country's political leaders will turn their full attention to this urgent problem now that it should be possible to make a substantial reduction in the heavy burden of defence expenditure which the country has been bearing in the last few years and which has contributed to the acutely serious economic situation.

State trading organisations continue to grow in importance and control an increasing proportion of the country's trade so that the part we in the private sector can play is severely restricted. Within these limitations The Chartered Bank continues to give all the assistance it can, but we view with much concern our soaring overheads and the cost of keeping our business going.

THAILAND

Thailand has continued to prosper under the present regime, which has given the country the political stability so essential to economic progress, and exports from this country, rich in agriculture, again reached a satisfactory level. The pattern of the export trade did, however, change somewhat over the

years as restrictions were applied to rice shipments in order to avoid a possible shortage at home. Foreign exchange earnings are, in any case, now less preponderantly dependent upon rice and it is gratifying that in addition to the other traditional exports, tin and rubber, useful earnings are now arising from shipments of jute, maize and timber. There is a trade deficit but, as the already satisfactory exchange reserves rose over the year, foreign aid clearly more than offset any adverse balance. Provided Thailand is not faced with military aggression and is not tempted to abandon her present liberal attitude towards trade and commerce, her future should be brighter than most of the South East Asian countries.

VIETNAM

The struggle to maintain the independence of Vietnam continued throughout the year and could last for some years to come. Increased pressure by the Viet Cong has been countered by stronger American support for the government but, in a country eminently suited to guerilla activity, the final outcome will depend to a great extent on the co-operation of a people free from rebel threats and terrorism.

The country's exchange reserves are under stress because of the decline in exports attributable to cultivation and transport difficulties created by rebel action. This affected both rubber and rice and there were no rice exports at all, notwithstanding special military measures to protect the harvest. Prospects for the coming harvest are, however, much better and there should be a considerable surplus available for shipment.

CAMBODIA

Incidents on the frontiers with Thailand and Vietnam have continued to cause anxiety and have led the head of state, Prince Norodom Sihanouk, to propose that the country's independence should be guaranteed by the fourteen states which participated in the agreement to neutralise Laos.

Cambodia's economy is recovering from the setback caused by the devastating floods in late 1961 and the latest rice crop is back to average. This means much-needed foreign exchange, for until the flood damage stopped rice shipments foreign aid had always been sufficient to cover the normal trade deficit.

Last year, however, some reduction of the exchange reserves was unavoidable, but they are still at a more than comfortable level and with the improvement in the rice exports which is now anticipated, and with normal shipments of rubber, maize and timber, receipts should approximately balance payments.

THE PHILIPPINES

Last year I mentioned that shortly after he had assumed office

President Macapagal made the courageous decision to introduce in January a further phase of exchange decontrol. This virtually abolished exchange restrictions in the Philippines and, despite some doubts at the time, this bold move has proved successful. With the withdrawal of the Central Bank as a buyer and seller of exchange the peso was left to find its own level. Although official support has been necessary from time to time it is a matter of justifiable pride to the authorities that they have been able to stabilise the peso without utilising the various credit facilities placed at their disposal in the United States. In fact the international reserve shows substantial improvement despite repayments of loans from abroad. The success of exchange decontrol has opened up new and promising opportunities for trade and industry in the Philippines.

HONG KONG

As Britain's negotiations to enter the European Economic Community had a depressing effect on all branches of Hong Kong industry, then conversely the failure of the talks will probably be hailed as an encouragement and a pointer to future prosperity.

Textile manufacture is still the barometer of local industry and its difficulties during the year were unfortunately so great that most of the mills were reduced to working well below capacity and some sections were brought to a standstill. The principal problem which had to met was the temporary embargo imposed by the United States government on shipments of all Hong Kong major textile lines. This embargo came on top of the voluntary undertaking already given to British cotton manufacturers to limit shipments to the United Kingdom. In view of the experience of the textile industry it is perhaps surprising that Hong Kong again had a prosperous year with increases in both exports and imports. This to some extent was due to the widening of the range of products manufactured and to improvement in quality. Moreover, earnings from tourism have now bounded into second place behind textile.

Given freedom from external political pressures there seems no reason why the prosperity of Hong Kong should not continue and it is encouraging that during the year trade with the mainland increased.

CHINA

The prospect of better crops this year after a series of setbacks should stimulate China's economy and, given a period reasonably free from natural calamities, the country, with its continuing official policy of agricultural expansion, should achieve greater economic stability and increased external purchasing power. Last year the United Kingdom's share in China's

trade was slightly reduced but, given freedom from political barriers, there is no reason why it should not grow as China's purchasing power increases. Our Shanghai office has continued to do useful business mainly in connection with the financing of China's export trade.

JAPAN

Japan in 1962 staged another of its remarkable balance of payments recoveries, but this time it was by means of a spectacular growth in exports rather than by the more usual policy of restricting imports. Final figures show an increase of \$355 million in the exchange reserves over the year but included in the published reserve figures are gains in Euro-dollars, free yen and other short-term foreign credits as well as the balance of the 1961 crisis borrowings from American banks. Helpful too, is the spending of United States forces stationed in Japan, which is still over thirty-million dollars monthly, but after allowing for these items there was much genuine improvement in trade.

Many factors contributed to these good results, one of the most important being the skill with which the monetary authorities reversed the effective tight-money policy of the previous year. With a continuance of political tranquility, and the usual exhibition of hard work and determination by

the people of Japan, the country's future looks assured for some time to come.

NEW YORK

The anxiety which I mentioned last year had been caused in the Orient by the decision to reduce huge stockpiles of strategic material held by the United States government still remains and doubts over the precise terms on which these surpluses are to be sold have had their effect on rubber and tin prices. Our New York branch has continued to develop our numerous and long standing connections with exporters and importers in the United States.

HAMBURG

At present approximately half the Federal Republic's capital assistance to developing countries is directed to Asia, an encouraging indication of German interest in trade with the East. Meanwhile our own business in Hamburg continues to progress satisfactorily.

CONCLUSION

From this review, it is clear that continuing inflation is still a major problem with many of the developing countries and, in addition to this, their ever increasing short-term and medium-term foreign debt must cause deep concern. Its servicing accentuates the already difficult balance of payment problems and at times the return from

eagerly sought after foreign loans is not commensurate with the cost as they are diverted into nationalistic enterprises which do little to balance and strengthen the economy.

The supply of aid is necessarily limited, save in exceptional circumstances and many Asian countries are now seeing the advantages of encouraging private investment from abroad. Whereas foreign loans involve interest charges and repayments which become a burden on budgets and exchange reserves, the risk of private investment is borne entirely by the investor who can only receive a return on his investment if his enterprise is successful. Ability to attract new private capital is closely linked with the treatment of existing investments and those countries which have failed in their appeal to the overseas investor are invariably those which have been less than fair to direct investments made in the past. It is those who already know the East and have confidence in its future who are most likely to be the new investors and it is not accidental that most of the private investment which has been made in Asia in recent years has come from enterprises which were already locally established. The potential investor from overseas who is considering setting up business for the first time naturally takes into account the treatment meted out to existing foreign

firms in the country in which he is interested. He is unlikely to be impressed by promises of freedom to remit profits and repatriate capital by governments which deny such freedom to existing enterprises. It is significant that those governments which have been most successful in attracting foreign investment have been at pains to create conditions favourable to business enterprise and to induce confidence in the political and economic stability of their countries. The flow of private capital to developing countries would be greatly facilitated if agreement could be reached on an internationally acceptable code of behaviour regarding the treatment of foreign property on the lines of the draft convention recently sponsored by the Organisation of Economic Co-operation and Development.

We continue to assist to the best of our ability the many countries in which the Chartered Bank group is working. This assistance can be financial or in the form of advice based on many years experience in many different countries and needless to say wherever we have a branch it is our policy to work fully in the interest and aspirations of the country concerned and within its regulations.

Copies of the full-text of the statement will be sent on application to the Secretary of the Bank at 38, Bishopsgate, London, E.C.2.

INDIAN MINING ASSOCIATION

Coal Prices Too Low

More Efficient Use of Fuel Recommended

Review by the Chairman, Mr Pran Prashad

The following is the text of the speech by Mr Pran Prashad, Chairman of The Indian Mining Association at the Annual General Meeting of the Association held in Calcutta on 22nd March, 1963 at the Bengal Chamber of Commerce and Industry.

Gentlemen,

Your Committee's report has been circulated and will give an idea of the field of activities covered by the Association in the year under review. We have had our share of success and disappointment.

Over the year, considerable interest has been shown in our affairs. We were pleased to appear before the Estimates Committee of the Lok Sabha which undertook a detailed and searching enquiry into the affairs of the Industry. A Working Party of this Committee toured the Coalfields and was able to obtain a first-hand impression of many of our problems. I hope that our legislators will now be even more appreciative of the difficult tasks imposed on us.

One of our significant achievements was the response of the Industry to the calls made upon it in the context of the National Emergency. This Industry, I am proud to say, was one of the first of all organised industries to step up output so that defence production and maintenance of essential services during the critical period of November last year were not handicapped by shortage of coal supplies. I should like to pay a tribute to those managements which, despite the extra expense involved, ungrudgingly responded to the call of the hour. We must also remember that our achievement would not have been possible without the whole-hearted support and co-operation of our workers who agreed to forgo their rest days and to resort to seven-day working. I am confident that if a like need arises, the country can rest assured that the Coal Industry will not fail in its duty.

The most outstanding feature of the year, however, has been the fact that coal production has increased from 56 million tonnes in 1961-62 to about 64 million tonnes in 1962-63. The increase in production has been remarkable, despite shortages of explosives, spare parts, machinery and, until

very recently, of power and transport. Out of this increase of 8 million tonnes the Private Sector has contributed over 6 million tonnes and is at present ahead of its production target for 1962-63 as fixed by the Planning Commission's Working Group. However, I venture to suggest that there is no room for complacency, by either Government or producers, that this rate of progress can be sustained. The recent fall in demand for coal and the impact of the Central Budget proposals, as they stand, seriously affect the capacity of the Private Sector to increase its production potential. Urgent action is, therefore, necessary to remove many of the difficulties which have arisen. I make no apology for raising the subject of finance at such an early stage in my address this morning, and I feel that I must pinpoint these problems and indicate possible solutions.

Last year, when addressing you from this Chair, I referred to the Rs. 17 crore loan in foreign exchange granted by the International Bank for Reconstruction and Development to Government for use of the Private Sector of the Coal Industry. Out of the total allocation of Rs. 17 crores, of which Rs. 2 crores had been provided for equipment required for new mines, we had submitted applications for import licences in excess of the remaining sum. As against this, licences issued as at the end of February aggregated approximately Rs. 14 crores. Orders to the tune of about Rs. 7 crores had also been confirmed. The impact of the Budget would affect the ability of many Coal Companies to take up in full the foreign exchange allocations made against their approved Project Reports.

I also pointed out then that to ensure full utilisation of this foreign exchange, the provision of complementary Rupee funds was essential. The Industry had originally estimated that a substantial portion of these funds could be raised from ploughback or through fresh floatations. The result of the Budget proposals is that much of the ploughback will now be diverted to the State coffers. Because of historical reasons and depressed coal prices, the equity capital in coal mining has been low. The Industry has, therefore, perforce had to rely on borrowings to finance

its development. The Super Profits Tax proposed in the Central Budget will hinder the processing of such loans. We welcome the measure of positive assistance whereby Government have now agreed to guarantee medium and long-term loans from commercial banks to Coal Companies. I sincerely trust that when the Budget proposals are enacted, some, if not all, of the harsh features will be moderated.

The question of profitability and return on capital inevitably brings me to the question of costs of production and their relation to our existing selling prices. We are grateful for the prompt steps taken by Government in sanctioning ad hoc increases in coal prices as an incentive towards increased production. The increases in our price structure fell far short of our requirements and expectations, and moreover, we were distressed at the decision to extend ceiling prices for Grades II and HH coals. Most of you are aware that today's controlled prices are based on production costs of about six years ago and that over this period numerous impositions have been thrust on the Industry while costs of stores, power, royalties, etc. have steadily moved upwards. The profit left to the Industry, therefore, continues to be eroded.

It is appreciated that the level of selling prices of coal and coke has a direct bearing on the production costs of other industries. Although this must be borne in mind, I am sure all will agree that no single industry should be made to subsidise others if its own economics justify an increase in selling prices. The fact is that production has increased very substantially over recent years without a corresponding rise in profitability because of enhanced liabilities. The inevitable consequence of a selling price which makes no allowance for demands of development will be to retard expansion, which will thus give rise to the very inflationary trends which are now sought to be avoided with the existing price structure. I should at this stage like to make the general observation that in my view coal prices are too low and it is because of this that so little attention is paid to economy in its use. I submit that the only way to reduce fuel costs to the consumer is not by keeping coal prices at

an unreasonably low level but by the proper and efficient use of this fuel. Throughout the world, fuel economy is now a specialised science, and in our circumstances with coal as the major source of commercial energy, it is vital that this receives the country's attention.

Apart from adjustments of the price structure, which we contend should receive the early attention of the authorities to give us the relief we urgently need, there are certain legitimate claims which Government might reasonably approve without further delay. Firstly, we have proposed an increase in the depreciation allowances laid down in the Income-Tax Act for machinery and plant installed in mines. Although most coal mines work more than two shifts, the depreciation rates allowed do not provide for any extra shift allowance, as in the case of other industries. Besides, until recently, mining operations were by and large labour-intensive, but in order to achieve our targets, extensive mechanisation is inescapable. This involves more extensive as well as intensive use of machinery, making fair rates of depreciation essential. It will be recalled that during World War II, which can be considered as a roughly comparable period, special rates of depreciation at 50% of the written down value of machinery and equipment were allowed.

Secondly, I would again reiterate this Association's previous suggestion for the grant of a suitable depletion allowance to the Mining Industry which is working a wasting asset. Here again, such allowances have been granted to our counterparts in other industrially advanced countries. In fact, in India also a depletion allowance has recently been allowed in the case of the oil industry. I feel that in all fairness this facility should also be extended to the Coal and other mining industries. It has, however, been contended that in the case of the oil industry the reserves are limited. Equally in the case of minerals and particularly in Coal, natural reserves are not inexhaustible, but it is well known that our reserves of the better grades are limited and the quality of the seams has deteriorated rapidly. The profitability of the enterprise, therefore, becomes poorer with lapse of time and some compensation by way of a deple-

Firestone

World's Leading Producer of Rubber

Nobody builds tyres like Firestone, world's leading producer of rubber. Nobody tests tyres like Firestone—and millions of punishing tyre miles each year prove it. In fact, no part of a car is more thoroughly proved than its Firestone tyres. Motorists everywhere in the world, trust the tyre that's built, tested and backed by the Firestone name. It's their surest sign of value. They know what they are getting when they buy Firestone.

Firestone
Your Symbol of Quality and Service

tion allowance should be provided on this account.

Thirdly, there is the question of import duty on mining machinery and plant. In September, 1957, Government were pleased to specify a concessional rate of duty at 5% for imported machinery and plant required by the Mining Industry, which in 1960 was increased to 10% and under the new Budget proposals has now again been increased to 15% plus a surcharge of 10%. I am constrained to point out that in the implementation of the decision to grant a concessional rate of import duty, the authorities have not been fair to us. We are invariably asked to pay the higher rates of duty mentioned in the Customs Tariff, irrespective of the end-use of the equipment imported. Plant and equipment now being imported into India for coal mines particularly, is governed by the guarantees which individual companies have executed in favour of Government in terms of the World Bank Loan. Under this guarantee, equipment can only be installed at a colliery with an approved expansion project. In view of the numerous safeguards and the heavy penalties for misuse, I submit that the Customs authorities should allow importation of mining machinery at the concessional rate.

We have recently been informed that a production of an additional 83 million tonnes has been finalised for the Fourth Five Year Plan, making a total of 180 million tonnes annually by the end of that Plan. We have, however, not been given any indication as to the grades of coal required; the main consumption centres; the areas from which increased production is to be obtained; the transport facilities that will be available and the like. Accordingly, I would suggest that the Industry be informed at this stage of Government's intentions regarding these matters as well its future policy concerning the working of contiguous and new areas. Most companies have been working their mines upwards of half a century, and with exhausting reserves they will, in the course of the next few years, be faced with the prospect of having to abandon such pits. The Industry should therefore, be allowed to expand into new areas to replace old workings.

While great credit is due to our Railways for their splendid performance over the last twelve months, our production capacity continues to be governed by transport availability. The actual supply during the calendar year ended December 1962 averaged 6363 wagons per day. This represents an improvement of 415 wagons per day over 1961, and is an achievement of which the Railways can be justifiably proud, having regard to their other pressing needs during the Emergency.

The Railways have had to manage in spite of lack of resources

for implementation of their expansion programmes. As a result, they have sought to make up their requirements through numerous—in our opinion—unfair impositions on the users of their systems. The use of BOX wagons to speed up movement of raw materials to the Steel Plants and other bulk consumers has been introduced and it is contended that this necessitates the strengthening of colliery sidings. Demands have been made on numerous collieries to pay for not only the sub-grade work but also the permanent way materials required for remodelling of sidings. These demands have also been accompanied with threats of total stoppage of wagon supplies if not complied with. There are instances on record where collieries, having made such deposits, continue to load BOX wagons for months on end without remodelling of sidings. One wonders whether there is any justification for this demand when little has been done by the Railways to strengthen their own lines and marshalling yards. Another proposal is that collieries producing over 10,000 tonnes per month must install their own private weighbridges. This idea is, indeed, laudable but serious doubts arise as to whether expenditure of such large sums of money by several collieries is justified when the Railways can very well install them at each pilot section, thereby reducing the overall cost to the economy.

We, therefore, welcomed the interest shown by Government and the World Bank to study and advise on solutions to our problems connected with coal movement. We hope that their recommendations will receive the attention that they warrant and that remedial action will be taken. We hope also that they will be able to make concrete, practical and economical suggestions for speedy turn-round of wagons.

For the operational convenience of the Railways, bulk point-to-point movement of coal was largely introduced, as a consequence of the Coal Conference held in Delhi in December last. The use of block rakes at collieries, particularly the smaller units—and there are many more smaller units than larger ones—presents innumerable problems. I would like to cite an example. A colliery producing 300 tonnes a day would receive a block rake for loading on every fifth day. Under this scheme the colliery would have to stack its daily production for five days and arrange to load something over 1500 tonnes of coal within a period of five hours. No colliery, I submit, can work satisfactorily on this basis, and it is hoped that in this matter of block rake movement a workable solution will be found, to ensure that all the coal raised is moved to those who need it.

We welcome the initiative shown by our Minister, in developing alternative means of transport so that the full burden does

not fall on the Railways alone. Moreover, we applaud all measures which will result in increased movement of goods, including coal. The success of any scheme to encourage greater use of road transport involves the rapid improvement of roads and bridges and the availability of sufficient vehicles of the right size to make it an economic proposition. The early construction of the Durgapur Expressway could afford great relief to the already congested traffic on the Grand Trunk Road, and we welcome the steps that have been proposed by the Transport Ministry in conjunction with the State Government and hope these will now be implemented. The many schemes that exist on paper should now be made a physical reality.

With regard to the rail-cum-sea route, the target of 2 million tonnes announced a few years ago has still not been reached, and the position is said to be under review. Because of the increased coastal freight rates as well as the proposed increase in Calcutta Port charges, the cost of coastal shipments will become even greater than the present high costs. I submit that this needs early re-examination in the interests of the consumers.

A matter connected with the transport problem is the delay in the construction of Central Ropeways for sand-stowing in the Jharia and Ranigunge Coalfields, regarding which I expressed concern last year. I must once again record our very grave concern over the slow progress made, particularly as our coal production becomes more and more dependent on stowing with sand to be provided by these schemes. I hope that this matter will continue to receive the urgent attention of the Coal Board in the overall interests of both safety and conservation.

On the subject of stowing, this Association has perhaps with tireless persistence drawn attention to the recommendations made by the Coal Prices Revision Committee which clearly specify that subsidies should fully neutralise actual costs incurred in stowing. We understood that our previous submissions to Government in this connection would be considered favourably but we found to our regret that Government's revised proposals which were announced in August fell far short of our expectations. Under these revised rates of subsidy, those collieries which had not hitherto undertaken any stowing voluntarily on the plea of financial stringency, now stand to have their more expensive stowing costs involving conveyance of sand by road transport, neutralised in full while those units which had voluntarily undertaken stowing to conserve national wealth will continue to be at a disadvantage. This discrimination should be removed, and while no one denies the necessity to encourage more sand-stowing, the progressive units which at

their own expense long ago installed mechanical sand-gathering equipment should not be made to suffer in the matter of full neutralisation of costs incurred.

I also feel that it is necessary to point out that the literal interpretation of the principles and procedures laid down in the Coal Board's Manual tends to vitiate against the spirit of the Coal Mines (Conservation & Safety) Act. Because of restrictive interpretations, many collieries have to incur additional costs, apart from the subsidies they receive, to the extent of up to Rs. 1.50 nP per tonne. This Association in December last put forward numerous proposals in this respect, so that the assistance rendered could be more realistic. I hope that the Coal Board will soon rectify the position.

We are also grateful for the interest our Minister has taken in the matter of improving benefits to collieries from the scheme to subsidise working under adverse mining conditions. The rates were enhanced in November last. We have been told that the rates cannot be increased because the total income from the cess is insufficient. The solution, if I may venture to suggest one, lies with Government in that more funds could be obtained if the present cess on despatches could be suitably altered. As it is possible that coastal shipments may now be reduced to 1 million tonnes per annum, more funds within the framework of existing levies would be available, and I would suggest that these surpluses be used to increase the subsidies payable for working under difficult conditions.

The other day, the State Chief Minister and our Minister both stressed the vital need to extract coals from deep seams to a much greater extent. We in this Association fully concur with this view, because we are largely confined to vertical expansion, but it must be remembered that extraordinary mining difficulties and hazards are encountered at depth. The existing subsidies are totally inadequate to cover the greatly increased costs of such extraction, and my submission is that Government, in order to provide the proper climate for such developments, might appropriately consider the formulation of a special subsidy scheme for this particular purpose.

I shall now deal with the all-important subject of Grading. Last year, I dwelt on this subject at some length and referred to the appointment of an Experts Committee which was to look into the possibility of changing the present system of sampling adopted by the Board and the existing system of classification of coals on the basis of ash and ash plus moisture contents. This Committee submitted its report to Government in July and urged that the classification of all coals should be fixed on the basis of their calorific value. We did not agree with many of

the recommendations made by the Committee and we submitted our own views to Government in August. We agreed with Government's suggestion that a sample survey should be undertaken before the changes recommended were introduced as these would have serious effects on the pricing system which could only become apparent after the sample survey had been completed. About 74 units were selected for this survey and although we agreed to extend every co-operation to the Coal Board's field staff to expedite this work, I must record with regret that the traditional approach of the field staff to this as also to other problems reveals that in the few cases where samples have been drawn the procedure laid down by the Committee has not been properly followed, thus vitiating the results and defeating the very purpose of this exercise. I trust that before the new price structure on the basis of the revised classification is determined, our considered views will be taken into account. We continue to hear references to supplies of bad quality coal and we in this Association have persistently asked our Members to take such measures as are humanly possible to ensure that consumers have no cause for complaint.

We have continued to face difficulties over power and explosives. Our problems over power had, we felt, been resolved when the surplus energy available from Rihand and Hirakud was linked to the D.V.C. System. Many collieries in West Bengal were unable to derive full benefits from this increased availability, since the State Government's Electricity Licensing Committee was not aware until December that the Central Government had decided that the requirements of the Coal Industry were to receive the highest priority. Fortunately, we did not experience a very severe monsoon in 1962 and the peak loads normally essential for pumping immediately following the monsoons were not taken up. I would like to record our appreciation of the prompt steps taken by the Central Government and the assistance rendered to us by the Coal Controller's Organisation, since a year ago the situation was, indeed, critical.

The supply of explosives has been most unsatisfactory. Severe production cuts during our peak raising periods have been forced on us due to non-availability of the approved types of explosives and detonators. Emergent supplies have had to be rushed up to the coalfields on occasions. If production is not to be interfered with, any new arrangements for supply of explosives should be examined in detail before implementation, if they involve changes in the existing arrangements.

We have also continued to face difficulties with regard to acquisition of land and had hoped that

our problems would have been overcome through the amendments to the Land Acquisition Act which were effected last year. We have put up numerous proposals to Government and have also discussed our difficulties with the respective State Governments. Unfortunately, the amendment restricts the purposes for which land can be acquired under the Act. I do hope something tangible will result from our representations in this matter.

Our dispute with the West Bengal Government over the removal of royalty-receiving rights of lessees and sub-lessees seems nearer solution, in that although the appeals are still pending in the High Court, talks are to be held shortly with a view to arriving at an out-of-court settlement. I might add that this Association has during the past few years proposed such an amicable settlement which we had then hoped would have been possible. In Bihar, the position remains unaltered, although in both States income from royalties has been virtually abolished without compensation since the end of December, 1961.

The decision of the Supreme Court in the matter of application of the Coal Bearing Areas (Acquisition & Development) Act, 1957, to lands which had vested in the State Governments was announced in December last. This generally supports the view taken by us which is that Central legislation relating to a basic industry such as Coal should and must prevail over State enactments. The dispute now having been resolved, several areas in the Ranigunge Coalfield have been notified for acquisition by the National Coal Development Corporation. Some of these notifications cover working collieries and the law as it stands, prohibits the continuance of mining operations in notified areas. This results in a most anomalous situation in that on the one hand we are continually being pressed to increase production while on the other hand continuance of mining in such cases would result in an infringement of the law. I have already stated that in many of the units in the Private Sector workable deposits are nearing exhaustion. If such units are to be allowed to continue, new workings are essential to replace lost production potential. Our Minister, in an address from another platform a few weeks ago made a welcome comparison of our mixed economy with that of the European Community and referred to the "happy combination of the Public and Private Sectors engaged in a joint endeavour to maximise coal production." For this mixed economy to function effectively, it is essential to create an atmosphere in which both sectors can work in close co-operation, have equality of opportunity

and be allowed to operate under similar conditions.

Our periodic meetings with the Chief Inspector of Mines have continued and are now accepted as most beneficial to both sides. No one denies that the safest pit is the best one for increased production and this view, I know, is shared by our Chief Inspector. Many of the measures which we feel are essential, from the point of view of safety, and which we would like to introduce so as to establish in India the pattern adopted in other countries where legislation follows the practices of enlightened managements, are regrettably not possible, within the framework of our existing price structure.

Except in the case of a large unit in the Ranigunge Coalfield, our relations with labour have generally been satisfactory. It was most unfortunate that due to intra-union rivalry, there was a prolonged strike accompanied by violence, resulting in assaults on managerial personnel and the stoppage from work of safety men in a mine that is well known for its extremely dangerous workings due to the influx of gas. While breaches in the Code of Discipline on the part of the union and its officials have been brought to the notice of the authorities, the action taken, if any, under the Code does not appear to have had any noticeable result since the dispute within the union still remains unresolved. Stoppages of work without notice on this account at neighbouring collieries have also been reported. I do hope that the Central Workers' Organisation concerned, with the assistance of Government, can resolve this unsatisfactory state of affairs at an early date.

During the year, we received a Questionnaire from the Bonus Commission asking for our views on the introduction of a Profit-Sharing Bonus Scheme for our workers. As bonus disputes in coal mines had been eliminated altogether as far back as 1948 with the introduction of the statutory Bonus Scheme not dependent on profits, we opposed this proposal in our written reply and when we appeared before the Commission earlier this year. I hope that the Commission is convinced that it would not be in the interest of the workers themselves to have a profit-sharing bonus scheme. Improvements in the present scheme have already been effected, but we are always open to further suggestions which would make our existing bonus scheme even more satisfactory.

The Wage Board for the Coal Mining Industry which was constituted in August last has recently recommended an interim wage increase of Rs. 9.75 nP per worker per month pending the submission of its final report. The price increase sanctioned to implement this does not meet the cost in full, and in the case of Bye-product

Coke Plants only the increased cost of coal has been neutralised. No allowance has been made for the increased wages payable to the workers employed in Coke Plants and we hope that this anomaly will be rectified. The Board has also issued a very detailed Questionnaire calling for voluminous statistical information from individual managements. If the Wage Board is proposing to include in its terms of reference matters which do not in any way have a direct bearing on wages, one fails to see how it can finalise its deliberations with the expedition demanded of it.

In the field of welfare, while progress has been made, our activities and those of the Coal Mines Labour Welfare Fund Organisation have to some extent been curtailed due to the Emergency as a measure of economy. However, an approved scheme for the establishment of Co-operative Societies in the coalfields was recently circulated to managements. I would appeal to our members to extend their whole-hearted support so that the success of this scheme can be assured. The Housing Board has introduced a "Build Your Own House" scheme for miners, who are now entitled to financial assistance by way of subsidies and loans for construction of their own houses according to a given standard. The response has so far been poor but I would urge our Labour Unions to give wide publicity to this and encourage the implementation of this excellent proposal.

Turning now to minerals other than Coal, I am pleased to say that progress last year was generally satisfactory and output and movement of iron ore, limestone and dolomite for the Steel Industry again kept pace with the increasing demand. The position concerning manganese ore is still unhappy, as exports have again been very disappointing on account of ready availability of high grade ores from countries which enjoy a freight advantage over India. Future prospects are not encouraging.

Last year I reported that The Iron Ore Mines Welfare Cess Act 1961 sought to create a Welfare Fund for workers in iron ore mines. The Government of India has not yet notified a date for starting the levy and collection of this cess.

At the Third Session of the Industrial Committee on Mines other than Coal a proposal was considered for constitution of separate welfare funds for each category of non-coal mines. It was felt that whereas such funds can be efficiently administered in respect of minerals produced on a large scale such as coal, iron ore and mica, this would not be a practical proposition for most other minerals as units are often small and widely dispersed. It was, however, agreed that the Ministry of Labour and Employment should examine the

possibility of establishing a common welfare fund covering all non-coal mines and should prepare a working paper on the subject for discussion at a future Session of the Committee. With regard to wage-fixing for workers in non-coal mines, the Committee agreed that the Minimum Wages Act, 1948, should be extended in three stages to all mines and meantime we learn that two Wage Boards are shortly to be set up for the iron ore and limestone-cum-dolomite mines.

Gentlemen, I would be failing in my duty if I do not make some statement on the Industry's relations with Government. These relations, I am happy to say, are indeed excellent. We have our differences and on occasions when we are critical it would sound as though the Industry and Government have a very poor opinion of each other. This, of course, is not the case,

otherwise many of our distinguished guests would not be sitting with us to-day. The tasks that face us in the future require the joint and co-operative efforts of all concerned. The years that lie ahead hold a great opportunity for the Mining Industry which is charged with the task of making a significant contribution to the industrial growth of this country. Given the necessary incentives and encouragement, there is no reason why we should not prove equal to the challenge and I am confident that if the authority and power of Government is linked in a joint endeavour with the resources and potentialities of private enterprise, there is no doubt that we can with confidence shoulder the burdens of the future.

Our country's philosophy, based on the principle of peace and co-existence, demands continuous vigilance if we are to preserve

our liberties. It requires a spirit of live and let live. It needs, in the industrial sphere, an understanding of the wants of the community. We in the Mining Industry are conscious of our responsibilities in these and other directions and with the checks and balances that exist on the financing, development, labour policy, extraction and distribution of our products, the community can be sure that their requirements will be suitably met. These controls, wisely applied, will ensure that while sufficient freedom exists to guarantee efficient working, unfettered exploitation is not permitted. The days of "post-office socialism" also, namely, the working of enterprises without profit or loss, are gone, and the need for a fair profit commensurate with the hazards of the Industry and its requirements for growth will be recognised. It is in this context

that I should like to say that so long as we in the Industry continue to demonstrate our vigour our vitality and the successful fulfilment of the community's wants, we need have no fear of saying frankly and objectively what the country should, in turn, do for us. For this reason also, I am convinced that with the controls which form part of our planned economy, there is no cause for the occasional cry of Nationalisation which one sometimes hears. We are playing our part according to our programmes and while we all continue to do that, there is nothing that a nationalised industry can do which we cannot do as well, if not, better.

In conclusion, Gentlemen, I would like to stress that it is the aim of this Association to co-operate whole-heartedly with Government in all its plans for the industrial development and defence of our great country.

sequent to the close of the financial year, amount to about Rs 20.10 lakhs.

Decline in Madura Mills' Profits

The Madura Mills Company Limited has reported a substantial decline in the net profit, after providing for depreciation and Taxation, from Rs 89.77 lakhs to Rs 51.85 lakhs for the year ended 31 December 1962, reflecting the higher prices paid for raw cotton and the increase in working expenses on account of the implementation of the award. At the same time, prices of yarn remained unchanged and there was an upward revision in prices for yarn of lower and medium counts only recently.

In respect of allocations, the provision for Depreciation is higher at Rs 43.53 lakhs against Rs 32.94 lakhs. The transfer to Development Reserve is Rs 9.70 lakhs Rs 10.78 lakhs, while Taxation claims Rs 65.67 lakhs against Rs 69.40 lakhs. A sum of 10 lakhs is provided for Debenture Stock Redemption Reserve with the National Industrial Development Corporation Redemption Reserve being maintained at Rs 7.50 lakhs. The dividend on the Ordinary shares is, however, maintained at 15 per cent, taxable. Sales are shown at Rs 16.52 crores against Rs 17.70 crores.

According to the directors' report, the 450 Looms Project will be implemented in full in 1963. Most of the preparatory machinery has been shipped and the first batch of looms will be commissioned in April 1963. Consideration is also being given to ordering a further quantity of automatic looms, while work is progressing on constructing a modern weaving shed at Ambasamudram.

Coimbatore Cotton Pays Less

The Coimbatore Cotton Mills Limited has been obliged to report a sizable decline in the net profit, before providing for depreciation and taxation, from Rs 31.16 lakhs to Rs 23.37 lakhs for 1962. Sales are slightly lower at Rs 1.75 crores against Rs 1.85 crores on account of a sharp decline in the prices of staple fibre yarn. The increase in internal production and the arrangements for the import of large quantities of staple fibre, in order to overcome the shortage of cotton, had a depressing effect.

The provision for Depreciation is Rs 9.84 lakhs (Rs 10.20 lakhs). The transfer to Development Reserve is Rs 29.77 (Rs 3.25 lakhs) and Taxation Rs 7.54 lakhs (Rs 7.10 lakhs). There were transfers to other reserves for Rs 2.42 lakhs formerly. A lower dividend of 9 per cent, taxable, on the Ordinary shares is recommended against 16 per cent, taxable, paid previously.

Company Reports

Sen-Raleigh Repeats

SEN-RALEIGH Limited has reported a 22 per cent increase in sales at Rs 4.86 crores for the year ended 30 September, 1962 as against Rs 3.98 crores in the previous year. But, the net profit, after providing for Depreciation and Taxation, is only slightly higher at Rs 11.94 lakhs as against Rs 11.48 lakhs, reflecting the rising costs of raw materials.

In respect of allocations, Taxation is raised to Rs 11.86 lakhs from Rs 10.08 lakhs, while the Reserve for Repayment of Loan is maintained at Rs 3.75 lakhs. The Depreciation amount is reduced to Rs 21.86 lakhs from Rs 22.60 lakhs and Development Reserve to Rs 57,757 from Rs 1.28 lakhs. The dividend on the Ordinary shares is maintained at 8 per cent, subject to tax.

The company issued 6,50,000 ordinary shares at a premium of Rs 4 per share in November last year. Of this issue, Raleigh Industries of the UK has subscribed 334,000 shares, the balance being placed with the existing shareholders. The foreign exchange brought in by this subscription will be used for developing bicycle expansion schemes and introducing a scheme for the manufacture of House Service Meters.

The annual general meeting takes place on 28 March and the dividend is payable on or after 30 April, 1963.

Martin-Burn Reduces Distribution

The intensified restrictions imposed by the Government's policy is reflected in the working results of Martin-Burn Limited for the year ended 30 September 1962. The decline on the trading side has, however, to some extent been set off by small improvements in the managing agency commission earned and the profits of certain trading and industrial activities of the company.

Sales are shown lower at Rs 7.70 crores against Rs 8.58 crores. The net profit, after providing for Depreciation and Taxation, is substantially lower at Rs 41.67 lakhs as against Rs 49.21 lakhs for the preceding year. In respect of allocations, Depreciation is raised to Rs 2.89 lakhs from Rs 2.76 lakhs and Taxation to Rs 36.50 lakhs from

Rs 33.50 lakhs. The provision for General Reserve is lower at Rs 1 lakh against Rs 5 lakhs. The dividend on the Ordinary shares is reduced from Rs 2.75 to Rs 2.50 per share, subject to tax.

Despite the adverse trading conditions the engineering group of companies under the management of the company have been able to show some improvement. The profits of the electric supply companies have been barely maintained, while those of the railway group of companies show some decline due to the growing road competition.

Elgin Mills Fare Well

Despite a further increase in the cost of production due to higher prices of cotton, increase in wages and the rise in the prices of stores generally, Elgin Mills Company Limited has produced satisfactory working results for the year ended 30 September 1962, thanks to consistent efficiency and economies adopted where possible.

Sales have risen to Rs 6.31 crores from Rs 5.82 crores, while the net profit, after providing for Depreciation and Taxation, amounts to Rs 47.39 lakhs against Rs 47.29 lakhs in the previous year, although the former figure includes Rs 13.17 lakhs being adjustment in respect of additional depreciation provided in previous years.

Apart from providing Rs 13.17 lakhs for Capital Reserve, Depreciation is raised to Rs 11.27 lakhs from Rs 9.57 lakhs; Taxation to Rs 35.50 lakhs from Rs 31.75 lakhs and Rehabilitation Reserve to Rs 19.50 lakhs from Rs 10 lakhs. No allocation is, however, made to General Reserve against Rs 20 lakhs previously. The dividend on the Ordinary and Vendors shares is maintained at Rs 1.75 per share, subject to tax.

The company has received a licence for the installation of 12,000 spindles. The preliminary work in this connection has been taken in hand and all efforts are being made to put this unit into production as early as possible. The directors are taking efforts to secure additional spindleage for balancing purposes. Meanwhile, the programmes of renovation and modernisation of Mills No. 1 and No. 2 continue to be implemented. Commitments for capital expenditure, sub-

Union Carbide

Union Carbide India Limited has proposed a final dividend of 50 pP per share, making a total of Rs 1.25 per share, taxable, for the year 1962 as against a taxable dividend of Rs 1.80 per share paid previously. The dividend is payable on or before 26 July to those shareholders registered as on 14 June 1963. Transfer Books will be closed from 27 May to 14 June 1963.

Gross sales for 1962 totalled Rs 122,810,000 (Rs 95,012,257). Profits before tax and after development rebate amounted to Rs 18,624,531 (Rs 8,320,569). The higher profits are due mainly to the substantially increased sales and the lower development rebate in 1962 of Rs 780,000 (Rs 6,550,000). Taxation showed a substantial increase at Rs 12,919,470 (Rs 2,178,000), being due to the reduced development rebate and provision of Rs 3,565,000 for Super Profits Tax. Capital expenditure totalled Rs 3,380,690 for improved facilities and capacities at the Chemicals plant and the Zinc Rolling Mill. Depreciation increased to Rs 5,638,918 (Rs 3,494,115) as new factory capacities came into production. Comparative figures for 1961 are given in brackets.

Century Mills

It is generally felt that the Board of the Century Mills may consider the accounts and decide the dividend for 1962 after the Finance Minister announces the concessions by about the middle of April. But for the impact of SPT, the company would have easily maintained the distribution for last year.

Osmanahi Mills Limited have once again skipped the dividend for the year ended 30 September 1962.

STOCK EXCHANGES Helpless Drift in Values

Watch-Dog Writes:

STOCK markets are in the doldrums with equity prices seeking fresh lower levels on lack of any support. Despite the decisions of the authorities in Bombay and Calcutta to withdraw minimum price restrictions, activity has failed to pick up.

Lyons Range took a turn for the worse and prices nosedived under persistent liquidation.

Prices on Dalal Street slipped down further on disinvestment selling and professional offerings, which were touched off by the removal of minimum prices of all the scrips except ten.

There was no activity on the Madras Stock Exchange, which continued to present a monotonous look. No business was possible at the quoted rates.

On the Bangalore Stock Exchange, turnover was moderate.

Trading on the Ahmedabad Stock Exchange was dull and featureless.

Sentiment on the Delhi Stock Exchange remained subdued.

CALCUTTA

THE local stock market opened the week on a subdued note and prices receded gradually due to sustained bull liquidation, resulting in a considerable shrinkage in the volume of business. Whatever activity there was, was confined mostly to the clearing shares, which, as a matter of fact, were unofficially traded at well below the minimum levels.

Till the end of last week, hopes were entertained that the Union Finance Minister might announce some concessions over the terms of the Super Profits Tax. But the discussions between the Finance Minister and the representatives of trade and industry provided so far no clue to concessions in the tax proposals. There was even an official view that the SPT would not affect adversely capital formation. Thus, the remote possibility of any substantial modification in the SPT created a feeling of despondency.

Further discouragement was provided by the decisions made by some leading companies not to proceed with their right issues, expansion and diversification schemes. In this respect, the dividend-cuts by the Dunlop Rubber Company and Union Carbide and the postponement of divi-

The serious fall in prices in Friday's session of the market unnerved the operators so much that they placed before the President of the Calcutta Stock Exchange a memorandum urging him to take suitable steps in the present situation. In response to insistent demand from the members, the President decided that the market should be closed on Saturday, 23 March.

Representatives of the eight recognised stock exchanges will meet the Union Finance Minister on 28 March. At their meeting, the representatives will impress upon the Finance Minister the need for a substantial modification of the SPT.

dend by Braithwaite were bearishly interpreted.

There were also other disturbing factors which worried the marketmen and the average investor. First, concern was expressed over the flow of funds into stocks and shares, especially when the supply of bank credit had become very tight and costly. Secondly, it was felt that savings of individuals would be squeezed by the new surcharge on net incomes and compulsory saving scheme. Lastly, discouraging reports about massing of Chinese troops in the Tibetan area gave cause for a nervous feeling.

For obvious reasons, professional operators were inclined to liquidate their holdings, while investors were in no mood to risk capital unless the profitability was restored to a reasonable level. Even the decision made by the authorities to remove the minimum prices of all shares in the cash list with effect from 21 March failed to bring forth activity as they feared that, by this step, the pressure from banks might be aggravated.

Except for short-dated loans which ruled comparatively steady due to official support, conditions in the Gilt-edged section continued to remain dull. Institutional buying was conspicuous by its absence. State Loans were depressed in the absence of buyers. 3 per cent 1986 Conversion Loan eased off at the close to Rs 63.15 from the opening level of Rs 63.35.

Jute shares developed considerable weakness. It was difficult to locate buyers even by discounting present prices. There was a growing fear that, apart from the SPT which would mop up most of the profits, the modernisation and expansion programmes of various mills might be affected.

In the Engineering section, Indian Irons met with renewed offerings and were unofficially quoted at as low as Rs 18.50 against the minimum level of Rs 19.70. Similarly, Guest, Keen, Williams were on offer at Rs 28.25 against the minimum level of Rs 30.

Miscellaneous issues were generally weak. Hindustan Motor were unofficially on offer at Rs 14.87; Rohtas at Rs 9.87 and Union Carbide at Rs 29 against the minimum levels of Rs 15.90; Rs 10.75 and Rs 42.50 respectively. There was a fear that the dividends of many companies might be sharply cut unless the SPT was substantially modified.

Following table shows the extent of the decline in prices of a few other selected shares in each group:—

	As on 16 Mar.	As on 22 Mar.
Birla Jute	26.00	25.00
Ganges	12.94	11.62
Bengal	272.00	267.00

Titaghar	17.50	16.50

BANGALORE

The Bangalore Stock Exchange was inaugurated early this week by the Chief Minister of Mysore, Mr S. Nijalingappa. Presiding over the inauguration, Mr K. Mallappa, Industries Minister, said that the State Government would take full advantage of the facilities provided by the Stock Exchange for raising the required capital for the Industrial Investment and Development Corporation proposed to be set up in the State. It is expected that investment opportunities in the State will greatly improve as indications are that conditions conducive to rapid development of industries in the State will be created now that concerted measures are taken to increase power supply and other necessary facilities. The Bangalore Stock Exchange is the eighth to be recognised by the Central Government.

For obvious reasons, professional operators were inclined to liquidate their holdings, while investors were in no mood to risk capital unless the profitability was restored to a reasonable level. Even the decision made by the authorities to remove the minimum prices of all shares in the cash list with effect from 21 March failed to bring forth activity as they feared that, by this step, the pressure from banks might be aggravated.

Snippets

Steel Requirements: About 15 per cent of the present steel requirements in Ordnance factories are now being met from indigenous sources.

Indian Sarees: Indian sarees are becoming popular in the USA, particularly tussur and other silk varieties. India's exports of sarees to the USA in the nine months ending December, 1962, totalled 97,000 metres valued at Rs 198,000 against 12,000 metres valued at Rs 165,000 in 1961. Besides the USA, sarees are also being exported to Ceylon, Singapore, Malaya, the UK and African and West Asian countries.

Wage Board for Iron-ore Mines: The terms of reference and personnel of the proposed wage board for iron-ore mines will be finalised soon.

Newsprint Mills: The Government has issued a licence to a private party for setting up a newspaper print mill in Kangra District. The Indian firm is negotiating with a Canadian company for collaboration in setting up the mill estimated to cost about Rs 11 crores.

Income-tax Payments: The highest amount of income-tax paid by an individual in 1960-61 was Rs 23 lakhs and that paid by a company was Rs 278.9 lakhs.

A total of 11,724 persons drew an income of more than Rs 3,000 per month, in both the private and public sectors, during 1960-61, according to income-tax returns.

IOC's Progress

The State-owned Indian Oil Company was running 230 petrol pumps in addition to 32 depots in important towns in the country, according to the annual report of the Ministry of Mines & Fuel for the year 1962-63.

The Company, incorporated in June 1959, had imported considerable quantities of deficit petroleum products from U.S.S.R.

To handle these imports and also supplies from two public sector refineries at Nummati in Assam and Barauni in Bihar the country had acquired an army tankage, two naval tankages and had also taken up the construction of bulk storage facilities at several places.

The Company had undertaken the construction of bulk petroleum installations for supplying aviation fuels to the Air Force.

In terms of Government's agreement with ENI of Italy the IOC will import during the next two years distribution equipment from Italy against credit offered by ENI. The Company will also undertake distribution of petroleum gas available from Barauni and the cost of the project would also be adjusted against this credit. The project report submitted by the ENI companies regarding IPG distribution in India was under consideration.

"...to ensure for the people of the country all the benefits that can accrue from the acquisition and application of scientific knowledge"

Government of India Policy Resolution on Scientific Research, March 13, 1958

On March 21st, at Goregaon, Bombay, the Prime Minister inaugurated the first centre in South Asia offered by private industry for fundamental chemical and biological research. It has been established by the international chemical organisation C I B A.

Initially the Centre's scientific programme will comprise two main fields. Basic research in pharmaceuticals is to include chemical and biological investigations of Indian medicinal plants and the elaboration of new synthetic drugs. Dyestuff research will be conducted in collaboration with Atul Products Limited.

This new venture supports one important goal of the Third Five-Year Plan: increased efforts in basic research by private industry for economic development of the country. The project has been carried out in a spirit of goodwill and the most cordial cooperation. The 80 laboratories are now a functioning reality whose future rests in the hands of scientists dedicated to the task of improving the health and well-being of Man.

The Case Against the SPT

Elsewhere in this issue we have attempted a
detailed analysis of the implications of the Super
Profits Tax as embodied in the bill before Par-
liament, the validity of the assumptions behind
it, and its probable impact on the various sectors
of the economy should the bill get passed in its
present form. We shall gather up only some of
the more general considerations here.

There are to be discerned two assumptions be-
hind the tax with the first of which we have no
quarrel: with the second we have every quarrel.
There can be no two opinions on the inevitability
of new fiscal burdens in the situation in which
we find ourselves or about the corporate sector
having to bear its due share thereof. Certain
quarters have simulated indignation at what
they describe as the interested squeal of the
corporate sector which is not willing to make
even minimum sacrifices in a period of Emer-
gency. This is wholly disingenuous. The objec-
tion voiced by and on behalf of the corporate sec-
tor is not to the sacrifice demanded but to the
mode of exacting it. Indeed, quantified as this
sacrifice is in monetary terms at Rs 25 crores,
the corporate sector has repeatedly declared it-
self as willing to find this amount and more in
the form of taxes that will have none of the
deleterious effects on the economy that the SPT
in its present form is sure to have.

The second assumption behind the levy shows
that the inspiration behind the tax is more than
what has been dictated by the demands of the
Emergency. Mr Morarji Desai said in his bud-
get speech that the tax is intended to "remedy
the shortcoming" of there being no "correlation
between the rate of tax and the percentage of
profits" in our system of corporate taxation. This
principle is examined at some length in the ar-
ticles that follow and we shall merely set down
the broad conclusions here.

It is significant that Mr Desai has advanced
none of the conventional reasons for an Excess
Profits tax, like mopping up windfall profits aris-
ing out of war spending. He has, on the other
hand, thought up a fundamental lacuna in our
tax system: there is, unlike in the system of
taxation of non-corporate income, no principle
of progression in the taxation of companies.
Presumably this is considered as a defect in an
equitable sense vis-a-vis other kinds of tax-
payers. Now the principle of progressive taxa-
tion of companies is wrong for two reasons.
First, other things remaining equal, any progres-
sive tax is a tax on efficiency. It is accepted in
the taxation of other taxable entities only be-
cause of wider considerations of policy stem-
ming from a desire to reduce economic inequa-
lity. This principle has obviously no application
to a body corporate. Indeed, insofar as it has,
it may turn out that companies that make huge
profits have (because of their popularity in the
market) as their shareholders men of ordinary
means who may now have to bear the burden of
a Super Profits Tax. Thus the principle that
the tax should be levied on those best placed to
bear it is directly contravened by the idea of
progression in company taxation newly sought
to be introduced by the SPT.

That there are certain adventitious factors in
the economy that do not make automatic a direct

correlation between high profits and efficiency
cannot be denied. But within a particular in-
dustry, the difference in the percentage of profits
between one company and another may fairly be
said to be due to the difference in efficiency and
the principle of progressive taxation in such a
context is a tax on efficiency.

Our second objection is that the tax does not
make any distinction between industry and in-
dustry applying only the criteria of capital and
reserves as a yardstick of basic fair profits. In-
sofar as this implies encouragement of retained
profit, this may be progressive but a large capi-
tal base is not necessarily a sign of progressiv-
ness in an industry nor does the tax make al-
lowance, as the Excess Profits Tax and the Busi-
ness Profit tax did, for fluctuations in profitabil-
ity from year to year. The tax does not also
act as a conscious instrument of industrial policy
in that it has not made any distinction between
industries that ought to be encouraged and
those that ought to be discouraged.

Thirdly, computation of the capital for calcula-
ting a certain percentage thereof as exempt from
Super Profits Tax is unrealistic. Six per cent on
paid up capital and reserves (other than reserves
allowed as a deduction in the computation of
income for income tax purposes) is by implica-
tion conceived as a fair return net of tax and
anything in excess thereof is treated as super
profits. In a context in which lending rates in
the markets is about 7 per cent (though the lender
has to pay tax thereon) and the preference
capital has a guaranteed net (in the case of tax-
free dividends) return of about 9 per cent, this
is far too meagre a basic reward for risk capital.

Fourthly, the rates of tax (50 per cent on super
profits between 6 and 10 per cent of "net worth"
and 60 per cent on the rest) will leave with the
company hardly any funds for dividend distri-
bution and for ploughing back of profits for fur-
ther expansion. In some cases as much as 80
per cent of its income may have to be paid away
in taxes. The cutting into post-tax profits will
mean

- cut into dividends, with resultant difficul-
ties in attracting fresh capital and even
more importantly,
- a serious obstacle in the way of foreign
collaboration in Indian industrialisation.
- the prospects of self-financing by plough-
ing back of profits will be seriously jec-
pardised.

We are therefore strongly of the opinion that
it would be best if the Super Profits Tax does
not get into the Statute Book at all. The reve-
nue expectations could well be obtained by other
means from the corporate sector. It could well
take the form of a surcharge on companies of
about 7 to 10 per cent. If a refinement is con-
sidered necessary, it can take the form of a sur-
charge on distributed profits, thereby encourag-
ing the retaining of profits in business. Should
the Finance Minister be so much in love with
the SPT that he cannot bring himself to follow
either of these alternatives, we would urge upon
him to consider carefully the various changes in
the SPT bill that we have suggested elsewhere.

SUPER PROFITS TAX —A STUDY

SPT

The Objections in Principle

IT is fairly clear that among the welter of motives behind the Super Profits Tax in the form in which it has been presented in Parliament, the simple one of finding an additional Rs 25 crores from the corporate sector is the least important. It is necessary to state this explicitly at the outset, in view of certain irrelevancies that have muddled the argument. Much synthetic indignation has been expended on the alleged unwillingness of the corporate sector to rise to the occasion and bear cheerfully the inescapable burdens of the hour. This argument proceeds on the assumption that what is being objected to is the fiscal sacrifices demanded. This is a deliberate distortion of the issues involved. The short answer to this is that the additional fiscal sacrifice necessary has been quantified at Rs 25 crores and if the corporate sector is willing to find this or a larger sum by other modes of taxation on itself, there should logically be no reluctance to withdrawing the SPT.

Introducing the Bill in Parliament, Mr Desai has enunciated a fiscal principle of some novelty. It is open to question whether this is the best time for fiscal experimentation, especially when the return therefrom is so minimal compared to the total amount of taxes raised. However that may be, it is plain that Mr Desai has advanced none of the conventional reasons for taxing excess profits. Indeed, except by implication arising from a basic exempted slab for taxing "Super Profits," the idea of an excess profit may not even be said to be present. The Excess Profits Tax Act, 1940, for example, said in its preamble that it was expedient to tax "the excess profits arising out of certain businesses in the conditions prevailing during the hostilities". The Statement of Objects and Reasons of the Bill to tax Super Profits makes no such assertion. It merely says that the object is to impose "a special tax on certain companies." Mr Desai said in the course of his budget speech, "In our system of corporate taxation there is no correlation between the rate of tax and the percentage of profits. This shortcoming needs to be remedied". In other words, Mr Desai wants to introduce the element of progression in the taxation of companies whereby a company making more profits will not only pay more tax but at a higher rate of tax. This is, in some ways, a novel idea. Presumably, Mr Desai thinks that there is no reason why the principle of progressively increasing rates of taxation for higher incomes currently applicable to non-corporate income should not be applied to companies. In other words, some obscure consideration of equity as between the non-corporate and corporate sectors, rather than the need to mop up of windfall profits arising in abnormal times is the avowed purpose of the bill.

This is clear from the fact that the SPT is applicable only to companies whereas both the Excess Profits Tax and the Business Profits Tax that we had in the forties were applicable to all taxable entities. Moreover, they were directed only at what might be called business income, whereas the SPT is directed at all kinds of income. It is true that Mr Desai has also applied the principle of taxing the residue after tax even in the case of non-corporate assesseees in the form of a progressively increasing surcharge. In the

case of registered firms, a 20 per cent surcharge is also levied on its tax. But the rate of such surcharge is far less than what is contemplated under the Super Profits Tax Bill and in any case we have Mr Desai's own words for what he considered the purpose of this Bill. It is necessary to examine this principle.

The first objection to this principle is that even in the case of non-corporate assesseees progressive taxation is defensible only by a species of special pleading. Intrinsically, such a tax is wrong in that it punishes initiative, enterprise, ability and efficiency. This, of course, assumes, that the higher profits have a direct correlation to these qualities, which may not always be the case. If they are not, a blanket Super Profits Tax, as we shall argue later, does not mend matters. Be that as it may, there is a great deal to be said in favour of a Kaldorian fiscal philosophy in which income is lightly taxed whereas property and expenditure is highly taxed.

If, in spite of this objection, progressive taxation of individuals and other non-corporate assesseees is accepted without demur, it is because of reasons of social policy that rightly sets its face against excessive concentration of wealth in a few hands which the absence of such a policy will encourage. But such considerations will not apply in the case of bodies corporate. The levy of a progressive tax on such bodies will undoubtedly penalise the efficient units and the social requirement that extenuates it does not exist in their case. Indeed, in a wholly unintended way, the social policy that stems from the desire to protect the weak will get defeated by a policy of progressive tax on companies. For, a company that makes high profits owing to the high managerial and entrepreneurial qualities of a good management is likely to have its shares held as widely as possible and in many cases the owners of such shares will be men of small means. The Super Profits Tax will directly affect their welfare by cutting into their dividends.

If in spite of these objections, a progressive rate of taxation of corporate bodies is considered expedient, it can be only because of the assumption that a higher profit has no necessary relationship with efficiency. The argument is often advanced that in a sheltered market bedevilled with shortages profits are not a function of efficiency. Such a description of the Indian economy is too impressionistic and inexact on details. In international comparisons, this may have a broad validity, explaining, incidentally, one of the attractions an underdeveloped country offers to foreign capital. It may also be true, though in a much less extent of comparisons between industry and industry. But within the same industry, there is, even in a seller's market, a differential in performance depending upon the particular unit's efficiency.

If the SPT were simply a rough and ready expropriation of what might be called abnormal profits arising when a country is at war, there would have been less scope for argument because by its very nature such taxes are arbitrary. But Mr Desai, for what must have weighed with him as good and sufficient reasons, does not claim that the SPT is such a tax. Indeed, if it were, his sophisticated principle of progression in company taxation would be a needless refinement. Therefore, the objection to the SPT in its present form is that purporting to be a sophisticated fiscal measure, it is unscientific and indiscriminate in its impact.

This then is the chief objection in principle to the SPT in its present form. In the first place, it does not make the necessary distinction between monopoly profits and profits arising from skill and prudence. Secondly, it is unscientific in that it places a premium on financial capital vis a vis human capital in the form of entrepreneurial and technical skill, which are even more import-

ant for our development than financial capital. Thirdly, it does not make any distinction between industry and industry. Fourthly, it does not provide for variations in fortunes from year to year. Fifthly, it does not take note of the special position of foreign capital and entrepreneurship that have come to India to assist in our economic development. Sixthly, in this as in other things, it has not made the tax an instrument of our economic policy by favouring desirable industry and discouraging the one we can do without. And seventhly, by taking the cream of profits normally available for self-financing and for rewarding shareholders, it will dry up the sources of funds for the private sector. These funds are required not only for expansion, but even more importantly, from the point of view of the reputation of the companies, for honouring commitments and liabilities already incurred on the hope of finding funds in this wise.

These objections are examined in greater detail in the articles that follow and some important amendments to the Bill suggested. It would seem that, given the expectation of a mere Rs 25 crores from this tax, it is a tremendous amount of fuss to make. That, if we may say so, is precisely the point. If the amount could be secured otherwise, there should be no particular reason why this tax should be levied. After making all the allowances for exaggeration in the pleadings of the corporate sector, there is a hard core of valid objection. After all, the erosion of value to the tune of Rs 34 crores in the Calcutta Stock Exchange after the announcement of the SPT cannot be wholly a subjective illusion. If in spite of all this, the Bill is proceeded with in its present form, the reasons can only be two-fold. First, the estimate of Rs 25 crores is an underestimate and the Government wants for some reason much more money than what it has budgeted for. Secondly, considerations of face. Whatever may be said of the first, the second reason is admittedly inoperative in the case of Mr Desai.

THE PRICE LINE

The price line must be held. This is as much the responsibility of the State as of every citizen. Idle money, in the form of cash in hand, is the devil in the price spiral.

Money put in a bank, remains active in the service of production and distribution of goods and facilitates keeping the price line under control.

Use less cash; make your money transactions through your bank account. You will thus make a direct contribution to the effort in holding the prices under check.

The Objections in Detail

Apart from the principle of the tax, our first objection is to the criteria that the Bill erects for computing the tax free slab. An abatement for Super Profits Tax purposes based on the owned-capital base has obvious drawbacks. As we have already stated, it puts a discount on human qualities that make a success of business by according an exaggerated importance to money. Alternatively, it seems to imply that a heavy capital base is an attribute either of an industry in need of fiscal feather-bedding or of one entitled to special treatment for reasons of wider policy. It is neither. Such a computation does not also take note of the realities of the situation. It is not only trading companies (which may plausibly be thought of as not deserving of much sympathy in the present context) that run their business on borrowed capital. Even manufacturing and industrial companies, some of them with heavy capital bases, have extensive recourse to loan capital both for their day-to-day finance and for funds for expansion. The bank over-draft is a more or less permanent debt. Moreover, the demands of expansion have made inevitable vast imports and the foreign exchange for them. Most of such foreign exchange is in the form of loans.

In any case a return of six per cent on owned-capital is too low an allowance of non-taxable Super Profits. In so far as it implies any norm of fair profits excess over which can be treated as Super Profits, the arguments against it are weighty. We are not forgetting that, unlike the standard profit of the EPT Act and the abatement of the BPT Act, this norm of profit is net of corporation tax. In the first place, there are avenues of tax-free investments of funds involving no risk whatsoever, like, for example, some of the small savings schemes. Secondly, in the prevailing market conditions, the borrowing rate is between seven and nine per cent. It is true that the interest is allowed as a deduction. It is also true that the interest is taxable in the hands of the lender. But what we are saying is not that the return allowed is less than what obtains in the case of loans. All that we say is that the reward for risk (greater in the case of equity capital) is quite inadequate.

The position is even more invidious vis-a-vis preferential yield. In the first place, preference dividends paid by a company do not, unlike interest paid on loans, get allowed as a deduction in determining the total income for income tax purposes and therefore do not operate to reduce Super Profits. Secondly, where preference dividends are tax-free, the comparability between the two returns under comparison is complete. We are aware that the spe-

cies of tax-free preference dividends has disappeared after the introduction of the new system of corporate taxation. But it should also be remembered that in order to mitigate the hardship caused by the new system to the holders of erstwhile tax-free preference shares, companies increased the rate of such preference dividends.

But the real injustice to the equity shareholder vis-a-vis the preference shareholder will arise this way. The liability to SPT will not affect the contractual obligation to pay the stated percentage of preference dividends. This would mean that such dividends in excess of the return considered fair can only be found at the expense of the equity shareholder, who will thus be bearing not only his share of the new burden but also that of the preference shareholder. This may be considered by the cynic as one way of redressing the balance in favour of the preference capital which was so far being comparatively neglected in the feverish rush for growth scrips. But the essential injustice involved in such over-taxing of risk-taking cannot be denied.

The next point is the rate of tax that has been proposed in the Super Profits Tax Bill. On another page we have attempted a table of the probable impact of the SPT on the companies whose shares are in the forward list of the Calcutta Stock Exchange. This shows that most companies will not be able to find the money needed for paying dividends and for transfer to reserves on the scale they did during the current year if SPT is levied on them. It will also be seen that many of these companies have vast commitments in the form of loans taken for expansion.

In view of this we would suggest a provision for deduction from the super profits the amounts transferred to reserves upto a maximum of 20% of the profits. This accords with the stated desire of encouraging capital creation from profits. It is also anti-inflationary in a sense, a not inconsiderable merit in the present context. Indeed, the scheme of SPT recognises this principle as salutary obliquely by relating the tax-free slab to taxed reserves. This recognition should be made more articulate by allowing as deductions such transfers in the computation of SPT.

We are aware of some of the snags and loopholes for evasions this may give rise to. For example, it may well happen that the company will transfer certain amounts to general reserves this year and withdraw it the next year for other uses. This will secure the reduction in SPT and at the same time allow the company to do exactly what it pleases with the amount. It is true that if this is done the capital base will get reduced so that the non-taxable

slab will be reduced in later assessments. But this will happen only in the third year, for the calculation of tax-free slab is on the capital base at the beginning of a year.

But this loophole is capable of a simple remedy. As in the case of transfer to development rebate reserves, it can be stipulated that the transfers to reserve, in order to qualify for deduction for SPT purposes should be left undrawn except for developmental purposes for a stated number of years. Or there is another alternative. In the old days, the rebate in income tax given for undistributed profits was subsequently neutralised by taxing subsequent excess distribution over the accepted norm. In the same way, any drawal from this reserve for other than permitted purposes can be subjected to SPT in the year in which such drawal is made. Of course, the question of identifying the particular reserve from which the drawal is made will arise, but that can be suitably be provided for.

The other snag in this suggestion is the reconciling of the idea with the requirements of what used to be called "23A companies." The purposes of old section and its successor provisions are at cross purposes with this suggestion in that non-distribution of profits is to be penalised under those provisions. Our solution to this problem would be that some distinction should be made between companies that we desire to encourage and those that we don't. Among the former will come manufacturing and industrial companies and among the latter the "hard-core" 23A companies, the tightly-held corporations. These two categories overlap some times but the present income tax law does make some attempt to distinguish the various categories of companies by providing differentials of obligatory distribution. Besides, what might be called the normal obligatory distribution,—60 per cent of taxed profits—can be just made even after providing for the suggestion we have made. For a 20% transfer of untaxed income is a 10 per cent transfer of taxed income so that if the company did make this transfer, it will just be able to escape the penal provisions of section 23A by distributing the whole of the residue.

The only remaining snag is in connection with companies whose existing reserves equal the paid up capital in which case the section requires a hundred per cent distribution of the residue. We would suggest the relaxation of this provision. In other words, we would like that, in the case of companies that are not "hard-core" 23A companies, the ceiling on transfer in excess of 100 per cent of the paid up capital should be relaxed. In fact, in the case of banking companies, the principle is recognised in that the statutory transfers to reserves under section 17 of the Banking Companies Act is taken

into account in reckoning the distributable profits for the purpose of applying section 23A. This principle should be suitably extended to the SPT.

Foreign Companies

We have kept for the last the discussion of the impact of the SPT Bill on foreign investors. The objections from the point of view of domestic entrepreneurs that we have urged apply a fortiori in the case of foreign investors in India. Desire to invest in India either through subsidiaries or directly will sharply diminish in consequence. In detail also, the bill will act harshly in the case of foreigners. For example, the reckoning of the capital of a company with world-wide interests for SPT purposes will have to be done backwards—i.e. the capital base for Indian income will be taken to bear to the company's total capital base the same proportion that its Indian income bears to its world income. This base may well be so narrow and a six per cent return thereon will be so exiguous that the entire taxed profits may be liable to SPT. Secondly, in some cases, the total percentage of tax paid by a foreign company may be more than what is paid by an Indian company because of the fact that certain classes of dividend and other income of foreigners are taxable at a higher rate than the corresponding Indian incomes. This would lead to the anomaly of foreigners being asked to make a greater sacrifice than Indians for an emergency which is essentially Indian. Thirdly the disallowance of salaries and perquisites in excess of Rs 60,000 for income-tax purposes will have its effect in the SPT computation also. These provisions are more likely to affect foreigners. These salaries, related as they are to international norms, cannot be easily reduced by the companies. This means fortuitous penalty for such companies. Taking all these into account we would suggest the following modifications in respect of foreign companies:

1. If our suggestion that only business income should be subjected to SPT is accepted, it would automatically let out of taxation of dividends received by foreign principals of Indian subsidiaries. This would mitigate the vexation and inequity of trying to find a notional capital based on Indian and world incomes, at least in the case of companies whose income is only from dividends.

2. If this is not acceptable, a different and more equitable criterion of determination of the capital base should be devised. Perhaps the actual cost of the investment may be taken as the capital. In some cases, the loan capital to subsidiaries should be also be taken into account.

3. At least for SPT purposes no disallowances of excess salaries should be made and the total income base suitably modified.

Japur Udyog(f)	...	3.62	...	...	...	...	...	...	...	...	...	...

This table has to be used with care as it suffers from some inherent and inescapable limitations. Among these are:

The computation has been made on the basis of the latest available published Accounts. Except in the case of Burrakur coal, (for which the accounts for the previous year for 1963-64 were available), the computation is notional.

The published profits as per profit and loss account have been taken, with obvious adjustments, as equivalent to the total income for income-tax purposes. This may not always be the case. The allowance for depreciation for income-tax may vary from the amount charged in accounts and the profit or loss on sale of assets may also differ in income-tax assessments. Most importantly, where under the provisions of the Finance Bill, salaries in excess of Rs 60,000 per annum are disallowed the total income will be larger than the published profit.

Provision made by the company for tax has been taken as the tax deductible in arriving at the Super Profits. This may not always be the case.

The determination of what constitutes eligible reserves is not easy. The Supreme Court has held in the context of BPT that the balance in the Profit and Loss Account is not a reserve within the meaning of this provision unless it is specifically imprinted with the characteristic of a reserve. Such surpluses have not therefore been taken as reserves. Likewise, items not specifically identifiable as reserves have not been treated as such.

Wherever appropriation to development rebate reserve has been made in the accounts it has been taken as the full amount of development rebate allowed under the Act, unless the appropriation is made to the "statutory development rebate reserve," in which case it has been taken as 75 per cent of allowable rebate.

The dividends distributed for the year given in the table is only dividends on ordinary shares. If preference dividends distributed are also taken into account, the shortfall will be even more striking.

(a) Additional Depreciation Reserve treated as ineligible on the assumption that it has been allowed in Income-tax.

(b) Dividend Adjustment account treated as not eligible reserve. General development reserve would appear to be created by transfers from Development Rebate Reserve (Statutory) and hence treated as ineligible. There is scope for error here.

(c) Capital Reserve on Revaluation of Assets not treated as eligible Reserve.

(d) The figures for Indian Copper Corporation are in millions of pounds.

(e) Reserve for Income-tax (1962-63) not taken as an eligible Reserve.

(f) The company expects relief under Section 84 and 101 of I. T. Act and refunds on appeal of earlier years; and has not estimated the tax liability for the year. Hence not possible to estimate the actual tax liability for the year. So, no computation of Super Profit Tax.

(g) The amount includes transfer to Development rebate reserve also.

SPT, EPT and BPT

In discussing the impact of the SPT in its present form, it will be useful to compare it with the provisions of the Excess Profits Tax and the Business Profits Tax, both of which were in operation in the forties. In some important respects the SPT differs from the two old special taxes. As already stated, the latter were applicable to all assesseees and they were levied only on business profits. The starting point, therefore was the business profits. In the case of the EPT, which was in some respects the more complicated of the two, a "standard profit" was calculated either by reference to a standard period prior to the war, or as "a statutory percentage" of the average capital employed in the business during the period. This was an extremely complicated calculation, but it had the merit of grappling more adequately than does the SPT with the concept of what produced the excess profits. An absolute minimum standard profit of Rs 36,000 was also prescribed. Any profit in excess of this standard profit was subject to EPT at the rate of 50 per cent upto 31 March 41 and at the rate of 66.66 per cent thereafter until the Act was repealed in 1946. Most importantly, in case the profits of a particular year were less than the standard profit, the "deficiency" was allowed to be carried forward or backwards to be set off against the chargeable profits of another chargeable accounting period. In addition, there was a scheme of compulsory deposit of excess profits from January 1943 by which a certain amount calculated as a percentage of the excess profits tax was to be deposited in addition to paying the tax. This amount was, of course, repayable after the war with interest. The EPT paid was allowed as a deduction in income-tax.

The BPT had a slightly different scheme and was more akin to the SPT in its rather rough and ready method of calculating the tax-free business profits. This was partially justified because of the comparative lightness of the tax, which was 16.66 per cent of the taxable business profits. The tax was levied on the business profits in excess of a standard figure of "abatement", which was (in the case of a company) calculated in more or less the same manner prescribed in the SPT Bill. But there is an important distinction between the two in that a minimum abatement of Rs 1 lakh (later Rs 2 lakhs) was prescribed in the BPT Act. (For non-company assesseees other minima applied.) As in the case of the EPT, the BPT was an allowable deduction for income tax purposes. Again, as in the case of EPT, deficiencies from the standard abatement were capable of set off against earlier or later taxable profits.

There is one important respect in which the SPT may be said to be an improvement on the earlier taxes, though some room for doubt may arise in actual interpretation of the wording in the SPT Bill. Under the BPT Act, neither the loss incurred in earlier years nor the unabsorbed depreciation of prior years were, unlike for income tax, allowed to be set off against the chargeable Business profit. In the SPT Bill, however, the starting point being the total income for income tax purposes, these will presumably get adjusted.

OUR SUGGESTIONS

1. The SPT bill should be dropped. Instead, a surcharge on corporation tax at a percentage that will yield the Rs 25 crores anticipated from SPT should be levied. If considered expedient for anti-inflationary and other reasons, this levy can take the form of a tax on distributed profits.

2. Should the first suggestion not be acceptable and a tax on residue of taxed income of companies be deemed necessary, we would suggest that the principle of progression be dropped.

3. The tax should be levied only on the business profits of a company.

4. The Capital base for calculation of a tax-free Super Profits should be enlarged. The rate of return should also be raised to, say, 9 per cent. The rate of SPT should also be reduced substantially. This should not be difficult in view of the low expectation from the SPT.

5. An absolute minimum abatement should be provided for in the bill on the analogy of the EPT and BPT Acts.

6. The principle of carry forward and backwards of deficiency from the standard profits should be incorporated.

7. Transfers to reserves upto 20 per cent of untaxed income should be allowed as a deduction for all companies other than the "hard-core 23A" Companies. This should be done even if the reserves exceed 100 per cent of the paid-up capital.

8. Special concessions of the kind discussed in the article on foreign companies should be given to them.

In the light of the above discussion we would suggest the following changes in the SPT provisions:

(1) The SPT should be confined to business income, but with adjustment for earlier losses and unabsorbed depreciation. This would, on the analogy of the earlier taxes, take out of the scope of SPT, the income from investments and house property etc except in the case of banking companies and investment companies and (for property income) property companies.

(2) The principle of set off of deficiency against taxable SPT of earlier and later years should be incorporated. This suggestion has the disadvantage of putting in the head of Mr Desai the idea of an SPT for a considerable time, which we are reluctant to do for obvious reasons. Nevertheless, if the tax is to be there, this important modification is necessary. This is the only way in which the fluctuations in the fortunes from year to year to which some industries, —Tea and Jute are obvious examples—are prone, can be partially neutralised. Of course, even this provision will leave high and dry the patient shareholder who has waited without any return all those years when his company made little or no profit. He will now have the mortification of seeing his patience rewarded with much less dividend than he had a right to hope for, for the SPT would have, without regard to earlier history, taken the cream of the profit away. The adjustment for deficiency we have suggested will not avail in this case since the deficiency eligible for set-off can arise only after the tax came into force.

(3) We would suggest the fixing of a minimum absolute abatement which would be not liable to SPT even though such an absolute minimum is higher than 6 per cent of the capital and eligible reserves. It may be argued that since the 6 per cent abatement is from taxed income in the case of SPT, there is no need for an absolute abatement. This argument is fallacious for two reasons. First, an abatement is in effect in operation in the 6 per cent of capital plus eligible reserves and all that is now suggested is an alternative figure in absolute terms. If necessary, this can be a lower figure than what was allowed in BPT, but an absolute minimum is necessary in the interests of small companies. Secondly, as against the allowance of IT in SPT assessments, under the older scheme, BPT and EPT were allowed as deductions in income tax assessments. It is doubtful whether SPT is allowable as a deduction in income tax.

(4) The capital computation for purposes of ascertaining the standard profit prescribed in the EPT Act comes no doubt nearest to assessing precisely the income-producing base. Like some of the Tariff Commission's price fixing formulae, this is to be preferred in contexts like this. But we hesitate to suggest it because of its extreme complexity. Simplicity is a great virtue in tax laws and hence our general preference of the BPT formula to that of the EPT. But while the SPT Bill follows the BPT Act in its provisions for capital computation, it adopts the higher rates of tax adopted in the EPT Act, giving some justification for the old cliché about "Heads I win and Tails you lose." This needs rectification.

SPT

Memorandum by Stock Exchanges

The following is a summary of the memorandum submitted jointly by the eight recognised stock exchanges in the country:

The Memorandum examines the position taken up by the Finance Minister in his budget speech that an increase in the corporation tax is either not practicable, or may not bring in the required revenue of Rs 25 crores, or would not secure an equitable distribution of the burden; and that the Super Profits Tax would be more equitable because it would correlate the rate of tax with the percentage of profits by taxing at 50 to 60 per cent, all "excessive" or "super" profits earned by a Company exceeding a standard return of 6% on its paid-up capital plus taxed reserves.

It is pointed out that, prima facie, net profits above 6 per cent, cannot be said to be "excessive" or "super" when current bank borrowing rates are 7 to 8 per cent, and debenture and preference capital cannot be raised at less than 9 per cent.

An examination of Company Balance Sheets shows that even in the case of industries like iron and steel, cement and electricity where there is price regulation or statutory control, and in undertakings like banks and insurance companies which no one could charge with profiteering, some units make excessive" or "super" profits and others do not. Therefore, what are called excessive or super profits are really differential profits.

Differential profits arise from the operation of economic factors which differ from country to country, industry to industry, and unit to unit within the same industry. Some countries are undeveloped or under-developed in comparison with others, and as pointed out by the Taxation Enquiry Commission (1953-54), "a year to year comparison of trends in various industries shows large fluctuations in profit-earning capacity of industries". This is fully borne out by the statistical studies published by the Reserve Bank of India on the working of 750 and 1,001 Companies representing respectively two-thirds and three-fourths of the total paid-up capital of public limited companies.

Differential profits also accrue to different units within the same industry because of divergent factors influencing their economic stature and financial position. Companies are new or old, risky or safe, efficient or inefficient, well-managed or otherwise. They differ in the total amount of capital employed for fixed assets and working purposes, in the propor-

The beginning of a new life...

A great day in Asoke's life... it marks the beginning of his professional career. His parents and relations wish him all success in his new life.

A moment ago, Asoke went to grand father to seek his blessings. The familiar fragrance of Jabakusum that wafted from

Asoke's hair brought back to grandfather the memory of that day when he too, with firm steps, set out for his first day in the office.

For three generations, for nearly a century, Jabakusum has been the undisputed favourite in Indian households — an indispensable hair oil for daily use, an essential item in hair-dressing.

THE FAVOURITE OF THREE GENERATIONS

C. K. SEN & CO. PRIVATE LTD. Jabakusum House, Calcutta-12

tion of equity, preference and debenture capital, that is, in the gearing of their capital structure, and in the proportion distributed as dividends or retained as reserves. The Reserve Bank studies referred to above show that Companies do not make excessive profits; and that even these moderate profits are not frittered away by distributing excessive dividends, but as much as 35 to 40 per cent, is conserved as reserves representing enforced savings on the part of shareholders for initiating, promoting and accelerating industrial growth, development and expansion. This is confirmed by an examination of Balance Sheets of individual companies.

It follows that there is no yardstick in the nature of a standard return on capital with which to measure profits for either industry as a whole, or from industry to industry, or between one company and another in the same industry. As observed by the Taxation Enquiry Commission (1953-54), "the percentage standard gives

rise to certain anomalies because it is not possible to lay down any particular profits ratio as applicable equitably to all forms of enterprise." It is therefore a fallacy to assume that all differential profits earned by a company in excess of 6 per cent. of its paid-up capital plus taxed reserves are "excessive" or "super" profits.

Further, as the Income-tax Inquiry Committee (1924-25) points out, "the amount of profit made by a company bears no necessary relation to the wealth or property of its shareholders" who have ultimately to bear the burden of any tax imposed on the company. A Super Profits Tax which taxes companies' net profits between 6% and 10% of their paid-up capital plus taxed reserves at the rate of 50 per cent., and net profits above 10% at the rate of 60 per cent., is prima facie confiscatory; and it will incalculably increase the maldistribution of the tax burden because, as observed by the Income-tax Investigation Commission (1949), "public companies gene-

rally attract a large number of middle class shareholders and many of them would be seriously prejudiced if the companies are subjected to super-tax at a progressively increasing rate."

The investing public will also be hard hit by the adverse effects of the Super Profit Tax on the stock market. Since the Super Profits Tax will materially reduce the profit-earning and dividend-paying capacity of different companies, the structure of stock exchange prices will be distorted, and the continued and unequal fall in prices, differing from industry to industry and company to company, is likely to deepen the present depression.

On the whole, therefore, the Super Profits Tax will have serious repercussions. To mitigate the defects, the proposed tax should at least be modified to provide for the following:—

(a) Capital employed should include all shareholders' free reserves (e.g., development

rebate reserve) as well as debenture and long-term loan capital and bank borrowings.

(b) Standard return on capital employed should be increased from 6% to 10% with power to prescribe a higher percentage where necessary.

(c) Option should be given to Companies to calculate standard deduction either with reference to a percentage return on capital employed, or in comparison with "normal profits" earned in a base-period, say, the last year or the average of the last two or three years.

(d) Profit chargeable to Super Profits Tax should be reduced by Preference dividend in excess of the amount of dividend calculated at the standard rate of return on capital employed.

(e) The Super Profits Tax rates should be substantially reduced to less than 20 to 25 per cent.

(f) Provision should be made for carry-forward and carry-backward of losses and deficiency of profits and for set-off and grant of refund.

(g) Exemption should be given to industries where there is price regulation or statutory control, and also to special industries like banking.

(h) Exemption should also be given to companies "in which the public are substantially interested" within the meaning of Section 2(18) of the Income-tax Act, failing which, as recommended by the Income-tax Investigation Commission (1949), provision should be made for refund or credit of Super Profits Tax to shareholders of such companies.

(i) Tax holiday should be given to all new companies.

The experience of similar legislation when proposed in Australia and other countries suggests that even modifications of the kind indicated above do not really solve the problem. That is also the view of the Taxation Enquiry Commission (1953-54), which has stated that such taxation has shown no particular advantages over the customary forms of income taxation. The customary form of taxation for companies is the Corporation Tax, and therefore, instead of levying a Super Profits Tax, it would be from all points of view more practicable, desirable and equitable to levy a temporary surcharge of 10 to 12½% on the Corporation Tax, raising the effective rate of Corporation Tax to 55 to 56½ per cent. for the duration of the emergency.

The Super Profits Tax Bill, 1963

(As Introduced in Lok Sabha on 28th February, 1963)

A

BILL

to impose a special tax on certain companies.

Be it enacted by Parliament in the Fourteenth Year of the Republic of India as follows:—

1. (1) This Act may be called the Super Profits Tax Act, 1963.

(2) It extends to the whole of India.

2. In this Act, unless the context otherwise requires,—

(1) "assessee" means a person by whom super profits tax or any other sum of money is payable under this Act and includes every person in respect of whom any proceeding under this Act has been taken for the assessment of his chargeable profits or of the amount of refund due to him;

(2) "assessment" includes re-assessment;

(3) "assessment year" means the period of twelve months commencing on the 1st day of April, every year;

(4) "Board" means the Central Board of Revenue constituted under the Central Board of Revenue Act, 1924;

(5) "chargeable profits" means the total income of an assessee computed under the Income-tax Act, 1961 for any previous year or years, as the case may be, and adjusted in accordance with the provisions of the First Schedule;

(6) "Income-tax Act, 1961" means the Income-tax Act, 1961;

(7) "prescribed" means prescribed by rules made under this Act;

(8) "standard deduction" means an amount equal to six per cent of the capital of the company as computed in accordance with the provisions of the Second Schedule;

Provided that where the previous year is greater or less than a period of twelve months, the aforesaid amount of six per cent of the capital shall be increased or decreased proportionately;

Provided further that where an assessee has different previous years in respect of his income, profits and gains, the aforesaid increase or decrease, as the case may be, shall be calculated with reference to the length of the previous year of the longest duration; and

(9) all other words and expressions used herein but not defined and defined in the Income-tax Act shall have the meanings respectively assigned to them in that Act.

TAX AUTHORITIES

3. (1) Every Director of Inspection, Commissioner of Income-

tax and Income-tax Officer shall have the like powers and perform the like functions, under this Act as he has and performs, under the Income-tax Act, and for the exercise of his powers and the performance of his functions, his jurisdiction under this Act will be the same as that he has under the Income-tax Act.

(2) All officers and persons employed in the execution of this Act shall observe and follow the orders, instructions and directions of the Board:

Provided that no such orders, instructions or directions shall be given so as to interfere with the discretion of the Appellate Assistant Commissioner in the exercise of his appellate functions.

(3) Every Income-tax Officer, employed in the execution of this Act, shall observe and follow the orders, instructions and directions issued for his guidance by the Director of Inspection or by the Commissioner or by the Inspecting Assistant Commissioner under whose jurisdiction he performs his functions.

CHARGE OF TAX

4. Subject to the provisions contained in this Act, there shall be charged for every assessment year commencing on and from the 1st day of April, 1963, a tax (in this Act referred to as the super profits tax) in respect of the chargeable profits of the previous year or previous years, as the case may be, of every company, at the rate or rates specified in the Third Schedule.

RETURN OF INCOME

(5) (1) In the case of every company whose chargeable profits assessable under this Act exceeded during the previous year the amount of standard deduction, its principal officer, or in the case of a non-resident company if it has no principal officer in India, the person treated as its agent under section 163 of the Income-tax Act, shall furnish a return of the chargeable profits of the company during the previous year in the prescribed form and verified in the prescribed manner and setting forth such other particulars as may be prescribed, before the 30th day of September of the assessment year:

Provided that on an application made in this behalf, the Income-tax Officer may, in his discretion, extend the date for the furnishing of the return.

(2) In the case of any company which in the Income-tax Officer's opinion is assessable under this Act, the Income-tax Officer may, before the end of the relevant assessment year, serve a notice upon its principal officer, or in the

case of a non-resident company if it has no principal officer in India upon any person who is treated as its agent under section 163 of the Income-tax Act, requiring him to furnish within thirty days from the date of service of the notice, a return of the company's chargeable profits during the previous year in the prescribed form and verified in the prescribed manner and setting forth such other particulars as may be prescribed:

Provided that on an application made in this behalf, the Income-tax Officer may, in his discretion, extend the date for the furnishing of the return.

(3) Any assessee who has not furnished a return during the time allowed by the Income-tax Officer under sub-section (1) or sub-section (2), or having furnished a return under sub-section (1) or sub-section (2) discovers any omission or wrong statement therein, may furnish a return or a revised return, as the case may be, at any time before the assessment is made.

ASSESSMENTS

6. (1) For the purposes of making an assessment under this Act, the Income-tax Officer may serve on any person who has made a return under sub-section (1) of section 5 or upon whom a notice has been served under sub-section (2) of section 5 (whether a return has been made or not) a notice requiring him on a date therein to be specified, to produce or cause to be produced such accounts or documents as the Income-tax Officer may require for the purposes of this Act and may from time to time serve further notices requiring the production of such further accounts or documents or other evidence as he may require.

(2) The Income-tax Officer, after considering such accounts, documents or evidence, if any, as he has obtained under sub-section (1) and after taking into account any relevant material which he has gathered, shall, by an order in writing, assess the chargeable profits and the amount of the super profits tax payable on the basis of such assessment.

PROVISIONAL ASSESSMENTS

7. (1) The Income-tax Officer, before proceeding to make an assessment (in this section referred to as the regular assessment under section 6, may, at any time after the expiry of the period allowed under sub-section (1) or sub-section (2) of section 5 for the furnishing of the return and whether the return has or has not been furnished, proceed to make in a summary manner a provisional assessment of the chargeable profits and the amount of the super profits tax payable thereon.

(2) Before making such provisional assessment, the Income-tax Officer shall give notice in the prescribed form to the person on whom the provisional assessment is to be made of his intention to do so, and shall with the notice forward a statement of the amount of the proposed assessment, and the person shall be entitled to deliver to the Income-tax Officer at any time within fourteen days of the service of the said notice a statement of his objections, if any, to the amount of the proposed assessment.

(3) On expiry of the said fourteen days from the date of service of the notice referred to in sub-section (2), or earlier, if the assessee agrees to the proposed provisional assessment, the Income-tax Officer may, after taking into account the objections, if any, made under sub-section (2), make a provisional assessment, and shall furnish a copy of the order of the assessment to the assessee:

Provided that assent to the amount of the provisional assessment, or failure to make objection to it, shall in no way prejudice the assessee in relation to the regular assessment.

(4) There shall be no right of appeal against a provisional assessment made under this section.

(5) After a regular assessment has been made, any amount paid or deemed to have been paid towards the provisional assessment made under this section shall be deemed to have been paid towards the regular assessment; and where the amount paid or deemed to have been paid towards the provisional assessment exceeds the amount payable under the regular assessment, the excess shall be refunded to the assessee.

PROFITS ESCAPING ASSESSMENT

8. If—

(a) the Income-tax Officer has reason to believe that by reason of the omission or failure on the part of the assessee to make a return under section 5 for any assessment year or to disclose fully and truly all material facts necessary for his assessment for any assessment year, chargeable profits for that year have escaped assessment or have been under-assessed or assessed at too low a rate or have been made the subject of excessive relief under this Act, or

(b) notwithstanding that there has been no omission or failure as mentioned in clause (a) above on the part of the assessee, the Income-tax Officer has in consequence of information in his possession reason to believe that chargeable profits assessable for any assessment year have escaped assessment

DIPTI more than a household name

The Trade name Dipti is a hall mark of quality. Dipti Lanterns can easily be claimed as one of the most popular household articles throughout India. Khas Janata Kerosene Cookers have earned great popularity as indispensable household utility; simple in operation, sturdy in construction and remarkable in performance, these Kerosene Wick Cookers help you save time and fuel. or have been under-assessed or assessed at too low a rate or have been the subject or excessive relief under this Act.

he may, in cases falling under clause (a) at any time, and in cases falling under clause (b) at any time within four years of the end of that assessment year, serve on the assessee a notice containing all or any of the requirements which may be included in a notice under section 5, and may proceed to assess or re-assess the amount chargeable to super profits tax, and the provisions of this Act shall, so far as may be, apply as if the notice were a notice issued under that section.

PENALTIES

9. If the Income-tax Officer, in the course of any proceedings under this Act, is satisfied that any person has, without reasonable cause, failed to furnish the return required under section 5, or to produce or cause to be produced the documents, accounts or other evidence required by the Income-tax Officer under sub-section (1) of section 6, or has concealed the particulars of the chargeable profits or has deliberately furnished inaccurate particulars of such profits, he may direct that such person shall pay, by way of penalty, in addition to the amount of super profits tax payable, a sum not exceeding—

(a) where the person has failed to furnish the return required under section 5, the amount of super profits tax payable;

(b) in any other case, the amount of super profits tax which would have been avoided if the return made had been accepted as correct.

Provided that the Income-tax Officer shall not impose any penalty under this section without the previous authority of the Inspecting Assistant Commissioner.

OPPORTUNITY OF BEING HEARD

10. No order imposing a penalty under section 9 shall be made unless the assessee has been given a reasonable opportunity of being heard.

APPEALS TO THE APPELLATE ASSISTANT COMMISSIONER

11. (1) Any person objecting to the amount of super profits tax for which he is liable as assessed by the Income-tax Officer or denying his liability to be assessed under this Act, or objecting to any penalty or fine imposed by the Income-tax Officer, or to the amount allowed by the Income-tax Officer by way of any relief under any provisions of this Act, or to any refusal by the Income-tax Officer to grant relief or to an order of rectification or amendment having the effect of enhancing the assessment or reducing the refund, or to an order refusing to allow the claim made by the assessee for a rectification under section 13 or amend-

ment under section 14 may appeal to the Appellate Assistant Commissioner.

(2) Every appeal shall be in the prescribed form and shall be verified in the prescribed manner.

(3) An appeal shall be presented within thirty days of the following date, that is to say—

(a) where the appeal relates to assessment or penalty or fine, the date of service of the notice of demand relating to the assessment or penalty or fine, or

(b) in any other case, the date on which the intimation of the order sought to be appealed against is served.

Provided that the Appellate Assistant Commissioner may admit an appeal after the expiration of the said period if he is satisfied that the appellant had sufficient cause for not presenting it within that period.

(4) The Appellant Commissioner shall hear and determine the appeal and, subject to the provisions of this Act, pass such orders as he thinks fit and such orders may include an order enhancing the assessment or a penalty.

Provided that an order enhancing an assessment or a penalty shall not be made unless the person affected thereby has been given a reasonable opportunity of showing cause against such enhancement.

(5) The procedure to be adopted in the hearing and determination of the appeals shall, with any necessary modification, be in accordance with the procedure applicable in relation to income-tax.

APPEALS TO APPELLATE TRIBUNAL

12. (1) Any assessee aggrieved by an order passed by a Commissioner under section 15, or an order passed by an Appellate Assistant Commissioner under any provisions of this Act, may appeal to the Appellate Tribunal against such order.

(2) The Commissioner may, if he objects to any order passed by the Appellate Assistant Commissioner under any provisions of this Act, direct the Income-tax Officer to appeal to the Appellate Tribunal against the order.

(3) Every appeal under sub-section (1) or sub-section (2) shall be filed within sixty days of the date on which the order sought to be appealed against is communicated to the assessee or to the Commissioner, as the case may be.

(4) The Income-tax Officer or the assessee, as the case may be, on receipt of notice that an appeal against the order of the Appellate Assistant Commissioner has been preferred under sub-section (1) or sub-section (2) by the other party may, notwithstanding that he may not have appealed against such order or any part thereof, within thirty days of the receipt of the notice, file a memorandum of cross-objections, verified in the pres-

cribed manner, against any part of the order of the Appellate Assistant Commissioner, and such memorandum shall be disposed of by the Appellate Tribunal as if it were an appeal presented within the time specified in sub-section (3).

(5) The Appellate Tribunal may admit an appeal or permit the filing of a memorandum of cross-objections after the expiry of the relevant period referred to in sub-section (3) or sub-section (4), if it is satisfied that there was sufficient cause for not presenting it within that period.

(6) An appeal to the Appellate Tribunal shall be in the prescribed form and shall be verified in the prescribed manner and, shall, except in the case of an appeal referred to in sub-section (2) or a memorandum of cross-objections referred to in sub-section (4), be accompanied by a fee of rupees one hundred.

(7) Subject to the provisions of this Act, in hearing and making an order on any appeal under this section, the Appellate Tribunal shall exercise the same powers and follow the same procedure as it exercises and follows in hearing and making an order on any appeal under the Income-tax Act.

RECTIFICATION OF MISTAKES

13. (1) With a view to rectifying any mistake apparent from the record, the Commissioner, the Income-tax Officer, the Appellate Assistant Commissioner and the Appellate Tribunal may, of his, or its own motion or on an application by the assessee in this behalf, amend any order passed by him or it in any proceeding under this Act within four years of the date on which such order was passed.

(2) An amendment which has the effect of enhancing the assessment or reducing a refund or otherwise increasing the liability of the assessee shall not be made under this section unless the authority concerned has given notice to the assessee of its intention so to do and has allowed the assessee a reasonable opportunity of being heard.

(3) Where an amendment is made under this section, the order shall be passed in writing by the authority concerned.

(4) Subject to the other provisions of this Act, where any such amendment has the effect of reducing the assessment, the Income-tax Officer shall make any refund which may be due to such assessee.

(5) Where any such amendment has the effect of enhancing the assessment or reducing the refund already made, the Income-tax Officer shall serve on the assessee a notice of demand in the prescribed form specifying the sum payable.

OTHER AMENDMENTS

14. Where as a result of any order made under section 154 or

section 155 of the Income-tax Act, it is necessary to recompute the chargeable profits determined in any assessment under this Act, the Income-tax Officer may proceed to recompute the chargeable profits, and determine the super profits tax payable or refundable on the basis of such recomputation and make the necessary amendment and the provisions of section 13 shall, so far as may be, apply thereto, the period of four years specified in sub-section (1) of that section being reckoned from the date of the order passed under the aforesaid sections of the Income-tax Act.

REVISION OF ORDERS PREJUDICIAL TO REVENUE

15. (1) The Commissioner may call for and examine the record of any proceeding under this Act, if he considers that any order passed therein by the Income-tax Officer is erroneous in so far as it is prejudicial to the interests of the revenue, he may, after giving the assessee an opportunity of being heard and after making or causing to be made such inquiry as he deems necessary, pass such order thereon as the circumstances of the case justify, including an order enhancing or modifying the assessment, or cancelling the assessment and directing a fresh assessment.

(2) No order shall be made under sub-section (1)—

(a) to revise an order of reassessment made under section 2, or

(b) after the expiry of two years from the date of the order sought to be revised.

(3) Notwithstanding anything contained in sub-section (2), an order in revision under this section may be passed at any time in the case of an order which has been passed in consequence of, or to give effect to, any finding or direction contained in an order of the Appellate Tribunal, the High Court or the Supreme Court.

Explanation.—In computing the period of limitation for the purposes of sub-section (2), any period during which any proceeding under this section is stayed by an order or injunction of any court shall be excluded.

REVISION OF ORDERS BY COMMISSIONER

16. (1) The Commissioner may, either of his own motion or on an application by the assessee for revision, call for the record of any proceeding under this Act which has been taken by an Income-tax Officer or Appellate Assistant Commissioner subordinate to him and such inquiry or cause subject to the provisions of this Act, may pass such orders thereon, not being an order prejudicial to the assessee, as he thinks fit.

(2) The Commissioner shall not of his own motion revise any order under this section if the order has been made more than one year previously.

(3) In the case of an application for revision under this section by the assessee, the application shall be made within one year from the date on which the order in question was communicated to him or the date on which he otherwise came to know of it, whichever is earlier.

Provided that the Commissioner may, if he is satisfied that the assessee was prevented by sufficient cause from making the application within that period, admit an application made after the expiry of that period.

(4) The Commissioner shall not revise any order under this section in the following cases—

(a) where an appeal against the order lies to the Appellate Assistant Commissioner or to the Appellate Tribunal but has not been made and the time within which such appeal may be made has not expired, or, in the case of an appeal to the Appellate Tribunal, the assessee has not waived his right of appeal; or

(b) where the order is pending on an appeal before the Appellate Assistant Commissioner; or

(c) where the order has been made the subject of an appeal to the Appellate Tribunal.

(5) Every application by an assessee for revision under this section shall be accompanied by a fee of twenty-five rupees.

Explanation 1.—An order by the Commissioner declining to interfere shall, for the purposes of this section, be deemed not to be an order prejudicial to the assessee.

Explanation 2.—For the purposes of this section, the Appellate Assistant Commissioner shall be deemed to be an authority subordinate to the Commissioner.

APPLICATION OF PROVISIONS OF ACT 43 OF 1961

17. The provision of the following sections and Schedules of the Income-tax Act shall apply with such modifications, if any, as may be prescribed, as if the said provisions were provisions of this Act and referred to super profits tax instead of income-tax:—

2(44) 131 to 138 (both inclusive), 140 156 160 161 162 163 164 167 170 173 175 176 178 179 220 to 229 (both inclusive), 231 232 233 237 to 245 (both inclusive), 281 282 284 286 to 298 (both inclusive), the Second Schedule and the Third Schedule.

Provided that reference in the said provisions to the "assessee" shall be construed as references to an assessee as defined in this Act.

INCOME-TAX PAPERS TO BE AVAILABLE FOR THE PURPOSES OF THIS ACT

18. (1) Notwithstanding anything contained in the Income-tax Act, all information contained in any statement or return made or furnished under the provisions of that Act or obtained or collected for the purposes of that Act may be used for the purposes of this Act.

(2) All information contained in any statement or return made or furnished under the provisions of this Act or obtained or collected for the purposes of this Act may be used for the purposes of the Income-tax Act.

FAILURE TO DELIVER RETURNS, ETC.

19. If any person fails without reasonable cause to furnish in due time any return under section 5 or to produce, or cause to be produced, any accounts or documents required to be produced under section 6, he shall be punishable with fine which may extend to five hundred rupees, and with a further fine which may extend to ten rupees for every day during which the default continues.

FALSE STATEMENTS

20. If a person makes in any return required under section 5, any statement which is false, and which he either knows or believes to be false, or does not believe to be true, he shall be punishable with simple imprisonment which may extend to six months, or with fine which may extend to one thousand rupees, or with both.

ABETMENT OF FALSE RETURNS, ETC.

21. If a person makes or induces in any manner another person to make and deliver any account, statement or declaration relating to chargeable profits liable to super profits tax which is false and which he either knows to be false or does not believe to be true, he shall be punishable with simple imprisonment which may extend to six months, or with fine which may extend to one thousand rupees, or with both.

INSTITUTION OF PROCEEDINGS AND COMPOSITION OF OFFENCES

22. (1) A person shall not be proceeded against for an offence under section 19 or section 20 or section 21 or under the Indian Penal Code except at the instance of the Commissioner.

(2) The Commissioner may, either before or after the institution of proceedings, compound any offence punishable under section 19 or section 20 or section 21.

POWER TO MAKE EXEMPTION, ETC., IN RELATION TO CERTAIN UNION TERRITORIES

23. If the Central Government considers it necessary or expedient

so to do for avoiding any hardship or anomaly or removing any difficulty that may arise as a result of the application of this Act, to the Union territories of Dadra and Nagar Haveli, Goa, Daman and Diu and Pondicherry, the Central Government may, by general or special order, make an exemption, reduction in rate or other modification in respect of super profits tax in favour of any class of assesses or in regard to the whole or any part of the chargeable profits of any class of assessee.

POWER TO MAKE RULES

24. (1) The Board may, subject to the control of the Central Government, by notification in the Official Gazette, make rules for carrying out the purposes of this Act.

(2) In particular, and without prejudice to the generality of the foregoing power, such rules may provide for all or any of the following matters:—

(a) the form in which returns under section 5 may be furnished and the manner in which they may be verified;

(b) the form in which notice for making provisional assessment shall be given;

(c) the form in which appeals under section 11 or section 12 may be filed and the manner in which they shall be verified;

(d) the procedure to be followed on applications for rectification of mistakes and applications for refunds;

(e) any other matter which by this Act is to be, or may be, prescribed.

(3) The Central Government shall cause every rule made under this section to be laid as soon as may be after it is made before each House of Parliament while it is in session for a total period of thirty days, which may be comprised in one session or two successive sessions, and, if before the expiry of the session in which it is so laid or the session immediately following, both Houses agree in making any modification in the rule or both Houses agree that the rule should not be made, that rule shall thereafter have effect only in such modified form or be of no effect, as the case may be; so however that any such modification or annulment shall be without prejudice to the validity of anything previously done under that rule.

SAVING

25. Nothing contained in this Act shall apply to any company which has no share capital.

THE FIRST SCHEDULE

[See section 2(5)]

Rules for Computing the Chargeable Profits

In computing the chargeable profits of a previous year, the total

income computed for that year under the Income-tax Act shall be adjusted as follows:—

1. Income, profits and gains falling within the following sub-rules shall be excluded from such total income, namely:—

(i) any income chargeable under the Income-tax Act under the head "capital gains";

(ii) any compensation or other payment as is referred to in clause (ii) of section 28 of the Income-tax Act;

(iii) profits of any business of life insurance.

2. On the balance of the total income, income-tax and super-tax shall be calculated at the rates in force in the financial year; as if such income had been the total income no portion of which had been exempt from the payment of income-tax or super-tax and on no portion of which any deduction of income-tax or super-tax had been admissible under any provisions of the Income-tax Act or the annual Finance Act; and the tax so calculated shall be deducted from the amount of the income aforesaid.

3. The net amount of income calculated in accordance with rule 2 shall be increased by any expenditure incurred on account of commission, entertainment and advertisement, to the extent such expenditure, in the opinion of the Income-tax Officer, is excessive having regard to the circumstances of the case:

Provided that the previous authority of the Inspecting Assistant Commissioner is obtained for holding such expenditure to be excessive.

THE SECOND SCHEDULE

[See section 2(8)]

Rules for Computing the Capital of a Company for the Purposes of Super Profits Tax

1. Subject to the other provisions contained in this Schedule, the capital of a company shall be the sum of the amounts, as on the first day of the previous year relevant to the assessment year, of its paid up share capital and of its reserves in so far as the amounts credited thereto have not been allowed in computing its profits for the purposes of the Indian Income-tax Act, 1922 or the Income-tax Act, 1961 diminished by the amount by which the cost to it of the assets the income from which in accordance with the First Schedule is not includible in its chargeable profits, exceeds any money borrowed by it which remains outstanding.

Explanation 1.—A paid up share capital or reserve brought into existence by creating or increasing (by revaluation or otherwise) any book asset is not capital for computing the capital of a company for the purposes of this Act.

Explanation 2.—Any premium received in cash by the company on the issue of its shares standing to the credit of the share premium account shall be regarded as forming part of its paid up share capital.

2. Where after the first day of the previous year relevant to the assessment year, the paid up share capital of a company is increased or reduced by any amount during that previous year, the capital computed in accordance with rule 1 shall be increased or decreased, as the case may be, by a portion of that amount which is proportional to the portion of the previous year during which the increase or the reduction of the paid up share capital remained effective.

3. Where a part of the income, profits and gains of a company are not includible in its total income as computed under the Income-tax Act, its capital shall be the sum ascertained in accordance with rules 1 and 2, diminished by an amount which bears to that sum the same proportion as the amount of the aforesaid income, profits and gains bears to the total amount of its income, profits and gains.

THE THIRD SCHEDULE (See section 4)

Rates of Super Profits Tax

Super profits tax shall be charged on the amount by which the chargeable profits exceed the amount of the standard deduction, at the following rates, namely:—

- (i) on an amount equal to four per cent. of the amount of capital as computed in accordance with the Second Schedule. . . 50%
- (ii) on the balance. . . 60%

STATEMENT OF OBJECTS AND REASONS

The object of this Bill is to impose a special tax on certain companies on their income and profits as reduced by the income-tax and super-tax chargeable thereon, in so far as such reduced amount exceeds six per cent. of their capital. The Notes on Clauses explain the various provisions contained in the Bill.

MORARJI DESAI.

New Delhi;

The 28th February, 1963.

NOTES ON CLAUSES

Clause 2 contains definitions of the various terms and expressions used in the clauses of the Bill.

Sub-clause (5) defines 'chargeable profits' to mean the total income of the assessee for the previous year relevant to the assessment year as computed under the Income-tax Act, 1961 and

adjusted in accordance with the provisions of the First Schedule.

Sub-clause (8) defines the term 'standard deduction' to mean an amount equal to six per cent. of the capital of the company as computed in accordance with the Second Schedule and adjusted in relation to the length of the previous year.

Sub-clause (9) says in general that all words and expressions used in the Bill but not defined therein and defined in the Income-tax Act, 1961 shall have the same meanings as in that Act.

Clause 3 seeks to give jurisdiction to the same authorities as have jurisdiction under the Income-tax Act, 1961.

Clause 4 seeks to provide for the charging of super-profits tax for the assessment year 1963-64 and subsequent assessment years on the chargeable profits of every company during the previous year or years at the rate or rates specified in the Third Schedule.

Clause 5—

Sub-clause (1) seeks to impose a liability on the principal officer of every company, or in the case of a non-resident company if it has no principal officer in India, the person treated as its agent under section 163 of the Income-tax Act, 1961 to furnish a return of the chargeable profits of the company by the 30th day of September of the relevant assessment year.

Sub-clause (2) seeks to enable the Income-tax Officer to issue a notice requiring the filing of a return of the chargeable profits within thirty days from the date of service of the notice.

Under both the sub-clauses, the Income-tax Officer has been authorised to extend the time for furnishing the return.

Clause 6 provides that the Income-tax Officer may call for accounts, documents or other evidence from the assessee for the purpose of his assessment, and shall make the assessment after considering all the material so obtained by him.

Clause 7 enables the Income-tax Officer to make a provisional assessment of the chargeable profits of the assessee at any time after the expiry of the period allowed for filing a return subject to the issue of a 14 days' notice to him inviting his objections, if any, to the proposed assessment. It has been provided that there shall be no right of appeal against such a provisional assessment and that the tax paid on the provisional assessment shall be deemed to have been paid towards the regular assessment.

Clause 8 relates to the assessment or re-assessment of chargeable profits which have escaped assessment or have been under-assessed etc. This provides that

in the case of omission or failure on the part of the assessee to file a return or to disclose fully and truly all the materials necessary for his assessment, such proceedings may be initiated at any time, and in other cases within four years of the end of the relevant assessment year.

Clause 9 relates to the imposition of penalties for the assessee's failure without reasonable cause to furnish a return of his chargeable profits or to produce the accounts, documents or evidence required by the Income-tax Officer, and for any concealment or deliberate furnishing of inaccurate particulars of his chargeable profits.

Clause 10 provides that the assessee shall be given a reasonable opportunity of being heard before any penalty under clause 9 is imposed upon him.

Clause 11 relates to appeals by the assessee to the Appellate Assistant Commissioner against any order passed by the Income-tax Officer. The provisions in this clause are on the lines of the corresponding provisions in the Income-tax Act, 1961.

Clause 12 relates to appeals to the Appellate Tribunal by assessee or by the Income-tax Officer under the directions of the Commissioner against any order made by the Appellate Assistant Commissioner. It has been provided that in disposing of such appeals, the Tribunal shall exercise the same powers and follow the same procedure as it exercises and follows in disposing of any appeal under the Income-tax Act, 1961.

Clause 13 provides for the rectification of mistakes apparent from the record of any proceedings by the Commissioner, the Income-tax Officer, the Appellate Assistant Commissioner and the Appellate Tribunal, suo motu or at the instance of the assessee, within four years of the date on which the order sought to be rectified has been passed. The provisions in this clause are on the lines of the corresponding provisions of the Income-tax Act, 1961.

Clause 14 seeks to enable the Income-tax Officer to re-compute the chargeable profits of the assessee in consequence of any order of rectification or amendment passed by him under section 154 or section 155 of the Income-tax Act, 1961, in relation to the relevant income-tax assessment of the assessee, within four years from the date of the latter order.

Clause 15 enables the Commissioner to revise any orders passed by the Income-tax Officer which are prejudicial to revenue, within a period of two years from the date of the order sought to be revised. This provision corresponds to section 263 of the Income-tax Act, 1961.

Clause 16 enables the Commissioner to give relief to the assessee on revision of any orders passed by the Income-tax Officer or the Appellate Assistant Commissioner subordinate to him, either of his own motion or on an application by the assessee. The provisions in this clause correspond to the provisions in section 264 of the Income-tax Act, 1961.

Clause 17 seeks to make applicable to the proceedings relating to super-profits tax, certain provisions of the Income-tax Act, 1961, pertaining to various matters for which no separate provision has been made in the Bill, e.g., issue and service of notice of demand, recovery of arrear tax dues, assessment proceedings against non-residents through an agent, liability of directors of private companies in liquidation, reference to High Court, appeal to the Supreme Court, etc.

Clause 18 provides that all information contained in any statement or returns made by the assessee or furnished in any proceeding under the Income-tax Act, 1961, may be used for the purposes of proceedings relating to the super-profits tax and vice-versa.

Clauses 19 to 22 (both inclusive) relate to prosecution for various offences by way of failure to deliver returns without any reasonable cause, making of false statements, abetment of false returns, and composition of such offences. These provisions substantially correspond to the relevant provisions in the Income-tax Act, 1961.

Clause 23 seeks to enable the Central Government to make an exemption, reduction in rate or other modification in respect of super-profits tax in favour of any class of assessee or in regard to the whole or any part of the chargeable profits of any class of assessee in order to remove any difficulty or avoid any hardship that may arise as a result of application of super-profits tax to the Union territories of Dadra and Nagar Haveli, Goa, Daman and Diu and Pondicherry.

Clause 24 seeks to enable the Central Board of Revenue to make rules for carrying out the purposes of this enactment.

Clause 25 seeks to exclude companies which have no share capital from the purview of super-profits tax.

The First Schedule lays down rules for computing the chargeable profits.

The Second Schedule lays down rules for computing the capital of a company for the purposes of super-profits tax.

The Third Schedule lays down the rates at which super-profits tax are sought to be levied on chargeable profits exceeding the amount of the standard deduction.

BANKS & SPT

Transfers to Reserve should be Permissible Deductions

Since the planned era began, there has been a steady and not inconsiderable increase in the responsibilities of the banking system. At one stage, in 1956, so great was the demand for funds from industry, and at the time so inaccessible was the capital market, that short-term accommodation taken from the banking system was actually put to medium-term use. That is to say, finance obtained for stocks was utilised to effect purchase of plant and equipment.

In the middle period of the Second Plan, however, some respite was available for the banking system, in that the capital market strongly revived. Hardly any new issue failed, and where foreign collaboration had been obtained, the over-subscription was many times the amount sought. But meantime with the growth in industrial production, there was the automatic increase in the quantum of working capital needed, not only for industry but for trade and commerce as well. It thus happened that, save in one year, there has been sustained rise in the industrial demand for funds from banks.

Meantime, too, Deposits lost some of the vestiges of stagnancy that had been the fate of the banks in 1956. The qualification is necessary that the apparent failure of Deposits to grow with the lure of Deposits to grow with the banking system in that year was due to such new accretions being camouflaged in a contraction arising from a large import bill on private sector account relating mainly to purchases abroad of Second Plan projects. But from 1957 onwards, with a pause in 1960-61, there has been a not unsatisfactory increase in Deposit resources. There are some who believe that such new resources were secured because of banks' bidding for new Deposits with the lure of higher interest rates. Our own view, which we have repeatedly made clear, is that growth in Deposits was inescapable and was due to Governmental disbursements, both on enlarged budgets and on plan projects finding their way—after a time-lag—into the banking system. But the anxiety of the banks, faced as they were by intense pressure upon their resources, is in retrospect understandable. What was unfortunate, and what as a result continues to affect banks' earnings, was their decision to increase not once, but time and again, the interest rates on Deposits with a view to obtaining new resources. For, this move has almost permanently affected the composition of Deposits: Time liabilities greatly exceed the total of Demand liabilities, whereas not many years ago the reverse was

the case; and automatically the charge of interest paid has been a consistently and relentlessly rising one. Though Advance rates also went up, banks' earnings got eroded; though profits were up, the rise was just not enough.

Another development in recent years has been the emergence of a new entrepreneurial class. More small businessmen have gone into industry, and Government for its part encouraged such initiative being shown. Naturally, however, bank financing in this respect held greater risk of loss; it became increasingly clear that the inner reserves of the banking system had to be strengthened to meet anticipated or probable losses on this account. At the same time the growth in Deposits of banks, particularly after the Second Plan began, underlined the low capital base of the system. The central banking authority after a study of the question recommended that banks should strive to attain a capital plus reserves ratio of 6 per cent of Deposit resources. For this reason a transfer of 20 per cent of published profit to reserve, under Section 17 of the Banking Companies Act, was made statutory even after reserve was built up on a par with capital. This requirement cut further into the disposable profits of the banking system.

Again, following upon the closure of the Palai Central Bank, spotlight was focussed upon the need for the insurance of bank Deposits, so that the public could have greater confidence in the banking system. Indeed, the only period of Deposit stagnancy during the Second Plan period occurred immediately after disruption of confidence arising from the Palai Central closing its doors. A scheme was introduced for insurance of bank Deposits and took effect for a whole year as from the beginning of 1962. There was a prompt and welcome return of confidence and Deposits regained their uptrend; but automatically operating costs of banks, by reason of the payment of the relative premia, rose further.

The growth in Deposits vis-à-vis the expanded demand for Advances, as we have seen, was responsible for a species of Deposits war in which rates of interest paid on them rose steadily, thus eroding banks' net earnings. The banking system of course in its search for new Deposits has tried as far as possible to secure them through the establishment of branches which would be easy to open and which would not entail too large a loss in the initial years of operation. However, it soon became clear that the rate of inflow of Deposits was greater in the so-called non-urban areas than in the

industrial areas; but costs involving loss were larger in the former. Also, the Reserve Bank, in order that the whole country side could be monetised through spread of the banking habit, has been insisting that licences for new branches would be issued such that "unbanked" areas also got covered

Reserve Fund

Section 17 of the Banking Companies Act (as amended)

(1) Every banking company incorporated in India shall create a reserve fund and shall, out of the balance of profit of each year as disclosed in the profit and loss account prepared under section 29 and before any dividend is declared, transfer to the reserve fund a sum equivalent to not less than twenty per cent of such profit.

(1A) Notwithstanding anything contained in sub-section (1), the Central Government may, on the recommendation of the Reserve Bank and having regard to the adequacy of the paid-up capital and reserves of a banking company in relation to its Deposit liabilities, declare by order in writing that the provisions of sub-section (1) shall not apply to the banking company for such period as may be specified in the order.

Provided that no such order shall be made, unless, at the time it is made, the amount in the Reserve Fund under sub-section (1), together with the amount in the share premium account is not less than the paid-up capital of the banking company.

(2) Where a banking company appropriates any sum or sums from the reserve fund or the share premium account it shall within twentyone days from the date of such appropriation, report the fact to the Reserve Bank explaining the circumstances relating to such appropriation:

Provided that the Reserve Bank may, in any particular case extend the said period of twentyone days by such period as it thinks fit or condone any delay in the making of such report.

by such a scheme of expansion. Thus, the search for new Deposits has meant that banks have had to be prepared to meet losses on new branches.

Last of all chronologically was the Desai award given last autumn, whereby with the abolition of one category of banks and the elimination of one designation of area, the salaries and allowances to bank labour constituted a heavier bill. Such increases in emolu-

ments made inescapable a similar series of adjustments for supervisory staff. The Desai award will mean that operating costs of banks will further rise by phases over the next three years. The margin of profit of the banking system, already slender, as a result has been further eroded, as the published results for 1962 make quite evident. Thus the banking system has to consider seriously how best it can augment earnings, keep a check on expenditure and increase its balance of profit.

We now have the super profits tax; and in its present form its impact upon the banking system will be such as to prevent the strengthening that is the avowed objective of the Reserve Bank. Furthermore, it is unjust, in that banks will be penalised the while they meet the statutory obligation of transferring to reserve. For, by the time the ordinary taxes have been paid, the transfer effected under Section 17 of the Banking Companies Act, and the super profits tax liability provided for, the balance available with banks for distribution as dividend will be very small indeed. What is more, so long as the super profits tax is applicable banks will be most reluctant to add to inner reserve. It is this last point that is significant, and indicates that a special relief is necessary from the super profits tax for the banking system. While obviously the general relief from super profits tax—which we have indicated earlier and relating to transfer to reserve up to a maximum of 20 per cent of the profit after tax being an admissible deduction—is an absolutely just concession for banks, we would urge that a further rider to the super profits tax is necessary in order that the banks can proceed with strengthening of inner reserves. We submit that transfers to inner reserve, up to a maximum of 10 per cent of the profit after tax, be allowed as a deduction for purposes of reckoning the super profits tax liability of banks. The loss in revenue to central coffers through such a relief will be small, but the benefit to banks will be great. Firstly, as already noted, apart from transfer under Section 17, inner reserves could be strengthened at a maximum rate of 10 per cent of the taxed profit; and such additions to inner reserve are essential, if losses on the new responsibilities for finance of the banking system are to be met. Secondly, the reduction in the super profits tax liability will to corresponding extent enlarge the distributable surplus of banks; and the payment of satisfactory rates of dividend will make it less difficult for banks to raise new capital through rights issues.

World of Finance

UNITED BANK The Budget's Impact on the Banking System

Dr N. N. Law, who has in the past had the happy knack of dealing with emerging banking problems at the annual general meetings of the United Bank of India Ltd, has this year had to be content with an analytical assessment of 1962, and more particularly of the Budget proposals and how they affect banking. He has quite rightly concentrated his emphatic comment upon the super profits tax. The impost in his opinion can be inferred to be undesirable; it will, he has said, "considerably" offset the otherwise positive quality of the budget; but in his plea for relief he restricts himself to the problem faced by the banks.

While all published comment so far has stressed that the statutory transfer to reserve under section 17 of the Banking Companies Act should be an allowable deduction, Dr Law foresightedly asks for something more: the transfers of banks to reserve "to the extent of at least 30 per cent of after-tax profit" should, the suggestion is, be specially exempted from the chargeable profit for purposes of the super profits tax. Section 17 merely lays down that a minimum of 20 per cent of the published profit be transferred to reserve; the extra 10 per cent that Dr Law wants is obviously in order that inner reserve, too, can be strengthened. (See article on banks in SPT section).

United Bank's Chairman would doubtless have been gratified to find one of his oft-repeated suggestions acted upon by Government. The Finance Minister in his Budget speech has indicated that the question of the formation of Investment Trusts is under consideration. Originally, as it were, a suggestion emanating from the Shroff Committee, the idea of investment trusts unfortunately has in the past been impossible of adoption because of the multiplicity of tax incidence. Dr Law contents himself in this regard with the submission that Government should seek "to provide conditions and encouragement for such trusts to grow extensively throughout the country." But we are afraid that so long as the super profits tax, with or without modification from its present form, is in existence, the prospect of success for investment trusts is bleak: the small investor needs to possess more courage

than we believe him to be capable of, if he is to extend support—in the circumstances as they obtain today—to any scheme of investment trusts.

Similarly, Dr Law's approach to the Budget proposal of compulsory deposits is from the viewpoint of what impact the measure will have on the banking system. The fear is that compulsory deposits, in addition to the unprecedentedly heavy tax burden posed by the new Budget, will involve a considerable drain upon the resources of banks. So, Dr Law restates his case for commercial banks being treated as depositories of the Government; and the reason is that, if the growth of Deposits is in any way impaired, the ability of the banking system to cope with the demand upon it from industry will be seriously affected. There is perhaps one aspect of commercial banks being used as Government depositories which needs to be cleared up. There could be the stipulation that banks should by and large contrainvest in gilt-edged such Deposits; the implication is that the funds are immediately available to Government, though through the Reserve Bank, in as much as the latter will be a consistent seller of gilt-edged through the tap; but then absorption of gilt-edged by banks to that extent will reduce the Centre's reliance on deficit financing. For banks, the Government deposits will be useful in that the gilt-edged investment thereagainst will add to liquidity.

Dr Law has always held the view that interest rates on Deposits are too high; this year he makes the point that the lending and borrowing rates of banks should be related to bank rate by convention; and the British example in this regard is cited. Such a spread is vital, if banks' earnings are to keep pace with the rising operating costs and if, besides, profits are going to be sufficient for adding to reserves and maintaining satisfactory dividends. For much the same reason, of improving banks' earning potential, Dr. Law has reiterated his suggestion of standardising charges for various banking services. One idea often mooted in the past was the levy of a commitment charge on an overdraft limit, but that came to naught. With the added spectre of the liability of super profits tax, it is high time that the banks got together to find out how best they can augment earnings and keep in check—if reduction is not possible—operating expenditure. The start of the 1963 slack season, due notionally as from the beginning of May, could be a good time for the banks to hold their confabulations in this respect.

BANK OF BARODA Slight Rise in Capital Ratio

The accounts of the Bank of Baroda Ltd for 1962 share in common with the experience of the banking system a substantial increase in earnings which, however, has been offset by the general uptrend in operating costs.

Deposit resources of the bank rose by Rs 18.51 crores, or 19.4 per cent, to Rs 113.56 crores—an increase that compares favourably with the rate of growth of other banks. True to form, it is Fixed Deposits (up by Rs 9.07 crores at Rs 62.19 crores) which predominate account for the rise. In smaller proportion, Savings Bank Deposits (higher by Rs 5.29 crores at a shade under Rs 25 crores) and Current Accounts (marked up by Rs 2.37 crores at Rs 26.78 crores) have also contributed.

The gilt-edged portfolio is practically unchanged at Rs 21.42 crores; against Rs 21.40 crores; the new resources have thus gone mainly to an expansion in the credit extended by the bank and to adding to cash balances. The total of Advances is up by Rs 14.42 crores at Rs 84.79 crores, and the credit ratio has also accordingly inched up from 73.7 per cent to 74.4 per cent. Cash balances, including money at call and short notice, have risen by Rs 2.52 crores to Rs 10.78 crores; and besides it was possible to reduce borrowings by Rs 1.05 crores to just under Rs 2.5 crores.

The gross income of the Bank of Baroda went up very satisfactorily by Rs 1.08 crores (representing a rise over the previous year of 21.0 per cent) to Rs 6.22 crores. As expected the bulk of this increase has come from enlarged income by interest and discount, which has gone up by Rs 85.21 lakhs to Rs 5.07 crores; and commission, exchange and brokerage have also fetched Rs 21.80 lakhs more at Rs 1.10 crores.

The extra earnings, as already noted, have been offset by rises in operating costs: interest paid is higher by Rs 52.27 lakhs at Rs 5.07 crores; and salaries and allowances by Rs 33.52 lakhs at Rs 1.70 crores. Furthermore, rents, taxes and insurance cost Rs 9 lakhs more; stationery, printing and advertisements absorbed a sum higher by Rs 4½ lakhs; and other expenditure, including a donation of Rs 3½ lakhs to the National Defence Fund went up by Rs 7½ lakhs. In consequence, the balance of profit is seen to have declined to Rs 63.19 lakhs from Rs 67.63 lakhs.

The transfer to reserve has been cut by Rs 7.25 lakhs to Rs 12.75 lakhs; but bonus to staff gets Rs 1.80 lakhs more at Rs 22 lakhs; dividends absorb Rs 1.80 lakhs more at Rs 27.30 lakhs, but this includes an element of new capital. The carry forward is about Rs 1 lakh higher at Rs 4.17 lakhs. With the issue of capital for Rs 50 lakhs during the year, and including realisations from share premium and the transfer to reserve, the capital ratio has improved from 3.47 per cent to 3.59 per cent.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills were opened on Monday, 25 March, 1963. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.405 per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.370 per cent per annum.

Notes

COAL

No Reason for Complacency

The coal industry which had been lagging behind its production targets till last year has recorded resounding progress in recent months and it is expected that output in the current year may even overshoot the annual target. The credit for this exemplary performance should go entirely to the private sector which has achieved the increased production in the face of a number of difficulties some of which like the supply of explosives and detonators became quite acute some time back. But this achievement pales into insignificance compared to the big task that faces it in coming years. As against the present annual rate of about 65 million tons, the industry is expected to increase output to 104.78 million tons by the end of the current plan (The original target was 97 million tons but it has subsequently been revised upward in view of the anticipated rise in the demand for coal from thermal power stations and steel plants as a consequence of the higher targets for these sectors). Of this the private sector collieries are expected to account for about 68 million tons, against their present annual rate of production of about 50 million tons. Although the private sector collieries have acquitted themselves well so far, it is doubtful if they all will be able to shoulder further responsibility unless they get substantial relief from their numerous difficulties.

Fortunately some of these difficulties are much less severe now than they were till recently. Coal transport has shown marked improvement in recent months while power supply has also considerably improved. But the handicaps that are dogging the steps of the industry are still very much there. Mr Pran Prashad, Chairman of the Indian Mining Association, has shown in the course of his speech at the recent annual meeting of the IMA that unless the industry is enabled to work profitably and to find adequate funds for its expansion programme, it will not be able to undertake additional responsibilities in the form of increased production. The need for modernising coal mines has no doubt been realised and the outcome of such realisation is the

crippling of a key industry for want of an equitable price for its produce.

RIVER WATERS DISPUTE Govt. Award

The award in the Krishna and Godavari Waters dispute announced last week by the Union Minister of Irrigation and Power cannot be expected to have the approval of all the Governments who are parties to the dispute because of the wide divergence of the stand taken by them. Anyway it is not final because the revised allocation of the waters of the rivers is valid only for the next 15 years. The award, which is based on the Gulhati Commission, has indicated that detailed projects will be worked out in the shape of a master plan for the two river basins by a Central Authority constituted under the River Board Act of 1956. The Commission has called for the constitution of such a body without delay for bringing about a co-operative approach and establishing the necessary co-ordination in the planning and operation of various developments in the two river basins. It also has made it clear that the integrated operation of all projects, which is indispensable, would not be possible without such a co-ordinating body.

Under the award the waters of the Krishna have been distributed as follows: 400 TMC for Maharashtra, 600 TMC for Mysore and 800 TMC for Andhra. This new dispensation gives Andhra less than what it is getting under the 1951 agreement while the other two States get more. The 1951 agreement about the revision of which Andhra showed itself to be firmly against has been found to be untenable as the Law Ministry has ruled that it is legally wholly ineffective and unenforceable. Andhra's main concern however has been that it should be allowed to proceed with the major irrigation and power projects which have been already approved. This the award seems to have conceded. For even the Gulhati Commission has found no objection to the starting of work on the Srisaillam project. And the Union Irrigation Minister has pointed out that the award will not adversely affect the State because the projects can be proceeded with under the Master Plan to be drawn up for the two river basins. Maharashtra has been asked to keep its expansion of the Koyna project based on the westward diversion of the Krishna waters in abeyance pending availability of adequate water supply. The main objection to allowing this diversion is that the water will be wasted into the Arabian sea while it can be profitably used on cultivable land in the river basins where much land is still starved of sufficient water for irrigation.

It will be some consolation for Madras that it has been allotted a small quantity of 15 TMC needed for augmenting drinking water supply in Madras city.

The Government cannot be blamed for giving an award which is not final for the reason there are not enough data to form firm conclusions. The Gulhati Commission has referred to this lacuna in a number of places in its report. Actually it is the opinion of the Commission that the data on which the Krishna-Godavari projects are based are wholly inadequate. Therefore the task of the final allocation of the waters of the rivers can be properly taken up only when complete data are collected by the proposed Central Authority. In any event unless the States concerned abandon narrow parochial considerations and agree to co-operate with one another in utilising the valuable water resources to the good of the community at large, disputes will continue over the sharing of the waters of the two rivers for the simple reason that the rivers flow through the territories of all the disputant States.

INDUSTRIALISATION Madras Forges Ahead

The report of the Department of Industries of Madras State provides a comprehensive picture of the impressive industrial development the State has registered in recent years. The many sided progress on the industrial front both in the public and private sectors evident-

PRO/MS-2

ces the Government's breadth of vision and pragmatic approach for accelerating the tempo of industrial growth. The State has to its credit planned gigantic public sector undertakings many of which are in the process of establishment and some others are getting ready for going into steam. The impressive growth of industries in the private sector is another encouraging factor of which the State can feel legitimately proud. The Government has achieved a unique distinction in fostering the private sector industries by providing requisite inducements to the industrialists. Equally impressive is the unobtrusive flourishing of the small scale undertakings in a wide range and variety which have already started to function as feeders to the large scale industries in an efficient manner. The industrial estates and colonies, the service units, general engineering workshops and specialised workshops for carpentry, metal products and other miscellaneous enterprises have helped to give a boost to industrial development.

Out of 494 licences issued to the entrepreneurs for establishing industrial ventures under the Industries (Development and Regulation) Act 334 have been translated into reality and 138 are nearing completion. Many other industries like the sugar, paper, cement and rubber are rapidly expanding. The dynamic policy followed by the Government has also facilitated the sprouting of as many as 687 new factories in 1962 alone, which is according to any manner of reckoning is an encouraging record. The State's achievements in this realm should give food for thought to other industrially backward States in the Indian Union.

RESEARCH CIBA Shows the Way

With the inauguration of the Rs. 2.5 crore CIBA research centre at Goregaon, near Bombay, by the Prime Minister last week a new chapter has been added to the country's scientific research. The research centre, the first of its kind to have been sponsored by private industry in the whole of South Asia, has as its primary object the furtherance of pharmaceutical research in India. In collaboration with the Atul Products Limited, dyestuff research, another mainstay of the CIBA world organisation, will also be conducted. The centre accommodates eighty separate laboratories, an animal house, a scientific library, administrative offices, utilities, a canteen and living quarters with a plinth area of buildings and passage-ways of over one lakh square feet.

Among the outstanding facilities and techniques the Centre provides are cold room laboratories for

working compounds sensitive to ordinary temperatures, a Craig counter current distribution apparatus which totally separates closely related compounds for the quick determination of their nature and proportion, radioactive isotopes for tracing and recording the location and action of new chemical compounds on animal organisms, a general pharmaceutical laboratory equipped with modern research appliances and a fine precision workshop for the repair and development of scientific apparatus.

Under the able stewardship of Dr T. R. Govindachari, a distinguished chemist, and staffed by prominent Indian scientists specially trained in some of the leading premier institutions abroad, the research centre will engage itself in promoting fundamental chemical and biological research with particular emphasis on chemical and biological investigation of natural plan products for possible therapeutic action.

In Western countries the business houses, under the pressure of productivity and competition consciousness spend vast sums on research in their own laboratories and in collaboration with the universities. The abundant research facilities and attractive remuneration are conducive for making great progress in research and scientists more often than not achieved world wide recognition. This is basically lacking in India and the Indian business houses have yet to show any gratifying signs of research consciousness despite numerous tax inducements. The CIBA research centre, therefore, is not only a new venture but also a shining example, aiming to promote fundamental research in the country.

A New Sprayable Rubber

A new technique of spraying liquid urethane, recently announced by the Goodyear Tyre and Rubber Company, is expected to revolutionize the manufacture of many rubber products. Unlike the other members of the urethane family, which either dry enamel-hard or remain liquid only for minutes, the new liquid urethane is pliable after vulcanization. After the selection of urethane for its resistance to attack by petroleum products, the research group worked with various combinations of rubber, solvents and curing chemicals to produce the new sprayable rubber.

The process has been successfully used to produce a superior low-cost fuel tank for light aircraft. The older method of making fuel tanks required an expensive plaster form, over which layers of nitrile rubber sheeting and rubberized fabric were laid, the overlapping parts cemented, and the whole vulcanized in high pressure steam. The plaster form was

then broken inside the tank and removed in pieces through the tank's natural openings.

In contrast, according to the new technique, the tank is built on a cardboard form over which layers of the liquid rubber is sprayed, between which a layer of liquid nylon is painted and a layer of nylon fabric is laid. The whole is then vulcanized and the form removed. This simplified production not only improves upon the desirable features of the older tanks, namely, fabric and nylon barrier content, abrasion resistance, but a possible source of tank-failure is eliminated since the new tank, unlike the older one, is seamless.

Apart from fuel tanks for light planes, the company has already used this technique to produce implantable artificial hearts for medical research. Both quality and cost factors will be reflected in varying degrees as the spraying technology is adapted for fabrication of other products.

US AID Clay Report

The recommendations submitted by the Special Presidential Committee led by General Lucius Clay have set a pattern for the US Government's foreign assistance programme to the independent developing countries in future. Though the programme will retain its basic features the committee has suggested slight alterations in the quantum of aid both economic and military to the various countries according to their economic and military position. At the same time stress is laid on the need for enhancing the matching contributions from other aid giving countries like the UK, France, Germany, Italy, Japan and Canada and also the need for reducing the interest charges and softening their lending terms. Though the committee has recommended an immediate cut of about \$500 million in foreign aid, it has strongly suggested that aid to India should be facilitated without any obstruction. The US Government's growing interest in the economic development of India is well known and the ready response to extend military assistance to safeguard the country's independence and integrity is eloquent testimony to its favourable disposition toward India. But the maintained only if the other helping nations also liberalise their lending conditions.

IDA Loan to Railways

The International Development Association, an affiliate of the World Bank, has extended last week to India a development cre-

dit equivalent to \$67.5 million to finance imports of material and equipment required for railway's development programme in 1963. The present credit will be utilised for purchasing components and materials and also for the electrification programme, for track and for other material and equipment.

Considering the crucial role played by the railways as the country's most important carrier of long distance freight and passenger traffic its rapid expansion and modernisation is an integral part of the development programmes. The foreign exchange component of the railway's development programme has been of a substantial order and the Third Plan scheme envisaging tremendous expansion will only inflate the import bill. The World Bank's assistance in meeting the cost in foreign exchange, through six loans over the past thirteen and a half years, totalled approximately \$378 million, by far the largest amount lent by it to any single enterprise.

The IDA credit is for a term of 50 years with repayment commencing from 1 May 1973. Subsequently one per cent of the principal will be repayable annually for 10 years and 3 per cent for the final 30 years. The credit is free of interest, but a service charge of 3/4 of 1 per cent per annum on the amount withdrawn and outstanding will be charged for covering administrative costs.

ENGINEERING EXPORTS 20 per cent Rise in 1962

The progressive increase in the exports of engineering goods from India is a heartening evidence of the high quality of the goods and their competitive cost structure. The estimated exports of machinery and engineering goods in 1962 valued at Rs 11 crores represents a 20 per cent rise from the previous year. Increased exports were directed primarily toward the developing countries in the West—Asia, East and West Africa and also to the industrially advanced countries like the USA and the UK. The value of exports of these goods in the current year is expected to go up to approximately Rs 16 crores. All round improvements were anticipated in exports with special emphasis on items such as iron and steel castings, diesel engines, power driven pumps, electric fans and sewing machines. The Government's decision to set up an international trade institute for co-ordinating export promotion activities all over the world and to provide greater fiscal aids to export promotion councils, commodity boards and established exporters for intensifying market research, commodity research and area survey, augurs well for making further inroads into international markets

Then, too, it is likely that American help will not be forthcoming for the fourth steel plant, however much Mr Galbraith may have set his heart on it. The Clay Committee does not exactly approve of loans to foreign governments for setting up enterprises which could have been within the competence of the private sector. The Germans and the Russians may have their show-cases, but American aid to India will presumably continue to be unspectacular. This is a pity, I think, in more ways than one. From the Indian standpoint it means that all thought of achieving the Third Plan steel target can be forgotten; and the US for its part is losing a chance to place on record on Indian soil its technological capabilities. The trouble is, the in-

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THE Aid-India Club is to meet early next month; and meantime I am afraid the developments in America are not such as to inspire the hope that US aid will continue to be pitched at a high figure. "Give-aways", long ago discarded on television, are what foreign aid also is being thought of as. After the difficult passage that the bill had last year, President Kennedy appointed a special committee, headed by General Clay (retired), and its report published last week will have served merely to streng-

then the viewpoint and feelings of the anti-aiders. One criticism is that much too often the Americans rush in with aid for fear that the Russians might tread there and naturally aid given in haste is largely wasteful. The Clay Committee, let me make clear, is not against the continuance of foreign assistance by America; its quantum can be reduced, it has said, because so much of the aid now given is unnecessary. Another target—though no names are named—is constituted by countries which maintain an armed strength greatly in excess of the needs of self-defence. This we may interpret as indicating a further reduction in warmth for military assistance. And of course the emphasis will increasingly be on loans rather than grants. The American Congress this year may take abrupt action because with the next fiscal year's appropriations the total of foreign aid committed by America will cross the \$100 billion mark. Hence the cloudy prospect, for us, of obtaining foreign loans of large enough magnitude for the third year of the Third Plan—at least from America.

Then, too, it is likely that American help will not be forthcoming for the fourth steel plant, however much Mr Galbraith may have set his heart on it. The Clay Committee does not exactly approve of loans to foreign governments for setting up enterprises which could have been within the competence of the private sector. The Germans and the Russians may have their show-cases, but American aid to India will presumably continue to be unspectacular. This is a pity, I think, in more ways than one. From the Indian standpoint it means that all thought of achieving the Third Plan steel target can be forgotten; and the US for its part is losing a chance to place on record on Indian soil its technological capabilities. The trouble is, the in-

ability of Indian investors and/or entrepreneurs to raise the capital for a new steel plant is not properly understood by our American friends. After all, the industrial policy resolution notwithstanding, the expansion programmes of the private steel producers are being approved. If Government feels that the fourth steel plant should be state-owned, it is because the private sector in steel cannot lay its hands on funds of the magnitude required.

Either with bank finance—secured through the high respect and creditworthiness they have built up—or with just plain efficiency, myriads of such small companies earn large, yes, even super profits. Their penalisation is in one sense a rebuff to the small businessman. I am not certain in my mind the kind of relief they need. But again in its present form the super profits tax as affecting this species of companies is going to be crippling; the large enterprise with mammoth capital I suppose will come into its own—that is, if the super profits tax-free slab is increased, in the Act, from 6 per cent to 9 per cent or 10 per cent. For, to the companies with small capital even this relief will count for practically nothing at all.

I have heard one suggestion, that might possibly afford the relief that the small companies may need and find useful. Just as, in the case of Wealth Tax and Estate Duty there is a free first slab, it has been suggested that, in the reckoning of super profits tax, a particular kind of exemption may be given. The exemption as already provided for in the bill is that the first 6 per cent of the profit after the ordinary taxes (in relation to capital plus allowable reserves) will not attract the super profits tax. In order to extend some relief to small companies, the suggestion is that the first Rs 1 lakh of profit should also be allowed to be exempt from super profits tax. Perhaps such concession could be given for all Section 23A companies. In any case, the small businessman already bears a high tax burden, and unless

relief of the sort I have indicated is made available, there is, I repeat, the prospect of the species slowly becoming extinct..

Lastly while I am on this subject, there is this matter of junketing in America which seems to be the rage these days. The Finance Minister, by virtue of the Fund-Bank meetings almost invariably held in Washington, earns his yearly visit; and lesser officials, for furthering negotiations or even signing on the dotted line, can arrange matters for a visit to Washington. In fact the trip abroad on a ministerial level is relatively rare; underlings—but they are the people really connected with the work involved—have the strenuous job of holding discussions and finalising projects. What is mysterious is Mr Patnaik's recent mission that took him to Washington; and as intriguing is the press report that Mr Krishnamachari has deferred a trip that he had planned for next month; or so. Has TTK's decision to postpone any link with the kind of luck Mr Patnaik had? Or are the two missions entirely separate, one political and the other economic? And now we have yet another indication, the possibility of Mr Chavan heading a military mission to both America and Britain. It seems to me that though after the Chinese ceasefire things have been quiet the Government's attention is fully absorbed in matters military. The Third Plan of course is not being given up, but the preoccupation is with what should be done in the event of a flare-up later this year, may be in the spring. And so the missions for defence aid. It is almost certain that response to requests for such assistance will be more readily forthcoming than aid for the Third Plan projects.

UNITED BANK OF INDIA LIMITED

Plea for Relief for Banks from Super Profit Tax

Need to Re-organise Structure of Interest Rates

Review of Banking Conditions by Dr N. N. Law, the Chairman

Extracts from the speech by Dr N. N. Law, Chairman, United Bank of India Ltd. at the Annual General Meeting held on the 25th March, 1963.

Gentlemen,

I welcome you to this 13th Annual General Meeting of the United Bank. Since we met last year, we have lost our revered director Sri N. C. Datta, who died on April 16, 1962, at the age of 83 years. The death of Sri Datta has been a great loss to the Bank and the community. Way back in 1914, urged by the spirit of national service, when Sri Datta founded the Comilla Banking Corporation, banking was yet at a formative stage. His strength of conviction and urge for service is better appreciated when one remembers that he set forth on a pioneering enterprise, and in order to work whole time for it, gave up a lucrative legal practice. With his progressive approach, foresight and expert knowledge, he has made a marked contribution to the banking industry.

The closer I came to him the more I was charmed by his forthright behaviour, wealth of experience, and the warmth of his affection. Let us take consolation in the fact that he lived a glorious life, saw the fruition of his dream, assisted us in solving the difficult problems of amalgamation, and was able to see the United Bank well on the way to progress. May the departed soul rest in peace.

With a deep sense of sorrow I have also to refer to the rather untimely demise of Sri Dharendra Narayan Mukherji, the founder of the Hooghly Bank, another amalgamating unit of the United Bank. On the 19th of February 1963, Sri Mukherji passed away at the age of 62. Sri Mukherji, as you are aware, coming from a well-known family, sacrificed a lot in the interest of the nation and built up the Hooghly Bank, the hard way. The story of the growth of the Hooghly Bank and its march from a small place on Dharamtala Street to 42 Chowringhee Road, is like the story "from log cabin to White House". His efforts, with winning manners, contributed not a little to solving the problems of the merger. Even when he was not on the Board of this Bank he did his best to support the cause of the institution. We condole his very untimely death.

On this occasion we cannot but remember with reverence the founders of the other two amalgamating units—the Comilla Union Bank and the Bengal Central Bank. The late Sri I. B. Dutt started the Comilla Union Bank in 1922. He had no need for personal earnings and was motivated entirely by selfless service to the community. Those who know the history, vividly recall even to-day, how he, for all his aristocratic heritage and foreign education, went from door to door, with a spirit of humility, for collecting a few rupees either by way of capital or deposit.

Late Sri J. C. Das, who founded the Bengal Central Bank, was wellknown in the country as a professional Accountant, having acquired his accountancy qualifications both in the U.S.A. and U.K. His firm of Accountants enjoyed a high reputation in the country. His advent in the field of banking was again a case of service to the cause of the community. The Bengal Central Loan Company was established by him at Calcutta in 1918, with a view to helping and co-ordinating the activities of various loan offices in Eastern India. A few years later it was converted into a regular commercial bank. Development of the Bengal Central Bank was entirely the result of his untiring efforts. The late Sri Das had often thought of a merger of the larger banks of Bengal to make it one of the foremost in the country. It is not generally known that in 1948 the merger of the Bengal Central Bank and the Comilla Banking Corporation was almost complete, but certain circumstances prevented it. It is an irony of fate that when the amalgamation really took place, with a larger purview, he was no longer with us to see the fruits of his efforts.

I take this opportunity to pay my homage to the deceased founders of the amalgamating units.

NATIONAL EMERGENCY

I must make a reference to the state of emergency that the country now faces. Our defence forces who gallantly resisted the massive aggression against heavy odds, deserve the highest tribute. The memory of the brave who laid down their lives in defending the motherland, will ever remain enshrined in every heart.

Confronted with the challenge, the immediate reaction of the nation has been to face up to it with unity and determination. It is now the duty of all of us to see that the initial enthusiasm and the sense of oneness is maintained so that the period of emergency is seen through successfully.

EMERGENCY RISK INSURANCE

Of the measures taken with the advent of the emergency, mention must be made of the Emergency Risk Insurance, which also covers the plantation industry. This has been a timely and appropriate step. However, by the nature of things, the schemes of Emergency Insurance cannot cover all the facets of the risks which are inherent in the situation. As in the case of the risks covered under the Emergency Risk Insurance, there are other risks also which had better be covered similarly, rather than left with the respective units to carry. I feel that a close study of the risks of every nature that the financial institutions, vis-a-vis industry and trade, have to bear, should be undertaken, in collaboration with all the sections concerned. Remedies suggested by such a study could be formulated well in advance and implemented whenever the situation so warrants.

I take this opportunity to mention that the services rendered by your Bank in the frontal areas during the relevant period, were highly appreciated by the Chief Minister of Assam, the business community in general and the tea industry in particular. I must also make a particular mention of the staff of all categories at our branches in the forward areas who conducted themselves admirably well during the crisis period.

GOLD CONTROL MEASURES

Another emergency measure that deserves mention is the steps taken to discourage hoarding of gold. The issue of gold bonds, has been a very well devised measure. It is most unfortunate that it did not meet with much success.

SUPER PROFIT TAX

As expected, the budget for 1963-64 has imposed substantial burden in the form of increased and new taxation. On the whole, in view of the emergency, such a step was inevitable. The increased outlay will largely be financed by tax resources and less by deficit financing. This approach is preferable to relying more on deficit financing, which would have further eroded the purchasing power. However, this positive quality of the budget would considerably be set off by the adverse impact of the Super Profit Tax now proposed. A few remarks on this aspect of the budget will not be out of place here.

By further taxing the taxed profits of corporate bodies, their ability to build adequate reserves, through ploughing back, will be seriously curtailed. Particularly in the case of banks, the need for plough back, both in the form of published as well as internal reserves, is pressing and this has fully been recognised by the Monetary Authority; the Super Profit Tax will hit hard the already limited ability of the banks. If the recent attempts to strengthen the banking system are to succeed, some method of relief from the incidence of this tax will have to be devised.

I may suggest that in case of banks, their transfers to reserves—published and internal—to the extent of at least 30 per cent of after-tax profit be specially exempted from the chargeable profit to be calculated under any modifications to the Super Profit Tax that may be introduced as a result of reappraisal. Such a concession, while helping the banking system will not result in any great loss to the Exchequer in terms of revenue. The imposition of Super Profit Tax, besides its impact on corporate finance, also has a bearing on the industrial development in the country. The importance of private sector investment for economic development is well recognised and has also been emphasised in the Economic Survey released along with the Budget. In the recent years the capital market was showing signs of healthy growth and a new section of investors was gradually developing. The imposition of Super Profit Tax as proposed has produced an impact on the market, which, if continued, may distort this healthy development to an undesirable degree.

INVESTMENT TRUST

It is heartening to learn that the Government is considering the question of formation of Investment Trusts with a view to spreading the benefit of the industrial investment in the community at large.

I have, in the past, emphasised the importance of and need for Investment and Unit Trust, as recommended by the Shroff Committee. It is wellknown that the growth of such trusts has so far been inhibited on account of the incidence of multiple taxation which, under the present tax laws, such trusts would be subject to. I am, therefore, particularly happy that the idea is now being considered in earnest at the appropriate level.

I would, however, submit that in order to achieve the desired results, it would be necessary for the Government to provide conditions and encouragement for such trusts to grow extensively throughout the country. Such a broad based development, with direct participation from the small investors, alone can provide for a healthy, balanced and natural growth of the capital market.

COMPULSORY DEPOSIT SCHEME

The other measure I would like to refer to is the Compulsory Deposit Scheme, which is being introduced for the first time. As a step to curtail consumption, to mobilise resources and to ensure a general participation in the defence efforts the scheme has been well devised. However, the scheme in its present form can seriously affect the growth of deposits with the commercial banks by diversion of funds, and to that extent inhibit commercial banks' ability to serve the needs of industry and trade.

The scheme will affect the very section of the people who provide the prime deposit to the banks. The banking system, therefore, can legitimately expect that the Government will take other measures so as to mitigate their problem created by this imposition. We have, in the past, had occasion to refer to the need for utilising the commercial banks as depositories of Government funds, and I feel that the present measure is a further justification for giving a serious consideration to this idea.

BANK'S WORKING

The Directors' report and the accounts for the year 1962 have been in your hands for some time and, I am sure, you have studied them with interest. You will, no doubt, have seen that despite the situation that developed towards the end of the year, the results have been satisfactory. Deposits have risen by Rs 5.83 crores or by nearly 10% over the previous year.

This growth in deposits enabled us to increase our advances partially to meet the rising demand for bank credit, and to expand our investment portfolio in government securities. Our Foreign department continued to render services to the country's import and export trade, and over the years the volume of business transacted has registered a satisfactory growth, with a pronounced increasing trend.

Our Pakistan branches continued to play their useful role in the development of the local economy and their business during the year was satisfactory.

DESAI AWARD

In September last the Award of the National Industrial Tribunal (Bank Dispute) was announced, with its provisions taking effect from January 1962. You will have noticed that the establishment charges have risen by Rs 24 lakhs, inclusive of normal increment etc., as against an increase of about Rs 8 lakhs during the previous year. This is an increase of 16.7 per cent over the previous year and of 4.1 per cent on the quantum of increase in deposits in 1962. Most of this rise is due to the extra load imposed on the Bank by the Award, and its other implications are yet to be felt in the current year.

However, now that the Award has been implemented in the interest of the wellbeing of the staff, one may reasonably expect a higher degree of co-operation from the staff members. Only then can the incidence of the operating cost be somewhat lightened. I do hope that while the management will continue to make their efforts, the staff will not be lacking in extending greater co-operation.

INTEREST RATES

You would have noticed that interest on deposits during the year under review has increased by Rs 24 lakhs for a rise of only Rs 5.83 crores in deposits. This works out to 4.1 per cent on the amount of increase in deposits and reflects the tendency towards increase in the rates of interest on deposits noticed during the last few years. If we are obliged to abandon our restraint with regard to interest on deposits, I am afraid, our operating cost ratio would further rise. I would once again like to repeat that higher interest rates on bank deposits, in a regulated and closed economy, does not, as it could not, by itself act as stimulant to deposit growth.

The recent growth in bank deposits is largely attributable to opening up of new branches, increase in the national income, expansion of currency and similar other factors. If all these are taken into account one would see how little, if any, has been the influence of increased rate of interest on the growth of deposits. At the same time banks' operating costs have been unnecessarily raised. As a result the rates of interest on advances have also increased.

If the lending rates were raised to broaden the differential with the deposit rates and thus substantially to strengthen bank reserves, a useful purpose would have been served. But, instead, the trend has continued to be that the increase in interest rate on deposits has pushed up the lending rates without expanding the differential. The structure of interest rates, I feel, should be reorganised to suit the economy, at the same time to improve the profitability of the banks.

The convention evolved by the British banks in this regard, viz. that the maximum rate of interest on deposits be 2 per cent below the Bank Rate and that the prime rate of advances be 1 per cent above the Bank Rate with a minimum of 5 per cent, is more pragmatic in its approach than the agreement adopted in this country. I think the Indian Bank's Association should reorganise the inter-bank agreement on similar lines, but providing for a larger differential.

rest rates, I feel, should be reorganised to suit the economy, at the same time to improve the profitability of the banks.

SERVICE CHARGES

Here I would like to reiterate the need for standardising the

charges for various services provided by banks. While deposit rates are regulated by agreement, absence of standardisation of service charges based on the costs of such services, militates against true implementation of the deposit rate agreement. I am at a loss to understand how in the face of the existing agreement on deposit rates, and even on lending rates, can there be any objection to an agreement on service charges; particularly when such an agreement becomes necessary in the interest of the existing ones.

Markets

JUTE Raw Jute Prices

WITH the start of the sowing season, there have been already attempts at estimating the size of the next jute crop. The receipt of rains in several growing regions about the middle of this month, and scattered rainfall since then has engendered the belief that the next crop will be as big as the current season's, if not bigger. It is gratifying that there is realisation even in government circles that increased attention has to be bestowed on improving the quality of the coming crop. For one thing, two consecutive large crops have thrown up some difficult problems which are still causing anxiety despite concerted steps to lift all available jute at the minimum prices. The difficulties have arisen largely because the two crops comprised a considerable quantity of low quality jute which could not be absorbed in full for technical and other reasons. Because of the changing pattern of production in the industry, the demand for quality is increasing. But such jute is in short supply while there is plenty of low quality jute. This unsatisfactory position can be

remedied only by impressing upon the jute cultivators that by improving the quality of jute they will at once serve the industry better as also obtain a better return for themselves. As far as the industry is concerned, it is already nursing the grievance that it has been overburdened with a large quantity of jute at a price which is rather on the high side considering the decline in jute goods prices in the course of the last few months. The industry's contention is that jute goods being predominantly dependent on exports, the industry pays for the raw material should be commensurate with the world market prices for jute goods. It is therefore with anxious interest that the industry is awaiting the announcement of the minimum price for next season's raw jute. It has been indicated by the Jute Commissioner that the minimum price for next year's crop will be announced well in advance, possibly by the end of March or thereabouts.

The improvement in sentiment in the jute goods market since the second half of last week stems from the expectation that there will soon be a revival of foreign enquiries. As a matter of fact

scattered enquiries in hessian from the US have been reported during the past few days. Referring to the outlook for exports of jute goods, Mr Manubhai Shah, Minister for International Trade, is understood to have told the Informal Consultative Committee of Parliament for the Ministry of Commerce and Industry that the present trend is hopeful for the industry and it is expected to fulfill its export target of 900,000 tonnes per annum during the Third Plan. The Minister is also reported to have informed the committee that jute goods exports during current financial year will fetch a record amount of foreign exchange—Rs 155 crores to Rs 160 crores.

★

The raw jute market continues to show a quiet trend. Although arrivals have been declining, sellers are keen for business even at a discount. Even so buyers have been evincing little interest with the result prices are quoting well below the minimum levels. However, good quality jute continues to fetch a premium as it is in short supply. Meanwhile, there are reports of distress among jute growers in Bihar. In a memorandum to the Prime Minister a large number of members of the Bihar Legislature have urged him to take immediate steps to ensure a fair return to the jute growers. The memorandum has alleged that the State Trading Corporation has also been exploiting the distress conditions by offering prices lower than the official minima. One of the remedies suggested is that Government should allow the export of raw jute without restrictions as to quality.

The cotton market continues to show a quiet trend. Although arrivals have been declining, sellers are keen for business even at a discount. Even so buyers have been evincing little interest with the result prices are quoting well below the minimum levels. However, good quality jute continues to fetch a premium as it is in short supply. Meanwhile, there are reports of distress among jute growers in Bihar. In a memorandum to the Prime Minister a large number of members of the Bihar Legislature have urged him to take immediate steps to ensure a fair return to the jute growers. The memorandum has alleged that the State Trading Corporation has also been exploiting the distress conditions by offering prices lower than the official minima. One of the remedies suggested is that Government should allow the export of raw jute without restrictions as to quality.

★

COTTON Irregular Trend in Futures

THE cotton futures moved irregularly during the past week owing to alternate bouts of buying and selling indicating uncertainty about the new crop and tenders against the maturing Jarilla March 1963 contract. In the initial deals the prices in the futures section, developed a sagging tendency obviously due to the absence of demand for ready cotton. The Jarilla May contract which commenced the week at Rs 695.00 came down to Rs 691.75 per three quintals. Subsequently, however, the contract staged a modest recovery and moved up to Rs 700.25 thanks mainly to short covering and stray speculative support from Calcutta. But the rally was of a short duration and the contract slipped down to Rs 695.50 owing to bull liquidation. Thereafter the contract developed a somewhat steadier trend. The volume of business in the week under review was meagre and the sentiment tended to be cautiously firm. The Jarilla March contract, on the contrary, registered wide fluctuations. After opening the week at Rs 720.25 per three quintals the con-

tract shot up to Rs 735.00 on a.c. of the rumours of abolition of export duty on cotton stapling 3/4" and below, an export quota for which has already been issued. In mid-week transactions the contract fell down to Rs 714.00 as the rumour was proved baseless. But later the contract spurted to Rs 740.00 per three quintals. The maturing contract has failed to attract any tenders so far. The contract went off the board on Monday last quoting around at Rs 750.00, the highest level of its career.

The spot market at Sewri displayed sluggish conditions. The mill demand was far from encouraging though scattered enquiries were reported in available lots of L-147, CO2, Kalyan and Digvijay. Despite easy sellers mill purchasing was limited owing to the stringent conditions in the monetary market. According to reports from the upcountry centres arrivals of new cotton are slowly diminishing. The season for Gujarat and Saurashtra in expected to come to a close very shortly. Marketing in Indore-Malwa area had already been stopped.

Enquiries from overseas buyers for Bengal Desh broadened on the export front. Out of the export quota of 75,000 bales about 40,540 bales are reported to have been registered for shipment till 20 March. The other short staple cotton for which an export quota has been released along with the quota for Bengal Desh has not so far met with any demand.

In the export section the American cotton met with very little demand in the early part of the week. But later a prominent mill was credited with a purchase of 4,000 bales of this growth.

The tangle over the shipments of cotton piecegoods to Burma (which was suspended recently due to the nationalisation of banking business there) has at last been resolved and the banks have resumed making payments against letters of credit. On account of this welcome development the prospects of increased exports to that destination are bound to brighten up. Apart from these, it was also reported that the Burmese body entrusted with the task of importing cotton, textiles has again invited fresh tenders through the Joint Venture Corporation for the supply of textiles. The tender is for a total value of Rs 1 crore and includes quality items such as printed and dyed fancy flannels, printed and dyed voiles, mosquito nettings, bleached mulls, printed satins, cotton waste blankets and plain sewing thread. Out of the total requirements of Burma, India's contribution is only about 15 per cent, while China accounts for 25 per cent and the remaining 60 per cent by Japan.

PIECEGOODS

Trading conditions in the cotton piecegoods market have taken a turn for the better and the activity is expected to gather fresh momentum within a couple of weeks. In the domestic sector almost all the upcountry centres evinced keen interest in a number of varieties particularly in seasonal goods. The export section also showed signs of improvement.

Dhoties, saris, markings and powerloom mulls, during the week review, met with good demand. On the whole the prices ruled firm. Seasonal varieties like the cambrics and lawns

were also sought after. Most of these goods were in short supply. The mills were disinclined to reduce the prices.

In the powerloom section, grey uncalendared cotton piecegoods met with moderate enquiry from local processors and dealers. But the turnover was restricted and the prices ruled steady.

Encouraging enquiries flowed from Bihar and UP for selected goods. Kanpur has entered the market in a big way after the Holi festival. Restricted enquires from Delhi were also reported.

On the export front the exporters were anxious to make shipments of their goods to the UK before the validity of export licences expires in order to avert any penalty. Business with Sudan was confined to restricted quantities of dorais, bleached and dyed voiles and sheetings. East Africa was contented with a moderate quantum of coatings, sheetings and blankets. Australia purchased sheetings and coatings according to the availability of licences and prices.

TEA

Encouraging Prospects

AT a recently-held meeting, the Chairman of the Tea Board, Mr A. S. Bam has stated that the prospects for Indian Tea, particularly Darjeeling tea, are encouraging and there is no ground for apprehending that the supply will outstrip consumption in the foreseeable future. He has also added that there is every reason to hope that consumption will increase in keeping with the increase in production and may be at a faster rate.

In the above connection, Mr Bam has mentioned that the export performance during the first two months of the current year has been very encouraging and much better than in 1961 and 1962. The quantity exported during January and February 1963 was 38.1 million kgs, valued at Rs 226 crores as against 33.5 million kgs valued at Rs 20.3 crores in 1961 and 31.3 million kgs valued at Rs 17.8 crores in 1962. It is also worth noting that, although production in 1962 has been lower by 4 per cent in Assam Valley, 18 per cent in Cachar and 2 per cent in Dohars compared to 1961, there has been no such decline in the production in Darjeeling.

Production of Tea in South India is estimated lower at 9.8 million pounds in February as compared to 11.5 million pounds in the previous month. However, this put the total outturn, in the first two months of the current year, higher at 21.3 million pounds as against 19.8 million pounds in the corresponding 1962 period.

Exports from South India increased to 93.48 million pounds in 1962 from

80.02 million pounds in the previous year and 78.87 million pounds in 1960. Although exports to the UK fell from 48.62 million in 1961 to 45.34 million last year, shipments to all other destinations rose from 31.4 million to 48.14 million pounds. Supplies to the USSR rose from 4.53 million to 8.84 million pounds as also those to Australia from 3.92 million to 8.82 million pounds; the UAR from 5.08 million pounds to 8.45 million pounds; the USA from 5.92 million to 7.2 million pounds; Canada from 5.77 million to 5.93 million pounds and to the Netherlands from 1.35 million to 2.39 million pounds.

A report issued from Cochin states that, in an effort to increase the crops, producers have not been able to expand processing facilities as fast as the crop increase they achieved. The result has been, though not in all cases, a general fall in quality and consequently in prices. Tea interests are now re-examining their production policy. They feel that it is better to produce less but of better quality and thereby secure higher prices.

Coonoor in the Nilgiri Hills has become India's third tea auction centre. There was considerable enthusiasm at the first regular fortnightly auction inaugurated at the end of last week. It was attended by more than a hundred merchants from all over the South. Representatives of important tea-broking firms of Cochin were also present. The auction was conducted by the Ardesher Brokers Corporation, otherwise known as ABC, which represents leading Indian planters and merchants in Nilgiris.

Producers of Common tea had received no help from the Union Government in solving their problems. The new auction centre at Coonoor will, therefore, help Nilgiri's small tea-growers in disposing of their annual production of 8 million kgs, much of which is Common tea. It is felt that the auction will definitely help growers to improve the quality of tea and secure better prices.

The first auction was a complete success. In all, 70 lots of tea were offered and all but one were sold. The average price realised was stated to be 20 nP per kg over the valuation. The total quantity on offer was about 20,000 kg.

In the Export Sale held in Calcutta this week, offerings were 37,543 packages of Leaf grades. There was a good general demand: but prices for the better teas weakened towards the close of the sale. Plain orthodox teas were sold readily at firm and often were sold readily at "tea for price" a dearer rates with "tea for price" a dearer feature. Better liquoring strong BOPs and Fannings met with a useful enquiry at irregular and generally lower rates; but the BPs were sold well. Medium Assams followed a similar trend; but the better liquoring Assams were considerably easier. Whole Leaf grades were well supported at firm to dearer rates. Medium CTCs were irregular and often dearer, particularly the fibrous types. The small quantity of Legg cuts on offer, came to a good market; but prices were lower by up to 30 nP. Tippy sorts were irregular. Due to

insufficient quotable teas on offer, no rates were given.

In the Colombo market, offerings were 8,083,681 pounds. At the opening, best Dimbula/Dickoya Brokens were generally lower following quality. Plain sorts were sold at about previous rates. Bright liquoring Uvas and Uda Pusselawas were fully firm to dearer. Coloury medium brokens from Western districts advanced irregularly by 5 to 15 cents per pound, while low mediums and plain Uvas met with strong demand and were 5 to 10 cents dearer.

Low-grown flowery BOPs were up by 2 to 5 cents and other leafy Middle East and small leaf brokens were fully firm to slightly dearer. Dimbula/Dickoya BOPs followed the lower market for their respective brokens, while medium Uvas were irregular with plain sorts easier. Low-grown were firm and flowery BOPs were irregular and tending dearer.

Under a bilateral trade agreement with Ceylon, Russia has proposed to buy 6 million pounds of Ceylon teas at the local auctions this year. This is about 1 million pounds more than last year's figure. In 1961, her purchases totalled only 319,000 pounds. Of this, more than 2 million pounds of tea have already been shipped to Russia. Russia's requirements of tea are met from Indian Indonesia and Ceylon.

In London auction, offerings were around 75,000 packages of North Indian and other miscellaneous growths. Buyers appeared somewhat discriminating as regards the quality. Good liquoring teas and coloury mediums were a very strong market; but poorer qualities met with an average demand and were sometimes easier. In South Indian teas, the pattern was along the same lines. The demand for African teas was limited and prices were irregular. For Ceylon teas, demand was maintained and prices were generally fully steady. BOP Fannings met with strong competition, while a few invoices with improved quality were sold at higher rates. Price indication for Plain teas was 2sh 10d to 3sh 2d per pound.

SUGAR

Enhanced Production Target

THOUGH hardly a fortnight has passed since the release of the monthly quota for domestic consumption, there has been a further rise in Sugar prices. The ex-mill rate for D/29 is placed higher at Rs 116. This is attributed to brisk buying support from all consuming areas while mills are reported to be hesitant sellers. There is a general feeling that there will be a sharp fall in the overall sugar production in the current season, which is coming to a close.

The sharp rise in prices is due to the premature end of the season in

Uttar Pradesh. Against the average crushing season of 144 days, the current season is not likely to last beyond 90 days in that State. Of the 28 mills in eastern Uttar Pradesh, 21 mills have already been closed down and the production in the State is estimated to be lower by about 33 per cent.

The season's overall production is expected to be 2,450,000 tons as against the production of 2,800,000 tons in the previous season. The available supply for the current season is placed at 3,450,000 tons including the carryover of 1,000,000 tons. The offtake, on the other hand, is estimated at 3,050,000 tons including 400,000 tons earmarked for export. Thus, the carryover for the next season will be 400,000 tons—a quantity hardly enough to meet six weeks' requirements of the country.

At one stage, it was feared that the heavy accumulation of stocks could not be satisfactorily tackled. The sugar industry was thus asked to restrict production in 1961-62. The lower level of output in that year, a fairly satisfactory volume of exports and an increase in internal consumption led to a reduction in stocks. In the light of subsequent developments, the restrictions regarding the crushing of cane were removed and it was expected that the output of factory sugar would be satisfactory in the current year. But, on account of a largescale diversion of sugarcane for the manufacture of gur and khandasari and a smaller standing crop, many factories in Uttar Pradesh particularly have been obliged to close down. Total production is not expected to be very much more than 2,500,000 tons.

The Union Minister for Agriculture has been quick to realise that a difficult situation will arise in regard to the availability of sugar even for internal consumption and that the export effort will have to be slowed down if the necessary incentives for raising output are not given in time. In this respect, the announcement by him that the target for capacity in respect of the industry will be raised to 4,000,000 tons from 3,500,000 tons is an indication of growing internal demand and of the confidence that exports can be maintained around 500,000 tons. The industry has got the capacity to produce even now up to 3,500,000 tons. Only, there should be adequate cane supplies and a reasonable margin of profit.

At a time, when the industry in India has generally welcomed the decision to step up production, reports about the world sugar situation as a whole are far from encouraging. According to a study made by the United States Department of Agriculture, there is likely to be a swing from excessive to tight supplies. The dramatic decline in Cuba—the largest producer—and the poor beet crops in Western Europe are the main contributory factors. The declining production trend taken in conjunction with the increasing rate of world sugar consumption—2 million tons per year—will mean that sugar supplies will become uncomfortably tight at the beginning of the 1963-64 season.

NON-FERROUS METALS Prices Look Up

The Bombay market for Non-Ferrous Metals, which had been ruling quiet till the end of last week, has developed a steadier tendency during the week under review. But for Wirebar which ruled easy and Ingots which were quiet, other forms of Copper were steady on renewed support from the consumers and the up-country centres.

Zinc has suffered a setback although a slight recovery in prices is noticed at the close of the week, thanks to buying enquiry at the lower levels. Tin prices have continued to rule firm due to tight supply position. The market for Lead is well maintained. In general operators are not inclined to extend their commitments in view of proximity of the import policy announcement.

RUBBER Rise in 1962 Output

For the first time, production of Rubber in India went up by 4,365 tonnes in one year, showing a rise of

16 per cent over the 1961 output. Provided weather is favourable, the increase in production in the current year may be better than that of last year.

According to the figures released by the Rubber Board, production has shown a decline in January to 3,142 tonnes from 3,965 tonnes in the previous month, while consumption has increased to 6,563 tonnes from 6,458 tonnes. Stocks with the estates, as at the end of January, are shown at 1,854 tonnes against 2,516 tonnes at the end of last year; with the dealers at 3,334 tonnes against 3,297 tonnes and with the manufacturers at 13,780 tonnes against 13,894 tonnes. Imports in January were substantially lower at 1,496 tonnes against 2,208 tonnes. The following statistics will be of interest (figures in tonnes):—

Production during January 1963	
Total stock of natural rubber as on 31 January, 1963	15,940
Total stock of synthetic rubber as on the same date	3,029
Total	18,969

World estimate of natural rubber production for 1962 is, that it is slightly below consumption. But, the difference has been made good by the release of American stockpile rubber.

Prospects for 1963 are said to depend very largely on the progress achieved by Soviet Russia in setting up and getting into production its three new synthetic rubber plants. Last year, USSR absorbed 345,000 tons from the world market; but it was 20,000 tons less than in 1961.

CASHEW Estimate of Lower Crop

Raw Cashewnut prices have been showing a rising tendency and the rate for African Angoche has firmed up further by Rs 20 to Rs 690 per ton. With the kernel market continuing at 44 cents a pound, prices of raw nuts are said to be uneconomical.

The keen enquiry for the African nuts mainly follows fears about the size and the quality of the Indian crop. Some manufacturers estimate the crop to be not more than 50,000 tons against earlier expectations of 65,000 tons. The African crop is also not expected to be substantially higher than in the last season. The crop is now estimated around 140,000 tons. Of this, slightly over 100,000 tons is reported to have already been sold.

The Indian crop, apart from being smaller, is expected to come rather late. Normally, they are available by the middle of February. The pace of arrivals is also said to be not satisfactory. The kernel outturn of these nuts may be lower if they are exposed to rain, which they are likely to be as the crop is late.

GOLD & SILVER Dull Conditions

On the Bombay Bullion Exchange, activity in the Silver section continued to be restricted and price movements were negligible. Although there were expectations of a revival of demand with the progress of the busy season, prices hardly moved due to reports of continued arrivals. The rate was hovering around Rs 238.

The Gold section remained dull and the demand for the metal was small. Rates moved narrowly between Rs 100.50 and Rs 101, while sovereign was steady at Rs 74.50.

OILS & OILSEEDS Higher Levels not Maintained

Although conditions on the Bombay Oilseeds Exchange remained buoyant during most part of the week under the lead of castorseed, higher levels could not be retained till the close following small liquidation on easier advices from the ready section.

In the Castorseed section, sentiment remained bullish on account of frequent reports of an improvement in the export trade in castor oil. A section of the trade claimed sizable business with some of the East European countries and active enquiries from the USA. But a definite indication of the revival in the export trade was not forthcoming and this caused a slight setback towards the close. Castor ready closed at Rs 33.50 and Castor Oil, commercial quality, at Rs 13.05.

The advance in castorseed imparted a firm tone to the Groundnut section. Sentiment was also aided by the sustained covering by shippers against their previous export commitments with Spain. Groundnut Bold ready was quoted at Rs 41.50 and Groundnut Oil at Rs 16.20.

Trading in the Linseed section also reflected an upward tendency, which was attributed to the active speculative support from the operators in Madhya Pradesh, Uttar Pradesh and Delhi. Higher advices from Northern India in respect of rapeseed also tended to accentuate the bullish sentiment. Ready was quoted at Rs 32.62 and Linseed Oil at Rs 12.50.

World production of linseed in 1962 is now estimated at 131 million bushels—2.2 million bushels less than what was forecast in November last, but 11 per cent or 13 million bushels greater than the small outturn of 1961. Last year's production was the largest since 1956 and about equal to the 1957-59 average.

For the Investor

INVESTMENT GOSSIP Deep Gloom

Trading in the Calcutta Stock Exchange has been at a standstill practically the whole of the week. After the sharp break in equity prices last Friday the market was declared closed on Saturday and though the market has been officially open since then, brokers have refrained from doing any business. Elsewhere, conditions have been no better though scattered business has been going on in one or two exchanges. For the past one or two days, Dalal Street has been reporting some improvement in trading sentiment with a few selected shares coming in for buying support at improving price levels. This is presumably due to revival of hopes about some modifications to the Super Profits Tax.

Representations and memoranda detailing the disastrous effect of SPT have been pouring in New Delhi besides personal meetings between top ranking personalities in commerce and industry and the Prime Minister and the Finance Minister. All these representations have pointed out that the SPT in its present form will seriously affect the growth of industry. In a joint memorandum to the Union Finance Minister, the eight recognised stock exchanges in the country have sought to impress upon Mr. Morarji Desai the deleterious effect of the SPT. They have pointed out that the revenue sought to be obtained from the corporate sector can very well be got out of it in ways which do not cripple it. In its view a temporary surcharge of 10 to 12 1/2 per cent on the corporate tax will serve the purpose that if the stock markets are to function normally either the SPT should be scrapped or drastically modified. There has been a serious erosion in equity values since the Budget

MARTIN BURN LIMITED

NOTICE is hereby given that the Register of Members and Share Transfer Books for Preference Shares in the Company will remain closed from the 10th April to 11th April, 1963, both days inclusive, for the purpose of payment of Preference Dividend for the half-year ending 31st March, 1963, on or after the 19th April, 1963, to those Preference Shareholders whose names appear on the Company's Register of Members on the 11th April, 1963, or to their mandatees.

By Order of the Board,
A. G. GIDLEY,
Secretary.
Registered Office:
12, Mission Row,
Calcutta-1.
27th March, 1963.

proposals were announced. A study prepared by the Calcutta Stock Exchange shows that the scrip dealt in the post budget sessions so far have dropped as much as Rs 34 crores.

A foretaste of what the SPT will bring in its wake has been provided by quite a few dividend announcements made during the past few days. Reduced dividends have been announced by Dunlop Rubber, Union Carbide and a few cotton mills in Bombay. The decision to defer its proposed rights issue by Goodyear is yet another clear indication about what will happen to other expansion plans if the SPT goes on the Statute Book in its present form.

Calcutta Stock Exchange Special Erosion in Equity Values

THE Calcutta Stock Exchange has made a study to show the serious fall in the prices of individual scrips since the Budget day. The study shows that the fall in the value of individual scrips in some cases amounts to as much as 31 per cent. In more than half a dozen cases, the fall in values ranges from 20 to 30 per cent. In the majority of cases, they range from 10 to 20 per cent.

Following statement represents the erosion in value of Ordinary shares of 122 companies out of 621 listed companies in Calcutta Stock Exchange dealt since the presentation of the Budget:

SECTION:	Erosion (Rs)
Miscellaneous	15,21,89,362
Cement & Pottery	1,32,04,375
Jute	3,68,97,697
Tea	35,19,250
Engineering	5,07,00,565
Mining	77,42,680
Bank	61,95,322

Bank	1,14,00,000
Insurance	57,91,796</

Facit Asia

Facit Asia Limited has been formed for the purpose of manufacturing Facit calculators and adding machines in collaboration

with well-known Swedish manufacturers, who are pioneers in the office equipment field. The Indian company has been licensed to produce 5,100 units in each of the models and it will be the first of

THE DUNLOP RUBBER CO. (INDIA) LTD.

NOTICE

NOTICE is hereby given that the 37th Annual General Meeting of the Company will be held at the Registered Office, "Dunlop House", 57B, Free School Street, Calcutta, on Wednesday, the 24th day of April, 1963 at 11 a.m. for the following purposes:

- To consider the Profit and Loss Account for the year ended the 31st December, 1962, the Balance Sheet as at that date and the Reports of the Directors and Auditors of the Company.

- To declare dividends.

- To appoint Directors in the place of those who retire by rotation.

- To appoint Auditors and to fix their remuneration.

SPECIAL BUSINESS

To consider and if thought fit to pass, with or without modification, the following resolutions of which number 5 will be proposed as an ordinary resolution and numbers 6 and 7 as special resolutions:

- (As an ordinary resolution): "That Sardar Hardit Singh Malik, a Director of the Company, who retires by rotation and who attained the age of sixty-eight years on 23rd November, 1962, be and is hereby reappointed, a Director of the Company and it be and is hereby specifically declared that the age limit for directors prescribed in Section 280 of the Companies Act, 1956, shall not apply to him".

Special Notice of intention to propose this resolution in conformity with Section 281 of the Companies Act, 1956, has been received by the Company.

- (As a special resolution): "That subject to the approval of the Central Government, the terms and conditions of service of Mr. Prakash Narain Haksar, a Director and Deputy Managing Director (Purchasing) of the Company, as approved by a special resolution at the Annual General Meeting held on 27th April, 1961, be and are hereby varied in the manner following, that is to say:—

- a pension be provided to him in accordance with the Rules and Regulations of The Dunlop Rubber Company (India) Limited Ex-

ecutive Staff Pension Fund established by the Company under the Trust Deed dated 22nd September, 1962 and

- the payment of bonus to him be discontinued, and the said terms and conditions varied as aforesaid be and are hereby approved.

- (As a special resolution): "That subject to the approval of the Central Government, the terms and conditions of service of Mr. Phani Bhusan Sen Gupta, a Director and Deputy Managing Director (Administration) of the Company, as approved by a special resolution at the Annual General Meeting held on 19th April, 1960, be and are hereby varied in the manner following, that is to say:—

- a pension be provided to him in accordance with the Rules and Regulations of The Dunlop Rubber Company (India) Limited Executive Staff Pension Fund established by the Company under the Trust Deed dated 22nd September, 1962, and
- the payment of bonus to him be discontinued, and the said terms and conditions varied as aforesaid be and are hereby approved."

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

The Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 17th April to 1st May, 1963, both days inclusive. Any dividends that may be declared will be paid only to those members whose names appear on the above Registers on 16th April, 1963.

By Order of the Board
P. B. Sen Gupta,
Director & Secretary.

Dunlop House,
57-B, Free School Street
Calcutta
29th March, 1963.

NOTE:

An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 has been annexed to the notice issued to the members of the Company.

its kind in Asia. The factory will be located near Madras and the necessary licences for the import capital goods, raw materials, etc., have been received.

Out of the issued capital of Rs 30 lakhs in equity shares, 15,000 shares of Rs 100 each have been reserved for subscription by the foreign collaborators. The directors and their friends have already taken up shares for Rs 7.65 lakhs, while the balance of Rs 7.35 lakhs has been offered for public subscription.

Kesoram Industries

Kesoram Industries & Cotton Mills Limited, Calcutta, will issue Mortgage Debentures of the value of Rs 175 lakhs, carrying interest up to 7 per cent per annum.

Binani Industries

Binani Industries Private Limited, Bombay, is to issue capital of Rs 49,000 in equity shares of Rs 10 each, to be issued on capitalisation of the company's Reserves to a like extent, to the existing shareholders of the company.

Indian Oil

The Indian Oil Blending (Private) Limited, Bombay, a new company will raise a capital of Rs 20 lakhs in equity shares of Rs 50 each for cash, at par. Of this, shares of the value of Rs 10 lakhs will be offered for subscription to Mobil Petroleum Company Inc. of New York, and the remaining Rs 10 lakhs to Indian Oil Company Limited, Bombay.

KCP Fives

K.C.P. Fives Lille-Cail (Private) Limited, Madras, is to issue equity capital of Rs 40 lakhs for cash, at par, to be subscribed privately—50 per cent by KCP Limited, Madras and 50 per cent by Fives Lille-Cail, Paris.

STOCK EXCHANGES
Impressed State

Watch-Dog Writes:

SENTIMENT in stock markets has remained generally depressed. Operators have thought it prudent to keep out of the market till the final outcome of the meeting between the representatives of the eight stock exchanges and the Union Finance Minister is known.

As a matter of fact, operators on the Calcutta, Delhi and Ahmedabad stock exchange had no inclination to do any business till Thursday although the markets remained officially open. The only relieving feature was the slight improvement in sentiment noticed on Dalal Street on expectations of some relief in the SPT.

Lyons Range remained officially open; but brokers refrained from doing any business on fears about the adverse effects of the SPT.

Although Dalal Street opened the new account on a depressed note, the downward movement in prices

was arrested by bear-covering and some selective investment support. Expectations that the SPT would have to be suitably amended aided the sentiment.

Barring a few transactions in preference shares and in small lots of equity shares, business on the Madras Stock Exchange continued to be at a standstill.

The Bangalore Stock Exchange experienced a dull session without scrip being traded.

Trading on the Delhi Stock Exchange remained suspended during most part of the week as members refrained from transacting any business.

Easy conditions continued to prevail on the Ahmedabad Stock Exchange.

The London Stock Exchange, however, exhibited a cheerful sentiment, as pre-Budget buying was on an increased scale.

CALCUTTA

Friday Evening.

BUSINESS on Lyons Range was paralysed by a decision of the members of the stock exchange to refrain from doing any business till Thursday, when the Presidents of all the recognised stock exchanges would be meeting the Union Finance Minister.

From the last week-end, it became evident that until and unless the proposed SPT would be suitably modified trading in the market would continue to be a difficult affair. The cuts in dividends by some important companies and the preparation of detailed memorandum by the various stock exchanges made it abundantly clear that established and new companies would find it difficult to run their business on a profitable basis.

The decision of the authorities to remove the minimum prices had no effect on the market, as operators felt that, without a definite improvement in the general climate and a radical change in the SPT, there would not be any significant recovery in prices or expansion of business. However, expectations of some relief in the SPT with operators eagerly awaiting the outcome of the Delhi talks accounted for a slight improvement in sentiment towards the close of the week.

THE PUNJAB NATIONAL BANK LTD., NEW DELHI.

NOTICE

The Transfer Books and Register of Members of the PUNJAB NATIONAL BANK LTD. will be closed from 17th April to 30th April, 1963, both days inclusive. The final dividend, 1962, to be declared at the Annual General Meeting to be held on 10th May, 1963 at the Registered Office of the Bank, Parliament Street, New Delhi shall be payable to shareholders whose names appear on the Register of Members as on 30th April 1963.

By Order of the Board of Directors,
R. L. TULL,
General Manager.

BURNPUR —A PORTRAIT IN STEEL

A busy steeltown. Alive to the problems of the day,
prepared for the challenge of tomorrow. Thousands
live and work here day and night. All of them think in
terms of steel—and more steel, for India.

Yet less than ten years ago, the rated annual capacity at
Burnpur was about half a million tons of crude steel and a
similar quantity of pig iron. A two-step expansion
programme has since raised annual production at
the integrated steelworks to 1 million tons of
crude steel and 1.3 million tons of pig iron.
The smallest additional capital cost
can expand production further,
by another million tons of steel
if need be.

Meanwhile, IISCO steel—in
all the shapes that steel
can take—serves India's
developing economy.

Plan Progress, 1961-62

THE Planning Commission's review of the progress achieved in the initial year of the Third Plan is a depressing document. It records that "overall performance in agriculture was less than satisfactory", while in the industrial sector, "the rate of growth of production as a whole had slackened"—a by no means new discovery. The output of food-grains in 1961-62 at 78.6 million tons was lower by a million tons as compared with 1960-61. There was also a decline in the production of important commercial crops like cotton. The rate of growth of industrial output during the first year of the Third Plan was 4.6 per cent as compared with the increase of 11.1 per cent achieved in the last year of the Second, almost all important industries showing a lower rate of growth. The fall in agricultural production, together with the slower tempo of industrial activity, is reflected in the estimates of national income, having increased by only 2.1 per cent which is not only much smaller than the record increase of 7.1 per cent in the last year of the Second Plan, but also less than the average rate of 4 per cent for the Second Plan period.

The extenuations too are familiar. Seasonal fluctuations in agricultural output are only to be expected in a country where nearly three-fourths of the cultivated area do not have the benefit of irrigation. But this does not explain why the expansion of irrigation facilities has been less than what it was in the previous year. Additional utilisation of major and minor irrigation was only 8.9 lakh acres as against 10 lakhs in the previous year, additional potential from minor irrigation 17 lakhs acres as against 25 lakhs acres and additional area benefited by soil conservation 12.8 lakhs acres as against 20 lakhs acres in 1960-61. There has been a tendency in some States to divert outlays for irrigation from continuing schemes to new schemes, with the result that new potential is not being speedily created. Moreover, because of the failure to construct field channels, maximum benefits has not been realised from the irrigation potential already created. These are obviously failures of performance for which there are no ready alibis.

With agricultural output down and industrial activity slackening, it is not surprising that it has not been possible to absorb all the new entrants to the labour force. Annual additions to the labour force during the Third Plan have been estimated at three million persons. But additional employment opportunities created are estimated at two million in 1961-62 and 2.4 million in 1962-63, which means that, during the first two years of the Plan, the backlog of unemployment has increased by 1.6 million. The rural works programme, on which it is proposed to spend Rs. 150 crores during the Third Plan was expected to reduce the backlog of unemployment at the beginning of the Plan, by providing additional employment opportunities of the order of 2.5 million. But it now appears that the programme of rural works has got snarled by procedural difficulties.

The report makes a feeble attempt at spotting silver linings. In the industrial sector a lower rate of growth has been accompanied by

diversification and new lines of production, like watches, ammonium phosphate etc. Secondly, figures of financial outlay are more encouraging than the murky picture presented by a review confined to production statistics. Even here, the performance was not as good as was anticipated when the budgets were framed for the year. At the time of the formulation of the Third Plan, it was indicated that the outlay to be aimed at should be a minimum of Rs 1,100 crores. The actual achievement is better by Rs 42 crores, though compared to the budget estimates for the year, there is a shortfall of Rs 78 crores. (See Table appearing overleaf). The detailed break-up of the actual outlay over different heads of development, shows that, as compared with budget estimates, there are short falls in certain items and excess outlay in others. For example, Central expenditure in regard to agricultural programmes, social services, irrigation and Power and Industries and Minerals was less than anticipated. Expenditure on Transport and Communications was as budgeted, expenditure under this head on Roads, Ports and Harbours and Shipping registered shortfalls while Railways and Civil Aviation recorded substantial increases. In the States Sector, there are shortfalls under agricultural programmes, Village and Small Industries and Social Services, which are attributed to delays in formulation of schemes and obtaining the required financial sanctions. Expenditure on Irrigation was also less than budgeted, while it was larger under Floods Control, Power, Roads and Road Transport and Industries and Minerals. This Pattern also tells its own doleful tale.

The pattern of resources available for financing the total outlay shows the remarkable buoyancy of the receipts from taxation which are much larger than anticipated in the budgets, while there has been a setback in the receipts from market borrowings and small savings. The net borrowings of the Centre and the States amounted to only Rs 148 crores. Small savings during the year amounted to Rs 88 crores as compared with Rs 108 crores in the previous year. The prize bonds proved a flop, bringing in only Rs 4 crores against the sum of Rs 10 crores expected under this head. Not surprisingly, surpluses of public undertakings were also far below the estimates. Actual receipts corresponding to external receipts amounted to Rs 303 crores against the budget estimate of Rs 490 crores, and included borrowing amounting to Rs 54 crores out of PL 480 funds. Against the budget estimate of Rs 123 crores, deficit financing during the year is shown at Rs 96 crores. But if the increase in the long-time security holdings of the Reserve Bank is also brought under the category of deficit financing, the total will be Rs 173 crores.

The Emergency has introduced a large element of uncertainty regarding the resources that may be ultimately available for Plan programmes. But the review of the progress of the Plan during 1961-62 makes one point clear: it is not shortage of financial resources so much as administrative deficiencies in regard to implementation that will stand in the way of the realisation of Plan targets.

SPT

Some Legal Conundrums

The Scheme and the Tax

Before discussing specific ambiguities in the Super Profits Tax Bill, it will be useful to indicate its general scheme. Section 4 of the Super Profits Tax bill is the charging section. This section provides that a tax (referred to as super profits tax) shall be levied in respect of the chargeable profits of the previous year or previous years, as the case may be, of every company, at the rate or rates specified in the Third Schedule. The expression "chargeable profits" is defined in section 2(5) of the Bill as the total income of an assessee computed under the Income-tax Act, 1961 for any previous year or years, as the case may be, and adjusted in accordance with the provisions of the First Schedule. The expression "standard deduction" is defined in section 2(8) as an amount equal to six per cent of the capital of the company as computed in accordance with the provisions of the Second Schedule. The Third Schedule provides that super profits tax shall be charged on the amount by which the chargeable profits exceeds the amount of the standard deduction, at the rate of 50 per cent on an amount equal to four per cent of the capital and at 60 per cent on the balance.

The first Schedule indicates the adjustments to the total income to be made for arriving at the chargeable profits. Rule 1 provides that income, profits and gains of certain kinds included in the total income should be excluded. These are:

(i) any income chargeable under the head "Capital Gains"

(ii) any compensation or other payment as is referred to in clause (ii) section 28 of the Income-tax Act.

(iii) Profits of any business of life insurance.

Rule 2 provides that on the total income so adjusted, "income tax and super-tax shall be calculated at the rates in force in the financial year, as if such income had been the total income no portion of which had been exempt from income tax or super tax and on no portion of which any deduction of income-tax or super-tax had been admissible under any provisions of the Income-tax Act or the annual finance Act; and the tax so calculated shall be deducted from the amount of the income aforesaid."

Rule 3 provides for sundry disallowances of expenditure on account of commission, entertainment and advertisement which the Income Tax Officer considers "excessive" in the circumstances. Such disallowances are to be added to "the net amount of income calculated in accordance with rule 2"

What is Total Income?

The first ambiguity that might arise is about what precisely constitutes the total income for income-tax purposes. Is it, for example, the figure arrived at after making adjustments for losses of prior years? If so, obviously, the amount of SPI payable would be less in cases where there are prior losses. It is true that this question involves the interpretation of the sections in the

Income-tax Act rather than those in the SPT Bill. Nevertheless, the question has to be answered in determining the liability for SPT.

As is well known, for income tax purposes, there are provisions for the set off against the profits of the year of losses from business in earlier years under certain conditions. Profits from business in a particular year as computed under sections 28 to 44 of the Income-tax Act, 1961 are obviously part of the total income. The crucial question therefore is: Are the business profits of the year (and therefore the total income of the year) the figure before making the adjustments for the losses of the prior years under section 24(2) of the old Act (section 72 of the Income-tax Act, 1961) or after making the adjustments? Let us take a hypothetical example of a company whose whole income, for simplicity's sake, consists of business profits: Let us assume that the company has sustained a loss of Rs 50,000 for the assessment year 1962-63. Let us also assume that the company has made a profit of Rs 1,00,000 for the assessment year 1963-64. The question is: Is the total income of the company Rs 1,00,000 or Rs 50,000?

The answer to this question would depend upon the meaning of "total income." To a lay mind, it may seem that the total income of a particular year is the net result of the aggregation of the gains and losses under various heads in that year and where the law permits the bringing forward of earlier losses, such losses will automatically enter into the computation of the total income. This may well be the true legal position but it will have to be arrived at by construing the relevant sections. The arguments either way are highly technical and involved but can be briefly and crudely summarised as follows:

To take first the arguments against taking the total income as net of prior losses: Section 4 is the so-called charging section and lays down that tax shall be charged at the rates prescribed in the annual Finance Acts in accordance with, and subject to the provisions of, the Act, in respect of the total income of the previous year. Section 2(45) defines total income as the total amount of income referred to in section 5 computed in the manner laid down in the Act. Section 5 lays down generally that, subject to the provisions of the Act, the total income of a person shall be income accruing, arising, received etc. Section 14 of the Act enumerates the heads of income for the purpose of the charge of tax and computation of total income. These heads comprise salaries, business, property etc.

Now, it is quite conceivable in the Income-tax Act that certain things can enter the computation of the tax without necessarily figuring as part of the total income exactly as certain items can figure in the total income without entering in the tax calculations at all. In both cases the tax will be on the total income, though, of course, subject to the provisions of the Act. Section 4 says that the tax shall be levied on the total income. Now section 84, for example, provides that the income from new industrial undertakings are exempt under certain conditions. Another provision, section 66, provides that this exempted income will nevertheless form part of the total income. The tax in such cases would still be a tax on the total income computed in the manner laid down in the Act and subject to the other provisions of the Act. It would not be correct to say that the tax is on the total income minus the exempt income even in the case of a company, where the fact that every rupee bears tax at a flat rate makes

it in effect a tax on the total income minus the exempt income.

In the same manner, the provisions relating to set off of current losses and carry forward and set off of earlier losses may result in a lesser tax than if the set off was not allowed: and yet the resultant tax would still be on the total income, but, subject to the provisions of the Act. Certain other circumstances also would appear to lend support to this view. For example, Chapter IV of the Act is headed "computation of total income" and indicates how the income should be computed under the various heads like salaries, business etc. It is significant that the set off of losses or carry forward and set off of losses do not occur in this chapter but in chapter VI. It may be argued that it is not unreasonable to infer from this that set off of losses is not an operation in pursuance of computation of the total income and what does not enter the computation of the total income cannot be part of the total income. Secondly, even in Chapter VI where aggregation of income is mentioned, it is mentioned in a context in which exempt incomes and amounts allowed as rebates (like donations to charity etc) are included in the total income. Section 66 is very important in this respect. Its marginal heading is "Total income" and it says that in computing the total income of an assessee, there shall be included certain exempted incomes and amounts on which rebates are admissible. It is significant that losses (especially brought forward losses) are not mentioned here. It may be said that this was not done because this section contemplates only positive figures for inclusion. But then, if as implied, automatic aggregation will take place in the case of losses, there is no need for special provisions for set off of the year's loss. Even this argument of automatic adjustment is unavailable in the case of loss brought forward. It is also significant that in the provisions relating to carry forward and set off of losses, there is no indication whatever about the impact of the operation on the total income.

A Bombay High Court Decision

A Bombay High Court Decision

For the proposition that the total income is net of prior losses brought forward, we have the weighty authority of the Bombay High Court. (C.I.T. vs. National Electrical Industries Ltd. 37, I.T.R. page 131.) Interpreting the provisions of the old Act (which differs in arrangement and phraseology, though not in principle, from the Income-tax Act 1961), the court held, "According to the scheme of the Income-tax Act, the total income is to be ascertained after allowing from the profits and gains of the year of account the unabsorbed depreciation of the prior years as well as the permitted set off of loss of the current and the past years and it is only after the total income is computed and the liability to tax ascertained that the benefit of section 15(C) is to be allowed to the assessee by exempting from payment of tax on such profits or gains derived from the industrial undertaking as do not exceed 6 per cent. of the capital employed in the undertaking." In this case, the assessee claimed that the total income was the amount before set off of prior losses and that the exemption in respect of profits from new industrial undertakings should be set off against that amount. For if the total income after adjusting for losses was either a negative figure or too low a positive figure, effect for the exemption cannot be given and the assessee loses an advantage. This was held to be inescapable in the scheme of things. It is significant that the Revenue stood to gain by this interpreta-

lation and therefore it is unlikely that it will be allowed by the courts to argue differently in the context of SPT where it stands to lose by this interpretation.

Comparison with EPT & BPT

Another argument is based on the analogy of the provisions of the Excess Profits Tax Act and the Business Profits Tax Act. In these Acts, it was provided specifically in the rules that neither the unabsorbed depreciation nor the losses of earlier year will enter the computation of the chargeable profits (Clauses 1 and 3 of rule 3 of Schedule 1 of the EPT Act and Clauses 1 and 2 of rule 2 of Schedule 1 of the BPT Act.) The starting point in these Acts was business profits as determined under section 10 of the Income-tax Act of 1922 (corresponding to section 28 of the present Act.) The argument is that since it was considered expedient to exclude specifically from the income determined under Section 10 the unabsorbed depreciation and losses of prior years in order to compute the chargeable profits, it is reasonable to assume that but for such prohibition, the adjustments for both would have had to be made in arriving at the profits under section 10 of the Income-tax Act of 1922. At least with regard to unabsorbed depreciation there is no doubt that this would be the case. For the Income-tax Act (both the old and the new) provides that unabsorbed depreciation of prior years is to be added to and to form part of the depreciation of the year. This is subject to priority to earlier losses for set off against available income, but that fact does not interfere with the legal position that earlier depreciation if unabsorbed, forms part of this year's depreciation.

It may be argued that the provisions in the EPT and BPT Acts are by way of superabundant caution and they are not available for interpreting the true legal effect of the provisions of the Income-tax Act. (The actual wording of the rules which carefully leaves the matter open will lend support to this view). But the coupling in these provisions of earlier losses with unabsorbed depreciation, which latter, as we argued, undoubtedly enters in the determination of the business income under section 10, would be strong prima facie ground for arguing that the same is the position with regard to earlier losses also. If this argument is correct, the absence in the SPT bill of provisions similar to those in the EPT and BPT would imply that the earlier losses will have to be allowed in determining the business income and therefore total income.

Lastly, there is another important reason why under the SPT provisions earlier losses should automatically enter in the computation of total income. It has been remarked that there is in the SPT bill no provision similar to that in the Excess Profits Tax Act and the Business Profits Tax Act by which any deficiency from the prescribed standard profit is carried forward or backwards and set off against the chargeable profits of the later or earlier year. This undoubted hardship is partially (and only partially as we shall show in a moment) mitigated by the assumption that the total income that is the starting point for the computation of the SPT is net of prior losses. A loss is a fortiori a deficiency from standard profit. So, where adjustment is made in the starting point itself for an earlier loss, there is an oblique provision for deficiency. The EPT and BPT Acts provided for deficiencies being adjusted but they prohibited the taking into account of earlier losses. The SPT does the same thing differently. In other words, where the deficiency is in the form of a loss, insofar as its carry forward is allowed in the computation of total income, the position is the

same under the SPT on the one hand and the EPT and BPT on the other. If for nothing else, at least for this small mercy made possible, the interpretation that total income is net of earlier losses should be considered the right one.

Before we part with this aspect of the question, two further comments should be made. First, as already stated, the SPT provisions as they now stand make only partial provision for adjustment of deficiency. In the first place, even on the more favourable interpretation, deficiencies cannot be carried backwards to an earlier year as they can be in EPT and BPT. Secondly, where the deficiency is not a loss but a positive figure but nevertheless below standard profit, the adjustment for losses will not avail the assessee for there is no loss to adjust. Therefore the case for adjustment of deficiency on the lines provided in the EPT and BPT Acs remains as strong as ever.

Secondly, if the interpretation that total income is net of prior losses is correct, then the SPT Bill in its present form will give assessees with prior losses a certain advantage that they would not have had if the provisions had been similar to those in the EPT and BPT. For, under SPT, the losses of 1962-63 would automatically deplete the profits of the year 1963-64 leaving a smaller total income. Had EPT or BPT been applicable for 1963-64, the earlier losses would not have availed in view of the rules we have already quoted. On the other hand, the provisions regarding deficiency would not operate either, because only deficiencies arising after the Act came into force will qualify.

Treatment of Disallowed Expenses

The next set of conundrums arises in the interpretation of rule 3 of the First Schedule to the Super Profits Tax Bill. This rule provides for the "add back" of amounts spent on commission, entertainment and advertisement which the Income Tax Officer considers "excessive in the circumstances of the case". What those circumstances are which would justify these items of expenditure being deemed excessive for Super Profits Tax purposes without being so deemed for income-tax purposes is going to keep many lawyers and some courts busy for quite some time. For obviously this provision implies that a certain amount may be considered as wholly and exclusively incurred for the business in the context of income-tax assessment and yet be considered to have been incurred for extra-commercial reasons for SPT purposes. The EPT and BPT Acts laid down specific provisions to deal with artificial transactions and transactions designed to avoid or reduce liability to those taxes. Presumably under SPT also, the design to avoid SPT would probably be the circumstance that would provide the occasion for invoking this rule.

The second difficulty arises in this way. Rule 2 of the First schedule provides for the deduction from the total income (as adjusted by rule 1) of income-tax and super-tax at the rates in force in the financial year calculated in the manner laid down therein. Rule 3 lays down that "the net amount of income calculated according to rule 2" shall be increased by the amount of expenditure on commission, entertainment and advertisement considered excessive by the Income-tax Officer. This would appear to suggest that the net super-profits in cases where there have been such "add backs" would be the income after tax plus the disallowance. One would have imagined that the normal thing to do would be to add the disallowed expenditure to the total income as adjusted and then calculate the tax.

deduction prescribed in rule 2. In other words one would have thought that logically, rule 3 should have been rule 2 and rule 2 should have been rule 3. In other words whatever adjustments are to be made by exclusions and additions should be made to the total income and the tax should then be deducted as provided in rule 2. The way the provisions have been framed will make a substantial difference in the amount of the SPT.

A hypothetical example will clear up the point. Assume that the total income as adjusted is Rs 1,00,000 and the expenses disallowed for SPT purposes is Rs 20,000. Assuming the tax rate to be 50 per cent, the Super Profits would appear to be, as the rules are worded, Rs 70,000 (Rs 1,00,000 minus Rs 50,000 plus Rs 20,000.) If on the other hand, the disallowed expenditure is added to the total income and the provisions of rule 2 were applied, the Super Profits would be Rs 60,000 (Rs 1,00,000 plus Rs 20,000 minus Rs 60,000 being half of Rs 1,20,000.)

It is to be presumed that the mode of computation has been deliberately devised thus. The intention is presumably to treat the whole of the disallowed amount as super profits and deny the notional tax under rule 2 whereon, since the amount has in fact not suffered the tax. In other words since the idea is only to allow the actual income-tax and supertax suffered—this is another ambiguity which will be dealt with at greater length next week—there is no reason for adjustment before rule 2 begins to operate.

(To be Concluded)

RAJASTHAN

Development Decade

COMPARED to many other States of the Indian Union, Rajasthan is very advantageously placed in regard to prospects of achieving a substantial improvement in the living conditions of its inhabitants through economic development. It is well known that Rajasthan has for generations supplied other parts of the country with entrepreneurial talent in the fields of industry and commerce. Shortage of capital and entrepreneurs, which stands in the way of other States developing their economic potential, is not a problem for Rajasthan. If, in spite of rich endowment of this key factor of economic progress, Rajasthan has remained one of the poorly developed regions of the country, it may be supposed, as was readily done in the past, that lack of natural resources is the principal reason for the poor pattern of economic activity. But this will be a superficial view, for a technoeconomic survey of the State carried out by the National Council of Applied Economic Research has shown that Rajasthan is also richly endowed with most of the essential resources for economic development.

The State has substantial resources in the fields of agriculture and minerals, locational advantages for industrial development, and, most important of all from the standpoint of improvement of per capita income, a low population. But the development of the region has been held back by two important factors. Rajasthan is an area of low rainfall, and the State is also short of surface water resources, so that the scope for agricultural development in the past was strictly limited. Large irrigation works which could have redressed the

balance required concerted action by the numerous princely States into which the region was cut up before Independence. The political and administrative integration of the region, which has since been accomplished, has cleared the ground for rapid economic development in the future. The irrigation works that were initiated during the first two plan periods hold out the promise of rapid expansion of agriculture. The State can now look forward to an era of rapid economic growth and expect to overtake the other States in the coming years.

This optimistic estimate of development prospects is borne out by the NCAER Survey. On the basis of a detailed appraisal of the material resources and economic development possibilities, the Council has suggested the guidelines of the development of the State for the decade 1961-71. The programme that has been recommended would require an investment of Rs 1,500 crores during the ten year period. Of the total investment, 8 per cent will be borne by the Centre, 44 per cent by the State and the remainder by the private sector.

The Survey has laid particular stress on the existence of a very large potential for the development of agriculture and allied activities which will enable Rajasthan to become the leading State in the production of crops, as well as in the reorientation of the agricultural economy on efficient lines. The State, the Survey points out offers excellent opportunities for evolving a more economic and efficient land-use pattern based on improved techniques of wet and dry cultivation and, above all, in modernising agriculture.

Rajasthan, it may be added, also offers the best conditions for trying out the suggestion put forward by a committee of leading industrialists, that joint-stock companies may be allowed to engage in agricultural production. The adoption of this suggestion in Rajasthan will not lead to any displacement of agricultural population and can, therefore, be done at least social cost. The shortage of draught cattle to which the NCAER Survey has drawn attention underlines the need for mechanization of agricultural operations which can be effectively done only by large units. The NCAER Survey has also drawn attention to the fact that there will be a serious shortage of labour in the Rajasthan Canal area which could become a very prosperous agricultural region, and has suggested that the State should lay down a definite policy of colonisation of the area and provide the necessary overhead facilities in advance. It has also been recommended that since this is a new area, farming could be practised on cooperative lines. While this is no doubt in harmony with official doctrine the success of cooperative farming has yet to be proved in practice. For the early and effective utilisation of the irrigation facilities, it will be advisable to allow the experiment suggested by the Kanoria Committee to be tried out in the Rajasthan Canal area. The joint-stock companies may be expected to provide the necessary overhead facilities and establish colonies of agricultural labour on enlightened lines in terms of any practicable policy that may be laid down.

Out of the total investment of Rs 1500 crores proposed, in the NCAER Survey, 35 per cent will be for agriculture, irrigation and allied fields. As a result of the adoption of the measures recommended, which include intensive search for underground water, it is envisaged that farm output would be more than doubled during the decade and the State will have a surplus of four million tons of foodgrains. The increase in commercial crops

should lead to the establishment of processing and manufacturing industries based on these products.

The programme of development recommended has made substantial provision for the development of power transport etc. Twelve per cent of the total investment is allocated for transport and nine per cent for power. For improvement of the transport system, construction of 573 miles of railways and 9200 miles of roads has been recommended. In the field of Power, installed capacity will have to be increased from 147 MW in 1960-61 to 600-700 MW by 1970-71.

The programme for industries envisages an investment of 18 per cent of the total outlay. The bulk of the investment on factory industries will be absorbed by chemical and engineering industries. The main centres of industrial activity will be in the districts of Kotah, Udaipur, Jaipur and Ganganagar. The industries recommended include manufacture of nitrogenous fertilisers, cement, viscose rayon, soda ash, caustic soda, calcium carbide among chemical industries and copper, lead and zinc smelters, and a precision instruments factory in the engineering group. Sugar and textile industries are also marked out for considerable expansion.

The NCAER has estimated that if the developments suggested are brought about, economic growth in Rajasthan would be nearly twice as fast as compared with the country as a whole. The annual rate of growth of aggregate income would be about 13 per cent and that of per capita income 7.5 per cent, as against the all-India growth rates of 7.4 per cent and 4 per cent respectively. Rajasthan will also be in the happy position that it will not have an unemployment problem on its hands at the end of the decade of development.

THE PRICE LINE

The price line must be held. This is as much the responsibility of the State as of every citizen. Idle money, in the form of cash in hand, is the devil in the price spiral.

Money put in a bank, remains active in the service of production and distribution of goods and facilitates keeping the price line under control.

Use less cash; make your money transactions through your bank account. You will thus make a direct contribution to the effort in holding the prices under check.

World of Finance

MONEY MARKET

No Relief Yet for The Banking System

The end of fiscal year disbursements of the Central Government do not appear to have been made in any magnitude; and accordingly banks have failed to experience any worth while improvement in their Deposit resources, such that they could sizeably reduce their indebtedness to the central banking institution. The money market is, thus, still in the grip of fair stringency. Perhaps is will not be until the second week in April—with the beginning of the month disbursements out of the way—that there will be a falling off from the peak pressure as far as the banking system is concerned.

Yet, the fact is that according to the latest banking returns, some gain in Deposits has been recorded. But the magnitude of the rise is much too insignificant.

BANK RETURNS

Deposits Start to Rise

The returns of the Reserve Bank show that, despite the week ended 29 March being the last week of a month, Active Note Circulation has risen of Rs 11.52 crores to Rs 2,241.96 crores, further by Rs 11.52 crores to Rs 2,241.96 crores, though there has been inflow of Rupee Coin in amount of Rs 0.64 crore. Both Foreign Securities and Rupee Securities are unchanged at Rs 105.08 crores and Rs 1,911.42 crores respectively. So, the Reserve Bank's cash in the till has been drawn down by Rs 10.89 crores to Rs. 8.56 crores.

State Governments would appear to have received some payments from the Centre, in as much as their balances have improved by Rs 3.81 crores to Rs 31.42 crores on top of a reduction of Rs 1.46 crores to Rs 28.89 crores in their ways and means borrowings from the Reserve Bank. The rise of Rs 15 crores to Rs 214.02 crores in Investments might indicate recourse to deficit financing in such amount. In any case, the Centre's balances are lower by Rs 4.83 crores at Rs 55.83 crores.

Scheduled Banks have been able to add Rs 3.23 crores to their Reserve Balances, raising the total to Rs 74.91 crores. On the other hand, there is also a small increase of Rs 1.91 crores to Rs 71.28 crores in the loans and advances of the Reserve Bank to Scheduled Banks.

The rise of Rs 5 crores to Rs 66 crores in the Government of India Treasury Bills purchased and discounted by the Reserve Bank may be linked with disinvestment by the State Bank.

Lastly, after some weeks of consistent rise, Balances Held Abroad have dropped by Rs 1.19

crores to Rs 11.30 crores; but foreign assets in the holding of the Reserve Bank are still at a relatively comfortable level of Rs 116.38 crores.

The return of Scheduled Banks for 22 March records a further increase in Deposit resources. (It may be noted that in the previous week net Deposits of Scheduled Banks rose by Rs 8.33 crores). Net Demand Deposits have moved up sharply by Rs 21.17 crores to Rs 959.16 crores, clearly indicative of the impact of the end of fiscal year disbursements of the Central Government. But payments in turn would appear to have been made to Government, in that net Time Deposits have been drawn down by Rs 12.37 crores. Thus, all that was possible was a reduction of Rs 8.76 crores to Rs 69.52 crores in indebtedness to the Reserve Bank; and borrowings from the State Bank moved up fractionally by Rs 0.74 crore to Rs 20.43 crores. The second half of the month has produced moderation in the demand for Advances, the total Scheduled Bank credit rising only by Rs 0.86 crore to Rs 1,534.52 crores. The increase of Rs 10 crores in the gilt-edged holdings of Scheduled Banks is, of course, on account of the State Bank. The end result is a small decline of Rs 1.07 crores to Rs 179.62 crores in cash balances, including money at call.

STATE BANK

Rise in Lending Rates

The State Bank of India has announced that with the recent increase by a half per cent on deposits, the rates of interest on advances other than Government securities have also been increased.

"The rates on other advances are stepped up on a tapering basis by fractional increases which in some cases are as low as one-fourth per cent", the announcement said.

"The rate of interest on advances against Government Securities, however, remains the same as at present—five per cent".

"Technically, therefore", the announcement said, "the State Bank of India advance rate now becomes six per cent". Small industries and co-operatives continue to enjoy concession in interest rates which are broadly of the same order as before.

SYNDICATE BANK

Personalised Service

A point repeatedly made, against forcing the pace of amalgamation of small banks and the creation of a few giants, is that the common touch, personalised service and intimate knowledge of constituents are all attributes that belong to the small bank, attributes that seem to fade away as banks get bigger. This catering to

the special needs of a population that is just in the process of acquiring the banking habit is appositely brought out in the statement made by Dr T. M. A. Pai, Chairman of the Canara Industrial and Banking Syndicate Ltd; not that, we may hasten to add, the Syndicate Bank (as it is popularly known) is a small bank; with its increase in Deposit resources of Rs 8 crores odd during 1962, it has graduated well into the middle rank, of medium banks, in commanding Deposits of the order of Rs 32½ crores. But Syndicate Bank continues to have a care for the custom of the small constituent.

One innovation, which Dr Pai says has aroused appreciation from all over the world, is an all-women's branch at Seshadripuram in Bangalore; the experiment is reportedly a "great success." The lady manager, we may presume, will have a better appreciation of a request for a loan from the fairer sex and will be able to gauge with greater accuracy the saving/repayment potential of such a customer. All too often men pay by cheque, but women insist on cash; and the Syndicate Bank's experiment therefore may be greeted as an attempt to spread the banking habit among one section of the population (half it is, as Dr Pai points out) that so far had been immune to its charms.

In a go-ahead spirit an Industrial Finance Division has been opened, which is intended to assist industries not merely with money, either as short-term or medium-term loans, but also with a sympathetic study of their projects and proposals. Yet another item of personalised service is scholarship for students: the Syndicate Bank has "financed" some 80 students within the country and 76 for higher learning abroad.

The accent on service is further evident in the building programme of the Syndicate Bank. The bank has its own buildings at over 20 places, and due for completion this year are another ambitious 9. The object, according to Dr Pai, is "to provide better facilities to our customers in more commodious premises." The aim of the Syndicate Bank is aptly brought out in the Chairman's assertion that "every step possible is being taken so as to provide a congenial atmosphere in our Offices and cater to the conveniences of our customers."

HSBC

Group Profits Rise, but Fall in Rupee Earnings

The profits of the Hongkong and Shanghai Banking Corporation for 1962, inclusive of dividends received from subsidiaries and after tax and transfer to inner reserves, rose by £200,000 (sterling equivalent) to £2.9 million. The summarised group consolidated balance-sheet at the end of 1962 shows that the balance-sheet total has risen by £124 million to £603 million in round figures). A large part of this increase is accounted for by a rise of £84 million in acceptances, a contra item. The real increase, thus, relates to Deposit and other accounts being marked up by £34½ million to £436 million. The extra resources have been utilised as to £17½ million in expanding the Advances portfolio; as to £8 million in adding to cash balances, including money at call; and as to £5 million in augmenting the investments of the Corporation.

The rupee accounts of HSBC, however, disclose that exchange banks, too, were affected by the variety of factors that caused operating expenses to rise during 1962; it needs, nevertheless, to be pointed out that the ultimate reason for the fall in rupee balance of profit lies in an unusual rise in Other Expenditure.

Deposits and other accounts of the Indian branches of HSBC rose by Rs 82 lakhs to Rs 9.06 crores; and this enabled borrowings to be curtailed by Rs 1.04 crores at Rs 1.16 crores. Investments show little change at Rs 1.52 crores. But cash balances have been strengthened by Rs 0.97 crore at Rs 1.42 crores, the whole of the increase being ascribable to money at call and short notice. Besides, the total of Advances has gone up by Rs 1.32 crores to Rs 11.32 crores. As a result Other Liabilities have increased from Rs 1.86 crores to Rs 5.70 crores, and the amount due to the Head Office and Other Branches outside India is Rs 3.80 crores higher at Rs 5.40 crores.

The gross income of the Indian branches has been marked up by Rs 10.37 lakhs at Rs 95.04 lakhs. Interest and discount fetched Rs 13.19 lakhs more at Rs 76.96 lakhs, while commission, exchange and brokerage also earned Rs 1.83 lakhs more at Rs 18.44 lakhs. But the net profit on revaluation of investments and other assets has fallen by Rs 2.25 lakhs to Rs 0.43 lakh. Interest paid is higher by Rs 3.42 lakhs; salaries and allowances by Rs 2.07 lakhs at Rs 30.09 lakhs; but the significant increase is one of Rs 8.53 lakhs to Rs 11.08 lakhs in Other Expenditure. The balance of profit in consequence is lower by Rs 5.05 lakhs at Rs 9.63 lakhs. Incidentally, remittances during 1962 worked out to Rs 20.39 lakhs against Rs 3.46 lakhs in 1961.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills were opened on Monday, 1 April, 1963. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.405 per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.370 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 8 April, 1963. Successful tenderers should make payment on Friday, 12 April, 1963 or on 11 April, where Friday is a holiday.

During the week ended 29 March, 1963, Government of India Treasury Bills for Rs 1,56,46,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 2 April to 6 April, 1963 at Rs 99.426 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 26 March to 30 March, 1963 amounted to Rs 10,00,000.

At the previous week's sales (25 March) Rs 2,00,00,000 was tendered against an offer of Rs 2,00,00,000, and the latter amount was accepted at an average rate of Rs 2.370 per cent per annum.

Gold and Euro-Dollars

By Paul Einzig

As at the time of writing the gold market in London is having a quiet period it seems to be the right moment for a discussion of the question of financing gold transactions, without running the risk of aggravating a disturbing movement by doing so. From time to time during recent years there were such disturbing movements as a result of dollar devaluation fears. Those fears have now largely subsided—at any rate for the time being—and for this reason it can do no harm if we examined the method with which speculation in gold was financed on the occasion of those scares. Many speculators who could afford to buy gold outright had done so, but the extent of such operations is necessarily limited. It is true, many banks in Western Europe were prepared to finance gold hoards to the extent of anything up to 95 per cent of their value, so that the speculator only had to find the remaining 5 per cent.

There was also the forward market in gold which became very active during periods of gold scares. Even so, the premium on forward gold was seldom really high, probably because few speculators deemed it worth their while to risk paying a larger premium. On the other hand, even fewer speculators—or, for that matter, present or prospective holders of gold—were inclined to provide a counterpart for speculative forward buyers of gold by selling forward without covering their risk. The way to cover was to buy spot gold, store the gold for the duration of the contract, and finance it with the aid of borrowed money. Since this was done on a fairly extensive scale, the premium on forward gold was always kept down to the vicinity of the interest charges paid on such loans, plus the cost of gold storage, plus a reasonable profit.

The development of a Euro-dollar market has greatly facilitated transactions of this kind. In the absence of Euro-dollar facilities most banks would be reluctant to finance such operations out of credit resources which are needed or might be needed by their regular clients. On the other hand, the Euro-dollar mar-

ket has made it easy for banks to secure additional resources by borrowing Euro-dollar deposits at a cost which compared favourably with the cost of other methods of short-term borrowing. This meant that, owing to the existence of plentiful supplies of Euro-dollar deposits, the tasks of financing spot gold purchases for the purpose of providing a counterpart for the sales of forward gold had become easier and cheaper. This is one of the items on the debit side of the balance sheet drawn up when marshalling arguments for and against the Euro-dollar system.

Recovery of Sterling

For a few days towards the middle of March it looked as though sterling was in for another major attack. The discount on forward sterling widened considerably and the pressure on spot sterling made it necessary for the authorities to intervene long before the dollar rate reached the support point of \$2.78. Even so, the spot rate was allowed to decline below the par of \$2.80 for a day or two. The pressure was due to the revival of devaluation talk and to fears that the Budget would let loose another dose of inflation. In anticipation of this, many British importers covered their dollar requirements in advance. Speculators, too, took a hand, and when it became too costly to sell sterling forward they borrowed Euro-sterling in Paris at anything up to 5½ per cent and sold the proceeds.

In order to restore confidence, the Bank of England decided to apply its new device of charging interest above the Bank rate on loans to the Money Market. The reaction was instantaneous. It was not so much the actual hardening of rates that caused the improvement of sterling as the psychological effect of the gesture. Even though a straight increase of the Bank rate to 4½ per cent would have been more effective, it would have discouraged the trade revival which the authorities are anxious to encourage. So the next best thing was to make money dearer in Lombard Street in a way that would not affect the cost of credit to industry and commerce.

The recovery of sterling was instantaneous. Speculators hastened to cover, because they realised that the authorities intended to fight back instead of yielding, and that the measure adopted by the Bank of England would reduce the loss of gold. This is an important consideration, for it now seems probable that, for the sake of bringing about a recovery, the Government is prepared to allow the reserves to decline for some time. It is, therefore, essential that the decline of the reserves should be mitigated, so that it could continue longer without bringing their figure to danger level. If necessary the Government will make use of its drawing right with the International Monetary Fund, and possibly support will be forthcoming also from the Central Banks which co-operated in the support of sterling in 1961.

The outcome of the race between trade recovery and decline of reserves will be decided by the rate at which France, Germany and Italy will yield to pressure for higher wages. That pressure is very much in evidence, but no more so than in Britain. And they can afford it better than Britain to yield to the pressure. In the long run the Government would be unable to maintain its deflationary policy unless a rise in prices abroad makes it possible to maintain and increase British exports in spite of the rise of their costs of production.

Notes

EASTERN REGION

Multiple Problems

Addressing the sixtythird annual general meeting of the Bharat Chamber of Commerce held in Calcutta last week Mr Hari Singhania catalogued the multiple problems facing the Eastern Region and particularly West Bengal and stressed the need for their speedy solution to accelerate the tempo of industrial development in the region. At the same time Mr Singhania highlighted the pivotal role the region, and West Bengal in particular, had to play in the present Emergency. However considering the slackening tempo of industrial growth the State witnessed during the last decade of planned growth, Mr Singhania drew attention to the fact that the State is gradually losing its importance in the industrial and commercial map of the country. To substantiate this point, attention was drawn to the progressive deterioration in the number of new industrial undertakings in West Bengal despite the congenial locational factors and overhead facilities the State enjoys. For instance total number of licences permitted for the State roughly over the Second Plan period is 264 against 598 for Bombay. Particular mention should also be made in the deterioration of foreign collaborations in comparison with those located in Bombay. Similarly the aggregate capital of new companies formed in this region works out to approximately one-third of that in Bombay region. Though the Government of India's policy of a wide dispersal of industries is justified, the economies of location and industrial tradition cannot be easily glossed over motivated by an urge to encourage a regional development and balanced industrial growth. Mr Singhania's suggestion for a co-ordinated effort by the different States in the Eastern Region is worth considering particularly in spheres like agriculture, transport and power development.

The acute unemployment problem in West Bengal and low rate in the increase in per capita income are serious impediments for speedy economic advancement of the State. There is no gainsaying that the West Bengal's development depends on industry, commerce and trade. In this context the president referred to the report of the Techno-Economic Survey projecting an investment of Rs 238 crores in 86 large scale industrial ventures over the next decade and an investment of Rs 88 crores for establishing a number of industrial units in the small scale sector. He has also suggested the setting up of a special machinery in association with chambers of commerce to foster the growth of industries in large, medium and small scale sectors. Another useful suggestion made by Mr Singhania is the constitution of a "cell" in the State Government to make a correct assessment of the impact of the various Central Government policies on the State's economy.

POWER

Estimates

Committee's Findings

Latterly there has been welcome change in Government's attitude toward tackling problems of power development. At long last it seems to have been convinced that for industrialisation to proceed apace power supply should be adequate and even in excess of demand. But unfortunately the effect of this growing awareness will be manifested only some years hence as power development programmes are essentially time consuming. In the meantime there appears to be no alternative but to make the best use of available power as a gap between demand and supply is likely to persist for the next one or two years. As more and more industrial units are commissioned, the demand for power has been increasing at a fast pace but the installed generating capacity in the country is not going up even as per schedule. During the Second Plan period power capacity had lagged behind the target by as much as 1.3 million kW. The position in the first two years of the current Plan has been no better. An aggregate installed capacity of 13.45 million kW is envisaged by 1965-66 but since the bulk of the increase is expected to accrue in the last year of the Plan, the gap between supply and demand is likely to be of sizable proportions in the next couple of years. The Thirteenth Report of the Estimates Committee has shown that firm generating capacity in the country would continue to lag behind the anticipated demand throughout the Third Plan. The overall position

in the country as worked out by the Committee from the statement showing the installed and firm generating capacities furnished by the Government is that the shortage will increase from 353.1 MW in 1961 to 455.3 MW in 1966. The Committee also finds that power supply will be lagging behind demand at the end of the current Plan in all States except Jammu and Kashmir, Kerala, Rajasthan and Delhi. Heading the list of regions which will have an overall shortage is the Bihar-DVC-West Bengal region with the heaviest shortfall of 202.5 million MW.

The situation is sought to be remedied by taking up a number of new schemes over and above those included in the Third Plan. These schemes are expected to yield a total of 559 MW. In addition to these Government has proposals for obtaining standby plants of a total capacity of 100,000 kW for meeting emergency requirements. But it is doubtful whether even then there will be any early relief to consumers. It looks as though the shortage will continue unabated till the end of next year for even these additional schemes which have been taken up with the express purpose of bridging the gap in supply as quickly as possible have been receiving consideration in a leisurely fashion as will be evident from the fact that all these schemes have been sanctioned only last year. The growing power shortage does not seem to have brought about any corresponding sense of urgency in implementing the remedial measures. The Estimates Committee has elicited the information that out of the 100,000 kW standby plants proposed, sanctions have been given so far for only 25,000 kW, while the bulk of the capacity is yet to be sanctioned.

The unsatisfactory position on the power front is the result of past failure of the Centre to realise that power development is a matter that cannot be left to too many cooks in the form of the State Governments who are not well known for taking a comprehensive view point covering the entire country. This is prominently in evidence in the matter of power development within the DVC valley and outside it, with serious results for the whole of the region. Calcutta and the industrial area once again are suffering from a power cut. Vital export industries like the jute industry have been obliged to submit to short working and it looks as though the power cut will be in operation throughout the summer months.

The shortage has been aggravated by the Emergency with its additional demand for power for stepping up production in defence and defence based industries. While the needs of the defence industries have perforce to be met without delay, it is also equally important that industry in general is also not made to suffer for want

of power. The solution to the problem lies in allowing industrial units wherever possible to set up their own generating capacity by allotting to them sufficient foreign exchange. In the meantime expeditious action is to be taken in the matter of establishing regional grids in various parts of the country. The four regional grids proposed to be established during the current Plan, should be brought to fruition as early possible as there is much benefit to be derived from inter-connection of power systems.

TEA

Outlook Good, but—

The view that there is every reason to hope that the Third Plan target for tea exports will be hit has been expressed by the Chairman of the Tea Board, Mr A. S. Bam, in the course of his speech at the annual meeting of the Assam Tea Planters Association at Sibsagar last week-end. He has categorically stated that the targets of production and exports as laid down in the Third Plan are not at all impracticable because consumption of tea in the world is increasing rapidly. Mr Bam's optimism evidently stems partly from India's plans to mount intensive promotional campaigns in different countries of the world. The abolition of the export duty on tea should also go a long way towards making our tea quite competitive in world markets. Any diffidence about production outstripping demand is discounted as the Tea Board seems to be convinced that there will be no excess of world

PRO/MS-2

supply of tea over world demand in the foreseeable future.

Tea interests however are not so optimistic about the outlook for the industry, because its ability to compete effectively in world markets is being continually impaired by rising cost of production while its replanting and other development programmes so essential for attaining increased production are being impeded by paucity of finance. The Super Profits Tax has come as a bolt from the blue as it will take away what little profit that will be available for plough back. The abolition of the export duty is a welcome measure but it is pointed out that its good effect will be almost completely nullified by the increase of 20 per cent in the surcharge on the excise duty on tea. Besides, the industry is to bear a multiplicity of levies imposed by the various State Governments.

A production target of 900 million lbs. has been set for the industry by the end of 1965. Although the current plan period began on a very encouraging note with production showing a record increase to 778.5 million lbs. there has been a setback last year. Of course the decline was due to unfavourable climatic conditions. But climate is not the only determining factor. With only three years to go for the completion of the Third Plan period, there is still a sizable gap between actual production and the target. There should therefore be sufficient incentive for the tea producers to step up their output while adequate finance should be made available to the industry to carry out its development programmes. It will be idle to think that propaganda alone will be able to push up our tea exports even though it is one of the most important factors. Our tea will sell well in world markets only if it is competitive in price. Here again the abolition of export duty will be certainly helpful but its effect will not be fully reflected in increased exports if the domestic industry is being made to smart under a multiplicity of levies.

COAL

Continuing Problems

The coal industry has been very much in the news now a days. The various problems the industry has to grapple with have been voiced at the annual general meetings of the Indian Mining Federation, the Indian Mining Association and the Indian Colliery Owners' Association held last month. Addressing the Indian Colliery Owners' Association held in Dhanbad last week Mr Rasiklal Worah, the President of the Association, spotlighted numerous disadvantages under which the collieries have to operate. The extreme dependence of imported

machinery and equipment for coal mining resulting in a heavy drain of foreign exchange, the lack of adequate trained personnel to man the operations, the non-availability of sufficient explosives and detonators, the uneconomic price formula fixed by the Government, the unsatisfactory set up for the coal movement and to top all these the adverse impact of the proposed Super Profits Tax on the collieries' finances were the most important aspects touched by the President at some length. All these problems will only grow to unmanageable proportions with the rising tempo of coal mining activity as the Third Plan target has been revised upward recently. It is to be admitted that efforts have been made to solve many of these problems and some have already succeeded in mitigating the rigours to some extent.

However the implementation of the programme for modernisation and expansion will be slackened considerably owing to the non availability of adequate finance. Despite the world Bank's loan, the private sector collieries would be hard pressed to raise the matching fund as the undistributed profit of the companies which were earmarked for reinvestment in the industry for the execution of project plants approved under the World Bank Loan Scheme would be depleted by the SPT. The depressing trend in the coal shares that has been in evidence quite some time now shows how the investors are disposed of toward coal shares and the profitability of the collieries. To this can be added the unremunerative price fixed for coal in utter disregard of the mounting coal mining costs. Mr Malaviya who spoke on the occasion expressed great satisfaction at the tempo of coal production and also paid a tribute to the creditable performance of the private sector collieries. If the industry is to maintain the pace of coal mining operation, if not improve upon, the Government would look into these complaints and take immediate action to eliminate them.

KANDLA

A Free Port for Exports

At long last the Government of India has taken a final decision on establishing the Kandla free trade zone in an approximately half a square mile within a period of eighteen months hence. The question of establishing a free trade zone at Kandla was first suggested by the Export Promotion Committee as early as 1957 and the Government's determination to proceed with the scheme, though belated, is to be commended obviously due to the numerous advantages that will accrue from it. The free trade zone at Kandla, the smallest of its kind

in the whole world, will be principally export oriented and will be administered by a high power committee to be constituted very shortly. According to present arrangements about thirty to forty medium industrial undertaking would be set up in the area for processing, assembling and the like trades with foreign collaboration or with investment from Indians abroad for the purpose of foreign exchange assistance. These industries would engage in manufacture of goods at a lesser cost made possible by the exemption from customs and excise duties on the raw materials imported. They would also be free from other government restrictions. Another significant feature of the Kandla's development as a free trade zone is the opportunities that are being invited from and partially assured for the Indian businessmen in foreign countries. Foreign investment to meet the foreign exchange requirements by Indians themselves living abroad would be a novel sort of Indian participation in Kandla's trade venture. On the success of this experiment, Government would also establish similar zones elsewhere in the country to step up foreign exchange earnings.

BHILAI

Annus Mirabilis

1962-63 was an eventful year for the Bhilai Steel Plant when the throughput of pig iron and steel exceeded the annual rated capacity and the rolling of ingot steel in the blooming mills also outstripped the annual rated capacity. The tempo of production was well maintained and the rated capacities in steel and pig iron output and rolling of ingots were reached well ahead of schedule.

The steel plant completed its annual production target of one million tons of steel on 10 March, three weeks ahead of schedule. Two days later the pig iron production target of 1.11 million tons for the year was reached and in the same month the rated capacity of rolling one million tons of ingot steel in a year was crossed. Besides, all the important departments of steel works, the blast furnace, steel melting shop and rolling mills and also some of the by-products departments and auxiliary shops attained their production capacities. The highest monthly production in steel melting shop during the year under review was recorded in January last when it reached 98,000 tonnes of ingot steel, 15,000 tonne more than the rated capacity. The performance of the steel melting shop on the whole compare favourably with other steel plants abroad working under similar conditions. This creditable record of the plant, no doubt, is a recognition of the excellent organisational set up and

the high order of technical competence of those in Bhilai.

Among the other achievements of the plant are the successful use of sinter in the blast furnace, for the first time in India, and the utilisation of radio active isotopes for controlling various production processes. It is also noteworthy that Bhilai Steel Plant was the first of the steel plants in the public sector to forge ahead with expansion programme. The capacity of the steel works would be raised to 2.5 million tons of ingot steel from 1 million tons per annum. As a part of this expansion programme a new wire and rod mill with an annual capacity of 400,000 tons of wire-rods would be set up.

BRITISH AID

Lord Altrincham's Plea

The role played by Britain in India's economic advancement during the past has been brought out in an elaborate manner by Sir Paul Gore-Booth, British High Commissioner, in his address to the Federation of Andhra Pradesh Chamber of Commerce and Industry in Hyderabad last week. British investments in this country has shown a progressive increase and the volume of investments by the end of 1960 at Rs 443 crores shows a smart increase from Rs 206 crores in 1948. The total investment from Britain in 1960 works out to roughly 78 per cent of the aggregate foreign investments in India. While elaborating its leading role as investor Sir Gore-Booth also drew attention to Britain's position as a leading market for Indian goods like tea, leather goods, tobacco and a host of other things. The High Commissioner also enumerated different types of assistance extended to India, the most useful of which is the balance of payments support aid which, by dint of its nature, facilitates direct monetary support to balance payments under severe strain and stress.

It is interesting to note in this connection the strong plea entered by Lord Altrincham for enhancing the quantum of British aid to India and other developing countries and for liberalisation of the terms and conditions that govern them. This interest is particularly welcome when viewed in the background of the Clay Committee's report to the US Government demanding for a matching offer from other aid giving countries on better terms. In an article published in the Guardian, Lord Altrincham has built up cogently a strong case for lowering the rate of interests and expanding the volume of aid from Britain. It should also be mentioned that India's foreign exchange requirements for the remaining years of the Third Plan would be given a

detailed thinking when the Aid-India Club would meet in Washington at the end of this month. While deciding the pattern and volume of assistance, the Consortium countries would do well to provide a sizable portion of their aid in the shape of untied loans on liberal conditions for which the country has been pressing for sometime now.

ASIATIC OXYGEN

Substitute for SPT

Many substitutes have been offered for the vexatious super profits tax; Mr B. L. Jalan's is by far the most novel suggestion. Mr Jalan used the forum of the annual general meeting of Asiatic Oxygen Limited, held last week, to give expression to his views in his Chairman's address to the members of the company. He poses the rhetorical question: does not the super profits tax "go against those basic principles of taxation which have been evolved through many centuries?" After all the yield from the proposed tax is to be only Rs 25 crores—at least, that is the amount that Mr Morarji Desai has budgeted for, though it is almost certain that realisations from the tax in its present form will far exceed that figure. Mr Jalan reasons that for the defence effort industry must work additional shifts, and that Sundays would cease to be a holiday; industry for its part should make over the additional profits to the National Defence Fund, and the workers their extra wages. His estimate, with which it is difficult to quarrel, is that workers' earnings would rise by about Rs 75 crores and that the increase in the gross national product would work out to Rs 480 crores. Surely, the inference is, apart from the contributions to the National Defence Fund as just mentioned, the expansion in the economy would produce additional tax revenues.

Again, Mr Jalan draws attention to the fact that, in a half year, voluntary contributions to the NDF have added up to more than double what would be fetched by the super profits tax. So, he says, "I have absolutely no doubt in my mind that if instead of imposing this fresh tax, the Government asked the industry and the people of India to make additional voluntary contributions to the tune of Rs 25 crores, they would welcome this as an additional responsibility to be carried out willingly and with a sense of gratification."

There is only one rub; industry is unable to work to present capacity, leave alone any thought of additional shifts or output on Sundays. Reserves of foreign exchange being at their scant level, industrial raw materials are in short supply, because imports have necessarily been restricted. But if

we should succeed in our efforts to secure untied loans, the obstacle in the way of optimum production by industry would be removed. It is unlikely that Mr Jalan's substitution of voluntary contributions for the super profits tax will find acceptance by Government; but the arguments he has advanced and the views that he has so forcibly expressed both point to the futility and self-defeating character of the super profits tax—as introduced in the Lok Sabha. Substantive amendments and particular reliefs are absolutely necessary.

NAHARKATIYA

Crude Conditioning Plant

The world's first crude conditioning plant has gone into operation at Naharkatiya. The plant built by the Oil India Limited, a joint venture of the Government of India and the Burmah Oil Company, at the cost of Rs 1.65 crores has thrown open new vistas for

stepping up the production of crude oil from the oil fields in upper Assam. The crude conditioning plant, it may be noted, is an integral part of the 720 mile long pipeline constructed by the Oil India. When the oilfields in upper Assam at Naharkatiya and Moran were discovered the waxy nature of the crude oil with a pour point varying between 27 degrees and 37 degrees C posed a baffling problem in transportation. To tackle this Government sought the collaboration of the Burmah Oil Company and British Petroleum to evolve methods of transforming

SUN-LIGHTED SANDALS

To bring relief in midsummer boredom, wander where you will, in sprightly go-lightly Bata sandals. Sun-lighted shapes and open mellow leathers, Bata sandals are the pure classic, pure fun footwear that evoke cheer for comfort, praise for taste.

Bata

this crude pumpable with very low underground temperature. The researches have proved that if the crude was heated to about 100 degrees C it would change into a fluid state even at a very low temperature. As a result of this success a pilot plant was set up to determine the optimum rate of cooling to produce minimum viscosity and on its model the crude is first heated and then cooled down to 65 degrees C. Subsequently the crude will be funnelled into vertical tube treater vessels where it will be allowed to cool at a pre-determined rate and afterwards it will be pumped into the pipeline connecting the refineries. A feature of the plant is the high degree of automation introduced in the design which can be completely operated from a control room. A similar plant at the cost of Rs 60 lakhs is at the constructional stage in Moran about thirty miles away from Narkatiya with an estimated capacity of 2,000 kilometres per day.

US AID

Increased Quantum Likely

The outlook for larger aid this year from the US has considerably brightened following President Kennedy's \$4,525 million foreign aid message in which he has made a special reference to the needs of India. According to the Agency for International Development, India, Pakistan and Turkey will be the major beneficiaries of the development loan totalling \$1,160 million in President Kennedy's foreign aid programme for 1963-64. The appropriation of \$4,525 million asked for by the US President comprises \$1,405 million for military aid and \$3,120 million for economic aid, including the funds for development loans earmarked for use outside Latin America. The proposed development lending in the Near East and South Asia will range between \$890 million and \$950 million. India, Pakistan and Turkey with 80 per cent of the region's population will receive nearly 90 per cent of the funds. Proposed development loan spending in Africa and Europe is estimated at between \$165 million and \$249 million, with Nigeria and Tunisia accounting for the bulk of the programme. In the Far East, the proposed spending ranges from

\$105 million to \$155 million with South Korea and KMT China as the chief recipients.

In his aid message President Kennedy has stressed two important points. He has pointed out that one of the objectives of the US foreign aid policy is to secure increased participation of other industrialised nations in sharing the cost of international development assistance. The US President has also referred to the need for encouraging the private investor to take an active interest in the development of the underdeveloped countries. Aid receiving countries are to be told of the need for improving the climate for private investment both domestic and foreign.

WHOLESALE PRICE

Slight Rise in Index

The official wholesale price index (with the year ended March 1953 as 100) advanced by 0.8 per cent to 127.3 during the week ended March 9, 1963 as compared with 126.3 (revised) for the earlier week. The index was higher by 0.6 and 2.2 per cent respectively when compared with the corresponding week of the previous month and that of a year ago.

Higher prices of Milk (+9%), Potatoes, Meat and Turmeric (+3% each), Vanaspathi (Dalda), Eggs and Black Pepper (+2% each) and Urad, Oranges, Bananas, Betelnuts, Mustard oil and Tea (+1% each) raised the index for 'Food Articles' by 0.6 per cent to 123.9 as compared with 123.1 (revised) for the earlier week. The prices of Onions (-9%), Gingelly oil (-8%), Coconut oil and Fish (-6% each), Barley (-5%), Groundnut oil (-4%), Sugar (2%) and Maize, Ragi, Gram, Masur, Gur, Coffee, Chillies and Salt (-1% each), however, moved down.

A sharp increase in the prices of Tobacco manufactured (+20%) and Tobacco raw (+15%) was responsible for a rise of 15.8 per cent to 110.4 in the index for 'Tobacco' during the week.

The index for the 'Fuel, Power, Light and Lubricants' group rose by 7.1 per cent to 135.0 due to a substantial advance in the prices of Kerosene oil (+47%) and Petrol (+18%) although the prices of Castor oil (-2%) showed a fall.

A rise in the prices of Cottonseed (+3%) and raw cotton, raw Silk and Gingellyseed (+1% each) was noutralised by a decline in the prices of raw

Wool (-3%), Copra (-2%) and Groundnuts, Castorseed, Rapeseed and Lac (-1% each) and the index for 'Industrial Raw Materials' stood unchanged at its earlier week's revised level of 135.3.

Book Review

Income-tax Law and Practice: by O.P. Chopra, M. A., LL.B, I.R.S. Published by S. C. Sarkar and Sons Private Ltd. Price: Rs 55.

Books on Income-tax law have been flowing in a steady stream ever since the Income-tax Act, 1961 was passed. Most of these are pot-boilers trying to cash in on a passing vogue, a scissors and paste affair, stringing extracts from decisions and statutes with the minimum of original comment. The task is made easy by the fact that the Act and related statutes can make a volume of respectable, even intimidating, size. There would thus appear to be a more urgent need of a guide to Income-tax commentaries than to Income-tax itself.

Mr Chopra's book is an exception to the general rule. He is exceptionally qualified for the job in that he is a former member of the Punjab Civil Service (judiciary) and has, therefore, an eye for the significant legal detail. He is, in addition, an official of the Income-tax, Department and has been intimately connected with the problems he discusses with lucidity and precision in these pages.

The Income-tax Act, 1961, has no doubt tidied up the law by removing the legal cobwebs that had accumulated over four decades. Even so, expert guidance is necessary. For as Lord Sumner said in a celebrated obiter, "The way of the tax payer is hard and the Legislature does not go out of its way to make it easier." This is partly because of the conceptual difficulties inherent in the tax, the nature of income and capital and so on. Mr Chopra's book sails through these difficulties with expert ease.

A stated earlier, Mr Chopra's book is no popular hash but a book for the experts. It is designed for use by the cognoscenti who would find in it able exposition of tricky points of law. It discusses the general principles of construction, and elucidates parti-

cular provisions in all their ramifications. It draws extensively on decided cases and the history of the provisions to explain particular difficulties. Two special features of the book deserve mention. First, it makes extensive use of illustrations and mathematical examples—a rarity in books with the same expert legal scope. Mr Chopra's experience as an officer of the department has no doubt made this possible. The value of such illustrations can hardly be over-estimated for they elucidate points, far better than pages of commentary can. Secondly, Mr Chopra has gathered compendiously all the public circulars issued by the Central Board of Revenue from 1939 upto nearly the end of 1962. These are of inestimable value for they either embody substantial executive modification of the rigours of the law, or give the department's interpretation of particular provisions. These may not be legally binding but the tax payer knows where the department stands in these matters. Finding them together in one place is sure to save a lot of trouble in looking for them all over the place.

The chief merit of the book, however, consists in its commentary which reveals considerable analytical subtlety, grasp of detail and capacity for trenchant statement of the law. Mr Chopra has located areas of ambiguities (of which, to judge by his commentary, there are many) and suggested several means of clarifying legislative indendments and mitigating the rigours of unintended hardships. For example, the provisions relating to charity would appear to be a veritable booby trap both for the tax payer and the tax gatherer. For example the expression "Accumulation and setting apart" of income by charitable entities gave rise to endless trouble in the past and the Direct Taxes Inquiry Committee had recommended its advance. In the new Act, however, it has made its appearance once again leaving room for all the old quarrels. There are countless such examples on which Mr Chopra has offered constructive suggestions. It is quite conceivable that besides the tax gatherer and the tax payer, the CBR and the Law Ministry will benefit by a study of this work. As for the tax payer and the tax gatherer, the book is sure to become an indispensable source of new light on a difficult subject.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

HAZARDING a none too rash a prophecy, I would say that in the next available issue of Swarajya, Rajaji will institute a pitiless comparison between the British and Indian budgets for the coming year. He will have quite a lot to say, for it is possible to match the two pretty near point by point. Mr Maudling has given away about £270 million in tax relief whereas Mr Desai has levied about as many crores of rupees in fresh tax. Mr Maudling has released from the net of taxation about 4 million small fry, whereas Mr Desai has dragged in God knows how many millions into his net of Compulsory Deposit Scheme. Mr Maudling has announced a species of Development Rebate for companies moving into the so called "depressed areas". Mr Desai has, on the other hand, soaked companies with a SPT. And so on. I agree that the comparison is not altogether fair, since there exists no basic comparability in the two situations. Britain struggling to emerge from the slough of stagnation by tax concessions and budgetary deficits to stimulate activity even at the risk of domestic inflation has a different set of problems from India which has to find the money to fight the enemy at the gate. The proper comparison would be with war-time Britain, when, presenting the first Emergency budget, Kingsley Wood spread his net so wide as to include everything from boots to books. (He is reported to have said that he couldn't see the difference between the two. He was made, I am happy to report, to see difference and books were left alone). How far Mr Maudling will succeed in his endeavour, it is difficult to say. Mr Harold Wilson has poured scorn on the Chancellor's "death-bed conversion" to expansionism. He was also sarcastic about bye-elections as fiscal catalysts. Mr Desai's party, unlike Mr Maudling's, has the bye-elections before it but I rather think that Mr Desai is saying to himself: "Let others worry for a change." To be just to him, elections have no terrors for him, for when most State Governments craftily held back their new taxes till after the last elections, Mr Desai went ahead undaunted and stung one and all for tidy sums. (However, in retrospect, what he then took is flea-bite compared to what he has since shown himself capable of.) Such a man is not going to bother about half a dozen bye-elections in the offing, especially when it will need about two hundred bye-elections to dislodge him. Mr Maudling had also to think of

the next general election due in spring,—a thing that Mr Desai needn't bother about for another four years.

Other analogies between the two budgets may be pressed, though not by Rajaji himself with his well-known views on prohibition. Mr Maudling has removed the excise licences formerly needed for home-brewing. In a quip that went big with a sympathetic House, he said he was glad to give private citizens the right to make their own beer. I cannot see Mr Desai making either the concession or the joke. The anti-prohibitionists—the double-barrelled negative describes to a nicely our predicament in this matter—would say that in areas where prohibition is the law, home brewing without licence already exists: indeed the only kind of alcohol available is the home-brewed one. This may well be true but I think that the anti-prohibitionists are over-stating their general case. Wine is central to the domestic pieties and beer and other drinks indubitably a mark of good fellowship in the West to a degree that they have not been in India, at any rate, in recent centuries. I cannot for example, see any Indian counting among the many virtues of his wife what if I remember right, made the Vicar of Wakefield put up with his otherwise trying spouse—the ability to make excellent gooseberry wine. And there, if you like, you have the heart of the matter. If only the anti-prohibitionists had the women on their side, the battle would have been won long ago. As it is, all we have is the promise of a high court judge to inquire into the effects of prohibition. He is, Mr Shriram Narayan has assured, to be assisted by a Senior I.C.S. officer. Meantime, with the women not on their side, the suspicion is wide-spread that the only advocates of scrapping of prohibition are those who get (or who would, if prohibition wasn't there) their drinks free.

We have all been so familiar with complaints about public sector undertakings not making enough profits that it comes as something of a shock that at least one of them has been profiteering at the expense of the public and doing so in a sphere where it is least defensible. The Seventh Report of the Public Accounts Committee has unearthed some rather depressing facts about Hindustan Antibiotics at Pimpri. This concern shares with certain other

State should be the exploiter in this case is all the more odious.

But this is not all. The situation gets even more Gilbertian when we find from the report that the market price of the imported penicillin is fixed with reference to the sale price of Hindustan Antibiotics'. I could not ascertain from the report whether the sale price is identical for both. If so, the situation is rich in that the much debated RPM (Resale Price Maintenance) at a uniform rate by monopolists against which socialists sometimes thunder, would appear to be in operation here. Anyway, the licenced importers would have made some not unwelcome windfall profit. Considering that the total imports between 1958 and 1961 is estimated at Rs 1 crore, some lucky pockets have been lined with Government assistance.

Some of the arguments against price reduction urged by the authorities were almost cynical. Price reduction, for example, would not benefit the consumer but only the middle-men. For a Government busy eliminating middle-men where they are really useful, this confession of inability to remove them in a sphere where it can easily do so is truly scandalous. Why, can they not sell penicillin from the post offices as they used to quinine in the old days? Or what about the family planning clinics so solicitously opened all over the place? Is it that they are afraid that the pills might get mixed up? The truth is, often, socialist intentions of unexceptionable idealism lose their pristine quality en route to their realisation. This is due, no doubt, to what Lord Hailsham called the other day, "original sin." In the result, as in the last scene of George Orwell's animal Farm, it is difficult to tell the pigs from the men.

(From Our New Delhi Correspondent)

AIMO Conference

The importance of following fair trading practices has been emphasised in the President's address to the annual Conference of the All-India Manufacturers' Organisation which was inaugurated by the Prime Minister on March 30. Mr Prabhu V. Mehta, who was re-elected Chairman for another term on the concluding day of the Conference, had pointed out in his speech on the inaugural day that the AIMO had taken the initiative a decade ago to advocate the setting up of a Fair Trade Practice Board for each important industry and trade. With the Emergency, this had become more urgent and, jointly with other associations, a pledge was drawn up to be observed by each manufacturer and its implementation is to be watched by a committee of thirty-eight associations or by a Fair Trade Practice Board of the concerned industry. Mr Mehta said that the response to their appeal was fairly encouraging. The Fair Trade Practices Boards, he said, had been functioning effectively in the USA where, by persuasion and, at times, even though by pressure, they have succeeded in making their members adhere to a Code of ethics.

The chairman's address dealt with, inter alia, the problem of mobilisation of physical and financial resources, technical manpower, transport, and regional co-operation for the integrated economic development of the Indo-Pacific Oceanic region.

The main resolution adopted by the Conference dealt with Industrial Development vis-a-vis the New Budget Proposals. As regards the specific tax proposals, the Conference recorded its opposition in principle, to the concept of the Super Profits Tax as envisaged in the Super Profits Tax Bill and the surcharge on the profits of industrial firms, because they introduce double taxation of profits in the hands of the corporate and organised sector and will do irreparable damage to the national economy. The resolution also expressed the apprehension that the discretion proposed to be given to the assessing Income-tax Officers to disallow expenditure on advertisement, commissions etc. and the estoppel of appeals against provisional assessments would introduce a new element of uncertainty and discrimination in the assessments of different companies and firms under officers and would deny justice to assesses against inequitable provisional assessment. The Conference, therefore, urged that the Rules to be framed for enforcing new taxation measures should be specific and clear in all respects without leaving any room for discretion on the part of

assessing officers and that all justifiable expenditure incurred for the purpose of business should be fully and fairly allowed as deductions for the purpose of assessing taxable profits.

The Conference also considered that the proposals for compulsory deposits on incomes as low as Rs 1,500 per annum are beyond the capacity of such lower income groups besides being impracticable of enforcement and will result in over burdening the low income group whose present resources are already over-stretched in the context of the continuous rise in the cost of living. It was suggested that compulsory deposits should be limited to incomes of Rs 3,000 and above per annum. The Conference was of the opinion that the limit of Rs 60,000 per annum on remuneration and perquisites of an individual employee for allowing it as deduction for expenditure is totally inadequate and recommended that this limit should be removed.

Regarding the Super Profits Tax, the Resolution urged that the Bill should be amended so as to provide that the tax should not be attracted unless the income of a company, after deducting the carryover of losses, allowances, allowances under section 15(c) of the Income tax Act and the income and super-tax payable by it exceeds ten per cent on the total of the capital, reserves including development rebate reserve, and short and long-term borrowings incurred for carrying on the business and that the rate of tax to be levied on the surplus profit should not exceed 33 1/3 per cent instead of the present 50% and 60% proposed in the Bill and further that small industries as at present defined by the Government of India should be exempted altogether from the operation of the Super Profits Tax. The Resolution also called for a categorical stipulation that the taxation proposals shall be restricted to the duration of the Emergency.

Another resolution called for Planing the development of Power on a national basis, and to that end recommended the constitution of a National Power Authority. The Conference urged Government to refer to consider its policy in regard to power generation by investor-owned companies and also stressed the need for encouragement of these companies by allowing an adequate rate of return which would enable them to attract capital for expansion. Regarding electricity rates, the Conference urged that these should be fixed "on commercial considerations and on the economic needs of the consuming industries." It was also urged that all duties on power consumption for raising general revenues should be abolished. The third Resolution dealt with the subject of applied Research for Industrial Development and urged closer cooperation between industry and national laboratories and other research institutions.

Board of Trade

The Board of Trade which met here last Saturday, under the Chairmanship of Mr Manubhai Shah, Minister of International Trade, examined the impact of the new budget proposals on the export trade of the country, noted that the effect might not be very adverse and suggested that studies of individual export products might be made so that compensatory measures, if necessary, might be taken to mitigate such effects. It was, however, found that the growing burden of sales tax was very high. The Board decided to constitute a Committee under the Chairmanship of Mr R. G. Saraiya, with the Sales-tax Commissioners of Uttar Pradesh, Maharashtra, West Bengal, Gujarat and Madras and representatives of the Ministry of Finance and the Ministry of Commerce and Industry to review the question of sales-tax, both Central and States, on export commodities and to suggest the procedures and the quantum of rebates or refunds or set-offs on different groups of commodities which entered into export trade. The Board also requested the Government to include textiles, vanaspati and vegetable oils in the scheme of income-tax relief on export sales announced by the Finance Minister.

The Board notes with satisfaction that exports during the current financial year will show a rise of Rs 35 to Rs 40 crores as compared with the previous year. Total value of exports are expected to reach between Rs 695 to Rs 700 crores. Including exports from Goa, the total exports are estimated at Rs 710 to Rs 715 crores. It was also recognised that much more work would have to be done in order to place the foreign trade, and particularly the exports of the country, on a rational, long-term basis. In this connexion the Board emphasised the need for strengthening short-term programmes of locating and identifying exportable quantities and commodities, so as not only to maintain the minimum rise of Rs 40 crores per annum but, if possible, to augment it further so as to make up the past back-log. A full-fledged annual review of the country-wise and commodity-wise performance would be undertaken by the Board sometime in May, when figures would be available for the whole year of commodity wise exports to all the countries of the world.

Reserve Bank Surveys

Among the measures for stepping up exports further the Board has underlined the need for larger programmes of market research and area surveys. The market studies undertaken by the Reserve Bank in certain countries of Africa and Asia were reviewed.

Among the countries visited by the officials of the Reserve Bank last year were Rhodesia, Nyasaland, Nigeria, Ghana and Libya in Africa and Burma, Thailand and Ceylon in South East Asia. The studies emphasise the fact that export promotion to Africa needs a new, forward look, not only to explore the possibilities of new items like air conditioners, milling machines, sewing

machines or electric fans, but also of new lines in traditional export commodities like cotton textiles. New designs for cotton textiles, it is pointed out, are important in the African market and that the Japanese have been particularly adept in anticipating demand for new designs and style of both cloth and ready-made garments. The best market for tea appears to be in North Africa, but though Indian tea is exported in large quantities to North African countries like Libya and Egypt, this market cannot be taken for granted in view of the increasing competition from East African and Ceylon teas. In jute, the problem, it is pointed out, is one of maintaining steady prices, meeting market specifications with regard to size and texture of bags and ensuring regular deliveries. As regards neighbouring countries, attention has been focussed on the value of long-term agreements for promotion of exports.

The Board considered that these studies carried out by the Reserve Bank were very valuable both to the Trade and Government and felt that the Reserve Bank should be requested to enlarge these programmes on a continuing basis and that an increasing number of economic experts should be associated with the banking officials for this purpose.

The position regarding the export of traditional commodities was considered satisfactory on the whole. Jute, tea, tobacco, sugar, oils and oil cakes, iron ore, handloom fabrics, handicrafts, raw hides and skins, mica and coir had maintained steady and satisfactory rise. The items which had lagged behind and which required further stimulation were manganese, steel scrap, iron and steel and cotton textiles. As regards the last, it was suggested that mixed fabrics as well as more processed, dyed and finished textiles and garments and made-up articles of textiles should be given greater attention. The Board also reiterated its earlier decision that sugar, fish, and sea foods, oils and oil cake, cotton and, particularly, the agricultural commodities needed to be more intensively developed to make a much larger contribution to the country's exports than is the case at present. These products, it was noted, had an ever increasing world market and if greater availability could be made possible, their exports could be stepped up to traditional markets and new markets could also be developed.

The Board at this meeting paid particular attention to the export of handloom products and considered a number of measures for increasing their export. The value of overall exports in 1962 is estimated at about Rs 10 crores which compares favourably with the export performance of Rs 8.5 crores in 1961. But the total of exports in 1962 is still short of the target of Rs 13.25 crores fixed for the year. Among the steps that could be taken by the industry to increase exports, the Board has emphasised the need to follow Fair Trading Practices in the matter of supply according to specifications, time schedules for delivery, packing

Markets

JUTE Raw Jute Problems

Contrary to earlier expectation that no more compulsory purchase quotas would be issued to jute mills this season, it has been announced early this week by the Jute Commissioner, Mr C. G. L. Joneja, that jute mills have been asked to take up a total of 4.50 lakh bales of jute during the current month. Of this quantity IJMA mills are to purchase 4.25 lakh bales while non-member mills have been allotted a quota of 0.25 lakh. The April quota compares with 5.03 lakh bales for March and 6.4 lakh bales for February. The rather belated announcement of the purchase quota is presumably due to a last minute decision taken by the authorities in a bid to bring some improvement in sentiment in the raw jute market which continues to be rather quiet with prices, especially for the lower qualities, quoting below the minimum levels for some weeks now. According to the Jute Commissioner, with the lifting of the April quota by mills, the quantity of raw jute that will still be left with the holders will be markedly reduced,

despite the inflow of a sizable quantity of unauthorised jute from Pakistan. By the end of this month, all but 3.5 lakhs bales of the current year's crop of 7.1 lakh bales would be lifted. To this however is to be added the quantity smuggled from Pakistan, variously estimated from 5 lakh bales to 10 lakh bales. Mr Joneja seems to think that it will not be difficult for the trade and industry to absorb whatever quantity that is left in the remainder of the current season. Thus the position at the end of the season will be that the carry over will be almost the same as the quantity that was available at the beginning of the season, that is 26 lakh bales.

The Jute Commissioner has also disclosed that Government has already finalised the minimum price for jute for the 1963-64 jute crop and that the announcement is imminent. It has been pointed out by the industry that the present minimum price of Rs 30 per maund basis Assam Bottoms which was fixed at a time when jute supplies were not as abundant as at present has now become unrealistic. The need of the hour is a reduction in the cost of production of jute goods in order to enable our goods to compete effectively in world markets with Pakistan. As

COTTON

Jarilla March off the Board

The cotton futures market during the past week presented an erratic trend. The ruling Jarilla May contract which opened the week at Rs 703.50 per three quintals moved up to Rs 709.25 towards mid-week on account of bear covering. However the favourable survey results in respect of Kalyan cotton tendered against the March contract the May contract reacted to Rs 704.25. But the contract again looked up to Rs 710.00 thanks to the short covering induced by the apprehension that there would not be any more imports of cotton during the current cotton season. This rally, however, proved shortlived and the contract slumped down to Rs 702.25 before finally closing the week at Rs 703.2, per three quintals. Trading in the contract was thin in the absence of fresh incentives.

The Jarilla March contract which went off the board last week had a chequered career. Starting its career at Rs 730.25 on 9 May last year on a bullish note it slipped down to Rs 704.00 towards the end of the month. But later in September it staged a smart recovery to Rs 752.25 owing to the fears that the cotton imports should be curtailed consequent on the crisis in the country's foreign exchange situation. Again a reactionary phase crept in after the Chinese attack on our border and also due to the bright crop outlook as a result of which the contract fell down steeply to Rs 659.00. At this stage the Government stepped in to arrest the declining trend but the subsequent recovery was feeble.

The spot market at Sewri displayed sluggish conditions. It would appear that the mills have slackened their purchases following the hectic improvement in prices of almost all the available varieties of cotton. Scattered buying at lower levels was reported in CO 2L 147, Kalyan and Digvijay.

In the export section overseas enquiry for Bengal Deshi broadened and the prices hardened on short covering by the shippers. Out of the export quota of 75,000 bales nearly 44,200 bales were reported to have been registered for shipment till 27 March. The supply position is estimated at 5.05 lakh bales against 5.85 bales in the previous season. Against this India has made a commitment for an export of 2.75 lakh bales and the domestic consumption is expected to go up to 1.80 lakhs obviously due to the increasing defence orders.

Consumption of domestic cotton by the textile mills in the country recorded an heartening improvement in January last when it reached 3.88 lakh bales, an increase

raw jute constitutes about 60 per cent of the cost of production of the industry, it is important that the price of raw jute is not too high to price our jute goods out of world markets. In fixing the price of jute for the next season, one important point that is to be borne in mind is that already Indian industry's serious rival, the Pakistani industry enjoys several advantages, an important one being low cost of raw material. The large quantity of raw jute that has found its way into India this season from Pakistan clearly shows that smugglers find it profitable to take the risk of moving jute from Pakistan over the border into India.

One of the solutions suggested to cope with the situation created by the two large jute crops in India is that exports of raw jute should be allowed regularly. Government has also partially accepted this suggestion as 2 lakh bales of jute have been permitted to be exported of the current year's crop. Export performance of raw jute however is not very satisfactory as out of the total of 2 lakh bales, so far only 1.25 lakh bales have been exported. It would appear that this poor showing is largely due to the difficult conditions attached to export of raw jute. Speaking at the annual meeting of the Calcutta Hydraulic Press Association, Mr J. R. Modi, the Chairman, has pointed out that the reason for the poor sales overseas is to be sought in the restrictive jute export policy. According to him there is ample scope for selling our jute in a number of foreign markets, Government would do well to announce the continuation of the policy of raw jute exports for the next year. In support of this plea he points out that there is no shortage of jute in sight and it will be in the national interest to allow such jute exports freely, subject to the limitations of such quality restrictions as may be found necessary for the protection of the country's manufacturing industry.

Prices in the jute goods market fluctuated both ways during the past week in response to speculative activity. Genuine business continued to be negligible and the optimism engendered by last week's scattered foreign enquiries has diminished considerably in the absence of further enquiries. Hessian 40" X 10 oz Ready lost ground from Rs 47.25 to be placed at Rs 46.90 by close on Wednesday. The heavy goods section was however comparatively better. B Twills ready after having been pushed down to Rs 110.75 recovered most of its earlier loss to be finally placed at Rs 111.20.

The announcement of purchase quota for mills for the current month had little effect on sentiment in the raw jute section where prices of low quality jutes continued to be quoted below the minimum levels.

Auditors' Report on the Indian Branches of the Hongkong and Shanghai Banking Corporation under Section 30 of the Banking Companies Act 1949

We have audited the above Balance Sheet and the annexed Profit and Loss Account of the Indian Branches of The Hongkong and Shanghai Banking Corporation with the books and accounts of the Calcutta Branch and with certified returns from Bombay Branch.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions of Section 211(1) (2) and (3) and 227(5) of the Companies Act 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with Schedule VI of the Companies Act 1956, but are conformity with Forms A and B of the third Schedule of the Banking Companies Act 1949.

We report that:

We report that:—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for our audit.

(b) In our opinion proper books of account as required by law have been kept by the Calcutta Branch so far as appears from our examination of those books and proper returns, adequate for our audit, have been received from Bombay which was not visited by us.

(c) The abovementioned Balance Sheet and Profit and Loss Account are in agreement with the books of account and certified returns.

(i) In our opinion and to the best of our information and according to the explanations given to us, such Balance Sheet and Profit and Loss Account give the information required by the Companies Act, 1956 in the manner required for the Banking Companies and, on such basis and subject to the same remarks, give respectively a true and fair view of the state of affairs of the Indian Branches as at 31st December, 1962 and their results for the year ended on that date.

PRICE, WATERHOUSE, PEAT & CO.,
Chartered Accountants,
Calcutta, 22nd March, 1963.

THE CANARA INDUSTRIAL & BANKING SYNDICATE, LTD.

(Incorporated in Indian Union with Liability of Shareholders Limited).

DIRECTORS' REPORT

The Directors have pleasure to submit to the shareholders the 37th Annual Report for the year ending 31st December, 1962. According to the audited Balance Sheet annexed hereto, the net profit of the Bank for the year 1962 was Rs. 30,33,234-80 (after paying Rs. 1,51,000/- to the National Defence Fund) which, with the balance of profit of Rs. 34,750-56 of the previous year brought forward, comes to Rs. 30,67,985-36.

After providing Rs. 6,50,000/- to the Statutory Reserve Fund, a sum of Rs. 24,17,985-36 is available for appropriations. The Directors recommend the following appropriations:—

To pay a dividend at 10% p.a. and bonus at 10% p.a. on 'A', 'B' and 'C' Class Equity Shares, subject to deduction of tax " " " " Rs. 6,60,152 18

To pay a dividend at 8.57 per cent p.a. on Cumulative Preference Shares of Rs. 100/- each and at 7.15 per cent p.a. on Cumulative Preference Shares of Rs. 10/- each, subject to deduction of tax in both cases ... Rs. 1,80,051 03
Rs. 12,00,000 00

To provision for taxation	Rs. 12,00,000 00
To provision for Bonus to Staff	Rs. 3,00,000 00
To provision for Depreciation	Rs. 77,782 15

The Directors have pleasure to state that the total Reserve Fund and other Reserves stand at Rs. 68,00,000-00 as against Rs. 53,50,471/- (inclusive of share premium) last year. The total Paid-up Capital and Reserves (including share premium) now stand at Rs. 1,42,64,986/- against Rs. 1,01,57,343/- at the end of last year.

The Equity Capital of Rs. 50 lakhs in 5,00,000 'B' Class Shares of Rs. 10/- each issued at a premium of Re. 1/- per share during the year was heavily over-subscribed. The Authorised Capital of the Bank has been raised to Rs. 2 crores.

100 Branches of the Bank have been audited by the Statutory Auditor and other Branch Auditors appointed under the provisions of Section 228 of the

BALANCE SHEET AS AT 31st DECEMBER, 1962

AUDITOR'S REPORT TO THE SHAREHOLDERS

I have audited the foregoing Balance Sheet of the Canara Industrial & Banking Syndicate Limited, as at 31st December, 1962, and the Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns from 38 branches audited by me and 64 branches audited by other auditors and 75 branches exempted from audit, under Exemption granted under Rule 4 of the Companies (Branch Audit Exemption) Rules 1961, Order Nos. 1 (21)-CLVI/62 of Government of India, Ministry of Commerce and Industry, Department of Company Law Administration, dated 25th August, 1962, 16th October, 1962 and 22nd January, 1963.

The reports on the accounts of the branches audited by other Auditors have been dealt with in preparing my report in the manner considered necessary by me. I report that:

- I have obtained all the information and explanations which, to the best of my knowledge and belief, were necessary for the purpose of audit and have found them to be satisfactory;
- The transactions of the Bank which have come to my notice have been within the powers of the Bank;
- In my opinion, proper books of account, as required by law, have been kept by the Bank so far as appears from my examination of these books, and proper returns adequate for the purpose of audit have been received from the branches of the Bank;
- The foregoing Balance Sheet and Profit and Loss Account, dealt with by this report, are in agreement with the books of account and the returns;
- In my opinion, and to the best of my information and according to the explanations given to me, the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies and, on such basis, the said Balance Sheet gives a true and fair view of the state of affairs of the Bank as at 31st December, 1962 and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

The Canara Industrial & Banking Syndicate Ltd.

Encouraging Progress During 1962

Vigorous Branch Expansion: Ambitious Building Programme

Statement of Dr T. M. A. Pai, the Chairman

The following is the statement of Dr T. M. A. Pai, Chairman, circulated together with the accounts of the Canara Industrial & Banking Syndicate Ltd for 1962:

The progress made by the Syndicate during the year 1962, I am happy to say, has been quite encouraging under all heads. The total deposits of the Syndicate have increased from Rs. 24.63 Crores to Rs. 32.65 Crores; the rise of Rs. 8.02 Crores this year as compared to Rs. 5.76 Crores last year represents an increase of 37% over the previous year's figures. The total advances including bills discounted have improved to Rs. 18.27 Crores, constituting 54% of Capital, Reserves and Deposits. The cash and balances and Investment in Government and other Securities were Rs. 16.43 Crores showing an improvement of the liquidity as compared to last year from 44% to 50% of deposits. In the course of the year, the Bank issued Equity Capital amounting to Rs. 50 Lakhs to its existing shareholders and the issue was heavily oversubscribed. The Paid-up Capital of the Bank has increased from Rs. 48,07,000/- as

on 31-12-1961 to Rs. 76,65,000/- as on 31-12-1962. Including the share premium of Rs. 6,15,000/-, the Reserves as on 31-12-62 amount to Rs. 66 Lakhs and the total of the Paid-up Capital and Reserves amount to Rs. 142.64 Lakhs. The Capital and Reserves now constitute 4.4% of the total deposits and it is our endeavour to increase the percentage by further appropriations towards Reserves and by further calls due on the Shares issued last year which fall due in 1964 and 1965.

OPENING OF NEW BRANCHES

The total number of Branches of the Bank which was 159 as on 31-12-1961, now stands at 176. We have since received permission for opening two Branches in Goa at Sanquelim and Curchorem. Steps are also being taken to select good centres for development during the current year.

PREMISES

During 1962, buildings for our Offices have been completed at several centres. The Bank has now its own buildings at Karwar, Brahmapur, Barkur, Udipi, Honavar, Kanhangad, Mangalore-Ham-

pankatta, Bombay, Vengurla, Malpe, Payyanur, Gurpur, Bagalkot, Kumbha, Kasaragod, Karkala, Cochin, Bajpe, Secunderabad, Robertsonpet, and Trivandrum. We have an ambitious programme during the current year of completing the office buildings at Manipal, Bangalore Gandhinagar, Hospet, Adoni, Kozhikode, Bhatkal, Kinnigoli and Thirahalli, the object being to provide better facilities to our customers in more commodious premises. We are giving our attention to reorganisation of the Office and having good and modern furniture at all the branches, so that customers might feel quite at home and be comfortable at our offices. The Head Office building at Manipal is likely to be completed in a couple of months and with all the Offices conveniently integrated at one place, further improvement in the administrative efficiency should be possible. At several of our Branches, we have entered into long term arrangements with the building owners and are having premises altered or new buildings put up to our specifications and requirements, so as to provide the additional space for our rapidly growing

BANK AMALGAMATIONS

During the year 1962, we took over three Banks in the South, namely, The Salem Ammapet Sengundar Bank, Ltd., The Hindu Bank Karur, Ltd. and The Kerala Service Bank, Ltd. and in 1963, we have taken over the Citizens Bank, Ltd., Robertsonpet. All the transfers have been effected on the basis of transfer of assets and liabilities without taking over the Capital of these Banks and as a result of these mergers, the Syndicate Bank has opened Branches at seventeen centres.

We have now a net-work of 14 Branches in the Madras State and 26 Branches in Kerala State. During the year consequent on the mergers, the Bank has been able

to spread to new areas in the South, increasing its utility to constituents in these localities. The Syndicate will continue to give every assistance to smaller banking institutions in the country in a spirit of service and co-operation, in all the ways one Bank can be of service to another. Smaller banking institutions are faced with several difficulties in view of the rising costs of administration and the complicated legislation in the country affecting them and the recent trend of voluntary mergers with bigger institutions is both logical and imperative. This process of integration is in the national interest and in the interests of the country's economy, which requires stronger banking institutions, able to inspire confidence in the people and render allround services to their customers in the context of the present national emergency. Banks must develop their connections with one another and work in close co-operation so as to be able to render to customers at places where they do not have their own branches, at as low a cost to the customer as possible, because, no Bank can ever have Branches at all important places and no constituent can be expected to go from one Bank to another for the services he requires at different places.

OUR ROLE IN SMALL SAVINGS

The Syndicate has from the earliest times, been a pioneer in small savings schemes. Our schemes of Pigmy Deposits, the Cash Certificates and the Cumulative Deposits have served to attract the savings of the middle and lower middle classes. We are happy that we have carried the message of savings to all parts

of the country and all sections of the people wherever we have our branches, a large number of which were opened in rural and semi-urban areas which had no banking facilities from a modern Bank. We have pursued during the year the policy of carrying the message of banking to a section of our people to whom Banks have not been giving sufficient attention so far, namely, to women and students. Even from the earliest times, the Bank has a large number of ladies and to day we have over 260 ladies on our staff. We have posted a large number of them to our Branches, so that women may feel at home when they come to the Bank for its services. During the year, the Syndicate has started a new experiment, by having an all-women's Branch at Seshadripuram, Bangalore. The entire staff including the Manager at this Branch consists of ladies and I am happy to say that the experiment being perhaps a singular one, has received the appreciation of all people not only in this country but even abroad. The Branch has been able to make much headway in attracting women to its counters and as the experiment has been a great success, we intend to pursue this and we have already introduced separate Savings Counters at several of our Branches entirely staffed by women. The efforts that have to be made by banking institutions to cater to the banking needs of women who constitute half of our people, cannot be neglected any longer and the need for women's Banks all over the country is particularly great in the face of the present national emergency, and the necessity for diverting funds from idle investments in gold to productive purposes for the country's defence requirements. The

Syndicate has also given special attention to Students' Savings Bank Accounts and offers facilities and conveniences to students in the matter of remittances of funds.

NEW DEPARTMENTS

We have recently started an Industrial Finance Division to assist industries both with regard to short term and medium term advances. The new industries that are coming up in this country after the development of the basic industries, find themselves handicapped for want of a sympathetic study of their requirements and adequate assistance, particularly under medium term advances. We are also contemplating opening an Executor & Trustee Department of our services in this sector, which we had not taken up so far intensively. Our Investors' Agency Department which has proved its utility during the last few years in the field of investment advice is being developed for further extensive service. Our Inspection Department is being strengthened so as to cope with the additional work involved in more frequent and through inspection of branches and to understand their problems and give them every help. We have continued our assistance for technical education both inside as well as outside the Country and over 80 scholars have received assistance from our Loan Scholarship Fund and 76 under our Loans for Foreign Studies schemes.

GENERAL

The Country has to gear itself up to the task of facing an unscrupulous and ruthless enemy on its northern frontiers and perhaps be prepared for a long drawn out War. The national emergency has however, unified us and brought us together as one man to face

the invader and do everything we can, whether as soldiers guarding our frontiers or as workers in the fields and factories to increase production and provide war material. The Country cannot rest until the invader has been driven back from our sacred soil and the needs of defence must be given priority over even the development programmes of the Five Year Plans. As a responsible section of the Country's economy, Banks must do whatever lie in their power to assist the war effort. I am happy that donations to the National Defence Fund have come forth spontaneously from all parts of the Country in the form of gold as well as in cash. Your Bank had made a donation of Rs. 1.51 Lakhs to the Defence Fund which is the highest among South Indian Banks, besides which, our employees have contributed about Rs. 15,000/- as their contributions. We have also decided to make large investments in Defence Bonds and have extended a number of facilities to soldiers and their families free of charge.

I convey my special thanks to our valued customers for their continued patronage and to the Bank's Directors and Shareholders for their enthusiastic co-operation. Thanks to the very hard work and initiative of our Managing Director, Shri T. A. Pai, and the co-operation and keen spirit of service of all our Staff, the institution has made steady headway from year to year. I am deeply appreciative of their services and I am confident that with their enthusiasm and hard work, the Syndicate will soon take its place among the largest institutions of the Country.

(Note:—This does not purport to be a record of the proceedings of the Annual General Meeting).

ASIATIC OXYGEN LIMITED

Shri Jalan Suggests Voluntary Contributions in place of Super Profits Tax

Extracts from the Chairman's Speech of Shri B. L. Jalan at the Annual General Meeting of Asiatic Oxygen Limited held at Calcutta on Saturday the 30th March, 1963.

Gentlemen,

As you are aware, our proposed production facilities together with those of our subsidiary company will represent an extensive network of industrial gas factories around the country, at Calcutta, Bhilai, Barauni, Durgapur, Bombay, Madras, Rourkela, Hyderabad and Patna. We will also have additional three units for the manufacture of oxy-acetylene gas, welding and cutting equipment, electrodes, and arc welding transformers,

which will enable us to provide complete service to our customers, large or small, in the industrial welding and cutting field. Our gas plants are expected to be shipped from the U.S.A. very shortly and we hope that all our gas plants will be on stream before the year is out.

It is not necessary for me to dilate at length on the prospects of this industry. The demand for oxygen and dissolved acetylene was estimated at 1000 million cubic feet and 150 million cubic feet respectively in 1960-61. The Third Plan production targets of 1650 million cubic feet for oxygen and 200 million cubic feet for dissolved acetylene were based on a projected capacity of 2300 million

cubic feet for oxygen and 230 million cubic feet for dissolved acetylene. This growth represents a 66 per cent rise in 5 years for oxygen and 33 per cent for dissolved acetylene. All indications and projections show that the demand would be higher. Utmost vigilance, however, is warranted in our licensing policy which may lead to mushroom growth of industrial units leading in its wake to uneconomic and wasteful capacity.

The industrial gas industry has assumed a special importance owing to the national emergency proclaimed in the aftermath of the massive and wanton Chinese invasion. The requirements of oxygen and allied gases for purposes of

defence have considerably gone up in consequence of increased defence efforts. Your industry, I am proud to say, has joined the whole country in offering its services and unstinted support in the national cause. It is a matter of great satisfaction to us that practically the whole world has supported our righteous stand and that Communist China has been completely isolated. Friendly countries like the United States and the United Kingdom, besides several others, have come out with large scale and immediate help.

As the Prime Minister has rightly said, the war has been fought not only on our frontiers but equally in our fields and

factories. No time would be more propitious than now that the 150 million of our working village people should be geared to provide more food and more raw materials. Voluntary extra effort would be the answer. Members of Parliament, State legislatures and other social workers supported by government officials in rural areas can do yeoman's service to the nation by organising the villages to dig canals, wells and the like. Targets should be determined for each State, each district, each village. Simultaneously, industry should be asked to operate additional shifts and to work on all Sundays. Workers should contribute to the National Defence Fund their extra wages and the industrialists their extra profits. It is estimated that in one year alone workers would earn about Rs. 75 crores of additional wages, the industry would produce additional goods and services of the gross value of Rs. 480 crores and of the net value of about Rs. 180 crores.

It is in this perspective and context that we should view the various measures taken by the Government including the new taxes. The yield, you know, of the new super profits tax has been estimated at Rs. 25 crores which pales into insignificance before the estimates of additional wealth which would be created by making the industry work on additional shifts and on Sundays. Moreover, the suggestions I have made a little while ago would increase the national wealth, and therefore, the intrinsic strength of the nation. The taxation will only bring about a mere transfer of the existing flow of incomes even if it does not actually, as apprehended by many, retard production seriously. It may also be recalled in this connection that even the voluntary contributions to the National Defence Fund during the last six months, have been twice as large as the total yield estimated to accrue from the new super profits tax for the whole year. I have absolutely no doubt in my mind that if instead of imposing this fresh tax, the Government asked the industry and the people of India to make additional voluntary contributions to the tune of Rs. 25 crores, they would welcome this as an additional responsibility to be carried out willingly and with a sense of gratification.

In the midst of the flare up of border warfare and some initial reverses, our Prime Minister so boldly and so rightly laid the task before the nation: while we should double our efforts and be prepared for a prolonged war with our treacherous neighbour, we should not relent our efforts to achieve a faster rate of industrial and economic growth. Any other approach would only achieve one of the basic objectives of our communist adversary. Confronted with a complete debacle of "leap

forward" at home, the successful "leap forward" in India by democratic methods, techniques and institutions, became an eye-sore to China. By giving up our plans of economic development we would only be playing into the hands of the aggressor.

Our distinguished Finance Minister in his budget speech so candidly and so lucidly described the objectives of our fiscal and economic policies. At the cost of repetition I will reproduce here what he said: "First and foremost, there is the need to increase production and accelerate the pace of development. The growing claims of defence and development cannot be met except on the basis of an expanding volume of production; by far the greater part of the responsibility for increasing production rests with the private sector and when I refer to the private sector, I am referring not only to organised industry and labour, but also to the millions of our peasants and artisans." "The second thing which may be evident from what I have said earlier is the seriousness of our foreign exchange position." One wonders, however, if the tax proposals are calculated to help achievement of the basic objectives of our policy.

Take the super profits tax. It is a tax on taxed income. It is a tax on economy and efficiency and higher productivity. It is a deterrent tax on inflow of foreign capital. Does it not, therefore, go against those basic principles of taxation which have been evolved through many centuries?

The super profits tax also negates the attractive features of our tax system, namely, development rebate and five year tax holiday.

I do not have many doubts about the situation which emerges. Our objectives have been wisely devised; but the ways and means adopted to achieve them are calculated to defeat the very objectives. It is not a question, as is some times posed, of public and private sectors. It is a basic question of mobilising, in the most efficient manner, our limited national resources. It is in this context that I sincerely believe that our Industrial Policy enunciated in 1956 has become outdated and obsolete. There cannot be a dichotomy of productive effort, reserved here for the private sector and there for the public sector. There is only one sector and one goal. The only goal is the national growth and prosperity.

It is only in recent years that people in the middle and lower income brackets have shown considerable interest in industrial investments. This is doubtlessly a very healthy and profound development. It has a far reaching impact on our economic and social framework. I wish the Government realised the deterrent impact

the new budget would produce on these large number of investors and disturb healthy trend of more widespread interest in capital issues.

There is yet another area into which I am afraid the dynamic sense of national urgency has yet not penetrated. The functioning of the licensing procedures and of the autonomous public institutions continues to be as, if not more, dilatory than before. The impression has gained currency that the national emergency has not brought any perceptible change in the red tape-ridden methods and procedures of Government.

I am aware of quite a few cases of leading foreign companies which otherwise willing to make large investments, were repelled by bureaucratic behaviour and dilatory methods of licensing and regulatory procedures. It is, perhaps, seldom a more precious asset, that is, highly advanced technical know-how. The United States of America spends every year on research alone some 15 billion dollars, that is, about Rs 7500 crores equivalent to our total public spending under the entire Third Five Year Plan in all the sectors of the economy. It is, indeed, this national urge for more efficient techniques, tools and processes which have made possible the high productivity of American industry and the phenomenal prosperity of the American people.

I had referred earlier to another objective of our current economic policy, to hold the price line. It is a 'must' for our rapid and accelerated rate of industrial and economic growth and for mobilising our resources for defence at minimum cost. I am afraid, however, that powerful forces have been released in the economic system which would make it impossible to hold the price line. Government spending, both on civil and defence accounts, has been raised phenomenally. Similar spending on capital account has been likewise rising. Monetary incomes have been touching new high levels. Liquidity within the country is expanding owing to foreign aid and investments. Industrial costs have been allowed to increase

unabated. Taxes have been imposed which tend to further increase the costs. The cost of capital equipment and construction has considerably gone up. The cost of capital goods has witnessed an unprecedented rise in recent years while bank credit to industry is becoming more and more difficult to obtain. Disposable profits have been reduced by all forms of taxation.

This does not purport to be the record of proceedings of the meeting.

JESSOP AND COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN that the THIRTYFIRST ANNUAL GENERAL MEETING of the Members of Jessop & Co., Ltd. will be held in the Committee Room No. 2 of the Bengal Chamber of Commerce & Industry at 6, Netaji Subhas Road, Calcutta-1, on Monday the 29th April 1963 at 11 A.M. for the transaction of the following business:—

1. To receive and consider the Accounts, together with the Reports of the Board of Management and Auditors for the year ended 31st October, 1962.
2. To declare a Dividend.
3. To appoint Auditors and fix their remuneration.
4. To transact any other business of an Ordinary General Meeting.

The Ordinary Share Transfer Registers of the Company will be closed from 17th April to 29th April 1963, both days inclusive.

By Order of the Board,
K. S. BASU,
Secretary.

63, Netaji Subhas Road,
Calcutta, 25th March 1963.

Note:—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

of 17,000 bales over the consumption in December. However when compared to the relevant figures of 4.01 lakh bales in the same month last season, it is evident that consumption is still lagging behind. The moderate improvement in the consumption of cotton in the month under review has been largely offset by the decline in the consumption of imported growth which at 90,000 bales shows a decline of 14,000 bales from that of December last. The overall foreign cotton consumption in September-January is however placed higher by 7,000 over the relevant figures in the corresponding period of last season. Stocks of domestic cotton show a modest improvement while those of foreign cotton record a slight decline.

The cotton marketing season in Vidarbha, Kandesh, Rajasthan, UP, Punjab and Marathwada is reported to have almost ended. But the marketing season in Gujarat and Saurashtra is in full swing, while it is yet to start in the South. Out of the total crop of six lakh bales of Digvijay cotton nearly 4.5 lakh bales have already been sold. The unsold stocks with the traders and ginners are estimated at 85,000 bales while the stocks with the societies are placed at 65,000 bales.

PIECEGOODS

The cotton piecegoods market during the past week presented cheerful conditions. Demand from upcountry centres looked up and bookings for overseas countries also recorded sizable improvement.

The revival of demand from the upcountry centres helped the dealers to reduce their stocks to a considerable extent. The transactions with the mills on the other hand were restricted as the wholesale dealers were reluctant to make commitments on account of the tight financial conditions and the uncertainty in the political horizon.

Seasonal goods were in good demand. Upcountry dealers evinced keen interest in piecegoods like bleached longcloth, lawns, cambrics, voiles, dhoties, saris and mulls. Quality bleached longcloth and cambrics were, however, in short supply.

Calcutta, Bihar, UP and Rajasthan were the prominent upcountry buyers during the week under review. Enquiries from Assam were restricted and the dealers in Bombay were disinclined to transact any business with that destination owing to the longish delay in receiving payments.

On the export front business with the UK was limited. Sudan was satisfied with a small quantity of sheetings. East African interest was confined to bed tickings, sheetings and coatings. Ceylon accounted for a moderate quantum of bleached longcloth and dhoties. Australia's fancy was limited to coatings, sheetings and wider width gadlapt.

The Government of Poland is reported to have requested the Government of India to permit further exports of Indian cotton waste at least to the tune of Rs 10 lakhs to Poland during the current year. This request, it should be noted, follows the Government of India's ban on exports of cotton waste to East Germany and Poland. Though there was no agreement between the two Governments covering the exports of this particular commodity exports of cotton waste were allowed till recently. The ban has naturally compelled the Polish Government to approach the Government of India for allowing exports at least to the quantum specified in the request. This would mean that we have to export about 4,000 bales of cotton wastes from India in the previous year.

★

The prospects of stepping up exports of cotton piecegoods to Burma, have brightened with the authorities decision to advance money against letters of credit. Out of the licences for import of cloth and yarn worth 50 million kyats issued by the Government of Burma nearly 60 per cent still remain unutilised. As some of the licences are valid upto May the Burmese traders are expected to make a frantic effort to cover their requirements within a few weeks.

It has also been reported that the Government has issued textile licences valued at 249 lakh kyats to the Joint Venture Corporation and those valued at 112 lakh kyats to the Union of Burma Co-operative Wholesale Society Limited in October 1962. These licences will be valid upto the end September. Private trading companies were also permitted licences for a total value of over 148 lakh kyats valid upto 31 May 1963 in last December. Out of these, import licences worth 315 kyats remain unutilised. Therefore Burma is expected to quicken its purchase of cotton piecegoods particularly items like voiles, mosquito nettings, dyed tussore, striped and printed shirtings, dyed sheetings and dyed and printed flannelles, in the immediate future.

★

TEA

Good Demand at Lower Rates

ALTHOUGH export sales have ended at almost the same time as in 1962, an encouraging factor is that the season has closed with virtually no carryover, thanks to the short crop combined with bigger export sales. It is, therefore, expected that the new season may start in a steadier tone. Although many tea districts are reported to be experiencing drought so far, it is hoped that the new crop will soon start making progress when normal rainfall sets in.

According to tea circles, the relaxation in the quantum of ex-

port duty, proposed in the 1961-62 Budget had almost certainly contributed towards the increased export of tea during 1962-63. Apart from well-sustained internal demand, the 1962-63 season's trading has witnessed the continued support of the USSR for Darjeeling tea and orthodox Assams. Of particular note has been the increased activity of such countries as Iran, Australia and the Netherlands, all of which showed up well in the shipping lists.

Meanwhile, in the Dust sale held in Calcutta this week, offerings amounted to 29,582 packages. Demand was good and general. Medium CTC types were sold at a discount of 15 nP to 20 nP with the secondary varieties coming in for keen competition. Good CTCs were readily absorbed at slightly easier rates. Plain orthodox types were well supported at rates which were 10 nP to 15 nP below last levels, while the Assam varieties followed a similar trend.

The few liquoring invoices, however, realised satisfactory prices. Legg-cut teas were a strong feature of the sale and were fully firm with the selected lines dearer. Following rates (per kilo) were quoted:—Plain Orthodox Dust Rs 4.20 to Rs 4.45; Medium Assam Dust Rs 4.60 to Rs 5.30; Leggcut Dust Rs 5.20 to Rs 5.60; Medium Assam CTC Dust Rs 5.50 to Rs 5.90 and Good Assam CTC Dust Rs 6.60 to Rs 7.10.

In the Cochin market, offerings were 340,000 kg of Leaf tea. Against good general demand. Low Medium and Medium teas were quoted 10 nP to 15 nP a kilo easier, particularly Fannings grades. Good Mediums were irregularly easier following quality, while high-grown and unorthodox descriptions were lower.

There was a good general demand for the 7,357,181 pounds tea offered in the Colombo market. Best Dimbula/Dickoya broken were irregularly lower following the decline in quality; but other sorts were strong and generally 5 to 10 cents dearer. Brighter Uvas were steady. Useful coloury medium broken orange pekoes from western districts met with good demand and were about 5 cents dearer. Low mediums were 5 to 10 cents lower, but may be quoted firm on last week's closing rates.

Low-grown flowery BOPs were slightly dearer and other Middle East Leaf types were irregular. Small leaf broken were also irregular. Good liquoring Dimbula/Dickoya BOP Fannings were in strong demand and fully firm to dearer. Mediums were irregular and generally easier and low-grown were fully firm to slightly dearer.

A nationwide tea publicity drive is being organised on a massive scale in Australia in an attempt to save Ceylon's dwindling tea market. At present, more than 60 per cent of tea, now imported into Australia, is from Ceylon. Australia

is also the fourth largest customer of Ceylon tea.

With the production of 50,000 pounds in February 1963, the total tea outturn in Pakistan, during the eleven months ended February 1963, was lower at 51.4 million pounds as compared to 58.17 million pounds in the corresponding period of the previous year.

The amount of tea sold in the internal auctions, during the eleven months of 1962-63, totalled 42.7 million pounds as against 43.82 million pounds in the corresponding period of 1961-62.

Rather more tea was put up for sale at last week's London auction, total offerings amounting to some 83,000 packages as compared with 75,000 packages offered in recent weeks. Teas from North India accounted for most of the increase in offerings and the market for these, together with the other miscellaneous growths, displayed a similar trend to the previous week with good liquoring invoices fully steady to dearer. Medium descriptions were about steady, while the thin and plain liquoring African teas were cheaper to buy. A firm market prevailed for all descriptions among the South Indian teas on offer with Fannings grades particularly in request. These were often dearer.

The Ceylon teas encountered a strong and active demand at fully steady to dearer rates for all teas except a few poor medium and low-grown sorts, which sometimes declined by one penny per pound. The best quality invoices on offer were against the strongest feature of the sale. The week's price indication for Plain tea was one penny lower at 2sh 9d to 3sh 1d per pound.

Need to Raise Cane Output

SUGAR markets have continued to display a firmer tendency on account of the continued buying support from the main consuming areas. In the Hapur market, mill delivery prices have improved by about Rs 2 per quintal. The steady rise in prices is attributed to the reports that the sugar factories in West Uttar Pradesh are unwilling to dispose of their stocks at the current price level in anticipation of a further rise. Consequently, the supply position remains tight.

Since the output of the commodity during the 1962-63 season is expected to be not more than 2,100,000 tons, it is feared that the trend of prices will become still firmer unless stern measures are adopted by the Government to hold the price down to a reasonable level. Judging by the performance of the industry, the output target looks rather big. In order to achieve this target, the Government has proposed to offer some incentives.

In the above respect, the Union Minister for Food and Agriculture

DONATE
LIBERALLY
TO
NATIONAL DEFENCE FUND

has already indicated that the price of sugarcane will be increased shortly. He has exhorted kisans to raise production of cane, as the fate of the industry and the trade is linked with it. He has stated that Bihar has produced 10.57 crore maunds of sugarcane last year, whereas this year it has gone down to 5 crores maunds, because of the imposition of a 10 per cent cut on sugar production. He has suggested that Bihar should produce at least 15 crores maunds of cane to feed its 28 sugar mills.

It is true that the cane-growers should be encouraged to produce more. Since they have received more for cane due to linking its price with recovery, any further rise incentive is expected to do more harm than good. If cane cultivation is to be promoted, it is essential that the yield per acre is increased. Since the price of cane constitutes a major item in the cost of production, it should be supplied to the sugar mills at a reasonable price.

NON-FERROUS METALS Mixed Trend in Prices

Prices on the Bombay Non-Ferrous Metal market have continued to show a mixed trend. Owing to tight money conditions, dealers in Copper and Zinc have unloaded their stocks, while arrivals from the mofussil centres have increased appreciably. The Government's policy to conserve stocks of these metals for more vital needs in view of the foreign exchange shortage appears to have induced the consumers to turn their attention to metals like aluminium. The demand for these two metals has, therefore, shrunk.

For obvious reasons, the prices of Lead and aluminium are well maintained. The market for Tin has continued to rule firm due to persistent buying in view of the tight supply position.

On the London Metal Exchange, Copper was neglected except for some small business. The prices of Lead reacted on rumours of an early settlement in the 9-month old strike. Although a few buyers were operating on the fall; their demands were insufficient to check the decline. Zinc was also offered in sympathy with the setback in the lead market. Tin prices, however, continued to rise, thanks to the fair business reported done.

COFFEE World Coffee Agreement

It is announced that the Executive Council of the International Agreement, composed of 27 pro-

ducer countries, has agreed to extend the present Agreement for six months until 30 September 1963. The Council has also approved export quotas for the corresponding period, totalling 20,500,000 sacks. The extension will be valid till a new agreement, drawn up between producer and consumer countries last year, comes into force.

The United Kingdom is becoming a substantial consumer of coffee with 66,879 tons imported last year. Her import of raw coffee in 1953 was only 29,935 tons and the rate of rise is one of the highest in Europe. India has not shared in this growth of the British market. Her contribution in 1956 was only 545 tons; in 1958—1,170 tons; in 1961—1,495 tons and in —630 tons (up to November).

The Coffee Board exposed at the major Pool sale, held at the weekend at Coimbatore, 983 tonnes of coffee consisting of 296 tonnes of Plantation variety; 627 tonnes of Robusta and 60 tonnes of Arabica Cherry. Following were the bidding range (all rates per 50 kg ex-bag, ex-curing Works):—Plantation PB Rs 285 to Rs 310; Plantation A Rs 245 to Rs 255; Plantation Triage Rs 215 to Rs 235; Cherry Rs 170 to Rs 175; Robusta PB Rs 168 to Rs 170 and Robusta Flat Rs 163 to Rs 167.

CASHEW Market Turns Quiet

Prices of Cashewnut have displayed a slightly easier tendency following buyers' resistance in the kernel market. The US buyers are reported to have turned down offers of about 25,000 cases of kernels at 46 cents a pound. It is stated that buyers are few even at 45 cents. Any decline in kernel prices below 44 cents is, however, ruled out by the market circles in Bombay in view of the wide disparity between raw nut and kernel prices.

Towards the end of last week, about 50 tons of African Angoche were reported to have been transacted at Rs 710 a ton. There are now no buyers on fears of a lower Indian crop, while sellers are said to be in plenty.

CHEMICALS & DYES Restricted Activity

The Bombay market for Dyes and Chemicals remained generally steady. Buyers were few and the occasional purchases were restricted to immediate needs. Stockists were, however, eager sellers, being influenced by the paucity of funds and the uncertain policies conditions. The forthcoming import

policy had also weighed with the operators.

In the Chemicals section, Acids were firm, because of seasonal demand. Prices of Caustic Soda and Soda Ash improved on upcountry demand and shortage of stocks. Bleaching powder moved up slightly in the absence of sellers. On the other hand, Camphor and Menthol suffered a slight setback due to the availability of smuggled goods.

In the Dyes section, consumer demand was negligible. There was some demand for Vat dyes while Bases were steady. Stray enquiries from Ahmedabad had no appreciable effect on the market. There was, however, a tendency for prices to seek low levels due to continued arrivals of imported goods.

COCONUT OIL Sharp Fall in Prices

In the Bombay market, there has been a sharp fall in the prices of Coconut Oil. This is mainly attributed to the easy supply of copra at lower rates. The terminal markets in Malabar and Mysore are receiving substantial quantities of copra. There is a general feeling that prices will go down further as there are very few buyers even at the prevailing low prices.

SILK

The Bangalore Silk market presented a mixed trend during the week ended 22 February. Filature silk prices remained steady during the week. Cottage basin silk prices increased to rule between Rs 94.80 to Rs 103.06 per kg. Price of superfine quality of charka raw silk increased to rule between Rs 89.28 to Rs 95.90 per kg. Charka raw silk (1st quality) increased to rule between Rs 84.87 and Rs 88.28 per kg.

Spun silk yarn prices remained firm during the week.

In Channapatna and Mugur, prices of reeling cocoons increased to rule between Rs 5.00 and Rs 5.50 and between Rs 4.10 and Rs 6.50 per kg, respectively. In Sidlaghatta, minimum price came down slightly and the maximum price remained steady.

The Bhagalpur Silk market remained steady during the previous week. Eri cocoon and yarn prices were also steady. Daba variety of tasar reeling cocoons continued to rule between Rs 85 to Rs 90 per kahan.

In the Malda Silk market Cottage basin silk ruled between Rs 81 and Rs 107 per kg. Charka raw silk ruled between Rs 75 and Rs 81 per kg. Transactions of reeling cocoons restarted after a lapse of about 2½ months. Reeling cocoons were quoted between Rs 5.36 to Rs 5.81 per kg.

GOLD & SILVER

Narrow Price Movements

Conditions on the Bombay Bullion Exchange remained generally quiet. In the Gold section, there was a tendency for prices to decline in the absence of demand. Fears of fresh measures as also the report that the Government might supply the metal at the international price to promote export of jewellery made for hesitation. The rate was quoted at Rs 97 and the business put through was limited. Sovereign remained unchanged at Rs 74.

The Silver section was dull and price movements were confined to narrow limits. Sentiment was affected slightly by reports of some arrivals, which amounted to 13 bars as against an offtake of only 12 bars. The rate for ready (below .996) was quoted at Rs 238.

OILS & OILSEEDS

Initial Steadiness not Maintained

Although the market for Oils and Oilseeds started the week on a steady note and prices improved on speculative support during the initial period of the week, fresh support was totally absent at the close due to quieter advices from the oil section.

In the Castorseed section, major bull operators started unloading their purchases in panic following the issue of tenders amounting to 3,650 tonnes. In demoralised trading, the maturing March contract slumped by more than 12 points in a single day. The downward trend gathered further momentum due to speculative selling. The failure of the bull squeeze was attributed mainly to the unwillingness of the buyers to absorb the offerings of spot supplies which they themselves had attracted by pushing up the prices to unusually high levels. The sustained lull on the export front in respect of castor oil and the liberal inflow of spot castorseed and castor oil also tended to break the bull hold. Castor ready was quoted at Rs 31.12 and Castor Oil, commercial quality, at Rs 12.44.

In the groundnut section, prices fluctuated within a range of less than two points. The initial steadiness was not maintained till the close due to the withdrawal of support from vanaspathi manufacturers and crushers. Ready Bold was quoted at Rs 41.75 and Groundnut Oil at Rs 16.25.

The market for Linseed depended mainly on the behaviour of castorseed and groundnut. Ready was quoted at Rs 32.50 and Linseed Oil at Rs 12.37.

For the Investor

INVESTMENT GOSSIP Cautious Mood

Though no indication was given by the Union Finance Minister of Government's reaction to the representations that had been made about the extreme severity of the Super Profits Tax when the presidents of the eight recognised stock exchanges in the country met him last week, the hope is still lingering that some suitable modifications will ultimately be made to the tax. So far, however, reports have it that modifications if any will be mainly in respect of foreign companies and banks. The improvement in sentiment noticeable toward the close of this week is partly due to hopes of an improvement in the political situation consequent on the Chinese decision to release Indian POWs. The lowering of the minimum prices for nine forward scrip in the Calcutta stock exchange has also been helpful in reviving interest at the lower levels. Even so, indications are that operators and investors will be reluctant to extend their commitments till something definite is known about the SPT.

SPT apart, there are also quite a few adverse factors in the investment situation which are inhibiting investment interest. Already a number of companies have slashed dividends and investors are experiencing considerable financial strain as a result of the heavy erosion in equity values that has occurred in the course of the last few months. The outlook for some of the major industries is still clouded by various shortages and intense competition in world markets. Cotton textile exports continue to be at a discouraging level and from the accounts published so far, profits of cotton textile companies have declined last year as compared with the previous year. The outlook for the jute industry is not assessed to be very bright in view of the increased competition from Pakistan in the sacking markets. The Chairman of the IJMA has warned that there is no room for complacency on the strength of the performance of the industry last year. Increased exports in 1962 were made possible because of a large backlog of unsatisfied overseas demand. The engineering industry is handicapped by shortage of raw materials both indigenous and imported.

WATCHDOG APPLAUDS . . .

ICICI

Thanks to Mr. Morarji Desai's defence and development Budget, the capital market is moribund. The decision of Goodyear to defer its rights issue, Central Bank's reluctance (though sanction has been received from the Controller of Capital Issues) to proceed with raising of fresh capital and the extension of the date for application moneys in respect of East Anglia's rights issue all follow upon the happenings in Lok Sabha on the evening of 28 February, 1963. The success of English Electric's issue is perhaps just the exception that proves the rule.

In such a situation the responsibilities of India's financial institutions for furthering industrial progress will be the greater. Banks will be called upon for additional requirements of working capital, and strained though its resources are, we may be sure that the banking system will not allow defence and development production to suffer for want of funds. But the problem that remains is one of securing capital for expansion and new enterprises; and it is also one of finding the requisite foreign exchange, since no releases can be made from our foreign balances. Here is where the ICICI

(or, to give its name in full, the Industrial Credit and Investment Corporation of India Limited) can be expected to rise to the occasion.

ICICI got off to a good start under the Chairmanship of Sir Ramaswami Mudaliar. Formed (in 1955) at a time when the capital market was, for the entrepreneur, practically non-existent, ICICI soon secured the resources for assisting the formation of industry in every way: a loan of \$10 million was obtained from the IBRD (the World Bank, as it is popularly known) in March 1955, and there was besides an advance of Rs 10 crores from the Government of India; and this was in addition to the issued and paid-up capital of Rs 5 crores.

There can be little doubt that under the historian of the Indian money market will record ICICI's role as catalyst and reviver of the capital market. Soon, with the purposive and vigorous underwriting activities of ICICI, the stock market climate so improved as to usher in boom conditions for the raising of fresh capital. (Indeed, at the time one prominent underwriting done by ICICI was a failure, in that the underwriter was left to take up the bulk of the issue; and there was criticism that ICICI was much too fro-

NEW ISSUE NOTES English Electric

It is learnt that even with the present depressed conditions in the capital market, the response from the investing public to the issue of equity capital for Rs 25 lakhs by the English Electric Company had been very encouraging. While the final figures are yet to be tabulated, reports indicate that the subscriptions may be around Rs 60 lakhs.

New India Assurance

The New India Assurance Company Limited will raise further capital of Rs 28,48,425 in equity shares of Rs 15 each as bonus shares on capitalisation of Reserves to a like extent.

Fibre Glass Pilkington

The Fibre Glass Pilkington Limited, Bombay, a new company, is to issue capital of the value of Rs 1,19,99,930 in equity shares of Rs 10 each, at par. Of this, shares of the value of Rs 60 lakhs will be offered for subscription to Fibre Glass Limited of St. Helens, Lancashire, England.

Heavy Electricals

Heavy Electricals (India) Limited, Bhopal, a Central Government undertaking, is raising further capital of Rs 50 lakhs, divided into 5,000 equity shares of Rs 1,000

each, to be issued privately for cash, at par.

Indian Oil

Indian Oil Company Limited, another Central Government undertaking, is to issue further capital of Rs 25 lakhs, divided into 2,500 equity shares of Rs 1,000 each, to be issued privately for cash, at par.

MCIC

The Mettur Chemical & Industrial Corporation Limited, Madras, is issuing capital of Rs 90 lakhs consisting of 6,00,000 equity shares of Rs 10 each and 3,00,000-9 per cent preference shares of Rs 10 each, all for cash, at par.

Nimar Textiles

Nimar Textiles Limited, Maharashtra, will issue capital of Rs 60 lakhs, divided into 50,000 equity shares and 10,000 Cumulative Preference shares of Rs 100 each carrying dividend at 9.5 per cent per annum for cash, at par.

Bilaspur Spinning

The Bilaspur Spinning Mills & Industries Limited, a new company incorporated in West Bengal, is to issue capital of Rs 27.39 lakhs, divided into 1,98,900 equity shares of Rs 10 each and 7,500 Cumulative Redeemable Preference shares each carrying dividend at 9.3 per cent.

ward; but of course such criticism was wholly wrong).

Then, after his tenure in office in Washington winning friends and influencing people (he has always had that ability), Mr. G. L. Mehta assumed the Chairmanship of ICICI; he brought to it the verve and dash that are his especial attributes. Ever-increasing assistance to industry, and the finding of vaster new resources, in rupees and in dollars, have highlighted the years that Mr. Mehta has been Chairman. The accounts and report for 1962 show that—

- (1) Loans from the World Bank, four in number, add up to \$60 million. But—
- (2) The amount drawn is no more than a shade under Rs 10 crores at Rs 9.95 crores, or about \$20 million.
- (3) Advance from the Central Government adds up to Rs 17.50 crores. But—
- (4) Only Rs 14.50 crores have been drawn.
- (5) Reserves and surplus built up are placed at Rs 1.58 crores against the paid-up capital of Rs 5 crores.
- (6) So far, 183 companies have received a total of Rs 60.16 crores in assistance.
- (7) ICICI's investments are shown at Rs 10.48 crores, its rupee loans (sanctioned) at Rs 9.07

crores and its foreign exchange loans (again, sanctioned) at Rs 18.73 crores, against which the amount disbursed is Rs 11.30 crores.

(8) Its best investments are in Amar Dye-Chem, Mysore Electrical Industries and Standard Batteries, the book profit in each case being about cent per cent.

I need, however, to point out that, according to the Directors' Report, almost the whole of the World Bank credits have been utilised by ICICI, in the sense that \$56 million have been committed. So, naturally, a fifth line of credit from the World Bank is now under negotiation.

Again, foreign exchange credits were also at the resource of ICICI as to \$5 million from the Agency for International Development (USA) and as to DM 20 million from the West German Reconstruction Loan Corporation; and discussions are afoot for another DM 5 million.

What does ICICI hold for the future of Indian industry? Its importance is best brought out in the following quotation from the Directors' Report: "... with the increase in the Corporation's activity there were inquiries from overseas institutions regarding the possibility of buying its shares." I see, aye, a continued contribution to the Indian economy from ICICI.

Carborundum Universal

Carborundum Universal Limited has proposed to issue 20,000 equity shares of Rs 100 each, at a premium of Rs 25 per share, to the existing shareholders in the proportion of two shares for every five shares held. The permission from the Controller of Capital Issues has already been obtained.

United Carbon

United Carbon India Limited, Bombay, a new company, is to issue capital of Rs 1,62,50,000 in equity shares of Rs 100 each, at par. Of this, shares of the value of Rs 65 lakhs—Rs 50 lakhs for cash and Rs 15 lakhs for consideration other than cash against technical know-how—will be offered for subscription to the foreign collaborators, United Carbon Company, Houston, Texas, USA.

IMFA

Indian Metals & Ferro Alloys Limited, Orissa, will issue capital of Rs 75 lakhs (inclusive of Rs 4,66,000 already raised), divided into 6,00,000 equity shares of Rs 10 each and 15,000 Cumulative Redeemable Preference shares of Rs 100 each carrying dividend at 9.5 per cent for cash, at par.

Mithila Iron & Steel

The Mithila Iron & Steel Company Limited, a new company, incorporated in West Bengal, is issuing capital of Rs 35 lakhs, divided into 2,50,000 equity shares of Rs 10 each and 10,000-9.5 per cent Cumulative Redeemable Preference shares of Rs 100 each.

OFC

The Orissa Forest Corporation Limited, a State Government undertaking, will issue capital of Rs 25 lakhs, divided into 25,000 equity shares of Rs 100 each for cash, at par, to be subscribed privately.

*

INVESTMENT BRIEFS

Trichinopoly Mills Limited has reduced the dividend from 15 to 10 per cent, taxable, for 1962.

Andhra Sugars Limited has revised the dividend on the Ordinary shares to 12 per cent, taxable, due to the need for providing larger sum towards taxation.

Likewise, the directors of Krishna Industrial Corporation Limited have reduced the dividend on the ordinary shares to 8 per cent from 10 per cent, taxable.

Rajalakshmi Mills Limited has proposed a taxable dividend of 15 per cent for 1962 as against a taxable dividend of 20 per cent paid previously.

BALANCE-SHEET BRIEFS

Dunlop Rubber Company (India) Limited has reported a lower net profit, after providing for depreciation and taxation, of Rs 95.59 lakhs for 1962 as against Rs 1.65 crores for the previous year. The directors have proposed a taxable dividend of 15 per cent as against a taxable dividend of 20 per cent paid previously.

According to a preliminary report, Guest, Keen, Williams, Limited has made a higher net profit, before providing for taxation, of Rs 1.30 crores for 1962 as against Rs 1.04 crores for 1961. A final dividend of 80nP per share, has been proposed, making a total of Rs 1.40 per share; taxable for the year, same as in the previous year.

The preliminary report issued by British Paints (India) Limited reveals a net profit of as much as Rs 24.33 lakhs for 1962 as against Rs 13.49 lakhs for the preceding year. The dividend is, however, reduced from 12.5 to 10 per cent, taxable.

The working of the Nizam Sugar Factory Limited has resulted in a net profit of Rs 50.53 lakhs for the 15 months ended 30 September 1962 as against Rs 79.43 lakhs for 1960-61. The dividend is reduced from Rs 5.75 to Rs 4.50 per share, subject to tax.

*

BALANCE-SHEET REVIEWS Excellent Results of INDAL

THE Indian Aluminium Company Limited has produced excellent working results for 1962, reflecting demand for the company's products being excess of supply. Sales have reached yet another record level of Rs 10.50 crores against Rs 8.39 crores, while the net profit, after providing for Depreciation and Taxation, works out to Rs 1.27 crores against Rs 1.24 crores for the preceding year.

In respect of allocations, Depreciation is raised to Rs 1.05 crores from Rs 58.87 lakhs and Development Rebate Reserve to Rs 61.50 lakhs from Rs 45.50 lakhs. The provision for Taxation is slightly lower at Rs 52.50 lakhs against Rs 53 lakhs. After transferring Rs 30 lakhs from Fixed Assets Replacement Reserve, General Reserve is raised to Rs 89 lakhs from Rs 50 lakhs. The dividend on the Ordinary shares is raised from Rs 1.50 to Rs 1.75 per share, subject to tax.

According to the directors' report, the year under review marked the successful completion of the integrated expansion programme undertaken by the company in 1959 as well as the commencement of its latest expansion project for doubling the capacity of the Alupuram smelter and for setting up an aluminium foil mill at Kalwa.

Consequently to the commissioning of the second stage of the Hirakud smelter, primary metal production increased to 22,912 tonnes during

the year under review from 15,909 tonnes in 1961.

In spite of extensive dislocation resulting in the final stages of modernisation and expansion of the Belur rolling mill, total production of fabricated products at all plants was almost unchanged at 12,974 tonnes as against 13,193 tonnes. The expansion of the Muri plant was completed and it is expected that the expanded plant will be able to operate at higher than its rated capacity. The new smelter at Alupuram is scheduled to go into operation in mid-1964. The foil mill is projected for completion in mid-1965. The addition of aluminium foil to the already diversified range of products manufactured and sold by the company will enable it to participate in this new and rapidly developing market for aluminium.

National Pipe Repeats

The unsatisfactory supply position of raw materials, irregular supply of power and increased expenditure under repairs and maintenance—all these factors are reflected in the working results of the National Pipes & Tubes Company Limited for the year ended 30 September 1962. Sales have declined from Rs 1.16 crores to Rs 1.08 crores, while the net profit, after providing for Depreciation and Taxation, is substantially lower at Rs 9.73 lakhs as against Rs 14.55 lakhs for the preceding year.

Except Development Rebate Reserve the provision for which is raised to Rs 15,600 from Rs 9,205, all other allocations have been reduced.—Depreciation from Rs 2.09 lakhs to Rs 1.75 lakhs; Taxation from Rs 12 lakhs to Rs 11.07 lakhs; General Reserve from Rs 5 lakhs to Rs 2 lakhs and Dividend Equalisation Reserve from Rs 2.50 lakhs to Rs 1.00 lakh. The dividend on the Ordinary shares is, however, repeated at Rs 2 per share, subject to tax.

The directors state the Company's import licence applications for plant and machineries in connection with the expansion scheme are under the process of examination by the various Government departments. It is expected that the licences will be issued shortly. They add that the prospect for the current year is dependent on the improvement of the supply position of raw materials and adequate power supply.

Indian Tack & Nail Incurs Loss

Indian Tack & Nail Company has released the second report for the year ended 31st December 1962. Sales are shown at Rs 58,165 as against nil, while the accounts reveal, after providing for Depreciation, a loss of Rs 3.19 lakhs as against a loss of Rs 1.01 lakhs for the preceding period covering nine months ended December 1961.

A sum of Rs 1.93 lakhs (nil) is provided for Depreciation. The debit balance carried forward to next year is Rs 4.20 lakhs. The company's factory at Konnagar has been completed and all machinery installed. Production of shoe tacks and nails began in October 1962. The directors state that they are confident that full production can be attained during the current year, provided adequate supplies of raw materials and electric power can be ensured.

Star Paper Fares Well

The working of the Star Paper Mills Limited has resulted in a net profit, before providing for Depreciation, of Rs 13.82 lakhs for the year ended 30 September 1962 as against a loss of Rs 2.26 lakhs incurred in the preceding year. The results would have been much better, but for the fact that normal production on the new plant could not be achieved before July 1962 due to stoppage of the new Paper Machine No. 3 on account of the damage to the M. G. Rubber Presser Rolls. Normal production on the new plant was thus obtained for only three months of the year under review.

Sales have risen to Rs 2.97 crores from Rs 1.74 crores. Out of the profits mentioned above, a sum of Rs 14.97 lakhs (nil) is set apart for Depreciation. No dividend is recommended. A sum of 56,490 is carried forward to next year.

The directors state that due to allotment of insufficient forest areas of twisted pine by the Uttar Pradesh Government, supplies of wood from that State's forest were grossly inadequate and purchases of wood had to be made from the market at prohibitive prices. Due to high transport and labour charges together with an increase in the forest loyalty, the extraction cost of pine wood has also been higher than anticipated. The prices of chemicals and stores rose further during the year. All these unforeseen factors have considerably affected the working results of the year. An application has been to Uttar Pradesh Government for allotment of additional raw material for increasing production further.

Andhra Sugars Earn More

The rise in sales from Rs 1.65 crores to Rs 2.33 crores is reflected in the working results of Andhra Sugars Limited for the year ended 30 September, 1962. The net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 18.26 lakhs as against Rs 10.47 lakhs for the preceding year.

After transferring Rs 3 lakhs from General Reserve, the directors have made the following allocations:—Depreciation Rs 10.67 lakhs (Rs 8.94 lakhs); Taxation Rs 7.50 lakhs (Rs 5.70 lakhs); Deve-

lopment Rebate Reserve Rs 8.00 lakhs (Rs 3.35 lakhs) and Rehabilitation Reserve Rs 4.50 lakhs (nil). The dividend on the Ordinary shares is maintained at 16 per cent, taxable.

The quantity of cane crushed was 165,978 metric tons and sugar manufactured 164,902 bags as against 169,717 tons of cane and 173,430 bags of sugar in the preceding year.

During the year, 23,450 metric tons of Superphosphate was produced and sales amounted to 25,886 tons as against 15,272 tons of production.

Both the Industrial Alcohol Plant and Acetic Acid plant will be in full production in the current year and both the units are expected to contribute substantially to the prosperity of the company.

The Caustic-Soda-Chlorine plant could not be commissioned as anticipated earlier. The directors have finalised arrangements for the supply of plant and machinery from Japan and the Government of India has given the consent. The Caustic-Soda plant is expected to go into production during the current year.

Considerable progress has been made with regard to the Fertiliser project at Kothagudem. Most of the preliminary work associated with this project has been completed. A new company is, therefore, to be registered shortly with foreign financial and technical collaboration. The collaboration agreement, which has been approved by the Government, provides for investment of Rs 40 lakhs by the Andhra Sugars Limited in the new company.

Thirumbadi Rubber Pays Less

The Thirumbadi Rubber Company Limited has earned a net profit of only Rs 1.04 lakhs for the year ended 30 September 1962 as against Rs 5.75 lakhs for the previous year although the latter figures includes Rs 5.24 lakhs being the profit on the sale of assets of the Calicut Estate.

After transferring Rs 1.00 lakh from Debenture Redemption Reserve, Depreciation is raised to Rs 28,379 from Rs 27,271 and Taxation to Rs 94,000 from Rs 76,933, apart from providing a sum of Rs 75,000 for General Reserve. The provision for Rehabilitation and Development Reserve is, however, lowered to Rs 25,000 from Rs 4.75 lakhs. The dividend is reduced by 2 per cent to 10 per cent subject to tax.

The quantity of rubber manufactured is lower at 202,316 kgs against 245,549 kgs.

Lower Profits for Kumbergode

Kumbergode Estates Limited has also reported a lower net profit,

after providing for Depreciation and Taxation, of Rs 58,804 for the year ended 31 October 1962 as against Rs 94,376 for the previous year, reflecting the lower outturn of 129,778 kgs of coffee as against 182,301 kgs.

In respect of allocations, Taxation is raised to Rs 56,729 from Rs 38,780, while Depreciation is reduced to Rs 31,933 from Rs 39,222 and General Reserve to Rs 10,000 from Rs 15,000. The dividend is reduced from 17.5 to 15 per cent, subject to tax.

National Rubber Pays More

Thanks to the major effects of the expansion scheme and an all-round improvement in the demand for the company's products, National Rubber Manufacturers Limited has reported an increase in sales from Rs 2.70 crores to Rs 3.52 crores for the year ended December 1962. The net profit, after providing for depreciation and taxation, is slightly lower at Rs 6.41 lakhs as against Rs 6.87 lakhs, mainly due to a large provision for taxation.

Apart providing a sum of Rs 5.00 lakhs for taxation, and maintaining Dividend Equalisation Reserve at Rs 1.00 lakh, Depreciation is raised to Rs 7.58 lakhs from Rs 6.93 lakhs. The provision for Development Rebate Reserve is lower at Rs 46,307 against Rs 1.72 lakhs. The dividend on the Ordinary shares is raised from 6½ to 8 per cent, subject to tax.

The directors state that a new licence for expansion of capacity for the manufacture of fan-belts and V-belts has been received.

*

STOCK EXCHANGES Better Sentiment

Watch-Dog Writes:

STOCK markets have exhibited a slight improvement in sentiment during the week under review, although the overall trading pattern continues to remain cautious. The slight recovery in prices is influenced by the hope entertained by the operators that, in response to the numerous representations made by all concerned, the Union Finance Minister may make some concessions in the SPT.

After the lapse of one week, trading on Lyons Range was resumed. A better sentiment prevailed on Dalal Street where Scindia Steam was a bright spot.

With free trading possible due to the lifting of the minimum prices from 3 April, there was better activity on the Madras Stock Exchange.

On the Delhi Stock Exchange, operators refrained from doing business in popular shares.

Price trends on the Ahmedabad Stock Exchange were mixed.

After a period of successive dull

sessions, there was slight activity on the Bangalore Stock Exchange, thanks to the removal of the minimum prices.

The London Stock Exchange was distinctly unenthusiastic over the Budget. Buyers showed a reluctance to commit themselves.

On Wall Street, all the gains that were made early in the week, were wiped out towards the close.

*

CALCUTTA

Friday Evenng.

AFTER an interval of a week, trading revived on the belief that the Union Finance Minister would definitely offer a small relief in the SPT. Rumours were also current that banks would be excluded from the levy of the tax, because of their unique position in the economy of the country.

Business on the opening day of the week was, however, meagre. The only significant feature was the absence of selling pressures; but the rates for the cleared securities were below the official minimum levels. The authorities were, therefore, compelled to take further measures to relax trading restrictions. With a view to facilitating business, they reversed downward the minimum prices of 9 clearing shares as under:—

Indian Iron from Rs 19.70 to Rs 19.25; Hindustan Motor from Rs 15.90 to Rs 15.50; J. K. Cotton from Rs 12.75 to Rs 12.25; Dunlop Rubber from Rs 32 to Rs 31; Guest, Keen, Williams from Rs 30 to Rs 29.50; Indian Aluminium from Rs 29.50 to Rs 29; Orient Paper from Rs 31.25 to Rs 30.50; Kesoram from Rs 19.25 to Rs 19 and Rohtas from Rs 10.75 to Rs 10.50.

Simultaneously, the compulsory carryover restrictions in respect of 8 clearing shares, viz., Burrakur Coal, Howrah Jute, Indian Cable, Indian Copper, J. K. Cotton, Jaipur Udyog, Orient Paper and Orissa Cement were removed with effect from 4 April. Making-up prices for the next settlement were fixed on the basis of the revised minimum prices and carryover charges were also fixed.

But for above measures, the market would not have presented an improved appearance from Thursday onward. The improvement in sentiment was also aided by the news of the decision made by China to release over 3,000 Indian prisoners and of the reports of the arrival of four ships bearing American military assistance to India shortly.

There was however, a section of the operators who believed that full confidence could return to the market only when it was possible to take a more definite view of the immediate outlook. It was feared that, since the recent fall in prices had wiped out the margin in the case of overdrafts against shares, bank pressure might do more harm than good. In the circumstances, it was felt necessary that the Reserve Bank should ask the banks to be more generous in advancing against shares.

The Giltedged section ruled slightly steadier in view of the official support. Turnover was, however, negligible as support from institutional investors was conspicuous by its absence. Business in State Loans was difficult in the absence of buyers. 3 per cent 1986 Conversion Loan hovered narrowly around Rs 63.

Bank shares developed a steadier tendency on rumours that the levy of the SPT might be excluded. Punjab National improved to Rs 18.25 from Rs 17.50.

Despite the reports of an improvement in trading conditions in the cloth market, Textile shares remained generally dull. The only bright spot was Jay Shree, being supported up to Rs 13.81 from Rs 12.81.

Coal shares came in for selective enquiry. Bengal scored Rs 5 at Rs 270, while Central India were taken up to Rs 9.25 from Rs 8.75 and Western Bengal up to Rs 7.87 from Rs 7.56.

Lower advices from the gunny market had an adverse effect on the Jute section where dealings were few and far between. Birlas were done at the minimum level of Rs 25, while New Central fluctuated narrowly between Rs 11.78 and Rs 12.

Although trading was restricted, Tea shares came in for selective support on the belief that, as the old season closed with virtually no carry-over, the new season might start in a steadier tone. It was also thought that export enquiries would improve in view of the removal of the export duty. Brooke Bond changed hands at Rs 10.62 to Rs 10.87 and Bishnauth at Rs 15 to Rs 15.87. Hasimara were almost steady at Rs 12.00.

Sugar shares were practically neglected. Darbhanga came in for offer at Rs 7.25 with Raza/Buland moving narrowly around Rs 9.35.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons. Following the revision of the minimum price of Indian Irons from Rs 19.70 to Rs 19.25, there was an emergence of support, resulting in the scrip moving up to Rs 19.60. TEXMACO were supported up to Rs 20.50 from Rs 19.60 and Guest, Keen, Williams up to Rs 30.06 from Rs 29.62. Britannia remained dull at Rs 8.90. Jessop were on offer at Rs 20.31 against Rs 21.06 despite the dividend being maintained for last year.

Miscellaneous issues followed the general trend of the market. Dunlop Rubber were quoted at the new minimum level of Rs 31, while Roh-tas, Jaipur Udyog and Indian Aluminium were almost maintained at Rs 10.87; Rs 10.62 and Rs 30 respectively. Hindustan Motor were done at Rs 15.50 to Rs 15.62; Indian Copper at Rs 4.10 to Rs 4.19; Kesoram at Rs 19 to Rs 19.25; Orient Paper at Rs 30.50 to Rs 30.70; Goodyear at Rs 34.37 to Rs 34.56; India Steamship at Rs 5.31 to Rs 5.69; Dr. Paul Lohmann at Rs 15 to Rs 15.50; Sirpur Paper at Rs 10.56 to Rs 10.75 and Asiatic Oxygen at Rs 8.69 to Rs 9.12. Hindustan Aluminium were stagnant at Rs 11.87 and so also J. K. Syndicate at Rs 10.31 and Usha Martin at Rs 13.

Known and trusted on every Continent
of the globe, the trademark 'Sanforized'
can boost the export of Indian cottons

The Birthday Gift

IF YOU WERE CHARLES II YOU'D LOOK FOR AN OAK TREE...

SANFORIZED

cloth that is labelled 'Sanforized' has the identical international standard of performance - it will not shrink out of fit. The trademark can give a tremendous boost to India's export of cotton textiles. It can help the industry to touch - perhaps exceed - the Third Plan target of 800 million yards of cloth for export and thus earn valuable foreign exchange.

Issued by Cluett, Peabody & Co., Inc. (Incorporated in the U.S.A. with limited liability) proprietors of the registered trademark 'SANFORIZED'. The trademark proprietors use the trademark 'SANFORIZED', or permit its use by authorised registered users, only in respect of tested fabric which meets the trademark proprietors' strict requirements as to residual shrinkage.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay 2.

Spotlight on Agriculture

More than usual interest attached to the All-India Congress Committee session which concluded its two day meeting early this week in New Delhi, meeting as it did after an interval of ten months during which period tremendous changes have taken place in the country. The national emergency has imparted new urgency to defence preparations which have now been given the highest priority. The country is asking and getting large scale military aid from western countries, particularly the US and the UK and this is to be reconciled with our policy of non-alignment. There is therefore room for honest doubt even among Congressmen, whether we should continue to call ourselves non-aligned. But the speeches on the official resolution on Chinese aggression have clearly shown that the overwhelming majority of the Congress Party is in full agreement with the policy of non-alignment followed by the Prime Minister.

But it was not logic-chopping about non-alignment that made the session memorable, but the fact that it succeeded in turning the spotlight on the agricultural and industrial situation in the country. It is good both for the Congress and the country at large that a frank and uninhibited appraisal of the progress made on the agricultural front has been made. Despite large outlay on agricultural development and the building of impressive dams and reservoirs, agricultural production has lagged behind during the first two years of the Third Plan. The Third Plan has set a target of 100 million tons for foodgrains production by 1955-56, but the annual output even at the end of the second year is only of the order of 80 million tons. This compares with the annual output of 76 million tons achieved by the end of the Second Plan. Such disappointing performance is not confined to foodgrains, but is true of almost all other agricultural commodities. For instance cotton production has declined sizably during 1961-62 to 46.30 lakh bales as against 53.95 lakh bales during the previous season. The shortfall has already cost the country dearly in foreign exchange. A recent study made by the Planning Commission has estimated the demand for cotton in the country to double in the next thirteen years. The progress of cotton production has received a setback during the current Plan, though it improved from 29 lakh bales at the beginning of the First Plan to 54 lakh bales at the end of the Second Plan. Production of oilseeds too is not making the planned pace of progress as output during the year 1961-62 has touched a level of only 68.25 lakh tons while the Third Plan target is as high as 98 lakh tons. At this rate, the overall increase of 30 per cent in agricultural production envisaged by the Third Plan is well nigh impossible.

Evidently Mr G. L. Nanda's note on agricultural and industrial production which formed the starting point for the discussion in the AICC is a sequel to the finding of the Planning Commission's Panel on Agriculture. The Panel pointed out in February this year that agricultural production had been stagnant during the first two years of the current Plan and if the target of 100 million tons of foodgrains were to be hit, a big effort would be required in the remaining three years of the Plan. Mr Nanda's assessment is that "even allowing for the weather factor, the rate of growth of agricultural production still shows no improvement over that of the last decade which itself was only

half of the higher rate envisaged for the Third Plan period."

There has been considerable complacency in this matter, our parousness being obscured by the fact of massive PL 480 imports. A good share of the blame for creating a feeling of complacency in regard to food production in particular is to go to the Ministry of Food and Agriculture. This Ministry's annual report for 1962-63 has been giving the impression that nothing is seriously amiss on the agricultural front and whatever setback there has been is largely to be attributed to unfavourable weather conditions. It has struck a confident note about agricultural production in that it maintains that stability in output has been attained.

In the AICC discussion also Mr Patil and his Deputy have tried to shift the blame for any setback in agriculture on the fact that the Food and Agricultural Ministry does not have full control over the agricultural sector as a whole. This is partly true, since primarily agriculture is the responsibility of the States and the States have, by and large, failed the Centre. Avowals of the importance of Agriculture are frequent enough and large allocations of funds are made in the plans. But allotment is one thing, spending them and spending them usefully is another.

The pattern of failure has its lessons no less than its intriguing aspects. For example re-sounding success has attended agricultural programmes in the States of Madras and Punjab. The Prime Minister referred to this phenomenon and wanted an investigation on why other States have not been able to make similar progress in agricultural production. It has since been announced that this investigation is to be carried out by a team of Union Ministers themselves. But some time ago the Central Government had announced its decision to send three teams of officials of the two Central Ministries of Food and Agriculture and Community Development and Cooperation and the Planning Commission to the States to review their agricultural programmes. In the circumstance a further investigation by Ministers seems a piece of escapism from the real task which is the actual execution of fairly evident duties.

It is imperative that the factors impeding rapid agricultural development are identified and the remedies applied expeditiously. In a recent brochure entitled "Development of Agriculture", the Federation of Indian Chambers of Commerce and Industry has indicated the lines on which action may be initiated so that the required rate of agricultural growth is attained. The suggestions put forth in the brochure for fostering increased agricultural production are practical though the plea for permitting joint stock companies to undertake agricultural production may not be acceptable to Government. Perhaps the biggest handicap of our agriculture is its low productivity. There is no reason why the yield per acre should continue to be low in India while elsewhere in the world, farmers are able to obtain a sizably larger yield. It is often assumed that since there has been a large increase in irrigation facilities, production should also increase automatically. As the FICCI points out the availability of irrigation facilities should be accompanied by a proper system of drainage, supply of improved seeds, fertilisers, agricultural implements and provision of credit.

SPT

Some Legal Conundrums

Eligible Reserves

The next question that we shall consider is the nature of the reserves that shall enter the capital base computed according to the Second Schedule of the SPT Bill. [This lays down that the capital of the company for the purposes of SPT will be the sum of the paid-up capital and of its reserves on the first day of the year of account of the company in so far as the amounts credited to such reserves have not been allowed in computing its profits for the purpose of the Indian Income-tax Act 1922 or the Income-tax Act, 1961. Such a capital base should be further adjusted for the net value of the assets that produce the income that have been excluded from the total income under rule 1 of the First Schedule. Secondly, increase in capital or reserves brought about by revaluation of assets will have to be ignored in computing the capital base. Premia on shares received in cash and standing to the credit of the share premium account are to be deemed to be part of the paid-up capital. Rule 2 provides for increase (or decrease) in the capital of the company in the course of the accounting year by prescribing adjustment of the capital in proportion to the period such increase or decrease is effective. Rule 3 provides for adjustments of the capital base where the whole income of a company is not taxable under the Income-tax Act. Such a situation will arise in the case of plantation companies part of whose income may be agricultural or in the case of a foreign company which may have foreign income not forming part of the total income for income-tax purposes in India. In such cases, the rule provides for a rough and ready computation of the capital base. It enjoins that the capital computed on the basis of rule 1 should be reduced by the proportion that the income not taxable under the Income-tax Act bears to the entire income of the company.]

What is the nature of the reserve that does not qualify for figuring in the capital base discussed above? The rule says that reserves "in so far as all the amounts credited thereto have not been allowed" in the computation of the company's profits in its income-tax assessment will qualify. Instances of disqualified reserves have been generally taken to be reserve for bad debts, depreciation reserve and development rebate reserve. In practice, companies often charge bad debts and depreciation to the profit and loss account and therefore these do not form part of any reserves. And where a reserve for bad debts is created, it is doubtful whether the amount appropriated to it in any year will be automatically allowed in the income-tax assessment for that year except, of course, in the case of a financial corporation engaged in long-term finance for industrial development in India for which special provisions have been made in the Income-tax Act. In all other cases, the requirement for allowance as a deduction of a bad debt is that it should have been written off in the books. (However, it has been held that it is not necessary that the amount should be written off the account of the debtor.) Secondly, where a reserve for bad debts has been created by a debit to the profit and loss account, the adjustment for final write off is made by a debit to the said reserve account with a corresponding credit to the particular debtor's account in consequence of which the quantum of reserve gets automatically reduced. In any event, in the actual computation of the reserve, all the relevant factors

will be taken into account to see that no amount allowed in the income tax assessment as a deduction forms part of the reserve.

D. R. Reserve: Is it Eligible?

In the case of the development rebate, a rather interesting argument may be advanced by assessee to the effect that the development rebate reserve is not one created out of amounts allowed as a deduction in income-tax assessments. The reasoning runs somewhat as follows:

Section 33 of the Income-tax provides for the allowance as a deduction of a particular sum by way of development rebate. This allowance is subject to the provisions of section 34. Section 34(3) (a) provides that the deduction referred to in section 33 shall not be allowed unless an amount equal to seventy-five per cent of the development rebate to be actually allowed is debited to the profit and loss account of the relevant previous year and credited to a reserve account. Now what is allowed in the computation of profits, the argument runs, is not the amount credited to the reserve account but another amount computed by the Income-tax Officer in accordance with section 33. Section 34 mentions merely the condition precedent for the allowance of a sum mentioned in section 33 and it is this latter amount that is allowed as a deduction. By the same token, what is transferred to a reserve under section 34 is not an amount allowed in computing the taxable profits.

This is supported by the wordings of the two sections. As quoted partially earlier, section 33 says in terms that "a sum by way of development rebate . . . be allowed as a deduction . . ." This amount is a stated percentage of the cost of the asset installed. Now section 34 also mentions "deduction referred to in section 33." It is therefore clear that the deduction for income tax purposes is the sum calculated according to section 33 and none else. Secondly, section 34 goes on further to identify the amount with which it (i.e. section 34) is concerned. It says that the deduction referred to in section 33 shall not be allowed unless "an amount equal to seventy-five per cent of the development rebate to be actually allowed is debited to the profit and loss account . . . and credited to a reserve account." The words in italics are very important. What is transferred to the reserves is not the development rebate allowed, or even seventy-five per cent of it. It is an amount equal to seventy-five per cent of the development rebate. In other words, there is only equivalence (to the extent of seventy-five per cent) and no identity between the amount allowed in computing the profits for income-tax assessments and the amount transferred to a reserve.

Deductible Tax

THE next question is the most difficult of all we have been considering. It is: What is the amount of tax that is contemplated as deductible under rule 2 of the First Schedule? The answer to this question is of the greatest importance since the interpretation most favourable to the assessee makes a substantial difference to the Super Profits Tax payable. The circumstance that the yield from the tax estimated at Rs 25 crores is too low on the most unfavourable interpretation of the section would seem to argue that the favourable interpretation is what Authority has in

mind. Unfortunately for this comforting conclusion, there are other official pronouncements that make this impossible. In any event, courts will take no notice of these things and will be solely guided by the wording of the section. It is therefore necessary to examine it.

Rule 2 of the First schedule says: "On the balance of the total income, income-tax and super-tax shall be calculated at the rates in force in the financial year as if such income had been the total income no portion of which had been exempt from the payment of income-tax or super-tax and on no portion of which any deduction of income-tax or super-tax had been admissible under any provisions of the Income-tax Act or the annual Finance Act; and the tax so calculated shall be deducted from the amount of income aforesaid."

It would seem that there are at least three possible interpretations of this rule, two of them official. In his budget speech, Mr. Morarji Desai said: "The tax will operate when the income of a company after deducting the income-tax and super-tax payable by it exceeds 6 per cent of the capital . . ." This would seem to imply that the actual tax on the income levied by the Income-tax Officer will be the amount deducted. The second interpretation is that deductible from the Statement of Objects and Reasons of the Bill. This says that the "object of this Bill is to impose a special tax on certain companies on their income and profits as reduced by the income-tax and super-tax chargeable thereon. . . ." There is some difference between tax chargeable on the income of a company and the tax payable by a company into which we need not go here. It is enough to note that a plain reading of the rule makes both interpretations too loose for legal purposes. For example, apart from everything else, neither makes any reservation about the tax attributable to incomes (like income under the head "Capital Gains") that have been excluded from the total income under rule 1.

Even otherwise, the equation of the result of the computation of income-tax and super-tax in rule 2 with the amount of these taxes payable by a company or chargeable on its income would appear to be manifestly wrong. Not only does the rule not say so, it says something else that excludes such a view. It says that an elaborate notional computation shall be made ignoring the fact that the total income may include items that are exempt. In other words, whatever may be the actual tax paid by the company (or chargeable on its income) under the Income-tax Act, the SPT bill contemplates a larger allowance for deduction as tax in the determination of the chargeable profits. Thus, though income from new industrial undertakings and (to take an example of an item provided in the annual Finance Act,) income from exports, in computing the income-tax and super-tax according to rule 2, it will have to be assumed that they are not so exempt and the tax calculated on them will have to be deducted.

50% or 80%?

But the crucial question remains: what are the rates at which this calculation is to be made? To appreciate the full force of the implication of this question, it may be stated at once that according to one interpretation the deduction for income-tax and super-tax can be as high as 80 per cent, whereas the more unfavourable interpretation would put this percentage of income-tax and super-tax at 50 per cent in most cases. This consequence arises by the differing interpretation of the expression "rates in force in the financial

year." The argument is that this expression refers to rates applicable to companies in general and not to the rates applicable to any particular company. There is no difficulty about income-tax as all companies have the same rate of income-tax. In the case of super-tax difficulties arise. In paragraph D of part II of the First Schedule of the Finance Bill, 1963 (which will eventually be the Annual Finance Act relevant for 1963-64 assessment) provisions for super-tax on companies are made thus:

Paragraph D

In the case of every company . . .

Rates of Super-tax

on the whole of the total income . . . 55 per cent, provided that . . .

Here follows a series of rebates for different companies and different incomes resulting in different effective rates for different companies.

The argument is that the rate of super-tax referred to in rule 2 is the "basic" super-tax rate viz. 55 per cent and together with the basic income-tax rate of 25 per cent the notional deduction for tax should be at 80 per cent.

The argument against this view runs somewhat like this: There is no such thing as a basic rate of super-tax but only different rates of super-tax for different incomes and different companies. This is evident by the heading "Rates of Super-tax" in the Finance Bill implying differing super-tax rates. (In the provisions for income-tax on companies, the heading is, significantly, "Rate of Income-tax".) Therefore, the provisions of rule 2 merely mean that the tax will be calculated for each company at rates applicable to it and to its different incomes and this tax shall be deducted. There is no reason to restrict the plural "rates" in the rule as applicable to a rate of income-tax and a rate of super-tax. They may refer to different rates of super-tax also.

A Supreme Court Decision

Some support for the second interpretation can be had from the decision of the Supreme Court in the case of Rajputana Agencies vs. Commissioner of Income-tax (35 I.T.R. page 168.) There the question arose in the context of tax on excess dividends. As is well known, undistributed profits used to get a rebate from income-tax of one anna in the rupee formerly. If subsequently, there was a distribution of dividends in excess of the available taxed profits of the year, it was provided that there shall be levied an additional income-tax "equal to the sum, if any, by which the aggregate amount of income-tax actually borne by such excess falls short of the amount calculated at the rate of five annas per rupee" on the excess. Now, by virtue of certain concessions given to incomes arising in former princely states in those years, the effective average rate at which the appellant company was taxed was 16 pies in the rupee, which was much less than the Indian rate. So in computing the rate at which the excess dividend was to be taxed, the Income-tax department took it as the difference between five annas and 16 pies. The company contended that the rebate it obtained under the Part B States Concessions Order was irrelevant in determining the rate at which the excess dividends should be charged, for the expression used in the Finance Act is "the rate applicable to the total income of the company" and this must be the rate mentioned in the Finance Act as applicable to "companies." This contention was repelled by the Supreme Court which held that the

phrase "the rate applicable to the total income of the company" . . . "referred not to the rate prescribed by the Act (i.e. Finance Act) for the relevant year generally in reference to income of companies, but to the rate actually applied in a given case."

This would seem to be pretty categorical and arising it does in another context in which a notional computation is made of tax on companies, it may seem conclusive. Even so, there may be some difficulties stemming from the difference in phraseology. For example, the Supreme Court was interpreting the expression "rate applicable to the total income of the company." The form of words especially the definite article before "total income" and before "company" made the argument that the rate referred there was the general rate applicable to companies difficult to sustain. But the expression used in the SPT Bill is "rates in force in the financial year." There is apparently nothing here to connect the rates with any particular company and since the computation is notional such a divorce from a particular assessee is not so bizarre as to make the rule of construction regarding avoidance of obvious absurdities applicable here. The question may therefore well be open.

There is perhaps one consolation in all this. If there is little comfort for assessee, there is plenty of money for lawyers in these conundrums, unless, of course, the Legislature makes its intentions plainer.

Concluded

The Budget and Sterling

By Paul Einzig

MR MAUDLING'S eagerly-awaited Budget struck a compromise between the fanatics of expansionism and their opponents. There is to be expansion, as indeed there is bound to be with an overall deficit of nearly £700 million. Nor is it the Government's intention to mop up the additional purchasing power thus to be created. The fact that interest on Savings Certificates has just been reduced and the issue of such certificates suspended for two months seems to show that the Government has no intention to stimulate genuine saving for the sake of neutralising the inflationary effect of the excess expenditure. That being so, it would be little short of miracle if the deficit did not produce inflationary effects. Consumer demand is bound to go up and with it wage demands will be accentuated. As for capital expenditure, it might derive some degree of encouragement from the Government's decision to end the "stop-go-stop-go" system. That system has been increasingly unpopular during the last two years or so, and it has become fashionable to be convinced that it is possible to proceed non-stop without running into inflation. The Budget statement endorsed that view by word and by action.

From this attitude it follows logically that there is no need for worrying about the effect of expansion on the balance of payments. Since expansion means an increase of the output there is, according to the new doctrine enunciated by Mr Maudling, no inflation in the long run. Any adverse effect during the transition period should be met out of the gold reserve and by making use of Britain's drawing right with the International Monetary Fund and other credit arrangements.

One is permitted to doubt the soundness of these views. But the new policy does mean that there is no need to worry about sterling until the next general election. The Government intends to bolster up sterling until then by meeting adverse balance, withdrawals of hot money and speculative pressure by running down international assets and by running up international short-term indebtedness. As far as it is possible to ascertain, there are enough assets and drawing rights to enable the Government to hold out until the spring of 1964 or even until the autumn of that year.

The Government's new policy also means that sterling will not be defended with the aid of high Bank rate and credit squeeze. Those weapons of the "stop-go" policy have been discarded. Expansion will be allowed to proceed and its burden will be borne by the gold reserve and by the drawing facilities.

It is possible that Britain will be saved of the long-run consequences of this policy by a convenient inflation in the United States, France and Germany. In the United States, too, it is tempting to throw caution to the wind and proceed with an expansionary policy regardless of its effect on the gold reserve. Judging by the size of this year's American Budgetary deficit, this is what is likely to happen. In France and in Germany pressure for higher wages is on the increase. Prices in France are already abnormally high and are likely to rise. Possibly by comprison the British inflation will be moderate, so that the balance of payments will not be affected by it. Otherwise whichever Party will win the general election would find the cupboard bare of gold and the drawing rights exhausted, so that the new Government would have to revert to "stop-go" whether it likes it or not. Anyhow it is something that there is no need to worry about sterling in the meantime.

—(Copyright).—

The Challenge

Defence effort necessitates development of a great ability to produce weapons and equipment and to transport them. At the same time, adequate supplies of essentials for civilian consumption must be maintained. All this involves tremendous finance. But to meet the requirement, the less we have to depend upon deficit financing the better for our economy.

The resources of the nation must be mobilised to feed the various needs for production and distribution. Bank is the most suited agency for this purpose. Put all your money in your bank account and make your payments by cheques. That will be your yet another direct contribution to the nation's defence effort.

MONEY MARKET

Chaos in Interest Rates

THE end of March finally produced some relief for the banking system, with governmental disbursements apparently flowing back in the form of new Deposits. Some reduction in debt to the central banking institution has taken place, and there has been a slight easing in the call money market. But the fact remains that expansion in Scheduled Banks' credit during the current busy season—which notionally runs up to the end of April—is taking place at a record rate, and therefore the pressure upon the banking system has been severe. Even the considerable addition to Deposit resources in the three Fridays up to 5 April has, it is already apparent, not been enough to dispel the feeling of stringency; an abatement of pressure is all there has been.

The consequence is that banks are once more thinking in terms of how best new Deposits could be attracted. The State Bank herein appears to have given a lead by announcing its increase in Deposit rates. The prospect is that other banks, under the impetus of institutions which are already over-extended, will very likely consider before the end of the month another round of increase in Deposit rates that they themselves may pay on Deposits of various categories.

We have deliberately used the phrase "another round" to describe the probability of another increase in Deposit rates. For it seems to us that a species of spiral is to be noticeable in the earnings and expenditure of banks. Increase in Advances, arising from rising industrial demand for funds, contributes to enlarged earnings—but at the same time highlights the inadequacy of resources to cover the expansion; so the inter-bank call money rate firms up, and borrowings from the Reserve Bank reach into the penal tiers of interest. Expenditure thus rises, but the cost of the short-term borrowings does no great or lasting damage. It is the next step, the attempt by banks to secure new Deposits with greater permanency, which permanently adds to costs: the vain hope that higher interest rates on Deposits will quicken the pace of new accretions results merely in the charge of

interest paid for all Deposits moving up for all time.

The regrettable fact is that in times of slack there is no downward re-adjustment in rates on Deposits. As happened, for example, in 1957 and 1958, banks then get new Deposits for which they have no immediate use, for which, however, they pay through the nose. There is, we fear, no flexibility in the structure of interest rates in this country.

And in any event we do not for a moment believe that higher rates offered significantly contribute to the securing of new Deposits. If moreover account is taken of the fact that with any round of increase in Deposit rates the cost of the existing Deposits automatically goes up, it will be seen that such new resources are prohibitively and even calamitously dear.

The result is that the margin of earnings gets gradually eroded. The surplus available with banks either for transfer to reserve (whether published or inner) or for distribution of dividend fails to be of satisfactory size. Thus, each round of increase in interest rates is a self-defeating exercise.

We would urge in consequence that at the end of this month, when the 1963 slack season notionally begins, there is a concerted attempt by the banking system to restore some semblance of orderliness in the structure of interest rates. Let there be a study of the correlation between higher interest rates and new Deposits secured; and of the impact of such series of increases upon banks' earning margins.

BANK RETURNS

The Fiscal Year-end Disbursements

The returns of the Reserve Bank for 5 April disclose that governmental disbursements at the end of the fiscal year have been particularly large and that they have apparently been concentrated over the last two days of March.

Active Note Circulation has expanded by Rs 59.64 crores to Rs 2,301.59 crores. There appears to be inflow of Rupee Coin for Rs 2.02 crores, but regard must be had for the Central Government's right each year to tender rupee coin for Rs 5 crores and receive credit there-against from the Reserve Bank. Thus, on the

presumption (which can safely be made) that in the week under review the Centre in fact has exercised such option, it would be seen that there has been out-flow of Rupee Coin for nearly Rs 3 crores. Foreign Securities are unchanged at Rs 105.08 crores, but Rupee Securities, by dint of the expansion there-against, are higher by Rs 65 crores at Rs 1,976.42 crores. This, incidentally, is one clue to the deficit financing instituted by the Centre during the week. The result is that the Reserve Bank's cash in the till moves up by Rs 7.39 crores to Rs 15.95 crores.

In the Banking Department, it is to be noted that Investments are higher by Rs 5 crores at Rs 219.10 crores; and as we shall presently see, the State Bank in the week also figured as a purchaser of gilt-edged for Rs 8 crores. The rise of about Rs 11 crores in the Treasury Bills purchased and discounted by the Reserve Bank would relate to replenishment of their balances by the State Governments. Thus, deficit financing as such may have added up to Rs 80 crores.

The Centre's balances are higher by Rs 46.64 crores. Thus, about Rs 35 crores of year-end disbursements have already been spent. Such expenditure in turn has helped the banking system immediately. While Reserve Balances of Scheduled Banks are lower by Rs 3.45 crores at Rs 71.46 crores, their indebtedness has been reduced by Rs 23.07 crores to Rs 48.21 crores. We may take it that the accretion to Deposits of Scheduled Banks has exceeded such a figure fairly substantially—after all, the week ended 5 April would have involved beginning of the month disbursements.

The State Governments, too, have made their year-end payments. Their Deposits are lower by Rs 23.22 crores at Rs 8.20 crores, and their ways and means borrowings from the Reserve Bank have mounted by Rs 14.37 crores to Rs 43.26 crores.

Balances Held Abroad once again show a small drop of Rs 1.35 crores to Rs 9.95 crores; but foreign assets in the keeping of the Reserve Bank continue to exceed the Rs 115 crore mark.

The return of the State Bank for 5 April indicates that it has not been a small beneficiary of governmental year-end payments. Deposit resources are up by Rs 11.70 crores at Rs 570.73 crores. Constituents in receipt of such payments have also reduced their borrowings, the total of Advances, despite it being a beginning of the month week, falling by Rs 4.66 crores to Rs 316.75 crores. The gilt-edged portfolio has been added to by Rs 8 crores to be placed at Rs 218.93 crores. The rise of about Rs 14 crores under Other Assets would indicate that further gilt-edged purchases by the State Bank is in prospect. Cash balances, including money at call and short notice, are lower by Rs 1.99 crores at Rs 24.57 crores.

For the third week in succession, according to the return of Scheduled Banks for 29 March, an increase in Deposit resources has been experienced. Such rise could relate to the initial governmental year-end payments. Net Demand Deposits have gone up by Rs 18.29 crores to Rs 977.45 crores, and this is offset as to Rs 8.30 crores by a drop in net Time Deposits to Rs 1,204.04 crores. The total of Advances, in rising by Rs 7.84 crores, has crossed the Rs 1,600 crore mark in being placed at Rs 1,602.40 crores. Borrowings from the State Bank are higher by Rs 2.43 crores at Rs 21.86 crores, and indebtedness to the Reserve Bank has also gone up by Rs 0.49 crore to Rs 70.00 crores. The rise of Rs 4 crores in gilt-edged holdings is attributable to the State Bank. Cash balances, including money at call and short notice, have in consequence risen by Rs 4.85 crores to Rs 184.47 crores.

Notes

ESTIMATES COMMITTEE On Coal—

The findings of the Estimates Committee on the operation of the National Coal Development Corporation and the genuine doubts expressed by the Committee on the latter's capacity to produce 33 million tons in the current Plan do not come as a surprise to those who have been closely observing the trend of coal production recently. Some time ago Mr Malaviya has conceded that the private sector has forged ahead with coal production target while the NCDC has been lagging behind. As the Committee's report reveals, the Corporation has not so far reached the Second Plan target of 13 million tons of coal for which capacity was stated to have been expanded in 1960-61. However a smart increase in output during the last quarter of the last Plan was recorded by the NCDC which culminated in the accumulation at pit heads of nearly 17 lakh tons by the end of March 1961. In addition to the failure to fulfil production target the Corporation is also found to have achieved considerably less than the optimum utilisation of the man power and machinery at its disposal. The report is also critical of the operation of the Karagli washery set up in collaboration with a Japanese firm. The working of the washery was not only been uneconomic and haphazard but also resulted in huge loss. The expenditure on repairs and maintenance of washery in 1959-61 totalled Rs 1.19 crores while the overall cost of the washery comes to only Rs 1.72 crores.

While expressing great concern at the transport bottleneck in the carting of coal during the Second Plan, the Committee observed that it was primarily on account of the lack of co-ordination at different levels. The Corporation is again put in the dock in not planning coal production, disregarding the available capacity of the railways to lift coal. The accumulation of coal at pit heads will mean locking up of capital, and the like which will only slacken the pace of production of the collieries.

Though the record of the Corporation is distressing, in view of the pivotal role played by coal as fuel for industrial production it would be unfair to ignore that the NCDC has been subjected to all sorts of procedural delays and in-decisions which are commonplaces with the State enterprises in the country. As suggested, a high

power committee should be set up to co-ordinate all the operational and related activities to accelerate the tempo of coal production.

And Oil

The Estimates Committee has brought out some aspects of the uneconomic functioning of the oil industry in the public sector. The location of the refineries at Nummati and Barauni is subjected to scathing criticism. The Committee finds no wisdom in selecting Nummati as the locale of the refinery in view of the extra expenditure incurred on the movement of materials from Calcutta and on the anticipated loss of Rs 90 lakhs per annum as freight for the movement of products to the destinations outside Assam. Even on technical grounds the site is quite unsuitable which would stand in the way of working the refinery to its full capacity throughout. Besides the cost of production of the various products in the refinery was neither worked out not insisted upon by the Government failing which conclusions cannot be drawn on the economics of operation. As regards Barauni it has been reported that the USSR, the collaborating partner, was not quite happy over the site. The present locale has resulted in extra expenditure in the cost of machinery which would have been averted had the refinery been set up elsewhere.

The Estimates Committee has also suggested the examination of the feasibility of merging the Oil and Natural Gas Commission, the Indian Refineries Limited and the Indian Oil Company into a complex like the ENI of Italy for conducting the various operations, like the oil exploration, production, refining and marketing. Such a merger will no doubt yield rich rewards like the economy in operation, efficiency and co-ordination and elimination of duplication of effort and wasteful expenditure. It will also have the advantage of the pooling of resources, technical skill experience, training and research. The proposal by the ONGC to run a refinery at Koyali in Gujarat is an indication of the possibilities and recognition of the need to integrate these operations. The propriety in allowing the State Governments to have financial participation in lieu of the land given by them has also been challenged by the Committee as it may pave the way for similar claims from other State Governments which have donated land

for the setting up of public sector undertakings. Besides the Committee has recommended that the entire question of the establishing of petro-chemical industries and the proper utilisation of gases of refineries, requires urgent scrutiny by the Government.

COTTON TEXTILES

Problems Galore

The problems afflicting the various industries in the country are varied and not a day passes without some complaints from the spokesmen of one industry or the other. The Ahmedabad Millowners' Association which met last week is no exception to the general rule. In his speech to the Ahmedabad Millowners' Association, the outgoing President Mr Rasiklal Nagri while surveying briefly the different factors that led to slackening pace of industrialisation during last year viewed the problems confronting the cotton textile industry in a broader perspective. He covered a wide ground dealing, among other things, with the staggering incidence of taxation, the shortage of raw cotton, the considerable leeway that has to be made in the sphere of research, the poor export performance and the need for reducing the cost of production.

Mr Nagri also expressed concern at the downturn in cloth production in recent years. The total output in 1962 is estimated roughly at 4,618 million metric metres against 4,701 metric metres in the previous year. The main factor ascribed to the fall in production was the inadequate availability of domestic cotton. The cotton textile industry started the year under review with the prospects of an acute cotton scarcity looming large in the horizon. Cotton output during 1961-62 was a low of 46 lakh bales and the imports allowed were also lower than the previous year's. Predictably enough the forces of demand and supply were in operation as a result of which the prices shot up sharply and pierced the official ceiling and the Government had to introduce measures to arrest the trend. The estimated crop of 54 lakh bales in the current season is also short by one million bales and it is an irony that India with the largest acreage under cotton crop has the lowest per acre yield. Recent experiments have proved that the per acre output can stepped up considerably if latest methods of cultivation were adopted. The results of these researches should be allowed to percolate to the levels of the ordinary cotton growers for registering any tangible improvement in both throughput and quality.

The fall in export of cotton textiles is another trend that has to be arrested without delay. The basic defect with our cotton textiles is the prohibitive cost of pro-

duction which more often than not prices our goods out of the international markets. The high cost structure requires careful and detailed thinking and unless appropriate remedies are applied the export prospects of Indian cotton textiles will be gloomy.

ENGINEERING INDUSTRY

Idle Capacity

A disturbing feature of the economy for some time now is the existence of considerable idle capacity in industry. This is due to the fact that the working of industrial units has been hampered by various shortages such as fuel, power, transport and imported raw materials and components. For various reasons, and principally because of the large increase in imports in previous years, our exchange resources have been depleted so much that stringent measures have become necessary to conserve what little of foreign exchange that is available for the most essential imports. It is unfortunate that while the repercussions of the shortages have been felt by almost all industries, such vital industries as the engineering industry too have been hard hit. It has been estimated that in the engineering industry as much as 50 per cent of the installed capacity has been rendered idle for the past many months. It is strange that even during the present Emergency which has thrown up a big demand for defence stores, no serious steps have been taken by Government to utilise the large idle capacity in the engineering industry for defence production. (Western Region) has pointed out, the large idle capacity of the engineering industry should have been viewed as a blessing in disguise by Government for meeting the needs of the Emergency. Here is considerable idle capacity only waiting to be provided with adequate raw materials and other essential requirements to go into production, and yet no notice of this by no means inconsiderable potential seems to have been taken.

Defence production apart, the engineering industry is vital to the economy of the country in that it plays a large part in the working of other industries, and generally in other developmental activities. The growth of idle capacity in the industry will correspondingly increase the shortages of many urgently needed engineering goods, thereby starting a chain reaction of retarded economic activity. It is high time that authorities woke up to the seriousness of the situation in the industry and initiated steps to enable the industry to reduce the idle capacity as much as possible. This it would appear could be done if Government only chose to have a closer look at the difficulties of the industry. Mr Aloke Mitra chairman of the Indian Engineering Association has shown in the course of his speech at the annual meeting of the Association in Calcutta a few days ago that marked improvement in the working of the industry can be brought about by attending to some of its specific needs of steel sections. Of course steel supplies are still short of requirements despite a sizable increase in indigenous production of iron and steel. But what is very seriously hampering production is the shortage of special quality steel, of treated steel and of particular sections and sizes of steel. He has pointed out that the lack of special steel and of matching steel is in fact the biggest single factor responsible for slowing down production. A glaring example has been cited by him, two firms lost production last year of railway wagons to the value of approximately Rs 4 crores for want of matching steel. After all matching sections are not required in large quantities and yet because of the non availability of these, large quantities of steel have had to lie idle with fabricators. The difficulty arises from the inability of the indigenous steel industry to supply in full the demand for matching sections. This is a matter that has got to be seriously looked into with a view to augmenting the indigenous supply of matching sections. In the meantime the only practical course appears to be to import these sections in adequate measures. With adequate supplies of matching steel alone the idle capacity in the industry will be markedly reduced and consequently availability of vital engineering goods like railway wagons will also increase.

US

A Letter from Washington

The warm winds of spring seem to be breathing a new spirit into the American economy. The improved climate of business activity is being reflected in an improved climate of business opinion.

Walter Heller, Chairman of President Kennedy's Council of Economic Advisers, has offered what amounts to a keynote of this improved sentiment. He told a conference of the Magazine Publishers Association last week that recent events have strengthened the economic outlook, adding substance to the Council's forecast of a four to five per cent rise in the Gross National Product (GNP)—total output of goods and services—this year. The way things are shaping up, the rise could be even steeper.

The President's adviser called attention to such encouraging developments as the continuing gain in retail sales, which if anything seems to be accelerating; the growing backlog of unfilled orders at durable goods factories; and the prospect of at least a five per cent increase this year in capital outlays for expansion and modernization of facilities.

One might also note that steel production has been rising steadily from week to week, and now has surged to the highest level in nearly a year, with the official production index up to 125 per cent of the 1957-59 weekly average. The climb in output and orders is too buoyant to be explained solely in terms of inventory building against the possibility of a strike later in the year.

The fact is that leading steel-consuming industries are showing marked advances in operations. Construction continues strong, and the record pace of contracts for new building, up six per cent last month to a February record, indicates that future construction volume will be expanding further.

The automobile industry is doing at least as well as expected, with actual results outstripping even some of the early optimistic forecasts. A real spring buying surge appears in the making, as mid-March sales set a record for the period.

Truck sales, which many automotive officials regard as a barometer for the entire economy, also have been outperforming last year's pace, and have been showing gains this year even larger than those scored by the passenger car industry. This comes on top of near-record 1962 performance, when truck sales were the highest for any year since 1950.

Machine tool orders, in a shrinking trend ever since the invest-

ment boom of 1955-56, are showing welcome signs of renewed strength. They began to turn up late in 1962, and are now booming, having just chalked up the best February total in seven years.

Machine tool orders are watched closely, as this industry's products—the lathes, grinders, stampers and other equipment that turn raw metal into usable products—are basic to nearly all industrial production. The current upswing is particularly significant because it is being generated largely by domestic US demand, instead of the foreign demand that has helped sustain the industry in the past several years.

All in all, the vast majority of business indicators that usually foretell the course of general activity are pointing clearly upward. It has been a year and half since there was this much unanimity among these so-called leading indicators.

Even the employment situation, which has demonstrated no overall improvement to speak of in recent months, shows signs of improvement to come. This is seen in the lengthening factory work, week the drop in temporary lay-offs, and the fewer initial claims for unemployment insurance.

On the basis of all the available evidence, a robust upswing appears in the making for the US economy. Just how robust it will be, and to what extent it exceeds the normal seasonal expectations, remain to be seen.

A key element could be the kind of tax reduction bill Congress finally comes up with. It is significant, however, that an increasing majority of experts now is leaning to the view that no business dip is in sight, tax cut or no tax cut.

This does not mean everything is thereby satisfactory on the business front. But it is clear that there is nothing basically wrong with the US economy, and it is equally clear that the right kind of fiscal stimulus could go a long way to insuring a continued vigorous upswing for some time to come.

*

SPARK PLUGS

Great Strides in Recent Years

The Automobile Spark Plug Industry has made considerable progress during the past few years and it is now supplying the major portion of the internal demand. The industry comprises only two units with an aggregate annual capacity on single shift basis at 1,029 million pieces. The Department of Technical Development however has estimated the capacity of the industry as 1,596 million pieces on

the basis of optimum utilisation of plant and machinery installed. Actual production of the industry in the three years 1960, 1961 and 1962 are 1,191 million, 1,453 million and 1,081 million pieces respectively. On the basis of domestic production and imports, the apparent consumption of spark plugs is placed at 1,187 million pieces.

The industry which was granted tariff protection in 1955, continues to enjoy protection and the present term expires on 31 December 1963 and the Tariff Commission is currently enquiring into the question of protection to the industry beyond that date. The present scheme of protection covers automobile sparking plugs of 14 mm. and 18 mm. sizes and parts thereof, including the resistor types, but excluding integrally screened types.

Although the industry has stabilised itself thanks to the tariff protection enjoyed by it for over 8 years now, it is still largely dependent on imports for its raw materials. Of the raw materials required only two items are drawn from indigenous sources. The major item in the raw material group is bright drawn free cutting steel bars and that, in the components group, the insulator. It is however gratifying that with regard to one of these items, the insulator, self sufficiency will be attained before long as domestic production will commence in the next few months. As for the other item, it looks as though indigenous production will have to await the setting up of a basic alloy steel industry in the country. Consumers of indigenous spark plugs are satisfied with their quality and performance though there is a general feeling, as pointed out by Mr K. R. P. Aiyangar, Chairman of the Tariff Commission, that their prices are higher compared to imported plugs. It is to be hoped that when all the raw materials are produced within the country, the manufacturers will be able to bring down the price of their products.

*

A Correction

In the leading article entitled "A Second Look at the Central Budget" that appeared on 9 March 1963, it was inadvertently stated that the yield from the Compulsory Deposit Scheme and from the premia for Emergency Risks Insurance do not figure in the estimates of receipts. They do. The yield from higher postal rates to which also a reference was made figures in the separate accounts of the Posts and Telegraphs Department, dividend from which to the General Revenues takes account of these receipts. The inference drawn of a larger possible receipts than budgeted for is to the extent mentioned above incorrect. We regret the error.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

Mr. Krishna Menon's speech on the budget has not had the press it deserved and only lately could I read the whole of it in Blitz. He made, it goes without saying, many excellent points, but there was one rather odd thing he said that should not pass without comment. Mr Menon was against the abolition of the export duty on tea and he gave an unusual reason for this. Taxation, he said, had its international aspects, and with the export duty abolished, Indian tea would compete more vigorously with Ceylonese tea and this will hurt Ceylon, who is a good friend. This, I must say, is a stunner. E. M. Forster is credited with the epigram that if it were a choice between betraying a friend and betraying the country, he would pray for the courage to do the latter. I can see the point of this attitude in personal relationships. But friendship among nations that is so unself-regarding as to sacrifice one's interests out of consideration for the other's possible feelings, is a little beyond my ken. I am also rather less impressed than Mr Menon is with Ceylon's friendliness. This is not because I appreciate less Mrs Bandaranaike's good offices in our dispute with China, though reports of voluntary contributions from Ceylon to our National Defence Fund being stopped do make odd reading. But I do feel that in matters of friendship, especially in Afro-Asian contexts, we are inclined to clutch at the shadow instead of at the substance. Afro-Asian solidarity is a wonderful thing, except that it suffers from the slight disability of not being a fact—yet. A good deal of trouble has arisen because we have tended to sacrifice present interests out of a timid fear of appearing to jeopardise this rather pathetic illusion. There are all kinds of evasions and self-deceptions this policy gives rise to. For example, Indian advocacy of the case of the people of Indian origin in Ceylon has been muted and apologetic as a result of this. The comparison may be odious and not altogether fair, but our objection to substantially the same (though admittedly more reprehensible in actual manifestations) attitude in South Africa is more articulate. There are many unavowed and even unconscious inhibitions in all this. But it does sound preposterous that we should trim our trade policies in ways that will

hurt us out of too nice a regard for the feelings of others. Mr Krishna Menon opposes the abolition of the export duty on tea for the one reason for which it should be supported. It is not as if we have been pampering our exporters, especially of tea: we are nowhere near offending the GATT principles designed against unfair export incentives. We do not even offer the kind of export bonuses that many countries including Pakistan do. And where do we draw the line? If we are to be too gentlemanly to compete with Ceylon in tea, I don't suppose we can be caddish enough to compete with Pakistan in Jute goods

"Enter Rumour, painted with a thousand tongues", thus the stage direction in the Morality Plays. It can be, painted tongues and all, a monstrous thing, an oppressive miasma of innuendoes and insinuations, of hints of dark deeds done in secret. Public life in India, as in England, has in recent months been plagued by it more than usually. Ministers' names in impounded books, nephews who blossom into tycoons overnight and nieces who land cushy jobs—these are the staple of polite political conversation these days. Often, when an attempt is made to condense into facts these hints of vague enormities, they turn out to be nothing more substantial than poisonous fumes of malice or idleness. Even so, what survives is enough to trouble public conscience. A lot more than what gets printed is bruited, though what gets printed is shocking enough. We used to hear a lot less of these in the not so distant past. Could it be that they were more honest days? Or only the more discreet, the skeletons well-tucked away and the key of the cupboard in safe-keeping? Or is it that these are more wicked days or merely the more careless? It is difficult to say. There is also a feeling that public men in the old days were more sensitive and readier to suffer for improprieties even if they were only indiscretions. In comparison, umbrage is not easily taken these days even when accusations are pretty direct, and extenuations are more readily forthcoming than resignations. The dictum about Caesar's wife is apparently considered too unrealistic. Part at least of the trouble is the

relativistic ethics in terms of which these matters are inevitably judged. For example, taking money for the party especially for fighting elections is permissible. Even here some distinction was sought to be made by Mr Tyagi between collections turned over to the party and those used for individual candidates. Lloyd George sold knighthoods in return for contribution to the party funds without feeling particularly oppressed by such conduct. Elections costing what they do, this particular compromise is considered inescapable, and since no quid pro quo is to be expected or given (at least in theory), it is assumed that no impropriety is involved. In lesser contexts, as when an official takes a bribe, this argument is universally held to be unavailable.

*

It is rarely that Mr Lal Bahadur Shastri gets caught in the wrong foot, but this week he was. It was also an uncharacteristic performance that landed him in this difficulty. Last week, he had made some allegations about a PSP worker having made a silly speech in which he allegedly said things, which if true, were not only in bad taste but actionable. When promptly challenged by the PSP leader, Mr Shastri took shelter under confidential intelligence reports which the Speaker, not surprisingly, found quite inadequate. Mr Shastri defended himself on a ground that may well boomerang in other contexts. He erected criteria of political judgments that may be found awkward

at other times. For example, he is reported to have said that "in forming a political assessment on the basis of reliable intelligence reports, one does not have to observe the same standards as would be required in a court of law." In the first place, this is, if one may say so without offence, to beg the question, which is whether the report is reliable. If it were, then the political inference therefrom that Mr Shastri drew was perfectly legitimate. But the more serious consequence of Mr Shastri's proposition is the laxity of standards of political judgment that he implies. On analogy, it would be said that valid inferences about ministerial improprieties could be made on as slender a basis.

*

A dedicated man, if ever I know one, is Mr M. J. MacLaren. It was difficult to get hold of him for a luncheon engagement because he believed he just could not spare the time away from his desk at Allahabad Bank. Such leisure as he had was on Sundays, and even these, if he could, he would have spent in furtherance of the Bank's business. He has, with Indian Finance, been dead set against the trend of ever-increasing rates of interest paid on Deposits. Apart from the many provocative discussions I have had with him on the banking situation in this country there is the almost incidental counsel he gave as Indian Finance's banker. Mr MacLaren retires this week from India, after around three decades in the service of Allahabad Bank; no one more reserves the rest implicit in retirement. Both Indian Finance and I feel saddened, though, because a good friend leaves Indian shores for good.

(From Our New Delhi Correspondent)

EEC for Liberal Trade Policies

WHAT the European Economic Community could do to help developing countries, through comprehensive trade agreements, was indicated by Dr Walter Hallstein, President of the Common Market Commission at a press conference in New Delhi last Tuesday. Dr Hallstein visited India on the invitation of the Ministry of Scientific Research and Cultural Affairs to deliver this year's Azad Memorial lectures. The visit also provided the opportunity for wideranging discussions with ministers and officials of departments concerned with economic affairs. Dr Hallstein was apparently satisfied with the trend of the discussions for he said that his trip was a success.

The main topic of the discussions related to the problem of adverse trade balances which focussed all the other problems of developing countries. The figures of India's trade with the member countries of the European Economic Community show that there has been, and still is, an adverse balance. But this adverse balance, Dr Hallstein pointed out, had diminished since the formation of the EEC in 1958. In the two Azad Memorial lectures, which provided the background to the points he made at the press conference, Dr Hallstein had described the impetus behind the formation of the EEC and its powerful impact on the economic development within the Community as well as on its trade with the rest of the world. Dr Hallstein further elaborated the point that he had made in the second lecture, that the European Economic Community was not an inward looking organisation. On the contrary, its existence had made for expansion of trade with the rest of the world.

Referring to the apprehensions that are frequently expressed, that the mere fact of the formation of the EEC, a powerful economic grouping which is, in a way, self-sufficient, would have an adverse effect on trade, he declared that this was not borne out by actual experience, which is the other way. Whereas world trade since the formation of the EEC had increased by 22 per cent, the Community's trade with the rest of the world had increased by 39 per cent. He also pointed out that the special arrangements regarding Associated Territories in Africa had not adversely affected imports of tropical products from "third" countries. In this connexion he added that, when agreements for the Associated Territories were

renegotiated, the common external tariff on tropical products had been reduced by 40 per cent, and the trend was towards a more balanced arrangement.

Under the Treaty of Rome, said Dr Hallstein, the Community was committed to a liberal trade policy. This commitment was reinforced by self-interest, for the Community was a manufacturing area dependent on imports of raw materials for its industries, and external markets for its manufactures. The Community regarded that a liberal trade policy was a sound policy and adhered to it in its relations with the rest of the world.

The incidence of the common external tariff, Dr Hallstein pointed out, was lower than the incidence of the former national tariffs which it replaced. Moreover, in the course of the Dillon round of negotiations in GATT, the tariff had been cut by 20 per cent. The average tariff had been reduced from 7.4 per cent to 5.6 per cent. The common external tariff, he said, was now lower than the British non-preferential tariff and much lower than tariffs in USA. Further reductions are envisaged as a result of the forthcoming 'Kennedy round' for which preparations are under way.

The question of comprehensive trade agreements with India, Pakistan and Ceylon whose problems were similar, Dr Hallstein said, would have to be approached in the light of the Kennedy negotiations in GATT. Dealing specifically with the problems of India's trade with EEC countries, Dr Hallstein quoted figures showing that the trade deficit had narrowed from 327 million dollars in 1958 to 156 million dollars in 1962. When his attention was drawn to discrepancies between these figures and Indian trade statistics, he said that the differences were being examined by experts and he was confident that they could be reconciled.

Regarding specific measures for narrowing the trade gap, Dr Hallstein indicated that the progress made in the course of the negotiations for Britain's entry into the EEC was not entirely lost with their suspension. The formula that had been evolved, as part of the solution of the problems of India, Pakistan and Ceylon, could serve as the basis for comprehensive trade agreements to be negotiated with the Six.

Referring to the comprehensive trade agreements, Dr Hallstein said that the accent was on the word 'comprehensive', for trade now was no longer merely concerned with exchange of goods and payments. It partook of the character of a modern development policy and had to tackle

quite a number of restraints on trade that existed. It comprehended questions relating to tariff policies, quota policies and all sorts of devices available to encourage foreign private investment, technical assistance, financial aid etc. The external assistance provided by the EEC countries for India's development plans amounted to over 500 million dollars and was second only to the contribution of the United States.

The EEC is now in the second stage of its transitional period of twelve years toward complete integration. From 1971 trade policy would be exclusively the affair of the Community. But, at present, the Member States have a say in the matter. In regard to development policy, the rule of unanimity would continue for about two and a half-years. From January 1, 1966, questions of development policy such as quantum of aid to developing countries and its terms would be decided by a majority vote. But Dr Hallstein did not think that the rule of unanimity would come in the way of a policy of assistance to developing countries, for in this point all the members are unanimous.

Cotton Production

Steps taken to increase the production of cotton were reviewed at a recent meeting of the Planning Commission. Though substantial improvement had been effected in the Second Plan both in output and quality, further progress during the Third Plan was considered inadequate, especially in the light of estimates of the likely growth of demand. A study made by the Planning Commission's Committee on Natural Resources has estimated that the demand for cotton will more than double itself during the next thirteen years. At the end of the Fifth Plan the demand is expected to range between 115 and 130 lakh bales.

After reviewing the different steps taken for increasing production, the Commission has recommended that the package programme for cotton, initiated by the Ministry of Food and Agriculture, should be further intensified. The steps taken by the State Governments for expansion of cotton in new project areas, it was noted, were inadequate and stress should be placed on proper crop planning in these projects. In areas considered most suitable for cotton development other crops should not be allowed and the entire energy of the extension staff should be devoted to the spread of this cash crop. It was noted that 70 to 75 per cent of areas under cotton were already under improved seeds and that it will go up to 90 per cent by the end of the Third Plan. The establishment of seed testing laboratories and a scheme for supply of standard seeds in the country's principal growing areas was recommended. The meeting also recommended the stepping up of production of pesticides, encouragement of fabrication of hand and power sprayers and intensification of research for tackling the ravages of specific pests like the boll worms and caterpillars, and

stricter enforcement of various legislative measures relating to cotton and entrusting these to one single agency at State level.

The meeting stressed the need for ensuring remunerative prices to the grower and recommended that an advisory Committee on Agricultural Prices should be set up in the Ministry of Food and Agriculture. The meeting noted that the recent introduction of groundnut in three-year crop rotation in some major cotton growing areas had brought about a marked improvement in soil fertility and yields and decided that similar crop rotations should be evolved in the major cotton growing areas.

Steel: Output and Cost

Mr C. Subramaniam, Minister of Steel and Heavy Industries, told the Informal Consultative Committee of Parliament that all the public sector steel plants were on their way to attaining their full rated capacity. Whatever target was fixed was being achieved. Steps were also being taken to bring down costs by 15 per cent, and he expected that the public sector plants would soon be able to show profits.

He also told the Committee that an announcement would be made soon on the question of increase in the retention of steel owing to the rise in railway freight and royalty on minerals, implementation of Interim Wage Award and incidence of War Risks Insurance premia. Government had decided that retention prices for 1960-62, which had been fixed at Rs 522.50 per tonne, could be applicable provisionally for the period beyond April 1, 1962, subject to escalations necessitated by statutory increases in the prices of raw materials railway freight etc. In the meantime, the question of the future price policy and the manner in which steel prices should be determined is being reviewed.

Zonal Transport

The Lok Sabha was informed last week that a proposal which will enable the Governments of Assam, Bihar and West Bengal to be associated with the Road Transport Organisation set up by the Department of Transport, for the movement of essential supplies to Assam and North Bengal, was under consideration. The suggestion came up at a meeting held in Calcutta on February 8, to consider certain matters relating to road and inland water transport in the West Bengal-Assam area. Since the scheme of the Road Transport Corporation Act, 1950, does not envisage the establishment of a Corporation to provide transport service in more than one State, a proposal for the conversion of the departmentally operated road transport undertaking into a limited company, under the Companies Act, 1956, is under consideration. In case a company is incorporated, it will be open to the Governments of West Bengal, Bihar and Assam, to participate in it as shareholders in due course.

CHAIRMAN'S SPEECH

National Rubber Manufacturers Limited

All Round Improvement

Wider Technical Assistance Finalised

Chairman's Address by Mr. K. N. Mookerjee at The Seventeenth Annual General Meeting of The Company held on 11th April, 1963

Ladies and Gentlemen,

It gives me much pleasure in extending to you all a hearty welcome to the Seventeenth Annual General Meeting of your Company. The Directors' Report and Audited Accounts for the year ended 31st December, 1962 have been in your hands for sometime now and with your permission I shall take them as read.

ACCOUNTS

You will have noticed from the Directors' Report that your Company's working during the year under review reflected an allround improvement. Not only sales of the Company's products increased substantially but also there was considerable decline in the finished goods inventory as well as borrowings. The profit for the year after charging depreciation increased by about 66 per cent over that of 1961 and the percentage of net profit on sales registered further improvement. Due to better working results your Directors have recommended higher dividend on Ordinary Shares at 8% as against 6.5% in the previous year.

INDUSTRIAL GROWTH

Industrial output in India no doubt improved during the year 1962 but at a slower rate than in previous years chiefly due to shortage of power and transport facilities and imported raw materials and components. Against this background the rubber manufacturing industry reveals encouraging trends, the index of production (with 1956 as the base year) having reached the level of 167.5 for the first 11 months of 1962 as against the general index of 149.6; its progress was striking over the decade up to 1961, output having more than doubled during that period.

Two new units for the manufacture of automobile tyres and tubes reported to have gone into production in 1962; while certain other rubber manufacturing units effected expansion of their production capacity. The installed capacity relating to rubber footwear, tyres and tubes, hoses, industrial V-belts and fan-belts, transmission and conveyor belting, camel back, foam rubber, etc. registered appreciable increase during the year under review; in terms of volume of production also there was a rise in the manufacture of almost all the major items.

EXPANSION PROGRAMME

You would have noticed from the Directors' Report that major effects of the Company's expansion programme were reflected in its working during the year under review. In fact, the Company's turnover in 1962 exceeded by 17% the target of Rs. 3 crores per annum expected to be achieved through execution of the expansion programme. Your Company have now received a fresh industrial licence from the Government of India for substantial expansion of manufacturing capacity in respect of Industrial V-belts and fan-belts by 6,00,000 Nos. per annum so as to bring the total capacity to 14,40,000 Nos. per annum. A licence to effect substantial expansion of the capacity for cycle tyres is also expected to be received in the near future.

GOODYEAR AGREEMENT

It is indeed a matter of gratification that throughout the year 1962 your Company received full co-operation and assistance from Goodyear India Limited. The present agreement with them will expire at the end of 1963 and a fresh agreement providing a wider scope for technical assistance to be received from Messrs. Goodyear, the terms of which have been finalised, is awaiting execution.

MANAGED COMPANY

It gives me great pleasure to announce that General Tyres Limited, of which your Company owned considerable headway. Construction of buildings has been completed. Almost all imported plant and machinery have been received at the factory site and installation thereof, which commenced in July 1962, is almost completed. A team of technical experts has already arrived from Czechoslovakia for putting the plant into operation. The plant for the manufacture of automobile tyres and tubes is expected to go into trial production very soon. Meanwhile, the Government of India have issued a licence permitting General Tyres Limited to effect substantial expansion of their production capacity by 6,00,000 kgs. of tyre re-reading materials and by 1,20,000 Nos. each of tyres and tubes per annum so as to raise the aggregate licensed

capacity to 3,00,000 Nos. each of tyres and tubes per annum.

EXPORTS

The rubber manufacturing industry forged ahead during the year under review with its export programmes and consequently exports of rubber products from India reached a level of Rs. 95.1 lakhs as against Rs. 78.5 lakhs in 1961, representing a rise of more than 21%. Your Directors pursued a policy of contributing to the country's export drive. Towards the end of 1962 your Company made an on-the-spot survey of export possibilities in a number of countries in the Middle East and East Africa. These as well as South East Asian regions offer fair prospects for export of Indian rubber products including those of your Company provided both prices and quality thereof are effectively competitive with those of products imported from other countries. The proposed tax rebate of 2% on the export turnover of manufacturing companies including exports by first purchasers from such companies as per the Finance Bill 1963, will, I am sure, give some though not adequate incentive for export promotion.

RAW MATERIALS

A carbon black plant has already gone into production in India and the first synthetic rubber plant is scheduled to commence production shortly so that supplies are expected to be available from these indigenous sources in the near future. Meanwhile, it is disquieting to note that raw material cost for the rubber manufacturing industry is sure to go up in 1963 as a result of the increases in the basic rates of import duty on rubber, carbon black, etc., the imposition of a general 10% surcharge on all import duties as well as the additional Central excise levies on a number of items as per the Central Government's budget for the year 1963-64.

BUDGET PROPOSALS

The additional levies provided for in the Finance Bill, 1963 are likely to retard the pace of industrial development in India including that of the rubber manufacturing industry. I have already referred to the impact of the Central Budget on raw material cost. Transport costs will also go up appreciably. Even on a conserva-

tive estimate all these levies are likely to impose an additional burden to the extent of 6 to 7%. Besides, the rates of Central sales tax are going to be raised and the duty on industrial consumption of electric power in West Bengal will go up. The 20% surcharge on excise duty relating to tyres and tubes as well as rubber products like camel back and foam rubber will cause further hardship. No industry could possibly bear such heavy imposts. Therefore, it would be rather unrealistic to expect that there would not be any upward movement of the price line.

Higher rates of import duty on machinery, spare parts and tools will raise the capital cost of expansion projects as well as new industrial ventures. Perhaps the heaviest blow will be dealt by the super profit tax which would very seriously affect the capacity of companies to maintain dividend and/or to build up reserves and also their ability to repay borrowed capital. Such a situation in its turn is sure to discourage investment and restrict ploughing back of earnings in the corporate sector and also deter in-flow of foreign capital and know-how. It is, therefore, considered essential that an objective view of the whole situation should be taken and substantial modifications in the budget proposals particularly those relating to the Super Profit Tax should be made with a view to not only maintaining but also accelerating the tempo of industrialisation in order to achieve our twin objects of defence and development.

ACKNOWLEDGMENTS

Before I conclude, I am sure, you will join me in expressing our sincere gratitude to all dealers, customers and suppliers of the Company for their ready cooperation and valuable support during the year under review. On behalf of the Board of Directors and on my own, I take this opportunity of expressing our warm appreciation of the cordial relations maintained between the management and labour and the loyalty and devotion of officers, and staff of the Company throughout the year 1962.

NOTE: This does not purport to be a record of proceedings of the Annual General Meeting.

Markets

JUTE Minimum Price for Jute

Hopes that the plea of the jute goods industry for fixing the operational minimum price for jute in the season 1963-64 at a lower level than what is obtaining now have been belied; for Government has announced early this week that it has decided to maintain the price at Rs 30 per maund f.o.r. Calcutta. The main contention of the industry has been that the current minimum prices are unrealistic as prices of manufactures have declined sharply over the past few months. The need for maintaining a close relation between raw jute prices and prices of jute goods is now being keenly felt in view of the growing competition of Pakistan whose jute industry is underquoting Indian jute goods in world markets because among other advantages such as an export bonus scheme, it gets its raw material much cheaper than its counterpart in India.

The decision to maintain the present minimum price together with the differentials for lower qualities will perpetuate the difficulties experienced in marketing the last two years' crops. The crops in the current and previous seasons comprised a large quantity of inferior quality jute for which demand is diminishing. For one thing, exports of sacking for the manufacture of which inferior quality jute is used is fast declining as a result of the growing competition from Pakistan in world markets. Secondly, the Indian industry is making steady progress in the diversification of its production by stepping its output of carpet backing for which superior quality jute is required. The continuance of the present minimum prices will encourage the production of lower quality jute in the next season also.

It is however gratifying that Government too realises the need for minimising the output of lower quality jute. While announcing the minimum price for the next season, Mr Manubhai Shah, Minister of International Trade, has admitted that our jute industry will require a larger proportion of better quality jute. The industry will also welcome the Minister's statement to the effect that it is necessary that inferior quality jute

programme of providing facilities for grading of jute.

★

is not passed off as better quality. It has often been the experience of the industry during the past two years that it has been obliged to accept inferior quality jute while paying the minimum price for a better grade jute. This difficulty arises because there is as yet no proper method of grading jute according to various qualities. It is now conceded by Government that grading arrangements should work satisfactorily. The Agricultural Marketing Adviser of the Ministry of Food and Agriculture is shortly to institute a phased

The jute goods market has been showing an irregular trend during the past week as sentiment was mainly governed by speculative interest in the absence of sustained foreign interest. Hessian was particularly quiet as no business of importance is anticipated for some time partly in view of the large stocks in US and partly because the second quarter of the year is usually a slack period for foreign enquires. With the announcement of the stock figures for IJMA mills as at the end of March, the quieter tendency became more pronounced as hessian stocks rose by 5,200 tonnes to be placed at 29,600 tonnes. In contrast sacking section steadied up in the second half of the week as stocks of this category of goods have risen by only 700 tonnes to stand at 44,700 tonnes as compared to 44,00 tonnes at the end of February. Total stocks

of jute goods at the end of last month at 90,600 tonnes show a rise of 8,400 tonnes.

The raw jute market continues to rule quiet with lower quality jute quoting below minimum levels. The fact that a purchase quota of 4.5 lakh bales has been specified by the Jute Commissioner for jute mills for the current month has not brought any marked improvement in sentiment. It is however pointed out that the trend in the Calcutta market is no indication of the jute market as a whole. It is pointed out that market sentiment in the upcountry trading centres is strong with prices quoting above the Calcutta parity. According to the Jute Bulletin as far as the growers are concerned the season 1962-63 has practically ended. The fact that they have commenced in earnest sowing for the next season shows that they are not affected by the present low price for the fibre ruling in Calcutta. Now that the

Government has announced that the minimum price for the next season's crop will be maintained at Rs 30 per maund basis Assam Bottom for Calcutta, they will go ahead with the preparations for the next crop with confidence. There is no longer any uncertainty as to the minimum price they will be able to obtain and the lifting of the entire crop. For the arrangements made this season for the proper lifting of the crop are to continue and all the agencies engaged in buying jute will continue to be asked to absorb jute at the minimum prices if the need for such assistance arises.

★

Maximum Output to Continue

At their meeting on 10 April, the Committee of the Indian Jute Mills Association considered the market situation in the light of the stocks of manufactured goods held by the mills at the end of March. They

noted that the stocks had risen by 8,300 tons but agreed that the industry should continue to operate at the present maximum level of production for a further period of one month from the end of April to the end of May 1963.

STOCKS OF JUTE GOODS WITH IJMA MILLS—March 1963.

TEA Prospects

THE latest annual review, released by Messrs A. W. Figgis & Company Private Limited, points out that the balance between supply and demand should be favourable to the producers. The world crop was smaller at 1,456 million pounds in 1962 as compared with 1,464 million pounds in the previous year. Considering that world consumption has meanwhile been higher and that there is little carryover in North India, the 1963-64 season should start on a steadier note. The review adds that "it is nevertheless difficult to assess the impact of the 1963-64 Budget on Calcutta auction prices. They are likely to increase due to excise duty. Whether this will discourage enquiries at this market remains to be seen".

According to latest reports, the weather is not particularly en-

couraging. There has been little or no rain in the Cachar district. There is a general feeling that, unless rain falls in the near future, many tea areas will be affected by drought. In this connection, the review states that the traders will feel the pinch of dearer money, while the purchasing power, especially of the middle class, has been cut by the compulsory deposit scheme and the surcharges on income-tax, which might retard the domestic consumption.

Meanwhile, the Chairman of the Indian Tea Planters' Association, Jalpaiguri, has observed that the various taxes will tend to reduce the competitive strength of Indian tea and curtail the profitability not only in the home market, but also in the export field. He has welcomed the abolition of the export duty, but has pointed out that the SPT, with the exemption limit fixed at 6 per cent, will affect the industry in general and hamper new company floatations and expansion of production. He has also pointed out that these taxes will hit the tea industry hard.

The Chairman of the Tea Board has stated that steps have been taken to increase the production and improve the quality, so that Indian tea may become more popular. He has added that the target for the industry, which had appeared distant and difficult to attain at the beginning of the Third Plan period, looks like being achieved, because of the various measures taken by the Government and the Board. He hopes that the industry will take all measures like artificial irrigation, manuring, etc., to see that the production in the current year increases significantly over that of 1961.

The main factor affecting the exports of India tea is the price at which foreign buyers can get as compared with the prices at which similar teas can be obtained from other countries. In the last decade, the share of Indian tea in world exports had declined mainly because the prices of Indian teas were uncompetitive. In this respect, the Chairman of the Tea Board hopes that the abolition of the export duty will eliminate the price disadvantage from which Indian teas had been suffering. As a matter of fact, the reports received by the Tea Board from different countries indicate that the abolition of the export duty has made Indian tea competitive.

Prospects of duty-free entry for tea brightened considerably after the French Foreign Minister supported a Dutch proposal that the common external tariff on tea be reduced to zero. At the same time, the French leader reportedly suggested that reciprocity be granted in the case of India and Ceylon by the UK. Though no definite decision has been taken by the Council of Ministers, an agreement may be reached during the debate on the convention of Association.

THE USA: THROUGH PAN AM'S MORE FOR-YOUR-MONEY PLAN!

Pan Am's the way to visit the USA. A Pan Am 'round-the-world economy ticket costs very little more than the First-class return fare from Calcutta to London! See the fabled cities of Europe and the Orient. And when you reach the USA:

In high style on a Pan Am Jet Clipper, stay at a world-famed Sheraton hotel in more than 30 cities for \$6 a day—and pay only \$6 more for three full meals!

Or, if you have the time to see everything, go anywhere for up to 99 days for only \$99—\$1 a day, on luxury "picture window" coaches

Add it up for hotel, \$6 for meals, \$1 for travel—there's a bargain! Visit New York, Washington and wonderful places like San Francisco!

Another round-the-world ticket gives you as many as 45 extra fare. Thrill cities for big sights such as

the Grand Canyon and wonderful Niagara Falls!

America has many natural wonders to see. And from East to West you can enjoy the fun that is offered in pleasure spots like this:

Ask your Travel Agent—a friendly man—how to fly with

Pan Am's Priceless Extra of Experience around the world.

JWPAAG311C

According to a report issued from Colombo, exports of tea from Ceylon increased to 35.1 million pounds in January from 32.42 million pounds in the corresponding month of 1962. Supplies to the UK, the largest buyer of Ceylonese tea, rose from 11.62 million in January 1962 to 14.78 million pounds in the month under review.

Exports of tea from East Africa declined to 3.33 million pounds in December 1962 from 4.19 million pounds in the previous month.

While exports from Kenya and Uganda fell from 2.58 million and 1.14 million in November 1962 to 2.01 million and 734,300 pounds respectively in December, shipments from Tanganyika rose from 465,500 pounds to 591,300 pounds.

Production of tea in East Africa increased to 6.0 million pounds in January from 5.3 million pounds in December 1962. While the output in Kenya and Tanganyika rose from 3.19 million and 924,740 pounds in December 1962 to 3.59 million and 1.28 million pounds

respectively in January, production in Uganda fell slightly from 1.18 million to 1.13 million pounds.

Tea stocks in London, as on 29 March, totalled 159.04 million pounds as against 157.26 million pounds in the previous week. The total quantity to be landed on the same date was 18.25 million pounds. Total afloat was 31.81 million pounds including from Calcutta 13.06 million pounds; from Chittagong nil; from Cochin 1.10 million pounds; from Ceylon 11.85 million pounds and from other Ports 5.80 million pounds.

Average prices realised were 47.06d per pound as against 47.29d in the previous week and 53.87d in the corresponding period of last year.

COTTON Trading in August Contract Commences

THE Jarilla August contract started its career on Wednesday last week at Rs 715.00 at a premium of Rs 9.50 over the ruling May contract. On the opening day, however, the new contract declined to Rs 710.00 on selling pressure but rallied upto Rs 715.50 on good support toward the close of the day. From that period onward the contract showed a steady improvement and smartly rose to Rs 722.50 per three quintals thanks mainly to good spot advices and improved conditions on the political front.

The May contract also ruled firm throughout the week and sharply went up to Rs 716.25 from Rs 701.25 per three quintals.

The spot market registered a further increase of Rs 10 per candy in the prices of all the popular growths. Most of the varieties from Gujarat were reported to have been quoted above the official ceilings obviously owing to the encouraging enquiries from the mills. Mills made a frantic

attempt to purchase the available lots of domestic cotton on the apprehension that the Government may not permit imports of foreign cotton during the current season. Improved offtake on the cotton piecegoods market also aided the bullish sentiment during the week under review.

With a view to stepping up cotton output in the country the Ministry of Food and Agriculture and Planning Commission have jointly selected twenty districts in different States for launching an intensive drive to raising cotton production. Under the new programme a large number of demonstration plots will be set up for educating farmers improved agricultural practices for increasing the per acre yield of cotton. Assistance in the form of supplying improved seeds, adequate quantum of insecticides and subsidies will be given to the cotton growers to induce them to switch-over to modern methods of cultivation.

PIECEGOODS

The cotton piecegoods market continued to present cheerful conditions last week also. Demand in the domestic sector was largely confined to seasonal goods and moderate enquiry from overseas buyers was also reported. However the stringent conditions in the monetary market stood in the way of largescale offtake in the domestic sector and the prices remained more or less unaltered.

Seasonal goods like the cambrics, lawns, bleached and dyed mulls, voles and bleached longcloth were in great demand. Bleached and dyed poplin, superior varieties of dhoties and saris for delivery in July also met with encouraging demand. Scattered enquiries for next season's goods like umbrella clothing and flannels were also reported.

Rajasthan, UP and Bihar were the prominent upcountry buyers during the week under review. A few varieties of cotton piecegoods were in short supply and were sold at a premium over ex-mill prices. Seasonal goods are also reported to have changed hands at slightly higher prices. Superfine dhoties met with keen de-

mand from buyers even at higher rates.

The bookings to the UK during the week under review dwindled into an insignificant trickle and that destination accounted for only a moderate quantity of usual qualities. Sudan was on the whole inactive. Enquiries from Africa were few and far between obviously due to the difficulties in exporting goods to the Belgian Congo. Iraq was contented with a small quantum of coatings. Singapore was satisfied with a restricted quantity of grey sheetings and longcloth while Ceylon evinced keen interest in blankets and other usual varieties against licences issued. Encouraging interest was also reported to have been shown by some of the East European countries in prints and poplins. All other destinations were practically quiet during the week under review.

Exports of cotton textiles from India in February totalled 46.2 million metres worth Rs 4.13 crores as against 51.3 million metres valued at Rs 4.61 crores in the preceding month and 42 million metres valued at Rs 3.96 crores in February 1962. During the past three years the exports of cotton textiles from the country have shown a downswing. From 604 million metres worth Rs 58.47 crores in 1960, exports of cloth slipped down to 550 million metres worth Rs 50.35 crores in 1961 and 496 million metres worth Rs 46.03 crores in 1962.

The Cotton Advisory Board which met in Bombay last week under the chairmanship of Mr R. Doraiswamy, the Textile Commissioner, has recommended to the Government of India to allow imports of cotton on an adequate level to maintain the current tempo of production. The Board also suggested to make certain modifications in the basic staple length definitions of varieties, changes in groupings and premium for improved growths of domestic cotton for the 1963-64 season. The Board has estimated the current season's crop at approximately 53 lakh bales in view of the damage caused to the cotton crop in the South. The meeting also discussed the control measures to be introduced during the next season and suggested slight alterations in the compulsory survey and supervisory scheme in the light of the experiences gained in the 1962-63 season. However it has recommended the continuation of the quota distribution and random requisitioning of cotton as before.

The piecegoods exporters have recently requested the Government to permit them to fulfil their export commitments with the United States purchasers against which letters of credit have been opened or goods have been manufactured or accumulated. They have urged Mr Manubhai Shah, the Minister for International Trade to allow such shipments against shipping bills immediately in lieu of quotas to be issued by the Government after finalising the licensing scheme. It may be recalled that the Government has suspended exports of four categories to that destination since 27 March. The US Government is reported to have allotted an annual quota of 30 million square yards for export of these four categories from India. Out of

this, about 25 million square yards have been so far exported leaving a balance of approximately of 5 million square yards. According to the recent estimate of the exporters goods of nearly 3 million square yards have been manufactured, packed or stocked for exporting to the US.

The Cotton Textiles Export Promotion Council is understood to have urged the Government to finalise a licensing scheme based on the exporters' performance in the last three years. Even the remaining 5 million square yards is intended to be distributed in accordance with the licensing scheme. The council expressed doubts about the prospects of exporting cotton piecegoods from India to the US in view of the proposal of the US Government to grant a subsidy on fibre sold for domestic consumption which would lead to a lower retail prices of cloth. Understandably the traders have stopped booking orders for distant deliveries.

The reported rumour that the Government will not issue licences for importing cotton until July has led to a sharp rise in prices of foreign cotton particularly Egyptian cotton. It is understood that further release of import licences has been suspended with a view to conserve foreign exchange. In the circumstances those mills which

have already made prior commitments for export of cloth under the voluntary export obligation scheme are in a dilemma.

The Egyptian Cotton Commission is reported to have made an upward revision in the export prices of cotton since 31 March 1963. Accordingly Karnak and Menoufi are now costlier by Rs 26 per candy while Giza 45,47 and others are marked up by Rs 31.

More Controls on Rubber Marketing

IT is understood that the Rubber Board and the Government of India are thinking in terms of introducing more controls on Rubber marketing, mainly to help the growers, especially the small ones. It is even suggested that marketing will be made a monopoly of the Rubber Board. According to reports, three proposals are being considered by the Board and the Central Government. They are the Pool system of marketing; voluntary co-operative marketing system for the small growers and the Rubber Board undertaking

the responsibility of meeting the tyre-manufacturing industry's raw rubber requirements.

It cannot be denied that the interests of the rubber planting industry can be protected only by producing more rubber and, if possible, by making country self-sufficient in this strategically important commodity. The industry should produce rubber of good quality at a price level that can stand competition with natural rubber imported from outside and synthetic rubber of both local and foreign manufacture. It is regrettable that the Rubber Board has been in existence for more than a decade with sufficient funds at its command; but it has not been able to achieve the twin objective mentioned above.

In the above connection, it would be recalled that the control price for grade I rubber was fixed at Rs 147.50 per 100 pounds f.o.b. Cochin, excluding the cess of Rs 6.25 now collected from the manufacturers and the sales tax at 2 per cent collected at the last purchasing point. At one time last year, the small grower's rubber (Grades III and IV) was getting only about Rs 130 per 100 pounds in the kottayam market. The

ANNOUNCEMENT

THE STATE BANK OF INDIA HAVE REVISED THEIR

DEPOSIT RATES

as from the 1st APRIL 1963.

The revised rate are as under:-

Savings Bank Accounts	— 3% per annum
Savings Bank Deposit Accounts	— 3½% per annum
Fixed Deposits for six months	— 3¾% per annum
Fixed Deposits for twelve months	— 4% per annum
Fixed Deposits for twenty-four or thirty-six months	— 4½% per annum

Call Deposits and other Short Term Deposits are also accepted at fully competitive rates.

THE STATE BANK OF INDIA

with its wide net-work of offices numbering over 1000 throughout the country, is at the Nation's service.

Regardless of whether your deposit needs are large or small, your nearest STATE BANK OF INDIA office invites you to make use of the Bank's DEPOSIT SERVICES.

STATE BANK OF INDIA INDIA'S LEADING BANK

SISTA'S-58-73

small grower's rubber is invariably of low quality and it is usually purchased by the buyer as anything that comes below the Grade II. The price differential between I and III grade is Rs 6 per 100 pounds. Under normal conditions, therefore, the small grower can expect only Rs 138.44 per 100 pounds at Cochin. So, what the small grower actually lost when he had to sell his rubber in the Kottayam market at Rs 130 was less than Rs 3 per 100 pounds.

Although the price of rubber is statutorily fixed, the natural law of supply and demand operates in a small way. When there is a shortage, the buyer shows willingness to pay a premium for the available supplies. The manufacturers also got an opportunity to build up stocks and bargain for cheaper rates with the sellers. It is, therefore, pointed out that the easier remedy to this situation of the Indian producers of natural rubber being forced to sell their rubber at less than the controlled price is to readjust the import policy.

CHEMICALS & DYES

Sluggish Conditions

Sluggish conditions prevailed in the Bombay market for Dyes and Chemicals. While the demand from consumers was negligible, stockists were anxious sellers. Tight money conditions and the impending announcement of the new import policy were the main influencing factors.

In the Chemicals section, a slight improvement in prices was noticed in view of limited stocks and the increased demand. Menthol was better, while Champor was easy. Prices of other items moved around last week's levels.

Among Dyes, Vats and direct dyes were firm. Naphthols and Base Colours were rather steady. There was a virtual absence of buyers for appreciable quantities. There was a general feeling that the present dull conditions might continue till the announcement of the new import policy.

SUGAR

Supply to Ceylon

According to reports issued from Colombo, India has agreed to supply 4,000 tons of refined crystal sugar to Ceylon before the Sinhalese and Hindu New Year falling in the middle of April. The supply will be made at a reduced price, the price charged being that of raw sugar which is usually ten pounds sterling per ton less than that of crystal sugar.

The supply is being made at the request of Ceylon authorities who had approached the Indian High Commission here, as they are in need of the commodity at the present moment, particularly in the context of the New Year.

The International Sugar Council, which held a meeting in London towards the end of last week, recommended the extension for an indefinite period of the International Sugar Agreement, which was due to expire next December. In order to extend the agreement, the following procedure will be followed: the project of a protocol to be drafted before 15 May will be submitted to the interested

governments for their consideration at a short conference to be convened by the Secretary General of the United Nations, preferably at the London seat of the Sugar Council and, if possible, before 1 July, 1963. Subsequently the Council will study the basis of a new agreement to replace the present one.

PEPPER

Firm Market

Pepper prices in the Cochin market have continued to display a firmer tendency, thanks to renewed interest shown by overseas buyers. As price levels prevailing in the Singapore and Cochin markets are more or less at parity, sellers are optimistic that America will find it cheaper to make purchases from here due to difference in freight and time of delivery. This optimism is borne out partially when the USA made substantial purchases from here recently.

Confidence among sellers is also strengthened by the reports that there is a shortage of stocks in Saarak and Singapore. There is a general belief that the immediate outlook for the commodity is not bleak, as more buying from New York grinders and East European countries are in the offing. In the Cochin market, the rate is quoted at Rs 286 per quintal.

GOLD & SILVER

Silver Quiet

Conditions in the silver section on the Bombay Bullion Exchange remained generally quiet as support was lacking from the start. Prices, therefore, developed a slightly easier tendency. Advances from the upcountry centres were also not conducive to activity, while reports of some arrivals and poor off-take also made for hesitancy on the part of the operators. The rate for the white metal was quoted around Rs 235.

Although activity in the Gold section was restricted, there was a tendency for prices to rise. This was due more to absence of sellers than to any substantial support. The rate for the metal was quoted at Rs 102 and at £12-10s-7½d in London. The market for Sovereign ruled quiet, the rate being quoted around Rs 74.

OILS & OILSEEDS

Steadier Outlook

The market for Oils and Oilseeds presented a steadier appearance. Activity was prominent in the Castor seed section, thanks to the rumours that the Government would shortly announce incentives for the export of castor oil. Although a precise estimate of the shipments in recent months was not available, demand from abroad was claimed to be poor. It was, therefore, felt that a prompt decision in respect of export incentives would help the trade considerably.

Groundnut attracted bull support at lower levels throughout the week.

THE BOMBAY DYEING AND MANUFACTURING COMPANY LIMITED

NOTICE

The Eightyfourth Annual General Meeting of The Bombay Dyeing and Manufacturing Company Limited will be held at the Registered Office of the Company, Neville House, Ballard Estate, Bombay 1, on Thursday, the 18th April 1963, at 4-30 P.M., to transact the following business:—

1. To adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1962.

2. To sanction the declaration of a Dividend.

3. To appoint a Director in the place of Mr. Pratapsinh Mathuradas who retires by rotation, and being eligible offers himself for re-appointment.

4. To appoint a Director in the place of Mr. N. M. Wagle who retires by rotation, and being eligible offers himself for re-appointment.

5. To appoint a Director in the place of Mr. J. D. Choksi who retires by rotation, and being eligible offers himself for re-appointment.

6. To appoint Auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting, and to fix their remuneration.

SPECIAL BUSINESS

7. AND for the purpose of considering, and if thought fit, to pass (with or without amendment as may be permissible), the Resolutions set out below as Special Resolutions:—

(a) SPECIAL RESOLUTION NO. 1.

"RESOLVED that, subject to permission being accorded by the Central Government under Section 363 of the Companies Act, 1956, in respect of all or such of the amounts referred to hereafter for which permission is necessary, the Company hereby waives the recovery from Messrs. W. H. Brady & Co. Ltd. (who are or may be deemed to be 'associates' of the Managing Agents of the Company) of the sums of Rs 43,158/52, Rs 87,429/40, Rs. 67,363/69 and Rs. 34,464/48 paid by the Company to Messrs. W. H. Brady & Co. Ltd. during the years 1960, 1962 and 1963 (up to the 11th March 1963), respectively, in respect of goods purchased from them by the Company."

(b) SPECIAL RESOLUTION NO. II.

"RESOLVED that, subject to permission being accorded by the Central Government under Section 363 of the Companies Act, 1956, in respect of all or such of the amounts referred to hereafter for which permission is necessary, the Company hereby waives the recovery from Messrs. The Empire Dyeing & Manufacturing Co. Ltd.

(who are or may be deemed to be 'associates' of the Managing Agents of the Company) of the sums of Rs 1,14,504/27, Rs 2,75,904/87, Rs 63,579/44 and Rs 1,30,923/38 paid by the Company to Messrs. The Empire Dyeing & Manufacturing Co. Ltd. during the years 1960, 1961, 1962 and 1963 (up to the 11th March 1963), respectively, in respect of the services by way of processing work rendered by them to the Company."

(c) SPECIAL RESOLUTION NO. III.

"REVOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. W. H. Brady & Co. Ltd., Bombay, (who are or may be deemed to be 'associates' of the Managing Agents of the Company), to be operative as from the date of this Meeting until determined by three months notice given by either side to the other, in respect of purchases from Messrs. W. H. Brady & Co. Ltd. of machinery and spare parts of machinery, laboratory and testing equipment and mill stores such as emery fillets, spindle tapes, valves, pins, bobbins, beam flanges, steel strappings, greases and lubricating oils, beltings and such other goods in which they trade or do business or may trade or do business, as well as in respect of the sale or supply to them of any property or any article produced, dealt in or owned by the Company; subject to the conditions that the prices of such mill stores, machinery and spare parts and such other goods and equipment as aforesaid shall be such as are reasonable and/or are approved of the Directors of the Company, and that all payments to be made to the Company by Messrs. W. H. Brady & Co. Ltd. shall be made within one month from the date of the sale or supply of any property or any article by the Company to Messrs. W. H. Brady & Co. Ltd."

(d) SPECIAL RESOLUTION NO. IV.

"RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, and subject to the approval of the Central Government being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting and for the sake of identification initialled by the Chairman, purporting to be between

Company and Messrs. The Empire Dyeing & Mfg. Co. Ltd., Bombay, (who are or may be deemed to be 'associates' of the Managing Agents of the Company)—(subject to any amendments as may be suggested by the Central Government and accepted by the Board of Directors of the Company and by Messrs. The Empire Dyeing & Mfg. Co. Ltd.)—to be operative as from the date of this Meeting, until determined by three months notice given by either side to the other, in respect of Messrs. The Empire Dyeing & Manufacturing Co. Ltd. rendering services by way of any work of or in relation to processing of cloth and yarn such as bleaching, dyeing, printing, raising, mercerising and finishing, and in respect of purchases from them of such goods in which they trade or do business or may trade or do business, as well as in respect of sales to them by the Company of any property or any article produced, dealt in or owned by the Company, subject to the conditions that the price or rates to be paid by the Company shall be reasonable and/or approved of by the Directors of the Company, and that all payments to be made to the Company by Messrs. The Empire Dyeing & Mfg. Co. Ltd., shall be made within one month from the date of the sale or supply of any property or any article by the Company to Messrs. The Empire Dyeing & Mfg. Co. Ltd."

(e) SPECIAL RESOLUTION NO. V.

"RESOLVED

(a) that, to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of an agreement for sale in terms of the draft placed before the Meeting and for the sake of identification initialled by the Chairman, for the sale to Messrs. Bombay Ring Travellers Co. Ltd., (who are or may be deemed to be 'associates' of the Company's Managing Agents), of two plots of land of the Company's Dye Works at Cadell Road, Mahim, namely (i) an area admeasuring about 4,300 square yards (over which Blocks 'Q', 'O' and 'OI' are at present located), and (ii) an area admeasuring about 2,300 square yards (situate on the other side of a 20' wide road between these two plots, (subject, however, to increase or decrease in area as provided in the aforesaid draft Agreement), at the price of Rs 130/- per square yard, and on payment, by way of reimbursement, of betterment charges under the Town Planning Scheme in respect of these plots at Rs 5/- per square yard; subject to the con-

dition that the stamp duty and registration charges in respect of the documents relating to the sale of the said two plots shall be borne and paid by the purchasers.

(b) that the Board of Directors of the Company be and they are hereby authorised to complete aforesaid agreement for sale and thereafter to complete the conveyance of the said two plots of land in favour of Messrs. Bombay Ring Travellers Co. Ltd. and/or their nominee or nominees in accordance with the terms of the said agreement for sale."

The Explanatory Statement under Section 173 is annexed in respect of the above Resolutions.

The drafts of the contracts referred to in Special Resolutions Nos. III, IV and V are open for inspection by any Member at the Registered Office of the Company on all working days from 10-30 a.m. to 1-00 p.m.

By Order of the Board,
Nowrosjee Wadia & Sons (Private) Ltd.
NEVILLE N. WADIA,
Director,
Managing Agents.

Bombay 14th March, 1963.

Notes:—

(a) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(b) The Share Transfer Books of the Company will remain closed from Saturday, the 9th March, 1963 to Friday, the 29th March, 1963, both days inclusive.

(c) The Dividend when declared will be made payable at the National and Grindlays Bank Ltd., Bombay, on or after the 26th April, 1963, to those Members whose names stand on the Register of the Company on the 29th March, 1963, and the Dividend Warrants will be duly posted to them.

(d) The members are requested to notify immediately any change of address to the Company.

(e) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the Special Business set out above is annexed to the Notice of the Annual General Meeting posted to the Members.

now
THE
LITRE

Metric capacity measures are now compulsory in trade throughout the country. • The kilogram and the metre became compulsory last year; thus the metric system of weights and measures is now the only legal system in India. • The simplicity of the metric system will be obvious if you use the units (litre, metre and kilo) as they are, for their intrinsic value. • Do not equate metric measures to old units like seer, viss or ollock.

For the Investor

INVESTMENT GOSSIP

Revival of Interest

The steady trend noticeable on the stock market for the past few days stems from the growing belief that generally conditions will become conducive to the smooth working of the corporate sector. The discussions at the recent session of the All-India Congress Committee have revealed that many are concerned about the declining trend in industrial and agricultural production. Although industrial production is comparatively better, the rate of growth in the industrial sector too cannot be considered to be satisfactory. In the context of the present national emergency when industrial production is to be stepped up, it is imperative that factors retarding progress should be identified and eliminated. In this view the Super Profits Tax is an unnecessary measure which is sure to come in the way of continued rapid industrial development.

It is therefore gratifying that informed sources believe that the Union Finance Minister will be persuaded to effect such modifications to the SPT as will make it harmless in so far as capital formation is concerned. As has been made clear by almost all representations made to the Union Finance Minister, the corporate sector will be ready to pay the Rs 25 crores that the SPT is to yield by any other method which

does not stifle the corporate sector as the SPT in its present form is certain to do. With the fears about the SPT considerably reduced by hopes of suitable modifications to it, marketmen have been enthused by other favourable factors. There are persistent reports that Government is now favourably disposed toward the question of an increase in the steel retention price. It is expected that the announcement in this regard will come soon enough with the rise in the retention price adequate to cover the increased costs to the steel companies necessitated by increase in the freight, the emergency risk insurance, increase in royalties etc. In the meantime, both TISCO and IISCO have reported record production during March. There are also strong rumours that these two companies will be allowed to embark on expansion programmes during the Fourth Plan. There are indications that the difficulties of the coal industry will receive sympathetic consideration at the hands of Government. The Union Minister of Mines and Fuel is reported to be in favour of granting an increase in coal prices. Collieries will be able to expedite their modernisation programme as Government has finalised the credit guarantee scheme under which collieries will get matching rupee finance to take advantage of the World Bank loan.

NEW ISSUE NOTES

ECEC

The Electric Construction & Equipment Company, Limited has proposed to increase its share capital by Rs 15.50 lakhs comprising 15,500—9.3 per cent Cumulative Redeemable Preference shares of Rs 100 each, to be offered to the holders of equity shares in the ratio of one preference share for every 40 equity shares held by them as on 16 April. The amount payable on application is fixed at Rs 100 a share and the last date of the receipt of application along with remittance is 15 May. Transfer Books will remain closed from 16 April to 23 April, 1963.

East Anglia Plastics

In response to the request from many shareholders, the directors of East Anglia Plastics (India), Limited have decided to extend the last date for acceptance of right shares, offered to their letter of rights noted 28 February, up to 30 April, 1963.

Dr Paul Lohmann

The Board of Directors of Dr Paul Lohmann (India), Limited have announced that the shareholders of the company, whose names are registered as on 26 April, will be entitled

to rights shares, at par, in the ratio of two shares for every share held on that date. Transfer books will remain closed from 22nd to 26 April, 1963.

Oriental Spun Pipe

The Oriental Spun Pipe Company Limited, a new company to be incorporated in the State of Delhi, will raise capital of Rs 75 lakhs, divided into Rs 60 lakhs in equity and Rs 15 lakhs in cumulative redeemable preference shares carrying dividend at 9.2/7 per cent per annum, at par.

Yemmiganur Spinning

In supersession of the consent accorded previously, Yemmiganur Spinning Mills Limited, Yemmiganur, has been allowed to issue a capital of Rs 30 lakhs, divided into 25,000 equity shares of Rs 100 each and 5,000 cumulative redeemable preference shares of Rs 100 each (carrying a dividend of 9.3 per cent).

Utkal Machinery

Utkal Machinery Limited, Bombay, is issuing further capital of Rs 40 lakhs, divided into 40 Debenture units of Rs 1,00,000 each, carrying interest at the rate of 7 per cent per annum, to be issued to LIC as security for a loan.

Shree Digvijay Cement

Shree Digvijay Cement Company, Limited will issue additional capital of Rs 50 lakhs in equity shares of Rs 100 each, at a premium of Rs 10 per share.

BIEC

The British India Electric Construction Company, Limited, Calcutta, is issuing equity shares of Rs 10 lakhs, at a premium of 33 1/3 per cent. The capital will be issued to two UK companies for consideration other than cash.

BONUS ISSUE NOTES

SIS Siddhanta Works

The South India Saiva Siddhanta Works Publishing Society, Tirunelveli Limited, Madras, is to raise further capital of Rs 1 lakh in ordinary shares of Rs 10 each on capitalisation of the company's general reserve to a like extent.

Bombay Burmah Trading

The Bombay Burmah Trading Corporation Limited has decided to subdivide the existing shares into units of Rs 25 each. All the fully-paid shares of Rs 2,500 and Rs 125 each will be sub-divided into shares of Rs 25 fully paid-up, while the shares having a face value of Rs 125 each and which are paid-up to the extent of Rs 50 per share will become shares of Rs 25 each with Rs 10 paid-up. After the subdivision of the existing shares in the above manner, new bonus shares will be offered to the

existing shareholders in the proportion of one share for every fully-paid share held, while the partly-paid shares will be credited with Rs 10 per share and made into Rs 20 partly-paid shares having a face value of Rs 25 per share.

INVESTMENT NOTES

Kesoram

A centrifugal casting foundry capable of producing 30,000 tons of pressure pipes and 3,000 tons of shapes annually is being set up in Calcutta by the Kesoram Industries & Cotton Mills, in collaboration with a West German firm. The plant will comprise three hot blast cupola furnaces designed for an hourly output of 10 tons of molten metal, four centrifugal casting machines for the various pressure ranges and pipe lengths and also a continuously-working oil-fired pipe annealing furnace putting out 8 to 10 tons an hour.

TISCO

The production figures of the Tata Iron & Steel Company have made a good showing in all departments for the year ended 31 March, 1963 as compared with the previous year. The output of Saleable Steel rose to 1.41 million metric tons from 1.32 million tons and Pig Iron to 1.77 million tons from 1.65 million tons. Steel Ingots improved to 1.80 million tons from 1.64 million tons. Thus, the plant operated at 90 per cent of capacity. The output of the company for the month of March was also higher than that in February, due mainly to a longer working month.

IISCO

The production figures released by the Indian Iron & Steel Company, Limited reveal an all-round increase in March as compared to the previous month. The output of Pig Iron has risen to 116,303 metric tonnes from 106,428 tonnes in February; Steel Ingots to 93,288 tonnes from 79,233 tonnes and Saleable Steel to 87,400 tonnes from 69,816 tonnes. Despatches are substantially higher at 106,182 tonnes against 64,180 tonnes.

The total output for the company's financial year ended 31 March, 1963, has shown a marked rise as compared to the previous year, as will be clear from the following figures (in metric tonnes):—

	1963	1962
Pig Iron	1,291,825	1,187,397
Steel Ingots	1,002,038	934,499
Saleable Steel	795,119	734,951
Despatches	800,118	734,006

Bombay Oxygen

Bombay Oxygen Corporation Limited has completed the erection of its oxygen gas plant at Bhandup. The acetylene plant of the company will be commissioned in June. It is learnt that the company has obtained the sanction of the Government for setting up a welding electrode plant with a capacity of 2,200 tons a year. The capital outlay on the project is estimated

at Rs 20 lakhs. Negotiations for obtaining collaboration from East European countries are in progress. The company has also sought the permission of the Government to undertake the manufacture of liquid oxygen. It is planned to put a plant with a capacity of about 300 cubic metres per hour. The capital expenditure on this project is placed at Rs 20 lakhs.

INVESTMENT BRIEFS

The Kasturbhai group of textile mills in Ahmedabad has suffered a setback during 1962. Gross profits of all seven units are lower as compared to the previous year, resulting in a cut in the distribution to the shareholders. Following are the details:

	(In Lakhs Rs)	1962	1961
Gross Profits			
Arvind Mills	...	101	108
Raipur Manufacturing	...	39.95	45.52
Ahmedabad New Cotton	...	19.85	31.70
Aruna Mills	...	41.28	51.23
Ashoka Mills	...	25.81	45.41
Nutan Mills	...	22.31	23.31
Saraspur Mills	...	26.04	37.43

	(Per Share)		
Dividends			
Arvind Mills	...	30 *	45

Ahmedabad New Cotton	...	20 *	35
Aruna Mills	...	24 *	35
Ashoka Mills	...	24 *	35
Nutan Mills	...	22 *	35
Saraspur Mills	...	24 *	35

* Paid on the increased capital.

Bowreah Cotton Mills Co. Ltd., has declared a dividend of 15 per cent for the year 1962 on increased capital against 20 per cent in the previous year. In June, 1962 the company increased its capital by Rs 9.6 lakhs by issuing ordinary right shares in the proportion of 2 new shares for every five shares held.

Dunbar Mills Ltd., has also cut the dividend to 15 per cent for the year 1962 against 20 per cent in the previous year.

STOCK EXCHANGES

A Sign of Relief

Watch-Dog Writes: STOCK markets have continued to be in a cheerful mood. Not only the fall in prices has been arrested, but also leading equities have made fresh headway due to continued support on the belief that the Union Finance Minister may announce some modification in the SPT on 18 April. There are also expectations of an early announcement with regard to an increase in steel retention prices.

Lyons Range witnessed a further recovery in equity prices; but activity was mostly confined to the speculative issues.

Dalal Street continued to rule steady with active support for selected

A mixed trend prevailed on the Madras Stock Exchange.

Business on the Bangalore Stock Exchange continued to remain rather dull.

The size of the recovery in prices on the Delhi Stock Exchange was suggestive of a distinct revival of activity as well as confidence.

Price movements on the Ahmedabad Stock Exchange were confined to narrow limits.

The London Stock Exchange turned irregular. Rubber shares made a good showing with buyers attracted by the big yield and the recent favourable company statements.

Wall Street forged ahead to a new 1963 high under good leadership.

CALCUTTA

PINNING the hope on a possible revision of the Super Profits Tax, operators on the Calcutta Stock Exchange continued to extend their support, resulting in prices developing a remarkable recovery in prices during the week under report. Activity was, however, mostly confined to the speculative issues, while a few selected shares in the cash list moved up only in sympathy. The market remained closed from Thursday on account of Easter and New Year holidays and will be reopened on Tuesday, 16 April.

In general, the recovery in prices, that was noticed from the middle of last week, was extended further, thanks to a lessening of anxiety over the formidable tax proposal. In this respect, the confidence expressed by the FICCI President that some changes would be made in the SPT seemed to have aided sentiment, not to speak of the absence of any adverse developments in the Sino-Indian situation.

There were also one or two factors which were conducive to the growth of a constructive approach to equities. First, the Government seemed to be anxious to maintain the tempo of industrial output during the emergency by taking all suitable measures. Secondly, prospects of financial aid from various countries continued to be bright. Lastly, an announcement regarding the revision of retention prices of steel was expected at an early date. Prices, therefore, picked up on short-covering and some support in the nature of bargain-hunting although profit-taking erased some of the extreme gains towards the close.

Gilt-edged securities were devoid of interest support from institutional in-

vestors was conspicuous by its absence. 3 per cent 1986 Conversion Loan moved narrowly between Rs 63 and Rs 63.08.

Bank shares remained unchanged. United Commercial, after a long time, came in for business and changed hands at Rs 70.50 to Rs 71.50.

Weaker advices from the gunny market following the news of a substantial rise in stocks with the mills at the end of last month had an adverse effect on sentiment in the Jute section; but the prices of a few selected shares moved up in sympathy with the general trend of the market. Birlas were taken up to Rs 26 from Rs 25.37; Ganges up to Rs 12.69 from Rs 12.25; India up to Rs 17.62 from Rs 17.50 and New Central up to Rs 12.62 from Rs 12.31. Anglo-India were enquired at Rs 201.

The news of the Government trying to assist the coal industry in securing necessary rupee finance induced selective support for coal shares. Central India moved up to Rs 9.94 from Rs 9.25; Western Bengal to Rs 8.75 from Rs 7.87 and South Karanpura to Rs 7.87 from Rs 7.56. Burakur were nominally quoted at Rs 15.50.

The improvement in the trading conditions in the cloth market seemed to have no effect on Textile shares, which remained generally dull. The only two bright spots were Bharat Commerce and Jay Shree, having buyers up to Rs 20.75 and Rs 14.81 from Rs 20.56 and Rs 14 respectively. J. K. Cotton moved narrowly between Rs 12.37 and Rs 12.56.

Tea shares met with little or no interest. Operators seemed to have started thinking about the prospects for the coming season. They were anxious to know the effect of the impact of the budget on auction prices and whether the levy of a 20 per cent surcharge on the excise duty would discourage enquiries at the Calcutta market.

Except for some enquiry in Cawnpore at Rs 10.62, Sugar shares were practically neglected. Darbanga were quoted at Rs 7.25.

Engineering shares were fairly active under the influence of Indian Irons. The expectation of an early announcement with regard to the increase in steel retention prices induced a further recovery in the price of the scrip to Rs 20.45 from the week end level Rs 19.78. TEXMACO ad-

vanced to Rs 21.40 from Rs 20.25 and so also Guest, Keen, Williams to Rs Rs 30.69 from Rs 30.12. Jessop spurted to Rs 22.25 from Rs 21.81 on reports of the company having orders on hand for the next five years. Britannia improved to Rs 9.56 from Rs 8.90 with Braithwaite changing hands at Rs 32.75 to Rs 33.06 and J. K. Steel at Rs 15.25 to Rs 15.50.

Miscellaneous issues followed the general trend of the market although the volume of business was restricted. Following were the price trends of a few selected shares:

	As on 6 April	High-est Rs	As on 10 April Rs

SNIPPETS

New UK Loan

An agreement for a loan of £3.5 million by the British Government to the Government of India was signed in New Delhi on 9 April. The announcement about this loan was made by the UK Chancellor of Exchequer, Mr Reginald Maudling while presenting his Budget for the fiscal year 1963-64. This is a new loan and is in addition to the £95 million aid made available to India for the Third Plan. The loan is for a period of 25 years and the repayment will begin seven years after its commencement. The loan will be utilised for purchase in Britain of steel plates and other steel products for a number of projects in both the public and private sectors.

New Casting Steel

The development of a new casting steel which has been recently announced by the International Nickel Company, Inc. is expected to fill many needs in a number of modern industries such as the aircraft, missile, machine, construction and tool and die. This new casting steel provided the designer and engineer with castings to complement the wrought ultra-high-strength maraging steels previously developed by International Nickel and which constituted major advance in the evolution of high-strength engineering materials.

BANK OF ENGLAND

*Known and trusted on every Continent
of the globe, the trademark 'Sanforized'
can boost the export of Indian cottons*

The Birthday Gift

Under a gift of cotton...
"Sanforized" is the name of the cotton...
It is the name of the cotton...
It is the name of the cotton...

**IF YOU WERE CHARGED IF
YOU'D LOOK FOR AN OAK TREE...**

...that is a cotton fabric, the Sanforized...
"Sanforized" is the name of the cotton...
It is the name of the cotton...
It is the name of the cotton...

**WE BRING
THE FINEST
COTTON
FIBRE
TO YOU**

SANFORIZED
REGD. TM. MK.

cloth that is labelled 'Sanforized' has the identical international standard of performance - it will not shrink out of fit. The trademark can give a tremendous boost to India's export of cotton textiles. It can help the industry to touch - perhaps exceed - the Third Plan target of 800 million yards of cloth for export and thus earn valuable foreign exchange.

Issued by Cluett, Peabody & Co., Inc. (Incorporated in the U.S.A. with limited liability) proprietors of the registered trademark 'SANFORIZED'. The trademark proprietors use the trademark 'SANFORIZED', or permit its use by authorised registered users, only in respect of tested fabric which meets the trademark proprietors' strict requirements as to residual shrinkage.

SANFORIZED
Working, drinking and all that fun...
Make life and make it right...
They say so in your ad...
(Simply serves to simplify a life.)

For information: 'Sanforized' Service, 95, Marine Drive, Bombay 2.

Indian Finance

INVESTOR'S SUPPLEMENT

Steep Decline in Equity Values in March

The stock market was in a demoralised state throughout March, following the imposition of heavy taxation, both direct and indirect, in the budget for 1963-64. Earlier hopes that the corporate sector would be spared from further levies had been belied as the Super Profits Tax alone would cripple the sector. The SPT which will operate when the income of a company, after deducting the income tax and super tax exceeds 6 per cent of its capital and reserves except for such amounts of reserves which are allowed as deduction in computing the total income tax, is expected to net Rs 25 crores annually. The SPT is a harsh measure as it will take away almost all the after tax profits of companies thus rendering them financially weak. With little or no free funds available, companies will not be able to pay a reasonable dividend to shareholders and their expansion plans will receive a setback. The method of computing super profits for the purpose of the tax will seriously affect companies with small reserves and those which are employing considerable borrowed finance.

The stock market was completely paralysed when the full implication of the massive taxation proposals was realised. Equity prices were hammered down on persistent selling pressure and further decline in values was averted only by the expedient of imposing

minimum prices. Even so the undertone of the market continued to be easy in unofficial markings. For some time sentiment appeared to recover but that phase proved short-lived as the tenor of the speech of the Union Finance Minister in the Rajya Sabha while replying to the five day debate on the Central budget gave no indication of changes in the SPT. Both operators and investors were convinced that unless the SPT was suitably modified the outlook for equities would remain bleak. It was however believed that the numerous representation made to the Government about the crippling character of the SPT would have some favourable effect. Government had been urged to give up the SPT or in the alternative to so modify it that the corporate sector is left with sizable funds out of the after tax profits to enable it to continue its expansion programme and to pay a reasonable dividend to shareholders. It was pointed out that the aim of fostering the rapid growth of industries would be thwarted if the SPT was allowed to go on the Statute Book unchanged. With the prospect of a cut in dividend and postponement of expansion

plans of companies, investors would be discouraged from investing their funds in industrial equities. Some of the representations made to the Government had pointed out that if the aim was to collect Rs 25 crores from the corporate sector, it would be accomplished in a number of ways without disrupting the normal working of companies by such a measure as the SPT. Estimates made of the incidence of the SPT indicated that the tax would net much more than the Rs 25 crores estimated by the Union Finance Minister to accrue from the tax. According to the Calcutta Stock Exchange Association the total burden that the companies included in its official list would be called upon to bear on account of the SPT would be as much as Rs 15 crores. The estimate however had pointed out that the actual figure might be much more because the year 1962 had been a good year for the jute industry. The conclusion arrived at by the Calcutta Stock Exchange study is that most companies would have to choose between paying a dividend and ploughing back funds into the business.

Even though it was generally believed that Government would not

want the private sector industries to get into serious trouble in respect of their expansion programmes for want of adequate funds, investors continued to be chary of extending their commitments. The general tendency was to sell out and cut loss.

Towards the close of the month trading on the Calcutta Stock Exchange came to a standstill as operators refrained from doing any business for a whole week though the market was officially open. Evidently it was expected that the meeting between the Union Finance Minister and the presidents of the eight recognised stock exchanges in the country would produce some indication of the possible change that would be made to the SPT. However there was no help from the eagerly awaited meeting and conditions continued to be easy.

In the meantime, sentiment had been further adversely affected by the cuts in dividends announced by a number of companies. Few prominent companies had also announced their decision to postpone their expansion plans in view of the heavy incidence of the Super Profits Tax. In the general gloom caused by the SPT buying support was completely absent and all were sellers. Marketmen were so obsessed with the SPT that even the removal of the minimum price restrictions failed to arouse any interest.

(a) Includes Rs 91,540 being refund of tax.

(b) After transferring Rs 100,000 from Taxation Contingencies Reserve.

(c) After transferring Rs 20,000 from general and Dividend Equalisation Reserve and writing back Rs 100,000 from provision for taxation.

(d) After writing back £18,805 being provision for taxation for Indian Taxation in previous years.

(e) After transferring Rs 100,000 from provision for taxation and Rs 14,000 from Development Rebate Reserve.

(f) After transferring Rs 137,000 from General Reserve and writing back Rs 86,740 from Development Rebate Reserve.

(g) After transferring Rs 50,000 from provision for taxation.

(h) After transferring Rs 2,865,300 from General Reserve No. 1.

(j) Includes Rs 2,240,000 being profit on sale of Orient Mill Property and Assets and writing back Rs 18,300 being Development Rebate Reserve.

(k) After transferring Rs 80,000 from General Reserve.

(l) After transferring Rs 100,000 from General Reserve and Rs 100,000 from Debenture Redemption Reserve.

(m) After transferring Rs 35,000 from Dividend Equalisation Reserve.

(n) After transferring £14,000 from Other Reserves.

(o) After transferring Rs 120,000 from Contingency Reserve.

(p) After transferring Rs 230,188 from General Reserve No. 1; Rs 380,000 from General Reserve No. 2 and Rs 45,500 from Dividend Equalisation Reserve.

(q) After writing back Rs 100,000 being excess provision for taxation.

(r) After transferring Rs. 200,000 from General Reserve.

(s) After transferring Rs 300,300 from Reserve No. 1 and Rs 1,629,503 from General Reserve No. 2.

(t) Preference shares carry a dividend of 10 per cent of which only 5 per cent is cumulative.

(u) After writing back Rs 1,00,000 from provision against jute stocks and jute contracted for.

(w) After transferring Rs 450,000 from General Reserve.

(x) After writing back Rs 104,975 being provision against anticipated loss on raw jute and work in progress.

(y) After transferring Rs 365,000 from provision for taxation; Rs 30,000 from Contingency Reserve; Rs 12,395 from provision for Doubtful Debts and including Rs 54,963 being refund of Contribution to Pension Fund.

(z) After transferring Rs 160,000 from General Reserve.

(a1) After writing back Rs 520,000 from provision for possible loss on forward contracts; Rs 100,000 being excess provision for Income-tax and writing back Rs 930,280 being profit on sale of assets.

(a2) After transferring Rs 137,000 from General Reserve and Rs 1,000 being excess provision for depreciation.

(a3) After transferring Rs 956,680 from General Reserve; Rs 100,000 from Debenture Redemption Reserve; Rs 79,322 from Development Rebate Reserve and Rs 93,100 from Welfare Reserve.

(a4) After transferring Rs 84,000 from General Reserve.

(a5) After transferring Rs 350,000 from Tax Contingency Reserve.

(a6) After transferring Rs 1,040,000 from Contingency Reserve and writing back Rs 230,000 from provision for possible loss on Forward Contracts.

(a7) After transferring Rs 50,000 from General Reserve.

(a) After transferring Rs 162,500 from Dividend Equalisation Fund.

(b) After transferring Rs 385,000 from Dividend Equalisation Reserve and writing back Rs 29,468 from provisions.

(c) After transferring Rs 281,261 from General Reserve.

(d) After transferring Rs 784,586 from General Reserve No. 2; Rs 522,000 Reserve of exempted profits and Rs 358,750 from Dividend Equalisation Reserve.

(e) After transferring Rs 60,000 from Development Rebate Reserve and Rs 90,940 from Rehabilitation Fund.

(f) After transferring Rs 9,800,000 from General Reserve.

(g) Includes Rs 628,716 being provision for contingencies written back.

(h) After transferring Rs 62,000 from General Reserve.

(i) After transferring Rs 1,200,000 from Development Rebate Reserve.

(j) After transferring Rs 329,164 from General Reserve Rs 270,000 from Deferred Taxation Reserve and Rs 41,811 from provision for taxes.

(k) After transferring Rs 400,000 from Development Reserve.

(l) After transferring Rs 142,000 from profit on sale of capital assets.

(m) After transferring Rs 407,298 from General Reserve.

(n) After transferring Rs 150,000 from Deferred Taxation Reserve and Rs 129,559 from provision for taxes made in previous years.

(o) After transferring Rs 1,150,000 from Special Reserve.

(p) After transferring Rs 100,000 from General Reserve.

(q) After transferring Rs 2,500,000 from Dividend Equalisation Reserve; Rs 3,042,276 from provision made in previous years and Rs 1,613,458 from General Reserve.

(r) After transferring Rs 250,000 from Reserve for Deferred Income-tax.

(s) After transferring Rs 4,800,000 from General Reserve and writing back Rs 718,567 from provision in previous years.

(t) After transferring Rs 3,699,860 from General Reserve.

(u) Dividend in the form shares in The Punjab National Bank at one share for every 20 shares held in Bharat Nidhi.

(v) After transferring Rs 110,000 from Reserve Fund.

(w) After writing back Rs 37,643 being provision for taxation and Rs 10,000 being Reserve for Bad and Doubtful debts.

(x) After transferring Rs 114,000 from Reserve for Doubtful Reserve; Rs 31,138 from Investment Reserve and including Rs 129,735 being balance refunds capital from Baraboni Tea Co. and Rs 135,113 being refund of Income-tax.

(y) After transferring Rs 228,256 from Rehabilitation and Expansion Reserve.

(z) After transferring Rs 300,000 from Rehabilitation Reserve; Rs 123,920 from Reserve for taxation and writing back Rs 135,815 from Depreciation Reserve.

(a1) After transferring Rs 500,000 from General Reserve and Rs 1,950,000 from Dividend Reserve.

(a2) After writing back Rs 32,015 being over provision in previous years.

(a3) After writing back Rs 116,059 from provision for taxation.

(a4) After writing back Rs 315,185 from Fleet Depreciation Reserve.

(a5) After writing back Rs 122,000 being excess provision of Development Rebate Reserve.

(a6) After writing back Rs 1,123,473 being depreciation on Mining Leases and Rs 56,833 being depreciation excess provided in previous years.

Small Mercies

IF Mr Morarji Desai's short list of reliefs (sum-
marised elsewhere in this issue) cannot be said
to have exceeded one's wildest hopes, it cannot
be said to show a total imperviousness to sug-
gestion either. Contrary to earlier and prob-
ably inspired reports of an undemocratic
hardening of attitude as a consequence of wide-
spread criticism, Mr Desai would appear to
have gone some distance in meeting objections
on details though not in principle. Political, (to
be more precise, electoral) considerations may
explain the unbending on the levy on kerosene.
Administrative second thoughts have probably
influenced the modifications in the Compulsory
Deposit Scheme. But the changes in direct
taxes, especially in the scheme of the super
profits tax are most certainly due to the Finance
Minister's readiness to be converted by reason-
able argument. While we could wish that he
had gone further and dropped the bill, it would
be naive to ignore the political impossibility of
so total a reversal of policy.

As it is, we should count among the most
important gains Mr Desai's unequivocal asser-
tion that the SPT and the CDS are to be con-
sidered "now and in future, as measures which
are identifiably different from our general poli-
cies and laws governing savings and profits."
This statement is to be welcomed for the reason
that Mr Desai's Budget speech gave a totally
different impression. Mr Desai seemed to imply
a certain lacuna in the tax system which he
wanted to remedy by the SPT. Though the
reliefs announced by Mr Desai still leaves
intact the principle of progression in the tax-
ation of companies, it is clearly to be understood
as a fiscal exorcism to be jettisoned at the
earliest opportunity.

For the rest, Mr Desai has made some conces-
sions on details in the super profits tax. The
actual wording of the relevant sections will have
to be studied before the full implications of the
proposed reliefs are laid bare. Mr Desai has
not accepted the suggestion that the levy
should be confined to business, that the rate of
super profits should be reduced and that the
differential rates should be abandoned. But he
has partially acceded to the request for a larger
capital base by making it clear that the devel-
opment rebate reserve will form part of the
capital base, incidentally obviating a legal
ambiguity in existing provisions we had dis-
cussed in these columns. He has however not
agreed to allow the loan capital also to become
part of the capital base.

Mr Desai's references to the proposed exemp-
tion from super profits tax of items that are ex-
empt from income-tax are somewhat obscure. As
the bill now stands, income-tax and super-tax
attributable to these items will be deducted
(though such taxes have not in fact been paid)
in arriving at the super profits. What is prob-
ably now contemplated is the removal of these
items from the total income itself for super
profits tax purposes in the manner in which
income under the head capital gains is already
provided to be excluded. This will make some
difference in the quantum of super profits.

Mr Desai has accepted the principle of an
absolute minimum of non-taxable super profits
of Rs 50,000. This is sure to benefit a large
number of small companies, though we could
have wished for a larger allowance than Rs
50,000. More disappointing is the fact that Mr
Desai should not have conceded the principle of
carry forward and backwards of deficiency, a
principle universally applied in such contexts.
The absence of such a provision is sure to hit

hard, among others, industries subject to the
vagaries of world trade like Tea and Jute.

Among the substantial concessions given
with an eye on the foreign investor in India is
the removal of the ceiling on salaries and perqui-
sites of non-Indians both for income-tax and
super profits tax purposes. The provision regard-
ing exclusion of dividends, royalties, interest on
foreign loans and fees paid to non-resident would
also appear to be designed to reassure foreigners.
(Mr Desai's speech lends itself to a possible
interpretation that such income, especially divi-
dends and royalties, of even Indian companies
would be exempt from SPT. This is a point
that will require to be clarified.

Perhaps the most important concession that
Mr Desai has made is the allowance as deduction
in the computation of super profits of 10 per
cent of total income under some conditions.
The analogous provisions for banks is the allow-
ance as deduction of the amounts transferred
from profits to the reserves, even though such
transfers may exceed the statutory require-
ments, provided the Reserve Bank considers
such transfers reasonable and the amount does
not exceed the maximum of such transfers in
the immediate past. This is a most gratifying
provision in that our plea that not only statu-
tory transfers to reserves but a little more
should be allowed as a deduction has been
recognised. As for non-banking companies, our
plea for allowance of a deduction of 20 per cent
of total income credited to reserves has been
partially met. The restrictions on the use of
the reserves created by such transfers are more
or less what we had suggested, though Mr
Desai has allowed only 10 per cent of the total
income as a deduction. In one respect, Mr
Desai has gone further in that he will allow as
deduction even amounts not credited to such
reserves provided the sums are utilised for
"repayment of debts, creation of additional
fixed assets, or paying of preference dividends
in excess of 6 per cent." This concession
meets to some extent the most important practi-
cal objection to the SPT in that it provides for
ploughing back of profits and reduces the in-
equity (to some extent) to the equity shareholder
vis a vis preference shareholder.

Though the position is not very clear, it would
seem that at least for the year 1963-64, companies
would be able to use as they like the windfall of
10 per cent of total income now announced by
Mr Desai. Presumably, companies which felt
impelled to announce dividend cuts or which had
deferred their decisions on dividends may be able
to have second and more generous thoughts on
dividends for this year.

Mr Desai's other concessions are the reduction
of surcharge on professional firms, and the reduc-
tion of the duty on kerosene. The latter he was
bound to do, in view of widespread criticism,
which his arguments based on the foreign ex-
change situation did nothing at all to diminish.
Mr Desai's changes in the Compulsory Deposit
Scheme are more for administrative reasons
than anything else. But the relief to the very
poor among the rural population would be con-
siderable. There is no reason why the urban
house-owner too poor to pay income-tax should
be considered a better target than a income-tax
paying house owner on the one hand and the
professional man with income not high enough
to attract income-tax on the other. We also think
that people who barely achieve the dubious dis-
tinction of income-tax assesses deserve a
better deal than what they have received.

Slump in First Quarter

EXCEPT for a brief period during the latter half of February when the recovery in equity prices was substantial enough to bring about a feeling of buoyancy and cheer—a rather unusual development with only a few days left for the presentation of the Central Budget—stock markets were generally in a bad shape during the quarter just ended. It looked as if the hangover of the sharp decline towards the end of 1962 following the Chinese invasion had not yet passed. Although the absence of any fresh developments in the border situation was encouraging, there was no disposition to take an optimistic view.

The principal bug-bear of the market was the coming load of taxation. Professional operators felt that the defence expenditure would go up tremendously and the greater stress would be imposed on direct sources of

revenue. It was feared that, in whatever form the new taxes would be raised, industries would have to encounter greater difficulties, resulting in the possibility of the trend of profits being downward rather than upward in the near future. As the State Governments were also anxious to implement the Plan schemes without any radical changes, the feeling was gaining ground that the Central and State taxes would be heavy and that the corporate profits would be seriously affected. Again, it was thought that the impact of costlier credit, rising costs and shortages of essential raw materials could not but have a telling effect on industrial working.

On the political front, too, the marketmen did not expect that the uncertainties would ease as a result of India's acceptance of the Colombo proposals. There was even a feeling whether there would be any possibility of the Chinese resuming their aggressive intentions on the borders when summer would set in.

The final outcome of talks over the Kashmir issue was also being watched carefully.

Thus, in the absence of cheering news from the economic and political fronts, genuine investors were also in no mood to take risks despite the attractive levels of stock prices. The flow of discouraging corporate news was another contributory factor. In this respect, the reports of cuts in dividends, withdrawal or postponement of right issues previously announced, difficulties experienced continuing or negotiating collaboration agreements and deferment of expansion plans by certain companies, induced them to take a pessimistic view about the working of the corporate sector. Although some industries were expected to thrive under the impetus provided by the defence effort, they were finding it difficult to precisely locate the units individually. Investors were, therefore, not in a position to decide as to which particular shares they should lodge money in. In this

respect, that the craze for the new issues (Table II) had been drying up was a clear indication.

The very beginning of the year was not quite auspicious for the marketmen. Apart from political and economic uncertainties, it was felt that the decision made by the Reserve Bank to raise the Bank Rate from 4 to 4½ per cent would have a serious impact on the credit requirements of industries at a time when the country was being geared to meet the Chinese aggression. It was also thought that if the national emergency continued for an indefinite period, there was every prospect of the Bank Rate being raised further. To make matters worse, there were reports of the Government having no intention to modify the retention price of steel for the time being. Even the little ray of hope that dawned as a result of the remedial measures adopted by the stock exchange authorities disappeared owing to a general feeling that the market might experience a more critical phase in the near future. Another important factor, that had been affecting sentiment in the market, was the fear that the Central Budget for 1963-64 would have an extremely depressing effect on market values.

But, for the first time since the commencement of the year, the market presented a cheerful appearance from the middle of February on account of a general belief that fresh taxation might not after all be very regressive in character and efforts would be made to provide for defence expenditure by way of deficit financing. Again, the decision taken by the authorities to scrap all minimum prices helped to inject more life into the market, resulting in operators becoming bold enough to indulge in active buying. With the result, bear operators were left with no other option than to cover their sales, especially when they were not inclined to keep their open positions before the forthcoming Central Budget.

As a matter of fact, the pre-Budget sentiment disclosed a measure of buoyancy, being influenced by a hope that the overall tax burden might not be as heavy as had been feared at one stage. It was also believed that there would be sufficient encouragement for the corporate sector to attain the maximum level of output and plan for future growth. There were also hopes that the bulk of the increased taxes would be indirect. When the Budget proposals were actually announced, they were initially accepted with a courageous heart on the feeling that the budget was justified in the circumstances prevailing today.

On second thoughts, however, operators came to the view that the budget was much worse than what they had apprehended it to be, especially when the magnitude of the tax effort had been wide off the mark and the corporate sector was not spared in contrary to expectations. They considered that the proposal for a Super Profits Tax would seriously cripple the corporate sector of the economy which, in turn, might affect the dividend-paying capacity of various companies, not to speak of the general fear that it was likely to frighten away even foreign capital and unnerve the domestic capital market, too.

Again, it was thought that the additional surcharge on personal income-tax would greatly reduce the savings of the salary-owners, the main prop of the stock market. It was also feared that the raising of the import and excise duties on machinery and spare parts and some industrial raw materials might undermine India's ability to compete in export markets and might have far-reaching repercussions on the price level. The increase in excise duty on petrol, diesel oil

and automobiles was expected to lead to higher transportation charges, resulting in an increased cost of production. Naturally, in the midst of the staggering budget proposals, the abolition of the export duty on tea and a reduction in the Emergency Risks Insurance premium were completely ignored. It was thought that, unless the SPT was suitably modified, the outlook for the corporate sector would be bleak.

Sellers, therefore, predominated in several counters, resulting in steady evaporation of equity values. The authorities did their best to avoid panicky sales by the re-fixation of minimum prices, by enforcing compulsory carryover in cleared shares and by restricting the trading hours. Conditions from mid-March were so depressed that business came to almost a standstill and no transactions were at all recorded during the last week of the quarter when operators refrained from doing any business. As a matter of fact, the steady

decline in prices, noticed in the middle of March, was accelerated when the authorities decided to remove the minimum prices of all shares in the cash list. This relaxation was effected to stimulate business by giving freedom to the genuine investors to take advantage of the low level of prices for shares of those companies which had fairly assured prospects. But the investors felt that, without a definite improvement in the general climate and a radical change in the SPT, there would not be any significant recovery in prices or expansion of business. There was an anxiety on their part to know how the Finance Minister would modify the SPT. Moreover, an estimate, made by the Calcutta Stock Exchange Association, of the SPT liability of the companies quoted on Lyons Range, compelled them to revise ideas of equity prices. They were not inclined to lend any support even to the shares of those companies which would not be very adversely affected by the

Company	Type of Issue	Issue Price	Details of Issue
1. Galvavire Industries, Bombay.	...	Ord. Rs 100	Issued capital of Rs 30 lakhs divided into 30,000 equity shares, at par.
2. Selected Satgram Collieries, Calcutta.	Rights Ordinary	Rs 100	Raised further capital of Rs 30 lakhs by the issue of 30,000 equity shares for the development of the collieries in the Third Plan period.
3. Franco Malhotra Steel Rolling.	Offered to public	Ord. Rs 10	Issued Capital of Rs. 20 lakhs in 2,00,000 equity shares for undertaking manufacture of steel for Engineers' files in collaboration with a French firm.
4. Shree Digvijay Cement, Gujarat.	Private	Ord. Rs 100 at a premium of Rs 50 per share	Raised further capital of Rs 1.50 lakhs by the issue of 1,500 equity shares. All shares are offered to the foreign collaborators for financing the setting up of Asbestos Sheet and Pipe factory.
5. International Hotel, Calcutta.	Offered to public	Ord. Rs 100	Raised capital of Rs 1 crore in one lakh equity shares. Forty-nine per cent is offered for public subscription.
6. Bharat Cement Works, Bombay.	-do-	Ord. Rs 100 at par	Issued capital of Rs 97,64,800 in equity shares.
7. Pyrotenax.	Offered to public	Ord. Rs 100 each	Offered 14,250 equity shares. The company will manufacture mineral insulated metal sheathed electric cable. The issue was over-subscribed by more than 15 times.
8. Kesar Sugar Works.	Rights Ordinary	Rs 50 each	Issued two equity shares for every five shares held, at par.
9. East Indian Coal.	Rights Ordinary	£1 each, at a premium of 13sh	Issued capital of £144,000 in 144,000 shares.
10. Boehringer-Knoll Limited.	Offered to public	Rs 100 each, at par	Raised Rs 15 lakhs in equity shares.
11. Delhi Oxygen Limited.	-do-	...	Issued capital of Rs 40 lakhs for the manufacture of oxygen, acetylene and other gases.
12. Gannon, Dunckerley.	Conversion offer	Rs 10 each	Issued capital of Rs 2.25 lakhs into 22,500 equity shares, to be issued to the holders of Deferred shareholdings of Rs 1 each (15,000 equity shares on conversion into ordinary and the balance of 7,500 shares as consideration for alteration of the rights by capitalisation of the Company's General Reserve to the extent of Rs 75,000).
13. Indian Detonators Ltd.	Rights Ordinary	Rs 100 each, at par	Issued further capital of 15 lakhs in addition to Rs 5 lakhs already issued in December 1962.
14. Globe Motors Limited, Bombay.	Rights Ordinary	...	Issued Rs 10 lakhs to the existing share holders in the ratio of one share for every share held, after making the existing shares fully paid-up by making a final call of Rs 25 per share. This will raise the capital of the company to Rs 60 lakhs.
15. National Standard Duncan Ltd., Calcutta.	Offered to public	Ord. Rs 100 each, at par	Issued 49,992 shares out of which National Standard of the USA will subscribe 25,000 shares and Duncan Brothers Ltd. 12,742 shares. The offer to the public is 12,250 shares. The factory will be built in Bombay for producing lead-wire.
16. Kerala Heavy Electricals Ltd.	-do-	Ord. Rs 10 each, at par	The issue was over-subscribed by 7.50 times.
17. Sri Krishna Rajendra Mills Ltd., Bangalore.	Rights Preference	Pref. Rs 100 each	Issued Rs 110 lakhs divided into 11 lakhs shares. Out of this, Rs 28.6 lakhs will be offered to Hitachi Limited, Tokyo, foreign collaborators. The company will manufacture power transformers and other electrical equipments.

Company	Type of Issue	Issue Price	Details of Issue
18. Girdhar Cotton Mills Ltd., Calcutta.	Right Issue	...	Issued capital of Rs 35 lakhs (including Rs 5 lakhs already issued), divided into Rs 20 lakhs in equity shares and Rs 10 lakhs in Preference shares (carrying 9 per cent interest), both at par.
19. Electric Construction Equipment Co., Ltd., Calcutta.	Right Issue	Ord. Rs 10 Pref. Rs 100	Raised capital of Rs 31 lakhs, divided into 1,55,000 equity shares and 15,500 Cumulative Preference shares (carrying 9.5 per cent interest).
20. Ghatlagar (India) Private Ltd., Bombay.	Public Issue	Ord. Rs 1000 at par	Issued capital of Rs 15 lakhs out of which shares worth Rs 70,000 are issued to the West German collaborator.
21. Devidayal Tube Industries, Bombay.	-do-	Rs 100 each, at par	Issued equity shares of Rs 85 lakhs. Out of this, shares worth Rs 41.09 lakhs were offered to the public (Rs 25 per share to be paid with application, Rs 25 on allotment and the balance by two calls).
22. Mukund Iron & Steel Works, Bombay.	Right Issue	Rs 10 at a premium of Rs 1 per share	Issued further capital of Rs 91,89,225 in 9,18,900 equity shares in the ratio of one for each held.
23. Investa Machine Tools & Engineering Co., Ltd., Bombay.	Right Issue	Rs 100 at par	Issued capital of Rs 25 lakhs to the existing shareholders in the ratio of 1:2.
24. Ayyappa Textiles Ltd., Madras.	Public Issue	Rs 50 each, at par	Issued capital of Rs 15 lakhs in the form of equity shares for the establishment of a spinning mill with an initial spindleage of 6,000.
25. Magadh Textile Mills Ltd., Calcutta.	-do-	...	Issued capital of Rs 35 lakhs, divided into Rs 20.25 lakhs in equity shares and Rs 8.75 lakhs in Cumulative Redeemable Preference shares, for establishing a spinning mill at Chakradharpur.
26. Goodyear India Ltd., Calcutta.	Right Issue	Rs 10 each, at a premium of Rs 16 per share	Issued further capital of Rs 99,85,000, divided into 9,98,500 equity shares. Out of this, 3,48,500 shares are offered as right shares to Goodyear Tire and Rubber Company, Akron, Ohio, USA. The remaining shares are offered to the existing Indian shareholders.
27. Hindustan Lever Limited, Bombay.	Right Issue	Rs 10 each, at a premium of Rs 25 per share	In the interests of the shareholders, the decision to go ahead with the changes in the share structure was subsequently delayed.
28. Birpara Tea Co., Ltd., Calcutta.	Special Scheme	Ord. Rs 100 Pref. Rs 100	Raised further capital of Rs 84,27,250, divided into 8,42,725 equity shares. Out of this, 2,85,725 shares are offered to Unilever Limited, London. The remaining 5,57,000 shares are offered to other shareholders.
29. General Magnets Limited, Calcutta.	Public Issue	...	Subsequently, the issue was deferred.
30. Saurashtra Ceramics Ltd., Bhavnagar.	-do-	Rs 100 each, at par	Issued Rs 24.50 lakhs, divided into 24,000 equity shares and 500 Cumulative Preference shares, to be allotted to the shareholders of the Hantapara Tea Company Limited, subject to the approval of the Calcutta High Court.
31. Peyrolle Burn Limited, Calcutta.	Private Issue	Rs 100 each	Issued Rs 12,50,000 in equity shares. The company will manufacture permanent magnets for house meters, telephone equipment, radio, loud speakers, etc.

new taxes, as the sharp decline in prices had a demoralising effect.

There were also other disturbing factors. Market circles were taking a gloomy view of the flow of funds into stocks and shares, especially when the supply of bank credit had already been restricted and the pressure from banks might increase since the minimum prices had been scrapped. Doubts were also expressed whether the LIC would be able to give much support as it might be compelled to invest heavily in the big Government loans, which were in the offing. There was, therefore, a growing feeling that the outlook for the stock markets would remain obscure unless some unexpectedly bullish factors would introduce a pleasant surprise. In this respect, the outcome of the meeting, to be held between the Finance Minister and the representatives of the eight recognised stock exchanges on 28 March, were anxiously awaited. The extent of the decline in the

prices of a few selected shares will be clear from Table I.

Section-wise, Jute shares, which had been responding well till the close of 1962 following the announcement of satisfactory interim dividends by various mills, developed considerable weakness especially from the middle of January, reflecting the anxiety with regard to the slow offtake of jute goods by overseas buyers. Apart from the quieter phase in the gunny market, the announcement of a 10 per cent surcharge on excise duties on jute manufactures led to a fear that it would affect the offtake especially of heavy goods the stocks of which were rising rapidly. Moreover, it was thought that, by the levy of the SPT, the jute mills might not have sufficient funds to discharge financial obligations arising out of the expansion programmes undertaken, not to speak of the inability to declare enhanced dividends and to maintain the position in the export market.

Coal shares came in only for selective support. Even the reports that a World Bank team would soon be arriving in the country to explore the possibilities of expansion in the coal industry, seemed to have been ignored. It was feared that, unless the producers were given adequate financial facilities, the progress of the industry might be hampered.

Tea shares had been neglected since the end of 1962 when the Chinese commenced its full-scale attack against India. Moreover, doubts were expressed with regard to the outlook for profits, as the effects, of higher average price had already been offset by the shortfall in the crop. The withdrawal of the refund of excise duty did not enthuse the operators, who thought that the enhancement of the excise duty would almost neutralise the benefit of the abolition of the export duty.

Sugar shares remained depressed throughout the period in view of the fear that the profits of various companies might have been adversely affected by the fall in cane crush, larger export losses and the increase in manufacturing costs. There was also a general impression that the working of the industry, during the current season, would not be better, if not worse, than in the previous season.

Trading in the Textiles section remained dull, reflecting the prospect of a further decline in the prices of cloth and yarn.

Engineering shares were generally quiet and price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were offered at well below the minimum price fixed by the stock exchange committee. Even at the low levels, operators were hesitant to buy as they feared that the IISCO might find it difficult to raise the dividend in the near future, considering the expansion and the reduced retention price of steel.

Miscellaneous issues followed the general trend of the market.

Strengthen The Nation

The vitality of the national economy supplies the real strength to the Nation. That means more and quicker production and distribution of goods. Banking service is indispensable for promoting the higher pace in industry and commerce.

Your banking transactions directly contribute towards development efforts. Spending or saving, do it through a banking account and help us increasingly to help raise the tempo of economic activity, so very essential for strengthening the Nation.

United Bank of India Ltd.

REGD. OFFICE: 4, OLIVE GHAT STREET, CALCUTTA-1

World of Finance

BANKS & SPT

For this Relief, Much Thanks

Mr Morarji Desai has shown himself to be aware of the special concession in regard to the super profit tax that banks stood in need of. Transfer to reserve, whether statutory or not, and even exceeding the minimum prescribed under Section 17, will not attract the super profit tax. Accordingly, with the SPT leviable on the quantum of profit after corporate tax and after transfer to reserve, the surplus with banks available for distribution will be large enough, perhaps, to allow of a reasonable dividend being paid. So the Finance Minister for his part has thought up suitable relief for the banking system, such that the process of strengthening it need not suffer on account of the SPT burden or the difficulty of raising fresh capital through rights issues. The next step to be taken is by the banks themselves.

BANK RETURNS

Spectacular Rise in Bank Deposits

The anticipated increase in the Deposit resources of the banking system, consequent upon the vast disbursements of Government at the fiscal year-end has taken place as recorded in the return of Scheduled Banks for 5 April. The statutory figures of the Reserve Bank for 12 April, show moreover a further improvement in the cash position of the banking system.

In the week under review Active Note Circulation has again risen by Rs 26.64 crores to Rs 2,328.23 crores, and there has been outflow of Rupee Coin for Rs 1.11 crores. Currency has been expanded against Rupee Securities for Rs 20 crores. With the transfer from the Issue Department, Rupee Securities are now placed at just below the Rs 2,000 crore mark at Rs 1,996.42 crores. Foreign Securities are unchanged at Rs 105.08 crores, and so the Reserve Bank's cash in the till has moved down by Rs 7.75 crores to Rs 8.21 crores.

With the governmental cheques being presented for payment, the Centre's balances are lower by Rs 8.45 crores at Rs 94.02 crores. State Governments too have suffered a depletion of Rs 3.46 crores to Rs 4.74 crores in their Deposits, in addition to which they have increased their ways and means borrowings from the Reserve Bank by Rs 9.65 crores to Rs 52.91 crores. Another indication of Government payments being "encashed" lies in the fact that Bills Payable stand reduced by Rs 10.33 crores at Rs 28.37 crores. That the banking system has benefited is shown by the rise of Rs 14.44 crores to Rs 85.90 crores in the Reserve Balances of Scheduled Banks. However, reduction in debt to the Reserve Bank is a nominal one of Rs 0.40 crore to Rs 47.81 crores. State Co-operative Banks, on the other hand, have managed to cut their borrowings by Rs 6.59 crores to Rs 114.77 crores. The rise of Rs 18.79 crores in Treasury Bills purchased and discounted by the Reserve Bank is possibly on account of the State Governments seeking to replenish their balances.

Investments are lower by Rs 18.93 crores at Rs 200.17 crores, reflecting the transfer to the Issue Department.

Lastly, Balances Held Abroad have again fallen by Rs 0.89 crore to Rs 9.06 crores. Foreign assets

in the possession of the Reserve Bank are once more below the Rs 115 crore mark—and the export season is in the process of drawing to its close.

The return of the State Bank for 12 April is largely featureless, following as it does the week in which, thanks to governmental disbursements relating to the end of the year, substantial increase in Deposit resources was registered. In fact, Deposits have declined by Rs 7.16 crores to Rs 563.56 crores, and the total of Advances has gone up by Rs 2.62 crores to Rs 319.37 crores. There has been disinvestment in gilt-edged for Rs 4½ crores, and the result is a small drop of Rs 0.70 crore to Rs 23.87 crores in cash in hand, including money at call and short notice.

The end of the year disbursements of Government, possibly concentrated on the last two days of March, have contributed to a spectacular increase in the Deposits of the banking system as reflected in the return of Scheduled Banks for 5 April. Net Demand Deposits have crossed the Rs 1,000 crore mark in rising by Rs 33.49 crores to Rs 1,010.94 crores, and net Time Deposits are also slightly higher by Rs 1.68 crores at Rs 1,205.72 crores. Of the more than Rs 35 crores increase in Deposits, the element traceable to the State Bank is Rs 11.70 crores. At the same time, probable receipts of Government payments by bank constituents may have been responsible for the no more than nominal increase of Rs 0.45 crore to Rs 1,602.85 crores in the total of Advances—despite it being the first week of a month, when demand for funds would have been heavy. There is a rise of Rs 7.05 crores to Rs 600.33 crores in gilt-edged holdings—wholly on account of the State Bank. The new resources have enabled the banking system to reduce indebtedness to the State Bank by Rs 1.20 crores to Rs 20.66 crores; and borrowings from the Reserve Bank have been cut sharply by Rs 21.49 crores to Rs 48.51 crores. Cash balances including money at call and short notice have improved by Rs 11.79 crores to Rs 196.26 crores. In the coming weeks indebtedness to the Reserve Bank should get swiftly reduced.

Firmness of Sterling

By Paul Einzig

The basic principle underlying the policy that is behind Mr Maudling's Budget is that the Government is prepared to put up with adverse pressure on sterling for the sake of pursuing a reflationary policy that would reduce unemployment and would increase production by the target figure of 4 per cent. From that principle it follows that the Government expected to witness a weak tendency in sterling and the firm tendency on the

Stock Exchange. Actually it is exactly the opposite that happened, during the days that followed the Budget speech. Equities on the Stock Exchange drifted downwards in spite of the sharp rise in Wall Street and in spite of the crop of favourable economic indices and good company results published during the last few days. Evidently the prospects of a £700 million Budgetary deficit have failed to impress the Stock Exchange. On the other hand, sterling appreciated day after day both in relation to dollars and in relation to continental hard currencies. It seems that neither the Stock Exchange nor the foreign exchange market regarded Mr Maudling's Budget as being particularly inflationary. Hence the disappointing result on the Stock Exchange and the unexpectedly favourable response on the foreign exchange market.

But sterling's firmness was at least partly due to the fact that the devaluation scare had come to an end. While in March everybody was talking about the possibility of a devaluation or of the adoption of the floating round, most people have now come to realise that scare was unfounded. Its accentuation towards the end of March was due to the publication of an article in the *Economist* which simply presented the case for and against devaluation without taking sides. This supreme impartiality came to be interpreted in Zurich and elsewhere as meaning that the *Economist* was in favour of devaluation even if it had no wish to say so in so many words.

The recovery of confidence in sterling was largely the result of the statement made in the United States by the new leader of the British Labour Party, Mr Harold Wilson, who said that it would be idiotic to devalue or to adopt a floating exchange rate. This emphatic statement reassured the foreign exchange market that, should there be a Labour Government after the next general election, it would not be its intention to abandon the present parities. That being so, the prospects of a Socialist victory are no longer looked upon as amounting to certain devaluation.

The fact that a much larger dose of inflation was expected is also indicated by the firmness of the gilt-edged market that followed the Budget statement. That firmness was even more striking than the weakness of equities. Few of us would have thought that we would ever live to see the day on which the announcement of a Budgetary deficit of £700 million would be looked upon as a bull point for the gilt-edged market. But, after all, the deficit might have been some £150 million higher had the Chancellor yielded to advice thrust upon him with great persistence.

Notes

STEEL OUTLOOK Clear if not Bright

The outlook for steel production during the current plan is now clear if not bright. Mr C. Subramaniam, Minister for Steel and Heavy Industries is to be congratulated on his candid admission of the fact that the shortfall in production is due to the delay in the expansion of the public sector plants as well as the inordinate delay in setting up the Bokaro unit which was originally expected to be ready about this time. It is now clear that the Third Plan steel target of 10 million tons will not be achieved. A production of about 9 million tons will be about all that will be possible in the first year of the Fourth Plan.

There is however ample evidence to show that active steps are being taken from now to ensure that the fourth plan target is achieved according to schedule. It is expected that the target for the next plan will be set at 18 or 19 million tons. As against this, the capacity in sight will be 9 million tons in the public sector plants (3.5 million tons at Bhilai, 3 million tons Durgapur and 2.5 million tons Rourkela after expansion) and 3.3 million tons in the

private sector, giving a total of 12.3 million tons. To attain the Fourth Plan target, it will be necessary to set up more plants. It will be advantageous to explore also the possibility of expanding all existing plants. Full expansion of the public sector plants have already been taken on hand. The expansion of Bhilai is now expected to be completed by 1965. In regard to the other two plants, Rourkela and Durgapur, there has been some delay but lately things have started moving. Placing of orders for Rourkela awaits the signing of the agreement between the Government of India and the Government of West Germany. Mr Subramaniam is shortly to visit Bonn for this purpose. The entire foreign exchange requirements for Rourkela expansion is to be provided by the West German Government. Orders in respect of the Durgapur expansion programme are expected to be placed soon as tenders are already under scrutiny. It is gratifying that ideological considerations are not to inhibit plans for expansion of steel output. The private sector steel plants have shown themselves anxious to embark on expansion plans at their works. The Indian Iron & Steel Companies works are capable of doubling their output from the present 1 million tons to 2 million tons. The company's first stage of expansion to 1.3 million tons has already been accepted in principle. Tata Steel has also indicated that it will be able to step up production from its present installed capacity of 2 million tons to 3 million tons. These proposals however had not met with favourable response for a long time. By categorically stating that the private sector steel plants have been playing their part well and that both the sectors in the steel industry are working in unison towards attaining the common objective of increased output, Mr Subramaniam has dispelled many a mistaken impression derived from irresponsible criticism about the role of the private sector plants. The policy is that fullest use of the in-built capacity of both the sectors is to be made. In this view the expansion of the private sector plants is to be sanctioned just as expansion of the public sector plants follows in the usual course. The expansion of an existing plant, as Mr Subramaniam has pointed out, is less costly than the putting up of a new plant of like capacity. Government has taken too long a time to grasp the obvious advantage. Better late than never. It is also a happy augury that both

the sectors will be treated on an equal footing in the matter of price and products.

A steel plant at Salem using Neyveli lignite is almost a certainty while the idea of putting up small coast based steel plants using imported coke is being actively pursued. Even with such advanced planning, it cannot be asserted with confidence as yet that the fourth plan steel target will be achieved according to schedule because of the continued uncertainty about the Bokaro steel plant. Mr Subramaniam has expressed the confidence that the Bokaro plant will come up in the public sector with American assistance. He has however admitted that there has been some controversy over the setting up of the plant. The latest position is that the Government of India has received a copy of the US technical team's report on the feasibility of the Bokaro plant but the contents are a closely guarded secret. It is however known that there is a strong lobby in the American Congress against the US Government participating in a project that will be set up in the public sector. Evidently, much of the real difficulty about the plant being set up except under complete American auspices arises from the apprehension that it may prove to be another Rourkela. Understandably enough, such a situation will not be quite palatable to the US especially since Bhilai built under Russian auspices has more than fulfilled expectations. Lately the American people have become rather critical of assistance to developing countries. The Clay report gives a clear indication what sort of difficulties the US administration is up against. The fact that Mr Subramaniam has deemed it necessary to request Members of Parliament not to say or do anything that would stand in the way of the plant being erected is a clear indication that the matter has reached a delicate stage.

COAL Rupee Finance Facilities

Two items of news that have been announced last week should cheer the coal industry. It is well known that the industry has been finding it difficult to find the rupee finance to match the World Bank loan in foreign exchange for its expansion and modernising programme. This has meant that the World Bank loan has been but tardily used. Government has now come forward with a scheme of partial guarantee to credit institutions willing to lend the money to the industry. The Reserve Bank has also agreed to liberalise its line of credit to scheduled banks more or less on the lines of its liberalisation earlier in respect of advances by the scheduled banks to exporters.

The scheme of guarantee will be administered by the Refinance Corporation for Industry which will be the agent of the Government and be known as the "guarantee organisation." The object is to enlarge the supply of institutional credit to the private sector coal industry by granting a degree of protection to lending institutions against possible losses of these advances as bad debts. The scheme provides for the sharing of such losses between the lender and the Government in the ratio of 35:65. The guarantee scheme is applicable in respect of advances sanctioned to colliery undertakings in connection with the World Bank Loan No. 292 IN to acquire and install coal mining machinery and equipment required for a new mine or for the expansion of an existing mine or for maintaining existing production of a mine or for full utilization of the additional capacity created by the imported machinery and equipment.

The institutions eligible for availing the guarantee facilities are the State Bank of India and its 7 subsidiaries, 50 other scheduled banks, 14 State Financial Corporations, the Madras Industrial Investment Corporation Ltd. Industrial Finance Corporation of India and the Industrial Credit and Investment Corporation of India Ltd. The coal undertaking intending to avail of the borrowing facilities under the scheme should approach one of these credit institutions.

The advance eligible for guarantee may be in the form of a loan repayable on demand or on the expiry of a fixed period, including a cash credit or an overdraft. Advances for the purpose of financing capital expenditure including working capital requirements of a term nature are expected to be made as formal term loans while those for financing short-term working capital requirements may be granted on a demand basis. It is an essential condition of the guarantee that the advance guaranteed under the scheme shall not be diverted for any purposes other than those indicated earlier.

The application for guarantee may be made by the credit institutions before or after sanctioning an advance. The application should be for a minimum period of one year or in the case of a loan for a fixed period exceeding one year, for one or more years or the period of the loan, at the option of the credit institution, subject to a maximum period of 10 years from the date on which the loan is first availed of.

A charge at the rate of $\frac{1}{2}$ per cent per annum on the amount of advance as sanctioned will be levied for providing guarantee cover.

The Refinance Corporation will provide refinancing facilities to all the credit institutions excepting the Industrial Finance Corporation of India and the Industrial Credit and Investment Corporation of India Ltd. in respect of their

medium term loans for periods between 3 to 7 years (in exceptional cases up to 10 years) provided other conditions of eligibility for refinance are satisfied. Advances to larger sized units, i.e., those having paid-up capital and reserves exceeding Rs 2.50 crores are not eligible except in marginal cases under the scheme of financing of the Refinance Corporation.

The Reserve Bank's contribution to the problem of finding finance for the coal industry takes the form of liberalisation of its credit to Banks. Normally, scheduled banks are eligible to borrow from the Reserve Bank upto a maximum of the equivalent of 100 per cent of their statutory reserves; additional borrowing limits, over and above this ceiling, are granted on a scrutiny of the factors underlying the demand. In order to provide an incentive to eligible scheduled banks to assist the coal industry the Reserve Bank will be prepared to increase the borrowing limits available to such banks at Bank Rate to the extent of their advances to colliery undertakings which are covered by the Guarantee Scheme. Such additional accommodation for any quarter will be based on the average of the outstanding advances at the end of each month during the preceding quarter. For the quarter July-September 1963, the additional accommodation will be equal to the average of outstanding advances to colliery undertakings guaranteed under the Guarantee Scheme as at the end of each month during the quarter April-June 1963. The additional borrowing limits can be availed of by eligible scheduled banks against the collateral of either Government securities or bills tendered under the Bill Market Scheme and will be treated as an addition to the normal quota (equivalent of 100 per cent of the statutory reserves) through an extension of the Bank rate slab for borrowings from the Reserve Bank.

Umrer Mine Inaugurated

The inauguration of the Umrer coal mine with an estimated coal deposits of nearly 70 million tonnes by Mr R. M. Hajarnavis, Union Minister of State in the Home Ministry, marks the beginning of the coal mining operations by the National Coal Development Corporation in Maharashtra. The discovery of this coal deposits is purely accidental as a farmer in his efforts to deepen his well has stumbled on coal from which period onwards drilling operations were conducted vigorously. The Umrer project will start with a production of a quarter of a million tonnes by the middle of 1964 and is expected to reach one million tonnes by the end of the Third Plan. Coal raised from this mine will be crushed, screened to size and stored in bunkers for loading purposes. The project costing Rs 4.5 crores also

envisages the setting up of a washery at a later date. A railway line connecting the project with Bulti-Bori station on the Nagpur-Wardha section of the Central Railway has been sanctioned by the Railway Board and when completed will help transporting nearly 4,000 tonnes of coal every day. Coal mined from Umrer reserves will serve the power houses at Akola, Bhusaval and other places and the low shaft iron smelting furnace in Ratnagiri and a few cotton mills in Gujarat. Apart from providing immediate employment for nearly 800 people, the mine is bound to revolutionise the industrial development in the adjoining areas.

LIC Competing Demands on Savings

The fact that the Life Insurance Corporation has decided to change over to the financial year has necessitated the extension of its last accounting period by three months. The figures that have been made available a few days ago, therefore, refer to the fifteen month period 1 January 1962-31 March 1963. New business completed during this period amounted to the no doubt impressive level of Rs 745 crores. During the previous year i.e., 1 January 1961 to 31 December 1961 new business totalled Rs 608 crores. As compared to 1960, the performance in 1961 is to be deemed quite satisfactory although a better record for the year had been anticipated in that the total business to be completed had been fixed at Rs 655 crores. Viewed against the background of past performance, the LIC cannot be deemed to have fared quite well during the fifteen month period ended March 1963; for as against a business of Rs 608 crores for twelve months, new business written in 15 months is only Rs 745 crores.

It is not surprising that the performance during the period under review has not shown an improvement over the comparable previous period because the last six months ending March 1963 have been abnormal in that a national emergency has been declared in the country. This in itself cannot be construed unfavourable to new business. On the contrary, the emergency should have made the people more insurance conscious. If however writing of new business had been slowed down after the emergency has been declared, it may partly be due to the fact that people were more interested in swelling the National Defence Fund by diverting part of their savings to it, relegating for the time being their own personal interest. This cannot be taken as a setback to life insurance. But at Mr Desai's massive tax

effort as embodied in the Central Budget for 1963-64 has upset all business in the country, it should have also made the task of the insurance agents really difficult since Budget Day. Except perhaps food and clothing, nothing has escaped the tax gatherer's net. The biggest threat is the compulsory deposit scheme. The combined effect of the rise in the cost of living brought about by the in-

crease in excise duties and the compulsory deposit scheme is that savings in the hands of the people have been seriously depleted. It is inevitable that a measure such as the compulsory deposit scheme will to a corresponding extent adversely affect new life insurance business.

The setback to life insurance that the new business figures undoubtedly reveal cannot however-

THE RELIEFS

The tax concessions announced by Mr Morarji Desai will cost the exchequer about Rs. 16 crores in the revenue account and raise the overall deficit from Rs. 151 crores to Rs. 181 crores.

The following is a summary of the concessions and changes announced by the Finance Minister:

1. **INDIRECT TAXATION:** The proposed increase in duty on inferior kerosene will be reduced by about 50 per cent and that on superior kerosene by about 20 per cent. The loss in revenue will be Rs 11 crores, consisting of Rs 7 crores as customs and Rs 4 crores as Central excise.

2. **DIRECT TAXATION:** (a) The limitation of Rs 5,000 per month allowed as expenses for the purpose of the Income-Tax Act will not apply to non-Indians.

(b) The surcharge on income-tax leviable on registered firms will be reduced from 20 per cent. to 10 per cent. in the case of professional firms.

3. **COMPULSORY DEPOSIT SCHEME:**

(a) In the land revenue paying class, individuals whose land revenue liability is less than Rs 5 per annum will be exempted.

(b) Persons engaged in professions who do not pay income tax will also be exempted.

(c) In the salaried class, those with an income of Rs 1,000 or more per annum but below the income tax level—and already saving 11 per cent. or more of income—will be exempted.

(d) Urban property owners already paying tax on income, including that from urban property, need not make a separate deposit.

(e) Premature repayments will be allowed in suitable cases such as foreigners leaving India finally.

4. **SUPER PROFITS TAX:**

(a) It is proposed to allow a deduction on profits chargeable to super profits tax a sum equal to 10 per cent of the total income before payment of any tax in order to meet resources necessary for new development as well as

such committed obligations as debt repayments.

(b) The requirement that a reserve account should be created will not apply to electricity supply companies subject to restrictions regarding the building up of reserves.

(c) In the case of banks, it is proposed to allow a deduction from the chargeable profit the whole of the amount credited to reserves, provided the Reserve Bank certifies the amount to be reasonable and further, the amounts do not exceed the maximum credited to such reserves in the previous three years.

(d) Such items of income as now enjoy an exemption from income tax and/or super tax will also be exempted from super profits tax.

(e) The amount of tax saved on account of relief in respect of export's profit and manufacture's sales for export will be allowed to be deducted.

(f) Dividends, royalties, interest on foreign loans and fees paid to non-residents for technical services will be excluded from the scope of the super profits tax.

(g) A minimum deduction of Rs 50,000 will be allowed in the case of small companies even where this amount is higher than 6 per cent of capital plus reserves.

(h) The development rebate reserves will be added to the capital base while computing the SPT liability.

(i) The revised figure for the net yield from the SPT is now estimated by Mr Morarji Desai at Rs 20 crores, implying a reduction of Rs 5 crores in the original estimate.

5. **NET EFFECT:** The net effect of the changes announced today, after excluding the reduction of Rs 80 lakhs in the States' share of excise revenue, will be to increase the budgeted revenue deficit of Rs 77 lakhs to Rs 15.97 crores. The Finance Minister now estimates the total collection under the compulsory deposit scheme at Rs 60 crores, of which the States will get Rs 35 crores and the Centre Rs. 25 crores.

be attributed to want of effort on the part of the LIC. It is continuing its vigorous efforts at carrying the message of life insurance to the rural population. Special attention is now being paid to impressing on the people the role of life insurance in building up the defence of the country as well as fostering economic development. There is of course still need for the LIC to set its house in order so that policyholders get the best possible service. During the past few years, some welcome improvements have been made but the

fact remains that the LIC is yet to reach the efficiency that had been attained by some of the companies during the pre-nationalisation days.

IRRIGATION Utilisation Pattern

A recent study in the latest issue of the Reserve Bank of India Bulletin on the progress of the irrigation projects in the country

throws much light on their functioning in the different States of the country. In the case of major and medium projects the study reveals gradual improvement has been registered in the utilisation of irrigation facilities that are ushered in during the last decade of planned economic growth. Utilisation as a proportion of the potential created had smartly improved from 48 per cent in 1955-56 to 71 per cent in 1961-62. But there had been marked variations in the performance in the different States and shortfall in the utilisation of irrigation was pronounced in Maharashtra, Mysore, MP and Jammu & Kashmir.

It is, however, interesting to note that minor irrigation projects are playing a vital role in extending irrigational facilities to dry lands, and they are bound to continue to occupy a predominant position obviously owing to the restricted scope for launching new projects and the need for extending the benefits throughout the country.

Extension of minor irrigation has assumed urgency consequent on the programme for stepping up production of foodgrains, cotton, jute and sugar in 1962-63. The evaluation of minor irrigation made by the Programme Evaluation Organisation of the Planning Commission discloses that inadequacy of investigation of the possibilities and scope for new works is the major obstacle in the rapid enhancement of minor irrigation schemes. Deplorably enough many of the States do not have an organisation for co-ordinating and building any reliable records of irrigation potential created and utilised under this category nor about the state of maintenance and for that matter the need for improvement or restoration. Another anomaly brought out by the study is the suspension by some States of minor irrigation extension programme within the command area of new major projects and the resultant neglect of the existing works despite the marked preference shown by the agriculturists for them.

The net area under irrigation which stood at 18 per cent in 1950-51 went up by about 70 million acres during the decennium ended 1960-61 forming approximately 21 per cent of the net area sown. In the same period the net area irrigated showed an increase of 63 per cent. An analysis of the data relating to the net irrigated area during the First and Second Plans shows that additional acreage brought under irrigation was nearly 24.4 per cent and 74.9 per cent of the target respectively. The area expected to be brought under irrigation in the Third Plan is 90 million acres or nearly 70 per cent over the figure in 1950-51. The crop-wise utilisation of the additional area served by irrigation projects between 1952-53 and 1958-59 shows that 66 per cent was utilised for foodgrains, 13 per cent for cotton, 9 per cent for oilseeds and four per cent for sugar cane. During the same period the irrigated area under foodgrains went up by six million acres but its proportion to the aggregate irrigated area shows a nominal decline to 80 per cent from 81 per cent.

The article points out some of the loopholes in the planning and administration of irrigation projects which are inhibiting the maximum utilisation of the potential created. There is lack of an integrated scheme to organise these activities, the construction of fresh ayacut roads, storage facilities,

marketing schemes demonstration farms with the result that the irrigation potential become a chancy affair unrelated to the irrigation programme. Therefore, the article suggests the setting up of team of experts to evolve concrete programmes of development. The article also draws attention to the need of credit for the utilisation of irrigation facilities for which the co-operatives can step in with the assistance of farm refinancing corporation.

SHIPPING Revised Target Exceeded

It is to be expected that with the assurance given in the Lok Sabha by the Minister for Transport and Communications, the apprehensions expressed in some quarters about Government's decision to increase the ceiling of foreign participations in Indian shipping from 25 per cent to 40 per cent will be set at rest. Some Indian shipping interests believed that such increase in foreign participation will result in foreign domination of our shipping. Mr Jagjivan Ram has now made it clear that these fears are unfounded because Government will see to it that adequate safeguards are taken to ensure that the dominant position of Indian interests is kept intact. For this the existing rules for the constitution of the board of directors to ensure effective control are not being changed. The chairman, managing director and three-fourths of members of the board of joint shipping companies will have to be Indians in all cases. Increased foreign participation has been seen to be particularly inimical to the Indian position in coastal shipping which has been built up to its present level by dint of hard work under trying circumstances. Mr Jagjivan Ram has given the assurance that administrative action will be taken if necessary to see that coastal trade is not dominated by companies having a large proportion of foreign capital under the revised shipping policy.

It is expected that increased foreign participation will directly result in speedily filling the wide gaps in the tonnage for coastal trade, bulk carriers, tramps and tankers, especially the last three categories, in which the share of indigenous shipping is still meagre. It is also time that such deficiency is sought to be made up expeditiously because otherwise our shipping has been taking long strides since the beginning of the current plan. Contrary to earlier misgivings about the maintenance of a satisfactory pace of progress in building additional tonnage consequent on the meagre allotment of funds for shipping under the Third Plan, the growth of tonnage has

been quite rapid indeed. Even the revised target of 1.3 million g.r.t. (original target was 1.1 g.r.t.) has already been exceeded. It is now confidently expected that the target of 1.5 million g.r.t. recommended by the National Shipping Board will also be hit before the end of the Third Plan period. It is gratifying that at long last Indian Shipping is fast coming into its own as even by attaining the target of 1 million target it has come to take a place among principal maritime nations of the world. In view of the greatly increased foreign trade of the country, it is a legitimate ambition to get a reasonable share for our shipping in this trade. As yet our ships participate in this trade to the extent of only 12 per cent or so, though the trend has been steadily upward during the past few years. Now that the ceiling for foreign participation in our shipping has been substantially increased there is every reason to expect that even present expectations of the tonnage at the end of the Third Plan will be far exceeded.

ENGINEERING GOODS The Western Prospect

The delegation sponsored by the Engineering Export Promotion Council which has returned after a study cum exploratory tour of West European countries is optimistic of stepping up exports of Indian engineering goods to those countries. The task is however not apparently light in view of the fierce competition from other countries exporting producer and consumer goods. But we can compete with them if we strictly adhere to specialised production, technical ability of a high order, quality consciousness and launch vigorous propaganda and establish ourselves as suppliers of engineering goods and services even to those sophisticated consuming centres in the countries covered by the tour. Mr Kirloskar talking at a press conference in Calcutta last week stated that the delegation has been successful in its attempt to convince manufacturers in Italy, West Germany, Netherlands, Belgium, Luxembourg, France and the UK to depend on India as a regular supplier of engineering goods.

The delegation has recommended a number of steps to promote exports of engineering goods to West Europe which include, among other things, the establishment of close personal contact with purchasers abroad to assess their requirements and to deliver goods according to specifications at competitive prices. In this connection it was pointed out that we should seek the co-operation of prominent West European agents in pushing

the sales of our goods in those destinations. Besides, it advocates to permit individual firms to enter the international markets on a permanent basis and to participate in trade fairs and exhibitions in places like Milan, Hanover, Brussels and Birmingham. Foreign trade missions should be encouraged to visit India to acquaint themselves of the our industrial advancements and to select those goods which they require.

Mr Kirloskar has also stressed the need for setting joint ventures for producing those items for which the European countries offer goods prospects. Besides as suggested, an organised machinery should be constituted for the sale of Indian products. It needs special mention that the wider range of Indian goods exhibited at Leipzig fair has attracted greater interest from West German business agents in our engineering goods. They have approached representatives of the Kirloskar and other firms with enquiries for the goods which we can offer.

REFINANCE CORPN. Wider Usefulness

The progress of the Refinance Corporation for Industry Limited, since its inception, has been remarkable. The tempo of progress recorded in the business of the Corporation during the year 1961 was well maintained in 1962 when the Corporation received 88 applications for refinance from 20 financial institutions for a total sum of Rs 1,377.09 lakhs as against 69 applications received for a total sum of Rs 1,126.96 lakhs in the preceding year. The total refinance sanctioned by the corporation, since its inception and up to the end of 1962, now comes to Rs 2,712.03 lakhs covering 165 applications received from 22 financial institutions as against Rs 1,649.20 lakhs covering 92 applications from 17 institutions at the end of 1961.

The progress revealed by the above figures indicates that the usefulness of the Corporation is being realised by the various financial institutions. Judged both from the number of applications and the amounts involved, the progress in the last two years, particularly the last year, has been quite substantial. It is, therefore, hoped that this trend will persist, leading to early utilisation of the P.L. 480 funds earmarked for the Corporation.

From the statement of accounts released by the Corporation, it will be seen that the Corporation has made a higher net profit, after providing for depreciation, of Rs 25.57 lakhs as against Rs 20.19 lakhs for 1961. The Depreciation amount is higher at Rs 447 against Rs 202. All other allocations have also been raised. The provision for Taxation is substantially higher at Rs 13.10 lakhs against Rs 8.97 lakhs.

A sum of Rs 1.18 lakhs is transferred from General Reserve for meeting the short provision of tax for the previous year, which has risen out of the increase in the rate of the company's tax from 45 to 50 per cent after the closing of the last annual accounts. The provision for General Reserve is raised to Rs 2.68 lakhs from Rs 1.00 lakh. The dividend is, however, maintained at 4 per cent, subject to deduction of tax.

According to the directors' report, the Reserve Bank has accorded its approval to the State Financial Corporations borrowing from the Refinance Corporation. The Board has, therefore, decided to extend refinancing facilities to 3 other scheduled banks and the Punjab State Co-operative Bank Limited also without requiring them to become shareholders of the Corporation. Moreover, the Corporation has extended refinancing facilities in respect of credits. In this respect, a scheme has drawn up for refinancing of medium-term export credits, i.e. credits for periods exceeding six months but not exceeding five years, which has come into force from 1 January 1963. The total period of credit excluding the period of pre-shipment credit should not be less than six months or more than five years, provided the exporters obtain necessary exemption under Rule 6 of the Foreign Exchange Regulation Rules, 1952.

The directors are also considering measures for increasing the usefulness of the Corporation and they have considered it desirable to extend refinance facilities to the extent of the instalments falling due for repayment within 10 years in respect of long-term loans, which are of particular interest to the State Financial Corporations and also to loans made jointly by two or more banks or by a bank and a term-lending institution, such as State Financial Corporations or Industrial Finance Corporation of India. Among the most important extensions of the corporation's sphere is the guarantee to lending institutions in respect of loans for the matching rupee finance for the World Bank loan to the coal industry.

EMPLOYMENT PICTURE Improving, But...

The improving employment situation in the United States has now been confirmed officially. Advances significantly greater than would normally be expected at this time of year have brought the seasonally adjusted unemployment rate for March down to 5.6 per cent of the labour force from February's 6.1 per cent. This was the sharpest month-to-month decline in more than four years.

In actual figures, employment in March increased by 790,000 to a new high for the month of 67,148,

THE TYRE MOST IN DEMAND

DUNLOP

LONGEST MANUFACTURING EXPERIENCE IN INDIA

Dunlop Truck and Bus tyres are most in demand with operators all over the country. They have proved themselves to be the most sturdy, most dependable and most profitable under all conditions of service. Extra strong casing—more re-treads per tyre—lowest cost per mile!

DUNLOP TRUCK AND BUS TYRES
lowest cost per mile

DCC-1A

050. This rise was more than 500,000 larger than is usual in March.

Unemployment fell to 4,501,000 from February's 4,918,000. This drop of 417,000 came at a time when there usually is little change in the jobless total.

Particularly encouraging are the underlying trends. Employment gains were registered chiefly among adults, and by and large the men and women who found work were those looking for full-time jobs.

These employment gains have come at a time, moreover, when the pace of economic activity has been quickening, lending support to the view that further job gains are in store. This may be reflected in the lengthening factory work-week, and the decline in lay-offs and new claims for unemployment compensation.

The question is how far the gains will go. No one pretends that the present level of unemployment is either satisfactory or desirable. But there are differences over the level below which unemployment can reasonably be expected to drop in the complex and mobile US economy. The Kennedy administration has set sights on a four per cent rate as an interim, though

not necessarily final, goal although some experts believe that reasonably full employment can be achieved at a somewhat higher figure.

A key point is the broad measurement of unemployment in the United States. It embraces not only those laid off, but also new job seekers, those waiting to report to a job, and even those who reportedly would have been looking for work if they thought jobs were available.

Also included are people in the process of voluntary job changing, young people entering the labour force for the first time, and such re-entrants to the labour force as older women and seasonal and part-time workers. In times of relatively low unemployment, these types of so-called "fractional unemployment" have accounted for as much as 70 per cent of the total. Today, according to some estimates, this kind of unemployment is running above two million, or nearly half the total.

It would seem to follow that reasonably full employment in the United States, in the sense of at least as many job vacancies as job seekers, can be reached when the

unemployment rate is well above zero. By this definition, there are those who would say that the nation is close to the full employment level right now.

But this kind of statistical exercise, even assuming it is justified, does not get the heart of the problem. It does little for the earnest job seeker who faces the reality of joblessness for whatever the cause—lack of skills, industrial changes, technological advances, company reorganizations or what have you. Nor does it consider the pace of economic growth that may be needed to make full use of the nation's productive potential and thus ensure the widening of employment opportunities for a growing labour force.

A study by the Chase Manhattan Bank of New York City, presents an illuminating picture of where unemployment hits hardest. It shows that by occupation, unemployment rates are highest among unskilled non-farm workers, lowest among professional and technical workers.

By age, the highest rates are among young workers, particularly teenagers, and the lowest among men and women in the prime working ages. This is underscored in the recent March report, which shows that unemployment among teen-agers, already high, did not share in the general decline to any noticeable extent.

Particularly telling is the analysis of unemployment by educational levels. It shows that unemployment among men with some college or other advanced training actually decreased during the 1950's, from 2.3 per cent to 1.4 per cent of the labour force, while joblessness among those with less than a secondary-school education—representing 12 years of basic schooling—rose markedly.

This indicates that unemployment is not necessarily a general or intractable problem in the United States. The view that what the United States faces is as much an educational as an unemployment problem may have much to recommend it.

On the other hand, it is possible to exaggerate this view beyond all reality. A person out of work is a person out of work. And complicating the situation is the fact that young people will be entering the labour force in increasing numbers in the years ahead.

All this helps explain the comprehensive and many-pronged approach the Kennedy administration has been taking to this problem. It involves emphasis on stimulating economic growth, on aid to education, on manpower training and development, on youth programmes, on assistance to distressed areas of the country among others. Nor is the lesson lost on the schools and the business community, whose

responsibility for enlightened action is recognized and real in a democratic society.

NATIONAL RUBBER Poised for Further Expansion

The National Rubber Manufacturers Limited has registered around improvement during the year ended 31 December 1962. The sales of the company's products went up considerably and there was a progressive decline in the finished goods inventory and borrowings. The profit of the company after depreciation shot up by approximately 66 per cent over that of the previous year and the percentage of net profit on sales showed sizeable improvement. All these factors have helped the Directors to recommend a higher dividend of 8 per cent on ordinary shares against 6.5 per cent in the preceding year. These results only reflect the general trend in the rubber manufacturing industry as a whole when the index of production (with 1956 as the base year) reached the level of 167.5 for the first eleven months of 1962 against the general index of 149.6.

Besides, the company is poised for further expansion for which it has already obtained an industrial licence to expand the manufacturing capacity in regard to industrial V-belts and fan-belts by 600,000 numbers so as to taking the aggregate capacity to 1,440,000 numbers per annum. This apart, the company is also programming to enhance its capacity for cycle tyres for which a licence is expected very shortly.

It is also heartening to note that the General Tyres Limited, of which the National Rubber is the Managing Agents, has made substantial headway. The construction of the buildings is nearing completion and almost all the imported plant and machinery has been installed and the plant for manufacturing automobile tyres and tubes is expected to go into trial production very soon.

Though the supply of indigenous raw materials is progressively improving, the cost of these materials is bound to get inflated consequent on the increases in the basic rates of import duty on rubber, carbon black etc., the imposition of a general 10 per cent surcharge on all import duties as well as additional Central excise duties on a host of items included in the budget for 1963-64. To top all these financial burdens to the industry comes the proposed Super Profits Tax which will not only impede the pace of industrial development but also dampen the entrepreneurial activity in the country.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

ENTHUSIASTS of Hindi in Parliament wrote another golden page in our parliamentary history last week. I doubt whether one could describe their conduct in terms that would not offend parliamentary privilege, to which, despite their own scant respect for parliamentary decencies, they are presumably entitled. (Or are they? Here is a nice point for constitutional pundits.) By and large, our Parliament has a fine record: but the present session which began with boorish discourtesy to the President from the same set of people is sure make us all wonder again about premonitions of early demise of the parliamentary system in the country. The Official Language Bill itself is a profoundly unsatisfactory compromise meant to propitiate the kind of people who can never be propitiated. I entirely agree with Mr Frank Anthony that in the form in which the Bill is, the substance of Mr Nehru's assurances has disappeared as near completely as makes no difference. Even the status of an "associate language" for English is not formally avowed and the only concession to non-Hindi sentiment is the provision that English is to continue to be used beyond 1965 for official purposes of the Union, a concession more formal than real. Not all Hindi-enthusiasts foaming at the mouth can make Hindi take the place of English immediately. But the really insidious provision that is quite contrary to the spirit, if not the letter, of Mr Nehru's assurance is the review by a Joint Parliamentary Committee in 1975 on the progress of the use of Hindi for official purposes and the implementation of its recommendations by a simple Presidential Order. Without dolefully anticipating the nature of the possible recommendations of such a committee—though, Mr Anthony's experience in similar contexts in the past has been painful—it is permissible to say that a review by a Parliamentary Committee is not the same thing as ascertainment of the wishes of those who do not speak Hindi. But it is not distant fears, real though they are, that bother me. It is the Bill's potentiality for immediate mischief that has me worried. A sullen and disappointed East and South nursing a feeling of being let down on a matter of supreme importance to them is hardly likely to pull their full weight in the difficult times ahead. And the kind of behaviour

that the Lok Sabha witnessed last week is sure to put their back further up.

Trust TTK to put his finger on it! I couldn't agree more with his preference of the heavy top to the middle spread. Whether in man or in government, the rolls of fat in the middle is an ungainly sight, a sin against God and man and at all times to be abominated. Alas, often the top is heavy because it is swollen but if part at least of the weight is due to grey matter, I don't think we need particularly mind. The cliché about a "top-heavy" administration is a vestigial survival of an old slogan that had a validity of sorts in those days. I believe it was an objection directed more at the salaries paid to the top civil service brass than their number; and part at least of the objection was grounded in political resentment at external guarantees from the Secretary of State. Moreover, governing was of the most rudimentary kind in those days. Therefore both the number of people governing and the amount of money spent on them may with some plausibility be said to have been disproportionate. Things have changed quite a lot since. The change can be summarised by saying that civil servants have been displaced by bureaucracy, a change not often recognised by the rather loose habit of equating the two. In other words, governing has yielded place to administration and the latter requires vastly more complex (though perhaps duller and less personal) talents. Much modern expertise is dubious, but I think that a top administrator needs to know more about more things these days than at any time before and top administration needs a wide variety of specialised knowledge. This inevitably makes for a relatively expensive and numerous top. Anyway, whether you agree or not about the top, I do think that a regimen of slimming in the middle that will reduce the waist-line padded with supernumerary deputy secretaries, under-secretaries and superintendents et al would do a whole world of good. But this is unlikely to succeed for much the same reason that the attempts of film stars to shed the extra pound fail. Of late we have heard quite a lot about "surplus staff" in this or that ministry, but if you think

that this is a prelude to a more streamlined administration, you have another guess coming. Like the dame who throws away the gains of weeks of dieting on lettuce and water by a momentary weakness for ice-cream, the passion for economy will disappear when a new scheme comes along. Not for nothing did the poet sing of the "Sweets of Office."

I hold that the most tragic consequence of nuclear weapons is the blunting of the moral sensibility of one of the greatest spirits of our times. What but abject terror of nuclear destruction of mankind would have made Bertrand Russell come out with the puerile sophistries of his latest book "Unarmed Victory"? He himself says as much: "Whenever the question of peace or war is relevant, the merits of either side become insignificant in comparison with the importance of peace. For this reason I shall always side with the more peaceful party in any dispute between powerful nations. It has happened in both disputes . . . the communist side has been the less bellicose." The word "bellicose", my dictionary tells me, means "inclined to fighting". I should like to ask Russell how he would describe the clandestine erection of missiles in Cuba by the Soviet Union and the subsequent lying about it. Were these deadly weapons taken there just for the heck of it? A bully threatens you and that is not being bellicose. You bare your fist and Russell on the sidelines, making peaceable noises

considers it inexcusable truculence. The bully flinches at the consequences of a clash and changes his mind and tells Russell that out of deference to his wishes he has decided to withdraw. Russell says that the bully is really a peace-loving man and the man who stood up to him is merely spoiling for a fight. Can one get things more screwy? In the correspondence columns of the New Statesman, Russell recently made a feeble attempt at proving that he held the scales even between the Soviet Union and the United States over the Cuban affair. "Unarmed Victory" proves such professions entirely hollow. Over the Sino-Indian conflict too, Russell argues that the unilateral ceasefire by the Chinese is conclusive evidence of their peaceable nature. When Mr Nehru refuses to fall into the elaborate trap set by Chou, Russell considers him a hysterical nationalist spouting ultimatums. Why does Russell refuse to go into the merits of the case? The least disreputable reason that I can think of is his fear that the conflict would trigger off a nuclear war. Russell would thus appear to justify a complete abdication of moral judgment of issues so long as it buys peace of a kind. This is relativism with a vengeance and if pressed, such moral irresponsibility would probably be justified by the total nature of the destruction in a nuclear war which makes even appeasement respectable. It is easy to see that this way lies the sophist's hell. And how does Russell reconcile his notion of a peace-loving Chou with Chou's furious onslaught on Khrushchev for what Russell considers a supreme act of peace? Teaching logic to Russell requires, I concede, a certain hardihood. But there are occasions when lesser men must teach their betters.

A Positive Policy for Steel

A firm declaration of Government policy on steel production and prices was a notable feature of Mr C. Subramaniam's reply to the Lok Sabha debate on the demands for grants for his Ministry. He was speaking with particular reference to the criticism made earlier in the debate by Mr Murarka who had questioned Government's decision to allow expansion of steel plants in the private sector. While Government's industrial policy, he explained, reserves iron and steel production to the public sector, it permits growth in the private sector where this is in the national interest. It was in pursuance of this policy that the private sector steel plants were encouraged to expand in the First and the Second Plans, since it was a fact that expansion of an existing plant to make full use of in-built capacity is more economical than the setting up of a new plant. This was in fact the principle on which Government is acting in the public sector also where the three steel works are being expanded before building new steel works.

Referring to the happy coexistence of the public and the private sector Mr Subramaniam said that the mixed economy in steel had yielded excellent results. Both sectors, he pointed out, are working under the same conditions and limitations. The objective of central planning of production was to share the market demand fairly and equitably and this, he said, would continue. He did not consider that, in the context of our steel economy, there was any possibility of unhealthy competition between the products of the public and private sectors. This will continue to be the case even when the fourth and other public sector plants come into operation.

There was no discrimination, the Minister said, in the pricing system, which affected both sectors equally. The declared policy of Government so far has been common prices for the public and private sectors alike. This policy, Mr Subramaniam affirmed, would be continued and sustained. In the further development of the steel industry that was envisaged, while the public sector would naturally provide the main increase according to Government's policy, he was sure that "the private sector also

will continue to play its part and co-exist."

The expansion programmes that have been drawn up to achieve a production of 18 to 19 million tons by the end of the Fourth Plan, envisaged, in addition to the expansion of existing steel plants, the setting up of three new steel plants in the public sector. Surveys had already been made in three regions namely, Goa-Bellary-Hospet, Bailadila-Vizag and Salem. About Bokaro, the Minister expressed the hope that it would be taken up in the public sector with American assistance, and he appealed to the House not to say anything that would be detrimental to the project.

As regards Third Plan prospects, Mr Subramaniam conceded that production was likely to be short of the target of nine million tons of ingot steel, because of delays in regard to Bokaro as well in finalising expansion programmes of the public sector projects. The agreement for expansion of Bhilai was finalised only towards the beginning of last year and in the case of Rourkela and Durgapur, the expansion programmes have been delayed by more than two years. Both the plants are now working at full rated capacity and it should, therefore, be possible to start the expansion programmes without further delay.

The foreign exchange requirements of Rourkela expansion, including payments for foreign technicians who will be employed during the construction stage, are fully covered by the loan agreement finalised with West Germany. The West German Government will give a loan of 400 million Deutsch Marks for a period of twenty years, and carrying an interest of five and three fourth per cent, the repayment of instalments starting after the fifth year. Mr Subramaniam left last week en route to Bonn where he will sign the loan agreement. He will be back on 29 April in time for discussions with US Secretary of State Dean Rusk regarding Bokaro. During this trip Mr Subramaniam will take the opportunity of visiting the steel works of Demag and Krupp and other firms who are collaborating in the Rourkela expansion programme. On the way he will stop in Austria for discussions on financial and technical assistance for the conversion of Bhadravati Iron and Steel works to the manufacture of special and alloy steels.

Gift From New Zealand

The latest gift from New Zealand of a Milk Evaporator for the Delhi Milk Scheme is a reminder of the continued and abiding interest that this country has been taking in the development of dairying projects in India. Mr A. M. Thomas, Union Deputy Food Minister, was not indulging in exaggeration when he described the help extended by New Zealand for this purpose as "magnificent". In addition to a contribution of £800,000 for the purchase of equipment for the Delhi Milk Scheme with a fleet of rail tankers to transport milk from Anand, thereby benefitting the milk producers of Kaira district of Gujarat as well as the consumers in Bombay city. New Zealand had also extended help to construct and equip a hostel at the Aarey Milk Colony to serve as an International Dairy Training Centre. The Minister also referred to the National Dairy Research Institute at Karnal which had received valuable dairy equipment which was being used to train dairy personnel. Aid had also been received from New Zealand for the Milk Schemes of Calcutta, Madras, Jaipur, Patna and Lucknow and the new milk projects coming up at Indore and Dehra Dun. In addition, New Zealand had also made available the services of some of her top dairy experts. The spreading of the benefits from the urban area to the surrounding country-side is a notable feature of these Milk schemes. Referring to the impact of the Delhi Milk Scheme, the New Zealand High Commissioner who made the presentation on behalf of his Government noted that it had increased the cash income of the rural milk suppliers by about Rs 3 crores per annum.

World Business Meet

Mr Bharat Ram, President of the Federation of Indian Chambers of Commerce and Industry, will lead the Indian Delegation to the nineteenth Congress of the International Chambers of Commerce which is meeting in Mexico City from April 20 to 27. About 2000 delegates from all over the world, representing national and international organisations are expected to attend the Congress.

The Indian delegation will include among others, Mr Babubhai M. Chinai, Mr Madan Mohan R. Ruia and Mr Ramnath A. Podar. Mr Bharat Ram, the leader of the Indian delegation has been appointed Co-Chairman of the First Plenary Session of the Congress. He will also address one of the Congress meeting on the subject "Export Problems of Developing areas." Mr Babubhai M. Chinai has been requested to initiate the discussion on the subject "Banking in underdeveloped countries". Other Indian representatives will participate in the discussion groups on various technical subjects. Mr Madan Mohan Ruia will preside at

the XI the session of the Commission on Asian and Far Eastern Affairs of the International Chamber of Commerce which will also be held in Mexico at the time of the Congress.

Speeding up Power Projects

Steps that have been taken for expediting implementation of power projects, it is understood, were explained by Mr Hafiz Mohd. Ibrahim to the Informal Consultative Committee of Parliament attached to his Ministry. One of the reasons for the delay is stated to be the procedures that had to be followed before getting clearance for the foreign exchange required or importing equipment. Some of the hurdles that delayed sanctions have now been eliminated. It has been agreed that the concurrence of the Development Wing for sanctioning foreign exchange need not be obtained, if quotation had been invited for machinery or spare parts by an open tender for a period of 21 days and there was no indigenous offer. The Department of Economic Affairs has also delegated powers to the Ministry of Irrigation and Power to sanction free foreign exchange up to one lakh of rupees on their own authority. It has also been decided to centralise the issue of licences for import of power project machinery in Delhi and import licences are expected to be given within fifteen days in respect of any project. Project authorities have also been advised that along with the main power plant, they should also attend to the procurement of auxiliary items to ensure that the progress of the projects is not held up for lack of these items. The Committee, it is understood, was also told about the progress achieved in the utilisation of irrigation potential.

DIRECTORS' REPORT FOR THE YEAR ENDED 31st DECEMBER, 1962

To THE MEMBERS OF DEVKARAN NANJEE BANKING CO., LTD.

1. Your Directors beg to submit herewith the audited Balance Sheet and the Profit and Loss Account of the Company, hereinafter called the Bank, for the year ended 31st December 1962. The Auditors' Report is also annexed.

2. The Bank has, during the year, made generally good all-round progress. The Bank's deposits, at the end of the year have increased to over Rs. 50½ crores, the total working funds to over Rs. 5½ crores, and the number of accounts to over 2,50,000. Five branches were opened during the year—all in Greater Bombay, at Jogeshwari (East), Mahim, Malad (East), Santa Cruz (East), and Wadala—bringing the total number of Bank's branches to 112 at the end of 1962. Five Safe Deposit Vaults were opened—at Jogeshwari (East), Malad (East), Santa Cruz (East), Tardeo, and Wadala—bringing total number of Safe Deposit Vaults to 34. Steps were also taken to expand the activities of the present branches.

3. During the year, after obtaining the necessary consent from the Controller of Capital Issues, Government of India, the issued, subscribed and paid-up Capital of the Bank was increased to Rs. 1 crore from Rs. 50 lakhs, by issuing 1 lakh equity shares of Rs. 50 each, at a premium of Rs. 2 per share. The newly issued shares rank for dividend with the existing equity shares to the extent of 25 per cent of the dividend to be declared for the year ending 31st December 1962 and in all other respects *pari passu* with the existing shares.

Your Directors are happy to state that the Reserve Funds of the Bank have also now reached the figure of Rs. 1 crore, which is equal to the present paid-up capital of the Bank.

4. In the context of the present national emergency caused by the Chinese aggression, the Bank has been doing its mite in support of the Government's defence effort. The Bank has contributed Rs. 1½ lakhs to the National Defence Fund and subscribed Rs. 50 lakhs to the National Defence Loan. The Bank has placed the services of all its 112 offices for receiving contribution to the National Defence Fund free of any charge. The Bank is also extending the required facilities to the employees who wish to join the Territorial Army and the Lok Sahayak Sena.

5. The Bank has made a net profit, after providing for taxation, of Rs. 24,08,322.17, which, together with the sum of Rs. 13,51,086.09 brought forward

ward from last year's account, amounts to Rs. 37,59,418.26. Out of this your Directors have made the following appropriations:

To Ad-Interim Dividend paid for the half-year ended 30th June 1962 at the rate of Rs. 2.00 per old share	Rs. 2,00,000.00
To Reserve Fund under Section 17 of the Banking Companies Act	Rs. 23,00,000.00
To Pay bonus to staff	Rs. 4,50,000.00
and propose to appropriate the balance as under:	
To Pay a Final Dividend for the half-year ended 31st December 1962 at the rate of Rs. 3.50 per old share (making in all 11 (Eleven) per cent per annum, subject to deduction of tax)	Rs. 3,50,000.00
To Pay a proportionate Dividend of Re. 1.40 per new share (subject to deduction of tax)	Rs. 1,40,000.00
and To Carry Forward	Rs. 3,19,418.26
	Rs. 37,59,418.26

6. Shri Laxmikant S. Dabholkar had attained the age of 65 on 29th July 1962 and, as such, under Section 280 of the Companies Act 1956, he will vacate his office as a Director at the conclusion of the ensuing Annual General Meeting. The Board of Directors have received the requisite notice from members proposing his re-appointment as a Director. Shri M. A. Master, who is aged 78, also retires at the ensuing Annual General Meeting. The Board of Directors have received the requisite notice from members proposing his re-appointment as a Director. In accordance with Article 100 of the Articles of Association, Shri Natvarlal S. Choksey and Shri Harshadrai B. Parekh retire from the Board of Directors by rotation, but being eligible offer themselves for re-appointment.

7. You are requested to appoint Auditors for the ensuing year and to fix their remuneration.

Yours faithfully,

For the Board of Directors,

LALITCHANDRA C. D. NANJEE,
Chairman.

Sixty-Eighth Report of the Board of Directors

GENTLEMEN,

The Directors beg to place before the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1962.

The Net Profit for the year, including the sum of Rs. 23,36,733.88 brought forward from the previous year's account, amounts to	Rs. nP. 2,03,32,560 71
---	------------------------

The following appropriations have been made:—

An ad-interim dividend was paid for the half-year ended 30th June 1962 at the rate of Rs. 2.40 per share, subject to tax, on 12,60,000 shares	30,24,000 00
Amount transferred to Reserve Fund	38,71,500 00
Amount transferred to Special Reserve	58,00,000 00
Amount transferred to Staff Gratuity Fund	10,43,810 83
Amount provided for Bonus to Staff	65,00,000 00

To carry forward to next year's account	Rs. nP. 2,03,32,560 71
---	------------------------

The Directors recommend to the Shareholders payment of a final dividend for the half-year ended 31st December, 1962 at the rate of Rs. 2.60 per share, subject to tax, on 12,60,000 shares (making in all 14% net for the whole year) which will absorb Rs. 32,76,000/- and a dividend @ Rs. 2.60 per share, subject to tax, (pro rata from the date of allotment) on 1,454 shares allotted to the Shareholders of the Jodhpur Commercial Bank, Ltd., during the half-year ended 31st December, 1962, which will absorb a further amount of Rs. 1,028.52.

The Bank's business during the year under review showed satisfactory progress. During the year 1 Branch, 12 Sub-Branches and 5 Pay Offices were opened at various centres and 1 Sub-Branch and 2 Pay Offices had to be closed down as they were found to be unremunerative.

With the nationalisation of Banks in Burma, the business of our Rangoon Office was taken over by the Government of Burma on 23rd February, 1963. The manner in which the take-over is to be effected is not yet settled. It may be stated, however, that a sizeable portion of the assets of the Branch is held in India.

During the year, increases in the Capital structure of the Company took place, as mentioned below, on account of the implementation of the Scheme, prepared by the Reserve Bank of India and sanctioned by the Central Government, for the amalgamation of the Jodhpur Commercial Bank, Ltd., with our Bank, in terms of which the Shareholders of that Bank had the right to opt for cash payment or shares of our Company of equivalent value, and those Shareholders, who did not exercise the option to receive cash, became entitled to the allotment of a corresponding number of shares of our Company. Some Shareholders opted for Shares of our Company instead of receiving cash payment due to them. Accordingly, 1,454 Ordinary Shares of our Company were allotted during the year under review to such Shareholders and our Authorised and Issued and Subscribed Capital was increased as under:—

- (a) The Authorised Capital increased from Rs. 6,30,00,000/- to Rs. 6,30,72,700/-, and
(b) The Issued and Subscribed Capital increased from Rs. 3,15,00,000/- to Rs. 3,15,36,350/-.

Further allotment of Shares of our Company will have to be made to the Shareholders of the Jodhpur Commercial Bank, Ltd., who have not exercised the option to receive cash and have accordingly become entitled to equivalent Shares of our Company.

BALANCE SHEET AS AT 31st DECEMBER, 1962

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of The Central Bank of India, Ltd., as at 31st December, 1962, and also the foregoing Profit and Loss Account of the Bank for the year ended on the date in which are incorporated the returns of the 156 other branches audited by us, 48 branches audited by other auditors and the unaudited returns from 155 other branches not visited by us, in respect of which the Central Government has made an order granting exemption from audit pursuant of section 228 of the Companies Act, 1956.

We report that:

- We report that:
- (a) we have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
 - (b) the transactions of the bank which have come to our notice, have been within the powers of the Bank;
 - (c) in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purpose of our audit, have been received from the Branches of the Bank not visited by us;

(d) the Bank's Balance Sheet and Profit & Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) the reports on the accounts of the Branches audited by other Auditors have been forwarded to us and the same have been considered in preparing our report:

(f) in our opinion and to the best of our information and according to the explanations given to us, the said accounts, read along with the notes appearing thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December 1962, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

the Shrivastava committee, which is under consideration of government, has pointed out that it will be quite proper on the part of India to take retaliatory measures to counter the unfair practice adopted by Pakistan to maximise export of jute goods.

Markets

JUTE

Steady Undertone

Though there has been some improvement in sentiment in the jute goods market during the past week, marked price changes are discernible mainly in the sacking section. This is due to two factors: the lower than anticipated rise in stocks as at the end of March and reports of sizable business on Government of India account and East Africa. Speculative interest has also been particularly active in sacking futures. However the outlook for sacking does not appear to be bright especially since Government has decided to maintain the minimum price for raw jute for next season at the current levels. Compared with the present level of sacking prices, raw jute prices are high. But the fact that Indian sacking has performed so well in foreign markets in common with similar goods from other manufacturing countries (competition is now confined to Pakistan) makes it imperative that its cost of production is kept as low as possible. At present for various reasons and mainly because the Pakistani industry gets its raw material at a

considerably low cost as compared to Indian mills, Indian sacking is unable effectively to meet the Pakistani threat. Government has therefore been urged to devise ways and means to enable our industry to overcome the Pakistani competition. It is now becoming increasingly clear that Pakistan will not hesitate to take further measures, if necessary, to maintain its position and even improve it in world markets. For, sensing that some action may soon be forthcoming a spokesman of the Pakistani industry has sought to make it appear that the threat is not from Pakistan to India but the other way about. In support of this position he has pointed out that the export bonus scheme is largely a device intended to neutralise the high replacement cost of looms in Pakistani as compared with India where looms had cost much less when they were put up. But the figures of sacking exports show that India is fast losing ground while Pakistan has made remarkable headway. This is what matters and this is the position that should be grasped by our Government before it is too late. It is reported that the report of

(Continued)

The outlook for the next jute crop has considerably improved as beneficial rains have been received in almost all growing regions. Sowing operations are reported to be in full swing and indications are that growers will be encouraged by the decision of the Government to maintain the minimum price for raw jute at current levels to place the emphasis on jute. It is apprehended that a situation similar to that obtaining this season may ensue in the next season also as there is nothing to restrict growers to concentrate on the production of quality jute. In the meantime the raw jute market in Calcutta continues to rule dull with prices showing no material change over the previous week. It is not surprising that lower quality jute is not in demand because mills, for one thing are having more than sufficient stock and for another they are in need of superior gra-

des in view of their steady shifting to hessian and carpet backing production.

Conditions in the jute goods market have shown some improvement over the past few days. In earlier dealings sentiment was somewhat quiet especially in hessian as a consequence of a sizable rise in the stock of this category of goods. But with the release of figures for burlap consumption in US for March, there has been

some slight improvement in sentiment although consumption has been lower than in February. Burlap consumption in US in March is placed at 85 million yards as against 89 million yards in the previous month. Stocks at the end of the month remain unchanged at 304 million comprising 160 million yards spot and 144 million yards afloat. But in spite of the continued high level of stocks and the decline in consumption, the

outlook for hessian offtake in the US market is considered to be satisfactory. The decline last month is not worrying operators much because the previous month's consumption had been unusually high. That the rate of consumption of burlap in US is well maintained is evident from the fact that in the first quarter of the current year consumption has been more or less level with the corresponding period of last year. Any spurt in offtake in the primary market is unlikely for the simple reason that overseas buyers may not be in any great hurry to augment their stocks as indications are that supplies will be quite large. Mills' output in March touched a high level at 104,500 tonnes showing rise of as much as 10,100 tonnes over the figure for the previous month. The rise in output is due to the fact that mills had worked 208 hours during March as against 184 in February. The pattern of production continues to show that the emphasis is on hessian, the output of which stood at 44,700 tonnes as compared with 42,700 tonnes of sacking produced. Although the industry is to work upto full capacity, production in the current month may be adversely affected due to power shortage.

PRODUCTION OF JUTE GOODS— March 1963

TEA Good Crop Expected

ACCORDING to reports from Tezpur, there has been timely early rain over the tea-growing districts of Assam. It is also reported that some gradens have started manufacturing tea though, because of the current emphasis on quality for export purposes, most of the first flush will be thrown away. In fact, rain at this time of the year enables planters to use fertilizers, so that the second flush is ample. Moreover, the second flush is the real good tea though some gardens have their best flavour leaf in autumn.

Fears are, however, entertained in some quarters that, due to the Chinese threat to Assam, investment in the tea industry may shrink, have been largely falsified. As a matter of fact, British invest-

ments have continued at the level of previous years. This means, the majority of the gradens are not without funds. Again, advances from banks to individual planters, which had stopped last autumn, have been resumed. In the circumstances, the crop is expected to be good this year.

Direct exports of North-East Indian Tea to the UK, in the ten months ended January 1963, were lower at 153.54 million pounds as against 161.3 million pounds in the corresponding period of last year. Out of the total exports in April 1962/January 1963, ship-

ments to London auctions accounted for 140.25 million pounds and those against private sales and forward contracts for 13.29 million pounds as against 148.11 million and 13.19 million pounds respectively in the similar period ended January last year.

Ceylon has once again beaten all previous records in respect of tea outturn. No less than 467 million pounds were produced in 1962 showing a rise of more than 11.3 million pounds over the 1961 crop. The trade disposed of this large production and no less than 76 per cent of this amount was sold in

Colombo auctions. With regard to marketing, altogether 356.3 million pounds were offered for sale in the Colombo and ex-Estate offerings amounted to 335.8 million pounds and 20.8 million pounds as against 342 million and 13.6 million pounds respectively in 1961. The total net sales average for 1962 was Rs 1.75 per pound as compared to Rs 1.83 in the previous year and Rs 1.88 in 1960.

In London auction, only 64,500 packages were offered. There was a strong demand for improved

RESERVE BANK OF INDIA

Applications are invited for the following posts in the various departments of the Reserve Bank of India:—

- (A) POSTS AND SCALES OF PAY:
- | | |
|---|-----------------------------------|
| (i) Deputy Chief Officers | Rs. 1275-75-1575. |
| (ii) Banking Officers | |
| (iii) Research Officers | Rs. 375-55-815 EB 55-925-80-1045. |
| (iv) Industrial Finance Officers | |
| (v) Probationary Assistant, for Economic Department | Rs. 250-25-450 EB 25-650. |

Note:—Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scales.

In addition to pay, the selected candidates in all categories mentioned above will be eligible to draw local pay (at centres where it is admissible) and house allowance at rates prescribed from time to time. Dearness Allowance is not admissible to category (i).

(B) QUALIFICATIONS:

(i) Deputy Chief Officers, Department of Banking Operations: Applicants should have a minimum of 15 years' commercial banking experience out of which not less than five years should be in a responsible position. Preference will be given to applicants with high academic qualifications who have made a special study of Economics, Banking, Commerce or Accountancy.

(ii) Banking Officers, Department of Banking Operations: Applicants should (a) have a minimum of five years' commercial banking experience out of which not less than three years should be in a responsible position. Preference will be given to applicants with high academic qualifications who have made a special study of Economics, Banking, Commerce or Accountancy or (b) be Chartered Accountants with a minimum standing of five years.

(iii) Research Officers, Economic Department: Applicants should possess first or high second class Master's degree in Economics or Commerce of an Indian or foreign University or a Doctorate degree in Economics of an Indian or foreign University, and a period of research work in one or more of the following subjects: (a) Monetary Economics, (b) Banking Theory and Practice, (c) International Trade and Finance, (d) Agricultural Economics and (e) Planning and Development. Applicants are expected to be proficient in economic analysis. A period of practical banking training will be an additional qualification in respect of applicants with specialisation in (a), (b) and (c) above and experience of agricultural surveys in respect of (d) above.

(iv) Research Officers, Department of Statistics: Applicants should possess (i) first or high second class M.A./M.Sc. in Statistics/Mathematics of an Indian or foreign University, M.Stat of Indian Statistical Institute, Calcutta or an equivalent qualification (ii) experience in the application of statistical methods to economic problems, (iii) Research experience in one or more branches of applied statistics like sampling, econometrics, etc. A doctorate in Statistics, experience in handling of official statistics, etc. will be considered as additional qualifications.

(v) Industrial Finance Officers, Industrial Finance Department: Applicants should have a minimum of 3 years' experience in a Commercial Bank or a term lending institution in a responsible position. Preference will be given to applicants with high academic qualifications who have made a special study of Economics, Banking, Commerce or Accountancy.

(vi) Probationary Assistants, Economic Department: Applicants should possess a first or high second class Master's degree in Economics or Commerce of an Indian or foreign University. A period of research work done in one or more of the following subjects, namely, (a) Planning and Development, (b) International Trade and Finance and (c) Econometrics will be considered as an additional qualification.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY THOSE

CANDIDATES WHO POSSESS HIGH ACADEMIC QUALIFICATIONS AND/OR ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

(C) AGE LIMITS AS ON 1ST APRIL, 1963:

(i) Deputy Chief Officers: Candidates should not be over 45 years of age.

(ii) Banking Officers, Research Officers and Industrial Finance Officers: Candidates should not ordinarily be over 35 years of age, but the age limit may be slightly relaxed in the case of candidates with exceptionally good qualifications and/or experience of value to the Bank.

(iii) Probationary Assistants: Between 21 and 25 years. The maximum age limit is relaxable, but not beyond 30 years in the case of:—

(i) Candidates possessing special qualifications and experience of value to the Bank;

(ii) Ex-employees of banking institutions whose services had to be terminated for reasons of economy or as a result of the banks going into liquidation;

(iii) Personnel retrenched from Government offices after at least one year's service applying through Employment Exchanges; and

(iv) Candidates belonging to the Scheduled Castes or Scheduled Tribes.

2. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees and should clearly indicate the post and the department for which they have applied.

3. Applicants for the above posts must remit with their applications a fee of Rs. 7.50 for each post by cheque or bank draft on a Scheduled Bank payable at Bombay or by Postal Order. The application fee is in no case refundable. Bonafide refugee candidates not in employment applying through Employment Exchanges are exempted from payment of application fees while in the case of candidates belonging to Scheduled Castes/Tribes, the fee will be reduced to one-fourth.

4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Hyderabad, Trivandrum, Lucknow and Patna accompanied by copies (originals should not be sent) of certificates regarding age and educational qualifications, statements of marks secured in the Graduate and Post-graduate degree examinations and two testimonials should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before the 18th May, 1963.

5. Candidates already in service will be required to produce a proper discharge certificate from their employers in the event of their being selected at the time of their appointment in the Bank's service.

6. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of a certificate to that effect from a competent authority.

7. Candidates must be prepared to serve in any office of the Bank in India or group of departments to which they are posted, and to undertake tours when required.

8. Selected candidates will have to appear for interview/s before the Selection Board at any of the Bank's Offices.

9. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

10. If any candidate desires to have his application acknowledged, he should send it by "Registered Post-Acknowledgement Due." Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

11. Canvassing in any form will be regarded as disqualification.

ACC ACCOSET-50

ACC HIGH TEMPERATURE REFRACTORY CEMENT

INDISPENSABLE FOR
MONOLITHIC LINING OF FURNACES

Accoset-50 can withstand the effect of moisture, the abrasive action of the charge and great temperature fluctuations.

ACCOSET-50 is also excellent for

- Jointing, repairing and patching
- Bonding and laying firebricks of any shape
- Protective wash of furnace walls and floors
- Gunning

Technical literature sent free on request.

quality of Ceylon teas. BOP Fanings advanced considerably apart from the plainest types, which were lower. Low Medium and the more attractive selection of high-grown types were sold at higher prices. Good Liquoring teas and coloury mediums among the North Indian and other miscellaneous growths met with a firm market although light liquoring orthodox descriptions were irregular and often easier except for the plainest kinds which ruled steady.

Better liquoring Africans were fully steady to dearer, while there was more competition for the plainer and light liquoring African sorts. South Indian teas had good enquiry; but light liquoring sorts were irregular and tended lower. The week's price indication for seasonal peak quality tea was 5sh 1d to 7sh 2d per pound as compared to 5sh 1d to 6sh 10d in the previous week. The rate for Plain tea was unchanged at 2sh 8d to 3sh 1d per pound.

Tea stocks in London and provincial warehouses, for the week ended 5 April, totalled 163.75 million pounds as against 159.04 million pounds. The total amount to be landed on the same date was 12.18 million pounds. Total float was 30.82 million pounds including from Calcutta 15.80 million pounds; from Cochin 1.59 million pounds; from Ceylon 9.48 million pounds and from other ports 3.95 million pounds.

Exports of Cashew Kernels

THE Cashew Export Promotion Council has reported that the export of Cashew kernels from India has risen by over 11,500,000 pounds during 1962 as compared to the previous year. The total value earned has, however, declined by about Rs 20 lakhs. Exports totalled 102,373,600 pounds against 90,812,450 pounds in 1961, valued at Rs 18.52 crores and Rs 18.71 crores respectively.

Exports of cashewnut shell liquid totalled 66,46,825 kg as against 65,77,259 kg in 1961. The total value earned by cashewnut shell liquid in 1962 and 1961 is calculated at Rs 65.85 lakhs and Rs 63.70 lakhs respectively. The Council has reported that the export of cashew kernels to Italy during the past year amounted to 272 tons, believed to be the highest in recent years. India's export of cashew kernels to Italy in 1956-57 was 348 tons and since then export of this commodity to that country was running at an average of only about 58 tons per year.

Cashew kernels are included in the schedule of exports from India to the United Arab Republic under the trade agreement between the two countries. Under the agreement cashew kernels are allowed to be exported to UAR on rupee payment. At present, India's cashew trade with UAR is very negligible. It is, however, added that there are indications

that the UAR will import more cashew in the near future.

The Council has also announced that a new cashew processing industry will be set up in Hongkong to cater to the needs of the South-East Asian retail market as a result of the recent visit there of an Indian Cashew Trade Delegation. The processing of cashew involves bulk imports of cashew kernels from India, which will be fried, salted and marketed. The firms, which had shown interest in this proposal, believe that, with its free Port status and other facilities, Hongkong will be able to compete for markets in the Philippines, Malaya, Singapore and Thailand, which are at present supplied by the USA, UK and Australia.

Meanwhile, raw cashewnut prices have declined further following heavy arrivals of the Indian crop at the terminal markets in the South coupled with a lack of buying interest from the USA. The demand from the USA is restricted at 44 cents a pound for prompt shipment and 45 cents for forward deliveries.

LAC Crop Estimate

According to the preliminary estimate of Baisakhi Lac crop for the current year, 500,000 maunds will be produced against 820,000 maunds and 560,000 maunds produced in 1962 and 1961 respectively. The average production in ten years preceding 1962 is 731,400 maunds.

The crop this year is expected to be lower than the average. The fall is attributed to the low prices of stick lac last year. Because it was considered uneconomical a large position of the last Katki crop was left unharvested and, as a result, the trees were not infected for the Baisakhi crop.

State-wise estimates of the crop (in maunds) are:—Bihar 275,000; Madhya Pradesh 83,000; West Bengal 93,000; Maharashtra 18,000; Uttar Pradesh 20,000; Orissa 3,000; Gujarat 2,000 and other centres 6,000.

According to the Committee's final estimate, 132,000 maunds of Aghani (Kusumi) lac crop was produced in 1962-63. The preliminary estimate was 125,000 maunds. The final estimate of this crop for the previous two years was 5,000 maunds in 1961 and 95,000 maunds in 1960. The average production in the ten years preceding 1961 is 74,050 maunds.

SUGAR Selling Price Fixed?

The price of Sugar has shot up to a new high level. In the Bombay market, E grade is placed at Rs 128 and D grade at Rs 127 per quintal. The absence of any announcement with regard to the release of fresh quota has given rise to apprehensions in some quarters that along with the new quota some restrictions on prices of sugar may also be announced. In this connection the

Union Minister for Food and Agriculture has stated that both the Central and State Governments are keeping a close watch on the sugar situation and efforts are being made to secure the co-operation of the industry and trade in holding the price of the commodity.

It is, however, understood, that the member-mills of the Indian Sugar Mills Association have decided to sell sugar in North India at the ex-factory price of Rs 112 per quintal for the D-29 carbonisation variety. The sulphitation variety will cost a rupee more. The wholesalers are required to add Rs 7 per quintal for octroi, godown charges and cartage and sell for Rs 119 per quintal to retailers. This will give them a profit of only 50 nP per quintal.

The sharp rise in prices for sugar in the international markets in recent months has been greatly helpful in exporting factory sugar from this country. Apart from realising larger foreign exchange earnings for the same quantum of exports, the subsidy incurred on exports will be virtually eliminated. It is estimated by the International Sugar Council that world demand for sugar will be in excess of supplies for some time. The Council has stated that consumption so far this year showed that 600,000 tons more than was expected six months ago, would be needed to satisfy world demand this year. Requirements by the USA this year are put at 3.8 million tons—about 180,000 tons more than forecast six months ago.

PEPPER Rising Tendency in Prices

It is generally believed that the Indian Pepper crop for the current season may not turn out to be more than 25,000 tons. Arrivals have already started to dwindle in Malabar. The bulk of the current crop has been marketed and whatever stock is lying with the growers is not likely to come to the market shortly. On the other hand, the commodity has received good support, both in the forward and the spot sections. Shippers are reported to be persistently buying against their commitments with the foreign buyers. They are reported to have sold more than 1,000 tons to the Communist countries.

America buys only in small lots presently. Shippers expect more orders from this direction in the next few weeks. Stocks with the American buyers are not large. In fact, enquiries from the American buyers are steadily pouring in; but the business does not manifest since their rates are a cent per pound lower than the Indian rates. In the Cochin market, the rate for the ready position is quoted at Rs 295 per quintal.

CHEMICALS & DYES Mixed Trends

Prices in the Bombay market for Chemicals and Dyes have continued

to show a mixed trend. While conditions in the Dyes section remain dull with prices displaying an easier tendency, Chemicals are comparatively active with some of the items ruling firm.

Caustic Soda is in the limelight and the price has shot up from Rs 52 to Rs 57 per 50 kg following the face value restriction imposed on its imports under the cotton textile export incentive scheme. According to a notification issued last week, not more than 10 per cent of the import entitlements, granted under the scheme, can be utilised for the import of caustic soda.

Bleaching Powder has also advanced on the news that the State Trading Corporation will not be importing goods, because of the availability of indigenous stocks in the country. Prices of other items remain more or less steady.

Sentiment in the Dyes section is generally subdued. Apart from the tight money conditions, heavy stocks with the manufacturers have also contributed to the weakness of the market. Some of the manufacturers are reported to have reduced the prices of their products.

OILS & OILSEEDS Higher Levels not Maintained

After recording a smart advance in prices, the Bombay market for Oils and Oilseeds suffered a slight setback towards the close due to scattered liquidation and profit-taking. The bullish sentiment in the market early in the week stemmed mainly from strong rumours that the Government would shortly announce export incentives for castor oil and linseed oil. Reports, that the floor prices of cotton were likely to be raised, aided the bullish fervour. Higher advices from the share, grain and commodity markets accentuated the upward trend.

In the Groundnut section, there was brisk activity. Although arrivals of groundnut and groundnut oil continued to be large, traders had little difficulty in disposing of the supply in view of the brisk purchases made by crushers and vanaspathi manufacturers. There was a general disposition to build up stocks for the lean season ahead. Groundnut Bold ready was quoted at Rs 43.25 and Groundnut Oil at Rs 16.70.

The Linseed section reflected a marked strength. Rumours of export incentives in respect of linseed oil and the sustained strength in rapeseed in North India stimulated a good deal of speculative interest. Ready was quoted at Rs 35.31 and Linseed Oil at Rs 13.70.

In the Castorseed section, price movements were mostly influenced by the activity in the groundnut and linseed sections. Although higher levels continued to attract profit-taking, the overall tendency was noticeably firm. Castor ready was quoted at Rs 31.75 and Castor Oil, commercial quality, at Rs 12.95.

COTTON Buoyancy in Futures

The cotton futures market during the past week depicted a distinctly buoyant trend and the Jarilla May contract shot up by more than 19 points against 12 points in the previous week and the Jarilla August contract went up by 17.5 points against 7 points. The market opened the week on a steady tone and the May contract smartly surged to Rs 737.50 on Tuesday from the last week's closing of Rs 715.25 per three quintals. The bullish sentiment was attributed to the hectic short-covering in the wake of firm advices from the spot market. The fears of scarcity of cotton during the current year also led to a virtual scramble in the market by the mills. The sentiment was also aided by the bleak prospects for importing cotton from the sterling area as well as under PL 480. Consequently there was a narrowing down of the contango to Rs 2 from Rs 6.75 on Monday. Thereafter, however, operators switched over from the May contract to August contract mainly due to the apprehension that a further spurt in the May contract may induce further tenders as tendering differences were scheduled to be fixed very shortly.

The Jarilla August contract also spurted initially to Rs 737.00 from Rs 722.00 but declined to Rs 731.00 toward the midweek. Immediately after the switch-over to the new contract from the old contract the price was pushed up to Rs 740.50 before finally closing at Rs 739.50.

Price fluctuations were on a wider level during the major of the week in both the May and August contracts. The initial spurt was on account of the sustained support based on the reports that there was a scramble for ready available lots. Mr Gulzarilal Nanda's statement that the floor price of cotton should be raised was also interpreted bullishly. The additional incentives that are offered for the export of particular varieties of garments also helped the sentiment.

Meanwhile, the trade is awaiting the details of the alternative arrangements for securing the requisite quantum of foreign cotton. About 28,000 bales of UAR cotton is expected to be imported on rupee payments.

In the spot market the prices of Digvijay, Surti, Kalyan and Wagad registered a rise of nearly Rs 35 during the week under review. There was also improvement in the prices of varieties like CO 2, L 147 and 197/3 thanks to renewed mill support. Leading mills from South India, Kanpur and Ahmedabad were reported to have purchased almost all the choice varieties.

In the export section, nearly 49,000 bales out of the shippers'

export quota for 60,000 bales are reported to have been registered for shipment so far. Japan is showing greater interest in Indian cotton and as such the export quota is expected to be exhausted in the immediate future. Prices of Bengal Deshi ruled firm in the local market.

In the import section spinner interest was pronounced in Sudan and Egyptian cotton against their defence orders. Interest in the US cotton also broadened but offers from shippers were far from encouraging.

An all-India on the spot survey of cotton areas completed recently reveals that none of the special agricultural programmes for stepping up cotton output has been implemented by the States. Further the much publicised package programme does not seem to have progressed beyond the blue print stage. In the circumstance special efforts are needed to enhance cotton production. The survey has shown that the States have been

going slow with these programmes owing to financial consideration, the overall output has remained more or less unchanged and the production potential of new irrigation project areas can be had only in the next Plan period. However it should be noted that with the bleak prospects of bringing more acreage under cotton cultivation the stress should be on increasing the per acre output through intensified modes of cultivation.

PIECEGOODS

Trading conditions in the Bombay cotton piecegoods market looked up considerably during the week under review. In the domestic sector fresh enquiries for seasonal goods were reported while business on the export front also improved to an encouraging level.

Fine varieties of cotton piecegoods were in great demand obviously due to the marriage season and summer. Fancy goods also met with good demand from purchasers. Bleached cambrics and

lawn, bleached longcloth and bleached and dyed mulls attracted attention of buyers. However, some of the varieties, particularly those of reputed mills were in short supply. Coarse and lower medium piecegoods were also in demand. The prices of most of the available varieties evinced an uptrend. South Indian interest was restricted to low priced varieties. Grey flannelettes and umbrella cloth also met with enquiries from some of the upcountry centres.

Conditions on the export front were cheerful on account of two factors. First, owing to the efforts of the trade delegation to Burma sponsored by the Cotton Textile Export Promotion Council we have received tenders for nearly 9 million yards of white shirting from the Burmese Government. The lifting of the import restriction on cotton textiles by the Ethiopian Government is another congenial development for promoting exports of cotton textiles to that destination.

MORE PIPES to meet the nation's needs

With the addition of a second plant at the Kulti Works of The Indian Iron & Steel Co. Ltd., the production of spun iron pipes has increased from 60,000 to 150,000 tons per year. Besides helping to satisfy India's growing demands for large diameter pipe mains, the increased tonnage saves India many crores of rupees annually in foreign exchange. Employing latest techniques, the Kulti Works of IISCO is the first to produce 3" to 30" diameter spun iron pipes in the country.

For the Investor

INVESTMENT GOSSIP

Tax Reliefs Buoy Sentiment

The stock market has reacted favourably to the tax concessions announced by Mr Morarji Desai on Tuesday. Equity prices have improved on a wide front on revival of buying interest. As yet support is mainly confined to the more speculative counters and selected cash scrips. The fact that the Calcutta Stock Exchange authorities have abolished the remaining restrictions on minimum prices has also been of some help in aiding expansion of trading.

The improvement in stock market sentiment stems from the fact that as a result of the concessions, the incidence of the SPT on the corporate sector will be reduced somewhat. Mr Morarji Desai himself has estimated the loss of revenue to Government as a consequence of the concessions at only about Rs 5 crores. Development rebate can now be included under reserves while computing the capital base of companies for the purpose of the tax. The Deduction from profits chargeable to SPT a sum equal to 10 per cent of the total income before payment of any tax is a significant gain. While no condition is to be attached in making this deduction for the assessment year 1963-64, in future this deduction will only be permitted if the amount is utilised for the repayment of debts, creation of additional fixed assets, paying preference dividends in excess of 6 per cent or credited to a reserve which cannot be used for any purpose, except those mentioned above for a period of 5 years. It is to be noted that no condition is to be imposed with regard to the deduction of 10 per cent of the gross profits in computing the profits of companies for the assessment year 1963-64, i.e., the income relating to the year 1962. This will improve the dividend outlook for companies for last year. The concession in regard to reserves in the case electricity companies and banks will confer some much needed relief to them.

The Finance Minister has also given relief to new industrial undertakings and comparatively smaller companies which do not have a large capital or reserve. While the former have been exempted from the super profits tax to the extent they enjoy exemption from income-tax and super-tax, the latter have been

allowed to deduct a minimum of Rs 50,000 even in cases where this amount is higher than 6 per cent of capital plus reserves.

It cannot be denied that the concessions in SPT will remove part of the difficulties which the measure if retained in its original form would have created for the corporate sector. It is also undeniable that even after the concessions the corporate sector will continue to find it difficult to plough back adequate funds into business and to pay a reasonable dividend, because the relief at best will be only marginal. This is what is important for investors who after all are mainly interested in the return they hope to get from their investments. To the extent the concessions do not improve the outlook for dividends, equities may not appear to be very attractive to buyers. The expansion programme of industries will also be adversely affected as the rate of tax and the exemption limit are kept unchanged. As against these however there is the assurance of Mr Morarji Desai that the SPT is a special measure and that he will not hesitate to scarp it if it is found that it retards corporate growth.

INVESTMENT NOTES

Anil Starch

The Anil Starch Products Limited has decided to shift the superphosphate plant of the company from Ahmedabad to Bhavnagar in Saurashtra, which is the main market for superphosphates. The construction of the plant in Bhavnagar will be started soon.

BIC

The British India Corporation Limited will be holding the annual general meeting on 27 April to consider the declaration of dividends. Transfer Books of the Corporation will be closed from 10 May to 8 June, 1963, both days inclusive.

Hindustan Lever

Speaking at the extraordinary general meeting of the company in Bombay on Thursday, Mr P. L. Tandon, Chairman, has hinted at the possibility of the company's Rights Issue in its present form being withdrawn. The company, however, hopes to make at the proper time, fresh proposals. Referring to the company's development projects (the most important of them is the milk project) he has pointed out that they are already half finished. The company is getting Unilever's agreement subject to the UK Government's consent to

a loan of about Rs 20 lakhs in sterling to enable it to complete them. The company also proposed to form a wholly owned subsidiary company for developing exports. Already it has been devoting its fullest effort in promoting exports with considerable success. The company's exports which amounted to Rs 74 lakhs in 1961 rose to Rs 201 lakhs in 1962 and in 1963 the prospects continue to be good. Besides handling its own products, the export subsidiary will also undertake the export of products manufactured by others.

BALANCE SHEET REVIEWS
Jessop Repeats

DESPITE the fact that it was not possible to utilise fully the capacity of the various departments on account of the shortage of matching steel and the transport bottleneck which caused delay in the despatch of finished goods, Jessop & Company Limited has reported a significant increase in total turnover to Rs 12.82 crores for the year ended 31 October 1962 from Rs 12.01 crores in the preceding year. The net profit, before providing for Taxation and Depreciation, amounts to Rs 182.71 lakhs as against Rs 139.71 lakhs for 1960-61.

The company has, however, not benefitted by the increased earnings, because it was necessary to provide large sums towards Taxation. Also, the SPT might make the company liable an estimated amount of Rs 27.12 lakhs. The provision for Depreciation is Rs 29.91 lakhs (Rs 23.09 lakhs) and Taxation Rs 79.07 lakhs (Rs 48.78 lakhs). The amount set apart for SPT is Rs 27.12 lakhs (nil), while the transfer to Development Rebate Reserve is raised to Rs 9.52 lakhs from Rs 9.08 lakhs. The allocation to Reserves has been affected on account of the larger tax liability. The transfer to General Reserve is thus only Rs 22.50 lakhs even with a higher level of gross earnings against Rs 42 lakhs formerly. The dividend on the Ordinary shares is maintained at 8.58 per cent, subject to tax.

The company is busy with expansion plans. It is expected that there will be a large increase in the turnover of Road Rollers, Electrical Multiple Unit Coaching stock, wagons and other engineering goods. But it is feared that, in the absence of favourable developments, the expansion plans may be delayed. The demand for the full range of the company's products continues to be large.

Actually, orders on hand will keep the works busy for some years ahead. With many big projects now being taken up, it will be necessary to incur heavy capital expenditure. It has, therefore, been pointed out in the directors' report that "the burden of taxation, however, inevitable it may be, is likely to make it difficult for the company to pursue the scheme of expansion activity".

HP Glass Skips

The Hindustan Pilkington Glass Works Limited has produced disappointing working results for the year ended 31 October 1962. In this connection, the directors have stated that the company's Works at Asansol were completely re-orientated to improve the capacity and technique of production. In the course of this process, production had to be suspended from the end of October 1961 to the end of March 1962.

Thus, the accounts, presented now, reflect the working results of the company for not more than six months. With the loss of production and due to irregularity in the allotment of railway wagons that seriously affected despatches, sales for the year have shown a considerable decline to Rs 63.90 lakhs from Rs 1.07 crores. The accounts reveal, after providing for Depreciation, a net loss of Rs 12.16 lakhs as against a net profit of as much as Rs 23.95 lakhs for the previous year.

In respect of allocations, Depreciation is raised to Rs 18.75 lakhs from Rs 6.73 lakhs. In the preceding year, a sum of Rs 12.62 lakhs was provided for Taxation. The loss for the year along with the Development rebate Reserve of Rs 12 lakhs now provided, makes a total debit balance of Rs 23.21 lakhs, which is carried forward to next year. The dividend is skipped for the year as against a taxable dividend of 12 per cent paid previously.

The directors have, in their report, stated that, consequent on the introduction of the new "PPG" technique, that has increased the production capacity from 34 million to 54 million square feet of sheet glass per year, the position is to be recouped within a short period. Production has already gathered momentum. If the present tempo is kept up and despatches continue unhampered, satisfactory results may be expected in future years. The annual general meeting will be held on 30 April. Transfer Books of the company will remain closed from 17 to 30 April, 1963.

Cawtex Earns Less

Although sales have risen to Rs 1.74 crores from Rs 1.62 crores, Cawnpore Textiles Limited has reported a net profit, after providing for Depreciation and Taxation, of only Rs 6.02 lakhs for 1962 as against Rs 10.01 lakhs for the preceding year, reflecting the unfavourable trading conditions prevailed in the cotton textile industry, the increase in the cost of production due to higher cotton prices and the increase in wages consequent upon the implementation of Wage Board Award.

Depreciation is raised to Rs 4.30 lakhs from Rs 3.79 lakhs, while Taxation is reduced to Rs 7 lakhs from Rs 9 lakhs; Development Re-

bate Reserve to Rs 75.750 from Rs 1.61 lakhs and General Reserve to Rs 3 lakhs from Rs 5.50 lakhs. A sum of Rs 9.47 lakhs, being adjustment in respect of additional depreciation provided in previous years, is transferred to Capital Reserve. The dividend is, however, maintained at 50 nP per share, subject to deduction of tax.

Raza/Buland Sugar's Profits Rise

Raza/Buland Sugar Company Limited has reported a substantial rise in the net profit, after providing for Depreciation, from Rs 4.88 lakhs to Rs 19.42 lakhs for the year ended 31 October 1962, thanks to the rise in sales of sugar and molasses from Rs 3.34 crores to Rs 4.23 crores.

The Depreciation amount is raised to Rs 3.61 lakhs from Rs 3.27 lakhs, while the provision for Development Rebate Reserve is lower at Rs 62,000 against Rs 97,000. After transferring Rs 5.50 lakhs (Rs 4.50 lakhs) from Dividend Equalisation Fund, the provision for Taxation is raised to Rs 9.60 lakhs from Rs 2.00 lakhs with Gratuity Reserve being lowered to Rs 94,037 from as much as Rs 10 lakhs.

Keeping in view the rehabilitation needs of the company, the directors have thought it fit to create a Rehabilitation Reserve of Rs 7.5 lakhs out of 50 per cent of the Central excise duty amounting to Rs 10.5 lakhs availed during the year on the excess production of the 1960-61 season. Orders for the major items of plant and machinery for the company's expansion programme have been placed and deliveries are likely to commence in early 1964.

Burma-Shell Refineries' Results

Despite a decline in the net profit, Burma-Shell Refineries Limited has maintained the dividend for the year ended 31 December 1962. Gross income from refining has risen to as much as Rs 13.68 crores from Rs 12.78 crores, while the net profit, after providing for depreciation and taxation, amounts to only Rs 1.61 crores against Rs 2.53 crores for the preceding year.

All allocations have been raised: Depreciation from Rs 1.71 lakhs to Rs 1.81 lakhs; Taxation from Rs 3.07 crores to Rs 5.19 crores (including Rs 1.34 crores for SPT) and Development Rebate Reserve from Rs 4.41 lakhs to Rs 4.73 lakhs. The directors have proposed a final dividend of 7.5 nP per share, making a total of 25 nP per share on the A and B Ordinary shares, same as in the previous year and this is made possible after transferring Rs 1.77 crores from Tax Equalisation Reserve and Rs 22.17 lakhs from General Reserve.

A total of 3,153,241 metric tons of crude oil was consumed in producing 3,090,202 metric tons of products. Further improvements during 1962 increased the possible intake to a rate equivalent to 3.75 million metric tons per annum and the permission to process at this rate has been granted by the Government as from 1 January 1963. The annual general meeting will be held on 29 April, 1963.

Tide Water Oil Maintains Dividend

The reduction in the selling prices of lubricants and the reduced quantity of imported lubricants are reflected in the working results of the Tide Water Oil Company (India) Limited for the year ended 31 October 1962. Although sales have risen to Rs 93.90 lakhs from Rs 85.60 lakhs, the net profit, after providing for Depreciation and Taxation, works out to only Rs 1.30 lakhs as against Rs 2.28 lakhs for the previous year.

Apart from providing Rs 600 for Development Rebate Reserve, Depreciation is raised to Rs 24,078 from 21,376 and Taxation to Rs 3.17 lakhs (including Rs 73,000 for SPT) from Rs 2.02 lakhs. No provision is made for Dividend Equalisation Reserve against Rs 50,000. The directors have proposed a final dividend of Rs 2.80 per share, making a total of Rs 3.50 per share, subject to tax, same as in the previous year. The directors state that the total provision for taxation absorbs 71 per cent of the profits for the year.

Henley Cables Incur Loss

Henley Cables India Limited has again incurred a loss of as much as Rs 7.87 lakhs for 1962 although sales are shown at Rs 2.16 lakhs as against nil. The loss incurred in the preceding year is shown lower at Rs 10,619.

A sum of Rs 2.49 lakhs (nil) is provided for depreciation and Rs 46,126 (Rs 73,536) for Taxation UK. The dividend is skipped again for the year.

The directors have stated that, in consideration of the demand for certain types of rubber and thermoplastic cables beyond the factory's initial range of products, they have authorised Rs 6.00 lakhs for expenditure on additional plant which, in conjunction with plant already installed, will increase the range at present manufactured. An import licence for the plant required is awaited.

PNB

The Punjab National Bank Limited has made excellent progress during the year ended 31 December, 1962.

Total deposits increased by Rs 16.84 crores and, at the end of 1962, stood at Rs 167.52 crores,

showing an increase of 11.18 per cent as compared to 8.03 per cent for the previous year. Total credit extended by the bank during the year also increased by Rs 6.32 crores to Rs 99.54 crores. The increase in gross earning of the bank from Rs 9.16 crores to Rs 10.30 crores was also significant. The substantial increase in balance sheet totals from Rs 205.12 crores at the end of 1961 to Rs 223.96 crores at the end of 1962 reflects an all-round progress of the Institution.

The working of the bank during the year 1962 has resulted in a

THE PUNJAB NATIONAL BANK LIMITED, NEW DELHI.

NOTICE

NOTICE IS HEREBY GIVEN that the next Annual General Meeting of the Shareholders of the Punjab National Bank Limited, New Delhi, will be held at the Registered Office of the Bank, Parliament Street, New Delhi, on Friday, the 10th May, 1963, at 4.00 P. M. Notice of the Meeting setting out the ordinary and special business to be transacted thereat and the Explanatory Statement attached therewith are being sent by post to the Shareholders at their Registered addresses.

By order of the Board of Directors,
R. L. Tuli,
GENERAL MANAGER

New Delhi
Dated 10th April, 1963.

N.B.

- The Transfer Books and the Register of Members of the Company will remain closed from 17th April to 30th April, 1963 (both days inclusive).
- A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member. Such proxies on the form should reach the Registered Office of the Company at least 48 hours before the time fixed for the Meeting.
- The dividend when declared will be made payable, subject to the provisions of the Articles of Association of the Company, at the Registered Office of the Company on or after 11th May, 1963, to those shareholders whose names stand on the Register of Members as on 30th April, 1963, and in respect of the shares standing in their names as on that date.
- Shareholders are requested to intimate the change of address, if any.

profit of Rs 124.21 lakhs including Rs 10.38 lakhs brought forward (Rs 122.63 lakhs including Rs 4.23 lakhs brought forward for previous year) after making necessary provisions for taxation and contingencies and after providing Rs 15.64 lakhs towards Employees' Gratuity Fund and Rs 1.43 lakhs towards Employees Superannuation scheme. This performance is very encouraging particularly in view of the fact that it has been arrived at by absorbing a considerable increase in establishment charges mainly owing to the latest Bank Award (an increase of Rs 48.16 lakhs during 1962 compared to an increase of Rs 21.74 lakhs in 1961), increased rate of interest on Savings Fund accounts and Premium on Deposit Insurance which came into operation from 1st January, 1962 and Rs 3.36 lakhs more for Gratuity to the staff.

Out of the profits of Rs 124.21 lakhs, including Rs 10.38 lakhs brought forward, a sum of Rs 20 lakhs has already been utilised for payment of ad-interim dividend at Re 1 per share subject to tax, leaving a balance of Rs 104.21 lakhs for appropriation. A sum of Rs 25 lakhs has been transferred to Reserve Fund making a total of Rs 236.56 lakhs at the end of the year. Provision for Bonus to staff has also been increased from Rs 37.50 lakhs in 1961 to Rs 40 lakhs in 1962. The directors have recommended a final dividend of Re 1 per share, subject to tax, making a total of 20 per cent, subject to tax, which is the same as last year.

*

INVESTMENT BRIEFS

Southern Structural Limited, Madras, has proposed a maiden dividend of 6 per cent, taxable, for 1962.

Polsin Limited has reduced the dividend from Rs 17 to Rs 14 per share, taxable, for the year 1962.

*

BALANCE-SHEET BRIEFS

Bharat Commerce & Industries Limited has reported a substantial decline in the net profit from Rs 47.29 lakhs to Rs 21.80 lakhs for 1962. The dividend is, however, maintained at Rs 1.50 per share, subject to tax.

Escorts Limited has shown a profit of Rs 37.29 lakhs for 1962 as against Rs 23.33 lakhs for the previous year. The directors have proposed a taxable dividend of 11 per cent on the increased capital.

Jaya Shree Textiles Limited has made a net profit of only Rs 24.30 lakhs for 1962 as against Rs 27.92 lakhs for the previous year. The directors have proposed a taxable dividend of Re 1 per share on the increased capital.

Oucherlony Vally Estates Limited has incurred a net loss of Rs 3.02 lakhs for the year ended 31 October 1962 as against a net profit of Rs 8.35 lakhs for 1960-61. The dividend is reduced from 12 to 6 per cent, taxable. The dividend is paid after transferring Rs 1.17 lakhs from Dividend Equalisation Reserve.

The working of the Mysore Coffee Curing Works Limited has resulted

in a net profit of Rs 3.82 lakhs for the eighteen months ended 30 June 1962 as against Rs 2.62 lakhs for the previous full year. A taxable dividend of 15 per cent was first declared; but this has since been reduced to 10 per cent, taxable, on account of the additional liability under SPT.

*

STOCK EXCHANGES

Lively Trading

Watch-Dog Writes:

STOCK markets have generally reacted favourably to the tax concessions announced by Mr Morarji Desai. Although the modifications in the SPT have fallen below market expectations, the indications that the present measures will be only temporary have given boost to buying activities, resulting in a sharp rise in prices on a wide front.

Reopening after the Easter holidays, Lyons Range was in a buoyant mood, thanks to the optimistic view taken by the operators in regard to the tax concessions.

Industrials on Dalal Street were buoyant due to heavy short-covering as well as sustained speculative support.

A firm trend prevailed on the Madras Stock Exchange where sellers were found to be reserved in many scrips.

Cheerful conditions were witnessed on the Delhi Stock Exchange where equities recorded a further sharp rise in prices.

The Ahmedabad Stock Exchange buoyed up with industrials advancing further on speculative support coupled with sustained short-covering.

Prices on Wall Street touched another new 1963 high although profit-taking was noticed towards the close.

It was another good week on the London Stock Exchange where prices forged further ahead in response to the Government's new issue plans.

*

CALCUTTA

LYONS RANGE presented buoyant conditions during the week under review. While leading equities continued to forge ahead on account of renewed speculative support, investors rushed in to buy shares of the new companies on hopes that the new companies would get a "tax holiday" in regard to SPT. As a matter of fact, operators were awaiting the Finance Minister's decision on relief in taxation structure.

When the tax concessions were announced on Tuesday evening, the initial reaction was particularly favourable and the announcement was greeted with a sharp spurt in prices. In fact, sentiment improved to such an extent that the authorities found it expedient to scrap the minimum prices of all the cleared shares as

well as relax trading restrictions further. Members were allowed to make fresh purchases although such purchases could be made only from members having already a net purchase position to the extent of Rs 3 lakhs in all the shares in the cleared list, but not exceeding Rs 1.50 lakhs in Indian Irons; Rs 1 lakh in Hindustan Motor and Rs 50,000 in other shares in the clearing schedule.

Purchases so made could be sold, although only the members having a plus position would be allowed to sell to the extent of their net purchase position. The working hours of the Calcutta Stock Exchange were also extended by another hour, i.e. from 12 PM to 2-30 PM instead from 12 PM to 1-30 PM.

On the whole, most of the operators took a hopeful view of the tax concessions. They felt that the Finance Minister had at least tried to meet some of the objections to the SPT although he had not agreed to the increase in the rate of return on capital and reserve as suggested by prominent industrialists to 9 per cent and a reduction in the rate of tax. Moreover, they seemed to have welcomed the inclusion of development rebate reserve as part of the reserve to be added to the capital base for the purpose of calculation of SPT and the relief of Rs 50,000 for small companies.

A section of the operators, however, thought that the tax concessions were on entirely different lines. There was a feeling that the iniquitous nature of the levy would continue to afflict the corporate sector, since its structure nor the rate of tax had been changed. They feared that the position in regard to the payment of dividends on the ordinary capital had not improved significantly and it was likely that most of the companies would find it difficult even to maintain the present dividends. There was, therefore, a general disposition on the part of this section of the operators to book profits at the higher levels.

Section-wise, gilt-edged securities continued to remain dull. In spite of the comfortable conditions in the money market, institutional support was conspicuously by its absence. There were sellers in medium and long-term securities. 3 per cent 1986 Conversion Loan moved narrowly between Rs 63 and Rs 63.10.

Thanks to the relief given to the banking institutions, Bank shares remained very steady. Punjab National were enquired up to Rs 20 from Rs 19.12 with United Commercial moving between Rs 70 and Rs 71.

Jute shares came in for cautious trading on the fear that by the decision of the Government to maintain the minimum price at Rs 30 per maund, the competitive power of the Indian jute industry would be impaired. Ganges were taken up to Rs 13.31 from Rs 13; New Central up to Rs 12.81 from Rs 12.50 and India up to Rs 12.25 from Rs 12.02, Birlas scored more than Rs 2, at Rs 28.37.

The possibility of an increase in the selling price of the commodity and the Government's decision to extend financial facilities to collieries through the Refinance Corporation under a system of guarantee, induced selective support for Coal shares. Although Burrakur were stagnant at Rs 15.50, Central India moved up to Rs 10.25 from Rs 9.91; Western Bengal to Rs 9.31 from Rs 8.97 and South Karanpura to Rs 8.87 from Rs 7.87.

There was little doing in the Tea section. Operators seemed to have started thinking about the prospects for the 1963-64 season. There was a general fear that levy of a 20 per cent surcharge on the excise duty might not only discourage enquiries from the overseas buyers, but also promote resistance from the local consumers. It was feared that, if the domestic demand declined, the outlook especially for Common Teas would suffer. The only bright spot was Hasimara, which changed hands at Rs 12.50 to Rs 13.06.

Sugar shares were practically neglected. Raza-Buland were marked up to Rs 10.31 from Rs 9.50 and Darbhanga up to Rs 7.31 from Rs 7.12. Dyer Maskeen spurred to Rs 28 from the recent low of Rs 25.75.

Although trading in the Textiles section was restricted, selected shares developed a hardening tendency in sympathy with the general trend of the market. Jay Shree were enquired up to Rs 15.06 from Rs 14.62 with Bharat Commerce forging ahead to Rs 22.50 from Rs 20.75 following the dividend being maintained. Elgins, after a long time, came in for business at Rs 19.50.

Engineering shares were in the limelight and prices showed an appreciable rise under the influence of Indian Irons which, for the first time after the budget, crossed Rs 22 mark, to quote Rs 22.15. In sympathy, Guest, Keen, Williams were taken up to Rs 33.25 from Rs 31; TEXMACO to Rs 23.25 from Rs 21.25; Jessop to Rs 23.75 from Rs 22.50 and Britannia to Rs 10.50 from Rs 9.81. J. K. Steel scored 25 nP at Rs 15.50.

Thanks to the emergence of bull support, the Miscellaneous section provided several bright spots, as will be clear from the following price trends:

Read how Pan Am's World-Wide Marketing Service
can increase your overseas sales

Recently, Pan Am announced its unique new service for businessmen, the World-Wide Marketing Service. Already shippers have discovered that this service gives them accurate, up-to-date information that may mean the difference between standing still in international markets or getting the jump on their competition.

You can share in the benefits of Pan American's world-wide experience, too. Here's the kind of information Pan Am can give you on any one of 114 trade centres throughout the world:

Expert advice on overseas shipping—on packing, rates, insurance, cartage and routings.

Free marketing facts on economic conditions, customs procedures, currency exchange, and other special information.

Latest news on world markets—with "Horizons," the monthly Clipper Cargo

magazine, published just for shippers.

Simplified documentation—from one source speeds your product all along Pan Am's delivery chain (manufacturer to air-port, overseas, to consignee).

Information about drastically reduced rates. On one route air cargo rates have

been slashed 63%. Attractive new low rates put you into new markets—for new profits—faster!

World-wide representation at no extra cost. Wherever you ship, Pan Am representatives give your product individual attention.

An international viewpoint on the spot! Pan Am personnel, trained to international business methods and local markets, provide world-wide contact service.

One phone call puts you in business abroad! Call your Clipper Cargo agent or local Pan American office in:

Coal: Performance and Prospect

Certain aspects of the Third Plan programme for coal production, to which the Estimates Committee has drawn attention in its latest report, raise doubts about the feasibility of achieving the targets set for 1965-66, unless action is taken from now onwards to deal with the problems of the sort that created difficulties in the last year of the Second Plan. Though the private sector collieries reached the target assigned to them and the NCDC showed a spectacular increase in production in the last quarter of the year, the total production during the 1960-61 was short of the Second Plan target by over five million tons. The original Third Plan target of 97 million tons has been revised upwards more than once and is now fixed at 98.38 million tons. But the actual output in 1961-62, the first year of the Plan period, was not only lower than the target for the year according to the phased programme but was even lower than the previous year's output. The shortfall in this year, as in the previous one, was in the public sector. It has been explained that NCDC was obliged to restrict production owing to the accumulation of pithead stocks. The planning for transport was clearly out of step with the plan for coal raisings.

The year-wise and field-wise targets as fixed in August 1962 by the Working Group on Coal Production and Transport is as shown in the table given below:

Year.	Bengal-Bihar fields.	Outlying fields.	Total
1961-62	43.2	11.2	54.4
1962-63	47.3	13.8	61.1
1963-64	51.7	16.2	67.9
1964-65	56.3	20.2	76.5
1965-66	65.1	33.2	98.3

The Third Plan had to start from a lower base than anticipated and there was no increase in production during the first year of the Plan. According to the pattern of phasing that has been adopted, the target for 1962-63 was only 1.1 million tons more than the Second Plan target of 60 million tons. There is also a very steep increase in the closing years of the Plan, which is particularly marked in the last year, in which production has to be stepped up by 21.8 million tons. The annual rate of increase of 4 million tons in Bengal-Bihar coal fields would have to be doubled in 1965-66. The increase is even sharper in the case of the outlying fields where production has to be stepped up from 20.2 million tons to 33.2 million tons.

Discussing the annual production targets, the Estimates Committee has asked whether demand could be expected to keep pace with such a sudden spurt in production. The Committee has also referred to the problem of gearing up transport to move the coal that is raised, and suggested that the phasing of production may be reviewed with a view to correlate it to demand and transport capacity. It is quite possible that coal raisings may reach or even exceed the targeted levels in the last year of the Plan. But merely to bring the coal to the surface will avail little unless it is also possible to transport the coal to the consumers who are in a position to use it.

It is apparent that the effective demand for coal will be determined by the progress made in the development programmes for high priority consumers like the steel industry. The existing steel plants are reported to have reached their rated capacities only during the last month and expansion programmes have been delayed by one

to two years. The Minister for Steel has also stated in the Lok Sabha that the production in 1965-66 will be short of the target. It follows that the steel plants will not be able to consume all the coal earmarked for them and for which programmes have been drawn up for raising and transport. The facilities that have been created for transport of coal to steel plants, over short leads, cannot be switched over to serve the needs of other consumers at centres which are at a greater distance from the coalfields. Delays that have already occurred in getting on with the steel expansion programme and the lower level of production that is now envisaged as a result of these delays, will provide the excuse and justification for scaling down the coal target for 1965-66, unless it is possible to allocate sufficient resources to increase transport capacity to handle coal movement to "other consumers" than is at present envisaged.

Transport is thus the crux of the problems of coal production and the achievement of the targets laid down for coal will depend less on the completion of the mining projects themselves than on the provision of extra transport capacity and on the closest cooperation between the Railways and the Ministry of Mines and Fuel in dovetailing their respective programmes. In this connexion it is relevant to draw attention to the Estimates Committee's observation that the lessons of the Second Plan when production was deliberately stepped up regardless of the fact that corresponding transport facilities were not available, have yet to be learnt. The Committee has also observed that, although year-wise targets of coal production as worked out by the Working Group have been agreed to by the Railways and they are broadly committed to move the quantity indicated therein, the field-wise targets of production and direction-wise movement thereof during each of the remaining three years of the Third Five Year Plan have still not been furnished to them by the Ministry of Mines and Fuel. The Committee has urged that this should be done without delay. While the Ministry of Mines and Fuel could draw up the field-wise targets, the direction-wise targets depend on the expectations of other Ministries concerned with coal consuming industries. It will be a Herculean job to tie up the programmes of the various Ministries without leaving any gaps or loose ends. The only way to avoid a situation in which coal production may have to be deliberately curtailed, while industries are starving for coal, is to expand the Railways' programme so as to provide a cushion which will enable them to deal with any change that becomes necessary in field-wise targets of production or direction-wise movement.

Coal's fortunes are looking up, however. At long last some hopeful glimpses of realism are to be seen on the horizon. Last week Mr Desai announced two fiscal incentives of far-reaching importance. The first is a truly generous development rebate for new machinery installed in the next three years and the second a reduction in import duty on machinery for the industry. With the announcement last week of other measures to help the industry find rupee finance, the stage is set for the fullest and expeditious use of the World Bank loan. The World Bank's interim report on coal transport is expected to be available in the next few months. Indications are also there that the vexed question of an economic price for coal is under active consideration. In their sum, these auguries justify a degree of optimism about the future of the industry that would have seemed rash even few months ago.

Our India

AS a nation we Indians are given to wrangling over words. Perhaps it is the result of having confined all our intellectual activity over more than two millennia to the interpretations of the Vedas, rival systems of philosophical thought all claiming equally to keeping to the letter of the Srutis. Whatever they may be few would have thought that the differences over the language problem would have been narrowed down to choosing between two words, "may" and "shall". And no one would have thought that the meaning of "may" would be a matter of controversy. The element of discretion in the connection of the word "may" is, of course, indisputable. What is in doubt is whether in the wording of the Bill now before Parliament "may" will serve the purpose as well as "shall". This depends not so much on the binding character of the function assigned by the relevant clause as on the strength and inclination of the President of the time, the political set-up and the relative strength of the Hindi and the anti-Hindi-wallahs. If the political life of the country can be kept free of the kind of pressure groups which try to swing matters always in their own interest, then there would be a political consensus which the law and usages of the country would follow automatically. In such conditions, "may" and "shall" will make no manner of practical difference. If on the other hand the power of political groups should be on the ascendant then there would be little chance of their exercising any degree of self-restraint in the interests of orderly and amicable settlement of thorny problems.

It is not to these words then that present attention should be diverted. Leaders in all walks of life should think rather of the ways by which we can encourage constructive dispassionate thinking, progressive settlement of sharp differences of opinion and a readiness to wait for radical reform to evolve itself instead of trying to force it with sledge-hammer strokes. It is in this respect, not in the matter of sticking to his promises, that the Prime Minister leaves something to be desired. He has been quick, though not quick enough, to see the depth of feeling in non-Hindi areas, particularly the South, against any attempt to impose Hindi. He has been quick, too, to give the promise that English will not be dislodged too soon to suit their tastes and needs. But, to my mind, he has not thrown his weight sufficiently against the Hindi fanatics to make them realise that they can have their way only at the cost of having to find a new Prime Minister and controlling the separatist groups in the South for whom this room for allegations of breach of promise against Mr Nehru would be a god-send. If the Hindi-wallahs think they can exploit the wording of any one clause to force the issue to their advantage they must be disillusioned without delay. This task cannot be left to the DMK. It is only Congressmen of standing that should do it. The controversy over "may" and "shall" only shows up vital defects which cry aloud for correction.

A similar fault in national character shows up in our dealings with the Sugar industry. Formerly the trend of events was such that the bulk of the blame for any untoward development could be fairly laid on the industry itself, the Government coming in for a minor share. The industry's affairs never did run smooth. Violent oscillations between over-production and scarcity have made up a large part of its history, and in the old days it was the job of the owners of mills to ensure a fair balancing of supply and demand. With the advent of planning, the position is almost entirely different. With the Government in full control of licensing, cane prices, releases to the market, deals for exports and the prices to be charged to the consumer and, last but not least, targets of production each year, the millowners have, so to say,

a cast-iron alibi against any charge that may be laid at their door. Here again it does no good merely to indulge in the exciting game of fault-finding or nice apportionment of blame between different parties. In sugar, more than any other industry, not excluding even cotton textiles, our need is to reconstruct the whole of the productive organisation in a manner in which the mills can not only meet the internal demand but also provide for exports at economic prices. The sugar industry has grown up in such a haphazard manner with so little regard for economic laws and so much for political forces that it is today a well-nigh hopeless task to put this house in order. When a committee of enquiry is forced to point out that it costs far less to build new economic units than to form them by amalgamation of existing small ones, we have a fair idea of what is involved in rationalising this industry. The case of cotton textiles is not far different. Estimates of the cost of modernising these industries mention quite staggering figures. The tendency is naturally to live from day to day, to the rough expedients of the day and trusting to the future for some pleasant surprises to pull us out of the muddle.

But really, how much can the future be expected to help us out? Talking of sugar, Castro and Cuba are a heaven-sent blessing. The history of the world sugar industry being what it is, we cannot expect export markets to fall into our laps. The cotton industry has for more than half a century been intensely competitive. And yet we have had exports which our competitive capacity by itself does not strictly entitle us to. We lost the lead in cotton exports which the war period made us a present of. And now in sugar, we are clinging to foreign markets at an enormous cost. We speak day in and day out of export targets. We speak of export promotion almost like the parents of dull boys who want school children to be promoted regardless of their marks in the annual examination. If we cannot do without exports and if exports can't be had for love or money, then surely we ought to proceed about the modernisation or rationalisation of export industries much more scientifically, that is, in a dispassionate, business-like manner, than we have done so far.

What chance is there of our doing so, as things are? The trend of events, too, does not favour such a change. To tell the truth, we are getting the things we need a little too easily, whether it is military equipment or foreign aid or even exports for our uneconomic products. We may not wish for a change in this kind of luck. But we may seek to deserve the luck or to keep the gains by beginning to deserve them.

"JNAN"

Gilt-Edged Trend

By Paul Einzig

Ever since the Budget statement the gilt-edged market in London has been steady to firm. To some extent this is due to the fact that the dose of inflation which Mr Maudling announced in his Budget statement has fallen short of anticipations. That in itself would not be a valid reason, for a rise in the prices of fixed interest-bearing securities. It would merely justify a more moderate fall than would have occurred if the dosage of inflation had been more in accordance with anticipations. After all, the chances are that even as a result of Mr Maudling's relatively "moderate" measures the cost of living will continue to rise, which will mean a continued fall

in the real purchasing power of capital and dividend of Government stock. Nobody is sufficiently optimistic to imagine that the relatively moderate character of Mr Maudling's measures will mean stability of prices. The cost of living index has been creeping up and is likely to continue to creep up. That being so, it would be natural if many investors were inclined to hedge against inflation by switching into equities. The reason why this is not done on an appreciable scale is, twofold. Many investors are not at all certain whether Mr Maudling's measures would lead to a trade recovery. And many more are doubtful whether these measures would save the Government from a Socialist victory at the next General Election.

But the main reason for the firmness of the gilt-edged market is the announcement of the Government's policy to bolster up sterling if necessary with the aid of realising a large part of the gold reserve drawing extensively on external credits. This would mean that an adverse change in the balance of payments, or an outflow of hot money, would not entail another period of high Bank rate. The Government is determined to bring about a trade revival and to that end it has abandoned, for the time being, the policy of dear money. Interest rates will be kept as low as possible. The anticipation of this tends to benefit the gilt-edged market, even though the absence of dear money is liable to accentuate and accelerate inflation. The British public, even such a sophisticated section of it as investors, is not very inflation-conscious. Rising commodity prices and cost of living are not liable to react on the gilt-edged market to anything like the extent rising interest rate would react. The effect of high interest rates is apt to be clear-cut and instantaneous, while that of rising prices is apt to be vague and uncertain. The prospects of the absence of high interest rates for some time to come seems to be more than sufficient to offset the effect of inflation fears.

THE PRICE LINE

The price line must be held. This is as much the responsibility of the State as of every citizen. Idle money, in the form of cash in hand, is the devil in the price spiral.

Money put in a bank, remains active in the service of production and distribution of goods and facilitates keeping the price line under control.

Use less cash; make your money transactions through your bank account. You will thus make a direct contribution to the effort in holding the prices under check.

NEW LOAN

For Conversions Only?

With the 3½ per cent 1963 loan falling due for repayment on 12 May, the new loan announcement of the Central Government may be said to be imminent. In addition we may take it for granted that conversion facilities in advance will be available for the 3 per cent 1963-65, which matures on 1 June. The outstandings of the two are Rs 58.06 crores and Rs 116.18 crores respectively. Furthermore, there are two Hyderabad loans (the liability for which has been assumed by the Centre) maturing this year in a total amount of about Rs 8½ crores. Thus, loans maturing this year add up to Rs 183 crores, in round figures; and against this the Budget takes credit for Rs 393 crores to be raised from the market, from which amount, however, an element of Rs 100 crores being earmarked for the State Governments, which will not this year be coming forward with borrowing programmes of their own.

It will be seen, therefore, that the new cash sought by the Centre is just around Rs 110 crores. Such a target is by no means ambitious, but if Government is to succeed in its borrowing programme, care has to be taken in the timing and composition of it.

We would say, first of all, that with the slack season having just begun, it would be most inopportune for the Centre to seek new cash at this juncture. So, the first point to be made is that the next week's loan announcement should, that, the next week's loan announcement should, be restricted to a pure conversion issue. If cash, is sought, it will be the Reserve Bank which will have to find all the money; and if pressure is brought to bear upon the banking system—which, incidentally, has never been the case in respect of a Central as distinct from a State loan—then the money market, just beginning to ease, will once again be subjected to considerable strain.

The second point to be made relates to the interest coupon that should be offered. Bank Rate, it is true, was raised early this year. But it would be a mistake for that reason alone to raise the interest coupon. Indeed, with the prospect of a fair slack season this year, the Government should seek in its new loan programme to give a downward impetus to interest rates. This it could do by not raising its interest coupon this year. In this context we may remember that last year's borrowing programme consisted of further tranches of the 3½ per cent 1968 and the 4 per cent 1972; the one strictly new loan, apart from the National Defence Bonds which have been available on tap, was the innovation of the 4½ per cent 1985. The pattern is, hence, a short-dated (six years) at 3½ per cent; a medium-dated (10 years) at 4 per cent; and almost a never-never (23 years) at 4½ per cent. The last loan, we may point out, is meant specifically for the Life Insurance Corporation which for its policy-holders would like a high interest coupon.

The third point, then, concerns the maturity pattern that we would advocate. A short-term loan for banks is essential. What we favour is a five-year loan. Unfortunately, 1968-69 is already a heavy year from the point of view of maturities, outstanding in that year falling due for repayment amounting to Rs 228 crores. The situation is not much better in the next year, when the 3½

per cent 1969 with outstandings of Rs 190.85 crores matures. So we are afraid that banks may have to be content with a seven-year loan; at the moment only the 3 per cent 1970-75 has to be repaid, in a total amount of Rs 115.06 crores, in 1970-71. But we would stress that in the case of banks re-financing is automatic. That is to say, if a five-year loan is offered this year, despite 1968-69 being a "heavy" year for repayments, then the monetary authorities could be confident of the banks converting their holdings in that maturing year into another five-year loan, if that were offered. So, while we fear that the Reserve Bank may decide upon a 3½ per cent 1970, we would recommend for the easy absorption of the banking system a further tranche of the 3½ per cent 1968. There is little need for the medium term; and for the LIC and other investment institutions of that kind, we may perhaps have another twenty-three year loan, a 4½ per cent 1986.

IBA

Resistance to Dear Money

"It appears that the increase in the Bank Rate was being urged upon India by the International Monetary Fund, the World Bank and other International Financial Authorities. The question now is whether this is the beginning of a dearer money policy, whether there will be further increases in the Bank Rate and what will be their effect on the economy of the country."

This quotation is not from Indian Finance: the words are Mr Tulsidas Kilachand's, and the speech from which the extract has been published was one he delivered last week as Chairman of the Indian Banks' Association. We may here draw attention to another publication of the IBA recently, upon the achievements and burdens of banks in the country. In pointing out that, in a decade the cost of interest paid has almost quadrupled, the publication explains:

"The gradual rise in the cost of raising funds reflects, among other things, the evolution of the dear money policy of the Government of India and higher income to the depositors."

Ever since 1956 we have been warning against the manifold and adverse consequences of a steadily increasing trend in the cost of money. But we are afraid that blame in the first instance belongs, not to the monetary authorities, or even to the IMF imposing pre-conditions for extending its assistance, but to the banking system itself. It was the intense competition for Deposits from around the end of 1956 that really marks the beginning of the dearer money era. There was nothing wrong about inter-bank call money, or over-night money, quoting above bank Rate; and this in fact was the position from and during the 1956-57 busy season. But then banks began to pay above bank Rate for enticing what was current account money thinly camouflaged as Time Deposits. The Reserve Bank raised the rate of interest it charged on Government securities from February 1957; but this was merely in recognition of and in order to bring its own lending rate into conformity with the other ruling interest rates. The de jure raising of bank Rate followed in May 1957, but here too the Reserve Bank was following a trend already set, not

giving a lead to it. In the 1957 slack season, when money market conditions were unusually easy particularly as compared with the stringency of the previous busy season, banks continued to compete for Deposits, in the belief that though the money that they dearly bought was at the moment unlendable, later on it would come in handy. One inter-bank agreement after another on Deposit rates raised the permissible maxima. That meantime the Reserve Bank introduced its multiple tier bank Rate did raise the cost of central banking credit; but surely that was no reason why the banking system also began to pay more for Deposits.

One result of the banks bidding for Deposits (through higher rates for the so-called Time Deposits) was completely to transform the proportion of total Liabilities that was in the form of Demand Deposits. Hence, for the increase in Deposits banks were paying also for the switch-over from Demand to Time accounts.

A time has come to put a stop to this frittering away of banks' resources. As we remarked last week the Finance Minister has provided apposite relief for the banking system by permitting transfers to reserve, both published and inner, without attracting super profits tax. We urge the IBA now to reverse the trend in banking interest rates. Mr Kilachand recognises that a high interest rate structure affects industry, especially in so far as concerns the competitive strength of Indian goods in export markets. There is, too, the cost of servicing the national debt. What applies to Government and its interest rates should hold equally good for the banking system. If Deposit rates were reduced, banks' earning margins would so improve as to make possible the strengthening of the system through transfers to reserve. If banks reduce their rate of interest on borrowings from depositors, then perhaps, as the Reserve Bank has done in the past, it would again be able to "follow" a trend.

A welcome suggestion from the IBA Chairman is that a common understanding on service charges is being sought to be evolved. This, together with the working agreement on minima for Advance rates, should add to banks' earnings; if at the same time the IBA takes steps to keep expenditure under control, by reducing interest rates on Deposits, a beginning will have been made in the direction of sound and healthy banking.

CENTRAL BANK

Special Reserve: What it Means

The Central Bank of India Limited has, while reporting a substantial increase in its gross income, shown its balance of profit to be nominally lower; and the reasons therefor are representative of the burdens that banking had to bear during the last year.

The balance-sheet as at the end of December 1962 reveals that Deposits have gone up satisfactorily by Rs 15.87 crores to Rs 236.06 crores. The increase has occurred mainly under the head of Fixed Deposits (higher by Rs 7.50 crores at Rs 122.02 crores); Savings Bank Deposits also show a welcome rise of Rs 5.66 crores to Rs 43.78 crores; but Current Accounts have gone up only by Rs 2.71 crores to Rs 70.26 crores. Thus, the improvement in the resources of Central Bank has taken place largely under the heads of higher-costing of Deposits; and this fact stands reflected in the profit and loss account.

Central Bank utilised almost the whole of its new found resources in expanding credit to constituents: the total of Advances is higher by Rs 14.45 crores at Rs 175.45 crores, and the credit ratio in the process has also gone up from 73.1 per cent in the 1961 balance-sheet to 74.3 per cent. At the same time, the gilt-edged portfolio has also been added to by Rs 6.85 crores to Rs
