NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-first Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company at 7, New Dewas Road, Indore, on Monday, the 29th June, 1964, at 4 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1963.
2. To sanction the declaration of a Dividend.
3. To appoint a Director in place of Shri J. C. Jall who retires by rotation and is eligible for re-appointment, and to consider and, if thought fit, to pass the following Resolution as a Special Resolution of which a Special Notice as required by Sections 190, 261 and 281 of the Companies Act, 1956, has been received by the Company:—

"RESOLVED that pursuant to the provisions of Sections 261 and 281 and other applicable provisions, if any, of the Companies Act, 1956, Shri J. C. Jall who retires by rotation and who is a Director and Member of Messrs. Jall Brothers (Private) Ltd., the Managing Agents of the Company, and who has attained the age of 75 years, be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

The reasons which make the above Special Resolution necessary are more fully set out in the Explanatory Statement annexed to the Notice which for the purpose of Section 261 shall be deemed to be incorporated in this Notice.

4. To appoint a Director in place of Rao Raja, Lt.-Col., Seth Hiralalji Kalyanmalji who retires by rotation and is eligible for re-appointment and to consider and, if thought fit, to pass the following Resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

"RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956 Rao Raja, Lt.-Col., Seth Hiralalji Kalyanmalji who has attained the age of 65 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

5. To appoint Auditors for the current year and to fix their remuneration.

SPECIAL BUSINESS

6. To consider and, if thought fit, to pass with or without modification, the following Resolution as an Ordinary Resolution:—

"RESOLVED that pursuant to the provisions of Section 310 of the Companies Act, 1956 and subject to the approval of the Central Government being obtained and in supersession of the Special Resolution passed by the Company in the Extraordinary General Meeting held on 25th September 1943, the remuneration payable to each Director of the Company be and is hereby increased from Rs. 50 to Rs. 100 and that of the Chairman from Rs. 60 to Rs. 120 for each meeting of the Board or of a Committee of the Board attended by him."

7. To consider and, if thought fit, to pass the following Resolution as a Special Resolution:—

"RESOLVED that subject to the approval of the Central Government being obtained, Article 119 of the Articles of Association of the Company providing for remuneration to Directors and Chairman be deleted and the following Article be substituted in its place as Article 119:—

"119. The remuneration of every Director, inclusive of the Director Ex-Officio (other than the Chairman), for his services, shall be Rupees One Hundred for each meeting of the Board attended by him. The Chairman shall be entitled to Rupees One Hundred and Twenty for each Board Meeting attended by him and the Directors shall be paid such further remuneration (if any) as the Company in General Meeting may from time to time determine, and such further remuneration shall be divided among the Directors in such proportion and manner as the Directors may from time to time determine, and in default of such determination, equally. The Directors shall also be entitled to be paid First Class Travelling and all other expenses incurred by them respectively for attending and returning from Board and Committee meetings, or, in or about the performance of their duties as Directors."

8. To consider and, if thought fit, to pass the following Resolution as a Special Resolution:—

"RESOLVED that the Articles of Association of the Company be altered as under:—

The existing Article 58 be deleted and the following Article be substituted in its place as Article 58:—

"58. The transfer or transmission of any shares in the Company shall be made without making any charge in respect of such transfer or transmission."

By Order of the Board,
For THE RAJKUMAR MILLS LTD.,
For JALL BROTHERS (PRIVATE) LTD.,
R. C. JALL,
Permanent Director,
Managing Agents.

INDORE,
Dated 1st June, 1964.

Notes:—(1) A Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(2) The Share Transfer Books of the Company will remain closed from Monday, the 22nd June, 1964 to Monday, the 29th June, 1964, both days inclusive.

(3) The Dividend, if sanctioned, will be made payable on and after 15th July, 1964 to those Shareholders whose names stand on the Register of Members on Monday, the 22nd June, 1964 at the Registered Office of the Company between 12 noon to 3 p.m. on all working days.

(4) Shareholders are requested to immediately notify change in their addresses, if any, to the Company.

(5) The relative Explanatory Statement, pursuant to Section 173 of the Companies Act, 1956 in respect of Items Nos. 3, 4, 6, 7 and 8 set out above, is being posted to the Shareholders individually along with the Notice of the aforesaid Annual General Meeting.

ECUADOR'S NATIONAL HIGHWAY

The World Bank and its affiliate, the International Development Association (I.D.A.), have joined with the U.S. Agency for International Development (A.I.D.) and the Inter-American Development Bank (I.D.B.) to provide the equivalent of $39 million to the Government of Ecuador for a $62.2 million five-year national highway programme. The four organisations signed recently documents providing for a World Bank loan of $9 million, and I.D.A. credit of $8 million, an A.I.D. loan of $13.3 million, and an I.D.B. loan of $6 million. The A.I.D. made a loan of $2.7 million for the programme in September 1963; the remaining costs of $23.2 million are being covered by the Government of Ecuador. The programme will further the goals of the Alliance for Progress of Ecuador. The World Bank loan is for a term of 25 years, including a 5-year grace period, and bears interest at the rate of 5½ per cent per annum including the 1 per cent commission which is allocated to the Bank's Special Reserve. Bank of American National Trust and Savings Association and Grace National Bank of New York are participating in the loan, without the World Bank's guarantee, for the total of $120,000 representing the first maturity which falls due on 1st August 1969. The I.D.A. credit is for a term of 50 years. Repayment of principal will begin on 1st August 1974 after a 10-year period of grace. One per cent of the principal will be repayable annually for 10 years and 3 per cent will be repayable annually for the final 30 years. The credit is free of interest but a service charge of ¾ per cent per annum on the amount withdrawn and outstanding will be made to meet I.D.A.'s administrative costs. The A.I.D. loan is for a term of 40 years, including a 10-year grace period, with interest at ¾ per cent for the first 10 years and 2 per cent thereafter. The I.D.B. loan, made from its ordinary resources, is for a term of 25 years, including a 4½ year grace period, with interest at 5¾ per cent, including the 1 per cent commission allocated to the Bank's Special Reserve.

THE NEW CENTRAL CABINET

IT looks as though the task of forming a new Cabinet was a tougher one for Mr. Lal Bahadur Shastri than that of finding a successor to Jawaharlal Nehru was for Mr. Kamaraj. This is not surprising, for Mr. Shastri must have been keen to avoid misunderstanding among his closest colleagues and chances of split in the Congress Party. He had to be sure of unity not only in the Cabinet but also in his Party. While the Prime Minister has undoubtedly the right to choose his Council of Ministers, practical considerations demand that he has to carry the Party with him in exercising this right, if he is to be assured of its sustained support and co-operation without which he cannot last long. The omission of Mr. Morarji Desai and Mr. Jagjivan Ram from the new Cabinet has not been in keeping with confident forecasts contained in New Delhi advices, but the inclusion of Mr. S. K. Patil and Mrs. Indira Gandhi has been. Mr. Jagjivan Ram had been a Minister at the Centre for a pretty long time, almost as long as Mr. Nehru himself. His non-inclusion is, therefore, not such a glaring one as that of Mr. Morarji Desai, but circumstances had so developed that it was not possible for Mr. Shastri to give him the rank of No. 2 in the Cabinet as insisted by Mr. Desai. The fact that Mr. Shastri gave that rank to Mr. Gulzarilal Nanda, despite reports of differences between the two during the last days of Mr. Nehru, is another proof of his amiable qualities.

It is a good thing that Mr. Desai has assured the new Prime Minister of his loyal support, thereby putting an end to possible mischief by his supporters in Parliament and outside. In the present emergency, with both China and Pakistan being hostile to India and with economic stability threatened by strong inflationary pressures, political stability is absolutely essential and the party in power cannot afford to remain divided. In any case, Mr. Nanda has himself placed a limit on his term of office. He has told the public more than once that, if he failed to end corruption within two years, he would give up ministerial power. One-fourth of this period is nearly over already; since the vow he has taken seems unrealistic to us, what with more State trading and more economic controls in the offing, his exit from the Government is a certainty, unless his colleagues succeed in prevailing upon him to give up his vow. No motive need be read into our drawing attention to this contingency which is Mr. Nanda's own creation. It is not suggested here that Mr. Nanda should go. Only, it is to be hoped that Mr. Shastri is not unmindful of Mr. Nanda's solemn promise to the nation about eradicating the evil of corruption and that he and his colleagues everywhere will do everything possible to facilitate the translation of that promise into a reality well before the target date. This calls for the adoption of such economic (including fiscal) policies as would not compel people to resort to corrupt practices. In this context, the move to place the Gold Control Order on the permanent Statute Book is a singularly ill-advised one. The avenues for corruption are so many in this country—and their number is continuously increasing—that Mr. Nanda's self-imposed condition for staying in office is unlikely to be fulfilled.

The consensus of opinion in the country seems to be that Mr. Shastri's Cabinet is more homogeneous than Mr. Nehru's, in that it is free from doctrinaire persons of both leftist and rightist extremes. Whether this comment is correct or not time alone can tell. It would, however, be correct to say that, in recent years, the top Congress leadership never had any rightists in the sense in which the Swatantra Party, for instance, is understood, so that the three-tier division of rightists, centrists and leftists is fictional. The only refreshing feature about Mr. Shastri's Cabinet is that it is free from Mr. K. D. Malaviya and Mr. Krishna Menon. The absence of any demand in the Congress Party for their reintroduction is an encouraging feature. It is, however, a negative satisfaction, for the stress on expanding the public sector continues to be as divorced from realities as it used to be when both these gentlemen were in power. To give only one instance: in practical terms, there has been no change in the Government's policy in regard to petroleum industry. Mr. Humayun Kabir and Mr. O. V. Alagesan have all along been only talking of doing this and doing that, but have done precious little for a speedy realisation of the expansion goals set for this group of industries. The drift reflects the hesitation of these two Ministers to make realistic adjustments in the policy pursued by Mr. Malaviya. Will things change for the better under Mr. Shastri's leadership? One has to wait and see. Meanwhile, the gap between demand and production is yawning to the disadvantage of consumers and the balance of payments position.

Considering that Mr. Shastri has reiterated that there would be no break from the policies and programmes initiated by his illustrious predecessor, Mr. Nehru, the reshuffling of some of the Ministers carried out by Mr. Shastri is of no major significance. But this does not mean that the glaring incongruities in the changes effected by him could go uncommented. Indeed, they have not. The lumping together of Law and Communications, under the stewardship of Mr. A. K. Sen, makes no sense and so also that of Parliamentary Affairs and Civil Aviation, under Mr. Satya Narayan Sinha. The Prime Minister has failed to avail himself of this opportunity to rationalise the economic ministries and streamline them. All transport and communications other than Railways and Shipping could have been kept under one Minister of Cabinet rank. Railways, of course, should remain separate, as it is now, in view of its immense dimensions, but shipping and ports could have been easily tagged on to the Commerce Ministry. The industries are so vast that their break up into steels and mines, petroleum and chemicals, and industries (general), including heavy engineering and technical development, is a convenient arrangement which Mr. Shastri has done well to continue with minimum changes. The transfer of jute and textiles to Commerce Ministry is a sensible thing to do, as they have to be looked after from the point of view of improving their contribution to export trade. The retention of Atomic Power with the Prime Minister may reflect Mr. Shastri's determination to be personally in charge of realising Mr. Nehru's dreams as quickly as possible. But he is needlessly overburdening his responsibilities. He would do well not to emulate Mr. Nehru's weakness of not delegating authority and responsibility to other hands. Perhaps, atomic power, scientific research and technical education could be entrusted to the care of a separate ministry and so also foreign affairs. Only the persons chosen for these tasks must be competent, as both are vitally important for modernising and strengthening the country. If Mr. Shastri sheds these additional responsibilities, he will have more time for doing full justice to the task of policy-making, coordination and supervision, as well as other duties that fall on a Prime Minister.

It is a thankless job to comment on the allocation of portfolios to the various Ministers individually. It is easy to find fault with persons and, say, X or Y does not have much experience of the portfolios allotted to him, that he is a misfit, and so on. It is equally easy to praise a Minister. But it is not our intention to do anything of the kind. The best thing to do

would be to wish good luck and Godspeed to the Ministers and judge them later on the basis of their performance in the new responsibilities entrusted to them. What is, however, more pertinent is whether Mr. Shastri has disturbed the existing set-up more than necessary. The fact that Mr. Shastri did not disturb Mr. Nanda, Mr. Krishnamachari, Mr. Chavan, Mr. Chagla, Mr. Humayun Kabir, Mr. Sanjivayya and Mr. Tyagi suggests that he confined the changes only to the minimum necessary to accommodate the three new entrants, namely, Mr. Patil, Mr. Sanjiva Reddy and Mrs. Indira Gandhi suitably. This will, of course, cause some inconvenience to those Ministers who have been shifted and some delay in the execution of policies and projects. Mr. Subramaniam, Mr. Swaran Singh and Mr. Dasappa were getting into their strides, after mastering the intricacies of the problems entrusted to them by Mr. Nehru. Now, they will have to start afresh again in the new duties assigned to them. This, however, is an inevitable drawback of democracy. But so long as all Ministers are there and work in close co-operation with one another and so long as all major issues are decided at Cabinet level, the impact of the changes need not be appreciable. Moreover, the secretariat of civilians is there to ensure continuity of policy and work and to guide the Ministers.

In the changes made by Mr. Shastri one does see a purpose. It is no use, he must have felt, giving back to Mr. S. K. Patil Food and Agriculture at a time when the need for more controls and active State intervention is under contemplation. Development of agriculture is a far more intricate and difficult job than establishing steel plants and other heavy industries, as the former involves managing and carrying forward sixty million agriculturists through fifteen State Governments. In giving this tremendous responsibility to Mr. Subramaniam, Mr. Shastri has provided him with an opportunity to display his ability for organisation and drive. The fact that Mr. Subramaniam has accepted the challenge is a tribute to his courage and sense of discipline. This does not mean that Railways, or Steel and Mines, or Industry and Heavy Engineering or Irrigation and Power have no problems at all and are easy jobs. Far from it. They are all vital portfolios. The country's economic growth depends as much on the efficient handling of these portfolios as on that of agriculture.

THE FIRST TASK BEFORE NEW CABINET

THE first task to which the new Cabinet has addressed itself pertains to prices. Mr. Lal Bahadur Shastri, immediately after he was elected to succeed Mr. Nehru as Prime Minister, declared (in a talk with Press correspondents at New Delhi on Tuesday the 2nd inst.) that the most formidable problem currently facing the country was how to check the soaring prices. Echoing these words, the Finance Minister, Mr. T. T. Krishnamachari, stated in the Lok Sabha two days later (on Thursday the 4th inst.) that the price situation in the country had become "critical" and the position was "extremely serious." Mr. Shastri is reported to have already urged the Ministries concerned to take some immediate steps to correct the disquieting situation and, as a first step, the Finance Ministry has decided to subsidise the transport cost of procured foodgrains with a view to equating procurement prices with wholesale prices. Meanwhile, heated discussions are being held in Ministerial circles (Central and State), as well as in the Prices Sub-committee of the Congress Parliamentary Party, on Mr. Krishnamachari's proposals for rigorous State trading in foodgrains and control over retail distribution, both of which, according to him, are inevitable, since there is no other alternative. He has, of course, clarified the position by saying that what he said last week was his personal opinion and that the Government as a whole is yet to take a decision.

The price situation is certainly disturbing to a degree and it is just as well as that the powers-that-be have candidly acknowledged it, though the solutions they have in view are of a dubious nature. Never before in the past ten years had the rise in prices been so steep as that witnessed this year. The actual rise in wholesale prices (all commodities) over the year ended 16th May 1964 was as much as 9 per cent, as compared with the increase of a little over 4 per cent in the preceding 12 months. The rise has been mostly in food articles, which have appreciated in value by no less than 13 per cent, as against 5 per cent. Since the beginning of January this year, the wholesale price index (base: 1952-53=100) for cereals (the principal component of the food group) alone has gone up by 9 per cent, bringing the total advance since May last year to 17.5 per cent. While these official figures are revealing in themselves, the actual position at the retail end is much worse.

Why has there been such a steep increase in prices? It is necessary to find a correct answer to this poser, for, unless the situation is correctly diagnosed, the remedies may turn out to be worse than the disease. The persistently rising trend of prices has been the cumulative impact of three factors. There is, first of all, monetary inflation. Thanks to heavy outlays on defence and development, the total money supply has gone up quite considerably, by as much as Rs. 885 crores in the first three years of the Plan, the rise in 1963-64 alone being of the order of Rs. 430 crores. The rise in money supply by itself may not be inflationary, as, technically speaking, the deficit financing is not as large as is believed. What has happened is that the rise has not been accompanied by a proportionate increase in the availability of goods and commodities, especially food and consumer goods. Thus, between 1960-61 and 1963-64, the money supply has risen by over 30 per cent, whereas the total supply of goods and services (as indicated by the index of national income at constant prices) has increased by about 8 to 9 per cent. Secondly, there has been cost inflation in industry, arising from increased indirect tax burden heaped by the Government, heavier wage bill, markedly higher raw material prices, enhanced prices of fuel, stores, chemicals and other accessories, and enhanced freight charges. Since, side by side, the productivity of industries, in general, has not improved significantly, the unit cost of production has gone up appreciably, leading to higher consumer prices. Besides monetary and cost inflation, there has been the pull of the demand factor, following the continuously rising trend of population and the increasing wants of the people. Take, for example, foodgrains. In the past three years, the total available supply (production plus imports) has remained almost stagnant at about 83 to 84 million tons, while there have been 25 to 26 million more mouths to feed, so that the *per capita* availablity of foodgrains is today much less than what it was three years before.

In view of all the aforesaid factors, prices have risen substantially, pushing up living costs. As wages are linked to cost of living, the rising spiral of prices gets strengthened. It is a case of inflation feeding upon itself. As compared with the end of the second Plan (March 1961), the all-India consumer price index (1949=100) for working class has climbed up by 20 points or about 16 per cent. The impact of rising prices and living costs becomes more apparent when it is realised that the income-earning group with much reduced purchasing power of the rupee has to support dependents with costlier habits.

Ever since Chinese aggression on Indian soil in October 1962, the necessity of keeping prices under check has been loudly talked about. The Governments, Central and State, have already taken several measures to hold the price line. The Reserve Bank, too, has followed, by and large, a restrictive credit policy. Even so, the prices of food articles and several other essential items of consumption continue to rule at phenomenally high levels.

The causes responsible for the highly inflationary trends in the economy are thus clear, but what does not seem to be clear is the answer to the question: How to hold the price line within manageable limits? The answer that immediately comes to one's mind is introduction of price and physical controls. But the country's experience with such controls in the past as well as State trading in foodgrains both of which Mr. Krishnamachari advocates has been very bitter, not to speak of the waste of much money on the enforcement of controls. Mr. Krishnamachari's claim that the experiment of controls during the years 1942 to 1953 had been successful, because the rise in prices was negligible, is misleading and untenable. Since public memory is proverbially short, let us recall a few figures pertaining to the period mentioned by Mr. Krishnamachari. The average general wholesale price index (August 1939=100) for the financial year 1953-54 stood at 397.5, as against 171.0 in 1942-43, representing a rise of 132 per cent in a period of 11 years. The rise was mainly in food articles, the index of which moved up from 177.7 in 1942-43 to 384.4 in 1953-54, an increase of 116 per cent. Can anyone seriously contend that an increase of this magnitude in prices—an average rise of 10.6 per cent per annum in food and of 12.0 per cent in all commodities—is negligible and that the position was one of relative stability? By all means, let Mr. Krishnamachari advocate any step he wants, but let him not twist facts, for facts are facts and they are sacred.

A rigorous system of State trading in foodgrains and control on retail trade, in the opinion of the Finance Minister, has become inescapable in order to keep the prices in check. We are afraid the task involved may be too big for the State Governments to handle, for it is these Governments which have to enforce controls and State trading. It is estimated that the foodgrains trade involves an annual turnover of over Rs. 2,000 crores. One of the suggestions made is that co-operatives could be entrusted with the responsibility for distribution. But, barring a few here and there, the way in which the vast majority of co-operatives have been conducting their affairs leaves much to be desired. The failure of attempts made sometime ago by the Government of West Bengal to set up fish co-operatives is still fresh in one's memory.

The Governments should, and ought to, take regulatory measures, including punitive action, whenever there is any tendency on the part of traders to create artificial scarcity and rig up prices. But these measures must only supplement the existing trade channels and not supplant them. There are in India about 600 well-organised *mandis* at which over 600,000 persons handle foodgrains trade. The experience of trading techniques built over a period of several years by these persons, which provide foodgrains to the public even in the remotest areas with minimum handling cost, would go waste, if the State itself were to take over the entire work of distribution. Bureaucratic inefficiency and extensive black market and adulteration are evils inherent in any form of State trading in foodgrains. Besides, it is bound to inflate the prices for consumers, in view of the heavy administrative cost involved. What is worse, the Governments will also incur heavy losses which have to be met out of either taxes or deficit financing. The total loss on State trading in foodgrains even on a limited scale during the year 1962-63 is put at Rs. 24 crores, according to the Audit Report (Civil) 1964. The extent of loss in the event of country-wide application of State trading and rationing in all urban areas can be easily imagined.

The key to the problem of rising prices lies, not in State trading and further extension of controls, but in a determined bid to augment the supply of foodgrains and consumer goods. There is, of course, nothing new in this statement. Everyone has reiterated it over and over again. But that does not mean that its relevancy has diminished. On the contrary, the reverse is true, considering that as much as 60 to 70 per cent of the total expenditure of the household is devoted to food items, of which about three-fifths is on foodgrains. Instead of wasting precious time and money on enforcing negative measures such as controls and rationing, the State Governments will do well to concentrate attention on the production front. Through speedy and effective arrangements for the supply of irrigation, agricultural implements, manure and good seeds, the output of foodgrains can be stepped up to a considerable extent. (If anyone were to say that all this has been tried and the results are not as satisfactory as they ought to be, then it would be an admission that the outlays on defence and development have been beyond the organisational ability of the Government to secure increases in the production of food and consumption goods. In that case, the remedy is obvious. It is, however, our contention that the remedies mentioned here have not been effectively tried and there is a lot that can be done, if only the Governments have the necessary will power.) Simultaneously, transport facilities must be improved, so as to ensure proper distribution of foodgrains and other commodities. Steps must also be taken to restrain the increase in money supply, to abolish futures trading in all the remaining commodities, including castorseed and linseed, and to maintain interest rates at a high level. All these measures, though they are very important, will not by themselves be of much avail, unless the Governments cut down non-development and unproductive expenditure to the barest minimum, for it is such expenditure that always aggravates the inflationary potential. It is the duty of Mr. Krishnamachari, as the Union Finance Minister, to apply the axe in this respect not only at the Centre but in all the States also. Unfortunately, he does not seem to be taking any initiative in this direction.

MARKET GOSSIP

Quietly Steady

NOTHING notable has happened in the share markets since we discussed the trends in these columns last week. Business has been extremely thin and patchy. Fluctuations have been narrow even in the most active counters. Tata Steel, for instance, has been moving within a range of a rupee and Indian Iron 10 nP. (For more details, *vide* the comparative table on page 1044.) Generally speaking, the tone of the market has been quietly steady. Over the week, the list shows a large number of minor losses than small gains. Prominent among the latter are the scrips of safety like electricity, banks, and insurance, as well as such blue chips as Hindustan Lever, Gwalior Rayon, A.C.C. and Wimco. Some enquiry has also been noticeable for shares of good new companies which have been in production for some time now and should be in a position to declare a maiden dividend in a year or two. Speculative activity has been dormant and the *budli* rates on the Settlement that went through on Friday last (5th June) were normal.

The uncertainty about the position of cotton textile prices has caused misgivings among operators and almost all textile scrips have been marked down to some extent. Market circles have noted that the gentlemen's agreement among mills on cloth prices has definitely broken down, with some mills having taken the initiative to increase their selling prices. But they are afraid that the Government might retaliate by introducing statutory price controls and compelling the mills to manufacture standard cloth and that, if all these things were done, the profit-margin of mills might go down. At the moment, this is only a fear, but whether it will be confirmed is anybody's guess. Automobile shares, especially T.E.L.Co., are perceptibly quiet, on reports hinting at the possibility of decontrol of trucks. The observations of a T.E.L.Co. spokesman that the Company would not increase its selling prices in the event of decontrol has been bearishly interpreted by some. The news on Thursday this week that the I.D.A. has sanctioned a fresh credit of $90 million to India, which would be available for importing components, materials and balancing equipment for factories producing trucks, buses, machine tools, construction equipment and electrical equipment, has been quietly ignored.

The formation of new Cabinet at the Centre by Mr. Lal Bahadur Shastri has had no perceptible impact on stock markets either way. There has been no pronounced reaction among market circles to the omission of Mr. Morarji Desai from the Cabinet. Although some of them have regretted it, the vast majority have not cared very much; obviously, they no longer have a soft corner for him, after all the new taxes imposed by him in his last budget as the Finance Minister. But the fact that Mr. Shastri has formed a Cabinet which has engendered no bearish pressure is something for which investors should feel grateful. They have already suffered so much since the Budget for 1964-65 that any further capital depreciation will add to their mental worry and perhaps compel them to unload their holdings in the hope of retrieving whatever capital they can.

There are a few who are inclined to believe that T.T.K. would feel impelled by the continued depression on stock exchanges to give some tax concessions. In order to avoid any future disappointment, it is better not to entertain such hopes. They are just wishful thinking. He cannot concede any tax concessions before the next budget, lest the leftist elements in the Congress should pounce upon with the accusation that he is departing from the socialist policy laid down by Mr. Nehru.

What may change the course of the market in favour of bulls is a settlement with Pakistan and/or China. This is a remote possibility. Another development which may have that effect is an increase in the dividends of two steel companies for 1963-64 due to be announced in the coming weeks. Even a rise of a rupee in T.I.S.Co. dividend and of 25 nP in that of Indian Iron will, market circles aver, have a tonic effect on the drooping stock markets. But are these two companies in a position to oblige them?

Unit Trust

In less than three weeks from now—with effect from the 1st of next month—the Unit Trust of India will begin selling its units through the 3,500 offices of the State Bank, its subsidiaries and 36 commercial banks which have contributed over a crore of rupees to the Trust's initial capital of Rs. 5 crores. The share brokers on the recognised stock exchanges may also act as agents for the sale of units. But there will be no trading in units on the stock exchanges. The units can be purchased in ten or multiples of ten and no upper limit is fixed. During the first month, that is, July, units of the face value of Rs. 10 each will be sold at par. Thereafter, prices will be fixed by the Trust based on the prices quoted on the stock exchanges for the underlying securities in the portfolio of investments. The prices will be determined daily and announced through the All-India Radio and the Press.

Announcing the proposed sale of units from 1st July at a press conference in Bombay on Monday this week, Mr. R. S. Bhatt, Chairman of the Trust, was confident that the response to the issue of units from investors (large and small) would be excellent. This remains to be seen, for, in view of the high cost of living and heavier incidence of taxation, including annuity deposits, the savings available for investment do not seem to be appreciable. From the long-term point of view, the outlook for the sale of units will depend on the efficient and profitable working of the Trust as well as on the trend of savings.

The units of the Trust have three distinct advantages. One, investment in these units is safe, inasmuch as the risk is spread over a wide range of securities (fixed-income bearing and variable-income bearing). Two, the unit-holders are assured of a steady decent return. The Trust, according to Mr. Bhatt, will aim at a yield of 6 per cent and nine-tenths of its income will be distributed. The Trust is completely exempted from payment of corporation tax and other taxes. Neither the dividend received by the Trust from the companies in which it holds shares nor the dividend it pays out to unit-holders is liable to tax. Again, dividends upto Rs. 1,000 distributed to unit-holders who are individuals are exempted from income-tax and also super-tax in the case of a holder who would not be liable to pay super-tax but for the inclusion of this income in his total income. The third advantage is that the units are highly liquid. An investor can cash them whenever he wants. The units can be sold back to the Trust any time (after 31st October 1964) at prices fixed by the Trust; the prices will be based on the prices of the underlying securities on stock exchanges. No details of the underlying securities will, however, be disclosed. The spread between the rates at which the Trust sells and repurchases units will be just five per cent, as against 10 per cent in other countries. The Trust is making elaborate arrangements for mechanising its operations so that it can act quickly and efficiently. It will soon be opening branches at Calcutta, Madras and Delhi and in other places later, if warranted by circumstances.

The unit-holders will not, however, reap any direct benefit from the capital gains accruing to the Trust. Only they will benefit to the extent to which such gains will be reflected in the higher prices of units. As for capital losses, they will be offset against either capital gains or income. The scope for such losses, however, is very limited. For, in accordance with the main objective for which the Trust has been set up, the Trust will pay special attention to security of capital and reasonable return (including capital appreciation) on investment. In the regulations framed for the functioning of the Trust, two important guide lines have been provided: First, investment by the Trust in any one company should not exceed five per cent of the value of its total investible funds or 10 per cent of the value of securities issued and outstanding of such a company; and, secondly, no more than five per cent of the investible funds should be invested in the initial issues of securities of new industrial undertakings. Moreover, the Trust is required to act strictly on business principles with due regard to the interest of unit-holders. It will be guided by such directions in the matter of policy involving public interest as the Reserve Bank may give.

The Trust has a competent Executive Committee which meets once a week or ten days and decides on the purchase and sale of securities. The Trust, Mr. Bhatt disclosed, has already invested (since it began functioning on 1st February last) a substantial amount of its initial capital of Rs. 5 crores. He did not, however, give the exact amount invested so far nor the details pertaining to the types of shares and securities bought by the Trust.

Cotton Crop Fares Better

With only less than three months to go for the current cotton season (1963-64) to end, it is now certain that the 1963-64 crop would be an all-time record of only a little less than 6 million bales (of 400 lbs. each). The latest estimate, covering the season upto the end of April last, puts the crop at 5.95 million bales, an increase of 100,000 bales over the previous estimate (as at the end of March) and 200,000 bales more than last season's record crop of 5.76 million bales. The 1961-62 crop, it may be noted here, aggregated only 4.7 million bales.

All the leading cotton growing areas, except the West Coast and South, produced a higher crop during the current season. Thus, the Northern area has accounted for a crop of 1.47 million bales, as compared with a little over 1 million bales last season. The Central Belt has turned out a record crop of 2.17 million bales, as against 1.96 million bales last season. On the other hand, the crop in the West Coast is estimated at 1.4 million bales, a fall of 450,000 bales from last season's figure. Down South, too, the crop has turned out to be a little lower at 875,000 bales as against 887,000 bales last season.

The crop has not only been bigger in size but also earlier in moving into the market. This is evident from the figures of crop arrivals. By the end of April, 5.35 million bales had already arrived. The corresponding figure for the last season was only 4.7 million bales, out of a total estimated crop of 5.76 million bales.

The record crop of nearly 6 million bales and higher carryover at the beginning of the season go to confirm the earlier expectation that the supply position in respect of Indian cotton would be comfortable. The supply of domestic cotton is now estimated at 8.12 million bales, comprising a carryover of 2.17 million bales and a crop of 5.95 million bales. Assuming that imports would be of the order of, say, about 800,000 bales, the total supply works out to 8.92 million bales. This should be adequate to cover the consumption requirements, estimated at around 6.25 million bales comprising 5.4 million bales of Indian cotton and 750,000 bales of foreign cotton and yet leave a comfortable surplus. Thus, the difficult and costly task of balancing supply of and demand for cotton has been accomplished fairly easily, thanks mainly to the generosity of Nature.

The question now is: What of the next season? Will Nature be again kind to cotton? None can say at present. But it would be wise not to count too much on another good crop materialising next season also. For it is rarely, if ever, that the weather turns out to be favourable in two consecutive years. Although it is too early to predict the new crop, it would appear to have made a good beginning. New crop sowings are reported to have commenced in the Punjab, Rajasthan and U.P. Acreage under cotton in the Punjab, it is said, is likely to be about the same as in the current season, whereas in Rajasthan, especially in Ganganagar circle, it is expected to be more by about 15 per cent. Canal water supply so far is said to be adequate and germination is reported to be progressing well.

Mohatta And Heckel Ltd.

Steel wires and wire ropes are extensively used in mining, shipping, engineering, ropeways, cranes, lifts, etc. The total consumption requirements (annual) are expected to be no less than 40,000 tons by the end of the third Plan, whereas the capacity actually installed at present is considerably less. The shortage in supplies will be met to some extent by the new venture of Messrs. Mohatta and Heckel Ltd, which has been given an industrial licence to put up a factory with an annual installed capacity of 5,000 tons of steel wires, wire ropes and barbed wires on double-shift basis. The factory, which is being located at Khopoli near Bombay, is expected to go into production early next year.

The total capital outlay on the project is estimated at Rs. 125 lakhs. Excluding the loan of Rs. 35 lakhs obtained from the I.C.I.C.I. and borrowings of Rs. 25 lakhs from banks, etc., the balance of Rs. 65 lakhs is proposed to be met by way of share capital (Rs. 50 lakhs equity and Rs. 15 lakhs preference). Out of this share capital, Rs. 21.30 lakhs have already been subscribed or agreed to be subscribed by promoters and their friends. The foreign collaborators in the venture, Messrs. Georg Heckel GmbH of West Germany, are contributing Rs. 9.60 lakhs to equity capital, besides giving technical help and assistance. The remaining Rs. 43.70 lakhs represent the public issue that the Company has now announced. The issue consists of Rs. 28.70 lakhs of equity (287,000 shares of Rs. 10 each) and Rs. 15 lakhs in preference (15,000 9½ per cent cumulative redeemable preference shares of Rs. 100 each); the subscription list will open on Saturday the 20th inst. and close on 2nd July or earlier but not earlier than the 24th inst. The entire issue has been underwritten, among others, by the I.F.C. of India, the L.I.C. and the I.C.I.C.I.

Considering that the products to be produced by the Company is assured of ready demand, that the factory is being located at a place which enjoys all the requisite facilities, and that the Company has secured the technical collaboration of a world-famous company, the response to the public issue will doubtless be encouraging. The Chairman of the Board of Directors is Mr. Brijratan S. Mohatta.

Chrysler-Rootes Deal

The offer of Chrysler Corporation, one of the three American automobile giants, to buy 20 per cent of the Ordinary shares (voting) and 50 per cent of 'A' Ordinary shares (non-voting) of the British Rootes Motors, announced in London last week, has sparked off a political controversy far more fierce than the sensational take-over bid of I.C.I. for Courtaulds. Whereas the latter was a fight between two British giants, the present proposal is regarded as a marriage, by mutual consent, between an American giant and a British firm. The issue of public interest involved in the I.C.I.-Courtaulds take-over bid was the alleged trend towards monopoly, whereas that involved in the Chrysler-Rootes deal is fresh American penetration in British motor industry.

The British Labour Party has been quick to react to the development. M.Ps representing that Party in Parliament have expressed alarm at what they call "the growing foreign holdings in British industry" and concern over "the increasingly large proportion of the British motor industry falling under the U.S. control." The leader of the Party, Mr. Harold Wilson, demanded to know what guarantee the Government had from either Rootes or Chrysler that the latter's minority holding in the former will not be converted into a majority holding in the future—as happened in France where Chrysler is now in full control over the French motor firm, Simca, after gaining a minority holding. The British Government and the Conservative Party, on the other hand, have welcomed the deal, which has yet to be put through. Mr. Edward Heath, President of the British Board of Trade, welcomed it as being of great financial benefit to both Rootes and to the country. "I am certain," to quote his statement, "that it is in the best interests of Scotland and Linwood (where the Rootes plants are located) to have this connection with this very big and experienced concern (Chrysler). It will help production." He also thought that it would undoubtedly strengthen Rootes's position as well as the whole of U.K. motor industry.

Defending the deal in the House of Commons, Mr. Reginald Maudling, Chancellor of the Exchequer, told the Opposition that the deal did not involve the transfer of control of policy of the Rootes Group out of Britain and that Chrysler would not be able to increase its 30 per cent holding of voting shares without the sanction of the British Treasury. In general, the arrangement between Chrysler and Rootes, according to him,

DELHI LETTER

CONTROVERSY OVER STATUS

MORARJI DESAI'S REFUSAL TO YIELD

From Our Special Correspondent

NEW DELHI, *9th June*

IN the week-end following Jawaharlal Nehru's death, numerous sections of the Congress Party had joined hands to launch "stop-Morarji" moves and the Congress President, Mr. K. Kamaraj, managed the consensus negotiations competently to prevent the Congress Party from breaking into bits in a succession contest in the open. The operation, leading to the unanimous election of Mr. Lal Bahadur Shastri as the Party leader, was swift and smooth; but the arrangement of the new Cabinet has been an agonising task for Mr. Shastri. There was no "stop-Morarji" pressure of any significance after the election of Mr. Shastri; if at all, it is Mr. Desai who called himself to a halt outside the Cabinet room by a "Number-2-or-nothing" stand. Until well past midnight on Monday, Mr. Shastri tried to fix things, but in vain. The best he could offer Mr. Desai, it seems, was No. 3 position, below Mr. Gulzarilal Nanda but above Mr. T. T. Krishnamachari; that was not enough to bring Mr. Morarji Desai into the Cabinet. As for Mr. Jagjivan Ram, the man with the longest Central Ministerial service except for Mr. Nehru, reports are that he was not even asked.

And so it has come to be that from among the "Kamarajed" Ministers of national standing, it is only Mr. S. K. Patil, who has returned to the seat of power in Delhi, in addition to Mr. Shastri whose restoration was undertaken by the late Mr. Nehru himself. There is general welcome given to the allotment of the Railway portfolio to Mr. Patil; his capacity for administrative drive could be well utilised in the Railway Ministry without upsetting any State political apple carts.

Mr. Shastri retains with himself the management of External Affairs and Atomic Energy, although his direct association with external affairs is of very recent origin. When he goes to the Commonwealth Prime Ministers' Conference in London next month, Mr. Shastri will be making his first real foreign trip. His only journey across the seas hitherto has been to the outpost islands of the Andamans in the Indian Ocean and the only foreign country he has visited is Nepal, within the Indian sub-continent. In April last year, he managed to persuade King Mahendra to turn his face again to the south, towards friendship with India.

Not A Creditable Concession

The admission of Mr. Sanjeeva Reddy into the Central Cabinet is considered to be a direct concession to Mr. Kamaraj whose relations with the Andhra leader are politically affectionate. But this concession is not necessarily creditable, because it was only a few months ago that Mr. Sanjeeva Reddy's character was held suspect by the highest counsels of judicial opinion, the Supreme Court. It was this Supreme Court judgment which led to the immediate resignation of Mr. Reddy from the post of Chief Minister of Andhra.

Heavy industry and steel organisation is a sufferer in the Cabinet rearrangement. When Mr. C. Subramaniam was made something of an industrial overlord by Mr. Nehru—he was put in charge of Steel, Mines and Heavy Engineering—the commendable idea was to help in coordinated development of these allied sectors. Now, Mr. Sanjeeva Reddy is placed in charge of Steel and Mines and Mr. Swaran Singh is transferred to take over Industry and Heavy Engineering. Mr. Subramaniam is switched to Food and Agriculture, which has become one traditional graveyard of Central Ministerial reputations. Mr. Swaran Singh had not settled down to cast any decisive influence on the affairs at Krishi Bhavan when talk of his being sent to Punjab to relieve Mr. Pratap Singh Kairon began. Mr. Subramaniam, on the other hand, had begun to make an impact on the industrial sectors placed under his charge. He had a positive approach to industrial development and encouragement of indigenous enterprise and he had firmly refused to be imprisoned by the negative endeavours of the civil service. To a great extent, he isolated himself from the civil servants who had found a patron in Mr. Krishnamachari who also disagreed vehemently with Mr. Subramaniam's ways. Mr. Subramaniam had been getting on well with the Russians and the Czechoslovaks and other East Europeans, who will play a crucial part in heavy engineering, without giving the impression of being "sold" to the Soviet lobby in the country. As Food and Agriculture Minister, Mr. Subramaniam will have more to do with the Americans and P.L. 480 than with the Russians.

At the time of writing, it had not yet become clear what Mr. Shastri plans to do in relation with the Planning Commission. Mr. K. Raghuramiah had given a good impression as Minister in charge of ordnance production, but he has been shunted from the Defence Ministry to the Labour Ministry in which he will have less to do than his predecessors, because "social security" has been separated from labour and tagged on to cottage industry—perhaps an official recognition of the fact that patronage to crafts endorsed by Mahatma Gandhi is more in the nature of social welfare measures than industrial enterprise. Mr. Raghuramiah had in recent months done a successful campaign of advertisement of ordnance production through effective public relations with newspaper correspondents. Irrigation and Power again have a Minister with Cabinet rank, with the transfer of Mr. Dasappa to that Ministry.

By not bringing Mrs. Indira Gandhi directly into the External Affairs Ministry or to handle some other similar high-level portfolio, Mr. Shastri has acted cautiously; sentimental attachments have been satisfied without undue national risk. She has not joined the Cabinet yet; she will be sworn in after she has finished with numerous family preoccupations.

Military Assistance

The Shastri administration starts with a generous assurance from the United States of long-term support to the defence build-up against the Communist Chinese. For fifteen months, the negotiations had dragged on. A few days before Mr. Kennedy was to take a decision on the long-term commitment, he was assassinated. Mr. Chavan's mission to the United States last month had to be broken midway because of Jawaharlal Nehru's death; Mr. Chavan was to meet President Johnson but came away cancelling the appointment.

The Governments of India and the United States, however, have gone ahead in issuing a joint *communique* which virtually ensures long-term American military assistance, though, for procedural reasons, the assurance is not stated in unambiguous terms. For the U.S. fiscal year 1964-65, the United States Government will provide another $60 million in grants, the same level of military aid as in the previous two years. In addition, the Indian Government will receive credits amounting to about $50 million a year. Or, in other words, the total American credits and grants over five years will be around Rs. 250 crores. During the period of the five-year defence plan which is estimated to cost about Rs. 5,550 crores, the Indian Government wants Rs. 800 crores in foreign exchange, if it is to stick to the programme for the defence build-up which will increase the strength of the army to more than eight lakhs (including six or more mountain divisions). The Defence Ministry wants to increase the strength of the Air Force to 45 squadrons, including some all-supersonic squadrons. From Britain, Canada and Australia, India expects about Rs. 15 crores of military assistance annually, or a total of Rs. 75 crores in five years. This leaves a huge gap which may partly be filled by Soviet and other East European assistance.

The United States has not so far obliged Indian negotiators on the question of supplies of modern supersonic fighter planes. India has been asking for F 104 Star fighters to compose three squadrons, at a cost of probably $150 million. The United States has supplied these craft to Pakistan, her military ally in S.E.A.T.O. and C.E.N.T.O. The U.S. was willing to sell India Skyray fighters which have a speed just above the supersonic scale while the F 104 is capable of twice the speed of sound. The Skyray planes were launched into military duty about twelve years ago and their manufacture was stopped some six years ago. The Indian Air Force naturally is unwilling to accept the dumping of planes which it considers to be obsolete, though the U.S. is said to be willing to sell Skyrays at give-away prices.

MARKET GOSSIP

(Concluded from previous page)

would bring "new capital to this country and access to American know-how and research and greatly increase export facilities—and a very good thing it is for the motor industry too."

If the deal comes through, as in all probability it will, Chrysler would have evened it up with the other two American giants in the automobile industry, namely, General Motors and Ford Motors which already have gained a firm footing in the European automobile industry. It is true that Chrysler have managed to convert its minority holding in the French firm, Simca, into a controlling interest, but it is not represented either on the Continent or in Britain on a scale comparable to that of General Motors and Fords. General Motors, it may be noted, has a 100 per cent ownership of Opel in Germany and Vauxhall in Britain. Ford has a wholly-owned subsidiary in Germany, near Cologne, and about four years ago, converted its 50 per cent holding in Ford Dagenham (in the U.K.) into a 100 per cent holding. In contrast, Chrysler, which, incidentally, is smaller in size than either General Motors or Ford in the U.S., has not hitherto had any major outlets in Europe. With its association with Rootes, Chrysler will be able to compete more effectively with its American and European rivals.

There would be little exchange of personnel between Rootes and Chrysler, said Mr. I. J. Minett, the latter Company's Vice-President for International Operations, but there would be manufacturing and marketing operations, perhaps involving the supply of Chrysler equipment to Rootes and *vice versa*. It is too early to predict precisely what effect the association of Chrysler and Rootes will have on the international market for cars. But there can be no doubt that the rationale of the association is that size and efficiency are basic to success in a highly competitive market like that of cars.

"Wage Drift" In Britain

A warning about the dangerous results to the economy of what it calls "wage drift" has been sounded by the British National Incomes Commission (Nicky, for short) in a special interim report published on the 3rd inst. By "drift" the Commission means the gap between wage rates and actual take-home pay. This gap is accounted for by the fact that workers get paid for, usually at overtime rates, putting in hours of work in excess of the prescribed limit. The progressive reduction in weekly hours of work in Britain has had the effect of widening this gap and it is to this phenomenon that Nicky has drawn attention. The immediate provocation for issuing the warning is the fact, referred to in our last issue (*vide* page 963), that the engineering unions have claimed a 40-hour working week and the employers have agreed, in principle, to the demand, provided the unions, on their part, agree to a wage-freeze for a period of three years. Referring specifically to this development, the Commission says, in its report, that it would be failing in its duty, if it did not remind both sides of industry of the dangerous results of wage drift and their impact on the national economy. The Commission has urged all industries, which have wage drift, to take such drift into account when negotiating increases in wages. "The element of wage drift, provided it could be analysed and qualified," points out the Commission, "is or should be a vital factor in national wage negotiation. It, therefore, intends to study further the extent of wage drift in the engineering and shipbuilding industries.

Proceeding, the Commission points out that the total effect of wage increases is the sum of nationally-negotiated rises plus the continuous bargaining and adjustment which takes place at the level of the individual factory and shipyard. The latter escapes public notice, but, if wages are to be kept in line with productivity, the Commission emphasises, "it is quite useless for attention to be confined to the former alone." The difference between nationally negotiated rates and actual earnings is large, according to the Commission, and "can add more than half as much again to wages as basic rates." The latest Labour Ministry figures indicated that the difference was increasing partly as a result of local negotiations and partly because of payment by results.

Nicky's report, as is only to be expected, has not been kindly received by the unions. Typical of the unions' reaction is the comment of Mr. George Barrat, General Secretary of the Confederation of Shipbuilding and Engineering Unions. He says that it is "regrettable that the Commission's chief argument should be directed against the wage-earner." "It had," he continues, "said little about the drift in prices and profits." The unions have consistently refused to give evidence before the Commission and reports from London say that they will refuse to be bound by the interim report. The employers, it is said, may not also be in a position to heed Nicky's warning because they could not possibly back out of the decision to go ahead with the offer of a 40-hour week, provided the unions accepted the other conditions of the offer.

A point that clearly emerges from this development, which needs to be carefully noted in India, is that Nicky has shown commendable political courage to warn, even at the risk of incurring the displeasure of organised labour, against a settlement which, in its opinion, will be harmful to the economy. This is an object-lesson to this country, where even supposedly independent and expert commissions and committees, which are expected to give independent and objective findings and advice, tend too easily and too often to please workers as it is fashionable to do so and, in the process, fail to do justice to their brief.

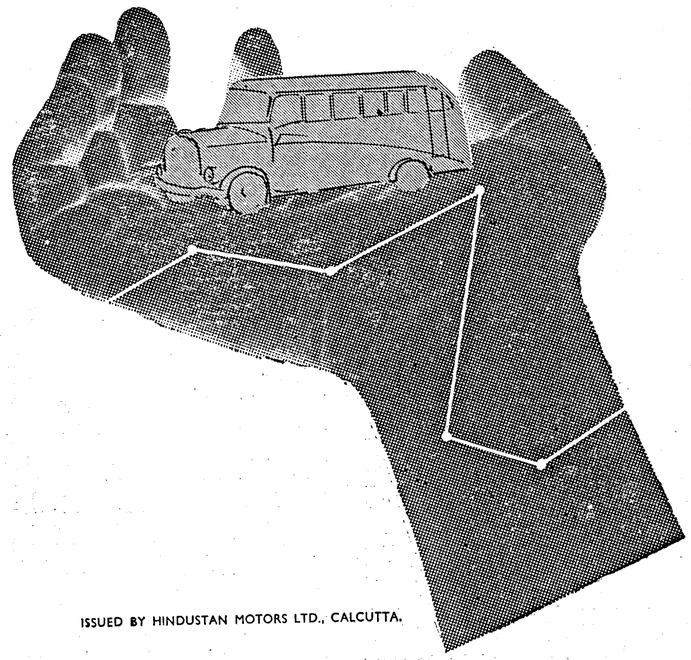
THE AUTOMOBILE INDUSTRY . . . .

For the better utilisation of India's vast manpower, for the industrial and agricultural develoment of outlying areas, for the speedier attainment of the national objectives, automobiles play an important part in providing an adequate communication net-work. Movement of land produce from villages to the urban markets, transport of manufactured goods from industrial areas to remote centres of consumption, all depend on transport. And the most flexible, speedy and inexpensive means of transport is the motor vehicle. The farmer needs his seeds and fertilisers at the right time, the urban dweller needs vegetables and foodgrains in fresh condition. The man in the village requires clothes, medicines, toiletries and a hundred and one other necessities of life. His counterpart in the cities wants to sell his manufactured ware in larger number to realise the economies of mass production. That is where road transport plays a major role.

To raise the overall level of consumption and distribution, a wide-spread communication system has to be opened up and the 5,60,000 villages, towns and cities of India linked up by road as an alternative and supplementary to rail.

Not only does the automobile industry supply the vehicles, but its contribution by way of direct and indirect taxes helps meet the cost of road building and maintenance, construction of bridges and improvement of amenities for the travelling public. Each Hindusthan Ambassador car, for instance, contributes some 5140 rupees (equivalent to one third of the "on the road" price of the car in Calcutta) to the Government in this form.

upholds road transport



CAR PRICE STRUCTURE :

Government taxes, direct and indirect :	33%
Raw materials, manufacturing and overhead expenses, salaries and wages, depreciation, profit etc. :	25%
Indigenous ancillary components :	24%
Imported components :	11%
Dealer's commission including distribution, service, advertising etc. :	7%

THE AUTOMOBILE INDUSTRY IS A KEY INDUSTRY

A SHINING EXAMPLE FOR ALL MANAGERS

THE personality of the late Mr. Jawaharlal Nehru was so unique and many-sided that men and women from different walks of life could find in it qualities worthy of emulation. He was a statesman, scientist, philosopher, idealist and dreamer, pragmatist and man of action, democrat, individualist and intensely human person, *all rolled into one. He was,* perhaps, not the businessman's ideal but there are many aspects of his character and personality that are a shining example for businessmen, executives and administrators to follow. His habits of punctuality, hard work, sense of responsibility, integrity, fearlessness and fairplay are the qualities that *all managers of men, money* and machines should cultivate if they are to take their rightful place in the community they live in. In a country not particularly known for its industriousness, Mr. Nehru set the example of working for 16 hours a day, on an average. And the amazing thing is that, in spite of the long hours of work he put in, crowded schedules and hectic life, his physical fitness, till a couple of years ago, that is, until he was well past seventy, was the envy of even young men. To say that the secret of his health lay in the fact that he derived strength from the people (which is another way of saying that he derived great satisfaction from the work he did and the appreciation of his work by the people) is to ignore the part played by the judicious combination of work and physical exercise which was characteristic of Mr. Nehru's daily routine.

He was not fond of slogans but the one he coined a few years ago is a very valuable one. It is: *Aram Haram Hai* (that is, we cannot afford leisure). This slogan of his, which spontaneously came out in reply to an agitation for more holidays and fewer working hours by a section of workers, reflects his attitude to work and duty. And Robert Frost's famed lines, in the poem "Stopping by Woods on a Snowy Evening," which he had copied on his working desk in his own hand, confirms his passionate devotion to duty. Even more than that, it indicates a quality which is rare among politicians, namely, keeping promises. But then Mr. Nehru was not a mere politician. He was a statesman imbibed with highest ideals who, having stirred up among his countrymen the vision of a glorious India, worked ceaselessly towards its realisation.

In a fitting tribute to "Jawaharlal Nehru—the Man," Mr. Sri Prakasa, a former Governor of Madras and Maharashtra and a valued colleague of Mr. Nehru in the struggle for freedom, describes his qualities in these words:

"Nehru, as a man, was a tremendously hard-working person. There was no trace of indolence in his nature. We are generally a lazy people. We are always inclined to leave for tomorrow whatever we can do today. He had his 24 hours of day and night as anyone else. But he made his 24 hours yield an amount of work that others would take weeks to accomplish. Efficient, methodical, punctual, he was impatient of laziness or carelessness, of excuses for not doing allotted tasks—and doing them in the proper way. For continuous devotion to work he was unique and unparalleled. But what he did is humanly possible. He did all that as a man. Other men can do the same in their limited spheres of life, as he did on the wide stage of the world. He leaves a lesson behind in this for his fellow-countrymen which they would do well to take to heart.

"Then again, as a man, he was a most responsible person. No one had ever any reason to suspect that he would not do what he was saying. Whether he undertook a small task or a big one, he honoured his word as few, I fear, do in our land. We are prone to make promises easily and are prone, as easily, to forget them. We are not serious in what we say. If he promised to lend a book or write a letter, if he promised to attend a function or send a contribution, he fulfilled what he said and no one had need to remind him or fear that he would forget. A sense of responsibility is a great and necessary virtue for human beings who live in organised society which, in its turn, can only function properly if every one therein could trust every one else to do what he says. Every one has, in some way or other, to depend on every one else; and if there is any deviation on the part of any one from the path he has undertaken, there is dislocation of life itself. Almost all the confusion that we witness in our social and economic life is due almost entirely to a lack of a sense of responsibility in us that makes us so unreliable and undependable. Let us take a lesson from Nehru's way of life, and be as responsible and reliable in our dealings with our fellowmen as he was."

If all managers in the business world and Government administration sincerely and religiously follow the example of Mr. Nehru, as described by Mr. Sri Prakasa, India will doubtless eventually become a very efficient nation.

Mr. Nehru, like all mortals, had weaknesses. One serious failing of his, which itself had its origin in his passionate desire to get things done quickly and rightly, was, as Mr. Sri Prakasa rightly says, that he did not believe in delegating work to others. He preferred to do everything himself for fear that, otherwise, it would not be done properly. Many great men in history had this defect but that does not make it less so. Had Mr. Nehru persuaded himself to pass on a part of his burden to his colleagues, perhaps India would have been privileged to enjoy his leadership for a few more years.

STEEL PLANT FOR GOA?

It will be recalled that the Steering Group for Iron and Steel had tentatively recommended certain targets for the fourth Plan—16-17 million tonnes of steel ingots, four million tonnes of foundry-grade pig iron and one million tonnes of alloy and special steel ingots. The Group's related recommendation was that the target for ordinary steel should be achieved by expanding the existing steelworks in the public and private sectors and by setting up two new steel plants (besides the Bokaro project already included in the third Plan) in the public sector. The proposed Neyveli-Salem Iron and Steel project was also to be in addition to these two plants—one to be located in the Goa-Hospet area, with its rich iron ore reserves, and the other in the Bailadilla-Vishakapatnam region. The feasibility study for the Goa plant was recently received by the Government. According to this study, a 1.5-million-tonne plant, with provision for expansion upto four million tonnes, was an economically and technically feasible proposition. The "decision" to establish the Goa plant during the fourth Plan period was also announced, rather hurriedly, by the erstwhile Minister for Steel, Mines and Heavy Engineering, Mr. C. Subramaniam. The hope was expressed by the Minister that the Goa plant, which was to be given priority in the fourth Plan, might be set up with the collaboration of some members of the consortium from France, Japan and the U.S.A. who had offered assistance for the Bokaro project before the Russians came forward to construct it.

Whether the Government has taken a *firm* decision to establish the fifth public-sector steel plant in the Goa-Hospet region is, of course, not quite clear. If, however, it is assumed that the "decision" is liable to be changed in the light of practical considerations, it may be worthwhile to know what these considerations can possibly be. The first and foremost consideration is how the required quantity of coking coal, which is not available in the Goa region, is going to be ensured. Whether the coal is imported from a foreign country or supplied by coastal shipping from the Bihar-Bengal collieries, the cost of haulage would be pretty substantial. If, on the other hand, it is proposed to rely entirely on imports in order to conserve the domestic reserves of metallurgical coal, such imports could be effected relatively advantageously only from South Africa with which this country has currently no trading relations. To think of importing coal from that country would involve a difficult political decision which the present Government may or may not be inclined to take. There is thus an element of uncertainty in regard to coking coal supplies for the proposed steel plant.

The second consideration pertains to power supply. As a large-sized steel plant would require a lot of power and the possibilities for hydel power generation are stated to be very limited in the Goa area, a big thermal station would have to be established in the vicinity of the plant. A thermal station, in its turn, would require large quantities of non-coking coal which, again, would have to be supplied by coastal shipping. Alternatively, an oil-fired thermal power station, as the Trombay station of Tatas, can be envisaged. But this would call for immediate expansion of at least one, if not both, of the existing petroleum refineries in Bombay from where the fuel for the power station can be easily shipped. All these considerations would have to be borne in mind and weighed carefully before coming to a final decision to locate a steel plant in Goa. The main advantages of Goa for a steel plant are: (a) abundant supply of high quality iron ore, which can be easily transported to plant site by river transport or ropeways, and (b) excellent deep-water port from where steel can easily be exported to internal and external markets alike.

It is reported that the World Bank Mission is in favour of Goa. If this is true, then it means that it has taken all aspects into consideration. According to the Mission, Goa is *prima facie* desirable for the simple reason that a steel plant there can serve the growing market in the Bombay area which takes a fifth of the country's total steel supplies. It is also attractive from the point of view of possible steel exports. Since the Mission is said to be of the view that the steel demand estimated by it for 1970-71 could be met through expansion of the five existing plants and by the establishment of one new plant besides the Bokaro project, its preference for Goa means, in effect, that the Bailadilla-Vishakapatnam region, which, too, has abundant iron ore reserves, could be abandoned as a possible location. If the Government is confident in its expectation that the World Bank's preference for Goa would improve the prospects for foreign aid, there may be a case for not dropping the proposal. But there is no reason to suppose that foreign aid (private or government-to-government) would be definitely available for any new steel plant, whatever be its location. One has only to recall, in this connection, the difficulties that confronted the Bokaro project before the Russians decided to take it up, albeit in part.

OUTLOOK FOR TEA

India exported about 42 million kg. of tea during the first four months of the current calendar year, as against the 57 million kg. exported last year. On the basis of this trend, it would, however, be rash to conclude that 1964 would witness a setback to tea exports, in contrast to the upward trend noted in the past three years. For it is possible that the decline in exports is temporary and that it may be more than made good in the remaining months of the year. The latest available indications are that the export prospects for tea in the immediate future seem to be quite encouraging. This at any rate is the view expressed by one of India's leading tea trading firms, Messrs. J. Thomas and Company of Calcutta, in its latest annual report covering the season 1963-64. In support of its view, the Calcutta firm observes:

"The fact that world supplies have been static, while demand has been rising, has clearly been an important factor responsible for the present equilibrium. To what extent world supplies —or even the North Indian crop—will increase or decrease during 1964 is obviously a point on which no useful forecast can yet be offered. But the circumstance that equilibrium prevails does imply that the 1964-65 marketing season should get off to a good start. It is noteworthy that there has been no difficulty in disposing of the end-of-season teas on the Calcutta market at useful prices; in London too, significantly, rates were sagging in the earlier months, but they have now revived and are ruling firm at this writing. The available evidence thus indicates that almost no country has unusually large stocks or a surplus of the commodity. The prospects for the immediate future, therefore, are encouraging."

The outlook for tea should, however, be assessed not from the short-term but from the long-term point of view. There is, of course, no reason to strike a note of pessimism in regard to the future for Indian tea, whatever be the trends in the world tea economy. But to say that India has nothing to fear because it produces quality teas which have no equal in the world markets would tantamount to over-simplification. Indeed, such an impression, as Messrs. Thomas and Company have aptly described, "is a regrettable myth." For, during the 1963-64 marketing season, it will be recalled, the prices of good quality teas actually declined in comparison with 1962-63, so that the working results of even some of the best Assam companies for this year have been poor. Nor is it a matter for supreme satisfaction that the large potential domestic market for tea will cushion the industry to some extent against adversity abroad, for, while that prospect may be encouraging from the point of view of tea producers, it does not help the country's foreign exchange budget. Clearly, if India is to maintain and consolidate its position as the world's biggest exporter of tea, a more realistic approach is urgently necessary. Forcefully pleading for such an approach, Messrs. Thomas and Company have pinpointed some of the weaknesses of the present policies, as will be seen from the following extract from their annual report:

"A fundamental weakness of the present policies is that they have raised the cost of production in the tea industry to disturbingly high levels. Not only is this dangerous for an industry whose fate is determined by factors of demand and supply in a highly competitive international market over which it has no control. There is also the disheartening reminder that high production costs and taxes in this country have in the post-war years amounted to a subsidy for competitors, and perhaps done more than anything else to encourage tea-growing in the newer producing territories. Now, the Wage Board is expected soon to announce yet another increase in wages, which cannot but have unfortunate consequences for so labour-intensive an enterprise. The burden of taxation remains high too."

A more or less similar view has been expressed by Sir John Muir, Chairman of the Finlay Group of Companies, in his statement to shareholders of James Finlay & Co. Ltd., London. As readers are aware, this group has considerable stake in tea industry not only in this country but also in Ceylon and East Africa. He said in London last week that it was "necessary that some incentive by fiscal means should be given to producers, if it is desired that they should expand, as, without some assistance, it will be beyond their means to do so to any material extent.... The Assam Government has, I regret to say, again decided to increase the rate of agricultural income-tax; this is the third increase in successive years. All these burdens which the industry has to bear are not conducive to expansion and make it difficult, if not impossible, for tea companies in India to earmark the finance required for development and, at the same time, meet their obligations to shareholders." Another point made by Sir John pertained to the report of the Bonus Commission. He said:

"The bonus formula conceived by the Commission, which, it would seem, is to have application to all industries, appears to be entirely unsuited to a labour-intensive industry such as tea. Although the scheme is described as being designed to enable workers to participate in the prosperity of the industry, the many unsatisfactory features even contain a quite contradictory provision for the payment of an appreciable minimum bonus in times of loss and it is to be hoped that Government will realise these defects and modify the final award. The report of the Working Group on Plantation Housing, to which I referred last year, is still awaited, but it is hoped recognition will be accorded to the enormity of the financial burden attaching to the task with which the industry is faced and that some relief will be forthcoming."

All these handicaps continue to weigh heavily on the tea industry which, as is well known, is the country's second largest earner of foreign exchange, accounting as it does for as much as 20 per cent of total exports in value. The authorities should not find it difficult to appreciate that a handicap to Indian tea industry means protection of a corresponding degree to its competitors. The big challengers to Indian tea today are Ceylon and African countries. Despite all the mistakes (fiscal and otherwise) that are being made by the Ceylon Government, Ceylon tea has been scoring over Indian tea in all the principal markets of the world. If things go on at this rate, it will not be long before Ceylon steals the first place among the tea exporting countries. The African producers are also making rapid headway. This is not crying "wolf." Similar warnings by this journal in regard to cotton textiles were disregarded, so that India has been steadily losing its share of the world trade in these manufactures.

The authorities are already aware that the cost of new planting and replanting of tea bushes is high and so the returns, as Messrs. Thomas and Company point out, have to be commensurate with the large outlays involved. For this purpose, the provision of loan facilities is welcome, but it has to be supplemented by tax reliefs and subsidies. "In the effort to fight competition," to quote the Calcutta firm, "the tea industry needs not merely fiscal concessions but clear rewards for confident expansion. A useful beginning in this direction could be made by granting a full rebate of the excise duty on any tea which is exported and by allowing the expenditure on replanting and new planting as a revenue charge." These remedies have been suggested time and again in recent years. The response, however, has been poor. Not even the veracity of the first remedy has been admitted by the Government of India. As regards the second one, Mr. Manubhai Shah disclosed a few weeks ago that it was already being favourably considered by the Centre and that the State Governments, too, were being requested to treat such cost as revenue expenditure under the State Agricultural Income-tax Acts. It is time the stage of consideration quickly yielded place to that of action. Unless all remedial measures are introduced without any further delay, the proposed fourth Five-year Plan target of 1,000 million lbs. of tea (as compared with the crop of 780 million lbs. in 1961) will sound highly unrealistic.

INCOME-TAX APPEALS

The suggestion recently made by the Chief Justice of India that the Income-tax Appellate Tribunal should be abolished and its work be entrusted to high courts has not found favour with the Federation of Indian Chambers of Commerce and Industry. The Federation has just taken the stand, in a note to the Union Finance Ministry, that the tribunal, consisting of a judicial officer and an accountant as members, is the best machinery for inquiring into the technical and accounting aspects involved in tax appeals. There may be a case, in the considered opinion of the Federation, for streamlining the present machinery but not for abolishing it altogether. Incidentally, this view is also in accord with that of the Direct Taxes Inquiry Committee which had specifically recommended that the prestige of the Tribunal should be enhanced and that high courts need not be entrusted with the work. It is indeed a realistic approach, for entrusting such taxing problems to the *aleady-overburdened high* courts may mean much delayed justice.

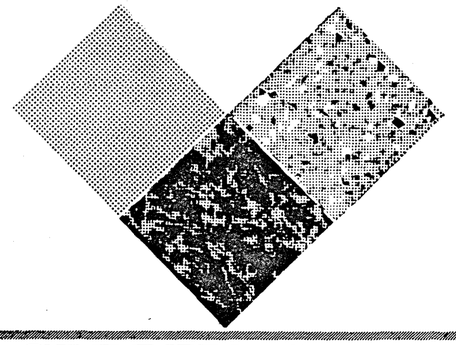
It would, therefore, be sensible to keep intact the present set-up for hearing income-tax appeals. The set-up, of course, can be improved in some ways. It is here that the F.I.C.C.I.'s stand is notable for its constructive suggestions. One of these is that the first appeal before the Appellate Assistant Commissioner should be made an effective first appeal instead of being a mere administrative review as at present. This, according to the Federation, can be ensured only if the Assistant Commissioner is independently placed under the Ministry of Law. The standard of recruitment and status of the members of the Tribunal should also be raised. A further two-fold suggestion is that the appellate procedure could be cut short by referring a question of law to the high court and, in the event of varying judgments on the same question of law by different high courts, by seeking the Supreme Court's decision in the matter. As for questions of fact, the Federation's suggestion is that a reference to the high court could possibly be made, if there is no agreement between the parties on the facts of a case and the relevant questions are of a substantial character. Finally, the Federation has suggested that the second appellate tribunal could take the form of a court of revenue appeals at the high court level, with five benches—one each at Delhi, Bombay, Madras, Calcutta and Allahabad. Appeals from the orders of the Income-tax Appellate Tribunal, as visualised by the Federation, would then rest with the court of revenue appeals on both questions of fact and law. The merit of these suggestions would seem to be that, in most cases, there might be no need for second appeals, if questions of law or substantial questions of fact have been referred to high courts and disposed of in the course of first appeals before the Tribunal. That would certainly make for quicker justice in income-tax cases.

WORLD BANK LOAN TO TUNIS

The World Bank has announced the grant of a loan equivalent to $7 million to Tunisia to assist in creating a modern port for Tunis. The project will relieve serious congestion and provide additional capacity at the port handling over half the country's foreign trade and serving an area containing more than half of Tunisia's population of four million, including Tunis, the capital and main commercial centre. The Chase Manhattan Bank (New York), Commerz bank A.G. (Dusseldorf), Chemical Bank New York Trust Company and Bank of America National Trust and Savings Association (San Francisco) are participating in the loan, without the World Bank's guarantee, for a total of $420,000, representing the first maturity and part of the fifth maturity which fall due between 1st August 1967 and 1st August 1969.

The total cost of the project is estimated at $11.4 million. The Bank loan of $7 million will cover the foreign exchange requirements. The Government of Tunisia will apply the proceeds to the cost of the project which, on completion, will be transferred to the new Office; the latter will assume a liability to the Government corresponding to the amount of the Bank loan.

The World Bank loan is for a term of 25 years and bears interest at the rate of 5¼ per cent per annum, including the 1 per cent commission which is allocated to the Bank's Special Reserve. Amortisation will begin in August 1967.



GREATER STYLE
with new
VYNATILE
WONDERFUL PLASTIC TILES FOR FLOORS!

There's nothing like VYNATILE—the unique new floor covering! Strong, flexible and beautiful, VYNATILE does wonders for rooms—looks distinctive on any floor. Ideally suited to offices, shops, restaurants, showrooms, banks, theatres, homes and hospitals!

Choose VYNATILE in 3'x3' sheets, in thicknesses of 1.5 mm. or 2 mm. Or ask for it in any economical size. Better still, take it as tiles to fit into your scheme of things!

VYNATILE...better in so many ways!
- So durable. Won't rot, crack, break or scratch!
- Can be used on any surface!
- Superbly finished. In 28 attractive colours and patterns!
- Can be wiped clean in seconds!
- Professionally laid to last for years!

INDIAN EXPORTS SO LITTLE TO LATIN AMERICA

DELEGATION'S VISIT MAY PROVE HELPFUL

THE Government of India has done well in sending a trade delegation to Latin America this month (June 1964). This region does not appear to have received adequate attention from India. Argentina and Chile are the only two countries of the area with which India has some sizable trade.

The total value of exports from India to Argentina rose from about Rs. 5 crores in 1961-62 to Rs. 8.5 crores in 1962-63. The major items of exports were hessian cloth and manganese ore. In 1962-63, this country exported to Argentina 43,168 metric tons of hessian cloth as compared with 24,582 metric tons in the preceding year. The export of manganese ore improved from Rs. 3 lakhs in 1961-62 to Rs. 5 lakhs in the next year.

India's total exports to Chile fell from about Rs. 2 crores in 1961-62 to Rs. 1.28 crores in 1962-63. The decline was prominent in tea, hessian cloth, sacking cloth and sacking bags. Export of tea from India declined from Rs. 35 lakhs to Rs. 18 lakhs, hessian cloth from Rs. 9 lakhs to Rs. 52,000, sacking cloth from Rs. 2.6 lakhs to Rs. 64,000 and sacking bags from Rs. 1.3 crore to Rs. 77 lakhs.

The actual figures of exports during 1963-64 are not yet available. But estimates show that the total exports to this region were about Rs. 12 crores in 1963-64. The main items were jute manufactures, lac, paraffin wax, groundnut oil and manganese ore. Of these items, only jute manufactures were the most important. In 1963-64, the export of jute manufactures to Latin America was as follows:

	(Rs. '000)
Hessian cloth	87,528
Hessian bags	10,324
Sacking bags	9,908
Sacking cloth	1,200
Jute rope and twine	266
Jute wool sacks	70

The export of lac was valued at Rs. 40 lakhs, that of paraffin wax Rs. 36 lakhs and groundnut oil Rs. 8 lakhs.

It is significant that the export of non-traditional items to South America has made practically no progress. Items like pneumatic cycle covers, radio receivers, bicycles and parts, sewing machines, art silk piecegoods etc., hardly figure among our export trade with this region. And even among traditional items, only exports to Argentina are sizable. The exports to other countries like Bolivia, Brazil, Chile, Colombia, Peru and Venezuela are negligible. It may be noted that our total export of tea to Latin America was valued at about Rs. 15 lakhs in 1963-64.

So far as imports into India from Latin American countries are concerned, the main items are kerosene, natural sodium nitrate, antimony ore and concentrate, and raw cotton, the quantity and value of these imports being relatively negligible.

It is to be hoped that the visit of the trade delegation will prove useful and effective in improving our trade relations with this part of the world.

The accompanying table shows the pattern of our export to Latin America in 1963-64.

FISH IN SAUDI ARABIA

Although fish is very much liked in Saudi Arabia, there is no organised fish industry as such in that country. Saudi Arabia has a substantial consumption of marine products like fish, prawns, shrimps, etc. Though the coastal areas of the country seem to provide large-scale fishing prospects, the trade in fresh fish is limited and is being handled by a small section of professional fishermen. The local people, including those living in deserts, are fond of fish and the bulk of the demand is known to be met from imports of tinned and canned/dry fish from outside.

China, Japan, the U.S., Portugal, Egypt, the U.K. and Denmark have been the principal suppliers to this market. Occasionally, Indian products like tinned shrimps, etc., are also found in the market. Syria, Lebanon, Bahrain and Kuwait, etc., also share in this trade. Dried prawns in larger size are known to be imported from India while other kinds of dry fish are being imported from coastal areas like Dubai, Doha, etc.

Among various kinds of fish, tuna and sardine are more popular and are consumed in sizable quantity. Regarding packing, it is gathered that, generally, tins of 3¼ oz. and 4½ oz. are more desired and marketed here in quite a good quantity owing to the cheapness in prices. Customs duty leviable on tinned fish, prawns and shrimps, etc., is 25 per cent *ad valorem*, while dried fish with or without salt is subject to a duty of Saudi Rials 2 per 100 kilogram only.

MARKET FOR SHRIMPS IN U.S.

The United States could absorb practically everything that India produces by way of canned and frozen shrimp, says a report received by the World Trade Department of Indian Chamber of Commerce, Calcutta from San Francisco. The report says that dried shrimp has as yet not found a market in San Francisco. However, after suitable recipes are made for preparations of dried shrimp so that dried shrimp could be used as an *hors d'œuvre* in America, it is bound to have good sales. Thus, there is great scope for its export to the United States. Initially, this will involve quite a lot of expense, as a promotion drive is necessary for the development of the export of this commodity.

A delegation of the Marine Products Export Promotion Council visited the United States in April 1964. It covered New Orleans, Los Angeles and San Francisco as well as other places on the East Coast of the United States. The members of the delegation met leading canners of shrimp, lobsters, mackerel, tuna, and sardines at these places. The delegation is expected to submit a special report of its findings to the Ministry of International Trade.

Composition of Indian Exports to Certain Latin American Countries in 1963-64 (Estimated)

(In Rs. '000)

LONDON LETTER

MARKET IN DOLDRUMS

GOLD RESERVES UP

(From Our Own Correspondent)

LONDON, *6th June*

THE stock market is so preoccupied with political and trade trends that even the third successive month's rise in the gold reserves does not awaken one flicker of interest. As a commentator has put it, "one look at a jobber and the price of the most respectable stock drops by 6*d*." ! So for six weeks now, industrial shares have drifted downwards, with investors being counselled by some to hold on because an upward turn is bound to come and by others not to buy because as the election gets nearer there will be a further drop—to which the optimists reply that that has already been discounted.

One of the last of the pre-election by-elections has now taken place and Labour is jubilant with the record size of its majority. The Conservatives find comfort that the swing against them at this election was only 5.2 per cent, while at the recent group of four by-elections it was 6 per cent ; they calculate that, if the swing goes on reducing at this rate, they will just about scrape in in October. Labour does not take this view, pointing out that, at the last General Election, the constituency, Faversham, was one of the few Labour gains of a marginal seat, so that Labour's performance this week must be measured against a very good result in 1959. The most solid commentators concede that the tide towards Labour has not significantly weakened, while the bookmakers have indeed increased the odds in favour of a Labour victory : the betting is 7 : 2 now in favour of a Labour win !

The May rise in the gold reserves of £17 million follows an April rise of £19 million, so that from below £950 million in Feb.-March the reserves are now very nearly back to their £1,000 million norm. Sterling, while still at a fractional discount on par with the dollar, has strengthened and, if the next set of trade figures shows that the April results were relatively poor, then the currency will be very firm, in spite of any election doubts.

Stock Market

To return to the Stock Market position. This must be seen in context. A year ago, the *Financial Times* index stood a little over 300 points from which it continued to rise sharply to reach 350 points by the end of December. Then came the sharp fall in January from which a ragged recovery took the index to equalise its New Year heights in the latter part of April. Since then, the decline has been steady, but, even so, amounts to no more than 5 per cent from the peaks. It must fall nearly as much again to make the early February low point. And, if one takes monthly averages, then April, with its all-time highs, is calculated by the *Financial Times*. Ordinary index to be 347 and May 343. The current trend of the index is no steeper than it has been for several weeks—ignoring the abnormalities of particular days.

Now, although political and trade reasons are given as the underlying factors for the downward trend, it is as well to take a look at current yields and consider whether the catching up on the past of the last three years has not overshot itself. The industrial ordinary dividend yield shown by the *Financial Times* index was only 4½ per cent at peak prices and even at today's lower levels is only a fraction over 5 per cent. The special 500-share index (the most important securities) gave only a shade over 4 per cent at the peaks and even now only 4.7 per cent. While a glance down the list of top grade industrials shows yields under 4 per cent as common. The holders at these levels are more interested in an inflation hedge than in current returns, but, clearly, many investors wonder whether the hedge has not been too expensively provided.

Industrial Prospects

In the background, the industrial prospects are as strong as ever, but that does not mean that exaggerated capital appreciations can be looked for, unless inflation really occurs. And the authorities have already shown that the greatest danger industry faces is the Chancellor's heavy hand to knock business activity down as soon as the head of inflation is raised. The danger of recession is thus greater than the danger of inflation, which lends point to the inadvisability of general investment at what appear to be overvalued levels. The current market movements can, therefore, be regarded just as much as a realistic appraisement of what the generality of industrial shares are worth, of what long-term investors expect to get on their capital, as responses to political and trade fears.

Of course, prices can quite easily move up again, though a serious movement is not likely till a new Government has been elected and shown its hand, but the broad feeling is that prices have, in the recent past, been marked up about as high as is reasonable in the light of current yields and current capital appreciation prospects. If there are further drops, these will not mean any lessened appreciation of industrial prospects—these are set high, unless and until Government action slaps them down—but will be in response to the various fears which activate an essentially speculative market.

READY FOR A DOLLAR TURN-ROUND?

By Questor

IT may not be long. I suggested here some time ago, before the U.S. balance of payments deficit is a problem of the past and the world is again faced with a dollar shortage. I am glad to note various straws in the wind which tend to support this suggestion.

The sharp reduction in the deficit during the first quarter of 1964 appears to have been due largely to special factors of one kind and another and may not persist. But the drain of gold appears to have been finally staunched. Not only has the Federal Reserve gold stock been absolutely unchanged for fourteen weeks past but the Treasury has recently been gaining rather than losing from the operations of the "gold pool" of central banks organised by the Bank of England. So far this year, the total reserve has risen by just on $100 million.

There is no doubt that the U.S. gold stock is still being insulated to some extent from the free operation of market forces through the network of inter-governmental arrangements organised by Mr. Roosa. It is too early yet to claim that the surplus countries of Europe are anxious to hold on to as many dollars as they have. But private confidence is returning steadily, and this in itself could have a major effect on the flow of short-term capital. It is the short-term capital account, as Professor Triffin points out in a recent article (entitled, significantly, "The End of the Dollar Glut?"), which is now of crucial importance.

In 1959, he remarks, the U.S. market balance on current account—current transactions, that is, together with the outflow of official—moved suddenly into heavy deficit. But, since then, it has moved back into a larger and larger surplus. The effect of this recovery has been masked only by a jump in the outflow of private capital, both short-term and long-term.

Yet the outflow of short-term capital was more than halved during the second half of 1963, and that of long-term capital has since been greatly reduced by the interest equalisation tax proposal. The rate of overall deficit dropped from nearly $3 billion during 1960-62 to less than $2 billion in the second half of last year, and a continuation of the 1963 rate of improvement "would eliminate—and even reverse —this residual deficit in a relatively short time."

There are some reasons for believing that this rate of improvement will, in fact, be maintained. Imports may rise with business activity, and cuts in foreign aid will probably be directly matched by a drop in exports. But the current account seems bound to gain from the sharp improvement in the cost-competitiveness of the U.S. which has taken place during the past few years.

Since 1959, U.S. wage costs have risen no faster than output. By contrast, they have risen by about 10 per cent in Britain and twice as much or more in the European Economic Community. A graph of relative wage-movements per unit of output is enough in itself to divert attention from the temporary payments difficulties of the U.S. to the structural factors tending to produce a world shortage of dollars.

The U.S. surplus on current account is already large enough to finance a reasonable level of long-term capital exports, and a further increase might well cause considerable embarrassment to its trading partners. The return to overall equilibrium can best be arranged by means of a reversal of the flow of short-term capital. Short-time capital tends naturally to flow towards developed financial centres; it moved into the U.S. from abroad at an average rate of $500 million a year in the early 'fifties and over $1 billion a year in the late 'fifties.

In 1960, however, the flow suddenly changed direction and $1.8 billion a year moved out of the U.S. during 1960-62. Only in the middle of last year did this movement slacken as speculation about dollar revaluation began to seem far-fetched in the light of heavy Russian gold sales, successful co-operative action to oil the working of the monetary system, and the gradual reduction of the European surplus. There is every reason to expect that this trend will continue.

Politicians are always liable to continue fighting last year's battles, particularly in the economic field, and there is a risk that the U.S. may go on acting as if it had a payments deficit long after the deficit has disappeared. Such an error of policy, given the relative size of the U.S., could have a serious impact on world prosperity. The U.S. Administration, I believe, should realise that the balance now depends on the movement of short-term capital, that this can change swiftly, and that it should be ready to change its attitudes with equal swiftness.

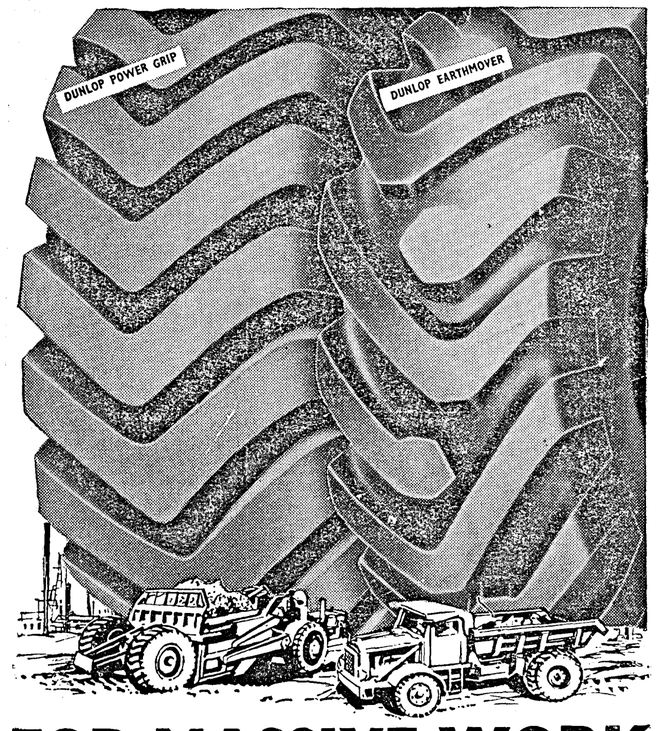
A change of attitudes may become necessary in two directions. First, the U.S. should be ready to seize the initiative at the first possible opportunity to force through a reform of the international monetary system which reduces the dependence of world trade on holdings of pounds and dollars. Once the U.S. is back in a position of strength, it is to be hoped it will be more imaginative than the Europeans have been while in surplus.

Second, it should be ready to offset an inflow of short-term capital by spending dollars freely. This might not only mean abandoning the interest equalisation tax—which seems to have served its main purpose before being actually imposed—but supplying larger quantities of untied aid to developing countries and removing many of the protectionist devices which are still operated against imports of foreign goods and services.

MIDLAND BANK'S NEW CHAIRMAN

Sir Archibald Forbes, a Deputy Chairman of the British Midland Bank, is to succeed Viscount Monckton as Chairman of the Bank on 1st July 1964. Lord Monckton is retiring for reasons of health. Sir Archibald will also be the Chairman of the Midland Bank Executor and Trustee Company. He joined the Board of Midland Bank and the Trustee Company as a Director in 1959 and was appointed Deputy Chairman of both in 1962.

MASSIVE TYRES



FOR MASSIVE WORK

The scraper and the dumper. Two powerful modern beasts of burden, indispensable for moving with continuous operation thousands of tons of earth at project sites. Tremendously heavy and strenuous work, requiring the toughest pneumatic tyres. Dunlop Power Grip and EM. 7 Earthmover tyres are proving themselves superbly in service ... at Koyna, Nagarjunasagar, Kosi, Sharavathi, Beas ... In the iron ore mines of Bihar, Madhya Pradesh, Goa...In the farflung coalfields of the National Coal Development Corporation and at many other project sites all over India.

The tread pattern and especially tough casings of these Dunlop tyres were developed after prolonged field trials in different kinds of terrain in many parts of the world.

INDUSTRIAL DEVELOPMENT BANK

AN OUTLINE OF ITS MAIN FEATURES

THE Industrial Development Bank of India, now being actively established under an act of the Parliament which received the President's assent on 16th May 1964, will begin operations from 1st July 1964. It is intended not only to provide capital for the public and private industrial sectors, but also to mobilise savings, enterprise and skills for productive investment. For the first time will it now be possible for a central co-ordinating agency to deal with *all* the problems of industrial financing and development and to adopt and enforce a system of priorities in promoting industrial growth. The vision of an Industrial Bank for taking an active part in the promotion of new industrial undertakings, conceived by the Central Banking Enquiry Committee more than thirty years ago, when no action was possible, has at last been realised in full measure.

Not that the entire period of a generation has been without any activity whatsoever in this direction. Since 1948, several financial and development agencies like the Industrial Finance Corporation, the Industrial Credit and Investment Corporation of India, the Refinance Corporation for Industry and the National Industrial Development Corporation at the Centre, State Financial Corporations, and State Industrial Development Corporations at the State level and specialised institutions like National and State Small Industries Corporations have tried to serve, to a considerable extent, the needs of Indian industry. Although they were all conceived on a modest scale and began operations with limited objectives and scope, some of them at least, particularly the first three, have made impressive progress, gained valuable experience, and cultivated a constructive and integrated approach towards the development problems of industry.

Nevertheless, they have been unable to make that substantial contribution towards the industrial progress of the country envisaged in the Five-year Plans, for they were neither intended nor equipped to carry the major burden of financing industrial expansion and growth in various directions. The total assistance provided by the various existing institutions was estimated by the Finance Minister around Rs. 200 crores—clearly inadequate in relation to the size of the private and public sector investment under the Plans and in view of the rising costs and prices: gaps in the development of certain vital and strategic sectors like electricity, fertilisers, alloy or special steels, petro-chemicals, and useful consumer goods have been even more yawning than in others. Although a more accurate measure of the usefulness of the existing institutions could have been provided by the Finance Minister by considering the total amount of investment which Rs. 200 crores has helped to sustain, the limitations of the existing institutions cannot be denied.

Firstly, their capital resources are relatively meagre; secondly, the statutory framework within which they operate is restrictive; and, thirdly, the requirements regarding assets or securities against which they can lend are rather rigid. The result has been that existing finance and development institutions were largely unable to handle major projects, to finance basic industries, assess the risks of enterprise in a long-term perspective. As the Finance Minister put it, the existing institutions tend, by reason of their statutory obligations and traditions, to be conservative.

Strange Paradox

It is a strange paradox that, while the new Industrial Development Bank has been created mainly for overcoming these limitations, nothing is being proposed to give an equal freedom of operations or to provide comparable resources to the existing institutions: none of their limitations are of their own creation, and, unless the statutes or rules governing their working are amended, their usefulness may continue to be circumscribed in many ways. It is not enough to refer to their limitations and to leave them at that; even within the limitations of obligations and traditions, many of the existing institutions have made significant contributions towards financing industrial development; they have encouraged new entrepreneurs and talents, and the value of their contributions would be enhanced by removing their handicaps.

It appears to be the intention of the Finance Minister to make the Industrial Development Bank, with its vaster resources and wider functions, a major force in the capital market: whether he will ultimately succeed in finding in the new Bank an alternative which will make the mood or morale of the capital market entirely irrelevant to the Government policies, is altogether a different matter, but, in any case, whatever be his aims, he would have come much nearer to them, if he had relied upon widening the functions and increasing the resources of those existing institutions which have already made their mark, rather than upon starting an entirely new institution which will take years before it could make a place for itself as a leader of those who are far ahead of itself in practical experience and insight into the strategy of development.

Resources

The new Development Bank will have ample resources from the very commencement of its operations: the initial paid-up capital of Rs. 10 crores (authorised capital Rs. 50 crores which could be raised to Rs. 100 crores, if needed), supplemented by an interest-free loan of an equal amount from the Central Government (repayable in 15 equal instalments after a period of 15 years from the date of the loan), makes the position of the Development Bank unique in many ways, unmatched by any of the existing institutions. In addition, the Development Bank's set-up is notable for five other features which provide it a privileged access to the Government and the Reserve Bank both for its rupee and foreign exchange resources. Thus, it can borrow from the Reserve Bank for short periods against trustee securities, for periods up to five years against *bona fide* commercial bills or promissory notes bearing two good signatures, and for long-term purposes out of the National Industrial Credit (Long-term Operations) Fund which will shortly be established by the Reserve Bank and which will be augmented by an annual contribution of Rs. 5 crores out of the Reserve Bank's profits. The Development Bank can further borrow, with the approval of the Central Government, in foreign currency from any foreign bank or financial institution and can also raise deposits or borrow money on bonds in India. The Central Government itself will make its own direct contributions to the Development Assistance Fund of the Development Bank, a fund which is intended to isolate the losses of the Bank resulting from its operations undertaken purely in national interest.

Short-term borrowing from the Reserve Bank will be in the nature of usual banking accommodation: the medium-term borrowing is, however, an altogether new concession or facility which will add, on the whole, to the quantum of resources available for industrial development. The Industrial Development Bank is authorised to discount certain kinds of usance bills, maturing within a period of five years, which may be floated or created for financing industrial enterprises. The discounting may be made both for the purpose of financing the enterprises themselves or of refinancing the banks which have financed them. Further, the Reserve Bank of India is being authorised to rediscount such bills.

Two Funds

The National Industrial Credit (Long-term Operations) Fund is intended to be used for supplementing the resources which the Industrial Development Bank may be able to raise in the normal course for financing the activities of the established agencies which are concerned with the provision of industrial credit, and to the extent necessary, for financing the Development Bank's own programmes. The Reserve Bank may purchase out of this Fund, bonds and debentures issued by the Development Bank or may grant loans to the Development Bank for the purpose of acquiring shares, bonds or debentures of other financial institutions.

The Development Assistance Fund will be used for financing essential industries, which, on purely commercial considerations or in light of the standards or criteria normally adopted by credit institutions, may not be able to obtain any financial assistance. The activities of the Fund, it is hoped, may bring into existence, over a period of years, a number of enterprises which may be of vital or strategic importance to the country, but which an ordinary banker or a commercial institution may not be *willing* or *able* to finance.

With these resources, the Development Bank may engage into any or all of the fivefold types of business of refinancing or granting loans, subscribing to or purchasing bonds, debentures or equity, guaranteeing deferred payments and underwriting equity capital, undertaking research into the problems of industrialisation or providing technical and administrative assistance for industrial promotion, expansion and management, details of which were given on page 358 of *Commerce* dated 7th March 1964.

Before concluding this article, one may refer to the controversial constitution and top management of the Development Bank. It is, in a sense, the lender of last resort for all periods other than purely short periods. And, for all purposes as far as industrial enterprises are concerned, this apparent similarity with the functions of the Reserve Bank of India as the lender of last resort for short-term purpose has apparently induced the Government to entrust not only the ownership but also the management of the new Bank to the Reserve Bank of India, by totally ignoring the fundamental differences between term lending or industrial credit and seasonal or short-term credit. It is difficult to appreciate how a single, identical Board of Directors could possibly discharge the onerous functions and heavy responsibilities of managing a Bank concerned with industrial financing and development, simultaneously with managing the central banking function of maintaining the currency and credit mechanism of the country on an even keel, even if one were to accept without any reservations the claim of the Finance Minister that the Reserve Bank is free from political pressures of influences, that it is in a position to take an objective view of the country's needs and that it is competent to undertake multifarious responsibilities quite unrelated to each other.

BUY NATIONAL DEFENCE CERTIFICATES

KRISHNARAM BALDEO BANK

The profit, before taxation, of the Krishnaram Baldeo Bank (Private) Ltd. for the year ended 31st December 1963 has declined to Rs. 2.07 lakhs from Rs. 3.48 lakhs to which level it had improved in 1962 from Rs. 1.73 lakh earned in 1961. The profit has receded again because both outward interest and staff expenses have increased, whereas in 1962 they had been lower. The amount of interest paid on deposits and borrowings, which had come down from Rs. 5.34 lakhs to Rs. 4.45 lakhs in the previous year, has moved up to Rs. 5.93 lakhs during the year under review. Staff expenses, too, have gone up to Rs. 3.01 lakhs from Rs. 2.61 lakhs to which level they had dropped in 1962 from Rs. 2.78 lakhs in 1961. Other expenses have increased further from Rs. 1.25 lakh to Rs. 1.42 lakh. On the other hand, the income from banking business proper has recorded a limited improvement from Rs. 11.78 lakhs to Rs. 12.19 lakhs as compared with the increase of over Rs. 1 lakh from Rs. 10.71 lakhs to Rs. 11.78 lakhs recorded in the previous year, though income from other sources, which had receded from Rs. 43,000 to Rs. 34,000 in the previous year, has gone up to Rs. 59,000. Depreciation has claimed Rs. 35,100 (Rs. 33,541 a year before) and taxation Rs. 82,000 (Rs. 1.72 lakh). The amount set apart for staff gratuity fund has been lower at Rs. 10,000 as compared with Rs. 26,000 in the previous year. The statutory reserve fund has got Rs. 50,000 less at Rs. 25,000. The taxable dividend on the Rs. 50 paid 100 rupee shares has been maintained at Rs. 1.50 per share, to which level it had been raised in the previous year after it was cut in 1961 from Rs. 3.90 to one rupee. The carry forward is Rs. 25,241, as against Rs. 10,398 brought in.

The increase in outward interest has been due largely to the improvement in the deposits position from Rs. 176.36 lakhs to Rs. 195.08 lakhs, in contrast with the decline from Rs. 205.08 lakhs to Rs. 176.36 lakhs in the previous year. With an improved deposits position, the Bank has closed the year with higher advances aggregating Rs. 85.02 lakhs, as against a decline of Rs. 19.21 lakhs to Rs. 61.72 lakhs in the previous year. Investments, which had moved down from Rs. 89.44 lakhs to Rs. 87.40 lakhs in the previous year, have receded further to Rs. 83.50 lakhs at the end of the year under review. The total cash at the end of the year is also lower at Rs. 82.89 lakhs as compared with Rs. 84.71 lakhs a year before. Thus, while the credit ratio has jumped up from 35 per cent to 43.9 per cent, the ratio of investments to deposits has moved down by seven points to 42.5 per cent and that of cash balances to deposits receded from 48 per cent to 42.5 per cent. Only Rs. 55.15 lakhs out of the total investments of Rs. 83.50 lakhs are in Government securities. The paid-up capital is unchanged at Rs. 25 lakhs and reserves amount to Rs. 42.75 lakhs, bringing the total of "own funds" to Rs. 67.75 lakhs which, as a percentage of deposits, stand at as high as 34.8 per cent, as against 38.2 per cent a year before.

BOOSTING MILL CLOTH PRODUCTION

ADEQUATE SUPPLY OF MACHINERY AND RAW COTTON URGENT

COMMONSENSE will tell anyone that the solution to the problem of high prices lies in a sustained increase in the production of goods and commodities. The importance of such an increase in production is especially great in the case of an essential item of consumption like apparel fibre and fabrics. The past few years have, of course, witnessed a marked rise in the available supply of these materials, but the rise has not been commensurate with the expansion of demand for the same. Actually, in respect of mill-made cotton cloth, production has not only not risen but tended to decline. The output of cloth is currently running at an annual rate of about 5,000 million yards, which, though it is higher than the 4,837 million yards produced last year (1963), is well below the peak output of 5,317 million yards touched in 1957. It must, of course, be conceded that there has been an improvement in the quality and fineness of cloth produced since 1957. Even so, the output in 1963 can be said to have been less than that in 1957. The reduction in output has occurred when the population of the country has gone up considerably, the net addition between 1957 and today being no less than 56-57 million, so that the *per capita* availability of mill-made cloth has gone down from 13.1 yards in 1957 to 10.8 yards in 1963; no account is taken here of the changes in stocks with mills and traders. If one deducts, as, indeed one must, the cloth exported (839 million yards in 1957 and 534 million yards in 1963), the *per capita* availability of mill cloth for domestic consumption comes to a mere 9.6 yards in 1963, as against over 11.0 yards in 1957.

A part of the decline in mill cloth output might have been made good by a notable improvement in the production of handloom-powerloom cloth, rayon piecegoods and fabrics produced from other man-made fibres. But this is no consolation. A point that one must bear in mind, in this connection, is that, between 1957 and 1963, a considerable amount of capital has been expended on modernisation and expansion of the composite mills. Unless, therefore, this additional investment yields more production and expands the profitability of the industry, it becomes a social waste. Further, the production of cloth in mills must be stepped up, if the persistently rising demand for cotton textiles (exerted by the continuously increasing trend of population, the improvement in purchasing power in the hands of the people and the need for earning foreign exchange through exports) is to be satisfied *fully and at an economic cost.* We have advisedly italicised the words "fully and at an economic cost," because it is the more efficient mill industry that has the economics of scale and not the decentralised sector representing the handlooms and powerlooms.

How can the production of mill cloth be augmented? One of the ways open is more intensive utilisation of capacity. This is being done to a considerable extent, the limiting factors being shortage of power, trained labour and raw materials. Quite a good portion of the industry has been modernised, though there is still a substantial leeway to be made up. It is also necessary to expand further the spinning and weaving capacities of mills, rehabilitate the economically viable units (utterly old and weak units must, of course, be closed down), modernise (that is, installation of high-speed spindles and automatic looms), and rationalise production methods. All this requires an adequate supply of textile machinery. It is true that the capacity and the production of the different items of machinery have both expanded quite appreciably of late (*vide* Table A), but the supplies actually available are said to be insufficient to meet the current requirements of mills. One of the difficulties encountered by the cotton mill industry in its efforts to maintain production at a high level has been the long delivery periods extending to more than forty months stipulated by the indigenous manufacturers of ring frames and carding engines. Pointed attention to this difficulty has been drawn by the Indian Cotton Mills Federation in the course of a communication addressed to the Textile Commissioner. The Federation has urged the Textile Commissioner to persuade the Government of India to permit imports of ring frames and carding engines to the required extent.

Table A: *Progress of Cotton Textile Machinery Industry*

Spindles

The Federation has sought to justify its stand by submitting a special note on the requirements of textile machinery from 1964 onwards by way of expansion and rehabilitation to the Cotton Textiles Consultative Board at its meeting held on 9th December 1963. According to this note, the rehabilitation requirements of spindles are estimated at 600,000 every year. As for expansion, licences have already been issued for 3.3 million spindles, of which not more than 300,000 spindles have been actually installed, besides the 100,000 to 200,000 spindles installed against licences issued during the second Plan period. There is thus a balance of three million spindles to be installed against licences issued in the third Plan period. Recently, it will be recalled, all mills were allowed to expand their spindleage by 7½ per cent and this will call for the installation of another one million spindles, or a total of four million spindles. Even if it is assumed that only half of this total number is installed in the remaining two years of the third Plan, the annual requirements comes to one million spindles. The aggregate annual requirements of spindles, including the 600,000 needed for rehabilitation, will thus be 1.6 million, against which the current annual rate of production is not more than 800,000 spindles; this is likely to rise to one million spindles by the end of 1965-66. The annual shortfall, according to the Federation's reckoning, is of the order of 800,000 spindles.

Carding Engines

On the assumption that the expansion of spindles in the remaining two years of the Plan will be at the rate of one million a year, the requirement of carding engines will be 3,300 to which should be added another 1,000 engines for rehabilitation, making a total of 4,300, whereas the rate of output is just 1,700 (the third Plan target is 1,770). The annual shortfall thus comes to 2,500 carding engines.

Looms

As for looms, the position is as follows:

For purposes of rehabilitation, 7,000 looms are required per year. Further, mills have recently been permitted to install additional 10 per cent looms which makes for a requirement of 20,000 looms. Again, the 210 spinning mills will, at the rate of 100 looms each, require 21,000 looms for balancing purposes. Assuming that only half of the permitted expansion of 41,000 looms will be completed in 1964 and 1965, the annual requirement of looms will be 17,000 (7,000 for rehabilitation and 10,000 for expansion), but actual output is running at only an annual rate of 6,000 (3,500 automatic looms and 2,500 plain looms). The shortfall is 11,000 looms.

Other Items

Besides the inadequacy in the domestic supply of spindles, carding engines and looms (all these are on the banned list), there will be a corresponding shortfall in the supply of other items of machinery also such as blow room lines and speed frames.

Fourth Plan Needs

The position in regard to the supply of cotton textile machinery is bound to be even more difficult during the fourth Plan period, as will be noted from the estimates in respect of spindles and looms (by the Working Group on Textile Machinery) given in Table B below:

Table B: *Machinery Requirements*

(Spindles in millions and looms in actual numbers)

	End of		Present capacity
	Fourth Plan	Third Plan	
Spindles	21.25	15.5	14.00
Looms	290,000	220,000	200 000

The estimates are considered to be the minimum for ensuring an average *per capita* availability of 18.59 yards of cloth by the end of the fourth Plan. Assuming that the number of spindles and looms at the end of the third Plan will reach the figures mentioned alone, the additional capacity that will have to be installed in the fourth Plan period comes to 5.75 million spindles (3.00 million for expansion and 2.75 million for rehabilitation) and 70,000 looms (30,000 for expansion, 33,000 to rehabilitation and 7,000 for meeting the requirements of the powerloom sector). The addition of this much capacity is estimated to entail a total outlay of Rs. 300 crores, or Rs. 60 crores in each year of the fourth Plan. This figure of Rs. 60 crores is double the value of annual output (Rs. 30 crores) of spindles and looms anticipated for 1965-66 and nearly three times the actual production (Rs. 19 crores) in the calendar year 1963.

Need for Some Imports

The aforesaid figures vividly bring out the great shortfall that remains to be covered in the supply of textile machinery in order to enable the cotton mill industry to meet its expansion and rehabilitation requirements of machinery in the next seven years. The indigenous manufacturers of cotton textile machinery must, therefore, be given, as the Federation has rightly emphasised, every possible help, through allotment of foreign exchange, long-term loans to meet rupee finance, and supply of pig iron, imported components, etc., to augment production. The manufacturers also, on their part, should endeavour their best to incorporate latest designs and other technological processes in the equipment turned out by them. Until, however, the capacity of the

MANCHESTER LETTER

COTTON TEXTILE IMPORTS UP AGAIN

WEAVERS' ASSOCIATION REVIEWS TRENDS IN TRADE

From Our Special Correspondent

MANCHESTER, 2nd *June*

APART from two months in the first quarter of 1961, imports of grey and finished cotton goods in April were the highest so far encountered. The total involved was 78,084,000 yards, of which 62,387,000 yards represented grey cloth, including 26,511,000 yards from India alone. As a result, at the end of four months of the current year, shipments of cotton fabrics into British ports were little more than 10 million yards below the peak level recorded in 1961, being 270,688,000 yards. Most of the rise was accounted for by grey cloth arrivals, which totalled 208,262,000 yards, as against 169,780,000 yards. The increase in purchases of finished fabrics was much smaller, showing a rise of only 8 million yards at 62,425,000 yards.

India's share in this trade has been exceedingly large, having supplied 85,523,000 yards of grey cloth and 10,365,000 yards of finished material. This represents a joint increase of more than 25 million yards over last year's level. In contrast, Pakistan has sent almost exactly the same volume as a year ago at 22,331,000 yards, and shipments of grey cloth from Hong Kong have dropped by nearly 6 million yards at 23,037,000 yards. Arrivals of finished cloth from the Colony have already been reduced from 12,241,000 yards to 8,753,000 yards. Other suppliers have made negligible inroads in the market, apart from China which has stepped up grey cloth supplies from 12,145,000 yards to 17,998,000 yards.

Man-made Fibres Too

Before turning to exports, the significant increase in purchases of man-made fibre goods from abroad must be mentioned. Cloth imports in the four months have risen from just under 20 million yards to nearly 31 million yards, and yarn and thread arrivals from 4,500,000 lbs. to over 8 million lbs. On the cotton side, yarn and thread exports in April showed a welcome revival, exceeding 2 million lbs. for the first time since 1962. Even so, the total for the four months of 7,173,000 lbs. is some 300,000 lbs. lower than last year, but at about the same level as in 1962.

Exports of woven cotton fabrics are still drifting downwards, the April total of 17,152,000 yards, bringing the four-month aggregate to 69,092,000 yards, as against 75,760,000 yards in the same period last year. In the man-made fibre sector, however, more gains were made, and total shipments for the four months were 30,104,000 square yards—practically identical with imports. Disposal of man-made fibre yarns abroad, however, continued on a flourishing scale, with a rise of nearly 2,500,000 lbs. on the same month last year. To the end of April, exports totalled 32,403,000 lbs., as against 25,389,000 lbs. and earnings from this source were nearly £3 million higher at £13,057,000.

What the Weavers Think

Annual reports, by virtue of their content, are usually written in a formal style. Factual statements and even pungent comment illustrate the trend of events and give a general outline of the situation in any given year. Occasionally, however, a more breezy note is introduced which, by its less formal approach, attracts attention and throws a slightly different emphasis on what are described as official documents. Such a one is the 80th annual statement issued by the Amalgamated Weavers' Association, in which the hand of Mr. Lewis Wright, the General Secretary, can be clearly seen. In dealing with prospects, which certainly appear brighter, he lists a series of rhetorical questions, all of which have a big bearing on the outlook.

For instance, Mr. Wright asks will the volume of cheap overseas imports to this country further increase? Will the Government recognise that confidence in the industry cannot be maintained with a Damocles Sword hanging over its head? Will a Labour Government be elected to take the necessary steps to safeguard the industry's future? Will the pattern of demand for textiles in their many forms remain unchanged or perhaps improved? Will re-equipment continue at the necessary tempo? Will the number of new entrants enable the industry to meet future demand? Not only these but a host of other questions are problematical and must remain for the moment unanswered.

A final question from Mr. Wright: "Was there ever such a frustrating, uncertain, browbeaten and nail-biting industry as this? It's bad enough fighting when battle stations are reasonably defined but to have to fight in the dark with one hand tied behind the back is enough to break the spirit of even the most doughty. The odd thing" he adds, "is that the industry's spirit is not broken. It is still resilient and money is still being invested in an uncertain future."

No Fear of Change

Earlier in the report, the Weavers Amalgamation refers to the "fast and furious changes" which have taken place within the industry during the past year. "Cotton has been accused of fearing change," it adds. "In point of fact, few industries have undergone more change than cotton." The result has been quite spectacular, productivity increases due to the introduction of new systems and automatic looms coupled with work-study methods. Compared with about four years ago, productivity has been raised by about 15 per cent per head. "No mean result for a so-called 'backward' industry," the report comments.

The latest returns at the end of March show that, out of 120,000 looms now in operation, some 42,000 were automatic. At that time, 74,000 looms, or 62 per cent, were working on a single shift, 27,600 or 23 per cent were on double-day shift and 18,000 looms or 15 per cent were running three shifts.

New Union Structure

Still faced with widespread changes arising from concentration of units, the trade organisations are looking at their own internal structures. The employers made a start some years ago in realigning the associations which were formerly devoted to separate cotton and man-made fibre divisions. The research stations have merged and the latest moves under the auspices of the Cotton Board foreshadow additional integration. The trade unions can scarcely stand aside in such circumstances and measures are being considered for a revision of the arrangements covering the various districts of the Weavers' Association. The report points out that, with the contraction of membership, there are too many smaller units all operating within a restricted area, with different rules, different contributions and often differing customs and practices.

Looking ahead, it is suggested that, with the change in the industry's structure, more and more negotiations will be with the head office of some combine or group, covering several districts. Under the proposed plan, some districts of the Association would be merged or at least a closer working relationship established, possibly with joint secretaries. Because of the development of commercial mergers and financial links, as well as the wider use of work-study techniques, the union feels there may well be the need for central co-ordination of work-study investigations.

The Regional Scene

Organisations such as the Lancashire and Merseyside Industrial Development Association have an important part to play in steering economic movements into channels where they will be of most value to the community at large. Quite rightly, their eyes are focused on the future rather than the past; in consequence, traditional industries, and particularly those which have suffered a decline, tend to be ob-

NEW U.S. WHEAT-COTTON PROGRAMME

DOMESTIC MILLS TO GET COTTON CHEAPER

AN important farm legislation entered the U.S. statute book when President Johnson signed, on 11th April last, a modified version of the original Cooley Bill as passed by the Senate. Known as the Agricultural Act of 1964, the enactment, *inter alia*, seeks to make certain significant changes in the marketing arrangement for wheat and cotton. One such change is the introduction of marketing certificates for granting subsidy to farmers and another is the return, in effect, to a one-price system for cotton. The salient features of the new wheat-cotton programme are described in the following article reproduced from the *Monthly Letter* for June of the First National City Bank:

Frankness in calling a spade a spade is something that Americans have always prided themselves on. But when it comes to getting a subsidy, many citizens prefer to call it something else.

Nowhere has this been truer than in the agricultural area where, ever since the early 'thirties, farmers' incomes have been subsidised by rigging market prices for basic products well above what might exist under free market conditions. By embedding the subsidy in the price system through a complicated rigamarole of Government crop loans and forfeitures, the size of the subsidy has been shrouded. But because this has led to bulging surpluses and rising federal budgetary costs—as well as disrupting international trade in farm products—the whole machinery has been threatening to come apart like the old one-horse shay. What has kept it going is that farmers and legislators up to now have been unable to agree on a new formula—one that would preserve some freedom of choice for the farmer and limit the costs to consumers and taxpayers, while still keeping the subsidy element safely hidden from immediate public view.

The most important innovation in the wheat-cotton bill pushed through Congress and signed into law by President Johnson on 11th April is the introduction of marketing certificates as the principal means for providing subsidies to farmers. Though the function of certificates is not the same in wheat as in cotton, they promise to bring out the subsidy elements involved as never before. This may well be the chief virtue of the new legislation; the efforts to hide farmers' subsidies have been responsible for much of the waste and misdirected effort stemming from farm programmes in the past. With the new law applying only to 1964 and 1965 crops, the public will have a chance to see more clearly how the subsidy machinery actually works before Congress decides on more permanent legislation.

New Subsidy System for Wheat

For wheat, the basic price support has been sharply lowered to $1.30 a bushel, which is slightly below the recent world price on a national average farm basis. This compares with the basic support of $1.82 (plus 18 cents for diversion payment) for 1963, and $2.00 for 1962. The new bill will in effect give cash subsidies to wheat farmers through the use of marketing certificates issued for up to 90 per cent of the normal yield of their allotted acreages. For 45 per cent of his normal yield, a farmer gets domestic marketing certificates worth 70 cents a bushel representing his share of the U.S. wheat market for human consumption; up to another 45 per cent is covered by export marketing certificates worth 25 cents. Any remaining wheat will be eligible only for the basic price support of $1.30 per bushel. The grower will receive additional cash at the rate of 20 per cent of the basic support on the normal yield of allotted acreage diverted from wheat as part of the programme. The farmer, after selling his wheat at the local grain elevator, will be able to cash his marketing certificates through the agriculture Department—in effect, getting a direct cash subsidy.

Payments to farmers will be financed by requiring that millers buy a 70-cent domestic marketing certificate for each bushel of wheat processed for human consumption in this country; correspondingly, each bushel of wheat shipped abroad must be covered by a 25-cent export certificate. In practice, however, millers and exporters will usually buy their wheat through normal commercial channels and send a cheque to the Government covering the cost of certificates for the bushels milled or exported. At home, this added cost will in fact be passed on to the consumer. The cost of certificates to the exporter, however, will be largely offset by export subsidies, which generally have been set in the 10-25 cent-per-bushel range recently.

The system of marketing certificates is roughly the same plan that was voted down in the wheat growers' referendum a year ago, but with some compulsory features eliminated. Though vigorously opposed by the American Farm Bureau Federation—the nation's largest general farm organisation—the bill was strongly supported by the Administration as a way of avoiding a $600 million decline in wheat farmers' incomes this year without increasing budgetary costs. Constitutional questions, however, have been raised on the ground that the domestic marketing certificate is in fact a processing tax levied on the miller. Witnesses before the Senate Agricultural Committee pointed out that this would seem to conflict with the Supreme Court ruling in the Hoosac Mills case (1936) that a federal processing tax was unconstitutional; others have noted that the export certificate would seem to violate a Constitutional ban on export taxes. Representative Thomas B. Curtis has raised the objection that the certificate requirements are in fact new taxes levied on millers and exporters, which were not considered by the tax-writing committees of Congress.

Single Price for Cotton

The problem of keeping the subsidy hidden in the cotton programme has been complicated by the demand of domestic textile mills that they be allowed to buy cotton at the lower world price in the same way as foreign mills. Recently, cotton has been supported at about 32½ cents a pound; except for minute quantities, quotas have prevented domestic mills from buying cheaper foreign cotton. But to meet the much lower world market price in sales abroad, the Government has provided an 8½-cent export subsidy, permitting cotton to be sold at around 24 cents a pound to foreign mills. The 8½-cent differential represents a rough measure of the subsidy provided to cotton growers by the Government and the American consumer. Because of high raw cotton prices, however, domestic mills have been shifting away from cotton to rayon and other man-made fibres.

The legislators met the problem by lowering the support price to 30 cents a pound for most growers and providing a new certificate worth 6½ cents a pound as an offset in commercial markets. But in order to maintain the appearance that cotton growers are not getting a subsidy, the law provides that the new "payment-in-kind" (P.I.K.) certificate should be issued to some one other than the cotton grower. In effect, the Government is paying a 6½-cent subsidy to both domestic and foreign consumers of U.S. cotton to make up for the initial 6½-cent subsidy to growers contained in the support price. During the transition period until 1st August, the offsetting subsidy is being paid directly to the domestic mills.

In hearings held by the Agriculture Department to determine who should get the subsidy after 1st August, the textile mills—not wishing to appear as recipients of a subsidy that actually goes to the farmer—have vigorously protested that the payment should be paid to someone else, preferably the "first handler" of cotton in commercial channels. The latter procedure would automatically lower the price of cotton in commercial channels by 6½ cents, thus permitting both domestic and export markets to operate on a unified, one-price basis around a basic price of about 23½ cents a pound. While Agriculture Secretary Orville Freeman has not made a ruling at the time of writing,* the cotton trade is hopeful that the "first handler" procedure will be followed.

If so, the effort to disguise the subsidy to cotton farmers will have been largely in vain. Since the going market price will average roughly 6½ cents below the basic support of 30 cents a pound, it will be quite clear that the P.I.K. certificate actually represents the amount of cotton growers' subsidy. Moreover, the law also provides an additional subsidy of 3½ cents a pound—based on "normal" yield—for cotton growers who cut their harvested acreage to 67 per cent of their allotment. On the other hand, farmers are permitted to exceed their allotments by a bare 5 per cent—without subsidies or penalties—if they post bond that all the cotton grown on the additional acreage will be exported. Heavy penalties are provided for any farmer otherwise exceeding his basic allotment.

Farmers, of course, are by no means unique in getting a subsidy or some other kind of Government assistance. The cotton textile industry itself is protected by an elaborate system of bilateral quotas that is being applied so restrictively against countries like India, Portgual, Taiwan, Hong Kong, Jamaica, South Korea and the Philippines that the Administration is predicting a 15 per cent drop in cotton textile imports this year. Yet, one of the principal arguments for initiating these bilateral quota arrangements was that the price of cotton was cheaper abroad than at home, thus discriminating against domestic mills. Since the new cotton law removes this handicap, the whole quota programme on cotton textile imports should be re-examined in light of our overall effort to liberalise world trade and provide assistance to developing countries.

Freer Trade in Farm Goods

As in the case of previous farm bills, many different kinds of criticism may be levied against the new programmes, particularly the imposition of new restrictions on farmers' freedom in marketing their crops. Nevertheless, the root cause of the farm problem—and the need for controls—has been the encouragement to overproduction provided by high price supports. The new programme for wheat—and also for cotton, if the "first handler" route is followed—will tend to establish market prices somewhere around world market levels, with the farmers' subsidy largely isolated in the various certificates.

Though far from ideal, this may be regarded as a step in the right direction. If we are to restore greater scope for freer commercial trade in farm products on a world-wide basis, we must begin by letting domestic farm prices adjust to world market levels. By substantially reducing the amounts of subsidy on wheat in commercial sales abroad, the new arrangement should bolster the position of our bargaining team at the "Kennedy round" G.A.T.T. negotiations in their efforts to liberalise trade in farm goods. In the meantime, we should redouble our efforts to formulate a new programme designed to permit market forces to work in agricultural production while helping farm families adjust to an expanding economy.

* It has since been announced that the subsidy would be paid to whoever wanted to claim it after 1st August—ED.

MANCHESTER LETTER

(*Concluded from previous page*)

served in a rather subdued light. So it is with the cotton trade in the latest annual report of the Association. It suggests, for example, that the influence of the cotton trade on the industrial situation in the area, despite the inevitability of further closures and despite the latest decrease in employment, will be in future much less significant. For this reason future growth will not be essentially a process of replacement but one of firm progress.

The increase in activity in the cotton industry over the past 12 months has been a significant factor in reducing unemployment, says the Association. At present, short-time working is practically non-existent and, having recovered from yet another cyclical recession, the industry seems prepared for a further period of intensive activity.

Vacant Factories

It would be wrong, the report adds, to assume that the basic troubles of the trade are over. The overall decline in employment provided by the mills is still the main cause of the region's poor growth record. Since the cotton re-organisation scheme more than 100 mills or finishing works have closed. The total floor space vacated by these closures approaches 13 million square feet, of which only 4½ million square feet have so far been pre-occupied.

At the same time, the way in which the North-West has withstood the tremendous decline in its basic industries in the past 12 years is given due credit. "That a loss of 163,000 jobs in cotton alone since 1951 has been absorbed and the area still remains a vital region poised for expansion is in itself a tribute to its workers and their resilience," declares the report.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

MOHATTA AND HECKEL LIMITED

(INCORPORATED UNDER THE COMPANIES ACT, 1956 ON THE 14TH DAY OF JUNE, 1962)

Registered Office: MUSTAFA BUILDING, SIR P. M. ROAD, BOMBAY-1

SHARE CAPITAL

AUTHORISED CAPITAL—

		Rs. nP.
8,00,000	Equity Shares of Rs. 10 each	80,00,000.00
20,000	9½% (free of Company's tax but subject to deduction of taxes at source at the prescribed rates) Cumulative Redeemable Preference Shares of Rs. 100 each	20,00,000.00
		Rs. 1,00,00,000.00

ISSUED CAPITAL—

5,00,000	Equity Shares of Rs. 10 each	50,00,000.00
15,000	9½% Cumulative Redeemable Preference Shares of Rs. 100 each	15,00,000.00
		Rs. 65,00,000.00

SUBSCRIBED CAPITAL—

1,07,000	Equity Shares of Rs. 10 each by Promoters, Directors, their friends and associates, etc.	10,70,000.00

PAID-UP CAPITAL—

(i) 7,915	Equity Shares of Rs. 10 each fully paid at par for cash	79,150.00
(ii) 95,680	Equity Shares of Rs. 10 each paid at Rs. 5 per share at par for cash	4,78,400.00
(iii) 3,405	Equity Shares of Rs. 10 each paid at Rs. 2/50 per share at par for cash	8,512.50
		Rs. 5,66,062.50

AGREED TO BE SUBSCRIBED BY COLLABORATORS—

	Rs. nP.
(i) Messrs. Georg Heckel GmbH., Saarbrucken, West Germany, the Foreign Collaborators of the Company have agreed to subscribe for 96,000 Equity Shares of Rs. 10 each at par for cash	9,60,000.00
(ii) 3,720 Equity Shares of Rs. 10 each at par will be allotted to Messrs. Georg Heckel GmbH., Saarbrucken, West Germany, for consideration other than cash in accordance with the Collaboration Agreement	37,200.00
(iii) Mr. Rolf Hellmannsberger, the Managing Director of the said Foreign Collaborators has agreed to subscribe for 6,280 Equity Shares of Rs. 10 each at par for cash	62,800.00
	Rs. 10,60,000.00

NOW OFFERED FOR PUBLIC SUBSCRIPTION AT PAR FOR CASH—

(a) 2,87,000	Equity Shares of Rs. 10 each	28,70,000.00
(b) 15,000	9½% Cumulative Redeemable Preference Shares of Rs. 100 each	15,00,000.00
		Rs. 43,70,000.00

TERMS OF PAYMENT	Equity	Preference
On application :	Rs. 2/50	Rs. 25
On allotment :	Rs. 2/50	Rs. 25

Balance payable in two calls and there shall be minimum interval of two months between the calls.

BOARD OF DIRECTORS

1. **Shri BRIJRATAN S. MOHATTA,** (Chairman), 'Ratnakar,' Narain Dabholkar Road, Bombay-6. Industrialist. Director of: 1. B. R. Herman & Mohatta (I) Private Ltd., 2. Malwa Vanaspati & Chemical Co., Ltd., 3. Birla Jute Mfg. Co. Ltd.
2. **Shri GIRDHARDAS KOTHARI,** 41, Ballygunge, Circular Road, Calcutta-1. Merchant. Director of: 1. Birla Jute Mfg. Co. Ltd., 2. Birla Cotton Spg. and Wvg. Mills Ltd., 3. The United Commercial Bank Ltd., 4. Metal Distributors Ltd., and others.
3. **Shri KISHORE DHARAMSEY KHATAU,** 'Laxmi Building,' Ballard Road, Fort, Bombay-1. Industrialist. Director of: 1. Chemicoat Ltd., 2. Indian Plywood Mfg. Co. Ltd., 3. Deutz India Ltd., and others.
4. **Shri BANSIDHAR SOMANI,** 'Shri Niketan,' 99, Netaji Subhash Road, Bombay-2. Industrialist. Director of: 1. West Coast Paper Mills Ltd., 2. Matchwel Electricals (I) Ltd., and others.
5. **Mr. R. HELLMANNSBERGER,** Mahestr 29, Saarbrucken, 2, West Germany. Industrialist. Director of: 1. Georg Heckel GmbH., 2. Saarbrucker Draht GmbH., 3. SAAMAG Saarbrucker Maschinenbau GmbH., 4. HESA, Societe pour la transformation de l'acier, and others.
6. **Shri KANTILAL M. DESAI,** 'Oceana,' Marine Drive, Bombay-1. Businessman and Industrialist. Director of: 1. Galileo Instruments Ltd., 2. Permanent Magnets Ltd., 3. Bombay Steam Navigation Co. Ltd., and others.
7. **Shri SURAJRATAN R. MOHATTA,** 'Ratnakar,' Narain Dabholkar Road, Bombay-6. Industrialist. Director of: 1. B. R. Herman and Mohatta (I) Pvt. Ltd., 2. Mohatta Bros. (E) Ltd., 3. Mohatta Sales Ltd., and others.

9. **Shri RAVIKUMAR G. MOHATTA,** 'Lotus Court,' J. Tata Road, Bombay-1. Industrialist. Director of: 1. B. R. Herman & Mohatta (I) Pvt. Ltd., 2. Indian Tools Manufacturers Ltd., 3. Govind Sugar Mills Ltd., 4. Mohatta Sales Ltd.

MANAGING AGENTS

Mohatta Sales Limited, Bombay

(Subject to the approval of Central Government under the provisions of Companies Act, 1956.)

SOLICITORS

Mulla & Mulla and Craigie Blunt & Caroe, Bombay.

AUDITORS

Todarwal Karnavat & Co., Bombay.

UNDERWRITERS

1. **Industrial Finance Corporation of India,** New Delhi.
2. **Life Insurance Corporation of India,** Bombay.
3. **The Industrial Credit & Investment Corporation of India Ltd.,** Bombay.
4. **Syndicate Bank Limited,** Udipi.
5. **Canara Bank Limited,** Bombay.
6. **Devkaran Nanjee & Co.,** Bombay.
7. **Raja Ram Bhasin & Co.,** New Delhi.
8. **H. P. Mehta & Co.,** New Delhi.
9. **Harkisondass Lukhmidass,** Bombay.

PROPOSED ACTIVITIES

The Company is setting up Steel Wires and Wire Ropes Manufacturing Plant with a capacity of about 5,000 tons per annum.

PROSPECTS

It is estimated that by the end of the Third Five Year Plan, the country's yearly requirements of Wire ropes will be about 40,000 tons per annum, whilst the present output thereof in the country is far below the estimated demand for wire ropes.

LOCATION

Factory will be located in fast developing industrial area of Khopoli, District Kolaba. Maharashtra. Suitable freehold land admeasuring about 16 acres for the factory has been purchased by the Company.

BANKERS TO THE ISSUE

1. **CANARA BANK LIMITED**
2. **SYNDICATE BANK LIMITED**
3. **BANK OF INDIA LIMITED**
4. **UNITED COMMERCIAL BANK LIMITED**
5. **DEVKARAN NANJEE BANKING CO. LIMITED**

BROKERS TO THE ISSUE

Bombay :

1. **Harkisondass Lukhmidass,** Stock Exchange Building, Apollo Street, Fort, Bombay-1.
2. **Devkaran Nanjee & Co.,** Devkaran Nanjee Building, Horniman Circle, Fort, Bombay-1.
3. **Lewis & Jones,** Bank of Baroda Building, Apollo Street, Bombay-1.
4. **Navalchand T. Shah & Co.,** 15, Union Bank Building, Dalal Street, Fort, Bombay-1.
5. **P. R. Subramanyam & Sons,** 70-A, Stock Exchange Building, Apollo Street, Fort, Bombay-1.
6. **R. R. Nabar & Co.,** 31, Dalal Street, Fort, Bombay-1.
7. **Jashwantlal V. Bhagat,** 136, New Stock Exchange Building, Bombay-1.

New Delhi :

1. **Raja Ram Bhasin & Co.,** 31, Delhi Stock Exchange Assen. Bldg., Asaf Ali Road, New Delhi.
2. **H. P. Mehta & Co.,** Connaught House, Connaught Place, New Delhi.
3. **Harbans Singh Mehta & Co.,** 33, Regal Building, Parliament Street, New Delhi.
4. **Raj Paul Chadha & Co.,** Delite Cinema Building, Asaf Ali Road, New Delhi.

Calcutta :

1. **Place, Siddons & Gough (Pvt.) Ltd.,** 6, Lions Range, Calcutta.

Madras :

1. **Chitra & Co.** 322-323, Linghi Chetty Street, Madras.
2. **Maconochie & Co.,** Mercantile Bank Building, Madras.

Bangalore :

1. **P. R. Subramanyam & Sons,** Shree Siva, 24, Fourth Street, Benson Cross Road, Bangalore-6.
2. **Lokkur & Co.,** Kempegowda Road, Bangalore-9.

APPLICATIONS

Copies of the Prospectus and Application Forms can be had from the Registered Office of the Company, its Brokers and Underwriters or from its Bankers to the Issue.

Applications for Shares must be for a minimum of 25 Equity Shares, or a multiple of 25 Equity Shares, and/or 5 Preference Shares or a multiple of 5 Preference Shares.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON SATURDAY THE 20TH JUNE, 1964 AND WILL CLOSE AT THE CLOSE OF BANKING HOURS ON THURSDAY THE 2ND JULY 1964 OR EARLIER BUT NOT EARLIER THAN THE CLOSE OF BANKING HOURS ON WEDNESDAY THE 24TH JUNE, 1964.

DISTRIBUTION OF INCOME AND WEALTH

NO FIRM CONCLUSIONS DRAWN BY MAHALANOBIS COMMITTEE

THE Mahalanobis Committee on the Distribution of Income and Levels of Living has not yet submitted the second part of its report dealing with changes in levels of living during the first and second Plan period. The Committee itself has stated that, if the problems are to be sized up in correct perspective, the second part would have to be read along with the first part dealing with recent trends in the distribution of income and wealth and the concentration of economic power. That the report as a whole, comprising both the parts, should be studied together is quite sensible. But the Committee has chosen to submit the first part earlier, and critics have necessarily had to examine the findings of this part in isolation from the rest (whatever that be) of the report. To what extent critics, in so doing, have been fair or unfair to the Committee will be known only after the second part, too, is finalised and published. In the meantime, readers of *Commerce* may find it useful to know the data and findings of the first part in some detail. Hence the attempt here to highlight the findings of chapters 2 and 3 of this part. (It will be recalled here that the findings of chapter 4 devoted to "concentration of economic power" have already been covered in a feature article on page 942 of *Commerce* dated 30th May 1964.)

The Committee has first examined the trend of national income in the period 1950-51 to 1960-61 according to its basic components, namely, private consumption, Government current expenditure and savings. This analysis is intended to supply no more than a broad idea of changes in the general level of living over the decade under review and of what has been done to promote future growth. Starting with the question as to what has been the additional national income during the ten-year period of the first and second Plans, the Committee has provided a picture of consolidated total increase in national income and associated items in the following table:

Table I: *Consolidated Position*

Item	Symbol	Rs. abja (Rs. 100 crores) at 1948-49 prices	Percentage.
Total increase of national income in ten years	(a)	190.0	100.0
Increase in Government expenditure	(b)	25.5	13.4
Increase in domestic savings	(c)	25.2	13.3
Sub-total	(d)= (b) + (c)	50.7	26.7
Balance available for increase in private consumption	(e)	139.3	73.3
Of which absorbed by increase in population	(f)	85.6	45.0
Net available for increase in *per capita* consumption	(g)=(c)—(f)	53.7	28.3

It will be seen from the above figures that the total additional income earned during the decade under study was Rs. 19,000 crores, of which Rs. 2,550 crores was used in increasing Government expenditure over the whole period. Another part, Rs. 2,520 crores, represented the additional domestic savings in ten years. These two amounts aggregating Rs. 5,070 crores, according to the Committee, may be considered to have been used for purposes of development and expansion of investments to promote future economic growth. The balance available for increase in private consumption was Rs. 13,930 crores for the whole of the ten-year period. If the population had remained the same throughout the period, then this amount would have been wholly available to increase the *per capita* consumption of households. In actual fact, however, the population was also growing at the rate of about seven or eight million persons per year. A good part of the additional national income had, therefore, to be used to provide these new additions to the population with the same *per capita* consumption as in 1950-51.

The Committee's calculations, in this connection, show that Rs. 8,560 crores was absorbed to provide the new entrants into the population during the decade with a *per capita* consumer expenditure at the 1950-51 rate for an appropriate number of years. Finally, according to the Committee's estimate, the balance of Rs. 5,370 crores was the net amount available for increasing the average *per capita* consumption of the whole population. Distributing this amount over the average number of persons over the decade, the Committee has worked out the figure of Rs. 2.5 as the share of each person per year in the increase in consumer expenditure. In other words, with Rs. 219 as the consumer expenditure per person in the base year (1950-51), the rate of increase was only about 1.1 per cent per person per year. The Committee's calculations on the basis of end-year figures of *per capita* consumer expenditure, namely, Rs. 219 in 1950-51 and Rs. 246 in 1960-61, both at 1948-49 prices, do not also show any significant variation, for the rate of increase computed therefrom was no more than 1.2 per cent per person per year. Answering specifically the question as to what has happened to the additional income generated by the two plans, the Committee says:

"Corresponding percentage figures (using the total additional income of Rs. 190 abja, given in column (4) of Table I, show the position very clearly. A little over 13 per cent of the additional income had been used to increase Government expenditure and another 13 per cent represented the increase in domestic savings. The two taken together, about 27 per cent, was used for development activities and for building up the foundations of future progress.

"It would be noticed (from Table I above) that about 73 per cent of the additional income was available for increase in private consumption, out of which 45 per cent, however, was required to provide that part of the population which was added during the decade with a *per capita* consumer expenditure at the rate of 1950-51. The largest part of the additional income during the decade thus had to be used to compensate for the growth of the population during the ten-year period. Any slowing down of the rate of growth of population would help in improving the general level of living. The balance of only a little over 28 per cent or a quarter of the additional income was available for the net increase in *per capita* consumption."

Trends in Income Distribution

In the third chapter, the Committee has studied some recent trends in the distribution of income and wealth. The purpose of this study is to examine how the increase in national income in recent years has been shared by income and occupational groups and whether the inequality in incomes has increased or decreased over the first decade of planned economic development. At the very outset, the Committee has pointed out the inadequacy of available national income data which throw no light on the size-distribution of income. Incidentally, according to the Committee adequate data for a thorough study of the changes in income distribution are not available even for advanced countries having better statistical systems than those obtaining in India. As the required data are not available at present for a direct study of income distribution, the Committee has drawn no firm conclusions on the subject.

The Committee has, however, examined a number of special papers on income distribution, prepared by the Central Statistical Organisation, the National Council of Applied Economic Research, the Indian Statistical Institute, the Reserve Bank of India, the Union Ministry of Finance and some independent research workers. The data and estimates contained in these papers have been derived either from the income-tax statistics or from household sample surveys. They suffer from some serious limitations. In income-tax statistics, for instance, the proportion of income recipients in the tax-paying group was less than one per cent (0.74 per cent to be precise) of the total number of income recipients even in 1960-61. Moreover, incomes in tax statistics are derived only from non-agricultural sources. Because of tax evasion, income-tax statistics do not also accurately reflect the incomes of non-salary earners. The other data, which, in some studies, have been combined with the income-tax data, are the N.S.S. data relating to consumer expenditure. These, however, only relate to the distribution of total consumption *expenditure* into certain expenditure brackets and do not provide information on incomes as such. The N.C.A.E.R. has no doubt carried out sample surveys, both in the urban and the rural sectors, for obtaining data, *inter alia*, with regard to distribution of income. But these data are available only for one year. In spite of these limitations, all the available data and estimates relating to income and wealth distribution have been examined by the Committee. Its concluding observations on the data are as follows:

(1) The most important conclusion which emerges from this study is that we do not have the required data for drawing valid conclusions concerning the changes in income distribution which might have taken place over the two Plan periods.

(2) The available estimates and data relating to size-distribution of income seem to suggest that the degree of inequality in income distribution is not higher in India than in some other developed or underdeveloped countries; the distribution of income in the urban sector is more unequal, as in the other countries, than that in the rural sector.

(3) The analysis of the available income-tax data suggests some reduction in inequality of income among the tax-paying group as a whole and also for some of the sub-groups of this population over the period under study except for pure salary earners where the picture is mixed. However, in view of the deficiencies to which these data are subject, it is not possible to place much confidence in this conclusion or to make any generalisation on this basis. Also changes, if any, in the distribution of taxed income would not generally have any relation to the size-distribution of income in its economic sense.

(4) Available estimates and data suggest no significant change in the overall distribution of incomes, though they do indicate a slight probable increase in inequality in the urban sector and some reduction in inequality in the rural sector. Again, in view of the inadequacies of the data used for comparison purposes, it is not possible to be definite about this conclusion (*vide* Table II).

Table II: *State of Personal Income Distribution*

Fractile group (p.c. of household)	1952-53	1953-54	1955-56	1956-57	1953-54 to 1956-57 Total	1953-54 to 1956-57 Rural	1953-54 to 1956-57 Urban	1960 Rural	1960 Urban
95-100 ..	14.0	14.0	23.0	17.5	20.0	17.0	26.0	..	31.0
90-100 ..	24.0	23.0	34.0	25.0	28.0	25.0	37.0	33.0	42.4
50-90.. ..	..	..	41.0	..	44.0	44.0	38.0	45.7	40.3
0-20.. ..	7.5	8.0	9.5	8.5	8.0	9.0	7.0	4.0	4.0

Notes: (i) Figures in columns (2), (3) and (5) are based on "A note on the derivation of size distribution of personal household income from a size-distribution of consumer expenditure" by N. S. Iyengar and M. Mukherjee, presented at the Second Econometric Conference in June 1961.

(ii) Figures in column (4) are based on "The inequality of Indian incomes" by H. F. Lydall, *Economic Weekly* Special Number, June 1960. Lydall's figure in the last line relates to bottom 25 per cent and not bottom 20 per cent.

(iii) Figures in columns (6), (7) and (8) are based on the study "Distribution of income in the Indian economy: 1953-54 to 1956-57," Reserve Bank of India *Bulletin*, September 1962.

(iv) Figures in column (9) are based on unpublished data collected by N.C.A.E.R., while those in column (10) are based on N.C.A.E.R.'s publication *Urban Income and Saving*.

(5) Trends in wages and salaries received by selected occupation groups over the decade 1950-51 to 1960-61 indicate that, with the notable exception of agricultural labourers, the growth in income of employees has generally kept pace with the growth in average income per employed person for the country as a whole. In particular, there is evidence that the growth in incomes of the mining and the factory workers has kept ahead of the rate of growth in average income per employed person. Agricultural labourers as a group do not seem to have shared in the increase of incomes.

(6) Analysis of the income-tax data based on the occupation of common assessees reveals that, over the period 1951-59, the average incomes received by contractors have registered the highest increase; the rise in income of this group has been very much higher than the rise in the income per em-

Table III: *Income Distribution by Broad Groups of Households, 1953-54 to 1956-57*

Groups	Households Number (000)	Households Per cent	(At current prices) Total income Personal Rs. crores	Total income Personal Per cent	Total income Disposable Rs. crores	Total income Disposable Per cent	Income per household Personal Rs.	Income per household Disposable Rs.

Associate this number with something toothsome and delicious—"point-double-o-nine" millimetre represents the gauge thickness of aluminium foil from which food wraps are made. Gay and colourful though these wraps are, they are not used for decorative reasons alone; "point-double-o-nine" millimetre, when laminated, is actually one of the most hygienic packagings yet devised. That's why reputable manufacturers of Confectionery and Biscuits insist on modern Alfoil protection for their products.

ployed person for the country as a whole. Self-employed persons engaged in business (manufacturing, trade, transport and financial business) and the salaried class among the taxpayers also have increased their incomes, but in their case the rate of growth in income seems to have just kept pace with the rate at which average income per employed person has grown.

(7) It should be noted that there is a general feeling, though the Committee could not collect the required data to support it, that an average person whether in urban or rural areas is better fed, better clothed and even better housed in the 1960's than in the 1950's and that the working conditions have also improved generally over this period. On the other hand, since there is also some evidence that the rate of growth in income for certain high-income groups has been as high as or higher than the rate of growth in income per employed person for the country as a whole, it has not been possible for the Committee to pronounce a definite judgment, even of a broad nature, on the changes in income distribution. However, it can be stated that there is no clear indication of a significant change in income distribution over the Plan decade.

(8) Much less information is available on the distribution of wealth, among different groups in the population than on the distribution of income.

(9) Some scattered data obtained through household sample surveys indicate that there is a fair degree of concentration of personal wealth held in the form of land both among the rural and urban sectors. The distribution of personal wealth held in the form of owner-occupied houses is known only for the urban sector which indicates that there is less concentration of wealth in this form than in the form of land holdings.

(10) The available income-tax data relating to dividend incomes indicate that there is a greater degree of concentration in personal wealth held in the form of company shares than in the form of land or owner-occupied houses.

(11) Available fragmentary data relating to distribution of important items of wealth indicate that the degree of inequality in wealth distribution is higher than that in income distribution; wealth distribution seems to be more unequal than income distribution as in some other countries.

(12) If the question of income distribution is to be answered satisfactorily, there is a clear need for the Government to organise the collection of the required data: the earlier we start on this job the better. The available data on the distribution of income and wealth are too meagre to draw any firm conclusions on the issues referred to the Committee.

Some Research Findings

Some of the research findings on which the above conclusions are based may now be summarised. For instance, Mr. Lydall's estimate of the distribution of income for the year 1955-56 for the entire population, covering both the urban and rural sectors and each sector separately, shows that 86 per cent of the population had a *per capita* annual income of less than Rs. 360 and 69 per cent a *per capita* annual income of less than Rs. 240. On the assumption that persons with incomes falling between Rs. 240 and Rs. 360 are uniformly distributed over this range it appears that approximately 72 per cent of the population in 1955-56 had an income lower than the average *per capita* national income (namely, Rs. 255) for that year, and their share in total personal income was of the order of 49 per cent. Thus, nearly 28 per cent of the population, having a *per capita* income higher than the average for the nation as a whole, claimed more than 50 per cent of aggregate personal income in 1955-56.

The R.B.I. study on income distribution attempts to utilise all the available data for the purpose. But the period covered by this study is rather short—1953-54 to 1956-57. So, it is not possible to derive the trend in income distribution over the whole decade from 1950-51 to 1960-61. Still the study gives some idea of the direction of change (*vide* Table III). The main conclusions of the R.B.I. study are: (i) income distribution in the urban sector is more unequal than that in the rural sector, and within the rural sector it is more unequal in the non-farm sector than in the farm sector; and (ii) the degree of inequality in overall income distribution does not seem to have changed significantly, though the degree of inequality in the urban sector appears to have increased and that in the rural sector to have declined.

The data on income distribution available from the urban household saving survey and the rural household consumption survey, both carried out by the N.C.A.E.R., pertain to 1960. According to the N.C.A.E.R. study, the share of the top 10 per cent in both the rural and urban sectors is higher than the share indicated in the R.B.I. study, and the share of the bottom 20 per cent in both the sectors in the N.C.A.E.R. survey is about half of that estimated in the other studies. The size-distribution of income before tax for the urban household sector covered by the N.C.A.E.R. survey indicates that 75 per cent of urban households received an income which was less than the average for all urban households, while a major proportion of them (or nearly 42 per cent of all households) were actually subsisting at an income level of less than Rs. 1,000. Nearly 86 per cent of urban households received an income of less than Rs. 3,000.

As for rural households, the size-distribution of income based on the N.C.A.E.R. rural consumption survey data reveals that, while the average income for all rural households for 1960 was Rs. 1,126, roughly 61 per cent of rural households had an income of less than Rs. 1,000 in that year. Another 25 per cent of households received an income between Rs. 1,000 and Rs. 1,999, while there were some seven to eight per cent of households in the next income bracket, that is, Rs. 2,000-2,999. Thus, approximately 94 per cent of rural households had incomes under Rs. 3,000 in 1960, as compared with 86 per cent of urban households in the same income bracket in the same year. A comparison of the share in total income of the households with incomes under Rs. 3,000 among the urban and rural sectors indicates that incomes are much less unequally distributed among the rural households than among the urban. Here the bottom 86 per cent of urban households with incomes under Rs. 3,000 shared 50 per cent of aggregate income before tax (or 52 per cent after tax), whereas the bottom 94 per cent of rural households with incomes under Rs. 3,000 accounted for more than 77 per cent of aggregate rural income. The Reserve Bank study, too, shows a more or less similar result.

Studies pertaining to changes in the distribution of income within the tax-paying class indicate a fall in concentration of income among the individual income-tax assessees taken as a whole over the period 1953-54 to 1959-60. The relevant data show a marked reduction in the degree of inequality in incomes among all tax-paying assessees.

Regarding distribution of wealth, the Committee has presented the available rough estimates of aggregate wealth (value of reproducible tangible assets). These assets are owned (*a*) individually (that is, by households and single persons), (*b*) jointly (that is, by the limited and unlimited liability companies, inclding partnerships) and, (*c*) publicly (that is, by the Central and State Governments, including local authorities). A rough grouping of the data in these three categories indicates that the household sector accounted for 71 per cent of all tangible wealth (Rs. 17,086 crores) in 1950, while the shares of the organised private sector and Government sector were 12 per cent and 17 per cent, respectively. In 1961, the share of the household sector declined to 60 per cent of all tangible wealth (Rs. 32,164 crores) in that year, while the share of the organised private sector increased to 15 per cent and that of the Government sector to 25 per cent. The substantial increase in the share of the Government sector, according to the Committee, is significant in that it provides an offset to the tendency towards concentration in the private corporate sector.

A SQUARE Deal

Kirloskar

is offered by the well-known Kirloskar Lathe, the BOMBAY Lathe. Note carefully its special features and you will know that in design, construction and performance it gives full value for its cost. Admits between Centres 6'-9" • Length of Bed 12'-0" • Maximum Swing Over Bed 26".

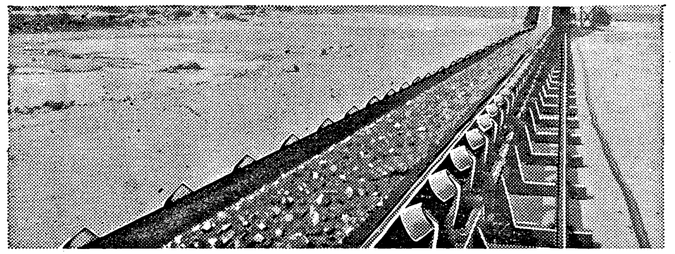
FOR THE FIRST TIME IN INDIA

CONVEYOR BELTING WITH A COTTON/NYLON CARCASS

DUNLOP
INTRODUCES
STARLON



Starlon's cotton/nylon carcass is a major break-through in conveyor belting development in India. Read on for details how Starlon will bring increased pay-offs for you!

Intensive tests have proved that conveyor belts with a cotton/nylon carcass are far more successful for heavy duty material handling service. Starlon is the result of these tests. It is backed by the world-wide technical know-how and experience of Dunlop and is specially constructed for extra heavy conveyor jobs.

Here's why Starlon means a much more profitable investment!

1. Improved flexibility—better troughing, smaller pulleys.
2. Less horse-power required.
3. Increased flex life.
4. Reduced number of plies—lighter and thinner.
5. Higher impact strength.
6. Greater tear resistance.
7. Better fastener holding properties.
8. Higher belt weft strength.
9. Lower capital cost; lower cost per ton carried.

Starlon Belting, 17240 metres long and 1524 mm wide, will shortly be supplied to the Neyveli Lignite Corporation for their mine expansion scheme. This is the largest single order for conveyor belting and yet another Dunlop achievement.

For complete details on Starlon, contact the nearest Dunlop office or write to:

ISSUE OF SHARES BY TENDER—I

By D. R. Pendse, M.A. (Cantab)

WHEN sound and prosperous public companies decide to increase their capital or widen their shareholding, they generally resort to such well-known methods as a public offer for sale or a placing or an introduction, etc. An essential ingredient of all these alternatives is that the sale price has to be fixed well in advance and announced in the prospectus. Such advance fixation of the price is also, perhaps, its weakest ingredient; for many uncertainties and unknown factors still remain and the price fixed does not often give results which would simultaneously satisfy the Government and the investors, the company promoters, the stock exchanges and stockbrokers alike. The search, therefore, continues for a more flexible and efficient tool for determining the price at which such offers for sale can be made. In Britain, some experiments were recently tried with the tender method for issuing shares and all yielded encouraging results. In the course of the present article, it is proposed to examine the principal features of this tender method which seem to make it particularly suitable for trial also in the Indian capital market.

The question of determining the price would arise in the case of that company the shares of which clearly indicate a premium over their paid-up value. Such a company, if not listed on a recognised stock exchange, may be seeking a quotation. It may then be advised by the stock exchange authorities and the Government to effect a wider distribution of shares as a pre-condition for the grant of a quotation. This is achieved either by the company persuading some major shareholders to offer a part of their holdings to the public through a stockbroker or by the company itself issuing additional capital and offering it to the public. In the latter case, technically, the existing shareholders, who are entitled to the new shares, renounce their rights by means of the requisite resolution. The latter case may also arise in the case of a company which is already listed on a stock exchange and which, presumably under the advice of the stock exchange authorities and the Government, makes a public offer in order to allow a still wider public participation in its achievements. This is particularly likely if the company proposes to diversify its activities.

"Correct" Issue Price

The principal problem in such cases is, of course, the determination of the correct price. Under the present practice of fixing the price in advance, usually a series of discussions take place among the promoters (the term "promoters" is used in this article to indicate the company or the "client" as the case may be) and their brokers, the stock exchange authorities and the concerned wings of the Central Government. Various general criteria such as the book value, the intrinsic value (if applicable), the market price, as well as estimates of the would-be state of the market at the time of the issue are presumably taken into account. The chief consideration with the promoters is naturally that the issue must be a success. In other words, when dealings commence, a premium over the issue price should be established. Even the stock exchange authorities would support this view, because, if many issues go on a discount over the issue price, it would adversely affect the confidence of the investors. The promoters having personally an active interest in stock market movements are further interested in as large a size of this premium as possible, because it means a greater profit per share to the successful allottees. The tendency of many promoters is, therefore, to advocate quite a low issue price—at just a nominal premium over the paid-up value or even at par. On the other hand, a large difference between the resultant market price and the issue price would not be relished by the Government, because it is dismayed to see stags usurping handsome profits which properly belong to the promoters; nor by the stock exchange authorities, because it inevitably results in hectic trading and a disorderly market. Even to the stockbrokers such a wide difference invariably means a very large oversubscription and consequently huge but futile work. The problem of fixing the "correct" price, therefore, generally boils down to striking a balance between these two opposite sets of considerations.

With the best of intentions of all the parties concerned, the balance is, however, not always happy. First, there is a time-lag between taking the decision of the issue price and actually bringing the issue on the market. This tells on the correctness of the price fixed in advance, leaving no room to make last-minute changes in the original price. Secondly, there is often some heartburning as to what the issue price should have been. Thirdly, if the issue is a fairly large one and comes from a leading management, it may have repercussions on the market prices of shares of other companies engaged in similar activities. Lastly, the method is admittedly but helplessly arbitrary, because it offers no machinery to weigh the views of those who did not participate in the discussions but who are intimately interested in the matter. All these drawbacks arise mainly from the fact that the issue price is fixed very much in advance; and all these can be avoided to a considerable extent by the adoption of the tender method of issuing shares.

A British Innovation

The tender method seems essentially to be a British innovation and was much in vogue there during the early twentieth century, when many water companies and other public utilities adopted it. The initial issued capital of these companies was often small as compared with the authorised capital, because the preliminary activities like purchase of land, surveying and the beginning of construction work would require comparatively small amounts but bigger amounts would become necessary once actual construction began. By that time, the prospects of its success were known to the market, investors were willing to participate in the equity of such companies even by paying a premium over the paid-up value of shares. The companies, therefore, adopted the tender method and got the maximum possible funds from the market by allotting the new shares to the highest bidders at their respective tender prices. The shareholding generally remained quite narrow, but then the concept of a wide base of shareholding as something desirable *per se* had not developed at that time.

Gradually, with changing needs of the market, the tender method fell in disuse. About four years ago, however, there was an unprecedented boom in the new issue market coupled with its attendant consequences, fair and otherwise. This compelled a British issue house to propose to the Council of the London Stock Exchange some time in December 1959 that they may be permitted to use the tender method for their next issue. But the Council, after giving "careful and sympathetic consideration," turned down the suggestion and decided that it could not grant quotations to issues by the tender method "until they have fully discussed with other interested parties all safeguards which may be necessary in modern conditions." Presumably, these discussions were fruitful, for, in May 1961, the Stock Exchange allowed a usefully modified version of the tender method to be used as an experimental measure for a small issue in respect of equity shares of a company called Parway Land and Investments. This revival of the tender method became a success and gradually the Stock Exchange authorities became more liberal in giving permission to issues by tender. By now, the tender method would seem to have been accepted as a useful and suitable device.

In India, this method, in a limited form is known to the money market because Treasury Bills are issued by tender. It is also said that, after the First World War, it was used for some loans of Municipalities, State Governments, etc., but data are not readily available. For issuing shares of public companies, however, this method seems to have been entirely unused and perhaps unknown.

Mechanism

In essence, under the tender method, a minimum price for the issue is fixed and applicants are invited to quote their own prices (at or above the "minimum" price) and the number of shares which they would be willing to buy at the particular prices. In order to save clerical work, it is common to prescribe that applications should be for multiples of a prescribed number of shares and that the tender price should also be a multiple of a particular amount. The application forms and the accompanying cheques are generally sent in sealed envelopes to the bankers, managing brokers, etc. (as the case may be), and all these are opened simultaneously after the closing date for the receipt of these applications.

Whenever the number of shares applied for is equal to or less than the shares offered for sale, full allotment at the minimum price, and not at the respective tender prices, is generally made, the minimum price thus becoming the allotment or the sale price. Whenever there is oversubscription, the allotment prices can either be the respective tender prices (as in the case of public utility companies in the past) or one single uniform price (as is more commonly the case now). Tenders at a price which is less than (*a*) the lowest of the allotment prices (in the first case) or (*b*) the uniform allotment price (in the other case), receive no allotment. Those at a price which is equal to the above are, if necessary, subjected to a *pro rata* diminution to the extent it is practicable. Tenders at a price higher than the above would get either full allotment or a partial allotment depending upon how the allotment prices have been fixed by the management.

The above points may be illustrated with reference to a recent British issue by the tender method. The company concerned issued 660,000 shares of a face value of 5*s.* each. The minimum tender price fixed by the promoters was 12*s.* 6*d.* Applications were received for over 1,400,000 shares at prices varying from the minimum price to 20*s.* The following table gives the shares applied for and the number of applicants at various prices. In order to facilitate further examination, cumulative totals are also given:

Tender price (Shillings)	Actual number of		Cumulative totals of	
	Applications	Shares applied for	Applications	Shares applied for
(1)	(2)	(3)	(4)	(5)
20	7	2,000	7	2,000
19	1	2,800	8	4,800
18/6-18	12	11,200	20	16,000
17/9-17	23	27,600	43	43,600
16/9-18	126	136,000	169	179,600
16/9	12	22,700	181	202,300
16/6	94	96,600	275	298,900
16/3	64	53,100	339	352,000
15	368	203,500	707	555,500
14/9	74	211,600	781	767,100
14/6	238	223,700	1,019	990,800
14/3	72	62,000	1,091	1,052,800
14	201	169,100	1,292	1,221,900
13/9	28	36,400	1,320	1,258,300
13/6	63	75,500	1,383	1,333,800
13/3-13	47	47,600	1,430	1,381,400
12/6-12/6	70	53,200	1,500	1,434,600
	1,500	1,434,600		

The "allotment price" was fixed at 14*s.* 6*d.* All applications at this or a higher price received full allotment if they were for 2,000 shares or less each. Those for more than 2,000 shares each were scaled down in a graded manner, rather in favour of the less large applications. In all 1,019 applications received allotments.

Flexibility

The principal merit of the tender method is its flexibility. By deciding on particular modes of allotment several variations of this method can be devised, so that the one which suits best can be employed in individual cases. There are four principal variations which would arise when allotment is made:

(1) at many different prices but with full allotment to all successful applicants;

(2) at many different prices, but with partial allotment;

(3) all at one single price ensuring full allotment to all successful applicants, or

(4) all at one single price but with partial allotment.

For the sake of brevity, these will henceforth be referred to as:

(1) Mf (Multiple prices, full allotment);

(2) Mp (Multiple prices, partial allotment);

(3) Sf (i.e. Single price, full allotment); and

(4) Sp (i.e. Single price, partial allotment).

Multiple Prices

The implications of these four variations are examined in turn:

The simplest form which the multiple price method could take would be to allot the shares at the respective tender prices starting from the maximum price quoted and going downwards upto that lowest price at which also allotment was to be made in order to sell all the available shares. This is Mf. In the illustrated case, if such a method has been applied, the allotment prices would have ranged from 14*s.* 9*d.*

and above at the respective tender prices but those quoting 14*s.* 9*d.* would have received a *pro-rata* scaled down allotment. Thus, applicants quoting 15*s.* 9*d.* would have been allotted 22,700 shares; those quoting between 17*s.* and 17*s.* 9*d.*, 27,600 shares, at the respective tender prices, and so on.

The principal and perhaps the only advantage of this variation of multiple prices is that the promoter would earn more money by this method than by any other variation. On the other hand, there are three implications of Mf which are not so happy: First, this would give the narrowest possible distribution of shares among the applicants, when a wide distribution of shareholding is being rightly accepted as a desirable goal. In the above illustration, only 781 out of the 1,500 applicants would have received allotment as against 1,019 that received allotment under the method actually adopted. Secondly, there will be no unsatisfied demand for the shares at all, because, at any given allotment price, except perhaps the lowest, the applicants would have received the maximum which they were willing to take up. As a result, when dealings commence, new buyers are likely to be few and far between and there is every possibility of the shares going into a discount even as compared with the lowest allotment price. This knowledge and fear would create a further selling wave and might well lead to panicky conditions which would not be appreciated either by the promoters or the stock exchange authorities. Thirdly, ignorant and rash investors who tender at ridiculously high prices might be at a terrible disadvantage and would come to grief.

A Better Alternative

These unhappy implications are moderated considerably under Mp. For example, in the illustrated case, the shares could be allotted to applicants quoting a price of 14*s.* 6*d.* and above as was actually done, but the allotment may be at the respective tender price. Since 9.91 lakh shares were applied for at 26*s.* and above, as against only 6.6 lakhs offered for sale, this would naturally mean that all these applications will have to be scaled down in order to decide the number of shares to be allotted. Thus, under Mp the lowest allotment price as well as the revenues obtained by the promoters would be less than under Mf. As against this, if the distribution shown in the above table is broadly representative of the sort of distribution which would apply in similar other cases, the Mp version would usually result in a wider distribution of shares. Secondly, there would be some unsatisfied demand at every allotment price; for example, at 15*s.* 6*d.*, while there was a demand for over 96,000 shares, only about 64,000 shares would be allotted, thus generating an unsatisfied demand for about 32 thousand shares within this group. When dealings commence, this unsatisfied demand is apt to result in a premium over the lowest allotment price. There should also be neither a panic nor any hectic trading, because there would be buyers as well as sellers at various prices. Thirdly, a partial protection is offered to rash investors, because they are allotted less than what they rashly asked for.

The protection is at best partial and, indeed, this drawback would be inherent in any method based on multiple prices, whether Mf or Mp. There would be fear in the minds of investors that, due to their ignorance of the stock market and of the inner working of the company, they might quote an unreasonably high price and would have to pay for their ignorance and suffer a loss in case they desired to sell their shares. This fear might keep away many genuine investors from such issues and if it happens often, neither the Government nor the Stock Exchange authorities would continue to appreciate it. This drawback can be eliminated completely only in a scheme of a single allotment price.

Single Price Scheme

Under the single price scheme (i.e. Sf), if the intention is to make full allotment to all successful applicants, the allotment price is simply the lowest tender price at which the number of shares applied for are just equal to those offered for sale. In other words, the allotment price under Sf is, obviously, the same as the lowest allotment price under Mf. In the above illustrated case, this would have meant the allotment price of 15*s.* 9*d.* Here too, among all the schemes based on a single price, Sf yields more revenue than any other variation, though it is less than under Mf. Moreover, from the point of view of any of the three disadvantages from which Mf suffers, Sf presents a more suitable alternative. Thus, Sf gives a wider distribution as compared with Mf. Secondly, since the allotment price would be less than the tender price for most of the allottees, they would go in for more shares and this demand would be likely to establish a premium over the single allotment price when dealings actually commence in the market. Thirdly, the rash investors would have a feeling of confidence, because they would not be harshly penalised even if their expectation of the 'correct' market price turns out to be ridiculous. A choice of Sp rather than Sf would help erase further whatever little remains of these three disadvantages; but it would also, no doubt, mean still less revenue than under Sf.

Tool of Scaling Down

Looking from another angle, it can be said that, in the present circumstances, schemes with a partial allotment seem to be more suitable than those with full allotment because of its healthy effect on the distribution. The tool of scaling down is so versatile that any desired number of allottees can be obtained to order by adopting a particular rate of scaling down. This point is of particular significance to us in India, because the Securities Contracts (Regulation) Rules require that at least 49 per cent of the shares should be widely distributed among the public; it is often customary to interpret this phrase to imply different specified numbers in relation to different sizes of share capital of the companies seeking a quotation, and to different classes of shares.

When partial allotment is envisaged, the scaling down of the applications can be effected either at a uniform rate to all allottees, or by offering a preferential treatment to some of them, for example, the highest bidders, by allotting a higher proportion of the shares applied for as compared with low bidders. This opens up several new possibilities. Under Sp, a preferential treatment to highest bidders would mean that they will get away with a better deal without having to pay anything for it. If the promoters have announced their intention to give such a preferential treatment, this would actually constitute a temptation for investors and stags to put in higher and higher tender prices and, consequently, it would distort market dealings. Moreover, if many persons tender at prices which are higher than what they really believe to be reasonable, it would raise the average tender price and consequently the allotment price itself. In another recent British case, where the promoters had declared their intention to give preferential treatment for applications at prices higher than the allotment price, the market quotation went to a discount over the allotment price within a few days after dealings commenced. Perhaps, both the drawbacks mentioned in this paragraph would be at work in such cases. On the whole, therefore, in cases of single prices, it is advisable to stick to a uniform scaling down. A preferential treatment to the higher bidders would be more understandable in case of multiple prices.

Actually, for single prices, it is possible to argue in favour of a slight preferential treatment to the lowest (successful) bidders. Such reverse preferential treatment may discourage fancy quotations and achieve a wider distribution. Moreover, the unsatisfied demand of the higher bidders would be stronger and the chances of the market opening at a premium over the allotment price would be better.

It remains a fact, however, that as compared with multiple prices, a single price would encourage stagging. This would be all the more so in Britain because there, unlike in India, cheques accompanying the application forms are not necessarily encashed immediately. Secondly, since there is no fear of a penalty for rash investors, a single price issue would arouse greater interest and would consequently mean more paper work for the brokers.

DEVIDAYAL CABLE INDUSTRIES LIMITED

EXPANSION SCHEMES PROGRESSING ACCORDING TO SCHEDULE

CHAIRMAN, MR. HARIKISHANDAS AGGARWAL'S STATEMENT

ADDRESSING the shareholders of Devidayal Cable Industries Ltd., at their First Annual General Meeting, held at Bombay on Friday, 5th June, 1964, Mr. Harikishandas T. Aggarwal, Chairman of the Company, stated that the expansion schemes of the Company were being implemented according to schedule. Additional capacity for super enamelled wires had been installed and machinery for the D.P.C. wire and strip unit is due to arrive. Mr. Aggarwal hoped that these steps would enable the Company to increase its turnover soon. He indicated that the Company might be able to pay a good dividend for the current year.

The following is the full text of Mr. Aggarwal's speech:

Before proceeding with the business of the meeting it is my painful duty to refer to the sad and sudden passing away last week of our beloved Prime Minister, Pandit Jawaharlal Nehru. The late Pandit Jawaharlal Nehru, who guided the destiny of our country since it gained independence, was essentially a man of peace. He was acclaimed and accepted as a leader in the international sphere, who had dedicated his life to the ideal of brotherhood of man throughout the world. In his death, India has lost a patriot and an international figure who devoted all his life for the welfare, betterment and upliftment of humanity. May his soul rest in peace!

As a mark of respect to the departed leader, we observe two minutes silence.

I have pleasure in extending to you a cordial welcome to the first annual general meeting of the Company after it has become a public limited company.

The Directors' report and the audited accounts have been in your hands for some time, and with your permission, I shall take them as read. Before I formally move the resolution for their adoption, I would like to make a few observations on the working of the Company since the close of the financial year, namely, 31st December 1963.

As regards prospects during the current year, I am pleased to inform you that, up to the end of April, the Company's turnover was Rs. 56.5 lakhs, as compared to Rs. 30.23 lakhs over the corresponding period for the last year. On the basis of sales for the four months, the Company is confident of achieving its target of Rs. 1.70 crore before the end of 31st December 1964.

Expansion Schemes

The Company's expansion schemes are proceeding according to the schedule. The additional capacity for super-enamelled wires has been installed. In the case of D.P.C. wire and strip unit, the machinery has been shipped in May 1964 and the building is ready. The additional capacity will be installed by the end of the year. These additional capacities will enable us to increase the turnover.

As regards the steel and alloy steel wire mill unit, the delivery of the machinery is expected by the end of September 1964. The unit will go in production early next year.

Raw Materials Policy

In accordance with the Government's policy, the Company, along with other cable manufacturers, has switched over to aluminium conductors in the manufacture of cables up to the size of 95 mm. sqr. since April 1963, as it is in the interest of national economy to conserve foreign exchange in the import of copper. The introduction of cables with aluminium conductors has aroused certain dealer/consumer resistance, as size for size, aluminium conductor cable requires a larger size conductor for carrying a given current as compared to copper conductor cables, resulting in the use of higher size of conduit pipes and fittings. This resistance is gradually subsiding, because of the Government and quasi-Government institutions adopting aluminium conductor cables for wiring purposes.

The organisational efforts of our sole selling agents, Messrs. Cable Marketing Company, have assisted in our cables finding ready market.

Your Company has been a pioneer in the manufacture of winding wires and has established a reputation for their quality.

Labour

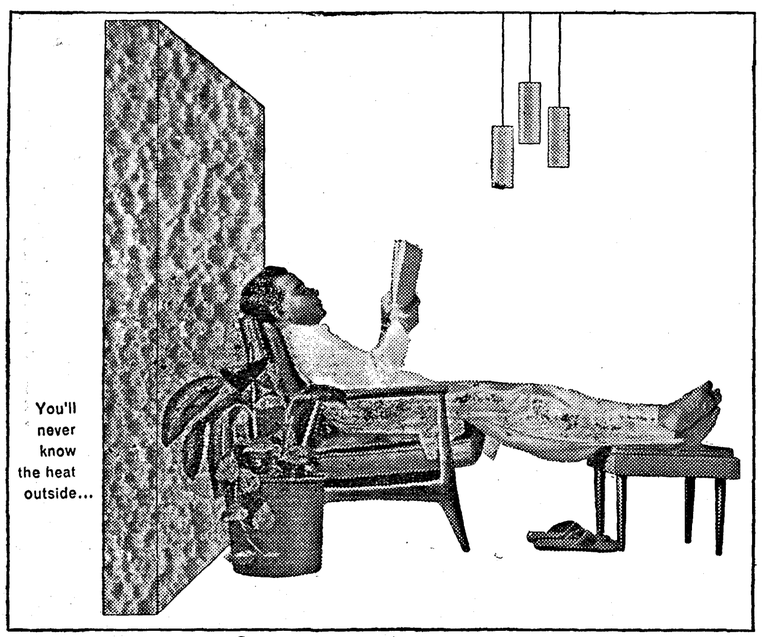
The Company is fortunate in having full co-operation from our workmen. We provide a canteen, which serves subsidised, wholesome lunch and snacks to workmen. We have introduced incentive schemes in certain sections of the factory. The workmen also get bonus every year. Since 1959, a Joint Management Council has been set up, where in both the management and the workers participate to their mutual benefit.

Prospects

In view of the production and sales trend so far, the Board is confident that the Company will be in a position to pay good dividend on the increased capital for the current year in addition to transferring a sizable amount to the general reserve.

On behalf of the Board of Directors and on my own, I wish to express our warm appreciation of the cordial relations existing, and devoted services rendered by all workmen, officers and staff of the Company during the year under report.

Note: This does not purport to be a report of the proceedings of the Annual General Meeting.



Thermocole® keeps your room so cool!

THERMOCOLE is foamed polystyrene: The lightest rigid insulation material. Its closed cells provide an effective barrier against heat, noise and moisture.

THERMOCOLE is versatile. It is ideal for insulating roofs, walls and floors in all kinds of buildings. One inch of THERMOCOLE insulates better than four feet of concrete!

THERMOCOLE false ceilings are very attractive. It is excellent for fabricating light-weight insulating partitions and doors.

THERMOCOLE is feather-light, yet strong, durable and easy to work with. It cuts structure and labour costs. Efficiency with economy—that's the insulation THERMOCOLE provides.

OIL REVENUES OF MIDDLE EAST GOVERNMENTS

FIFTY-FIFTY SHARING OR FIXED PAYMENT?

PERCENTAGE of profits or fixed payment per barrel—which is the appropriate basis for determining the oil revenues of Middle East Governments? Payments made under existing concession agreements in that part of the world contain elements of both. But the emphasis in government thinking has tended to shift from the former to the latter since O.P.E.C. came into being. The reasons are succinctly stated in O.P.E.C.'s latest publication, which is based on a talk given by a well-known member of its staff, Mr. Francisco R. Parra*. Says the author:

O.P.E.C. member-governments realise that their per-barrel revenue must be protected. Price decreases do not produce an increase in volume sufficient to more than offset the lower per-barrel income. In fact, the demand for crude oil at the source is so inelastic as to provide reasonable grounds for doubting whether a price change of the order of $0.20 or $0.30 per barrel has any effect at all on volume. It would therefore be extraordinarily short-sighted of any government to disinterest itself from its unit revenue.

Whether the demand for Middle East crude, as distinct from the demand for crude in general, is as inelastic as Mr. Parra here implies may be questioned in passing. The production statistics certainly give a different impression. In the past six years, a period in which free world oil consumption has gone up by one-half, crude oil production in the Middle East has almost doubled, from 178 to 344 million tons, whereas that of Venezuela has risen only 17 per cent, from 145 to 170 million. This striking disparity in growth rates surely cannot be dissociated from the relative reduction in Middle East oil prices that has occurred during this period. In consequence, the oil revenues of Middle East governments has risen by well over 50 per cent, despite the slight drop in posted prices, whereas those of Venezuela have gone up by no more than 14 per cent. Statements about the elasticity of demand for crude oil thus need careful qualification.

Accepting, however, the understandable desire of governments to protect their unit revenues, how is this to be done? There are, says Mr. Parra, only two possible ways. The first is along the lines of the old royalty system; the second is to tie taxes to a set proportion of company profits and then to ensure that those profits remain at a reasonable level by means of price control—which necessarily implies control over supply.

A fixed royalty per ton is, of course, the time-honoured way of remunerating the owners of mineral rights, including the governments of oil countries. It was the method first adopted in the Middle East, the government being protected against the consequences of inflation by tying the fixed payment (commonly 4s. sterling per ton) to the price of gold. Under this arrangement, government oil revenues fluctuated only in accordance with the volume of sales.

In the nineteen-fifties, the traditional basis was largely superseded by fifty-fifty profit-sharing arrangements. While the royalty was retained, thus giving the government a guaranteed minimum payment per barrel, provision was made that the total revenue received by the government should be equal to half the profits from crude oil production. Profits were to be calculated by deducting operating costs from gross revenue, the latter being arrived at by multiplying the volume produced by a published ("posted") price.

Implications of Fifty-Fifty

The supreme advantage of the new arangement, from the governments' point of view, was that it gave them an immediate increase in revenues. The change of base and the growth of production resulted in a fourfold expansion of government oil revenues in the Middle East in six years, from the equivalent of $238 million in 1950 to $969 million in 1956. Moreover, Governments and oil companies had a joint interest in the production and export of crude oil—and what could be fairer than an agreement to split the profits fifty-fifty?

Given that the international companies were disposed to meet the governments' desire for higher revenues, the new arrangements were advantageous from the companies' standpoint: for taxes paid to host governments could in general—though there are many complications in individual cases—be offset against income-tax liabilities in the country of domicile. For the company therefore the real cost of the additional payment to the government was generally less than the cost of an equivalent increase in royalties. In other words, the company could afford to offer the host government more by way of profit-sharing than it could by way of royalty.

What was perhaps not quite so evident to host governments was that an agreement to share profits is by implication an agreement to share risks. At that time, of course, there was a general belief that oil company profits could move in one direction only—upwards. But the profits of a business enterprise can never be determined in advance. They are the resultant of all the variables that influence costs, prices and volume of sales, many of which are outside the control of the management. Thus, while the retention of a royalty element guaranteed a certain minimum revenue to host governments, the introduction of profit-sharing arrangements meant, in theory at least, that their actual revenues could fluctuate in accordance with the ups and downs of the business.

Shedding the Risk

In the event, the governments have been largely insulated from the risks inherent in any genuine profit-sharing agreement. True, the small reduction in posted prices made in the Middle East in August 1960 might have been reflected in lower government revenues, but this effect was more than offset by the increase in the volume of exports.

Since then market prices have weakened considerably but the companies have maintained the structure of posted prices intact, meeting the cost of discounting out of their own share of the profits. As we pointed out last month, the consequence for one company—British Petroleum—is that in 1963 Middle East governments took no less than 64 per cent of the total net earnings from the group's world-wide integrated operations—£146.8 million, as compared with the company's £82.8 million.

This kind of result, unforeseen in the 1950s, has fundamentally altered the character of the profit-sharing arrangements. Mr. Parra in his pamphlet sums up the change in these words:

During the past three years the posted prices have not been decreased by the oil companies despite the worsening of the market. Other things being equal, then, per barrel revenue to member governments was stabilised during that period. Revenue is no longer a percentage of profits but a certain number of cents per barrel regardless of the level of actual profits, and this will remain true until posted prices are changed. Thus, the fiscal system in the Middle East has in practice come to resemble the old type of royalty payment more than a tax on profits. But this is obviously an unstable situation which cannot endure as the market strain on the companies increases and the temptation to cut posted prices (and therefore taxes) grows correspondingly.

It is therefore the fear of a cut in posted prices that leads to the plea for formal recognition of the desire to stabilise per-barrel revenues. The practical question is whether the desired goal could in fact be reached by either of the routes indicated by Mr. Parra.

Safeguarding the Revenue

The first alternative—that governments should receive a flat payment per barrel, along the lines of the old royalty system—is surely a non-starter. It seems unlikely that Middle East governments in general would be prepared to forgo the potential advantages of the existing arrangements and revert to a fixed royalty per barrel. And if they were willing to do so, the international oil companies would surely find it well-nigh impossible to agree. Because of the possibility that royalty payments to host governments could not be offset against income-tax liabilities at home, the lion's share of the oil companies' remaining profits might be swept into the tax collector's maw. What was left over would then be insufficient to finance the investment needed to keep the enterprise going—and government revenues would suffer correspondingly.

The second alternative—that government revenues should be tied to profits, which should in turn be kept at "a reasonable level" by means of price controls—bristles with difficulties. Most decisive, perhaps, is the consideration that any such arrangement would excite the critical attention of the U.S. Department of Justice. American oil companies are subject to the provisions of the anti-trust acts even in their foreign operations. For this reason they could not consent to be parties to any price-fixing arrangements, even if they (in common with other companies) considered such arrangements to be desirable.

Nor could the reactions of the developing countries be disregarded. How could the governments of such countries be induced to acquiesce in a restriction scheme the avowed object of which was to control the supply and keep up the price of the oil which they so urgently need for their economic development? These two obstacles appear to be pretty well insurmountable.

If the advocates of production control believe that these objections in principle could somehow be disposed of, they still have to get down to details. They must devise a restriction scheme capable of winning the unanimous support of O.P.E.C.'s eight member-governments. For unanimous support would be indispensable if the scheme was to be viable. Each member country would have to be given a production quota. On what basis? On the basis of past exports? This would be quite unacceptable to the newer members (particularly Libya, and Algeria if this country joins the organisation) where expansion is most rapid. In proportion to proved reserves? This would involve—assuming that reserves estimates on a uniform basis could be agreed by the members—such a drastic change in the existing pattern of production as to be unacceptable. When one takes account of the diverse interests of the producing countries and the need to relate crude oil production to the pattern of demand, the task of drawing up a workable scheme acceptable to all the governments appears formidable indeed.

In this connection it is easy to be misled by the example of Texas—which, undeniably, has a workable prorationing scheme. But the Texas Railroad Commission, which fixes the monthly production "allowables," has behind it all the authority of the State: it is in a position to impose its will on the individual producers.

Facing Realities

That well-nigh insurmountable obstacles, both of principle and detail, would jeopardise any attempt to keep up prices and profits by controlling crude oil production is certainly not news to Mr. Parra. It may perhaps be inferred that his main purpose in ventilating the question was simply to emphasise the unwillingness of Middle East governments to accept the risk inherent in a true profit-sharing agreement in a period of sagging market prices. As he explicitly points out, the risk is kept in abeyance so long as posted prices are maintained at the present artificial level. The implication, as the companies must be fully aware, is that Middle East governments would not countenance any reduction in posted prices; and, in present market conditions, this means, in effect, that the profit-sharing arrangements are no longer fifty-fifty.

Payments to Middle East governments amount in most cases to well over 50 per cent of the true profits from crude oil production, and the percentage may vary from year to year. To all intents and purposes, these payments now have the character of a large flat-rate addition to per-barrel costs of production, with the operating company alone undertaking the risk-bearing function. It could be argued that recognition of this change was implicit in the recent round of negotiations between companies and Middle East governments—negotiations in which the difference between the parties was reducible to so many cents per barrel. This position having been reached, the two parties may well go on to devise new arrangements that would satisfy the legitimate aspirations of host governments without robbing the companies of their freedom of action in the matter of prices.—*By Special Arrangement with Petroleum Press Service.*

*The Oil Industry's Organisation in the Middle East and Some of its Fiscal Consequences. Published by O.P.E.C.

A CORRECTION

In the article on Russian competition in oil, published on page 852 of *Commerce* dated 16th May 1964, it was stated that, according to the forecast of the National Petroleum Council of the U.S.A., the Soviet bloc oil exports to the free world, including shipments to Cuba, would rise from 37 million tons in 1963 to 38¼ million tons in 1965. The latter figure should be 48¼ million tons and not 38¼ million tons.

NEW PRODUCTS AND PROCESSES

Two-pedal Driving for Trucks

DEVELOPMENT of a supercharged diesel "differential power system" that provides two-pedal driving for heavy and medium commercial vehicles and increases their efficiency was announced recently by a British firm, F. Perkins Ltd., Peterborough, Northamptonshire, England. The system, which has many other potential applications—for example, in dump and fork-lift trucks, bulldozers and other earthmoving machinery, locomotives and off-highway vehicles—is automatic and allows a major simplification of the transmission, which gives greater efficiency and better fuel economy, particularly at high speeds and with big loads. The aim of the development was to produce a power unit that provided constant horsepower, or a torque output that rose steeply as engine speed was reduced. It has been achieved by interposing an epicyclic type of differential gear between the engine and the output shaft. One member of the differential gear operates a mechanical supercharger that feeds the engine air intake. The supercharger drive "senses" when an increase in engine torque is required and boosts the air supply. Engine torque is increased by more than 200 per cent over the working speed range, compared with 10-20 per cent for a conventional engine. With a special torque converter, the increase can be as much as 7 to 1 over the range.

Motor Scythe and Lawn Mower

A new rotary scythe is to be exhibited by a British firm, Mayfield Engineering Ltd., Sussex, at the Public Works and Municipal Services Exhibition in London later this year. By unscrewing two nuts the scythe can be detached and a 24-in. wide lawn mower, or other attachment, fitted. The 4-stroke engine has two forward speeds of 2½ m.p.h. and 1½ m.p.h. for light or heavy growth, a single plate clutch and a recoil as well as a lever starter. Both the rubber-tyred 14-in. diameter driving wheels have a free wheel to facilitate turning and can be locked to the axle for descending steep slopes. An adjustable Vee-belt runs from the engine to a vertical shaft at the bottom of which is a cutting disc. Attached to the disc are four double-edged, pivoted knives which are free to swing clear when obstructions are encountered. By reversing the Vee-belt, both cutting edges can be used.

New Wire Recorder

A new magnetic wire recorder for aircraft, developed in Britain by S. Davall and Sons Ltd., Perivale, Greenford, Middlesex, England, and designed for the retrieval of recorded data under the worst conceivable conditions, has been selected by British European Airways for all its fleet. It consists of a quick-release cassette, containing the wire and three heads for erase, write and read, and a drive unit. One loading of wire gives 200 hours recording time. The cassette, which weighs 15 lb. and measures about 6 in. by 9 in. by 4 in., withstands exposure to flames of 800 deg. C. for 15 minutes over 50 per cent of its surface. It will also withstand 100 g. impact shock at the attachment points and a static load of one ton in any direction.

"Clear View" Device for Drivers

A simple device that gives the motorcyclist and racing car driver a clear view ahead in rain, sleet and snow has been developed by a London firm, Cleaver-Hume International Ltd., 29 Wright's Lane, Kensington, London, W. 8. It consists of a convex disc of transparent plastic large enough to cover the upper half of the face. The disc, which turns on ball bearings and is secured to a harness that fits on the driver's crash helmet, has plastic vanes set around its edge. The whole is so finely balanced that, even at a speed of 10 m.p.h., the slipstream makes the disc rotate fast enough to throw off rain, snow or sleet, leaving the driver with a clear view. The device, including its harness, weighs only 10 oz.

Low-cost Gas Chlorinator

A small, low-cost gas chlorinator, made mainly of plastics and designed for wall mounting, has been introduced by a London firm, Chlorination Equipment Ltd., 129 Kingsway, London, W.C. 2. It operates without heat and does not require a drain. Maximum output is 2 lb. of chlorine an hour against a mains pressure of up to 80 p.s.i. Safety devices cut off the flow of chlorine if the water supply is interrupted or if there is a loss of gas vacuum.

Road-marking Paint

Tests in the Arabian Gulf area, where surface abrasion is very severe, preceded the recent introduction of a new British road-marking paint, made by Detel Products Ltd., Stonefield Way, Victoria Road, Ruislip, Middlesex, England. It is based on a rubberised material that gives elasticity and flexibility, and it incorporates finely-divided granite that makes it highly resistant to traffic wear. It dries sufficiently in 15 to 20 minutes, even in cold weather, to allow traffic to pass over it.

Adhesive Fabric

A new type of British furnishing fabric in a linen/cotton mixture has an adhesive on one side and can be stuck on to uncoated or varnished wood, plain or painted plaster, brick or glass. The material is said to be a considerable advance on similar materials made from other fibres. It is shrink resistant, and difficulties experienced in earlier efforts to prevent the adhesive from causing blotches in the yarn have been overcome. It is being aimed especially at the architectural field, but is also suitable for use by painters and decorators, and by do-it-yourself enthusiasts, says the makers, namely, Crest Weaving Co. Ltd., Hilltown, Dundee, Scotland.

Artificial Leather

An economical way of making artificial leather ranging in texture from soft kid to tough cow hide has been patented jointly by two Japanese firms, Toyo Cloth Company Limited, of Osaka, and Toyo Rayon Company Limited, of 2, 2-chome, Nihonbashi-Muromachi, Chuo-ku, Tokyo. An alcoholic solution containing a salt such as calcium chloride, a polymer and a catalyst is applied to a cloth backing and then, after it has set (by heating it for 20 minutes), the salt is leached out with water. A "breathable" layer is left whose porosity and texture depend on the polymer and salt used. Dyes can be added as necessary.

Asbestos Paper

A Canadian Company, namely, the Dominion Tar and Chemical Company, of 2,240, Sun Life Building, Montreal, Quebec, claims to have found a way of making very strong asbestos paper, and of making it cheaply, by using short, almost waste fibres instead of long ones. Uses of the paper range from non-inflammable kitchen cloths to furnacemen's aprons and gloves. The Company believes that it will increase the sale of asbestos waste. A slurry of the fibre is spread out on a wire mesh and drained and pressed as usual and a special polymer is used as the binding agent. An incidental advantage of the polymer is that it allows the slurry to drain and dry more quickly.

Non-brittle Lacquer

Deutsche Gold-Und Silber-Scheideanstalt, of 9 Weissfrauenstrasse, Frankfurt (Main) 1, Germany, has patented a lacquer which sets shiny and hard like varnish yet is sufficiently flexible not to develop even microcracks when repeatedly cooled to minus 20 degrees Centigrade and warmed up again. Since it can be brushed or sprayed on to concrete and stone as well as metal and wood, it is suitable for gloss-coating practically anything from the inner parts of refrigerators and the floors of cold stores to garden furniture.

Remote Control of Power Supplies

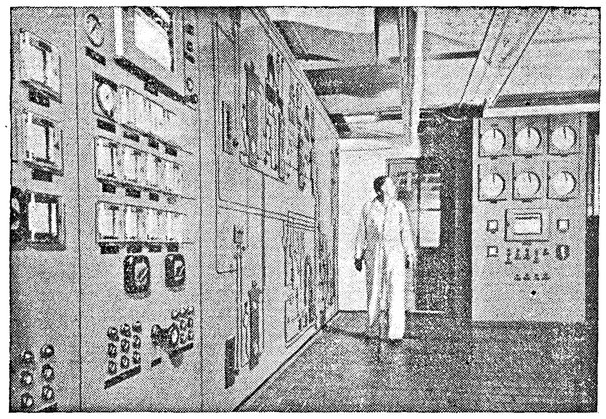
A system that enables engineers in a single control room to supervise power supplies to all the 25-kV. A.C. electrified railway lines radiating eastward from Liverpool Street Station, London, has been installed by Standard Telephones and Cables Ltd., of Britain. It covers altogether some 110 miles of electrified track and supervises 45 trackside sub-stations. The heart of the system is a "mimic diagram" 40 feet (12,2 m.) long which depicts the complete electric power network by means of coloured lines and symbols engraved on 1-inch-square mosaic tiles. Circuit breakers and other remotely-supervised switches are represented by 1-inch square semaphore keys which indicate the state of the switchgear and can be turned by hand to alter it. Alarms representing faults such as excessive temperature of transformer windings are also shown in the appropriate position. Signals are transmitted between control room and sub-stations by a voice-frequency telegraph system using twelve channels from 1,140 to 2,450 c/sec. In front of the mimic diagram is a control desk for two engineers who can, for example, obtain details of the supply voltage at a remote feeder station, determine the power consumed at a feeder station during the previous half hour, or alter the tapping on a transformer.

New Silicon Diodes

A new silicon diode intended for rectifier equipments on A.C. locomotives and motor coaches is introduced by Westinghouse Brake and Signal Co. Ltd., of Britain. It is rated at 300 amps. continuously and will survive a fault current of 1,400 amps. for 5 cycles when a motor flashover occurs, giving time for the high-voltage circuit-breaker to open and isolate the fault. Hitherto 150-amp. cells with a maximum fault current of 700 amps. for 5 cycles have been used by British Railways, so only half as many of the new cells will be needed, with consequent savings of space and cost. The new diode, known as the Type SxFN300, has a base only 2⅜ inches square and is 1⅞ inches (48 mm.) high. Its flat square copper base and four fixing holes enable it to be bolted very firmly to a heat sink, with good thermal contact. Current need not be carried across to the heat sink since terminals for external connections are taken directly from the top of the anode and from the base. 54 A.C. multiple-unit motor coaches now being built for British Railways by The English Electric Co. Ltd., will use these new cells.

CLEARER-THAN-GLASS PLASTICS

A rigid, cast acrylic material, said to be clearer than glass and with a light transmission factor of 92 per cent compared with an average of 87 per cent for ordinary glass, is now being produced in Britain by BX Plastics Ltd., Manningtree, Essex, England. It is only half the weight of glass, but its impact strength is many times greater. Its clarity and surface gloss are unaffected by rapid temperature changes, and it resists many organic and inorganic corrosives, acids and alkalis.



Look what you get with

HONEYWELL instrumentation

Far more than just instruments, you get a complete control system, custom designed for your specific needs, by men who know your processes.

You get expert, interested assistance every step of the way, with your initial planning and long after your instruments are installed. Blue Star assume full responsibility for the engineering, installation and start-up of your system.

You get training for your instrument technicians in the most up-to-date maintenance methods at the tuition-free Blue Star-Honeywell Instrumentation Education Centre at Bombay.

You get prompt, competent service from your nearest Blue Star office and immediate replacement of emergency repair parts.

These are but some of the plus-values that comprise Instrumentation by Honeywell...and they apply regardless of whether you buy a single instrument, a replacement part or a complete control system.

NEW INDIA SUFFERS A SETBACK

DEVELOPMENTS AT HOME AND ABROAD AFFECT BUSINESS

GENERAL insurance is truly an international business. No company, especially companies like the New India Assurance Company, Ltd., which does business in more than one country can, therefore, expect to have its business unaffected by international developments. It is, therefore, not surprising that the accounts of the New India Assurance Company Ltd. (*Managing Director:* Mr. B. K. Shah, Bombay), which writes general insurance business in five Continents, for the year ended 31st December 1963, reflect the impact on its business of the political and economic developments in such countries as Indonesia, Burma and Ceylon. The devaluation of the Indonesian currency, as well as restrictive legislation in Burma and Ceylon, also impinged on the Company's foreign business. This, coupled with the planned corrective measures adopted by the Company itself in several countries, particularly those with disturbed political and economic conditions, resulted in a decline in the premium derived by the Company from its foreign business.

Nearer home, in India, too, conditions were not very favourable. The calendar year 1963 was the first full year to experience the impact of the national Emergency on the economy and, through it, on general insurance. Added to this was the reduction in fire premium rates and restrictions on the sale of motor vehicles which followed in the wake of the Emergency. All these had an adverse effect on the business of the Company. In the result, there was not only a decline in net premium but also a simultaneous increase in claims cost, commission, expenses and taxes. This squeeze on the profit-margin from both sides—the revenue side and expenses side—resulted in the net profit for the year declining from Rs. 73.06 lakhs for 1962 to Rs. 61.50 lakhs, a drop of 15 per cent.

The Directors have, however, proposed to maintain the dividend at last year's level of Rs. 4.50 per share, subject to deduction of tax. In addition, they propose to pay, as in the previous years, a bonus of Re. 1.20 per share, subject to deduction of tax, out of the profits for the year and the balance of Rs. 8.2 lakhs being the compensation received from the Life Insurance Corporation of India. The total distribution to shareholders, on this basis, works out to Rs. 64.9 lakhs, as against Rs. 54.1 lakhs in 1962. This increase in distribution, in spite of the dividend being the same as in the previous year, is accounted for by the increase in paid-up capital brought about by the issue of bonus shares in 1963. The following table summarises the working results of the Company for the year 1963, as compared with those for the previous two years:

(In lakhs of rupees)

	Year ended 31st December		
	1963	1962	1961
Fire :			
Net premium	332.86	447.25	442.40
Claims	201.14	195.38	165.05
Commission and expenses	178.47	197.14	196.89
Underwriting profit or loss (+).	+42.56	+59.90	+72.33
Fire fund	196.43	22362	221.20
Marine :			
Net premium	284.46	293.44	244.00
Claims	179.88	176.17	180.88
Commission and expenses	95.84	74.28	60.50
Underwriting profit or loss (+).	+23.17	+6.93	Nil
Marine fund	284.46	293.44	244.00
Miscellaneous :			
Net premium	644.34	626.65	578.92
Claims	394.49	359.77	290.47
Commission and expenses	224.82	220.68	194.54
Underwriting profit or loss (+).	+30.61	+37.39	+51.06
Miscellaneous fund	322.17	313.32	289.46
Net profit	1.50	73.06	74.57
Provision for taxation	59.74	67.34	58.95
Dividend	64.94	54.12	54.12

As will be seen from the above table, the combined net premium suffered a setback from Rs. 13.67 crores in 1962 to Rs. 13.22 crores. This was due mainly to the decline in premium from the Company's foreign business, both direct and reinsurance. The overall claims cost rose from 53.7 per cent in 1962 to 58.7 per cent, the increase being essentially due to the adverse experience in respect of both direct and reinsurance business in foreign countries, especially the U.K., W. Europe, Singapore and Australia. Commission, expenses, taxes and other charges, too, were higher at 37.8 per cent of premium, as against 36 per cent in the previous year. The increase was largely due to exchange loss on account of the devaluation of the Indonesian currency. Reflecting the higher claims and other costs, the combined underwriting profit declined from Rs. 104 lakhs in 1962 to Rs. 96.34 lakhs in 1963.

An analysis of the fire department's accounts shows that net premium in the department declined by Rs. 54 lakhs. The claims ratio, too, was higher at 51.2 per cent as against 44.5 per cent in the previous year. Expenses of management, taxes and other charges also were higher by 1.7 per cent at 21.6 per cent. Commission, however, registered a decline of 0.4 per cent. The overall cost of the department at 45.5 per cent showed an increase of 1.3 per cent, as compared with the previous year. The underwriting profit consequently dropped to Rs. 42.6 lakhs from Rs. 59.9 lakhs in 1962, which works out to 10.8 per cent of premium, as against 13.4 per cent in 1962.

Premium income in the marine department also was lower by Rs. 9 lakhs at Rs. 2.84 crores. The claims ratio increased to 63.2 per cent, that is, 3.2 per cent higher than in the previous year. This, coupled with the higher commission paid and expenses of management, inflated the overall cost in the department to 33.7 per cent, as compared with only 25.3 per cent in the previous accounting year. After providing for 100 per cent reserve for unexpired risks and taking credit for interest on departmental funds, the accounts show a surplus of Rs. 23.2 lakhs as against Rs. 6.93 lakhs in the previous year.

In the miscellaneous department, premium income increased by Rs. 17.7 lakhs. The claims ratio was 3.8 per cent higher than in the previous year at 61.2 per cent. While commissions paid declined by 1.2 per cent, expenses of management taxes and other charges showed a small increase of 0.9 per cent as compared with the previous years. The overall cost of the department worked out to a lower figure of 34.9 per cent, as against 35.2 per cent in 1962. The underwriting profit amounted to Rs. 30.6 lakhs, as against Rs. 37.4 lakhs in 1962.

After crediting the profit and loss account with the underwriting profit of Rs. 96.34 lakhs and providing for other income and outgo, the gross profit, subject to tax, is lower at Rs. 1.21 crore, as against Rs. 1.40 crore for 1962. The net profit, after providing Rs. 59.7 lakhs for taxation, amounts to Rs 61.50 lakhs. Of this profit, a sum of Rs. 2.8 lakhs has been transferred to the gratuity reserve and the balance of Rs. 58.7 lakhs to the dividend reserve. A sum of Rs. 8.21 lakhs has been transferred from the capital reserve to the dividend reserve. The proposed dividend and bonus would absorb Rs. 64.94 lakhs, leaving Rs. 2.94 lakhs in the dividend reserve to be carried forward.

The market value of the investments of the Company, as on 31st December 1963, stood at Rs 12.11 crores, showing an appreciation of Rs. 40 lakhs over the book value of Rs. 11.71 crores. The Company had, as at the end of 1963, capital and reserves aggregating Rs. 13.28 crores, comprising a paid-up capital of Rs. 1.71 crore, reserves of Rs. 3.54 crores and departmental funds amounting to Rs. 3.03 crores.

(*Concluded from next column*)

Rs. 6.46 lakhs in the previous year. After crediting to the profit and loss account the net underwriting profit and taking into account interest, dividends and other expenses, the amount available for appropriation, including Rs. 11,948 brought in from the previous year, aggregates Rs. 12.33 lakhs, as against Rs. 11.65 lakhs in the previous year. Out of this a sum of Rs. 3.50 lakhs has been transferred to the general reserve and the balance of Rs. 8.83 lakhs to the dividend reserve from which will be paid the proposed dividend of 8 per cent per annum, subject to tax; this will absorb Rs. 8 lakhs.

The funds and reserves of the Corporation as on 31st December 1963 aggregated Rs. 3.45 crores, comprising a paid-up capital of Rs. 1 crore, general reserves of only Rs. 7 lakhs and departmental funds of the order of Rs. 2.37 crores.

REINSURANCE BUSINESS IMPROVES

INDIA RE.'S RESULTS ENCOURAGING

THE past year was a comparatively favourable one for general insurance in India. Although the profitability of the business during the year was lower than in the previous years, all classes of general insurance business recorded encouraging increases in premium income. The rate of growth of fire premium, however, slowed down during the year, but this was due to the reduction in fire tariff rates in the previous year. The higher claims and other costs, of course, reduced the profitability of fire business, but this was offset, to some extent, by the improvement in marine business and the higher profitability of such miscellaneous insurance accounts (except motor) as burglary insurance, cash-in-transit, personal accident, fidelity, third party, engineering contractors' all risks and solvency and credit.

These encouraging trends in general insurance are reflected in the working results of the India Reinsurance Corporation (General Manager: Mr. R. M. Desai, Bombay) for the year ended 31st December, 1963. The gross premium written by the Corporation in all the departments amounted to a little less than Rs. 7 crores (Rs. 6.99 crores to be precise), as compared with Rs. 5.87 crores in 1962. The net premium, after fulfilling the statutory and other retrocession obligation, aggregated Rs. 3.89 crores an increase of Rs. 61 lakhs over the 1962 figure. The overall claims amounted to Rs. 2.13 crores or 54.7 per cent of net premium, as compared with Rs. 1.68 crore or 51.1 per cent of premium in the previous year. Commission and other charges, however, were lower at Rs. 1.29 crore, or 33.1 per cent of premium, as against Rs. 1.10 crore or 33.7 per cent of premium in the previous year. Expenses of management too accounted for a smaller per cent of premium as compared with the previous year. Thus, the ratio (of expenses to premium) was 1.7 per cent, as against 2 per cent in 1962. As a result of the improvement in commission and expense ratio, the aggregate underwriting profit increased from Rs. 6.46 lakhs in 1962 to Rs. 10.70 lakhs during the year under review. The year's business resulted in a net profit, after taxes, of Rs. 12.21 lakhs, as compared with Rs. 9.07 lakhs in the previous year. After strengthening the general reserve by Rs. 3.50 lakhs, the Directors have proposed to maintain the dividend at last year's level of Rs. 40 per share, subject to deduction of tax, being 8 per cent of the paid-up value of Rs. 500 each with a face value of Rs. 1,000. The following table highlights the salient features of the working of the Company during the year under review, with figures for the previous two years given for purposes of comparison:

(In lakhs of rupees)

	For the year ended 31st December		
	1963	1962	1961
Fire :			
Net premium	147.38	136.08	114.00
Net claims	68.69	62.20	48.90
Commission, etc.	55.08	55.90	44.91
Expenses of management	3.22	3.46	2.84
Underwriting profit or loss (+).	+15.84	5.23	3.33
Fire fund	73.69	68.04	57.00
Marine :			
Net premium	85.14	74.12	59.68
Net claims	61.05	55.01	38.90
Commission, etc.	21.61	17.00	14.53
Expenses of management	0.93	0.94	0.74
Underwriting profit or loss (+).	—7.24	—11.40	—11.18
Marine fund	85.14	74.12	59.68
Miscellaneous :			
Net premium	156.71	118.00	85.17
Net claims	83.32	50.57	33.61
Commission, etc.	51.32	37.58	28.13
Expenses of management	2.56	2.25	1.69
Underwriting profit or loss (+).	+2.10	+12.63	13.13
Miscellaneous fund	78.36	59.02	42.58
Net profit	12.21	9.06	9.79
Provision for taxation	8.00	6.00	3.50
Dividend	8.00	8.00	8.00
	(8%)	(8%)	(8%)
Carry forward	..	0.12	2.58

The underwriting profit in the fire department, as will be seen from the above table, spurted from Rs. 5.23 lakhs in 1962 to Rs. 15.84 lakhs. The marine department continued to be in the red. But the loss suffered in 1963 was substantially less than that in 1962, being only Rs. 7.24 lakhs, as against Rs. 11.40 lakhs. Underwriting profit in the miscellaneous department, however, suffered a sharp setback; it declined from Rs. 12.63 lakhs in 1962 to a mere Rs. 2.10 lakhs in 1963. Nevertheless, the total underwriting profit in all the three departments taken together, was, as noted above, higher at Rs. 10.70 lakhs, as against only

(*Continued in previous column*)

WILL LAC BE ABLE TO SURVIVE?

GROWING COMPETITION IN WORLD MARKETS

THE success achieved in finding and developing synthetic substances serving as substitutes for lac in many of its uses has jeopardised the position of Indian lac, exports of which have rapidly declined in the past few years. Until not long ago, export trade in lac was a virtual monopoly of India. Besides being a subsidiary source of income to the economically underdeveloped regions in the States of Bihar, Orissa, Madhya Pradesh, Maharashtra and Assam, the industry has for many years been an important earner of foreign exchange. Even a decade ago, India was the major exporter of various varieties of lac to the world markets, but today a situation has arisen when it is finding it difficult to sustain this trade mainly for two reasons. First, there has been a steep decline in the world demand for lac, as the use of synthetic resins has been increasing on account of their cheapness and suitability to the modern techniques of production. The world consumption of lac during the period from 1955 to 1961 came down from 45,200 tons to 38,000 tons, a decrease of about 15 per cent. In the year 1960-61. India and Thailand, the two chief producers of lac in the world, produced 68,000 tons of lac but their exports to the world market were only 37,600 tons, leaving 39 per cent of the total production of the two major countries which provide 99 per cent of the total imports of the world, unutilised. Secondly, Thailand has come up as a tough competitor to Indian lac in recent years. During a period of 20 years, it has increased its share of export from 9 to 30 per cent, whereas India's share has come down from 90 per cent to about 70 per cent.

The following table shows the value of exports of Indian lac in all its varieties during the period from 1951-52 to 1963-64:

Total Exports of Lac from India

(Value: In crores of rupees)

1951-52	..	14.84	1958-59	..	..	5.74
1952-53	..	7.42	1959-60	..	..	6.37
1953-54	..	6.69	1960-61	..	..	6.33
1954-55	..	10.55	1961-62	..	..	4.62
1955-56	..	11.77	1962-63	..	..	4.80
1956-57	..	9.47	1963-64	..	..	4.62
1957-58	..	6.86				

It is clear from the figures above that the situation facing the export trade of our lac industry is, in fact, alarming, because within a period of 12 years the exports of this commodity have gone down to one-third of what they were. There was a time when even the small quantities of lac produced in the neighbouring countries used to be imported into India and were processed along with the indigenous lac before it was exported to countries using the same. Now the position has been completely reversed.

Indian lac is exported in the form of shellac, seed lac, button lac, etc. and, on an average, has been contributing about Rs. 5 crores annually to the foreign exchange earnings of the country during the last three years. The peak contribution of Rs. 14.84 crores made in the year 1951-52 now appears to be a far cry. Nevertheless, every effort must be made to step up the exports of this commodity. The industry must be put on a scientific footing through the discovery of new uses and application of latest techniques.

Although extensive research work is in progress and various artificial substitutes have been discovered to replace lac in some of its uses, lac is still unique as a natural resin, because it is the only commercial resin of animal origin. Lac, as readers are aware, is a hardened secretion of a small insect, commonly known as lac insect, which is usually a parasite on certain trees called host trees. Lac cultivation depends on many factors such as the location of host trees and their proper infection and cropping. For the collection of crop, the encrusted twigs are cut down and the lac separated. In its crude form, the lac is known as sticklac. It is in this form that the lac product is brought to the market. After it has been washed with water and cleansed, it is known as seedlac which is later on further refined by a process of hot filtration for conversion into shellac, button lac, dewaxed lac and dewaxed decolourised lac. Over 90 per cent of India's exports of lac is in the semi-refined form of seedlac or refined form of shellac. Certain bye-products of the industry, such as *malamma* and *kiri* which are refuse products, are also exported. The refining operations are carried out within the small-scale factories in different parts of the country and in one large mechanised factory in Calcutta, which is also the port through which practically all the lac is exported to other countries.

Marketing

The *modus operandi* of the marketing of lac product in India is that the cultivator brings his produce to the market near his home. The produce of an individual producer is never more than 4-10 seers per season. This is purchased by middleman who then sells it to the representatives of factories. After the necessary processing in factories, lac is despatched by rail or road to Calcutta for export to foreign markets.

The first efforts towards rationalisation and proper functioning of the lac industry in India were made in the post-World War I period. Following the wide fluctuation in the price of lac, as also shortfalls in the production, the Government of India appointed early in 1920 a two-man Committee to enquire into the conditions of lac trade and suggest measures for its improvement. In order to bring price fluctuations and adulteration in the lac industry under check, the Committee suggested adoption of intensive and systematic cultivation according to scientific methods. As a result, the Indian Lac Association for Research was formed in 1921 and entrusted with the task of establishing the Indian Lac Research Institute at Namkum, Ranchi (Bihar). In the year 1930, the Government of India constituted the Indian Lac Cess Committee under the Indian Lac Cess Act of 1930 which replaced the Indian Lac Association for Research. The major function assigned to the Committee were looking after the cultivation and marketing of lac. The Research Institute at Ranchi is being maintained by this body within the framework of the Ministry of Food and Agriculture. Originally, the functions of the Institute consisted chiefly of laying emphasis on cultivation aspects of lac with the object of improving methods of cultivation and also the quality of produce. In later years, however, with new developments, the scope of the Institute was broadened to include investigations on fundamental aspects of both entomological and chemical research as also developments deserving immediate attention such as improving the methods of shellac manufacture and also finding out new uses of lac. After World War II, the Institute's scope of activities was further widened. A separate wing was opened to be in charge of propaganda and demonstration of scientific and improved methods of lac propagation. In order to meet the requirements of skilled personnel for lac developmental programmes, a large number of persons are also being trained by the Research Institute in the application of improved methods of lac cultivation, as also in the industrial utilisation of lac.

At present, the Indian Lac Cess Committee is actively engaged in the research work on fundamental and applied aspects of lac entomology and cytological, physiological and genetical aspects of lac insect. Experiments have been made to determine the best method of raising Moghania plantation. On the chemistry side, a pilot plant, capable of bleaching 45 kgs. of seedlac per day, has been installed and successfully operated. Two new regional laboratories have been opened at Balrampur and Daltonganj. In addition, construction of an air-conditioned godown for storage of seedlac and shellac at Calcutta has been taken up by the Institute. A scheme for estimating crop production based on random sample surveys has also been brought into operation.

Price Stability

Besides the Cess Committee, which has an extension wing to popularise scientific techniques and publishes statistics of lac trade and industry, the Government of India has established a Shellac Export Promotion Council at Calcutta, which works in close collaboration with the Indian Shellac Exporters' Association. In order to prevent wide fluctuations in the prices of lac, minimum prices for all grades of lac meant for export have been fixed. This also serves the purpose of protecting the lac growers at home and overseas buyers from cut-throat competition. Realising the need for maintaining buffer stocks to stabilise prices, the Government of India formulated a new scheme in the year 1961 for price stabilisation and promotion of exports of lac. Under the Scheme, the State Trading Corporation was authorised to act as a buffer stock agency to regulate the purchase of lac as also the export prices of lac. The State Trading Corporation operates in the lac trade through a Seedlac Buffer Stock Scheme with buying offices in all the major lac refining centres, namely, Gonda, Balrampur, Ranchi and Daltonganj. Of late, there have been some complaints against the operations of the State Trading Corporation. One of them is that Corporation is operating with a profit-motive than with the object of helping the industry to regulate prices and promote exports of lac. It is said that the margin between the price offered by the State Trading Corporation for the best quality of Seedlac and the minimum price fixed for exports is unduly high in its favour. If this is true, it is not clear how the growers will feel encouraged to step up production of lac and improve the quality of the commodity.

It would be interesting to note here the changes in the trend of offtake of Indian lac by the principal importing countries. Lac from India is mainly exported in the form of shellac which, as said earlier, is refined seedlac after hot filtration of lac in its crude form. The chief consumer of lac in its crude form. The U.S.S.R., U.S.A. and U.K. The following table shows the annual intake of Indian shellac by these countries:

(In lakhs of rupees)

	1960-61	1961-62	1962-63	1963-64
U.S.A. ..	55	39	46	39
U.K.	52	37	44	37
U.S.S.R. ..	44	56	50	74

In the United States and the United Kingdom, India has yielded ground to Thailand. The quality of Thailand shellac is not as high as that of Indian shellac, but, as its price is cheap, it pays the importers in the U.S. and the U.K. to import them and refine them further before use. The Soviet Union has emerged as the major market for Indian shellac. But one cannot bank on that country maintaining that position, because the tremendous scientific developments that are taking place in that country will surely make it possible for it to find cheaper substances at home. Further, it is said that Russia is already planning production of lac in bulk quantity and for this purpose lac insects have been imported and are being acclimatised to local climate. If it succeeds in its efforts, Indian exports to Russia will naturally be affected.

Lac or the shellac to be precise, is a versatile natural resin which can be put to a number of uses. It is used in the polish for floors and furniture, for finishing of metal foil, leather, rubber, playing cards, etc., as insulating varnish and as plastic in the manufacture of gramophone records, etc. Formerly about one-third of the shellac exported found its way in the manufacture of gramophone records, but now gramophone records are being made in the developed countries from synthetic substitutes. Various other uses of lac are now being abandoned in favour of synthetics.

Lac trade in the world today is a duopoly as it is controlled only by two producers—India and Thailand. Both the countries will not gain anything by cutting each other, because in that situation they will bring the prices of lac in the export market to very uneconomic levels. The best course for the two producers is to seek an understanding with each other regarding prices and production. Both the countries can, perhaps, promote joint research which will result in an expanding market for lac. It is just possible that research may show that a blending of lac with the synthetics will provide a satisfactory solution to the competition offered by the substitutes.

A Useful Monograph

It will be apt to conclude this article by making a reference to a useful publication entitled "A Monograph on Lac" brought out by the Indian Lac Research Institute, Namkum, Ranchi (Bihar). Although it is only a collection of articles from eminent authorities on lac, the monograph provides a good picture of historical aspects of lac production in India and abroad, cultivation of lac and factors influencing the same, technical aspects of lac production and processing, uses of lac, grading and standardisation of lac, research and marketing of lac products. It also contains material on the lac trade and industry. It is thus a valuable addition to the literature available on this commodity. In the foreword to the monograph the Agricultural Commissioner, Government of India says:

"Apart from exports, one could expect a progressively expanding market for shellac within

(*Continued on page 1041*)

INDORE MALWA UNITED MILLS

MODERNISATION HELPS IMPROVE PROFIT

THE Indore Malwa United Mills Ltd. (Chairman: Mr. K. G. Seksaria, Indore) has staged, during the year ended 31st December 1963, a welcome, though not quite unexpected, recovery fully justifying the hopes expressed by the Chairman at the last annual general meeting of the Company a year ago. While expressing his views on the prospects of the Company for the year under review (that is, 1963), the Chairman, it will be recalled, had stated that, though the results till the time of the annual meeting were not satisfactory, with the functioning of the processing department and installation of additional machinery in the various departments of the mills, there would be considerable economy in the manufacturing costs which, coupled with an improvement in quality and an increase in production, would result in higher profitability. Such, indeed, has been the case. For, though the sales realisation has decreased by Rs. 14.19 lakhs to Rs. 382.19 lakhs, closing stocks of finished and processed goods have risen from Rs. 54.61 lakhs to Rs. 62.53 lakhs—during the preceding year they had declined by Rs. 15.66 lakhs from Rs. 70.27 lakhs—while the gross profit has expanded by more than 50 per cent from Rs. 14.14 lakhs to Rs. 21.42 lakhs. If this profit is still well below the record level of Rs. 32.67 lakhs attained in 1961, it is chiefly because of the steep rise in manufacturing costs due to rise in prices of raw materials, increase in wages, and fringe benefits, on the one hand, and the continuation of the system of voluntary price control, on the other, to say nothing of the dislocation in working caused by the large-scale renovation of the mills and occasional labour troubles.

Side by side with the improvement in gross profit the essential provisions, too, have increased, that for the remuneration to the Directors' committee from Rs. 0.29 lakh to Rs. 0.32 lakh for depreciation from Rs. 6.26 lakhs to Rs. 9.30 lakhs and for taxation from Rs. one lakh to Rs. three lakhs. Consequently, the resultant net profit is higher by only Rs. 2.21 lakhs or 30 per cent at Rs. 8.80 lakhs. It is heartening to note that the Directors have decided to utilise the available amount partly for augmenting the reserves and partly for enhancing the rate of dividend payable to shareholders. The ploughback has been stepped up from Rs. 3.00 lakhs to Rs. 4.55 lakhs while the dividend has been risen by half a point to eight per cent, subject to deduction of tax. The dividend claims Rs. four lakhs as against Rs. 3.75 lakhs a year ago, yet leaving a heavier carry forward of Rs. 34,392 as against Rs. 8,880 brought in.

The above details are presented in the following table together with those for the three years immediately preceding, for the sake of comparison:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sale proceeds	382.19	396.33	347.52	320.50

Market price (in Rs.) of ordinary shares:	1964	1963	1962	1961	1960
High	212	205	240	180	135
Low	200	170	175	120	107

Pursuing the programme of renovation and modernisation of its mills, the Company spent during 1963 Rs. 1.09 lakh on additions and extensions to buildings. It also received machinery worth Rs. 27.68 lakhs during the year and installed of these machinery worth Rs. 26.82 lakhs. Almost all these machines have been put into commission.

There has been no change during the year in the paid-up capital of the Company which therefore continues to stand at Rs. 50 lakhs made up entirely of ordinary shares of Rs. 100 each. It has the support of Rs. 30.89 lakhs in reserves and surplus. Borrowings, on the other hand, have increased substantially from Rs. 98.44 lakhs to Rs. 149.10 lakhs, chiefly because of the loan of Rs. 50 lakhs availed from the State Bank of India against immovable property and plant and machinery. Current liabilities and provisions, however, are a shade lower at Rs. 43.32 lakhs, as against Rs. 47.82 lakhs a year ago. Inclusive of the additions of Rs. 30.09 lakhs made during the year, the gross block stands at Rs. 242.65 lakhs. On deducting therefrom Rs. 148.61 lakhs being the amount of depreciation, there is a net block of Rs. 94.04 lakhs. Current assets, investments and loans and advances total Rs. 179.29 lakhs. It will thus be noted that the Company's financial position is satisfactory.

As regards the prospects for the current year, it is best to quote here what the Directors themselves have to say in this respect. They observe that, since 1st December 1963, there has been a further increase in the cost of labour. Further, the Central Government, in its budget for the year 1964-65, has enhanced the excise duty on grey and processed cloth in medium, fine and superfine varieties. It is feared that it would be difficult to pass on in full the steep rise in excise duty to consumers and that the industry would therefore have to bear a large portion thereof. With these adverse factors, coupled with the rising spiral of the cost of production and lack of uniform co-operation from the labour due to internal friction amongst them, the prospects for the current year are anything but bright. Nevertheless, with the completion of the Company's modernisation and renovation programme, it is hoped that the current year's results will compare favourably with those for the past year.

At present, the Rs. 100 fully paid ordinary shares of the Company are quoted at Rs. 209 *cum*-dividend and fetch a net return of no more than 3.10 per cent per annum.

Three companies of the Mitsubishi group of Japan were officially amalgamated on the 1st inst., into Mitsubishi Heavy Industries Ltd. The three companies are Shin Mitsubishi Heavy-Industries, Ltd., Mitsubishi Nippon Heavy-Industries, Ltd. and Mitsubishi Shipbuilding and Engineering Company, Ltd.

SHREE GOPAL PAPER FARES VERY WELL

PROFIT TOUCHES ALL-TIME PEAK

THE Shree Gopal Paper Mills Ltd. (Managing Agents: Messrs. Karamchand Thapar and Bros. Pvt. Ltd., Calcutta) has fared exceedingly well in the past year, that is the year ended 31st December 1963, and its performance is sure to appear more impressive considering the somewhat difficult trading conditions faced by the paper and *vanaspati* industries in which the Company has sizable stakes. The gross realisation from the sale of products has expanded by over 12 per cent from Rs. 806.10 lakhs to Rs. 898.32 lakhs and the gross profit has reached an all-time high of Rs. 214.73 lakhs, being higher by Rs. 27.37 lakhs than previously. It is interesting to note that a larger contribution to improved sales has come from the *vanaspati* division the turnover of which has advanced from Rs. 96.10 lakhs to Rs. 120.19 lakhs, even though the plant had to be shut down completely during the last two months of the year for want of raw materials. It is further pertinent to observe that, despite the seemingly higher gross profit, the profit margin (ratio of gross profit to sales) has actually declined by 1.6 point to 21.7 per cent due obviously to the continued upward trend in the cost of paper production.

As a corollary to the betterment in gross profit and notwithstanding the increase of Rs. 9.35 lakhs to Rs. 67.35 lakhs in the provision for depreciation, the provision for Managing Agents' commission and Directors' remuneration is higher at Rs. 15.91 lakhs, as against Rs. 14.00 lakhs for the year before. The provision for taxation, however, is lower at Rs. 51.25 lakhs, as compared with Rs. 60.00 lakhs, and, consequently, the net profit is up to Rs. 74.22 lakhs from Rs. 55.26 lakhs a year ago. Out of this, the Directors have transferred Rs. 44.65 lakhs to reserves and have set aside a further Rs. 7.56 lakhs in order to pay the preference dividends in respect of the year. They have further rounded up the ordinary dividend to 18 per cent from 17 6/7 per cent, both subject to deduction of tax, and this claims Rs. 22.59 lakhs. The carry forward is naturally lower at Rs. 43,420, as against the Rs. 73,294 brought in.

The steady progress achieved by the Company during the past four years is well brought out by the following comparative figures:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sale proceeds	898.32	806.10	644.69	468.90
Other income	20.02	10.78	8.26	9.80

Ordinary	22.59	22.41	22.41	22.41
	18%	17 6/7%	17 6/7%	17 6/7%
Carry forward	0.43	0.73	1.58	0.57
Market price (in Rs.) of ordinary shares:	1964	1963	1962	1961	1960
High	26.12	27.50	28.62	28.37	30.75
Low	24.50	21.50	22.75	23.70	22.12

Performance of the paper unit during the year was highly satisfactory and the finished saleable production amounted to 37,331 tonnes as against 35,126 tonnes of the previous year. While the accent continued to be on increased production, equal efforts were also made to improve the quality of ordinary writing and printing paper. A proposal was submitted to the Government for expanding production by 7,000 tonnes annually with the installation of balancing equipment. The scheme has been approved by the Government and the Company has been authorised to negotiate with the I.C.I.C.I. and the I.F.C. for the import of necessary equipment valued at Rs. 35.50 lakhs. Since chemical cost accounts for a large proportion of the final cost, the possibilities of expanding the capacities of the existing electrolytic bleach plant are being seriously considered. The existing plant produces about 1.5 tonnes of caustic soda per day, together with an almost equivalent quantity of chlorine. It is proposed to expand the capacity to 30 tonnes of caustic soda and chlorine per day.

(*Continued in previous column*)

(*Concluded from next column*)

Stationary production during the year under review showed an appreciable increase, despite the fact that the expansion of printing section could not be carried out on account of restriction on imports of machinery. Sales during the year amounted to Rs. 66.47 lakhs, as against Rs. 55.63 lakhs for 1962. The *vanaspati* section worked for 275 days and produced 4,285 tonnes of *vanaspati*, as compared with the 3,862 tonnes produced in 276 days during 1962. Of these, 4,501 tonnes were sold, as against 3,739 tonnes. The factory had to stop its manufacturing activity for a few days during the months of October and November 1963, due to difficulty in procuring oil supplies at reasonable rates. Otherwise, the tempo of production was fairly well maintained throughout the year.

There is no change in the paid-up share capital of the Company which continues to stand at Rs. 208.02 lakhs, made up of Rs. 81.49 lakhs in two classes of preference shares of Rs. 100 each and the balance in ordinary shares of a nominal value of Rs. 10 each. Reserves, however, have improved from Rs. 177.05 lakhs to Rs. 221.34 lakhs, excluding the Rs. 30.16 lakhs earmarked for payment of dividend and the Rs. 57.25 lakhs credited to the tax reserve. Secured and unsecured loans are only slightly higher at Rs. 158.22 lakhs, but there is a marked rise in current liabilities and provisions which aggregate Rs. 201.44 lakhs. Fortunately both borrowings and current liabilities and provisions are adequately covered by current assets to advances which altogether amount to Rs. 383.62 lakhs. Investments, most of which are in preference and ordinary shares of companies belonging to the same group, are carried in the books at a cost of Rs. 74.95 lakhs. Inclusive of the addition of Rs. 12.30 lakhs during the year, the block account as at 31st December 1963 stands at Rs. 665.14 lakhs and, on deducting therefrom the depreciation earned todate, yields a net block of Rs. 330.51 lakhs which figure also includes Rs. 6.17 lakhs as the cost of capital work-in-progress.

The present market price of Rs. 10 paid ordinary shares of the Company is Rs. 24.87 *cum-div.* Reducing it to an *ex-div.* basis, the net yield works out to 6.1 per cent per annum.

SVADESHI MILLS EARNS AND PAYS MORE

FROM BETTER CLOTH AND RENOVATION

UNLIKE the other two cotton mills managed by the House of Tatas, namely, the Tata Mills and the Ahmedabad Advance, the Svadeshi Mills Company Ltd. has reported better results for 1963, mainly due to the production of more improved varieties of cloth which found ready consumer acceptance and the economies effected as a result of the continuous process of renovation and rehabilitation of the plant and machinery. Its net sale proceeds have gone up from Rs. 519.45 lakhs to Rs. 591.51 lakhs, at which level they show an improvement of nearly a crore of rupees over Rs. 492.82 lakhs in 1961. This further rise in sales has lifted gross profit to Rs. 82.05 lakhs, whereas, in the previous year, it had dipped, in spite of higher sales, from Rs. 82.82 lakhs to Rs. 62.68 lakhs. The lower inventory at close, amounting to Rs. 101.73 lakhs, as against Rs. 119.51 lakhs, and the much restricted increase of less than Rs. 5 lakhs in other expenses at Rs. 221.48 lakhs as compared with Rs. 13 lakhs in the previous year, provide some indication of what has caused the profit to resume its upward march. The sales figures are net, that is, after excluding the amount of excise duty collected and paid which is Rs. 91.84 lakhs during the year under review against Rs. 76.50 lakhs a year before.

Depreciation has claimed about Rs. 2 lakhs more at Rs. 23.34 lakhs and taxation Rs. 5 lakhs more at Rs. 23 lakhs. The Managing Agents' commission is also higher at Rs. 4.08 lakhs as compared with Rs. 3.46 lakhs in the previous year. Because of these increased essential provisions, the improvement of nearly Rs. 20 lakhs in gross profit has been reduced to Rs. 12 lakhs approximately at the level of net profit which has moved up from Rs. 19.34 lakhs to Rs. 31.63 lakhs. But it is sufficient to allow full restoration of the two-point cut in the dividend on the 100-rupee ordinary shares, from 19 per cent to 17 per cent per annum, which had been imposed in the previous year. It would have been sufficient also to cover a still higher dividend. But instead of doing more than just restoring the cut in the dividend, the Directors have preferred, in view of the Company's renovation programme, to utilise the bulk of the increase in net profit to raise the plough-back to reserves from Rs. 3.50 lakhs to Rs. 11.53 lakhs. Both the preference and ordinary dividend are to be paid from dividend reserve to which Rs. 20.10 lakhs have been carried out of the year's profit. The previous year's dividend liability was also met from dividend reserve, but the amount transferred to this reserve was Rs. 1.57 lakh short of the actual liability and to that extent the plough-back was reduced.

The following table compares the Company's progress from 1960:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sale proceeds	591.51	519.45	492.82	446.75

Low	235.00	224.00	231.00	218.50	220.00

New plant and equipment worth Rs. 32 lakhs were installed during the year. The important items were equipment for modernisation of the existing blow room lines, drawing frames, automatic looms, a hank mercerising machine, etc. These new equipments are expected to improve further the quality of cloth and achieve a better balance between spinning and weaving. The year ended with works under construction and machinery awaiting installation worth Rs. 27 lakhs. Orders have been placed for new machinery of the value of Rs. 29 lakhs. During the year, 9,680 spindles were added to the 2,992 installed in the previous year. Orders for eight more ring frames aggregating 3,520 spindles remain to be executed. On their installation, the Company will have achieved the required balance between spinning and weaving. By the end of next year, the Company expects to work 288 additional automatic looms sanctioned to it in replacement of 265 plain looms, which will build up the automatic weaving to about 42 per cent of the total capacity. This and the future expansion and modernisation of the processing department will no doubt require a large financial outlay. But the Directors are seized of the problem.

The gross block stands at Rs. 440.65 lakhs (Rs. 409.52 lakhs a year before) and has been written down to a net value of Rs. 184.58 lakhs. As against this, the "own funds" amount to Rs. 251.15 lakhs, of which Rs. 115 lakhs are in share capital and Rs. 136.15 lakhs are in reserves and surplus. While the share capital is one-fourth of the gross block, borrowings amount to Rs. 150.62 lakhs, which together with current liabilities and provisions, raise the total short-term indebtedness to Rs. 287.28 lakhs. This indebtedness is, however, well covered by current assets, book debts and investments aggregating Rs. 326.74 lakhs.

The net yield on the Rs. 100 fully paid ordinary shares of the Company at their current market value of Rs. 248 *cum-div.* is 6.5 per cent per annum.

PAN AMERICAN AIRWAYS

"In a few years, air cargo volume will double, leading to the day when industry revenues from air freight business overseas equal revenues from passengers, repeating the history of surface transport." Thus observes Mr. Juan T. Trippe, President of Pan American World Airways, in the Company's annual report just issued. "Overseas air freight will increase at a more rapid rate than passenger traffic." In 1963, Pan Am, the world's largest air cargo carrier, flew 200 million cargo ton-miles in scheduled overseas service—twice that of any other carrier—producing a record $54,395,000 in cargo revenue. Pan Am inaugurated jet service for passengers in 1958 and it also opened the jet age for air freight when it placed three all-cargo jets in service in June 1963. By June 1964, Pan Am will have taken delivery of 11 all-cargo jets, with two more scheduled for delivery the following winter. These 13 jet freighters, the largest and fastest in service, will bring Pan Am's jet cargo fleet investment to $110,000,000.

Pan Am's earnings in 1963 were at an all-time high, setting a new record in the air transport industry. Net income after taxes was $33,568,000, or $5.13 per share. This compares with $15,007,000 or $2.23 per share in 1962. Net income included capital gains of $2,487,000 in 1963, as compared with $648,000 for the previous year.

Operating revenues for 1963, not including affiliated companies, rose by 11.3 per cent to $560,917,000. Operating expenses also excluding affiliated companies, however, increased but by 5 per cent. Cost per revenue ton-mile was reduced to 42.4 cents from 44 cents the year before. Cost per available ton-mile was down to 23 cents from 24.7 cents.

(*Concluded from next column*)

expanded by putting up a supplementary pipe machine and an additional sheet machine. The supply position of asbestos fibre continues to be difficult, but the Company has made a representation to the Government for a larger allocation of foreign exchange commensurate with rated capacity. The 200,000 tonnes expansion of the cement division was attained in November 1963. The installed capacity now is 640,000 tonnes.

The Company issued in June-July 1963, 50,000 equity shares at a premium of Rs. 10 per share. Earlier, in March, it issued to its collaborators, Messrs. Johns Manville Corporation, New York, 1,500 equity shares. These issues have raised the paid-up capital, including Rs. 79.94 lakhs in preference shares, from Rs. 227.86 lakhs to Rs. 279.42 lakhs. It is backed by Rs. 129.42 lakhs in reserves and surplus. The loan liability has gone up from Rs. 232.49 lakhs to Rs. 272.13 lakhs and, inclusive of current liabilities and provisions, the total indebtedness amounts to Rs. 395.93 lakhs, as against Rs. 330.08 lakhs a year before. Investments are unchanged at Rs. 79.34 lakhs (Rs. 78.88 lakhs of which are quoted at Rs 125.51 lakhs) and current assets, loans and advances amount to Rs. 264.36 lakhs. The floating assets thus total Rs. 343.70 lakhs, roughly Rs. 52 lakhs less than the short-term indebtedness. The gross block, which has expanded during the year from Rs. 575.14 lakhs to Rs. 692.69 lakhs, has been written down to Rs. 440.76 lakhs. Capital work in progress is shown separately at Rs. 20.41 lakhs.

Currently quoted at Rs. 187.50 *cum-div.*, the Rs. 100 fully paid ordinary shares offer a net yield of 5.9 per cent per annum.

DIGVIJAY CEMENT

ASBESTOS PRODUCTS MAKE A BIG DIFFERENCE

"AS you are aware, the Company had to draw substantial amounts from its reserves for declaring modest dividends for the years 1958, 1959 and 1960. The overall working results for 1962 have fallen short of expectations. Though the Company had the full benefit of the price increase granted by the Government during the working of the whole year, the profits have been just sufficient to make statutory provisions and declare a very modest dividend." Read against the backdrop of these rather unencouraging comments of the Directors of Shree Digvijay Cement Company Ltd. (Managing Agents: Shree Laxmi Agents Ltd., Sikka, Gujarat) in their report for 1962, their statement that the results for 1963 show an overall improvement marks a big difference.

In terms of rupees and paisa, it means the biggest ever increase in turnover and gross profit; in the former of as much as 33 per cent or Rs. 153.28 lakhs to Rs. 617.78 lakhs and in the latter of roughly 70 per cent or Rs. 52.63 lakhs to Rs. 128.71 lakhs. Even after making much larger essential provisions following the substantial improvement in gross profit, the net profit is up by roughly 90 per cent from Rs. 32.83 lakhs to Rs. 61.49 lakhs. To this are added Rs. 5.72 lakhs being compensation received from the asbestos machinery suppliers for delay in shipment, which bring the disposable surplus to Rs. 67.21 lakhs. Following a conservative appropriation policy, the Directors have tucked away to reserves out of this a fairly big sum of Rs. 39.93 lakhs as against Rs. 16.16 lakhs a year before. But, in spite of this, the surplus is large enough to permit a three-point increase to 13 per cent per annum in the dividend on the 100-rupee ordinary shares and that too on increased capital.

The year's results are compared with those for the previous three years in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sale proceeds	617.78	464.50	318.02	320.23
Other income	9.54	6.01	10.57	1.34
Closing stocks	36.40	20.99	26.10	6.03
Materials, stores and spares consumed	280.93	210.36	121.09	117.35
Other expenses	233.09	178.96	162.29	156.39
Gross profit	128.71	76.08	65.28	43.93
Managing Agents' commission.	5.59	3.85	3.71	1.64
Provision for—				
Depreciation	32.63	21.75	18.86	18.08
Taxation	29.00	17.65	14.50	10.25
Net profit	61.49	32.83	28.21	13.96
Compensation from suppliers.	5.72	..	..	..
Withdrawals from reserves and provisions	..	..	..	4.07
To reserves	39.93	16.16	7.00	1.21
Dividends—				
Preference	5.20	5.20	5.20	5.20
Ordinary	22.63 (13%)	13.49 (10%)	13.44 (10%)	12.10 (9%)
Carry forward	0.02	0.57	2.58	0.02
Equity shares' market value (in rupees):	1964	1963	1962	1961	1960
High	194.00	192.00	218.25	215.00	182.00
Low	168.00	144.00	157.75	147.00	140.00

There are three factors which have influenced the year's results. One is that the output of clinker and cement increased from 426,000 and 472,000 tonnes to 642,000 and 503,000 tonnes, respectively. The other is that the Government allowed an increase of Rs. 2.75 per tonne in the retention price of cement as of 1st June 1963. The third is that the Company commenced production of asbestos cement products. But the Directors complain that the increase in the cement price does not adequately cover the total increase in the cost of production and that the Company has been representing for a proper revision of the ex-works price for its clinker grinding unit. They attribute the overall improvement in the year's results largely to earnings from the asbestos cement products division and partly to the higher output of cement.

The big difference seen in the results during the year is thus due to the Company undertaking production of asbestos cement pipes and sheets. Actually, trial production in the plant at Ahmedabad commenced in November 1962. The entire project was originally to be set up by the subsidiary, Laxmi Asbestos Products Ltd., but this idea was given up in favour of the present arrangement. The clinker grinding plant and the asbestos cement factory have involved an aggregate capital expenditure of Rs. 132 lakhs. The output in the asbestos cement products division during the year was 23,300 tonnes. The plant is proposed to be

To dividend (taxable) ordinary	10,35 (35%)	15,31 (45%)
Carry forward	30	23

Extracts from the Directors' report: During most of the year reasonably favourable market conditions were experienced and production in the Industry continued at a very high level. The working time agreement of the Indian Jute Mills Association was abolished with effect from 1st February, 1964, after consultations with the Government of India. The abolition of the working time agreement resulted in a marked increase in the production of Mills in India, but has not resulted in any alteration in the existing level of production at Wellington Mill which has been working to full capacity for some considerable time.

A further stage of expansion of the broad loom plant at Wellington Mill was undertaken during the year and a total of 48 looms which are currently working three shifts for 7 days a week have been installed and commissioned. The prices obtained for *Carpet Backing* have been satisfactory during the year. It now appears that production of *Carpet Backing* has more than caught up with world demand and although future prospects are reasonably good, prices of this commodity may well show a lower tendency in the coming months.

The outlook for the current year is not particularly encouraging as raw jute prices are ruling steady and prices of finished goods have fallen because of the pressure of the extremely high level of production of the Indian Jute Industry. It is certain that the Company's working results for the current year will be substantially below those for the year just ended.

Accounts in brief as at 31st March 1964 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	29,58,200	Gross block	1,95,45,693
Reserves and surplus	1,01,40,462	—Depreciation	1,19,34,120

N.B.—Adjustments relate to the balance brought forward from the previous year.

Extracts from the Directors' report: During the year under report the mills at Peelamedu worked for 241 days in treble shifts with an installed capacity of 27,226 spindles, spinning finer counts over Nº 50 and was closed for 11 days on account of power cut and for 52 days due to strike and the 'B' mills worked for 291 days with an installed capacity of 12,320 spindles on cotton with three shifts and 10,120 spindles on staple fibre in two shifts spinning Nº 34, 24 and 17. The power-cut and strikes adversely affected the production. Surcharge on current consumption was raised from 30 per cent to 50 per cent.

The balance of machinery ordered under the expansion scheme for spinning staple fibre have been received, installed and commissioned to work before the close of the year. The additional combing unit ordered for 'A' mills has been commissioned. Six more ring frames at Peelamedu were converted into latest UT 3E drafting system. The Government of India has allowed the mills to increase their spindleage as under: to raise the spindleage upto 25,000 spindles where the existing installed capacity is below that and in other cases upto 7½ per cent to 10 per cent of its installed capacity. The directors of the Company have resolved to avail of the opportunity and increase the installed capacity of the units. Application have been made to the Government of India to amend the licence.

The outstanding commitments of the Company for purchases of capital goods under the modernisation scheme is Rs. 13,11,400 and on purchase of cotton and consumable goods is Rs. 12,33,780.

Accounts in brief as on 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	30,71,100	Gross block	1,43,81,456
Reserves and surplus	39,65,357	—Depreciation	78,31,740
Other liabilities	52,77,474	Net block	64,99,716
		Investments	6,50,110
		Other assets	11,94,619
		Cash	39,69,488
	Rs. 1,23,13,931		Rs. 1,23,13,931

* Paid-up capital consists of 29,711 equity shares of Rs. 100 each fully paid and 1,000 6½% tax free cumulative preference shares of Rs. 100 each.

Synthetics and Chemicals Ltd.

(*Chairman*: Mr. Tulsidas Kilachand, Bombay.)

Fourth Annual General Meeting—29th June 1964.

Extracts from the Directors' report for the year ended 31st December 1963: The working of the Company for the period without providing for depreciation, has resulted in a loss of Rs. 29,25,604 which is added to the balance of Rs. 9,38,858 brought forward from the last years' account. The total loss amounting to Rs. 38,87,990 is carried forward. The sales for the year amounted to Rs. 93,72,189 against Rs. 2,23,639 in 1962.

The commercial production of *synthetic rubber* was started during the year. The total production during the year was 8,511 metric tons. The installation of the plant and machinery for the 30,000 tons capacity has been completed. The teething troubles in the plants and difficulties experienced in the utilities area have now been overcome. The plant is now working satisfactorily and is capable of producing at the rate of 30,000 tons per annum.

The quantity of rubber produced is consistently of high standard and conforms to the International Standard and the rubber consuming industry is fully satisfied with it.

The Company has made arrangements with the Firestone Tire & Rubber Company, U.S.A., for the manufacture of other types of rubbers and latices and the Directors expect that the manufacture of the additional products will be commenced in the current year.

Due to the continuation of imports of rubber, both synthetic and natural in 1963, the offtake of the Company's products did not reach the expectations and consequently the Company had to carry large stocks of its products.

The indigenous production of natural rubber has increased. With the production of synthetic rubber in India, with large inventories with the rubber using industry and their unutilised import licences for rubber, total availability of all rubbers is ample. There is therefore no necessity of further imports of any rubber, either natural of synthetic, for considerable time except for a small quantity of the highly specialised rubber such as oil resistant and Butyl. The Company has made detailed representations to the Government of India indicating how synthetic rubber production of 30,000 tons per annum can be gainfully utilised and that imports of all rubbers should be completely stopped till the existing production of natural and synthetic rubber in the country is fully utilised thereby saving valuable foreign exchange.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	5,74,07,900	Gross block	14,66,53,786
Reserves	25,74,844	—Depreciation	10,89,355
Other liabilities	14,94,61,578	Net block	14,49,64,431
		Block-in-progress	4,82,245
		Disclosure fees	14,26,500
		Current assets	5,47,38,367
		Investments	4,030
		Cash	16,13,646
		Miscellaneous expenditure	23,26,513
		P. L. Account Deficit	38,87,990
	Rs. 20,94,44,622		Rs. 20,94,44,622

* Paid-up capital consists of 5,74,885 Equity shares of Rs. 100 each. Allotment and call money in arrears amount to Rs. 80,600.

Tensile Steel Ltd.

(*Managing Agents*: Shaw Industries Private Ltd., Bombay.)

Third Annual General Meeting—16th June 1964.

Extracts from the Directors' report for the year ended 31st December 1963: The year's account show a net loss of Rs. 20,93,135 which is inclusive of Rs. 4,41,416 being depreciation provided in full as per rules and Rs. 13,41,328 as development rebate.

Project Inauguration: The completion of civil construction works, installation of plant and machinery and other ancillary works on schedule and trial operations were undertaken from July onwards. The plant was inaugurated on 12th November 1963, and is working satisfactorily.

Prestressed Concrete Wires manufactured by the Company has been very well received by all concerned. The Government Test House at Alipore has certified the Company's product as being in conformity with ISI 1785-1961. The Company is expecting to receive for its product ISI mark very soon.

Raw Materials and Production: After initial difficulties in the procurement of imported raw material, as a result of representations to the Government of India, Company has succeeded in getting sizable allocations under (*a*) own import licences, (*b*) international credits, and (*c*) barter entitlements. The allotment of *High Carbon Wire Rods* till date almost covers the Company's requirement for a year.

However, the factory could not start operations earlier owing to initial raw material paucity which, in fact, had compelled to suspend production operations for over two months.

Over and above the raw material difficulties, the Company is confronted with power shortage. The Company is sanctioned full power required only for one shift, i.e. between 12 midnight and 8 a.m. This position is likely to continue till the Dhuvaran Power Station is commissioned.

Finance and Borrowings: As reported last year, against the estimated short-fall in the project cost as per revised cost estimate, the Gujarat State Financial Corporation, Ahmedabad, had sanctioned a loan of Rs. 10,00,000 ranking *paripasu* with the charges created in favour of the Industrial Finance Corporation of India against their loan. The Company has already received from the Gujarat State Financial Corporation Rs. 8,90,000 out of the loan granted and the balance is yet to be received.

The first instalment of deferred payment of Rs. 2,99,520 due to one of the Company's Collaborators and plant and machinery suppliers, Messrs. C. Itoh & Co. Ltd., Japan, was paid off on its due date, viz. 30th November 1963.

The Company has arranged cash credit facilities with the Bank of India Limited, Bombay, on the hypothecation of stocks of raw material, finished and semi-finished products and stock-in-process. The present sanctioned limit in the cash credit account stands at Rs. 45,00,000.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	44,93,250	Gross block	1,00,01,681
Reserves	13,41,328	—Depreciation	4,50,793
Other liabilities	78,79,388	Net block	95,50,888
		Current assets	18,29,072
		Miscellaneous expenditure	2,02,937
		Cash	4,670
		P.L. Account Deficit	21,25,799
	Rs. 1,37,13,966		Rs. 1,37,13,966

* Paid-up capital consists of 45,000 Equity shares of Rs. 100 each. Calls in arrears amount to Rs. 6,750.

Binani Metal Works Ltd.

(*Managing Director*: Mr. Ghanshyamdas Binani, Calcutta.)

Twenty-third Annual General Meeting—29th June 1964.

Working Results:

	For the year ending 31st December (In thousand rupees)	
	1963	1962
Sales	2,51,33	1,88,41

High	13.12	12.12	13.37
Low	11.62	8.87	9.81

† Upto 28th May, 1964.

Extracts from the Directors' report: Considerable additions to the net block were made during the year under review and this has helped in increase of production and sales.

The Company's order book is very satisfactory. Significant progress has been made in the Tool Room Project. The Company hopes to secure a foreign exchange loan of Rs. 5.2 lakhs from the Industrial Finance Corporation of India to finance import of special purpose machines from West Germany for the Tool Room Project.

With the approval of the Government of India the Company has entered into a collaboration agreement with Messrs. Multicore Solders Limited of U.K. in respect of production of *ERSIN Core Solder*. Messrs. Multicore Solders Limited are one of the leading producers of *ERSIN Core Solder* and the Company expects to benefit considerably from the know-how and the assistance agreed to be provided by the U.K. Company.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	40,00,000	Gross block	52,01,611
Reserves and surplus	12,06,218	—Depreciation	18,36,998

		Investments	5,236
		Cash	98,490
	Rs. 1,25,75,514		Rs. 1,25,75,514

* Paid-up capital consists of 4,00,000 equity shares of Rs. 10 each.

NEWS IN BRIEF

THE number of villages electrified upto the end of January 1964 is 37,457.

The life expectancy of men and women in India is 41.89 years and 40.55 years, respectively, according to Dr. Sushila Nayar, Union Health Minister.

The Government of India is considering a proposal to establish a heavy structural plant near Wardha. Details regarding the scope and range of manufacture, as well as the financial implications of project, are being worked out.

Czechoslavakia has offered to install in India an 800-kw. transmitter within about 21 months. If the Government of India agrees to the Czech tender, it will take 15 months to manufacture the transmitter and 6 months to install it. The transmitter will cost about Rs. 60 lakhs.

The Government of India has decided to permit limited imports of cotton/cotton waste/woollen card clothing from Hungary. The intending parties are required to submit their applications in the prescribed form to the Joint Chief Controller of Imports and Exports, Bombay, on or before the 30th inst.

India is likely to get concessions from the Iranian Government for oil exploration in the offshore areas of that country. If India is able to procure a licence for exploration and production, foreign collaboration will have to be sought. The oil potential of the area for which India has sought a licence from Iran is estimated at 20 million tons a year.

A world conference on disarmament and international co-operation will be held at New Delhi on 14th November 1964, on the occasion of the 75th birth anniversary of the late Mr. Nehru. The decision to hold such a conference has been taken by the Continuing Committee of the Seminar on International Affairs and World Peace. This seminar was inaugurated by Mr. Nehru in December last.

The State Trading Corporation has finalised a contract with West Germany for the export of 1,500 tons of tapioca chips to that country. It has agreed to purchase 25,000 tons of tapioca provided the Kerala State Tapioca Market Expansion Board could procure a fixed price from the parties nominated by the Board. At present, the Government of India is subsidising tapioca exports in the interests of earning foreign exchange.

A high-level conference to consider the problems of flood control in the States is scheduled to be held at Srinagar on the 25th and 26th inst. It will be attended by the Ministers in charge of flood control in Bihar, Andhra Pradesh, Assam, Jammu and Kashmir, Kerala, Maharashtra, Orissa, Punjab, Uttar Pradesh and West Bengal, besides the representatives of the Union Ministries of Irrigation and Power, Finance, Planning Commission and the Central Water and Power Commission.

The Union Government has decided to participate in the International Fair to be held at Brno in Czechoslavakia from 6th to 20th September 1964. This Fair is essentially an engineering goods fair and India's participation in it will help acquaint Czechoslavakia's foreign trade enterprises with the range and quality of Indian manufactures. Though the Brno Fair is only for displaying engineering goods, India has managed to set up an independent "India Pavilion" where suitable publicity will be given to the traditional items of export.

The Union Government has decided to create a central committee for jute development entrusted with the task of increasing jute yield in the country and improving the quality of fibre. The Committee will report annually to the Indian Central Jute Committee which will continue to be in charge of jute research. The creation of this Committee has been decided in the place of the jute development board suggested by the Srivastava Committee. The Committee will consist of State Agricultural Secretaries, officials of the Planning Commission and representatives of the jute growers and the industry.

"The developing countries should in future strongly increase their own efforts." Thus said the German Minister for Economic Co-operation, Mr. Walter Scheel, in a speech at Hanover recently. Germany, according to him, is willing to aid the developing nations in utilising their potential of labour and natural resources, in realising the possibilities of building up their own saving capital and in selling their products on the world market. But the emphasis has to be shifted from financial aid to training and social aid. Only then could financial aid become useful and within the next five years, Germany will build up a staff of several thousand experts for development aid. Three basic considerations have emerged from Mr. Scheel's policy speech: (1) Development aid is a permanent task for more than one generation; (2) Germany knows no traditional zones of influence; (3) Germany's financial means for development aid are limited.

The production performance of the Bhilai and Durgapur steel plants continues to be highly encouraging. The Bhilai plant produced during the month of May 1964 91,000 tonnes of ingot steel, that is, 7 per cent more than the monthly rated capacity. Production of hot material (pig iron) amounted to 106,330 tonnes, about 13 per cent more than the monthly rated capacity. About 80,934 tonnes of steel ingots were rolled by the Rolling Mills and 31,237 tonnes by rail and structural mill. Production of blooms and slabs was 70,557 tonnes which was also higher than the monthly rated capacity of the plant. The billet mill produced 40,947 tonnes, an increase of 18 per cent more than the monthly rated capacity of the mill. The merchant mill rolled 15,811 tonnes during the month thereby exceeding the rated capacity by 17 per cent. The steel plant at Durgapur produced a record of 93,000 tonnes of steel ingots, representing 110 per cent of the rated capacity and the big jump in the Merchant Mill to 28,743 tonnes constituting 141 per cent of the rated production. There was also a new monthly record in the wheel and axle plant where 2,176 sets were despatched. This plant has reached the target in reducing the cost of production by 15 per cent.

• • • •

From Abroad

The Malaysian Minister for Commerce and Industry, Dr. Lim Swee Aun, has said that the American releases of stockpile tin and surplus production of synthetic rubber are threatening Malaysian exports of these two major commodities.

The E.E.C. Commission in Brussels foresees persistent pressure on the labour market throughout 1964 in various Common Market countries, particularly in West Germany. Industrial expansion is expected to maintain a shortage of workers comparable to last year's.

The production of synthetic rubber in the United States continued at a record rate during the month of April, 1964. Total production in that month amounted to 146,213 long tons. This was the second highest level of production ever recorded in a single month.

The Government of Japan has agreed to the functioning of five Communist China's officials in Tokyo as a trade liaison mission without any guarantee from the Government of China to the effect that these officials will not engage in political activities.

World population reached a record high of 3,135 million by mid-1962, an increase of 25 per cent over mid-1950 level. At the same time, world industrial production has more than doubled, the actual increase being 118 per cent. The total production of energy (all kinds) multiplied by one-and-a-half times during the eight-year period from 1954 to 1962.

The United Nations' expanded programme of technical assistance spent about $48 million as aid to 122 countries and territories during the year 1963. About 3,037 experts of 79 nationalities are taking part in the progamme, of whom Britain accounts for 426, France for 329, the U.S.A. for 246, India for 136 and the Soviet Union for 123.

The Norwegian Storting (Parliament) has unanimously adopted a series of amendments to the Holiday Act of 1947, as a result of which the statutory holiday for all wage-earners covered by the Act will be extended to four weeks with effect from 1st May, 1965 and workers will be entitled to an annual holiday of 24 working days, instead of 18 days as before.

The Dutch Government has sought advice of the Social and Economic Council on how to stem the almost constant inflationary pressure in the event of labour shortage persisting. Meanwhile, the Government has increased the Bank rate to 4½ per cent from 4 per cent, to which level it had been raised from 3½ per cent five months ago.

The Common Market's foreign trade surplus with third countries continues to rise sharply. During the first two months of 1964, the E.E.C. imports from non-E.E.C. countries were higher by 22.9 per cent as compared with the same period last year, and exports by 20.7 per cent. This development pushed the E.E.C's negative balance of trade for the two months to the 700-million dollar mark, representing an increase of 36 per cent.

Rumania has begun negotiations with the General Agreement on Tariffs and Trade (G.A.T.T.) with a view to joining the organisation. If Rumania joins the G.A.T.T., it would be the fourth country in the Communist bloc to do so, Czechoslavakia already a contracting party, Yugoslavia has acceded to the G.A.T.T. provisionally and Poland is participating in the work of the contracting parties under a special arrangement.

The Yaounde Convention, which links 18 French-speaking African States in an association agreement with the Common Market, comes into force this month. Under the terms of the agreement the Six will immediately extend to the African associates tariff preferences and financial assistance. Coffee, cocoa, pineapples, cloves, coconuts, pepper, vanilla and nutmeg will now be allowed into the Community duty-free from the associates and, at the same time, the common external tariff will be reduced by about 15 to 25 per cent on imports of these products from third countries.

The West German chemical industry continues to reduce prices and record a rising sales volume. Turnover in the first quarter of the year aggregated about DM. 7,100 million—14 per cent more than in the same period of 1963. Subsidies paid from public funds to various economic and social groups of West Germans have risen to more than 50 per cent in the past five years. The total last year was DM. 22,400 million, as against DM. 14,400 million in 1959. Out of this total, nearly DM. 12,500 million were paid as cash grants; the rest consisted of tax concessions and rebates. The highest amount from public funds was paid to the social security systems.

The International Monetary Fund has approved of a standby arrangement with the Government of Liberia authorising drawings upto the equivalent of $4.4 million over the next twelve months. The arrangement succeeds the one-year standby arrangement covering $5.7 million approved by the Fund in May 1963. Under that arrangement, Liberia drew a total of $4.1 million. The new arrangement will provide continuing support for a comprehensive programme of financial reform introduced by the Liberian authorities last year.

A rise of nearly 17 million tons in grain output in Russia will be ensured by the mineral fertilisers to be produced by 1970 in the new plants now being put up in Kazakhstan. The raw material for the plants will be provided by the Karatau deposits with the phosphorites reserves of 1,500 million tons. The gigantic plants, which will make use of these reserves, will be the world's largest producers of mineral fertilisers. Leningrad engineers have already completed designing the first section of a phosphorus salt plant in Chimkent. The designing of a plant to produce double superphosphate in Jambul is nearing completion. Several plants are to be built in the area of Karatau phosphorite basin. In the near future, they will produce millions of tons of mineral fertilisers annually for the farmers in Kazakhstan, Siberia and Central Asian Republics. The technological scheme of the plants is based on the Soviet electro-thermal method of obtaining phosphorus. Electricity for the smelting furnaces of the plants will be supplied by the Siberian power grid to which the world's largest hydro-power stations are linked.

PERSONAL

MR. M. K. Kidwai, Commissioner for India in Mauritius, has been appointed High Commissioner for India in Malaysia.

Mr. D. C. Kothari has been re-elected President of the Madras Stock Exchange for the current year. Mr. J. V. Somayajulu has been elected Vice-President.

On the advice of the Prime Minister, Mr. Lal Bahadur Shastri, who will also be Minister of Foreign Affairs and Minister of Atomic Energy, the President has appointed the following persons, (with their respective portfolios) to be members of the Council of Ministers:

Cabinet Ministers

Mr. Gulzarilal Nanda—Home Affairs.

Mr. T. T. Krishnamachari—Finance.

Mrs. Indira Gandhi—Information and Broadcasting.

Sardar Swaran Singh—Industry (including Heavy Engineering and Technical Development).

Mr. S. K. Patil—Railways.

Mr. Asoke Kumar Sen—Law and Communication.

Mr. Y. B. Chavan—Defence.

Mr. Sanjiva Reddy—Steel and Mines.

Mr. C. Subramaniam—Food and Agriculture.

Mr. Humayun Kabir—Petroleum and Chemicals.

Mr. Satya Narayan Sinha—Parliamentary Affairs and Civil Aviation.

Mr. H. C. Dasappa—Irrigation and Power.

Mr. M. C. Chagla—Education.

Mr. D. Sanjivayya—Labour and Employment.

Mr. Mahavir Tyagi—Rehabilitation.

Ministers of State

Mr. Mehr Chand Khanna—Works and Housing.

Mr. Manubhai Shah—Commerce (including textiles and jute).

Mr. Nityanand Kanungo—Cultural Affairs.

Mr. Raj Bahadur—Transport (excluding Civil Aviation).

Mr. S. K. Dey—Community Development and Co-operation.

Dr. Sushila Nayar—Health.

Mr. Jaisukhlal Hathi—Minister of State in the Ministry of Home Affairs.

Mrs. Lakshmi N. Menon—Minister of State in the Ministry of Foreign Affairs.

Mr. K. Raghu Ramaiah—Minister of State in the Ministry of Labour and Employment.

Mr. O. V. Alagesan—Minister of State in the Ministry of Petroleum and Chemicals.

Dr. Ram Subhag Singh—Social Security and Cottage Industries.

Mr. R. M. Hajarnavis—Supply.

Dr. K. L. Rao—Minister of State in the Ministry of Irrigation and Power.

Mr. B. R. Bhagat—Planning.

Mr. A. M. Thomas—Minister of State in the Ministry of Food and Agriculture.

Notices

THE GANESH FLOUR MILLS COMPANY LIMITED

DELHI

Registered Office: Subzimandi, Delhi

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 72nd Annual General Meeting of the Shareholders of The Ganesh Flour Mills Company, Ltd., Delhi, will be held at the Company's premises at 64-65, Najafgarh Road (Industrial Area), New Delhi, on Monday the 29th day of June, 1964, at 10 a.m., to transact the following business:

1. To receive, consider and adopt the Directors' Report and the Audited Balance Sheet and Profit and Loss Account of the Company for the year ending 30th September, 1963.
2. To declare dividends.
3. (*a*) To appoint a Director in place of Shri Satya Narain Gupta who retires by rotation under the Articles of Association of the Company and being eligible for re-appointment, offers himself for re-appointment as a Director of the Company;

   (*b*) To appoint a Director in place of Shri Om Parkash who retires by rotation under the Articles of Association of the Company and being eligible for re-appointment, offers himself for re-appointment as a Director of the Company.
4. To appoint Auditors for the Financial Year 1963-64 and fix their remuneration. Messrs. A. F. Ferguson & Co., Chartered Accountant, the retiring Auditors, being eligible for re-appointment, offer themselves for re-appointment as Auditors of the Company for the year 1963-64.

SPECIAL BUSINESS

5. To consider and if thought fit to pass the following with or without modification as an ordinary resolution:

   "Resolved that the Company hereby approves of the appointments and consents to the continuance, as the case may be, of the Sole Distributors/Distributors/Dealers of the Company for a period not exceeding five years commencing from the dates of such appointments and for the products and the area respectively mentioned, subject to any variation that may be made in the terms of their appointments including changes in area and products and subject also to the condition that the arrangements may be terminated earlier by one month's notice on either side."

   (List of Sole Distributors/Distributors/Dealers and the explanatory statement regarding special business as required under Section 173(2) of the Companies Act, will be included in the notice of the Annual General Meeting to be sent to the Shareholders alongwith the Balance Sheet.)

By Order of the Board of Directors,
For THE GANESH FLOUR MILLS CO. LTD.,
KIRPA NARAIN,
Secretary and General Manager.

DELHI,
Dated 30th May, 1964.

N.B.—(*a*) Share Transfer Books of the Company will remain closed from 17th June to 29th June, 1964 (both days inclusive).

(*b*) Members unable to attend are requested to send their Proxy Form, sent alongwith the notice, duly stamped, signed and completed in favour of a person attending the meeting. Forms not properly signed and/or completed or received less than forty-eight hours before the meeting will be treated as invalid.

(*c*) A member entitled to vote is entitled to appoint a Proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

(*d*) The terms of appointment of Sole Distributors/Distributors/Dealers as mentioned in item No. 5 above will be open for inspection of the members at the Registered Office of the Company from 17th June 1964 to 29th June 1964 during working hours.

(*e*) All Shareholders of the Company are requested to send their present addresses to the Company before the date of the meeting so that dividend warrants for the year ending 30th September 1963 may reach them at their correct address.

DUNCAN BROTHERS & COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Sixty-fifth Annual General Meeting of the Shareholders of Duncan Brothers & Company Limited will be held at the Registered Office of the Company, No. 31, Netaji Subhas Road, Calcutta, on Monday, the 29th June, 1964, at 11-00 a.m., for the following purposes:

2. To declare dividends on the Cumulative Preference, Redeemable Preference and Ordinary shares.
3. To elect a Director.
4. To appoint Auditors for the current year and to fix their remuneration.

SPECIAL BUSINESS

To consider and, if thought fit, to pass with or without modification the following resolutions:—

5. As a Special Resolution:

   "Resolved that Mr. R. P. Goenka be and is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation."

6. As an Ordinary Resolution:

   "Resolved that Mr. A. F. Macdonald be and is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation."

The Register of Members and Share Transfer Books of the Company will be closed from 19th to 29th June, 1964, both days inclusive.

By Order of the Board,
S. K. MITRA,
Secretary.

31, NETAJI SUBHAS ROAD,
CALCUTTA, 1*st June*, 1964.

Note: A member entitled to attend and vote at the meeting may appoint a proxy to attend and, on poll, to vote on his behalf. The proxy need not be a member of the Company.

An Explanatory Statement has been annexed to the Notice sent to the shareholders.

THE KARANPURA DEVELOPMENT COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE KARANPURA DEVELOPMENT COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday the 26th June, 1964, at 11.00 a.m., for the following purposes:—

1. To consider and adopt the Audited Accounts of the Company for the year ended 31st December, 1963, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

4. To appoint a Director in place of Mr. B. P. Ray, who retires, and in this connection to consider and, if thought fit, to pass with or without modification, the following resolution of which a notice has been received by the Company from one of its members under Section 257 of the Companies Act, 1956, which will be proposed as Ordinary Resolution:

   "That Mr. B. P. Ray be and is hereby appointed as a Director of the Company."

The Share Transfer Registers of the Company will be closed from the 17th June, 1964 to the 26th June, 1964, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LTD.,
Secretaries & Treasurers.

CHARTERED BANK BUILDINGS,
CALCUTTA, 21*st May*, 1964.

Notes:—(*a*) A member entitled to attend and vote at this meeting, may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(*b*) The Dividends, if declared, will be paid on or after the 15th July, 1964, to those members, whose names appear in the Company's Books on 26th June, 1964, or to their mandatees. No application for dividend warrants will be necessary.

(c) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, is being sent to all members.

THE KARANPURA DEVELOPMENT COMPANY LIMITED

AT A MEETING OF THE BOARD OF Directors held on Thursday, the 21st May, 1964, the following dividends were recommended for declaration at the Annual General Meeting to be held on Monday, the 29th June, 1964, subject to deduction of tax.

On Ordinary Shares at 3 per cent per annum.

On Founders' Shares at 9 per cent per annum.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries & Treasurers.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA, 21*st May*, 1964.

THE BORREA COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of the BORREA COAL COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday, the 26th June, 1964, at 10.30 a.m., for the following purposes:—

1. To consider and adopt the Audited Accounts of the Company for the year ended 31st December, 1963, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

4. To appoint a Director in place of Mr. B. P. Ray, who retires, and in this connection to consider and, if thought fit, to pass with or without modification of which a notice has been received by the Company from one of its members under Section 257 of the Companies Act, 1956, which will be proposed as Ordinary Resolution:—

   "That Mr. B. P. Ray be and is hereby appointed a Director of the Company."

The Share Transfer Registers of the Company will be closed from the 17th to the 26th June, 1964, both days inclusive.

By Order of the Board,
F. W. HEILGERS & Co. (PRIVATE) LTD.,
Secretaries & Treasurers.

CHARTERED BANK BUILDINGS,
CALCUTTA, 21*st May*, 1964.

Notes:—(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(*b*) The Dividends, if declared, will be paid on or after 15th July, 1964, to those Shareholders so entitled whose names appear in the Company's book on the 26th June, 1964, or to their mandatees. No application for Dividend Warrants will be necessary.

(*c*) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, is being sent to all members.

THE SENDRA COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE SENDRA COAL COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday the 26th June, 1964 at 11.25 a.m. for the following purposes:—

(1) To consider and adopt the Audited Accounts of the Company for the year ended 31st December, 1963 and to receive the Directors' and Auditors' Reports thereon.
(2) To declare the Dividend recommended by the Directors.
(3) To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

(4) To appoint a Director in place of Mr. P. Sen Gupta, who retires, and in this connection to consider and if thought fit, to pass with or without modification the following resolution of which a notice has been received by the Company from one of its members under Section 257 of the Companies Act, 1956, which will be proposed as ordinary resolution.

   "That Mr. P. Sen Gupta be and is hereby appointed a Director of the Company."

The Share Transfer Register of the Company will be closed from the 17th June, 1964 to the 26th June, 1964 both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LTD.,
Secretary.

CHARTERED BANK BUILDINGS,
CALCUTTA, 25*th May*, 1964.

Notes:—(*a*) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(*b*) The Dividend, if declared, will be paid on or after 15th July, 1964, to those members so entitled whose names appear in the Company's book on the 26th June, 1964, or to their mandatees. No application for Dividend Warrants will be necessary.

(c) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, is being sent to all members.

THE BORREA COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF Directors held on Thursday, the 21st May, 1964, the following dividends were recommended for declaration at the Annual General Meeting to be held on Friday, the 26th June, 1964, subject to deduction of tax.

On 6½ per cent Cumulative Preference Shares at 8.45 per cent (being dividend at the stipulated rate of 6½ per cent per annum increased by 30 per cent thereof, in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960).

On Ordinary Shares at the rate of 15 per cent per annum.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LTD.,
Secretaries & Treasurers.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA, 21*st May*, 1964.

THE SENDRA COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF Directors held on Monday, the 25th May, 1964, the following dividends were recommended for declaration at the Annual General Meeting to be held on Friday, the 26th June, 1964, subject to deduction of tax.

On Ordinary Shares at the rate of 3 per cent per annum.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LTD.,
Secretary.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA, 25*th May*, 1964.

THE ONDAL COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE ONDAL COAL COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday, the 26th June, 1964 at 11.15 a.m., for the following purposes:—

1. To consider and adopt the Audited Accounts of the Company for the year ended 31st December, 1963, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 17th to the 26th June, 1964 both days inclusive.

By Order of the Board,
PRAN PRASHAD,
Chairman.

CHARTERED BANK BUILDINGS,
CALCUTTA, 21*st May*, 1964.

Notes:—(*a*) A member entitled to attend and vote at this meeting, may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(*b*) The Dividends, if declared, will be paid on or after 15th July, 1964, to those shareholders so entitled whose names appear in the Company's book on the 26th June, 1964, or to their mandatees. No application for Dividend Warrants will be necessary.

THE ONDAL COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF Directors held on Thursday, the 21st May, 1964, the following dividends were recommended for declaration at the Annual General Meeting to be held on Friday, the 26th June, 1964, subject to deduction of tax.

On 6½ per cent Cumulative Preference Shares at 8.45 per cent (being dividend at the stipulated rate of 6½ per cent per annum increased by 30 per cent thereof, in accordance with the provisions of the Preference Shares (Regulation of Dividends Act, 1960.)

On Ordinary Shares at the rate of 5 per cent per annum.

By Order of the Board,
PRAN PRASHAD,
Chairman.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA, 21*st May*, 1964.

THE HAILEYBURIA TEA ESTATES LIMITED

KYTHARAM BUILDING, KOTTAYAM

NOTICE IS HEREBY GIVEN THAT THE Forty-first Annual General Meeting of the Shareholders will be held at the Registered Office of the Company at Kottayam, Kerala State, on Monday the 29th June, 1964 at 4 p.m., to receive the Directors' Report and accounts for the year ended 31st December, 1963, to declare a Dividend, to elect a Director, to elect Auditors and to fix their remuneration etc., and to transact any other ordinary business of the Company.

The Transfer Books of the Company will be closed from 20th June to 29th June, 1964, both days inclusive.

By Order of the Board,
PARKINS (PRIVATE) LIMITED,
Managing Agents.

KOTTAYAM,
27*th May*, 1964.

THE TWYFORD TEA COMPANY LIMITED

KYTHARAM BUILDING, KOTTAYAM

NOTICE IS HEREBY GIVEN THAT THE Forty-ninth Annual General Meeting of the Shareholders will be held at the Registered Office of the Company at Kottayam, Kerala State, on Monday the 29th June, 1964, at 2 p.m., to receive the Directors' Report and Accounts for the year ended 31st December, 1963, to declare a Dividend, to elect a Director, to elect Auditors and to fix their remuneration etc., and to transact any other ordinary business of the Company.

The Transfer Books of the Company will be closed from 20th June to 29th June, 1964, both days inclusive.

By Order of the Board,
PARKINS (PRIVATE) LIMITED,
Managing Agents.

KOTTAYAM,
27*th May*, 1964.

ESCORTS LIMITED

26, Faiz Bazar, DELHI 6
(*Registered Office*)

NOTICE IS HEREBY GIVEN THAT THE 19th Annual General Meeting of the above Company will be held in its premises at 16, Barakhamba Road, New Delhi 1, on Tuesday, the 30th June, 1964, at 10 a.m., to receive, consider and adopt the Directors' and Auditors' Reports and audited accounts for the year ended 31st December, 1963 and to consider other matters as Ordinary and Special Business of which notice is being given to the Members.

By Order of the Board,
P. L. JAITLY,
Secretary.

May 29, 1964.
DELHI, 6.

Note: 1. The Transfer Register and Members Register (both of Equity and Preference capital) shall remain closed from 15th to 30th June, 1964, both days inclusive.

2. Explanatory statements as required under Section 173 of the Companies Act, 1956 in regard to the items under special business will be forwarded to the Members with the notice.

THE CALCUTTA TRAMWAYS COMPANY LIMITED

(*Incorporated in England*)

NOTICE IS HEREBY GIVEN THAT THE Preference Shares Transfer Books will be closed from the 17th to 30th June, 1964 (both days inclusive), for the preparation of Dividend Warrants in respect of the Interim Dividend of 2½ per cent, less Income-tax, payable on the 1st July, 1964, on account of the profits for the year ending 31st December, 1964.

By Order of the Board,
R. W. TURNBULL,
Agent.

P4, MISSION ROW EXTENSION,
CALCUTTA-1.
5*th June*, 1964.

MAHINDRA UGINE STEEL COMPANY LIMITED

CHAIRMAN MR. HARISH MAHINDRA'S SPEECH

DEMAND FOR ALLOY CONSTRUCTION STEEL RISING

AT the First Annual General Meeting of Mahindra Ugine Steel Company Ltd., held at Bombay on 9th June 1964, Mr. Harish Mahindra, Chairman, informed the shareholders *that the Company's plant under construction* would be ready for trial runs early in 1966. With an installed capacity for manufacturing 18,000 tons of finished alloy constructional steel, the plant, he said, would meet only 7.2 per cent of the estimated annual demand of about 25,000 tons of such steel. As there was a big gap between the estimated demand and the aggregate licensed capacity, he felt heartened by the Steering Group's recommendation that licensed projects should be encouraged to expand to economic sizes.

The following is the full text of Mr. Mahindra's speech:

LADIES AND GENTLEMEN:

I have great pleasure in extending to you a warm welcome to the first annual general meeting of the Company.

First and foremost, I would like to give expression to what is uppermost in our minds. We meet today in the shadow of the greatest tragedy to befall our nation since the assassination of Mahatma Gandhi in 1948. For seventeen years the unswerving hands of Prime Minister Nehru guided our nation through many a storm. Just when he seemed imperishable, Time and Mortality touched him. For our heritage he has left us his dreams and ideals to translate *into reality. He set the infant democracy in* his care on the path of rapid industrialisation. He showed determination and faith in the nascent nation's capacity to take giant strides to ultimately keep pace with the developed nations of the world. He called the industrial complexes that came out of the Plans the temples of modern India. In his last speech at Chowpatty, he measured his country's growth with the yardstick of its steel output. In his tryst with destiny he put his faith in all of us who have to collectively make our minute contribution towards the realisation of his dreams. Therefore, we must remember his death to the day of ours.

Our nation is fortunate *in its choice of Shri* Lal Bahadur Shastri. The new Prime Minister is eminently suited to shoulder the burdens of the State during the critical years ahead. With him go our hopes and aspirations for tomorrow's India.

In a small measure, in our own immediate world, we have suffered the loss of our helmsman, my uncle, Mr. K. C. Mahindra. It is unfortunate that as the project is taking off from the drawing board stage to field activity he is no longer with us.

As shareholders of the Company, you have had an opportunity to study the prospectus of the Company published at the time of the public issue of capital. It would, therefore, be redundant if today I should tread on the ground with which you are by now familiar.

Venture into Steel Sphere

Many of you may wonder why Mahindra and Mahindra Limited, basically an engineering house, should venture into the sphere of steel production. The founders, Mr. J. C. Mahindra, my father, and Mr. K. C. Mahindra were by professional training "men of steel." Mr. J. C. Mahindra was the Sales Manager of Tata Iron and Steel Company Ltd., prior to the Second World War. He was appointed by the British Government as Adviser to the Government of India on steel supplies needed during the war years, and in 1941 he became the first Iron and Steel Controller of India. Mr. K. C. Mahindra was associated with Messrs. Martin Burn Limited, Managing Agents of the Steel Corporation of Bengal Limited (now Indian Iron and Steel Company Ltd.). In recent years, as Director of Hindustan Steel Limited, he took considerable interest in the development of the steel industry in India.

I may also mention here that right from its inception Mahindra and Mahindra Limited successfully established trading activity in steel on sound lines. Long before major imports were contemplated by the Government, they secured exclusive franchise for representing some of the leading French and British steel makers. This paved the way for the ultimate consolidation of the steel business—imported as well as controlled stock. Years of close association with the steel makers all over the world and the resultant experience gained by them have infused a sense of confidence in that they can today augment, on a modest scale, the Government's efforts to develop the alloy steel industry in India.

Technical Collaboration

Your Company was fortunate in securing the technical collaboration of Acieries Electriques d'Ugine of France, who have specialised in the manufacture of tool, alloy and special steel for over half a century. As co-promoters, Ugine have rendered invaluable assistance to your Company in bringing the scheme to its present fruition. The keen interest exhibited in your project by Mon. Rene' Perrin, President General of Acieries Electriques (whose name is connected with the renowned Ugine-Perrin Process of steel making), and his worthy colleagues have contributed in no small measure to the progress so far made on the project.

The responsibility for raising the foreign exchange component of the project was shouldered by the promoters. The amount involved was substantial in the context of so many competing claims for foreign financial assistance. I would like to express our deep appreciation of the co-operation extended to us by the financial institutions, namely, the International Finance Corporation in Washington, the Industrial Finance Corporation of India and the Industrial Credit and Investment Corporation of India Limited.

Need for Special Steels

Steel industry occupies the pride of place in the national Plans. Steel remains the most important industrial material in modern technology, and the conditions of its production and development will necessarily influence the rapid and substantial growth of our economy. Development of a branch of this industry—alloy steel—so vital to the industrialisation of the country had, in the past, not been given the special attention it deserved. The emphasis has now shifted to the speedy implementation of alloy steel projects. It is, therefore, imperative that development of the special steel industry should be accorded top priority by the Government.

The Steering Group for Iron and Steel has set the target for production of tool, alloy, and special steels at one million tons after analysing the various demand projections made by the National Council of Applied Economic Research and other organisations. The demand for alloy constructional steel alone is estimated at 250,000 tons per annum. This represents 25 per cent of the total demand for tool, alloy, and special steels which, ostensibly, is a conservative estimate of the demand that will unfold itself in the years to come. In the U.S.A., alloy constructional steel alone accounts for about 75 per cent of the total tool, alloy, and special steel deliveries.

Your Company will initially produce alloy constructional steel. This kind of steel finds its application in automobiles, transport, material handling equipment, machine building and other industries. These industries, which have been subjected to the vagaries of an imported supply, can then look forward to a dependable and regular supply from indigenous sources.

Capacity of Plant

The capacity of your plant will be 25,000 ingot tons or 18,000 tons of finished steel per annum. This will account for 7.2 per cent of the estimated demand for alloy constructional steel. There is a significant gap between the estimated demand and the licensed capacity for alloy constructional steel. It is, therefore, heartening to note that among the various measures proposed, the Steering Group has recommended that plants, which have been licensed and have been making progress, should be encouraged to expand to economic sizes. This is a realistic approach which would prove to be beneficial to the country—both from the point of time and cost.

The basic design work of the shop buildings and ancillary buildings has practically been completed. Contracts for structural steelwork are being processed. Construction work at the site has commenced, and the tempo of work will gain momentum immediately after the monsoon. If there is no major hold up in the receipt of construction materials, it is hoped that the main shop buildings will be completed by the end of 1965.

Manufacturing facilities which are being provided will, *inter alia*, include one 20-ton electric arc furnace, slag furnace, high speed forging press, manipulators, reheating furnaces, rolling mill, annealing and tempering furnaces. Orders for the major items of plant and equipment have been placed. Shipments of most of these items are expected to be made by July/August 1965. The erection work of the major items of plant and equipment will take about four to six months. Trial runs of some of the units of the plant are likely to be made in early 1966.

Manpower Training

I would like to caution that the task ahead of us is an arduous one. Management of a steel plant poses grave problems in finding talented managerial and technical personnel. Whilst some of the key men will undergo training in Ugine's plant, by and large, the operating crew will have to be trained in India.

The manpower requirements of the steel industry in the fourth Five-year Plan will increase considerably, and it is, therefore, of paramount importance that an orientation-*cum*-practical training course is arranged in the existing steel works in India for graduate engineers, diplomaholders, technologists and artisans. In-service training can, at the most, augment the above scheme and cannot, by itself, provide a solution to this problem. The sad experience of the new steel plants, which viewed availability of skilled manpower with complacency, would indicate that immediate measures are necessary to organise suitable training facilities for the personnel required by all new steel units. Otherwise, operational efficiency will be seriously impaired, and the time-lag involved in attaining normal production will not be reduced.

Employment Potential

When the plant is geared for optimum output, the employment potential of your Company will be of the order of 1,200 people. This additional labour force in Khopoli region will accentuate the problems of housing in that area. The ribbon development of industries in Bombay-Thana road will gradually extend to Khopoli. The need for establishing industrial workers' colony in Khopoli region merits immediate attention of the State Housing Board. Unless congenial living conditions are created near Khopoli, it will be difficult to attract technicians to settle down in that area. State Government's assistance is also required in providing basic amenities, such as adequate potable water supply, medical, educational and recreational facilities. I fervently hope that the State Government will extend its fullest cooperation to us in overcoming these problems.

Thoughts on Mixed Economy

I find myself agreeing with Barbara Ward, a noted and influential economist of our time, when she says that in India today—". . . Very large programmes of public investment under the Plans—combined with very strict control over imports—has given Indian private enterprise the best decade in its history." An economy based on total private enterprise remains a mere ideology today. It exists nowhere in the world. The ratio of public and private enterprises in a "mixed economy" may vary according to the different political and economic factors prevalent in a country. A study of the Marshall Plan operations in post-war Europe has established beyond doubt that programmes of public investment act as a stimulus to private enterprise and also set up a dynamic market economy. A conflict between the two sectors is to be avoided, as in the democratic, underdeveloped nations of the world both the streams of economic growth have come to stay. Therefore, I do feel confident that in the policy of "democratic socialism," to which our Government is committed, we will find an atmosphere conducive to the success of our enterprise.

TREND OF MARKETS

MONEY EASY AGAIN

(From Our Own Correspondent)

BOMBAY, *10th June*

There was no change in the tone of the short-term money market which continued to be quite comfortable. Borrowers found no difficulty whatever in obtaining their requirements, as plentiful supplies of funds were available. Business put through was fairly large, but the inter-bank call rate (for both renewals and fresh money) remained unaltered at 4½ per cent. Conditions at Calcutta, too, were very comfortable, the call rate moving down from 6 per cent to 4¼ to 4¼ per cent.

The easy trend of money notwithstanding, the response to the 91-day Government of India Treasury Bills, tenders for which opened on Tuesday the 9th inst., continued to be poor. The total amount offered was no more than Rs. 2 crores which was just the amount invited; the whole of it was accepted, the average rate of accepted tenders being Rs. 3,000 per cent per annum, same as last week. The intermediate Treasury Bills, however, elicited better support. The total amount of Bills actually sold from the 3rd to 6th inst. was Rs. 129.50 lakhs, as against a bare Rs. 5 lakhs a week before and Rs. 20 lakhs two weeks before.

A sharp decline of Rs. 6.67 crores to Rs. 108.95 crores in India's foreign exchange reserves occurred during the week ended 5th June 1964. The bulk of this decline, Rs. 5.00 crores to be precise, was accounted for by foreign securities held in the Issue Department of the Reserve Bank, the total of which stood at Rs. 98.46 crores. Balances held abroad fell by Rs. 1.67 crore to Rs. 10.49 crores. Loans and advances to scheduled banks improved by Rs. 3.83 crores to Rs. 36.28 crores, whereas their deposits with the Reserve Bank were less by Rs. 75.91 lakhs at Rs. 87.71 crores. Notes in circulation showed an increase of Rs. 23.01 crores to Rs. 2,549.53 crores.

There was a further drop of Rs. 13.05 crores to Rs. 1,824.82 crores in the total credit made available by scheduled banks to their clients during the week ended 29th May. Since, at the same time, deposits went up by Rs. 19.64 crores to Rs. 2,511.08 crores, borrowings from the Reserve Bank receded by Rs. 14.58 crores to Rs. 32.87 crores, including Rs. 6.41 crores (fall of Rs. 1.32 crore) borrowed against usance bills. Investments rose by Rs. 1.18 crore to Rs. 621.76 crores and so also total cash by Rs. 9.82 crores to Rs. 155.21 crores.

The Gilt-edged market ruled dull as usual. Turnover was greatly restricted, with values of most Central and State loans remaining unchanged at last week's levels.

In the foreign exchange market, the banks' selling rate for U.S. dollars advanced from Rs. 478.50 to Rs. 475.25 per $100 and their buying rate, too, rose from Rs. 475.25 to Rs. 475.75. In New York, the pound sterling eased again *vis-a-vis the dollar*, the spot rate declining by 0.270 cent to 279.410-279.440 cents and the three months' forward by 0.200 cent to 270.990-279.020 cents.

SLUMP IN BULLION

(From Our Own Correspondent)

BOMBAY, *10th June*

Conditions akin to a panic prevailed in the bullion market during the week under review. There was nervous selling by some parties, while buying support was at a low ebb. Heavy arrivals of both gold and silver depressed the sentiment of operators. Easy advices from upcountry markets also imparted weakness. Consequently, values slumped.

Silver was hammered down from Rs. 256.50 on Wednesday last week to as low as Rs. 244 yesterday. The low rate prevailed throughout today. The daily average arrivals continued to be quite heavy, being 35 bars, whereas offtake was no more than 10 bars.

Fourteen-carat gold encountered persistent selling and fell by Rs. 4 to Rs. 67.75. Primary gold, trading in which is only unofficial, receded by a rupee to Rs. 119. Sovereign was dull at Rs. 92.

The international price for gold at London gained ¼ cent to $35.07¼ per fine ounce. The sterling price spurted by 10¾*d.* to 251*s.* ¾*d.* Ready and forward silver continued unchanged at 111¾*d.* and 111¼*d.*, respectively, as also silver in New York at 129.3 cents.

The official motion for reference of the Gold Control Bill to a Joint Committee of Parliament was adopted by the Lok Sabha on Friday the 5th inst. The Joint Committee has been asked to submit its report by the last day of the first week of the next session of Parliament. The Bill, it will be recalled, seeks to place on a permanent footing the provisions relating to the Gold Control Order. The main purpose of the Bill, according to Mr. B. R. Bhagat, is to discourage investment in gold and gold ornaments and to encourage investment in the socially and economically useful channels. The total quantity of gold declared up to 18th February 1964 amounted to 42,970 kg., valued at Rs 42.98 crores at the prevailing market rate. Replying to the criticism that the Gold Control Rules have failed in their objective of preventing smuggling, Mr. T. T. Krishnamachari said:

"The question of importing gold to stop smuggling is ruled out, because we have no resources to do so. The price of gold in India being higher than international prices, smuggling is taking place. India is also not in a position to produce more gold. Production of gold is confined to two mines which is negligible. So use of gold has to be restricted to immediate needs. This is a thing which we cannot escape. Government will endeavour to stop smuggling. I hope that later the Government's efforts will bear fruit."

In the course of his reply to questions on gold smuggling, Mr. Bhagat stated in the Lok Sabha that it was difficult to estimate whether smuggling of gold had increased after the enforcement of the Gold Control Order. He, however, said: "The fact that prices of gold have been maintained without rising over a period and that there have been large seizures of smuggled gold go to show that gold smuggling has not increased." The latest quotation per ten grams of 14-carat gold is around Rs. 69.50 and that for 24-carat gold in unofficial dealings is said to be around Rs. 118.00. The nominal minimum level touched for 24-carat gold was Rs. 95 on 28th February 1963. It is, however, true that, since April 1964, there has been an upward trend in the price of gold. In the last few months, there has been some increase in the seizure of smuggled gold, but this is not significant enough to indicate that smuggling had assumed pre-control proportions. In reply to a supplementary, Mr. Bhagat said that the Government 'constantly makes an appraisal' of the position in regard to the functioning of the Gold Control Order. Mr. S. M. Banerjee pointed out that one of the objects of the Gold Control Order was to unearth hoarded gold in the country and asked: "Is it a fact that, according to Government statistics, gold to the tune of Rs. 4,000 crores is there?" Mr. Bhagat observed that the estimate of Mr. Banerjee was not correct or reliable.

The following table shows the trend of prices during the week under review:

	10-6-1964 (closing)	High	Low	3-6-1964 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (996 fine) ..	244.00	254.00	244.00	256.50
GOLD				
Ready (14-carat) ..	67.75	70.25	67.75	71.75
Sovereign ..	92.00*	—	—	92.00*
London—				
Gold ..	251*s.* 6¾*d.*	250*s.* 1*d.*	250*s.* 8¼*d.*	250*s.* 10*d.*

COTTON FUTURES EASY

(From Our Own Correspondent)

BOMBAY, *10th June*

Easy conditions prevailed in the cotton futures market during the week. The easiness was induced by the ban, imposed last week, on futures trading in fourteen commodities and reports of scattered rains in some cotton-growing areas, especially Khandesh, Berar, and C.P. region. The prospect of the monsoon starting early bearishly affected the market. The expectation that the crop during the current season would be an all-time record of nearly 6 million bales also imparted weakness to the market. The Jarilla August contract, which had closed at Rs. 727.50 (per three quintals) last week, met with persistent selling and declined from the week's opening rate of Rs. 725.50 to Rs. 720 yesterday. The finish was, however, a shade higher at Rs. 721.50. The net loss over the week is Rs. 7.50.

In the spot market at Sewri, trading was generally dull. Most of the mills, having already booked their requirements, were no longer bulk buyers. Limited quantities, however, were lifted by needy mills. The main varieties that attracted attention were Co2, Laxmi, L.147, Digvijay etc. Prices tended to rule easy. New crop sowings are reported to have commenced in the Punjab, Rajasthan and U.P. In the Punjab, the acreage under cotton is expected to be about the same as in the current season, whereas in Rajasthan, especially Ganganagar circle, it is expected to be about 15 per cent higher. Canal water supply is said to be so far adequate and germination is reported to be progressing satisfactorily.

There was, by and large, no revival of export interest in Bengal *Deshi*. Stray demand was, however, reported from Japan and some Continental countries. In the foreign section, apart from regular interest in American cotton, mills bought moderate quantities of East African cotton. Interest in other growths were limited. The Textile Commissioner has notified that he will consider application from cotton mills, cotton waste spinning units and woollen mills for import of cotton/cotton waste/woollen card clothing from Hungary on a limited scale.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Gadag Laxmi 1,190; Jaydhar 1,065; L.147 1,190; Nagar Co2 1,770; Khamgaon 1,120.

GROUNDNUTS RECEDE

(From Our Own Correspondent)

BOMBAY, *10th June*

Groundnuts and groundnut oil drifted downward, while the other seeds and oils remained firm. The easiness of groundnuts was due to scattered selling by some stockists who feared more stringent official measures to bring down prices. Moreover, enquiries from crushers and *vanaspati* manufacturers were not quite encouraging. Castorseeds, however, met with good buying support from Delhi and Calcutta operators. Reports of export business in commercial oil also imparted strength. Consequently, prices tended to move up. Linseeds ruled firm, thanks to tight supply position and bullish North Indian advices in regard to rapeseed. Cottonseeds also ruled firm, though the volume of business put through was limited.

Forward trading in the groundnut section remained suspended, following the imposition of the ban by the Central Government (*vide* our last report for details). Nizam bold ready dropped 50 nP to Rs. 58.50. Khandesh quality fell by Re. 1.25 to Rs. 59. Groundnut oil ex-mill declined by 25 nP to Rs. 22.85 and Railway receipt by 30 nP to Rs. 22.40.

The cottonseeds June 1964 contract moved up from Rs. 174.62 to Rs. 176.25 and the September contract from Rs. 176.00 to Rs. 177.25. Ready Kanpur hardened by 25 nP to Rs. 33.50. Madras quality was fully maintained at Rs. 34.50. Castor oil commercial strengthened by 20 nP to Rs. 13.75. Oil B.S.S. was firm at Rs. 14.50.

In the linseed section, the June contract gathered 3 nP to Rs. 42.94. The September contract rose by 31 nP to Rs. 44.06. Bold ready picked up 13 nP to Rs. 44.75. Linseed oil was done at Rs. 18.05.

The cottonseed June contract fluctuated between Rs. 105 and Rs. 106 before finishing at Rs. 105. The net loss over the week was 50 nP.

The following table shows the closing prices of oilseeds and oils on 10th June as compared with those of two previous weeks.

	10-6-1964	3-6-1964	27-5-1964
Groundnuts	Rs.	Rs.	Rs.
Nizam bold	58.50	59.00	57.62
Khandesh quality	59.00	60.25	58.25
Oil ex-mill	22.85	23.10	22.35
Oil Rly. Receipt	22.40	22.70	22.05
Castorseed			
June 1964 contract	176.25	174.62	174.37
September 1964 contract	177.25	176.00	175.75
Ready Madras	34.50	34.50	34.12
Ready Kanpur	33.50	33.25	33.00
Oil B.S.S.	14.55	14.65	14.40
Oil commercial	13.75	13.55	13.51
Linseed			
June 1964 contract	42.94	42.71	42.57
September 1964 contract	44.06	43.75	43.55
Bold ready	44.75	44.62	44.62
Linseed oil	18.00	18.05	18.05
Cottonseed			
June 1964 contract	105.00	105.50	105.50

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

KIPS WEAK

(From Our Own Correspondent)

MADRAS, *8th June*

The kip market remained weak. Exporters' interest in cow hides, cow calf and buff calf was poor. Importers' demand was patchy and a few sales of light weight cow hides all grades and medium fifths were placed at ¼ to one penny lower than last week's levels. The U.S. buyers were not in the market for buff hides or calf.

Tanned goat skins ruled firm and sellers were reserved, as they were in a well sold foward position. Continental buyers were interested in light and medium goat all selections and 11/12 lbs. fifths. Tanned sheep position was unchanged. Prices in the raw markets remained steady.

It is reported that, of late, the demand for bark tanned kips is definitely giving way in favour of chrome tanned for upper leathers; and the prospects for larger shipments of bark tanned kips are not encouraging. In the tanned skins section also, importers of E.I. tanned skins are facing serious competition from Pakistan, Nigeria and Middle East countries.

Shipments from Madras during May were: 1,847 bales cow hides, 181 cowcalf, 15 buffs, 596 buffcalf, 497 goat and 306 sheep skins to U.K. ports; 7 cow hides, 43 cowcalf, 1,193 goat, 442 sheep skins and 888 cases chrome and pickled goat skins to the Continent; 10 buffs, 65 buffcalf, 151 goat skins to U.S. ports; 24 goat and 186 sheep skins to Japan.

PEPPER IN DISTRESS

(Messrs. Parekh and Co.)

BOMBAY, *10th June*

Malabar black pepper, which enjoyed a boom sometime back, is now again in distress. The rise and fall in the value were equally drastic at both Cochin and Bombay. The quotations are given below:

	Highest	*Lowest*
	Rs.	Rs.
May delivery at Cochin ...	416	300
Vaisakh delivery at Bombay	432	321
Garbled (Ready) at Cochin	390	272
Ungarbled (Ready) at Cochin	378	262
Spot in New York	$0.44—	$0.31¼

The United States, Russia and other East European countries, which were by and large responsible for the boom, are now keeping away, the U.S. being supplied by Lampong at a comparatively cheaper price, owing to revaluation of the Indonesian Rupiahs and in view of the proximity of the new season in Sumatra. New crop Sarawak is also under selling in Europe. Russia and other East European countries having bought sizable quantity in the earlier part of the season seemed to have almost covered their autumn requirements. The official export figure for Malabar black so far available from November 1963 to April 1964 is 12,145 tons, as against 11,869 tons in the same period in 1962 and 1963. The trade on the Coast and in Bombay seems to be more in favour of revising its former estimate of Malabar higher, as the growers appear more prone to sell at lower as now monsoon is making favourable progress on the Coast after a delay of couple of days.

Ungarbled Malabar black, after remaining steady during the earlier part of the week at round about Rs. 336, is now quoted at Rs. 328. Garbled has slipped from Rs. 340 to Rs. 338.

July delivery at Cochin is down from Rs. 372 to Rs. 360 and August from Rs. 378 to Rs. 367. In Bombay, the turnover on the ring is very much restricted for want of a new development. *Jeth* delivery climbed down from Rs. 375 to Rs. 364 and *Shrawan* delivery from Rs. 390 to Rs. 378.

Singapore, under the pressure of the new crop of Sarawak after going down from $(M)120 to $(M)110, is now reported steady, but the undertone of the market is flat. The trade there is watching the development of the Tripary Summit Conference at Tokyo. Spot in New York is reported to be barely steady at round about $0.34 even after the resumption of trading following the conclusion of the Annual Spices Convention. Demands from grinders is reported to be slow though there is some business in futures for July and August delivery with some lots changing hands. The future of the market appears uncertain, as the movement of ready stock on the Coast and in Bombay is reported to be slow, most of the stock at both Cochin and Bombay is being kept in *badla* by the bulls after paying a big backwardation charge. The world pepper market will be more guided by the selling policy of Indonesian traders *and the the prospect of new crop of Lampong* which is at present reported to be in good form.

Ready pepper in Bombay is quoted at Rs. 179 per 50 kilos with demands slow.

MEDIUM TEA EASIER

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

" COCHIN, *4th June*

In sale No. 22 held on Tuesday the 2nd inst., 751,000 kgs. were offered. Quality again showed a decline. The market met much better support than in the previous week, but prices were again lower. Highgrown B.O.Ps elicited only fair demand at much lower rates. Poorer highgrown fannings evinced less enquiry, whereas cleaner sorts were sold well. Good mediums, although being readily absorbed, were again easier. Mediums again declined quite sharply. Interest in fannings lessened as the sale progressed. Low mediums met ready market but with prices showing a further falling away, particularly plainer descriptions. Black leaf sorts sold well, though they were slightly easier. Whole leaf grades were again irregular and much lower. Tippy teas were neglected. Unorthodox descriptions attracted good support and were about steady.

The quotations (per kg.) were:

	1964	1963
	Rs.	Rs.
Low mediums	4.20-4.50	4.00-4.20
Mediums	4.40-4.70	4.25-4.45
Good mediums	4.90-5.10	4.50-5.05
Nilgiri B.O.P.	4.40-5.85	4.50-5.80

The average price realised in sale No. 22 was Rs. 4.44 per kilo, as against Rs. 4.61 a week ago and Rs. 4.19 in the corresponding sale last year.

A total of 326,000 kgs. was offered in dust sale No. 22 held today. The market met good demand but irregularly lower rates. Highgrowns were well supported and were about steady. Under mediums, Wynaads sold well, but Travancores declined again. Unorthodox teas tended easier, while residuals came to a market about 20 paise below last.

The average price realised in dust sale No. 22 was Rs. 4.18 per kilo, as against Rs. 4.26 a week ago and Rs. 3.92 in the corresponding sale last year.

Colombo: 6.4 million lbs. were offered in this week's sale. The market met with good demand. Highgrowns and mediums were sold at generally firm rates. Lowgrowns met good support at around last week's rates.

London: *North Indian and other growths*: In Monday's sale, the market evoked strong general demand with prices for all types fully firm to dearer.

Ceylon and South Indians: In Tuesday's sale, there was quieter demand for the Ceylon teas on offer. Highgrowns were substantially lower, while mediums declined by 2d. to 4d. Lowgrowns were barely steady. South Indians were in good demand and sold at prices around last.

As we go to press, Messrs. Forbes, Ewart and Figgis Private Ltd. wire as follows:

"*Sale No.* 23: 878.000 kg. offered Good general demand. Low medium and medium brokens irregular, tending easier. Fannings much lower. Good mediums about steady. Highgrowns irregular, often lower. Unorthodox firm."

TEA ARRIVALS HEAVY

(From Our Own Correspondent)

CALCUTTA, *9th June*

There was no internal sale in tea last week; nor was there an export sale yesterday. Traders used this break to re-assess prospects for the new season in the light of new factors. Tea arrivals intensified further during the week. Forward bookings claimed considerable space, and prompt loaders, especially to the U.K. and Continental destinations, carried a good portion of tea.

Although a higher world crop is expected this year, there is no apprehension of a glut in supplies, as there is evidence that tea has captured new markets, and now that all European Common Market countries have abolished the high external tariff on tea—notwithstanding the fact that the high internal taxes continue in these countries, and reduction or abolition is looked forward—tea imports into Europe are expected to be higher. There is also evidence that, with the growing popularity of instant tea, U.S. consumption of tea is gradually picking up. Several gardens are now producing C.T.C. teas instead of orthodox manufacture, as the overseas consumers are showing greater preference for the former. Although, according to current indications, good demand for C.T.C. manufacture is expected, it cannot be said that production of this speciality would possibly be greater than offtake. While there have been recent reports that demand for C.T.C. teas would absorb the entire output, there is, at the same time, a section of the trade which apprehends that the change to C.T.C. manufacture has been much quicker than the development of demand. As in India—upto the end of May 1964, the tea crop in North East India was higher by 10 million lbs., while that in South India was lower by 4.4 million kgs.—so in Ceylon, Pakistan, the U.S.S.R. Africa, and China a higher crop is expected. There is also evidence that both Turkey and Persia would send out a greater quantity to world markets.

Although world production is expected to rise, consumption is also expected to be higher. The developing countries of Asia and Africa are capable of increased offtake. Despite increased output, the U.S.S.R. has in recent years steadily increased its offtake of Indian tea. The trade is concerned that, in the year 1963-64, tea consumption within India failed to expand, in view of sugar shortage, general rise in cost of living and scarcity of foodgrains in certain areas. The fact that exports rose despite a fall in output is also *indicative of a fall in* the share of the tea retained within the country. Although the F.A.O. report of a possible glut in supplies to the extent of 50,000 tons by next year is no longer entertained by the trade, it is emphsised that the market for Indian tea abroad has not been expanding as fast as the tea of other producing areas. It is also pointed out that, in the absence of internal promotional campaigns in favour of tea in India's growing industrial areas, other soft drinks are gaining at the cost of tea. At the same time, more encouragement than at present is necessary for acreage expansion. It is, therefore, urged that Government policies should be re-formulated in order to evolve an increase in production, exports and internal consumption.

JUTE GOODS DULL

(From Our Own Correspondent)

CALCUTTA, *9th June*

In the absence of adequate support, dull conditions prevailed in the jute markets during the week under review, and both goods and fibre eased. Overseas buyers continued to accord measured support to goods, as they were confident of the unlikelihood of a rise in prices. With the scrapping of the working time agreement, which regulated output of mills in accordance with demand, the monthly production is tending to be higher than previously. Whether demand is adequate or otherwise, mills have to continue at the enhanced rate of production, in view of their high stocks of fibre. Thanks to the issuance of monthly compulsory purchase quotas, mills have been obliged to block considerable sums in fibre stocks. Not only have the mills been faced with the problem of space and finance, but the continued storage is also affecting the quality of the fibre. Further, prospects for a good crop in both India and Pakistan are encouraging, and Pakistani mills, too, are raising output. These factors have led foreign buyers to refrain from entering into large commitments, and they believe that prices would move down further. In recent weeks, there has been a rapid shrinkage in the rate of profits of mills in the manufacture of hessian and sacking, and the poor interest being displayed in offerings of shares of jute mills on the Calcutta stock exchange is attributed to the apprehension of less profitable working for mills in the current accounting period. That the apprehension is well-founded is evident from the fact that (1) output has risen; (2) goods in stock with mills have gone up offtake not equalling production; (3) production costs have increased as a result of the implementation of the Wage Board award, besides enhanced charges for electricity and lighterage; and (4) financial problems have followed the increase in stocks of goods as well as fibre, thus raising holding costs.

The keen competition shown by Pakistan mills in overseas sacking markets has led to a shrinkage of business for Indian mills. It is generally known that the Pakistani mills are also attempting to show similar competition in hessian, but the quicker and better adaptability of Indian mills to the changing pattern of overseas demand has prevented the Pakistani mills to step-up their competition in hessian. It is significant that, speaking at the annual general meeting of the Pakistan Jute Mills Association recently, Mr. M. M. Ispahani, the Association's Chairman, called upon the indifferences mills to take a larger share in the hessian business. He said that now that Pakistan mills had obtained a strong grip in the predominantly sacking markets of the world, future plans for the country's jute industry should take into account that hessian provided a far brighter prospect in the long run. Mr. Ispahani was of the opinion that the abolition of the working time agreement by Indian mills exposed the Pakistani industry to fierce competition. The trade here is a little confounded at the dismissal by the P. J. M. A. Chairman of the raw jute price advantage and bonus scheme in Pakistan as illusory and unfounded. For it is common knowledge that it is these two factors that have enabled Pakistan mills to get rapidly a larger share of sacking in the overseas markets. Indian sacking has been practically ousted from several overseas markets because of cheaper and better quality Pakistani sacking. It is on account of Pakistan's stiff competition in sacking that mills in India have turned their attention to specialities such as carpet backing cloth. However, mills in Pakistan also have plans to increase their output of miscellaneous goods. For Mr. Ispahani declared that, if the Pakistani jute industry were to rehabilitate itself and win markets, its capability to compete at par with the Indian industry should be ensured.

During the week under review, fibre ruled easy. Sellers were keen for business, but mills showed more interest in selected grades. As a result, white and *daisee* bottoms eased by 50 nP per maund, the current quotations being: Assam bottoms Rs. 31.00; northern bottoms Rs. 30.00; and *daisee* bottoms Rs. 33.00. The trade noted with cheer that, in 1963-64, India was able to raise fibre exports to 25,657 tonnes from 11,272 tonnes in 1962-63. Foreign exchange earnings increased to Rs. 2.91 crores from Rs. 1.27 crores. Of total exports in 1963-64, the U.S.S.R. alone accounted for as much as 21,476 tonnes valued at Rs. 2.48 crores. Considering that prospects for a bumper crop are bright, there is the need to increase export of fibre this year. However, overseas demand is mostly for the superior grades. Also prices in India are higher than at which Pakistan is able to offer. At the same time, mills in India also need more of the selected grades than the inferior grades. For, with the keen competition of the Pakistani jute mills, Indian exports of heavy goods have fallen and, accordingly, mills in India have turned their attention to produce more hessian and specialities. As such, mills in India also require selected grades of jute in larger quantities. It is expected that the forthcoming crop would have a greater proportion of quality fibre. Against this background, it is good news that the Government of India would soon set up a committee which would be charged with the responsibility of increasing jute yield and improving the quality of the fibre. It would be remembered that the Srivastava committee had recommended the constitution of a jute development board; however, the Government thought that the constitution of an autonomous board such as the Tea Board was not needed. Firstly, jute is not on the same lines as plantation crops such as tea and coffee and, secondly, a separate jute board would duplicate the functions of the State Governments which were already providing extension services to jute farmers. Also, the Jute Commissioner is assisting farmers in the timely disposal of their crop.

The goods market was quiet during the week under review. The poor offtake for export as well as Government purchases of low quantities affected market sentiment. Nervous selling in the futures market on Tuesday last led to a virtual collapse of sentiment, and ready B. twills at Rs. 111 were marked down by Re. 1. Ready hessian 40" 10 oz. eased from Rs. 44.10 to Rs. 43.95. At lower levels, the futures market attracted a certain amount of business, leading ready B. twills on Wednesday to recover to Rs. 111.55 and hessian 40" 10 oz. to Rs. 44.05. Thursday's feature was some business with the U.S.A. in hessian. Government issued a tender for 500 bales of B. twills. Both B. twills and hessian 40" 10 oz. were better at Rs. 111.80 and Rs. 44.30, respectively. In the absence of adequate support, sentiment was affected on Friday and the quotations eased to Rs. 111.55 and Rs. 44.05. Over the week-end, although quotations at Rs. 111.70 and Rs. 44.20 were fractionally better, business passing was poor.

FOODGRAINS ADVANCE

(From Our Own Correspondent)

HAPUR, *8th June*

Steadier trend was witnessed in the foodgrains market during the week. The last week's imposition of ban on wheat exports by local traders outside Hapur and the fixation of ceiling price (purchase) at Rs. 22 to Rs. 25 per 40 kilogram were set at naught by traders following brisk buying support in the face of poor arrivals. Prices registered sharp gains. Wheat improved by 2 to 4 per quintal according to quality during the week to be quoted now at Rs. 57.50-Rs. 61.50 for average quality and at Rs. 62.50-Rs. 68.75 for farm produce, as against the controlled price of Rs. 43 a quintal. Daily arrivals averaged 1,000 to 1,500 maunds and local stocks were estimated around 2,000 quintals.

Rice ruled steadier and rose by 67 nP to Rs. 2 per quintal on good demand in the face of poor supplies. Week-end prices were:—Rice *basmati* superior Rs. 96.45 to Rs. 99.14; *sela* Rs. 93.77 to Rs. 96.45; *mainpuri* Rs. 74.50; *ramajwayan* Rs. 80.38, *raimunia* Rs. 83.06; and *gadda* Rs. 74.50 per quintal.

Gram also ruled steady on poor arrivals from Punjab and other States and on good demand. Arrivals were around 300 maunds a day. Local produce was quoted at Rs. 57.25 and Punjab quality at Rs. 56.26 per quintal. Barley and *bejhar* sought higher levels on good buying support in the face of small arrivals and prices were Rs. 42.50-Rs. 43.50 and Rs. 43.75-Rs. 45 per quintal, respectively. *Juwar* and *guwar* remained unchanged at previous levels, while oats sought higher levels. *Methi* was subdued on lack of support. Week-end prices were:—*Juwar* Rs. 43 to Rs. 45; *guwar* Rs. 58.94 to Rs. 61.62; *methi* Rs. 52.50 to Rs. 55; maize Rs. 43.50 to Rs. 45; and oats Rs. 57.50 to Rs. 58.94 per quintal.

TAKE THE TENSION OUT OF MONSOON MOTORING

During the monsoons, you will be safer and far more confident on Dunlop Gold Seal car tyres. They are specially designed to provide the maximum grip and minimise the chance of skidding on wet roads.

METALS QUIET

(From Our Own Correspondent)

CALCUTTA, *9th June*

Quietly steady conditions were in evidence in the metal market during the week under review. On the London Metal Exchange, tin touched a new high, copper staged a small recovery, zinc maintained recent gains, and lead eased.

Utensil copper scrap in Calcutta was maintained at Rs. 690 per 100 kgs. A small improvement in the supply position was in evidence. If the Government of India accepts the recommendation of the Planning Commission, the quota of non-ferrous metals allowed to small industries would be increased by a third. The Commission has also desired that allocation in the case of a selected group of high priority small scale units should be made on the same basis as in the case of scheduled industries. In London, spot copper wire-bars recovered from £284 a ton to £289, following good demand at lower levels. Spot cathodes and fire-refined also closed higher on balance at £283 and £277, as against the opening quotations of £276 and £269, respectively. Spot tin on the L.M.E. touched a new high at £1,130 a ton, after opening at £1,081. According to Sir Ewan Fergusson, Chairman of the Straits Trading Co., the high prices should encourage the equipment and operation of low grade areas on which the future of tin mining depended a great extent. He declared that prospecting activity had been stimulated in many countries and that, although this was normally unrewarding and expensive, it was necessary if the world requirements of tin were to be produced in the future.

Virgin lead in Calcutta was unchanged at Rs. 303 per 100 kgs., but electrolytic zinc eased from Rs. 313 to Rs. 307 per 100 kgs. On the L.M.E., spot lead closed at £87¼ a ton, after opening at £88¼. Spot zinc was maintained at £123 a ton. The Japanese non-ferrous metals industry is reported to be contemplating to raise prices of zinc and lead, in view of the continued rise in import prices of ores. In the U.S.A., it is thought that present zinc price is high enough for increased mining operations. The U.S.A. has proposed to release 75,000 tons of zinc and 50,000 tons of lead from its strategic stock-piles in an attempt to ease demand.

Notice

THE MODERN MILLS, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 30th Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70 Forbes Street, Fort, Bombay-1, on Tuesday, the 30th June 1964, at 4.00 p.m., for transacting the following business:—

1. To receive and adopt the Directors' Report and the Audited Statements of Accounts for the year ended 31st October, 1963.
2. To declare a dividend.
3. To elect Directors.
4. To appoint Auditors for the current year and to fix their remuneration.
5. Pursuant to the provisions of Section 372(4) of the Companies Act, 1956, to sanction investment upto a maximum of 1,50,000 Equity Shares of the nominal value of Rs. 50 each in Modern Fibres of India Ltd., a Company proposed to be shortly incorporated, even though such investment would be in excess of the limits specified in Sub-section (2) of Section 372 of the said Act.

Notes:

(1) A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(2) The Transfer Books of the Company remained closed from 22nd May 1964 to 16th June 1964 (both days inclusive).

Detailed Notice of the above Meeting is being published in the Press and is also being posted to the Shareholders individually.

By Order of the Board,
N. SIRUR & Co. PRIVATE LIMITED,
Managing Agents,
N. D. SIRUR,
Managing Director.

BOMBAY, *dated 22nd May* 1964.

TEXTILES

(Concluded from page 1016)

indigenous industry is expanded sufficiently to enable it to make prompt deliveries, the need for some imports of textile machinery, especially ring frames and carding engines, cannot be avoided, even though such imports entail foreign exchange spending. Fortunately, several aid-giving countries have agreed to make available to India untied credits, a part of it can be allotted to the cotton mill industry for importing the badly needed items of machinery.

Raw Cotton

Alongside of efforts to ensure the requisite supply of machinery and equipment to the cotton textile industry, there is the urgent need for adequate supply of raw cotton. As against the estimated (by Messrs. Volkart Bros.) commercial crop of 5.95 million bales for the current (1963-64) season, the Perspective Planning Division of the Planning Commission has put the fourth Plan target of production at 9.8 million bales, or an addition of as much as four million bales between now and seven years later (1970-71). The successful fulfilment of this target will involve a more dynamic action on the part of the Central and State Agricultural Departments than what has been the case all these years.

Cloth Prices

If the supplies of machinery and raw cotton (at reasonable prices, of course) are adequate, the mill industry's output of cloth will definitely expand. And to the extent to which production expands, the unit cost of production will be lower (assuming that much of the expansion will be in the existing units through installation of automatic looms, high speed spindles and other improved types of machinery), leading to a fall in prices for the consumer. Pending such a development, the ex-mill prices of cloth, which continue to be pegged under the voluntary price regulation scheme of September 1960, will have to be revised suitably in order to compensate for the increase in the prices of cotton, chemicals, stores and other accessories, rise in coal freight and electricity charges, enhanced provident fund contribution, heavier wage bill and the additional tax burden imposed in the 1964-65 Central budget. The Indian Cotton Mills' Federation has clearly told the Government of India that it can no longer enforce the present voluntary price stamping scheme. The reaction of the Government is not known. It is, however, felt that the Government may put into effect a statutory system of price stamping. Such a system, it is to be hoped, will be fair to both the industry and the consumer.

COMMERCE AND INDUSTRY

(Concluded from page 1031)

the country in keeping with the pace that has been set up for industrialisation in our successive Plans. Its employment in the manufacture of electric insulating materials, protective and decorative finishes, grinding wheels and series of other miscellaneous applications cannot easily be supplanted by other substitutes due to its cheapness and its many unique properties. Such industrial utilisation of lac, however, has to rest on a dependable production of the raw material of the right type. This Monograph dealing as it does with the scientific cultivation of lac, its correct processing, profitable marketing and economic utilisation, it is hoped, will meet a long-felt need."

This is, indeed, an optimistic assessment of the outlook for a commodity which is beset with many problems. But the optimism is not wholly unwarranted. The machinery necessary for rationalisation of the lac trade and industry already exists in the country. If the Lac Cess Committee, the Lac Research Institute, the State Trading Corporation and the Export Promotion Council play their roles effectively, there is no reason why the commodity should not fare better than it has done in recent years.

MAHINDRA UGINE STEEL CO. LTD.

(Concluded from page 1038)

In conclusion, I would like to offer my grateful thanks to all the shareholders, who have put their trust in this venture, and the members of the staff for their devotion and hard work. I am truly fortunate in my colleagues on the Board of your Company. They have eminently distinguished themselves in the industrial and public life of our nation. I am, hence, assured of their experience and sound advice at all times to guide me in this undertaking.

Thank you.

Note: *This does not purport to be the record of the proceedings of the First Annual General Meeting of the Company.*

GENEVA TRADE CONFERENCE ENDS

UNTIL late in the night on Sunday (14th June), the day previous to the deadline fixed for the close of the United Nations Conference on Trade and Development at Geneva, there was a widespread fear that the Conference might end in a fiasco. For so deep was the rift between the developing and developed nations on the important issue of continuing machinery to pursue the work done in the Conference and to evolve steps for implementing the decisions reached therein. Fortunately, however, the fear was belied, thanks to the eleventh-hour agreement reached on the "Final Act"—the document summarising the principles enunciated by the Conference, as well as its main findings; the Act was adopted at the closing session on Tuesday, that is, a day later than the scheduled date. We say "fortunately," because any abrupt ending of the Conference would have resulted in considerable frustration and bitterness among all the participating countries, thereby undermining the prospects for a healthy and orderly development of world economy, not to speak of the time, energy and money spent on the Conference becoming a waste. The United Nations alone, it is stated, has spent no less than $2 million for the preliminary meetings and the full-fledged session of the Conference which lasted for full eighty-six days (from 23rd March to 16th June), besides the expenditure incurred by the Governments of the 122 participating countries on their delegations, and the thousands of hours devoted by the 1,500 delegates for discussion and debate. Much of the credit for saving the Conference is attributed by Geneva reports to Mr. Manubhai Shah (India), Mr. Edward Heath (U.K.), Dr. Prebisch (Secretary-General of the Conference) and Dr. Kaissouni (President of the Conference); it is these leaders who were constantly at the centre of the conciliation work.

The elaborate preparations made by the U.N. Secretariat for the Geneva Conference and the good deal of discussions that preceded the opening of the Conference had raised high hopes that the Conference would spell out clear-cut solutions to the intricate problem of growing imbalance in world economy, with special steps to meet the needs of developing countries. The hopes were strengthened greatly by the deliberations of the main Conference and the five Committees which were most constructive, in that the various questions were being treated seriously and objectively with side issues avoided. It may be true to say that these hopes have not been fulfilled entirely, as the Conference has left unanswered the basic questions involved, namely, those pertaining to the reduction in the yawning world trade gap, provision of assured and remunerative markets for primary commodities, and creation of expanding outlets for the varied production potential of developing countries, especially in manufactures and semi-manufactures. But it would be wrong to say that the Conference has achieved nothing substantial. The issues have been aired thoroughly and the representatives of developed countries have conceded, at least in principle, many things which the developing countries put forward. There is a better understanding of the problem by both the groups and a tremendous amount of spade-work has been done which is bound to yield results when follow-up action is taken.

If the results of the Conference are not as tangible as an underdeveloped country would wish, the blame lies as much with the developing countries as with the developed. Thus, while the developed countries were not quite prepared to face the facts of world trade squarely, the developing countries sought to force, by sheer weight of their numerical majority, the developed nations to accept their points of view. Apart from the fact that such an attitude was not good statesmanship, it is somewhat regrettable that the developing countries should have ignored two vital points. One is that the developed countries (of the free world in particular) exercise a powerful influence on the course and volume of international trade, accounting as they do for as much as four-fifths of the total world trade. They have their own political and economic systems which they cannot be expected to compromise, as, indeed, they would have to, if some of the proposals put forward by the developing countries in concurrence with the centrally planned economies were to be subscribed by them. The other is that these countries have been providing every year enormous amounts of money by way of financial and technical assistance for the economic development of the underdeveloped world. Thus, they are not such diehards as was sought to be made out by some of the underdeveloped countries. The U.S., in particular, seems to have been the target of much criticism, especially in the closing stages of the Conference. It is, however, not so well known, as it ought to be in this part of the world, that that country played, as Mr. Manubhai Shah would testify, a great role in getting this Conference organised. If it has conceded less than the expectations of the developing countries, the fault is not entirely of that country.

Be that as it may, the Geneva Conference can certainly claim quite a few achievements to its credit. It has well served the objective of drawing pointed attention to the dangerous impact of the world economic system caused by the growing trade gap, putting the wide and varied problems involved in their correct perspective, and placing the solutions therefor in much better focus now than ever before. The Conference is also notable for the firm commitment to action in regard to certain concrete issues, as, for instance, correction of the terms of trade of developing countries. The World Bank has been entrusted with the task of studying these issues in detail and offering solutions. One may, however, wonder why this job has been given to the World Bank which is primarily concerned with the problem of providing long-term capital for development. The International Monetary Fund appears to be the more appropriate body for tackling it. May be, the fact that the World Bank has been more intimate with, and sympathetic to, the developing countries than the I.M.F. is an explanation for this decision. A more valid explanation may perhaps be that the external trade problems of developing countries are essentially of a long-term nature, in that they are not such as can be solved within a short period of three or four years.

Another notable achievement of the Geneva Conference was the unreserved acceptance, by the developed countries, of the obligation to earmark one per cent of their annual income for the specific purpose of giving aid to developing nations. The acceptance, though it formalises what has almost been agreed to already, is of great significance to the developing countries, in that it will ensure continuity of aid. Even now, the aid given by some countries is equal to one per cent of their national income. But it is not so with all the developed countries. Besides, there is a feeling that the developed countries are getting tired of rendering economic aid. There is at least a section of public opinion in these countries which suffers from it. Accordingly, there is room for the misgiving that the quantum of economic aid might taper off in the coming years. Now the prospects of continued aid appear to be better in the light of the decision taken at Geneva. It is estimated that, if all developed countries implement this decision, the total quantum of aid made available by them will go up from the present annual rate of about $6,000 million to at least $9,000 million. This increase of $3,000 million, though it is quite appreciable, will, however, cover only a small part of the estimated $20,000 million combined net external payments deficit of developing countries for 1970. Further, as the major portion of aid is given in the form of loans, the developing countries will continue to be faced with the pressing problem of heavy external debt service charges which have already gone up quite considerably in the past five years; they were $2,500 million

loped countries adopted a different attitude. They were hesitant to commit themselves categorically. One explanation offered for this attitude is their fear that they would incur the displeasure of workers and employers in their countries who, as readers are aware, are highly organised and strongly resist even the slightest chance of inconvenience to them. It takes time to soften their resistance and make them realise that they have a role to play in making this world better for all. Patience and persuasion are required for this purpose and not frustration and anger.

The developing countries have, of course, reason to feel disappointed over the failure of the marathon Conference to achieve any agreement on their demands for trade preferences, for guranteed access to the markets of developed countries, and for commodity arrangements to stabilise the prices of primary products. If, however, they have accepted the results of the Conference, it, is apparently in the hope that these results would lay the foundation for more substantial progress in the period ahead. This hope is not unjustified, because, thanks to the compromise formula adopted at the closing session, international arrangements will be made to continue the work of the Conference. The arrangements are as follows:

A trade conference is to be held regularly, at least every two or three years, the second conference being scheduled for the beginning of 1966.

A Trade and Development Council, attached to the United Nations mechanism, will be established to act as the permanent organ. This Council will consist of 55 members, 18 of whom will represent Western countries and Japan, 12 African countries, 10 Asian countries, 9 Latin American countries, and 6 East Europe and Soviet Russia. (That India secured the maximum number of votes and got elected as an Asian member of the Board of the Council is, indeed, creditable and speaks highly of the prominent role played by Mr. Manubhai Shah and his colleagues who participated in the Conference).

In order to safeguard the interests of all countries, the U.N. Secretary-General will constitute a Conciliation Committee to seek appropriate voting procedure. (It was this thorny issue that almost led to a complete deadlock in the Conference.)

A secretariat, probably headed by Dr. Prebisch, will be set up within the framework of the U.N. Secretariat.

With the aforesaid arrangements, the attempts made jointly by the Soviet bloc and developing countries to form an International Trade Organisation (I.T.O.) have been thwarted; actually, at a committee meeting, these countries had pushed to a vote a resolution calling for the creation of such an organisation. The executive powers of the proposed Trade and Development Council have yet to be defined and the chances are that they may be of a limited nature, even though the developing countries may enjoy a majority in it. Whatever the powers assigned to it, the Council, it is to be hoped, will not supplant the G.A.T.T. and other existing bodies but only supplement them. If experience in future were to show that G.A.T.T. as a separate body is more a hindrance than a help to the promotion of world trade on lines beneficial to the rich and poor countries alike, there would be time enough to consider its future. Meanwhile, it is not prudent to give up an institution which we know for something untried and unknown.

SALARIED MIDDLE CLASS

THE middle class, which cannot be identified with the "middle income group," is by no means a "homogeneous" section of the population—homogeneous in the sense in which industrial workers are. It is, on the other hand, a heterogeneous section, composed of white collar workers in Government, salaried employees of mercantile, industrial and financial establishments, small industrialists and traders, professionals and other intellectual workers with moderate incomes. No doubt these groups have some common characteristics flowing from their educational background, disinclination towards manual work, modes of living and pattern of family life. But these common features are not such as to neutralise the rampant individualism of middle class families—a kind of individualism which is aggravated by the factor of heterogeneity and the prevalence of wide income disparities. This probably explains why middle class folk have an infinite capacity for making themselves miserable. The class as a whole is so placed in society that it cannot but perpetually grumble at the rich and tremble at the poor. It is thus one of the most discontented sections of Indian society.

But it is a section which, in many ways, occupies a strategic position in the body politic and the body economic. The educated middle class in particular provides, by and large, leadership, sub-leadership and sub-sub-leadership in all spheres of activity—both Governmental and non-Governmental. Its leadership of political parties, trade unions, social service organisations, educational institutions, public undertakings, and so on can make for social stability or undermine it, depending on whether it is relatively contented and at peace with itself or is being progressively proletarianised and subjected to the privations of unemployment. If the class of people, possessing wealth, has the means to seek influence and importance, the middle class, possessing education, seeks to achieve the same objective with the aid of what it has and thus comes into conflict with the former sometimes, if not always. And it is also well known that all extremist movements, which may subvert political democracy and undermine social stability, are led by discontented and power-crazy sections of the educated middle class. Such a class of people, with so much potential for doing social good, as also social mischief, was not systematically studied by sociologists in India for a long time. That the joys and sorrows, the hopes and aspirations, the prejudices and attitudes, the conditions of work and living and the political and social activities of this class would need to be studied comprehensively in any assessment of its crucial role in Indian society, need hardly be overemphasised. It is, indeed, heartening to find that a beginning in this direction has recently been made by the Central Statistical Organisation in its middle class family living survey.

This survey, with 1958-59 as its reference year, did not, however, cover the entire middle class, for it was confined to *families of non-manual employees engaged in non-agricultural activities in urban areas only*. Its principal object was to study expenditure patterns for the purpose of providing weighting diagrams for the proposed middle class cost of living indices in different urban centres. As many as 45 such centres (composed of 10 towns with a population of less than 100,000 each, 24 in the 100,000-500,000 population range, seven in the 500,000-1,200,000 range, two in the 1,200,000-2,000,000 range and two with a population of more than two million each) figured in the survey. The aggregate number of households in the sample for the "family budget" part of the survey was 26,400, while that for the "conditions of work and living" part of the survey was 8,800. In the first part of the survey, data were collected regarding demographic particulars of the family, income and other receipts and expenditure on consumption, savings and investments. The second part of the survey covered demographic particulars and sickness, education and training, employment and unemployment, conditions of work, trade union participation and social security, housing conditions, recreation, family welfare, savings and assets, indebtedness and possession of luxury goods. The large volume of data collected in the survey as a whole has been partly processed, and the first volume of the report, just released by the C.S.O., is confined to the income and expenditure of middle class families and the employment and service conditions of middle class employees. Some of the findings and conclusions in this volume are being highlighted for comment here, while the tabular statements are included in a detailed special article on page 1060 of this issue.

The authors of the survey have estimated that middle class families, defined as those depending mainly on income derived from paid non-manual employment in the non-agricultural sector, number about 2.5 million in the country's urban areas and constitute about one-seventh of the total number of urban families. The urban salaried middle class is thus a small minority section of the entire urban population. But it is a section which plays a crucial role in the urban economy by virtue of its educational attainments and consumption propensity —a role that is no less significant than that played by possessors of wealth who, too, constitute a small minority. A finding of interest to Bombay is that it has the largest number (170,000) of middle class families, while Delhi, Calcutta and Madras have, respectively, only 92,000, 80,000 and 63,000 families. The finding regarding the structure of middle class families shows that, though the average size of such families is mostly between four and five in the different centres, the size increases with income and is about twice or thrice as high in the top income groups as in the bottom income groups. In other words, families with larger incomes have greater responsibilities, apparently because they have more dependents than the lower-income families. A middle class family, with a relatively larger income, should thus be an object of sympathy, not of envy.

The findings regarding the pattern of income distribution of middle class families are very revealing. The percentage distribution of such families by monthly income is noted in the following table:

Monthly income	Major cities*	Minor cities†	Towns‡
Rs.			
0—100	3.8	14.6	16.9
100—150	13.1	22.6	22.7
150—200	17.4	19.0	20.3
200—300	25.0	23.1	19.1
300—500	23.8	14.1	12.0
500—750	8.8	4.3	2.8
750—1,000	3.7	1.2	1.1
1,000—1,500	2.8	0.7	0.7
1,500 and above	1.6	0.4	0.4
Total ..	100.0	100.0	100.0

* Bombay, Calcutta, Delhi and Madras.

† Hyderabad, Bangalore, Poona, Nagpur, Ahmedabad, Lucknow and Kanpur.

‡ With a population of less than 500,000 each.

It will be seen from the above figures that middle class families with incomes of more than Rs. 1,000 per month represent no more than 4.4 per cent of all middle class families in the four major cities of India and just 1.1 per cent in the minor cities and towns. Only in three large cities, namely, Bombay, Calcutta and New Delhi, average monthly incomes range between Rs. 350 and Rs. 380. In all other centres, the average incomes range from Rs. 160 to Rs. 250 per month. A break-up covering the lower middle class (defined as the lower 50 per cent) shows that the relevant monthly average incomes range from Rs. 175 to Rs. 200 in the four major cities and from Rs. 100 to Rs. 125 in all other centres. It would appear that this lower half of the salaried middle class is not much different from the working class from the income point of view. But, from the expenditure point of view, it seems to maintain a different pattern of living which is governed by the traditional values attached to better housing, better clothing, better education and better medical and personal care—values which are no different from those of the upper middle class. This is at once its glory and its misery—glory because it seeks to live a better and richer life and misery because it does not have enough means for such living even after stinting on food. Specifically, the bottom 25 per cent of the middle class population, whose incomes are comparable to those of the working class population, spend about 50 per cent of their income on food—this is about 44 per cent for the middle class as a whole—, about 30 per cent on fuel, housing and clothing and 20 per cent on items such as education, medical care and transport. But the working class families are known to spend comparatively more on food and correspondingly less on other items.

As the patterns of middle class and working class expenditure are thus different, the case for constructing and maintaining a separate middle class cost of living index is unassailable. Unless this is done at the earliest on the basis of the present middle class family living survey, the lot of the middle class will continue to be one of misery in the context of ever-rising prices. Only then will there be an adequate neutralisation of the periodical increases in the cost of living of middle class families with their distinctive patterns of living. The fact that the level of middle class expenditure (the monthly average ranging from Rs. 148 in Jammu to Rs. 388 at Delhi) is generally in excess of the level of income, except at the higher levels of income above Rs. 750 per month, would also seem to underline the need for a measure of relief to a class of people who are unable to make both ends meet for reasons largely beyond their control. Such relief can conceivably flow from scientific and dependable middle class cost of living indices for different urban centres. The Government should act with expedition in this matter for the simple reason that the methods of financing open to it are not open to middle class families. It should not be forgotten here that, if the Government can easily finance its budgetary deficit by created money, the average middle class family can meet its recurring deficit only by borrowing or by distress sale of valuables, if any.

MARKET GOSSIP

Distinctly Steady

THERE has been a slight improvement in the state of share markets this week. Equity values in general have moved up a little. Almost all the pivotal scrips have closed the week with modest gains, after moving within narrow ranges. Turnover, however, has not picked up to any significant extent. Operators are, of course, cautious, but confidence is gradually spreading. The feeling that the worst is over is gaining ground and a disposition to effect selective purchases is discernible among investors and professionals alike. The cordial exchange of greetings between Prime Minister Shastri and President Ayub Khan is regarded as a good augury for the stock exchanges. Hopes of a reduction in the margins payable by bulls and expectations of some relief in the fiscal burden are once again being entertained by the professional operators. Some of them are arguing that the failure of a number of new issues since the Central Budget must have convinced the Finance Minister by now that the markets had not exaggerated the depressing effects of his tax policy. Another argument put forward by them is that, with the Unit Trust commencing the sale of units on 1st July, the Government cannot afford to take an attitude of indifference towards the continued slump in equities. The talk in market circles is that the Finance Minister may soon exempt investments in new shares from wealth tax. The absence of any bad news, the onset of monsoon in good time in Western India and better profits by companies that published their results this week have helped sustain the steadiness of stock exchanges.

The authorities of the Bombay Stock Exchange are pursuing their attempts to get the margins on forward scrips relaxed. They have so far had no response from the Finance Minister, but they are scheduled to meet the officials concerned this weekend. The outcome of this meeting may, therefore, take some time to be known, as the officials will not be in a position to give a reply on the spot; they would naturally like to consult their Minister. It is, however, rather risky for anyone to be optimistic on this score. The point to be borne in mind, in this connection, is that what is deterring the markets from recovering is not the existence of margin system but the crushing burden of taxation and other handicaps, as, for instance, shortages of raw materials, power, fuel, transport, steel and cement. Indeed, removal of, or reduction in, margins on speculative operations may give rise to a misleading revival of the market that may do more harm than good to genuine investors. There seems to be no point in taking steps that will help only the professional speculators to make some quick profit. It may also have the unhealthy result of strengthening the Finance Minister's false belief that his fiscal policy is not as bad as is made out by his critics. Again, once the margin is reduced, it would not be easy to restore the cut, if a change in the situation were to warrant such a step, without seriously upsetting the trend of the market.

Steel shares are strongly fancied. As yet the improvement in Tata Steel Ordinary and Indian Iron is only fractional. Over the week, the former has gone up by a rupee to Rs. 145.25 and the latter by 8 nP to Rs. 24.32. If they have not attracted any sizable buying so far, it is because of two considerations: (1) the carry forward charges in the fortnightly settlement on Friday this week would be heavier on account of the addition of transfer books charges and (2) the fear that one of the biggest speculators who has been long in Tata Steel for a long time might choose to lighten his holding every time a sizable rise in values takes place.

The reasons why steel shares are fancied are many. In the first place, the prevailing rates themselves are attractively low, especially as they include the dividend for the accounting year 1963-64 due to be announced in a few days' time. Secondly, as the companies have fared well in the past year, their profits must be larger. Accordingly, the prospects of an increase in dividend are reasonably bright. Thirdly, the relationship of both the companies with the Government have improved, following the amicable settlement of the question for repaying the development loan of Rs. 10 crores each. And, fourthly, the Government itself might not be averse to the idea of a higher dividend, since the companies will have to keep their shareholders contented, if they are to increase their capacity during the fourth Plan period as is now contemplated. The same consideration may induce the Government to adopt a reasonably liberal policy in regard to steel retention prices as well.

Ex-Mill Cloth Prices

In the absence of any action by the Government or the Cotton Mills' Federation against the mills which have unilaterally increased the prices of cloth in contravention of the voluntary agreement on prices, textile shares have remained fully steady, with marginal gains in most of the scrips. It is contended on behalf of the mills that it is the Government which is to blame, as it has been avoiding the issue of fair ex-mill prices for months together, and that the mills cannot indefinitely wait for the Government to make up its mind. There is considerable force in this argument. The agreement is after all a voluntary one and cannot be placed on par with statutory controls. It is, however, unnecessary to make much of this development, because, for all practical purposes, the agreement had ceased to be effective from the point of view of consumers. Perhaps, the lead openly given by a few mills will compel the Government to do what they should have done long ago. There are quite a few mills which have not benefited by the higher prices paid by consumers, as they have not departed from the terms of voluntary agreement. Must they be penalised for their honesty? There is a general impression that as soon as Mr. Manubhai Shah returns from Europe he will attend to this question.

Since the logic of facts demands an upward revision in the ex-mill prices of cloth, the solution to this outstanding question would, other things remaining the same, impart additional strength to textile scrips. Some, however, are not so sure, for the Government has not always been a respecter of logic. They are afraid that it may use its decision not to raise the floor and ceiling prices of cotton for the coming season as an argument for continuing the *status quo* in regard to cloth prices too. But such a stand is not wholly correct, as the ceiling and floor prices for certain varieties of cotton have been raised. Further, neither when the floor prices of cotton were raised by Rs. 100 per candy a year ago for the 1963-64 crop, nor when the ceiling prices were raised by Rs. 125 per candy for the 1962-63 season, were the ex-mill prices of cloth allowed to be increased by the Government. What the mills have been asking for is an increase in their selling prices to cover the rise in production costs that has already taken place and not for any increases in the prices of cotton that have been sanctioned for the season beginning from 1st September next. Surely, it cannot always be a case of "Heads I win, tails you lose."

Cotton Price Policy

The Government's decision not to effect any general increase in the floor and ceiling prices of cotton for the 1964-65 season is undoubtedly a right one. Already the prices of Indian cotton are much above world parity for comparable varieties. Competitors of Indian mills in world markets are getting their raw materials at much lower prices and Pakistan has just helped them by reducing the export duty on all varieties of its cotton by 50 per cent. In saying this, we do not suggest that the grower of Indian cotton should be given a raw deal. To some extent, the growers' case for better prices has been recognised by allowing marginal increases in the prices of better varieties. Further, an additional incentive of Rs. 28 per candy has been given to producers of Digvijay A by enhancing the floor and ceiling prices to that extent. As already mentioned, the ceiling prices were raised by Rs. 125 per candy with effect from 1st September 1962 and the floor prices by Rs. 100 per candy a year later. Any further incentive to the cotton grower has to be provided in kind, that is, in the form of facilities that will enable him to improve the quality of cotton as also the yield per acre. In this connection, the Government has done well to make it clear that cotton price control will be strictly enforced in the coming season, that prices specified in the schedule will be reduced for cottons which appear to have been deliberately mixed or watered, and that the prices for improved varieties of cotton duly certified to have been grown in areas reserved for use of pure seed or agmarked (purity not less than 98 per cent) will be increased by Rs. 50 per candy. The upward adjustments made in the premium for saw ginned cotton will benefit the growers in the Punjab, in particular, where saw-ginning is more popular than roller-ginning. Thus, growers of cotton who take pains to raise quality staples and to ensure that the purity of strains is not affected by using mixed seeds are assured of better prices than last year.

The Crucial Cement Industry

There are certain crucial shortages, such as those of coal, power, steel, raw materials, spare parts and technical manpower, that may come in the way of optimum utilisation of capacities in established enterprises. As a consequence, "industrial growth," in the sense of growth of production, may be retarded. But there are certain other crucial shortages, such as those of cement and other constructional materials, which may unduly delay the actual establishment of new industrial enterprises and the expansion of existing ones, thereby retarding "industrial growth." The latter shortages may be more damaging in their effects, for they slow down the process of industrialisation itself. Viewed thus, the shortage of cement would seem to be a critical and crucial one in the present phase of industrialisation, in particular, and of economic development, in general, involving several construction projects in the fields of irrigation, power, transport, housing, education and defence. Whether this crucial shortage, which has been persistent during the second and third Plan periods, can be allowed to continue in the fourth Plan period is the question. There can be only one answer to this question and that is that high priority should be given to the matter in all its bearings. This journal, which has dealt with the subject twice in recent weeks (*vide* page 870 of *Commerce* dated 23rd May 1964 and page 962 of *Commerce* dated 6th June 1964), is reverting to it in view of its urgent character. The occasion for referring to this subject has been provided by the report of an expert group in the Planning Commission.

It is, indeed, gratifying to find that this Group has correctly diagnosed the causes for the slow growth of the cement industry in recent years. The Group has hit the nail on the head when it says that the low margin of profit and the difficulty in raising adequate equity capital have been mainly responsible for the slow growth of the industry. But its recommendation that financial institutions like the I.F.C. and the I.C.I.C.I. should adopt a more liberal policy in granting loans to this capital-intensive industry, while welcome in itself, does not seem to be a wholly adequate remedy. Luckily, the Group has recognised that cost increases on account of raw materials, power, freight and labour have not been adequately provided for in the prices fixed for cement producers and that these additional charges and the financial burden of increased taxes have *further* reduced the profit margin which was low enough even otherwise. The obvious implication here is that fairer and more remunerative ex-factory prices should be fixed for cement.

Another cause of slow growth of cement industry has been identified by the Group. This is the present policy of licensing cement units to new enterpreneurs who, lacking experience in this field, find it difficult to raise adequate financial resources and also take considerable time in surveying and prospecting limestone deposits and procuring machinery. Obviously, the Group is not in favour of ideological preference for new entrepreneurs solely on the ground that further concentration of the industry in the hands of existing companies should not be allowed. In other words, the Group's view seems to be that the practical consideration of who can deliver the goods quickly should be the decisive factor in the matter of licensing additional capacity.

The Group's report is also notable for some other practical suggestions. These pertain to raw material supplies and cement machinery. As for the principal raw material, namely, limestone, its recommendation is that prospecting licences therefor should be eliminated and that some organisation should be constituted to carry out raw material surveys on behalf of the industry. Its view that this work of surveying and prospecting limestone could be entrusted to the Cement Manufacturers' Association itself is, incidentally, akin to the suggestion advanced by this journal in its issue of 6th June 1964 (*vide* note entitled "For Higher Cement Production" on page 962).

As for cement machinery, the Group's findings are interesting. There is being built up adequate capacity for the manufacture of cement machinery within the country. But some of the cement licensees, according to the Group, are reluctant to place orders for indigenous machinery mainly because of the high costs of such machinery, as compared with those of foreign cement plants, and the absence of deferred payment facilities in India. It is also said that cement licensees hesitate to place orders for indigenous machinery because little is known about the quality and performance of such machinery. These do not, however, seem to be insuperable difficulties. The Group has suggested, in this connection, that the prices quoted by indigenous machinery manufacturers should not exceed the cost of imported plants by more than a reasonable margin and that they should give such performance guarantees as are normally given by foreign firms. There is no doubt that the Group has taken a sensible view on this matter. Cement licensees should realise that they cannot hope to have foreign exchange for importing machinery when indigenous capacity for manufacturing cement plants has been, and is being, built up at considerable capital cost with its own foreign exchange component. For their part, indigenous machinery manufacturers should do their utmost to bring down the cost of cement machinery by, among others, diversified manufacture of plant and equipment for different industries and to improve the quality of machinery produced by them.

New Industrial Locations

It is generally thought that there would be no difficulty in locating a new industry in a place where, besides raw material supplies, the basic *infra-structure* facilities, namely, power, transport and water, are adequately available. This is, of course, true, but not *wholly* so. For, even if these advantages are already there on new sites, other unsuspected difficulties may confront entrepreneurs who seek to establish industries on such sites. The Government of Maharashtra, which is particularly anxious to disperse industries from the congested Bombay metropolis as far as possible and to get new industries established in underdeveloped regions, would do well to take note of the kind of difficulties that are likely to crop up in new industrial locations. That the State Government would have to play a certain helpful role in the matter has been rightly urged, for instance, by Mr. Harish Mahindra, Chairman of Mahindra Ugine Steel Company Ltd., in his speech at the first annual general meeting of the Company held at Bombay last week. This is what he said:

"When the plant is geared for optimum output (25,000 tons of alloy constructional steel), the employment potential of your Company will be of the order of 1,200 people. This additional labour force in the Khopoli region will accentuate the problems of housing in that area. The ribbon development of industries on the Bombay-Thana road will gradually extend to Khopoli. The need for establishing an industrial workers' colony in the Khopoli region merits the immediate attention of the State Housing Board. Unless congenial living conditions are created near Khopoli, it will be difficult to attract technicians to settle down in that area. The State Government's assistance is also required in providing basic amenities, such as adequate *potable* water supply and medical, educational and recreational facilities."

Mr. Mahindra may be taken to have spoken not only on behalf of his own company but on behalf of all new entrepreneurs who have been, and are being, advised by the authorities to locate their industrial units on "virgin" sites. After all, trained men have to man the machines and, unless they are assured of certain basic amenities for their families, money alone will not attract them to new industrial locations in underdeveloped regions.

DELHI LETTER

GRAVE VIEW OF FOOD PROBLEM

NEW MINISTER FACES AGONISING DAYS

From Our Special Correspondent

NEW DELHI, *16th June*

INTER-ASSOCIATION rivalries prevented the new Food and Agriculture Minister, Mr. C. Subramaniam, from having his first confrontation on Monday with the representatives of food traders—a community estimated to handle a total turnover of more than Rs. 2,000 crores. Not that heart-to-heart talks with the foodgrain dealers would have made any immediate difference to the fortunes of the consumer. There is no longer any trust placed by Delhi on the word of the grain dealers to exercise any self-discipline on prices. At one time, Mr. S. K. Patil thought that the foodgrain dealers could be persuaded to play the game and he had some initial successes, including a restraint on prices of commodities immediately after the emergency following the Chinese attack in October 1962. But Mr. Patil's hopes too were short-lived; during his last days at Krishi Bhavan, before he was "Kamarajed" out of office last August, Mr. Patil's faith in the good behaviour of the foodgrain dealers had been proven to be misplaced. An uncharitable explanation of the comparative price restraint soon after the Chinese attack was that the business community was scared of the mood of the masses at that time. From his very first days in the Food Ministry, Mr. Swaran Singh never tried to hide his lack of faith in the trader.

Even before Mr. Subramaniam took over his new charge, Finance Minister Krishnamachari had blazed the trail for a new turn in the direction of policy. When he announced the need for a formidable endeavour in State trading in foodgrains, at the fag end of the special session of Parliament, none took pains to direct fire on the Finance Minister himself for his responsibility through fiscal changes which added to the high increase in bank credit and more opportunity for trade hoarding foodgrains. Only a few months ago, in propounding some academic hypothesis to govern budgeting, Mr. Krishnamachari had spoken eloquently on the evils of physical controls. One M.P.'s comment last week was: How well T.T.K. does the twist!

When the Central Cabinet was being rearranged, a quip by a former Chief Minister to this correspondent was that the Prime Minister should take over the Food and Agriculture portfolio, in extension of the thesis currently popular that State Chief Ministers should be made responsible for the progress in the agricultural sphere.

A candid question posed almost disarmingly by Mr. Subramaniam immediately after taking over the food portfolio was about the mystery of the shortage of rice deliveries to the consumers coupled with higher rice production. Perhaps, a part of the answer to this question is to be found in Mr. Krishnamachari's fiscal changes soon after he inherited the Finance Ministry from Mr. Morarji Desai. Mr. Krishnamachari was in a hurry to announce his newly found faith in extensive State trading. He did this, it is now clear, without elaborate consultations with his Cabinet colleagues. Anyway, when Mr. Krishnamachari made the announcement, the new Prime Minister had not been installed in office. But Mr. Krishnamachari shrewdly chose to be the one to make the first announcement on the tactics in the general strategy desired by Mr. Shastri to bring prices down.

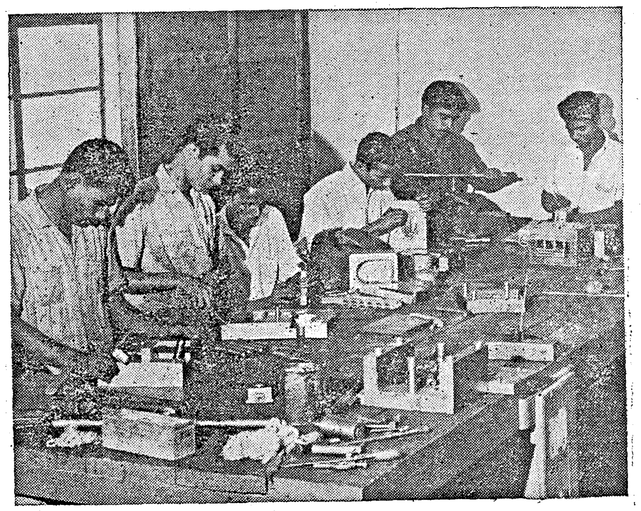
Mr. Subramaniam begins his days in Krishi Bhavan with a fairly clear directive of policy which the force of circumstances has dictated. It is that, unless the State enters the distribution field in a big way, nothing effective can be done to control prices. The decision of the National Development Council in 1957 favoured State trading but little was done to promote the idea, because Mr. S. K. Patil did not have his heart in it. The Bhubaneswar Congress discussions also underlined the trend towards State trading in foodgrains. Mr. Subramaniam's task will not be confined to experimenting with piecemeal State trading for temporary advantages. His assignment is to lay the foundation of a long-term policy which will not be tampered with because one crop season provides a bumper supply. The Shastri Cabinet was sworn in on 9th June. The Prices Sub-Committee of the Congress Parliamentary Party discussed the situation on 10th June and expressed broad agreement with the Finance Minister's advocacy of State trading measures. On 11th July, came alarming reports from west Bengal and Maharashtra. On 12th July the Parliamentary Party's price panel spelt out measures which it said should be undertaken by the Government. These measures are: State trading in *selected areas and commodities*, direct purchases from farmers at *remunerative* prices, steps to disgorge the surplus available with traders and producers, monetary regulations to mop up the purchasing power and drastic steps against hoarders, including seizure of hoarded stocks and deterrent punishment. The party panel also added a suggestion to try and get more imported supplies.

In relation to the crop *plus* imported supplies—a total which has remained fairly constant during the last three years—the *per capita* food availability has fallen by between seven and eight per cent between 1961 and now because of the increase in population. The marketable surplus this year is placed at between 31 and 33 per cent for rice and wheat; in other words, about fifteen million tonnes of wheat and rice should theoretically be available from the indigenous crop as surplus. But the rate of food arrivals in the *mandis* has fallen by sixteen per cent as compared with last year. Procurement of rice by the Centre and the States has been at a low level, being a little over six lakh tonnes in 1962-63, out of a production of about 32 million tonnes or a little over 10 million tonnes of rice available that year as surplus from the producers.

According to the Food and Agriculture Ministry's annual report for 1963-64, the Government released *4.92 million tonnes of grain from* stocks in the calendar year 1963. Of this quantity, 3.8 million tonnes were wheat and 1.12 million tonnes were rice. Last year, there were 60,000 fair price shops functioning in the country. The 1963 releases from stocks were higher than *4.31 million tonnes released in* 1962. Imports in 1963 at 4.56 million tonnes were also higher than 3.64 million tonnes in 1962.

Two major problems to be tackled before the Government launches a policy of State trading on a large scale are: to persuade the State Governments to undertake a bold procurement policy and to speed erection of storage capacity. The Central Government owns storage space for less than two million tonnes and has rented space to stock a little more than one million tonnes. It is realised that State trading cannot lead to any substantial reduction in prices, because the prices payable to the producers cannot be reduced. Any major attempt to push down prices paid to producers will be fraught with political dangers, particularly affecting election prospects.

At the meeting of State Chief Ministers scheduled for three days from 24th June, the Prime Minister and the Food Minister will naturally demand firm commitments by the State leaders on measures to be taken immediately. The Cabinet Sub-committee, which studied the suggestions of the Congress Party panel, had also before it a study by a group of Secretaries of the Government. As was to be expected, the civil servants devoted themselves more to the hurdles before State trading than possible solutions. Once Mr. Shastri remarked that the civil servants were supposed to be intellectually brilliant but they rarely contributed to new ideas or evolved new avenues of action. The power of positive thinking on ways to solve the administrative problems in food distribution will have to be left to 'mediocers' like the Prime Minister—a word which Mr. Shastri has jokingly used to describe himself. Mr. Subramaniam also starts his attack on the food problem with a reputation of not allowing himself to be dominated always by the civil service. That need not necessarily prove to be a handicap. In Britain, Mr. Bevan, for example, faced this problem, but was undeterred.



SMALL SCALE
INDUSTRIES

...We shall be happy to consider requests from Small Scale Industries for financial assistance.

DARE HOUSE at PARRY'S CORNER

Soon after he had founded his business in 1788, THOMAS PARRY acquired a site for his office and godowns at the corner of Esplanade and First Line Beach, strategically situated, as close as it was then possible to approach Fort St. George. It was not long before this corner became known as Parry's Corner which name it bears to this day.

On January 1, 1819 PARRY took into partnership JOHN WILLIAM DARE—"not only a fine businessman but also a great character".

DARE HOUSE, the Head Office of the E.I.D.-PARRY GROUP is named after him.

One-hundred and twenty-six years have passed since JOHN DARE'S death in 1838. Eventful years of steady progress for PARRY'S!

The E.I.D.-PARRY GROUP of today consists of E.I.D.-PARRY LTD., PARRY & CO., LTD., and a number of subsidiary and associated concerns, in all nine companies of substance, contributing to the country's economy through the manufacture of sugar, confectionery, fertilisers, industrial and potable alcohol, acids, chemicals, carbonic acid gas, sanitaryware, etc.

The GROUP provides employment to more than 10,000 people. The strong position it has achieved today gives it courage and confidence further to increase and broaden its activities to keep pace with the country's Five-Year Plans.

JOHN DARE

U.S. FOREIGN AID BILL

NO one, not even the highly cynical critic of the U.S. Congress, had expected that the House of Representatives would vote in full the *$3,500-million foreign aid* authorisation asked for by President Johnson in respect of the fiscal year *commencing from* the 1st of next month. For everyone had been aware of the rough weather the *1963-64 Foreign Aid Bill* had to encounter in spite of passionate appeals by the late Mr. Kennedy, Mr. Johnson and other members of the Administration. Mr. Kennedy, it will be recalled, had requested the U.S. Congress *to appropriate $4,900 million* for foreign aid and he himself cut it down subsequently to $4,500 million. But the Congress did not act on Mr. Kennedy's request till after his assassination. Finally, the Johnson Administration got (in *December 1963) only a $3,000-million appropria*tion, a reduction of as much as $1,500 million as compared with the revised request for $4,500 million.

Judged against such a deep cut, it must have, indeed, been a matter for supreme satisfaction to President Johnson and a matter for gratification to the aid-receiving nations, including India, that the House of Representatives has voted the entire sum asked for by the Administration. This is the first time in seventeen years, we are told, that the House has not cut a Presidential request. The Senate, to which the Bill has now been sent, is also expected to take similar action, though attempts may be made by some to prune the Bill at least to some extent. The Senators will do well to pay due heed to the warning given by the Administration that the U.S. foreign policy objectives would fail, if there is lack of foreign aid funds, and that the blame for such a failure would rest squarely on Congressmen. They cannot, of course, ignore this warning especially in a Presidential election year.

More than 71 per cent of the appropriations voted by the House of Representatives for the coming fiscal year will be for economic assistance, the amount actually earmarked being $2,500 million; the balance of $1,000 million is for military assistance. Since over four-fifths of the aid funds will be spent in the U.S. itself, the impact of the programme on that country's balance of payments will not be severe. In any case, recent months have witnessed a significant improvement in the balance of payments of the U.S.

The smooth passage of the U.S. Foreign Aid Bill in the Congress will ensure the prospects for continued economic assistance to India and other developing countries. The U.S., as a member of the Aid-India Consortium, has already pledged for the current financial year, that is the fourth year of the third Plan, a tidy sum of $435 million which represents as much as 42 per cent of the combined aid pledges amounting to $1,028 million. What is more, approximately one half of this total aid will be given in the form of untied credits which will help India greatly in financing maintenance imports needed by several industries for utilising their installed capacities more intensively. Besides large-scale aid from the U.S., India may also continue to get sizable assistance from the International Development Association (I.D.A.), the resources of which have now been augmented to the tune of $750 million, thanks to the approval, by the Congress, of the Bill covering the additional U.S. contribution to the I.D.A. The I.D.A. credits are of special importance to India, in that they do not involve any heavy repayment burden, since they are long-term in nature and bear no interest rate excepting for a small service charge.

While all this is quite encouraging, India has reason to view with some concern the two amendments to the U.S. Foreign Aid Bill passed by the House of Representatives. One of the amendments prohibits the grant of aid for any productive enterprise, if similar enterprises in the U.S. are not operating at near capacity and if the aid cuts into the U.S. share of the world market. The other amendment seeks to use the piled up excess counterpart funds for U.S. expenses abroad. Such expenditure, assuming that the U.S. Administration will take the amendment seriously, is bound to aggravate the already serious inflationary trends in the Indian economy. It may be somewhat embarrassing for the Government of India to suggest to the U.S. Government that such expenditure be held in check. The U.S. Congress itself may not like suggestions of this nature coming from an aid-receiving nation. The better solution, therefore, lies in an all-out bid to boost this country's production of foodgrains, raw cotton and other commodities, so as to obviate the need for imports of goods that are surplus in the U.S. under P.L. 480 year after year.

POPULATION CONTROL

The 'fifties added as much as 80 million to India's population, as compared with some 45 million added in the 'forties. That much net addition to numbers swallowed up 62 per cent of the aggregate additional income of Rs. 8,600 crores which economic growth had made available for increase in private consumption during the entire first decade of planning. Only the balance of 38 per cent was available for a net overall increase in per capita consumption during the period. The Mahalanobis Committee on Distribution of Income and Levels of Living has, incidentally, calculated that this increase in consumer expenditure represented no more than Rs. 2.5 per person per year. In other words, with Rs. 219 as the per capita consumer expenditure in the base year 1950-51, the rate of increase in that expenditure was only 1.1 per cent per head per annum during the period 1951-61. This was a pitifully low rate of improvement in the level of per capita consumption. It is in the light of this experience that the Mahalanobis Committee has observed that "any slowing down of the rate of growth of the population would help in improving the general level of living."

But that is a rather mild observation, considering that, in the 'sixties, through which the country is now passing, the net addition to numbers will be of the order of 100 million. Mr. Asoka Mehta, Deputy Chairman of the Planning Commission, has, therefore, done well to put the whole problem in a graver perspective. In his convocation address at the Demographic Training and Research Centre at Bombay this week, he has said that, "if population is allowed to increase unchecked, economic growth and social change may well prove to be a tantalising mirage." He has gone further and added that "if we tried to maintain a rate of growth that would keep pace with the population spiral, we would fail because the economy would not be able to sustain the heavy rate of savings and investment required." This is a pretty grim warning and it has a positive content too. The content is that population control alone can make it possible for the benefits of development "to reach the broadest segment of the people, in any significant measure and within a reasonable time limit."

Mr. Asoka Mehta's warning and suggestion alike are very timely, for, thanks to decreasing mortality and almost stationary fertility, India's population is expected to reach the fantastic level of 625 million by 1976. Can anything drastic be done to slow down the current annual rate (2.3 per cent) of population growth? Dr. Sushila Nayyar, Union Minister of Health, has also said, in her presidential address at the convocation of the Demographic Training and Research Centre, that "something has to be done to check this population explosion." But what that something can be she has not chosen to describe. Obviously it cannot be the present family planning programme that has practically made no difference to the fertility rate which continues to remain pretty high.

That the Health Minister has in mind no drastic measures of birth control should be apparent from her personal view that "increase in employment opportunities for women, extension of education amongst them and postponement of the age of marriage will have a profound impact on moderating fertility." But these are not direct measures of immediate significance. They may, of course, moderate fertility in the long run. In fact, such trends are already in operation, to some extent, in urban areas, although they are mostly confined to the educated middle class which constitutes just a seventh of the urban population. But their extension to all classes of the population in both urban and rural areas will necessarily take a long time, probably three to four decades. What is to be done in the relatively short period covering the next 12 years? One wonders whether the Union Ministry of Health cannot devise more practical and direct measures of reactivating the family planning programme so as to bring down the birth rate at least by 25 per cent, if not 50 per cent, over a ten-year period.

CIVIL AVIATION

The progress of civil aviation in India is usually reviewed at half-yearly intervals. It will be recalled that the last such review related to the first half of 1963 (vide page 819 of *Commerce* dated 16th November 1963). In that review, the performance of the Indian Airlines Corporation and of Air-India was compared with that in the corresponding period (the first half) of 1962. The comparison, incidentally, showed that both the Corporations had flown more kilometres, carried more passengers and lifted more cargo and mail, thereby operating more revenue ton-kilometres, in the first half of 1963 than in the corresponding period of the previous year. A similar comparative review, just available for the second half of 1963 and the second half of 1962, also points to improved performance, in terms of aggregate revenue ton-kilometres operated. In this connection, it will be seen from the table below that the revenue ton-kilometres operated by the Indian Airlines Corporation aggregated 43.16 million in the second half of 1963, as compared with 40.54 million in the corresponding period of 1962, while the revenue ton-kilometres operated by Air-India came to 71.28 million, as against 60.80 million.

	Indian Airlines (July-December)		Air-India (July-December)	
	1963	1962	1963	1962
Kilometres flown (million) ..	15.46	15.63	7.86	7.44
Passengers carried (thousands)	439.4	469.3	106.4	93.2
Cargo lifted (million kg.) ..	15.00	16.57	3.54	2.83
Mail carried (million kg.) ..	*3.92*	*3.50*	*0.63*	*0.71*
Capacity ton-kilometres (million)	64.03	60.02	141.79	130.50
Revenue ton-kilometres (million)	43.16	40.54	71.28	60.80
Overall revenue load factor (Per cent)	67.5	67.5	50.3	46. 6

A closer look at the figures would, however, show that, while Air-India had registered a positive improvement in terms of its overall revenue load factor (that is, revenue ton-kilometres operated as a percentage of capacity ton-kilometres), the Indian Airlines Corporation remained static in this respect in the two comparable periods. If Air-India's overall revenue load factor increased from 46.6 per cent in the second half of 1962 to 50.3 per cent in the second half of 1963, it was indicative of better utilisation of available capacity in spite of acute world competition. It may incidentally be noted that this improved performance of Air-India is reflected in a higher gross operating profit of Rs. 4.0 crores (before payment of interest or dividend, but after providing for depreciation and obsolescence) for 1963-64, as compared with Rs. 3.5 crores for 1962-63. On the other hand, in the case of I.A.C., the overall revenue load factor of 67.5 per cent, which is less than the figure of 71.3 per cent in the first half of 1963, points to an increase in idle capacity. Usually, business in the second half of a year is a little less than in the first half because of monsoon. Even so, the absence of any improvement, as compared with the same half-year of 1962, suggests that the progress of I.A.C. was not as satisfactory as it could have been. It may be further noted that but for the fare increases of 7½ per cent on trunk routes and 5 per cent on regional routes, brought into effect from 1st June 1963, the I.A.C's overall load factor would have been something less than even 67.5 per cent in the period under review.

PAKISTAN BUDGET

Liberalisation of imports with a view to boosting industrial production, reduction in some direct taxes, rationalisation of indirect tax structure, increased defence expenditure and an emphasis on accelerated economic growth are the salient features of the Pakistan (Central) Budget for 1964-65, presented by the Pakistan Finance Minister, Mr. Mohammed Shoaib, to the National Assembly in Rawalpindi on the 12th inst. The Finance Minister has visualised revenue receipts of about Rs. 297 crores during the fiscal year beginning from 1st July 1964 and an expenditure of Rs. 278 crores, leaving a surplus of about Rs. 19 crores on revenue account. In view of this surplus, apparently, the Finance Minister has not imposed any fresh taxation. On the contrary, he has proposed some tax relief for the middle income group and has extended the tax holiday for industries by another two years, that is, till 1967. The incidence of taxation on the higher income groups and big industrialists has, however, been enhanced to some extent, evidently to give the Budget a socialist tinge. But it is nothing more than a tinge, especially as compared with the penal rates of taxation prevailing in this country. He has also suggested some marginal modifications in customs duties and excise duties. But this rationalisation of indirect tax structure is not expected to have any adverse effect on the economy, even though it is expected to yield an additional revenue of Rs. 8.65 crores. On the other hand, liberalisation of imports, especially of raw materials, besides helping industrial production, is also expected to bring down the price level. Pakistan's defence expenditure during 1964-65 will total Rs. 129.65 crores which is 46.5 per cent of the estimated revenue expenditure of Rs. 278 crores.

The increase in the defence expenditure and the imposition of a rehabilitation surcharge of 1 per cent on all commodities liable to sales tax, will be noted with interest in India because both these have political implications. The tax concessions and tax holiday in Pakistan are in contrast with the pattern emerging in India where investors and the corporate sector are under constant pressure of heavy taxation which, besides affecting the incentive for hard and efficient work, also raises the price structure.

Pakistan's dependence on foreign assistance predominates in the estimates of development expenditure in the 1964-65 budget. Out of the development expenditure of Rs. 367 crores proposed by the Finance Minister, nearly Rs. 274 crores, that is 74.6 per cent, will be met by loans and grants from foreign countries. Even so, the capital budget shows a deficit of Rs. 10.27 crores, after taking into account the surplus in the revenue budget.

Another important feature of the Pakistan Budget which will have an impact on India's export trade is the reduction of export duties on cotton and raw jute by 50 per cent besides the abolition of sales tax on cotton. Hitherto, export duty on raw jute was at the rate of Rs. 20 per bale of long jute and Rs. 10 per bale of cuttings. Now, it will be at half these rates. As an importer of Pakistani jute (India took about 300,000 bales in 1963-64), India will doubtless benefit by this cut, but this advantage will be more than offset by the competition which Indian jute goods will have to face in countries which are manufacturing them out of raw jute imported from Pakistan. It may be noted that imports of Pakistani jute into India represent only less than 10 per cent of Pakistan's total jute exports. So far as cotton is concerned, Pakistan has hitherto been levying an export duty of Rs. 20 per bale on all varieties. Now it will be at Rs. 10 per bale. This sharp reduction will tell on India's exports of Bengal deshi cotton which is subject to a duty of Rs. 25 per bale. It is obvious that, unless India, too, reduces its export duty on cotton, Pakistan will have a distinct advantage over it. Again, as in the case of jute manufactures, so also in the case of cotton textiles, the reduction in export duty on the raw material by Pakistan will tend to have an adverse effect on India. The important buyers of Pakistani cotton are Japan, China and the U.K., all of which compete hard with India for the available markets for cotton manufactures. Pakistan is thus compelling Indian jute and cotton textile industries to improve their competitive capacity at a time when their own production costs are rising owing to domestic inflationary pressures.

S.U.N.F.E.D.

Although the Special United Nations Fund for Economic Development—S.U.N.F.E.D. for short—has been functioning only since October 1958, the quantum of aid it has given to the developing countries is quite substantial. Thus, out of the overall cost of projects approved to date, amounting to $837 million, the share of assistance rendered by the Fund comes to as much as $502 million. A wide range of activities, especially in the fields of industry and agriculture, in 121 countries and territories, has been financed by the Fund. The projects receiving assistance from the Fund are such as would accelerate the economic development of the less-developed countries and new capital investments of all types. The specific purpose for which the Fund is established is to create conditions that will make such investments either feasible or more effective. Surely, there is no exaggeration whatever in the claim of Mr. Paul Hoffman, Managing Director of the Fund, that, with an increasing number of projects aided by the Fund reaching completion or advanced stages of operation, their impact can be seen both in local communities and in national economies of low-income countries. The impact, according to a special report published by the Fund recently, is visible in the "quickening tempo" of programmes to train man-power for industry and agriculture, in the growing interest of the domestic and foreign investors in opportunities revealed by surveys of natural resources, and in the priority being given in the national budgets to the development of basic economic tools such as power, transport and communications. This report is being discussed at a session of the Fund's Governing Council which began at The Hague on Monday this week.

Some 45,000 nationals, it is said, had completed or were taking courses in 78 Fund-assisted training institutions in December 1963. They included engineers in Pakistan, vocational instructors in India, draftsmen in Uganda, agricultural specialists in Liberia and management personnel in Korea. Further, the Fund has purchased equipment worth $29.8 million for projects ranging from an engineering research centre and tele-communications training institute to an aerial search for new minerals and production of livestock vaccine. Nearly two-thirds of the equipment had already been delivered by the end of 1963. The Fund has also approved of aid for a number of pre-investment projects, including resource surveys and feasibility studies, technical education and applied research institutes in as many as 121 low-income countries, the total number of such projects completed up to the end of March last being 24. One of them was a training project which set up a complex of permanent centres for industrial instructors. The other 23 were pre-investment surveys and feasibility studies, of which 11 had already generated $475 million of local and external investment. In addition, 234 projects were under field execution and 116 projects were being readied for field work. As many as 1,840 international experts have served in the Special Fund projects, of whom 1,300 were in the field at the end of March this year. Working with them were 12,000 nationals of the assisted countries, including 5,000 senior and intermediate personnel.

By the end of 1963, $199 million had been spent on the execution of projects: $125 million by recipient Governments and $74 million by the Special Fund. Of the total funds approved to date by the Fund's Governing Council, 63 per cent has gone to support governmental efforts in speeding up their industrialisation schemes. The work undertaken with the Fund's aid in the developing countries covers, among others, finding new mineral reserves, manpower training, applied research, power and basic services. A large part of the aid by the Fund has been utilised for training for instructors, managers, supervisors, and foremen who would, in turn, pass on their skills to industrial workers and thus achieve a "multiplier" effect. In India, for example, the Special Fund and the International Labour Organisation are helping five Instructor Training Institutes which will turn out 2,000 graduates a year. So far, three of them have produced 1,500 trained instructors, who will teach industrial craftsmen. Modernisation of industry requires continuing technological research, the report notes, and applied research centres in 19 countries are being strengthened or established with Special Fund aid. The Fund is helping nine countries to investigate resources that could lead to greater production of cheap power needed for agricultural and industrial development. The Fund is also assisting countries in providing basic services such as communications and transport systems that are vital for economic growth.

In the agricultural sphere, the Fund is aiding 59 countries with pre-investment projects. The importance of such projects lies in the fact that, for the low-income countries, improvement in productivity of agriculture is an essential first step towards economic progress. The assistance rendered in this field includes supply of information pertaining to water resources, soil, type of crops, the value of various types of fertilisers and control of pests. In the field of pest control, the Special Fund and the F.A.O. are helping to protect rice crops in Asia, to eradicate the rhinoceros beetle which attacks coconut palms on Pacific islands, to combat the desert locust, and to produce livestock vaccine in the Middle East. In view of the need for agricultural personnel, the Special Fund is aiding 11 projects for specialised training at various levels.

AMERICAN LETTER

SPEAKING WITH A FORKED TONGUE ON TRADE AND TARIFFS

"BLEEDING MADRAS" POPULAR AGAIN

By N. Pattabhi Raman

NEW YORK, 13*th June*

THE inter-relation between trade and development has been highlighted by the proceedings of the U.N. Conference on Trade and Development in Geneva. Grants and loans given by the affluent nations to the less developed countries for purposes of development are, generally speaking, not only inadequate but their effectiveness is impaired by the adverse trends in the terms of trade of the poorer countries. It is widely realised, therefore, that concerted measures require to be taken to enable the developing nations to improve their export earnings, measures that include the removal of discriminatory tariffs and quantitative restrictions employed currently by the advanced nations.

This issue is receiving attention also at the Kennedy Round of negotiations under the General Agreement for Tariffs and Trade (G.A.T.T.). The G.A.T.T. has served a useful purpose, but its major failure lies in the fact that it has not been able to prevent member-nations from violating its underlying principles. Sometimes, as in the case of the Geneva Textile Agreement, some of its members have even banded together to foist on the trading world an arrangement patently contrary to the spirit and purpose of the G.A.T.T.

On this issue of crucial importance to the developing countries, the U.S. has been speaking with a forked tongue. Washington has proclaimed that the U.S. is for freer trade, for the progressive elimination of trade barriers, for assisting the less developed countries in their efforts to expand their exports. But, in the case of textiles, it has pursued a course of action inconsistent with these declarations.

Late President Kennedy's View

In advocating a policy of freer trade and asking for enabling legislation by the U.S. Congress, the late President Kennedy indicated that it was not the policy of the U.S. Government to protect domestic industries from imports through tariffs or restrictive quotas. The policy, he said, was rather to assist the industries and workers adversely affected by competition from abroad to adjust to the situation by "moving men and resources out of uneconomic production into efficient production and competitive positions."

President Kennedy recognised that some industries or units, demonstrably weak and uneconomic in a world of competition, would need assistance in transferring their resources to other spheres of productive activity. He recognised also that workers of such industries or units would need help in relocating or retraining. But he emphatically rejected protectionism as a solution.

In the case of cotton textiles, however, the U.S. Government has virtually ignored the policy of freer trade. U.S. mills benefit from a long-standing and proliferating patchwork of protection. By way of tariffs, the U.S. exacts nearly 27 per cent on the value of imported cotton goods—one of the highest duty levels on cotton in the Western world. It is estimated that, on 16 standard cotton constructions, the U.S. duty exceeds that of Canada by approximately 21 per cent, that of Great Britain by 50 per cent and that of West Germany by 125 per cent. Any hopes that the U.S. rates might be reduced in the course of the Kennedy Round of G.A.T.T. negotiations must be placed against the U.S. industry's plea, already beginning to be successful, that the bargaining in Geneva should bypass its products.

Powerful Pressure Group

The fact is that the U.S. textile industry constitutes a powerful pressure group, with influential backing in Congress. Through pressure tactics and legislative horse-trading, its lobbyists and backers have been able to maintain and improve import protection for its products. First, the Eisenhower Administration negotiated the so-called "voluntary" quotas with Japan. Then, the Kennedy Administration institutionalised the concept of "voluntary" restrain through the Long-term Agreement Regarding International Trade in Cotton Textiles, which is referred to more conveniently as the Geneva Textile Agreement.

A basic argument cited in favour of the Geneva Textile Agreement is that it will enable the orderly expansion of the textile exports of the producing countries without disrupting the markets of the importing countries. This argument does not, however, stand close scrutiny. By administering artificial respiration to the dying elements of the U.S. cotton textile industry, the Agreement is more likely to result in maintaining U.S. cotton textile production at an artificially high level. This in turn will either retard the growth in output in the countries which have a comparative advantage in textile production, or else contribute to surplus world production and all the market disruption implied by it.

A Cover-up for Unhealthy Departure

The Geneva Textile Agreement is really a device to enable the United States to impose unilateral import quotas on cotton products. It is a cover-up for an unhealthy departure from the proclaimed U.S. view that domestic industries which are not capable of standing up to import competition should, instead of seeking protection, remove their resources to other spheres of activity.

At the time the Geneva Textile Agreement was being discussed, a high Indian official told me that India had reached an understanding with the U.S. and that Indian textile shipments to the U.S. would not be affected by the Geneva accord. But this expectation, if ever valid, was falsified when the U.S. asked India to exercise "voluntary" restraint in regard to its textile exports to America and prescribed import ceilings applicable to several categories of Indian cotton products.

Last month, the U.S. Government took an additional step to further limit the import of Indian cotton textile products. It obtained a 2½-year agreement with India under which Indian exports to the U.S. of five categories of textiles will be cutback to 37 million square yards a year during the period of the agreement, compared to actual shipments of 45 million square yards in 1963. The five categories are: carded sheeting, print cloth shirting, carded twills and sateens, and "carded yarn fabrics not specified elsewhere." These categories constitute a major portion of India's textile exports to the U.S. which, in 1963, totalled 67 million square yards, including handloom fabrics. The agreement also placed a ceiling on shipments of towels.

Barron's, the New York financial weekly, recently observed: "In cotton textiles, ... the United States has displayed scant moral fibre." It is difficult to disagree with this comment on the U.S. Government's trade policy with regard to cotton textiles. It has been said that U.S. deviation on this issue from its proclaimed policy of freer trade merely proves that politics is the art of the possible. But it is no consolation to countries like India, Taiwan or even Japan which are fighting hard to expand their export earnings.

Handloom Goods

Fortunately, the Geneva accord does not cover handloom fabrics. Hopefully, therefore, India can try and make up, partially at least, through expanded exports of handloom products to the U.S.

Since they were first introduced, Indian handlooms have done fairly well in the U.S. and their imports have steadily increased. "Bleeding Madras," as everyone knows by now, made a big splash four or five years ago. As some buyers cornered the supply, prices skyrocketed and many manufacturers turned to other fabrics. Until recently, only a handful of sportswear producers were doing any significant business in Madras. But, in recent weeks, demand has suddenly spurted, as teenagers have begun buying Madras, as if they are just making a discovery. Sales of a variety of clothing made of "Bleeding Madras" are reported to be very good—so good, in fact, that, according to one source, manufacturers are finding it hard to keep up with the demand and additional supplies of the fabrics are being urgently flown in from South India. Appropriately, and taking the cue from a current cinema hit, a department store in Pittsburgh chose the following as the theme of its promotion in a recent week: " A Mad, Mad World of Madras."

In this context, the recent opening in New York of an office of the Handicrafts and Handlooms Export Corporation (H.H.E.C.) should be helpful in stabilising and further expanding the market for handlooms and developing the potential market for Indian handicrafts. Until now, the promotion of Indian handlooms and handicrafts was left to the India Trade Centre, which the Government of India established here some nine years ago and which functions under the direction of the Indian Consul-General in New York. During the last two or three years, the Centre has been virtually inactive, the chief occupation of its staff being stock-taking! Anyway, even in its active days, the Centre was only a promotional organisation: it booked no orders. The H.H.E.C., on the other hand, is a promotional-cum-sales organisation; moreover, it is backed by a resourceful headquarters organisation.

Besides catering to the wholesale trade, the H.H.E.C. is currently handling sales of handicrafts and handlooms at the Indian Pavilion in the New York World's Fair. As one who has seen several Indian exhibits in the U.S. display the same types of goods again and again, I am quite impressed by the array of new and interesting products of quality on view and sale at the Indian Pavilion. Also impressive, and particularly noted by American businessmen, is the wide range of advanced industrial products on display. There is reason to hope, therefore that the exhibit will stimulate an expansion of India's exports to the U.S.

TWO I.D.A. CREDITS FOR PAKISTAN

The International Development Association, an affiliate of the World Bank, has extended two credits aggregating the equivalent of $39.5 million to assist in financing highway projects in Pakistan. One credit, of $22.5 million, is for the construction of a 150-mile highway between Dacca and Chittagong in East Pakistan, the other one, $17 million, being for the construction of a 90-mile highway between Karachi and Hyderabad and three bridges to the north in West Pakistan. The credits will also finance the services of consultants to advise and assist the highway departments in both Provinces and to undertake certain feasibility studies.

Both credits are for a term of fifty years. Repayments of principal will begin on 15th October 1974, after a 10-year period of grace. Thereafter one per cent of the principal will be repayable annually for 10 years and 3 per cent will be repayable annually for the final 30 years. The credits are free of interest, but a service charge of ¾ per cent per annum on the amount withdrawn and outstanding will be made to meet the I.D.A.'s administrative costs. The Government of Pakistan will re-lend the proceeds of credits to the Provincial Governments of East Pakistan and West Pakistan on I.D.A. terms.

TAKING THE STING OUT OF FOREIGN CAPITAL

By Questor

AMERICANS are probably as hardened against the charge of dollar imperialism as are Europeans against that of neo-colonialism; these are the sort of accusations, we tend to assume, which are to be expected from poor countries with a strong sense of grievance and national pride. But it is salutary to try—indeed today it is necessary—to see things from the point of view of those who see themselves as underdogs.

If neo-colonialism means a reluctance to admit freely the cheap manufactures of developing countries and a preference for the traditional pattern of exchanging manufactures for raw materials, most European countries are undoubtedly guilty of it. History is built into their tariff structures and can change only slowly. If dollar imperialism means that the U.S., with a surplus of capital to export, tends to dominate the most rapidly-growing and profitable industries in developing countries and thereby to limit the freedom of their Governments to plan economic development, there is an element of truth in this charge too.

It is not a matter only of Guatemala or Cuba. Canada finds the dominance of many of her industries by U.S. capital an embarrassment as well as a benefit. Australians resent the hold of General Motors on their car industry. And Europe, too, is now beginning to be concerned about the spreading influence of Detroit. General de Gaulle is said to have been extremely annoyed at the beginning of last year when Chrysler succeeded in obtaining a controlling interest in Simca. A fair number of people in Britain were worried, politics apart, when Ford took over complete control of its British subsidiary; a fair number are worried now about Chrysler's plan to take an interest in Rootes.

Rootes is a relatively small firm, still controlled by the family which started it, and too small to survive alone in the international battle which appears imminent. A link-up with some other manufacturer is inevitable, and Chrysler has long been the favourite partner: there appears to be a natural affinity between these two firms, both of which are considerably smaller than their domestic giants, but which are determined to survive and have a complementary range of vehicles and markets. Chrysler, in fact, is not proposing to absorb Rootes but is offering some $33 million for a 30 per cent share of the voting stock and a half-share of the rest. The Rootes family will lose absolute control, but it will still hold about 38 per cent of the votes against Chrysler's 30 per cent.

Faint Twinge of Anxiety

The trouble, of course, is that these proportions may not last. If the Rootes family one day relinquishes management of the firm, the trust which holds the family's stock may consider it sensible to diversify its portfolio; Chrysler may gradually build up its holding, as it did in the case of Simca, to one of effective control. If this were to happen, more than half the British car industry would be in American hands—two of the major units are already wholly-owned subsidiaries of Ford and GM. The Labour opposition tried to make political capital out of this possibility and were routed decisively with accusations of insularity and zenophobia.

Yet it is not altogether surprising that British politicians should feel a faint twinge of anxiety about the growing U.S. hold on the motor industry. The connection has so far brought the country nothing but advantage. The U.S. firms have brought in large amounts of capital and the expertise of a much larger industry; they have been managed by Englishmen, and they have an excellent record of exports.

Yet cars are a factory of key economic importance in any society which contains a large number of affluent consumers. The motor industry is highly ramified and of particular concern to any Government which attempts (as many must) to regulate the operation of the economy. It is not pleasant for any Government to face the fact that the level of employment and investment and exports in a major industry may be settled by decisions taken, from an alien point of view, by a board of directors meeting in Detroit. It is more unpleasant, in some ways, for the Government of a developed country which is expected to observe stricter rules of international behaviour. Even a Labour Government would think long and hard before nationalising British Ford.

In theory, without doubt, the free movement of international capital can do nothing but good: it blesses givers and receivers alike. But practice is more complicated than theory. The poor countries of the southern hemisphere are in great need of capital; yet they are determined to run their affairs as they please. Some of the richer countries, too, are beginning to have their reservations about the free entry of U.S. capital; General de Gaulle's vision of Europe, after all, is an attempt to stand up to the colossus.

At present the outflow of U.S. capital is limited to some extent by the balance of payments deficit. When this ceases to be a problem however, as it well may before long, charges of dollar imperialism are likely to become more common. The only escape from them, so far as I can see, is for U.S. parent firms to see to it that their foreign subsidiaries pay as much attention as native firms to the interests of the country in which they operate. In Britain, at least, they have always done so.

I.D.A. CREDIT FOR INDIA

A credit equivalent to $90 million for expanding production in selected lines of capital goods industries has been granted to India by the International Development Association, an affiliate of the World Bank. The credit will assist companies engaged in the production of commercial vehicles, industrial machinery and construction equipment. This will enable these enterprises to import components and materials on a larger scale which has not been possible till now due to the shortage of foreign exchange. The I.D.A. credit will make it possible for these industries to increase their output at an average by 30 per cent by the end of the current financial year. As there is also provision for the purchase of spare parts for heavy earthmoving machinery and construction equipment already in India, it will also help construction industry in the country. The industries which will benefit from the I.D.A. assistance are of major importance in the economic development of the country and there is a ready market for their products. The funds that will become available for the purchase of spare parts and construction equipment, will, it is expected, speed up the extension of various development projects throughout the country, particularly in the fields of irrigation and electric power.

The I.D.A. credit will be made available to the parties through the regular import licensing procedures of the Government of India. This credit, together with similar assistance from the other members of the Aid-India Consortium, will make possible the first substantial increase in three years in the allocations of foreign exchange for imports of industrial materials and components. The I.D.A. credit is for a period of 50 years. Repayment of the principal will begin from 15th November 1974, after a 10-year period of grace. Thereafter, 1 per cent of the principal will be repayable annually for 10 years and 3 per cent will be repayable annually for the final 30 years. The credit is free of interest, but a service charge of ¾ per cent per annum on the amount withdrawn and outstanding will be made to meet I.D.A.'s administrative costs.

(*Concluded from next column*)

naire before his last public address at the end of this week, he knew its lesson and affirmed that there were no signs of unhealthy expansion in the economy, the growing pressure on resources "is precisely what we have been expecting and planning for." Lest any should misunderstand him, he added that this was "now clearly a testing time for the economy" (which is what his political opponents have been telling him!) and that the picture of brisk business could be spoilt by excessive home demand, rising costs, rising prices, lack of income restraint. He also pointed out that it was legitimate to call on the I.M.F. for help to tide over short-term imbalances due to stockbuilding imports (this may be a pointer to coming events), but he did not expect such an imbalance to be prolonged and, indeed, to be natural to "the early stages of a vigorous expansion."

LONDON LETTER

BUSINESS IS BRISK

PESSIMISM BELIED

(*From Our Own Correspondent*)

LONDON, 13*th June*

A LIVELY and ascendant Stock market this week for the first time since mid-April coincides with one of the four-monthly assessments made by the Federation of British Industries on the state of the economy. There is a general tendency here to equate this present time with four years ago. The boom of 1963 is compared with that of 1959 and the downward trend for 1960 is, therefore, looked for this year. Nevertheless, the economy appears more stable today than it did four years ago and new orders are still trending upwards. The actions of the business community are, therefore, belieing its fears.

The first question asked by the Federation of its members is whether they are more, or less, optimistic than four months ago. 34 per cent are *more* optimistic, 61 per cent record no change, and only 5 per cent are less optimistic. (When the question was asked in February, 44 per cent were *more* optimistic, so the volume of rising optimism is less.) As evidence of strain on capacity 42 per cent still say that their present level of output is *below* capacity, though 50 per cent said that in February. No less than 56 per cent say that they have no surplus capacity, as compared with 48 per cent who gave that answer four months ago.

What about current output, comparing the past four months with the previous period? 60 per cent record an increased output, 31 per cent the same and 7 per cent a diminished output, but these are figures to be expected. The order book position looks ahead; here 59 per cent of the firms say their orders are up on the previous period, 28 per cent say they are the same and 7 per cent say they are down. (In February only 55 per cent said they were up and 9 per cent said they were down, so the improvement is marked.) If the orders for capital equipment are separated, we find a less conclusive picture: 15 per cent record a rise (as in February), 10 per cent the same, 3 per cent record a drop (against 4 per cent in February), but most firms find the question too difficult. But it is worth observing that the official figures for capital expenditure by industry record a rise in the first quarter of this year of 6 per cent over the last quarter of 1963.

Export Picture

The picture on exports is less assuring: 28 per cent of the firms feel more cheerful than in February, but that is a reduced percentage over the last count when 32 per cent felt more cheerful. On the other hand, only 9 per cent feel more depressed, as compared with 11 per cent at the last count. It is the number who record no change in their view of the export future that has gone up. Yet, in spite of the reduced percentage of "more optimistic" answers, new orders are still coming in faster than before and the number of firms recording a drop in export orders is less.

It is also encouraging to find that average cost per unit of output are rising for a smaller number of firms than in February, though more firms are also recording rising *selling* prices.

There is much more *steadiness* in the economy, as compared with 1960. For instance, retail trade which tends to boom with rising business generally has been much more stable than expected and, though retail prices have risen 2 per cent over the year, volume has slowly increased to 5 per cent over its mid-1963 level. This growth compares with a 9 per cent rise in production over the year to end March and a 1.7 per cent rise in employment over the same period. Even though hire-purchase debt has topped the £1,000 million-mark to create a new record, it seems that the general public are spending their increased incomes cautiously.

The big question that industry is asking is when and where the employment bottlenecks will occur—though employment is not yet seen as a menace to rising output (about half the firms fear labour shortage in some form or other over the summer months). Of course, the labour pattern over industry is erratic, some industries—engineering and textiles in particular—being tighter for labour than others such as chemicals and the food groups.

Whether or not the Chancellor of the Exchequer had seen the results of the question-

(*Continued in previous column*)

MONTHLY ECONOMIC REVIEW OF U.K.

PACE OF GROWTH WELL SUSTAINED

COST OF LIVING, TOO, STEADILY RISING

By J. R. H. Pringle

ONE of the major tasks facing all those attempting to diagnose the state of the United Kingdom in the coming months will be to estimate the net effects of the measures taken by Mr. Maudling, Chancellor of the Exchequer, in the Budget in mid-April. The withdrawal of purchasing power of £103,000,000 expected as a result of those measures was less than most unofficial observers had thought likely. On the other hand, most agree with the Chancellor that some help in reaching the declared goal of slowing down the rate of expansion to 4 per cent a year can be expected from certain "natural" forces. In the Budget speech Mr. Maudling mentioned, for instance, that the rate of increase of stockbuilding may be expected to level off, and that the growth of demand may also be lessened by higher savings—which the Chancellor encouraged by increasing the limits allowed on individual holdings of premium bonds and national certificates and by introducing a new national development bond. The crucial question is whether these autonomous factors, when allied with the Budget measures, will prove sufficient to restrain the pace of growth to one that can be sustained.

Trend Still Upward

It is, of course, still too early to form any reliable estimate of how the economy has been behaving since the Budget. Statistics even for the first quarter of the year are still incomplete, while those for the period since mid-April are highly sketchy. Taken together, moreover, these indicators present a picture of the economy that is far from clear. Thus, those relating to March suggested that the rate of growth may have slackened slightly. For, instance, in that month, the Board of Trade's seasonally adjusted index of the value of retail sales fell by one point to 111, though the Board commented that too much significance should not be read into this small change. New credit extended by hire purchase finance companies also appeared to be levelling off: the increase in the total debt outstanding, of £16,000,000 to £985,000,000, was probably due largely to the operation of seasonal factors. Further, the seasonally-adjusted index of industrial production, which had been revised upwards to 127 for February, remained at that figure for March. However, the adjustment for seasonal factors was more hazardous than usual because Easter fell in March. And there seemed little indication of a change in the long-term trend: in the first quarter of the year the average value of the index was 2½ per cent above its level in the final quarter of 1963, as compared with a rise of about 2 per cent in that quarter above its level in the third quarter of last year.

Moreover, other indicators relating to the first quarter of this year continued to point upwards. The latest returns by the Ministry of Public Building and Works for the construction industry, for example, showed that total output remained at the record level of last year's closing months during the first quarter, and orders for new work were also flowing in at a record rate. The Board of Trade's index of the volume of orders received by the engineering industries rose from 144 to 147 between the two quarters, with a particularly large increase in orders received from the home market, which were up from 140 to 149: and home orders for machine tools, as computed by the Machine Tools Trade Association, also continued to rise sharply—in January, at £7,800,000, they were 72 per cent above their level in January 1963.

For April, the evidence was again conflicting. Car production which had been one of the foremost leaders of the expansion continued to bound upwards: weekly output rose by over 4,000 to 40,969, and partly no doubt as a reflection of the continued strength of the car boom, estimates of steel production this year have again been revised upwards: Britain's steel manufacturers now expect to produce 26,000,000 tons this year, as compared with an expected production of 25,500,000 three months ago. Nevertheless, the demand for labour appeared to be slackening: in April, the number wholly unemployed fell by less than could have been expected from the operation of purely seasonal factors. And the demand for loans from the banks also seemed to be lessening: in April, net advances to the private sector increased by only £7,500,000.

Straws in the Wind

Pointing to these "straws in the wind" early last month, Mr. Maudling told the House of Commons that he felt that he had pitched his judgment (over the appropriate increase in taxation) about right. If he were right, he said, it meant that extra measures would not have to be taken later in the year: meanwhile, the slow-down of expansion would not be such as to check it and detract from confidence.

The two "straws in the wind" to which Mr. Maudling was referring, now seem, however, to be pointing in a rather different direction. Net advances, excluding those to the nationalised industries, rose by £39,000,000 in May—only £4,000,000 less than in May last year when the reflation was just getting under way. The incidence of the Whitsun holiday, however, makes comparison with earlier months difficult, and the rise is in any case not extraordinary. The really disquieting figures were those relating to unemployment. At the May count, the numbers wholly unemployed were down to 361,000: since the April count the numbers of wholly unemployed adults had fallen by 37,000—14,000 more than is normal for the time of year—while the number of unfilled vacancies had risen by 14,500—6,000 more than normal. The unemployment rate fell from 1.8 per cent to 1.6 per cent, and was down to below 1 per cent in the Midlands, at 0.9 per cent, to be precise. If present trends continue for another month or so, the number of unfilled vacancies will be larger than the number available to fill them—a stage usually regarded as heralding the beginning of intensive pressure on the labour market, with all that implies in the way of higher costs and prices.

A number of factors probably contributed to this disconcertingly rapid fall in the unemployment rate. To start with, it seems that the current phase of expansion is pulling in far fewer recruits to the labour force—the so-called "unregistered unemployed" than had been expected on the basis of experience of previous expansionary phases. In particular, it appears that the numbers of married women that have been tempted back into employment as a result of the high level of demand for labour has not approached the numbers that have joined at similar times before. This apparent trend towards an increased unwillingness by such women to go out to work would notably reduce the labour available to meet the continued growth of demand. Some might argue, however, that another important factor has been the tendency for employers to build up their labour force more slowly at the beginning of an expansionary phase and to continue to take on more workers after demand has begun to level off, in order to re-establish the desired ratio of labour to output. On this argument, it could be maintained that, despite the continued growth of demand for labour, the growth of final demand is already dropping from 6 per cent to 4 per cent as planned, and this may well be reflected in an easing of the employment situation in the next few months.

Consumer Demand not Slackening

As we have seen, however, there is little firm evidence to support the view that the growth of demand is, in fact, levelling off. Indeed, on a wider view, it would be surprising if it were. For the current expansion of the economy has now reached the stage at which a boom in fixed investment is being superimposed on the high rate of growth of demand for consumer and consumer durable goods that has until recently been the principal element in the economic expansion: and investment plans already being put into effect are not likely to be significantly affected by marginal adjustments to the growth of consumer demand. Though in many respects such an investment boom is welcome, since it should increase capacity and productivity in the future, it adds to the pressure on the economy in the meantime, and in particular places further demands on the labour supply.

Once the labour shortage begins to limit the growth of output to a rate below that at which demand is rising, prices—both of labour and of the final product—must tend to edge upwards. Though such factors appear to have played little part in the rise in the Ministry of Labour's index of retail prices of 0.9 point to 106.1 in April—a rise that it is thought was due largely to higher milk prices and higher local rates—it would not be surprising if higher costs were reflected in a further rise in the index in the next few months. Even excluding such forces, the index will almost certainly have risen further in May, because of the effect of the Budget measures.

A sustained rise in the cost of living index would also in itself tend to increase the pressure on wage costs—both directly, since wage rates in some industries are tied to the index, and indirectly by adding ammunition to other unions' demands. Britain's largest union, the Transport and General Workers' Union, has in fact recently announced that it feels that the rise in the cost of living index makes it impossible to accept the Government's appeals for wage restraint in isolation. This declaration by the Transport and General Workers' Union will certainly stiffen the attitudes of other unions. Of particular significance will be its effect on the Confederation of Shipbuilding and Engineering Unions, which is currently in the midst of important negotiations with the employers over the latter's offer of a long-term contract. Moreover, the unions insist on regarding negotiations over pay and those intended to secure a 40-hour working week as two separate issues. Pressure on costs is, therefore, likely to mount in the months ahead.

Handicap to Exports

A marked rise in labour costs would in turn handicap the chances of securing the large increase in exports that remains a vital requirement for the achievement of a period of sustained economic growth. The trade balance is, in fact, more than ever the most carefully watched of Britain's economic indicators. The figures for April were disappointing on the seasonally-adjusted figures. Exports fell by £36,000,000, while imports rose slightly and the trade balance deficit widened to £107,000,000, one of the largest on record. Admittedly a comparison over three months reveals a slightly brighter picture: in February to April the average value of exports was 5 per cent more than over the previous three months, while imports were only 3 per cent higher. But this result is obtained only because the exceptionally unfavourable figures from January distort the average for the earlier period.

The detailed breakdown of the trade figures for April revealed that exports to the Sterling Area and to E.F.T.A. countries have continued to increase, but that those to all other principal markets have fallen. Particularly disappointing was the fall in exports to North America, since the current expansion of the U.S. economy might have been expected to lead to a higher demand for our goods in that market.

It has, of course, long been expected that the rapid expansion would at some stage cause the balance of payments to slip into deficit, and the Government has ample credit facilities at its disposal to meet such an occurrence. The $500,000,000 "swap" with the United States and the possibility of short-term credits from other central banks under the Basle arrangement. together constitute a considerable total. There is no doubt, however, that it will be necessary to do everything possible to maintain competitiveness in the coming months.

ENDLESS CHAIN FOR OFFICE PAPER CHASE

Britain's first skyscraper office block to have an automatic mechanical messenger service went into operation this month within the "golden mile" of the City of London. A press-button vertical conveyor took over from the human floor-to-floor messengers carrying inter-office memoranda, invoices, and correspondence up and down the 20-storey block of offices.

With its inauguration, the manufacturers—Lamson Engineering, Co. Ltd., of London—foresee the new pattern of tomorrow's postal services in tall office blocks which are now springing up throughout Britain. Instead of the postman delivering from floor to floor, he will deposit mail on the control floor of the building and it will be automatically routed on the selective conveyor as required. For 75 years this firm has been studying the problem of the distribution of paper in offices, hospitals and factories, and they have brought to this ever-growing cascade a new turn of speed, despite the fact that offices today are growing upwards as well as outwards. The newest of these refinements to keep paper moving is a "dial-your-floor" conveyor system on a continuous chain, which trays hook on to and move themselves off at the selected floor. The paper moves in the shaft at 75 feet a minute, each tray can carry 30 lbs., and frequency of service of the line is eight trays a minute.

INCENTIVE TO DEPOSITORS

TENTATIVE AGREEMENT AMONG BANKS

IT has taken the bankers full three months to come to a tentative agreement on the "revision and rationalisation" of their deposit interest rates. Even before the Governor of the Reserve Bank indicated in March 1964 that bankers should re-examine their deposit rates in order to accelerate deposit mobilisation, some of the bankers themselves were advocating reconsideration of the issue but many of them were not willing to go all the way with the advocates of higher deposit rates. In fact, the debate on deposit rates actually started more than a year ago, when the State Bank of India raised its rates in April 1963 to bring them on a par with the rates prescribed under the Inter-Bank Agreement on Maximum Rates of Interest on Deposits, and the bankers barely managed to avoid a competitive increase of ½ per cent to preserve the differential then existing between the rates of the State Bank and those of the members of the Indian Banks' Association. Even now, the final decision is yet to emerge and is likely to take at least another month, if not more, for the tentative agreement among the members of the Indian Banks' Association has to be approved by the Exchange Banks' Associations, in the first instance, and has to be referred to all the banks participating in the Inter-Bank Agreement for approval by a three-fourths majority.

Grudging Concession

Sharp differences of opinion among bankers on the role and efficacy of interest rates in the process of deposit mobilisation and their consequences on the structure of bank costs and on the relationship and inter-action between deposit rates and service charges are responsible for this long drawn out procedure and delay in arriving at a decision. There has also been a good deal of wishful thinking. This is evident from the tendency to postpone the problem as long as possible, hoping that time would somehow come to their rescue. If, however, this hope does not materialise, they usually hit upon *ad hoc* solutions to which they pathetically cling until circumstances force them again to sit up and take notice of the problem. Expediency, rather than evolution of a long-term policy based on informed analysis and a view of the prospects, has been the characteristic feature of inter-bank agreement on deposit rates. When it was urged over a year ago that interest rates on deposits had become unrealistically low, some influential bankers used to argue that, as there were bright prospects of heavy deficit financing, deposits would automatically grow at an adequate rate and that, therefore, there was no need for paying higher rates of interest. Deposits did, of course, register a record rise, but the demand for bank credit grew even faster. Today, with bank credit standing at a high level, with prospects of a much smaller contraction in it during the current slack season and with the necessity for maintaining a higher liquidity ratio from about the beginning of next busy season, the banks have found that it is absolutely essential to do something more effective than they have done so far to stimulate the growth of their deposits. Had they realised this point last year itself, they would have, perhaps, been in a better position today. Even now, the tentative decision taken by them reflects only a grudging recognition of a compelling situation.

After prolonged discussions, the bankers are reported to have ultimately agreed to allow the short-term rates up to six months to remain unchanged and to raise the rates of interest for term deposits beyond that period by rates varying between ½ per cent to 1 per cent. The proposed new structure of rates now under consideration for final approval is as shown in the accompanying table.

The new rates for deposits beyond six months are almost entirely based upon the recommendations of Bhabha Committee, specially appointed by the Conference of Bank Chairmen to go into the question. The marginal reduction in rates recommended by Bhabha Committee for periods below 6 months, by sliding the period of deposits was, however, not acceptable to the bankers who have decided to maintain the present position in this respect unchanged.

Incidentally, credit for bringing about some measure of agreement on the proposed rates goes to the Committee under the Chairmanship of Mr. C. H. Bhabha, Vice-Chairman of the Central Bank of India: it may be recalled that, even in 1958, the credit for persuading the reluctant bankers into joining the agreement was also due to Mr. Bhabha who was then Chairman of the Indian Banks' Association.

The proposed rates reflect some clever, though not necessarily clear, thinking. An increase of ½ per cent in the rates of interest on deposits beyond three years and of 1 per cent beyond seven years is intended to create only an appearance of a better deal to depositors and to those bankers who demanded a rise in deposit interest rates, while at the same time meeting the point of those bankers who were worried about the implications of a higher deposit rates to their costs and profits. There are hardly a few term deposits beyond three years and certainly none beyond seven years, and the rise of ½ per cent and 1 per cent respectively in these categories will largely remain theoretical and no more than a source of mental satisfaction to those who favour dear money, without any substantial practical consequences either on the rate of deposit mobilisation or on the amount of interest paid out to the depositors by the banking system as a whole.

Meagre Rise

For deposits maturing between 6 months and three years, the Bhabha Committee has recommended only a meagre rise of ¼ per cent in the existing rates of interest. Banks must be holding substantial term deposits within these periods, particularly between six months and 1 year. Although it is not possible to estimate the exact extent of such deposits in the absence of relevant data, the Bhabha Committee seems to have realised the fact that the cost of even

INTEREST RATES ON DEPOSITS

" 7 years	5	6	+ 1

* After modifying Bhabha Committee Recommendations.

a quarter per cent rise in the rate of interest in this category of term deposits may add substantially to the expenses of banks: it is this realisation which must have prompted it to propose a fractional reduction in the term deposits rates for periods below six months by sliding the periods. The largest proportion of bank deposits are held in this group—below six months—and even a slight reduction in rate would have been enough to compensate for the higher rates of interest in the other two categories. On second thoughts, however, bankers have decided to reject the proposal for reducing these rates, as it is contrary to the trend of current thinking and is likely affect the rate of deposit mobilisation. By maintaining the existing rates in this group, and by allowing varying rates of increase in the rate, the bankers have committed themselves to paying more for their resources.

The question that comes uppermost when considering the proposed structure of rates is: how far is it going to help deposit mobilisation? The largest rise in rates has been given where it is the least likely to affect the rate of deposit mobilisation or bank costs, practically no rise or only a small increase of a ¼ per cent is given where it vitally affects the costs: it is debatable whether such a small increase in rates was really necessary and whether it is going to make any difference to the rate of deposit mobilisation. It is, of course, possible to argue that, in view of the tremendous rise in the responsibilities and functions of banks and in view of the diversification of their investment and advances portfolios, banks will need a greater proportion of long-term deposits; the higher rates for the longer term are therefore a step in the right direction. But, in any case, this is a long-term prospect of a structural change in the composition of bank deposits: the entire purpose and rationale of a revision in rates was to bring more deposits to banks immediately. Do the bankers really and seriously think that a *status quo* in the very short-term rates and a mere ¼ per cent rise in rates between 6 months and 3 years will affect materially either the *trend* or *amount* of bank deposits? During 1963, bank deposits rose by 15 per cent—an all-time record growth of Rs. 289 crores. But the experience of the autumn and winter of 1962-63 has clearly illustrated the favourable effect on deposit growth of deficit financing. As already stated, a good part of that growth was the result of heavy increase in Government expenditure. Even without the small and extremely inadequate rise in rates proposed in the most vital sphere of deposits, they would continue to rise, as Government expenditure is going to be heavier still in the coming months. Bankers could save themselves the few crores of rupees which they are now willing to gift away to depositors, without any chance of getting a substantial rise in their deposits. After all, were these weeks and months of waiting, controversy and differences just over a quarter per cent? If the bankers wanted to risk their money over a real chance to attract the bulk of the genuine savings of the people, a straight ½ per cent rise in all rates above three months but below 6 months and 1 per cent rise beyond that would have been the most appropriate. There is still time to think of this solution.

Savings Deposits

The confusion and lack of sense of proportion and relativity among bankers are clearly illustrated by the abolition early in 1963 of interest on all current accounts, the liberalisation of savings bank rules over the last few years, which has, in effect, converted most such accounts into current accounts, and the failure to give a higher rate of return on savings deposits, which have the greatest potential for growth. It is true that interest on current accounts is not paid anywhere in the developed world, but by refusing to permit a small return of about 1 per cent to interest sensitive rural and southern areas, the banks have forced most of the depositors in such areas to switch funds from current accounts to savings accounts, where the depositors enjoy almost the same facilities and privileges regarding withdrawal. The wisest thing to do would have been to go back to the pre-Agreement days, restrict the number of total withdrawals and the amount of each withdrawal in a savings account, raise the rate of interest on such accounts by 1 per cent to 4 per cent. After all, when investments in Government securities are earning 4.50 per cent, savings deposits can no longer expect to be competitive with just a 3 per cent return of bygone ages.

Yet another example of the misplaced zeal of the bankers is found in their rejection of Bhabha Committee recommendation of lowering the 3 days Notice Money (described as Call Money!) to 2½ per cent. It is difficult to appreciate why bankers want to pay 3 per cent for 3 days when they reluctant to pay 4 per cent for 6 months and over. Most of the call deposits are "big money" and, even if the entire banking system were to offer no more than 2½ per cent (or even 2 per cent), the money is bound to stay in it. Where else will it go? A little more than a year ago, even the State Bank call rate was in fact 2-2½ per cent., and it would not have been difficult for the banks and the State Bank to agree to a common single rate for this kind of deposits.

Think Again

In any case, the last word on bank interest rates is not yet said or heard; for some of the important banks are reported to have made it a condition that their acceptance of deposit rates structure depends upon a further agreement on important service charges and facilities; if no such agreement is possible as it appears to be the case, it is likely that the agreement on deposit rates itself may be scrapped, or at least suspended for a period. If such a thing happens, it might prove to be a blessing in disguise for the bankers and the Reserve Bank would then be glad to allow the market forces to determine a realistic level and structure of bank deposit rates. Such a move will also help the banks in their struggle against the advocates of nationalisation—for the agreement on deposit rates as is conceived and operated now is a clear case of restrictive practice initiated six years ago. After all, banks in India did grow and remain healthy even when there was no such agreement.

MANCHESTER LETTER

LULL IN TEXTILE TAKEOVER DEALS

POWERFUL CONTROL BY BIG GROUPS?

From Our Special Correspondent

MANCHESTER, *9th June*

DURING the past few weeks, there has been a lull in the phase of takeover deals which have been such a major feature of the Lancashire cotton industry in the past 12 months. Now, however, all the old rumours have been revived by another major deal, involving the rapidly-growing Viyella International and the Bradford Dyers Association. While neither company is based in the heart of the cotton mill country, the Viyella combine has lately absorbed several other firms which are by tradition regarded as Lancashire concerns, and the big dyeing group has such notable textile links across the Pennines that many other companies are involved in this new amalgamation.

When deals of this magnitude are taking place other considerations tend to pale into insignificance. It is easy to forecast that this marks by no means the last of a series of integration projects by the major firms. Everything points to a continuation of the forging of stronger links between the different sections, for so long established on a horizontal basis.

Nor is it possible, in the circumstances, to avoid frequent reference to the ideals promulgated in various publications by Mr. Joe Hyman, who, as Chairman of Viyella International, has assumed an almost unique position in the trade by virtue of his Company's evident search for growth. It has been suggested that the latest bid represents his "last territorial demand," but it would indeed be surprising if his tally of conquests ends at this point.

Mr. Hyman's views on the textile industry and his theories on management are widely quoted in the City pages. Examples: "The two surest ways to ruin an industry are tariffs and 'A' shares," and "I think that, in the larger group, you have sufficient scope to attract first-class minds; they can't find that in Lancashire as it was."

Programme of Direction

On management theories, Mr. Hyman has lately put his thoughts on paper, dealing with the actual practices used in his "federation" of companies and on a broader industrial basis. "We explain to those people who are going direct that they must work to quinquennial programmes of their own development," he says and adds: "The first, and perhaps most important directive, is that the day a man starts a job he must on that day plan who will succeed him. Indeed, if he does not do so, he is going to find it more and more difficult as time goes on, because, unless one grows with a situation, it is increasingly difficult to develop with it, and also because a sentimental attachment to the job grows which is difficult to break later on."

His theory of management envisages a graduate entering industry in his early twenties, spending five years in post-graduate work within the company as part of a management structure, five years in a leading position, five years being responsible for an operational group, and five to ten years in direction. This, says Mr. Hyman, would give a cycle of 25 years, allowing the man freedom to do other things, such as public service or Government work, around the age of 45 to 50.

Role of Professional Managers

The essence of the problem, he feels, is that Britain's first industrial revolution was carried through by proprietorial entrepreneurs, but the second industrial revolution will be carried out by professional managers. He likens the situation to modern constitutional Government, involving the development of a professional civil service.

Proprietors and families can no longer control industrial organisations long term, he continues. "Britain's somewhat rigid social structure, which was compatible with the country's needs in early Victorian days, now acts as in inhibiting factor on the best in the country for our modern role. The position is at its worst in the older industries, where there is a dearth of professional management and an excess of nepotism."

Among his suggestions for improving the outlook is a scheme to encourage a number of graduates who pass the civil service administrative examinations to be immediately recruited into industry. "If there are 30 or 40 acceptances each year for this grade, it would be worthwhile for the Government to arrange for perhaps a quarter of them to enter industry," he adds.

Independence Still A Virtue

Is there a future for the small firm in textiles in the midst of such a sharp swing towards major groupings and powerful control by the big battalions? Many people whose activities are confined to individual sections and have been content to maintain steady progress in the lower strata of the industry having regard to pure size must have been asking themselves this question many times in the past few years and particularly during the furore of deals which have followed the interest taken by the man-made fibre producers since mid-1963.

Many companies in this category illustrate the strong family influence which has been at work in textiles for generations past. Events have shaped destinies by absorptions and mergers so that some of these fundamentally close-knit units have received fresh impetus from outside sources. There are still many companies, however, which feel justified in carrying on by their own efforts aided by the numerous inventions and systems successfully introduced in productive and marketing methods.

Below the Giants

Among those who contend that there is still a definite place for at least a rank of textile firms below the giants is Mr. G. W. Stott, Chairman of Stott and Smith Ltd., whose current annual statement illustrates the position of an old-established firm which is determined to stay the pace. A feature of the reorganised textile industry, he says, has been the growth of large trading groups but there are still many smaller and efficient independent companies whose future prospects are just as encouraging as are those of their larger counterparts.

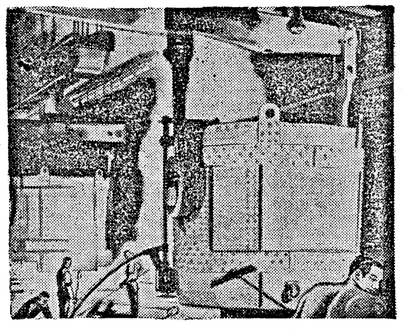
To compete successfully in the trade today, however, nothing can be left to chance; every available benefit must be gained from the aids to efficiency which are available. In common with many other concerns faced with similar problems, the action taken by Stott and Smith has been to withdraw capital from low-earning ventures and to increase investment in those sections of the business which show an adequate return.

While this must be a slow process, the results achieved after a severe setback in 1962 justify the means adopted. Internal reorganisation and raising the tempo of re-equipment must be carried out if current progress is to be maintained.

Pruning Overheads

Other companies can substantiate this argument and the days are certainly long past when any business can afford to stand still. Crosses and Heatons Ltd., whose chequered record of the past has resulted in a drastic concentration scheme, is another group where overhead costs have been pruned very substantially. Production has been raised by the more intensive use of modern spinning machinery and future plans include mechanical handling layouts, the further concentration of productive units and improvements in the preparatory processes. All these developments and the consolidation of the administrative headquarters of the company, say the directors, will lead to lower overheads.

DEVELOPMENTS IN THE EAST



With the improving living standards in the East comes the prospect of trade expansion and of increasing opportunities for profitable marketing. The world-wide facilities of three great banking organizations, merged into a single comprehensive service, are at your disposal with up-to-date information and expert advice on all aspects of finance and trade in these areas.

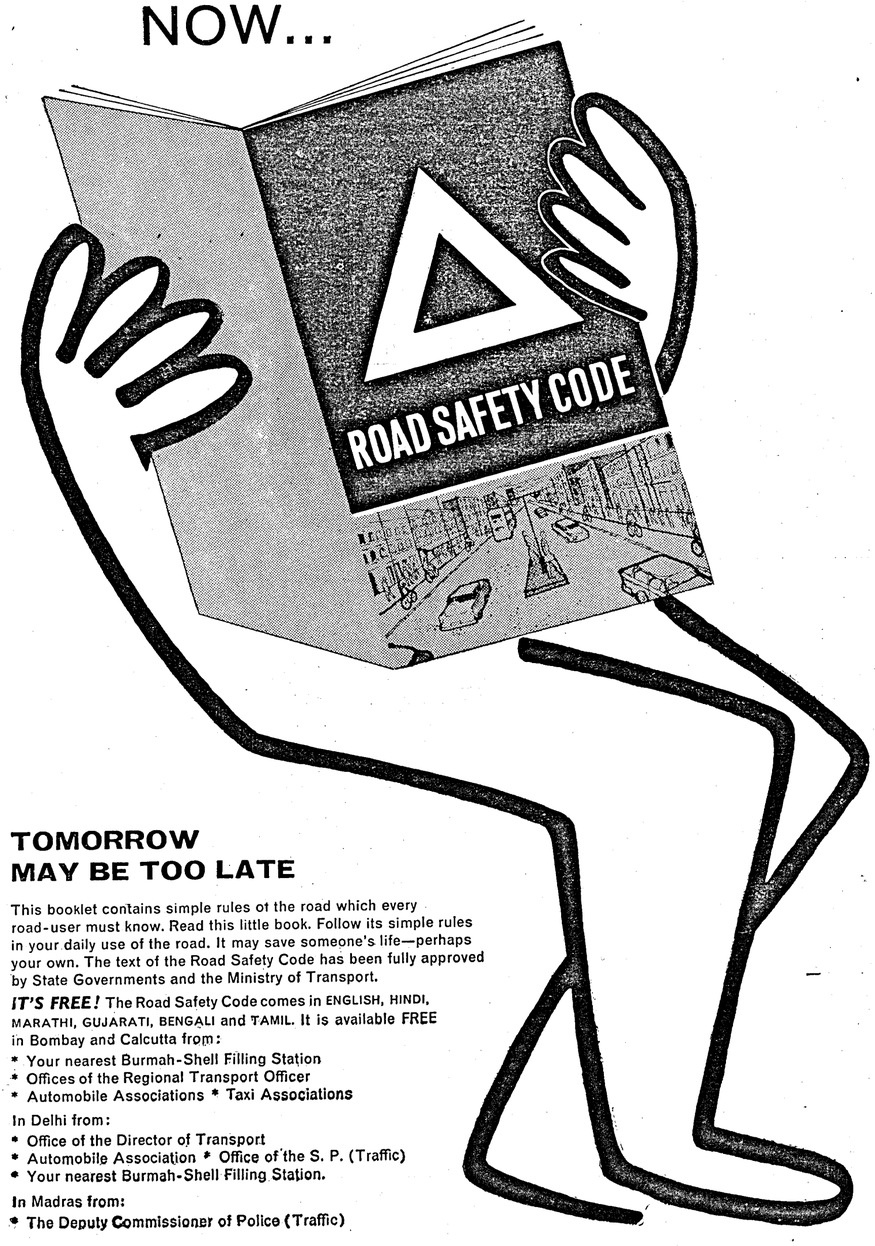
READ THIS NOW...



TOMORROW MAY BE TOO LATE

This booklet contains simple rules of the road which every road-user must know. Read this little book. Follow its simple rules in your daily use of the road. It may save someone's life—perhaps your own. The text of the Road Safety Code has been fully approved by State Governments and the Ministry of Transport.

IT'S FREE! The Road Safety Code comes in ENGLISH, HINDI, MARATHI, GUJARATI, BENGALI and TAMIL. It is available FREE in Bombay and Calcutta from:

* Your nearest Burmah-Shell Filling Station
* Offices of the Regional Transport Officer
* Automobile Associations * Taxi Associations

In Delhi from:

* Office of the Director of Transport
* Automobile Association * Office of the S. P. (Traffic)
* Your nearest Burmah-Shell Filling Station.

In Madras from:

* The Deputy Commissioner of Police (Traffic)
* Automobile Associations * Taxi Drivers' Associations

Road Safety is a matter of life...and death

Issued in the interest of Road Safety by Burmah-Shell.

WORLD RUBBER ECONOMY AND INDIA

FALL IN PRICES DUE TO SEVERE COMPETITION FORECAST

THE coming years will witness an increasingly severe competition not only between natural and synthetic rubbers but also among the various types of competing synthetic rubbers, with the result that there will be a decline in the prices of both. This is the conclusion that emerges from the findings of the International Rubber Study Group which held its seventeenth meeting at Tokyo recently. The conclusion is based on the existence of a substantial surplus production capacity for synthetic rubber. The impact of the decline in prices as forecast by the Study Group is, of course, of particular concern to Malaysia, Indonesia and Thailand (and Ceylon) where raw rubber is the most important earner of foreign exchange and Government revenue, besides being the major source of employment and income to a large percentage of population. But there is no cause for any despondency. For natural rubber, since it enjoys certain advantages which synthetic rubber lacks, can always hold its own, provided those who produce it endeavour their best to offer their product to consumers in a competitive manner. The essence of the problem, as the Rubber Study Group has rightly emphasised, lies in the rapid raising of the general level of efficiency of the natural rubber industry as a whole, "efficiency" covering *all* aspects of production, processing and marketing.

In the considered opinion of the Study Group, the development, as yet in its pioneer stage, of crumb rubber well packed and sold according to technical specifications is of special interest. Production of natural rubber in this form is already taking place in some countries, albeit in moderate quantities, and the processing and marketing aspects are being studied intensively. This development, we are told, has important implications which call for appraisal by producers, traders and consumers. The Group has authorised the Secretary-General to

invite the major consuming interests to co-operate with the Group by giving clear and precise guidance on matters like the acceptability of the aforesaid form of rubber to consumers, its technical specifications and the preferred size of bale. While all this takes time, the present marketing practices, which will necessarily continue for some years to come, will have to be improved greatly. The Rubber Study Group has done well to emphasise this aspect, as also the need for strengthening the regulation of fair trade practices and quality control on shipments.

The very considerable expenditure on research and development in the synthetic rubber industry, according to the Study Group, has led to continuing technical advances. Such advances, while they have not changed significantly the competitive relationship between natural and synthetic rubbers, are doubtless serving to consolidate and enhance the acceptability of synthetic rubber in many usages. The Group, at its previous meeting in Washington, had stated that the major impact of competition for natural rubber was from polybutadiene in the truck tyre field. It is, however, now said that the impact has not been felt not by natural rubber but by S.B.R. in the passenger tyre field, though it is admitted that oil-extension of synthetic rubbers is assuming greater importance than what had been anticipated before and that it "is offering a particular economic challenge to the natural rubber industry." The new E.P.R. synthetic rubber, which will eventually be used on a large scale for tyres, is expected to compete with other synthetic rubbers, especially butyl, rather than with natural rubber.

The continuing existence of a substantial excess synthetic rubber production capacity in the world is bound to affect equally both natural and synthetic rubber producers. The companies engaged in the manufacture of synthetic rubber or, in certain cases, Governments have no doubt every right to take any decision they like in respect of creating new capacity or expanding present capacity. But it is desirable, as the Rubber Study Group says, that, before taking such a decision, due consideration should be given to the present and prospective supply-demand position and the effect on the econo-

* Excluding synthetic rubber produced in China or non-member countries in Eastern Europe.

mies of natural rubber producing countries. There is certainly scope for greater liaison between the two sectors which should consider where co-operation would be mutually beneficial. An interesting suggestion put forward by the Group pertains to point efforts in the field of development and publicity.

The review of the statistical position of rubber as made by the Group shows that the overall world surplus in 1964 will amount to 120,000 long tons, as against 73,000 tons in the previous year. The larger surplus is anticipated, despite the fact that the total supply of natural rubber amounting to 2,230,000 tons (production of 2,135,000 tons plus stockpile release of 95,000 tons) will be below the estimated consumption requirements of 2,235,000 tons to the extent of 25,000 tons. For this shortfall is expected to be more than made good by synthetic rubber, the anticipated output of which is put at 2,690,000 tons, as against the requirements of 2,545,000 tons. Table A compares the world rubber position in 1964, as estimated by the Study Group, with that in 1963, Table B indicates the estimated consumption of natural and synthetic rubbers in different countries during the year 1964, and Table C shows the estimates production in different countries in the same year as compared with the previous two years.

Since the overall world surplus of rubber is expected to be larger in 1964 than in 1963, it

is not surprising that prices have tended to look down. Natural rubber in the London market moved down from 22¾d. per lb. a year ago to 19d. recently. There has, of course, been a slight recovery of late, the latest available rate being 20.13/16d. But the recovery has been due to two temporary factors, namely, the possibility of a strike among Malayan plantation workers and the expected delays in shipments from Nigeria due to labour troubles. And available indications are that the rubber prices may resume their downward trend, though the decline may not be appreciable.

Whatever developments that take place in the world rubber economy will affect India to a significant extent, because India countinues to import every year substantial quantities of rubber, natural, synthetic and reclaimed. The actual imports in the calendar year 1963 aggregated over 27,000 metric tons. Large-scale imports are necessitated by the wide gap that exists between production and consumption requirements, as will be seen from Table D. Projecting the figures for financial years, the deficit in rubber supplies in 1965-66 (last year of the third Plan) is estimated by the Rubber Board at no more than 20,000 tons, the anticipated total demand and production put at 100,000 tons and 80,000 tons (50,000 tons of natural rubber and 30,000 tons of synthetic rubber), respectively. The deficit differs widely from the figure of 90,000 tons mentioned in our article on page 284 of *Commerce* dated 22nd February 1964. This figure (of 90,000 tons), which was based on private estimates, is said to be a clear exaggeration. Considering the ac-

Table D: *Rubber in India*
(In metric tons)

	1963	1962	1956	1952
PRODUCTION (total) ..	43,590	32,107	23,891	20,181
Of which: Natural ..	37,200	31,357	23,819	20,181
Synthetic ..	5,250	750	..	..
Reclaimed	1,140	..	..	..
CONSUMPTION (total) ..	79,509	68,762	35,220	23,536
Of which: Natural ..	60,209	51,776	29,460	21,398
Synthetic ..	11,624	10,409	2,447	17
Reclaimed	7,676	6,577	3,313	2,121
IMPORTS (total) ..	27,015	41,162	12,632	5,774
Of which: Natural ..	15,670	23,394	9,463	3,851
Synthetic ..	6,693	10,856	2,806	15
Reclaimed	4,652	6,912	3,363	1,908

tual trend of production and consumption in the past three or four years, the estimates prepared by the Rubber Board as mentioned above seem to be quite realistic. Even so, the estimated gap of 20,000 tons for 1965-66 is big enough and its filling up involves the spending of much precious foreign exchange. The need for stepping up the domestic production of raw rubber is, therefore, urgent. There is plenty of scope for augmenting the productivity of rubber lands from the present level. The scope can certainly be exploited fully if only the Rubber Board plays its part properly in giving all possible encouragement and support to growers.

RUBBER IN MALAYA

Replant or die! The force behind this slogan of the Rubber Industry (Replanting) Board is felt throughout the industry in Malaya. Natural rubber is not a raw material with a declining economic significance, as its production is climbing steadily, according to the Natural Rubber Bureau, Malaya. The end of 1962 saw 50 per cent of Malaya's four million rubber acreage planted with high yielding trees producing three or four times the quantity of rubber grown from unselected seed—1,500 to 2,000 lbs. per year, as against 490 lbs. from the older type of tree. The past 12 years have witnessed one of the most ambitious replanting and new planting programmes ever undertaken in tropical agriculture. Vast acreages which were formally supporting uneconomic trees already past their prime production have been replaced by new high yielding stock. To accomplish this, it was essential to give smallholders financial assistance and it was agreed that a flat rate replanting cess of 4½ cents be levied on every pound of rubber exported from the Federation. This money is redirected into two Funds administered by the Rubber Industry (Replanting) Board.

Fund A ensures that the money collected on estate produced rubber is returned to the estates and is repaid according to proof of production. A company's new planting and replanting policy is handled by the directors and the extent of these operations is, of course, outside the scope of Fund A. Fund B is the special replanting scheme for smallholders, affording the necessary financial assistance. Total grants of $750 per acre are paid in seven instalments so enabling the small producer to weather the first unproductive years and this scheme has given a definite fillip to the rate of progress. The Board demands certain standards concerning the proper preparation of land and the correct procedure of planting and maintenance; no grants are paid unless these are fulfilled. The Board's staff, in collaboration with rubber instructors from the R.R.I. Smallholders Advisory Service, do their utmost to teach basic planting principles and supervise the replanting. Various services are also supplied, the most important being the provision of high yielding planting material by

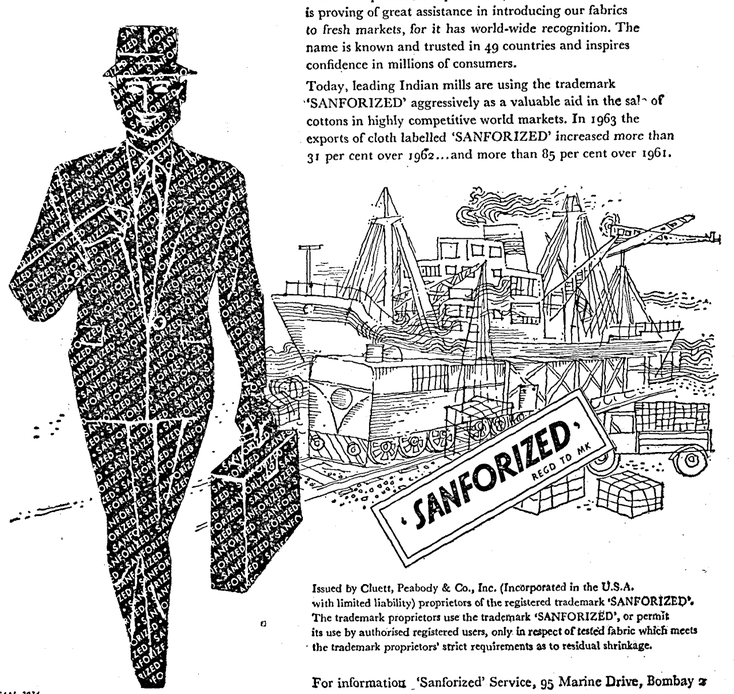
(Continued on page 1082)

The label 'SANFORIZED' is helping to carry Indian cottons round the world

For centuries Indian textiles held sway in world market. Millmade cottons are still a leading item of export. In 1963, over 500 million yards went abroad and earned the country Rs. 41.2 crores in foreign exchange.

New markets need to be tapped, however, to build bigger, even more profitable exports. The label 'SANFORIZED' is proving of great assistance in introducing our fabrics to fresh markets, for it has world-wide recognition. The name is known and trusted in 49 countries and inspires confidence in millions of consumers.

Today, leading Indian mills are using the trademark 'SANFORIZED' aggressively as a valuable aid in the sale of cottons in highly competitive world markets. In 1963 the exports of cloth labelled 'SANFORIZED' increased more than 31 per cent over 1962...and more than 85 per cent over 1961.



Issued by Cluett, Peabody & Co., Inc. (Incorporated in the U.S.A. with limited liability) proprietors of the registered trademark 'SANFORIZED'. The trademark proprietors use the trademark 'SANFORIZED', or permit its use by authorised registered users, only in respect of tested fabric which meets the trademark proprietors' strict requirements as to residual shrinkage.

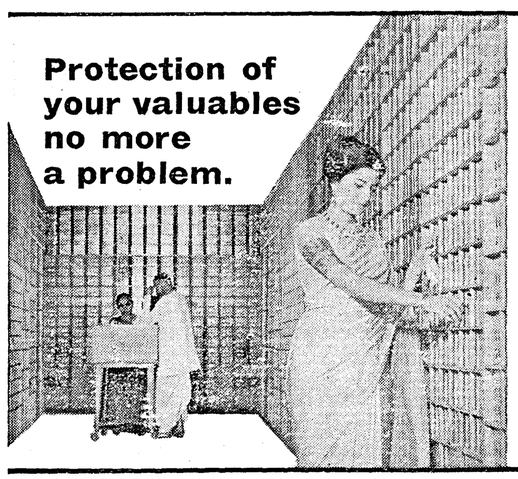
Protection of your valuables no more a problem.



Your home is perhaps a vulnerable place for keeping costly jewellery and important documents. Why run the risk of losing your valuables by theft, fire and other hazards?
The local head offices and branches of the State Bank of India afford facilities for the safe custody of your personal effects at moderate charges.
Facilities are also available at local head offices and at a number of important branches for hiring lockers of various sizes.
By depositing your valuables in the State Bank, you will save yourself the worry about their safety.
Please contact the nearest Branch Agent for further particulars.

C.S.O.'S MIDDLE CLASS SURVEY

FAMILY BUDGETS AND CONDITIONS OF WORK

IT is well known that the middle class population occupies a strategic position in Indian society. But not much is known about the conditions of work and levels of living of this important class. The only all-India attempt to survey middle class conditions was made in 1945-46, when the then Economic Adviser to the Government of India conducted a family budget enquiry covering Central Government employees throughout the country. This survey, however, was not followed up by the construction and maintenance of an all-India middle class cost of living index, presumably because its coverage was rather limited. But the need for such an index continued to be felt on several occasions in connection with the fixation and adjustment of the emoluments of Central Government employees. The Technical Advisory Committee on Cost of Living Index Numbers, set up by the Union Ministry of Labour and Employment, therefore, recommended in 1954 that family budget enquiries should be conducted to cover, among others, urban middle class population. Later, in 1957, the Wage Board for Working Journalists mentioned in its report that it was greatly handicapped in its work by the lack of middle class cost of living index numbers, and recommended that, as disputes concerning the emoluments of middle class employees were on the increase, necessary steps should be taken to compile and maintain a reliable middle class cost of living index. At the same time, members of Parliament, too, had emphasised the need for the construction of such an index.

Thanks to such persistent pleas, the decision was finally taken by the Government in November 1957 to carry out an urban middle class family living survey and to place the overall responsibility for the survey on the Central Statistical Organisation. The field work of the survey was entrusted to the National Sample Survey and the field wing of the Indian Statistical Institute. The Survey was restricted to *families of non-manual employees engaged in non-agricultural activities in urban areas* (that is, the urban salaried middle class) for the twin reason that the cost of living index numbers were required mainly to settle disputes in respect of salaries and allowances between employers and employees and that data on income and expenditure could be obtained with greater reliability in the case of fixed-income employees. It covered the year 1958-59. The first report of the survey, based on some of the tabulations so far made by the Indian Statistical Institute, has just been released. It will be followed by reports on the results of other tabulations which are under way.

The report, now before the public, deals in particular with the income distribution and expenditure of middle class families and the employment and service conditions of middle class employees. The data regarding income distribution have been presented in summary form in a leading article in this issue. But the data regarding such income distribution, studied from the point of view of central tendency and spread in another manner, are given here in Table I. This table gives first the income limits (upper and lower) of the mid-50 per cent of families. The upper limit here, incidentally, corresponds to the lower income limit of the top 25 per cent. The lower limit of the mid-50 per cent, on the other hand, corresponds to the upper income limit of the bottom 25 per cent. The third column in the table shows the "interquartile range," that is, the average family income of the mid-50 per cent of families. The table next gives the income limits (upper and lower) of the mid-90 per cent of families. The upper limit here, incidentally, corresponds to the lower income limit of the top five per cent. The lower limit of that mid-90 per cent, on the other hand, corresponds to the upper income limit of the bottom five per cent.

How the figures in the table are to be read may be illustrated by a reference to one centre.

Table III—Distribution of expenditure by item groups and by class of cities

(In Rs.) *(Figures within brackets are percentages)*

Item Group	Major Cities	Minor Cities	Other Towns
Food, etc. ..	148.6 (40.3)	116.0 (44.1)	116.9 (43.7)
Fuel, etc. ..	14.0 (3.8)	13.0 (4.9)	11.5 (4.3)
Clothing, etc. ..	44.3 (12.0)	31.8 (12.1)	34.3 (12.8)
Housing, etc. ..	55.4 (15.1)	36.7 (13.9)	34.3 (12.8)
Miscellaneous ..	106.2 (28.8)	65.9 (25.0)	70.5 (26.4)
Total ..	368.5 (100.0)	263.4 (100.0)	267.5 (100.0)

In Shillong, for instance, the incomes of the mid-50 per cent of families range between Rs. 159 and Rs. 440 per month (columns 2 and 3). This, incidentally, shows that the bottom 25 per cent of families have monthly incomes below Rs. 159 and the top 25 per cent have incomes above Rs. 440 per month. The interquartile range for this town shows that the average family income of the mid-50 per cent of families is Rs. 281 per month (column 4). The fifth and sixth columns bring out that the incomes of the mid-90 per cent of families range between Rs. 106 and Rs. 853 per month. This, incidentally, shows that the bottom five per cent of families have monthly incomes below Rs. 106 and the top five per cent have incomes above Rs. 853 per month. The seventh column, giving overall average figures for all the families (that is, 100 per cent of families), shows that an average salaried middle class family in Shillong, for instance, has a monthly income of Rs. 341.

It will be seen from the overall average figures of family income in Table I that only in three cities, namely, Calcutta, Bombay and Delhi-New Delhi, the middle class families have average monthly incomes of more than Rs. 350. Average incomes, it will be further seen, range from Rs. 161 in Jammu to Rs. 378 in Calcutta. The inter-centre range of variation in average incomes thus seems to be considerable. The authors of the survey have also given the finding that the average family income of the "lower middle class" (defined as the lower 50 per cent of the middle class families) varies considerably from Rs. 83 in Gulbarga to Rs. 194 in Bombay.

The survey data regarding expenditure are very comprehensive. In the report are to be found centre-wise statistical statements pertaining to monthly average family expenditure on different items like food, fuel and light, etc., monthly average family expenditure by monthly family income, monthly average family expenditure on different items like food, fuel and light, etc. by monthly family income, and so on. These tabular statements are far too many and too long to be included in this article. The utmost that is possible is to present a single centre-wise statement on monthly average family expenditure on different items and monthly *per capita* expenditure. The relevant figures are to be found in Table II.

A comparison of the average family expenditure figures in Table II with the average family income figures in Table I shows that, in all except three centres, namely, Shillong, Calcutta and Jammu, out of the 45 urban centres, the reported expenditure exceeds the level of income. Not much significance, according to the authors of the survey, is to be attached to this phenomenon, for it is the usual experience in family budget studies, based on the interview method, that expenditures are somewhat exaggerated, while incomes are somewhat understated.

In order to facilitate a study of the inequalities in the levels of expenditure, the authors of the survey have estimated average monthly expenditures by interpolation in respect of the bottom 25 per cent, the mid-50 per cent, the top 25 per cent, the top 10 per cent and the top five per cent of families, ranked according to family income. The results, in a nutshell, show that the monthly expenditures of the mid-50 per cent vary from Rs. 126 in Jammu to Rs. 323 in Bombay. In comparison, the expenditures of the bottom 25 per cent vary from Rs. 263 in Jammu to Rs. 736 at Bombay, while those of the bottom 25 per cent vary from Rs. 85 in Jammu to Rs. 199 at Simla. Expenditures of the top 25 per cent thus seem to be generally about three to four times those of the bottom 25 per cent. Expenditures of the top 10 per cent vary from Rs. 379 in Jammu to Rs. 1,088 in Bombay, while those of the top five per cent vary from Rs. 404 in Jammu to Rs 1,432 in Bombay. The top 10 per cent of families thus seem to be spending roughly four to six times as much and the top five per cent about five to eight times as much as the bottom 25 per cent. But, considering the fact that the higher-income groups have families roughly twice or thrice as large as the lower-income groups, it would appear that inequalities in *per capita* expenditures are less sharp than in family expenditures.

Weighted average expenditures, together with the corresponding percentages for various size groups of centres, are given in Table III.

The expenditure pattern, it will be seen from Table III, varies somewhat as between the major cities and other centres, in that middle class families in the former spend proportionately less on food and fuel but more on housing and miscellaneous items, as compared with their counterparts in the latter.

The share of food, beverages, tobacco and intoxicants in total family expenditure at all levels ranges from 38 per cent in Gauhati and Indore to 54 per cent in Jammu. The average for all centres is 44 per cent. This is in striking contrast to the consumption behaviour of working class families which are known to spend about 50 to 60 per cent on food, beverages etc. As for expenditure on fuel and lighting, it accounts for four per cent, on the average, for all centres, while the clothing group is responsible for 12 per cent and the housing group for 14 per cent. The miscellaneous items, such as medical care, education, amusement, transport, taxes and interest account for the balance of 26 per cent of total average family expenditure.

The survey findings regarding employment and service conditions are given in summary form below:

1. The average number of employees per middle class family varies from 1.01 to 1.32, with a mean at 1.14. As the average size of middle class families ranges mostly between four and five, it may be broadly taken that one in four of the members of a family is an employee.

2. The principal economic activity in which middle class employees are engaged in public service (that is, in the service of Central, State and Local Governments), which accounts for the largest share in 32 out of the 45 centres. Educational services account for the largest share in two centres and the second largest at 30 centres. Industry, which constitutes the most important activity at Calcutta, Bombay, Ahmedabad and Bangalore, is second in importance at four other centres. In terms of occupational terminology, clerical and related workers predominate. Their proportion among all middle class employees varies from 44 per cent in Sambalpur and Gulbarga to 88 per cent in Shillong. The next important category is that of professional and technical employees, of whom teachers constitute the largest component.

3. The average length of service of a middle class employee varies from 8 to 16 years, as will be seen from Table IV. Most of it (6 to 14 years) is confined to one establishment. This means that middle class employees generally stay stable in the establishments where they are employed, once they settle down in their chosen careers.

4. Middle class employees work, on an average, six to seven hours per day. Teachers usually work fewer hours. Salesmen work longer.

5. A majority of the employees are entitled to casual leave (15 days) or earned leave (30 days) or both. Most of them are not entitled to any sick leave in addition.

6. Conditions of service in centres in which commercial employees predominate generally

Blueprints of expansion of a nation's industrial activity require adequate financial resources for implementation.

Allahabad Bank plays its part in providing funds for projects. The investor's money thus plays a vital role in the country's rapid development, the Bank guaranteeing its security and interest to the investor.

ISSUE OF SHARES BY TENDER—II

By D. R. Pendse, M.A. (Cantab)

IN the light of the advantages and drawbacks of the four principal variations* discussed in the first instalment of this article last week, it is perhaps possible to indicate a rationalised version. Instead of having one single price or having all tender prices as allotment prices, only two or three representative tender prices may be chosen as allotment prices. These may be selected in such a way that, except in the lowest selected price, allottees would invariably be paying less than their own tender price. In the case illustrated earlier (*vide* page 1024 of *Commerce* dated 13th June, 1964), allottees quoting between 14*s.* 6*d.* and 15*s.* may all be allotted at 14*s.* 6*d.*, those quoting between 15*s.* 3*d.* and 15*s.* 9*d.* at 15*s.* and so on. The scaling down may then be coupled with some preferential treatment for the higher bidders. This could be done in two ways: first, by offering them a larger portion of the shares applied for and, secondly, by enlarging the difference between the tender price and the allotment price. It is hoped that this rationalised version would combine in it the principal advantages of the four versions discussed earlier. It would be interesting to note the results when such a rationalised version is actually put to trial.

Stagging

At this stage, it is necessary to consider some other aspects and clear some possible doubts about this tender method. The first and the most important is perhaps regarding stagging. Stags are friends of bulls and not of bears. Since the tender method is applicable mainly where a premium is indicated, the stags necessarily try to find a place in such issues. They thrive (*a*) on the difference between the market price and the allotment price, (b) on the number of shares which they are able to procure in order to sell at the established premium. In the usual cases, the allotment price is the same as the issue price, which is fixed in advance. Hence stags have only to form a judgment of the possible market price and devise ways for securing maximum possible allotment of shares. For this purpose, they usually take recourse to making one or more (multiple) applications for a large number of shares. This also helps to create an atmosphere of demand for the shares and to raise the opening price and thus their profit.

Under the tender method, as long as the allotment price is above the minimum price, there is obviously some diversion of profits to the promoters which would otherwise have gone to the stags. Therefore, other things being equal, stags are unlikely to bubble with joy over the tender method. Unlike the fixed price issues, here there are two unknowns to reckon with, namely, the allotment price and the market price. They must form a judgment on both these and stake their resources to influence both of them. In cases of multiple prices (both Mf and Mp), the stags are apt to be positively scared: if they tender and receive allotment at prices higher than the resultant market price, they will clearly be in trouble. If, alternatively, they tender at the lowest 'reasonable' price according to their calculation of the market, not only the chances of allotment are uncertain but also their own applications to some extent would lower the lowest allotment price, the market price, and their profit.

In cases of single price (Sf and Sp), the stags would face another dilemma. Under Sf, the allotment price would automatically be fixed fairly at a high level and chances of a wide difference between the market and the allotment price would be slim. Under Sp, if the promoters have announced the intention to give a preferential treatment to the higher bidders, the stags would like to quote a high tender price. But this itself would raise the allotment price and reduce the rate of their profit. If many stags follow this method, the allotment price may actually turn out to be higher than the market price. If there is to be no preferential treatment but only a uniform scaling down, the stags would have to be satisfied with profits on a larger turnover. In such circumstances, it is even possible that the stags would put in as low a tender price as possible and, perhaps, form a syndicate so as not to outbid each other. In such an event, the resultant market price would also be comparatively low and then again they may have to depend on a larger turnover for their profit or, alternatively, would have to nurse the shares for quite some time until the market moves up steadily to a "reasonable" level. The harm that may arise from such a concerted attempt by the stags is limited because the promoters would have, in any case, fixed a minimum allotment price.

On the whole, under the tender method, the weaker stags would perhaps remain passive while the more resolute ones would continue to operate. Their operations would give just the necessary fluidity to the market without their leading to hectic trading which is common when too many or too powerful stags operate as in case of issues at a pre-fixed price.

Next. Is the scaling down process itself as arbitrary as the advance fixation of the issue prices? Scaling down is only a tool and it is used *after* the exact distribution of applications as well as the prevailing conditions in the stock market are known and weighed. The applicants and the market as a whole have expressed their views by the time the promoters sit down to decide as to how scaling down should be used. Moreover, scaling down, which is directly related to fixing the allotment prices, can be moulded to suit the desired objective of the promoters as regards the eventual market price and the distribution of shareholding. Far from being arbitrary, scaling down thus provides a legitimate and a flexible instrument for allotment.

Investors' Judgment

Another doubt that may arise is whether an investor is better able and better equipped to spell out a correct price than the promoters, the stock exchange authorities, etc., who all together decide the issue price in the usual cases. Three points may be made in this connection. First, even in the tender method, it is usual to fix a minimum price and in fixing this the promoters, etc., are naturally called upon to use their judgment about the "correct" price. So the tender method actually takes their collective judgment as a base on which investors and others can improve, to mutual benefit. Secondly, investors are perhaps not so ignorant as one would think. A good deal of the advice from the brokers, from the financial Press and others is nowadays available to them and they would actually welcome an opportunity of exercising their judgment. In the case illustrated earlier, a conspicuous clustering of applications around the ultimate allotment price was seen. This has become quite a common feature in many other British issues by tender and suggests that investors do have a shrewd judgment of the correct price for an issue. Lastly, after all, what a majority of the applicants consider to be a correct price does tend to become the allotment price under the tender system and, perhaps, this fact would limit the penalties which, if at all, they may have to pay.

Clear Announcement

It is imperative, however, that the promoters clearly state the procedure of allotment and publish it in the prospectus so as to avoid any possible confusion in the minds of the applicants. Particular mention should be made in the announcements about three points:

(1) Whether there will be one or more allotment prices; (2) whether, in the event of oversubscription, there will be full or partial allotment and, (3) if partial, whether preferential treatment will be shown to particular classes of applicants. A specimen of the sort of announcement in case of an Sp issue (based on the text of an announcement in a recent British issue) may well be as follows:

"(1) All shares for which applications are wholly or partly accepted will be sold at the same allotment price which will be not less than the minimum price per share.

"(2) The allotment price will be the lowest price at which any application is wholly or partly accepted but it will not necessarily be the highest price at or above which applications for not less than the number of shares offered shall have been received.

"(3) It is intended that applications at prices higher than the allotment price shall receive preferential treatment, but the same will not necessarily be accepted in full. In deciding the allotment price and the basis of allocation, the promoters will have regard to the desirability of allocating the shares to a reasonable number of applicants in relation to the number of shares offered and of the need to establish a market in the shares. All applications below the allotment price will be rejected in full and the promoters reserve the right to reject or to accept in part only any other application irrespective of the price of application. The full basis of acceptance will be published.

"(4) If applications are received for less than the total number of shares now being offered, the allotment price will be the minimum price.

"(5) Acceptance of applications will be conditional upon the . . . stock exchange granting permission to deal in and a quotation for the shares of the company not later than . . . . Monies paid in respect of such applications will be returned if such permission and quotation are not granted by that date, and in the meantime will be retained in a separate account."

All Sectors will Benefit

The tender method has just stood the tests of experiments in Britain. In India, it has not been tried at all. It would, therefore, be too early to anticipate with any worthwhile precision as to which particular variation would be best suited in different cases. The material point is that the tender method, in most of its variations, offers a more flexible, a more pragmatic and a more acceptable alternative to the prevalent method of fixing issue prices well in advance. Promoters would be particularly happy with this method, because it would enable them to share at least a part of the profits which could otherwise have gone to the stags. The stock exchange authorities should also welcome the tender because it is likely to result in a more orderly and active market when dealings commence. The managing brokers, the other stock brokers, etc., would appreciate its merits inasmuch as it would considerably lighten their burden of having to receive and process far too many applications, many of which have to be returned or balloted and thus do not earn them any brokerage or commission. The small investor and his guardian, namely, the Government, would also relish this method, first, because it eliminates ballot and the consequent frustration among many applicants, and secondly, because the small investors actually stand a better chance of getting a proper allotment, if they are intelligent enough to tender at a proper price. The only sector where there might be some dissatisfaction would be the large and institutional investors which, besides the regular stags, include trusts, banks (applying on behalf of their clients), etc., and, of course, representatives of managements themselves when they have an active interest in stock market movements of the shares of their companies. Under the prevalent method, all these have, perhaps, got away with a bargain on more than one occasion, by judiciously "arranging" their applications. Under the tender method, their grip over the issue would be relaxed: at too low a tender price, they might get no allotment; at too high a price, they may help push up the allotment price and their margin; and at a well-judged tender price, there may still be heavy scaling down! Moreover, they would find it difficult to put to an unfair advantage their inside knowledge of the company's working. In the larger public and trade interests, these may not be such great drawbacks after all.

Depressed Market and Tender

It would not be correct to discard the tender method as irrelevant on account of the present depressed conditions in the Indian capital market. It is no doubt true that the rare boom conditions witnessed in the British capital market were instrumental in bringing to a sharp focus the merits of this neglected tool. But there is nothing in the mechanics of the tender method which would be incompatible with the fixation of a minimum price at par or even at a discount. It should be applicable to all cases of public offers for sale, placings, introductions, etc., where the advance fixation of the allotment prices presents some drawbacks. Irrespective of the state of the capital market, such cases will arise now and then, as long as large unlisted public companies continue to seek a stock exchange quotation and listed companies want to offer new issues to the public. In these cases, the tender method of determining the allotment price is likely to be a more rational and satisfactory alternative, and its claim deserves a close and sympathetic examination.

(Concluded)

1. Multiple prices, full allotment (Mf); 2. multiple prices, partial allotment (Mp); 3. single price, full allotment (Sf); and 4. single price, partial allotment (Sp).

NEW PRODUCTS AND PROCESSES

Shielded Arc Welding Outfit

MESSRS. Elin-Union A.G., Vienna, displayed a number of interesting technical innovations at the Vienna Spring Fair 1964. In the field of electric welding, the Company exhibited a new shielded arc welding outfit for wire diameters of up to 1.2 mm. and amperages of up to 250A. The new welding apparatus is eminently suited for shielded arc weldings using carbon dioxide, argon or mixed gas. Thanks to its handy size, the new outfit can be used on all building sites. In view of European economic integration which has made considerable strides in technical matters, all engines currently in production at Elin-Union have been adjusted to the measures and standards recommended by the International Engineering Committee (I.E.C.). Specifications as to capacities and performances have also been standardised.

Electric Testing Pistol

The testing of operation and insulation of electric appliances circuits and equipment of all kind up to 750V and 25A has been made much easier by the development of a handy new testing pistol by an Austrian enterprise. (Messrs. Elton, Dipl. Ing. Portenschlag-Ledermayer, Vienna 9, Alserstrasse 27.) The very practical pistol helps to prevent accidents. It will be very useful for controlling telephone installations, testing electrical appliances and accessories in test fields and for repair work. The shape of the pistol is adapted to the anatomy and functions of the human hand. The live point is protected against contacts by a tubular sheath. By means of a device similar to the trigger of a gun, the sheath is pulled back with the index thus exposing the live point. After the end of the testing operation, the trigger is released and the action of a spring brings the sheath back to its initial position covering the point. The live pistol can be put down on conductive tops or other parts of machinery without the hazard of causing a short circuit. The metal parts are injection moulded into a mould of insulating nylon material. The entire pistol has moreover an extraordinary resistance against mechanical stresses of all kind.

Frozen Meals

One of the most interesting developments in the field of deep-freeze methods realised in Austria is the manufacturing of frozen meals, intended mainly for hospitals, homes, canteens, etc. As generally known, it has become extremely difficult, mainly owing to the shortage of skilled labour, to prepare different meals, adapted to individual needs, for all patients. After many tests with frozen foods, experts and scientists have developed a system by which about 40 different meals can be preserved; the ready dishes can be taken out and used at any moment. According to the new process (*Manufacturers:* Brueder Warchalowski Industriewerke, Vienna 3, Petrusgasse 5), the freshly cooked food is apportioned to small aluminium foil containers and chilled very quickly to 40°C. The containers are then stored upto the time of their consumption at a temperature of 25°C. A special thawing system has been developed to make the food eatable very quickly. Tests have proved that the deep-frozen food loses only very little of its vitamin content and that there is no difference in taste between the deep-frozen food and freshly cooked dishes. Owing to the new process, the food can be chosen according to individual needs and wishes. Moreover, it helps to ease the work of the staff, also because the aluminium foil containers are thrown away after being used.

Dyeing and Finishing of Viscose Rayon Fabrics

A new method of simultaneous dyeing and finishing of viscose rayon fabrics has been developed by the Silk and Art Silk Mills' Research Association, (S.A.S.M.I.R.A.), Bombay. Viscose rayon fabrics are usually dyed with direct dyes prior to their resin finishing operation to improve their crease resistance. In order to develop an economical process, a successful attempt was made by the Association to carry out dyeing and finishing operation in one step, so that crease resistance as well as dyeing, fast to washing could be obtained. Under this method, viscose rayon fabric manufacturers will now be able to produce rayon fabric in colours and with wash-n-wear properties at low cost. The new technique has three-fold advantage over the conventional method of dyeing and finishing separately. First, it helps the manufacturer to use direct dyes with better effects. Secondly, rayon fabrics so treated will have better washing fastness and, finally, this simultaneous dyeing-finishing method eliminates a number of processes involved in separate dyeing and finishing. It helps cut down labour and cost in rayon fabric manufacture.

Cockpit Voice Recorder

A new aircraft cockpit voice recorder, marking an important advance in flight safety, is being produced by the Lockheed Aircraft Service Company, California. The device consists of three microphone and earphone inputs and one cockpit "hot mike" input which record pilot and crew and ground-to-air conversations on a 30-minute closed loop magnetic tape. During the 30-minute period, it produces a virtually indestructible record of every word spoken. The recorder, which is the result of three years' research, development and testing, is available in two configurations: packaged in a standard one-half AIR short survival case (about the size of two cigar boxes) for aircraft radio rack mounting, or as an integral part of other L.A.S.C. recording equipment.

The new voice recorder is the latest in a family of airborne data recording products developed by Lockheed engineers and scientists, and manufactured by the L.A.S. Special Devices Division, Ontario. More than 700 L.A.S. flight recorders are in worldwide airline service on virtually every type of passenger jet. L.A.S. also offers airborne maintenance recording systems that retain a life history of aircraft and aircraft parts. Lockheed maintenance recording systems, now in military and commercial service, signal the need for maintenance or parts replacement before failure occurs.

Remote-controlled Diesel-electric Mobile Crane

Fur unloading bulk cargo (sand, gravel, pumice, etc.) from inland navigation craft, an engineering works in Rotterdam (Holland) has developed a mobile crane mounted on a specially designed, motor-driven, crane-carrying chassis. This crane truck is capable of a road speed of 50 km/hr. (31 mph.), so that, after completing discharging operations in one location, it can be moved rapidly to its next unloading point. A diesel motor drives a generator, which in turn supplies power to the electric motors for slewing and positioning the jib and to two hoisting motors. Operation is extremely simple. All grab movements can be controlled by means of two switches, which can be operated with one hand, leaving the other free to control the slewing and derricking action. The speed of all movements is regulated by the accelerator pedal. Altogether novel is the crane's remote-control system. It eliminates the drawback, found when crane and barge are on a level with each other, that it becomes increasingly difficult to see into the hold from the shore crane as the level of the cargo drops. Remote-control facilities now enable the crane-driver, within about 20 metres from the crane, to pick a good position commanding an overall view of the hold to be emptied. The crane operator can easily carry with him the control panel and pedal, which are connected to the crane's electrical system by means of remote-control cables. All movements of grab and jib, as well as the speeds at which they are performed, can be controlled at a distance. The advantages of this tele-control arrangement are that it eliminates the need for a man to give the driver signals and, because the driver's view is unimpeded, that the grab can always be lifted full from the vessel's hold, which only serves to enhance transhipment capacity. A patent on this tele-control system is pending.

Small, Handy Plane for Craftsmen and Handymen

A design office in Holland (Technisch Bureau Kraak, Postbus 51, Tiel) is marketing a small, handy plane for use by both craftsmen and handymen. It consists of a plastic handle measuring 12 x 6½ x 3½ cm, (4.7" x 2.5" x 1.4"), containing a blade-holder with six steel blades. The blade-holder comprises ten hollow rectangular plastic slabs (6½ x 2 x 1 cm; 2.5" x 0.8" x 0.4") and two rubber strips (6½ x 2 x ½ cm: 2.5" x 0.8" x 0.2"), between which the six steel blades are placed. In the slabs and blades are two round holes through which two round rods are pushed, so that slabs and blades are pressed firmly together and thus form a single blade-holder assembly. The blades project vertically a few millimetres along the top and bottom of the blade-holder assembly. The two rubber strips attached to either end of the blade-holder serve as spring buffers, allowing the blades to give slightly as the plane is pushed to and fro. The blade-holder fits into a plastic handgrip (12 x 6½ x 3½ cm; 4.7" x 2.5" x 1.4") open on one side. When not in use the plane is shielded on the cutting side by a transparent plastic guard. To use the plane, it should be moved to and fro over the surface to be treated. The intensity of the planing action can be regulated by varying the pressure applied. The blades are made of high-grade steel and have a double cutting edge. When one set of cutting edges gets blunt the blade-holder, with blades in position, can be reversed, thereby exposing the second cutting edge. When both cutting edges are blunt a new set of blades can be obtained at a modest price. The plane is suitable for planing, scrapping, polishing, etc., rough wood surfaces, putty and paint, doorsills, parquet flooring, hardboard, veneers, etc.

On-load Tap Changer

The State-owned Heavy Electricals (India) Ltd.'s Bhopal factory has achieved a significant break through in power distribution technique by manufacturing, for the first time in India, an A.E.I.-design "on-load" tap changer. This equipment is a vital part of transformer design and construction. The on-load tap changers for transformers are used for power distribution, electric furnaces, rectification, voltage regulation and traction.

Machine for Sharpening Scissors

A British machine (Manufacturers: Blakesley Reid, Ltd., Mountsorrel, Leicestershire) which takes most of the skill out of sharpening a pair of scissors, long recognised as being one of the most difficult operations involving a grinding wheel, was awarded a first prize gold medal in the Class "A" Engineering Section of the 13th International Inventors' Exhibition held in Brussels. The machine has been specially designed for the hollow grinding and edge grinding of all types of scissors, knives and similar cutting tools.

Gaseous Oxygen Rocket Motor

A continuous-burning gaseous oxygen rocket intended for demonstration and research on thermo-dynamics and heat engines in universities and engineering schools has been developed by Messrs. P.A. Hilton Ltd., Southampton Airport, England. Although it is a rocket motor, it is, in fact, a reaction chamber where conversion of heat into kinetic energy can be studied. Readily available propellents such as gaseous oxygen, kerosene, diesel oil or any common hydro-carbon fuel are used. A water-cooled, stainless steel combustion chamber held on hydraulically damped flexible mountings, houses a combined atomiser and high energy igniter located in the centre of an annular stream of oxygen.

New Ideas in Brief

A micro-organism isolated from sewage and capable of effectively producing Methionine—a material considered to be fundamental in the formation of body protein—has been discovered by the Israel Institute of Technology, Haifa, Israel.

A new lacquer set shiny and hard like varnish yet is sufficiently flexible not to develop even microcracks when repeatedly cooled to minus 20 degrees C has been developed by Deutsche Gold- und Silber-Scheideanstalt, 9 Weissfrauenstrasse, Frankfurt 1, Germany.

A method has been devised by Veb Elektrochemisches Kombinat Bitterfeld, East Germany, for producing pure iron oxide—for use in magnetic tapes, as paint pigments and as chemical Catalysts—from impure ferrous sulphate sludge which is a by-product of pickling and descaling steel.

Electrostatic paint-spraying techniques (Developer: Polychem, Vaduz, Liechtenstein) are said to have been successfully applied to plastics and waxes that normally would have had to be mechanically spread or rolled on.

A high-accuracy timing system for ultra-violet light recorders has been introduced for filters by S. E. Laboratories, North Feltham, Middx., England.

A new low-priced compute, Oracle, which is claimed to be able to solve many of the problems holding stocks and to provide a new approach to the problems of accurate forecasting has been developed by Associated Industrial Consultants, Uxbridge House, London, W.5.

Two Russian engineers (Soviet Information Service, 3 Rosary Gardens, London, S.W.7) have developed an industrial method of radio frequency welding at the Leningard Research Institute of High-Frequency Currents.

A fast-response fluid control valve for use in hydraulic circuits which, because its response to high-pressure surges is virtually instantaneous, avoids the damage often caused to pressure systems by overloading, has been developed by Brakeshoe International, 21 Chemin Terroux, Grand-Saconnex, Geneva, Switzerland.

A three-axis line milling control system, flexible enough to be suitable for most machines has been developed by E.M.I., Electronics, Hayes, Middx., England.

A new centrifuge, capable of separating the contents of eggs from their shells—the shell fragments staying inside the drum and the whites and yolks being forced out through tiny holes in the drum's sides—has been evolved by N. V. "Esbe," Minstraat 26, Asperen, *Holland.*

Farm Products in Plastic Packs

The plastics industry is playing an important role in enhancing the presentation of Australian farm products on world and local markets. In South Australia, use-once-throw-away plastic bags, of 250 gallons capacity, were used recently for bulk transport of wine. The main saving was in allowing the transporting vehicle to back-load freight instead of returning merely empty casks. Other instances of plastics use include:

Vacuum-packed wool, where a polythene liner is employed within the jute bale to prevent contamination.

Cans lined with polyester-type urethane foam are being employed to protect perishable foods which become fragile after freeze-drying. This process is cheaper than refrigeration, preserves flavours and food-values better and, as it excludes fluids, results in great freight savings.

A new packaging machine for hermetically-sealing thin-walled semi-rigid polystyrene cups has been designed and made by Helix Electrical Products Pty. Ltd., Sydney. It is used for jams, honey, liquid foods.

A departure from plastics is the use of aluminium foil for packing and marketing export plant seedlings. This has been developed by the Sydney company, S.T. Leigh and Co., Pty. Ltd. Unlike the old method of selling seedlings in bundles or bulky boxes, use of aluminium foil allows seedlings to remain undisturbed from seed-sowing.

'Train' Plants Pines

A "Train" of implements for planting pine seedlings in one operation has been developed in Australia. The machine can plough, ridge, plant, roll and fertilise the soil. It requires one operator and a tractor driver. The complete 'train' is 64 ft. long. It consists of ridger plough, "sheepsfoot" road roller and a planting machine, drawn by a tractor. The train was developed and is being used on the Feachester tree farm of Australian Paper Manufacturers Ltd. on Bribie Island, near Brisbane, Queensland. It is not being produced commercially.

Formerly three operations were needed. With the composite machine, the ridger plough turns and ridges the soil, the roller compacts it and the planting machine breaks down clods and automatically measures and drills into the soil a fertiliser mixture containing phosphates and trace elements. The planter operator then places the seedlings in the holes by hand and the machine firms them in. With minor modifications, the equipment can be used to sow seed instead of seedlings. The "train" method takes 1½ seconds to fully prepare the soil and plant one seedling—half the time per seedling taken by the previous methods.

THE BRITISH INDIA CORPORATION LIMITED

CHAIRMAN, MR. SATISH CHANDRA, STRIKES AN OPTIMISTIC NOTE

CONSOLIDATION OF ACTIVITIES LEADS TO TANGIBLE RESULTS

ADDRESSING the shareholders of the British India Corporation Limited at their Forty-fourth Annual General Meeting held at Kanpur on Saturday, 6th June 1964, the Chairman, Mr. Satish Chandra, emphasised that the affairs of the Corporation had been fairly consolidated during the year 1963 so as to show tangible results. He highlighted the fact that the trading results have been very encouraging as is manifest by an increase of 38.8 per cent in the turnover and of 66 per cent in the surplus. The Chairman was confident that, with its inherent strength, the Corporation would be able to solve future problems rationally, thus leading to greater stability and progress.

The following are extracts from the address of Mr. Satish Chandra:

FRIENDS,

At the time of issuing the notice for this 44th annual general meeting of the Corporation, none of us could ever have imagined that we would be assembling today under the shadow of a great national tragedy and an overwhelming sense of personal grief. On 27th May 1964, our beloved Leader and Prime Minister, Jawaharlal Nehru, passed away and with him ended a glorious chapter in India's history. With his nobility of character, humane approach to all problems, dedication to high ideals and the spirit of service and sacrifice, he moulded the lives, thoughts and deeds of our countrymen. The best homage that we can pay to this valiant fighter of our freedom struggle and the architect of modern India is to dedicate ourselves to his great ideals of national unity, secular democracy, social justice, universal brotherhood and world peace for which he worked, lived and died. Although it is not possible to fill the void created by his passing away, the work of the nation must be continued with perseverance and high endeavour on the foundation laid by him.

May I request you to stand silently in honour of his memory before I proceed with the normal business for which we are gathered today.

The audited accounts, balance-sheet and Directors' report for 1963 have already been circulated and with your consent I shall take them as read.

Dividend Raised

The period under review covers the first complete year of management of your Company's affairs by the new Board of Directors elected by shareholders in the autumn of 1962. You will recall the circumstances under which a general meeting was specially convened, and an election held after several years. I am glad to report that the trading results for the year have been highly encouraging and show a substantial improvement over those of previous years. As you will see from the accounts, our turnover has increased from Rs. 928 lakhs in 1962 to Rs. 1,288 lakhs, i.e. by 38.8 per cent. Surplus for the year amounts to Rs. 236.07 lakhs as compared with Rs. 142.10 lakhs, reflecting an increase of 66 per cent over the previous year. A provision of Rs. 133 lakhs has been made for payment of direct taxes this year as against Rs. 77.54 lakhs last year.

In view of the satisfactory profitability of your Company, the Board after careful consideration have deemed it proper to recommend payment of a dividend of 15 per cent on the equity capital, i.e. 75 nP per share as compared with 45 nP paid last year. It will be appropriate for me at this stage to draw your attention to the fact that out of the year's earnings a total sum of Rs. 45.61 lakhs has been ploughed back in the form of depreciation, development rebate, and general reserves in order to strengthen the resources of the Corporation.

Leather Branches

The trading results of our Cooper Allen and North West Tannery Branches have shown reasonable improvement. As against recurring losses suffered in past years by these important branches of the Corporation, it has been possible to return a moderate figure of profit this year. There was increased activity in the footwear, chrome and bark leather departments. Footwear supplies to Defence Forces and the National Cadet Corps were substantial.

Woollen Branches

During the year under review, our Lal-Imli and Dhariwal Woollen Branches have shown very good results. A record output was achieved by both the factories, which ran on a three-shift basis for most of the year. In view of a complete change in the normal pattern of production to meet the urgent needs of our Defence forces, four Wool Advisers, including the Superintendent of our Woollen Branches, Mr. V. Calloway, were selected by the Government of India to plan production, negotiate prices, and arrange for raw materials. The team of Wool Advisers visited Australia, New Zealand and the U.K. to purchase suitable cross-bred wools. This co-ordinated effort on the part of Government and representatives of the woollen industry enabled supplies of raw materials for defence production to be made strictly according to specifications, and delivery schedules.

The plant rehabilitation and modernisation scheme is making fairly good progress. Seventy-two semi-automatic looms imported from Poland at a cost of approximately Rs. 16 lakhs are now in the process of installation. Most of the gilling, drawing and twisting machinery costing about Rs. 13 lakhs imported under rupee payment arrangements has already been received at the mills. An import licence for machinery worth about Rs. 25 lakhs for which an essentiality certificate has already been granted is, however, pending disposal. Import of this machinery is essential to enable us to derive the maximum benefit from the machines already purchased. Applications have also been submitted for the grant of import licences for carding, spinning, and winding machinery as well as automatic looms at a cost of approximately Rs. 60 lakhs.

The basic needs of our woollen factories for imported raw materials cannot by any means be met by the Government's present export promotion incentive scheme. I sincerely hope that allocations of import quotas will be made on the basis of a realistic assessment of the installed capacities as well as the magnitude of trading obligations of each unit. Full advantage continues to be taken by us of raw wool produced and synthetic fibres available in the country within the limits of their usefulness. If we are to remain in effective production, it is essential that the requisite quantity of imported raw materials should be made available. I must point out in this context that the value of basic licences last year was reduced by Rs. 32 lakhs and this year there has been a further reduction by Rs. 21 lakhs.

Cotton Textiles

The three cotton textile mills owned by the Corporation's subsidiaries, the Elgin Mills Company Ltd. and Cawnpore Textiles Ltd., worked at full capacity during 1963 except for the period when production was adversely affected for a few days during October 1963 due to a serious power breakdown in the city of Kanpur. Despite a larger turnover, the profits in both the companies were lower than the previous year, due to enhanced labour costs and a general rise in the prices of raw cotton and all stores and spares. Since 1960, the overall cost of production has increased by more than 18 per cent, but no corresponding increase in the prices of finished goods could be made due to the voluntary price control agreement between Government and cotton textile manufacturers. The rapid advance in basic costs, which has caused profit margins to decline at a rate inconsistent with improved turnover, has now become a matter of concern to the industry.

In addition to a licence granted to Elgin Mills in 1962 for the installation of 12,000 spindles, further licences for 12,500 spindles each were granted last year to the Elgin Mills and to Cawnpore Textiles.

The rehabilitation and modernisation programme of the cotton units is proceeding according to schedule. A sum of Rs. 44 lakhs was spent by Elgin Mills and Rs. 12 lakhs by Cawnpore Textiles during the financial year 1963. Further sums of Rs. 40 lakhs and Rs. 2 lakhs respectively have been spent by the two companies during the current financial year.

Elgin Centenary: Shastriji's Visit

The celebration of the Elgin Mills Centenary during the month of March 1964 was an outstanding event. On this momentous occasion which was indeed a landmark in the history of the Company, we had the privilege and honour of having Shri Lal Bahadur Shastri, now the Prime Minister-designate of India, as our chief guest. In his earlier capacity as the Union Minister of Commerce and Industry, he had taken a great deal of interest in the welfare of the B.I.C. group of industries. We are happy that he has now been chosen to guide the nation along the path shown by Gandhiji and Pandit Jawaharlal Nehru. We have no doubt that under his stewardship, the nation will continue to march forward with determination and unity towards economic progress and social emancipation.

Sugar

The four sugar factories of Cawnpore Sugar Works Ltd. and two factories of Champarun Sugar Company Ltd. experienced another difficult year.

Apart from such factors as availability and quality of cane, several other causes contributed to the adverse impact on profitability such as distress sales during surplus conditions and unremunerative controlled prices during the subsequent shortage, the old and outmoded equipment in the units and their uneconomic capacities. About 40 lakh rupees have been spent for rehabilitation and modernisation in these sugar units and further investment is being made.

The sugar companies are fortunate in having secured the services of Shri S. N. Gundu Rao, formerly Director of the National Sugar Institute, as their Technical Adviser. Under his guidance the working efficiency of the six sugar factories in the group has already improved.

There was an improvement in the volume of business done by our subsidiary, Brushware Ltd., which maintained its reputation for quality products. The development programme in the Saran Engineering Company Ltd. is in process of gradual implementation. The Corporation continues to serve as Secretaries and Treasurers for both these companies, and as Secretaries for the Beta Picker Company Ltd.

Labour Relations

The labour relations during the year were, by and large, harmonious. I cannot, however, avoid reference to a very regrettable setback in Elgin Mill No. 1 during the month of March 1964, only a few days after the Centenary celebrations. An infructuous and wholly unreasonable workers' strike was instigated over the issue of bonus voluntarily declared by the Company. Although in a year of decreased returns, bonus at a special rate amounting to Rs. 16.09 lakhs was sanctioned by the management as against Rs. 10.64 lakhs in the previous year with the sole object of letting the employees of the Company experience in the Centenary year a sense of joy over the progress of their unit, some trouble-makers chose to launch a perverse campaign of indiscipline and agitation which led to a completely unwarranted and unlawful stoppage of work for 20 days. The workers realised only after considerable suffering that their leaders had misguided them along a wrong path to the detriment of their own interests. They subsequently admitted that they had violated the Industrial Truce Resolution and the Code of Discipline. Let us hope that such unfortunate incidents will not be repeated. In addition to the loss of wages by the workers during the strike period, the loss in the mills' productivity will have its impact on profits during the current trading year and consequently on the quantum of bonus which the Company may be in a position to pay next year.

General

I think, the shareholders will agree that the affairs of the Corporation have been fairly consolidated so as to show tangible results. Although the Corporation has during the year under review shown excellent results, there are many important tasks ahead of us. The future will certainly throw up new problems in the spheres of finance, management, industrial relations, productivity, cost control, and sales. With the sound inherent strength of your Corporation, however, I am confident that we shall be able to evolve rational solutions leading to greater stability and progress.

I regret to report the resignation from the Board of one of our Directors, Shri S. B. Bose, for reasons of ill-health. I am, however, pleased to welcome to the Board two new Directors, Shri B. P. Ray, the partner in a distinguished firm of solicitors at Calcutta, and Mr. K. M. Wilcox. It is hardly necessary for me to introduce Mr. Wilcox, who has rendered long and meritorious services to the Corporation. Your Directors have thought it fit to invite him to join the Board and to appoint him as Deputy Managing Director subject to the approval of the Government.

To my colleagues on the Board I am deeply indebted for their valuable advice and guidance. Their mature judgment has been of tremendous help in finding solutions to many problems which have engaged the attention of the management. I would particularly like to mention Shri B. P. Bajoria, the Vice-Chairman and Managing Director, whose perseverance and hard work have contributed a great deal towards the successful results of the Corporation during the year. I wish to express my thanks to all ranks of our employees for their loyalty, co-operation and steadfast devotion to duty.

Before I close, I wish to pay tribute to the gallant soldiers who either gave up their lives or suffered untold hardships on the battlefield in the defence of our motherland during the early days of the Chinese invasion. I am sure you would all like to associate with me in the expression of this humble sentiment.

BANKING IN LIBYA

THE CHARTERED BANK

and

THE EASTERN BANK LIMITED

have pleasure in announcing that their associated Bank

THE COMMERCIAL BANK S.A.L.

has opened for business at

2, 4, 6 & 8 MAIDAN IQBAL, TRIPOLI, LIBYA

On Monday, 15th June 1964, under the general management of Mr. K. A. Anderson. Enquiries concerning the banking services available and the facilities for financing trade with Libya afforded by the new Bank will be welcomed by the Indian branches of

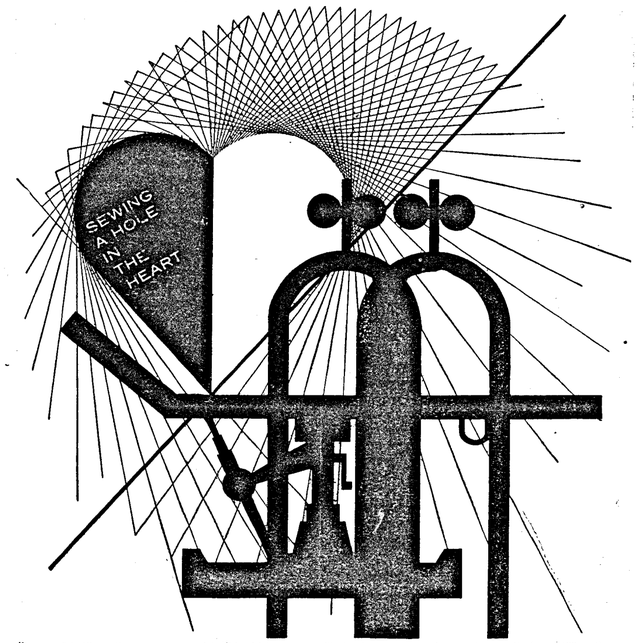
THE EASTERN BANK LIMITED

THE BIG HURRY IN THE WORLD OF SURGERY



"Impossible!" all the surgeons said. "You'd have to still the heart to repair the damage". And stilling the heart would kill the patient! ■ Thus the problem remained for a long helpless decade, till in 1958, a brilliant English surgeon invented the "heart and lung" machine. Now it could be done! ■ The machine temporarily took over from the damaged heart the massive yet delicate business of blood-circulation while the surgeon sewed up the hole. ■ Oxygen was on the scene. It always is on the scene when the best surgeons of the world perform such surgical feats, making the "impossible" operations of yesterday a common-place occurence today. ■ But today is always a day too late when countless lives are at stake. ■ We of Indian Oxygen are alive to our responsibility of keeping Indian Medicine and Surgery supplied with medical gases, and will continue to try and keep pace with the big hurry.

ECONOMICS OF BIG IRRIGATION PROJECTS

SOME THOUGHTS ON SOCIAL COSTS

By S. Ramayya, I.A. & A.S. (Retd.)

IN my first article (published on pages 534-35 of *Commerce* dated 28th September 1963), I analysed the effects of a big storage irrigation project on the finances of a State and showed how they would produce great strains and stresses on its economy. I concluded by stating that projects of over Rs. 10 crores should be taken over by the Centre. In this article, I propose to analyse the subject from the point of view of Social Costs.

In the previous article, I took a particular project as a model. The same model will be used here also. A summary of the model may be given at the outset. It is a project with a huge dam and reservoir and two big canals on either side. The outlay will be about Rs. 150 crores, 50 crores for the dam, and 50 crores each for the canals. The capitalised interest, over 17 or 18 years will be another 50 crores. Consequently, the total capital-at-charge will be of the order of Rs. 200 crores. It is expected to irrigate 2 million acres, mostly paddy lands and generally one crop. At half a ton of rice per acre, the net output or additional national income, at Rs. 500 per ton, is expected to be Rs. 50 crores in the region. It was also stated that, while in the public sector pure economic outlay would be about Rs. 150 crores, in the private sector permanent outlay for levelling, bunding, channels, carts, bullocks, etc., by the peasant farmer to bring barren land into cultivation would, at a minimum of Rs. 750 per acre, be another Rs. 150 crores. It was also shown that Rs. 300 crores of outlay would yield Rs. 50 crores of additional net income.

Capital-Output Ratio

Modern developmental outlays, by and large, based on the experience of the older and advanced countries are expected to yield a capital output ratio of 3:1; that is, Rs. 100 investment should produce a net additional income of Rs. 30. There may be differences of this ratio sectorally; but, in agricultural *cum* irrigation projects, medium and small, we can expect one ratio, that is, Rs. 100 investment will add to income by Rs. 100. There is, however, the *glaring fact* that, in the present-day India, with its high population, 70 per cent of which is engaged in subsistence farming with small holdings and poor capital, the existing techniques of production and possible factor combinations, cannot give, in a big project, a capital output ratio of *3* by only *6*. Let us analyse the consequences.

Magnitude of Marginal Social Cost

Capital is a scarce commodity at all times and in all nations; more so in underdeveloped countries like India where the main objective is economic growth. It is, therefore, obvious that all marginal investments should produce the maximum national income. If that rate on an average is 30 per cent on investment naturally a huge chunk of investment of Rs. 300 crores should be carefully thought of. If such an investment in a huge reservoir project, combined with peasant subsistence farming, is going to produce only Rs. 50 crores of income and not the 100 crores which can be obtained in a different sector, we have to think not twice but many times. Supposing in a complex of industries, these Rs. 300 crores of investment is expected to add Rs. 100 crores to the national income, there is a clear loss of Rs. 50 crores, by investment in this irrigation project. The magnitude and significance of this loss is easy to work out. In one year, in that big irrigation project alone, the loss is of the magnitude of Rs. 50 crores. In fifty years, it will tantamount to 50 x 50=Rs. 2,500 crores. If there are five such projects, the loss will amount to the astronomical figure of Rs. 12,500 crores throughout India in net national income. What is the significance of this loss?

Loss in Consumption and Welfare

Let us assume that, in the region under reference, by diverting these investments to, say, industry, we get an additional income of Rs. 100 crores. If all the additional income is consumed by the people, the result will be an *additional* consumption by people of Rs. 50 crores in a year itself; in 50 years it is equivalent to additional consumption of 50 x 50=Rs. 2,500 crores; five such industrial complexes will mean, as shown in the previous para, Rs. 12,500 crores of extra consumption. It is easy to imagine the increase in the welfare of the masses by such a huge consumption in poor India. It will tremendously add to production itself by better food, clothing, shelter, medical and educational investment in human beings.

Loss of Saving and Loss in Growth

The assumption made in the last para may look a little far-fetched. It may be argued that no Government will permit consumption of all additional growth income. True. Let us, therefore, assume that, out of the maximum Rs. 100 crores of possible income, a good percentage will be saved; a maximum of 10 per cent only can be squeezed in poor India with low standards of living and high propensity to consume. This is in addition to the 10 to 12 per cent tax gathering by the Government. Let us assume that 10 per cent is saved. The loss of Rs. 50 crores of income means a loss of Rs. 5 crores saving apart from Rs. 6 crores tax loss, with all its implications, that is, further investment, further additional consumption and saving and further growth which will work in a compound interest fashion. We can once more easily work out the magnitude of this in five such projects over a stretch of time.

It is, therefore, obvious that we in India should see that every investment produces the maximum possible return. Any loss will affect not only consumption and welfare but also saving and taxation and further growth which is most essential in the present-day Indian context.

Any Countervailing Gains by Such Investments

We shall now analyse whether, openly or otherwise, by such investments we may get other social and economic or political gains which will be a set-off against these colossal losses. At best we can think of three or four objects or a combination of these with reference to such an investment. They are:

1. Greater foodstuff production for the growing population and saving in precious foreign exchange in importing food.

2. Employment to the growing peasant farmers, adding to their prosperity, improving agriculture, or, at the worst, keeping them going with social stability in the region.

3. Like other projects, this will also add to the national income and savings and we can have some future growth.

Let us examine these contentions. To take the No. 1 first. It is true there may be greater foodstuff production to the tune of one million tons. But at what cost? Rs. 300 crores of investment have produced or will produce a million tons. Supposing we invest these Rs. 300 crores in industry with an output of Rs. 100 crores, export the same and import one million tons of foodstuff, say, from Burma or Thailand. If the international price is equivalent to our internal price, we can gain heavily. We can not only import one million ton of foodstuffs for Rs. 50 crores but also in addition get another Rs. 50 crores worth of capital goods or anything we want. If the international prices are cheaper, we gain much more. If the international prices are 50 per cent higher than our internal costs, even then we may gain Rs. 25 crores per annum not a small amount, indeed.

Now to take up points 2 and 3. It is also true that peasants may be spread in this tract with their subsistence agriculture and may for sometime appear prosperous as compared with what their position is now in the tract. But it may be a very short-lived prosperity. The two million acres will be occupied normally by 2 million people or each family of five may have a holding of five acres, that is, four lakhs families will get Rs. 50 crores of income. The *per capita* income will be Rs. 250 only from agriculture. Even allowing a little extra income in cottage industries and handicrafts during off-season, it may at best be another Rs. 50, or a total of Rs. 300 average; even less than the low present *per capita* Indian income of Rs. 330. It is also well known that primary production like agriculture or mining, unlike industry, will have very little backward or forward linkage effects, except for a few minor processing industries like rice mills. Big industries will not arise in a purely agricultural region to give further employment. However, such side income from cottage or medium industries are due to investments in their respective spheres.

But the worst feature is the present population explosion in India, especially in the rural sector. The peasants reproduce themselves at a high rate of about 2½ per cent annually. Even at 2 per cent, the two millions, will add another 40,000 to the total number in the area next year. This 40,000 at the original Rs. 250 *per capita* income from agriculture will require an additional income of Rs. one crore. Assuming that, in the region we have in view, the peasants save or are forced to save 10 per cent of Rs. 50 crores of the agricultural income, the saving will work up to Rs. 5 crores. Where will this be invested? The first presumption is naturally they will invest it in agriculture itself, in better implements or cattle or fertilisers or pesticides. What will this marginal investment add as marginal income? We can guess safely up to an extent. If the 2 per cent additional growth in numbers is not drawn off into industries in the region, they will press on land. Holdings will progressively be reduced. Consequently, other production factor combinations will be changed and there will be less scope for capital investment in agriculture. On the most optimistic estimate, the savings may not produce even a 20 per cent return; it may be much less. At 20 per cent return, the total income may be just Rs. one crore and there will be practically no growth. If it is less than 20 per cent, say, 17 or 18 per cent the income will be only Rs. 80 lakhs, as against the required Rs. one crore, an ominous sign. It means the peasants will multiply quickly, and will go on reducing the holdings further and further, bringing down the marginal productivity of labour steadily; in extremely bad cases to zero and sometimes even *minus*, creating disguised unemployment in the rural sector as in many old colonial empires.

It may, of course, be argued that the Rs. 5 crores saving can be diverted to industries with a better return of 30 per cent, in which case the *per capita* income of the peasant may increase by a small sum of Rs. 2 from Rs. 250 to Rs. 252. And a snail's pace of growth can be thought of. But there are so many assumptions here; after squeezing the Rs. 5 crores, the State should invest the amount in industries forcefully. It may be possible in a Communist State. In India, however, where there is some democratic freedom, such things may be somewhat difficult.

The Fundamental Problem

The fact is that, in underdeveloped countries, there is a bad lop-sided economy, the getting over of which is a tremendous task. The British Colonial Imperialism and peace of 150 years left three very bad economic legacies. First, came the terrible population explosion of the twentieth century, bursting the mediaeval balance obtaining for ages. Secondly, the growing masses started pressing on the land. Thirdly, small enclave industries, mining and plantations had very little spread effects in the economy. The major portion of such good effects as in shipping, export trade, insurance, banking, processing went only to the Metropolitan country, that is, Britain. The result was a surging mass of over 70 per cent of the population, pressing on the land with peasant subsistence agriculture, at a very low standard of life.

The greatest problem of development in India as in other underdeveloped countries is to withdraw more and more of the seething crowd from agriculture into industry and other avocations, where the higher productivity of industry and the now better land-man and capital-labour ratio in agriculture will slowly and steadily improve the standard of life. The parrot-like cry of first agricultural revolution as in England and other countries and then the Industrial Revolution ignores the basic facts of those countries. English agriculture with enclosures starting from the fourteenth century was capital-oriented and had always better land-man ratio, because English population was always less than the optimal. The twentieth century Indian conditions are entirely different.

While our intentions may be good in such investments, namely, to improve the lot of the peasantry in every respect, we should keep our main objective clear before us and consider carefully whether such highly capitalised projects can go with primitive techniques of farming by poor peasantry and draw us nearer the great objective or simply perpetuate a pauperised agricultural sector and create more problems for the future. Good intentions and issues of prestige will be of no avail against cold economic facts.

THE AUTOMOBILE INDUSTRY . . . .

saves India Rs. 700 million in foreign exchange

The sixty thousand motor vehicles produced yearly in India today represent a considerable saving in foreign exchange, as otherwise they would have to be imported for the equivalent of some 700 million rupees. In addition, the spare parts for the maintenance of these vehicles would also have to be imported for a further large amount of foreign exchange.

Today as much as 80% of the components and material of a vehicle are of Indian origin and in the case of a car such as the Hindusthan Ambassador the cost of imported components, exclusive of import duty, only amounts to about 1685 rupees per vehicle. As more ancillary industries develop in India, the indigenous content will further increase and the foreign exchange content will correspondingly decrease.

Such savings in foreign exchange for the benefit of the country's economy necessarily entail some sacrifices on the part of the purchasers of automobiles, both price-wise and quality-wise; price-wise because local materials and indigenous ancillary components are more costly than their imported counterparts; quality-wise because the Indian automobile industry—and more particularly the ancillary industries—are still young and have not yet reached the high standard of quality attained by more advanced foreign manufacturers through decades of experience, automation and other mass production methods.

CAR PRICE STRUCTURE :

Government taxes, direct and indirect :	33%
Raw materials, manufacturing and overhead expenses, salaries and wages, depreciation, profit etc. :	25%
Indigenous ancillary components :	24%
Imported components :	11%
Dealer's commission including distribution, service, advertising etc. :	7%

THE AUTOMOBILE INDUSTRY IS A KEY INDUSTRY

BUSINESS NEWS FROM EUROPE

RUMANIA EMBARRASSES AMERICA?

TREND OF TEA CONSUMPTION IN EUROPE—ITALY NOT IN FAVOUR OF DEVALUATION

From Our Special Correspondent

RUMANIA'S move to buy a nuclear power plant from the United States and to ease trading restrictions between the two countries has come as a big surprise both to America and her allies. The move comes at a time when America has been trying to limit trade exchanges with the Communists. It must be to them a little embarrassing, since the British are the leaders of the "fat Communist is a peacible Communist" policy and the French are the leaders of the "let's-recognise-China" political school. Consequently, the move is not without its irony. It must also be embarrassing because the Rumanians originally approached the British for a nuclear power station and were turned down on the grounds that it came under the N.A.T.O. embargo—which the Americans had been instrumental in drawing up.

The Rumanian overture widens the breach between them and the Russians. Mr. Khrushchev recently visited Rumania twice in efforts to patch up the quarrel. More important, though, is that this move could herald a new approach to East-West trade by the *Americans*. If the United States starts to revise its position, and to act a little more liberally over the strategic trade embargo list, a number of European countries could be in for a severe dose of competition.

Britain and West Germany have dominated the East European trade. France has been building up contacts with China that have, till now, been almost exclusively the preserve of the Japanese. If the United States now shifts its position, all four are in for a period of hard, cold competition.

Tea in Europe

Consumption in Europe of tea—long considered the Englishman's traditional drink—is rising. Growth is slow, but it is steady. The one major exception is Britain, where imports and consumption are now somewhat below their peak, having settled on a plateau just below record figures in both. Britain is still the greatest importer of tea in the world, accounting for 84 per cent of Europe's imports and 42 per cent of the world's. In 1962, the last year for which tea statistics are available, Britain imported 520 million lbs. This was a fall of just over half of one per cent as compared with the previous year but some 38 million lbs. below the 1957 record.

To put the matter clearly in perspective, though, only in three years has more been imported by Britain—in spite of the slight fall from 1961's 523 million lbs. Consumption per head in Britain in the period 1959-61 was 9.74 lbs., slightly below the 9.97 lbs. in the period 1956-58, though it had probably risen to 10 pounds in 1962, only just below the record 10.1 lbs.

It is too soon to say whether tea consumption has reached saturation point in Britain, because one year's evidence does not necessarily mark a trend. But the evidence that tea is suffering from acute competition is obvious. While tea consumption has stayed stable over the period 1955-61, domestic expenditure on coffee in the same period increased by half, beer by 15 per cent and soft drinks by 20 per cent. The growth of instant coffee, especially, is thought to have had a big effect on tea drinking. So is the advertising campaigns that the instant-coffee producers have carried out to boost their product. This campaign is in direct contrast to the old-fashioned policy adopted by most of the tea firms. Coffee advertising is thought to be running at about £1 million (2.8 million dollars) a year.

Inside the Common Market all the countries have increased imports of tea, though West Germany has accounted for most of the combined increase. The Netherlands remains the leading European tea importing nation, with 20.8 million lbs. in 1962. But, while this is a mere seven per cent above the 1957 level (and considerably below the record 1961 level), the West German imports have been increasing regularly and, in 1962, were almost 40 per cent up. At 18.9 million lbs., there is a distinct possibility that they will soon overtake the Dutch. The Italians have almost doubled their imports, but only to a miniscule 4.3 million lbs. and the French take slightly less, 4.25 million lbs. Belgian imports are less than a million lbs. Ireland takes more than any Common Market country with 23.6 million lbs. Among other European nations the Danes and Poles take more than the French and have been increasing imports steadily.

In consumption per head, the Irish are nearest to the British figure, with 8.1 lbs. in the period 1959-61. In the same period, the Dutch clearly established that, though total imports were declining, consumption per head (1.76 lbs.) was well ahead of all other European nations, not one of which reached one lb. Denmark, Switzerland and Russia follow. The extent to which Europe is *not* a tea-drinking continent can be seen from some other figures. Consumption per head in Iraq was 5.38 lbs. in the same period, 6.02 in Libya, 6.75 in New Zealand, 5.95 in Australia, 2.45 in Canada and 2.28 in Tunisia.

The tea-producing nations, led by India, Ceylon and Indonesia, hope to get consumption increasing more rapidly in Europe. A sustained advertising programme is likely in Britain towards the end of the year, since this market accounts for half the exports of the first two. But they also believe that the most likely big break-through will be made in Russia, where there is less built-in opposition to tea. Russian consumption per head is fairly low—0.55 lb. a year, and total imports, 34 million lbs. in 1962, are just half the 1959 level. A recovery has been made from 1961, the worst year since 1955 and both India and Ceylon hope to do a lot better in this market.

Can Italy Cure Her Inflation?

Whether Italy has turned the corner in the fight to control its economic crisis is too soon to say. But it now appears that the threat which caused the Treasury Minister to say that the economy was "in danger of collapsing" may be on the wane. If it is, then much of the credit must go to the United States which promptly came to the aid of Italy, supported by some European central banks, to the tune of 1,000 million dollars, thereby showing a confidence in the Centre-Left Government that Italy's own industrialists have never had.

But, if the crisis has been dampened down by disinflationary measures, there is plenty of evidence that the basic causes of the blowing up of the now-famous "miracle" have been left untouched. Fundamentally, this has been a crisis between politics and economics—in spite of the Moro administration having the largest parliamentary majority in Italy for a long time. There are plenty of economic corrections to almost any crisis: what has been lacking in Italy has been the political will to apply them.

So far, the Government has been content to pursue a mildly disinflationary policy to counter a serious crisis that really began at the end of 1962. Until 1961, Italian growth fed on a supply of cheap labour (from the south) and ploughed back the returns of that growth into investment through high profits. The growth was, therefore, creative and at the same time safeguarded against inflation by distributing the return mostly to those who saved a large proportion of additional income. But, after 1961, organised labour began to seek—and get—a larger share of the growth. It did this at a time when the northward migration was at its peak. But the recipients of the higher wages were not savers: on the contrary, they tended to spend to the hilt. The result was booming wage costs, an import surplus and a fall-off in exports.

In the first quarter of this year, wages rose by 12 per cent, and, if the Treasury Minister's estimate that they threaten to increase by 15 to 16 per cent during the year proves correct, they have got to be slowed down now. The import surplus is expected at the very least to be 1,000 million dollars; at worst, it may be as high as $1,700 million. Either way it would be a big improvement on last year's 2,500 million dollars.

What Italy clearly needs to counteract the crisis is a large increase in exports, aided by an increase in tourist receipts. The question now is whether this can be achieved by the conventional disinflationary measures that Italy has taken—talks on a wage policy with the unions, purchase tax increases on consumer durables, a possible compulsory national loan.

Devaluation?

If they are not achieved and a fundamental imbalance results, devaluation will become essential. For Italy's sake then, is devaluation not a better method?

Such a course could shift demand and so allow goods to be exported which are now flooding the home market. By making imports dearer, it would choke a lot of them off and so relieve the balance of payments surplus at the same time as exports would be given an incentive. Nor is Italy without precedent. Both France (in 1958) and Canada (1962) have proved that small trading nations can devalue without setting off a chain of international ramifications. Nor need Italy worry unduly about the rise in import prices. Imports of food and materials comprise only a third of Italy's total imports (compared, for instance, with Britain's two-thirds) and so would not have such a serious effect in pushing up production costs.

Italy has, so far, set her face against devaluation. She prefers to seek international monetary co-operation from other central banks and the International Monetary Fund. These may work in the short run. But outside Italy it is thought that they will not remove the fundamental cause of the present disequilibrium.

Holland Under Pressure

Holland, too, is threatened by inflation this year and the fortunes of the economy are thought to be closely linked with the wage increases granted early in the year. Last year, was a year of fairly smooth general growth. Gross national product went up 4.5 per cent (compared with 2.7 per cent in 1962) and industrial production by rather more. Only agriculture seriously lagged behind, largely due to the bad weather.

But the rise in output brought the inevitable increase in demand for consumer goods, and consumption rose by 5.5 per cent, one point more than the previous year. Prices followed suit (up 3.5 per cent) and the inevitable prices-wages spiral was set in motion. In order to dampen the threat of inflation, credit expansion by the banks was curtailed and the discount rate raised. At the start of this month, the Bank rate was raised half a per cent to 4½ per cent. Government spending was also cut back or delayed, and special facilities for new investments were withdrawn.

Even so, wages are expected to shoot up by 16 per cent this year. Because of a lower profits margin, due to the higher wages, the investment drive is thought likely to peter out by the end of the year as over half the Dutch industrial investment is self-financed. As the economy has also lost the advantage of relatively cheap labour, which it has enjoyed since the war, exports are likely to become much more difficult to sell as prices rise. Consequently the import surplus this year is expected to be around £100 million (280 million dollars).

The inflation has been warmly greeted in some quarters, who hold that it will help to cure the over-employment and so put the economy back on an even keel. Those who hold this line, though, are thought by most observers to be advocating a cure more drastic than the trouble itself.

African Links with the Six

Tariff preferences and financial assistance will now be given to 18 African States as a result of a Common Market convention which has just come into force. The 18 are the French-speaking African nations. The Yaounde Convention, which makes this link formal, has been in the pipeline for some time but only became legal when Dutch and Italian instruments of ratification were deposited with the European Economic Community's Commission this month.

Under the terms of the convention, the Six will immediately extend tariff preferences and financial assistance to the 18. Coffee, cocoa, pineapples, cloves, coconuts, pepper, vanilla and nutmeg will be allowed into the Common Market duty-free. At the same time, the common external tariff will be reduced by between 15 and 25 per cent on imports of these products from third countries, such as the English-speaking East African States.

The convention is planned to last for five years and, during that period, the Community will make £261 million (730 million dollars) available to it in aid. Member states will contribute £238 million (666 million dollars) and the European Investment Bank another £23 million (64 million dollars). About a fifth of this money will go to assist diversification and production.

The Common Market has made it plain that this sort of convention is not restricted to the former French colonies. It has said that a similar association is open to other states in the same economic position as the 18. So far, the former British colonies have fought shy of associating with the community in such a formalised way. But it is possible that both Nigeria and some of the East African States may be thinking of negotiating less formal agreements.

Progress of Cyprus

In theory, the Cypriot economy should be on its knees. But, in spite of the crisis which has torn the island into two, the economy has so far retained a remarkable degree of buoyancy. Partly this has been due to the purchasing power injected by the United Nations forces. But more likely is the fact that the economy had been getting onto a good footing before the trouble started last Christmas and much of the export business is concentrated in areas where the impact of political strife has been least felt. Also, the worst-affected part of the population, the Turks, is the smallest (18 per cent of the total).

Cyprus exported more agricultural produce in the first quarter of the year, £3.1 million, than in the same period of last year, £2.95 million. But some other exports, notably wine and potatoes, have been lower. What Cyprus wants, and was beginning to get, is a good tourist trade. But so long as the bullets fly, this will continue to be the worst-hit sector and essential hotel building will be left uncompleted.

Export figures for this year are so far sketchy and incomplete, but, in general, are stated to be lower. Mineral exports last year were only just below the 1962 total at £7.5 million (21 million dollars) but in January they fell by approximately a third.

Basically, the economy of Cyprus is hamstrung. Goods lie in warehouses and locally-produced merchandise is not being distributed. At the same time, unemployment is high. Official statistics refer to 7,000; but it may be at least twice as high, because there are no reliable figures from the Turkish sector of the population. If the political crisis is not overcome soon, the economy could start grinding to a halt as taxation becomes increasingly difficult to collect.

Spanish Agriculture

In order to stimulate exports, 60 per cent of which are of farm produce, Spain is making intensive efforts to raise agricultural production. But in the effort she is facing the difficult problem that the quickest method—large-scale irrigation—is the most costly and, if pursued relentlessly, could endanger the rest of the economy by diverting scarce resources.

Plans either at the blueprint stage or at the stage of being put into action are estimated to cost about £900 million, of which over a third will be invested in the next four years. However fast the pace, though, a large part of the country will still be left suffering from drought. About 50 million acres are affected at the moment, as compared with less than five million acres under irrigation of which the Government has promoted at least half).

The problem is whether output cannot be stimulated quicker, and more cheaply, by other means. Spain suffers, in the south, from having too much fragmentation and, in the north, from too many large estates. In Asturias and Galicia, under two per cent of the farms are larger than 50 acres; in Andalusia, 70 per cent are above 50 acres and 40 per cent are more than 250 acres.

Many experts think that output could be quickly stimulated, if the smallholdings of the south could be welded together at the same time as many of the under-utilised estates of the north were sub-divided. They feel that output could be increased by up to half in such places as Seville and Badajoz with little capital investment, if the land were properly used.

Such improvements are quickly needed. Output in some sectors is not much better than it was 30 years ago and there has been no overwhelming improvement over the past decade. The index of vegetable production, for instance, is only a fifth higher than it was in the period 1931-35 and the index of livestock production is just a fifth higher than in the period 1953-57. Potatoes, one of the main exports, are being produced at little above the 1931-35 level.

Hungary May Import Meat

Hungary, compelled to export some of her best fatstock to pay for grain and feed purchases abroad, may be forced to import meat herself later this year. In an interview for an official newspaper, copies of which have just reached Munich, Food Minister, Mr. Imre Kovacs, said Hungary was now suffering from a meat shortage largely due to over-exporting. Figures quoted by Mr. Kovacs indicated that supply of meat and demand for it in Hungary were fairly closely balanced even in normal times. Although domestic meat supplies were increasing by about 4½ per cent annually, consumption appeared also to be growing by at least 4 per cent a year.

The situation is complicated not only by the current need to export, but by the fact that meat production on private holdings is declining and consumers are relying increasingly on supplies from Central Government stocks. Because of this, the meat shortage is most severe in country districts. Mr. Kovacs said meat was now on sale, normally only once a week, in less than half of the country's rural communes. Mr. Kovacs criticised Hungarian prejudice against imported frozen meat on political and other grounds.

Topical Briefs

This year should see record output levels for ***Britain's*** iron founding industry. Buoyant conditions in the economy have produced full employment and long order books in most of the industry's customers—engineering, motor-vehicle manufacturers, steel companies and manufacturers of pressure pipes and fittings—and it is thought that this could result in a record flow of castings during the year. Although the industry comprises 1,400 foundries, the large proportion of them small ones, nearly all are working at, or near, peak output. At the end of last year, castings were running at an annual rate of around 3.85 million tons. If the growth which brought castings to this level is maintained, this year should see an output of about four million tons. This improvement in output marks the end of a longish period in which the industry has been in the doldrums. Margins have been tight, prices low and a certain amount of surplus capacity was evident. Some 400 foundries have shut in the last seven years and greater mechanisation and more new techniques introduced into the remaining ones.

Forestry products now comprise nearly three-quarters of ***Finland's*** total exports. The forest products industries' exports rose by 8.7 per cent last year to £369 million (835 million dollars), of which the European Economic Community took 35 per cent and EFTA 32.8 per cent. Of the rest, 10.5 per cent went to Eastern Europe, and 5.6 per cent to North America. In all, exports went to 132 countries. Biggest growth was made by woodpulp, but, because of general over-capacity in both woodpulp and paper in Scandinavia, there has had to be some cutting back in the Finnish industry. Last year, woodpulp put on 12.9 per cent in value and paper and board 8.8 per cent. West Germany was the leading paper buyer with 270,000 tons, followed by Britain with 227,000 tons, the United States 204,000 tons and the Soviet Union 92,700 tons.

Swissair, Switzerland's national airline, has chosen the American DC-9 to replace its fleet of Convair 440 Metropolitans. Two other new planes were in the running in addition to the Douglas plane for a short-range jet—Britain's "bus-stop jet", the BAC One-Eleven and the French Caravelle-10. Swissair have now placed an order for 10 DC-9s for delivery between June 1966 and December 1968, the first European airline to do so. This is the second time that Britain has lost a Swiss order. In 1956, the Swissair chose the Metropolitan in preference to the Viscount, one of the new airlines in Europe to pass over the Viscount. The fact that Swissair already run a fleet of DC-8s for inter-continental flights no doubt helped to sway the verdict in favour of the smaller Douglas plane and of standardisation of parts. Swissair believe that, with its Caravelles, it will have one of the most modern, airline fleets in Europe after 1966.

French exports and imports reached record monthly levels in April but the trade gap yawned a little wider. Exports reached £230 million (644 million dollars) in the month, £46 million (128.8 million dollars) behind imports, but the overall balance of payments (taking into account invisibles and other receipts) improved by £20 million (56 million dollars) and the gold and exchange reserves reached 4,523 million dollars. The continued upward pressure on beef prices is causing some concern for the price stabilisation plan, not least because of the repercussions of the consumer price index on minimum wage rates. Consequently, some 10,000 tons of imported frozen beef were fed onto the market. Signs of over-heating are also evident in the economy as a whole, with output running 10 per cent up during the first quarter, as compared with the corresponding period of 1963. Expansion has been particularly strong in metals and chemicals.

Notice

STATE BANK OF INDIA

NOTICE

WITH REFERENCE TO THE NOTICE OF the 25th March 1964 issued in terms of Regulation 29(2) of the State Bank of India General Regulations regarding the holding of a Local Meeting of the shareholders of the State Bank of India on the Branch Register of shareholders at the Bombay Local Head Office of the Bank for the sole purpose of electing a person to be a Director of the Central Board in pursuance of Section 19(1)(c) of the State Bank of India Act, 1955, to fill the vacancy which will arise on the 1st July 1964 through the retirement of Shri Pratapsinh Mathuradas, NOTICE IS HEREBY GIVEN that I have accepted as valid the nomination proposing the name of Shri Pratapsinh Mathuradas of 9, Wallace Street, Fort, Bombay, as a candidate for election as a Director of the Central Board of the State Bank of India. The said nomination being the only valid nomination received, Shri Pratapsinh Mathuradas shall be deemed to be elected a Director of the Central Board of the Bank at the said Local Meeting of the shareholders proposed to be held on the 24th June 1964 which meeting in terms of Regulation 40(1) of the said General Regulations now stands cancelled.

R. V. PANDIT,
Deputy Secretary & Treasurer
State Bank of India,
Bombay.

GUEST, KEEN, WILLIAMS, LIMITED

MODERNISATION AND DEVELOPMENT SCHEMES UNDER WAY

STATEMENT BY CHAIRMAN, MR. RAGHAVAN PILLAI, AT ANNUAL MEETING

THE statement by Mr. Raghavan Pillai, Chairman of the Board of Directors of Guest, Keen, Williams, Limited, at the Thirty-fourth Annual General Meeting of the Company held at Calcutta on 12th June 1964, was devoted largely to a review of the progress of the Company and its subsidiary, Sankey Electrical Stampings Ltd. The Chairman also referred to the several expansion and modernisation projects, some of which were under way and some others on the drawing board. An idea of the scale of development could be had from the level of capital expenditure proposed to be incurred on expansion and rehabilitation schemes during the period 1964-66 alone. The relevant outlay would be as much as Rs. 7.5 crores, with a foreign exchange component of Rs. 2.5 crores.

The following is the full text of Mr. Raghavan Pillai's statement:

I have great pleasure in welcoming you to this, the thirty-fourth annual general meeting of your Company. The Directors' report and the statement of accounts have been circulated and been in your possession for some time, and I propose with your permission that they be taken as read.

Jawaharlal Nehru

We are meeting in the shadow of a supreme tragedy. The man who made India what she is today is with us no more. Few men, in any country, or in any age, have given of their all in the service of their country, of their people, and of humanity at large, as has Jawaharlal Nehru, in our country, and in our day. In him Nature wrought a rare synthesis of knowledge and understanding—of the ancient and modern, of East and West, of science and the humanities, and of materialism and spirituality, and we as a nation should be profoundly and eternally thankful that so unique a man should have been here to lead us in the hour of our greatest need. I count it the choicest among the blessings of my life that I had the privilege of working for him for close on eleven years first as Secretary of the Cabinet and later as Secretary General in the Ministry of External Affairs. I think of him as I knew him then—a man, before whom the dross in us seemed to melt away, and the magic of whose mind illumined and inspired our own. He is gone, and for us that remain I can think of no better wish than that we will, with renewed vigour and with his unseen guidance, go about our daily tasks, cheerfully as he would have wished, each resolved to help to fashion a new India fit in every way to take her place in this changing world, and yet not forsaking the traditional values of this ancient land.

Retrospect

In the lives of organisations as of men, there comes a turning point when the past, however distinguished, seems but a preparation for what is yet to come. That turning point has now come for your Company. Nineteen sixty-three has been an eventful year of outstanding significance in the history of your Company, and marks the beginning of a new period of increasing challenge as well as opportunity. The year has witnessed the consolidation of the gains from an earlier period of development; the merger of your Company and of its subsidiary, Sankey Electrical Stampings Ltd., making possible the more effective and efficient utilisation of the combined resources of the two companies; and a significant advance, beyond the stage of study and preparation, in the implementation of our further programmes of development. At a time when more than one business establishment in the country has celebrated its centenary, we must, I am afraid, count ourselves among the youthful, and for us the age of reminiscence still lies many decades away. Yet, though youthful, we can claim the advantage of vigorous growth, and it seems appropriate for us at this juncture to cast a backward glance at our own past, the better to assess our prospects for the future.

Our story opens with the formation in 1922 of Henry Williams (India) Ltd., which, in a small workshop at Shalimar, within the boundaries of the present Calcutta Works, started the manufacture of railway track and signal materials. The intention was to develop the Indian interests of Henry Williams Ltd., Darlington, U.K., which was well established as a manufacturer and exporter of these materials to the Indian railways.

In 1931 a new company was formed, under the name Henry Williams India (1931) Ltd. for the purpose, *inter alia*, of acquiring the former company and expanding its activities. One of the earliest major developments had been the establishment of a Bolt Works in 1926, and in consequence rolling mills were installed in 1932 mainly with the object of securing a source of the special raw material required for the manufacture of bolts and nuts.

In 1934 Guest, Keen and Nettlefolds Ltd. acquired a major holding in the company, which was then given its present name, Guest, Keen, Williams, Ltd. Twenty-two years later, in 1956, the Company became a public limited company, and Indian investors now have a vital stake in the fortunes of the Company.

Contribution to Defence Production

During the years 1939 to 1945 the Company made a valuable contribution to defence production, and at the end of the war resumed the manufacture of similar products to the pre-war range. After a period of consolidation the Company embarked on a long-term plan of expansion which still continues and indeed has been progressively accelerated.

The first significant step was the installation of a steel melting furnace in 1952. This was followed by a second furnace in 1958.

A new unit was built at Bhandup near Bombay for the manufacture of woodscrews, and production started in 1953. Since that time the Bhandup Works has been substantially enlarged and numbers of other fasteners have been added to its range of manufacture.

At the same time much of the Calcutta Works was modernised, in particular the Bolt Works. A well equipped, modern toolroom was built in 1957. The manufacture of pressed steel car and trailer type wheels was introduced in 1960, and in 1961 the commissioning of extensive new rolling mills was completed, a project costing over Rs. 3 crores. In the same year the manufacture of bright steel bars was started. Fabricating and service departments have been generally improved and expanded in recent years, and the extent of overall development is clearly illustrated by the fact that the gross value of fixed assets in the Company's balance sheet has risen from Rs. 2.47 crores to Rs. 10.12 crores in the last ten years.

In December 1960 your Company acquired a controlling interest in Sankey Electrical Stampings Private Ltd. This company was formed in Calcutta in 1943, primarily at the instance of the Government of India, in order to establish an indigenous supply of electrical stampings for defence purposes and at a time of acute shortage of imports.

The first works was set up at Worli in Bombay and was later moved to its present site at Bhandup in 1946. The increasing demand for stampings in Eastern India prompted the Company to establish a second works in Calcutta in 1950 and a third unit came into being in Bangalore in 1959.

Electric Steel Sheets

Apart from pioneering the manufacture of electrical stampings in India, the Company, by virtue of its association with Messrs. Joseph Sankey and Sons Ltd., U.K., was in the fortunate position of being able to influence the negotiation of a technical collaboration agreement between that company and the Tata Iron and Steel Company Ltd. in 1946 covering the manufacture of electrical steel sheets in India. That agreement with Tatas was an important milestone in the development of the electrical engineering industry in this country.

In recent years Sankey Electrical Stampings Ltd., has responded to the need for the diversification of its range of products by embarking on the manufacture of precision pressed components for various industries and several new ventures have been planned for the near future.

Finally we reach 1963, a year which has brought several important developments that have broadened the base of your Company's structure. Sankey Electrical Stampings Ltd. became a wholly owned subsidiary on the exchange of shares with Tatas, and on 10th December you approved a scheme of amalgamation whereby that subsidiary was to be merged with and operated as a division of your Company. I am glad to report that the consent of the Calcutta High Court has since been received and the amalgamation is effective retrospectively from the start of this year.

On 24th December 1963 you approved the Directors' recommendation of a bonus share issue in the ratio of one for two. The bonus share issue and the exchange of shares with Tatas constituted a substantial increase in the issued capital which, in turn, necessitated raising the authorised capital of the Company, and you will recall that an increase from Rs. 6 crores to Rs. 10 crores was approved at the shareholders' meeting on 24th December 1963.

To assist in financing expansion it was decided during 1963 to issue debentures amounting to Rs. 1.5 crores and as you may know that issue was fully subscribed in February this year. Another significant event during the year under review was your Company's investment of Rs. 38.2 lakhs, in the form of plant and cash, in Sankey Wheels Ltd., a newly formed company which is to make passenger and commercial vehicle wheels.

Thus, from its modest beginnings in the years between the World Wars, your Company has progressed steadily to a place of importance in our country's industry.

Board of Directors

I am pleased to inform you that Mr. K. C. Maitra was appointed a Managing Director of your Company with effect from 29th December, 1963. Mr. Maitra has been the Managing Director of Sankey Electrical Stampings Ltd. for the past 14 years, and, as already mentioned, that company has now been amalgamated with your own Company.

It is the intention also to appoint four additional Directors to strengthen the Board of your Company and the proposed election of Mr. N. R. Banerjee, Mr. A. H. Sethna, Mr. R. B. Ritchie and Mr. J. M. Leighton will be the subject of resolutions later at today's meeting. Mr. Banerjee and Mr. Sethna were Directors of Sankey Electrical Stampings Ltd. for a number of years, and Mr. Ritchie and Mr. Leighton are at present senior executives of the Company.

Production

A rise in the level of output and sales of all major products was achieved in 1963, but raw material supplies were again the limiting factor which governed the extent of the advance. In particular, supplies of steel billets, which constitute the raw material for the majority of the Company's manufactures, were unsatisfactory both in quantity and in surface condition, and it was only by virtue of comparatively large billet stocks at the start of the year that it was possible to maintain an adequate level of production.

At the end of the year stocks of good quality billets were critically low and output of various products has been adversely affected.

The output of the rolling mills rose again in 1963 in spite of irregular billet supplies, and in particular, production of spring steel bars for the transport services was increased satisfactorily.

Production of bright steel bars was twice the previous year's level of output but full use of the potential capacity of the plant could not be made owing to the continued shortage of free cutting steel in India.

In the forge, production was affected by plant breakdowns, and steps are being taken to replace some of the older stamps. Whilst

competition and raw material difficulties limited the output of certain railway track material, the production of major items, including crossing sleepers and points and crossings, was substantially increased.

A small increase in the output of fasteners in the Bolt Works was achieved, but the manufacture of special and high tensile products was hampered by the lack of quality raw material.

At the Bhandup Works, in spite of unstable conditions in the market for woodscrews and various other small fasteners, a substantial rise in turnover was achieved.

Operating Results and Dividends

The accounts for the period under review have been with you for some time and you will no doubt have noted with satisfaction the improvements that have been achieved in the Company's operating results.

Turnover improved to Rs. 16,37,49,450 from Rs. 13,06,09,872 in 1962 representing an increase of 25.4 per cent. The increased income from sales helped by vigilant efforts to exercise economies has earned for the Company a total surplus before taxation of Rs. 2,17,43,217, compared with Rs. 1,27,55,590 for 1962. The available profit for disposal has not, however, risen proportionately owing to a much higher charge for taxation which for 1963 amounts to Rs. 1,36,59,114, compared with Rs. 55,60,000 for the previous year.

Taxation

The increased charge for taxation arises mainly from the issue of bonus shares in December last year for which an additional tax of Rs. 26,34,114 is payable calculated at the rate of 12½ per cent on the face value of the shares issued. Furthermore, a provision of Rs. 4,29,656 had to be made in respect of the new levy of 7½ per cent on equity dividends introduced by the Finance Act 1964. It is unfortunate that the welcome exemption from the payment of additional tax in respect of bonus shares, when issued out of share premium account, came just too late for your Company to benefit as its bonus issue was made prior to 1st April 1964. As a silver lining to this disappointment, shareholders will have no doubt noted with some measure of relief that under the provisions of the Finance Act 1964, as finally passed, this bonus issue will not attract capital gains tax in their hands.

In my statement to you last year I had occasion to mention that the Company would have no liability to super profits tax in respect of its profits for 1962 but that a provision of Rs. 1,20,000 on this account had already been made, based on the original proposals in the Super Profits Tax Bill. As you know, the super profits tax has now been replaced by a surtax, but it is estimated that no surtax will be payable on the Company's profits for 1963. Accordingly, the provision of Rs. 1,20,000 made in 1962 has been written back in the 1963 accounts.

After all required transfers and appropriations the profit available for disposal is Rs. 66,86,070. An interim dividend of 60 paise per share has already been paid and your Directors have recommended a final dividend also of 60 paise per share, making a total distribution of Rs. 1.20 paise per share for the 52 weeks ended 28th December 1963. The balance of Rs. 3,64,196 has been taken to general reserve. Members of the Company will, I am sure, appreciate that the reduction of 20 paise per share in the total distribution for 1963 compared with that for 1962 was inevitable in view of the additional tax payable on account of the bonus share issue and the levy of 7½ per cent tax on equity dividends, which amounts would otherwise have been available for disposal.

Balance Sheet

Whilst on the subject of the accounts, I should like to mention again some of the important features of the balance-sheet.

The authorised capital of the Company was increased to Rs. 10,00,00,000 in December last year primarily to enable the bonus share issue to be made. The paid-up capital of the Company was also increased from Rs. 4,00,00,000 to Rs. 6,32,18,740 by the issue of 2,14,583 shares of Rs. 10 each to the Tata Iron and Steel Company Ltd. in exchange for their holding in Sankey Electrical Stampings Ltd., and by the allotment of 21,07,291 bonus shares of Rs. 10 each out of the Company's share premium account.

Opportunity was taken last year of the Company's debentures being offered at or below par to purchase and cancel debentures worth Rs. 10,25,000 by utilising the amount standing to the credit of the debenture sinking fund. The outstanding liability for debenture loan at the end of 1963 has, therefore, been reduced to that extent. The effect of this operation is fully reflected in the movement in the debenture sinking fund account.

On the other side of the balance-sheet you will find an investment of Rs. 38,20,000 in equity shares of a new company, Sankey Wheels Ltd. This is in accordance with a resolution approved at your annual general meeting last year.

Sankey Electrical Stampings Ltd.

For our subsidiary, Sankey Electrical Stampings Ltd., the year 1963 was an abnormal one. At its major works at Bhandup, as a result of inter-union rivalry, a large number of workmen resorted to 'go-slow' tactics which culminated in an unjustified strike. Weeks of tension followed, but, thanks to the unequivocal stand taken by the Company, with the support of the findings of the State Evaluation Committee and of its own commendable record of labour relations, and thanks also to the understanding of the Company's stand shown by those with authority and competence to judge, the strike was called off unconditionally after 108 days. I had intended to share with you today some thoughts evoked by this deplorable strike, but the recent constitution of a Court of Inquiry by the Government of Maharashtra to inquire into certain issues connected with the strike makes it inopportune for me to do so. Before leaving this topic, however, I should like to commend the devotion and loyalty displayed by all members of the management, the supervisory staff and those workmen who, during the period of the strike, worked under great stress, and at considerable personal risk, to ensure that essential supplies, in particular to the Defence services, were not interrupted. I should like at the same time to say a special word of gratitude to the Company's wide circle of customers, both big and small, who, by their patience and forbearance, though being put to serious inconvenience and worse themselves, gave strength and support to the Company during those trying days.

Apart from this unfortunate labour trouble, the Company was hard put to it to obtain sufficient supplies of transformer grade steel which have all to be imported. In spite of these major handicaps, the Company was able not only to maintain but actually to increase its turnover to a small extent. The programme for diversification of the range of manufacture continues to make good progress, and in fact, the increase in turnover is due entirely to these new products. There is now in hand another important project, the manufacture of brake components for the automobile industry, which in due course will further augment turnover.

Future Development

Construction of the new steel melting shop is making good progress and the stage 1 plant will be in production next year. A year ago I mentioned the proposed reorganisation of the rolling mills, and I am now glad to inform you that this project has since been approved by the Government of India. The reorganisation includes the installation of a new merchant bar mill in new buildings and will permit the running down of some of the old mills which have been in service since 1932.

Much of the old plant in the Calcutta Bolt Works is being replaced by specialised, modern equipment and this is expected to lead to improved quality and some diversification in the range of sophisticated fasteners manufactured.

Work started towards the end of the year on the extension of the bright steel bar shop. The new plant has since been commissioned and will contribute to earnings in 1964.

At the Bhandup Works certain outmoded machines were replaced during the year by modern, high production plant and a new material storage bay and pickling plant were constructed and commissioned. The expansion of woodscrew capacity was largely completed and the plant is now being worked up to the required level of efficiency. The Government of India granted approval for the expansion of self-tapping-screw capacity and it is hoped that the plant will be installed next year.

Many other projected schemes for expansion and modernisation are on the drawing board, and, whilst newly installed plant is being carefully nursed into a state of optimum efficiency, planning for your Company's future continues.

Capital Expenditure

To enable you to obtain a clearer idea of the scale of our development programmes, I should like to add that capital expenditure during the three years 1964-66 on planned expansion and rehabilitation projects is expected to be Rs. 7½ crores, of which a sum of Rs. 2½ crores represents foreign exchange. Expansion will naturally continue beyond this period, but as plans are under continuous revision in the light of changing demands and shifts in priority, it would not be realistic to give an estimate of the cost of such future expansion. By far the greater part of the foreign exchange required will be in sterling, and for this we shall be dependent on the liberal aid which, with a vast and invaluable fund of technical advice, we have been receiving from Guest, Keen and Nettlefolds Ltd.

Never since independence have the preservation of our national unity and the achievement of rapid and accelerated growth, in industry and possibly even more in agriculture, been as urgent and crucial as now. Yet, it is to be doubted whether we are continuing to hold our own with other large and developing countries with whose standards of performance our own will necessarily be compared. More than ever before, the pursuit of our national purpose must therefore today form the prime motive behind the efforts of us all. It is in this realisation that your Company will continue, within its capacity and its resources, to play its part in helping to build the industrial strength of our country and promote the well-being of our people.

Finally, I should like to express on your behalf, and on my own, our thanks to the staff and all employees who have worked keenly in the Company's interests during the year. Rapid growth and reorganisation bring many frustrations in their wake, and the success of the Company's operations is a tribute to the loyalty and enthusiasm displayed by its personnel.

Note: *This does not purport to be a record of the proceedings of the Annual General Meeting.*

Market Rating Indices for Towns of India Book II

A comprehensive, practical and upto-date guide to urban markets, based on the 1961 Census and other Government reports. Markets rated on estimated consumption expenditures for 735 towns and town groups, with a population of 20,000 and over. An invaluable guide for setting your sales targets. Price : Rs. 20/-. (Postage extra)

CONSUMER SURVEY—GREATER BOMBAY

A survey of a cross-section of households selected by random sampling method in October 1962. Four separate reports giving consumption patterns and brand shares for 4 economic levels on (1) powders (2) hair oils & dressings and shampoos (3) analgesics and (4) sarees. Price on request.

IMPACT AUDIT—INDIAN INDUSTRIES FAIR 1961

A survey based on a sample of 5387 visitors from 13 occupational groups. Helps you plan your future exhibition displays. Price : Rs. 50/-. (Postage extra)

KHANDELWAL FERRO ALLOYS LIMITED

PROSPECTS FOR FERRO-MANGANESE INDUSTRY BRIGHT

CHAIRMAN, DR. A. RAMASWAMI MUDALIAR, ON STEEL TUBE PROJECT

BRIGHT prospects for the ferro-manganese industry were held out by Dr. A. Ramaswami Mudaliar, Chairman of the Khandelwal Ferro Alloys Limited, when he addressed the Sixth Annual General Meeting of the Company at Bombay on Friday, 12th June 1964. Exports through barter arrangements, Dr. Ramaswami Mudaliar said, were proving somewhat remunerative and the domestic demand, too, was steadily increasing following the expansion of steel plants. He expected the conclusion of another barter deal with the U.S. and added that there was the "very distinct possibility" of the industry's profits being augmented by exports of ferro-manganese slag. Alluding to the position of his own Company, he revealed that the steel tube mill project had made considerable progress; the Government of India had already sanctioned a Belgian credit on deferred payment terms for import of plant and machinery and the Industrial Finance Corporation had sanctioned a rupee loan of Rs. 77 lakhs.

The following is the full text of Dr. Ramaswami Mudaliar's speech:

GENTLEMEN,

I have great pleasure in extending to you a cordial welcome to the sixth annual general meeting of the Company. The audited accounts and the Directors' report have been in your hands for sometime and, with your permission, I shall take them as read.

Production Report

During the year under report, it has not been possible for the Company to work the factory throughout the year to its full capacity. As stated in my last year's speech, the restriction in total production was due to the fact that the demand in the country could not absorb the total production of ferro-manganese. During the latter part of the year, the prospects became a little brighter, and the plant went into full production from September 1963. The total effect of the increased production and of the demand of the steel factories will be realised in the current financial year, but it may be stated that, during the year under review, it has also been possible to make a small profit.

Indo-U.S. Barter

As a result of the ferro-alloy industry pointing out to the Government of India the need for export promotion and the possibility otherwise of the industry going out of existence, the S.T.C. made special efforts to promote barters. The Government has recently concluded a barter deal through the Minerals and Metals Trading Corporation of India Limited with the Commodity Credit Corporation of the Government of the United States of America. In terms of this barter, the Indian ferro-manganese industry has to supply 128,000 tonnes, over a period of eighteen months commencing from the middle of December 1963, to the United States Commodity Credit Corporation. Out of this total, your Company has been allotted a share of 44,000 tonnes. Two shipments have already been made amounting to 18,500 tonnes against the above allotment and, with the production going ahead as it is now, there will be no difficulty in the Company completing the entire supply of 44,000 tonnes and possibly producing even more should the Minerals and Metals Trading Corporation require an additional quantity from us within the period of eighteen months under the barter contract.

Internal Demand

With the expansion of the steel plants in the country, there is a steadily increasing demand for ferro-manganese, and your Company expects to supply about 15,000 tonnes during the year to the various steel plants.

Private Barters

Besides the above barter, the Managing Agents and your Board are arranging for the promotion of barter deals with the approval of the Minerals and Metals Trading Corporation of India Ltd. for the export of ferro-manganese against the import of iron and steel materials and other commodities. Proposals have been submitted to the Corporation and their approval, it is hoped, will shortly be forthcoming.

During the year under review, your Company has made a gross profit of Rs. 25,00,417 before providing for depreciation and development rebate. As may be seen from the accounts, a sum of Rs. 15,62,391 has been provided for depreciation and Rs. 8 lakhs has been provided for the development rebate reserve. The loss brought forward from the previous year amounted to Rs. 1,08,352. The net profit after these adjustments is Rs. 29,674.

Electricity Tariff

The ferro-manganese industry has been pleading for lower electricity charges from the very commencement, particularly in the Maharashtra State. These charges have been very heavy. The Managing Agents and the Board have made representation to the authorities of the Maharashtra State Government and also to the Maharashtra State Electricity Board, pointing out the extreme necessity and importance of allowing the industry a suitably reduced tariff, and stressing the fact that the industry is a highly power-consuming industry and that the power supply may be taken as an essential raw material of the industry. The rates charged for such electro-metallurgical industries both in other States of India and in foreign competing countries are very substantially lower than the rates charged by the Maharashtra State Electricity Board to your Company.

I am glad and thankful that I am in a position to inform you that, as a result of these constant representations, some measure of relief has been granted by the Maharashtra State Electricity Board for a period which covers the Indo-U.S. barter period of eighteen months. In other words, owing to both the furnaces being at work to meet the barter demand during these eighteen months, the consumption of electricity has gone up to a high figure and, on the analogy of a slab system, the rate has been reduced to a certain extent by the Electricity Board, so long as the consumption is at that level. It is hoped that further barter deals will enable the production to be at its present level and that the electricity charges will be proportionately reduced.

The Maharashtra State Electricity Board was charging electricity duty for the period October 1962 to September 1963 amounting to Rs. 5,73,120. The Company paid under protest a sum of Rs. 4,08,161 against this duty for the period October 1962 to June 1963.

Your Company made representation that this industry was exempt from this duty and I am glad to inform you that the Electricity Board, under their letter dated 18th April 1964, has written to Industries and Labour Department, Government of Maharashtra, stating that, as the Company was eligible for the concession in electricity duty, a refund of Rs. 1,48,507 might be refunded to the Company.

Negotiations are now in progress for obtaining the balance amount of electricity duty, Rs. 2,59,654, for the period October 1962 to February 1963.

Wanchoo Report

It is obvious that what has been stated above is not a permanent solution to the problem. The electricity charges must in any case be at a much lower level for this industry than for industries other than electro-metallurgical and electro-chemical industries. This aspect has been put before the Wanchoo Committee very forcibly by your Company and other reliefs have also been requested, such as the reduction of railway freight both for the raw material and for the finished product. It is hoped that the report of the Wanchoo Committee will be available soon with recommendations on these matters and that the Government will pass suitable orders giving relief to the industry.

Export of Ferro-manganese Slag

The proper utilisation of the waste product of the industry is a problem that has been enaging the attention of your Board. Slag is one of the things that is accumulating in the factory to the detriment of the convenience of the works. The Managing Agents have tried to find a market for this and there are indications that foreign buyers being satisfied with the particular kind of a slag that your works are producing, are contemplating buying it. A sample shipment of 1,500 tons has already been sent and it is hoped that an arrangement may be entered into for the sale of this slag.

Manganese Ore Mining Leases

Your Board is anxious to get some mining leases for recovering manganese ore for the raw material requirement of your works. Repeated representations have been made both to the State Governments and to the Government of India, and it is hoped that the leases may be granted of a few suitable manganese ore areas at an early date.

Coke

I referred in my speech last year to the sudden jump in the price of coke of the proper kind required by your industry. Representations have been made to the Government both for a reduction in price of the coke and for the allotment of low phosphorus coke for supply to the ferro-manganese industry.

Tax Rebate

It is a matter of great satisfaction that the Hon'ble the Finance Minister has, in his Budget speech, announced that, in respect of certain basic industries, a rebate on corporation tax equivalent to 10 per cent of the income-tax and super-tax normally payable by the Company will be granted. This rebate is also applicable with reference to surtax to the extent of 20 per cent of the tax assessed. Your Company will also be exempted from the dividend tax to the extent of a dividend of 10 per cent on capital other than preference capital for a period of five years from the first declaration of dividend by your Company. The ferro-manganese industry has been classified as a basic industry for this purpose.

The Hon'ble the Finance Minister has, in his closing speech, announced that, by an amendment of the Income-tax Rules, the concession of additional depreciation for the working of the third shift of the plant and machinery will be allowed with effect from the assessment year 1964-65. The accounts for the year 1963 were adopted by the Board before this change was envisaged by the Finance Minister. However, the third shift allowance for the year 1963 will be provided in the accounts during the current year.

Expansion Programme

In my speech last year, I had referred to the action being taken by the Board for the establishment of a steel tube mill. Since then, I am glad to be able to say that we have made considerable progress. The Government of India have now sanctioned us a Belgian credit on deferred payment terms for the import of plant and machinery. They have also issued your Company an import licence for Rs. 64,72,000 covering the import of plant and machinery.

The Industrial Finance Corporation of India have, after a careful assessment of the profitability and all other relevant aspects of the tube mill project, agreed to guarantee the repayment of the deferred payment terms of the Belgian loan and have also sanctioned a rupee loan of about Rs. 77 lakhs for expenditure in India on the construction of the project. There are, however, a few outstanding details to be finalised in Belgium and with the plant and machinery suppliers and, for this purpose, the General Manager has proceeded on a short deputation. As soon as the details are settled, it would be possible for the Company to take in hand the construction of the project in India.

Future Prospects

In conclusion, it may be stated that the ferro-manganese industry may now be said to have tided over the initial difficult period of depression and that its future prospects are bright. While, on the one hand, exports by means of barters are proving somewhat remunerative, there is, on the other hand, a steadily increasing demand in the domestic market due to the expansion of the steel plants. There are also fair chances of another barter deal being concluded between the Minerals and Metals Trading Corporation of India Limited and the Commodity

(Continued on page 1077)

INDUSTRIAL LICENSING LIBERALISED

SIMPLIFIED PROCEDURES TO AVOID DELAYS

RECOGNISING that the rules and procedures specified for issuing the various types of industrial licences had overgrown to such an extent that they tended to slow down the pace of industrial development at a time when growth had to be speedier, the Government of India constituted in September last a special committee, known as the Industries Development Procedures Committee, under the chairmanship of Mr. T. Swaminathan, I.C.S., Secretary, Ministry of Heavy Engineering, with a view to minimising the controls and facilitating the issue of licences as promptly as possible. The terms of reference of the Swaminathan Committee were to review the procedure relating to the operation of the controls applicable to the establishment of additional industrial capacity under the Industries (Development and Regulation) Act, 1951, the import of capital goods, the issue of capital, and admission of foreign investment and collaboration and to suggest such modifications as would reduce delay in action. The Committee was also asked to examine the procedures governing the licensing of raw materials for the industry. It must be said to the credit of the Committee that it has acted fairly quickly, having completed its task in slightly less than six months. Only, the Government has taken a little more time in accepting the Committee's recommendations.

The Committee made its recommendations in two parts. An interim report was submitted by the Committee on 17th December 1963, that is, within a period of less than three months from the date of its constitution and was accepted by the Government on the 13th January 1964. In that report, the Committee had confined itself to two main recommendations, namely, the issue of a 'letter of intent' and the adoption of a special accelerated procedure for 'key' industries. The final report of the Committee was submitted on 18th March 1964, covering the rest of the terms of enquiry, particularly those pertaining to the delays in the issue of licences for the import of components and raw materials. This final report has just been published, thereby providing one with an opportunity to review the committee's work as a whole.

'Letter of Intent'

It is of utmost importance that the applicants submitting their proposals regarding the establishment of industrial concerns, should know at the earliest whether the Government would be prepared to consider favourably the grant of licence to them. During its case studies, the Committee found that the procedures prevalent were very cumbersome and that the frequent movement of files caused unnecessary delay in the granting of licences. Although it is laid down under Rule 15 of the Registration and Licensing of Industrial Undertakings Rules 1952, that the decisions on the applications for industrial licences should be taken within a period of three months, a random selection of eight cases for case study by the Committee, presented a very disappointing state of affairs. In these cases, the time taken ranged from 61 to 396 days and in six cases out of the eight in the sample, the period involved was more than 150 days. Accordingly, the Committee favoured a speedy procedure for grant of licences under which a 'letter of intent' could be issued within a month or so of the date of receipt of application. This 'letter of intent,' besides indicating that the Government would be prepared to consider favourably the proposal put forward by the applicant, would also enable him to go ahead with his plans for negotiating with foreigners for collaboration or for the supply of capital goods, etc. But, if within a period of six to twelve months, depending on the nature of the industry, the party concerned does not complete the formalities regarding foreign collaboration, capital issue, etc., the 'letter of intent' under the Committee's recommendation, would automatically lapse. Although the stipulated period for the submission of applications for other clearances has been reduced to four months by the Government, the period of validity of a 'letter of intent' is not rigid and depends on the nature of the case and, if necessary, the period of validity can be extended.

The Committee recommended in its interim report that, once a 'letter of intent' has been issued, a different procedure should be followed in respect of 'key' industries, a list of which was made out by the Committee having regard to the shortfall in effective establishment of production capacity for the attainment of Plan targets and the need for speedily establishing additional capacity in certain industries important for the promotion of self-generating industrial growth. The twenty-two industries included in the list of 'key' industries are: pig-iron, alloy steel, ferro-chrome and other ferro-alloys except ferro-manganese and ferro-silicon, malleable iron castings, steel castings, steel forgings, structurals (heavy), industrial machinery, cranes, machine tools, including small tools, dies, jigs and fixtures, automobile ancillaries, coated abrasives, electric winding wires, fertilisers, sulphuric acid, caustic soda and soda ash, rubber chemicals, petro-chemicals, including synthetic rubber pesticides, paper and paper board, cement and pulp (cellulosic). In the case of these industries, the Swaminathan Committee recommended that all further clearances should be considered simultaneously by the Sub-committee of the Licensing Committee. This recommendation has also been accepted by the Government and the Ministry of Industry has already appointed a special officer, Mr. K. J. George in the Ministry. Accordingly, it is now possible for an entrepreneur wishing to establish any one of the key industries to make his applications simultaneously for securing approval for the phases of investment. In addition, a number of Committees have been set-up for greater internal co-ordination and more powers have been delegated to the Ministries for facilitating speedy disposal of applications.

Final Report

The Government has also accepted, in principle, the recommendations made by the Swaminathan Committee in its final report, according to the resolution released on 11th inst. Briefly stated, the report, *inter alia*, advocates the extension of the special accelerated procedure as recommended in the interim report in December last in respect of 'key' industries for issue of all licences to industries which are either import saving or export-oriented. The Committee has listed eight industries in which substantial imports are taking place at present. These are: Industrial chains, transformer oil, insulating paper, high tensible galvanised steel wires, laboratory glassware, detonators and detonating fuse, synthetic fibres and caprolactum. The accelerated procedure has been recommended for these industries in order to ensure that adequate manufacturing capacities are speedily established. According to the Committee, this procedure can also be adapted in case of any industry which the Government considers to be of special importance from the point of view of earning substantial amounts of foreign exchange through exports.

In regard to the industries other than the twenty-two 'key' industries listed in its interim report, the Committee has expressed the view that, due to various practical considerations, including the foreign exchange difficulties which make the prompt clearance difficult, it would not be practicable to follow the special accelerated procedure recommended for key industries. In order to overcome the situation, the Committee has suggested that, where the availability of foreign exchange is not the main limiting factor, the issue of 'letter of intent' must be followed by the issue of licences for all other purposes, such as import of capital goods, approval of foreign collaboration terms and issue of capital, within three months from the date of the receipt of the respective applications. The Committee has also prescribed a close watch over the timely clearance of applications. The Committee has further specified that a list of cases which have not been disposed of within three months from the date of receipt of the applications should be put up at each meeting of the respective committees such as Licensing Sub-committee, C. G. and Foreign Agreements Committee.

The Committee has observed that the existing procedures for importing raw materials/components involve considerable delays in the issue of licences which are often issued at the end of each licensing period. These delays, caused mainly by the uncertain foreign exchange position, have an adverse effect on industrial production, for there is always a time lag between placing of orders and receipt of goods. The Committee has, therefore, recommended that, in order to ensure continuous and uninterrupted production, *ad hoc* licences equal to 50 per cent of the value of the licences for the first half of the previous licensing year should be issued and half of the remaining 50 per cent should automatically be made usable in the second half of the year pending the final announcement of the policy for that year. These suggestions were put forward just one week before the announcement of the import licensing policy for 1964-65 (that is on 31st March 1964). Substantial modifications, incorporating them in effect, were made then alone. In its resolution published this week, the Government says that, while accepting the Committee's suggestions, it has devised a simpler procedure where there is no need for the issue of *ad hoc* licences. This procedure is as follows:

In case of industries where annual licensing is in practice and where the raw materials are not likely to be met from the newly-developed indigenous sources, annual licences of the same value for the previous year would be issued, subject to the condition that, during the first half of the licensing period, only 50 per cent of the value of annual licence could be utilised. There will be a simultaneous authorisation for the utilisation of an additional 25 per cent from the commencement of the second half of the licensing period. The value of these licences will be suitably adjusted when the final policy for the period is announced. In other cases, licences of the value not exceeding that licensed for the first half of the previous licensing period will be issued to meet the needs of the industries for the first half year.

The Government has made it clear that the additional authorisation of 25 per cent of the value of the annual licences for the second half of the licensing period will not, however, be made in the case of established importers.

The Committee has also advocated some modifications in the form of application with a view to ensuring simplification in the procedures. It has, for instance, suggested the submission of two applications, one to enable the issue of a letter of intent and the other, the final application at a later stage, when all the relevant information becomes available, for the grant of formal industrial licence.

The speed with which the Swaminathan Committee has submitted both the interim and final reports and the manner in which the Government has accepted the recommendations provide a gratifying instance of fast action by the bureaucracy. The simplified procedures will, it is to be hoped, go a long way towards helping the establishment of new industrial units, the expansion of the existing ones, and fuller utilisation of existing industrial capacity, provided they are properly implemented. The efficacy of the techniques devised by the Committee for the speedy disposal of applications for industrial licences can be known only after they have been tried for some time. The Committee's awareness of the little regard that is usually shown to the time element in the Secretariat is evident from its stress that a close watch on the timely clearance of all applications for licences must be maintained. Its suggestion that, after a year, the working of its scheme should be carefully examined by a similar Committee is a valuable one, for such a study will provide an opportunity for prompt adjustments that may be found necessary in the light of experience and the then prevailing circumstances.

JARDINE HENDERSON JUTE GROUP

MARKED RISE IN PRODUCTION COSTS AFFECTS PROFIT MARGIN

IN contrast to 1962 which was one of the most prosperous ever enjoyed by the Indian jute industry, the year ended 31st December 1963 was less profitable. Offtake of jute goods, of course, continued to be satisfactory and production by the industry was maintained at the maximum. But, at the same, prices realised from the sale of goods declined throughout the year, in view of readier availability. As against this, cost of production increased by approximately Rs. 30 per ton following the award of the Wage Board for jute industry, besides the additional incidence imposed by emergency risks insurance premiums and higher electricity and lighterage charges. Since most of these cost increases were unrelated to the level of output, profit-margins suffered a setback. Fortunately, in most cases, the decrease in profits was not serious enough to necessitate a cut either in dividend or in ploughback. This feature is well reflected in the working results for the year ended 31st December 1963 of the two companies under the management of Jardine Henderson Ltd., namely, the Kamarhatty Company Ltd. and the Kanknarrah Company Ltd.

Kamarhatty

The working results of the Kamarhatty Company for the year under review bear the impact of all the aforesaid factors, as also of the loss of two weeks' production owing to a lock-out in July and a strike in November. Not only has turnover declined for the second year in succession by Rs. 22.10 lakhs to Rs. 393.68 lakhs, but the profit-margin (ratio of gross profit to sales) has also decreased by no less than 1.9 point to 13.7 per cent, with the consequent decline of Rs. 9.92 lakhs to Rs. 33.91 lakhs in gross profit. Notwithstanding this fall in gross profit, there has been an increase of Rs. 0.59 lakh to Rs. 4.00 lakhs in the provision for Managing Agents' commission and of Rs. 6.83 lakhs to Rs. 30.33 lakhs in that for taxation. Although the provision for depreciation has been stepped down, the saving has been marginal, being only Rs. 0.85 lakh to Rs. 6.03 lakhs and, as a result, the net profit has contracted from Rs. 31.05 lakhs to Rs. 13.55 lakhs. Adding to this the Rs. 2.62 lakhs withdrawn from reserves and past provisions, the Directors have transferred Rs. 6.43 lakhs (Rs. 7.33 lakhs) to reserves, besides setting aside Rs. 1.25 lakh for paying preference dividend in respect of the year. The ordinary dividend has remained unchanged at 20 per cent, claiming, as before, Rs. 8.64 lakhs.

Kanknarrah

Like its sister company, the Kanknarrah Company, too, has produced somewhat depressing working results for 1963. Whereas the realisations from sale of products have deteriorated only moderately from Rs. 391.46 lakhs to Rs. 387.56 lakhs, the gross profit has come down rather sharply from Rs. 68.64 lakhs to Rs. 54.26 lakhs or by about 21 per cent. Nevertheless, essential provisions in aggregate have more than doubled from Rs. 19.34 lakhs to Rs. 42.26 lakhs, mainly because of the increase of Rs. 23.46 lakhs to Rs. 33.55 lakhs in the provision for taxation and of Rs. 0.30 lakh to Rs. 4.12 lakhs in that for the Managing Agents' commission, though the provision for depreciation is somewhat lower at Rs. 4.59 lakhs, as against Rs. 5.41 lakhs a year before. The resulting net profit is, therefore, as low as Rs. 12.00 lakhs, as against Rs. 49.30 lakhs for the previous year. Fortunately the Directors have found no reason to reduce the ordinary dividend of 15 per cent even after setting aside Rs. 1.11 lakh for the payment of preference dividend and transferring Rs. 6.76 lakhs (Rs. 4.05 lakhs) to reserves, of which Rs. 3.86 lakhs (Rs. 1.45 lakh) merely represent the amount withdrawn from reserves and provisions credited during prior years.

The relative performance of the two Companies during the past four years is presented synoptically in the comparative table appearing at the foot of this review.

The financial position of the Companies is sound. The share capital, mostly in equity shares of Rs. 100 each, is well supported by reserves and outside interest (comprising loans and current liabilities and provisions), though it exceeds own funds, is fully covered by current assets and loans and advances. The gross block in each case is very substantially reduced to about a fifth of its original cost as will be seen from the following summary of the balance-sheets of the two companies as at 31st December 1963:

(In lakhs of rupees)

LIABILITIES	*Kamarhatty*	*Kanknarrah*
Share capital—		
Preference	16.00	14.23
Ordinary	42.20	54.00
	58.20	68.23
Reserves	36.85	16.58
Own funds	95.05	84.76
Loans	43.14	32.36
Current liabilities and provisions	85.77	83.25
Total	223.96	200.37
ASSETS		
Gross block	208.46	179.25
Less depreciation	160.07	135.47
Net block	48.39	43.78
Capital work-in-progress		0.02
Investments	17.65	3.27
Current assets, loans, and advances	159.02	148.20
Total	224.96	200.37

The companies continued to operate as many looms as possible during the year under review, having regard to ancillary machinery installed, and the operation of looms is in excess of the registered complement under the working time agreement of the Indian Jute Mills Association was subject to the purchase of loom hours from other mills. Raw jute supplies were adequate throughout the year, though quality continued to deteriorate. Prices were well maintained at the operational minima imposed by the Government and the resources of all the mills were stretched to the utmost to provide finance and storage space for the stocks which they were obliged to hold.

Greater emphasis was placed by the Companies during the year on quality control and preshipment inspection of goods. While results were achieved, it was here that the declining quality of raw jute supplies became most apparent and large quantities of jute fit only for sacking production that the mills were obliged to buy to fulfil their quotas set by the Jute Commissioner is reported to have become an acute embarrassment to the Companies and to the industry. Furthermore, the offtake of sacking, while it was sustained to some extent by increased internal consumption, was steadily reduced as a result of increasing production at lower cost in Pakistan.

The current *cum-div.* prices and the net yields fetched by the shares on an *ex-div.* basis are as follows:

	Price Rs.	*Yield* %
Kamarhatty	164.00	8.1
Kanknarrah	140.00	9.4

The Directors report that the results for the current financial year indicate a continuance of this trend and, with even increasing competition, the margin of profit that can be earned on both hessian and sacking is still diminishing. They, however, point out that there are indications that more countries are beginning to take an interest in Indian jute goods and hope that the strenuous efforts being made by both the Government and the Indian Jute Mills Association will result in the creation of new markets, particularly for sacking, to replace those already lost. Even so, the Directors fear, it will be difficult to retain such markets and prevent a further erosion of our established markets unless possible steps are taken to offset the large price advantage enjoyed by the Pakistan mills.

Both the Companies have planned the installation of additional machinery to complete the modernisation of the preparing and spinning departments and, in the case of indigenous items, orders have been placed. In addition, they are increasing the sewing capacity of the factories. The Directors of Kamarhatty Company report that considerable expenditure was necessary during the year in order to carry out repairs to the retaining wall on the river front of the Company's property and that this is now in good condition. Plans are being prepared, they say, for the construction of two additional godowns for jute storage.

PROGRESS AT A GLANCE

(In lakhs of rupees)

ANGLO FRENCH TEXTILES PAYS MORE

PROFIT FAILS TO KEEP PACE WITH RISE IN SALES

IN all respects, the results of the Anglo French Textiles Ltd. [Managing Agents: Messrs. Best and Co. (Pondicherry) (P.) Ltd.] for the past calendar year are better than those for the previous year. Its sale proceeds, which had dipped in the previous year from Rs. 307.62 lakhs to Rs. 278.32 lakhs, have recovered to a new high level of Rs. 314.16 lakhs. Its gross profit at Rs. 25.49 lakhs has gained Rs. 3 lakhs out of Rs. 9 lakhs lost in the previous year. The net profit at Rs. 11.01 lakhs is slightly lower as compared with Rs. 11.40 lakhs realised a year before, which is, however, due to the essential provisions going up with the improvement in gross profit. Although the net profit is lower, the distributable surplus is higher at Rs. 13.57 lakhs, as it includes, besides Rs. 6,172 brought in from the previous year, Rs. 2.49 lakhs being receipts relating to previous years. As a result, not only the amount transferred to reserves has been raised from Rs. 7 lakhs to Rs. 7.92 lakhs, but the bulk of the four-point cut imposed in the dividend on the 100-rupee ordinary shares has also been restored; the rate of dividend being 15 per cent per annum, as against 12 per cent a year before.

Considering that the production of yarn declined from 4.88 million kg. to 4.69 million kg. and that of cloth from 24.62 million metres to 22.92 million metres owing to a strike involving stoppage of work for nearly a month, the year's results are quite satisfactory. The increase in sales, in spite of lower production, is explained by the decline in stocks of finished and processed goods from Rs. 56.18 lakhs to Rs. 26.83 lakhs. Another point to be noted is that, as against the improvement of nearly Rs. 36 lakhs in sales, the increase in gross profit is of only Rs. 3 lakhs. This is in spite of the production being lower and the sales having gone up due entirely to depletion of the previous year's stocks. Further, we are told that costs were generally well controlled and where increases occurred, they were beyond the management's control. Notwithstanding all this, profit has failed to keep pace with the rise in sales, apparently because three-fourths of the improvement in the turnover (Rs. 27 lakhs, to be precise) has been on account of export sales on which the Company obviously did not realise a remunerative price.

The following table brings out the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sales (gross)	314.16	278.32	307.62	267.22

The Income-tax Act, 1961, was made applicable to Pondicherry (where the Company is located) as of 1st April 1963, and the Company's total income for 1963 is subject to assessment under this Act. Under the Pondicherry (Taxation Concession) Order, 1964, a deduction of 60 per cent will be allowed from the tax computed for the assessment year 1964-65.

The Company's modernisation plans continue to be affected by delayed deliveries of materials. But the Directors state that, in the context of the overall situation in the country in regard to the availability of machinery and machinery parts, the progress made during the year was greatly satisfactory.

The Company's paid-up capital, including Rs. 18 lakhs in 6 per cent cumulative redeemable preference shares of Rs. 100 each, is unchanged at Rs. 48 lakhs. It is backed by Rs. 46.48 lakhs in reserves and surplus. Loans and advances of Rs. 62.52 lakhs and current liabilities and provisions of Rs. 67.63 lakhs together bring the total indebtedness to Rs. 130.15 lakhs, as against which current assets, book debts and investments total Rs. 168.66 lakhs. The gross block, which has expanded during the year from Rs. 84.92 lakhs to Rs. 91.71 lakhs, has been written down to Rs. 49.01 lakhs and, together with capital work-in-progress, the net block is shown at Rs. 55.97 lakhs.

The yield on the Rs. 100 fully paid ordinary shares of the Company at their current market value of Rs. 155 *cum-div.* works out to 8.4 per cent per annum net.

TEXMACO'S RESULTS IMPRESSIVE

RESERVES STRENGTHENED

THE year ended 31st December 1963 has turned out to be one of all-round prosperity for the Textile Machinery Corporation Ltd. (Managing Agents: Messrs. Birla Brothers [Private] Ltd., Calcutta), in spite of hurdles and bottlenecks in the procurement of certain raw materials and components, occasional pin-pricks from the labour and at times critical power supply position. It was possible for the Company to show a further substantial improvement in its working, despite these handicaps, only because the management was, we are told, all the while alive to the difficulties and disturbances and was successful to a large extent in discovering ways and means to avoid the consequent loss to economy and productivity. It is heartening to learn from the Directors that they are hopeful of maintaining the progress so far achieved by overcoming the difficulties in the best possible manner.

The most encouraging feature of the year's operations is that the realisation from the sale of the well diversified range of products has, for the first time, crossed the Rs. ten-crore mark by advancing from Rs. 9.62 crores to Rs. 12.22 crores and has in fact more than doubled since the setback suffered in 1960. The gross profit has likewise advanced by no less than Rs. 93.11 lakhs to Rs. 250.35 lakhs, the improvement during the past three years being over 400 per cent. Nearly two-thirds of the enlarged gross profit, however, has been absorbed by the essential prior appropriations. The provision for the Managing Agents' commission has risen from Rs. 7.41 lakhs to Rs. 10.98 lakhs, that for depreciation only nominally from Rs. 25.37 lakhs to Rs. 26.29 lakhs, and that for taxation sharply from Rs. 70.90 lakhs for the year before to Rs. 123.75 lakhs. The improvement in net profit from Rs. 53.56 lakhs for 1962 to Rs. 89.33 lakhs for the year under review is, therefore, much less than that in gross profit. The bulk of the rise in profit has been used to raise the ploughback substantially from Rs. 23.43 lakhs to Rs. 55.57 lakhs, of which Rs. 8.70 lakhs (Rs. 6.50 lakhs last year) go to the provision for contingencies, Rs. 4.87 lakhs (Rs. 3.07 lakhs) to statutory development rebate reserve and Rs. 42 lakhs (Rs. 13.75 lakhs) to general reserve. Finding that, even after these heavier transfers to reserves and after setting aside Rs. 11.36 lakhs for preference dividends in respect of the year, a larger sum is available for distribution to shareholders, the Directors have raised, for the second successive year, the ordinary dividend by 2½ points to 15 per cent, subject to deduction of tax. This claims Rs. 22.50 lakhs and leaves Rs. 54,305 as carry forward as against Rs. 64,360 brought in.

The magnificent progress achieved by the Company during the past two years is reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sales and internal consumption	1,221.84	961.44	777.46	587.88

	(15%)	(12½%)	(10%)	(10%)
Carry forward	0.54	0.64	0.63	0.59

Market price of ordinary shares (in rupees):	1964	1963	1962	1961	1960
High	29.10	28.90	26.35	24.76	29.40
Low	26.35	19.00	19.75	16.24	21.50

In line with the financial results, the physical performance of the Company was impressive. The production of textile machinery went up appreciably, the increase in production over the preceding year being 20 per cent in ring frames, 40 per cent in carding engines and 81 per cent in drawing frames. Quality and workmanship received the utmost attention and constant efforts were made for further improvement. To bring its products up to the most advanced standards, the Company has entered into a technical collaboration agreement with Messrs. Zinser Textilmachinen of West Germany and the machines manufactured under this scheme are expected to be marketed in early 1966. Activities of the machine tool division proceeded according to schedule. An indigenous content of 50 per cent was achieved and is expected to be increased to 75 per cent in the current year. The quality of the machines manufactured was well appreciated and the entire output after July 1963 was acquired for defence needs. The project for the manufacture of the advanced type of combination turret lathe made further progress. The Government has issued clearance for the import of the necessary plant and machinery and negotiations for acquisition of foreign exchange for purchasing the equipment are in an advanced stage.

The working of the foundry continued to be satisfactory in spite of power shortage and the resultant interruption in production. The extension of the present capacity from 3,000 tons to 9,000 tons is under active implementation. The building to house the extended plant is reported under construction and the required additional power has already been sanctioned. The rolling stock division also made good progress during the year, the increase in outturn being 10 per cent as compared with 1962 and 33 per cent with 1961. A scheme for expansion has been prepared and many components, hitherto in short supply, are being developed in the Company's factories. The production of water tube boilers and sugar mill machinery was maintained, though full capacity could not be utilised for want of orders. Unfortunately, the cast iron spun pipe project has failed to make any further progress due to some difficulties at the Governmental level and non-availability of foreign exchange.

The paid-up share capital of the Company, as at 31st December 1963 continues to stand unchanged at Rs. 290 lakhs—of which Rs. 150 lakhs are in equity shares of Rs. 10 each but the reserves have risen to Rs. 126.15 lakhs. The total of own funds thus aggregate Rs. 416.15 lakhs. Outside finance is as high as Rs. 891.20 lakhs comprising Rs. 330.49 lakhs under secured and unsecured loans and Rs. 560.71 lakhs under current liabilities and provisions. These, however, are fully covered on the assets side by current assets and loans and advances which stand, as at the date of the balance-sheet at Rs. 1,014.23 lakhs. Investments, mainly unquoted, are carried in the books at a cost of Rs. 4.85 lakhs. New assets worth Rs. 37.23 lakhs were acquired during the year. This has raised the gross block account to Rs. 574.97 lakhs which, on deduction of Rs. 292.92 lakhs being the accumulated amount of depreciation, yields a net block of Rs. 282.05 lakhs. Besides, capital work-in-progress is valued at Rs. 5.85 lakhs, so that the total of net block works out to Rs. 287.90 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 27.40 *cum-div.* and give a net yield of 4.6 per cent per annum.

MODERN MILLS' PROFIT DROPS SHARPLY

The revision of cotton yarn prices in February 1963 (upward for counts 40s and below and downward for counts 40s and above), the depressed state of the cloth market for quite long after the Chinese aggression and the concession allowed to independent processors in the rates of excise duty on processed goods under the 1962-63 budget have all combined to cause a sharp fall in the gross profit of Modern Mills Ltd. [Managing Agents: Messrs. N. Sirur & Co. (P) Ltd., Bombay] from Rs. 31.03 lakhs to Rs. 20.54 lakhs, despite a further rise in sales from Rs. 248.69 lakhs to Rs. 266.80 lakhs, during the year ended 31st October 1963. While the second factor, namely, the depressed state of the cloth market, has uniformly affected the industry as a whole, the first factor has hit this Company particularly on account of its large output of superfine yarn, and the last factor has reduced its processing revenues, because the concession caused a large part of powerloom cloth to get diverted to independent processing factories for processing.

The year under review has been the third in a row of lower profit, but the setback now has been so sharp that the profit has sunk to the lowest level for the past four years and is only Rs. 3.13 lakhs more than Rs. 17.41 lakhs realised in 1958-59. Net profit at Rs. 12.89 lakhs is higher by Rs. 2.20 lakhs over the year, because no provision for taxation is required to be made for the year in view of the deficit resulting from the payments during the year of the previous years' bonuses. For the same reason no provision has been made for development rebate. The payments during the year of the previous years' bonuses amount to Rs. 14.12 lakhs and after allowing for these payments, there is actually a deficit of Rs. 1.23 lakh. But this deficit is made up by writing back excess provisions of Rs. 7.95 lakhs, and out of the balance of Rs. 7.05 lakhs (including Rs. 32,182 brought in from the previous year) Rs. 45,500 have been credited to gratuity reserve and Rs. 6.55 lakhs to dividend reserve for meeting the year's dividend liability and the surplus of Rs. 4,622 has been carried forward. The rate of dividend on the Rs. 50 fully paid ordinary shares has been halved to 6 per cent per annum. But this is on a much larger paid-up capital of Rs. 108.39 lakhs, as compared with Rs. 50.77 lakhs a year before following a series of new capital issues, at first of 92,947 right shares in the proportion of one-for-one to shareholders as on 4th June 1962, which, however, became fully paid only during the year under review, followed with capitalisation of reserves to the extent of Rs. 7.74 lakhs through a one-for-six bonus issue and a further capitalisation of reserves to the extent of Rs. 15.48 lakhs for a similar issue.

The following table compares the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st October			
	1963	1962	1961	1960
Sales of cloth, yarn and waste	266.80	248.69	232.40	192.28

	(6%)	(12%)	(12%)	(12%)
Carry forward	0.05	0.32	0.30	0.32

Equity shares' market value (in rupees):	1964	1963	1962	1961	1960
High	50.00	52.00	84.00cr	94.00	106.00
Low	38.50	44.00	54.00xr	63.00	55.00

Machinery worth Rs. 13.13 lakhs arrived during the year. Since its close, commitments for machineries worth Rs. 9.99 lakhs have been made. The comprehensive shrinkage range costing about Rs. 5.05 lakhs for "Sanforizing" cloth, which arrived in the current year, has been erected and trials are in progress. The 12,096 new spindles ordered for expansion at Mill No. 2 started arriving in last April and are under erection. A hundred and forty-four additional Japanese automatic looms are expected shortly.

On 18th July, 1963, the Company invested in sufficient shares of Sundatta Foods and Fibres Ltd. to make that Company a subsidiary as envisaged in the resolution passed on 30th April 1962. The Company now holds in Sundatta Foods 29,018 shares of Rs. 50 each (against 5,312 in the previous year) out of that company's paid-up capital of Rs. 27.32 lakhs, including Rs. 8.91 lakhs in 50-rupee preference shares. Against the cost price of Rs. 13.95 lakhs, its holdings command a market value of Rs. 8.13 lakhs only. During the year ended 31st March 1963, Sundatta Foods earned a profit of Rs. 11,691, subject to depreciation, which has gone to reduce the carry forward loss to Rs. 8.33 lakhs. In February last, the Company entered into a partnership with the Mysore Spinning and Manufacturing Company Ltd. and the Minerva Mills Ltd. under the name and style of Sundatta Fabrics for conducting retail cloth sales. The first retail cloth shop was opened in Bangalore on 9th March.

With a paid-up capital of Rs. 108.39 lakhs and reserves and surplus of Rs. 46.55 lakhs (excluding Rs. 6.55 lakhs from general reserve required for meeting the year's dividend liability), the Company has a gross block of Rs. 187.88 lakhs (Rs. 166.21 lakhs a year before) which has been written down to Rs. 95.31 lakhs. Borrowings of Rs. 95.57 lakhs and current liabilities and provisions of Rs. 34.13 lakhs (including the dividend liability) bring the total indebtedness to Rs. 129.75 lakhs, which is well covered by current assets, book debts and investments aggregating Rs. 185.11 lakhs.

Currently quoted at a discount at Rs. 38.50 *cum-div.*, the Rs. 50 fully paid ordinary shares of the Company fetch a net yeild of 5.7 per cent per annum.

AMAR DYE'S PROFIT FALLS AGAIN

The gross profit of Amar Dye-Chem Ltd. (Managing Agents: Messrs. Amritlal and Co. Pvt. Ltd., Bombay) which has been on a downward trend ever since 1960 has lost further ground in the year ended 31st December 1963. The actual profit is just Rs. 30.38 lakhs, as against Rs. 36.59 lakhs for the preceding year. Since this recession has taken place in spite of the modest increase in sale proceeds from Rs. 142.90 lakhs to Rs. 149.54 lakhs, the profit-margin (ratio of gross profit to sales) has, as a matter of course, declined by no less than 5.3 points to 20.3 per cent. Commenting on the disappointing state of affairs, the Directors observe:

"The Company has been manufacturing a line of products called naphthols and fast colour bases. This group of dyestuffs has been passing through critical times after it was removed from tariff valuation and was put on *ad valorem* basis for purposes of customes duty. There were, therefore, large imports of these items against unutilised licences during 1963 and these had a very adverse effect on the sales during the first three quarters of the year. Besides, there was a clearly visible shift in the consumption pattern of dyestuffs towards pigment printing colours, involving a replacement of naphthols, vat colours, etc. This resulted in a large accumulation of stocks of finished products to such an extent that the Company had to slow down the production of its traditional items. The total overhead expenses thus had to be distributed on a lower production which naturally increased the cost. Against this background, all efforts were made to effect sales at reduced prices and at considerable discount which affected the profits of the Company."

The following comparative table presents synoptically the working results of the Company for the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sale proceeds	149.54	142.90	170.40	176.15

Closing stocks of finished goods	53.68	55.79	48.81	34.32
Raw materials and stores consumed	66.57	61.06	76.61	87.39
Other expenses	52.04	54.11	46.62	34.49
Gross profit	30.38	36.59	64.08	67.72
Managing Agents' commission	0.96	2.01	4.34	5.61
Provision for—				
Depreciation	20.75	12.65	8.66	7.8
Taxation	..	9.63	22.40	21.06
Net profit	8.67	12.30	25.68	33.24
Withdrawal from reserves	6.60	..	..	10.40
Receipts in respect of previous years	0.17	0.40	0.87	2.37
Miscellaneous write-offs	..	..	..	0.10
To reserves	6.62	3.08	20.42	35.68
Dividends—				
Preference	1.71	1.71	1.71	1.71
Ordinary	7.20	8.10	7.35	3.70
	(8%)	(9%)	(12½%)	(12½%)
Carry forward	0.07	0.16	0.35	0.18

Market price of ordinary shares (in rupees):	1964	1963	1962	1961	1960
High	170	228	389	440	528
Low	128	145	195	276	235

Consequent on the decrease in gross profit, the provision for Managing Agents' commission has declined from Rs. 2.01 lakhs to Rs. 0.96 lakhs, while that for depreciation has risen sharply from Rs. 12.65 lakhs to Rs. 20.75 lakhs. As for taxation, even though no provision has been found necessary probably because of a heavier development rebate—the transfer to the statutory reserve has trebled—the net profit still stands reduced by Rs. 3.63 lakhs at Rs. 8.67 lakhs, the lowest level touched during any of the past five years. From this, a sum of Rs. 6.62 lakhs has become compulsorily transferable to the development rebate reserve and, since a further Rs. 1.71 lakh has to be earmarked for paying preference dividend, there is very little profit left for distribution to equity

shareholders. So the Directors have been obliged to withdraw Rs. 6.60 lakhs from the reserve and declared a lower dividend of 8 per cent, as against 9 per cent, subject to deduction of tax. This claims Rs. 7.20 lakhs, leaving Rs. 6,813 to be carried forward, as against the Rs. 15,665 brought in.

The Company's expansion programmes continued to make satisfactory progress during the year. The first phase of the programme to manufacture T.P.M. dyes was delayed somewhat due to the late delivery of some equipments, but these important items could be successfully marketed during 1963. Plants for some other important items have gone into regular production in the first quarter of 1964 and those for certain others will be commissioned during the second quarter of this year. Technicians from the collaborators are at present working on these projects and it is expected that, by the end of June, all the plants connected with the first phase of the programme will be put into proper shape and turned to work satisfactorily to rated capacity. As for the second phase, the building is under construction and the plant is expected to be ready by the end of the current year.

The BON acid plant was commissioned in December 1963. After some teething troubles, two units are working smoothly to rated capacity and production from this plant will be doubled during the next three months after two more units go on stream. The Directors anticipate that, after meeting the Company's own requirements there will be enough surplus of this important intermediate available for domestic sales as well as for exports. The pigment plant is also ready for operation and trial runs are currently being caried out. As soon as the qualities are standardised, regular production will start. The production unit for making dye intermediate is expected to be ready by the end of 1964. No progress, however, could be made with the composite scheme for the manufacture of intermediates for dyes to make the Company self-sufficient.

The Company proposes to diversify its activities with a view to ensuring itself against the possible lean periods due to shifts in the consumption pattern of dyestuffs. Accordingly, it has applied and obtained licence for manufacture of 240 tons of organic peroxide. It has also negotiated for technical collaboration with Novadel Ltd. of London and the Government has approved in principle the terms of the agreement. Further, the Company proposes to manufacture pigment, printing colour and has obtained the necessary permission from the Government, besides procuring the technical know-how. Steps are being taken to start production as early as possible. The manufacture of pigment dyes, it is stated, will compensate for the setback in the business of naphthols and fast-bases. Reactive dyes and pigments printing colours are two ranges of dyestuffs which are highly promising and the Directors express the hope that the Company's entry in these lines will, in due course, greatly help in building up its prosperity.

Following the rights issue made in the previous year, the equity share capital of the Company has risen to Rs. 110.23 lakhs and, together with the preference share capital of Rs. 20 lakhs, makes for a total share capital of Rs. 130.23 lakhs. This is backed by Rs. 80.19 lakhs in reserves and surplus. Own funds have, therefore, advanced from Rs. 189.22 lakhs to Rs. 210.42 lakhs. But this improvement is outstripped by the rise in outside interest of Rs. 27.98 lakhs to Rs. 196.88 lakhs, comprising Rs. 142.22 lakhs as secured and unsecured loans and Rs. 54.66 lakhs as current liabilities and provisions. The addition of new assets worth Rs. 65.13 lakhs during the year has raised the gross block to Rs. 229.75 lakhs and, even though the accumulated amount of depreciation of Rs. 73.73 lakhs is larger by Rs. 22.76 lakhs as compared with the previous year, the net block still stands higher at Rs. 155.29 lakhs, as against Rs. 113.65 lakhs. Since capital work-in-progress is also valued at Rs. 53.38 lakhs, as against Rs. 28.52 lakhs, the total net block is Rs. 208.67 lakhs or Rs. 66.50 lakhs higher than previously. Current assets, loans and advances, and investments however, are down from Rs. 215.92 lakhs to Rs. 198.49 lakhs and are still sufficient to cover fully the borrowings and current liabilities and provisions put together.

As regards prospects for current year, the Directors have stated that, since the last quarter of 1963, business conditions have improved considerably and new plants for reactive dyes and T.P.M. dyes have been commissioned into production. Five applications for patents in respect of reactive dyes have been filed and two have not been opposed. The Company is manufacturing and marketing all the five of them and the range is gradually expanding. The cumulative effect of these, as well as the better trading conditions which are expected to continue during the whole year, will, the Directors hope, end in better results for 1964. In fact, the results of the first quarter of 1964 are said to be much better than those for the corresponding period last year. The main problem worrying the Directors is that of raw materials. With new projects coming on stream, requests have been made to the Government for more raw material allocation. The response is not encouraging, but all possible sources of obtaining raw materials are being tried to maintain production at a satisfactory level.

The Rs. 100-paid ordinary shares of the Company are currently quoted on a *cum-div.* basis at Rs. 146 and fetch, on an *ex-div* price, a net annual return of 4.6 per cent as fresh investment.

ELPHINSTONE MILLS SCRAPES THROUGH

In spite of a substantial increase of Rs. 65.17 lakhs to Rs. 343.03 lakhs in sale proceeds as compared with Rs. 8.29 lakhs to Rs. 297.86 lakhs in the previous year, the Elphinstone Spinning and Weaving Mills *Company Ltd.* (Director: Mr. N. K. Jalan, Bombay) has fared no better during 1963 than what it did in 1962. For its gross profit at Rs. 25.24 lakhs has recovered only a part of the setback of nearly Rs. 29 lakhs (to Rs. 13.98 lakhs) suffered in the previous year. But it would be lower, if the sum of Rs. 19.91 lakhs provided in the previous year as bonus for the years 1959, 1960 and 1961 is taken into account before determining the 1962 profit. During the year under review, only Rs. 3 lakhs have been provided as bonus for 1962. Because of this large difference in the bonus provision staff expenses have come down from Rs. 99.92 lakhs to Rs. 83.40 lakhs and the gross profit has recovered slightly as noted before.

The improvement in profit is in no way in keeping with the rise in sales, because of various reasons listed by the Directors, namely, the abnormally high prices of both indigenous and foreign cottons, the monthly average rate of D.A. paid to the operatives during the year for 26 working days reaching a record high of Rs. 97.10, the *status quo* on the price front under the system of voluntary price control and the poor realisation from export sales due to competition. Additionally, production of superfine qualities was hampered on account of shortage of suitable cotton and that of leather cloth was curtailed owing to shortage of the required raw materials.

Net profit, after making the essential provisions, has doubled from Rs. 3.56 lakhs to Rs. 7.29 lakhs. But still it has been supplemented by Rs. 3.07 lakhs drawn from reserves, as against Rs. 6.50 lakhs a year before. The amount of profit carried to reserves is Rs. 3.38 lakhs as compared with Rs. 4.09 lakhs in the previous year. The rate of ordinary dividend has been kept unchanged at Rs. 9 per Rs. 50 fully paid share. The ordinary and preference dividends aggregating Rs. 7.15 lakhs are to be paid out of general reserve to which Rs. 7.57 lakhs have been transferred from the year's profit. The surplus carried forward is Rs. 12,247, as against Rs. 5,844 brought in.

The Company's progress in the past four years is tabulated below:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sale proceeds	343.03	297.86	289.57	226.71
Closing stocks	79.86	105.30	80.31	68.24
Other income	5.53	3.99	2.32	3.81
Materials, stores and spares consumed	174.69	165.98	150.19	129.78
Staff expenses	83.40	99.92	82.82	71.35
Other expenses	39.79	37.96	37.17	24.90
Gross profit	25.24	13.98	42.78	35.83
Provision for—				
Depreciation	12.35	9.82	8.08	6.30
Taxation	5.60	0.60	16.00	7.00
Net profit	7.29	3.56	18.70	22.53
Write-backs and refunds	0.29	...	...	0.25
Transfer from reserves	3.07	6.50	...	...
Miscellaneous provisions	0.04	0.12	1.03	0.27
Transfer to reserves	3.38	4.09	9.01	14.54
Dividends—				
Preference	1.75	1.75	1.75	1.75
Ordinary	5.40 (18%)	5.40 (18%)	6.60 (22%)	5.40 (18%)
Carry forward	0.12	0.06	1.37	1.06

Equity shares' market value (In rupees):	1964	1963	1962	1961	1960
High	102.00	104.00	142.00	126.00	67.00
Low	95.00	89.00	93.00	55.50	35.00

Further increases in the Company's staff expenses are said to have taken place during the current year. Following the Government's decision to adopt the Lakdawala Committee's recommendations for calculating the consumer price index number on a revised upward basis, dearness allowance at an increased rate of approximately Rs. 8 extra per worker per month is being paid from January last. The Industrial Court's Award in respect of leave for workers, effective as of 1st January 1964, has meant an additional burden of Rs. 2 lakhs per year. Further, the increase in the employer's contribution to provident fund from 6¼ per cent to 8 per cent from December last has raised the Company's provident fund contribution by Rs. 1 lakh per year. Besides higher staff expenses, the Directors say that increases in the excise duty on yarn and cloth and the introduction of *Surtax and the 7½ per cent Dividend Tax* will impose a heavy burden on the industry.

But in spite of limitations affecting its profitability, the Company has been proceeding with its modernisation programme. Several useful items of machinery valued at Rs. 14.79 lakhs were installed and put into commission during the year, while 16 automatic looms were under erection before the year was out. The Cotton Textile Loan Advisory Committee has recommended to the N.I.D.C. Ltd. an additional loan of Rs. 37 lakhs to the Company for equipping the Moon Mills with the latest types of spinning and other machinery.

The Company's paid-up capital, including Rs. 25 lakhs in preference shares, remains unchanged at Rs. 55 lakhs and is backed by reserves and surplus amounting to Rs. 49 lakhs, excluding Rs. 7.15 lakhs from general reserve required for meeting the year's dividend liability. Borrowings have receded from Rs. 86.12 lakhs to Rs. 76.55 lakhs, of which Rs. 26.24 lakhs are from the N.I.D.C. Ltd. and the balance of Rs. 52.31 lakhs is from banks and other sources. Taking into account these short-term loans of Rs. 52.31 lakhs and current liabilities and provisions (including the year's dividend liability) aggregating Rs. 93.87 lakhs, the total indebtedness to outsiders works out to Rs. 146.18 lakhs, as against which current assets, book debts and investments amount to Rs. 139.61 lakhs. The gross block of Rs. 253.02 lakhs (Rs. 237.37 lakhs a year before) has been written down to Rs. 135.61 lakhs. Depreciation for the years 1958 and 1959 amounting to Rs. 9.35 lakhs has not been provided for. No provision has been made for depreciation for 1961, 1962 and 1963 on the assets acquired from the Moon Mills Ltd., as these have not been put to use.

The Rs. 50 fully paid ordinary shares of the Company are currently quoted at Rs. 97.50 *cum-div.* and offer a net yield of nearly 8 per cent per annum.

FACILITATING RESEARCH ON CORPORATE SECTOR

A two-day conference of Heads of Faculties of Commerce and Economics of Universities and premier economic research institutions in India will be held here at New Delhi in August next. Convened by Mr. R. C. Dutt, Chairman of the Board of Company Law Administration, the Conference will consider the question of securing closer liaison between the Board and the Universities in drawing up plans and policies for research concerning the *corporate sector or for solving corporate problems.* It is expected that several Universities and research institutions will be represented at the Conference, which will be inaugurated by Mr. T. T. Krishnamachari, Union Finance Minister.

As a result of the recommendation of the Research Programme Committee attached to the Board of Company Law Administration, it will be recalled, facilities were offered for inspection of published documents filed with the Registrars of Companies and guidance to the research workers and others engaged in reseach on problems relating to the corporate sector in the Universities and research institutions. The Research and Statistics Division of the Administration also brought out an information brochure outlining a co-ordinated plan of research work in this field. Since the Administration took this initiative, a large number of research projects have been undertaken in the Departments of Commerce in the Universities and other research institutions. The Estimates Committee of Parliament, its report on the working of the Company Law Division, urged greater liaison between the Research Division of the Company Law Board and the Universities, so that research on corporate matters might get a fillip. As a sequel to this recommendation, as also after reviewing the progress made in this regard during the last five years, it was decided in April last to sponsor a Conference of University Professors and others engaged in high-grade research on corporate problems to discuss (i) present state of research work on corporate problems in the country, (ii) difficulties faced by the research workers and the assistance which the Government could render in solving them and (iii) a co-ordinated plan of research on corporate problems, so that duplication of efforts might be avoided and more purposeful research might be conducted on the more important aspects of the working of the corporate sector.

West Germany's biggest customer for, and biggest supplier of industrial know-how is the United States. German receipts from the U.S. for patents, inventions, processes, etc., in 1963 accounted for 21 per cent of Germany's worldwide receipts. German expenditures in the U.S. for the same types of know-how constituted 38 per cent of Germany's worldwide expenditures. Japan and Italy were runners-up as customers for German know-how. Biggest German expenditures in this field went to, after the U.S., Switzerland, the U.K. and Holland. In 1963, W. Germany paid a total of 637 million DM for licences, received payments of 216 million DM. The comparison is based on a survey by the Bundesbank.

LABOUR

(*Concluded from page 1061*)

seem to be less satisfactory than the conditions in centres where public services predominate.

7. About three per cent of the employees have had to undergo unemployment at one time or another during the preceding year (1957-58). A majority of them were, however, fresh entrants to the labour force. The reasons for unemployment in other cases were mainly retrenchment, dismissal or termination of contract. The average duration of unemployment works out to 21 weeks per person unemployed.

The authors of the survey have not sought to make any critical assessment of the middle class in Indian society on the basis of this survey. But they have made some concluding observations. The *per capita* income of around Rs. 50 per month of the salaried middle class families, according to them, is not much above the estimated *per capita* income of Rs. 43 per month in the case of urban families in general. A comparison of the average incomes and expenditures of middle class families with those of working class families in the same cities reveals that the average incomes/expenditures of the former are about two to three times those of the latter. But, according to the authors, the incomes and expenditures of the "lower middle class," which are roughly about half the overall level, may be regarded only as slightly higher up, as compared with the working class. There is, however, the compensating circumstance that the service conditions of non-manual employees are in general more satisfactory than those of industrial workers.

SYNOPSES OF COMPANY REPORTS

Rajkumar Mills Ltd., Indore

(*Managing Agents*: Messrs. Jall Brothers (Private) Ltd., Indore.)

Forty-first Annual General Meeting—29th June 1964.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1963	1962
Sales	1,66,57	1,38,19
Closing stock	34,01	50,66
Gross profit	17,47	16,38
To Managing Agents' remuneration	96	1,20
Transfer to depreciation	4,24	4,12
,, ,, provision for contingencies	1,50	Nil
,, ,, provision for taxation	6,75	Nil
Net profit	4,02	11,06
Excess provisions for taxation, etc. written back and other adjustments	4,06	28
Balance brought forward from previous year	15	12,58
Appropriations:		
To arrears of income-tax	Nil	18
Transfer to development rebate reserve	1,27	83
,, ,, general reserve	2,15	20,72
To provisions for contingencies for previous years and other liabilities	2,07	Nil
Proposed dividend (tavable) equity	2,54 (20%)	2,03 (16%)
Carry forward	20	15

Market value of equity shares (In rupees):	1964†	1963	1962
High	142.00	171.25	176.00
Low	137.00	120.00	151.00

† Upto 28th May 1964.

Extracts from the Directors' report: *Exports*: The Company exported 21,63,550 metres of cloth of the Ex-Mill value of Rs. 13,94,557 during the year 1963.

Expansion: A general permission has been granted by the Government to all composite Mills in the Country to install additional spindleage to the extent of 7½ per cent and loomage up to 10 per cent of their licensed capacity. Mills having between 12,000 and 25,000 spindles are allowed to increase spindleage to 25,000. Under this permission, the Company has installed 61 Plain Looms which are put in commission and an order for 2,244 spindles has been placed. Thus the installed looms at present are 628 and after receipt of the ordered spindles, the installed spindles will be 25,000.

During the course of the year, a sum of Rs. 8,50,000 has been spent on machinery covering Electric Motors, Distribution Boards, Plain Looms, Hot Air Stentering Machine, etc. Orders for materials for converting Ring Frames to Casablancas GX-2 system of High Drafting One Tri-Raising Machine, 1 Warp and 4 Weft Ring Frames of the approximate value of Rs. 4,98,000 are pending.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	12,68,250	Gross block	1,07,96,840
Reserves and surplus	37,63,396	—Depreciation	64,27,242
Other liabilities	81,34,824	Net block	43,69,198
		Current assets	66,70,049
		Investments	1,35,193
		Cash	29,92,030
	Rs. 1,31,66,470		Rs. 1,31,66,470

* Paid-up capital consists of 25,365 Equity shares of Rs. 50 each. Of the above 5,073 shares are allotted as fully paid-up by way of Bonus shares through capitalisation of reserves.

Premier Fertilisers Ltd.

(*Managing Agents*: Emcete & Sons Private Ltd., Madras.)

Fourth Annual General Meeting—29th June 1964.

Extracts from the Directors' report for the year ended 31st December 1963: *Production*: As mentioned in the Directors' last report, production commenced from the end of January 1963. Being a new plant, the initial teething troubles were there, and after studying and attending to them increased production could be started only by about May 1963, and the rated capacity attained in stages thereafter.

Sales: In spite of severe competition and entering the field for the first time, the Company was able to market over 50 per cent of the *superphosphate* produced. Sale of fertiliser mixtures was encouraging. Plans have been worked out to increase both production and sales of superphosphate and mixtures during 1964.

Working Results: The profit for the year ended 31st December 1963, before charging depreciation is Rs. 52.803. This is encouraging, being the first year of operation as it is, considering the uphill task the Company had to face in marketing. This sum together with the surplus of Rs. 56,804.10 brought forward from previous year aggregates to Rs. 1,09,607.10. As this amount is small compared to the amount of depreciation necessary to be provided for 1963 (which according to the income-tax method works out to Rs. 9,64,479) no depreciation has been provided and the profit has been carried forward.

General: In 1964, the Company opened a Mixing-cum-Sales Unit at Tiruchirapally and Thirunelveli in addition to those already functioning at Cuddalore, Madurai, Coimbatore and Bangalore. Sales are being planned and organised to expand and intensify the Company's activities, and better results are expected this year.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	49,84,750	Gross block	60,41,412
Reserves and surplus	1,18,077	—Depreciation	40,438
Other liabilities	45,48,891	Net block	60,00,974
		Current assets	33,91,345
		Investments	22,897
		Cash	71,632
		Miscellaneous expenditure	1,64,820
	Rs. 96,51,718		Rs. 96,51,718

* Paid-up capital consists of 5,00,000 Equity shares of Rs. 10 each. Calls in arrears amount to Rs. 15,250.

Ferro Alloys Corporation Ltd.

(*Managing Agents*: Messrs. Saraf Mor & Co. Private Ltd., Tumsar, Maharashtra.)

Eighth Annual General Meeting—27th June 1964.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1963	1962
Sales	1,61,43	2,25,57
Sales of imported ferro alloys	9,83	Nil
Closing stock of finished products	2,15,65	1,24,32
Gross profit	28,03	36,72
To Managing Agents' remuneration	1,17	1,85
Transfer to depreciation	9,83	10,69
,, ,, development rebate reserve	21	35
,, ,, provision for taxation	8,50	8,06
Net profit	8,32	15,77
Refunds of expenses for previous years	28	19
Appropriations:		
To expenses relating to previous year	18	5
Transfer to provision for Bonus	90	75
,, ,, general reserve	1,00	5,50
Proposed dividends (taxable) Preference	1,56	1,56
,, ,, ,, Equity	5,60	7,20
	(7%)	(9%)
Carry forward	57	1,20

Market value of equity shares (In rupees):	1964†	1963	1962
High	116.50	130.00	176.00
Low	107.50	116.00	126.00

† Upto 5th June 1964.

Extracts from the Directors' report: *The Barter*: The Government of India through the State Trading Corporation of India Limited (now The Minerals & Metals Trading Corporation of India Limited) successfully negotiated the second barter agreement with the Government of U.S.A., for export of ferro-manganese against import of cotton. Under this barter this company has been allotted the largest quota for export. Though the present deal does not leave adequate margin of profit, yet it will help the company to dispose of its accumulated stocks. The Company has already shipped about 18,000 tons in the year 1964 and further 15,000 tons will be shipped shortly.

Operation: The Company's factory at Shreeramnagar (Garividi) was in full production throughout the year except for a brief period of a fortnight when there was a sudden and illegal strike by the workers. In order to supply the quantity of ferro-manganese allotted to the Company under the above mentioned barter agreement, the furnaces were utilised for manufacturing of ferro-manganese only. The working of the factory has been quite satisfactory.

Repairs to plant and machinery: In addition to normal repairs the company had to do heavy replacements in the shape of slag and metal pans, buckets for Bucket Elevator as also repairs to crushers etc. Besides this, large amounts were expended over re-lining of furnaces.

Messrs. Best Minerals Private Limited, Bombay/Nagpur are owing some good manganese mines in Madhya Pradesh and Maharashtra State. The quality of the manganese ore is well suited for production of ferro-manganese. Since shareholders of the aforesaid company are willing to dispose of their shares, the company is interested in the purchase of the entire shareholdings of the said Company with a view to ensure supply of quality manganese ore for this Company's factory. The matter is under negotiation.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,00,00,000	Gross block	1,43,85,859
Reserves and surplus	26,46,636	—Depreciation	55,29,712
Other liabilities	2,58,91,251	Net block	87,56,147
		Current assets	2,92,99,741
		Investments	3,18,236
		Cash	1,63,763
	Rs. 3,85,37,887		Rs. 3,85,37,887

* Paid-up capital consists of 80,000 Equity shares of Rs. 100 each and 20,000—6 per cent. tax-free cumulative redeemable preference shares of Rs. 100 each.

Enfield India Ltd.

(*Chairman*: Mr. K. R. Sundaram, Madras.)

Eight Annual General Meeting—27th June 1964.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1963	1962
Sales	2,22,89	1,40,50
Receipt from job orders	12,02	12,60

Proposed dividends (taxable) Preference	91	91
,, ,, ,, Equity	3,62	1,85
	(7½%)	(4%)
Carry forward	6	6

Market value of equity shares (In rupees):	1964†	1963	1962
High	10.87	9.50	12.05
Low	9.10	8.97	05.0

† Upto 28th May 1964.

Extracts from the Directors' report: *Operation*: The working results for the year are satisfactory. In the last year's report your attention was drawn to the disproportionate utilisation of available plant capacity as a result of the Company having to concentrate on the production of 350 cc. motor cycles for the Defence Services at the expense of other models, particularly the Scooter. After stabilising the higher production of 350 cc. motor cycles, the Company resumed production of scooters. For an industry of this type, to put into effect a revised pattern of production, necessarily involves considerable time. Therefore, the production of scooters was small. As a consequence, while the results for the year under review have shown a significant improvement, the turnover and profit are not as high as they would have been. Pilot production of industrial engines commenced in August, 1963.

Towards the end of the year under review, the construction of ancillary units in the K. R. Sundaram Industrial Estate sponsored by the Company, was nearing completion, only a little behind schedule. Two units had commenced production.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	58,33,000	Gross block	1,27,35,885
Reserves and surplus	9,22,808	—Depreciation	41,42,015
Other liabilities	1,85,27,929	Net block	85,93,870
		Current assets	1,63,78,629
		Investments	30,024
		Cash	2,80,614
	Rs. 2,52,83,737		Rs. 2,52,83,737

* Paid-up capital consists of 10,000—7 per cent tax-free redeemable cumulative preference shares of Rs. 100 each and 4,83,300 ordinary shares of Rs. 10 each.

Andhra Cement Co., Ltd.

(*Chairman*: Mr. V. Ramakrishna, Madras.)

† Upto 28th May 1964.

Extracts from the Directors' report: The production during the year could not show substantial improvement over the previous years, in spite of a satisfactory supply of raw materials including coal. Certain major repairs to plant and machinery, besides unforeseen repairs following unprecedented rains during the year, were carried out. The shortfall was also the result of heavy accumulation of stocks of clinker for want of timely releases due to short supply of transport, which continued as a bottleneck for some months. Every effort is being made to maximise production and to achieve the targets set out for the industry. Clinker production, cement production and cement despatches were as follows:

Clinker production	....	1,66,219 tonnes
Cement production	...	1,60,114 ,,
Cement despatches	...	1,61,514 ,,

The Government have given an increase in the retention price by Rs. 2.75 per tonne (with a reduction of 0.25 in the Selling Agency Commission) effective from 1st June 1963, but this was more than offset by the increased costs that have resulted from Governmental action and for reasons beyond the Company's control. The increase allowed was not adequate to compensate for the increased manufacturing costs and the subsequent increase in costs caused by surcharge on power tariffs and freight and other Governmental actions. The decline in profit was largely due to the aforesaid reasons.

The import of the oil firing equipment for converting the *kilns* from coal firing was delayed due to the payments having to be negotiated on terms prescribed by the Government and acceptable to the suppliers. Due to abundance of coal, of late, it is understood the Government are re-examining the implications of the proposal.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	73,89,580	Gross block	1,84,57,207
Reserves and surplus	10,36,769	—Depreciation	1,08,05,161
Other liabilities	86,21,375	Net block	76,52,046
		Current assets	87,67,376
		Investments	5,88,010
		Cash	29,392
	Rs. 1,70,47,724		Rs. 1,70,47,724

* Paid-up capital consists of 7,10,317 Equity shares of Rs. 10 each and 2,488—6 per cent tax-free cumulative first preference shares of Rs. 100 each. Amount paid-up on shares forfeited is Rs. 37,610.

KHANDELWAL FERRO ALLOYS LTD.

(*Concluded from page 1072*)

Credit Corporation of the United States Government for the export of ferro-manganese on the satisfactory performance of the present Indo-U.S. barter. There is, further, very distinct possibility of the profits of the industry being augmented by the export of ferro-manganese slag, and this line promises to be a good foreign exchange earner.

In addition to the above, the results from the establishment and operation of the steel tube mill, for which the Industrial Finance Corporation have agreed to furnish the necessary guarantee to the foreign loan and sanction a rupee loan for the construction of the project, will, it is hoped, add to the profit-earning capacity of the Company.

On behalf of the Board of Directors and on my own, I wish to express our warm appreciation of the cordial management-labour relations and the devoted services of all workmen, officers and staff of the Company during the year under report.

Notices

RESERVE BANK OF INDIA

APPLICATIONS ARE INVITED FOR THE following posts in the Reserve Bank of India:—

(A) **POSTS AND SCALES OF PAY:**

(i) **Deputy Chief Officers, Department of Banking Operations—Rs. 1275-75-1575.**

(ii) **Banking Officers: Rs. 430-430-55-815 EB 55-925-60-1045.**

Note: Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scales.

In addition to pay, the selected candidates in both the categories mentioned above will be eligible to draw local pay (at centres where it is admissible) and house allowance at rates prescribed from time to time. Dearness Allowance is also admissible to Category (ii) at rates prescribed from time to time.

(B) **QUALIFICATIONS:**

(i) *Deputy Chief Officers*: Applicants should have a minimum of 15 years' commercial banking experience out of which not less than five years should be in a responsible position. Preference will be given to applicants with high academic qualifications who have made a special study of Economics, Banking, Commerce or Accountancy.

(ii) *Banking Officers*: Applicants should (*a*) have a minimum of five years' commercial banking experience out of which not less than three years should be in a responsible position. Preference will be given to applicants with high academic qualifications who have made a special study of Economics, Banking, Commerce or Accountancy or (*b*) Chartered Accountants with a minimum standing of five years.

Candidates who have applied for these posts in response to previous advertisements issued during the last three years need not apply again.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY THOSE CANDIDATES WHO POSSESS HIGH ACADEMIC QUALIFICATIONS AND/OR ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

(C) **AGE LIMITS AS ON 1st JULY 1964:**

(i) *Deputy Chief Officers*: Candidates should not be over 45 years of age.

(ii) *Banking Officers*: Candidates should not ordinarily be over 35 years of age but the age limit may be slightly relaxed in the case of candidates with exceptionally good qualifications and/or experience of value to the Bank.

2. Candidates who wish to apply for more than one category of posts must submit *separate* applications accompanied by *separate* application fees and should clearly indicate the post for which they have applied.

3. Applicants for the above posts must remit with their applications a fee of Rs. 7.50 for each post by cheque or Bank draft on a *Scheduled Bank* payable at Bombay or by Postal Order. *The application fee is in no case refundable.* In the case of candidates belonging to Scheduled Castes/Tribes, the fee will be reduced to one-fourth.

4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore Hyderabad, Trivandrum, Lucknow, Patna and Jaipur accompanied by copies (originals should not be sent) of certificates regarding age and educational qualifications, statements of marks secured in the Graduate and Post-graduate degree examinations and two testimonials should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1, so as to reach him on or before the 25th July 1964.

5. Candidates already in service will be required to produce a proper discharge certificate from their employers in the event of their being selected at the time of their appointment in the Bank's service.

6. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of a certificate to that effect from a competent authority.

7. Candidates must be prepared to serve in any office of the Bank in India, and to undertake tours when required.

8. Selected candidates will have to appear for interview/s before the Selection Board at any of the Bank's Offices.

9. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

10. If any candidate desires to have his application acknowledged, he should send it by "Registered Post—Acknowledgement Due." Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

11. Canvassing in any form will be regarded as disqualification.

HYDERABAD ASBESTOS CEMENT PRODUCTS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE SEVENTEENTH ANNUAL GENERAL MEETING of the Hyderabad Asbestos Cement Products Ltd. will be held on Monday, the 29th June 1964 at 11-00 a.m., at the Registered Office of the Company at Sanatnagar, Hyderabad-18, to transact the following business:

1. To receive and adopt the Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1963 and the Directors' and Auditors' Reports thereon.
2. To declare a Dividend.
3. To appoint Directors in place of Shri Nadirsha B. Chenoy and Shri Noor Mohamed Alladin who retire by rotation under Article 122 of the Articles of Association of the Company

(i) Shri Nadirsha B. Chenoy has attained the age of 84 years (his date of birth being 21.6.1881). Shri Nadirsha B. Chenoy has been long associated with Board of Directors and his re-appointment is considered to be in the interest of the Company. The Company has received the requisite Special Notice from a member of the Company and accordingly, the Special Notice is hereby given to the Shareholders of the Company for passing the following resolution for the re-appointment of Shri Nadirsha B. Chenoy.

"RESOLVED that Shri Nadirsha B. Chenoy who has attained the age of 84 years, be and is hereby re-appointed as a Director of the Company and it is hereby specifically declared that the age limit prescribed under Section 280 of the Companies Act shall not apply to him."

(ii) Shri Noor Mohamed Alladin being a Director and a Shareholder of Messrs. Hyderabad Agencies Private Ltd., the Managing Agents of the Company, is deemed to be an associate of the said Managing Agents. As such his re-appointment is subject to the compliance with the provisions of Section 261 of the Companies Act, 1956. Shri Noor Mohamed Alladin has been long associated with the Board of Directors and his re-appointment is considered to be in the interest of the Company. The Company has received the requisite Special Notice from a Shareholder and accordingly the Special Notice is hereby given to the Shareholders for passing the following resolution for the re-appointment of Shri Noor Mohamed Alladin as a Director of the Company.

"RESOLVED that Shri Noor Mohamed Alladin, an associate of the Managing Agents, be and is hereby re-appointed as a Director of the Company."

4. To appoint Auditors and fix their remuneration.

The retiring Auditors, Messrs. S. G. Dastgir & Co. Chartered Accountants, are eligible for re-appointment.

5. SPECIAL BUSINESS: To consider and if thought fit to pass the following Ordinary Resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956 has been received and is hereby given by the Company.

"RESOLVED that the appointment as a Director of this Company of Shri N. Sundaresan, who has attained the age of 70 years (his date of birth being 13.1.1895) and whom Messrs. Hyderabad Agencies Private Ltd., the Managing Agents of the Company, propose to nominate as Director, be and is hereby approved and it is hereby specifically declared that the age limit prescribed under Section 280 of the Companies Act, 1956 shall not apply to him."

By Order of the Board,
For HYDERABAD ASBESTOS CEMENT PRODUCTS LIMITED,
G. R. DESAI,
Secretary.
(Company Law.)

Registered Office:
SANATNAGAR,
HYDERABAD-18,

14, Netaji Subhas Road, Calcutta

NOTICE IS HEREBY GIVEN THAT THE Register of Loan Stock holders of the Company will remain closed from 20th June to 29th June 1964, both days inclusive for the purpose of payment of interest for the half-year ending 30th June 1964 on 6½ per cent Unsecured Convertible Loan Stock 1963/70 of the Company.

By Order of the Board,
THE BENGAL PAPER MILL COMPANY LTD.,
H. P. DHANUKA
Director.

1st *June,* 1964.

INDORE MALWA UNITED MILLS LIMITED

MODERNISATION AND RENOVATION PROGRAMME

CHAIRMAN, MR. K. G. SEKSARIA, REVIEWS PROGRESS

THE hope that the Government of India would decide the question of cloth prices in such a way as to give a fair return to shareholders and to leave an adequate surplus for modernisation and rehabilitation was expressed by Mr. Kudilal Govindram Seksaria, Chairman of the Indore Malwa United Mills Limited, in his speech at the Fifty-seventh Annual General Meeting of the Company held at Bombay on Tuesday, 16th June 1964. Mr. Seksaria alluded to the "alarming rate" at which costs, particularly of cotton, were rising. But, so far as his own Company was concerned, he declared, it would be producing more processed cloth than before. With the completion of the present modernisation and renovation programme resulting in an improvement in the Company's competitive capacity, he hoped that the working results for the current year would be equal to, or even slightly better than, those for 1963.

The following is the full text of Mr. Seksaria's speech:

GENTLEMEN,

I have great pleasure in welcoming you all to the fifty-seventh annual general meeting of the Company.

At the outset, let me mention here that we are all meeting today under the shadow of a great tragedy that has befallen this country in the passing away of our beloved leader Pandit Jawaharlal Nehru. Under his able leadership, India had achieved for herself a place of pride in world politics in such a short time. Afro-Asian nations looked to him for guidance. At home, through the Five-year Plans, the country made rapid strides towards industrialisation, so that the country could keep pace with the developed nations of the world. He believed in resolving all disputes amongst men as well as amongst nations by peaceful means and was a strong advocate of the principle of co-existence. Although some of the world powers did not like his policy in the beginning, they are now veering towards the same. His loss was mourned not only by the country of his birth but throughout the world. By his passing away, a vacuum has been left in our country which may perhaps never quite be filled. We, therefore, should make our utmost contribution towards the realisation of his dreams.

Mr. Shastri

The nation is fortunate in having Shri Lal Bahadur Shastri as his successor. He is eminently suited to shoulder the burden of the State. During the critical period ahead, our hopes and aspirations are with him in steering clear the nation amidst storms and tribulations towards a peaceful, prosperous and united India.

The Directors' report and the annual accounts of the Company for the year ended 31st December 1963 have been in your hands for some time and, with your permission, I take them as read.

You will no doubt be gratified to observe from the Directors' report and the audited accounts that the Company has been able to show a higher profit of Rs. 23.93 lakhs subject to provision for depreciation, development rebate, taxation and bonus for the year 1961, as compared with Rs. 15.75 lakhs made last year.

Cotton

Cotton position had been satisfactory last year, due to favourable weather conditions prevailing in the cotton growing areas. The Indian cotton crop for 1962-63 season amounted to a record figure of 59 lakh bales, the highest since independence. Anticipating a better crop, the Government raised the floor prices in advance for the 1963-64 season by Rs. 100 per candy and the compulsory survey scheme was abolished. Subsequently, due to unfavourable climatic conditions prevailing in the cotton growing areas and the steady rise in mill consumption, prices of all varieties touched the ceilings. However, your Company was able to procure cotton for its mills at reasonable prices.

The industry's problem of planning out production on a reasonably long-term basis can be solved by the vigorous steps taken by the Government to increase the production of cotton and adequate imports of foreign cotton.

Cloth and Yarn Prices

Prices of cloth and yarn in the home market remained almost stationary during the year under review, due to the voluntary control imposed by the industry in the year 1961. The industry was in the grip of persistent cost inflation due to higher prices of raw cotton, heavier wage bill, increased costs of stores, dyes and chemicals, rise in fuel and electricity charges, enhanced railway freight, emergency insurance premium and other imposts. It has been calculated that there had been a rise of more than 15 per cent in the cost of production since 1962. Due to rigid cost inflation, and with no compensating increase in cloth prices, the production of cloth decreased in the year 1963. Representations have been made by the industry to the Government from time to time to permit increases in the prices of cloth, as the industry is unable to continue the present system of stamping of prices on a basis which was fixed in January 1961. I hope that the Government will decide the question of cloth prices in such a manner as will not only give a fair return to the shareholders but also leave adequate surplus for the enormous task of modernisation and rehabilitation.

In spite of new restrictions being applied by many of the importing countries, exports of cloth showed a slight increase during the year 1963, as compared with last year, that is, 508 million yards (Rs. 40 crores) in 1962 to 531 million yards (Rs. 41 crores) in 1963. However, the export performance of your mills has not been happy. The shortfall has been covered by purchasing surplus exports of other mills.

Taxation

The last budget has not brought any substantial relief to the Company. While the rates of income-tax and super-tax under the new Finance Act have been the same, the Government has imposed a dividend tax at 7½ per cent on the dividends paid in the year 1963, which liability has been estimated at Rs. 28,102 and the same has been included in the provision for taxation. The levy of super profit tax has been replaced by a new levy of sur-tax which is no doubt more liberal than the former. I would like to state that the Company will not be required to pay any sur-tax for the year 1963. Further, the Finance Minister has given a special relief by way of third shift depreciation allowance at 50 per cent on the normal rates of depreciation for the assessment year 1964-65, which corresponds to the Company's financial year 1963. As a result of this allowance, the provision for depreciation for the year 1963 will increase, resulting in the reduction of the taxable profits of the year. As some of the departments of our mills have been working third shift, the amount of third shift depreciation allowance is being worked out and the same will be adjusted in the current year's accounts.

As stated above, the second important cause of increase in the cost of production was the increase in the wage bill. In spite of the best efforts made by the industry to modernise and renovate its machineries within the limits of its resources, the increased *per capita* productivity has not produced the expected benefits. The Bonus Commission, in its report, has laid down a formula for the calculation of bonus applicable to all industries. The report is under the consideration of the Central Government.

Meanwhile, due to the insistence of the Indore Mill *Mazdoor Sangh*, Indore, an agreement has been arrived at by the Madhya Pradesh Millowners' Association, Indore, of which your Company is a member with them, to pay a provisional bonus for the year 1962, equivalent to their 20 days' basic earnings, exclusive of dearness allowance. The said agreement will be later revised in the light of any all-India recommendations accepted and made applicable to the textile industry by the Government for the year 1962.

Turning to the affairs of the Company, the working of your mills during the year 1963 was better, in spite of the decrease of Rs. 14 lakhs in total sales of cloth, yarn and waste and the dislocation caused in the working of the mills due to large-scale modernisation and renovation of the mills' machinery and occasional labour troubles due to internal friction amongst them.

As the Company was able to procure cotton for its mills at reasonable prices, the consumption of cotton has been more or less stationary, that is, Rs. 187 lakhs in 1963, as against Rs. 190 lakhs in 1962. On account of the economies effected by the Company, stores and dyes consumption dropped by Rs. 2 lakhs and the administrative expenses, exclusive of interest charges and expenses incurred on account of medium-term loan taken from the State Bank of India, dropped by Rs. 2.61 lakhs. On the other hand, coal and electricity charges have increased by Rs. 1.74 lakhs, due to higher coal prices and enhanced railway freight and higher electricity duty. Although insurance charges have been shown higher by Rs. 1.92 lakhs, the same are due to the Emergency Risk Insurance. Interest charges show an increase of Rs. 2.87 lakhs, but it is due to purchases of machineries.

Salaries and wages during the year 1963 have increased by about Rs. 4 lakhs and are expected to increase further during the current year due to the rise in the cost of living index and other factors.

Cloth production during the year 1963 was 3,71,48,628 metres, as against 3,70,59,696 metres in 1962, but, as the market conditions were dull, the sale and offtake of cloth during the year 1963 was lower.

New Machinery Installed

In the Directors' report under the heading modernisation and renovation, full particulars have been given to you about the receipt of new machineries in the year 1963. I am glad to inform you that most of the new machines have been commissioned during the current year, like mineral khaki plant, package dyeing plant and Artos-Maneklal pid and pinclip stentering machine and the same are working satisfactorily. You will be pleased to know that orders for mineral khaki are being received in bulk quantities from the Defence and other Government departments and that our supplies are being approved and accepted by them. Production of mineral khaki is increasing.

As regards the prospects of the current year, I am afraid that the year 1964 will be a year of strains and stresses. Costs, particularly of cotton, are rising at an alarming rate, but, as far as our Company is concerned, it will be producing more processed cloth than before. With the completion of the present modernisation and renovation programme, resulting in the increase of the competitive capacity of the Company, I hope that the results of the current year will be equal to or slightly better than those of 1963. This is, of course, subject to any unforeseen event taking place in the political and the economic fields. The working of the first five months of 1964 shows normalcy.

As intimated to you in the notice, we would be transacting some special business in the meeting. In the explanatory note annexed to the notice, the nature of the business has been fully explained. I hope you will kindly accord your approval thereto.

Our relations with the trade union have been cordial throughout the year, although at times, due to a rift amongst the workers, the mills had to experience considerable difficulties.

On behalf of the Board and myself, I thank all the officers and other employees of the Company for the good work they have put in during the year.

I also thank all my colleagues on the Board for the invaluable support which they have always given to me.

I thank you all for coming here and listening to me.

Note:—*This does not purport to be the record of the proceedings of the 57th Annual General Meeting of the Company.*

NEWS IN BRIEF

UNDER an agreement signed between the Oil and Natural Gas Commission and the Soviet trade organisation "Technoexport" at New Delhi on 15th inst., a seismic survey will be conducted in the Kutch Gulf area and the Madras coast with the help of a special Soviet seismic ship.

A Rs. 5-lakh rolling mill, designed and built by the Moscow Research and Design Institute, has recently been erected in the Indian Institute of Technology at Powai near Bombay. The mill, the cost of which has been borne by the U.N.E.S.C.O., is fully automatic with a special central room operating all processes.

The Kerala Government is contemplating to set up an industrial estate for producing rubber articles in Central Travancore. Five acres of land have already been acquired for this purpose. The proposed estate will have 20 units, each with an investment of Rs. 30,000. At present, many rubber articles required for the Railways are imported.

A team of World Bank experts is expected to arrive in Calcutta towards the end of July 1964 to hold discussions with the West Bengal officials and make an on-the-spot study of four projects—the Bally Bridge approach development, Haldia Link Road, Durgapur Express Highway, and the second bridge across the Hooghly—for which aid from the Bank is being sought. The projects are together estimated to cost over Rs. 45 crores.

A new company, called Tata-Merlin and Gerin Limited, is proposed to be formed soon in Bombay to undertake manufacture, among others, of switchgear and electrical equipment. The new venture is the result of collaboration between Voltas and the French firm of Merlin and Gerin. The authorised capital of the new company will be Rs. 2.5 crores. The French firm has about forty-year experience in the manufacture of switchgear, power and instrument transformers, pre-fabricated switchboards and special equipment for mines and railways.

Exports of iron and steel manufactures from India in the first three months of the current calendar year aggregated Rs. 102.2 lakhs against Rs. 66.3 lakhs in the same period of 1963. The major items exported were steel blooms, billets, bars, plates, rounds, etc. (Rs. 2.37 lakhs), stainless steel utencils (Rs. 13.0 lakhs), railway track materials, cast iron pipes and fittings, steel trunks and steel furniture. The main importing countries were Kuwait, Bahrein, Aden, Oman, Nigeria, Kenya, Tanganyika, Ceylon, Thailand, Saudi Arabia, Malaysia, Muscat and Mauritius.

A technical collaboration agreement for the installation of a high pressure boiler plant at Tiruverumbur in Tiruchirapalli has been signed between the Technoexport of Czechoslovakia and the Heavy Electricals (I) Ltd. The agreement covers technical co-operation and consultancy service for the production of (*a*) high pressure boilers ranging from 125 to 450 tonnes—steam per hour capacity; (*b*) package boiler units with output six tonnes per hour above 22 atm. pressure—temperature 380 degree C.; (*c*) high pressure valves and figgings for the above boilers; training of Indian personnel in the C.S.S.R. and working drawings for the production of non-standard equipment in India; test equipment and factory layout, services, etc. The total payment for the various services amounts to Rs. 2 crores.

• • • •

From Abroad

The aggregate world production of all the major wool products increased last year, according to the Commonwealth Economic Committee. The top 24 wool textile manufacturing countries produced 2½ per cent more tops, 2½ per cent more worsted yarn, 4 per cent more woollen yarn and one per cent more woven fabrics.

The machine tools industry in Poland exported almost 30 per cent of its total output during the year 1963. Some units, exported even 50 per cent or more of their production. Polish machine tools are imported by many firms of world-wide repute in Great Britain, West Germany, Sweden, France, Italy, etc.

The Pakistan Government has decided to build a second international airport at Dacca, without any American aid. The cost of building the airport as estimated by the U.S. Aid and Development Agency is Rs. 6.2 crores, of which one-third represents foreign exchange spending.

Telephone subscribers in Japan can now get the numbers they want in the United States within ten minutes by merely dialling an exchange in Tokyo and giving the American number desired. This facility has been rendered possible by a cable laid between Ninomiya in Japan and Hawaii which is connected with the U.S. through a sub-marine cable. The new cable has ensured quick direct services to Canada, Alaska, Hawaii, Mexico, Jamaica, Puerto Rico, Bermuda and Virgin Islands.

As much as one-fourth of the Cuban budget for 1964—that is, almost 627 million pesos—has been earmarked for education, culture, scientific research and social services, the share of education alone being 219 pesos. The Cuban Ministry of Education is utilising all modern scientific methods relating to education. Since 1962, the Ministry has been broadcasting a number of educational programmes for adults over a national television net work. The sum allocated for agrarian reform is 343 million.

The U.N. Food and Agricultural Organisation has reported that the prospects for the 1964-65 world grain crop are better than last season's record. The expectations of wheat production are favourable in all the regions of the world. Production of coarse grains (outside the eastern trading area) increased more than that of wheat mainly because of larger maize and barley output. The current world grain situation is characterised by a major increase in the volume of international trade in 1963-64. The world prices of both wheat and coarse grains rose in the second half of 1963, but they have weakened again in recent months.

Transit tolls on all vessels using the Suez Canal will be increased by one per cent from the midnight of the 29th inst. There will be an additional increase payable by vessels exceeding 37 feet draught and 104 feet width. An extra 2 per cent will be payable for every foot or fraction thereof exceeding 37 feet, an additional 1 per cent charge being payable for every 6 feet or fraction thereof exceeding 104 feet width. In view of the insignificant increase in the number of vessels using the canal during the last three years, the idea of two-way traffic in the Canal had been put off. The second five-year development plan provides for the deepening of the Canal to take vessels having 41 feet draught.

Mr. Pierre-Paul Schweitzer, Managing Director of the International Monetary Fund, and Mr. Alfred Zehnder, Ambassador of Switzerland to the U.S. have extended letters costituting an agreement for the association of Switzerland with the Fund's general arrangements to borrow. Under the borrowing arrangements, which have been in effect since October 1962, ten industrial members undertake to lend the Fund up to $6 billion in their national currencies, if this should be needed to forestall or cope with an impairment of the international monetary system. Switzerland will make financial arrangements directly with individual countries. The Swiss Confederation has informed the Fund that it would be prepared to consider arrangements, which may be reciprocal, with any of the participants in the borrowing arrangement, and would make resources available for this purpose in amounts not exceeding an outstanding total equivalent to 865 million Swiss francs. Swiss association with the Fund's general arrangements to borrow will enable the Fund to call upon the Swiss Confederation to extend credits to participant countries in accordance wih their implementing arrangements with Switzerland.

PERSONAL

AIR Marshal A. M. Engineer, who is retiring shortly as the Chief of the Air Staff, has been appointed Ambassador of India to Iran. He is expected to assume charge of his new assignment by the end of November this year.

The President has approved of the following changes in the portfolios of Cabinet Ministers and Ministers of State:

Cabinet Ministers

Mr. Asoke Kumar Sen—Law and Social Security.
Mr. Satya Narayan Sinha—Communications and Parliamentary Affairs.

Ministers of State

Mr. Nityanand Kanungo—Civil Aviation.
Mr. K. Raghu Ramaiah—Supply in the Ministry of Industry.
Dr. Ram Subhag Singh—Ministry of Railways.
Mr. R. M. Hajarnavis—Cultural Affairs in the Ministry of Education.
Mr. A. M. Thomas—Defence Production in the Ministry of Defence.

Deputy Ministers

The President, on the advice of the Prime Minister, has appointed the following as Deputy Ministers:

Dr. Mono Mohan Das—Rehabilitation.
Mr. Shah Nawaz Khan—Food and Agriculture.
Mr. S. V. Ramaswamy—Commerce.
Mr. Ahmed Mohiuddin—Transport.
Mr. B. S. Murthy—Community Development and Co-operation.
Mr. Lalit Narayan Mishra—Home Affairs.
Mrs. Soundaram Ramachandran—Education.
Mr. D. R. Chavan—Food and Agriculture.
Mr. C. R. Pattabhi Raman—Information and Broadcasting.
Mrs. Maragatham Chandrasekhar—Department of Social Security.
Mr. Jaganath Rao—Law.
Mr. Sham Nath—Railways.
Dr. D. S. Raju—Defence.
Mr. Dinesh Singh—External Affairs.
Mr. Bibudhendra Misra—Industry.
Mr. B. C. Bhagavati—Department of Communications.
Mr. Shyam Dhar Misra—Irrigation and Power.
Mr. Prakash Chandra Sethi—Steel and Mines.
Mr. Ratanlal Kishorilal Malviya—Labour and Employment.
Mr. Bhakt Darshan—Education.

TREND OF MARKETS

CALL RATE RECEDES

(From Our Own Correspondent)

BOMBAY, *17th June*

The short-term money market depicted a distinctly easy trend during the week under review. Demand for credit was on a reduced scale, while the supply of funds was plentiful. Interest rates, as a consequence, drifted downward. Inter-bank call rate stood at 3½ per cent for fresh money and 4 per cent for renewals, whereas both were quoted at 4½ per cent last week. Calcutta also reported easy conditions, the call rate declining from 4½-4½ per cent to 3½-3½ per cent.

The money market has taken note of the revised deposit interest rates schedule as tentatively approved by bankers at their meeting held at Bombay on Thursday the 11th inst. The schedule is the same as that recommended by the Bhabha Committee in respect of deposits for terms of over three months, while, in the case of notice money, the Committee's suggestion for lowering the interest from 3 to 2½ per cent has been rejected. (For details, please see page 1055 of this issue). The revised schedule is yet to win the approval of some big banks. Negotiations are still going on and it is not clear as to when it will come into force.

Thanks to the persistently easy money conditions, the response to the 91-day Government of India Treasury Bills, tenders for which opened on Tuesday the 16th inst., was a little better. For the first time after a long interval of several months, the amount offered exceeded the amount invited, thereby indicating that some outside "special sources" also took interest in these Bills.. The total amount tendered was Rs. 2.34 crores, as against the Rs. 2.00 crores invited (and also accepted). The average rate of accepted tenders was unchanged at Rs. 3.000 per cent per annum. The Intermediate Treasury Bills, too, evoked better support, the Bills actually sold from the 10th to 13th inst. aggregating Rs. 220 lakhs, as against Rs. 128.5 lakhs a week before and only Rs. 5 lakhs two weeks before.

There was a further fall of Rs. 2.04 crores to Rs. 106.91 crores in India's foreign exchange reserves during the week ended 12th June. The fall was entirely in balances held abroad which aggregated Rs. 8.45 crores. The foreign securities held in the Issue Department of the Reserve Bank were unaltered at Rs. 98.46 crores. Loans and advances to scheduled banks declined by Rs. 18.12 crores to Rs. 18.16 crores. Their deposits with the Reserve Bank also declined by about Rs. 6 crores to Rs. 81.72 crores. Notes in circulation increased by a further Rs. 4.46 crores to Rs. 2,553.98 crores.

The total credit made available by scheduled banks to their clients declined again during the week ended 5th June but by only Rs. 1.45 crore to Rs. 1,823.37 crores. While the decline was small, the rise in deposits, too, was negligible, being less than Rs. 4 crores to Rs. 2,515.07 crores. Borrowings from the Reserve Bank were higher by Rs. 1.55 crore at Rs. 35.42 crores, of which those against usance bills accounted for Rs. 8.19 crores, a rise of Rs. 1.78 crore. Total cash fell by Rs. 3.09 crores to Rs. 152.12 crores and investments by Rs. 1.26 crore to Rs. 620.50 crores.

Trading in the Gilt-edged market was a dull and drab affair this week also. In the absence of any fresh development, operators evinced little interest in fresh business. Business put through was very much limited, with practically no change in the quotations for both Central and State loans.

In the foreign exchange market, the banks' selling and buying rates for U.S. dollars declined by 25 nP each to Rs. 479 and Rs. 475.50 per $100, respectively. In New York, the pound sterling firmed up a little *vis-a-vis* the dollar, the spot rate rising by 0.060 cent to 279.470-279.500 cents and the three months' forward by 0.080 cent to 279.070-279.100 cents.

RECOVERY IN BULLION

(From Our Own Correspondent)

BOMBAY, *17th June*

The panicky conditions that prevailed in the bullion market last week had a psychological effect on the bullion market in the early part of the week under review. Operators were not inclined to enter into fresh commitments either way. Turnover, as a result, was greatly restricted, with limited fluctuations in prices. The market, however, picked up strength on Monday the 15th inst., when, following emergence of support at lower levels, both gold and silver staged a recovery. The recovery gathered further momentum yesterday and today, thanks to poor arrivals and firm advices from upcountry centres. Quite a large part of the losses suffered last week was made up. Actually, in gold, today's closing rate was only a shade lower than the price prevailing a fortnight before.

Silver began the week higher at Rs. 245, as against the previous close of Rs. 244, and improved gradually to touch a high of Rs. 252 today. The daily average arrivals were reported to be no more than 15 bars, as against the average of 35 bars last week. Offtake was unchanged at about 10 bars a day. The floating stocks are estimated at 600 bars.

Fourteen-carat gold, which had been hammered down from Rs. 71.75 to Rs. 67.65 last week, recovered to Rs. 71.25 today. Primary gold, in unofficial trading, was quoted higher at Rs. 118, as against Rs. 116. Sovereign was fully maintained at Rs. 92. The international price for gold at London eased slightly from $35.07¼ to $35.07⅛ per fine ounce. The sterling price, too, fell from 251s. 6¾d. to 251s. 0¼d. Both ready and forward silver continued unchanged at 111¾d. and 111¾d., respectively, as also silver in New York at 129.3 cents.

The following table shows the trend of prices during the week under review:

	17-6-1964 (closing)	High	Low	10-6-1964 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (996 fine) ..	252.00	252.00	244.00	244.00
GOLD				
Ready (14-carat) ..	71.25	71.25	67.50	67.75
Sovereign	93.00*	—	—	92.00*
London—				
Gold	251s.0¼d.	251s.1d.	251s.	251s. 6¾d.
Silver Ready ..	111¾d.	—	—	111¾d.
Silver Forward ..	111¾d.	—	—	111¾d.
New York—				
Silver	129.3 cents	—	—	129.3 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce. * Unofficial rate.

OILSEEDS LOOK UP

(From Our Own Correspondent)

BOMBAY, *17th June*

The oilseeds market put on a cheerful appearance during the week under review. Both seeds and oils evoked good buying enquiries. The spot section reported tight supply position in respect of all oilseeds. Brisk buying of castor oil by shippers against export commitments entered into with some Communist countries also imparted strength. Consequently, prices tended to move up. The rise in prices would, indeed, have been more marked but for fears of margins. The renewed reports suggesting that the authorities were determined to check the rising tendency in commodity prices were taken note of by traders, but they did not have any effect on the market.

Groundnut bold ready Nizam quality hardened by 50 nP to Rs. 59 and Khandesh by 75 nP to Rs. 60.50. Oil ex-mill gathered 10 nP to Rs. 22.95. Railway receipt advanced by 25 nP to Rs. 22.65.

In the castorseeds section, the September 1964 contract moved up from Rs. 177.25 to Rs. 178.87, while the June contract declined by 13 nP to Rs. 176.12, after being higher at Rs. 178.37 on the 13th inst. This contrary movement reflected the switching of operations from the maturing contract to the distant contract. Ready Madras spurted by 37 nP to Rs. 34.87 and Kanpur by 25 nP to Rs. 33.75. Oil Commercial was firm at Rs. 13.75. B.S.S. rose from Rs. 14.50 to Rs. 14.65 before finishing at Rs. 14.45.

The linseed September contract strengthened by 41 nP to Rs. 44.47. The June delivery was fully maintained throughout at Rs. 42.94. Bold ready gained 25 nP to Rs. 45. Linseed oil increased by 30 nP to Rs. 18.30.

Despite the firmness of raw cotton, cottonseed was dull. The June 1964 contract eased by 50 nP to Rs. 104.50.

The following table shows the closing prices of oilseeds and oils on 17th June as compared with those of two previous weeks.

	17-6-1964	10-6-1964	3-6-1964
Groundnuts	Rs.	Rs.	Rs.
Nizam bold	59.00	58.50	59.00
Khandesh quality ..	60.50	59.00	60.25
Oil ex-mill	22.95	22.85	23.10
Oil Rly. Receipt	22.65	22.40	22.70
Castorseed			
June 1964 contract	176.12	176.25	174.62
September 1964 contract.. ..	178.87	177.25	176.00
Ready Madras	34.87	34.50	34.50
Ready Kanpur	33.75	33.50	33.25
Oil B.S.S.	14.45	14.55	14.55
Oil commercial	13.75	13.75	13.55
Linseed			
June 1964 contract	42.94	42.94	42.91
September 1964 contract.. ..	44.47	44.06	43.75
Bold ready	45.00	44.75	44.62
Linseed oil	18.30	18.00	18.05
Cottonseed			
June 1964 contract	104.50	105.00	105.50

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

TEA EASIER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *11th June*

A large quantity of 875,000 kgs. was catalogued in Sale No. 23 held on Tuesday the 9th inst. Quality was about maintained. There was good general demand, with prices irregular and slightly easier, but support for fibrous fannings was a weak feature. The few selected best Nilgiri teas were sold well and, in the case of the lesser kinds, their brokens ruled firm when quality was maintained, but, otherwise, prices declined. Clean highgrown fannings were sold at higher rates than their equivalent brokens, but the fibrous types were discounted. Good medium and low medium brokens remained firm where quality was preserved, but plainer sorts in these categories registered declines. Similar fannings of clean appearance met ready buyers, but the fibrous kinds were sold at much lower levels. Black leaf sorts were about steady, whereas plainest descriptions shaded in price. Orange Pekoes were sold well, but flowery Pekoes came to a lower market. Teas of unorthodox manufacture elicited useful enquiry at around last prices.

The quotations (per kg.) were:

	1964	1963
	Rs.	Rs.
Low mediums	4.00-4.50	4.00-4.20
Mediums	4.40-4.60	4.25-4.45
Good mediums	4.70-5.10	4.50-4.05
Nilgiri B.O.P.	4.40-6.10	4.50-5.80

The average price realised in Sale No. 23 was Rs. 4.32 per kilo, as against Rs. 4.44 a week ago and Rs. 4.23 in the corresponding sale last year.

A total of 375,000 kgs. was offered in dust sale No. 23 held here today. The market met with good general demand. Highgrowns were well supported and sold at around last rates. Good mediums elicited strong enquiry and fetched last prices. Mediums and low mediums opened to an easier market, but, as the sale progressed, prices became firm on last levels. Unorthodox descriptions came to a generally steady market.

The average price realised in dust sale No. 23 was Rs. 4.20 per kilo, as against Rs. 4.18 a week ago and Rs. 3.95 in the corresponding sale last year.

Colombo: In the sale this week, the market opened to a strong general demand. Whereas highgrowns and mediums were steady, black leaf descriptions sometimes eased, but plainest sorts were fully firm.

London: North Indian and other growths: In Monday's auction, there was quieter demand and, although best Assams were firm, others were irregular and often 1-2d. easier.

Ceylon and South Indian: In Tuesday's sale, there was good demand with prices generally rather easier.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire us as follows:

"*Leaf sale No.* 24: 861,000 kg. offered. Fair general demand. Low medium and medium brokens a little easier. Fannings about steady. Good mediums lower. Highgrowns evoked better but irregular demand. Unorthodox fully firm."

JUTE GOODS STEADY

(From Our Own Correspondent)

CALCUTTA, *16th June*

With more inquiries from abroad and good business having taken place during the week under review, jute goods were steady, while fibre was quiet, with mills continuing to show little interest in the remainder of the old crop. Timely rains during the week have improved the prospects for the new crop, though Pakistan's bid to raise exports of raw jute, according to the trade, would come in the way of India's attempts to export the surplus inferior fibre. The U.S.S.R. has been India's outstanding market for fibre in the last one year, and India's efforts to export fibre to other countries have not met with success in view of cheaper and superior Pakistani fibre. A feature of the 1964-65 Pakistan budget, just announced at Rawalpindi, is a 50 per cent cut in the export duty, from $2.10 a bale to $1.05 on jute cuttings and from $4.20 a bale to $2.10 on other types of fibre. Mr. Mohammed Shoaib, Pakistan's Finance Minister, declared that this measure would lower jute prices in world markets. The announcement has been naturally welcomed in the principal markets overseas and, on behalf of the Dundee mills, it is stated that the cut in the duty, although small, would make a small but useful reduction in raw material costs. About 95 per cent of the 150,000 tons of raw jute imports into Great Britain is from Pakistan. Lower prices for fibre would mean that foreign mills dependent on Pakistani raw material would be able to increase their competitive power against Indian products.

It will be remembered that fibre exports from Pakistan had been affected in recent months, in view of the bumper crops in 1963-64 in both Pakistan and India. Moreover, India has entered the export field and succeeded in the last one year in raising exports. In the last budget, India had also reduced the export duty on raw jute, but, even then, Pakistani prices had been lower. If only India should succeed in finding lasting export markets for the surplus inferior fibre, the trade feels, minimum prices should be reduced. In view of the price advantage, the Pakistani mills have been able to price out Indian sacking goods from foreign markets. Having succeeded in finding firm markets for sacking, Pakistan mills have now turned their attention to increasing their output of hessian and specialities, such as carpet backing cloth. Mills in India find that their profit margin has been reduced and, with more stocks of fibre and goods, financial difficulties have also cropped up.

The shortage of lighters in the Calcutta port is causing anxiety. It is apprehended that shipments would be affected if the shortage were to continue for any length of time. Although prices in the New York burlap market (that is, spot 40" 7½ oz. hessian at 8.45 cents a yard and the 10 oz. hessian at 11.35 cents) remained unchanged, U.S. orders for ten million yards of hessian earlier this week served as a sentiment-booster. The U.S. bag manufacturers appeared to be adequately stocked with burlap for meeting near-term requirements. The news of a fall in goods stocks with mills at the end of the last month also pleased the market, though it was soon realised that the fall had not been due to increased business but lower production as a result of more holidays in the month and labour troubles. With stocks at 125,000 tonnes, the decline was 3,900 tonnes. The largest fall (3,500 tonnes) was recorded in sacking goods at 41,300 tonnes. Hessian fell by 700 tonnes to 47,000 tonnes and miscellaneous goods by 800 tonnes to 15,600 tonnes. Carpet backing cloth increased by 1,100 tonnes to 21,100 tonnes. Considering that foreign business is usually dull at this time of the year, the market has not considered the statistical position as disappointing.

The low prices in the goods market have been a source of anxiety to mills. Whereas buyers are expecting a further decline, it should be pointed out that, in sacking manufacture, mills are incurring losses and that the profit margin in hessian is just adequate to cover the loss. Even so, mills have turned sellers for all positions in an attempt to reduce their stocks and not to hinder the rate of production. The East India Jute and Hessian Exchange Association has been considering measures to arrest the extreme bearish activity

that overtakes the market occasionally. Accordingly, with the prior approval of the Forward Markets Commission, the Exchange has fixed certain floor prices for hessian and sacking. All trading is prohibited whenever hessian is quoted at Rs. 44 or below or 25 nP less than the respective closing rate for the previous day. In sacking, the minimum price is Rs. 110.50 or 50 nP less than the respective closing rates for the previous day.

The fibre market was devoid of any feature. Sellers were anxious to reduce their inventories of the remaining portion of the last crop. The reduction in export duty on Pakistan fibre would hamper India's attempts to find export markets for surplus inferior fibre. All indications are that the forthcoming crop would have a larger proportion of the superior grades. Excellent weather has been maintained in areas where sowing has been done. Plants have benefited much from occasional rains. Cultivators are also being assisted by the Government in the improvement of quality. If only the mills are enabled to increase their output of hessian and specialities, they can be in a position to improve their working results. For, thanks to keen competition by Pakistan mills in overseas markets, mills are sustaining loss in the manufacture of heavy goods. Ready delivery fibre was quoted as follows in the week: Assam bottoms Rs. 30.50, daissee bottoms Rs. 33.00, and northern bottoms Rs. 30.00.

The goods market was steadier during the week. There were some inquiries for non-standard constructions in short supply. The earlier orders from the U.S.A. for ten million yards of hessian and the fall in goods stocks with mills at the end of last month were noted with satisfaction. On Tuesday last, ready B. twills were quiet at Rs. 112.00 and hessian 40" 10 oz. at Rs. 44.10. On the following day, B. twills gained to Rs. 112.25, but hessian 40" 10 oz. eased to Rs. 43.95. At this stage, business on Government account involving 2,300 bales of B. twills was done. As a result, B. twills rose to Rs. 112.70. There was some overseas business in hessian, too, and 40" 10 oz. improved to Rs. 44.15 on Thursday. U.S. inquiries were a feature on Friday, and hessian 40" 10 oz. was steady at Rs. 44.20. B. twills were quoted at Rs. 112.60. During the week-end, short-covering in ready goods was a feature, though no fresh overseas business took place. B. twills moved up to Rs. 113.00 and hessian 40" 10 oz. to Rs. 44.50. The feature of trading yesterday was buying interest in ready delivery goods. The Government also showed interest in B. twills. Ready B. twills were steady at Rs. 113.30 and hessian 40" 10 oz. at Rs. 44.45.

CLEARANCE IN KIPS MODERATE

(From Our Own Correspondent)

MADRAS, 15*th June*

Arrivals of kips from upcountry tanneries to Madras were on the usual scale during the week and clearance by exporters and for local trade was moderate at unchanged prices. Shipment business was not brisk, but continued to be selective, with emphasis on light and medium cow and cowcalf light fourths. There was no call for buffcalf or lights for shipment. Shippers were trying to get slightly increased prices for cowhides light weights, but were not successful.

Export trading in tanned goat skins was selective. Prices remained steady. Inquiries centered round 8/9 lbs. goat skins in which sellers were few, at present. U.S.A. demand was poor and at low prices. As regards tanned sheep, primes and semiprimes were in demand at slightly lower levels, while middle class ruled firm. Trade anticipates that demand for clothing trade will revive shortly.

Prices in the raw skins centres were steady for goat skins and weak for sheep skins. Tanners are going slow with their purchases, in view of their stock position.

FOODGRAINS ADVANCE

(From Our Own Correspondent)

HAPUR, 15*th June*

Foodgrains were firm again. The Union Government, feeling concerned over the rapidly deteriorating food situation, is shortly discussing the matter at highest levels. Poor arrivals in the face of brisk consumer demand were the main influencing factor. Despite the record rice production of 36.5 million tons (as compared with 34.81 million tons in 1961-62), rice position is reported to be difficult, as the zonal system of distribution is not functioning properly. As for wheat, India has sought an extension, by one year, of the period of the current P.L. 480 agreement which is due to expire on the 30th inst. This is to enable the import of the outstanding balance of 2.4 million tons of wheat under the current agreement. It is further proposed to seek a new P.L. 480 agreement to cover the period of 1964-65.

What advanced by Rs. 2 to Rs. 3 per quintal in the early part of the week, but became quiet later as demand turned slack at higher levels, as against the controlled price of Rs. 43 per quintal. Wheat average quality was now quoted at Rs. 55 to Rs. 58.75 and farm produce at Rs. 61.50 to Rs. 66. Arrivals averaged 1,000 to 1,200 maunds daily and local stocks were estimated around 2.000 quintals.

Rice ruled steadier on poor arrivals against brisk seasonal demand. Stocks were estimated around 3,500 quintals. Week-end prices were:—Rice *basmati* superior Rs. 96.45 to Rs. 99.13; *sela* Rs. 93.77 to Rs. 96.45; *mainpuri* Rs. 74.50; *ramajwayan* Rs. 80.38; *raimunia* Rs. 83.06; and *gadda* Rs. 75.03 per quintal.

Gram ruled firm and rose by one rupee per quintal on small arrivals to be quoted now at Rs. 57.50 to Rs. 58.50 according to quality. Stocks were estimated at 2,000 quintals. Barley and *bejhar* advanced sharply by Rs. 2.50 and Rs. 3, respectively, on good demand. Barley was now quoted at Rs. 45.25 to Rs. 46.25 and *bejhar* at Rs. 44.40 to Rs. 45.50 per quintal. *Juwar* and *guwar* continued steady and oats recorded good gains. *Methi* was quiet in small trading. Other coarse grains were listless. Week-end prices were:—*Juwar* Rs. 43 to Rs. 45; *guwar* Rs. 58.94 to Rs. 61.62; *methi* Rs. 52.50 to Rs. 55; maize Rs. 43.50 to Rs. 45.50; and oats Rs. 59.50 to Rs. 60.50 per quintal.

Firm conditions continued in the pulses section. Prices in all the items registered gains due to small arrivals and tight supply position. Peas prices rose by Re. 1 per quintal on brisk buying support from Madras and Bengal. Arrivals averaged 300 maunds daily and stocks were estimated around 6,500 quintals. Peas *dara* was now quoted at Rs. 51.50 to Rs. 53.50 and farm produce at Rs. 54 to Rs. 56 per quintal. Peas *dal* also moved up to Rs. 56.26 per quintal. *Arhar* was steady at previous level. *Urd* and *Moong* sought higher levels due to shortage of supplies. *Urd* was quoted at Rs. 66.98 to Rs. 72.34 and moong at Rs. 80.38 to Rs. 96.45 per quintal. *Masoor* and other sections ruled steady. Week-end prices were:—*Arhar dal* Rs. 93.77 to Rs. 96.45; *moong dal* Rs. 100; *urd dal* Rs. 80.38; *masoor* Rs. 66.98 to Rs. 72.34; *masoor dal* Rs. 84.50; and gram *dal* Rs. 64.30 per quintal.

CONTROL ON "KHANDSARI"

(From Our Own Correspondent)

HAPUR, 15*th June*

Sugar continued to rule firm, as the commodity was in short supply. As against the controlled price of Rs. 135 per quintal, the price in the open market was much higher at Rs. 175 to Rs. 180. The supply position tightened furthered during the week, as the ration quota was reduced from one kilo to ¾ kilo per unit per month. Due to summer season and marriages, bulk buyers and even consumers had to met their requirements from the open market. Position worsened further following the seizure of *khandsari* stocks by the U.P. Government.

Trading in *khandsari* came to a standstill in mid-week as the State Government seized *khandsari* stocks all over the State and banned the sale of *khandsari* by licensed dealers. The Government also fixed the prices of *khandsari* seized at Rs. 120 per quintal and these stocks would be made available to manufacturers of sweets and consumers through fair-price shops. Trade was very much perturbed on account of this seizure and a two-day *hartal* was observed to record its protest. Following seizure of *khandsari*, *boora* in the open market touched a new height of Rs. 2 per kilo. Traders were reported to be taking up the matter with the Government and, failing to get any redress, they were contemplating legal action against the Government.

Ready *gur* also turned firmer during the week, thanks to revival of demand on receipt of import permits for the current month. Daily arrivals averaged about 200 maunds and local stock were placed around 15,000 quintals. Cane crop prospects were fairly good but most of it would depend on monsoon which is expected by the end of the current month. Acreage of cane, however, is reported to be higher than last year. The week-end prices (in rupees per 40 kilogram) were:—*Pansera* 29.50 to 30; *dara* 29 to 29.62; *balti* 29 to 29.37; *shakker* 31 to 33.

Gur in the Muzaffarnagar market, however, was depressed, due to non-receipt of import permits. Stocks at that end were estimated at 180,000 maunds and week-end prices (in rupees per 40 kilogram) were:—*Chaku* 33.50 to 35; *ladoo* 32 to 33; *khurpapar* 32 to 33.50; *pansera* 29 to 30; *rusket* 13 to 17.50; *shakker* 35 to 36.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, 17*th June*

After starting on a bearish note in the beginning of the week, the futures section gained sufficient bullish support to close on a firm note. The bullish fervour was so strong during the week, especially in the latter half of it, that even the prospect of the Government releasing a fairly large global quota for import of cotton could not check it. There was a sizable amount of bear covering in the August Contract, the only one now in operation, and some fresh buying by bulls. The main factors that accounted for the firmness of the Contract were the waning of the fear that the Government might close down futures trading in cotton, too, as has been done in fourteen other commodities and the failure of South West monsoon to maintain satisfactory progress after beginning well. Reports from producing areas said that the rainfall was inadequate to ensure ideal conditions for sowing purposes.

A major development during the week was the announcement of the Government's cotton policy for the 1964-65 season. The Government has decided to maintain the floor and ceiling prices of cotton during the next season at the same levels as in the current season, namely, 1963-64. Marginal increases have, however, been made in the floor and ceiling prices of some of the varieties, keeping in view the improvement in quality. Noteworthy among them is the increase of Rs. 8 per quintal (Rs. 28 per candy) made in the floor and ceiling prices for Digvijay 'A.' Further, the varieties AK-235 and AK-277, grown in the cotton tracts of Vidharbha, have been included for the first time in the price schedule and they have been given the same floor and ceiling prices as for Gaorani 6 and 12. The price notification for 1964-65 also provides a premium for saw ginning in respect of all varieties, excepting Bengal *Deshi*, at a uniform rate of Rs. 14.10 per quintal (Rs. 50 per candy) at the floor level and Rs. 21.10 per quintal (Rs. 70 per candy) at the ceiling level. In the case of Bengal *Deshi*, the premium will continue at the existing level of Rs. 9 per quintal (Rs. 30 per candy). As no changes were expected, the cotton policy announcement did not have any noticeable effect on the cotton futures market.

The market showed a quiet trend in the beginning of the week as there was a doubt whether futures trading would at all be permitted in the context of the prevailing official thinking that such trading tended to raise the prices. As the week progressed, this doubt ceased to exercise the minds of operators. The timely beginning made by the monsoon was considered as a good augury for cotton crop in the coming season and engendered a feeling of caution among the buyers. But, subsequently, an upward trend in prices asserted itself when rains petered out and sky was reported to be clear in the cotton tracts. Except at the opening of the week, the Jarilla August Contract continued to show firmness almost throughout and gained net 16 points over the week. The bulls' interest steadily improved and, after touching a high of Rs. 736.50 today, the Contract closed at Rs. 736.25 as compared with Rs. 721.50 a week ago.

In the spot market at Sewri, trading was dull during the major part of the week, as supply of good quality cotton was scarce. Towards the end of the week, however, some activity was noticeable and spinners' interest was well marked in Partur 197/3, L147, Co2, Raichur Laxmi and Gadag Laxmi varieties. Among foreign staples, *some interest was evinced by mills in American*, Egyptian, East African and Sudan cotton.

The following are the latest available rates from the spot market at Sewri for some of the popular varieties:

Gadag Laxmi Rs. 1,141; Hubli Jaydhar Rs. 1,127; Hubli Co2 Rs. 1,219; Nagar Co2 Rs. 1,260 and Surat Dig. Rs. 1,265.

The market's expectations about global import quota materialised on Wednesday this week. The Government has announced a quota for about 214.000 bales for shipment between 1st July and 31st December 1964. Of these, 70,000 bales are said to have been reserved for allocation against export incentive scheme and 20,000 bales for defence orders. The balance will be distributed to actual users. It is said that the bulk of the quota will be utilised for importing Egyptian and Sudan cottons.

The Textile Commissioner, Government of India, has reminded all 'A' class licence holders (excepting mills and banks) to send regular fortnighty returns regarding their sales and deliveries of Indian cotton; otherwise, the Commissioner will take steps against them which may include non-renewal of such licences for the season 1964-65.

The Pakistan Government's announcement about a reduction of 50 per cent in the export duty on cotton and the abolition of sales tax on this commodity is expected to affect adversely the exports of Bengal *Deshi* variety. Hitherto, Pakistan has levied an export duty of Rs. 20 per bale on all varieties, as against Rs. 25 per bale levied by India on exports of Bengal *Deshi* and Mathia varieties. The reduction in the export duty on Pakistan cotton by Rs. 10 per bale will undoubtedly have serious repercussions on the export of Indian short-staples, unless India, too, reduces its levy without delay.

PLANTING

(Concluded from page 1058)

official nurseries. Three new areas are being developed as seed gardens, the first of these alone extending over 2,400 acres, so as to assure ample supplies.

The main new planting, however, is provided for under schemes initiated by the Government and the Federal Land Development Authority. The latter secures areas of land for settlement schemes through the State Governments and this land is cleared and planted by contracted labour, the settlers only being moved in when the housing accommodation is ready. The families are then expected to work together under the supervision and guidance of a F.L.D.A. manager and his field staff. Settlers are paid a subsistence allowance for the first two years. These projects are financed for the most part by the Federal Government plus loans from the Malayan Development Corporation. Member smallholders are expected to repay the amount of money advanced towards the development of their rubber holding plus any further costs as for accommodation.

Under Government schemes, $168 million were set aside for the period 1955-62 to aid estates to replant or new plant up to 21 per cent of their total acreage and a grant of $400 is paid per acre. A further $112 million were allowed to assist smallholders. This could be used to assist replanting or to finance block new planting schemes and to establish nurseries and seed gardens for the supply of the most up-to-date high yielding planting material at nominal costs. By 1967, both these schemes will have been completed.

COFFEE IN BRAZIL

Foreign exchange earned on coffee exports from Brazil is now negotiable on the free exchange market, according to instruction 272 published by the Superintendency of Money and Credit. (Hitherto, earnings were being converted at the rate of 600 cruzeiros per dollar.) The instruction also lays down that private banks must repass 90 per cent of coffee-exchange purchased to Banco do Brasil (previously 100 per cent); that the contribution quota (coffee export tax) for the 1964-65 crop will be $22.50 per bag and $28.00 for 1963-64 and previous crops. The contribution quota will be adjusted when the Banco do Brasil's free exchange rate exceeds 1,210 cruzeiros per dollar. The S.U.M.O.C.'s instruction is part of the financial scheme for the new coffee crop, now being debated by the I.B.C. Administrative Board. According to well-informed sources, the Board members, representing the trade and farmers, are dissatisfied at the low prices contained in the plan for the new crop.

Note :—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities : repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Including Defence Savings Banks Deposits upto 1954-55. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 9 marked 'E' are not included. J—Commenced from 2nd January 1959. N.B.—Five-year prize bonds were issued from 1st April 1960 and the total outstandings amount to Rs. 22.22 crores. Fifteen-year Cumulative Time Deposits commenced from June 1962—the outstandings at the end of Mar., 1964 amount to Rs. 62 lakhs. Twelve-year National Defence Savings Certificates commenced from 16th November 1962 and the outstandings at the end of Mar., 1964 amount to Rs. 160.51 crores. Ten-year Defence Deposit Certificates were issued from 16th November 1962—the outstandings at the end of Mar., 1964 amount to Rs. 31.65 crores. Five-year Premium Prize Bonds were issued from 1st January 1963 and outstandings at the end of Dec., 1963 amount to Rs. 5.75 crores.

A new series of Premium Prize Bonds, 1964 was issued since 1st January 1964. The outstandings at the end of March 1964 was Rs. 6.68 crores including outstandings of the previous series.

*Progressive net repayments at the end of period since 16th April, 1947.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P. G.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. C.R.—Cum. Right. XR.—Ex. Right.

Shares :—If a company has different classes of shares—as for example : 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up' per share.

Accounts :— Figures in the Accounts Closed column represent the months or the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

SOME REFLECTIONS ON MR. SHASTRI'S REMARKS ON FOURTH PLAN

THE first statement of India's new Prime Minister, Mr. Lal Bahadur Shastri, on planning, in general, and on the Fourth Plan, in particular, reflects a high degree of realism and commonsense. The observations were, of course, brief and general, made at a meeting of the Planning Commission, on 23rd June, over which he presided as its Chairman for the first time. But their significance is as an indication of the thinking of Mr. Shastri on an important aspect of the nation's life. It is common knowledge that the economic stresses and strains through which the country is now passing are due in part to defects in planning and implementation. These defects have to be avoided in the Fourth Plan, besides being rectified to the extent possible in the Third Plan period itself, for there is a limit to the sufferings a country can safely undergo in order to provide a better future for itself. It is in this context that Mr. Shastri's remarks are quite timely. Suggestions are being made by persons close to the Planning Commission that the outlay on the Fourth Five-year Plan will have to be of the order of Rs. 20,000—22,000 crores. The Perspective Planning Division has submitted a paper to the Planning Commission making out a case for an investment of Rs. 22,000 crores. Dr. V. K. R. V. Rao, a member of the Planning Commission, disclosed at Bangalore this week that the Fourth Plan was likely to be as big as the first three Plans put together or about double the Third Plan, that the Plan document would be in terms of ten years' perspective, with details for the first five years, and that the first memorandum would be ready in about a month's time. the Planning Commission must consider carefully before releasing this memorandum to the public whether the country would be in a position to stand the strain of such a huge outlay as is now being contemplated. If the size of the coming Plan is going to be twice as much as that of the current Plan, the hardship that the people will have to endure will also be twice as much as it is today. The people are certainly in no mood to undergo so much suffering.

The protagonists of gigantism may be inclined to dismiss those who urge a cautious approach as pessimists, unworthy of being heard. They may argue that similar notes of caution were struck when the Second and Third Plans were drafted and that, if they had listened to these timid advices, the country would not have made even the progress which it has made in the sphere of industry and agriculture. But, unfortunately for them, the economic growth has been lagging far behind, even though there has been no marked shortfall in the outlay

cultivation or to convert dry lands into wet ones. Again, not all the multi-purpose projects have served the multi purposes. It will, indeed, be no exaggeration to say that none of the major irrigation projects, in which provision was made for inland navigation, has so far yielded that benefit. Nor have the benefits in the form of flood protection been as significant as one was led to believe. An impartial evaluation of the benefits of all the major irrigation projects from these points of view is long overdue and, if completed in good time, will help in assigning an appropriate place for these projects in the Fourth Plan. The object in referring to these aspects of big irrigation projects here is not to belittle their importance and value to the economy. In tropical and sub-tropical zones, where rainfall is seasonal and where the perennial rivers fed by snow and rain are subject to seasonal floods, there is no doubt these projects are necessary and their value is everlasting, if they are properly maintained and the water stored in them is put to all the best possible uses. The object is to stress the importance, as was done by Mr. Shastri early this week, of medium and minor irrigation works which have not received the attention they deserve at the hands of State Governments. If greater attention is paid to these works and farmers are helped to establish masonry, as well as tube, wells, the increase in agricultural production will be quicker and more than proportionate to the capital outlay involved. The hard commonsense of Mr. Shastri is also evident from his emphasis on the need for farmers using compost and green manures to overcome the shortage of chemical fertilisers of the right type.

Poverty and unemployment in rural areas, where they are strongly entrenched, can be reduced if animal husbandry, poultry farming and road building, among others, are vigorously developed. In a modern economy, the scope for traditional cottage industries as a solution to rural unemployment is very, very limited. At best, they can help only the unemployed artisans and persons who have an aptitude for art and technical skill. Their number, however, is not large. Further, the products of cottage industries are neither durable nor of high utility. Their prices will be beyond the pockets of the common man, if workers employed in their manufacture are to be paid decent wages. To subsidise them is to pour money in the drain which this country cannot afford. On the contrary, every rupee spent on fostering animal husbandry, poultry farming, horticulture, road building, furniture making, and such other occupations of great utility to rural and urban centres alike will be quite rewarding. Today, there is an acute shortage of subsidiary foods such as milk, butter, *ghee*, eggs, and fruits and this in turn has contributed much to the increase in cost of living. By devoting attention to these aspects of rural economy, much can be done to relieve these shortages and to provide gainful employment that can attract even educated youths. A new orientation is required in the Governments' policies and attitudes pertaining to rural employment. The central theme of this employment policy should be to produce goods and services for which there is a ready market and which can satisfy the consumers' needs. Hitherto, the policy has been to produce goods of all sorts for the sake of providing employment and then thrust them on consumers by various means. This policy has been a costly failure. Vast sums of money have been lost, without yielding any sustained results. It is to be hoped that planners at both the Centre and States have learned a lesson and that they will refrain from repeating their mistakes, without necessarily waiting for the Fourth Plan.

PAKISTAN'S ECONOMY BUOYANT

PAKISTAN'S economy, as delineated on the pages of the *Economic Survey* for 1963-64, presents a picture of growth with relative stability. It is not overall growth in terms of national income that is meant here, significant though the increase in *per capita* real income from Rs. 259 in 1962-63 to Rs. 269 in the year under review is. But it is growth in some vital sectors that is much more significant. In the agricultural sector, for instance, the output of both food and non-food crops has maintained a steady uptrend since 1959-60. This is borne out by the index of agricultural production (base: average of 1949-50 to 1952-53=100) which shows 134 and 172, respectively, for food crops and non-food crops in 1963-64, as compared with 117 and 129, respectively, in 1959-60. Particularly noteworthy, in this connection, is the estimated output of rice at 11.6 million tons in the latest year, as compared with 9.8 million tons and 10.6 million tons, respectively, in 1962-63 and 1961-62, and that of cotton at 2.4 million bales (of 400 lbs. each), as against 2.1 million bales and 1.8 million bales in the respective earlier years. The claim that some of the major crops like rice, cotton and sugarcane have set new production records in 1963-64 and exceeded the second Plan targets, by significant margins, a year ahead of schedule seems to be a valid one, though the relevant estimates are provisional. It would thus appear that the steady, though not spectacular, agricultural growth in Pakistan is a healthy feature of its economy. But the country has still some way to go before wheat imports, which were of the order of 1.3 million tons in the July 1963-March 1964 period, can be wholly dispensed with. However, as against this continued dependence on wheat imports may be partly set the trend of increase in the exports of raw cotton at a monthly rate of about 64,000 bales in the July 1963-March-1964 period, as compared with a monthly average of 53,000 bales in 1962-63.

Another sector which has continued to show buoyancy is that of industry and mining. The index of industrial production (base: 1959-60=100) shows 156.5 in the October-December 1963 quarter, as compared with 133.6 in 1962-63 and 119.2 in 1961-62. The industries which have recorded marked increases in production are sugar, jute manufactures, fertiliser, petroleum and cement. In the mining field, too, buoyancy has been well maintained. The index of mineral production (base: 1959-60=100) has gone up from 124.0 in 1961-62 to 138.2 in 1962-63 and further to 159.1 in the last quarter of 1963. The impressive growth of production in industry and mining has been rightly attributed to the enterprise of the private sector which, after over-fulfilling the Rs. 284-crore Investment Schedule of the second Plan period to the extent of Rs. 123 crores in about half the period, has taken up since February 1963 a supplementary investment schedule for Rs. 153 crores. Of course, the public sector, too, has contributed its share, having completed 34 industrial projects, with an aggregate capital outlay of Rs. 80.3 crores, in West Pakistan and 25 projects, with an aggregate outlay of Rs. 62.7 crores, in East Pakistan. But it is the private sector that has made the major contribution to industrial growth, thanks to the adoption of congenial fiscal and financial policies by the Government. This favourable climate for investment has, incidentally, enabled the Government to obtain foreign loans and credits to the tune of about Rs. 350 crores for the private sector since the beginning of the second Plan. What is more, the Department of Investment Promotion and Supplies has accorded so far sanctions to 313 units, involving a total investment of Rs. 89 crores, of which Rs. 39 crores is foreign private capital. This does not include Rs. 43 crores of foreign loans associated with that equity capital. That this policy of encouragement to private enterprise (both domestic and foreign) is being continued steadfastly is borne out by the absence of new direct taxes in the 1964-65 Budget, the removal of wealth tax on private companies, the extension of tax holiday scheme upto 30th June 1970 and the grant of an additional 10 per cent tax rebate to mining industry and of tax exemption to foreign technicians for three years instead of the present two.

As both agricultural growth and industrial growth have generally conformed to expectations and even surpassed them in certain lines, they have led to two salutary results in the context of relative price stability, that is, in the context of a modest rise of two points per annum in the index of wholesale prices during the last five years. One result is the emergence of unsuspected additional resources for the second Plan within the country itself. It will be recalled here that the Plan had originally contemplated that about 50 per cent (Rs. 1,155 crores) of its entire outlay would be financed through foreign aid and loans. But the current expectations are that no more than Rs. 947 crores of foreign aid and loans would be required during the whole Plan period and that as much as Rs. 1,443 crores will have been spent on development out of the country's own resources by the end of 1964-65, as against the original estimate of Rs. 1,145 crores. The other salutary result—this is also related to the first—is the increasing ability of the economy to augment its export earnings. It is, indeed, noteworthy that, as against the original estimate of Rs. 1,125 crores of exports (including invisibles) for the entire Plan period, actual exports in the first three years aggregated Rs. 750 crores. If the export performance is maintained at about the current level in the next two years, the Plan estimate, it is said, will be exceeded by Rs. 187 crores. It is broadly to the extent of this excess that foreign aid requirements would be less.

That in all the vital sectors of Pakistan's economy growth has taken place with relative stability over a certain period is thus undeniable. But the modest average annual increase of two points in the wholesale price index during the last five years as a whole conceals the fact that, in 1963-64, the pressure on prices was quite strong and persistent in several lines, even assuming that the index is scientific in its construction, which, according to some observers, is not so. For instance, the average wholesale price of wheat at Lyallpur was higher at Rs. 18.50 per maund in March 1964, as compared with Rs. 16.00 a maund in April 1963. The wholesale price of white sugar at Karachi during 1963 ranged between Rs. 62 and Rs. 72 per maund, as compared with a range of Rs. 54 to Rs. 62 per maund in 1962. On the whole, the prices of consumer goods, especially the imported ones, tended to rise during the year. If these and other price increases were not reflected in the index for 1963-64 (105.8 points in the first eight-month period, as against 104.8 in 1962-63), it must have been because of the decline in the prices of rice and oils. This modest rise in the wholesale price index does not, however, seem to reflect the true state of affairs insofar as cost of living is concerned. While the cost of living index at Narayanganj in rice-eating East Pakistan increased by only two points from 129 in March 1963 to 131 in March 1964, the index at Karachi and Lahore in wheat-eating West Pakistan increased during the same period by 10 points and 13 points, respectively. As wheat production has been static at about four million tons in the last three years and the issue price of imported wheat, too, has had to be increased, recent price and cost of living trends in West Pakistan have been less encouraging than in East Pakistan. How easily the vaunted price stability can also be disturbed in the wake of latest Budget proposals will be seen from Karachi reports. It is said that, although the Budget proposals are to take effect from 1st July 1964, in the case of almost all items (cigarettes, vegetable ghee, edible oils, *biris*, motor car tyres, etc.) which have been affected by tax hikes as proposed by the Finance Minister, the prices have shown upward trends and the people are required to pay more for them than they were paying on the eve of the Budget. This tendency to profiteer has been described as odd and ununderstandable and rightly criticised by a section of the Press in Karachi.

But that is how price increases have been effected, in some cases legitimately and in some others illegitimately, in India, too, in the wake of the defence-oriented Budgets of 1963-64 and 1964-65. That the tax element is reflected proportionately or disproportionately in the prices of a wide range of commodities is unfortunately true. A large part of the price increase in this country in 1963-64, for instance, was due to this element. It cannot be different in Pakistan, where, too, the accent is increasingly on indirect taxation. So the authors of the *Economic Survey* of Pakistan would have done better if they had not sought to draw excessive comfort from a comparison of price trends in Pakistan and India during 1963-64 and taken it for granted that "reasonable" price stability in their country would continue. In fact, there would seem to be no warrant for complacency on the price front. It is pertinent to note, in this connection, that, despite the vaunted price stability, the quantum of subsidy given by the Government of Pakistan for bolstering the exports of manufactured goods is much higher than in India—in fact, it is quite lavish—and that the discount at which Pakistani rupee is quoted in the foreign exchange markets of the world is greater than in the case of Indian rupee. As Pakistan relies so heavily on free enterprise for industrialisation, there is all the more reason why its Government should make it function as fair enterprise in all respects, so that the broader purpose of social justice may also be served to some extent.

MARKET GOSSIP

Cloth Prices

THE cotton mill industry, it is unfortunate, has once again become a victim of public condemnation for no fault of its own. May be, some mills have increased their ex-mill prices of cloth above the levels fixed under the Indian Cotton Mills Federation's voluntary price regulation scheme. But the increase has been inevitable, for, otherwise, these mills would be in the red soon. Caught as they are between a steep rise in production costs, on the one hand, and pegging of prices, on the other, the mills, especially the marginal units, are passing through a severe crisis. The voluntary price regulation scheme, it will be recalled, was forced on the industry, though the industry pleaded for a statutory enforcement of price control which the Government was not prepared to enforce. The scheme was meant to be a purely temporary arrangement, pending the final decision of the Government on the findings of the Tariff Commission which initiated an inquiry into cloth prices towards the close of 1960. Although the scheme has been in operation for nearly four years and the Tariff Commission submitted its report in December 1962, the voluntary price regulation scheme still continues without any price adjustments to take care of increased production costs. Is this fair?

It is deplorable that, despite repeated representations from the industry either to scrap the scheme or to make suitable adjustments in the formula to take care of increased costs of production, the Government continues to be silent. At any rate, the scheme ceased to be really effective long back, as the Federation, which administers the scheme, does not have any power to take action on mills which are compelled to sell cloth at prices higher than those fixed. No less a person than Mr. Naval Tata, Chairman of the Tata Group of cotton mills, has frankly stated that the scheme has been a thorough failure. Here is what he says in his statement to the shareholders of his companies at their annual meetings held this week:

"The increase in the cost of production can be met either by suitable adjustments in the selling prices of cloth or by extensive rationalisation of means of production. Since 1960, the industry has been operating under a voluntary price regulation scheme under which the prices of every sort produced are fixed by a Price Fixation Committee. The number of sort changes allowed to be made in any given period of time is limited. This scheme was introduced as a temporary measure. Since then, a Tariff Commission inquiry into cloth prices was initiated in December 1960. Although four years have passed and the Commission submitted its report in December 1962, the scheme still continues without any price adjustments to take care of increasing production costs. Various suggestions have been made to Government either to scrap the scheme, *which in its operation, to be blunt, has become a farce* (italics ours), or to make suitable adjustments in the formula to take care of increased costs of production. Uptil now, there has, however, been no favourable reaction. Even the report of the Tariff Commission has not been published or acted upon."

The fuss over the issue of cloth prices is unnecessary and can certainly be ended, but the Government must take a prompt decision early. It is to be hoped that the Cotton Textile Consultative Board, due to meet in Bombay on the 7th of next month, will discuss the problem in all its aspects and make appropriate recommendations.

Institute Of Bankers

The efficient functioning of any enterprise, be it big or small, depends to a considerable extent on the persons in charge of it. It is, therefore, of vital importance that these persons are given intensive training in the field in which they work. The need for such training is especially urgent in the banking sector, what with its vast, diversified and complicated nature of functions and responsibilities assumed in the context of economic development. If the banks are to play the role assigned to them satisfactorily, they must necessarily make an all-out effort to see that their staff members acquire sound knowledge of both the theoretical and practical aspects of banking and other kindred subjects. Out of over 200,000 employees of commercial banks, only a few thousands have so far been trained. And, with the expansion of new bank branches, more and more persons will be recruited. The task of extending training facilities to all the employees of banking industry is, therefore, becoming formidable.

Viewed thus, it is, indeed, gratifying to find that the Indian Institute of Bankers has been doing a pretty good job in encouraging banking studies, as witness the marked expansion in the membership of the Institute (from 18,425 in 1959 to nearly 35,000 at present), the rise in the number of candidates entering for the Associate Examination (from 12,887 in 1959 to 21,953 in May 1963), and the increase in the number of examination centres (from 335 to 516). The rise in membership certainly reflects, as Mr. P. C. Bhattacharyya, Governor of the Reserve Bank of India and also President of the Institute, stated in his speech (read in his absence on tour by Mr. C. H. Babha, Vice-President) at the thirty-seventh annual meeting of the Institute held at Bombay on Thursday this week, very broadly the expansion of banking services in the country, a trend that is likely to continue. In the context of such a development, it is just as well that the Institute is being equipped to undertake an expansion of its activities and services to its members on a planned basis. By the middle of next year, we are told, all places with a fair concentration of the Institute's members will have centres of their own.

The opening of centres and sub-centres of the Institute no doubt provides a minimum of essential services to the members, but the measure of their (centres') real effectiveness, as Mr. Bhattacharyya rightly remarked, lies in the extent to which the members avail themselves of these services and indicate to those in charge of them the types of assistance or facilities they need. This is very important, because the reports from centres already set up show that the members are not making adequate use of the library and reading room facilities, and that the attendance at the free lecture courses organised at the centres with sizable membership is not as large as one would wish. Mr. Bhattacharyya was, therefore, prompted to call upon the bank managements to assist the Institute in improving the efficiency and effectiveness of the centres by persuading their staff to make use of them in an ever-increasing measure.

While the number of bankmen entering for the Associate Examination conducted by the Institute has increased markedly in recent years, it is disquieting to learn that the standards of performance of candidates in almost all subjects have been generally poor. The candidates must, of course, apply themselves earnestly and prepare for the Examination adequately. Even so, the need for imparting systematic instruction to these candidates cannot be stressed too strongly. Indeed, there is, as Mr. Bhattacharyya said, no substitute for such instruction. The Institute has done well, therefore, in organising tutorial classes in Bombay. It is proposed to conduct similar courses in other important centres such as Delhi, Calcutta and Madras.

Whatever the organisational set-up, it is necessary that those who qualify for the Institute's certificates and diplomas should not only be aware of the additional functions and responsibilities assumed by the banks in the context of economic development but also possess a knowledge and understanding of their meaning and significance.

The need to evolve model syllabi for the training of bankers is more urgent now than at any time before. It is only through such syllabi that the Institute could certify that the candidates who successfully complete its examinations would be able "to bring to their day-to-day work greater knowledge and discernment and give a better account of themselves than those who have not similarly qualified themselves."

While all this represents a correct approach, one wonders whether the Institute itself is adequately staffed and serviced to fulfil the expanding responsibilities entrusted to it. There are complaints from the candidates appearing for the examinations that the time taken by the Institue to announce the results is pretty long, that the time allotted for answering the question papers (two hours) is extremely short having regard to the number of questions and standard of answers expected, the security arrangements for ensuring secrecy of question papers leave much to the desired, that there is no provision for verifying the marks lists by those who feel aggrieved, and that not all banks reward those of the staff who have been successful in winning the Institute's diploma. It is high time the President and members of the Council paid attention to these points.

Steel For Watch Manufacture

Watch is aptly described as a little mechanical masterpiece. So exacting are the demands on its precision. Even a slight mistake in assembling the different parts will render the watch absolutely useless. It is no wonder that modern watch manufacture is a highly skilled automatised process and that the materials used must possess quite extraordinary properties. Take, for instance, the main spring. It has to work continuously for many years and, all the time, it is supposed to "pull even." The fatigue resistance (that is, lifetime of a watch spring depends to a large extent on flatness and smoothness of surfaces and edges, as well as accurate width and thickness. Until recently, watch springs were made almost exclusively from carbon steel with or without small additions of alloys. Lately, however, main springs of stainless steel and other highly alloyed materials have come into use. Extensive research and series of experiments, conducted at the Sandvik Steel Works of Sweden and elsewhere, have resulted in a stainless steel spring of remarkable properties. The steel produced by the Sandvik, it is claimed, gives the springs a lifetime five to ten times that of springs made of old carbon steel. As many as 10,000 re-windings before breakage have been reported, which are equivalent to some 27-28 years of service in a watch. This Swedish firm, it may be noted here, is collaborating with the Indian firm, Sandvik Asia Ltd. (Poona), in the manufacture of tungsten carbide tips and tools and rock drill steel equipment.

Besides the main spring, there are several other important parts of a watch, including wheels, pinions, shafts of different kinds and winding stems, of which some are made from strip steel and some from wire or ground rods (silver steel). The winding stems can, of course, be produced from carbon steel which is good from the machinability point of view. But this steel, it is said, gets rusted often, leading to stem rupture. The Sandvik of Sweden is now manufacturing a type of stainless steel (called Sandvik 4C27A), which not only offers machining properties (hardness and toughness) as good as those of carbon steel but is corrosion-resistant.

ANNUITY DEPOSITS

HOW THEY AFFECT TAXPAYERS

By Bansi S. Mehta

[Although nearly four months have elapsed since the Union Finance Minister announced the introduction of Annuity Deposits in the place of Compulsory Deposits, the Government has still not framed the scheme giving the exact details, with the result that the taxpayers are unable to assess the extent to which the payment of Annuity Deposits will actually affect them. The taxpayers will, therefore, find the article, published in this column, quite interesting and useful. The article is an adaptation of the speech delivered by Mr. Bansi S. Mehta, a leading Chartered Accountant, in Bombay last week under the auspices of the Forum of Free Enterprise.—ED.]

ANNUITY Deposits are intended to serve a three-fold purpose: (a) to check inflationary tendency, (b) to spread over the tax liability, and (c) to obtain on an involuntary basis public savings at a cheap rate of interest. How far the first objective will be met is, indeed, doubtful, because the refunds of Annuity Deposits, after about four to five years, will start matching the payment by the depositors to the Government, so that there will be more or less a counter-balancing of inflow and outflow of money. The second objective also stands fulfilled to a very limited extent; since, in a majority of cases, the involuntary nature of the deposits will rather tend to increase the overall tax liability. But the most serious objection will be that the taking of a lump sum today in exchange for 'piece-meal' refunds in future deprives citizens of the real worth of their money, in view of the continuous inflation that we have been witnessing in this country. It is somewhat unfortunate that our law-makers do not take into account all the aspects before they embark upon such a novel piece of legislation.

It is curious that the provisions relating to Annuity Deposits are mixed up into the Income-tax Law for reasons best known to the Finance Minister himself. One is reminded of that tyrannical Sultan who, when told by his ministers that prison cells were all full of prisoners and that the Sultan should, therefore, stop sending people to prison, replied that let there be two prisoners in one cell. One thing, however, is clear that the constitutional validity of Annuity Deposits is not beyond doubt simply because it is mixed up into the Income-tax Law. Requiring citizens to make involuntary deposits is something which does not come under the power to tax income.

The charge of Annuity Deposits is created when the Finance Act is passed; and, therefore, the liability for the first time can arise only when the Finance Act specifically requires Annuity Deposits to be made. There is no provision whereby the liability fixed by the earlier Finance Act is continued, even if the next Finance Act is not passed. It is, therefore, a little curious that taxpayers should be called upon to make Annuity Deposits even in respect of the subsequent years in advance. Our experience about Compulsory Deposit shows how fickle our laws are and what the mortality rate is amongst the new laws. It will only add to the Administration's burden to repay the advance Annuity Deposits if and when the present Annuity Deposits are removed from the statute book.

Annuity Deposits are required to be made by an individual, a hindu undivided family, an unregistered firm, an association of persons or a body of individuals other than a company or a co-operative society and an artificial juridical person. In each case, however, the person must be resident in India within the meaning of the Income-tax Law. An individual, in order to be liable, must be a citizen of India. Citizenship is a legal concept and, therefore, a mere domicile in India would not be enough to require a person to make an Annuity Deposit. In making an hindu undivided family liable as a unit. I submit, the 'law-makers' have committed a mistake. There is no provision for a higher limit for a hindu undivided family in respect of rates at which such Deposits are to be made. Under the Income-tax Law, minimum taxable limits are separately specified for hindu undivided family at higher amounts. Similarly, by making an association of persons liable, a grave hardship is likely to arise.

Take the case of a Trust having an annual income of, say, Rs. 30,000. Under the provisions of the Trust Deed, the income is to be allocated equally amongst three beneficiaries, so that each will have an annual income of Rs. 10,000 which is less than Rs. 15,000 above which alone a person can be required to make an Annuity Deposit. But, in this case, it will be the Trust as a unit that will be called upon to make the Annuity Deposit.

The basis for calculating Annuity Deposits is the adjusted total income. Let me explain how this income is to be arrived at. We start with total income as calculated under the various provisions of Income-tax Law. From this total income, for the current assessment year, that is, 1964-65, we have to deduct salary income, share from an unregistered firm, share from an association of persons, compensation under Section 28(ii) and capital gains. The resultant figure is the 'adjusted total income.' For subsequent assessment years, the adjusted total income is to be arrived at by deducting from total income accumulated balance received from a recognised Provident Fund, income received in arrears or in advance, share from an unregistered firm, share from an association of persons, compensation under Section 28(ii) and capital gains. From this it will be noticed that a very important omission in this behalf is income which is exempt under the Income-tax Act such as income from new industrial undertakings and donations, etc. The result will be that, even in

DELHI LETTER

BRIEF TALKS WITH MIKOYAN

A SLIGHTLY BITTER PILL FROM RUSSIA

From Our Special Correspondent

NEW DELHI, 23rd June

WHEN Soviet Vice-Premier Kosygin came to Delhi to attend the funeral of Jawaharlal Nehru, he made initial acquaintance with the shape of things evolving immediately after the end of the Nehru era. Mr. Kosygin, in public and in private, gave an assurance of continued Soviet support to India, both politically and economically. Mr. Anastas Mikoyan, another Soviet Vice-Premier, on a 36-hour-long halt last week-end in Delhi, on his way as the head of a delegation to Indonesia, used the occasion to familiarise himself further with the personalities in the seat of power in Delhi. He made it a point to accent Soviet support for India on the Kashmir question and also welcomed Mr. Lal Bahadur Shastri's statement on the continuing Indian policy of non-alignment. Both these points, publicly made by Mr. Mikoyan, have naturally been welcomed in Delhi which, at the same time, has been offered a slightly bitter pill by the Soviet Union. New Delhi had tended to assume that, as in the period preceding the formulation of the third Five-year Plan, when Russia announced her commitments long in advance, this time too Moscow would tell the Indian Government quite early how much assistance it would be able to render India during the years of the fourth Five-year Plan. Such an advance promise was considered important by the planners in Delhi, because the Soviet bloc aid was to be funnelled purely into crucial industrial development programmes which need elaborate and time-consuming preliminary discussions. Aid from the West, on the other hand, has partly been for maintenance imports needing not much advance planning.

The Finance Minister, Mr. T. T. Krishnamachari, was planning to visit the Soviet Union for talks on the economic aid programme. Mr. Mikoyan lost no time in putting a damper on the Finance Minister's plans by making it clear that it would serve no purpose for the Finance Minister to visit the Soviet Union on an early date. The promise to underwrite the Bokaro steel plant's first 1.5 million tonne stage is a commitment which will be largely fulfilled during the fourth Plan period. Apart from this commitment, which may involve more than Rs. 150 crores of Soviet assistance, the Russians are not willing to make any advance promises for the fourth Plan. The Russians certainly wish to wait and watch how the new Indian administration and its star leaders grow, with Nehru gone out of the picture.

When Mr. T. T. Krishnamachari first headed the Steel Ministry, he negotiated the deal with the Russians for building the Bhilai steel plant. When Mr. Swaran Singh was in charge of steel, the gossip in Delhi was that his doors were always open for free conversations with the Russians from Bhilai. To be fair to the Minister, the Russians put in charge of their Bhilai operations an individual of high status who could be acceptable to the rank-conscious Ministers and officials in Delhi. The preliminary agreement in principle for another, major agreement with the Russians, the project to make the supersonic MIG-21 fighter plane, was made when Mr. Krishna Menon was in the Defence Ministry. Without being a part of the Soviet lobby like the former Oil Minister, Mr. K. D. Malaviya (who pioneered the oil deal with Moscow), Mr. C. Subramaniam still made an impression with the Russians and successfully laid the foundation for Soviet collaboration to build the Bokaro plant. In recent months, the Russians seem to have developed a dislike for Mr. Krishnamachari. It is not known who is to be blamed for this attitude of Russians. They seem to have been cut up by the fact that the Indian Government did not plump for more oil connections with Russia. With Nehru gone, there is no court of last appeal. Mr. Krishnamachari and the civil servants today exercise greater control on project negotiations than any other group in the past. The Soviet and Indian bureaucrats do not speak the same language. The impact of Mr. Sanjeeva Reddy on the affairs of the Steel and Mines Ministry will be an important equation which remains to be evaluated.

Mr. Mikoyan gave Mr. Shastri a formal invitation to visit the Soviet Union but Mr. Shastri has been in no hurry to fix an early date. The first key Minister to visit Russia in the near future will be Defence Minister Chavan who has received a Mikoyan promise that the two-year-old programme for MIG manufacture will now be speedily implemented. According to original calculations, twelve MIGs were to be delivered by the end of this year. Six were received, of which two were lost in a crash. Russia is now said to be ready to deliver two more MIGs to replace the lost two. The Russians are also said to be working on an improved version of the MIG-21 plane to convert it into an all-weather fighter. The licence to manufacture a missile and weapons system to arm the MIGs has yet to be granted by the Russians. Mr. Mikoyan, who met Mr. Shastri, Mr. Chavan as well as Mr. Krishnamachari, is understood to have accepted in principle an Indian demand for more transport aircraft and helicopters. Mr. Chavan will discuss this deal also when he visits Moscow.

Apart from Rs. 384 crores aid commitments until the end of the third Plan and the promise to assist Bokaro building, the Russian military commitments are now placed at more than Rs. 120 crores.

Mr. Chavan's U.S. mission was halted midway when Nehru died, but soon afterwards a joint *communique* was issued by the Indian and U.S. Government, spelling out the American commitments. Mr. Chavan is also to visit Britain soon—a trip he had to cancel in the end of May. From Britain Mr. Chavan seeks submarines and technical aid to build warships at the Mazagon Docks. An important British contribution to the Indian defence industry is the deal with Vickers for the manufacture of military tanks at Avadi. The British aided project is to make medium tanks, and discussions are in progress with the French to make a light tank. This will be a proven light tank which can be transported by air and dropped into forward border areas.

Oil Project Delays

Programmes for new oil refineries and negotiations with oil companies are getting into new slippery areas, to the discomfiture of Minister Humayun Kabir and his officials. The world over, the deals are becoming more favourable than in the past few years as far as the buyers are concerned, but the Indian Government is finding it difficult to arrive at conclusions as to what attractive prices are. Even if the Russians are willing to supply crude to India, the oil company refineries—existing or planned—cannot be forced to touch it. The Malaviya deal with Philips Petroleum for the Cochin refinery was not so long ago hailed as a great advance which taught a lesson to other companies, but second and third thoughts on the deal have led to considering the deal in less favourable light. The cost of the crude to which the Cochin refinery is tied is now considered too high. For the Madras and Haldia refineries the foreign companies which offered collaboration naturally have tried to tie in their sources of crude. If enough crude is ever produced in India, all the refineries in the country, whoever the owner, have to use the Indian crude. The efforts now are to persuade the refineries to accept crude which can be termed Government crude by virtue of the Indian Government being an investor abroad in exploration and production. Even if the efforts to go into Iran for oil exploitation in a tie-up with ENI or Philips

why carry CASH?

CARRY

THE BANK OF INDIA LTD. RUPEE TRAVELLERS' CHEQUES

Without any irksome formalities, you can purchase Rupee Travellers' Cheques of The Bank of India Ltd. Issued in three denominations, Rs. 25, Rs. 50 and Rs. 100, they are encashable in INDIA at all Branches of the Bank and Branches of the State Bank of India. The Bank of India Rupee Travellers' Cheques protect you against loss or theft of your money.

THE BANK OF INDIA LTD.

T. D. KANSARA, General Manager

a new dimension to investment

The Unit Trust of India - established by an Act of Parliament - offers you a unique form of investment which is safe, brings a steady return and is liquid enough to realise when you are in need of funds. This is: Units under the Unit Scheme, 1964.

The object of the Unit Trust is to pool the savings of the community by sale of units and to invest them in well chosen securities of diverse types. The investment policy of the Trust is to build up a balanced portfolio of investments, yielding an average return of over six per cent per annum.

Barring expenses limited by statute to a maximum of five per cent of the income, the Trust will distribute the balance to the unit holders as dividend.

Income from dividend up to Rs. 1,000 is free of income-tax in the hands of unit holders.

The management of the Unit Trust is vested in the Board of Trustees consisting of representatives of the Reserve Bank of India, State Bank of India, Life Insurance Corporation, commercial banks and business and financial institutions.

Each unit will be of the face value of Rs. 10. You can buy ten or a multiple of ten units. There is no upper limit to investment in units.

The Trust offers the initial sale of units at par from July 1 to July 31.

By investing in units, you get these advantages:

Safety of Capital
Assured Income
Promise of Capital Growth
Spread of Investment
Tax Concessions
A Share in the Nation's Growing Industrial Prosperity

Details of the unit scheme and application forms will be available at over 3,500 offices of the following banks from July 1:

State Bank of India, Bank of India Ltd., Central Bank of India., Punjab National Bank Ltd., United Commercial Bank Ltd., Allahabad Bank Ltd., Bank of Baroda Ltd., State Bank of Bikaner & Jaipur, State Bank of Hyderabad, State Bank of Indore, Bank of Maharashtra Ltd., State Bank of Mysore, State Bank of Patiala, Bank of Rajasthan Ltd., State Bank of Saurashtra, State Bank of Travancore, Indian Bank Ltd., Devkaran Nanjee Banking Co., Krishnaram Baldeo Bank Ltd., New Bank of India Ltd., Syndicate Bank Ltd., Tanjore Permanent Bank Ltd., United Bank of India, Union Bank of India Ltd., British Bank of the Middle East Ltd., Chartered Bank, First National City Bank, Hongkong and Shanghai Bank Ltd., National & Grindlays Bank Ltd., Netherlands Trading Society Ltd., Mercantile Bank Ltd., Oriental Bank of Commerce Ltd. and Indian Overseas Bank Ltd.

THE CO-OPERATIVE SECTOR

THE kind of mixed economy that has been evolved in India under conditions of planning, according to the *New York Times*, has had mixed results, combining stultifying State control and red-tape with the less savoury features of free enterprise. One may or may not agree with this view of the Indian economy. But there can be no two opinions about the complementary character of the public sector and the private sector. This is itself a potent factor making for balance between what are basically two conflicting sectors. A free co-operative sector may well buttress that balancing element, and so the idea of developing that sector "as a balancing force between the public sector and the private sector"—an idea aired by Mr. S. K. Dey, Union Minister for Community Development and Co-operation, in his address at the annual conference of State Ministers of Co-operation held at Hyderabad on the 19th and 20th instant—is cartainly commendable. But the qualification to that commendation is that the co-operative sector should be genuinely "free"—free from State participation and interference. If it is not that, it can only develop as an adjunct of the public sector, thereby not only failing to serve as a "balancing force" between that sector and the private sector but also giving rise to discord between the two sectors as in the case of the co-operative sugar factories.

It must be said to Mr. Dey's credit that he was not oblivious of the need for ensuring the independence of the co-operative sector from Government interference, in spite of the large amount of State aid given to co-operatives. In fact, he recognised that the only alternative to State control would be to build up federal organs in the different spheres of the co-operative movement for taking over some of the functions now performed by Government and governmental agencies. In other words, Mr. Dey was in favour of freeing the co-operative sector from excessive bureaucratic domination so as to make it a self-disciplined and self-regulatory movement. It will be recalled, in this connection, that the Vaikunth Lal Mehta Committee on Co-operative Administration had recommended early this year that the primary credit societies should come to be supervised by central banks uniformly in all the States, instead of being subjected to departmental supervision, and that the supervision of all other co-operative societies should be transferred to appropriate federal co-operative agencies. That the Government has accepted this salutary recommendation is clear from Mr. Dey's assurance "that the Government will go all out to build up and support these federations, provided they can grow in competence to serve the people and their constituents." Mr. Dey's proviso here is fundamental, for the proposed transfer of powers from the Registrar of Co-operative Societies to federal co-operative agencies can be safely effected only after systematic arrangements are made to ensure their supervisory competence.

The proceedings of the conference of State Ministers of Co-operation are noteworthy for some of the decisions taken by it. The decision to set up a high-powered committee to review the present pattern of organisation of co-operative marketing of agricultural produce, distribution of agricultural requisites and supply of consumer articles at all levels is a right one in the context of the proposed extension of the package programme of intensive cultivation to more districts. Only, the suggested committee should report promptly on the steps needed to make the co-operative channels, leading to and from the agricultural sector, more efficient and effective. The other decision that "co-operatives should be utilised as the sole agency of the Government in the scheme of State trading and procurement of foodgrains" does not, however, seem to be quite sound. It would appear that the Registrars of Co-operative Societies, at their conference at Hyderabad held on the 17th instant, had given a rather hasty lead in the matter by recommending that "sole agency" role for co-operatives without examining carefully whether they were in a position to play that role adequately in all parts of the country.

That the normal trade channels would have to be relied upon for procurement and distribution in most parts of the country even under a regime of limited or partial State trading should be obvious, for only a few areas in some States are fairly advanced in the sphere of co-operation. This is not to suggest that State trading is desirable in itself but that co-operatives are in no position to play any worthwhile role in such trading, whether partial or full, and, consequently, in holding the price line. Both the Registrars' conference and the Ministers' conference have been unduly optimistic on the score of the co-operative sector's capacity to handle a substantial portion of the marketed surplus. There is no doubt that this capacity is very limited in sheer physical terms, for the primary marketing societies through which, according to the Registrars' conference, the Governments' procurement operations should be undertaken, number no more than 3,000 in the entire country and the bulk of their membership is confined mostly to a few States, such as Andhra Pradesh, Madras, Maharashtra, Mysore and Uttar Pradesh.

CENTRAL AID FOR IRRIGATION

A big storage irrigation project, costing up to Rs. 100 crores, or possibly, more, usually causes great strains and stresses in the finances of a State Government, with the result that sufficient funds are not available for both the big and small projects to be taken up simultaneously. This problem has, therefore, been agitating the minds of publicists and administrators for some time now. For instance, a retired Financial Adviser to the Andhra Pradesh Government on the Nagarjunasagar Project and a former Accountant General (Mr. S. Ramayya) recently analysed the problem in all its bearings and advanced the suggestion that irrigation projects costing over Rs. 10 crores should be financed entirely by the Centre (*vide* page 534 of *Commerce* dated 28th September 1963). In two other articles published last week and this week, he has gone into this question further and drawn attention to certain other economic and social costs of big irrigation projects. The Union Finance Minister, Mr. T. T. Krishnamachari, too, it will be recalled, had something to say on this subject in his inaugural address at the Indian Economic Conference held at Bombay on 25th December 1963. His suggestion was that the Centre should shoulder more direct responsibility for irrigation and power development. And it was also his expectation that such a change in the area of responsibility would produce the additional good that "the economics of a project might receive greater consideration as against sentimental and parochial support that often goes with such a project." That these suggestions have not been in vain should be apparent from the report this week that the Central Government proposes to select one irrigation or multi-purpose project in each State to share 50 per cent of its cost.

The Government's idea seems to be that such "specially-aided projects" should be those involving an aggregate capital outlay of more than Rs. 20 crores each. The projects reported to have been tentatively selected for special aid are as follows:

1. Nagarjunasagar—Andhra Pradesh.
2. Gandak (Division)—Bihar.
3. Tawa—Madhya Pradesh.
4. Upper Krishna—Mysore.
5. Beas Project (I and II)—Punjab.
6. Rajasthan Canal—Rajasthan.
7. Ramganga—Uttar Pradesh.
8. Narmada—Gujarat.
9. Bhima Irrigation—Maharashtra

The aforesaid nine major projects would involve an aggregate outlay of about Rs. 614 crores. Of this amount, only Rs. 103 crores has been spent so far. The balance (Rs. 511 crores) would have to be provided in the remaining years of the third Plan and the fourth Plan. As some States, which have no project costing more than Rs. 20 crores each, may be allowed to group two or three small projects, it can be inferred that the Centre's proposal, if finally adopted, would mean a financial commitment of probably upto Rs. 400 crores on its part during the third and fourth Plan periods. It is a safe assumption that the Union Finance Ministry would agree to this commitment, for T.T.K. himself has openly urged that the Centre should assume more direct responsibility for irrigation and power development and the Union Ministry of Irrigation and Power has made out a strong case for the Centre sharing the cost of major irrigation projects.

The hope, in this connection, is that the big projects with their large irrigation potential, if completed within the optimum period, would add substantial blocks of irrigation potential with each project and result in significant increases in the production of foodgrains. What is more, their expeditious execution would also result in sizable savings in service charges during construction. As paucity of funds is generally responsible for delays in execution, the proposed direct assistance by the Centre would certainly make for speedier implementation of big projects. The State Governments, too, would then be in a better position to take simultaneous or early steps in regard to the construction of distributaries and field channels in the commanded areas and pay more attention to medium and minor irrigation projects which can yield quicker results in terms of agricultural production. In view of these and other advantages that are bound to result from the sharing of cost and responsibility by the Centre, it is very much to be hoped that a definite plan of financing would be finalised and brought into force at the earliest. Meanwhile, the fourth Finance Commission, which has just commenced its work, will have to make suitable adjustments in its recommendations for allocation of Central resources to the States for the fourth Plan period.

OUTLOOK FOR COFFEE

It looks as though the current coffee season (April 1964-March 1965) would be extremely favourable for coffee growers from the point of view of both production and price realisation. The total crop is estimated at 67,500 tonnes, which, though it is below the earlier estimate of 70,000 tonnes, is higher than the 65,000 tonnes plucked in the previous (1963-64) season. The anticipated rise in output may not, of course, be appreciable, but it should be considered quite significant, considering that a long spell of drought in the beginning of the season and insufficient blossom showers during April-May have not caused as much damage to the crop as had been feared before. Moreover, the actual production of coffee may be higher than the revised estimate of 67,500 tonnes, for, in the previous season, though the estimated crop was only 65,000 tonnes, the actual receipts into the pool up to the 11th of this month aggregated 66,950 tonnes, according to the data furnished by Mr. H. Sitarama Reddy, Chairman of the Coffee Board, at a meeting of the Board held in Bangalore last week-end.

Besides larger crop, the sales realisations of coffee growers are likely to be much better in the current season than in the previous season, in view of the present firmness of prices. Coimbatore Robusta coffee sold for internal consumption is currently quoted at Rs. 225 per per half quintal bag, as against about Rs. 179 prevailing a year before. The coffee exported abroad is also fetching a higher price, along with the coffee exported from other countries. The latest available quotation for Uganda Robusta grade 10 (unwashed) coffee in London is £12-17-6 (about Rs. 172) per cwt., whereas the rate standing at this time last year was no more than £10-2-0 (Rs. 135); a few weeks ago, the quotation had risen to as high as £16-16-0 (Rs. 224) per cwt.

The total coffee production in the current (1964-65) season, as already noted, is expected to be of the order of 67,500 tonnes. This quantity, though it is markedly higher than the 45,590 tonnes produced in 1961-62, is actually a shade lower than the production of 67,565 tonnes in the last year (1960-61) of the second Plan and well below the third Plan target of 80,000 tonnes fixed to be achieved by next season. In other words, the gap that remains to be covered for the fulfilment of the target is 12,500 tonnes. It may not be difficult to produce this additional quantity, provided the problem of inadequate blossom showers is tackled properly. The Coffee Board Chairman has done well, indeed, in stressing the importance of maintaining optimum shade and the usefulness of sprinkler irrigation equipment both of which can come to the aid of planters in ensuring their crop in spite of uncertain weather conditions. In some cases, overhead irrigation may also be of immense help in ensuring a good crop. Another handicap confronting the coffee producers is the inadequate curing facilities which have failed to expand in keeping with the rise in production of coffee seeds. Something effective must be done if this is not to become a serious bottleneck.

All this, however, requires quite a bit of capital. There is much to commend in the suggestion of Mr. J. W. Lawrence, the retiring Chairman of the Nilgiri Planters' Association, who spoke at the annual meeting of the Association held at Coonoor last week, that the Coffee Board should arrange immediate payment for coffee delivered to the pool, as the small growers were finding it difficult to raise sufficient capital even for working expenses. The Board, by the way, is the sole buyer of coffee from the planters.

From the long-term point of view, there is plently of scope for augmenting the productivity of coffee lands. A sum of Rs. 30 crores, it is estimated, will be required over a fifteen-year period to rehabilitate and modernise the industry. Since the average annual expenditure works out to Rs. 2 crores only, the coffee industry can easily meet this expenditure with some loan facilities from the Coffee Board.

The need for stepping up coffee production is urgent in the context of the expanding domestic market for this beverage and the exigency of earning foreign exchange through exports. The internal consumption for the 1963-64 season was estimated at about 30,000 tonnes. This is a gross underestimate. It was, however, on the basis of this estimate and taking production as 65,000 tonnes, that the exportable surplus of coffee out of the 1963-64 crop was put at 35,000 tonnes. This was the export allocation recommended by the Marketing Committee of the Board early in March last. But, in view of the larger crop anticipated, the Government of India has suggested to the Board to consider the possibility of raising the allocation beyond 35,000 tonnes. The total quantity (out of the 1963-64 crop) actually sold for export so far is about 17,825 tonnes, including the 2,507 tonnes put up in the export open auction on Wednesday this week. Incidentally, it will be recalled, the open auction system for exports has been introduced in the place of the sealed tender system; the first sale by open auction was held at Bangalore on 8th April 1964.

The 17,825 tonnes of coffee actually sold for export so far account for the major portion of the export quota allotted to India under the World Coffee Agreement. For the coffee year 1963-64, India was originally allocated a quota of 21,304 tonnes, being 99 per cent of the basic export quota, as against the 21,384 tonnes allotted in respect of the previous year when actual exports to the member-countries of the Agreement amounted to 21,469 tonnes. With the enhancement of quotas made at the emergency session of the International Coffee Council held in February 1964, India got an additional quota, bringing the total quota to 22,064 tonnes. A further increase of 387 tonnes in the quota is expected to be announced in the near future on account of the shortfalls notified by some exporting countries. Meanwhile, in accordance with the decision of the Coffee Council, India has introduced the system of certificates of origin with effect from April this year. And it is making efforts to get its basic export quota enhanced.

The actual shipments of coffee from India during the last financial year (1963-64) aggregated 23,336 tonnes, as against the 20,416 tonnes exported in the previous year, representing a rise of 14.3 per cent. But the total amount of foreign exchange earned was higher by only 9.0 per cent (at Rs. 8.30 crores, as against Rs. 7.61 crores). For the average export price realised was lower in 1963-64 than in 1962-63: Rs. 3,556.50 per tonne, as against Rs. 3,727.40.

Judged against the actual export performance during 1963-64, it is highly doubtful whether the allocation of 35,000 tonnes for export out of the 1963-64 crop recommended by the Coffee Board's Marketing Committee, let alone the higher allocation suggested by the Government, will be fulfilled. But this need not raise any fear of heavy unsold stocks, for domestic consumption is much higher than the estimate of the Coffee Board. At present, this is nearer 40,000 tonnes than 34,000 tonnes. Actually, there is a scarcity of good coffee in many parts of the country and prices are pretty high. Further, India can certainly sell abroad larger quantities of coffee every year, if only every effort is put in to raise the productivity of coffee lands, quantatively and qualitatively. Improvement in productivity, it is needless to say, reduces production costs and yields a better return to the grower.

CARDAMOM INDUSTRY

The cardamom industry in India is predominantly an export industry, in that almost three-fourths of the total output is sold abroad. Out of the 3,800 tonnes of cardamom produced in the 1963-64 season, over 2,306 tonnes were exported, the foreign exchange earned being about Rs. 3.20 crores. The principal buyers of Indian cardamom are Middle East countries, Sweden, W. Germany, Britain and the U.S. The Soviet bloc countries have also been importing Indian cardamom lately. Exports to the Middle East have registered a sharp rise from about 1,000 metric tons in 1962-63 to 1,169 tons in 1963-64. This region accounts for more than half of the total exports of cardamom from India, which, after receding from 2,364 tonnes (worth Rs. 3.59 crores) in 1961-62 to 2,259 tonnes (Rs. 2.67 crores) in 1962-63, recovered to 2,306 tonnes (Rs. 3.20 crores) in 1963-64.

Since the bulk of the cardamom produced in the country is exported, the need for avoiding violent fluctuations in prices can hardly be emphasised. Even though the record crop of over 3,800 tonnes in the 1963-64 season presented some problems, it is a matter for satisfaction that the entire crop was disposed of at fairly stable prices. Cardamom growers and exporters seem to be generally satisfied with the prevailing level of prices. Although the Government has undertaken to step in and purchase cardamom from planters if the price goes below the guaranteed level, there has been no occasion for it to do so, as the minimum prices have been fairly high. Indeed, it appears that, in view of the high prices, Indian cardamom is encountering some competition from Ceylon and Guatemala.

The problem of marketing the crop at satisfactory prices has all along engaged the attention of the Cardamom Marketing and Development Committee. Sometime ago, the Committee had suggested to the Government the setting up of a Board on the lines of the Coffee Board to take over not only the marketing functions but also sales promotion and research. It is not known whether or not the Government of India has accepted this suggestion. The Chairman of the Committee, Mr. H. Sitarama Reddy, in his speech at the ninth meeting of the Committee held at Bangalore on Sunday this week, was silent on this issue.

The current season's cardamom crop, according to Mr. Reddy, will be smaller than that harvested in 1963-64, as a result of the failure of pre-monsoon showers. The exact extent of damage to the plantations can be assessed only after some time. Steps are, however, being taken to increase production of good quality cardamom. The total acreage under cultivation is also being extended. A sum of Rs. 15 lakhs has been set apart in the third Plan for the various schemes of development.

The high cost of production underlines the need for raising productivity through the adoption of new methods of cultivation. Colour continues to be a very important factor in the evaluation of cardamom. The smoothness and size of the capsules are also significant factors. All these, as Mr. Sitarama Reddy rightly pointed out, indicate that the vital need is to improve methods of processing fresh cardamom from the estates.

An agreement for the building of a shipyard at Cochin as a joint concern was signed between India and Mitsubishi Heavy Industries of Japan, at Tokyo on 23rd inst. The shipyard will be built as a part of India's third Plan and will comprise, among others, a dock of 30,000 deadweight tons and a shipway of 15,000 deadweight tons. The cost of the project is estimated at about Rs. 8.5 crores.

(Concluded from next column)

that the U.K. might do a little better than this, since it estimates that exports of manufactures from the industrial nations generally may exceed an 8 per cent increase over 1963 and that the U.K. is not likely to do worse than her competitors.

The picture, therefore, is of an economy no longer outrunning its strength and of a balance of payments which has already produced its worst rate of deficit and should now be on the mend.

Fly in the Ointment

Yet, since nothing is ever perfect, we must take note of the fly in the ointment: costs and prices. The index of retail prices has now pushed up one per cent on the month, making 2 per cent on the quarter, against a rise of only 1 per cent over the previous nine months. The overall rise of 3 per cent on the year is acceptable in a phase of expanding activity, but the *rate* of acceleration is not. For British exports to achieve the targets set, costs, as Ministers never cease to remind, must be kept down. Rising retail prices are a real danger to that. The Minister of State, Board of Trade, said this week (after the usual peroration about the need to be competitive): "We believe that the economic prospects in the world as a whole in 1964 will continue to be good. In other words, the opportunities for British exports are undoubtedly there. For Britain's sake, they must be taken and with both hands."

LONDON LETTER

BANKING THE FIRES

MANY ENCOURAGING POINTERS EMERGE

(From Our Own Correspondent)

LONDON, *20th June*

THIS past week the City has been recovering its stock market confidence, so that industrial equity prices are almost back again to the previous peak levels of early January and mid-April. Partly this is due to a feeling that the economoy has no longer run-away problems bothering it, that the Bank Rate is not likely to go up as a further precautionary measure (though it may if overseas rates draw more funds away), that pound sterling seems to have adequately stabilised itself, and that, all in all, the domestic economy is perfectly sound and business should go quietly ahead.

The latest industrial production figures might even suggest a recession, since, for two months now, the manufacturing index has stood a point below its peak, while the all-industries index has flattened out for four months. Such a short-term reading of the index could be misleading. There is no recession, but equally the run-away rise of 1963, which carried the index from 110 (January) to 125 (December) in twelve months, has petered out. The food, drink and tobacco industries are, indeed, the only ones to account for the dropping back of the manufacturing index. Mr. Maulding, the Chancellor, is a very relieved man.

Foreign Trade

Of course, on the trade front, he has his problems, but they also do not seem to be getting any worse. The month of May showed exports restored to the February/March level, with imports no higher than in those months and so a trade gap of £20 million which can almost be contained by the country's invisible income. But, because April and January were such shocking months for slightly obscure reasons, the total trade gap for the five months of this year is nearly £180 million (£36 million per month) which is twice as wide as can be bridged by the invisibles at their best. Perhaps, it is convenient to consider the past two quarters which give a very fair picture of how the country is really placed:

Monthly Average

(In million £s.)

	Dec. '63-Feb.'64	March-May 64
Exports f.o.b.	364	373
Imports c.i.f.	450	453
Imports f.o.b.	398	403
Adverse trade balance	34	30

These adverse trade balances in quarters each of which included one exceptionally bad month, compare with £4 million per month in 1963—a year which produced a surplus of £120 million on current account. The current deficit on *trade* only is £28 million a month *worse* than in 1963 or £336 million worse over a year. This points to an overall deficit on current account of £200 million or so.

But the tendency appears to be towards improvement: exports in the past three months were 2 per cent higher than in the preceding quarter and in the first five months of this year they were over 4 per cent higher than the 1963 average. Imports in March/May rose only one per cent over the December/February level; *but* for the first five months of the year they were 13 per cent higher on average than during 1963. All this is confirmation that Britain's balance of payments problem is one of paying for the bulge of increased imports resulting from the upsurge of increased industrial activity.

It is the same sort of problem as that which faces the underdeveloped countries perennially—and it has to be met the same way, by advance from the I.M.F. as and when the pressure on the balance of payments reveals a shortage of currency. Capital movements aside, it does not seem as if the total amount of this pressure could exceed £200 million and the tendency is for this figure to diminish.

Further Rise in the Offing

The Bank of England lends support to this view this week. It assesses that industrial material imports may now be levelling out, while British exports are due for a substantial rise—which ought to mean some higher rate of progress than the 4½ per cent advance which the first five months of this year have shown over 1963. If the rate of advance could be doubled (to 9 per cent over the 1963 level), then the estimated deficit on current account could be halved. Indeed, the Bank's calculations suggest

(Continued in previous column)

INDO - AFRICAN TRADE

NEED AND SCOPE FOR EXPANSION

STAGNATION in India's export trade with its traditional partners and in traditional commodities, due to a variety of reasons, of which competition offered by countries and new commodities is only one, has compelled this country to look out for new markets, especially in the resurgent continent of Africa. Covering about one-fourth of world's land area and with a human habitation of 8.5 per cent of world's total population, Africa is still engaged in removing the vestiges of foreign rule. Although 36 out of a total number of 50 countries in this region have achieved freedom, almost all of them present the picture of a colonial economy where the occupational patterns are characterised by agricultural production and mineral extraction for exports to the developed countries of the world and to import in return the manufactured goods necessary for modern living. With the achievement of political freedom, conscientious efforts are being made in all these countries to alter their economic structure in order to bring economic welfare to their people. Africa's trade with the external world constitutes about 5 to 6 per cent of the total, and is mainly concentrated in the developed regions. With the increase in the import of consumer and developmental goods from the industrialised countries unaccompanied by any corresponding rise in their own export trade, several of the African countries have now begun to suffer from a chronic shortage of convertible currency.

F.I.C.C.I.'s Study

The African countries are marked by a heterogeneity of characteristics. There are wide variations in the matter of agricultural production, *per capita* income, rate of economic growth, degree of industrialisation and the direction of foreign trade. The rate of growth is modest and varies between Rs. 250 and Rs. 500 per annum. With its untapped economic resources and enormous opportunities for the development of trade and industry, Africa presents great possibilities for expansion of India's trade and improving the general economic relationship. It is, therefore, in the fitness of things that associations seeking to serve trade and industry should take increasing interest in the economic affairs of African countries and provide reliable intelligence to its members, as well as to the general public. The Federation of Indian Chambers of Commerce and Industry, for instance, has started a series of publications on India-Africa trade. Its first brochure in the series is devoted to a study of the prospects and possibilities of India's trade with the countries bordering the eastern shores of Africa. The countries covered are Somali Republic, Kenya, Uganda, Tanganyika and Zanzibar, Northern Rhodesia, Southern Rhodesia, Nyasaland, Mauritius and Malagasy.

The F.I.C.C.I.'s study reveals that, during the past few years, India's imports from Africa as a whole varied between 5 to 7 per cent of the total, that is, from Rs. 50 to Rs. 70 crores, the corresponding percentage and value for exports being 6 to 8 and Rs. 50 to Rs. 60 crores. At present, India's exports to this continent include cotton piecegoods, jute fabrics, tea, spices, sugar, footwear, readymade garments, blankets and bed linen. More recently, the list has expanded to include some light engineering goods, cinema films and toilet articles. India's imports from the African continent mainly consist of raw cotton, metallic copper, raw cashewnuts, rock phosphates, vegetable tanning materials, palm oil and cloves. The total trade between India and the East African countries, in particular, is not appreciable. In 1962-63, India's trade with these countries constituted only 2 per cent of the total and for the East African countries the percentage was three. A disappointing feature of our trade with these countries is that the correction of an adverse balance of trade has always been brought about by decreasing imports, resulting in a contraction of the total volume of trade between the two. The following table shows the trend of trade between India and the East African region:

(In lakhs of rupees)

Year	Exports to E.A. (including re-exports)	Imports from E.A.	Balance of trade
1961-62	14,20	30,38	—16,18
1962-63	12,39	19,33	— 5,06
1963-64	12,00	14,11	— 2,11

It will be seen from the figures above that the adverse balance of trade has been brought down to Rs. 211 lakhs in 1963-64 from Rs. 1,618 lakhs in 1961-62. But this has been done by decreasing imports by more than 50 per cent, from Rs. 3,038 lakhs in 1961-62 to Rs. 1,411 lakhs in 1963-64. The exports have also gone down by 15 per cent from Rs. 1,420 lakhs in 1961-62 to Rs. 1,200 lakhs in 1963-64.

Although it is important to bring a balance in trade in the long run, it is always desirable to achieve it at continuously rising levels of total trade. Due cognisance must be paid by the trading countries to the objectives of multilateral trade. The dismal consequence that follows the diminution of imports by one country is that the others follow suit. If India has been constantly contracting its imports from the East African countries, the latter, too, have been doing the same thing as is manifest from the following figures showing India's exports to the various countries in the region.

(In lakhs of rupees)

	Exports (including re-exports)	
	1962-63	1963-64
Somali Republic	50.18	52.88
Kenya	544.69	504.37
Uganda	63.98	65.58
Tanganyika	277.16	247.28
Zanzibar	28.52	28.82
Northern Rhodesia, Southern Rhodesia and Nyasaland	222.77	165.70
Mauritius	111.91	120.15
Malagasy	39.96	16.04
Total ..	1336.17	1200.82

The decline in India's exports to the countries which have just achieved independence and which offer potential markets for our goods needs to be reversed. There has been a steep fall in the value of our exports to Kenya and Tanganyika, the two major importers of Indian products, from Rs. 544.69 lakhs and Rs. 277.16 lakhs in 1962-63 to Rs. 504.37 lakhs and Rs. 247.28 lakhs in 1963-64, respectively. This cannot be attributed to reasons beyond India's control. This is a sequel to India's policy of restricting imports from this region as well as to competition from other countries such as the U.K., Japan, Hong Kong, West Germany, France, the U.S. and Pakistan.

The following table shows the trend of India's exports of jute goods and cotton piecegoods, the two commodities which form the major part of its exports to this region:

(In lakhs of rupees)

Country	Jute goods		Cotton piecegoods	
	1961-62	1962-63	1961-62	1962-63
Kenya	98.26	77.78	244	208
Mauritius	1.47	1.55	57	41
Rhodesias, Nyasaland	165.57	96.15	43	27
Somalia	0.99	1.59	16	17
Tanganyika	50.55	75.52	158	120
Uganda	44.02	37.44	7	5
Zanzibar	1.47	1.36	9	6
Total ..	362.33	291.39	539.0	427

It will be seen from the table above that India is fast losing ground in the markets of East African region. In Kenya, exports of jute goods have gone down to Rs. 77.78 lakhs in 1962-63 from Rs. 98.26 lakhs in 1961-62. Similarly, cotton piecegoods exports have declined from Rs. 244 lakhs in 1961-62 to Rs. 208 lakhs in 1962-63. Though there is an increase of about Rs. 25 lakhs in India's jute goods exports to Tanganyika from Rs. 50.55 lakhs in 1961-62 to Rs. 75.52 lakhs in 1962-63, the decline suffered in the total jute goods exports to the markets in the East African region is to the tune of Rs. 70 lakhs. Cotton piecegoods enjoy a predominant position in India's trade with East Africa, forming about one-third of the total exports to region. In the year 1961-62, for instance, India exported cotton piecegoods worth Rs. 539 lakhs. In 1962-63, however, these exports declined to Rs. 427 lakhs, a fall of about 20 per cent. All this speaks of a very disappointing trend in India's current trade with the African states under study.

It is high time that this country gave serious thought to the prospects of expanding trade and economic relations with the countries in the East African region. It is obvious that, if India is to export more to this region, not only must its competitive capacity, in terms of quality, price and delivery, compare favourably with other principal supplying countries, but it must also step up the imports of a large variety of raw materials which the African countries are in a position to export. Otherwise, the latter will have no incentive to buy more from India. Obviously, India can increase its intake of the minerals and raw materials, as its own industrialisation proceeds. It is gratifying to find that, in its brochure, the Federation has laid adequate stress on this important aspect, for trade is a two-way traffic. Pointing out how this could be done, the Federation observes:

"It is obvious that the demand for at least some of the minerals and raw materials which we at present import can be increased. We might also think of the possibility of importing some raw materials for processing in India, both for internal use as also for re-export. Effort should also be made for trying to meet our requirements of raw materials and food articles from Africa, as far as possible, on the basis of long-term contracts. It is possible that, in order to accommodate increasing quantities of raw materials from Africa, we might in the future have to make some structural adjustments in our economy, so as to leave certain fields of economic activity to countries which are even less developed industrially than ourselves. We should welcome any collaboration projects wherein India is asked to set up processing and fabricating industries for products in which we already have some experience and expertise.

"During the past few years, bilateral agreements have become a major canalising and stimulating agency in fostering trade and raising it to continually higher levels. Trade agreements by themselves, of course, do not lead to more trade but they go a long way in creating the right kind of climate inasmuch as the terms of such agreements would be based on careful study by each country as to its needs and surpluses taking into account their individual plans for economic and industrial growth. Trade agreements are essentially inter-Governmental instruments, but the individual businessman can contribute a lot towards proper framing and fulfilment of such agreements inasmuch as at the preliminary stage he would be aware of the most promising items and subsequently he can appropriately follow up the lines indicated by the items as agreed between the two countries."

Capital Investment

Alluding to the scope for India's participation in the economic development of African nations through both investment and technical assistance, the Federation says:

"Most countries in Africa have liberal investment legislation and a number of concessions is usually offered to collaborators from abroad. Trade will be built on a really strong foundation in countries where Indian capital and know-how are recognised, accepted and welcomed. Whatever projects we take on hand abroad should be carefully modelled to the needs and requirements of its population; they should be sound economically and should prove technically and financially viable from earlier stages. The personnel sent abroad to set up and operate these projects should be competent and courteous, and should be able to transfer their skills to the local technicians and managers quickly and systematically. Also important is on-the-site training of African technicians in Indian factories and installations. Schemes for these programmes are to be operated by, among others, the India-Africa Development Association."

The above approach of the Federation is pragmatic and reflects a keen appreciation of India's long-term interests. The prerequisites for successful collaboration between India and the African group of countries to their mutual benefit have also been pithily stated. India is not that underdeveloped as to be unable to spare a certain amount of capital, entrepreneurial skill and technical know-how required for establishing a number of processing industries in Africa. It is up to the Government and businessmen to explore the ways and means of fulfilling this task.

The Government of India has initiated a series of measures in recent months to modernise the jute industry and step up exports of jute goods. A new scheme called the "self-financing scheme" has been introduced under which the jute mills will be allowed to pay the cost of imported machinery out of their foreign exchange earnings within a stipulated period. Consequent on the liberal allocation of foreign exchange, licences for the import of machinery of the total value of Rs. 5.40 crores have been issued for the ten months ending January 1964, which represents a threefold increase over the 1961-62 figure. On the exports side, long-term trade agreements incorporating specific provisions for the export of jute manufactures have been concluded with the Soviet Union and other East European countries.

The Bombay Regional Centre of the Central Board for Workers' Education which works under the Ministry of Labour and Employment, has so far conducted 17 training courses which have trained 357 worker-teachers and 11,838 workers. The Workers' Education Scheme has been in operation in Bombay since 1959. The Central Board for Workers' Education is conducting various courses for the industrial workers through its 24 regional centres. The chief activity of the centres is to conduct full-time worker-teachers' training courses of three months' duration regularly at least thrice in a year.

A two-day conference of State Housing Ministers has been convened by the Union Minister for Works and Housing. The conference, which will be held at New Delhi on the 3rd and 4th September next, will discuss measures to step up the Housing Programme in the current Plan period and to finalise the basic approach to the fourth Plan.

JUDGMENT ON EURO-CURRENCIES

By Questor

TWO authoritative accounts have just been given, one in the annual report of the Bank for International Settlements, the other in the Bank of England's latest bulletin, of the international market in Euro-currencies which has sprung up in the past few years.

Two years ago an official of the Fund put the size of the market at $4-5 billion. The B.I.S. now puts it—cautiously, because it is difficult to make full allowance for duplication—at $7 billion, of which about $5 billion is in Euro-dollars and the rest in Euro-sterling, Euro-Swiss francs and Euro-D-marks. British liabilities and claims in March of this year amounted, according to the Bank of England, to some $3.6 billion, the bulk of it in Euro-dollars.

The growth of this market quickened up only in the late nineteen-fifties. The first impetus came from the 1957 decision, taken because of a foreign exchange crisis, to prevent British banks from using sterling to finance transactions between third countries outside the sterling area. The merchant and overseas banks based on London sought to make good this loss of business by offering short-term dollar loans and accepting dollar deposits from foreigners in exchange. They were able to do so profitably, because of the relatively wide spread, encouraged by Regulation Q, between the deposit and lending rates of U.S. banks, and because they dealt only in relatively large sums.

The growth of this new market was then helped by the relaxation of exchange control regulations, which followed the European move to external convertibility, and by the surplus of dollars for investment which the U.S. payments deficit created. London deposits in foreign currency rose from a mere $140 million in 1955 and $200 million in 1957 to nearly $3 billion at end-1962 and over $3½ billion today.

Where do these deposits come from? The statistics have obvious limitations. So far as Britain is concerned, the largest suppliers on paper are Switzerland (20 per cent), Canada (10 per cent) and the U.S. itself (9 per cent); Western Europe as a whole accounts for 55 per cent.

But it is highly probable that a considerable part of what appears to come from Canada, and perhaps from Switzerland too, is really U.S. money. And the fact that only 20 per cent of these deposits are attributable, on paper, to customers other than banks, plainly means very little. Business concerns, according to the Bank of England, have been taking a greater interest in the market, and in particular "it is thought that companies resident in the United States, and also U.S. subsidiaries abroad, may have been putting funds into the Euro-dollar market."

There is another question to be asked: Where do the dollar loans go to ? Even less is known about this. The bulk of the foreign currency deposited with London banks is immediately re-lent abroad. A high proportion, as in the case of deposits, is lent to Western Europe, and considerable amounts are lent to the U.S. and Japan. Some is presumably used to finance foreign trade, while some is switched into domestic currency for local use. The Belgian Government, which is constantly short of funds, is a regular borrower of short-term dollars in London.

Some Euro-dollars may have been used to subscribe to the many dollar-denominated loans which have been floated by syndicates in London and elsewhere since the virtual closing to foreigners of the U.S. capital market. But only a relatively small proportion of the foreign currency deposits accepted in London are converted into sterling for investment at home, mainly with local authorities and finance houses; the Bank of England puts it at about 10 per cent.

The advantages and disadvantages of the market are those of freedom and regulation. It has flourished on the differences which exist between financial centres, whether because of Government-imposed controls, differences in banking habits, or differences in the level of short-term interest rates which spring from different economic circumstances. It has certainly helped to promote competition on the international scale between banks. It has also helped to bring interest rates in different centres more into line with one another than they would otherwise have been possible.

At the same time, of course, it has reduced the ability of individual Governments to shape the pattern of national interest rates and monetary policy to what they conceive to be their domestic needs. It has also probably done something to aggravate the U.S. payments deficit and may have encouraged a certain amount of dangerously loose international lending.

During the past few months, the growth of the market—as measured in London, at least—has slowed appreciably. This may be due to the fact that U.S. banks are now offering more competitive terms to depositors and that European banks therefore have a smaller margin within which to operate. It may also owe something to a large U.S. bankruptcy and the salutary reminder that dollars, however plentiful, have to be lent as carefully as any other currency. The Bank of England sums up its attitude, which seems to be also that of the B.I.S., in the judicious conclusion that "the market has shown that it has a useful part to play, although, if the pause in growth during the past few months reflects a more cautious approach, this may not be wholly a bad thing."

At the invitation of London and Birmingham Chambers of Commerce, a Russian trade mission is currently touring Britain. This mission will soon be followed by a powerful delegation of 20 to 30 Soviet technicians for drawing up detailed specifications for chemical plants which Russia proposes to buy from the U.K.

FIRST DETONATOR FACTORY IN INDIA

Aerial view of the factory —Artist's impression

The factory of INDIAN DETONATORS LTD., at Hyderabad is fast coming up. First of its kind in India, it will commence production of Ordinary, Electric and Delay Detonators shortly.

CONTINGENT LIABILITIES OF BANKS

AN INTERESTING NEW STUDY BY RESERVE BANK

ALTHOUGH the contingent liabilities of scheduled banks total (as of 28th September 1962) Rs. 481 crores—more than 6½ times their owned funds (capital *plus* reserves) and 20 per cent of their total resources—they do not involve any *immediate* financial commitments by the banks. By its very nature and definition, this type of business involves future liabilities which have to be met *only* if the customers, on whose behalf they are undertaken, default. The type or form of the liability undertaken is known to the banker, but the exact nature of the obligation is uncertain. Similarly, while the maximum liability involved is always known, the extent to which a claim will have to be met is uncertain. Nevertheless, the banks undertake the responsibility of meeting these uncertain claims and the risk of loss is always present. They, therefore, charge a commitment fee for undertaking these obligations. Since no immediate disbursement of funds is involved and the percentage of ultimate loss is small, this type of business provides an attractive source of income for banks.

The most important of these contingent liabilities are the guarantees (aggregating Rs. 285 crores in the total mentioned at the outset) issued for fulfilment of obligations undertaken by a bank's constituents. They constitute 60 per cent of the total contingent liabilities. Letters of credit (totalling Rs. 180 crores) opened on behalf of local importers favouring the exporter in a foreign country come next, with 37 per cent share. Acceptances of bills of exchange on behalf of constituents form a very small proportion—only 3 per cent or Rs. 16 crores—of the total contingent liabilities.

Power of Control Assumed

Unlike in some foreign countries as, for instance, the U.S., Germany, Denmark or Egypt, in India, till recently, neither the total volume of such liabilities of a bank nor those on behalf of any single constituent were in any way controlled or restricted. The Banking Laws (Miscellaneous Provisions) Act 1963 imposed, for the first time, a two-fold control, under which the Reserve Bank could issue a directive prescribing the maximum amount of guarantees that could be issued on behalf of any single constituent, as well as the terms and conditions on which such guarantees may be issued.

Although power was acquired by the Reserve Bank, very little was known to the public regarding the extent, composition, nature and types of contingent liabilities. This gap in knowledge has now been filled by the Reserve Bank by gathering data and publishing a survey thereof in its latest monthly *Bulletin*. The Bank's study is based on data collected from 80 scheduled banks (1) on the total outstanding liabilities on account of acceptances, letters of credit and guarantees as on 28th September 1962, with details as to purpose, security, maturity, etc. in respect of guarantees only, and (2) on underwriting business of shares and debentures of joint-stock companies during the period between January 1956 and June 1962.

Some Limitations

This was an *ad hoc* survey, made for the first time, and reveals interesting information regarding banks' contingent liabilities. But its usefulness is limited for the present, though it can grow, if such surveys are made and published every half year, or at least once every year, so that one can get an idea of the underlying trends. Further, the extent to which this type of business is subject to seasonal variations as is bank credit, cannot be determined, unless the position at the end of March (that is, the approximate peak of the busy season) is also surveyed and compared with the position at the end of September (that is, the approximate trough of the slack season). Again, although it is recognised that the business of contingent liabilities brings attractive income to the banks, data regarding the amount of its contribution to their total income has not been collected by the Reserve Bank. Since acceptances and letters of credit are generally for periods up to six months, they constitute a less risky form of business than guarantees. Data in respect of the former, therefore, relate only to the amount, whereas fuller details regarding the guarantee business have been given. In spite of these limitations of the Survey, the Reserve Bank's effort in bringing together these data for the first time and analysing them for the benefit of the public is highly commendable. The analysis is particularly useful, because the banks covered by the Survey are divided into four groups on the basis of their deposits in addition to separating the foreign banks, which are a class by themselves, as their activities are confined largely to the financing of India's foreign trade.

More than half (52 per cent) of the total contingent liabilities of banks were accounted for by four large Indian scheduled banks (including the State Bank of India) with deposits over Rs. 100 crores. Medium-sized banks with deposits between Rs. 50 and Rs. 100 crores and foreign banks accounted for 18 per cent each.

Foreign Banks

Apart from the magnitude and type of contingent liabilities, it is the relative proportion of these liabilities to the resources of a bank that is more relevant for assessing the extent of the risk in such business. The total contingent liabilities, as well as guarantees, are, therefore, classified according to the size of banks and set out in relation to the owned funds, deposit liabilities and total resources of each group of banks. In this analysis, the foreign banks have presented a problem, as their "owned funds" do not relate to India alone. Their contingent liabilities have, therefore, been related to the deposits which they are required to keep with the Reserve Bank of India in fulfilment of the statutory requirements in regard to capital. In this way, however, their contingent liabilities are as much as 23 times the deposits, as against eight times for larger banks and six times for all the scheduled banks. The Reserve Bank has, therefore, developed a concept of 'notional' owned funds of these banks, by taking the share of their world capital funds equivalent to the ratio of their Indian deposits to world deposits, and points out that the ratio of contingent liabilities of foreign banks to their 'notional' capital funds is about the same as the average for other banks.

Distribution of guarantees on the basis of various criteria shows, among other things, that 42 per cent of the guarantees, totalling Rs. 121 crores, were given to Government and other public authorities. Guarantees in favour of foreign sellers in respect of imports on deferred payment basis totalled Rs. 107 crores or 37 per cent. It is interesting to find that, while the foreign banks have issued guarantees totalling Rs. 37 crores in favour of Government authorities they have taken only negligible interest in deferred payment guarantees, their share in the total being no more than Rs. 7 crores. Of the total guarantees issued by Indian scheduled banks, four large banks with their deposits above Rs. 100 crores accounted for more than two-thirds. It will thus be noted that it is the big domestic banks that have guaranteed the great bulk of imports on deferred payment basis.

Guarantees by Period of Maturity

(In crores of rupees)

Agencies in favour of which guarantees are executed	Period of guarantee				Total
	Up to 3 years	3—7 years	Over 7 years	Unspecified	
Government and other public authorities ..	108 (89)	4 (4)	5 (5)	3 (2)	120 (100)
Foreign sellers in respect of imports on deferred payment basis	51 (40)	37 (35)	18 (16)	1 (1)	107 (100)
Other types of guarantees	38 (65)	15 (26)	4 (8)	1 (1)	58 (100)
Total ..	197 (69)	56 (20)	27 (10)	5 (1)	285 (100)

(Figures in brackets are percentages to total guarantees).

The accompanying table gives the maturity distribution of the guarantees. It shows that 69 per cent of the guarantees totalling Rs. 197 crores are for a short period of three years. Although the table does not show those maturing within a year, they were as much as 44 per cent. It will also be noticed that the majority of guarantees to Government authorities were for shorter periods, while more than half of the deferred payments guarantees was for periods beyond three years. As foreign banks concentrate largely on guarantees to Government, 87 per cent of the guarantees extended by them were for shorter periods. Accordingly, they assumed less risk than the Indian banks.

Nearly two-thirds of the guarantees were unsecured: 85 per cent of the guarantees extended by foreign banks and 95 per cent of the guarantees extended by smaller banks with deposits of less than Rs. 25 crores were unsecured. Of the total secured guarantees, more than half was secured against machinery and other fixed assets.

Guarantees to the industrial sector amounted to Rs. 237 crores and constituted 83 per cent of the total. In this, the iron and steel and engineering industries had as large a share as 34 per cent, followed by textiles with 16 per cent. Classification of total guarantees by rates of guarantee charges shows that as much as 88 per cent of the guarantees carried guarantee charges at rates up to one per cent and seven per cent were at rates between one and two per cent.

Underwriting Business

Part II of the Reserve Bank's study pertains to the recently growing underwriting business transacted by banks. During the 5½-year period ended June 1962, shares and debentures underwritten by banks amounted to Rs. 21.50 crores or 30 per cent of the issues in respect of which the banks had entered into underwriting commitments. The trends in underwriting and the distribution of underwriting commission are reviewed in detail by the study. While the Banking Companies Act does not prohibit banks from underwriting shares and debentures of joint-stock companies, it imposes indirectly a ceiling on the amount of shares they can safely underwrite, since they cannot hold, in any capacity, an amount exceeding 30 per cent of the paid-up share capital of the company or 30 per cent of their own share capital and reserves whichever is less. The State Bank of India Act permits it specifically to underwrite trustee securities and debentures.

Out of the total amounts (Rs. 21 crores) underwritten by banks, ordinary shares claimed the largest proportion (Rs. 9 crores or 43 per cent), followed by debentures (Rs. 7 crores or 32 per cent) and preference shares (Rs. 5 crores or 25 per cent). These proportions vary from year to year, but the trend since 1960 has been increasingly in favour of ordinary shares which shows that banks have been providing risk capital on an increasing scale.

As regards the proportion of the amount underwritten (Rs. 21 crores) to the amount issued to the public (Rs. 72 crores) in respect of which banks had entered into underwriting commitment, preference shares accounted for the largest proportion (49 per cent) followed by ordinary shares (27 per cent) and debentures (25 per cent).

Of the total amount of shares and debentures underwritten during the period under review, banks had to take up about 25 per cent (Rs. 5.4 crores): of the amounts thus taken up, they were subsequently able to dispose of securities amounting to Rs. 1.5 crore, with the result that the amount outstanding at the end of September 1962 was Rs. 3.9 crores—18 per cent of the amount underwritten and 5 per cent of the total amount of issues in which the banks participated. The study further shows that, owing to the boom conditions that prevailed in the capital market at the time they undertook the commitment, banks had to take up ordinary shares worth only Rs. 50 lakhs or a mere five per cent of the total ordinary shares underwritten by them. In the case of preference shares and debentures, however, the amount and percentages were larger at Rs. 1.9 crores or 38 per cent and Rs. 3 crores or 43 per cent, respectively. This shows that these two forms of investments were not well fancied by investors during the period under review.

The rates of underwriting commission charged by banks ranged widely between ½ per cent and over 3 per cent of the amounts underwritten, the weighted average being 1.50 per cent. It is noteworthy that the charges for preference shares were comparatively higher than those for ordinary shares, while those for debentures were the lowest. This only reflects the investors' lack of interest in preference shares in those days and the difficulty experienced in successfully placing them. In the depressed conditions of capital market today, the reverse is true.

Analysing the business of underwriting by banks from the point of view of a central banker, the authors of the Reserve Bank Study point out that, in the case of most of the banks, the underwriting commitments were within reasonable limits both in relation to their paid-up capital and reserves as well as to total resources. Here is another testimony to the fact that, by and large, banks in India are judiciously and soundly managed.

THE AUTOMOBILE INDUSTRY . . . .

Tens of thousands of scientific and technical personnel—engineers, metallurgists, technicians, skilled craftsmen—are needed to accelerate the country's industrial and economic development.

The Automobile Industry and the allied industries with their wide range of manufacture—from steel sheet to upholstery leather, from electrical components to intricate mechanical parts, from rubber and plastic articles to paints and textile fabrics—play an essential part in supplying this need.

These industries, with the multiplicity of techniques employed and the complexity of operations involved, afford excellent training ground for a variety of technical and scientific personnel. A number of these industrial firms—notably Hindustan Motors Ltd.—have organised training schemes for apprentices and for engineering graduates and are conducting special courses for mechanics (including sons of factory workers), workshop and service personnel.

The financial contribution made by the Automobile Industry to the Government in the form of taxes, duties and other levies also helps to develop various schemes under the Five Year Plans, such as public sector industries and technological institutes which again provide scope for training technical manpower. A Hindusthan Ambassador car, for instance, contributes as much as 5140 rupees or 33% of the "on the road" price of the car in Calcutta to the national exchequer.

The automobile and allied industries thus help to multiply the trained manpower in the country.

lends a hand to the training of manpower

FINANCES OF STATE GOVERNMENTS

SHARP RISE IN DEBT POSITION

THE Monetary Economics Division of the Reserve Bank of India's Economic Department has made a comprehensive study of the recent trends in the finances of State Governments. This has been an annual feature of the Reserve Bank for some years now, but the present study is of great value because another Finance Commission has been constituted to decide the question of allocation of revenues between the Centre and the States. The findings of the study are published in the May 1964 issue of the Bank's monthly *Bulletin*. The study is based on the latest budget documents of State Governments which contain the final accounts for the year 1962-63, revised estimates for 1963-64 and forecasts for 1964-65. Statistics relating to the consolidated position of all the States for the back period covering broadly the first and second Plans are also presented so as to facilitate a comparison of the trends in States' finances during the planning period so far.

The findings of the study impressively highlight three disquieting features of States' finances, namely, the heavy debt burden, marked depletion of cash balances, and recurring ways and means difficulties. The aggregate outstanding debt of State Governments, which stood at no more than Rs. 445 crores as on 31st March 1952 (the first year of first Plan), moved up year after year and touched a high of Rs. 4,023 crores at the end of March 1964; it is expected to be higher by another Rs. 543 crores at Rs. 4,566 crores towards the close of the current financial year. The net rise in debt over the thirteen-year period (from 1951-52 to 1964-65) comes to as much as Rs. 4,121 crores. The bulk of this rise is accounted for by the debt due to the Central Government which has gone up by Rs. 3,279 crores to Rs. 3,517 crores. The States' liability on account of market loans and bonds (issued in connection with abolition of *zamindari, jagirdari*, etc.) has increased by Rs. 558 crores to Rs. 692 crores. Unfunded debt has risen by Rs. 146 crores to Rs. 203 crores and floating debt by Rs. 22 crores to Rs. 38 crores. In addition to these, indebtedness under "other loans" is expected to be of the order of Rs. 116 crores by the end of March next. There was no such indebtedness at all during the first Plan period.

The persistently mounting debt burden of State Governments has been due to the fact that the Centre has continued to make available to the States large-scale funds as loans, while the States have not cared to make adequate arrangements to repay the loans. The total of the loans for the first four

Table A: Plan Outlays of States

Total ..	950	805	670	576	3,002	3,922

years of the third Plan alone is estimated at Rs. 2,274 crores which is more than the Rs. 2,187 crores provided in the whole of the first (Rs. 770 crores) and second Plan (Rs. 1,417 crores) periods. These loans are in addition to the colossal amounts of money transferred from the Centre to the States by way of share in taxes and duties, grants-in-aid and other contributions. The aggregate transfer for the first four years of the third Plan is put at Rs. 1,831 crores, as against 533 crores in first Plan and Rs. 1,138 crores in second Plan. Despite such large-scale transfers of funds from the Centre, the combined overall deficit of State Governments continues to be quite heavy. The actual estimated deficit for the current financial year is Rs. 42.5 crores (after taking into account the additional tax measures expected to yield Rs. 6.4 crores), bring the total deficit for the first four years of the third Plan to Rs. 63.2 crores, as against Rs. 63.7 crores for the first Plan period and Rs. 15.1 crores for the second Plan period.

The two usual ways by which the State Governments have sought to cover the overall deficits are the running down of cash balances and liquidation of securities. The aggregate closing cash balance of all States at the end of March 1965 is expected to be *minus* Rs. 34.2 crores, whereas it was plus Rs. 50.7 crores at the end of March 1952. The total amount of securities sold by all the State Governments together was about Rs. 25.7 crores in the second Plan; the figure for the first four years of the third Plan is estimated at Rs. 34.5 crores. Besides running down cash balances and selling securities, the Governments of some States have taken recourse to heavy unauthorised overdrafts from the Reserve Bank on several occasions. At one time last year, such heavy overdrafts caused a lot of embarrassment to the Centre and the Reserve Bank alike and, actually, the Centre had to issue a stern warning to the States. Drawing pointed attention to the disturbing nature of the ways and means difficulties faced by States, the Union Finance Minister, in his budget speech (29th February 1964), had this to say:

"The whole position will require careful review in the context of the fourth Five-year Plan. While we should aim at giving the States a good deal of flexibility in allocating their own resources, so far as Central assistance is concerned, we must also ensure that a major portion of it is related to the capital expenditure on identifiable projects which are economically sound and can be expected to generate the resources for the repayment of their liabilities. Other devices will also have to be thought of."

The financial position of State Governments would not have been so disquieting as it is today but for their limited tax effort, large investments in capital projects that take a long time to yield results and failure to keep their revenue expenditure within their means. Take, for instance, the current year. Only seven States have proposed marginal adjustments in taxes which are expected to bring in a bare Rs. 6.6 crores. Including these adjustments, the tax effort of all the States taken together, as the Reserve Bank's study shows, have so far been below the third Plan target of Rs. 610 crores, the additional tax resources accruing to the States from the changes effected since the beginning of 1961-62 amounting to less than Rs. 550 crores. This leaves a balance of Rs. 60 crores to be raised next year, the last year of the Plan. If this year the States could in all raise only Rs. 6 crores, what hope is there that they would find ten times this amount in one year? Alluding to the meagre tax effort of the States as a whole in 1964-65, the Reserve Bank article observes: "The meagre tax effort ... should ... be considered against the backdrop of the persistent pressure on the price line; State Governments, in general, were reluctant to impose additional burdens on the low *per capita* income of people through enhancement of indirect taxes." If the scope for additional taxation is thus limited, then the only course open to the States is to cut down their non-developmental expenditure. It must, however, be added that not all the State Governments have lagged behind their targets for additional taxation. Some of the States have been more conscientious than others. It would have been a good thing if the authors of the present study had highlighted the performance of each individual State and singled out the erring ones for comment.

There is a persistent pressure on States' resources and this threatens to grow according to the budget forecast for 1964-65. This is attributed to the fact that the surplus on revenue account and the capital receipts together are inadequate to match the steadily growing capital disbursements. It is, however, noted that, ignoring (a) the special loans granted to certain States to clear the unauthorised overdrafts from the Reserve Bank during 1961-62 and 1962-63 and (b) the share of centralised market borrowings during 1963-64, Centre's loan assistance to States, as already noted, has been steadily rising. As for market loans, "during the first two years of the Plan, the States had drawn upon the market at a rate much faster than what was visualised in the Plan; net market borrowings of the States during 1961-62 and 1962-63 amounted to Rs. 76 crores and 83 crores, respectively. In 1963-64, the States' share in the centralised market borrowing programme was Rs. 101 crores; an addition, three States issued Rs. 23 crores of bonds in connection with the abolition of *zamindari* system. For 1964-65, only eleven States have indicated their market borrowing programmes which would yield a net sum of Rs. 47 crores (net of redemption of maturing loans and other obligations). It is likely that the actual net market borrowings for 1964-65 may turn out to be larger, considering that States like Maharashtra, Punjab and Orissa, which have not indicated their programmes so far, may approach the market.

Reflecting the all-round expansion of economic activities under the Five-year Plans, the revenue receipts of State Governments show a distinct improvement. Thus, between 1951-52 (actuals) and 1964-65 (budget), the gross revenue receipts have quadrupled, from Rs. 396 crores to Rs. 1,555 crores, or a rise of Rs. 1,159 crores. The rise is accounted for by both tax and non-tax revenue, the former increasing by Rs. 569 crores to Rs. 950 crores and the latter by Rs. 490 crores to Rs. 605 crores. The increase in tax revenue has been due to higher collections under States' tax heads (such as general sales tax, excise, motor vehicles tax and electricity duties), as well as accrual of larger share of the divisible pool of taxes which also includes the payment of past arrears of income-tax. The yield from agricultural income-tax has remained stationary around Rs. 10 crores since 1961-62. The Taxation Enquiry Commission, it is recalled,

Table B: Outstanding Debt of States

* Budget estimate only. † Revised estimates.

had recommended (in 1953-54) that all States should impose this tax on the ground of introducing equity in rural taxation, if not on considerations of revenue. At present, eleven States (out of the 15) have introduced this tax and, even here, it is reported that about 55 per cent of the cropped area is still outside the purview of the tax. Of the non-tax revenue, almost 50 per cent represents grants from the Centre which in 1964-65 are estimated at Rs. 280 crores, as against Rs. 115 crores in 1951-52. There has also been a rise in the net contribution from public enterprises, from Rs. 25 crores to Rs. 66 crores.

Despite a significant addition to the States' share of the divisible pool of taxes consequent upon (a) the larger allocation recommended by the three Finance Commissions and (b) the step-up in tax rates by the Centre, the proportion of shared taxes in States' tax receipts, which had risen from about 19 per cent in 1951-52 to 27 per cent in 1960-61, has tended to remain more or less at the same level during the third Plan period. A factor explaining this trend is the buoyancy in States' tax revenue and the levy of sizable additional taxation by States during the years 1962-63 and 1963-64.

Alongside the rise in revenue receipts, there has been a sevenfold increase in capital receipts of State Governments, the combined estimate for 1964-65 being Rs. 946 crores, as against Rs. 135 crores in 1951-52. Nearly two-thirds of the total capital receipts is accounted for by loans obtained from the Central Government: Rs. 641 crores, as against Rs. 74 crores. The loans made available by Centre to States, as a proportion of the total expenditure of States, showed a steady rise from 14 per cent in 1951-52 to 29 per cent in 1955-56 and, after declining to 23 per cent in 1960-61, rose again to 30 per cent in 1963-64. In the current year, it is expected to decline to 26 per cent. The amount of money raised by way of open market loans, which was no more than Rs. 12 crores in 1951-52, are expected to aggregate about Rs. 79 crores in 1964-65.

The overall budgetary picture of each of the States indicates that only two States, namely, Bihar and Uttar Pradesh, have budgeted for small surpluses during 1964-65, while, in the case of five States, namely, Andhra Pradesh, Gujarat, Madhya Pradesh, Maharashtra and Mysore, even after taking into account additional taxation, the deficits, are perceptibly large. The overall deficit for all the States during 1964-65 would be of the order of Rs. 42 crores (including the effect of tax changes)—a significant deterioration as compared with a deficit of Rs. 11 crores for 1963-64 (R.E.). It may, however, be noted here that the actual outturn, on revenue account in particular, has in the past proved to be better than the original estimates. Further, a number of States have budgeted for larger Plan outlays than those approved by the Planning Commission, the realisation of which is conditional upon the States' efforts at mobilisation of fresh resources. Some States have also indicated their decision to intensify their drive for speedier collection of tax arrears and prompt disposal of current assessments. If these factors are taken into account, it would not be wrong to assume, according to the Reserve Bank study, that the overall deficit of the States during 1964-65 may not turn out to be disturbingly large.

The aggregate budgetary outlay of State Governments has registered a notable expansion, a natural concomitant of economic planning. The total outlay (under both revenue and capital heads) budgeted for the current financial year stands at as high as Rs. 2,544 crores, representing a rise of Rs. 1,962 crores or 337 per cent as compared with the actual outlay of Rs. 582 crores in 1951-52. Of this rise, the share of development expenditure alone comes to Rs. 1,040 crores, the budget estimate of such expenditure for 1964-65 being Rs. 1,337 crores. Non-development expenditure has spurted from Rs. 224 crores in 1951-52 to Rs. 654 crores in 1964-65, loans and advances granted by States from Rs. 49 crores to Rs. 332 crores, repayment of loans to the Centre from Rs. 11 crores to Rs. 180 crores, and other expenditure from Rs. 1 crore to Rs. 41 crores.

Education is the largest head of development expenditure on revenue account. Between 1951-52 and 1964-65, the outlay on education has increased by Rs. 248 crores to Rs. 308 crores. This social expenditure accounts for one-third of the increase in total developmental outlay during the years 1963-64 and 1964-65. In the latter year, almost all the States, with the exception of West Bengal, have provided for increased expenditure on education. The growing magnitude of expenditure on education in the States is explained by larger grants to universities, increased enrolments for primary, secondary and technical education, and the consequent need for a larger number of teaching staff, as well as increased emoluments to the teaching staff. For the year 1964-65, a number of States have offered increased educational concessions to students and have also revised upwards the pay scales of teachers. In the Punjab, for instance, special assistance is being given to students belonging to scheduled and backward classes. In Madras, education upto secondary level has been made free for all, irrespective of family income.

Agriculture (including animal husbandry and co-operation) comes next in importance, the expenditure on which shows a continuous increase from Rs. 26 crores in 1951-52 to Rs. 135 crores in 1964-65. For 1964-65, all the States have budgeted for larger outlays, in a determined bid to boost agricultural output. The higher expenditure budget during 1964-65 reflects mainly the States' proposals for intensification of efforts on agricultural experiments and research, agricultural demonstration and propaganda, soil conservation, agricultural engineering including contour bunding and trenching, tractor and bulldozer services, etc., grants to co-operatives for subsidies to staff and construction of godowns, and new development schemes.

Between 1951-52 and 1964-65, the outlay on rural and community development has gone up by Rs. 79 crores to Rs. 80 crores, on medical and public health by Rs. 99 crores to Rs. 128 crores, and on industrial development by Rs. 59 crores to Rs. 71 crores. The other components of development expenditure, all of which account for a rise in outlay, are irrigation (and navigation), multipurpose river valley schemes, buildings and roads, civil works, electricity schemes and other residual heads. As for non-development expenditure, the two most important items are civil administration and debt services. The outlay on the former has doubled from Rs. 107 crores in 1951-52 to Rs. 216 crores in 1964-65 and that on debt services from Rs. 8 crores to Rs. 210 crores.

Over the first four years of the third Plan (from 1961-62 to 1964-65), the aggregate budget outlay of the States show a rise of Rs. 924 crores or 57 per cent to Rs. 2,544 crores in 1964-65 (B.E.). A little over half of the rise (51 per cent) in total expenditure has gone into direct developmental heads. In fact, under the stress of national emergency and the urgency to concentrate efforts on stepping up output in the two key sectors, namely, agriculture and industry, the tempo of developmental expenditure has been accelerated. The *Third Plan: Mid-term Appraisal* focussed attention on the stagnation in agricultural output in the first two years of the Plan period and the need to reinforce efforts for a more rapid growth of agricultural output. Central assistance to States for implementation of certain Plan projects, particularly agricultural programmes which are expected to yield quicker results, was stepped up after the presentation of the Union Budget for 1963-64. Consequently, total developmental expenditure (on revenue and capital accounts combined), which had risen by Rs. 112 crores in 1961-62 and by Rs. 75 crores in 1962-63, advanced by Rs. 113 crores in 1963-64 (R.E.). For the budget year, this is anticipated to rise by as much as Rs. 174 crores to Rs. 1,337 crores; at this level, it constitutes about 53 per cent of the total expenditure bill of the States for 1964-65. Of the proposed increase of Rs. 174 crores in developmental outlay in 1964-65, as much as Rs. 145 crores or 83 per cent are earmarked for Plan schemes, while the balance is distributed over social overheads and other non-Plan schemes.

The State budgets for the year 1964-65, drawn up against the backdrop of inadequate performance of agriculture in the preceding three years, which not only held back the rising tempo of industrial activity but also gave rise to a sharp upward thrust to the general price level, have focussed attention on boosting agricultural production through schemes which would yield quicker results. Thus, out of a rise of Rs. 192 crores in the aggregate expenditure bill (revenue and capital accounts combined), as much as Rs. 174 crores are proposed to be spent on development schemes; in fact, the provision for development expenditure exceeds by a sizable margin the outlays on Plan schemes for 1964-65. Nearly one-third of the expansion in development expenditure would be channelled into agriculture and allied fields like co-operation, irrigation and rural and community development. In addition, a part of the increase under 'loans and advances by States' represents larger assistance to agriculturists in the form of *taccavi* loans, fertiliser loans and loans for purchase of agricultural implements, etc. Education, medical and public health, and buildings and roads are the other more important developmental heads on which the expenditure during 1964-65 would be marked up appreciably.

A notable feature of the non-development expenditure during the budget year is that, consequent upon the persistent rise in prices and cost of living, almost all the States have effected an upward revision in the pay structure of their lower cadres of employees. In this connection, it may be noted that the financial assistance made available by the Centre to States for raising the emoluments of low-paid Government employees had been discontinued since 1961-62. Side by side, most of the States have, in line with the measures at the Centre, liberalised the social security benefits to their employees, such as pension schemes and family pension schemes. This trend towards increased social security benefits to the Government servants, which is in line with the ideals of a socialist State, would sizably push up civil expenditure of the States. Even so, the total non-developmental expenditure, which had risen substantially during 1963-64 mainly because of the increase in debt service charges, is expected to come down marginally during 1964-65.

An important finding of the Reserve Bank's study is that the implementation of the third Plan at States' level, as judged by the allocation of financial resources, has proceeded so far, more or less, in conformity with the programme phased at the time when the Plan was formulated. The aggregate Plan outlays of States have been progressively stepped up from 15 per cent (of the total target for 1961-66) in 1961-62 to 17 per cent in 1962-63, 21 per cent in 1963-64 and 24 per cent in 1964-65, leaving about 23 per cent to be covered in the last year of the Plan (*vide* Table C). There are, of course, wide variations in the performance of individual States on the Plan front. While States like West Bengal, Madras, Orissa and Assam have implemented the Plan at a faster pace, progress has been rather slow in Bihar, Jammu and Kashmir, Madhya Pradesh and Rajasthan.

So far as the current financial year is concerned, the budgets of all States, with the exception of Mysore, provide for larger outlays (as compared with 1963-64). Indeed, in the majority of States, the proposed outlays are more than the amounts approved by the Planning Commission, which is interpreted by the authors of the Reserve Bank study, as indicative of the States' determination to speed up the process of development. Most of the States are also hopeful of a larger flow of assistance from the Centre. Only in the case of West Bengal and Assam, where the excess of financial outlays over approved amounts is considerable, the fulfilment of Plan outlays will depend largely on these States' ability to mobilise fresh resources. It is, however, needless to add that the performance of States in implementing the Plan projects is better judged by physical achievements rather than by capital outlays. But such an evaluation, it must be conceded, is outside the scope of the study under review, though one would like the Reserve Bank, which has one of the best economic research divisions in the country, to undertake it one of these days.

MANCHESTER LETTER

A NEW PACKAGE DEAL FOR LABOUR

HIGHER WAGES—MORE HOLIDAYS—LESS WORKING HOURS

From Our Special Correspondent

MANCHESTER, 16*th June*

DURING any phase of sustained activity in the market, rising prices must be anticipated and the hardening movement encountered during the past couple of months has been a vital factor in trading. Official statements made earlier in the year underlined the relatively narrow margins which were ruling, despite the build-up in order books. Pressure for supplies was certainly strong, but sellers were unable to gain much ground in the shape of really remunerative contracts.

When it became apparent that long staple cotton prices were moving sharply upwards due to shortage of supplies, the opportunity was taken to hold out for firmer rates; in consequence, yarn quotations showed a much stiffer trend. The accompanying table below illustrates the lack of movement in the first part of the last six months and the subsequent rise:

Yarn salesmen have not found the going entirely easy, but, as it frequently happens in a rising market, the impetus has gathered strength. The approach of the holiday season has created additional inquiry from customers who are anxious to maintain a steady flow of material through distributive channels which have been clamouring for deliveries.

New Pay Deal

A new "package" deal for Lancashire's 140,000 spinning and weaving operatives is now in its final stages of negotiation. Talks between employers and trade union leaders went on for over six hours last week and, at the end of the discussions, it was confidently stated that a final settlement would be announced later this week.

Agreement in principle on the main terms has already been reached, it is understood, but hard bargaining on side issues has delayed an official announcement. Under the agreement, unless some last-minute adjustments are made, the workers will get a 4 per cent pay increase, an extra day's holiday and a reduction in the working week from 42½ to 42 hours without loss of pay. The rise is expected to operate from the first pay day in July and the extra holiday would be granted later this year. In future, an annual wage review will be carried out and according to present arrangements earnings would be incresed at the rate of 4 per cent per year over the next three years.

In return for these concessions, the unions have accepted, a qualifying clause in the holiday agreement under which operatives will have to present themselves for work on the day before and the day following a holiday under penalty of loss of holiday pay. It is expected that the extra day's holiday this year will be taken on Christmas Eve—a day on which there has been traditional large-scale absenteeism in the mills.

Not only will the earnings of the workers be stepped up on a regular basis, but it is anticipated that further additional holidays and reduction in working hours will be adopted during the three-year period of the scheme.

A fourth claim made by the trade unions at the beginning of the negotiations for a compensation scheme for redundant operatives was rejected by the employers. Redundancy payments, it was felt by the millowners, were a matter for Government legislation.

Despite the apparent agreement between the traditional textile manufacturing areas and the up-and-coming countries, whose competition is so feared by the older industries, under the terms of the Geneva long-term arrangement on imports and exports, there is still a very wide gap between the ideas of the two producing blocs. The form of co-existence provided by the agreement is in fact only accepted by the expanding textile countries because they recognise that their markets would be drastically curtailed by unilateral measures by the importing nations in its absence. Suggestions are now being put forward that the American Government may be persuaded to delete textiles from the new series of talks scheduled to take place shortly on tariff reductions. Separate negotiations on textiles are being urged by the U.S. manufacturers, who are anxious to put up as an effective a defensive screen as possible, as witnessed by their success in gaining support from Washington for maximum protection under the long-term agreement.

European Fears

Nor are the Continental spinners and weavers any less enthusiastic for the adoption of any system which will maintain their immunity from the inroads made by competitors. The Committee of the E.E.C. cotton industries has categorically stated that, in view of the competition provided by certain countries which export at low prices, the common external tariff must be kept at its present level if a sound and prosperous cotton industry is to be maintained by the Six. The ultimate E.E.C. tariff rate is of vital importance to countries outside the Common Market as the schedule of tariff reduction is already well ahead of the original estimates. Having already been cut by 60 per cent of the 1957 level, an additional 20 per cent drop is likely by the end of this year. Some observers believe that the aim of a unified external tariff may be reached as soon as 1966, compared with the original goal of the abolition of all internal tariffs by 1970.

Whether the E.F.T.A. countries will also seek to exclude textiles from their tariff revisions must await further top level talks next month, but, in the meantime, the representatives of low-cost competitive areas are watching the current developments very closely. They contend, with some justification, that the signatories to the Geneva agreement are more anxious to keep within the letter of the law than to subscibe to the spirit of the pact.

More Output Gains

April's official returns on production and employment issued by the Cotton Board show a continuation of earlier trends and no apparent complicating side-tracks. In a nut-shell, the level of available manpower remained unchanged, while output per working day again expanded. Single yarn production, for instance, was at its highest level since November 1961 and was 8 per cent higher than in April last year. Within the total, spun yarns from man-made fibres and mixtures were 16 per cent up. Production of doubled yarn measured by weight reached the highest level since October 1960. Cloth output was 4 per cent above last April and was at its best for nearly two years back.

The number of employees on the books of spinning and weaving firms at the end of April was 142,340—the same as a month earlier. This showed a reduction of 4,230 as compared with the same date last year, a loss of 3 per cent, but the output gains emphasise the rise in productivity.

Progress in Comparisons

Inter-firm comparison systems, already operating in the spinning and weaving sections of the industry, having been launched by the Cotton Board Productivity Centre more than 12 months ago, are clearly making progress. Companies participating in the scheme already exceed 50 and the idea is to be extended into the textile finishing branches. The Federation of Piece Dyers and Finishers is collaborating with the Productivity Centre in offering similar facilities to those already provided for the producing branches and some 20 per cent of the firms concerned have indicated their readiness to take part.

Suitable management ratios have now been drawn up and complete secrecy is assured, so that those participating can gauge their relative efficiency and if necessary take steps to improve individual departments which appear to be lagging behind their competitors. In this way, the general efficiency of the industry as a whole can be raised.

MORE ON ECONOMICS OF BIG IRRIGATION PROJECTS

THE PROBLEM OF WATER RATES

By S. Ramayya, I.A. & A.S. (Retd.)

[*In the first article on this subject in* Commerce *dated 28th September 1963, the author examined the subject from the aspect of State Finances and concluded that, in the present constitutional set up of India with Irrigation and Agriculture as State subjects, huge irrigation projects, like huge industrial projects, should be the concern of the Centre. Otherwise, the States would, he said, be hard put to find the money even for interest payments. In the second article published in* Commerce *20th June 1964, the author examined the social costs of such big projects and came to the conclusion that, in the present economic climate of India with 70 per cent of the people living on subsistence farming, such investments would lead to huge social loss in consumption. It was also shown that they were not advisable from the point of view of saving and future growth. In this article, he examines the water rate problem, involved in such projects, and its manifold effects.*—ED.]

LAND revenue is an ancient impost in India on agricultural production, levied by the State for its revenues. Since water is a necessity for agricultural production and land revenue was deemed to be a share of the agricultural product for State purposes, some water rate, if water is provided by the State, forms part of the land revenue and was recovered by the State from time immemorial. Apart from rainfall and natural storages in big depressions, some sort of small irrigation was undertaken from ancient time by kings, local chiefs, village *Panchayats* or charitably disposed rich persons, depending on the technological skill of the times. Although the usefulness of irrigation was obvious from the point of view of production, it was more often undertaken on the considerations of *dharma* or charity, from undisposable surplus of the treasuries or big merchants. In the days of the Muslims, there are evidences of big tanks being excavated as famine relief as well as irrigation works, as for example, the famous Hussain Sagar of Hyderabad.

It was only during the British regime, from the late nineteenth century that economic calculations entered into irrigation projects. The principle of British regime, as laid down by the Select Committee of the House of Commons in 1879, was that "the financial results of works of irrigation are, in the opinion of the Committee, the best test of their utility." The Royal Commission on Irrigation of 1901 endorsed this idea after great deliberation.

This is the famous financial productivity test, a very simple principle. The direct capital outlay *plus* the capitalised interest till a certain period must yield in the shape of revenues, mainly water rates *less* maintenance charges, a rate of, say, 4 per cent or 5 per cent or 6 per cent, the rate being mainly dependent on the borrowing rates of the period. Such projects were called 'productive works.' A few works undertaken in regions of famine which did not yield the return were called 'unproductive works.' Most of the big irrigation systems undertaken in British days were of the diversion types, namely, barrages and weirs, utilising sometimes the old channels as, for example, the systems in the Punjab and Sind and in the Godavari, Krishna and Cauvery Deltas. They were cheap and more or less full water rates could be recovered and hence productive in the language of those days. A Rs. 30 or 40-crore investment for an anicut or barrage *cum* canals may evoke a private investment of Rs. 30 or 40 crores and both may produce Rs. 30 or 40 crores of output with a nice capital output ratio of 2 or 3.

Recent Discussions

In unproductive projects, recent big storage schemes and other works, where full water rates could not be recovered, the principle of water rates assumed certain importance. As the Taxation Enquiry Commission remarked, "there is a multiplicity both in the principle and in the rates for assessments in India." Today there is a bewildering variety of systems for the calculation of the actual charges and they vary from State to State and within the State itself from canal to canal. The trend of opinion formulated by the old Revenue Departments was towards taking a portion of the net benefit to the peasant due to irrigation. If the irrigation added, say, Rs. 50 per acre as additional net income to the farmer, the State would try to capture Rs. 20 or Rs. 25.

Subsidy Element

All these are older *ad hoc* approaches to a fundamental problem in agriculture. We have to re-examine the case from the point of view of modern economic analysis in the developing economy of modern India. It is best to approach it with a model, the one I expanded in my first and second articles. The project model therein may cost financially, with capitalised interest, Rs. 200 crores, when it is thrown open for full irrigation after, say, 17 or 18 years. This will mean to the State an expenditure of Rs. 9 crores as interest at 4½ per cent *plus* Rs. one crore by way of depreciation, assuming the life of the project to be 200 years. There will be an additional Rs. one crore for maintenance charges at a conservative estimate of Rs. 4 per acre on 2 million acres; in all Rs. 11 crores. The commercial water rate will, therefore, be, with Rs. 11 crores for 2 million acres, Rs. 55 per acre. Assuming that the State Government charges only Rs. 30 per acre from the poor peasant, since it is obvious he cannot afford to pay more, the recovery will be Rs. 6 crores. In other words, the State is giving a subsidy of Rs. 5 crores per year in this region to the poor peasant for raising foodstuff. Let us now analyse the magnitude, the objects and the significance of this subsidy.

Magnitude of Subsidy

On a fairly approximate calculation, we notice that, in this project, the subsidy to the peasant farmer annually will be to the tune of Rs. 5 crores per annum. Supposing there are five such gigantic projects in India, the subsidy at this rate will work out to Rs. 25 crores per annum for the whole country. And, in the present constitutional set up, Agriculture and Irrigation being State subjects, the States will have to bear it. In fifty years, till India grows richer and enters the take-off stage, the total will be the prodigious sum of 50 × Rs. 25 crores =Rs. 1,250 crores.

What is the object of this subsidy? To understand the problem clearly let us take an example. The Industries Minister of a State is putting up a huge power project in the public sector costing Rs. 100 crores, borrowed at 6 per cent to produce, say, one million Kw. of electric energy, to induce private sector to set up industries in the area. Although power costs, say, Rs. 100 per Kw., the State is charging, in the early stages, only Rs. 40 to the industrialists, giving a subsidy of Rs. 60, so that there may be an inducement to start industries. Entrepreneurs come there and invest Rs. 200 crores in a complex of industries. After 5 or 6 years, the whole region is humming with activity. At this stage, some Rs. 300 crores have been invested in the region, Rs. 100 crores in the public sector, Rs. 200 crores in the private sector. The net additional national income is Rs. 100 crores. The State can now do one of various things. It can slowly and steadily increase the electricity rate fully to Rs. 100 per Kw.; or it may increase it to, say, Rs. 50 or Rs. 60, leaving the balance of Rs. 50 or Rs. 40 as subsidy. Meanwhile, the Rs. 100 crores will yield a tax revenue at 6 per cent Rs. 6 crores to the State, assuming total national tax effort at 12 per cent of national income shared 50 : 50 by the State and Centre. These Rs. 6 crores alone will meet the interest charges, while the Rs. 5 or 6 crores drawn from electricity rates will meet other charges like depreciation, maintenance, etc. There will be savings from the additional national income both in the individual, corporate, and public sectors which can be reinvested. Thus is a growth economy set going in the area.

Objects of Subsidy

From this example, certain general principles can be deduced. These are:

(*a*) Social overhead expenditures in the shape of public utilities like power or irrigation may have to be undertaken by the State only, since the private sector may not be able to afford it as they may involve heavy expenditure; and, in any case, the subsidy element will deter them.

(*b*) The main object of such utilities is to induce large private investments, so that the national income may grow. Consequently there should be a certain balance between social overhead and direct production by the private sector. In other words, too much investment by the State with poor industrial activity is not good.

(*c*) The guiding economic principle is to get the maximum total output for society with the minimum costs in private productive activity and social overheads.

(*d*) Since the Government can only be treated as an agency, utilising social production for its activity, all its costs will have to be recovered from social production and/or social saving if Government policy is on a no-profit basis. If Government gives a subsidy in a public utility, the cost of it has to come from social production, or saving, ultimately.

Irrigation Investment and Water Rates

The application of the aforesaid principles to irrigation investment and water rates will have to be as follows:

(*a*) Big irrigation works are public utilities and, in the Indian context, have to be undertaken by the State, since they involve a huge expenditure and is beyond the capacity of the poor peasant.

(*b*) and (*c*) While a certain amount of private investment is induced (to the tune of Rs. 150 crores by peasant farmers in our model), it is not adequate both in quantum and productivity. Conversely, the public investment is not low enough with private investment to match the output. That is, if public outlay is, say, only Rs. 30 crores, private capital is Rs. 120 crores and if both produce an income of Rs. 50 crores, it is a different story. In the power project example mentioned above, we saw how Rs. 100 crores public outlay induced Rs. 200 crores of private investment and both produced the maximum output of Rs. 100 crores. As against this, the investment Rs. 300 crores in irrigation and agriculture produces only Rs. 50 crores income. Peasant farming has little scope for improving its investment even in future even with a subsidy. Nor has it the capacity to increase its output, except, perhaps by a small fraction with better seeds, fertilisers, etc. The cost of new storage projects will not also come down, unless there is a great cost-reducing technological invention.

(*d*) The Rs. 50-crore output in the irrigation project is contributed by, and has to be divided into, three portions: Rs. 11 crores go to State for interest, maintenance and depreciation, Rs. 4 crores say, to other capital like implements, carts, bullocks, etc., which may be farmers' capital, and Rs. 35 crores to farmers and peasants as wages. The peasant farmers' share in the output (Rs. 35 crores+Rs. 4 crores) may be all right so far as they are concerned. The State, however, gets only Rs. 6 crores, by way of water rate at Rs. 30 per acre. It may recover on the Rs. 39 crores income to the peasants by way of taxes, another Rs. 2.5 crores, that is, Rs. 7.5 crores in all. The total cost to it is, however, Rs. 11 crores. Who is to pay the balance of Rs. 3.5 crores? Since the poor peasant has paid the maximum tax, *the fact emerges that the non-agricultural sector which is also not too rich has to pay the Rs. 3½ crores by way of additional taxation. Thus the subsidy is paid by the urban people.*

Some Other Peculiar Effects of Subsidy

If Rs. 250 is the cost of production per half ton of rice produced in an acre in the area and is also its price, and if Rs. 55 is the commercial water rate and the farmer is charged only Rs. 30, the peasant is subsidised to the extent of Rs. 25 per acre or 10 per cent by the State in the production of foodstuff.

The subsidised peasant does not sell all his foodstuff in the market or purchase all his foodstuff from it. He practically consumes two-thirds of the production of his farm directly, especially foodstuff, because such a large portion of his income will normally go for food. Consequently, the peasant (in the model region) gets his foodstuff at a subsidised rate of 10 per cent. That means two-thirds of Indian population, or may be slightly less, get their food at 10 per cent less than the cost and they may consume about two-third of production. One-third of agricultural production goes to the non-agricultural sector (leaving out imports), that is, to the remaining one-third of the population who are mainly urban and industrial workers. From this, it follows that levy of produce by State from peasants at a cheaper rate may be justified.

Food is a basic necessity and there is a minimum fixed demand for it; and the demand is inelastic; that is, that minimum has to be

GROWTH WITH STABILITY IN PAKISTAN

MONETARY AND CREDIT CONDITIONS REVIEWED

By Dr. Anwar Iqbal Qureshi

ECONOMIC ADVISER TO THE GOVERNMENT OF PAKISTAN

THE year 1963-64 (April-March) has been remarkable for the economy of Pakistan. In spite of a record increase in money supply of Rs. 110 crores (16 per cent) and of Rs. 104.08 crores (29 per cent) in bank credit, in the course of a year, the increase in wholesale price has only been marginal, 1.4 per cent to be precise. The growth rate in the economy has been six per cent and the *per capita* national income has increased from Rs. 259 in 1962-63 to Rs. 269 in 1963-64. For the first time in the history of Pakistan, the dominance of agricultural sector has been overcome and it now contributes less than 50 per cent to the G.N.P.

The high rate of growth witnessed in the national economy with a very steep rise in money supply and credit, without its consequent effects in the form of rise in price level, has attracted a good deal of attention and has been very favourably commented upon by various international experts. It is, therefore, proposed to give here a detailed account of developments in the field of money and credit during 1963-64.

Monetary and Credit Structure

The year 1963 witnessed an unprecedented expansion in money supply and bank credit in Pakistan provided by the scheduled banks to various sectors of the economy. Both money supply and bank credit touched a new high peak. At the end of 1963, money supply stood at Rs. 746.95 crores, and bank credit at Rs. 416.10 crores, showing increases of Rs. 95.74 crores and Rs. 79.05 crores, respectively, over 1962.

At the end of March 1964, money supply stood at Rs. 786.10 crores, as compared to Rs. 676.10 crores in March 1963, a rise of Rs. 110 crores. Bank credit during the same period increased from Rs. 356.15 crores to Rs. 460.25 crores, a rise of Rs. 104.10 crores.

The rapid expansion in money supply and bank credit was the result of increased economic activity, which gained momentum as the Second Plan entered its final phase. The demand for money and credit increased considerably from the private as well as the public sector. Of the Rs. 95.74 crores increase in money supply during 1963, the private sector accounted for Rs. 34.30 crores and the Government sector for Rs. 48.03 crores.

The sharp rise in money supply did not, however, produce any notable change in prices. This was made possible by the liberal import policy adopted by the Government and selective credit control measures introduced by the State Bank, aiming at preventing hoarding and stock piling. The index of wholesale prices increased by 1.02 point in 1963.

New Monetary Measures

The rapid expansion in money supply amounting to Rs. 88.16 crores during the 12 months ended June 1963 and an abundance of credit which increased by Rs. 80.85 crores during the same period resulted in pressure on the price level and a tendency to build up inventories. In other words, inflationary pressure which had been kept in check in the past, again crept into the economy, and required effective corrective measures.

The State Bank announced on 26th July 1963 monetary measures to guard against the "risk of inflation" and to check the "pace of credit expansion." These measures, which came into force from 1st August 1963 were:

1. Introduction of a quota system under which ceiling are fixed on the amounts which each scheduled bank is entitled to borrow at the bank rate.

2. Simultaneously, accommodation to each individual bank under the Bill Rediscounting Scheme is limited to the maximum amount drawn under the scheme during 1962-63.

3. Moreover, reserve requirements which had hitherto been 5 per cent of demand liabilities and 2 per cent of time liabilities, were raised to a uniform 5 per cent of the aggregate of demand and time liabilities.

The most significant measure introduced by the State Bank is the quota system for its lending to commercial banks. Under this system, ceilings have been fixed on the amounts each scheduled bank is allowed to borrow at the Bank Rate. The ceilings are determined on the basis of 50 per cent of the balances which the banks are required to maintain with the State Bank. This basic quota was worked out in such a way that, on the basis of existing deposits, the banks would be able to obtain their normal requirements from the State Bank at the Bank Rate. Only when a bank starts lending excessively would it be subjected to the higher rate of interest. While the State Bank is anxious to avoid excessive credit creation, it is equally keen to ensure that all genuine credit requirements are adequately met by the banking system. The State Bank has been allowing sizable credit expansion to permit the economy to operate at full capacity and to continue to grow. Investment activity should continue to get normal assistance from the banking system. The present quota system provides a balance inasmuch as existing credit needs would continue to be met, while further credit creation on a large scale would be slightly more expensive.

At the same time, the State Bank has sought to ensure that small borrowers are not adversely affected by credit control measures. In order to safeguard the interests of small borrowers, banks will be permitted to borrow additional funds at the bank rate to the extent of their loans of Rs. 25,000 and below made on or after 1st August, 1963. The Bank will also provide funds at the Bank Rate to institutions which would cater specifically to the needs of small men.

Bill Rediscounting Scheme

Simultaneously, accommodation to each individual bank under the Bill Rediscounting Scheme is limited to the maximum amount drawn under the Scheme during 1962-63. Under this Scheme, the State Bank has been providing assistance to banks to meet their seasonal requirements. The freezing of these limits at the level of last year's utilisation would not have a directly restrictive effect. It is, however, necessary as a supplement to the quota system to avoid the possibility of the circumvention of the quota system.

Finally, the reserve requirements which stood at 5 per cent of demand liabilities and 2 per cent of time liabilities have been raised to a uniform level of 5 per cent of the aggregate of demand and time liabilities. This would have the effect of immobilising a certain portion of the funds of commercial banks and would thus make them cautious and selective in their lending policies. At the same time, this immobilised portion would provide a bigger cushion to all banks in case of any emergency and would thus be a greater safeguard for depositors. This measure, in addition to helping the immediate credit situation, would also augment the long-term soundness of the banking system.

These measures generally aim to restrain the pace of credit expansion and to guard against the risk of inflation. They will also have the effect of helping the consumer by discouraging the building up of stocks. They would stimulate savings by bringing about a higher deposit rate structure. By directly relating the size of the State Bank's assistance to the deposit performance of each bank, the measures provide an incentive to the banking system to mobilise deposits. Besides, a few credit restrictions in force since 1960 were continued and these are discussed at a later stage in this article.

Table 1: *Money Supply*

(In crores of rupees)

Month/Year Last Friday	Currency in circulation	Demand deposits (general)	Other deposits with S.B.P.	Money Supply
December 1956 ..	346.30	142.97	2.69	491.96

1964				
March	479.17	301.83	5.10	786.10

Note: Money supply referred to in this article consists of currency in circulation, demand deposits (general) with the scheduled banks and "other deposits" with the State Bank (excluding I.M.F. Account No. 1/U.S. Counterpart Funds, I.B.R.D. Indus Account, U.S. Development Loan Fund), which are repayable on demand.

Higher Bank Rate *vs.* Staggered Rates

There are two schools of thought in Pakistan regarding the most effective method to control credit. One school believes in the classical method of controlling credit by a straight rise in the Bank Rate. The second school, in view of the peculiar circumstances of underdeveloped countries, specially of Pakistan, does not favour a straight increase in the Bank Rate but prefers a policy of discriminatory staggered rates. The State Bank authorities, after careful study of the situation, adopted the latter method, discussed at some length above. The reasons for preferring this method are discussed below.

Bank Rate policy is usually designed to (i) improve the balance of payments by encouraging the inflow of foreign funds and by discouraging the outflow of funds, (ii) curb inflationary pressures by restricting the demand for credit, and (iii) reduce consumption demand and stimulate savings. As there is no international financial centre in Pakistan which could attract foreign funds by higher interest rates, a change in the Bank Rate has practically no impact on the balance of payments.

Secondly, Pakistan has a substantial non-monetized sector, and the banking system covers only a small part of the production of the country. Bank credit forms a small portion of the total national product. The role of bank credit and its cost, either in financing long-term investment or in meeting consumption requirements, could not, therefore, be considered as significant as in developed countries.

Efficacy of Bank Rate

The imperfections of the money market further weaken the efficacy of Bank Rate as an instrument of monetary control in Pakistan. Currency rather than bank money forms the major portion of money supply. The interest rate structure is neither uniform, compact nor sensitive. In the absence of any links between them, there is a wide disparity between the interest rates of private money lenders, indigenous bankers and non-scheduled banks and those of the organised sector, and the absence of a short-term money market limits still further the efficacy of Bank Rate. Moreover, unless it is used ruthlessly, the Bank Rate weapon is unlikely to produce appropriate adjustments in interest rates, sufficient to impose the necessary check on consumption and investment demand. In a country, where the marginal efficiency of capital is very high, a small rise in Bank Rate may not reduce the demand for advances to any significant extent. Nor can a small increase in the Bank Rate bring about any sizable additional savings.

Money Supply 1963-64

During 1963, money supply increased by Rs. 95.74 crores, from Rs. 651.21 crores at the end of 1962 to Rs. 746.95 crores at the end of 1963. This compared with the increases of Rs. 30.97 crores in 1962 and of Rs. 4.33 crores in 1961. At the end of March 1964, money supply stood at Rs. 786.10 crores, as compared with Rs. 676.10 crores at the end of March, 1963. Table 1 shows money supply with its components since December 1956.

The sharp rise in money supply during 1963 is accounted for by an expansion of currency in circulation by Rs. 43.39 crores to Rs. 453.72 crores, of demand deposits by Rs. 52.29 crores to Rs. 288.15 crores and of Rs. 0.06 crore to Rs. 5.08 crores in other deposits with the State Bank of Pakistan (excluding I.M.F. Account No. 1, U.S. Counterpart Funds, Indus Basin Accounts and U.S. Development Loan Fund, etc.)

Money supply expanded in each sector of the economy. The largest expansion was in the Government sector followed by the private sector, the foreign sector and "other items." Table 2 shows the causative factors of money supply since 1961.

Table 2: *Money Supply and Its Causative Factors*

(In crores of rupees)

Causative factors	December 1963	December 1962	December 1961	January-March 1964
Money supply	+95.74	+30.97	4.33	+39.15
1. Private sector ..	+80.94	+79.47	+45.90	+24.62
Adjustment for shift to time deposits ..	—46.64	—47.67	—19.18	— 4.68
Net private sector ..	+34.30	+31.80	+26.72	+19.94
2. Government sector ..	+58.18	— 3.90	+ 5.02	+ 7.71
Adjustment for counterpart funds ..	—10.15	+17.21	+11.18	— 5.87
Net Government sector ..	+48.03	+13.31	+16.20	+ 1.84
3. Foreign sector	+10.05	+ 1.64	—18.00	+10.65
4. I.B.R.D. Indus Account ..	+ 0.79	+ 0.23	— 9.79	+ 4.88
5. Other items	+ 2.57	—16.01	—10.80	+ 1.84
Net effect	+95.74	+30.97	+ 4.33	+39.15

Net expansion in the Government sector, after adjustment for different counterpart accounts, was Rs. 48.03 crores, as compared with Rs. 13.31 crores in 1962 and Rs. 16.20 crores in 1961. The main expansionary force in this sector was generated by increased holdings of Government Securities and other domestic assets by the State Bank, the commercial banks' increased investment in Government Securities, decline in the cash balance of provincial Governments, and increased loans made available to the Government by the State Bank of Pakistan. This increase in the Government sector was partially offset by accumulation of deposits in the counterpart funds.

The private sector expansion, after adjustment for shift to time deposits, amounted to Rs. 34.30 crores, as compared to Rs. 31.80 crores in 1962 and Rs. 26.72 crores in 1961. But for a substantial shift to time deposits amounting to Rs. 46.64 crores, the expansion in this sector would have been much more pronounced. Increased availability of credit to the private sector by the scheduled banks and their investment in private securities were the factors responsible for the increase in the private sector.

As compared with a marginal expansion of Rs. 1.64 crore in 1962 and in contrast to a substantial contraction of Rs. 18 crores in 1961, the foreign sector during 1963 showed a sizable expansion of Rs. 10.05 crores. The expansion in the foreign sector was accounted for by the increased holdings of gold and foreign assets by the State Bank.

During January-March 1964, money supply rose by Rs. 39.15 crores. The causative factors for this increase reveal that the expansion took place in all the sectors. The private sector accounted for the largest expansion amounting Rs. 19.94 crores after adjustment of Rs. 4.68 crores for shift to time deposits. The expansion was due to increased loans made available to the private sector by the scheduled banks. The foreign sector was expansionary by Rs. 10.65 crores on account of increased holdings of gold and foreign assets by the State Bank.

Bank Credit 1963-64

During 1963, bank credit expanded by Rs. 79.05 crores, from Rs. 337.05 crores at the end of 1962 to Rs. 416.10 crores at the end of 1963. This compared with increases of Rs. 64.59 crores in 1962 and Rs. 98 crores in 1961. The increase during the last three years average a Rs. 69.21 crores per annum. This rate of expansion is higher than the estimates of the Credit Committee (1962), which postulated a credit expansion during the Plan period at Rs. 50-60 crores per annum.

The increase of 23.5 per cent in bank credit during 1963 is accounted for by an increase of Rs. 72.64 crores to Rs. 382.40 crores in advances and of Rs. 6.41 crores to Rs. 33.70 crores in inland and foreign bills purchased and discounted. At Rs. 382.40 crores at the end of 1963, scheduled banks' advances were the highest so far recorded.

During January-March, 1964, bank credit increased further by Rs. 44.15 crores to Rs. 460.25 crores, as compared with an increase of Rs. 19.10 crores during the corresponding period of 1963. The increase was accounted for by a rise of Rs. 42.99 crores to Rs. 425.37 crores in advances and of Rs. 1.8 crore to Rs. 34.88 crores in bills purchased and discounted.

The larger increase in bank credit than in deposit resources compelled the banking system to operate on a much higher credit-deposit ratio and placed considerable strain on their liquidity position. This ratio, which stood at 81.8 per cent in 1962 and 80.5 per cent in 1961, rose to 86.9 per cent in March 1964. The table below shows the credit deposit ratio since 1959:

(In crores of rupees)

Last Friday	Total Bank credit	Total bank deposit (general)	Ratio of credit to deposits (Per cent)
1959	161.98	289.92	57.3
1960	202.48	302.61	68.9
1961	272.46	338.51	80.5
1962	337.05	412.04	81.8
1963	416.10	510.97	81.4
1964 (March)	460.25	529.33	86.9

Credit to Small Borrowers

In its report of 1962, the Credit Committee drew attention to the inadequacy of credit to small borrowers. It stated:

"We have already stated our broad conclusion that the overall availability of credit in the country has not been inadequate and the requirements of the large borrowers are being met, but that stringency is experienced by (a) the small borrower and (b) the less developed areas. The evidence produced to our committee, both written and oral, stressed beyond doubt the existence of stringency in these two sectors."

The Credit Enquiry Commission (1959) also brought to the notice of the Government the difficulties of small borrowers and recommended some measures to remove these difficulties. The Credit Committee (1962) recommended the following measures to encourage the flow of credit to the small borrowers:

1. Government policies designed to sustain the small middle class *entrepreneur* should be consistently pursued.

2. The banking system should aim at making not less than 15 per cent of their total advances to parties requiring up to Rs. 25,000. This should be set as a target, but, instead of enforcing it as a compulsory requirement, the State Bank should use its influence to ensure the achievement of this target and exert pressure on individual banks which are lagging behind.

3. Developing the commercial banking system to assist the small borrowers is likely to be more effective than the establishment of a special credit institution. Commercial banks should set up separate Small Loans Departments.

4. Banks should adopt a less orthodox outlook in regard to security and be willing to take a somewhat greater risk in dealing with small loans, as over 50 per cent of deposits are provided by small parties on which the banks make profit. The banks should formulate specific schemes for encouraging small borrowers and Government and/or State Bank should be prepared to underwrite a part of the losses under these schemes.

5. Procedures relating to hypothecation and pledges of property, particularly land and real estate, and laws governing the realisation of bank dues against such property should be made simpler and less expensive.

6. Lower margins should be laid down in the case of small loans.

7. An intermediary agency in the form of Discount Houses and Guarantee Brokers should be created to help the small borrowers as recommended by the Credit Enquiry Commission.

The distribution of bank credit among economic groups reveals that the largest slice went to the commercial sector, followed by the manufacturing, agricultural and services groups. The table below shows the classification of bank credit by major economic groups:

Classification of Bank Credit by Major Economic Groups

(In crores of rupees)

Economic group	31-12-60	31-12-61	31-12-62	31-12-63
Agriculture, forestry, hunting and fishing	13.22	21.29	24.43	37.43
Mining and quarrying	1.46	1.54	1.63	0.76
Manufacturing	61.53	78.06	105.63	140.89
Construction	1.43	0.85	10.46	8.73
Electricity, gas water and sanitary services	1.39	3.63	3.42	1.88
Commerce	98.03	114.29	146.41	168.96
Transport, storage and communications	3.50	4.93	6.21	8.21
Services	15.83	20.14	20.58	31.37
Financial institutions	0.03	0.07	0.01	..
Employees and activities not adequately described ..	7.29	18.82	6.70	16.36
Others	0.57	0.67	1.10	0.86
Total ..	204.36	264.28	326.58	421.45

In pursuance of these recommendations, efforts have been made to meet the credit requirements of small borrowers. While introducing selective credit control measures in July 1963, the State Bank felt that the introduction of the quota system may be against the interests of the small borrowers. To safeguard their interests, it was, therefore, decided to permit banks to borrow additional funds at the Bank Rate to the extent of their loans of Rs. 25,000 and below. It was further decided that funds will be provided by the State Bank at Bank Rate to institutions such as the proposed People's Finance Corporation which specially cater to the needs of the small borrowers.

A significant step in this direction was the setting up of a People's Credit Department in January, 1964 in all the branches of National Bank of Pakistan which caters for the financial requirements of small business and industry. This department provides credit ranging from Rs. 500 to Rs. 50,000. For the purpose of granting loans under the scheme, small business concerns have been grouped under five categories which include small business concerns/individuals who own shops, small industries, cottage industries, rickshaws, baby taxis, taxis, buses, trucks, motor launches, country boats or those who are engaged in clearing and forwarding of goods, advertising, contracts or supply works, imports and exports and other trades and occupations of a similar character. The rate of interest is 2 per cent above the Bank Rate with a minimum of 6 per cent.

During the three and a half months of its existence (up to April 1964), the total amount of credit provided to 10,000 applicants by the new Department exceeded Rs. 9 crores.

Credit Controls

The following credit restrictions imposed in 1960 were continued during 1963 and the first quarter of 1964.

1. In February, 1960, at the instance of the Government, bank advances against stocks of wheat and rice were restricted up to a maximum period of six months. In October, 1962, the maximum period for such advances was raised from six months to one year. There has been no change in this position during the year under review.

2. Advances against shares of newly floated companies are allowed to be made by banks if 50 per cent cash is provided by the intending subscribers. Share brokers have, however, been exempted from this restriction.

3. Forty per cent margin restrictions on advances against imported manufactured goods (excepting industrial machinery) and cotton yarn (except for export) were imposed in March 1960 with a view to checking the hoarding and blackmarketing of such goods. With a view to avoiding hardship to small traders no restrictions have been imposed on advances against imported manufactured goods up to an amount of Rs. 25,000 to any one party in West Pakistan and up to Rs. 50,000 to any one party in East Pakistan. Advances against imported manufactured goods in East Pakistan are, however, subject to 20 per cent margin only as against 40 per cent in West Pakistan.

4. Unsecured advances and advances secured by guarantee or by banks are restricted to a maximum limit of Rs. 50,000 to any one party, provided that the advance up to Rs. 50,000 is not intended for financing imported manufactured goods (excepting industrial machinery) and cotton yarn (except for export).

5. With a view to liberalising the import policy, some items including iron and steel were placed by the Government under O.G.L. towards the end of 1961. As a result, advances against iron and steel increased enormously resulting in hoarding and blackmarketing of iron and steel. In consultation with the Ministry of Commerce, the 40 per cent margin restriction was, therefore, imposed on advances against iron and steel in January 1962. Iron and steel imported under industrial licences are, however, exempt from this restriction. There has been no change in this restriction during the year under review.

6. Since May 1962, advances against cotton textiles (both indigenous and imported) had been subjected to 40 per cent margin. With a view to checking the huge build up of stock of cotton textiles with the help of bank finance, the margin on

PETRO-CHEMICALS IN THE UNITED STATES

PHENOMENAL GROWTH SINCE THE TWENTIES

By V. S. Swaminathan, MA., M.Sc. (London)

JUST as it has been said that the U.S. meat-packing industry uses all the products of the pig except its squeal, similarly the petroleum industry uses every thing in crude oil except its smell. Indeed even that finds an outlet today. It is added to otherwise odourless gases to help detect leaks in pipe systems. Petroleum not only provides light, power and heat, but it possesses another very valuable characteristic. We refer to its ability to yield an exceptionally wide range of chemicals, generally termed for convenience petro-chemicals. In the evolution of the oil industry there have been four phases—illumination, motivation, provision of energy for industry, and manufacture of chemicals useful to man, his cultivated crops and domesticated animals.

The petroleum industry started as provider of kerosene for illumination. It went on to fuel millions of motor vehicles and power thousands of ships, locomotives and aircraft. Later, it began feeding a multitude of diverse industrial furnaces. And the years following the Second World War witnessed the emergence, and phenomenal growth, of the petroleum chemicals industry. While refinery operations "upgrade" the value of crude oil by perhaps a third, chemical processing takes the value up to as much as twelve-fold.

With the mass production of motor cars the demand for gasoline became so great that this unwanted "by-product" of the kerosene era (of the 19th century) became the main product of the first half of this century. It soon became apparent that the amount of gasoline (of the order of 15 per cent) recoverable from a barrel of crude oil by straight distillation would fall far short of meeting the mounting demand for this once unwanted product. In an effort to solve this problem, Dr. William M. Burton started work in 1906 on a refinery process known as "cracking." By applying pressure and heat to crude oil he succeeded in splitting the complicated molecules of the heavier fractions so that they might be rearranged as lighter components, principally gasoline. Dr. Burton's discovery permitted a doubling of the gasoline yield from a barrel of crude oil. And the First World War hastened the multiplication of thermal cracking units. This cracking process at the same time yielded large quantities of very light highly reactive gaseous products—the olefines. The search for a possibility of utilising these olefines gave the main impetus to the fostering of the petro-chemical industry. Today thousands of chemicals are produced starting with refinery gases, special petroleum fractions like naphtha, or natural gas.

Nature of Industry

The key to an understanding of petro-chemical industry lies in three related words—cracking, synthesis and polymerisation. By cracking petroleum compounds are broken into simpler molecules for use as building blocks. Synthesis converts these "chemical bricks" into new forms to produce other basic products. Finally, polymerisation causes the building blocks of the same kind to form chains, thus linking the simpler molecules into larger ones termed polymers. The manufacture of high polymers takes place in two stages:—(1) the production of the monomer (repeating chemical unit), and (2) its polymerisation into a resin or plastic. In some cases it is possible to form polymers from two or even three monomers which may differ from one another and yet be capable of linking end-to-end to form mixed monomer chains. These are known as copolymers, and they form the basis of the most important types of synthetic rubber including the well-known Buna-S (Butadiene-Styrene) rubber. Today synthetic polymers account for three industries of great and growing importance—plastics, rubbers and fibres.

Now petroleum scores over coal for synthesis in being liquid and in the fact that hydrogen is already combined with carbon. Compared with coal and vegetable raw materials, like molasses, grains and potatoes, it is more easily transported, and gives a higher yield of synthetic chemicals on a weight-for-weight basis. The oil and natural gas industries are, moreover, in a position to provide the necessary feedstocks in virtually unlimited quantities, at constant quality and often at appreciably lower cost than attainable by using, other raw materials. For these reasons the chemical industry is growing much faster than industry in general, and the expansion of the petro-chemical sector, in particular, surpasses that of the whole.

Pioneers in the Field

Turning to the United States, the Union Carbide Chemicals Co. and the Standard Oil of New Jersey were pioneers in the petro-chemical field. In 1920, the former company extracted ethane and propane from natural gas and cracked them to make ethylene and propylene. Jersey Standard manufactured isopropanol, utilising propylene from cracking still gases. These were converted into a line of useful consumer products. America's military needs spurred the development of styrene-butadiene synthetic rubber industry. The U.S. Government then spent nearly $1,000 millions on 30 synthetic rubber plants. In the five-year periods since the Second World War, the U.S. production of petro-chemicals expanded thus:—1945-50, 12 per cent; 1950-55, 15 per cent and 1955-60, 11 per cent. In 1960, this country accounted for 56,000 million lbs. of petro-chemicals, valued at $7,000 million, representing 30 per cent of the chemical industry's output and 60 per cent of its income. Four-fifths of this quantity went into seven main channels, namely, plastics, fibres, rubbers, paints, automotive chemicals, detergents and agricultural chemicals. The remainder yielded an astonishing number of speciality products such as adhesives, drugs, explosives, perfumes, cosmetics, etc.

Petro-chemicals are broadly classified as straight chain types (aliphatics) or ring types (aromatics and naphthenes). Aliphatics and aromatics are considerably more important commercially than naphthenes. The main aliphatic raw materials are mathane, ethane and ethylene, acetylene, propane and propylene, butane and butylenes, butadiene and pentane and pentenes. The principal aromatics are benzene, toluene, xylenes, naphthalene and cresylic acids. In addition, some inorganic chemicals like ammonia, sulphur and carbon black are produced in large quantities from petroleum fractions and natural gas.

At one time the term plastics denoted cheap substitutes—things to be endured as part of the war effort. Since then the U.S. plactics production has multiplied twenty-fold, representing a $6,000-million-a-year industry. Many of the plastics owe their present status to the availability of three aliphatic gases—ethylene, propylene and acetylene. Again, synthetic rubber, a poor relation to natural rubber only 20 years ago, today accounts for nearly two-thirds of all rubber consumed in the United States. It is also based on such aliphatic raw materials as butadiene, ethylene and isoprene. The recent development of new polymers with much greater heat resistance may be the forerunner of vastly superior aliphatic products. The chain-like arrangement of carbon atoms found in such aliphatic plastics as polypropylene accounts for "tacticity" or order. This brings to notice "atactic," or disordered, polymers, "isotactic," or regularly ordered, polymers and "syndiotatic," or alternately-oriented, polymers. Scientists are now working on isotactic and syndiotactic polymers with which they are linking millions of aliphatic molecules in symmetrically uniform patterns. Higher density and greater resistance to heat and solvents are thus imparted to polymers. Future adaptations of ordered polymers cannot fail to pave the way for tougher, more versatile aliphatic materials.

Aliphatics

Ethylene gas, a derivative of ethane, is the most important aliphatic raw material. It serves as the starting point for scores of intermediate and end products. Polyethylene is the first of the modern plastics to exceed 1,000 million lbs. in sales in the U.S.A. New outlets have been found for it in packaging, pipe coatings, construction sheeting and household items. Markets for low-pressure (linear) polyethylene have so far been lagging behind, accounting for barely one-tenth of the total polyethylene sales. However, a recent discovery that linear polyethylene can be formed readily by blow-moulding techniques, based on the traditional glass making process, has opened promising new markets for plastic bottles.

In terms of ethylene consumed, ethylene oxide is still a narrow leader. The oxide is used primarily for ethylene glycol manufacture which, in turn, is synthesised to automobile anti-freeze. Ethylene glycol anti-freezes account for 90 per cent of the anti-freeze market. Ethyl chloride, another ethylene offspring, is used chiefly for manufacturing tetra ethyl lead, a gasoline additive. Synthetic ethyl alcohol derived from ethylene is employed to produce acetaldehyde, the starting point for various acids and other intermediates. The end products range from medicines to vitamins to synthetic fibres.

Acetylene is another major petro-chemical building block derived for the most part from methane gas. Neoprene rubber produced exclusively by Du Pont is the only important end product based entirely on acetylene. An estimated 55 per cent of vinyl chloride in America is manufactured from the same chemical and the balance from ethylene. Another noteworthy acetylene derivative is acrylonitrile—a starting material for fibres and nitrile rubbers. Also vinyl acetate, again derived from acetylene, is finding increasing acceptance in paints and adhesives.

The bulk of propylene, produced from refinery cracking operations, has recently emerged as a major building block. The U.S. demand for it in 1960 totalled 2,000 million lbs. And polypropylene, one of the lightest and strongest of the plastics, is showing the greatest growth potential of propylene derivatives. It has a melting point of 300° F. and is highly resistant to chemical attack. So far polypropylene has scarcely dented the plastics market. Many believe that it will follow polyethylene's "explosive" growth pattern. Indeed major battles are already taking place between polypropylene and linear polyethylene especially in the fast growing plastic bottle market.

At present isopropyl alcohol remains the largest volume propylene consumer. Its major end use is in acetone manufacture, acetone being a solvent and a raw material for methyl methacrylate (perspex) resin. Other noteworthy propylene derivatives and their end uses are isopropanol (solvents and drugs), polychlorœthylene (dry cleaning solvent), propylene oxide (hydraulic fluids, anti-freeze and detergents) and oxoalcohols (plasticizers).

Butadiene

Butadiene, principal ingredient of synthetic rubber, ranks next only to ethylene in importance as a petro-chemical building block. In 1960, the United States produced nearly 2,000 million lbs. of butadiene. Nine-tenths of it are polymerised with styrene in a 3 : 1 ratio to produce S.B.R. (styrene butadiene) rubber in the U.S.A. Among speciality synthetic rubbers manufactured in the United States are butyl, nitrile, thiokol, polyurethanes, chlorosulphonated polyethylenes, silicones, fluorinated rubbers and polysulphides. A remarkable development is the recent perfection of the so-called "synthetic natural" rubbers. They are cis-1,4 polyisoprene, a duplicate of the natural product, and cis-1, 4 polybutadiene, which, although different in chemical structure from the natural rubber, displays similar physical properties. The manufacture of synthetic natural rubbers calls for the use of complex new catalysts known as organo-metallic compounds. The latter are made of a hydrocarbon element and a metal, such as titanium tetrachloride or trimethyl aluminium. Polyolefin plastics moved towards a close relationship with rubber in 1960 through the development of ethyl-propyl copolymers, rubber-like materials with good resistance to ozone, wear and groove cracking. Thus the traditional lines between plastic and rubber technology are visibly disappearing.

What future products and processes will evolve from aliphatic compounds is anybody's guess. As chemists add to their knowledge of arranging straight-chain molecules into complex new patterns startling materials will undoubtedly emerge. One thing is certain. No aspect of living will escape the restless minds of chemists as they seek new, cheaper and better products from petroleum and natural gas.

Aromatics

Woven into the fabric of modern life is a remarkable variety of products obtained from aromatic chemicals. The aromatics contain a unique molecular structure—the benzene ring. It is composed of six carbon atoms internally bonded together in a hexagonal shape. Externally joined to each of the carbon atoms is a hydrogen atom. By relatively simple processing any of these hydrogen atoms can quite easily be replaced by one or a combination of atoms or molecular units, for example, sulphates, nitrates, halides or aliphatic molecules. Since there are six hydrogen sites where these substitutions can be made the benzene ring offers the chemist unlimited possibilities for the creation of different aromatic compounds. The main aromatics are benzene, toluene and the xylenes.

Prior to the Second World War aromatic compounds were obtained as a by-product of coal coking for steel manufacture. This proved a limited and fluctuating source. Eventually petroleum chemists found a way to obtain benzene from a hydro-formed petroleum naphtha. When in 1953 E.I. du Pont de Nemours needed large quantities of the aromatic paraxylene at a reasonable price to make Dacron (Terylene in U.K.) a process was devised to separate the chemical from a refinery distillate. Today 75 per cent of the aromatic chemicals in the U.S.A. are derived from petroleum, and ten leading industries rely upon them to create an enormous number of consumer products.

In 1960 America accounted for 454 million (U.S.) gallons of benzene, 54 per cent of it from petroleum sources. Three-fifths of the quantity produced were used to make styrene and phenol, and the rest went into synthetic detergents, insecticides, herbicides, plant hormones, paints, dyes, solvents, medicines, explosives, perfumes, resins, photopraphic chemicals and other useful products. Styrene, one of the principal derivatives of benzene, is synthesised to make tyres, rubber goods, latex paints, paper coating, shoe soles, luggage and a wide assortment of polystyrene plastic goods. Phenol, the leading benzene consumer, is used to make a cornucopia of items—resins, adhesives, varnishes, insecticides, medicinals, perfumes; flavouring agents, etc.

The U.S.A. produced 306 million gallons of toluene in 1960, more than four-fifths of it from petroleum. It was the primary constituent of T.N.T. and aviation gasoline during the last war. Its present largest outlet is in the formulation of lacquer solvents. It is also the starting point for urethanes, saccharin, aspirin, food preservatives and plastics. Toluene diisocyanate (T.D.I.) is used in making urethane foams, surface coatings and other products.

Xylenes

In 1960, America's output of xylenes amounted to 321 million gallons, almost all from petroleum. They appear in ortho, meta and para forms. Ortho-xylene is starting material in the manufacture of synthetic resins, dyes, vitamins, pharmaceuticals and alkyd paints used in finishes for cars, refrigerators and the like. Meta-xylene is used in making solvents, dyes, plasticisers and reinforced plastics. Para-xylene is synthesised to terephthalic acid, an essential ingredient for the creation of polyester resins like Dacron and Mylor. Many aromatics are used in the manufacture of synthetic fibres. The projected U.S. synthetic fibre capacity at the end of 1962 will reach 3,000 million lbs. a year. Synthetic fibres are made by extruding a liquid polymer through a spinneret, a shower-head-shaped nozzle with many minute holes. Filaments of the polymer are drawn from the spinneret and spun into a fibre in a spinning solution or in air. Over one-third of all synthetic fibres find their way into industrial applications.

Aromatics are indispensable to many industries—perfumery and flavouring, dyestuffs and, above all, agriculture for destroying weeds, killing insects, curing plant and animal diseases, which cause a $15,000 million annual U.S. crop loss. Weeds are destroyed with 2, 4-D and crop yield is increased by 2, 4, 5-T plant hormone. Insects are killed with D.D.T. and B.H.C. Parasites are warded off with pentachlorophenol or one of its aromatic cousins. Also a long list of ethical and proprietary medicines, like sulpha drugs, aspirin, chloropromazine (to treat mental illness) and others to relieve hypertension, headaches and pains, are derived from aromatic chemicals.

Industry Comes of Age

The American oil and natural gas companies spent $184 million on new petroleum chemical plant facilities and budgeted $326 million for 1961. Having come of age, the industry now faces the problems of adolescence, that is, keener competition, cost-price squeeze, lower profit margins, lower growth rate and lower prices. The trend is, therefore, towards bigger and more efficient plant units, costing between $10 and 50 million. The U.S. production of petro-chemicals is reckoned to go up to 85,000 million lbs. in 1965. And, according to McGraw Hill, Department of Economics, output will be up 240 per cent by 1975.

The oil industry's chemical activities today comprise the supply of hydrocarbon base materials and intermediates for the chemical industry, as well as the manufacture of various chemical end products. Most of the major oil companies are now engaged in worldwide chemical business through separate subsidiaries or through associated enterprises jointly owned with other chemical corporations.

Thus the chemical interests of Jersey Standard in the U.S.A. are vested in the Enjay Chemical Co., California Standard in the California Chemical Co., Mobil Oil in the Mobil Chemical Co., Phillips in the Phillips Chemical Co., and Sinclairs in Petrochemicals Inc. and in Sinclair-Koppers Chemical Co. Again Texaco has a 50 per cent holding in both Texas U.S. Chemical Co. and the Jefferson Chemical Co., but is also engaged in various wholly-owned chemical enterprises. Gulf participates in Goodrich-Gulf Chemicals Inc. in the manufacture of synthetic rubber, and in Callery Chemical Co. in the production of chemical high energy fuels. The Royal Dutch-Shell Group has long had its own chemical company in the United States.

In the case of Shell Oil in the U.S.A., sales of chemicals at $205 million in 1960 contributed over 11 per cent to the company's sales revenue of $1,828 million, excluding sales taxes. In the same year Jersey Standard registered a 15 per cent increase in the sales of chemicals to $295 million, as against a rise of under two per cent in the overall revenues to $6,300 million after taxes, indicating a share chemicals in the company's total revenue of 4.7 per cent. With California Standard, chemicals accounted for 9.5 per cent of total sales proceeds, and with Indiana Standard just below four per cent.

Petroleum As Feedstock

Today over 200 firms use petroleum as a feedstock for the produciton of chemicals, some two-thirds being established oil and chemical companies, while the balance is made up of undertakings operating in other fields. Their products represent over 30 per cent in volume and more than 50 per cent in value of the 10,000 chemicals manufactured by the U.S. chemical industry. Over the decade of the 'fifties the annual growth rate measured in terms of installed capacity was 13 per cent. This compares with 8 per cent for chemicals and 3 per cent for oil which, in the U.S., is the growth rate of the economy at large.

In the last four years, however, there has been a slowing down of the rate of expansion stemming from the temporary over-capacity in the supply of feedstocks, the sector of the industry in which petroleum companies have a major interest. Nevertheless, demand for these feedstocks is rising much faster than for finished products, and though 12 to 16 per cent represents the maximum any oil concern—Shell Oil and Phillips—draws in the way of revenue from its ventures in the field of chemicals, such activities continue to offer oil and gas companies important avenues for diversification and further growth. In a recently published survey of Resources in America's future it was estimated that as much as 12 per cent of all oil and gas production might go into chemicals by the year A.D. 2000 as against three to four per cent at the present time.

In fine, petroleum chemicals have freed industrialists from the limitations of natural products like cellulose, lac, leather, fur, glass and metals. Strange as it may seem in retrospect, the synthetics were not well received at first. They were called ersatz, a poor imitation of Nature's products. But synthetics have won acceptance when consumers got to appreciate their obvious and intrinsic merits and limitations. In their case properties designed in a product could be decided in advance. The chemist and production engineer could then tailor-make it through organic synthesis in the majority of cases.

W. Germany is the second largest consumer of mineral oil in Western Europe, which in turn is the second largest consumer in the world. After the U.S. consumption, accounting for about 40 per cent of the world's supply, comes W. Europe, with 287 million tons or 22 per cent. Of this, W. Germany, with consumption of 59 million tons in 1963, is second to Britain (62 million tons) and ahead of France (38 million tons).

W. Germany has increased its lead as the world's biggest exporter of typewriters. Its typewriter sales abroad last year accounted for 27 per cent of international sales, as against 25 per cent in 1962. Total world production of typewriters in 1963 was 4.9 million units, of which the U.S.A. accounted for 27 per cent and W. Germany, in the second place for 22 per cent.

GROWTH WITH STABILITY IN PAKISTAN

(Concluded from page 1109)

advances against cotton textiles was raised from 40 to 60 per cent with effect from June 1963.

The money market in Pakistan is confined to inter-bank operations in Karachi. The scheduled banks lend to each other and occasionally to non-scheduled banks. The transactions are conducted in Karachi alone, because the head offices of almost all the important banks are located there. The bank branches in other centres remit their surplus funds to Karachi for investment and borrow from the head office in time of need. Such transactions which link other parts of the country with the Karachi call money market remain, so to speak, concealed in inter-bank transactions.

In recent years in the face of growing demand for loanable funds there has been greater activity in the inter-bank call money market. At the same time, there has been a perceptible decline in the seasonality of the inter-bank flow of funds. The call market is now characterised by more regular activity throughout the year. The rate which used to go down to a quarter per cent at the seasonal low does not now fall for any considerable period below 2 per cent. On the other hand, at the height of the busy season, the rate exceeds the Bank Rate.

The table below shows the inter-bank call money rates at Karachi since 1961:

(Percentage)

Last Friday	1961	1962	1963	1964
January	4½	4	3½-3¾	4-4½
February	4½-4¾	3¾-4	3¾-3¾	4-4½
March	3¾-4	3¾-4	3¾-3¾	4-4½
April	3¾	3¾-4	3¾-3¾	..
May	3¾-3¾	3¾-3¾	3¾-3¾	..
June	3¾-3¾	3¾-3	3¾-3¾	..
July	3¾	3¾-3	3¾-3	..
August	3¾	3¾-3	3¾-3	..
September	3¾-3¾	3¾-3¾	3¾-3	..
October	3¾	3¾-3¾	3¾-3	..
November	3¾	3¾	3¾	..
December	4	3¾-3¾	4-4½	..

During 1963, the inter-bank call money rate fluctuated widely between 1¾ and 4½ per cent. The fluctuation was mostly, seasonal in nature. During the first three months of 1963, the inter-bank call money rate ruled steady at 3¾-3¾ per cent, as compared to 3¾ to 4 per cent during the corresponding period of 1962. The call money rates declined with the onset of the slack season in April to 2¾-2¾ per cent, dipped to the lowest at 1¾ per cent in July 1963 which is the lowest rate since July 1960. During the rest of the slack season, the call money market improved to 2¾-3 per cent in October, the last month of the slack season.

The market enlivened with the beginning of the busy season in November when the rates advanced further to 3¾ per cent. The rise continued till March, 1964 when the rates ruled steady between 4-4½ per cent.

"INCOME-TAX *vs.* FOREIGNER"

Tax laws in India are extremely complicated and a foreigner is bound to feel confused by the various clauses and sub-clauses of the Indian Income-tax Act. Mr. P. L. Jaitly, Secretary of Escorts Ltd., New Delhi, and an authority on taxation as a chartered accountant, has endeavoured to make the understanding of this Act a little easier by bringing out a pocket-size brochure of some sixty pages. The booklet has been published by the National Investment and Finance, Nicholson Road, Delhi 6. (Price: Re. 1.50.) It will serve as a handy guide on income-tax, especially to businessmen entering into foreign collaboration agreements and to foreign investors, in general. The author has made the publication up-to-date by taking into account the various incentives given by the Finance Minister in his budget proposals for 1964-65 for attracting foreign capital and technical assistance. He has also described in detail the extent to which a foreign company can invest in the share capital of an Indian company and information about agreements for the avoidance of double taxation. Coming as it does at a time when there is a great deal of talk about attracting more foreign capital, the booklet does serve a useful purpose to both Indian and foreign entrepreneurs. The author claims that his brochure is a dedication to the "cause of economic development of the country," the object of which is to lift the standard of living of the people.

"STOCK EXCHANGES QUOTATIONS"

The revised edition of "Stock Exchange Quotations," published by Messrs. J. R. Motiwalw & Co., a leading firm of stock and share brokers in Bombay (32, Apollo Street, Fort, Bombay), will be found quite useful by investors in shares and securities. The publication gives the closing prices of Government securities, debentures, equity shares and preference shares traded on various stock exchanges in the country (Bombay, Calcutta, Madras, Ahmedabad, Hyderabad, Madhya Pradesh, Delhi and Bangalore) as on the last working day of the calendar years 1962 and 1963, as well as the financial years 1962-63 and 1963-64. The publication is priced at Rs. 3 only.

PLANS FOR PETRO-CHEMICAL COMPLEXES

PRIVATE SECTOR TO PLAY AN IMPORTANT ROLE

THE petro-chemical sector of the chemical industry has registered phenomenal growth in the Western countries, especially in the United States, in recent decades. As the oil and natural gas industries are in a position to provide feedstocks in large quantities for petro-chemical complexes, the organic raw materials required for a wide range of industries have come to be increasingly manufactured in such complexes in the West. Petro-chemicals have freed industrialists from the limitations of natural products like cellulose, lac, leather, fur, fibre and metals and led to the establishment of plastic and synthetic fibre and rubber industries, as also industries manufacturing paints, automotive chemicals, detergents, agricultural chemicals and speciality products like adhesives, drugs, explosives, perfumes and cosmetics. The petro-chemical industry is thus a basic and vital field of modern manufacturing. But, thanks to the Government's unhelpful attitude towards the petro-chemical projects of some oil refineries and other private parties, virtually no progress has been made so far in this field in India, with the result that the organic chemical plants licensed up till now have had to be based mostly on industrial alcohol and coal tar by-products, instead of on refinery by-products. That the Government of India has lately begun to display active interest in the promotion of this vital industry is, however, a heartening development. Only it is to be hoped that it will not go back to ideological wilderness and dog-in-the-manger policy.

It is noteworthy, in this context, that the public sector Fertiliser Corporation has just finalised its proposal for the construction of a methanol plant—the first of its kind in India—as an adjunct to its Trombay fertiliser plant which is based on refinery gas and naphtha supplied by Burmah-Shell and Esso refineries in Bombay. The methanol plant will utilise synthetic gases produced during the course of fertiliser manufacture in the Trombay fertiliser plant and is expected to commence production in late 1965. When in full production, it will make India self-sufficient in methanol—a key organic chemical which is now wholly imported for use in the manufacture of plastics, drugs, resins, synthetic fibres and dye-stuffs—and contribute to a foreign exchange saving of about Rs. 4 crores per year. Under an agreement concluded with the Government of India on the 19th instant, the U.S. Agency for International Development is to provide a loan of $7.8 million (Rs. 3.7 crores) for the construction of this plant with an annual productive capacity of 33,000 tons. The Fertiliser Corporation of India has also entered into a contract with Girdler Corporation of the United States for the designing, fabrication and erection of the plant.

Mafatlal's Projects

After much frustrating delay, most of which was not of its seeking, the private sector, too, is on the move in the petro-chemical field. The Mafatlal House project, which has been in suspense for more than two years now, has at last been brought to the stage of fruition. This project, which is being promoted by the Standard Mills Co., Ltd, belonging to the Mafatlal group, is likely to be approved by the Government, now that the ideological approach of the former Oil Minister, Mr. K. D. Malaviya, seems to be undergoing some modification. The estimated capital outlay on the project will be Rs. 30 crores with a foreign exchange component of Rs. 14 crores. The new company (National Organic Chemical Industries Ltd.), which is to implement the project, will have an initial issued and paid-up capital of Rs. 10 crores, of which a third is to be taken up by the Mafatlal group, a third by foreign collaborators and a third by the public. Shell International of the United States are the Company's technical and financial collaborators. It is proposed to locate the plant in the Thana-Belapur area in Maharashtra State. The Mafatlal group has also on hand a proposal to launch another venture for the manufacture of finished products like polyethylene from the raw materials supplied by its petro-chemical plant. This related venture, which has been assured of the technical and financial collaboration of a West German firm, will involve a capital outlay of Rs. 8.5 crores. Its capacity will be 20,000 tons per annum. Like the first plant, it will also be located in the Thana-Belapur area. Further details about both the projects, it is stated, will be available to the public early next week.

Another project of the private sector which has already made considerable headway is that of the Union Carbide of India Ltd. In fact, this company will be the first to establish a petro-chemical complex in India. At Trombay, the Union Carbide has already a chemicals and plastics plant, built at a cost of Rs. 4.5 crores. It is now manufacturing, besides such basic organic chemicals as acetic acid, butyl alcohol, butyl acetate and ethyl acetate, the versatile plastic material known as polyethylene. The raw material for all these products is industrial alcohol derived from molasses. But arrangements are already well on hand to switch over to petroleum-based raw materials. The Union Carbide will be the first in India to install a naphtha cracker, involving a capital outlay of Rs. 8.5 crores, which will raise the Company's total outlay in Trombay to Rs. 13 crores. It is said that this plant will offer raw materials sufficient to produce various saleable chemicals and saleable polyethylene at Trombay of nine million kgs. (per annum) each, as compared with the present combined capacity of 6.8 million kgs. of both chemicals and polyethylene. Implementation of this expansion project has already begun with the levelling and grading of an area of about 42 acres of land. It is scheduled to be completed by 1966.

Programme for Fourth Plan

The aforesaid developments—one project in the public sector and two others in the private sector—point to increasing participation by either sector in the petro-chemical field in the years to come. There will be a lot to be done by both the sectors, judging by the capacity projections for products based on petro-chemical raw materials. According to the planning group for the petro-chemical industry, the following capacities would need to be established by 1970-71, that is, the end-year of the fourth Plan:

(In thousand tons)

Product	Capacity Required
Polyethylene	120
Polypropylene	10
P.V.C. resin	110
Vinyl chloride for P.V.C.	115
Nylon	28
Polyster	20
Polyvinyl alcohol	10
Synthetic rubbers	120
Ethanol	315
Benzene	174
Detergent alkylete	20

The third Plan schemes for some products based on organic chemicals are, on the other hand, relatively few and small. It is expected that in the last year (that is, 1965-66) of the current Plan, there will be the following capacities for some products:

(In thousand tons)

Product	Capacity	Production (Estimated)
Polyethelene	12	12
Polyvinyl chloride ...	15	9
Polystyrene	14	10
G.R.S.-rubber	30	24
Methyl alcohol	30	16

It will be seen from the figures in the above two tables that there is a big field open to entrepreneurs who may be interested in establishing the manufacture of a wide range of products based on petro-chemical (organic) raw materials.

As for the manufacture of these petro-chemical raw materials themselves, the planning group, it is noteworthy, is reported to have assigned an important role to private enterprise. The group's idea is that either the responsibility for primary processing of natural gas or naphtha cracking could be assumed by the public sector and the manufacture of ultimate petro-chemicals thrown open to the private sector or the State could develop certain fully integrated petro-chemical complexes and also allow the private sector to push forward on a nearly identical basis. Whichever alternative is ultimately adopted by the Government in its policy for petro-chemicals, there will be need for co-ordination between the public and private sectors, for the petro-chemical industry is of strategic importance and is capable of improving the economics of oil refineries also. As both the public and private sectors are in the field of petroleum refining, the case for allowing petro-chemical complexes to develop on the basis of the respective refineries in either sector would seem to be self-evident. The fact that the Government has already permitted Union Carbide to go ahead with its project for establishing a naphtha cracker plant, which will be fed by naphtha produced by the Esso and Burmah-Shell refineries, shows that it appreciates the merits of this policy.

JUST OUT! 6th & Revised Edition!

"FUNDAMENTALS OF BUSINESS ORGANISATION & MANAGEMENT"

By NAIDU & DATTA

Rs. 13.50 p.

Incorporating latest amendments to Companies' Act. Recommended by many Universities as a Text Book.

Region-wise Picture

The planning group has also outlined a detailed programme for the development of petro-chemical complexes in different centres. At *Bombay* the additional manufacturing schemes envisage capacities of 25,000 tons for polybutadiene synthetic rubber, 5,000 tons of methyl methacrylate resins, 4,000 tons of polybutens, 8,000 tons of propylene oxide for conversion to propylene glycols and subsidiary manufacture of several other chemicals. The possible expansion of the naphtha cracker and petro-chemical projects of Union Carbide, already referred to, has also been suggested. At *Barauni* (where a public sector oil refinery is located) the proposed programme envisages capacities of 25,000 tons of benzene, 11,500 tons of oxylene, 9,000 tons of P-xylene, 25,000 tons of butadiene, 8,000 tons of acrylonitrile, 10,000 tons of propylene, 10,000 tons of nylon intermediates, 25,000 tons of cyclohexane and 18,000 tons of caprolactum.

At *Koyali* in Gujarat (where a public sector oil refinery is being located) one set of schemes is to be linked with a naphtha cracker and another set not to be linked with it. The schemes to be linked with the naphtha cracker envisage supplies of 75,000 to 80,000 tons of ethylene, 48,000 tons of propylene, 40,000 tons of polyethylene, 32,000 tons of vinyl chloride, 20,000 tons of P.V.C., 25,000 tons of styrene, 18,000 tons of polystyrene, 15,000 tons of acrylo-nitrile, 15,000 tons of propylene tetramer, 9,000 tons of butadiene extraction, 30,000 tons of polybutadiene, 17,000 tons of benzene extraction and 15,000 to 20,000 tons of paraffin extraction. The schemes not to be linked with the naphtha cracker envisage capacities of 33,000 tons of benzene, 10,000 tons or orthoxylenes, 8,000 tons of paraxylenes, 21,000 tons of cyclohexane, 15,000 tons of caprolactum, 30,000 tons for butyl rubber and 30,000 tons of isobutane.

The group has suggested schemes of manufacture for the Haldia area (near Calcutta) where a public sector oil refinery is proposed to be located and also for the Madras area for which another public sector refinery is envisaged. At *Haldia* the suggested programme will involve the establishment of capacities of 110,000 tons of ethylene, 50,000 tons of polyethylene, 20,000 tons of ethanol, 20,000 tons of E.P.T. rubber, and so on. At *Madras* the programme envisages, in its first phase, partial oxidation of 100,000 tons of naphtha and manufacture of 30,000 tons of acetylene naphtha 64,000 tons of vinyl chloride, 30,000 tons of P.V.C., 40,000 tons of methanol and 40,000 to 50,000 tons of formaldehyde. In the second phase (to commence operation in 1973), 100,000 tons of ethylene and 44,000 tons of propylene are to be manufactured.

The group has finally made pointed recommendations regarding the optimum size of plants, customs and excise duties, etc. The optimum size of plants, such as those of ethylene, in its opinion, should be increased beyond the levels recommended by the French petroleum expert some time ago. The group has recommended that excise duties or sales taxes should be levied only on the finished marketable products and that import duties on catalysts required by the petro-chemical industry should be removed.

NEW PRODUCTS AND PROCESSES

Development of Supersonic Aircraft

HUNDREDS of tufts of wool are to be fixed over the wing surface of a high-speed research plane to gain airflow data. Known as the "tufting method" of gaining the information, the results will aid the development of the supersonic Anglo-French Concord airliner. In the first full statement on the faster-than sound Type 221 aircraft, the British Aircraft Corporation says that two research methods will be used for studying airflow. One is the tufting method, the second is pressure plotting. Cameras are used in both. In pressure plotting, small instruments record the varying pressures of air passing over the wing and the information recorded on film. In the tufting method, a camera mounted on the fin of the plane films the wing surface and records the movements of the tufts, revealing to experts later the pattern of airflows. The 221 is a slender delta wing plane 57 ft. 6 in. long with a wing span of 25 ft. Powered by a Rolls-Royce Avon turbojet, it will be flying at speeds of up to 1,061 m.p.h. in the research programme.

"Brains" for Space Rockets

A new factory which double-checks the equipment used to check the minute electronic devices providing the "brains" of space rockets, missiles and supersonic aircraft, has gone into production near London. The largest of these devices, containing hundreds of separate parts, are no bigger than a matchbox. Manufacturing tolerances of these electro-mechanical servo mechanims are to the order of one-fifth of a micron. The products themselves are tested for "life" and operational endurance in an environmental department which can stimulate extremes of temperature and tropical conditions including fungal attacks and sandstorms. They form part of the control system of all of Britain's latest aircraft including the TSR-2 and the Anglo-French supersonic airliner Concord. They are also in the equipment of the Blue Streak missile shortly to have its first live firing from the Woomera rocket range in the Australian desert.

Electrical Hygrometer

Extensions to its Leeds (Northern England) headquarters costing nearly £200,000 sterling will mark the first stage of a big expansion scheme planned by the Wool Industries Research Association which has members in India, Australia, New Zealand and Canada. An electrical hygrometer to measure relative humidity inside wool bales and rolls of fabric, and a yarn tension meter for production control in textile processes are two of the more recent devices developed by the Association.

7,000 Million-Volt Machine

'NIMROD', the proton synchrotron recently commissioned at the Rutherford High Energy Laboratory, Chilton, near Didcot, Berkshire, England, will be used for research into the elementary particles which are the fundamental constituents of the physical universe. The synchrotron accelerates particles to an energy of 7 GeV, or 7,000 million electron volts. The rotating machinery for the 'NIMROD' magnet power supply, in the form of a double motor-generator set with flywheels was installed by The English Electric Co. Ltd., at a cost of over £500,000. The double set consists of two 5,100 h.p., 1,000 r.p.m. slipring induction motors and two 90 MVA (Peak) salient-pole alternators arranged in tandem, to give a total peak rating for the set of 180 MVA.

Vibratory Conveyor

A vibratory spiral elevator that can lift sand at a rate of more than 10 tons an hour, requires no maintenance, and can be installed inside an area 4 ft. square, has been developed by a British firm. The elevator is 15 ft. high, although it could be up to 20 ft. high, and consists of a trough 6 in. wide and 3 in. deep, wound in the form of an ascending spiral around a tubular centre column 15 in. in diameter. At the top of the column is a strong framework carrying two flame-proof vibrator motors and the whole unit is suspended by coil springs. An anchored base has rubber buffers to prevent lateral movement without restricting the vibratory action.

Contactless Switch

A new type of contactless switch, developed by a British firm, is claimed to be considerably cheaper than any comparable device at present on the market. It is impervious to oil, dirt and water, has an unlimited operating life and requires no maintenance. In addition, it has none of the undesirable characteristics of moving contact devices, such as contact bounce and the tendency to spark. The switch has transistorised circuits in a U-shaped resin block 2⅜ in. high, 2 in. across and 1⅛ in. deep. Inserting a metal plate between coils in each arm of the block interrupts a magnetic field. This interruption operates an electronic switch. The output power is approximately 27 mW and, depending on the loading, the voltage can rise to a maximum of 20 volts.

Fastest Teletype Relay System

Lockheed Aircraft Corporation, has placed in operation the fastest teletype relay system in the world, designed to save a quarter-million dollars a year in communications expense and to speed a 100-word telegram between California and Georgia in six seconds flat. The first of its kind installed anywhere, the system has been dubbed "instant communications" for multiple point operation. It will provide a new tool for quick management response to scientific, engineering or administrative problems arising in complex major weapon system programmes, according to Mr. Dudley E. Browne, Lockheed Group Vice President for Finance and Administration.

New Semiconductor

The products of basic research are playing an increasingly important part in industrial engineering. Typical examples are semiconductors which are to be found everywhere in modern plants in the form of rectifiers, transistors and thyristors for switching and controlling energy. At the 1964 Hannover Fair, Siemens-Schuckertwerke exhibited a galliumarsenide semiconductor laser which at high current densities emits an intensive, monochromatic, directional beam at the infra-red end of the optical spectrum. High efficiency is obtained in the conversion of electrical energy into radiation. Other exhibits include superconductors which suddenly lose their resistance at temperatures below —255°C. These lend themselves to various interesting applications such as the construction of coils for powerful stationary magnetic fields.

Quicker Road Repairs

Schering A.G., of 170-172, Mullerstrasse, Berlin N.65, says that cracks and potholes in concrete roads can be repaired more quickly than usual if a lining of a synthetic cement is applied to the edges of the hole before the centre is filled in with ordinary cement. The lining greatly increases adhesion between old and new and speeds setting, while the use of a cheaper cement for the bulk keeps costs down.

Improved Glass Fibre

A Swedish inventor, Ernst H. B. Nystroem, of 11, Vasavaegen, Djursholm 2, claims to have developed a way of producing high quality glass fibre free from globules and scraps of non-fibrous glass. The fibre produced in this way is ideal, it is stated, for the production of heat and sound insulating boards and slabs.

Fabrics Have Many Qualities

Societe Rhovyl, of Rue Jean-Goujon, Paris 8e, France, has developed synthetic fabrics which, besides being chemically inert, strong and non-inflammable, have less tendency to shrink when dry-cleaned or washed in boiling water. They are suitable for use in carpets, curtains and clothes and also for industrial purposes as they have electrical, acoustic and thermal insulating properties.

Replacement for Clapboard

Wood fibre, asbestos and cement are combined in a wood-like building material developed by the National Gypsum Company, of 325, Delaware Avenue, Buffalo 2, New York. Intended as a replacement for clapboard siding, it is said to resist both fire and termites.

New Radio Telescope to Aid Satellite Work

A new radio telescope is to be built for the Radio Research Station (Department of Scientific and Industrial Research) by Associated Electrical Industries. It will be like a smaller version—only 82 feet in diameter—of the steerable bowl used at Jodrell Bank. It is scheduled to be completed in 1965 and will be at Chilbolton, between Andover and Winchester. The new telescope will be used chiefly for investigations of radio waves transmitted through the lower atmosphere (troposphere) from satellites and ground stations.

Effective Machine Protection

The trend of developments in the machinery industry brings with it in many cases a demand for flexible couplings for torques which can no longer be attained with standard catalogued sizes. In recognition of this state of affairs, Messrs. Eisenwerk Wülfel, Hanover-Wülfel, have developed their Elco-Coupling for a torque of 150,000 mkp. This is a further development of their successful and well-known highly-flexible compression-sleeve coupling for the resilient connection of drive units and machines. The Elco-Coupling provides effective damping of shocks in the transmission of power, while vibrations are attenuated or eliminated altogether. To a certain extent, parallel or angular misalignment of shafts is also neutralised. With their many-facetted characteristics, Wülfel Elco-Couplings afford lasting protection to machines from fracture and premature wear. The coupling bolts are inserted in the coupling halves with the aid of tapper spigots, due to their size and weight. In this way, an absolutely firm seat is obtained and, at the same time, fitting is made considerably easier.

In Brief

Apparatus for quickly measuring the concentration of industrial effluents and plating solutions, without the need for taking samples, has been devised in Eastern Europe by J. Prusek and M. Machacek, 7 Kladenska, Prague 6, Czechoslovakia.

A Hungarian firm claims to have perfected a way of producing two or more plastic tubes from one. Developer: J. Ferenczi, 62 Meszaros utca, Budapest 1, Hungary.

A new selective weedkiller operates mainly by contact but there is a moderate systemic action as well. Consequently its action is quick. It has been developed by May and Baker, Dagenham, Essex, England.

A way of treating steel used for the cores of transformers so that its magnetic properties are improved and loss of electric power is reduced has been developed by Cie des Ateliers et Forges de Loire, 12 rue de la Rochefoucauld, Paris, France.

A machine which can weld tubes with internal diameters of 10 mm. to the end plates of heat exchangers, condensers and similar equipment at high-speed has been developed by ESAB, Box 850, Goteborg 8, Sweden.

An automatic braking device for retarding the rapid return motion of fast-moving tool carriages or the turret slides of machine tools has been developed by Index-Werke KG, Esslingen, Neckar, Germany.

By pressing together heated foamed-glass pellets, making plates, sheets and tubes suitable for heat insulation is possible on a cheap scale. Information: A. Ahlstrom Osakeyhito, Karhula, Finland.

A grease gun with a hollow handle into which pre-packed cartridges of grease can be screwed is now being made by H. E. J. Fuhrmann, 68 Eschershеimer Landstrasse, Frankfurt, Germany.

A wrench or spanner with a swivelling handle has been devised by a German firm. Information: Tool Importers, 42 Praed Street, Paddington, London, W.2.

A new paint system for the protection of steel ships from corrosion and marine fouling has been developed in East Germany by VVB Lackenfarben, East Berlin, Germany.

A noble metal alloy suitable for thermal deposition of porcelain in the manufacture of dentures has been produced by Deutsche Gold-und-Silberscheideanstalt vormals Roessler, 9 Weissfrauenstrasse, Frankfurt, Germany.

AMAR DYE-CHEM LIMITED

CHAIRMAN, MR. A. K. DOSHI, ON COMPANY'S PROGRESS

PROSPECTS FOR CURRENT YEAR BETTER

IN the course of his speech at the Tenth Annual General Meeting of Amar Dye-Chem Limited, held at Bombay on the 25th June 1964, the Chairman of the Company, Mr. A. K. Doshi, attributed the rise in production costs to increasing wage bill and taxes and to curtailment of production necessitated by the piling up of stocks. He told the shareholders that, though the progress of the Company in 1963 was not very satisfactory, the position since then had improved considerably. Sales had picked up, accumulated stocks had gone down and the financial position of the Company had become easy. The Chairman reported that the exports of dyestuffs were slowly but steadily increasing despite competition from the advanced countries like Germany, U.K., Italy and Japan. He said that there were great potentialities for further expansion of exports; negotiations with Indonesia were in progress at present.

The following is the text of the Chairman's speech:

GENTLEMEN,

On behalf of the Board of Directors, the management of the Company and myself, I have great pleasure in extending to you all a hearty welcome this afternoon on the occasion of the tenth annual general meeting of the Company and placing before you for consideration, the Directors' report on the working of the Company for the year ended 31st December 1963, together with the audited accounts for the period. These have been circulated to you previously and with your permission, I shall take them as read.

Company's Operations

The salient features of the Company's activities are revealed in the Directors' Report, which is already in your hands. You must have observed that the Company's performance during the year 1963 is not as satisfactory as it was in previous years. This was anticipated to be so and the causes which led to the deterioration of Company's profit were reported in my last year's speech and which, unfortunately, continued during the large part of the year 1963. However, the Company has put its best efforts to tide over the past two difficult years and I am very glad to express to you that the working of the Company during the current year has been considerably improved and you can look forward to better results next year.

The reasons for lower profit during the year 1963 have been discussed in detail in the Directors' report.

Besides these, the cost of production during the year 1963 was higher, as we had to curtail production due to piling up of stocks, which can be seen from the following figures:

1961	...	...	...	1,122.5 tonnes
1962	...	...	...	987.2 „
1963	...	...	...	657.2 „

In this connection, I would like to quote the following:

"Judged from any angle, greater production and productivity from the existing resources is an essential prerequisite for economic development."

Thus, it makes it clear that the cause of all our troubles was low production and, having mentioned all the causes already in last year's speech, I would not like to take more of your time to repeat them again. Very fortunately, the situation is now much better as I have already said above.

Sales and Trading Conditions

I am giving below for your information the sales turnover during the first five months of 1963 and 1964:

Period	*Quantity*	*Value*
Jan. to May 1963 ...	247.06 tonnes	Rs. 53,35,917
Jan. to May 1964 ...	362.47 „	„ 81,41,427

Due to improved sales, most of the accumulated stocks have been completely depleted and the financial position of the Company has also become easy. The Company is therefore able to finance its expansion programme through its own resources, besides the increased capital of Rs. 30 lakhs which was raised last December.

The installation of T.P.M. plant is complete and all the items are ready for marketing. There is keen competition in this line of products and therefore it will take some time before the sale picks up. However, the sales of reactive dyes, which is a new range which your Company has brought out and is the first manufacturer of this range of dyes in India, are satisfactory and will contribute to the sales and profits of the Company this year.

Regarding the installation of an intermediate plant, the position remains the same as described last year and there has been absolutely no progress in that direction, except the fact that the new BON acid plant has been functioning since March this year. It is a pity that we have not been able to obtain any Government decision on this subject, although a year has gone by and some decision is promised to us from month to month. In the meantime, the Company is compelled to buy more and more export incentive licences at a premium of 60 per cent, as the raw material licence given to us is quite insufficient.

Rising Cost of Production

The cost of production has been going up from year to year, due to various causes already within your knowledge and which have been brought out on every occasion. During the year under review, there has been further increase in the employers' contribution to provident fund from 6¼ per cent to 8 per cent. The wage bill is continuously increasing due to the increase in cost of living index. Although our wages are consolidated inclusive of dearness allowance, we had to make provision in the last agreement with the workers for dearness allowance in case of increase in cost-of-living index, in fairness to them. There is a shortage of experienced technical personnel in the country and in order to curb the tendency to leave us, we are compelled to upgrade their salaries from time to time.

The report of the Bonus Commission, if accepted by the Government of India, will further add to the burden of the industry, as it envisages a distribution of 60 per cent of available surplus, without making any provision for rehabilitation, surtax and development rebate. This will hardly leave anything for ploughing back out of profits for expansion of the industry. Fortunately, this is going to affect the public sector as much as the private sector and this report has therefore set the Government thinking, and we do hope, they will take a rational view of the whole issue before announcing their decision.

I should also bring it to your notice that in spite of our strong opposition, all the three industrial units in Shahad have been included in the Ulhasnagar Municipal area. This will lead to further burden of taxation like house tax, sanitation tax etc., without the Municipality offering any civic amenities. This has amounted to approximately Rs. 50,000 in the current year and will go up as years pass by. With our strenuous efforts it has been decided to exempt these industries for a period of seven years from the levy of octroi duty.

Exports

I am glad to report that the Company's exports are slowly but steadily increasing and it has gone to Rs. 3,45,370 in the year 1963. This figure may not look so impressive by itself, but you will appreciate that the dyestuff industry is a new one in this country and to build up exports against the competition of advanced countries like Germany, U.K., Italy and Japan is an extremely difficult task and it should be considered creditable that this industry is still contributing its mite to increase exports. During the first five months of this year, this figure has gone up to Rs. 2,73,116 and we expect to improve over the last year's figure substantially during the current year. The quality of the material has been accepted throughout the world without receiving any complaints from any quarters.

The Company has a great potentiality for exports to Indonesia, but they want a very long credit, which our Government finds difficult to extend. We are still in communication with that country as well as with the Government of India and hope that some beginning will be made.

Tariff Commission

There is going to be a Tariff Enquiry during this year after ten years, and we do hope that all the difficulties of the growing industry will be brought out in this enquiry and proper remedies suggested by the Tariff Commission to the Government of India so as to consolidate the progress already achieved and help it to expand further to cover all ranges of dyestuffs and make the country completely self-sufficient in the products which are vitally important to our large textile industry.

Conclusion

Before concluding I should like to offer my sincerest thanks to all my colleagues on the Board for their invaluable support and to all dealers, customers and suppliers of the Company for their ready co-operation and invaluable support during the year under review. On behalf of the Board of Directors and on my own behalf I also express my warm appreciation of the happy relations maintained between the management and labour and the loyalty and devotion of officers and staff of the Company throughout the year 1963.

AMBIKA SILK MILLS COMPANY LIMITED

SILVER JUBILEE YEAR ANNUAL GENERAL MEETING

CHAIRMAN, MR. RAVINDRA MAGANLAL, DEPLORES THE HIGH RATES OF CORPORATE TAXATION

ADDRESSING the Twenty-fifth Annual General Meeting of the Ambika Silk Mills Company Limited, held at Bombay on 22nd June 1964, the Chairman, Mr. Ravindra Maganlal, expressed satisfaction with the Company's progress during the year ended 31st December 1963. He emphasised that, despite the increasing costs of production on all fronts, the Company was able to show an increase of 8.5 per cent in the gross profit. He deplored the increasing rates of corporate taxes, which, he held, were in disregard of contribution of this sector to the development of the country.

The following is the full text of the Chairman's speech:

GENTLEMEN,

I have great pleasure in extending to you a very cordial welcome to this Silver Jubilee year annual general meeting of the Company. I thank you all for attending the same. The Directors' report and the audited accounts for the year 1963 have been in your hands for quite some time and I believe I have your permission to take them as read.

None of us had anticipated the national calamity in the passing away of our beloved Prime Minister, Pandit Jawaharlal Nehru, on the 27th of May 1964, when the invitation was sent to you to attend the 25th annual general meeting of this Company. We are meeting here today under the grim tragedy and shock from which the nation has yet to come out. He was a unifying force at home and peace-making force in the international arena. Under his able leadership, the nation has witnessed progress at home and peace and friendship abroad. The guiding star and architect of modern India is no more with us and yet the march of the nation cannot be stopped. The most befitting tribute we can pay to the departed leader is to follow sincerely his lofty ideals of secularism and socialism, democracy and development, peace and friendship at home and abroad.

We are, however, fortunate enough in witnessing the solid foundation of democracy and unity laid down by our beloved leader. The nation has well demonstrated this in unanimously electing Shri Lal Bahadur Shastri as the new Prime Minister of India. This man of Gandhian outlook and Nehru's teachings will surely finish the unfinished task of our late beloved Prime Minister. Every one of you will join with me in wishing our new Prime Minister every success in his onerous responsibilities.

During the year, we had also the misfortune of losing one of the partners of our Managing Agents, my brother Shri Bipinchandra Mangalal, who breathed his last on the 1st September 1963.

Before we proceed with the agenda of the meeting, I request you all to stand up for two minutes in memory of the departed souls.

Sales

You will be happy to note that your Company's quality fabrics have become the household name in the Indian maket. Mounting figures of sales may well be considered as an index of the rising popularity of your Company's quality products. The sales have gone up by Rs. 5.13 million (from Rs. 17.13 million to Rs. 22.26 million), that is, in other words, an increase of 30 per cent.

Profit and Taxation

Material and manufacturing costs during the year under review have substantially gone up, yet I am happy to say that the gross profit of the Company has gone up by Rs. 2,63,202, that is, a rise of 8.5 per cent over the previous year. I request you to appreciate this rise in profit in this context of increasing cost of production on all fronts. This well reflects, I may please be permitted to say, the vigilance of the management to exercise checks at all levels of manufacturing activities.

Even in the presence of higher profits, you will witness from the report, a curious paradox of smaller disposable surplus. This is essentially due to the fact that we have provided additional sum of Rs. 3,04,000 compared with the previous year, for the national exchequer. Our total tax works out to about 75 per cent of the net profit.

Modernisation and Renovation

In this dynamic world, new inventions and improvements in machines and methods of production are quite often. Modernisation and renovation, therefore, has become a continuous process. The Board of Directors of your Company have always kept this view in mind and consequently they have always been providing for renovation, replacement and modernisation. During the year under report, additions to machinery have been to the tune of Rs. 5,95,265 and further orders of Rs. 8,71,524 have already been placed. This will positively go a long way further in improving the economic working and profitability of the concern. This process of modernisation and renovation is essentially a costly affair and calls for sacrifices at all levels. We have, therefore, thought it fit to plough back whatever maximum possible profits we can under the prevailing circumstances. This explains the smaller dividend this year.

Taxation

We do not deny the need of taxation both for defence and development purposes. It is more so, in the context of developing economy. Much has been said and written in and out of Parliament on the Budgets and various taxation methods. Yet I must say that the raising of the corporate taxation of the closely held manufacturing concerns from 50 per cent to 60 per cent is, to say the least, to ignore their contribution to the development of the country. Every year fresh tax proposals based on grossly inaccurate estimates are presented to Parliament. This is, to say the least, most unjust and unfair.

The last year's budgeted deficit of Rs. 16 crores converted itself into a surplus of Rs. 88 crores. This is a glaring example of inaccurate estimates presented to Parliament. The honest taxpayer legitimately wishes that Parliament be given honest estimates of incomes while inflicting fresh taxes.

Exports

Time and again, stress has been laid on the inevitability of exports. Aid will have to give way to trade in the ultimate analysis. Though the man-made fibre fabric industry has not lagged behind its export drive, the export picture on the whole is far from satisfactory. It is a plain but unpalatable truth that India's share in the world export trade is on the decline. It is a home truth that countries on the threshold of development have little opportunity of diversifying their exports till the time their industrial base has sufficiently widened. It will be impossible for us at least for a decade, to stand against the competition of highly industrialised countries in exporting commodities requiring huge capital outlay and superior technical skill. Unless favourable treatment is bestowed on the developing countries of Asia and Africa, they will not be able to earn substantial foreign exchange through their exports. The solution to this, I believe, lies in the world division of trade. The highly industrialised countries should concentrate themselves on the capital-intensive and highly sophisticated consumer articles, leaving room for the developing countries in the field of semi-manufactured and simple consumer goods. The resources realised by such diversion in the highly industrialised countries may well be utilised towards the other alternative manufacturing activities. This will ensure a sufficient export trade to the developing countries and thereby give them the opportunity to earn their much-needed foreign exchange. A World Conference on trade may well grapple with this problem.

Before I conclude, I would like to thank all my colleagues on the Board who rendered unflinching co-operation throughout the year.

I am happy to say that your Company would receive unsparing co-operation from the members of technical and administrative staff throughout the year. On the labour front, we had a peaceful working. It is the endeavour of the management to create in every employee a sense of pride in being a part of our organisation. I take this opportunity of thanking them all on your behalf.

Gentlemen, now I propose that the report of the Directors and balance sheet together with the profit and loss account for the year ended 31st December, 1963 as audited and certified by the Company's Auditors be and is hereby approved and adopted.

Note: *This does not purport to be a record of the proceedings at the Annual General Meeting.*

U. P. LETTER

GOVERNMENT SEIZES "KHANDSARI" STOCKS FROM DEALERS

REHABILITATION OF DISPLACED PERSONS

From Our Special Correspondent

LUCKNOW, 24*th June*

THE prices of foodgrains in the different U.P. markets keep on rising. A survey has revealed that, during the past twelve months, foodgrain prices in U.P. have increased, on an average, by Rs. 14 per quintal. As was only to be expected, the prices of some foodgrains have risen more than the prices of other foodgrains. The price of average quality wheat in U.P. markets, for example, is Rs. 56 to Rs. 58 per quintal, as against Rs. 41 per quintal a year ago, while the price of *arhar* is Rs. 72 to Rs. 73 per quintal as against Rs. 51 per quintal a year ago. The main causes of the rise in foodgrain prices are a fall in production by nearly 22 lakh tonnes as compared with the output in 1961, export of gram from U.P. to other States and restrictions on the import of wheat from the Punjab and, above all, defective distribution of the available supplies as between the different markets. The cultivators have not parted with their surplus stocks as quickly and in as large quantities as in the past partly because they can now afford to hold stocks for longer periods and partly because they expect prices to rise still higher in the future. The wholesalers and retailers are not as much to blame for the rising prices as is frequently made out by the Government's spokesmen.

The U.P. *Gur* and *Khandsari* Association and the *Khandsari* Dealers' Association have strongly protested against the U.P. Government seizing the stocks of *khandsari* sugar from dealers in U.P. The stocks seized are privately estimated at 100,000 tonnes and the Government has fixed a price of Rs. 119 per quintal to be paid to dealers for *khandsari* sugar for these stocks, whereas the dealers are said to have purchased *khandsari* sugar at Rs. 150 and above per quintal to supply the bulk consumers and others in the main consuming centres. The Government's justification for seizing the stocks of *khandsari* sugar, as U.P's Food and Civil Supplies Minister Mr. Jagmohan Singh Negi explained to pressmen, is that *khandsari* crystal sugar was being mixed with factory sugar and the dealers were indulging in black-marketing and profiteering. There might have been some stray cases of this kind, but it could not be established that, as a rule, the dealers were indulging in these activities. Uptil now there was no control on the prices of *khandsari* sugar, but its export outside U.P. was banned. The fact appears to be that the *khandsari* producers and dealers were pressing the Government to allow exports of *khandsari* for which there is good demand in markets outside U.P. and refused to sell it to the Government at specified prices. But certainly this should not have led the U.P. Government to adopt the drastic step of seizing stocks at controlled prices which are much lower than the prices which the dealers actually paid for it. The net result of the Government's hasty action has been to inflict heavy losses on dealers of *khandsari* sugar, to create an artificial scarcity of sugar in the open market and to give rise to an avoidable uncertainty about the future. If it was found necessary to control the prices of *khandsari* sugar, it should have been done during the crushing season, so that the diversion of sugarcane from factories to *khandsari* units was reduced and the production of *khandsari* sugar did not get artificially boosted up.

The U.P. Government has announced that bulk consumers will now get factory sugar to the extent of 25 per cent of their monthly sugar quota and *khandsari* for the balance of the quota. This way, according to Mr. Jagmohan Singh Negi, 4,000 tonnes of factory sugar would be released for supply to individual consumers in rural and urban areas. But the implication that the total supply available for distribution to consumers would increase is not valid. To the extent that the individual and bulk consumers were already using *khandsari* sugar, the supply in the open market would be reduced as a result of Government's raid on the stocks of *khandsari* sugar.

Aeronautics (India) Ltd. has taken over the management of the Aircraft Manufacturing Depot at Kanpur. This is the first step in achieving single-line management of the existing two aircraft manufacturing units—one at Kanpur and another at Bangalore run by the Hindustan Aircraft Limited—and the proposed three units for the production of MIG-21 fighter-interceptors. There can be no doubt that single-line management under Aeronautics (India) Ltd. will increase efficiency and reduce the costs of production.

But it is not quite correct to argue that the production programme of the Aircraft Manufacturing Depot at Kanpur was behind schedule due to inefficient management. The Kanpur Depot which started operations in 1959, under a ten-year contract with the British firm of Hawker Siddeley Aviation Ltd., was expected, under the revised programme, to produce two Avros in 1962, 12 in 1963 and 18 in 1964. But so far it has only produced four planes—three in series one and one in series two and five planes are said to be on the assembly line. The planes produced by the Kanpur Depot are of the requisite quality but the production programme could not be kept on schedule and the costs of production could not be kept down because of factors outside the control of the management. It is, indeed, remarkable that the Depot at Kanpur made even this limited progress.

Floods: Government's Failure

The rainy season has arrived but the U.P. Government does not appear to be prepared to meet it. Every year floods in the Rapti, the Ghaghra and the Gandak rivers cause huge damage to the eastern districts of U.P. It is, indeed, rather strange that the Government has failed to take effective action to prevent damage from floods. At a public meeting in Gorakhpur, on the occasion of the visit of the Union Minister for Irrigation and Power, Dr. K. L. Rao, it was pointed out by many speakers that one of the causes of these annual floods is the wrong construction of bunds in the past without proper planning. Some of these bunds have since been abandoned, thereby not only checking the normal flow of water but resulting in the silting of rivers. These bunds have been breached in many places and, when flood water gushes through these narrow breaches, much localised devastation is done. It is necessary to make a thorough survey of these bunds and to get them completely demolished, if they are useless, or to get them repaired if they are serving any worthwhile purpose. It is unfortunate that, in spite of their annual recurrence, the U.P. Government has not succeeded in devising a plan for the desilting of rivers, for constructing reservoirs and gates for controlling the flow of water during floods and for raising the level of the low-lying areas. There are no doubt many difficulties in the way and the thing is easier said than done, but, if a sincere effort is made, there is no reason why the eastern districts could not be protected against damage and loss of life from annual floods.

The public meeting also suggested that, in case of floods, the land revenue of the *kharif* crop in the completely marooned villages should altogether be waived in case there is a loss of 50 per cent of the crop or above, instead of giving the cultivators remissions in land revenue. Gratuitous relief should not be given indiscriminately but only to the destitute. *Taqavi* loans should be given only to those persons who are in a position to repay them. The significance of these suggestions lies in the fact that, in the past, the help given to the victims of floods created fresh difficulties for them and made their lot worse.

Displaced Persons

The rehabilitation in U.P. of displaced persons from East Pakistan is causing some difficulty. The U.P. Government has agreed to rehabilitate 5,000 displaced families, out of which some 1,200 families have already arrived. Since most of these families want to be settled on land and sufficient unoccupied land is not available in U.P., the Government is faced with a problem. Avenues of employment are now being tapped for some of the displaced families in industries in the private sector by the Government subsidising units which agree to give employment to the displaced persons. Such a programme might prove less costly to the Government and quicker in getting employment for the displaced persons. But the scope for even such a programme is necessarily limited and it might result in the unemployment of some of those persons who are already employed in these industries. Moreover, apart from the problem of finding employment, the shortage of housing accommodation, medical facilities and supply of drinking water are causing some discomforts to the displaced families. But these difficulties would soon be overcome. The U.P. Government has submitted for the approval of the Union Government eight schemes for the rehabilitation of displaced persons in the Bareilly, Rampur, Pilibhit and Bijnor districts and in the Tarai region of the Nainital district.

Market Rating Indices for Towns of India Book II

A comprehensive, practical and up-to-date guide to urban markets, based on the 1961 Census and other Government reports. Markets rated on estimated consumption expenditures for 735 towns and town groups, with a population of 20,000 and over. An invaluable guide for setting your sales targets. Price : Rs. 20/-. (Postage extra)

CONSUMER SURVEY— GREATER BOMBAY

A survey of a cross-section of households selected by random sampling method in October 1962. Four separate reports giving consumption patterns and brand shares for 4 economic levels on (1) powders (2) hair oils & dressings and shampoos (3) analgesics and (4) sarees. Price on request.

IMPACT AUDIT— INDIAN INDUSTRIES FAIR 1961

A survey based on a sample of 5387 visitors from 13 occupational groups. Helps you plan your future exhibition displays. Price : Rs. 50/-. (Postage extra)

BIG IRRIGATION PROJECTS

(*Concluded from page* 1107)

satisfied at whatever cost, being a first basic necessity.

If by lower effort and production, that is, less input of capital and labour, prices can be raised by the agricultural sector, it will do so. Production will not, therefore, be maximised in this process, even in peasant farming. For example, if the non-agricultural sector consumes 30 million tons at Rs. 500 a ton, the agricultural sector may reduce the output to 25 million tons and raise the price to Rs. 600 per ton, thus introducing both scarcity and higher price. In this process, the distribution agency may also take a hand. Consequently, the balance of five million tons may have to be imported, wasting precious foreign exchange. Can this analysis throw light, to some extent, at least on the recent high prices of foodstuff and lesser production apart from the vagaries of the monsoon, as well as heavy foreign imports? The question is worth careful study.

This series of three articles reveal that we cannot get away from the fact that, in the present Indian context and with peasant farming, huge reservoir projects may not be suitable. While the cheaper diversion type of projects of the British days may have been all right for peasant farming, the huge and costly projects now being executed may suit only more capital intensive farming of the future with big farms. If, for example, with Rs. 150 crores outlay by the public sector and another Rs. 450 crores outlay by big farmers on huge farms of over 200 acres each, employing tractors, harvesting machines, etc., the output per acre is increased by four times (the per acre yield of rice in America is over 4 times the Indian rate), the income will go up to Rs. 200 crores, giving a ratio of three. Till then, we may have to be content with medium and minor irrigation works or any cheap and available diversion types, which may give us a favourable capital-output ratio.

(*Concluded*)

BENGAL PAPER'S PROGRESS STEADY

FURTHER EXPANSION UNDER WAY

STEADY progress has been made by the Bengal Paper Mill Company Ltd. (Chairman: Mr. N. D. Bangur, Calcutta) during the year ended 31st December 1963. With production reaching a new peak of 22,567 tonnes during the year (as compared with 21,588 tonnes in 1962), net sales (that is, excluding excise, commission and discount) have improved from Rs. 340.42 lakhs to Rs. 359.61 lakhs and the stock of finished goods at close has increased slightly from Rs. 9.04 lakhs to Rs. 9.59 lakhs. The higher production is said to have been due to the improvements effected in the day-to-day operations of the Company's mills and general efficiency, together with a small production of the new paper machine. Gross profit, which had gone up by nearly Rs. 5 lakhs to Rs. 60.03 lakhs in the previous year, has gone up further to Rs. 64.75 lakhs in the year under review. The industry's representations to the Government for an increase in paper prices, since the last increase of Rs. 60 per tonne along with the discontinuance of the rebate of Rs. 40 per tonne in respect of paper supplied in reels, are still under consideration. What has brought about the higher profit is the increase in production. It must also be added that the increase in the cost of raw materials and stores consumed was only marginal from Rs. 155.42 lakhs to Rs. 155.95 lakhs.

While gross profit has risen by Rs. 4.72 lakhs, the net profit has more than doubled from Rs. 16.44 lakhs to Rs. 34.92 lakhs, because the tax provision is *nil*, as against Rs. 30.73 lakhs a year before, in view of (1) a larger provision for depreciation of Rs. 29.83 lakhs as compared with Rs. 12.85 lakhs in the past and (2) the heavy transfer of Rs. 31.40 lakhs, as against only Rs. 1.26 lakh, to development rebate reserve following the completion of the expansion programme on hand. In all, no less than Rs. 31.50 lakhs out of the net profit of Rs. 34.92 lakhs have been carried to reserves. The balance of profit of Rs. 3.42 lakhs has been supplemented with, apart from other credits, a transfer of Rs. 11.35 lakhs from general reserve in order to meet the dividend liability aggregating Rs. 15.38 lakhs. Although the rate of dividend on the 10-rupee ordinary shares has been the same at Rs. 2 per share, the aggregate liability has increased from Rs. 11.50 lakhs to Rs. 13.50 lakhs, because the 180,000 right shares issued on 12th March 1962, which were paid up to Rs. 7.50 per share by the end of the year, as against Rs. 2.50 a year before, have qualified for a higher rate of dividend of Re. 1.50 per share, as against only 50 paisa in the previous year.

The following table shows at a glance the Company's progress in the past four years:

(*In lakhs of rupees*)

	For the year ended 31st December			
	1963	1962	1961	1960
Sales, less excise duty	359.61	340.42	295.09	276.40

Carry forward	..	0.51	1.40	1.41

Equity Shares' market value (In rupees):	1964	1963	1962	1961	1960
High	28.50	32.56	41.40CR	106.00	107.00
Low	26.00	25.81	32.00XR	84.00	92.50

The new paper machine, stock preparation plant, multi-stage bleaching plant and coal boiler were commissioned during the year according to schedule. The new turbo generator was commissioned in January 1964 and the recovery boiler in May 1964. The mill is now able to produce 100 tonnes of paper per day and efforts are continuously being made to increase the speed of the new paper machine to obtain still better results.

Responding to the Government's invitation to the industry to submit schemes for meeting the shortfall between the actual paper production and the target fixed for the third Plan, the Company submitted and got approved of a scheme for raising its production by 21,000 tonnes per annum. The Directors are satisfied that this further expansion will be advantageous to the Company and accordingly they are closely pursuing the matter.

On the 180,000 ordinary shares referred to above, which were issued at a premium of Rs. 12 per share, the Directors made the second call of Rs. 5.50 per share on 31st July 1963 and the final call of Rs. 5.50 payable on 20th February 1964. Thus, these shares have become fully paid. Further, Rs. 2,67,750 out of the Rs. 30 lakhs 6.25 per cent 1963-70 unsecured convertible loan stock issued last year were converted into 10,710 ordinary shares during the year under review as per terms of the issue. The total ordinary capital as of 1st June 1964 is Rs. 73.07 lakhs. As at the end of the year under review, it stood at Rs. 68.44 lakhs, besides a preference capital of Rs. 26 lakhs. Reserves and surplus total Rs. 95.97 lakhs. Borrowings, excluding Rs. 76.71 lakhs from the I.F.C.I. Ltd. and Rs. 29.34 lakhs under the 1963-70 convertible stock including interest, are shown at Rs. 146.69 lakhs, which together with current liabilities and provisions account for a total short-term indebtedness of Rs. 243.57 lakhs, as against which current assets, book debts and investments aggregate Rs. 250.10 lakhs. The gross block, which has increased during the year from Rs. 300.20 lakhs to Rs. 538.57 lakhs, has been written down to Rs. 304.72 lakhs and the net block is shown (inclusive of capital expenditure on fixed assets under construction) at Rs. 375.22 lakhs.

Currently quoted at Rs. 27.25 *cum-div.*, the Rs. 10 fully paid ordinary shares of the Company offer a net yield of 6.2 per cent per annum.

ESCORTS FARES BETTER

An increase of more than Rs. 100 lakhs in sales from Rs. 344.60 lakhs to Rs. 451.07 lakhs highlights the working results of the Escorts Ltd. (Managing Agents: Messrs. Harparshad and Co. (Private) Ltd., Delhi) for the year ended 31st December 1963. Sales of the Company's and its subsidiaries' own products have gone up from Rs. 129 lakhs to Rs. 264 lakhs, thus justifying the optimism expressed by the Directors in their previous report. But, as expected by the Directors, sales of imported goods have declined and even commission receipts on import of goods have dropped from Rs. 21.29 lakhs to Rs. 9.69 lakhs, thus reducing income from other sources from Rs. 28.58 lakhs to Rs. 17.96 lakhs. The effect of this lower trend in sales of imported goods and the fall in commission receipts is seen in the much limited rise of about Rs. 4 lakhs in gross profit from Rs. 52.84 lakhs to Rs. 56.93 lakhs as compared with the improvement of over Rs. one crore in sales. Net profit at Rs. 24.99 lakhs is higher by Rs. 6 lakhs. But, in spite of this, the dividend on the 10-rupee ordinary shares, which, in the previous year had been maintained at 11 per cent per annum, has been passed over in order to conserve funds for financing the schemes in hand and expansion of the existing plants. The amount transferred to reserves has been raised three-fold from Rs. 7.46 lakhs to Rs. 22.34 lakhs, out of which Rs. 22 lakhs have been carried to general reserve.

The Company's progress in the past four years is summarised in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sales	451.07	344.60	192.88	243.44
Other income	17.96	28.58	55.21	30.04

Equity shares' market value (In rupees):	1964	1963	1962	1961	1960
High	18.25	18.37	20.00	24.75CR	..
Low	16.75	16.50	18.75	18.50XR	..

The three manufacturing schemes, namely, electro-medical equipment, shock absorbers and heating elements, which were started in November-December 1962, reported output worth Rs. 62 lakhs, in spite of difficulties in obtaining raw materials. While a licence for manufacturing automobile shock absorbers was obtained, foreign exchange difficulties came in the way of getting a licence for importing components and plant and machinery. Inadequate supply of indigenous components, raw materials and limitations of space restricted the Company's assembly and partial manufacture of *Rajdoot* motor cycles to 2,600 units against the target of 4,000. Sales of motor cycles and spare parts fetched Rs. 55 lakhs in 1963. The imported content of the motor cycle sold for Rs. 2,390 has been reduced to Rs. 350 c.i.f. Having covered the manufacture of most of the jigs, tools and fixtures, the Company expects to manufacture a larger number of motor cycles this year. To overcome the effect of restrictions imposed on import of complete tractors, the Company designed and developed its own tractor, with an imported component pack value below that of the licensed manufacturers. The Government has greatly appreciated the Company's efforts in this direction and allowed it to import CKD deletion packs from Poland. An application for an industrial licence is still under consideration.

The subsidiary Goetze (India) Ltd. reported good demand for piston-rings and cylinder liners. It has been allowed to make piston pins. Sharpedge Ltd., another subsidiary, is expected to fare better from the end of this year, after additional machinery is installed. The Company purchased 2,855 equity shares and 200 preference shares of Valsura (P.) Ltd. in 1963 whereby it became a subsidiary. This subsidiary has a fish canning unit at Kandla and has a fairly large order from Government. The New Garage Ltd. was turned into a subsidiary with the purchase of five more equity shares in 1963.

During the year, the Company's paid-up capital increased from Rs. 117.85 lakhs to Rs. 136.05 lakhs, of which Rs. 100.18 lakhs (Rs. 83.78 lakhs in the previous year) are in equity shares and the balance is in two types of preference shares. The equity capital is to be raised further by a one-for-five bonus issue which has been sanctioned already and will not attract tax, as the amount involved is roughly Rs. 20 lakhs. To this extent, the share premium account (shown at Rs. 30.95 lakhs) and reserves and surplus (amounting to Rs. 78.09 lakhs) will be reduced. Short-term loans (the Company has also borrowed Rs. 60 lakhs from the I.F.C.I. Ltd.) of Rs. 141.17 lakhs and current liabilities and provisions amounting to Rs. 400.94 lakhs bring the total short-term indebtedness to Rs. 542.10 lakhs, as against which current assets, loans and advances amount to Rs. 585.90 lakhs and investments to Rs. 22.33 lakhs. The gross block, which rose during the year from Rs. 173.84 lakhs to Rs. 244.45 lakhs, has been written down to Rs. 208 lakhs.

ORISSA CEMENT PAYS DIVIDEND LARGELY FROM RESERVES

The financial results of the Orissa Cement Ltd. [Managing Agents: Messrs. Dalmia Agencies (Private) Ltd., New Delhi] for the past calendar year show a setback in sales from Rs. 589.53 lakhs to Rs. 518.07 lakhs and in gross profit from Rs. 142.19 lakhs to Rs. 62.82 lakhs. Net profit at Rs. 16.34 lakhs is nearly a third of what it was a year before. Out of this, nearly a third, Rs. 5.69 lakhs to be precise (as against Rs. 24.02 lakhs in the previous year), has been carried to reserves. The balance of profit of Rs. 10.66 lakhs is insufficient to cover the preference and ordinary dividends requiring Rs. 24.84 lakhs. So a sum of Rs. 28.56 lakhs has been transferred from general reserve to the dividend reserve, along with the balance of profit. The ordinary dividend has been maintained at the rate of 10 per cent per annum to which level it had been cut last year from 15 per cent per annum paid for the years 1961 and 1960. After payment of dividends, there will be a balance of Rs. 14.38 lakhs to the credit of dividend reserve.

The following table compares the Company's financial results for the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sale proceeds	518.07	589.53	534.30	434.23
Other income	18.50	8.42	13.77	7.92
Closing stocks	55.24	40.28	54.09	45.76
Materials and stores consumed	222.36	218.19	203.04	148.91
Other expenses	266.35	222.85	193.68	163.74
Gross profit	62.82	142.19	160.59	116.47
Managing Agents' commission	2.09	6.82	8.11	6.92
Depreciation	35.39	36.62	36.82	38.65
Taxation	9.00	51.00	44.00	28.50
Net profit	16.34	47.75	71.66	42.39
Net withdrawal from reserves ..	14.18	..	..	..
To reserves	5.69	24.02	34.99	14.01
Dividends—				
Preference	2.34	2.34	2.34	2.88
Ordinary	22.50 (10%)	22.50 (10%)	33.75 (15%)	33.75 (15%)
Carry forward	..	..	1.11	0.52

Equity shares' market value (In rupees):	1964	1963	1962	1961	1960
High	14.62	15.94	20.32	16.36	15.32
Low	12.87	13.31	15.00	13.00	12.64

According to the Directors the profit has been adversely affected on account of a shortfall in despatches of cement, silica and basic refractories and a general increase in manufacturing costs owing to a lower utilisation of the production capacity in respect of clinker and certain types of refractories and a rise in the cost of raw materials. It may be noted here that the Company was granted, effective as of 1st June 1963, an increase of Rs. 2.75 per tonne in the ex-works retention prices of cement, as against its claim for Rs. 4.44. Since then, costs have gone up further. In addition to these factors, a substantial loss incurred in respect of packing charges for cement under the formula adopted by Government for determining such charges and a provision of Rs. 39.05 lakhs in the accounts for the year under review in respect of electricity charges to be paid for previous years also explain the pretty sharp fall of nearly Rs. 80 lakhs in gross profit in relation to what is but a moderate drop in of Rs. 71 lakhs in turnover.

The following comparative figures—in thousand tonnes—or cement production and despatches in the past three years will give readers an idea of the Company's physical performance:

	1963	1962	1961
Clinker production	339	354	335
Cement production	353	380	373
Cement despatches	353	393	365

Cement production and despatches, we are told, were unusually high in 1961 and 1962 on account of the availability of substantial accumulated stock in addition to production during those years of clinker. The stock of cement and clinker were brought down substantially by the beginning of 1963. As a result despatches during the year were lower. Clinker production could not also attain the 1962 level because of increased stoppages of both the kilns for bricklining and repairs.

There has been a steep downward trend, according to the Company, in the demand for silica bricks since 1961 due to the rapid conversion of open hearth furnaces from silica roof to basic roof. Therefore, despatches of steel quality silica bricks declined during the year from 17,010 tonnes to 4,868 tonnes. The Company was, however, able to manufacture 3,103 tonnes and supply 2,293 tonnes of coke oven silica bricks which were hitherto being imported. Demand for basic refractories has shrunk because of the delay in the steel industry's expansion and its curtailment of stocks. As for fireclay refractories, full kiln capacity cannot be utilised due to lack of balancing equipment.

The second stage of the basic refractory plant's expansion was completed with the installation of an additional heavy duty hydraulic press and by the lighting of the second basic

tunnel kiln on 15th January 1964. The new kiln has been specially designed to fire up to 1,700° C temperature and will be capable of producing superior quality basic roof bricks for the open hearth furnaces. A licence granted to the Company for manufacturing slag cement based on the blast furnace slag which was to be available as a by-product from the Rourkela steel plant was revoked by the Government on 7th January 1964 on the ground that effective steps to install the plant had not been taken within the specified time. The Company, however, found the Rourkela slag unsuitable and pending other arrangements, it suggested that it be supplied granulated slag from Bhilai and/or Jamshedpur, but the Government turned down this suggestion. The disturbances which broke out at Rourkela towards the end of March last and later spread to Rajgangpur affected the Company's works for a week or so.

The Company's paid-up capital, unchanged at Rs. 265 lakhs including Rs. 40 lakhs in preference shares, is backed by reserves and surplus aggregating Rs. 128.18 lakhs, excluding Rs. 24.84 lakhs in the dividend reserve required for meeting the year's dividend liability. Borrowings of Rs. 87.93 lakhs, excluding Rs. 42 lakhs from the I.F.C.I. Ltd. and Rs. 3.92 lakhs from the Government, and current liabilities (including the dividend liability) and provisions amounting to Rs. 193.43 lakhs bring the total short-term indebtedness to Rs. 281.36 lakhs, as against which current assets, book debts and investments aggregate Rs. 323.60 lakhs. The gross block of Rs. 664.19 lakhs (Rs. 629.57 lakhs a year before) has been written down to Rs. 333.50 lakhs. Capital work-in-progress and machinery in transit are shown seperately at Rs. 58.15 lakhs and Rs. 21,483, respectively.

The net yield on the 10-rupee ordinary shares of the Company at their current market value of Rs. 13.19 *cum-div.* is 6.4 per cent per annum.

BRITISH PAINTS STEPS UP DIVIDEND

A gradual and still continuing shift in business from low-priced heavy products to higher-priced lighter products such as enamels, etc., offering an increased sales recovery per tonne of product, and a further curtailment in overhead expenses have enabled British Paints Ltd. (Chairman: Mr. B. Gill, Calcutta) to report excellent results for the year ended 31st December 1963. The realisation from the sale of products, continuing its upward journey, reaching the level of Rs. 268.59 lakhs as against Rs. 235.87 lakhs a year ago. The gross profit has staged a steep rise from Rs. 27.42 lakhs to Rs. 41.04 lakhs, a record figure. The profit-margin (ratio of gross profit to sales), therefore, shows an increase of some 3.7 points to 15.3 per cent. Although essential provisions are logically higher than before—that for depreciation having gone up from Rs. 2.75 lakhs to Rs. 2.78 lakhs and for taxation by Rs. 5.62 lakhs to Rs. 24.70 lakhs—the net profit at Rs. 13.56 lakhs is nevertheless larger by no less than Rs. 7.97 lakhs than that a year ago and has actually doubled during the past two years. Since to this has been added Rs. 2.56 lakhs withdrawn from reserves and past provisions and Rs. 0.28 lakh brought in, the amount available for distribution to equity shareholders—after a credit of Rs. 0.35 lakh (Rs. 0.31 lakh) to miscellaneous provisions—works out to Rs. 16.05 lakhs or roughly three times that available a year ago. This has prompted the Directors to step up the dividend by five points to 15 per cent, subject to deduction of tax, claiming Rs. 7.50 lakhs as against Rs. five lakhs in the previous year.

Considering that a sizable sum of Rs. 8.53 lakhs or more than half the disposable surplus has been credited to reserves, it might be argued that the dividend could well have been stepped up further without causing any serious damage to the financial position of the Company. The Directors, however, report that two considerations weighed heavily with them in not recommending a dividend higher than the one actually proposed. First, no ploughback was possible last year owing to drop in profits and second, funds are urgently needed to finance a few essential expansion schemes which have been already taken in hand. They also hasten to assure the shareholders that these schemes, when completed by the end of the current year would, by easing the flow of men and materials, quicken the pace of production and despatches and would also create a substantial increase in the productive capacity of the Company.

The growth achieved by the Company during the past four years is well reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sales	268.59	235.87	211.33	187.74
Other Income	0.54	0.43	0.62	1.13
Closing stock of finished goods and in transit	24.44	27.26	19.60	21.95
Raw materials consumed ..	120.97	126.07	108.95	101.41
Excise duty	25.04	15.44	12.66	11.55
Other expenses	79.26	75.03	81.99	60.35
Gross profit	41.04	27.42	16.00	16.68
Provision for—				
Depreciation	2.78	2.75	2.88	3.10
Taxation	24.70	19.08	6.40	6.82
Net profit	13.56	5.59	6.72	6.76
Withdrawal from reserves and provisions	2.56	..	1.70	0.43
Miscellaneous provisions ..	0.35	0.31	0.22	..
To reserves	8.53	0.29	1.96	3.63
Dividend..	7.50	5.00	6.25	3.55
	(15%)	(10%)	(12.5%)	(12.5%)
Carry forward	0.02	0.28	0.29	0.21

Notwithstanding the excellent results achieved, the year was not without some disquieting features. For example, there was a shortage of mild steel and tin sheets which restricted business somewhat and has shown so far little indication of improvement during the current year. Shortage of a few essential raw materials also has of late been very acute and continues to exercise an adverse effect on production and sales. Fortunately, this is being counter-balanced by the increasing recognition of the quality of the Company's products for which there is an ever-growing demand and this has prompted the Company to take positive measures for expanding its manufacturing and selling facilities.

Thus, it acquired during the year under review new assets worth Rs. 3.70 lakhs of which Rs. 1.84 lakh represent the cost of additions to the paint factory and Rs. 1.86 lakh of those to the resin factory. These have raised the block account to Rs. 52.36 lakhs which on deduction of the accumulated amount of depreciation yields a net block of Rs. 22.65 lakhs. Current assets, investments and loans and advances aggregate (as on 31st December 1963) Rs. 148.62 lakhs and cover more than two times the outside interest comprising of Rs. 22.10 lakhs as borrowings and Rs. 50.12 lakhs as current liabilities and provisions. The share capital stands unchanged at Rs. 50 lakhs, all in equity shares of Rs. 10 each, but reserves and surplus is higher at Rs. 49.05 lakhs, so that own funds amount to Rs. 99.05 lakhs, as against Rs. 90.86 lakhs a year ago.

The present market quotation for the Rs. 10 ordinary shares of the Company is Rs. 21.00 *cum-div.* On an *ex-div.* basis, the net yield per annum works out to 6.1 per cent.

INDUSTRIAL INVESTMENT TRUST LTD.

An improvement of nearly Rs. one lakh in gross profit from Rs. 7.78 lakhs to Rs. 8.72 lakhs has been reported by the Industrial Investment Trust Ltd. (Chairman: Mr. Maneklal Premchand, Bombay) for the year ended 31st December 1963. The improvement is more apparent than real, especially as the income by way of dividends on shares and interest on debentures and securities has actually receded from Rs. 10.93 lakhs to Rs. 9.54 lakhs, though other receipts have been higher at roughly Rs. 62,000 as compared with about Rs. 16,000 a year before. Further, management expenses have gone up from Rs. 1.04 lakh to Rs. 1.44 lakh. However, what has accounted for the rise in profit is the fact that the previous year's figure was arrived at after taking into account the net loss of Rs. 1.85 lakh on sale or redemption of investments. As against this capital loss of Rs. 1.85 lakh in 1962, adjusted against revenue profit, there was a net capital profit of Rs. 1.78 lakh on sale or redemption of investments in the year under review but the directors have transferred it to capital reserve. If this gain were included in the year's profit, the apparent rise in it would be higher to that extent.

After allowing Rs. 5,353 (Rs. 1,446 a year before) for depreciation and Rs. 2.91 lakhs (Rs. 3.34 lakhs) for taxation, the net profit is higher by Rs. 1.33 lakh at Rs. 5.76 lakhs. But it is not enough to cover the dividend aggregating Rs. 6.50 lakhs at the rate of Rs. 6.50 (the same as for the previous year) on the 100-rupee shares. The shortfall is made good by withdrawing Rs. 73,000 from reserves. The only consolation is that, in the past year, the inroad made into the reserves was much larger. Thus, in addition to Rs. 1.10 lakh withdrawn from reserves, Rs. 69,977 were obtained by way of refunds and write-backs. The surplus carried forward is Rs. 1,890, as against Rs. 3,254 brought in.

The following table shows the changes in the Trust's investments in the past four years:

(Percentage distribution)

	As at 31st December			
	1963	1962	1961	1960
Banks	4.10	4.04	6.58	6.17
Cements	4.51	4.62	3.99	3.82
Chemicals	4.64	2.96	2.43	1.34
Coal	1.96	1.34	1.17	1.09
Cotton and silk	13.43	13.19	12.06	12.93
Electric and trams	3.04	3.01	12.69	15.37
Insurance	1.50	1.57	1.36	1.31
Iron and steel	6.62	6.32	5.63	5.41
Jutes	5.65	7.72	7.67	8.02
Mining	2.15	2.12	1.84	1.96
Miscellaneous	32.08	31.60	26.67	23.96
Oil	..	..	..	..
Paper	3.23	2.62	2.26	2.20
Railways	..	..	..	..
Rubber	0.51	0.51	0.44	0.43
Salt	1.49	1.47	1.27	1.22
Shipping	1.04	1.03	0.97	0.93
Sugar	9.48	9.37	8.24	9.20
Tea	2.68	3.04	2.68	2.63
Telephones	..	..	..	0.02
Government securities ..	2.40	2.37	2.05	1.97
Total ..	100.00	100.00	100.00	100.00
Market value of Trust's own equity of Rs. 100 each (in Rs.)	1963	1962	1961	1960
High	77.00	82.30	81.00	80.00
Low	65.70	72.00	70.00	69.00

It will be seen from the above table that the only significant changes in the Company's portfolio are in tea and jute shares, the percentage investment in which has dropped from 3.04 and 7.72 to 2.68 and 5.65, respectively, and in chemicals and miscellaneous shares, the percentage investment in which has gone up from 2.96 and 31.60 to 4.64 and 32.08, respectively. These changes have apparently been induced by the consideration of improving the income. The total of investments (at or under cost) has, however, declined further to Rs. 122.54 lakhs as at 31st December, 1963 from Rs. 124.06 lakhs a year before and Rs. 143.47 lakhs two years before. The quoted investments amount to Rs. 97.56 lakhs (as against Rs. 102.85 lakhs a year before) and command a market value of Rs. 126.04 lakhs (Rs. 131.39 lakhs). Taking the quoted investments at the market value and the unquoted investments at the book value, the value of the total investments as at 31st December 1963 was higher than the total book value by 23.2 per cent as against 23 per cent as at 31st December 1962. This bears out the care and prudence exercised by the Trust in selecting its portfolio of investments. According to denomination, the investments are classified as: Government securities 4.40 per cent (4.49 per cent in 1962), preference shares 13.08 per cent (13.29) and ordinary shares and stock 82.52 (82.22) per cent. This shows that the cut in investment in Government securities from 9.74 per cent to 4.49 per cent in favour of that in ordinary shares from 75.36 per cent to 82.22 per cent as seen in 1962 has been carried a little further during the year under review. Out of the total investments as at the end of the year, 5.03 per cent (4.97 per cent in 1962) were sterling securities and 94.97 per cent (95.03 per cent) were rupee securities.

STRAW PRODUCTS' NEW FACTORY STARTS YIELDING RESULTS

Appropriately enough, the performance of Straw Products Ltd. (Managing Agents: Messrs. J. K. Agents Pvt. Ltd., Bhopal) in the year ended 31st December 1963—its silver jubilee year—has been heartening. The Company has commenced the payment of dividends on preference shares after a lapse of three years and has cleared the arrears for 1960. Indeed, it could have paid for the remaining three years (that is, 1961, 1962 and 1963 inclusive) as well had not heavy commitments towards deferred payments and repayment of loans with interest thereon compelled the Directors to conserve the available funds. For the same reason, as also because of the arrears of preference dividend, no distribution is being made, for the fourth successive year, to the equity shareholders. It may be recalled here that the Company has had to skip the dividends for these years, because of heavy outlay on a big expansion project. This project has already been completed and the Company should soon be in a position to resume payment of equity dividends also.

With a full year's output of paper from the new factory in Orissa becoming available for sale, the turnover has multiplied more than three times from Rs. 149.16 lakhs to Rs. 453.40 lakhs, of which nearly two-thirds represent the realisation from the sale of paper. The gross sales of boards have also been higher at Rs. 152.88 lakhs as against Rs. 128.93 lakhs, even though the production of straw boards had to be curtailed due to reasons discussed more fully in subsequent paragraphs. Commensurate with the sale proceeds, the gross profit has expanded from a mere Rs. 16.83 lakhs to Rs. 62.20 lakhs. Thus, notwithstanding the various difficulties faced by the industry, the ratio of gross profit to sales (that is, the profit margin) has been bettered from 11.4 per cent to 13.7 per cent. Amongst prior appropriations the provision for the Managing Agents' commission gets the minimum permitted under law, namely, Rs. 50,000, same as in the previous year, but that for depreciation claims as much as Rs. 36.87 lakhs, as against a mere Rs. 6.15 lakhs. As in the past year, no provision has been made for taxation partly because of the arrears of development rebate aggregating Rs. 105.84 lakhs and partly because the depreciation charged in the accounts is substantially less than that available for calculation of the tax liability. After making these essential provisions, there remains a profit of Rs. 24.83 lakhs as against Rs. 10.18 lakhs previously. From this, the Directors have provided Rs. 15.58 lakhs as depreciation arrears for 1962 and have also written off Rs. 3.44 lakhs as underwriting commission and brokerage on issue of share. A sum of Rs. 13 lakhs, as against Rs. 11 lakhs last year, has been credited to reserves while the preference dividend for 1960 claims Rs. 3.06 lakhs.

The working results of the Company for the past four years are set forth in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960

* For the year ended 31st December 1960.

The paper mill in Orissa, which was commissioned ahead of schedule in October 1962 after completion of erection in record time, made commendable progress during the year. After overcoming the teething troubles, the mill reached a high level of production and efficiency within a short time and an output of 15,737 tonnes was achieved. The paper board mill at Bhopal also worked satisfactorily and produced 12,042 tonnes of board, even though production of straw boards had to be curtailed from 6,872 tonnes to 4,463 tonnes due to heavy excise duty which put the mill in a disadvantageous position *vis-a-vis* units producing less than 5,000 tonnes a day. Certain special requirements for defence were also produced by the mill.

The Directors, in their report to the shareholders, refer to the uneconomic pegging of paper prices as against the very considerable rise in the cost of essential chemicals and materials required for production. In spite of the assurances given by the Government that the matter was receiving sympathetic consideration, increase in prices has not been sanctioned so far. The position of new units like the Company's paper mill in Orissa, the Directors say, is all the more difficult, because of the very high capital investment as compared with the older units. This is so, because, while fixing the fair ex-works price of paper, the Tariff Commission has calculated the return on the basis of a capital investment of Rs. 1,100 to Rs. 1,300 per tonne of capacity, while the capital cost of a new unit is as high as Rs. 3,500 per tonne. The present level of prices, therefore, does not allow the new units a margin of profit sufficient even for providing full depreciation at income-tax rates. The excise duty on boards is also heavy and amounts to about 70 per cent of the selling price of a cheap commodity like straw boards. In the Directors' opinion, therefore, unless and until ex-factory prices are increased, the paper industry, as a whole, and the new units, in particular, will continue to suffer.

The Company's financial position is fairly strong. As at 31st December 1963, the share capital remains unchanged at Rs. 214.99 lakhs—of which Rs. 75 lakhs only are in preference shares of Rs. 100 each—but reserves have been strengthened further to Rs. 147.95 lakhs giving total owned funds of Rs. 362.94 lakhs. As against these, outside finance amounts to Rs. 472.84 lakhs, comprising Rs. 142.84 lakhs by way of secured loans and Rs. 330 lakhs of current liabilities and provisions. That this slight imbalance is due to rapid expansion in the capital outlay is seen from the fact that the net block stands as high as Rs. 660.93 lakhs, or nearly twice the amount of own funds, while the gross block account is even higher at Rs. 727.84 lakhs inclusive of additions worth Rs. 14.05 lakhs made during the year. Current assets and loans and advances aggregate Rs. 164.18 lakhs and are too low to cover the outside interest. Investments at book value are a little lower at Rs. 10.70 lakhs as against Rs. 12.25 lakhs a year before.

MAHARASHTRA STATE FINANCIAL CORPORATION

The second annual report of the Maharashtra State Financial Corporation for the year ended 31st March 1964 outlines the further progress made by the Corporation during the year and shows unmistakable signs of the influence of the recommendations of the Reserve Bank's Working Group on S.F.Cs, on both the working and the data furnished in the Report. During the year, 362 fresh applications seeking assistance of Rs. 6.18 crores in the aggregate were received, bringing the total number of applications since the inception of the Corporation to 1,876 for Rs. 34.05 crores. As many as 213 applications for Rs. 3.22 crores were sanctioned during the year, bringing the progressive total of sanctions to Rs. 12.45 crores covered by 842 applications. A sum of Rs. 2.09 crores was disbursed during the year, the progressive total being Rs. 7.65 crores. Repayments during the year amounted to Rs. 0.39 crore, the progressive total being Rs. 1.87 crore. Loans outstanding at the end of the year amounted to Rs. 5.78 crores.

Out of 213 applications sanctioned during 1963-64, 55 were for constructing new premises by existing concerns, 45 for setting up of new concerns and the balance of 113 for completion of programme of expansion and for manufacture of new products.

Although the rate of interest charged by the Corporation was 7½ per cent, the Corporation continued to charge concessional rates of interest going down to 5 per cent with a view to promoting the regional development of small-scale industries, particularly in the underdeveloped areas of the State. A region-wise classification of loans is also provided in the report. Among other details given in the report mention may be made of break-up of the number and amount of loans sanctioned according to (i) small, medium and large concerns and (ii) limited companies, co-operatives, partnerships and proprietory concerns. A classification of the number and amount of loans sanctioned according to the size of each loan, industry-wise classification of the applications received and sanctioned and the detailed position of the stage at which each application rests are also disclosed.

The gross earnings of the Corporation rose from Rs. 25.50 lakhs in the previous year to Rs. 36.31 lakhs during 1963-64. The expenses also rose substantially but not to the same extent, with the result that the profit (subject to taxation) was higher by Rs. 1.31 lakh at Rs. 9.43 lakhs. A provision of Rs. 5 lakhs for taxation has brought the progressive total of tax provisions to Rs. 33.82 lakhs. The guaranteed dividend of 3½ per cent absorbs Rs. 3.50 lakhs out of the surplus and it is gratifying to find that no subvention from the State Government was necessary to pay this dividend. The progressive total of subventions received from the Government and still outstanding has remined unchanged at previous year's level of Rs. 19.39 lakhs to which it had come down from the peak of Rs. 27.59 lakhs reached in 1959-60.

BROCHURE ON PLANNED LIGHTING

Planned lighting, a section of the broad branch of engineering known as Illumination Engineering, is still in infancy in Indian industrial concerns. The Bajaj Electricals Lighting Advisory Service, by publishing an attractive brochure entitled "Planned Lighting" has done a good service to this new branch of engineering, which is a specialised aspect of modern technology and can be perfectly employed to provide scientific lighting for achieving the twin objectives of reducing power consumption and increasing efficiency and productivity in industry. This publication, explaining, as it does, the technical and scientific aspects of the specialised subject of illumination engineering, will be found useful by industrial engineers, architects and interior decorators.

SYNOPSES OF COMPANY REPORTS

Indian Standard Wagon Co., Ltd.

(*Managing Agents*: Messrs. Martin Burn Ltd., Calcutta.)

Annual General Meeting—Held on 26th June 1964.

Working Results:

	For the year ended 31st March (In thousand rupees)

Market value of ordinary shares (in rupees)	1964†	1963	1962
High	38.62	37.00	205.00XR
Low	31.94	28.21	30.50XR

* Includes a cash bonus of 5 per cent. † Upto 12th June 1964.

Extracts from the Directors' report: *Output*: The large output of springs, forgings and wagons was maintained with difficulty as the Company's Works continues to carry on from hand to mouth in respect of materials. This uncertainty in respect of supplies is extremely unsatisfactory and precludes an accurate forecast of results for the current year. However shareholders will notice from the accounts now under review that stocks are greater which means that there is more chance of obtaining matching steel to permit a steady flow of work. The order book remains at its normal satisfactory level.

Accounts in brief as at 31st March 1964 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	98,33,075	Gross block ..	1,52,59,529

Carry forward	22	2,42

* On the increased ordinary capital of Rs. 1,08,00,000.
† On a paid up ordinary capital of Rs. 90,00,000.

Extracts from the Directors' report: *Share Capital*: The *Rights* issue of ordinary shares on the basis of one for five was duly completed during the year and the ordinary dividend will be paid for 1963 on a total of 108,000 shares. The 6 per cent redeemable preference shares were also issued during the course of the year and will rank for *pro rata* 1963 dividend.

General: The financial result for 1963 shows an advance over that of the previous year, and this is mainly attributable to the very successful trading of the jute mills during the year ended 31st March 1963, though other departments have contributed to the satisfactory performance. Unfortunately, however, this achievement has been entirely nullified by the incidence of the new corporate surtax and dividend tax. The surtax, like last year's super profits tax, has the effect of penalising especially those companies, such as your own, which are investing heavily in the development of new projects designed to be of service to the nation. It has been necessary to provide in these accounts for the 1962 super profits tax which could not be determined at the time of closing the previous accounts, but the provision made against contingencies last year is adequate to cover this liability. It should be mentioned that the Company's substantial investments in shares of companies with properties in Pakistan have not received any return during the last few years although all possible steps have been taken to obtain Pakistan Government sanction to the remittance of profits of these companies.

Accounts in brief as at 31st December 1963 are as under:

Liabilities	Rs.	Assets	Rs.
Capital*	1,63,00,000	Gross block ..	43,30,880
Reserves and surplus ..	1,26,89,124	—Depreciation ..	16,00,363

† Upto 12th June 1964.

Extracts from the Directors' report: *Operations*.—The Company's tea interests were adversely affected by the difficult trading conditions which obtained throughout that industry during the year, but the reduction in profits from that source was partially offset by the improvement in trading profits from other interests. After making provision for the Company's liability to tax under the Companies (Profits) Surtax Act 1964 and for the tax on dividends distributed, the Board has decided to recommend a reduction in the final dividend as compared with last year.

Subsidiary Companies.—

The Bengal Flour Mills Company Ltd.—This company had a satisfactory year and a substantial increase in profit was recorded.

Bridge & Roof Company (India) Ltd.—Although an increase in turnover during the year was recorded, the profit earned by this company was approximately the same as that of the previous year.

British India Electric Construction Company Ltd.—The activities of this company continued to expand and its results for the year were very satisfactory.

Steel Containers Ltd.—This company's output during the year was curtailed by a shortage of raw materials which was reflected in the reduction in the profit earned.

Industrial Containers Ltd.—There was a substantial increase in the production by this company which resulted in a very satisfactory profit for the year.

Hope's Metal Windows (India) Ltd.—This company encountered difficulties in re-establishing its products in a highly competitive market and a loss for the year was incurred.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.

To dividends	Nil	Nil
Carry forward	+ 30	— 1,08

Extracts from the Directors' report: Although the Company showed a profit before the provision

of depreciation since the commencement of production, it is a matter of regret that it has not so far been able to declare a dividend. However, it may be stated here that as a result of the current year's operations, it would be possible to show much more satisfactory working results.

Production: During the year under review the factory could not produce to full capacity, in the absence of a ready market either in the country or abroad to absorb such full production at economic prices. It is, however, a matter of satisfaction that the Government of India have recently concluded a barter deal between the Minerals & Metals Trading Corporation of India Ltd., and the Commodity Credit Corporation of United States Government for an export of 1,28,000 metric tons of Ferro Manganese over a period of eighteen months commencing from about the middle of December 1963 in exchange for U.S. agricultural commodities such as cotton, etc. Under this barter this Company has been allotted 44,000 tons as its share of supply out of the total of 1,28,000 tons. The Company has already made two shipments to the U.S.A. amounting to about 18,500 metric tons.

Steel Tube Mill Project: The Directors have been endeavouring to put up a Steel Tube Mill as a separate unit with a view to improve the financial position of the Company and to offer the benefits of this profitable venture to the shareholders of the Company.

The Government of India have already sanctioned an adequate Belgian Credit to cover the import of plant and machinery from Belgium to be repaid under deferred payment terms over a period of 12 years.. The Industrial Finance Corporation of India have already accorded their approval to: (1) A Guarantee of the Deferred Payment Terms under the Belgian Credit, and (2) A Rupee loan in connection with the construction of the project in India. The Government of India have also issued the necessary import licence for the import of plant and equipment.

Accounts in brief as at 31st December 1963 are as under:

Low	15.37	12.32 12.30

† Upto 20th June 1964.

Extracts from the Directors' report:

Crop—Tea:

	Estimate	Crop Secured	
	1963 Kgs.	1963 Kgs.	1962 Kgs.
Pasuparai ..	2,60,000	2,92,500	2,81,100
Carady Goody ..	3,75,000	3,92,500	3,89,100
Total ..	6,35,000	6,85,000	6,70,200

The total crop of 6,85,000 kgs. harvested during the year is satisfactory and records an increase of 14,800 kgs. over the previous year's production.

The F.O.B. cost for the year was Rs. 3.18 per kg. as against an estimate of Rs. 2.91 and the all-in-cost was Rs. 3.80 per kg. as against last year's figure of Rs. 3.67. The net average sale price realised was Rs. 4.62 per kg. as against Rs. 4.39 during the previous year.

Cardamom: The quantity of cardamom harvested during the year amounted to 22,510 kgs. as against 26,690 kgs. in the previous year. The cost of production for the year was Rs. 6.54 per kg. as against Rs. 5.97 during the previous year and the average sale price realised was Rs. 13.92 per kg. as against Rs. 12.64 for 1962.

Crop Estimate for 1964:

	Tea (Kgs.)	Cardamom (Kgs.)
Pasuparai	2,75,000	..
Carady Goody	3,80,000	22,500
Total ..	6,55,000	22,500

The policy of fine plucking for tea has been continued and production during the year was satisfactory and exceeded the estimate, as well as the crop during the preceding year. With special attention paid to manufactured and better quality plucking, the average sale price had been higher than that of last year. It is satisfactory that in spite of unfavourable weather conditions during the year, the Company was able to harvest the estimated quantity of cardamom. Sales realisations have also been better.

The Directors have taken up the question of improving the efficiency of the Tea factories by installation of the additional machinery, etc. In this connection it has been decided to take full advantage of the loan facilities granted by the Tea Board under its Hire Purchase Scheme for Tea Machinery.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.

† Upto 20th June 1964.

Extracts from the Directors' report: The additions to machinery during the year under review have been to the tune of Rs. 6 lakhs, the main additions being as under: 2 *High Draft Fly Frames*, 2 *Drawing Frames* and 4 *Combers*. The last two items mentioned above were received in December 1963 and put into commission in 1964.

The Company has been permitted to increase its installed capacity by 7½ per cent in the case of spindles and 10 per cent in the case of looms. An order for 9 *Ring Frames* (4,104 spindles) has been placed to attain the permitted increase.

A portion admeasuring about 2,933 sq. yds. out of the Company's property at Gamdevi has been agreed to be sold and full price has by now been received by the Company.

Accounts in brief as at 31st December 1963 are as under:—

,, ,, ,, Ordinary ..	6,40	5,60
	(8%)	(7%)
Carry forward	3,26	3,61

Market value of Ordinary shares (in rupees):	1964†	1963	1962
High	13.60	13.75	18.37
Low	10.94	10.00	12.31

† Upto 20th June 1964.

Extracts from the Directors' report: The Company's increased turnover has been reflected in a higher consumption of raw materials but holdings have been lower because of larger export sales of unmanufactured tobacco.

Cigarettes: Whilst there has been a nominal drop in the All-India production of cigarettes there has been a noticeable increase in the demand for lower priced cigarettes. The Company had anticipated this change because of the severe Tax Impositions in the 1963 budget and had consequently made an all out effort to establish the popular priced *Number Ten Virginia* cigarettes. The bulk of the Company's increased sales has been in this price group and has been achieved in a shrinking market in spite of increasing pressure from our major competitor.

Regent Filter Tipped cigarettes continue to remain unchallenged as the leading quality filter tipped cigarettes produced in India. The Company has recently introduced *Carlton's Filter-tip* at 60 nP for 10 sticks to cater to a popular price group. The Directors are confident of changes in smoking habits in favour of filter tipped cigarettes, and it would be advantageous to have a filter tipped cigarette, at a reasonable price available to the smoking public.

Unmanufactured Tobacco: The year 1963 set a fresh record for the All-India exports of unmanufactured tobacco. This Company's exports have also shown a larger increase over the previous year. Whilst these increased exports have stemmed mainly from Eastern European countries, the Directors are happy to record the reentry into the Indian tobacco market after several years, of a large buyer from the Far East, whose future demands for Indian tobacco could be sustained.

General: The recent budget announcement contains a small change in the taxation structure of cigarettes. Some tax relief has been given in a particular price category and a small increase made in a lower one. Whilst this new tax structure has given overall relief to most cigarette manufacturers, this Company has not been able to participate in this benefit, as its sales have been confined to the lower group, where tax has been increased.

Accounts in brief as at 31st December 1963 are as under:—

Extracts from the Directors' report: Trading results for the period under report have been influenced by the continued voluntary price control of yarn and cloth and the rising trend in the cost of raw materials, labour, power and stores, etc.

This Company has installed new machinery worth Rs. 21.52 lakhs for replacement, modernisation as well as for the diversification of its products. For further modernisation of the mills the orders to the tune of Rs. 21 lakhs are outstanding.

In order to increase the production of yarn and cloth in the country, the Central Government, by way of general permission to the cotton textile industry has sanctioned an increase of additional spindles equivalent to 7½ per cent of their existing spindles and 10 per cent of their installed loomage. The installation of spindles has been completed and that of looms is receiving active consideration of the directors.

The Company has received sanction from the Central Government to produce an additional 20,00,000 yards of printed cloth per year. The construction of the printing shed has been completed and arrangements for the installation of modern cloth printing machinery are being made. The mills are expected to produce printed materials during the current year.

NEWS IN BRIEF

A JOINT Indo-Hungarian enterprise has just begun for the construction of a mine blasting fuse factory at Hyderabad. Hungary is supplying building plans and all machinery for the factory, the first of its kind in India. The project is to be completed by the middle of next year.

The road-bridge over the Mahanadi at Cuttack, claimed to be the longest in India, will be opened for traffic on the 28th inst. by the Union Minister for Steel and Mines, Mr. Sanjiva Reddy. The 7,392-foot bridge will form a vital link in the national highway (No. 5), now under construction, connecting Calcutta with Cuttack.

The Coir Board is preparing a scheme envisaging the establishment of a mechanised unit for coir manufactures. The necessary machinery for the unit will be imported from West Germany. The scheme forms part of the Union Government's proposal to mechanise one-third of the matting sector of the coir industry.

The Tea Board has decided to send Tenzing Norkey, the Everest hero, to the United States to popularise Indian tea there. Recently, the Director of Tea Promotion, Tea Board; Mr. K. Venkatachary, visited Tokyo to make arrangements for the presentation of choice Indian tea to the athletes participating in the Olympic Games in October this year.

The Indian Airlines Corporation has signed a contract with the Sud Aviation of France for the purchase of fourth Caravelle aircraft which is expected to be delivered in November this year. With the acquisition of the fourth Caravelle, the I.A.C. hopes to meet the growing requirements of traffic on the trunk routes. According to the General Manager of the I.A.C., Mr. J. S. Parakh, the present rate of utilisation of the Caravelles by I.A.C. is almost the highest in the world.

The Indian Institute of Foreign Trade organised a three-day seminar on handicrafts at New Delhi from 18th to 20th inst. The seminar recommended the establishment of a handicrafts export promotion fund under the auspices of the All-India Handicrafts Board. It is estimated that as against an export of about Rs. 30 crores worth of handicrafts products during the current year, this fund which will amount to Rs. 9 lakhs, providing a nucleus for attracting matching contributions from the Marketing Development Fund of the Government of India.

The heavy machine building plant of the Heavy Engineering Corporation of India at Ranchi will manufacture the entire sixth blast furnace complex for the Bhilai Steel plant. At present, the Bhilai plant has only three blast furnaces with a production capacity of the one million tons. The fourth and fifth furnaces are expected from Russia, and the Heavy Engineering Corporation will supply the sixth one in 1967-68. Meanwhile, the heavy machine building plant will manufacture three blast furnaces for the proposed Bokaro Steel plant which will have an initial production capacity of 15 million tons by 1968. It will also produce a casting machine for the Durgapur plant.

A trade agreement was signed between India and Poland at Warsaw on the 19th inst, following negotiations held at that place between an Indian trade delegation and the Polish Government. Under the agreement, which covers the years 1965 and 1966, the volume of trade between the two countries by 1966 is expected to be of the order of Rs. 3.8 crores both ways. There will be considerable diversification of goods to be exported by India, including engineering goods, cotton textiles, and various items of manufactured goods, besides the expansion of trade in traditional goods, particularly in iron ore, manganese ore, mica, jute goods and tobacco. Poland is also interested in imports of deoiled linseed cakes from India and will export steel, machine tools, textile machinery and various chemicals.

A delegation of Indian paint industries which visited some of the Middle Eastern and African countries has explored the possibilities of stepping up exports besides negotiating foreign collaboration for starting paint factories in those countries. The delegation has succeeded in getting a concrete proposal for technical collaboration from Ethiopia, one firm in Nairobi and another in Baghdad have started preliminary talks for collaboration with Indian manufacturers. As for exports, India's share is about Rs. 3 lakhs out of a total of Rs. 8 crores worth of paints and related products imported by those countries annually. The visit of the delegation has yielded actual orders worth Rs. 2.5 lakhs; prospective orders are estimated to the extent of Rs. 5 lakhs.

The Union Ministry of Works and Housing has raised the maximum amount of loan admissible under the low income group housing scheme from Rs. 8,000 to Rs. 10,000. The rise is a sequel to the recommendation made by the working group on housing co-operatives. The loan-assistance would continue to be restricted to 80 per cent of the cost of a house, including the cost of land, the ceiling admissible now onwards will be Rs. 10,000. The low income group housing scheme is meant for persons whose income does not exceed Rs. 6,000 per annum. The Central Government advances funds to the State Governments which, in turn, grant loans to individuals and co-operatives upto 80 per cent of the cost of a house. Loans can also be given to non-Governmental hospitals, educational trusts, charitable institutions and local bodies for construction of houses for their low paid employees. Since the introduction of the scheme in 1954 up to the end of March 1963, the Central Government has provided a total of Rs. 52.3 crores, in addition to the Rs. 1.82 crore advanced by the Life Insurance Corporation under this scheme. The budget provision under the scheme for the current year is Rs. 3.68 crores. The total number of houses constructed under the scheme upto March 1964 was about 840,000.

The U.S. Government has announced the authorisation of a $25-million (Rs. 11.9 crores) line of credit in favour of the Government of India. The credit will be extended by the U.S. Export-Import Bank. Proceeds of the credit will be used to finance the purchase of American capital equipment and services required by the public or private sectors engaged in development programmes and projects within India. The loan is repayable over a period of 12 years commencing in 1967 and bears an interest at 5½ per cent. Three earlier credits for similar purposes have been authorised by the Bank in favour of the Government of India for a total of $225 million (Rs. 107 crores). These credits also financed capital goods such as mining and construction equipment, transportation and earth-moving equipment, communication equipment and machinery for the textile, aluminium, chemical and automobile industries. The first line of credit for $150 million was extended on 27th February 1958; the second for $50 million on 23rd December 1960; and the third for $25 million on 3rd August 1962. In addition to these non-project loans, the Bank has extended credits to a number of Indian enterprises engaged in the manufacture of diesel locomotives, fertilisers, rayon, chemicals, plastics and forgings. Credits have been used by Air-India to purchase its all-jet fleet. The total amount of assistance extended by the Bank to India now amounts to $368 million (Rs. 175 crores). The Bank's assistance is a part of the U.S. Government aid programme to India which now aggregates to $5,348 million (Rs. 2,547 crores).

From Abroad

Messrs. L. M. Ericsson Company of Sweden have signed a contract with the Egyptian Government for supplying telephone components, tools and instruments worth $10,000,000 for the State-operated telephone factory outside Cairo.

The Pakistan Government has decided to establish five or six trade and commercial offices in foreign countries during the next financial year. The New Budget has provided a sum of Rs. 28.94 lakhs for this purpose.

A television broadcasting corporation will shortly be set-up by the Government of Pakistan to run the television stations in the country. The corporation will be an autonomous body with fifty-one per cent of the shares owned by the Government.

Egg production in North American and Western Europe during the current year is expected to be higher than in 1963. When the actual output in these regions was 4,060,000 tons and 3,600,000 tons, respectively. North America accounts for one-third of the world's chicken eggs.

The Governments of Britain and France are considering a proposal envisaging joint geological investigation with a view to speeding up the implementation of the English Channel tunnel project. The total cost of such investigation is estimated at £1-million.

An intensive seismic survey for oil deposits off the Mediterranean shore of Israel has just been launched by Petrocana, a locally incorporated subsidiary of Saneana of Canada. Petrocana, which is entirely foreign financed, has already spent $5-million on offshore prospecting in Israel.

A blueprint for the construction of a 65,000-ton nuclear powered merchant vessel has been presented by a Swedish-Norwegian consortium of leading shipyards called Rederi Atom. The cost of the vessel will be about Kr.66 million ($13,000,000), including Kr.10 million for the light-water reactor unit.

The idea of social insurance has become a reality in Poland. All working people, members of labour co-operatives, cottage industry workers, apprentices of handicraft and industrial workers are insured at present. There are over 8.5 million insured working people. Including their families, the number comes to about 20 million, representing about 65 per cent of the total population of Poland.

Czechoslavakia signed on the 19th inst. a contract for the first loan it will receive from Britain to buy from Britain a complete range of equipment for an ammonia and urea plant, along with necessary patents. The £4-million loan contract was concluded in London by the representatives of the Czechoslavak National Import Agency and the Lazard Brothers Bank. The British Government has underwritten the loan.

The Norwegian Storting (Parliament) has unanimously approved general plans for an economic map project to cover the entire country. The project, which is estimated to cost about £9-million, will be spread over a period of 15 years. It will provide detailed information which can be very useful in planning economic development, new communications and power plants.

PERSONAL

MR C. H. Bhabha, Chairman of the National Shipping Board, has resigned. He was appointed the Board's Chairman a year ago in succession to Mr. G. L. Mehta.

Mr. Govind Narain, Chairman of the Minerals and Metals Corporation of India, is leaving for the United States on 23rd July to explore markets for Indian manganese ore on a long-term basis.

Mr. K. B. Lall, India's Ambassador to Belgium and to the European Economic Community, is likely to be appointed Principal Private Secretary to the Prime Minister, Mr. Lal Bahadur Shastri.

Mr. D. Bose has been re-elected President of the Indian Rubber Industries Association, Bombay, for the current year. Mr. M. M. Patel and Mr. M. S. Vohra have been elected Vice-Presidents.

Mr. M. K. Kidwai, Joint Secretary in the Ministry of Irrigation and Power, has been appointed Ambassador to Saudi Arabia. He is expected to assume charge of the post in November next.

Mr. Wilson M. Compton, Jr., President of the Cameron Machine Company of Dover, New Jersey, has been elected to the Board of Directors of Dorr-Oliver Incorporated, Stamford, Conn., New York, the wholly-owned Indian subsidiary of which is Dorr-Oliver (India) Ltd.

Prime Minister, Mr. Lal Bahadur Shastri, has taken over as Chairman of the Planning Commission. The other Ministers who have been re-appointed as members of the Commission, are Mr. Gulzarilal Nanda, Home Minister, Mr. T. T. Krishnamachari, Finance Minister, Sardar Swaran Singh, Minister for Industry, and Mr. Beliram Bhagat, Minister for Planning. Mr. C. Subramaniam, Minister for Food and Agriculture, has also been appointed as a member of the Commission.

Mr. C. P. A. Garnett, Managing Director of Jenson and Nicholson (India) Limited, will leave for London by air on 28th inst. to attend an International Paint Conference being held by Berger Jenson and Nicholson Limited. The conference, beginning 1st July, will span a ten-day period. It will be attended by delegates from 14 countries. Berger, Jenson and Nicholson Ltd. is the world's largest paint group with a world-wide network of 25 factories serving both industrial and domestic users.

Fifty per cent of the total cost will be subsidised by the State. Provinces and municipalities will pay 30 per cent and ground owners will contribute to the extent of 10 per cent.

While agricultural output in Western Europe and the world, in general, has risen by an average of 30 per cent over the past ten years, farming production in Sweden has remained practically unchanged. Domestic production has been checked through a heavy reduction in labour, which has dropped by more than 50 per cent in the post-war era. A comparison between agricultural producer prices in Sweden and other Western European countries shows that in 1962-63 Swedish prices were on an average 3 per cent higher than those of the E.E.C. countries. However, this average includes somewhat lower Swedish prices for cereals than in E.E.C. In this connection it may be noted, however, that wages in Sweden are much higher than in other European countries.

A proposal for a comprehensive change in Sweden's tax system has been presented recently by an investigating committee. The proposal envisages a combined shift from direct to indirect taxation. The other salient points of the proposal are abolition of the current 6-4 per cent turnover tax and specific taxes, introduction of a 13 per cent "added-value" tax covering a wider field of goods and services, reduction of direct taxes, higher child allowances and payment of certain welfare fees, such as old-age pension fees and certain health insurance fees, by the employer instead of by the individual. The suggested reforms, which are recommended to take effect gradually over the period 1966-70, are expected to alleviate the total tax burden on families with children, while single persons will have to pay more than which they are paying now.

French, American, Russian and Norwegian expeditions will search for oil on Spitsbergen. In addition, purely scientific expeditions from the U.K., Germany, Yugoslavia and Norway will visit the islands. The Russian Company Arctic Ugol, which has mined coal on Spitsbergen for many years, will continue its oil research, although on somewhat smaller scale than last summer when some 100 men took part. The Caltex subsidiary American Overseas Petroleum Company, which has been searching for oil on Spitsbergen since 1960, will send a drilling expert to the islands this summer. Test drilling may start next year if this year's investigations are successful. The French Company, Bureau de Recherches de Petrole, will undertake magnetic and gravimetric as well as geological and geophysical studies. The private Norwegian company, Norsk Polarnavigasjon A/S will continue its test drilling this summer. The Company claims to have found "very promising" layers of oil containing rock. It started test drilling three years ago with very simple equipment.

ELPHINSTONE SPINNING AND WEAVING MILLS CO., LTD.

SPEECH OF CHAIRMAN, MR. N. K. JALAN

HIGHER COTTON OUTPUT AND REVISED PRICES FOR TEXTILES URGED

THE ever-increasing need for raising output of raw cotton was highlighted by Mr. N. K. Jalan, Chairman of the Elphinstone Spinning and Weaving Mills Company Ltd., in his speech at the Forty-fifth Annual General Meeting of the Company held at Bombay on Thursday, 25th June 1964. With the permission granted to the existing units to increase their productive capacity, the demand for cotton, Mr. Jalan declared, was bound to go up. He pointed out how the mills were not in a position to procure cotton to the required extent at reasonable prices even though the ceiling prices for 1962-63 crop and the floor prices for 1963-64 season had been substantially raised. With the country having the lowest *per capita* output of cotton in the world, he strongly urged the adoption of scientific methods of cultivation in order to improve productivity. Mr. Jalan referred to the continuous increase in manufacturing costs and said that, despite such an increase, the mill cloth prices had been stationary since January 1961 when the voluntary price control system was adopted by the industry. He pleaded for an immediate revision of the price fixation formula as the present one had outlived its utility. He also referred to the inadequate supplies of indigenous machinery and called for allotment of more funds for importing the badly required items of machinery.

The following is the full text of Mr. Jalan's speech:

GENTLEMEN,

It gives me great pleasure to welcome you all to this forty-fifth annual general meeting of the Company and, with your permission, I shall take the report and accounts for the year 1963, which have been in your hands for some time now, as read.

We are meeting under the shadow of the greatest catastrophe that has fallen on the country in the loss of our beloved Prime Minister, Pandit Jawaharlal Nehru, who was the jewel of India and the guiding star of the country's destiny for a pretty long period. He had been a source of great strength to the country and the loss to the nation in his sudden demise is irreparable. He was the architect of modern industrial India in that the progress of economic development of the nation can be directly attributed to him. The people will remember him for giving, more than anything else, the most stable government to the nation and laying sound foundations for establishing the largest democracy in the world. It was he who strove hard throughout his life to further the cause of peace in the world and no doubt he will go down in history as one of the wisest among the senior statesmen and leaders devoted to the advancement of human civilisation.

The choice of a successor has fallen very wisely and unanimously on Shri Lal Bahadur Shastri, who is known for his quiet disposition, moderation, integrity, tolerance, mature judgment, yet dynamic ability and a flair for finding solutions to the most complicated problems. Shri Shastri has always identified himself with the hopes and aspirations of the people. I am sure his election would ensure political stability in the country and he will have the enthusiastic and wholehearted support of the entire nation. His unanimous election as our leader goes to prove that the teachings of Mahatma Gandhi and Jawaharlal Nehru for taking united action in times of emergency have been faithfully pursued.

Coming to the affairs of the Company for the year under review, the gross trading profit was Rs. 29,07,662. The working results of the year, I hope, will be considered satisfactory especially in the light of higher costs on all counts and low realisation. Taxable dividend on ordinary shares has been proposed at 18 per cent, same as for the last year.

Production of Cloth

There has been no improvement in the output of cotton textile industry during the past few years. Production of cloth during the year under review was only 4,837 million yards, as against 4,987 million yards and 5,142 million yards during 1962 and 1961, respectively. The existing units were not ordinarily allowed to increase their capacity and the Government was banking more on powerloom production. The uneconomic cost of production also proved a positive deterrent to the increased output in the mill sector.

It is, however, a happy augury that the Government has at long last recognised the necessity of allowing the existing units to increase their capacity and with this end in view has allowed extension of 7½ per cent in spinning and 10 per cent in looms.

Cotton

There was record production of home-grown cotton since independence during 1962-63 season, the total yield turning out to be as much as 57 lakh bales. The crop in 1963-64 is expected to be still better, and the outturn is likely to be in the region of 60 lakh bales. Still, however, there is a very great need for raising the production of cotton to meet the ever-expanding demand of the cotton textile industry and, further so, on account of the expansion of capacity permitted by the Government—but the results achieved so far in this direction are far from satisfactory. In spite of the fact that the ceiling prices for 1962-63 season crop and the floor prices for 1963-64 season were substantially raised, mills were not in a position to procure cotton to the extent required by them and at reasonable prices. It is strongly urged that the traditional methods of farming should be discarded and scientific methods of cultivation be developed and adopted to improve the productivity. Incidentally, it may be noted that production per acre in India is still the lowest as compared with other principal cotton producing countries of the world.

In order to arrest the heavy drain on the country's valuable foreign exchange resources, as a result of importation of long-staple cotton, it is necessary to take some decisive steps to increase the cultivation of this quality inside the country. It will also be necessary to arrange for the imports of cotton on a systematic basis for the production of finer fabrics to make good the shortfall in the domestic production and to advert any consequences of possible cloth shortage.

Cloth Exports

Although our country was able to export a total of 534 million yards of cloth in 1963, as against only 508 million yards in 1962—thanks to the industry's compulsory export obligation scheme—the country's export performance cannot be said to be satisfactory, being much below the export target of 850 million yards. Your mills were able to export approximately 15 per cent of the production of the year, as against about 14 per cent in the preceding year.

Bonus for the year 1962 was paid in December 1963 at the rate of 25 per cent of the basic earnings of the staff and workers, which was at the maximum rate under the agreement arrived at between the Millowners' Association and the Rashtriya Mill Mazdoor Sangh.

The Bonus Commission has already submitted its recommendations to the Government long back and it is still under the consideration of the Government. The main defect of the formula as suggested by the Bonus Commission lies in that the payment of bonus is made to be absolutely unrelated to performance and not in any way linked with the quality and quantity of work that the worker puts in. In other progressive countries, such payment is directly related to productivity. Besides, the recommendations are calculated to especially hit the cotton textile industry, inasmuch as the special requirements of rehabilitation of this industry would not constitute a prior charge for the calculation of bonus under the formula.

It is paradoxical to find that the Bonus Commission has not allowed any amount for rehabilitation as a prior charge for computation of bonus as also the development rebate and surtax. The return at 7 per cent on capital and 4 per cent on reserve used as working capital is much low in the present financial condition of the market. Preference shares give a return of 9½ to 10 per cent. Even debentures give a return of 7½ per cent. The semi-Government loans fetch a return of 4⅜ per cent. In such a state of market, it is ill-conceived to determine a return of 4 per cent on reserve and 7 per cent on capital, while providing nothing for rehabilitation.

In the textile industry, a Rehabilitation Enquiry Commission was set up to enquire into the life of the machinery and the amount of money required for rehabilitation. The amount so determined was colossal, to wit, Rs. 66.4 crores. If no allowance is considered for rehabilitation, how, at a time when the costs of plant and machinery are going up every day, will it be possible to rehabilitate such an old industry?

Rising Cost

In the last few years, I had occasions to refer to the continuously increasing cost of production of this industry. The pressure of higher cost has exerted itself in all directions. The prices of cotton have gone up sharply. The wage bill of the industry has also gone up considerably as a result of the steep increase in the dearness allowance and the increments in the basic wages of the workers awarded in the years 1960 and 1962. Social costs have risen considerably. Employers' contribution to the health insurance scheme of the workers and to the provident fund have been raised. Fringe benefits for workers have been enhanced substantially by the grant of extra casual and privilege leave with wages. Prices of stores, colours and chemicals have also increased. Various new Central, State and Municipal taxes have been imposed on the Bombay cotton mill industry since 1960.

As against this relentless and continuous increase in the manufacturing expenses on all counts, the mill cloth prices have been pegged to the same since January 1961 when the voluntary price control system was adopted by the industry by way of its contribution to the stabilisation of prices. It will, however, be clearly seen that the old formula of fixing the prices of cloth as applied in 1961 has completely outlived its utility and thus needs immediate reorientation.

This price-and-cost inflation has become an institutional feature of our economy and unless positive steps are taken to check the upward thrust of prices and the prices of cloth are allowed to be suitably revised, it would in due course become more and more difficult for mills to face the competition in overseas markets and even to operate on a profitable basis.

Provisions of Last Budget

The Finance Act, 1964, has placed several fresh burdens on the corporate sector. I would especially like to refer to the dividend tax which has sought to curb not only excessive but any distribution by companies by way of dividends on risk capital. This is not reasonable and I would at least urge for a minimum

(Continued on page 1125)

Notice

SHAW WALLACE AND COMPANY LIMITED

DIVIDEND ON PREFERENCE SHARES

THE DIRECTORS HAVE SANCTIONED AN Interim Dividend on the Company's Preference Shares for the year ending 31st December, 1964 at the rate of 2.4975 per share (i.e. Rs. 3/- per share increased in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, less Income Tax at the Company's rate of 25 per cent). This dividend will be paid to Members whose names appear in the Company's Preference Share Register on 15th July, 1964 or their mandatees, subject to deduction of tax under Section 194 of the Income Tax Act.

The Preference Share Transfer Register of the Company will be closed from 4th to 15th July, 1964, both days inclusive.

By Order of the Board,
D. A. HOUGHTON,
Calcutta Director & Secretary.

Registered Office:
4, BANKSHALL STREET,
CALCUTTA, 1.
24th June, 1964.

TREND OF MARKETS

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, *24th June*

Conditions in the short-term money market were very comfortable during the week under review. Funds were available freely, following return flow of money from mofussil centres, and borrowers could obtain their entire requirements without any difficulty whatsoever. Actually, the demand for funds was on a reduced scale, with the result that turnover was somewhat restricted. Inter-bank call rate for both renewals and fresh money was lower at 2½ per cent, whereas, last week, the former stood at 4 per cent and the latter at 3⅜ per cent. Conditions at Calcutta were also comfortable, the call rate declining by a further ¾ per cent to 2¼ per cent.

The distinctly easy tone of the money market is reflected in the following:

1. A sharp fall of Rs. 36.71 crores to Rs. 2,517.28 crores in notes in circulation during the week ended 19th June 1964;

2. A marked decline of Rs. 14.13 crores to Rs. 4.13 crores in loans and advances sought by the scheduled banks from the Reserve Bank;

3. An increase of Rs. 7.49 crores to Rs. 89.21 crores in the deposits of scheduled banks with the Reserve Bank; and

4. Excellent response evoked by the 91-day Government of India Treasury Bills; the total amount offered against the Bills, the tenders for which opened on Tuesday the 23rd inst., was Rs. 4.27 crores, which was more than twice that invited (and also accepted), namely, Rs. 2 crores. The average rate of accepted tenders eased to Rs. 2.995 per cent per annum from Rs. 3.000 per cent which prevailed in the past few weeks. The Intermediate Treasury Bills, too, elicited very good support, the Bills actually sold from the 17th to 20th inst. aggregating as much as Rs. 13.32 crores, as against Rs. 2.20 crores a week before and Rs. 1.29 crore two weeks before.

There was a further drop of Rs. 6.06 crores to Rs. 100.85 crores in India's foreign exchange resources during the week ended 19th June. The decline was accounted for by both foreign securities held in the Issue Department of the Reserve Bank and balances held abroad; the former receded by Rs. 5.00 crores to Rs. 93.46 crores and the latter by Rs. 1.06 crore to Rs. 7.39 crores.

A further fall of Rs. 14.43 crores to Rs. 1,808.94 crores in the total credit made available by scheduled banks to their clients occurred during the week ended 12th June. Their deposits also fell but by only Rs. 5.58 crores to Rs. 2,509.49 crores. Consequently, borrowings from the Reserve Bank receded by Rs. 17.06 crores to Rs. 18.37 crores, of which the share of those against usance bills was Rs. 5.53 crores, a drop of Rs. 2.67 crores. Total cash declined by Rs. 1.55 crore to Rs. 150.57 crores and investments by Rs. 64.66 lakhs to Rs. 619.86 crores.

In the context of the easy money conditions, it was natural that the Gilt-edged securities, especially the short-dated Central loans, should have evoked good support during the week. 3½ per cent 1969 rose by 15 nP to Rs. 98. 3½ per cent 1967 and 3 per cent 1966-68 gathered 10 nP each to Rs. 99.85 and Rs. 98.20, respectively. 2½ per cent 1976 advanced by 50 nP to Rs. 83. 3 per cent non-terminable picked up 25 nP to Rs. 63.50. Among State loans, 4½ per cent 1974 Gujarat spurted by 35 nP to Rs. 99.60 and 4 per cent 1968 Mysore by 20 nP to Rs. 99. 4 per cent 1968 Kerala put on 10 nP to Rs. 98.50.

Market circles are eagerly awaiting the official announcement of the Central Government's loan programme. The annoucement is expected any day now. The 1964-65 budget, it will be recalled, provides for a market borrowing of Rs. 295 crores. Since a sum of Rs. 141.52 crores has already been obtained from the recent conversion offer, the cash loans are expected to aggregate about Rs. 155 crores. The distinctly easy trend now prevailing in the money market is considered propitious for the Centre launching the second tranche of its borrowing programme. The State Governments, too, will enter the market later in the slack season, presumably in the second half of August or early in September. Eleven States have indicated their market borrowing programmes covering a total of Rs. 47 crores (net of redemption of maturing loans and other obligations). It is likely that the actual net borrowings may turn out to be larger, considering that Maharashtra, Punjab and Orissa, which have not indicated their programmes, may also approach the market.

In the foreign exchange market, the banks' selling and buying rates for U.S. dollars improved by 25 nP each to Rs. 475.25 and Rs. 475.75 per $100, respectively. In New York, the pound sterling weakened *vis-a-vis* the dollar, the spot rate declining by 0.120 cent to 279.350-279.380 cents and the three months' forward by 0.100 to 278.970-279.000 cents.

SPURT IN PURE GOLD

(From Our Own Correspondent)

BOMBAY, *24th June*

The firmness of gold bullion noted last week continued unabated this week. Pure gold, in unofficial trading, shot up from Rs. 118 to Rs. 129 per 10 grams. The spurt in gold was due to paucity of stocks, good demand and fall in arrivals. Smuggling activity, it was said, had been nearly paralysed with the commencement of rains. Fourteen carat gold advanced by 25 nP to Rs. 71.50. Sovereign was fully steady at Rs. 92.

Silver showed a different trend this week, shedding some of its gains of last week. This was due to increased daily average arrivals of 25 bars, as against 15 bars last week, whereas the offtake remained unchanged at about 10 bars a day. Thus the white metal of .996 fineness began the week at Rs. 252, same as last week, and receded gradually to Rs. 247.50 today.

The International price for gold at London went up slightly from $35.07⅛ to $35.07⅜ per fine ounce. The sterling price also moved up from 251s. 0½d. to 251s. 1½d. Both ready and forward silver remained unchanged at 111⅛d. and 111⅜d., respectively, as also silver in New York at 129.3 cents.

It is understood that the Central Government has rejected the plea of the All-India Sarafa Association to extend the last date beyond 9th July 1964 for the submission of memoranda to the Select Committee on the Gold Control Bill. The Select Committee has invited comments, memoranda and suggestions from the public concerned to reach them by that date. The Association sought extension of time limit, as it had not received sufficient copies of the Bill to distribute amongst its members. Some members of the trade who are rather upset by the Government's rejection of their plea and have asked the Association to take vigorous steps to put forth its views before the Select Committee in time.

The following table shows the trend of prices during the week under review:

	24-6-64 (closing)	High	Low	17-6-1964 (closing)
SILVER				
Ready (996 fine) ..	Rs. 247.50	Rs. 252.00	Rs. 247.50	Rs. 252.00
GOLD				
Ready (14-carat) ..	71.50	71.50	70.25	71.25
Sovereign ..	92.00*	—	—	92.00*
London—				
Gold	251s. 1½d.	251s.1½d.	250s.11½d.	251s.0½d.
Silver Ready ..	111⅛d.	—	—	111⅛d.
Silver Forward ..	111⅜d.	—	—	111⅜d.
New York—				
Silver	129.3 cents	—	—	129.3 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce. * Unofficial rate.

OILSEEDS MOVE UP

(From Our Own Correspondent)

BOMBAY, *24th June*

The most outstanding feature of trading in the oilseeds market during the week under review was the sustained firmness of groundnuts and groundnut oil which rose to touch record high levels. The volume of business was pretty large. Castorseeds were firm almost until the last day when it suffered a moderate reaction. Linseeds, though dull, were well held, but cottonseeds were a neglected counter. Groundnut oil had closed the previous week at around Rs. 22.80 per 10 kg. but was bid up to Rs. 23.90 during the week under review. The undertone was firm. Sentiment in the groundnuts section was induced by the continued demand for oil from *vanaspati* manufacturers who bought sizable quantities almost every day of the week, with the turnover averaging 200 tonnes a day. The provocation for aggressive buying by the industry was due presumably to the fact that *vanaspati* could now be sold at the manufacturers' price following the virtual scrapping of the voluntary control on production. Almost all varieties attracted demand and the turnover was of the order of a thousand bags a day.

Knowledgeable sources feel that, if at all the market is due for a change, it should be for a rise. For one thing, United Kingdom and Continental advices indicate a firm tone. In London, groundnut oil has improved from £113 to £122 per long ton. Secondly, Burma is reported to be an active buyer of Nigerian oil and, evidently, the resellers of this oil are covering their short positions. How important is the influence that Burmese demand exerts on world prices can be inferred from the fact that, while, in 1961, this country imported hardly around 2,000 tonnes of groundnut oil, its offtake in 1963 went up to as much as 4,500 tonnes. During the current year, Burma is credited with having already bought 27,000 tonnes from India and 50,000 tonnes from Nigeria. At present, India does not seem to have much to offer and sellers here are holding off in anticipation of a further rise in prices. It is said that Burma is in the market for a further 50,000 tonnes of oil and a like quantity of seeds. This gives an idea of the probable pressure on world groundnut oil in the days to come.

Operators in castor futures paid scant attention to the imposition of a weekly price range limit of Rs. 2, announced by the Forward Markets Commission on Tuesday this week, and took the September contract to a record high of Rs. 180.50, while bears came forward to cover their short positions. In Kerb, the rate was Rs. 182.50. Against the previous week's closing of Rs. 178.87, the September contract opened at Rs. 179.12 and, after fluctuating in a moderate range, reached Rs. 180.50. The courage of bulls, however, failed on Wednesday when marginal operators liquidated their positions nervously on fears that the F.M.C. was likely to come out with margins. The September contract, as a consequence, declined to Rs. 179.75.

Market men felt that the last minute reaction would prove short-lived provided, of course, no margins were imposed. Factorwise, sentiment continued to be induced by persistent demand from export houses. The United Kingdom was said to be in the market for castor oil and communist countries were also active. Trading in the maturing June contract was mostly of a switchover type.

Prices in the spot section tended to look up and, despite the slight reaction towards the end of the week, closing levels were generally better on balance. Castor Madras small was done at Rs. 35.12, as against the last week's closing of Rs. 34.87. Gujarat small improved from Rs. 34.87 to Rs. 35.12. Cutch small and Kanpur bold ended the week at Rs. 35.12 and Rs. 34.12, respectively, as against Rs. 34.87 and Rs. 33.75 a week before. Castor oil commercial rose over the week by 40 nP to Rs. 14.15 and oil B.S.S. by 30 nP to Rs. 14.75.

Linseeds were dull with the June contract pegged at Rs. 43 per 50 kg. and the volume of business in this contract was rather small. The ceiling in the September contract was raised to Rs. 45 per 50 kg. and the market was hovering just a little below this level at Rs. 44.62.

Lack of interest in linseeds was as it should be, for there was virtually no export business in linseed oil. Price movements were guided mainly by mustard oil which advanced to Rs. 3,000 per tonne in Uttar Pradesh and, in West Bengal, it was quoted around the ceiling of Rs. 3,225. The effective price was said to be higher still.

Cottonseeds were a neglected counter and, there were occasions when rates were not even quoted.

Groundnut expeller cakes also touched a record of Rs. 495 per metric ton in Bombay and extractions were quoted as high as Rs. 415 per metric ton. The main factor was aggressive buying by East European countries. The absence of hedge facilities also compelled extraction manufacturers to bid up prices. Informed sources think that high prices will affect exports. It is said that the United Kingdom has followed the rise rather reluctantly. Currently prices in London are £37/15 for July, £37/10 for August and £37 for August-December.

The following table shows the closing prices of oilseeds and oils on 24th June as compared with those of two previous weeks.

	24-6-1964	17-6-1964	10-6-1964
Groundnuts	Rs.	Rs.	Rs.
Nizam bold	61.25	59.00	58.50
Khandesh quality	62.00	60.50	59.00
Oil ex-mill	24.25	22.95	22.65
Oil Rly. Receipt	23.80	22.65	22.40
Castorseed			
June 1964 contract ..	177.00	176.12	176.25
September 1964 contract ..	179.75	178.87	177.25
Ready Madras	35.12	34.87	34.50
Ready Kanpur	34.12	33.75	33.50
Oil B.S.S.	14.75	14.45	14.55
Oil commercial	14.15	13.75	13.75
Linseed			
June 1964 contract ..	42.97	42.94	42.94
September 1964 contract ..	44.62	44.47	44.06
Bold ready	46.25	45.00	44.75
Linseed oil	19.10	18.30	18.00
Cottonseed			
July 1964 contract	102.00	104.50	105.00

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

PEPPER STEADY

(Messrs. Parekh and Co.)

BOMBAY, *22nd June*

Despite absence of inquiries either from the U.S.A. or from East European countries, Malabar black pepper was steadily held during the week because of the following reasons:

1. Growers are holding off in anticipation of a fall in demand from the U.S.A. and Europe.

2. Whatever little business is passing in the local market on the coast, it is from stock under loan in the assemblying centres. Whenever the market becomes soft, one of the bulls is making token purchases with a view to supporting the market and keeping up the bullish psychology built up during previous months.

3. Insufficient rain in some part of Malabar has given handle to bulls for making bullish propaganda. Repeated showers in the area have, however, belied the fear of drought and consequent shorter crop. It is too early to forecast the size of new crop at this stage.

4. To sustain the morale of the spot market, the bulls are off and on supporting the futures on both the rings at Cochin and Bombay.

During the week, there was small demand amounting to a couple of bags from Pakistan which was responsible for a slight advance in ready at Bombay. Improvement in ready helped longs in the futures for *Jeth* which otherwise would have gone down because of the proximity of maturity date. Most of the outstanding business in *Jeth* was switched to *Shravan*, after paying *badla* charges of Rs. 14. Bulls who were carrying forward their long positions from one month to another after paying heavy penalty in the form of *badla* charge may soon become disillusioned if no improvement is coming forth during July-August, as, after this period, there will be a very small chance of demand coming from the U.S.A. because, then, the new crop of Lampong will be coming in the market.

Ungarbled, after going down to Rs. 328, improved to Rs. 336, while garbled rallied from Rs. 338 to Rs. 348. The futures on the Cochin ring is moving within a narrow groove with turnover very thin. The futures on the Bombay ring firmed up from Rs. 349 to Rs. 365, owing to short covering and manipulation by long in *Jeth* delivery.

Spot in New York was down from $0.34 to $0.31½ with grinders unwilling to buy without concession. Indonesia is reported to be offering June-July and July-August on the parity of $0.29½ to $0.30. Speculators in New York are reported to be offering Brazilian pepper for August-September at $0.27, but, so far, nothing definite is known.

Singapore is reported steady for black at $(M) 107½, but there are reports that Sarawak is offering black at about 24d. c and f main European ports direct from Sarawak.

The future appears uncertain and is, for all purposes, depending upon the selling policy of Lampong.

Though there are no arrivals of Lampong from Indonesia to Singapore direct, there are rumours

that some parcels of Lampong are reported to have been re-directed either from Japan, Hong Kong or Europe.

Ready pepper in the local market is quoted at Rs. 182.

BLACK LEAF TEA FIRM

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *18th June*

Once again, a larger quantity amounting to 861,000 kgs. was offered in sale No. 24 held on Tuesday the 16th inst. Quality of medium teas was similar to that of last week's offerings, but many highgrowns showed an improvement. Good general demand continued and, where quality was maintained, prices ruled firm. Otherwise, they were irregular and occasionally easier, but there was better support for fannings grades. There was a limited selection of best liquoring nilgiris teas on offer which were sold at irregular rates, but the lesser highgrowns were occasionally dearer where quality was improved; otherwise, they were irregular and sometimes lower. Fannings in these categories encountered strong competition, whereas the more fibrous kinds were sold at further discounts. All medium brokens came to a somewhat irregular market, but the plainer more stalky descriptions were easier. Good medium fannings were fully firm and occasionally dearer, but medium kinds tended lower; low mediums were often dearer. Black leaf sorts came to a fully firm market, as did plainest descriptions. There was generally better enquiry for whole leaf grades, but liquoring descriptions were sometimes easier, as were tippy teas. Unorthodox descriptions ruled firm to dearer.

The quotations (per kg.) were:

	1964	1963
	Rs.	Rs.
Low mediums	4.00-4.40	4.00-4.15
Mediums	4.30-4.60	4.20-4.35
Good mediums	4.60-5.10	4.40-5.10
Nilgiri B.O.P.	4.40-7.20	4.40-5.55

The average price realised in the leaf sale No. 24 was Rs. 4.31 per kilo, as against Rs. 4.32 a week ago and Rs. 4.16 in the corresponding sale last year.

In Dust sale No. 24 held today, 355,000 kgs. were offered. The market met with active demand. Highgrowns were sold well at enhanced rates. Travancores were generally dearer, but Wynaad sorts tended irregular. There was good enquiry for residuals and they were generally sold well. Unorthodox descriptions were somewhat irregular but usually firm.

The average price realised in dust sale No. 24 was Rs. 4.25 per kilo, as against Rs. 4.20 a week ago and Rs. 3.93 in the corresponding sale last year.

Colombo: Just over 7¼ million lbs. were offered this week and the market opened to a fair general demand at rather lower rates for all descriptions except coloury highgrowns and mediums which were firm.

London: *North Indian and other growths*: In Monday's auction, there was fair demand, but, as most of the North Indian teas were of end-of-season description, these came to an irregular and easier market. Ceylon and South Indians: Offerings in Tuesday's sale came to a strong market and prices were fully firm.

As we go to press, Messrs. Forbes, Ewart and Figgis Private Ltd. wire us as follows:

"*Leaf sale No.* 25: 779,000 kgs. Good general demand. Low mediums and mediums irregularly five to ten paise dearer. Good mediums fully firm. Highgrowns irregular but firm. Quality unorthodox dearer. Whole leaf strongest feature."

MILLS BUY MORE RAW JUTE

(From Our Own Correspondent)

CALCUTTA, *23rd June*

With their need to complete the current quota, mills showed more attention in the raw jute market during the week under review. Jute goods were also steadier, as a result of more inquiries from overseas buyers for both hessian and heavy goods, and satisfactory statistical position. Despite the shortage of lighterage, shipments of goods were satisfactory during the week. Internal buying was also swift, and Government of India's tenders for B. twills continued to be featured intermittently. Traders hoped that the earlier expectation of an increase in internal consumption of heavy goods this year would be fulfilled.

Burlap quotations from the New York market were unchanged, and the news that U.S. consumption of burlap last month was only 63.5 million yards, as against 74 million yards in April 1964 and 76 million yards in May 1963, caused disappointment, but, if this failed to leave an impact on prices during the week, the cause was the good business done with the U.S. in hessian. Inquiries indicated that the U.S. buyers preferred to enter into commitments for replenishment of stocks. For they would not have failed to note that, despite their measured support in recent months, hessian prices had remained steady, albeit at lower levels. The U.S. buyers had earlier been reported to be looking forward to a further decline in prices, but, though the mills exhibited anxiety to sell for all positions in recent weeks, they had realised that inviting business by lowering prices further would lead to losses. It is this realisation on the part of overseas buyers that culminated in more overseas inquiries during the week under review, leading to steadier prices. It is, indeed, a disappointment to note that the average monthly consumption of burlap in the U.S. for the first five months of this year has been only 73.04 million yards, as against 78.93 million yards and 76.80 million yards in the corresponding periods of 1963 and 1962, respectively. In the context of the continuing boom in U.S. business conditions, the fall in burlap consumption has led to apprehensions that burlap is giving place to substitutes or that the recourse to bulk handling methods is more rapid than generally believed.

Against this background, the report that a U.S. firm has discovered a synthetic substitute for jute carpet backing cloth has caused real concern. It is on account of the good prospects for jute carpet backing cloth that the mills in India have installed about 2,000 broad looms at considerable capital costs in the last two years. Production of jute carpet backing cloth in India has, however, proceeded faster than demand, but market surveys have led to the conclusion that demand for this speciality in the U.S. would increase rapidly. If now jute carpet backing cloth is to compete with the synthetic substitute, there is the fear that the mills would be prevented from raising production of this speciality to the level of installed capacity. The U.S. firm, it is further reported, has already begun to produce the substitute, which is a non-woven fabric coming from petro-chemicals, on a commercial scale, and proposes to market the same at a comparable price as that of the jute fabric. It is also reported that a number of European and U.S. firms specialising in the petro-chemical industry have planned to use their surplus capacity to produce non-woven fabrics. From Philippines has come the news that research is being undertaken to produce a carpet backing material from abaca. Concern is also entertained from the Pakistani shift of emphasis from sacking to hessian and specialities. At the same time, the revision of export duty on raw jute in Pakistan would enable overseas jute mills dependent on Pakistan fibre to lower production costs, though, for the time being, this possibility is ruled out by the rise in fibre prices in Pakistan.

The publication of May output figures has confirmed the earlier view that the mills' despatches exceeded production. The fall in output to 101,600 tonnes (hessian 43,400 tonnes, sacking 38,500 tonnes, carpet backing 7,400 tones and miscellaneous goods 12,300 tonnes) from 103,700 tonnes in April 1964 (hessian 44,400 tonnes, sacking 39,300 tonnes, carpet backing 7,300 tonnes, and other goods 12,700 tonnes) is explained by the shorter number of hours worked as a result of holidays. Taking into account the stocks at the end of April 1964 amounting to 128,900 tonnes, the total availability in the month was 230,500 tonnes. Stocks at the end of May being 125,000 tonnes, it follows that demand in the month was of the order of 105,500 tonnes, which, in other words, exceeded the month's output by 3,900 tonnes. Such a result, despite difficulties at the Calcutta port, has been noted with satisfaction, but it may as well be that despatches through surface routes against internal consumption have risen. The despatch details for May are, therefore, awaited with interest.

With the marketing of selected grades from the old crop having practically ended, mills showed scattered interest in lower grade jute and mesta. With the breaking of the monsoon during the week in this part of the country, holders of the old crop were anxious to find buyers. The new crop was being offered for forward delivery at Re. 1 per maund higher than the minimum prices, but mills were not prepared to enter into commitments unless quotations came down to the minimum levels. Ready delivery old crop was quoted as follows: Assam bottoms Rs. 30.00; northern bottoms Rs. 29.50; and daisee bottoms Rs. 33.00.

The increased interest shown by overseas buyers led to steadier conditions in goods during the week. While Argentina continued to buy small quantities, U.S. buyers showed sustained interest. Although the fall in U.S. burlap consumption was a disappointment, it was hoped that U.S. buying would gather momentum in the coming weeks. As regards heavy goods, both West Africa and Burma effected substantial purchases. The Government of India continued to issue tenders for B. twills. On Tuesday last, ready hessian 40" 10 oz. fell from Rs. 44.45 to Rs. 44.30 on the news of the fall in U.S. consumption of burlap in May, while ready B. twills rose from Rs. 113.30 to Rs. 113.70 as a result of keen demand for ready goods and steadiness in near-delivery positions. Short-covering in ready goods was a feature on Wednesday and, as a result, hessian 40" 10 oz. recovered to Rs. 44.40 and B. twills gained to Rs. 113.90. At this stage, Government tenders for B. twills pushed up sentiment, and ready B. twills jumped to Rs. 115.00 on Thursday. Hessian 40" 10 oz. was firm at Rs. 44.35. Mills turned sellers at these levels, but, while B. twills eased fractionally to Rs. 114.90, hessian 40" 10 oz. firmed up to Rs. 44.50 on Friday. Over the week-end, a Government tender for B. twills was again a feature, but ready B. twills fractionally eased to Rs. 114.80, since business from other quarters was lacking. However, hessian 40" 10 oz. was better at Rs. 44.45. With B. twills at Rs. 115.40 and hessian 40" 10 oz. at Rs. 44.45, conditions were steadier yesterday, as reports of heavy rains in Assam caused the apprehension if floods would affect the jute crop.

Notice

LARSEN AND TOUBRO LIMITED

Registered Office:

I. C. House, Dougall Road, Ballard Estate BOMBAY-1

NOTICE IS HEREBY GIVEN THAT THE Register of Members and Share Transfer Books of the Company will be closed from Tuesday the 14th July, 1964 to Wednesday the 12th August, 1964, both days inclusive.

L. & T. (MANAGEMENT) PRIVATE LIMITED,

N. M. DESAI,
Director,
Managing Agents.

Dated: 27th June, 1964.

FOODGRAINS SHOOT UP

(From Our Own Correspondent)

HAPUR, *22nd June*

All cereals, including pulses, continued to rule firm during the week. Poor arrivals in the face of brisk consumer support were the main influencing factors. Reports of alarming food situation with constant soaring prices of all grains have been received from many parts of U.P. The Chief Minister of U.P. has, however, said that the food situation in the State was well under control. The State Government is reported to have adequate stocks to meet the demand of the consumers, and the number of fair price shops has been increased to 12,879 in May, as against 4,782 in November last. The U.P. Food Minister, Mr. Negi, has suggested that wheat growing States should be asked by the Centre to build up buffer stocks starting with the next *rabi* harvest, and for this a levy system should be adopted as in the case of rice.

Wheat advanced by Rs. 2 to Rs. 2.50 per quintal according to quality during the week on brisk support from east U.P. traders and local consumers. Arrivals were poor and estimated around 1,200 to 1,500 maunds daily and local stocks were put around 2,000 quintals. Average quality was now quoted between Rs. 58.50 to Rs. 62.50, and farm produce between Rs. 64.50 to Rs. 57.50 per quintal against the controlled rate of Rs. 43 per quintal, at fair price shops. Firm trend was witnessed in the rice market also, and the price rose by Re. 1.34 to Rs. 2.50 per quintal according to quality on heavy seasonal demand in the face of poor supply position due to meagre stocks. Week-end prices were:—Rice *basmati* superior Rs. 96.45 to Rs. 99.13; *sela basmati* Rs. 93.77 to Rs. 96.45; *mainpuri* Rs. 75.02; *ramajwayan* Rs. 83.06; *raimunia* Rs. 84.40 and *gadda* Rs. 77.70 per quintal.

Gram firmed up by Rs. 2 to Rs. 2.50 per quintal following the ban imposed on the export of the commodity from Punjab. Later, the U.P. Government also banned the export of gram. Arrivals of gram were small. Local produce was now quoted at Rs. 61.50 and Punjab quality at Rs. 60.50 per quintal. Barley and *bejhar* continued firm on good demand. Barley was now quoted between Rs. 45.50 to Rs. 47.50 and *bejhar* between Rs. 45.50 to Rs. 47.75 per quintal. *Juwar* and *guwar* prices held steady as demand continued for seed purposes. *Methi* ruled quiet, while oats attracted good demand. Week-end prices were:—*Guwar* Rs. 58.94 to Rs. 61.62; *methi* Rs. 52.50 to Rs. 55; maize Rs. 44.25 to Rs. 46.40 and oats Rs. 59 to Rs. 60 per quintal.

Steadier conditions continued in the pulses market and prices in all the sections registered further gains on small arrivals, coupled with meagre stocks. Peas rose by Rs. 2 to Rs. 3 per quintal according to quality and was quoted between Rs. 55 to Rs. 57.50 and farm quality between Rs. 58 to Rs. 60 per quintal. Peas *dal* prices also advanced to Rs. 57.50 per quintal. *Arhar* also ruled firm as stocks with trade were reported to be nominal, and prices now ranged between Rs. 71 and Rs. 75.02 per quintal. *Urd* and *moong* were steadier in sympathy with peas and *arhar*. Other sections also reported a firm trend. Week-end prices were:—*Arhar dal* Rs. 93.77 to Rs. 99.13; *urd dal* Rs. 85.74; *moong dal* Rs. 102.50; *masoor dal* Rs. 84.50; and *gram dal* Rs. 66.98 per quintal.

"KHANDSARI" STOCKS FREEZED

(From Our Own Correspondent)

HAPUR, *22nd June*

A steadier trend was in evidence in the crystal sugar market during the week, as the supply position deteriorated further. Demand continued to be brisk, following freezing of *khandsari* stocks by the State Government. In order to ease the supply position, the U.P. Government proposed to utilised the *khandsari* stocks seized. Sugar in the open market touched a new height upto Rs. 175-Rs. 180 per quintal, as against the controlled price of Rs. 130 and, in retail, the commodity was not available even at Rs. 2 a kilo.

Trading in *khandsari* here as well as in other important centres of Muzaffarnagar, Bareilly and all over U.P. came to a standstill following freezing of stocks by the State Government. Such seizure aggregated over 60,000 tons. Arrangements to distribute these stocks through fair-price shops were being made and, as trade and *khandsari* producers were clamouring for an increase in prices, it was gathered that the U.P. Government was reconsidering the fixation of *khandsari* prices at Rs. 120 per quintal and prices might be enhanced. After the seizure of *khandsari* stocks, *goora* prices touched new heights upto Rs. 2.25 a kilo.

Ready *gur* stayed steady here during the week on revival of demand against import permits received. Week's offtake was four wagon loads mostly to Gujarat and Punjab and local stock shrank to about 14,000 quintals. Daily arrivals from producing ends were small at an average of 200 maunds. Cane crop prospects were fair as yet, but most of it would depend on monsoons which is now expected shortly. *Shakker* was very much in request during the week, due to dearth of sugar in the markets and prices of the commodity touched new heights. Week-end prices (in rupees per 40 kilogram) were:—*Gur pansera* 30; *dara* 29.25; *kotha* selected 30; dry-wet 28.75; *shakker* 31 to 33.50.

After an early improvement, *gur* and *shakker* sustained sharp losses during the week in the Muzaffarnagar market on selling pressure. Despite demand from Gujarat, Maharashtra and Punjab, prices eased by upto Re. 1 per 40 kilogram on fears of Government measures to check the rise in prices of essential commodities. *Gur pansera*, however, attracted support from West Bengal. *Ladoo* quality ran down by Rs. 2 per 40 kilogram on want of support. *Shakker*, too, was depressed and week-end prices (in rupees per 40 kilogram) were:—*Chaku* 31 to 32; *pansera* 30; *khurpapar* 32 to 33; *laddoo* 30 to 33; *shakker* 33 to 41.30.

COTTON FUTURES ERRATIC

(From Our Own Correspondent)

BOMBAY, *24th June*

The buoyancy which prevailed in cotton futures towards the end of last week, continued during the beginning of the week when the Jarilla August Contract touched a high of Rs. 740.75, on buying by speculators influenced by reports of absence of rains in some of the cotton growing tracts. The high level induced profit-taking and the upward momentum received a check. The stern warning issued by the Forward Markets Commission about the unhealthy speculation resulting from the option deals also helped to restrain the rising trend. The warning had a perceptible effect and, on the following day, trading in futures was characterised by a subdued trend. There was some unloading by upcountry operators who had played a very prominent role in the earlier bullish activity. In the latter half of the week, especially towards the close, the Contract moved erratically on alternate bouts of buying and selling.

The Jarilla August Contract which had closed at Rs. 736.25 last week touched a high of Rs. 740.75 on the first day of the week (that is, 18th June) and came down to Rs. 731.25 by the middle of the week, thus losing 9.50 points within a period of four days. The Forward Markets Commission's warning started the downward trend, which was accentuated by reports of good rains in Akola, Marathwada, Berar and Vidharbha districts. Thereafter, the Contract moved forward, subject to irregular fluctuations, to touch Rs. 740 again on Wednesday, before closing lower at Rs. 736. Bear-covering at the lower levels, firmness of other markets like that of oilseeds, and encouraging advices from the spot market tended to pull the Contract upwards, while the desire to book quick profits by the bulls prevented a continuously rising trend.

At the Sewri spot market except for some moderate activity, there was no special development. Domestic varieties were in restricted demand from the mills. Selected lots of L.147, Co2, Laxmi and Digvijay varieties changed hands. Towards the end of the week, trading became thin. The following are the latest available quotations for some of the popular varieties:

Dhulia Rs. 1,055; Hubli Laxmi Rs. 1,141; Khamgaon Rs. 1,010; and Nagar Co2 Rs. 1,101.

Among foreign varieties some stray business was transacted in Sudan cotton for July shipment. Though spinners' interest in Egyptian was keen, no actual business was reported in absence of finalisation of the Indo-Egyptian Trade Agreement. Export business was at a standstill. Japan and other importing countries preferred to wait and see as to what India would do in regard to the export duty on cotton. The East India Cotton Association is said to have moved the Ministry of Commerce for the abolition of export duty on cotton, as a sequel to the reduction of duty on cotton by 40 per cent in Pakistan. The Association has also advised the Government to give a rebate of 50 per cent in the railway freight on cotton exports, as freight rates in Pakistan are much lower. Another suggestion made by it is that sales tax on cotton sold for export must be withdrawn. Not only has Pakistan already done this, but it has also been suggested by the Saraiya Committee which recently went into the question of sales tax on exports of all goods.

BETTER DEMAND FOR TEAS

(From Our Own Correspondent)

CALCUTTA, *23rd June*

Fair demand was in evidence during the external sale held yesterday. In last week's internal sales also, better demand prevailed as the proportion of tea on offer with improving liquors showed an improvement. Tea shipments were satisfactory during the week, and space in prompt loaders for the United Kingdom and the Continent was difficult to be obtained. Forward space was, however, easier. Tea arrivals have gathered momentum, but it is apprehended that floods may cause some hold-up. Already, the water level in the Brahmaputra has alarmingly risen.

Export buyers are proceeding cautiously, and the average price of leaf realised so far in the new season's sales has been only Rs. 6.26 a kg. as against Rs. 6.77 a kg. for the same period in the last year. In view of the trend for a bumper crop, buyers expect more favourable prices and are in no hurry to enter into commitments. Up to the end of May, the North-East Indian crop amounted to 57,771,025 lbs., showing a rise of 8,423,625 lbs. as compared with the corresponding period in 1963. Similarly, other producing areas, excepting South India, have recorded higher figures. Up to the end of April, South Indian production totalled 46 million lbs., showing a shortfall of 13 million lbs. Up to the end of May, Pakistani output at 9.87 million lbs. represented a rise of 3.41 million lbs. Ceylon produced 174 million lbs. up to the end of April, as against 166.56 million lbs. East Africa and Mozambique (P.E.A.) produced 37 million and 11.46 million lbs., respectively, up to the end of March, as against 31.12 million and 9.60 million lbs. These figures only confirm the earlier forecast that in this year tea producing countries would need to send to world markets more tea than in 1963. Stiffer competition is, therefore, in store, and the Indian industry is worried about rising costs.

In last week's internal sales held in Calcutta, dusts on offer totalled 6,291 chests, including 282 chests of old season's teas. There was a better general demand, and teas with improving liquors were particularly favoured. C.T.C. teas, barring the first flush offerings, came to a dearer market. Prices of orthodox teas were maintained, but there were withdrawals of this category. Legg-cut teas were in better demand. No quotations were issued in view of the limited quantity of suitable teas on offer.

Strong general demand was accorded to leaf on offer totalling 20,733 chests during yesterday's external sale. The strongest features were the brighter liquoring Assams and Dooars C.T.Cs, prices of both of which appreciated. Other C.T.Cs were in good demand, although prices were irregular. The ordinary Darjeelings eased, but the bright flavoury Darjeelings were absorbed at higher rates. Orthodox teas eased, but those with improved quality realised higher prices. Quotations per 1 kg. inclusive of excise duty (given for the first time since the present series of sales began a few weeks ago) were: best Assam C.T.C. fannings Rs. 7.50 to 8.50, medium Assam C.T.C. B.P. Rs. 5.80 to 6.80, best Assam C.T.C. B.P. Rs. 7.50 to 8.50, medium Assam C.T.C. fannings Rs. 5.80 to 6.60, clean plain pekoe Rs. 5.20 to 5.40, plain B.P. Rs. 4.50 to 4.70, and plain fannings Rs. 4.30 to 4.50.

EXPORT BUSINESS IN KIPS POOR

(From Our Own Correspondent)

MADRAS, *22nd June*

Tanned cow hides were slightly firmer than last week, following good demand for light weight cow hides for shipment to U.K. Inquiries for other lines were small and selective. Ordinary marks were not in demand. U.S. interest in buff calf or lights was absent. Export trading in kips on the whole was poor.

In the tanned skins section, there was good call for light weight goat skins, all selections, but inquiries for higher averages were poor; and this detered shippers from accepting orders for light weights alone, in a big way. Demand for 8/9 lbs. average was patchy and that for higher weights negligible. In sheep skins, primes and semi-primes were held steady, but the volume of business was not much. In middle class, top selections were in demand but not lower ends. In the local market, prices remained firm and were unworkable for exporters.

The following were the ruling prices per lb. for all round lots in the local market:

		Rs.
Tanned cow hides	8/8½ lbs. average	2.06 to 2.12
Tanned buff	12/14 lbs. average	1.80 to 1.90
Tanned buff calf	1½/2 lbs. average	2.90 to 3.00

ZINC RISES, TIN STEADY

(From Our Own Correspondent)

CALCUTTA, *23rd June*

While zinc continued to rise and tin was steady but unchanged, both lead and copper scrap eased a little in the Calcutta metal market during the week under review. Prices on the London Metal Exchange showed a steady rise.

Tin in Calcutta was maintained firm at Rs. 2,800 per 100 kgs. The improvement in the stock position—imports into India in May 1964 totalled 737 tonnes as against 288 tonnes in the previous month and 298 tonnes in May 1963—prevented the price from rising further. On the L.M.E. spot tin opened at £1,190 a ton and steadily rose to £1,220. At £1,182 the three-months' quotation gained £17. Prices in the Far Eastern markets also advanced. The rising trend reflects the low level of warehouse stocks in London, although the end of the strike in the Bolivian tin mines has been a matter of satisfaction. On the other hand, labour troubles have brought to a standstill Nigerian tin movements to the world markets. World markets are avoiding a breakdown in supplies only on account of timely releases from the U.S. strategic stockpiles. The U.S.A.'s total releases in this year would be 20,000 tons, which is estimated to be the effective gap between production and consumption. Tin released from U.S. stockpiles is free to be exported to all countries excepting Mainland China.

Following good demand, spot lead in London closed higher on balance at £90⅞ after opening at £89½. In Calcutta, virgin lead at Rs. 297 eased by Rs. 3. The fall was attributed to consumers' reluctance to follow the rising trend. Moreover, with imports into the country in the last month having substantially risen to 5,463 tonnes from 657 tonnes in April 1964, the stock position has recorded a marked improvement. On the other hand, zinc imports in the last month were only 3,788 tonnes as against 6,030 tonnes in the previous month and 7,037 tonnes in May 1963. The deterioration in the stock position was naturally reflected in the price rising from Rs. 308 per 100 kgs. to Rs. 311. In London, spot zinc touched a new high at £136 a ton. The three-months' metal hardened from £117⅞ to £122½. On the other hand, spot copper wire-bars in London closed lower at £295 after opening at £300. At £284 and £285 spot copper cathodes and fire-refined copper disclosed losses of £6 and £1, respectively. The closing rates for the forward position were £278 and £274, respectively, as against the opening rates of £284 and £278. Utensil copper scrap in Calcutta was steady at Rs. 675. Demand was moderate. Although May imports of copper totalled only 6,141 tonnes, as against 10,252 tonnes in the previous month, recent arrivals have improved the stock position.

ELPHINSTONE SPG. & WVG. MILLS CO., LTD.

(Concluded from page 1122)

tax exemption for dividends on equity capital. The incidence would act as a deterrent to companies declaring even normal dividends and the provisions would therefore come in the way of savings and investments. The Companies (Profits) Surtax, replacing Super Profits Tax, with dividend tax and the bonus tax, would together place a heavy burden on companies. It is also urged that the cotton textile industry of the country which is facing a mighty problem of modernisation and expansion should be brought within the purview of the specified industries to be entitled to the rebate of super-tax like other specified industries.

Leather Cloth Division

The working of this division was hampered considerably during the year under review owing to acute shortage of basic raw materials. And although in the latter part of the year the required raw materials could be procured from indigenous manufacturers, these were available only in restricted quantities and besides the quality was not uniform, with the result that the quality of the finished products could not come up to the required standards. During the current year, however, we have installed one of the most modern and up-to-date machines in this division and have also introduced Foam PVC and Profile Jet qualities. All these are expected to produce leather cloth of very high quality and new varieties apart from improving the existing quality of products. We have also been availing the services of foreign technical consultants to advise us on the latest techniques in the field of leather cloth manufacture.

Expansion

You might have observed from the Directors' report that the Cotton Textile Loan Advisory Committee has recommended an additional loan of Rs. 37 lakhs to the Company from the National Industrial Development Corporation Ltd. for the purpose of equipping the Company's Moon Mills unit with the latest types of spinning and other machinery. We are now trying to finalise negotiation for placement of orders for the second unit.

Modernisation and Renovation

In spite of the various difficulties confronting the working as enumerated in the preceding paragraphs, the management has been continuously putting all its efforts to rationalise, modernise and increase the efficiency all round to enable us to look forward to the future with optimism. In accordance with this policy, several useful items of machinery valued at about Rs. 15 lakhs were installed in the various departments during the year under review in addition to the amount spent towards extension of factory buildings. The Company's equipment of automatic looms has steadily increased thereby improving the quality of its cloth production and its capacity to export its goods.

In this context, I would like to point out that the machinery available from indigenous sources are not sufficient for the cotton mill industry to meet its expansion and rehabilitation requirements in the next few years. Until, however, the capacity of the indigenous industry is expanded sufficiently to enable it to make prompt deliveries, the Government should allow liberally some imports of textile machinery, especially ring frames and carding engines, etc. even though such import entail foreign exchange spending. Since several aid-giving countries are reported to have agreed to make available to India untied credits, a part of it should be allotted to the cotton mill industry for importation of the badly needed items of machinery.

Note: *This does not purport to be a record of the proceedings of the Annual General Meeting.*

FOREIGN COLLABORATION NUMBER OF "INDUSTRIAL TIMES"

The fortnightly *Industrial Times* (Editor: Mr. Subhash J. Rele, Bombay), has just brought out a special number on foreign collaboration. The number presents different shades of opinion on foreign collaboration from official spokesmen, industrialists and representatives of foreign countries, in the various articles they have contributed to the journal.

The significant value of foreign collaboration, both financial and technical, in the planned development of this country cannot be overemphasised. The *Industrial Times* has focussed attention on this aspect of the economic growth of India in the special number under review. The consensus of opinion of the contributors is that a quicker flow of foreign private investment from industrialised countries is most essential for a rapid economic development of the country.

TREND OF SHARES

BUOYANCY RETURNS

(From Our Own Correspondent)

BOMBAY, 25*th June*

IN brisk dealings Dalal Street maintained a buoyant tone during the week under review on persistent bull support and heavy short-covering. Intermittent profit-taking induced moderate reactions, but sales were well and readily absorbed. Closing levels were slightly down on the highest of the week; nevertheless, the list showed substantial on-balance gains. The volume of business was sizable and tended to increase with the improvement in prices, thereby indicating that the undertone was firm.

Among market leaders, Tata Ordinary closed the week at Rs. 151.50, against Rs. 147 of the previous week. Indian Iron improved from Rs. 24.50 to Rs. 25. Among Mill shares, Bombay Dyeing and Century were quoted at Rs. 57.30 and Rs. 593.50, respectively, against Rs. 56.50 and Rs. 585 of the previous week. Similarly, Standard improved from Rs. 587 *cum-div.* to Rs. 615 *ex-div.*, disclosing a handsome gain of Rs. 44 over the week. Bombay Burmah was well held at Rs. 58.20 against Rs. 57.20 of the previous week while Associated Cement closed on a distinctly better note at Rs. 152.25.

National Rayon was firm at Rs. 369.50, an improvement of nearly ten points over the previous week but a notable counter was Indian Dyestuff which moved up to Rs. 284 on Wednesday on consistent bull support. The shares were apparently set for further advance but, as the rise was already more than 10 per cent on the last *hawala* rate of Rs. 255, a margin of Rs. 29 against bulls came automatically into force. The shares closed the week at around Rs. 276.25.

Telco was another bright counter at Rs. 277, while Hindustan Motors and Premier Auto were both slightly better at Rs. 18.40 and Rs. 97.50 respectively. Voltas improved during the week from Rs. 245 to Rs. 252.25; so did Tata Chemicals—from Rs. 17.68 to Rs. 18.60.

Apart from the moderate contango charges at Friday's settlement and easy money conditions, sentiment was induced by hopes of an early relaxation of margin restrictions following the talks between the Chairman of the Company Law Board, Mr. R. C. Dutt, and the President of the Stock Exchange. The market had never been happy with these margins and had been looking forward to their withdrawal. There is, however, nothing to suggest that margins would be withdrawn wholesale but the market would be satisfied even with a substantial relaxation of margin restrictions.

Sentiment was also helped by hopes of a higher dividend by Tata Steel which might be followed by its counterpart in Calcutta, Indian Iron. What the dividend is going to be is anybody's guess, but it is apparent that the market is carried away so much by bull factors that it even ignored reports of fresh Pakistani outrages in Poonch. To brush aside bearish news is the characteristic of a market which is set for a rise.

Corporate news was generally favourable. Tata Oil came out with a cut in the dividend but the disappointment was more than offset by the one for three bonus issue which the Directors announced at the same time. A total number of 1,40,150 shares of Rs. 25 each will be issued by capitalising Rs. 35.04 lakhs from out of the share premium account of Rs. 35.95 lakhs.

J. K. Rayon has been back on the dividend list with a proposal to pay 5 per cent for 1963 on Ordinary shares. The Company is shaping well, though the Directors have not been able to make any headway with their scheme of reorganisation of the cotton textiles section owing to foreign exchange difficulties.

The day for an Ordinary dividend from Khandelwal Udyog should not be distant. Arrears of Preference dividend have been cleared in part and as the Chairman, Dr. A Ramaswamy Mudaliar, has pointed out, working results for the first five months of the current year have been encouraging enough to make the Directors feel that the arrears might be wiped off in full. It appears that the Company will be able to make a handsome profit during the current year.

Indian Rayon has been progressing consistently with the ideas of its shareholders. The Company is getting Yen credit to the tune of Rs. 20 lakhs and the scheme of doubling the plant capacity to 11.11 tonnes a day is being implemented.

A noteworthy feature was the support from investors to electricity shares in general and to Ahmedabad Electricity in particular which enabled it to be quoted again at par after a long interval, though the shares suffered a slight reaction at the close. Shipping and sugar shares were well held. In fact, there was not a single section on the stock exchange which failed to receive support. That cash shares were equally firm with forward scrips was a welcome feature and augured well for the strength of the market.

It would, however, be hasty to read in the present rise more than what is contained in it. The market has to be watched carefully before drawing conclusions. Anyway, the market had been lying low too long and it was only natural that it should sit up for a while. However, Government policies will have much to say in the future trend of the market.

In keeping with the firm trend in Bombay, the Calcutta market was well maintained under the lead of Indian Iron. Prices, wherever changed, showed moderate to good increases. Here too, the market was expecting higher dividends from steel companies as well as relaxations in margins. Almost all the sections were active.

Indian Aluminium consolidated its gains and advanced further on active follow up support. Jute and coal shares attracted selective support, but cotton mill shares failed to make an impression. Paper shares were steady, with Orient at Rs. 36.30. Titaghur was distinctly better. Interest in tea shares was selective. In the cash section, selected engineering and miscellaneous shares gained further ground.

Although the volume of business was moderate, Madras was steady on the whole presumably under the influence of Bombay and Calcutta. In the forward section, selected shares were supported. There was talk of a one for six bonus issue by Deccan Sugars. Rayons were well held. Mettur Chemicals attracted buying interest but by and large plantation shares were neglected. Parrys Confectionery improved presumably due to shortage of scrips. Mill shares were sticky, though the rise in Sivananda was notable as an exception.

ROCKWELL INDIA LTD.

The demand for machine tools continues to be far in excess of indigenous production. Hence the high priority assigned to the development of this industry in both the public and private sectors. But not many entrepreneurs are coming forward in the private sector to establish new units, for there are several practical difficulties in the way. Whoever displays some enterprise in this field deserves to be praised. That Rockwell India Limited was incorporated in December 1962 with the object of manufacturing wood working and metal working machinery is, therefore, a welcome development.

The Company has an authorised capital of Rs. one crore, divided into 100,000 ordinary shares of Rs. 100 each. The issued capital is Rs. 30 lakhs, of which Rs. 15 lakhs have been subscribed by Rockwell International S.A., Switzerland, and Rs. 7.65 lakhs by Batliboi and Company Private Limited of Bombay and its associates and friends. A public offer for the balance of Rs. 7.35 lakhs, all in ordinary shares, was made this week. The issue was oversubscribed within two days, even though the condition was that the entire amount of Rs. 100 per share should be paid along with the application. The amount offered to the public was no doubt small. Nevertheless, it has the distinction of being one of the very few, if not the only, new equity issues that got oversubscribed since the Union Budget for 1964-65.

The Company's financial and technical collaborator is a Swiss firm which is a wholly owned subsidiary of the well-known Rockwell Manufacturing Company of the United States. The Indian promoter, that is, Batliboi & Company Private Ltd., too, has been acting for many years as the selling agents in India for wood and metal working machinery manufactured by the U.S. firm. Rockwell India Limited, as a manufacturing firm, will thus benefit from the rich experience of both the promoters. Its plant, which is to be located in Surat District in Gujarat, will involve a capital outlay of about Rs. 52 lakhs which will be met by the issued capital of Rs. 30 lakhs and loans from bankers and other sources. With Mr. Pratap Bhogilal as the Chairman of the Board of Directors and with American representatives on the Board, the Company may be expected to show drive and enterprise in the field of machine tool manufacture.

DELHI LETTER

(Concluded from page 1096)

mature, it will be some years before such crude may be available. Such crude supplies may also not be in quantities sufficient to meet the country's growing needs. Notwithstanding all this, the Oil Ministry is now reluctant to enter into agreements for the refineries in Madras and Haldia until the foreign firms agree in principle to take imported "Government Crude" as and when it becomes available. The final round of talks with oil company officials on this question is expected to take place in a few weeks. These talks will delay the signing of collaboration agreements for the Madras and Haldia projects.

While officials declare there is no question of higher priority for one plant, as between the Madras and Haldia projects, it appears certain that the Madras plant will receive the go-ahead earlier. This is partly because the Haldia plant will have to await the erection of an efficient oil terminal port there. The arrangements in Madras are easier. It now appears that, for the Madras refinery, two foreign collaboration offers are in the lead. The offer by the Burmah Oil Company and Shell International together is said to be attractive in terms of crude prices, while the Italian ENI's offer is to be reported to be cheaper in terms of the initial cost of the plant. ENI does not have crude oil supplies of its own, but Italy uses Soviet crude for one thing and ENI is one of the possible partners for an oil exploration deal in Iran. The Madras plant rules out permission for any large-scale expansion of the Caltex refinery in Visakhapatnam for the present. As regards demand estimates, there is now general agreement among the refiners in both the sectors on 18 million tonnes by the end of the third Plan and about 30 million tonnes by the end of the fourth Plan.

WEEK'S STOCK EXCHANGE TREND

ANNUITY DEPOSITS

(*Concluded from page* 1095)

respect of income which is recognised by law to be exempt, the tax-payer will be called upon to make Annuity Deposits.

Let us now see how Annuity Deposits are to be calculated. The Finance Act has prescribed rates which are to be applied to the adjusted total income to find out the amount of Annuity Deposit. Regarding these rates, two curious points must be noted. The first is that, unlike income-tax rates, these rates are step-rates. One has, therefore, to find out in which bracket one's income falls and apply the rate indicated against that bracket to the whole of the total income. Secondly, although the ultimate rate is to be applied to the adjusted total income, for finding out the rate, one must look at not the adjusted total income but the total income. I will illustrate this point thus:

Suppose a man has got a total income of Rs. 1 lakh, consisting of Rs. 10,000 dividends and Rs. 90,000 capital gains. The adjusted total income will be Rs. 10,000, because capital gains are to be eliminated in arriving at the adjusted total income. Yet Annuity Deposit will be required to be made, since the total income exceeds Rs. 15,000.

Law has made special provision for authors, playwrights, musicians and actors. Such persons can voluntarily make an Annuity Deposit equal to 25 per cent of the adjusted total income. The principle is that the income earning span of life of such people is relatively a limited one and, if they are permitted to make deposits of substantial portions out of their total income as and by way of saving for future, it will secure a reduction in their present tax liability, and, at the same time, secure income in future by making the refunds of Annuity Deposits available in future perhaps at a time when their income earning faculties are not at the same level. Similarly, a person receiving a gratuity can make additional Deposit equal to 50 per cent of the gratuity amount.

The amount of Annuity Deposit is to be reduced from the total income. This, indeed, is very kind of the legislature, because, otherwise, for tax-payers in the high income brackets, it would be very difficult to find funds to make their Annuity Deposits. It is very essential that Annuity Deposit is shown in the return of income as a deduction. This is because, under the newly introduced Section 140A, one will now have to pay one's tax liability within 30 days of filing the return of income. Now the amount that one is so required to pay is to be calculated on the basis of the return of income. Hence, if Annuity Deposit is not shown as a reduction, technically, one will have to pay tax on a higher total income, although he is entitled to an allowance from that total income. It will, therefore, be obvious that total income will have to be smaller in quantum and hence the provisions relating to relief in respect of the life insurance premia, donation, etc. which are based on total income will also be affected, since the percentages will now be applied to the reduced total income. This has very nearly upset many persons' calculations when they took out life insurance policies subject to such amount of premia as to be within the limit of one-fourth of their total income. Now suddenly they find that the premia which they are paying is in excess of the limit, because the total income is not the same income which they anticipated. Similarly, the annual letting value of self-occupied property which is to be restricted to 10 per cent of the total income, will also be affected.

A very curious provision has been made in law in regard to the manner in which the reduction of Annuity Deposit from total income is to be made. The law says that the reduction shall operate first against salary income, next against any other earned income and lastly against unearned income. An example will clarify this point. Suppose a man's total income is Rs. 1 lakh consisting of salary of Rs. 4,000, property business income of Rs. 2,000 and dividends of Rs. 94,000. The Annuity Deposit will be calculated on the adjusted total income which will be Rs. 96,000 (total income Rs. 1,00,000 *less* salary Rs. 4,000). The applicable rate is 12½ per cent and the amount of Annuity Deposit will work out Rs. 12,000. Now this amount of Rs. 12,000 is to be deducted from the total income and the reduction will first come against salary income Rs. 4,000, business income Rs. 2,000 and the balance of Rs. 6,000 against dividends. The result will be that the reduced total income of Rs. 88,000 will consist entirely of dividends that is unearned income. This will be very harsh, since unearned income is taxed at much higher rates than earned income. It is particularly harsh, in view of the position that, when Annuity Deposits will be subsequently refunded, they will be taxed as income and that too as unearned income. One may not be able to believe it, but it exists in reality. This shows to what extent legislative insincerity can go. I do not, for a moment, think that legislature could have thought of specifically providing that the reduction shall operate first against earned income and somehow forgotten to say that the refunds also shall first be treated as earned income. It is nothing but a case of dishonest drafting.

There are three stages in which Annuity Deposits will be called upon to be paid. The first stage is the "Advance Payment." Since the Scheme came into force from this assessment year only, there is no "advance payment" for assessment year 1964-65, but, for subsequent assessment years, there is a provision requiring advance payment of Annuity Deposits to be made. The provisions relating to advance Annuity Deposits are on the same lines as advance income-tax. That is, for an existing tax-payer, the income-tax officer will serve a notice for advance Annuity Deposit based on the latest completed assessment, while a new assessee will have voluntarily to file his Estimate of Income and pay Annuity Deposit on the basis of such estimate. The advance Annuity Deposits are to be paid in four instalments just like advance taxes. The second stage is the stage of "self-assessment." That is, payment of Annuity Deposit amount by the tax-payer himself on the basis of his return of income within 30 days of the filing of the return of income. Hence, no sooner one files one's return of income, one must be ready to pay Annuity Deposit within 30 days. The third stage is the stage of Income-tax Officer's completing the assessment either on a provisional or a regular basis. At that stage, balance, if any, which may be payable will be demanded. At this stage, I cannot help expressing concern over the needless and pointless complications which the "law-makers" have introduced into the Act. Just consider what tremendous amount of uncertainty and complications will surround the Annuity Deposit Refund position where assessments are subject-matters of long drawn-out appeals, rectifications, etc. The Annuity Deposit has to be refunded in ten equated annual instalments. How will Government repay Annuity Deposits which are subject to adjustments consequent upon modifications in total income? And every time an adjustment in Annuity Deposit takes place, inevitably intricate calculations in respect of interest will follow. It is a pity that politicians do not comprehend how much they are burdening the administration by their queer and novel experiments just to satisfy their own ego and craze. Why cannot we do away with all these complications and have a simple scheme or simple tax law? But, as has been repeatedly pointed out, if there are two ways of doing a thing in India—one simple and the other intricate—we instinctively prefer the latter. If a person does not file his return of income for the assessment year 1964-65, he will still have to pay the Annuity Deposit before 31st March 1965.

The exact details will only become known when the Central Government frames the Scheme. From the provisions in the Income-tax Act, all that can be said is that the deposits will be refunded in ten annual equated instalments of principal amount and interest. The rate of interest is to be notified by the Central Government. Here is a case where a person is involuntarily required to make an investment and is told that how much he would earn out of it the Government woud let him know in due course but first he should hand over whatever he has to pay and whatever the Government requires. There is no provision at the moment dealing with the excess Annuity Deposit which may have been made, but I hope the Scheme will contain provisions dealing with such an eventuality and I further hope that the provisions will be simple to operate.

A question of some importance is whether the amount of Annuity Deposits outstanding is liable to wealth tax or not. Under the Wealth Tax Act, the right to receive an Annuity where the terms of Annuity prohibit commutation into a lump sum grant is exempt from wealth tax. However, from the provisions in the Income-tax Act, it appears that, under the Annuity Deposit Scheme to be framed by the Central Government, provision will be made to make lump sum grant in case of hardship. Hence, in my opinion, the amount of Annuity Deposit will be liable to wealth tax.

On paper there exists an option not to make Annuity Deposits, but the conditions and consequences are so prohibitive that I cannot visualise what set of people can really take advantage of such an option. The option can be exercised before 30th June of the assessment year and not later. But, for the current year, the time limit is 30th September. If any one delays, he will have to satisfy the Income-tax Officer that he was prevented by sufficient cause. The declaration once made is final in the sense that it will apply not merely for the assessment year in which it is made but for all future assessment years. The declaration will exempt the declarant from Annuity Deposit subject to the condition that he pays an amount of additional tax equal to half of the difference between the Annuity Deposit and the reduction in his total tax liability resulting from the allowance of Annuity Deposit as a deduction from his total income. Let me illustrate this part of the condition:

Suppose a man's income before deducting Annuity Deposit is Rs. 1,00,000. The Annuity Deposit ordinarily would work out to Rs. 12,500. But, at the same time, this Rs. 12,500 will be allowed to him as a reduction from Rs. 1,00,000. By this, his effective total income will be only Rs. 87,500. Thus, he saves (assuming his income to be earned income) 75 per cent of Rs. 12,500 in his tax liability which will work out to Rs. 9,375. Now if this person were to exercise the option not to make Annuity Deposit, he would have to pay half of the difference between Rs. 12.500 and Rs. 9,375, that is, Rs. 1,562.50, as an additional income-tax. Now, surely, nobody would like to pay Rs. 1,562.50 as additional tax unless peculiar circumstances exist. I venture to suggest that this provision is deliberately designed to make exercise of option so expensive that it will be well-nigh impossible for any one to get rid of Annuity Deposit obligation. There is, however, one relaxation and that is that for persons above the age of 70, there would be no obligation to pay additional tax, if he were to exercise the option. But even persons above the age of 70, if they want to take advantage of this, should make a declaration of their intention.

I have tried to summarise the important provisions relating to Annuity Deposit. I know I might have left out certain points, but the complications and the intricacies in which the whole new Chapter XXIIA is hedged are such that nothing but a full-sized commentary can deal with all possible points in respect of Annuity Deposits.

The whole basis and the spirit behind the Scheme are utterly fallicious and are opposed to principle of equity and justice. If the Government wanted to offer incentive to persons like musicians, authors, actors, etc., it could have done so by restricting the provisions affecting them. But requiring, on an involuntary basis, Annuity Deposits from all persons is something which, I think, can never be justified. In fact, in the whole of the Budget discussions, not a single cogent reason has been made out in support of the Annuity Deposit Scheme. But existing as we are in a country where anything is tolerated, Annuity Deposit, happily, had a smooth passage and is, like a giant monster, very much amongst us scaring us away, and our only hope, and I pray hope, is that the infantile mortality syndrom overtook Compulsory Deposit will also not spare Annuity Deposit.

1964

Notice

BHARAT NIDHI LIMITED

Registered Office:
5, Parliament Street, New Delhi

NOTICE

THE ANNUAL GENERAL MEETING OF THE shareholders of Bharat Nidhi Ltd. will be held at The Punjab National Bank Building, 5, Parliament Street, New Delhi, on Friday, the 17th day of July, 1964 at 3-30 p.m., to transact the following business:

1. To receive and adopt the Directors' Report and the Audited Statements of Accounts for the year ended 31st December, 1963.
2. To declare dividends on Preference and Ordinary Shares.
3. To elect a Director in place of Shri B. P. Khaitan who retires by rotation and, being eligible, offers himself for re-election.
4. To appoint Auditors for the current year and fix their remuneration. Messrs. Sodhbans & Co., Chartered Accountants, and Messrs. Aiyar & Co., Chartered Accountants, retiring Auditors, being eligible, offer themselves for re-appointment.
5. To consider and, if thought fit, to pass, with or without modifications, the following resolution as Special Resolution:—

   RESOLVED that Article 43 of the Company's Articles of Association be deleted and be substituted by the following Article which may be numbered as 43:—

   "43.—There shall be paid to the Company in respect of every registration of membership on transmission and of every registration of a transfer of shares, a fee not exceeding one rupee for each transfer or transmission. Notwithstanding anything herein contained the Directors shall have power to waive payment of such fee generally or in any particular case."

A member entitled to attend and vote at the meeting of the company is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

By Order of the Board,
(Sd.) V. K. VERMA & CO.,
Registrars.

NEW DELHI,
12*th June*, 1964.

Note: As previously notified, the Share Transfer Books of the Company were closed from 1st June, 1964 to 20th June, 1964, both days inclusive.

The dividends when declared will be made payable to those Members whose names appear in the Registers of Members on 20th June, 1964.

Explanatory Statement as required under Section 173 of the Companies Act, 1956

Ministry of Finance has suggested to Stock Exchange in the country that in the interest of wider and broader dissemination of share ownership among general public the companies listed on the exchanges should not charge any transfer fees on the transfer or transmission of shares as well as on the subdivision or consolidation of share certificates. This practice is followed by many well-known companies in India.

Your Directors are of the opinion that they should have the power to waive the charging of fee on transfer or transmission of shares. The amount of fee received by the Company for the above purpose during the year 1963 is not substantial.

As Article 43 of Articles of Association of the Company does not give any power to the Directors to waive the fee payable on transfers or transmission it is necessary that the above Article should be amended as shown in the proposed resolution.
