RAMTIRTH BRAHMI OIL

Special No. 1. Registered.

An invaluable hair tonic for the prevention of dandruff and falling hair. It is manufactured scientifically with many precious ingredients, which cools brain, improves system and brings sound sleep. Most ideal for body massage. Useful to every one in all seasons.

Available Everywhere.

WORKING OF INTEGRAL COACH FACTORY

ESTIMATES COMMITTEE HIGHLIGHTS ACHIEVEMENTS

IT is a story of success that is unfolded in the Estimates Committee's latest report on the Railway Ministry's Integral Coach Factory located at Perambur in Madras City. This public enterprise, which has the distinction of being the largest manufacturing unit of its kind in Asia, commenced production of railway coaches in October 1955 with Swiss technical collaboration. It has involved, up to the end of 1962-63, an aggregate capital outlay of about Rs. 9.69 crores (Rs. 6.87 crores on the shell factory proper and Rs. 2.71 crores on the furnishing project), including the cost of township. The Estimates Committee has noted, with satisfaction, that, by May 1961, when the agreement with the foreign collaborator ceased to be operative, the coach factory had been able to master the technical "know-how" of integral coaches so as to dispense with the services of the Swiss collaborating firm and save the country valuable foreign exchange. It has further noted that, with its up-to-date machinery and manufacturing techniques, the factory is now geared up to build all types of broad-gauge and metre-gauge coaches according to different specifications. The I.C.F.'s diversified manufacturing programme thus covers coaching stock for all gauges, broad-gauge A.C. electric multiple unit coaches and diesel rail cars meant for carrying short-distance passenger traffic. But it is a pity that the Committee, which has highlighted these production achievements, has failed to appraise the factory's performance in its financial bearings too.

While it is remarkable that the Integral Coach Factory has achieved a production rate of 600 integral coaches per year (as of 1962-63) by introducing partial second shift, it is yet to be allowed to introduce a third shift which, in the opinion of the Estimates Committee, may be required to augment the coaching stock within the country and to effect some exports. Although there are other manufacturers of coaching stock, namely, the Railway Workshops, the Hindustan Aircraft Ltd., Jessop and Braithwaite, the I.C.F. happens to be the chief supplier to the Railways and seems to have the potential for three-shift working. In any case, there is need for stepping up the manufacture of coaches, for the total "anticipated production" of 5,231 broad-gauge, 3,406 metre-gauge and 352 narrow-gauge coaches during the third Plan period is less than the total "planned requirements" (including substantial throw-forward requirements from the second Plan period) of 5,364 broad-gauge 3,858 metre-gauge and 419 narrow-gauge coaches for the period. The "planned requirements" themselves, incidentally, seem to be on the conservative side, for they provide for only a three per cent increase in passenger traffic, whereas, according to the Committee, the experience of both the second Plan period and the first two years of the third Plan indicate that the actual increase in suburban and non-suburban traffic, taken together, is of the order of about five per cent per annum. While the total requirements seem to be higher than what the Railways have planned for, the trend of production in the first three years of the current Plan merely corresponds to the yearly target. That the Railways should thus be able to achieve their limited production target for coaches can be no consolation, for it will still be inadequate in relation to the requirements.

TABLE I.—*Planned Requirements of Coaches*

Type of coach	Broad Gauge		Metre Gauge		Narrow Gauge	
	2nd Plan carry-over	3rd Plan needs *	2nd Plan carry-over	3rd Plan needs *	2nd Plan carry-over	3rd Plan needs *
I class	152	614	2	193	..	..
I and III composite	..	391	43	245	..	..
III class	79	728	138	1,484	..	..
III class sleeper	..	320	107	257	..	..
III luggage & brake van	219	766	55	529	..	..
III and postal van	16	41	2	67	..	..
Total passenger coaches	466	2,860	347	2,775	156	358
Non-passenger coaches	303	1,565	243	981	30	61
Electric multiple unit coaches	19	939	..	102	..	..
Grand total	788	5,364	590	3,858	186	419

*Include thrown-forward requirements of Second Plan.

Another noteworthy finding in the Committee's report is that the average cost of manufacture per coach body shell in the I.C.F. has come down from Rs. 274,000 in 1955-56 to Rs. 71,000 in 1961-62. The cost of furnishing (Rs. 64,000 for III class coach and Rs. 84,000 for I class coach in 1961-62) is also found to be less in the I.C.F., as compared with that in the Railway Workshops. It is, therefore, appropriate that I.C.F.'s present capacity for furnishing 360 shells per annum is being expanded so as to deal with 500 coaches in 1964-65 and 650 in 1965-66. In other words, the furnishing division itself will ultimately handle the entire production of the shell factory. That will mean the release of furnishing capacity in the Railway Workshops for possible other uses.

TABLE II.—*Anticipated Production of Coaches*

Type of coach	I.C.F.	H.A.L.	Railway Workshops	Private Sector	
				Jessop	Braithwaite
Broad Gauge:					
I class	614	..	..	..	..
I and III composite	391	..	..	..	..
III class	79	649	..	..	..
III class sleeper	..	320	..	..	..
III luggage and brake van	563	170	33	..	..
III and postal van	..	25	16	..	..
Non-passenger coaches	53	267	906	119	171
Electric multiple unit coaches	592	..	..	263	..
Total	2,292	1,431	955	382	171
Metre Gauge					
I class	190	..	3	..	..
I and III composite	..	..	43	202	..
III class	513	..	11	600	..
III class sleeper	150	..	107	..	..
III luggage and brake van	..	..	57	472	..
III and postal van	..	..	2	65	..
Non-passenger coaches	68	..	618	203	..
Electric multiple unit coaches	102	..	..	..	..
Total	1,023	..	841	1,542	..
Narrow Gauge: Passenger coaches / Non-passenger coaches	..	..	352	..	..

Some other findings are also quite revealing. The Committee sees, for instance, no reason why the Hindustan Aircraft Ltd., which has been manufacturing III class integral broad-gauge coaches for the last five years at higher unit costs, should not be able to manufacture a coach at a cost comparable to that of the I.C.F. which has ceased to manufacture that particular type of coach since 1959-60. The I.C.F., it may be recalled, produced that type of coach at a unit cost of Rs. 142,000 (including cost of furnishing) in 1959-60, as compared with the present H.A.L. unit cost of Rs. 176,000 for the same type of coach. But the I.C.F., for its part, is now producing III class metre-gauge coaches at a higher unit cost (Rs. 135,000 including cost of furnishing) than those of Jessop (Rs. 122,000) and the Railway Workshops (Rs. 105,000). The Estimates Committee is, however, confident that the I.C.F. will be able to bring down the cost as it gains experience in the manufacture of metre-gauge coaches. While dealing with the cost of electric multiple unit coaches—a line of manufacture just being taken up in I.C.F.—the Committee has drawn pointed attention to the difference in the cost per unit supplied by Jessop (Rs. 15.60 lakhs) and the cost per unit supplied by the Japanese in 1955 (Rs. 12.30 lakhs). As the difference in cost is substantial, the Committee has urged that Jessop should bring down the cost of manufacture. But any reasonable cost comparison would be possible only after I.C.F., too, gets into full stride in this particular field of manufacture. This is an aspect which has escaped the Committee's notice. On the export question, however, the Committee has recognised the need for quotations being tendered, on a collective basis, by a consortium of manufacturers of railway rolling stock in both the public and private sectors. But exports, it would appear, can be seriously thought of only when the production of railway rolling stock becomes surplus to the country's requirements.

BENEFITS OF U.S. SPACE RESEARCH

The U.S. space programme to land astronauts on the moon before 1970 is producing, incidentally, numerous benefits. These cover various technological advances which are also useful in non-space applications, particularly in manufacturing, transportation, communication and medicine.

The U.S. National Aeronautics and Space Administration has also established a special "Office of Technology Utilisation" to speed up industrial application of techniques generated by space research. Its task is to watch for new developments at the Government's space research centres and at the 5,000-and-odd private companies and research organisations involved in the U.S. space effort. Selected innovations will then be distributed to industries which may be able to use them. Some notable examples of non-space applications are given below:

(1) Shock-absorbing aluminium tubes, especially designed to soften lunar landings, have been installed at the bottom of elevator shafts. The tubes are also being tried on helicopters and airplanes to reduce injury and damage in emergency landings.

(2) The little wire sensors through which the physical condition of astronauts is reported to earth are used in some hospitals for constant automatic observation of the physical condition of seriously ill patients.

(3) A non-stick coating, developed during research on solid rocket fuels, is used to advantage by a small hat manufacturing company. The firm previously suffered costly delays and wastage when resin used to stiffen hats frequently stuck to the hatmakers' heating moulds.

(4) A farm-equipment manufacturer has adopted a space industry-developed method of guiding an electric arc welding head along the seam separating two pieces of metal.

(5) An industrial plant, which had been experiencing about 25 per cent breakage of miniature, precision wirewound resistors, eliminated that breakage by substituting ceramic material developed by a government space laboratory.

(6) An adaptation of the pressurised spacesuits worn by astronauts is used in some hospitals to treat stroke victims.

(7) A space scientist has developed a "retrometer" for complete privacy in voice transmission by a beam of light over long distances in space. Investigators are now examining the possibilities of using the system for radio communication on earth free from possible interception by unwanted listeners.

(8) Officials of cities plagued by water and air pollution are closely watching space researchers who are developing systems to provide pure air and water for astronauts on long space voyages to distant planets.

These are only random examples of about 1,000 products and techniques recently culled out from U.S. space research for non-space usage. As the U.S. space effort is an "open programme," all the new knowledge will be available to any country which can benefit from it. Already more than 60 nations are co-operating with the U.S. in what has become the greatest international programme of scientific information exchange in world history.

President Johnson has just revealed that the United States has successfully developed an advanced experimental jet aircraft which has been test flown at speeds exceeding three times the speed of sound. The performance of the plane, designated as the A-11, is claimed to exceed that of any other aircraft in the world today. The aircraft, now undergoing extensive tests at the Edwards Air Force Base in California, has been tested in sustained flight at more than 2,000 miles an hour and at heights in excess of 70,000 feet. Its development has been made possible by major advances in aircraft technology of great significance to both military and commercial application. President Johnson has also expressed the hope that the development of supersonic commercial transport aircraft would be greatly assisted by the lessons learned from this A-11 programme.

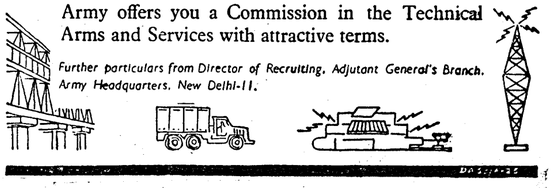
Here is your chance to serve the nation! The Army offers you a Commission in the Technical Arms and Services with attractive terms.

Further particulars from Director of Recruiting, Adjutant General's Branch, Army Headquarters, New Delhi-11.



NEW PRODUCTS AND PROCESSES

Stops Fare-dodging

A machine, which can distinguish between a real and false bus or other transport ticket has been introduced by a British firm, Ticket Equipment Ltd., Cironeester, Gloucestershire, England. It has been designed to be used in conjunction with the same firm's ticket-selling machine for off-vehicle sale of tickets at a bus stop, station, in the vehicle itself, or with any other form of pre-sale tickets. It sounds an alarm to alert the bus driver when a false ticket is presented. The transport company using the machines would issue a special ticket, cheap and extremely difficult to forge. The ticket is prepared with a printing ink incorporating a metallic element which affects a magnetic field when the ticket is presented in the slot in the machine. The machine will automatically recognise or reject the ticket, cancel it, and print to nine figures of information (route number, date, time, etc.) plus the machine number for the subsequent information of any inspector who may board the bus. It will accept a multiple ticket for as many as eight journeys, cancelling one section and giving the information for each in turn. This is particularly valuable on transport systems with a multi-zonal fares structure, with or without transfers. The machine can also be adapted to give a control impulse to open a turnstile or barrier.

Filtering Semi-fluids

The problems of filtering viscous slow-moving semi-fluids is claimed to have been solved by a British firm, British Filters Ltd., Maidenhead, Berkshire, England. Filtering these fluids is much more difficult than with free flowing liquids such as water, petrol and chemicals. The Company has overcome this by a new all-stainless steel-jacket laboratory filter, which was on show for the first time at the International Filtration Exhibition, held in London, 11th-14th February. Basically the filter consists of two concentric cylinders, with the annulus sealed at both ends. Two nozzles are provided on the outside to permit introduction of steam or hot water—to make the substance flow freely—at a pressure of 20 lb. per sq. in. maximum. The top of the vessel is closed by a thick plate, carrying a filling funnel, pressure gauge and three-way cock. The funnel is provided with a two-way cock which must be closed to the atmosphere so that the container may be pressurised.

Pressure Switch

A high-sensitivity pressure switch to operate control units or warning devices, where reliable indication of pressure changes is required, is being produced by a British firm, Heron Electrical Devices Ltd., Ardea Works, Benton Square, Newcastle-upon-Tyne, 12, Northumberland. Its applications include marine and general industry, dairy farming, brewing, explosive storage, mining, engineering, traffic monitoring, medical research, fire protection, bank security, hospitals, aircraft safety and water treatment. The standard model is 6 in. x 3 in. x 1¼ in. deep and is capable of either local or remote-control positioning. Pressure from the area to be controlled is fed to one side of a diaphragm in the body of the unit via a small-bore inlet pipe. The switch is fully adjustable over its range, and has built-in damping to ensure positive action with fast response. A hinged dive-plate, sealed by the diaphragm, actuates the plunger of a highly-sensitive microswitch to operate the warning device or control unit, and adjustments are made by a range screw.

Optical Probe

A quicker and more convenient method of examining valves inside gas and water pipes without interruption to the flow has been developed by a British firm, E. Pass & Co. Ltd., Denton, Lancashire, England, using an endoscope equipped with a ¾ in. diameter optical probe and high intensity external lighting. This technique can also be used for the visual examination of the interior of live steam or petrol pipes. The British gas industry is successfully using the technique to inspect old mains, to determine whether valves, for which all records have been lost, are open or closed. The endoscope not only permits visual inspection of the valves but enables photographs to be taken of them to provide an accurate and readily understood record of their state.

Pallet Loader

A fully automatic pallet loader, designed to load boxes, cartons or crates on to a pallet in an interlocking pattern, is being produced by a London firm, Lamsen Engineering Co. Ltd., Hythe Road, London, N.W. 10. It can be adapted to work with any kind of production flow, whether from a single feed line straight from a sealing machine or from a complicated system of multiple conveyors, each handling a different product or package size. Maximum rating is 35 packages per minute on a single feed system and 30 per minute for a multiple feed. In both cases, however, the speed is governed by a combination of factors such as pallet and carton size, pallet pattern, and height of the pallet load.

Bullet-proof Glass

A new type of bullet proof glass, said by the makers to be stronger weight-for-weight, more translucent and splinterproof than previous types of glass, has been developed by a British firm, Leavlite Ltd., Bromley Hayes, Lichfield, Staffordshire, England. When a ¾ in. thick sheet was subjected to a burst of fire from an automatic at point blank range the reverse side of the glass remained free of splinters. At the same time, a newspaper can be read easily through a 2 ft. thickness of the glass. It has been developed for use in bullion vehicles, bank tellers' windows, pay offices, showcases and any department where a protective shield is required. Curved windscreens can be manufactured from the glass. The same firm is also producing a silica/quartz laminate which resists oxy-acetylene cutters by reflecting the heat back onto the cutter. This ruins the cutter and half hour resistance for a sheet only ¾ in. thick is claimed. This material is already being used in Britain between the inner and outer steel shells of safes.

Stainless Steel

A new process for making stainless steel strip recently put into commission in Britain is claimed to be a notable advance in this field. Because of the high surface finish produced by this process, polishing costs can be considerably reduced and this enables fabricating companies to cut production expenses and market finished articles at more competitive prices. It will produce stainless steel strip in varying thicknesses and in widths up to 12 in. at 150 ft. per minute. Previously, the bright annealing of stainless steel was possible only in muffle type furnaces which have the inherent disadvantages of limited life, dependent on working temperature and the risk of marking the highly finished surface of the strip. The new equipment removes these disabilities and has the additional advantages of higher maximum operating temperature and much reduced floor space in relation to output capacity.

Heavy-duty Guillotine Shearing Machine

An engineering works at Heer (Holland) which specialises in the manufacture of hydraulic guillotine shearing machines (some with blade lengths exceeding 3 metres for plate thicknesses up to 25 mm has extended its production range by the addition of shorter, i.e. 800 and 1,000 mm long shearing machines specially designed for cutting plates up to thicknesses of 16 and 20 mm respectively. They can be used in structural steel works, for example for cutting sketch, gusset and sole plates and strip material, and in works where long shearers are already in operation. The short shearing machines were also specially designed to reduce the load on the larger models and thereby make more efficient fabrication possible. The frames of the machines (made entirely of open-hearth steel) consist of two side-housings with the cutting table mounted in between. The pivoting cutter-beam assembly is secured between the side housings by two shafts. With this modern construction, therefore, the conventional blade-alignment devices are not necessary, since the entire cutter assembly moves about a fixed point projected above the bottom blade. This assembly contains a double-edged blade mounted in a special moulding of adjustable construction. A four-edged bottom blade is rigidly fixed in the cutting table. Thanks to the oscillating motion of the cutter beam, wear on the blades is reduced to a minimum as they come into contact only at the point and actual moment of cutting. In the side housings the cylinders are installed that depress the cutter beam to shear the plate. The fact that the clearance between the shearing blades can be adjusted in a matter of seconds guarantees burr-free cutting of the desired plate thickness. Clearance adjustment controls are mounted on the side of the machine, where plate thicknesses can similarly be read off. This makes it simple for plates of varying thicknesses to be sheared in quick succession. The hydraulically operated plate-clamping jacks work independently and, after the shearing stroke, are restored to their initial position by built-in springs. The pressure on the jacks can be regulated. These jacks—five to every metre of cutting length—press down onto the plate and clamp it immovably before the shearing blade starts moving. It is impossible for the plate to shift during cutting owing to the pressure exerted by the cutter beam; nor can it move when a strip only a few millimetres wide has to be sheared off, for instance when simply truing up a plate.

The machine is operated fully hydraulically and all parts are interconnected by oil lines. The pump, complete with control block and safety valve, is housed in the oil tank. This built-in control block is responsible for distributing the oil to the jacks and the two main cylinders. So that the plate can be clamped down, oil is routed to the jacks fractionally before the two main cylinders that actuate the cutter beam. When the foot-pedal, connected to the control block by a system of rods, is depressed, oil flows through the block to the points in question and the cutter assembly descends for the shearing operation. Immediately the foot-pedal is released, the cutter beam returns to its initial position. In some models a system of springs has been incorporated to retract the hydraulically depressed cutter beam to its starting position after cutting. The hydraulic circuit contains a safety valve, thanks to which the shearer can never be overloaded. If the maximum load is reached, the cutter beam is halted automatically. The shearing machine calls for little maintenance.

Hard, Protective Varnish

A varnish in which electrical components can be dipped to give them a hard, transparent protective skin that is unaffected by either tropical or sub-zero temperatures, has been patented by Licentia Patent-Verwaltnungs G.m.b.H., of 1, Theordor-Stern-Kai, Frankfurt-on-Main, Germany. It does not have to be heated, and can be washed off with the aid of a solvent. Another type of skin, this time for protecting highly polished wood and plastics, has been reported by the H. Widerhold Company, of 102, Düsseldorf—strasse, Hilden/Rheinland, Germany. It is made from transparent pvc and can be sprayed on and stripped off. Full protection is assured and the appearance of the article is in no way impaired.

CONDENSED MILK TO COSMETICS

Milk products or cosmetics, lubricants or vanaspati, paints or pharmaceuticals, processed food or printing inks, wide is the range of industries served by tin containers manufactured by Poysha. Though young in years, they are already one of the leading tin container manufacturers in the country. Over the last four years their turnover has increased by about 70% annually ■ A great deal has been achieved in such a short time because at Poysha the emphasis is always on quality and service. At every stage of manufacture quality control is exercised by technicians, working with modern equipment. Service begins even before the order is placed and ends only when canning is completed.

DONATE GENEROUSLY TO THE NATIONAL DEFENCE FUND

ALLAHABAD BANK, LIMITED

(AFFILIATED TO THE CHARTERED BANK)

DIRECTORS' REPORT

The Directors of the Allahabad Bank, Limited, have pleasure in submitting the Accounts, duly audited showing the position of the Bank's affairs as at the 31st day of December, 1963.

	Rs.	nP	Rs.	nP
The result of the working for twelve months, including the balance of Rs. 6,15,706.71 from former Account, and after making allowance for taxation and depreciation, is a profit of	....		32,57,139	06
Out of this, there has been transferred to Reserve Fund	5,30,000	00		
A Dividend on the Ordinary Shares at the rate of 15 per cent. per annum and Dividend on the Preference Shares at the rate of 7.80 per cent. per annum (both subject to deduction of tax in accordance with the provisions of the Indian Income Tax Act) for the six months ended 30th June, 1963, has also been paid absorbing	5,64,750	00		
			10,94,750	00
Leaving an available balance of	....		21,62,389	06
which your Directors recommend should be disposed of as follows:				
In payment of a Dividend (subject to deduction of tax in accordance with the provisions of the Indian Income Tax Act) on the Preference Shares for the six months ended 31st December, 1963, at the rate of 7.80 per cent. per annum	58,500	00		
In payment of a Dividend (subject to deduction of tax in accordance with the provisions of the Indian Income Tax Act) on the Ordinary Shares for the six months ended 31st December, 1963, at the rate of 15 per cent. per annum	5,06,250	00		
Provision for Bonus to Staff	11,30,000	00		
			16,94,750	00
Carry forward to next Account	....		4,67,639	06

The business of the Bank continues to record steady progress in deposits, advances and working results. The improvement in the working results has been achieved by better utilisation of funds reflected in a higher level of advances. As hitherto, investments are shown in the Balance Sheet at less than the actual market value.

No new branches were opened during the year, but the Muslim University, Aligarh, Cash Office, was upgraded to Branch status. It is hoped to open several new offices in 1964 for which the permission of the Reserve Bank of India has been obtained.

The Bank obtained exemption from the Central Government from the requirement of compulsory audit for 39 branches in respect of their accounts for 1963 and the remaining offices were either audited by the Bank's Statutory Auditors, Messrs. A. F. Ferguson & Co., or by firms of Chartered Accounts appointed in consultation with them.

Mr. I. G. Thomson resigned from the Board on his departure from India. Mr. J. Russell was appointed by the Board as a Director to fill the vacancy caused by Mr. Thomson's resignation.

Mr. M. J. Maclaren resigned from the Board consequent upon his retirement from India. Mr. J. Ritchie, O.B.E., was appointed as a Director to fill the vacancy caused by the resignation of Mr. M. J. Maclaren.

Mr. J. M. Parsons was appointed as a Director to fill the vacancy caused by the resignation of Sir H. Mackay Tallack from the 28th March, 1963.

Mr. I. G. Thomson was Director and Chairman of the Board for a period of more than three years and his services to the Bank in that capacity were outstanding. Mr. M. J. Maclaren held the post of the General Manager of the Bank creditably from April 1958, prior to which he had been associated closely with the Bank for many years. Sir H. Mackay Tallack had been a Director of the Bank since the 23rd June, 1961. The Directors place on record their deep appreciation of the valuable services rendered to the Bank by Mr. I. G. Thomson, Sir H. Mackay Tallack and Mr. M. J. Maclaren.

Mr. S. P. Puri was appointed a Director and subsequently Chairman. Under Article 104 he retires, but offers himself for re-election.

Under Article 115, two of the Directors, Maharajadhiraja Bahadur Sir Uday Chand Mahtab, K.C.I.E., B.A., of Burdwan and Mr. M. R. Das retire from office by rotation, but are eligible for re-election.

Auditors will have to be appointed for the year ending 31st December, 1964.

Mr. J. M. Parsons being absent from Calcutta has not signed the accounts.

By Order of the Board,
S. P. PURI,
Chairman.
J. RITCHIE,
General Manager.

CALCUTTA, *The 20th February*, 1964.

AUDITORS' REPORT TO THE MEMBERS

1. We have audited the foregoing Balance Sheet of the Allahabad Bank, Ltd., as at 31st December, 1963, and also the foregoing Profit and Loss Account of the Bank, for the year ended upon that date, in which are incorporated the returns of all the Branches, of which 26 Branches have been audited by us, 25 Branches by other auditors and 39 Branches marked with asterisks in the attached list of Branches have not been audited, being exempt under Rule (4) (1) (a) of The Companies (Branch Audit Exemption) Rules, 1961.

2. We report that:

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from all the Branches of the Bank;

(d) the reports on the accounts of Branches audited by other Auditors have been forwarded to us and have been considered in preparing this report;

(e) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and returns;

(f) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1963, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

CALCUTTA,
Dated 20th February, 1964.

EXPERIENCE OF POST-WAR COMMODITY AGREEMENTS

SUGGESTIONS FOR MAKING THEM MORE EFFECTIVE

By Prof. Nicholas Kaldor

KING'S COLLEGE, CAMBRIDGE

[At the request of the Economic Commission for Latin America, Prof. Nicholas Kaldor of Cambridge, an economist of international repute, prepared some time last year a special report on stabilising the terms of trade of underdeveloped countries. In that report, published in a recent issue of the Commission's Economic Bulletin for Latin America, *Prof. Kaldor has made a brilliant exposition of the whole problem. He has not only analysed the various causes responsible for the "very limited success of the numerous commodity agreements and negotiations since the war but also indicated the lines on which these agreements and negotiations could be made more effective in achieving an orderly development of international trade. In particular, he has emphasised the need for stable and satisfactory terms of trade of developing countries, removal of restrictions on the size of their markets through heavy revenue duties by the developed countries and free access for the exports of manufactures of developing countries in the developed high-income nations. The views of Prof. Kaldor, though they were published last year, hold good even today. They are being published here, as they provide a useful background to readers in the context of the forthcoming U.N. Conference on Trade and Development due to begin at Geneva on the 23rd of this month and expected to last up to 15th June.—Ed.]*

ONE of the reasons often cited for the very limited success of the numerous commodity negotiations since the war, lies in the limitations under which post-war commodity negotiations have been conducted. The guiding principles for commodity negotiations were laid down by the Havana Charter of 1948—a treaty which was never ratified but whose major provisions in this field have been, and still are, generally observed. The Havana Charter states that one of the main objectives of international commodity agreements is "to prevent or moderate pronounced fluctuations in the price of a primary commodity, with a view to achieving a reasonable degree of stability on the basis of such prices as are fair to consumer and provide a reasonable return to producers, having regard to the desirability of securing long-term equilibrium between the forces of supply and demand." The Charter also specifies that "participating countries which are mainly interested in imports of the commodity concerned shall, in decisions on substantive matters, have together a number of votes equal to that of those mainly interested in obtaining export markets for the commodity."

In other words, the provisions of the Havana Charter prescribed that producers and consumers should have equal weight in conducting the negotiations and in shaping the provisions of any commodity agreement. They also laid it down (in effect) that the main purposes of such agreements are to moderate any pronounced fluctuations in prices; not to interfere with long-term trends that may be necessary for securing "long-term equilibrium" between the forces of supply and demand.

Scope Unduly Limited

These guiding principles have been interpreted (at least by the developed countries) in a manner that has unduly limited the scope of such negotiations. The main interest of the producing countries has been in obtaining both stable prices and satisfactory terms of trade in respect of manufactures—in the same way in which agricultural producers of the developed countries demand, and generally obtain, such terms, either through guaranteed prices (as in the United States or the United Kingdom) or through measures of agricultural protection (as in Contintental Europe). But the Governments of the main importing countries were, not unnaturally, unwilling to extend to the primary producers of foreign countries the same kind of support as regards prices or guaranteed markets which they were ready to grant to their own agriculturists; and they also discouraged attempts by the producing countries to secure these ends by themselves through concerted regulation and control of market supplies. Thus, the pre-war type of commodity agreement—which mainly relied on a restriction of exports by producers—was at first frowned upon as contrary to the liberal principles of the Charter, partly because it was held that, by restricting production and maintaining high prices, such agreements tended in the long run to restrict consumption as well, and partly because they inevitably tended to freeze the pattern of production and trade in a commodity, and thereby prevent the realisation of one of the objectives laid down in the Havana Charter, that of "increasing opportunities for the satisfaction of requirements from sources which can produce in the most effective and economic manner." The only post-war agreement which mainly relied on export restriction for its operation was the International Sugar Agreement of 1953. But sugar has always been recognised as constituting a special case, and the 1953 Agreement was largely a continuation or renewal of a similar Agreement concluded in 1937. In the case of coffee, an analogous agreement—comprising both exporting and importing countries—could not be concluded until 1962.

The authors of the Havana Charter evidently had two kinds of commodity agreement principally in mind which were thought to provide the possibility of "moderating pronounced fluctuations" in prices, but without necessarily interfering with the long-term operation of the free market. One of these was the creation of international buffer stocks for particular commodities and the other a multilateral contract or guarantee, by both exporting and importing countries, to buy or sell at least part of their normal requirements or supplies within a stipulated range of prices, irrespective of the level of prices in the free market. As it turned out, neither of these two types of agreement offered much scope for successful international negotiations.

Buffer stock agreements proved extremely difficult to negotiate, as they would have required financial resources for their successful operation beyond the reach of producers and beyond the willingness of consumers. The only international buffer stock agreement which actually materialised was the International Tin Agreement of 1956 and, as the subsequent history of its operations shows, its success was due not to the buffer stock scheme but to its provisions relating to export control, which were originally intended as subsidiary. The financial resources of the buffer stock authority were exhausted in less than two years after the inception of the scheme, and in the two following years the price was maintained by a heavy restriction of exports by the producers (a reduction of 41 per cent in the first full year of export control and of 36 per cent in the second full year; after that, the world demand supply situation changed, so that it was possible to maintain the price above the support level without restrictions).

Wheat Agreement

The only known instance of a multilateral contract guaranteeing purchases and sales within a range of stipulated prices is the International Wheat Agreement, originally negotiated in 1949. In the four years covered by this Agreement, the world price was consistently above the maximum price stipulated in the Agreement, so that the Agreement was effective in securing supplies to the participating importing countries at lower prices than they would have paid otherwise. However, this Agreement operated entirely in the interest of the importers; and when the exporters insisted on some increase in the maximum price for the second four-year period (from 1.80 to 2.05 dollars per bushel), the largest importer, the United Kingdom, withdrew from the Agreement, and was later followed by other participating importers. The Agreement was re-negotiated for a third time in 1959, but its price-stabilising features were virtually abandoned. The history of the Wheat Agreement thus shows that it is unsafe to rely on the willingness of the high-income importing countries to guarantee to pay higher prices for their imports than they need to pay in the free market.

Sugar Agreement

On the other hand, the International Sugar Agreement of 1953 was successful during most of its period of operation in stabilising world prices around 3.75 cents per lb. This Agreement, whilst it conformed to the formal requirements of the Havana Charter in giving equal voting rights to both exporting and importing countries, was essentially an agreement to restrict exports by means of quotas, on the same lines as its predecessor, the International Sugar Agreement of 1937. Each country was given a "basic quota," the actual quotas being expressed as a percentage of this, fixed in the light of estimated requirements each year. The main novel feature of the 1953 Agreement was that it provided for an *automatic* adjustment of the actual export quotas upwards or downwards, whenever the price of sugar rose above a stated maximum, or fell below a stated minimum, for thirty consecutive days. (Later on, this was amended to allow for both automatic and discretionary adjustments of the quotas at various points within the initial zone of stabilised prices.) The main obligation on importers (in both the 1937 and the 1953 Agreements) was to reserve a certain minimum percentage of their total import requirements for participating exporters. Exporting countries were obliged to take measures to restrict their production whenever their stocks exceeded 20 per cent of their output, but the manner of implementing this obligation was left entirely to the particular Government concerned.

Although the International Sugar Agreement of 1953 covered only one-half of the world's trade (the rest was covered by special arrangements such as the United States preferential import arrangements or the Commonwealth Sugar Agreement), it was successful (except for a brief period after the Suez crisis) in stabilising prices within the stipulated range through the regulation of supplies. However, when after the cessation of United States purchases of Cuban sugar, the pattern of world trade changed suddenly and drastically, the Agreement broke down owing to the inability of exporters to agree on a new distribution of export quotas and its operative provisions are at present suspended.

Coffee Agreement

The new International Coffee Agreement of August 1962 (which succeeds two earlier one-year agreements negotiated among producing countries only) follows, in its general outline, the provisions of the International Sugar Agreement, except that the adjustment of the actual quotas in relation to the "basic quotas" is not tied to the movements of the world price, but is left to the quarterly decision of the Council, the obligations relating to prices being confined to "assuring that the general level of coffee prices does not decline below the general level of such prices in 1962," and "assuring to consumers prices which are equitable and which will not hamper a desirable increase in consumption." The participating importers undertake to limit their imports from non-participants, whenever the exports of participants fall below 95 per cent of the total world exports of calendar year 1961. Exporting countries similarly undertake to limit their production to the amounts needed for domestic consumption, exports and stocks, but the policies and procedures to be adopted in this connection are left entirely to the individual country concerned. There is a provision for a review of the distribution of the basic quotas after three years, and for their revision by the Council subject to a two-thirds majority vote of the exporters and importers; failing that the initial quotas will remain in operation for the remaining two years of the Agreement.

Lessons and Policies for the Future

The above outline of the post-war experience with commodity agreements suggests two main conclusions:

One, of the various types of international commodity arrangements that have been considered, international agreements for the regulation of the export and production of primary commodities provide the most promising instrument for stabilising the terms of trade of underdeveloped countries and assisting them in an orderly adjustment of their production structure. If it is objected that such agreements tend to create monopolistic conditions in the marketing of the commodities concerned, it should also be borne in mind that the underdeveloped countries are themselves confronted by such monopolistic markets in their purchases of manufactured goods—where prices are kept at higher than competitive levels by international private cartels or simply by the absence of price competition among producers, operating in imperfect markets. In fact, the sellers of primary commodities suffer from two important handicaps in comparison with those who sell manufactured goods. The first is that, by and large, the primary producers are "price-takers," whereas industrial producers are "price-makers." A fall in demand for manufactured goods leads directly to a reduction of output; any reduction

in prices occurs only indirectly and incidentally, depending on the extent to which producers are induced to lower profit margins. A fall in demand for primary commodities, on the other hand, leads directly to a fall in prices; it leads to a restriction of output only indirectly, in so far as the decline in prices causes producers to lower their output. The second handicap is that, whereas the benefits of technical progress in manufacturing are largely retained by the producers (in the form of higher real wages and profits), the benefits of technological progress in primary production are largely passed on to the consumers, in the form of lower prices, leaving little benefit to the producers in the form of a higher real income. (This is partly due to the prevalence of imperfect competition in manufacturing, and partly to the fact that organisations of industrial workers are in position—unlike workers in the agricultural sectors of underdeveloped countries—to ensure that industrial wages increase at least as fast as industrial productivity. The exceptions to this are to be found in those cases—such as oil—where the distribution of the commodity is controlled by large international concerns.) The creation of "producers' cartels" for primary commodities would serve to lessen the structural handicaps of underdeveloped countries resulting from differences in market structures and market organisation—a state of affairs which turns the terms of trade against them, and makes them poorer, without any compensating advantage from the point of view of the total wealth produced by the world as a whole. The prices resulting from the operation of unrestricted competition are only commendable from the point of view of the optimum allocation of the world's resources, in a world where *all* markets are equally competitive.

The second lesson to be drawn is that the prejudice, or opposition, of importing countries in respect of export-restriction agreements can be overcome, once it is demonstrated that a sufficient number of the exporting countries are determined to come to such an agreement in any case (this was shown in the negotiations leading up to the International Coffee Agreement). Faced with the alternative of a one-sided cartel agreement of the producers, it is clearly in the interests of the importers to participate, and thereby acquire an influence in shaping the basic provisions as well as the policies of the Council operating the Agreement—quite apart from the wider interest in helping underdeveloped countries on broad humanitarian considerations. (It is also in the interests of the exporters to have the importers included, since they alone can guarantee access to markets, and ensure compliance among the exporters.) Hence the negotiation of export-quota agreements (of the type of the sugar and coffee agreements) for all the principal primary commodities produced by the underdeveloped countries is largely a matter of securing adequate co-operation and co-ordination of policies among the different exporting countries. Once the exporting countries are prepared to form a "trade union" of some kind, the opposition of importing countries will cease to be an effective obstacle.

Reasons for Failure

However, if such export-control agreements are to become the major instrument for regulating and stabilising the terms of trade of underdeveloped countries, not just in times of "emergency" but more or less as a permanent measure, they must provide for more efficacious and flexible techniques for adapting both the structure of production to the requirements of world trade, and the structure and pattern of trade to the changing conditions of production than either past or existing agreements have succeeded in doing. It is well known that export-quota agreements are difficult to negotiate and, if brought into being, are likely to breakdown sooner or later, for one of three reasons or a combination of them:

(a) *Failure to secure full participation by all the producing countries*: The larger the number of exporting countries which accede to an agreement, the greater the temptation for the remaining exporters to stay out, since the restriction of the exports of the others gives them the benefit of better prices, without their being restricted in the development of their own exports. On the other hand, as pre-war experience has shown, countries which are willing to participate in an agreement are not likely to tolerate for long encroachment by outsiders on their markets; if the agreement leads to a gradual reduction in the share of world trade of the participating exporters, it is likely to break down sooner or later.

(b) *Failure to regulate the domestic production of the exporting countries leading to the accumulation of excess stocks which the participating countries are financially unable to carry*: If at the prevailing (domestic) price, the production of any particular country exceeds its requirements for domestic consumption and exports, and the excess is purchased by a government agency which holds it in stock, the incomes generated by the production of the export commodity will exceed the export receipts; and this will be reflected in an adverse balance of payments, or in domestic inflation, or both. The maintenance of the domestic price will also militate against the structural adjustment and diversification of the economy which the agreement was designed to facilitate. The carrying of excessive and growing stocks imposes an increasing strain on the operation of the agreement, and an increasing temptation to evade it or to abrogate it.

(c) *The impossibility of "freezing" the pattern of world production and trade for more than a limited period*: It is inevitable that the initial distribution of export quotas should follow more or less closely the actual distribution of exports in the year (or years) prior to the first negotiation of the agreement. But the pattern of world trade—which in the absence of international regulation would constantly tend to change, as the production and exports of low-cost areas, or areas showing a high rate of productivity growth expand at the expense of other areas—cannot be artificially "frozen" in this way for more than a limited period. The history of most commodities shows dramatic changes over longer periods in the distribution of the sources of supply and the channels of trade. The main centre of rubber production shifted from Brazil to Malaya; of coffee from Arabia to Brazil, and (lately) to Africa; of cocoa from Central America to West Africa; of tea from China to India and Ceylon, etc. The share of African countries in world coffee exports has increased from 3 to 20 per cent in recent years. Unless the agreement provides some mechanism for a steady adjustment in the distribution of the quotas in the directions in which the *pattern* of trade would have changed in the absence of regulation, the agreement is bound to break down at some point—at the point where the "low cost" producers feel that they have more to gain from the expansion in the share of their trade under free competition than they have to fear from the fall in prices that will accompany that process.

How to Overcome Defects

All these defects can be overcome, however, once the nature of the problem is sufficiently understood and the participating exporting countries are fully apprised of both the requirements and the advantages of obtaining a solution. As regards the problems of securing full participation, this is partly a matter of "bringing home" the advantages of a commodity agreement to *all* (actual or potential) exporters, which, of course, partly depends on the provisions made in the agreement itself for securing in the long run a growing share of world trade to the fast-growing, low-cost areas. But it also depends on the extent to which the major importing countries are willing to participate in the scheme, as was pointed out earlier, if the importing countries are willing to limit their imports from non-participants to their existing share of such imports, the major obstacle to securing full paticipation is removed. The willingness of importers to participate and to undertake such obligations will depend, of course, on how far the exporters are ready to regulate the actual quotas so as to stabilise prices at levels which are "fair to consumers" as well as providing a "reasonable return to producers," and as the example of the Sugar Agreement has shown, it is possible to get agreement on the automatic variation of quotas so as to keep prices within the desired zone.

With regard to the prevention of excessive accumulation of stocks, both the sugar and coffee agreements, as we have seen, impose an obligation on exporting countries to regulate their domestic production, so that it does not exceed their requirements, but they leave the manner and method of such regulation entirely to the countries concerned; nor are there any sanctions on countries which fail to implement this obligation effectively. It would not be unreasonable to impose an obligation on exporting countries to the effect that such regulation should be by means of a *variable export duty or export levy*, or at least that such a variable export duty or levy should form at least one of the instruments of production control. Without prescribing what the level of such a duty should be, the participating exporters could be asked to increase this duty in the face of any persistent excess of production over requirements and to decrease the duty whenever there are persistent shortages (and/or the countries concerned are unable to utilise their full quotas) and to continue raising or lowering the duty until the disequilibrium is eliminated. For example, the obligation might be to increase the sum of export duties and levies* by an amount equal to 10 per cent of the f.o.b. price of the commodity whenever domestic stocks increase by more than 10 per cent of output over a period of, say, three years and when total stocks carried exceed, say, 30 per cent of the average annual output of the previous three years; and there should be a similar obligation to decrease the sum of export duties and levies by, say, 5 per cent, of the f.o.b. price whenever the total stocks carried fall below 10 per cent of the average output of the previous three years (any unutilised amount of the export quotas being reckoned as a deduction from stocks).†

Variable Export Duties

These provisions would ensure that market forces were utilised to the maximum possible extent in securing the required adjustments in production. Market forces alone may not, of course, always be sufficient to bring about the degree and the kind of adjustment required in the absence of other complementary instruments of regulation. For example, in the case of commodities with a long gestation period, short-period output may be quite inelastic with respect to price, and excessive price variations in the domestic price of the commodity may set up cobweb-type reactions. In such cases, the export duty should be set so as to reflect the difference between the export price and the long-run domestic cost of production of the commodity, and other instruments should be employed for dealing with short-period maladjustments. To the extent that governments regulate production by methods other than changes in the internal price (acreage-restriction subsidies, for example), the need to vary the internal price through variations in the export duty will be correspondingly lessened, or may be avoided altogether. But a provision on the above lines would ensure that participating countries would be obliged to cut (or raise) the internal price in *the last resort*—i.e. if other methods of regulation failed to be effective.

Variable export duties or levies are already widely employed, mainly as a means of stabilising the internal price in the face of fluctuations of the external price, or simply as a method of collecting revenue. In the scheme envisaged here, their function would be different. The external price would be stabilised by the operation of the export restriction agreement itself, and the purpose of the variable export duty would be to regulate internal supplies so as to keep pace with external requirements, and thus assist in the necessary structural readjustment of the economy. There may be a political objection against this—precisely on the grounds that it fails to maintain the internal purchasing power of the farming population (though this argument loses much of its force when the increase in production is itself the consequence of a rapid growth of productivity). But if high prices lead to excessive production, the desire to secure an adequate income for farmers by buying their crop at a high price and the desire to maintain satisfactory terms of trade in the world market are incompatible—as the recent example of Brazil has shown. If governments wish to maintain the farmers' purchasing power, it would surely be much better to do this by means of subsidies administered in a manner that would promote the necessary re-organisation of agriculture instead of obstructing it—e.g. by subsidies on the acreage devoted to food production for home use, or on the produce of such acreage, or by developing alternative export crops for which there is still an unsatisfied world demand.

It is obvious that a scheme of this kind will only be found acceptable if the agreement also provides for a systematic redistribution of the basic export quotas by small and gradual steps in favour of the most efficient producers. The governments of the relatively efficient low-cost producing countries could hardly be expected to carry out the self-denying ordinance of discouraging their farmers by low prices—and the more efficient their farmers the lower

*The meaning of "export duties and export levies" will need careful definition. Apart from a formal export duty levied at the ports, fees charged for export licences should be treated as an export levy, as should also the profit on the operation of a government-owned marketing or purchasing agency; the losses, on the other hand, should count as a negative levy, or a subsidy, and should be deducted from other duties or levies charged. Allowances would also have to be made for differential exchange rates in cases where the proceeds of exports are converted into local currency at a different rate from that charged on imports.

†This scheme would thus allow for a considerable variation of stocks in relation to output without calling for remedial measures. It would allow for any bumper crop or any crop failure due to weather conditions which is likely to be reversed without any price incentives subsequently. The difference between the minimum increase of duty of 10 per cent and the minimum decrease of duty of 5 per cent is intended to take into account the greater responsiveness of producers (in the short run) to price increases than to price decreases.

these prices must be—unless they can look forward, in the long run, to the prospect of raising their exports by obtaining a growing share of the world market. If such an adjustment in the distribution of quotas is to proceed in a smooth and orderly manner, it must be based on *objective* criteria that are specified in the agreement itself and not left to subsequent *ad hoc* negotiation. Fortunately the scheme of variable export levies provides such a criterion: once each country attains the export duty which keeps its domestic production in balance with its requirements, the level of that duty (in relation to the f.o.b. price of the commodity) gives a clear indication of the domestic cost of production, or supply price, of the commodity, in terms of international currency. Hence the heavier that duty for any particular country in relation to the average, the lower the costs of production of that country in relation to the average costs of all producers.

Annual Redistribution of Quotas

It is suggested, therefore, that, after the lapse of some initial period (say, three or five years) during which the "basic quotas" remain unchanged, there should be an annual redistribution of quotas in favour of countries whose net export levies (reckoned either simply per ton or as a percentage of f.o.b. prices) are greater than the average, and at the expense of those countries whose net export levies are less than the average. The average would need to be calculated as weighted average—the export quotas serving as weights. No country's basic quota should be increased by more than, say, 5 per cent, in any one year, the actual increases among the various countries being distributed according to some logarithmic formula, based on the percentage excess of their export duties over the average. Only countries which have been able to make full use of their existing quotas should be entitled to any increase in quotas. This makes, it impossible for countries to obtain higher quotas by raising their export levies to excessive levels. Similarly, no country should have its basic quota cut by more than, say, 5 per cent in any one year, the actual cuts being distributed in the same way in accordance with the shortfall of the level of export duties below the average, subject to the proviso that the total reductions of all countries whose quotas are cut should represent not less than (say) 2½ per cent of their aggregate basic quota, the sums of the increases in quotas being equated sums of the reductions. (These adjustments in the basic quotas are of course additional to, and independent of, the change in the *actual* quotas, expressed as a percentage of the basic quotas, which are decided quarterly by the Council, and distributed on a *pro rata* basis.)

Strong Incentive

This system would give a strong incentive to each participating exporting country to rely on export duties (or levies) as the main instrument for regulating domestic production, since the higher its export duties are, the greater its chance of obtaining a gradually increasing share of world exports. At the same time, a country would not benefit by making its export duty excessive, since in that case, it would be unable to fulfil its existing quota, and would not be entitled to any increase in its quota.

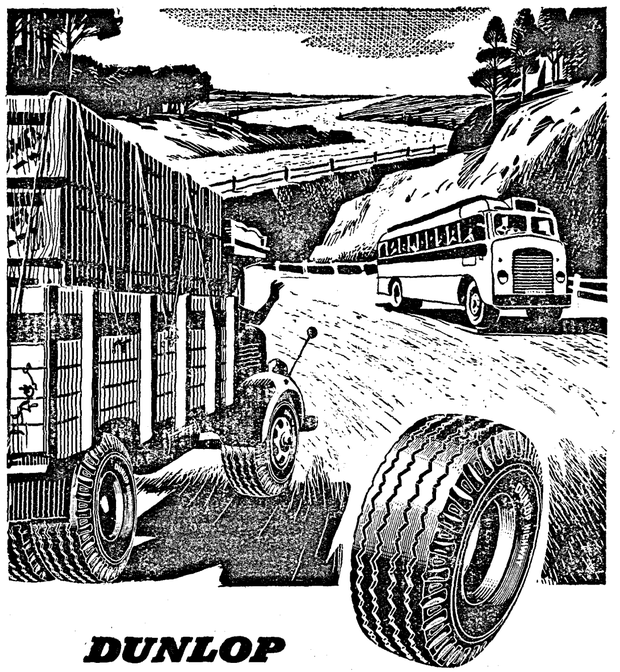
Since the countries whose basic quotas are increased under this scheme would gradually be forced to reduce their export duties (otherwise they would be unable to make full use of their quotas), while the countries whose basic quotas are reduced would be forced to increase them (otherwise they would accumulate excessive stocks) the continued operation of the scheme would lead to a *gradual equalisation of the level of export duties among all participants*—which means that it would tend to bring about the same distribution in the pattern of production and trade as would come about in an ideally functioning competitive market, but without the price fluctuations and uncertainties involved in the latter. It would thus combine the flexibility of a free market system with the maintenance of stable and remunerative world prices.

There is no reason why this system should not be extended to a wide range of commodities—including those (e.g. cotton) where different countries produce widely differing grades and qualities. *It is less promising for those* commodities (e.g. rice or wheat) which are mainly produced for domestic consumption, and where the exports are marginal to domestic requirements. It may, therefore, not be the ideal method for dealing with the problems of temperate-zone foodstuffs. But such commodities are largely produced by the developed, high-income countries; with the exception of rice, the commodity exports of most underdeveloped countries consist of commodities the bulk of which is destined for export, and only a relatively small part for domestic consumption.

Main Difficulty

One of the principal difficulties with international commodity arrangements since the war has been the lack of agreement among countries—particularly as between exporting and importing countries—as to the basic objectives which such arrangements should serve, and as to the techniques of regulation by which the objectives were to be attained. If the coming United Nations Conference on Trade and Development could come to an agreement on principles to be followed in the regulation of commodity trade and production that are both more explicit and more broadly conceived than the provisions of the Havana Charter, the way would be opened for tackling the problem of the terms of trade of the primary producing countries in a more comprehensive manner by arranging for the simultaneous negotiation of a large number of commodity agreements on parallel lines.

It is not suggested, of course, that the attainment of stable and satisfactory terms of trade is the only problem facing underdeveloped countries in the field of international trade. The restriction of the size of their markets through heavy revenue duties (or protective duties) in the importing countries, or as a result of discriminatory arrangements favouring particular group of producers (as, for example, the preference granted by the Common Market or the Commonwealth) represent further problems whose solution will no doubt form one of the principal subjects of discussion at the coming international trade conference. Another equally important problem is to secure relatively free access for the exports of manufactures of underdeveloped countries in the developed, high-income countries, which are bound to play an increasingly important role with the passage of time. These wider problems may require a recasting of the institutional arrangements in the field of international trade that were created after the war.



DUNLOP
HIGHWAY for highest
mileage on long heavy hauls

The Dunlop Highway Truck and Bus Tyre assures higher initial tread mileage on heavily laden long distance trucks and modern fast buses. And finally, when the tyre is worn smooth, the excellent retreadability of the casing means that it will continue to serve for many more thousands of miles.

4TH
VALUATION RESULTS

Life Insurance Corporation of India

The Life Insurance Corporation has pleasure in declaring the rates of bonus as a result of the fourth Valuation of its liabilities and assets as at 31st March 1963. These bonus rates are applicable to with-profits policies issued by the Corporation and which were in force for full sum assured as at the date of Valuation.

The total sums assured and bonuses under 94,93,033 policies in force on the date of the Valuation amounted to Rs. 3,166 crores, and the total amount payable under 10,303 Life Annuities was Rs. 1,05,13,117 per annum. Out of the total profits available for distribution amounting to Rs. 26.71 crores, a sum of Rs. 25.39 crores has been utilised for allotting bonuses to the policyholders. Government's share of surplus amounted to Rs. 1.32 crores.

The rates of bonus on with-profits Policies of the erstwhile Insurers are governed by the Life Insurance Corporation of India (Classification of Policies for Differential Bonuses) Regulations, 1961 and these have been similarly increased, wherever applicable.

All Policies entitled to participate in profits on the Valuation date are eligible for :-

- **Two years' bonus—if the Policy was effected in the months January to March of any year prior to 1.1.1963.**
- **One year's bonus—if the Policy was effected between 1.1.1963 and 31.3.1963 or in the months April to December of any year prior to 1.1.1963.**

Bonus intimations in respect of the fourth Valuation will be sent out to the policyholders as soon as possible.

SCIENCE OF MANPOWER MANAGEMENT IN A DEVELOPING ECONOMY

EASY TO GRASP, BUT DIFFICULT TO PRACTISE

By Dr. K. S. Chaudhari

Department of Business Administration, Lucknow University

MANAGEMENT is a new science, developed largely in the Western countries, the greatest contribution in this direction being that of the U.S.A., where its different branches have been studied in an intensive manner. As a result of these studies, a delineation of management functions has been achieved, which is recognised almost all the world over.

Broadly speaking, there are four functions of management. They are: Planning, Control, Co-ordination and Motivation. Planning concerns itself with the fixing of certain goals or targets, the assessment of latent and available resources and the methods of achieving the goals. Control means regulation of activities with a view to ensuring the progress of performance leading to the execution and full fruition of the plans drawn up. Co-ordination is to guide, by principles and policies, the various sectors so as to ensure a harmony of action and the unity of purpose. Motivation refers to the creation of a positive attitude towards the work assignments and maintaining the interest of the people to co-operate effectively in carrying out the plan projects.

The theory of management unequivocally emphasises that all these functions of management need to be integrated into a unified function, to be carried out by the manager. Integration is a process, personified by the manager whose personality must radiate the integrative forces. But this radiation, though constant, is not constantly manifest. The very nature of the process is subtle, so that it does lend itself to a readily analytical study. The chief feature of the process is the interweaving of economic and social facets which, in a temporal setting, present or threaten a situation of conflict. It is here that the manager has to show his social skill in thwarting or mitigating this conflict or its chances. The process of integration has several phases; for example, planning requires information, judgment and decision; motivation and co-ordination require consultation, communication and command (persuasion in human relations approach); and control requires record, review (information) which, in the feed-back process, affects judgment and decision.

All these phases have to be accomplished through the active co-operation of the people at various levels and time sequences. The people make judgments, take decisions, command (or, alternatively, persuade), communicate, keep records, review and feed-back the process. Therefore, management of the people, i.e., the manpower, has come to be recognised as the *sine qua non* of good management.

The Meaning

Manpower management in a developing economy is, truly speaking, management of a developing people. The term "developing economy" indicates two facets of a single phenomenon from two different angles. It is a pointer, on the one hand, to the preceding state of underdevelopment, and, on the other, to a positive direction of the process of development, having been initiated or well on its way. This dichotomy invests the situation with certain characteristics of a transition. We, therefore, start with the assumption that basic socio-economic goals have been decided upon by mutual concurrence and a movement has been set afoot in which manpower management has to play an important role.

Before we raise some specific problems concerning manpower management in a developing economy, there is, however, a general observation which has a fundamental importance. Economic development in modern times necessitates external assistance. External assistance is inevitably a combination of financial resources as well as the technical know-how supplied by the industrially advanced countries. The technical know-how brings in the question of technological changes which poses a host of problems having wider social and psychological implications. The most important problem is: how far the policies and practices in the area of manpower management current in the assisting countries can be transplanted in the socio-economic set-up of the assisted country. Obviously, the range is not unlimited. Let us then briefly examine the fundamental problems of manpower management in a developing economy.

Regional Inequalities

Firstly, in an underdeveloped economy, regional inequalities are found to exist, i.e. certain regions are industrially more advanced than others and in those areas there is a concentration of effective manpower. Technical competence is to be sought for in these areas only. Secondly, the pressure of manpower resources in such a country is rather strong due to a high rate of population growth and the saturation point in agricultural occupation reaching earlier. This fact gives a high priority to the question of employment as a matter of public policy. But added employment may only raise the cost of production by increasing labour costs. A developing country stands in need of a growing volume of exports and addition to cost is a great handicap in export promotion. Thirdly, the rate of capital formation in an underdeveloped country is lower; as such the capital costs of development projects *vis-a-vis* public employment policy is a major consideration. In such circumstances, resort is generally taken to external finance but techniques of manpower management cannot be so easily imported because of the sociological, psychological, political and cultural differences between the two countries. Fourthly, the general level of living and knowledge of the workers in an underdeveloped country is comparatively lower with the result that their physical capacities are limited. The combined effect of all these factors is that workers in an underdeveloped country lack that physico-psychological adaptivity which is called for by radical technological changes necessitated by rapid economic development. That being so, manpower management presents a formidable challenge in the attitude of workers as well as their capacities.

Development of Right Attitude

Attitude is a broad, and somewhat a vague term. But its referential character is indisputable. In the present context, we mean the attitude of the management towards the workers and *vice versa*, as well as the attitude of the workers towards their work. In many instances, the attitude of the workers towards their work gets inextricably mixed up with their attitude towards the management and presents a complex pattern which, though a problem of industrial relations, is also a problem of industrial engineering. Many authorities have discussed this problem under the title of "employee motivation," because a right type of attitude is a prerequisite as well as an essential constituent of employee motivation. Yoder writes: "Creation and maintenance of appropriate attitudes are, for this reason, responsibilities in which managements fail. These attitudes involve personal and social reactions and behaviour in which many unknowns still resist investigation and understanding. Motivational problems have been described as the most difficult in the entire field of management." If the problem is so tough in America, where the value of management training and education is undisputed, the condition in a developing country can be well imagined. The first priority has necessarily to be given to the development of right attitude on the part of the management towards the workers—their problems and reactions to these problems. The need for this priority arises from the fact that leadership in business, particularly in a developing economy, comes from the management which has both, the resources and the vision, to initiate new policies.

As to the creation of right attitude among the workers, the monistic theory of motivation assumes human motivation to be essentially economic and the two main props supporting its structure are monetary rewards and penalties. In its evolution, it emphasised the latter earlier and the former later, but researches have established that the highest levels of efficiency cannot be achieved by giving accent either on the one or on the other. To quote Yoder again: "Modern manpower cannot be scared or driven into efficiency and enthusiasm, nor can it always be cajoled into peak performance merely by increasing financial incentives... current motivation theory emphasises the variety of considerations that may influence working behaviour." In an underdeveloped economy, the social set-up is traditional in character, giving a higher weightage to personal relationships—a factor which takes away much of the force of the theory of economic motivation. In highly developed economies, financial incentives are actually stronger and more effective.

Attitudes once created have to be maintained, stabilised and in-built, in order to make them a self-generating force. They have to be canalised into the channels of interest in work. This is, in fact, a socio-technological problem in the sense that modern technology has to be absorbed by an underdeveloped economy and is not to be imposed upon it.

The creation of proper attitude is a means to an end, a purpose which is the goal of the business or industry. In a democratic society, this goal is the service of the community. The attitude of the management and the workers towards each other and towards the industry has to be transformed into action. Assuming again the leadership of the management, the next logical step is to create and augment the capacities of the workers.

Development of Requisite Capacities

In an underdeveloped economy, professional managers as a distinct class is almost non-existent. Requisite capacities, therefore, need be developed first among the managerial personnel, because, unless they are made to understand their job, they cannot provide that effective leadership in business, which alone can procure willing co-operation from the workers. In a democratic society, leadership is not "command-oriented," it is based on the principles of liberty, freedom and human dignity and thus it is "persuasion-oriented." Manpower management today must accept the basic philosophy that employers and top management are effective agents for the members of their work teams; they have to discover and develop their special skills. These and many other similar functions, which a manpower manager is called upon to perform today, cannot be learned by intuition or acquired by hearsay. America has proved that managerial talent can be developed. Business schools in American universities have shown that this can be done by providing suitable theoretical training with material from the actual business situations. This is the basic principle of the famous Case Method at the Harvard Business School. Other methods are: the Conference Method, the Seminar Method, the Business Games Method and the Syndicate Method, developed at other universities, e.g., the M.I.T., Stanford, etc.

Modern manpower management's main endeavour is to restore human dignity which was lost during the long strides made by modern industrialism largely as a result of scientific and technological advancement. The employment relationships in course of time became completely depersonalised, so that a worker's entire human personality got reduced to a ticket number, the employer's personality merged into the noisy, heavy and the dark coloured machinery upon which he worked. In American industry today, greater and greater emphasis is given to human relations in industry.

A Boon And A Bogey

In an underdeveloped economy, the personal factor is at once a boon and a bogey, depending upon the way it is exploited by business executives. If they are properly trained in modern management technique, they can utilise it as an ingredient of healthy industrial relationship and if they follow the traditional "rule of thumb," the same personal factor can create a host of impediments in the form of groups, cliques, organised defiance to authority and change, etc. The importance of managerial education and training is greater in a developing economy, because personnel managers have to create a climate in which workers will develop the correct attitude. This, they cannot do merely by giving a warm handshake or a pat on the back or by shedding tears on the woes of the workers. They have to provide right answers to vital questions like scientific recruitment, job satisfaction, effective motivation, development of efficient work teams, retention of experienced employees, maintaining their morale, and building up loyalty among them. In short, they have to create in them a sense of security (both social and economic) and give them a dignified status.

Requisite capacities among the workers can be created by the twin methods of proper selection and training. After the requirements of each job have been assessed, suitable personnel has to be recruited and given training. A developing economy sometimes needs a rapid technological change and the existing workforce has to adapt itself to this change. This necessitates training by designing in-plant training programmes. Training of workers is an investment and in an underdeveloped economy this kind of investment is necessary if the level of real incomes is to be increased. The importance of such training is enhanced by the fact that there is a scarcity of technically trained personnel. Indicative of this are the wide gaps in wage differentials—so common in underdeveloped economies. Low capital formation co-exists with the phenomenon of low "brain formation." Technical skill has to be developed to meet this deficiency. Whereas capital can be imported from abroad, borrowing technical skill presents certain difficulties. In the first place, the technical skill in highly developed countries is designed to save labour; in an underdeveloped economy, the technique ought to be labour-intensive. Secondly, the developed countries are today themselves short of technicians who can easily find well-paid jobs at home and are reluctant to take up overseas assignment. Thirdly, the developing countries can ill afford to pay the foreign technicians so adequately as to induce them to come over. Lastly, a high wage to the foreign technicians creates a feeling of resentment among the local technicians of comparable merit.

These difficulties make training of industrial workers more of a domestic affair of the developing economy. However, it is well to remember the caution that a mere imitation of the training methods abroad would not do, for the simple reason that they are too expensive and have been designed in the light of the socio-psychological background of the workers of those countries. Their adaptation to local conditions requires both facultative imagination and empirical research.

Research

A developing economy is a planned affair and research is the handmaid of planning. Research itself needs to be planned. The first step is to assess the managerial and administrative talent available in the country and estimate the current as well as future requirements. The next step is to undertake a study of the requirements of jobs, and in that light, to evolve suitable systems of selection and recruitment on the basis of the degree of intelligence displayed by the workers as well as their skill and aptitudes. Then a study of the pattern of behaviour of these workers should enable the manpower managers to determine the extent to which workers' participation is feasible in each case.

It has been found that, in an underdeveloped economy, the real interest in research is not so much purposive but a mere show-window. Some paraphernalia is maintained by the so-called progressive business concerns, which they designate as research section. The utility of research is to be tested by its capacity to provide definite answers to some clearly stated questions. Yoder has quoted Dr. Pendleton Herring on the utility of research, saying that it helps (i) to avoid waste of material and human resources, (ii) to reduce frictions which are caused by lack of knowledge, (iii) to diminish frustration and unjustified expectations, (iv)) to indicate the various alternatives which can be adopted in particular situations, and (v) to present a clear picture of human potentialities.

One should not suppose that the problems of manpower management in a developing economy are unknown in their range or character and that they are entirely different from those in a developed economy. They are more or less identical in their nature but their magnitude is certainly not the same. Research will determine their magnitude and suggest measures which again may be different in their content and emphasis. In fine, manpower management in a developing economy is simple to understand but to undertake it is an uphill task which requires a judicious combination of initiative and drive.

TUNNEL UNDER ENGLISH CHANNEL

POSSIBLE IMPACT ON AIR AND SEA TRANSPORT

By Our Aviation Correspondent

FROM time to time, over the past one hundred years, the peoples and Governments of Britain and France have argued the merits and demerits of a plan to connect their two countries by a tunnel driven under the English Channel. By and large, the idea found little favour in Britain. Whatever the benefits to trade and communications, the nation's security, in the popular view, was best served by keeping Britain an island. That was probably a wise policy. There were times during both the First and Second World Wars—particularly the latter—when a tunnel would have presented a dangerous and vulnerable flank. Had such existed, it would certainly have been destroyed by the British when the Germans advanced on the Channel ports.

Now, whether there should, or should not, be a rail or road connection between Britain and France may seem to be of little or no concern to readers in India. The tunnel-*versus*-bridge controversy, nevertheless, has aroused a great deal of world interest, and, to the student of transport at least, the possible effects of either link on existing patterns of communication present some fascinating problems. To that extent, one is encouraged to proceed.

Since the end of the Second World War, it has increasingly been borne in upon the British people that air transport, to all intents and purposes, has turned the flank of their island fastness. Former opposition to a link with the Continent has, consequently, evaporated. There remain, of course, the diehards who stoutly maintain that 21 miles of sea still constitute a very effective defensive barrier. Time and events may prove them to be right—but that is not an aspect which one proposes to discuss here.

Thus, when the question was reopened after the Second World War, although public opinion was more favourable than at any previous time in history, the "tunnellers" encountered opposition from another quarter. A school of thought had arisen which strongly advocated the idea of a bridge. Both projects have been studied in great detail. The main arguments for the tunnel appear to be that it will impose no obstacle to the safe navigation of the narrow waters of the Straits of Dover, that it presents fewer engineerings problems, and that it will be less costly.

Advantages

Be the pros and cons what they may, the British and French Governments have recently agreed—in principle at least—to proceed with a tunnel. This, it is currently thought, may be completed by the end of the present decade. At first sight, such a link appears to pose a threat of no small magnitude to all existing modes of cross-channel transport—and, particularly, perhaps, to air transport. Let us examine some of the more specific issues involved.

Take the time factor, for example. If passengers can board a train at Victoria station in London and travel direct to the Gare Du Nord in Paris, their total journey time, between the two capitals, should not only be less than that of present air services but the fare, too, should be significantly less. Freight is also an obvious beneficiary. The very fact that no transhipment is involved must lower costs and save time. To that extent at least, air freight would be comparatively more expensive and show a smaller saving of time. In other words, it would be a much less attractive proposition than today.

Car-Ferry Business

And, on the subject of freight, one has to recognise the increasing importance of the car-ferry business—both sea and air. One of the most striking aspects of tourism today is the cult of the motoring holiday. Of recent years, the demand for this class of transportation—the family party with their automobile—has increased by leaps and bounds. At least two independent British airlines, indeed, make the car-ferry their sole operation. A direct rail link, with no transhipment, could not but present a very attractive alternative.

Finally, what of the ordinary, run-of-the-mill, day tourists who flock in their thousands, from one side of the Channel to the other, during the summer months? They will, one has to presume, infinitely prefer a means of transport which will save them those unpleasant paroxysms of *mal de mer* which so many have to endure during the brief sea or air crossings!

But is all this not, perhaps, to take too superficial and too short a view of the possible effects of a tunnel which will provide, after all, a rail link only? In the first place, before such a tunnel could be operative, it is estimated that cross-channel traffic of all kinds will have increased by 50 per cent or more. It is almost inconceivable that a rail link—and that, too, through a tunnel 22 miles in length with all its attendant limitations on the frequency of operation—could carry all, or even a major part of, the traffic which will then be available.

It has also to be remembered that the great bulk of the present cross-channel traffic—passengers, freight, and automobiles—neither originates in, nor is aimed for, the two major cities. A direct link between London and Paris, consequently, may not exercise quite such an influence as one would suppose. Take the car-ferry business, for instance. Whereas those, who simply desire to get their cars across the Channel, use the cheaper sea services, the tendency of the air ferry is to widen the scope of service. Thus, the tourist who lives, say, in Manchester and wants to tour Italy, will be enabled to fly with his car from Manchester to Genoa or Rome. The eventual pattern will be a network of such services connecting the major cities of Britain and the Continent. A rail link between London and Paris will have little effect on such traffic.

Other Factors

There are, of course, other factors which may have come into play by 1970. Space precludes any detailed examination of these possibilities but the introduction of VTOL airliners is certainly one. Such services, operating from small airports reasonably close to city centres, would materially reduce the time of all present short-haul, inter-city air services. This would cancel out the time advantage of a rail link between London and Paris. There is, too, the possibility of large hover-craft operating cross-channel ferry services with attendant advantages in time and cost.

On the whole, one draws the conclusion that while the tunnel will certainly carry a great volume of traffic, and, no doubt, thus justify its construction, its effects on other modes of transport will be far from devastating—and least of all, perhaps, on air transport. One might, perhaps, add a rider to that conclusion: had it been decided to construct, instead of a tunnel, a bridge designed to carry both the railway and an adequate flow of motor traffic, then things might be very different. We have only to observe the flight from rails to roads, which has been in progress all over the world during the past twenty years, to recognise the fact that people—and this includes the shipper of cargo—ultimately adopt the cheapest and the most convenient means of transport.

Notice

THE LANSDOWNE JUTE COMPANY, LIMITED

NOTICE

AT A MEETING OF DIRECTORS HELD ON 29th February, 1964, the following interim dividend was recommended for the year ended 31st March, 1964, subject to deduction of Tax:—

On Cumulative Preference Shares at Rs. 9.10 per cent per annum for the years ended 31st March 1962 and 1963.

The Dividend will be paid on or after 31st March, 1964, to those Shareholders (or their mandatees) whose names appear in the Company's Books on 24th March, 1964.

The Share Transfer Register of the Company will be closed from 14th March, 1964, to 24th March 1964, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries and Treasurers.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA-1.

29*th February* 1964.

DISTURBING TREND OF EXPENSES IN LIFE INSURANCE

IS PROLIFERATION OF STAFF JUSTIFIED?

THE most disturbing factor in an otherwise encouraging picture of the business of the Life Insurance Corporation of India is the upward trend of expenses. The latest valuation report of the L.I.C.'s actuaries, to which a reference was made in our last issue (*vide* page 318), gives an indication of the effect of higher expenses on bonus. In view of the increase in the expense ratio to 14.13 per cent during the intervaluation period from 12.66 per cent (average) during the previous biennium, the actuaries increased the provision for "profits and expenses." While this increased provision might have been necessary in order to leave an adequate margin which may be relied upon to contribute to stable profits in future, its effect was to reduce the surplus revealed by the current valuation. Thus, against a provision for expenses and profits of 20 per cent of office premium in respect of with-profit policies and 15 per cent of office premium in respect of without profit policies during premium paying period made in the previous two valuations, in the current valuation, provision in respect of participating policies (whole life) has been increased to 22 per cent, and in respect of other participating policies to 20.5 per cent of office premium, though provision in respect of non-participating policies has been kept unchanged at 15 per cent of office premium. The following table illustrates this position at a glance:

Provision for Expenses and Profits

(As percentage of office premium)

	Valuation			
	Fourth	Third	Second	First
During premium-paying period:				
Participating : whole life policies	22.0	20	20	20
Other participating policies	20.5			
Non-participating policies	15.0	15	15	16
After cession of premium: (In rupees per thousand assured)				
Participating policies	7	7	7	7
Non-participating policies	2	2	2	2

The L.I.C. management attributes the increase in expenses to two causes. First, consequent on the agreement reached by the L.I.C. with the two employee associations representing class III and IV employees, there was an increase in expenses on salaries and allowances with effect from 1st January 1962. Secondly, whereas the expenses other than those that are directly dependent upon premiums such as commission were, during the three months January, February and March 1963, practically one-fourth of those for a full year, the renewal premium income during these three months was much less than one-fourth of the renewal premium income for a full year due to concentration of new business towards the end of the year over the past several years. The extent of the individual contribution of each one of these factors to the increase in expenses is not known. But, while the second factor may be expected to be temporary, in that it arose from the change in the accounting year from the calendar year to the fiscal year, the first, namely, higher incidence of salaries will be a permanent feature. The scope for reducing expense on this account is, therefore, limited, but the L.I.C. could, and should, ensure full utilisation of its manpower. This point was especially emphasised by the Estimates Committee of the Lok Sabha in its report three years ago on the working of the Corporation. The Committee had noted that the overall increase in the staff of the L.I.C. during the three-year period 1957-59 was over 21 per cent and the increase in expenditure on account of this was 29 per cent. The increase in the class I officers, according to the Committee, was most marked, having been of the order of 43 per cent in number and over 39 per cent in expenditure. In respect of supervisory and clerical staff the increase during the period was over 25 per cent in number and 26 per cent in expenditure. The Committee comment on this trend in staff proliferation is worth recalling.

"While some additional staff might have been required to look after the increased business of the Corporation, the Committee find it difficult to appreciate the justification for such a large increase in the number of employees within a period of three years. They consider that the real test of economy and efficiency of the Corporation would be to increase the business without a corresponding increase in operational cost. The Committee feel that, once the Corporation has established its network of organisation, it should be possible to exercise more economy in the number of staff employed and the existing organisation should be able to take care of additional business to a large extent. They recommend that the staff position in the various categories of the different zones may be constantly reviewed with reference to the workloads which should be uniform for all zones and efforts made henceforth to secure additional business without a corresponding increase in staff."

The Government's reply to this point of the Estimates Committee is that the L.I.C. depends on manpower for transacting its business. As business grows, it would be necessary to increase the available manpower also. However it has conceded that, as more and more of the Corporation's employees are trained and get experience, it would be possible to manage with less additional staff than the increase in business would call for. The Corporation, the Government has pointed out, has already made efforts in this direction (during the period 1957-60) and, as a result, the staff has increased by only 21 per cent, as compared with an increase of 36 per cent in the business in force.

Figures of the number of staff given in the latest annual report of the Corporation, however, do not bear out the Corporation's contention that it is trying to manage with less and less additional staff. For, between December 1960 and March 1963, that is, in twenty-seven months' time, the number of staff has increased by 19 per cent and their salaries by 42 per cent, whereas business in force (in India) increased by 41 per cent. This compares with the 21 per cent in staff and 36 per cent increase in business in the 36 months ended 1960. There has been a 41 per cent increase in the number of Development Officers but new business brought by them increased by only 50 per cent.

Category-wise, the most striking increase, 41 per cent to be precise, took place in the salaries of the clerical and supervisory staff, though the number of this category of staff increased by only 16 per cent. The increase in the number of class I officers was 35 per cent during the period and their salary increased by an equal percentage. The number and salary of Development Officers increased by 41 per cent each during the period. The subordinate staff also benefited from the increase in salary, the gross salary paid to this category of staff at the end of March 1963 being 46 per cent more, as compared with end of December 1960. The following table indicates the number and gross monthly salary of employees of the Corporation in India in each class as of March 1963 as compared with December 1961 and December 1960:

No. of Employees in India and their Gross Monthly Salary

(In thousands of rupees)

Class	December 1960*		December 1961		March 1963†	
	No.	Gross salary	No.	Gross salary	No.	Gross salary
Class I officers ..	1,852	15,16	2,162	17,77	2,495 (35)	20,48 (35)
Development officers ..	5,808	19,71	7,128	23,92	8,208 (41)	27,85 (41)
Supervisory and clerical staff ..	26,706	54,90	28,625	63,51	30,915 (16)	78,60 (42)
Subordinate staff..	5,878	6,05	5,933	6,94	6,462 (10)	8,81 (46)
Total ..	40,244	95,82	43,848	112,14	48,080 (19)	135,74 (42)

* Salary figures for December 1960, do not include the *ad hoc* increase in D.A. paid for that month in March 1961.

† Salary figures for March 1963 are on the basis of the revised scales of pay in respect of supervisory, clerical and subordinate staff.

Note:—Figures in brackets are the percentage increases in the number of staff and their gross salary over the December 1960 figures.

It is evident from the above table that not only has the number of employees of the Corporation increased considerably, but there has also been a substantial increase in expenditure by way of salary to the staff. A further expansion is under way, as the L.I.C. is currently recruiting staff for its general insurance department formed recently following its decision to take up general insurance business in competition with the private sector. In view of this rapid expansion of staff and the expenditure on them, the Corporation should now take steps to ensure that the increase in staff and enhancement in their salary is accompanied by higher work turnover. So far, in spite of the increase in the number of staff, there have been constant complaints about the service rendered to policyholders. The Corporation would, therefore, be well advised to initiate a programme of job-time evaluation, so that appropriate workloads could be fixed for each employee. Further, the Corporation should expedite the mechanisation of its operations and bring to early fruition its plans for introducing computers. A huge organisation like the L.I.C. should be able to turn the economics of scale and the invention of electronic equipment to its advantage.

Swiss Industries Fair Basle 11th—21st April 1964

When a country has no raw materials of its own, there's only one way to prosperity: import them, process them, re-export the finished products. And in doing so there's only one way to success: perfection. You'll find the proof at the Swiss Industries Fair Basle. You'll find it in tiny watches, in jewelry, in electrical engineering, heavy machinery, machine tools, tools, instruments, textiles... every one of the quality products presented at this trade fair reflects the high standard of Swiss industry, craftsmanship and resourcefulness. Your visit to Basle is an excellent opportunity for establishing useful contacts and initiating new business connections. For detailed information, booklet, catalogue... and good advice on a fast and comfortable flight to Basle simply contact

INDIA'S FOREIGN TRADE PROBLEMS

S.T.C. TO WIDEN ITS TENTACLES

EXPORTS and imports are the two wheels of the foreign trade machine of a country. The problems of exports cannot be completely divorced from those of imports and *vice versa*. Naturally enough, the smooth functioning of the foreign trade machine presupposes coordinated approach to the problems of both the sectors. It was, therefore, just as well that the Government of India recently reconstituted the Export Promotion Advisory Council and the Import Advisory Council into a single body known as the Export-Import Advisory Council. The functions of the Council, which was inaugurated on the 26th of last month by Mr. Manubhai Shah, Union Minister for International Trade, have been widened in the light of the new trends developing in the field of world trade and also reoriented with a view to forging closer links between exports and imports. Mr. Manubhai Shah has expressed the hope that the Council, along with the Board of Trade, as well as institutions like the Institute of Foreign Trade, Export Credit and Guarantee Corporation, Export Promotion Councils and Commodity Boards, "would provide adequate institutional framework for tackling the many tasks that lie ahead." If, however, this hope is to be fulfilled, it is imperative that the Council's recommendations will receive more serious attention at the hands of the Government than has been the case so far.

The foreign trade picture of India has improved distinctly of late, the adverse trade balance, according to preliminary estimates, having gone down from Rs. 439 crores in 1962 to Rs. 301 crores in 1963. The reduction is due largely to the marked rise of Rs. 104 crores to Rs. 791 crores in export earnings. The rise in exports has been registered in almost all items, namely, traditional items, commodities which are otherwise difficult to move, and new manufactured products. While all this is highly gratifying, there should be no room at all for any sense of complacency, what with the pressing need for financing the continually expanding import requirements for economic development and the mounting burden of external debt services. Indeed, export efforts will have to be intensified considerably in the years to come in the sphere of both primary products and manufactured goods. Making a fervent call to this effect, Mr. Manubhai Shah dwelt at some length on the three most important traditional earners of foreign exchange (jute goods, cotton textiles and tea), as well as on iron ore, manganese ore, oilcakes, vegetable oils and sugar. The problems concerning the exports

Exports: Main Items

(In crores of rupees)

	1963	1962	Rise
Jute manufactures ..	160	150	10
Tea	133	124	9
Cotton textiles	65	57	8
Iron ore	36	29	7
Oilcakes	34	27	7
Sugar	26	15	11
Other items	337	285	52
Total ..	791	687	104

of the first four items as highlighted by him may be summed up here:

Jute goods: Scheme of quality control and pre-shipment inspection of jute goods have been started and would help in promoting the exports of this major foreign exchange earner.

Cotton textiles: Continuous efforts are necessary to achieve higher levels of exports. We should aim at producing not only textiles at lower costs but also to ensure that our textiles cater to the tastes and requirements of the foreign buyer, are competitive in quality and that the exporters ship only good quality goods which conform to specifications and samples.

Tea: Increase in tea production is a precondition to enable us to sell more tea abroad. Production of quality tea can be augmented only by an adequate programme of new cultivation either by extension or by replacement, by improved agricultural methods and by creating conditions and extending suitable encouragement to planters to go in for intensive and extensive cultivation.

Iron ore: The Government is taking integrated steps to reduce the costs of production, transport and shipping. Also pelleting, briquetting, and improvement in grading and blending of ores are being undertaken.

While the rise of Rs. 104 crores in total exports during the year 1963 is spread over all the Continents, India's trade with a few African countries, which constitute the traditional destination for exports, showed a somewhat downward trend which continues to persist. Mr. Manubhai Shah, therefore, urged the Export Promotion Councils and Commodity Boards to focuss greater attention to the development of these markets. He also referred to (*a*) the sustained efforts now being made by the Government to promote exports by entering into bilateral trade agreements with East European countries, (*b*) increased participation in trade fairs and exhibitions held abroad, (*c*) arrangements to participate in a big way in the New York World's Fair as well as the Leipzig Fair, (*d*) larger export risk insurance facilities, (*e*) grant of financial guarantees and supplementary credit to help exporters, and (*f*) working of a revolving fund in foreign exchange to facilitate import of raw materials for the export-oriented industries.

India's export requirements, coupled with its development needs, clearly underline the importance of productivity aspect in Indian industry. If productivity is not increased, it will, as Mr. A. R. Foster, the retiring President of the Bengal Chamber of Commerce, rightly said in his speech at the last annual general meeting of the Chamber held at Calcutta a few days ago, be difficult for India to compete for exports in a world in which there is a remorseless desire for more efficient outturn. Incidentally, Mr. Foster drew pointed attention to the need for increasing the capacity and efficiency of Calcutta Port and the River which serve as the main exit of a major part of the country's exports. He observed:

"The completion of the Farakka barrage in 1970 will, it is hoped, solve the problem of the deterioration of the River and preserve Calcutta's status as one of the world's major ports. In step with this, it is hoped, will go the expansion and modernisation of the docks, in particular the improvement in the outturn and efficiency of the port workers through the early introduction of incentive schemes on the lines of those already operating with great effect in other ports in India. Finally, it is most satisfactory from the point of view of both Calcutta and the Port to note the beginning of work at Haldia. The role of Haldia is vital in relieving pressure on Calcutta's restricted capacity and, even if the development of the harbourage is slow in these early years, there can be no doubt about the great potential contribution it can make to North East India's ocean going trade. In the meantime, the subsidiary anchorage at this site has continued to work well from the shipping point of view and this, with a slightly better draught position in the Hooghly, has until recently produced fairly satisfactory conditions. But it must not be forgotten that the deterioration of the River during the last decade has had serious consequences for the activities of the Port and has involved recurring outlays, partly due to the high level of expenditure on dredging and controlling the river but also because of the cost of the additional shipping required to handle the Port's trade and the expense of waiting for proper draughts and tides. The long-term measures now being planned at Haldia and Farakka will not come a moment too soon."

"... I think, in this connection, I would like to refer to the interesting proposals submitted by the Indian Engineering Association for the creation of a free trade zone at Haldia. I think it is to be regretted that the official reaction so far is to postpone consideration of this project till there has been experience of the experiment at Kandla. Most supporters of the scheme here feel that there is little comparison between the conditions in the two areas. Here we have a background of expertise in industrial production and export, ample cheap raw materials, large supplies of energetic and skilled workers and the traditions of two centuries of industrial pioneering and expansion, and a site located in the Bay of Bengal within a short distance by sea or by air to the most rapidly developing areas of the South East of Asia. Both from the point of view of the development of this area of Eastern India and of the Indian export trade as a whole, I think there is justification for second thoughts on the decision to hold up consideration of this project in the meantime."

To revert to the Export-Import Advisory Council meeting. Practically every one who spoke at the meeting emphasised the urgency of export promotion. Among some of the suggestions made, five stand out prominently. In the first place, railway freight rates and port charges must be revised downwards. Secondly, fiscal burden on exports and the manner in which the ever-rising prices of inputs exerts pressure on costs must be examined. Thirdly, State Government representatives should be associated in future with the Council's deliberations, because the States, according to Mr. Bharat Ram, the F.I.C.C.I. President, are not helping in the furtherance of the export drive. Fourthly, export-oriented industries should be given priority in the utilisation of non-project foreign aid. And, fifthly, export promotion measures must be implemented uninterruptedly and efficiently.

So much about exports. As for imports, Mr. Manubhai Shah made it clear that, while export promotion and defence needs would continue to deserve the Government's foremost attention in the process of formulating the future import policy, further cuts might have to be imposed on items of low priority or where production had expanded. The Committee on Import Substitution and the various groups in several departments and Ministries, he said, were constantly reviewing the possibility of using indigenous raw materials in place of imported ones where practicable. He, however, held out the welcome assurance that the Government would endeavour to meet to the maximum possible extent the essential requirements of the industry and, if possible, slightly liberalise imports of plants, equipment, capital goods, and basic raw materials and components. The other elements of the import policy as enunciated by Mr. Shah are as follows:

"Preference will continue to be given to the industries with an export orientation and also to industries which can, in the very short run, help in considerable saving in foreign exchange by producing indigenously items which had to be imported. The import of capital goods will have to continue to depend upon the availability of external resources either in the form of investment or credits, governmental or private foreign capital, on acceptable terms. The equipment and capital goods required for modernisation and rehabilitation of industries will receive high priority. Fertilisers, pesticides, tractors and all the requirements of agriculture and plantation sectors will continue to be fully met. Our requirements of imports for defence industries and defence goods will also have to be adequately met. Small-scale industries, I cannot forget, because our friends in this sector deserve the nation's special attention."

Imports: Main Categories

(In crores of rupees)

	1963	1962	Rise (+) or fall (—)
Capital goods	186 (17)	169 (15)	+17
Industrial raw materials..	731 (67)	743 (66)	—12
Consumer goods	175 (16)	214 (19)	—39
Total ..	1,092 (100)	1,126 (100)	—34

Note:—Figures in brackets relate to percentage shares in the total.

While the broad framework of the import policy indicated by Mr. Shah is welcome, his plea for expanding State trading in the field of imports (and also exports) is irrational and unjustified. Where is the need for such expansion when there are individuals and special agencies who have long experience in import trade? The decline in the role of established importers, consequent upon the introduction of users' licences, is no excuse for widening the sphere of operations of S.T.C., especially to cover those few highly profitable items that are still left with the established importers. It is unrealistic to assume that trading houses can survive only on exports and domestic distribution business. If they handle imports, too, they will be able to fare better in export promotion also, because of their contacts with foreign markets. Further, no elaborate arguments need be advanced to prove that the actual users and established importers bargain much better than a State agency with overseas interests. The foreign sellers always raise their prices when they come to know about the entry of a State agency. Besides the increase in imported cost, the industries will also have to bear an additional cost, since the State agencies will include its imports and distribution charges to the selling prices. The various complaints about the way in which the State Trading Corporation has been handling the import trade and how it has been making enormous profits at the cost of the community are well known. Mr. Manubhai Shah cannot be unaware of the deficiencies of the State agencies in regard to know-how and experience necessary for engaging themselves more actively in specialised items of imports such as plant and machinery. The State agencies must only supplement the private trade channels and not supplant them.

WALCHANDNAGAR INDUSTRIES FARES WELL

MORE AGREEMENTS WITH FOREIGN FIRMS

THE working results of Walchandnagar Industries Ltd. [Managing Agents: Messrs. Walchand & Co. (Private) Ltd., Bombay] for the year ended 30th September 1963 are in conformity with the performance of the sugar industry as a whole in Maharashtra State. Taking advantage of the sustained internal demand for sugar during the year, the Company has been able to liquidate a large portion of the stock of sugar brought forward from the previous year as is revealed in the decline in the value of closing stocks of finished goods from Rs. 83.73 lakhs to Rs. 35.02 lakhs. Consequently, therefore, even though the production of sugar during the year itself has been short by about 17,000 bags of one quintal each, the realisation from sale of products has expanded from Rs. 538.71 lakhs to Rs. 561.25 lakhs. A fair portion of this rise in sales has, of course, been due to the larger disposal of sugar and spirit, but part of it has been due also to the rise of Rs. 16.45 lakhs to Rs. 229.37 lakhs in the value of machinery sold during the year. Gross profit has jumped up from Rs. 67.11 lakhs to Rs. 82.80 lakhs, the rise being of as much as 23.4 per cent, as against just 4.2 per cent in the turnover.

This substantial increase in gross profit has resulted in an increase of Rs. 1.67 lakh to Rs. 5.46 lakhs in the Managing Agents' commission and in the provision for taxation from Rs. 15.50 lakhs to Rs. 22.50 lakhs. Even though the essential provisions have claimed two-thirds of the gross profit, the net profit has risen from Rs. 18.69 lakhs to Rs. 27.84 lakhs. It will be seen from the comparative table below that the net profit has retrieved most of the ground lost in the previous two years. Out of the year's profit, Rs. 5.96 lakhs (as against Rs. 4.31 lakhs a year before) have been credited to reserves and Rs. 5 lakhs have been set aside for the payment of preference dividend. The ordinary dividend remains the same, namely, 12 per cent per annum, subject to deduction of tax, but claims a slightly bigger amount of Rs. 18.18 lakhs. The carry forward is only Rs. 1,059 as against Rs. 1.14 lakh brought in.

(In lakhs of rupees)

	For the year ended 30th September

Low	145	133	140	158	249

The duration of the season was reduced from 177 to 156 days and the quantity of cane crushed was also lower at 189,986 tonnes as against 203,239 tonnes while the percentage recovery was also lower at 12.13 per cent, as against 12.25 per cent in the previous year. As a result, the quantity of sugar manufactured declined from 248,015 bags to 230,634 bags of one quintal each. The production of spirit, however, increased fivefold from 762,318 litres to 3,722,108 litres and the worth of goods supplied by the plastic factory was also higher at Rs. 5.61 lakhs, as against Rs. 5.04 lakhs in the previous year.

The Company's surplus land was taken over by the Government of Maharashtra State on 11th July 1963 and the same was placed in the possession of the Maharashtra State Farming Corporation Ltd. An agreement has, however, been entered into with the State Government and the Maharashtra State Farming Corporation Ltd. to allow the Company to harvest the standing crop.

The Company has recently entered into an agreement with Messrs. Prerovske Strojirny, Czechoslovakia, for the manufacture of complete cement plant and parts thereof at Walchandnagar. The Company had approached Messrs. Escher-Wyss A.G., Zurich, Switzerland, for technical collaboration in the manufacture of paper plants and ancillary equipments and they had agreed to collaborate and give all assistance to the Company. The draft of the proposed co-operative agreement with Messrs. Escher-Wyss A.G. has been sent to the Government for approval. Negotiations for technical collaboration are in progress with Messrs. MAAG Gear-Wheel Company Ltd., Zurich, Switzerland, for manufacturing MAAG speed-reduction gears, pinions and their accessories as required in sugar, cement, paper and pulp industries. Proposal to manufacture steam turbines for sugar mills at the Company's factory at Walchandnagar in collaboration with Messrs. G. & J. Weir Ltd. of Glasgow, U.K., is also under consideration. The Company has approached the I.C.I.C.I. for a loan in foreign exchange equivalent of U.S. dollars 525,300 (about Rs. 25 lakhs) for meeting the cost of imported equipment for the cement machinery making projects and the same has been sanctioned.

The Company has completed deliveries of sugar machinery to three co-operative sugar factories referred to in the previous year's report. These factories have been crushing over 1,200 tonnes each per day. A 30" x 60", 18-roller milling plant, with a crushing capacity of 1,750/2,000 tonnes per day, which was manufactured and supplied by the Company went into operation in the Mawana Sugar Works Ltd., District Meerut. The Company also manufactured and supplied the complete centrifugal station of this factory which has a crushing capacity of 3,500 tonnes per day. During the year, the Company secured orders for two complete sugar factories each with the milling plant of 30" x 60" size for crushing 1,000 tonnes of sugarcane per day and capable of being extended to 1,750 tonnes capacity per day by suitable additions and alterations.

There has been no change in the Company's paid-up share capital of Rs. 201.50 lakhs comprising Rs. 50 lakhs in preference shares of Rs. 100 each and the balance in equity shares, also of Rs. 100 each. It is supplemented by Rs. 139.26 lakhs in reserves and surplus. Borrowings from banks against security of tangible movable assets have, however, declined sizably from Rs. 164.55 lakhs to Rs. 96.55 lakhs and, as a result, the total of borrowings, including Rs. 100 lakhs in two series of debenture bonds, has receded by Rs. 68 lakhs to Rs. 196.71 lakhs. Current liabilities are also lower at Rs. 179.92 lakhs as compared with Rs. 183.94 lakhs a year ago. On the assets side the net block is placed at Rs. 274.82 lakhs and has been arrived at by reducing the gross block of Rs. 510.73 lakhs by Rs. 235.91 lakhs, being the depreciation provided so far. Investments are shown at Rs. 9.31 lakhs, of which Rs. 8.16 lakhs are in the Company's own mortgage debentures. Current assets and loans and advances amount to Rs. 430.50 lakhs.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 158.00 *cum-dividend* and offer a net annual return of over 5.6 per cent.

Notice

THE ANDHRA SUGARS LIMITED
Venkatarayapuram,
Post Box No. 2,
TANUKU
Andhra Pradesh

NOTICE IS HEREBY GIVEN THAT THE Sixteenth Annual General Meeting will be held on Monday the 30th March, 1964 at 3.00 p.m., at the Registered Office at Tanuku.

Notice is also hereby given that the Share Registers of the Company will be closed from 20th March 1964 to 2nd April 1964, both days inclusive.

RALLIS INDIA LIMITED

Forty per cent assets of Rallis India Ltd. are employed in industrial production and half of its income is derived from products of industries which it owns solely or in association with others. But trading in commodities is still an important part of its business. Such trading, with cotton in the lead, accounted for 30 per cent of its income in the year ended 31st August 1963. Giving this insight into the Company's working to shareholders at their fifteenth annual general meeting held at Calcutta on Monday last week, the Chairman, Mr. Badridas Goenka, said that the new mix of industry and trade in business should protect the Company from the vagaries of fortune which it had suffered in the recent past. Progress during the current year, he added, had been satisfactory.

Referring to the need for holding the price line, Mr. Goenka stated that all articles over which the Company was able to exercise an element of price control were maintained at a stable price level. Its pharmaceuticals, fertilisers and pesticides, he pointed out, were found to have been cheaper than what they had cost a few years ago. The three divisions manufacturing these products were also constantly improving their all-India services. But, while maintaining the price line, the Company had been faced with pressure on costs, especially from the rising wage bill without a corresponding increase in labour productivity. The continuous upward surge in dearness allowances, Mr. Goenka observed, raised serious doubts about the validity of trying to keep the price line in an economy based on labour costs which were totally unrelated to productivity. The Bonus Commission's recommendations, setting aside 60 per cent of the available surplus for bonus to labour regardless of any provision for rehabilitation, would, he feared, widen the gap between labour costs and productivity and thus aggravate inflation.

The Company was doing its best, Mr. Goenka said, to save foreign exchange. It had reduced the import content of its engineering products to less than 10 per cent of their sales value and of pharmaceuticals to under 2 per cent. But, in spite of that, it was faced with delay in allocation of foreign exchange which seriously affected its production. In order to overcome that problem, the Company had established the Commercial and Industrial Exports Ltd., which, under the chairmanship of Mr. P. A. Narielwala, occupied the pride of place among the export houses recently formed for promoting exports.

UNILEVER'S SALES AND PROFIT HIGHER

Provisional results of Unilever Ltd. and Unilever N.V. for the year ended 31st December 1963 show an increase of 4 per cent, or £59 million (Rs. 78.7 crores) to £1,535 million (Rs. 2,046.7 crores), as compared with 1962. Profit before taxation amounts to £118.7 million (Rs. 158.3 crores), as against £106.6 million (Rs. 142.1 crores) for 1962. The consolidated net profit has gone up by 7.5 per cent, or £3.9 million (Rs. 5.2 crores) to £55.7 million (Rs. 74.3 crores).

The Directors of Unilever Ltd. have recommended a final dividend of 8.69*d.*, bringing the total dividend for 1963 to 13.5*d.* (as against 11.76*d.* in 1962) per five shilling ordinary share, before deducting income-tax. In the case of Unilever N.V., the final dividend is Fl. 2.43, bringing the total for the year to Fl. 3.78 (as against Fl. 3.3 for 1962) per Fl. 20 paid ordinary share.

TWO COMPANIES TO RAISE RS. 10.60 CRORES

The Controller of Capital Issues has authorised two companies to raise fresh capital amounting to Rs. 10.60 crores. The consent is valid for 12 months in both cases. Following are the details:

Bokaro Steel Ltd., a Central Government undertaking, is to issue capital of Rs. 10 crores divided into 100,000 equity shares of Rs. 1,000 each to be issued privately for cash at par. The capital will be utilised for setting up a new steel project at Bokaro.

Poysha Industrial Company Ltd., Bombay, having a subscribed capital of Rs. 25 lakhs, is to issue capital of Rs. 60 lakhs in equity shares of Rs. 10 each for cash at par. Out of this, shares of the value of Rs. 18 lakhs will be issued to the existing shareholders as rights and the remaining Rs. 42 lakhs to the public by prospectus. The money will be utilised for financing the expansion involved in the manufacture of tin containers.

INDIA SUGARS' NET PROFIT JUST ENOUGH TO COVER DIVIDEND

CRUSHING CAPACITY TO BE EXPANDED

THE shareholders of India Sugars and Refineries Ltd. [Managing Agents: The India Sugar Agencies (Private) Ltd., Bombay] have hardly any reason to be particularly enthused by its favourable results for the year ended 30th September 1963, because, in spite of the improvement, the return on the 10-rupee ordinary shares has only been maintained at 8 per cent per annum, taxable, to which level it was reduced by a further two points in the previous year. But a close look at the year's results shows that the dividend could not have been raised. For, while sale proceeds have improved from Rs. 214.44 lakhs to Rs. 222.01 lakhs and gross profit has recovered smartly from Rs. 13.18 lakhs to Rs. 18.19 lakhs, the net profit at Rs. 6.05 lakhs is just enough to cover the ordinary dividend absorbing Rs. 5.12 lakhs, after allowing Rs. 73,260 to pay the dividend to preference shareholders.

Actually, the net profit shows a considerable improvement over Rs. 3.42 lakhs to which level it had dropped again sharply in the previous year from Rs. 7.64 lakhs earned during 1960-61 and Rs. 12.37 lakhs earned during 1959-60. The improvement would have been greater still but for the rise in the tax provision from Rs. 4.10 lakhs to Rs. 6.50 lakhs following the increase in gross profit. It is, however, not the net profit but the net surplus available for distribution that really counts for dividend purposes. While the net profit in the previous year was lower, the distributable surplus, after adding as much as Rs. 3.17 lakhs brought in from 1960-61, was adequately raised to cover the reduced dividend of 8 per cent. The net profit for the year under review is higher, but the total for distribution shows hardly any change at Rs. 6.74 lakhs, because the amount brought in from the previous year is only Rs. 68,747. It will thus be seen that the dividend for the year under review could only have been maintained at the previous year's level. Out of the available surplus, however, a slightly larger sum of Rs. 19,611, as compared with Rs. 5,069 in the previous year, has been carried to reserves and provisions. After providing for the dividend liability, the balance is Rs. 69,501, which is carried forward.

The following table compares the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1963	1962	1961	1960
Sale proceeds	222.01	214.44	127.14	204.53
Other income	2.98	2.56	3.72	4.13
Closing stock of finished goods	22.10	48.89	67.71	10.53
Cost of sugarcane	89.45	92.76	101.53	88.95
Excise duty and literage fees	53.27	52.83	20.23	51.87
Other expenses	37.29	39.41	38.19	35.99
Gross profit	18.19	13.18	19.09	22.50
Provision for—				
Depreciation	4.32	4.70	5.54	5.70
Taxation	6.50	4.10	4.70	2.92
Managing Agents' remuneration	1.30	0.87	1.21	1.51
Net profit	6.05	3.42	7.64	12.37
Past expenses	..	..	1.74	..
Provisions written back	..	..	1.46	..
To reserves and provisions	0.20	0.05	0.16	5.42
Dividends—				
Preference	0.73	0.73	0.73	0.73
Ordinary	5.12 (6%)	5.12 (8%)	6.40 (10%)	8.96 (14%)
Carry forward	0.69	0.69	3.17	3.11
Cane crushed (tonnes)	160,479	186,340	206,203	153,133
Sugar produced (tonnes)	16,661	19,186	18,890	16,006
Average recovery (%)	10.31	10.29	9.13	10.42
Equity shares' market value (in rupees):	1963	1962	1961	1960
High	10.25	11.00	14.00	13.65
Low	8.50	9.25	10.80	12.00

The improvement in profit during the year has come from the steady price realised for sugar. The cost of sugarcane crushed during the year declined, as can be seen from the foregoing table, from Rs. 92.76 lakhs to Rs. 89.45 lakhs because the quantity of cane crushed dropped from 186,340 to 160,479 tonnes, as a result of which the quantity of sugar produced came down from 19,186 tonnes to 16,661 tonnes. But production of spirit in the distillery unit increased from 512,500 litres to 789,616 litres.

The expansion scheme for enhancing the distillery's capacity is progressing and the Directors expect that the scheme for producing 3,000 gallons of spirit per day will be completed during the current year. Active steps have also been taken for implementing the expansion scheme providing for a crushing capacity of 1,250 tonnes a day, instead of the present capacity of 1,000 tonnes, and the Directors are hopeful that the expansion can be put into effect from the beginning of the next season.

The net profit of the Salar Jung Sugar Mills Ltd., a subsidiary of the Company, increased considerably from only Rs. 985 to Rs. 3.95 lakhs. It has been utilised to reduce the carry forward deficit to Rs. 3.69 lakhs. The expansion scheme of this subsidiary is also reaching an advanced stage and it is hoped that, in the next season, it will be able to crush 1,000 tonnes of cane a day, thus ensuring a more economic working of its mill. As regards the other subsidiary, namely, Manjula Confectionery Ltd., while attempts were made for increasing sales of confectionery with some partial success, the Directors of the holding company found that for the subsidiary's economic working a further investment of capital and enlargement of its sales organisation were imperative but decided not to put in any further capital at the present juncture. Subsequently, the subsidiary negotiated and sold, with the consent of the holding company's Directors, its plant and machinery, spares, stores and raw materials, etc., to Parry Confectionery Ltd.

The financial position of the Company is good. Its paid-up capital, including Rs. 11 lakhs in 7.5 per cent, taxable, cumulative preference shares, amounts to Rs. 74.98 lakhs and is backed by reserves and surplus standing at Rs. 16.14 lakhs. The total of secured loans has come down from Rs. 49.61 lakhs to Rs. 20.69 lakhs. These loans and current liabilities and provisions bring the total indebtedness to outsiders to Rs. 74.92 lakhs, as against which are available current assets, book debts and investments aggregating Rs. 126.42 lakhs. The gross block has gone up during the year from Rs. 86.23 lakhs to Rs. 87.71 lakhs and has been adequately written down to Rs. 39.63 lakhs.

Currently, the Rs. 10 fully paid ordinary shares of the Company are quoted at their face value, but *cum-div.* and offer a *net* yield of 5.9 per cent per annum.

WORLD'S BIGGEST MERGER OF PHOTOGRAPHIC FIRMS

Agfa AG., Leverkusen, and Gevaert Photo-Producten N.V., Mortsel/Antwerp, have decided to combine their industrial activities into a single economic unit. The formation of this unit, the world's biggest merger of photographic firms, is in keeping with the progressive integration of the European Common Market. It will be accomplished on a 50:50 basis to include on both sides the entire industrial activity in the scientific, technical, commercial and financial field. The co-operation will greatly increase the research potential by co-ordinating the joint scientific efforts and will rationalise production and distribution as well as strengthen the partnership's competitive position.

Since formal mergers across the frontiers are not yet legally possible, the economic unit will be realised through the take-over of all activities by a new Belgian and a new German operating company. Gevaert Photo-Producten N.V. and Agfa AG, will each hold 50 per cent of the shares of both the operating companies. The managing boards will consist of the same directors in both the companies in equal proportion. The operating companies will be formed shortly and will start their activity as from 1st July 1964.

In pursuance of the formation of this unit, Agfa will take over several companies of the German photographic industry, affiliated to its parent company Farbenfabriken Bayer AG., Leverkusen, in particular Leonar-Werke AG., Hamburg; Mimosa GmbH., Kiel; Chemische Fabrik Vaihingen/Enz GmbH., Vaihingen/Enz; and also the 50 per cent Bayer subsidiary, Perutz-Photowerke GmbH., Munich. The other shareholders of Perutz., C.F. Boehringer and Soehne GmbH., Mannheim, will have a proportionate minority interest in the enlarged Agfa AG., and will be represented on the latter's supervisory board. In addition to the branded products of Gevaert and Agfa and notwithstanding the comprehensive rationalisation pursued by this unit, the branded products of Perutz, Leonar and Mimosa will also remain available on the market.

NATIONAL AND GRINDLAYS BANK LIMITED

(Amalgamating National Bank of India Ltd., Grindlays Bank Ltd., and the Eastern Branches of Lloyds Bank Ltd.)

Notices

MARTIN BURN LIMITED

NOTICE

THE ANNUAL GENERAL MEETING (BEING the Eighteenth Ordinary General Meeting) of the Company will be held on Monday, the 30th March, 1964, at 11 a.m., at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:

1. To receive and adopt the Audited Accounts for the year ended 30th September, 1963 and the Directors' and Auditors' Reports thereon.
2. To declare a Dividend on the Ordinary shares in the Company.
3. To appoint a Director in place of the one retiring.
4. To appoint Auditors and to fix their remuneration.
5. Special Business.

   To reappoint Sir Biren Mookerjee as a Director of the Company as he vacates office on having attained the age of 65 years. In this connection notice is hereby given that a special notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 281 of the Companies Act, 1956, to move the following resolution at the meeting:—

   "That Sir Biren Mookerjee be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."

6. Special Business.

   (*a*) To accord consent, pursuant to Section 314 of the Companies Act, 1956, to Mr. R. N. Mookerjee, who is a relative of Sir Biren Mookerjee and Mr. Romendra Nath Mookerjee, Directors of the Company, to hold and continue to hold an office or place of profit under the Company as an Assistant and if thought fit to pass the following resolution as a Special Resolution:

   RESOLVED: That consent be and is hereby accorded to Mr. R. N. Mookerjee, who is a relative of Sir Biren Mookerjee and Mr. Romendra Nath Mookerjee, Directors of the Company, holding and continuing to hold an office or place of profit under the Company as an Assistant on the expiry of his present contract of service for a period of four years as from 1st June, 1964, on the scale of pay Rs. 1,500-100-1,800 together with such usual allowances, benefits, amenities and facilities as are admissible to other assistants of the same rank and grade and that the Directors be and they are hereby authorised at their discretion to accelerate or withhold any increments within the limits of the scale of pay referred to herein.

   (*b*) To accord consent, pursuant to Section 314 of the Companies Act, 1956, to Mr. A. N. Banerjee, who is a relative of Sir Biren Mookerjee and Mr. Romendra Nath Mookerjee, Directors of the Company, to hold and continue to hold an office or place of profit under the Company as an Assistant and if thought fit to pass the following resolution as a Special Resolution:

   RESOLVED: That consent be and is hereby accorded to Mr. A. N. Banerjee, who is a relative of Sir Biren Mookerjee and Mr. Romendra Nath Mookerjee, Directors of the Company, holding and continuing to hold an office or place of profit under the Company as an Assistant on the expiry of his present contract of service for a period of four years as from 1st September 1964 on the scale of pay Rs. 3,000-200-3,600 together with such usual allowances, benefits, amenities and facilities as are admissible to other assistants of the same rank and grade and that the Directors be and they are hereby authorised at their discretion to accelerate or withhold any increments within the limits of the scale of pay referred to herein.

The Ordinary Share Register and Transfer Books of the Company will be closed from 16th March, 1964 to 30th March, 1964, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,
L. K. SEN CHOWDHRY,
Secretary.

CALCUTTA, *2nd March*, 1964.

Note:—The Dividend, if sanctioned, will be paid on or after 1st April, 1964, to those Shareholders so entitled whose names appear in the Company's Register of Members for Ordinary Shares on the 30th March, 1964 or to their mandatees.

An Explanatory Statement annexed to the convening notice as required under the Companies Act, 1956, has been forwarded to the members of the Company.

THE PHALTAN SUGAR WORKS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-second Annual General Meeting of The Phaltan Sugar Works Limited will be held on Friday, the 20th day of March, 1964 at 4 p.m. (S.T.) at the Registered Office of the Company, Sangli Bank Building, 296, Bazargate Street, Fort, Bombay-1, to transact the following business:

1. To receive and adopt the Directors' Report and the Audited Balance Sheet and the Profit and Loss Account for the year ended 30th September, 1963.
2. To declare a dividend.
3. To appoint a Director in place of Shri L. V. Apte who retires by rotation, but being eligible offers himself for re-election.
4. To appoint a Director in place of Shri Natverlal Bhikhabhai who retires by rotation, but being eligible, offers himself for re-election.
5. To appoint a Director in place of Shri Himatlal Kantilal who retires by rotation, but being eligible, offers himself for re-election.
6. To consider and if thought fit, to pass the following Resolution as a special Resolution.

   RESOLVED: That subject to the necessary approval of the Central Government the Articles of Association of the Company be altered in the manner following; namely by deleting from Article 143(i) the words "Each Director shall be paid out of the funds of the Company by way of remuneration for his services, a sum not exceeding Rs. 50 for each Meeting of the Board or Committee of the Board, attended by him" and substituting therefor the following:

   "143(i) The remuneration of a Director for his services shall be the sum not exceeding Rupees Two hundred and fifty for each meeting of the Board or Committee of the Board, attended by him."

7. To consider and if thought fit, to pass the following resolution as a Special Resolution.

   RESOLVED: That the Articles of the Company be altered—

   (*a*) by deleting the existing Article 3 and by substituting the same by the following Article 3: "Article 3. The capital of the Company is Rs. 1,00,00,000 (Rupees one crore) divided into 1,80,000 Ordinary shares of Rs. 50/- each and 20,000 Cumulative Producers Participating Preference shares of Rs. 50/- each.".

   (*b*) by adding the following Article 3(A) after the new Article:

   "Article 3(A). The Cumulative Producers' Participating Preference shares shall have attached thereto rights and privileges following, that is to say—

   (1) The holders of such Preference shares shall be entitled to receive out of the profits of the Company resolved to be distributed a fixed cumulative preferential dividend at the rate of 8 per cent per annum without any deduction on account of tax payable by the Company but subject to deduction of shareholders tax in accordance with the provisions of the Income-tax Act and rules made thereunder or under any statutory modifications or amendments thereof, on the capital for the time being paid up on such preference shares respectively.

   (2) In the event of payment of dividend for any period in excess of 18 p.c. on ordinary shares, the holders of such preference shares shall be entitled to participate for dividend in excess of the fixed preferential dividend of 8 p.c. at the rate of an additional 1 p.c. for every increase of 2 p.c. dividend to the ordinary shareholders over the rate of 18 p.c. referred to above, Provided the profits of the year for which such dividend is payable are sufficient to justify such distribution i.e. such preference shareholders will not be entitled to dividend in excess of the fixed preferential dividend whenever dividend is declared out of the profits of the earlier period. Provided further that the maximum dividend payable to the holders of such Preference shares in respect of any financial year shall not exceed 12 per cent per annum.

   (3) In the event of the winding up of the Company or on repayment of capital, the holders of such Preference shares shall be entitled to have the surplus assets applied, firstly in paying off the capital paid up on the preference shares held by them, and secondly in paying off the arrears (if any) of the fixed preferential dividend aforesaid to the commencing of the winding up whether earned or declared or not, and thereafter shall not be entitled to participate in any surplus of profits or assets to which only the ordinary shareholders will be entitled.

   (4) The Preference shares shall not be transferable for a period of 5 years from the date of allotment PROVIDED HOWEVER that the Directors may in their absolute discretion transfer any preference shares before the said period of 5 years expires.

   (c) Existing Article 121 be altered in the manner following:

   (i) The following clause be added as Sub-clause 1.

   (1) Subject to the provisions of the Act and Sub-clause 2 hereof every member of the Company holding any preference share capital shall in respect of such capital have a right to vote only on resolutions placed before the Company which directly affect the rights attached to his preference shares.

   (ii) Existing Sub-clauses 1, 2 and 3 shall be renumbered as 2, 3 and 4.

   (iii) The words "Sub-clause 1" wherever occurring in the Article shall be deleted and the words "Sub-clause 2" shall be substituted therefor.

8. To consider and if thought fit to pass the following Resolution as a Special Resolution.

   RESOLVED: That notwithstanding anything contained in sub-section (1) of Section 81 of the Companies Act 1956, upto 20,000 Cumulative Producers Participating Preference shares of Rs. 50 each now to be issued be offered at par to any persons (whether or not those persons include the persons referred to in Clause (a) of sub-section (1) of Section 81 of the Act) who are cane growers who agree to deliver cane to the Company subject to the special rights and privileges attached to the said Preference shares as specified in the Articles of Association of the Company on such terms and in such manner as the Board of Directors may in their absolute discretion think proper.

9. To appoint Auditors for the current year and fix their remuneration.

Notes: (*a*) The relative explanatory statements pursuant to Section 173 of the Companies Act, 1956 in respect of the special business under items 6, 7 and 8 set out above have been forwarded to the members of the Company at their Registered address.

(*b*) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(c) The Transfer Books of the Company are closed from the 25th January 1964 to 22nd February, 1964, both days inclusive.

(*d*) Dividend when declared will be payable through the United Commercial Bank Ltd., Fort, Bombay-1, on and after 23rd March 1964 to those shareholders whose names stand on the Register of Members on the 25th January, 1964 to whom dividend warrants will be posted.

By Order of the Board of Directors,
M. L. APTE,
Director.

TWO-THOUSAND-CRORE BUDGET OF CENTRAL GOVERNMENT

REVENUE SURPLUS RS. 54 CRORES—DEFICIT FINANCING RS. 86 CRORES

TO Mr. T. T. Krishnamachari goes the unique distinction of having presented, for the first time in the history of the Government of India, a two-thousand-crore-rupee budget. Actually, the aggregate revenue receipts of the Government in the coming financial year (April 1964-March 1965) are expected to be of the order of Rs. 2,095 crores. They will be higher still at over Rs. 2,135 crores if account is taken of the new taxation proposals covering Rs. 40.27 crores. The anticipated revenue receipts of Rs. 2,095 crores (excluding the effect of new tax proposals) represent a rise of Rs. 182 crores as compared with the revised estimate of Rs. 1,913 crores for the current (1963-64) year which itself is well above the budget estimate of Rs. 1,836 crores, the actual additional increase thus being Rs. 77 crores. The Finance Minister has stated that he has tried to be as liberal as he could in estimating receipts, since the actuals in the past have shown large increases in receipts. Even so, one can expect the rise to be more appreciable, thanks to the broadening of the country's economic activity, with an all-round improvement in production, consumption and earnings of the people. As against the rise of Rs. 182 crores in revenues, the total revenue expenditure is expected to go up (as compared with the revised estimate of Rs. 1,825 crores for 1963-64) by more than Rs. 216 crores to Rs. 2,041

BUDGET AT A GLANCE

(In crores of rupees)

	1964-65 (Budget)	1963-64 (Revised)	1963-64 (Budget)*	1962-63 (Actual)
Revenue Account:				
Receipts	2,095†	1,913	1,836	1,585
Expenditure	2,041	1,825	1,852	1,472
Surplus (+) or deficit (—) ..	+54	+88	—16	+113
Capital Account:				
Receipts	1,685§	1,595	1,600	1,384
Expenditure	1,915‡	1,818	1,774	1,479
Surplus (+) or deficit (—) ..	—230	—223	—165	—95
Overall surplus (+) or deficit (—) ..	—176	—135	—181	+18
Defence Expenditure—Total ..	854	809	868	474
Revenue account	718	693	709	425
Capital account	136	116	159	49
Plan Outlay	1,984	*N.A.*	1,651	1,414‡

* After taking into account the effect of budget proposals. † Without the effect of new tax proposals covering a total of Rs. 40 crores. § Excluding Rs. 50 crores from the proposed Annuity Deposits. ‡ Revised estimate only. N.A.—Not available.

crores. The estimate of expenditure is clearly inflated, the Finance Minister's assurance that he has been as strict as possible in providing funds for expenditure notwithstanding. In the current year, there is actually a saving of Rs. 27 crores, representing the difference between the revised estimate of Rs. 1,825 crores and the budget estimate of Rs. 1,852 crores.

Overall Deficit

Taking revenue receipts at Rs. 2,095 crores and expenditure at Rs. 2,041 crores for the coming year, the surplus on revenue account works out to Rs. 54 crores, the corresponding figure (revised) for 1963-64 being Rs. 88 crores; the budget estimates had anticipated a deficit of Rs. 16 crores. Adjusting this surplus against the deficit of Rs. 230 crores on capital account, the overall budgetary gap comes to Rs. 176 crores at the existing level of taxation. More than half of this gap—to the extent of Rs. 90 crores to be precise—is proposed to be met through (*a*) changes in taxation yielding a net gain of Rs. 40 crores and (*b*) introduction of Annuity Deposit Scheme yielding Rs. 50 crores (on capital account). The balance thus remaining uncovered is Rs. 86 crores which will, perhaps, be met by expansion of Treasury Bills, that is deficit financing. Commenting on the budgetary deficit, the Finance Minister observed:

"Given the present economic situation,... this order of deficit, I think, should serve best the requirements of growth as well as reasonable stability in prices. ... I have given attention to the overall deficit, rather than to the position on the revenue account. With the growing importance of capital expenditure in our budgets, it is no longer sufficient merely to balance the revenue budget. Indeed, the revenue budget must yield an increasing volume of surplus, if the requirements of public investment are to be met without continually growing reliance on private or foreign savings."

Revenue Receipts

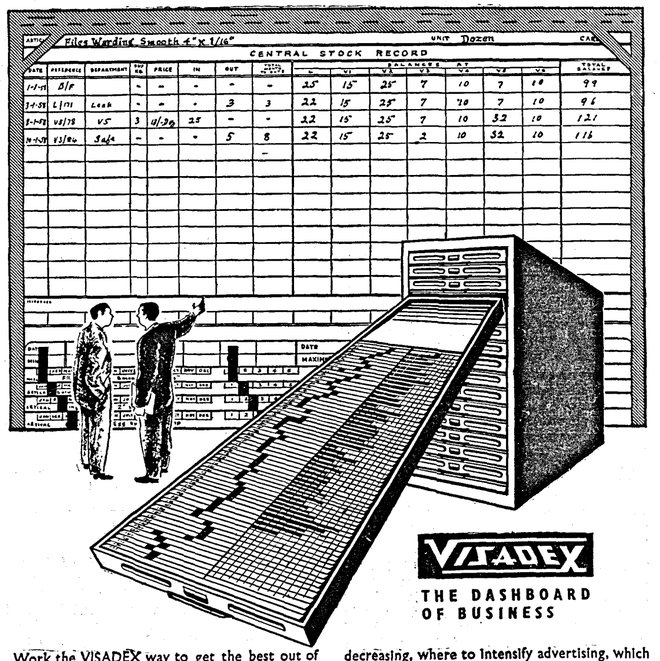
At the existing levels of taxation, the revenue receipts next year, as already noted, would be more by Rs. 182 crores as compared with the revised estimates for the current year. The bulk of the rise is accounted for by the four principal heads of revenue, namely, Union excise duties (+Rs. 47 crores), corporation tax (+Rs. 20 crores), taxes on income (+Rs. 15 crores) and customs (+Rs. 10 crores). Interest receipts are expected to go up by Rs. 32 crores. Following the change in the procedure for the release of assistance under P.L. 480 on an advance basis, the grants for approved projects are now expected to exceed the current year's provision by Rs. 76 crores. But this would be covered by a corresponding transfer to the Special Development Fund for which the expenditure estimates take a debit. These improvements, however, will be partly offset by a drop of Rs. 12 crores under Emergency Risks Insurance receipts and Rs. 4 crores under the surplus profits of the Reserve Bank accruing to Government.

Revenue Expenditure

Almost a third of the total revenue expenditure of Rs. 2,041 crores budgeted for the year 1964-65 will be for Defence Services (Rs. 718 crores), the entire balance of Rs. 1,323 crores representing Civil expenditure. The Defence requirements debitable to revenue next year show an increase of Rs. 25 crores over the revised estimates of Rs. 693 crores for the current year, while Civil expenditure shows an increase of Rs. 191 crores. The growing volume and cost of public borrowings, mainly for development, account for an increase of Rs. 36 crores under debt charges. A lump provision of Rs. 10 crores has been made on account of the increase in dearness allowance sanctioned recently with retrospective effect from 1st July 1963. Miscellaneous social and developmental services in the fourth year of the Plan are expected to cost Rs. 21 crores more, whereas grants to States for both Plan and non-Plan purposes would exceed the current year's revised estimate by Rs. 53 crores. The self-balancing items of grants under P.L. 480 deposits and Emergency Risks Insurance receipts together account for a net increase of Rs. 64 crores. The States' share of Union excise duties would also show an increase of Rs. 5 crores.

Capital Budget

The capital budget of the Central Government for the coming year provides for a total direct capital outlay of Rs. 796 crores, representing an increase of Rs. 34 crores over the current year's revised estimate of Rs. 762 crores; these figures are exclusive of adjustments for transfer of loan assistance from the U.S. which is notionally treated as capital expenditure. Defence capital disbursements are put at Rs. 136 crores (+Rs. 20 crores as compared with the revised estimate for 1963-64). Repayment of both internal and external debt is estimated at Rs. 259 crores (+Rs. 19 crores), loans to parties other than State Governments at Rs. 254 crores (+Rs. 64 crores), and loans to States at Rs. 606 crores (+Rs. 81 crores). Loans to States exclude the States' share of combined market loan, whereas the revised estimate of Rs. 525 crores for 1963-64 includes Rs. 101 crores as their share in the market borrowing which was a combined effort for the States and the Centre. It has since been decided, after consultation with the State Governments, to resume the practice of separate market operations in the next fiscal year. In this connection, the Finance Minister said that the financial position of most of the States was causing him



VISADEX

THE DASHBOARD OF BUSINESS

Work the VISADEX way to get the best out of your men, machines and materials.

VISADEX can tell you what you need to know at a glance. VISADEX offers you a fluent indexing system by which records are kept on cards, while colour signals spotlight what things are in stock or needed, whether production is ahead of or behind schedule, sales are increasing or decreasing, where to intensify advertising, which department requires more personnel, who owes you and how much ... VISADEX. In short, affords greater control at less cost, besides keeping records secure.

Our VISADEX Representative will be happy to show you, without obligation, how simple VISADEX is to operate—either with Card Pockets or Brass Card-holders—and how easily it can meet your specific requirements.

a good deal of concern. The relevant extract from his speech is as follows:

"The total amount due to the Centre by the States at the end of the current financial year (March 1964) will be of the order of Rs. 3,000 crores. In addition, the States' liability on account of market loans at present amount to Rs. 656 crores. Both in terms of loans from the Centre and market borrowings, the States have been receiving more than what was originally contemplated in the Plan. Their share of Central taxes and duties has also been increasing. Yet most of them are constantly facing ways and means difficulties of a disturbing nature. The whole position will require careful review in the context of the fourth Five-year Plan. While we should aim at giving the States a good deal of flexibility in allocating their own resources so far as Central assistance is concerned, we must also ensure that a major portion of it is related to the capital expenditure on identifiable projects which are economically sound and can be expected to generate the resources for the repayment of their liabilities. Other devices will also have to be thought of. As a first step, it is proposed to set up the fourth Finance Commission at the beginning of the next financial year, so that its report becomes available before we finalise the shape and size of the fourth Plan."

Direct Capital Outlay

The position of the relatively more important group totals under direct capital outlay of the Centre is shown below, the figures in brackets relating to the revised estimate for 1963-64 and actual for 1962-63, respectively:

(In crores of rupees)

Discharge of permanent debt ..	259 (240; 229)
Railways	253 (237; 216)
Industrial development ..	217 (209; 171)
Public works	66 (70; 42)
Schemes of State trading ..	31 (30; —22)
Grants for development ..	21 (18; 15)
Posts and telegraphs	21 (30; 21)
Delhi capital outlay	14 (12; 7)
Currency and coinage	9 (13; 9)
Kolar Gold Mines	0.56 (3.30; 0.18)

The amount of Rs. 217 crores earmarked for industrial development includes, among others, Rs. 100 crores for Hindustan Steel Ltd., Rs. 10 crores for Bokaro Steel Ltd., Rs. 8 crores for Drugs Corporation, Rs. 7.63 crores for Indian Refineries Ltd., Rs. 33 crores for Oil and Natural Gas Commission, Rs. 12.5 crores for Heavy Electricals Ltd., Rs. 9 crores for National Coal Development Corporation, Rs. 2.35 crores for Heavy Engineering Corporation, Rs. 1.5 crore for Hindustan Machine Tools, Rs. 13.5 crores for nuclear power stations and Rs. 2.75 crores for uranium ore mill.

Provision has been made in the budget next year for a total expenditure of Rs. 1,516 crores for implementing the Plan, of which Rs. 253 crores will be on revenue account and Rs. 1,263 crores as Capital outlay, including loans. In addition, the Railways are expected to provide Rs. 46 crores, Hindustan Steel Rs. 25 crores and other public sector enterprises Rs. 44 crores from their own resources. These estimates include Rs. 559 crores as assistance to the States, of which Rs. 122 crores would be on revenue account and Rs. 437 crores on capital account. The States are expected to find Rs. 353 crores from their own resources. Thus, the total State Plans next year would be of the order of Rs. 912 crores, as compared with the current year's budgeted outlay of Rs. 750 crores. With the Central outlay of Rs. 957 crores, contribution from public sector enterprises of Rs. 115 crores and State Plans of Rs. 912 crores, the total Plan outlay in the fourth year of the Plan would amount to Rs. 1,984 crores, showing a step-up of Rs. 333 crores over the budgeted outlay of Rs. 1,651 crores for the current year. Much of this additional outlay is to strengthen the agricultural sector, as well as to meet the cost of Plan projects which are nearing completion.

Overall Budgetary Position

The overall deficit in the budget for the current year (1963-64), which was originally estimated at Rs. 181 crores, is now placed lower at Rs. 135 crores. The reduction, it is significant, has taken place despite the net increase of Rs. 121 crores in loans and advances (Rs. 94 crores to States and Rs. 27 crores to other parties). For this increase has largely been made good by the rise of (*a*) Rs. 70 crores in revenue from corporation tax and taxes on income (including the States' share of Rs. 21 crores), (*b*) Rs. 35 crores under customs and excise, (*c*) Rs. 42 crores under small savings, and (*d*) Rs. 31 crores under miscellaneous debt heads, though this will be offset by the decline in Emergency Risks Insurance receipts and compulsory deposits.

A part of the improvement in the budgetary position during 1963-64 is also explained, according to Mr. Krishnamachari, by the saving or shortfall of Rs. 27 crores in expenditure under revenue (Defence and Civil heads accounting for Rs. 16 crores and Rs. 7 crores, respectively) and of Rs. 64 crores under capital other than loans and advances. The major shortfalls in capital expenditure are in respect of Defence (Rs. 43 crores), Hindustan Steel (Rs. 19 crores), Atomic Energy (Rs. 11 crores) and food purchases (Rs. 14 crores). The capital expenditure of Railways, however, is expected to show an increase of Rs. 19 crores.

With this analysis, the overall budgetary position of the Central Government in respect of the coming financial year may be assessed now. Direct capital outlay will amount to Rs. 796 crores, loans to States and other parties to Rs. 860 crores, and debt repayments to Rs. 259 crores, or a total disbursement of Rs. 1,915 crores. This amount is expected to be met to the extent of Rs. 54 crores from revenue surplus (before tax proposals), Rs. 40 crores from changes in taxes, Rs. 50 crores from Annuity Deposits, Rs. 997 crores from internal and external borrowings, Rs. 285 crores from repayments of loans, Rs. 125 crores from small savings, and Rs. 278 crores from miscellaneous debt and deposit heads, or a total of Rs. 1,829 crores. The uncovered gap thus comes to Rs. 86 crores which, as has been indicated already, will be covered by means of deficit financing.

UTILISATION OF IRRIGATION POTENTIAL

The Government of India proposes to take certain measures to bridge the gap between the irrigation potential and its utilisation in the States. A number of steps have already been taken by the Government to improve the utilisation. Some of those are: (1) Most of the State Governments have enacted legislation assuming powers to take up the construction of field channels at the cost of beneficiaries in the event of their failing to do so. (2) Concessional water rates in the initial period of development have been allowed to the cultivators by several State Governments. (3) The State Governments have been advised to provide loans from 'Block' funds to the beneficiaries to enable them to construct field channels. In case of default, the 'Block' funds are to be made available to the *Panchayats* for taking up these works. (4) Teams of officers from the Central Water and Power Commission are going round the sites to examine the position of utilisation of the irrigation potential already created. (5) The Ministry of Food and Agriculture and the Ministry of Community Development and *Panchayati Raj* have taken up supporting programmes like grant of loans for levelling of fields, construction of field channels, purchase of bullock, etc., supply of better seeds, evolving suitable crop pattern, setting up of demonstration farms, etc.

THE INDUSTRIAL CREDIT AND INVESTMENT CORPORATION OF INDIA LIMITED

STATEMENT BY CHAIRMAN, MR. G. L. MEHTA

THE Annual General Meeting of the shareholders of the Corporation will be held at the Registered Office of the Corporation, 163 Backbay Reclamation, Bombay 1, on Thursday, 9th April 1964, at 4 p.m. The following is the Statement by the Chairman, Mr. G. L. Mehta, circulated to the shareholders with the Directors' Report and Accounts for the year ended 31st December 1963.

I have great pleasure in welcoming you and placing before you the ninth annual report of the Board of Directors of the Corporation for the year ended 31st December 1963.

The Chinese aggression came towards the end of 1962, and its impact on the economy was felt during most of 1963. First came a budget which, in its call on the nation's resources, was unprecedented. Secondly, and more importantly, during most of the year, the economy seemed to show signs of faltering. I would like to state that this was not a new phenomenon but a confirmation and accentuation of a trend that had set in some time in the middle of 1962.

Cathartic Impact

One consequence of the emergency was a realisation of more careful assessment and husbanding of our resources and of the need to seek their allocation according to priorities which necessarily had to be defence-oriented. This, no doubt, was an operation whose object was to change the trend of the economy, and I shall not concern myself with it. But the Chinese action also seemed to have had a cathartic impact on the economy, inducing a considerable amount of rethinking on what I would like to call the efficiency of the economy and the factors influencing it. This being a matter vital to a development bank like I.C.I.C.I., I shall briefly dwell on it.

Partly as a legacy of the last world war and to some extent in consonance with the philosophy of planning, we have now a vast mechanism of controls and regulation. Of these, those that concern us most are industrial licensing, capital issues control, import (and consequent exchange) control, and price fixation policy. All these policies affect the efficiency of industry and their justification must be sought in a balance between social benefits and economic cost.

Place of Controls

In a planned economy, the channels into which investment flows have necessarily to be determined on *a priori* long-term criteria. Moreover, we are far from an era of vast resources when we can afford to let them be used without regard to objectives. Consequently, we have priorities and a mechanism to ensure that resources are used according to these priorities. While there may be differences on specific points, I believe that, broadly, the priorities we have set before ourselves are appropriate to our conditions and needs.

However, the essence of planning lies not only in laying down the right order of priorities but in setting up a mechanism to ensure the effective utilisation of resources. In the sphere of industry, for example, as regards the utilisation of foreign currency resources made available by international and foreign agencies or of the industrial capacity set up with such help, or in the synchronising of industrial capacity and the infra-structure (power, transport, communications and so on), our administration has admittedly fallen short of the goals largely because of the magnitude, complexity and novelty of the tasks.

I have no doubts about the necessity for the regulatory function of the State in an economy like ours. In an economy where priorities have to be determined, industrial licensing is essential to ensure their observance in regard to industries. In an economy where capital is short, control on resort to the capital market is unavoidable. An economy which derives almost the whole of the foreign currency resources required for capital development from foreign assistance needs to ensure careful and prudent use of such resources not only to satisfy foreign lenders but also for its own benefit. And for all these reasons—development according to priorities, scarcity of indigenous and foreign currency resources—because the normal forces of competition do not operate to ensure a fair deal to the consumer, it may in some cases be necessary to impose limits on the prices an enterprise may charge to the consumer.

Criteria for State Intervention

Granted the need for all these, the areas in which State intervention should take place need to be determined on grounds of social utility of such intervention or, as I said earlier, on a balance of social and economic considerations. While necessarily the demands on the State would be diverse and compelling, the State might be tempted to do too many things all at the same time.

A welcome result of the Chinese incursion and the subsequent stagnation of the economy has been to set off inquiries into the functioning of our economic system. As a first measure, the Government has already announced increased exemption limits for industrial licensing and capital issues control and removed price control on sixteen commodities; a committee headed by Shri T. Swaminathan (Secretary of the Ministry of Heavy Engineering) is examining the impact of controls on industrial production and has already issued an interim report suggesting revised licensing procedures; another committee headed by Dr. V. K. R. V. Rao, member of the Planning Commission, is at present considering import licensing procedures and machinery so as to recommend measures for accelerating the use of foreign currency resources. Measures for decontrol of steel prices are also under active consideration.

Gradually, as the year has passed by, economic conditions have stabilised. Our exports have increased, easing somewhat the strain on foreign exchange resources. Money market conditions have been easy, and in the capital market conditions have to some extent improved; buyers have become selective, and the market for preference shares and debentures has tended to revive.

Unit Trust

The Finance Minister has announced various steps to accelerate the tempo of activity in the economy. Besides relaxation in the Reserve Bank's lending policy, a Unit Trust is being set up to enable the middle classes to participate in investment in industrial securities. There is also a proposal to set up another development bank which would help to strengthen the institutional arrangements for providing industrial finance and particularly in bridging the gap in respect of large issues. The Finance Minister has also under consideration the giving of fiscal incentives for reviving confidence in the capital market.

Maximising Production

This is a beginning well made. But along with a search into procedures and machinery, it is also necessary to take stock of our productive capacity and to ensure the maximum output from it. While more and more factories and plants are being set up and are increasing our manufacturing capacity, we appear to have taken it for granted that, once capacity is set up, it automatically gets fully utilised. In fact, for various reasons such as scarcity of foreign currency resources for maintenance imports, want of power and other ancillary facilities in some places, lack of adequate supervisory and skilled workers and inadequate selling effort, we are not using our resources to the maximum. This is a waste of capital resources which a poor economy like ours can hardly afford. Unglamorous as the task may appear, it is necessary that we make an inventory of our production facilities unit by unit and take steps to obtain the maximum output from them.

Such an inventory will also reveal many gaps in our industrial structure—in the form of lack of complementary production facilities for goods which, at present imported or import-restricted, can be produced internally. To relieve the immediate pressure on our foreign trade account and even to set free foreign currency resources for newer industries and further development, it is necessary to set up a priority programme for setting up these industries. It is time we tried to consolidate our gains in recent years, determine the gaps in our industrial structure and, accordingly, devise priorities for the next phase of economic advance.

The hesitation shown by the economy during 1963 should thus be used to round the economic structure and to lay the basis for further advance on the course set for the economy. Economic development is a continuous task and there is no respite from it. But, in its nature, development is a dynamic process, and men's minds and thinking often fail to keep up with the dynamism of the economy. The year 1963 is important in focussing the need for such adjustment.

Record Assistance to Industry

The role of a development bank such as I.C.I.C.I. in the prevailing conditions needs to be clearly understood. I had stated in my last year's Statement that we considered the long-term prospects of industry in this country to be good and that we would be willing to stand by industry in the immediately difficult situation faced by it in the capital market. As the capital market seemed to dry up, industry increasingly turned to I.C.I.C.I. and other financial institutions for finance to implement projects which had been worked out, some of them even in the pre-emergency period. Often enough, financial plans had to be changed and entrepreneurs who would have issued rights shares turned to financial institutions for loans, and those who, in more normal times, would have approached the market directly turned to us for underwriting their issues to ensure their success. As a measure of our response to this demand, I may mention that, in a year when investment seemed to falter and entrepreneurs tended to postpone undertaking further projects, I.C.I.C.I.'s net assistance, as you will notice from the Directors' report placed before you, has been a record maximum at Rs. 23.05 crores. In 1963, I.C.I.C.I. gave underwriting sanction for Rs. 3.68 crores for 18 operations. Of 11 issues (total I.C.I.C.I. underwriting being Rs. 177.5 lakhs) which came to the market, three operations for Rs. 65 lakhs were oversubscribed; in the case of the other eight operations for Rs. 112.5 lakhs, we had to take up Rs. 83.25 lakhs. Clearly, apprehensions regarding the state of the capital market were not unfounded.

Moreover, a development bank like I.C.I.C.I. has a long-term contribution to make in an economy like ours. While planners must necessarily conceive and project in terms of national strategy and comprehensive policy, their plans have to be worked out in the form of individual projects, and the proper financing, management and economics of the projects ensured. This requires careful scrutiny of the details of individual projects, advice to entrepreneurs on various means of strengthening the viability of the projects by adequate safeguards in collaboration arrangements, and a close watch on the progress of the projects to ensure their timely completion and efficient working. If planning is found necessary at the national level, it is also indispensable at the project level. The role of a development bank is to ensure such planning at the project level.

Encouragement to New Entrepreneurs

The process of industrialisation consists in drawing into the vortex of industry persons from outside it. I.C.I.C.I. has, as a matter of general policy, tried to contribute to this development. Many projects financed by I.C.I.C.I. have been started by entrepreneurs for whom these projects were the first step in the industrial field. I.C.I.C.I's new entrepreneurs have come from a variety of fields—trading, management, engineering and other professions. Promotion and management of industry requires qualities which the new entrepreneurs do not always possess from their earlier background. While to the established entrepreneur, a development bank like I.C.I.C.I. might appear only as a source of funds, I should mention that an institution of this character plays and should play an important part in providing various ancillary services to new entrepreneurs. We advise them on the various formalities to be fulfilled in setting up a manufacturing unit, on a suitable capital structure for the project and the need for (and, if so, the terms of) foreign collaboration arrangements.

I would also like to reiterate two other points which I had made in my last year's Statement: the role of I.C.I.C.I. in the underwriting field and the role of I.C.I.C.I. in financing non-traditional industries. Confidence is a tender plant and those who, carried away by the large oversubscription to new share issues during 1960-62, were inclined to under-rate the role of underwriters, would have been disillusioned by the lack of public response even to good issues in 1962-63. The readiness of institutions like I.C.I.C.I. to come forward with support and assistance has prevented a decline in the level of investment which this public apathy would otherwise have brought about. Moreover, since its inception, I.C.I.C.I. has invested funds in non-traditional industries—particularly metal-based and chemical industries. This has involved taking greater risks; however, in keeping with the planning effort in the country, we have considered it desirable to mould our investment according to the requirements of the economy.

Healthy Investment

In these multifarious ways, I.C.I.C.I. as a development bank seeks to foster investment on healthy lines: in times of sluggishness in the capital market, it provides funds to enable the flow of investment to continue; in normal times, it carries out scrutiny of projects, guides entrepreneurs about their projects. I.C.I.C.I. itself has made special efforts to assist new entrepreneurs, to take up riskier forms of financing like underwriting and to invest in non-traditional industries. To carry out this task, I.C.I.C.I. has developed a cadre of competent professional staff and evolved procedures to ensure sound judgment. In the final analysis, the quality of work depends upon the competence and integrity and co-operative spirit of the staff, and our energies are continuously devoted to build up such staff and ensure the efficient working and development of the Corporation.

The efficiency of an economy depends upon having a machinery for decentralised decision-taking and administration of such decisions. Even as governmental administration and industry become more complex, it is necessary all the time to review the division of functions and the nature of such functions. In such a set-up, an independent development bank acts as a mechanism for ensuring planning at the project level. It is in this spirit that we carry on our work, and, I am sure, given confidence and resources, we shall be able to make this institution increasingly useful to the national economy.

Value of Help Rendered

The net financial assistance sanctioned by the Corporation during 1963 amounted to Rs. 23.05 crores. Of this, the amount sanctioned for new projects was Rs. 18.07 crores (including Rs. 7.36 crores in foreign exchange) in respect of 52 projects. The total cost of these projects (including working capital of Rs. 31.13 crores) would amount to Rs. 123.37 crores of which Rs. 36.91 crores would be required in foreign exchange for fixed assets. The total cost would be financed by share capital of Rs. 36.95 crores (Rs. 34.98 crores ordinary and Rs. 1.97 crore preference), long-term loans of Rs. 52.68 crores and bank borrowings and cash accruals of Rs. 33.74 crores. When in normal production, the total turnover of these projects would be about Rs. 68.10 crores. The net foreign exchange saving as a result of output from these projects would be nearly Rs. 46 crores.

As the operations of the Corporation have increased, it has been found necessary to augment its resources, in respect of both foreign currency and rupee resources. Earlier in 1963, after a visit by a joint mission from the International Bank for Reconstruction and Development (World Bank) and International Finance Corporation (I.F.C.), I went to the United States and had negotiations with the World Bank which resulted in the Bank sanctioning a loan of U.S. $30 million to I.C.I.C.I., the largest single loan obtained by I.C.I.C.I. so far. Subsequent to this, the Government of India have sanctioned to I.C.I.C.I. a rupee loan of Rs. 10 crores out of P.L. 480 funds. Towards the end of 1963, the loan of DM 20 million from Kreditanstalt für Wiederaufbau, referred to by me in my last year's Statement, was made effective. I take this opportunity to express our gratitude to the Government of India, the World Bank and the Kreditanstalt für Wiederaufbau, for their loans and to the Government of India also for the guarantee on the World Bank loan. We value highly the co-operation and confidence of the Government and these institutions.

Financial Results

During 1963, the Corporation's income from interest, dividends and underwriting commission, etc., amounted to Rs. 236.13 lakhs. After allowing for interest on loans taken and for other expenses, profit subject to tax amounted to Rs. 101.54 lakhs against Rs. 78.92 lakhs in 1962. After providing Rs. 41.42 lakhs for taxation and Rs. 2.24 lakhs for doubtful debts, the balance carried to revenue appropriation account is Rs. 57.88 lakhs against Rs. 46.38 lakhs in 1962. Of this, Rs. 14.50 lakhs is transferred to special reserve. The capital gain of Rs. 7.79 lakhs has been transferred to capital reserve not available for dividend. The Directors recommend a dividend of 7 per cent.

We have been able to extend and strengthen our relations with sister development banks outside India. Mr. Mobert Michel Titus of the Agricultural and Industrial Credit Corporation, Liberia, visited I.C.I.C.I. for a period of four weeks under a U.N.T.A.O. programme. Mr. Tat Pang Cheam of the Malayan Industrial Development Finance Ltd., Malaya, and Mr. Chamlong Tohtong of the Industrial Finance Corporation of Thailand, were with I.C.I.C.I. for a period of two weeks each. In addition, Shri R. N. Sahoo, Managing Director of the Orissa State Financial Corporation, Dr. G. Varade Gowda, Assistant Director of Industries, State Government of Mysore and Shri M. R. C. Warrier, Development Commissioner of the Kerala State Industrial Development Corporation, were with us for short periods to study procedures and working. We welcomed the opportunity of making contacts and rendering some service to similar institutions in the country and abroad.

Shri J. S. Raj, our Deputy General Manager, visited Tehran to attend a Conference on Stock Exchanges; later, he also went to Afghanistan on an I.F.C. (Washington) mission to examine the problem of providing industrial finance there. In October 1963, Shri H. T. Parekh, our General Manager, attended the Second Regional Conference of Development Banks in Asia, convened by the Industrial and Mining Development Bank of Iran. I am also glad to state that, at the request of the World Bank and I.F.C. (Washington), we have lent the services of Shri J. S. Raj for a period to head a new development bank being set up in Nigeria. In all these ways, we are co-operating with other institutions to provide a basis for friendly relations.

Finally, I would like to state that the present position of I.C.I.C.I. is due to the competence, devotion and team work of the I.C.I.C.I. staff. I take this opportunity to express my sincere appreciation of their work.

BOMBAY,
13th February 1964.

WORLD FOOD PROGRAMME SIGNS AGREEMENTS WITH TURKEY

The F.A.O. World Food Programme has signed three agreements with Turkey on projects to use food to aid economic development projects. More than 12,230 tons of food and feed worth about $1,221,000 are to be shipped to Turkey during this year and next. One project is to replace the old and dying ones with new and fast-growing trees. Another is to help correct the misuse of land in the upper watershed of the Kirmir river. The third is to move villages from the over-crowded north to pilot villages in the east and south-east.

Under the first project, 5,000 hectares of worn-out forest land are to be replaced with intensively managed plantations of fast-growing trees species. The new plantations will be in five selected locations in north-western Turkey; they would help meet the increasing demand for timber and forest products. Later, similar plantations with quick-growing species are planned to cover 150,000 hectares within a couple of decades and thereby to double the timber output. More than 3,500 tons of wheat, butter oil, cheese, beans and tea are to be used for feeding workers engaged in felling the old trees, levelling and terracing the soil and planting new trees. Food from the World Food Programme would be part of the wages, the rest being paid by the Turkish authorities in cash.

The second project is the Kizilcahamam watershed management scheme, aimed at improving the management of the upper watershed of the Kirmir river, where the main problem was the misuse of land. Initially, food aid would pay for one-third of the wages of workers on state-owned land and total wages on privately-owned land. The plan is to restore forests, plant trees on bare slopes, improve pastures and conserve water in an area of about 6,000 hectares. The Turkish authorities intend to treat the area as a model to show the villagers how to put the land to the best use and preserve it from excessive grazing. In all, nearly 1,500 tons of food and about 2,350 tons of feed is to be supplied for the workers and their livestock.

The third project is to move 900 families (about 4,500 persons) from over-populated northern Turkey to the eastern and south-eastern region, where they would be resettled in nine new pilot villages. Their resettlement involves distributing land, building roads, houses, farms and schools and providing a water supply. Ultimately, the Turkish Government intends to establish 44 pilot villages over a five-year period. Nearly 3,500 tons of food and feed are to be distributed to the settlers to feed them and partly feed their cattle till they grow their own food and fodder.

The three agreements with Turkey have raised to 15 the number of agreements signed by the Programme for projects in Africa, Asia, Latin America and Europe. The total cost to the Programme in terms of food, feed, insurance, transport, etc., is $15,027,253.

Mr. Allan Ræ, a senior partner of the solicitors firm of Crawford Bayley and Co., Bombay, and a Director of CIBA of India Ltd., has joined the management of CIBA Ltd., Basle, the well-known Swiss chemical company. During his 16 years stay in India, Mr. Ræ was a Director of, and legal adviser to, several leading companies.

ALLAHABAD BANK

ADVANCES UP AGAIN

A FURTHER satisfactory improvement is seen in the working of the Allahabad Bank Ltd. (General Manager: Mr. J. Ritchie, Calcutta) during the year ended 31st December 1963. Total income has increased from Rs. 380.42 lakhs to Rs. 433.36 lakhs, which is a new peak level, deposits have expanded by a further Rs. 5.19 crores to Rs. 67.84 crores and advances, which had improved in the previous year after two years' stagnancy by Rs. 6.74 crores, have risen by Rs. 7.54 crores more to Rs. 45.91 crores. Finally, the balance-sheet total has gone up from Rs. 71.94 crores to Rs. 79.06 crores.

According to the Directors, the improvement in the results has been achieved by better utilisation of funds as reflected in the higher level of advances. The increase in income has come under all heads and the bulk of it has naturally flowed from interest and discount earned the total of which has risen from Rs. 331.66 lakhs to Rs. 380.82 lakhs. But, as against the addition of Rs. 52.94 lakhs in the total income, there has been an increase of only about Rs. 4 lakhs to Rs. 26.41 lakhs in net profit after meeting all expenses and allowing for depreciation and taxation. In other words, along with the income, expenses have also gone up, which, as is known, is due to the higher operating expenses of banks as a whole. The outward interest has moved up from Rs. 178.78 lakhs to Rs. 192.46 lakhs, staff expenses have increased further from Rs. 125.96 lakhs to Rs. 143.25 lakhs and other expenses, too, have shot up from Rs. 49.98 lakhs to Rs. 64.66 lakhs. In spite of this all-round increase in expenses, the net profit has reached a new peak of Rs. 26.41 lakhs, thus more than wiping out the slight setback (from Rs. 22.49 lakhs to Rs. 22.44 lakhs) suffered in the previous year. Out of this, Rs. 11.30 lakhs, or some 42 per cent, has gone as bonus to staff.

So far as the shareholders are concerned, the return on the Rs. 100 fully paid ordinary shares has been maintained at 15 per cent per annum, subject to tax. The entire return, half of which was paid earlier as interim, is in the form of dividend, whereas in the previous year it comprised 12 per cent dividend and 3 per cent bonus. Thus, the previous year's bonus now forms part of the dividend. Further, since the dividend is payable for the whole year (as against only for three months in the previous year) on the 22,500 new equity shares of Rs. 100 each issued in the previous year at a premium Rs. 50 per share to the shareholders in the proportion of one new share for every two shares held, it absorbs a larger sum of Rs. 10.12 lakhs as compared with Rs. 7.42 lakhs a year before. The amount carried to reserves is Rs. 5.30 lakhs, as against Rs. 4.50 lakhs last year, but the surplus carried forward is lower at Rs. 4.68 lakhs, as against Rs. 6.30 lakhs brought in.

The following comparative table gives a clear idea of the steady progress made by the Bank in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Gross income	433.36	380.42	334.12	293.84

Cash	641.54	863.07	986.45	909.25
Balance-sheet total	79,05.56	71,94.13	64,60.82	59,84.50
Ratio to deposits of—	%	%	%	%
Advances	67.6	61.3	55.1	61.4
Investments	26.3	28.3	30.5	24.2
Cash	9.4	13.8	17.2	17.5

N.D.=Not disclosed.

The expansion in deposits has been shared by all types, but the bulk of it has been under fixed deposits. Thus, fixed deposits have increased from Rs. 39.96 crores to Rs. 42.58 crores, savings deposits from Rs. 9.57 crores to Rs. 11.17 crores and current and contingency accounts from Rs. 13.11 crores to Rs. 14.09 crores. Borrowings, amounting to Rs. 5.45 lakhs, have been raised outside India and secured by bills negotiated under credit. The bulk of the available funds have been utilised, as noted before, in advances and, as a result, the liquidity ratio has dropped from 42.1 per cent to 35.7 per cent. Even so, the latter figure indicates a fairly comfortable position. The ratio of the Bank's "own funds" to deposits is unchanged at 3.1 per cent.

TREND OF MARKETS

MONEY TIGHT

(From Our Own Correspondent)

BOMBAY, *4th March*

The slight improvement in the tone of the short-term money market noted last week was short-lived, for conditions turned extremely tight again this week. There was persistently high pressure of demand for credit, whereas the volume of funds actually available was smaller. Indeed, borrowers had to look around for accommodation. The inter-bank call rate for both renewals and fresh money stood at the high level of 6 per cent throughout the week. Conditions at Calcutta were no better. Call rate went up by ¼ per cent to 6¼ per cent with borrowers over.

The money market has taken note of the Central Government's borrowing programme as is indicated in the Union budget for 1964-65 presented to Parliament on Saturday, 29th February. The budget takes credit for new rupee loans aggregating Rs. 300 crores to be floated in the coming financial year. The whole of the loan proceeds will be for the Centre, as the combined borrowing operations on behalf of both the Centre and the States have been discontinued. In the current (1963-64) year, it will be recalled, the loans floated fetched a total of about Rs. 452 crores, of which the share of the States was Rs. 101 crores. In other words, the amount utilised by the Centre was Rs. 351 crores. As compared with this, the borrowing contemplated in the Central budget for 1934-65 is lower by Rs. 51 crores. The money market has also noted that the deficit financing to be resorted to through issue of Treasury Bills in the coming year is put at Rs. 86 crores, as against Rs. 60 crores (revised) in the current (1963-64) year and Rs. 124.56 crores in the previous (1962-63) year.

The 91-day Government of India Treasury Bills, tenders for which opened on Tuesday the 3rd inst., evoked limited support. The total amount actually offered was no more than Rs. 2 crores which was just equivalent to that invited and also accepted. The average rate of accepted tenders increased by a further Re. 0.010 per cent to Rs. 2.360 per cent per annum. Inquiries for Intermediate Treasury Bills, however, were better, the amount of Bills sold from 28th to 29th February being Rs. 60 lakhs, as against Rs. 20 lakhs a week before, though it was lower than Rs. 99.75 lakhs fetched two weeks ago.

India's foreign exchange reserves improved by Rs. 2.75 crores to Rs. 123.56 crores during the week ended 28th February. The improvement was entirely in balances held abroad which rose from Rs. 18.35 crores to Rs. 21.10 crores. The foreign securities held in the Issue Department of the Reserve Bank continued unchanged at Rs. 102.46 crores. Loans and advances to scheduled banks went up by Rs. 14.93 crores to Rs. 67.54 crores, of which those against usance bills alone accounted for Rs. 33.24 crores, a rise of Rs. 10 crores. Deposits of scheduled banks with the Reserve Bank also increased by Rs. 5.58 crores to Rs. 85.85 crores. Notes in circulation declined by a further Rs. 11.16 crores to Rs. 2,423.16 crores.

The total credit made available by scheduled banks to their clients spurted again by Rs. 15.23 crores to Rs. 1,747.63 crores during the week ended 21st February. Since, at the same time, deposits also increased by Rs. 13.80 crores to Rs. 2,439.25 crores, borrowings from the Reserve Bank fell by Rs. 11.33 crores to Rs. 52.11 crores, including Rs. 23.23 crores (—1.49 crore) obtained against usance bills. Investments declined by Rs. 3.50 crores to Rs. 646.33 crores.

Activity in the Gilt-edged market continued to be restricted for lack of institutional support. Business put through was small with values moving narrowly.

In the foreign exchange market, the banks' buying rate for U.S. dollars receded by 50 nP to Rs. 475 for $100 and their selling rate by 25 nP to Rs. 478.50. In New York, the pound sterling firmed up *vis-a-vis* the dollar, the spot rate going up by 0.270 cent to 279.790-279.820 cents and the three months' forward by 0.080 cent to 279.330-279.360 cents.

SOVEREIGN MARKED UP

(From Our Own Correspondent)

BOMBAY, *4th March*

Neither gold nor silver but sovereign stole the show this week by recording a two-point rise to Rs. 88 yesterday. Fourteen-carat gold was steady, whereas pure gold and silver were easier.

The improvement in sovereign was attributed by dealers to the flow of "black" money in the market. This did not seem surprising, considering that trading in sovereign itself is illegal. But a corresponding improvement in pure gold could not be registered; in fact, the quotation today was two points lower over the week at Rs. 103, due possibly to the availability of the contraband material. Fourteen-carat gold fluctuated in a narrow range between Rs. 64.75 and Rs. 65.50 and closed the week at the higher level, as against Rs. 65 last week.

Silver sagged after a quiet start in the absence of fresh support. After opening 50 nP lower at Rs. 260.50, it rounded off the week Re. 1.50 lower at Rs. 259.50. The daily average offtake and arrivals figures were unchanged at 10 bars and 12 bars, respectively.

The international price for gold improved further from $35.07½ to $35.08¾, but the ready rate in London eased from 251s. to 250s. 9½d. Silver prices in New York and London continued firm at their last levels.

The following table shows the trend of prices during the week under review:

	4-3-1964 (closing)	High	Low	26-2-1964 (closing)
SILVER				
Ready (996 fine) ..	Rs. 259.50	Rs. 261.00	Rs. 259.50	Rs. 261.00
GOLD				
Ready (24 carat) ..	65.00	65.50	64.75	65.00
Sovereign ..	85.00*	—	—	85.00*
London—				
Gold ..	250s. 0½d.	250s. 11d.	250s. 8d.	251s. 0d.
Silver Ready ..	111½d.	—	—	111½d.
Silver Forward ..	111¾d.	—	—	111¾d.
New York—				
Silver	129.3 cents	—	—	129.3 cents

* As on 24-6-1963.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce

• • • •

The Government of India has allowed approved auctioneers, functioning under the Pawn-broker's Acts, to auction unredeemed gold ornaments having gold of a purity exceeding 14 carats pledged with a pawnee. The announcement follows representations requesting that the sale of unredeemed gold ornaments may be permitted in States which have legislation in respect of pawn-broking on the same basis as in other States without similar legislation, so that these ornaments may be sold at a market value based on free competition.

The State legislation governing pawn-broking provides that unredeemed ornaments will be sold only through auctioneers recognised by specified authorities. Under the Gold Control Rules, however, a professional auctioneer is deemed to be a dealer and consequently he is debarred from selling ornaments of over 14 carat purity.

COTTON FUTURES EASY

(From Our Own Correspondent)

BOMBAY, *4th March*

Inspite of the meagre tenders (a mere 50 bales) on the 1st notice day, namely Monday, 2nd inst., which should normally constitute a bullish influence, the cotton futures market depicted an easy trend during the week. The easiness was induced by the announcement, made on 29th February, to the effect that 375,000 bales (of 400 lbs. each) of U.S. upland cotton would be imported into India under an agreement signed between the two countries. Traders expected that this cotton, in so far as it is for shipment before 30th June 1964, would add to the supplies available to mills for consumption during the current season and help stabilise Indian cotton prices. This consideration coupled with the slackness of mill demand for ready cotton and the declining trend of spot prices prompted fairly wide-spread selling which resulted in a decline in prices. The announcement regarding import of U.S. cotton overshadowed the Budget to which the market reacted only timely. In fact, the Budget had little effect on the market. Prior to the Budget, however, futures prices showed a tendency to firm up on rumours of a possible increase in import duty on cotton, which proved wrong, and the market resumed its recessionary trend. The decline was not so much in the maturing Jarilla March contract, which gathered some strength from bullish prospects for tenders, as in the Jarilla May contract which was subjected to heavy selling. This was a reflection of the traders' assessment of the improvement in the supply position consequent on the larger availability of U.S. cotton.

The following table indicates the trend of prices of the contracts during the week:

(In rupees per three quintals)

	4-3-64	*High*	*Low*	26-2-64
Jarilla March ...	769	778	776	771
Jarilla May ...	734.50	751.50	734.50	747.50

Mill demand for spot cotton was extremely limited, partly because spinners were inclined to await the Budget before entering into large commitments and partly because they anticipated a fall in prices. Needy mills, however, picked up moderate quantities of such popular varieties as CO2, 197/3, Digvijay and Kalyan at lower prices. Following the announcement of a large P.L. 480 allocation, prices of comparable Indian cotton declined. Prices of foreign cotton, especially East African and Sudan cotton also tended to look down. Traders are awaiting a notification from the Textile Commissioner getting forth the details of allocation of U.S. cotton. Both mills and traders were glad to note that there was no rise in the import duty on cotton in the Union Budget. Export demand for Bengal *Deshi* was virtually dormant. In the absence of foreign interest, prices of this variety receded.

The following table indicates the trend of tions (in rupees per candy of 784 lbs.) from the spot market at Sewri:—

Wagad 883; Dhulia; CO2 1,700; Viramgaon 950; Khamgaon 1,200; Ganganagar 730.

ART SILK YARNS RISE

(From Our Own Correspondent)

BOMBAY, *4th March*

Art silk yarns recorded notable gains this week. Prices were marked up soon after it was known that the excise duty on rayon yarns had been raised. As the week progressed, there was a further improvement on sellers' withdrawing from the market. Demand was limited and turnover was small. Staple fibre yarns, however, were easy, while cotton yarns were well held at their last levels.

Among art silk yarns, National Rayon 120D advanced from Rs. 12.17 to Rs. 12.65 a kilo and Century 75D jumped up from Rs. 18.41 to Rs. 19.18. Kohinoor 2 x 40 spot staple fibre yarn slipped down from Rs. 9.42 to Rs. 9.37. Among cotton yarns, 80s Gokak gained two points to Rs. 85.

The Association of Man-made Fibre Industries has decided to pass on the entire increase in the excise duty on rayon yarn to consumers. The increase, proposed in the budget, is of the order of 50 per cent in the case of viscose rayon yarn and 100 per cent in the case of synthetic yarn. A notification issued by the Assistant Collector of Customs has created in the meantime a feeling that the special excise duty at the rate of 33⅓ per cent on art silk yarn may not be collected for the current month. But, according to an official interpretation of the provisions of the Finance Bill, 1964, the special excise will continue to be collected this month as before.

The total incidence of excise duty, inclusive of special excise, on yarns of various deniers per kg. will be as follows (with the figures of pre-Budget incidence in brackets):

Staple Fibre: of cellulosic origin Re. 1.15 (Re. 1.33) others Rs. 2.67 (Re. 1.33). On staple fibre yarn, there will be no excise duty.

Viscose Yarn: below 75D—Rs. 8 (Rs. 6); 75D to 100D—Rs. 6 (Rs. 4); above 100D Rs. 4 (Rs. 2.67).

Synthetic Yarn: below 75D—Rs. 12 (Rs. 6); 75D to 100D—Rs. 10 (Rs. 6), and above 100D—Rs. 8 (Rs. 6).

There have been no changes in the rates of customs duty on yarn; but the rates of countervailing duty will undergo changes following the variations in excise duty. The total incidence of customs duty, inclusive of countervailing duty, will now be as under (per kg.):

Staple Fibre: of cellulosic origin—27.5 per cent *ad valorem* plus Re. 1.15; others—27.5 per cent *ad valorem* plus Rs. 2.67; staple fibre yarn—55 per cent *ad valorem* or Rs. 7.50 whichever is higher plus 10 per cent—60.5 per cent or Rs. 8.25 per kg. whichever is higher.

Viscose Rayon Yarn: below 75D Rs. 13.34; 75D to 100D—Rs. 9.80; above 100D—Rs. 7.30.

Synthetic Yarn: below 75D—60.5 per cent *ad valorem* or Rs. 8.25, whichever is higher, plus Rs. 12; 75D to 100D—60.5 per cent *ad valorem* or Rs. 8.25 whichever is higher plus Rs. 100; above 100D—60.5 per cent *ad valorem* or Rs. 8.25 whichever is higher plus Rs. 8.

The decision to pass on the additional excise to consumers has been taken, according to the Association's President, Mr. Rasiklal J. Chinai, after carefully considering the impact of the clamping of the "harsh measure on an industry which has been suffering from 1957 from a series of controls and duties."

The additional duty has been resented by also weavers and dealers. According to the Silk and Artsilk Mills' Association the increase in the duty will net in about Rs. 9 crores in view of the incidental increases in the special excise and also in the countervailing import duties. The industry sells its annual production, estimated at 31 million kg., at an average price of Rs. 10.50 per kg. Twenty per cent of the output consists of 100 and lower deniers, 60 per cent of 120 deniers and the balance of other deniers. On the average, the incidence of the duty (including the special duty) has gone up, it is argued, by a rupee to Rs. 6 per kg.

Urging reconsideration of the additional duty in a telegram to the Finance Minister, the Bombay Yarn Merchants' Association and Exchange Ltd. has pointed out that the increased duty will push up prices of rayon textiles which are used by the middle class. The Exchange has also stated that the heavy duties on cotton yarns, rayon yarns and synthetic yarns are exhorbitant as compared to the reliefs given to the powerloom sector.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	4-3-1964	26-2-1964
Art silk yarn (per kg.)—	Rs.	Rs.
National Rayon 120D	12.65	12.17
Century 75D	19.18	18.41
S. I. Viscose 150D	13.46	12.91
Staple fibre yarn (40 x 2)—		
Kohinoor (per kg.)	9.37	9.42
Century	9.28	9.24
Cotton yarn (per bundle of 10 lbs.)—		
10s Navsari	19.37	19.37
20s Podar	24.25	24.25
32s Hiver	32.00	32.00
40s Mahindra	42.00	42.00
60s Finlay	—	76.25
80s Gokak	85.00	83.00

SPURT IN OILSEEDS

(From Our Own Correspondent)

BOMBAY, *4th March*

The oilseeds market ruled distinctly firm during the week under review including the special budget session on Saturday. Besides excellent upcountry advices, absence of any fresh levy on groundnut oil and castor oil (as had been feared before) in the Central budget for 1964-65 imparted strength to the market. Groundnut futures firmed up on upcountry support and higher spot advices. The bullish fervour was fanned further by the reported decision of the Forward Markets Commission to enhance the ceiling rates for distant contracts in oil at Delhi and in Saurashtra by a rupee. This decision gave rise to hopes among trade circles here that the ceiling rate for the September contract in groundnuts would similarly be raised by at least Rs. 10. Groundnut oil prices also recorded a rise, in sympathy with the rise in prices of copra oil, following the increase in customs duty on copra from 25 per cent to 30 per cent. There was an impressive advance in prices of oilcakes too, thanks to fresh overseas inquiries. Castorseeds, which were hesitant in the early sessions due to budget nervousness, recovered perceptibly after the budget. The recovery followed reports that shippers were covering their position frantically. Linseeds moved up in line with the general trend. Cottonseeds, however, continued to be subdued owing to lack of support at higher levels and easy advices from the cotton market.

In the groundnut section, groundnut April 1964 contract commenced the week at Rs. 237.62, as compared with the previous closing of Rs. 237.37. In the pre-budget session, the contract remained at the opening level, owing to the usual pre-budget apprehensions. In the budget session, the contract touched Rs. 237.75. Thereafter, it swiftly moved up and closed at Rs. 239.25 today, Re. 1.75 lower than the official ceiling of Rs. 241. Nizam bold ready gained 88 nP to Rs. 50.50. Khandesh quality put on 50 nP to Rs. 51.25. Oil ex-mill gathered a like amount to Rs. 20.25. Railway receipt gathered 45 nP to Rs. 19.80. The groundnut oilcake expeller shot up by Rs. 14.50 to Rs. 413.50 (per tonne), following good export enquiry from Poland.

The castorseed March 1964 contract, which had declined from Rs. 172.25 to Rs. 171.75 in the budget session, recovered in the later sessions and touched a high of Rs. 174.50 today. June contract opened the week at Rs. 172.62, as against the previous close of Rs. 172.50. After rising to Rs. 173.00 in the pre-budget session, it eased to Rs. 172.87 in the budget session, but moved up again and touched Rs. 175.37 today. The net gain over the week was Rs. 2.87. Oil ready Madras and Kanpur were strengthened by 38 nP each to Rs. 34.75 and Rs. 33.50, respectively. Oil B.S.S. rose by 20 nP to Rs. 15.05, while oil commercial lost 25 nP to Rs. 14.60.

Linseed March 1964 contracts spurted by 31 nP to Rs. 40.06 and June contract by 43 nP to Rs. 40.87. Linseed bold ready was unchanged at Rs. 40.25, as also linseed oil at Rs. 16.10.

The cottonseed April 1964 contract began the week at Rs. 104 and remained at that level during both pre-budget and budget sessions. It was 50 nP lower at Rs. 103.50 yesterday. Today, however, it was better at Rs. 104.

The following table shows the closing prices of oilseeds and oils on Wednesday 4th March as compared with those of two previous weeks:

	4-3-1964	26-2-1964	19-2-1964
Groundnuts	Rs.	Rs.	Rs.
April 1964 contract	239 25	237 37	238.12
Kham bold	50 50	49 62	49 87

PEPPER ERRATIC

(Messrs Parekh and Co.)

BOMBAY, *4th March*

Malabar pepper ruled erratic during the week, with fluctuations both ways. The highest touched for garbled at Cochin was Rs. 310 and that for ungarbled was Rs. 300. Calicut was comparatively firmer, as there was demand for Tellicherry bold from Italy. There were heavy fluctuations in forward delivery at Cochin, as the speculators had become overbought in the recent rising market. In the ready section, floating stocks are mounting, as most of growers in assembling markets are putting their goods in loan in anticipation of higher prices. Unless there is timely support from New York, the market is likely to go down, for the technical position both in ready and forward has become somewhat weak.

March delivery, after touching Rs. 321, came down to Rs. 310 before improving to Rs. 315. May delivery, after rallying to Rs. 335, came down to Rs. 320 but recovered to Rs. 325.

Spot at New York improved 50.35, as there were scarcity of offers from both Indonesia and India, though grinders were refusing to follow the rise at the origins; they had enough stock in their pipe lines to cater for the coming two months. Last year, import of black pepper into the U.S.A. proved higher than usual.

As there have been no import of pepper into Singapore since October 1963 from Indonesia, the stock there is diminishing and, as a consequence, black and white are higher at $(M)120 and $(M)162½, respectively. Singapore, after the confrontation, is slowly going out of the export trade in world pepper and the present higher quotations obtained there have little impact on Europe and U.S.A., as Indonesia is offering pepper cheaper direct to both Europe and the U.S.A. *Chaitra* and *Vaisakh* delivery in Bombay are having wide fluctuations, as the local market in forward has become overbought. The highest touched for *Chaitra* is Rs. 337 and that for *Vaisakh* is Rs. 350, the lowest in the beginning of the week being Rs. 321 and Rs. 332, respectively.

The future of the market depends upon the selling attitude of Indonesia and the political situation in North Borneo and Sarawak. The second meeting on the Ministerial level among Malaysia, Indonesia and Phillipines is now being held at Bangkok. The outcome thereof is eagerly awaited by the trade. The pepper position in Indonesia looks like Chinese Jig-saw puzzle and it requires really a clever brain to put different pieces in the correct position together, in order to have a real picture of the situation. Uncertainty on the Kashmir border makes speculators more cautious and reactions thereirom at every boosting are most likely.

Ready pepper in Bombay is quoted at Rs. 162 per 50 kilos.

C.T.C. TEAS EASIER

(From Our Own Correspondent)

CALCUTTA, *3rd March*

The absence of any specific concession to the tea industry in the Union budget proposals for 1964-65 has caused disappointment to the tea industry and trade. For it had been thought that the industry had driven home its case for excise duty relief. If the industry is to get a fair share of the increasing world consumption, it is imperative for the gardens to increase production at lower costs. While it is possible to raise production, the indications are that the industry has already reached optimum output. Tax incentives should, therefore, be accorded. In this connection, the fact that last year the industry was able to increase exports only as a result of the withdrawal of the export duty is significant.

There have been reports of the U.S.S.R.'s success in growing tea. This is significant, because Russia has been a significant buyer of Indian tea in recent years. It is reported that the tea acreage in the U.S.S.R. has gone up 20 times in the past 3½ decades. The countries to which Russia exported tea in 1963 are said to include Czechoslovakia, East Germany, Poland and Bulgaria. The fact that at the same time the U.S.S.R. continues to lift more and more quantities of Indian tea should be attributed to increasing consumption in the U.S.S.R. itself.

In the internal sales held last week, dusts on offer totalled 31,921 packages. Demand was good, but the trend was irregular. Medium C.T.Cs eased, but the lots with improving liquor were about firm. Plain orthodox teas were absorbed at lower rates, but "teas for price" were steady. Medium Assams were absorbed at irregular prices, but the brighter lines sold well. Legg-cut teas were in ready demand, although realisations were lower. The quotations (in rupees) per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust 6.20 to 6.70, medium Assam C.T.C. dust 5.00 to 5.25, legg-cut dust 4.75 to 5.00, medium Assam dust 4.60 to 5.00 and plain orthodox dust 4.40 to 4.60.

Leaf on offer at yesterday's export sale, totalled 63,985 packages which met with a fair general demand at lower rates. Legg-cut teas met with ready demand at prices which were 15 to 25 nP lower than last rates. Whole leaf grades were about firm. Darjeelings with flavour met with competition, but others in this category exhibiting an "end-of-season" character eased. C.T.Cs generally eased, with fannings being a weak feature. Bright liquoring orthodox teas were dearer, but the more ordinary teas eased by 15 to 20 nP. "Teas for price" gave way by 10 to 20 nP. The quotations (in rupees) per one kg., inclusive of excise duty, were: Best Assam C.T.C. fannings and best Assam C.T.C. B.P.—not quotable, medium Assam C.T.C. B.P. 4.60 to 4.80 (nominal), medium Assam C.T.C. fannings 4.50 to 4.70 (nom.), clean plain pekoe 4.90 to 5.20, plain fannings 4.10 to 4.30 and plain B.P. 4.10 to 4.30.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, *3rd March*

Metal prices were fully steady during the week under review, though the downward movement in tin and copper on the London Metal Exchange suggested that the recent boom there had spent its force. The warning by the Union Minister for International Trade, Mr. Manubhai Shah, that further cuts might have to be imposed on imports of items of low priority or where production had expanded, suggested the improbability of an upward revision of quotas in respect of metals. The Minister, who was addressing the first meeting of the Export-Import Advisory Council in New Delhi, stated that although exports in 1963 had improved, the foreign exchange reserves at the end of 1963-64 were expected to be the same (Rs. 172 crores) as at the beginning of the year, because of the repayment of Rs. 25 crores to the International Monetary Fund. In the next two years, the country would be faced with substantial repayment obligations, and the Minister painted a picture of bleak prospects for imports.

The industry had looked forward to the budget in the hope of transformation of the existing 10 per cent *ad valorem* duty on copper and copper alloy pipes and tubes into a specific duty as in the case of sheets, circles, stripes and foils covered by tariff item 26A(ii). It had been pointed out that the levy of *ad valorem* duty calls for many formalities such as: (1) submission by the manufacturer to the excise authorities of a wholesale list of prices, which is subject to variation from time to time, thanks to the fluctuation in the prices of raw materials, (2) in the absence of such a list, true copies of the purchase order as well as the manufacturer's acknowledgment of order should be provided, and these should be verified true copies by the C.E. sector officer along with the originals, and (3) all bills of the manufacturer must be verified by the sector officer. Needless to say, the industry had represented that all these delay production and the flow of supplies to customers. The industry is disappointed that its suggestion has not been accepted by the Union Finance Minister, but it still hopes for a modification of the duty.

On the London Metal Exchange, spot copper wire-bars eased from £267 a ton to £256½. It is significant that while early in the week the 3-months' metal at £269 was higher than the spot by £2, as the week progressed the difference shrunk to 10s., with the quotation at £257. This was indicative of the unlikelihood of a rise in prices. Spot cathodes at £252 a ton lost £14 during the week, with the forward position giving way from £267 to £252. Fire-refined spot and 3-months opened at £262 and £263 respectively and both closed at £246. In Calcutta, utensil copper scrap maintained Rs. 680 per 100 kgs. Spot tin in London closed at £1,145 a ton after opening at £1,158. Demand stood abated. It should be stated that, because of its heavy stocks of tin and other strategic metals, the U.S.A. is in a position to prevent any unhealthy rise in prices. In the U.S. and the U.K., there is this realisation that violent fluctuation in metal prices would hamper the economic progress in the underdeveloped countries of Africa, Asia and South America and that as such the Governments of the metal-exporting countries should initiate measures for stabilising prices at fair levels. The fall in London quotations of the two principal metals in the week is thus significant against the background of this realisation.

In Calcutta, the prices continued steady. The stock position continued as tight as before, despite tin imports in January having totalled 711 tonnes, as against only 331 tonnes in the previous month. Zinc and lead also maintained the recent gains. In London, spot zinc eased from £101¼ a ton to £101, but spot lead hardened from £83¾ to £84¼.

EXPORT DUTY ON RAW JUTE ABOLISHED

(From Our Own Correspondent)

CALCUTTA, *3rd March*

While dull conditions continue to prevail in both raw jute and jute goods markets, the trade have welcomed the withdrawal of the duty on fibre exports (Rs. 4.50 a bale on cuttings and Rs. 15 a bale on others), announced in the 1964-65 budget of the Central Government. This fiscal incentive is particularly welcome, since India has been able to export only very little fibre as a result of keen competition in overseas fibre markets from Pakistan which is able to offer better quality fibre at a lower rate. Most of the remaining 1963-64 crop in India, still in the hands of stockists and cultivators, is inferior fibre not required by mills. Attempts to export the surplus inferior fibre have not so far been accompanied by striking results. At present, mills have in their stock fibre sufficient to see them through up to the time the next crop begins arriving in the market. Mills have already blocked large sums in fibre in an attempt to support the fibre market and also to fulfill the compulsory quota issued month after month by the Jute Commissioner. It would be unfortunate, indeed, if the mills were asked to invest more sums on fibre of questionable quality. In these circumstances, the withdrawal of export duty on fibre, it is to be hoped, will lead to increased exports, thereby easing considerably the surplus problem. Such of the inferior fibre as cannot be exported now should be bought by co-operatives. If, as is expected, the forthcoming crop will be better in quality, the lower grade fibre which is not finding an export outlet now can be held over for export in the next season. Should these measures alone fail to ease the surplus problem, mills would suggest that further buying should be done by the Jute Buffer Stock Association and that the banks should be asked to provide financial accommodation against the holding of raw jute on mills' account.

With mostly poor qualities on offer, and demand for these being low, quiet conditions were again in evidence in the fibre market during the week under review. Having already completed the February quota, mills showed little buying interest. At one time, some business on mills' account was done in *jungli mesta*. Arrivals in agencies averaged about 50,000 maunds a day, but agency prices were out of parity with Calcutta. Sellers, in an attempt to locate buyers, discounted quotations, but failed to draw in much response. Prices per maund were unchanged as follows: Assam bottoms Rs. 30.00; Northern bottoms Rs. 29.00; and daissee bottoms Rs. 33.50. Co-operative marketing societies are showing increased interest, and it was indicated that, up to 8th February, their purchases in Assam, West Bengal, Orissa, Bihar, Uttar Pradesh and Andhra aggregated 127,000 maunds.

Reports coming from overseas countries make no mistake of the argument that, if India desires to retain its markets abroad for jute goods in the face of stiff competition from Pakistan mills, continuing attention to improve quality of production of both goods and fibre is essential. It is creditable that the mills in India have already introduced a system of pre-shipment inspection on a voluntary basis. It was significant that the Jute Commissioner, Mr. G. C. L. Joneja, on his return in January from a six-week tour of the E.C.M. countries and some other parts of Europe, declared that the sophisticated and fastidious markets in European countries were now mainly depending on their own jute industries and imports from other countries, particularly Pakistan. While it is shown that mills are taking every effort to improve quality of their output, it is pointed out that, unless the quality of fibre, is also improved, the industry's efforts will be of no avail. The fall in quality during the last season was attributed to several factors, including lack of adequate water for retting leading to over-growth of plants and the system of minimum prices and price support scheme. It was only because the last previous season's crop had a high proportion of questionable grades of fibre not wanted by mills that marketing problems have resulted. Mills, therefore, urge that the present price differentials for the inferior variety should be broadened in order to make cultivators pay more attention to quality.

That the mills are continuously doing research and adjusting production to suit buyers is borne

(*Continued on page 395*)

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P. O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. Cli.—Cum. Right. XR.—Ex. Right.

Shares :—If a company has different classes of shares—as for example : 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up' per share.

Accounts :—Figures in the Accounts Closed column represent the months or the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

TREND OF MARKETS

(*Concluded from page 387*)

out by their success in turning out carpet backing cloth, most of which is exported to the United States.

Although demand for goods failed to improve this week, prices showed a fractional gain. This was due mainly to their relatively low levels. It was expected that overseas demand would soon improve. The feature on Tuesday last was an improvement in prices of heavy goods following Government interest in ready and near delivery B. twills. There was, however, disappointment when actual buying fell short of expectations. Ready B. twills improved from Rs. 109.85 to Rs. 110.35 and hessian 40" 10 oz. to from Rs. 45.70 to Rs. 45.80. The gains would have been more marked had there been no selling pressure. Further, business with overseas buyers was poor. The fall in interest this week on internal consumption accounts should be attributed to budget uncertainties. For goods for internal consumption are subjected to excise duty and, though there was no case for an increase in these duties, forward buying was restricted. On Wednesday last, B. twills eased to Rs. 110.30 and hessian 40" 10 oz. to Rs. 45.75. With poor interest shown by local buyers, the market was inactive on Thursday, when quotations at Rs. 110.50 and Rs. 45.85, respectively, were quiet. On Friday, however, business on account of due date covering was done. Overseas interests also responded. As a result, B. twills improved to Rs. 111.00 and hessian 40" 10 oz. to Rs. 46.15. With B. twills quoting at Rs. 111.10 and hessian 40" 10 oz. at Rs. 46.30, conditions over the week-end were steadier. However, yesterday, B. twills eased to Rs. 110.50 and hessian 40" 10 oz. to Rs. 45.90.

WHOLE LEAF TEA STRONG

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *27th February*

Offerings in leaf tea sale No. 8 held here on the 25th inst. amounted to 472,000 kgs. Quality was fully maintained and there was a useful selection of teas on offer. The market met with good demand. Low medium and medium brokens were sold well, though prices were generally lower by 10 to 15 nP. Similar fannings evoked less support and were easier, with a number of withdrawals. Good medium brokens were sold readily, but, here again, prices were lower by up to 20 nP. However, a few best invoices under this category were sold well. Highgrowns were sold at irregular rates and often realised prices lower than last. Clean black leaf descriptions were firm, though fannings were a little easier. Unorthodox descriptions, meeting fair support, were sold at around last rates. Whole leaf grades were strong, particularly good liquoring F.Ps. There was better enquiry for tippy teas which were dearer.

The quotations (per kg.) were:

	1964 Rs.	1963 Rs.
Low mediums	4.40-5.00	4.30-4.80
Mediums	4.90-5.40	4.80-5.30
Good mediums	5.20-6.60	5.30-6.00
Nilgiri B.O.P.	6.50-10.30	6.00-12.00

The average price realised in sale No. 8 was Rs. 5.42 per kilo, as against Rs. 5.36 a week ago and Rs. 5.49 in the corresponding sale last year.

There was strong demand for the small quantity of 193,000 kg. offered in dust sale No. 8 held today. Highgrowns were much in demand and were sold in sellers' favour. All medium descriptions were sold well at dearer rates with competition for Wynaad types. Clean black grainy sorts followed the generally dearer trend of the market.

The average price realised in dust sale No. 8 was Rs. 4.72 per kilo, as against Rs. 4.63 a week ago and Rs. 4.35 in the corresponding sale last year.

Colombo: The market opened to good general demand, but prices generally followed a slightly lower trend, except for selected quality lines.

London: *North Indian and other Growths*: In Monday's auction, there was good general demand for the more useful kinds, but the poorer teas were again easier.

Ceylon and South Indians: In Tuesday's sale, there was good demand and all descriptions came to a firm market with the exception of thin plain types.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale No. 9*: 388,000 kgs. offered. Good demand. Low mediums and mediums about steady. Good mediums fully firm to dearer. Highgrowns irregular and easier. Unorthodox unchanged."

KIPS FEATURELESS

(*From Our Own Correspondent*)

MADRAS, *2nd March*

Tanned cow hides showed little change this week. Export trading was patchy, with a few importers buying kips probably for later sale. Demand for cowcalf and buffcalf skins was selective and small. Offtake of low grade kips for the inland trade was negligible. The tone of the market was weak all-round.

Importers in the U.S. were still out of the market, both for buffcalf and tanned goat skins, and buyers from the Continent were not keen either, though their demand for middle class sheep skins lower selections was good.

Prices of tanned goat skins were steady and the volume of trading was small, while those of prime and semiprime sheep was firmer and higher prices were established for middle class sheep skins lower ends.

The next German tanned skins auctions were scheduled to take place today when 79,200 goat skins and 39,900 sheep skins were to be on offer. The results are awaited with interest by the trade.

TREND OF SHARES

DISTINCTLY BEARISH

(*From Our Own Correspondent*)

BOMBAY, *5th March*

STOCK markets reacted bearishly this week to the Union budget proposals. Like the Swatantra M.P., Mr. M. R. Masani, they seemed to have liked the first part of the

MARKET GOSSIP

(Concluded from page 351)

very much more than that under the C.D.S. The concession provided by allowing annuity deposits as a deduction has been watered down considerably by making the refund of principal and interest chargeable to tax as the income of the depositor for the year in which it is paid. The C.D.S., in contrast, had two redeeming features: (1) Income-tax payers could get some concession in the additional surcharge levied. Compulsory deposits are deductible from the additional surcharge to the extent of deposits made or 3 per cent of the residual income in the case of persons whose residual income is Rs. 6,000 or less per annum, and in the case of those with income exceeding Rs. 6,000, 3 per cent of the first Rs. 6,000 of such income and 2 per cent of the balance thereof. (2) Interest on C.D.S. is free of income-tax. There is no reason why the latter concession at least should not be given for annuity deposits also, unless, of course, the rate of interest payable on such deposits is made sufficiently attractive to offset this disadvantage. The Annuity Deposits Scheme has also a few more disadvantages. For instance, in the case of young assessees, whose incomes will normally rise in the coming years, the repayments will add to their total income and if, as a result, the slab goes up, the incidence of taxation will be higher. Again, the same result will follow if the rates of taxation in future years go up. And, finally, with the purchasing power of money going down year after year, the value of the deposit refunded may be much less than at the time of collection. Since these deposits are being taken under compulsion, the Government should offer to annuity holders some form of cover against this erosion in the value of money.

Massive Tax Cuts, But In U.S.

Although the economies of India and the U.S. cannot be compared, the problems facing the two countries for some time now are more or less similar: unemployment, idle capacity in industry and balance of payments deficit. The Union Finance Minister has no doubt strongly underlined the urgency of speeding up industrial growth, but the series of proposals he has incorporated in his budget for 1964-65 are hardly conducive to such growth. Indeed, the implementation of the proposals may well slow down the tempo of industrial development. Since this issue has been discussed in detail elsewhere, it is unnecessary to refer to it here. In contrast to the changes in tax structure as proposed by Mr. Krishnamachari stands the new Tax Bill just enacted in the U.S. The Bill provides for a massive cut of $9.2 billion in personal income-taxes and of $2.3 billion in business profits taxes during the current year, or a total cut of $11.5 billion; the total tax liabilities of Americans in 1963 amounted to over $100 billion. The average reduction in the case of personal income-taxes comes to as much as 20 per cent. Corporations will benefit by a cut to 22 per cent from the 30 per cent which they pay at present on their first $25,000 in profits. Surtax is levied on profits exceeding this amount and the combined liability will decline from 52 per cent to 50 per cent in 1964 and 48 per cent next year. A million and a half persons are now eliminated from the tax rolls and some 13.5 million with low incomes enjoy the benefit of reduced taxation. In view of the new minimum standard deduction of $400 for a married couple plus the personal exemption of $600 each, such a couple need not pay any tax till their income exceeds $1,600 per annum. The basic idea underlying the U.S. Government's move to effect large-scale tax cuts is apparently this: higher business activity, stimulated by leaving more money in private hands, will yield higher revenue for the exchequer than what would accrue from an economy stifled by higher income-tax rates. By deciding on a heavy tax reduction programme, the U.S. has followed the example set by Britain, Austria and some other countries.

Deposits With Companies

The relatively low rates of interest offered by banks on term deposits under the inter-bank agreement and the higher rates charged by them on advances have led to a diversion of funds from banks to joint-stock companies. This trend has been frowned upon, unjustifiably according to some, by the Government and the banks alike, though for different reasons. While the former feels that this will upset the cost of its own borrowings, the latter are annoyed because the companies are pinching away some of their deposits, which is their raw material. Both are, of course, viewing the problem from their respective angles and so do the owners of money. Is it unnatural, if they try to earn a little more on their resources, taking advantage of the keen competition for funds? Be that as it may, in the context of the controversy whether there should be a curb on the deposits taken by joint-stock companies—the Reserve Bank recently acquired new powers to control such deposits—an article published in the February issue of the *Reserve Bank of India Bulletin* on deposits from the public with joint-stock companies is of topical interest. The study covers a three-year period from 1960-61 to 1962-63 and is based on the accounts of 1,111 public limited companies which are among the 1,333 companies included in the R.B.I.'s latest series of studies on finances of Indian joint-stock companies and, in terms of paid-up capital, covers nearly four-fifths of the entire non-Government, non-financial public limited joint-stock companies' sector.

Deposits from the public with the selected companies recorded a steady rise of 15 per cent per annum during the period, the aggregate figure going up from Rs. 25 crores at the end of 1960-61 to Rs. 29 crores at the end of 1961-62 and further to Rs. 34 crores at the end of 1962-63. The proportion of companies reporting deposits showed, however, only a marginal increase from 24.8 per cent in 1960-61 to 25 per cent in 1961-62 and 25.3 per cent in the subsequent year. This means that the accretion in deposits was shared by more or less the same companies. Companies with a paid-up capital of more than Rs. one crore each accounted for about 30 per cent of the total deposits at the end of 1962-63 and absorbed about 59 per cent of the increase in that year. There was a substantial addition to their deposits in the previous year also. Companies in the size groups of Rs. 25 to 50 lakhs and Rs. 10 to 25 lakhs also accounted for a large proportion of the total deposits. The proportion of companies accepting deposits was about one-fourth to one-third except in the lowest size group of a paid-up capital of Rs. 5 to 10 lakhs, in which the prevalence of the practice was much less widespread.

Deposits were largely concentrated in sugar, cotton, engineering, chemicals and trading companies, which together accounted for about 75 per cent of the total in 1962-63 and claimed about 54 per cent of the increase in that year. Acceptance of deposits was fairly widespread among cotton textile and sugar companies; in the former industry, they numbered more than half and in the latter two-fifths at the end of the period under review. The proportion of companies reporting deposits at the end of 1962-63 was about 24 per cent in the chemical industry and less than 20 per cent in the engineering and trading groups. The proportion recorded an increase over the period in the case of engineering and chemicals and a decline in the case of sugar and cotton industries. There was an increase from year to year in the total deposits with companies in these industries during the period, but, except in the case of cotton textiles, the rate of growth was lower during 1962-63 as compared with the previous year. The proportion of fixed deposits to the total varied from 65 to 67 per cent in the three years. Fixed deposits rose by 17.7 per cent during 1962-63, while the rate of growth of other deposits was lower at 9.9 per cent. The predominance of fixed deposits is due to the natural anxiety of the public to earn some worthwhile return on their limited savings.

It is interesting to find that deposits constituted only a minor source of finance even for the big companies, their proportion to total borrowings in 1962-63 being only 2.6 per cent for companies with a paid-up capital of more than Rs. 1 crore and 3 per cent for companies having a paid-up capital of Rs. 50 lakhs to Rs. 1 crore. In other groups also, the source was of low importance, though in the smaller size groups it tended to be of relatively greater significance. A regionwise study discloses that deposits were a good source of finance for cotton mills in Coimbatore, amounting to as much as one-third of their total borrowings. Other groups in which they accounted for a fairly large part of the aggregate loan capital were the trading companies of Madras and West Bengal, sugar companies of the Punjab, engineering companies of Gujarat and Delhi and chemical companies of Gujarat.

Cloth To Cost More

Consumers of mill cotton piecegoods will henceforth have to pay more, not to mills, which do deserve an increase in price to make up for at least a part of the substantial rise in production costs, but to the Central Exchequer. This is the *relief accorded by the Union Finance Minister in* the budget for the coming financial year! It is true that the basic excise duty on mill-made grey cloth has been reduced and that handloom cess and additional excise duty have been left unchanged. *But the reduction has been more than neutralised* by the steep increases in yarn compounded duty, processing surcharges and excise on cotton yarn. In the case of grey cloth itself, the total excise duty per square metre has been raised by 0.24 nP to 14.10 nP for lower medium, by 0.24 nP to 17.20 nP for higher medium, by 0.53 nP to 34.70 nP for fine and by 0.23 nP to 47.80 nP for superfine cloth, while that for coarse counts has been lowered by 1.24 nP to 6.70 nP. The rates of yarn compounded duty are so fixed that the composite mills are required to pay yarn duty at rates higher than those fixed for yarn sales. This is unfair. The Finance Minister will do well to concede the millowners' plea for reducing the compounded duty from the revised high levels. In the name of rationalising processing surcharges, the Finance Minister has heaped a further burden on the mills. Processed fabrics of higher medium, fine and superfine varieties now bear an additional surcharge of 5 nP per square metre, the revised surcharge being 10 nP for bleached-dyed-printed cloth, 20 nP for mercerised-water-proofed (including rubberised) cloth and 30 nP for others (including shrink-proofed and organdie processed). Some relief has been given to mills producing shrink-proof and organdie-processed lower medium and coarse piecegoods, as the processing surcharge has been cut by 5 nP to 20 nP, whereas the surcharge on bleached-dyed-printed and mercerised-water-proofed categories continues at the old levels of 5 nP and 10 nP, respectively.

The rates of excise duty on cotton yarn have been substantially enhanced "not only to raise," to quote the Finance Ministry's memorandum explaining the provisions of the Finance Bill 1964, "some additional revenue but also in the process to transfer a larger portion of the total incidence to yarn from the fabric stage." Although yarn (in-hanks) above 26 counts is now made to bear a higher rate of duty as compared with counts above 40s, the difference in effective rates of duty between yarn cleared in other forms and yarn in hanks have been stepped up markedly from the present level of about 10-18 nP to 10-40 nP per kg. apparently to provide differential support to the handloom sector *vis-a-vis* the powerlooms. The revised rates of effective duty per kg. of yarn (unsized) cleared in hanks and other than hank, respectively, according to French count, are:

Less than 6s: Nil-10 nP; 6-14s: Nil-15 nP; 14-22s: Nil-25 nP; 22-29s: 5 nP-35 nP; 29-40s: 10 nP-45 nP; 40-51s: 25nP-60 nP; *51s and above:* 50 nP-90 nP.

Justifying the revision, the Finance Minister said: "Increase in the duty on fine and superfine yarns has become necessary, in view of the high profits that are being made on such yarns which are spun from imported cotton. By levying a surcharge on sized yarn and also by prescribing higher effective rates for yarn other than in hanks, with the duty on yarn in hanks being kept at a comparatively low level, the impact of these duties on handloom cloth will not, it is expected, be felt."

Mr. Krishnamachari's principle of differential support does not end with handlooms; it has been extended to the powerlooms too. The powerloom units with 50-300 looms which would have paid from 1964-65 the same rates as payable by composite mills in respect of the basic and additional duties on grey fabrics will now pay only a four-fifths of these rates. As regards units with 5-49 powerlooms, the rates of compounded duty have been substantially reduced, particularly for units producing only medium and/or coarse fabrics.

The effect of the aforesaid changes will be an additional excise revenue of Rs. 9.81 crores from yarn and a loss of Rs. 2.66 crores from fabrics, or a net addition of Rs. 7.35 crores. Taking into account this effect, the revenue proceeds from Central excise on cotton textiles in the coming year, as compared with the current and previous years, will be as follows:

(In crores of rupees)

	1964-65 (Budget)	1963-64 (Revised)	1963-64 (Budget)	1962-63 (Actual)
Cotton fabrics	54.94	56.50	56.50	58.37
Cotton yarn	20.10	9.80	9.20	8.38
Additional duties (textiles) ..	22.63	22.40	21.33	20.34
Total ..	97.67	88.70	87.03	87.09
Gross excise duties (all sources)..	769.54	703.47	696.34	598.83

It will be seen from the above table that, out of the total Rs. 770 crores expected to be derived by the Government of India from excise duty, consumers of textiles alone will contribute almost Rs. 100 crores, representing about 13 per cent of the total. One wonders whether such an essential item of consumption as cloth should be subjected to a stiff rate of excise duty. The Government does, of course, need a lot of money for defence and development, but it can definitely get much larger revenue even if the rates of excise duty on cloth are reduced, provided it gives all possible encouragement to the more efficient mill sector to produce more and more cloth through speedy expansion, modernisation and rationalisation.

U.S. Cotton To The Rescue

The distinctly firm trend of cotton futures in the past few weeks, which was a sequel to reports of widespread damage to the crop in the Western region on account of the cold wave, was reversed this week and prices showed a definite tendency to decline. This was because of the announcement of a P.L. 480 allocation for the import of 375,000 bales of U.S. cotton. The allocation was not altogether unexpected; in fact, it was long overdue. But what came as a pleasant surprise was that this cotton would be made available to mills for consumption in the next four months. All the 375,000 bales (of 400 lbs. each) are to be shipped before 30th June next. The delay in making the allocation had earlier given rise to the fear that the cotton would not be available for consumption during the current season. This fear has now been belied.

Import of 375,000 bales of U.S. cotton, which represents only just over six per cent of the total annual consumption of Indian mills of 5.7 million bales (both Indian and foreign cotton), does not, of course, alter the supply position so substantially as to induce a reactionary trend in prices. But the announcement, coming as it did at a time when prices of long-staple Indian cotton was showing a firm trend, has checked the rise, at least temporarily. One reason for this is the expectation that a sizable quantity of the 375,000 bales of the U.S. cotton would be of staple length below 1.1/16" which would be used as a substitute for some of the long-staple Indian varieties the supply of which may fall short of demand. The Indian Cotton Mills Federation is said to have already recommended that 100,000 bales out of the present allocation should be of staple length below 1.1/16". It is further reported to have suggested that the balance of 275,000 bales should be in staple length of 1.1/16" and above, with 75,000 bales thereof reserved exclusively for distribution among exporting mills against their retention quota.

The futures market greeted the announcement with a decline in the price of Jarilla March contract by as much as Rs. 8 per three quintals on Monday the 2nd inst., as compared with the previous day's close. The May contract eased by Rs. 7 per three quintals initially, but later reacted more sharply to touch a low of Rs. 735 per three quintals on the 3rd inst., a fall of Rs. 14.50 as compared with the closing quotation on the day prior to the announcement, namely, Saturday, 29th February. Although prices have recovered slightly since then, the present temper of the market is in sharp contrast to that before the announcement which, incidentally, over-shadowed the Central Budget in cotton traders' eyes. This explains the tame reaction of the cotton market to the Budget. Traders were, however, happy that rumours of an enhancement of import duty on cotton proved baseless, as the Budget did not raise the import duty on cotton.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CVIII. No. 2760 BOMBAY, 14th MARCH 1964 PRICE Rs. 2

BHUBANESHWAR AND PRIVATE SECTOR

THE Congress Party's Bhubaneshwar Resolution on "democratic socialism," its significance and consequences to the private sector figured prominently in the several speeches delivered at the thirty-seventh annual session of the Federation of Indian Chambers of Commerce and Industry by the spokesmen of both the Government and industry. Due to poor health, Prime Minister Nehru, who had inaugurated the annual session of the Federation every year since 1947, was unable to do so this year. His place was taken by Home Minister Gulzarilal Nanda who ably played the role. Mr. Nanda was not a wee bit behind his chief in giving a sermon to businessmen. In an otherwise agreeable lecture, he asked them not to belittle the Bhubaneshwar Resolution. Speaking about it in a tone which sounded reverential, Mr. Nanda observed that the Resolution represented "both a synthesis and a consolidation of our thinking and aspirations over many years" and that "one should not talk lightly about it." He was provoked to make this remark by Mr. Bharat Ram who wondered, in his presidential address, whether there was any need for a re-statement of the Congress Party's well-known socialist ideology. The retiring President was perfectly justified in making the point he did on this issue, for, apart from the fact that there has been no lack of ideology and that the phrase "socialist pattern of society" coined at Avadi was no less socialistic than the one ("democratic socialism") adopted at Bhubaneshwar, the post-Bhubaneshwar speeches of certain prominent Congress leaders (including Ministers and ex-Ministers of Centre and States alike) have been anti-private sector.

An attempt is being made to make private enterprise the scapegoat for the Congress Party's failures on the economic front. Mr. Nanda himself has been blaming the trade and industry for the rise in price levels, while the basic cause is the shortfall in agricultural production for the third year in succession. By no stretch of imagination can this setback be attributed to industry and trade in the private sector. They have not been in charge of agriculture. It is the Congress as the ruling party that has been looking after agriculture with results that are highly disappointing. Its excessive land reforms, such as ceiling on land and co-operative farming, and administrative failure in supplying farmers all over India with facilities (irrigation, implements, better seeds, fertilisers, credit and communication) for increasing production and in infusing among them confidence in the future of agriculture that have been responsible for agriculture continuing to be the Achilles' heel of Indian economy. Both talent and capital have been deserting the rural areas and the Government's attempts to provide new leadership, as well as cheap finance, through Community Development Service and Co-operatives, have not been as successful as was expected. The stepmotherly treatment meted out to such essential consumer goods industries as cotton textiles, to food industries (sugar and vegetable oils) and to some basic industries (like steel, coal and cement) right from the day India became independent up to a year or two ago has resulted in supply of goods lagging behind demand. The bullock-cart approach to the population problem, even when its seriousness was apparent in the beginning of the 'fifties, is another cause for the continued economic backwardness of the country. In short, there have been innumerable mistakes in framing economic policies and in executing them and the country is paying the price for them in the form of inflation, mass unemployment and poor rate of economic growth. What is more, the Congress Party has been slow in learning from mistakes.

The Bhubaneshwar Resolution on "democratic socialism" has unleashed unfavourable forces on the private sector. As Mr. Bharat Ram aptly remarked, it has raised "a chorus for nationalisation and establishment of co-operatives in respect of all conceivable economic activities, from banks to rice mills and wholesale to retail trade." It has strengthened "the tendency to ignore the achievements of private enterprise and to chastise, with reckless confidence and without acquaintance with facts, all actions of businessmen." It has led to the growth of a new superstition that "the competence and resources of Governmental organisations are infinite." A new lease of life has been given to the myth of concentration of economic power and economic control in a few hands and a lot of time, resources and energy are going to be wasted in the fruitless search for monopolies. This is implied in the Government's decision to appoint a Monopolies Commission. On top of the existing comprehensive statutes governing joint-stock commercial companies and banking companies, a fresh legislation will be inflicted on the people to facilitate the formation and working of the Monopolies Commission. The Company Law of 1956, which has already undergone two drastic amendments, is also going to be revised again. Such proliferation of laws is due to the mentality of a worker who is given to the bad habit of blaming the tools for his failures. The observations of Mr. Bharat Ram on this subject are quite pertinent and deserve to be recorded here, even though a Monopolies Commission is a *fait accompli* now. "The Industrial Licensing Policy even now takes care of this aspect," observed Mr. Bharat Ram, and quoted the Prime Minister who conceded only a year ago in a statement to Parliament that this policy contained, *inter alia*, "safeguards for avoiding industrial capacity in a few hands." The Finance Minister, too, has said in his budget speech that the biggest industrial plants in the country today belong, in terms of ownership, much more to the people in general than to the original founders with whose names they are popularly associated. So a Monopolies Commission is a superfluous body and the taxpayer has to suffer the cost involved, simply because a section of politicians has been crying wolf.

Mr. Bharat Ram drew attention to a dangerous line of thought voiced by Mr. T. T. Krishnamachari in his budget speech which many seem to have missed. The Minister has made a subtle distinction between ownership and control, and control and management. He does want to encourage managerial talent and good management. This is perfectly all right. But "can efficient management be secured without effective control? Is this not a problem confronting Governmental administration and public sector enterprises?" In posing these questions, Mr. Bharat Ram touched the crux of the issue. Surely, "responsibility and control," as he appropriately added, "go together and can be divorced only at the risk of grievous consequences." This warning is not unnecessary, having regard to what has happened in quite a few public sector corporations supposed to be autonomous and in some of the private sector companies with ownership spread over a large number of shareholders and with boards consisting of directors holding no more than their qualification shares. Grave irregularities, resulting in negligence, inefficiency and demoralisation among the workers, marked the working of these undertakings to the detriment of investors. The companies in the private sector suffered from the additional disadvantage of wranglings among the directors and chief executives for securing effective control.

The harm done by the Bhubaneshwar Resolution is quite clear in the Union Budget as well as in the Budget Debate. It has apparently prevented the Finance Minister from going the whole hog with measures for stimulating the growth of the economy. Even the few concessions given by him to the private sector have drawn the criticism not only from communists but also from some members of the Congress Party itself that he has failed to follow the Party mandate as re-defined at Bhubaneshwar and that he has been unduly soft to the private sector and foreign private capital. This criticism is undoubtedly false, for the confiscatory and redistributive taxes have been increased in terms of both coverage and incidence. The principle of compulsory savings—the term "forced savings" will be more appropriate—has been perpetuated in the form of Annuity Deposits Scheme, thereby forcing the private sector to look to the Government for long-term capital to a greater extent than before the Budget. In substance, therefore, some of the budget proposals "are at cross-purposes" (to borrow the phrase used by Mr. Bharat Ram) with the objective of promoting economic growth. Besides this, the administrative techniques which the Finance Minister proposes to follow to check tax evasion are very authoritarian and expose businessmen to the tender mercies of bureaucrats. Elucidating this point neatly, Mr. Bharat Ram said:

> "As it is, the discretionary power in the hands of the Executive is ominously large. It is to be further widened, especially in computing deductible expenditure for purposes of business. Because the Finance Minister feels that "unduly large amounts are spent" —a moot point—and because, according to him, it is not practicable to spell out all the restrictions in detail in the Act, Government will assume power to make rules in this behalf. In effect, it would mean that the assessees would be required to submit to the prejudices and predilections of individual officers. With the onus of having to prove their *bona fides*, the position of the assessees has become more perilous. The five steps, which the Finance Minister has proposed for checking evasion, will expose the honest assessee also to unprecedented embarrassment and even harassment. I do not see how Government expect that the combined effect of all these will give a fair deal to the honest taxpayer. The proposed removal of the secrecy provision from the Income-tax Act and other similar enactments may well result in character assassination, but without any benefit to the Exchequer."

It will thus be seen how the Congress Party's experiment in socialism is rapidly pulling the country more and more towards bureaucratic authoritarianism and regimentation which ill goes with democracy. Now, more than ever, the private sector in industry is firmly tied to

the apron strings of the Government. The Bhubaneshwar Resolution, solemnly reaffirmed by Mr. Nanda at the F.I.C.C.I's meeting this week, is designed to strengthen these strings. In the light of this trend, Mr. Nanda's assurance that, "in the pursuit of progress and social justice, the private sector has an honoured place and is not just tolerated," though welcome, sounds hollow. The statements of Government spokesmen when delivered from the forums of the private sector have invariably been friendly, but their actions have rarely been in consonance with them. The private sector has undoubtedly grown under the Congress Party's programme of planned economic development. Despite all the checks and balances imposed on it, private enterprise has brought about a rapid expansion of industries, albeit in fields where it is allowed to operate. During the last decade, the output of private industries has doubled. Over 188 new major products were manufactured for the first time in the last five years and the quality of production has also been steadily improving. All this demonstrates the dynamism of Indian private enterprise in general and justifies the assertion that it would have taken the economy to much higher levels had it been given greater scope and encouragement for displaying its talents. No enlightened businessman is opposed to the social objective of increased welfare of the masses, for he knows that it is an essential prerequisite for his own survival and growth. But those politicians who preach nationalisation and agitate for imposition of all sorts of controls and punitive taxation fail to realise that an economy which curbs individual effort stifles itself. Unfortunately, they are in a majority in this country today.

GROWTH PROBLEMS OF COAL INDUSTRY

FOR some time now the coal industry, especially in the private sector, has been passing through a difficult phase marked by a relative over-production of low-grade coals and the consequent accumulation of pithead stocks. The smaller collieries, it is said, have not been particularly well placed to undertake investment for expanding the production of higher grade coals and have, therefore, concerned themselves with the mining of lower grades to an extent not warranted by the demand therefor. In other words, the relative abundance of unwanted coals has been attributed to the unplanned increase in the output of smaller collieries. But this seems to be only one of the reasons. Another reason for the accumulation of stocks, currently estimated at more than five million tonnes, is last year's easy transport position which enabled industrial consumers to build up substantial buffer stocks.

Whatever be the causes of stock accumulation, the present situation certainly calls for remedy, for it has spelled financial difficulties for the smaller collieries. Three possible solutions have been suggested in this connection. One is that industrial consumers should be persuaded to take more coal. This does not seem to be a feasible proposition, for, in the present comfortable transport position, no industrial consumer would be willing to block more funds in larger-than-necessary buffer stock. The second solution suggested is that producers should popularise the use of soft coke as a domestic fuel in the place of cowdung. But this is a long-term solution involving sustained propaganda and effort, and it has no relevance to the immediate situation. The only other alternative is to curtail the production of lower grade coals, but this, too, seems to be out of question in the absence of suitable official steps, including a possible reward for the exercise of self-restraint in mining. Perhaps larger price differentials between higher grades and lower grades may automatically lead to some reduction in the output of the latter. But, here again, the latest selective price increases sanctioned have not significantly enlarged the price differentials, although the lower-grade coal producers have just complained that the erstwhile gap of Rs. 11 per tonne between the higher and lower grades has been "unfairly" widened further by Re. 0.75 to Re. 1.25 per tonne. Since the Government presumably thinks that the present crisis of over-production is a temporary phase, one cannot hope for any drastic remedy. If the situation corrects itself in due course, well and good. But, if it does not, the Government may then have to institute appropriate measures to bring supply and demand into some sort of equilibrium.

As far as the long-term approach to the relative importance of lower grade coals is concerned, it would be prudent to heed the advice of Mr. Pran Prashad, Chairman of the Indian Mining Association, who spoke at the annual general meeting of the Association held at Calcutta on the 7th instant. In his considered opinion, if the present unplanned increase in the output of lower grade coals is allowed to continue for any length of time, the long-term production programme is bound to suffer a setback. The long-term programme, in which the bigger units of the industry have been participating with their large investments (facilitated by the World Bank loan) in modernisation and expansion, does not unfortunately cover the smaller collieries to the same extent as it covers the larger ones. This is because the smaller collieries are financially incapable of undertaking the long-term preparations needed for expanding the output of higher grade coals. If they are to avail themselves of the loan facilities for modernisation, they would have to be amalgamated with bigger units more rapidly than up till now. This is the only possible inference from the following observations made by Mr. Pran Prashad:

"Advances in current mining technology have left these smaller units untouched and they continue to be run on cottage industry lines.... This Association, representing, in the main, the larger units of the industry, bears the smaller units no ill-will, but I feel the time has come when responsible coal producers must start to consider the total picture. No other country in the world today is obliged to keep 850 and odd coal mines in production to produce merely 68 million tonnes of coal per annum. The production of fuels at the lowest possible cost can, in modern conditions, be achieved only by units capable of ultimately producing upwards of half-a-million tonnes of coal per annum. For the Indian coal industry, which is now well set on the road to expansion, there is a splendid opportunity to leap at once from the age of the pick-axe to the age of full mechanisation, obviating the long and tedious crawl through intervening stages of advance."

Mr. Pran Prashad has called for action on four fronts, so that the industry could be rapidly modernised. It is most important, in the first instance, to ensure the adoption of advanced management techniques by mining engineers. Further training for such engineers has been considered necessary and the industry has, therefore, accepted the British National Coal Board's offer to send out to India a team of specialists to impart training in modern techniques. It is up to the managements of coal companies to take prompt advantage of this opportunity. The second front on which action has been urged by Mr. Pran Prashad is the technical equipment of mines. The expansion of production at the rate needed to sustain the economy's long-term plans, in his view, cannot be achieved except by large-scale installation of mechanical equipment for deep underground mining. But mechanisation on that scale would be feasible only in units of substantial size. The Amalgamation Committee itself, it will be recalled, had proposed that a mine producing 10,000 tonnes per month be considered a minimum economic unit. Even this comparatively low figure has now been reduced to 7,000 tonnes per month. According to Mr. Pran Prashad, if amalgamation is at all to take place, it must be based on a much larger unit-size, so that the higher overheads on modern equipment may be absorbed. The third aspect mentioned by him is related to the possible shrinkage in employment potential as a consequence of the adoption of advanced technology. Since such shrinkage cannot be helped, Mr. Pran Prashad has rightly urged that efforts to increase employment opportunities should be concentrated mainly on secondary industries which are sustained by the supply of basic fuels. As for the fourth aspect namely, productivity, the required improvement therein should be sought largely through mechanisation effected with the willing cooperation of labour unions. In short, Mr. Pran Prashad has advanced a cogent plea for mechanised mining in larger and more economic units. Few can disagree with this view. Its feasibility in existing large-sized collieries is not open to dispute. But its applicability to smaller collieries would involve their amalgamation—a process that is yet to gain momentum, and one does not know when and how it will.

The question of coal prices has a vital bearing not only on plans for modernisation but on the pattern of production according to grades. The present "cost plus" basis is considered unsatisfactory to the industry. No doubt non-price incentives, such as liberalisation of the scheme of assistance to collieries handicapped by difficult mining conditions, reduction of import duty on certain items of mining equipment and enhancement of the development rebate from 20 per cent to 35 per cent for the coal industry, have been given in the last one year or so. The Central Budget for 1964-65 has also included coal in the list of industries made eligible for a rebate of corporation tax equivalent to 10 per cent of the income-tax and super-tax normally payable by them and of 20 per cent of Surtax. But the Government is yet to recognise the need for a depletion allowance in the case of coal industry. As far as price incentives are concerned, it is a welcome development that the Government has just sanctioned an increase of Re. 1.25 per tonne in the case of non-coking coals of selected A and B grades in West Bengal/Bihar and "selected grade" in the outlying fields. In respect of coking coals, too, it has been notified that, with effect from the 3rd instant, in addition to the existing prices, every colliery owner shall be paid the following amounts where, in pursuance of an agreement between him and the consumer, the grade of the coal supplied is determined by sampling and analysis at the destination:

	Per tonne
In the case of any of the grades of coking coal A to E (conforming to old grades, selected A and B) ...	Re. 1.25
In the case of any of the grades of coking coal F, G and H (conforming to old Grade 1)	Re. 0.75

The above price increase in the case of coking coal, it is stated, would be limited to the supplies made available to the steel plants. This does not seem to be a straight increase in price at all but a premium payable for supplies conforming to specifications as determined by an analysis at destination. As the steel plants take 12 million tonnes out of the 17 million tonnes of such coking coal now raised, the balance of five million tonnes supplied to other consumers would not presumably command the aforesaid premium. So, under the present price scheme, it is only non-coking coals that have been given a straight price rise. The Indian Mining Association has, of course, welcomed this price increase on the ground that it largely neutralises the increase in costs of the grades concerned. But it has, at the same time, criticised the exclusion of Raniganj Grade I coal and Grades I and II coals in the outlying fields from the scheme of price increase. The viability of units, which are modernising themselves at considerable expense for expanding the production of these grades of coal, would be seriously affected if their claim for neutralisation of cost increase is not conceded.

But all this does not mean that the industry would be satisfied with small price increases for neutralising increases in cost alone. Its basic claim for raising the notional gross profit of Re. 1.75 per tonne, if conceded, would result in a more economic price. This is particularly necessary at the present time when the investment rate per tonne of coal produced is as high as Rs. 200 per tonne in several cases and the historical depreciation is thus quite inadequate as a source of capital. In order to attract and service capital in expansion programmes, it is of the utmost importance that an economic price for coal, especially in the case of higher grades, be determined without further delay.

EDUCATION FOR INDUSTRY

EDUCATION is in ferment throughout the world. In the U.K., the Robbins report recommended last year massive expansion in higher education, and legislation to give effect to the recommendations is under way. In the U.S., the stimulus to education given by the late President Kennedy is continuing. In France, W. Germany and Soviet Russia, educational needs are constantly being reviewed and educational systems reshaped to suit the changing requirements of the times. This new wave of reform and change in education has been caused by the needs of the fast-developing technological age which renders yesterday's educational systems and institutions obsolete today. Moreover, industry provides the largest market for the products of educational institutions and the two should, therefore, be in constant touch with each other. The modern technological developments are so fast that, even in the Western countries, educational institutions find it difficult to keep pace with industry. But the need for close co-operation and some kind of partnership between the two has never been in question. In fact, much of the recent striking improvements in scientific and technical education in these countries has been due to the close partnership between the educational world and progressive firms in industry and commerce. This partnership has taken several forms such as appointment of university and college staff members as consultants on industrial research and development projects; the provision of purposeful opportunities for these men to return to industry during their vacations; the identification of senior industrial staff with programmes of university or college research in which their firms may have a long-term interest and the attachment of junior staff members for co-operative participation in this work. As technology takes rapid strides forward, this partnership should become stronger and more broad-based. Hence the efforts to reorient the educational systems to subserve the changing needs of the industrial society.

The need for closer liaison between educational institutions and industry is far more urgent in India where the former still live in ivory towers. The educational system introduced by the British to produce clerks and administrators still remains largely intact. The result is a curious situation of large-scale educated unemployment and chronic shortage of technicians, engineers, scientists and industrial managers. The seminar on collaboration between industries and technical institutions held this week at the Indian Institute of Technology, Powai, Bombay, should focus attention on this serious lacuna in the country's educational system. The seminar, the first of its kind in India, was organised by the Institute of Applied Manpower Research, New Delhi.

Inaugurating the seminar in Bombay on the 8th inst., Mr. C. Subramaniam, Union Minister for Steel, Mines and Heavy Engineering, said that education in a modern society was too serious a business to be left solely to the educationist. Its interactions on society had so many ramifications that it would be an act of high irresponsibility to let it grind out its pattern all by itself. Since the wares of education were bought and used more and more by competitive industry and commerce, its customers had to play, Mr. Subramaniam averred, a vital part in fashioning its profile, in shaping its content and in modulating its rigidities. In other words, the Minister went on to add, since industry was the main customer of education, particularly technical education, there was need for closer dialogue between industry and education and better flow of information and personnel. The only way out of the relative isolation of educational institutions, in Mr. Subramaniam's opinion, is to force them into contact with industry.

He commended the practice in Soviet Russia in this respect, where industrial units take particular educational institutions under their patronage and link the planning of their requirement of technical personnel with these institutions. There is also a substantial flow of information between these industrial units and the educational institutions they patronise. Similar free exchange of information and personnel is characteristic of educational institutions and industrial units in the U.S. and the U.K. The Minister wanted similar close relations to be established between educational institutions and industry in India also. Specifically, he suggested that the Indian Institute of Technology, Powai, be linked to the Hindustan Steel Ltd. for a few years, so that the staff of the Institute could learn the technical problems of the steel plants managed by Hindustan Steel, while the steel plant managers in turn could spend some time at the Institute.

Co-operation between educational institutions and industry is also necessary to promote research. As was pointed out by Mr. Subramaniam, research sponsored by industry has to be increasingly undertaken not only by special institutes of research but also by educational institutions. In fact, the great universities of the West have also been leaders in the scientific revolution. The computer, for instance, was invented at the Harvard and Pennsylvania Universities. The practice of sponsoring research on problems of applied science and technology by industry has yet to develop in this country. If teachers in educational institutions are not conversant with the technological problems of industry, students can hardly be expected to imbibe the spirit of innovation and research in Indian conditions.

It will be observed from what has been stated so far that Mr. Subramaniam has devoted considerable thought to this important problem. The course indicated by him is the correct approach to the present situation where education is far removed from the realities and problems of the workaday world. Indeed, education will be a waste if it does not equip the students for worthy and socially useful careers in a modern industrial society. Suitable changes in the content and emphasis of curricula and closer association between industry and educational institutions are, therefore, necessary.

MARKET GOSSIP

Controlled And Dearer Credit

THE liberal credit policy, launched by the Reserve Bank of India exactly four and a half months ago—on 30th October 1963—has given place to a policy of controlled and dearer credit. Thus, under the modified policy, which came into effect from the close of business on Wednesday the 11th inst., the maximum amount that a scheduled bank can borrow from the Reserve Bank has been reduced from 75 to 50 per cent of its total statutory reserves at the Bank rate of 4½ per cent and from 75 to 50 per cent at 6 per cent. Any borrowing beyond this limit (that is, more than 100 per cent of a bank's statutory reserves) will be subjected to a penal interest of 6½ per cent. Hitherto, additional withdrawals over and above the permissible overall quota of 150 per cent of statutory reserves were not liable to any such penal interest; they were charged just 6 per cent. In other words, a third higher-tier of discretionary credit has been added again to the two-tier structure of lending hitherto in force. Besides slashing the automatic accommodation which a bank can seek from the Reserve Bank, the average cost of credit has also been raised. It is calculated that a bank will have to pay not less than 5.25 per cent on borrowings equivalent to its total statutory reserves with the Reserve Bank, as against about 4.87 per cent payable until now. Simultaneously with these modifications, the Reserve Bank has asked the scheduled banks to avoid grant of credit for hoarding of commodities expected to be in short supply and to bring down the level of clean advances given to parties other than industrial borrowers. Actually, in respect of groundnuts, where there is evidence of speculative withholding of stocks with the help of bank credit, the Reserve Bank has enhanced the minimum margin on bank advances against groundnuts from 45 to 50 per cent and reimposed for the period beginning from March-April 1964 ceilings on such advances at 130 per cent of the level maintained in the corresponding period last year. Emphasis is, however, laid, and rightly so, on the need for banks extending all possible assistance for augmenting output of goods for defence, exports and for genuine productive purposes.

Busy Season: From 25th October to end-February Only
(In crores of rupees)

	1963-64	1962-63	1961-62
Deposits*	+66.78	+37.40	+68.00
Deposits with Reserve Bank	—32.65	—1.69	—9.64
Borrowings from Reserve Bank ..	+65.32	+29.30	+25.70
Cash position	—20.22	—1.70	—7.80
Investments	—108.11	—95.00	—38.20
Bank credit	+280.79	+139.00	+131.80
Highest level touched by bank credit ..	1,758.74	1,524.57	1,355.72
Highest credit ratio (%)	77.04	74.58	69.49
Lowest level touched by bank credit ..	1,467.82	1,363.02	1,222.73
Lowest credit ratio (%)	65.45	66.85	64.79

Note :—The above figures relate to Scheduled Banks (including State Bank of India) only.
* Exclusive of P.L. 480 and P.L. 665 deposits.

The announcement of a tighter and dearer credit policy, with the continued reasonably liberal supply of credit for productive purposes, has caused no surprise at all to anyone. Indeed, one had expected the announcement to come much earlier. For the Union Finance Minister, in his budget speech of 29th February, had clearly hinted at the possibility of tighter credit control, as witness his following remarks:

".... The overall rate of monetary expansion in the economy will call for a careful watch.... Government indebtedness to the banking system has been a major factor in monetary expansion in recent years; but bank credit to the private sector has also shown a brisk increase during the current busy season.... A close watch has to be kept on the situation to ensure that credit creation is kept within reasonable limits and does not encourage speculation or hoarding."

Judged against the foregoing remarks of the Finance Minister and in the context of the difficult supply situation of agricultural commodities, it is quite natural that the Reserve Bank has tightened its credit policy to some extent. The total credit made available by scheduled banks has gone up perceptibly since the commencement of the current busy season. The actual increase between 25th October 1963 and 28th February 1964 was as much as Rs. 290 crores—another Rs. 10 crores are believed to have been added in the week ended 6th March—as compared with the increase of just Rs. 139 crores in the corresponding period of the 1962-63 busy season. The increase would of course, not have been considered unprecedented if only it had been accompanied by a significant rise in industrial and agricultural production. But this has not been the case especially in regard to agricultural output. The pace of expansion in bank credit is much more than the rate at which the deposits of scheduled banks have increased, the net accretion to the deposit portfolio during the aforesaid period being no more than Rs. 67 crores. The banks have, therefore, been compelled to rely more heavily on borrowings from the lender of last resort. The total outstanding borrowings from the Reserve Bank, which stood at Rs. 1.88 crore before the current busy season commenced (on 25th October 1963), jumped up to touch the all-time peak of Rs. 107 crores on the 6th of this month. The net expansion thus comes to over Rs. 105 crores, as against the rise of about Rs. 75 crores in the same period during the 1962-63 busy season.

Among the several factors that have been responsible for the marked expansion of bank credit, special mention must needs be made of three important factors. One is the increase in the cost of holding inventories of raw materials, the prices of which have risen quite appreciably of late. The second is the pressure of demand for more bank credit from several industries in Bombay for paying enhanced dearness allowance to workers. The third is the rise in borrowings from some parties in expectation of an upward revision in the prices of steel, paper, coal and certain other items. To these factors one has also to add the increased pressure of demand from some business houses, since a large part of the unaccounted money which was being lent to these houses has been diverted for the purchase of consumer goods and other durables, thanks to the fears of such money being unearthed. Since all these factors have exerted heavy pressure on bank credit, the Reserve Bank has considered it urgent to check a further undue expansion of credit by banks, keeping, at the same time, in mind the need for ensuring adequate credit facilities for genuine purposes.

Interest On Deposits To Go Up?

Alongside its move to control credit, the Reserve Bank has asked the banks to intensify their efforts to mobilise deposits by all possible measures, including a re-examination of the rates of interest offered by them on deposits. These rates, as readers are aware, are pegged at low levels under the Inter-bank Agreement. This journal has for long pleaded for an increase in deposit interest rates and it is happy that its view has now found favour with the Reserve Bank. Unless the banks effect an immediate increase in interest rates on deposits, they will simply not be in a position to meet the rising tempo of financing expansion out of their own resources and, at the same time, to conform to higher liquidity requirements due to come into effect six months from now, that is, on 16th September next.

When the Reserve Bank is fully convinced that the present conditions warrant a tighter and costlier credit policy, coupled with increase in deposit interest rates, one fails to understand as to why it is still hesitant to effect a straight increase in Bank rate. Such an increase is overdue. The earlier it is effected the better.

Not Even Small Mercies

How stubborn the Union Finance Minister, Mr. T. T. Krishnamachari, is! After listening to the six-day Lok Sabha debate on his Budget for 1964-65, he has merely confirmed all the controversial taxation proposals and conceded virtually nothing. The public cannot, therefore, look forward even to small mercies by way of marginal tax concessions in respect of most proposals. Of course, T.T.K. has clarified some points pertaining to personal income-tax, annuity deposits, gifts tax, development rebate, surtax on corporate profits, dividend tax, excise duties, and so on. But his clarifications, though quite welcome in some ways, do not mean much in the absence of immediate concessions. For instance, the clarification regarding personal income-tax (sans compulsory deposit) on incomes below Rs. 15,000 per annum shows that the only persons (married with more than one child) who will be paying substantially less (than in 1963-64) in the form of tax as such are those belonging to the Rs. 4,200 salary bracket, as will be seen from the following figures:

Salary bracket	Total tax minus compulsory deposit in 1963-64	Compulsory deposit in 1963-64	Total tax payable in 1964-65
Rs.	Rs.	Rs.	Rs.
4,200	60.90	125.00	36.00
5,000	93.10	149.00	84.00
6,000	176.50	176.00	184.00
7,500	338.73	205.00	334.00
9,000	510.01	225.00	550.00
10,000	690.00	250.00	709.00
12,500	1,003.00	294.00	1,084.00
15,000	1,571.00	336.00	1,584.00

Thanks to abolition of the compulsory deposit scheme, earners in the above brackets will have bigger "take-home" pay packets. That is some relief to the middle class insofar as more money will be available for current expenditure. But the tax incidence as such will continue to be more or less the same as in 1963-64 at most levels of income below Rs. 15,000.

As for annuity deposits payable by assessees with incomes above Rs. 15,000 per annum, the combined incidence of tax and annuity deposit will be somewhat heavier than that of tax and compulsory deposit in 1963-64. It is a pity that T.T.K. has refused to make the annuity deposit scheme optional except in the case of old persons above the age of seventy. Regarding gifts tax, the Finance Minister has clearly indicated that the exemption limit is Rs. 5,000.

Perhaps the most salutary clarification pertains to the development rebate which, as now envisaged, will cover the period upto 31st March 1967. It is also good that T.T.K. has held out the hope that thereafter a fresh system of development rebates, which might be on a graduated scale weighted in favour of the essential industries with higher capital content, would be introduced. Another salutary assurance given by T.T.K. is to the effect that representations made for keeping the combined impact of estate duty, capital gains tax and other incidental costs in respect of inherited property well below the entire value of such inheritance are under active consideration.

The Finance Minister has confirmed that, in the case of 20 bigger companies, which were paying super profits tax last year, the incidence of the proposed surtax and dividend tax as a percentage of the total income would be less. But

he has also admitted that, in the case of some companies which were not liable to pay S.P.T., the position will be different under the present Budget proposals. The demand for relief in excise duties, such as those on kerosene and cloth, has been rejected on the ground that the scope for any such relief is comparatively limited in a period of shortage. T.T.K. has gone further and said that some excise duties may have to be raised by executive order up to a certain limit in order to reduce middlemen's margins. All in all, therefore, the Finance Minister has dashed all hopes of concessions in most of his immediate tax proposals.

Minimum Cane Price For Next Season

The Union Food and Agriculture Minister has fallen a victim again to the pressure tactics of politicians and vested interests. And so the consumers of sugar will be compelled to pay still higher prices for obtaining their requirements of this sweetening agent in the coming season (November 1964-October 1965). For the production cost of sugar mills will increase quite markedly as a result of the further upward revision in the basic minimum price of cane announced in Parliament on Wednesday last week. The minimum price per maund of cane with 9.4 per cent recovery (delivered at the factory gate) payable by sugar mills in the coming season is fixed at Re. 1.85 which represents a rise of 4 nP per maund, as compared with the price of Re. 1.81 per maund fixed under the price linking formula; there will be a premium as now of 1.5 nP per maund of cane for every additional 0.1 per cent recovery. The revised price of Re. 1.85 will be payable even if the recovery per cent is below 9.4, whereas, in the current season, it will be recalled, a deduction of 1.5 nP for every 0.1 per cent fall in recovery upto the minimum limit of 9 per cent is allowed. For all cane with a recovery of 9 per cent and below, the minimum price is now Re. 1.75 nP per maund; in the next season, it will be Re. 1.85, as the system of deduction for fall in recovery below the specified minimum has been discontinued. In making this change, the Government, the official Press note says, has taken into account the effect of adverse season on recovery. Besides ensuring enhanced cane prices, the Government has also conferred an additional advantage on cane growers. Thus, the permissible limit for deduction from the cane price at receiving centres situated away from factory gates would be 1.5 nP per maund per mile up to a distance of eight miles. Thereafter, upto 24 miles, there will be no further deduction beyond 12 nP per maund and the balance of transport cost, that is, up to 24 nP per maund, will be debited to cost of sugar manufacture. These deductions are at present made in full out of the cane price received by growers.

In raising the cane price further, the Government of India has, of course, been prompted by the anxiety to ensure for mills adequate cane supplies for maintaining sugar production at a high level so as to cater to the expanding domestic requirements and exports. But, since the enhanced basic minimum price will be payable even for cane with a recovery of below 9.4 per cent, the cultivators will be interested only in producing a larger quantity of cane irrespective of quality considerations. Consequently, more and more lands now being devoted to rice and other foodgrains will be diverted to cane cultivation. Such diversion apart, cane price is not the only element that influences the flow of cane supplies from the fields to the factories. For much will depend on the level of *gur* and *khandsari* prices which continues to be ruling pretty high. Unless the Central and State Governments display political courage and take stringent measures to regulate production and prices of *gur-khandsari*, the sugar mills will continue to find it difficult to secure cane supplies adequate enough to maintain optimum crushing operations, the increase in the minimum cane price notwithstanding. The force of this contention is amply borne out by the experience of the past several seasons, including the current season. And it is, indeed, deplorable that the authorities refuse to learn from this experience. The result is that the defects in the official sugar policy are perpetuated, the less vociferous poor consumer continuing to make a heavy sacrifice by paying unconscionably high prices for such an essential item of consumption as sugar.

A Courageous Verdict

One more State legislation relating to land reforms, namely, the Madras Land Reform (fixation of Ceiling on Land) Act, 1961, has been declared *ultra vires* the Constitution by the Supreme Court. The Court held that Section 5(1) of the Act, which fixes ceiling on landholdings, violated the fundamental right enshrined in Article 14 of the Constitution and that Section 50 read with Scheduled III relating to compensation was discriminatory and against Article 14. Since these two sections constituted the pivotal provisions of the Act, their Lordships maintained, the whole Act must be struck down as unconstitutional. The Court gave verdict while disposing of a batch of six writ petitions filed under Article 32 of the Constitution, challenging the constitutionality of the Act on the ground that it violated Articles 14, 19 and 31(2) of the Constitution.

The Act, it may be recalled, was passed by the Madras State Assembly in September 1961 and received the assent of the President in May 1962.

This is the second time the Supreme Court has pronounced null and void one or more sections of a State legislation seeking to give effect to the land policy recommendation of the Second Plan. The previous judgment related to the Kerala Agrarian Relations Act, whereby the Court invalidated the applicability of the legislation to *ryotwari* land. An appeal against the judgment of the Maharashtra High Court invalidating Section 28 of the Maharashtra Agricultural Lands (Ceiling on Holdings) Act 1961 is pending before the Supreme Court.

These successive decisions of the Supreme Court, striking down one or more sections of the State land ceiling legislation, invests special significance on the pending 17th Amendment to the Constitution, which will serve to validate provisions of all land ceiling legislations which would not otherwise stand constitutional scrutiny. The amendment, now under consideration by a Select Committee, is itself a sequel to the Supreme Court's judgment in respect of the Kerala Agrarian Relations Act. As readers are aware, it seeks to bring *ryotwari land within the meaning* of "estate" (as defined in the *zamindari* abolition legislation) and to include as many as 124 State enactments to the Ninth Schedule of the Constitution, thereby placing them all beyond the pale of the Supreme Court. It is, therefore, rightly apprehended that the amendment, if carried out, will undermine the fundamental right to property guaranteed by the Constitution. The insidious implications of the amendment was pointed out by Mr. N. G. Ranga at the National Convention of the Swatantra Party held at Bangalore last month. According to him, if the amendment were approved by Parliament, 80 per cent of peasants and many others would be denied the protection of the Supreme Court in safeguarding their fundamental right to property. It was an after-thought, he said, to claim that such measures were all comprehended in the promised land reforms. Never were land reforms meant, Mr. Ranga asserted, either by positive exposition or implication, to give power to the Government to take away compulsorily on payment of nominal compensation the lands of every type of peasantry and that too by depriving them of the protection of the Court.

The criticisms levelled against the 17th Amendment are too serious to be lightly brushed aside. They raise issues of far-reaching importance to every citizen of this country. No one, of course, questions the right of Parliament to carry out whatever amendments to the Constitution it deems desirable. But it will, indeed, be a bad day for democracy and individual freedom, when Parliament, with the help of the majority party backed by the leftist elements in the Opposition, legislates to deny the citizens the protection of courts of law for holding property which is rightly theirs.

Gold Pool—A Success

Close co-operation between central banking authorities is a distinguishing feature of the monetary scene in free world countries. Many co-operative arrangements have born out of this willingness to act in concert. One such is the international Gold Pool set up about three years ago, at the suggestion of the U.S., with the object of sharing the burden of stabilising the gold market and keeping gold prices within reasonable limits in the event of exceptional and excessive demand for gold. Central banks of Belgium, France, Italy, the Netherlands, Switzerland, West Germany, U.K. and U.S.A. participated in the Pool which was not an official one. Its existence was, however, an open secret, although the size and scale of its operations were not disclosed.

What is said to be the first public recognition of the existence of the Pool has been given by the Bank of England by publishing, in its latest quarterly *Bulletin*, an article tracing the origin, and assessing the operations, of the Pool. The development of the Pool, it is pointed out, has occurred in two stages. In the first stage, the Pool was purely an agreement among central banks to stabilise the price of gold, when demand was excessive, by gold sales from the Pool. Gold was contributed to the Pool by the member-banks. Sales from the Pool on a substantial scale were made when major international monetary crises such as those which followed the Wall Street crash (of May 1962), the speculative flight from the Canadian dollar and the unprecedented demand for gold in London in the wake of the Cuban crisis. Since the end of 1962, according to the article, there was no need for selling gold from the Pool in the open market.

The second stage of development of the Pool began when arrangement was made to buy gold in case a surplus of supplies threatened to depress price. Under it, the participants agreed to coordinate their purchases whenever the London gold price fell below the official U.S. selling price of $35 an ounce. In practice, the Bank of England made the purchase on behalf of all the members, with the purchases being distributed periodically on an agreed basis.

Summing up the results of the Pool's buying and selling operations, the article points out that, from the practical point of view, the net position shows a considerable balance in favour of the participating central banks, that is to say, a considerable addition to monetary reserves. Last year, for instance, the Pool was left with no less than $600 million in gold to be distributed among the member-banks. This amount represents over half the total inflow of gold into London during the year. As compared with this, in 1962, about four-fifths of newly-mined gold were hoarded and only $300 million worth of gold found its way into official reserves. "Whether the accrual of gold to central bank reserves," the article concludes, "would have been smaller without the existence of the Gold Pool it is impossible to prove." "But there is little doubt," it asserts, "that the knowledge that central banks were working together in the gold as well as the exchange market has helped to maintain public confidence in the existing international monetary structure."

A similar endorsement of the merits of the Gold Pool and its continued operation has been made by Mr. Charles A. Coombs, Vice-President of the Federal Reserve Bank of New York, in a report published in the Bank's monthly review for March 1964. Other participating central banks may also be expected to hold identical views on the working of the Pool. Thus the Pool, which started as an informal arrangement and continues to be so, has become an important instrument of international co-operation among central banks.

HABIB BANK FARES WELL

THERE has been a further all-round improvement in the working of the Habib Bank Ltd. (Chairman: Mr. Ahmed Habib, Karachi) during the past calendar year which, as the Directors point out, witnessed a large-scale growth and expansion of banking throughout Pakistan. The total deposits of the Bank have risen by Rs. 28.83 crores to Rs. 124.25 crores, on top of an increase of Rs. 15.10 crores registered in the previous year, the bulk of the rise having gone into advances which have spurted by Rs. 21.82 crores to Rs. 68.30 crores, lifting the credit ratio by over six points to 54.9 per cent. Investments, which had been practically unchanged in 1962, have added as much as Rs. 10.32 crores to Rs. 48.98 crores during the year under review, though, as a ratio to deposits, they stand one point lower at 39.4 per cent. With both advances and investments tending to be markedly higher, the Bank's gross income has shot up from Rs. 475.29 lakhs to Rs. 609.89 lakhs and its balance-sheet total has expanded further from Rs. 154.33 crores to Rs. 196.47 crores.

Following the sharp accretion of deposits, the outward interest has gone up from Rs. 97.13 lakhs to Rs. 130.17 lakhs and other expenses, too, have increased from Rs. 190.87 lakhs to Rs. 242.13 lakhs. Even so, the profit before taxation has recorded a handsome improvement of Rs. 48.81 lakhs to Rs. 230.25 lakhs. However, with taxation claiming Rs. 36 lakhs more at Rs. 134 lakhs, the net profit is up by only Rs. 12.81 lakhs to Rs. 96.25 lakhs. The transfer to the reserve fund has been maintained at Rs. 20 lakhs, bringing the total of reserve fund and other reserves to Rs. 240 lakhs. The dividend on the five-rupee shares, including the interim distribution of 15 per cent, is maintained at the previous year's level of 20 per cent.

The Bank's progress in the past four years is indicated in the following comparative table:

(In lakhs of Pak rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Gross income	609.89	475.29	411.32	315.83*

* After deducting interest paid.

The progress made during the year illustrates the Bank's growing operations through a steady expansion of branches. The number of branches (including one in Bombay), increased from 92 in 1959 to 107 in 1960, to 125 in 1961 and 166 in 1962. During the year under review, the Bank opened 76 branches in both the wings of Pakistan, bringing the total to 242. The Bank actively participated during the year in the schemes sponsored by the State Bank of Pakistan. In order to increase advances to small investors, the Bank has set up a special small loans department at its central office.

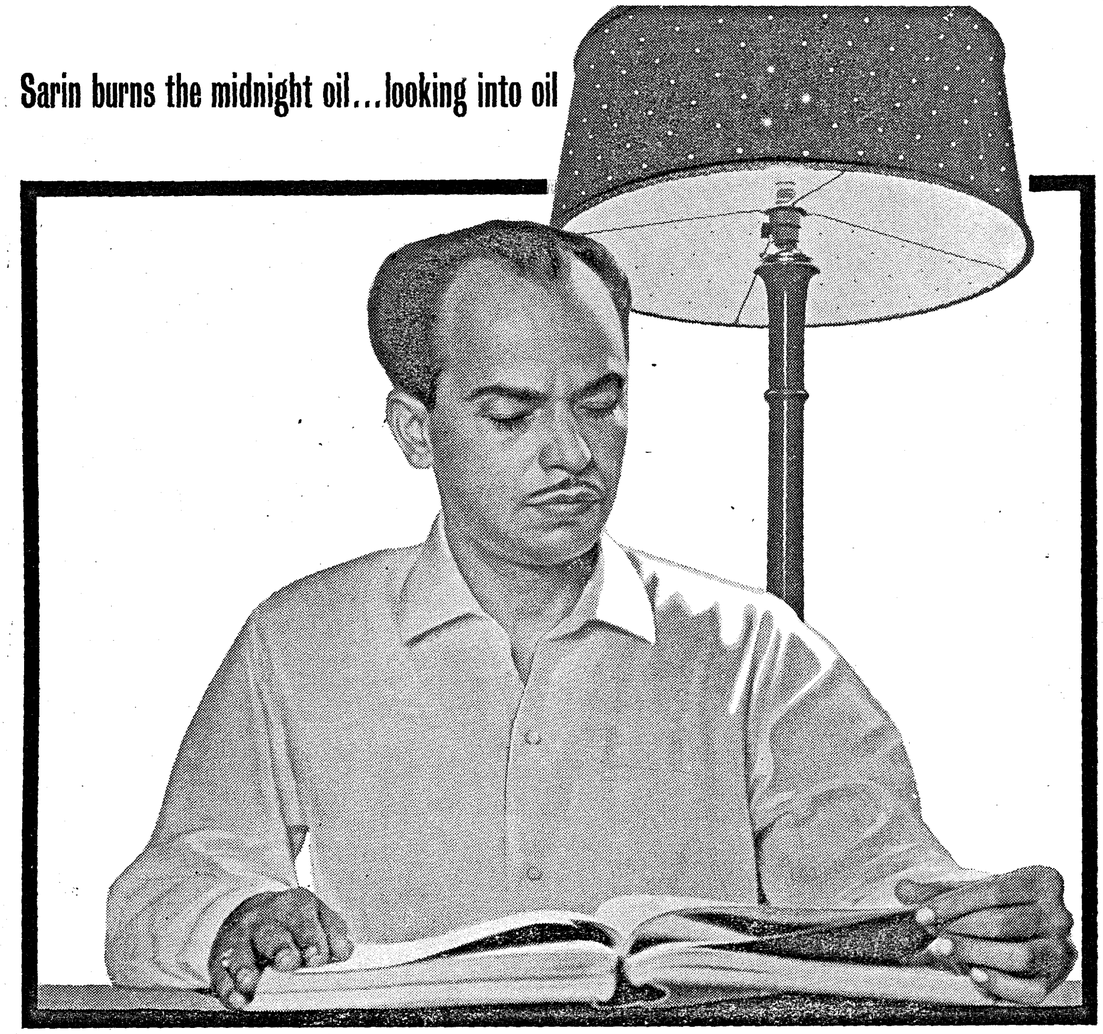
BHASKAR TEXTILE'S PUBLIC ISSUE

Bhaskar Textile Mills Ltd. is offering for public subscription 140,000 equity shares of Rs. 10 each and 7,000 9.5 per cent tax-free, cumulative redeemable preference shares of Rs. 100 each. The entire public issue has been underwritten, among others, by the Orissa State Financial Corporation and the Industrial Finance Corporation of India. The lists for subscription will open on the 23rd inst. and close on 4th April, or earlier, but not before 30th inst. In addition to this offer of shares to the public, the Company has issued equity shares worth Rs. 14 lakhs to its Directors, promoters and their friends, so that the total issued capital comes to Rs. 35 lakhs, as against the authorised capital of Rs. 100 lakhs which is divided equally in equity and preference shares.

Incorporated on 4th August 1962, the Company has been licensed to install 25,000 spindles for manufacturing cotton yarn. It proposes to set up a spinning plant of 15,000 spindles at Jharsuguda in Orissa, where it has been allotted by the State Government land admeasuring 126.05 acres. Adequate supply of power has also been assured. Orders for plant and machinery have already been placed with manufacturers abroad. It is expected that the plant will go into production in the third quarter of this year.

The total cost of the project, including the working capital of Rs. 12.25 lakhs, is estimated at Rs. 109 lakhs, of which Rs. 69.50 lakhs are on account of plant and machinery and Rs. 21 lakhs on account of land and buildings. It is proposed to meet this outlay through the share capital issue of Rs. 35 lakhs, deferred payment facilities of Rs. 29 lakhs and a bank loan of Rs. 45 lakhs.

Sarin burns the midnight oil...looking into oil



The house is quiet. The family asleep. A neighbouring clock chimes midnight. One lone light glows in the room. The man in the chair barely stirs at the stroke of twelve. He is absorbed in a book on oil technology. His name is Jaswantrai Sarin. His job: Sales Engineering Representative with Burmah-Shell, Calcutta. His function: to provide technical service to fuel oil and lubricants customers.

THERE'S A GOOD CASE FOR FUEL OIL

...and Sarin talks about it convincingly. Actively engaged in fuel development work, he has played a part in introducing to India a major technological break-through: the use of fuel oil in blast furnaces—an advance in technique and application. Sarin advises customers on correct lubricants and fuel oil selection; the use of equipment. He investigates fuel and lubrication problems as they arise.

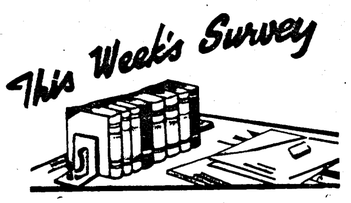
TODAY, AS EVER, PEOPLE LIKE SARIN ARE WORKING FOR YOU

Sarin frankly admits to being absorbed in his job. 'Next to my job,' he says, 'I love driving.' The call of the open road finds Sarin and his family off at weekends to picnic spots around Calcutta.

Sarin and people like him—at all levels of responsibility—are Burmah-Shell. Today, as ever, they are hard at work...working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

BURMAH-SHELL

BURMAH-SHELL are People in the service of the People



CONCENTRATION OF ECONOMIC POWER?

THE available estimates and data relating to incomes would seem to suggest that the degree of inequality in income distribution is not higher in India than in some other developed or underdeveloped countries. There is another element of similarity between India and the other countries in that the distribution of income in the urban sector is more unequal than that in the rural sector. As for the distribution of wealth among different groups in the population, the data available thereon are much less than on the distribution of income. But such fragmentary data as are available in this connection would seem to suggest that wealth distribution in India is more unequal than income distribution as in some other countries. In coming to these broad conclusions, which are as much true of India as of several other developed countries, the Mahalanobis Committee on Income Distribution, according to reports in a section of the daily press, has made no unique or original contribution to the continuing debate on the degree of concentration in economic resources and power in India. The fact of inequality in income and wealth distribution is there for all to see, and so what the Committee has said about it after more than three years of labour (or, is it idling?) does by no means constitute a wonderful discovery. Nor is it quite sensible to say, as the Committee has done in a general manner, that "the wide range of variation one finds between the top and the bottom tenths of the population *clearly* (italics ours) reveals the existence of concentration of economic power in the country *in its most generalised form*" (italics ours).

Any comparison between the top tenth and the bottom tenth of the population can only distort the perspective. The bottom tenth in the United States, for instance, is extremely poor by American standards. But that is a country where the generality of the population is known to enjoy the fruits of equal opportunity in an abundant measure. Perhaps, the disparities in the incomes and levels of living of the different groups in India's population, too, have been reduced to some extent by economic planning over the last one decade and more. As the Mahalanobis Committee itself says, "there is a general feeling, though the Committee could not collect the required data to support it, that an average person, whether in urban or rural areas, is better fed, better clothed and even better housed in the 1960's than in the 1950's and that the working conditions have also improved generally over this period." But it is strange that the Committee, which has not taken pains to collect the required data about the varied beneficial effects of planning, has still permitted itself of the observation that "there is no clear indication of a significant change in income distribution over the Plan decade." That the Committee has not done justice to one of its major assignments is thus clear.

How has the Committee carried out its assignment pertaining to the evaluation of "concentration" in the sector of industry? Since private corporate business has been under fire for its so-called concentration of economic power, what the Committee has said about it would need to be fully narrated. At the outset, it is pointed out that companies having a paid-up capital of Rs. 50 lakhs and more constituted, as of 1960-61, only 1.6 per cent of the total number of companies but claimed 53 per cent of the total paid-up capital. Here, again, the reference to concentration is only "in its most generalised form." This generalisation, by itself, would not have been of much significance, if the Committee had stopped there. Its subsequent inference that this phenomenon of "increasing size of companies" is conducive to greater concentration of control and economic power does not go well with its own observation that "the increasing size of companies is by itself not necessarily an index of growing concentration in ownership of companies, for there is evidence of an increasing dispersal of ownership as such." Has not diffused ownership diluted the "concentration of control and economic power? Even if it has not, the Banking Companies Act and the Companies Act have been there to dilute and/or neutralise such concentration. Moreover, as the Committee itself has noted, the following "countervailing measures" have been in operation:

(1) The public sector in industry has been expanded so much since 1950-51 that, by the end of the third Plan, it would account for a fourth of organised industrial production and over a third of mineral production.

(2) Important industries, which are in private hands, are subject to State regulation through control of production, prices and distribution.

(3) Industrial licensing has sought to regulate the expansion of new capacity and, to the extent possible, encourage the entry of new medium-sized firms in competition with existing large enterprises. The licensing provisions also seek to ensure a degree of regional and other diversification of industry and to prevent the emergence of industrial monopolies, though this objective has to be constantly balanced against the equally imperative need of promoting efficiency and productivity.

(4) Legislation governing the operation of companies attempts to eliminate abuses and malpractices and prevent excessive inter-company investment.

(5) For encouraging the growth of new entrepreneurs and small industry, various credit and service institutions, besides industrial estates, have been developed.

(6) The fiscal instrument has been pressed into service to lessen inequalities in income distribution through a sharply progressive tax system.

Without taking the trouble of assembling fresh data on the effects of these countervailing measures, the Committee has preferred to give, on the basis of available data which are imperfect and inadequate, two sweeping findings. One of these is that there is "the presence of concentration of economic power within the economy in terms of income, property and, especially, control over the non-Governmental corporate sector." And the other is that "concentration of economic power in the private sector is more than what could be justified as necessary on functional grounds, and it exists both in generalised and in specific forms." In our view, these findings, to say the least, are unfortunate, in that they will only provide further grist to the mill of political agitation. They do not seem to have even the saving merit of being based on adequate data. For the rest, one must await the publication of the Committee's full report.

TEA INDUSTRY

The tea industry, along with coffee, rubber and a few other industries, has been given two important concessions in the new scheme of direct taxation proposed by the Union Finance Minister in his budget for the year 1964-65. One is the grant of a rebate of corporation tax equivalent to 10 per cent of income-tax and super-tax which will normally be payable by it. The other is the grant of a similar rebate in respect of surtax on such profits to the extent of 20 per cent of the tax assessed. Welcome though these concessions are, there is no doubt that whatever relief the concessions afford will be neutralised to some extent by the proposed 7½ per cent tax on the dividends distributed by tea companies. The imposition of dividend tax, coupled with the absence of any relief in excise duty, has, therefore, caused much disappointment among tea circles. Indeed, the budget, according to Mr. S. P. Sinha, the retiring President of the Indian Tea Association, who spoke at the eighty-third annual general meeting of the Association held at Calcutta on Friday last week, is unlikely to assist the tea industry to expand its production and exports to the degree expected by planners. Incidentally, it may be noted that the gap between the current rate of output and exports and the targets fixed to be achieved in 1965-66 is quite wide. The following figures speak for themselves:

(In million lbs.)

	Third Plan target	*Actual position*	*Gap*
Production	900	752	148
Exports	610	493	117

The actual shipments of tea (493 million lbs.) in 1963 no doubt represents a rise of 22 million lbs. as compared with 471 million lbs. shipped in 1962 and 454 million lbs. in 1961. But it is considered doubtful whether the upward trend will persist in the current and coming years, what with the renewed competition from Ceylon and East Africa. Tea prices in world markets, Mr. Sinha pointed out, had recently shown a tendency to decline. While the export duty on tea has been abolished since last year, the burden of excise duty has been increased to make up for the loss of revenue and the previous practice of allowing some rebate of excise duty when tea is exported has been stopped. Regretting this, Mr. Sinha said: "From no other commodity has this privilege been withdrawn, nor has the current budget indicated any relief in this direction." Few can disagree with Mr. Sinha's contention that, if India is to step up its export earnings, production of more quality teas is essential. Again, the earning of foreign exchange, as he rightly emphasised, depends both on quality and on price. It is, therefore, essential to encourage the tea industry to expand and replant not on the ground from which bushes have been recently uprooted but on virgin soil with modern methods of propagation and the best stock which the scientists and planters can provide. There is no exaggeration whatever in Mr. Sinha's statement that, since taxation, wage bill and housing costs are so heavy, the industry does not have at its disposal sufficient funds for undertaking such expansion. The plea of the industry for allowing the cost of replanting tea as a revenue charge is certainly unexceptionable. Equally unexceptionable is the oft-repeated plea for rationalisation of taxation. Reiterating the plea, Mr. Sinha observed:

"As the agricultural income-tax is assessed on the basis of the Central Government's assessment of company income, it would be reasonable for agricultural income-tax to be limited to the same rate as that of the Central tax. Duties such as the entry tax on bringing teas into Calcutta for sale could well be abolished and the States, in return, allowed a grant from the Centre in proportion to the excise on the tea grown within their boundaries."

Rationalisation of taxation and relief in excise duty are important from the point of view of building up a healthy domestic market for tea. It is only such a market that acts, as Mr. Sinha very pertinently remarked, as a buffer to overproduction and an insurance against a drop in world demand. This is a simple point which ought to be recognised by the authorities.

Suitable tax incentives alone are not sufficient. The labour policy of the Governments, Central and State, must also be realistic in approach. The need for such a policy is all the greater in the case of tea industry which, as is well known, is a labour-intensive agricultural industry that does not readily lend itself to mechanism in the field. Anyone who has cared to follow the developments in this industry will agree with Mr. Sinha when he says that even a comparatively small rise in individual wages would add significantly to costs of production and that there are limits to what the industry could afford without running at a loss. Mr. Sinha's criticisms of the Bonus Commission's recommendations are also valid. The calculations made to assess the effects of the recommendations on 15 selected representative tea companies, it is said, revealed that the bonus payable by 11 companies under the Bonus Commission's formula would be well above that actually distributed for the years 1959, 1960 and 1961, while six companies, after deducting the suggested returns on capital and reserves, would be left with nothing for distribution to shareholders. There is much to commend the suggestion of Mr. Sinha that the existing tailor-made bonus agreement for plantation workers must be continued, instead of being replaced by the Bonus Commission's formula. After all, the Commission itself has recommended exemption of plantation industries from the purview of its findings on the score that these industries would be able to pay bonus higher than the minimum only if *adequate* (italics ours) profits are made.

THREE MORE STATE BUDGETS

The budget estimates of Punjab, Rajasthan and Assam Governments for the coming (1964-65) financial year disclose revenue deficits. The actual deficit is pretty huge in the case of Assam (Rs. 3.17 crores), but comparatively much smaller in respect of Punjab (Rs. 24 lakhs) and Rajasthan (Rs. 62 lakhs). The Assam and Rajasthan budgets contain fresh tax proposals yielding an additional revenue of about Rs. 86 lakhs and Rs. 58 lakhs, respectively, whereas no such proposals are included in the Punjab budget. All the three budgets, like their counterparts in other States, provide for relief to Government employees. The relief is sought to be accorded primarily in the form of enhanced dearness allowance and employees who have retired from service will get more liberal pensions. Again, the budgeted Plan outlay to be expended in the coming year is quite large in all the three States: Rs. 55.50 crores in the Punjab, Rs. 46.25 crores in Rajasthan and Rs. 34.20 crores in Assam.

Adding to the revenue deficit of Rs. 24 lakhs the deficit of Rs. 1.34 crore on capital account, the overall deficit in the Punjab budget for 1964-65 comes to Rs. 1.58 crore. This will actually be higher by another Rs. 9.42 crores

at Rs. 11.00 crores, as the Government, according to the State's Finance Minister, Dr. Gopi Chand Bhargava, intends to provide more funds for tackling the problem of floods and for granting more liberal advance to agriculture, including reclamation, horticulture and animal husbandry. The Finance Minister has left the entire gap uncovered in the hope of being able to borrow "a substantial amount" from the people, particularly for flood control schemes. Out of the aggregate third Plan outlay of about Rs. 230 crores, the State will have spent by the end of this month about Rs. 119 crores, so that the balance to be invested in the last two years of the third Plan is Rs. 111 crores, of which Rs. 55.5 crores or exactly half will, as already stated, be spent in 1964-65. In his budget speech, the Finance Minister announced the establishment of an Industrial Development Corporation with a share capital of Rs. 10 crores. Alluding to public sector projects, he revealed that an air rifle factory, a steel casting plant, a seamless tube unit and a pig iron plant with an annual capacity of 100,000 tons were in advanced stage of planning.

The budgetary position of the five States in 1964-65 is shown below:

(In crores of rupees)

	Punjab	Rajasthan	Assam
Revenue	112.67	72.19	61.78
Expenditure	112.91	72.81	64.95
Net revenue position	—0.24	—0.62	—3.17
Overall budgetary position ..	—1.58	—2.00	—6.70
Plan outlay	55.50	46.25	34.20

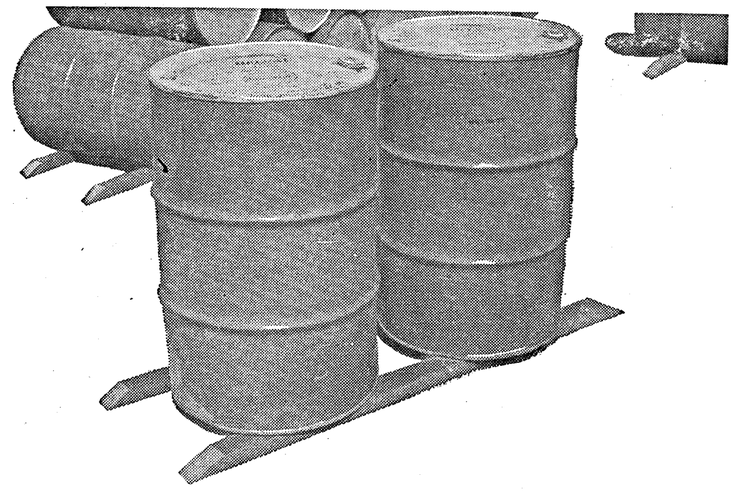
The revenue deficit of Rs. 62 lakhs in the Rajasthan budget has been reduced to Rs. 4 lakhs through five new tax measures: (*a*) levy of a tax on such vacant lands in all towns with a population of 10,000 and above as have been lying vacant for a period of two years and more from the date they first passed into private ownership; (*b*) increase in sales tax on bullion and ornaments from half a per cent to two per cent and on tractor tyres and tubes from two to six per cent (on plastics, the tax is fixed at 7 per cent); (*c*) imposition of an export duty of two per cent on dressed hides and skins; (*d*) levy of a sales tax at two per cent on yarn export; and (*e*) a tax of six per cent on liquor. After taking into account the additional yield of Rs. 58 lakhs from these measures and the contemplated public loan of Rs. five crores, there will still be left an uncovered overall gap of Rs. 85 lakhs. It is, indeed, creditable that the Finance Minister of Rajasthan has assured the House that he would fill this gap by effecting further economy in expenditure and better recoveries from various minor sources of revenue.

The new tax proposals contained in the Assam budget include an increase of just one naya paisa in the rate of general sales tax, a six per cent increase in sales tax on luxury goods, imposition of a sales tax of two naye paise in the rupee on coal, coke and coal gas, levy of an electricity duty of two naye paise per unit, upward revision of excise duty on liquor, and increase in the existing rate of taxation on agricultural incomes to the extent of two naye paise in the rupee on incomes between Rs. 1,00,000 and Rs. 2,00,000 and three naye paise on incomes exceeding Rs. 2,00,000. The additional yield expected from these measures is put at Rs. 85.9 lakhs, the revenue deficit as a consequence being reduced to Rs. 2.31 crores. To this must be added the deficit of Rs. 2.53 crores on capital account and the Rs. 1.00 crore needed to raise the salaries of Government employees as recommended by the Pay Committee, so that the uncovered overall deficit works out to as much as Rs. 5.84 crores. The Finance Minister of Assam says that the deficit "has for the most part been caused by the Planning Commission through the reduced outlay of the State Plan, but hopes that the gap will be filled by more liberal grants and loans from the Centre. Considering the strategic importance of Assam and the vital role it plays as the producer of tea, the need for strengthening the economy of this border State cannot be stressed too strongly. It is to be hoped that the Government of India will concede the just demand of the State for providing the necessary financial means to enable the State Government to take up a programme of the size and magnitude already recognised to be reasonable and legitimate by the Planning Commission.

AVRO 748

The cost of the first aircraft in series II of Avro 748 has been estimated at about Rs. 32 lakhs, with a foreign exchange content of Rs. 20 lakhs, thus showing an indigenous content of 37.5 per cent. The actual cost of the basic aircraft and its indigenous content are still being compiled. This information was given by Mr. K. Raghu Ramiah, Minister of Defence Production, in reply to a question in the Lok Sabha this week.

The first aircraft in the series II of Avro 748 successfully completed its test flight on 28th January this year. The aircraft, which has fully met the latest British and American civil airworthiness requirements, is powered by the Rolls-Royce propeller-turbine power plant. It has the outstanding quality of being able to operate from short landing fields and unprepared surfaces. Designed according to tailsafe principles with low wing design, it has a pressurised passenger cabin. Another feature of the aircraft, which incorporates the automatic pilot with weather warning radar, is simplified ground servicing.



GREATER SUPPLIES OF
Mobil LUBRICANTS
FROM INDIANOIL

Mobil

The world-famous MOBIL automotive, industrial and marine lubricants are now supplied by INDIANOIL, whose round-the-clock service to industry and transport denotes speedy progress towards national self-sufficiency.

AMERICAN LETTER

SIGNIFICANCE OF TAX REDUCTION

BRAKES ON THE ECONOMY WILL BE RELEASED

By N. Pattabhi Raman

NEW YORK, *6th March*

THE reduction in individual and corporate income taxes that was enacted into law in the United States in the last week of February was described by President Lyndon B. Johnson as "the single most important step that we have taken to strengthen our economy since World War II."

The President's description of the tax cut in these terms was no exaggeration. The measure is indeed highly significant in many respects.

Firstly, it is the largest tax cut in the fiscal history of the United States. Officially, it is estimated that it will reduce the tax burden by some $11,500 million, with benefit to the tune of about $9,000 million going to individual taxpayers and $2,400 million going to business corporations. Even this estimate could prove to be on the low side, for the level of economic activity has risen, since these projections were made at the time the tax reduction programme was first initiated by the late President Kennedy thirteen months ago. Some current unofficial estimates place the reduction in revenues at around $13,000 million.

Secondly, the tax reduction will be concentrated within a two-year period and not spread over a span of several years, thus heighfening both the psychological and the economic impact. Individuals, who now pay from a low of 20 per cent to a high of 91 per cent, will pay, when the cut becomes fully effective, between 16 per cent in the lowest bracket and 70 per cent in the highest bracket. The rate of taxation applicable to large corporations, now 52 per cent, will drop to 50 per cent on this year's earnings and to 48 per cent on 1965 earnings. The rate on the first $25,000 of a corporation's earnings, now 30 per cent, will become 22 per cent effective this year; this lower rate will particularly benefit smaller corporations that fall in this income category.

Thirdly, the tax cut marks a very important innovation in U.S. fiscal policy, for this is the first time that the U.S. has cut taxes when the federal budget is already in substantial deficit. In advocating the tax cut, the late President Kennedy described it as "an insurance for prosperity and an insurance against recession." He argued that the deficit would persist if the taxes were not reduced and the economy thus stimulated, and stressed the fact that it was the sluggish rate of growth which produced deficit after deficit as revenue receipts failed to rise enough to match expenditures. This was daring talk in a country in which conventional wisdom strongly endorses, in theory at least, the virtue of thrift, but it has finally paid off. Even though the courageous leader is dead, the tax reduction he fought for has now become a reality.

Tool of Economic Expansion

Finally, the tax cut is significant also because it indicates that a deliberate choice was made as between public and private spending as a tool of economic expansion. In the view of the President's Council of Economic Advisers, the economy has been lagging in its growth rate since about 1957 because of inadequate outlays. Aggregate demand could be stimulated either through increased Government spending or through measures that would trigger a higher level of spending in the private sector. The latter course was preferred. It was held that the rates of income taxation, which had been raised high during wartime, were acting as a damper on economic activity. The logical step was to lower the rates and thus release millions of dollars into the private economy.

The proposal to trim taxes encountered serious opposition only among those frequently described as champions of fiscal prudence but who are perhaps better described as believers in balanced budgets. (An individual who regularly spends more than he earns is ultimately overcome by his debts; a nation too cannot escape this consequence—so runs their argument.) Business groups too initially opposed the measure, unless it were to be accompanied by corresponding reductions in Government spending. A variety of factors ultimately led to a broad consensus in favour of the Tax Revision Bill as passed. Administration spokesmen argued at first that to cut Government spending as counterpoise to the tax cut would in effect cancel the expected benefit to the economy, but, finally, President Johnson deliberately focussed attention on the economy axe as a concession to the fiscal conservatives. While doing this, however, he won approval for a provision which will make a larger portion of the tax reduction become available to individual taxpayers this year itself: this was his way of seeking to assure that the cut in taxes will produce the desired expansionary effect. The fact that a good part of the tax cut will benefit business corporations and individual taxpayers in the high income bracket also helped to reduce the opposition.

Another factor that helped to get the tax measure through was the Administration's willingness to drop most of the companion reform proposals designed to reduce inequities, end special privileges and plug loopholes. Pressure groups knocked most of the reform measures down while they were being considered by Senate and House committees, and what passed through their expert fingers amounted to relatively little. In money terms, the tax revision programme as finally approved by Congress contains only $835 million worth of tax reforms, as compared with the $3,300 million worth initially proposed by the Administration.

Impact

What are the prospects of the tax cut giving the right amount of push to the American economy? In the Administration's view, the prospects are, indeed, excellent. Even though the gross national product is at a higher level than it was thirteen months ago when John F. Kennedy sent his tax message to Capitol Hill, the Government's economic advisers argue that there is still a great deal of slack in terms of underemployed machinery and men. Industrial production has been on a plateau for about six months. Capital spending towards modernisation of production facilities and expansion, where necessary, has perked up as a result of liberalised depreciation allowances and also in anticipation of the tax cut, but it should rise much higher in order to quicken the pace of economic activity. Consumer spending has to be stepped up to provide a broad-based fillip to aggregate demand. In the circumstances, the President's economic advisers hold that as substantial a reduction in tax

(*Continued on page 443*)

THE MAJOR EVENT IN THE ENGINEERING CALENDAR

Don't miss it!—the outstanding engineering exhibition of the year... Don't miss it!—your finest opportunity to see and compare, under one roof in London's vast Olympia, the newest products of the world's leading makers of machine tools and allied equipment... Don't miss it!—the chance of talking over your own production problems with the world's most experienced production engineers.

It's a show of immense interest and value to everyone concerned in fast, accurate, economical production—a *live* show in every sense of the word! All the machines will be powered and many will be working on actual production runs.

Exhibits include:—

Metal cutting machine tools
Metal forming machine tools
Engineers' small tools
Gauges and measuring equipment
Testing equipment
Electronic control gear
Power hammers
Woodworking machinery

Why not combine your visit to the exhibition with a holiday in Britain? And see London at its gayest—at the peak of the London 'Season'!
So make your plans and get your travel agent to reserve your hotel accommodation *without delay*.

INTERNATIONAL MACHINE TOOL EXHIBITION 1964

Olympia
London, England
June 25 — July 9

(Sundays excepted)

● *For further information regarding the Exhibition, please write to the address below.*

Organised by THE MACHINE TOOL TRADES ASSOCIATION, 25-28 BUCKINGHAM GATE, LONDON, S.W.1

LONDON LETTER

THE SHADOW OF POLICY TO COME

MR. BROWN ON RELATIONS WITH INDIA

From Our Special Correspondent

LONDON, *6th March*

ALTHOUGH the present Government is now confidently preaching its own reincarnation, the balance of opinion is still that, in its rebirth, the Premier is likely to wear the body of Mr. Wilson and his deputy that of Mr. Brown. Due to circumstances he cannot explain, Mr. Brown has never been to India, but India captured him in London this week and put him through a gruelling cross-examination on how a Labour administration would conduct itself in its relations with India. Mr. Brown, who is known for very free speaking of his mind, had the advantage that he was able to speak "personally and not for his colleagues" and without the inhibiting thought that the mantles of either Foreign or Commonwealth Secretary would fall upon him, for he is destined to look after Production and Planning. His eminence in the Party, however, is such that full weight must be given to his views and the result of the cross-examination was to reveal Mr. Brown very much a Commonwealth and perhaps even more a "World" man.

This was first revealed in his views about Kashmir which he regards as a domestic problem of the Indian continent. England, he insists, is a sister member of the Commonwealth with India. Nobody wanted her to *adjudicate*, so what was she expected to do? Take sides? But would not that damage the Commonwealth? As he saw it, the danger of disruption to the Commonwealth came from two directions—the emergent, developing countries, impatient of discovering any practical advantage from Commonwealth membership; and the older countries such as Canada, finding themselves out of sympathy with a nascent Commonwealth and finding it more natural to develop both economic and foreign policy links with, say, the U.S.A.

But certainly one of the first acts of a Labour Government would be to convene a Commonwealth Conference which Mr. Brown would prefer to see held in one of the older member-countries—again Canada—because he feared that some of these countries already considered that the U.K. was showing excessive preoccupation with the newer countries. Further, annual conferences should each be held in a different member-country to get away from the idea that the U.K. held a special position in the Commonwealth family of nations.

Mr. Brown, however, had his own doubts as to the mood of India in relation to the development of Commonwealth trade. He was obviously hankering a bit after Europe and wondered whether the interests of all countries did not suggest as a first priority the development of British trade with Western Europe, so that the consequences of such trade might be a much greater development of West European (including the U.K.) trade with India. Which all goes to illustrate that, if Commonwealth trade and economic relations generally are to be developed, then someone (and it is the U.K.'s job) had better get down to the business of seeing what trade can be developed and how best to do it. Otherwise, there will be no special relations of any value created in trade anywhere.

But Mr. Brown was not noticeably enamoured of special relations. He saw a market for Indian iron ore in the U.K. (on special terms?) but India would have to reciprocate by buying British engineering products—but would India make sure that the U.K. got her iron ore?, he asked with the implication that she could not. He did not say anything about the U.K. guaranteeing that India got her engineering products. Which goes to show that mutual trade development may require a greater degree of planning than politicians on either side are yet prepared to concede. A Labour Government is determined to renationalise the iron and steel industry—which means the same degree of planned centralised buying as existed during the war. The U.K. could then place firm contracts for Indian ore, but what about the provision of the reciprocal engineering products?

Indian Textiles

On textiles, Mr. Brown felt very strongly: the U.K. had killed her cheap Lancashire industry for India and it was time that India stopped "exporting poverty"—that was the sentiment of one Trade Union official to a country where trade union officials had a long way further to go!

What about sugar? Mr. Brown was asked. Oh, yes, the sugar agreement must be widened, but for all Commonwealth countries, not just for one. Similarly, the U.K. (Mr. Brown would have it) would be prepared to look at integrating Commonwealth industry—but for all Commonwealth countries and with full reciprocity. Certainly, the Labour Party—and now Mr. Brown was not speaking only for himself—would not enter a European Common Market on terms which excluded the Commonwealth; but what he would like to see was a U.K. entering the Common Market and keeping the field open for India. Open fields can be very draughty places—Mr. Brown will need some time to explain just how the wind is to be tempered. If what he really means is that he wants an integrated Common Market *plus* Commonwealth, then that could be an exciting prospect, but he must expect to hear some howls of protest from across the Atlantic.

Nevertheless, a centre needed to be created to fit together Commonwealth arrangements—a sort of O.E.E.C. for the Commonwealth—but, if such a drawing together of economic ties was to be effective, then some Afro-Asian countries would have to learn to dissociate capitalism from colonialism. The capitalism of which he was speaking was, of course, socialist capitalism, the export of capital and its use in overseas development—such capitalism had much to offer to countries emerging from colonialism if they could forget their suspicions. However, Mr. Brown could not see that, because a country was in the Commonwealth it could get better credit terms than a country outside. Maybe not, but would it not be better to put this thought in terms of better credit where reciprocity in expanding markets was given? Mr. Brown might have made more play with the thought that the Commonwealth gave the *opportunity* (because of the commercial, financial and language links between the members) for valuable reciprocal arrangements fitting into a planning philosophy: the opportunity needed to be worked upon and developed.

LOMBARD BANK PAYS MORE

After consideration of results for the full year 1963, the Directors of Lombard Banking Ltd. (London) have recommended a higher final dividend of 12.5 per cent, as compared with 7.5 per cent paid in the previous year. The interim dividend for the year, already paid earlier, was doubled to 5 per cent. The year's total dividend, at 17.5 per cent, less tax, is thus higher by 7.5 per cent as compared with the previous year and exceeds the rate forecast by 5 per cent.

Profit of the group (including investment income) for 1963, before charging depreciation, interest on debentures and registered loan notes of subsidiaries, Directors' emoluments and auditors' fees, has increased from £1.13 million to £1.79 million. The consolidated net profit, before tax, has more than doubled from £601,000 to £1.30 million. U.K. taxation has claimed £540,000 (£346,000 a year before) and overseas taxation £29,000 (£46,000). This break-up of taxation suggests that the increase in profit has come entirely from the Bank's business in the U.K. The consolidated net profit, after taxation and after allowing for minority interest, has amounted to £637,000 (£184,000 in the previous year). Appropriation for dividends are £84,000 on preference shares and £351,000 (£201,000 in 1962) on ordinary shares.

(*Concluded from next column*)

The time for a precautionary rise in the discount rate had plainly come, and it was raised by 1 per cent, because a rise of only ½ per cent would only have created the expectation of more to follow.

The second reason for welcoming the U.S. statement was that the U.S. authorities have now plainly got their own balance of payments problem back into perspective. They can accept at its face value, as they might not have done a year ago, the statement that Britain is not attempting to bolster up its position by attracting short-term funds from abroad but is merely seeking to prevent an outflow. This more confident attitude may be of considerable use to the world, if, in fact, there is trouble on the exchanges later this year. If other currencies become weak, the dollar will probably be strong. It is comforting to know that the managers of the dollar are likely to behave appropriately.

TEST CASE FOR FINANCIAL CO-OPERATION

By Questor

THE implications of the inflationary situation in Italy are causing increasing concern to her neighbours. It is a result of the fact that wages have, for three years past, been rising much more rapidly than productivity. Prices have soared, exports have fallen off, and imports have grown sharply. The effect on the balance of foreign payments has been magnified by a heavy outflow of domestic capital—some of it subsequently reinvested in Italy under a foreign name.

The Bank of Italy is attempting to meet this situation with restrictions on credit, for the ability of the Centre-Left Government to take more direct or vigorous action is strictly limited by the political situation, though it is now making a particular attack on car imports. The present coalition is probably the only alternative to a Government of extreme right or left, but for all that it is not a strong one.

It is unpopular with the Italian business community and apparently unable to obtain its co-operation in paying the taxes needed to meet the demand for social services. It is equally unable, in these circumstances, to prevent the unions from demanding higher wages. And it is reluctant to introduce deflationary measures, of a kind severe enough to keep wage and price increases in check, because of the danger of alienating its moderate left support and playing into the hands of the Communists, who are entrenched particularly strongly in the industrial north. The outlook is not promising.

It is scarcely surprising, therefore, that the Italian lira, despite informal support operations by the U.S., is at present the sick currency of Europe. Its weakness has been accentuated recently by the fact that a Minister, addressing a trade union audience and emphasising the need for wage restraint, was rash enough to suggest that devaluation would be inevitable if prices continued to rise at the pace of the past two years. The immediate result, predictably enough, was a sudden Italian demand for gold in London.

The weakness of the lira has given the U.S. Treasury an opportunity to put into practice Mr. Roosa's principle—that the U.S., once the payments deficit is no longer a problem, will seek to maintain order in the exchange markets and increase the supply of international liquidity by accumulating foreign currencies in its reserve. But it seems likely that the lira will need much more support, of a kind which few Governments are likely to offer without an exchange guarantee, in the months ahead at a time when other countries, too, may be running into trouble. The effectiveness of the new methods of international financial co-operation may soon be put to a telling test.

They have already been put to the test in one way, however, and survived it without much difficulty. It is only a few weeks since Mr. Dillon told Congress that the chief risk of an increase in U.S. interest rates lay in what happened to German and British rates rather than in domestic inflation, and that the U.S. would use its influence to persuade European Governments to tackle their inflationary problems with fiscal rather than monetary weapons.

It could have been interpreted as a direct rebuff when the Bank of England raised its discount rate, and by a full 1 per cent. But the U.S. Treasury, I was glad to see, took the unusual step of putting out a statement to the effect that the move had been made only after full consultation and that it was necessary to prevent potentially unsetting flows of capital across the exchanges.

This statement was welcome for two reasons. In the first place, the Bank of England had good reasons for raising its discount rate and it is right that the U.S. authorities should appreciate them. Britain is at a stage of the business cycle when a large rise in stockbuilding is bound to take place, and the import content of British stocks is particularly high. The balance of foreign payments is due to run into deficit before long, and the Government made plain many months ago its readiness to draw on the International Monetary Fund to finance this.

But its position is complicated by the fact that Britain has an election due this autumn and that this itself could conceivably be the occasion for a flight of short-term funds. The publication of an unexpectedly bad set of trade figures caused the gold reserve, which has been rising slowly on the surplus of the outer sterling area, to drop suddenly by some $50 million last month.

(*Continued in previous column*)

STATE BANK OF INDIA REPORTS ALL-ROUND PROGRESS

HIGHER TURNOVER, RESOURCES AND UTILISATION

A.D. 1963 was a good and prosperous year for the State Bank of India; not only because it earned more, not because its resources were more intensively utilised over the year, but because its turnover, as reflected by the balance-sheet total, reached a new and record level of more than Rs. 670 crores. It was the higher turnover that enabled the State Bank of India to meet the heavy increase in expenses, largely in staff and interest charges, in addition to higher taxes, and yet show a rise of Rs. 5½ lakhs in net profit (after taxes).

Total gross earnings of the Bank have risen by Rs. 2.79 crores to Rs. 25.37 crores mainly as a result of higher earnings from interest and discount. As against a 9 per cent rise in the total turnover, the earnings show a 12.3 per cent rise, indicating a more intensive utilisation of resources and reflecting higher rates on advances since April 1963. A good part of increase in earnings has been neutralised by higher expenses. Staff expenses alone are higher by Rs. 1.43 crore, or 15 per cent, at Rs. 10.85 crores, as a result of additional staff employed for new as well as existing branches, and rise in their emoluments due to increments and/or higher dearness allowances. Interest paid on deposits is also higher by Rs. 95 lakhs, or 12 per cent, at Rs. 8.86 crores: this was partly due to a ½ per cent increase in time and savings deposit rates of the State Bank of India and a few other marginal changes in terms, conditions and deposit rates with effect from 1st April 1963. All other expenses and the amount of depreciation and repairs to bank property were also slightly higher. The combined result of the rise in expenses is that net profit (after taxes) is higher by only two per cent, a rise of Rs. 5.57 lakhs to Rs. 2.75 crores.

Transfers to reserves have been maintained at Rs. 55 lakhs, but they could not be raised upto the level of Rs. 75 lakhs reached in 1961. This is partly because the year 1963, though good, was not as prosperous as 1961 and partly because the liability for bonus to staff has almost doubled from Rs. 45 lakhs in 1961 to Rs. 82 lakhs in 1963. Transfers to staff welfare and housing funds have been maintained at Rs. 5 lakhs each, while transfers to pension fund are a shade better. Dividend has been maintained at 23 per cent absorbing the same amount of Rs. 1.29 crore as in the previous years. The amount carried forward (Rs. 36 lakhs) is lower by about Rs. 10 lakhs than the amount brought in (Rs. 46 lakhs). The table below shows the Bank's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Gross income	25,37.29	22,58.72	19,74.64	19,53.35
Of which:				
Interest and discount earned	18,48.43	16,19.07	14,12.24	14,86.91
Commission and exchange earned	6,61.87	6,14.82	5,39.61	4,28.68
Interest paid	8,86.29	7,91.45	6,88.72	8,05.04
Staff expenses	10,84.82	9,41.71	7,97.80	7,31.09
All other expenses	2,58.93	2,25.93	1,91.66	1,77.01
Depreciation and repairs	32.42	30.38	25.46	22.03
Profit	2,74.82	2,69.25	2,71.00	2,17.59
To reserve fund	55.00	55.00	75.00	25.00
To pension fund	8.61	7.62	7.42	7.23
To staff welfare fund	5.00	5.00	10.00	5.00
To staff housing fund	5.00	5.00	10.00	10.00
To bonus to staff	82.00	72.00	45.00	42.00
To dividend	1,29.37	1,29.37	1,29.37	1,27.97
	(23%)*	(23%)*	(23%)*	(22.75%)*
Carry forward	35.51	45.63	50.41	56.21

	As on 31st December			
	1963	1962	1961	1960
Capital	5,62.50	5,62.50	5,62.50	5,62.50
Reserves	9,30.00	8,75.00	8,20.00	7,45.00
Integration and development fund	3,56.17	3,11.54	2,55.98	1,97.80
Deposits	594,30.98	567,37.09	531,33,18	576,32.32
Borrowings from other banks	72.40	63.00	2,05.50	9,96.50
Advances	290,15.51	270,48.48	255,31.53	232,24.37
Investments	283,48.57	262,48.81	229,89.26	209,70.75
Cash†	53,61.32	57,25.35	69,31.75	69,65.94
Balance-sheet total	670,57.04	615,35.33	572,10.37	620,53.42
Ratio to deposits of:	%	%	%	%
Advances	48.8	47.7	48.7	40.6
Investments‡	47.7	46.2	42.9	50.3
Cash	9.0	10.1	12.9	11.19

* Subject to deduction of tax.
† Including money at call and short notice.
‡ Only the unencumbered portion.

The balance-sheet as at 31st December 1963 shows that deposits and other accounts rose by Rs. 27 crores to Rs. 594 crores, representing a rise of Rs. 13 crores to Rs. 71 crores in savings deposits, Rs. 10 crores to Rs. 260 crores in current accounts, and Rs. 4 crores to Rs. 264 crores in fixed deposits. Since, however, the balance-sheet includes under the deposit head other accounts and funds belonging to the Bank, these figures do not give a correct picture of the growth of the Bank's deposits. It is, therefore, usual for the State Bank to append a table showing trends in the growth of its deposits at the end of the report of the Central Board of Directors every year. Even this table, however, does not show the real trends, for it does not take into account changes in U.S. P.L. 480 and P.L. 665 deposits. The table below presents a correct picture of trends in the deposits of the State Bank of India after making adjustments on the basis of data P.L. funds:

(In crores of rupees)

	As on			
	30-12-60	29-12-61	28-12-62	27-12-63
Demand deposits	200	209	233	255
Time deposits	124	147	180	227
Total deposits	324	356	413	482

The accounts of the State Bank of India for all the years from 1956 onwards have been considerably distorted by these movements in P.L. 480 and P.L. 665 counterpart funds deposited with the State Bank of India. Not only the deposits but also the figures of investments and balance-sheet totals have all been artificially inflated or depressed by these funds, and, what is more, the extent of distortion has been varying from year to year in both the directions and has not always been disclosed, nor is it possible to estimate movements in all the quantities. It is only now that the State Bank's returns have gradually become free from the shadow of P.L. funds effects, although a few traces still remain. According to the latest available information, such funds totalled Rs. 37 crores at the end of February 1964.

The rise in advances and investments of the Bank over the year was almost of an equal order: the former went up by Rs. 20 crores to Rs. 290 crores pushing up the ratio of advances to deposits by 1 point to 48.8 per cent: the latter rose by Rs. 21 crores to Rs. 283 crores, the ratio (of unencumbered portion of investments) going up from 46.2 to 47.7 per cent in the process. During the last busy season, the Bank's credit portfolio touched a new peak of Rs. 309 crores on 12th April 1963. The composition of advances remained more or less the same, with 75 per cent of advances going to industry and 9.6 per cent to commerce at the end of 1963, as against 72 per cent and 9.5 per cent, respectively, at the end of 1962. The gain in industrial advances was at the cost of personal, professional and financial advances.

During the year, the Bank stepped up its interest rates on advances also: the advance rate was raised from 5 per cent to 6 per cent, and the hundi rate in two stages to 7½ per cent. The whole structure of advances rates was raised on a tapering basis ranging from ¾ per cent to ¼ per cent.

The Bank's investments in Government securities (including Treasury Bills) rose from Rs. 247 crores at the end of 1962 to Rs. 270 crores at the end of 1963. The investments thus rose by Rs. 23 crores as compared with a rise of Rs. 29 crores in the previous year. Cash balances, money at call and short notice were, however, lower by Rs. 4 crores at Rs. 53 crores, their ratio being lower by 1 point at 9 per cent.

The State Bank and its subsidiaries had together 1,644 branches and pay offices at the end of 1963, of which the State Bank alone accounted for 1,076. With 20 new branches opened during 1963, the total of new branches opened between 1st July 1960 and 31st December 1963 comes to 70, as against 145 branches to be opened during 1960-65 under the plan for branch expansion. In addition, the Bank has opened 9 new branches outside this programme in metropolitan towns and big cities. A new programme for opening 319 new branches mainly in rural and semi-urban areas during five years from January 1964, in addition to the balance of 75 new branches to be opened under the existing programme has been framed in consultation with the Reserve Bank of India and the Government.

The Bank's total assistance limits sanctioned to small-scale industries amounted to Rs. 19.6 crores as on 31st December 1963, but the amounts of limits actually utilised out of these sanctions are not disclosed. Out of this amount, the largest amount of assistance was given under the Bank's scheme for providing working capital to small-scale industries. As many as 2,400 units at intensive centres and 1,500 units at other branches had total limits of Rs. 11.95 crores and Rs. 5.64 crores, giving a total of Rs. 17.59 crores: the total amount of outstandings under this head were Rs. 6.03 crores and Rs. 2.52 crores, respectively, the total being Rs. 8.55 crores. Out of the total limits for Rs. 17.59 crores, Rs. 9.3 crores were covered under the Guarantee Scheme of the Government of India. Eighty per cent of the limits sanctioned were for less than Rs. 50,000 each. The intensive centres now total 39. In addition to working capital loans, the Bank sanctioned limits amounting to Rs. 13 lakhs for medium-term finance to small-scale industries through 27 branches. Local Boards were given powers to sanction medium-term loans up to Rs. 5 lakhs; the Bank also decided to continue to assist, for some time, small-scale units which had crossed the capital-asset limit of Rs. 5 lakhs, in order not to dislocate their working.

The scope and amount of financial assistance extended by the State Bank to various types of co-operative institutions, increased further in 1963. The remittance-facilities granted by the Bank to co operative institutions under the Reserve Bank of India Remittance Facilities Scheme as well as under it's own scheme increased from Rs. 224 crores during the year ended 30th June 1962 to Rs. 308 crores during the year ended 30th June 1963. The total credit limits sanctioned by the Bank to all types of co-operative institutions as well as the corresponding outstandings increased from Rs. 33 crores and Rs. 9 crores, respectively, on 30th September 1962 to Rs. 45 crores and Rs. 9 crores, respectively, on 30th September 1963. The sanctioned limits and outstandings in respect of the Bank's advances against warehouse receipts stood at Rs. 4 crores and Rs. 1 crore, respectively, on 30th September 1963, as compared with Rs. 5 crores and Rs. 2 crores, respectively, on 30th September 1962. The decline, we are told, was on account of the inclusion of such advances within the purview of Reserve Bank of India's selective credit controls.

Three further measures were taken by the Bank to assist the co-operative sector: (a) extension of the scope of its term-loan facilities to processing and industrial co-operatives, (b) grant of advances against the guarantee of State Governments to statutory corporations to enable them to finance industrial co-operatives, (c) provision of accommodation against Government guarantee to apex co-operative banks for granting advances through central financial agencies to labour contract and construction co-operatives against the security of bills certified for payment by the Public Works Departments.

STATE BANK OF TRAVANCORE

Unlike 1962, the year ended 31st December 1963 has seen a fairly encouraging improvement in the declared net profit (which is after meeting all expenses and providing for depreciation and taxation) of the State Bank of Travancore (General Manager: Mr. T. R. Krishnaswami, Trivandrum). The profit has increased by Rs. 1.58 lakh to Rs. 10.51 lakhs, as against some Rs. 58,000 to Rs. 8.93 lakhs a year before. It has prompted the Directors of the Bank to enhance the dividend, for the first time since it became a State Bank's subsidiary on 1st January 1960, by a modest one per cent to 6 per cent per annum on the Rs. 100 fully paid shares.

The rise in profit has followed a further expansion in the Bank's business. The balance-sheet total, which had more than doubled in the past two years following the amalgamation of three banks with the Bank, has added a further Rs. 1.12 crore to Rs. 26.37 crores during the year under review. Deposits have once again gone up by about Rs. 2 crores to Rs. 21.25 crores and, while advances show again a slight increase from Rs. 7.36 crores to Rs. 7.81 crores, investments have continued their steady rise and reached Rs. 8.09 crores, as against Rs. 7.25 crores a year before. The cash-deposits ratio is as high as 32.9 per cent, as against 31.8 per cent in 1962, following the increase in the aggregate cash balance from Rs. 6.07 crores to Rs. 6.99 crores.

The improvement in net profit, the Directors say, is not commensurate with the expansion in the Bank's business because of higher establishment charges and cost of deposits. The income has also not kept pace, they explain, with the grant of fresh limits for advances following the realisation of certain sticky advances taken over from the amalgamated banks. Interest on doubtful advances of the amalgamated banks has not been taken into account while computing earnings. It may, however, be pointed out here that there has been, in the past four years, a rather sharp fall of about 13 points to 36.7 per cent in the Bank's credit ratio, the drop over 1962 being some two points in spite of slightly higher advances during 1963. At the same time, the investments deposits ratio has been held under 40 per cent, raising the ratio of liquid assets to over 70 per cent.

The Bank's progress in the past four years is tabulated below:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Interest and discount earned	86.71	87.92	62.55	40.01
Commission and exchange	11.93	12.50	9.32	4.83
Other income	11.58	7.85	2.70	0.61
Interest paid	58.69	54.54	33.91	17.76

Investments*	38.0	37.9	30.1	41.3
Cash	32.9	31.8	34.8	29.5

* Unencumbered portion only.

The income for the year under review amounts to Rs. 122.22 lakhs, as against Rs. 108.27 lakhs for the previous year. Expenditure has gone up to Rs. 111.71 lakhs from Rs. 99.34 lakhs, the rise being attributed by the Directors to the heavy incidence of salaries consequent on the readjustment, with effect from 1st July 1963, of the pay and service conditions of the employees of the erstwhile Travancore Forward Bank Ltd., the Kottayam Orient Bank Ltd. and the Bank of New India Ltd. (all of which were amalgamated with the Bank around the middle of 1961), so as to

(Continued on next page)

BANK OF INDIA'S RESULTS IMPRESSIVE

DIVIDEND, HOWEVER, SLIGHTLY LOWER

THE results of the Bank of India Ltd. (General Manager: Mr. T. D. Kansara, Bombay) for the year ended 31st December 1963 are quite impressive, though, on taking the year-end figures, the progress in respect of deposits is not as striking as it was in the previous year and the return to shareholders on their Rs. 50 paid 100-rupee shares has been pruned by two points to 18 per cent per annum, subject to tax. The accretion of deposits, which was pretty sharp at Rs. 32 crores or 25.7 per cent in 1962, has slowed down to Rs. 16.81 crores, or 10.7 per cent, to Rs. 173.97 crores during the year under review. But the important point to be borne in mind is that the growth has been maintained at a substantial pace, despite keen competition for deposits from both banking and non-banking companies. The expansion of deposits in the past three years, it may be further noted, is as much as Rs. 64.53 crores, or 59.6 per cent. The small cut in dividend, all of which has been effected in the final dividend at 10 per cent as against 12 per cent for the previous year, has been necessitated by the fact that a full year's dividend, as against only a part of it a year ago, is due on the new shares of a total paid-up value of Rs. 105 lakhs issued in the previous year. The two other major indicators of progress, namely, gross income and balance-sheet total, show a further improvement. The former has gone up from Rs. 803.04 lakhs to Rs. 996.82 lakhs and the latter from Rs. 191.31 crores to Rs. 213.45 crores.

The further rise in income has flowed from the extension of the Bank's policy of maximising the use of available resources as reflected in a rise of no less than Rs. 191 lakhs in the Bank's income from banking business proper. The credit ratio is lower by 2.8 points from 80.9 per cent to 78.1 per cent. This apparently reflects the Bank's desire to fall in line with the general wish of the central banking authority that banks should not maintain their credit ratio at too high a level. In view of this, the investments-deposits ratio has gained about four points to 20.4 per cent, while the cash ratio has remained more or less unchanged at 8.7 per cent.

The Bank's impressive progress has been due to its policy of expanding its operations through an increase in its activities and opening of more branches. Both of these, it will be admitted, are undoubtedly a costly affair these days, but should yield even better results in the coming years. It is no wonder, therefore, that, along with the improvement in income, the Bank's total expenses, too, have risen sharply from Rs. 681.77 lakhs to Rs. 857.09 lakhs. Nevertheless, its profit, after provision for depreciation, taxation and development rebate, has advanced to Rs. 125 lakhs during the year under review from the sticky level of about Rs. 110 lakhs in the previous two years. Nearly a fourth of this profit, or Rs. 36 lakhs as against Rs. 32.50 lakhs a year before, has been earmarked to cover the bonus to staff. The reserve fund, it is good to find, has received one lakh more at Rs. 25 lakhs. The dividend, though slightly lower, absorbs Rs. 30,000 more at Rs. 72.90 lakhs, out of which Rs. 40.50 lakhs is on account of the final dividend which is to be paid out of a special reserve created out of the year's profit for meeting that liability. The surplus to be carried forward is much lower at Rs. 4.20 lakhs as compared with Rs. 13.10 lakhs brought in.

The following comparative table brings out the Bank's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Interest and discount earned	858.97	682.82	509.86	440.02

Cash	8.7	8.0	9.1	11.0

* Subject to deduction of tax.
† Unencumbered portion only.
‡ Excluding Rs. 40.50 lakhs under special reserve meant for meeting the year's final dividend liability.

Before the close of the year, a sum of Rs. 5 lakhs was transferred from the internal reserves to the reserve fund. This fund now stands at Rs. 385 lakhs out of total reserves amounting to Rs. 445.50 lakhs, excluding the special reserve of Rs. 40.50 lakhs meant for meeting the year's final dividend liability. Together with the paid-up capital of Rs. 405 lakhs, the reserves bring the total "own funds" to Rs. 850.50 lakhs which amount to 4.8 per cent of the deposits as at the end of the year under review. The Directors propose to increase the authorised capital of the Bank from Rs. 10 crores to Rs. 11 crores by the creation of 200,000 'A' shares of the face value of Rs. 50 each and to issue therefrom 40,500 shares as fully paid bonus shares in the proportion of one such bonus share for every 20 existing shares by capitalising a sum of Rs. 20.25 lakhs out of a total of Rs. 45 lakhs standing to the credit of share premium account.

The expansion of deposits during the year has been all-round. Thus, fixed deposits have increased from Rs. 79.81 crores to Rs. 86.70 crores, savings deposits from Rs. 28.22 crores to Rs. 35.50 crores and current accounts from Rs. 49.13 crores to Rs. 51.77 crores. But the expansion was not enough to meet fully the demand for accommodation from customers and the Bank had to resort again to borrowings from other banks, the outstanding amount of which is shown at Rs. 464.08 lakhs, as against Rs. 477.33 lakhs a year before. However, as much as Rs. 462.45 lakhs of this outstanding amount, as against only Rs. 77.33 lakhs a year before, has been obtained under the Refinance Corporation Scheme. Over the year, the total of advances has gone up from Rs. 127.20 crores to Rs. 135.94 crores. Investments and cash balances also have gone up, the former from Rs. 29.97 crores to Rs. 35.43 crores and the latter from Rs. 13.64 crores to Rs. 15.30 crores. Of the advances, 62.53 per cent has been to industry, 21.23 per cent to trade and the balance of 16.24 per cent to others.

During the year, the Bank opened 37 branches in the country, bringing their total number to 123. The number of foreign branches remained unchanged at 14 in eight countries. Besides, the Bank has 1,000 correspondents in all the principal countries of the world.

The Bank's shareholders number as many as 12,158, of whom those (7,566 persons) holding one to twenty shares account for 62.23 per cent of the total paid-up capital. Some 2,511 shareholders hold 21 to 50 shares each, their share in the total being 20.65 per cent. In other words, 82.88 per cent of the capital is held by 9,777 persons. These figures show how widely the ownership of the Bank is distributed.

(Concluded from previous page)

bring them on par with those corresponding to the employees of the Bank.

On 1st December 1963, the Bank acquired the business of the Vasudeva Vilasam Bank (Private) Ltd., Perintalmanna. Now it has under consideration the taking over of the business of the Champakulam Catholic Bank Ltd. which has its office at Champakulam. Further, at the instance of the Reserve Bank, the Bank is examining the question of amalgamating with it, under Section 45 of the Banking Companies Act, 1949, the Cochin Nayar Bank Ltd. at Trichur.

During the year under review, the Bank assisted development of small-scale industries by financing 75 units (as against 38 units in the previous year), with an aggregate limit of Rs. 57.71 lakhs (Rs. 33.16 lakhs). The total limit of finances extended to co-operative institutions dropped sharply from Rs. 61.67 lakhs to Rs. 1.02 lakh. Credit facilities against warehouse receipts were extended to only 241 accounts, as against 386 accounts a year before, with the aggregate limit amounting to Rs. 14.62 lakhs, as against Rs. 21.97 lakhs.

TATA-JOHNSON LIMITED JAMSHEDPUR

THE DYNAMIC MAKERS OF

PULP & PAPER MACHINERY

TATA-JOHNSON LIMITED, are the leaders in the country in designing and supplying top quality equipment for the Pulp & Paper Industry.

STANDARD EQUIPMENT:

Stock Pumps - Hot Liquor Pumps - Chippers - Chip Screens Chest Agitators - High Speed Refiners - Jordan Refiners - Jönsson Screens - Black Liquor Filters - Pulpers - Vacuum Pumps Controllers. These and similar equipment are all supplied against Rupee Payment.

TAILOR MADE PLANTS:

Continuous Digester Plants - Batch Digester Plants - Blow Tanks and Blow Heat Recovery Plants - Brown Stock Washing Plants Bleach Plants - Black Liquor Evaporator Plants - Paper Mills.

The above type of plants are supplied with the highest indigenous content.

We are only manufacturing modern equipment as per our experienced collaborators' designs.

RISE IN PROFIT—DIVIDEND STEPPED UP

JUDGED against the depressed conditions that prevailed in the capital markets during the major part of the year ended 31st December 1963 and the full impact on the national economy caused by the series of factors arising from the Chinese aggression, the Industrial Credit and Investment Corporation of India Ltd. (Chairman: Mr. G. L. Mehta, Bombay) has certainly given a quite creditable account of itself. The Corporation has expanded the scope and range of its activities. Reflecting such expansion, the gross income from various sources (interest on loans, dividends, underwriting commission and brokerage, etc.) has risen by about 41 per cent from Rs. 167.38 lakhs to Rs. 236.13 lakhs. Alongside the rise in income, interest payments have also no doubt gone up by Rs. 48.83 lakhs to Rs. 118.63 lakhs, established expenses by Rs. 1.28 lakh to Rs. 11.71 lakhs and provision for taxation (including tax deducted at source) by Rs. 8.88 lakhs to Rs. 41.42 lakhs. Even so, the net profit shows a handsome increase of Rs. 11.50 lakhs to Rs. 57.88 lakhs. As a result of the new proposals, the Corporation will, of course, have to pay more tax on account of the dividend distributed, but it can hope to get some relief from the removal of tax on inter-corporate dividends. The additional burden, therefore, is not likely to be more than Rs. 1.50 lakh.

The increase in the net disposable surplus has naturally prompted the Directors to raise the dividend to Rs. 7 per share, subject to deduction of tax, from Rs. 6.50 per share distributed in the previous two years. Since dividend payments absorb Rs. 35.00 lakhs, as against Rs. 32.50 lakhs, the ploughback has naturally increased from Rs. 11.60 lakhs to Rs. 25.50 lakhs. The result is that the equity per share of Rs. 100 has advanced further from Rs. 132 to Rs. 137, against which the market price as at 31st December 1963 is as low as Rs. 94.

The rapid advance made by the Corporation during the past four years is well brought out in the following comparative table:

(In lakhs of rupees)

	1960	1961	1962	1963
Gross income	87.84	155.56	167.38	236.13
Profits before tax	62.61	74.27	78.92	101.55
Profits after tax	37.67	46.52	46.38	57.88
Dividend* per share (%)	5.75	6.50	6.50	7.00
Net worth per Rs. 100 share	115	125	132	137
Market value as on 31st December per Rs. 100 share	71	82	92	94

* Subject to deduction of tax.

The Corporation's activities can be grouped under three main heads, namely, granting of loans and guarantees, underwriting capital issues, and participating in the share capital of companies through direct subscription. The total number of loan operations has increased from 90 in 1962 to 113 in 1963 and the amount sanctioned has risen by approximately 50 per cent from Rs. 14.70 crores to Rs. 20.96 crores. Actual disbursements, however, have increased by only 10 per cent from Rs. 8.03 crores to Rs. 8.85 crores, whereas, in the previous year, they had advanced by over 60 per cent from Rs. 4.46 crores. The slowing down of the rate of increase in the amount disbursed probably reflects the sluggishness of the country's economy. The total amount disbursed as at the end of 1963 aggregates Rs. 27.85 crores, the bulk of it being in foreign currencies.

The underwriting activity, however, has suffered a moderate setback, due, of course, to the poor state of the country's capital markets. Although the number of operations has increased from 14 to 24, the amount sanctioned has come down from Rs. 3.91 crores to Rs. 3.68 crores, while the amount disbursed is marginally lower at Rs. 1.25 crore, as compared with Rs. 1.28 crore a year ago. Underwriting of preference shares and debenture-stocks issue, no doubt, forms the bulk of the operations as before, but underwriting of equity issues has also received greater attention than hitherto. As for direct subscription, though the number of operations is reduced by half to seven from 15 in 1962 and the amount sanctioned is less than a third at Rs. 30 lakhs, as against Rs. 99 lakhs, total disbursements are actually higher at Rs. 66 lakhs, as against Rs. 54 lakhs previously, due possibly to the spill-over from earlier years. As usual, the bulk of investment is in ordinary shares and the balance in debenture-stocks, that in preference shares being conspicuous by its absence. It will be noted from the table at the end of the page that, out of the total business of Rs. 97.01 crores transacted (in terms of amounts sanctioned), nearly 72.4 per cent or Rs. 70.17 crores represent loans and guarantees. This emphasises the Corporation's role as the provider of long-term loans to industries.

Besides its paid-up capital of Rs. 5.0 crores and the amount ploughed back in the form of reserve, the working funds of the Corporation include the advance secured from the Government of India, loans from the World Bank and those received from the Agency for International Development. Out of the advance sanctioned by the Central Government, the Corporation had withdrawn by the end of December 1963 an amount of Rs. 14.50 crores only. During the year, the balance was also utilised and this has raised the amount of the advance to Rs. 17.50 crores. This besides, the Corporation obtained a fifth line of credit amounting to $30 million from the World Bank, making the total World Bank lending to $90 million. Out of the loan of $5.0 million from the A.I.D., only a portion was utilised in 1962, while the balance was availed of during the year under review. The Corporation's working funds, therefore, advanced from Rs. 31.16 crores to Rs. 39 crores and were made of Rs. 5 crores as paid-up share capital, Rs. 1.86 crore as reserves and surplus, Rs. 17.50 crores as advance from the Central Government, and Rs. 14.64 crores as loan from the World Bank and the A.I.D. A loan agreement for DM 20 million (Rs. 2.38 lakhs) was also concluded with the Kreditanstalt fur Wiederaufbau (Reconstruction Loan Corporation) of Federal Republic of Germany, but no amount was drawn against this during the year pending finalisation of a second loan agreement for DM 5.0 million. The whole of the loan of $90 million received from the World Bank was sanctioned by the Corporation as loans to private sector undertakings and so also the loan of $5.0 million received from the A.I.D. Although the Corporation sanctioned DM 21.01 million (Rs. 2.50 lakhs) as loans against the amount received from the Kreditanstalt, no disbursements were actually made. These, however, ccmmenced during the current year. In order to augment the Corporation's rupee finance, the Government of India has sanctioned a further loan of Rs. 10 crores out of the P.L. 480 funds and formalities in respect of this are expected to be completed shortly. Negotiations for the second line of credit of DM 5.0 million are expected to be completed shortly.

TEXTILE OUTPUT AT A HIGH LEVEL

MILLS ABSORBING MORE WORKERS

From Our Special Correspondent

MANCHESTER, *3rd March*

MANCHESTER LETTER

ECONOMIC developments, culminating in the rise in the Bank Rate, have been a dominating influence in the market during the past week. Textile traders are bound to be affected, like all other industrialists, by the increased cost of holding stocks, but the current position of well-filled order books and steady demand is not likely to be seriously undermined by the new financial uncertainty.

A far more disturbing element—one which has for long been at the root of Lancashire's troubles—is the rate at which low-cost arrivals of foreign goods have been entering this country. It so happens that the national overseas trade returns for January, showing a substantial balance of payments deficit, were strongly mirrored in the corresponding figures for cotton textiles, exports being sharply curtailed and imports rising dramatically.

While it is true to say that foreign suppliers tend to concentrate their efforts at the beginning of each calendar year when the new quotas start, the fact cannot be disguised that 1964 has opened on an unfortunate note in this particular sphere. Imports of cotton grey cloth were only slightly higher than January last year, at 52,519,000 yards, as against 51,751,000 yards, but the rate of arrivals was much larger than in the second half of 1963. On the other hand, imports of finished cotton fabrics increased from 13,497,000 yards in January last year to 17,596,000 yards. Comparable returns for cotton yarn and thread showed bigger takings from abroad at 4,052,000 lbs. during the month, as against 3,614,000 lbs. in 1963.

Less from Hong Kong

Chief suppliers of grey cloth were again India, with 20,087,000 yards and Pakistan 8,079,000 yards; these figures compare with 19,027,000 yards and 9,437,000 yards, respectively, last year. A marked increase in shipments from Canada took arrivals from 811,000 yards to 2,456,000 yards, while Portugal supplied 3,046,000 yards, as against 1,927,000 yards. Bigger arrivals came from China with 5,267,000 yards, as against 3,518,000 yards and the Irish Republic with 1,460,000 yards, as against 884,000 yards.

Almost the only exception to this rising trend was Hong Kong whose grey cloth shipments to this country in January aggregated 4,808,000 yards, as against 8,130,000 yards. Against this, however, is the fact that finished cotton cloth arrivals from Hong Kong increased from 1,106,000 yards in January 1963 to 2,483,000 yards this year, the cost of these purchases rising from £100,000 to £313,000. India also sent more finished cloth, as did Belgium and Portugal.

Exporters of man-made fibre fabrics have been justifiably praised for their efforts during the past two or three years. It is significant, however, that, in January, imports of man-made fibre cloth increased from 4,824,000 yards to 7,652,000 yards, while arrivals of man-made fibre yarn and thread rose from 945,000 lbs. to 2,572,000 lbs.

Meanwhile, on the export side, shipments of cotton yarn and thread in January at 1,769,772 lbs. were higher than the average during the second half of last year, but cotton cloth sent abroad was only 15,758,000 yards, which is the lowest monthly figure on record. Man-made fibre cloth shipments, however, moved up from 5,658,000 yards to 6,972,000 yards and exports of man-made fibre yarns amounted to 8,024,000 lbs. as against 6,785,000 lbs.

Supply Rate Steady

Theory and practice have frequently been opposing forces when matters of economics come up for consideration, but, in the textile industry in recent years at least, the trade cycle theory based on the stock position has usually been vindicated in practice. On some occasions, the anticipated recovery has been delayed, often by outside influences which have caused buyers to hesitate when they might have been expected to enter the market in force.

The omens were right for such a development 12 months ago and, although a reasonable amount of activity was encountered in the spring and summer months, it was not until the late autumn that any large-scale purchasing took place. At the end of 1962, the broad picture of supplies of cotton and man-made fibre cloth, illustrated by adding output to imports and deducting exports, showed that the balance had reached its lowest level since 1953, and the way was obviously clear for substantial restocking. The table below shows the current position:

(In million yards)

Year	Output	Imports	Total	Exports	Balance for home trade
1937	4,122	75	4,197	2,001	2,196
1949	2,592	400	2,992	1,078	1,914
1950	2,840	342	3,182	1,017	2,165
1951	2,960	476	3,436	1,105	2,331
1952	2,192	210	2,402	871	1,531
1953	2,632	143	2,775	895	1,880
1954	2,775	335	3,110	812	2,298
1955	2,479	365	2,844	688	2,156
1956	2,314	380	2,694	595	2,099
1957	2,287	490	2,777	567	2,210

1959	1,927	575	2,502	411	2,091
1960	1,911	786	2,697	383	2,314
1961	1,842	801	2,643	336	2,307
1962	1,613	642	2,255	290	1,965
1963	1,574	700	2,274	303	1,971

In the ensuing 12 months, the situation has scarcely altered, the balance showing less change than at any time since the war. Larger imports, chiefly in grey cloth, offset the small reduction in output, while, for the first time since 1953, the fall in exports was halted.

In the knowledge that the remaining mills in the industry are well supplied with business which will keep machinery active at least until the second half of the current year, coupled with the rising trend in productivity, it would not be surprising if 1964 provided an improvement in the volume of output for the first time for a decade. Imports are not likely to be substantially curtailed, while an expansion in shipments abroad may well be only marginal.

Build-up Ahead?

If these predictions are borne out, the available supplies will again move upwards, and much will, therefore, depend on the disposal of textile products through the home market. Political considerations have not yet affected the attitude of distributors who are obviously anticipating a fair movement of goods through retail channels. Industrial activity in many sectors of the economy is still extensive, so that the call for specialist materials of this kind should be at least maintained.

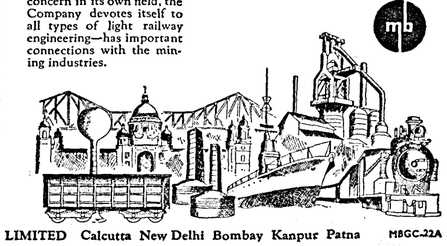
Commenting recently on the recovery in textiles, which has led to vacancies arising in the mills, a local employment official in one of the mill towns ventured the opinion that the cotton trade was showing more stability and now offered better prospects for recruits. This is the type of attitude the industry should cultivate; such unsolicited testimonials are the best advertisement it can get.

MARTIN BURN LOOK BACK TO OVER
180 YEARS OF SERVICE TO INDIA

...to be able to compute this service by decades, not by years alone...to recall that our creed has consistently been the development of our country's resources through engineering and allied enterprises...to take pride in planning that makes the many units in our organization fall into a rational and complementary group and each one a leader in its particular field, a position which some of them, early pioneers in India, held even in the last century. For us looking back is a worthwhile proposition—an incentive to *move forward.*

AMONG THE COMPANIES IN THE MARTIN BURN GROUP ARE:

THE INDIAN IRON & STEEL CO. LTD.: With a million ton integrated steel plant at Burnpur, the largest foundry in the Commonwealth at Kulti and its own collieries and iron ore mines, IISCO has an enviable record in production efficiency.
BURN & CO. LTD., HOWRAH WORKS: Pioneers in foundry practice in India, in structural steelwork fabrication and the manufacture of rolling stock—the origins of the Company go back to the year 1781.
BURN & CO. LTD., REFRACTORY & CERAMIC GROUP: Apart from stoneware pipes and chemical stoneware, the works of this group—eight in number and located in four states—manufacture nearly all types of refractories to meet the requirements of India's steel industry, power undertakings, railways, ordnance factories—in fact, any industry requiring refractory material for the maintenance of furnaces.
THE INDIAN STANDARD WAGON CO. LTD., SANTA: The oldest Indian unit started for the specific purpose of manufacturing railway rolling stock—has been mainly responsible for building up the wagon building industry. Also manufactures springs, forgings, pressings and stampings for heavy industry as well as automotive components.
THE HOOGHLY DOCKING & ENGINEERING CO. LTD.: Established in 1819, the Company has a shipbuilding yard, a dry dock and extensive workshops at Salkia.
ROBERT HUDSON (INDIA) LTD: A premier concern in its own field, the Company devotes itself to all types of light railway engineering—has important connections with the mining industries.
RAILWAY COMPANIES: Some of the first feeder railways in India, with six systems in four states.
ELECTRIC SUPPLY COMPANIES: Pioneers again in the generation and distribution of domestic power in India—serve 45 towns in Uttar Pradesh and Madhya Pradesh.
THE VAUGHAN BURN CRANE COMPANY LTD.: A collaboration with The Vaughan Crane Company Ltd. of Manchester... Hand operated and electric overhead travelling cranes and chain pulley blocks.



MARTIN BURN LIMITED Calcutta New Delhi Bombay Kanpur Patna MBGC-22A

PUBLIC DEBT OF CENTRAL GOVERNMENT

BURDEN OF EXTERNAL DEBT SERVICES GROWING

SOME of the fiscal incentives which the Union Finance Minister has offered to attract foreign private investment are in the right direction, though one wishes that the Finance Ministers had not nullified the effect of these incentives to a considerable extent by the complicated and complex changes in the structure of corporate taxation as a whole. In offering these incentives, the Finance Minister has been prompted by the important consideration that foreign investment in the shape of equity capital, besides bringing with it technical know-how and managerial skills, both of which are in short supply in India, has also the special advantage of not adding to the heavy and growing burden of debt repayment. "India's external debts," the Finance Minister said in his budget speech, "are already at a high level. For the third Plan, we had a repayment liability of approximately Rs. 575 crores, including principal and interest, and the repayment liability for the fourth Plan is already in excess of Rs. 825 crores."

In the coming (1964-65) year alone, the external debt repayment liability is put at as much as Rs. 143.82 crores (including interest at Rs. 76.56 crores), as against Rs. 120.83 crores (including interest amounting to Rs. 59.34 crores) in 1963-64 and Rs. 94.46 crores (including interest payment of Rs. 47.00 crores) in 1962-63. The liability will be heavier still in the coming years as indicated by the Finance Minister. Before the era of planning began in April 1951, there was no such liability at all. The magnitude of the debt repayment liability is indicated below:

Discharge of Permanent Debt

(In crores of rupees)

	1964-65 (B.E.)	1963-64 (R.E.)	1962-63 (Actual)	1950-51 (Actual)
Debt raised in India ..	192.35	178.45	183.25*	47.00*
Debt raised outside India ..	67.26	61.49	47.46*	Nil
Total ..	259.61	239.94	230.71*	47.00*
Total interest payments ..	313.41	277.06	240.43	64.73
Of which :				
On internal debt	154.89	140.01	127.37	45.37
On external debt	76.56	59.34	47.00	Nil
On unfunded debt ..	71.13	68.52	57.07	15.73
On reserve funds, etc. ..	9.01	7.37	6.47	
On other obligations ..	1.82	1.82	1.62	3.63

* Revised estimate only.

It will be noted here that the foregoing figures reflect only the position of the Government obligations. In addition to these, foreign exchange has also to be found for meeting the capital transfers of the private sector, such as dividends, technical fees, savings of foreigners and repatriation of investments. The total of these remittances must now be a tidy sum.

To return to the external liabilities of the Central Government. The large repayment liability must be attributed to the significant expansion in external assistance received in the form of loans. The total debt raised outside India as at the end of the next financial year (31st March 1965) is expected to touch Rs. 2,439 crores, as compared with Rs. 1,809 crores at the end of this month; figure for 1950-51 was no more than Rs. 58 crores. In other words, over a period of fourteen years (from 1950-51 to 1964-65), the total external debt has gone up by over forty-two times. Such an increase in external debt need not, of course, cause any undue concern, inasmuch as it has been utilised to build up assets through the process of economic development. But care has to be taken to see that the debt does not rise to alarming proportions, for such a rise entails a mounting burden of external debt services. It is from this angle that one has to view Mr. Krishnamachari's proposals for giving tax reliefs to foreign investors; a detailed analysis of these proposals and a few suggestions for improvement are contained in the special article published on page 352 of our last issue.

Debt Position of Central Government

(In crores of rupees)

	As on 31st March			
	1965 (B.E.)	1964 (R.E.)	1964 (B.E.)	1951 (R.E.)
Debt raised in India (total) ..	5,069	4,785	5,246	2,031
Of which :				
Current loans	3,222	3,114	3,068	1,438
Treasury bills ..	1,536	1,360	1,869	372*
Special floating loans ..	281	281	281	213
Expired loans	30	30	28	7
Debt raised outside India (total) ..	2,439	1,809	1,790	58
Total ..	7,508	6,594	7,036	2,089
Other liabilities	2,483	2,335	2,349	699
British war loan	—21	—21	—21	—32
Grand total of public debt ..	9,970	8,907	9,364	2,746
Of which :				
Covered debt	9,303	8,224	8,091	2,195
Uncovered debt ..	667	683	1,273	551
Interest-bearing obligations (total)	9,658	8,597	9,056	2,562
Of which :				
In India	7,240	6,809	7,286	2,501
Outside India	2,418	1,788	1,770	61
Interest-yielding assets	8,605	7,589	7,380	1,681
Cash and securities held on Treasury account	52	52	116	142
Balance of total interest-bearing obligations not covered by above assets	1,001	956	1,560	739
Breakdown of interest-bearing obligations in India :				
Public debt	4,758	4,474	4,937	1,812
Unfunded debt	2,218	2,113	2,137	450
Deposits	264	222	212	239

* Including Treasury deposit receipts aggregating Rs. 21 crores.

Alongside the marked increase in external debt, the internal public debt of the Government of India, too, has risen quite significantly, from Rs. 2,031 crores in 1950-51 to Rs. 4,785 crores at present, and there is expected to be an addition of another Rs. 284 crores in the coming year, bringing the total by the end of March 1965 to Rs. 5,069 crores. Consequently, the amount which the Government of India will be paying as interest on this debt in the coming year is estimated at Rs. 154.89 crores representing an increase of Rs. 14.88 crores over 1963-64 and of Rs. 109.52 crores over 1950-51. Including this amount with the interest of Rs. 71.13 crores on unfunded debt, Rs. 9.01 crores on reserve funds, Rs. 1.82 crore on other obligations and Rs. 76.56 crores on debt raised outside India, the total interest payments for the year ending 31st March 1965 come to Rs. 313.41 crores, as against Rs. 277.06 crores for 1963-64 and no more than Rs. 64.73 crores for 1950-51.

Taking together the debt raised in India and that raised outside, the total outstanding public debt of the Central Government is expected to amount to Rs. 6,594 crores at the end of the current year (March 1964) and Rs. 7,508 crores at the end of next year (March 1965), as against less than Rs. 2,090 crores in March 1951. To these must be added other liabilities amounting to Rs. 2,334.51 crores, Rs. 2,482.71 crores and Rs. 689 crores, in respect of the years 1964-65, 1963-64 and 1950-51, respectively. Included in "other liabilities" are investments of deposits of P.L. 480 counterpart funds, balances in the various Provident Funds, Post Office Savings Bank, Post Office Cash, National Savings, National Plan, National Plan Savings, National Defence Treasury Savings Deposit and Defence Deposit Certificates, deposits under Cumulative Time Deposits Scheme and the Compulsory Deposit Scheme, Depreciation and Reserve Funds of Railways, Posts and Telegraphs, etc., and certain other deposits, mainly relating to deposits of Income-tax, Super-tax, etc. Excluding the war contribution, the liability in respect of which remains suspended, the total outstanding debt of the Government of India will be Rs. 8,910 crores at the end of this month and Rs. 9,969.92 crores a year later, as against Rs. 2,746 crores at the end of 1950-51. The table in column one bottom compares the etimated debt position of the Central Government as at the end of next year with that at the close of the current year and 1950-51.

The breakdown of the debt raised in the different countries as of 31st March 1965, the figures in brackets relating to end-March 1964 is given below:

(In crores of Rs.)

U.S.A.: 1,153.18 including 104.54 from the Export-Import Bank (779.20, including 100.23 from the Export-Import Bank); U.K: Government loans 236.31 (220.72), India stocks and railway debenture-stocks 0.08 (0.08), expired loans 0.03 (0.03), war contribution 20.62 (20.62); U.S.S.R.: 236.00 (167.75); Canada: 13.90 (12.16); West Germany: 191.04 (173.08); Japan: 57.53 (37.61); Switzerland: 6.23 (2.23); Czechoslovakia: 5 (1.00); Yugoslavia: 5.20 (1.05); Poland: 3.70 (3.20); Austria: 4.11 (0.45); Netherlands: 3.50 (0.50); France: 1.28 (nil); Denmark: 1.02 (0.10); Belgium: 0.80 (nil); Federation of Rhodesia and Nyasaland: 0.79 (1.06); New Zealand: 0.26 (0.33); Kuwait: 22.51 (25.72); World Bank: 179.11 (181.82); I.D.A.: 98.56 (72.48); Bank of India, Tokyo: 0.04 (0.05); New credits: 192.89 (7.52).

The total outstanding public debt of the Central Government (as on 31st March 1965) analysed with reference to the purposes for which the money has been utilised or the assets by which it is covered is shown below, figures in brackets relate to end-March 1964:

(In crores of Rs.)

Railways: 2,387.06 (2,134.06); Posts and Telegraphs and other commercial departments, including D.V.C.: 306.79 (304.74); Investment in commercial concerns—industrial development: 1,318.61 (1,101.42); loans and advances: 4,584.81 (3,978.66); amounts recoverable from the U.K. and the States on account of purchase of annuities for sterling pensions: 14.23 (17.44); subscription to I.M.F. 282.00 (282.00); purchase of World Bank shares: 37.00 (37.00); subscription to I.D.A. 19.22 (15.52); purchase of U.N. bonds: 0.95 (0.95); debt due from Pakistan: 300.00 (300.00); cash and other investments: 51.90 (52.32).

Allowing for these, the uncovered debt will amount to Rs. 667 crores at the end of the coming financial year (March 1965), as against the pre-war figure of Rs. 188 crores. The whole of this cannot, however, be called unproductive, since the large grants to State Governments for development in recent years which increase

THE MARK OF QUALITY

We have pleasure in announcing that we have started commercial production of Mild Steel Tubes to I.S. 1239/58 at our Works at Vatva. All enquiries for booking of orders, etc. may please be made to our Sole Distributors:

TUBE DISTRIBUTORS
31-33 Jhaveri Chambers, Station Road, Ahmedabad 2.

SHRI AMBICA E.R.W. STEEL TUBES ARE STRONGER:
All pipes tested individually to hydraulic pressure of 700 lb/sq. in.

ANNOUNCEMENT REGARDING THE PROPOSED ISSUE OF CAPITAL BY

BHASKAR TEXTILE MILLS LIMITED

A COPY OF THE PROSPECTUS TOGETHER WITH THE DOCUMENTS AS REQUIRED BY SECTION 60 OF THE COMPANIES ACT, 1956 HAS BEEN DELIVERED TO THE REGISTRAR OF COMPANIES, WEST BENGAL, FOR REGISTRATION.

INCORPORATED ON: 4TH AUGUST, 1962
REGISTERED OFFICE: 2, BRABOURNE ROAD, CALCUTTA 1.

EXISTING AND PROPOSED ACTIVITIES

The Company was incorporated with the object of carrying on all or any of the businesses namely spinners, yarn merchants, cloth manufacturers, etc. The Government of India have granted a licence bearing No. L/23/1/243/Tex/62 dated 4th April 1962, subsequently amended by letter No. 10/629/62/Tex(B) dated 5th September 1962 for manufacture of cotton yarn for this undertaking with an installed capacity of 25,000 spindles. The present project is to set up a spinning plant of 15,000 spindles. The Company has been allotted approximately 126.05 acres of land by Government of Orissa at Jharsuguda. Adequate supply of power has also been assured. Licences to import major items of machinery from abroad have since been obtained and orders for plant and machinery have already been placed with the manufacturers. It is expected that the plant will go into production by June/September, 1964.

LOCATION OF THE INDUSTRY: Jharsuguda in the State of Orissa.

BOARD OF DIRECTORS

SRI SURAJMAL MOHTA, 2, Brabourne Road, Calcutta.
SRI P. D. HIMATSINGKA, 6, Old Post Office Street, Calcutta.
SRI BAIJNATH TAPURIAH, 9, Brabourne Road, Calcutta.
SRI RASIKLAL MANEKLAL, Vasant Vilas, Babulnath Road, Bombay-7.
SRI BENI PRASAD MAHESHWARI, 9, Brabourne Road, Calcutta.
SRI B. D. KOTHARI, P-10, Debendra Dutt Lane, Calcutta.
SRI M. K. MOHTA, 2, Brabourne Road, Calcutta.

AUDITORS

MESSRS. S. S. KOTHARI & CO., Chartered Accountants, 21, Old Court House Street, Calcutta.
MESSRS. JHUNJHUNWALA & CO., Chartered Accountants, 6, Commercial Buildings, Calcutta.

	No. of Shares	Nominal value of each share	Amount
AUTHORISED CAPITAL :			
Equity Shares	5,00,000	Rs. 10	Rs. 50,00,000
Preference Shares	50,000	Rs. 100	Rs. 50,00,000
			Rs. 1,00,00,000
SUBSCRIBED CAPITAL :			
Equity Shares	1,40,000	Rs. 10	Rs. 14,00,000
PROPOSED ISSUE :			
Equity Shares	1,40,000	Rs. 10	Rs. 14,00,000
Preference Shares	7,000	Rs. 100	Rs. 7,00,000
(9.5% Tax-free Cumulative redeemable Preference Shares).			Rs. 21,00,000

TERMS OF PAYMENT :	Per Equity Share	Per Preference Share
On Application	Rs. 2.50 nP.	Rs. 25
On Allotment	Rs. 2.50 nP.	Nil.

APPLICATIONS FOR SHARES

Applications for Shares must be for 10 or multiples of 10.
Applications for Preference Shares must be for 5 or multiples of 5.
The entire issue of Equity and Preference Shares will be offered to the Public for subscription in cash at par. Subscription of the amount is assured by the reason of the whole issue having been underwritten.

DATE OF OPENING AND CLOSING OF THE SUBSCRIPTION LIST

The subscription list will open at the commencement of Banking hours on 23rd March 1964 and will close at the close of the Banking hours on 4th April 1964 or earlier at the discretion of the Board of Directors but not before the close of the Banking hours on 30th March 1964.
Application forms along with copies of the Prospectus can be had from the Registered Office of the Company or from the Underwriters, Bankers or Brokers, whose names and addresses are given below :—

UNDERWRITERS :

ORISSA STATE FINANCIAL CORPORATION.	Killa Maidan, Cuttack 1.
INDUSTRIAL FINANCE CORPORATION OF INDIA.	Reserve Bank Building, Parliament Street, New Delhi, 1.

HARBANS SINGH MEHTA & Co.	33, Regal Building, Parliament Street, New Delhi.
RAJPAL CHADHA & Co.	Delite Cinema Building, Asaf Ali Road, New Delhi.

CAPITAL OUTLAY

The total cost of the present project, including the working capital, will be Rs. 1,09,00,000 estimated as follows :—

	Rs.
Land	1,25,000
Buildings	19,75,000
Machineries	69,50,000
Miscellaneous assets	4,50,000
Preliminary and Miscellaneous expenses of this issue ..	1,75,000
Working Capital	12,25,000
	1,09,00,000

It is proposed to meet the capital outlay as follows :

FINANCIAL RESOURCES

	Rs.
Equity Shares	28,00,000
Preference Shares	7,00,000
Deferred payment facilities	29,00,000
Secured loan from the Bank of Baroda Ltd.	45,00,000
	1,09,00,000

RIGHTS OF PREFERENCE SHARES

The Preference shareholders are entitled to a Cumulative Preferential dividend of 9.5 per cent per annum free of Company's tax. The Shares are redeemable immediately after 12 years from the date of issue on 3 months' notice.

the productive capacity of the country as a whole are not entirely unremunerative. Similarly, the large capital outlay on Central property, the value of which is either not shown at all in the Government's accounts or is shown as non-commercial (such as the Delhi capital outlay and defence capital outlay) is not without value. Besides, a considerable portion of the capital outlay has been incurred on schemes of State trading such as foodgrains, fertilisers, iron and steel, of which there are reserve stocks, particularly of foodgrains.

The aggregate interest-bearing obligations of the Government of India as on 31st March 1965 is put at Rs. 9,658.59 crores, as against Rs. 8,596.95 crores at present and Rs. 2,562.00 crores at the end of March 1950-51. Of this total, obligations in India account for Rs. 7,240.45 crores and those outside for Rs. 2,418.14 crores. Of the obligations in India, the share of public debt alone comes to Rs. 4,757.74 crores (loans Rs. 3,222.19 crores and Treasury Bills Rs. 1,535.55 crores), unfunded debt and deposits accounting for Rs. 2,218.35 crores and Rs. 264.36 crores, respectively. The unfunded debt includes: Investment of U.S. counterpart funds Rs. 323.19 crores; Service funds Rs. 24 lakhs; 10-year Treasury Savings Deposit Certificates Rs. 71.24 crores; 10-year Defence Deposit Certificates Rs. 54.25 crores; Post Office Savings Bank Deposits Rs. 538.72 crores; Compulsory Deposits Rs. 25 crores; Cumulative Time Deposits Rs. 32.23 crores; 12-year National Plan Savings Certificates Rs. 318.85 crores; 12-year National Defence Certificates Rs. 255.49 crores; Post Office Cash and Defence Savings Certificates Rs. 47 lakhs; National Savings Certificates Rs. 84.77 crores; 10-year National Plan Certificates Rs. 14.71 crores; State Provident Funds Rs. 474.88 crores; others Rs. 23.81 crores.

The estimated interest-bearing obligations aggregating Rs. 9,658.59 crores (as at the end of March 1965) are covered by (*a*) interest-yielding assets amounting to Rs. 8,605.33 crores and (*b*) cash and securities held on Treasury account amounting to Rs. 51.90 crores, so that the obligations not covered by assets come to Rs. 1,001.36 crores.

The Union Government budget for 1964-65 has taken credit for new rupee loans aggregating Rs. 295 crores to be floated in the coming financial year. The whole of the loan proceeds will be for the Centre, as the system of combined borrowing operations on behalf of both the Centre and the States, reintroduced last year after many years, is proposed to be discontinued. In the current (1963-64) year, it will be recalled, the loans floated fetched a total of about Rs. 452 crores, of which the share of the States was Rs. 101 crores. In other words, the amount utilised by the Centre was Rs. 351 crores. As compared with this sum, the borrowing of Rs. 295 crores contemplated in the Central budget for 1964-65 is lower by Rs. 56 crores. Excluding the repayment of maturing loans amounting to Rs. 192.35 crores (3¾ per cent National Plan Loan 1964: Rs. 157.00 crores; 3.1 per cent 1964: Rs. 30.00 crores; 1¼ per cent Hyderabad Loan 1964: Rs. 3.75 crores; 15-year Annuity Certificates Rs. 35 lakhs and expired loans Rs. 1.25 crore), the net borrowing in 1964-65, it is seen, will be Rs. 101.65 crores. The following table compares the receipts on account of rupee loans (including Annuity Certificates and Prize Bonds) floated and discharged with the figures assumed in the respective budget estimates since 1951-52:

Public Borrowings in India

(In crores of rupees)

Financial year ended March	Floated		Discharged	
	Actuals	Budget	Actuals	Budget
1951-52	50.37	100.00	84.59	87.40
1952-53	-0.07	25.00	0.97	1.45
1953-54	75.30	100.00	112.51	116.70
1954-55	158.65	75.00	46.12	49.76

1956-57	158.16	100.60	80.02	0.68
1957-58	196.82	100.80	67.47	31.85
1958-59	202.56	140.65	21.23	20.15
1959-60	379.62	226.20	116.98	117.67
1960-61	247.03	252.00	109.37	109.00
1961-62	256.52	236.50	137.88	137.60
1962-63	337.04	260.70	182.59	182.85
1963-64	452.32*	400.50	178.45*	180.30
1964-65	..	295.00	..	192.35
Total for the thirteen years from 1951-52 to 1963-64	2,558.59	2,149.71	1,207.29	1,105.16

* Revised estimate only.

Thousands of crores of rupees have been transferred from the Centre to the States in the past few years by way of share in taxes and duties, grants and loans. The total amount actually transferred in the first three years of the third Plan was Rs. 2,959.99 crores, which was more than what was transferred in the whole of the second Plan (Rs. 2,867.92 crores) and first Plan (Rs. 1,412.97 crores). Another Rs. 1,173.57 crores are to be added in the coming year. Details are given below:

Resources Transferred from Centre to States

(In crores of rupees)

Financial year ended March	Share in taxes and duties	Grants	Loans	Grand total
1964-65 (B.E.)	253.69	314.08	605.80	1,173.57
1963-64 (R.E.)	259.50	257.17	626.08	1,142.75
1962-63	224.06	222.19	523.55	969.80
1961-62	178.38	216.84	452.42	847.44
II Five-year Plan	711.13	745.95	1,410.84	2,867.92
I Five-year Plan	326.74	287.70	798.53	1,412.97
Total for the fourteen years from 1951-52 to 1964-65	1,953.50	2,043.73	4,417.22	8,414.45

Besides giving liberal grants and loans to States, the Government of India has also been investing on a significantly large scale in several undertakings. At the end of the coming (1964-65) year, the total investments are expected to be Rs. 2,652.24 crores in the departmentally run commercial undertakings and Rs. 1,184.43 crores in other Government commercial undertakings, or a total of Rs. 3,836.67 crores. The former include Railways Rs. 2,389.40 crores, Posts and Telegraphs Rs. 224.41 crores, Indian Security Press Rs. 3.32 crores, Currency Note Press Rs. 5.81 crores, Government Opium Factory at Neemuch Rs. 1.10 crore, Government Opium and Alkoleid Works Rs. 4.60 crores, Overseas Communications Service Rs. 3.91 crores, lighthouses and light-ships Rs. 6.59 crores, Delhi Milk Scheme Rs. 2.47 crores, Forest Department (Andamans) Rs. 5.67 crores, Electricity Department (Andamans) Rs. 30 lakhs and Kolar Gold Mines Rs. 4.04 crores. Out of the Rs. 1,184.43 crores invested in "other" Government commercial undertakings, those under construction account for Rs. 298.01 crores, promotion and developmental undertakings for Rs. 106.15 crores, and running concerns for Rs. 780.27 crores (including Rs. 548 crores in respect of the Hindustan Steel Ltd.). Details are given below:

Central Government Investments

(In crores of rupees)

	1964-65 (B.E.)	1963-64 (R.E.)	1962-63 (Actuals)	1961-62 (Actuals)
Departmentally run commercial undertakings:				
Capital invested*	2,652.24	2,373.67	2,096.85	N.A.
Net profit	60.22	69.30	65.98	N.A.
Net profit as percentage of capital invested ..	2.3	2.9	3.1	N.A.
Other Government commercial undertakings:				
Capital invested*	1,184.43	978.25	806.47	7638.62
Of which:				
Running concerns* ..	780.27	666.21	563.01	490.20
Dividend profit received by Government from running concerns	2.32	2.16	1.36†	1.35‡

Net profit is arrived at after deducting working expenses, interest on capital and depreciation from gross receipts.

* As at the end of the year.

† There was a total net loss of Rs. 9.14 crores during the year 1962-63.

‡ There was a total net loss of Rs. 11.01 crores during the year 1961-62. N.A.—Not available.

It will be seen from the above figures that the total net profit expected to be earned by the departmentally run commercial undertakings in the coming year works out to a bare 2.3 per cent per annum of the huge capital invested; the rate of return (net) was 3.1 per cent for the year 1962-63. In the case of 'other' running concerns also, the dividend received by the Government is ridiculously low as compared with the huge capital invested. Viewed thus, the Planning Commission's estimate that the surplus from the public sector undertakings by 1965-66 would be of the order of Rs. 300 crores will simply not prove correct. The Finance Minister has candidly admitted this fact. The huge investments in the public sector can be justified only if the undertakings are run efficiently, so that they yield a handsome return to the exchequer and, at the same time, build up reserves to finance their own future expansion. That way alone should the public sector expand, and not by adding unduly to the tax burden on the community.

PHILBLACK*

Intermediate Super Abrasion Furnace Black

For more tread miles at moderate cost...use Philblack I. Philblack I is famous all over the world for its high reinforcing properties and excellent performance. To ensure consistently high quality and uniformity in your rubber compounds...use Philblack I.

PHILBLACK I is now made at our Durgapur Plant.

Let any or all the types of Philblack work for you.

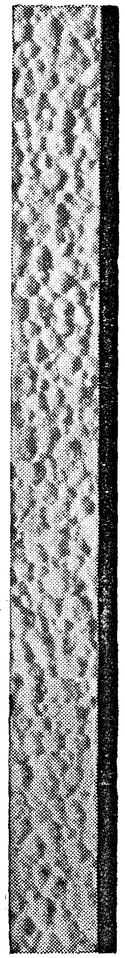
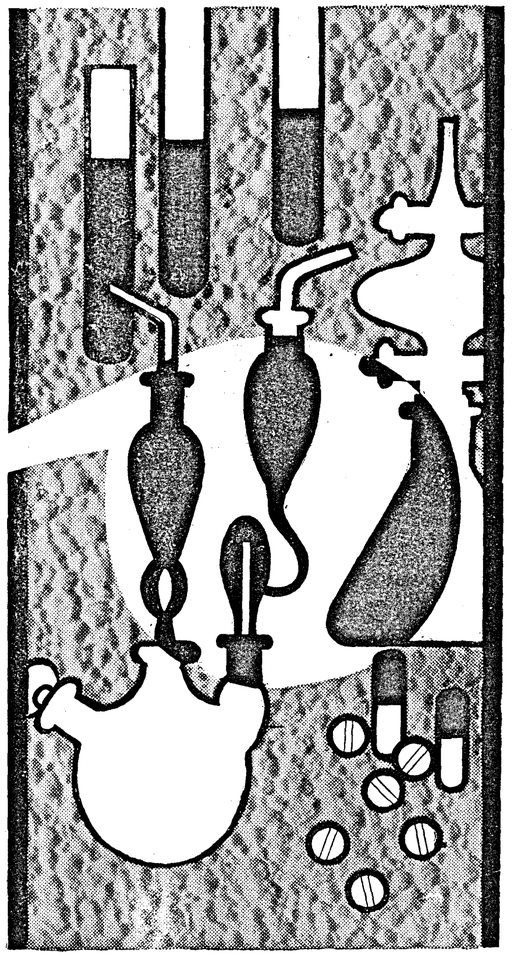
Thermocole®

KEEPS IT COOL AT **CIBA**





Research has a perfect setting at the new CIBA centre in Bombay. It has the perfect insulation, too, thanks to THERMOCOLE.

There are many organisations in India that know and use THERMOCOLE for insulation, and CIBA is one of them. No matter how hot and noisy it is outside, THERMOCOLE keeps it cool, quiet and comfortable inside.

THERMOCOLE is foamed polystyrene—the lightest rigid insulation material in the industry. It has a very low thermal conductivity. It can deaden airborne and vibrational sound and cut out heat, dust and humidity.

There is one sure way to work under ideal conditions: insulate against heat and sound with THERMOCOLE.

The Trade Name— ~~Thermocole~~ is your Guarantee of Quality for Expanded Polystyrene

When the need is insulation against heat and sound, call in...

OVER 1,000 CORRESPONDENTS IN ALL THE PRINCIPAL COUNTRIES OF THE WORLD.

To be submitted to the Shareholders at the Fifty-eighth Annual General Meeting to be held at the Registered Office of the Company at 70/80, Mahatma Gandhi Road, Bombay-1, on Thursday, the 26th day of March, 1964, at 4 o'clock in the afternoon.

Directors' Report for the year ended 31st December, 1963

The Directors submit to the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1963. The Auditors' Report is also annexed.

The transactions for the past year after provision for taxation have resulted in a profit of Rs. 1,25,00,000.00. To this has been added the balance of Rs. 13,09,847.75 brought forward from the previous year, making a total sum of .. .. Rs. 1,38,09,847 75

The following appropriations have been made :—

	Rs.	nP
An interim dividend was paid at the rate of 8.00 per cent., subject to deduction of tax at the rates in force, on the Paid-up Capital of Rs. 4,05,00,000 which absorbed	32,40,000	00
Transferred to the Reserve Fund	25,00,000	00
Transferred to Special Reserve	40,50,000	00
Bonus to Staff	36,00,000	00
To carry forward to the next account	4,19,847	75
Rs.	1,38,09,847	75

The Directors recommend to the Shareholders payment of a final dividend at the rate of 10.00 per cent., subject to deduction of tax at the rates in force, making 18 per cent. for the year on the Paid-up Capital of Rs. 4,05,00,000 which will absorb Rs. 40,50,000.00.

The Directors propose, subject to obtaining the necessary consent from the Controller of Capital Issues, Government of India, and other authorities, to increase the Authorised Capital of the Company from Rs. 10,00,00,000 to Rs. 11,00,00,000 by the creation of 2,00,000 "A" shares of the face value of Rs. 50 each and to issue therefrom 40,500 "A" shares as fully paid bonus shares in the proportion of one such bonus share for every twenty existing shares, whether ordinary shares and/or "A" ordinary shares, held by a member on a date to be specified later, by capitalising a sum of Rs. 20,25,000 out of the Share Premium Account. The necessary application has been made to the Controller of Capital Issues in this behalf. After the necessary consent from him and other authorities has been obtained, the Shareholders will be requested to pass the necessary resolutions for this purpose at an Extraordinary General Meeting.

The business of the Company continued to function satisfactorily.

The Bank Rate was increased from 4 per cent. to 4½ per cent. with effect from the 3rd January, 1963.

Before the close of the year, a sum of Rs. 5,00,000.00 was transferred from the internal reserves to the Reserve Fund.

As in 1962, for the information of Shareholders, a statement is furnished on page 27 giving an analysis of sub-head (vi) of Advances being—

Debts due by companies or firms in which the directors of the banking company are interested as directors, partners or managing agents or, in the case of private companies, as members.

During the year, 37 Branches of the Bank were opened in India at Borivli, Chembur, Dadar, Khar and King's Circle in Bombay, at New Cloth Market, Relief Road, Sabarmati and Saraspur in Ahmedabad, at Bow Bazar and Vivekananda Road in Calcutta, at Willingdon Island in Cochin, at Kamla Nagar in Delhi, at Telco Town in Jamshedpur, at Mylapore and Thyagaroyanagar in Madras, at Dharampeth and Gandhi Baug in Nagpur and at Anand, Bhopal, Dehu Road, Durgapur, Howrah, Jabalpur, Jaipur, Kalol, Kalyan, Kalyani, Kota, Nadiad, Naroda, Navsari, Patna, Porbandar, Rourkela, Thana and Varanasi.

Under the provisions of Section 256 of the Companies Act, 1956, the following Directors of the Company retire by rotation, but are eligible and offer themselves for re-election :—

Mr. Ramniwas Ramnarain — Mr. N. K. Petigara
Mr. Bhagvandas C. Mehta — Mr. Jaisinh Vithaldas

The Shareholders are requested to appoint Auditors and to fix their remuneration.

AUDITORS' REPORT TO THE MEMBERS

(1) We have audited the foregoing Balance-Sheet of The Bank of India Ltd. as at 31st December, 1963, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited returns from all the Branches, of which 64 Branches have been audited between us and 72 Branches by other Auditors.

(2) We report that :—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit and have found them to be satisfactory ;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from all the Branches of the Bank ;

(d) the reports on the accounts of Branches audited by other Auditors have been forwarded to us and the same have been considered in preparing this report ;

(e) the Bank's Balance-Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the audited returns ;

(f) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance-Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1963, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

S. B. BILLIMORIA & CO., *Chartered Accountants*
A. F. FERGUSON & CO., *Chartered Accountants*

BOMBAY, 20*th February*, 1964

Statement Pursuant to Section 212 of the Companies Act, 1956

The Profit and Loss Account of The Bank of India Ltd. for the year ended 31st December, 1963, does not include any profit or loss of its subsidiary, The Bank of India (U.K.) Nominees Ltd. (a nominee company incorporated and operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by The Bank of India Ltd. The shares of the subsidiary are wholly owned by the Bank.

Having regard to the fact that no Profit and Loss Account of the said subsidiary is prepared in the circumstances aforesaid and that its Balance-Sheet and the Reports of its Board of Directors and Auditors are drawn up in accordance with the law in force in the United Kingdom, an application was made to the Central Government under sub-section (8) of Section 212 of the Companies Act, 1956, and, in exercise of the powers conferred by the said sub-section (8) of Section 212 of the Companies Act, 1956, the Central Government, being satisfied that it is necessary so to do, have directed that, in relation to The Bank of India (U.K.) Nominees Ltd., a subsidiary of the Bank, the provisions of Section 212 of the said Act shall apply only to the extent that The Bank of India Ltd. shall be required to attach to its Balance-Sheets copies of the Balance-Sheets and of the Reports of the Board of Directors and of the Auditors of the said subsidiary made out in accordance with the provisions of the English Companies Act for the time being in force in the United Kingdom and that The Bank of India Ltd. is exempted from attaching to its Balance-Sheets a copy of the Profit and Loss Account of the said subsidiary.

THE BANK OF INDIA (U.K.) NOMINEES LIMITED

DIRECTORS' REPORT FOR THE YEAR ENDED 31st DECEMBER, 1963

The Directors submit the Balance-Sheet for the year ended 31st December, 1963. The Auditors' Report is also annexed.

No Profit and Loss Account is submitted as none has been prepared. No profit was made and no loss was sustained. The expenses of the Company have been paid by The Bank of India Ltd., of which the Company is a wholly-owned subsidiary.

REPORT OF THE AUDITORS

We have obtained all the information and explanations which we have required and which to the best of our knowledge and belief were necessary for the purpose of our audit. In our opinion proper books of account have been kept by the Company. We have examined the above Balance-Sheet which is in agreement with the books of account. In our opinion such Balance-Sheet gives the information required by the Companies Act, 1948, in the manner so required and is properly drawn up so as to exhibit a true, correct and fair view of the state of the Company's affairs at 31st December, 1963, according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

But what can I do to help ?

There is so much that every Indian woman can do, *now*, to strengthen and defend the Home Front. Take part in Defence through local women's organisations. There is plenty to be done. Contribute, and *encourage* contribution, to National Defence Fund and buy Defence Certificates. There are, too, the many personal efforts you can make—in discipline, behaviour and attitude :

• Wage war on waste; check thoughtless buying and resist inflated prices. • Do not buy gold. Give your gold for country's cause. • Be resolute in work, whatever it may be, because each task done just that little more efficiently helps the national drive, strengthens India's position. • Rouse yourself from apathy, and Take Action.

BE VIGILANT—*take part in national preparedness*

REPORT OF THE AUDITORS

We have audited the foregoing Balance-sheet of the Habib Bank Limited, Indian Union Branch as at 31st December, 1963 and also the above profit and loss account of the Bank for the year ended upon that date.

In accordance with the provisions of Section 29 of the Banking Companies Act 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Section 211 and 227 of the Companies Act 1956, the Balance-sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the sixth schedule to the Companies Act 1956, they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act 1949.

We report that:

(*a*) we have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(*b*) the transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(*c*) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of these books;

(*d*) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(*e*) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act 1956, in the manner so required for Banking Companies and on such basis the said Balance-sheet gives a true and fair view of the statement of the affairs of the Bank as at 31st December, 1963 and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

REPORT OF THE AUDITORS

TO THE PRESIDENT OF INDIA.

We, the undersigned Auditors of the State Bank of India, appointed under Section 41 (1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1963.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretaries and Treasurers of the Local Head Offices at Madras and New Delhi, by the Manager, Pakistan Branches and by Branch Agents, which Returns have been incorporated in the above Balance Sheet and Accounts, and report (i) that, in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (ii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory; (iii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iv) that the Returns received from the Local Head Offices at Madras and New Delhi and from the Branches of the Bank have been found adequate for the purpose of our audit; (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and (vii) that, in our opinion, Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray & Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. B. Billimoria & Co. and at Calcutta by Messrs. Ray & Ray.

E.I.D.-PARRY LIMITED

CHAIRMAN, MR. H.V.R. IENGAR, ON ENNORE FACTORY'S WORKING

SUGAR INDUSTRY'S PROBLEMS CONTINUE TO MULTIPLY

THE abnormal teething troubles experienced by the Ennore fertiliser factory of E.I.D.-Parry Ltd. are fully explained by Mr. H. V. R. Iengar, Chairman of the Company, in his statement circulated to the shareholders for the year ended 30th September 1963. He says that troubles have arisen because of lapses on the part of the contractors and some of their sub-contractors, which the Directors had no reason to anticipate. He hesitates to make any categorical statement as to when the factory will have a trouble-free run. The cut in the year's dividend from 21-3/7 per cent to 18 per cent per annum has been imposed due essentially to the Directors having found it difficult to make any forthright prognostications about the Ennore factory. Meanwhile, preliminaries in regard to the Visakhapatnam fertiliser project have been finalised and the new company, formed for operating it, will enter the capital market shortly.

The following is the full text of Mr. Iengar's statement:

In the speech which I delivered last year I made some observations on the general subject of British investment in India, of Indo-British co-operation and of the part that could be played by organisations, such as this Company, in promoting such co-operation. I would have greatly wished to have devoted the major part of my speech this year to some other subject of general importance, for I think this practice, which the chairmen of some companies have adopted, of discoursing at some length on a topic of general economic importance is a good practice. Unfortunately, however, I have so much to tell you about the domestic problems of our own Company that it would not be possible for me to travel beyond that without making the speech unduly long.

Ennore Factory

You will remember that in the speech last year I said, referring to the Ennore fertiliser factory, that although there had been delay in its commissioning, I thought that the major problems had been overcome, that the factory was at the time in full production and that it would make a substantial contribution to the earnings of the group during the year 1963. I much regret to have to tell the shareholders that my anticipations have not proved correct and that, although the factory was in production at the time I prepared last year's speech, it was so only for a very brief period and that, since then, we have been dogged by a series of misfortunes for none of which the Company is responsible.

Although we were equipped within our organisation to put up a superphosphate factory and successfully commissioned, by purely departmental effort, the superphosphate factory of our wholly-owned subsidiary, Andhra Fertilisers (Private) Limited, at Tadepalle, we felt that for putting up a complex factory, such as the one that has been attempted at Ennore, it would be desirable to give what is commonly known as a turn-key contract to a firm with an established reputation. We accordingly gave such a contract to Messrs. Simon-Carves Limited of the U.K. in the confident expectation that the factory will be completed and put into commission to our satisfaction in time. The Directors were aware that in a works of the complexity of the Ennore factory, teething troubles are to be expected, but events at Ennore have gone far beyond what can be regarded as normal in this context. I attach a statement to this speech setting out the major incidents that have taken place at Ennore. These indicate that on the part of the contractors and some of their sub-contractors there have been lapses which we had not anticipated and which we had no reason to anticipate. This has been to us a bitter disappointment. The consequence has been that, against a possible total of 56,000 tons, up-to-date only 11,500 tons have been produced. At the date of this speech the works have been restarted, but in view of past performances, I hesitate to make any categorical statement as to when we will have a trouble-free run. In the meanwhile, the works have not yet been taken over by us. Shareholders will naturally want to be assured that everything is being done to get the works functioning on a satisfactory basis as quickly as possible and that their interests in the matter of damages will be adequately protected. On both points, I can give the fullest assurances to the shareholders. No one could be more distressed than your Directors that this project, on which such high hopes had been built, should have been subjected to so many frustrations, and they have been giving the highest priority to ensuring that it is properly put on its feet. Naturally, they are taking the best possible legal advice.

The financial significance of the difficulties that we have encountered at Ennore is that in the year 1962-63, we suffered a very heavy direct loss even without taking into account the dividend that we paid on the additional capital that was raised expressly for the Ennore factory. But it says much for the inherent strength and resilience of the group that it has been able to absorb this serious loss and to show reasonable profits. Apart from demonstrating the inherent vitality of the group, our experience of last year also demonstrates the great advantages of the diversification of the group's activities.

Group Accounts

Before dealing with the accounts, may I recapitulate a point that not all of our shareholders always remember? This meeting is a meeting of the shareholders of E.I.D.-Parry. This Company owns one hundred per cent of the equity in Parry and Co. but none of the preference capital in that Company. E.I.D.-Parry also owns the entire capital of Andhra Fertilisers and Parry, Murray and Co., whilst Parry and Co. owns the entire share capital of the Mofussil Warehouse and Trading Company. The existence of these subsidiaries is due to historical reasons which it is not necessary to elaborate at this stage. The accounts that are presented of E.I.D.-Parry have been prepared in accordance with the requirements of the English Companies Act and are the group accounts, that is to say, they show the profits of E.I.D.-Parry, of Parry and Co. and of the other subsidiaries all put together, and you will notice that the interests of outside shareholders, namely, the preference shareholders of Parry and Co. have been shown separately and deducted from the total Group profits. Apart from statutory requirements, I think there is justification, in common sense, for this arrangement because, in fact, Parry and Co. (with the exception of the interest of the preference shareholders) and the other subsidiaries are the property of the shareholders of E.I.D.-Parry. But you will appreciate that although group profits, as shown in the accounts, pertain in the broad sense to the shareholders of E.I.D.-Parry, a dividend to them can be paid only out of the profits of the main holding company, namely, E.I.D.-Parry.

The group profits after taxation of the year under review together with the group profits in previous years are shown below:

1959	...	...	...	...	£386,058
1960	...	...	...	...	£378,483
1961	...	...	...	...	£351,392
1962	...	...	...	...	£252,287
1963	...	...	...	...	£360,047

You will find that the figures for 1963 are substantially higher than the figures for 1962, in spite of the deplorable performance of Ennore. There are two main reasons for this. The first is that we have done well in our other activities such as sugar, pottery, and sales of fertilisers as well as general sale. In this connection, shareholders may be interested in the following figures. The sales of goods manufactured within the group rose from £6.8 million in 1962 to £8.0 million in 1963. The sales of goods manufactured outside the group and purchased by us outright rose likewise from £6.3 million to £8.2 million. Sales on consignment account rose from £5.0 million to £5.8 million. Shareholders may recall that in my speech at the last annual meeting, I pointed out that while the growing emphasis on manufacturing activities was undoubtedly correct, I attached great importance to the continuance of our trading activities—a view which gains point from our experience of last year. The second reason for the higher profits is that the taxation for 1963 is very much reduced, being only £189,509 against nearly £381,561 in the previous year. The reason for the reduced taxation is, of course, that we have become eligible for a heavy development rebate in respect of the Ennore factory amounting in the year under review to as much as £217,350.

Dividend Reduced

The Directors have given a great deal of attention to the problem of the dividend that should be declared for the year 1963. There are arguments to support the proposition that it would be justifiable to repeat the same dividend as for last year, namely, a total of 21-3/7 per cent. The main argument for this would be that the profits of the group for 1963 after tax are substantially higher than in 1962 and are, indeed, at the same level as the average for the years 1959, 1960 and 1961, and that it is legitimate for the shareholders to claim that the dividend should be based on the group profits after taxation. There are, however, equally weighty arguments which suggest that the dividend should be reduced. In particular, I would mention that if we want to claim development rebate, as indeed we must, we must by law appropriate £165,300 to the development rebate reserve—this, in effect, largely represents the tax "windfall" given to new concerns to strengthen their reserves. After this appropriation, the sum available for dividend from the net profit of E.I.D.-Parry is only £120,192, as compared with £259,650 that we will need for dividends, including the ordinary dividends of 21-3/7 per cent. This sum of £120,192 could, of course, be supplemented by recourse to the reserves. Shareholders will remember that in the year 1959 a dividend equalisation reserve was created amounting to £150,000. If a dividend at the same rate as last year's is to be declared, almost the whole of this reserve would have to be withdrawn leaving only a nominal sum in the reserve. Whether this would be appropriate would depend on whether we are satisfied that we would be able to repeat the same dividend for the year 1964 and subsequent years.

Prospects

That depends to a large extent on Ennore, more particularly during the current year. We are satisfied that our other activities will show a sustained improvement but, unfortunately, we are not in a position at the moment to make any forthright prognostications about Ennore. In any event, it is clear that the year 1964 would also see a loss on Ennore and that the E.I.D.-Parry profits for that year, by themselves, may not justify a dividend of 21-3/7 per cent. To do this, we would have to withdraw from the general reserve.

Here again arguments could be made on both sides. It could be pointed out in justification for maintaining a dividend at last year's level, that, although we may be withdrawing almost the whole of the dividend equalisation reserve of £150,000, we would be putting into other reserves a sum of £262,800. In other words, the use of almost the entire dividend equalisation reserve would not leave the total reserve position any weaker. In fact, the net reserve position would actually be stronger. But it must not be forgotten that the development rebate reserve arises in reality from a tax concession and any prudent company would wish to use such a concession to strengthen the reserve position. After the most careful consideration of the arguments on both sides, the Directors consider that it would be wise to make use of only part of the dividend equalisation reserve in 1963 and leave the other part for use in 1964, if necessary. They have, accordingly, decided to recommend that a sum of £104,000 be taken out of the dividend equalisation reserve for the year 1963 and that a total dividend of 18 per cent be paid to the shareholders.

Sugar Production

Historically, the manufacture of sugar has formed a big part of our activities, though with increasing diversification its place in our total group effort is getting gradually reduced. Nevertheless, it remains important enough for me to refer to it. I am afraid the problems of the sugar industry continue to multiply. In 1963, we saw again an acute shortage of sugar throughout the country, and the reintroduction of control. It is ironical to recall that only a year ago Government restricted production by 10 per cent because they feared a crisis of surplus. Because of this cut in production the area planted with sugarcane was reduced, as farmers had no indication from Government whether they would permit factories to crush all the available cane. At the same time, attractive prices were offered for *gur*, which, in addition to its normal use in the Indian household, is also one of the basic raw materials for illicit distillation, and, consequently, cane for the legitimate sugar manufacturing industry was in short supply, especially in the North, and only 21.5 lakh tonnes were produced throughout the country in 1962-63, against 27.2 lakh tonnes in the previous year. With a rapidly increasing population and a rising demand for sugar, this was a serious setback. In spite of the lower production, Government exported 4½ lakh tonnes, primarily at a loss, although international sugar prices started to rise before all the contracts were completed.

In the South, the fall in production was not more pronounced than in the North, and the States of Madras, Mysore, Andhra, Kerala and Pondicherry produced 4.33 lakh tonnes, against their previous year's production of 4.58 lakh tonnes. At Nellikuppam, 3,17,757 tonnes of cane were crushed, against 3,83,455 tonnes in the previous year, to make 29,542 tonnes of sugar, against 35,395 tonnes in 1962.

It will be recalled that the Government of India, with the declared intention of paying for cane on the basis of quality, instituted a sliding scale for cane payments in 1962-63. In reality, however, the price paid continued to be much higher than the real value of the sugar in the cane, and farmers who grew cane of low quality were compensated almost to the extent of those whose cane was superior.

In order to boost production, Government offered an incentive by way of a rebate in excise duty of 50 per cent on the additional sugar produced over the previous year's figure in the period 1st July to 31st October. It will be observed that, within 18 months, the Government's policy changed from restriction in production to inducement for increased output. At Nellikuppam, for the first time, a special season was introduced in the months of September and October 1963. Although the experiment was not entirely satisfactory, and the recovery of sugar was lower than we expected, we had hoped that the excise duty rebate would, to some extent, compensate for the poor results. Unfortunately, the Government of India ruled that factories, which had not in any previous year produced sugar during the period 1st July to 31st October, would not be eligible for the rebate and Nellikuppam fell under this category. Representations have been made against this decision and it is hoped that they will be successful.

There are more uncertainties for the sugar industry in 1964. The Government have progressively increased the price of cane and the latest increase of 7 nP per maund was without any compensatory rise in the sugar price in South India. We will naturally do our best, but the degree of control exercised by Government and the constant shifts of policy are discouraging. As the years go by, I fear that sugar manufacture will become of less and less importance in the totality of our activities.

Ceramics

Shareholders may remember the announcement made by Mr. Noel-Tod at the annual general meeting two years ago, of our agreement with Messrs. Doulton and Co. Ltd., U.K., in the matter of sanitaryware production. I am happy to say that our relationship with this Company continues to be most satisfactory and, with their assistance, we have completed a substantial expansion of the sanitaryware works at Ranipet, that the third kiln has now been commissioned and, in fact, will be officially inaugurated in the beginning of April. A new range of patterns has been developed and introduced on the market, standards and quality are improving progressively, and we are looking ahead to further interesting developments arising from our fruitful association with Messrs. Doulton and Co. Ltd.

Visakhapatnam Fertiliser Project

In my speech last year, and in those of my predecessors for the previous two years, reference was made to our association with California Chemical Company and International Minerals and Chemical Corporation in the Rs. 33-crore fertiliser factory at Visakhapatnam.

I am glad to inform you that arrangements for the integration of this project are now nearing completion and it is anticipated that an offer of shares will be made to the public in March/April 1964.

Your Company will hold approximately Rs. 55 lakhs of the equity share capital of the new company, which will operate the Visakhapatnam fertiliser project, of which approximately Rs. 49 lakhs will be subscribed for in cash.

Your Company's contribution to the success of this project, is not, however, limited merely to financial participation. We are assisting the new company in the implementation of its seeding programme to familiarise the farming community with the advantages that will accrue from the use of complex fertilisers similar to that which will be produced by the Company and, when the new company's factory at Visakhapatnam goes into production, this Company will, in its capacity as principal selling agents, be mainly responsible for the marketing of the factory's production.

We are proud to be associated with the American collaborators in this venture, which is one of the major projects included in the third Five-year Plan. The fertiliser factory at Visakhapatnam will have an annual production capacity of about 3,65,000 tonnes of ammonium phosphate and 16,500 tonnes of urea which will not only make an important contribution to the much needed increase in food production in the country but will also result in a foreign exchange saving of the order of Rs. 10 crores per annum.

Staff Relations

I am happy to state that our relations with all categories of employees have been satisfactory and I would like to take this opportunity of thanking them for the part they have played in the development of group activities. I would in particular mention our staff at Ennore. They have had an exceedingly difficult and what must often have been a frustrating time but their cheerfulness and willingness to put in hard work have been most praiseworthy.

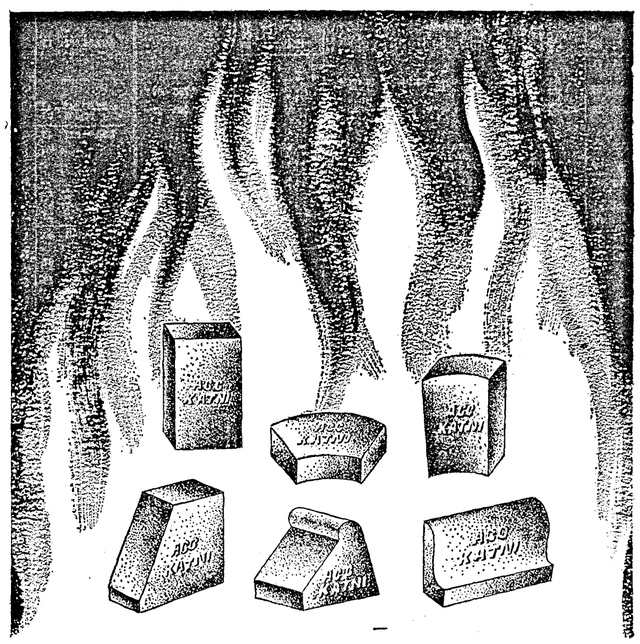
Changes in Management

Mr. M. J. Edwards, the Managing Director, is retiring with effect from the 1st April after 35 years of service. I am sure shareholders will want to convey to him all their good wishes for his future. Mr. John K. John will be Joint Managing Director and Mr. Bowen, Deputy Managing Director from the same date. Having worked with them I can assure you that they will form a strong and coherent team.

Note: The above statement is not a report of the proceedings at the Annual General Meeting, which will be held on 30th March 1964.

SUCCESS OF SWISS DIESEL MARINE ENGINES

The gross tonnage of all ships in the world of over 2,000 tons launched during 1963 totalled 12.25 million. Of these, those fitted with Diesel engines accounted for some 8 million tons, with a total power of 4 million H.P. For the first time, Sulzer Co. Ltd. of Winterthur (Switzerland), headed the 36 firms in different parts of the world which build Diesel engines for ships. 28.28 per cent of the total world output was in fact supplied by this big Swiss firm and the concerns producing for it under licence. Three other big world companies follow with 25.18 per cent, 13.59 per cent and 11.32 per cent; 32 other engineering works share the rest, i.e. less than 22 per cent. In 1963, 121 ships were fitted out with Sulzer Diesel engines representing a total power of some 1,141,500 H.P.



ACC HIGH ALUMINA FIREBRICKS

—manufactured to *your* specifications

Suitable for all types of kilns and furnaces, ACC HIGH ALUMINA FIREBRICKS possess all the physical properties required for long, trouble-free service under the most severe operating conditions.

ACC FIREBRICKS ensure: ■ high refractoriness ■ higher furnace availability ■ longer life of furnaces and kilns ■ lower maintenance costs ■ increased output

REPORT OF THE AUDITORS

TO THE STATE BANK OF INDIA

We, the undersigned Auditors of the State Bank of Travancore appointed under Section 41 (1) of the State Bank of India (Subsidiary Banks) Act, 1959, do hereby report to the State Bank of India upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1963.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Head Office and the certified returns from Branches, which Returns have been incorporated in the above Balance Sheet and Accounts and report :

(i) that the chitty liabilities and a part of the chitty assets equal to the amount of such liabilities are shown as contra and the balance of "Chitty assets over liabilities" is shown under "Other Assets including silver" in the Balance Sheet;

(ii) that, in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and is properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank;

(iii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory;

(iv) that the transactions of the Bank which have come to our notice have been within the competence of the Bank;

(v) that the Returns received from the Branches of the Bank have been found adequate for the purpose of our audit;

(vi) that the Profit and Loss Account shows a true balance of profit for the period covered by such account;

(vii) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and

(viii) that, in our opinion, Books of Account have been kept by the Bank as required by law.

VARMA & VARMA,
Chartered Accountants.

BUSINESS NEWS FROM EUROPE

UNCERTAIN OUTLOOK FOR TV INDUSTRY

ITALY AND BELGIUM TACKLE INFLATION—POLAND PUSHES DRUG EXPORTS—E. AFRICA KEEN ON C.M.

By Our Special Correspondent

THE European television industry, after a period of steady growth, faces an uncertain future as demand in some countries shows signs of saturation. Stagnating TV set sales, notably in France, in countries that have low *per capita* TV ownership by British standards, raise serious doubts about a surge in sales which, earlier, had been widely anticipated. Though the demand pattern varies widely—sales in the Netherlands for instance have lately been strong—there are now indications that Europeans as a whole (not counting the British) are resistant to the attractions of TV ownership. This resistance has been underlined recently by the failure of the International Radio Consultative Committee to agree on an international standard colour TV system, mainly due to the unwillingness of some countries to commit themselves to expensive developments. It is now felt that only Britain has a sufficiently well developed industry to cope with widespread colour TV broadcasting.

A British colour service is now likely to go into operation soon, following the Government's decision to go ahead with it, despite the lack of an international agreement. In any case, TV set sales in Britain have recently been on the crest of an expansionary wave, up 33 per cent in December 1963 alone, as compared with the same month of the previous year and 21 per cent higher for the whole year.

Elsewhere in Europe, the main concern is to bring more networks into operation to boost TV coverage. Here, again, most countries lag behind Britain which will soon have a third channel and, moreover, looks forward to a second commercial channel, probably by the end of 1965.

In France and Germany

In France a second channel is due this year but even so is not expected to boost set sales which, after increasing by 20 per cent in 1961 and 1962, were stagnant at around 900,000 last year. The French have so far shown little real enthusiasm for TV and the country has only 4 million sets.

West Germany, by contrast, has more than eight million sets. But sales there have also sagged in recent years from the peak in 1960, when over 2.3 million sets were made. Sales are unlikely to pick up this year even with a third channel. Similarly, exports have fallen in recent years to around 300,000 a year.

The fact that only 27 per cent of French and 41 per cent of West German homes have TV sets, as compared with 82 per cent in Britain, indicates the potential for faster sales. Nevertheless, the potential is no guide to the possible level of future sales as has been proved by the relatively disappointing sales of many companies over the past two years.

Going against the general European trend, however, are the Dutch. Sales of TV sets in the Netherlands last year were 27 per cent up on the 1962 level and now over 54 per cent of Dutch homes have a set. Such is the buoyancy of sales there that most analysts agree that market saturation is a long way off. And Dutch sales could be further boosted by the opening of a second channel due this year.

Italy is another country where sales of TV sets have been in the doldrums recently, though the outlook for a sharp jump in demand appears, at least on the surface, to be good. Only about 30 per cent of Italian homes have TV sets installed, marginally fewer than in Belgium.

Among the smaller European nations, the growth of TV ownership has been rapid in recent years. Switzerland, for example now has over 300,000 sets, a figure that earlier Government estimates had expected to be reached no sooner than 1968. Austria has a similar number of sets. The expansion of sales in both countries, though likely to slow somewhat this year, seems set for a steady rise for the next couple of years at least.

Italy's Steps to Recovery

Italy, taking steps to cure the inflation that brought the "economic miracle" to its knees in 1961, is pondering the second phase of a two-part attack to restore the economy's growth. After 15 years, the economy overshot in 1960-61 into serious inflation and the first part of the attack on it by the Centre-Left Government consists of stabilising both prices and the balance of payments. The second part is likely to be aimed at economic stimulation.

In the first phase, petrol tax was increased by 14 per cent, a purchase tax on new cars of between 7 and 15 per cent was introduced, hire purchase was limited to a maximum of 12 months and the initial payment raised to 30 per cent, imports of some essential foods were increased to keep prices down and national service was reduced from 18 to 15 months to make more labour available.

The tax on cars was necessary, because the rapid increase in foreign-made vehicles being sold was becoming an increasing payments drain. In 1963, when 20 per cent of all new cars registered were foreign, the cost to the economy was £120 million (336 million dollars). But sales were expanding at such a rate that the cost would probably have risen as high as £180 million (504 million dollars) this year.

Prices and wages ran into serious difficulties last year. By October, the last month for which figures are available, the level of wholesale prices was 5.6 per cent above October 1962, consumer prices 9 per cent up and the cost of living by more than 9 per cent. By last September, the level of industrial wages had risen 13 per cent in nine months.

Trade Deficit

These increases had a multiplier effect on the rest of the economy. Imports in the first 10 months of the year shot up by 26 per cent, from £1,772 million (4,972 million dollars) to £2,231 million (6,247 million dollars), while exports went up by only 9 per cent to £1,500 million (4,200 million dollars). Had no steps been taken, the visible adverse balance of trade would probably have increased to unmanageable proportions.

The adverse Italian balance of payments has always been butressed by a large invisible balance; remittances from Italians living abroad or working abroad temporarily, and tourist income. But, in 1963, even this dropped away. This left an estimated trade deficit for 1963 double that in 1962.

The second stage in the recovery programme, to cover the longer term, is to be a Five-year Plan, announced in the summer to cover the years 1965 to 1969. The move towards more, and flexible, planning is a direct consequence of the new Government, with its political alignment more to the Left. In order to get the economy back to the "miracle" state of pre-1960, when industrial productivity was growing at the rate of 14 per cent a year, the new plan is expected to advocate four immediate measures and a series of steps to be taken after 1969.

The immediate measures are expected to be a cutting down in public expenditure, a curb on unearned income, holding back the consumption of inessentials and luxury goods, and an attempt to tighten the law, so that tax evasion becomes more difficult. Whether these measures will stabilise the economy and get it moving forward again at a fast rate is uncertain.

It is thought more likely that some of the even-longer-term measures will have to be adopted before this comes about. These are thought to include a reform of the public administration—particularly the civil service—overhaul of the tax structure, more modernisation and investment in agriculture, schools, hospitals, and housing, and a reform of company law, so that shareholders are better informed about their firms.

The fact that production has been expanding steadily, though at a declining rate (6 per cent last year) should make it easier to achieve these long-term aims and stabilise the economy in the short-term. But any progress towards hitting Plan targets could be undermined by the vast amount of capital which is fleeing the country—most of it to Switzerland. From £270 million (766 million dollars) in 1962 it jumped up to £509 million (1,425 million dollars) in the first 11 months of 1963. It is thought that the outflow has slowed down this year, as business, traditionally Right-wing, has become more confident in the new Government. But this traffic needs more than a "slowing down." If the economy is to be built up again, it needs to be brought to a standstill.

Belgium Heads for Trouble

Belgium is running into economic difficulties at the half-way stage of its 1962-65 expansion plan. Industrial productivity has slowed down, prices have leapt up, as have labour costs, and current French and Italian inflation threatens to spread in and hit the economy.

Over the four years, a target had been set for a 22.4 per cent rise in Belgium's Gross National Product. At the same time, a 37.2 per cent rise in exports and a 35.5 per cent rise in gross capital formation was set. Private consumption, with a target rise of 17.8 per cent, was planned to rise the slowest.

These aims are well on target. The real average rise in GNP has been 4.7 per cent in 1962 and 1963, as compared with 3.1 per cent for the period 1953-62. Exports are already well above the 8.5 per cent annual target. In 1961, the index was 130 (1958 equals 100), 135 in 1962 and there was a big leap forward to 175 in September, 1963.

Were it not for the incipient inflation in France and Italy and the strong pull exerted on the Common Market by West Germany's export surplus, Belgium's ability to reach her target would appear to be assured. But there is now a very serious danger that she will be hit by her neighbours' inflation.

Industrial productivity which stood at an index of 116 in 1961 (1958 equals 100) rose to 122 by the end of 1962. But, in the first nine months of 1963, it increased only two points to 124. Prices, too, have suddenly leapt up. They rose by 5 points in 1963, as much as in the previous four and a half years. And total labour costs rose 10 per cent.

The authorities are aware of the danger of inflation on top of full employment. A cut in public expenditure through withholding building credits is forecast. Bank rate has been raised and more foreign labour attracted.

Poland's Bold Bid

Poland is making a big attempt to capture a share of the European drug market. Of the 53 countries to which she exports outside the Communist bloc, the largest customers are now Switzerland, Denmark, Finland, West Germany and Britain. In order to widen export outlets, a three-year agreement was signed last September with the Benelux countries. This envisages a rise in pharmaceutical trade and a big rise in chemical trade above the 1962 two-way trade figure of £12.5 million (35 million dollars).

This drive is seen as Poland's contribution to the plan of the Comecon—the East European common market—for the Communist countries. Although Poland has for some time exported drugs to Western Europe, exports have only been pushed hard since 1958. By 1962, the last year for which figures are available, there had been a 16-fold increase. Exports in 1958 were a mere £375,000 (1.1 million dollars). But, by 1962, they reached £5.82 million (16.3 million dollars). Of these exports, 80 per cent were antibiotics and over 88 per cent went to Europe. The next largest amount, 7 per cent, went to north and south America.

In the same period, imports, presumably for re-export to the rest of the bloc, have been held remarkably steady. From £3.5 million (12.5 million dollars) in 1958 they fell to £2.5 million in 1960, when they started to rise again. But even in 1962, they were only just below £4 million (11.2 million dollars.)

It is likely that Western Europe will be the object of even more competition in the years ahead. Polish production in 1961 of antibiotics was 42.5 tons, over 250 per cent above 1959. But the target for 1963 was 100 tons. Similar target figures were set for sulphonamides, steroid hormones (the next most important exports) and other drugs.

African Links with E.E.C.

A further boost to Common Market trading outlets seems assured as East African States form their own trading areas and seek links with the European Community. Two separate groups appear to be following the lead set by the former French colonies and Nigeria on the west coast. First, there is a Common Market between Kenya, Tanganyika and Uganda. Secondly, many of the 34 countries represented at the February Addis Ababa Conference of the United Nations Economic Commission for Africa also appear to like some form of association.

The East African countries only sell some 8 per cent of their exports—£200 million (560 million dollars) a year—to each other. Eighty per cent—£2,000 million (5,600 million dollars)—goes abroad, mostly to Western Europe. The pattern of imports is the same. At the moment, neither of the two African groups wants full partnership with the Community. Partly this is for political reasons: they fear that to be tied too closely would leave them open to the accusation of "neo-colonialism" and create upheavals, of which the February coup and later French intervention in Gabon is the latest.

Economically, by opting for a free-trade arrangement, the East African States can sell to the Community while at the same time avoiding the danger of having their economies flooded with goods from outside the Six. Usually, like Nigeria (which seeks special terms for cocoa, palm products, groundnut oil and plywood), they want preferential treatment for certain products.

These economies are growing steadily, if fitfully. Total exports from Central African States have grown from £1,121 million (3,140 million dollars) in 1959 to an average of £1.250 million (3,500 million dollars) in 1963. Imports have grown at the same pace. In the three former British East African States, exports have fluctuated more: from an average of £131 million in 1963 and £138 million (386 million dollars) in 1960.

Malta: Unsolved Payments Problem

With Independence Day—May 31—now less than three months away, Malta is still no nearer solving the problem of how to pay her way when the British prop is withdrawn. The problem is simple: imports were running at a level of £29.3 million (84 million dollars) last year; exports brought in £3 million and re-exports another £2.3 million, leaving a trade gap of £24 million.

It will not be easy to reduce that gap. Between 1955 and 1961 imports rose by 35 per cent, partly due to a rising population in a largely Roman Catholic country. But exports rose only marginally.

Most of this gap has been met by Britain through payments for the naval dockyard. Now this has stopped. Invisibles, such as remittances from Maltese working abroad helps to cover part of the deficit—but not nearly enough.

Economising on imports will be difficult. Some 36 per cent comprise food, drink and tobacco, 35 per cent manufactures, and minerals and fuels another 7.5 per cent. In an economy that is completely dependent on imports, there is little room for manœuvre.

The major hope for raising the income of the island lies in an expansion of tourism. After an extensive publicity programme, the number of tourists rose from 12,583 in 1959 to 22,791 in 1961 and 32,300 last year. New hotels are being built and a hotel for the American Hilton group is a possibility.

Unemployment in Malta has now reached crisis proportions. With the closing of the naval dockyard, it shot up from 1961's 4,000 to over 6,600 last October, some 7 per cent of the working population. As a short-term remedy, emigration to Europe and Australia has been explored and Australia has increased her quota from the island. The Governor has said that 30,000 emigrants will be needed in the next four years —10 per cent of the population.

German Farm Productivity Up

West German farmers now produce more than 2½ times as much food per head as they did a decade ago, on about 20 per cent fewer farms, three per cent less land and with 42 per cent fewer workers. Following a break due to poor crops in 1961-62, the Agriculture Minister, Herr Werner Schwarz, expects these trends to continue this year.

But the annual Green Report, which includes the new long-term figures, adds that, in the six years to 1962-63, the German farm-worker's average annual wage rose only 137 per cent to £418, while that of industrial and commercial workers increased by 179 per cent to £586. The Green Report is the West German Agriculture Ministry's annual submission to the Federal Parliament in Bonn. On it the Green Plan, or yearly agricultural review and policy, is based. This year it is proposed to repeat a request for total farm subsidies amounting to £223.2 million.

The Green Report says that the number of farms in West Germany in the agricultural year 1962-63 was 1.54 million, or 400,000 less than in 1949-50. In 1949, 80.2 per cent of all farms were officially listed as "small" holdings—less than 25 acres—long typical of German agriculture. Last year, only 71.3 per cent of holdings belonged to this class and, over the 12-year period reviewed, farms with an arable area of between 25 and 250 acres increased from 19.6 to 28.5 per cent of the total.

National arable acreage itself decreased from 34.9 million acres in 1949 to 33.9 million acres last year. In 1963, only a little over 30 per cent of it was occupied by farms of less than 25 acres; 66.4 per cent by medium-sized holdings from 25 to 250 acres; and some 3.5 per cent by large units of more than 250 acres.

The Report goes on to say that, between 1951 and 1963 alone, 1.6 million or 42 per cent of West Germany's whole farm labour force left the land. At the same time, however, *per capita* productivity of those remaining rose by 152 per cent. Last year, cash sales by the farm sector rose 10 per cent to £2,027 million, while net farm income, after payment of operating costs, increased by 45 per cent to £518 million.

Bulgaria Gets Soviet Farm Loan

Most of a new 300 million rouble Soviet loan to Bulgaria—£96.4 million at the official exchange rate—is expected to go, at Russian suggestion, to agricultural modernisation. The loan, negotiated during a visit by Bulgarian Prime Minister Todor Zhivkov to Moscow last month, is now understood to allow for Russian deliveries to Bulgaria this year and next of large quantities of farm machinery. This, according to a Moscow source, will include some 5,000 tractors and 1,000 combine harvesters.

Bulgaria, however, may not be as keen as appears at first sight to embark on a big Soviet-assisted plan of agricultural improvement. Her farms are said to be the most backward in Eastern Europe, and the planners of the Russian-led COMECON, the Soviet bloc's common market, are anxious to see them improved. This is especially so, now that food is short all over the bloc.

But the Bulgarians, like their neighbours the Rumanians, want to industrialise and to secure the higher standard of living they suppose this process will bring. Unwilling to be struck permanently in the role of grannary to Communist Europe, the two Balkan States have both hinted that in 1964 and 1965 they will channel only a limited amount of their investment effort into farming.

Topical Briefs

Trade between **Austria** and **Poland** appears to be on the increase from recent deals. Most important of these has been a £500,000 (1.4 million dollars) contract for the supply of Austrian transformers and other equipment for the Polish Konin Aluminium plant. But a much bigger order is expected soon, probably worth £11 million (30 million dollars). Following meetings between representatives of heavy industries in the two countries a programme has been worked out which could double trade to £40 million (112 million dollars) within the next few years. For instance, Voest, the leading Austrian steel concern, has just put in a bid to build the largest fertiliser plant, one capable of turning out 500,000 tons of chemical fertilisers a year. This plant is expected to cost some £18 million (50 million dollars) of which Poland will meet about 40 per cent of the cost. At least two other fertiliser plants are projected and, if Austria wins the first contract, she will be in a very favourable position to get the others and beat strong West German, British and Japanese competition.

France, for the first time, now produces synthetic rubber suitable for heavy tyres. Two factories have recently started production, one at Bordeaux, the other near Marseilles. Each is capable of turning out some 20,000 tons a year and the Bordeaux plant is claimed to turn out a brand of Polybutadiene more suitable for heavy tyres than Styrenebutadiene, which has accounted for most of the French synthetic rubber output in the past. Synthetic rubber production has been rising rapidly in France in the past few years. From 17,000 tons in 1960, it more than doubled to 40,000 tons in 1961, and went on to 64,000 tons in 1962. About 100,000 tons is estimated to have been produced last year. Even this, though, is below demand which was 108,000 tons back in 1962 (as compared with 90,000 tons in 1960). While the demand for synthetic rubber has been rising that for natural rubber has been declining slowly. Between 1960 and 1962, it fell away from 127,000 tons to 123,000 tons.

Spain's trade deficit went up over threefold last year, largely because of a big rise in imports, by 23.7 per cent to a total of £684 million (1,914 million dollars) during the year. As exports actually decreased by 0.3 per cent to £262 million (734 million dollars) the trade gap, at £431 million (1,207 million dollars), had widened by £134 million (374 million dollars). A part of the drop in exports arises from a fall in shipments of oranges. The fruit was badly affected by the severe winter of 1962-63 and exports fell 16 per cent. Had it not been for this appreciable fall in one of Spain's main products, export earnings would almost certainly have been higher, as cotton textiles, metallic manufacturers, capital goods and other foodstuffs all increased in value.

West German bourses, despite warnings about inflation, seem to be reacting mainly to a new "miracle" look in the economy. By the last week in February, the Herstatt all-bourses index was holding at its best level for a year, with only marginal fluctuations in some sections. At a fraction either side of 106, the index showed prices more than 20 per cent better than their 1963-64 worst, exactly a year earlier. The immediate causes of strength are Federal income-tax cut proposals, record figures from the motor industry, and frequent reports of improved company profitability. Subscription rights from Kloeckner-Humboldt-Deutz also helped towards the end of February. The bourses themselves are choosing to discount the dangers of tax reduction in a year of excessive demand in the capital market and excessive domestic boom. Consistent with current sentiment, most steels (including Mannesmann among the higher yielders), motors and engineering shares are among the leaders. But others to gain have been Suddeutsch Zuckerraff (mirroring experience of sugar refiners abroad) and Dyckers Zement among construction shares.

MILAN FAIR

This famous trade fair of worldwide appeal puts at your disposal more than forty years of experience as well as its highly organized

INTERNATIONAL TRADE CENTRE

At the Milan Fair the pick of world production is shown by 14,000 exhibitors from eighty-four different countries. You will find their products systematically classified in well-planned pavilions rising several storeys high and spread over a display area of 600,000 square yards. Escalators, fast lifts and other forms of rapid transport will make your visit a refreshing, pleasant and profitable one. The Milan Fair holds the secret of good business, as four million visitors who go there every year would tell you.

VISIT THE MILAN FAIR
FROM 12 TO 25 APRIL 1964

UNITED BANK OF INDIA LIMITED

Registered Office: **UNITED BANK BUILDINGS, 4, CLIVE GHAT STREET, CALCUTTA-1**

ANNUAL REPORT OF THE DIRECTORS FOR THE YEAR ENDED 31st DECEMBER, 1963

To be placed before the shareholders at the Annual General Meeting to be held at the hall of the Academy of Fine Arts at Cathedral Road, Calcutta 16, on Monday the 30th March 1964, at 11 a.m.

The Directors beg to submit to the shareholders the Audited Balance Sheet of the Company as at 31st December, 1963, and Profit and Loss Account for the year ended 31st December, 1963, together with the Auditors' Report thereon.

	Rs. nP
The Profit for the year after making provision for taxation and including the balance of Rs. 3,26,006.24 brought forward from the previous year's account amounts to ..	29,65,814.66
Out of this amount the following appropriations have been made :	
To Reserve Fund under Section 17 of the Banking Companies Act	5,30,000.00
Leaving an available balance of	24,35,814.66
Out of the above, the Directors recommend the payment of a Dividend to the shareholders at 7½ per cent. per annum, subject to deduction of tax at the prescribed rates in accordance with the provisions of the Income Tax Act, absorbing	20,20,000.00
Balance to be carried forward to next year's account	4,15,814.66

The Bank's business during the year made satisfactory progress.

During the year under report, 7 branches were opened of which 4 were in Calcutta and its suburbs, namely—Jadavpur, New Alipur, B.L. College (Sibpur) and Bhatpara, one at Bhubaneswar in the State of Orissa, one additional at Gauhati in the State of Assam and one at Nizamuddin in New Delhi.

The Bank during the year under report, purchased 57 Cottahs of land on Old Court House Street, Calcutta, to build a multi-storied building to house the Head Office of the Bank.

Dr. N. N. Law, Dr. S. B. Dutt, Nawab Sir K. G. M. Faroqui and Sri S. N. Ray retire by rotation and being eligible offer themselves for re-election.

The shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

Sri M. J. Vaidya, being out of India, could not sign the Report and Accounts.

N. N. LAW, *Chairman.*

UNITED BANK RAISES DIVIDEND
MARKED GROWTH IN DEPOSITS

THE Directors of the United Bank of India Ltd. (Managing Director: Mr. B. K. Datta, Calcutta) have proposed a higher dividend of 7.5 per cent per annum, subject to tax, for the year ended 31st December 1963 as compared with 6 per cent paid for the previous year. The increase which is the second in the past four years underlines the steady but sure growth in the Bank's operations. The results for the year under review show a further improvement in gross income from Rs. 355.44 lakhs to Rs. 403.51 lakhs, of which Rs. 331.55 lakhs (Rs. 289.90 lakhs a year before) has come by way of interest and discount, Rs. 55.93 lakhs (Rs. 50.48 lakhs) by way of commission, exchange and brokerage, and Rs. 16.03 lakhs (Rs. 15.06 lakhs) in the form of other receipts. At the same time, expenses, too, have gone up—outward interest from Rs. 113.06 lakhs to Rs. 125.44 lakhs, staff expenses from Rs. 158.78 lakhs to Rs. 181.21 lakhs and other expenses from Rs. 44.89 lakhs to Rs. 49.68 lakhs. Nevertheless, profit, after depreciation and taxation but before providing for bonus to staff, has risen by as much as Rs. 6.73 lakhs, or 22 per cent, to Rs. 36.69 lakhs. Nearly 30 per cent of it, that is, Rs. 10.29 lakhs as against Rs. 8.76 lakhs a year before, has been absorbed by bonus to staff. The appropriation to the reserve fund has been stepped up by more than Rs. one lakh to Rs. 5.30 lakhs. After providing Rs. 20.20 lakhs for the year's dividend, the balance carried forward is higher at Rs. 4.16 lakhs, as compared with Rs. 3.26 lakhs brought in.

The accompanying table compares the Bank's progress in the past four years.

A striking feature of the Bank's working during the year under review is the marked growth in deposits from Rs. 64.70 crores to Rs. 72.60 crores. The percentage increase over the year is 12.21, as against the average of 11.7 for all scheduled banks, excluding the State Bank, and of 10.1 for all scheduled banks, including the State Bank. Almost the whole of the accretion to the Bank's deposits has come under two types—current accounts which have grown from Rs. 21.40 crores to Rs. 25.81 crores and savings deposits which have gone up from Rs. 23.31 crores to Rs. 26.85 crores. Staff security deposits have edged up from Rs. 9.42 lakhs to Rs. 10.16 lakhs, but the third important type of deposits, namely, fixed deposits, have actually receded slightly from Rs. 19.90 crores to Rs. 19.84 crores. In spite of the satisfactory growth in deposits, the Bank has closed the year with borrowings amounting to Rs. 162.16 lakhs, though about Rs. 9 lakhs less over the year; the major portion of these borrowings has come under the Refinance Scheme.

Advances have expanded by Rs. 3.26 crores to Rs. 47.16 crores but, as a ratio to deposits, they have come down by nearly three points to 64.9 per cent. Investments, too, have moved up from Rs. 19.16 crores to Rs. 20.37 crores, but their ratio to deposits has slipped back from 28.5 per cent to 27.8 per cent. On the other hand, the cash ratio has risen from 12.2 per cent to 14.9 per cent, as the year has closed with an increase of about Rs. 3 crores to Rs. 10.85 crores in the aggregate cash balances.

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Interest and discount earned ..	331.55	289.90	237.54	215.59
Commission, exchange and brokerage	55.93	50.48	43.19	39.02
Other Income	16.03	15.06	17.04	15.20
Interest paid	125.44	113.06	89.09	79.16
Staff expenses	181.21	158.78	137.74	129.50
Other expenses	49.68	44.89	36.33	32.45

Dividend	20.20	16.08	16.07	11.44
	(7.5%)	(6%)	(6%)	(4.3%)
Carry forward	4.16	3.26	2.40	2.07

	As on 31st December			
	1963	1962	1961	1960
Paid-up capital	268.72	268.67	268.61	268.54
Reserves	100.30	95.00	90.74	86.63
Deposits	72,59.98	64,70.13	58,86.99	51,73.68
Borrowings from other banks ..	162.16	171.02	6.79	18.01
Advances	47,15.82	43,90.44	37,61.26	31,62.21
Investments	20,37.02	19,15.85	17,70.54	16,79.24
Cash	10,85.03	791.73	810.25	704.02
Balance-sheet total	93,06.58	83,40.95	75,87.34	67,26.84
Ratio to deposits of—	%	%	%	%
Advances	64.9	67.8	63.8	61.1
Investments*	27.8	28.5	30.0	32.1
Cash	14.9	12.2	13.8	13.6

* Unencumbered portion only.

Borrowings have been kept under control and the Bank has closed the year with a comfortable liquidity position. Cash and balances with other banks and money at call and short notice have gone up from Rs. 10.33 crores to Rs. 10.85 crores, while investments have risen from Rs. 19.16 crores to Rs. 20.37 crores, but their ratio to deposits has slipped back from 28.5 per cent to 27.8 per cent. On the other hand, the cash ratio has risen from 12.2 per cent to 14.9 per cent, as the year has closed with an increase of about Rs. 3 crores to Rs. 10.85 crores in the aggregate cash balances.

The Bank's paid-up capital has shown little variation over years of a continuous expansion in business. At Rs. 268.72 lakhs now, it comprises Rs. 49 lakhs in 20-rupee shares on which Rs. 10 have been called up and Rs. 219.72 lakhs in Rs. 10 fully called shares. Nonetheless, the Bank's "own funds," which amount to Rs. 369.02 lakhs, constitute 5 per cent of total deposits. The Bank's shares are widely distributed amongst its 21,700 shareholders, with holders of small lots of shares (with the paid-up value of a lot not exceeding Rs. 2,500) accounting for 90.4 per cent of the total number.

The Bank opened during the year seven branches, bringing the total number of branches (including 15 in East Pakistan) to 122. It has purchased 57 *cottahs* of land in Calcutta city for housing its head office in an impressive building. The artist's sketch of the proposed new building adorns the cover of the Directors' report and statement of accounts of the Bank for the year under review.

QUARTERLY DIVIDEND OF AMERICAN EXPRESS

The Directors of the American Express Company have declared a dividend of 35 cents per share on its $5 common stock for the first quarter of the current year. The dividend, payable on 1st April next to shareholders on the Company's record on the 6th inst., is the same as was paid in each quarter of 1963 and marks the 95th consecutive year for which the Company is paying dividend.

The Company has taken up a 13,000 sq. feet three-storey pavilion in the forthcoming New York World Trade Fair to make available to its visitors multitude of services and entertainment, including a 'financial emergency' service. Arrangements are being made to enable visitors to cash personal cheques drawn on their banks and to ensure information pertaining to travel facilities for visitors.

UNITED BANK OF INDIA LIMITED—*(Continued)*

AUDITORS' REPORT

We have audited the annexed Balance Sheet of United Bank of India Ltd. as at 31st December, 1963, and also the annexed Profit and Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Branches audited by other Auditors. The reports on the accounts of the branches audited by other Auditors have been dealt with in preparing our report in the manner considered necessary by us.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the proviso to sub-sections (1) and (2) of section 211 and sub-section (5) of section 211 and section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :

(*a*) we have obtained all the information and explanations, which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(*b*) the transactions of the bank which have come to our notice, have been within the powers of the Bank ;

(*c*) in our opinion, proper books of account as required by law, have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank ;

(*d*) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(*e*) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1963, and the Profit and Loss Account gives a true and fair view of the Profit for the year ended upon that date.

FUTURE OF ELECTRIC FURNACES

THEIR IMPORTANCE IN INDUSTRIAL HEATING GROWING

By George P. Tinker

[The author of this article, who retired a few weeks ago as Managing Director of A.E.I.-Birlec Ltd. but continues as one of its Directors, is a world-renowned metallurgist. A.E.I.-Birlec, with which he served for over 38 years, is now the largest electric furnaces organisation in the world.]

ONE of the factors which influences a furnace user in choosing between electrically heated and fuel-fired equipment is, of course, the relative costs of a given amount of useful heat derived from the respective sources. For many years the tendency has been for the prices of fuels to increase faster than the price of electricity and this fact has necessarily influenced the growth of the electric furnace industry. Though the relative rates of price increase may fluctuate in the short term, it would seem that the general future trend must be in the same favourable direction.

The ease with which electric power can be carried to any part of a production plant without the need for providing fuel storage and waste product disposal systems further strengthens the case for electric furnaces in modern integrated plants. The practice of arranging all production operations in a lay-out following the logical sequence of processes makes it highly desirable to locate furnaces in the production flow-lines rather than in a separate building, and electric heating eminently suits such a scheme.

Apart from such generalised advantages, electric furnaces can show special attractions in certain processes—in fact, many production operations today would be scarcely possible by any other means. An example is the smelting of metallic ores and other minerals which are often indigenous to areas where fuel is either unavailable or costly. The reduction of the ore, virtually at the mine head, in electric furnaces greatly improves the economics of the industry by enabling it to ship the essential material in a processed condition occupying much less bulk than the ore and yielding a much higher tonnage price.

Production of Ferro-alloys

This is not to discount the technical advantages of electric smelting which, in general, result in a product of higher and more consistent quality than can be obtained by other methods. The production of ferro-alloys for steel making—for example, ferro-chrome, ferro-manganese, etc., is now essentially an electric furnace process. Calcium carbide production is another example, while the prospect of producing pig iron in electric smelting furnaces, a process which has been practised for many years in Norway, for example, is now receiving keen attention in many parts of the world.

In steel making, electric arc furnaces are established as highly economic where considerable proportions of steel works' scrap are included in the raw material. Steel making direct from pig iron is not yet a regular arc furnace process, due partly to the large volumes of slag generated in the refining stages, but a process is already in use by which the "rough" slag reactions take place in a separate vessel, the hot metal being then transferred to the arc furnace for final refining.

Massive operations, such as those described, are, perhaps, the most spectacular uses of electric furnaces but by far the greatest number of installations are concerned with foundry and heat treatment operations. Electric furnaces continue to gain ground in the iron foundry under the impulse of increasingly tight metallurgical specifications and the competition of forgings and fabrications in fields which were at one time reserved for castings. At the same time, the electric furnace can be instrumental in increasing foundry productivity, as in a case where a pair of cupolas serves as the main source of molten metal, delivering into an electric holding furnace of the induction type from which metal is tapped as required for delivery to the casting floor. The facility provided by this system for pouring back into the electric furnace any molten metal remaining in the ladle—thereby saving the time and cost of casting it into pigs and re-melting it in the cupolas—quickly repays the cost of the electric furnace.

Induction melting furnaces are particularly convenient tools both in the foundry and in the billet casting shops feeding the smaller rolling mills. In the foundry, the strong circulation of the molten metal produced by the electro-magnetic forces generated by the furnace inductor enable machine shop swarf and other finely divided material to be assimilated in the melt so rapidly as to avoid almost completely the oxidation losses which occur in other types of furnace.

Heat Treatment

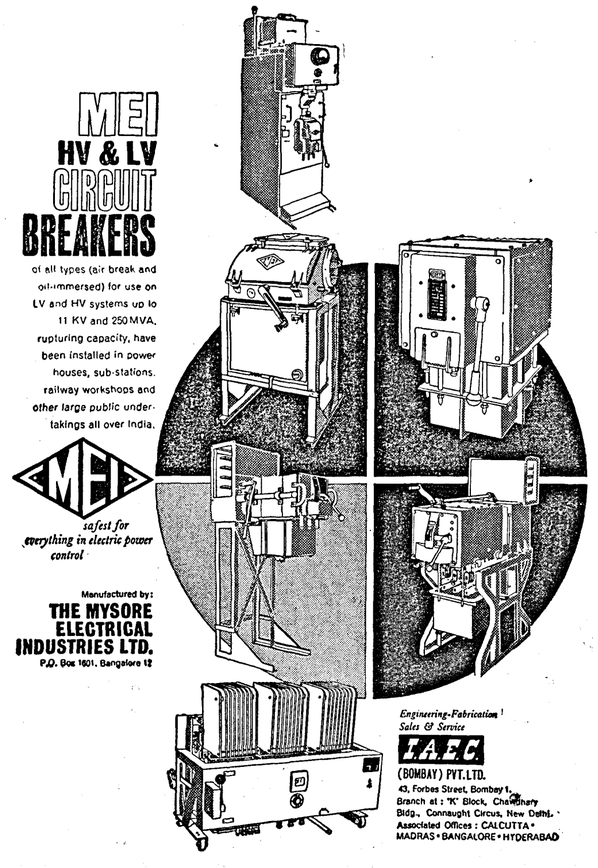
In heat treatment operations it is an inherent advantage of electric furnaces that the siting of the plant and the arrangement of mechanised work handling systems are not restricted by the means of heating, as may be the case with fuel-fired furnaces. Further, the widespread practice of maintaining an artificial gas atmosphere of controlled composition in heat treatment furnaces is simplified when contamination by combustion products is not a consideration.

Controlled atmosphere furnaces with mechanised work handling and conveying systems are built today in very large sizes. Amongst notable installations are those for the continuous annealing and galvanising of steel strip at the rate of eight tons or more per hour, using a hydrogen atmosphere to preserve the metal surface in an oxide-free condition ideal for bonding with the zinc coating. The continuous bright annealing of stainless steel strip in hydrogen atmosphere is another process where electric furnaces are virtually the only practicable equipment and where the high temperatures required—necessitating the use of molybdenum heating elements—demand the sensitive temperature control which electric heating readily provides. Another specialised steel of the high silicon, grain-oriented type for transformer cores relies exclusively on controlled atmosphere electric furnaces for both the decarburising and final annealing processes.

Outside the annealing of rolled and drawn metals, electric furnaces take a prominent part in the heat treatment of many engineering products, particularly in the hardening of machinery parts of all kinds. In such cases the convenience of locating the furnace in the machine line is often of primary importance and the practice of integrating the furnace conveyor system with the general materials-handling plan for the shop is growing, the material passing through a succession of cleaning and heat treatment stages, in some cases, without any manual operations.

Induction heating equipment may be classed with electric furnaces in this context and has the advantage of extremely rapid heat input and, therefore, small floor space for a given heating capacity. It is used increasingly both for heating billets for forging, extrusion etc. and for the surface hardening or other localised treatment of engineering components. It is characteristic of induction heaters that only one piece—or at most very few—is undergoing heating at any instant. This closely matches the normal machining and other metalworking processes employed in industry and the possibilities of combining operations by means of transfer conveyors are thereby enhanced.

It is evident that the wide range of industrial processes in which electric furnaces can show advantages is sufficient to ensure a prosperous future for the industry. Moreover, many of the new developments in metallurgy and engineering—such as the melting and heating of materials in vacuum and the as yet tentative prospect of heating by high energy beams—show clearly that electric power is still the pre-eminent pioneering force in the sphere of industrial heating.



NEW PRODUCTS AND PROCESSES

Milk Container

A NEW disposable bulk container for milk, designed by a London firm, The Bowater Organisation, Bowater House, Knightsbridge, London, S.W.1., for high-speed filling in the dairy, consists of a two-ply polythene bag inside a square, corrugated fibre-board case, which packs flat when empty. The container has a special filling and pouring spout, and is primarily intended for pressure filling by machine. It holds five gallons and the machine can fill it in 20 seconds.

Brighter Coating for Metals

Langbein Pfanhauser Werke A.G., of 1-3, Heerdter Buschstrasse, Neuss am Rhein, Germany, says that it can produce unusually bright, decorative electrodeposits of nickel, copper and gold on metals simply by adding to the plating solution a trace of one or other of several organic compounds that contain the chemical element selenium. The compounds also disperse the electrodeposits throughout the solution to give an even coating and generally help to make the process more efficient.

Building Bricks from Waste

Building bricks can be made from old rags, wood chips, waste paper or cotton fibres according to George Neidl, Uferstr, 6, Berlin N.65, Germany, who has patented a method of treating fibrous materials for this purpose. The waste material is placed in a tank and is continuously circulated with a liquid pumped through the tank by an obliquely mounted pump. During its circulation the liquid gradually thickens as more raw material is added until a thick slurry is formed. A cement binder is then added to make tubes, bricks or blocks for the building industry.

Water-soluble Cores

A mixture which is stated to produce excellent quality water-soluble cores for use in steel and cast iron foundries is reported by Founderie de Precision, 32, Boulevard National, Nanterre (Seine), France. Consisting mainly of sodium metasilicate and sodium disilicate, to which small quantities of crushed glass, graphite or iron oxide may be added, the mixture is melted and then cast into a mould of the required core shape. After stripping, the core is introduced into the mould in which the metal is to be cast. When the casting has been made it is immersed in hot water until the core is dissolved. The cores are claimed to produce high-quality inside surfaces and to be capable of withstanding severe casting conditions.

Grinding and Polishing

A grinding and polishing machine has been developed at Britain's Atomic Energy Authority's research centre at Windscale for preparing metallographic specimens for subsequent chemical etching and microscopic examination. The machine was designed primarily for use in post-irradiation examination facilities but is also suitable for use in conventional applications. This machine is more compact and simpler to operate than those it replaces. It is also more versatile and will require less maintenance. Features of the machine include a variable speed motor to give a complete range of speeds from the rough grinding to the polishing stages and a self-compensating linkage to maintain the load on the specimen perpendicular to the lap face.

Magnetic Alloys

Two magnetic alloys for different purposes have been developed by American electrical concerns. Cobalt and vanadium are alloyed with iron to produce Remendur by Bell Telephone Laboratories, of 463, West Street, New York, N.Y. It is said to have the highest residual magnetism of any magnet material, yet to be so ductile it can be rolled to the thickness of a hair. It can also be produced as foil or ribbon for use in reed switches. The Materials Manufacturing Division of Westinghouse Electric Company, Blairsville, Pennsylvania, makes Hipernom of 79 per cent nickel, 4 per cent molybdenum and 17 per cent iron. It is said to be highly permeable to magnetic flux, even at low magnetising forces. Hysteresis, the loss of power in inducing magnetism, is said to be low. Hipernom is intended for magnetic cores.

Road Marking Post

A new unit which makes it possible to remove or replace a special type of road marking post is being produced by a U.K. firm, Hamilton Ltd., Belfast, Northern Ireland. A few years ago the firm developed a reinforced rubber post, to replace the customary concrete type. If struck by a car, it bent over, returning to its original position without damage to itself or to the vehicle. The post has since been adopted by many road authorities in Britain as well as in more than 30 oversea countries. In the past it has been bedded in concrete along the verges of road, but the firm felt that there should be some method of simple removal so that, in the event of damage from vandalism or other causes, a replacement could easily be fitted. The new unit which can be bought with the post, is a metal socket with a special locking device, which holds the post in position. This socket is set in concrete and the post quickly fitted in position. If it has to be replaced, the post can be released and withdrawn in ten seconds and a new one fitted.

Improving the Reproduction of Photographs

If one holds a colour transparency towards the light and compares it with a print taken from the same negative, one is always surprised to see how much richer and more vivid the colour of the transparency seems. The loss of brilliance and colour in photographs viewed directly is accounted for among other things by the fact that part of the light reflected from the back layer does not reach the observer's retina but is deflected at the surface separating the gelatine from the air. A big Swiss chemical and pharmaceutical products firm has tried to overcome these drawbacks in the reproduction of photographs by concentrating its research in two directions. The "Telcolux" process perfected in its laboratories replaces the baryta layer on the back—with its diffused reflection—by a sheet of aluminium foil. The latter, which is cold rolled and reflective, has the property of reflecting the light only in a given cone. In this way, it is possible to prevent total reflection in the image layer and at the same time to increase the brilliance of the light areas by concentrating the light into a narrow pencil. The photographs obtained with the "Telcolux" process also have a "micro-relief" surface, which considerably reduces the stray light reflected from the surface, resulting in its turn in deeper shadows and stronger contrasts. The principle of the "Telcolux" process can be applied not only to photographic papers, but also to printing processes of all kinds. The positive prints made by means of this process, whether in colour or black and white, have practically the same sparkle and the same vividness of colour as the projected slides.

Tungsten Carbide Tipped Steels

Performance of Carbide Tipped Drill Steels vary very much according to the nature of rock, the condition of drilling equipment and the method in which the steels are handled and ground. Tungsten Carbide Tipped Drill Steels, designed and produced by Avesta Jernverks AB, Sweden, belonging to the Swedish Johnson Group, have been successfully tested at some places and there has been, it is said, a growing interest for these steels in this country. For some of the important Hydro-electric Projects under execution in India, Avesta drill steels will be extensively used. Rock drill steels in general are subjected to high fatigue stresses due to the blows applied to them by the drilling machine piston. Additional stresses are also imposed by rotation and possibly bending of the steel. The combination of these stresses can lead to fatigue failure. As an effective check against these stresses, Avesta drill steels are given a special heat treatment followed by "shotpeening," a process developed for increasing the fatigue resistance of the rod by cold working of the surface. They are also given a rust preventive finish and the water hole is lined with stainless steel to avoid premature rod breakage due to corrosion and cavitation. Avesta tipped drill steels with carbide inserts from their own factory are designed for use with both light self-rotating rock drills equipped with telescopic air feed legs and with special light weight drills that have come into use in recent years. There are already several makes of the latter type on the market. Both air blowing and water flushing can be used but the latter is to be preferred as air blowing is a potential danger to health (silicosis) and also causes greater wear and tear on the insert and steel. During operation rock drill edges were down, assuming a rounded shape which on the average has a radius of 3/4". This cutting edge radius 3/4" is at present considered to be standard for re-grinding. Avesta drills are supplied with a cutting edge radius greater than 3/4". Experience shows that carbide saving resulting from this greater initial radius is equal to carbide consumed in one or two re-grindings.

TREND OF WORLD OIL PRICES

IS THE LOW TIDE ABOUT TO END?

OIL producers, host governments, consumers of petroleum products, investors in oil shares —and oil journalists—would like to know whether the seven-year decline in oil prices is likely to be arrested in the near future. This is a question to which an unequivocal answer cannot be given. Yet the number of people who would be prepared to risk an affirmative reply is certainly greater now than it would have been some months ago. These optimists would not claim that there is as yet any decisive evidence of a turn of the tide. They nevertheless believe that prices may now be at or near the bottom.

So far as crude oil is concerned, the first evidence of an improvement would present itself in the guise of smaller discounts rather than of higher posted prices. At the moment, there is no reason to suppose that discounts are, in general, any less than they were, say, a year ago. Nor is there yet any clear indication that posted export prices for products have begun to harden.

The charts accompanying this article reveal the extent of the decline that has occurred in the Caribbean, Persian Gulf, and Far Eastern markets since 1959, especially in motor gasoline. They show that all products, except fuel oil at Aruba and Abadan, are rather cheaper now than they were at this time last year. And they are a reminder of the pressure that is still being exerted on refiners' margins and therefore on crude oil postings.

The natural inference is that the depressive forces operating during the past few years are still at work. Let it be recalled that the most important single cause of price weakness since Suez has been the entry of so many newcomers—especially American "independents" —into the producing sector. Prevented by U.S. import restrictions from channelling their newly won crude into their home market, yet urgently needing a financial return on their heavy investments, these companies have been forced to seek outlets elsewhere; and the fast-growing markets of Western Europe have offered the most promising prospect. Continental, Marathon, Indiana Standard, Phillips, Cities Service, Murphy, Sinclair—these are perhaps the best known of the many companies that have been seeking to break into new markets in recent years. To do so they have generally had to offer lower prices or other incentives to consumers. In many cases also, the competition of Russian oil has played a decisive part in undermining the price structure.

Unbalanced Demand

The pressure on gasoline prices has been aggravated by the imbalance of European demand—the fact that consumption of middle distillates (and in some cases fuel oil) has been going ahead more rapidly than that of gasoline, which is almost everywhere held back by heavy taxation. The effort to satisfy all demands for jet fuels, heating oils and diesel oils may leave the refiner with a surplus of naphthas which can be disposed of only at bargain prices.

It is, of course, generally possible for consuming countries to solve this problem of imbalance by covering a part of their requirements of middle distillates (or fuel oil) by imports from abroad. But this merely concentrates the problem on the export refineries; and the consequences may be seen in the sagging course of gasoline postings as depicted in the accompanying charts. Unfortunately it seems to be difficult, if not impossible, in this highly competitive industry for refiners and marketers to compensate for lower returns on gasoline by corresponding increases in the price of middle distillates.

While oil consumption in general continues to expand in a healthy manner, partly in consequence of the low level of prices, it remains true to the European market that the problem of imbalance has not yet been solved. Perhaps a solution is being found, however, in the shape of the increasing use of naphthas as feed-stocks for chemical plants and gasworks, and of natural gas in certain applications in place of fuel oil; and substantial increases in natural gas supplies are now in prospect.

Abundant Crude

As regards crude oil supplies, the position is still one of actual and potential surplus. In the Middle East, where oil has been discovered in at least a dozen different places in the last four years, enormous production potential exists. In Saudi Arabia, Aramco is in process of bringing in yet another field. By this summer, the second of Iran's offshore concessions will have started production. Output in the Neutral Zone is scheduled for a further large increase. Farther west, in Libya, the curve of production has been rising steeply and exports will begin from the third terminal at Ras Lanuf by the end of this year. The Algerian Sahara has a large shut-in production which awaits the completion of the disputed third pipeline to the coast. Russian exports to the West will doubtless continue to rise, though probably at a moderate rate.

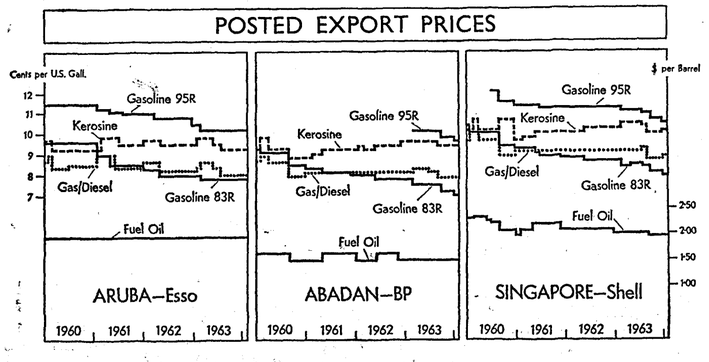
Meanwhile, the multiplicity of competing companies in the field is a virtual guarantee that fresh discoveries will be made. Despite the overall surplus, companies, large and small, are still engaging in exploration ventures to make good a shortage of supplies under their own control, to diversify their sources, to forestall discovery by others or, most importantly, to ensure that future increases in the demand for oil will not go unsatisfied. The international oil companies are ubiquitous in their search and U.S. independents have certainly not lost interest in the possibility of finding cheap crude. French state-owned concerns, now promised a larger share of the home market, are to be found searching for oil outside the French Community. German and Italian companies also continue to go abroad. ENI is as active as ever in its quest for the raw material needed to feed its refining and marketing affiliates.

In this connection, it may be recalled that vast tracts of relinquished territory in the Middle East and elsewhere are, or soon will be, available for fresh exploration. The Saudi Arabian Government is in a position to offer about half a million square miles surrendered by Aramco, not to mention the western part of the country that was never included in the Aramco concession. Kuwait's National Petroleum Co. is inheriting almost half of K.O.C.'s original concession area and the newly constituted Iraq National Oil Company will operate in areas formerly included in IPC's concession. In Libya, a considerable acreage given up last year is now available for redistribution. In Algeria, where development has been retarded by political uncertainties, the new state-owned oil company will almost certainly be given rights over some of the territory that has recently become free. In addition, we are now witnessing an unprecedented burst of prospecting activity under the waters of the North Sea.

The probability that fresh oilfields will be located in the near future must, therefore, be rated high. By the same token, there would seem to be little prospect of an early end to the period of oil surplus, even though continued dynamic growth of demand is taken for granted. It is thus arguable that, if some of the companies who are successful in finding oil are in urgent need of fresh market outlets, they may be constrained to indulge in price-cutting practices in the attempt to elbow their way in.

In reply, the optimists in the industry might legitimately advance the elementary consideration that commercial undertakings cannot go on cutting prices, and therefore unit profits, indefinitely, if they hope to stay in business. In the long run, they must earn enough to cover their full costs, including capital charges, and to make provision for the investment necessary for growth.

As prices have fallen during the past seven years, oil companies have striven to protect their profit margins by a fairly drastic pruning of operating costs. This has been achieved by genuine economies of one kind or another; and their very success in this direction must correspondingly reduce the scope for further economies of the same kind. On the other hand, various concessions have been made to host governments which, from the companies' standpoint, represent an additional charge against earnings. Any concessions which the companies make to Middle East governments on the royalties issue will increase the burden. It is these and other prospective increases in costs that seem likely to provide the strongest deterrent to further shading of prices in the current year.—*By arrangement with Petroleum Press Service.*



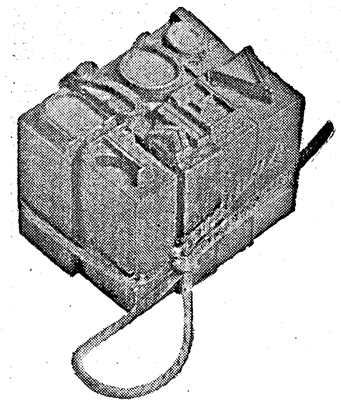
ROURKELA STEELWORKS

A delegation of the Hindustan Steel Limited (H.S.L.), headed by Mr. A. N. Banerji, General Manager of the Rourkela Iron and Steelworks, visited the DEMAG in Duisburg recently. The contracts for the major supplies within the framework of the Rourkela Iron and Steelwork's expansion were signed in the "Designers Centre." Rourkela's present capacity of 1 million tons of crude steel is to be increased to 1.8 million tons. The DEMAG's supplies will include an electric sheet rolling mill with an annual output of 50,000 tons, making Rourkela the first Indian iron and steelworks able to produce transformer and dynamo sheet for the electrical industry. The initial material will be supplied by India's first wide strip mill, now being equipped with a third sub-floor strip coiler —an earlier DEMAG supply. A twin-stand tandem finishing mill will be supplied by the DEMAG to complete the cold rolling mill. Depending on the rolling schedule, this has a monthly output of between 25,000 tons and 30,000 tons. An electrolytic tinning line with an average annual output of 100,000 tons of tin plate, the first of its type on the continent of Asia, is to be supplied. This will be so designed as to permit an output of 175,000 tons in the second expansion stage. In addition orders were placed for the complete top gas cleaning plant for the planned fourth blast furnace, the slab charging facilities for a further pusher-type furnace, a large number of special cars for the iron and steelworks, together with numerous cranes for the steel and rolling mill plant. DINGLER-Werke, the JUNKERATHER MASCHINENFABRIK and KAMPNAGEL, all subsidiaries and affiliates, will also participate in making the supplies in addition to DEMAG.

INCOME-TAX REFUNDS

A reader writes:

Complaints are being made repeatedly in Lok Sabha by political parties and economists that the income-tax collection machinery is slow and should be tightened to avoid cases of evasion and delays. Stringent measures are suggested and taken by Government in pursuance of assurances given in this regard, but no one seems to be worried about hundreds and thousands of cases where large amounts are due to assessees from the Income-tax Department on account of excess taxes collected from dividends and other items of income. There are cases where refund applications have been pending with Income-tax officers in respect of three or four assessment years and all attempts made by assessees to expedite final assessment of their income and obtain refunds within a reasonable time are having no effect and assessees are left helpless. Just as statistics of arrears of income-tax are sought and given in Parliament, if statistics of refund applications pending before the various Income-tax Officers all over India, especially in big cities like Bombay, Calcutta and Madras are called for, it will be found that the machinery of making refunds also should be gingered up. It will be remembered then the Finance Minister, a few years ago, changed the pattern of assessment of dividends in the hands of shareholders an assurance was given that refund applications would be dealt with expeditiously without causing any hardship to the assessees. Strict arrangements should be made to deal with all applications for refunds within three months after submission of returns and I hope the Finance Minister will take such steps as he finds necessary in this regard and help thousands of sufferers who are waiting for their refunds from the Income-tax Department for years in some cases.



CAN YOU MAKE
A GOOD IMPRESSION?

Yes—on paper!
In fact, it's easy if
the paper looks sparkling,

PENSION-CUM-LIFE INSURANCE FOR SELF-EMPLOYED

SCHEME FOR CHARTERED ACCOUNTANTS

ALL working people, whether self-employed or working for somebody else, need some kind of a retirement scheme for their old age when they became incapable of working or to provide for their family in the event of their premature death. While those in service do enjoy the benefit of provident fund, pension and other retirement benefits, which are a common feature of the service conditions offered by most factories, firms and commercial establishments, independent, professional people like doctors, architects, lawyers and chartered accountants have to depend on themselves for providing for their old age. In the advanced countries of the West, life insurance companies have come forward to help self-employed people by offering superannuation and pension policies tailor-made to suit the requirements and capacities of these people. And Governments in some countries at least have extended some of the tax concessions applicable to provident fund and pension schemes of regular employees to self-emlpoyed people also.

A plea for making similar concessions to self-employed people has been made by the Institute of Chartered Accountants of India in the course of a memorandum submitted to the Finance Minister prior to the Budget. The memorandum, which dealt mainly with reform of the system of direct taxation in the country with suggestions for reorientation of the structure and rates of direct taxation, urged that the tax concessions available to pension and life insurance schemes for groups of employed persons should be extended to self-employed persons also. Specifically, it recommended a scheme of pension and life insurance for chartered accountants and pleaded for appropriate changes in the Finance Act so as to make the scheme as attractive as the group schemes of employed persons.

Who Needs It?

Chartered accountants, the memorandum points out, could be divided into two groups: (1) the professionals who are not in anybody's employ but are independent practising auditors, income-tax experts, etc., (2) chartered accountants who are employed on fixed remuneration in various firms and business houses. The second group presents no problems, because, as employees, the Income-tax Act confers upon them several concessions if they join the provident fund and Superannuation schemes which their employers may have established.

The memorandum submits that the problems of the former group, that is, the group consisting of practising chartered accountants, can be solved only if the Government is prepared to have a legislation more or less on the lines of the U.K. Finance Act, 1956. For a body of practising professionals, the memorandum further submits, the type of scheme which one can envisage for groups of employed persons is not implementable. This is because the income of every individual member of the profession may vary as also his requirements. The utmost flexibility, permitting variations in contributions from year to year and as between one individual to another, though they belong to the same income group, is necessary. At present, chartered accountants have the option of taking individual policies from the Life Insurance Corporation of India according to his needs. At the most, the Life Insurance Corporation of India can consider whether it can assist this body of professionals by offering some concession in rates. But to build up a satisfactory death and retirement benefits out of individual taxed income, the memorandum points out, is really a difficult task.

The scheme suggested by the authors of the memorandum is based on two assumptions: (1) that it will include only the self-employed chartered accountants, (2) that the necessary tax concessions will be given by the Government to this class of chartered accountants. For the purpose of the scheme, it has been assumed that the normal age of retirement of a chartered accountant is 65, though actually, a chartered accountant will not normally retire from his profession unless he is obliged to do so on grounds of ill-health. Fixing of this normal retirement age does not, however, imply that a member of the scheme must necessarily retire at this age or that he should commence receiving his retirement benefit from that age, regardless of whether he retires or not. There would be provision in the scheme for retirement before the normal retirement age as also for deferment of retirement after the normal retirement age. A member of the scheme may pay every year a varying contribution, subject to such limits as may be prescribed by the Government under the law granting the necessary concessions to self-employed persons. This contribution would be applied by the Corporation as single premium for the purchase of pension at normal retirement age. If the member retires at the normal retirement age the total pension he will receive will be the sum of the total various units of pension which will have been secured for him each year by the annual contribution which he will have paid before his retirement. The Corporation will issue each member an individual certificate stating the total contribution paid by the member and the total pensions that will have been purchased by him by the contributions paid till date. Obviously, such certificates will have to be issued every year, because the total quantum of pension and the contributions will vary from year to year, depending upon the amount of contribution which the member will pay each year and his attained age.

Normal Pension and Options

For the purpose of simplifying the administration of the scheme, a normal pension is also envisaged. This pension will be guaranteed for a minimum period of five years and will continue as long as the member is alive. The member will, however, have the option to exchange this normal pension with any other type of pension. Three types of optional pension in lieu of the normal pension have been indicated. They are the following:

1. *Pension guaranteed for longer periods.* A pension which, instead of being guaranteed for 5 years, can be guaranteed for a longer period of say either 10 or 15 years. If death of the member occurs during this period, the pension will continue to be paid to his dependents without any reduction for the balance of the guaranteed period. If, however, the member survives the guaranteed period, the same pension will continue to be paid to him during the remainder of his life. In this class of pension, therefore, the member has an assurance that regardless of his survival to the end of the guaranteed period, he or his dependents will benefit by the pension over the minimum guaranteed period. On the contrary, if he lives beyond the guaranteed period, he has an assurance of life-long income. There is thus a guarantee of a minimum benefit but no limit to the benefit which he can receive if he lives long enough.

2. A member can purchase separate pension for himself and for his wife, each of which may be guaranteed for an agreed period (e.g. 5, 10 or 15 years) and continue thereafter during the life time of beneficiary until death.

3. If the member does not wish to purchase separate pensions for himself and his wife, he may purchase what are commonly known as "last survivor pensions." This pension envisages that a certain amount of pension would be payable to the member and his wife so long as both are alive. If one of them dies, the pension will continue to be paid to the survivor until his/her death. It is customary to provide in "last survivor pensions" that so long as the member and his wife are alive the quantum of pension should be more than the pension payable to the survivor.

If a member retires before the normal retirement age, obviously, the amount of his pension will have to be adjusted. The member will have paid fewer contributions and he is expected to live longer, because he retires at a younger age. Consequently, the pension payable on earlier retirement age will be of a smaller amount than the normal pension. For the same reason, if a member retires after the normal retirement age, the quantum of his pension will be more than the pension at normal retirement age.

In the event of death of the member before the normal retirement age, his dependents will receive the contribution paid under the scheme and the interest which the Corporation may agree to pay thereon either in the form of an income or lump sum.

The aforesaid scheme is mainly intended to provide retirement benefits to the self-employed members of the chartered accountancy profession. It, however, gives no cover to his dependents in the event of his premature death. The memorandum, therefore, proposes a scheme of life insurance to supplement the scheme. The object is to ensure a regular monthly income of a fixed amount commencing on the death of the member before the age of 65 and payable for a fixed period of, say, 15 years. This cover may be provided under the temporary insurance plan. Under this plan, a member will pay a level annual premium, the amount of which will depend upon the monthly income to be provided for the dependents. For instance, if a member, aged 35, wishes to provide a monthly income of Rs. 1,000 payable to his dependents for 15 years from the date of his death, the sum assured will have to be about Rs. 1,46,000 for which the annual premium payable will be Rs. 2,800. If his death occurs at any time before he reaches 65, a guaranteed income of Rs. 1,000 per month will be paid to his wife, children or any other dependents for a period of 15 years. If the member survives to the age of 65, the insurance cover will cease; it carries neither surrender nor paid up values and consequently on the expiry of this plan no cash benefit will accrue. In other words, the member or his dependents would receive no benefits under this plan except in the event of death prior to attaining the age of 65.

A combination of the pension and temporary insurance plan, the memorandum points out, should provide reasonable security to the member and his family. Under the temporary insurance plan, the income will always cease at the end of the fixed period of fifteen years and, consequently, if the widow of a member survives this period, she will have no income during her old age. The scheme, therefore, envisages a pension plan for the widow by utilising the contributions of the member.

Only the broad outlines of the scheme have been indicated in the preceding paragraphs. Its underlying principle, namely, that self-employed people need some kind of a retirement or pension benefit and that the Government should make available to them the concessions available to those in service is unexceptionable. In fact, in the matter of tax relief for pension or retirement benefits, no distinction need be made between self-employed and service people. This principle has been accepted in countries like U.K. and there seems to be no reason why it should not be followed in this country, too.

Notice

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN that a Second Interim Dividend of 2%, subject to tax, has been declared by the Board of Directors as payable on 20th April 1964 to the shareholders whose names appear on the Company's Register on 30th March 1964 or to their mandatees.

The Share Transfer Books of the Company will be closed from 26th to 30th March 1964 and transfers received at the office of the Company's Registrar (Jardine Henderson Limited, 4 Clive Row, Calcutta) before close of business on 25th March 1964 will, if in order, be registered in time for the transferees to receive the dividend.

By Order of the Board

P. J. RICKETTS

Assistant Secretary

VIRGINIA HOUSE
37 CHOWRINGHEE
CALCUTTA.
10th March 1964.

EMPLOYEES' STATE INSURANCE

The twenty-seventh meeting of the Employees' State Insurance Corporation held recently at New Delhi under the chairmanship of Mr. D. Sanjivayya, Union Minister of Labour and Employment, reviewed generally the progress made in the construction of hospitals and dispensaries under the Employees' State Insurance Scheme in the various States and sanctioned necessary funds for the purchase of lands, construction of new buildings, etc. The meeting approved in principle the proposal for the programme of research for study of problems of industrial medicine and hygiene. The research measures will be initiated in the employees' State insurance hospitals and the cost will be met solely by the Corporation. One of the important decisions taken by the Corporation was the grant of extended sickness and medical benefit to insured persons suffering from certain morbid conditions, on the same scale and subject to the same conditions as in case of tuberculosis, leprosy, mental and malignant diseases, etc., for which extended sickness benefit at full sickness benefit rate and medical care are already available to the insured persons. Sufferers from all such prolonged diseases will now be placed on cash benefit at the full sickness benefit rate for a maximum period of 365 days.

CO-OPERATIVE MOVEMENT IN 1961-62

ALL-ROUND PROGRESS MAINTAINED

THE year 1961-62 (1st July 1961 to 30th June 1962) recorded a relatively modest growth in the number of co-operative societies of all types in the country as a whole. At the close of that year the relevant aggregate number was 341,841, as compared with 332,488 at the end of the previous year. In terms of percentage, the increase in the number of societies in 1961-62 was only 2.8 per cent, as compared with 6.1 in 1960-61 and 10.4 in 1959-60, because steps had been taken in that year to weed out weak and dormant societies which were not fit for resuscitation. Thanks to this modest increase, the proportion of population covered by the co-operative movement came to only 42 per cent, as compared with 39 per cent at the end of 1960-61. But the owned funds and working capital (including owned funds) of all societies registered bigger increases in percentage terms during the year under reference. The owned funds, for instance, rose from Rs. 317 crores at the end of 1960-61 to Rs. 369 crores at the end of 1961-62, that is, by 16.4 per cent, while working capital (including owned funds) increased from Rs. 1,312 crores to Rs. 1,535 crores, that is, by 17.0 per cent. Another notable feature of co-operative movement in the year under review was that the loans advanced by all primary societies aggregated Rs. 449 crores, representing an increase of Rs. 70 crores or 18.5 per cent over the previous year. It would appear from these highlights that the financial magnitudes of the co-operative movement in 1961-62 reflected relatively larger increases than in the aggregate number of societies and their membership. An overall picture of the movement, as it stood at the end of that year, is provided by the table on the next page; the table is taken from the *Statistical Statements Relating to the Co-operative Movement in India*, 1961-62, just published by the Reserve Bank of India.

Short-term Credit

How the different sectors of the movement fared during 1961-62, as compared with 1960-61, may now be reviewed here. The credit societies catering predominantly to short-term credit requirements are the State co-operative banks, central co-operative banks, primary agricultural societies, grain banks and primary non-agricultural societies. To take the State co-operative banks, that is, the apex banks, first. Their finances were in better shape during the year under review, thanks to the increase in their working capital. The comparative composition of their working capital in the two years is brought out in the following table:

Working Capital of State Co-operative Banks

Item	1960-61		1961-62	
	Amount (Rs. crores)	Percentage to working capital	Amount (Rs. crores)	Percentage to working capital
Working capital ..	221.7	100.0	256.1	100.0
(1) Owned funds ..	24.0	10.8	28.9	11.3
(2) Deposits ..	72.3	32.6	81.4	31.8
(3) Borrowings from				
(a) Government ..	6.0	2.7	7.2	2.8
(b) Reserve Bank ..	113.8	51.4	131.7	51.4
(c) Other sources ..	5.6	2.5	6.9	2.7

It will be seen from the above table that the borrowings of state co-operative banks from the Reserve Bank formed 51.4 per cent of their working capital in both the years. Their advances during 1961-62 aggregated Rs. 256 crores, while the outstanding loans advanced by them amounted to Rs. 197 crores.

The working capital of central co-operative banks, too, increased from Rs. 304 crores in 1960-61 to Rs. 353 crores in 1961-62. The comparative composition of this working capital shows that owned funds increased from Rs. 51 crores (16.7 per cent) to Rs. 62 crores (17.5 per cent), deposits from Rs. 112 crores (36.8 per cent) to Rs. 124 crores (35.3 per cent) and borrowings from Rs. 141 crores (46.4 per cent) to Rs. 166 crores (47.2 per cent). The total loans advanced by the central banks in 1961-62 amounted to Rs. 384 crores as compared with Rs. 354 crores in the previous year. Short-term loans accounted for Rs. 354 crores and medium-term loans for Rs. 30 crores in the 1961-62 total of Rs. 384 crores. The outstanding loans at the end of 1961-62 amounted to Rs. 259 crores, of which Rs. 255 crores were due from societies and the balance from individuals. As for overdues, they formed 15.7 per cent of the outstandings, as against 12.5 per cent a year before.

Of the primary credit societies numbering 236,748, by far the largest single group is represented by the agricultural credit societies (215,081 in 1961-62, as compared with 212,129 in 1960-61). Out of the total number of the latter societies, as many as 20,095 had been dormant for one year and 20,627 for two years or more. Thus the number of dormant societies constituted no less than 18.9 per cent of the total number of agricultural credit societies. Of the total membership of 19.6 million, roughly 51 per cent actually borrowed during the year under review. The working capital of these societies at the end of 1961-62 amounted to Rs. 325 crores, representing an increase of Rs. 51 crores over the previous year. Included in this working capital are the share capital (Rs. 69 crores), deposits (Rs. 18 crores) and borrowings (Rs. 219 crores). The total loans advanced by the active societies during 1961-62 aggregated Rs. 228 crores, of which Rs. 205 crores were short-term and Rs. 23 crores medium-term. Their recoveries during the year amounted to Rs. 190 crores, while the overdues were pretty large, being of the order of Rs. 63 crores, or 24.5 per cent of the outstandings. The overdues showed a marked increase of Rs. 19 crores during the year and the proportion of overdues to outstandings also increased by 4.2 per cent. This is, indeed, a very disquieting aspect of co-operative credit.

Of the primary credit societies, grain banks increased their working capital from Rs. 5.4 crores in 1960-61 to Rs. 6.1 crores in 1961-62. The loans advanced by them amounted to Rs. 2.0 crores in the former year and to Rs. 2.5 crores in the latter. As for non-agricultural primary credit societies, their working capital of Rs. 165 crores in 1961-62 represented an increase of about Rs. 15 crores over the previous year. Of this working capital, deposits alone accounted for as much as Rs. 103 crores. The significance of this achievement can be appreciated if it is recalled that the deposits collected by all the State co-operative banks in the country amounted to Rs. 81 crores only in the same year and that the deposits collected by all the agricultural credit societies came to no more than Rs. 18 crores. As for the loans advanced by the non-agricultural credit societies, these were of the order of Rs. 162 crores in 1961-62, as compared with Rs. 131 crores in the previous year.

The all-India averages in respect of membership, share capital, deposits, working capital and loans advanced per borrowing member are given in the following table relating to agricultural credit societies:

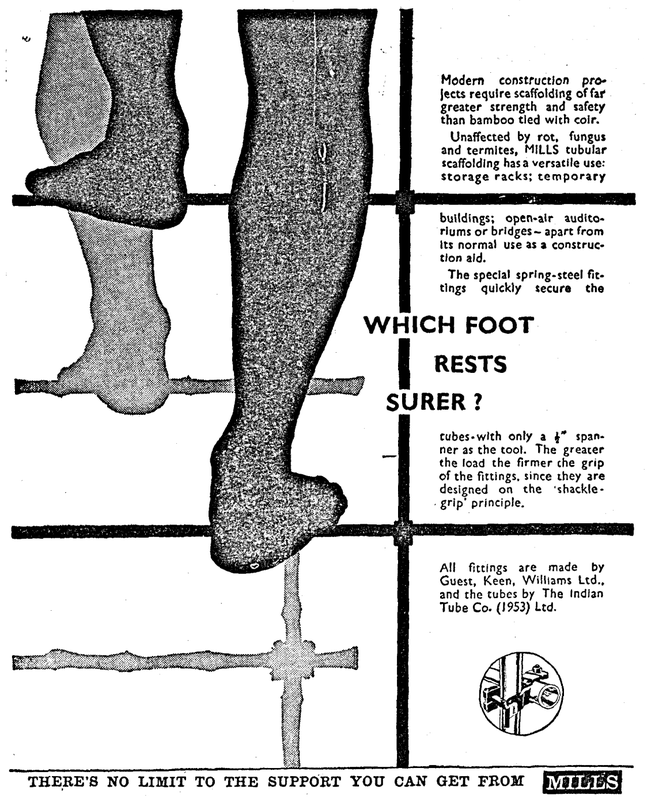
Agricultural Credit Societies

(Amounts in rupees)

Item	All societies		Large-sized societies	Small-sized societies
	1960-61	1961-62	1961-62	1960-61
Membership per society ..	80	91	502	75
Working capital per society ..	12,913	15,126	118,628	11,220
Share capital				
(a) Per society	2,722	3,190	27,455	2,274
(b) Per member	34	35	55	30
Deposits—				
(a) Per society	683	820	7,042	585
(b) Per member	9	9	14	
Loans advanced per borrowing member	226	229	256	220

Long-term Credit

In the co-operative sector, central and primary land mortgage banks cater to long-term credit requirements. During 1961-62, the membership of central land mortgage banks consisted of 500 primary land mortgage banks, 182 other co-operative institutions and 298,701 individuals. Their working capital increased from Rs. 48 crores in 1960-61 to Rs. 62 crores in 1961-62. The long-term loans advanced by them during 1961-62 for land improvement, purchase of machinery, etc. amounted to Rs. 15 crores, as compared with Rs. 12 crores in the previous year. The long-term loans outstanding to them stood at Rs. 48 crores, of which overdues accounted for Rs. 1.6 crore. As for primary land mortgage banks, their working capital increased from Rs. 27 crores in 1960-61 to Rs. 38 crores in 1961-62. The bulk of the increase in their working capital was accounted for by the increase



in borrowings from central land mortgage banks from Rs. 24 crores to Rs. 34 crores. The loans outstanding to these banks in 1961-62 amounted to Rs. 35 crores, as against Rs. 25 crores in the previous year.

Non-credit Societies

The operations of different types of non-credit societies, numbering in all 104,132, during 1961-62 and the relevant financial magnitudes have been exhaustively dealt with in the *Statistical Supplements*. Some of the findings are highlighted below:

(1) The working capital of 21 State marketing societies amounted to Rs. 11 crores. The total value of agricultural produce sold by them, both as owners and agents, was Rs. 12.4 crores, of which paddy accounted for Rs. 5.3 crores and oilseeds for Rs. 2.4 crores. They also sold agricultural requisites of the value of Rs. 16.0 crores, of which Rs. 12.3 crores represented fertilisers.

(2) The sales of agricultural produce by 151 central societies, functioning at the district or regional level, amounted to Rs. 6.5 crores, while the agricultural requisites sold by them were valued at Rs. 14.6 crores and the value of consumers' articles sold by them at Rs. 8.4 crores.

(3) The number of primary marketing societies as on 30th June 1962 was 3,007, with a total membership of 1.65 million and aggregate working capital of Rs. 32 crores. The total value of their purchases was Rs. 61 crores, while their total sales amounted to Rs. 94 crores, of which Rs. 60 crores represented sales by them as agents. Of the total sales, agricultural produce accounted for Rs. 60 crores, and agricultural requisites for Rs. 22 crores (of which fertilisers accounted for Rs. 15 crores). The marketing societies advanced loans to the tune of Rs. 5.3 crores to societies and Rs. 20.6 crores to individuals and others. They owned 1,932 godowns with an estimated aggregate capacity of 3.5 million quintals and also hired 3,630 godowns.

(4) The number of sugarcane supply societies at the end of 1961-62 was 9,194, including one State society, 69 central societies and 9,124 primary societies. The working capital of central societies and primary societies was Rs. 1.0 crore and Rs. 9.0 crores, respectively. The value of sugarcane marketed by the central societies was Rs. 7.7 crores, while, in the case of primary societies, it was Rs. 61.0 crores. The primary societies also supplied agricultural requisites of the value of Rs. 4.2 crores.

(5) Milk supply unions and societies, numbering in all 4,044, purchased milk worth Rs. 11.5 crores and sold milk and milk products of the aggregate value of Rs. 14.3 crores.

(6) The number of co-operative sugar factories at the end of 1961-62 was 67, as compared with 66 at the end of the previous year. Their paid-up capital was Rs. 19.5 crores, of which the Government's contribution was Rs. 7.8 crores. Their borrowings were to the tune of Rs. 48 crores, of which Rs. 20 crores were from co-operative banks, Rs. 5.0 crores from the State Bank of India, Rs. 16 crores from the Industrial Finance Corporation and just under Rs. one crore from the Government. Their total working capital amounted to Rs. 78 crores, as compared with Rs. 65 crores in the previous year. The number of factories in production was 35, as against 32 in the previous year. The value of sugar produced by them was Rs. 45 crores, as compared with Rs. 44 crores in 1960-61, while their sales of sugar amounted to Rs. 44 crores, as against Rs. 29 crores in the previous year. Among the States, Maharashtra had the largest number of sugar co-operatives, namely, 20, of which 14 were in production, contributing Rs. 27 crores to the total value (Rs. 45 crores) of sugar produced by co-operative sugar factories in the country.

(7) The cotton ginning societies sold cotton of the total value of Rs. 13 crores during the year.

(8) The number of joint farming societies was 2,381 at the end of 1961-62 with a total membership of 56,435, as compared with 2,080 at the end of 1960-61, with a total membership of 51,452. The number of members working full time in field operations decreased from 28,021 to 21,015. The area commanded by the societies in 1961-62 was 365,000 acres, of which 273,000 acres were under cultivation. The total value of production was Rs. 1.1 crore, as compared with Rs. 1.05 crore in the previous year.

(9) The collective farming societies increased in number from 1,104 in 1960-61 to 1,196 in 1961-62 and in membership from 36,790 to 40,904. The area commanded in 1961-62 was 197,000 acres and the area under cultivation 112,000 acres. The total value of their production fell from Rs. 0.53 crore to Rs. 0.47 crore.

(10) The number of irrigation societies fell from 1,555 in 1960-61 to 1,469 in 1961-62 and the area commanded by them from 291,000 acres to 273,000 acres. The area actually irrigated by them also fell from 169,000 acres to 152,000 acres, their income declining from Rs. 23 lakhs to Rs. 21 lakhs. The societies had Rs. 1.7 crore worth of irrigation works.

(11) The fisheries societies, numbering 2,538 with a total membership of 268,000, had a catch of the value of Rs. 1.2 crore.

(12) In the field of handloom weaving, there were 19 apex weavers' societies, 120 central societies and 12,222 primary societies. The total working capital of the apex societies was Rs. 7.6 crores and the value of cloth produced by them (including cloth procured from primary weavers' societies) amounted to Rs. 5.6 crores, while their sales were of the order of Rs. 8.9 crores. The central weavers' societies had Rs. 1.4 crore of working capital and the cloth produced by them was valued at about Rs. one crore, while their sales came to Rs. 1.4 crore. The primary weavers' societies had Rs. 22 crores of working capital, produced cloth worth Rs. 39 crores and sold cloth valued at Rs. 43 crores.

(13) Other industrial societies had an aggregate working capital of about Rs. 19 crores. The value of their production was Rs. 16 crores and that of their sales Rs. 20 crores.

(14) The total number of co-operative spinning mills was 25, with an aggregate working capital of Rs. 6.3 crores and with 221,000 spindles. The value of yarn sold by them during the year was Rs. 2.9 crores.

(15) The number of wholesale consumers' stores was 32, while that of primary stores was 7,266. The primary stores had an aggregate working capital of Rs. 9.8 crores. Their purchases and sales were Rs. 34 crores and Rs. 35 crores, respectively, during 1961-62, as compared with Rs. 38 crores and Rs. 44 crores, respectively, in the previous year.

(16) There were six State and 7,877 primary housing societies, with a total working capital of Rs. 72 crores. The amount of loans outstanding to them was Rs. 27 crores, while the value of land and buildings owned by them was Rs. 40 crores. The number of independent houses and tenements constructed by them was 15,613, valued at Rs. 15.1 crores, while the number and value of houses constructed by members were 12,575 and Rs. 9.7 crores, respectively.

Some general findings regarding the state of the co-operative movement in the year under review may also be highlighted. Firstly, Government participation in the share capital of various types of societies increased from Rs. 40.00 crores in 1960-61 to about Rs. 47.50 crores in 1961-62 (Rs. 30.3 crores to credit institutions and Rs. 17.2 crores to non-credit institutions). Secondly, the total liabilities and assets of societies under liquidation during the year were Rs. 13 crores and Rs. 8 crores, respectively. And, finally, the profit-and-loss picture shows that 201,669 societies had an aggregate profit of Rs. 26.3 crores and 83,621 societies had an aggregate loss of Rs. 11.4 crores. The profit-making societies in the previous year, it may be noted here by way of comparison, numbered 201,390, with an aggregate profit of Rs. 24.3 crores, while the losing societies numbered only 75,558, with an aggregate loss of no more than Rs. 6.4 crores.

SECTION 7 OF BANKING COMPANIES ACT

Section 7 of the Banking Companies Act, 1949, as amended with effect from the 1st February 1964, provides that no firm, individual or group of individuals shall, for the purpose of carrying on any business, use as part of its or his name any of the words "bank," "banking," or "banking company."

Drawing public's attention to the provisions of this Section, a Reserve Bank's Press note warns that the use, or continuance of the use, of any of the abovementioned words by any firm, individual or group of individuals as part of its or his name, would constitute a contravention of the law and would attract the penalties provided under Section 46(4) of the Banking Companies Act, namely, punishment with fine which may extend to Rs. 2,000 and, where a contravention is a continuing one, with a further fine which may extend to Rs. 100 for every day during which the contravention continues. Action may, therefore, be taken immediately by any firm, individual or group of individuals using any of the prohibited words to desist from doing so, the note adds.

Co-operative Movement in 1961-62

(Amounts in crores of rupees)

SCIENTIFIC FILMS ON INDUSTRIAL TECHNIQUES

An Audio-Visual Library of 300 films (16 mm) illustrating up-to-date scientific method of running industrial undertakings has been organised by the Directorate General of Technical Development.

The membership of the Library is open to all industrial undertakings, technical associations and institutions on payment of an annual membership fee of Rs. 25.

Those having projector facilities of their own may apply to the Development Officer (Library), Directorate General of Technical Development, Udyog Bhavan, New Delhi, for the films.

MODERNISATION HELPS MADURA MILLS

DIVIDEND INCREASED—RESERVES GET MORE

THE working results of Madura Mills Company Ltd. (Managing Agents: Messrs. A. & F. Harvey Ltd., Madurai) for the year ended 31st December 1963 are, indeed, heartening and provide sufficient justification for the Directors' decision to raise the dividend by 2½ points to 17.5 per cent per annum, subject to deduction of tax, on the Company's Rs. 15 fully paid ordinary shares. Owing to a variety of factors discussed more fully below, the realisation from sale of products and waste and also from processing charges has risen by a little over 10 per cent from Rs. 16.52 crores to Rs. 18.25 crores and the gross profit has improved by about Rs. 36 lakhs to Rs. 204.34 lakhs.

The higher gross profit has naturally meant a bigger provision for the commission payable to the Managing Agents. Accordingly, Rs. 8.67 lakhs (as against Rs. 7.64 lakhs in the previous year) have been provided to meet this liability. The provision for taxation has, however, decreased from Rs. 65.67 lakhs to Rs. 58.32 lakhs owing to two factors. First, with a higher depreciable block, the provision for depreciation has increased by as much as Rs. 13.65 lakhs to Rs. 57.18 lakhs. And secondly, the development rebate claimed (that is, the provision for development rebate reserve made in the accounts plus one-third thereof) has risen quite sharply to Rs. 36.51 lakhs from Rs. 12.93 lakhs a year ago. Moreover, the previous year's tax provision was inclusive of an amount of Rs. 10.02 lakhs being the additional provision for 1961 due mainly to the changes made by the Finance Act, 1962. Further, the tax liability of Rs. 55.65 lakhs for 1962 included a provision for super profits tax whereas the provision for 1963 makes no allowance for S.P.T. and has been determined before the announcement of the current year's budget carrying the sur-tax and a tax on the dividend amount.

The net profit has, therefore, reached an impressive level of Rs. 80.17 lakhs from Rs. 51.51 lakhs the year before. The whole of this improvement has not, to be sure, flowed to the shareholders, as the Directors have wisely decided to plough back nearly two-thirds of the available surplus for meeting the growing needs of the business. From the amount of Rs. 91.02 lakhs available for disposal including Rs. 10.85 lakhs brought in, the Directors have credited Rs. 27.38 lakhs (as against Rs. 9.70 lakhs in 1962) to the statutory development rebate reserve, Rs. 10 lakhs (same) to the debenture-stock redemption reserve, Rs. 7.50 (same) to the reserve to be utilised for the payment of the loan from the National Industrial Development Corporation and Rs. 14.92 lakhs (as against *nil*) to the general reserve. The dividend absorbs Rs. 30.65 lakhs, leaving a much reduced carry forward of Rs. 59,354, as against Rs. 10.85 lakhs brought in.

The following comparative table gives a comprehensive idea of how the Company has fared in the past four years.

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sales and processing charges	18,24.61	16,52.45	17,69.62	17,86.47

Low	33.40	28.50	33.12	34.75	30.50

Note:—All dividends are subject to deduction of tax.

The improvement in the working during 1963 is the combined result of the modernisation scheme and the measure of rationalisation of workloads achieved during the year, despite power for a total of 34 days, including 14 days of no power at all. The small increase in internal yarn prices granted in February 1963 has also contributed to the improved results. Moreover, yarn exports during the year were satisfactory and, in addition, a creditable cloth export performance was achieved during the latter half of the year. Calls for Defence requirements were also met in full.

In their previous year's report, the Directors had stated that the project involving the installation of 450 automatic looms would be implemented in full in 1963. This schedule has been strictly adhered to. Besides, a licence for an additional 500 looms has been received and the essentiality certificate for the import of these looms from Belgium has also been obtained. The construction of the weaving shed at Ambasamudram is making satisfactory progress and is expected to be completed this year. The addition of bleaching, dyeing and finishing plants is also engaging the attention of the Directors and applications have been submitted for the necessary licences to import the most up-to-date machinery.

With a net addition of Rs. 170 lakhs during the year, the gross block has expanded to Rs. 997.93 lakhs. It has been written down to Rs. 456.55 lakhs and, together with work-in-progress, shown at Rs. 513.25 lakhs. Investments, mostly in unquoted shares, are carried in the books at a cost of Rs. 49.70 lakhs while current assets, looms and advances total Rs. 797.97 lakhs. There is no change in the Company's paid-up equity share capital of Rs. 175.03 lakhs. It is supplemented by Rs. 610.01 lakhs in reserves. The "own funds" are thus of the level of Rs. 785.04 lakhs. The outside interest aggregates Rs. 595.87 lakhs comprising Rs. 394.07 lakhs as borrowings (Rs. 114.44 lakhs in debentures, Rs. 49.34 lakhs from the N.I.D.C., Rs. 53.88 lakhs as cost of machinery purchased on deferred payment basis and the balance as loans from banks) and Rs. 181.80 lakhs as current liabilities and provisions.

The Rs. 15 paid shares of the Company are currently quoted at Rs. 35.50 *cum-div.* and fetch a net return of 5.5 per cent per annum.

(*Concluded from next column*)

of the total component parts of single speed lifts are being manufactured locally. The construction work of the Company's factory for house service meters at Hyderabad was completed during the year and initial production of single-phase meters was started in November 1963. It is proposed to manufacture polyphase meters.

Mention was made in last year's report that the Company was contemplating to put up a factory for the manufacture of transformers and switchgear at Sonepat in Punjab. The Directors are pleased to report that the industrial licence for this has been received and that the economics of the project are being further reviewed before a final decision is reached. A contract division, established during the year, has been successful in getting substantial business from the railway electrification for the erection of switching and booster stations in the Eastern zone. The total value of this contract is about Rs. 50 lakhs.

In their last report, the Directors had made mention of a proposed increase in the capital of the Company to finance its continued expansion. Accordingly, 15,500 preference shares of Rs. 100 each were offered to the existing shareholders, out of which only 3,003 shares were taken up by them. This has raised the paid-up share capital of the Company from Rs. 61.10 lakhs to Rs. 64.11 lakhs, made up of Rs. 3 lakhs in preference shares of Rs. 100 each and Rs. 60.94 lakhs in ordinary shares. This is supported by Rs. 28.47 lakhs in reserves, excluding Rs. 6.21 lakhs which are to be paid out as dividend. Besides, application money in respect of the 12,497 preference shares offered to the public is placed at Rs. 12.83 lakhs. Secured loans from banks and the Industrial Finance Corporation have risen from Rs. 94.57 lakhs to Rs. 155.91 lakhs while current liabilities are higher by Rs. 23.09 lakhs at Rs. 133.23 lakhs. New assets worth Rs. 58.06 lakhs were acquired during the year and this has inflated the block account to Rs. 126.10 lakhs. On deducting therefrom Rs. 30.30 lakhs, being the accumulated depreciation, the net block works out to Rs. 95.80 lakhs. Current assets, loans and advances and investments collectively amount to Rs. 298.47 lakhs.

The present market quotation for the Rs. 10 fully paid ordinary shares of the Company is Rs. 14.12 *cum-div.* On an *ex-div.* basis, they fetch a net return of more than 5.2 per cent per annum.

PROGRESS OF ELECTRIC CONSTRUCTION GOOD

DIVIDEND, HOWEVER, SAME

THE year ended 31st October 1963 has been one of steady progress for the Electric Construction and Equipment Company Ltd. [Secretaries and Treasurers: Messrs. Birla Brothers (Pvt.) Ltd., Calcutta], in spite of there having been during the year persistent shortage of raw materials, power, etc. Gross realisation from the sale of products has come within striking distance of the Rs. 3-crore level and the gross profit has reached an all-time high level. The impressive results have quite naturally elated the Directors, as they state in their report to the shareholders that "further expansion programmes have been launched as the Company moves towards new horizons." Aggressive merchandising, with special emphasis on selected markets, has brought about further growth in the highly competitive transformer and electric motor markets, and this appears to be the main reason for the 38 per cent rise in sales realisation from Rs. 206.25 lakhs to Rs. 285.93 lakhs. The larger turnover has helped to raise the gross profit substantially from Rs. 26.54 lakhs to Rs. 40.32 lakhs.

Following this increase in gross profit, the remuneration payable to the Secretaries and Treasurers has risen from Rs. 1.48 lakh to Rs. 1.79 lakh and the provision for taxation has nearly doubled from Rs. 8.80 lakhs to Rs. 15.25 lakhs, even though the provision for depreciation at Rs. 8.97 lakhs is higher by Rs. 3.26 lakhs. The increase in the provision for depreciation is, of course, due to the expansion in the depreciable block during the year itself as well as owing to the fact that a full year's depreciation has had to be provided on the new manufacturing facilities acquired during the preceding year. In spite of these higher essential provisions, the net profit is higher by Rs. 3.56 lakhs at Rs. 14.11 lakhs. Out of this, as much as Rs. 8 lakhs, as against Rs. 5.05 lakhs a year before, has been transferred to reserves. The dividend on the 10-rupee ordinary shares once again remains unchanged at 10 per cent per annum, subject to deduction of tax, and claims Rs. 6.09 lakhs.

The steady progress made by the Company in the past four years is clearly brought out in the following comparative table.

(In lakhs of rupees)

	For the year ended 31st October			
	1963	1962	1961	1960
Sale proceeds (gross)	285.93	206.25	167.94	119.20
Other income	13.53	11.20	5.84	5.22

Transformers accounts, as noted before, for the major portion of the Company's business during the year under report. Their production at both the Cossipore and Visakhapatnam factories increased further and a total of 331,585 kVA were produced, as against 254,035 kVA during the previous year.

The Company's unit at Budge Budge, producing switchgears and lifts, maintained a steady rate of progress during the year under review. A total turnover of approximately Rs. 42.20 lakhs has already been achieved during the year in the new factory. The Government has approved the collaboration agreement which the Company has entered into with Messrs. Ateliers de Constructions Eletriques de DELLE of France for the manufacture of a wide variety of switchgears. The work of manufacturing switchgears under this collaboration is now being pursued vigorously and it is hoped that production would start towards the beginning of 1965. Progressive manufacture of lifts is also continuing satisfactorily and now approximately 95 per cent

Notices

THE UNITED COMMERCIAL BANK LIMITED

Registered Office:
2, India Exchange Place
CALCUTTA-1

NOTICE

NOTICE IS HEREBY GIVEN THAT THE TWENTY-FIRST ANNUAL GENERAL MEETING of the Members of THE UNITED COMMERCIAL BANK, LIMITED, will be held at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, on Wednesday, the 8th April, 1964, at 4 p.m., to transact the following business:—

1. To receive and adopt the Report of the Directors and the Audited Balance Sheet as on 31st December, 1963 and Profit and Loss Account for the year ended 31st December, 1963;
2. To declare a Dividend;
3. To appoint a Director in the place of Mr. G. D. Birla who retires under Article 92 of the Articles of Association of the Bank, and to consider and, if thought fit, to pass the following resolution of which special notice as required by Section 281 of the Companies Act, 1956, and in accordance with Section 190 thereof, has been received by the Bank;

   "That Mr. G. D. Birla, who has attained the age of 69 years, be and is hereby re-appointed a Director of the Bank and that the age limit, prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."
4. To appoint two Directors in the place of Mr. I. P. Goenka and Mr. Y. N. Mafatlal who retire under Article 92 of the Articles of Association of the Bank and, being eligible, offer themselves for re-appointment;
5. To appoint a Director in the place of Mr. R. L. Nopany who retires under Article 92 of the Articles of Association of the Bank but does not seek re-appointment and to consider and, if thought fit, to pass the following resolution of which due notice in writing as required by Section 257 of the Companies Act, 1956, has been left at the office of the Bank:

   "That Mr. Mohanlal Nopany be and is hereby appointed a Director of the Bank."
6. To appoint Auditors for the current year and to fix their remuneration.

SPECIAL BUSINESS

To consider and, if thought fit, to pass with or without modification, the following resolutions as Ordinary or Special Resolutions as indicated against each Resolution:

7. (As an Ordinary Resolution of which due notice in writing as required by Section 257 of the Companies Act, 1956 has been left at the office of the Bank):

   "That Mr. S. T. Sadasivan be and is hereby appointed a Director of the Bank."
8. (As a Special Resolution if the Resolution referred to in item No. 7 is passed): That the consent of the Company be accorded to the holding by Mr. S. T. Sadasivan, on his appointment as a Director, of an office or place of profit under the Company, namely, as an officer on leave preparatory to retirement.
9. (As an Ordinary Resolution: That the payment of Rs. 6,159.12 out of the unappropriated balance of Rs. 25,151.41 at credit of the Profit and Loss Account on 31st December 1962 being the difference in the amount of dividend due at Rs. 0.375 per share, *less* tax, and that authorised by the Twentieth Annual General Meeting to be paid at Rs. 0.250 per share, *less* tax, on 49,273 New Shares (Part of 80,780 New Shares) be and is hereby confirmed.
10. (As a Special Resolution if the Resolution referred to in item No. 7 is passed): That pursuant to the provisions of Section 314 of the Companies Act, 1956, consent be, and is hereby accorded to Mr. P. Nagarajan who is a relative of Mr. S. T. Sadasivan whose name has been proposed for appointment as a Director, holding and continuing to hold an office or place of profit under the Company, namely, an employee of the Company on the terms and conditions as to remuneration specified in the Explanatory Statement annexed hereto and on such other benefits, terms and conditions as may be applicable as per Bank's rules from time to time and the Board of Directors or a Committee thereof be and they are hereby authorised to grant a higher increment, in the scale at their discretion.

Note.—1. A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER.

2. (*a*) The Transfer Books of the Bank will be closed from Monday, the 23rd March, 1964 to Wednesday, the 8th April, 1964, both days inclusive;

(*b*) The dividend, if sanctioned, will be payable on and after the 9th April, 1964, to those Members whose names appear on the Company's Register on the 8th April, 1964;

(*c*) Dividend Warrants will be posted to the Members at their registered addresses or in accordance with their mandates. Members are requested to advise change in their addresses, if any;

(*d*) The Explanatory Statement as required under Section 173 of the Companies Act, 1956, has been forwarded to the Members of the Company.

By Order of the Board,
S. T. SADASIVAN,
General Manager.

CALCUTTA, 6*th March*, 1964.

Per Pro. ASPINWALL & CO., LTD.,
V. P. THOMAS,
Managing Agents.

COCHIN-1,
7th March 1964.

SYNOPSES OF COMPANY REPORTS

Indian Wood Products Co., Ltd.

(*Managing Agents*: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta.)

Forty-fourth Annual General Meeting—24th March 1964.

Working Results:

	For the year ended 30th September (In thousand rupees)	
	1963	1962
Sales	64,37	68,89
Gross profit	20,49	24,86
To Managing Agents' remuneration	1,61	2,25
Transfer to depreciation	94	89
,, ,, provision for taxation	8,85	11,81
,, ,, ,, Super Profits tax	5,75*	Nil
Net profit	3,34	9,91
Appropriations:		
Transfer to general reserve	1,15	2,50
,, special reserve	42	Nil
To interim dividend (taxable) ordinary	2,00 (10%)	2,00 (10%)
Proposed final dividend (taxable) ordinary	3,00 (15%)	4,00 (20%)
Carry forward	5	3,26

Market value of ordinary shares (in rupees):	1964	1963	1962
High	29.94	32.00	33.50
Low	28.00	28.50	30.75

* Includes Rs. 2,31,413 for Super Profits Tax for 1962.

Extracts from the Directors' report: As foreseen last year, the increase in the cost of raw materials has affected the profits. This has been further aggravated by the dull market conditions for Katha as a result of which the Company had to reduce the selling price in the middle of the year. The market has now become more stable, but the Company continues to be faced with competition from small-scale factories. In addition the Company still continues to buy Khair trees from the auctions and, now that it has used up its stocks of lower priced timber, there will be a further small increase in the cost of raw material. These factors may affect profits in the current year to some extent.

Accounts in brief as at 30th September 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	20,00,000	Gross block	24,75,890
Reserves and surplus	29,58,721	—Depreciation	21,67,063
Other liabilities	58,04,606	Net block	3,08,827
		Current assets	1,03,09,521
		Investments	2,000
		Cash	1,42,979
	Rs. 1,07,63,327		Rs. 1,07,63,327

* Paid up capital consists of 2,00,000 ordinary shares of Rs. 10 each. Of the above 80,000 shares have been allotted as fully paid up bonus shares, by way of capitalisation of reserves.

Permanent Magnets Ltd.

(*Chairman*: Mr. Madanmohan R. Ruia, Bombay.)

Third Annual General Meeting, Baroda—23rd March 1964.

Extracts from the Directors' report for the year ended 31st December 1963:

The year's accounts show a net loss of Rs. 3,47,314 as against the loss of Rs. 1,80,987 in the previous year. Depreciation as required under the Companies Act 1956 has been written off in full. Development rebate amounting to Rs. 3,72,649 will be provided as and when there is sufficient profit. The net loss of Rs. 5,28,926 which includes Rs. 1,79,647 being the loss brought forward from the last year has been carried forward.

Finance: On 29th October 1963 the Company executed a mortgage in favour of I.C.I.C.I. Limited for a foreign exchange loan equivalent to Rs. 13,07,000 out of which a sum of Rs. 71,190.48 equal to U.S. $14,950 being the first instalment was repaid during the year 1963. On 2nd January 1964 another mortgage for a loan of Rs. 10,00,000 was also executed by the Company in favour of the United Commercial Bank Limited. Up to 31st December 1963 the Company had drawn Rs. 9,27,042.71 out of this loan. The Company has also entered into a tripartite agreement with I.C.I.C.I. Limited and the United Commercial Bank Limited to the effect that both the mortgages referred to above shall rank *pari pasu*.

Progress of the Project: The Company's factory was formally inaugurated by Pujya Shri Ravi Shankar Maharaj, the well-known Sarvodaya Leader on 16th February 1963. Up to 31st December 1963, 75 per cent machinery and spare parts worth Rs. 14,40,000 required to produce at the rate of 180 tons of finished magnets per annum had arrived. Machinery and spare parts worth Rs. 5,00,000 are expected to arrive by 30th March 1964, and should be installed by the end of April 1964.

Raw Materials: The Company has received a licence for import of raw materials for the licensing period—April 1963 to March 1964.

Sales: The turnover of the Company during the year of Rs. 6,50,975 is much lower than expected. This according to the Directors was mainly on account of the fact that the Government of India had issued import licences to actual users of permanent magnets even after this Company had started production. The Company strongly protested to the Government of India about the serious problem it had created for the Company. Thereupon the Company informed that the import of permanent magnets has now been banned. The stocks thus imported in the meantime by some of the prospective customers are expected to last for 9 to 12 months and in the meanwhile the Company has made all out efforts to book the orders in advance, which so far amount to Rs. 20 lakhs approximately. The sales during the current year are expected to move up to Rs. 40 lakhs approximately and it is expected that with the appointment of sole selling agents they may improve still further.

The Directors decided that instead of the Company having its own sales organisation, it should appoint sole selling agents for the products of the Company and accordingly they have appointed Messrs. Shamun Private Limited as the sole selling agents for the Company's products subject to the same being approved by the shareholders in the General Meeting. Messrs. Shamun Private Limited have very good contacts and have agreed to organise all-India network of the sales department at their cost.

The Company will be ready to produce full licensed capacity of 180 tons of permanent magnet per annum, by the end of May 1964 when all the machinery will have arrived and installed; and with the sincere efforts that are now being made it may not be long before the Company is able to operate at its full capacity.

The loss that has been shown is due to the fact that the Company operated much below its installed capacity during the whole of the year 1963 for reasons narrated above. The Directors, however, expect that the year 1964 will see better results.

Expansion: The Company has received a licence for the manufacture of 180 tons of *Hard Ferrite (Ceramic) Magnets* per annum. The proposed project is being studied by the Company's collaborators and ourselves.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	24,98,125	Gross block	34,57,329
Other liabilities	32,92,459	—Depreciation	3,30,289
		Net block	31,27,040
		Machinery-in-transit	2,22,743
		Technical know-how	1,10,000
		Current assets	17,09,068
		Miscellaneous expenditure	91,231
		Cash	1,576
		P.L. a/c Deficit	5,28,926
	Rs. 57,90,584		Rs. 57,90,584

* Paid up capital consists of 25,000 Equity shares of Rs. 100 each. Calls unpaid amount to Rs. 1,875.

Chitavalsah Jute Mills Co., Ltd.

(*Managing Agents*: Messrs. McLeod & Co., Ltd., Calcutta.)

Annual General Meeting—12th March 1964.

Working Results:

	For the year ended 31st July (In thousand rupees)	
	1963	1962
Sales—gunnies and jute	1,87,18	2,25,39

Market value of ordinary shares (in rupees):	1964	1963	1962
High	10.12	11.37	13.06
Low	10.00	9.75	11.12

* Loss after providing for Managing Agents' remuneration, depreciation and provision for taxation.
† In respect of previous years.
‡ For the two years ended 31st July 1961 and 1962.

Extracts from the Directors' report: With plentiful supplies of raw material the Company's Mills continued to work in accordance with the working time agreement of the Indian Jute Mills Association. The number of looms in operation, however, varied with purchases of loom hours or utilisation of the Company's own accumulated loom hours during the year under review. The 5 per cent sealed loomage was discontinued on the 23rd December 1962, and working hours of the registered complement increased from 48 to 49 per week with effect from 17th June 1963. An average of 296 looms worked in double shift 96 hours per week during the year and, at the time of writing this report, 280 looms are working on this basis. Intermittent power cuts led to the loss of 12½ working hours. Modernisation of Mill Machinery is continuing.

Labour relations have not been satisfactory but although there were 10 stoppages during the year, they were for the most part of short duration, the longest being for two days only. Mill efficiency has been well below standard due to the adoption of a "go slow" policy by the workers and subsequent to the close of the year there were strikes from 21st August to 18th September 1963, and from 4th to 10th October 1963. Since then mill efficiency has improved.

Large jute crops have once again made fibre freely available and in addition to normal purchasing, quotas were taken up on Buffer Stock Account as well as those issued periodically by the Jute Commissioner. The Company was thus obliged to hold large stocks of jute resulting in considerable financial strain.

Trading conditions were not comparable with previous years as a result of recent competition in the South Indian market where previously the Company's Mill used to enjoy a monopoly for sacking goods, which is the main manufacture. With the loss of certain conventional foreign sacking markets to Pakistan, the Calcutta Mills have entered the South Indian market and sold their goods at Calcutta quotation rates. This necessitated selling the Mills production at much lower rates than previously and, with higher wages paid to workers compared with their counterparts in West Bengal as a result of Tribunal Wage Awards, together with low efficiency, many sales had to be made at less than cost to meet the competition. A similar situation arose in the twine market with the establishment of two new mills in the same area for the manufacture of this product.

With the strikes that have taken place, increases in workers wages by implementing the recommendations of the Jute Wage Board and further competition in the South Indian market, it is anticipated that prospects for the current year will show little improvement.

Accounts in brief as at 31st July 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	35,15,000	Gross block	1,38,59,292
Debentures†	10,69,000	—Depreciation	87,51,922

Transfer to general reserve	2,41	Nil
To dividends (Taxable) Preference	*	86
,, ,, ,, Ordinary	*	1,54
	(14%)	(14%)
Carry forward	(a)	12

Market value of ordinary shares (in rupees)	1963	1962
High	160.00	155.00
Low	127.50	140.00

† This includes Rs. 25,500 for Super Profits Tax. (*a*) only Rs. 729.
* The dividends for 1963 are to be paid out of the General reserve.

Extracts from the Directors' report: With addition to the plant and machinery, the Company's production of *Railway Wagons* progressively increased during the year.

The hydraulic *Floor Cranes* and *Truck Cranes* which the Company has been manufacturing with technical know-how in foreign collaboration are now a known product in the market. Thanks to the efforts of the engineers and the workmen for this achievement in the new line within such a short time.

The Company has already started marketing of its own *Concrete Vibrators* through M/s. Voltas Limited, Bombay, who have been appointed as the sole distributors for this purpose. The early response to this new item of production is also quite encouraging.

Negotiations have now been concluded for technical collaboration with a European firm for the manufacture of *Fork Lifts* by the Company. The Government of India has already approved the terms of collaboration and it is expected that the Company would soon be in a position to commence the production of this new item for which there is immense scope in this country. The Company intends to raise further capital for its expansion programme by issuing right shares to the existing equity shareholders.

Contentment of labour was always the policy of the management. Apart from the payment of bonus, the Company was always sympathetic to the grievances of the workers and offered to do all the best that could be done. It is a priced hope of the management that the labour co-operation will continue in the same friendly spirit as hitherto.

The Company is for decades in the line of Civil Engineering. In spite of the competition the Company has continued to enjoy the confidence and this fact is quite well testified by the volume of new and new jobs secured by the Company. It needs however, be mentioned here that the profitability in this line is considerably affected by the vagary of conditions, increasing costs and uncomfortable supply position. The progress on the two big jobs which are being carried out by the Company on a joint venture basis is fairly satisfactory.

The directors report that the Company was able to make a good progress regarding opening of a branch office in Nigeria. It would not be out of context to mention it here that at the time of submitting this report the Company is already in possession of a permission from the Nigerian Government for branch office in that country.

Accounts in brief as at 31st July 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	22,00,000	Gross block	49,41,793
		—Depreciation	30,54,773
Reserves and surplus	6,90,176	Net block	18,87,020
Other liabilities	1,55,27,314	Current assets	1,63,69,571
		Investments	93,417
		Cash	67,782
	Rs. 1,84,17,490		Rs. 1,84,17,490

* Paid up capital consists of 11,000 Ordinary shares of Rs. 100 each; 5,500 —7.86 per cent taxable cumulative first preference shares of Rs. 100 each and 5,500 —7.86 per cent. taxable second cumulative preference shares of Rs. 100 each.

TREND OF MARKETS

MONEY TIGHT AGAIN

(From Our Own Correspondent)

BOMBAY, 11*th March*

The short-term money market continued to rule pretty tight during the week under review. Demand for credit was persistently on a high level, whereas the supply of funds actually available was insufficient to meet it. Consequently, borrowers had to look around for accommodation. The call rate among the exchange and larger Indian banks was maintained throughout at the high level of 6 per cent. The rate among the smaller Indian banks also remained unchanged at 6 per cent, with borrowers over. Calcutta, too, reported tight money conditions, the call rate standing at 6¼ per cent, same as last week.

The growing demand of money is reflected in (1) a sharp expansion of Rs. 42.42 crores to Rs. 2,465.57 crores in notes in circulation during the week ended 6th March,

(2) a marked rise of Rs. 39.40 crores to Rs. 106.94 crores in loans and advances made available by the Reserve Bank to scheduled banks in the same week,

(3) decline of Rs. 3.38 crores to Rs. 82.47 crores in the deposits of scheduled banks with the Reserve Bank, and

(4) continued poor support for the 91-day Government of India Treasury Bills, tenders for which opened on Tuesday the 10th inst. The total amount offered was Rs. 2.12 crores, which was just Rs. 12 lakhs more than what was invited and also accepted. The average rate of accepted tenders was unchanged at Rs. 2.360 per cent per annum. The Intermediate Treasury Bills, however, evoked fair-sized support, the amount of Bills actually sold from the 4th to 7th inst. being Rs. 132.75 lakhs, as against Rs. 60 lakhs a week before and Rs. 20 lakhs two weeks before.

There was a further improvement of Rs. 2.07 crores to Rs. 125.63 crores in India's foreign exchange reserves during the week ended 6th March. The improvement occurred despite the appreciable drop of Rs. 7.93 crores to Rs. 13.17 crores in balances held abroad. For this drop was more than made good by the rise of Rs. 10 crores to Rs. 112.46 crores in the foreign securities held in the Issue Department of the Reserve Bank.

The total credit made available by scheduled banks to their clients went up by another Rs. 11.11 crores to Rs. 1,758.74 crores during the week ended 28th February. Since their deposits increased by only Rs. 4.5 crores to Rs. 2,442.76 crores, the banks had to take recourse to larger borrowings from the Reserve Bank. The total of such outstanding borrowings advanced by Rs. 15.08 crores to Rs. 67.20 crores, of which those against usance bills accounted for Rs. 32.51 crores, a rise of Rs. 9.28 crores. Investments were higher by Rs. 4.90 crores at Rs. 651.23 crores.

Thanks to the persistent tight money conditions, the Gilt-edged market ruled dull. Institutional support was poor. Consequently, the business put through was meagre, with values remaining practically unchanged.

In the foreign exchange market, the banks' selling and buying rates for U.S. dollars remained unaltered, the former at Rs. 478.50 per $100 and the latter at Rs. 475. In New York, the pound sterling firmed up a little *vis-a-vis* the dollar, the spot rate rising by 0.020 cent to 279.810-279.840 cents and the three months' forward by 0.030 cent to 279.360-279.390 cents.

* * * *

The total cash contributions brought into the Central account of the National Defence Fund at New Delhi up to the end of February 1964 amounted to Rs. 58.17 crores. Of this amount, Rs. 28 lakhs came from the U.K. and Rs. 63 lakhs from other countries. The total of contributions in gold and gold ornaments was of the order of 2,285,000 grammes (equal to about 196,000 tolas).

COTTON FUTURES STEADY

(From Our Own Correspondent)

BOMBAY, 11*th March*

The cotton futures market ruled generally steady during the week under review. The main influencing factor was the expectation of some relaxation in the control measures imposed on Gujarat cotton as a sequel to the State Government's intervention. The rejection in survey of 100 bales of Punjab 216F cotton tendered against the March contract also imparted some strength to the market. These two developments more than offset the effect on the market of the relatively large tenders issued on the second and third notice days. As compared with a mere 50 bales tendered on the first notice day, 250 bales each were issued on the second and third notice days, bringing the total tenders to 550 bales. The expected global import quota for foreign cotton, which had induced some easiness in cotton futures last week, did not adversely affect sentiment this week and cotton futures consequently ruled steady. The decisions of the Cotton Advisory Board, which met on the 10th inst., had no effect on the market because they pertained to the coming season. The Board is reported to have appointed a special committee to work out realistic ceilings of different varieties of cotton. It is believed to have discussed the price differentials of various types of cotton in the context of the current agitation for an upward revision of the ceiling prices for certain varieties of cotton. The only subject of immediate relevance to cotton trade discussed at the meeting is said to be the premium payable on P.L. 480 cotton.

The Jarilla March 1964 contract opened the week at Rs. 770, Re. 1 higher than the previous close of Rs. 769 and, after firming up to Rs. 778 yesterday, declined to Rs. 776 today. The Jarilla May contract too depicted an identical trend. After opening higher at Rs. 739.50, it steadily improved to Rs. 749 on Monday, the 9th inst., but receded to close lower at Rs. 743.50 today.

The following table indicates the trend of prices of the contracts during the week:—

(In rupees per three quintals)

	11-3-64	*High*	*Low*	4-3-64
Jarilla March ...	774	778	765	769
Jarilla May ...	743.50	749	737.50	737.75

Trading in the spot market at Sewri continued to be on a restricted scale. Prices, especially of varieties like CO2, L147, Digvijay and Laxmi receded, following the announcement of P.L. 480 allocation for American cotton. Spinners adopted a wait-and-watch attitude, pending a further fall in prices. Export demand for Bengal *Deshi* continued to be dull, thanks to absence of enquiries from Japan and the Continent.

In the foreign section good demand was reported for American cotton. The Textile Commissioner is reported to have advised mills to submit their requirements of American cotton of 1" and below, as also of 1.1/16" and above, immediately. After thus assessing the mill requirements, actual allotment letters will be issued to them. It is said that the entire quantity of 375,000 bales will be imported and any balance between the actual mill purchases and the total allocation remaining will be lifted by the Indian Cotton Mills' Federation. It is also reported that a premium of Rs. 35 per bale will be levied on American cotton stapling 1" and below. It may be mentioned that there was no such premium on cotton of this staple length in the past.

The following are the latest available quotation—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Kalyan 965; Hubli Laxmi 1,210; Nagar 930; American 1,265-1,360; Sudan XP3L 1,610.

SILVER EASIER

(From Our Own Correspondent)

BOMBAY, 11*th March*

Silver prices suffered a further setback this week on increase in arrivals and absence of speculative support. Gold, too, closed lower after early steadiness, but sovereign ruled firm.

The daily average inflow of the white metal rose from 12 bars to 15 bars, while the offtake dropped from 10 bars to seven bars. Buyers seemed to have withdrawn from the market on expectations of a further decline in the price. After opening one point higher at Rs. 260.50, the price steadily moved down to close at Rs. 255.50—the week's lowest level.

Until Saturday the 7th inst., 14-carat gold was well held at the last week's closing level of Rs. 65. But, subsequently, the price eased gradually to finish at Rs. 64. Pure gold was unofficially quoted one point lower over the week at Rs. 107. Sovereign was unchanged at Rs. 88.

The international price for gold moved up further from $35.08⅜ to $35.09¼. The ready rate, in London, closed one-half penny higher at 250*s.* 10*d.* Silver prices in New York and London ruled firm at their last levels.

The following table shows the trend of prices during the week under review:

	11-3-1964 (closing)	High	Low	4-3-1964 (closing)
SILVER				
Ready (996 fine) ..	Rs. 255.50	Rs. 260.50	Rs. 255.50	Rs. 259.50
GOLD				
Ready (14 carat) ..	64.00	65.00	64.00	65.00
Sovereign ..	85.00*	—	—	85.00*
London—				
Gold ..	250*s.* 10*d.*	250*s.* 10½*d.*	250*s.* 9½*d.*	250*s.* 9½*d.*
Silver Ready ..	111½*d.*	—	—	111½*d.*
Silver Forward	111⅝*d.*	—	—	111⅝*d.*
New York—				
Silver ..	129.3 cents	—	—	129.3 cents

* As on 24-6-1963.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce.

ART SILK YARNS FIRM

(From Our Own Correspondent)

BOMBAY, 11*th March*

Art silk yarns maintained a firm tone this week. Prices recorded further moderate gains on selective support and absence of selling pressure. Staple fibre yarns also recorded some improvement. Cotton yarns continued steady.

National Rayon 120D advanced from Rs. 12.65 to Rs. 12.98 a kilo and Century 75D gained as much as 38 nP to Rs. 19.51. Among 2 x 40 spot staple fibre yarns, Kohinoor were marked up from Rs. 9.37 to Rs. 9.54. Cotton yarns were generally unchanged.

The Indian Cotton Mills Federation has requested the Union Government to adjust the rates of yarn compounded duty in respect of the lower medium, higher medium, fine and superfine categories so that the rates would correspond to the actual consumption of yarn. It has said that the notified rates should be reduced to 3.3 nP for lower medium cloth, 4.1 nP for higher medium, 6.1 nP for fine and 4.6 nP for superfine cloth in place of 4.4 nP, 5.5 nP, 7.2 nP and 8.4 nP, respectively. In support its plea for such reduction, the Federation has stated that the purpose in prescribing for the first time separate rates of duty for unsized yarn and sized yarn is to ensure that (*a*) the powerlooms which buy yarn in hanks should be required to bear the appropriate yarn duty at the stage of sizing so that they do not secure undue advantage of the concessional hank yarn rate devised to benefit the handloom industry, and (*b*) the excise disparity between mill cloth and powerloom cloth be reduced from the present excessive levels. If this twin purpose is to be served, the Federation has argued, it seems only reasonable that composite mills which obtain unsized yarn from their spinning section and convert that yarn into cloth (which is subject to a basic excise duty, a handloom cess and an additional excise duty at full rates) should be required to bear the yarn duty at rates applicable to unsized yarn.

Even if it is assumed that, in regard to yarn which is subsequently sized in the composite mills, the yarn duty should be paid at sized yarn rates, since it is only the warp yarn (constituting about 50 per cent of the yarn content of cloth) which is sized, the compounded yarn duty should be the average of the sized and the unsized rates. On this assumption, the Federation has contended, the compounded duty rates should be 3.5 nP for lower medium cloth, 4.3 nP for higher medium, 6.7 nP for fine and 5.1 nP for superfine cloth.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	11-3-1964	4-3-1964
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	12.98	12.65
Century 75D	19.51	19.18
S. I. Viscose 150D	13.46	13.46
Staple fibre yarn (40 x 2)—		
Kohinoor (per kg.)	9.54	9.37
Century	9.28	9.28
Cotton yarn (per bundle of 10 lbs.)—		
10s Navsari	19.37	19.37
20s Podar	24.25	24.25
32s Hisar	32.00	32.00
40s Mahindra	42.00	42.00
60s Pioneer	65.00	—
80s Gokak	85.00	85.00

HEDGE TRADING IN GROUNDNUTS

(From Our Own Correspondent)

BOMBAY, 11*th March*

After our last report was printed, the Forward Markets Commission announced its decision to permit the Bombay Oilseeds and Oils Exchange Ltd. (Bombay) and the Saurashtra Oil and Oilseeds Association Ltd. (Rajkot) to commence trading in groundnut and groundnut oil for July 1964 delivery from such date as the Boards might fix, subject to certain measures of control, the details of which are given later in the report. The new measures of control and the Commission's directive for shifting the trading ring to the East India Chamber of Commerce at Patwa *chawl* caused considerable disappointment among traders. As a mark of protest, traders refrained from doing any business in futures on Friday, Saturday and Monday. On Friday the 6th inst., the Exchange authorities met the Chairman of the Commission and urged him to raise the ceiling prices for groundnut and groundnut oil to reduce the heavy margins and not to press for the shifting of trading ring. The Chairman, however, pointed out that the Commission would concede the plea for higher ceiling only if the traders agreed to heavy margins. Feeling disappointed at the outcome of the meeting, traders, as already stated, abstained from entering into any fresh transaction in futures for three days. Following, however, the assurance given by the President of the Exchange that he would meet the F.M.C. authorities on Thursday the 12th inst. and urge them to reconsider the decision, futures trading was resumed yesterday (Tuesday).

The measures of control stipulated by the Forward Markets Commission for the commencement of hedge trading in July 1964 groundnuts and groundnut oil at Bombay and in Saurashtra are as follows:

Trading in groundnut July 1964 delivery shall be subject to a maximum price of Rs. 246.00 per 250 kg. at Bombay and Rs. 245.00 per 250 kg. for Saurashtra. In respect of hedge contracts in groundnut oil for July 1964 delivery, the maximum price shall be Rs. 33.50 per tin of 16 kg. at Bombay and Rs. 33.00 per tin of 16 kg. for Saurashtra.

Whenever the closing price of the July 1964 delivery in groundnut and groundnut oil exceeds Rs. 240 per 250 kg. and Rs. 32.60 per tin, respectively, at Bombay and Rs. 239 per 250 kg. and Rs. 32.10 per tin in Saurashtra, a margin deposit shall be payable on the long open position of a member on his own account and of each of his clients as follows:

Groundnut		Groundnut oil	
Open position (In tonnes)	Rate of margin (Per tonne)	Open position (In tins)	Rate of margin (Per tin)
First 250	Nil	First 6,250	Nil
250-1,000	Rs. 200	6,250-25,000	Rs. 6.80
Above 1,000	Rs. 400	Above 25,000	Rs. 13.60

For the purpose of the above margin payment, the long open position of the member on his own account, the long open position of each of his clients and the contracts of clients appropriated by the member shall be taken into account. The margin deposit will not, however, be payable in respect of the long open position acquired by a member or his client as a hedge against his unfulfilled export commitments in H.P.S. Groundnut or groundnut oil to a foreign country, provided the member submits a declaration in the prescribed form to that effect.

Every member, before entering into hedge contracts on behalf of a non-member client, shall obtain a declaration from the non-member client in the prescribed form. The declaration shall be open for inspection by the association and the Commission.

If a client of a member has not paid the required margin deposit, it shall be open to the Board to direct the member to square up the part of the open position of the client in respect of which margin has not been paid, and such squaring up may be either at the market rate or at such rate as may be fixed by the Board.

The existing limits on the weekly rise in prices, namely, Rs. 5.5 per 250 kg. of groundnut and Re. 0.80 nP per tin of groundnut oil will continue to be in force for the July 1964 deliveries. The limit on the net open position of individual members will, however, not be applicable in respect of such deliveries.

Over the week, Groundnuts were steady. The April 1964 contract began the week at Rs. 239.37 as against the previous close of Rs. 239.25, and touched Rs. 239.50, yesterday, before closing at Rs. 239.25 today. Nizam bold ready picked up 37 nP to Rs. 51.37. Khandesh quality spurted by a rupee to Rs. 52.25. Oil ex-mill, however, lost 15 nP to Rs. 20.10. Railway receipt shed 15 nP to Rs. 19.65. The groundnut oilcake expeller moved down from Rs. 413.50 to Rs. 406.50.

Castorseeds ruled irregular. The March 1964 contract put on 75 nP to Rs. 175.25, while June contract sagged by Re. 1.12. Spot ready Madras was marked up by 12 nP to Rs. 34.87. Kanpur bold was dull at Rs. 33.50. Oil B.S.S. lost 5 nP to Rs. 15. Oil Commercial declined by 10 nP to Rs. 14.50.

Linseed March contract strengthened by 19 nP to Rs. 40.25, but June contract was lower by 18 nP to Rs. 40.69. Bold ready was neglected at Rs. 39.75, as against Rs. 40.25. Oil ready eased by 20 nP to Rs. 15.90.

Business put through the cottonseeds was considerably restricted. April contract stood at Rs. 103.50, as against Rs. 104 last week-end.

The following table shows the closing prices of oilseeds and oils on Wednesday 11th March as compared with those of two previous weeks:

	11-3-1964	4-3-1964	26-2-1964
	Rs.	Rs.	Rs.
Groundnuts			
April 1964 contract	239.25	239.25	237.37
Nizam bold	51.37	50.50	49.62
Khandesh quality	52.25	51.25	50.75
Oil ex-mill	20.10	20.25	19.75
Oil Rly. Receipts	19.65	19.80	19.35
Castorseed			
March 1964 contract	175.25	174.50	171.25
June 1964 contract	174.25	175.37	172.50
Ready Madras	34.87	34.75	34.37
Ready Kanpur	33.50	33.50	33.12
Oil B.S.S.	15.00	15.05	14.85
Oil commercial	14.50	14.60	14.85
Linseed			
March 1964 contract	40.25	40.06	39.75
June 1964 contract	40.69	40.87	40.44
Bold ready	39.75	40.25	40.25
Linseed oil	15.90	16.10	16.10
Cottonseed			
April 1964 contract	103.50	104.00	104.50

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

DEMAND FOR TEA IMPROVES

(From Our Own Correspondent)

CALCUTTA, 10*th March*

Good demand marked yesterday's tea export sale. The trend was influenced by reports of unsatisfied demand for leaf in other auction centres, namely, Colombo, Cochin and London. The progressive decline in the U.K. tea stocks to 166 million lbs. in the week ended 28th February from 167½ million lbs. in the previous week—in the week ended 14th February stocks were still higher at 170 million lbs.—was significant. Although this statistical position is encouraging, the growing deterioration in conditions in the Calcutta port as a result of the shortage of lighters and berths is causing anxiety among the trade, because tea exports in recent weeks have fallen more than the arrivals.

While noting the Tea Board Chairman, Mr. A. S. Bam's claim that the significant increase in tea exports in 1963 despite a shortfall in output was due to the rationalisation of the physical structure of exports as well as the abolition of the export duty, the tea trade has regretted that the Government is making good the export-tax revenue loss by increased receipts from excise duties. While the full benefit of the abolition of the export duty has been passed on to the consumer abroad, the burden of increased excise duty is falling on the industry. This factor, in addition to the lower output and lower average realisations in Calcutta auctions, has made the dividend outlook for tea companies in this part of the country for the last accounting period very dismal. The Tea Association of India has expressed concern at the continuance of the heavy excise duty. It has, however, welcomed the concession given to the tea industry in the shape of a rebate of corporation tax equivalent to 10 per cent of the income-tax and super-tax normally payable.

Mr. Bam is reported to have claimed that, in addition to finding new markets for Indian tea abroad, the Board is attempting to increase internal consumption. However, it is generally well known that, in its anxiety to increase exports, the Board has discontinued all internal campaigns for quite sometime. Against this background, the impressive increase in exports last year, despite an admitted shortfall in production, would naturally have stemmed from a shortfall in internal consumption. According to a tea consumption survey undertaken by the Tea Board in certain selected towns in six States, namely, Kerala, Madras, Andhra, Mysore, Maharashtra, and Gujarat, the main reason why people in the majority of towns selected did not take tea is the "lack of habit." This finding is in consonance with the industry's belief that the tea habit in India is not spreading, and this factor gives poor incentives to such gardens as are only capable of producing the inferior teas for which demand overseas is poor. It has often been pointed out that at a time when the standard of living of the people is rising, the lack of propaganda for tea in the newly growing industrial areas is giving an advantage to other soft drinks.

Even in the U.S.A., according to Mr. Geo N. Witt, President of that country's Tea Association, tea competes with cola, fruit and vegetable drinks, coffee, milk, beer, whisky and wine. In India, the industry and trade think that the popularity of soft drinks, squashes, green coconuts, and fruit juices and mixtures is on the increase at the cost of tea. They, therefore, urge the early revival of internal campaigns for tea, so that the tea habit in India may spread and the industry may be enabled to increase production. Speaking at the annual meeting of the Indian Tea Association, Mr. S. P. Sinha, Chairman, declared that an insurance against a drop in world demand was in the Government's recognising importance of the internal market which acted as a cushion to overproduction.

Referring to the tax structure, Mr. Sinha thought that sterling companies at least stood no chance of relief from tax burdens as a result of this year's Union Budget proposals. For, the aggregate of income-tax and super tax for non-resident companies has been increased from 63 per cent to 65 per cent, and they are not entitled to the 20 per cent rebate on surtax. He also thought that the relief accorded to resident companies would be offset by the 7½ per cent tax on dividends distributed.

Dusts on offer at the last week's internal sales totalled 32,180 packages which met with a good general demand. Good C.T.Cs were readily absorbed. Medium C.T.Cs were also about steady, but the plain liquoring types eased. Clean orthodox teas were in good demand at lower rates. Legg-cut teas came to an easier market. "Teas for price" eased visibly. The quotations per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust Rs. 6.20 to Rs. 6.70, medium Assam C.T.C. dust Rs. 4.95 to Rs. 5.25, legg-cut dust Rs. 4.70 to Rs. 4.90, medium Assam dust Rs. 4.60 to Rs. 5.00 and plain orthodox dust Rs. 4.30 to Rs. 4.60.

Leaf on offer at yesterday's export sales totalled 65,181 packages attracted a good general demand at irregular rates. Quotable teas being insufficient, no quotations were given. The bright liquoring and clean orthodox and C.T.C. teas met with good demand, while the plainer liquoring and more fibrous teas eased. Legg-cut teas met with steady demand at lower rates. Whole leaf grades were firm, with buyers showing preference to the cleaner teas. Flavourv Darjeelings were readily absorbed, but the "end-of-season" Darjeelings eased.

METALS BUOYANT

(From Our Own Correspondent)

CALCUTTA, 10*th March*

On good demand, metal prices were in a state of buoyancy during the week under review. On the London Metal Exchange, while zinc and lead reacted, tin and copper rallied after the last week's recession.

The continued shortage of copper supplies is causing anxiety, as production programmes are not proceeding on a planned basis. While it is encouraging news that the U.S.A. and India recently signed an agreement for the grant of a U.S. loan of $225 million to finance imports of steel, non-ferrous metals, and machinery and machinery parts from the U.S.A., it should be pointed out that the inability of the U.S. producers to meet Indian inquiries for copper is causing concern. In view of this, India had to turn to the U.S. commercial sources for prompt supplies in recent months. Needless to say, the price of the latter is higher than that of the producers. Besides, supplies from the U.S. commercial sources also do not meet demand in full. The industry and trade have, therefore, urged New Delhi to take up the matter with Washington in an attempt to arrange regular supplies of copper under the D.L.F. import licences from producers. Utensil copper scrap, in Calcutta, spurted from Rs. 680 per 100 kgs. to Rs. 690. On the London Metal Exchange, spot copper wire-bars at one time declined to £253 a ton from the week's opening of £255, but closed £2 higher on balance at £257. The three-months' quotation rose from £257¼ to £259¼. At £257, spot cathodes added £2 while spot fire-refined was unchanged at £247. It was noted that producers of copper in the U.S.A. looked forward to higher profits this year in view of demand chasing prices up. That demand has gone up is also evident in that in the U.K. alone production of copper and coppy alloy manufactures totalled 813,686 tons last year, as against 775,119 tons in 1962. U.K.'s consumption of copper in all forms in 1963 was also higher at 677,960 tons, as against 649,307 tons in 1962.

Tin was in acute short supply in Calcutta. The price, at Rs. 3,400 per 100 kgs., was higher. In London, spot tin gained from £1,025 a ton to £1,062. At one time, the quotation was even higher at £1,075. The three-months' position closed at £1,052½, after opening at £1,015. The higher trend was stimulated by the unlikelihood of production equalling demand in the near future. This year's deficit is estimated between 25,000 and 30,000 tons, and, if the belief that for a substantial rise in tin production the minimum period that would be necessary would be five years is correct, there is the need for the U.S.A. to slow down stockpile releases rather than stepping them up. The U.S.A. has already announced that its stockpile releases policy would be decided against the background of the need to promote the growth of the mining industry. It follows, therefore, that releases would only take place at or above the market price, and that would mean that the U.S.A. has changed its earlier stand of speeding-up releases. This is, of course, as it should be, as in view of the growing world shortage the U.S.A. should conserve its strategic stocks.

Lead, in Calcutta, rose from Rs. 240 per 100 kgs. to Rs. 240, while zinc eased from Rs. 298 per 100 kgs. to Rs. 295. In London, spot lead and zinc eased from £80⅜ and £100¼ a ton to £78 and £96, respectively, with the three-months' quotation closing lower on balance at £79¼ and £91⅜, respectively.

RISE IN JUTE GOODS STOCKS

(From Our Own Correspondent)

CALCUTTA, 10*th March*

Adequate overseas interest lacking, jute goods moved narrowly during the week under review. A worsening of the situation in the Calcutta port arising from the acute shorage of lighters for loading and continued cut in drafts in the river depressed sentiment. There were, therefore, apprehensions of increase in stocks of goods with mills at the end of last month. Naturally enough, the mills were keen sellers for forward positions, and both the U.S. and Argentina showed interest in ready hessian. Reports from the New York burlap market, however, continued to be dull. Consumers there appeared adequately covered to meet their near-term requirements. Spot 40" 7¼ oz. and 10 oz. hessian remained unchanged at 8.80 cents and 11.55 cents a yard, respectively.

Against the background of the need to find more markets for heavy goods, the trade has welcomed the proposed delegation to Northern and Western Africa. The delegation, which will be headed by Mr. N. L. Kanoria, will spend four weeks and explore the prospects to step-up consumption of jute goods. The trade has urged that one way of overcoming Pakistani competition in overseas markets is a reduction in prices, but feels that, even at existing prices, exports can be increased, if steps are taken to explain to overseas consumers the merits of Indian goods. The trade delegation is, therefore, timely. At present, India exports to these two regions of Africa about 110,000 tonnes jute goods a year valued Rs. 17 crores.

The fibre market was stimulated by the announcement of the issue of a compulsory purchase quota on mills for the five weeks to 4th April. The quota is 430,000 bales, of which mills in the membership of the Indian Jute Mills Association should buy 400,000 bales. The balance should be bought by non-I.J.M.A. mills. Daily arrivals in agencies have now fallen to about 40,000 maunds, and as such it is explained that the above quota, which is lower as compared with the February quota of 540,000 bales, would be sufficient to absorb all arrivals. As and when mills complete the quota now issued, marketing of this season's crop would aggregate 6.69 million bales or 83.62 per cent of fibre availability in this season. In order to complete marketing of the outstanding quantity, that is, 1.31 million bales, quotas would be issued in both April and May. For this season, with adequate stocks of fibre, mills hardly need to buy any more fibre. Mills have also no spare space in their godowns. At the same time, with a fall in overseas demand for goods since the last two months, mainly arising from the bad conditions existing at the port, more godown space is being occupied by goods also. Considering all this, any move to burden the mills with blocking of more funds in fibre of poor quality is hardly fair.

According to the Jute Commissioner, Mr. G. C. L. Joneja, the Government is examining the proposal to import from Pakistan a larger quantity of long jute and cuttings than last year. If about 225,000 bales of long jute and 275,000 bales of cuttings are imported from Pakistan, mills would be enabled to use a greater proportion of quality fibre in the production of standard goods also. Overseas consumers pay much attention to quality, and mills in India have often urged the imperative need for improving the quality of the domestic fibre output. If weather is good this year, it is expected that the third Plan's target of eight million bales would be achieved. Referring to this estimate, the Jute Commissioner said that the target would be achieved without sacrificing any foodgrains acreage to raw jute. He said that the Government was now turning its attention to improve quality and that fourteen districts in West Bengal, Assam, Bihar and Tripura had been chosen for an intensive package programme. Although the Union Minister for International Trade, Mr. Manubhai Shah, dismissed the anxiety arising from stray complaints of poor quality of jute goods exported from India as alarmistic, the need of mills to use a greater proportion of quality fibre in production of standard goods cannot be overlooked. While increased exports of cuttings and long jute from Pakistan would only be a temporary way out, the ultimate answer lies in making cultivators in India pay more attention to improve the quality of fibre.

Following the issue of March purchase quota, mills showed more interest in raw jute. This, to a certain extent, abated the earlier selling pressure, and white jute recorded a slight improvement. Thus, daisee bottoms improved from Rs. 33.50 a maund to Rs. 34.00, with Assam bottoms and northern bottoms being maintained at Rs. 30.50 and Rs. 29.50, respectively. No reaction to the cancellation of the export duty on fibre has been received from foreign markets. This lack of interest in the concession is due to the poor demand for such of the fibre as India is able to export.

The disturbance caused to shipments as a result of a further deterioration in conditions in the

Calcutta port was duly reflected in the number of overseas inquiries falling. Anxiety was caused to shippers with due-date shipments. Both Argentina and the U.S.A. showed interest in ready hessian. Absence of any revision in excise duty on jute goods for internal consumption was a disappointment, but, since the uncertainty has passed, internal buying should again revive. On Tuesday last, ready B. twills firmed up from Rs. 110.50 to Rs. 111.00 following Government interest for March-April goods. In sympathy, hessian 40" 10 oz. gained from Rs. 46.15 to Rs. 46.25. At this stage, there was speculative buying in heavy goods in the futures market, and this enabled ready B. twills to go up to Rs. 111.60 on Wednesday. Hessian 40" 10 oz. remained quiet at Rs. 46.10. With overseas business lacking, these rates could not be maintained on Thursday, when B. twills eased to Rs. 111.50 and hessian 40" 10 oz. to Rs. 46.00. However, on Friday, there was again speculative activity in the futures market which pushed up ready B. twills to Rs. 111.70. Ready hessian 40" 10 oz., however, eased to Rs. 45.95. Sentiment improved over the week-end, with B. twills being priced higher at Rs. 112.25 and hessian 40" 10 oz. at Rs. 46.10. Quotations yesterday were Rs. 112.40 and Rs. 46.00, respectively.

PEPPER WEAK

(Messrs. Parekh and Co.)

BOMBAY, 11*th March*

Malabar black pepper ruled weak during the week under pressure of liquidation by weak bulls at both Cochin and Bombay in forward, owing to proximity of due date for March and *Chaitra* delivery. Ready pepper was affected sympathetically. Ungarbled at Cochin was down to Rs. 293, while garbled was on sale at Rs. 300, though in small quantity. March, after touching to Rs. 314, came down to Rs. 303 and May climbed down to Rs. 317 from Rs. 330.

Singapore was firm due to scarcity of black pepper stocks now estimated at hardly 500 tons. Black pepper was nominally quoted at Str.$122½ and white at Str.$162½.

Spot in New York, after touching $0.36, came down to $0.35. For grinders were sidelining.

Forward ring in Bombay is experiencing heavy fluctuations, as most of the speculators are switching their long position from *Chaitra* delivery to *Vaisak* after paying about Rs. 13 as carry-forward charges.

The future of Malabar pepper appears promising, as nearly half of the production is already marketed and, for the remaining half, India will have to carry on for coming seven months. If the U.S.A. and Europe come in the Indian market, which they will have to do in the very near future, as Singapore is out of the picture, the market of Malabar is likely to advance. But everything depends on how Indonesia market Lampong pepper. Average monthly export from Singapore is estimated to be about 2,000 tons and, as Singapore has now no or little stock, most of the demand from small diversified destinations will sooner or later come to India.

Chaitra delivery, after opening at Rs. 335, came down to Rs. 323. *Vaisak* was pressed down to Rs. 336 from Rs. 348, the highest being Rs. 352.

Ready pepper in the local market is quoted at Rs. 323, with demand comparatively small as is usual in a declining market.

The quality of North Malabar pepper this year is rather poor and hence there is greater loss in refraction when processing the quality to ASTA standard.

"KHANDSARI" DECLINES

(From Our Own Correspondent)

HAPUR, 10*th March*

Sugar continued steady, as the supply position was restricted. Prices in the open market improved further to Rs. 160 to Rs. 165 a quintal. Production of sugar is gradually coming to a close due to the non-availability of cane and, while some of the factories have been forced to close their season. Some other have raised their cane purchasing prices from Rs. 5.36 to Rs. 6.40 a quintal and still found it difficult to obtain enough cane. Sugar production in the current season would be around 26 lakh tons. In the Muzaffarnagar market also, the supply position of sugar continued tight, with prices in the private quoted at Rs. 160 to Rs. 165 a quintal.

Prices of *desi khandsari* registered a fall of about Rs. 5 a quintal during the week, as outside demand was slack due to fears of a price control on the commodity. *Khandsari* manufacturing units continued to attract larger supplies of cane at Rs. 6.75 to Rs 7.40 a quintal. Week-end prices were: Inferior Rs. 110 to Rs. 125; medium Rs. 130 to Rs. 135; superior Rs. 140 to Rs. 145 and *Boora* Rs. 155 to Rs. 160 a quintal.

Ready *gur* ruled quiet during the week in the absence of buying support. Export permits for the current month had not yet been received. Daily arrivals here have run down to an average of 1,500 maunds, but stocks with the trade have mounted to 22,000 quintals. Total arrivals here during the current season are placed around 1.67 lakh quintals, the corresponding figure last year being much lower at 1.35 lakh quintals. Week-end prices (in Rs. per 40 kilogram) were: *Gur pansera* and superior 27, average 26.50 to 26.75 balti 26.75 to 27.

In the Muzaffarnagar market, *gur* prices were subdued. *Chaku* quality was marked down by Rs. 2 to Rs. 27 to Rs. 28.50 per 40 kilogram, *pansera* lost Re. 1.75 at Rs. 25 to Rs. 26 and *laddoo* and *khurpapar* were easy by Re. 1.50 and Re. 1 per 40 kilogram, respectively. *Shakker*, however, attracted support from Punjab, Rajasthan and local areas and prices were at Rs. 32 to Rs. 35.50 per 40 kilogram according to quality. Sowings of cane for the next season was in full swing and an increased acreage was in foresight.

FOODGRAINS EASIER

(From Our Own Correspondent)

HAPUR, 9*th March*

Foodgrains were easier this week on large-scale sales of imported wheat and flour through fair price shops both in the urban and the rural areas and expectations of early arrivals of new *rabi* crops. The Government's proposal to increase wheat imports under P.L. 480 to 500,000 tons a month from the present four to four-and-a-half lakh tons dampened the sentiment. Moreover, crop reports in the country indicated a marked improvement from the losses due to the frost and cold spell in January. Harvesting of *rabi* grains would begin next month.

On heavy sales through fair price shops, wheat prices declined by Re. 1.50 to Rs. 2.50 per quintal to Rs. 63.50 to Rs. 65.50 for the average quality and Rs. 67.50 to Rs. 70 for the farm produce. Stocks with the trade were, however, meagre, as arrivals were poor. Rice continued steadier on poor supply against good demand. Stocks left with trade were also negligible. Week-end prices were:—Rice *basmati* superior Rs. 96.45 to Rs. 99.13, *sela basmati* Rs. 93.77 to Rs. 96.45, *mainpuri* Rs. 68.32, *ramajwayan* Rs. 80.38, *raimunia* Rs. 83.06 and *gadda* Rs. 65.64 per quintal.

Gram prices eased by Re. 1 to Re. 1.50 per quintal on slack demand at higher levels and easy Punjab advices. The Punjab quality was quoted at Rs. 57.60 and the local produce at Rs. 57.22 per quintal. Barley and *bejhar* ruled steady due to the poor supply position, and prices ranged between Rs. 42 and Rs. 42.50 for barley and between Rs. 43 and Rs. 43.50 per quintal for *bejhar*. Maize eased by Rs. 2 to Rs. 3 per quintal on selling pressure induced by expectations of a decline in seasonal demand. The average quality was quoted at Rs. 39.75 to Rs. 40.50 and the superior white at Rs. 41 to Rs. 42.50 per quintal. Stocks were fast running down. *Juwar* and *guwar* prices also drifted lower on arrivals of new *juwar*. Oats and *methi* were unchanged.

A subdued trend was witnessed in pulses. Peas prices moved down by 50 nP per quintal to Rs. 52 to Rs. 52.50 for the *dara* quality and Rs. 53 to Rs. 53.50 for the farm produce. Peas *dal* also eased to Rs. 54.92 per quintal. *Arhar* declined by Rs. 2.50 on slack demand and prices ranged between Rs. 60 and Rs. 64.30 per quintal according to quality. *Urd* and *moong* prices were almost stationary at the previous levels. *Urd* was quoted at Rs. 66.98 to Rs. 72.34 and *moong* at Rs. 72.34 to Rs. 80.38 per quintal. Gram *dal* sought higher levels, while *masoor* and its *dal* ruled steady. Week-end prices were:—*Arhar dal* Rs. 75.02 to Rs. 80.38, *urd dal* Rs. 80.36, *moong dal* Rs. 83.06, *masoor* Rs. 66.98 to Rs. 72.34, *masoor dal* Rs. 83.06 and *gram dal* Rs. 65.64 per quintal.

TEA FANNINGS DEARER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 5*th March*

A total of 388,000 kgs. was on offer in tea sale No. 9 held here on Tuesday the 3rd inst. Quality was again useful and generally about maintained from all districts. There was good general demand. Low medium and medium brokens elicited more inquiry and were generally sold at slightly dearer rates, while there was considerably more activity for similar fannings which were a strong feature and generally dearer. Good medium brokens were readily absorbed at about last rates, while their fannings were fully firm and generally dearer. Less demand was seen for high grown brokens which were irregular and generally somewhat lower. Fannings grades, however, were keenly competed for at fully firm to dearer prices. Clean black leaf teas and whole leaf grades were sold well at generally enhanced levels. There was fair demand for tippy teas.

The quotations (per kg.) were:

	1964 Rs.	1963 Rs.
Low medium	4.40-5.10	4.45-5.00
Mediums	4.90-5.60	5.00-5.40
Good mediums	5.40-6.70	5.45-6.20
Nilgiri B.O.P.	6.30-9.50	6.20-12.40

The average price realised in sale No. 9 held today was Rs. 5.71 per kilo, as against Rs. 5.42 a week ago and Rs. 5.59 in the corresponding sale last year.

In dust sale No. 9 held today, 171,000 kgs. were offered. The market opened to strong general demand which continued throughout the sale. All mediums continued to receive useful inquiry and were sold at firm to dearer rates. Highgrowns on offer were also sold readily and realised higher prices. Residual kinds came to a strong market and clean black grainy descriptions were well supported. Unorthodox descriptions also shared in the general trend of the market.

The average price realised in dust sale No. 9 was Rs. 4.82 per kilo, as against Rs. 4.72 a week ago and Rs 4.55 in the corresponding sale last year.

Colombo: There was good demand. Best liquoring teas were slightly dearer, while others were about steady. Mediums and uvas were lower by 5 to 10 cents.

London: In Monday's sale, there was fair general demand. Better liquoring Assams were dearer, but poorer sorts came to an easier market.

Ceylon and South Indians: In Tuesday's sale, offerings amounted to 16,260 packages, of which 5,340 packages came from South India. There was good general demand for both Ceylons and South Indians which were firm to dearer.

As we go to press, Messrs. Forbes, Ewart and Figgis Private Ltd., wire:

"*Sale No.* 10: 378,000 kgs. offered. Good general demand. Low mediums about steady. Mediums and good mediums firm. Highgrowns good demand, but prices irregular. Unorthodox steady."

DEMAND FOR KIPS POOR

(From Our Own Correspondent)

MADRAS, 9*th March*

Arrivals of kips from the tanneries to the Madras market this week were moderate and the clearance was slow. Export demand was poor, but there was some offtake for the inland trade. Enquiries from importers for cowhides run and fifths in medium weights, for cowcalf fourths in light weight and for top marks in buff calf skins were patchy. Prices, on the whole, ruled weak.

In the tanned skins section, buyers of goat skins were showing great resistance to Madras prices. Export trading was selective and small, the call being for lower ends. American importers seemed to show small interest in heavy weight goat skins. There was no change in the sheep skins market, and importers were complaining about the poor quality of middle class sheep skins shipped recently.

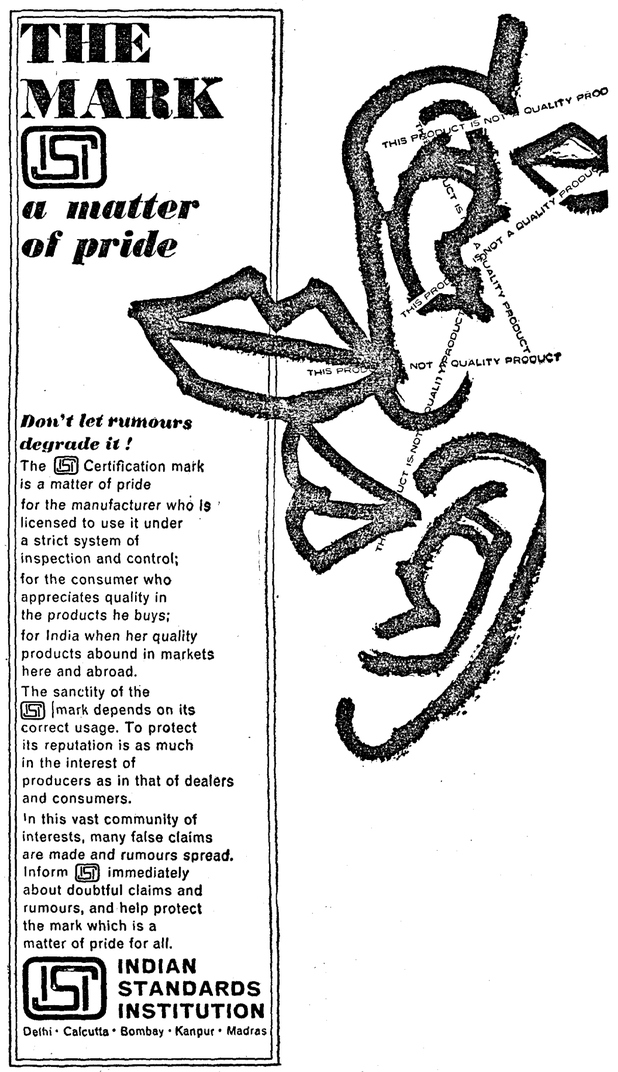
At the German auctions held last week, 35 per cent of the goat skins offered were sold. Upper selections and goat tannages fetched 3d. to 6d. more than the current prices here. In sheep skins, clearance was poor on account of high prices.

Shipments during February were: 1,914 bales tanned cowhides, 221 cowcalf, 9 buffhides, 857 buffcalf, 591 goat and 381 sheep skins to the U.K. ports; 28 cowhides, 13 cowcalf, 28 buffcalf, 989 goat, 420 sheep skins and 992 cases chrome and pickled goat skins to the Continental ports; 10 buffhides, 45 buffcalf, 325 goat skins to the U.S. ports: 3 goat and 85 sheep skins to Japan.

SANDVIK ASIA LIMITED

The Poona factory of Sandvik Asia Limited is now in a position to make quick deliveries of tungsten powder for production of tungsten carbide, tungsten carbide blanks for manufacture of finished tools, rock drill steels, detachable bits and extrusion drill steel equipment, and tungsten carbide cutting tools. This was revealed by Mr. Wilhem Haglund, President of the parent Company, Sandvik Steel Works, Sweden, at a Press conference in Bombay on Tuesday this week. Tugsten carbide is an important complement in the development of the industry, and the Indian Government wished to establish a domestic tungsten carbide manufacturing plant in India, in order to save considerable foreign exchange involved in imports. The rock drill steels produced by the Poona factory are sold by the Atlas Copco (India) Private Limited, the sole distributors, which belongs to the world's foremost experts in the compressed air field, the Swedish Atlas Copco Group, and is in a position to render very efficient service backed by years of rich experience in the field of rock drilling and rock removal.

Besides Sandvik Asia Limited, the Sandvik Steel Works of Sweden has 27 other subsidiaries in different parts of the world, including Europe, North and South America, Africa, Australia and Asia. In addition, there are some 100 agents in various parts of the world where there are no subsidiaries. In 1963, the turnover of the Sandvik group amounted to over Rs. 50 crores, of which 77 per cent was accounted for by sales in export markets. The Sandvik Group produces sperial steels, finished steel products and tungsten carbide products.



TREND OF SHARES

SUPPORT AT LOWER LEVELS

(From Our Own Correspondent)

BOMBAY, 12*th March*

ON small and selective but steady support at lower levels, equities gathered some fresh strength this week, in refreshing contrast to their distinctly bearish behaviour last week owing to persistent bull liquidation and selling pressure following the presentation of budget proposals. Support was forthcoming on account of several considerations. The foremost among them was the belief that after the budget would follow some relief in tax proposals. The proximity of dividend announcements, especially of companies like National Rayon and Kohinoor which are expected to propose higher dividends, was another consideration. Technically, too, and in view of the last week's sharp shake-out, the market seemed favourably placed for attracting some renewed support. Finally, the market being still under the influence of some prominent strong bull operators also explained the support which values met with at setbacks.

In spite of all this, however, trading was unexciting and price movements were narrow, with net changes over the week being small, though not incidental. But the week's trading pattern seemed to suggest a tendency on the part of values to settle down around their post-budget low levels. Should they succeed in holding intact these levels for some more time, as they did this week, that period might well turn out for the market as one of digesting the budget shock before resuming the upward journey. No doubt, the budget has set a limit to this upward journey by having failed to provide no definite incentive to investors. But, at the same time, it promises to be growth-oriented and has created, through tax incentives, scope for accelerating progress of certain selected basic industries. This and some possible tax reliefs can help the market regain its *equi poise*. Its task should be made easier by the principal bull operators who are still very much there in the picture.

Hopes of some relief in tax proposals have so far been belied. The Finance Minister offered no categorical concessions in his reply to the general debate on the budget in the Lok Sabha on Tuesday the 10th inst. But he indicated that the Government was examining the suggestion that the levy of Capital Gains Tax on bonus share issues should be differentiated. The Government was also considering the view, he said, that the total impact of the Estate Duty and Capital Gains Tax and incidental sale costs of inherited property should not be such as to cover the entire value of property. While a reconsideration of the Capital Gains Tax on bonus shares would certainly prove a good incentive for the market, firm expectations are also entertained about a sizable relief in the additional excise duty on rayon yarn, as it is believed that the estimated revenue from the enhanced rate is a gross underestimation and that the actual burden on the industry would be far more heavy than what has been anticipated. It will be remembered here that, because of the increase in the duty on yarn, rayon shares have been the worst hit in the post-budget shake-out. Marketmen also expect the Finance Minister to reduce the proposed tax on the amount of profit distributed as dividend. Meanwhile, they have welcomed the clarification from T.T.K. that development rebate would not altogether be abolished after 1967 but would be replaced by a graded rate of rebate.

The report this week that the Mahalanobis Committee had failed to produce any definite conclusions concerning the changes in income distribution in the country and had made no specific observations about concentration of wealth and economic power was well received by the market. The corporate news about an increase in Martin Burn's sales from Rs. 770.08 lakhs to Rs. 877.25 lakhs and gross profit from Rs. 81.06 lakhs to Rs. 94.44 lakhs and that the National Rubber Manufacturers Ltd. had raised the dividend for 1963 by two points to 10 per cent, following the spurt in pre-tax profit from Rs. 11.41 lakhs to Rs. 22.44 lakhs, proved stimulating for the market. Sentiment was also influenced by reports of purchases of Tata Steel Ordinary and Hindustan Motors by the L.I.C. and the Unit Trust on the Bombay Stock Exchange.

• • • •

Except for Scindia which came in for strong support and finished 64 nP higher at Rs. 16.40, trading was featureless on Dalal Street. Among market leaders, Steel shares moved in a narrow range and closed fractionally lower—Tata Ordinary at Rs. 149.50, as against Rs. 149.75 last week, and Indian Iron at Rs. 25.20, as against Rs. 25.35—but Century and National Rayon staged some good recovery from Rs. 641 and Rs. 404.50 to Rs. 656 and Rs. 415, respectively. Other Textiles were also steadier, notably Kohinoor which rose during the week from Rs. 336 to Rs. 342.50 on support based on expectations of a higher dividend for 1963.

The proposal of the Directors of Morarjee Goculdas Spinning and Weaving Company Ltd. to issue additional capital of Rs. 23 lakhs in ordinary shares of Rs. 100 each and offer it at par to the existing shareholders in the proportion of four new shares for every nine shares produced no material change in the market value of the shares at Rs. 388. On the other hand, Dharamsi Morarji's offer of a one-for-three rights issue at par, amounting to an aggregate additional capital of Rs. 13.79 lakhs, did not stem the downward trend in the shares which closed, over the week, 10 points lower at Rs. 135.

T.E.L.Co. and Voltas were quiet at Rs. 306.50 and Rs. 272, respectively, and so were Hindustan Motors at Rs. 19.12 and A.C.C. at Rs. 149.75. The cash section displayed an easy trend, with SLM-Maneklal declining by 13 points to Rs. 187, Permanent Magnets by 10 points to Rs. 122.50 and New Standard Engineering by Rs. 9.50 to Rs. 140.50.

• • • •

Forward shares on the Calcutta Stock Exchange made a mixed show, while in the cash section, Jutes were particularly easier. Thus, among the cleared shares, Dunlop were up by 19 nP to Rs. 38.31, Indian Aluminium by 25 nP to Rs. 32.25 and Shree Gopal Paper also by 25 nP to Rs. 26, while Indian Cable eased further by 50 nP to Rs. 37.50, Guest Keen by 56 nP to Rs. 26.44 and Howrah Jute by 75 nP to Rs. 17.81. Among Jute shares, in the cash section, Fort Gloster dropped by six points to Rs. 270 and Alliance by five points to Rs. 125.

Coal shares were quiet, with Bengal reacting from Rs. 255 to Rs. 252. Burn, in the Engineering section, moved down by six points to Rs. 312. Alkali declined further from Rs. 33.37 to Rs. 32. A setback from Rs. 16.19 to Rs. 13.94 in Hindustan Pilkington Glass and from Rs. 34.75 to Rs. 32.62 in Union Carbide featured an otherwise dull trading in Miscellaneous issues.

• • • •

Selected Plantings and Miscellaneous evoked support on the Madras Stock Exchange. Nonsuch Tea improved by 87 nP to Rs. 23, Consolidated Coffee by 87 nP to Rs. 20.87 and Vaikundam Rubber by Rs. 2.75 to Rs. 36.50. In the miscellaneous section, Aluminium Industries gained 88 nP to Rs. 20, Travancore Chemical 25 nP to Rs. 18.50 and Madras Rubber 47 nP to Rs. 14.37. Among Textiles, Lakshmi eased by two points to Rs. 135 and S.I. Viscose by Re. 1.50 to Rs. 134.

AMERICAN LETTER

(Concluded from page 404)

burden as has now been approved is just right and will help prevent the economy from slipping into yet another recession towards the end of the year.

A Department of Commerce survey shows that consumer spending for the full year 1963 totalled $373,100 million, an increase of 5 per cent from 1962. With prices up less than 1½ per cent, this means that the physical volume of consumption rose almost 4 per cent. Spending during the fourth quarter of 1963 actually topped the annual rate. The overall increase in consumption expenditures fully matched the advance in disposable personal income from 1962 to 1963, so that personal saving last year held at the previous year's level.

It is estimated that nearly $8,000 million of the $9,200 million tax reduction applicable to individual taxpayers will flow directly into their pay packets this year. This is a potential addition to purchasing power, but all of this may not be used to buy goods or services; a certain proportion will certainly be put away in "the little tin box," whether that be a commercial bank, a savings bank, a savings and loan association or a mutual fund. It is likely also that some part of the additional "income" will be used to pay back consumer loans.

Inflation Ahead?

Some economists believe that, while a shot in the arm is certainly necessary, the dosage is too heavy and that as a result the forces of inflation, which are making their presence felt here and there already, will be strengthened. Some others believe that the tax cut would benefit essentially the "wrong groups," meaning the middle and upper brackets and for this reason it would not give demand the necessary fillip. The President and his advisers are, however, confident that the tax cut "will encourage the growth and prosperity of this land that we love." They expect that the tax cut will trigger an expansion which would gain momentum under the multiplier effect, just as a weighted object thrown in a rather stagnant pool sends a steady ripple outwards in ever-widening circles. The President has even given specific examples of companies that plan to expand their facilities and labour force and cited the prediction of a New York business economist that capital spending in 1964 alone will be 20 per cent higher than last year. Current plans call for an increase in capital spending of some 9 per cent only.

The dominant mood in America is thus one of optimism, that this most significant experiment in the nation's fiscal history would pay off handsomely. Economic forecasters, whether bullish or bearish, have frequently been wrong, but there is no weighty reason to believe that the tax cut will not help to release the brakes on the economy. The results as they emerge may differ in degree from those expected by the official crystal-gazers, but an expansion is definitely in view.

WORLD TRADE CONFERENCE

ALL eyes are now turned towards Geneva, the venue of the U.N. Conference on Trade and Development, due to begin there on Monday next and expected to last for full twelve weeks, that is, up to 15th June. The idea of convening this Conference, ever since it was mooted over two years ago, has aroused considerable interest throughout the world; it is the largest ever to have been held anywhere, with as many as 122 countries participating in it. Although the deliberations of the Conference and the decisions taken thereat are of particular significance to the large number of developing countries, they are of equally great significance to the developed countries, in both the free and Communist worlds. For the problem to which the Conference is supposed to find a solution concerns as much the latter group of countries as the former. Briefly stated, the problem pertains to the widening imbalance in the world economy, consequent on the highly disproportionate rate of increase in the trade of developing and developed countries. Every developed country has enjoyed the benefit of an increased share in the expanded world trade during the last decade, but the share of many a developing country has not only not improved but has actually declined. The example of India will suffice. Between 1950 and 1962, this country's share in the total world export trade has gone down from 2.0 per cent to 1.1 per cent. The combined overall external payments gap of developing countries by 1970 is now put at as wide as $20,000 million, whereas a United Nations study published two years ago had estimated the deficit for that year to be about half this figure, $11,000 million, to be precise. While the developing countries are greatly worried about the widening payments gap, as that would undoubtedly hamper their efforts to speed up their rate of economic growth, the developed countries are fully conscious of the fact that such a gap would endanger their own economic prosperity, for they know that trade is, after all, a two-way traffic. No wonder, then, that both the groups of countries are eagerly awaiting the outcome of the Geneva Conference.

Before dealing with the question of taking appropriate measures for averting a serious impact on the world economic system caused by the growing trade gap, the Conference will first have to assess correctly the nature of the problem of the trade needs of developing countries. The problem is a two-faced one. On the one side, there is the heavy dependence on imports of machinery, equipment and other essential goods that are strategic to lifting the levels of productive investment for accelerated economic growth. And, on the other, in most developing countries, production for export and trade constitute a preponderant part of their total economic activity. It is necessary to bear in mind here the extremely vulnerable nature of the export trade of these countries. Even a cursory glance through the pages of the world trade history in the past several years will at once show that the traditional exports of primary products of predominantly agricultural origin, which account for nine-tenths of the combined foreign exchange earnings of developing countries, have expanded at slower rates in volume and suffered from sharper declines in prices than nearly all other products. And, what is worse, the adverse price trends for primary products, especially since 1954, have led to a marked deterioration in the terms of trade of these countries. When such is the state of affairs, the developing countries are simply unable to pay for the expanding needs of imported supplies, not to speak of meeting the external debt service charges. If only all the developed countries participating in the Geneva Conference were to recognise this simple but crucial aspect, a lot of precious time, which would otherwise be wasted in long-drawn-out discussions, could be saved and utilised for constructive purposes. The Conference should not be turned into a debating platform; instead, attempts should be made to find a workable solution to the problems of world trade and aid.

Considering that the foreign trade problems of all developing countries are more or less similar, it is just as well that these countries have reached a broad understanding among themselves about the common stand they should take at the Geneva Conference. The credit for this must go in large measure to Mr. Manubhai Shah, Union Minister for International Trade, and his colleagues who it is that have tried hard to persuade the other developing countries to accept the need for a joint united approach. Forming part of this approach are four important pleas that are expected to be put forward at the Conference. One of them covers stable and remunerative prices for primary products,

World Export Trends
(In million $)

	1962	1951
World total	124,400	76,990
Of which :		
Developed countries*	94,542	51,945
Percentage share in the total	76	67
Developing countries	29,858	25,045
Percentage share in the total	24	33

Note : The above figures exclude Communist countries.
*United States, Canada, Western Europe, Oceania and Japan.

raw materials and minerals through a system of compensatory financing for losses in export earnings caused by falls in the prices of their exports and adoption of measures designed to make the commodity agreements more effective. The other three pleas relate to (*a*) abolition of non-tariff barriers imposed by the developed countries; (*b*) removal of all quantitative restrictions and internal duties which impede the free and full flow of manufactured goods, semi-processed items and other commodities of the developing countries to the expanding markets of the developed countries; and (*c*) elimination of differential tariffs that militate against the entry of manufactured goods.

All these pleas are unexceptionable from the point of view of developing countries, but their acceptance *in toto* by the developed countries will require a lot of persuasion and serious negotiation, for some of the existing handicaps are designed to give protection to the workers of developed countries. As we in India who have watched the opposition in some of the developed countries like the U.K. and the U.S. to permit imports of manufactured goods know very well, both workers and employers in all these countries are highly organised and will strongly resist even the slightest chance of inconvenience to them. The battle will undoubtedly be a tough one. The only consolation is that economists, financial journalists and some politicians who have had occasions to study the world problems are appreciative of the need for promoting imports from the developing countries. It is, indeed, commendable that British spokesmen have most forcefully urged the other developed countries to take as helpful and positive an attitude as possible towards the trade problems of developing countries. Here is what Mr. Edward du Cann, Minister of State at the Board of Trade, said at London the other day:

"The United Nations Conference should take as its first priority the task of improving living standards by means of increasing trade. We regard it as essential to improve the potential for developing countries to sell their manufactured goods in the markets of the industrialised countries. To this end, I may fairly claim that Britain has set an example. If the industrialised countries seek markets for their specialised, capital-intensive products, they must in turn provide an access in their own markets to their potential customers. Methods to achieve this must be found. Other countries in Europe and North America must individually do their share. Collectively, the machinery must be provided."

The last sentence in the above extract is important. It is just not enough if the Geneva Conference succeeds in merely enunciating a set of principles to ensure progressive liberalisation of international trade, with a considerably larger access to the semi-processed and manufactured goods of developing countries in the markets of the richer nations. The Conference will also have to evolve a suitable machinery to give effect to the code so enunciated. There seem to be three alternatives: To modify the rules of the G.A.T.T. so as to make it a more effective instrument for expanding world trade on a stable and healthy footing, or to set up a new International Trade Organisation (I.T.O.), or to convert the Geneva Conference itself into a permanent organisation with secretarial assistance from the United Nations.

This is not the first time that the setting up of a new I.T.O. has been proposed. Soviet Russia and its allies have sponsored the proposal time and again but to no purpose, thanks to the marked divergence of opinion between this group and the free world countries, especially the U.S. Where is the need for a new I.T.O. or for converting the Geneva Conference into a permanent body when there is already a ready-made organisation, the G.A.T.T.? May be, the G.A.T.T. has not served as a purposeful instrument of international trade co-operation in the way every one wants. This is not the fault of G.A.T.T., for the world itself has remained divided politically into two separate compartments since 1945, that is, shortly after the U.N. came into existence. The prolonged cold war was not the creation of G.A.T.T. There is some force in the contention that the G.A.T.T. has served mainly as an excellent forum for the industrialised countries to conduct tariff negotiations and that it has not served the interests of developing nations adequately. But no one can deny G.A.T.T. the credit for preventing tariff wars among the countries of the free world in the post-war years, for facilitating them to move in the direction of establishing a multilateral system of trade, and for serving as

a forum through which the developing countries in the free world could get their points of view heard by the developed countries and could extract certain concessions. A large measure of credit must also be given to G.A.T.T. Secretariat for highlighting, through its special reports and annual publications, the adverse trade trends suffered by the developing countries since the early 'fifties.

Apart from securing a better deal for the developing countries, the association of Communist countries with G.A.T.T. poses a ticklish and complex problem, because their economic system and training methods differ from those of the free world. Will it be possible to fit them into G.A.T.T. through a mere modification of the rules, without transforming the G.A.T.T. itself into a new body unrecognisable from its old self? Frankly, we do not know the answer. All that one can say at this stage is that much will depend upon the attitude of Russia and its partners in COMECON. But any attempt on their part to break up the G.A.T.T. as part of their grand design to spread international communism will be deplorable and deserve to be cold-shouldered by India and other underdeveloped countries. It would be unfortunate if the Communist countries tried to exploit the Conference as part of their cold war strategy. It is to be hoped that the developing countries will not lend themselves to be used as tools in the hands of communists. While there is room for amending the charter of G.A.T.T. for accommodating the legitimate trade requirements of U.N. members, there is no case for winding it up. The G.A.T.T. has got quite an efficient administrative set-up and possesses rich experience gathered over a number of years, both of which can certainly be made use of for furthering world trade.

It would be appropriate to refer here to some of the modifications in G.A.T.T. rules suggested by India with a view to redressing the balance in favour of developing countries. A gist of India's point of view as presented in a draft submitted to the G.A.T.T. this month is given below:

Measures must be taken to stimulate trade in primary products at remunerative prices. There is need for diversification of exports from developing countries. The industrialised nations should grant special concessions to the developing countries for their exports of finished and semi-finished goods. They must treat both raw materials and semi-finished goods on the same basis; both oilseeds and vegetable oils, for instance, should be allowed duty-free entry. Further, they must grant preferential treatment to imports from developing countries and adopt measures for fostering the expansion of such imports without asking for reciprocity. Again, the industrialised countries must extend both financial aid and help in developing export industries and in the work of export promotion as such.

The measures advocated by India are reasonable and based on those contained in the G.A.T.T. Action Programme evolved in 1962 by 18 developing countries. The adoption of this Programme at the Geneva Conference and the successful "Kennedy Round" for 50 per cent global reduction of tariffs—negotiations on such a reduction will commence thirty-one days after the Geneva Conference begins, that is on 4th May—will, there is no doubt, go a long way towards reducing substantially, if not eliminating altogether, the rigours of a serious imbalance in world economy in the coming years. The best way of silencing the Western critics lies in their spokesmen readily conceding the reasonable demands of the developing countries. By doing so, they will also have set standards to be followed by the Communist countries in their relations not only with the free world but also among themselves. The Western powers still have the whip hand in this respect. It remains to be seen whether they will use it judiciously and with foresight.

INDUSTRIAL RELATIONS

JUDGING from the number of man-days lost due to industrial disputes, which can be taken as a broad indicator of the general climate of industrial relations, 1963 was a year of comparative industrial peace. The total number of man-days lost during the year, according to the annual report of the Ministry of Labour for 1963-64, just published, is provisionally placed at 2.9 million, as compared with 6.1 million in 1962, a decline of over fifty per cent. This is just about half the average number of man-days lost owing to industrial disputes in the last five years from 1958 to 1962.

The improvement in industrial relations was noticeable in both the Central and State spheres. Out of the total number (2.9 million) of man-days lost, 300,000 were accounted for by railways, mines, ports and harbours, etc., which fell within the Central sphere. The situation, according to the report, was generally normal in banks and insurance companies, in that no work stoppages of any significance took place during the year. There were, however, as many as 60 strikes in coal mines last year. But these were mostly of short duration. Consequently, the total time loss was about 41,000 man-days, as compared with the loss of 187,000 man-days in 1962. The labour situation in non-coal mines showed considerable improvement in 1963, the number of man-days lost being just about half of that in the previous year.

Although 1963 was thus a peaceful year as compared with 1962, the annual time loss on account of industrial disputes is still considerable. For the cost of losing nearly three million man-days in terms of wages and production lost is substantial which the country can ill-afford at the present time. Had the Industrial Truce Resolution, solemnly adopted by both employers' and workers' representatives in November 1962, been faithfully observed by both parties, the time loss last year would have been much less. But, after the initial enthusiasm, respect for the Resolution waned and the old attitudes and postures returned. Both employers and workers are guilty of violation of the Truce Resolution. The Government itself failed to keep its promise to hold the price line. This explains why the improvement in industrial relations, witnessed during the first four months (November 1962 to February 1963) after the adoption of the Truce Resolution, did not continue, in spite of the attempt made at the last session of the Indian Labour Conference to restore "that sense of urgency and shining spirit of the earlier days." The situation at present seems to have worsened further. Workers throughout the country are restive and strikes and work stoppages and threats thereof are now becoming more frequent. All this points to one cardinal fact, namely, industrial relations cannot be insulated from the general economic situation and the best way to ensure industrial peace is to create an economic climate favourable for it. To say this is not to condone the actions of employers or workers, who are guilty of violation of the Truce Resolution and who deserve no sympathy, but to underline the fact that, unless certain basic requirements are fulfilled, it is idle to expect any lasting improvement in industrial relations.

The annual report of the Ministry indicates that joint management councils are now functioning in 80 units—25 in the public sector and 55 in the private sector—as compared with 53 in the previous year. To what extent this quantitative increase should be taken as an index of the progress of the scheme is a debatable point. Since the objective of the scheme is to foster better relations between workers and management and to improve productivity, the success of the scheme can be judged only by the extent to which joint management councils have contributed directly to industrial peace and productivity. The Ministry's report says that the scheme has made "slow but steady progress" and modestly concedes that it will take some time before the functioning of joint management councils becomes a normal feature of industrial relations in the country.

The extension and improvement of social security is mentioned as a major achievement of the Ministry of Labour. The Government's decision to start a family pension *cum* survival benefit scheme in favour of the members of statutory provident funds is singled out by the report as "an important development" that deserves to be mentioned. Under this scheme, a fund will be created from the difference between the old rate of provident fund contribution (6¼ per cent of wages) and the enhanced rate of 8 per cent (made applicable to 24 industries so far), out of which a pension will be given to the widow of a member who dies prematurely. The scheme is expected to be introduced in the Fourth Plan period and will cover 25 million contributors and their families, bringing the total number of beneficiaries to 125 million.

The extension of the social security will no doubt be welcomed by the employed, but the unemployed, whose number is increasing, will derive little comfort from the improvement in the lot of those whom they consider to be already lucky. The number of unemployed on the live register of employment exchanges, according to the Ministry's annual report, continued to show a rising trend. This, it explains, is primarily due to additions to the labour force. At the end of December 1963, the number of unemployed on the all-India live register of employment exchanges stood at 2,518,463, as compared with 2,379,500 a year before. It must, however, be remembered in this connection that this number is only a rough indication of the *trend of unemployment in this country, for not* all the unemployed people are registered. Indeed, the number of unemployed on the live registers of employment exchanges represents only a small fraction (approximately one-sixth) of the total unemployed about which no firm figure is available. Incidentally, the non-availability of regular, dependable statistics on total unemployment in the country is doubtless a gross reflection on the labour bureaux of Central and State Governments. When will our authorities be developed enough to provide this vital data?

WEALTH FROM MINERAL WASTES

IT is a misnomer to describe wastes of any kind—be they of human and animal or of agricultural, industrial and mineral origin—as "useless remains," for they can be, as indeed several of them are, utilised economically in the creation of fresh wealth. Examples of such utilisation—of rags and waste paper in the manufacture of paper and paperboard, urban wastes in the making of compost manure, cowdung and agricultural wastes in rural composting, iron scrap in the production of steel, and so on—come readily to one's mind. While this country, like any other, is undoubtedly making some use of its huge annual wastes arising from current consumption and production, it cannot claim to be utilising them *fully and most economically* so as to augment agricultural and industrial output. In fact, India has still a long way to go before it can overcome its poverty of physical resources by, among others, optimum utilisation of its varied wastes in fruitful ways. This is particularly called for in the agricultural sector, where the production potential can yet be impressively increased if only all that has been taken out of land is returned to it in the form of night soil, cowdung and compost manure. No less important is the effort to convert industrial wastes—which are all the time accumulating with the ever-increasing industrial production—into economically useful products, particularly those wastes arising from mineral and metallurgical industries which are basic to development. It is in this context that the international symposium on "Utilisation of Metallurgical Wastes," which concluded its discussions at the National Metallurgical Laboratory at Jamshedpur on the 13th instant, would seem to have served an eminently useful purpose.

Economic utilisation of mineral and metallurgical wastes, incidentally, would call for the development of new technologies. This is a function of applied research—a field in which *scientists in India and abroad have achieved* something and would have to achieve still more. While it is difficult to say from a perusal of the brief press reports covering technical discussions at the Jamshedpur symposium what research achievements are immediately capable of commercial exploitation and what processes under development would be of potential significance, one has at least a broad picture of problems and possibilities in the sphere of utilisation of metallurgical wastes. As far as research work in India is concerned, the realisation that "rich" ores are gradually ceasing to be abundant has led the National Metallurgical Laboratory to undertake both short-term and long-term research projects in six fields. These are: (1) Treatment of mining rejects and mineral discards, such as of ore fines and other low-grade by-products—their beneficiation, processing and optimum utilisation; (2) utilisation of slags and residues—treatment of by-products of metal industries, such as of blast furnace and steel slags, flue dusts and mill-scale coke breeze; (3) utilisation of drosses, swarfs, skimmings, such as of zinc dross from galvanising shops and aluminium dross, reclamation of lead and processing of electro-metallurgical residues and muds; (4) utilisation of metallurgical waste gases, such as during electric smelting of ferro-manganese; (5) miscellaneous utilisation studies, such as of steel scrap reclamation, refractories, raw materials, etc., and (6) scientific research studies, such as those relating to mineralogy and slag phase systems based on hot stage microscopy, X-ray diffraction analyses and other physical methods of examination of metallurgical by-products and wastes. In all these fields, according to Dr. B. R. Nijhawan, Director of the Laboratory, who spoke at the *symposium's* first technical session on the utilisation of raw materials, wastes and by-products, a lot of research work has been done.

The most significant research work under way in the Laboratory pertains to agglomeration of iron ore fine wastes. As mechanised iron ore mining, crushing and screening release 25-40 per cent of ore fines, the accumulated quantity of such fines may amount to about 12 million tonnes by the end of the third Plan. This will represent a loss of Rs. six crores, if the ore fines are not economically utilised. Hence the Laboratory has addressed itself to the work of sintering, pelletising, briquetting and beneficiation of the ore fines for utilisation in iron making. The Laboratory has also developed a suitable technical "know-how" for using natural ore fines for production of iron powder which is necessary for flame-cutting and scarfing, for metallurgical applications such as bearings, for mild steel electrode coating and for catalytic purposes in chemical and textile industries. Suitable beneficiation techniques have been evolved by the Laboratory in respect of (i) utilisation of fine grained raw material by briquetting for ferro-manganese smelting and (ii) recovery of sulphur and gold from tailings from the Kolar Gold Fields. In the field of utilisation of slags, flue dusts, etc., the most notable achievement of the Laboratory is the production of lightweight insulation concrete from foamed blast-furnace slag.

Another noteworthy achievement of the Laboratory is in the field of utilisation of metallic drosses, scarfs, skimmings etc. The feasibility of recovering zinc from the dross (which accounts for about 25 per cent of the metallic value) in metallurgical shops by distillation at atmospheric pressure has been successfully established at the Laboratory for adoption on a commercial scale. Aluminium dross containing about 50 per cent Al has been upgraded to one containing 80 per cent Al by wet grinding in the presence of small quantities of chromic acid. Similarly, brass-dross containing 35 per cent copper has been upgraded by a suitable process to contain 56 per cent copper. The Laboratory has done successful work on the recovery of copper from scrap by fire refining and electrolytic refining. Research on the recovery of lead and zinc from flue dusts has established that recoveries of 80 per cent lead and 75 per cent zinc are possible. The Laboratory has also conducted investigations on the recovery of aluminium, titanium, iron and vanadium oxides from the "red mud" waste of aluminium plants. If substantial recoveries are established, they should greatly improve the economics of aluminium production.

This review of N.M.L's research achievements and continuing investigations is illustrative of the possibilities for economic utilisation of mineral and metallurgical wastes. It need hardly be emphasised that, in the field of non-ferrous metallurgy, where the scarcity of zinc is particularly acute as it has to be mostly imported for the use of galvanising and paint industries, the feasibility of recovering zinc from various wastes and scraps demands urgent consideration.

The Jamshedpur symposium, which provided an excellent opportunity for interchange of technical ideas between Indian and foreign scientists, was based on a number of technical papers by experts. A French expert, for instance, reported on his work on ore fines and also presented pilot plant data connected with pelletising of lorraine iron ore for blast-furnace sinter. Two Indian experts discussed some recovery and utilisation possibilities in the ferro-manganese industry where the slag carries away 14 to 76 per cent manganese and furnace gases carry 68 per cent of carbon monoxide which is wasted at the moment. French, British, Russian and Indian technologists reported on their development work pertaining to the utilisation of waste heat and gas in iron and steel plants. Utilisation of coke breeze (going waste now) to produce pig iron on a small scale was suggested by an Indian researcher. A Russian professor detailed Soviet experience in the recovery of nickel from nickel-copper ores. An American scientist dealt with the recovery of metallics from steel mill wastes. The S.L. direct reduction process developed by a West German firm, according to an Indian scientist working in that firm, would be ideal for developing steel industry in those areas where metallurgical coals were not available. The scope for utilising metallurgical wastes in the railways was described by two Indian experts. If all these expert discussions are not to go waste, the three parties concerned—industry, Government and Laboratory—should co-operate with one another more fully and devotedly than they have done so far in research development and commercial exploitation of processes for utilising metallurgical wastes. That way they can effect annual savings of many crores of rupees, of which foreign exchange would be a significant proportion.

MARKET GOSSIP

Credit Squeeze And After

THE gentle credit squeeze applied by the Reserve Bank is by no means an ideal substitute for a straight, sizable increase in the Bank rate. Obviously, the Government, having opted for no significant change in the fiscal policy for encouraging savings and investment, does not want to dampen the climate for the capital market further by pushing up the Bank rate. But two wrongs do not make a right. There is no certainty that the slight enhancement in the cost of central bank credit and the tightening of selective credit control will have any sustained impact on the inflationary situation. Further, the Government wants to persist in its policy of heads I win, tails you lose, that is, relatively cheaper credit for itself and costlier credit for the private sector. Despite these deficiencies, the Reserve Bank's moves last week deserve to be welcomed in the spirit of "something better than nothing" and "better late than never." Its advice to banks to consider an increase in the rates of interest on deposits is pertinent, though it does not appear to have been palatable to most of the banks. This is evident from the decision of bankers to meet the Governor of the Reserve Bank early next week in order to ascertain what exactly the Bank has in mind.

There is one section of bankers which feels that the inter-bank agreement itself should be scrapped for both political and economic reasons. But it is in a minority and will not be able to give effect to what it feels. There is another section which is in favour of a modest upward revision in the rates of interest on deposits as well as advances. This section too is in a minority. The most influential section of bankers is of the view that nothing needs to be done. It wants the *status quo* to be continued for some months, in the belief that the busy season will soon be over and that everything will be normal again. According to it, advances will start getting repaid and deposits with banks will resume their upward trend. The most striking argument put forward by it is that, without offering any increase in deposit rates last year, the banks were able to gather record deposits, the expansion being the largest to be registered in any one calendar year. And this school maintains that all available indications are in favour of another record growth in deposits in the current year also. To the argument that expansion in bank credit this busy season has also been spectacular, its reply is that there have been special reasons for the unprecedented rise in bank credit and that they may not repeat themselves in the next busy season.

Some idea of the Reserve Bank's reaction to this line of reasoning may be had next week. But knowledgeable circles aver that the Reserve Bank itself is in two minds on this issue. It is, therefore, a moot point whether anything definite will emerge from the bankers' meeting with the Governor next week. Some, however, say that the Reserve Bank authorities will be perfectly satisfied if the banks agree to raise the prevailing rates of interest on term deposits, with a maturity of two years and over, by a half per cent.

Effect Of State Ownership

The season for the annual statements of bank chairmen in India has commenced. Mr. B. Venkatappiah, Chairman of the State Bank of India, released his statement last week. He has confined himself mostly to the affairs of his bank and its subsidiaries. A comprehensive review of his statement appears on page 454 of this issue. He has said nothing about general economic matters. Neither the Budget proposals, nor the state of capital markets has excited him. This is not surprising. Being the chief of a nationalised undertaking, he cannot be expected to cover controversial ground and come to a clash with either the Government or the captains of the private sector. A thing that will surely happen when more and more commercial undertakings come under State ownership or State domination is that the intellectuals who are in charge of the administration of these undertakings will lose the freedom to express their views on the burning issues of the day. More and more intelligentsia will become silent vassals of the State. When this happens, it will adversely affect the prospects for democracy. Suppose, for argument's sake, Mr. Venkatappiah, an able administrator and a clear thinker on economic problems confronting the country, were outside the public sector, one could then count on his guidance and leadership for correcting the mistakes of bureaucracy and politicians in power.

When the public sector expands, there will be more regimentation of thought and action. To give an instance, again. If the Unit Trust were in the private sector, instead of in the public sector as it is today, one could expect its chief to range himself along with the critics of the Budget, instead of remaining a silent spectator. Today, not a bit of the specialised knowledge acquired by him on public finance and economic policies can be used for educating public opinion, unless he chooses to perform the embarrassing task of playing the role of a public relations officer of the Government.

To give one more instance. Consider some of the first class administrators who have left the Government service and are either free-lancers or part of the private sector, as, for example, Mr. H. V. R. Iengar, Mr. N. Dandekar and Mr. H. M. Patel. Their current contributions as critics of Governmental policies and actions are quite forthright, substantial and healthy. In the light of what has been stated here, it will be appreciated that, if banking were nationalised, it would be a serious blow not merely to the private sector but to the democratic way of life itself, especially when there is no strong political Opposition to the ruling party from the right side. One will miss variety and life will become dull and monotonous.

Nationalisation Of Banks

The annual statement of Mr. A. D. Shroff, in his capacity as the Chairman of the Bank of India, is in refreshing contract to that of the State Bank of India's Chairman, Mr. Venkatappiah. After referring to the working of his Bank, Mr. Shroff has chosen the occasion to comment on the Budget and the persisting cry for nationalisation of banking from certain political quarters. Although his criticism of this cry is on well-known lines, there is a freshness about it. Thus, unlike many others who have spoken before him on this subject, he has not forgotten to congratulate the Government of India on its stout resistance to the increasing political pressure for nationalisation of banks. This is an aspect that needs highlighting, because those who are agitating for nationalisation of banks have created an impression that the majority are with them and that only a handful of people are opposed to their demand. The truth of the matter is that the majority in Government and Parliament are opposed to nationalisation of banks.

Briefly stating the case against nationalisation of banks, Mr. Shroff argues:

"I have endeavoured to study as objectively as possible the demand for nationalisation of banks in India and find it incomprehensible how it could serve the best economic interests of the country. In substance, the advocates of nationalisation appear to have been influenced by political ideology rather than by considerations for developing the economic interests of the country. It appears to me to be very naively assumed that all the deposits, which the banks in India, over a period of years, have succeeded in mobilising, can by one stroke of nationalisation be diverted towards the economic development of the country. A close study of the use to which bank deposits have been put will convince any objective student of the subject that the commercial banks in India have consistently been responsible for providing substantial resources, for both working and medium-term capital, to our industries and trade and commerce of the country. Mere nationalisation of banks would not automatically provide additional funds for the development of the country. So long as the private sector is to continue to exist and play its important role in the economic life of the country, an agency has to be provided for the smooth and expanding activities of the private sector, and the most effective agency for that is the operation of commercial banks in the country. In recent years, commercial banks have started playing an increasing part in providing medium-term finance for the capital requirements of a number of our industries. Besides, banks are making no small contribution towards Government, local self-government bodies and public utility services in their borrowing programmes."

Mr. Shroff has tried to dispel the widespread misconception that commercial banks, and in particular the big banks, cater to only big business, by quoting the data pertaining to the Bank of India, one of the big five. These show that, of the total number of about 11,500 borrowers on 31st December 1963, about 4,450 borrowers had sanctioned limits upto Rs. 10,000 and about 4,970 had sanctioned limits between Rs. 10,000 and Rs. 1,00,000. This means that nearly 82 per cent of the total number of borrowers of the Bank had sanctioned limits below Rs. 1,00,000.

After drawing attention to the efforts that are being made by his bank to provide increasing credit facilities for small industries and the large number of small shareholders who hold the vast majority of Bank of India's share capital—which in itself is an index of the popularity of the Bank's shares among the investing public—Mr. Shroff adds confidently:

"I would like to assure the investing public that I have sufficient faith in the good sense and judgment of our ruling authorities to believe that no precipitate action for nationalisation of banks will be taken, as it will certainly do permanent harm to the economic interests of the country. With the extensive powers vested in the Reserve Bank of India for keeping a vigilant watch over maintaining a correct standard of conduct in the management of banks, with the institution of the Deposit Insurance Scheme and with the successful working of banks over a period of years ever widening their services to an increasing number of people in the country, I have no doubt that, ultimately, wiser counsels will prevail and that this political demand for nationalisation will yield to a better appreciation of the vital role played by banks in the developing economy of this country."

Time alone can tell whether even this well-reasoned optimism of Mr. Shroff is justified. For the latest taxation proposals of Mr. T. T. Krishnamachari are proof of the unpredictability of the ruling authorities of the day. Commenting on these proposals, Mr. Shroff remarks that their cumulative effect "has been to aggravate the feeling of frustration, if not also of depression." in the capital markets. Analysing the implications of the direct taxes, Mr. Shroff comes to the following conclusions:

"The replacement of the Super Profits Tax by the new Surtax has undoubtedly, in a number of cases, provided some marginal relief, but that relief has been neutralised by the imposition of a new tax on the dividends distributed by the companies. As a matter of fact, instead of simplifying

(*Continued on page 492*)

U. CO. BANK'S RESULTS IMPRESSIVE

A CONSIDERABLE improvement in gross income and in deposits and a spurt in advances are the highlights of the impressive results of the United Commercial Bank Ltd. (General Manager: Mr. S. T. Sadasivan, Calcutta) for the year ended 31st December 1963. The Bank's balance-sheet total—a fair measure of growth—has shot up from Rs. 159.59 crores to Rs. 176.77 crores, with the increase in the liabilities side being almost entirely on account of the expansion in deposits.

The aggregate income, which had gone up by about Rs. 72 lakhs in the previous year, has increased further by more than Rs. 81 lakhs to Rs. 714.71 lakhs. This entire increase has come from banking business proper, because the income from other sources has actually dropped from Rs. 10.30 lakhs to Rs. 9.93 lakhs. The income by way of interest and discount has improved from Rs. 483.62 lakhs to Rs. 540.57 lakhs and that by way of commission and exchange has risen roughly by Rs. 25 lakhs to Rs. 164.21 lakhs in contrast with the setback of about Rs. 3 lakhs to Rs. 139.27 lakhs suffered in the previous year. Along with the income and in consonance with the general trend, expenses, too, have increased. This, however, is quite understandable in view of the growth of business during the year and the bigger wage bill. The total of outward interest has moved up by Rs. 37 lakhs to Rs. 337.90 lakhs. Staff expenses have also risen from Rs. 183.03 lakhs to Rs. 209.55 lakhs and other expenses have gone up by Rs. 11 lakhs to Rs. 78.72 lakhs. But in spite of this, the net profit, after depreciation and taxation, has added Rs. 3.10 lakhs to Rs. 76.43 lakhs, as against only Rs. 72,000 in the previous year.

Thanks to this improvement in profit, the Directors have been able to maintain the dividend on the Rs. 50 paid 100-rupee shares, which is payable for the full year on the 200,000 right shares issued on 13th August 1962 in the proportion of one for two at a premium of Rs. 25 per share, as against for only four and a half months on the 160,000 of these additional shares applied for and allotted in the previous year. But, as against the increase of Rs. 3.10 lakhs in net profit, the distribution by way of dividend has gone up by Rs. 9.10 lakhs to Rs. 33.60 lakhs. Further, the bonus to staff has also been higher by Rs. 2.50 lakhs at Rs. 19 lakhs. In order to permit this higher distribution of profit as dividend and also as bonus to staff, the Directors have reduced allocation to the published reserves from Rs. 28 lakhs in the previous year to Rs. 17 lakhs during the year under review. The carry forward is slightly higher at Rs. 75,941 as compared with Rs. 18,992 brought in.

The following comparative table mirrors the Bank's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Gross income	7,14.71	6,33.18	5,61.46	5,28.98
Of which:				
Interest and discount earned	5,40.57	4,83.62	4,10.24	3,79.00
Commission and exchange earned	1,64.21	1,39.27	1,42.38	1,41.73
Other income	9.93	10.30	8.84	8.25
Interest paid	3,37.90	3,00.89	2,60.79	2,52.34
Staff expenses	2,09.55	1,83.03	1,56.35	1,40.85
All other expenses	78.72	67.77	56.44	53.23
Depreciation and repairs	12.11	8.16	15.36	15.13
Net profit	76.43	73.33	72.61	67.43
To gratuity trust fund	4.00	4.00	4.00	..
" N.D.F. and other funds	2.26	2.15	..	..
" reserve fund	17.00	28.00	30.00	30.00
" bonus to staff	19.00	16.50	14.00	12.00
Dividend*	33.60	24.50	24.00	24.00
	(12%)	(12%)	(12%)	(12%)
Carry forward	0.76	0.25	2.07	1.47

	As on 31st December			
	1963	1962	1961	1960
Capital	2,79.67	2,23.34	2,00.00	2,00.00
Reserves	3,20.00	3,03.00	2,35.00	2,05.00
Deposits	120,07.91	105,73.89	93,90.40	88,93.87
Borrowings from other banks	4,51.86	4,12.36	2,69.28	9,32.28
Advances	85,91.72	71,07.70	64,20.71	61,38.50
Investments	38,11.41	36,39.87	35,97.22	33,88.29
Cash	11,74.59	11,24.13	8,66.10	9,56.71
Balance-sheet total	176,77.35	159,39.12	145,27.50	149,35.81
Ratio to deposits of—	%	%	%	%
Advances	70.9	67.2	64.0	69.0
Investments†	31.2	34.2	35.8	29.5
Cash	9.7	10.6	8.7	10.7

* Subject to deduction of tax.
† Only the unencumbered portion is taken into account.

It will be seen from the foregoing table that the year-end figure of advances is higher by as much as Rs. 14.87 crores, as compared with less than Rs. 7 crores increase in the previous year and less than Rs. 3 crores increase in 1961. This spurt in advances during the year under review reflects a much greater demand for accommodation from the Bank's customers and its readiness to relax a little its rather conservative lending policy. It is common knowledge in banking circles that the U.Co. Bank's credit ratio always used to be well below the average ratio for the scheduled banks as a whole. Further, the proof that the Bank's policy has been conservative is available in the fact that, after having risen from 58.2 per cent to 69 per cent in 1960, its credit ratio remained around 65 per cent in 1961 and 1962, whereas its liquidity ratio in those two years was approximately at about 44 per cent. The slight shift in th's policy during the year under review has enabled the credit ratio to expand to 70.90 per cent, which is almost the same as the average for all the scheduled banks. Demand for credit from customers would appear to have been pretty high, as on top of a handsome rise of over Rs. 15 crores in deposits to Rs. 120.98 crores, the Bank has closed the year with higher borrowings amounting to Rs. 451.86 lakhs as compared with Rs. 412.36 lakhs a year before. The ratio of investments to deposits has contracted from 34.2 per cent to 31.2 per cent, though the aggregate of investments stands higher at Rs. 38.11 crores as compared with Rs. 36.90 crores in the previous year.

It may be noted here that accretion of Rs. 15 crores in deposits has been the highest for the past few years. The increase has been recorded in all types of deposits. Fixed deposits have expanded from Rs. 57.77 crores to Rs. 68.15 crores, savings deposits from Rs. 12.99 crores to Rs. 14.88 crores and current accounts from Rs. 34.97 crores to Rs. 37.96 crores.

Because of such a large growth in deposits the ratio of the Bank's "own funds" to deposits has remained unchanged at 5 per cent. The Directors have found it desirable to capitalise a sum of Rs. 20 lakhs out of the sum of Rs. 40 lakhs standing to the credit of the share premium account and issue bonus shares in the proportion of one for every four. They have accordingly applied to the Controller of Capital Issues for his consent in this behalf. This is the first bonus issue to be made by the Bank since its inception in 1943.

Fifteen more branches were opened by the Bank during the year in leading cities and important trading centres in the country, bringing the total number of branches to 175.

HIND CYCLES' MERGER WITH GWALIOR RAYON

Discussions carried out for quite some time on amalgamating the Hind Cycles Ltd. with the Gwalior Rayon Silk Manufacturing (Wvg.) Company Ltd. have now resulted in a scheme of merger having been drawn up for the approval of the shareholders of the two companies. After that it will have to receive the sanction of the High Court of Madhya Pradesh which has the jurisdiction. The scheme is to take effect as of 1st April 1964. Before proceeding with the details, it may be pointed out that the scheme seems to be fair and considerate to the shareholders of Hind Cycles, particularly to the preference shareholders whose dividend arrears amounting to Rs. 7.12 lakhs for the three years ending 31st March 1964 are to be paid fully in cash by Gwalior Rayon, notwithstanding the fact that their claim, though a contingent liability, cannot be established unless their Company declares a dividend and, in case of its winding up, there is the requisite surplus of assets available for distribution. Since on the approval and sanction of the merger scheme, the Hind Cycles will be dissolved without a winding up, the Directors of Gwalior Rayon have been fair enough to have decided not to deprive the preference shareholders of that Company of their claim for the dividends in arrears. The payment of such arrears is to be made in cash along with the allotment of shares in Gwalior Rayon.

Besides this advantage allowed to the preference shareholders, both the ordinary and preference shareholders of Hind Cycles will benefit more from the relatively higher market value which their present holdings would command on being converted into shares of Gwalior Rayon. Finally, no fractional certificates for shares are to be issued. All fractions will be consolidated into whole shares which will be sold and the net proceeds of their sale distributed among the members of Hind Cycles in proportion to their respective right to the fractions. To outsiders who may still be wondering why a rayon weaving unit wants to take over a cycle manufacturing company there is nothing to offer for satisfying their curiosity except the explanation by the Directors of Gwalior Rayon that the amalgamation will be in the common interests of the shareholders of both the companies.

Under the scheme, the ordinary shareholders of Hind Cycles will get for their every 100-rupee share two-and-a-half 10-rupee equity shares of Gwalior Rayon, credited as fully paid-up and ranking in all respects *pari passu* with this Company's existing shares. Every member of Hind Cycles holding 5 per cent redeemable cumulative preference shares of Rs. 100 each will be allotted 5 per cent redeemable cumulative preference shares of Rs. 100 each of Gwalior Rayon, to be called series "C," and a cash payment of Rs. 15 per share. The holders of 5.5 per cent redeemable cumulative preference shares of Rs. 100 each will be allotted 5.5 per cent redeemable cumulative preference shares of Rs. 100 each of Gwalior Rayon, to be called series "D," and a cash payment of Rs. 16.50 per share. The holders of 5 per cent redeemable cumulative preference shares of Rs. 25 each will be allotted a similar share of the same value in Gwalior Rayon, to be called series "E," and a cash payment of Rs. 3.75 per share. Those holding 8.57 per cent redeemable cumulative preference shares of Rs. 100 each will be allotted a similar share of the same value under a new series called "F," and a cash payment of Rs. 23.71 per share.

The current market value of Gwalior Rayon ordinary (Rs. 10 paid-up) is Rs. 40, against which the Rs. 100 fully paid Hind Cycles are quoted at Rs. 85. The 8.57 per cent preference shares of Gwalior Rayon are quoted at Rs. 109.75, while the similar shares of Hind Cycles stand at Rs. 84.50. The Rs. 100 paid 5 per cent preference shares of Hind Cycles are placed at Rs. 52 and the 5.5 per cent at Rs. 75. Hind Cycles' 31,070 ordinary shares command an aggregate market value of Rs. 26.41 lakhs, against which the holders thereof will receive 77,675 ordinary shares of Gwalior Rayon quoted at Rs. 32.62 lakhs aggregate. The market value of the Gwalior Rayon's 8.75 per cent preference shares to be allotted to the holders of similar shares in Hind Cycles is higher at Rs. 21.95 lakhs, as compared with Rs. 16.90 lakhs of the latter.

TREND OF SHARES

POST-BUDGET NEW LOW LEVELS

(From Our Own Correspondent)

BOMBAY, 19th March

EQUITIES dropped to new low levels in the current downward trend since the Union Budget. Till Monday the 16th inst., they ruled quietly steady on the extension of small support and absence of selling pressure. But between Tuesday and today, when the lowest levels were struck, there was a sharp setback on persistent tired bull liquidation and considerable bear pressure in a market virtually devoid of fresh support. Closing prices, though slightly above the week's lowest levels on scattered short-covering, were perceptibly lower than those a week ago. Market leaders in Bombay, like Century, Standard, National Rayon and even T.E.L.Co., recorded heavy losses due to both panicky selling on account of a prominent bull operator and some bear hammering.

Standard, in fact, attracted on Tuesday a heavy margin of Rs. 64 per share payable by sellers before the 20th inst. The amount of margin represents the difference between the 16th inst. *hayala* rate of Rs. 720 and the interim margin clearing rate of Rs. 656. The setback in National Rayon was accentuated by the mere maintenance of the 1963 dividend at Rs. 16 per share, as against the market's expectations of a higher dividend of any thing between Rs. 18 and Rs. 22, and the announcement of a one-for-ten rights issue at par, which the market did not expect and which, it believed, would constitute an additional load. The subsequent clarification by a spokesman of the Company that (i) the Board could not have paid a higher dividend without depleting reserves, (ii) a bonus issue would not have been desirable in view of the newly proposed capital gains tax on bonus shares, (iii) the proposed rights issue would leave in the hands of the shareholders about Rs. 46 per share, and (iv) the current year's working so far had been quite encouraging, did cause a swift rally in the shares, but that proved short-lived, as the scrip relapsed further in line with the general trend. The weakness in Century was due to the delay in the publication of the directors' report and statement of accounts for 1963 and rumours that the Directors might come out with a rights issue instead of the proposed bonus issue. T.E.L.Co. suffered more as a result of the report on Tuesday that the loss of revenue to the Company consequent upon the recent strike by the workers had amounted to no less than Rs. 1.10 crore.

While the above factors affected the market leaders, the general sentiment turned weak because of (i) the absence of any expected relief in the tax proposals, (ii) the Reserve Bank's tightening credit control which made money all the more dearer and even led banks to think of revising upward their minimum lending rate by one-half per cent to 7 per cent, though with a corresponding increase in their rates of interest on two-year deposits, and (iii) the fast deteriorating political relations with Pakistan. The Finance Minister's official denials of any reliefs in the tax proposals and his advice to the F.I.C.C.I. to give a fair trial to the proposals seemed to belie expectations of any concessions being in the offing. At the same time, however, there was a feeling that, in the middle of next month, when the Lok Sabha starts debating the Finance Bill proper, some reliefs might be announced. As for the banks revising their lending rates, it was subsequently reported that such a contigency was not likely to occur till the end of the current busy season. As regards the political scene, Prime Minister Nehru's statement yesterday in the Lok Sabha that the cease-fire line in Kashmir would be crossed if necessary created some misgivings in Dalal Street as witness the fall in market leaders in the kerb deals late on Wednesday evening to levels even lower than those which were touched in the official session today. It will be worthwhile to note here that the Premier clearly stated that the cease-fire line would be crossed only as a measure of self-defence and not as a matter of policy. Possibly, his statement served as a convenient excuse to bear operators for pulling down values easily at a time when the market was in a nervous state.

• • • •

Dalal Street suffered a sharp setback, the extent of which is clearly indicated in the table, *Week's Stock Exchange Trend*, in the last column of page 492.

• • • •

Losses were widespread on the Calcutta Stock Exchange too. Among the cleared shares, Birla Jute dropped by Rs. 2.19 to Rs. 33.06, Kesoram by Re. 1.81 to Rs. 25.81, Indian Aluminium by Re. 1.56 to Rs. 30.69, Orient Paper by Re. 1.55 to Rs. 37.35 and Guest Keen and Indian Cable by one point each to Rs. 25.44 and Rs. 36.50, respectively. In the cash section, Coals were exceptionally steadier with Bengal five points up to Rs. 257, but Jute shares were conspicuously weak, with Delta eight points down to Rs. 146 and Kelvin four points down to Rs. 155. Burn, in the Engineering section, fell by 17 points to Rs. 295. Miscellaneous issues, wherever changed, were lower, with losses extending to a rupee and more in Associated Battery, Goodyear, Indian Oxygen, Isaac Holdens, N.I. Cable and Union Carbide, and to six points in Rallis at Rs. 124. Papers, Sugars and Tea shares were all moderately lower.

• • • •

Textiles and Miscellaneous issues were marked down and Plantings fell in line with the general trend on the Madras Stock Exchange. Thus, S.I. Viscose dropped by more than five points to Rs. 128 and Dhanalakshmi by six points to Rs. 210. Western India Plywoods, in the Miscellaneous section, slumped from Rs. 234 to Rs. 210.

AMAZING, NEW surface for floors!

VYNATILE PLASTIC TILES

Better than any floor covering today !

Exciting things happen to floors—with VYNATILE! It's the wonder floor covering with a superb finish. A delightful addition to rooms. VYNATILE is distinctive on any floor. And that lovely look is sealed on to last for years and years!

VYNATILE is amazing! • Won't crack, scratch, break or rot. • Absorbs noise and shock. • Cleans in a jiffy! Just imagine—no rub, no scrub. • And it's so attractive. Available in a variety of colours and patterns that match any decor.

Choose VYNATILE in 3' x 3' sheets—in thicknesses of 1.5 mm. and 2 mm. Or ask for it in any economical size. Better still, take it as tiles to fit into your scheme of things!

VYNATILE...better in so many ways!

- Exceptionally durable... gives lasting value!
- Attractive on any surface—concrete, wood, steel or tile!
- 12 plain colours, 12 'marbalised' tones and 4 mosaic patterns to choose from!
- Dust, grease, spilled drinks and food can be cleaned away in seconds—just wipe with a damp cloth!
- Its hard-wearing flexible surface gives excellent under-foot comfort!
- Professionally laid to last for years!

INDO-FRENCH COLLABORATION

INDIA'S economic and commercial relations with France have not been quite so important up till now as those with the United States, the United Kingdom and West Germany. But they have not been wholly insignificant either, as will be evident from the figures pertaining to trade and aid. In the sphere of trade, for instance, India's exports to France were of the value of Rs. 9.0 crores in 1963, as compared with Rs. 8.0 crores in 1962, while its imports from that country amounted to Rs. 13.5 crores in the former year and Rs. 12.2 crores in the latter. As for aid, the French Government authorised its first capital goods credit to India to the tune of Rs. 14.3 crores in 1961-62 and its second capital goods credit of Rs. 9.5 crores, besides Rs. 4.8 crores of credit to I.F.C., in 1962-63. But all this authorised aid has not been utilised by India so far, and the Union Budget for 1964-65, too, has taken credit for only Rs. 1.3 crore by way of receipts from that source. It would appear from these figures relating to trade and aid that there is continuing scope for economic co-operation between the two countries. As much has been recognised in the Indo-French protocol of trade and economic co-operation, signed at New Delhi on the 15th inst.

This protocol opens out a broad vista of opportunities for trade and collaboration between the two countries. In regard to trade, it is noteworthy that France has given an assurance that its import policy for some goods in which India is interested—goods like woollen carpets, Kashmir rugs, basketware and sports goods—will soon be liberalised in order to provide for increases in their quotas. Currently the tour of the French trade delegation to India, according to the protocol, is calculated to expand this country's sales of cotton and jute goods, manganese ore, vegetable oils, tobacco, tea, hides and skins to France. Another significant feature of the protocol is the agreed three-point stand on the U.N. Conference on Trade and Development. The three points are: (i) that stabilisation, at sufficiently remunerative level, of the prices of primary products, should be brought about; (ii) that the "invisible" element in the balance of payments of the developing countries should be improved; and (iii) that steps should be taken to expand the imports into developed countries of manufactured products from the developing countries.

The protocol has also laid the framework for Indo-French collaboration in industrial development and planning. France, according to the protocol, has broadly agreed to collaborate with India in the establishment of petro-chemical, chemical (including fertiliser) and metallurgical industries like pig-iron, steel, special steel and aluminium. Initially, French technical experts, it is envisaged, will visit India to work out arrangements for industrial collaboration in specified fields for the fourth Plan. There is also promise of technical collaboration between French and Indian undertakings for the manufacture of glass, machine tools, measuring and control apparatus, scientific instruments and tractors. As for co-operation between the two countries in the sphere of planning, the protocol has provided for exchange of working documents on the technical and organisational problems arising from the development and execution of plans, particularly regarding perspective planning, physical and financial planning and relations between planning authorities and private enterprises. It need hardly be emphasised that French planners' experience in dealing with private enterprise has quite a few lessons for their confreres in this country.

What the protocol has said in general terms about industrial collaboration may not mean much if, at the same time, certain steps are not taken to facilitate the inflow of French private capital. One such step would be to conclude at the earliest an agreement between the two countries for the avoidance of double taxation. Another step would be to simplify the Indian tax structure which, according to expert French opinion, is much too complex. It would also be necessary to eliminate or reduce substantially the multiplicity of controls which are a despair to foreign enterprises seeking to invest in India. As the French investors, according to M. Jean Wahl, head of the division of commercial policy in the French Ministry of Finance and Economic Affairs, would not be tied down to any dogma but would be ready to collaborate with the public sector and the private sector alike, the Government here would do well to extend to them the minimum facilities they expect. For, after all, such pragmatic investors from a country which has a mixed economy like ours deserve to be actively encouraged for the simple reason that their very entry may improve the general climate for foreign private investment.

PROGRESS OF FERTILISER PROJECTS

In his recent Budget speech, the Union Finance Minister, it will be recalled, referred to the increasing emphasis that was being placed on intensive agricultural production under the "package programme." As fertiliser is one of the most important resources to be made available to agriculturists in a "package," the Finance Minister did well, at the same time, to include it in the list of industries made eligible in his Budget for a rebate of corporation tax equivalent to 10 per cent of the income-tax and super-tax normally payable by them and of 20 per cent of surtax. That this fiscal concession may go some way towards expediting progress in fertiliser production in the private sector may be foreseen, though it may have no immediate relevance to the crash programme to which the Planning Commission and the Finance Ministry have agreed, according to the Union Minister for Petroleum and Chemicals, to give the highest priority in the next two years. Incidentally, the proposed crash programme may be confined almost entirely to the public-sector fertiliser units and it is presumably in this context that the Central Agricultural Board has just requested the State Governments to indicate their additional requirements of fertilisers for 1965-66 and 1966-67, so that arrangements could be made for stepping up their production and, possibly, imports too. This is good insofar as it goes. But it is disquieting to hear from the Minister for Petroleum and Chemicals that, in spite of this crash programme, the third Plan fertiliser target as such would be achieved only in the second year of the fourth Plan.

It would be interesting to know, in this connection, how much progress has so far been made and how much remains to be made under the third Plan. In the case of nitrogenous fertilisers, for instance, the Plan's capacity target is one million tonnes in terms of nitrogen, against which the capacity actually installed up till now is only 368,000 tonnes. The production target is 800,000 tonnes of nitrogen, against which actual production in the public and private sectors together amounted to only about 220,000 tonnes in 1953. As for phosphatic and potassic fertilisers, no clear account of the progress in their production in relation to targets (400,000 tonnes of P_2O_5 and 200,000 tonnes of K_2O) is available. But, considering the fact that all types of fertilisers are in short supply, it is obvious that the various projects in the public sector and the private sector alike have been exceedingly slow in coming up. In the public sector, the ammonia and urea plants of the Rs. 34-crore, American-aided Trombay Fertiliser Project, designed to produce 90,000 tonnes of nitrogen and 45,000 tonnes of nitrophosphate per annum, are expected to be commissioned only by the end of this year. The Rs. 16-crore, British-aided Namrup Fertiliser Project, designed to produce 45,000 tonnes of nitrogen per annum with the aid of natural gas to be obtained from the Assam Gas Company, will be ready for initial production only by the middle of next year. The Gorakhpur Fertiliser Project, estimated to cost Rs. 27 crores and designed to produce 80,000 tonnes of nitrogen per annum, is due to be completed by the Japanese consortium by 1966. But, as not even the initial steps have been taken, its completion may be delayed much further. The Korba Fertiliser Plant of the Fertiliser Corporation of India, estimated to cost Rs. 33 crores and designed to produce about 100,000 tonnes of nitrogen a year, is expected to go into production late in 1967. The Neyveli Fertiliser Project is scheduled to commence production from September next year. The Fertilisers and Chemicals (Travancore) Ltd. is expected to complete by 1965 its expansion scheme for raising the annual capacity to 70,000 tonnes of fixed nitrogen and 33,500 tonnes of phosphates. All in all, therefore, the public-sector projects are not progressing fast enough to relieve appreciably the tight fertiliser situation. But it is just possible that it may be relieved to some extent by the proposed crash programme aimed at increasing production in the existing units.

If the public-sector projects are lagging behind, the units licensed in the private sector seem to be even slower in coming up. Of the six fertiliser units to be established in this sector, one each at Visakhapatnam, Kothagudium, Baroda, Hanumangarh, Tuticorin and Mangalore, only the first three are stated to have made some progress so far. In the case of the Visakhapatnam unit, approval was recently given to American collaboration proposals. The exact state of affairs pertaining to foreign collaboration for the other projects is not known. The Government was said to be seriously considering the question of revoking the licences issued to the promoters of these projects. The latest report, however, is that it is prepared to give some more time for these parties to show evidence of their ability to fulfil their undertaking. It is said that Messrs. Kothari and Sons, Madras, who have the licence for setting up the project at Tuticorin, have sought the permission of the Government to transfer the location to Madras. A similar request has been made by Mr. Jalan, who has the licence for the Hanumangarh project, to shift the site to Kotah and the Government has asked the Fertiliser Corporation to examine the suitability of Kotah for establishing a fertiliser unit. Messrs. Shaw Wallace & Co., who have the licence for the Mangalore project, have been given further time to finalise foreign collaboration arrangements. The factory at Baroda is to be financed out of Japanese and French credits and the licensee has been given permission to place the orders for the necessary plant and machinery. It may be supposed that, in the light of the welcome extended by the Union Finance Minister to foreign capital participation in industries, some energetic steps would be taken at the earliest by the Government and the parties concerned to finalise collaboration arrangements. The special fiscal concessions available for the fertiliser industry may be expected to create a more favourable climate for foreign capital in a field which has been virtually boycotted by it so far, provided satisfactory arrangements are also evolved in regard to pricing policy.

PROBLEMS OF BISCUIT INDUSTRY

For biscuit manufacturers, the going is not so sweet as some of their biscuits are. From the description of the difficulties encountered by the industry given by Mr. A. C. Khanna, President of the Federation of Biscuit Manufacturers of India, in his speech at the Federation's fourteenth annual meeting held at New Delhi this week, it is clear that the industry faces all the problems common to consumer goods industries in the country, with a couple of its own thrown in, to make a formidable list. The main difficulties of the industry are: (1) shortage of raw materials, (2) poor quality of wheat flour, (3) inadequate supply of sugar and milk, (4) high cost of tin containers and other packaging materials, and (5) the usual high rate of taxation. These have effectively curbed expansion of production, which, nonetheless, increased by 16 per cent (over 1962) to 33,268 metric tonnes last year, as against the target of 40,000 tonnes set for the final year of the third Plan. Even this target, it may be noted here, is a modest one. The Cereal Products Panel of the Development Council, which examined the question carefully, has recommended a target of 75,000 tonnes, almost double the third Plan target, for the fourth Plan. In order to achieve this target, the existing production capacity has to be substantially expanded. The present installed capacity for biscuit manufacture, on a single-shift basis, is 28,620 metric tonnes per annum. In order to produce 75,000 tonnes in the fourth Plan, the capacity will have to be raised to at least 50,000 tonnes, according to Mr. Khanna, because two-shift working envisaged by the Panel is not possible in all cases, even assuming that raw materials are available.

One of the main difficulties in the way of expansion of capacity, according to Mr. Khanna, is shortage of foreign exchange for importing the necessary plant and equipment. Since buscuit manufacture is a consumer goods industry, it gets only low priority in the matter of foreign exchange allocation. The industry had asked for a foreign exchange allocation of Rs. 30 lakhs per annum for importing plant and equipment but the Government has been insisting on justifying the demand by showing matching exports. While the policy of relating imports to exports may be desirable in the context of the need to export more, this stipulation has really caught the industry in a vicious circle. The manufacturers maintain that they find it increasingly difficult to compete in foreign markets because the existing plant and machinery of biscuit manufacturers in India are obsolete. Their competitors, who include some of the most advanced countries, enjoys the advantage of the most modern plant and equipment, unlimited and unfettered supply of good quality raw materials and first class packaging materials. This is why Indian biscuits find it hard to compete in foreign markets, even though the export price is 30 to 40 per cent cheaper than domestic prices. Accordingly, the Government's insistence that imports of modern plant and equipment will be allowed only if the industry shows matching exports will make it impossible for the industry to modernise itself and export more. The solution to this problem is not to let the industry carry on with its outmoded machinery but to allow it to import the necessary equipment on the express understanding that it will increase exports to a specified level within a stipulated time. As it is, the industry has been asked to aim at an export target of 5 per cent of its total production. The President of the Federation considers this as an impossible target. Even a target of two per cent of production, according to him, is difficult to achieve, in view of the industry's many handicaps, of which lack of modern equipment is one of the most serious. Mr. Khanna has pointed out, in this connection, that, even in advanced countries like the U.K., where total biscuit production is about 12 times more than in India, exports amount to only 3 per cent of total production. The President of the Federation, however, believes that exports could be increased, if better incentives were given. He has suggested that the present rate of import entitlement of 20 per cent of the f.o.b. value of exports should be raised to 60 per cent. A long-term increase in exports could be achieved only if, as Mr. Khanna conceded, the industry is allowed to modernise itself.

DEFENCE PRODUCTION

The proportion of Defence outlay in the overall Central Government expenditure, which had declined from 27 per cent in 1951-52 to just 16 per cent in 1962-63, has gone up since then, the figure for 1964-65 (Budget estimate) being 22 per cent. Expressed in actual amounts, the Defence budget for 1964-65 provides for an aggregate expenditure of no less than Rs. 854 crores (on both revenue and capital accounts), as against Rs. 474 crores in 1962-63 and Rs. 197 crores in 1951-52. However much one may regret such huge outlays on Defence, they are, as the Union Finance Minister very aptly stated in his budget speech, "a matter of painful necessity for us." How else could the country keep itself free from the serious threats posed by Pakistan and China and go on uninterruptedly with endeavours to raise the low living standards of its teeming millions? The need for sustained effort to strengthen the country's defences cannot, therefore, be stressed too strongly. Forming an essential part of this effort are (a), the immediate creation of an adequate production base and (b) improvement and expansion of the means of communications and transport.

While planning for the Defence build-up has to be done with due regard to (a) the overall economic situation, (b) limitations of finance, particularly of foreign exchange, and (c) availability of technical know-how, many of the Defence projects, such as border roads, could be of civilian use too. The Union Finance Minister has done well, indeed, in instructing the Army authorities not to have any more emergency construction; whatever is done must be of a permanent nature. The validity of this instruction holds good as much in the case of Defence production as in that of communications and transport. Considering the urgent need to expand the production base, the move of the Defence Ministry to separate the responsibilities for current production from those relating to the planning of future requirements must be welcomed. It is, however, necessary to emphasise that every care will have to be taken to avoid duplication of effort and waste of money and to bring about appropriate co-ordination of efforts of the two wings.

In the first phase of the programme for expansion of production base, six new ordnance factories, according to the Defence Ministry's annual report for 1963-64, have been sanctioned and these are already in the process of being established; there are now 22 factories manufacturing armaments and other equipment. It is somewhat unfortunate that uncertainties of foreign aid and foreign exchange difficulties have hampered the Defence Ministry's efforts not only to augment production in the existing ordnance factories but also to go ahead with the setting up of new ordnance factories during the current (1963-64) year. Out of the Rs. 158 crores allocated for capital works, about Rs. 43 crores still remain unutilised. It is, however, gratifying to hear that the position has since improved greatly. Action, we are told, has already been taken in respect of three of the six new ordnance factories sanctioned to acquire land, commence construction of civil works and place orders for machinery. A programme has also been drawn up to establish the remaining three factories as early as possible.

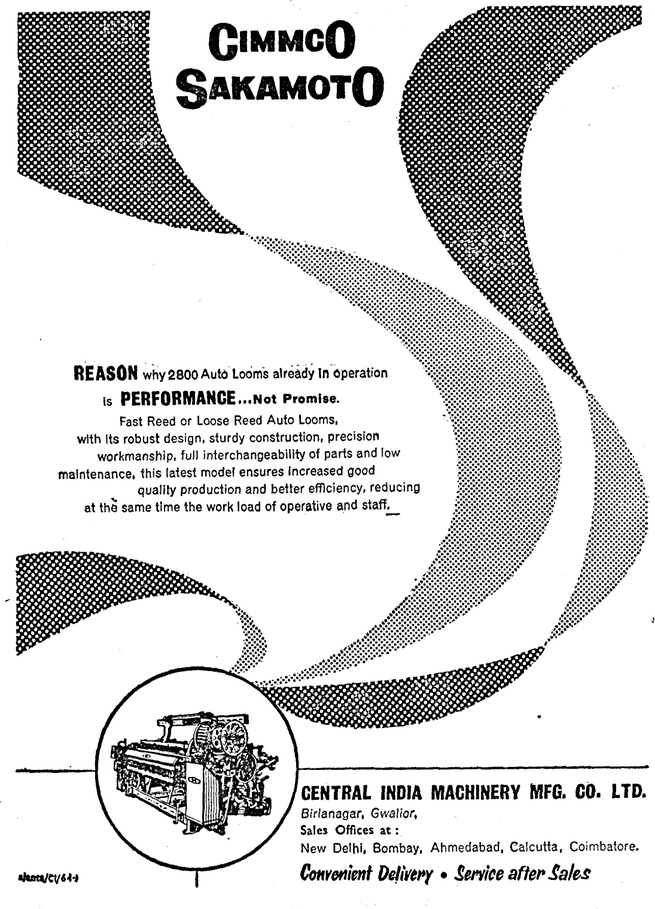
In the context of the immediate urgency of adequate production base, the role played by the Research and Development Organisation under the Ministry of Defence is quite important. Highlighting the useful work that is being done by this organisation, the Ministry's report gives the following particulars:

> The Organisation has 25 research laboratories and technical establishments, two training establishments and three field research stations under it. At present, there are approximately 700 projects and investigations in hand; some research work has also been entrusted to universities and other research organisations. The Organisation has been of assistance in developing a number of new weapons and has also developed the know-how for manufacture in ordnance factories of several types of conventional ammunition which were previously imported. The weapons of imported origin which have been developed for manufacture include a high velocity tank gun, a rocket launcher, rockets and a recoilless anti-tank gun. In the field of communications, too, a number of electronic equipment items have been developed, including several for use in the forward areas. In radar technology, a beginning has been made with the development of a local warning radar for the army and the development of a field artillery radar. A high altitude pre-fabricated portable hut, collapsible assault boat, pontoons, motor boat bridging and a mine prodder have been developed. The Organisation has paid special attention to problems relating to the behaviour of men and weapons under severe conditions of temperature, pressure, wind-velocity, etc., in high altitudes. In the field of food research and food technology, dehydrated foods have been developed for use at high altitudes and these have been accepted by the troops. Production of freeze-dried food items has been developed with the help of technical know-how equipment obtained from abroad. A scheme to set up a five-ton accelerated freeze-dried plant has been sanctioned. The Organisation has assisted commercial firms to develop complex items of defence equipment. These include, among others, a light aluminium alloy bridge, a light floating footbridge, pre-fabricated airfield landing mats and signal specialised vehicles.

Along with the Research and Development Organisation, the Inspection Wing of the Defence Ministry, too, is doing much useful work. This Department has taken a number of steps to replace imported items by encouraging indigenous manufacture. During the year 1963-64, nearly 200 different projects to develop indigenous production of imported stores were initiated. Imported items worth approximately Rs. 10.16 crores were diverted for procurement or production through indigenous sources. In various ways, the Inspection Organisation rendered assistance to the civil sector to produce Defence stores.

On its part, the Defence Institute of Work Study at Mussoorie has qualified 189 officers from Defence organisations and conducted a number of appreciation conferences for over 1,000 officers. Some study cells have been created in the Navy and the Army.

The progress achieved in the sphere of Defence production especially since Chinese aggression in 1962 is no doubt encouraging, but much still remains to be done before one can think of full-fledged defence all along India's frontiers. The Defence effort of the country, as Mr. Krishnamachari has rightly stated, depends largely on building up the production base and the steps taken to strengthen the economy are also those that will strengthen our defences.



LONDON LETTER

U.K.'S EXTERNAL CAPITAL POSITION

ASSETS EXCEED LIABILITIES?

(From Our Own Correspondent)

LONDON, 14*th March*

THE Bank of England has just concluded another excursion into the realms of the uncertainty which clouds this country's external *capital* position and, in spite of the admitted guesswork and underestimating which enters into many of the figures, it is clear that we know a great deal more than in the days when the gold stock and the "sterling balances" represented the sum of knowledge. Perhaps the most surprising fact which emerges is that the U.K. is not, after all, the world's great creditor. There is an apparent surplus of assets over liabilities of £1,600 million, but the Bank itself warns that this figure is "neither coherent nor complete" (far too many components lack certitude)—and goes on to point out that what really matters is the net income derived from the capital and the flows in and out of the country of capital. This is obvious, but, since the point of the Bank's exercise was to take a look at Britain's total of assets and liabilities one must point out that this look reveals that whatever Britain *owns* she also (for the most part) *owes*. How does this come about?

The U.K. has been a great investor overseas—never before has it been estimated to what extent. Now we have a figure for general industrial security investments of £3,000 million (an incomplete estimate) plus assets abroad owned directly of £3,500 million, apart from investments in oil of £1,100 million, in insurance of £350 million (in the U.S.A. only), by U.K. banks (no figure yet available) and in real estate (no figure)—a total of a minimum of £8,000 million. A little less than half this is in the sterling area and rather more than half in the non-sterling area.

But, on the other hand, one often ignores the extent to which foreign capital is invested in the U.K. Security investments and directly owned assets amount to £2,135 million and overseas oil investments in the U.K. total £700 million (two-thirds the U.K.'s own oil investments abroad). No figures are available for investment in the U.K. by foreign banks, insurance companies and real estate investment. However, it is clear that, against the £8,000 million of assets must be set, some £3,000 million of liabilities, leaving a net investment of a minimum of £5,000 million—much less than usually assumed. However, against these net commercial assets must be set the net liability on Government investment account.

The U.K. Government has made loans abroad and acquired (on the outbreak of the last war particularly) non-sterling securities to a total of some £1,070 million; but the Lend-Lease and other loans to the U.K. are £1,930 million, while overseas investors hold some £710 million of Governmental stocks, so that on *official* capital transactions the U.K. (thanks to the world war) is a debtor by some £1,600 million. This brings the U.K.'s long-term investment creditor position to something under £4,000 million. The figure is put as high as this, because it is likely that more U.K. assets have been omitted from the calculations than U.K. liabilities.

On the short-term position, there is less new to be discovered. The picture is as it was at the end of 1962. Then the gold stock just topped £1,000 million *plus* £180 million held with the I.M.F. We now learn that the British banking system had claims in non-sterling currencies in respect of loans abroad in excess of £1,000 million—but this is British overseas banking at work, for these non-sterling currencies were deposited here and form part of the U.K.'s short-term sterling liabilities. These banking assets and liabilities balance.

But the U.K. has also claims in sterling abroad of some £850 million which are an important offset against the well-known item of "sterling balances" in respect of sterling deposits with commercial banks, the latter totalling £1,475 million. Thus this U.K. bank deposit liability is brought down to a net £600 million. But the heaviest "sterling balances" liability is in respect of Treasury Bills and other Government stocks held by overseas banks and commercial institutions and residents, as well as some small deposits kept with the Bank of England and the Crown Agents. The total of these items at the end of 1962 was £2,400 million.

These sterling balances added to the net liability on balances with the commercial banks give a grand total of £3,000 million which is not subject to the margins of error of the long-term figures. Thus to sum up, the U.K., international banker, owns a net £4,000 million (or more probably) abroad in long-term investments, but owes in the form of the short-term "sterling balances" some £3,000 million, and holds a stock of "cash" in the form of the gold reserve plus I.M.F. gold of nearly £1,200 million. Not many commercial bankers would be satisfied with this position! On the other hand, thanks to the I.M.F., the U.K. carries a big hidden reserve in its borrowing rights with the I.M.F. First, it can borrow as much from the I.M.F. again as it holds in gold (i.e. £360 million); next it can borrow £500 million, the equivalent of the amount of sterling the I.M.F. holds. This brings the liquid assets to some £1,860 million—the position is not much changed today—but, against the picture of Britain's international business, it still looks very queer banking!

The Electricity Corporation of Nigeria has been given a loan of $30 million by the World Bank for financing the construction of transmission lines and distribution facilities which will form the basis of a nation-wide power network. Twelve private banks are participating in the loan, without the World Bank's guarantee, for a total of $2.17 million, representing the first four maturities which fall due between September 1966 and March 1968. The total cost of the transmission and distribution project is estimated at $42.3 million, of which $30 million in foreign exchange will be covered by the Bank loan. The loan is for a term of 20 years and bears interest at the rate of 5¼ per cent per annum including the 1 per cent commission which is allocated to the Bank's Special Reserve. Amortisation will begin in September 1966. The loan is guaranteed by the Federal Republic of Nigeria.

Under a new stand-by arrangement with the International Monetary Fund, the Government of the Syrian Arab Republic has been authorised to draw the equivalent of $18.5 million upto the end of December 1964. Since 1960, the Syrian Arab Republic has made several drawings on the Fund, and its outstanding drawing currently total the equivalent of $12.6 million. The Syrian quota in the Fund was recently increased from $15 million to $25 million. The new stand-by arrangement will provide continuing support for the efforts being made by the Syrian authorities to overcome a difficult balance of payments position which has persisted for several years.

The Nahorkatiya and Moran crude conditioning plants of the Wheese Ltd. of Britain have been taken over by the Assam Oil Company on behalf of the Oil India Ltd. The plants, built at a cost of over Rs. 1.65 crore, form part of the Oil India pipeline from Nahorkatiya oilfieds to the public sector refineries at Gauhati and Barauni.

(Concluded from next column)

in a serious crisis : the reference to " exceptional and concentrated " demand suggests that there is plenty of room to quarrel about definitions.

The experience of commodity support schemes suggests that rigid formulæ are likely to prove disastrous, unless every member is prepared to throw everything into the defence of the scheme. Since rigidity is the essence of this particular scheme, and since central banks are not yet prepared to commit themselves to supporting the present monetary structure in any conceivable circumstances, it is probably right to preserve a prudent vagueness about what action would be taken in hypothetical situations. It is probably right, too, to keep the speculators guessing : we all tend, as Tacitus remarked more briefly, to exaggerate the size of the unknown.

But it still seems to me that the object of the gold pool would have been achieved more certainly, if the market had been allowed to know of its existence rather than surmise it and if the success of its operations had been published more promptly. It is convenient to operate in the dark; nowadays, however, when it is the fashion to publish, failure to do so may be taken to imply weakness rather than strength.

POOL OF GOLD REVEALED

By Questor

THE Federal Reserve has made a point, since Mr. Roosa established his system of currency swaps, of setting out in detail from time to time what use has been made of these facilities. No information whatsoever, on the other hand, has been made available about the operations of the gold pool set up in the autumn of 1961; even the existence of the pool has not been publicly admitted. An account of its genesis and its working has now been published for the first time by the Federal Reserve and the Bank of England simultaneously.

The need for such an arrangement first became apparent in the autumn of 1960, when a combination of factors led to a demand for gold which drove the price in the free London market up to $40 an ounce. My impression at the time was that the U.S. authorities were at first disposed to let the speculators burn their fingers. The Bank of England, however, which has long experience of dealing with speculative movements, persuaded them that " this state of affairs threatened the whole structure of exchange relationships in the western world " and obtained their consent to bring the price back to its normal level by means of substantial sales. Conditions in the market remained quiet for almost twelve months afterwards.

By the autumn of 1961, however, demand for gold was building up again. In October, therefore, " the U.S. financial authorities proposed the setting up of an informal kind of arrangement, the object of which would be to share the burden of the cost of intervention on the London gold market to keep the price within reasonable limits in the event of exceptional and concentrated demand." The central banks of the U.S., Britain, Switzerland and the Six then agreed to form a sales consortium, with the U.S. taking a 50 per cent. share in the pool. The Bank of England was to act as operating agent with authority to draw on the pool in case of need.

After a brief period of experiment, however, conditions changed. The market price began to fall, and the same group of central banks—again at the suggestion of the U.S.—agreed to buy gold as a group and in the same proportions through the London market whenever the price fell below the Federal Reserve equivalent. Between the early and late spring of 1962, some $80 million of gold had been acquired for the pool in this way.

Before it could be distributed, however, conditions had again changed because of the break on Wall Street and the flight from the Canadian dollar. By mid-July, the $80 million had disappeared and, by the time of the autumn meeting of the International Monetary Fund, the pool had been forced to throw in another $50 million of its own.

What effect the Cuba crisis had has yet to be disclosed : we are told only of " record demands for gold " and " substantial sales from the pool." But Russia, paradoxically, came to the rescue : by the end of October, when the crisis was easing, the net outlay since July was down to $100 million. By the end of the year, the outlay had been completely recovered.

The selling side of the pool has been in abeyance ever since. During 1963, with speculative positions being unwound and Russia continuing to sell heavily to finance wheat purchases, the pool acquired and shared out among its members rather more than $600 million of gold. Whether the accretion to world monetary reserves would have been any smaller in the absence of a pool, it is admitted, nobody knows. But " there is little doubt," it is claimed, " that the knowledge that central banks were working together in the gold, as well as in the exchange, markets has helped to maintain public confidence in the existing international monetary structure."

The claim is probably just. But I find it difficult to square this remark with the fact that the existence of the pool, now two-and-a-half years old, has only just been officially admitted. Every dealer in the market—every financial journalist, for that matter—has long been aware of the fact that central banks were working together to keep the price of gold within bounds. What they did not know, and still do not know, is the rules of the gentleman's agreement—whether, in particular, there are any limits on the Bank of England's discretion to intervene in the market or on the amount of gold which each member is ready to contribute to the pool

DELHI LETTER

REMOVING MALAVIYA MALFORMATIONS

RIGHT ABOUT TURN IN FOOD IMPORTS POLICY

From Our Special Correspondent

NEW DELHI, 18*th March*

THE Ministry of Petroleum and Chemicals is seriously going about the task of removing the heap of malformations that have developed in the country's oil industry during the past so many years. The Professor has shown his hand as adroitly in this sphere as he is used to in scholastic persuasions.

The series of announcements Mr. Humayun Kabir made in the Lok Sabha yesterday indicate clearly a totally different approach than that pursued by Mr. Malaviya. They have a coating of pragmatism not often noticed in the State oil sector in the recent past.

Among these are (i) merger of the Indian Oil Company and the Indian Refineries Limited; (ii) a new committee to review the price structure of petroleum products, taking into account the transport factor; (iii) a petro-chemical complex near Haldia after the ones in Bombay and Gujarat (a Cabinet sub-committee is already looking into the problems in order to expedite the setting up of petro-chemical complexes on the basis of the recommendations of the Henny Committee); (iv) a seventh refinery in the public sector in view of the encouraging collaboration offers received for the proposed refineries at Madras and Haldia (the other four in the public sector are Noonmati, already in production, and Barauni, Koyali and Cochin, under construction).

The merger of the two public sector oil organisations was in the air for quite some time now. It will not only rationalise the operations of production and distribution but will also remove some of the anomalies that creep into two separate units doing part jobs. Public sector undertakings are rather slow in shaping into proper business organisations, at least that is the experience in this country. But there is also the experience of the private sector oil companies where refining and distribution of petroleum products under a single management have been successfully carried on with substantially low overhead costs. The Government's desire to be businesslike in purely business organisations is surely a step to be welcomed. And so did the members of Parliament who found quite a few satisfactory answers to their queries.

In the same line is the appointment of a new committee to review the price structure of petroleum products. The Damle Committee's price formula, although remaining effective till the end of the next financial year, has revealed some snags which require a complete overhaul of the price structure. This has become urgent in view of the *fact* that three public sector refineries coming up shortly and that their respective distribution zones do not justify the application of the present formula.

Cochin Refinery

The problem has particularly arisen because of certain clauses in the agreement with the Philips Petroleum for the Cochin refinery. The process margin and the cost of crude allowed to the Philips Petroleum are now realised to be much higher. Under the agreement, the Philips Petroleum is allowed a process margin of Rs. 47 per ton *plus* the cost of crude at Rs. 75 per ton at current prices, a total of Rs. 122 per ton, whereas the products which the Cochin refinery would produce are available in world markets at Rs. 115 per ton. Moreover, if the Government carries out its assurance to the Philips Petroleum of a future expansion of the Cochin refinery's market area, it will inevitably encroach upon the area to be served by the proposed Madras refinery. For almost identical reasons, the products of the Noonmati refinery are now being sold in West Bengal and Bihar and those of the Barauni refinery will have to be pumped to some distant consumption centres. The Madras refinery, it seems, will have to start with a handicap in that case. Government obviously fears similar anomalies in respect of the products of the Koyali refinery as well. Hence its search for a price structure for petroleum products that will take into account the transport factor in particular. The present indications are that the future price formula will show a definite upward trend than that prescribed by the Damle Committee. Additionally, the new review will also have to take into account the shortages in some of the middle distillates and in kerosene, before arriving at a formula satisfactory to both the public and private sector oil undertakings.

The possibility of the Government going in for a seventh refinery in the public sector is rated very high in certain Planning Commission circles. The Commission, by its recent study, has shown up the utter irresponsible calculations of the former Minister of Mines and Fuel in regard to the demand and supply position of the petroleum products in the country. These sources hold that, with the increase in the number of refineries, some of the short-supply-items will be augmented, though that will also automatically increase the production of motor spirit, a surplus product. However, it is conceded that the surplus in motor spirit will be more than compensated if the country is able to meet adequately the rural demand for kerosene and the industrial demand for furnace oil and some other important middle distillates indigenously.

Two Methods

There are two methods open to the country, it is stated, to dispose of the surplus motor spirit, besides export (which, in any case, cannot be of a very substantial nature). First, adjustment of the levies on motor spirit in such a way as to make its price less prohibitive for the consumer. But this may entail a cut in the State revenues. Therefore, the second alternative suggested is the revival of the small car project even if it be in the private sector and handled by one or more firms or a consortium of private firms with State participation in equity capital. Even as it is, rapid dieselisation of road transport has considerably eased the consumption of motor spirit.

Another reason that makes the Government think in terms of a seventh refinery is the low cost of setting it up. The two refineries at Barauni and Koyali are expected to cost Rs. 36 crores and Rs. 28.5 crores, respectively. The Noonmati refinery required an outlay of Rs. 15 crores. The estimated cost of the 2.5 million ton refinery at Cochin will be Rs. 17 crores. As against these, the collaboration offers for the Madras and Haldia refineries (2.5 million tons each), now being examined by the Government, have limited the cost to about Rs. 10 crores each. Considering that the refineries at Madras and Haldia will be much more sophisticated than the one at Cochin, the estimated cost must be very attractive. This should also show that the " great gain " to the public sector with the Cochin refinery type agreement, as was claimed at that time, was nothing very extraordinary. In fact, the Government seems to have come to a decision that the Cochin refinery agreement is not an example worthy of emulation.

Fresh P.L. 480 Agreement

After considerable weighing of the pros and cons of food imports and their possible adverse influence on the country's efforts at *attaining self-sufficiency in food*, the Government has decided to enter into a fresh agreement with the United States for supply of five million tons of foodgrains under P.L. 480. The imports are to be spread over a period of four to five years on a sliding scale, with the last shipment being of the smallest quantity. Mr. Swaran Singh is expected to go to Washington towards the close of or after the current Budget session.

This is almost a right about turn in the Government's attitude towards food imports. When the former Food Minister went to Washington in 1963, he had secured a general agreement of the U.S. Government for further supplies to India under the P.L. 480. But Mr. Patil had to stop probing any further because of the known apathy at home towards such imports.

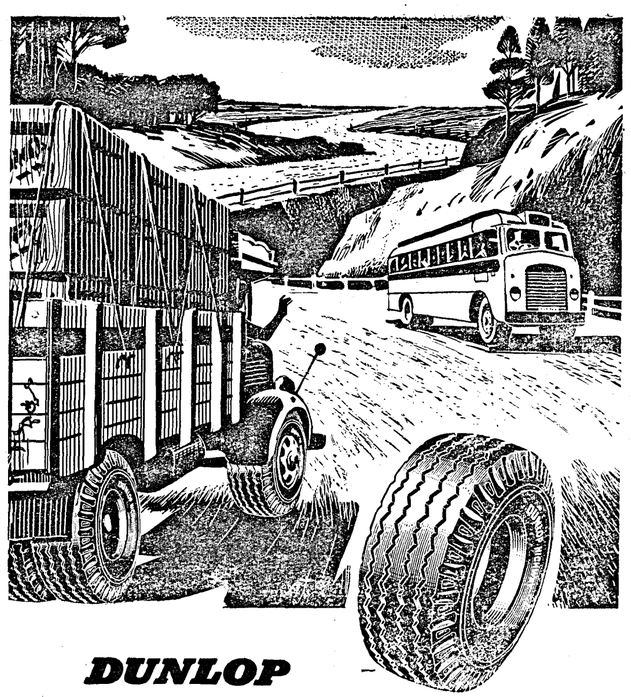
The present decision is obviously due to the realisation that the food targets for the third Plan, even when reduced to the level of 95 million tons, will not be achieved. The recent damage to the *rabi* crop has further created some uncertainty, as is also evident from the soaring prices. In these circumstances, the Government, it seems, does not wish to take any risk.

The grimness of the country's food position has been highlighted by a Ford Foundation expert who holds that food production by the end of the third Plan will be of the order of 85 or 86 million tons only. On the basis of the present trend of foodgrains production, he has calculated that the *per capita* per day net availability will range between 14.6 to 14.7 ozs. in 1965-66, taking also into account the rise in population. That will be the smallest since 1958, as the official figures in the accompanying table show. Even this quantity per head per day will go down if there is one bad monsoon during the last two years of the third Plan. If imports are assumed, and they will have to be, the net availability would be between 15.4 and 15.5 ozs. per head per day.

Net Availability of Cereals and Pulses

Year	Per capita net availability (ozs. per day)		Total
	Cereals	Pulses	
1957	12.8	2.4	15.2
1958	12.0	1.9	13.9
1959	13.5	2.6	16.1
1960	13.5	2.3	15.8
1961	13.8	2.4	16.2
1962	13.8	2.2	16.0

The Ford Foundation expert has, however, suggested, among several remedial measures, intensive cultivation in selected areas. Even with all these, he does not envisage a production figure that will cross 90 million tons under the most favourable circumstances.



DUNLOP
HIGHWAY for highest mileage on long heavy hauls

The Dunlop Highway Truck and Bus Tyre assures higher initial tread mileage on heavily laden long distance trucks and modern fast buses. And finally, when the tyre is worn smooth, the excellent retreadability of the casing means that it will continue to serve for many more thousands of miles.

DUNLOP HIGHWAY for HIGHEST MILEAGE

MORE ON STATE BANK'S PROGRESS

MR. VENKATAPPIAH'S STATEMENT REVIEWED

REFLECTING the dual role and functions of maintaining a commercial character in running the business of banking within the framework of public policy and interest prescribed by the charter of the State Bank of India, Mr. B. Venkatappiah, its Chairman, spoke at the ninth annual general meeting of the shareholders held at Bombay last week, of the performance of and the prospects for the State Bank of India both in relation to its normal banking activity and with reference to those spheres of development in which the Bank has always played a special role. He also referred to the progress made by the State Bank of India in its organisation and methods—matters which are pertinent to its growth and efficiency such as recruitment and training, premises and housing, personnel welfare and relations, delegation and decentralisation. In essence, therefore, his speech is the story of the progress of the State Bank of India and its subsidiaries.

The first part of Mr. Venkatappiah's story of progress refers to income and operations of the Bank during 1963. As was pointed out in our last week's review of the working of the Bank, higher earnings were the result of two principal reasons, namely, expansion of business and modification in lending rates. All the assets and liabilities of the State Bank of India were consistently higher in 1963; the busy season peak of the Bank's advances at Rs. 309 crores in 1963 was Rs. 20 crores higher than the peak of the previous season in 1962: the annual turnover as reflected by the 1963 balance-sheet of the Bank was higher by more than Rs. 55 crores at Rs. 671 crores.

The lending rates were raised with effect from the close of business on 5th April 1963 so as to bring them in greater conformity with the prevailing conditions in the money market as well as to meet the Bank's higher operating costs. Reflecting the rise in the Reserve Bank of India's Bank Rate, the State Bank of India's advance rate was raised from 5 per cent to 6 per cent. Increases in the entire structure of the Bank's lending rates were graduated: little or no addition was made to the higher range of lending rates, whereas, among the lower ranges, they were put up by one full point: concessions to small industries and co-operatives were, however, maintained.

Deposit Rates

The higher operating costs were, in the first place, the result of the Bank's policy towards its deposits and deposit rates. Since the terse advertisement of April 1963, announcing the rise in deposit rates offered by the Bank, a clear cut enunciation of Bank's policy in this direction was necessary. Mr. Venkatappiah has provided this missing link. He has pointed out that the Bank's policy is quite simple. While the Bank has no intention of entering into undesirable, unhealthy and harmful competition with other banks, it, nevertheless, proposes to make every effort, along with other banks, to attract savings and to bring them increasingly into the banking system, for building up the deposits of the State Bank. Accordingly, rates on various categories of savings and fixed deposits were raised by ½ per cent in April in order to bring them on par with the rates offered by other banks. The deposit rates of the State Bank had for long remained below those offered by the other banks in the hope that the public sector character of the Bank would offer sufficient incentive to depositors to compensate them for the slightly higher rates of interest offered by the other banks. Moreover, as long as the continuing accrual and substantial balances of counterpart funds distorted and concealed the real trends and movements in the State Bank's deposits, it may have been possible for the State Bank to ignore the discouraging effects of the interest rate differential; but, once it became clear, that, in future, no special accruals or balances were likely to give a buoyant look to its deposits, the State Bank could no longer ignore the real trends in its deposits. Further, it is becoming increasingly evident in recent months that the public sector character of the Bank can no longer be a substitute for higher rates of interest, particularly in the face of the gradually increasing competition among banks for deposits.

At the time when the rates of interest on deposits were raised by the State Bank of India, other banks were apprehensive that a part of their deposits will be diverted to the State Bank: but their fears have turned out to be unfounded, since there is no evidence of any diversion having taken place. The problem is again before all the banks, including the State Bank of India: the Reserve Bank has requested them to re-examine the deposit rates in the context of the need for mobilising greater resources. By the time the State Bank Chairman spoke, the bankers' reactions to the request had hardly time enough to crystallise, but he promised to consider the request in the light of the needs of the State Bank and of what the other banks do. There is no doubt that the parity between the deposit rates of the State Bank and other large banks has come to stay. There is also hardly any doubt that, like the other banks, the State Bank has no wish to enter into any rate war or unhealthy and harmful rate competition. Further, there can hardly be any doubt which way the bankers will respond to the Reserve Bank's wishes, in spite of their hesitations and indecisions of the past months regarding deposits; yet the weeks to come could still provide a real test to the bankers to match their practice with their professions. What will be the attitude of other banks, in case they are still unable to agree in favour of higher deposit rates? What will be the attitude of the State Bank of India, in case the inter-bank agreement on deposit rates is scrapped? How will the State Bank and other banks act if they agree to higher rates in principle, but disagree on the *extent* of rise? The Reserve Bank has a variety of means to enforce its wishes, but the simplest of them all is to set the pace and pattern by acting through the State Bank of India.

Another factor contributing to higher operating costs of the State Bank of India is the higher wage bill. The Bank has a very considerable branch expansion programme ahead apart from the large back-log of recruitment to make up. In addition to the intensive plan for recruitment of additional clerks and supervisors, increase in salary and allowances of non-award staff following higher salary for award staff last year, and higher dearness allowances all round have contributed to a higher wage bill.

Branch Expansion

The State Bank has undertaken a big project of branch expansion for opening about 400 new branches during the next five years: the programme consists of 319 branches to be opened before the end of 1968 and the balance of 75 branches, yet to be opened under the previous programme, before the middle of 1965. It is expected that 30 per cent of the total branches will be in rural and semi-urban centres. This new project is comparable to the one undertaken by the Bank during the first five years of its establishment and executed successfully. The Chairman has, however, sounded a note of caution by drawing attention to the difficulties involved in implementing the new scheme of branch expansion. The deeper the Bank goes into the rural interior, the more and more difficult it becomes to obtain suitable sites or buildings for the branch offices; personnel are to be recruited and trained and, with all the banks expanding their activities and spheres of operations, it is difficult to obtain and retain suitable and eligible hands. With rapidly increasing number of branches and offices, adjustment and reconciliation of inter-branch accounts becomes a very complicated matter. A news item some weeks ago claimed that the State Bank of India was planning to install electronic data processing equipment for this purpose, but its Chairman has chosen to remain silent on the project in his annual statement to the shareholders. Be that as it may, the farther the Bank goes into semi-urban and rural areas the greater is the need to evolve new techniques for mobilisation of deposits adequately, and simpler ways for disbursement of appropriate credit. For tackling these problems with a long-term perspective, the Bank has established new Premises and Planning Organisation and Methods (POM) Divisions; one of their basic aims is to provide improved customer services and better working conditions.

A committee of experts appointed by the Bank has made detailed suggestions regarding staff, premises and accounting problems; these, we are told, are being implemented: the Premises Department is busy finding suitable sites and buildings, constructing new premises and renovating existing branches. A large-scale programme of recruitment is already in operation and the schemes of training for new entrants, as well as for the existing staff at all levels, have been expanded and revised. It is very interesting to hear that the Bank has at present facilities to train over 1,000 clerks and 200 officers every year. Inter-branch accounting procedures have been somewhat simplified and further measures are being planned. As regards mobilisation of rural deposits experimental techniques are being tried at several centres: a committee has already investigated this problem for three of the Bank's subsidiaries. All this reorganisation is conditioned by the desire to improve customer services; suitable forms and media of communication are employed for approaching people. In conducting all these experiments, care has been taken to ensure that costs are commensurate with results.

In all these ways, the State Bank of India has built up a framework and guidelines for future progress; but, with progress comes the problem of increasing size: and it becomes progressively impossible to administer such a large monolithic structure with more than 1,600 branches, their agents, staff and customers from a single Central Office or even from three or four regional Local Head Offices. The authorities of the Bank are seized of the problem, as witness the State Bank of India (Amendment) Bill 1963 currently before the Lok Sabha. This Bill seeks to facilitate further delegation and decentralisation of administrative, organisational and operational powers and procedures by creating a larger number of Local Head Offices, by reconstituting the Local Boards, and by increasing their powers, which may be exercised under the general or specific directions of the Central Board. The amending Bill is designed to introduce changes that will enable the Bank to dispose of its business efficiently and expeditiously. The main elements of the Bill, it will be recalled here, were outlined and their implications discussed on page 42 of *Commerce* dated 11th January 1964.

Subsidiaries

The observations of the Chairman of the State Bank of India on the progress and achievements of its seven subsidiaries give one the impression that he is satisfied with them. He has quoted data showing an all-round improvement in their growth, as will be seen from the following extract from his speech published in full elsewhere in this issue:

> "In their traditional operations no less than in the developmental sphere, the performance of the subsidiary banks has been a noteworthy one. The number of offices of the seven banks together rose from 510 at the end of 1962 to 568 at the end of 1963. Also in the aggregate, their deposits rose by over Rs. 13 crores to Rs. 156 crores and their advances by about Rs. 4 crores to Rs. 75 crores. There was an increase in profits from Rs. 58.50 lakhs in 1962 to Rs. 67.97 lakhs in 1963. The State Bank of Travancore has raised the rate of dividend from 5 per cent for 1962 to 6 per cent for 1963. The State Bank of Patiala, which had not declared any dividend for 1962, has been able to declare a dividend of 5 per cent for the year under review. The State Bank of Saurashtra, while once more not declaring a dividend, has nevertheless taken the opportunity to strengthen its reserves further. The other subsidiaries maintained the same level of dividend as in the previous year."

This picture of the State Bank's subsidiaries is, however, not complete. There is another side to it, which is not so very pleasing. Thus, the working results of the subsidiaries for 1963 point to a gross underutilisation of resources. This is reflected in the abnormally high cash and liquidity ratios and low credit-deposit ratios. Even the absolute levels of deposits and advances of some of the subsidiaries are lower than in the previous year. Moreover, some of them have been losing ground in their development activities too. It is high time, therefore, that the State Bank of India undertook a thorough enquiry into the working of, and the prospects for, the subsidiaries.

With the experience gained during almost a decade of its existence and with the initiatives that have already been taken, the State Bank of India is now poised to assume larger responsibilities for playing a more effective role in the national economy. The other commercial banks may soon find that they will be lagging far behind, unless they take up the challenge thrown by the State Bank of India, for improving their technique of banking, for servicing the customers and the nation better and more efficiently. Planning and reorganisation of our banking system is long overdue. Whatever be its shortcomings, the State Bank of India has given a definite lead in this matter to the other commercial banks: if they take up the challenge, it can truly be said that free and fair competition between the public and private sectors of banking in our country has provided incentives to both and that a system of such "mixed banking" is ideally suited to the country.

SOMEONE, SOMEWHERE NEEDS ELECTRICAL EQUIPMENT AND TRAINING

And AEI goes into action

AEI is India's largest supplier of electrical equipment and the Commonwealth's biggest. 60 AEI factories and 100,000 employees the world over manufacture every type of equipment for the generation, distribution, control and use of electricity. Many of the important men in electrical engineering in India and abroad who buy and use AEI equipment were originally apprenticed in AEI factories. They are unanimous on one point: they owe a great deal to the intensive training given by AEI.

Remember how the acorn grew into an oak

From a small start in 1941 with 150 workers and an output of Rs. 1.5 lakhs annually, the AEI factory in Calcutta has grown into an important manufacturing unit. Today, it employs 726 men

and produces a wide range of electrical equipment. AEI also markets lamps and fans in India and plans to extend its lines of industrial and domestic appliances. 'The aim,' says Works Manager C. M. Meek, 'is to increase productivity using the same manpower and machinery.'

In India AEI produces

Transformers for power and distribution (Up to 5,000 kVA) • Transformers for electric furnaces (Up to 3,500 kVA) • Electric motors (Up to 500 h.p.) • Motor starters (Up to 100 h.p.) • Pumping sets (3, 5 and 7.5 h.p.) • High voltage isolators (Up to 132 kV and 800 amps.) • Metal-enclosed unit distribution switchboards (Up to 500 amps. at 660 volts) • Bus bar connectors (Up to 1,000 amps.) • Lighting fittings (Fluorescent, discharge and tungsten fittings of all types) • Electric furnaces (Heat treatment) • Electric furnaces (Melting) • L.T. circuit breakers (Oil circuit breakers up to 1,200 amps.).

Every month: enough cable soon to stretch from Bombay to Delhi and back!

AEI, by virtue of the collaboration agreement concluded in 1960 between Tatas and W. T. Henley's Telegraph Works Co. (since merged with AEI, U.K.) are now progressively increasing the manufacture of world famous Henley cables in India. At the new cable factory near Poona, thermoplastic and rubber insulated cables are manufactured for domestic and industrial use. The factory employs 400 people and output has already exceeded two million metres per month.

Planning 6,000 futures

AEI helps in the training of engineers the world over. In AEI's British factories more than 6,000 apprentices are undergoing training. 250 AEI U.K. trained engineers are now working at Heavy Electricals (India) Limited, Bhopal, where AEI are consultants; another 150 Bhopal-destined engineers are under training with AEI U.K. In addition 500 Indian engineers have taken their training in AEI's U.K. factories. This is a record believed to be unsurpassed by any other electrical engineering company operating in India. AEI's factory near Calcutta takes on 6 to 12 graduate engineers every year on a two year course. It also trains, by special arrangement with the Government, senior officers from defence services like the Navy. The training school at Bhopal, for which AEI are consultants, can train 3,000 men at a time. 6,200 trainees have registered so far; 4,200 have completed training; the rest are still under training. On graduation, some will be absorbed by the project; others will work at similar projects in different parts of the country. The Bhopal training school is fast becoming an important seat of technical learning in India.

40 years is a responsible age

In India, AEI's activities date back about forty years and include contributions to the Bhakra Dam power project (Punjab's latest and India's largest), the steel works at Durgapur and the 720 mile oil pipeline in Assam. Worldwide, AEI has many impressive achievements to its credit—the largest generating sets ever made for British power stations; locomotives and traction equipment for British and Indian railways; switchgear, cable and generators for the vast hydro-electric schemes at Kariba and Owen Falls in Africa; a large rectifier installation for the production of aluminium in Canada; turbo-electric propulsion machinery for the 45,000 ton P.&O. Orient passenger liner 'Canberra'...

We don't usually indulge in name-dropping, but...

In our case it's justified. AEI is no newcomer. Its origins go back *more than sixty years*. Today, Associated Electrical Industries Limited embraces such famous names as British Thomson-Houston, Metropolitan Vickers, Siemens Edison Swan, Henley's, Ferguson Pailin, Hotpoint and Birlec. The people, traditions and unexcelled experience of the parent companies remain unchanged.

Principal products worldwide

Steam and gas turbines and generators • Hydro-electric generators • Marine propulsion equipment • Electric drives for rolling mills and mine winders • Electric furnaces • Traction and railway signalling equipment • Transformers and switchgear • Power and telephone cables • Motors and their control gear • Electronic apparatus and radar equipment • Particle accelerators, electron microscopes and mass spectrometers • Industrial controls, instruments and meters • Semiconductor devices and power rectifiers • Private and public telephone exchanges and other telecommunication equipment • Lamps and lighting fittings • Heating equipment • Electro-medical apparatus • Nuclear power station equipment • Domestic appliances.

AEI Largest Supplier Of Electrical Equipment To India

MAN-MADE FIBRE INDUSTRY

TAX BURDEN HEAVY—PLEA FOR RELIEF JUSTIFIED

THE man-made fibre industry has once again been chosen for additional taxation. In the Union budget for 1964-65, the Finance Minister, while reducing the special excise duty on staple fibre of cellulosic origin from 33⅓ per cent to 15 per cent with a view to facilitating clearance of stocks lying unsold with factories, announced steep increases in the rates of excise duty: by 50 per cent on filament yarn of cellulosic origin and 100 per cent on other synthetic fibres and yarn of non-cellulosic origin. Accordingly, yarns below 75 deniers are now subjected to a total excise duty (basic plus additional duty) of Rs. 8 per kg., which is Rs. 2.67 more than what was prevailing before, namely, Rs. 5.33. On yarns above 75 deniers but below 100 deniers, the total duty is higher by Rs. 2 at Rs. 6 and, on yarns above 100 deniers, it is higher by Re. 1.33 at Rs. 4. Taking the present increase and the upward revisions effected in the previous years, the total additional tax burden imposed since 1956 comes to as much as 627 per cent in the case of yarns below 75 deniers and above 100 deniers and 641 per cent in respect of yarns from 75 to 100 deniers.

Manufacturers of yarn would, of course, not have minded in the least the steep increase in excise duty if only they had been in a position to pass on the incidence of the extra burden to consumers, that is, the weaving mills. But such a transfer of incidence was not possible until recently because of the control on selling prices. Right since 1956—it was in that year that the industry was first subjected to excise duty—the basic selling prices, according to the Association of Man-made Fibre Industry, have almost remained constant on account of controls, while it is the excise duty that has significantly increased the ultimate price payable by consumers. Even after the abolition of control in November 1963, the spinners, it is stated, have not been able to get higher prices, in view of the resistance of buyers to pay prices higher than the controlled prices. The position is said to have been rendered worse since then, as a result of the recent increase in excise duty. How can the Government, asks the President of the Association, Mr. Rasiklal J. Chinoy, expect the spinners to bear the additional tax burden itself.

An Underestimate

Incidentally, the additional yield that the Finance Minister expects from the steep increases in excise duty on rayon and synthetic fibre and yarn is put at Rs. 4.70 crores. This figure is considered by the industry to be an underestimate. The calculations made by the Association reveal that the additional yield will be not less than Rs. 7.96 crores. The table below shows the budget estimates and actual excise revenue collected form rayon and synthetic fibres and yarn during the last six years:

(In crores of rupees)

Year	Budget estimate	Actual collection	Difference
1957-58	0.90	0.95	0.05
1958-59	0.90	0.86	—0.04
1959-60	1.93	2.02	0.09
1960-61	2.30	2.82	0.52
1961-62	4.39	5.58	1.19
1962-63	7.35	9.71	2.36
1963-64	11.33	12.67*	1.34
1964-65	18.50†	21.76‡	3.26

* Revised estimate only.

† Including the additional Rs. 4.70 crores expected as a result of budget proposals.

‡ Estimate by industry without taking into account the difference between budget estimate proper and actual collection.

In a memorandum submitted to the Union Finance Minister, the Association has impressively brought out the serious impact of the increase in excise duty on the man-made fibre industry and pleaded for the withdrawal of the fresh impost. If, however, the Finance Minister is unable to concede the plea fully, he should at least consider a reduction in the rates of excise duty. That the present incidence of excise duty is pretty heavy is clearly borne out by the following figures:

(In rupees per kg.)

	100 deniers	120 deniers	150 deniers
Basic ex-factory price exclusive of excise duty	8.26	7.64	6.94
Total excise duty including additional excise	6.00	4.00	4.00
Ratio of excise duty to basic ex-factory price (%)	72.6	52.4	57.6

Thanks largely to the heavy excise duty burden, the selling prices of yarn produced by indigenous mills are markedly higher than those of foreign manufacturers as will be seen from the figures quoted below:

(In rupees per kg.)

	150 deniers	120 deniers	100 deniers
India	11.48	12.43	15.50
Britain	8.27	8.98	9.42
U.S.A.	8.79	10.60	12.39
Japan	5.05	5.05	5.66
France	7.76	..	..
Italy	7.80	..	..
Switzerland	9.08	..	..
Sweden	7.80	..	..

It is not the enhanced tax burden alone that has adversely affected the man-made fibre industry, as the production cost itself has risen quite appreciably in recent years. Since 1957-58, the additional incidence per kg. of yarn has gone up by 15.75 nP, 6.82 nP and 1.25 nP on account of higher prices of caustic soda, sulphur and charcoal, respectively. Power charges have risen by 6.52 nP and price of steam coal by 9.76 nP. There is, besides, the additional burden of 46 nP by way of loss on account of lower sales price fixed for yarn to be distributed under the Export Promotion Scheme. Moreover, higher discounts on inferior qualities have added another 4.25 nP. Taking all these factors into account, the average cost of producing one kilogram of yarn is now higher by 191.24 nP as compared with the position obtaining in 1957-58. While, thus, both the tax burden and the incidence of cost increases have become heavier, selling prices have not recorded a corresponding rise; actually, before decontrol in November 1963, the prices had been pegged at the 1957 level, despite repeated requests and representations by the industry.

Saving of Foreign Exchange

The Association of Man-made Fibre Industry regrets the heavy incidence of taxation especially because the industry is endeavouring to maintain production at as high a level as possible, so that considerable amounts of foreign exchange which would otherwise have to be spent on imports of foreign yarn could be saved. Higher production of yarn has also enabled the weaving industry to produce more cloth not only for internal requirements but also for exports. During the year 1963, for instance, India exported 85.67 million metres of rayon and synthetic fabrics, the total foreign exchange earned being Rs. 9.34 crores, a tidy sum indeed. To what extent the expansion of the man-made fibre industry has resulted in the saving of foreign exchange is indicated below:

Year	Production of viscose filament yarn (In million kgs.)	Foreign exchange saved at Rs. 3.3 per kg. (In lakhs of Rs.)	Production of staple fibre (In million kgs.)	Foreign exchange saved at Rs. 1.43 per kg. (In lakhs of Rs.)
1950 ..	0.12	4	..	..
1951 ..	2.45	81	..	..
1952 ..	3.65	1.21	..	..
1953 ..	4.48	1.48	..	..
1954 ..	5.02	1.66	3.09	44
1955 ..	5.83	1.92	5.71	82
1956 ..	7.57	2.50	7.92	1.13
1957 ..	9.71	3.21	8.02	1.15
1958 ..	13.43	4.44	13.96	2.00
1959 ..	15.10	4.98	20.39	2.92
1960 ..	18.98	6.27	21.82	3.12
1961 ..	21.43	7.07	26.00	3.72
1962 ..	26.23	8.66	32.38	4.63
1963 ..	31.17	10.29	32.25	4.61

That the spinning sector of the rayon industry is earning only moderate profits and not huge profits, as is alleged by some, has been well brought out by the Association. Quoting the Reserve Bank's survey of 1,001 leading companies, the Association says that, as against the average profit (as per cent of net worth) of 10.8 per cent, the average earned by the spinning sector is no more than 8.8 per cent on the employed capital of Rs. 36.90 crores. The return on capital is certainly meagre especially considering that this industry is subjected to obsolescence risk much more than any other industry. The Association has impressively highlighted this vital aspect. It observes:

"Unlike other industries which rarely make use of corrosive chemicals in the process of manufacture, the rayon spinning industry has to utilise at every stage of its manufacturing operations chemicals such as sulphuric acid, carbon-di-sulphide and caustic soda which are highly corrosive, thus making the life of machinery and equipment employed for the manufacture of rayon yarn much shorter than the machinery used in other industries. Added to this is the fact that the process of manufacturing rayon yarn, unlike the cotton textile industry, has to be a continuous one; the plant has to work round the clock on all the 365 days of the year, which results in higher wear and tear than what would be the case with other industries working with one or more shifts a day. . . . In the wake of inventions of quite a few synthetic fibres which are put on the market all over the world, manufacture of rayon yarn has to contend with the competing claims of synthetic fibres like Orlon, Dacron, Terylene, Acrylics and other fibres. For instance, the machinery manufacturers in the United States—the largest producers of rayon—report that orders for rayon yarn manufacturing equipment for home consumption have been gradually reduced over the years. This will possibly make it clear how serious is the risk of obsolescence and how, therefore, due consideration needs to be given for accelerating the depreciation of machinery, so that the entire amount invested in machinery is permitted to be realised before the machines go out of date."

Research

Besides the need for more liberal depreciation allowance, sizable reserves will also have to be built up for meeting the increased outlay on research and development. It is only by furthering the study of high molecular science that textiles of beauty, elegance, usefulness and convenience could, as the Association rightly avers, be created for both domestic consumption and export. Moreover, since the man-made fibre industry is capital-intensive in nature, the level of dividends declared must be reasonable so as to attract an adequate flow of additional resources as and when they are required for expansion. There is, then, the need for providing a safeguard against (*a*) rise in production costs over which the industry has no control, and (*b*) statutory increase in costs arising from legal charges or from the recommendations of a Government body or committee.

Judged against the aforesaid background, the plea of the Association of Man-made Fibre Industry for substantial relief from the abnormally high incidence of excise duty is unexceptionable. By conceding the plea, the Union Finance Minister will surely enable the industry to expand and develop on sound lines. After having created the necessary condition for such expansion and development through decontrol, the Finance Minister, it is to be hoped, will not deny the industry the much-needed relief in taxation.

WORLD OUTPUT OF MAN-MADE FIBRES

Man-made fibres, which have already made considerable inroads into the field hitherto held by natural fibres, continue to make rapid advances. Preliminary data relating to world output of man-made fibres last year given in *Textile Organon*, published by the Textile Economics Bureau of New York, indicate that global production reached a new peak of 9,590 million lbs. in 1963, an increase of 10.2 per cent over the 1962 output of 8,704 million lbs. Production of both synthetics and cellulosics (rayon and acetate) set new records last year. The largest percentage increase in production was recorded by synthetics. At 2,860 million lbs. output of synthetic fibres in 1963 was 20 per cent more than the previous year's production of 2,382 million lbs. The largest increase by weight was in the U.S. where output rose by 18 per cent. The increase in production in Japan was as much as 29 per cent. Substantial increases were recorded in the U.K., France, Italy and West Germany. The increase in synthetics output was shared by both filament yarn and staple yarn, the former rising by 13 per cent to 1,655 million lbs. and the latter by 22 per cent to 1,205 million lbs. Total output of synthetic fibres (both filament and staple), as noted above, thus worked out to 2,860 million lbs.

Rayon and acetate production climbed to 6,730 million lbs., an increase of 6.5 per cent over the previous year's figure of 6,322 million lbs. Both filament and staple recorded increases in production, but the rise in the latter was comparatively more marked, being 10.1 per cent., as against 1.5 per cent in the former.

Higher output of rayon and acetate filament is attributed to increases in the U.S.S.R. (18 million lbs.), India (10 million lbs.) and the U.K. (8 million lbs.). These more than offset the decline in the U.S. (17 million lbs.) and Japan (7 million lbs.). The change in emphasis in the U.S. and Japan is reflected in cellulosic staple output, the U.S. producing 93 million lbs. or 17 per cent more and Japan 84 million lbs. or 13 per cent more. There were also substantial gains in cellulosic staple output in W. Germany, France, U.K., U.S.S.R. and Italy.

TEXTILE EXPORTS FROM INDIA

Foreign exchange earnings from textile exports increased by over Rs. 7 crores in 1963 as compared with 1962. The increase would have been more marked but for the decline in the average value per unit both cloth and yarn exported mainly because of fiercer competition in the world markets which, moreover, have been shrinking. The total foreign exchange earnings from textile exports in 1963 amounted to Rs. 63.49 crores, as against Rs. 55.86 crores in 1962. The rise was due entirely to the increase in the volume of yarn and cloth exports. Yarn exports aggregated nearly 30 million lbs. in 1963, as against 23 million lbs. in 1962. The average price realised per lb., however, dropped from Rs. 2.30 in 1962 to Rs. 2.07 in 1963. Exports of mill-made cloth increased from 508 million yards in 1962 to 531 million yards in 1963. Here again, the price realised per yard fell from 79 nP per yard in 1962 to 77 nP per yard in 1963.

Credit for the higher volume of exports goes to the industry as a whole which made, and has been making, all possible efforts to boost the country's foreign exchange earnings.

MORE TEXTILE COMPANY TAKEOVERS

MILLOWNERS TO DECIDE NEXT WEEK ON TRADE UNION'S DEMANDS

From Our Special Correspondent

MANCHESTER, *10th March*

FOR the observer who works from week to week, events in the textile industry are now moving so swiftly that to write about fresh developments in the takeover field is like sitting on a volcano. Even from one day to another it is difficult to keep pace with the situation, although a general pattern has emerged during the last few months which seems likely to continue. Contrary to the expectations of the past, the mergers so far arranged have had little effect on the horizontal section of the trade, but a strengthening of vertical ties has undoubtedly been effected.

MANCHESTER LETTER

While this movement is vitally important from the angle that production and marketing should be far more closely linked, it still leaves a large number of small firms, up and down the manufacturing area particularly, which are outside the orbit of the major groups. Rivalry for business among these modest units can have a weakening effect on the structure of the industry as a whole.

Merchants have lately been progressively disturbed by the curtailment of independent sources of supply as a number of firms with extensive capacity have decided to join the big combines, notably Courtaulds and Viyella. Financing such deals as have been carried out within the past year presents problems, but the trend towards an eventual handful of giant groupings is certainly developing in accordance with forecasts made not long ago.

Lengthy Catalogue

A catalogue of the textile company takeovers which have been initiated or completed even since the beginning of the current year would make a formidable list. It would include, for example, the absorption of Joshua Hoyle and Sons by the Yorkshire-based Illingworth Morris and Co.; Bolton Eagle by Bulmer and Lumb; Elton Cop Dyeing Co. by John Heathcoat and Co.; Fras. Hinde and Sons by Courtaulds; Ferguson Brothers, J. Chadwick and Co. and Clegg and Orr, all by Viyella International.

In addition, several other deals, some of which have not yet been finalised, have been announced or are pending. The acquisition of Lyle and Scott, the Scottish company, by Wolsey seems eventually probable after earlier bids had been made by other interested companies. Stott and Smith is resisting a bid for its capital and the Chairman has indicated that a number of approaches have been made by prospective buyers. Courtaulds is extending its interests in the finishing section by offering to acquire Barracks Fabrics Printing Company.

The three announcements made within the space of ten days by Viyella International provided the highlights of this particular phase, and none more so than the bid for Clegg and Orr, recognised as possessing some of the most up-to-date machinery in Lancashire. Traders were shocked at the trading loss reported of nearly £224,000, after a deficit of over £40,000 in the previous year.

Marketing Link Needed

Mr. J. Angus Orr, the Chairman, has since stated that the Company had not expected to be so short of orders last year. The volume of business obtainable, he said, was far less than that needed to maintain a reasonable level of output. Consequently, the full load of fixed overhead charges fell upon a greatly reduced production. Repeating now the almost well-worn argument about the paradox by which the Government encouraged companies to modernise by subsidy and by exhortation, while permitting the huge tide of imported fabric to grow, Mr. Orr says: "One could reasonably have expected more energetic action to support a market climate in which those companies which have really tried to be up-to-date could flourish."

The need for better marketing facilities is a matter which has exercised the minds of many Boards apart from the Clegg and Orr group. During the year, the certainty grew that the Littleborough firm should either become members of or help in forming a larger group which had established marketing facilities, according to Mr. Orr. Only in such a way did it appear that the long runs needed by modern plant would be obtained and the necessary time given for the technical assessment and the planning of production to meet the real needs of the ultimate user. The bid from Viyella provided an escape from the impasse.

Different Movements

Although the pattern of larger vertical groupings is the dominant influence in the market at present, other movements can be observed. The textile merchanting firm of Cook and Watts has absorbed another company of wholesale warehousemen, while Boardman, Marden has extended its textile interests by acquiring a protective clothing manufacturing unit. Nor can the diversification factor be ignored. Whitecroft Industrial Holdings, which changed its name from the now non-representative title of Bleachers' Association, has moved further away from textiles by acquiring a firm of civil engineering contractors and plasterers.

Armitage and Rigby, after a history of more than 125 years in the spinning and weaving industry, has disposed of its Warrington and Nelson mills to Alliance Brothers, the rapidly expanding textile group which has obtained control of several well-known companies within the past few years.

At the end of next week, the employers in the spinning and weaving sections are due to give their reply to the trade union proposal that a new basis for future wage rates and conditions should be established. A system of "programming" a regular movement of earnings, coupled with longer holidays and shorter hours, has been advocated.

It is difficult to see how the millowners can accept such a principle unless they can also claim second sight as to how the industry is likely to progress in the future. Only if both parties to the negotiations are prepared to agree that wage rates and conditions will fluctuate —downwards as well as upwards—according to the state of trade, can there be any prospect of compromise. On the table at the discussions will certainly be the latest official returns issued by the Ministry of Labour showing the average earnings and hours ruling in October last. At that time, the industry was on the upgrade and business had begun to broaden very substantially.

With odd exceptions, the level of earnings during the past two years has shown a distinct improvement, ranging from over £1 per week for men in the main branches of the industry to a few shillings in the case of some of the younger employees. The traditional variations are still apparent in that male labour is paid well below the general average of all industry, while women operatives frequently get more than the national average.

It has often been stated that payment for operatives working in modernised mills is well ahead of other sectors, so that the steady improvement in the earnings of men in relation to women is understandable; it is safe to predict that this trend will continue. At the same time, the national figures for industry reflect a very similar movement, so that the average male payment remains at almost exactly double the wages shown for women workers.

The average number of hours being worked by men in spinning and doubling in October was 46.4, as against 46.7 in April 1963. Women workers in this section were employed for 39.7 hours, the same as six months previously. In the weaving branch, the latest returns show men operating machinery for 44 hours, as against 43.7 in April. In the case of women, the figure was 39.8 hours, as against 39.5. In the textile finishing trade, average hours worked by men were 49.8, as against 48.6 in April 1963.

PROBLEMS OF FINANCING COFFEE INDUSTRY

FINDINGS OF RESERVE BANK STUDY

THE Indian coffee industry can certainly be relied upon not only to cater to the expanding domestic requirements of coffee but also to earn for the country sizable amounts of foreign exchange through exports. But four things are necessary. They are: reversal of the regressive tax policies, improvement in marketing system, reduction in the impact of heavy labour costs, and suitable incentives for production and export. All these involve, naturally, a rational approach to the problems of the industry by the powers-that-be at both Central and State levels. The need for such an approach, it is gratifying to note, has now been recognised, albeit belatedly. Some evidence of this recognition is found in the reported observations of Mr. Manubhai Shah, Union Minister for International Trade, at a meeting of the informal Consultative Committee for his Ministry, held at New Delhi on Friday the 13th inst. Mr. Shah, it is stated, told the Committee that the Coffee Board was taking steps to readjust its marketing procedures so as to hold the internal price line and to give the grower a fair return and that suitable adjustments would be made in the release of particular grades and varieties of coffee in internal marketing and for exports. The elements of the official coffee policy believed to have been spelt out by Mr. Shah are as follows:

It has been the policy of the Government and the Coffee Board to export surplus out of each season's crop after meeting internal requirements. This policy is based on the need to maintain economic stability by providing a firm internal support for the industry. Consistent with this policy, a substantial internal market has been built up and any attempt to curtail internal consumption would not only raise internal prices but also retard the industry's progress. But, at the same time, it is not desirable, in the long-term interests of the industry, to neglect foreign markets. There is an imperative necessity to earn as much foreign exchange as possible by exporting a larger quantity of coffee as before.

Hitherto, there was no destinational quota and successful bidders at export sales were free to export coffee to any country which offered the best prices. However, as a result of India's membership in the International Coffee Agreement, it has become necessary broadly to classify exports to (a) bilateral quota countries, (b) bilateral non-quota countries, (c) non-bilateral quota countries, and (d) non-bilateral non-quota countries.

With effect from the 1st of next month, sale of coffee for export will be made by open auctions, thus departing again from the system of closed bids or sealed tenders.

Open Auctions

The Coffee Board, it may be recalled here, did switch over from the system of closed tenders for export sales to open auctions with effect from 1st January 1962, but, within a few months, it reverted to the old system under the pretext that the system of open auctions had not been beneficial at all. This was a hasty conclusion, in that the system was not given a fair trial. Anyway, it is good to hear that the system will once again be introduced. When the system of open auctions in tea has worked so well with perfect protection for the producers, brokers and buyers for over a century now, there is no reason why the adoption of a similar system in coffee will also not work likewise. The system will undoubtedly encourage foreign importers to open offices in India or make other arrangements and participate directly in the auctions. Foreign firms can also participate through their agents or representatives in India by registering their names with the Coffee Board as per the terms and conditions laid down by it.

Whatever the system of marketing that is adopted, the need for ensuring conditions that will result in higher productivity of coffee lands, both quantitatively and qualitatively, is urgent to a degree. Since coffee plant is the basic capital stock of the industry, it must be looked after well. Besides, timely replanting operations must be undertaken so that the old stands may be replaced without any loss of production to an estate. If the industry is to be maintained in top condition, it will have to incur, from time to time, heavy expenditure on replanting and expansion of handling, processing, curing, transporting and warehousing facilities. All this, however, requires a lot of funds which cannot be found within the industry, owing to enhanced production costs and heavy tax incidence. The Rural Economics Division of the Reserve Bank of India's Economic Department has done well, therefore, to undertake a study of the question of financing coffee industry. The findings of the study are contained in the February 1964 issue of the *Reserve Bank of India Bulletin*. Although the findings are based on data which, in many cases, are largely out-of-date, they nevertheless help one to understand the problems of finance. The article also carries certain practical suggestions for meeting the financial needs of coffee growers.

Replanting

At the very outset, the Reserve Bank's study draws pointed attention to the existence of a high proportion of uneconomic trees in coffee plantations: as much as 30 per cent of the acreage under coffee in reporting estates (as of 1953) was planted before 1900, nine per cent between 1900 and 1910, 12 per cent between 1910 and 1920 and 49 per cent after 1920. Usually, the yield begins to decline when trees are more than 40 years old. Hence a good estate should always make provision for an average replanting of 2.5 per cent of the acreage per annum. As it takes about six years for a coffee plant to yield, a good estate should always have 15 per cent under immature plants. Coffee plantations in India, according to the study, have not paid attention to this effect. It is estimated that uneconomic trees, that is, trees due for replantation, account for 67 per cent of the total number of trees in Mysore, 53 per cent in Madras and 35 per cent in Coorg. If, therefore, the coffee trees are to be maintained in a state of economic productivity, replanting will have to be done at a reasonable rate. An idea of the magnitude of the problem of replanting can be had from the following findings of the study:

About 190,000 acres of coffee would require replanting on the basis of economic age of trees at 40 years. If it is assumed that one half of this area is in estates cultivated by individual growers and that, at the minimum cost of replanting at Rs. 1,500 per acre, small growers would require long-term finance to the extent of about Rs. 14 crores. An equal amount will have to be raised by big estates for replanting their share of the area. The total long-term requiements would thus come to Rs. 28 crores, besides the short-term finance of about Rs. 12 crores.

Four Disquieting Features

The assessment of the existing sources of finance and the difficulties of coffee growers in meeting their financial requirements as made by the Reserve Bank study pinpoints four disquieting features: (a) inadequacy of short-term credit and difficulty in obtaining long-term loans for a section of big growers; (b) non-availability, by and large, of short-term and long-term credit for small growers holding below 100 acres and covering 55 per cent of the total area under coffee; (c) rigidity and high cost of credit provided by commercial banks, curers and private money-lenders; and (d) control over curing of coffee by curing concerns which has resulted in the concentration of economic power and sizable control of credit in the hands of curers. Dealing with each of these issues in detail, the study has arrived at certain conclusions which may be summarised as follows:

"A proper institutional structure for provision of medium- and long-term credit needs of coffee estates has not yet been developed. The large estates may be able to raise resources for these purposes on the security of their assets by floating debentures. But, in the case of individual growers, this may not be possible. Thus, the difficulties in securing medium- and long-term finance have adverse effects on the maintenance of efficient working of their coffee plantations. In this context, it is important to note that adequate attention has not been paid to maintain the estates in good form.

"The review of the activities of the Coffee Board shows that the growers with less than 5 acres are not covered under the Coffee Development Plan and that the role of the Board in the provision of finance to individual planters is moderate. The group of small growers which is not covered by the Plan consists of about 35,000 estates and constitutes nearly three-fourths of the total number of estates. Although these small growers account for only one-sixth of the coffee area, their numerical strength and the economically disadvantageous position in which they are placed demand larger efforts to improve their economic well-being despite administrative difficulties. The Board is undertaking a good number of promotional activities ranging from assistance for increasing the yield per acre to promoting marketing. Provision of finance becomes only a part of its larger field of activities. The financial requirements of the coffee industry are large and, in order to meet them satisfactorily, the financial system needs to be insititutionalised and strengthened. How the institutional finance can best be

MONTHLY ECONOMIC REVIEW OF U.K.

RATIONALE BEHIND THE BANK RATE INCREASE

EXPANSION OUTPACING LABOUR SUPPLY

By J. R. H. Pringle

A NEW phase in the current cycle of Britain's economic expansion opened last month when the authorities took a modest step towards checking the pace at which activity had been rising. On 27th February, the Bank Rate was raised from 4 per cent to 5 per cent; it had been at 4 per cent since 3rd January 1963. The step was taken for both external and domestic reasons. On the external side, the aim was to arrest the movement of funds away from London that had developed in the latter part of the month after the publication of the depressing trade figures for January. In February, the gold and convertible currency reserves of the United Kingdom, it was later revealed, fell by £17,000,000 to £938,000,000—and as there were no extraordinary receipts or payments recorded during the month, this was a "true" figure. Sterling had weakened from the level of around $2.79⅞ at which it had been held since mid-August last to $2.79⅛—its lowest level since the summer of 1961. In this respect, the measure was immediately effective, and sterling recovered on 27th February to just above $2.79⅞, a level that was broadly maintained in the following week.

Effect on Capital Movements

The raising of the Bank Rate was not, however, intended to stimulate an inflow of funds from overseas. This negative aim was underlined on the following day, 28th February, when the Treasury Bill Rate—the prime determinant of the movement of short-term funds—rose only 10s. 4.86d. per cent to £4 6s. 1.66d. per cent. Allowing for the cost of forward cover, this rise was not sufficient to swing the arbitrage margin—which had been appreciably to London's disadvantage for some weeks—substantially in London's favour.

Thus, no incentive to oversea investors to switch short-term funds to London was established. International co-operation was, in fact, a notable feature of the whole operation. For, although Mr. Dillon, Secretary of the U.S. Treasury, had fairly recently warned that a rise in interest rates in Europe might threaten interest rate stability in the United States, the U.S. Treasury issued a statement immediately after the raising of the Bank Rate, stressing the "close consultation" that had taken place between the two countries regarding the developments that had prompted the measure, and stating that the consequent increase in short-term rates in Britain "is not expected to disturb the basically balanced international money market that has generally prevailed for some months. Consequently, the factors bearing upon the United States financial policy ... are expected to remain substantially unchanged."

Smooth Transition, the Aim

On the domestic side, the action is officially regarded as forming part of a policy designed to avoid the dislocation associated with "stop-go" measures and to promote a rate of growth that can be sustained. As Mr. Maudling, Chancellor of the Exchequer, said when he announced the step to the House of Commons, "our object this year is to achieve a smooth transition from the present growth rate of 6 per cent, possible while we are taking up slack in the economy, to a long-term growth rate of 4 per cent," and he went on to say that "the increase in Bank Rate will make its contribution to this transition and help to strengthen the prospects for future progress."

Certainly, to judge by the economic indices that came to hand last month, there is every sign that Britain's economy has up to now been expanding at a fast, and, perhaps, excessively fast, rate. The seasonally adjusted index of industrial production for November, which stood at 123, was revised upwards to 124 in the light of later information, and this record level was held in December, when the global figure may, moreover, mask a significant fractional rise.

In the fourth quarter of 1963, the seasonally adjusted index both for manufacturing industries and for all industries showed an increase of about 2 per cent over the previous quarter, and of about 7 per cent over the fourth quarter of 1962. For the year as a whole, the index for all industries averaged 118.6, compared with 115.0 for 1962—an increase of 3 per cent.

Among particular sectors of the economy, all the indicators point to a high and rising level of consumer demand. The Board of Trade's seasonally adjusted index of retail spending rose another point in January, to 112, after its two-point jump in December. Although the increase was due in part to higher food prices, there was also a rise in the volume of sales.

Motor Industry

The most outstanding news, however, comes once again from the motor industry. In a season when there is commonly a setback in production, output in January rose to a new peak. Weekly output of cars, at 37,070, exceeded the previous record set in November of last year by 1,178. Total January output, at 185,349, was also the highest on record. The Iron and Steel Federation's January forecasts of the demand for steel during the year have already been revised upwards—largely, it may be assumed, as a result of higher orders from the motor manufacturers.

Also in line with the motor boom, there was a further increase in the demand for hire-purchase credit. In January, the debt owing to the finance companies rose, in contrast to the normal seasonal pattern, by £4,000,000 to £618,000,000, and to judge by the figures for the number of H.P. contracts completed in February—which shows them, at 141,298, more than 20,000 up on the January total—this demand is continuing to rise strongly. Total hire-purchase debt outstanding in January, however, rose by only £3,000,000 to £957,000,000, because of a reduction in the debt to household goods shops, and the contribution of sales on hire-purchase to the total growth of demand continued to be much smaller than in the last cycle of expansion in 1958-60.

Further evidence that re-expansion has forged ahead since January is provided by the unemployment index. By mid-February the average unemployment rate for Great Britain was down to 2 per cent as compared with 2.2 per cent in January and 3.9 per cent in February 1963. Excluding school-leavers, the number of unemployed fell over the month by almost 20,000, whereas seasonal factors normally give rise to an increase of about 2,100. In the three months from mid-November to mid-February, the number of wholly unemployed adults fell by almost 5,000: the normal seasonal increase for this period is about 42,000. On the other hand, the number of unfilled vacancies rose by almost 36,000 over the three months—a period which usually produces a decrease of about 18,000.

The speed with which the unemployment rate has fallen has been faster than most observers had expected and, unhappily, faster than would seem appropriate had the hoped-for breakthrough in productivity taken place. Already some parts of the country report shortages in certain types of skilled labour. The unemployment figures also reveal the persistence of one of the country's most intractable economic—and social—problems: regional imbalance. Despite the increased efforts made in recent years to draw industry to the underemployed regions, the South, with less than 2 per cent unemployed, has, as in previous cycles of expansion, reached a state bordering on over-full employment before North-East England and Scotland have approached full employment—the unemployment rates in these parts remain above 4 per cent.

Trend of Trade

Another shadow on the economic scene was cast by the trade figures for January. Re-expansion has led to a marked increase in the demand for imports: on a seasonally adjusted basis, they rose in the month by £15,000,000 to £457,000,000 a month as compared with £408,000,000 a month in the previous quarter—a rise of 8 per cent. On the same quarterly comparison, exports were down by 1 per cent—from £347,000,000 to £343,000,000 a month—and recorded a particularly severe fall of £36,000,000 to £326,000,000 in January. The estimated deficit on visible trade widened from £13,000,000 in December to £72,000,000 in January.

A rise in the import bill is, of course, to be expected at this stage of the economic cycle, as manufacturers seek to rebuild their stocks of industrial materials and rising incomes swell the demand for food. Both types of imports rose sharply in the three months to January. More disturbing was a rise in the imports of finished manufacturers—a rise which the Board of Trade expects to continue this year as fixed investment, both public and private, expands.

Hardest Shock

The hardest shock, however, was the fall in exports. The fall was partly due to the disappearance of special factors that had boosted exports such as sugar earlier in 1963 and, of course, one month's figures give little indication of the long-term trend. Moreover, January trade figures always tend to fluctuate abnormally. Yet a quarterly comparison suggests that the rise in several classes of exports has levelled off. In view of the further rise in imports expected as the stockbuilding boom really gets under way, it is essential, for the health of the balance of payments, that the rise in exports achieved in earlier quarters of 1963 be resumed.

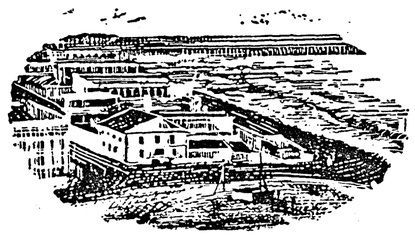
There is mounting evidence to suggest that further claims on the economy will also be made this year by private investment. Both home and export orders for the engineering and electrical goods industries were at record levels at the end of December. Orders on hand for the home market rose by 21 per cent and for export by 8 per cent during 1963, and the rise was especially strong in the latter part of the year. New orders for machine tools also show a sharply rising trend. The survey conducted by the Federation of British Industries early last month showed that the surge of new orders that developed after the exceptionally severe winter of last year continued in the four months to mid-February, and that, even more significantly, orders received for capital equipment have recorded a particularly marked revival.

Government expenditure in the coming financial year—some details of which became available last month—is also expected to rise. Although much less than the record increase announced last February, the estimated rise of £410,000,000 in above-the-line Government expenditure promises to add heavily to the total demands on the economy. In civil expenditure, the estimates show an increase of £266,000,000 (or 6.4 per cent) to £4,423 million. Defence spending, some of which is borne on the civil vote, is expected to rise by £144,000,000 (or 7.3 per cent) to £2,126 million, and this estimate has already been supplemented by further plans announced recently by Mr. Thorneycroft, Minister of Defence.

Rising Tide of Private Investment

Moreover, the actual increase in public-sector investment in the current financial year has fallen far short of the planned rise. Much of the increase budgeted for in 1963, and intended to fill the gap caused by the drop in private capital spending, will therefore take place in the coming year, and be superimposed on an already rising tide of private investment.

In sum, total demand can now be expected to rise considerably over the next year—at a faster pace, indeed, than many observers had previously supposed. The National Institute of Economic and Social Research, for instance, in its latest economic review, has revised upwards its estimates of the growth of demand: "Previously (in November 1963) we had thought that it might be slower during 1964 than during 1963. Now we expect it to be at least as fast." It now estimates that demand will rise at an annual rate of some 5 to 6 per cent up to the middle of 1965. The Institute believes that plant capacity should be adequate to accommodate a rise of demand of this order, but it has doubts about the availability of labour. Towards the end of February, therefore, the evidence suggested that, in the absence of restraining action by the authorities, the pace of expansion might tend to become too great for the economy to maintain in the long run. The decision to raise the Bank Rate was taken in the light of such evidence: so, no doubt, will be the action which Mr. Maudling will propose in the coming Budget.



1788
THE E.I.D.-PARRY GROUP
1964

THE HOUSE THAT THOMAS PARRY BUILT

Founded in 1788 as a small trading firm, Parrys have served the country well and truly for 176 years.

The remarkable progress made over more than one and three-quarter centuries has resulted in the E. I. D.-Parry Group of today, comprising nine companies of substance—all making important contributions to the nation's economy.

The strong position it has achieved has given the Group courage and confidence to expand its resources to meet the country's diverse needs in fertilisers, sugar, confectionery, sanitaryware, acids, chemicals, industrial and potable alcohol, etc.

COMMON PRODUCTION PROGRAMME

MR. DHEBAR'S VIEWS ON ITS WORKING

[Apropos Dr. J. D. Sundram's article on "Common Production Programme," contributed to Commerce dated 7th and 14th December 1963, Mr. U. N. Dhebar, Chairman, Khadi and Village Industries Commission, has sent a rejoinder which, along with Dr. Sundram's reply to it, is published here.—Ed.]

THE objective behind the Common Production Programme was to take measures to enable small industries to fulfil the targets proposed for them. It is possible to examine the question of fulfilment from the point of view of achievement of targets as well as from the point of view of adequacy of measures adopted for the purpose, or to see whether there was a gap between the measures proposed and the actual conditions obtaining in the field. Some critics have proceeded to criticise the programme of *khadi* and village industries on the assumption that the measures proposed were adequate and there was no gap between the conditions obtaining at the field level and the measures proposed. Their view apparently is that, since the targets have not materialised, the programme itself should be scrapped as one not contributing, or likely to contribute, towards meeting the requirements of the community.

I hope I am clear in the distinction I am drawing. I feel that not only the measures proposed were inadequate but there has also been a gap in our thinking. These are responsible for the consequences which many of us do not like. This gap in our thinking is universal; and on that account, we have not only not been able to reach targets in many fields, but have also tended to blame either the programme itself or seek a scapegoat.

I have dealt with this question in the notes I have submitted to the Planning Commission both about the minimum incomes and the general development of the economy. I may summarise my views as follows:

We are trying to build an economy which cannot be directly accepted by the masses of our country until they, in the first place, reach that stage of awareness which would enable them to assimilate it. Dr. Sundram, while dealing with the role of co-operatives in rural industries, says the same thing. He says: "The role of co-operatives in the rural industrialisation has been repeatedly emphasised as though the problems of personnel or social awareness and sense of social responsibility and community consciousness have all been solved." Unless an awareness is generated both at the personal and the social levels, so that everybody becomes conscious of his role, active co-operation of the masses will be difficult to obtain. The difficulties faced by the co-operative movement in the rural areas arise out of this fundamental limitation. In this field, in my opinion, we can draw upon the teachings of Vinobaji and Gandhiji with considerable advantage.

The more I consider the problem of rural development the more it appears to demand a thorough reviewing. The question is not one of mere economic backwardness; it is one of lopsided growth as well. Unless we tackle the lopsided aspects of this growth, even backwardness will not disappear so easily. It is as if we were attempting to build up a superstructure assuming that the foundation was uniformly solid, when in certain sections there was not even loose sand, much less a rocky bed.

Plight of Harijans

Five crores of Harijans, mostly inhabiting the rural areas, have been deliberately kept out of the rural economy. They do many odd jobs, but the prevailing social and economic ostracism has left indelible marks of inferiority and diffidence in their psychology. Similarly two and a half crores of tribals are living in complete isolation. They do not yet know what is contained in the document called "The Plan." They are at that level of consciousness where they are more concerned with creature comforts than with any thought of their own or group development. There is a vast section of Indian society which lives upon cattle breeding. They are mostly nomads. There are many other social groups equally, or more, backward. What goes by the name "rural community" is a heterogeneous mass with complex internal problems rendered more complex by social "do's and dont's" which operate as injunctions or taboos. To cut across this tangled socio-economic web is the urgent task. It was not so clear or apparent to us before. If, therefore, the handloom or the ambar charkha has suffered the fate it has, it is not due to any inherent fault in the character of the programme. The fundamental mistake is our assumption that Indian society is wholeheartedly ready to accept the scientific and technological aspects of our programmes the moment they are brought to their doors. The real difficulty is that between the Indian masses and their acceptance of a technologically sound programme is a veil of mental reservations, which is as thick as any cement concrete wall can be. The masses in general yet think of their development on those terms and conditions which would permit them to maintain their social fabric as it is.

Most of us speak a language which the masses scarcely understand; but we remain under the complacent belief that, since we are giving them schools and hospitals, they will join our efforts. Indian masses have accepted the facilities we have given them. But these facilities have not succeeded in attracting them to the main current of national developmental effort, because we are not touching the chord which can gravitate them to that current. This gap in our understanding is unfortunately paving the way for many other contradictions. It is not difficult to wind up the programme of *khadi* and handlooms; but it will be difficult to find a substitute therefor to provide gainful occupation to the people in the villages. If I were to write a note upon the functioning of the large-scale industries I would perhaps have attained considerable success in showing to the Western economists the extent of the inefficiency that prevails in that sector and the price that the country is paying to maintain it. This inefficiency applies both to the private-sector and the public-sector undertakings.

We can hardly afford to overlook the reality about the Indian masses. We are dealing with a community which is at various levels and stages of social awareness and growth. We cannot take for granted that this diversity would of itself resolve into unity and would facilitate the carrying out of our projects and plans. On the other hand, it is vitally important to bear in mind that deliberate efforts are needed to adapt these conditions purposefully to the achievement of our goal. If this is accepted, it would not be difficult to relate our programme in a scientific manner to the conditions obtaining at the field level. If the urgent problem of bridging the gap between reality and our understanding is ignored, it would inexorably lead to the rise of a dictatorship. The general belief is that the moment efficient units begin to work, surpluses will be created, and that from those surpluses we will be able to rebuild our economy. There is a great fallacy inherent in this thinking. Between those efficient units of our dream and the reality which obtains at the field level, there is day-dreaming of which we have already had enough. It would be better now to concentrate upon interpreting the programmes in terms of the needs of the masses and telling them that they should also take a definite share of the responsibility for fulfilling them.

The language that the people understand because of the level of their growth is the language of work and bread. But it is work and bread with the level of efficiency that they possess and the consciousness that they have. I have, therefore, come to the conclusion that the best method of reviving the rural economy is to concentrate upon agriculture, animal husbandry and rural industries. Let us not think of a vertical common production programme 7½ feet high above the hands and the heads of the people, but just a programme which their arms and heads can reach.

• • • •

Dr. Sundram's Reply

I have carefully studied Mr. Dhebar's reply to my article. I regret that I find in it nothing that meets any of the points I have made, but several that are not germane to the problem of Common Production Programme, as conceived and implemented in our country.

The objectives of the Common Production Programme, formulated by the Planning Commission and later endorsed by the Karve Committee, were not merely "to enable small industries to fulfil the targets proposed for them"; but the rehabilitation and development of the entire group of decentralised traditional industries. This involved various measures designed specifically for rehabilitation for the development of tools and techniques for progressively larger production of better products and for higher productivity, and for the provision of training in different skills to artisans, financial assistance for working capital, supply of raw materials, and marketing. These could probably be dismissed as "measures" towards increased production, but as the *Third Five-year Plan* puts it (p. 426):

> "The objectives of the programme for these industries ... are to create immediate and permanent employment on a large scale at relatively small cost, meet a substantial part of the increased demand for consumer goods and simple producers' goods, facilitate mobilisation of resources of capital and skill which would otherwise remain inadequately utilised and bring about integration of the development of these industries with the rural economy."

The development of these industries was to ensure "more equitable distribution of the national income and (to avoid) some of the problems that unplanned urbanisation tend to create. With improvements in techniques and organisation, these industries offer possibilities of growing into an efficient and progressive decentralised sector of the economy." (*Ibid.*)

"The gap in our thinking," pointed out by Mr. Dhebar, was a fact prior to the formulation of the second Five-year Plan. The gap between policy and the measures and between the measures and conditions in the field was to be narrowed in planned stages by the administrative authorities concerned. My point was that this task was not undertaken with "a sense of purpose, of direction, or even of earnestness." Mr. Dhebar concedes this point in para 2 of his reply. The failure, therefore, is not merely in production, but in each of the other equally important aspects of the programme.

Structure of Rural Society

It is really unfair to assume, as Mr. Dhebar seems to do, that the Planning Commission and the Karve Committee were unaware of the stratification of rural society. In fact, their programmes aimed at employing for productive purposes the available resources in capital and skill in the prevailing conditions in rural areas; and, over a period, change them through appropriate organisation. The artisan class was to be trained and assisted in a variety of ways to improve their lot. The programmes for this purpose have failed; the attempted patterns of organisation did not and do not have the essential qualities for self-sustenance and, instead, their working has given rise to more objectionable forms of vested interests that resist change. Co-operation presumes equality not of any kind but of competence at some level. This view is endorsed not by theory and theoreticians, but by experience. Hence, my submission that the co-operative method has little chance of success in the context of the prevailing conditions in the rural areas.

The Common Production Programme did not have as an objective the welfare of Harijans, tribals or any other definite section of the population. The general assumption was that, with specific measures of assistance, the artisans already engaged in an industry like the handloom, or *ghanis* or hand pounding of rice, etc. would improve their levels and quality of production, that the assurance of work in any of the industries at the given wages would draw the under-employed and the unemployed, and some definite improvement in their economic condition could be realised. None of the assumptions proved to be valid, because essentially the work and wages offered were not attractive enough. Certain sections of rural society who wanted marginal relief were drawn to some of the jobs, but the bulk of the unemployed preferred not to work in these industries. Even at the levels of wages in these industries, the cost of the products in relation to their quality was and is prohibitive, and marketing continues to be more of a problem than ever before.

The Evaluation Committees that assessed the working of these programmes came to the conclusion that these industries had not come up to expectations, and none of the objectives was nearer attainment at the end of the second Five-year Plan. This is a fact; and the logical inference is that the present programmes, their approach, content and *modus operandi* are, in the light of results, ineffective and need change.

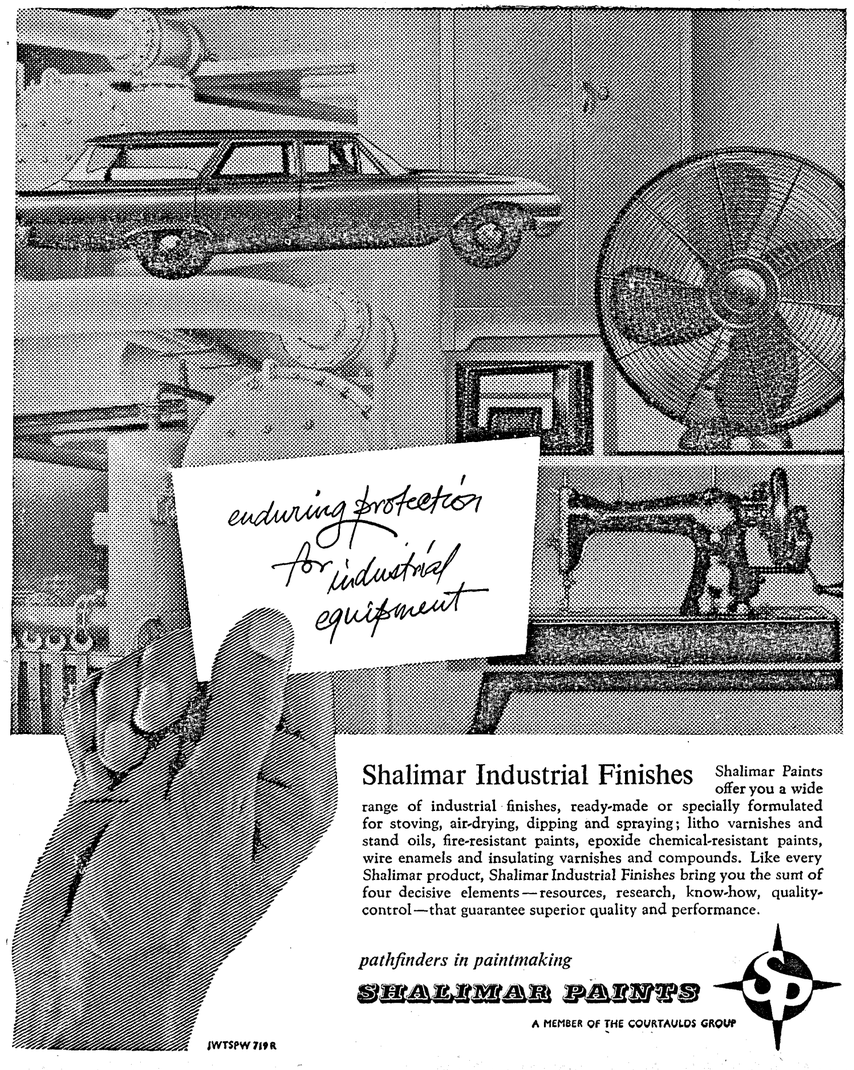
Notwithstanding all social ills, in no industry has Indian labour's capacity or willingness to learn new skills been found wanting. Social conditions in some areas among some groups militate against precipitate social change; but this does not deter them from becoming efficient operators, mechanics, fitters and what-have-you. The approach implicit in Mr. Dhebar's thesis, that is, gradualness—uniform and simultaneous rise among *all* people in rural areas—has proved to be the bane of the country. The gradualness has encouraged "traditional industries," like the handlooms, to develop into organised vested interests and a drag on economic growth and development. The nation's growth cannot be made dependent on the growth of the least efficient. We see the results of this approach on the other sectors of the economy. For instance, rationalisation in the cotton textile industry is opposed merely because it will throw some persons out of employment. It is not realised that increased output through rationalisation, its transport and the thousand and one other jobs prior to its sale will generate additional jobs in the economy, in addition to lowering the prices of the products and thus benefiting the consumers. Narrow, sectarian, group approach condemns the economy to a rate of growth that is nearly swamped by the growth of population. Incentives to grow on their own, to venture out into new fields of endeavour, rather than measures of protection and preservation are what are likely to yield results.

Khadi as cloth may be unacceptable; but *khadi* as that body of principles that enjoins consideration of the welfare of the downtrodden, the unemployed and the handicapped, has not merely been incorporated in the Directive Principles of the Constitution, but has become the basic motivation of our socio-economic policy. Let us not confuse means with ends.

There are other alternatives to traditional industries. As I stated in my article, these are "capable of providing employment on an enduring basis, if not on a comparable scale." My submission is that traditional industries, such as hand spinning and hand weaving, do not provide today "employment" in the accepted, economic sense; and nothing that is being done "to develop" them promises employment or make these industries viable. It is difficult to concede the validity of Mr. Dhebar's contention that large-scale industries are inefficient. Their working inefficiency, in spite of protection, is in many ways the result of a combination of economic policies, most of which cannot be considered as sound or even realistic. Inefficiency conceded—I am not conceding it—the bulk of consumer goods produced by them—and this is *the* basis of judgment—meets the demand of the overwhelming majority of the consumers. From a national point of view, wastage in any form anywhere is to be condemned and eschewed, particularly when resources are scarce in relation to needs. To seek to justify waste in one direction because wastage exists in another cannot be considered an argument at all.

The point is that the Indian masses are capable and willing to learn skills that are marketable and to accept tools that are productive. None of the skills taught under the development programmes for traditional industries or tools distributed met these minimum demands of the people. The time and labour involved in acquiring these skills, judged by the response of the unemployed and underemployed, did not represent addition to their productive and earning capacity. One cannot justifiably or truthfully attribute the poor response of the people to these training schemes in these industries to the resistance of rural people to change.

The entire drift of my argument was to show the need for a change in the approach to the development of the decentralised industrial sector. If the policy and measures to implement the policy have been and continue to be inappropriate (this has not been questioned by Mr. Dhebar), the logical answer, I submit, is to undertake the responsibility for drawing up alternative programmes that will yield results. I find Mr. Dhebar's reply does not answer the points I have raised about the Common Production Programme or the causes for its almost total failure. It would have been more to the purpose if an indication had been given of the changes being contemplated or effected to make the programmes more efficacious instruments of policy than a recapitulation of well-known facts about the structure of rural society or its so-called resistance to change. The motivation to change is need. Protection is perpetuation of waste. Let us end it.



Shalimar Industrial Finishes Shalimar Paints offer you a wide range of industrial finishes, ready-made or specially formulated for stoving, air-drying, dipping and spraying; litho varnishes and stand oils, fire-resistant paints, epoxide chemical-resistant paints, wire enamels and insulating varnishes and compounds. Like every Shalimar product, Shalimar Industrial Finishes bring you the sum of four decisive elements—resources, research, know-how, quality-control—that guarantee superior quality and performance.

HINDUSTAN STEEL'S PERFORMANCE

EXPANSION PROJECTS GETTING DELAYED

THANKS to the spur provided by the declaration of national emergency in October 1962, the three steel plants of Hindustan Steel Ltd. in the public sector registered higher levels of capacity utilisation in 1962-63, the latest year for which the annual report has just been published. The aggregate production of the three plants (Rourkela, Bhilai and Durgapur) during the year came to 89 per cent of rated capacity in iron, 83 per cent in ingot steel, 76 per cent in total saleable steel and 96 per cent in plates. The tempo of production accelerated further in the first quarter of 1963-64 when achievement was 97 per cent of capacity in coke, 100 per cent in hot metal (pig-iron), 98 per cent in ingot steel and 87 per cent in saleable steel. Still higher rates of operation were achieved in the months of December 1963 and January and February 1964 when near-capacity production in saleable steel, too, was attained.

A plant-wise picture of progress in production in 1962-63 and in the current year is also available. According to the annual report of Hindustan Steel Ltd., the Bhilai plant's remarkable and consistently good results reported last year were not only maintained but improved upon in the current year. Output of iron, steel, blooms, billets and total saleable steel so far at Bhilai have exceeded the rated capacities. The production of rails has been nearly doubled. One of the notable achievements is the consistent lowering of coke rate. The production of sinter currently is 83 per cent of capacity. Production at Bhilai is now fairly stabilised for optimum output under normal operating conditions. It is, however, stated that full advantage cannot be taken of Bhilai ingot production in excess of capacity until additional soaking pit capacity comes to use in the next few months.

At *Durgapur*, with the commissioning of the third blast furnace, the last open hearth (special casting) furnace and the wheel and axle plant during 1962-63, the million-ton integrated plant was completed. Production of steel ingots averaged 72 per cent of capacity and, by the end of that year, reached 107 per cent of capacity. Average production of saleable steel in 1962-63 was 62 per cent of capacity. The output of structural sections and merchant products also showed increase and several new sections were developed. In the current year, that is, 1963-64, further progress towards capacity production has been registered. In February 1964, production is stated to have been at rated capacity in coke ovens, blast furnaces, steel melting shop, blooming mill, billet mill and section mill. Thanks to recent steps taken to change over from acid to basic roof, further improvement in the production of steel ingots, as also in their quality, is expected. With additional soaking pits already installed, more steel ingots, it is expected, will be rolled into finished steel.

Setbacks at Rourkela

Performance at *Rourkela* was rather uneven during 1962-63. Of course, with the commissioning of the third battery of the coke oven plant in August 1962, all the units in the million-ton plant, excepting the three tinning lines, were in production. There was also a significant improvement in the performance of some of the departments through 1962-63. Steel ingot production, for instance, reached the record of 109 per cent of capacity in March 1963, although the average for the whole of 1962-63 was only 70 per cent of capacity. The average production of the plate mill during the year was 96 per cent of capacity. On the other hand, the average of the plate mill during the year was 96 per cent of capacity. On the other hand, the average of the total saleable steel was only 59 per cent of capacity. Such uneven performance was due to several setbacks during the year. These setbacks were: (1) industrial disputes in the Blast Furnace Department, leading to stoppage of production for a week; (2) shut-down of Blast Furnace No. 1 for major repairs in January-August 1962; (3) breakdown of the generator of the blooming and slabbing mill in January 1963; and (4) breakdown of 1,200-m.m. reversing mill in the cold rolling mills in January-March 1963.

Raw Materials

As for the supply of raw materials, the annual report has reviewed certain developments during 1962-63. The position regarding movement, and quality, of coal to the steel plants, according to the report, was not very satisfactory during the year. Durgapur suffered because the movement of coal in covered wagons entailed considerable manual handling. The problem of poor quality supply, as compared with the price charged for the higher grade has continued to be a serious handicap. The supply of washed coal from Kargali and Dugda has, however, improved consupply, as compared with the price charged for the higher grade, has continued to be a serious handicap. The supply of washed coal from Kargali and Dugda has however, improved considerably and the washed coal requirements of Rourkela and Bhilai are now being met fully. Iron ore and limestone supplies to the three plants seems to have been quite satisfactory. While the supply of empty B.F.Rs, four-wheeler wagons and tank wagons were uneven during 1962-63, the position has improved during the current year, with the result that stocks of raw materials have been maintained at a high level.

On the maintenance side, thanks to the steps taken last year, breakdowns were less in number and major breakdowns were rare exceptions. But it is admitted in the annual report that improvements have still to be made in maintenance facilities where they have been found inadequate, such as in wagon and loco repairs. Although the manufacture of spares in the plant workshops is at full capacity, there is need, it is stated, for developing other sources in the country for undertaking the manufacture of spares in order to reduce dependence on imports.

Manpower Training

The situation pertaining to manpower and training has also been described in the annual report. In the first place, there has been a progressive replacement of foreign technicians by Indian. In Bhilai, the number was reduced from 62 in August 1962 to 40 by June 1963, and this will be further reduced by the end of this year. Durgapur employed only 64 foreign technicians as of June this year. But, in Rourkela, following the recommendations of the Solween delegation, the number of foreign technicians had to be increased to 265. This number will be maintained for a year after which it will be reviewed. The need for deputing personnel for training abroad has, however, been reduced with the stabilisation of H.S.L's own training activities. For instance, during 1962-63, only 39 engineers and nine operatives from the three steel plants were sent for foreign training in certain fields. The facilities at the training institutes at Rourkela and Bhilai are also being strengthened to meet the personnel requirements of the expanded plants. At the beginning of the current year, there was a total of 2,445 trainees on the rolls of the Training Departments of the plants.

Another notable feature of the steel plants' working is that the production bonus scheme, introduced in December 1961, has achieved its object of raising production and stabilising it at a high level. The total payment under the scheme during 1962-63 came to about Rs. 1.1 crore. The revision of pay scales last year has also contributed to the general satisfaction of the employees.

Expansion Projects

As for the expansion projects of the three plants, considerable progress, it is claimed, was made in 1962-63 towards implementing them. But it is also admitted in the report that time-schedules pertaining to the Bhilai expansion project have had to be revised because of delays in the delivery of equipment from the U.S.S.R. and difficulties in the indigenous fabrication of structural steel works. Letters of intent for practically all the major units of the Rourkela expansion project were issued by March 1963. Due to delay in the award of equipment contract the construction time-schedule was, however, finalised only in May 1963. According to this schedule, the maximum tempo of construction will only be in 1965. According to the latest estimates, Rourkela expansion will cost approximately Rs. 132.3 crores, with a foreign exchange component of Rs. 59.8 crores. The Durgapur expansion project, too, has been delayed, with the result that a revised time-schedule has been prepared, taking into account the actual delivery prospects of equipment. Based on the tenders received, the present estimated cost of Durgapur expansion will be Rs. 70.0 crores with a foreign exchange cost of Rs. 25.6 crores. *The Alloy Steels Project*, for which the main equipment is to be supplied by a consortium of five leading Japanese firms with the help of an additional yen credit, also seems to be marking time. Orders for supplies of furnaces for the forge shop, bar mill, sheet mill and heat treatment furnace of this project are yet to be finalised.

An idea of the progress of H.S.L's capital expenditure on the steel plants proper, the expansion projects and other related projects can be had from Table I.

TABLE I—*Capital Expenditure*
(Amounts in crores of rupees)

Projects	Expenditure upto 31st March 1963	
	Total	Foreign exchange component
Rourkela Steel Plant:		
Million-ton plant	224.7	130.3
Expansion	7.9	1.9
Pipe plant	3.3	2.7
Operational equipment of a capital nature	3.3	..
Bhilai Steel Plant:		
Million-ton plant	200.9	98.0
Expansion	22.6	7.2
Operational equipment of a capital nature	2.1	1.9
Durgapur Steel Plant:		
Million-ton plant	193.3	95.1
Expansion	2.9	..
Alloy Steels Project	2.6	0.2
Coal Washeries Project	14.9	5.4
Fertiliser Plant	19.3	4.2
Bokaro Steel Project	1.3	..
Head Office	1.2	0.1
Total	700.3	347.0

Financial Results

During 1962-63, the Government of India subscribed a further sum of Rs. 60 crores to the capital of H.S.L., thereby raising the Company's share capital to Rs. 367 crores at the end of the year. As on 31st March 1962, the Company had drawn from the Government sums totalling Rs. 357 crores as loans. But no loans were drawn thereafter. The interest due on the loans was just under Rs. 18 crores as on 1st April 1963. The Company appealed to the Government for a moratorium of one *more* year for payment of this interest and for a suitable change in the ratio of loan to share capital by conversion of past loans utilised for capital expenditure into equity. The Government did not accept this suggestion and the only concession it allowed was to permit the Company to pay interest in two instalments—one in November 1963 and the other in March 1964.

TABLE II—*Progress At A Glance*
(Amounts in crores of rupees)

	1960-61	1961-62	1962-63
Production ('000 tonnes):			
Pig-iron (hot metal)	1,568	2,234	3,063
Steel ingots	774	1,605	2,490
Semis for sale	508	468	515
Finished steel	58	625	1,188
Despatches ('000 tonnes):			
Pig-iron	800	723	802
Steel ingots	24	47	1
Semis	450	490	547
Finished steel	29	560	1,147
Gross sales	44.2	79.3	130.5
Payment to Steel Equalisation Fund	3.3	8.4	6.2
Freight outward	4.9	6.8	11.0
Excise duty	5.6	6.9	10.4
Wages and salaries	9.3	13.4	19.7
Profit (before providing for depreciation)	2.2	6.7	6.7
Share capital—at year end	300.0	300.0	367.0
Loans:			
Bank—at year end	12.0	11.7	7.1
Government—at year end	306.1	357.1	357.1
Working capital—at year end	28.9	43.6	51.6
Net block—at year end	509.8	541.1	579.5
Depreciation—provided upto year end	10.0	54.8	86.0

The Company made an aggregate profit (before depreciation) of Rs. 6.6 crores in 1962-63, of which the share of Bhilai alone was Rs. 5.5 crores. But, after making a provision of Rs. 30.6 crores on account of depreciation for the year under review, the Company actually incurred an aggregate net loss of Rs. 23.9 crores as detailed below:

(Net loss in crores of rupees)

Rourkela	10.7
Durgapur	8.4
Bhilai	4.5
Coal washeries	0.3
	23.9

The Company's cumulative loss to the end of March 1963 amounted to Rs. 61.6 crores. The

NEW PRODUCTS AND PROCESSES

Thermo-electric Heat Pump

A COMPACT, portable thermo-electric heat pump test instrument provides localised transfer of heat. By using fittings shaped to go around the particular component under study, the pump can be used for heating and cooling individual components (for example, those in an electronic circuit) to determine the effect of temperature variation on performance in the complete system. Developed and tested by the Canadian National Research Council, the device uses two thermo-electric elements which provide a positive or negative temperature difference with respect to the ambient, depending on the polarity of the current. The outer surfaces of these elements are connected to an aluminium heat sink which forms the body of the device while the inner surfaces are in contact with two inserted fittings shaped to enclose the component under test. The pump is being made by Daystrom, Cooksville, Ontario, Canada.

Document Copiers

Two more models have been added to the Verifax range of document copiers made by Kodak, 246, High Holborn, London, W.C.1. The Cavalcade makes copies upto 9¼ by 14 inches and is very simple to operate. The user simply slides the original document and a matrix paper into a slot and from then on copies can be quickly made from the matrix whenever required. Copies are made on Hobart Manufacturing Company, of Hobart Corner, New Southgate, London, N.11, the machine incorporates draw-cut knives which tenderise the meat and, at the same time, knit separate pieces together, distributing the fat evenly and forming a complete steak.

Hydraulic Motor

After several years of research into the requirements of the heavy mechanical plant industry, the hydraulics division of Chamberlain Industries of the U.K. has introduced the Mark 10 Staffa hydraulic motor. It is the first "double-banked" motor the firm has made, and using this method (mounting two sets of five cylinders each radially around a common drive shaft) the motor packs a great deal of power into a comparatively small space. Although it is only some 37½ in. long and weighs 1,080 lbs, dry, the motor delivers 200 h.p. at its customary working pressure of 2,500 p.s.i. It is thought that such units, which develop high torque at low speeds, will be particularly useful for driving rolling mills, winches, coal conveyors, and even some types of ship. It has a speed range in either direction of 0-100 r.p.m., controlled by one lever through a variable-delivery pump which supplies the motor with oil at high pressure.

Self-service Fuelling

Self-service has been applied to fuelling cars and lorries in the Swiss-designed Pro Esa equipment, now to be made in Britain under licence by County Instruments, of Boreham Wood. It is thought that the idea will be attractive to the private fleet owner, who finds it uneconomic to have all his filling stations manned continuously. The equipment is contained in a cabinet and connected electrically to a counter installed in a normal petrol pump. When the driver wants to operate it he inserts his "identity card" into a slot in the cabinet. The machine recognises a printed circuit pattern on the card, starts the pump, records the amount of fuel delivered and automatically registers it against the number of that particular driver. When the driver removes his card the pump stops and the machine resets itself for the next demand. Each machine is set to recognise only one pattern on the identity card, so that the pump will not work if an unauthorised card is inserted. But any number of people can collect fuel from one pump if they all have the same card pattern. It is this facility that suggests an extension of the system to public filling stations and garages, since regular customers could have their own cards and fuel their own vehicles at any time, whether or not the staff were there.

Truck Brake Components of Plastic

Plastic-impregnated bushing and washers have been introduced by Scania-Vabis, the large Swedish commercial vehicle manufacturers, in a bid to make a number of vital points such as brakes, clutch bearings and kingpins in their heavy trucks and buses maintenance-free. The plastic used is Teflon combined with bronze. Before adopting roller-shoe brakes, Scania-Vabis carried out an extensive series of tests. One single bearing in the roller, for example, was tested a million times on brake work without visible signs of wear. On earlier types of brakes, the brake cam—the component that forces the brake shoes apart—worked against a steel plate. Brake dust and high temperatures were liable to destroy the lubricant, resulting in very heavy friction. With the bearing materials previously used, the problem was not solved by merely employing roller shoes instead of the steel plate, since the roller would often seize onto its pin after a time, so that it functioned as a fixed plate. Teflon, with its coefficient of friction of below 0.1—roughly the same that of ice—provided the solution. Since the roller shoes offer a smaller frictional resistance, the efficiency of the brake effort is increased by about 25 per cent. Consequently, the brake cylinders can be made smaller, which in practice means that the brakes will have a faster action.

Money-changing Slot Machine

A company in Amsterdam—Jennen Automaten N.V., Herengracht 286, Amsterdam (Holland)—has started turning out an electric money-changing slot-machine that works very simple and can be used for many types of coins and counters. After the insertion of a coin, and without any further action being required, the desired change is produced fully automatically in a few seconds. A given coin can be changed for various combinations of other coins; in all, ten coin magazines can operate in the slot-machine. The coin slot is shut off as soon as the mechanism has been started up following the insertion of a coin. The same locking device is actuated in the event of electric supply failure or when the machine is empty. The 50-watt motor in the slot-machine starts and switches off automatically. The change-issuing machine can be wired up in such a way that it is possible to tell at a distance whether the stock of change is getting low or running out altogether. A light then comes to indicate that the magazines need replenishing. The dimensions of the machine, which is easy to mount, are: height 50 cm. (1′ 8″), width at top 26 cm. (10″), width at bottom 22 cm. (8.6″), depth at top 26 cm. (10″) and depth at bottom 21 cm. (8.3″).

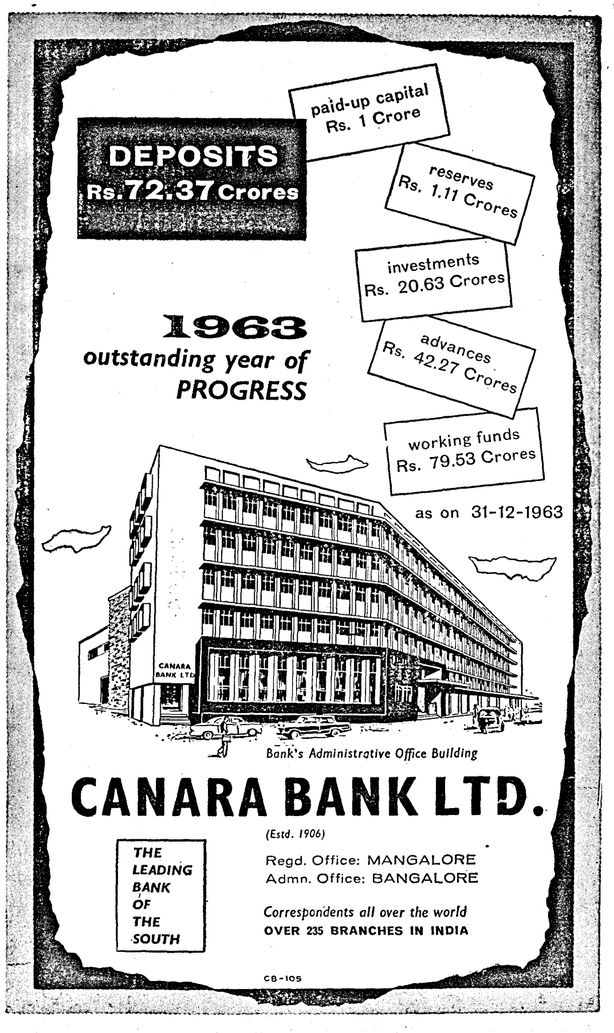
Decalcomanias

Inscribing letters, figures and such like by hand on drawings and designs is extremely time-consuming. To get round this, a Dutch firm has developed special decalcomanias bearing such letters, figures, symbols, etc. These decalcomanias consist of specially prepared translucent polyester sheets, on one side of which characters have been printed in mirror fashion. The sheets, which have a type area of 28 x 22 cm., are protected on the side with the printed characters by a backing sheet that has also been specially treated. The letters, figures, etc. are very simple to transfer. First the protective sheet is removed and the printed sheet laid on the receiving surface so that the characters are legible. The letters, figures and other symbols are then contained between polyester sheet and receiving surface. By rubbing a spatula over the characters the latter can be transferred with great precision from the sheet onto the receiving surface. The letters and other signs used by the manufacturer for his system are the original and internationally accepted varieties marketed by well-known type foundries. There are 36 types of letters, 12 kinds of figures, 18 groups of symbols and 12 varieties of grids; they can be delivered from stock in a large number of colours. Trade marks on these transfer sheets can also be made to order. The signs and symbols can be reproduced and are suitable for making hellographic prints. The transfers are not prone to annoying discolorations. The decalcomanias come in two types, namely, scratch-resistant and non-scratch-resistant (e.g. for drawing paper, etc.). Both types can be transferred onto all kinds of materials. The system has already been introduced into a number of European countries. In the U.S.A. the transfers are to go into production shortly under licence.

Lightning Arresters

Lightning arresters manufactured on a pilot scale at the Indian Institute of Science, Bangalore, are said to conform to all the standard tests for lightning arresters prescribed by the International Electro-technical Commission's specifications. The pilot plant work has proved that the manufacture of arresters can be undertaken on a commercial scale. Composition according to this is eminently suited to the manufacture of lightning arresters with suitable electrical conductivity. These arresters may also be used with advantage for protection of field coils and relay coils, for spark quenching purposes of telephone circuits etc.

Except for silicon carbide (carborundum), all the raw materials required for the manufacture of lightning arresters are available indigenously. Porcelain housing conforming to standard specifications will be available from Indian porcelain factories. The capital cost of a plant capable of producing 24,000 units of 9-12 kV 5,000 ampere is estimated at Rs. 10 lakhs. The cost per unit of lightning arrester is estimated at Rs. 150. Plant and machinery required for the manufacture of lightning arresters consists of mixing and sieving machines, hydraulic press, electric furnace, metalliser and testing equipments. All the machinery is indigenously available except electric mixing machine, hydraulic press, furnace and compression testing machine etc.



THE STATE BANK OF INDIA

SPEECH OF CHAIRMAN, MR. B. VENKATAPPIAH

"A FURTHER AND VERY CONSIDERABLE BRANCH EXPANSION PROGRAMME AHEAD"

THE State Bank of India has taken up on hand the implementation of a further and very considerable branch expansion programme. This was revealed by Mr. B. Venkatappiah, Chairman of the Bank, in his speech at the Ninth Annual General Meeting of shareholders held at Bombay on Thursday, 12th March 1964. The programme, according to Mr. Venkatappiah, envisages the opening of 394 new branches between 1st January 1964 and 31st December 1968 —75 being opened before the middle of 1965 under the previous programme and 319 before the end of 1968 under the new programme. The farther the Bank went into semi-urban and rural areas, he said, the greater would be the need for it to evolve new techniques whether for mobilisation of adequate deposits or for disbursement of appropriate credit. He admitted that the difficulties were real, but he firmly believed that they were not insurmountable, "provided always that, in finding solutions, we are allowed a perspective that is long enough."

The following is the full text of Mr. Venkatappiah's speech:

GENTLEMEN,

I welcome you to this meeting and am glad of the opportunity to tell you of the progress which the State Bank of India and its Subsidiaries have made since we met a year ago. More specifically, we are concerned today with the report of the Central Board of Directors of the State Bank of India for the year 1963, the Bank's profit and loss account for the same period and the balance-sheet as at 31st December 1963. You have already had an opportunity of perusing these documents.

Last year, we met under the shadow of Chinese aggression. The impact of that event on the economy of the country and, of particular relevance from our point of view, the dislocation caused to the normal operation of credit in certain sectors are no doubt still fresh in your mind. As I then told you, we immediately took several measures in collaboration with trade and industry, with the Reserve Bank of India and with Government. This was in order to ensure that credit, both medium-term and short-term, was available in appropriate form and adequate quantity in what were then regarded as the more vulnerable areas; that the distribution of foodgrains, whether by Government, co-operatives or the trade, was suitably and promptly financed; that the manufacturers of goods and equipment for meeting the defence needs of the country were assisted with credit in all the ways open to the Bank and that such assistance was especially directed, for here the need was greatest, to small and medium entrepreneurs engaged in defence industries; that special attention was devoted to export credit with a view to stepping up exports, since, as I said last year, a new dimension of gravity had been imparted by the National Emergency to the problem of foreign exchange; that the Bank and its Subsidiaries, through every single one of their branches and offices——and these together now number 1,644 —participated in the countrywide work connected with the collection of funds, gold and valuables for the defence effort; and, last but not least, that special facilities, also on a country-wide scale, were made available to the members of the Armed Forces in the matter of maintenance of accounts and remittance of moneys to families and dependents.

Efficient Working

I am glad to be able to report to you that, in all these respects, we succeeded in acting promptly, helpfully and in large measure effectively. In what follows I shall tell you of our other and more usual activities, those relevant to us as the biggest commercial banking organisation in the country: one, moreover, which has been enjoined by its charter to keep in mind both its commercial character and the public interest. I shall endeavour to review briefly not only the financial results of the year's working—these are satisfactory in so far as we have more than maintained our profits—but also our total performance, firstly in relation to our normal banking activity and secondly with reference to those spheres of development which have all along claimed our special attention. Further, I shall try, in continuation of what I said last year, to indicate as succinctly as I can the progress we have made in other matters pertinent to our own growth and efficiency such as recruitment and training, premises and housing, personnel welfare and personnel relations, delegation and decentralisation.

In comparison with 1962, we earned substantially more in 1963. Our income went up for two principal reasons. The main one of course was expansion of business. The advances touched a new peak: Rs. 309 crores in 1963, as against Rs. 289 crores in 1962. I may mention in passing that, in the current busy season, that of 1964, advances have already passed the 325-crore level. The other factor which contributed to increased earnings was the modification which we effected in our lending rates from the close of business on 5th April 1963, so as to bring them into greater conformity with prevailing conditions, including the already enhanced Bank Rate, as also of course our own needs. The State Bank of India Advance Rate was accordingly raised from 5 per cent to 6 per cent. But the increases actually effected were graduated. Little or no addition was made to the higher ranges of interest rates charged by the Bank and the full rise of 1 per cent was confined to the lowest range. Moreover, certain types of advances continued to be concessionary in the matter of interest. On loans to small industries, for example, the rates were stepped up only marginally; and on advances to co-operatives, they were retained at broadly the same level as before. We earned more than we did in 1962 not only on interest and discount but also on commission, exchange and brokerage. It will be seen that, after allowing for all usual and necessary provisions from the resultant earnings, our income has increased by Rs. 2.79 crores to Rs. 25.37 crores in 1963.

Lending Rates

I have referred to certain needs which, along with other factors, necessitated a modification of our lending rates. These were two. The first was connected with our deposits and the second with our wage bill. Our policy in regard to deposits is quite simple. We do not want to enter into undesirable competition with other banks, that is to say competition which is either unhealthy in itself or harmful to the economy. At the same time, in the important process of building up our own deposits, we propose to make every effort, along with other banks, to attract savings and bring them increasingly into the banking system. Accordingly, as one such measure, we raised the rate of interest on various categories of fixed deposits and savings deposits by ½ per cent during the course of the year. On the same date as we effected this, viz., 1st April 1963, we reduced the minimum acceptable amounts of call and short-term deposits from Rs. 1 lakh to Rs. 25,000 and introduced for the first time fixed deposits for periods of 24 and 36 months. Our deposits have increased. If demand and time deposits are taken together, there was an increase of Rs. 25 crores from Rs. 496 crores in December 1962 to Rs. 521 crores at the end of 1963. These figures, however, do not take into account the transfer of P.L. 480 funds to the Reserve Bank of India. This transfer was of the order of *Rs. 20 crores in 1962 and Rs. 42 crores in 1963.* If P.L. 480 funds were excluded altogether for 1962 and 1963, the increase in aggregate deposits was Rs. 69 crores in 1963. Of this, time deposits accounted for an increase of as much as Rs. 48.8 crores. The enhancement of our rates of interest on deposits, together with the larger quantum of deposits on which interest has had to be paid, accounts for an increase of about Rs. 95 lakhs in our expenditure. There is another big item of increase. I have referred to recruitment. We have a fairly large back-log to make up. Also we have a further and very considerable branch expansion programme ahead of us. We have assessed our needs and drawn up and started implementing an intensive plan of recruitment at both clerical and supervisory levels. I mentioned last year that, apart from the increases effected in the salaries and allowances of those governed by the award, we had found it necessary to revise the pay scales and otherwise improve the emoluments of various categories of our supervisory personnel. For some of these categories, the full year's cost of such revision is reflected in the expenditure for 1963. On all these counts and others, including the increased dearness allowance payable under the award in relation to the cost of living index, the establishment bill has gone up by Rs. 1.43 crore. In all, as compared with 1962, our expenditure has increased by Rs. 2.73 crores to Rs. 22.62 crores.

Profit

Income being Rs. 25.37 crores and expenditure Rs. 22.62 crores, the net profit for 1963 is Rs. 2.75 crores (as against Rs. 2.69 crores for 1962). Together with the balance of Rs. 0.46 crore brought forward from last year, the sum available for appropriation to various heads, including dividend to shareholders and bonus to staff, is Rs. 3.20 crores. The dividend has been maintained at the same level as in the previous year, *viz.*, Rs. 23 per share, subject to deduction of tax. This accounts for Rs. 1.29 crore. The bonus to staff is broadly on the same basis as last year, *viz.*, two months' salary; the actual amount provided is, however, larger than last year's—Rs. 82 lakhs, as against Rs. 72 lakhs—because of the increase in the number of employees and the increments meanwhile earned by them. To the reserve fund has been added the same amount as in 1962, *viz.*, Rs. 55 lakhs. Lastly, a sum of Rs. 5 lakhs has been transferred to the staff welfare fund and an equivalent amount to the staff co-operative housing fund. These provisions, too, are identical with those made last year.

It will be convenient if I refer at this stage to our Subsidiaries. They have made progress in various directions. An outstanding measure of reorganisation, as you are aware, was the establishment on 1st January 1963, of the State Bank of Bikaner and Jaipur. This institution, which in effect combined the State Bank of Bikaner and the State Bank of Jaipur in one large unit, is now in a position to serve more effectively than before the entire State of Rajasthan. In their traditional operations, no less than in the developmental sphere, the performance of the Subsidiary Banks has been a noteworthy one. The number of offices of the seven Banks together rose from 519 at the end of 1962 to 568 at the end of 1963. Also in the aggregate, their deposits rose by over Rs. 13 crores to Rs. 156 crores and their advances by about Rs. 4 crores to Rs. 75 crores. There was an increase in profits from Rs. 58.50 lakhs in 1962 to Rs. 67.97 lakhs in 1963. The State Bank of Travancore has raised the rate of dividend from 5 per cent for 1962 to 6 per cent for 1963. The State Bank of Patiala, which had not declared any dividend for 1962, has been able to declare a dividend of 5 per cent for the year under review. The State Bank of Saurashtra, while once more not declaring a dividend, has nevertheless taken opportunity to strengthen its reserves further. The other Subsidiaries maintained the same level of dividend as in the previous year.

Branch Expansion

I will now turn to the programme of branch expansion of the State Bank of India and in the same context deal with connected topics such as premises, recruitment and training. As mentioned in the Directors' report, the Bank had 4 local head offices, 733 branches and 332 sub-offices in India at the end of 1963. It had besides an office each in London and Colombo and five offices in Pakistan. In all, therefore, the Bank had 1,076 offices at the close of the year which, together with the 568 offices of the Subsidiaries, make a total of 1,644, a figure I have already mentioned, for the entire organisation. During the course of the year, the State Bank of India increased the number of its branches by 29 (of which 20 were under the Expansion Programme) and of other offices by 37. In consultation with Government and the Reserve Bank of India, the Bank has now entered, as from 1st January 1964, on a new five-year phase of planned expansion, comprising 75 branches (to be opened before the middle of 1965 under the previous programme) and 319 branches (to be opened before the end of 1968 under the new programme), making a total of 394 or nearly 400 for the next five years. This is as big a project of expansion as the State Bank had undertaken on its establishment and successfully executed during 1955-60. It is at the same time more complicated in many ways. Suitable buildings are hard to come by in the smaller towns. Personnel has to be recruited and trained. Inter-branch accounts and their reconciliation, if only because of the number of branches and offices involved, will present further complexities.

The farther the Bank goes into semi-urban and rural areas the greater will be the need for it to evolve new techniques whether for mobilisation of adequate deposits or disbursement of appropriate credit. These difficulties are real, but it is my firm faith that they are not insurmountable, provided always that, in finding solutions, we are allowed a perspective that is long enough. Endeavouring to act on this assumption we have already done some planning and taken certain measures. Premises Divisions have been constituted both in the Central Office and at the local head offices in order to devote special attention to finding suitable sites and buildings, constructing our own premises if needed and, incidentally, renovating existing branches wherever that may be necessary from the point of view of improved customer service or better working conditions. A committee has recently made detailed suggestions in all these respects and the recommendations are being implemented.

Recruitment of Personnel

I have earlier referred to the larger programme of recruitment at different levels which is already in operation. Further, we have revised and expanded our scheme of training. There is now a three-level training programme for the officials and a two-level programme for the clerical staff, with special courses for different categories wherever appropriate. The three-level programme consists of a preliminary and induction course, an intermediate course and a senior course, while the two-level programme consists of an induction course and an intermediate course. We have now, apart from the Staff Training College at Hyderabad, four residential training schools at Patna, Indore, New Delhi and Nagapattinam, in addition to three training schools at local head offices and 10 zonal centres. With these training facilities, as also the training arrangements provided by outside agencies in India and abroad, it has already been possible to train over 1,000 clerks and about 200 officers during the year. We have taken certain steps to simplify the accounting procedures which operate in and between our branches. For devising the further measures of reform that will no doubt be called for in this context, as also for dealing in a planned manner with the long-term problems of the Bank generally, a Planning, Organisation and Methods Division has been recently constituted in the Central Office with appropriate personnel. Lastly, in regard to the mobilisation of deposits in the rural areas and elsewhere, we are experimenting at several centres, keeping always in view the need, firstly, to improve customer service, secondly, to employ suitable forms and media of communication and, thirdly, to ensure that the cost is commensurate with the results. I may mention in passing, though this has specific reference to the Subsidiaries, that a committee has been asked to investigate and report on the subject of mobilisation of rural deposits in relation to the area covered by the State Banks of Mysore, Hyderabad and Travancore. The committee has recently submitted its report.

New Financial Institutions

Against the background of wider economic planning, may I at this stage take the opportunity of welcoming some of the new financial institutions which have been or are about to be established? I refer to the Unit Trust in its bearing on investment, the Export Credit and Guarantee Corporation from the point of view of export trade and the Development Bank in relation to industry. These will fill existing gaps in institutional assistance and I have no doubt that, in more than one context, the State Bank of India will be able to collaborate fruitfully with the new institutions as it does with those already in the field. It is pertinent to mention here that our advances are now increasingly industry-oriented, while, at the same time, there is no decrease in the quantum of the credit we make available for trade and commerce. In relation to the total advances of the Bank, industry accounted for 72.1 per cent in 1962. This percentage has increased to 75.1 in 1963. Further, about 30 per cent of the advances to the industrial sector were utilised by basic industries such as iron and steel, heavy engineering, cement, and fertilisers, and about 18 per cent by export-based industries like jute textiles. We have not of course neglected agriculture and food. Thus the jute buffer stocks financed by us accounted for more than Rs. 7 crores and the advances to State Governments for financing the distribution of foodgrains aggregated Rs. 13.5 crores. In the important sector of small-scale industry, our total credit commitments now aggregate Rs. 17.6 crores, so far as working capital is concerned. I would point out that this figure is exclusive of advances granted to small units of a traditional type such as rice and oil mills. You are aware that the facilities we now offer to small industrialists include medium-term loans and instalment credit. Further relaxations have been made in granting accommodation against supply bills drawn on the Directorate General of Supplies and Disposals. Also, where small units have secured orders from Government, we are arranging to ensure, by entering into a fresh agreement with the National Small Industries Corporation, that the units can obtain further facilities from us by way of advance payment for purchase of raw materials. We are thus continuously examining the scope of increasing our assistance to small entrepreneurs and have implemented a number of measures suggested in this context by the Study Team to which I made a reference last year. Further, in this sphere of our activity even more than elsewhere, we have been laying stress on simplification and improvement of procedures, introducing flexibility in our operations in order to meet the varied requirements of the small entrepreneurs, training our field staff specially for this purpose, and strengthening our staff position, in branches and local head offices, so that the work is attended to with efficiency and promptitude.

Financing Co-operatives

We have made some progress in the financing of co-operatives, and the total credit limits sanctioned by the Bank to all types of co-operative institutions increased from Rs. 33.4 crores on 30th September 1962 to Rs. 45.2 crores on 30th September 1963. In addition to the several types of credit facilities already provided, we started during the year to finance primary co-operative consumers' stores through co-operative financing agencies, in addition to the wholesale consumers' co-operative stores we had already been financing. Other new measures we initiated during the year include the extension of term loan facilities to industrial co-operatives and the financing, on certain conditions, of labour contract and construction co-operatives. Advances against warehouse receipts issued by Central and State Warehousing Corporations declined to some extent in the course of the year. It may be noted in this connection that the advances had been brought within the purview of the Reserve Bank's selective credit controls. It is nevertheless my belief that there is considerable scope for improvement in this business provided the warehouse receipt commands the unqualified confidence of depositors and lenders and thereby wins general acceptance and circulation as an instrument of credit. I have no doubt that the Corporations are cognizant of the steps which have to be taken in order to bring about such confidence. It goes without saying that, in the absence of such steps, the Bank itself is helpless in the matter of promoting the usefulness, much less the popularity, of warehouse receipts.

Last year, I referred to the need as well as scope for building up an enduring and harmonious relationship between the staff and the management. We have since taken several measures to this end. Firstly, in order that the issues might be clarified dispassionately and a programme of further steps drawn up constructively, we held in July-August 1963, with the assistance of experts on the subject, an internal seminar on management-staff relations. This was attended by those in the top management and other officers who were handling staff matters. In pursuance of the discussions in the seminar, we are exploring the possibility of having regular consultative meetings between management and staff at various levels, as also of evolving other relevant procedures. These matters are being discussed with the representatives of the Staff Federation and I hope that suitable arrangements will soon be agreed upon. It is needless for me to say that, important as all such procedures will be, the spirit behind them—a spirit of understanding and co-operation between management and staff—will be much more important. We have already made some headway in the matter of staff welfare following our discussions with the Staff Federation and the evolution of an arrangement for the utilisation of the staff welfare fund. Further, we have decided to encourage the formation of consumer co-operatives at important centres so that all employees might obtain their requirements of foodgrains and consumer goods at reasonable prices. Two such consumer stores have already been started—one at Madras and the other at New Delhi—and a few more are likely to be established shortly. While the Bank will help to establish these co-operatives by providing premises and other necessary equipment and facilities, what is contemplated is assistance of such a nature as would enable the societies to develop into autonomous and truly co-operative organisations within as short a time as possible. I am glad to be able to say that appreciable progress has been made in the matter of staff co-operative housing. In all, 49 co-operative housing societies have been established at 39 centres. Buildings have been completed in three cases and are under construction in about 20 cases. Loans are sanctioned on concessionary terms and in suitable instalments by the Bank. The loans sanctioned amount to Rs. 68 lakhs and those already utilised to Rs. 42 lakhs. Before leaving the subject of personnel, I would compliment all categories of the staff on another year's good work put in by them. I would also thank them for their devotion to the interests of the institution.

State Bank Amendment Bill

I should like, before I conclude, to make a brief reference to the State Bank of India (Amendment) Bill, 1963, which was introduced by the Finance Minister in the Lok Sabha on 21st December 1963. The Bill seeks to facilitate further delegation and decentralisation in the State Bank. It contemplates the creation of a larger number of local head offices as and when the need arises. With this possibility in view it provides for certain changes in the composition not only of Local Boards but also of the Central Board. It seeks to vest certain specific powers in the Local Boards; in addition, the Central Board may delegate other powers, but in either case the exercise of the powers is subject to any general or specific directions which the Central Board may give. As the statement of objects and reasons points out, the business and activities of the State Bank of India have expanded considerably since the Bank was established on 1st July 1955, and the provisions of the Bill are designed to enable the Bank to dispose of its business efficiently and expeditiously.

In conclusion, both on behalf of my colleagues on the Board and myself, I would pay a tribute to the very valuable services rendered to the Bank by Prof. D. G. Karve, first as Vice-Chairman and for the last two years as a Director of the Bank. He leaves us on relinquishing his assignment as a Deputy Governor of the Reserve Bank. I welcome at the same time Shri M. R. Bhide who has taken the place of Prof. Karve both in the Reserve Bank and on the Board. I would also record our high appreciation of the services rendered to the Bank by those who, during the year, ceased to be Directors of the Central Board or Members of the Local Boards.

THE UNITED COMMERCIAL BANK, LIMITED

Registered Office: **2, INDIA EXCHANGE PLACE, CALCUTTA-1**

To be placed before the Members at the Annual General Meeting to be held at the Registered Office of the Company at 2, India Exchange Place, Calcutta, on Wednesday, the 8th April, 1964.

REPORT OF THE DIRECTORS

The Directors have pleasure in submitting their Twenty-first Annual Report together with the Accounts of the Bank for the year ended 31st December, 1963.

	Rs.	nP
The net profit for the year, after providing for taxes and for all known and anticipated charges, and including Rs. 18,992.29 brought forward from the previous account, amounts to	76,61,861	95

The Directors have contributed further Rs. 2,00,000 to the National Defence Fund and Rs. 25,920 to the Sydenham College of Commerce and Economics Golden Jubilee Trust Fund, transferred Rs. 17,00,000 to the Reserve Fund and Rs. 4,00,000 to the Gratuity Trust Fund and provided Rs. 19,00,000 for bonus to the staff. They now recommend the payment of dividend at Rs. 6 per share subject to deduction of tax which will absorb Rs. 33,60,000 leaving an unappropriated balance of Rs. 75,941.95 to be carried forward.

The Directors consider that it is desirable to capitalise a sum of Rs. 20,00,000 out of the sum of Rs. 40,00,000 standing to the credit of the share premium account and they have accordingly applied to the Controller of Capital Issues for his consent in this behalf. The Directors now await the final outcome of this year's budget proposals relating to the taxation of bonus shares before taking further action.

During the year branches of the Bank were opened at Dum Dum and Jadavpur in Calcutta, Santa Cruz and Wardia Road in Bombay, Theagaroyanagar in Madras, Shivaji Nagar in Poona, Chawri Bazar in Delhi and at Anand, Robertsganj, Jammu, Mesra, Jharia, Vasco da Gama, Aurangabad, Cambay, Mavoor, Korba and Pinjore.

The Directors are thankful to the Shareholders and the clients of the Bank for their continued support. They also express their gratitude to the Bank's Advisers and Advisory Committees for their able help and guidance.

Mr. P. D. Himatsingka who has been a Director of the Bank almost since its inception, tendered resignation of his office as a Director in order to devote more time to his duties and work as a Member of Parliament. The Board have reluctantly accepted his resignation and wish to place on record their appreciation of the very valuable guidance and counsel given by Mr. P. D. Himatsingka and his unstinted devotion to the interests and welfare of the Bank.

Under Article 86 of the Bank's Articles of Association Mr. M. P. Birla has been appointed as a Director to fill up the vacancy caused by the resignation of Mr. P. D. Himatsingka.

Mr. G. D. Birla, Mr. I. P. Goenka, Mr. Y. N. Mafatlal and Mr. R. L. Nopany retire by rotation under Article 92 of the Bank's Articles of Association. Mr. G. D. Birla, Mr. I. P. Goenka and Mr. Y. N. Mafatlal offer themselves for re-appointment. Mr. G. D. Birla has attained the age of 69 years and special notice of a resolution for his re-appointment has been given in terms of Sections 190 and 281 of the Companies Act, 1956.

As Mr. R. L. Nopany wishes to retire from all active business he does not seek re-appointment. The Board have accepted his decision with regret and wish to place on record their appreciation of the valuable guidance and counsel given by him during the period of his office. Notice has been received from some members of their intention to propose at the forthcoming Annual General Meeting that Mr. Mohanlal Nopany be appointed as a Director in the vacancy thus caused and the Directors recommend his appointment.

The Directors have also to report to you changes in the general management of the Bank. Mr. S. T. Sadasivan will relinquish his office as General Manager on the 31st March, 1964, and the Directors have, subject to the approval of the Reserve Bank of India, appointed in his place Mr. R. B. Shah, the present Deputy General Manager. The Directors place on record their appreciation of the valuable and meritorious services rendered by Mr. S. T. Sadasivan as General Manager of the Bank and the outstanding contribution made by him to the progress of the Bank during his term of office. A resolution has been proposed to be moved at the next Annual General Meeting to appoint Mr. S. T. Sadasivan as a Director and the Board welcome this resolution so that the Bank may have the benefit of Mr. Sadasivan's vast experience in banking.

The Directors also place on record their appreciation of the services of the Officers and Staff of the Bank during the year.

The Shareholders are requested to appoint Auditors for the current year and to fix their remuneration.

On behalf of the Board,

G. D. BIRLA,
Chairman.

CALCUTTA, *6th March*, 1964.

REPORT OF THE AUDITORS TO THE MEMBERS OF THE UNITED COMMERCIAL BANK, LIMITED

We have audited the attached Balance-sheet of The United Commercial Bank, Limited, as at 31st December, 1963, and the Profit and Loss Account of the Bank for the year ended upon that date, annexed thereto, in which are incorporated the Branch returns audited by the Statutory or other Auditors. The reports on the accounts of the Branches audited by other Auditors have been forwarded to us and dealt with in preparing our report in the manner considered necessary by us.

We report that:

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) in our opinion, proper books of account, as required by law, have been kept by the Bank so far as appears from our examination of those books, and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance-sheet and Profit and Loss Account, dealt with by this report, are in agreement with the books of account and the returns;

(e) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner as required for banking companies and, on such basis, the said Balance-sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1963, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

U. P. LETTER

FALLING FOODGRAINS PRODUCTION

NEED FOR SETTING UP BASIC INDUSTRIES

From Our Special Correspondent

LUCKNOW, 18*th March*

THE continuously rising foodgrain prices in U.P. have focussed public attention on the causes of falling agricultural production in spite of the use of improved implements, greater use of better seeds, fertilisers and irrigation facilities. The falling production of foodgrains in U.P. was considered by the State Board of Agriculture and more recently by the U.P. Legislative Assembly in the course of the budget debate. In an impressive speech, Mr. Charan Singh, U.P.'s Minister for Agriculture, told the Legislative Assembly that the target of 182.4 lakh tons for the third Plan, on which the annual targets are based, is "unrealistic and impossible of achievement." In view of this, it was inevitable that the production of foodgrains should be below target. He pointed out that the productive capacity of land was not proportional to the amount of seed and fertilisers applied to it and the crude arithmetical method adopted in fixing the target had made it unrealistic and impossible of achievement. According to Mr. Charan Singh, no matter what anybody does about it, the production of foodgrains in U.P. could not be increased to the level of the third Plan target. But, even when due allowance is made for the inflated target, the achievement in the realm of foodgrains production in U.P. is highly disappointing. There might be some truth in Mr. Charan Singh's observation that, while the people from the Punjab are imbued with the spirit of self-help and self-improvement, the people of U.P. are not actuated by any such spirit and the urge for material prosperity is lacking. In support of his view, the Agriculture Minister quoted the views of some Ford Foundation expert who studied the package programme in the country and said that the package programme at Aligarh in U.P. had failed to spark the enthusiasm and confidence of the people, which is necessary for achieving higher productivity of land and a better way of life. It is, however, doubtful if the laziness and lack of ambition in the people of Uttar Pradesh, especially the cultivators, is mainly responsible for low agricultural production. While some cultivators in Uttar Pradesh, as in other parts of the country, might be lacking in the spirit of self-help and self-improvement, no such statement could with justification be made about the people of U.P. as a whole.

Lack of Co-ordination

There appears to be more truth in the criticism which some Opposition members of the Legislative Assembly offered that the main cause of low foodgrains production in U.P. is the lack of co-ordination between the different departments of the U.P. Government—agriculture, irrigation, co-operation, power and community development—responsible for increasing agricultural production. It is true that the portfolio might become unmanageable if all these departments were put in charge of one Minister. But there is certainly much scope for the co-ordination of work of officials belonging to all these departments at the village level. The appointment of an Agricultural Commissioner and the dismissal of a hundred or more block development officers is not going to improve matters unless the administrative set-up is thoroughly rationalised and attuned to the task of increasing agricultural production.

In the course of the budget debate in the Legislative Assembly, some very novel methods were suggested for increasing agricultural production. One member suggested that land holdings of less than 6½ acres should be exempted from land revenue. The Agriculture Minister, in reply, pointed out that if this were done the farmers would fragment holdings to escape land revenue and this would make the situation worse. He also rejected the suggestion that the policy of agricultural price support should be adopted to increase agricultural production. He pointed out that such a policy worked quite satisfactorily in a country like the U.S.A. where only eight per cent of the people live on land and the remaining 92 per cent of the people could afford to subsidise their produce, but it is not a practical proposition for a small fraction of the people in U.P. to subsidise the produce of cultivators who are in a vast majority. Mr. Charan Singh also said that the demand for parity between agricultural prices and the prices of goods consumed by the cultivator is a "mere slogan." In the free market which we have in this country no such price parity could possibly be established by the Government.

In the long period, an increase in agricultural production is the only effective method of stabilising the prices of foodgrains. For the immediate future the U.P. Government is making every effort to improve the distribution of available supplies, to tighten the control on the stocks of wholesalers and retailers, and to increase the number of fair-price shops. In the past, U.P. obtained one lakh tons of wheat and 68,000 tons of wheat *atta* from the Central stocks. In view of the present emergency, the Central Government has agreed to allot to U.P. 12 lakh tons of wheat and 7 lakh tons of wheat *atta* per annum. This is expected to ease the situation. But the increase in the price of wheat at the fair-price shops, which will now sell wheat at 2½ seers per rupee instead of 2 seers 10 chattaks per rupee so far, has produced an unfavourable psychological effect and has tended to prevent the price of wheat in the open market from falling.

Panchayat Raj

The panchayat raj experiment in U.P. has not worked satisfactorily. The panchayats suffer from inadequate finances, the panchayati adalats (courts) work in an erratic and irresponsible manner and the new system has failed to inspire a sense of equality and confidence among the rural people who continue to suffer as in the past. The elected village pradhans are mostly the ex-zamindars and there is lack of co-ordination between the elected representatives and the officials. It has been pointed out that there is too much "officialdom" in these panchayats and the elected representatives do not have the qualities and missionary spirit which is necessary to make the panchayat raj successful. In order to remove some of these defects the U.P. Government would shortly introduce a comprehensive Panchayat Raj Bill to fill the lacunæ in the existing Act. It is proposed to reduce the strength of the panchayats from the present level of a minimum of 15 and a maximum of 45 members to a minimum of seven and a maximum of 15 members. This would make the village panchayats more manageable. In the future the members of the nyaya panchayats would not be nominated by the Government but would be elected directly by the gram panchayats. This is calculated to make the panchayati adalats efficient instruments in administering justice. The post of the panchayat secretary and the village level worker would be amalgamated both to effect some economy and to introduce efficiency into the system. It might be a correct decision to give the gram panchayats more powers as they become mature. But, unless the resources available to them are increased, they are not likely to become effective instruments of economic development and social regeneration. In its present mood the U.P. Government does not appear keen at passing some of its sources of revenue to the panchayats or at least to share some of its revenues with the panchayats.

Basic Industries

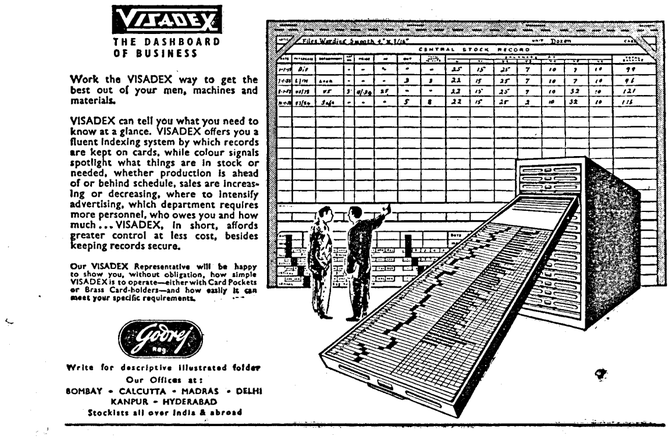
At a special meeting the Eastern U.P. Chamber of Commerce and Industry urged the State Government to persuade the Central Government to locate some basic heavy industries in Uttar Pradesh. It is unfortunately a fact that the Government of India and the Planning Commission have relatively neglected U.P. in the matter of setting up new industrial units in the public sector. If a number of basic heavy industries were to be set up in the public sector in U.P., for which there is much scope, new opportunities of employment would be created and many ancillary industries would be established which would help in the industrialisation of Uttar Pradesh.

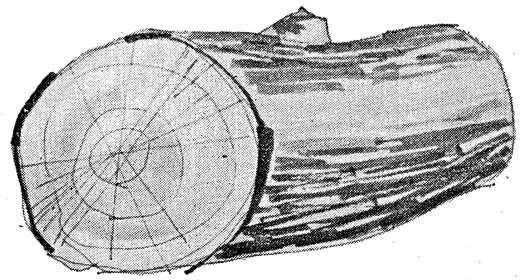
The existing industries in the private sector in U.P. are not doing well because of many handicaps. The Council of the East U.P. Chamber of Commerce has suggested that the electricity rates in U.P. should be reduced to the level of rates current in Andhra Pradesh, Maharashtra, Punjab and the other industrially progressive States in the country and, at the same time more power should be made available to industries. The factory by-laws and labour laws should be liberalised and facilities for the movement of materials for production purposes and for transporting the finished goods should be increased. The procurement of loans through the U.P. Finance Corporation should be made easier and the loans should be advanced in a more liberal manner. The infra-structure of the economy plays a vital role in the industrialisation of any region. The U.P. Government as yet does not seem to have appreciated the need for strengthening the infra-structure of the economy in U.P. The pet argument of Ministers of the U.P. Government is that the development of industries is the responsibility of the Central Government and they are helpless in the matter. But certainly strengthening of the infra-structure of the economy is within the province of the State Government.

Another thing which is directly under the control of the U.P. Government is to reduce the incidence of State taxes like excises, cesses and sales taxes and local taxes like octroi on industrial costs. Although U.P. is an industrially backward region, the incidence of State and local taxes on industrial costs is one of the highest in the country. This creates a vicious circle which has to be broken to give industries in U.P. a fair chance to develop in competition with industries in other parts of the country.

U.N.O. PLACES AN ORDER WITH SWITZERLAND

Within the framework of its technical aid programme, the United Nations Special Fund asked the Swiss firm of consultant engineers Motor-Columbus of Baden, to carry out a survey into the electrification possibilities in Panama. On the basis of the results of this survey, the Swiss firm, which was awarded the contract in the face of very keen international competition, is to submit to the Governments of Panama and the United States a complete technical and economic report on the opportuneness and the economic possibilities of harnessing the energy of the rivers Chico and Chiriqui, with a view to stepping up the industrialisation of the western part of Panama. This survey will also investigate the possibilities of using at the same time the two rivers for the irrigation of the lower regions for the purpose of increasing the agricultural potential.



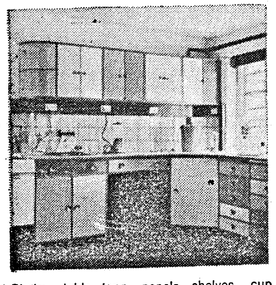


Out of this log of wood

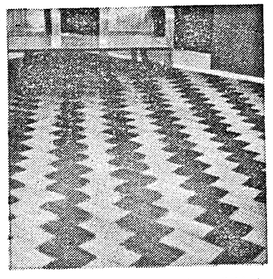
WESTERN INDIA PLYWOODS
make the widest range of specialised plywoods and hardboards

Today modern industry and architecture demand woods in a variety of specially processed forms: aircrafts demand light yet strong plywoods; engine rooms require fireproof plywoods; radio cabinets need specially processed plywoods for resonance; building construction and coach building demand oil-tempered super hardboards. Western India Plywoods, the largest manufacturers of processed woods in India, make numerous varieties and sizes of plywoods and hardboards to meet such industrial, architectural and defence needs of our country. They are marketed under the trade names 'Westindply' for plywoods, and 'Weston' for hardboards. Other products include 'Wipex' paper laminates for table tops and dining tables, Flushdoors and Block Boards.

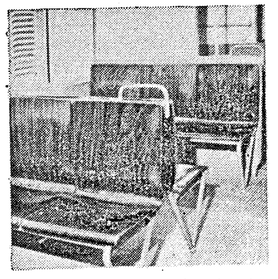
• • •



Chairs, table tops, panels, shelves, cup boards, flooring — infinite is the scope of 'Westindply', 'Weston' and 'Wipex'



'Westindply' plywoods are made available in a wide variety of veneers to add charm and colour to the living room



Specially shaped compressed-wood seats—only Western India Plywoods make them in India — for railway coaches, supplied to the Integral Coach Factory, Perambur

BONUS COMMISSION'S RECOMMENDATIONS UNREALISTIC

SOUTHERN INDIA EMPLOYERS ON LABOUR PROBLEMS

ONE of the first articulated reactions of employers to the recommendations of the Bonus Commission (the report of which was placed on the table of the Lok Sabha early this month) to have been published so far comes from the Southern India Employers' Federation, Madras. Speaking at the latest annual meeting of the Federation held at Madras on the 10th inst., Mr. A. D. Galloway, the outgoing Chairman, said that, judging from the summary of the Commission's report that appeared in the Press, the (majority) recommendations of the Commission were "unrealistic to a dangerous degree" in the context of the industrial development of the country. Conservation of profits for the rehabilitation and modernisation of existing industries and suitable inducements to investors, domestic as well as foreign, are as important as contentment among workers. Dilating on this point, Mr. Galloway observed that the formula for the calculation of bonus, evolved by the Commission, suffered from some serious defects. One defect, in Mr. Galloway's opinion, is that, according to the formula, no provision is to be made for rehabilitation allowance as a prior charge, despite the well-known fact that a large part of the machinery and equipment employed by Indian industry is obsolete and replacement costs are steadily rising. Another is the low return on investment provided for. The 7 per cent return on paid-up capital and 4 per cent on reserves (both subject to tax) allowed under the "formula" as prior charges are, according to Mr. Galloway, "too low to act as an incentive to further investment." In this connection, Mr. Galloway drew attention to a statement of Mr. Ashoka Mehta, Deputy Chairman of the Planning Commission, that a return of ten per cent or more on the capital invested in both public and private sector enterprises was necessary to provide the sinews of growth.

Minute of Dissent Justified

The factors that create prosperity in industries, Mr. Galloway went on to point out, appeared to have escaped the notice of the majority of the members of the Commission when they considered ways and means of sharing out the fruits of this prosperity. He pleaded that the value of the minute of dissent by Mr. N. Dandekar, who represented employers on the seven-member Commission, which covered some vital matters, including the return on capital and rehabilitation allowance, should not be assessed on a simple arithmetical basis. Mr. Dandekar, he pointed out, represented employers who, as much as workers, were primarily concerned with the Commission's report and it would, therefore, be wrong to overlook Mr. Dandekar's representative character when considering his note of dissent. The Chairman of the Southern India Employers' Federation expressed the hope that the Government, while taking a decision on the report, would realise that, unless the industry was maintained in a healthy state by rehabilitation and modernisation of plant and equipment at the correct time, for which specific provision should be made in the bonus formula and investors were assured of a sufficient net return on their capital, the aims of the Five-year Plan would not be achieved.

Mr. Galloway did not confine himself to the recommendations of the Bonus Commission alone. He also commented upon some of the important developments in the field of labour. Referring to the proposal to amend the Industrial Disputes Act with a view to enabling individual workmen to take disputes relating to their dismissal or discharge to a Tribunal for adjudication and to empower the Tribunal in such an adjudication to go into the merits of the case, Mr. Galloway said that the proposal had been opposed by employers on two grounds. First, there is no basis for the allegation made by trade unions that Industrial Tribunals have no power under the existing law to go into the merits of individual cases of dismissals and discharge. Secondly, such an amendment is bound to have serious and damaging effect on discipline in industry. Employers have also been maintaining that, under the existing law laid down by the Supreme Court, Tribunals already have wide powers to investigate cases in which it appeared that a serious miscarriage of justice had occurred. There are also many instances in which Tribunals have ordered reinstatement of discharged or dismissed workers. On these grounds Mr. Galloway contended that, under the existing law, Tribunals had power to give relief in deserving cases.

Powers of Tribunals

If the cases in which High Courts and the Supreme Court had interfered were to be examined, it would be found, he added, that such interference had occurred only when the awards of Tribunals were perverse. Reiterating the employers' opposition to the move, Mr. Galloway said:

"The power of Tribunals to go into the merits of individual disputes concerning dismissals and discharges was for the first time defined by the Labour Appellate Tribunal in 1951, and later the decision of the Labour Appellate Tribunal was approved by the Supreme Court. It is important to note that the Labour Appellate Tribunal and the Supreme Court laid down the law on this subject, bearing in mind the need to maintain discipline in industries on the one hand, and on the other, to ensure the security of employment of workmen. The law laid down on such broad considerations and not on account of any restrictions imposed by the Industrial Disputes Act itself, should not be set at nought merely because there has been agitation by trade unions for the law to be amended. Although this agitation has been going on for a long time, the trade unions have not yet been able to point out any instance where a miscarriage of justice has occurred on account of the law laid down by the Supreme Court. Employers are opposed to any endeavour to amend the Industrial Disputes Act which is not based on concrete evidence of injustice resulting from legislation as it exists—especially when the present law has been laid down by the highest judicial authority in the land, having in mind the need to maintain discipline in industry and, at the same time to ensure the security of employment of workmen."

The Chairman of the Federation, however, welcomed the proposal to amend the Industrial Disputes Act so as to make the awards given in arbitration proceedings under Section 10A of the Act binding on employers and workmen in the same way as awards given by Industrial Tribunals or Labour Courts, provided the persons agreeing to arbitration represented the majority of employers and workmen. He also welcomed the proposal to make awards and settlements terminable only by the majority of persons bound by them. But he regretted that the Government had not done anything to find a solution to the problem of minority unions and their damaging effect on industrial relations and production. This problem was discussed at a recent meeting of the State Labour Advisory Board and it was suggested that the Government should consider reviving the Bill it had brought forward some time ago, providing for the recognition of only one majority union in an industry or an individual establishment. Although this Bill had the support of employers and the majority of trade union representatives present at the meeting, the Government has so far not done anything because of the opposition to the Bill by one trade union organisation. "Unless it is the intention of the Government that only unanimous decisions of employers' and workers' organisations at tripartite meetings should be given legislative effect," Mr. Galloway said, "it is difficult to appreciate the Government's reluctance to proceed with the Bill when all the parties, barring a single trade union organisation, are prepared to accept the principle of it."

Provident Funds

The Chairman of the Federation also criticised the Government's action in making the enhanced rate of provident fund contribution applicable to the cotton textile industry. He said that the expert committee, which recommended the increase in provident fund contributions, did not include the cotton textile industry in the scope of its recommendations. But the Government increased the rate of contribution by employers from 6¼ per cent to 8 per cent in the case of cotton mills also. This, Mr. Galloway asserted, was contrary to what the employers were given to understand when they accepted the recommendations of the Wage Board for Cotton Textile Industry. It was thought that the Wage Board had granted an increase in wages which was the maximum that employers would be called upon to meet for a period of five years and that any further increase in labour cost should come out of the gains of rationalisation. In view of this, the Government's decision to make the enhanced rate applicable to the cotton textile industry was, according to Mr. Galloway, "contrary not only to the recommendations of the committee appointed by the Government itself but also contrary to the understanding reached when the recommendations of the Wage Board were implemented."

Fair Price Shops

The Chairman of the Federation was critical of the Government's policy of forcing, by legislation if need be, the industrial undertakings employing 300 or more workers to open consumer stores for their workers. Although employers fully appreciated the need to check rise in prices of essential goods, the business of running fair price shops and the like, Mr. Galloway pointed out, was the primary responsibility of the Government and it was wrong in principle to force employers to take over this responsibility.

Apart from the principle involved, there are also certain practical difficulties which make it unwise to force employers to open fair-price shops or consumer co-operatives. In the case of establishments, the workers of which live far away from their workplace, as is common in big cities, no useful purpose will be served by opening fair-price shops in the factory premises, because the workers, if they want to take advantage of the facility, will have to carry things over long distances. And whatever price advantage they may gain from buying from the fair-price shops will be offset by the expenses involved in carrying them, not to speak of the inconveniences. Moreover, it is not the workers themselves who do the shopping but their womenfolk and it will be practically impossible for them to make daily or weekly trips to their husband's workplace to buy their necessities. This is one of the main reasons why workers themselves are not very enthusiastic about the proposal. Of course, this problem does not exist in the case of establishments having their own workers' colony near the workplace. Even if the colony is situated away from the factory premises, fair-price shops could be opened.

Convenient location of fair-price shops and consumer co-operatives is not the only difficulty. Suitable staff has to be employed for running the shops and when, in future such shops are no longer needed, as might well happen if the price and supply situation improves, the question of retrenchment compensation to the staff of fair-price shops will also arise. These and other practical difficulties considerably detract from the usefulness of the scheme and it appears that the Standing Labour Committee, which recommended that all establishments having 300 or more workers should have their fair-price or consumer stores, has not carefully considered the practical aspects of the scheme. The Government would therefore be well advised not to force the employers to do something which is of doubtful practical utility but to encourage and assist them in establishing fair-price shops only in cases where such a course will really benefit workers.

I.L.O. AND AUTOMATION

With the establishment of an Automation Unit within the Office, the Director-General of the International Labour Office (I.L.O.) has provided a basis for the implementation of the new I.L.O. programme on automation as outlined in his report to the International Labour Conference last June. The new Unit is arranging for a meeting of experts from 12 countries to be held this month to advise on the methods for studying the social consequences of automation. It is expected that the experts will provide guidance on research mehods which can be utilised in different countries and thus permit international comparability of research findings. As another part of programme, the Unit is working with a Preparatory Documentation Unit on a clearing-house of information on automation issues. This is designed to make available to interested parties the information and experience developed in countries around the world on the social and economic issues associated with the introduction of automation.

CENTRAL WAREHOUSING CORPORATION

FACILITIES YET TO BE FULLY UTILISED BY FARMERS

WAREHOUSING in agriculture is a vital link between production and marketing and consolidation of that link is a must among the first steps towards stable agriculture prices. It is, therefore, quite encouraging to find, especially when lags on all sides of our agriculture have been quite glaring, that, during the year ended 31st March 1963, the six-year old Central Warehousing Corporation has surpassed the Plan targets for general warehousing capacity and volume of business. This is the second year in succession to witness such an impressive performance by the Corporation.

The number of Central warehouses increased from 60 to 78, thus exceeding the target for the year by one. Capacity in hand—in standard bags—expanded by 46 per cent, that is, from 1,235,330 to 1,801,730, which is 20 per cent, or 298,190 standard bags, above the target. Volume of business reflected in stocks held—in standard bags—went up by 43 per cent from 863,900 to 1,244,722, an increase of 23 per cent, or 235,257 standard bags over the target. The average annual occupancy of warehouses at 69 per cent was two per cent above the expected 67 per cent, though it was slightly lower, as compared with 70 per cent in the previous year.

The Corporation now has 80 warehouses all over the country, besides two special warehouses set up in Calcutta and Kanpur for storage of jute on behalf of the S.T.C. under the Government's price support scheme. With four more warehouses which will be established before the end of the current financial year, the total capacity will increase further. In addition, there are 525 warehouses run by the State Warehousing Corporations (S.W.Cs.). In all, there are facilities for scientific storage of as many as 85 commodities at 607 centres in the country.

Third Plan Targets

By the end of the third Plan period, the Corporation hopes to achieve the revised target of a total storage capacity of 269,800 tons at 100 centres, of which 168,900 tons at 36 centres will be of its own construction as against 46,600 tons out of a total capacity of 180,173 tons, as of 31st March 1963. Further, the Corporation expects to put up four cold storages by the end of the current Plan, one of which is already under construction. Plans for the remaining three are being finalised. Similarly, the 14 S.W.Cs. propose to have an aggregate capacity of about 800,000 tons at 680 centres, including their own constructed capacity of 367,695 tons at 245 centres, by the end of the current Plan.

The progress will be accelerated considerably during the next Plan period, when 50 more warehouses, each of 4,000 tons capacity, and three more cold storages of about 1,000 tons each are proposed to be built by the Corporation, bringing the total capacity to 413,900 tons at 100 centres, with the proportion of own construction capacity rising to 368,000 tons at 86 centres. Likewise, during the fourth Plan, the 14 S.W.Cs. are expected to construct additional capacity of 244,150 tons at 180 centres, raising the total to 611,845 tons at 425 centres (including four cold storages), out of which 350,000 tons will be in the form of hired accommodation at about 300 centres.

It is not as if the Corporation has been blindly multiplying the number of warehouses. It has rather taken care to create facilities in those places where they are urgently required. To cite an instance, during 1962-63, it agreed to undertake construction of warehouses on a large-scale in Assam in order to help the State Government meet its needs of storage and distribution of civil supplies. It also participated last year in the Government's price support scheme for stabilising jute prices in the country by placing at the disposal of the S.T.C. within five months storage capacity for 400,000 maunds of jute and completing negotiations for additional accommodation for about 800,000 maunds. What is more, it handled large stocks of fertilisers on behalf of the Government at conveniently situated centres so as to facilitate easy distribution to consumers in different States. All agricultural commodities received in warehouses are analysed and graded according to standard specifications. Last year, grade specifications were finalised for *maida*, lemon grass oil, vetiver oil, cardamom (seeds and capsules), mustard oilcakes, coriander and *mahuwa* seed. The outstanding State Bank advances against warehouse receipts at the Central and State warehouses remained almost unchanged over the year at Rs. 9.0 crores, though during the year they had gone up to about Rs. 12.5 crores.

Old Habits Die Hard

However, like the other facilities created for agriculture, such as irrigation, fertilisers and better tools and equipment, the warehousing facilities provided by the Corporation have continued to be inadequately utilised by co-operatives and producers, because, as the Corporation's Chairman who is also the Secretary of the Union Ministry of Food and Agriculture, Mr. V. Shankar, has said, old habits die hard and in a country like ours, with poor literacy, the task of carrying the message of warehousing to agriculturists is an uphill one. But the Corporation is continuing its efforts to do both extensive and intensive publicity of the benefits of the warehousing scheme through all the available media, namely, posters, handbills, film shows, radio talks, press releases and exhibition of cinema slides.

The Corporation's earnings from storage charges during 1962-63 increased by over 43 per cent from Rs. 14.26 lakhs to Rs. 20.48 lakhs, but the year's working resulted in a net loss of Rs. 2.20 lakhs, as against Rs. 2.03 lakhs in the previous year, bringing the total deficit so far to Rs. 14.65 lakhs. Explaining the Corporation's deficit working for all these years, Mr. Shankar says:

"It is very seldom that a warehouse is commercially remunerative right from the beginning. It is our experience that a potentially remunerative centre in a rural area may take even ten years before becoming commercially remunerative, while a warehouse in a rural area with some commercial bias, or a warehouse in an urban area, requires about five to seven years to become commercially remunerative. Taking all the above factors into consideration, the Board has decided to approach the Government to clarify the role of the Corporations as one of implementing a developmental and promotional scheme so that the Government may be able to give the Corporations adequate financial assistance in respect of the promotional side of their operations. We hope that the Government would agree to our request and thus enable the Corporations to meet their revenue losses in the initial periods of development. This will go a long way to improve the financial picture of the Corporations and, at the same time, enable us to fulfil the main objective for which the Corporations have been set up."

Subsidy

While the Corporation has a good case for obtaining Government grants, it may be noted here that a sum of Rs. 10.41 lakhs initially received (as interest-free loan for meeting its working deficit) from the National Co-operative Development and Warehousing Board has been converted into a subsidy by the Board and has gone towards reducing the Corporation's accumulated loss to Rs. 4.24 lakhs. The conversion has followed the enactment of the Warehousing Corporations Act, 1962, under which the Central Government has substituted the Board as a shareholder of the Corporation. The Act has also enlarged the scope and functions of the Corporations. The management of the "warehousing fund" has also been transferred from the Board to the Corporation for advancing loans to the State Governments for purposes of enabling them to subscribe to the share capital of the S.W.Cs., and for advancing loans and granting subsidies to the S.W.Cs. and State Governments for promoting the warehousing and storage of agricultural produce and other notified commodities. This new Act came into force on 18th March 1963 and the Corporation was also formally re-established from that date.

Impressive though the storage facilities created by the Corporation are, they constitute, relatively speaking, a small part of the overall third Plan target for warehousing. It will be recalled, in this connection, that the third Plan provided for increase in storage capacity from 2.5 million tons to 5.0 million tons, of which capacity to the tune of 3.5 million tons was to be owned by Government. The recent Mid-term Appraisal of the Third Plan has recorded that by the end of 1962-63, the total storage capacity was 3.3 million tons, of which storage owned by Government accounted for 1.8 million tons. But the Planning Commission has also drawn attention to the fact that, while the total storage with Central and State Warehousing Corporations has risen from 350,000 tons to a little more than 600,000 tons, the programme for co-operative storage, for which a target of two million tons was set under the third Plan, is still lagging behind. On the whole, however, progress in the creation of warehousing facilities in the first two years of the current Plan has been quite encouraging. Only, the available facilities, it would appear, have not been fully utilised by agriculturists.

World production of paddy in 1963-64 is expected to expand, but the Commonwealth Economic Committee's February rice report, just published in London, again emphasises that much would depend on the recovery in output in India and Pakistan. In its general review, the Committee says that some decline in production has occurred in Japan and Indonesia, and adverse weather conditions may also have affected crops in Burma and Thailand. Cambodia, however, anticipates an exceptionally good harvest, and both the United States and Egypt have harvested record crops.

MARTIN BURN FARES WELL

TAX BURDEN MUCH HEAVIER

THANKS to the satisfactory working of the engineering group of companies under its management and fairly comfortable trading conditions, Martin Burn Ltd. (Chairman: Mr. T. Leslie Martin, Calcutta) has made good progress during the year ended 30th September 1963, more than recovering the ground lost in the preceding year. Sale proceeds have advanced by as much as Rs. 107.17 lakhs, or more than 14.5 per cent, to Rs. 877.25 lakhs and other income is usefully higher at Rs. 120.05 lakhs, as against Rs. 105.69 lakhs in the previous year, due chiefly to a Rs. 6.58-lakh increase in the commission received as managing agents, or secretaries and treasurers, and a rise of Rs. 6.93 lakhs in miscellaneous receipts. Another heartening feature of the year's working is that, although stocks of finished goods are higher at Rs. 114.41 lakhs as against Rs. 94.94 lakhs, the value of total inventories at close (that is, stocks *plus* work-in-progress) at Rs. 177.68 lakhs is the lowest for the past five years, reflecting the improved trading activity during the year. Gross profit has risen by Rs. 13.38 lakhs to Rs. 94.44 lakhs, in spite of increased staff expenditure and higher other expenses.

The major portion of the gross profit has, however, been mopped up by essential provisions which have risen from Rs. 39.39 lakhs to Rs. 49.84 lakhs. The provision for depreciation has changed a little from Rs. 2.89 lakhs to Rs. 2.84 lakhs, but that for taxation is higher by Rs. 10.50 lakhs at Rs. 47 lakhs due partly to a higher taxable profit and partly to the Super Profits Tax the liability in respect of which is anticipated at Rs. 2.50 lakhs. The resultant net profit at Rs. 44.60 lakhs therefore shows only a small improvement over the previous year's figure of Rs. 41.67 lakhs. To this is to be added Rs. 9.39 lakhs being the previous years' tax provision written back, and Rs. 2.45 lakhs, being the amount brought forward, to get a disposable sum of Rs. 56.44 lakhs. Out of this, Rs. 12 lakhs have been credited to a special reserve under the Super Profits Tax Act to take care of any additional taxation under this head and Rs. 3.75 lakhs (Rs. 1 lakh a year before) have been transferred to the general reserve. After setting aside Rs. 3.90 lakhs for the payment of preference dividend, the Directors have proposed a dividend of 25 per cent per annum, subject to deduction of tax, the same as in the previous year, on the 10-rupee ordinary shares. This claims Rs. 36.78 lakhs, leaving a much reduced carry forward of Rs. 1,289 as against Rs. 2.45 lakhs brought in. It will be seen that, as against the plough-back of Rs. 15.75 lakhs effected during the year, Rs. 11.84 lakhs have been obtained out of the profits earned in the previous years.

A clear picture of how the Company fared during each of the past four years can be had from the following comparative table.

(In lakhs of rupees)

	For the year ended 30th September			
	1963	1962	1961	1960
Sale proceeds	877.25	770.08	857.88	749.31
Other income	120.05	105.69	105.71	113.97

Note:—All dividends are subject to deduction of tax.

The favourable turn of events during the year has eased the Company's financial position. The share capital, of course, stands unchanged at Rs. 207.12 lakhs, of which Rs. 60.00 lakhs only are in preference shares of Rs. 100 each, but reserves have gone up from Rs. 124.93 lakhs to Rs. 138.25 lakhs. As against this increase of Rs. 13.32 lakhs in "own funds," the outside interest has declined by as much as Rs. 133.04 lakhs following the reduction in secured loans from Rs. 121.67 lakhs to Rs. 81.83 lakhs and also in current liabilities and provisions from Rs. 479.44 lakhs to Rs. 386.24 lakhs. On the assets side, current assets have declined modestly from Rs. 456.09 lakhs to Rs. 435.13 lakhs, but, because of the precipitous fall from Rs. 187.03 lakhs to Rs. 79.19 lakhs in the amount paid as advanced income-tax, loans and advances have gone down by Rs. 103.60 lakhs to Rs. 105.64 lakhs. The book value of investments has risen somewhat from Rs. 197.39 lakhs to Rs. 203.37 lakhs. The net block has decreased from Rs. 70.44 lakhs to Rs. 69.29 lakhs, though it compares with a slightly higher gross block of Rs. 94.71 lakhs, as against Rs. 93.25 lakhs a year ago.

The Rs. 10 paid shares of the Company are currently quoted at Rs. 28.00 *cum-div.* and offer a net return of about 6.7 per cent per annum.

TRAVANCORE RAYONS LTD.

Prospects for the Travancore Rayons Ltd. appear encouraging. Its sales in 1963 are said to have increased from Rs. 313 lakhs to Rs. 350 lakhs, in spite of the rayon yarn section having been closed for over three months. The current year is likely to see a more than 40 per cent rise in turnover, provided both the rayon yarn and cellulose film section work without interruption. The rayon yarn section has already got back into full swing and the production has been above the rated capacity of 7½ tons per day. With the expected addition of six more spinning machines within two months, the tonnage will reach about 10 tons a day. Producing its own pulp from cotton linters, the Company will make 3,500 tons of cotton linter pulp per year soon after some balancing equipment is installed. Pulp from cotton linters saves foreign exchange spent on import of wood pulp.

The cellulose film section's capacity has been expanded to about 4,500 tons of film per annum, out of which 2,000 tons can be converted into moisture-proof heat-sealing varieties. In addition to having its own printing section, the Company has set up a plant for laminating cellulose film with aluminium foil, polyethene film and cloth. The laminated products are used in the book binding and packaging industries. The Company has also set up a sulphuric acid plant producing about 40 tons of acid per day. It sells surplus production of acid to industrial units in Kerala and Madras States.

ENGEL INDIA'S ALLOTMENT

The Engel India Machines and Tools Ltd. has despatched allotment letters to the successful applicants for its issue of 250,000 equity shares of Rs. 10 each which it made in the third week of December last. The scheme of allotment was approved earlier by authorities of the Calcutta Stock Exchange. The latter have also granted permission to the Company for listing its shares on the Exchange.

(*Concluded from next column*)

Rs. 129.16 lakhs to Rs. 360.68 lakhs. Besides, current liabilities and provisions have increased from Rs. 23.53 lakhs to Rs. 43.96 lakhs. The gross block has increased from Rs. 184.72 lakhs to Rs. 273.14 lakhs and, on deduction of Rs. 18.68 lakhs as accumulated depreciation, yields a net block of Rs. 254.46 lakhs. Investments, current assets and loans and advances together aggregate Rs. 316.70 lakhs, while miscellaneous expenditure yet to be written off or adjusted is placed at Rs. 3.94 lakhs.

As for the prospects, the Directors have to say as follows:

"Now that teething troubles have been overcome, production is being smoothly and steadily stepped up in numbers and in range. From June to September 1963, the factory produced only a few varieties of truck tyres. From October, it has been extending the types and sizes of tyres and has been making jeep, car, motor cycle and scooter tyres. The factory is also manufacturing nylon tyres. The Company's nylon hot-stretch unit, which was commissioned in November 1963, is one of the latest of its kind in use in the world. Production has now reached 700 tyres per day and it is confidently hoped that full production of installed capacity will be reached this year. It may be mentioned that the total sales for the first quarter of the next accounting year (October-December 1963) have been about Rs. 1¼ crore. Mansfield tyres have reached and maintained a high standard of quality, which is approved by the trade and by the users. It is indeed creditable that our tyres have been accepted for fitment as original equipment by various motor vehicle manufacturers. Mansfield tyres are now fitted as original equipment on Leyland trucks and buses manufactured by Messrs. Ashok Leyland, jeeps manufactured by Messrs. Mahindra and Mahindra, Ambassador cars manufactured by Messrs. Hindustan Motors, Tempos manufactured by Messrs. Bajaj Automobiles and motor cycle and scooters manufactured by Messrs. Enfield. The Company has also secured orders and is supplying tyres and tubes to the Defence Department, to leading consumers and transport operators and to almost all State Transport undertakings. It has also started exporting Mansfield tyres and tubes and active steps are being taken to develop the export market."

At present the Rs. 10 paid shares of the Company are quoted at Rs. 14.16 *cum-div.* and offer a net yield of 1.6 per cent per annum.

GOOD PROGRESS MADE BY MADRAS RUBBER

RESERVES GET MORE

THE results of the Madras Rubber Factory Ltd. [Managing Agents: Young India Agents (Private) Ltd., Madras] for the year ended 30th September 1963 are not, for obvious reasons, directly comparable with those for the nine-month period from 1st January to 30th September 1962, but they certainly indicate further progress made by the Company during the year. Thus, sales realisation, less return, has increased from Rs. 107.29 lakhs to Rs. 207.25 lakhs and the gross profit has advanced from Rs. 16.10 lakhs to Rs. 34.45 lakhs, at which level it is even higher than the Rs. 23.51 lakhs realised in the 13¾-month period ended 30th September 1961. What is still more interesting is that it forms 16.6 per cent of the gross sales, as against 14.3 per cent in 1960-61, despite 100 per cent rise in staff expenses from Rs. 10.44 lakhs to Rs. 21.71 lakhs and also in other expenses from Rs. 26.44 lakhs to Rs. 57.96 lakhs over that period. Managing Agents' commission has claimed Rs. 1.07 lakh, as against Rs. 0.64 lakh a year before, and the provision for depreciation has increased quite substantially from Rs. 2.26 lakhs to Rs. 11.86 lakhs. In view of the heavy development rebate available to the Company as a set-off against the taxable profit, once again no provision for taxation has been found necessary. The resultant net profit for the 12-month period is, therefore, much higher at Rs. 21.52 lakhs, as against Rs. 13.20 lakhs for the previous nine-month period.

Out of this, Rs. 18.40 lakhs have been credited to development rebate reserve, as against Rs. 10.45 lakhs, and, since the balance, inclusive of the amount brought forward from the previous year, is not sufficient to allow the maintenance of the dividend, the return to shareholders on their 10-rupee shares has been reduced for the second time in succession from 4.5 per cent to 3.2 per cent per annum. Further, the dividend is also payable *pro rata* on the 608,745 shares subscribed up to Rs. 2.50 per share, out of the total of 650,000 right shares issued at par during the year. The dividend absorbs Rs. 4.12 lakhs (Rs. 5.63 lakhs in the previous year), leaving a carry forward of Rs. 1.02 lakh, as against Rs. 2.02 lakhs brought in.

The Company's progress since it took over the business of the Madras Rubber Factory on 16th November 1960 is set forth in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th Sept. 1963	For 9 months ended 30th Sept. 1962	For the period from 16th Nov. 1960 to 31st Dec. 1961

Low	13.00	13.00 XR	17.70	10.00

When the main plant for the production of tyres and tubes was commissioned on 4th December 1962, it was expected that, after the trial runs, the factory would go into commercial production by April 1963. The target date, however, had to be postponed owing to teething troubles inevitable in such large undertakings. The most serious trouble was the failure of the water chilling system. Commercial production could, therefore, commence only in June and, during the year under review, production for a period of four months only could be obtained. Though output touched 400 tyres and tubes per day, the average daily production was less than 200 tyres. The major contribution to the turnover, therefore, again came from the tread rubber unit which accounted for 75 per cent of the year's sales and also made a valuable contribution to the profits of the Company.

Following the rights issue made during the year, the paid-up capital has increased from Rs. 124.92 lakhs to Rs. 140.21 lakhs. It is supplemented by Rs. 30.25 lakhs in reserves and surplus. Although "own funds" have thus been raised from Rs. 137.78 lakhs to Rs. 170.46 lakhs, there has been a spurt in borrowings from

(*Continued in previous column*)

FERTILISER FACTORY'S TROUBLES AFFECT E.I.D.-PARRY'S RESULTS

DIVIDEND CUT—RESERVES STRENGTHENED

"IF the fertiliser project (at Ennore) fails, for some reason or other, to yield the results expected of it, the profit-margin will be badly affected." In these words were summed up the prospects for the E.I.D.-Parry Ltd. in the review of its working during 1961-62, which was published in *Commerce* dated 16th February 1963. Unfortunately for the Company and its shareholders, the anticipations made near the close of February last year by the Chairman, Mr. H. V. R. Iengar, to the effect that, with the major problems having been overcome and full production working having been reached (at that time), the factory would make a substantial contribution to the group's earnings during the year ended 30th September 1963 have not proved correct. Mr. Iengar's anticipations have failed, because the factory happened to be in full production only for a brief period and since then the Company has been faced with a series of misfortunes for none of which it is responsible.

An account of the difficulties experienced by the Company is provided by Mr. Iengar in his statement to the shareholders for the year under review, published in *Commerce* of last week (*vide* page 422). Briefly, the abnormal teething troubles experienced by the factory have been attributed by him to lapses on the part of the contractors and some of their subcontractors who had been given a turn-key contract. The financial significance of the difficulties, according to him, is that, in the year 1962-63, the Company has suffered a very heavy direct loss even without taking into account the dividend paid on the additional capital raised expressly for the project. But, he adds, it says much for the inherent strength and resilience of the group that it has been able to absorb this serious loss and to show reasonable profits.

A synoptical view of the Company's progress in the past four years is presented in the following comparative table:

(In thousand £s sterling)

	For the year ended 30th September			
	1963	1962	1961	1960
Sale proceeds, less excise	15,307	12,610	12,295	10,529

Equity shares' market value (in rupees):	1964	1963	1962	1961	1960
High	39.00	40.60	44.75	45.50	62.00XR
Low	36.75	35.75	35.37	35.90	42.50XR

While net sale proceeds (that is, excluding excise duty paid) have expanded from £12.61 million to a new peak level of £15.31 million, gross profit has declined further from £822,275 to £797,912. But net profit has improved from £266,912 to £374,672, as the provision for taxation is much lower at £189,509 as compared with £381,561 a year before. The reason for the reduced taxation is, of course, that the Company has become eligible for a heavy development rebate in respect of the Ennore factory amounting to as much as £217,350 for the year under review. In order to claim this rebate, the Directors have carried to development rebate reserve the maximum permissible amount of £165,300, as against only £20,700 in the past year. Besides, the transfer to general reserve has also been increased from £67,500 to £82,500 and a sum of £15,000 has been set apart to create a special reserve. Thus, the total amount transferred to reserves is substantially higher at £262,800 as compared with £88,200 a year before. But this has considerably reduced the surplus available for dividend. The total dividend on the £1 fully paid ordinary shares has been reduced from 21-3/7 per cent to 18 per cent per annum, subject to tax, the entire cut having been imposed in the final dividend which is 10-6/7 per cent as against 14-2/7 per cent in the previous year. The dividend absorbs £202,986, as against £239,672 a year before, and for meeting this liability the Directors have withdrawn £104,000 from dividend equalisation reserve of £150,000 created out of the profit for the year 1958-59. Even after allowing for this withdrawal from the dividend reserve, the net amount conserved in business is much larger at £158,800 as compared with £88,200 in the previous year, though the sum carried forward is smaller at £2,260 as against £21,999 brought in.

The difficulties arising at the Ennore factory resulted in an output of only 8,727 tonnes of ammonium phosphate during the year, as against the plant's rated capacity of 56,000 tonnes. In addition to this uneconomic working of this factory, the results obtained out of the special sugar season were not commensurate with the additional overhaul charges involved in starting the sugar factory. Therefore, in future, it is intended to aim at a crop of 400,000 tonnes to be crushed in the main season between November and May. But, as against these uneconomic operations, sales of spirit and carbonic acid gas continued to be satisfactory. Sales of chemicals also generally remained satisfactory, though the sulphate of alumina plants and the chamber sulphuric acid plant had to be closed down, as they were no longer economic to operate. The merchanting business showed an improvement and both sales and profit in the ceramics division increased substantially. Progress during the year in constructing a third kiln and expanding the pottery works correspondingly was satisfactory and full production from the new kiln is anticipated in the latter half of the current year. Sales of fertiliser mixtures and superphosphate rose to a new record level of 129,697 tonnes. Thus, it will be seen that, apart from demonstrating the inherent vitality of the group, the year's results also demonstrate the great advantages of diversification of its activities in recent years.

Discussing the current year's prospects, Mr. Iengar says:

"We are satisfied that our other activities will show a sustained improvement, but, unfortunately, we are not in a position at the moment to make any forthright prognostications about Ennore. In any event, it is clear that the year 1964 would also see a loss on Ennore and that the E.I.D.-Parry profits for that year, by themselves, may not justify a dividend of 21-3/7 per cent. To do this, we would have to withdraw from the general reserve."

Meanwhile, preliminaries in connection with the Rs. 33-crore fertiliser project to be set up at Visakhapatnam in association with Messrs. California Chemical Company and the International Minerals and Chemical Corporation, both of the U.S., have been finalised. The Company will hold approximately Rs. 55 lakhs of the equity share capital of the new company which will operate the project, of which Rs. 49 lakhs will be subscribed for in cash.

Following the fuller utilisation of the loans obtained in connection with the Ennore project, the Company's loan capital has gone up from £1.95 million to £2.41 million, out of which £1.95 million represent debentures of two types, as against £1.50 million a year before. Taking borrowings other than debentures, and current liabilities and provisions, the total indebtedness to outsiders works out to £6.12 million. As against this, current assets total £7.87 million and investments £181,041, out of which £167,416 are quoted at £356,653. The paid-up capital, including £200,000 in preference shares, is unchanged at £1.13 million and is supplemented by reserves and surplus amounting to £2.24 million. The gross block, which has expanded during the year from £2.47 million to £5.56 million, has been written down to £3.91 million and is shown, together with work-in-progress, at £3.95 million.

Currently, the £1 fully paid ordinary shares of the Company are quoted at Rs. 36.87 *cum-div.* (final) and offer a net yield of 4.6 per cent per annum.

† Represents further provision for taxation for the year ended 30th September, 1961 (due to increase in tax rates).
‡ Upto 6th March, 1964.

Extracts from the Directors' report: Unlike the two previous years, supply of raw materials improved during the year under review which enabled the Company to increase production. The sale was higher than the previous year's by little over 10 per cent and the fabrication work also increased to a great extent. The gross profit prior to provisions for taxes increased considerably but the major quantum of this increased profit has to be utilised to meet the enhanced taxes. The provisions for taxes made this year is Rs. 21,97,056, as against Rs. 11,26,116 last year. The redeeming feature is that in spite of such heavy tax provisions, the general reserve allocation and the dividend can be maintained.

Although there is strong competition in the market the products of the Company are in good demand. Some modern machinery units had been installed for improvement of efficiency and quality in production.

Reference was made in the last report to the expansion scheme the Company had in view. Considerable progress has been made towards the contemplated expansion for increase in the installed capacity for production of hollows. Necessary import licence for the required plant and machinery has been granted to the Company and steps are being taken for importing the requisite plant and machinery.

Accounts in brief as at 30th September 1963 are as under:—

Market value of ordinary shares (in rupees):	1964	1963	1962
High	9.60xd	9.44	9.25
Low	9.25	6.75	6.50

* Dividend for 1963 will be paid out of the dividend reserve.

Extracts from the Directors' report: During the year under report, the aggregate production of *vanaspati, refined oil* and *hard oil* was about 19,000 tonnes (including production at the Secunderabad factory leased out to the Company, which commenced production since 7th February 1963) as against about 15,000 tonnes during the previous year.

There has been an increase in production as also in turnover over that of the previous year. The Company exported its products valued at Rs. 85 lakhs approximately.

The working results of the year under review are considered satisfactory. Besides providing depreciation for the year, the total arrears of depreciation for the previous years have been provided and it has been possible for the Directors to recommend dividend to the shareholders.

The excise duty *on raw oil* has been abolished whereas duty at Rs. 110.25 nP per tonne imposed *on refined oil* and duty on *vanaspati* enhanced from Rs. 200 to Rs. 384 per tonne with effect from the 1st March, 1963. This has resulted in further increase in the incidence of excise duty.

In accordance with the Essential Articles (Price Control) Amendment Orders, 1963, the price control on vegetable products and soap has been abolished with effect from the 21st May and 17th December, 1963, respectively.

The factory belonging to Aryan Industries (Private) Ltd., at Secunderabad is being worked by this Company as stated in the report of the previous year. By a further agreement dated 15th February 1963, the period of license for working of the said factory by this Company has been extended to two years with effect from the 1st February, 1963, with option to this Company to renew the license for a further period of three years.

The Company has secured a licence to import *Mazzoni Soap plant* having a rated capacity of about 10 tonnes per day. Necessary orders for the plant have already been placed. Pursuant to a licence granted by the Central Government under the Industries (Development and Regulation) Act, 1951, the Directors have finalised the plans to put up a *Glycerine Recovery Plant* at Kurnool.

Accounts in brief as at 31st September 1963 are as under:—

Kirloskar-Asea Ltd.

(*Managing Agents*: Messrs. Jayant Chandrakant & Co., Bangalore-3.)

Second Annual General Meeting—Held on 22nd February 1964.

Extracts from the Directors' report for the year ended 30th September 1963:—During the year the Company has earned Rs. 44,638 by way of interest and Rs. 16,184 for services rendered. After meeting the expenses, there remained a surplus of Rs. 5,854 which is adjusted to the preliminary expenses.

During the year under report the construction of the factory building was completed and the office is recently shifted to the Company's premises in Hebbal. The erection and installation of some of the machinery is completed and the initial production activities have just commenced in the current year.

The Company has now secured a licence for the import of capital goods and formal orders for machinery to be imported have been placed. The Company has also received an import licence to import certain raw-material and components.

The Company had submitted an application to the Government of India for the manufacture of certain new items and the Directors are glad to inform that the Government of India have granted to the Company a licence to manufacture *Isolators, On Load Tap Changers* and *Lightning Arrestors*. Steps are now being taken to plan the manufacture of these items.

Accounts in brief as at 30th September 1963 are as under:—

Liabilities	Rs.	Assets	Rs.

		Cash	17,36,799
		Miscellaneous expenditure ..	30,712
	Rs. 25,98,913		Rs. 25,98,913

* Paid-up capital consists of 25,000 equity shares of Rs. 100 each, fully paid up in cash.
† Represents land and furniture.

Thirumbadi Rubber Co., Ltd.

(*Secretaries and Treasurers*: Messrs. Peirce Leslie & Co., Ltd., Calicut.)

Forty-fifth Annual General Meeting—28th March 1964.

Working Results:

	For the year ended 30th September (In thousand rupees)		
	1963	1962	
Sales of rubber	6,12	6,17	
,, ,, Bought rubber, latex and scrap ..	4,58	3,07	
Closing stock of rubber	3,03	92	
Gross profit	3,29	2,46	
To Secretaries and Treasurers' remuneration ..	20	20	
Transfer to depreciation	31	28	
,, ,, provision for taxation	78	95	
Net profit	2,00	1,03	
Transfer from debenture redemption reserve ..	Nil	1,00	
Excess tax provision written back	1	Nil	
Appropriations:			
Transfer to development account	50	Nil	
,, ,, development rebate reserve ..	1	Nil	
,, ,, general reserve	20	75	
,, ,, rehabilitation and development reserve	47	25	
Proposed dividend (taxable) Ordinary ..	92	92	
	(10%)	(10%)	
Carry forward	17	8	

Market value of ordinary shares (in rupees):	1964	1963	1962
High	1.93	2.12	1.80
Low	1.90	1.25	1.47

Extracts from the Directors' report: Crop: A crop of 2,35,780 kg. (1961-62—2,02,316 kg.) was harvested at a cost of Rs. 3.05 per kg. excluding replanting expenses. The average price realised for the year was Rs. 3.20 per kg. as compared with Rs. 3.38 per kg. for 1961-62.

Capital Expenditure: A sum of Rs. 1,57,435 was spent on capital account.

Extracts from the Chairman's statement: Crops and Costs: A comparative statement showing the details of crop, costs and average sale price for rubber for the past three years is given below:—

Year	Crop		Estate cost of production per kg.	All-in cost of production per kg.	Average price realised per kg.
	Thirumbadi	Calicut			
	Kg.	Kg.	Rs.	Rs.	Rs.
1960-61 ..	1,48,951	96,598	2.77	3.21	3.76
1961-62 ..	2,02,316	..	2.83	3.12	3.38
1962-63 ..	2,35,780	..	2.81	3.05	3.20

The crop harvested during the year is very satisfactory. Young rubber areas recently brought into bearing have shown very encouraging results, while extra crop from areas intensively tapped prior to replanting has improved the total yield. But intensive tapping has also resulted in an increased percentage of scrap and this in conjunction with the lower prices for off-grades current during the second half of the season has adversely affected the average sale price.

Future Prospects: The crop for 1963-64 is estimated at 2,35,000 kg. to be produced at an all-in cost of Rs. 2.98 per kg. This is considered to be a satisfactory estimate which we hope to realise, provided of course that weather conditions are favourable.

Accounts in brief as at 30th September 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	9,15,300	Gross block ..	16,61,731

		Net block ..	14,26,833
		Current assets ..	5,41,901
		Investments	2,92,240
		Cash	1,61,945
	Rs. 23,92,969		Rs. 23,92,969

* Paid-up capital consists of 9,15,300 Ordinary Shares of Re. 1.00 each. Of the above 3,05,100 shares are allotted as fully paid-up by way of Bonus shares through the capitalisation of reserves.

Coonoor Tea Estates Co., Ltd.

(*Secretaries and Treasurers*: Messrs. Matheson, Bosanquet & Co., Ltd., Belmont, Coonoor, Nilgiri.)

Thirty-seventh Annual General Meeting—31st March 1964.

Working Results:

	For the year ended 30th September (In thousand rupees)		
	1963	1962	
Tea sales	10,66	10,53	
Closing stock of tea	99	1,12	
Gross profit	2,63	3,15	
To Secretaries' and Treasurers' remuneration ..	16	21	
Transfer to depreciation	37	36	
,, ,, provision for taxation	1,00	1,28	
Net profit	1,10	1,30	
Excess provision for taxation written back ..	10	Nil	
Appropriations:			
Transfer to development rebate reserve ..	3	*	
,, ,, general reserve	57	Nil	
To dividends (taxable) preference ..	8	8	
,, ,, ordinary ..	99	99	
	(17½%)	(17½%)	
Carry forward	Nil	47	

Market value or ordinary shares (in rupees):	1964†	1963	1962
High	18.37	23.00	26.50
Low	18.25	17.83	22.47

* Only Rs. 272. † Upto 10th March, 1964.

Extracts from the Directors' report: The Company had another record year with a crop of 452,382 lbs. (205,189 kgs.) against the crop of 430,748 lbs. (1,95,386 kgs.) obtained last year, receipts however were lower with a fall in world prices for highgrown teas. The cost of production was slightly higher due mainly to the increased labour wages excise duty, etc. As a result the net profit for the year is lower than last year.

A further 3 acres of China jat tea were replanted with clonal material. The 3 acres replanted last season are making excellent growth and should start yielding in 1965.

The estate cost of production per lb. of made tea for the financial year ended 30th September 1963 was Re. 1.54 per lb. (Rs. 3.40 per kg.) against the estimated cost of Re. 1.57 per lb. (Rs. 3.46 per kg.). As in previous years the cost of production includes payment of bonus to labour which was not originally estimated.

The average sale price realised for the season was Rs. 2.25 per lb. (Rs. 4.96 per kg.) compared to Rs. 2.32 per lb. (Rs. 5.11 per kg.) realised last year.

The Directors have approved the budget estimates for the season 1963-64 and these provide for the following: A crop of 420,000 lbs. (190,509 kgs.) of tea to cost Rs. 157.77 per lb. (Rs. 3.48 per kg.). The estimated capital expenditure for 1963-64 is Rs. 58,600.

Accounts in brief as at 30th September 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	7,16,730	Gross block ..	24,87,766
Reserves and surplus ..	13,90,424	—Depreciation ..	3,02,266
Other liabilities ..	3,04,078		
		Net block ..	21,85,500
		Current assets ..	1,94,599
		Cash	31,133
	Rs. 24,11,232		Rs. 24,11,232

* Paid-up capital consists of 1,500—6 per cent. cumulative preference shares of Rs. 100 each and 56,673 ordinary shares of Rs. 10 each. Of the above, 4,836 ordinary shares are allotted as fully paid up by way of bonus shares through the capitalisation of reserves.

NEWS IN BRIEF

AIR-INDIA'S technical and planning experts are examining every aspect of the Anglo-French supersonic aircraft 'Concord,' such as the time lag between the commercial flight of the first 'Concord' and the first American supersonic aircraft for which Air-India has already reserved delivery position.

The National Coal Development Corporation proposes to start nine coal mines with modern extraction methods in different parts of the country in order to meet the shortage of coal. Each of these mines would have a washery attached to it with a view to reducing the ash content to 16 to 17 per cent.

The Bank of Baroda introduced on Monday this week two mobile banks for extending banking facilities to villages around Patan and Nadiad towns in Gujarat State. The vans are fitted to the requirements of a slick banking office such as a counter for the clients, cupboards, safe, fans, a table for the agent and chairs for the customers.

The detailed project report for the Bokaro steel plant is ready and global tenders for the supply of machinery is likely to be invited between June and October next, orders for machinery being placed by the middle of next year, according to Mr. C. Subramaniam, Union Minister for Steels, Mines and Heavy Engineering.

With a view to providing information on, and assisting in the process of, private foreign investment to the country and to guide the Indian entrepreneurs seeking foreign private investment, the Central Government has appointed a special officer in the Ministry of Industry. He is Mr. K. J. George, Deputy Secretary, Union Ministry of Industry.

The Central Government has decided to allow the setting up of pig iron units in the private sector upto a maximum capacity of 300,000 tonnes per annum. Each case will be considered on its merits. But such units will not be allowed at a later stage to produce steel, since no new steel units will be allowed to be set up in the private sector.

Under a basic agreement reached between the Government of India and the Mitsubishi Group of Japan, the latter will construct at Cochin a shipyard for building 30,000-d.w.t class vessels and a dry dock for repairing 15,000-ton vessels. The total capital outlay on the project is estimated at Rs. 8.85 crores, of which the Government of India has agreed to provide Rs. 5.94 crores, the balance of Rs. 2.61 crores being contributed by the Japanese firm (Rs. 66 lakhs in investments proper and Rs. 1.95 crore in shipbuilding equipment). The work on the 50,000-sq. metre shipyard is expected to commence in 1965 and completed within four years.

Most of the recommendations of the Committee on Tourism (Chairman: Mr. L. K. Jha, Secretary, Department of Economic Affairs) have been accepted by the Union Cabinet. The recommendations cover the setting up of a corporation to handle activities of a commercial character, like hotel construction, provision of road transport facilities, production and sale of publicity material, entertainment for tourists, sale of imported articles at reasonable prices and arrangement of tours at all-inclusive rates, simplification of customs and immigration formalities, better facilities at airports, speedy confirmation of I.A.C. reservations and opening more tourist offices.

An excise duty at the rate of Rs. 4 per quintal has been levied on sodium silicate with effect from 1st March 1964. The duty is payable on all quantities of sodium silicate manufactured on or after this date. It is to be paid before the goods are cleared from the factory. Besides paying the duty, the manufacturers have to take out a Central excise licence and observe certain other incidental formalities (for instance, maintenance of accounts and submission of monthly returns) prescribed in the Central excise act and rules. To facilitate compliance with these requirements and also for removing any difficulty or doubts in following the prescribed procedure, all manufacturers who have not yet done so are advised urgently to contact the nearest Superintendent or Assistant Collector of Central Excise who will take necessary steps to explain the procedures and to resolve their difficulties to the extent possible.

Hitherto, exports to Afghanistan were set off against imports made from that country. The Governments of India and Afghanistan have now entered into a fresh trade agreement to cover a period of three years from February 1964. The agreement provides for a modification in the accounting by exporters to the Reserve Bank for the proceeds of their shipments to Afghanistan. A wide range of goods has been selected for exports from India and these have been specified in two schedules to the agreement, namely 'B' and 'C'. Exports of the commodities in Schedule B can be settled in two ways either by setting off against imports of dry fruits from Afghanistan of equivalent value or by receiving payment for such exports in rupees through the non-resident account maintained with the State Bank of India, New Delhi, by Da Afghanistan Bank. Payment for exports of goods specified in Schedule 'C' and of goods not specified either of the schedules B and C should be received only in a convertible currency against a letter of credit.

From Abroad

The Governments of Kuwait and Saudi Arabia have signed an agreement partitioning the oil-rich neutral zone on their common border. Japanese firms are exploiting the oilfields in this territory.

The Government of Pakistan has decided to levy a development tax on foreign oil company profits, recoverable with effect from January 1964. The rate of tax has not yet been disclosed, but it is said that the levy would yield about Rs. 100 lakhs annually.

President Johnson, in his annual manpower report to the Congress, has called for a broad range of legislation to create more jobs and provide better training for workers in the U.S. He has also urged the need for mobilising and upgrading technical skills in a major effort to wipe out persistent unemployment.

The Government of Yemen is issuing for the first time paper money in replacement of the 200-year-old Austrian silver thalers (worth about a U.S. dollar). In order to enforce the currency note system, the Government has decided to impose jail sentence (running for two years) for those who refuse to exchange silver coins for the new *currency*.

Since the initiation of development aid in the fifties, the volume of aid offered by Communist countries to developing nations works out to about six per cent of that extended by others. This is disclosed in a report of the Organisation for Economic Co-operation and Development. During the period under reference, the O.E.C.D. countries and Japan made available as aid a total of $95,000 million, as against the $5,500 million offered by Communist countries.

Pakistan will get from West German loans aggregating DM 117.5 million for the various development projects of Railways and Post and Telegraphs, as well as for the purchase of ships. An agreement covering the aid was signed recently between the Governments of the two countries. Half of the amount bears an interest of 3 per cent and is repayable in 25 years with a grace period of seven years. The other half will bear an interest at 5½ per cent and is repayable in 20 years with a grace period of 12 years for DM 7.5 million and five years for DM 51.25 million.

The World Bank and its affiliate, the International Finance Corporation, have agreed to join with American investment institutions, as well as investors in Thailand and seven other countries, in making loan and share capital available to the Industrial Finance Corporation of Thailand, a privately owned company which provides financial assistance to private industrial enterprises. The World Bank will lend $2.5 million and the I.F.C. will invest *Baht 4 million ($192,300)* in capital shares of I.F.C.T.

PERSONAL

MR. K. R. F. Khilani, Ambassador of India to *Rumania*, has been appointed concurrently India's Ambassador to Bulgaria.

Dr. Ludwig Erhard, West German Chancellor, has accepted the invitation from Prime Minister Nehru to visit India. The exact date of the visit will be fixed later.

Dr. Mohammad Hassen El-Zlyatt has been appointed U.A.R. Ambassador to India in place of Mr. Ahmed Hassen El-feki who will be U.A.R. Ambassador to Canada.

Sir Edwin McCarthy, who recently retired as the Australian Ambassador to the European Economic Community, has been appointed Chairman of the Commonwealth Economic Committee for three years.

Mr. S. T. Sadasivan will retire as General Manager of the United Commercial Bank on 31st March, but offers himself to be elected as a Director by the shareholders at their annual general meeting to be held at Calcutta on 8th April. He will be succeeded by Mr. R. B. Shah, the present Deputy General Manager.

Mr. Manubhai Shah, Union Minister for International Trade, left for London on Wednesday this week, to attend the meeting of the Commonwealth Economic Consultative Council started on the 19th inst. Mr. Shah will later proceed to Geneva to attend the United Nations Conference on trade and development due to begin there on the 23rd inst. He is the leader of the Indian delegation.

Plans for setting up a national refinery in the Korangi Industrial Area of Karachi were discussed recently by Mr. George B. Hergens, Vice-President of the American International Oil Company of New York, and Mr. Abdul Qadir, a former Finance Minister of Pakistan. Technical assistance will be provided by the American Company. The Bank of America has sanctioned a loan of $10 million for the purchase of plant and equipment for the refinery. The proposed national refinery, which will be subscribed and owned entirely by Pakistanis, will produce asphalt, lubricants, and other petroleum products. It will process annually 500,000 tons of crude which will be supplied by the American International Oil Company from the Dairus field in the Persian Gulf area.

Notice

THE MORARJEE GOCULDAS SPINNING AND WEAVING COMPANY LIMITED

DR. AMBEDKAR ROAD, PAREL, BOMBAY 12

NOTICE

NOTICE IS HEREBY GIVEN THAT AN EXTRAORDINARY GENERAL MEETING of the shareholders of the Company will be held at its Registered Office at Dr. Ambedkar Road, Parel, Bombay 12, on Friday, the 17th day of April 1964, at 4.00 p.m. (I.S.T.) to consider and, if thought fit, to pass the following Resolution, with or without modification, as an Ordinary Resolution:

"RESOLVED that 23,000 new Equity shares of the Company of the face value of Rs. 100 each be issued and allotted to the holders of the existing 51,750 Equity shares upon the following terms and conditions viz:—

a) that such new 23,000 Equity shares be offered at par in the first instance to the persons, who, on the date to be hereafter fixed by the Board of Directors, which shall not be later than the 30th day of September 1964, shall be the holders of the existing 51,750 Equity shares of the Company in the proportion, as nearly as circumstances admit, of four such new Equity shares for every nine existing Equity shares then held by such persons respectively;

b) that the new Equity shares shall not confer upon the holders thereof the right to the dividend, if any, declared or to be declared for any financial year of the Company prior to the 1st day of July 1964 but shall entitle such holders to rank for dividend, if any, declared in respect of the Company's financial years subsequent to the financial year ending with 30th June 1964, as from the first day of the month following the respective dates of allotments thereof or such other earlier date or dates after the date of payment in respect thereof, as the Directors may fix, in proportion to the capital for the time being and from time to time paid up thereon and the period during which such capital shall have been paid up on such new Equity shares during the financial year in respect of which the dividend is declared, but for all other purposes, the said new Equity shares shall rank *pari passu* with the existing Equity shares in the capital of the Company, and shall be subject to the Memorandum and Articles of Association of the Company;

c) that the offer aforesaid shall be made by notice specifying the number of the new Equity shares offered and limiting a time not being less than 15 days from the date of the offer, within which the offer, if not accepted shall be deemed to have been declined, with liberty to the Directors from time to time to extend the time for acceptance of the said offer, either generally or in respect of any particular case or cases;

d) that the offer aforesaid shall also include a right exercisable by the shareholder concerned to renounce the shares offered to him in whole or in part in favour of any other person to be approved by the Directors;

e) that the offer aforesaid may be made with option to the eligible shareholders to apply for such additional Equity shares as they may desire, provided that a shareholder who has renounced his right in whole or in part shall not be entitled to an allotment of additional shares. Such allotment of additional shares shall be in the absolute discretion of the Directors;

f) that the amount payable in respect of such new Equity shares shall be payable in full in cash along with acceptance of the offer;

g) that the Board of Directors be and are hereby authorised and empowered to dispose of any of the said new Equity shares not taken up by eligible members or shares remaining undisposed of, to such person or persons, whether shareholders of the Company or not, at such price or prices and on such terms and conditions and in such manner as the Directors may think fit;

h) that the certificates for the new Equity shares shall be completed and kept ready for delivery within 9 months from the respective dates of allotment thereof;

i) that no fractional certificates be issued to members in respect of fractions resulting from the offer of the said new Equity shares but that fractions of such new Equity shares shall be consolidated into whole new Equity shares and allotted as the Directors may deem fit to any person or persons (including any one or more of themselves and/or any one or more of the employees of the Company) for the purpose of being sold at the then prevailing market rate, and the sale proceeds, less expenses of sale and any other expenses, be divided proportionately amongst the members who would otherwise have been entitled to fractions of such new Equity shares; and

j) that for the purpose of giving effect to this Resolution, the Directors be and are hereby authorised to prescribe the forms of Application and Renunciation and other documents in respect of such new Equity shares and to give such other directions as they may in their absolute discretion think fit, including directions for settling any question or difficulty whatsoever that may arise in regard to the issue and allotment of the new Equity shares."

Bombay, dated 7th day of March 1964.

AN EXPLANATORY STATEMENT IN RESPECT OF THE ABOVE RESOLUTION HAS BEEN POSTED TO THE SHAREHOLDERS SEPARATELY AT THEIR REGISTERED ADDRESSES.

JAPAN AND I.M.F.

The Government of Japan has notified the International Monetary Fund that it is ready to make its currency, the yen, freely convertible for payments and transfers for current international transactions with effect from 1st April 1964. Japan thereby undertakes to perform the obligation set out in Article VIII of the Fund's Articles of Agreement. Members accepting the provisions of Article VIII undertake to obtain the Fund's agreement before adopting payments restrictions for current international transactions or engaging in multiple exchange rates and discriminatory currency practices. Japan is the 25th Fund member to assume Article VIII status, which now applies to nearly all the major industrial countries in the Fund. The Fund has established a stand-by arrangement which authorise the Government of Japan to draw the equivalent of $305 million over the next twelve months. The arrangement will provide additional resources in support of Japan's reserve position and thus help Japan to defend the convertibility of the yen in the event of temporary balance of payments difficulties.

WORLD BANK LOAN TO NEW ZEALAND

The World Bank has granted a loan of $32.5 million to New Zealand for the construction of an electric power transmission link between the country's North and South Islands. The link will be a 375-mile direct-current line, including submarine cables crossing the 25-mile wide Cook Strait, to carry power from the Benmore power station now under construction on the South Island, to the North Island which contains the greater part of New Zealand's population and economic activity. Twelve banks are participating in the loan, without the World Bank's guarantee, for a total of $3.72 million, representing the first six maturities which fall due between 15th September 1966 and 15th March 1969, portions of the next four maturities to 15th March 1971, and part of the final maturity which falls due on 15th March 1984. The loan is for a term of 20 years and bears interest at the rate of 5¼ per cent per annum including the 1 per cent commission which is allocated to the Bank's Special Reserve. Amortisation will begin in September 1966.

A committee appointed by the Norwegian Government in October last to study the implementation of the proposed four-week mandatory vacation has submitted a split report. The majority recommends that the present three-week vacation, to which nearly all workers are entitled, be extended to four weeks from the summer of 1965. The minority, comprising the two employer representatives, suggests that the extension be carried out in two stages, to become fully effective from the summer of 1966. The committee is in general agreement that 18 days of the four-week vacation should be taken during the summer and that the rest should be given within the vacation year, or in two parts if connected with legal holidays, not including Sundays. On the question of vacation pay, the committee has made four different recommendations, ranging from 8.5 per cent to 9.5 per cent of total wage earnings. Trade union representatives had proposed that the remuneration be fixed at 9.5 per cent from 16th May 1964, so that full vacation pay according to the new rate would be payable from 1st May 1965. The present rate approved in 1962 is 7.5 per cent of earnings.

PLANTING

(*Concluded from page 458*)

provided to the coffee plantations, therefore, needs further examination."

For a reasonably practical solution of the aforesaid problems, the Reserve Bank study has put forward the following five suggestions:

1. Setting up of co-operative societies for credit and marketing, as well as for performing all functions of a pool agent, including curing;

2. reorienting the loan policy of central co-operative banks to which the societies will be affiliated;

3. provision of credit to co-operative societies for purchase of capital equipment for curing and processing;

4. preparation, by States, of schemes for long-term replanting programme; and

5. arrangements for creating a *pari passu* charge for long-term loans of the Coffee Board or for establishing long-term institutions on the security created by equitable mortgage in favour of short-term lenders.

For the long-term needs of growers, a possible solution, it is suggested, can be found through the Agricultural Refinance Corporation. The Reserve Bank study observes:

"The Corporation is expected to provide funds for compact schemes, which are remunerative and businesslike in character involving considerable investment but which require long period of waiting for yielding results. Further, the schemes would have to be such that, because of the quantum of finance required and the terms of repayment stipulated, they cannot be financed by the central land mortgage banks within their existing framework. Schemes for replanting of coffee trees could, therefore, possibly be considered by the Corporation. The factors to be taken into account in determining the quantum of credit would include the cost of replanting and the period within which the amount advanced could be recovered, keeping in view the net return available after the end of the non-bearing period. Such a scheme to be successful would need very close and intensive supervision. It would, therefore, be necessary to evolve an efficient supervisory machinery by the land mortgage banks concerned in close collaboration with the Coffee Board. As the Corporation is primarily a refinancing body, the long-term loans will have to be advanced first by the eligible institutions, in this case, the central land mortgage banks, to be refinanced later by the Corporation. For this purpose, the central land mortgage banks may, perhaps, have to issue special debentures. Such debentures may be mainly subscribed to by the Corporation."

The suggestion that the Coffee Board should take initiative in organising co-operative societies of coffee growers and provide them with assistance, including share capital participation, is no doubt interesting. Every care will, however, have to be taken to ensure that the co-operatives are run on strictly business lines. It is very important that all applications for loans and other measures of assistance to co-operatives are processed carefully. And more important is the need for ensuring that the assistance received by the co-operatives is properly and efficiently utilised for the specific purposes for which it is given. At the same time, adequate arrangements must be made to recover the instalments of loans as and when they fall due. This aspect needs special mention in the light of the severe criticisms levelled by the Public Accounts Committee on the affairs of the Khadi and Village Industries Commission and the high level of overdues in the case of several co-operative credit societies.

ENGINEERING

(*Concluded from page 464*)

state of affairs is probably worse, for undercharges on account of depreciation, according to the Directors, are yet to be adjusted in the light of final capital cost figures which are still not available. The aggregate depreciation provided up to the end of March 1963 has come to only Rs. 86 crores. Whether the promised adjustments in the current year will take the total provision for depreciation to a reasonable level remains to be seen. Of the factors responsible for the slow growth of H.S.L's profit-making capacity, two may be particularly mentioned here. These are (i) the unduly long gestation period of the steel plants, and (ii) the relatively low retention price for steel that has not taken into account the Company's capital block which is larger than that of the private-sector companies. The twin elements of interest payment and depreciation charges would seem to call for financial discipline. As for the accumulated losses, the Company hopes to wipe them off only after the expanded units of the steel plants go into production. But the expansion projects themselves are being delayed in their execution. When the Company will be in a position to yield a handsome net profit (after depreciation, taxation, etc.) for dividend, general reserve, and so on, is, therefore, anybody's guess.

TREND OF MARKETS

MONEY DEARER

(From Our Own Correspondent)

BOMBAY, 18th *March*

Will interest rates on bank advances and deposits be stepped up? And, if so, when? These were the questions which were uppermost in financial circles throughout the week under review. On Wednesday last, it will be recalled—*vide* our reference on page 399 of *Commerce* dated 14th March—the Reserve Bank announced a policy of tighter control and dearer credit, with a special plea to scheduled banks "to intensify their efforts to mobilise deposits by all possible measures, including a re-examination of the rates of interest" offered by them on deposits. The rates, as readers are aware, are fixed under the Inter-Bank Agreement as follows:

(a) *Category I* (banks with deposits above Rs. 50 crores and exchange banks): 3 to 30 days (inclusive) 3 per cent, 31 to 60 days (inclusive) 3½ per cent, 61 to 90 days (inclusive) 3½ per cent, 91 days and over but less than 12 months 3½ per cent, 12 months 4 per cent.

(b) *Category II* (banks with deposits of more that Rs. 25 crores but upto and including Rs. 50 crores): ½ per cent higher than the rates for Category I.

(c) *Category III* (banks with deposits of more than Rs. 10 crores but upto and including Rs. 25 crores): ½ *per cent higher than the rates for* Category I.

The Committee administering the Inter-Bank *Agreement met on Tuesday the* 17th inst. to take stock of the situation in the light of the Reserve Bank's modified credit policy. There was reported to be a divergence of views among the Committee members as to whether the interest rates on deposits should be raised immediately. The majority opinion, it would appear, favoured the postponement of the decision at least till the pressure of busy season demand for funds eases some time in the third week of next month.

Thanks to the tightening of credit control by the Reserve Bank, there was a reduction in the supply of funds available in the short-term money market during the week, while the demand for credit continued to be on a markedly high scale. Much difficulty was experienced by borrowers to obtain their requirements fully. The inter-bank call rate for both renewals and fresh money increased by ¼ per cent to 6¼ per cent. Conditions at Calcutta were also equally stringent, the call rate there standing throughout at 6¼ per cent, same as last week.

The persistent stringency of money is reflected once again in the statement of the Reserve Bank of India for the week ended 13th March. The statement shows (*a*) a further increase of Rs. 6.86 crores to Rs. 2,472.43 crores in notes in circulation, (b) a fall of another Rs. 4.66 crores to Rs. 77.81 crores in deposits of scheduled banks with the Reserve Bank, and (c) the high level (Rs. 95.46 crores) of outstanding loans and advances obtained by them from the Reserve Bank. The total of loans and advances is, of course, lower by Rs. 11.48 crores as compared with the week ended 6th March. But the decline would not have occurred—actually there would have been a further marked spurt—but for the modified credit policy of the Reserve Bank under which not only has the automatic accommodation which a bank can seek from the Reserve Bank been reduced but the additional withdrawals (over and above 100 per cent of a bank's statutory reserves) are also subjected to a penal interest of 6½ per cent.

Also indicative of the stringency of money is the continued poor response to the 91-day Government of India Treasury Bills, tenders for which were opened on Tuesday the 17th inst. The total amount offered was just equivalent to that invited and also accepted, namely, Rs. 2 crores. The average rate of accepted tenders was higher at Rs. 2.500 per cent per annum, as against Rs. 2.360 a week before. The response to the Intermediate Treasury Bills, too, was poor. The amount of bills actually sold from the 11th to 14th inst. was no more than Rs. 21 lakhs, as against Rs. 132.75 lakhs a week before and Rs. 60 lakhs two weeks before. It has been announced that these Bills would be sold from the 18th to 21st inst. at Rs. 99.391 per cent subject to the condition that sales can be stopped at any time without notice if the Government thinks it necessary.

India's foreign exchange reserves improved again by Rs.2.83 crores to Rs. 128.48 crores during the week ended 13th March; the net rise since the beginning of this year comes to Rs. 22.91 crores. The improvement in the week under review was entirely in balances held abroad which aggregated Rs. 16.02 crores, as against Rs. 13.17 crores. *The foreign securities held in the Issue* Department of the Reserve Bank were unchanged at Rs. 112.46 crores to which level they had risen from Rs. 102.46 crores in the previous week.

There was a further sharp spurt of Rs. 24.55 crores to Rs. 1,783.29 crores in the total credit made available by scheduled banks to their clients during the week ended 6th March. At the same time, the deposits receded by Rs. 16.01 crores to Rs. 2,426.75 crores. The banks were, therefore, compelled to take recourse to heavier borrowings from the Reserve Bank. The total of these borrowings went up by Rs. 39.06 crores to over Rs. 106 crores. Of this amount, borrowings against usance bills alone accounted for Rs. 45.71 crores, a rise of Rs. 13.20 crores. The banks had also to sell a portion of their investments in order to meet the increasing demand for credit; the total of these investments stood at Rs. 644.47 crores, as against Rs. 651.23 crores.

With the money market ruling extremely tight, trading in the Gilt-edged market was a dull and drab affair. Fresh institutional support was lacking. Turnover was greatly restricted, with practically all Central and State Government loans quoted at last week's levels.

In the foreign exchange market, there was no change in the banks' selling and buying rates for U.S. dollars: Rs. 478.50 and Rs. 475 per $100, respectively. In New York, the pound sterling ruled irregular *vis-a-vis* the U.S. dollar. Thus, the spot rate eased by 0.020 cent to 279.790-279.820 cents, while the three months' forward gained 0.010 cent to 279.370-279.400 cents.

DIVERGENT TREND IN COTTON

(From Our Own Correspondent)

BOMBAY, 18th *March*

The cotton futures market depicted a divergent trend during the week under review. Thus the maturing Jarilla March contract met with buying support and firmed up while the Jarilla May contract ruled easy. The firmness of the former was influenced by considerations of tenders against the contract. With only 1,000 bales tendered against the March contract so far, the general feeling was that tenders likely to be issued on the remaining notice days would be far from adequate to meet the outstanding position estimated at around 20,000 bales. The easiness of the May contract, on the other hand, reflected traders' assessment of the supply and demand position of cotton. The latest crop estimate indicate that earlier fears of damage to the crop caused by the *recent cold wave was exaggerated* and that the overall crop position is better than was anticipated. The latest estimate put the crop at 5.8 million bales. This coupled with the possibility of fairly large import of foreign cotton points to a comfortable supply. Speculative selling induced by this consideration led to a decline in the quotation for the May contract. The lack of mill demand for ready cotton and the resultant fall in prices imparted further weakness to the contract which ruled well below last week's closing price throughout the week under review.

The trend of prices of the contracts during the week is indicated below:

(In rupees per three quintals)

	18-3-64	*High*	*Low*	11-3-64
Jarilla March	779.50	781.00	771.00	775.00
Jarilla May	738.50	740.50	733.75	743.50

The trading in Jarilla August contract is expected to commence sometime towards the end of this month. The Board of the E.I.C.A. is reported to have *considered* at its meeting on Friday, the 13th inst., the question of having the contract started earlier.

Activity in the spot market at Sewri continued to be restricted. Mill buying was on a very limited scale and spasmodic. Prices progressively found lower levels. The main varieties that attracted mill attention was Co2, Digvijay, L.147, 197/3 and Laxmi. Reports of quality deterioration of Kalyan deterred spinners from going in for this variety whose price consequently declined.

Export demand for *Bengal Deshi* was very slack. Hence local buyers showed little interest and prices consequently receded further. Export of raw cotton during the first six months (September 1963 to February 1964) of the current season is provisionally estimated at 111,000 bales of 180 kgs. each, as against 128,433 bales in the corresponding period of last season.

Mill demand for foreign cotton mainly centred around American cotton. But there was growing anxiety over the delay in issuing the purchase authorisation in respect of the 375,000 bales of P.L. 480 cotton allocated to India as per the announcement made on 29th February. Some mills are said to have booked U.S. cotton for April shipment. It is feared that if the purchase authorisation is delayed the mills would not be able to get the cotton in April. It would seem that the present allocation would be divided into two staple length categories, 1-1/16" and above and 1" and above but below 1-1/16", as recommended by the Indian Cotton Mills' Federation. The Federation is also reported to have agreed to lift the unutilised portion of the allocation, if any.

Cotton price policy for the next season (1964-65) is said to be one of the important issues coming up for consideration at the forthcoming meeting of the Indian Central Cotton Committee. One of the suggestions reported to have been made is that the present gap of Rs. 300 between the floor and ceiling prices of most of the varieties should be narrowed down to Re. 1.50 per candy. Another proposal made on behalf of the co-operative societies is said to be that the ceiling prices of cotton should be altogether removed or, alternately, to raise the ceiling prices substantially.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Wagad 890; L.147 1,170-1,260; Hubli Laxmi 1,180; Buri 1,135; Co2 (Nagar) 1,725; American 1,250; Sudan XP5L 1,440.

SILVER RALLIES

(From Our Own Correspondent)

BOMBAY, 18th *March*

Silver staged a small rally this week following a decline in arrivals and revival of support induced by expectations of good demand on account of the Hindu marriage season which would start within a month. Reports that buying interest had started again in upcountry centres affected sentiment. On silver gathering some fresh strength, gold also recovered a part of the earlier losses.

On the first day of this week itself, that is, on Thursday the 12th inst., silver improved to Rs. 258 after opening unchanged at Rs. 255.50. In the subsequent part of the week, it moved narrowly between Rs. 257.50 and Rs. 258.50, and finally closed at the former level, with a gain of two points. The last week's expansion in the daily

PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

average inflow from 12 bars to 15 bars disappeared this week, but the average offtake was still limited at eight bars, as against seven bars in the week before.

Fourteen-carat gold opened 50 nP lower at Rs. 63.50, but looked up to Rs. 65 by Monday the 16th inst. Later, it sagged a little to close today at Rs. 64.50. Pure gold was one point higher at Rs. 103 (*unofficial rate*). Sovereign was firmed at Rs. 88.

The international price for gold declined this week from $35.09¼ to $35.07¼. The *ready* rate, in London, was 1¼d. lower at 250s. 8¾d. Silver prices in New York and London were unchanged over the week.

The following table shows the trend of prices during the week under review:

	18-3-1964 (closing)	High	Low	11-3-1964 (closing)
SILVER				
Ready (996 fine) ..	Rs. 257.50	Rs. 258.50	Rs. 255.50	Rs. 255.50
GOLD				
Ready (14 carat) ..	64.50	65.00	63.50	64.00

ART SILK YARNS STEADY

(From Our Own Correspondent)

BOMBAY, 18*th March*

After a further rise early in the week, art silk yarns closed almost unchanged today. The quiet tendency in the latter part of the week was attributed to dealers' hesistancy at higher levels on fears that spinners who had been withholding supplies since the budget would release stocks any time now. Moreover, expectations of some relief in additional levy kept consumers away from the market for the time being. The erosion of early gains in art silk yarns imparted a soft tendency to staple fibre yarns also. Cotton yarns, however, were generally well held around their last levels.

Among art silk yarns, Century eased, as an exception, from Rs. 19.51 to Rs. 19.25 a kilo. Century 2 x 40 spot staple fibre yarn were marked up from Rs. 9.28 to Rs. 9.46, but others were generally quiet. Among cotton yarns, 10*s* Navsari drifted lower from Rs. 19.37 to Rs. 19.12 and 80*s* Ganesh closed 50 nP lower at Rs. 84.

Meanwhile, like weavers, dealers are also watching with interest spinners' efforts to pass on the burden of the heavy increase in excise duty on rayon yarn to consumers. It is feared that full success of their efforts would mean some shrinkage of margin of weavers and dealers. How far such fears are justified time alone will say. But by holding back supplies, spinners have been able to allow prices of 120D and 150D yarns to rise to nearly the full extent of the fresh levy. The price rise in the case of finer deniers, like 55, has also been sharp. While prices may still have to look up a little to induce dealers to go in for fresh commitments, it is pointed out that consumers are reluctant to lift goods against advance sales made by spinners up to the current month-end.

One important factor that explains this reluctance is the expectation that the Finance Minister would grant some relief in the heavy additional levy. The Bharat Artsilk Doubling Mills' Association characterised the fresh impost as being "too heavy" on the ground that, while spinners had insisted on passing on the burden to consumers of yarn, weavers and the doubling and twisting industries would not, in turn, be able to do the same. Pleading for a relief in the duty, the Association points out that it is extremely doubtful whether the art silk fabrics and other allied synthetic fabric industries can bear its high incidence, which is as much as 72 per cent of the ex-factory prices fixed by the rayon spinning units.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	18-3-1964	11-3-1964
Art silk yarn (per kg.)—	Rs.	Rs.
National Rayon 120D	12.08	12.08
Century 75D	19.25	19.51
S. I. Viscose 150D	13.46	13.46
Staple fibre yarn (40 x 2)—		
Kohinoor (per kg.)	9.57	9.54
Century	9.46	9.28
Cotton yarn (per bundle of 10 lbs.)—		
10*s* Navsari	19.12	19.37
20*s* Podar	24.25	24.25
22*s* Hisar	32.50	32.00
40*s* Mahindra	—	42.00
60*s* Pioneer	—	65.00
80*s* Ganesh	84.00	84.50

CURB ON BANK ADVANCES AGAINST GROUNDNUTS

(From Our Own Correspondent)

BOMBAY, 18*th March*

The important event of the week in so far as the oilseeds market is concerned was the commencement of hedge trading in cottonseeds and groundnut oilcake expeller variety for July 1964 delivery. Trading began today in the Jenabai Hall for cottonseeds and in the *Patwachal* ring for groundnut oilcake. The terms of business will be the same as those governing the current contracts. The ceiling for cottonseeds is unchanged at Rs. 113, with a weekly fluctuation limit of Rs. 3.50 either way. There is no ceiling in groundnut oilcake expeller variety, but there is a weekly price range of Rs. 15. The maximum limit for a member is fixed at 7,500 tonnes. As for hedge trading in groundnut and groundnut oil for July 1964 delivery, the Board of the Oilseeds Exchange has still not taken any final decision as it is apparently not inclined to accept the measures of control stipulated by the Forward Markets Commission; details of these measures are given in our last week's report. The Board, at its meeting yesterday (Tuesday the 17th inst.), decided to have further talks with the Commission authorities tomorrow, that is, Thursday the 19th inst. The representatives, of the Saurashtra Oil and Oilseeds Association are expected to join the Board in its talks with the Commission.

The reported refusal of the F.M.C. to relax the measures of control stipulated for the commencement of hedge trading in July 1964 contracts for groundnuts and groundnut oil, together with the Reserve Bank's directive pertaining to the enhancement of the minimum margin on bank advances against groundnuts from 45 to 50 per cent and the reimposition (for the period beginning from March-April 1964) ceiling on such advices at 130 per cent of the level maintained in the corresponding period last year, led to a fall in values of groundnuts and groundnut oil during the week. Tight money conditions, increased arrivals from upcountry centres and reduced offtake also imparted weakness. In sympathy with groundnuts and due to higher arrivals from growing centres, absence of foreign enquiries and heavy unloading by local bulls, castorseeds staged a retreat. Linseeds were easy, though they recovered later in the week following better North Indian advices for mustard seeds. Cottonseeds were listless.

The Reserve Bank of India Press note (issued on Wednesday the 11th inst.) regulating bank advances against the security of groundnuts and "other oilseeds" says:

"In view of the considerable rise in bank advances against the security of groundnuts and in view of the higher level of prices of groundnuts prevailing at present, it has been considered necessary to raise the margin on advances by scheduled banks against the security of groundnuts from 45 to 50 per cent and re-impose the ceiling restriction on such advances which was allowed to lapse in March 1963. Accordingly, under the new directive, scheduled banks are required to maintain, in the two-month period March-April 1964, an average aggregate level of credit which shall not exceed 130 per cent of such credit actually maintained in the corresponding period of 1963. Subsequently, in each two-month period commencing from May-June 1964, the ceiling limits are fixed at 120 per cent of such level of credit actually maintained during the corresponding period of 1963.

"The liberal credit facilities granted to exporters of H.P.S. groundnuts and groundnut oil as well as to the integral oil expeller mills in respect of exports of groundnut cake are continued in the new directive. Besides, the banks have been asked to meet any further credit requirements of exporters on a priority basis, within their general permissible limits of lending against groundnuts.

"The provisions relating to the margin requirements against the security of 'other oilseeds,' as set out in the earlier directive, are continued without any change."

Immediately after the Reserve Bank announced curbs on bank advances against groundnuts, the April 1964 contract was subjected to some selling and fell by Re. 1.38 to Rs. 237.87 on the opening day (Thursday) of the week under review. The contract did not recover from this level at all. Actually today, it was lower still at Rs. 237.50. Nizam bold ready slumped by 87 nP to Rs. 50.50 and Khandesh quality by 68 nP to Rs. 51.37. Oil ex-mill dropped 45 nP to Rs. 19.55. Business in the July 1964 contract is groundnut oilcake expeller, as stated at the outset, commenced today at Rs. 406.50. It commanded a premium of Rs. 8.50 over the April delivery which climbed down from Rs. 406.50 to Rs. 398.

Castorseed June contract was marked down by Rs. 2.25 at Rs. 172, while the March position improved by 75 nP to Rs. 176 on scattered support. Spot ready Madras lost 50 nP to Rs. 34.37 and Kanpur 38 nP to Rs. 33.13. Oil B.S.S. was a shade lower at Rs. 14.70. Oil commercial was unchanged at the last week's level of Rs. 14.50.

Linseed March contract moved down from Rs. 40.25 to Rs. 39.75 on Friday the 13th inst. but recovered subsequently and closed at Rs. 40.50 today. June contract fluctuated between Rs. 40.87 and Rs. 40.25 before finishing at Rs. 40.87. Over the week, bold ready gained 12 nP to Rs. 39.97. Linseed oil ready declined by 50 nP to Rs. 15.45.

enjoy unique JAL service on your next flight to LONDON and other gay cities of Europe

Leave Calcutta Sunday or Thursday evening (2220 hours) aboard a luxurious JAL DC-8 Jet. (Also by connection at Karachi.) Arrive in Rome for breakfast; London for lunch. Futures trading in cottonseed for July 1964 delivery began officially today. No transaction, however, was reported. The April contract was listless throughout at Rs. 103.

The following table shows the closing prices of oilseeds and oils on Wednesday 18th March as compared with those of two previous weeks:

	18-3-1964	11-3-1964	4-3-1964
Groundnuts	Rs.	Rs.	Rs.
April 1964 contract	237.50	239.25	239.25
Nizam bold	50.50	51.37	50.50
Khandesh quality	51.37	52.25	51.25
Oil ex-mill	19.65	20.10	20.25
Oil Rly. Receipts	19.35	19.65	19.80
Castorseed			
March 1964 contract	176.00	175.25	174.50
June 1964 contract	172.00	174.25	176.37
Ready Madras	34.37	34.87	34.75
Ready Kanpur	33.12	33.50	33.50
Oil B.S.S.	14.70	15.00	15.05
Oil commercial	14.50	14.50	14.60
Linseed			
March 1964 contract	40.50	40.25	40.06
June 1964 contract	40.87	40.69	40.87
Bold ready	39.87	39.75	40.25
Linseed oil	15.45	15.00	16.10
Cottonseed			
April 1964 contract	103.00	103.50	104.00

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

FAIR ENQUIRY FOR TEAS

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 12*th March*

A total of 378,000 kgs. was on offer in tea sale No. 10 held here on the 10th inst. Quality was again generally maintained from all districts. The market met with good general demand. Low medium brokens and fannings elicited fair enquiry and prices for these were about steady. Mediums and good mediums, meeting better support, were sold at firm rates, with buyers concentrating on brighter liquoring good mediums which realised useful prices. There was useful demand for highgrowns, but prices for these were a little irregular and occasional invoices inclined easier. Clean black leaf descriptions and whole leaf grades were sold readily at around last rates. Unorthodox descriptions were also sold well and prices for these may be quoted steady. Tippy teas were taken up at around last rates.

The quotations (per kg.) were:

	1964 Rs.	1963 Rs.
Low mediums	4.40-5.10	4.50-5.10
Mediums	4.90-5.60	5.10-5.50
Good mediums	5.40-6.80	5.50-6.50
Nilgiri B.O.P.	6.30-9.60	6.00-12.90

The average price realised in tea sale No. 10 was Rs. 5.59 per kilo, as against Rs. 5.71 a week ago and Rs. 5.39 in the corresponding sale last year.

There was good general demand for the 164,000 kgs. on offer in dust sale No. 10 held today. The small quantity of highgrowns was sold at irregularly easier rates. All medium descriptions were easier and declined by up to 15 nP. Teas of unorthodox manufacture, although somewhat irregular, were generally firm.

The average price realised in dust sale No. 10 was Rs. 4.67 per kilo, as against Rs. 4.82 a week ago and Rs. 4.73 in the corresponding sale last year.

Colombo: The market opened to strong general demand. Highgrowns were irregularly dearer following quality, while mediums and lowgrowns were sold readily and well at about the same rates ruling last week.

London: *North Indian and other growths*: In Monday's auction, there was fair demand for best Assams and these types ruled firm to dearer. The poorest descriptions, however, were again irregular and easier.

Ceylon and South Indians: A total of 22,467 packages were offered in Tuesday's sale, of which 3,714 packages originated from South India. The market met with good general demand. Both Ceylons and South Indians were fully firm to dearer, with the exception of the plainest kinds.

As we go to press, Messrs. Forbes, Ewart and Figgis Private Ltd. wire:

"*Sale No.* 11: 468,000 kgs. offered. Strong general demand. Low medium and medium brokens were around last prices. Fannings irregular, sometimes a little easier. Highgrowns and good mediums fully firm. Unorthodox steady."

SETBACK IN WHEAT

(From Our Own Correspondent)

HAPUR, 16*th March*

An easy trend was witnessed in foodgrain prices this week. Demand for cereals in the open market slackened, thanks to heavy sales through fair price shops at controlled prices. *Rabi* crop prospects were considered fair, though some early sown crop had suffered on account of cold spell and frost. Harvesting of *peas* has begun and that of coarse grains will begin next week and that of wheat next month. The Government is arranging to import more wheat from the U.S.A. and other countries. Further, the number of fair price shops in the country has also been increased.

Wheat prices declined sharply by Rs. 3.50 to Rs. 5 per quintal according to quality due to increased sales of the commodity through fair price shops. Wheat *dara* was quoted between Rs. 60.50 and Rs. 63.50 and the farm produce between Rs. 65.50 and Rs. 67.50 per quintal in the open market, as against the "controlled" price of Rs. 40.87 a quintal. Stocks with the trade were reported negligible. Rice eased by Re. 1.34 per quintal, as demand was slack and supply through fair price shops was better. Week-end prices here were: Rice *basmati* superior Rs. 96.45 to Rs. 99.13, *sela basmati* Rs. 93.77 to Rs. 96.45, *mainpuri* Rs. 65.64, *ramajwayan* Rs. 80.38, *raimunia* Rs. 83.06 and *gadda* Rs. 64.28 per quintal.

Gram prices also drifted lower by 67 nP to Re. 1.34 per quintal according to quality on the new crop arrivals from Madhya Pradesh. New *gram* was quoted at Rs. 57.60 and the local produce at Rs. 56.26 a quintal. Stocks of old crop were reported to be negligible. After early decline on slack demand, maize prices improved in the week-end due to the declining stocks. Prices ranged between Rs. 40.50 and Rs. 43.50 per quintal according to quality. *Barley* and *bejhar* were lower at Rs. 41 to Rs. 41.50 and Rs. 42 to Rs. 42.50 per quintal, respectively. *Juwar* and *guwar* ruled quiet. New *juwar* reached the market from Madhya Pradesh.

Mixed conditions prevailed in pulses. Peas ruled quiet, as demand was slack. Prices were Rs. 52 to Rs. 52.50 for the *dara* quality and Rs. 53 to Rs. 53.50 per quintal for the farm quality. New peas would reach the market after about a fortnight. *Arhar* and its *dal* were almost stationary. *Urd* and *moong* prices, however, sought higher levels on brisk demand and restricted supplies. *Massoor* prices drifted lower on better arrivals from M.P. Other sections were stationary. Weekend prices were: Peas *dal* Rs. 54.92, *arhar dara* Rs. 60 to Rs. 62.50, superior Rs. 62.96 to Rs. 64.30, *arhar dal* Rs. 72.34 to Rs. 80.38, *urd* Rs. 66.98 to Rs. 73.78, *urd dal* Rs. 80.38, *moong* Rs. 75.02 to Rs. 83.06 *moong dal* Rs. 85.74, *masoor* Rs. 62.96 to Rs. 66.98, *masoor dal* Rs. 83.06 and *gram dal* Rs. 64 per quintal.

SUGAR RULES FIRM

(From Our Own Correspondent)

HAPUR, 16*th March*

Sugar prices in the open market continued to rule firm at Rs. 160 to Rs. 165 per quintal, as against the controlled prices of Rs. 125 a quintal, due to restricted supplies by the fair price shops. Some of the factories in Meerut district were forced to close down due to the non-availability of cane and others were not receiving adequate cane supplies. But, in Muzaffarnagar and Saharanpur districts, factories were getting adequate supplies of cane. Total production of sugar in the country during the current season is now expected around 27 lakh tons, against the target of 33 lakh tons.

Demand for *khandsari* remained small throughout the week due to tight conditions in the money market and fears of Government action to curb the rising tendency in prices. The U.P. Government is discussing with *khandsari* producers the possibility of procuring a limited quantity for distribution to shopkeepers and allowing the rest for export to other States. Some of the *khandsari* units, which were still functioning, were buying cane up to Rs. 7 a quintal, as against Rs. 6.40 to Rs. 6.62 a quintal paid by sugar factories. Prices of *khandsari*, declined sharply during the week and, on Monday, they were: Inferior Rs. 100 to Rs. 115, medium Rs. 120 to Rs. 130, superior Rs. 131 to Rs. 140 and *Boora* Rs. 155 to Rs. 160 per quintal.

Ready *gur* drifted lower, as export permits for the current month were received only for a limited quantity. Daily arrivals of *gur* and *shakker* averaged 1,000 to 1,200 maunds, and the local stock was put around 22,000 quintals. Sowings of cane for the next season is being done with vigour. Week-end prices here (in Rs. per 40 kilogram) were: *Gur* superior 26 to 26.25, *dara* 25.50, *balti* 25.25 to 26.25 and *shakker* 27 to 29.

After early decline, *gur* and *shakker* prices rallied during the week in the Muzaffarnagar market on revival of demand following the receipt of permits for outward despatch during the current month. *Gur Chaku* was in demand from Gujarat, M.P. and Maharashtra and improved to Rs. 27 to Rs. 29.12 per 40 kilogram. *Pansera* was in request from West Bengal, Punjab and M.P. and was quoted at Rs. 26 per 40 kilogram. *Laddoo* quality attracted Rajasthan and Maharashtra support and was quoted at Rs. 27 to Rs. 28, with khurpapar placed at Rs. 26 to Rs. 26.50 per 40 kilogram. Total arrivals during the current season in Muzaffarnagar were 11.54 lakh mds., as against the corresponding figure last year at 13.55 lakh mds.

SHEEP SKINS IN DEMAND

(From Our Own Correspondent)

MADRAS, 16*th March*

There was no appreciable change in the kips market this week. Importers made only selective purchases. Small sales were reported in cowhides fifths selection, and buffcalf top marks. The tone of the market was quiet, with prices a shade easy.

Enquiries for tanned goat skins were patchy and buyers made counter offers for the bids made. The market for tanned sheep skins were steady to firm, with good enquiries all round. Shippers hesitated to enter into heavy commitments, because of the poor quality of recent arrivals of middle class sheep skins. It is hoped that the tanners will produce better stuff for export in this

S. & L. AND SUGAR PLANTS

For many years S. & L. have been supplying complete pipework installations for the Sugar Industry, and also supply their annual requirements of pipework. S. & L's reputation in this vital industry is second to none, as mill owners all over India will testify.

Recognised as the leading manufacturers in India of fabricated pipework, S. & L. offer a complete service from design to commissioning, with all materials and workmanship of the traditional high standards associated with S. & L.

line. Importers state that skins from Pakistan are offered at cheaper prices and expect the tanners here to offer goods at competitive rates. In the raw centres, prices of goat skins declined by Rs. 25 per hundred skins, though those skins of sheep still ruled firm.

The next tanned skins public sales in the U.K. will take place on the 23rd inst., when 40,000 goat and 20,500 sheep skins will be on offer. The results are awaited with interest.

COPPER PRICES RAISED

(From Our Own Correspondent)

CALCUTTA, *17th March*

With the shortage of base metals becoming more and more acute and with reduced arrivals against the need for increased imports, a steady trend continued to be in evidence in the Calcutta metal market during the week under review. On the London Metal Exchange, the feature was a further rise in copper, while the other three metals, *viz.* tin, lead and zinc, reacted to quote below the recent highs. The announcement of an increase in price by one cent a lb. by copper producers in the United States was also a feature of the week.

The steady rise in world price of copper leaves no doubt that other metals, like tin, have come to be in acute shortage. During the week, the London quotation for spot copper wire-bars opened at £259 a ton and steadily rose to close at £274. This was despite the earlier announcement in Chile that that country's selling policy would remain unchanged. The Rhodesian Selection Trust had also stated in London that the group's sales policy would remain unchanged. According to the group, the present high level of the price in London is unrealistic and reflects only marginal supplies. It was also stated that sufficient metal was available and that the group withdrew from the market at £236 a ton because the price advantage was not being passed on to the industry.

The R.S.T. and the Anglo-American Corporation revised their price during the week. This was soon followed by Kennecotts of the U.S.A. raising the price by one cent per lb. outside the U.S. market for Chilean mined copper. Anacondas also raised their price by one cent to 32 cents a lb. for U.S. consumers. The price of U.S. producers who own mines in Chile and South Africa was raised by one cent in respect of supplies for outside the U.S. market. This revision was attributed to the steady upward trend in the world market price during the recent months.

On the L.M.E., three-months wire-bars closed higher on balance at £274½ a ton, as against the opening of £262½. Spot cathodes opened at £257 and spot fire-refined at £249 to close higher at £269½ and £262 respectively, and their three-months' quotations closed at £270 and £263, as against £257½ and £249 respectively, in the opening. The Calcutta price of copper scrap was maintained firm at Rs. 690 per 100 kgs., although lower consumer interest was reported from upcountry centres. In London, spot tin opened at £1,100 per ton, but closed lower on balance at £1,070. In Calcutta, the rate was fully steady at Rs. 3,400 per 100 kgs.

It is expected that the deficit in tin in 1964 would total 17,000 tons, after allowing for an increase in production by 5,000 tons and for some limited exports from China, Russia and other communist countries. The deficit also takes into account the limited quantity which the Italian Government is expected to export. In other words, the shortage in the free world supplies can be overcome only if the U.S. continues to release its stockpile tin at the present rate, i.e., about 337 tons a week.

Both lead and zinc continued to be firm in Calcutta. On the L.M.E., the quotations eased. Thus, spot lead closed at £79½ a ton, against the week's opening of £80¼, and spot zinc at £96½ a ton, against £99.

DEMAND FOR TEA WEAK

(From Our Own Correspondent)

CALCUTTA, *17th March*

A drop in shipments of tea this week reflected the near exhaustion of the last crop as well as the continued difficulties being experienced in the Calcutta port. The weakness in demand at recent auctions held in Calcutta was to be expected due to the end-of-the-season offerings. The internal sale held last week also saw poor demand, but the auctions held at Mincing Lane attracted fair demand, though buying was selective leading to an irregular trend in the lower plainer Assams. A small increase of 1¼ million lbs. to 166.77 million lbs. was recorded in the U.K. tea stocks in the week ended 6th March.

The weather reports favour the start plucking this season earlier than in the last year. The weather last month was favourable and the rainfall adequate in most gardens in lower, central and upper Assam. Only in two areas, *viz.* Mangaldai and Nazira, the rainfall was deficient. In Cachar (central, south as well as north), the weather was seasonable; however, rain was badly needed in Longai, and red spider and blister blight were prevalent in some gardens in Hailakandi. Terai reported poor progress due to the prevalence of abnormally low temperature in early February. Darjeeling was deficient in rain. More rain was also needed in eastern as well as western Dooars.

The Estimates Committee's report on the working of Tea Board puts the blame squarely on the Tea Board for the lack of progress in the tea industry. Rightly stating that the progress of replantation has been unsatisfactory, the Committee has observed that replanting should be done by the industry with its own resources. However, the systematic increase in taxation year after year has deprived the industry of funds that could have otherwise been ploughed back from profits. Representations for relief in this regard have not borne any fruit. Even the last budget has been a disappointment. While Indian companies, which account for about 45 per cent of the tea output in this region is accorded some relief in the shape of tax rebate, non-resident sterling companies, which account for the remaining 55 per cent, have been actually made to pay more in taxes by virtue of the increase in the corporate tax from 63 per cent to 65 per cent. The industry has been pressing its claim for drawback of excise duty on exports; but unlike other industries, the tea industry has not been considered qualified by the Government for the grant of this privilege. If this is allowed, Indian tea's competitive strength in world markets can be increased, and the industry's hands strengthened for expansion.

The Committee's report does not find enough reason to accept the Tea Board's claim that there has been an improvement in the production of quality tea. The absence of statistics in this regard makes the claim of the Board vague.

The Committee also feels disturbed at the Tea Board's failure to project the image of Indian tea well in the importing countries. This deficiency, it finds, has enabled Ceylon to steal a great march over India. The Committee has also found that the Board's efforts to help boost exports and locate new markes through improved campaigns have not been satisfactory.

At the last week's dusts sale here, offerings totalled 31,357 chests. Demand was weak. Medium C.T.Cs eased up to 30 nP, but good C.T.Cs were steadily absorbed. Bright liquoring Assams of orthodox manufacture eased. All other orthodox teas could be pushed only at a heavy discount. Legg-cut teas were also a weak feature. The quotations per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust Rs. 6.20 to Rs. 6.70, medium Assam C.T.C. dust Rs. 4.85 to Rs. 5.20, legg-cut dust Rs. 4.60 to Rs. 4.85, medium Assam dust Rs. 4.20 to Rs. 5.00, and plain orthodox dust Rs. 4.00 to Rs. 4.20.

RAW JUTE RISES

(From Our Own Correspondent)

CALCUTTA, *17th March*

With more business taking place against the background of enlarged overseas inquiries, jute goods ruled steady during the week under review. Difficulties in the port of Calcutta causing delay to departure of laden ships continued to cause disappointment. Although fibre arrivals in terminal markets showed a small rise, which signified the anxiety of sellers to dispose of the outstanding crop as early as possible, fibre recorded a fractional rise, following the move of mills to cover the compulsory purchase quota in respect of the five weeks ending on 5th April.

The decline in goods stocks with mills at the end of last month, nominal though it was, was welcomed, but the cheer that it drew was only short-lived. For, soon, the details of production for that month were announced, and it was noted that mills' output at 99,200 tonnes showed a fall of 2,400 tonnes, as a result of the reduction in the number of working hours from 216 to 184. While working hours thus fell by 32, the disproportionate fall in production was accounted for by the fact that the January working hours do not take into account hours lost due to disturbances in that month. Output of hessian in February fell from 42,600 tonnes to 41,900 tonnes, sacking from 41,400 tonnes to 38,400 tonnes, and carpet backing cloth from 8,200 tonnes to 7,800 tonnes, while the rise in miscellaneous goods by 1,900 tonnes to 11,300 tonnes reduced the overall deficit to 2,400 tonnes. As regards stock, while at 42,300 and 46,500 tonnes, hessian and sacking goods recorded a decline of 1,300 tonnes and 2,000 tonnes, respectively. Carpet bags and miscellaneous goods, at 18,600 tonnes and 13,800 tonnes, recorded a rise of 1,500 tonnes and 1,700 tonnes respectively, thereby reducing the overall decline to 100 tonnes. These figures give one the impression that there was inadequate demand. But this was not so. For, thanks to the difficulties in the port, shortage of lighters and berths, and reduction in the river drafts, there was an increase of backlog. This realisation was reflected in the steady price trend during the week.

The trade has noted that the stiff competition offered by the Pakistani mills in foreign markets has caught the attention of the Government of India. In a note recently placed before the Parliament's Informal Consultative Committee, the Union Ministry of Industry points out that Pakistan will soon emerge as a serious competitor because of the availability of high-grade fibre at lower rates. The note also refers to the setting up of new mills in Europe. Although mills in India have captured a good portion of the demand for carpet backing cloth in the U.S.—the number of broad-looms at present is 2,600, as against 968 a year ago—it should be noted that the U.S. is engaged in research to find a suitable substitute for carpet backing cloth. This factor brings to the fore the need for the industry in India to strengthen its position abroad. The trade would urge, as it has often repeatedly been urging, that it is time to reduce the minimum prices of fibre to enable mills in turn to reduce their costs of production and pass on such reduction to consumers abroad. However, the recent statement by the Jute Commissioner that the present level of minimum prices would offer sufficient incentives to farmers to grow enough jute is taken as a hint that the Government does not propose revising the minimum prices for the forthcoming season also. These prices were fixed for the first time for the 1962-63 season and were continued for the subsequent season which is nearing the end. The increase in output of fibre is sufficient indication that farmers are making adequate profits and deriving economies of scale.

The note of the Central Industry Ministry referred to above analyses the salient aspects of exports in 1963. In 1963, burlap consumption in the U.S. touched a new high for the past three decades. While hessian exports to the U.K., Hungary, Poland, Yugoslavia, Iran, Turkey, and Egypt fell by a small degree, the countries to which hessian exports rose included Canada, Argentina, Chile, Australia, New Zealand, Belgium, West Germany, Denmark, Italy, the Netherlands, Sweden, the U.S.S.R., Bulgaria, Czechoslovakia, the Philippines, Iraq and the Sudan. Countries which took reduced imports of Indian heavy goods included the U.S.A., Cuba, Peru, Australia, Hungary, Poland, Rumania, Burma, Indonesia, Malaya, Thailand, Iraq, Turkey, Mali, Nigeria, Southern Rhodesia and Tanganyika. Increase in sacking exports took place in respect of Chile, the Dominican Republic, New Zealand, the U.K., Italy, the Netherlands, the U.S.S.R., Cambodia, Syria, and Ghana. Consumption in India increased significantly from 331,800 tonnes in 1961-62 to 371,000 tonnes in 1962-63. It is hoped that, by the end of the third plan, internal consumption would have risen to 400,000 tonnes.

During the week, mills paid more attention to the fibre market and, as a result, Assam bottoms rose from Rs. 30.50 to Rs. 31 per maund and northern bottoms from Rs. 29.50 to Rs. 30. Daisee bottoms, however, remained unchanged at Rs. 34.00. The quantity of white and tossa varieties on offer was extremely limited and, in respect of mesta, sellers were keen for business. Daily arrivals in the agencies were about 50,000 maunds. That the West Bengal Government is paying keen attention to increase in output is indicated by the advancement of a package programme. For its implementation, in the first instance, the Nadia district, where a large number of jute-growing refugee families from East Bengal has been re-settled has been chosen. Improved types of seeds are being supplied from two seed-multiplication farms in the district. Further, steps have been taken to ensure adequate irrigation facilities and supply of pesticides and chemical fertilisers. The State Government is also implementing its plan of sinking tube-wells.

The jute goods market ruled easier on Tuesday last. This followed heavy unloading in the futures market. Ready B. twills fell from Rs. 112.40 to Rs. 111.60 and ready hessian 40" 10 oz. from Rs. 46 to Rs. 45.65. The easing trend was accelerated by the publication of figures in respect of goods in stock held by mills at the end of the last month. These figures highlighted the delays caused to the export trade by shortage of lighters and berths. A fall in river drafts meant that ships could not take a full complement of cargo. While covering business against Government orders for B. twills continued throughout the week, both the U.S. and Argentina showed interest in hessian. Mills were keen to sell for all forward positions. The placing of a further tender by Government for 2,300 bales of B. twills for March-April delivery was a feature on Wednesday. There were also some overseas inquiries for hessian too. These enlightening features, however, failed to cancel the continued weakness in futures trading, and as a result ready B. twills gave way to Rs. 111 and ready hessian 40" 10 oz. to Rs. 45.25. At this stage, speculative activity revived in the futures market and, on Thursday, ready B. twills recovered to Rs. 111.65 and hessian 40" 10 oz. to Rs. 45.60. Scattered short covering and more speculative business in the futures market led to a further recovery on Friday, when ready B. twills moved up to Rs. 111.85 and hessian 40" 10 oz. to Rs. 45.85. Over the week-end, the undertone was steady with prices quoting at Rs. 111.75 and Rs. 45.75, respectively. They were a shade higher today at Rs. 111.85 and Rs. 45.80.

Notice

THE JAIPUR UDYOG LIMITED

Registered Office:

SAWAIMADHOPUR (W. Rly.)

NOTICE

NOTICE IS HEREBY GIVEN TO THE shareholders of The Jaipur Udyog Limited that an Extraordinary General Meeting of the Company will be held at the Registered Office of the Company at Sawaimadhopur on Monday, the 13th day of April, 1964 at 12 noon for considering and if thought fit for passing the following resolution with or without modification as a Special Resolution:—

RESOLVED that Article 44(*a*) of the Company's Articles of Association be deleted and be substituted by the following Article, which may be numbered as 44(*a*):

"44(*a*). A fee not exceeding Re. 1 may be charged for each transfer and shall, if required by the Directors or Managing Agents, be paid before every registration of transfer of shares."

By Order of the Board,

M. L. RATHI,
Secretary.

SAWAIMADHOPUR,
Dated 21st March 1964.

N.B.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

Explanatory Statement as required under Section 173(2) of the Companies Act, 1956, has been posted to each member of the Company.

MARKET GOSSIP

(*Concluded from page 447*)

the taxation structure, the new proposals have added so much complexity that the average taxpayer feels more confused than ever before. The reimposition of the Expenditure Tax which, on past experience, has shown to bring in insignificant revenue and at the same time has caused a lot of harassment to the very limited number of assessees coming within its mischief, is a source of serious resentment. The proposals for levying the Capital Gains Tax on bonus shares in hands of the recipients before they are actually sold and capital gain secured is perhaps amongst the most unjustified of the new taxes and is bound to impede seriously the revival of confidence in the investing public. ... The sharp increase in the rates of Estate Duty is ... so serious as to defeat the main objective of the Finance Minister in reviving confidence in the capital markets. Big efforts and big risks are only taken with the prospects of big rewards and, human nature being what it is, men who undertake such risks are largely motivated by considerations of making adequate provision for their families. Family life in India is a very important and binding interest in our society and I am afraid that the new philosophy enunciated by the Finance Minister that a man who earns has no right to transfer his property to his heirs and successors will prove, in actual practice, to be fatal to the development of our economy."

It is the realisation of these implications of the Budget that impelled this journal to remark a fortnight ago that, "as a result of his (T.T.K.'s) Budget, the growth of doctrinaire socialism will be faster than the growth of the economy as a whole." But all these criticisms do not seem to have moved T.T.K. even an inch. No wonder the stock exchanges are again in the doldrums.

Japan Looking Elsewhere For Iron Ore

Japanese steelmakers are pretty certain that India will be unable to fulfil the 1958 contract to supply two million tons of iron ore from the Kiriburu mines, with deliveries starting from April this year, although the report on the third Plan's mid-term appraisal claimed that the Kiriburu project had gone into trial production, "and will go into full production from the beginning of 1964 when exports to Japan will commence as scheduled." The dismay of the Japanese has been further heightened also by the failure of the Japanese-aided Bailadilla iron ore project to keep to its schedule of development. They have, therefore, already started looking for alternate supply sources of this raw material.

Reports have it that the Japanese have revived their interest in the large iron ore deposits in Australia and expect those deposits to become increasingly important sources of iron ore. In fact, one Australian group has already offered to supply a total of 65 million tons of iron ore over a period of 15 years from 1967. The Japanese steelmakers, on their part, think that the large Australian deposits should enable them to purchase at "competitive prices" and "ensure reliability of supplies." Australian miners, weary of the large capital investment required in developing this trade, are themselves looking for long-term contracts so as to enable them to recover the large capital investment. Thus, the mutual interests point to a successful bargain, and the Australian sources hint at such a possibility in the latter half of 1964.

It is not that the Indian authorities have not been aware that the delay over the Kiriburu and the Bailadilla projects would create difficulties for our future iron ore shipments to Japan. But then, there are several factors involved in all our planning and programming which upset schedules. Had it not been so, the mid-term Plan appraisal would not have been necessary at all. And couldn't this become another example of working towards the loss of good export markets?

What is of great concern to us is that there is no world shortage of iron and it is now very much a buyer's market commodity. The Japanese steelmakers are looking for sources where their iron ore purchases must be so competitive as to enable them to increase their exports of steel and steel products profitably in an extremely competitive market. The availability of new sources for Japan will inevitably depress the per-ton price of iron ore we were able to negotiate last year, which in itself was lower than the price we had received from Japan when the State Trading Corporation had undertaken its first shipments. Malaysia is another source for Japan. But the mine operators there are now finding it difficult to persuade the Japanese to take their full output, probably because the interest of the purchasers is now concentrated in the Australian deposits. We in India should not fail to read the signs.

Inflation in W. Europe

The spectre of inflation is haunting Western Europe again. In Italy, France and the Netherlands, inflation is a very real problem, while, in the U.K., Germany and the U.S., inflation is still a threat only. Prices have been rising in most countries of Western Europe. The biggest increases have occurred in France, Italy and Switzerland; the pressure on prices is growing in W. Germany. The U.K. and U.S.A. have fared better by comparison, the percentage increases in retail prices over those a year earlier having been of the order of only 2 per cent or less. In contrast, the percentage increases in France, Italy and Switzerland have exceeded 7 per cent. Germany and Belgium recorded lower increases—less than four per cent. But the general trend is unmistakably upward and, what is more, it is gathering momentum.

No economy has been hit harder by the present wave of inflation in Western Europe than that of Italy. In fact, inflation had brought the Italian "economic miracle" to its knees in 1961 itself and, in spite of the steps taken to bring it under control, it has now precipitated a major economic crisis in the country which has been aggravated by political factors. Consequently, the economic crisis has deepened into a crisis of confidence in the Government itself. The crisis revealed itself in a deterioration in the position of the lira, the Italian national currency, in the foreign exchange markets of the world and a failure of confidence among Italian industrialists. The lira has been weak in foreign exchange markets for quite some time now, but last week pressure on it was intensified and the discount on forward lira rose sharply to 10 per cent. The immediate provocation for this speculative assault on the lira was the news that Italian imports are still rising while wages are still moving up. It may be noted that wages rose by 15 per cent throughout the economy last year and by considerably more in some sectors.

In a bid to avert a financial crash, the Italian Government turned to the I.M.F. which promptly granted a credit of $225 million. This has now been supplemented by another credit of $1,000 million from the U.S. and W. European countries, possibly the Common Market countries. This new credit is made up of three parts. The U.S. Treasury and the Central banks of some European countries are making available $550 million to the Bank of Italy under a swap arrangement. The U.S. Export-Import Bank is providing a stand-by credit of $200 million and the U.S. Department of Agriculture has authorised the Commodity Credit Corporation to grant Italy *a $250 million credit for three years.*

The prompt and generous help from the U.S. and other countries has inspired hope and optimism that Italy will tide over the crisis soon. Signor Guido Carli, Governor of the Bank of Italy, has stated that Italy has now *sufficient financial support* to enable it to face up to the interval required for the stabilisation measures already initiated to take effect. The stabilisation plan, it may be recalled here, includes, on the one hand, imposition of a purchase tax on cars (the surge in car imports has been one of the principal causes for the deterioration in trade balance), consumer durables and more stringent restriction on hire-purchase and, on the other, curbs on expansion of bank credit. For political reasons, these measures had taken much longer to be introduced than had been hoped and they have not had time to make their effect felt on the economy.

While Italy is thus engaged in fighting inflation, West Germany is taking steps to forestall inflation. Chancellor Erhard has announced that his Government would adopt measures, mostly fiscal, to prevent creeping inflation. There is no thought of devaluating the D-mark, according to the Chancellor, but the measures proposed, he pointed out, would not be popular. He has urged economy in Government spending and moderation on the part of employers and workers. The community of interests and problems of the countries of W. Europe call for co-ordination in national economic policies. Chancellor Erhard has already conceded that there is need for such co-ordination at least among the Common Market countries and his Government has taken the initiative in pressing for it. He is genuinely concerned over West Germany's trade and payment surpluses which, he says, are connected with inflationary developments in other Common Market countries.

Production Of Tobacco

The current year might see a slight fall in the world production of tobacco leaf (excluding Mainland China and the Soviet Union) from its last year's record high of 3.4 million tonnes, which was about 4 per cent more than in 1962. This is estimated in a commodity note appearing in the February issue of the *F.A.O. Monthly Bulletin of Agricultural Economics and Statistics.* The increase in 1963, according to the note, was entirely on account of the combined production of Turkey, Bulgaria, Greece and Yugoslavia—the four major countries growing the oriental leaf type of tobacco —rising from 315,000 tonnes to 407,000 tonnes. Their share, and therefore the world total, would have been higher still, had not Turkey experienced the blue-mould disease and Bulgaria drought. Still, however, their higher output more than offset a decline in other cigarette leaf tobaccos—the burley and especially the flue-cured. The flue-cured leaf tobacco production in the United States declined by 37,000 tonnes and in the Rhodesias and Nyasaland by 13,000 tonnes. Inadequate rains at sowing time explain, the note says, the less than possible, though higher, production of cigarette leaf tobacco in India last year.

Tobacco exports from India have maintained their upward trend. They reached a record figure of Rs. 23.58 crores in 1963 as compared with Rs. 19.39 crores in 1962. The performance in the fiscal year 1963-64 up to December at Rs. 19.39 crores compares favourably with Rs. 14.68 crores in the corresponding period of 1962-63 and the total for the year would easily exceed the previous record of Rs. 18.97 crores attained in 1962-63. Recently, however, there has developed a rift between the growers and traders over the prices to be offered for the current crop of tobacco. This rift is feared to have affected sales of virginia tobacco. The fears have not been baseless, since even Dr. Ram Subhag Singh, Minister of Agriculture, seemed to have confirmed them the other day in the Lok Sabha, when he said that the foreign demand for tobacco continued to be at about the same level as in the past year and, if the growers and traders arrived at a settlement, there would be no reduction in the foreign exchange earnings. According to the Minister, the prices now offered by the traders are somewhat lower than those paid by them last year. There is no minimum support price for tobacco, either operational or statutory, but the Government has fixed minimum export prices for different grades of tobacco. All the same, the differences between the growers and the traders have delayed the arrival of the crop which normally reaches the market in the middle of January. It is necessary that the rift ends soon. Efforts in that direction are already being made by the Andhra Pradesh Government and the Indian Central Tobacco Committee.

WEEK'S STOCK EXCHANGE TREND

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CVIII. No. 2762 BOMBAY, 28th MARCH 1964 PRICE Rs. 2

PROSPECTS FOR U.S. AID

THE United States is no doubt a fabulously rich country, judged either by its natural and capital wealth or by its annual gross national product. But it is also a fact that about a fifth of its population is on or below the poverty line in relation to the vastly higher standards of living of the other four-fifths. The "poverty line" here is represented by an annual per-family income of $3,000 which alone can provide a modest but adequate way of life, by current American criteria. That country's chronically depressed areas with their unemployed are also so many pockets of poverty. While, on the one side, massive Federal spending and tax reduction are calculated to create newer employment opportunities, on the other, advanced automation is seeing to it that the ranks of unemployed are not greatly thinned. It is no wonder, therefore, that the Johnson Administration has accorded a high priority to its "war on poverty"—a war involving the establishment of civilian work camps, a new training scheme for youths, federally-financed part-time work for students, aid for small businessmen and the unemployed, etc. This programme, described as a modest beginning, is estimated to cost as much as a billion dollars even in its first year. As this "war" gathers momentum after a year or two of trial and error, Federal expenditure is bound to go up manifold. At the same time, thanks to acreage restrictions and diversion of land under the feed grain programme, surplus stocks of wheat and coarse grains have begun to fall appreciably in recent years from the peaks of 1960, and this declining trend may be expected to continue in the coming years. These facts pertaining to America's war on its domestic poverty and to the declining trend in the output and stocks of foodgrains would, incidentally, seem to suggest that its capacity and enthusiasm for assisting the war on poverty in other lands may somewhat diminish in future, if not disappear altogether, in spite of President Johnson's laudable assertion that "his economic opportunity programme to lift up lower-income U.S. families is part of the world-wide struggle to develop opportunities." In other words, the aid-giving potential of the United States may not continue to be quite as massive as it has been in recent years.

In fact, the diminishing trend in the quantum of aid from that country has already set in. It may be recalled, in this connection, that last year President Kennedy requested the U.S. Congress to appropriate $4,900 million for foreign aid. Although he reduced it later to $4,500 million, the Congress did not act on his request till after his assassination. Finally, the Johnson Administration got in December 1963 only a $3,000-million appropriation. With the reappropriation of about $400 million of unexpended balances, the total amount available for aid commitments in the current fiscal year (July 1963-June 1964) comes to $3,400 million, or 30.6 per cent less than the amount originally sought by the Administration. For the next fiscal year, the Johnson Administration has just asked for only $3,400 million.

President Johnson's relevant message to the Congress has the following highlights:

1. The United States does not seek to cover the whole world in its aid programme. It seeks instead, through prudent and responsible programmes, to help carefully selected countries whose survival in freedom is essential —and whose collapse would bring new opportunities for Communist expansion.

2. The appropriations recommended for fiscal 1965 total $1,000 million for military assistance and $2,400 million for economic assistance. Included in the total economic assistance are new authorisations of $917 million (comprising $335 million for supporting assistance, $225 million for technical co-operation, $134 million for contributions to international organisations, $150 million for the President's Contingency Fund and $73 million for administrative and miscellaneous expenses).

3. More than 80 per cent of aid funds will be spent in the U.S. and the impact of the programme on the country's balance of payments will be less than ever before.

4. The foreign aid now requested will, among others, ensure continued economic development in India, Pakistan and Turkey under the major international aid-consortia, to which the United States is a party, and provide the U.S. share of voluntary contributions to the U.N. technical co-operation programmes and to such special international programmes as the work of the U.N. Children's Fund and the development of the Indus Basin.

5. In 17 nations, the transition from reliance on aid to self-support has been completed and economic aid has ended. Fourteen countries are approaching the point where soft economic loans and grants will no longer be needed.

6. Under the agreement for replenishing the resources of the International Development Association, which is now before the Congress for approval, other countries will put up more than $1.40 for every dollar the U.S. provides to finance on easy terms development projects certified as sound by the World Bank. The amount asked for, in this connection, is $312 million, over a three-year period, from the U.S., as compared with the aggregate contribution of $438 million pledged by other countries.

7. Economic assistance operations will continue to be centred in the Agency for International Development. A general advisory committee on foreign economic and military assistance problems is being set up to serve as a continuing source of counsel to the President and to examine aid programmes in individual countries.

It is by no means certain that the Congress would not seek to reduce even the relatively modest amount of $3,400 million which represents no more than three to four cents of America's tax dollar. Democratic leaders in the Congress, according to President Johnson, have admitted that "it is going to be more difficult this year than it ever has been before." And so the President himself has just stated that "it is going to be very tough to get a good foreign aid measure through the Congress this year." It would thus appear that the peak of Congressional opposition to foreign aid is yet to be reached.

The prospects for U.S. aid to foreign countries in the coming year are thus not bright. Moreover, thanks to the exigencies of the current election year, the Johnson Administration itself may not be quite determined to get all of what it has asked for. Of course, it has begun to advance strenuous pleas for aid appropriation on the bare minimum scale required. For instance, in his testimony before the House Foreign Affairs Committee, Mr. Dean Rusk, Secretary of State, has presented the case for aid in the most telling manner possible. He has told the Committee that, "as all people grow in freedom and independence, so the security of the U.S. is strengthened; and as others grow in economic strength, so the U.S. will continue to prosper." Two-thirds of all development loans, according to Mr. Rusk, will go to seven countries—India, Pakistan, Turkey, Chile, Colombia, Nigeria and Tunisia. Two-thirds of all military funds will go to eleven countries along the Sino-Soviet periphery and four-fifths of supporting assistance to Korea, Vietnam, Laos and Jordan. Pointing out that U.S. foreign aid can only do a small part of the job, the Secretary of State has urged that "American private enterprise must bear a heavier burden of investment in the underdeveloped world, prospering allies must do more, and—most important—recipient nations must do their share through self-help and re-investment in their own economies." As far as U.S. private investment in the developing countries is concerned, it is heartening to be told that President Johnson will soon send to the Congress a request for a special tax credit to encourage it. In effect, this would mean that the U.S. Treasury would forgo a part of the tax it normally collects from a company when that firm engages in specified types of investment in a developing country. Moreover, as Mr. Rusk has announced, an advisory committee on private enterprise in foreign aid will soon be appointed to make a detailed study of the role of private resources and recommend ways in which this role can be increased and strengthened. And the Agency for International Development, too, will place more and more emphasis on contracts with private firms and organisations in providing technical assistance. All this is no doubt good. But it is just possible that the proposed accent on private investment might have the *unintended* effect of getting the Congress to cut the aid figure on the ground that private investors would make up for it.

Even assuming that the Congress would respond fully to the President's request for

Break-up of Economic Aid Asked For
(In million dollars)

Region	Development Loans	Technical Assistance	Supporting Assistance
Near East and South Asia ..	785	49	38
Latin America	482	88	17
Far East	70	48	262
Africa	105	83	31
Total	1,442	268	348

NOTE: 1. Not included in the above regional breakdown are such items as contributions to international organisations and administrative expenses.

2. Funds for Export-Import Bank loans, the Food-for-Peace programme and the Peace Corps are financed by other appropriations.

WEEK'S STOCK EXCHANGE TREND	539

$2,400 million for economic aid alone, there is still the doubt whether the needs of recipient countries would be adequately met in the coming fiscal year. It is not possible, for instance, to figure out from the regional breakdown, given in the accompanying table, how much U.S. assistance would be available to India for the fourth year (1964-65) of the current Plan. This country has now sought from the Aid-India Club, which has provided a total of $3,417 million for the first three years of the Plan, a sum of $1,150 million for the fourth year. This request for $1,150 million is not very much more than the $1,052 million finally pledged by the Consortium in August 1963 for the third year of the Plan. Considering that the U.S. contribution to last year's Consortium aid was at the same level of $435 million as in 1962-63, it may reasonably be expected that its contribution this year might not fall short of that figure. But, as against this expectation must be set the probability of some disappointment in the light of two facts. The first of these is that the U.S. pledge of $435 million for 1963-64 was made long before President Kennedy's Foreign Aid Bill was mangled and cut down to the size of $3,000 million in December last. If the fate of that Bill had been known in advance, the U.S. pledge for last year would have probably been somewhat less than what it actually is. The other fact is that the total foreign aid requested by the Johnson Administration for 1964-65 is only $3,400 million—a figure very much less than the Kennedy request for 1963-64.

It is not yet clear as to how much the U.S. will set apart for India out of the overall limit of $785 million earmarked for development loans to the Near East and South Asia in President Johnson's Foreign Aid Bill for the fiscal year 1964-65. The reports about the preliminary discussions of the Aid-India Club which met at Paris last week are vaguely optimistic. The Indian Government's hope seems to be that, at its next meeting in May in Washington, the Consortium would pledge the total aid requested for the fourth year. But this seems to be a slender hope. For, apart from the uncertainty on the score of the present U.S. Foreign Aid Bill, there is also a grave doubt whether the combined share of the World Bank and I.D.A. would be pledged at the same level of $245 million as in 1963-64. This doubt has arisen because the U.S. Government's request for Congressional approval for a contribution of $312 million, over a three-year period, to the I.D.A.'s resources has been rejected by the House of Representatives. The relevant Bill, already passed by the Senate, has just been referred back to a House Committee where the anti-aid lobby is reported to be very strong. Since the final success of this particular Bill is still problematical, the additional element of uncertainty on the score of I.D.A. share in the Consortium aid is there. While the Government of this country should hope for the best at the May meeting of the Consortium, it should also be prepared for the worst in advance. One of the ways in which this could be done is to modify the taxation proposals in the latest Budget in such a way as to improve the climate for private investment. It is common knowledge now that the Budget has failed to provide any worthwhile incentive to accelerate the tempo of economic development. Another direction in which the Government's precautionary effort could be concentrated is export trade. Considering that exports to hard-currency areas picked up significantly last year, it should be possible to promote this rising trend further in the current year, provided appropriate steps are taken. That would obviate the need for more non-project credits to finance maintenance imports. From the long-term point of view, too, it would be safer to rely increasingly on trade rather than on aid. It is in this context that India, like any other developing country, should judiciously work for the most favourable outcome of the current U.N. Conference on Trade and Development.

PROBLEMS OF JUTE INDUSTRY

WHATEVER be the scale of external assistance, India will need plenty of foreign exchange year after year for quite some time not only to finance the increasingly large imports (especially of capital goods) for economic development but also to service the foreign loans already obtained and that will be obtained in future. With the expansion and diversification of the industrial economy, the scope for earning foreign exchange may, of course, be much broader in future than at present. Nevertheless, it would be dangerous, indeed, to overlook the vital contribution that is being made by the traditional and well-established export industries. Among these, the pride of place goes to the jute industry, that ace earner of foreign exchange which accounts for well over one-fifth of the aggregate earnings. This industry does have a considerable export potential *vis-a-vis* the younger and newer lines of manufactures, what with its natural advantages and long experience of overseas trade. And there is no reason why this potential should not be exploited to the maximum by taking energetic action here and now. Failure to do so will render the prospects of India securing its due share in the expanding world markets for packaging and carpet materials dim. In fact, some of the existing markets built up through sustained effort may be lost once and for all.

In saying this, we are neither crying 'wolf' nor oblivious of the steps already taken by the Government and the industry to improve the competitive capacity of jute manufactures. Our object is to draw attention to certain external forces which are posing a serious threat to India's export trade in jute goods. This is necessary because the relatively better performance of jute industry in terms of both production and exports seems to have engendered a certain amount of complacency among the authorities concerned. Gone are the days when India almost held a monopolistic position in world markets. On the contrary, it has to face keen competition following the rapid expansion of Pakistan jute industry, alternative packaging materials, and bulk handling methods. How Pakistan has rapidly penetrated India's export markets, especially for sacking, was briefly but impressively pinpointed by Mr. J. V. Jardine Paterson, the retiring Chairman of the Indian Jute Mills Association, in his presidential address at the annual meeting of the Association held at Calcutta on Friday the 20th inst. He said.:

> "Hardly a day passes without some reference in the press to more looms being installed or new mills under construction or additional undertakings being planned. Nor are we entitled to assume that we will be able to compensate our loss of sacking markets by an expansion of our trade in other lines. It is common knowledge, for example, that broad loom units are under erection in Pakistan for the manufacture of jute carpet backing and there have already been some shipments of this fabric by Pakistan to America. Again, with growing experience in jute manufacture and the gradual emergence of a skilled labour force, the Pakistan industry is well placed to switch to hessian production on a larger scale if it should so decide. We in Calcutta are in no position to dictate the course of events—not, at least, under the present conditions of operation, with the Pakistani mills enjoying a cost advantage of anything from Rs. 350 to Rs. 400 a ton, as a result of their access to cheaper and better quality jute and their windfall profits from the bonus voucher scheme. We have been continually on the defensive, and no amount of export orientation, however desirable this may be, can alter the hard fact of our inferior competitive strength."

If the competitive capacity of the Indian jute industry is inferior, the question arises as to what should be done to strengthen it, so that the industry would be able to consolidate its position in existing markets and to venture into new markets. There is, first of all, the need for augmenting the output of quality jute goods. Secondly, the cost of production must be reduced. And, finally, several new uses for jute goods should be developed. There is ample evidence in Mr. Jardine Paterson's speech that the jute industry is fully seized of these problems. The industry, one is told, is now giving more attention to those matters with which an export industry in a highly competitive trade ought to be primarily concerned, namely, cost studies, technological improvements, quality control, product development, market research, sales promotion, public relations—in short, everything that is summed up in the expression "moving with the times." Improvement of quality, Mr. Jardine Paterson declared, is one of the most urgent matters confronting the industry. A quality control and inspection scheme to obviate complaints from buyers has recently been launched, new measures are being devised to settle complaints promptly and work continues on drawing up standard specifications for jute products, taking into account the industry's capacity and the consumers' requirements. The customers of jute industry, or, for that matter, of any other industry, are entitled at all times to receive goods of the specifications contracted for. Highly reassuring, therefore, is the statement of the I.J.M.A. Chairman that the industry is endeavouring its best to ensure that this right of buyers is fully met.

Alluding to promotional work, the Chairman of the I.J.M.A. gave some interesting information. It is clear from what he said that the coming year is likely to witness a broadening of the jute industry's promotional work generally. The industry has been assured of substantial financial assistance from the Government of India for this purpose through the medium of the Marketing Development Fund. Specific proposals for 1964-65 have already been forwarded to the Government. They include market studies, public relations work, advertising, participation in the New York World's Fair, continuation of the industrial research project in the U.S. and a proposed new documentary film on the jute industry. In association with the Jute Commissioner, the I.J.M.A. is planning delegations to North America and possibly Australia. Additionally, and on a longer-term basis, it has drawn up tentative plans for expanding its Research Institute's activities. In their present form, these plans provide for the setting up of a Product Development Section and a Fibre Conversion Unit and the I.J.M.A. has already approached the Government of India to ascertain to what extent it would be prepared to subsidise the scheme. In 1964, the industry will also see a fuller working out of its quality control scheme.

The latest move of the jute industry to undertake market research on an extensive scale must be welcomed, considering that this was an aspect to which the industry had not so far cared to devote adequate attention. The move signifies the industry's awareness of the urgent need to check any erosion of the markets for its products from other competing items. Even in the comparatively new line of manufacture, namely, jute carpet backing cloth, there are signs of growing competition from a hundred per cent man-made carpet backing material from nylon reinforced foam developed by the Mansanto Chemical Corporation of the U.S. This Company, with its world-wide connections, is credited with the intention of launching an intensive campaign against jute in the carpet backing field. Meanwhile, paper backing, too, is becoming more and more popular. In particular, where the tufted carpet produced is in the lower price and quality range, the lighter and cheaper kraft knitted scrim is being favoured. All this competition notwithstanding, the demand for jute backing based on its physical advantages will continue to be strong and preferential; only, the industry must heed the wholesome advice given by Mr. Paterson, namely, to ensure good average quality of jute backing, orderly marketing through established channels (instead of allowing this speciality product to become an ordinary bazar commodity) and relative price stability.

It is in the context of growing competition from the Pakistan jute industry and other alternative packaging materials that the need for reducing production costs in the industry assumes special significance. It is disquieting to hear from Mr. Paterson that the Jute Buffer Stock Association's operations are costing the industry something like Rs. 3 per maund of buffer stock jute per annum in the form of interest, insurance charges, etc. There is, again, the additional annual burden of over Rs. 3.5 crores as a result of the implementation of the Wage Board's recommendations. To add to these, there is the fresh burden imposed by the scheme of guaranteed bonus unrelated to profits. Considering all these handicaps, it is unfortunate that the Union Finance Minister has omitted jute from his list of vital industries qualifying for a tax rebate for development purposes. The industry, it may be noted here, had been denied the special tax concessions introduced in the 1962 Finance Bill as an incentive to exporting companies and companies manufacturing for export.

Since the jute industry is an export industry —almost three-fourths of its production is sold abroad—and since raw jute accounts for well over half of the industry's production costs, it is obvious that the quantity, quality and price of raw jute have a great bearing on India's ability to compete in the world markets for jute goods. The I.J.M.A. Chairman, therefore, made no apology for repeating what has been said time and again on the subject of jute cultivation and the related questions of price and quality. That a fair price for raw jute is as much in the interest of the jute industry as in that of the cultivator must be acknowledged without any mental reservation. The industry itself is fully aware of it, as witness its earnest efforts to maintain fibre prices at the officially determined minimum levels. But the industry, as Mr. Paterson aptly remarked, cannot for ever be expected to pay a price which is uneconomic to it in the context of the prevailing world market conditions. If only the Agricultural Departments of State Governments concerned shake off their lethargy and go all out to help the cultivator to raise the productivity of their lands quantitatively and qualitatively, the monctary yield from raising raw jute will be quite attractive, and there will be no need at all for financing the minimum prices at uneconomically high levels. Again, it is only through agricultural research that India's ability to produce more of high grade jute can be bettered and the sorry predicament of the jute mills having to use large quantities of low-grade raw material be avoided. There is no exaggeration in saying that it is the use of such jute that thwarts all attempts at maintaining maximum production of quality jute goods at competitive costs.

MARKET GOSSIP

Wanted: A Nutritive Treatment

ALTHOUGH Mr. T. T. Krishnamachari has consistently maintained during the past three weeks that he cannot concede any major modifications or concessions in his new taxation proposals and that all that one can expect is some minor refinements, hopes of, and suggestions for, reliefs and reforms are being voiced almost daily by chambers of commerce, stock exchanges, and individuals. The businessmen of this country are a hardy, persevering lot. Evidently, they are full believers in the theory that one must keep on knocking at the doors of persons responsible until their needs are fulfilled. This is undoubtedly a right and healthy attitude. Businessmen, it must not be forgotten, are concerned not only about their own interests but they have also to serve the interests of thousands and thousands of investors and workers. Further, the concern for the welfare of this country is by no means the monopoly of politicians. Businessmen, too, are equally interested, perhaps to a much greater extent than politicians, as they have a vital stake in economic growth and political stability.

As the author of the Budget, the Finance Minister will not be able to see where he has gone wrong. No parent easily concedes the faults in his offspring. So he has to be told again and again where he is right and where wrong. With the Finance Bill yet to be adopted by Parliament, the taxpayer can legitimately offer suggestions for amendments, try to convince the authorities about the equity of their proposals and hope for the best. Viewed thus, the brief but pointed observations of Mr. P. L. Tandon, the incoming President of the Bombay Chamber of Commerce and Industry, on the taxation proposals are well timed. He made them while addressing the annual meeting of the Chamber last Saturday. Being a shrewd leader, Mr. Tandon presented both the good and bad features of these proposals, thereby giving no room to his critics for levelling against him the charge of highlighting only the unfavourable aspects.

Thus, Mr. Tandon welcomed the various intentions in the Finance Minister's speech to stimulate the economy, to promote growth, to offer certain incentives to industry and management, especially to the much-needed investment and specialist personnel from abroad. He also welcomed the abolition of the S.P.T., the reduction in the tax rate applicable to inter-corporate dividends and the tax rebates granted to selected industries. Further, he expressed the hope that the recognition of a 10 per cent rate of return as free of tax, as contained in the new Surtax Bill, would be the criterion when examining the recommendations of such bodies as the Tariff Commission and Bonus Commission. But he posed a series of questions: Would the new measures, in their totality, achieve the accelerated rate of growth that every one is keen on? Are there enough incentives provided to industry, to investors and to the men who manage, to catalyse development in the way that seems to be eluding us of late? Has the confidence the budget proposals sought to infuse in the capital market been reflected by the stock markets? Mr. Tandon's conclusion was that "the quantum of incentive in the Budget needs much improvement, for we are still about the most heavily taxed country in the world, even among those whose need for growth is as great as ours and achievement sometimes better." In this connection, he made the following four specific points:

"First, taxing inter-corporate dividends discourages two of the prime needs of industry, namely, diversification of activities and development of management. Much healthy growth would flow were companies free to operate new activities as separate companies with their own structure of capital and management.

"Second, a tax on unrealised gains under the new tax on bonus shares is not just. While it may get at the speculator, it will be positively inequitable for a genuine investor—and their number is rapidly growing in the country—who may not sell the shares for many years to come, and then at a rate possibly lower than at which he was taxed. Revenue could, however, be protected against tax-free realisation of "old" shares of the same class after a bonus issue by operating a L.I.F.O. (last in first out) method, by which whatever shares are sold will be deemed to have been made out of the latest issue or purchase. The sale of part holding after a bonus issue is then deemed to be sale of bonus shares and is, therefore, a gain fully taxable. The cost basis of such bonus shares would be the cost of purchased shares divided by total purchased and bonus shares.

"Third, even the new surtax is still a tax on efficient utilisation of capital, something that in a capital-scarce country ought on the contrary to be encouraged.

"Fourth, the tax on dividends is a negative approach to encouraging growth through ploughback. Allowing a tax rebate for ploughback is a more positive and constructive way than taxing distribution."

U.P.A.S.I. On Bonus

Employers' reactions to the recommendations of the Bonus Commission (Chairman: Mr. M. R. Meher) are gradually crystallising into definite views. Two employers' associations, namely, the United Planters Association of Southern India, Coonoor, and the Saurashtra Millowners' Association, have already submitted to the Government memoranda setting forth their views on the Commission's findings and recommendations. Both these Associations are highly critical of the concept of compulsory bonus as accepted by the Commission, the formula for bonus computation evolved by it, and the other recommendations regarding applicability, limits of bonus, etc. And it is their considered opinion that, if the recommendations are accepted and implemented without suitable and necessary revision, their repercussions on industry would be serious and far-reaching.

Presenting primarily the plantation industry's point of view, the U.P.A.S.I. memorandum points out that the plantation industry, with its peculiar structure and economy, has not received anything more than the briefest and most cursory attention at the hands of the Commission and that the recommendations framed mainly with the manufacturing industries in view have been applied to plantation industry as well. The Commission's suggestion that plantations in South India may continue their industry-wise agreements has been rendered meaningless, says the U.P.A.S.I., by making the general formula applicable to plantations also. Its contention is that, unless the existing agreement is more attractive, there is no question of workers opting for it in preference to the Commission's formula. The main criticisms of the U.P.A.S.I. on the Bonus Commission's recommendations are summarised below:

1. The Commission has not given due weight to the peculiar feature of plantations. It has, for instance, overlooked the fact that the field assets in plantations are not allowed depreciation under the Central Income-tax Act and under the Agricultural Income-tax Acts of States, except in the case of rubber in Kerala and Madras. To the extent that depreciation is not allowed, the profits tend to be exaggerated both for taxation and for the computation of the surplus under the Commission's bonus formula. Consequently, a planting company making the same gross profit as a manufacturing or trading company would have to pay a much higher tax and bonus than the latter and would be left with less surplus for the growth of its internal resources.

2. Apart from the question whether payment of a minimum bonus recommended by the Commission, irrespective of profit or loss, is consistent with the Commission's own conception of bonus as participation by workers in the prosperity of the concern, the level of minimum bonus payable has itself been fixed without regard to practical consideration. The minimum bonus of 4 per cent of wages or Rs. 40, whichever is higher, fixed by the Commission would involve a payment of 10 per cent or more of wages as bonus in the case of plantations.

3. The "set on" and "set off" provisions, which are designed to enable and ensure continuity of bonus payment, have no merits, because the "set on" becomes operative only when the surplus is greater than the maximum bonus payable.

4. In the plantation industry, the equity capital forms a much smaller proportion of the working capital than in other industries. Hence the discriminatory rates of return on equity and other capital in the form of reserves act more harshly and unfairly against this industry and will thwart the generation of internal resources in future.

5. The agricultural nature of the industry and the extra risks involved have not been taken into account when suggesting a uniform 7 per cent return on equity capital for the plantation industry in common with trading companies and manufacturing industries.

6. The allocation of 60 per cent of the "available surplus" for the distribution of bonus ignores the interest of the consumers, the need for capital conservation for development and takes into account only the partisan claim of labour for larger bonus. This is particularly wrong at a time when the Wage Boards are being set up in almost all industries for the fixation of fair wages.

7. As a labour intensive industry, plantations are capable of offering greater employment opportunities if resources are available for development. If available resources are frittered away by high bonus payments to existing workers, capital cannot expand or provide new job opportunities.

8. The Plantations Labour Act for the welfare of labour requires large capital investment and plantations should be able to retain a larger share of the surplus for the purpose.

9. There is an obvious contradiction in the approach between the Government of India and the Bonus Commission in the matter of fostering capital growth.

The memorandum further submits that the 7 per cent return on equity capital allowed by the Commission is less than the current interest on borrowings. Even as far back as 1950, when the Labour Appellate Tribunal formula was evolved, it was granted that 6 per cent return on capital was justified as a prior charge for the computation of the surplus. Interest rates have greatly increased since then, the value of the rupee has fallen substantially and dividends have become liable to higher rates of taxation. Considering all this erosion in the net return to the investor, to suggest, as the Commission has done, that 7 per cent is adequate return on equity capital is, according to the U.P.A.S.I., an extremely retrograde and irresponsible recommendation. The U.P.A.S.I. submits that, before coming to any definite conclusions on the Commission's recommendations, the Government should take into account the aforesaid factors and provide for a higher return on capital employed. Apart from this, the U.P.A.S.I. has made the following further suggestions:

(a) Depreciation on field assets should be made an admissible item when applying the bonus formula to the plantation industry.

(b) Proceeds from the sale of timber should be excluded from the profits for computing surplus under the formula.

(c) Planting companies should be allowed 10 per cent return on the capital, the term "capital" having the same meaning as "capital base" given under the Budget proposals of the Government of India for 1964-65.

(d) In the interest of saving and re-investment in the business, the allocable surplus to bonus must be reduced from 60 per cent to 40 per cent.

(e) The expenditure incurred on welfare assets under the Plantation Labour Act should be allowed as a deductible charge.

(f) No minimum need be fixed as, in the case of a non-surplus year, there is no prosperity to share. If a minimum payment is made obligatory, it should not be above 2 per cent of average wage, without specifying any minimum amount. The maximum bonus should be fixed at 12½ per cent of average wage.

Turnover Tax In E.E.C.

One barrier to equal conditions of international trade is the variance among the sales tax systems of trading nations. Action is now being taken within the European Economic Community (E.E.C.) to correct this distortion. The Finance Ministers of the E.E.C. member-States, according to a German correspondent, have recommended that "The Six" should aim at a standard European sales or turnover tax. They have recommended further that it be a "net" rather than a "gross" tax—specifically, that it should be calculated on the "added value" accruing to a commodity at each stage of transfer (sale and purchase) until the commodity reaches the ultimate consumer. The average retail prices, it is said, shall not change, though, in practice, some may. Also the overall revenue to the State is to remain unchanged. Nor is the new "net" form of sales tax to grant any new incentive to industry.

The W. German industry has one particular interest in seeing the E.E.C's tax reform become a reality. As things stand, German equalisation-tax rates on imports are on the average less than those of other E.E.C. members. But a general agreement on sales tax reform, along the above lines, could eliminate the disparity by doing away altogether with the various States' export rebates and equalisation taxes on imports. So Germany, like various other E.E.C. members, has welcomed the initiative of the Finance Ministers.

The typical turnover tax, including that in effect in West Germany at present, works cumulatively. It produces a "build-up" or "cascade" effect. Two simplified examples showing the basic differences between the present and the planned sales tax systems—the figures are fictitious and rounded —are given below:

	DM
1. *The present sales tax*:	
(a) Producer sells typewriter for ...	208
Of his bill to wholesaler, he pays 4 per cent sales tax of	8
(b) Wholesaler buys typewriter for ...	208
Sells typewriter for	260
Of his bill to retailer, he pays 4 per cent sales tax of	10
(c) Retailer buys typewriter for ...	260
Sells typewriter for	365
Of his bill to customer, he pays 4 per cent sales tax of	15
2. *The planned "added-value" system*:	
(a) Producer sells typewriter for ...	220
The 10 per cent sales tax specified on bill is	22
(b) Wholesaler buys typewriter for ...	220
Sells typewriter for	260
The 10 per cent sales tax specified on bill is	26
Since producer already paid sales tax of	22
Wholesaler pays only rest of ...	4
(c) Retailer buys typewriter for ...	260
Sells typewriter for	370
The 10 per cent sales tax specified on bill is	37
Since producer and wholesaler already paid sales taxes of DM 22 and DM 4, retailer pays only the balance of	11

In the first example, the total sales tax accruing in three acts of purchase and sale is DM 8 plus DM 10 plus DM 15, or a total of DM 33. This amount would rise sharply in any further act of buying and selling ("cumulative" or "cascade" effect). One handicap of present system: the total amount of sales tax included in final bill is unknown to buyer, exporter, etc., since it is not specified on bills.

In the second example, the total sales tax accruing at a retail price of DM 370 is DM 22 plus DM 4 plus DM 11, or a total of DM 37 (10 per cent), no matter how many acts of purchase and sale are involved. One advantage of this system: the total amount of sales tax included in final bill is exactly known, since it is specified on each bill.

As the foregoing examples show, a commodity can carry a disproportionately low tax at an early

(Continued on page 540)

DELHI LETTER

BACK TO CONTROLS IN FOODGRAINS

TRADE RELATIONS WITH AUSTRALIA AND IRAN

From Our Special Correspondent

NEW DELHI, *24th March*

THE Finance Minister, Mr. T. T. Krishnamachari, is said to be experiencing frustrating difficulties in the way of his work. Nature and Cabinet colleagues have conspired to upset some of his concepts for supplying plenty of vitamins to revive the economy. The Finance Minister's liberalisation of bank credit is now widely considered to have backfired and contributed partly to the increase in the prices of foodgrains. Unfortunately for the Finance Minister, the liberalisation policy announced about the beginning of the current busy season, coincided with a bad agricultural year. Food controls are back again. The Finance Minister has also lost the first round of his running battle with the other Southern stalwart, Steel Minister Subramaniam, in preliminary matters concerning the erection of the Bokaro steel plant. A committee of officials, whose trend of thinking was tuned to T.T.K's broadcasts, had more or less said 'No' to Dastur and Company being the consultants. Mr. Subramaniam is understood to have made it an issue of prestige and has won the day. After all the in-fighting among the forces in Delhi, Dastur and Company will now be given a commanding role in pushing the Bokaro project through.

Wheat Zones

On Monday this week, Mr. Swaran Singh, the Food Minister, announced in the Lok Sabha the formation of nine wheat zones with immediate effect. Later in the day, speaking to the Parliamentary Consultative Committee, the Food Minister indicated that the wheat zones were only an appetiser; more controls were round the corner. While recognising that Nature has played foul, Mr. Swaran Singh has all along been placing equal emphasis on the mischief of grain dealers as being responsible for pushing up food prices. Mr. Swaran Singh also wants to fix ceiling prices for wheat and rice.

Indo-Australian Trade

(In crores of rupees)

Fiscal year	Indian imports	Indian exports	Balance in India's favour
1955-56	13.47	24.82	+11.35
1956-57	12.72	23.43	+10.71
1957-58	15.75	23.06	+ 7.31
1958-59	14.89	21.13	+ 6.24
1959-60	19.64	18.52	— 1.02
1960-61	17.79	22.38	+ 4.59
1961-62	22.73	16.03	— 6.70
1962-63	22.36	18.99	— 3.87

The wheat zones are: (1) The Punjab and the Union territories of Delhi and Himachal Pradesh from where export to Jammu and Kashmir will be permitted; (2) Uttar Pradesh; (3) Rajasthan; (4) Madhya Pradesh; (5) Bihar; (6) Maharashtra from where export to Goa will be permitted; (7) Gujarat; (8) Andhra, Madras, Kerala, Mysore and Pondicherry; (9) West Bengal, Orissa, Assam, Nagaland and the Union territories of Tripura and Manipur.

Permits for inter-zonal movement are not normally to be granted to private business men. This means that inter-zonal transactions will only be through State trading. Mr. Swaran Singh does not think that any procurement price needs to be fixed for wheat as in rice because he does not expect any surplus from the wheat producing areas. A substantial floor price for wheat already exists.

Mr. Swaran Singh hopes that the zonal movement controls will conserve supplies and help the Government to concentrate in areas of scarcity where it could distribute foodgrains from imported stocks. According to the Food Minister, about nine lakh metric tons of wheat have been distributed through fair price shops in January and February. The next task will be to negotiate a new deal with the United States for ample supplies under P. L. 480.

The annual report on the working of the Food and Agriculture Ministry covering the fiscal year 1963-64 says that, in the calendar year 1963, the Government issued 4.92 million metric tons of foodgrains from its stocks. Of this quantity, 3.8 million metric tons were wheat and 1.12 million metric tons rice. In 1962, the Government had issued 4.31 million metric tons from its stocks. Mr. Swaran Singh says that more than 60,000 fair price shops are functioning in the country, that is, one fair price shop for about 1,700 families.

Imports of foodgrains in 1963 were 4.56 million metric tons, valued at Rs. 183.6 crores, as compared with 3.64 million metric tons worth Rs. 141.1 crores in 1962 and 3.5 million metric tons worth Rs. 129.6 crores in 1961. Of the 1963 imports 4.073 million metric tons were wheat and 483,000 metric tons rice. Outside the P. L. 480 agreement of May 1960 which provided 3.898 million metric tons of wheat in 1963, India got 19,000 metric tons of wheat from Canada and 156,000 metric tons from Australia. Three lakh metric tons of rice came from the United States, 173,000 metric tons from Burma and 10,000 metric tons from South Vietnam. Contracts have been made for about 20,000 metric tons of wheat from Canada and about 180,000 metric tons of wheat from Australia.

Talks with Australia

For five days ended last Friday, a delegation from Australia had talks with Indian officials on ways to promote trade between Australia and India. The Australian delegation was headed by Mr. Nevil Stuart from the Department of Trade, Canberra, and included an aide from Canberra and the Australian Trade Commissioners in Bombay and New Delhi. No spectacular results were expected from the talks and the officials of the two countries had detailed discussions on each item in Indo-Australian trade. From Australia's point of view, there has been some concern over the reduced quantities of Indian wool imports.

The three major items of Indian exports to Australia are jute goods, tea, and cotton textiles. And there have been setbacks of a severe nature in the exports of jute goods and tea. Both in wheat transportation and in carrying sugar, the Australians have been switching more to bulk handling, but the big reductions in sales of jute goods to Australia stem from successful competition from Pakistani jute mills. Apart from the Pakistani bonus scheme on which the Indian exporter tends to put all the blame, the Calcutta exporters have been found wanting in control of quality. In the 1957-58 jute season, Australia bought almost all her requirements of 69,500 tons of sacking from India. By 1961-62, Indian sacking exports to Australia had fallen to 36,400 tons and Pakistan was selling 31,400 tons. Ceylon tea is also promoted by aggressive salesmanship in Australia. Indian cotton textile goods suffer from the same disadvantages as exports from Hongkong or Japan in that the Australians are keen to protect their small home industry.

A new item of exports to Australia that may be developed is machine tools. The leader of the Australian trade delegation paid a visit to Hindustan Machine Tools in Bangalore and to a manufacturing establishment at Faridabad, near Delhi. The products of Hindustan Machine Tools can be promoted in Australia, provided there is no contravention of franchise agreements with foreign collaborators. While wheat, wool, non-ferrous metals and milk products account for the major Australian exports to this country, in recent years there have been some attempts for Indo-Australian collaboration in small industrail projects. Among these is a deal between Repco, automotive parts makers, and Indian Pistons Repco Limited of Madras and Bimetals Bearings of Madras to make flywheel starter gears and pistons. Other collaboration agreements include those between Moore Road Machinery and Agrind Fabrications of Calcutta for road rollers, Mindrill Limited and Greaves Cotton to make diamond bits for rock drilling, Sparton Paints and Addison Paints and Chemicals of Madras, Olympic Tyre and Rubber and Indian Rubber Works of Bombay, Taxi-meters Australia Limited and Taxi-meters and Equipment Limited of Delhi. An Indian delegation will visit Australia later this year to pursue the trade promotion

LONDON LETTER

WAS JANUARY TRADE A FREAK?

IMPORTS EXPANDING FASTER THAN EXPORTS

From Our Own Correspondent

LONDON, *22nd March*

ALTHOUGH the Trade figures are now being used as a kicking ball in the British political game, it is a ball with an individuality of its own which refuses to be tamed to serve even a Prime Minister's whim. Sir Alec Douglas-Hume denied the validity of the trade figures in January and applauded them in February. More ordinary men must try to see what is really going on. The short answer appears to be that the January figures were freakish, but not nearly so as the Government (or the Premier at least) had hoped and that the U.K.'s balance of payments is, as a result, really showing the strain resulting from high demand imports.

In January, imports did shoot up to an all-time record (over £500 million on a c.i.f. basis) seemingly because of an inordinate stocking demand. For February, on the same basis, imports dropped back to £431 million. But the more serious factor in January was an astonishing fall in exports, right against the trend of the past year (though, in April 1963, there was also a temporary plunge). Now in February exports have risen to a new high peak! So January's record imports have been matched by February's record exports—and therein lies the moral: for the import growth is steeper than the export growth.

Making the comparison between imports and exports on the same basis (i.e. f.o.b.) in January, the trade gap (which can only be filled by invisibles) was £73 million (compared with some £13 million in December). In February, thanks to the export upsurge and the drop in imports, it fell back to £12 million. To have justified the Prime Minister's buoyancy, there ought to have been a trade *surplus* in February. For the deficit to have gone back to the "normal" recent level (it was £12 million in the three months September-November 1963) still leaves the horrific January figure upstanding. Thus, over the last three months, one must accept that the average trade deficit was as high as £33 million—nearly three times its level for the previous three months. Whatever the causes (it has been explained that restocking was the principal one), the long-term trade deficit is obviously much worse than had been anticipated.

Exports Must Expand Too

Is there a more cheerful side to this? Undoubtedly. In the first place, even though the import trend is up, it is not outrageously so. Over the past three months, imports are some 8 per cent higher than over the preceding three months and about 12 per cent higher than over 1963. In an expanding economy, exports must expand too and the figures for the past three months are 2 per cent up on those for the preceding quarter and 4 per cent up on 1963 as a whole.

These percentages tell the complete story: unless the rate of growth of exports in relation to imports can be improved, then the U.K. is going to pile up an uncomfortably large deficit. No doubt the Commonwealth Economic talks in London and the U.N. Conference on Trade and Development about to open at Geneva will take note of the implications of this. The relevance of the trade gap to politico-economic policy becomes more than ever marked.

There is no doubt that the industrial background to the balance of payments is very firm. The most recent production indices show a steadily rising trend bringing the level of output for the past quarter 2½ per cent over that of the previous quarter, 5 per cent over the period six months ago and no less than 12 per cent over this same time last year. And there are still plenty of businesses with unused capacity or which could use their existing capacity more intensively. In January, productivity was no less than 14 per cent over the level of twelve months earlier and even if this is discounted (since January 1963 was, for weather reasons, exceptionally bad), the figure is not likely to be less than 10-11 per cent on a longer comparison. Unemployment continues to fall, wages creep up, so do retail prices; but retail trade positively bounds ahead. This is all very healthy and the only cloud in this sideline survey is that export prices which have stood still in recent months (though they are 2 per cent up on the year) are lagging behind import prices. Thus, for the first time in many years, the terms of trade are taking a turn for the worse against the U.K. It is unlikely that the country will be able to rely any longer on help from this item in balancing its trading.

However, the U.K. picture must not be seen in isolation. None of the troubles affecting this country is absent from our European neighbours. The Common Market countries, which suffered a heavy overall trade deficit last year, are witnessing no turn in their trade tides; they are facing rising costs, with wage increases outpacing productivity increases by substantial margins (they are therefore in a far more advanced—the wage/cost state—inflation than is the U.K.). Indeed, the best palliative for a British minister sick with finding no solution to his domestic production and balance of payments tangle, is to look at Europe—and maybe to reflect that had the U.K. been in the Common Market she would be further on the way to joining the recession countries.

What does matter in all this is what contribution the U.K. and Europe are to make in the Geneva Development talks. Progress in these talks from the point of view of the developing countries demands an expansionist outlook. The U.K. is scared that her own expansion will outrun her capacity and, therefore, wants to control it; the European Community has lost sight of expansion altogether. Whence will the vision come? Where are the resources to implement it at this time? These are the questions beginning to be asked here, as the preliminary Commonwealth talks conclude.

DELHI LETTER

(*Concluded from previous page*)

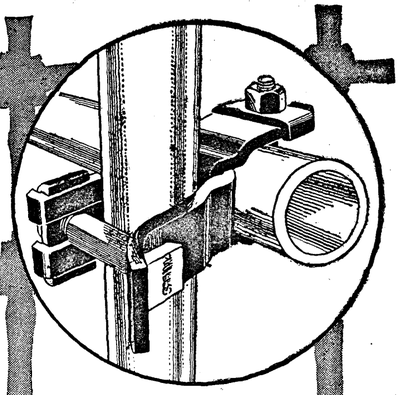
efforts further. At the Melbourne Trade Fair last year, the Indian participation was negligible, but at the international trade fair in New Zealand late in August next India has decided to participate in a proper way.

Opportunities in Iran

The current Indian trade exhibition in Kuwait is prestigiously big enough but Kuwait in itself is not an extensive market. Some plans are under study for an organised attempt to promote non-traditional Indian products in West Asia and the Middle East. When Mr. Manubhai Shah was in Teheran earlier this month to attend the session of the Economic Commission for Asia and the Far East, he used the opportunity to sign a trade and economic and technical co-operation agreement with Iran. The agreement had been negotiated earlier by Mr. Srinivasachar, Joint Secretary in the Trade Ministry, when he visited Iran in January. In recent days, Iran has changed its emphasis radically in the matter of imports. After extravagant imports in the later fifties, Iran has placed high tariffs on imports and is keen to encourage a variety of indigenous manufacturing units. Nearly thirty years ago, a group of Parsis from India had invested in a textile mill in Iran. Until some years ago Iran was a substantial importer of cement from India; now Iran has a cement surplus. India used to sell large quantities of *vanaspati* to Iran which now processes vegetable oil using imported oilseeds.

Late last year, Kamanis entered the investment field in Iran by participating in a copper rolling unit in the suburbs of Teheran. Kamanis are now interested in setting up a factory for house meters. Mahindra and Mahindra are said to be evincing interest in collaborating for the establishment of a factory in Iran to make trailers and axles. Birlas are probing prospects for a variety of industries—transformers, jute, sugar, air-conditioning and bicycles. Birlas also wish to open a permanent display centre in Teheran.

WHICH HOLDS THE GREATER LOAD?



Modern construction projects, require scaffolding of far greater strength and safety than bamboo tied with coir.

Unaffected by rot, fungus and termites, Mills tubular scaffolding has a versatile use—storage racks, temporary buildings, open-air auditoriums or bridges—apart from its normal use as a construction aid.

The special spring-steel fittings quickly secure the tubes—with a ½" spanner as the only tool needed. The greater the load the firmer the grip of the fittings, since they are designed on the 'shackle grip' principle.

All fittings are made by Guest, Keen, Williams, Ltd. and the tubes by The Indian Tube Co. (1953) Ltd.

BOMBAY'S CIVIC PROBLEMS

IT is customary for the presidents of national chambers of commerce to deal with problems pertaining to economic policy, taxation, trade, labour, and so on, in their addresses at annual general meetings. This has been the practice of even regional chambers of commerce like the Indian Chamber of Commerce, Calcutta, Bengal Chamber of Commerce and Industry, Calcutta, Indian Merchants' Chamber, Bombay, and Bombay Chamber of Commerce and Industry. But this year there has been a departure from this practice in the presidential address of Mr. Akbar Hydari at the annual general meeting of the last-mentioned Chamber held at Bombay on the 21st instant. Mr. Hydari's address, devoted entirely to some of the pressing problems of Bombay City, was, however, not unrelated to industry and trade. As a port of international repute and a leading centre of trade, commerce and industry, Bombay's civic problems are intertwined with its innumerable industries. Schemes designed to expand the handling capacity of the port, to relieve traffic congestion on the roads and to improve water-supply, sewerage, housing and fire-fighting facilities in a crowded metropolis like Bombay with its four million people are all directly or indirectly related to the industrial situation. If the City's civic problems are not to deteriorate to the point of operating as a drag on industry and its further development; if, in short, Bombay is not to become another Calcutta, timely and simultaneous action would have to be taken on several fronts. It was, therefore, in the fitness of things that Mr. Akbar Hydari sought to focus public attention on the City's problems and the possible solutions therefor.

Speedy dock expansion was rightly accorded the pride of place in Mr. Hydari's address. As nearly 40 per cent of India's imports and exports have to pass through Bombay, the Dock Expansion Scheme, approved in 1962 and aided by the International Development Association, would need to be implemented with expedition. If the progress of this project is not to be held up, the training of technical personnel, who are very much in short supply now, should proceed on the required scale and the World Bank's offer to finance schemes for such training should be promptly availed of by the Port authorities. The volume of dredging should also be increased at the same time.

While port development is certainly necessary for handling the ever-increasing volume of exports and imports, its consequential impact on the already congested transport network of the City would also call for attention. It is in this context that Mr. Hydari's treatment of the City's traffic problem is particularly relevant. At the outset he highlighted two facts, namely, that the City's rail and road systems were designed to serve a population of under two million only and that the vehicle population had more than doubled in the past ten years. There is, therefore, acute traffic congestion all round. But it is heartening to find that several schemes have been under way to ease vehicular traffic, particularly through traffic to and from Poona and Ahmedabad. The recent opening of the Eastern Express Highway and a part of the Western Express Highway is a notable development in this connection. Work is also continuing on other schemes like the construction of bridges across the Thana and Bassein creeks and link roads for the Express Highways. But a lot more will still have to be done to relieve the congestion of truck traffic originating in the docks and of urban and suburban traffic proper.

Another problem, which has a vital bearing on industrial production and the health of the City's population, pertains to protected water-supply and sewerage. The current gap between the daily requirement of water (about 300 million gallons) for domestic and industrial purposes and its average daily supply of 210 million gallons is expected to widen further, unless the proposed schemes are executed according to schedule. The long-term prospect in respect of an estimated demand of 560 million gallons per day for a population of 7.5 million in 1981 would depend on the speed with which five more reservoir schemes, involving an aggregate outlay of Rs. 128 crores, come to be implemented in the next 10 to 15 years. One can readily visualise that any such expansion in water-supply would have a serious impact on the already over-loaded sewerage system, unless, of course, drainage facilities are simultaneously expanded.

The acute shortage of housing accommodation is one more problem to which Mr. Hydari could have devoted some attention, but has not. Perhaps he thinks that the housing situation might be eased if and when the master plan for the City, which is to be submitted to the State Government by the end of July next, is implemented. The expectation here seems to be that the detailed planning contemplated for wards and zones in Greater Bombay might bring about a better balance between residential and industrial areas and mitigate the severity of the housing problem.

COTTON TARGET ELUSIVE

None, except perhaps the born optimist, would have thought when the third Plan target for cotton was fixed about four years ago that the target would be reached. For from 5.4 million bales (of 400 lbs. each) which was the production in the last year of the second Plan, to 7 million bales, the third Plan target, was indeed a far cry. The performance on the production front during the first three years of the third Plan has only confirmed the view that actual output would fall short of the target by a sizable margin. For, even if the current season's crop turns out to be a good one, as in the last season, and aggregates 5.6 million bales as at present anticipated, a 25 per cent increase in production would have to be achieved in the next two seasons for the Plan target to be reached. Past experience does not warrant the conclusion that this could happen. Mr. Swaran Singh, Union Minister for Food and Agriculture, himself has now admitted that the Plan target would not be reached, unless extraordinary and unrelenting efforts were made by all concerned.

Much store was set by the package scheme introduced in different irrigated parts of the country to raise cotton production through improved yield per acre. Even this hope has now been belied. For one has the authoritative statement of Mr. Swaran Singh to that effect. He conceded, in his speech at the eighty-ninth meeting of the Indian Central Cotton Committee, held at Bombay on the 21st instant, that "the scheme is not being executed in the desired manner." Although several facilities such as provision of additional staff and subsidies on seeds and other facilities have been offered for the execution of the scheme, it now appears, according to the Union Minister, that full use thereof is not being made by all States. This is, indeed, a disturbing revelation, though it is not altogether unexpected, because, right from the beginning, the response from the State Governments to the package programme was rather cold. The introduction of the package programme itself was delayed, supposedly due to financial and administrative reasons, as well as to lack of adequate, trained personnel. It is not known what progress has been made in regard to the plan for bringing the expected 600,000 acres under the package programme during the current season. But judging from the comment of Mr. Swaran Singh it looks as though the progress or the lack of it is disappointing. It is, therefore, almost certain that the third Plan target for cotton production would not be achieved. Not that anybody, who knows the ways of the Government, did expect that it would be. But considering the widening gap between demand and indigenous production and the imperative need to curtail imports of foreign cotton to save foreign exchange, one hoped that the Departments of Agriculture of State Governments would bestir themselves into some vigorous action to increase cotton production. But this hope has been in vain. The blame for this should not be laid entirely at the door of the State Governments. The Union Ministry of Agriculture, too, is blameworthy to some extent, because it failed to get its counterparts in the States to act vigorously in the matter.

The tragedy of the situation is that even though India is rich in knowledge (accumulated over the years) on agronomy, soil chemistry, irrigation, etc. which, if put into practice, will surely help to raise yield and increase production, it is lacking in a dynamic administrative organisation to make adequate use of this knowledge. The politicians, who have been in power ever since Independence, have been excellent talkers but poor administrators. Their production in words has been prolific but their performance in terms of deeds does not redound to their credit. How else is one to explain the failure of State Governments to make use of the several facilities made available under the cotton development schemes and the package programmes. And the Centre too is unpardonably indulgent and does nothing about the State Governments' indifference or inefficiency. And as long as this attitude persists, cotton production will remain an unsolved problem and Plan targets will never be hit. So far planning in respect of cotton has largely been an exercise in economic futility, and it will continue to remain so, unless official approaches and attitudes are radically changed. The crux of the situation in regard to cotton is that the disease has been diagnosed long ago and the remedy too has been well known, only it is not being properly applied.

A FINE SUGGESTION BY MR. TATA

A search for talent is on in the country in which the Union Government, State Governments and private agencies are engaged. Promising young people are increasingly encouraged by scholarships and other aid to develop their talents. But all this amounts merely to nurturing talent among the young and giving them "opportunities for the fullest education within the framework of the present system." This is no doubt commendable, but it is just not enough in the opinion of Mr. J. R. D. Tata who delivered the presidential address at the Fourth General Assembly of the Indian Institute of Science, Bangalore, on the 19th instant. His suggestion is that there should be something different for the most talented on the lines of the Grandes Ecoles (Great Schools) of France which train the most gifted to the highest level. While readily conceding that the democratic process will throw up leadership at all levels, Mr. Tata has nevertheless emphasised that "the progress of the country will greatly depend on the creative and constructive abilities of an elite of brilliant administrators, managers, scientists and innovators whose example and leadership will inspire others." But men who can attain such high levels of competence are always very few in number. It would be a great loss to society if these few men are not trained "to the top of their bent." Mr. Tata has developed his idea further by outlining, in this connection, a plan of action involving three steps.

The first of these steps would call for the establishment of a central agency which is to conduct a vigorous search for the best talent in our schools and colleges. Special facilities should next be created for training intensively the most promising, so that they may enter stiff competitive examinations. And, lastly, only the ablest—a number not exceeding five hundred at the outset—who get through such examinations should then be trained in three or four "career" institutions for a period of two or three years. These institutions, as envisaged by Mr. Tata, "should be uninhibited by traditional concepts and courses of study and be free to innovate and experiment." It is for the authorities to act on this fine suggestion advanced by Mr. Tata and for educators and administrators to determine the kinds of training and the degrees of specialisation related to the needs of the country.

The kind of specialisation and advanced training envisaged for talented men would become extremely difficult if the standards of education at higher levels are allowed to deteriorate. For, after all, it is from that reservoir represented by the universities that talented men would have to be selected for intensive training preparatory to stiff competitive examinations under Mr. Tata's plan. It is in this context that the need, among others, for continued reliance on the English language should be evident. Mr. Tata's vigorous criticism of some people who are faltering in their attitude to that language may be usefully quoted here:

"Before closing, may I refer for a moment to a curious contradiction in the thinking of some people? While they are convinced that the standards of education at higher levels must not be allowed to fall, they falter in their attitude to the English language, so that at times they appear ready to turn their backs on the pursuit of the best and most advanced knowledge which is available to us through English, that window on the outside world. While they look forward to closer collaboration among the universities and institutions for advanced work, they seem, at the same time, to view with equanimity their possible isolation from one another which the loss of English and dependence primarily on regional mother tongues might mean. If the history of the struggle over English ever comes to be written, it will reveal a sorry picture of confusion, contradiction, fanaticism and plain good sense, all mingled in State policies, public pronouncements and political propaganda. I have yet to see one clear, coherent, consistent and convincing programme on the subject that will hold in balance the claims of Hindi, regional languages and English. It is much easier to forecast, say, the production of steel under a planned programme in twenty years from now than the position of English, but my own guess is that English will be in a stronger position in this land in 1984 than it is today! Unless a rational solution of this admittedly difficult problem is found soon, we shall meet with continued confusion in the educational life of the country, resulting in a further deterioration in overall standards."

That is indeed a forthright and correct stand on the place of English. If Mr. Tata's guess that English might be in a stronger position in this country in 1984 than it is today comes true by any chance, it would mean the maintenance of highest standards in education. But will politicians and linguistic fanatics oblige the present younger generation, as also posterity, by retreating to sanity before much further harm is done?

PROTECTING CONSUMERS' INTEREST

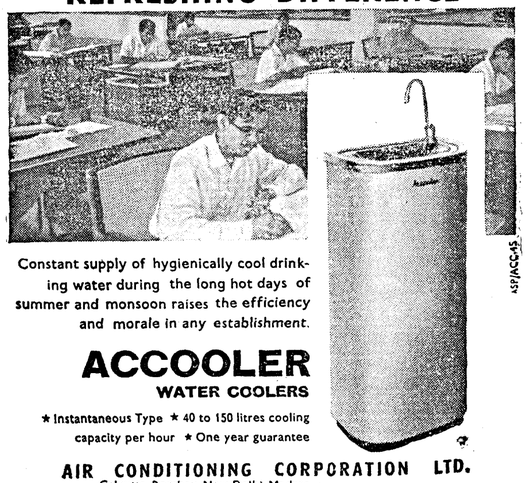
To the seven Division Councils of the Indian Standards Institution (agriculture and food products, building, chemicals, electro-technical, engineering, structurals and metals, and textiles), one more has now been added, namely, the Consumer Products Division Council which was inaugurated by Mr. Nityanand Kanungo, Union Minister for Industry, at New Delhi on Tuesday last week. The establishment of this Council is, indeed, a welcome move, in that it signifies the importance attached to the need for maintaining uniform quality in the production of goods and protecting the interests of consumers in a fast-developing industrial economy such as India. The three thousand and odd consumer items that are entrusted to the new Council come under fifteen broad categories, including utensils, cutlery, umbrellas, sports goods, pencils, matches, kerosene oil appliances for lighting and heating, medical instruments and equipment, and hospital appliances. All these items, besides being very widely used within the country, have considerable export potential. Last year (1963), India exported Rs. 112 lakhs worth of utensils of various kinds, Rs. 65 lakhs worth of sports goods, and Rs. 31 lakhs worth of umbrellas and components.

In the context of the drive for expansion and diversification of exports, standards on such consumer products, as Mr. Kanungo stated, will have an important role to play. "Exporters," to quote him, "will have to depend largely on the consistency of the quality of our goods and their reliability. Building up a reputation for quality goods is a painfully slow process, but the effort would be well worthwhile." The new Consumer Products Division Council of the I.S.I. can certainly be relied upon to break fresh ground in standardisation and start pioneering work on several vital items. It is gratifying to learn that the Council has already set up fifteen technical committees on which representation has been given to all interests concerned: consumers, manufacturers, Government departments and testing organisations.

The active association of consumer interests in the task of formulating quality standards is only as it should be. It is the consumer—an individual or a factory or a Government—that purchases goods for use or consumption. Even in a controlled economy, consumers ought to have reasonable scope for exercising their right of sovereignty, in order to prompt the producers of goods to maintain as high a level of quality as possible. The experience of the industrially advanced countries in the West which Mr Kanungo narrated in his speech shows that the consumer movement has registered phenomenal growth in recent years. Thoroughly confused by the available information on the products sold in shops and often frustrated by not getting fair value for money, increasing number of consumers have been organising and pooling their resources for setting up consumer-testing facilities and reporting the results. They are democratic institutions, financed by consumers and controlled by consumers. These organisations compare the quality, performance and value for money of the goods and services offered to the consumer and publish frank reports on the results of these comparisons together with the names and brands of the products tested. There are about thirty such consumer bodies and associations in different parts of the world with their activities co-ordinated and reinforced by the International Office of Consumers Unions. Some of them, such as those in the U.K., the U.S.A. and Holland, are dependent entirely on individual members, while others such as those in Denmark, Norway and Sweden are supported to an extent by their Governments. The membership of some of the Associations runs into several hundred thousands. For example, in the U.S., the total membership of the consumer organisations has exceeded 1.5 million. In the U.K., the Consumer Association has a membership of over 333,000 with an annual income of £500,000 (roughly Rs. 70 lakhs) which comes entirely from its members.

As compared with these efforts in other countries, the attempts made in India are feable. Mr. Kanungo recalled the establishment of the Consumers' Association of India in 1959 but regretted that the Association never found its footing, in spite of the active assistance rendered by the Indian Standards Institution and the Planning Commission. It is, however, a matter for satisfaction to hear from Mr. Kanungo that Mr. Justice G. D. Khosla has now assumed the presidentship of the Association. Under his able guidance and with the more active assistance from the I.S.I. and the Government, the Association, one may reasonably hope, will soon be rejuvenated.

REFRESHING DIFFERENCE



Constant supply of hygienically cool drinking water during the long hot days of summer and monsoon raises the efficiency and morale in any establishment.

TARGETS FOR GENEVA TRADE TALKS

AN ASIAN PLATFORM OF PRINCIPLES EMERGES

By K. Krishna Moorthy

ASIAN leaders and officials dealing with trade problems used the occasion of the twentieth session of the United Nations Economic Commission for Asia and the Far East (E.C.A.F.E.) that took place in Teheran from 2nd to 17th March, to expore their area of agreement on a common approach at the Geneva conference on world trade and development. There was unanimity of opinion on various trade problems and that was only to be expected. The impressive advance made at Teheran was that details of the trade problems, which were obscurely expressed at various similar conferences earlier, were discussed with a certain amount of clarity. With the Geneva conference round the corner the problem of dealing with the rich nations dominated the discussions. Japan was not in a position of leading any assault on Western and other developed countries' practices, since she herself is no poor nation; it fell to the lot of India and her Minister for International Trade, Mr. Manubhai Shah, to expound the cause of underprivileged Asia. There was able follow-up by Pakistan, Ceylon and Hong Kong, in particular.

Mr. Manubhai Shah initiated the specific resolution on trade, adopted unanimously by the 28 members of E.C.A.F.E., which spelled out the demands of the poor nations of Asia. As pointed out by some delegates to this correspondent, speaking first while introducing the resolution jointly sponsored by nine countries, Mr. Manubhai Shah covered almost the entire array of Asian developing nations' grievances. After discussing the generally stagnant pattern of exports from developing countries, Mr. Shah outlined three lines of action as necessary to overcome the difficulties.

First, access to world markets would have to be improved greatly. The main obstacles in the way of better access for primary products were agricultural protectionism and consequent quotas and tariff barriers, high internal taxes and other non-tariff barriers. In the case of processed and semi-processed goods, quotas and tariff barriers and anti-dumping laws were the serious obstacles. Mr. Shah suggested that the developed countries push ahead more quickly with the action programme drawn up by the ministerial conference of G.A.T.T. in May last year.

Secondly, the less-developed countries could seek new markets. Mr. Shah pointed to the centrally planned economies (communist countries) as new outlets for exports of less-developed countries. The share of Eastern Europe in the total trade of the E.C.A.F.E. region has gone up from one per cent in 1953-54 to 3.1 per cent in imports and 5.2 per cent in exports in 1961-62. Mr. Shah mentioned that this growing trade with communist countries should be developed on commercial lines so as to avoid some of the disadvantages arising out of bilateral arrangements.

Thirdly, the less-developed countries could trade on a larger scale among themselves. Nevertheless, if there is to be any hope at all for the poor nations to increase their exports, the industrialised nations need to permit free access for products without demanding reciprocity—this was briefly how Mr. Shah defined the basis for the demands to be made at Geneva.

Trade with Communist Bloc

While lauding the bilateral approach of the communist countries which has helped India as well as some other Asian countries to increase export earnings in the past decade, India has normally refrained from publicly criticising the pattern of East European behaviour in commerce. However, at the Teheran conference, making a welcome departure, India served notice that some of the criticism which she makes of Western industrialised countries also applies to Communist bloc nations. It is relevant to quote here the remarks of Mr. Shah dealing with this aspect of the problem. Mr. Shah said:

"Since trade with the socialist countries of Eastern Europe has assumed great significance in the past few years, new principles and rules to regulate and promote such trade will have to be evolved. The centrally planned economies can further reorient their production and trade policies in favour of the economies of the less developed countries.... While trade with these countries has expanded rather rapidly from the low levels which existed some time ago, the centrally planned economies should review their internal tax and pricing policies with a view to increasing their consumption of goods exported by the less-developed countries. As consumer goods enjoy a low priority in these countries, restrictions which these countries tend to place on import of consumer, manufactured and processed goods in a way hinder the exports of developing countries."

The Russians had to refrain from pressing their demand for a new international trade organisation, an idea which had found some favour in some Asian, African and Latin American countries in the beginning. At the Teheran conference, the Russian delegates merely asked for the "sympathy and support" of the Asians in their demand for a new organisation but there was not one Asian speaker to endorse the Soviet plea. Those Asian countries which are not yet members of G.A.T.T. appeared keen on getting into G.A.T.T. Any support for the idea of an international trade organisation would have merely meant political propaganda on behalf of Russia for a project which would be thrown overboard by the U.S. Congress, for example. Reform of G.A.T.T. and addition of new trading arrangements, rather than scrapping of G.A.T.T. and substitution by a new organisation that was the general approach at Teheran.

G.A.T.T. Action Programme

In the Teheran resolution, as originally drafted by India and eight other countries, the G.A.T.T. action programme had been mentioned as a desirable course to be pursued with vigour. But the Russians would have no mention made of G.A.T.T., because the organisation still considers the Soviet Union and its kind as untouchables. The reference to G.A.T.T. in the resolution had to be deleted to accommodate the Soviet Union. While pleading for the extension of G.A.T.T. to include the Soviet Union as well as many new sovereign nations, some delegates privately pointed out that, if a way could be found to bring the Soviet Union into some sort of international trade discipline, that would be a substantial achievement, whether within G.A.T.T. or outside it.

Apart from the episode involving the Russians, another interesting sidelight of the Teheran conference concerned Australia and New Zealand which were attending the meeting for the first time as full regional members of E.C.A.F.E. The E.C.A.F.E. Secretariat, in its annual survey, had treated Japan, Australia and New Zealand as a class apart, not within the definition of "developing nations" in the region. In a way, Australia and New Zealand were caught between the rich and the poor and neither set of nations was willing to accept the two countries into the fold. There were also uncharitable remarks, publicly made, about Australia and New Zealand being European appendages not really within the E.C.A.F.E. community. Both Australia and New Zealand are as keenly interested as any Asian nation in the reform of G.A.T.T. and in international commodity agreements to stabilise prices.

The Teheran charter of demands for the Geneva conference included a suggestion that the U.N. Conference on World Trade be reconvened once every two years. The general idea was that the conference should also have a permanent secretariat and a standing committee. The E.C.A.F.E responded in a way to Latin American and African appeals. The Executive Secretary of the Economic Commission for Latin America, Mr. Jose Antonio Myobre, visited Teheran during the E.C.A.F.E. session, addressed the conference and asked the Asian delegates to join the Latin Americans and Africans in presenting a common platform at Geneva. The Asian delegates were impressed with the dynamism of Mr. Myobre who was formally the Finance Minister of Venezuela and a political exile from his country during the days of the military regimes. The E.C.A.F.E. resolution confined itself to agreeing formally to co-operate with African and Latin American commissions but refrained from making anything like a trade union approach. Both E.C.A.F.E's Executive Secretary, U Nyun, and Mr. Manubhai Shah, congratulated themselves and their E.C.A.F.E. colleagues for "going farther than the Latin Americans and Africans" in their approach to international trade problems. It was not immediately clear how valid these claims were. Both Africa and Latin America have made more progress in substantial ventures of co-operation under their economic commissions than Asian nations have.

Appeal to the Rich

The most important clause in the Teheran resolution was an appeal to the industrialised countries, making the following supplication:

1. Progressive reduction and early elimination of all barriers and restrictions impeding the exports of the developing countries, without reciprocal concessions on their part;

2. refraining from imposing new tariff and non-tariff barriers to such exports;

3. reduction and gradual elimination of differences in the tariffs as between raw materials

COMMODITY PRICES AND RESERVE CURRENCIES

By Questor

THE consequences of the collapse of commodity prices during the nineteen-fifties have been serious enough amply to justify the attention they have, belatedly, been given. But the steep reaction from the Korea boom masked a more fundamental trend. Recovery from wartime devastation, technical improvements, subsidies and heavy investment all helped to increase the output of raw materials at a time when greater efficiency in their use and the development of synthetic substitutes were tending to keep the growth of their consumption below the growth of the developed economies.

For a decade now, the raw material and agricultural exports of the poorer countries have tended to fall in price, while the manufactured exports of the richer countries have tended to rise. Even if aid were a satisfactory substitute for trade—and foreign loans are directed into a few large channels rather than many small ones—the increase in aid has been cancelled out by this shift in the terms-of-trade. The rate of economic growth in most primary producing countries has slackened rather than accelerated.

In the past two years, however, the behaviour of commodity prices has changed. There have been fluctuations, of course, but the downward trend has given way to a slow upswing. The expansion of U.S. business has lasted for an exceptionally long time, the British economy is beginning to grow fast, and growth is continuing in continental Europe, even if at a slower pace. The primary producers are faring better than for some time past, and it is becoming relevant to wonder whether perhaps a new long-term swing in the terms-of-trade is now beginning. Many economists have recently suggested that the swing against the industrialised world might prove quite sharp. If they are right, a new twist will be given to the continuing debate on liquidity shortage.

It is always rash to talk about primary products and primary producers as a whole, because each is affected by somewhat different considerations. The current demand for sugar and cereals, for instance, is likely to be met by increased production fairly quickly. Coffee is firm largely because of frost and forest fires in Brazil. Cotton and rubber prices seem likely to be held permanently down by the competition of synthetics and there must be a ceiling on the price of wool. There is no immediate shortage of metals, with the important exceptions of tin and silver whose price, held down temporarily by sales from U.S. stocks, must be left eventually to rise if new resources are to be exploited. The industrialised world is certainly a long way off being short of raw materials and foodstuffs.

On the other hand, it is possible, if business activity in the industrialised countries continues to expand, that prices for many raw materials may continue upwards for some time. If drifting prices and the existence of vast surpluses can no longer be taken for granted, firms throughout the Western world may well decide that the level of stocks on which they have recently been in the habit of depending is dangerously small. A rush to rebuild stocks could drive up prices further and could be accelerated, once begun, by news of upheavals in any of the numerous politically unstable countries on which the West depends for its supplies.

The possibility that more money may soon be taken up in financing stocks of raw materials is of interest not only to the primary producers themselves: it may also have repercussions on the position of the reserve currencies—the dollar and the pound. The position of these two as reserve currencies has recently been a serious disadvantage to them. European surplus countries have acquired more dollars and pounds than they feel it prudent to hold, and elaborate machinery has had to be invented to suppress their instincts in the common interest.

But the new movement in commodity prices heralds some relief. Both the U.S. and Britain are centres of currency areas whose members are still content to accumulate reserves in the centre when their foreign payments are in surplus. The fact that the outer sterling area is in surplus—because of foreign aid and investment as well as because of higher commodity prices—has kept the joint gold reserve rising, despite the deterioration in Britain's own trading position. The U.S., similarly, is relying on primary producers in the dollar area to accumulate balances in New York during 1964.

These increases will not last: the poor cannot afford to keep much in the bank. But the average level of their reserves, and the amount of dollars and sterling needed to finance international trade in their products, is likely to move up with commodity prices. The U.S. and Britain have even more to gain than other industrialised countries from an "adverse" movement of the terms-of-trade.

(Concluded from previous page)

and products processed therefrom in the developing countries;

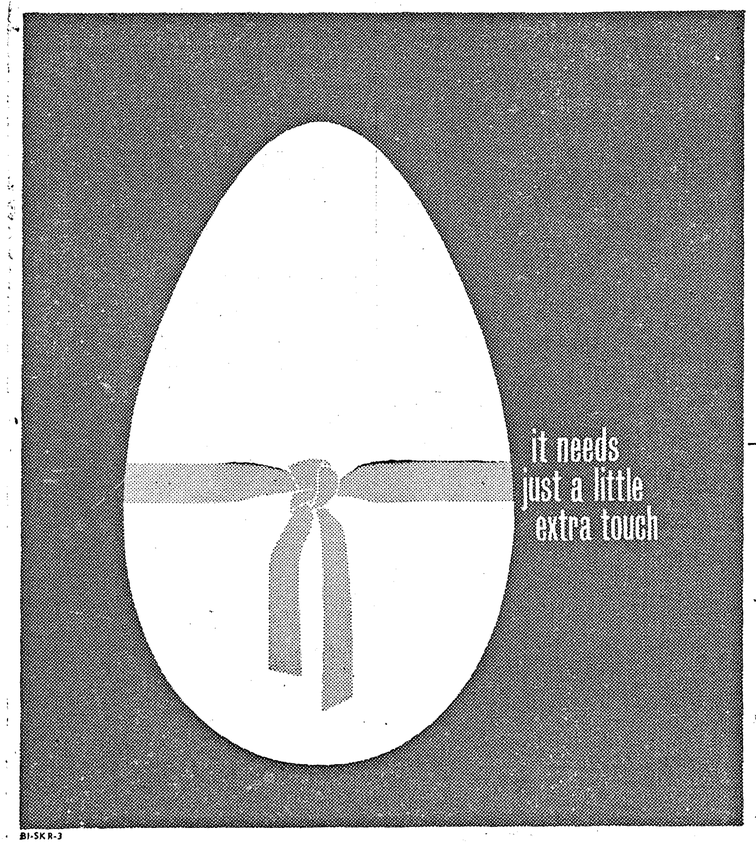
4. help increase in the volume of exports of the developing countries in primary products, both raw and processed, and stabilisation of prices at reasonable and remunerative levels and allow free access to the exports of manufactured and semi-manufactured goods from the developing countries, and initiate an active export promotion drive on an international basis on behalf of all developing countries;

5. extending non-discriminatory preferential treatment to imports of selected products originating in the developing countries as a whole; and

6. providing more adequate financial resources on favourable terms so as to enable the developing countries to increase their imports of the capital goods and industrial raw materials essential for their economic development, and better co-ordination of trade and aid policies.

E.C.A.F.E. also emphasised the need for a rational relationship between the prices of capital goods and the prices of the products of the developing countries.

The world's oldest stock certificate representing share ownership in a company still in operation today will be brought from Sweden to the United States for the New York World's Fair opening in April next. The certificate will be on show in the Swedish pavilion. Dated 16th June 1288, the document is written in mediæval Latin and records that Bishop Peter Elofsson received from his nephew, Nicolaus Christineson, a one-eighth share in Stora Kopparberg, which literally means the Great Copper Mountain. The transaction was validated by Kind Magnus Ladulas and several other dignitaries of the period, who affixed their seals.



TO MAKE IT MORE ATTRACTIVE

With a little care taken for attractive presentation of your rayon and synthetic fabrics, you have made a lasting impression on the overseas buyer. And if you service your export trade with maximum efficiency, you have made your business too. Attractive presentation of samples and fabrics creates confidence in you... brings in repeat orders.

Your reputation abroad rests on:
★ Supplies as per samples
★ Attractive presentation
★ Strong and seaworthy packing
★ Shipments in time

Build your exports on a long-term basis

BANK OF BARODA

PROFIT AND BUSINESS EXPAND

THE calendar year 1963 has been a particularly good one for the Bank of Baroda Ltd. (Managing Director: Mr. N. M. Chokshi, Baroda) for its profit, which had receded in the previous year from Rs. 67.73 lakhs to Rs. 63.53 lakhs due to the banks' general experience of an all-round increase in operating costs in that year, has recovered by as much as Rs. 11.58 lakhs to an all-time new peak of Rs. 75.11 lakhs. This improvement in profit which works out to 19.2 per cent has followed a 21.4 per cent expansion in business as represented by the balance-sheet total amounting to Rs. 174.66 crores, as against Rs. 143.86 crores at the end of 1962. The growth in business has been steady over the years, and it is encouraging that profit has kept pace with that growth. In fact, over the past four years, the rate of increase has been higher in profit than in business. Thus, whereas the 1963 balance-sheet total is about 60 per cent more than the Rs. 110 crores touched in 1960, the 1963 profit is nearly 84 per cent higher than Rs. 41 lakhs earned in that year. This proves that banking in India continues, as it should, to be a profitable business and that the experience of banks like the Bank of Baroda of having realised a slightly lower profit in 1962 was due entirely to a combination of three unfavourable factors namely, the implementation of the Desai award, the introduction of deposit insurance scheme and the general increase in the cost of operations.

Reflecting the growth of deposits, especially time and savings, interest paid has gone up by about Rs. 50 lakhs to Rs. 348.77 lakhs, as against about Rs. 52 lakhs to Rs. 296.81 lakhs in the previous year. Staff expenses, which had gone up by about Rs. 34 lakhs in the previous year, have shot up by about Rs. 45 lakhs to Rs. 215.52 lakhs during the year under review. But other expenses, up by Rs. 23 lakhs to Rs. 78.52 lakhs in the previous year, show a rise of only Rs. 17 lakhs to Rs. 95.21 lakhs during the year. Nevertheless, the Bank has been able to realise a higher profit, because of the encouraging improvement of Rs. 125.85 lakhs to Rs. 747.67 lakhs in gross income, as against an addition of Rs. 108 lakhs in the previous year.

The appropriation of the profit has continued to be on conservative lines, as, once again, more than one-fifth of it, (Rs. 15.50 lakhs as against Rs. 12.70 lakhs a year before) has been carried to the reserve fund, besides a sum of Rs. 10.500 (as against Rs. 33.70o last year) credited to the development rebate reserve. Bonus to staff has claimed Rs. 2 lakhs more at Rs. 24 lakhs. The return to shareholders, which had been reduced in the previous year by one point to 16 per cent per annum on their Rs. 50 paid 100-rupee shares, has been raised by two points to 18 per cent per annum, the entire increase having come in the final dividend at the rate of 20 per cent per annum as compared with 16 per cent for the year before. Although the increase is a modest two per cent, the dividend for the year absorbs Rs. 8 lakhs more at Rs. 36 lakhs because it covers the full year's distribution on the 100,000 right shares of Rs. 100 each issued on 22nd May 1962 in the proportion of one-for-three at a premium of Rs. 15 per share. The surplus carried forward is slightly lower at Rs. 2.97 lakhs, as compared with Rs. 3.47 lakhs brought in.

The following table compares the Bank's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Gross income	7,47.67*	6,21.82*	5,13.82*	4,31.14*

Cash	10.5	9.4	8.6	9.6

* After providing for taxation, bad and doubtful debts and other essential provisions. Taxations for 1960 was Rs. 30 lakhs, for subsequent years the amount is not disclosed.
† Includes Rs. 2.24 lakhs for paying final dividend at the rate of 20 per cent. on the new issue of Rs. 50 lakhs.
‡ Subject to deduction of tax. § Unencumbered portion only

The recovery in profit and the further growth in the business of the Bank have been facilitated by the sharp rise in its deposits from Rs. 113.96 crores to Rs. 140.17 crores. The increase, though seen in all types, is predominant in time deposits which have gone up from Rs. 62.19 crores to Rs. 77.70 crores. Savings deposits have improved from Rs. 24.99 crores to Rs. 30.63 crores and the deposits on current accounts from Rs. 26.77 crores to Rs. 31.84 crores. The bulk of the deposits are represented on the assets side by advances which have spurted by Rs. 21 crores to Rs. 105.81 crores and, as a ratio to deposits, the latter stand one point higher at 75.5 per cent. This marked rise in advances, which compares with an increase of Rs. 14 crores in 1962 and of Rs. 10 crores in 1961, has been responsible, to some extent, for the increase in borrowings from other banks from Rs. 249.73 lakhs to Rs. 364.01 lakhs. The ratio of investments to deposits has shrunk from 22.3 per cent to 21.8 per cent, but that of cash balances to deposits has increased from 9.4 per cent to 10.5 per cent. Thus, the aggregate liquidity ratio has edged up from 31.7 per cent to 32.3 per cent. The ratio of "own funds" to deposits, which had gained fractionally from 3.4 per cent to 3.6 per cent in 1962 following the issue of additional capital in that year, has moved down to 3.1 per cent in 1963 as a result of the large growth of deposits.

The Bank opened during the year 33 new branches, including one in Fiji Islands, making a total of 189 branches in India and 15 branches in foreign countries. Its Directors decided to take over the business of the Umbergaon People's Bank (Private) Ltd., Umbergaon. The takeover took effect on 1st January 1964 since when the latter bank's two offices at Umbergaon and Sanjan have commenced functioning as branches of the Bank.

U.S. EX-IMP BANK'S OPERATIONS

The U.S. Export-Import Bank made 46 long-term projects and equipment loans aggregating $458.5 million last year (1963). Included were funds to construct a fertiliser plant in India, to help build a bridge in Venezuela, a highway in Thailand, and electrical generating plants in the Ivory Coast.

The Bank, an independent agency of the U.S. Government, has been in business since 1934, supplementing private capital to improve trade between the U.S. and other nations. The Bank started making long-term loans even before the term "foreign aid" was conceived: The Bank's original purpose was to promote trade by providing credit for U.S. export sales. Very early, however, the Bank thought that it could accomplish its goal most effectively if its loans also contributed to the economic development of other countries. Although most of the Bank's long-term loans amount to foreign aid, they are not included in the foreign aid funds asked by the President and appropriated by Congress each year. In fact, for the past few years, the total Bank operations have appeared as a net gain rather than as an expenditure in the Federal Budget. This is possible because repayments on earlier loans—many of them are post-war loans to Western Europe—are more than enough to finance the Bank's current lending activity.

In addition to long-term project loans, Ex-Imp Bank provides emergency trade loans to nations having temporary balance of payments difficulties. The Bank also engages in other activities to promote U.S. exports. It provides short-term exporter credits, guarantees credits advanced by private banks, and finances medium-term and short-term insurance for export transactions, the insurance covering both credit and political risks.

Lumping all loans, guarantees and insurance, the Export-Import Bank last year assisted in financing $1,452 million worth of U.S. exports through 2,905 transactions. Thus it was—and is—indirectly helping to sustain the economic aid programme of the Agency for International Development and the Defence Department's spending abroad for free world defence.

The countries to which the Bank made available development-type loans during 1963 (some countries received more than one loan) were:

(In thousand $)

United Arab Republic $12,500; Ivory Coast $5,000; Liberia $4,500; Nigeria $9,500; Senegal $300; India $72,500; Iran $4,500; Israel $11,200; Iraq $2,800; Japan $18,200; Thailand $19,000; Austria $600; Iceland $500; Italy $185,000; Spain $28,100; Chile $2,000; Colombia $2,500; Ecuador $800; Mexico $32,600; Nicaragua $1,300; Peru $14,200; Panama $7,300; Trinidad and Tobago $4,000 and Venezuela $18,100.

The Bank made two emergency foreign trade loans during the year: $20 million to Argentina and $15 million to Chile.

(Concluded from next column)

encumbered portion of investments to deposits from 30.10 per cent to 26.00 per cent. This means that the Bank will have to make proportionally greater efforts to comply with the new liquidity requirements scheduled to be in operation from mid-September next.

Besides opening more branches during the year, the Bank also took over during 1963 certain assets and liabilities of the Coimbatore Standard Bank Ltd., Coimbatore, with its R. S. Puram branch and also Nanjinad Bank Ltd., Nagercoil, with its branches at Eraniel and Tittuvilai. Subsequent to the date of the balance-sheet, the Bank has also taken over the selective assets and liabilities of the Coimbatore Vasunthara Bank Ltd., Coimbatore, with branches at Coimbatore, Satyamangalam, Puliampatti and Kaniyur, in addition to opening three more of its branches. Thus, the Bank continues to pay attention to the question of expanding the area of its operations within the country.

INDIAN OVERSEAS BANK

A YEAR OF ALL-ROUND PROGRESS

GOOD progress was made by the Indian Overseas Bank Ltd. (General Manager: Mr. S. R. V. Arasu, Madras) during the year ended 31st December 1963. There was further substantial growth in deposits, accompanied by improvements in advances and earnings. The two-point cut to 12 per cent in dividend made in the previous year in the face of higher capital and apparently lower net profit has been restored and that too on a still bigger capital as a result of the final call of Rs. 25 made during the year on the then partly-paid 24,951 shares issued last year. The issued, subscribed and called up capital of the Bank is now on par with the authorised capital of 100,000 equity shares of Rs. 100 each. Only the paid-up capital is less by Rs. 28,425 on account of calls in arrears.

The published figure of net profit of the Bank shows a continuously declining trend since 1960, the fall being rather sharp from Rs. 26.16 lakhs in 1960 to Rs. 16.23 lakhs in 1963. But two reservations have to be made in comparing these figures. Firstly, the profits for the years 1962 and 1963 are substantially lower than those of the previous years because the undisclosed provision for taxation must be substantially higher as a result of fresh taxes proposed in the last two budgets. Secondly, the profit for 1963 has been arrived at after transferring a large sum of Rs. 9 lakhs to the Trustees of the Indian Overseas Bank Ltd. Staff Gratuity Fund, which appears to have been created this year. This transfer is, however, a book adjustment, partly compensated by a withdrawal of Rs. 8.70 lakhs from the balance held in the Bank's own Pension and Gratuity Fund account. Thus, although the net profit for 1963 is still lower than that for the previous two years, it has improved substantially—by as much as 25 per cent to be precise—over that for 1962.

Higher profit is the result of an all-round increase in turnover, deposits and advances, though a part of the increase has been neutralised by the inevitable rise in expenses. The business turnover as represented by the balance-sheet total has risen during 1963 by 21 per cent to over Rs. 64 crores, total gross earnings by 11 per cent to Rs. 263 lakhs, deposits and advances by 13 per cent each to more than Rs. 42 crores and Rs. 29 crores, respectively. The result is that, in spite of a 13 per cent rise in total expenses to Rs. 236 lakhs, the net profit is markedly better as already noted.

The interest paid on deposits has gone up from Rs. 97.81 lakhs to Rs. 107.29 lakhs: this is because almost four-fifths of the rise in deposits has been in fixed and savings deposits as against only a small rise in current accounts on which no interest is paid. Staff expenses are higher by Rs. 15.53 lakhs at Rs. 95.99 lakhs largely because of the additional staff required for the nine new branches opened during the year (as against eight in 1962) as well as for the expansion in the activities and business of the existing branches. Further, it also reflects the rising burden of increments and dear food and other allowances to the staff.

Transfers to published reserves have been stepped up slightly to Rs. 6.75 lakhs from Rs. 6 lakhs in the previous year. Bonus to staff however is taking up a substantially higher sum of Rs. 6 lakhs, as against Rs. 4 lakhs in the previous year.

The salient features of the Bank's activities and progress in the past four years are summarised in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960

N.D.—Not disclosed. ‡ On the increased capital.
§ After payment of Rs. 9 lakhs to the trustees of I.O.B. Ltd. Staff Gratuity Fund.

Thanks to the higher owned as well as deposit resources, the borrowings from other banks (including the Reserve Bank, have considerably fallen to Rs. 91.76 lakhs from Rs. 136.25 lakhs. Although advances have also risen, the credit-deposit ratio is fractionally lower at 65.3 per cent as against 65.7 per cent last year. Investments are, however, a shade lower by Rs. 2 lakhs. This trend, in the face of a substantial increase in deposits, has resulted in bringing down the ratio of un-

(Continued in previous column)

THE CHARTERED BANK

PROFIT AT HIGH LEVEL AGAIN

DESPITE the difficult and sometimes dangerous political conditions in certain areas of operation, the further increases in salaries and wages, and the rising costs of expansion through new branches, the Chartered Bank, it is gratifying to find, has reported satisfactory working results for the year ended 31st December 1963. The net profit earned by the Bank (after providing for taxation and making allowance for inner reserves) is quite handsome: £1,069,378. The profit, though it is slightly lower than that (£1,076,748) for the year 1962, is well above the £990,238 earned in 1961. The high level of profit is significant, especially in the light of a fall in the rate of expansion of banking business proper, as suggested by the year-end figures. The total advances made by the Bank have gone up by just £6.50 million, as compared with an increase of £26.33 million recorded in 1962; bills of exchange have, of course, improved markedly by £5.09 million, in contrast to a decline of £1.21 million suffered in the previous year. Even so, the net increase over the year in the most remunerative business of a bank has been smaller.

The profit of £1,069,378 earned during 1963, together with the £561,021 brought in from the previous year, gives a total of £1,630,399 available for distribution. Although this amount is much more than what is actually needed (£606,375) to pay the dividend at the previous year's rate of 15 per cent less income-tax paid, the Directors of the Bank have not proposed any increase in dividend. This is apparently due to the Directors' move to make a rights issue to stockholders in the proportion of one £1 share for every £6 of stock held at a premium of £1. The Directors have also preferred to strengthen the reserves by transferring £450,000 to reserve funds, which now aggregate £8.35 million, and to carry forward a larger sum of £574,024 (including the £63,591 retained in subsidiary companies' accounts), as against the £561,021 (£50,945) brought in.

The principal liabilities and assets of the Bank as at the end of the past four years are shown in the following comparative table in order to enable readers to get an overall idea of the Bank's progress in recent years.

(In thousand £ sterling)

	As on 31st December			
	1963	1962	1961	1960
Liabilities (Main)				
Capital	6,600	6,600	6,600	5,500
Reserve fund	7,900	7,325	7,150	5,700
Undistributed surplus	510	510	495	470
Current and other accounts	315,162	297,668	281,501	181,453
Fixed deposits	167,521	156,814	133,123	108,302
Notes in circulation	5,951	5,295	5,107	4,732
Bills payable	2,553	2,380	2,054	2,237
Acceptances (contra item)	5,697	9,510	16,757	7,524
Assets (Main)				
Cash	76,875	77,942	72,794	57,085
Investments—				
Government and other securities	90,595	82,385	63,697	69,431
Securities lodged against note issue	6,518	6,023	5,399	4,706
Advances	188,390	181,897	155,565	144,436
Bills of exchange	34,391	29,301	30,513	23,734
Bank premises	4,006	3,537	3,391	3,210
Holdings in subsidiaries	2,241	3,226	2,898	2,897
Trade investments	417	416	414	416
Balance-sheet total	481,704*	469,553*	353,142	316,203

* The Bank has followed the practice of other British Banks in including with liabilities confirmed credits, guarantees and indemnities.

The balance-sheet total as on 31st December 1963 stands at the impressively high level of £481.70 million, as against £469.55 million a year before. This will be higher still at £579.72 million if the accounts of the Eastern Bank Limited and other wholly-owned subsidiaries other than the Allahabad Bank are included. The Chartered Bank, according to Mr. Vincent Alpe Grantham, Chairman, has followed the practice of other British banks in including with its liabilities confirmed credits, guarantees and indemnities. Even without these additional items, the total of the consolidated balance-sheet would exceed the corresponding figure for 1962 by £33 million, reflecting the continued expansion in the business of the Bank and its wholly-owned subsidiaries.

With a strong financial position, sound management and rich experience gathered over a period of more than a century, The Chartered Bank is now well set for a substantial expansion in its banking activities. The policy of extending the group's organisation to new areas, initiated by the Bank a few years ago, has, as the Chairman says, made the Bank less susceptible to setbacks in individual countries in which it has branches. Further, the new ventures launched in California and Libya are evidence of the Bank's intention to continue taking advantage of suitable opportunities for widening the scale of its business.

UNION BANK OF INDIA

DEPOSITS EXCEED RS. 50 CRORES

ENCOURAGING progress has been reported by the Union Bank of India Ltd. (General Manager: Mr. F. K. F. Nariman, Bombay) for the year ended 31st December 1963. The main features are: (i) a handsome rise of over Rs. 5 lakhs in the declared profit from Rs. 22.07 lakhs to Rs. 27.36 lakhs as compared with an increase of only Rs. 44,860 in the previous year; (ii) a further expansion of roughly Rs. 10 crores to Rs. 52.04 crores in deposits and (iii) a spurt of about Rs. 8 crores to Rs. 31.12 crores in advances on top of an improvement of about Rs. 5 crores in the previous year. The second of these factors assumes particular significance not only because it has influenced the other two but also because it marks the Bank's attainment of (with the deposits having exceeded Rs. 50 crores) the status of a "big bank" under the inter-bank agreement governing the rates of interest on deposits. While gaining this status, the Bank stands to lose the "privilege" allowed only to "medium banks" of paying one-eighth of one per cent more than the "standard rates" of interest for attracting deposits.

The rise in profit has resulted from a further improvement in income from Rs. 223.56 lakhs to Rs. 271.22 lakhs owing to the spurt in advances. Moreover, the Bank has also succeeded in limiting the increases in the costs of operation. According to the published figures, the rupee was spent by the Bank thus: outward interest 35.82 nP. (as against 34.07 nP. a year before), staff expenses 33.68 nP. (36.00 nP.), and other operating expenses 20.40 nP. (20.06 nP.), the balance of 10.10 nP. (9.87 nP.) being the profit.

Nearly a quarter of the profit, or Rs. 6 lakhs to be precise, has been set apart for reserves and contingencies. The provision for bonus to staff has gone up from Rs. 7.66 lakhs to Rs. 9.28 lakhs. The dividend on the 5-rupee ordinary shares has been maintained at 11.4 per cent per annum, subject to tax.

The following comparative table gives a clear idea of the progress made by the Bank in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Interest and discount earned	204.73	164.67	132.83	133.42
Commission, exchange and brokerage	56.64	48.90	42.79	41.03

Investments	26.0	24.7	25.1	26.2
Cash	17.1	24.5	21.3	16.5

The accretion of about Rs. 8 crores in deposits has been shared mainly by fixed deposits and demand deposits, the former having expanded from Rs. 18.59 crores to Rs. 22.81 crores and the latter from Rs. 19.59 crores to Rs. 23.60 crores. Savings deposits also have improved but only slightly from Rs. 4.14 crores to Rs. 5.64 crores. With this steady growth in deposits, the Bank has been able to limit borrowings from the Refinance Corporation for Industry Ltd. to Rs. 16.37 lakhs, as against Rs. 15.12 lakhs a year before. The spurt in advances from Rs. 23.23 crores to Rs. 31.12 crores has lifted the credit ratio from 54.5 per cent to 59.8 per cent, at which level, however, it is still one point lower than what it was in 1960. Investments, too, have increased from Rs. 10.51 crores to Rs. 13.54 crores, with their ratio to deposits rising from 24.7 per cent to 26 per cent. But the cash ratio has dropped from 24.5 per cent to 17.1 per cent.

The Bank has been steadily increasing the number of its offices. During the year under review, it opened ten new branches in different parts of the country, bringing the total number of branches to 75. Twenty of its branches are equipped with safe deposit vaults.

DENA BANK FARES WELL

STRIKING INCREASE IN TURNOVER

EVERYTHING seems to have gone pretty well with the Devkaran Nanjee Banking Company Ltd. (Managing Director: Mr. Pravinchandra V. Gandhi, Bombay) during the past calendar year, for its progress during the 12-month period is notably striking. Its gross income, up by Rs. 40.04 lakhs at Rs. 264.87 lakhs in 1962, has registered a bigger increase of Rs. 58.18 lakhs to Rs. 323.05 lakhs during 1963. Its profit after depreciation and taxation, which had declined from Rs. 26.15 lakhs to Rs. 24.08 lakhs in the previous year due to the particularly higher cost of deposits for medium banks, deposits insurance scheme and the implementation of the Desai Award, has more than fully recovered to Rs. 26.59 lakhs during the year under review. Its deposits have continued their upward march by adding for the third year in succession a substantial sum of Rs. 8 crores to Rs. 59.09 crores. This accretion of deposits has facilitated the advances to pick up at a faster rate from Rs. 31.74 crores to Rs. 38.81 crores as compared with the restricted increase from Rs. 30.05 crores to Rs. 31.74 crores in the previous year. Finally, the balance-sheet total, indicating the extent of growth in business, has expanded further from Rs. 62.99 crores to Rs. 76.08 crores.

So far as the appropriation of profit is concerned, the Directors have continued to follow a judicious policy. They have set apart Rs. 10 lakhs to reserves, taking the total of published reserves to a level which is 10 per cent more than the paid-up capital of Rs. one crore. The amount transferred this year is, of course, much less than that (Rs. 23 lakhs) transferred last year. But a little more than Rs. 10 lakhs of last year's addition came out of the undistributed surplus of previous years. The rate of dividend has been enhanced by one point to 12 per cent and, as this is on the entire increased capital (from Rs. 50 lakhs to Rs. 100 lakhs) for the whole year, the amount required has nearly doubled. The bonus to staff also costs more, apparently because of the increase in number as well as in emoluments of each member. The surplus carried forward is, however, less at Rs. 1.79 lakh, as compared with Rs. 3.19 lakhs brought in.

The following comparative table gives a clear idea of the Bank's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960

Cash	10.3	13.1	11.0	13.3

† Unencumbered portion only.

The improvement in income during the year has been due largely to the higher level of advances. Taking the published figures, only the percentage share of interest earned in the total income has gone up from 82.07 to 84.52, whereas that of commission and exchange as well as of other receipts is lower at 11.76 and 3.72 as compared with 13.67 and 4.26, respectively, a year before. Of the total expenditure, outward interest works out to 47.67 per cent, as against 46.01 per cent in the previous year, staff expenses to 27.24 per cent, as against 28.28 per cent, and other expenses to 16.71 per cent, as against 16.62 per cent.

The further rise in expenditure during the year is on account of the continuous expansion of the Bank's operational activities and its branches. Seventeen branches were opened during the year mostly in Western and Northern India, bringing the total number of offices to 129. Since

(Continued on page 540)

EXPORT RISKS INSURANCE

ESTIMATES COMMITTEE EXAMINES THE ROLE AND OPERATIONS OF E.R.I.C.

SEVERAL suggestions for making the Export Risks Insurance Corporation (E.R.I.C.), now transformed into the Export Credit and Guarantee Corporation (E.C.G.C.), a more effective agency for promoting India's exports have been made by the Estimates Committee of the Lok Sabha in its Forty-seventh Report submitted a few days ago. The Committee's views and recommendations, which are based on a critical evaluation of the working of E.R.I.C. since its inception (in 1957), assume special significance in the context of the enlarged functions and more positive role assigned to the new Corporation in stimulating exports. The Committee has examined the basis of providing insurance cover to exporters, the scope for increasing the percentage of exports insured by the Corporation, the reasons for the low coverage in respect of a large number of commodities and the corrective measures required to improve the position, the types of policies issued in the light of the needs of exporters, the level of premium and the rebates offered, the organisational structure of the Corporation and its adequacy, publicity and field work and a host of other operational aspects which have a direct bearing on the working efficiency of the Corporation.

As regards the basis for providing insurance cover, the Committee points out that it would not wholly agree with the view of the Ministry of International Trade that insurance cover to exporters should be provided merely on the basis of the commercial judgment of the Corporation. It feels that cases may arise when it would be desirable to give risk guarantee to exporters on grounds of "national interest" also. The Committee points out that such guarantees are in fact provided by credit insurers in some other countries. Thus, the Export Credit Guarantee Department (E.C.G.D.) the U.K. and the Export Credit Insurance Corporation of Canada give such guarantees and undertake business on Government account in the "national interest." The Committee has, therefore, suggested that the Government should adopt a positive policy in this matter and encourage exports in selected cases on grounds of national interest. Such a step, according to it, is also likely to open new avenues of export also.

Coverage Low

The percentage of exports insured with the Corporation to the total exports of the country has been very low. It was 1.1 in 1960 and 1.7 in 1961. In 1962, however, the percentage rose to 2.7, that is, more than double that in 1960 and to 4 per cent last year. But this figure is still low when compared with other countries. The small percentage of coverage is attributed to the fact that nearly 50 per cent of the country's export trade is in traditional items like jute goods, tea and textiles in which Indian exporters have well-established connections and they therefore do not feel the need for export risks insurance so keenly. Apart from this, a sizable part of India's export trade is done against letters of credit, or between associates. These account for nearly 70 per cent of India's total exports, leaving only 30 per cent as insurable exports. As a percentage of total insurable exports, exports insured with the Corporation work out to 8 per cent in 1962 and 15 per cent in 1963. In absolute figures, out of a total exports of Rs. 665.88 crores in 1962, value of exports insured with the Corporation aggregated Rs. 18.11 crores, as against Rs. 6.96 crores in 1960 out of a total exports of Rs. 621.68 crores. While appreciating this increase, which is not unsubstantial, the Estimates Committee feels that there is still considerable room for improvement in the business of the Corporation. The example of similar organisations in other countries, as, for instance, the E.C.G.D of the U.K., which provided insurance cover to 22 per cent of its export trade in 1962, should, the Committee points out, serve as a guide to E.C.G.C. to step up its activities. The Committee has no doubt that, with the increase in the country's exports and its diversification, the Corporation should be able to insure a very high percentage of exports.

A detailed study of the Corporation's coverage of exports country-wise has given the Committee a picture of *uneven* performance in respect of coverage. It has, therefore, suggested that special efforts should be directed towards the countries where E.R.I.C. has not been able to make much impression and that the performance should be constantly reviewed and the possibilities of providing cover considered from time to time. An analysis of coverage commodity-wise has revealed that, while some commodities like sugar and sugar preparations, mineral fuels and lubricants and raw wool exported from the country have not been insured at all, the coverage in respect of a large number of other commodities has been very low. It would appear, the Committee points out, that the low coverage of the Corporation in insuring certain commodities is due to lack of contacts with exporters. The Committee has, therefore, suggested that the Corporation should review its procedures and practices with a view to ensuring that closest liaison is maintained with exporters and maximum business is secured. At the same time, it is necessary to examine, adds the Committee, the reasons for the low insurance coverage in respect of a large number of commodities and to study analytically the possibilities of export development in respect of each commodity. Earnest efforts are also called for to establish good contacts with exporters of the various commodities as also Export Promotion Councils and Commodity Boards.

Type of Risks

The Lok Sabha Committee has critically examined the types of risks covered and the policies issued by the Corporation. Its suggestions, in this regard, are very pertinent and germane to expansion of the business of the Corporation. One important suggestion refers to coverage of "non-acceptance" risks. Ordinarily, the Corporation does not indemnify the exporter in respect of losses incurred on account of "quality" disputes. In view of the difficulties experienced by Indian exporters, especially the small ones, the Corporation has undertaken to cover "non-acceptance" risks, provided the merchandise covered has been subjected to preshipment inspection. But the machinery for preshipment inspection envisaged under the Export (Quality Control and Inspection) Act, 1963, has not yet started functioning and the Corporation has not therefore issued any policy covering non-acceptance risks so far. The Committee feels that there is great scope for increasing the business of the Corporation through non-acceptance risk policies. The need to give this type of policy wide publicity, so as to make it popular among exporters, cannot be overemphasised in the opinion of the Committee. It has no doubt that the provision of such cover by the Corporation would enhance the possibilities of increasing exports. The Committee also wants the Corporation to examine the question of covering the risk on intermediaries, (that is, those to whom the exporter might have passed on his shipping documents against cash payment) and to evolve a new type of policy to cover such cases.

Commenting on the types of policies issued by the Corporation, the Committee notes that there is a declining trend in the number of specific shipments policies (that is, policies covering shipments under a single specified contract) as also in the maximum liability undertaken and the value of risks covered. It has, therefore, suggested that efforts should be made by the Corporation to secure more business on this type of policy. The slow progress made by the Corporation in issuing manufacturers and exporters credit insurance policies indicates, according to the Committee, that the benefits of these policies have not been adequately publicised by the Corporation or appreciated by the parties concerned. Since these policies offer considerable scope for increasing the business of the Corporation, it is essential, the Lok Sabha Committee points out, to explain the advantages of these policies to exporters. Expressing keen disappointment over the Corporation's failure to secure any business under the market development policy introduced in 1961, the Committee observes that the Corporation waited for the business to come instead of going all out to get it by explaining the benefits of this policy. It has suggested that concerted efforts be made to popularise this policy. It has also urged that the role of the Corporation in offering market development policies may be re-examined in order to ensure that there is no duplication and overlapping of functions because a number of other bodies like the Export Promotion Councils are doing similar work.

The popularity of the packing credit policy, as evidenced by the increase in the number of policies from year to year, is, according to the Committee, a pointer to the desirability of taking further steps to make the policy still more attractive. The Committee concedes that some types of policies are more popular than others, but it is of the opinion that, apart from the intrinsic merits of the policies, the art of selling the policies, the publicity given to them and the persuasion and persistence of the canvassers count a great deal in increasing sales. While suggesting that special steps be taken to increase the sales of all types of policies, it wants the Corporation (1) to examine critically the policies which are not so popular, with a view to remedying their defects, if any, and (2) to keep abreast of the latest type of policies issued by similar organisations in foreign countries. In this connection, the Lok Sabha panel has recommended that the Corporation should examine the feasibility of introducing in India the small exporters' policy issued by the E.C.G.D. of Britain. The fact that about 89 per cent of the policies issued by the Corporation are for sums below Rs. five lakhs indicates that the small exporters are in greater need of insurance facilities provided by the Corporation. The Committee, therefore, wants the Corporation to continue its efforts to provide risk cover to the small exporter.

Finance for Exporters

An important recommendation of the Lok Sabha panel refers to bank finance available to exporters. Bank finance availed of by exporters in respect of post-shipment assignments in 1960, 1961 and 1962 aggregated Rs. 2.37 crores, Rs. 3.20 crores and Rs. 2.51 crores, respectively, whereas the value of risks covered increased from Rs. 6.97 crores in 1960 to Rs. 20.69 crores in 1962. The Committee noted that there is thus very little increase in the post-shipment finance availed of by exporters on the basis of the Corporation's policies in spite of the increase in its business. It has been represented before the Committee that banks are not co-operating in giving credit facilities to exporters on the basis of the Corporation's policies. In view of this position, the Committee has suggested that the Government should take suitable steps to ensure that the Corporation's policies are accepted by banks in giving credit to exporters. The possibility of giving some negotiability to these policies, suggests the Committee, may also be examined.

After studying the level and structure of the premium rates charged by the Corporation, the Estimates Committee has come to the conclusion that the average premium rates of the Corporation are not only comparable with those of foreign credit insurers but are in fact lower in many cases. Thus, the average premium per 100 was 1.23 and 1.99 in the U.K. under sections 1 and 2 respectively, 0.57 in Australia, 1.73 in the Netherlands, 1.10 in Israel, 0.87 in Norway, 0.88 in Sweden, 0.71 in Canada and 1.05 in Belgium, whereas it was only 0.34 in India. In spite of this, Indian exporters complain that the premiums are rather high, probably because even a small addition to an already inflated cost makes Indian goods more uncompetitive. The Corporation had submitted before the Committee that it would be possible to reduce the premium of the volume of business were to increase. Already a system of rebate on premium has been introduced and it is said to have yielded encouraging results. Besides, it is also proposed to introduce a system of no-claim bonus to exporters. The Committee has welcomed these proposals and has expressed the hope that further incentives to exporters to insure their goods with the Corporation would be possible in the future.

Credit reports about buyers in foreign countries form the bedrock of the whole system of export risks insurance. The Committee has, therefore, suggested that the Corporation should carefully collect credit information and should build up a library of records containing up-to-date information. As regards settlement of claims, the Committee has suggested that the question of reducing the period for claims settlement in respect of political risks from 6 to 4 months, as has been done in the U.K., may be examined at an early date. Since keeping claims to the minimum is of paramount importance in export risks insurance, as in any type of insurance, the Committee wants the

MANPOWER SHORTAGE IN TEXTILE INDUSTRY

NEW BID TO RECRUIT TRAINED PERSONNEL

From Our Special Correspondent

MANCHESTER, *17th March*

MANCHESTER LETTER

MUCH has been written and said about the importance of closer links between production and marketing since the present phase of textile mergers and reconstruction began less than 12 months ago. Few people would dispute the necessity of efficient distribution as a corollary of modernised output and the projection of the best technical advice.

No direct reference to textiles was made by Lord Robens, Chairman of the National Coal Board, in the speeches he made in Manchester last week, but his remarks on the relationship between selling and production were just as applicable in the disposal of cloth and clothing as in the instances he mentioned of cars, chocolates and confectionery. If the national output is to be raised by 4 per cent., a figure regarded as attainable by the National Economic Development Council, it will be even more essential to sell the goods when they are made.

This may appear to be oversimplifying the issue, but it strikes a fundamental note clearly reflected in the minds of those who have been instrumental in making the structural changes in the textile industry which have lately taken place; it is undoubtedly a guiding light for them and the rest of the trade in the future. Merely to increase output without the facilities for efficient disposal of goods is to create even more embarrassing bottlenecks than those which have often clogged the wheels of textile distribution in the past.

Working Partnerships

Financial arrangements, including amalgamations and takeovers, are publicly announced when shareholdings are involved, but other developments on these lines are not always made widely known. Particularly when private firms are concerned, agreements between suppliers and customers are by their very nature kept secret, and a good many new links have been forged in the past 12 months. Similar systems of close working partnerships are being evolved, including a number based on the concept of "vertical thinking" which received considerable attention last year.

Moves of this kind behind the scenes confirm the opinion of those who know the industry well that more efficient working arrangements are being adopted from the mill floor through to the ultimate user. Percentage gains cannot be assessed in the same manner as in output, but, without a smooth flow of goods through the many channels concerned, the improvements secured by the installation of new plant and methods can easily be thrown away.

Something from Nothing

Inclusion of Korea in the list of those countries whose exports of cotton textiles to Britain is now the subject of import licensing has been greeted within the trade with mixed feelings. Satisfaction that the Government is continuing to take action of this kind in response to its pledge that the categorisation system is justified and that some protection should be provided against low-cost imports is tempered by regret that another supplier has now established a basic quota after sending only negligible quantities of goods before the middle of last year.

It was not, in fact, until August that cotton grey cloth imports were received from Korea. In that month, arrivals aggregated 115,435 square yards, and no further supplies were received in September. The final quarter of the year, however, saw a marked rise in shipments, the October figure being 230,870 square yards, followed by 348,509 square yards in November and 610,215 square yards in December.

Reference to the stricter licensing control now being exercised by the Government is made by Mr. J. W. Whitworth, Secretary of the Operative Spinners' Amalgamation, in his latest quarterly report. These agreements, particularly within the categorisation issue, he says, will help perhaps more than any other factor to restore confidence in the future of the industry.

Turning to the internal trade position, Mr. Whitworth says that nothing seems so absurd as the changing labour situation. On the one hand, thousands of experienced cotton operatives have been lost to the industry over the years, but now instances are being reported of a shortage of manpower.

Local papers published in the mill towns have for some time past carried advertisements seeking extra staff but only lately has at least one management tried the expedient of using the television medium as a means of attracting labour. A series of flashes offer jobs in both the day and evening shifts of a large mill group at Shaw. Whether this costly form of publicity will be imitated is open to question.

In a modernising industry, however, the labour factor becomes even more vital. Redeployment of manpower often involves a minimum of employment, so that one key man absent can affect the whole production of the mill. This aspect justifies in some measure the suggestions made in certain quarters that courses should be arranged to enable operatives to learn the work of other departments so that they can be interchangeable in an emergency.

More Manpower

Whereas overseas trade in cotton goods was disappointing in January, nearer home the production figures now released by the Cotton Board make a far more satisfactory showing. Not only was the comparative output higher than a year previously, but the labour force established its biggest gain since early 1960. From the low-point of 142,390 at the end of last year, manpower increased to 143,060, and each section shared in the improvement. The gain as compared the December returns was 250 in spinning, 20 in waste spinning, 120 in doubling and 280 in weaving.

According to the Cotton Board, the tone of business continued to be bright in January, and the rate of output of single yarn per working day was nearly 3 per cent up as compared with December and 6 per cent higher than in January 1963. Production of doubled yarn increased by 8 per cent over the year. Cloth output per working day showed a rise of 2 per cent over the previous month and was 4½ per cent better than in January last year. A point worth noting was that cotton and man-made fibres shared almost equally in the growth in cloth production.

Textiles in Europe

During the first half of last year, output in Western European countries continued to fall, but on a relatively smaller scale, according to the latest figures issued by the International Cotton Federation. Many of the trends which has been apparent for some years past were maintained, but with some slowing down in the curtailment of capacity. The maximum number of spindles active in the U.K. in the first half of last year was 6,771,000, as against 8,053,000 in place and 7,894,000 active out of 9,465,000 spindles in place in the same period of 1962. The number of mule spindles in operation took a further sharp dip last year to 1,508,000, a reduction of 600,000 on the 1962 level. Lancashire retained the largest number of spinning spindles active, the nearest rivals being Germany with 5,605,000 and France with 4,328,000.

Automatic looms again provided an increasing percentage of the weaving machinery in place and active during the period. In the first half of last year, they accounted for nearly 58 per cent of the active West European total, as compared with 52½ per cent in 1962 and barely 50 per cent in the previous year. Idle looms represented 8.93 per cent, whereas spindles not at work formed 11.6 per cent of those in place. Increased output in man-made fibre cloths enabled the total production from European mills to show a marginal increase in the second quarter of 1963 against the same period 12 months previously, but a marked decline occurred in the first quarter.

In the case of active spindles and looms, productivity showed a considerable increase over 1961 and 1962. This was in line with modernisation and rationalisation schemes being pursued throughout Western Europe, which are now bearing definite results.

PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. — United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

TEA BOARD SEVERELY INDICTED

ESTIMATES COMMITTEE PINPOINTS DEFECTS

BY Friday next week, the Tea Board will have completed one full decade of its existence. The Board, it will be recalled, was formally inaugurated on 3rd April 1954 when the former Central Tea Board and the Indian Tea Licensing Committee ceased to exist. The principal function of the Board as prescribed in Section 10 of the Tea Act 1953 is to promote the development of tea industry. The specific measures referred to in the Act for this purpose are : (1) regulating the production and extent of tea cultivation ; (2) improving quality ; (3) promoting co-operative efforts among growers and manufacturers ; (4) undertaking, assisting or encouraging scientific, technological and economic research and maintaining or assisting in the maintenance of demonstration farms and manufacturing stations ; (5) assisting in the control of insects and other pests and diseases affecting tea ; (6) regulating the sale and export of tea ; (7) training in tea testing and fixing grade standards ; (8) increasing the consumption in India and elsewhere of tea and carrying on propaganda for that purpose ; (9) registering and licensing of manufacturers, brokers, tea waste dealers and persons engaged in the business of blending tea ; (10) improving the marketing of tea in India and elsewhere ; (11) collecting statistics from growers, manufacturers, dealers and such other persons as may be prescribed on any matter relating to the industry ; (12) securing better working conditions and provisions and improvement of amenities and incentives for workers ; and (13) such other matters as may be prescribed. It is thus evident that the functions assigned to the Tea Board are very compressive and, now that the Board has completed full ten years, it is appropriate to take stock of its achievements as well as its failures. The publication of the report of the Estimates Committee (Chairman: Mr. Arun Chandra Guha, M.P.) on the Tea Board, which was placed on the floor of the Lok Sabha last week is, therefore, quite timely. The Committee has not only severely indicted the Board but also urged a more dynamic action, so that the tea industry would be in a position to cater fully to the expanding requirements for domestic consumption and exports in the years to come.

Raising Acreage

The Tea Board, it is pointed out by the Estimates Committee, has not so far prepared any planned programme for increasing the acreage under tea in consultation with the industry. That this criticism is valid is borne out by the niggardly increase in the total area under tea cultivation, from 320,000 hectares in 1954 to no more than 333,000 hectares in 1963 (as of March), or an addition of just 13,000 hectares. Even this addition must be attributed almost entirely to the efforts of independent estates themselves. In the context of the urgent need for augmenting production and export of tea, the Board should take steps at least now to chalk out a planned programme of extending tea cultivation. An essential prerequisite for such preparation is a comprehensive survey of the existing and potential areas for tea cultivation. The Plantation Inquiry Commission had recommended, as early as in 1956, that such a survey should be undertaken. But neither the Tea Board authorities nor the State Governments have cared to implement this recommendation. The Estimates Committee is rather surprised at the explanation given by the Board that it does not have either the machinery or the resources for conducting such a survey and that the survey should have been undertaken by the State Governments. In its opinion, several areas in the Himalayan foothills, Kashmir, N.E.F.A. and Nagaland are suited to tea cultivation.

A very pertinent point which the Estimates Committee has made concerns the desirability of control over fragmentation of tea estates. Such fragmentation results in uneconomic estates, loss of efficiency and lower yield. The Committee has criticised the Board for not having taken any steps to organise co-operatives of small and uneconomic gardens for the purposes of production, manufacture and marketing. The organisation of co-operatives may, of course, be desirable, but it would appear that, first of all, some stringent control is necessary for preventing fragmentation of tea estates.

Replanting

The Estimates Committee has also criticised the Board severely for the poor progress made in respect of replanting. The Committee regrets to observe that, in spite of the importance attached to replanting by the Plantation Inquiry Commission, no systematic programme therefor has been formulated as yet, with the result that the progress in replanting has been unsatisfactory. Out of the 88,400 hectares requiring replanting (as early as of 1956), the total area actually replanted comes to only 12,513 hectares. Urging immediate action in this regard, the Committee observes :

"It is well known that a constant process of renewal of aged and diseased plants is necessary, if a tea garden is to be kept at a high level of productivity and in a healthy condition. . . . A higher rate of progress in replanting is necessary to prevent the industry gradually running down the vitality and productivity, owing to progressive ageing of plants. . . . Immediate steps should be taken by the Board to collect information about the age-group of tea bushes in the various tea estates and gardens, so as to have a comprehensive idea about the present condition of the tea plantations. At the same time, it is necessary that a detailed assessment of the area requiring replanting is made and a long-term plan to replant the same within a reasonable period is drawn up by the Board in consultation with the tea industry. The Tea Board should also ensure that the programmes of replanting formulated by the various tea estates are implemented properly."

The Estimates Committee has thus stated the problem of replanting clearly and forcefully. But it is difficult to agree with its finding that replanting should be done by the tea industry from out of its own resources. How will this be possible, under the existing fiscal policies of the Centre and the States, both of which take away the major portion of the profits of tea companies made with great difficulty in highly competitive markets ? If only the Estimates Committee had analysed the financial position of tea companies, it would have found that, thanks to heavy incidence of taxation, wage bill and housing costs, the industry does not have at its disposal sufficient funds for undertaking large-scale replantation and new plantations on virgin soil. The industry has for long pleaded for allowing the cost of replanting as a revenue charge, but somehow the authorities have refused to concede the just plea.

Tea Economy At A Glance

	1963	1960	1955	1954
Total area under tea (hectares) ..	333,000	330,545	320,500	320,000
Actual production (mil. kg.) ..	338	321	308	296
Average per-hectare yield (kg.)	1,024	971	961	925
Area replanted (hectares)* ..	1,607	1,781	2,005	845
of which North India ..	1,601	1,769	1,976	819
South India	6	12	30	26
Exports of tea :				
Quantity (mil. kg.) ..	222	195	167	203
Value (Rs. crores) ..	133	121	114	131

Third Plan Target

It is also difficult to agree with the Committee's contention that the production target of 408 million kg. fixed under the Plan is not realistic. The target, incidentally, represents a rise of 87 million kg. as compared with the 321 million kg. actually produced in 1960. Is it really so difficult to obtain this much additional quantity over a period of five years ? Certainly not. Even now it should be possible for the industry to fulfil the target provided the Governments, Central and State, give the industry suitable incentives, rationalise taxes, help the planters to get their full requirements of fertilisers, pesticides, machinery, stores and spares, and follow a realistic labour policy. As the Committee itself admits, there is considerable scope for raising the per-acre yield of tea. It is disquieting to learn from it that the Board has not made any attempt so far to publicise and popularise clones of high-yielding tea for the use of estates. Recalling the recommendation made by the Plantation Inquiry Commission that necessary augments must be made for the provision of selected tea seeds and other planting materials, the Estimates Committee makes the following remarks :

The Committee regret to observe that Government did not fully accept the recommendation of the Commission in this matter. What is more regrettable is the casual manner in which the Tea Board dealt with the suggestions of Government that it should first assess the requirements of tea seeds and planting material. Instead of doing so, the Board left the arrangements for the supply of tea seeds, etc., to private parties—an arrangement which the Plantation Inquiry Commission earlier had found to be inadequate. The Committee cannot overemphasise the need for making adequate arrangements for provision of selected tea seeds and good planting material to all the tea growers. They, therefore, reiterate the recommendation of Plantation Inquiry Commission that the Tea Board should undertake this responsibility. In this connection, they would point out that another Board, namely, Rubber Board, is maintaining nurseries for the supply of high-yielding materials to the growers. . . . One of the functions of the Tea Board is improving the quality of tea. It is not clear how, in the absence of any statistics, the Board satisfies itself that there has been improvement in the production of quality tea.

Considering that Indian tea is encountering competition in world markets, not merely from the tea exported by other countries but also from other beverages like coffee, cocoa and soft drinks, the need for producing quality teas at cheaper cost cannot be stressed too strongly. The Estimates Committee has done well, therefore, in urging the Tea Board to encourage tea producers to rehabilitate their factories and gardens with modern equipment, to replace worn out bushes, and to plan extensions and replantations.

Other Lapses

The Tea Board has come in for sharp comments from the Estimates Committee on some other grounds too. Briefly stated, they are :

Although the Government of India had asked the Board as early as in July 1957 to set up a unit to study the cost of production as suggested by the Plantation Inquiry Commission, it was not until October 1962 that such a unit was actually established.

No efforts have been made to compile figures of production costs of estates in various regions.

It took two years for the Board and the Government to fill the post of Director of Production Control. Even after the appointment in 1958, the Board took another three years to initiate and activise development schemes.

The Board has not sought to prepare in time estimates of production, internal consumption and exports of tea.

No concrete results have been achieved from the seven research schemes for which the Board has given financial assistance aggregating about Rs. 5 lakhs to universities and technical institutions in the past three years. It is doubtful whether such schemes would prove effective and beneficial to the industry.

The Board, which is charged with the responsibility of undertaking research, has not paid due attention to the importance of carrying out unified research on tea, much less to disseminate widely the results of research already available. Even in regard to the research conducted by the various private research stations, the Board has not ensured that the fruits of such research are available for practical application to all tea growers, particularly the weaker ones.

Concrete action has not been taken by the Board to give effect to the Plantation Inquiry Commission's recommendation for setting up model tea farms for the benefit of producers.

No grade standards of tea have been fixed by the Board. Nor has any systematic research on the specific uses of tea waste been carried out.

There has been an undue delay in the construction of a new tea warehouse at Calcutta. The Board has also not yet assumed any responsibility for the administration of public tea warehouses at Calcutta.

The Tea Board has taken no steps whatever for training persons in tea testing.

No arrangements have been made by the Board to supply spraying equipment to small growers for controlling pests and other diseases.

The Estimates Committee's review of the finances of the Tea Board reveals that the principal source of finance for the Board is the amount it gets from the Government out of the net proceeds of the cess levied on all teas exported outside India; the rate of cess is Rs. 4.40 per 100 kg. The Board also realises licence fees directly for export licence or special export licence issued by it at the rate of Rs. 2.20 per 1,000 kg. or part thereof. Besides, the Board collects fees for licences issued under the Tea (Distribution and Export Control) Order 1957 and the Tea Waste (Control) Order 1959. Over the nine years from 1954-55 to 1962-63, the Tea Board received a total of Rs. 7.02 crores out of the aggregate cess collection of over Rs. 11.25 crores. It is surprising that there has been very wide variation in the budget estimates and the actual expenditure incurred by the Board. Thus, as compared with the budget estimates, the amount actually spent was lower by Rs. 36.83 lakhs at Rs. 135.52 lakhs in 1962-63, by Rs. 79.47 lakhs at Rs. 118.23 lakhs in 1961-62 and by Rs. 71.71 lakhs at Rs. 73.08 lakhs in 1960-61. The Estimates Committee has done well, indeed, in urging the Board to be more careful in preparing budget estimates and in ensuring that the funds are fully utilised in a planned and economic way. Meanwhile, the Committee has suggested that, since the tasks before the Board for the development and production of tea are quite heavy, the desirability of augmenting the resources of the Board suitably may be examined by the Government.

If the Tea Board has not functioned effectively and efficiently, it is not because of inadequate funds but because of the limitations and control of the Government under which it has to work. The Estimates Committee is quite right when it says that a statutory body like the Tea Board must possess a considerable degree of elasticity and autonomy in working if it is to take the initiative in drawing up and implementing appropriate programmes for the development of tea industry quantitatively and qualitatively alike.

EXCELLENT COVERAGE!

HARVEY CANVASES

provide the finest, surest protection for men and material

When the safety and protection of men and vital materials are at stake, one can't afford to take risks. Nothing but the finest coverage material will do! That's why top-ranking manufacturers insist on Harvey Canvases—the strongest and most reliable fabrics for making superior quality tarpaulins, tent canvases, etc.

Harveys' Madura Mills are today India's largest producers of industrial fabrics. Through the years they have built up a world-wide reputation for consistently high quality. They have the men, machines and knowhow to produce a wide range of industrial fabrics such as Tyre Cords, Belting Ducks, Jacket Ducks, Light and Heavy Canvases.

What's more, Harveys can weave industrial fabrics to your specifications—however rigid. Recent expansion at Madura Mills, with the installation of up-to-date high-speed looms and precision machinery, has further increased Harveys' weaving capacity. They can now meet all your requirements in industrial fabrics - to your complete satisfaction.

INDIA SUGARS AND REFINERIES LIMITED

PAMPERING OF CANE GROWERS MUST CEASE

SPEECH OF CHAIRMAN, MR. RAJESHWARA PATEL, M.P.

THE sugar policy of the Government of India was criticised by Mr. Rajeshwara Patel, M.P., Chairman of the India Sugars and Refineries Limited, in his speech at the Thirtieth Annual General Meeting of the Company held at Hospet on Monday, 16th March, 1964. Mr. Rajeshwara Patel regretted that the Government had not given any thought to the repeated representations made by the South Indian Sugar Mills Association about the "grave injustice" done to the factories in the South by fixing "very low prices." He also deplored the unfortunate tendency of cane growers to keep on demanding higher and higher price for cane and urged that the pampering of cane growers by the authorities must cease. Turning to the affairs of his own Company, he alluded to the programme for expanding the crushing capacity to 1,250 tons a day. The programme, he said, would be implemented in the ensuing season and the increased capacity would take care of all the cane grown in the area and bring about economical working and reduce *pro rata* manufacturing costs too.

The following is the full text of Mr. Rajeshwara Patel's speech :

GENTLEMEN,

Let me extend to you all a cordial welcome to this, the thirtieth annual general meeting of this Company. The Directors' report, the audited balance sheet as at, and the profit and loss account for, the year ended 30th September 1963, have been in your hands for sometime and, with your permission, I shall take them as read.

The results of the working for the year ended 30th September 1963 show considerable improvement as compared with the results of the past year. The improvement would have been greater still but for the rise in the taxation provision. The net surplus available for distribution, as you would observe, was just enough to recommend a dividend as per last year and no more.

Controls Hamper Production

In my speech at the last annual general meeting, I had voiced anxiety about the accumulation of sugar, on one hand, and introduction of control, on the other; the immediate reaction to this policy was a fall in prices. I am glad to be able to report that the accumulated stocks had been liquidated and there has not been any further fall in prices. The sugar production economy in the country is often disturbed by imposition and removal of controls. In a poor country like ours, sugar is sometimes termed as an item of luxury. The demand is highly elastic and is related to some extent with the *per capita* earning of the people. The demand increases as the standard of living of people improves. It follows, therefore, that prices of sugar cannot remain too high for too long, because the producers are under constant temptation to increase the production and take advantage of the potential demand which multiplies at lower level of prices. It is my sincere opinion that, if the industry is left alone without Government interference for some reasonable period of time, both production and prices are bound to adjust themselves in the interest of consumers. I would go still further and say that "control" only hampers production. A review of the sugar industry during the last fifteen years would prove that production has tended to decline whenever "controls" are brought in and to rise once controls are withdrawn.

The strange phenomenon of controls imposed last year simply baffles me. Different ex-factory control prices have been fixed for different sugar factory units in the country. It is said that one of the criteria for fixing such diverse prices is that it has got to be related to the price of cane that a unit is made to pay. The price of cane, it was argued, could not be uniformly fixed because of competition from jaggery manufacturers in certain areas. On careful examination of the prices for various factories, it would be observed that it is not so. To quote a few instances, I would mention :

(1) Daurala Sugar Works, Daurala, Dist. Meerut and

(2) Modi Sugar Mills Ltd., Modinagar, Dist. Meerut

where the cane price fixed payable by these factories are Rs. 46.90 and Rs. 48.50 per ton, respectively, and the ex-factory control sugar price which these factories are entitled to is Rs. 116.50 per quintal. Comparing these figures with that of our factory, you will see that the sugarcane price fixed by the Government as payable by us is Rs. 53.30 and the ex-factory control sugar price is fixed at Rs. 115 per quintal. The Government may have had their own reasons for making this disparity, but I am unable to appreciate the real purpose for such discrimination.

Again, in the earlier years, whenever controls were imposed on the price and distribution of sugar, the factories in the South, including our factory, always got slightly higher price than the ex-factory prices prevailing in the North. The reason was the freight advantage. The authorities took into consideration the fact that, if sugar is transported from the North to the South, certain freight would be incurred. Southern States being deficit in sugar production, some sugar is bound to be transported. Therefore, they used to include a portion of the freight which would have been payable, while fixing ex-mill control price of South Indian factories. It may be pertinent to mention here that, when wages were rationalised by the Sugar Wage Board, higher wages were fixed for factories operating in the South in comparison with those of the North and one of the considerations in so fixing higher wages was that factories in the South were getting better realisation of sugar due to freight advantage.

Grave Injustice

I have stated earlier that, on account of control, prices were steady. No doubt this is true, but, as explained above, the prices fixed are not commensurate with the production costs and certainly are discriminatory between prices fixed for the factories in North India and factories in South India. Representations were made to the Government by the South Indian Sugar Mills Association repeatedly about the grave injustice done to the factories in the South by fixing very low prices, but I regret to say that they have not given any thought to these representations, although we have driven home our point with facts and figures of actual working costs and proved that, even if we are given the same treatment as is given to the factories in U.P. and Bihar, the ex-factory price should not be less than Rs. 118 per quintal.

Another important factor that influences the judgment of the Government from time to time is the unfortunate tendency of the cane growers to keep on demanding higher and higher price for cane; in spite of the fact that agriculturists growing sugarcane, compared to others engaged in the production of other crops, are even now very favourably placed. On one hand, the policy of the Government seems to please the sugarcane growers even at the risk of causing unjustifiably high rise in the price of such important a commodity as sugar and, on the other, it refuses to appreciate the steep rise in the manufacturing costs. If this policy of the Government continues, I am afraid the outlook for the industry cannot be considered too bright. Even at the risk of incurring displeasure of many, from both the industrialist and agriculturalist classes, I wish to express my sincere opinion that the pampering of the grower must cease and reasonable margin to the producer be left, if the industry is to progress with enthusiasm and confidence. The policy of punishing the industrial efficiency and quality should also likewise stop.

As you have read in the Directors' report, the expansion scheme for increasing the crushing capacity of our factory to 1,250 tons a day is well under way and it is hoped that it would be implemented during the ensuing season. The increased capacity would take care of all the cane in the area and, I hope, would help in some measure to bring about economical working and bring down the *pro rata* manufacturing costs too.

No Justification

For some time past, the sponsors of a sugar factory in the co-operative sector have been once again trying to get another sugar factory established in the Kamalapur area within about six miles of our factory. After the expansion of our factory and that of our subsidiary, the Salar Jung Sugar Mills Ltd., Munirabad, which has also been licensed to increase its crushing capacity, the total cane available in the entire area would hardly be enough for feeding these two factories. It has been thoroughly examined satisfactorily that, even assuming that per-acre yield is considerably improved due to better manuring and better cultivation methods, the resultant cane production would just be sufficient to meet the enhanced requirements of our two factories. There is, therefore, no justification whatsoever for a third sugar factory in the co-operative or any other sector to be established in Kamalapur. We have made suitable representations to the Government of Mysore and the Government of India and have requested them that the licence for establishing another sugar factory in Kamalapur should not be granted because the unplanned establishment of any industrial undertakings bring all the factories to grief as was the case of several factories in U.P. and Bihar where enough cane is not available for a number of factories only because the initial choice about siting of the factory was not prudently planned.

I am extremely sorry to report the growing tendency of indiscipline among the labour and employees. A very undesirable step taken by the labour in resorting to go-slow strike in the month of December this season brought the production to almost a standstill for few days and resulted in a huge loss. While we certainly do not deny the rights of the labour to have an increasing share in the growing prosperity of the company they serve in the form of better wages, bonus, etc., there are several constitutional methods for resolving any dispute, but such ill-advised desperate action taken by the labour as resorting to go-slow tactics amount only to sabotage of production of an essential commodity. It is obvious that it serves no interest, not even the interest of the labour. I am sure you will agree with me that, in the hour of emergency, nobody would approve of such a deliberate act of gross indiscipline and sabotage.

Bonus

As has been mentioned in the Directors' report, the dispute about the bonus for 1960-61 is pending before the Industrial Tribunal, Bangalore, and for the two subsequent years, that is, 1961-62 and 1962-63, they have been referred to arbitration. The report of the Bonus Commission has now been published. Some of their recommendations, to say the least, besides being highly unreasonable, are extremely detrimental to the proper growth of the industry and fostering healthy relations between the labour and management.

The recommendations of the Bonus Commission, particularly to award bonus even by the industries which are running into loss or are uneconomically working, of a minimum of 4 per cent of their total annual earnings, is, to my mind an unreasonable and unjust infliction on the industry. Bonus, as we all know, normally could only mean a share of the labour in the prosperity of the concern. The scheme followed by the Bonus Commission is opposed to this basic principle. The matter is still under consideration of the Central Government and I hope that the recommendations of the Bonus Commission would not be accepted by the Government in its present form.

Taxation Policy

The taxation policy of the Government of India, as announced by the Finance Minister in his Budget proposals in Parliament on the 29th ultimo, is yet another step of disincentive to the growth of this industry. Wide powers are sought to be given to Government officers. If unrestricted powers to the taxation authorities are given, who, as experience shows, do not always use the discretion judiciously and coupled with the understandable temptation of the people taxed, the natural desire to protect oneself from the blackmailers and the human instinct of saving as much money for one's children, and in view of the ever-increasing tendency of corruption at all levels, a situation would soon come when a very large number of taxpayers and tax collectors may become liable to be prosecuted for breach of law in one form or another.

I very much doubt whether the principles enunciated are capable of achieving the real objective. To quote one instance, I would mention that, if the income returned by the assessee is less than 90 per cent of actually assessed one

AVERY

quality is in every component

Quality begins with components—believe Avery, leading manufacturers of weighing equipment for over 230 years. In its modern works at Calcutta, quality-conscious engineers scrutinize every vital component, follow advanced methods of production, to make Avery scales accurate. And accurate weighing means better profits, more goodwill. Ensure these by using Avery scales.

THE INDIAN OVERSEAS BANK LIMITED

Registered Office: **151, Mount Road, Madras-2.**

DIRECTORS' REPORT FOR THE YEAR ENDED 31st DECEMBER, 1963

(To be submitted to the shareholders of the Company at the Twenty-seventh Annual General Meeting to be held at the Registered Office of the Company, 151, Mount Road, Madras-2, on Tuesday, the 31st March, 1964 at 2-30 p.m.)

The Directors have pleasure in submitting herewith the Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1963 together with the Auditors' Report.

PROFITS AND THEIR DISTRIBUTION

1962 Rs.		1963 Rs.
19,99,875.16	Net Profit for the year (after payment of Rs. 9 lakhs to the Trustees of The Indian Overseas Bank Limited Staff Gratuity Fund)	16,23,333.51
...	Transfer from Pension and Gratuity Funds Account	8,69,766.15
2,22,933.24	Brought forward from last year	2,03,043.60
22,22,808.40		26,96,143.26
	Out of this sum the Directors have made the following appropriations:	
4,00,000.00	Transfer to Reserve Fund	6,75,000.00
2,00,000.00	Transfer to Development Rebate Reserve	...
4,00,000.00	Provision for Bonus	6,00,000.00
10,00,000.00		12,75,000.00
	The Directors recommend that the balance be disposed of as under:	
10,19,764.80	Payment of dividend at the rate of 14 per cent per annum subject to tax (against 12 per cent last year)	13,19,293.98
2,03,043.60	Carry forward to next year	1,01,850.18
22,22,808.40		26,96,143.26

2. The Bank's business and profits continue to show satisfactory progress.

3. During the year, nine branches were opened at Thana (Bombay), Aminjikarai-Madras, Puliyangudi, Gudiyattam, Porto Novo, Ranipet, Rajahmundry, Chokkikulam-Madurai and Bangalore-Cantonment. Since the date of the Balance Sheet, branches have been opened at Avadi (Madras), Shyambazar-Calcutta and Ayanavaram-Madras.

4. The Bank also took over during the year under report certain assets and liabilities of the Coimbatore Standard Bank Limited, Coimbatore with its R. S. Puram branch and also Nanjinad Bank, Ltd. Nagercoil with its branches at Eranlel and Thittuvilai. Subsequent to the date of the balance sheet, the Bank has also taken over the selective assets and liabilities of the Coimbatore Vasunthara Bank Ltd., Coimbatore with branches at Coimbatore, Satyamangalam, Pullampatti and Kaniyur.

5. All private banks and branches of foreign banks in Burma were nationalised with effect from 23rd February, 1963. Our claim for compensation in respect of our Rangoon branch lodged with the Banking Business Nationalisation Compensation Committee has not yet been disposed off. The working of Rangoon branch for the period 1st January, 1963, to 23rd February, 1963, is not taken into account.

6. In terms of Section 256 of the Companies Act, 1956, Messrs. M. Ct. Muthiah, A.R. Ramanathan, V. T. Padmanaban and G. K. Devarajalu retire and being eligible offer themselves for re-election. Under Section 260 of the Companies Act, 1956 read with Article 82 of the Bank's Articles of Association Messrs. S. S. Vasan, C. M. Khatau and V. K. Ramaswamy Mudaliar who were co-opted as Directors during the year 1963 offer themselves for re-election.

7. The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration Messrs. Suri & Co., the retiring Auditors are eligible for re-appointment.

By Order of the Board,
M. CT. MUTHIAH,
Chairman.

MADRAS, *2nd March*, 1964.

AUDITORS' REPORT

We have audited the annexed Balance Sheet of The Indian Overseas Bank Limited, Madras, as at 31st December, 1963 and the Profit and Loss Account for the year ended that date in which are incorporated the returns from 52 Branches audited by us and 9 branches audited by other auditors and the unaudited returns from 29 branches (as per list annexed) for which exemption from the provisions of section 228 of the Companies Act, 1956 has been obtained from the Central Government under Rule 4 of the Companies (Branch Audit Exemption) Rules, 1961.

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit and have found them to be satisfactory.

(b) The transactions of the Bank, which have come to our notice have been within the powers of the Bank.

(c) In our opinion, proper books of account as required by Law have been kept by the Bank so far as appears from our examination of those books and proper Returns adequate for the purpose of our audit have been received from the branches of the Bank not visited by us.

(d) The working of the Branch at Rangoon upto the date nationalisation, i.e., 23rd February, 1963 is not brought into account, as the effect of the nationalisation of the Banks on this branch is not yet finalised. The reports on the accounts of the other foreign branches of the Bank audited by the respective qualified auditors have been taken into consideration together with such other particulars and information thereon made available at the Central Office.

(e) The Bank's Balance Sheet and Profit and Loss Account dealt with by this Report are in agreement with the books of account and returns.

(f) Subject to the observations under clause d, in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956 in the manner so required for Banking Companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank, as at 31st December, 1963 and the Profit and Loss Account gives a true and fair view of the profit for the year ended that date.

THE BANK OF BARODA, LIMITED

(ESTABLISHED: 20TH JULY 1908)

(Registered Office: **Mandvi, Baroda)**

FIFTY-FIFTH ANNUAL REPORT OF THE DIRECTORS.

To be presented to the Shareholders at the Annual General Meeting to be held at the Registered Office of the Bank at Mandvi, Baroda, on Saturday, the 4th April 1964, at 11-30 a.m.

The Directors have pleasure in submitting this Fifty-fifth Annual Report together with the audited statement of accounts for the year ended 31st December 1963.

	This Year Rs. nP	Previous Year Rs. nP
The net profit for the year 1963 after providing for taxes, including Rs. 3,46,722.36 brought forward and after taking Rs. 14,70,408.19 nP towards depreciation on buildings and furniture, amounts to	78,46,969.92	66,21,722.36
An ad-interim dividend at the rate of 16 per cent. per annum, subject to deduction of income-tax at the appropriate rates was paid for the half-year ended 30th June 1963 which absorbed	16,00,000.00	12,00,000.00
Amount transferred to Reserve Fund	15,50,000.00	12,75,000.00
Amount transferred to Special Reserve	20,00,000.00	....
Provision for Bonus to Staff	24,00,000.00	22,00,000.00
	75,50,000.00	46,75,000.00
		*16,00,000.00
Balance of profit to be carried forward to next year's account	2,96,969.92	3,46,722.36
	Rs. 78,46,969.92	66,21,722.36

* Final dividend at 16 per cent. per annum.

The Directors recommend to the shareholders payment of a final dividend at the rate of 20 per cent. per annum per equity share (making 18 per cent. per annum for the year) subject to deduction of tax at the appropriate rates for the half-year ended 31st December 1963 to be paid out of the Special Reserve and which will absorb Rs. 20,00,000.

In terms of the Resolution No. 2(b) passed by the shareholders at the Annual General Meeting held on 8th April 1933 your Directors have distributed dividend at the rate of 16 per cent. per annum, subject to deduction of tax at the appropriate rates on the entire new issue of 1,00,000 equity shares for the half-year ended 31st December 1962 which absorbed an additional sum of Rs. 70,000 over the amount recommended in the last report, leaving a balance of profit of Rs. 3,46,722.36 nP to be carried forward to the account of the year under report.

The business of the Bank during the year under review continued to be satisfactory.

The Reserve Bank of India Rate remained unchanged at 4½ per cent. per annum since 3rd January 1963.

The Bank opened during the year 1963 33 new branches as under :—

Gujarat	18
Maharashtra	8
Rajasthan	2
Uttar Pradesh	1
West Bengal	2
Goa	1
Fiji Islands	1

making a total of 189 branches in India and 15 branches in foreign countries.

The Board of Directors decided to take over the banking business of the Umbergaon People's Bank (Private) Ltd., Umbergaon. Accordingly after due examination and valuation, the banking business of the Bank has been taken over from 1st January 1964, and its two offices at Umbergaon and Sanjan have commenced functioning as branches of this Bank from that date.

The Bank had in all 205 offices as at 31st December 1963. It has applied for exemption from audit under Section 228 of the Companies Act, 1956, in respect of 88 branches for the year 1963. Out of the remaining 116 branches (excluding Head Office), 101 branches in India have been either audited by the Bank's statutory auditors or by firms of Chartered Accountants entrusted with the audit in consultation with the statutory auditors. All the Bank's branches outside India numbering 15 have been audited by Chartered Accountants who have been competent to act as Company Auditors under the laws of the respective countries and who have been approved by the Bank's Auditors.

In accordance with Article 145 of the Articles of Association of the Bank, five Directors : (1) Shri R. D. Birla, (2) Shri Chinubhai Chimanbhai, (3) Shri K. P. Goenka, (4) Shri N. D. Bangur and (5) Shri Rasesh Navinchandra Mafatlal—retire by rotation and being eligible, offer themselves for re-election.

The shareholders are requested to appoint auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting and to fix their remuneration.

For and on behalf of the Board,

TULSIDAS KILACHAND,
Chairman.

BOMBAY, *27th February*, 1964.

CERTIFICATE PURSUANT TO RULE 8 (c) OF THE COMPANIES (BRANCH AUDIT EXEMPTION) RULES, 1961.

We hereby certify that no material change has taken place in the arrangements made for the audit of accounts of the Branch Offices exempted from audit under Rule 4 (1) (b) of the Companies (Branch Audit Exemption) Rules, 1961, enabling the Chartered Accountants employed by the Bank for the purpose of audit of the accounts of Branch Offices, to visit the Branch Offices and to have access at all times to the books, accounts and vouchers of the Bank maintained at such Branch Offices audited by them and for furnishing all such further information and explanations required by them and that such auditors have carried out the audit of the Branches assigned to them in accordance with the Internal Audit Programme drawn up by them and approved by the Bank's Statutory Auditors.

FOR THE BANK OF BARODA, LIMITED,
A. H. SHETH, *Director.*
N. M. CHOKSHI, *Managing Director.*

BOMBAY, *27th February*, 1964.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of The Bank of Baroda Ltd., as at 31st December, 1963, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns from 53 Branches audited by us, 63 Branches audited by Branch Auditors and unaudited returns from 88 Branches for which exemption from the provisions of Section 228 of Companies Act, 1956, has been obtained from the Central Government under Rule 4 clauses (a) and (b) of the Companies (Branch Audit Exemption) Rules, 1961.

We report that :

(a) We have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(c) in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank not visited by us ;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(e) the reports on the accounts of the Branches audited by Branch Auditors have been forwarded to us and the same have been considered by us in preparing our report ;

(f) in our opinion and to the best of our information and according to the explanations given to us, the said accounts, together with the notes thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1963, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

THE UNION BANK OF INDIA LIMITED

(REGISTERED 11TH NOVEMBER, 1919)

APOLLO STREET, FORT, BOMBAY 1

FORTY-FOURTH REPORT

The Directors have pleasure in submitting to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1963.

	Rs.	nP
The net profit for the year, after providing for taxation and including the sum of Rs. 1,39,907.02 nP. brought forward from the last year's account, amounts to ..	28,76,208	59
The following appropriations have been made :—		
Amount transferred to Reserve Fund under Section 17 of the Banking Companies Act, 1949	6,00,000	00
Amount written off Premises Account	50,000	00
Amount provided for Bonus to Staff	9,28,466	00
	15,78,466	00
The Balance of Rs. 12,97,742.59 nP., the Directors propose to dispose of as follows :—		
To pay a dividend of 57 nP. per share or 11-2/5 per cent. per annum, subject to deduction of tax, on 20,00,000 shares	11,40,000	00
To carry forward to next year's account	1,57,742	59
Total .. Rs.	28,76,208	59

The business of the Bank during the year under review continued to show satisfactory progress. The Bank opened ten new branches during the year, at Borivli, Khar and Malad in Bombay, Ellis Bridge and Vadej in Ahmedabad, Sojitra, Vaso (Gujarat), Amritsar (Punjab), Jabalpur City (Madhya Pradesh) and Valparai (Madras).

The deposits of the bank which stood at Rs. 42,62,00,000 at the end of December 1962 rose to Rs. 52,04,00,000 at the end of December 1963. Advances increased from Rs. 23,23,00,000 as at the end of December 1962 to Rs. 31,12,00,000 at the end of December 1963.

With the transfer of Rs. 6,00,000 from the Bank's Profit for the year, the Reserve Fund of the Bank now stands at Rs. 76,00,000.

Pursuant to the Resolution passed at the last Annual General Meeting of the Company, your bank applied to the Central Government for exemption from audit for the year 1963 under Section 228 of the Companies Act, 1956, in respect of 23 branches and the Central Government has by its Order dated 21st June 1963 granted such exemption. The remaining branches have been either audited by the Bank's Statutory Auditors or by firms of Chartered Accountants entrusted with the audit in consultation with the Statutory Auditors. In order to avoid considerable delay and expenses involved in having the accounts of all the Branch Offices of the Bank audited by the Company's Auditors and considering the satisfactory arrangements made by the Bank for audit and surprise inspection of the Branches by the Bank's Statutory Auditors, other well-known firms of Chartered Accountants and by responsible and competent Officers of the Bank, your Directors propose to apply for a similar exemption with regard to the auditing of the accounts of the Branch Offices for the year ending 31st December 1964 to the extent permissible under the Rules framed by the Central Government. Resolutions in this behalf under Item 7 of the accompanying Notice, are commended for approval.

Under the provisions of Section 256 of the Companies Act, 1956, three of the Directors of the Company, Shri Devji Rattansey, Shri Jal H. Mehta and Shri Ratilal Nathalal retire by rotation. Being eligible for re-election, they offer themselves accordingly.

You will be required to appoint Auditors for the ensuing year and fix their remuneration.

By Order of the Board,
DEVJI RATTANSEY
Chairman.

BOMBAY, *2nd March*, 1964.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of the Union Bank of India Ltd. as at 31st December, 1963, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date in which are incorporated the returns of 19 Branches audited by us, 31 Branches audited by other Auditors and the unaudited returns from 23 other Branches not visited by us, in respect of which the Central Government has made an order granting exemption from the audit pursuant to Section 228 of the Companies Act, 1956.

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) the transactions of the Bank which have come to our notice, have been within the powers of the Bank ;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank not visited by us ;

(d) the reports on the accounts of the Branches audited by other Auditors have been forwarded to us and the same have been considered in preparing our report ;

(e) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(f) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts read along with the notes appearing thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1963, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

DIRECTORS' REPORT FOR THE YEAR ENDED 31st DECEMBER 1963

To

THE MEMBERS OF

DEVKARAN NANJEE BANKING CO., LTD.

1. Your Directors beg to submit herewith the audited Balance Sheet and the Profit and Loss Account of the Company, hereinafter called the Bank, for the year ended 31st December 1963 to which the Auditors' Report is also annexed.

2. The Bank has, during the year, made generally good all-round progress. The Bank's deposits, at the end of the year, have increased to over Rs. 59 crores, the total working funds to over Rs. 65 crores, and the number of accounts to over 3 lakhs. Seventeen branches were opened during the year—at Bhandup, Khodadad Circle, and Parel in Bombay, Kolhapur in Maharashtra, Astodia Chakla in Ahmedabad, Sayaji Ganj in Baroda, Nanpura in Surat, Dhari, Gandevi, Jamnagar Grain Market, Kadod, Karamsad, Mehmedabad and Ode in Gujarat, Subzi Mandi in Delhi, Bhopal in Madhya Pradesh and Hyderabad in Andhra Pradesh—bringing the total number of the Bank's offices to 129 at the end of 1963. Six safe deposit vaults were opened—at Borsad, Dharmaj, Malegaon, Navsari, Saraspur in Ahmedabad and Surendranagar—bringing the total number of Safe Deposit Vaults to 40. Steps were also taken to expand the activities of the present branches. The Reserve Funds of the Bank at the end of the year, viz. Rs. 1,10,00,000 have exceeded the Paid-up Capital of Rs. 1 crore.

3. The Bank has made a net profit, after providing for taxation, of Rs. 26,59,096.14, which, together with the sum of Rs. 3,19,418.26 brought forward from last year's account, amounts to Rs. 29,78,514.40. Out of this the Directors have made the following appropriations :

	Rs.	nP
To Ad-Interim Dividend paid for the half-year ended 30th June 1963 at the rate of Rs. 2 per share	*4,00,000.00*	
To Reserve Fund (Raising the Reserve Funds to Rs. 1,10,00,000)	10,00,000.00	
and propose to appropriate the balance as under :		
To Pay a Final Dividend for the half-year ended 31st December 1963 at the rate of Rs. 4 per share (making in all 12 per cent. per annum, subject to deduction of tax) ..	8,00,000.00	
To Provision for Bonus to Staff	6,00,000.00	
and To Carry Forward	1,78,514.40	
Total .. Rs.	29,78,514.40	

4. Since the end of the financial year to which the annexed Balance Sheet relates, till the date of this report, two more branches were opened in Bombay—at Nagdevi and Juhu-Vile Parle—raising the total number of the Bank's branches to 131.

5. In accordance with Article 109 of the Articles of Association, Shri Lalitchandra C. D. Nanjee, Prince Udaybhan of Porbandar, and Shri Jayantilal R. Trivedi retire from the Board of Directors by rotation, but being eligible offer themselves for re-appointment.

6. You are requested to appoint Auditors for the period commencing from the conclusion of the annual general meeting till the conclusion of the next annual general meeting and fix their remuneration.

Yours faithfully,
For the Board of Directors,
LALITCHANDRA C. D. NANJEE,
Chairman.

Total Rs. 67,600.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of the DEVKARAN NANJEE BANKING CO., LTD., as at 31st December 1963 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns from 44 Branches audited by us, 34 Branches audited *by other Auditors* and unaudited returns from 50 Branches. Exemption from the provisions of Section 228 of the Companies Act, 1956, has been obtained from the Central Government for all the unaudited Branches.

We report that—

(*a*) We have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;
(*b*) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;
(*c*) in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank ;
(*d*) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;
(*e*) the reports on the accounts of the Branch offices audited by other Auditors, so far as were received till the date of our audit, have been dealt with in the manner considered necessary by us ; and
(*f*) in our opinion and to the best of our information and according to the explanations given to us, the said accounts, together with the notes thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December 1963, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

THE CHARTERED BANK

CHAIRMAN, MR. V. A. GRANTHAM'S ANNUAL STATEMENT

NATIONALISATION OF BANKS WILL AFFECT FOREIGN INVESTMENTS

THE annual statement of Mr. Vincent Alpe Grantham, Chairman of The Chartered Bank, to the shareholders for 1963, contains his usual comprehensive "overseas survey," which is a review of the year's economic scene in the countries where the Bank operates. His reference to India covers more of its difficulties than of its achievements. But, while emphasising the bottlenecks owing to various economic factors, Mr. Grantham does not spare the ruling party, for he says that, unfortunately, the Congress is in no mood for economic progress by the best means possible and that there is increasing clamour for a socialistic State with nationalisation and public ownership. In this context, he warns the authorities that the effect of bank nationalisation—a demand heard since 1948 but getting more backing in political circles now—on foreign investors in India would be profound. Such a move, he adds, would be completely contrary to the views held in the World Bank and would not be in keeping with India's dependence on good relations with that institution. Turning again to economic trends in India, he observes that inflationary tendencies are very much in evidence, while the economy requires considerable stimulus to obviate the risk of a recession and the misery it would entail.

The following is the full text of Mr. Grantham's statement:

The East has had more than its share of political upheavals during the past year, but despite this the Bank's business has been more than maintained. Any international organisation must be prepared to meet the challenge of change and uncertainty in the conditions in which it operates and with more than a century's experience of the East we are confident of our ability to move with the times and adapt our methods accordingly. The policy we initiated a few years ago of extending the group's organisation to new areas has made us less susceptible to setbacks in individual countries in which we have branches. The new ventures which we have now initiated in California and Libya are evidence of our intention to continue taking advantage of suitable opportunities for widening the scale of our business. We have also opened a number of new branches in countries in which we are already established and the group now has some 230 offices in 28 countries.

International banking is a highly competitive enterprise, and to maintain and develop the business of The Chartered Bank group we depend as always on the efficiency and devotion to duty of the General Management, the branch managers and the staff at all levels. Their efforts are responsible for the satisfactory outcome of a year in which for political reasons working conditions in certain areas have often been difficult and sometimes dangerous.

The Court of Directors

I have to record with deep sorrow the death early in November last of Sir Stephen Gibson, C.B.E., who joined the Court of Directors in 1958. Sir Stephen, who was Chairman of the Permanent Council of the World Petroleum Congress, brought to our deliberations a profound understanding of the political and economic problems of the oil-bearing countries and particularly those of the Middle East.

Tours

In the early summer of last year I visited the Cyprus organisation of The Chartered Bank and the Beirut branch of The Eastern Bank. This visit gave me a welcome opportunity of meeting members of our staff in Cyprus and Lebanon and of reviewing on the spot the development of the group's business in the Levant.

In April the Chief General Manager paid a short visit to India and Pakistan and during the autumn he travelled to the United States for the meeting of the World Bank and took the opportunity of exchanging views on international financial affairs with his numerous banking friends in New York and San Francisco. Mr. Pullen was able to investigate at first hand the prospects for promoting in California a domestic banking subsidiary of The Chartered Bank, to which project reference is made elsewhere in this statement.

Early in 1963 Mr. Stafford Northcote visited the Bank's branches in the Malaysian zone and Mr. Beath, accompanied by Mr. Goldsmith, General Manager of The Eastern Bank Limited, undertook a tour of the Middle East. Mr. Shewan has recently returned from a tour of the branches in the Far East.

Development

Stockholders will have learned from the newspapers that early in January the State Banking Department of the State of California authorised the Bank to open an agency in San Francisco and granted a licence to The Chartered Bank of London, a newly-formed subsidiary of ours, to undertake business as a domestic banking corporation in California. For technical and administrative reasons the agency and the new bank must have separate identities, but they will of course share premises and staff. We have had business connections with California for many years past and the port of San Francisco has long conducted a large trade with the Asian countries in which our branches are established. In seeking to extend the representation of the Bank in the Western Hemisphere, we were influenced by the continued expansion of the Californian economy and by changes in the direction of world trade which are likely to increase further the prosperity of the Pacific littoral of the U.S.A.

It is proposed to open The Chartered Bank of London for business in San Francisco during the month of June next. The deployment of staff and the adaptation of premises are already well advanced.

The Eastern Bank Limited

It has been remarked in the territorial survey embodied in this statement that the Middle East, the territorial sphere in which The Eastern Bank Limited chiefly operates, continues to be beset with many difficulties for British commercial and industrial enterprise; nevertheless, our subsidiary continues to prosper and to constitute an increasingly important sector of the group organisation.

For some time past The Eastern Bank Limited has sought to extend its representation to Libya whose economy has been powerfully strengthened by the commercial exploitation of newly-discovered oil resources. On 12th November last the Government of the Kingdom of Libya licensed the formation of The Libyan Commercial Bank SAL which has been promoted by influential Libyan citizens in partnership with The Chartered Bank and The Eastern Bank Limited. The capital has been subscribed by Libyan and British interests in the proportions of 51 per cent and 49 per cent respectively and it is expected that the new bank will shortly open for business in Tripoli. Arrangements are being made to open branches in other places of commercial importance in Libya.

Allahabad Bank Limited

We have now succeeded in our objective of obtaining an Indian Chairman for our subsidiary, which is India's oldest-established bank, and we have been very fortunate in securing the services of Mr. S. P. Puri, who is well known in Calcutta and has had a distinguished banking career.

Fortunately Mr. Puri's advent coincides with permission to open new branches and embark on a programme of further expansion. In 1963 total resources increased from £51.2 millions to £55.9 millions, with an increase in net profit.

The Year's Accounts

The consolidated balance-sheet, which includes the figures of The Eastern Bank Limited and our other wholly-owned subsidiaries, now total £580 millions, the highest figure so far achieved.

This year we have followed the practice of other British banks in including with our liabilities confirmed credits, guarantees and indemnities. Even without this additional item, the total of the consolidated balance-sheet would exceed the corresponding figure for last year by £33 millions, reflecting the continued expansion of the business of the Bank and its wholly-owned subsidiaries.

On the liabilities side you will observe that our major sources of funds, current and other accounts and fixed deposits, have increased to £264 millions and £199 millions respectively, a total augmentation for the year of £35 millions.

Advances to customers and other accounts continued to expand and have now reached a total of £213 millions, while holdings of quoted investments total £127 millions.

The increase in fixed assets is due almost entirely to expenditure in connection with further additions to and modernisation of our own and our main subsidiary's properties overseas.

Profits and Dividends

After making the usual provisions, net profit for the year at £1,069,378 shows a small decrease as compared with last year. We have had to meet further increases in salaries and wages as well as the costs of expansion through new branches and this has absorbed in this year the benefits of increased resources.

With the balance of profit brought forward from last year of £561,021, the amount available for distribution is £1,630,399, out of which £450,000 has been transferred to reserve funds which now stand at £8,150,000.

The interim dividend of 7½ per cent less income-tax paid in September 1963 absorbed £303,187 and it is now proposed to pay a final dividend at the same rate, making 15 per cent for the year.

Rights Issue

Stockholders will have received my letter of 4th March notifying them that it is proposed to make a Rights Issue to Stockholders whose names were on the Register at the close of business on 22nd February 1964 in the proportion of One £1 Share for every £6 of Stock held, at a price of 40s. per Share. Provisional Allotment Letters in respect of the shares to which the Stockholders are entitled will be posted on 20th March 1964.

II

OVERSEAS SURVEY

My annual review is normally concerned with the economic situation in the countries in which The Chartered Bank group operates, but last year more than ever political factors all too often dominated trade, industry and investment. The rapid improvement in modern communications, with easy travel throughout the world, has not in general brought a more international outlook to the countries of the Middle and Far East, and unfortunately nationalistic prejudices, far from being on the wane, are almost everywhere becoming more pronounced.

Most of the countries in our sphere of operations have well-thought-out, although sometimes overambitious, development plans to raise the living standards of their peoples, and understandably there is disappointment when increased production is nullified by increased population and economic growth is slowed down by lack of foreign exchange. Although when external reserves are lower help is usually sought from the older-established Governments and international organisations, such as the World Bank, any aid or loan given is usually restricted to schemes for the provision of basic services and industry, such as ports, railways and electricity. The main burden of the secondary development which figures largely in the development plans then falls on the private investor from abroad whose co-operation with local interests not only produces foreign exchange but also supplies technical expertise.

Risk capital is scarce and scared and if foreign investment is to be attracted there must obviously be confidence in the political background. Unfortunately discrimination by certain Governments in the area against foreign-owned enterprises has already raised serious doubts abroad and may well prejudice the efforts of neighbouring States to foster conditions favourable to investment from overseas. At present the foreign investor whose business is nationalised or expropriated without compensation has only world opinion on his side, and the stage has been reached when, for the sake of investors and for the developing countries themselves, a form of acceptable arbitration is necessary in cases of dispute. Countries which discriminate so blatantly and unfairly against existing investment are, however, unlikely to submit their action to neutral judgment and the World Bank and the Organisation for Economic Co-operation and Development (O.E.C.D.) have been giving serious consideration to the vulnerability of existing investment in countries where the normal canons of international behaviour are not observed. No doubt most of these countries do value assistance from and membership of the International Monetary Fund and the World Bank and perhaps pressure could be exerted by these institutions and stronger efforts made to instil a realistic appreciation of the connection between existing investment and the new investment they all want.

Cyprus

Last year in my review of the situation in Cyprus I suggested that the Republic's future depended largely on the two major communities co-operating in the national interest. It seemed then that little progress had been made since independence towards this desirable objective and, unhappily, inter-communal tension over the working of the constitution grew steadily worse and culminated in the tragic outbreak of violence in December which again brought Cyprus into the world's headlines. President Makarios unwittingly applied the spark to this inflammable position by putting forward a series of not unreasonable proposals for modifying the constitution, which shows that perhaps the best that can be hoped for in the coming months is an uneasy state of co-existence on the present basis.

Although inter-communal feelings are quickly roused I believe that the overwhelming majority of Cypriots of both Greek and Turkish descent are desirous of living peacefully in the island, and a prerequisite of any settlement seems to be the banning of arms and possibly the banishing of extremists on both sides. Unfortunately the present internal strife has automatically involved other States concerned with the negotiations leading up to the independence of Cyprus and, as a precautionary measure and to prevent further lawlessness and bloodshed on the island, an international garrison will be necessary until feelings die down.

The recent setback to the economy came at a time when economic processes and development plans were making steady headway. Foreign interest in investment in the island was on the increase and it was reasonable to assume that, given time and political stability, a proportion of the substantial Cypriot funds held abroad would be repatriated and turned to productive account locally. Now it will require a quick return of confidence to prevent further flight of capital and the Governor of the new Central Bank, which commenced operations during the year, must be exercised in his mind how to induce his fellow-countrymen to retain their funds in the local banking system as opposed to the introduction of restrictive measures which would inevitably have damaging effects on the value of the Cyprus pound. Given a continuation of external aid, a quietening of feelings with Cypriots looking upon themselves as Cypriots and not Greeks or Turks, there should be no need of any drastic action.

It is early yet to see the extent to which the recent troubles will affect the tourism which has been such a useful and growing source of exchange earnings. What we do know is that unless there is a return to normal conditions very soon those traders and agriculturists that were so badly hit by last year's slump in the vegetable and fruit markets of Europe will find it increasingly difficult to recoup their losses. The introduction of an improved method of marketing the potato crop should, however, be an insurance against such formidable losses again being incurred in that product.

Apart from earnings from agriculture, on which the country depends so much, exports of minerals have been well maintained and expenditure in connection with the British base is still an important factor in balancing the island's external payments. The introduction of an international force may give a temporary boost to exchange earnings, but to frighten away aid officials at a time when increased development is required seems incomprehensible.

Lebanon

The Lebanon had another quiet year with business activity at a satisfactory level. A minor flight of capital early in the year, due to disturbances in Iraq and Syria, was quickly reversed and in the long run the recent *rapprochement* between Iraq and Kuwait must benefit the Lebanon considerably. In fact the confidence that makes Beirut an international monetary centre and brings to it a thriving entrepot trade can only exist in comparatively peaceful conditions amongst the Lebanon's neighbours and in the Middle East generally.

Experience is beginning to confirm that the country's greatest asset may be its tourist trade. Last season was the best recorded and an expert investigation suggests that earnings from tourism may do far more than manufacturing industries and agriculture to reduce the country's reliance on foreign investment. In fact there are signs that investment in light industry may have been overdone for during the past two years no less than ninety factories have been constructed and quite a number of them have not prospered. The textile industry, which is by far the largest in the country, is in the doldrums and to revive it may be difficult in the face of higher labour costs. Agriculture too was generally disappointing, with the production of wheat and onions below that of 1962. Earnings from citrus fruits and olives increased slightly.

The Money and Credit Legislation, to which I referred in my last statement, was duly passed during the year and the new Central Bank is expected to open next April.

Iraq

The February revolution was followed by a period of suspense and uncertainty during which the Governments of Syria and Iraq were discussing their accession to the United Arab Republic. Further drastic reconstruction of the Government in Iraq in November seems to have restored confidence for the time being and although the international future is still obscure, Iraq is on better terms with all Arab countries and is co-operating with them in all common activities. Of particular importance was the restoration of good relations with Kuwait and, in return for the recognition of that country's sovereignty, Iraq received a loan of I.D. 30 millions repayable in twenty-five years. If the recently announced cease-fire in Kurdistan leads to a settlement of the longstanding dispute with the Kurds it will be a major achievement for the new regime, for not only have the operations against the insurgents been expensive, but the unsettled conditions brought to the north have discouraged agriculture in the area and have adversely affected crops, particularly wheat. This is one of the reasons for substantial imports from America, Australia and Syria and it was unfortunate that adverse climatic conditions should have, in the same year, reduced barley production and export earnings from this cereal.

In these circumstances and although the important date crop sold for good prices it was, as usual, left to the oil industry to bolster the economy. Fortunately the revenue continued to rise with production at a record level of 55.6 millions tons. Developments in oil relations took a slightly more encouraging turn and the way seems paved for further negotiations between the Government and the oil companies on a wider range of issues. Unfortunately the problem of Law No. 80 of 1961 remains the greatest stumbling block to further increased production.

In view of the country's indifferent export performance it was not surprising that the Government found it necessary to restrict imports and to concentrate on capital equipment rather than on consumer goods. Trade remained at a low level and the pace of development was slowed down, but it should be emphasised that few countries in the world have the development potential of Iraq with its combination of oil and agricultural riches. What is wanted probably more than anything else is for the Government to maintain a tolerant attitude towards business generally to stimulate confidence at home and abroad.

The Gulf

Bahrain: A quiet year with hardly any political disturbances made a good background for trading conditions but higher imports were not countered by a corresponding increase in re-export figures. This was, to some extent, due to lessening interest from Saudi Arabia and a tendency for South Persian merchants to switch their orders to Dubai because of visa difficulties. On the other hand, development in Abu Dhabi should indirectly help the local market.

A significant portion of the revenue continues to be expended on public utilities and during the year there were further expansions in the electricity, water-supply and drainage systems as well as additional construction of roads. The latest project initiated by the Government is for a new town to accommodate thirty-five thousand people on the Manama-Awali Road.

Prospects for the future are favourable with an increase of approximately £500,000 per annum in oil revenue and the possibility of a new source of wealth in the sea-bed concession shared by Bahrain with Saudi Arabia. The presence of British service personnel in the Island, and the local purchase policy of the Bahrain Petroleum Company, are important to the economy as between them they expend in Bahrain £3¼ to £4 millions per annum, much of it to the benefit of the local bazaar.

Qatar: During April and May there was a general strike accompanied by disturbances apparently intended to reinforce demands for certain administrative and political reforms and after the strikers had returned to work the Government of Qatar issued decrees reducing the rates charged for electricity and water and establishing a Municipal Council and Social Affairs Department.

Local market activity was throughout the year at a disappointingly low level but the general pessimism that has prevailed amongst the bazaar merchants should give way to tempered optimism in the light of increased oil revenues coming to the State. It is unlikely however that the shopkeepers will repeat their former mistake of overstocking and giving extended credit in anticipation of benefits from the State's additional wealth.

Although last year's revenue of roughly £20 millions failed to create buoyant conditions there was considerable expenditure on schemes which should finally help all. The first stage of the port scheme with the dredging of a new entrance channel is making good progress and the customs jetty and airport buildings have been improved. In fact when the new airport is completed it will be possibly the finest in the Middle East. Other undertakings for the benefit of the people were the drilling of artesian wells and additional water reservoirs, so generally prospects for Doha should improve.

Sharjah: The future of Sharjah must depend almost entirely on the success or otherwise of the drilling for oil which is about to begin.

Some development work is already in progress and a scheme for the public supply of electricity is being considered. A very encouraging development has been the finding of water in good quantity close to the town and this might make life easier for the inhabitants.

Abu Dhabi: This sheikhdom has featured regularly in the world press during the last few months as its oil has started flowing and there is a growing awareness of the increasing and future wealth that will accrue to the Ruler and his people.

The Ruler, Sheikh Shakhbut, is rightly being cautious in entering into large development commitments at this early stage but contracts are being negotiated for, amongst other things, a piped water supply from Buraimi. A post office has been opened and a temporary jetty completed which, with other building schemes for the Ruler and for commercial enterprises, will soon begin to give the town of Abu Dhabi a new look.

The Eastern Bank are sharing in this development by building new premises for their branch at Abu Dhabi, which it is hoped will be completed next year.

Hadhramaut

Mukalla: No massive development is possible in the Quaiti State unless the search for oil, which continued throughout the year, is successful. Trade is at present concerned almost entirely with the import of necessities such as grain and sugar and there are practically no exports. There seems, however, to be a real hope of establishing a fishing industry with an export potential, if certain technical and marketing difficulties can be overcome, and there is scope in the interior for minor development, such as small-scale irrigation, poultry farming etcetera. The Quaiti Government is once more considering a scheme for the supply of fresh water to Mukalla. The new premises of The Eastern Bank are nearing completion and it is hoped to occupy them during the first half of 1964.

Seiyun: The Kathiri State, like the Quaiti State, is deeply interested in the search for oil. Without some considerable accession of wealth large-scale development is out of the question. A new hospital is under construction at Seiyun and is nearing completion and a new Wadi road is expected to be completed by 1965.

It is perhaps not appreciated here in London that the Hadhramis of both States have for centuries been great traders not only in Aden but overseas—in the Far East, in Zanzibar and in East Africa. They take a very lively interest in events which affect the safety of Arabs and of Arab property in these areas and some of them may soon be seeking new fields for investment.

Aden

A crucial stage has now been reached in the political evolution of Aden Colony and the bomb attack at Aden airport on 10th December, which caused the postponement of the constitutional discussions to be held in London, was almost certainly sponsored by foreign interests anxious to create tension within the colony itself and to strengthen opposition to Aden's membership of the Federation of South Arabia. The recent efforts too from over the Yemeni border to spread disaffection amongst the tribes and to incite general subversion in the Federation of South Arabia had the same objective, but they have been effectively countered by the Federation's armed forces despite the difficulties imposed on military operations by the mountainous terrain. Notwithstanding all these subversive moves and outside interference there is every determination to press forward with the federal constitution, for with it there is a hope of economic and political survival which is perhaps more than can be said for the colony and the States without each other. There is still some apprehension amongst Aden businessmen at the thought of a legislature predominantly in the hands of members from the States, but even greater is their fear of the political intentions and actions of the Yemeni immigrants who collectively form one-third of the population and who, since the republican revolution in the Yemen, appear to favour Aden's integration with that country.

It is not surprising, therefore, that the immediate constitutional problem is whether the present restricted franchise is to be extended before the elections, due to be held in Aden not later than October. If such an extension were to be anything but limited it could still prejudice the position of the present Government, which has shown courage and skill in resisting trade union pressure aimed at weakening authority. Trade union action could also adversely affect the entrepot trade, from which Aden's prosperity is substantially derived. This trade is already suffering fierce competition from Djibouti and other ports, and the recent political happenings in East Africa are hardly likely to help. Fortunately, however, in spite of a sharp reduction in business with the Yemen, Aden's trade has stood up very well during the recent political uncertainty and the increasing number of ships calling at the port have brought revenue from bunkering and from tourism. In the long run Aden's economy will be more and more dependent on trade with the hinterland and for this reason it is important to accelerate development in the States in the interior which already grow cotton for export and where irrigation facilities are being expanded. The essential prerequisite however to the successful opening up of the interior is the construction of more roads and this must necessarily be largely dependent on generous aid from the British Government.

During the year The Eastern Bank Limited extended their organisation in the colony by opening a new branch at Ma'alla and another is to be opened at Sheikh Othman.

Iran

Considerable progress has been made in implementing the far-reaching social, economic and political reforms to which Iran is committed under the leadership of H.I.M. the Shah, with Mr. Alam as his Premier. This was perhaps to be expected after an election which has given the Majlis a completely pro-reform dominated membership, but it is possible that a stronger and more virile opposition party would have made for greater political steadiness and reduce the chance of further discontent and rioting.

The country's strong balance of payments position and its resources could sustain a comparatively rapid rate of economic growth but instead there is a persistent recession with business activity at a low ebb. An important factor in this situation is that confidence has never returned after the harsh stabilisation programme which had to be introduced in 1961 to check over-expansion and one of the prerequisites of renewed expansion in the economy is a successful outcome of the change to a co-operative system in agriculture. In industry more trained personnel and administrators are badly needed and in particular existing accounting methods are such as to deter local investment in industrial projects and the creation of a capital market. The Central Bank is well aware of these deficiencies and under its able Governor, Mr. Samii, is endeavouring to inject new life into the economy by a series of measures designed to expand credit. Government too, rather belatedly, is embarking on a more dynamic role to overcome the recession and is increasing its development spending.

This year's allocation from the oil revenues is forty per cent instead of sixty per cent to the Treasury and the increased balance to the Plan Organisation and, with the promise that foreign aid will also be forthcoming, the Organisation should be able to implement its ambitious third plan in which, although emphasis is shifted to rural and small-scale developments, there are large schemes covering fertiliser plants, steel mills, petro-chemical plants and additional sugar mills.

Foreign trade has, to some extent, been circumscribed by a desire to protect domestic products and to preserve foreign exchange, and the Government is worried by the continued downward trend in Iran's non-oil exports. To improve the situation incentive schemes are being introduced, and efforts made to bring down the lending rates of the commercial banks. The prospects in Iran should be good; all that is seemingly wanted is a return of confidence.

India

It has been an uneasy year for India. Despite efforts to mediate there has been no formal settlement of the situation on the northern borders and, although the possibility of a resumption of hostilities has receded, it has been necessary for India to maintain a state of military preparedness which has inevitably imposed further burdens on the country's already strained economy. Communal troubles in Pakistan and West Bengal coupled with the perennial problem of Kashmir have caused a further deterioration in relations with Pakistan. Continuing difficulties abroad against the background of high prices, heavy taxation and slow progress with the third Five-year Plan have led, within the ranks of the Congress Party, to widespread criticism of Government, which has not been significantly allayed by the ministerial changes made during the year in accordance with what became known as the Kamaraj plan.

The main economic difficulty is that the fruits of development are more than absorbed by the rapid increase in population, which has already reached over 450 millions and is growing at the annual rate of nearly 2½ per cent. This necessitates enormous food imports because of the inability to expand India's own agricultural production sufficiently to keep pace with the mounting demand, for results in the agricultural sector, despite heavy Government investment, have been disappointing. Following the encouraging progress made under the first two Five-year Plans production has been more or less stationary and last year the output of foodgrains even showed a reduction. Many reasons are given for this; slow progress with land reform, uneconomic use of land, inadequate agricultural credit facilities and shortage of fertilisers. It is clear however that, if the population rise is to continue unchecked, the success or otherwise of India's development programme will depend on a sustained effort to boost agricultural output.

In the industrial sector the situation is rather more encouraging as production has continued to expand, although the rate of increase has been lower than envisaged in the development programme. Some industries have made useful progress but the same can hardly be said of coal and power which have been slow to expand. Inflationary pressure on costs and inadequate supplies of raw materials through shortage of foreign exchange have handicapped growth in the private sector and, notwithstanding the recent commendable efforts of the Finance Minister to stimulate economic expansion, the unreasonably high taxation and its incidence constitutes a severe disincentive to extra effort, savings and investment. Perhaps in an effort to bridge the difference between the lot of the mass of the people who live near subsistence level and the ranks of the well-off industrialists and others, the Government has increased personal taxation to an unrealistic degree. The maximum revenue is, of course, required, but a start in reversing the present policy could be offset by a reduction in Government expenditure. This, in fact, spotlights the Government's problem: whether to eschew State trading and all those incursions of the bureaucracy into the private sector at much cost and little gain or to give that measure of freedom to initiative and industry that can, and usually does, contribute so much to national wealth and prosperity. Such a policy would too increase Governmental efficiency which now suffers from the impossible load imposed upon those all too few capable and efficient senior administrative officers whose burden is made heavier by deployment and secondment from their ranks into fields unnecessary in a reasonably balanced public-private State. Unfortunately Congress is in no mood for progress by the best means possible and there is increasing clamour for a socialistic State with nationalisation and public ownership.

Amongst the steps advocated by Congress members of the Lok Sabha is the nationalisation of banks in order, it is alleged, to eliminate the malpractices resulting from the concentration of economic wealth and power in the hands of those whose interlocking directorships cover banking, commerce and industry. This is no new demand for we have heard it since 1948 but it does seem to be getting more backing in political circles. I doubt, however, if Government will make concessions to the radical wing when the country is so dependent upon assistance from abroad. The effect of bank nationalisation on foreign investors in India would be profound, particularly in the United Kingdom whose investment it is understood is already about £350 millions, or seventy per cent of the total. Such a move too would be completely contrary to the views held in the World Bank, which would not help India's dependence on good relations with that institution.

Admittedly the report of the Vivian Bose Commission clearly indicated that some amendments to the Company Law were necessary, but businessmen generally are very apprehensive about the wide powers that Government has now taken by passing the Banking Laws (Miscellaneous Provisions) Act and the Companies (Amendment) Act 1963. The powers under these Acts, if exercised to the full, would allow the Government to take over the control and administration of companies, including the Indian banks, but I feel the Government will approach these problems in a sensible manner and would only contemplate using its extreme powers in an emergency. It is gratifying too that the Government officials who are directly connected with finance are agreed that the foreign banks play an important role in India's economy, particularly in the international field where the extensive credit which they provide abroad without the deposit of exchange balances is extremely useful.

In pointing out India's difficulties I may to some extent have given too little space to its achievements, for any visitor to the country cannot help being impressed by the progress and change taking place all around and although the country's affairs are, at the moment, confused, it is hoped that the coming budget session will clarify matters both for the Indian entrepreneur and for the foreign investor, on whom India places such reliance. Inflationary tendencies are very much in evidence but the economy requires considerable stimulus to obviate the risk of a recession and the misery it would entail.

I mentioned last year that we have received permission from the Reserve Bank to extend our branch organisation to Vasco da Gama in Goa. Our new office there opened for business in April but progress is slow and more and more it seems that the economic regeneration which New Delhi desires can only be achieved if Goa is made part of a larger entity.

Pakistan

Few people without a very close connection with Pakistan realise the intensity of the feeling in the country over the question of arms to India. This bitterness, in accentuating the hostility that was already felt over the failure to find any satisfactory settlement of the Kashmir dispute, led to strained relations with the West and possibly, as a symbol of political independence, resulted in more cordial relations with China. Encouragingly, and notwithstanding Hindu-Muslim trouble on India's eastern border, a trade pact was signed between the two countries covering the supply of coal and stone from India in return for Pakistan jute and raw cotton.

Internal politics, as opposed to external relations, again revolved round the political factions that had cost Pakistan so much in the past, and as usual East Pakistan-West Pakistan

relations. When President Ayub Khan introduced the constitution in 1962 it was with the object of keeping the party system out of politics and preventing politicians retarding the country's progress. When this proved impracticable, the alternative was to enter the party political arena himself and his decision to lend his immense prestige to the Conventionist Muslim League and to become its leader was well received in the country. This is evidenced by the subsequent success which his party enjoyed in recent by-elections in both provinces. The opposition has reacted to the Government's willingness to compromise on controversial issues by showing a more constructive attitude without in any way abandoning its principles, and thus once more the President has succeeded in preserving the internal stability which has been the outstanding benefit conferred on Pakistan by his regime.

The other problem of balancing the claims of the two wings is difficult to resolve without duplication of effort and waste of resources. The Eastern wing, in the knowledge of its good exchange earnings, has continued with forceful demands for parity with the Western wing in all spheres and this is certain to remain a major political issue for a long time to come. Industrial development in East Pakistan has been slower to get under way; one of the difficulties is that much of the development required in that area is unattractive in terms of profit to the private investor and to offset this East Pakistan will probably receive a major share of Government investment under the third five-year plan (1965-70) which is now in preparation.

Turning to the state of the economy, there are signs that the steady progress in agricultural and industrial sectors is being maintained, and in this context it is particularly fortunate that political developments have not yet resulted in a cessation of aid; in fact the World Bank is playing a leading part in schemes for irrigation and waterlogging and salinity. The pump operations in the Rechna Doab area show continued success and the water-table has been lowered by about five feet. A start is being made on the Chaj Doab project which covers an area of over two million acres and work is proceeding rapidly on the Mangla Dam. The Government is pressing all these projects with determination and additionally on its own it has carried out preliminary work on the Tarbela Dam project at a cost to date of Rs. 6 crores. Much more needs to be done to stimulate agricultural production for Pakistan's inability to feed its rapidly expanding population from its own soil has been costly in terms of foreign exchange, despite substantial foreign aid. More and more of the home production of raw cotton and raw jute is being absorbed in the country's own mills but these crops are still the major sources of exchange earnings and the rise in the cost of cotton from the United States has enabled Pakistan to regain its position in markets such as Hong Kong and thereby increase earnings.

One effect of the vast public works in progress has been a rise in the money supply and by a generous import policy this increase has only caused a slight upward movement in the general level of prices. Bank deposits however rose to the extent that they now represent forty per cent of the total money supply and there has been a corresponding fall in the percentage of money in circulation. In recent years the authorities have shown great skill in sustaining the momentum of economic development and at the same time checking any inflationary tendency. In present circumstances some curb on credit expansion was to be expected and the increase announced in July in the statutory reserves which the scheduled banks are required to keep with the State Bank and the restrictions introduced on commercial bank borrowing against Government securities and under the bill discounting scheme represented a timely note of warning.

Pakistan's immediate prospects appear reasonably promising, provided that agricultural and industrial development are kept in a reasonable relationship and that the labour unrest which led to strikes in various centres of industry last year is not allowed to develop to the extent that collective irresponsibility causes widespread interference with trade and industry.

Ceylon

For the first nine months of the year there was hope that notwithstanding the general inertia brought on by ever-widening socialistic measures Ceylon's economy was at last taking a turn for the better. The rigorous import controls imposed by Government began to be felt and with exports being maintained fairly well the trade figures were encouraging. Even during that period, however, there were ominous signs that stocks in the country were being run down too far and that the cost of replacement would be higher still, particularly in the case of sugar and wheat. The real setback came from the now all too familiar ill of disruption in the port. Once again labour troubles caused long delays in the turnround of shipping and the surcharge imposed in February 1962 on freight shipped to Colombo from British and Western European ports was doubled in December. Apart from the extra cost this imposes upon imports Ceylon's trade will also suffer from the increasing tendency of shipping to by-pass the port. The Government has now made concessions to the labour unions but it is too early to see whether any fundamental improvement in the working of the port will be achieved.

The import policy and the resultant reduction in the volume of goods available to the public was one of the factors responsible for the steep rise in prices and in the cost of living index, which at the end of the year reached an all-time record. The reduction in imports also led to a fall in the yield from customs duties, and this at a time of growing Government expenditure has meant further increases in taxes and yet again a budgetary deficit: all the ingredients in fact for further inflation.

Valuable revenue is absorbed by the ambitious State-sponsored industrial and development projects, few of which appear to be completed on time or within the stipulated financial limits and many of which after commencing operations incur substantial working losses. Nevertheless, it remains the present Government's policy to divert an increasingly large share of trade and industry to the public sector of the economy. Nationalisation, and particularly the acquisition of the business of foreign-owned companies, is considered an appropriate remedy for the country's economic difficulties.

The termination of United States aid early in the year because no compensation had been paid for the assets of the American oil companies which had previously been taken over was treated as an opportunity for further action in this direction and from January 1964 the marketing of petroleum products in Ceylon was taken over by a State-owned corporation. Moreover, the State monopoly of life insurance business established three years ago has now been extended to cover general insurance. Satisfactory arrangements for compensation have still to be formulated and if it turns out that the Government's intention is in effect to confiscate valuable foreign-owned assets there will be little prospect of obtaining the further investment from abroad which the authorities claim will be welcome in connection with the country's development programme.

Ceylon has resources which, efficiently managed, should be sufficient to assure the rapidly increasing population of steadily improving living standards and if a realistic economic policy were to be introduced there could be an early recovery from the present situation.

Burma

General Ne Win and the members of his Revolutionary Council are undoubtedly dedicated men determined to turn the country into a non-aligned State with its own brand of socialism but in setting this course they are probably going against the wish and the inclination of the bulk of the people. To date the Council has succeeded in alienating the informed and educated middle-classes, firstly in the political field by its refusal to countenance any form of democratic opposition and secondly by building up monopolistic State organisations in the economic sphere. Most of the top political leaders have been taken into custody and the search for a *rapprochement* with the various groups of insurgents, both communist and national, has failed. In fact, the Revolutionary Government have given notice of the end of the period of amnesty and are preparing an all-out offensive against the States. With administrative difficulties increasing all the time with the burden of nationalisation and the lack of trained administrators and technicians, the fear is that as these difficulties increase the regime will turn more and more to repression and regimentation and that they will seek assistance from and subjugate themselves to their nearest socialist mentor—China.

Symptomatic of the administrative deterioration in Burma today is the position of the banks. These were nationalised a year ago in a secretly planned surprise move, and as far as the foreign banks are concerned there has been, as yet, no attempt to pay compensation for their assets and business. We have left our manager in Rangoon to assist in arriving at a fair figure, but quite clearly having taken over our business there is either no desire to pay the compensation which it was understood would be forthcoming ninety days after nationalisation or there are differences of opinion amongst the officials concerned on what fair compensation for a good business means.

The Government would find no difficulty in making the payment or in allowing remittances for those companies and individuals who have had their assets turned into kyats, for the country's foreign reserves are in a very healthy state. It is a matter of prestige to the Revolutionary Council to maintain these reserves and in this they are aided by rice exports of over 1½ million tons annually, whilst imports are restricted as considered necessary. Imports and exports are now entirely in the hands of Government bodies and internally further steps under the Enterprises Nationalisation law of October 1963, which enables the Government to take over any enterprise, has left very little trade in private hands. What is left is now subject to new income-tax and labour laws which make it impossible for any organisation to retain more than 35,000 kyats out of any quantum of profit.

Malaysia

The recent history of federations in the Commonwealth has hardly been encouraging to further experiments in this type of political organisation, but there is good reason for optimism regarding the new federation of Malaysia whose inauguration in September was enthusiastically celebrated in the constituent States, Malaya, Singapore, Sabah and Sarawak. External opposition to the merger seemingly had the effect of consolidating support in Malaysia itself and, once agreement had been reached on the terms of Singapore's entry, there was no longer any major domestic impediment to the new federation coming into being. For the present at least Brunei has decided not to join but it remains to be seen whether this decision proves to be irrevocable.

As now constituted, Malaysia starts with substantial advantages. Internal political stability appears assured and federation has automatically created a larger and more diversified economy. Realistic programmes for raising living standards are already well under way in Malaya and Singapore and the resources and experience of these territories will now be available to speed development in Sabah and Sarawak. Of particular significance to the investor from abroad and to the future development of trade and industry is the inheritance of a free exchange system and of a sound currency, which has long circulated throughout Malaysia at the same fixed parity with sterling.

It had originally been intended that Bank Negara Malaysia, which since commencing operations in Kuala Lumpur five years ago has established close and cordial relations with the commercial banks, should become the central bank and the note issuing authority for all five States adhering to the present currency agreement. As Brunei has not joined Malaysia, however, negotiations have been initiated with the Brunei Government to facilitate the taking over by Bank Negara Malaysia of the assets and liabilities of the Currency Board. The necessary legal arrangements are to be made to extend the authority of the central bank throughout Malaysia and to entrust to it the duty of supervising the banking business of the whole country. Meanwhile an office has been established in Singapore to handle Federal Government accounts and during the course of the year its activities and scope will be extended.

The problems of inter-State trading and financial arrangements within Malaysia were examined early in the year by the World Bank Mission led by M. Jacques Rueff and the recommendations contained in the mission's admirable report eventually formed the basis of the terms agreed between the Federation of Malaysia and Singapore for the latter's entry into Malaysia. The main difficulty lay in reconciling the dependence of Singapore, Penang and Labuan on entrepot trade with the tariff protection required for the new manufacturing industries whose development was recommended by the Rueff mission. A common market is now to be established throughout Malaysia and

a Tariff Advisory Board is to be appointed to advise the Federal Government regarding the setting up of a common external tariff, but in any case the various provisions of the Agreement safeguard the maintenance of the free port status of Singapore for a period of time sufficient to enable its economy to be less dependent upon the existing entrepot trade. Thus the way is smoothed for the future development of trade and industry in Malaysia on an integrated basis.

The prudent budgetary policy followed in the past by all the constituent States starts the Federal Government's finances off on a firm footing. Foreign exchange reserves are substantial and the success of the loan floated in London in July by the Government of the Federation of Malaya, the first foreign loan to be raised by that Government, was a reassuring indication of overseas confidence. Living standards in Malaysia are amongst the highest in Asia but rising development expenditure is necessary to maintain and improve these standards and it is unfortunate that Government funds, which could assist development, have to be diverted to finance increased spending on defence.

States of Malaya

The weakness of world rubber prices during the year is the main reason for the increased deficit on the combined overseas trade of Malaya and Singapore and it is only the higher earnings for tin that have kept the figure small enough for Singapore's invisible earnings and the inflow of capital from abroad to restore the payments surplus. There is reason too to think that tin will continue to fill this vital role in the economy, for anxiety regarding the effects of sales from the surplus stockpile of the United States has, to a great extent, been allayed and with total world production falling prices should be favourable to the producer for some time to come. With this stimulus Malayan output is increasing, particularly in the gravel pump section and exports are increasing despite the Indonesian decision to send their tin ore to Arnhem instead of to Penang for smelting.

Even the lower world price of rubber is not quite so depressing as it might seem, for the Malayan industry, because of its replanting programme and low-cost production, is in a better position than natural rubber producers elsewhere and the high tonnage of shipments should be maintained. Further help to the export figures will come from the iron-ore, palm-oil, timber and pineapple industries and the completion at the end of the year of the North Klang Straits project should greatly assist the flow of overseas trade by obviating congestion at Port Swettenham.

Industrialisation is progressing at a favourable rate and the increased consumption of electricity is attributed to this factor. Fortunately the first phase of the Cameron Highlands hydro-electric scheme will be completed in June and the World Bank has made a substantial loan to assist in the further expansion of electric power. The official policy of encouraging conditions favourable to business enterprise has been amply rewarded by the interest shown by overseas investors. The reorganisation of Malayan Industrial Development Finance Limited, in which this Bank is a shareholder, has too come at the right time for further expansion. The funds available to the Company have been substantially increased through the participation of the International Finance Corporation in the equity and by credits provided by the Government and the World Bank.

We have further expanded our branch organisation in the Kuala Lumpur area by opening a new office during the year. We expect our new main office building there to be completed by the end of the year as planned.

Singapore

The overwhelming victory gained by the Government in the September elections was a tribute to the resourcefulness and energy of the Prime Minister and also a demonstration by the Singapore electors of their political maturity. The election result and the political stability it promises, coupled with the decision to establish a Malaysian common market, have given a welcome stimulus to industrialisation in Singapore. Rapid development of manufacturing industry will go a long way to assure future living standards in the island by providing employment for the large numbers of young people who will be coming on to the labour market and by rendering the economy less dependent on the entrepot trade. The progress made with the Jurong industrial project owes much to the drive and efficiency of the Government-sponsored Economic Development Board, which administers the project in addition to providing a wide range of services including finance and research in connection with the setting up of industries in Singapore.

Together with Penang, Singapore has taken the main brunt of the Indonesian Government's decision to ban trade with Malaysia following the new country's inauguration. This ban was particularly unfortunate coming as it did at a time when business circles in Singapore and Malaysia generally were confident about the future and its effect was to deny to Singapore almost overnight substantial imports of rubber, copra, coffee and other commodities. Surprisingly the ban has continued to be most effective and those sections of Singapore's trading community which were closely connected with Indonesia have suffered severely. The Government acted with commendable speed to assist those losing their employment and wide powers have been taken under emergency legislation to deal with any further unfavourable developments. Although a large part of the entrepot trade with Indonesia has only come to Singapore since 1957, when for political reasons the pattern of Indonesia's overseas trade was fundamentally changed, it is doubtful whether Indonesia will again use Singapore to any extent, even with a return of political friendship. What the effect of a permanent ban will be is difficult to judge as the entrepot trade has not been amenable to precise statistical analysis but clearly there will be a significant loss of earnings and increased unemployment. Singapore however has a resilient economy and perhaps, in the long run, may even gain from the diversion of funds that have been absorbed in this particular branch of trade to the financing of industrial development.

An encouraging feature for the future is the growing interest shown in Singapore and Malaysia by Australian business houses. In April this Bank joined with Australian Guarantee Corporation Limited, Australia's oldest finance company in which the Bank of New South Wales has a substantial interest, in the formation of a new finance company named Credit Corporation (Malaysia) Limited. Provision has been made for local participation in the equity of the new company and offices are being opened in Kuala Lumpur and Singapore.

In my last report I indicated that further expansion of our organisation in Singapore was envisaged and during the year we have opened four new branches on the island.

Sabah

On 31st August the colony of North Borneo achieved independence and now as the State of Sabah is a member of Malaysia. The July elections, in which more than eighty-five per cent of the electors cast their votes and the Alliance Party gained all the seats, showed that the people were overwhelmingly in favour of joining Malaysia. That Sabah has made a promising start with the new ministerial form of government is largely due to the Chief Minister who commands the respect and confidence of all communities.

Under the constitutional arrangements of the new Federation, Sabah will retain a measure of control over most Government departments for some years to come and this includes a degree of autonomy in financial matters, although finance is technically a federal subject. Thus financial responsibility for a number of services, such as education, police and security, will be borne by the Federal Government but Sabah will have a large share of responsibility for its own development plans and will contribute an appreciable part of the finance required for these plans. The balance will come either direct from federal revenues or be channelled through the Federal Government from outside sources, such as the British Government's grant of £10 millions for development in Sabah and Sarawak and the Singapore Government loan of $150 millions for the same purpose.

Fortunately trade and the economy continue to expand steadily and rising Government expenditure was offset to some extent by increased revenue from import duties. Exports showed a satisfactory increase over the previous year thanks to greater timber shipments. Rubber earnings were slightly down because of lower world prices and copra showed a reduction mainly because barter supplies from the Philippines ceased as traders there found a more profitable outlet for their produce.

The prospects for Sabah are promising and increasing attention is being directed by overseas interests to its development potential. The main difficulty has long been shortage of labour and the Government's decision early in the year to suspend the entry of Indonesian workers caused considerable concern to employers. In December official approval was announced for a pilot scheme involving the recruitment of some three thousand workers from other Malaysian States and this welcome development should help to meet the acute labour shortage.

Sabah's economy has been affected only to a small extent by Indonesia's trade ban and supplies of barter copra from Indonesian sources have not diminished appreciably. However, the possibility of subversion in the border areas and the raids which actually have taken place there provide cause for some anxiety.

Sarawak

The entry into Malaysia in September was the culmination of much political movement and upheaval and with it the Sarawak scene changed considerably. The last British Governor departed and many of the experienced administrators who had been responsible for guiding the country along its path of development have been replaced by as yet untried ministers and advisers. The division between State and Federal administration will gradually become clear but the first important effect of Federal Government has been to stop the further rise in taxation necessary if public services were to be maintained and improved. For the time being taxation remains at its present level and any increase necessary to equalise rates throughout Malaysia will be introduced gradually. Moreover, the extra burden of defence and security spending now necessary will be charged to the federal revenue and will thus bear less heavily on Sarawak, while the greater part of the heavier expenditure on development envisaged in the new Five-year Plan (1964-68) will also have to come from the Malaysian Government.

Notwithstanding damage caused by severe floods in the early part of the year exports, and particularly those of rubber and sago, were well maintained. Timber shipments too showed substantial expansion and with foreign support the industry is likely to develop further. Bauxite shipments have been on a reduced scale and transport difficulties appear to have arisen in connection with the coal deposits which I mentioned last year Japanese interests were developing in the interior. It is generally accepted that there is oil to be exploited off the Sarawak coast near Bintulu, but the size of the oilfield and its commercial potentialities have yet to be established.

In present circumstances the security situation is inevitably unsettled and there have been a number of border incidents. Further development in the State continues steadily; this takes the form principally of road construction and the building of residential and shophouse accommodation. We have extended our own organisation in Sarawak by opening a new branch at Bintulu.

Brunei

Although His Highness the Sultan had indicated his agreement in principle to Brunei's joining Malaysia, it was evident that there was strong opposition in Brunei to the merger, particularly if it involved handing over the valuable oil revenues to Malaysia. Eventually it proved impossible to find acceptable terms of entry before the inauguration of the new federation and, for the present, Brunei remains outside Malaysia without apparent prospect of any early change in the situation. There has been no public statement of the Brunei Government's intentions regarding the currency but it is to be expected that Brunei will decide to use the Malaysian dollar and that Malaysia will agree to this, thereby preserving the existing currency area which is working so well. Military operations in connection with the armed revolt of December 1962 were successfully concluded in May, but the 1959 constitution has not been restored and Government continues through nominated executive and legislative councils. Certain political parties are recognised but it is unlikely that elections will be held again for some time.

Trading conditions in the early part of the year were unfavourable because of the security situation after the December revolt and of serious floods which interfered with the timber industry in particular. Progress with development schemes has been slow and has mainly taken the form of road construction and housing projects. Plans for a deep water harbour at Muara have now been approved by the Government and Japanese concerns are showing interest in sharing in the construction of the new port. A new agreement announced in October will assure the Government of a larger share of the oil revenues and it is possible that the search now taking place off the coast for new sources of oil will compensate for the progressive reduction of existing supplies.

Indonesia

Indonesia has year after year astounded its critics by surmounting economic difficulties that at times threatened the very existence of the republic and there is no reason to believe that it will not continue to survive in its present form. The possibility of an early return to a stable economy and national prosperity looks, however, more remote than it did a year ago at the time of the West Irian settlement, when many of Indonesia's friends in the West, particularly the United States, were showing signs that they were prepared to be generous in an effort to help rehabilitate the export industries. Since Irian Barat, as it is now called, came under Indonesia's control, instead of the favourable trend expected from the economic measures announced by President Soekarno the country has had to suffer the effects of the policy of confronting Malaysia.

This has meant that exchange earnings have been reduced as alternate markets to Singapore were sought and the enhanced value brought about by the processing of Indonesia's rubber and copra there was lost. The ban on small ships out of Singapore trading in Indonesian waters has meant to a piling up of produce in many of the small ports of the outer islands and even the decision to send tin to Arnhem for smelting instead of to Malaya means additional freight payments for the longer haul. It also means that the looked-for reduction in the heavy expenditure on the armed forces is unlikely to take place, and on the contrary Russia is likely to press heavily for the settlement of its bill.

Internally, probably because Indonesia like the Philippines wants to be recognised as the dominating power in a confederation of the Malay races, the target of the confrontation policy was switched to the British and a campaign of well organised violence against British property alienated world opinion and discouraged capital investment: so too did the attempts of the labour unions to take over British business. The Government has declared such attempts illegal but the position of firms, and their capital investment, is still uncertain. It is against a background of political high tension and the localised struggle between Russian and Chinese ideologies that the hard-worked civil servants and advisers are trying to retain, against the demands of the forces, enough foreign exchange to meet the country's most pressing needs. Rice for the people must be bought and paid for and this is a formidable expense as local production figures are still disappointing and the population continues to increase rapidly. Other import necessities if a reasonable standard of living is to be maintained are such items as medical supplies and spare parts to keep the factories going. Even so the trade figures are not discouraging although the useful surplus achieved in the first half of 1963 is likely to be reduced when the figures for the more troubled months up to December are published.

What is required in Indonesia at the present time is a breathing space of some years, during which all efforts are directed towards increasing production, especially in foodstuffs, boosting exports, checking inflation and stabilising prices. Although they are all connected it is the chronic inflation and rapidly rising cost of living that are the root cause of the country's economic difficulties and need immediate attention, for the stage has now been reached when the cost of living in Djakarta can double in a matter of months in terms of the value of the rupiah.

Thailand

By the death of Field Marshal Sarit Thanarat in December Thailand suffered the loss of an able administrator and an outstanding personality and it is a measure of the success of his rule that his country has been spared the political upheavals which have afflicted other Asian States. By assuring political stability his regime created conditions favourable to continued prosperity and economic progress and, as his successor as Prime Minister, General Thanom Kittikachorn, who brings considerable experience to his new appointment, has made no major changes in the membership of the Government, it is evidently intended to maintain the policies of the previous regime.

It would be incorrect to assume, however, that the Government is resistant to change and content to keep things as they are. The authorities are well aware, for instance, of the problems posed by the rapid increase in the population and are meeting the situation by encouraging higher agricultural output and the production of a wider range of commodities. Official development plans lay emphasis on major irrigation projects and the improvement of road communications and a determined effort is being made to finance as much of this development expenditure as possible from current revenue. The development of secondary industries is also encouraged, but is wisely treated as a subsidiary objective as the country's proven mineral resources are slender except for tin and, to a lesser extent, iron-ore. Local demand is not enough to support large-scale industrial production and the only project of any size being undertaken at the moment is the Thai Oil Refinery, which is expected to come on stream later this year.

The stability of the currency, which is backed by gold and foreign exchange to the extent of over eighty per cent, is an indication of the Government's orthodox and realistic policy and the declaration, by arrangement with the International Monetary Fund, of a par exchange value for the tical, and all it implies, is a recognition of the success the financial authorities have had in keeping exchange rates steady. The foreign exchange reserves have continued, and are continuing, to rise as foreign aid and earnings from tourism more than offset the adverse trade balance. This is despite a progressive increase in imports during the last few years and it is perhaps surprising that Thailand's expanding market for a wide range of goods does not receive more attention from British manufacturers.

Rice and rubber continued to be the main sources of export earnings, but not to the same predominating extent as a few years ago, and shipments of maize, tapioca, jute and kenaf continue to increase. Tin has again made its valuable contribution and new exchange earners are appearing in the form of groundnuts, kapok, eggs, hides and skins and livestock. The variety of these exports helps to offset the danger to the economy of a primary producing country by fluctuations in world commodity prices. Inasmuch as Thailand has increased its exports by fifty per cent in total value during the past few years it has every reason to be proud of its progress.

Statistics can only tell part of the story however, and the real criterion by which a country's economy must be judged is the living standards of its people. Obviously in some parts of Thailand living conditions are less favourable than in others, but the general standard is rising and prices of staple commodities remain steady. Food is plentiful and there is sufficient purchasing power to stimulate demand for a wide variety of imported goods, which again serves to emphasise the opportunities for trade with Thailand. It is still a good field too for the foreign investor, for the liberal policies of the Government should assure continued economic progress and the only qualification one could make to this is the increasing political uncertainty in the area, particularly in respect of the ominous trends in Burma and Cambodia, its neighbours. Thailand, however, remains a firm supporter of SEATO and conversely gains strength from that association.

Vietnam

The military coup of 1st November which overthrew the Government of President Ngo Dinh Diem was not unexpected, but nevertheless most people were surprised by its timing and the efficiency of its planning. For some months the political situation in the country had been deteriorating and in particular the religious discrimination against the Buddhists was unpopular at home and abroad. A series of tragic and unpleasant incidents culminated in August in the imposition of martial law and the arrest by special security forces of large numbers of Buddhist monks. Subsequently, until the Diem regime was finally overthrown, repression continued and discontent spread rapidly. Thus in a country which is probably best suited to a benevolent dictatorship the reaction to autocratic and dictatorial methods was such that the coup was well received and normal conditions were restored within a few days.

The new Government, a revolutionary military council headed by General Duong Van Minh, inherited tremendous problems but had the advantage of strong American support and the restoration of the economic and military aid that was cut when the late President was in disfavour. The new regime had, however, hardly settled in when there came a break with France over that country's recognition of the People's Government of China followed quickly by a bloodless revolution led by General Kanh, one of the leaders concerned with the earlier *coup d'etat*. It is too early yet to see what form the new regime will finally take but it must make great efforts to win the confidence of the people at a time when the Viet Cong are doing their utmost to achieve some form of decisive success before a settled Government has an opportunity of putting its policies into operation. Fighting of one kind or another had been going on in Vietnam for over twenty years and the present struggle against the Viet Cong has continued since 1954. It is not surprising, therefore, that war-weariness tends to be prevalent and little is done to stop the infiltration of men and materials from neighbouring States to assist the rebels. Thus, in conditions which are ideal for guerilla operations, the successful outcome of the struggle against the Viet Cong must depend on the Government's ability to attract and keep the support of the population. The economy of the country must necessarily continue to suffer during the state of war and as terrorist activity increases so does trade diminish. Increased Viet Cong pressure means increased difficulty in communications and in the transport of goods, and while it is encouraging that the change of Government and the resumption of American aid stimulated trade the country is now faced with yet another change of Government. If Vietnam is to gain full value in exports from its rich agricultural potential, the new Government must take early and aggressive action against the rebels. Only by clearing areas and providing protection on the roads and waterways will the surplus from the increasing rice crop be transported to Saigon and other coastal cities for shipment. It is these rice exports, which last year were 300,000 tons, and the continuing shipments of rubber which have mainly been responsible for Vietnam maintaining its foreign exchange reserves at around £60 millions. The other important factor in this not unsatisfactory position is the extent to which aid from the United States finances Vietnam's imports and, although there is a gradual move for the country to be made more self-supporting economically, and it now finances two-thirds of its requirements, it will be many years before it can dispense with outside assistance.

One of the urgent problems at the moment is to curb the inflationary trend generated by a budgetary deficit and reflected in the increase in the money supply and the new Governor of the National Bank of Vietnam has already taken steps to this end, including the introduction of a better tax collection system and a more stringent fiscal policy. If these are successful and the plans for increased agricultural production are not sabotaged by rebel activity the future should be reasonably bright, but once again all seems dependent upon further and continued successes against the Viet Cong.

Cambodia

The last two months of 1963 showed violent changes of policy in both the political and economic spheres which could have the most far-reaching effects on the future of Cambodia, and in fact this area of South East Asia. For some time there had clearly been friction in Cambodia's diplomatic relations with the United States and Great Britain, but that Prince Sihanouk should follow his accusation that the United States was directly involved in radio broadcasts from South Vietnam and Thailand by rebel groups by severing diplomatic relations with the United States and renouncing aid, was a surprise to all. It was equally surprising that he should follow this by a bitter attack upon the British and the closing of the Cambodian Embassy in London.

Cambodia is a small country and, possibly because of this, the Prince has often made dramatic announcements and threats with the intention of catching the immediate and earnest attention of the major powers. He has, too, often openly expressed his disapproval of communism and not hesitated to suppress local communists when necessary, and apparently his sole desire has been to secure Cambodia as a neutral kingdom. It was possibly because of the Prince's unpredictable reaction to political events that Western diplomats on this occasion failed to gauge to the full his extreme sensitiveness, and for the time being at least there

is a complete break with the Western world. Whether this does, in fact, mean alignment with China is by no means certain and this may be dependent upon the trend in military action in South Vietnam, relations on the Thailand border and the extent to which France is prepared to fill the vacuum. Even now a guarantee of Cambodia's neutrality by the Western powers could change the situation.

In the economic sphere drastic changes quickly followed the threat to renounce American aid and Prince Sihanouk announced plans for the take-over of the import-export sector from 1st January 1964 and of the banking sector from 1st July 1964. French interests are the most heavily affected and, contrary to first impressions in their community, it now seems certain that these measures for State control of financial and economic affairs will be carried through to the end. Concurrently with the winding up of existing businesses the Government, to attract capital for new industries, has announced its preparedness to give guarantees of non-nationalisation for periods of up to fifteen years and also various tax exemptions.

Prince Sihanouk remains extremely popular in the country and the progress that has been made during the past few years has to a great extent been due to his encouragement and leadership. It will be a tragedy if, by the imposition of an economy on the communist pattern, all these achievements are nullified.

The Philippines

A further year under the leadership of President Macapagal should have confirmed the Philippines' position as an outstanding example of political and economic stability in a troubled area. That performance has not fully justified expectations is due partly to the President's inability to secure the success in the senatorial elections necessary for the implementation of his socio-economic programme and to the swing away from the West in foreign policy. Filipino statesmen have, by perhaps somewhat devious methods, endeavoured to identify themselves as Asians and as leaders in Malay countries by the formation of Maphilindo. This concept collapsed on the country's non-recognition of Malaysia and instead the cultural and trade alliance with Indonesia creates, perhaps wrongly, an impression of an anti-communist Philippines being allied with a communist Indonesia against an anti-communist Malaysia. In the meantime there is an indication that the Filipino First advocates are once again becoming vociferous at a time when the Government is making efforts to persuade the United States to revise the Laurel-Langley agreement where it hurts the Philippines and at a time when New York bankers are being asked to back a U.S. dollar loan.

Any disappointment in or criticism of the economic trends can only be directed at the high Government spending and the serious inflation, for the country's overseas trade has been satisfactory and external reserves are higher than they were a year ago. The budgetary deficit may have been swollen by costly measures in an election year and by reduced revenue through the five months' dock strike, but even so at three hundred million pesos it is very high and may mean new taxation and an upward revision of the basic wage, or even food subsidies. The rise in the cost of living will not be helped by the proposed Retail Trade Act which, ostensibly designed to oust the Chinese from their prominent position as shopkeepers, has now been found to have such wide application that it might even increase appreciably the cost of distribution of oils and fuels and of the bunkering of ships.

The Central Bank of the Philippines is endeavouring to counter the twenty-six per cent increase in the money supply over the year by tightening reserve requirements from banks and by the curtailing of rediscount facilities. Where this is not effective Government funds are withdrawn from the local commercial banks in an attempt to stop, amongst other things, unproductive enterprises such as the erection of luxury buildings. Another counter-inflationary measure is the ending of local banks obtaining finance from abroad by means of stand-by letters of credit. In any case, rumours of devaluation affected the rate for forward dollars and made the business too expensive. There seemed little point to these rumours for the external trade position is healthy and, if the country could only achieve the increased rice production which is within its power, the international balances should rise steadily. I am glad to finish on this encouraging note for much has been achieved in the Philippines during the last year and 1964 should see further economic advance, particularly if there is a trade boom in the United States.

Our own operations were a little more encouraging last year but conditions are not easy. Four new banks opened up during the year, bringing the total of local banks to thirty-five, and excessive competition between them must impair their prospects and the Central Bank may later on be forced to insist on amalgamations.

Hong Kong

A year with no political developments of any significance but one in which an acute water shortage could have affected health and industry might have produced very mixed results for the Colony's trade and economy. As it was, an rather unexpectedly, Hong Kong's external trade reached record levels and increased revenue under nearly all heads turned a budgeted deficit into a useful surplus.

It was the traditional markets in the United Kingdom and the United States that in the main absorbed the increased exports and the significance of this, and possible danger, is not lost on Hong Kong manufacturers who are strenuously trying to develop new overseas markets. It is realised that although the United Kingdom's failure to enter the European Economic Community (E.E.C.) has postponed the possible elimination of Commonwealth preference, by 1967 a number of Hong Kong's European competitors will have duty-free access to the British market through the European Free Trade Association (E.F.T.A.). In the United States too the stresses of internal pressure by interested groups are always unpredictable. In looking farther afield for new markets the diversification of local industry that has taken place may assist, but the rising cost of Hong Kong's labour is eroding much of the former competitive price advantage. The Government too has shown that it has this problem of finding new markets well in mind by encouraging trade missions to Europe and elsewhere, and there is now talk of a system of credit insurance that would give greater incentive to the exploitation of the more difficult and less creditworthy markets.

Fortunately for Hong Kong the textile industry, which accounts for more than half of the Colony's exports, took full advantage of the absence of international interference to increase production and shipments. This fine performance, which is a credit to the leaders of the industry, was helped to a great extent by the consolidation and lower production costs achieved during the highly competitive and difficult situation that arose in 1962 and, with the quota system operating reasonably well in the all-important British and American markets, it was possible to plan production well ahead and to concentrate on meeting the demand for goods of higher quality and price. As a result there is no longer any excess spinning capacity and this section of the industry has initiated plans for some expansion. The textile testing service introduced by the Federation of Hong Kong Industries in collaboration with the British Retail Trading Standards Association should be of great assistance in improving the quality of Hong Kong goods and in facilitating their marketing overseas. Probably the greatest increase as such during the year was achieved by the plastics industry which has steadily developed its range of products and now employs about ten per cent of the Colony's labour force. Unlike the textile industry whose markets are subject to constant pressure from restrictions imposed by the importing countries, Hong Kong's exports of plastic goods are shipped to a wide range of markets and, as they have a high labour content, the industry is relatively less susceptible either to political pressure or commercial competition. Japanese interests are pressing forward with plans for expanding production of transistor radios in the Colony, while the local steel rolling industry has enjoyed a better demand for its products than for some considerable time.

In my opening paragraph I mentioned the water shortage but although it has been necessary to restrict supplies for industrial purposes so far production has not been seriously affected. The tourist trade may have suffered to some degree but the number of tourists visiting Hong Kong has continued to increase and the hotel accommodation has doubled during the year. The bulk of the population at present is supplied with water for four hours only every four days and the Colony is now increasingly dependent on water carried by tankers from the Pearl River; a very expensive business. The Government is pushing forward with plans to enclose Plover Cove which will double the storage capacity, but as so far there has been insufficient water to fill the Shek Pik reservoir which was opened this year the immediate need is not so much increased capacity as more rainfall.

For another year private investment in the building of offices and residential accommodation has continued undiminished although it is becoming difficult to dispose of luxury flats and the emphasis is now more on providing low-cost accommodation. Prices of industrial land continue to rise except in outlying areas, indicating that there is still a large demand for factory sites despite the extensive areas of Government land which have been made available.

When, fortunately, economics rather than politics make the news it is easy to give an impression of drabness, but nothing could be further from the bustling Hong Kong scene in which the industry of its people, in an atmosphere of orderly control, gives an impression of underlying confidence and progress.

China

In China 1963 was a year of consolidation with signs that the policy of agricultural expansion was succeeding. The elements were a little kinder than in the three or four preceding years, but even so less flood, drought and other difficulties did not entirely account for the more plentiful food supplies in the large cities and the lower prices on the free market.

Quite clearly China's leaders are now gearing industrial development to agricultural production and with something like a proper balance between these two there is every reason to believe that there will be an increase in the range of manufactured items and in the general quality. The outcome, given reasonable conditions for the crops, should be a higher export target and some lightening of pressure on the people and an improvement in their living standard.

Once again China paid its commitments on the early Soviet loans and when, in 1965, this indebtedness is cleared the country should have increased ability to buy abroad. Present indications are that purchases will be diversified and placed in the cheapest markets and may include technical know-how as well as specialised machinery.

Our Shanghai office continues to do useful business in connection with the financing of China's overseas trade.

Japan

Questions in regard to Japan are nearly always in relation to its economy and seldom in respect of its politics, which suggests that the world at large takes its political stability for granted and it is no doubt right in so doing. By comparison with other countries Japan has few external problems and its policy must necessarily be to remain on good terms with all in order to keep selling and to increase its selling in overseas markets. In this context its most difficult task at the moment seems to be to avoid strained relations with Generalissimo Chiang Kai-Shek whilst recognising the People's Government of China and at the same time not offend its most important customer, the United States, by this trade-inspired switch. Notwithstanding these policies of expediency Japan still stands firmly alongside the Western world and endeavours to exert a steadying influence in South East Asia, although the less-than-lukewarm reception of Mr. Ikeda's goodwill mission in Asian centres shows that there is still a lingering distrust of Japan's intentions.

At home Mr. Ikeda, after sharp criticism from outside and within his own party of his economic policy and the spiralling prices of consumer goods, went to the country and was re-elected in November with an overwhelming majority. This enabled him to take a stronger line for co-operation and unity within the party and the Liberal Democrats can now concentrate on his programme for doubling the national income between 1960 and 1970.

This policy is still based on economic growth by heavy investment in industry and the successful modernisation of the Japanese economy has been one of the most notable features of the past decade. This has now made it possible for Japan to approach the final stages of freeing the external trade and payments system to bring it into line with other leading industrial countries operating a free economy. Most of the restrictions regulating imports have already been removed and the invitation which Japan has accepted to become a member of the Organisation for Economic Co-operation and Development (O.E.C.D.) carries with it an obligation to continue moving towards freedom of trade and external payments. The culmination of this process of removing the protective cover which has partially shielded the Japanese economy from the full blast of international competition will come in April, when the yen is to be made fully convertible in current transactions in terms of Article 8 of the International Monetary Fund Agreement. This important decision shows that the Japanese authorities are now satisfied that when trade deficits cause loss of external reserves the balance of payments can be restored by monetary measures alone, without resort to exchange controls. Full convertibility of the yen may, however, mean greater restraint in extending credit, which may in its turn mean a less spectacular rate of economic growth.

All these economic changes could only be undertaken by a country with strong exchange reserves and a favourable trading account, and although in 1963 increased consumer spending and a need to use the excess productive capacity created during the previous investment boom boosted the import bill by almost twenty per cent, record exports plus an inflow of foreign funds produced a favourable balance for the year. Some slight doubts must, however, exist regarding the future trend as Japan cannot look with certainty on the receipt of foreign funds, whilst the volatility of Euro-dollar deposits is always a danger and the effects of the U.S. interest equalisation tax on purchases by American citizens of foreign stocks have yet to be felt. Policy in respect of United States military spending abroad is likely further to reduce Japan's exchange earnings from this source.

However, Japan is entitled to expect the elemination of discriminatory restrictions against its goods in foreign markets and, with the probability of successful negotiations to this end, the prospects of the country would seem to depend more upon containing the demands for higher industrial wages and preventing further rises in price levels. Perhaps the overlending by commercial banks and the tight-money policy already followed give too little manœuvrability in this respect if the expansion goal is to be achieved.

New York

Economic pointers in the United States are more widely studied than those of any other country for the nations of the free world are all dependent to a greater or lesser extent on the state of the United States' economy. Fortunately the increased tempo, which began about the time when the late President Kennedy took office three years ago, shows little sign of slackening and still has enough momentum for one to see 1964 as a year of expansion; particularly as the effects of tax reductions and the present high liquidity and strength of the leading industrial companies should begin to be felt. These companies too have further expansion and inventory building capacity in their credit lines with the banks and additional borrowing would present little difficulty. What is more of a problem of the banks is the shrinkage of their profit margins which is brought about mainly by the fierce competition between themselves and unfortunately the fears of legislation against monopolistic practices prevent the obvious remedial action being applied.

The main difficulty confronting those responsible for economic policy is still to reconcile internal expansion with the reduction and elimination of the deficit in the country's external payments. The outflow of gold was markedly reduced during the second half of 1963 and in any case the authorities seem to produce their figures in a manner which puts the worst light on the situation and it is difficult to see, for example, that the Euro-dollar market is the complete liability that it is made out to be. Even so, it is only American investment abroad and the generous aid given to developing countries that turns a healthy trading position with increased exports into an adverse balance. One can only admire the strength of an economy which can stand up year after year to such tremendous national defence and international expenditure and can still afford to make gifts of, or sell for unremittable currency, about one-tenth of its exports.

The challenge of New York to be the world's leading capital market received a setback, perhaps temporarily, from the interest equalisation tax announced in July, but it has such a vast reservoir of funds that it must always be, with London, the centre of world finance.

Hamburg

The retirement of Dr. Adenauer was the end of an era and with Professor Erhard as the new Chancellor a change of mood in political matters is apparent and even in the most conservative circles there is greater hope of relaxation in the stresses with Eastern Germany and of the easing of conditions in Berlin. In economics too there is more optimism although it is still tempered with caution. A year ago costs were rising, industrial production was stagnant and pressure for high wages and conditions of full employment were steadily whittling down the competitive advantage which German industry had held in overseas markets. This, and the effects of the revaluation of the D. Mark in 1961, had brought the country's external payments into deficit, but last year the situation was reversed and, apart from January, the exchange reserves rose month by month. Amongst the causes that contributed to this somewhat unexpected change round was the inflow of foreign capital attracted by favourable interest rates and the strength of foreign demand for German goods, indicating that although German production costs were rising, inflationary pressures abroad, particularly in France and Italy, had forced costs there higher still. As this inflationary pattern in the European Economic Community (E.E.C.) seems likely to continue, the rising German exchange reserves may again threaten the stability of the international payments structure.

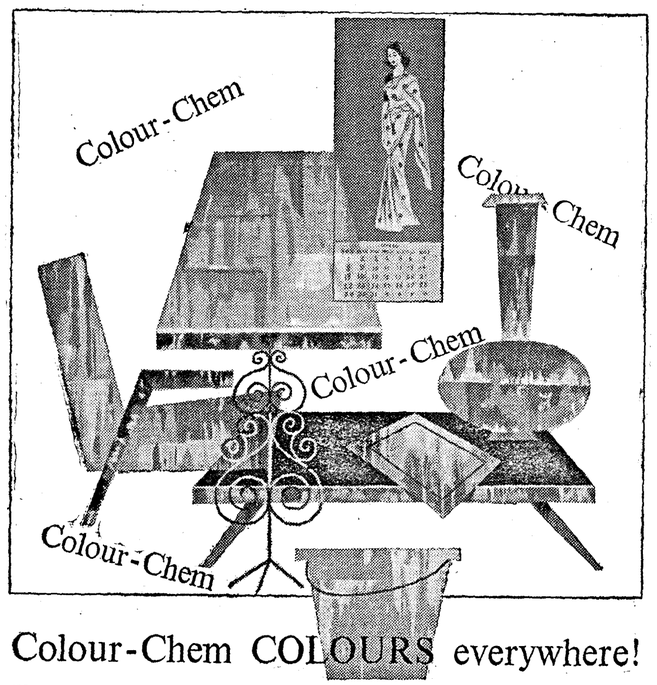
Professor Erhard strongly favours the maximum freedom in economic matters and the removal of barriers to international trade and there are encouraging developments with Eastern Europe and the Soviet bloc generally. German industry is also paying increasing attention to the markets of the East and our Hamburg branch is playing a useful part in the development of this business.

Conclusion

It will be apparent from this review that most Asian countries, notwithstanding generous grants of aid, still lack adequate foreign exchange for their development programmes and that reasonable progress can only be achieved if export earnings are improved. At first sight this might not appear too difficult, for international trade continues to grow, but significantly the trend is for the major part of that growth to be between the industrial countries, notably those in Western Europe. Nevertheless, in theory at least, primary producers in the developing countries should benefit from the steadily expanding demands of industry for raw materials, and the tendency for commodity prices to rise. This tendency is, however, by no means uniform for whereas tin and sugar have found better markets the price of rubber, for example, has steadily declined, and rubber is a very important exchange earner for many South East Asian countries. The lower price of the commodity has not only had an adverse effect on export earnings but has adversely affected the Government revenue needed for the local expenditure on development schemes.

There are thus grounds for anxiety that the industrial countries will continue only to expand trade amongst themselves and even to discriminate against low-cost Asian manufactures, which would leave the developing countries further and further behind in the movement towards higher living standards. If the industrial countries allow this to happen they may not only encourage political unrest but may lose markets with enormous potential from rising living standards in these populous areas.

This problem will undoubtedly face the forthcoming United Nations Conference at Geneva on trade and development and if trade barriers are to be removed much will depend upon the attitude of the European Economic Community (E.E.C.) to such important matters as the preferences at present enjoyed by the former French dependencies in Africa in their trade with the Community. Help may also come from a general lowering of tariffs through what is known as the Kennedy round, but finally whether the living standards in developing countries are raised will depend upon the willingness of the industrial countries to open their markets to these new nations of the East.



Colour-Chem COLOURS everywhere!

When you see the thrilling world of man-made colours around you—spectacular prints on your fabrics, colourful inks in your magazines, pleasing paints in the interior of your home, fascinating tapestry and the attractive furnishings of your drawing room, plastic balls in the hands of your children—remember that COLOUR-CHEM, India's leading makers of Pigment Colours, is very much a part of your daily life.

PROGRESS OF TRANSPORT SCHEMES

UNION MINISTRY'S REPORT FOR 1963-64

THE Union Ministry of Transport is responsible for the administration of several related subjects—namely, road transport, major and minor ports, shipping and shipyards, lighthouses and lightships, inland water transport, road development including National Highways, tourism, civil aviation, air corporations, the Meteorological Department, Railway Inspectorate and Co-ordination of different means of transport, including railways. For the sake of administrative convenience, the Ministry functions as the Transport Wing, the Roads Wing and the Department of Tourism. Its latest annual report, that for 1963-64, contains an authoritative review of progress and developments in the sector of "transport and communications." Some of the more important data given in the report are highlighted in this article, so that a fairly up-to-date view of the country's progress in one of its basic sectors may be obtained by the reader.

To take road development and road transport first. According to the Planning Commission's mid-plan appraisal published during the year under review, the total length of surfaced roads in the country is expected to increase from about 147,000 miles on 1st April 1961 to 172,000 miles by the end of March 1966. During the first two years of the Plan, about 11,000 miles of surfaced roads are estimated to have been added to the road network of the country. No estimate of the addition in the third year, that is, 1963-64, to the surfaced road milage is, however, available in the Ministry's report.

Thanks to the approval of additional road development programmes, the aggregate outlay on roads in the third Plan now stands at about Rs. 416 crores, as against Rs. 324 crores envisaged at the commencement of the Plan. Of this revised provision, the outlay on road schemes included in the Central sector comprising National Highways, Centrally-aided State roads and certain roads other than National Highways in Sikkim works out to Rs. 175 crores, as against Rs. 106 crores provided originally. The Ministry's report has provided an account of developments in this Central sector only.

National Highways

The National Highways Programme of the Central sector seeks to concentrate attention mainly on developing the existing N.H. system by constructing missing road links, bridging unbridged river crossings and improving the existing low-grade sections. The programme provides for the construction of about 300 miles of missing road links, 85 major bridges and the improvement of nearly 3,000 miles of low-grade sections. Including the work done during 1963-64, the achievement so far under the Programme comprises the construction of nearly 120 major bridges and the improvement of nearly 1,200 miles of low-grade sections. The estimated expenditure on original N.H. works in the year under review is Rs. 34.4 crores, as compared with Rs. 17.4 crores in 1962-63 and Rs. 9.8 crores in 1961-62. The increased expenditure in 1963-64 has been rendered possible largely by the International Development Association's credit (Rs. 29 crores) intended for the financing of certain specified N.H. works in the States of West Bengal, Orissa, Maharashtra and Bihar, as well as the Eastern Express Highway in Bombay. Incidentally, all the works covered by the I.D.A. credit are scheduled to be completed by September this year. As for roads other than National Highways in the Union Territories, including Nagaland and Sikkim but excluding Goa, Daman and Diu and Pondicherry, actual expenditure on original works in 1963-64 is estimated at Rs. 2.2 crores, as compared with Rs. 4.1 crores and Rs. 48 crores respectively, in 1961-62 and 1962-63. Centrally-aided roads of inter-State or economic importance have accounted for an expenditure of Rs. 3.7 crores in 1963-64, as compared with Rs. 3.5 crores and Rs. 4.1 crores, respectively, in 1961-62 and 1962-63.

In the field of road transport, some noteworthy developments have taken place in the year under review. Firstly, a study group has been set up to examine the procedure for the assessment and collection of motor vehicles tax, goods tax and passenger tax in respect of vehicles operating on inter-State routes in the different States and recommend a simple and uniform procedure in order to eliminate inconvenience and delay to inter-State transport, without affecting the revenue of the different States concerned. The group will also recommend a reasonable basis or formula for the division of the proceeds of the taxes from inter-State transport among the various States concerned. Secondly, the Motor Vehicles Insurance Committee, set up by the Government of India last year, has submitted its report. The Committee has recommended the creation of a Central Fund for compensating victims of accidents in certain circumstances and compulsory insurance against damage to third party property to a limited extent (Rs. 2,000). The Fund, which will be administered by the proposed National Road Safety Council, will compensate innocent victims of accidents involving uninsured or ineffectively insured vehicles. Thirdly, steps have been taken to convert a suitable number of temporary permits, under which public carriers are operating on long-distance routes, into regular permits. The Inter-State Transport Commission has determined the number of regular permits required for certain routes and has issued directions to the State Transport authorities concerned for the issue of the permits. The Commission has also laid down the criteria for the selection of operators for the grant of regular permits for long-distance routes. It has further recommended to the State Governments that inter-State permits might be granted freely to tankers lorries carrying petrol, oil and lubricants, subject to the condition that the operation of the vehicles is from point to point and is restricted to a distance of 300 miles or less.

Ports and Shipping

In the related fields of ports, shipping, shipyards and lighthouses, progress during 1963-64 was generally satisfactory. As for ports, statistics of the total traffic handled by the major ones among them are available only for 1962-63. The relevant figures are given below:

Name of major port	In million tonnes		
	Imports	Exports	Total
Calcutta	5.48	4.72	10.20
Bombay	11.08	4.86	15.94
Madras	2.59	1.20	3.79
Mormugao	0.11	5.35	5.46
Visakhapatnam	1.72	1.50	3.22
Cochin	1.06	0.40	2.36
Kandla	1.41	0.33	1.74
Total ..	24.35	18.36	42.71

The total traffic handled rose sharply from 33.9 million tonnes in 1961-62 to as much as 42.7 million tonnes in 1962-63 and must have easily exceeded 45.0 million tonnes in 1963-64.

The capital expenditure incurred on the development and modernisation of major ports in the first three years of the current Plan is presented in the following table:

(1 lakh=100,000) (Rs. in lakhs)

Name of major port	Capital expenditure in the first two years of the third Plan	Estimated capital expenditure in 1963-64	Total
Calcutta	998.3	739.6	1,739.9
Bombay	551.7	355.0	906.7
Madras	468.8	239.0	707.8
Mormugao	16.4	32.0	48.4
Visakhapatnam	264.2	362.0	626.2
Cochin	94.5	25.0	119.5
Kandla	160.8	87.0	247.8
Mangalore	2.5	76.0	78.5
Tuticorin	2.0	73.8	75.8
Total ..	25,59.3	19,89.4	45,48.7

The third Plan programme for the development of minor ports, involving an outlay of Rs. 11.5 crores in the Central sector, does not seem to have been progressing too well. Under this programme, loans are being given by the Centre to the State Governments to execute particular schemes. In the first three years of the Plan, only Rs. 1.1 crore has been advanced to the State Governments.

Shipping and Shipbuilding

In the sphere of shipping, the year under review witnessed satisfactory progress. Notwithstanding the foreign exchange difficulty, the Indian-owned tonnage continued to grow. At the end of November 1963, it stood at 1,213,000 G.R.T. This meant that the target of 1.1 million G.R.T. originally envisaged for the third Plan had been achieved 2½ years in advance. Credit for this largely goes to the Government which courageously went ahead with its decision to permit the entry of a new company, called the Jayanti Shipping Company, against the solid opposition of a section of Parliament and some of the existing shipping companies. Of the total tonnage at the end of November 1963, coastal shipping accounted for 429,000 G.R.T., while the tonnage employed in overseas trades was 784,000 G.R.T. Nine loans were sanctioned by the Shipping Development Fund Committee to the Indian shipping companies in the first eleven months of 1963. These totalled Rs. 11.4 crores for helping the purchase of 20 ships in all. Incidentally, with a further loan of Rs. 4.0 crores in 1963-64 given by the Government to the Shipping Development Fund Committee, the total resources of the Committee have aggregated Rs. 27 crores. Another notable thing about 1963 is that, out of a total quantity of 861,000 tonnes of cargo for which the Shipping Co-ordination and the Chartering Organisations were asked to arrange shipping space, the cargoes allocated to Indian ships aggregated 396,000 tonnes, representing 46 per cent of the total. It is claimed in the Ministry's report, in this connection, that no cargoes were allotted to foreign vessels unless they had first been offered to Indian vessels.

The report has recorded that the performance of the Hindustan Shipyard, Visakhapatnam, touched a fresh peak in 1963-64 in terms of value of output. But no estimate of the aggregate value of output during the year under review is to be found in the report. It is claimed that the cost of construction of successive series of ships has shown a welcome and progressive decline and that the subsidy part of the cost of a ship has come down to 19 per cent, as against the previous figure of 26 per cent. The third Plan programme for the development of the Yard, involving an outlay of Rs. 2.4 crores, has been under implementation since last year when a part of the programme, costing about a crore of rupees, was approved. The net profit of the Yard in 1962-63 was only Rs. 36,752, after providing a sum of Rs. 23 lakhs for depreciation. As for the second shipyard at Cochin, work on its construction is yet to begin, for even land acquisition for the site is not wholly completed. The third Plan programme for lighthouses and lightships, involving an estimated outlay of Rs. 6.0 crores, has been satisfactorily under way.

Inland Navigation

In the field of inland water transport, the Ganga-Brahmaputra Water Transport Board was asked to handle coal transport. But only 1,538 tons of coal were handled in four round trips during the year under review. The movement of coal by river was later suspended as it proved uneconomical. So Mr. K. D. Malaviya's boast, made with a lot of fan-fare, that he could move quite a few million tons of coal by river transport has proved an empty one.

Tourist trade in 1963 had slightly improved in 1963 when a total of 140,821 foreign tourists visited India, as compared with 134,360 in 1962. The increase of 4.8 per cent in tourist arrivals was too small. It reflected little or no success in attracting foreign tourists. This is not surprising, for the third Plan schemes for the development of tourism do not seem to have progressed well enough. That a total of only Rs. 86 lakhs, out of the third Plan allocation of Rs. 3.5 crores in the Central sector for such schemes, has been spent during the first three years, tells its own story.

TIN RESEARCH IN 1963

The report of the work of the Tin Research Institute (Greenford, Middlesex, England) during 1963 has something useful to say about all the main applications of tin. The chemical aspects of tin are rapidly becoming more and more important both on the theoretical side and in industry. Researches on the chemistry of tin, especially organotins, are being pursued now in dozens of universities throughout the world and also by the Institute's own team of workers at Utrecht where much of the modern interest in the chemistry of tin may be said to have originated. Industrial research laboratories are eagerly following up the applications in plastics, fungicides, and hospital disinfectants, and all the work should call for increasing tonnages of tin in the near future.

Wider practical experience has fully endorsed the value of tin in cast iron as a means of improving mechanical properties and wear resistance, and the report gives a long list of cast iron products in which tin is now regularly incorporated. Encouraged by this success, the Institute is now seeking to find out under what conditions tin may be beneficial in certain steels.

The Tin Research Institute and its seven offices in other countries maintained its free advisory services to industrial users of tin and distributed its publications widely. The Institute's quarterly journal *Tin and Its Uses* is available not only in French and German editions, but also in Spanish.

Mitsubishi Shipbuilding and Engineering Company Ltd. of Japan, recently began shipping to the Soviet Union machinery for a pulp plant. The complete plant costs approximately $20 million. The machinery for the plant will weigh about 10,000 tons. The machinery contained in the first shipment weighed approximately 1,500 tons.

NEW PRODUCTS AND PROCESSES

Mould Temperature Control

BOE-Therm and Cool-O-Matic are two new names in the field of mould temperature control. They are manufactured by Messrs. Elof Hansson A/S. of Denmark. Boe-Therm is constructed to be used in connection with moulding of plastics that require a high mould temperature in order to obtain dimensional stability and satisfactory finish. When moulding a great many of the new plastics such additional supply of heat is an obsolute prerequisite for a satisfactory finish to most parts, and when moulding ordinary plastics a supply of heat will diminish the number of scrap-shots considerably. As the two mould halves will demand unequal supply of heat due to unequal loss of heat (e.g. influenced by the cylinder), a valve has been built in to throttle the supply of oil to the mould half wanted. For cooling of the oil and thus of the mould a heat exchanger has been built in, the cooling water supply to which is controlled by the thermostat by a solenoid valve. Boe-Therm can be delivered as type 150 with a temperature control from 20 to 150° C and as type 250 with a range from 40 to 250° C. Cool-O-Matic is a transportable unit, developed to meet the requirements for effective, automatic and accurate control of the temperature in dies, moulds, rolls etc. in a greater range than at present. Cool-O-Matic is divided into two zones, zone I with a cooling effect of 4,200 kcal/h and zone II with a heating effect of 4.5 kW. Zone I regulates the water temperature from −5 to +40° C, and zone II from 0 to 90° C. Two mould halves may have the same or different temperatures. By use of Cool-O-Matic it is possible to reduce the moulding cycle considerably and so obtain higher production rates. Tests have shown a decrease of 20-40 per cent. For some plastics more transparent parts have been obtained, and it is possible to ensure that the moulded part remains on the correct side.

Automatic Silk Screen Printing

A Danish firm, Messrs. ERIK MEYER, has produced a range of semi-automatic and fully automatic silk screen printing machines for the plastics industry. The MEYER M 3 machine is intended for printing of round, conical and oval bottles which can be operated manually or semi-automatically. It offers perfect printing in an exceptionally steady procedure. The MEYER M 5 machine has been developed specially for manual and semi-automatic printing of rectangular bottles. It is a non-expensive machine which is being used by many Scandinavian bottle producers with great success, especially for limited numbers and for difficult jobs which could not be solved satisfactorily with other machines. The MEYER M 10 is the latest model. It is fully automatic, and it has been designed specially for rectangular bottles of polyethylene. The capacity is 2,000, 2,500 and 3,000 prints per hour, and the length of the drying belt is 2,300 mm. The bottles may have a width of 45-105 mm., a length of 140-270 mm. and a thickness of 25-80 mm. It is equipped with a flame treatment arrangement and with a drying device for quick-drying inks. The machine works mechanically, and it has been constructed for rapid changes from one bottle size to another. It is equipped with a specially adjustable squeegee head which ensures sharp impressions even on difficult items. A number of M 10 may be placed in line for the printing of several colours in one procedure. Messrs. Erik Meyer also manufacture machines to customer's specifications, e.g. silk screen printing of ball-point pens, odd-shaped items, etc.

Anhydrous Milk Fat

An Australian process for the production of anhydrous milk fat could possibly be applied in many countries where reconstituted milk and milk products are extensively used. The new process, now in commercial operation at the Deloraine, Tasmania, factory of The North Western Corporation Dairy Company Limited, makes possible, for the first time in Australian dairying history, production of anhydrous milk fat direct from choice grade cream. The scientific nature of the process enables the highest quality and control standards to be maintained and has the additional advantages of being much more economical. The new product gives an outstanding purity of 99.8 per cent milk fat with a moisture content as low as 0.05 per cent. Because of these factors, it has exceeded all expectations and created trade interests in many countries. Substantial export orders have already been obtained. The plant, first established at Deloraine in October, 1962 is now working to full capacity to supply the orders of reconstituters of milk and milk products. Principal advantages arising from the new process are a substantial saving in costs and minimising of butterfat loss during processing. An advantage in many markets is that because of its low water content, low temperature refrigeration is not necessary. Its storage life of at least six months has also won acclaim in areas where supply difficulties prevail. The new anhydrous milk fat process resulted from the foresight of Mr. G. H. Lavery, Managing Director of David Lavery & Son of Melbourne, a large exporter of dairy products. Development of the process was the work of the Division of Dairy Research, Commonwealth Scientific and Industrial Research Organisation. David Lavery and Son is keen to enter into joint ventures with milk and milk product reconstituters in any part of the world, even to the extent of financing plant erection, supply of machinery, technical information, or export supplies of anhydrous milk fat.

New Oxygen Steel Process

Hoesch, the German steel concern, is adding a new variation to the oxygen steel-making processes, the best known of which is the L-D process. Essentially it consists of wedding the L-D technique, which dispenses with the use of scrap, to the open-hearth technique in which scrap is essential. The latter can cope with iron made of ores containing phosphorous whereas the former cannot. By marrying the two, it is claimed, ores containing phosphorous can be used. Hoesch propose to build at a cost of about £2.2 million two L-D convertors of 60 tons capacity each to work in conjunction with four existing 200-ton open-hearth furnaces at its works in Dortmund. The open-hearth furnaces will be fed molten metal from the convertors, topped up with scrap. The proportion of scrap used can be varied, making it possible to take account of the market price of this material prevailing at any given time. It is claimed that the monthly capacity of the works can be increased from the present 66,000 tons per month to 100,000 tons by the new process because the time each charge needs in the open-hearth furnaces will be reduced.

Work Efficiency Analyser

Provisionally patented low-cost equipment specially developed for checking order desk efficiency, work loading of central dictating systems, internal and external telephone line loading, production line loading and the work norm of large servicing organisations is to be marketed by Lede, of Northway, Bracknell, Berks. It is also expected to find many uses in Organisation and Methods offices as a cycle and event counter. The analyser indicates automatically the loading of the communication system and will indicate where efficiency can be improved and where economies can be effected. It will also indicate the "free time" of a group of telephone lines over a selected time period and thus check that the exchange is not rejecting calls. The unit is portable, completely self-contained and fully automatic and does not require highly skilled operators.

New Method to Dispose of Chemical Residue

The search for a way to dispose of the chemical residues from the production of materials such as plastics, insecticides, and refrigerants has been one of the chemical industry's longest and costliest projects. The simple answer may well lie in a combustion and absorption system being marketed by Union Carbide Corporation under an exclusive licence from Hooker Chemical Corporation, it was revealed at the Chemical industries Exposition held recently in New York City. Chlorinated and fluorinated hydrocarbons are the worst of the bad actors. Not only are many of them hazardous, but their organic structure cannot be broken down by bacterial action—they are non-biodegradable, as the chemists say—and lead to pollution of the streams into which they find their way. Two methods of getting rid of hydrocarbons, both chlorinated and fluorinated, have traditionally been used; (1) they have been fed into settling ponds, or (2) they have been buried in steel drums. The first technique requires a considerable investment in land, and still runs the risk of stream pollution and ground water contamination. The second method entails obvious expense, and if the drums eventually rust away, ground water contamination could again result. Conventional burning of many of these residues is not possible because they will not support combustion at ordinary temperatures. Now, after four years of successful operation of development-and production-scale facilities, a feasible residue disposal system on which a number of United States patents are pending, has been developed for processing residues with a chlorine content as high as 90 per cent. The two-part system includes a high-temperature combustion chamber and an absorption system than can be designed to recover commercial strength halogen acids. Drawing on its years of design and production experience in chemical process systems, Union Carbide will manufacture and install complete residue disposal systems as a "turnkey" basis. The reaction chamber is actually a giant heat interchanger consisting of an inner downdraft chimney and a covered outer shell, the combustion reaction taking place near the top of the inner chimney. Because the combustion of chlorinated hydrocarbons in the Hooker reactor takes place at from 1,650 to 2,370 degrees F., (898.9° to 1,298.8° C.) auxiliary fuel is used for start-up. Once the inner wall reaches operating temperature, no further fuel is required. Residues enter the hot reaction zone and liberate large quantities of heat upon burning, maintaining the temperature of the chimney. Thermal equilibrium is attained by using this heat to preheat combustion air flowing upward in the annulus between the shell and internal chimney, down through which the hot gases are being discharged. It is this interchange of heat eliminating the need for auxiliary fuel, that makes the process so economical. Special refractories, carefully selected for the application, are used to line the combustion chamber and to form the inner tube or chimney. When the residues burn, the only by-products formed are water, nitrogen, oxygen, carbon dioxide, and gaseous HCl. No chlorine, carbon monoxide, or hydrogen are discharged from the reactor.

The gases leave the rseidue reactor at approximately 1,600 degrees F., (871.1° C.) and are cooled adiabatically in a carbon tower spray chamber. They are then scrubbed in a packed carbon tower. Nitrogen, Carbon dioxide, and oxygen are vented to the air and the extremely dilute acid—usually approximately 1 per cent—can be discharged. Depending on the residue being disposed of, and the economics of the process, the absorber can be designed for the recovery of commercial halogen acids.

Emulsion-type Wood Preservative

Impressive tests of the penetrating power of Woodtreat, a wood preservative whose active ingredients are the fungicide pentachlorophenol and the insecticide dieldrin, were recently completed by two Government-sponsored laboratories—one in Berlin and the other in the Netherlands. The German tests proved that the penetration of Woodtreat into both wet and dry wood continues for several weeks after application. The Dutch laboratory compared Woodtreat with a standard 5 per cent pentachlorophenol solution. Wooden test blocks, exposed to severe fungal attack, were protected to a depth of only 0.08 inches (a mm.) from the treated surface by the pentachlorophenol, whereas Woodtreat penetrated the full 0.6 inches (15 mm.) thickness of the blocks and gave them complete protection.

The novelty of Woodtreat, which is made by *Preservation Developments Ltd.* of London, lies in its consistency: it is a thick, paste-like oil-in-water emulsion which sustains itself on the surface of timber for several days or weeks and acts as a reservoir from which the active ingredients find their way into the wood over an extended period. A single application of Woodtreat has been shown to give deeper and more uniform penetration and retention than 20 brushed or sprayed coats of an ordinary organic-solvent preservative containing the same pesticides.

The paste can be spread over the surface of timber with brushes or wooden paddles at a uniform thickness of 1/32-1/16 inch (0.8-1.6 mm.). However, because of its exceptional penetrating power it is possible, and usually more convenient, to apply it in bands or ribbons at intervals of 5 or 6 inches (13-15 cm.) using a caulking gun or compressed-air greasing gun. All cracks and drilled holes should be filled and end-grain, which is particularly vulnerable, should be covered all over with ⅛-inch (7 mm.) of the paste.

In addition to its use as a preventive treatment for new timber, Woodtreat has particular advantages in the maintenance of old buildings. For example, it can often be applied to exposed parts of timbers in order to protect other parts inaccessible behind decorative plasterwork. Likewise it can be packed into the space round the ends of joists or beams in walls without completely opening up the surrounding masonry.

Lift for Car Servicing

A four-post platform lift for vehicle servicing at two levels, with the wheels free and the maximum amount of underbody accessibility, is being produced by a British company, Kismet Ltd., Fenlake Works, Bedford, England. The platform is raised on four trunnion-mounted phospher-bronze nuts, engaged with a steel screw in each lift post. This gives a positive drive and ensures perfect levelling. The screws are chain driven, each pair being operated by a 3 h.p. motor complete with gear unit. The motor units are controlled by a "dead man" push button switch to ensure the presence of the operator whenever the lift is moving. Conventional lifts do not have this positive drive. In most cases the platform is suspended on cables which are winched and can stretch in time. The frame's contact post assembly is also unusual, the firm claim, as the swing arms which support the vehicle are completely adjustable and independent, unlike other lifts in which either cross members and jacks have to be used to give wheel-free facilities or special support frameworks have to be inserted beneath the vehicle. The arms, which can be altered in length without moving the vehicles, can also be tilted upwards freely in their guide blocks—this prevents toe tripping between the arms and platform.

Dictating Machine

A small dictating machine, produced by Dictaphone Co. Ltd., 17, Stratford Place, London, W.1., has been approved by B.O.A.C. for use aboard their airliners. It has been through tests which ensure that privately owned electrical equipment does not interfere with the safety of the aircraft in the air, especially with the aircraft's navigational aids. The machine, weighing 5 lb. and measuring 8¾ in. x 6 in. x 2 in. is battery-powered and gives four hours continual recording time. It is re-charged by plugging in to an a.c. mains of 110 to 240 volts. The manufacturers say that to achieve airline approval the machine had to pass stringent tests as laid down in a British Standard. It has already been approved by British European Airways and some other international airlines.

Automatic Spraying Machine

A spraying machine for the automatic decoration of metal or plastic bezels, such as are used on car facia panels, car accessories, electrical instruments, toys and clocks, is being manufactured by a British firm, Automatic Equipment Ltd., Daleside Road, Nottingham, England. The machine is easy to operate and requires only one unskilled operator. Spraying is performed upwards through a spray mask. Each article is placed face downwards in the mask and held in position by a clamp to ensure maximum contact with the mask. On pressing a foot pedal the spray gun follows the contour of the bezel applying a smooth even thickness of material. On completion of the spray cycle, the component is removed and the process repeated. Results, it is claimed, are consistently better than those obtained by highly skilled operators using conventional methods.

Pitch Fibre Pipes

Pitch fibre pipes, cheaper than cast iron, steel and glazed stoneware for land drainage, sewage, irrigation and electrical conduiting, will be produced in a new British factory which goes into operation later this year. Use of pitch fibre pipes results in other savings, say the firm, Pitch Fibre Pipes Ltd., 16 Grosvenor Crescent, London S.W.1. Because of the smoothness of the bore the gradient can be lower, resulting in less excavation work, and additionally they can be laid in any weather conditions because no cementing is involved. The joints are "dry driven"—made by driving the pipes together in a colon. The trench could be even full of water. This technique of joining the pipes also means that the trench can be narrower than it would if any cementing work had to be undertaken. Advantages claimed for the pipes include flexibility and resistance to chemical action, exceptional wearing properties, and comparatively lower laying costs.

HIGH COST OF BIG GOVERNMENT

By A Special Correspondent

THE need for enforcing strict economy in administration has been stressed in the budget speech by every Finance Minister of the Government of India since independence. But actually the costs of administration, far from going down, are steadily increasing. Especially after the commencement of planning, the administrative machinery has become vastly bigger and costlier.

In 1953-54, the administrative services of the Government of India absorbed Rs. 26.74 crores and the estimate for 1964-65 is Rs. 81.84 crores. The main heads under "Administrative services" are General administration, Parliament, External affairs, and Audit. Out of Rs. 81.84 crores estimated for 1964-65, the outlay on general administration is Rs. 19.51 crores, external affairs Rs. 16.48 crores, Parliament Rs. 2.42 crores and audit Rs. 10.59 crores. The expenditure on justice, police, etc., is relatively small.

The rising trend in expenditure on administrative services of the Government of India is shown in the following table:

	Rs. crores
1953-54	26.74
1954-55	30.62
1955-56	33.57
1956-57	38.06
1957-58	42.00
1958-59	48.10
1959-60	52.04
1960-61	58.68
1961-62	59.17
1962-63	75.18
1963-64 (Revised)	80.45
1964-65 (Budget)	81.84

A detailed analysis shows that the expenditure on general administration has jumped up from Rs. 8.62 crores in 1953-54 to Rs. 19.51 crores in 1964-65 (budget), audit from Rs. 4.81 crores to Rs. 10.59 crores and external affairs from Rs. 4.56 crores to Rs. 16.48 crores.

It is true that Government expenditure in the present day cannot be confined, as in the past, to functions like collection of revenue and maintenance of law and order. The Government nowadays has not only to look to the security of the country but also to promote actively the health and happiness of its citizens. All this will necessitate a big Government. But even allowing for this factor, it cannot be said that the people of India are getting the best out of their administration. Few will grudge the large outlay on Government, provided the administration is carried on efficiently and every effort is made to avoid waste and put public money to the most productive uses. This, however, is not being done in India.

Year after year, the reports of the Estimates Committee, Public Accounts Committee, the Auditor-General and other official and non-official bodies draw attention to instances of colossal waste and extravagance indulged in by Government departments but these "irregularities" are not taken seriously by Government. The Public Accounts Committee's 20th report, presented to Parliament on the 3rd March 1964, also reveals grave and glaring instances of misuse of public funds on the part of the Ministry of External Affairs, the Ministries of Food and Agriculture, Health, Home Affairs, Information and Broadcasting, Labour and Law. Of particular significance is the Committee's disclosure that the scheme of State trading in foodgrains has, since its commencement in 1943-44, resulted in a loss of Rs. 98.24 crores of which Rs. 46 crores have so far been charged to revenue. These revelations, however, are, as in the past, unlikely to have any impact on the administration.

But the time has come when public opinion in India must express itself strongly and persistently against administrative waste and inefficiency. The victims of inefficiency are not only trade and industry but the common people who have to look up to Government for almost everything they need. The failure of the Government to bring about a continuous increase in food production is also largely due to administrative ineptitude. This was made clear by no less a person than Dr. S. Radhakrishnan, the President of India. In his convocation address to the U.P. Agricultural University on the 17th November 1963, Dr. Radhakrishnan said that the deterioration in Indian agriculture was due to the "lack of true and wise leadership and administrative efficiency."

If the Government of India is really serious about enforcing economy and efficiency in administration, it must, in the first place, refrain from adopting a policy of reckless nationalisation merely on ideological grounds. The proposal made at Bhubaneswar, urging State Governments to take over rice mills, is typical of the confused official thinking on this subject. State trading in food, as mentioned earlier, has resulted in huge losses and the working of most of the other public enterprises also has been unsatisfactory from the financial point of view. In the circumstances, to resort to further nationalisation of either banks or other industries will only create more complications, without adding to the wealth or welfare of the people. It is wrong to suppose that people's welfare can be achieved only by an ever-expanding public sector. Most of the advanced nations of the world have been able to ensure high living standards for their people without crippling private initiative. It was Mr. G. D. Birla who once described the United States as the greatest Welfare State in the world.

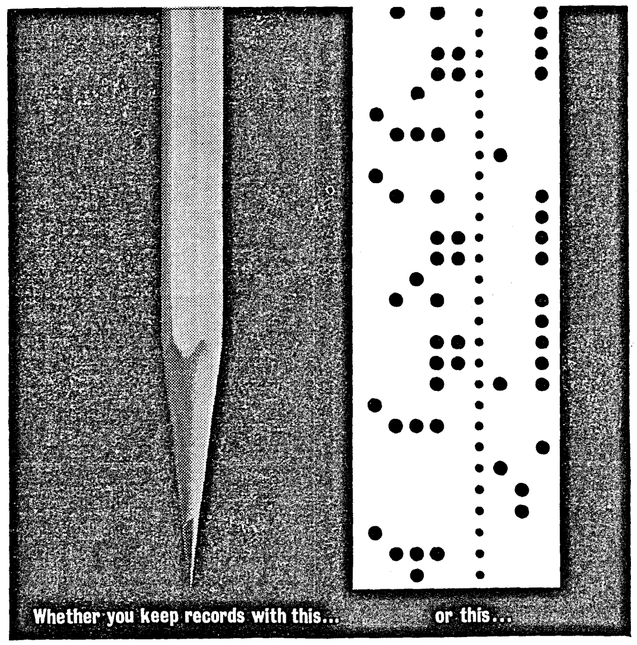
The mid-term appraisal of the Third Five-year Plan has vividly brought out the alarmingly slow rate of our economic growth. No longer, therefore, can we afford to remain indifferent to the problem of ensuring a clean and efficient administration which will be able to cope with the big tasks confronting the nation's economy. As Mr. Morarji Desai said in his budget speech last year, ".... Essentially, the task of achieving the utmost economy in public expenditure is not merely a question of cutting or reducing some items of expenditure or of laying down this or that procedure. What we need is more performance with less expenditure of resources in every sphere of public activity; and what such economy through efficiency requires is an attitude of mind—a spirit of vigilance and responsibility—on the part of all those who are entrusted with the expenditure of the people's money, be they engineers, army officers, contractors, workers, civil servants or, indeed, Ministers." Mr. T. T. Krishnamachari in his budget speech has said: "Economy in administration is fully compatible with efficiency; and it shall be my constant endeavour to ensure that the administrative machinery of the Government is reorganised so that it is fully responsive to this need." Similar sentiments have been expressed by his predecessors but their efforts have not been conspicuously successful. Whether Mr. Krishnamachari will be able to produce any significant results in this direction remains to be seen.

BRITISH INDUSTRIAL PRODUCTION SHOWS RISING TREND

The level of industrial production in Britain continued in January the strongly rising trend which had been a feature of the second half of 1963. This fact is brought out in the latest estimates issued by the Treasury last week in the form of index of industrial production for January.

Taking the three months November 1963-January 1964, which bring out the trend, the seasonally adjusted index shows the level of output as 2½ per cent higher than in the previous three months. Most of the major industrial groups in the index contributed to this increase, in particular iron and steel, coke ovens, and oil refineries. Clothing and footwear, and timber and furniture also showed more than the average increase.

Information which has become available in the early part of March suggests that this strongly rising trend has continued into February. This is particularly supported by the steel production figures for February, issued a week ago by the Iron and Steel Board, which indicated that steel output had reached a record level in February. And the provisional oversea trade figures released by the Board of Trade show that exports had reached a new peak, which is also indicative of a high level of industrial output.

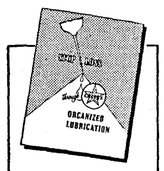


you can cut maintenance costs up to 15% or more with Caltex "Stop Loss" Programme

Here's one plan for reducing major overhead costs that puts no premium on your record-keeping methods.

Whether you use a clerk or a computer, you can count on a Caltex "Stop Loss" Programme for substantial savings in maintenance expense... savings that can reduce costs up to 15% or more.

The key to this plant management plan for cost control is our exclusive Lubrication Control System. This flexible blueprint for economy helps slash costs in the primary areas of production and maintenance. It eliminates the high price that companies pay for unnecessary shutdowns. It extends machine life, reduces maintenance time and labour costs, and increases unit output.

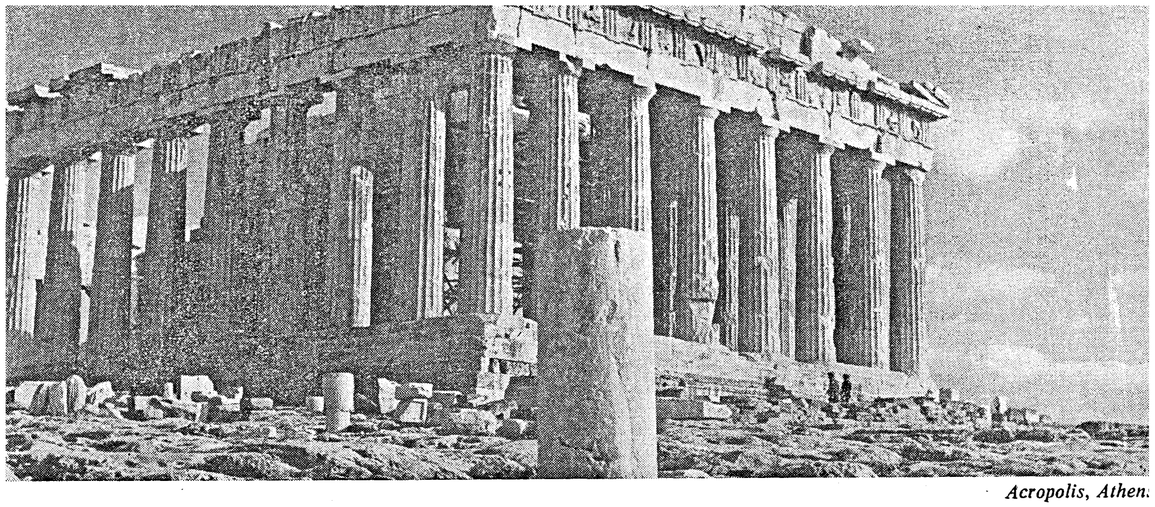


Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

CALTEX

CALTEX (INDIA) LIMITED BOMBAY • NEW DELHI • CALCUTTA • MADRAS

CAL SL. G. 1/64



Acropolis, Athens

Here's how on your next trip to Europe or North America, you can avail of reliable KLM's jet services and see Athens on your way, at no extra fare!

Athens, one of the 44 key cities covered by KLM's network of air routes in Europe, is now served direct by both the KLM's flights from India. A nice opportunity to visit this increasingly popular city for a while, before continuing your journey. Read on for more interesting KLM facts...

1. A KLM DC-8 jet leaves for Europe on Saturdays from Calcutta, on Tuesdays from Delhi and on Mondays, Tuesdays, Thursdays, Fridays, and Saturdays from Karachi.

2. KLM's flight from Calcutta leaves on Saturday at 20.30 hrs., arriving Athens on Sunday 05.30 hrs.

3. From Athens, this flight goes to **Zurich** on its way to Amsterdam, providing you with yet another attractive possibility! Arrival: Zurich Sunday at 08.00 hrs. Arrival: Amsterdam Sunday 09.55 hrs.

4. KLM's flight from Delhi to Amsterdam leaves on Tuesday at 21.55 hrs., arriving Athens on Wednesday at 05.55 hrs. Arrival: Amsterdam (via Frankfurt) Wednesday at 10.05 hrs.

5. Both these KLM flights from India can easily be connected at Karachi by passengers from Bombay and also from Delhi and Calcutta.

6. In Amsterdam, these services link up with daily non-stop KLM flights to New York and with frequent flights to Houston, Montreal and Mexico city.

7. On the Amsterdam-New York route, KLM will have 24 DC-8 jet flights a week during the peak season—17 non-stop, 5 via Glasgow and 2 via Shannon.

8. Between Amsterdam and Montreal, KLM operates five/six DC-8 jet flights a week, with three of them continuing to Houston and Mexico City.

Attractive KLM facilities

9. KLM has its own air-conditioned resthouse at Karachi airport, called "Midway House". It has spacious, comfortable rooms with shower baths and provides many facilities such as a supervised nursery, a barber shop, a souvenir and carpet shop and a floodlit tennis court. The service there matches the standards of a good European hotel.

10. KLM offers many interesting side-trip possibilities. For example, on the normal round-trip fare from Calcutta, Delhi or Bombay to London, you can enjoy a side-trip to Copenhagen or Paris.

Note : All timings effective April 1964

ATHENS— KLM's new gateway to Europe

Things to do in Athens : See the Acropolis by moonlight (a thrilling experience!); the Benaki Museum by daylight; go to a "taverna" (small typically Greek restaurant), try "Cocoretsi" (Greek speciality) or crisp "Kalamarakia" (fried squid), drink 'ouzo' (aniseed flavoured Greek apertif); take a stroll during a cool summer evening throughout the picturesque winding streets of the old Plaka quarter and if you happen to be there during August/September, in time for the Festival of Athens, attend the remarkable performances of ancient drama, concerts and ballets.

11. Make your choice of a number of attractive organised tours, planned to provide visitors to Greece with comfortable and easy means of access to every point of interest in the country. Contact KLM for full particulars regarding the number of days involved and the routing.

12. From Athens, many important cities in Europe and North America are served direct. For example, London, Madrid. Paris, Rome, Vienna, Zurich, Frankfurt, Brussels, Geneva, Copenhagen, Milan, Munich, Amsterdam, New York, Detroit, Chicago etc.

13. KLM's multi-stopover plan lets you make more than one stop en route your final destination at no extra fare. For instance, if you are flying from Delhi to New York, you can visit Rome, Frankfurt, Dusseldorf, Brussels, Paris, London, Amsterdam — all for the price of your ticket to New York. Ask KLM for details of other stopover possibilities.

14. When flying via Amsterdam, you can do a lot of interesting things at the airport. Shop for luxury bargains at the Tax-Free Shopping Centre. Buy a tax-free car at ShipSide Showroom. Take a Minitour of Amsterdam. Visit the airport's fascinating aeronautical museum.

15. All KLM flights to Europe from Calcutta, Delhi and Karachi arrive in Amsterdam next morning, offering immediate connections to London, Paris, Brussels, Geneva, Hamburg, and many other cities in Europe and also to New York.

16. Your Travel Agent will tell you more about the advantages of flying KLM. Get in touch with him or contact the nearest KLM Office. Calcutta—7, Chowringhee Road; Delhi—9A, Connaught Place; Bombay—Taj Mahal Hotel.

KLM ROYAL DUTCH AIRLINES

RAZA BULAND'S PROFIT DECLINES

DIVIDEND MAINTAINED AT TEN PER CENT

THE working results of the Raza Buland Sugar Company Ltd. [Managing Agents: Messrs. Govan Brothers (Rampur) (Pvt.) Ltd., New Delhi] for the year ended 31st October 1963 bear the impact of what may be called the adverse psychological conditions created by the Sugar (Regulation of Production) Act, 1961, which regulated the production of sugar in the country during the 1961-62 season. The restriction placed by the Act on the output of sugar during that season naturally led to an all-round fall in the area under sugar cane cultivation, with a consequent decline in the output. The situation was made worse by unfavourable weather conditions which lowered the cane yields quite materially. Further, there was a large-scale diversion of the limited cane supply to *gur* and *khandsari* manufacture and the organised sugar industry was starved of its normal raw material supplies. As a result, the total production of sugar in the country during the 1962-63 season fell to 2.16 million tonnes from 2.73 million tonnes and in west Uttar Pradesh alone it came down from 8.10 lakh tonnes to 6.05 lakh tonnes. So far as the Company is concerned, the total cane crushed at both of its mills was as low as 28.24 lakh quintals, as against 41.13 lakh quintals, and the production of sugar fell from 3.74 lakh quintals in 1961-62 to no more than 2.75 lakh quintals.

Sales realisation, however, has declined only by 13.2 per cent, from Rs. 423.15 lakhs to Rs. 367.13 lakhs to be precise. But this modest fall is due to the cushion provided by the large stocks brought forward from the previous year. The liquidation of these stocks during the year under review is reflected in the sharp fall in closing stocks from Rs. 59.32 lakhs to Rs. 4.57 lakhs. The same explanation holds good for the steadiness of gross profit at Rs. 25.33 lakhs, as against Rs. 25.07 lakhs for the previous year. An additional factor is the better recovery of sugar at 9.74 per cent, as against 9.11 per cent in 1961-62. There has also been a welcome reduction of Rs. 18.44 lakhs to Rs. 94.63 lakhs in staff and other expenses.

Since there is hardly any change in the gross profit and the provision for depreciation has moved up marginally from Rs. 3.61 lakhs to Rs. 4.21 lakhs, the provision for the managing agents commission has risen by only Rs. 0.13 lakh to Rs. 2.21 lakhs. That for taxation, on the other hand, has advanced from Rs. 9.60 lakhs to Rs. 12.60 lakhs, the higher provision being due entirely to the liability of Rs. 2.76 lakhs under the S.P.T. for 1962-63 and Rs. 1.19 lakh for the previous year. As a result of this rise in essential provisions, the net profit has declined from Rs. 9.78 lakhs to Rs. 6.31 lakhs. After fortifying this with Rs. 2.07 lakhs withdrawn from past provisions, the Directors have credited Rs. 1.88 lakh to reserves and, from the balance, have proposed the payment of an ordinary dividend of 10 per cent, same as that for the preceding two years.

The Company's performance during the past four years is presented synoptically in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st October			
	1963	1962	1961	1960
Sale proceeds	367.13	423.15	333.53	348.75
Other income	6.39	7.28	12.11	7.35
Closing stocks	4.57	59.32	91.26	69.43
Cost of cane	212.22	268.09	180.24	177.54
Excise duty	86.39	92.07	86.79	92.45
Staff expenses	30.15	33.95	29.50	28.76
Other expenses	64.68	80.22	82.17	77.00
Gross profit	25.33	25.07	8.68	36.79
Managing Agents' commission	2.21	2.08	0.53	3.09
Provision for—				
Depreciation	4.21	3.61	3.27	2.75
Taxation	12.60	9.60	2.10	18.92
Net profit	6.31	9.78	2.78	12.03
Withdrawals from reserves and provisions	2.07	5.54	14.38	..
To reserves	1.88	9.00	10.97	6.05
Dividend	6.50	6.50	6.50	8.13
	(10%)	(10%)	(10%)	(12.5%)
Carry forward	0.10	0.10	0.35	0.65
Market price of ordinary shares (in rupees): ..	1964	1963	1962	1961	1960
High	10.56	10.25	10.87	10.76	14.37
Low	9.87	9.87	6.00	10.64	12.19

All dividends are subject to deduction of tax.

The disposal of heavy stocks has led to a perceptible improvement in the financial position of the Company. The share capital (all in ordinary shares of Rs. 10 each), of course, remains unchanged at Rs. 65 lakhs, while the reserves are only nominally higher at Rs. 38.52 lakhs as against Rs. 37.08 lakhs a year ago. But the whole of the secured loan of Rs. 52.98 lakhs has been liquidated. As a result outside finance made up of loans and current liabilities and provisions has declined from Rs. 112.88 lakhs to Rs. 67.19 lakhs which is entirely made up of current liabilities and provisions. On the assets side, the net block inclusive of the cost of construction work-in-progress has increased from Rs. 51.91 lakhs to Rs. 57.80 lakhs. This figure has been arrived at by reducing the gross block of Rs. 107.58 lakhs (also inclusive of the cost of construction work-in-progress) by Rs. 49.78 lakhs being the amount of depreciation provided for. Because of the reduction in stocks, current assets, loans and advances have declined from Rs. 150.92 lakhs to Rs. 101.22 lakhs. Investments, too, are down from Rs. 12.13 lakhs to Rs. 11.69 lakhs.

The cane development activities of the Company for providing irrigation facilities and better variety of seeds to cane growers in collaboration with the Cane Development Department of the Government of Uttar Pradesh continued during the year. An aerial spray of insecticides over an area of 2,500 acres under sugarcane in the Company's reserved area to control pests was arranged and was found effective. Another scheme for the control of different types of borers through chemical and mechanical means is in operation in an area of 5,000 acres.

Under the intensive cane development scheme started by the Government of Uttar Pradesh in accordance with the recommendation of the High Power Committee for the sugar industry appointed by the State Government, two blocks of 4,000 acres each have been established in the Company's cane area. The expenses on this scheme are being shared by the Company, cane growers and the Government of Uttar Pradesh.

Confirmed orders for the delivery of machinery and equipment required for expanding the crushing capacity of both the sugar factories to 1,500 tons each per day have already been placed. On the basis of anticipated deliveries the expansion of the Raza Sugar Factory is likely to be completed by November 1964 while the expansion of the Buland Sugar Factory is likely to be delayed till November 1965. As for the prospects for the current year, the Directors report that, from the estimates so far available, the Company is expected to get 33 lakh quintals (88 lakh maunds) of cane for crush during the season 1963-64, as against 28.24 lakh quintals of cane received in 1962-63.

The present market quotation for the Rs. 10 fully paid ordinary shares of the Company is Rs. 10.37 *cum-div.* On the basis of the *ex-div.* price, the net yield works out to a little over 8 per cent per annum.

(Concluded from next column)

troubles. The plant and machinery for the caustic soda-chlorine plant, including that for its expansion, are expected to be erected shortly and production will start this year. All the necessary approvals for the fertilisers project at Kothagudem have been obtained and a new company is to be registered shortly for operating it in association with a leading U.S. firm. The plant is expected to go into production during 1966.

The progress of the sugar factory during the year under review is indicated in the table given above. As for the rest, production of superphosphate in the factory at Kovvur amounted to 23,004 tonnes, as against 23,450 tonnes in the previous year, and sales to 22,654 tonnes, as against 25,886 tonnes. The slight fall in sales was due to the failure of paddy crop in the Company's marketing area. Sales during the first four months of the current year have, however, been better.

The Company's paid-up capital, including Rs. 30 lakhs in preference shares, now stands at Rs. 79.95 lakhs and is supplemented by Rs. 41.14 lakhs in reserves and surplus. Short-term loans amount to Rs. 126.81 lakhs and current liabilities and provisions to Rs. 40.01 lakhs, bringing the total indebtedness to outsiders to Rs. 166.82 lakhs. This indebtedness exceeds the total of current assets, book debts and investments by Rs. 61.51 lakhs. The gross block, which expanded during the year from Rs. 237.78 lakhs to Rs. 259.44 lakhs, has been written down to Rs. 192.09 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 14.75 *cum-div.* and offer a net return of nearly 7 per cent per annum.

LOWER PROFIT FOR ANDHRA SUGARS

DIVIDEND REDUCED ON HIGHER CAPITAL

UNLIKE 1961-62, the year ended 30th September 1963 has proved unfavourable for the Andhra Sugars Ltd. (Managing Agents: Messrs. Ranga Rao and Company, Tanuku). For sale proceeds, which had soared from Rs. 164.68 lakhs to Rs. 232.67 lakhs in the previous year, have edged up only a little further to Rs. 235.03 lakhs during the year under review. The gross profit has actually dropped to Rs. 29.75 lakhs from Rs. 39.15 lakhs to which level it had jumped up in 1961-62 from Rs. 25.58 lakhs for the year before. The profit has declined because of two reasons. One is that a large quantity of sugar released for sale by the Government could not be delivered to customers by the year-end for lack of adequate supply of wagons. The other is—and this follows from the first—that sales effected during the year included those of sugar purchased at controlled rates from other factories, the margin of profit on which was very little. Besides, the Company had to make export of sugar at unremunerative rates.

Net profit, after the essential provisions, has declined from Rs. 18.11 lakhs to Rs. 7.57 lakhs. Although it is supplemented by the write-back of excess provisions and refunds amounting to Rs. 2.19 lakhs, the surplus available, after taking Rs. 1.15 lakh to development rebate reserve and setting apart Rs. 2.79 lakhs for the preference dividend, is insufficient for maintaining the ordinary dividend at 16 per cent on the increased paid-up capital of Rs. 49.95 lakhs following the issue of 100,000 equity shares of Rs. 10 each at par to the shareholders on 26th October 1962 in the proportion of one right share for every four shares held. The Directors have, therefore, pruned the dividend to 12 per cent per annum, subject to tax. The surplus carried forward is Rs. 9,337, as against Rs. 9,010 brought in.

The following table compares the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1963	1962	1961	1960

* In tons.

The increase of Rs. 10 lakhs to Rs. 50 lakhs in the issued equity capital during the year has followed a similar increase made in October 1961 in the form of a one-for-three right issue at par. In addition, the Company allotted on 1st October 1960 Rs. 30 lakhs worth of 9.3 per cent, taxable (originally, 6.5 per cent, tax-free) cumulative redeemable preference shares. Recently, it made a public issue of 100,000 equity shares of Rs. 10 each at a premium of Rs. 3 per share, which has been heavily oversubscribed. It now proposes to make a further rights issue of 100,000 equity shares in the course of the current year. This additional capital and a loan of Rs. 140 lakhs, as well as a guarantee of Rs. 28 lakhs for deferred payments (both of which have been negotiated with the I.F.C.I.), are required for financing the Company's Rs. 2.2-crore caustic soda-chlorine plant and other diversification plans. The progress of these plans, as indicated by the Directors in their report for the year under review, is summarised below:

The working of the acetic acid and industrial alcohol plants during the year proved satisfactory in spite of the earlier teething

(Continued in previous column)

NIZAM SUGAR'S RESULTS ENCOURAGING

FINANCES STRENGTHENED

THE Nizam Sugar Factory Ltd. (Chairman: Mr. V. K. Rao, I.C.S., Hyderabad) has reported highly encouraging results for the year ended 30th September 1963. Aided by the sustained internal demand for sugar during the year and the attractive price fetched by the Commodity, total sales realisation amounts to Rs. 675.01 lakhs for the year, as against Rs. 682.39 lakhs for the previous period of 15 months while carry forward stocks have declined by almost 85 per cent from Rs. 303.85 lakhs to Rs. 45.04 lakhs. As a result, the gross manufacturing profit for the year has advanced to Rs. 52.16 lakhs from Rs. 37.17 lakhs for the preceding period. Agricultural operations during the year too appear to have been highly successful since the profit earned on these is Rs. 25.13 lakhs, as against Rs. 15.19 lakhs for the previous accounting period, while the loss sustained by the confectionery department has been reduced by half from Rs. 2.47 lakhs to Rs. 1.06 lakh by effecting a larger turnover of confectionery products.

The total gross profit for the year, therefore, shows a handsome improvement of Rs. 26.34 lakhs to Rs. 76.23 lakhs over the previous period. Nearly a half of this, however, has been syphoned off by the essential provisions for depreciation and taxation, the former claiming Rs. 13.41 lakhs as against Rs. 12.15 lakhs and the latter as much as Rs. 25.00 lakhs as against Rs. 10.44 lakhs, so that the resultant net profit at Rs. 37.82 lakhs is up by only Rs. 10.52 lakhs, as compared with Rs. 27.30 lakhs earned in 1961-62. The Directors have utilised the major portion of this improvement in net profit for strengthening the reserves of the Company and only a small part of it for enhancing the dividend to shareholders. Thus, the reserves have received Rs. 14.26 lakhs, as against Rs. 8.22 lakhs set apart last year, and the dividend on ordinary shares absorbs Rs. 22.02 lakhs, as against Rs. 19.87 lakhs; the rate of ordinary dividend has been modestly raised from 18 per cent to 20 per cent. Even so, it is smaller than the 23 per cent paid for 1960-61.

The working results of the Company for each of the past four years are set forth in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th September	For 15 months ended 30th September	For the year ended 30th June	
	1963	1962	1961	1960

During the year, the Company crushed a smaller quantity of sugarcane, 575,420 tonnes to be precise, but the quantity of sugar produced was greater at 59,901 tonnes, because the quality of cane was better, the average recovery being higher by more than one point at 10.40 per cent. During the preceding period, it may be noted, 600,267 tonnes of cane was crushed, yielding 57,566 tonnes of sugar, with an average recovery of 9.59 per cent. The production of confectionery goods at 501.75 tonnes was higher by more than 100 per cent as against 247.27 tonnes for the previous accounting period of 15 months. As a result, the sale proceeds of products more than doubled from Rs. 6.10 lakhs to Rs. 12.73 lakhs, leading to a substantial reduction in the loss as said earlier. The Directors report that sale of confectionery products has registered a further substantial increase during the current year.

There has been no change in the paid-up share capital of the Company which stands at Rs. 145.89 lakhs made up of Rs. 12.00 lakhs in 5 per cent tax-free cumulative preference shares of Rs. 25 each, Rs. 23.84 lakhs in 4 per cent tax-free cumulative preference shares of Rs. 25 each, and the balance, namely Rs. 110.09 lakhs, in ordinary shares of Rs. 25 each. The reserves, on the other hand, have increased from Rs. 136.11 lakhs to Rs. 150.52 lakhs, thanks to the favourable trading during the year under review. Reflecting the better movement of sugar stocks and improved profits, the liabilities of the Company have gone down appreciably. Thus, secured loans have fallen from Rs. 232.58 lakhs to Rs. 123.76 lakhs and so have current liabilities and provisions from Rs. 390.37 lakhs to Rs. 227.84 lakhs. On the assets side, current assets, loans and advances have come down from Rs. 700.97 lakhs to Rs. 446.21 lakhs. The gross block, inclusive of the amount standing to the credit of the land purchases account, shows a rise of Rs. 14.00 lakhs at Rs. 429.86 lakhs, but since the amount of depreciation provided has also advanced from Rs. 214.34 lakhs to Rs. 230.67 lakhs, the total net assets are now worth Rs. 199.19 lakhs as against Rs. 201.51 lakhs a year ago. Investments are carried in the books at a cost of Rs. 2.62 lakhs as before.

The Rs. 25 fully paid ordinary shares of the Company are currently quoted at Rs. 58 cum-div. The net annual return on fresh investment at the ex-div. price works out to 7.4 per cent.

ALLOTMENT OF G.K.W.'S DEBENTURES

The recent public issue of 7 per cent debentures of the value of Rs. 75 lakhs by Guest, Keen, Williams, Ltd. was oversubscribed. The Company received 348 applications for a total of Rs. 77.74 lakhs. It has now fixed the allotment against the applications received. With the prior approval of the Calcutta Stock Exchange, applications for amounts up to Rs. 1 lakh of stock have been allotted in full and those for amounts over Rs. 1 lakh of stock have been allotted approximately 95 per cent of the amount applied for. Cheques for the amounts refundable are being issued immediately, while stock certificates for the amounts allotted will be posted by about the end of the current month. The public issue, it will be recalled, formed part of the total issue of Rs. 150 lakhs, the balance amount of Rs. 75 lakhs having been subscribed for by the underwriters and their friends.

(Concluded from next column)

forecast with any measure of accuracy exactly how effectively the increase in production or any other measures taken by the Company to effect economies would be reflected in future working results." The near-term outlook thus continues to be uncertain, though Mr. Sen adds that every effort to control the costs of production has to be made, even if its effect is no more than just a step in the right direction.

Progress in regard to the house service meter scheme of the Company has been limited to sending out the first batch of trainees to the Associated Electrical Industries Ltd., Manchester, and completing the import application for the plant. It is, however, expected that, with the first batch of trainees now actively associated with the planning of the Indian production in the U.K., this scheme will gather necessary momentum in the coming year.

The Company's exports of bicycles rose appreciably during the year under review. Orders are now flowing in steadily for the Balaka bicycle which was introduced to the African and Middle East markets during the year under review.

Following the issue of 650,000 new ordinary shares at a premium of Rs. 4 per share in November 1962 (of which 334,000 shares have been taken up by Raleigh Industries Ltd., U.K.), the Company's paid-up capital, including Rs. 30 lakhs in 5 per cent preference shares of Rs. 100 each, has gone up from Rs. 100 lakhs to Rs. 165 lakhs. It is supplemented by reserves and surplus amounting to Rs. 87.04 lakhs. Secured loans are shown at Rs. 245.04 lakhs and current liabilities and provisions at Rs. 115.04 lakhs, as against which current assets, book debts and investments aggregate Rs. 370.41 lakhs. The gross block of Rs. 328.44 lakhs (Rs. 303.26 lakhs a year before) has been written down to Rs. 191.32 lakhs and shown, together with work-in-progress and plant and machinery under erection, at Rs. 241.72 lakhs.

SEN-RALEIGH'S PROFIT DROPS SHARPLY

OUTLOOK STILL UNCERTAIN

THE fears expressed around this time last year by Mr. Abhijit Sen, Chairman of Sen-Raleigh Ltd., about the Company's near-term working have more than come true during the year ended 30th September 1963. Mr. Sen had painted a discouraging picture for the Company for reasons such as the changed order of priorities following the emergency and further cuts in imports as well as divergence of the limited quantity of indigenous steel to defence production. Further, raw material imports from the U.S. had been delayed, he had stated, because of the dock strikes there. These factors caused chronic shortages of raw materials during the year under review, which in turn affected production to the extent of necessitating lay-offs in the factory for periods extending up to two-three months at a time. The net result of all this is the very disappointing financial results for the year.

Whereas the net sale proceeds (that is, after excluding excise duty paid) show only a small setback from Rs. 479.33 lakhs to Rs. 461.21 lakhs, the gross profit has dropped sharply from Rs. 45.23 lakhs to Rs. 32.65 lakhs because of the uneconomic rate of production. The net profit has fallen even more markedly from Rs. 11.51 lakhs to Rs. 4.11 lakhs, at which level it is only one-sixth of Rs. 24.04 lakhs earned in 1959-60. The profit has been arrived at after allowing Rs. 21.03 lakhs for depreciation and Rs. 7.51 lakhs for taxation, of which Rs. 32,914 has been for S.P.T. for the year 1961-62. The profit would have been lower still but for the fact that as much as Rs. 1.12 lakh (as against Rs. 57,757 a year before) has been credited to development rebate reserve, because of which the tax liability for the year has been all the more reduced. After setting apart Rs. 3.75 lakhs to the reserve for repayment of loans and Rs. 1.95 lakh for the preference dividend, the balance of net profit has been insufficient to pay any dividend on ordinary shares. This is the first year of no return to ordinary shareholders since the Company started paying it in its sixth year ended 30th September 1955. The Directors have not considered it advisable to declare a dividend in view of the low profits and the need for conserving the Company's resources for implementing its vital expansion programme. Even a small return would have absorbed quite a large sum, since, in November 1962, the Company had raised its capital by Rs. 65 lakhs.

The following table compares the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1963	1962	1961	1960

* On account of 30 per cent of the preference dividend payable as prescribed by the Preference Shares (Regulation of Dividends) Act, 1960, for the year 1958-59.

The vital expansion programme refers to bicycle production. It must have been in full operation by now. The flow of material for its successful working is said to have been fully assured. The Company is also concentrating on plans for raising the production of components. Since the demand for bicycles and some of its components has started looking up after three years of near stagnation, the Company will be able to reap immediately fruits of its expansion programme. However, while noting these favourable trends, the Company's Chairman strikes a note of caution by saying that, "operating as we do in a spiral of increasing prices for raw materials and services, and with a voluntary ceiling on the selling price of our own product, I would not venture to

* The dividends for 1963 will be paid out of the dividend reserve.
† Upto 18th March 1964.

Extracts from the Directors' report: The accounts for the year under review reflects the further progress achieved by the Company in production keeping the costs comparatively low as a result of the continued and persistent technical improvements effected from time to time as also the efforts of the management and staff fully co-operating with each other to bring up the expanded plant to its full output and efficiency.

Expansion: In the last report the shareholders were apprised about the uncertainty of the Government of India granting Import Licence for import of capital goods, the needed foreign exchange therefore being provided for by the I.C.I.C.I. against the loan granted by them. The import licence bearing No. 978161/I.C.I.C.I./62/HQ/C.G.-IV dated 4th July, 1963, as asked for has been granted and orders for part of the equipments have alrady been placed. The loan agreement has since been executed with the I.C.I.C.I. for Rs. 3,60,000 repayable in twelve instalments. This loan is obtained against the hypothecation of 4½ per cent National Defence Bonds 1972 of the face value of rupees four lakhs, which the Company purchased during the year under review.

The equipments ordered are meant only for improving the quality of existing production and for providing increased amenities to workers as directed by the Factory Inspectors from time to time.

Efforts are still being continued to acquire the low lying land adjacent to the exising unit at Kurla at Government level. If the Company is fortunate enough to succeed in these efforts, it is the intention of the Directors to expand further the production of *Sanitarywares* as the present production is falling short of licensed capacity. Along with this, plans are under way for increasing the production of *Insulators* and for starting the manufacture of *Steatite Porcelain*.

Accounts in brief as at 30th September 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	24,55,650	Gross block	53,55,181
Reserves and surplus	28,40,048	—Depreciation ..	22,68,904

Extracts from the Directors' report: The factory commenced crushing on the 14th December 1962 and concluded on the 2nd March, 1963 with a crush of 6,43,184 quintals of cane as compared to 17,73,447 quintals in the previous year. The average recovery was 9.65 per cent as against 9.11 per cent during the previous year.

The area under cane plantation was reduced and the cane crop was damaged by floods. Thus on the one hand, the quantity available to the Company's factory for crushing was short while on the other hand the cane was diverted to *Gur* manufacturing as the prices of the *Gur* were prevailing very high.

The all India production of the sugar showed a considerable decrease and the Government of India imposed the Control on 17th April 1963 for regulating the consumption of sugar in the internal market and to fulfil the export commitments. The price for the Company's factory was fixed at Rs. 108.50 nP per quintal, which was much below the cost of production. An appeal was made by the Industry to increase the prices and the Government revised it on 19th July 1963 to Rs. 111.20 nP per quintal, on the remaining stock on that date which too could not cover the total cost production.

The Company manufactured raw sugar and supplied it to Export Agency Division of the Indian Sugar Mills Association for export. The Company's share in the export loss amounting to Rs. 3,54,469 has also been adjusted in the accounts of the year.

The minimum cane price was maintained at Rs. 4.26 nP per quintal at the Factory Gate and Rs. 3.94 nP per quintal for the outstations.

Season 1963-64: The tendency of growers to divert the cane into *Gur* could not be fully checked up as the *Gur* prices were ruling very high. Though the Company had doubled the volume of advances to the growers and the Government has placed the restriction on *Gur* movement, the Company is expecting some betterment in the cane supply position to the factory this year. The Government of India fixed the cane price payable for this season by us at Rs. 4.78 nP per quintal a the Factory-Gate and Rs. 4.46 nP per quintal at the outstations on previous year's recovery basis which was increased to Rs. 5.56 nP per quintal at Factory-Gate and Rs. 5.04 nP at outstations because of the large competition with *Gur* industry in the Company's area.

The prices of our sugar has been fixed at Rs. 118 per quintal which is not in conformity with the increase in cane prices.

Subsidiary Company: Hindustan Wire Products Ltd.: The directors are glad to inform that an industrial licence for expanding its capacity by 500 tons per annum has been received from the Government after the publication of the accounts of the subsidiary company.

Accounts in brief as at 30th September 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	29,23,562	Gross block	62,88,045
Reserves and surplus	11,46,079	—Depreciation	36,89,841
Other liabilities ..	45,60,674	Net block	25,98,204
		Block in progress	1,35,451
		Current assets ..	50,24,789
		Investments	6,93,487
		Cash	1,78,384
	Rs. .. 86,30,315		Rs. 86,30,315

* Paid-up capital consists of 3,89,805 Ordinary shares of Rs. 7.50 each fully called up. Amount paid-up on shares forfeited is Rs. 25.

Rajasthan Spinning and Weaving Mills Ltd.

(*Managing Director*: Mr. L. N. Jhunjhunwala, Calcutta.)

Mills—Bhilwara, Western Rly. (Rajasthan.)

Third Annual General Meeting—31st March 1964.

Extracts from the Directors' report for the year ended 30th September 1963: The profits before providing for depreciation and interest on loans from I.F.C., R.F.C. and deferred payments of machinery amounted to Rs. 2,62,840. This amount when adjusted against Rs. 2,77,140 being interest due for payment will leave a deficit of Rs. 14,300. With the loss brought forward of Rs. 9,038 and income-tax of Rs. 342 for the assessment year 1962-63 there is a total debit balance of Rs. 23,730 which is carried forward.

Finance: During the year under review fixed assets over Rs. 25 lakhs were acquired. The major portion of this acquisition was financed by borrowing Rs. 8 lakhs from Rajasthan Financial Corporation and Rs. 5 lakhs from Industrial Finance Corporation. Thus the Company's loans from I.F.C. and R.F.C. have increased from Rs. 30 lakhs to Rs. 43 lakhs. Since the Mill went under production it was necessary to secure additional working capital and the Company therefore financed the same through short-term loan of Rs. 8.21 lakhs raised during the year from the firms in which Directors are interested. The paid-up share capital of the Company also increased during the year from Rs. 29.24 lakhs to Rs. 29.88 lakhs as a result of the collection of the arrear calls. The arrears of call now stand at Rs. 11,150 only in respect of 1,520 Equity shares.

Production: The year under review marks the first phase of production. The Mill went into production initially in December 1962 and number of spindles in operation gradually increased. Since October 1963 the entire spindleage have been working and production has been achieved to the extent of entire installed capacity from January 1964. The actual performance could have been still better but for the difficulties encountered in the six indigenous *Simplex* frames both regarding availability and performance of these machines. The Directors are pleased to report that the Company has now imported two English *Speed Frames* which have been installed in January 1964. Another cheerful report is that the Company has been granted an import licence to import three American *Speed frames* and orders for those have already been placed. An idea of the steady growth of the Company's output will be available from the following figures:—

	Value of Produces Rs.
October 1963	6,22,745
November 1963	6,81,157
December 1963	7,45,263
January 1964	9,00,000

Production and Despatches: During the year under review the Company produced the following quantities yarn.

20's Reels	20's Cones	32's Reels	32's Cones	Total
Kgs. 2,76,678	Kgs. 2,66,230	Kgs. 13,970	Kgs. 1,67,857	Kgs. 7,24,635

The Order-Book of the Company was full. The entire production was despatch to the customers. The Directors are pleased to state that the quality of the Company's yarn is good and that it was well received.

Expansion: The Directors are glad to report that the Government has granted additional 7,000 and 1,350 spindles over and above the original Industrial licence for 18,000 spindles to the Company. The Company, therefore, proposes to stall 13,150 spindles making the total spindleage to 26,350. This is indeed the most welcome feature. The detailed estimates of finances for the expansion are under preparation and active steps are expected to be taken within this year.

Accounts in brief as at 30th September 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	29,88,850	Block†	73,00,356
Other liabilities ..	60,50,977	Current assets ..	16,08,067
		Investments	2,420
		Cash	33,169
		Miscellaneous expenditure	72,085
		P/L. Account Deficit ..	23,730
	Rs. 90,39,827		Rs. 90,39,827

* Paid-up capital consists of 2,40,000 Equity shares of Rs. 10 each and 6,000—9 per cent cumulative redeemable preference shares of Rs. 100 each. Calls in arrears on equity shares amount to Rs. 11,150.
† Subject to depreciation.

Star Paper Mills Ltd.

(*Managing Agents*: Messrs. Bajoria & Co., Calcutta.)

Twenty-seventh Annual General Meeting—31st March 1964.

Working Results:

	For the year ended 30th September (In thousand rupees)	
	1963	1962
Sales of paper (net)	4,41,92	2,96,50
Closing stock of finished products	20,57	19,10
" " paper-in-process	1,19	2,53
Gross profit	60,84*	14,29
To Managing Agents' remuneration	50	50
Transfer to depreciation	25,38	Nil
Net profit	34,96	13,79

To depreciation for 1961-62	25,15	14,97
To dividends—Preference	Nil	Nil
—Ordinary	Nil	Nil
Carry forward	10,37	56
Market value of Ordinary† shares (in rupees): 1964†	1963	1962
High 9.50	10.56	11.12
Low 8.25	7.50	9.25

* Profit after writing off Rs. 4,50,563 being share issue expenses.
† Upto 13th March 1964.

Extracts from the Directors' report: The Directors desire that the holders of preference shares should get net tax-free dividends at the stipulated rates and so separate meetings of the holders of each class of preference shares as well as of equity shares will be called shortly to consider the question of varying the rates of dividends payable on preference shares. After the decisions of the shareholders the Directors intend to declare interim dividends on preference shares for the year 1959-60.

While the cost of production has been steadily rising, the Government have not so far taken any decision on the several representations made by the Joint Committee of the Paper Industry for upward revision of selling prices of paper. It is, however, hoped that the Government will not further delay their decision on this vital question effecting the Paper Industry.

The Directors are considering a scheme of renovation of the old plant which will also result in increase of production. A new *Brown Stock Washing plant* for the old machine has been ordered the installation of which is likely to be completed during the current year. It will cause considerable saving of chemicals used in cooking of raw materials. Certain additions to the new plant are also contemplated to increase production. Negotiations with the U.P. Government for allotment of additional raw materials have not yet been finalised.

Accounts in brief as at 30th September 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	2,19,98,550	Gross block	5,19,80,051
Reserves and surplus	18,89,429	—Depreciation	1,16,04,687
Other liabilities ..	3,49,57,297	Net block	4,04,75,364
		Live stock	2,604
		Current assets ..	1,80,68,963
		Investments	1,68,066
		Cash	1,30,279
	Rs. 5,88,45,276		Rs. 5,88,45,276

* Paid-up capital consists of 10,000—5 per cent cumulative tax-free redeemable preference shares of Rs. 100 each; 30,000—6½ per cent tax-free redeemable second preference shares of Rs. 100 each; 40,000—7 per cent cumulative tax-free redeemable 3rd preference shares of Rs. 100 each; 29,991—7 per cent cumulative tax-free redeemable preference shares of Rs. 100 each; 9,99,890 Equity shares of Rs. 10 each and 1,00,000 'A' Equity shares of Rs. 100 each. Amount paid-up on shares forfeited is Rs. 550.

NEWS IN BRIEF

THE Union Government has decided to restrict exports of molasses and alcohol because considerable shortage of alcohol for industrial purposes is being experienced. The deficit in supply this year is estimated at about 20 per cent.

A power development survey team from Japan is arriving in India shortly to study the hydro-electric power potential of Assam State and to explore the possibilities of setting up industries based on natural gas.

The Rs. 30-lakh malt and malt-extract plant, installed by the Jagjit Distilling and Allied Industries Ltd., was inaugurated by the Chief Minister of Punjab at Hamira on Sunday last week-end. The plant will manufacture products worth Rs. 75 lakhs per annum.

The National Coal Development Corporation is opening shortly a pilot mine at Nandira for experimenting with the long wall mining method. If the experiment were to prove a success, a mine with a capacity of 500,000 tonnes per annum would be developed during the fourth Plan period.

The State Trading Corporation has concluded negotiations with Soviet Union for the sale of 160,000 pairs of shoes, poplin shirts valued at Rs. 39 lakhs, socks worth Rs. 8 lakhs and handicrafts worth Rs. 15 lakhs during the current year (1964). Negotiations for exporting knitted wear of the value of Rs. 15 lakhs are in progress.

India has produced its first electro-logging unit in the geophysical workshops of the Oil and Natural Gas Commission at Dehra Dun with Soviet assistance. This complicated piece of equipment, hitherto entirely imported, costs Rs. 2.5 lakhs in foreign exchange. All but 30 per cent of the components of the unit have been made by Indian technicians.

The Central Government has decided to go ahead with the heavy structural plant at Wardha. A project report for the plant, it will be recalled, was prepared by a British firm sometime ago, but, the implementation of the project had been shelved due to non-availability of adequate credit from the U.K. The Government is reported to be negotiating with an Austrian firm for necessary assistance.

Mica scrap and mica waste are now permitted to be exported from India, subject, however, to the condition that the f.o.b. price should be not less than Rs. 200 per metric ton; licences for exports will be issued by the authorities at ports. A complete ban on exports, it will be recalled, had been imposed with effect from 1st February last.

A bilateral agreement for the establishment of a shipping service between India and the United Arab Republic was signed at New Delhi on the 20th inst. The agreement provides for transportation of cargoes between the two countries by vessels belonging to India and the U.A.R. on the basis of parity. A new Indo-U.A.R. shipping service is expected to be inaugurated as soon as preliminary arrangements are completed.

The Namrup thermal station on the Southern bank of the Buridihing river at Dibrugarh in upper Assam is expected to be commissioned in August next. The station will generate 70,000 kw. of electricity from natural gas. The U.S. has supplied the main gas turbines and machinery for the project. The immediate beneficiaries of the project will be the fertiliser plant, factories producing plywood tea chests and other small industries.

The Indian Industries Exhibition in Kuwait was opened by the Crown Prince of Kuwait on the 20th inst. The exhibition is expected to last 15 days and will be India's first trade promotion exhibition to be held in the Persian Gulf area. India has the advantage of being one of the nearest sources of supply of goods required for the Kuwait markets. This exhibition will, therefore, afford a good opportunity to the manufacturers and exporters in India to maintain and develop their trade with Kuwait and other adjoining territories.

The Indo-Greek trade agreement has been extended for another year in accordance with the letters of intent exchanged between the representatives of the two Governments at New Delhi on the 20th inst. The agreement has been extended every year since it was signed in February 1958. The main items of exports from India to Greece are jute manufactures and coir, spices, cotton fabrics, shellac, mica and cine films. Imports from Greece into India, include abrasives, garnet, flint, gum resins, long-staple cotton and paper insulated cables.

The working group on plantations labour housing set up by the Union Labour Ministry has recommended that a provision of assistance in the form of subsidy to the plantation industry as in the case of other industries. The plantation labour housing scheme, it has said, may be modified to provide for the grant of subsidy to the extent of 25 per cent of the cost and the grant of loan to the extent of 50 per cent of the cost, on the lines of the subsidised industrial housing scheme. The group has also recommended that financial relief be given to the plantation industry allowing them higher rates of depreciation allowance than are admissible at present, in respect of expenditure incurred on provision of houses constructed according to approved standards for labour.

The value of fish and fish preparations exported during 1962-63 aggregated Rs. 408 lakhs, as against Rs. 388 lakhs in 1961-62. This favourable trend in exports has continued during 1963-64 also, the total exports during April to September 1963 amounting to Rs. 251 lakhs, as against Rs. 144 lakhs in the same period last year. Fish production in 1962 aggregated 975,000 tonnes, as against 961,000 tonnes in 1961. About 2,750 mechanised boats are now operating in the country. Of them about 250 were mechanised during 1963. Orders have been placed for importing 390 marine diesel engines from Yugoslavia. Indigenous manufacture of marine diesel engines has just started and it is expected that 100 marine diesel engines will be manufactured duirng the year. Scarcity of foreign exchange has been the main factor retarding progress in the mechanisation programme.

The Indian Telephone Industries, Bangalore, has now taken up the manufacture of a number of new items of telephone equipment, according to the annual report of the Department of Posts and Telegraphs for 1963-64, just published. The report states that, for the first time, co-axial line equipment was manufactured in the country without any foreign assistance. This equipment has been tested and has been passed for installations. Another item taken up for manufacture for the first time at the factory is the Supervisory Remote Control for Railways. In a number of other cases, such as ampliphone and telephone with visual indicator, bulk production has been started. On the side of electronic measuring instruments, 700 different instruments have already been manufactured in the factory. Another 1,000 instruments are expected to be completed by the end of 1963-64. The sales from I.T.I. during the year 1962-63 aggregated Rs. 7.73 crores. For 1963-64, the value of sales is expected to be of the order of Rs. 9 crores. Exports of telephone equipment during 1963-64 are estimated at about Rs. 9 lakhs, the importing countries being Nepal, Ceylon, Sudan, Egypt, Uganda and Kuwait.

Production at Jharia coalfield in Bihar will be stepped up as a result of the order worth over £1.3 million just placed with the General Electric Company of India (Private) Ltd. in conjunction with G.E.C. (Engineering) Ltd. of U.K. Half the order, for three comprehensive winding installations, will be executed locally to the designs of G.E.C. and its sub-contractors, the remainder being made in England. The installations comprise five electric winding engines and all the necessary equipment for handling coal, materials and men—including feeders, conveyors, skip plant, ropes, tipplers, headgears, gantries and storage bunkers fitted with discharge gates. The order, which covers the associated civil engineering work, was placed by the Indian Iron and Steel Company Ltd., Calcutta, which is embarking on a large-scale expansion scheme for increasing the output of coal in the Jharia area from 240,000 tons a year to 1.6 million tons. The coal is to be used in the company's steelworks at Burnpur.

Top-ranking executives of about 30 prominent American Corporations will visit India at the invitation of the Indian Investment Centre from 13th to 21st April next. The companies which have been invited are principally those that manufacture items on the priority list of the Government of India under the third Plan. These include producers of tool and alloy steel; industrial equipment; machinery and equipment for heavy industries; and possibly, representatives of major hotel and motel chains. Of the companies invited some have previously expressed interest in investing in India and several of them are familiar with India's economy. Some of them already are participants in Indian joint ventures. The main object of the visit is to study economic conditions in this country and consider the investment climate and pinpoint specific investment opportunities under the third and fourth Plan targets in the industries mentioned above. While these representatives of U.S. industries are here, they will take the opportunity to discuss specific industrial projects with the officials of the Government of India and with Indian industrialists. The group will be accompanied by U.S. Under Secretary of Commerce, Franklin D. Roosevelt, Jr., and Assistant Secretary of Commerce, Jack N. Behrmann.

From Abroad

The Burmese Government has nationalised all privately-owned shops, warehouses and brokers' establishments within Rangoon with effect from the 19th inst.

West Germany has become the world's largest supplier of oil-burning stoves, although production of oil-burning heaters began only a decade ago. Last year 46 manufacturers delivered 1.14 million units, nearly 300,000 of them for export.

West German investments in Italian industry rank third, following the U.S. and Switzerland, on the basis of investments from 1956 to the end of last year. In that period, West German investments in Italy came to 19,600 million lire (125 million DM).

The labour-management controversy brought on by a strike of West German Metalworkers last spring helped to make 1963 a record year for working hours lost through industrial disputes. Over 1,846,000 working days were lost in this way, more than in any year since 1950.

Rumania and Bulgaria are contemplating to develop a joint hydro-electric project on the river Danube near Somovit. The project covers the construction of a dam 20-25 metres high and about 1,500 metres long, with two lock-gates for navigation, and a power station with a capacity to generate 850 M.w. per annum.

"Q" is for "quality"—and most branches of industry in the Communist-controlled part of Germany are having a hard time earning the coveted stamp for their goods. This fact was announced recently by the chief of the Soviet Zone office in charge of testing raw materials and finished goods. At present, he said, only 8.6 per cent of all industrial products manufactured in the Zone merit a "Q".

Of the six members of the Common Market, West Germany was the most successful during the year 1963 in holding the price line, according to a report by the E.E.C. Commission. In that year, consumer prices recorded a rise of just 3.5 per cent as against a rise of 6.9 per cent in Italy, 6 per cent in France, 4 per cent in Belgium, 3.7 per cent in Luxemburg and 3.6 per cent in Netherlands.

A trade agreement has been entered into between the Governments of Cyprus and Czechoslovakia. Under the agreement which covers the years 1964 and 1965, Cyprus will buy from Czechoslovakia motor vehicles, tractors, motor cycles, building ceramics, footwear, paper, glass, musical instruments and beer in exchange for citrus fruit, tobacco, wine, hides, pynites and other materials.

Over one-fourth of the anticipated West German budget this year will go for social services. Of an overall budgeted sum of DM 60,300 million, social services account for DM 15,200 million. German defence commitments under N.A.T.O., including support of Allied troops on German soil, come to DM 20,600, million.

The Japanese Finance Ministry has issued a directive to exchange banks to restrict the amount of loans in foreign exchange granted to overseas branch offices of Japanese trade firms, as well as the guarantees for debts in foreign exchange which the branch offices of Japanese firms incur overseas. The loans and guarantees, it is stipulated, should not exceed outstanding balances at the end of January, which stood at about $490 million and $150 million respectively.

Under a decree promulgated by the Italian Ministry of Industry, the Shell Italiana, will construct a new four-million-ton oil refinery at Taranto in Italy at a total cost £15 million. Work is likely to commence in the "very near future." The proposed refinery will bring the Shell's refining capacity in Italy to 12 million tons. The Company's two existing four-million-ton refineries are at La Spezia and at Rho on the outskirts of Milan.

A Commission of inquiry appointed in October last year by the Ghanian President to probe alleged irregularities and malpractices in the grant of import licences in Ghana has suggested a wholesale transfer of the staff of the Ministry of Trade's Licensing Department and a thorough reorganisation of the department itself. The commission has cited cases of import licences being fraudulently amended both to increase the quantity and to change in some cases, the country of origin from Eastern Europe to Western Europe.

World-wide demand for Rolls-Royce aero-engines is such that it will keep the company's factories working flat out for at least two years, according to Sir Denning Pearson, Chief Executive and Deputy Chairman of Rolls-Royce. The main reasons for the boom are the continuing sales of British and foreign aircraft with Rolls-Royce power plants, the decision to put new aircraft into production, and the British Government's decision to re-engine the Royal Navy's American Phantom fighter with the Spey by-pass jet.

A search for oil and natural gas under the North Sea is proposed to be conducted jointly by the Burmah Oil Company, the Imperial Chemical Industries of Britain and the Murphy Corporation of the U.S. In the joint venture, the Burmah Oil Company and the I.C.I. are holding 45 per cent of the share each, whereas the share of Murphy Corporation is only 10 per cent. The Burmah Exploration Company has been entrusted with the task of conducting the search. Seismic work is expected to begin next month. This is the first time that the I.C.I. of Britain has participated in a search for oil and natural gas.

PERSONAL

MR. B. R. R. Rao, Controller of Training, Heavy Electricals, Bhopal, has been appointed Adviser on Intra-regional Training to the Colombo Plan Council.

Mr. R. H. Morrisson and Mr. R. N. Bangur have been elected Chairman and Deputy Chairman, respectively, of the Indian Jute Mills Association for the year 1964.

Mr. P. K. Sahgal and Mr. A. H. West have been elected President and Vice-President, respectively, of the Upper India Chamber of Commerce, Kanpur, for the year 1964-65.

Mr. R. C. Shah and Mr. B. M. Choksi have been elected President and Vice-President, respectively, of the All-India Importers' Association for the year 1964.

Dr. Abdel Moneim El-Kaissouni of the United Arab Republic has been elected President of the United Nations Conference on Trade and Development which began its twelve-week session at Geneva on Monday this week.

Mr. G. S. Sial, Divisional Manager (Administration) of the Mineral and Metals Trading Corporation, has assumed charge as Executive Director of the State Trading Corporation. He will be in charge of chemicals, cement, consumer goods and exhibitions.

Mrs. Sumati Morarjee, Executive Director of the Scindia Steam Navigation Co. Ltd., has been elected President of the Indian National Steamship Owners' Association for 1964-65. Mr. Pratapsinh S. Vallabhdass has been elected the Vice-President.

Notices

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 38th Annual General Meeting of the Company will be held at the Registered Office, "Dunlop House," 57B, Free School Street, Calcutta, on Wednesday, the 22nd day of April, 1964, at 11 a.m., for the following purposes :

1. To consider the Profit and Loss Account for the year ended 31st December, 1963, the Balance Sheet as at that date and the Reports of the Directors and Auditors of the Company.
2. To declare dividends.
3. To appoint Directors in the place of those who retire by rotation.
4. To appoint Auditors and fix their remuneration.

SPECIAL BUSINESS

To consider and if thought fit to pass, with or without modification, the following resolutions of which numbers 5, 6, 7, 8 and 9 will be proposed as ordinary resolutions and numbers 10 and 11 as special resolutions :—

5. (As an ordinary resolution): "That subject to the approval of the Central Government under Section 269 of the Companies Act, 1956, Mr. James Alexander Moore, Deputy Managing Director (Finance) of the Company, whose term of office expires on 22nd April, 1964 in accordance with Section 317 of the above Act and the Central Government's approval dated 25th September, 1959, be and is hereby reappointed with effect from 23rd April, 1964 as Deputy Managing Director (Finance) of the Company upon the same terms and conditions of service as presently govern his employment and the same remuneration as presently payable to him."
6. (As an ordinary resolution): "That Mr. Alan Grant McKay be and is hereby appointed a Director of the Company."

   Notice of the intention to propose Mr. Alan Grant McKay as a candidate for the position of a Director of the Company has been received from a member in conformity with Section 257 of the Companies Act, 1956.
7. (As an ordinary resolution): "That with effect from 1st August, 1963 the terms and conditions of employment of and the remuneration payable to Mr. Alan Grant McKay, Deputy Managing Director (Works) of the Company, as evidenced in a letter dated 22nd April, 1963 addressed to him by the Company, be and is hereby approved, and that as such Deputy Managing Director (Works) of the Company he will continue to be governed by the said terms and conditions of employment and be entitled to the said remuneration which have been approved by the Central Government from the date abovementioned."
8. (As an ordinary resolution): "That Mr. Krishna Padmanabhan be and is hereby appointed a Director of the Company."

   Notice of the intention to propose Mr. Krishna Padmanabhan as a candidate for the position of a Director of the Company has been received from a member in conformity with Section 257 of the Companies Act, 1956.
9. (As an ordinary resolution): "That subject to the approval of the Central Government under Section 269 of the Companies Act, 1956, Mr. Krishna Padmanabhan be and is hereby appointed Deputy Managing Director (Sales) of the Company upon the same remuneration and upon the same terms and conditions of service as governed his employment as an Executive Officer in the whole-time employment of the Company immediately prior to this appointment as evidenced in a letter dated 24th December, 1963 addressed to him by the Company."
10. (As a special resolution) : "That the authorised capital of the Company be and is hereby increased from Rs. 7,50,00,000 to Rs. 12,50,00,000 by the creation of 50,00,000 Shares of Rs. 10 each."
11. (As a special resolution): "That the Articles of Association of the Company be and is hereby amended in the manner following, that is to say :

    By deleting from Article 4 the first sentence and substituting therefor the following new sentence, namely :

    At the date of adoption of these Articles the share capital of the Company consists of Rs. 12,50,00,000 divided into 68,00,000 Ordinary Shares of Rs. 10 each, 30,000 Cumulative Preference Shares of Rs. 100 *each, 40,000 Second Cumulative* Preference Shares of Rs. 100 each and 50,00,000 Unclassified Shares of Rs. 10 each, which may be issued as Ordinary Shares or *with such* rights as may be thought fit."

    A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

    The Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 9th April to 30th April, 1964, both days inclusive. Any dividends that may be declared will be paid, on or after 9th May, 1964, only to those members whose names appear on the above Registers on 8th April, 1964.

By Order of the Board
S. K. ROY
Secretary.

DUNLOP HOUSE
57-B, FREE SCHOOL STREET
CALCUTTA
26th March, 1964.

Note :—An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 has been annexed to the notice issued to the members of the Company.

COMMERCE (1935) LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-ninth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, "Brady House," Veer Nariman Road, Fort, Bombay, on Wednesday, the 22nd April 1964, at 11 a.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1963.
2. To sanction the payment of Dividend.
3. To elect a Director in place of Mr. J. M. Mehta who retires by rotation in accordance with Article 157(1) (2) of the Articles of Association of the Company, but being eligible offers himself for re-election.
4. To elect a Director in place of Mr. V. Mathalone who retires by rotation in accordance with Article 157(1) (2) of the Articles of Association of the Company, but being eligible offers himself for re-election.
5. To appoint a Director in place of Mr. J. Charanjiva who was appointed a Director of the Company by the Board of Directors and who holds office only up to the date of this Annual General Meeting under Section 260 of the Companies Act, 1956 but who is eligible for re-appointment and in respect of whom the Company has received a notice in writing from some members signifying their intention to propose him for the office of Director of the Company.
6. To appoint Auditors for the current year and to fix their remuneration.
7. To consider and if thought fit to pass the following Resolution as a Special Resolution:—

   "RESOLVED that subject to the consent of the Central Government being obtained the Article 141(*a*) of the Articles of Association of the Company providing for remuneration of Directors be amended by deleting the said Article 141(*a*) and substituting for the said Article 141(*a*) the *following Article* 141(*a*):—

   141(*a*) Each Director shall be paid out of the funds of the Company by way of remuneration for his services such sum not exceeding Rs. 150 as the Directors may from time to time fix, for each Meeting of the Board or Committee of the Board attended by him."
8. To consider and if thought fit to pass the following Resolution as a Special Resolution:—

   "RESOLVED that the existing Article 50 of the Articles of Association of the Company which provides for a fee on transfer or transmission of shares be and is hereby deleted."

The Register of Members and the Transfer Books of the Company will be closed from Friday the 3rd April 1964 to Friday the 24th April 1964, both days inclusive.

By Order of the Board,
COMMERCE (1935) LIMITED,
E. M. ALVARES,
Officiating Secretary.

BRADY HOUSE,
12/14, VEER NARIMAN ROAD,
FORT,
BOMBAY, *12th March,* 1964.

Notes:

1. The relative Explanatory Statements pursuant to Section 173 of the Companies Act, 1956, in respect of the business under items 5, 7 and 8 set out above are annexed to the Notice forwarded to the individual members of the Company.
2. A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY OR PROXIES TO ATTEND AND VOTE INSTEAD OF HIMSELF. A PROXY NEED NOT BE A MEMBER.
3. The Dividend, when declared, will be made payable at the Registered Office of the Company, on and after 6th May 1964. The Dividend Warrants will be posted to those Shareholders whose names stand on the Register on the 24th April 1964.

INDIAN ALUMINIUM COMPANY LIMITED

31 Chowringhee Road, CALCUTTA-16

NOTICE IS HEREBY GIVEN THAT THE twenty-sixth Annual General Meeting of Indian Aluminium Company, Limited, will be held at its registered office, 31 Chowringhee Road, Calcutta-16, on Monday, April 27th 1964, at 11.30 a.m., for the following purposes:

1. To receive and adopt the Balance Sheet as at December 31st, 1963 and the Profit and Loss Account for the year ended December 31st, 1963, together with the Reports of the Auditors and Directors.
2. To declare dividends.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and to fix their remuneration.
5. As special business, to consider and if thought fit to pass with or without modification the following resolution of which special notice has been received:

   "That Dr. C. L. Katial, who retires at this meeting and who has attained the age of sixty-five years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to him."

The register of members and the share transfer registers of the Company will be closed from April 7th to April 27th, 1964, both days inclusive.

Payment of any dividend declared will be made only to those members whose names are registered in the books of the Company on April 27th, 1964, or to their mandataries. No application for warrants will be necessary. Claims on behalf of holders of shares held on blank transfer will not be entertained.

Any member of the Company entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

By Order of the Board,
T. D. SINHA,
Secretary.

February 17th, 1964.

Explanatory Statement and Statement of Interest as Required by Section 173 of the Companies Act 1956

Item No. 5

Dr. C. L. Katial, who has been a Director of the Company since 1958, has attained the age of sixty-five years on July 15th, 1963. The proposed resolution seeks to obtain your approval of Dr. Katial's appointment and your declaration that the age limit specified in Section 280 of the Companies Act 1956 shall not apply to him. Your Directors feel that it is in the interest of the Company that the Board should continue to receive the benefit of Dr. Katial's experience and able guidance.

The Company has received Special Notices from two members notifying their intention to move the resolution set out in the Notice. Apart from Dr. Katial, no other Director of the Company is interested in this resolution.

G. CLARIDGE & COMPANY, LTD.

NOTICE is hereby given that the Forty-fourth Annual General Meeting of the Shareholders of G. Claridge & Company Limited, will be held at the Company's Registered Office, Brady House, 12-14, Veer Nariman Road, Fort, Bombay, on Wednesday, the 22nd day of April, 1964, at 11-30 a.m., to transact the following business :—

1. To adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1963.
2. To sanction payment of Dividend.
3. To appoint a Director in place of Mr. Kishore M. Premchand who retires by rotation in accordance with Article 158 of the Articles of Association of the Company and being eligible, offers himself for re-election, and to consider, and if thought fit, to pass the following Resolution as a Special Resolution in respect of which a Special Notice as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company :—

   "RESOLVED that pursuant to Section 261 of the Companies Act, 1956, Mr. Kishore M. Premchand, who is an associate of Messrs. W. H. Brady & Company Limited, the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint two Directors to the Board) be and he is hereby re-appointed a Director of the Company liable to retire by rotation."
4. To elect a Director in place of Mr. Kishore D. Khatau, who retires by rotation and being eligible, offers himself for re-election.
5. To appoint Auditors for the current year and to fix their remuneration.
6. To consider and if thought fit to pass the following Resolution as a Special Resolution:—

   "RESOLVED that the existing Article 50 of the Articles of Association of the Company be amended by deleting the said Article and substituting for the said Article the following Article :

   "50. The transfer or transmission of any shares in the Company shall be made without making any charge in respect of such transfer or transmission."

To consider and if thought fit to pass the following Resolution as a Special Resolution :—

"RESOLVED that pursuant to the provisions of Section 360 of the Companies Act, 1956, as amended by the Companies (Amendment) Act, 1960 and subject to the consent of the Central Government being obtained when necessary, the Company hereby accords its approval to a contract being entered into between the Company and the United Motors (India) Limited, who are an associate of Messrs. W. H. Brady & Company Limited, the Managing Agents of the Company, for the sale and supply by the Company to United Motors (India) Limited and for the purchase by the Company from United Motors (India) Limited of all movable properties, goods and materials, owned, stocked, dealt-in or manufactured by the Company and United Motors (India) Limited respectively and for rendering services by the Company to the United Motors (India) Limited and by the United Motors (India) Limited to the Company for the purpose of their respective business in terms of the draft placed before the Meeting and for the sake of identification initialled by the Chairman to be operative from the date of its execution and to remain in force until it is determined by either of the parties thereto by one month's previous notice in writing to the other of them, subject to the condition that all payments to be made to the Company by United Motors (India) Limited for any such properties, goods and materials sold and supplied or services rendered by the Company to United Motors (India) Limited shall be made within one month from the date of the sale or supply and that the prices or amounts to be charged to the Company by United Motors (India) Limited in respect of the movable properties, goods and materials, sold and supplied and/or services rendered by United Motors (India) Limited to the Company shall be such as are not less favourable to the Company than the market rates or which are otherwise reasonable."

By Order of the Board of Directors,
For W. H. BRADY & COMPANY, LIMITED,
A. S. NARIMAN,
Secretary,
Managing Agents.

Registered Office :
" BRADY HOUSE,"
12-14, Veer Nariman Road, Fort,
BOMBAY, *9th March,* 1964.

Notes :-

(1) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of Special business under items 3, 6 and 7 are annexed to the Notice posted to the individual Shareholder.

(2) A Member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

(3) The Register of Members and the Transfer Books of the Company will be closed from Friday the 3rd day of April 1964 to Friday the 24th day of April 1964, both days inclusive.

(4) The Dividend when declared will be made payable at the Registered Office of the Company on and after Wednesday the 6th day of May 1964. The Dividend Warrant will be posted to those Shareholders whose names stand on the Company's Register on the 24th day of April 1964.

ESSO STANDARD REFINING COMPANY OF INDIA LTD.

NOTICE

To THE DEBENTURE-HOLDERS
ESSO STANDARD REFINING COMPANY OF INDIA LTD.

NOTICE IS HEREBY GIVEN THAT PURsuant to Clause 2 of the conditions referred to in the First Schedule of the Debenture Trust Deed dated July 29, 1953, for securing Rs. 4 crore 5¼ per cent Debentures due 1964-68, one-fifth of these debentures are now scheduled for redemption. Rupees eighty lakhs of the 5¼ per cent debentures will be redeemed at par on April 30, 1964. Although the Debenture Trust Deed specifies that this amount is due for redemption on May 1, 1964, the Directors have decided to redeem the debentures one day earlier, since the first of May is a public holiday. Interest will, however, be paid upto—and including April 30, 1964, as usual.

The Company will notify the holders whose debentures have been drawn for redemption. Such holders will be required to surrender their debentures, duly discharged, for payment and cancellation. INTEREST ON THE DEBENTURES DRAWN FOR REDEMPTION WILL CEASE TO RUN FROM MAY 1, 1964.

The Register of Company's 5¼ per cent Debentures due 1964-68 will be closed for transfers for the above purpose and for payment of interest from April 11, 1964 to April 30, 1964, both days inclusive.

By Order of the Board of Directors
H. J. MEHTA,
Secretary.

INSURANCE

(*Concluded from page* 504)

Corporation to build up and analyse the case histories of the claims paid for future guidance.

The administrative structure and functioning of the Corporation have a direct bearing on its business. On examining this aspect, the Committee obtained the impression that the present working of the Corporation, where expenses were more than income, was rather unsatisfactory. Administrative expenses, in its opinion, are on the high side in relation to premium income and it should be possible for the Corporation to increase its business and present a better financial picture. It is surprising that the Committee should have made this remark after listing numerous things which yet remain to be done by the Corporation but cannot be done, unless the Corporation is allowed to spend more. The Committee itself has noted that the performance of the Calcutta and Madras branches of the Corporation is poor, due mainly to inadequate staff, weak field organisation and insufficient publicity. Further, it considers that, as it is undesirable to depend totally on brokers for securing business in an important and growing port like Cochin, a separate branch office should be opened at Cochin. Moreover, it has recommended that suitable incentives be given to the field staff to encourage them to canvass more business and to attract the best talent to this job. But all this will cost money and the Estimates Committee ought to have recommended a bigger budget for the Corporation.

INDIA SUGARS AND REFINERIES LTD.

(*Concluded from page 508*)

by the Income-tax Officer, the assessee would be deemed to have concealed his income deliberately and would be punished with rigorous imprisonment up to two years. Experience shows that, uptil now, the difference between the returned income and assessed income of business houses, industrial units and individuals doing business vary more than 50 per cent in majority of the cases and it is also a fact that the mistake of the Income-tax Department has been in the past far in excess of the mistakes of the assessees. The Budget proposals seem to presume that the Income-tax Officers are invariably infallible men. The Finance Minister is certainly welcome to this opinion about his officers. But would that justify condemning every mistake on the part of the assessees to be only *mala fide* and criminal in its intent? The age-long dictum that "everybody is innocent unless otherwise proved" is sought to be given a go-bye and, hereafter, the opposite of it seems to be propounded, namely, that you would be considered guilty unless you prove your innocence.

Another Objectionable Feature

Another very objectionable feature is the removal of secrecy clauses from the taxation statute. I say that this step would completely demoralise the character of the people and will be a most welcome and potent weapon in the hands of blackmailers and society pirates. The proposal to increase 10 per cent in super-tax on companies falling under Section 104 of the Income-tax Act, under which category come most of the sugar mills, is indeed a very hard measure. Therefore, although the Finance Minister in his speech has suggested that he has given relief to the corporate sector and encouragement to the growth of industry, I say that his proposals would on the whole hit most of the companies and majority of them would be liable to pay larger taxes than they were paying in the previous year and thereby they would be discouraged in putting up new industries.

This is not the time nor the forum to express my views on the Budget proposals and, therefore, I would content myself by mentioning that it is my sincere hope that the Finance Minister would give second thoughts on the points mentioned above.

As indicated in my last year's speech, the plant and machinery of Manjula Confectionery Ltd. have been sold to Messrs. Parry's Confectionery Ltd. We feel the price at which the machinery has been sold is reasonable. The Directors of Manjula Confectionery Ltd. are now taking steps to continue the manufacture of confectionery by indigenous machinery and manual operation. Besides, it would continue to operate its business of petrol pump and allied activities.

Now gentlemen, with your permission, I shall proceed with other business of the meeting of the day.

Note : *This does not purport to be the proceedings at the Annual General Meeting.*

TREND OF MARKETS

CALL RATE 6½ PER CENT

(From Our Own Correspondent)

BOMBAY, 25*th March*

The short-term money market continued to experience stringent conditions. There was persistent pressure of demand for credit, whereas the supply of funds actually available was too insufficient to meet it. Borrowers, therefore, found it difficult to obtain their requirements. The inter-bank call rate for both renewals and fresh money rose by a further ½ per cent to 6½ per cent. Even at this level, funds could not be secured, owing to paucity of offerings. Turnover, as a consequence, was restricted. Conditions at Calcutta were no better, the call rate standing at the high level of 6½ per cent, as against 6¼ per cent a week before.

The market has taken note of the Reserve Bank's directive (issued on Saturday the 21st inst.) amending the provisions relating to ceilings in respect of scheduled banks' advances against foodgrains other than wheat and rice. Under this directive, every scheduled bank is required to maintain, in each two-month period commencing from March-April 1964, an average aggregate level of credit against the security of foodgrains (excluding wheat and rice) which shall not exceed such levels of credit actually maintained in the corresponding period of 1962. The other provisions relating to margin requirements, etc., as set out in the directive of 8th February 1964 will, however, continue without any change.

Apparently in view of the persistent stringency of money, there were no sales of 91-day Intermediate Treasury Bills during the period from the 18th to 21st inst. But tenders for the Government of India Treasury Bills were opened as scheduled on Tuesday the 24th inst. The Bills, of course, met with poor response, the total amount actually offered being just Rs. 2 crores; this was also the amount invited and accepted. The average rate of accepted tenders jumped up to Rs. 2.750 per cent per annum, as against Rs. 2.500 per cent.

There was a handsome rise of Rs. 6.16 crores to Rs. 134.64 in India's foreign exchange reserves during the week ended 20th March 1964. The bulk of the rise was accounted for by the foreign securities held in the Issue Department of the Reserve Bank; the total of these securities went up by Rs. 5.00 crores to Rs. 117.46 crores. Balances held abroad also improved by Rs. 1.16 crores to Rs. 17.18 crores. Loans and advances to scheduled banks increased by Rs. 3.44 crores to Rs. 98.91 crores, including Rs. 46.24 crores (a rise of Rs. 22 lakhs) granted against usance bills. At the same time, their deposits with the Reserve Bank rose by Rs. 3.75 crores to Rs. 81.57 crores. Notes in circulation declined by Rs. 16.18 crores to Rs. 2,456.25 crores.

The total credit made available by scheduled banks to their clients increased by a further Rs. 12.94 crores to Rs. 1,796.23 crores during the week ended 13th March. Deposits, too, increased but by only Rs. 4.52 crores to Rs. 2,431.27 crores. Nevertheless, there was a fall of Rs. 10.59 crores to Rs. 95.66 crores in borrowings from the Reserve Bank. The fall was entirely in borrowings other than those against usance bills which actually rose by Rs. 1.21 crore to Rs. 46.92 crores.

The Gilt-edged market ruled dull as usual. Fresh buying support was lacking. Business actually put through was, therefore, small with limited fluctuations in values.

The Reserve Bank of India announced today the suspension of open market sales of two Central Government loans, namely, 4 per cent 1969 and 4½ per cent 1986. At the time of suspension, the former was quoted at Rs. 99.50 and the latter at par. This move is obviously to groom the market for the Government's ensuing borrowing programme.

In the foreign exchange market, the banks' selling rate for U.S. dollars eased by 25 nP to Rs. 478.25 for $100, while their buying rate continued unaltered at Rs. 475. In New York, the pound sterling ruled irregular again *vis-a-vis* the dollar. While the spot rate gained 0.010 cent to 279.800-279.830 cents, the three months' forward declined by 0.050 cent to 279.320-279.350 cents.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, 25*th March*

A distinctly firm trend prevailed in the cotton futures market during the week under review. The firmness was more marked in the case of the maturing Jarilla March contract which ruled virtually buoyant, with the quotation rising by Rs. 10 over the last week-end closing to Rs. 792, only Rs. 6 less than the official ceiling price of Rs. 798. The main reason for the spurt in price was the failure of the volume of tenders issued on Monday, the 23rd inst., to come up to market expectations. As against an expected 2,000 bales, actual tenders issued on that day aggregated only 950 bales. These comprised 100 bales of 216F, 400 bales of Cambodia "C", 50 bales of Laxmi A, 200 bales of Laxmi "B", 150 bales of Gaorani, and 50 bales of Buri. Total tenders against the contract thus aggregated 2,600 bales. Sentiment was also favourably influenced by the firm trend of Kalyan prices in Ahmedabad. The strength of the May contract was largely derived from the buoyancy of March but it was also due partly to the apprehension that shipments of U.S. cotton against the recent P.L. 480 allocation might be delayed so that it would not be available for consumption in the current season. Buying support induced by these considerations led to a rise in price and the May contract nearly touched a high of Rs. 750 during the week, as compared with last week's closing rate of Rs. 741.75, although the finish was a shade lower. The following table indicates the trend of prices of the contract during the week:

(In rupees per three quintals)

	25-3-64	*High*	*Low*	18-3-64
Jarilla March	792	792	782	782
Jarilla May ...	747.50	749.50	740.25	741.25

The deliberations of the Indian Central Cotton Committee, which concluded its eighty-ninth meeting at Bombay during the week, had little direct effect on futures prices. Operators, however, noted the statement of Sardar Swaran Singh, Union Minister for Food and Agriculture, on cotton price policy made at the meeting. The relevant portion of his speech relating to price policy are as follows:

"To those who advocate a further increase in the ceiling prices of cotton, I would point out the existing disparity between the world prices of cotton and those of Indian cotton. Apart from cotton cloth being one of the prime necessities of life in the country itself, we look to our textile mills to earn an increasing amount of foreign exchange for our growing economy and we cannot sell our cloth in foreign markets if our costs, both of raw material and of manufacture, keep on spiralling upwards.

"It has, however, been suggested that, even on the basis of the existing basic maxima and minima, adequate incentive to the grower can be provided if the floor and ceiling prices of various qualities of cotton are determined with reference to the technical considerations, such as spinning capacity and other quality factor rather than on mere staple length or the so-called trade practices. I am informed that a schedule including such adjustments has already been presented to the Textile Commissioner. I have no doubt that it would receive due consideration from all concerned and any changes in price structure, which may thus be justified, would be enforced with effect from the cotton season of 1964-65. Such an approach, it would be agreed, would not only lend a scientific basis to price determination, but will also place every cotton in its rightful position on the merit of its intrinsic quality, thereby meeting fully the present criticism about the inappropriate classification of different varieties. It will also obviate all troubles of the type we witnessed in case of Deviraj cotton of Maharashtra last year and in Digvijay cotton of Gujarat this year."

The Cotton Committee also did not favour an upward revision of ceilings. It noted that the present ceiling prices of Indian cotton were above world parity and was therefore of the view that any increase in the ceiling prices would create difficulties in making available cloth at a reasonable price. The Committee was also against raising the floor prices because the problem, in its opinion, was one of preventing cotton prices from piercing the ceiling.

In the spot market at Sewri, activity was limited during the first half of the week but demand revived towards the second. Spinners showed interest in Digvijay, Kalyan, L.147, Wagad, etc. Export interest continued to be subdued, thanks to absence of inquiries from Japan and the Continent for Bengal *Deshi*. In the import section, American cotton was the centre of attraction and sizable business was put through. Importers are getting impatient at the inordinate delay in the issue of the purchase authorisation for the P.L. 480 cotton. American shippers are said to be reluctant to make offers in the absence of details of the purchase authorisation.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Gangenagar 790; Nagar Co2 1,590; L.147 1,170-1,210; Hubli Laxmi 1,200; California (on sample) 1,345; American (below 1-1/16") 1,250; Elpaso 1,560-1,580; B.P. 52 (old) 1,278.

GOLD WEAK

(From Our Own Correspondent)

BOMBAY, 25*th March*

Gold displayed further weakness this week due partly to an irregularly lower trend in silver and partly to limited offtake by jewellers. Both the 14-carat variety and the pure material, which is quoted unofficially, showed moderate losses. The weakness in gold did not, however, spread to sovereign which was unchanged at Rs. 88.

Fourteen-carat gold opened at the last week's closing level of Rs. 64.50 but steadily lost ground to finish Re. 1.25 lower at Rs. 63.25. Pure gold suffered a setback of three points to Rs. 105.

Silver which had rallied last week was lower again this week. It opened with a loss of 50 nP at Rs. 257 and, after remaining steady at that rate till Saturday, dropped to round off the week at Rs. 254.50. The renewed setback was due entirely to the failing support at higher levels, while the figures of the daily average arrivals and offtake remained unchanged at 12 bars and eight bars, respectively.

The international price for gold eased further from $35.07⅞ to $35.06½, with the ready rate in London closing 1½*d.* lower at 250*s.* 7½*d.* Silver prices in New York and London remained firm at their last levels.

The Government of India has amended the Gold Control Rules to the extent of allowing goldsmiths to make use of specialised workers having equipment for wire-drawing or die-casting, or those who specialise in stone-setting, enamelling or polishing, provided such workers are also certified goldsmiths. The amendment is a sequel to the representations made by goldsmiths and their associations.

The following table shows the trend of prices during the week under review:

	25-3-1964 (closing)	High	Low	18-3-1964 (closing)
SILVER				
Ready (999 fine) ..	Rs. 254.60	Rs. 257.00	Rs. 254.50	Rs. 257.50
GOLD				
Ready (14 carat) ..	63.25	64.50	63.25	64.50
Sovereign	85.00*	—	—	85.00*
London—				
Gold	250*s.* 7½*d.*	250*s.* 7½*d.*	250*s.* 6½*d.*	250*s.* 8¾*d.*
Silver Ready ..	111½*d.*	—	—	111½*d.*
Silver Forward ..	111½*d.*	—	—	111½*d.*
New York—				
Silver	129.3 cents	—	—	129.3 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce. * As on 24-6-1963.

ART SILK YARNS EASY

(From Our Own Correspondent)

BOMBAY, 25*th March*

On improved supplies and absence of support, art silk yarns turned easy this week. Staple fibre yarns, however, were steady, while cotton yarns showed small changes.

Among art silk yarns, National Rayon 120D moved down from Rs. 12.98 to Rs. 12.85 a kilo and Century 75D recorded a big decline from Rs. 19.25 to Rs. 18.83. In the staple fibre yarn section, spot 2 x 40 Century and Kohinoor were well held at Rs. 9.46 and Rs. 9.57, respectively. Among cotton yarns, 10s Navsari gained 25 nP to Rs. 19.12, but 80s Ganesh slipped back from Rs. 84 to Rs. 83.50 and 32s Hisar showed a loss of one point to Rs. 31.50.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	25-3-1964	18-3-1964
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	12.85	12.98
Century 75D	18.83	19.25
S. I. Viscose 150D	13.75	13.46
Staple fibre yarn (40 ×2)—		
Kohinoor (per kg.)	9.57	9.57
Century	9.46	9.46
Cotton yarn (per bundle of 10lbs.)—		
10s Navsari	19.37	19.12
20s Podar	24.25	24.25
32s Hisar	31.50	32.50
40s Vasanta	38.75	—
60s Kothari	61.00	60.50
80s Ganesh	83.50	84.00

TRADING IN GROUNDNUT JULY BEGINS

(From Our Own Correspondent)

BOMBAY, 25*th March*

Hedge trading in groundnut and groundnut oil for July 1964 delivery commenced at last on Monday this week. It had been delayed so far, in view of the difference of opinion between the Exchange authorities and the Forward Markets Commission over the measures of control announced by the latter three weeks ago. On Thursday this week, the Presidents of the Bombay and Saurashtra Oilseeds Exchanges met the F.M.C. authorities and renewed their plea for relaxing the measures of control. After discussing proposals and counter-proposals put forward by the Exchange Presidents and the F.M.C. authorities, it was agreed that trading in the July contract should be governed by the same terms and conditions applicable to the maturing (April) contract. Accordingly, a ceiling of Rs. 241 (Rs. 240 in Saurashtra) per 250 kg. has been fixed for the July contract, the limit on weekly ranges either way being Rs. 5.50 as before. There will be no obligation on the part of members to make any declaration about their speculative positions. Operators are rather disappointed over the low level of ceiling. Some feel that the volume of business will be considerably small. As for the venue of trading, the F.M.C. has permitted the trading to take place in the Jeenabhai Building, but it has made it clear that business in September contract will be allowed only if the place of trading is shifted elsewhere.

Over the week, groundnuts depicted a firm trend, following heavy short-covering, good spot demand, strong upcountry advices and acute paucity of ready supplies. Castorseeds, after early firmness in the first three sessions, eased to close quietly steady during the week. Linseeds were firm throughout, owing to tight supply position. The inflow of new crop from producing areas was small in contrast to the usual large arrivals at this time of the season. Higher mustard seeds advices in North Indian markets also imparted strength. Cottonseeds were maintained at last week's levels.

The groundnut April 1964 contract jumped up by Rs. 2.12 to Rs. 239.62. The July contract began on Monday at Rs. 235.87 and advanced to Rs. 236.37 today. Nizam bold strengthened by a rupee to Rs. 51.50 and Khandesh quality by Re. 1.13 to Rs. 52.50. Oil ex-mill gained 35 nP to Rs. 20. Railway receipts put on 40 nP to Rs. 19.75. Groundnut oilcake expeller April contract was marked up by Rs. 12 to Rs. 416.50, and July contract by Rs. 16.50 to Rs. 423, following the reported sale of 5,000 tons of groundnut extraction to East European countries.

Castorseed March contract moved up to Rs. 178.12 on Monday on special support, as against the close of Rs. 176 last week-end, before closing at Rs. 176.37 today. June contract lost 13 nP to Rs. 171.87. Spot ready Madras, Kanpur and oil B.S.S. were unchanged at Rs. 34.37, Rs. 33.12 and Rs. 14.70, respectively. Oil commercial shed 5 nP to Rs. 14.05.

Linseed March contract strengthened by 50 nP to Rs. 41. June position improved by 63 nP to Rs. 41.50. Bold ready firmed up from Rs. 39.87 to Rs. 40.25, today. Oil ready spurted by 65 nP to Rs. 16.10.

Cottonseed April contract was dull at Rs. 102.50 throughout the week. Some transactions were reported in July 1964 contract at Rs. 105.50 on Monday this week. No trading however was reported yesterday and today.

The following table shows the closing prices of oilseeds and oils on Wednesday 25th March as compared with those of two previous weeks:

	25-3-1964	18-3-1964	11-3-1964
	Rs.	Rs.	Rs.
Groundnuts			
April 1964 contract	239.62	237.50	239.25
July 1964 contract	236.37	—	—
Nizam bold	51.50	50.50	51.37
Khandesh quality	52.50	51.37	52.25
Oil ex-mill	20.00	19.65	20.10
Oil Rly. Receipts	19.75	19.35	19.65
Castorseed			
March 1964 contract	176.37	176.00	175.25
June 1964 contract	171.87	172.00	174.25
Ready Madras	34.37	34.37	34.87
Ready Kanpur	33.12	33.12	33.50
Oil B.S.S.	14.70	14.70	15.00

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

PEPPER MOVES UP

(Messrs. Parekh and Co.)

BOMBAY, 24*th March*

Malabar black pepper ruled firm during the week with tendency upward in sympathy with Cochin where speculators are reported to be active and are pushing up prices in both ready and forward. The spread between *Chaitra* and *Vaisakh* delivery in Bombay increased from Rs. 13 to Rs. 17. Premium of about Rs. 20 is easily obtainable between ready garbled and May delivery on the Cochin ring. As such, most of the ready and nearby delivery Malabar pepper are and will be going into storage, thus creating an artificial scarcity. March delivery went off the board at Rs. 311. Off and on, enquiries for sizable quantity from one or other Soviet bloc countries are supporting factors to the market which otherwise would have gone down, in view of the absence of noticeable buying from New York. However, during the week, some purchases by New York were reported done at prices ranging from $0.34½ and $0.36½. Thanks to the recent buying by East European countries, Malabar pepper is now in fine fettle.

Singapore is now out of the picture, there being very small stock left. The little arrivals that are coming in are from Sarawak only. Singapore market is likely to be neglected until the arrival of Sarawak new crop.

New York, which was until recently haggling for a lower price, is now reported to be showing interest in Malabar black, there being scarcity of offers from Indonesia. Spot in New York has gone up to $0.36½ with sellers reserved, as they cannot easily replace their sales to grinders. It seems that New York has missed the bus.

Ready ungarbled is now quoted at Rs. 310 and garbled at Rs. 320. Movements in May and July delivery are erratic and there is scarcity of contracts as sellers are reserved. They are unwilling to sell unless they can lay their hands on ready either at Calicut or Alleppey or Cochin.

Tentative export figures from November to March are in the vicinity of 9,000 tons. As such, if New York where unhedged stocks are reported to be smaller comes in the market, the prices are likely to improve still further particularly because, in rising market, growers in India usually sell sparingly, making the exporters more anxious to cover up their short position, as pepper is generally considered by them as a treacherous commodity. The statistical position of Malabar pepper is healthy and may become more so with the passing of time provided India does not keep its pepper outpriced in the world market because of unbridled speculation. *Chaitra* is now quoted at Rs. 340, the lowest being Rs. 312 and *Vaisakh* is listed at Rs. 358, the lowest being Rs. 321.

The future of pepper depends on the selling policy of Indonesia and the buying policy of Soviet bloc and the U.S.A. and Europe. The buying should develop before the advent of monsoon, as otherwise, there may be some reactionary downward trend, for the holders then may become tired longs and consequently anxious to liquidate some of the holdings.

Ready pepper in Bombay market is quoted at Rs. 165 to Rs. 168 per 50 kilos.

LEGG-CUT TEAS FIRM

(From Our Own Correspondent)

CALCUTTA, 24*th March*

Dusts on offer at last week's sale for internal consumption met with strong demand, and prices gained. Tea bookings recorded a further decline during the week due to lack of offerings. Until the new crop begins arriving, tea shipments will continue insignificant. Despite the increase in the U.K.'s tea stocks to 170 million lbs. in the week ended 13th March from 167 million lbs. in the previous week, good demand met offerings of North Indian teas at the Mincing Lane auctions held last week, with the brighter liquoring C.T.C. Assams being a strong feature.

Dusts on offer at last week's internal sales totalled 31,560 packages which met with strong demand. Medium C.T.Cs were fully steady, and prices for the bright liquoring teas gained. Fibrous teas, which had been a weak feature in recent weeks, met with a good market. Bright liquoring Assam orthodox teas were firm at about last rates; the exportable types in this category were the strongest feature of the sale. Legg-cut teas were unchanged but firm. The quotations (in rupees) per one kg., inclusive of excise duty were: Good Assam C.T.C. dust 6.20 to 6.80, medium Assam C.T.C. dust 4.95 to 5.25, legg-cut dust 4.60 to 4.90, plain orthodox dust 4.20 to 4.60 and medium Assam dust 4.60 to 5.00.

At yesterday's export sale leaf on offer amounting to 15,010 packages met with strong demand. Prices gained. Quotations were not issued due to the absence of sufficient quotable teas.

* * * *

Many U.S. imports of tea from India and other supply areas are now making the trip via Rotterdam instead of direct to the U.S.A. because the freight rate is lower when tea is transhipped from Rotterdam, which recently surpassed New York as the world's largest port in terms of tonnage handled. Tea sources in New York have been critical of the mounting steamship conference rates. For the past nine months, they have been paying higher rates on shipments from East Africa, with the rate raised by 10 per cent in last August, and from Calcutta and Ceylon, where rates were raised by the same amount in October and February. Another 10 per cent rise is to be effective from 14th April next on shipments on conference vessels from Cochin.

The Tea Association of the U.S.A. which represents about 80 per cent of American tea companies, said it currently costs $38.75 per cubic foot to ship tea directly from East Africa to New York as compared with $36.23 via Rotterdam. The cost from Calcutta is $40.49 direct compared with $34.40 via Rotterdam, and $38.62 from Cochin to New York compared with $34.84 via Rotterdam.

TIPPY TEAS STRONG

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 19*th March*

Offerings in tea sale No. 11 held here on Tuesday the 17th inst. amounted to approximately 468,000 kgs. Quality from all districts continued to be useful, but it was only maintained when compared with previous weeks. There was strong general demand. Nilgiri brokens elicited selective enquiry and were irregular, with the lesser kinds often registering a decline in price. Fannings, however, were sold readily and well at fully firm rates. Good mediums descriptions were again a strong feature of the market and were generally sold at dearer levels. Medium and low medium brokens were irregular; those teas maintaining their quality were generally firm, but others tended easier. Fannings grades met a little more enquiry and were sold at fully firm rates. Plainest teas, and black leaf descriptions were sold well, while whole leaf grades, particularly liquoring sorts, were again actively supported at generally dearer rates. Unorthodox teas were keenly competed for and often registered an advance in price. Tippy teas were in strong demand and prices were dearer.

The quotations (per kg.) were:

	1964	1963
	Rs.	Rs.
Low mediums	4.45-5.10	4.40-5.00
Mediums	5.00-5.60	5.10-5.50
Good mediums	5.60-6.80	5.50-6.50
Nilgiri B.O.P.	6.30-10.70	6.00-10.30

The average price realised in sale No. 11 was Rs. 5.60 per kilo, as against Rs. 5.59 a week ago and Rs. 5.44 in the corresponding sale last year.

A total quantity of 217,000 kgs. was offered in dust sale No. 11 held today. The market met with good general demand. Coloury mediums encountered useful support and were sold at fully firm rates, while other medium categories inclined a little easier. Highgrowns were sold readily, but these were irregularly lower. Clean black grainy descriptions were sold at around last rates. Unorthodox teas were fully firm, while their types were slightly lower.

The average price realised in dust sale No. 11 was Rs. 4.61 per kilo as against Rs. 4.67 a week ago and Rs. 4.76 in the corresponding sale last year.

As we go to press, Messrs. Forbes, Ewart and Figgis Private Ltd. wire us as follows:

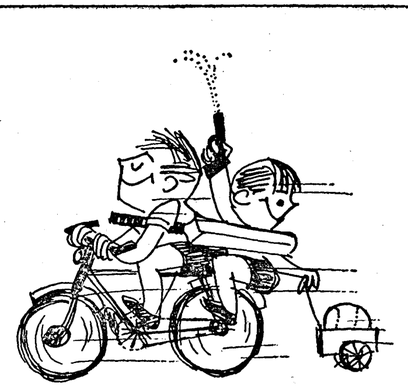
"*Sale No.* 12: 485,000 kgs. offered. Good general demand. All medium brokens tending easier. Fannings weakest feature. Highgrowns firm to dearer. Unorthodox lower."

JUTE GOODS STEADY

(From Our Own Correspondent)

CALCUTTA, 24*th March*

Fairly steady conditions were in evidence in both jute goods and raw jute during the week under review. Despite continued troubles in the



My boy won't face facts

Kids live in a magic world of their own. Toys, bats, tricycles, picnics—and they always want more. But how far will the money go? Taxes, bills, deductions at source and life insurance premiums. So I've often to say 'no' to the boy's pleas.

He doesn't know it of course, but he is the one who's going to benefit from those premiums—not his saint of a father. There is no knowing what may happen. One may pop off like a pesky balloon or stagger around with a stick at 80!

Either way, the boy will get the education he needs to give him a fighting chance when the time comes.

It's hard to say 'no'!—Wish I was a kid again.

ASP/LIC·E·35

Calcutta port *delaying shipments of gunnies, encouragement was derived from the satisfactory* statistical position. Ready goods were featured in short-covering as well as in shipper business, and mills were keen to sell for forward positions.

Encouraged by the *country's success* in gaining new markets, the Pakistan Jute Mills Association has announced its intention to sponsor a *five-man* trade delegation to the African countries to explore markets there. Demand for packaging materials in Africa is steadily growing side by side with the advancing farms and industrial output in the African countries, and Pakistan is confident of raising its exports because of the lower cost of production as compared with Indian mills. The Pakistan delegation will visit Egypt, the Sudan, Uganda, Kenya, Southern Rhodesia, Nigeria, Ghana, Liberia, Senegal, *Morocco*, the Congo, and Sierra Leone, and *will also examine the possibility of Pakistani entrepreneurs starting jute mills in these countries.*

The notable fall in arrivals of white jute led to firmer conditions in the fibre market during the week. Prices were steady as follows: Assam bottoms Rs. 31.50 a maund, Northern bottoms Rs. 30.50, and daisee bottoms Rs. 34.00. Mesta was on offer freely, but mills were less interested in this grade. Sellers, in their anxiety to dispose of their holdings, discounted quotations.

Several shipper inquiries led to steadiness in jute goods. The U.S.A. continued to place business in small quantities. Interest was also shown by the U.S.S.R. The trade was glad to note that in the seven months to January last, exports of hessian increased to 344,200 tons from 317,600 tons in the corresponding previous period. While exports to the U.S.A., Australia, New Zealand, and the U.S.S.R. rose, those to the U.K., East Europe, and West Europe declined. The Far East increased its offtake. On Tuesday last, there was no trading in view of the general *hartal* and the dislocation to transport. On *Wednesday*, the feature was business on Government account in repect of 3,000 bales of B. twills. Shippers received several inquiries for hessian. Ready B. twills were firm at Rs. 111.50 and hessian 40" 10 oz. at Rs. 45.50. *Further business in* B. twills on *Government account took place on* Thursday, and in hessian there was scattered business with overseas buyers. However, since the volume of business was insufficient, B. twills lost to Rs. 111.40 and hessian 40" 10 oz. to Rs. 45.30. With B. twills at Rs. 111.60 and hessian 40" 10 oz. at Rs. 45.40 there was some recovery on Friday. Over the week-end, these levels were maintained. With B. twills at Rs. 111.70 and hessian 40" 10 oz. at Rs. 45.50, prices were fractionally better during yesterday.

NEW POLICY FOR U.S. STOCKPILE TIN RELEASE

(From Our Own Correspondent)

CALCUTTA, *24th March*

The metal market was fully firm during the week under review. On the London Metal Exchange, copper and zinc staged a further rise, while tin and lead were firm at about the previous rates.

Spot tin in London closed at £1,872½ a ton, as against the week's opening quotation of 1,095. The lower trend, despite good Continental demand and consumer interest, followed the announcement in Washington of the stockpile release policy for the next *12 months*. The U.S.A. proposes, it has been stated, to release 20,000 tons in that period, and considers *that this would* bridge the gap between demand and supply. The U.S.A.'s surplus stockpile of tin, which is 127,000 tons, it has been estimated, will be disposed of in six to eight years' time. That the release policy would not normally influence *the market trend is indicated* in the U.S. Government's assurance that purchase offers would be accepted only if the prices were reasonably in line with market prices and that sales would be limited or interrupted when prices weakened. It has also been stated that, before making any major changes in the long-term programme in the releases policy, the affected countries would be consulted. The new release policy is reasonable in that the deficit between world production and consumption has been placed at 20,000 tons, which *will be equal* to the U.S. releases in the *next 12 months. Prior to the* announcement of the new *policy, the General Services* Administration of *the U.S.A. had begun* offering an additional quantity of *5,000 tons in view* of the continued heavy demand. Bolivia was reported unhappy over that increase and demanded prior consultation before making any *change* with regard to the release policy.

The *continued uptrend in the price* of lead in India *is causing anxiety. The present price* is as high as Rs. 265 per 100 kgs. Speaking at the annual meeting of the Indian Battery Manufacturers' Association, its President, Mr. S. P. Saha, urged the Government to liberalise lead imports. Unless supply of lead is increased, it is difficult for the storage battery industry to reach the targeted figure of one million batteries by the end of the third Plan. Spot lead in London opened at £81 ton and closed higher at £81¾. Spot zinc, at £102, added £2 to the opening quotation. Spot copper wire-bars in London staged a further rise to £279 a ton. According to overseas reports, the continuance of strong demand for copper in the U.S.A. and Europe is foreseen. This would naturally stir producers to raise their output, and it is thought that output and demand would reach equilibrium this year.

ZONAL SYSTEM FOR WHEAT

(From Our Own Correspondent)

HAPUR, *23rd March*

Wheat, rice and maize declined sharply during the week under review due to slack demand, thanks to increased sales through fair-price shops at controlled prices which were much lower than *those prevailing in the open market. Harvesting of rabi coarse grains has commenced and the new* grain would reach the market shortly. Crop prospects were fair and harvesting of wheat would commence in mid-April.

Wheat prices declined sharply by Rs. 3.50 to Rs. 6 per quintal, according to quality, in the open market on poor buying inquiry. The supply position at fair-price shops was satisfactory. Arrivals *from rural areas* were also reported to be slightly better. *Wheat* average was quoted between *Rs. 57.50* and *Rs. 60* and farm between *Rs. 63.50* and Rs. 66.50 per quintal, while at the fair-price shops the commodity was available at Rs. 42.25. Rice eased by Rs. 1.34 to Rs. 2.67 per quintal on increased arrivals and larger sales through fair price shops. Stockists were anxious sellers. Week-end prices (in rupees) were:—Rice *basmati* superior 93.77 to 96.45, *sela basmati* 91.09 to 93.77, *mainpuri* 62.96 to 65.64, *ramajwayan* 77.70, *raimunia* 80.38 and *gadda* 64.30 a quintal.

Gram was, however, steady, as arrivals of the new produce from M.P. were still small. New gram was quoted at Rs. 57.60 and the local produce at Rs. 56.26 a quintal. Stocks were negligible. Barley and *bejhar* ruled quiet at Rs. 41 to Rs. 41.50 and Rs. 42 to Rs. 42.50, respectively, per quintal due to poor demand. Maize was subdued, as the seasonal demand was poor, and prices were between Rs. 41 and Rs. 42.87 per quintal.

* * * *

The zonal system for movement of wheat *has been reintroduced* by the Union Government. *It divides the country into nine zones, export* of wheat and wheat products from, and imports into, which *have been prohibited except* under permits to be issued by the State Governments with the concurrence of the Centre. The private trade is to be kept out of the inter-zone movement which is to be restricted to Government or State-sponsored accounts.

Announcing this decision of the Government in the Lok Sabha on Monday the 23rd inst., the Minister for Food and Agriculture, Mr. Swaran Singh, explained that the system had been revived for conserving supplies of wheat in important consuming areas and for concentrating on deficit areas in which the Government would distribute supplies of imported wheat from Central stocks.

The nine zones which have been formed with immediate effect are (1) Punjab, Delhi and Himachal Pradesh from which exports to Jammu and Kashmir are to be permitted; (2) U.P.; (3) Rajasthan; (4) M.P.; (5) Bihar; (6) Maharashtra from which exports to Goa are to be permitted; (7) Gujarat; (8) the Southern States of Andhra, Madras, Mysore, Kerala and Pondicherry; and (9) the residual zone of the States of West Bengal, Orissa, Assam, Nagaland, Tripura and Manipur.

The Minister said in the Lok Sabha that supplies of imported wheat to roller mills in *all States* would be *maintained* and, if necessary, increased.

Addressing later the members of the Informal Consultative Committee attached to the Ministry, the Minister is understood to have said that the formation of the wheat zones was only the first step in the Government's efforts for controlling the rise in prices. Another measure intended was the enforcement of the ceiling prices for wheat and rice as *soon as circumstances required*. With the introduction of control on movement of wheat from producing areas, he expected, he said, the price level to go down.

However, contrary to the Minister's expectations, wheat prices in Bombay shot up by about Rs. 8 per quintal on the very next day of the announcement that the zonal system for wheat had been revived. The upswing also reversed the gradually declining trend noticed for four days before the announcement, when prices had eased by Rs. 6 to Rs. 8 per quintal on expectations of increased arrivals from Rajasthan and Punjab. The trade's reaction was that, with the zonal system having stopped free flow of wheat from Rajasthan and Punjab, prices were unlikely to come down unless the Government *succeeded in forcing them down by taking some other steps.*

ENQUIRY FOR KIPS SMALL

(From Our Own Correspondent)

MADRAS, *23rd March*

Trading in kips and calf skins this week continued dull and difficult, with importers highly selective in their requirements. Only lower ends were in demand. In cowcalf once again only "fourths" of certain weights were required, while "run" parcels were neglected. Buffs continued *unchanged. In buffcalf, only top tannages were solicited*, while middle classes remained unsaleable except for small quantities of inferiors. Tanned goat skin arrivals were moderate, but the clearance by shippers was also limited and, as a result, prices were a shade weaker, though shippers attempted to maintain firmer levels. Tanned sheep skins, all selections and tannages, more particularly lining classes, were keenly sought after at *prices slightly* better than those last *week.*

The raw goat skin markets were nearly steady, but the undertone in the Southern districts *was clearly weak.* Raw sheep skins continued firm.

THE NATION'S BUDGET —

YOUR BUDGET —

AND THE BANK—

covers all activities concerning the welfare and security of the citizens. It reflects the pre-planned economy which is the nation's target. The responsibility of expenditure and income coming true —balancing the budget—is shouldered by Government. In our democracy, this responsibility is shared by us all.

therefore has to be planned and balanced too. Our individual budgets ensure unhampered progress and welfare in our domestic sphere. This has a salutary effect on the nation's economy.

assists you through its manifold activities to balance your budget—and the nation's budget too!

TREND OF SHARES

A CORRECTIVE RALLY

(From Our Own Correspondent)

BOMBAY, 25th March

THE downward trend in equities, which had been progressing since the Budget, admitted a corrective rally this week on bear covering and scattered fresh professional support. The perpendicular decline in the markets for the past three weeks had brought down values to levels which seemed sufficiently attractive for sellers to book profit. Moreover, the trend of *badli* charges at the turn of the settlement on the Bombay Stock Exchange last week suggested a slightly oversold position in certain vulnerable counters. While the technical factors thus favoured a recovery, sentiment was influenced by reports of excellent support for blue chips from the L.I.C. and of the start of operations on a big scale by the Unit Trust as well as by the flow of some encouraging corporate news during the week, like the announcement of a higher dividend by Kohinoor Mills and Hindustan Lever. In spite of all this, however, the week closed on a none-too-promising note, as improved levels induced quick profit-taking and even attracted some mild selling pressure induced by unfavourable political reports.

The week under review saw the Unit Trust's Chairman, Mr. R. S. Bhatt, tell members of the Calcutta Stock Exchange that the Trust would invest in equities, preference shares and debentures of running companies with a good dividend record or growth prospects. The Trust would also invest in Government securities, he said. But it would not invest in the issues of entirely new undertakings because investments in such undertakings would not yield a return for a period of time. The Trust would operate on the lines similar to those followed by the L.I.C. It would receive offers from brokers for sale or purchase of securities, but it would not itself make any such offer. The Trust, which has its headquarters in Bombay, would soon open an office in Calcutta.

The Directors of the Kohinoor Mills Company Ltd. announced on Monday a higher final dividend of 14 per cent (making a total of 21 per cent) for 1963 as compared with 11 per cent (making a total of 18 per cent) for 1962. This three-point raised in the dividend must have come as a pleasant surprise to the market, as witness the swift recovery by the scrip to Rs. 341.50 on the day of the announcement from Rs. 330 on Friday the 20th inst. The higher dividend signified an improvement in the Company's financial results for the past year. The dividend will claim Rs. 3 lakhs more at Rs. 21 lakhs.

Killick Industries Ltd. also announced on Monday a 2.5 points increase to 7.5 per cent in its dividend for the year ended 30th November 1963. This news produced a gain of eight points to Rs. 90 in the Rs. 100 fully paid shares of the Company.

Another company to announce a higher dividend this week was the Hindustan Lever Ltd. The Directors of the Company have declared a 20 nP increase to 80 nP in the final dividend for 1963, making a total of Re. 1.40, as against Re. 1.20 in 1962. The shares of the Company rose from Rs. 35.25 to Rs. 36. The Company's turnover has gone up by 10.6 per cent from Rs. 54.02 crores to Rs. 59.55 crores, which is a new high level, with its exports rising sharply from Rs. 2.01 crores to Rs. 5.12 crores. But its pre-tax profit has declined by 9.8 per cent from Rs. 4.77 crores to Rs. 4.31 crores due to higher cost of raw materials and the continuance of price control on washing soap (freed from control only in December last) and *vanaspati*. Profit before sur-tax and dividend tax is higher by Rs. 9 lakhs at Rs. 204 lakhs, as the normal tax liability has declined from Rs. 242 lakhs to Rs. 227 lakhs. The exact liability in respect of sur-tax and dividend tax will be known only after the Finance Bill becomes law, but the Directors have set apart Rs. 56.5 lakhs towards these taxes. The net profit available for distribution amounts to Rs. 147.50 lakhs. The dividend absorbs Rs. 115.40 lakhs, as against Rs. 98.90 lakhs a year before.

As noted at the outset, favourable corporate news, coupled with institutional buying, brought about a change for the better in sentiment this week. But, considering that the week's trading still remained unexciting, it is clear that the market badly needs the real stimulant in the shape of some relief in the heavy additional excise duties, like the one proposed on rayon yarn, and the controversial direct tax measures, like the one for taxing equity dividends and capital gains on bonus shares. No inclination has so far been shown by the Finance Minister in favour of any relief. He ruled out the possibility of any major modifications in his budget proposals yesterday when some Congress M.P.s from Madras met him for pleading on behalf of the handloom industry for a relief in the proposed duty on fine and superfine cotton yarns. However, notwithstanding these categorical denials of the Finance Minister, the stock market is still optimistic that some relief will be forthcoming about the middle of next month.

Meanwhile, the capital gains tax on bonus shares has affected the issue of one more company, which is Century Mills. This Company which obtained this week the sanction of the Controller of Capital Issues for its proposed one-for-five bonus issue has decided to defer the proposal, pending the final outcome of this new tax. Unlike Elgin Mills and T. Maneklal, the Directors of which announced last week that they had decided to go back on their decision to make a bonus issue, this Company has only postponed the issue. But in case it decides to drop the issue, it is expected that its Directors would compensate the shareholders by proposing a final dividend for 1963, which they earlier decided to pass over in view of the proposed bonus issue. The Company is also expected to make a rights issue for financing its expansion programme. The whole matter is likely to be decided by the Directors at their meeting scheduled for tomorrow.

* * * *

Dalal Street staged a moderate rally, but failed today to maintain the best levels recorded yesterday on renewed selling by the recent buyers and professional sellers. Closing prices, therefore, showed only minor changes.

Among the market leaders, Steels were notably steady on persistent support from the L.I.C. Thus, Tata Ordinary, though 50 nP higher over the week, was Rs. 2.75 above the last *havala* rate of Rs. 144. Likewise, Indian Iron, though unchanged over the week at Rs. 24.64, showed an improvement of 28 nP over the last *havala* of Rs. 24.36. Similarly, Century and National Rayon, the worst sufferers in the post-budget debacle, were higher at Rs. 621.50 and Rs. 380 as compared with their last *havala* of Rs. 610 and Rs. 372, respectively, though they were still below their last week's closing prices. In the same way, Standard was 17 points higher at Rs. 667, though six points lower over the week. While these markedly depressed shares only staged a mild recovery, Kohinoor stole the show by closing Rs. 6.50 higher at Rs. 339.50 following the news of an increase in the final dividend. Additionally, this scrip too were said to have been absorbed by the L.I.C. T.E.L.Co. was yet another counter to have enjoyed institutional support and to record, as a result, a gain of Rs. 11.50 to Rs. 301.50. Voltas staged a sympathetic rise from Rs. 262.50 to Rs. 265.25. But, on liquidation touched off by rumours of nationalisation of shipping industry, Scindia reacted today from Rs. 15.80 to Rs. 15.48 at which level they showed a loss of 60 nP over the week.

* * * *

The improvement on the Calcutta Stock Exchange was confined mainly to selected cleared shares, whereas cash scrips showed a further setback. Thus, Texmaco recovered by Re. 1.05 to Rs. 27.90, Kesoram by 69 nP to Rs. 26.50, J.K. Cotton by 44 nP to Rs. 12 and Indian Aluminium by 31 nP to Rs. 31. But, in the cash section, Cawnpore, among Textiles, closed 56 nP lower at Rs. 6.44 and Bengal Coal declined further from Rs. 257 to Rs. 250. Jute shares continued weak, with Burnagore five points down at Rs. 212 and Kelvin nine points down at Rs. 146.

MARKET GOSSIP

(Concluded from page 495)

stage of its trading and incur a disproportionately high tax burden as the commodity nears the final purchaser. By contrast, a major effect of the proposed new "net" or "added value" turnover tax is to even out these stages. In Germany, the specific proposal to achieve this result (aside from special cases of lower tax and tax exemption) would work like this: The present 4 per cent "gross" or "cumulative" turnover tax would be replaced by a new 10 per cent tax on "added value," to be levied at each point that an item of commerce changes hands. In particular, the proposed new form of sales tax should streamline export and import procedures. At present, the "equalisation tax" on imports is determined by calculating the overall or cumulative turnover tax burden on a similar item in German domestic trade. This overall tax burden can only be roughly estimated. At present, too, there is the rather cumbersome procedure of granting an export rebate and an "export merchant's rebate" on goods going abroad. The proposed new system, however, would simply levy a single "added value" tax on imports and exempt exports from turnover tax. The basic idea is for Germany to eliminate a cause of distortion in multilateral trade.

Factory Farms For Cotton

One of the significant suggestions put forward at the eighty-ninth meeting of the Indian Central Cotton Committee held at Bombay on the 21st inst. was that cotton textile industry's active participation should be secured in the efforts to increase the yield per acre of cotton. Mr. Hansraj M. Patil, Maharashtra cotton growers' representative on the Committee, who made the suggestion, also indicated some of the ways in which the industry could help to bring about a tangible increase in production. These are (1) setting up of demonstration farms by the industry in selected areas and (2) distribution of cash awards to the best farmer in each taluka. Whether or not these are the best ways in which the mill industry can contribute to increasing cotton production is a debatable point, but there is no doubt that active participation by the industry in raising cotton production is not only desirable but urgently called for, if the chronic shortage of cotton and the uncertainty about supplies every year, which makes forward planning of cloth production difficult, is to be ended.

Of course, Mr. Patil's suggestion is not entirely new. Mr. Madanmohan Ruia, President of the East India Cotton Association, had advocated, in his speech at the forty-second annual meeting of the Association, among others, the setting up of demonstration farms in each taluka with the assistance of the industry. This journal itself had suggested, while commenting on Mr. Ruia's speech at the twenty-fourth annual meeting of the Cotton Buyers' Association held in December 1961 (*vide* page 14 of *Commerce* dated 6th January 1962), that, in view of the failure of official attempts made for so long to achieve the desired objective, it was high time some unofficial efforts were made to increase cotton production. It was specifically suggested by this journal then that the Indian Cotton Mills Federation and the East India Cotton Association should jointly draw up a programme for growing cotton in selected areas and demonstrating how production could be raised through improved yield. Now that this suggestion seems to have caught the fancy of men who matter in cotton (as, for instance, Mr. Ruia), it would be appropriate to elucidate it in greater detail.

The mill industry's association with cotton production should not be confined merely to the setting up of "demonstration farms" or the institution of cash awards for farmers. These have no doubt their own value, but they by themselves would not be adequate to bring about a substantial improvement in production. It is not always easy for individual farmers to transplant in his own field the improved techniques and methods of cultivation and manuring successfully adopted in the demonstration farms. There are, as readers are aware, demonstration farms in different parts of the country organised and run by agricultural research stations and State Departments of Agriculture, but their effect on production has at best been only marginal. If, therefore, any perceptible impression is to be made on production, it is necessary for the industry or individual units thereof to undertake the establishment of something more than demonstration farms. Those cotton mills that are in a position to do so should be permitted to establish large farms for growing cotton on a scientific basis. This calls for investment in land, implements, seeds, manures and other necessary accessories for cultivation, funds for which can be found only if the State is willing to exempt such enteprises from doctrinaire land reforms. The cotton mills could either buy land outright for the purpose if available or get farmers in specified areas to pool their land and form a joint-stock company in association with mills for large-scale cotton cultivation on modern lines. An arrangement which associates farmers closely with cotton cultivation and provides them a stake in it by way of part ownership, is preferable to the former approach for social and economic reasons. The object in suggesting the association of mills with farmers is to provide leadership, efficient administration and, above all, resources, all of which are now sadly lacking in rural areas.

In making this suggestion, we are not unmindful of the fact that it runs counter to the trend currently in fashion, that is, dismantling of factory farms under the land ceiling legislation—a trend which is bound to affect agricultural production and productivity. But, if the Government for once sheds its ideological predilections in favour of increasing cotton production through practical means, it should not be difficult to find a solution to the problem.

BANKING

(Concluded from page 503)

the close of the year, two more branches were opened in Bombay. Six safe deposit vaults were opened during the past year, bringing the total number of safe deposit vaults to 40. Steps were also taken to expand the activities of the existing branches.

The Bank's deposits, as at the end of the year, have increased to over Rs. 59 crores, its total working funds to over Rs. 65 crores, and the number of its accounts to over three lakhs. The accretion of Rs. 8 crores in deposits during the year, although the same as in the previous year, assumes particular significance inasmuch as, having crossed the Rs. 50-crore mark in deposits near the close of 1962 itself, the Bank has acquired the status of a "big bank" under the inter-bank agreement governing the rates of interest on deposits and ceased to enjoy, as of 1st May 1963, the "privilege" of paying one-eighth of one per cent more than the "standard rates" of interest for attracting deposits. Moreover, the growth has been in all types of deposits: in fixed deposits from Rs. 24.70 crores to Rs. 27.99 crores, in savings deposits from Rs. 12.91 crores to Rs. 16.36 crores and in current accounts from Rs. 13.46 crores to Rs. 14.75 crores.

The bulk of the deposits, as can be seen from the table, is represented by advances on the assets side. Of the total advances, 53.06 per cent has been to industry, 30.55 per cent to commerce and 16.39 per cent to all other lines of credit.

The number of the Bank's shareholders, which had gradually increased from 472 in 1959 to 719 in 1961, shot up to 2,220 in 1962 and rose further to 2,281 last year. The number of its staff has nearly doubled from 1,663 to 3,020 in the last five years, with the total of salaries paid rising by more than 100 per cent from Rs. 41.32 lakhs to Rs. 88.12 lakhs.

Notice

THE MYSORE KIRLOSKAR LTD.

Registered Office:

YANTRAPUR P.O. HARIHAR

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Company will be held on Saturday the 18th day of April 1964 at 4-00 p.m. (I.S.T.), at the Registered Office of the Company at Harihar, to transact the business, the details of which have been made known to the Shareholders separately by notice sent to them individually.

The Share Transfer Books and Membership Register shall remain closed from the 11th April 1964 to 18th April 1964 (both days inclusive).

For THE MYSORE KIRLOSKAR LTD.,

V. K. BODAS,
Assistant Secretary.

Date: 24th March 1964.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CVIII. No. 2763 BOMBAY, 4th APRIL 1964 PRICE Rs. 2

A DISAPPOINTING DEBATE

THE Lok Sabha debate on the Food and Agriculture Ministry's demands for grants, to which Sardar Swaran Singh replied on Monday last, did not effectively turn the spotlight on the Ministry's mistakes flowing from ineffective policies and unwarranted optimism. As the debate was aimless, discursive and insufficiently critical, the Ministry got away with it all, claiming, at the same time, more credit for the Government than was strictly due. The Parliamentary Secretary to the Minister for Food and Agriculture, for instance, boasted that "the greatest achievement of this Ministry is the establishment of a very powerful sugar industry in the co-operative sector." This he did without, at the same time, enlightening the members of the Lok Sabha on the state of health of that co-operative sector. The Minister of State for Agriculture, Dr. Ram Subhag Singh, claimed—rightly or wrongly—that agricultural production in the country now (in 1963-64) was higher than it had ever been before. He failed to clarify whether that level of production was all that could have been achieved with the enormous Plan outlays on irrigation, agriculture and community development or whether the rate of agricultural growth was reasonably adequate to meet the country's expanding food and raw material requirements.

For his part, Mr. A. M. Thomas, Minister of State for Food, asserted that "the achievement of the Government on the food front, with such a heavy loss in production (in 1962-63), is something which can only be belittled by a disregard of truth and objectivity." But the Minister's own objectivity was such that it overlooked the fact that practically throughout 1963-64 foodgrain prices were maintaining a steady uptrend (undoubtedly because of relative scarcity) even after allowing for their seasonal fall. That the food articles index (1952-53=100) as a whole rose by 2.9 points from 138.6 in the week ended 26th October 1963 to 141.5 in the week ended 14th March 1964, in striking contrast to a fall of 6.3 points over the corresponding period of 1962-63, was quietly ignored by him in his index comparisons. It was left to the Minister for Food and Agriculture, Sardar Swaran Singh, to make a claim of dubious scientific validity. The claim was that the linear increase of about four per cent per annum in agricultural production over the period 1949-50 to 1961-62, as against the population increase of about two per cent per annum over the same period, pointed to the direction in which the gap between the availability of food and raw materials and the overall demand for them would be narrowed, if not closed altogether. In making this forecast for the future, the Minister conveniently ignored five factors, namely, (i) income elasticity of demand for food and agriculture-based manufactures, (ii) increasing consumer preference for finer foodgrains, (iii) current and prospective population growth at the rate of not less than 2.5 per cent per annum, (iv) continuing need for maintaining or, possibly, increasing exports and (v) a disquieting fall, since 1961-62, in the production of foodgrains.

Ministerial replies to the debate were thus full of such claims of partial or doubtful validity. But they also contained factual interpretations and predictions pertaining to particular aspects of the broad subject of "food and agriculture." These interpretations and estimates were, of course, intended to paint a rather rosy picture of the overall food and agricultural situation. But how realistic that picture was is the question. To take the food situation first. The official estimate, in this connection, would seem, by and large, to be optimistic. It has been estimated, for instance, that the 1963-64 rice crop would be of the order of 36.4 million tonnes, as compared with about 32.0 million tonnes in 1962-63 and 34.8 million tonnes in 1961-62. While Mr. Thomas thought that, with the bigger rice crop in the current crop year (that is, 1963-64), "it would be possible to keep the situation under control," Sardar Swaran Singh had "a feeling that our position this year is not likely to be very difficult." But it was only about less than a month ago, official spokesmen at New Delhi were saying that the food situation this year would be a grim one. Has anything spectacular happened since then to take an optimistic view now?

One wonders whether this optimism is quite justified, for, if a shortfall of 2.8 million tonnes in rice production in 1962-63, as compared with 1961-62, could aggravate scarcity and cause prices to go up, there is no reason to believe that an increase of 1.6 million tonnes in production in 1963-64, as compared with 1961-62, would make any appreciable difference to the situation. The fact that population has increased by about 2.4 per cent a year since 1961-62 should be remembered here. What is more, as Sardar Swaran Singh himself estimated, the 1963-64 jowar crop has not been good. That would mean greater pressure on rice supplies in rural areas where the consumer preference for a finer cereal like rice is even otherwise increasingly in evidence. It would be puerile to think that nationalisation of bigger rice mills and co-operativisation of smaller ones would either increase rice supplies or bring down their prices. Such moves, if they were to materialise, would only lead to greater waste, inefficiency and scarcity and to bureaucratic harassment of innumerable rice producers. The only way in which rice scarcity can be overcome in the coming years is to implement the package programme more vigorously in areas which are already irrigated or can be irrigated with comparative ease. The pattern in these areas should also be increasingly one of double cropping.

As for wheat, the estimated production this year would be less than the 11 million tonnes in 1962-63, thanks to the unusual cold wave and the failure of winter showers. The shortfall in the jowar crop may be expected to increase the pressure on wheat supplies too. If the Government had to distribute 3.8 million tonnes of P.L. 480 wheat in the whole of 1963, it might have to find five to six million tonnes in 1964. In fact, the Government has already distributed as much as 1.6 million tonnes in the first three months of the current year. Thanks to assured P.L. 480 imports for one more year, it may be possible to continue the ship-to-mouth existence. But what will happen after one year? Will there be another P.L. 480 Agreement? It is difficult to believe that the situation can be remedied by the recent formation of wheat zones, for the marketable surplus of this cereal even in a normal year is only three to four million tonnes. That the surplus this year would be less is clear. The present downtrend in wheat prices in the producing States is a post-harvest phenomenon. It is not likely to last for more than a couple of months. There is, therefore, no warrant for drawing a comforting inference from the present "declining trend" in wheat prices, as Mr. Thomas sought to do.

In regard to sugar which, as a food product, has been dealt with by the Food and Agriculture Ministry, the current and prospective situation is no less depressing. Thanks to the Ministry's ambivalent attitude towards *gur* and *khandsari*, factory sugar production continues to be subject to wide vicissitudes. The latest estimate of sugar production in the 1963-64 season, according to Sardar Swaran Singh, is only 2.6 million to 2.7 million tonnes, which is less than the record production of about three million tonnes in the 1960-61 season. With the small carry-over from the 1962-63 season, the total availability in the current year is now estimated at only 2.8 million tonnes—a quantity that would not be adequate for both domestic consumption and export. Already the export prospects are becoming slender, not because the foreign markets are dwindling but because the country's export surplus is decreasing. Sardar Swaran Singh himself has admitted that only 250,000 tonnes, out of the contracted 300,000 tonnes, would be exported this year. Whether even that much export would materialise fully is doubtful, for, even according to Sardar Swaran Singh's conservative estimates, the domestic requirements (including a comparatively small and absolutely inadequate carry-over of 100,000 tonnes to next year) would amount to 2,570,000 tonnes in the current year. The position would not have been as bad as it is now, had the Food Ministry listened to the advice of sugar millowners in the last week of January and enabled the mills to compete effectively with *gur* and *khandsari* producers for the available supply of cane. Even then it was quite clear that sugar production would be well under 2.6 million tonnes, but the Ministry went on assuring the public that production would be not less than 2.8 million tonnes. As a result of its complacency, India has to go back on its export commitments. Nothing can be more disgraceful to the country than this. And yet no Member of Parliament took the Food Ministers to task on this point.

If sugar production is to increase substantially in the coming years and if exports are to be stepped up to earn the much-needed foreign exchange, some bold and realistic steps would seem to be necessary. Regulation of *gur* and *khandsari* production is one such step. Sardar Swaran Singh has no doubt recognised the need for "some sort of regulation, direct and indirect, of cane supply" to *gur* and *khandsari* units and for "some adjustment between the needs of the sugar industry and those of *gur* and *khandsari* manufacturers." His promised solution to this problem before the onset of the next season may not, however, be quite bold and far-reaching, for he has already qualified his remark by saying that "it has many aspects and touches so many vital interests." Secondly, it would be better to assist the expansion of existing units in the private sector, especially

the uneconomic ones among them in areas best suited for growing sugarcane. But this is not in the picture, for the Ministry has decided to recommend expansion of capacity only in the co-operative sector and also set up a committee to consider whether uneconomic private units could be taken over by the Government. Another bold step would be to advise such of those State Governments as have chosen not to exempt sugarcane farms from land ceilings to do so in the interest of higher productivity and efficient management. Further, as sugarcane crop and sugar production are subject to some fluctuations from year to year, it would be prudent to insulate the export sector from them by regulating domestic consumption through a system of flexible and informal rationing.

While on the subject of sugar, it would be interesting to examine how well the co-operative sugar factories have fared so far. The Parliamentary Secretary to the Minister for Food and Agriculture waxed eloquent on the performance of 41 such factories which worked in the 1962-63 season and produced 440,000 tonnes, representing 22 per cent of that season's total production of 2,160,000 tonnes. But he said nothing about the financial performance of those factories. From the latest available figures, those for 1961-62, published by the Reserve Bank of India, the co-operative sector in sugar industry had a net profit of only Rs. 41 lakhs (Rs. 128 lakhs of aggregate profit made by profit-making societies *minus* Rs. 87 lakhs of aggregate loss incurred by losing societies) in that year. It is true that there were only 35 working factories out of the licensed 55 factories, as of that year. But, even after allowing for this fact, it would appear that the aforesaid net profit of Rs. 41 lakhs is pitifully low in relation to the aggregate working capital of about Rs. 78 crores. The working capital, incidentally, includes about Rs. 8 crores by way of Government contribution to share capital and Rs. 48 crores of loans from Government, Central financing agencies, State Bank of India, I.F.C. and others. But for Government subsidies to the tune of about Rs. 36 lakhs, even the meagre profit of Rs. 41 lakhs would not have materialised. So, in spite of so much Government spoon-feeding by way of contribution to share capital, loans and subsidies, co-operative processing of sugarcane to produce sugar is patently unprofitable either for the members of the societies concerned, or for the community as a whole. Is there any reason to suppose that possible co-operative processing of paddy to produce rice would be a roaring success?

STEEL FOR ENGINEERING

FINISHED steel is one of the vital raw materials for engineering industry and its recent decontrol is of great significance to the latter. For the first time in 25 years, the industry is faced with a free market in that raw material. Whether decontrol will definitely benefit the industry cannot be confidently predicted at this stage. While welcoming this step in principle, the industry seems nevertheless to have some reservations about it. Mr. J. R. Armstrong, Chairman, Indian Engineering Association (Western Region), for instance, has just stated that it is only when the steel plants are able to meet the demand for all the required sections and steel prices are made stable that the effects of decontrol could be properly assessed. Mr. C. E. Cargin, Chairman, Indian Engineering Association, has just extended a qualified welcome to decontrol in his address at the fifty-third annual general meeting of the Association held at Calcutta this week. He has attached three conditions in this connection. One is that the joint committee of steel producers should take due account of the need for price stability. This will, indeed, be too difficult a condition to be fulfilled, for both the public-sector and private-sector steel plants have been none too happy over the erstwhile level of retention prices. The second condition is that the joint plant committee should exercise a measure of control over distributors, so as to ensure that the smaller quantities of steel are available at standard prices. How this control on distribution is to be exercised by the steel industry itself is by no means clear. And the third condition is that there should be no scope for the dangerous and unscrupulous practice of mixing tested with untested steel. This, again, will call for a measure of control on distribution. It would appear that, unless these difficult conditions are fulfilled, steel decontrol, by itself, may not be beneficial to engineering industry. This is the inference that one would be justified in drawing from Mr. Cargin's reactions to decontrol.

As of now, the industry, as is evident from his address, definitely looks forward to only two benefits from decontrol. One of these is that the usual delays in the planning of orders amongst the steel producers would be mostly eliminated. And the other is that the pattern of production would henceforward be more closely related to the pattern of demand, though the aggregate volume of steel production, which continues to fall short of aggregate demand by more than a million tonnes per annum, cannot be expected to increase as a consequence of decontrol alone.

The engineering industry, it is well known, has been working very much below capacity because of the overall shortage of pig iron, mild steel and special steels. The foundry section of the industry, for instance, has been working at less than a third of its capacity thanks to the low level (about a million tonnes) of production of saleable pig iron in the integrated steel plants. The structural fabrication section of the industry has had to restrict its working to 50 per cent of its installed capacity in 1963 for lack of matching steel sections. The structural fabricators can look forward to substantial relief only after steel production and engineering designs are adapted to the rationalised (standardised) list of matching steel sections. For the engineering industry as a whole, the short-term prospect is one of continued steel shortage in the final two years of the third Plan. If, however, the proposed fourth Plan target of 13 million tonnes of finished steel can be achieved, it will certainly bring relief to engineering industry. But that is a big 'if,' for, according to Mr. Cargin, it might not be possible to achieve more than 75 per cent of that target. The rate at which the steel processing industries might seek to expand would, in his view, be influenced by the confidence in the attainment of the fourth Plan steel target. If a serious shortfall in the achievement of that target is foreseen, it would be prudent to avoid a repetition of the current situation where idle fabricating capacity, for instance, can be avoided only by large-scale imports, if possible. Similar considerations apply to the target of one million tonnes proposed for special steel under the fourth Plan. If, as against the third Plan target of 200,000 tonnes of special steels, the most likely achievement is going to be only about 50,000 tonnes, is there any reason to suppose that the proposed fourth Plan goal of one million tonnes might be fully achieved? Any section of engineering industry, which seeks to expand its capacity merely 'in the light of proposed Plan targets, would do well to think twice before doing so, for laying down a target does not necessarily mean that it would be hit in time.

PROFESSIONAL MANAGEMENT

ONE of the most distinguishing features of the industrial scene in this country is the gradual transformation of the character and pattern of industrial management. The traditional, fraternal and autocratic pattern of top management, in which family ties and group interests are predominant, is yielding place to professional management. In fact, a new class of professional managers, who have little financial or vested interest in the concerns they serve, except their emoluments and career, is fast emerging and filling up senior management positions. This divorce of ownership from management is a welcome development and it is in keeping with the trend in industrial management in foreign countries. But the role and importance of industrial managers have yet to be fully appreciated by the society as a whole. It is not generally realised that one of the most crucial factors that will make or mar the industrial future of this country is the quality of its managers. Scarcity of competent managers is as much a problem of the private sector as of the public sector and even of the Government, because they all have to draw from a common limited pool of managerial talent. If the industrial development plans are to be successfully implemented, it is essential that facilities should be created for training managers in adequate number. There is plenty of talent in this country. A good percentage of the large number of young men coming out of schools and colleges is excellent executive timber which could be fashioned into first class managerial talent, provided proper facilities for management development are created.

The realisation of the urgent need to develop managerial talent has led to the initiation of a programme to train managers which has, of late, gathered some momentum. The All-India Management Association and the regional associations affiliated to it, the management institutes set up at Calcutta and Ahmedabad (the former with the assistance of the Massachusetts Institute of Technology and the latter with the help of Harvard University), the National Productivity Council, the Administrative Staff Training College at Hyderabad, have all been doing significant work in this direction. The assistance of international agencies like the I.L.O. has also been enlisted. But much more remains to be done not only for training more managers but also to make professional management a vocation that commands the respect and confidence of the society. Professional management in this country is still suspect in the eyes of the public, may be because of its identification with businessmen and industrialists who are constantly being looked upon critically. It is, therefore, essential that professional managers should strive to win the confidence of the public and to establish precedents and traditions that will redound to the credit of management as a profession.

This point was strongly stressed by Mr. R. L. Tuli, President of the Delhi Management Association, in his speech at the eighth annual meeting of the Association held at New Delhi last week. Mr. Tuli paused to examine whether management was a profession in the strict sense of the term and to enquire by what standards the general public judged an occupation as a profession. Management, in his opinion, is as much a profession as medicine or law, requiring some specialised knowledge and skill which could be acquired through a combination of formal education and practical training. The lofty concept of service, integrity of conduct and high sense of responsibility are the standards by which the public will judge any profession, including management. And public confidence in any profession is based upon the adherence by the practitioners to a rigid code of ethics and conduct, together with the prompt disciplining of those who transgress it. This is as much true of management as of any other profession. In India, there are at present no specific, agreed standards of conduct for business and industrial managers. Accordingly, the legal minimum tends to become the ethical minimum.

There is, of course, as Mr. Tuli conceded, a large number of business executives who have a high sense of ethics which govern their business conduct, but these are personal standards arising out of their own background and upbringing. They cannot be considered as group standards shared by the managers as a class. The need to evolve a code of conduct and ethics and to adhere to it is, therefore, more urgent now than at any time in the past. For, as Mr. P. L. Tandon, Chairman of Hindustan Lever Ltd. told the Bombay Management Association this week, business enterprises and their conduct are now being put under public searchlight as never before. Consequently, professional managers have to be extra careful about their conduct. They should refrain from associating themselves with any irregular and unethical practices that may be followed by their employers. One, of course, realises the practical difficulties involved in following this simple ethical advice. But one has to remember that the misdeeds of a few will reflect on the reputation of the whole class of professional managers in this country, who, judged by any standards, are second to none in competence, integrity and sense of social responsibility.

MARKET GOSSIP

Monopolies Commission

THE Government of India is actively proceeding with the task of implementing the Finance Minister's promise to Parliament that he will soon establish a Monopolies Commission for finding out the extent of concentration of economic power in a few hands in this country and framing a draft legislation for dealing with monopolies and restrictive practices. An initial team of officials has already started preparing the ground for the Commission. The members of the Commission are yet to be chosen, and there is no truth in the report that Mr. P. V. Rajamannar, a former Chief Justice of Madras, is likely to be the chairman. The Government seems to have in view one of the judges of the Supreme Court for this post. It is a logical inference that the Department of Company Law, now under the wing of the Finance Ministry, will be called upon to assist the Commission in the preparation and collection of data, for it has almost all the information about the corporate sector in the country. The Finance Minister, it is said, considers the work done by the Mahalanobis Committee in this regard inadequate and finds its observations and recommendations conflicting and disjointed. He wants to see to it that the work of the proposed Commission is carried out expeditiously and in a businesslike manner, without any conflicts among the members of the Commission.

The terms of reference to the Commission are being prepared. The Government has certainly no intention to oblige the business community by bringing the public sector undertakings also within the scope of the Commission. So the L.I.C., the S.T.C. and the like are not regarded by the Government as monopolies or as instances of concentration of economic power in a few hands.

The Finance Minister has already assured the public that the Commission will perform its tasks without in any way disturbing the working of industrial and commercial concerns. The Commission which will be appointed under the Public Enquiry Act, will only be a fact finding body. What may affect the business community will be its findings and the consequential legislation. Since these will take quite some time to materialise, there is no need for the business community to get excited about the appointment of the Commission. On the contrary, businessmen should welcome the move and co-operate with the Commission, with a view to disproving some of the popular misconceptions. If the facts are in their favour, as is claimed by them, why should they fight shy of the Commission? If they oppose this enquiry, their critics may use it as an argument to support their contention that businessmen have something to hide.

It is not clear whether the terms of reference to the Commission will be so framed as to cover the effects of economic controls introduced in the name of planning, on a competitive market economy. The idea of Monopolies Commission is being taken from countries, where the freedom for private enterprise is not so circumscribed as they are in this country, and applied to a strictly controlled economy. This itself has led to a certain amount of monopolistic conditions in certain sectors of the economy. There are, in this country, many gentlemen's agreements in trade, industry and finance which in other parts of the free world will be treated as objectionable restrictive practices. It is for the business community to consider whether, in the prevailing political climate of socialism, the continuance of these agreements will be in their best interest or whether they should be suitably modified.

Pattern Of Interest Rates

The pattern of interest rates is in a state of flux, with underlying pressures tending to push up the rates. We advisedly say "in a state of flux," because the majority of bankers are still unable to recognise the upward pull on interest rates, notwithstanding the cue given by the Reserve Bank on 11th March. But the terms of two conversion loans announced by the Government of India this week constitute fresh evidence that it is not prepared to hold down interest rates by artificial means. On the contrary, they clearly show that it is willing to recognise the irrefutable fact that the demand for capital is running ahead of supply and that the terms of its borrowing programme must accordingly be adjusted in favour of lenders. Thus, the Government has stepped up its rate of interest to 4.75 per cent for a long-dated loan and 4.19 per cent for a short-dated loan, from 4.50 and 4.09 per cent, respectively, last year. It is true that the long-dated loan is a little longer than the one issued a year ago, that is, 25 years, as against 23 years. But the straight increase of ¼ per cent in the rate of interest is highly significant of the direction in which the wind is blowing. Equally significant is the fact that, although the six-year period of short-dated loan is the same as that issued in 1963, the Government is offering 0.10 per cent more.

Even more significant is the fact that the terms of the new loans are slightly more favourable than the yields on comparable existing loans prevailing on the eve of the loan announcement. Thus, 4 per cent 1969 and 4 per cent 1972 were giving a redemption yield of 4.13 per cent and 4.11 per cent. The yield on 4¼ per cent 1972 was 4.19 per cent. As against these, 4 per cent 1970 new loan will fetch a yield of 4.19 per cent at the issue price of Rs. 99 per Rs. 100. Again, in the case of the new 25 year loan, the yield is perceptibly higher than that (4.50 per cent) on the existing 4½ per cent 1986 loan. This loan was actually standing at a premium of 5 nP. Again, while making a comparison of yields, it must also be remembered that, whereas one has to pay brokerage on purchases made from the Gilt-edged market, no such expense is involved while applying for the new loan. Thus, if the Government really wanted not to pay more on its borrowings, it could have done so, though it would have had to take the risk of poor response from investors. Evidently, it did not want to swim against a strong current.

The following table showing the progressively better terms offered by the Central Government on its borrowings will be noted with interest:

Year of Issue	Return Offered on New Loans		
	Short-dated %	Medium-dated %	Long-dated %
1960	3.55	—	4.01
1961	3.69	3.73	4.11
1962	3.90	4.10	4.50
1963	4.09	4.25	4.50
1964	4.19	—	4.75

The trend has thus been definitely upward, though only gradually.

The Finance Minister has already announced that this year the State Governments would have to raise their loan requirements separately and that the Centre would not borrow on their behalf as it did last year. The yields on existing 10-11 year State loans last year were so high (ranging from 4.61 per cent for Maharashtra to 4.94 for Assam and Kerala) that they would not have been able to borrow except by offering 5 to 5¼ per cent for 12-year loans. The Centre's intervention on their behalf helped them to get their needs at considerably cheaper cost, 4.25 per cent to be precise. This year, however, the State Governments will have to pay anything between 4.75 per cent to 5 per cent per annum. At present, 4½ per cent State loans having a ten-year maturity are yielding 4.60 per cent, as against 4.14 per cent available on a Central loan of identical maturity. For a twelve-year maturity, the yield will have to be higher. It is, however, too early to talk of the exact terms for State loans. Much will depend upon the terms the Centre offers when it approaches the capital market in the slack season with cash loans for completing the remaining part of its borrowing programme for the 1964-65 fiscal year. The present offer, as readers are aware, is only intended to facilitate the conversion of the two loans maturing this year, with an aggregate outstanding amount of Rs. 188.51 crores.

The new loans have not so far had any perceptible effect on the Gilt-edged market. Really speaking, they should have caused a fall in values. But, actually, it is difficult to put through any sizable buying order, let alone small lots. This is due to the technical position of the market. The Reserve Bank has withdrawn from the market as a seller. At the same time, there has been a short position in some of the securities thanks to selling by some dealers in anticipation of favourable terms on new loans. These shorts have been trying to cover their position without much success. If the technical position of the market gets corrected in the next few days, gilt-edged values may go down to some extent. The chances of any pronounced fall are, however, remote, for, as soon as the busy season comes to an end and bank advances get repaid, the banks will be substantial buyers, as quite a number of them will have to build up their investment portfolios, in order to maintain their liquidity ratio at well above the enhanced statutory limit that will come ino force in September next.

Those bankers who are opposed to an increase in the interest rates on deposits are surely swimming against the current. Their tenacity may be admirable, but it is going to be of no avail, as they will ultimately lose the battle in some way or other. At worst, they will continue to be subjected to severe credit controls, for, with a higher liquidity ratio to be maintained in the next busy season, they will have to go to the lender of last resort more frequently and borrow perhaps at higher penal rates. When the Reserve Bank itself has hinted that the time has come to raise the rates of interest on deposits and the Government too has followed it by giving more favourable terms to lenders, the contention of the Indian Banks' Association that it would raise the deposit rates only if (a) the lending rates also were enhanced and (b) the State Bank of India, too, followed suit simultaneously, is only an excuse for deferring action, for the State Bank is unlikely to disregard the official pointers. Anyway, at least one of the member-banks, namely, the Syndicate Bank, has mustered enough courage to disregard the Inter-bank Agreement on deposit rates and started quoting higher rates at its upcountry branches. It is only a question of time before some of the other banks, especially those in the South, also follow suit, unless the big banks agree to an upward revision in good time. The inter-bank agreement is thus once again in the melting pot. May be, appointment of the Monopolies Commission, when it materialises, will prove to be the last straw on the camel's back.

L.I.C. In General Insurance

The Life Insurance Corporation of India, which was so far concerned only with life insurance business, has commenced transacting general insurance business also with effect from the beginning of this month. This is in pursuance of a decision taken by the Corporation a few months ago to enter the general insurance field so as to offer complete insurance service to the public. The Corporation will transact all classes of general insurance business, namely, fire, marine and miscellaneous business. The last-mentioned class of business includes motor insurance, personal accident, aviation insurance, burglary, fidelity guarantee, credit guarantee, contract guarantee, contractors' all-risks insurance, workmen's compensation and engineering insurance (machinery erection, breakdown, boilers and pressure vessel explosion, loss of profit, etc.). The Corporation will operate as a non-tariff insurer. It will not, therefore, be bound to charge for its clients the tariff rates in force at present. To start with, however, the Corporation will charge the tariff rates, but, in due course, the Corporation says, it will evolve its own rating structure and schedule on sound and scientific lines in the light of its underwriting experience.

The L.I.C.'s entry into general insurance is sure to have far-reaching effects on the trend and character of the general insurance market in the country. With its 570 branches and sub-offices scattered all over the country and with vast resources at its command, the Corporation is in a position to dominate the general insurance field, as no private insurer, however big, can hope to do so. Even the biggest Indian company in the private sector, namely, the New India, is in size a pigmy as compared with the giant L.I.C. In addition, L.I.C. has its wholly-owned subsidiary companies doing both direct-writing (Oriental) and reinsurance business (Indian Guarantee). The L.I.C., together with its subsidiaries, is no less than a colossus in general insurance and, since it is not a tariff insurer, it can turn and twist the market the way it wants. Those, if any, who like to pretend that nothing has happened and that nothing ever will happen in general insurance because of L.I.C.'s entry are in for a rude shock. For competition in general insurance, which is already keen, has acquired a new and sharper edge.

Whether or not this will benefit general insurance will depend on how the L.I.C. conducts its business and how the private companies rise up to the challenge of meeting L.I.C.'s competition. As it is, the dice is heavily loaded against the private companies. L.I.C. can certainly use its position as the sole agency for doing life insurance business to attract general insurance business. The fact that the same agents of the L.I.C. who at present canvass life insurance business will also be canvassing general insurance business for the Corporation makes this more than a probability. In other words, there is likelihood of diversion of business from private companies to the L.I.C. If this is going to be the only, or even the main, outcome of L.I.C.'s entry into general insurance, the Corporation would have achieved nothing. If, on the other hand, the L.I.C. ventures into new fields hitherto not tapped by private companies or develops further the existing lines of business in a more efficient manner than the insurers in the private sector, it will be making a valuable contribution to the national economy. The total volume of business done in this country in the years to come will provide the answer. If there is a spectacular jump in the turnover of general insurance business without detriment to the progress of fair-sized insurers in the private sector, the L.I.C.'s entry will have been justified. In fine, it is too early to offer a pragmatic verdict on this momentous development in the field of general insurance. One has to wait and see.

Millionaires In Britain

Millionaires are not a vanishing tribe even in Britain where the concepts of Welfare State and progressive taxation, both of which militate against concentration of wealth, have taken firm roots. In fact, their number is increasing, though those who could be bracketed in the millionaire group, that is, persons with an annual income of over £100,000 (about Rs. 1,330,000) are less than a hundred. Thus, the number of Britishers having an income of over £100,000 in 1962-63 was 92, as against 87 in the previous year and only 63 in 1960-61. Another 92 persons were runners-up for the millionaire badge, their annual income ranging from £75,000 to £100,000, as against 83 persons in this income group in the previous year. These figures are taken from the latest annual report of the Commissioners of Inland Revenue of Britain just published. The report contains a formidable volume of tax and income statistics which present a comprehensive picture of income and wealth distribution in Britain.

There are, according to the Commissioners' report, 20.25 million taxpayers in Britain out of a total population of 53 million (in 1962) who paid £3,004 million in income-tax and surtax, an average of £148 each in 1962-63, as against £102 in 1961-62. Incomes of some two million persons were relieved entirely from tax by allowances. Tax revenues in 1962-63 reached a new record and the amounts collected from income-tax and estate duty were higher than in any previous year. Gross receipts from all direct taxes and duties rose to £4,201 million in 1962-63 from £4,061 million in the previous year. The cost of collecting this revenue was only £58 million, which was equivalent to 3.31d. per pound sterling, or 1.38 per cent, as compared with £55.5 million equivalent to 3.28d. per pound or 1.37 per cent in the previous year. The number of staff engaged on this duty showed a net increase of 1,017 to 58,270 during the year.

Net receipts on account of surtax aggregating £183 million was about £40 million less than in the previous year, because of the reliefs on earned income announced in the 1961 budget. The number of surtax-payers also declined from 442,123 in 1961-62 to 249,281 and so also their aggregate income from £1,949 million to £1,407 million. Surtax-payers with incomes exceeding £100,000 a year, that is, the so-called millionaires, were, as already noted, 92, as compared with 87 in the previous year. Among other major taxes, estate duty yielding £270 million during 1962-63, £9 million more than in the previous year, and profits tax £381 million, as against £334 million.

The total net wealth of individuals in Britain is estimated by the Commissioners of Inland

Revenue at £58,196 million, shared by 18,760,000 individuals. In the over £200,000 bracket there are an estimated 7,000 people, their total wealth amounting to £3,888 million. At the other end of the scale, those with not more than £1,000 each, numbered 9,416,000, their total wealth aggregating £4,301 million. There were 15.09 million individuals whose wealth did not exceed £3,000 each. Above this range, the most numerous bracket was £5,000-£10,000, comprising 1,120,000 persons, with an aggregate wealth of £8,003 million.

An analysis of the ratio of profits to turnover during the year 1959-60, based on a sample of British companies and presented in the report under review, indicates that 30,226 companies had a turnover of over £24,955 million; their gross trading profit amounted to £2,350 million and net trading profit to £1,739 million. The most common ratio of net profit to turnover was in the bracket 2½ to 5 per cent. In the highest bracket, with a ratio of profit to turnover of over 40 per cent, there were 826 companies. Their turnover was £216 million, gross trading profit £113 million and net trading profit £103 million. The lowest group, which had a negative ratio, comprised 980 companies with a turnover of £881 million, gross trading profit of £50 million and net trading profit of *minus* £15 million. This means that only a little over 3.3 per cent of companies in Britain had suffered a net loss in the past fiscal year.

Mr. Jalan On Fiscal Policy

The Union Finance Minister, Mr. T. T. Krishnamachari, has sought to give a new look to the Government's fiscal policy. This is how Mr. B. L. Jalan, Chairman of Asiatic Oxygen Ltd., described T.T.K.'s latest budgetary effort in the first part of his speech at the annual general meeting of the Company held at Calcutta on 30th March 1964. But what a new look! Mr. Jalan himself had this to say in the latter part of his speech:

"While we have to thank the Finance Minister for several reliefs proposed for industries, including selective corporation tax relief, one wonders whether the budget proposals will, on the whole, achieve these objectives. Great doubts have been expressed, which are reinforced by the prevailing investment climate on the stock markets. The treatment of bonus shares as capital gains and the imposition of a fresh dividend tax are measures which are bound to deter investors while the gains to the national exchequer may be negligible.

"What, however, is really disturbing is the fact that our basic fiscal policy undergoes structural changes almost every year. The re-introduction of expenditure tax, the raising of Estate Duty rates to 85 per cent and the uncertainty introduced about the development rebate, are matters which have obviously deterrent effects on the will to save and invest. While it is gratifying to learn that the Finance Minister has promised that he does not propose to make any basic changes in the coming years, there cannot be any doubt that the changes which have been already brought about in our fiscal structure from year to year have been so substantial that one's confidence in our stable fiscal policies is bound to be shaken."

Mr. Jalan has rightly pleaded for a *stable* fiscal policy, for it is only such a policy that will induce a higher level of investment and attract more foreign capital. But this does not mean that, in the name of stability, a judicious reduction in the incidence of taxation on both corporations and individuals should be denied. What is required is not only a lowering of the tax burden but also a simplification of the present multiplicity of taxes, made more cumbersome than ever before by the latest Budget.

FISH FLOUR

Scientists of the Fisheries Research Board of Canada's technological station at Halifax in Nova Scotia are opening a new chapter in Project Fish Flour. Until now, their experiments in the development of this high protein product has involved the use of commercial salt water fish. Now they are utilising "waste" or non-commercial fish of any type that is normally discarded by fishermen. The experiments on commercial fish have been highly successful. The highest quality flour was produced from haddock and cod fillets. The fillet produced the highest protein rating at its flour was whiter than that produced from other raw materials. In all cases the protein rating was excellent. Development of fish flour was a project sponsored by the Food and Agriculture Organisation of the U.N. and was undertaken by many of the world's leading fisheries research laboratories. The programme was prompted by a desire to supply underprivileged nations with a cheap supply of animal protein. Dietetic studies also showed that in Canada and the United States there was need for additional proteins in some diet formulations, especially for people engaged in heavy manual work, post-operative patients and elderly people. One of the simplest uses of the product has been as additive to bread and cereals.

BRITAIN'S FIRST WOMAN STOCKBROKER

Miss Muriel Melvin of Aberdeen, Scotland, will most likely become Britain's first woman stockbroker within the next three weeks. Her application for membership has already been approved by the Council of the Scottish Stock Exchange which started functioning at the beginning of this year. But it is open to objections that may be raised within 14 days and its final acceptance will be by a two-thirds majority of the Exchange members. It is not known whether the United States, or France, or West Germany has a woman stockbroker, but India has none so far.

TREND OF SHARES

EQUITIES STILL WEAK

(From Our Own Correspondent)

BOMBAY, *2nd April*

LAST week's rally in equities proved, as was indicated here, a corrective one to the downward trend since the budget, for after fluctuating both ways, the market relapsed again this week to close on a weak note. The price trend during the week under review indicated a narrow market confined largely to professional activity. Whatever small outside support that was noticed during the week was purely in the nature of bargain-hunting. Nothing more, however, could be expected, in view of the growing diffidence of marketmen about the ability of stock markets to record any sustained improvement in the absence of suitable reliefs in the tax proposals. While the expected tax reliefs were still far from being in sight, the adverse effect of the tax proposals as demonstrated in the postponement of a number of bonus issues and the delay in the announcement of working results and dividends by leading company managements, like Birlas and Mafatlals, continued to dampen sentiment. Reports that the Finance Ministry had written to stock exchanges asking them to explain the present weakness in the markets were given no particular importance. It was rather argued in this context that the Finance Ministry should know only too well what had caused the present weakness. A further extension of support by the L.I.C. and Unit Trust to blue chips, like T.E.L.Co., Hindustan Motors, Steel shares, A.C.C., Kohinoor and Bombay Burmah, failed again to leave any significant mark on sentiment. Finally, since the majority of professional operators continued to be bearish, even the slightly oversold technical position of the markets did not embolden buyers. On bargain hunting by the smaller fry and quick operations by the professionals for small gains, equities faltered at higher levels and closed with modest losses over the week.

While the delay in the announcement of the expected tax reliefs kept markets subdued, the general factors, too, worked against any recovery in values. Political factors, like the question of finding a successor to Prime Minister Nehru, Pakistan's growing intransigence and the serious problem of mounting influx of the minorities of that country into this country, and the proposed release of Sheikh Abdullah, weighed heavily with buyers against making any sizable purchases. The deteriorating labour situation in the industrial belt of India, more particularly in Madhya Pradesh, where the Central Government-owned Heavy Electricals factory was closed indefinitely from the night of 29th March, was a distinctly bearish factor for the markets. Finally, the import policy for 1964-65 announced on 31st March evening did not appear particularly favourable for accelerating the economic tempo, though it did carry some liberalisation for small and defence-biased industries.

The corporate news, particularly about the expansion plans of the Hindustan Lever Ltd. and the Indian Aluminium Company Ltd., made encouraging reading. But, with the confidence in T.T.K's ability to gear up the economy rather shaken after the budget and in the light of political disquiet and other discouraging factors, it did not enthuse marketmen to take a bullish view about even the shares of these two companies. The renewed weakness this week, after last week's rally, clearly underlined the markets' inability to stage any worthwhile come-back in the absence of definite stimulants.

* * * *

Fluctuations on Dalal Street were two-sided but narrow. While shares, like Steels, T.E.L.Co., Voltas and Hindustan Motors, resisted fresh bear pressure at lower levels, the more speculative counters such as Century, National Rayon and Standard succumbed further to selling. The Century's announcement yesterday of book closure in May produced more sellers than buyers in this scrip, as it did not say whether the books would be closed for the expected final dividend for last year or for a likely rights issue. The prospects of a higher book closure *badli* charge also kept buyers away from these shares. National Rayon's satisfactory outlook for the current year did not particularly restrain sellers in the shares of the Company, in spite of the fact that they appeared, to speculative buyers, rather low priced. However, a part of the setback in these shares seemed to be in sympathy with Century and also because of the transfer book closure *badli* tomorrow. Standard continued to remain weak because of uncertainty about last year's dividend pending a clearer picture about the proposed tax on the profit distributed as dividend.

Tata Ordinary closed the week with a loss of 50 nP at Rs. 146.25, Indian Iron of 4 nP at Rs. 24.60, T.E.L.Co. of Rs. 2.25 at Rs. 299.25, Voltas of Rs. 5.25 at Rs. 260 and Hindustan Motors of 12 nP at Rs. 18.28, Century were down by Rs. 11.50 to Rs. 611, Standard by Rs. 13 to Rs. 654 and National Rayon by Rs. 4.50 to Rs. 357.50. Indian Dyestuff slumped by Rs. 23.75 to Rs. 296.25. Among others, Bombay Dyeing declined from Rs. 61 to Rs. 60, Kohinoor from Rs. 339.50 to Rs. 336.50, A.C.C. from Rs. 148.50 to Rs. 148.25, Belapur from Rs. 222.50 to Rs. 220, Bombay Burmah from Rs. 60.30 to Rs. 60 and Scindia from Rs. 15.48 to Rs. 15.28. Cash scrips were lower in the absence of investment support. Hindustan Electric recorded a big fall of Rs. 12.50 to Rs. 117.50. Colour-Chem were five points lower at Rs. 341.25 and Synthetic Rs. 4.50 lower at Rs. 93.50.

* * * *

Excepting Dunlop Rubber which met with support and closed 81 nP higher at Rs. 36.37, forward shares on the Calcutta Stock Exchange ruled quiet and finished with small variations either way. Thus, Burakkur showed a gain of 32 nP at Rs. 16.19 and Indian Aluminium of 50 nP at Rs. 31.50, but Kesoram declined by 44 nP to Rs. 26.06, Howrah by 37 nP to Rs. 16.75 and Shree Gopal by 25 nP to Rs. 25. Cash scrips sagged further. Bharat Commerce, among Textiles, were marked down from Rs. 23.12 to Rs. 21.25 and Anglo-India, among Jutes, fell by Rs. 9 to Rs. 171, Bally by Rs. 6 to Rs. 242 and Kelvin by Re. 1.50 to Rs. 144.50. Burn Engineering lost further six points to Rs. 286. Alkali Chemical dropped by Re. 1.19 to Rs. 30.37 and Balmer Lawrie, among the Miscellaneous shares, were weak at Rs. 260 as compared with Rs. 265 last week, and so were Rallis India at Rs. 119.50 as compared with Rs. 124.

* * * *

Textiles, Miscellaneous issues and Plantings weakened further in Madras. Thus, Buckingham dropped by seven points to Rs. 265, S.I. Viscose by Rs. 5.50 to Rs. 128.50 and Bangalore Woollen by five points to Rs. 270. While Aluminium Industries gained 35 nP to Rs. 19.80, F.A.C.Ts declined by 30 nP to Rs. 5.40, Orissa Cement by 11 nP to Rs. 13.70 and Mettur Chemicals by 10 nP to Rs. 13.65. Among Plantings, Vaikundam Rubber were marked down from Rs. 36.50 to Rs. 35.10, with Balanoor Coffee closing 88 nP lower at Rs. 12.37 and United Nilgiri Tea 53 nP lower at Rs. 23.22.

BHARAT ELECTRONICS LTD.

The Bharat Electronics Ltd. (B.E.L.), Bangalore, has set itself a target of Rs. 9 crores worth of production of electronic equipment for its current financial year ending 31st March 1965. Last year (1963-64), it had exceeded the target of Rs. 4.20 crores by December 1963.

Since it commenced production in January 1956, the B.E.L. has manufactured equipment of a total value of Rs. 9.25 crores up to the end of December 1963, with the output rising progressively from Rs. 62,000 in 1955-56 to Rs. 302.74 lakhs in 1962-63. The saving in foreign exchange from the production in 1962-63 was of the order of Rs. 88 lakhs.

The B.E.L. today produces transmitters of different powers with facilities for various modes of operation, several types of receivers, transreceivers for static and mobile roles, multichannel equipment and single and independent side-band equipments. The electronic requirements of the Services are now being increasingly met from its production. While single and multichannel trans-receivers and medium and high-power transmitters are already being supplied to the Services, more and more specialised items of equipment are now being taken up for production.

PREMIER CABLE COMPANY LTD.

Premier Cable Company Ltd. proposes to enter the capital market some time in the middle of the current month. Its authorised capital is Rs. 1 crore, but it is issuing Rs. 70 lakhs out of this, comprising Rs. 22 lakhs in 9.3 per cent cumulative redeemable preference shares of Rs. 100 each and Rs. 48 lakhs in equity shares of Rs. 10 each.

The Company has been formed for manufacturing P.V.C. insulated power cables in technical collaboration with Messrs. VEB Kabelwerk Oberspree of the German Democratic Republic, who are one of the leading manufacturers in Europe of aluminium conductor cables using P.V.C. for insulation. The German firm belongs to the original A.E.G. group and has acquired its present name since the division of Germany. It has been in existence for last 65 years. The factory of the Company is to be located at Karukutty in Kerala State. The site has been chosen because of the availability of cheap power, educated and efficient labour and its proximity to the centres of raw material supply. Fifty-five acres of land has been purchased for the factory near the railway station.

KERALA SPINNERS LTD.

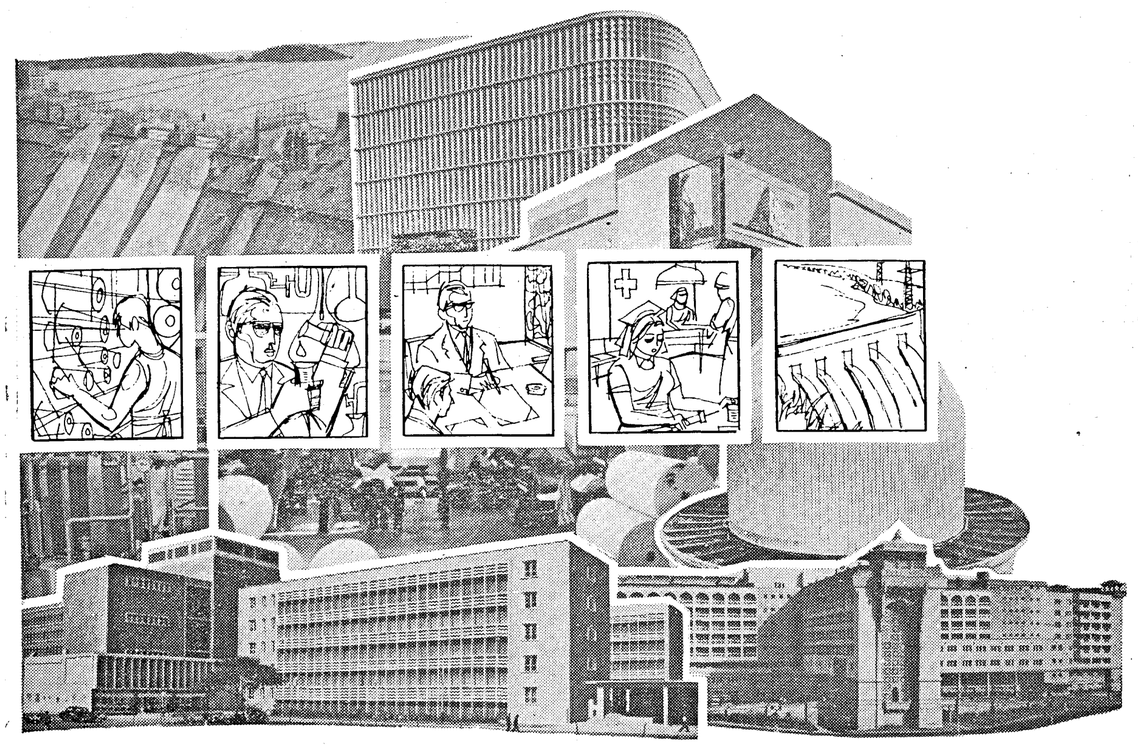
Kerala Spinners Ltd. is a new company registered at Ernakulam for setting up a spinning mill with a capacity of 25,000 spindles. Land for the mill has been acquired at Kamalapuram which is three miles from Alleppey, with the co-operation of the Kerala State Industrial Development Corporation Ltd. The foundation stone of the factory building has been laid and indigenous machinery worth Rs. 23 lakhs has been ordered.

The Company proposes to issue capital of Rs. 40 lakhs, of which Rs. 10 lakhs will be in preference shares and the rest in equity shares. The Kerala State Industrial Development Corporation Ltd. will subscribe for shares worth Rs. 10 lakhs. The promoters and their friends will take up shares of the value of Rs. 10 lakhs. The balance of Rs. 20 lakhs will be offered to the public in next June.

TAX DEDUCTION FROM DIVIDEND

The authorities of the Bombay Stock Exchange have notified its members that, when transactions for shares are put through on *cum*-dividend basis after the transfer books of the concerned companies have been closed, or when there is not enough time for transferring the shares to the purchaser's name, the buyer is entitled to a net dividend arrived at after deducting 20 per cent tax from the gross dividend declared and not 30 per cent as before. This change has been necessitated following the alteration contained in the current year's budget. In the case of individual resident shareholders, if a company deducts tax at source at less than 20 per cent, an adjustment will have to be made to that extent. As for Government securities and debentures, the present practice of deducting tax at the rate of 30 per cent continues. A notification on these lines has also been issued by the Council of Management of the Madras Stock Exchange.

they're glad they thought about air conditioning...



with CARRIER and VOLTAS of course!

When their factories, conference halls, booking offices, hotels, theatres, hospitals, laboratories and storage plants are up... when they're discovering for themselves what a world of cool, comfortable difference Carrier and Voltas make! Throughout the country, climate control of important projects ranging from atomic reactors, medical institutes and research laboratories to dams, fertiliser factories, machine tool plants and countless offices, embassies and public utility buildings has been entrusted to Voltas. Their equipment is first rate. And they bring the maximum engineering experience and skill to every job. No wonder their morale is as fine as their service. Clients are constantly saying: "Carrier and Voltas are the people who know air conditioning and refrigeration best!"

IMPORT POLICY

SINCE no one had feared any drastic import cuts and everybody had expected some liberalisation, the new import policy for the current financial year (April 1964-March 1965), announced on the last day of the last financial year (31st March 1964), has caused no surprise at all. There has been a notable improvement of Rs. 10 crores to over Rs. 126 crores in foreign exchange reserves over the year 1963-64, despite the payment of the first instalment (Rs. 11.90 crores) of the Rs. 119.04-crore I.M.F. credit obtained in August 1961. Further, the U.S. and U.K. Governments have made available sizable untied (general purpose) loans amounting to Rs. 107.10 crores and Rs. 6.7 crores, respectively. There is also the hope in Government circles that the Aid-India Consortium, at its meeting at Washington next month, would pledge the total aid of about Rs. 547.40 crores requested for the fourth year of the third Plan. Taking into account all these factors and with a view to improving the growth of industrial production which has been sluggish for some months now, the Government of India must have considered the present time to be quite opportune for liberalising imports. The move is in the right direction, considering that the continued restrictive nature of the import licensing policy for the year 1963-64 has resulted in a pronounced scarcity of, and high prices for, essential raw materials and components used by a wide range of industries. And the reduction in quotas for low priority items is only as it should be.

It is, indeed, gratifying that the Government has given due recognition to the maintenance needs of actual users, especially in the small-scale industry sector, as witness the increased quotas for imports of essential industrial raw materials and components. The increased quotas will certainly enable a number of industries to utilise a large part of their capacities now lying idle. The import quotas for 17 essential items have been enhanced and fourteen new items have been added to the import list of actual users, without, of course, any additional foreign exchange allocations. As for established importers, however, the overall quotas have been maintained at the previous year's level, thus ignoring their plea for a larger share. Even the scope given to these importers has not been extended to include those items for which quotas are granted to actual users.

Four striking features mark out the new import policy from the previous ones. In the first place, export incentive schemes have been brought within the orbit of the import policy. Accordingly, imports made under the incentive schemes are now governed by the overall policy, although entitlements will continue to be proportionate to the f.o.b. value of exports. This is a welcome move, intended mainly to rationalise procedures. Secondly, the policy for licensing individual items has been streamlined; a separate index is included for this purpose in the new Red Book. Thirdly, the scheme for licensing specific goods to consumer co-operative societies, which was in force up to the end of March 1964, has been replaced by a new scheme under which imports of a few selected consumer goods will be allowed during the current year within a limited ceiling, through wholesale central stores recognised by the Ministry of Community Development for distribution to consumers' co-operatives. And, finally, the scope of annual licensing has been widened to cover all imports, excepting eight items which include capital goods, raw jute, cashewnuts, raw wool, raw cotton, jute machinery and textile machinery.

If the import policy has not been more liberal than is actually the case, it is because of the Government of India's anxiety to avoid any undue pressure on its foreign exchange resources. The anxiety is clearly understandable, because the foreign exchange position is by no means comfortable having regard to the still large import surplus and the maturing obligations to foreign countries. There is, of course, the I.M.F. from which the country can secure a standby credit in times of compelling circumstances, but this is no solution. The basic problem of finding the required foreign exchange for the increasingly large imports lies in (*a*) more vigorous export promotion (the willingness of the industrially advanced countries to buy more from India is assumed here), (*b*) greater untied loans from the friendly countries abroad, and (*c*) larger inflow of private foreign capital.

AMALGAMATION OF SMALL COLLIERIES

The coal industry, which is represented by three organisations, namely the Indian Mining Association, the Indian Mining Federation and the Indian Colliery Owners' Association, does not speak with one voice at least on some matters. For instance, at the moment, the industry's approach to the related questions of amalgamation of smaller collieries and mechanisation of mining operations reflects sharp differences among the principal organisations. It was only the other day that Mr. Pran Prashad, Chairman of the Indian Mining Association, pleaded strongly for bigger units, capable of producing upwards of half-a-million tonnes of coal each per annum and for rapid and full-fledged mechanisation. But the Chairman of the Indian Mining Federation, Mr. S. N. Mookherjee, while addressing the fifty-first annual general meeting of the Federation last week, strongly criticised the Indian Mining Association's approach. Referring to what he called "the attempts which are unfortunately being made in some quarters to belittle the importance of small collieries in the developing economy of the country," he advanced the following counter-arguments:

"Perhaps it is not known to many that even in the U.S.A., the largest coal producing country, there is a much larger number of small mines with an output of below 25,000 tons a year than in India. But no attempt has been made by the U.S. Government to amalgamate them. Similarly, in the U.K., there are many small collieries scattered all over the country, each producing less than 10,000 tons annually, which were not taken over even by the National Coal Board when the coal industry was nationalised. ... As a matter of fact, these small collieries serve the country in their own way. ... Moreover, in view of the recommendation of the Committee on Amalgamation of Collieries that an economic colliery is one having a production of 10,000 tons a month, a figure which was later reduced to 7,000 tons, it is beyond my comprehension how one speaking in the same forum, a representative of which was a party to the above report, could express an altogether different view and consider an economic unit as one having a much higher monthly production. It has further been indicated that only collieries with a potential production of over half-a-million tons per annum can produce coal at the lowest possible cost and that marginal units... should close down and leave it to those stronger and more responsible units of the industry to meet the demands of the future. In that case, only a small number of collieries in India should be there to deliver all the coal needed during the fourth and subsequent Plan periods. This suggestion, which on the face of it is preposterous, is to me clear evidence of an attempt to establish a case for the concentration of the entire coal industry in the hands of a few business houses in the coal industry which, of course, is quite contrary to the national objective of democratic socialism for which the country has been striving so hard for the last several years. It must not be forgotten that in a socialistic pattern of society the existence of small and medium-sized collieries has rather helped to diversify and strengthen the economy of the country by thwarting attempts to create such monopolies."

So, in the name of socialism, Mr. Mookherjee has opposed the plea for larger units with their undoubted economies of scale, forgetting that both capitalist industrialisation and socialist industrialisation have the same objective, namely, organisation of production on large-scale lines. If the Indian brand of socialism is thought of in terms of wasteful and inefficient methods of production, it is difficult to see how the country can be industrialised rapidly. Mr. Mookherjee's criticism of the plea for full mechanisation of collieries in India is also of a piece with his stand against large-scale units. His argument, in this connection, is that, in the context of the availability of enormous manpower and the continuing possibilities for open cast shallow mining, it would not be necessary to go in for complete mechanisation. An identical argument has also been advanced by Mr. N. L. Jalan, President of the Indian Colliery Owners' Association, in his address at the annual general meeting of the Association held at Dhanbad on 30th March 1964. In his view, it would be unrealistic to prescribe wholesale mechanisation of mining at the present levels of economic development, demand for coal and employment. It may be noted here that the Indian Colliery Owners' Association, too, represents small collieries, besides big and medium ones.

All these arguments against fuller mechanisation are in a way calculated to scotch any move towards compulsory amalgamation of small and uneconomic collieries, for one of the compelling arguments in favour of amalgamation has all along been that a larger amalgamated unit could be more easily mechanised. Incidentally, amalgamation through persuasion has so far been completed only in 32 cases, and the Amalgamation Committee's proposals for transforming 450 uneconomic collieries in West Bengal and Bihar into 115 economic units have not been accepted by the colliery owners concerned. The Government, therefore, seems to be already thinking in terms of compulsory amalgamation through suitable legislation. It is probably because of this likelihood of statutory compulsion that the Indian Mining Federation, in particular, has vehemently criticised the Indian Mining Association's stand on the question. There is no doubt that there is a lot of acrimony in this controversy between two sections of the industry, and this is unfortunate. As far as this journal is concerned, its view has all along been that the twin processes of amalgamation and mechanisation should be expedited in the interest of more efficient production.

LABOUR PROBLEMS

As a critical evaluation of the labour situation in the country, the speech of Mr. D. C. Kothari, President of the All-India Organisation of Industrial Employers, at the thirty-first annual session of the Organisation held at New Delhi on the 2nd inst., is a notable one. In the light of his intimate knowledge of the dynamics of industrial relations in this country, Mr. Kothari examined the causes of labour unrest which has of late been much in evidence in spite of the Emergency and the various steps taken to ensure industrial peace, and suggested certain attitudes and approaches required to tackle the problem effectively. Labour policy has to consider, Mr. Kothari conceded, the overall economic conditions and needs, but it also has to serve, in his opinion, a limited purpose of promoting better labour-management relations. This, according to him, is essentially a problem of evolving acceptable procedures and rightly interpreting labour laws, so as to arrive at practical solutions to issues which disturb industrial peace. This requires an understanding of the operation of the economic mechanism, respect for national values and a spirit of tolerance and accommodation. Mr. Kothari regretted that some elements in the labour ranks were acting in a way contrary to this spirit and, taking advantage of the democratic political set-up in the country, were trying to whip up strikes on one pretext or another. Industrial unrest was in evidence, the President pointed out, even in establishments engaged in defence production, inter-union rivalry continued and very little was being observed of the self-imposed discipline embodied in the Code of Discipline. In other words, the deterioration in the labour situation stems from political factors and wider economic issues over which employers, either individually or collectively, have no control. The rise in prices is made an excuse to organise hunger strikes, demonstrations and *hartals* all of which, as Mr. Kothari aptly averred, will only bring down production and raise prices further.

The President of the Organisation then went on to examine the causes of the rise in prices and the methods for holding the price line. Since the pressure on prices has its origin in inadequate agricultural production, the problem, in Mr. Kothari's opinion, is how to increase agricultural production. He suggested, in this connection, that the Government should encourage industrial employers to associate themselves with agricultural production, so that the requisite fillip may be given to it. He, however, did not indicate how this could be done. Nor did he refer to the fact that the current trend is in the opposite direction, thanks to the land ceiling legislation. Instead of concentrating on increasing agricultural production, the Government, he added, seemed to be shifting the emphasis on to distribution. The normal agencies of distribution, which have served the community so faithfully for so long, are castigated and untried alternative methods are commended as ideal solutions. The reference here is, obviously, to the move, among other things, to force industrial establishments to start fair price shops for workers.

"There is enough evidence with the Government to prove," said Mr. Kothari, that employers have responded to the call to establish fair-price shops to the best of their ability and, if the desired progress has not been made, it is because of certain practical difficulties which can be overcome only with the help of the Government. The mere opening of fair-price shops or consumer co-operative stores, the President added, "is not a permanent solution and, very likely, it may not offer even temporary relief, if sufficient supplies are not made available to the shops."

An important aspect of industrial relations, which calls for immediate regulation, according to Mr. Kothari, is the demand of workers for additional leave provision which is even now over-generous. There are different kinds of holidays in this country, like national and festival holidays, their number varying from four to thirty, in addition to paid privilege leave for fourteen days under the Factories Act, sick leave for fifty-six days under the Employees' State Insurance Act, accident leave permissible under the Workmen's Compensation Act, etc. All these together enable an industrial worker to absent himself, on an average, from 120 to 150 days in a year. Social security provisions in labour legislation are sought to be interpreted as the minimum, with the result that industrial courts and tribunals have taken a very liberal view of the demands of workers. There is also a growing tendency to put pressure on management to close factories on special occasions. Mr. Kothari pleaded for putting an end to this anomalous situation or at least check any further fall in the number of working days. He suggested that every demand for holidays additional to those provided should not be a subject matter either of dispute or adjudication.

Referring to the criticism levelled against employers that they have failed to honour their commitment to popularise arbitration as a means for settling their disputes with workers, Mr. Kothari said that employers stood by their undertaking but reiterated the stand taken by them that voluntary arbitration would not succeed, unless the necessary climate and mutual trust in the parties were created. He, however, warned that, in the enthusiasm to try voluntary arbitration, it was unwise to lose sight of some basic managerial functions like maintenance of discipline, industrial operations, etc. Apart from these considerations, there are also certain other limitations. The success of voluntary arbitration depends, to a large extent, on the knowledge, integrity and social status of the arbitrators. Good arbitrators are not easily available in this country, though it may not be too difficult to find them. In any case, Mr. Kothari said, provision should be made for some remedy against perverse awards and awards that went far beyond the terms of reference until such time as enough experience in voluntary arbitration accumulated.

The President of the Organisation expressed disappointment at the recommendations of the Bonus Commission. It was expected, he said, that the Commission would be more discriminating in its approach to the bonus question and would consider its broader economic aspects and suggest a set of alternatives which would be applicable to different industries with different problems. This hope has been belied. On the bonus formula recommended by the Commission, Mr. Kothari made the following comments:

"If the funds available for the improvement of the technique of production, for obsolescence, for repayment of medium and long-term indebtedness, reserves for contingencies, etc., were dissipated by way of bonus to workers, surely the progress of industry cannot be expected to reach the targets indicated in the third Plan. Optional but necessary obligations like rehabilitation allowance (including wasting allowance for mining industry and re-plantation allowance for plantations industry), provision for depreciation to cover the gap between historical cost and replacement cost, etc., which give force and substance to industrial development, should be allowed as a charge before calculating the distributable profits for bonus. These issues are of wide application, and the damage they may perpetuate will be both severe as well as continuing. I trust the authorities will give consideration to these larger implications."

The problem of increasing industrial production simultaneously raises the issue of trained manpower. Mr. Kothari suggested in this regard that the future requirements of scientific and engineering personnel should be estimated well in advance, so that necessary measures can be taken to augment supply. It may be recalled here that the compulsory apprenticeship scheme under the Apprentices Act obliges industry to train a specified percentage of skilled workers in 23 designated trades. Large industrial establishments employing 500 or more workmen are required to set up training workshops for apprentices at their own expense and the Government is to give financial assistance for setting up such workshops and provide facilities for the import of machinery, etc. The Government has also undertaken the obligation to set up training workshops at a central place for the training of apprentices on the rolls of small establishments. The success of any such scheme, Mr. Kothari emphasised, would depend on the extent to which the Government fulfilled its obligations. A good suggestion made by him in this connection is that the State Apprenticeship Advisers should visit schools and tell the outgoing students about the existence and merits of the apprenticeship schemes.

CANADIAN INVESTMENTS IN INDIA

Although the financial assistance of Rs. 43.57 crores committed by Canada under the Aid-India Consortium for the first three years of the third Plan is almost thrice the amount (Rs. 15.71 crores) actually made available for the second Plan, its share in the aggregate aid commitments is rather small, being less than 2.7 per cent. The flow of private Canadian investments into India has, in fact, been negligible; out of the aggregate outstanding private investments amounting to about Rs. 760 crores (as of 31st December 1961), Canada accounts for only a few crores. Canadian Government contribution and private investments are insignificant, especially considering that Canada, which has a population (19 million) which is just one-twenty-fifth of India's, has a gross national product (Rs. 18,500 crores) which is one-fifth more than that of India.

Viewed against this background, the statement by Mr. William M. Anderson, leader of the Vancouver Board of Trade Mission to India, that Canada would continue to provide assistance for India's economic development and that private investments would increase in the years to come is, indeed, heartening. Mr. Anderson was speaking at a meeting between the mission and representatives of the Central Government and the Indian Investment Centre held at New Delhi on Saturday last. Through its aid programme Canada, he said, was collaborating in power development projects in India and, from there, other schemes could be carried on. He mentioned, among others, the paper and pulp industries in which Canada could take part. He was, however, somewhat guarded in his assessment of the climate for foreign capital obtaining in India.

Mr. Anderson's speech followed the policy explanation by Mr. C. Subramaniam, Union Minister for Steel, Mines and Heavy Engineering, and other officials. It was Mr. B. N. Adarkar (Additional Secretary, Department of Economic Affairs) that impressively dealt with the main points of Government's policy towards private foreign investments. As he justifiably claimed, foreign investors have been assured of fair and equitable treatment. No extra restrictions are placed on them and reasonable facilities are always afforded for remittance of profits. They have also the freedom to repatriate their capital. It has, of course, been laid down as part of the Industrial Policy Resolution that effective control should be in Indian hands, but, here too, the condition is being relaxed in suitable cases where large foreign exchange resources and a high degree of technical skill are involved. More recently, in the 1964-65 budget, some special additional tax concessions have been offered.

Favourable though these facilities are, there is still no denying the fact that the total burden of taxation on foreign investors continues to be heavy. It is, however, not so much this burden as the official red-tape and cumbersome licensing procedures, which result in irritating delays in the fruition of projects, that act as the real handicap to a freer and larger inflow of private foreign investments into India. Lately, both the planners and the powers-that-be are no

LONDON LETTER

NOR TRADE, NOR AID

U.K.'S ROLE IN WORLD CONFERENCE

From Our London Correspondent

LONDON, *30th March*

THE failure of the G.A.T.T. system to promote expansion in the trade of the underdeveloped countries sufficient to raise their growth rate steadily and help them close the gap with the developed nations, is the main reason behind the U.N. conference at Geneva on Trade and Development. The post-war rise in commodity prices at first encouraged the view that the trade of the poorer countries would expand automatically, but, after the Korean war, prices fell. Thus, the unit value of export prices of these poorer countries dropped from about 104 in 1954 to 92 in 1962—a fall of some 11 per cent. Over the same period, the unit value of exports of the developed areas rose slightly. Thus, if we take the middle year of the period (1958) as the norm, whereas four years previously there was an 8 per cent differential in favour of the poorer countries, four years later there was an 8 per cent differential *against* them. Britain's balance of payments surplus in past years has flowed almost entirely from this differential.

In these comparisons, the less-developed countries are taken as those outside Europe, North America, Australia, New Zealand, South Africa and Japan. These countries have one feature in common—a shortage of foreign exchange for development. To them it is an irony to suggest increase of productivity: between 1954 and 1962 the *volume* of their exports increased 50 per cent (nearly as fast as the increase in volume of the developed countries) but their export earnings increased only 30 per cent. The export earnings of the developed countries increased 70 per cent. What greater condemnation of *laissez faire* than these figures could be found?

These poorer countries, now dominating the U.N. in numbers, have therefore pressed for this conference, though there is no coherent plan for resolving their problem. As primary producers (with perhaps 80-90 per cent of their earnings from primary products) they cannot easily regulate their production to the market. And in the past decade the enormous increase in synthetic products has worked against them. It is, perhaps, natural that the main thoughts that have so far been publicised are that commodity restriction schemes should be introduced and that the richer countries should be urged to buy more. The first is difficult, though organised marketing—such as Australia and New Zealand practice for their staples—can help. The second falls on the problems of the richer countries themselves who suffer from cyclical fluctuations and consequent balance of payments troubles. Inevitably, these last attack the importing countries before even their own resources are fully employed; they then take the obvious measures of cutting off the exports of the poorer countries through the simple processes of trade restriction.

Of course, in the post-war world, massive aid has been given. It has, however, done nothing to solve the basic imbalance—though it has naturally provided the means to import capital goods—and the sources of this have diminished.

The U.K. is inclined to take the view at this conference that she stands whiter than most (both the Tory and Labour parties think this) as one of the freest markets in the world. Last year, the U.K. imported about a third of her total imports from these countries—not only is she a major market for their primary products, but also for their manufactures and semis. Duties and preferences are very low (on all imports protective duties amount to only 3 per cent of total value). Thus, the U.K. claims to take a larger share of her imports from the less-developed countries than does any other country: while *vis-a-vis* India and Pakistan she claims that while these countries no longer import British textiles, she herself is the only quota and tariff free market for their textiles in the world—though there has been voluntary limitation instead of quota (and there is the yarn quota now for India and Pakistan).

All this is poor enough comfort to the poorer countries who remain the poorer countries. But it has one advantage—it is making the U.K. take a strong lead to bring about a general reduction in trade restrictions maintained by the developed countries. The U.K. also favours modification of G.A.T.T. to enable the developed countries to grant preferences to the underdeveloped—without being obliged to extend these to developed countries. Similarly, the less developed ought to be able to grant preferences only to each other. And, of course, the U.K. has a traditional vested interest in the general expansion of world trade.

This programme is clearly not imaginative enough. Britain's conservatism does not lead her to advocating more regional planning and the reorganisation of international aid on such a regionally planned basis—yet the advocacy of such proposals must come from the aiders rather than from the aided. And to make such plans worthwhile, they must dispose of sufficient funds. Hence the richer countries should adopt the post-war U.N.R.R.A. principle—of allocating a proportion of national income for such aid. It has been done before and effectively. Then, the imbalance of payments must be countered and this is something beyond the powers of any one country. Too slowly perhaps a climate of opinion is being formed that would see an expansion of international credit. Only such an expansion can knock free the shackles that at present hamper a mutual expansion of trade between poorer and richer nations.

SURVEY

(*Concluded from previous page*)

doubt aware of this aspect and some steps have been taken. But energetic action is still lacking.

Considering the wide gap between the resources available and those actually needed for accelerating the tempo of economic development of India and the heavy repayment obligations involved in aid received by way of loans, the need for a larger inflow of foreign private investments into the country cannot be stressed too strongly. Surely, Canada, with its surplus of technical know-how and capacity to generate, as well as to raise, capital can, as Mr. C. S. Jha, Commonwealth Secretary, aptly said, play an important role in the economic growth of India. At the same time, the increasingly large-scale Canadian investments in India would be a good proposition to the mutual advantage of both the countries. Mr. C. Subramaniam did well in inviting the attention of the Canadian businessmen to this simple fact.

Besides larger inflow of Canadian private investments into India, there is the need for expanding exports from India to Canada which at present are rather low, the annual rate of actual exports being of the order of Rs. 23 crores. This rate may be expected to decline to some extent as a result of the imposition of a stiff rate of import duty on Indian textiles. It is strange, indeed, to learn from Press reports that no official of the Central Government sought to impress on the visiting Canadian businessmen the urgency of their country buying more and more of Indian goods in the coming years.
