Another factor which gives strength to the improved outlook for jute goods is the increasing level of internal consumption. In December, internal offtake rose to 34,500 tonnes from 29,900 tonnes in November. Although exports also rose it was the boosted seasonal demand for internal consumption that led the total offtake to rise substantially to 105,800 tonnes from 100,200 tonnes. Hessian rose from 40,100 tonnes to 47,400 tonnes. The increase in the total offtake of miscellaneous goods from 12,700 tonnes to 13,800 tonnes was due mainly to the increased overseas demand for carpet-backing cloth. However, the combined sacking offtake fell from 44,600 tonnes to 41,800 tonnes, internal offtake rising from 22,500 tonnes to 26,700 tonnes and export offtake declining from 24,900 tonnes to 17,900 tonnes. In view of the increase in hessian exports from 36,200 tonnes to 43,200 tonnes and that in miscellaneous goods from 9,200 tonnes to 10,200 tonnes, the total offtake for exports rose by 1,100 tonnes to 71,400 tonnes, despite the fall in sacking exports. Internal offtake of hessian and miscellaneous goods was slightly higher at 4,200 tonnes and 3,600 tonnes, respectively, as against 3,900 tonnes and 3,500 tonnes in November 1963.

Steadier conditions in the jute goods market were a feature of the week under review. There were several overseas inquiries for both hessian and sacking goods, leading to short-covering. Mills have decided to continue the enhanced rate of production in February also. With restricted working in mills on account of curfew, production this month is expected to fall and, therefore, the increase in output as well as stocks in December received less attention. In fact, prices tended to rise this week. On Tuesday last, scattered business in sacking for export took place, while good inquiries were received for hessian. As a result, there was local short-covering, and ready hessian 40" 10 oz. rose from Rs. 47.95 to Rs. 48.15. Ready B. twills were unchanged but firm at Rs. 112.80. Soon speculative activity in the futures market became rife, and ready B. twills spurted to Rs. 113.45 on Wednesday. However, hessian 40" 10 oz. eased to Rs. 48.05. The market was closed on Thursday on account of holiday and, when it reopened on Friday, there were rumours of impending Government tenders for B. twills, the price of which rose to Rs. 113.75. In sympathy, hessian 40" 10 oz. was steady at Rs. 48.10. The decision by mills to end the working time agreement was announced on Saturday, and this caused prices to decline. B. twills moved down to Rs. 113.20 and hessian 40" 10 oz. to Rs. 48.00. The market was closed yesterday, being a holiday.

In sympathy with the steadier jute goods market, fibre prices were fully firm at around the minimum levels. Daily arrivals have now fallen to about 100,000 maunds in the agencies, where prices are showing a tendency to rise. As a result of the purchases by 93 co-operatives in areas where prices had sagged, prices in most secondary markets and feeder centres in Assam, West Bengal, Bihar, Orissa, Tripura, Uttar Pradesh and Andhra have been stabilised. Up to the end of December, the purchases by these co-operatives aggregated 120,000 maunds valued about Rs. 36 lakhs. In Calcutta, prices were steady as follows: Assam bottoms Rs. 30.50 a maund; northern bottoms Rs. 29.50; and daissee bottoms Rs. 33.50.

DULL TRADING IN KIPS

(From Our Own Correspondent)

MADRAS, *27th January*

Trading in tanned hides with the U.K. continued to be difficult this week. Inquiries were for lower ends of medium and light cowhides. Cowcalf fourths had good call. Buffcalf attracted good business and ruled firmer.

Business in tanned goat skins was difficult due to higher prices. Tanners were unable to obtain raw skins at economical levels. Tanned sheep skins remained firm due to good demand from the overseas.

COPPER SPURTS

(From Our Own Correspondent)

CALCUTTA, *28th January*

The striking feature in the metal market during the week under review was the spurt in the international price of copper to about £242 a ton from £234, while other metals ruled easy. Producers, having exhausted all stocks held in London on their account, have lost control over the price trend in copper. Demand from the United States has been particularly heavy. From 1962, copper producers, except those in the U.S.A., have curtailed their production by about 15 per cent, but maintained stocks in London to hold the price line in view of the steady fall in copper consumption as a result of the growing popularity of aluminium. Since aluminium has several advantages, it has become a powerful substitute for copper all the world over. The Government of India has been urging industrial users to replace copper by aluminium, as India has inexhaustible resources of bauxite for making aluminium, and cable plants in India have already made a beginning.

The rise in the world price should be considered only temporary, since it is expected that producers would now use the idle capacity and raise production in an attempt to rebuild their stocks in London. The fact that the U.S. consumption of copper has been rising despite aluminium having become a conductor of electricity is taken as an indication of the resilience of the U.S. economy in 1963. The rise in the L.M.E. price is a matter of grave concern to India, since this would lead to a fall in imports in view of the need for more foreign exchange to maintain the present level of arrivals.

Utensil copper scrap, in Calcutta, hardened from Rs. 630 to Rs. 635 per 100 kgs. The fact that, in London, the three-months copper wire-bars rose from £240 to £243¾ a ton, shows that an immediate recession was not anticipated. Much now depends as to what steps the Rhodesian Selection Trust Group would formulate to rebuild stocks in London. Earlier this month, the Trust and the Anglo-American Group had announced their intention to increase their rate of copper sales from 85 to 90 per cent and reduce their cut-back programme by 5 per cent. Despite these measures, the price rise has not abated.

However, the uptrend in zinc in L.M.E., noticed in recent weeks, was arrested during the week under review. The price eased from £94¼ to £91¼ a ton and this followed freer offers from influential quarters. This led to a fall in demand. The three-month metal eased from £90½ to £89¼, thus ignoring the continued strength in U.S. futures. In India, the price was maintained at the higher level in view of poor stocks. The L.M.E. price of tin also eased; the week's opening and closing rates being £1,041¼ and £1,036 a ton, respectively. This was attributed to a temporary fall in demand and some loss in Penang. In Calcutta, the price was firm at Rs. 3,270 per 100 kgs., though the stock position was comfortable. Lead was firm at Rs. 215 per 100 kgs.

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, *27th January*

Quiet to steady trend was witnessed in the foodgrains market during the past week. There were reports that absence of adequate rains and heavy frost had adversely affected *rabi* crops. Wheat and other grain prices stayed steady and pulses, too, registered a steadier trend.

While wheat average quality at Hapur were stationary at Rs. 54.75 to Rs. 56.75 per quintal, superior farm produce was quoted higher at Rs. 58 to Rs. 59.50 per quintal. Open stocks with trade declined to about 2,500 quintals and wheat stocks in other markets were also very small as compared with the previous year. But thanks to the steps taken by the Government, prices have not gone up appreciably. Large-scale sales of wheat through fair price shops and wheat flour freely checked the otherwise perfectly bullish trend in grains prices.

Rice stayed steady, as arrivals in market still continued small and local stocks, too, were meagre. Week-end prices were:—Rice *basmati* superior Rs. 93.77 to Rs. 96.45; *sela basmati* Rs. 91.09 to Rs. 94; *mainpuri* Rs. 61.62; *ramajwayan* Rs. 75.02; *raimunia* Rs. 79.04 and *gadda* Rs. 60.28 per quintal.

Gram ruled steady at Rs. 49 to Rs. 50.25 per quintal according to quality on Punjab advices and local stocks ran down to 7,800 quintals. Barley and *bejhar* continued stationary at Rs. 39.50 and Rs. 40 to Rs. 41 per quintal, respectively. Stocks of both these coarse grains were small and demand, too, was slack. Maize continued to attract good seasonal demand and local stocks declined to 17,000 quintals. Arrivals were poor and prices registered gains towards the week-end. *Juwar* was listless at Rs. 46 to Rs. 47.50, while *guwar* improved slightly to Rs. 47 to Rs. 48.50 a quintal on better buying enquiry in the face of small stocks with trade. Other coarse grains, including oats and *methi*, stayed steady.

In pulses, the standing peas and *arhar* crop having been adversely affected due to heavy frost, prices were steadier. Arrivals of *urd* and *moong* were small in the face of good seasonal demand. Week-end prices were: peas *dara* Rs. 44.50 to Rs. 47; farm Rs. 48 to Rs. 49.50; peas *dal* Rs. 51.58; *arhar* average Rs. 56.26 to Rs. 57; superior Rs. 60.28 to Rs. 62; *arhar dal* Rs. 69.66 to Rs. 80.25; *urd* Rs. 61.62 to Rs. 64.30; *urd dal* Rs. 75.02; *moong* Rs. 69.66 to Rs. 75.02; *moong dal* Rs. 80.38; *masoor dal* Rs. 74.50 and gram *dal* Rs. 51.58 per quintal.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, *27th January*

Sugar ruled quiet during the week, as part of the demand is being met with *khandsari*. Sugar production in west U.P. is hardly satisfactory, since most of the mills are working with restricted hours, due to non-availability of adequate cane supplies and it is gathered that crushing operations would end earlier than expected. However, the overall production is reported to be better and latest available figures put the actual production so far at 1.2 million tons which is about 100,000 tons higher than the actual output in the corresponding period of 1960-61 which was the peak production season. Prevailing prices here were Rs. 155 to Rs. 158 per quintal, as against the controlled prices of Rs. 120 to Rs. 126 a quintal. Sugar factories in the Muzaffarnagar area are also facing shortage of cane supplies, as the *khandsari* manufacturing units are buying cane upto Rs. 6 a quintal, as against the Rs. 5.36 fixed to be paid by factories.

Desi khandsari staged a rally during the week in the wake of support from stockists. After an early setback on reports of proposed distribution of *desi khandsari* at controlled prices in U.P., there was a smart rally towards the week-end in response to Punjab and Rajasthan demand. *Khandsari* production was being continued with vigour in all the producing areas and week-end prices were: moist Rs. 100-Rs. 112, medium Rs. 115-Rs. 125 and superior Rs. 130-Rs. 140 per quintal.

Ready *gur* ruled quiet during the week, as few import permits were received here from Rajasthan side. Gujarat support was still lacking for non-receipt of import permits from that State. The week's offtake at ten wagon-loads was mostly under previous commitments. Daily arrivals of *gur* here were poor at an average of 1,500 maunds and arrivals were also meagre in mofussil markets of Gulaothi and Sinana and other centres. The fall in arrivals was due partly to extreme cold and frosty weather, and further the cultivators were retaining their produce for seed purposes. Week-end prices per 40 kilogram were: *Pansera* superior Rs. 25.50; *dara* Rs. 25; *balti* Rs. 25.75; *shakker* Rs. 26.

Gur and *shakker* sustained heavy losses in the Muzaffarnagar market in the earlier part of the week following the warning by the Union Food Minister against hoarding, but prices improved slightly later in the week on good buying enquiry in the face of poor arrivals. *Gur Chaku* was now quoted at Rs. 25.50-Rs. 27.50 and *khurpapar* at Rs. 26.25 per 40 kilogram. *Shakker* attracted good demand from Punjab and Rajasthan at Rs. 25 to Rs. 29 per 40 kilogram according to quality.

• • • •

The Union Government has modified the existing arrangement for the issue of import and export permits for *gur* by the district magistrates in the States. The modified arrangement has come into force today. The import permits for *gur* are now valid for five weeks instead of four weeks. The agents of importers must, however, submit their applications for export permits before the 21st of each month. Import permits received after this date will be cancelled and returned to the importing State Governments. The balance of the export quota will then be distributed by the district magistrates of exporting districts among the local exporters on export permits valid for one week only. The district magistrates of importing States will issue import permits to such associations or trades holding export permits. The validity by such import permits will be three weeks from the date of issue.

TWENTY-FIFTH EDITION OF KOTHARI'S INVESTORS' HANDBOOK

The 1963 edition of *Kothari's Economic Guide and Investors' Handbook of India* is the twenty-fifth number of this useful, informative and exhaustive publication on the progress made by the country through the corporate sectors. It, therefore, constitutes a landmark in the career of this reference book. While preparing it, however, its compilers—Messrs. Kothari and Sons, the well-known firm of share brokers of Madras—have had to skip the 1962 edition. But then in the preface to the 1961 number itself, they had expressed their cherished hope to bring out the silver jubilee edition in a more ambitious manner in order to serve the public to a greater extent. So much planning and thought have gone into the compilation of the volume under review. Besides, the Defence of India Rules were promulgated on 26th October 1962, the time when the new edition was nearing completion. They affected the whole process of printing, as they necessitated an almost complete re-arrangement of the contents and also deletion of certain information to comply with the D.I.R. 52, as, for instance, information relating to cement industry, aluminium, and coal companies, engineering units, companies having mining interests and also industries with a defence bias.

The delay in publication has, however, been used for bringing the volume more up-to-date, and since the purpose is not only to provide information on companies to investors and financiers but also to furnish statistics of economic interest, detailed data have been included on licensing, collaboration arrangements, capital issues and foreign assistance by way of investment, loans and grants. These additions more than compensate for the loss arising from the deletion of certain sections. The new edition is published in one volume, as against two in 1961, with the price per copy unchanged at Rs. 50. The publication has expanded from a slim edition of only 130 pages in 1936 to a giant volume of as many as 2,750 pages in 1963 and from serving the investment interests in South India alone to covering the corporate sector of the country as a whole.

U.S. LOANS TO I.F.C. AND I.C.I.C.I.

Funds available for private industry investment in India will be increased by Rs. 20 crores as a result of two agreements concluded between the Governments of India and the United States. The Industrial Finance Corporation and the Industrial Credit and Investment Corporation of India have each received a credit of Rs. 10 crores from the sales proceeds of agricultural commodities supplied to India under U.S. Public Law 480. The Corporations have extended assistance to several hundred concerns operating in a large variety of industries, including aluminium, automobiles, cement, chemicals, textiles, engineering, glass, mining, paper, plywood, rayon, sugar and shipping.

INDUSTRIAL DEVELOPMENT OF NIGERIA

A NEW BANK BEING SET UP

THE International Finance Corporation, an affiliate of the World Bank, has joined hands with leading American, European and Japanese investment institutions, as well as Nigerian interests, in establishing the Nigerian Industrial Development Bank. The initial capital resources of the Bank will amount to £N4.25 million (equivalent to $11.9 million). The American, European and Japanese institutions making new investments in N.I.D.B. have subscribed to a total of £N487,225 ($1,364,000). The institutions are: Chase International Investment Corporation, Istituto Mobiliare Italiano, Bank of America, The Bank of Tokyo, Limited, Commerzbank A.G., Irving International Financing Corporation, Northwest International Bank and Societe Financiere pour les Pays d'Outre Mer S.A.

The Bank is a reconstruction of a former industrial development finance company, the Investment Company of Nigeria (I.C.O.N.), which was created in 1959 under the sponsorship of the Commonwealth Development Finance Company Limited. In the four years since its formation, the I.C.O.N. has invested the larger part of its issued capital in private enterprise developments, some of which are already showing profits. It has been active in the new issue field and it has been managing the Lagos Stock Exchange. Its shareholders have agreed to a partial conversion of their shareholdings into the new Bank's shares, amounting to £N500,000 ordinary shares and £N250,000 preference shares. Most of the I.C.O.N.'s shares were held by 96 non-Nigerian shareholders, chiefly British, the largest of whom are: Commonwealth Development Finance Company Ltd., Commonwealth Development Corporation, United Africa Company Ltd., Barclays Bank D.C.O., Bank of West Africa Ltd., British-American Tobacco Company Ltd., Imperial Chemical Industries Ltd., Tube Investments Ltd., Vickers Ltd., Vivian, Younger and Bond Ltd., Chemical Overseas Finance Corporation, and International Basic Economy Corporation.

Financing Operations

The new Bank is designed to provide long and medium-term finance in the Federation of Nigeria. It will concentrate its operations, as a matter of policy, in the industrial and mining sectors. It will assist in the establishment and growth of productive private enterprises by supplying finance, and related services, in any form suitable to the needs of its clients. It will encourage the participation of foreign capital in Nigeria's economic development and seek to widen the base of private participation in Nigerian industry by selling its investments in the domestic market, by sponsoring new share issues and by engaging in underwriting operations.

The Bank has an authorised capital of £N5 million ($14 million), of which £N2 million ($5.6 million) initially have been paid in on ordinary shares and £N250,000 ($700,000) on non-voting preference shares. Ordinary shares worth £N1,020,000 ($2,856,000) or 51 per cent of the Company's voting capital, have been designated as Class A shares and reserved for Nigerian subscribers and international organisations, of which Nigeria is a member (for example, the I.F.C.). The remainder of the voting stock, designated as Class B shares, may be held by any interested investor, whether Nigerian or foreign. Class A shares have been subscribed by the I.F.C. and the Central Bank of Nigeria, which each took up shares for approximately £N499,830, and by Nigerian private investors who hold shares for about £N20,340.

It is the intention of both the Central Bank of Nigeria and the I.F.C. to sell their N.I.D.B. holdings to Nigerian private investors as rapidly as may be consistent with good marketing practices. These sales will be made for an initial period at par, and at appropriate prices thereafter. The two institutions will make their sales in equal proportions as private purchasers come forward.

Government's Assistance

The establishment of the Bank followed negotiations between the representatives of the I.C.O.N. and a Steering Committee composed of prominent Nigerians. The Federal Government of Nigeria, which has played an active role in encouraging the formation of the new company, is giving it further support by making a long-term interest-free loan of £N2 million available to it. This loan, together with its paid-in share capital, will raise the N.I.D.B's total initial resources to £N4.25 million.

The principal aims of the reconstruction were to establish a new institution which retains the I.C.O.N's essentially private nature and, though strongly supported by foreign participants, would be also essentially Nigerian in character. To achieve this purpose, it was agreed to regard the I.F.C's shareholdings in the N.I.D.B. as Nigerian and the I.F.C. has agreed that, when disposing of its holdings, it will sell only to Nigerian private investors.

Nigeria's six-year development plan is already providing the framework for an expansion of the country's industrial capacity. As a result of the Government's policy of encouraging investment, by the adoption of such measures as tax freedom for pioneer industries, liberal depreciation allowances, duty concessions on imported raw materials and reasonable tariff protection, Nigerian industry is expanding quickly, though as yet it forms a small part of the country's total economic activity. The establishment of the N.I.D.B. with adequate capital resources and with broad foreign connections will be an important step in assisting Nigeria's further industrial development.

TREND OF SHARES

EQUITIES RECEDE

(From Our Own Correspondent)

BOMBAY, 30*th January*

AFTER moving indefinitely in a narrow range for the major part of the week, equities turned definitely downwards from yesterday on bull liquidation, some renewed bear pressure and absence of fresh buying. Settlement considerations and pre-budget uncertainties explained selling by the erstwhile bulls. This was the first week since the start of the new year when losses were fairly well pronounced all over the list. Moreover, the volume of business tended to rise following the decline in prices. It would, therefore, appear that the trend will be easy until some definite indications are known about the ensuing budget. In the meantime, indicative of the investor's apathy is the marked depression in cash scrips and the widening discounts on new issues.

An inspired report in a section of the Press about the next budget proposals added to the confusion, since, while it said that major changes in the tax structure were likely and S.P.T. and C.D.S. were to be modified, it also spoke of intensification of the patently anti-rich measures, like wealth tax, estate duty and gifts tax. Again, it emphasised that, since the Finance Minister was known not to set much store by deficit financing, taxation and increased savings were the only alternatives left for mobilisation of resources. Beaten once last year, marketmen were afraid to take much risk over the budget this year. The inclination was clearly in favour of lightening one's commitments.

The corporate news during the week was encouraging, though it failed to create any enduring impression on market sentiment. Important developments were the announcement of Century's diversification plans and the proposals of the New Standard Engineering for manufacturing shortly shot blasting equipment under a new company, called Indabrator Ltd., and expanding its works for taking up manufacture of some new items. The Directors of Escorts Ltd. announced their decision to issue one bonus share for every five fully paid shares and 13 bonus shares for every 100 partly paid shares.

But, as against this good news, the report that the Tariff Commission had not recommended any increase in cloth prices but had suggested for acceptance by the Government a schedule under which the prices would, by and large, be lower than the existing ex-mill prices had a depressing effect on cotton mill shares.

* * * * *

Values declined sharply on Dalal Street only today on liquidation by a prominent industrialist-operator, following which there was increased selling in almost all the speculative counters which had otherwise been steady during the week in spite of lack of support. Weakness was also pronounced in view of the settlement tomorrow.

Steel shares dropped rather perceptibly; Tata Ordinary from Rs. 145.25 to Rs. 143 and Indian Iron from Rs. 24.88 to Rs. 24.48. Among Textiles, Century closed Rs. 7.50 lower at Rs. 666, after early improvement from Rs. 672 to Rs. 687 on the news of the diversification plans. National Rayon were sold down today from Rs. 421 to Rs. 408.50. Bombay Dyeing lost over the week 80 nP to Rs. 61.20 and Kohinoor three points to Rs. 330.

Engineering shares followed the general trend, with T.E.L.Co. declining by seven points to Rs. 285, Voltas by Rs. 2.50 to Rs. 262 and Hindustan Motors by 40 nP to Rs. 18.48. In the Miscellaneous section, Bombay Burmah showed a setback of 50 nP to Rs. 59.80 and Indian Dyestuff of Rs. 6.25 to Rs. 313.75. Cements were quiet, with A.C.C. marginally lower at Rs. 152 as compared with Rs. 152.25 last week, but Belapur, among Sugars, moved down from Rs. 229 to Rs. 225. Shipping shares were also easier, and Scindia dropped from Rs. 13.76 to Rs. 13.44.

* * * *

The trend was quite easy on the Calcutta Stock Exchange, especially because of the settlement yesterday. Among cleared shares, Indian Aluminium gained by 32 nP to Rs. 28.75, but Dunlop and Guest Keen were both 25 nP lower at Rs. 36.75 and Rs. 26.56, respectively, Orient Paper and Orissa Cement recorded losses of up to 30 nP at Rs. 37.90 and Rs. 13.50, and Birla Jute eased from Rs. 33.81 to Rs. 33.62.

In the cash section, Bowreah, among Textiles, receded from Rs. 25.24 to Rs. 23.75 and Cawnpore from Rs. 6.94 to Rs. 6.50. Coal shares were quiet, but among Jutes, Budge Budge moved down from Rs. 143 to Rs. 139 and Barnagore from Rs. 221 to Rs. 218, while Delta rose from Rs. 139 to Rs. 148. Engineering shares were easier, with Dalmia Iron and J.K. Steel recording losses of over 40 nP at Rs. 11.12 and Rs. 15.75, respectively. Philips India, in the Miscellaneous section, dropped sharply from Rs. 28.37 to Rs. 25.50 and Union Carbide closed one point lower at Rs. 40.50. Paper, Sugar and Tea shares showed small variations.

* * * *

Trading was dull on the Madras Stock Exchange, but values still slipped generally lower, with a few exceptions. Thus, Bangalore Woollen, closed two points lower at Rs. 236, Textools eased by 50 nP to Rs. 145, Aluminium Industries shed 10 nP to Rs. 18.40 and Indian Steel Rolling showed a loss of 15 nP to Rs. 9.75. On the other hand, Midland Rubber gained 50 nP to Rs. 11.40 and Highland Tea 23 nP to Rs. 15.60.

MARKET GOSSIP

(Concluded from page 159)

systems and administration and budget control is being organised as a new service of the Fund. An additional arrangement for providing technical advice in the organisation and operation of central banks will utilise assistance not only of the Fund staff but a panel of experts whom the Fund will be able to draw from established central banks. The Fund's training programme for officials of central banks also is being improved and expanded.

In its work on the problems of the developing primary-producing countries, the Fund has found many opportunities for co-operation with other international efforts. It is working closely with the development consortia organised by the World Bank and with the Contracting Parties to the General Agreement on Tariffs and Trade (G.A.T.T.), and will participate in the forthcoming U.N. Conference on Trade and Development. Responding to an invitation extended by the U.N. Commission on International Commodity Trade, the Fund produced last year a report on compensatory financing of export fluctuations that defined its role in problems of this nature. The statement noted that members were already using the Fund to deal with shortfalls in their export earnings and said that the Fund was willing to consider increases in quotas for countries needing assistance in larger amounts. Further, the report disclosed that the Fund had adopted a more liberal policy for use of its resources to counter export fluctuations. Since its publication last March, two countries have made drawings under this new facility which will doubtless prove useful to others in the future.

While most of its recent activity has centred on developing countries, the Fund also has given attention to the present and possible future payments problems of its industrial members. None of these countries drew on the Fund in 1963, but the United Kingdom and United States entered into stand-by arrangements for $1,000 million and $500 million, respectively.

The past two years of the Fund's operation have brought about a reduction in members' outstanding balances, an increase in Fund commitments under stand-by arrangements, and a shift from U.S. dollars to European currencies in much of the organisation's financial assistance.

LAKSHMI MACHINE WORKS LTD.

Lakshmi Machine Works Ltd. is issuing for public subscription 100,000 equity shares of Rs. 100 each. Lists for subscription for the issue, which has been fully underwritten, among others, by the I.F.C.I., the L.I.C., the I.C.I.C.I. and the Madras Industrial Investment Corporation Ltd., will open on Monday the 3rd inst. and close on the 19th inst., or earlier, but not before the 6th inst. Out of its authorised capital of Rs. 350 lakhs, comprising Rs. 300 lakhs in equity shares and Rs. 50 lakhs in 9 per cent. taxable, cumulative preference shares, the Company is issuing equity capital of Rs. 250 lakhs, including Rs. 100 lakhs already subscribed to by the promoters, Directors and their friends, Rs. 30 lakhs reserved for allotment to foreign collaborators, Messrs. Rieter Machine Works Ltd. of Winterthur, Switzerland, and Rs. 20 lakhs to be allotted to the International Finance Corporation, Washington, an affiliate of the World Bank.

The Company proposes to set up at Perianaickenpalayam, about 11 miles from Coimbatore, a plant for manufacturing textile machinery of all descriptions. The need for establishing additional textile machine-making capacity in the country has been felt for some years and has become rather pronounced in the last one year, with the existing manufacturing units being flooded with orders and being in a position to promise only distant deliveries. With the recent large licensing of spindleage, estimated at 1,000,000 spindles, the demand for textile machinery has grown and the delivery position has become less satisfactory. The Company hopes to place on the market textile machines of the same standard and quality as Rieters have themselves made.

The major raw material required for the manufacture of textile machines is special cast iron, while high carbon steel is needed in small quantities. These requirements, we are told, will be met partly by imports and partly by indigenous production. Since a number of projects for the manufacture of special steel of all descriptions have been licensed in the country, it is estimated that the Company will not need to depend on external sources for its requirements of raw material for any long time. Sufficient power supply has been promised by the Madras State Electricity Board and it is also contemplated to equip the Company with generators as a standby arrangement.

The project is divided into three stages, two of which are to be taken up in 1963-65 and the third will start from 1966. The total outlay is placed at Rs. 855 lakhs, comprising Rs. 595 lakhs on the first two stages and Rs. 260 lakhs on the third stage. The immediate outlay of Rs. 595 lakhs is to be met out of (1) the share capital issue as discussed above, (2) short-term borrowings of Rs. 186.30 lakhs, (3) a block loan from a bank of Rs. 65 lakhs and (4) institutional borrowings comprising Rs. 55 lakhs from the I.C.I.C.I. and Rs. 45.70 lakhs from the I.F.C., Washington. The cost of investment for the third stage is to be met out of cash accruals, bank borrowings and advances from customers. The Company's Chairman is Mr. A. M. M. Murugappa Chettiar and its Managing Agents are Messrs. G. Kuppuswami Naidu and Company, a well-known firm with a lot of achievements in the manufacture of machinery to its credit.

WEEK'S STOCK EXCHANGE TREND

SWATANTRA PARTY'S ECONOMIC POLICY

EVEN fiction can be made to appear as a fact through constant and consistent propaganda, much more so these days, when people are preoccupied with their means of living, having little time to think or verify. The leaders of Congress Party have often been saying that the Swatantra is a party of rightist reactionaries, bent upon establishing a capitalist society, and that it does not believe in economic planning or in State ownership of industries. The Swatantra Party has, therefore, done well to reiterate, at its third National Convention held at Bangalore last week-end, that it does not believe in *laissez faire*, nor is it opposed to planning. What it is opposed to is the type of planning done by the Congress Party, which has necessitated frequent amendments to the Constitution to the detriment of the freedom of the individual and violation of the fundamental rights guaranteed in Part III of the original Constitution adopted in November 1949. The substance of the resolution adopted at Bangalore is that Swatantra's planning will be confined to the four corners of the fundamental rights before they were abridged by the powers-that-be in the past 13 years. The touchstone of its plans for economic development is whether they will achieve the welfare of the people and will be of any use to the poorest and the weakest members of the community. Its order of priorities will start with the increase in the production and provision of elementary necessities such as pure drinking water, food, clothing, shelter and employment. On the question of State ownership of industries, the Party is of the view that such should be limited to the provision of infrastructure. Every Swatantra leader who spoke in favour of this resolution sought to highlight the virtues of his Party's approach to planning by presenting them against the failures of the Congress Party in this respect and drawing attention to the heavy tax burdens, increase in public debt, rise in prices and cost of living, shortages of essentials of life, detailed irksome controls over many walks of life, growing volume of corruption, etc. By implication, the Swatantra leaders meant that, under their system of planning and order of priorities, economic development will be more rapid and less painful, if not totally painless. They will have to do a lot of explaining, if one is to believe what they say.

It can be readily granted that there is excessive and injudicious taxation in the country, that there are far too many controls than necessary, that the Congress Party is creating a myth when it talks of the existence of harmful concentration of economic power, that there is both the need and the scope for giving a bigger role to the private sector, that considerations of rapid economic growth should have a priority over ideological dogmas and that, in the interest of economic efficiency, the value of profit-motive should be recognised. Indeed, there is a lot more that can be added to this list of the lines on which the Congress Party's economic policies should be amended in order to ensure optimum rate of economic growth with stability and without detriment to the fundamental principles of democracy. This journal has pointed out on many an occasion that the defects in the economic policies of the Congress Party and its administrative weaknesses in implementing plans for industry, agriculture and community development have provided a fertile ground for communism to flourish. Of late, most of the steps which the Congress Party has taken to improve its performance and to plug the loopholes have meant more strength to communism and less stability for private enterprise and individual initiative which are the pillars of a genuinely democratic society. But all this does not mean that economic planning by the Congress Party has been such a total failure, as is made out by the Swatantra Party. Nor has that planning been of the Soviet type, as Mr. Masani is never tired of saying; it is not even of the Yugoslavian type. Such criticisms are sheer exaggeration, if not false. It would do a lot of good to the Swatantra Party, if it is restrained and balanced in its criticism and does not repeat the mistakes of Congressmen and Communists in this respect.

The problem of economic development of India is unprecedented in the annals of history. The population, already over 440 million, is going up at the high rate of nine to ten million a year. The rate of capital formation is small. The people are impatient and highly conscious of their rights. There are politicians who are promising heaven on earth if the real Soviet-type or Chinese-type planning is followed. In such a state of affairs, it will not be possible to attain a rate of economic growth that will be sufficiently substantial to fulfil the aspirations of the people without a certain amount of hardship, without centralised planning, without controls and without State initiative in regard to certain heavy industries, in addition to activities for providing infrastructure facilities. The room for differences of opinion can only be in regard to details and not on fundamentals.

All along the Swatantra Party, however, has only been talking in broad general terms. This is not sufficient to carry conviction even to those who concede the need for an Opposition party like the Swatantra, in order to ensure the survival of democracy. It must come down to brass tacks and show in detail that the priorities indicated by it will lead to a more rapid increase in gainful employment, will result in less stress on balance of payments position and will mean less hardship to the people than has been the case under Congress planning. It must work out and show how much steel, fuel and power, cement, textile fibres, housing materials, capital goods, fertilisers and transport facilities will be required to provide the basic amenities needed by the people, according to its conception, and how it will find them. It must also show how it will raise the necessary resources. In other words, it will have to draw up a counter plan on the assumption that it will be in power one of these days. It is no use merely saying that all this will be done when the Party is returned to power with a majority. The Congress Party, too, was talking in vague terms before it came to power, but, when it started implementing its ideas of a welfare State, it found it necessary to go in more and more for heavy industries, for more taxation, for more controls, etc. What certainty is there that the Swatantra Party will do better? It cannot expect to be placed in power on broad generalisations. It will be imprudent for the Swatantra Party, in particular, to try to win the affections of the people merely by capitalising on the failures of the Congress Party, because, for reasons already mentioned, rapid economic development of a country like India cannot be achieved without tears.

The Swatantra Party must also evolve a policy for tackling employer-employee relations. The lower middle class and the working class are sceptical of this Party and are being increasingly attracted by trade unions which believe in communism. It must play an active part in inculcating among employers the philosophy of trusteeship and try to convince workers that their interests will be safer in a mixed economy of the type it has in view and not in that of the Congress Party or that of any other leftist party. This will be one way, in fact an effective way, of minimising the risks of nationalisation. The absence of any reference to employment and labour policies is a perceptible lacuna in the economic programme of the Swatantra Party.

In contrast to the nebulous character of the Swatantra Party's attitude to planning and economic development is its vigorous and forthright opposition to some of the specific policies and programmes of the Congress Party. A typical instance is provided by its stand on the seventeenth amendment to the Constitution now before a Select Committee of both the Houses. This is a dangerous measure, in that it exposes the entire peasantry to the risks of serfdom. There is no overemphasis or exaggeration in the Swatantra Party's criticism of this latest attempt of the Congress Party to whittle down further the fundamental rights of the people. Every one who cares for the future of democracy in this country must read the Swatantra Party's clear analysis of the implications of this unwarranted new assault on the already attenuated Constitution. Equally impressive is its line of reasoning against nationalisation of banking. Although the Congress Party has not officially accepted the demand for nationalisation of banks, its stand on this issue is vague. Many leading Congressmen still swear by it and the others who have said "no" have done so only on the ground that the time is not opportune for enforcing this "reform." Now that the Swatantra Party has opposed it on grounds of principle, the Congress Party will have to reckon with the fact that at least one of the Opposition parties is not in favour of this mischievous demand, designed to perpetuate the one party rule in this country.

EXPORT PERFORMANCE

NINETEEN hundred and sixty-three was, by all accounts, a record year for India's export trade—much better than the preceding one. The aggregate value of exports during that year, just estimated on the basis of the actual exports of the first 11 months, was as much as Rs. 785 crores, as compared with the total of Rs. 687 crores in 1962. Export earnings thus increased by Rs. 98 crores in 1963. Most of the export commodities shared in this handsome increase, as will be evident from the table accompanying this article. The picture that emerges from the table is, indeed, heartening, for the increase in exports, representing 15 per cent over those of 1962, is also the highest on record. That this improvement has resulted from a substantial rise in the volume of exports, and not from any jump in their unit values, is seen from the re-

levant index numbers (available upto October 1963) published by the Department of Commercial Intelligence and Statistics. Since the unit value index of exports was about the same in the first ten months of 1963 (107 points) as in 1962 (106 points) and since the volume index increased from 130 points in 1962 to 158 in the January-October period of 1963, it may be inferred that there was a considerable real increase in the quantum of exports, unaccompanied by any fall in unit values.

But that is not the only encouraging feature of the export situation, for there are some others which have been highlighted in a recent official review. One of these is that the export increase has been well spread over a number of commodities. Another is that about Rs. 85 crores of the increase have been earned in the form of dollars or sterling and not under the barter agreements with the Soviet bloc. Yet another is that most of the increase in exports has been achieved in items, the exports of which do not enjoy any incentives or assistance. The Board of Trade, which met at Calcutta on the 1st instant, has drawn attention, in this connection, to the fact that more than 80 per cent of the aggregate exports were effected without any special assistance. As the Board noted further, it was only in respect of a relatively small portion of the exports that some incentives had been considered necessary, in view of the disabilities of high costs, scarcity of raw materials, rising internal demand, etc. The exports covered by the export promotion schemes, it was revealed at the Board's meeting, aggregated only about Rs. 160 crores. The cost of incentives involved here was only of a small order, namely, Rs. 28 crores. Even this latter amount included a substantial portion of imported raw materials for which foreign exchange would have had to be otherwise consumed for sustaining the domestic industries concerned. The Board of Trade has rightly expressed satisfaction at the results achieved by exporters and manufacturers largely by their own efforts.

On the import side, too, the situation in 1963 was a shade better, for the aggregate import bill for the first 11 months of that year was only Rs. 977 crores, as compared with Rs. 1,017 crores in the corresponding period of 1962. The increase in exports and the decrease in imports had thus improved the overall trade balance, the deficit having been reduced from Rs. 401 crores during January-November 1962 to Rs. 274 crores during the corresponding period of 1963. It was against this background of improved trade performance that the Board of Trade met at Calcutta as much to take stock of export achievements as to bring about further improvements. But the Board was frankly not inclined to draw excessive comfort from the gains made last year. That sustained progress in export promotion could be achieved on a lasting basis only through cost reduction was fully recognised by the Board which felt that, in a situation of continually rising costs, drastic remedies would have to be resorted to for reducing them. One such remedy, in the opinion of the Board, would be to freeze the import duties on machinery and capital goods at the existing levels or to reduce them substantially, wherever possible. This suggestion is unexceptionable, for there is no doubt that the continually rising import duties on machinery and equipment tend to raise the capital costs of industries and to add to the costs of rehabilitation and modernisation.

But the Board's other suggestion, namely, that power rates should be kept at low levels for effecting reduction of costs does not seem to be quite reasonable, for, unless the returns on power projects are made economic, the country will find it increasingly difficult to service the loans (both foreign and Indian) incurred for financing them at some very high costs. Moreover, the Board's view runs counter to that recently advanced by the World Bank Mission to the effect that power rates should be increased so as to yield a return of at least 10 per cent on the capital base and thereby generate the required additional resources for accelerated power development. It also runs counter to the suggestion which was made by the Union Minister for Irrigation and Power at the Irrigation and Power Ministers' Conference early last month and which is being examined by a committee set up by that conference. That the Board of Trade has not realised that abundant supplies of power at whatever cost would make for optimum utilisation of industrial capacity and thus for a measure of cost reduction is surprising.

While the Board has no doubt done well to emphasise the need for cost reduction, in general, and for cost reduction studies by the Planning Commission, in particular, it does not seem to have recognised the wisdom behind the Union Finance Minister's recent plea for concentrated effort on selected export lines that promise the best results in terms of comparative cost advantages and the availability of markets. Although the export promotion schemes cover only a fifth of the country's exports, that fifth does represent, in absolute terms, a big slice of export trade and cover a wide range of commodities. There is, as T.T.K. opined, "danger in spreading our resources too thinly over a wide front." It should be a feasible proposition to concentrate greater promotional effort on export lines selected on the basis of cost advantages that they *already* have. This suggestion is by no means novel, for the Associated Chambers of Commerce of India, whose constituents can lay claim to a vast fund of experience in the country's export trade, have always placed greater emphasis on such a selective approach. The Chambers, it will be recalled, eloquently reiterated this approach in a resolution at their annual general meeting held early in December last. The relevant resolution recorded, *inter alia*, that "India must continue for some prolonged time to depend, to a major extent, on the earnings of the traditional and well-established export industries." "To safeguard and fortify some of the more important of those industries," the Chambers strongly recommended that (i) the tea industry should be allowed the finance necessary, through tax reliefs and otherwise, for expanding

and improving its output, (ii) effective action should be taken to make jute manufactures more competitive *vis-a-vis* those of Pakistan, and (iii) modernisation and increased productivity should be encouraged in the cotton textile industry.

It would be bordering on complacency to think, as the Board of Trade seems to do, that, because the bulk of export trade is moving unaided, it would be sufficient to rely on the development of healthier practices alone—practices such as quality control, sample adherence, contractual fulfilment, price stabilisation and export publicity. The three export lines, particularly mentioned by the Chambers for selective treatment, are tea (including coffee), jute manufactures and cotton textiles, and these account, as of 1963, for about Rs. 350 crores by way of export earnings. If to these are added other export commodities like pepper and other spices, vegetable oils, oilcakes, lac, cashew kernel, raw cotton, hides and skins, coir yarn and matting, fruits and vegetables, sugar and iron ore, the aggregate export earnings from raw materials and from manufactures based on agricultural commodities would come to more than Rs. 575 crores, representing nearly three-fourths of the entire export earnings. Surely, such a large sector of the country's export trade cannot be allowed to languish. If anything, it would need to be fortified and expanded by simultaneous efforts in the fields of cultivation, extraction and manufacturing. These efforts should be aimed at greater agricultural productivity (which is particularly important in the case of plantation crops, jute and cotton) through recognised means and at higher industrial productivity through modernisation of machinery and equipment, particularly in the jute, cotton textile and sugar industries. The Board of Trade's observation that the export sector of industries, agriculture and plantations has been having a higher priority for modernisation needs to be qualified by the statement that the gap between the achievements todate and the objectives, between the ideal and the real, is very wide.

RESPECT FOR JUDICIARY

JUST two days before he took the oath of office as the Chief Justice of India on Saturday the 1st inst., Mr. Justice B. P. Gajendragadkar concluded a series of three Lajpatrai Memorial lectures at Delhi. In the course of those lectures, Mr. Justice Gajendragadkar described, in his own inimitable style, how vital was the role played by the judiciary in a democratic setup and made two highly significant observations. One was that law would succeed only if it was wisely framed and was implemented in an honest and efficient manner. The other was that any public action (administrative or judicial) should not be influenced by improper considerations or be based on ulterior motives, for, otherwise, it would be a very bad form of corruption. These objectives cannot be fulfilled, unless the judiciary maintains a high standard of integrity, unblemished probity and independence from the influence of the executive. It is, indeed, a matter for great pride that, in this respect, the record of our courts of law has been clean and unquestionable. This is amply illustrated by the series of judgments which the courts have given in the past few years, judgments that have spared no one, however important a place he occupies in the political and social hierarchy. One such judgment was delivered by the Supreme Court on the 27th of last month when it quashed the schemes framed by the Andhra Pradesh State Road Transport Corporation (R.T.C.) for nationalising 64 motor routes in the Kurnool district. The five Judges who gave the judgment, including the Chief Justice, must have been aware that their verdict would greatly embarrass the Andhra Pradesh Government, more particularly the Chief Minister, Mr. N. Sanjeeva Reddy, whose stature in the party in power is pretty high; he was an ex-President of the Congress Party. Nevertheless, they did not hesitate in the least to give a verdict which, in their opinion, would serve the ends of justice and fairplay.

The Supreme Court's judgment arose out of a batch of eleven appeals by Mr. C. S. Rowjee and other motor transport operators against the R.T.C. The appellants, who were operators of motor transport in the western part of Kurnool district, objected to the R.T.C.'s schemes for nationalisation of road transport in 64 routes. The objections were overruled by the State's Minister for Transport and the operators filed writ petitions in the High Court challenging the legality of the schemes. The petitions, however, were dismissed by the High Court whereupon the parties went in appeal to the Supreme Court. The allegations made by the appellants are worth recording, in that they will help one to appreciate the soundness of the Supreme Court's judgment. Summed up, the allegations were:

The R.T.C.'s schemes were framed at the instance of the Chief Minister, Mr. Sanjeeva Reddy. Mr. Reddy felt chagrined at the defeat of his Party men and supporters and, desiring to wreak vengeance against the motor transport operators of western Kurnool, who were his political opponents, instructed the R.T.C. to change the order in which the districts were to have been taken up for nationalisation, so that Kurnool could be taken up first. In other words, Mr. Reddy wanted the R.T.C. deliberately to depart from the schedule which it had drawn up earlier. The R.T.C. gave effect to these instructions and directions by taking up first only the western part of the Kurnool district, instead of the whole of Kurnool district at a time eliminating the private operators in the western part from their field, and thereby giving rise to the impression that this was done to spite the political opponents of the Chief Minister. The schemes did not really reflect the opinion of the R.T.C. as was required by Section 68-C of the Motor Vehicles Act, 1939; they owed their origin only to the directions of the Chief Minister who had acted *mala fide*.

The facts of the case were clear enough. The five learned Judges of the Supreme Court could not but hold the view that the schemes in question were formulated merely in order to give effect to the wishes of the Chief Minister and that they did not comply with the statutory requirement, namely, that the Corporation must act on the basis of its independent judgment as to the requirements of public interest. They, therefore, declared that the R.T.C.'s schemes were vitiated by non-compliance with the requirements of Section 68-C of the Motor Vehicles Act. Since there had been no denial of *mala fide* intentions by the Chief Minister—this was unfortunate—nor any affidavit by any person who claimed or could claim to know personally about the allegations, their Lordships felt constrained to hold that the allegations that the Chief Minister was motivated by bias and personal ill-will against the appellants stood unrebutted. Stating that there was no affidavit even from the R.T.C. denying the allegations made by the appellants, their Lordships recalled the conference of the Corporation and its officers summoned by the Chief Minister soon after he took office at which he had admittedly suggested that nationalisation of road transport in the Kurnool district should be taken up first. They also recalled that the Chief Minister himself later made a statement in the Assembly as to what he did at the meeting and that the Corporation had departed from what it had decided only a little while previously. In view of all these and on the basis of the evidence placed in the case, their Lordships were satisfied that the R.T.C.'s action was the result of the conference of April 1962 and that the impugned schemes were formulated by the Corporation in order to give effect to the wishes of the Chief Minister expressed there.

When the highest supreme judicial body in the country passes strictures on anyone, they must be respected without any reservation, whoever be the person concerned and whatever view he may hold on them. It is, therefore, only proper that Mr. Sanjeeva Reddy should have decided to vacate office as the Chief Minister of Andhra Pradesh immediately after seeing the summary of the Supreme Court's judgment reported in the Press. The judgment has not just reversed an order of the Andhra Pradesh Government. It has also questioned the very motive behind the decision of the R.T.C., namely, the *mala fide* intentions of Mr. Reddy. By offering to resign, Mr. Reddy has, therefore, respected constitutional propriety and set a standard of conduct worthy of emulation by others. By quietly accepting the Supreme Court's verdict, he has also made amends for the indifference he showed when the case was being heard. He should have actually gone to the Court and defended his action. His failure to do so was perhaps the result of a guilty conscience. Whatever may be his explanation, he now stands condemned for misusing his authority as Chief Minister. However valuable his services to the country, in general, and to his State, in particular—he can certainly take legitimate pride in having contributed to the consolidation and stability of administration in Andhra Pradesh—respect for constitutional conventions is of inestimable value, especially to a young democracy like India. It is, therefore, essential for the Congress High Command to permit Mr. Reddy to resign. There is no other way of preserving democratic traditions and democracy.

More important than the resignation of Mr. Sanjeeva Reddy is the implication of the Supreme Court's judgment to the Administration. It is that administrators should not be misled in their decisions by the partisan motives and *mala fide intentions of the politicians* who are returned to power. This advice is applicable particularly to autonomous bodies; otherwise, their autonomy becomes a farce. In the light of the Supreme Court's findings, the Andhra Pradesh Government will, it is to be hoped, examine afresh the policy of nationalisation of road transport, so that the private motor operators may continue to carry on their activities, subject, of course, to the overall official regulation and control. The Andhra Pradesh Government, or, for that matter, the Government of any State, has plenty of things to do in several other fields of economic activity, particularly in the development of agriculture. It would be better, indeed, if it were to concentrate its attention on these, leaving the plying of motor vehicles and such other activities to the private sector which can undertake them more efficiently and cheaply.

MARKET GOSSIP

Sugar Abroad

THERE has been a sharp fall in world sugar prices of late. Sugar in London is currently standing at £80 per ton (c.i.f.) for spot, as against £93¾ prevailing three weeks ago. The drop in forward rates is even more sharp, being £20 per ton in March delivery, £18 in May and £16 in August. The swift break in prices has followed nervous selling induced by some bearish factors. One such important factor pertains to improved beet crop statistics in Western Europe which have rendered obsolete the earlier estimate of world shortage. It would appear from these statistics that more sugar will be available in Western Europe than had previously been thought, despite bad harvests in some countries. France recently put a sizable quantity up for tender and a still larger quantity is expected shortly. West Germany is also said to be proposing to sell a large quantity. It is, however, not so much these reports as the unexpected sale of sugar by Japan at cut prices that has imparted weakness to the world markets. Two cargoes of sugar were offered by Japan to Iran—one at £78½ per ton and another at £76½—and the appearance of two more cargoes is considered likely. Further, the Brazilian Sugar Institute has offered for sale some raw sugar and it is reported that the Dominican Republic will put a sizable quantity of sugar up for tender in the near future. On top of all these, there is the report that the U.S. has filled its import requirements earlier than expected, coupled with the announcement by President Johnson that he plans to remove all marketing restrictions on 1964 domestic cane and beet sugar. In a special agricultural message sent to Congress on Friday last week, President Johnson stated that he would present early in the season recommendations for remedial legislation concerning the sugar acquired by the U.S. from foreign suppliers under the global quota scheme.

Right now, it is difficult categorically to assert that the improved sugar beet prospects in Western Europe and the U.S. Administration's proposal would relieve the pressure on world market supplies which are still short. For much will depend on the moves of Russia and China, both of which are experiencing a shortage of sugar. Russia, according to one report, had a poor crop last year and some beet has recently been fed to cattle owing to the drastic scarcity of other feeds. "A pointer towards tightness in the Soviet position," to quote this report, "is that both Finland and Afghanistan, which are normally buyers from Russia, have shown buying interest in the world market. If Russia comes on to the world market as a buyer—some estimates put its demands at 500,000 tons—sugar prices should rise again."

I.M.C.'S PRE-BUDGET SURVEY

As we go to press, we have received a copy of the *Pre-Budget Economic Survey and Review of Budgetary Trends*, prepared by the Indian Merchants' Chamber, Bombay. The publication, as the title itself suggests, is divided into two parts—one part appraising the economic advance in the first three years of the third Plan and the second part reviewing the budgetary trends in relation to their impact on the economy. This is, indeed, a pioneer attempt by a non-official body in delineating a picture of the economy well in advance of the Central Budget. It has its undoubted value even as the official *Economic Survey*, usually released along with the Budget papers, and the customary eve-of-Budget analyses of economic and budgetary trends in the financial Press have theirs. While most of the facts and figures may be common to both official and non-official reviews, their analysis and interpretation may differ in some respects. It would, therefore, be interesting to examine the conclusions of the Chamber's *Survey* in the same critical way as we usually deal with the official *Economic Survey*. Our next issue will thus carry an article on the Chamber's timely publication.

One-price System For U.S. Cotton

While this country has been trapped by its own policy of higher price incentives for agricultural products and props to exports in the form of import entitlements, the United States is about to end its two-price system for cotton, which is the result of a policy of high price supports for agricultural products and which has, therefore, inflated domestic prices and necessitated some form of export subsidy to meet competition from foreign cotton in overseas markets. The policy, laying down the domestic price for cotton at 32 cents per lb. and the export price at about 24 cents per lb., is also said to have undermined the competitive position of the U.S. cotton textile industry and forced it to seek internal protection through quotas restricting imports of cotton textiles according to the country of origin and the type of fabrics. Legislative action ensuring a one-price policy for cotton is expected this year.

Indeed, on 31st January, President Johnson asked Congress to enact legislation enabling U.S. cotton to meet competition of foreign cotton and man-made fibres. He said, in a special farm message, that the present policy was not meeting the needs of either the grower, or the handler, or the cotton mill or the consumer. Foreign cotton was cheaper, he observed, and foreign mills could buy American cotton cheaper than could domestic mills. This was because the price-support programme held U.S. cotton above world price levels and above some man-made fibres, while foreign buyers were able to buy U.S. cotton at the world price through the operation of a Government subsidy.

Mr. Johnson said that the aim of the new cotton legislation should be threefold: *(1) to make* cotton more competitive with other fibres; (2) to make it possible for growers who desire to do so to produce cotton at world prices, without any subsidy, on a basis that would not add to U.S. stocks; and (3) *to maintain the income of cotton* growers while reducing excessive carry-over stocks. There are two proposals before Congress to deal with this problem and, as an Administration spokesman said, either would meet the goals set out by the President.

One of the proposals is embodied in the Cooley Bill passed by the House of Representatives on 5th December 1963. The Bill named after its initiator, Mr. Harold D. Cooley, Chairman of the Committee on Agriculture in the House of Representatives, seeks to enable U.S. mills to buy cotton at the export price by allowing them to claim against the difference amounting to 8½ cents per lb. a subsidy in kind, that is, *in the form of cotton acquired by the C.C.C.* in the course of its price support operations. But the Bill provides for a mandatory one-price system, as it includes the Jones amendment which leaves the amount of the offsetting domestic payment to the discretion of the Secretary of Agriculture. The Bill also allows growers to overplant their allotments, but without price supports. It will be seen that the manner in which the single-price system is sought to be brought about by this Bill is unique.

The other proposal, introduced in the Senate by Senator Herman Talmadge, aims at gradual reduction in grower price supports, with domestic and world prices finally becoming the same. It provides, however, for compensatory payments to growers for offsetting the loss of income that would result from the lower price supports.

The reaction of the Cotton Policy Committee of the American Textile Manufacturers Institute to the two proposals is that any one of them would serve the manufacturers' purpose. All that it wants is an expeditious return to a single-price system and it is opposed to anything that does not achieve this objective. In a statement last month, the Committee said: "For seven years, the textile industry has lived under the unfair burden of the two-price system. After 16 months, we have experienced serious disruption of our entire market structure for cotton textile products, awaiting the action of Congress to comply with the late President Kennedy's and now President Johnson's stated positions that Congress should correct the situation." Some opposition to the move for one-price system can be expected from the cotton growers and farm group leaders. But the Administration is strongly in favour of early legislation for ending the present system.

Whither World Coffee?

Even after the lengthy discussions at London last week-end, the Executive Board of the International Coffee Organisation (I.C.O.) deadlocked on the issue of export quota adjustments, though there was common agreement that more coffee was needed to halt the rise in world coffee prices. For the consumer-interests, led by the U.S., wanted a quota rise of 5-6 per cent, while the producer-interests, led by Colombia and Brazil, were not prepared to agree to an increase of more than 2-3 per cent. Incidentally, it may be noted that the aggregate basic export tonnages fixed under the Agreement amount to 45.53 million bags (of 60 kilos each), the total adjusted for the 1963-64 coffee season (October-September) being over 46.19 million bags. In view of the deadlock, the question arose: What next? Perhaps no one except the Board's Executive Director, Mr. J. O. Santos, seemed to know the answer to the poser. For it was Mr. Santos who suggested the convening of an emergency full Council meeting. The suggestion was immediately accepted and it was decided that such a meeting should be held on the 10th and 11th inst. Invitations, it is said, have already been sent out to fifty-nine member-countries of the World Coffee Agreement. The quota question besides, the meeting is expected to ascertain the present membership of the I.C.O. and adopt measures to permit the accession of those signatories which had not deposited the instrument of ratification by 31st December 1963. Also included in the agenda is the issue pertaining to redistribution of votes. As both producers and consumers in the I.C.O. must together total a thousand votes for each of the two sections, the votes of those who have not ratified the Coffee Agreement will have to be redistributed.

Whether the emergency meeting will succeed in arriving at a decision acceptable to both sides and, if so, how, remains to be seen. May be, the bargaining position of coffee producing countries has strengthened to some extent lately, following the decline in coffee prices on both sides of the Atlantic in the past fortnight, the Uganda spot London receding from 335s. to 325s. per cwt. But there is a growing belief that higher quotas can cause only a slight psychological break in the market and not reverse the trend towards a tighter supply position for coffee. The Commodities Editor of the London *Financial Times* is, therefore, inclined to feel that the principal bar-

gaining at the emergency meeting will centre round the distribution of higher quotas rather than the actual size of the increase. In either case, India will stand to benefit, provided, of course, its delegation to the meeting successfully presents its case for a bigger export quota than the 20,000 tons allotted to it and impresses upon the other members attending the meeting the pressing urgency of earning foreign exchange.

Bajaj-Tempo's Public Issue

Bajaj-Tempo Ltd., which has all but completed the construction of its new factory at Chinchwad near Poona and is in the process of transferring machinery and equipment from its existing factory at Malad, Bombay, is a pioneer in the manufacture of three-wheelers in this country. These three-wheelers, manufactured in technical and financial collaboration with Messrs. Vidal & Sohn Tempo-Werk GMBH., Hamburg-Harburg (West Germany), are sturdy, versatile vehicles which are used in several Indian cities as delivery vans, pick-up trucks, ambulances, autorickshaws, refuse trucks, oil tankers, and so on. Within less than three years from the commencement of manufacture in May 1959 with a licensed capacity of 1,000 vehicles per annum, the Company achieved 63 per cent indigenous content. Today, the indigenous content of the three-wheeler is 81 per cent, and this is expected to reach the level of 90 to 95 per cent by the end of 1964. The Company has been recently licensed for an expanded annual capacity of 4,000 vehicles, of which four-wheelers will account for 1,500 in the first year (that is, 1965) of their manufacture under the Rs. 1.8-crore expansion programme which has been taken on hand. This paper's representative, who, along with other pressmen, went round the Bajaj-Auto factory (manufacturing scooters) and the Bajaj-Tempo factory near Poona on the 21st of last month, was visibly impressed by their methodical and tidy organisation for production, as well as by the determination of the management to complete the expansion project by the end of this year and put the new Tempo-Viking four-wheeler on the market early next year.

A little more than half of the finance required for the expansion programme is to come from institutional sources. The Industrial Finance Corporation of India has already sanctioned a loan of Rs. fifty lakhs. Borrowings from banks and other sources will account for about Rs. 42.8 lakhs. The Company's reserves available for financing expansion amount to Rs. 7.4 lakhs. As the Bajaj-Tempo Ltd., which was incorporated in 1958 and became a public company in 1961 with an authorised capital of Rs. 100 lakhs in equity shares of Rs. 10 each, has an issued, subscribed and paid-up capital of only Rs. 14.6 lakhs (in equity shares of Rs. 10 each fully paid-up), it has decided to issue further equity capital to the tune of Rs. 65.3 lakhs. Of this fresh equity issue, Rs. 18.5 lakhs will be in the form of right shares which have been offered to the existing shareholders resident in India and fully subscribed; Rs. 16.9 lakhs and Rs. 90,000, respectively, have been reserved for allotment to the German collaborating firm and a German resident director against supply of machinery and equipment; and Rs. 29 lakhs will represent the amount presently to be subscribed by the public. It is for raising the last-mentioned amount of Rs. 29 lakhs that the Company is entering the capital market on 10th February 1964. Applications for shares, in this connection, must be for a minimum of 50 shares or multiples thereof. Rs. 3 per share is to be paid on application. The balance of Rs. 7 per share is to be paid in three calls at intervals of not less than three months. It may be noted that the present public issue of Rs. 29 lakhs has been fully underwritten.

The Company has a creditable dividend record to date. It paid 11 per cent in 1959-60, 20 per cent in 1960-61, 18 per cent in 1961-62 and 20 per cent in 1962-63. It has also capitalised a part of its reserves by issuing bonus shares of the face value of Rs. 4.9 lakhs (included in the already issued and paid-up capital of Rs. 14.6 lakhs). Besides, the Company is now ploughing back for expansion Rs. 7.4 lakhs representing accumulated reserves. With an influential Board of Directors (Mr. Ramakrishna Bajaj as Chairman, Mr. Charat Ram, Mr. R. P. Nevatia and two German engineers as Directors and Mr. N. K. Firodia as Managing Director), the Company may be confidently expected to function at a high level of business efficiency. With an expanding and assured market for light trucks of less than one-ton carrying capacity—the estimated demand for such vehicles is 30,000 per year at present—the Bajaj three-wheelers and four-wheelers seem to be assured of a good market. The three-wheeler pick up truck, costing Rs. 7,500 without excise duty, and the four-wheeler, likely to cost no more than Rs. 12,000 without excise duty, are bound to appeal to a whole range of users, including hospitals, municipalities and panchayats, dairies and small industries. In these circumstances, Bajaj-Tempo Ltd. can look forward to profitable performance, given an adequate and regular supply of raw materials and spare parts.

"Restricted Information"

The Union Government's latest order under the Defence of India Rules restricting the publication of news about the public sector undertakings, will be making the task of economic journalists still more difficult. As it is, information from Government sources is hard to come by. The official handouts, in their peculiar way, refuse to yield anything beyond a part information. The reports have to satisfy themselves with whatever little trickles down from these reluctant sources, as is evident from the columns of most of the daily newspapers. Those of the journalists who prefer to present a somewhat comprehensive picture about any of the important public sector undertakings will find it hard to file a copy, if some bureaucratic over-enthusiasts decide to club together all unpalatable facts as "restricted information." A particular difficulty will be experienced in regard to the petroleum industry in which case the private companies have also been roped in. While there can be no quarrel with the underlying principles of this order, there is legitimate fear, on the basis of past experience, that its injudicious application will tend to stifle a full and frank discussion of our economic development.

It is to be hoped that the authorities concerned, before declaring any information "restricted," will take into account the need for information for a correct assessment of the country's economic progress. For even a discussion of the Government's economic policies cannot be fruitful without facts.

U.K.—E. EUROPE TRADE

Britain will abolish quota restrictions on imports of manufactured goods from Eastern Europe, if satisfactory arrangements are reached with the countries concerned, according to Mr. Edward Heath, Secretary of State for Trade and Industry. Negotiations are currently being held at London between the British and Czech officials. Talks will also be held with Bulgaria, Hungary, Poland and Rumania. The object of the move is to enable these countries to earn more sterling to finance purchases of British capital goods, etc. The items which are expected to be freed from quota restrictions include machine tools, furniture, basket work, leather goods, glassware, pottery, books and pharmaceuticals. The East European countries, however, will have to ensure that their goods do not enter the U.K. at 'disruptive' prices; if this happens, Britain reserves the right to re-impose quota restrictions. The arrangements do not include Anglo-Russian trade, as this will be a separate subject to be negotiated soon.

"SANDVIK COROMANT" TOOLS

Sandvik Asia Ltd. has started marketing *Sandvik Coromant* tungsten carbide tips and tools which it manufactures in collaboration with Sandvik Steel Works of Sweden. These products are famous the world over for their quality and precision, and the Sandvik group is one of the world's leading manufacturers of cemented carbide products. Special care is taken at the Sandvik plant at Poona to equal the quality standards associated with the name *Sandvik Coromant*. The Company has been manufacturing for the past two years rock drill steel equipment which the Atlas Copco (India) (Private) Ltd. markets in the country on its behalf. The tungsten carbide tips and tools are, however, being sold directly by the Company.

RECORD RESULTS OF GENERAL MOTORS

General Motors, the world's biggest manufacturing corporation, has reported record income sales and employment during 1963. Net income has expanded from $1,459 million (approximately Rs. 693 crores) to $1,592 million (Rs. 756 crores). Estimated sales have totalled $16,500 million (Rs. 7,837.50 crores), as against $14,600 million (Rs. 6,935 crores) in 1962, the previous record year. The Company employed during the year an average of 640,000 people, including 157,000 outside the United States, and paid them a total of $4,300 million (Rs. 2,042.50 crores) by way of salaries, wages and other benefits.

As a further step towards expanding overseas interests, Fisons Ltd., the well-known fertiliser and chemical manufacturing firm of Britain, has struck a £2.5-million deal with the American Biltrite Rubber Company of Massachusetts, under which it has agreed to buy the American Company's National Polychemicals Division's assets and business. Funds for this acquisition have been provided by the Morgan Guaranty Trust Company of New York in the form of a medium-term loan. Details of interest rate and repayment periods have not yet been disclosed. National Polychemicals is a major supplier of blowing agents to the rubber and plastics industry in the U.S. It also operates in the field of speciality resins for hardboard, plywood and decorative laminates.

Tea crop of the Bombay Burmah Trading Corporation Ltd. for the seven-month period ended 31st December 1963 amounted to 2,035,002 kg. of made tea, as against 1,914,995 kg. during the same period of 1962. However, owing to the unfavourable weather conditions during January, the lead over last year has been reduced to some extent.

ALLIANCE JUTE MILLS COMPANY LIMITED

NOTICE

ANNUAL GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will be closed from 11th February, 1964 to 25th February, 1964, both days inclusive.

By Order of the Board,
McLEOD & Co. LTD.,
C. HOCKLEY,
Director,
Secretaries & Treasurers.

3, NETAJI SUBHAS ROAD,
CALCUTTA,
28th January, 1964.

TREND OF SHARES

PRE-SETTLEMENT STEADINESS

(From Our Owr Correspondent)

BOMBAY, *6th February*

MUCH need not be read into the slight steadiness in equities this week, though it was in refreshing contrast to the sudden weakness noticed near the close of last week. For, if last week's setback was due to pre-settlement liquidation, the minor change for the better in sentiment this week seemed due mainly to the beginning of the new account, especially because, in Bombay, it happens to be of a three-week, and not the usual two-week, duration. No doubt, factors like prospects of some relief in margins and good corporate news did sustain the improvement in sentiment. But the steadiness appeared to be largely on account of absence of fresh selling and some squaring-up of business in the first week of the new settlement. It is because of this that speculative counters like Century, National Rayon and T.E.L.Co. staged a smart rally and others closed generally with small gains. Shorts were cautious in the absence of any particularly depressing factor. But buyers, too, were scared away by the pretty high badli charges at the turn of the last settlement on both Bombay and Calcutta Stock Exchange. The result was featureless trading throughout the week, with some redeeming sparkles here and there.

The week opened with fresh hope for relaxation of margins. Mr. A. Baksi, Joint Secretary of the Union Finance Ministry, assured a deputation of the Bombay Stock Exchange, led by the President, Mr. K. R. P. Shroff, at a meeting here on Friday, 31st January, that he would place their plea before the Finance Minister. The same day came the news that the authorities of the Ahmedabad Stock Exchange had sought an interview with T.T.K. in the same connection. It now seems likely that after, if not before, the budget margins may be relaxed.

Corporate news remained generally good. The report of the Directors of Voltas Ltd. giving details of the expansion plans in hand and the statement of the Chairman, Mr. J. D. Choksi, that the Company had now reached a stage from which there would be no going back, had a favourable effect on the market sentiment, with the shares of the Company improving smartly from Rs. 261.50 to Rs. 270 during the week. The Alkali and Chemical Corporation of India Ltd. reported encouraging results for the year ended 30th September 1963. Gross profit of the Company has gone up considerably from Rs. 112.79 lakhs to Rs. 157.84 lakhs in line with the improvement in sales from Rs. 6.95 crores to Rs. 8.13 crores, but the dividend has been maintained at Rs. 1.50 per share. The Directors of the Madura Mills Company Ltd. announced a higher dividend of 17.50 per cent per annum on the Rs. 15 fully paid shares for the year ended 31st December 1963, as against 15 per cent a year before, following the increase in net profit from Rs. 51.51 lakhs to Rs. 80.17 lakhs. The Directors of Walchandnagar Industries Ltd. decided to maintain the ordinary dividend at 12 per cent per annum for the year ended 30th September 1963. However, the two steel companies' production figures for January showed a setback in saleable steel output from 136,600 tonnes to 133,100 tonnes in the case of the T.I.S.Co. and from 70,229 tonnes to 63,185 tonnes in the case of the I.I.S.Co.

The general news of interest to the marke had two interesting features, one the start of the Unit Trust of India from 31st January and the other the stress laid by the Finance Minister on the need for attracting more private foreign capi tal in the course of his speech at a meeting c the officials of the Indian Investment Centre a. New Delhi two days ago.

• • • •

On Dalal Street, Century and Scindia were in the limelight, the former staging a smart recovery from Rs. 666.60 to Rs. 692.50 on replacement buying by the prominent industrialist-operator in this scrip and the latter rising from Rs. 13.28 to Rs. 14.40 on strong support. National Rayon rallied from Rs. 409.50 to Rs. 424.50 and Kohinoor gained Rs. 6.50 to Rs. 336.50 over the week. Bombay Dyeing appreciated by a full point to Rs. 62.20 and Svadeshi by Rs. 5.50 to Rs. 250.50, but Standard were only three points higher at Rs. 780.

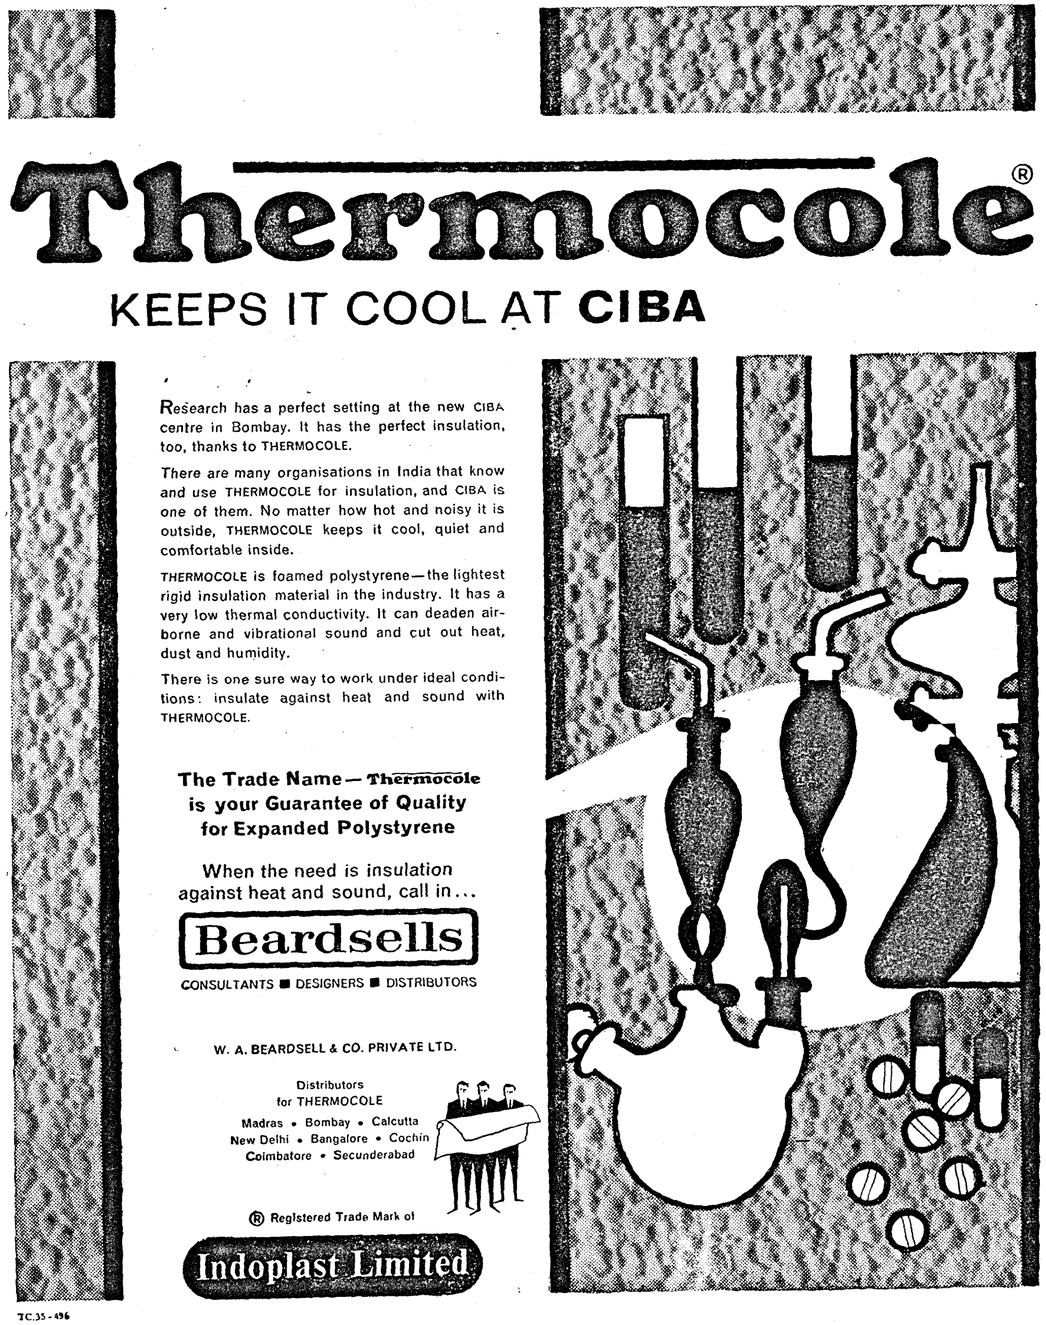
Among Steel shares, Tata Ordinary gained three points to Rs. 145.75 during the week and Indian Iron 44 nP to Rs. 24.84. In the Miscellaneous section, T.E.L.Co. improved by Rs. 6ne to Rs. 291.25 and Hindustan Motors by 24 nP ons Rs. 18.72. Bombay Burmah closed one po higher at Rs. 60.80. Quoted *ex-div.* from Mon the 3rd inst., A.C.C. gained Rs. 2.65 to Rs. 14 over the week. Belapur, among Sugar sha the moved up from Rs. 225 to Rs. 229. va

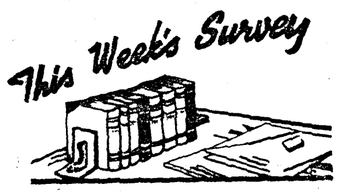
• • • •

Selected forward shares evoked some support on the Calcutta Stock Exchange. Thus, Howrah Jute improved from Rs. 17.87 to Rs. 18.50, Indian Aluminium from Rs. 28.75 to Rs. 29.31 and Dunlop Rubber from Rs. 36.75 to Rs. 37. But cash scrips made a mixed show. For instance, Bharat Commerce, among Textiles, declined by Re. 1.31 to Rs. 22.06 and Amalgamated Coal recorded a loss of Re. 1.75 to Rs. 23. Alliance Jute were marked down from Rs. 142 to Rs. 135, but Delta rallied further from Rs. 148 to Rs. 151. Engineering and Miscellaneous issues recorded small losses.

• • • •

Trading remained dull and the tendency easy on the Madras Stock Exchange. Among the prominent counters, E.I.D. suffered a setback o. 40 nP to Rs. 37.75, Midland Rubber of 30 nP to Rs. 11.10 and S.I. Viscose of one point to Rs. 133. Madura Mills rose, however, from Rs. 33.40 to Rs. 35.50 on news of higher dividend.





AN UNWISE DECISION

THE attitude taken by the employer interests in Bombay in regard to the readjustment of the existing consumer price index series with 1960 as base year recommended by the Lakdawala Committee and the decision of the Maharashtra Government thereon is, to say the least, deplorable. And more deplorable is the move of the Millowners' Association, Bombay, to take the issue to the Industrial Court. What, after all, are the considerations that have weighed with the employer interests categorically to reject the findings of the Committee? Their chief objections, according to a spokesman of the Employers' Federation of India, are six. They are:

1. The prices of milk taken into account by the Committee are wholly unrelated to the present mode of purchase.

2. The weightage given to *supari* as well as its price is most artificial and contributes substantially to the inflation of the index. If the index is accepted, it will mean that the working class family will be spending Rs. 20 a month on the item of *pan-supari* alone.

3. As regards house rent, the index has been worked out without taking into consideration the proportion of new houses to old houses in the city.

4. There has been a marked change in the proportion in which workers buy rice in the free market and from fair-price shops at prices fixed by the Government.

5. Before accepting the Committee's recommendations and deciding to give effect to them, the Government of Maharashtra did not take any steps to bring the parties (employers and employees) together for negotiation, nor had it accepted the employers' suggestion for referring the issue to arbitration.

6. As a result of the unilateral action on the part of the State Government, the industry in Bombay City will be saddled with an estimated additional burden of Rs. 5 crores per annum, of which the cotton textile industry alone will have to bear well over Rs. 2 crores.

The hue and cry raised by the employers' interests over the findings of the Lakdawala Committee are clearly unwarranted. This Committee was an impartial one in that it consisted of three independent competent persons who did not have anything to do with either industry or labour. Thus the Committee consisted of two leading economists, namely, Prof. D. T. Lakdawala of Bombay University (Chairman of the Committee) and Dr. K. Mukerji of the Gokhale Institute of Politics and Economics, Poona, and a statistical expert, namely, Mr. C. V. Rao, Deputy Director of Statistics, Reserve Bank of India. The Secretary to the Committee was Mr. T. R. Bhagawat, Assistant Commissioner of Labour, Government of Maharashtra. Such a Committee cannot, therefore, be accused of having taken a partisan stand in favour of labour and ignored the interests of employers. Considering that the Committee was quite a competent one and that it has clearly stated that it has finalised its recommendations after duly ascertaining and considering the various points raised by the employers' and workers' organisations, one fails to understand why the Bombay Millowners' Association has thought fit to take the issue to the Industrial Court.

The argument that the findings of the Committee are one-sided is untenable. The Committee itself says that, after carefully considering the various viewpoints of the interests concerned, it came to the conclusion that the old series required adjustment in respect of price indices of only four items, namely, ghee, ready-made tea, house rent and clothing group, that any revision of the series for periods prior to 1960 had to be ruled out, and that the incorporation of changes in consumption pattern in respect of a few items would disturb the weights of other items. It may be that the Committee has, as is pointed out by the employers, "totally ignored the various important suggestions made to it by them in connection with the index." In the absence of the full text of the Committee's report, which the Government of Maharashtra has still not made available to us despite special requests made to it, it is not known to what extent this contention is correct and on what grounds the Committee did not accept them. It is, however, apparent that the Committee was not convinced by the employers' suggestions. Further, since the representatives of workers also argue that many of their suggestions were not accepted by the Committee, it is obvious that the Committee has tried to strike a balance and in doing so has pleased neither party. In fine, if the Committee's link-up formula has gone against employers in some respects, it has gone against workers in other respects.

It has also to be remembered that, before the Maharashtra Government made up its mind, it did consult both the employers' and workers' representatives and heard their respective points of view. An outcome of this making was the Government's suggestion that the formula should be adopted only from January this year and not with retrospective effect, as was demanded by workers. Here also, the employers won a point in their favour.

As for the financial impact of the enhanced dearness allowance, the additional incidence that will fall on the mill industry, in particular, is put at Rs. 2 crores annually. Apart from the question that the mills will naturally pass on the additional incidence to consumers, the fresh average increase in the price of cloth produced by the city mills comes to less than two naye paise per metre. The millowners may contend that even this increase is inflationary. But they cannot themselves fight inflation single-handed. In any case, several millowners have not hesitated to buy cotton above the ceiling prices or to put up the price of cloth in contravention of the so-called gentlemen's agreement on fair prices by making slight changes in the composition of cloth. So if they advance the consumer's case in their favour, they will not succeed in carrying conviction to the public. They know as much as we do that actual prices paid by consumers have been going up all the time and that the index numbers do not reflect these increases in full. The best thing for the millowners to have done would have been to accept the recommendation of the Maharashtra Government gracefully, instead of deciding to fight out the issue in the Industrial Court on narrow technical and legal grounds. The question of composition of index numbers and their readjustments is a technical issue, for which economists are more suited than industrial courts. It is unwise to go in for adjudication on it. At this rate, there will be no end, no limit to the sphere of adjudication. Such a judicious approach would have helped workers to extend their co-operation and prevented them from being attracted by the trade unions controlled by the communists. Even employers need a political strategy and vision. Even now, it is not too late for the millowners of Bombay to drop their ill-advised move and bury this issue (so far as they could) by accepting the decision of the State Government.

The unwise lead given by the Millowners' Association, Bombay, it is to be fervently hoped, will not be emulated by its counterpart in Ahmedabad which has also reacted sharply to the Gujarat Government's decision to implement the award of the special committee set up by it to examine the question of readjusting the existing consumer price indices for the purpose of paying dearness allowance to mill workers. This Committee, too, consisted of two eminent economists (Dr. M. B. Desai, Professor of Agricultural Economics, M. S. University, who was also the Chairman of the Committee, and Prof. J. L. Dholakia of Gujarat University) and one statistical expert (Mr. V. V. Divetia, Director of the Bureau of Economics and Statistics); Mr. A. V. Vyas, Deputy Labour Commissioner, was the Secretary. The Committee has recommended the readjustment of the existing series in respect of house rent which was based on 1930 and cloth which was based on prices in 1952, but has not found it necessary to readjust the weightage in the miscellaneous group. As a result of the revision, the Ahmedabad cotton mill workers will get an additional dearness allowance of about Rs. 7-Rs. 7.50 per month and the annual D.A. bill of the industry is expected to rise by Rs. 1.25 crore to over Rs. 14.50 crores. Since the dearness allowance rate in most textile and other industrial centres in Gujarat has all along been linked to the consumer price index for Ahmedabad, the workers employed in these centres, too, will get higher dearness allowance. Whatever the additional burden, it well behoves the textile industry of Gujarat to accept the Committee's findings and give effect to them gracefully. It would certainly be a sad mistake, if it were to take the issue to a court of law.

WORLD STEEL MARKET

What a big change has taken place in the world steel economy in the last 16 years! The United States and Western Europe which, together, accounted for 80 per cent of the world's aggregate steel output (210-215 million tonnes) in 1947, produced only 50 per cent of the world total (420-425 million tonnes) in 1963. Gone, therefore, is the old dominance of the United States and Western Europe in the world steel market—a dominance based on technological know-how and ready access to abundant coal and iron ore resources. Thanks to fresh technological breakthroughs, low-cost transportation, development of rich new iron mines, foreign aid and private investment, several countries, which were formerly dependent on steel imports, are now making more and more of the metal themselves and even exporting it whenever domestic demand slackens. The trends in the growth of output in the principal steel-making countries in the period 1950-63 may be noted in the following table taken from the February issue of the Monthly Letter of the First National City Bank (New York):

(In thousands of metric tons of ingot)

	1950	1963	Per cent increase
300% or more:			
Japan	5,333	34,722	551
Mexico	430	2,094	387
Rumania	615	2,863	366
Netherlands	540	2,508	364
Italy	2,604	11,182	329
India	1,610	6,329	305
200% to 300%:			
South Africa	832	3,078	270
Yugoslavia	481	1,737	261
East Germany	1,097	3,913	257
Brazil	879	2,970†	241
Poland	2,272	8,730	215
Australia	1,597	5,022	214
Austria	1,044	3,235	210
100% to 200%:			
U.S.S.R.	29,800	87,500	194
Spain	890	2,500	182
Sweden	1,584	4,254	169
Czechoslovakia	3,186	7,998	151
Canada	3,384	8,386	148
Hungary	1,155	2,911	126
West Germany	15,453	34,828	125
Less than 100%:			
France	9,528	18,821	98
Belgium-Luxembourg	8,865	12,568	83
United Kingdom	18,348	25,221	38
United States	96,836	109,281	13

* Includes only countries producing more than one million tons in the last year. Where final 1963 figures are not available, production figures for the latest twelve months have been used.
† 1962 figure; 1963 figures unavailable for Brazil.

The very fact that steel imports into the United States and the Common Market have been heavy in recent years—some eight million tonnes in terms of ingot were imported into the former and 4.7 million tonnes into the latter in 1963—would seem to suggest that the world's ability to make steel has been growing faster than demand. With the world capacity exceeding 500 million ingot tonnes now and with an estimated record production of 420-425 million ingot tonnes last year, the traditional steelmaking countries have become increasingly anxious about the lagging demand for their steel and also sensitive to foreign inroads into their own domestic markets. In particular, the Common Market countries, in their anxiety to stem the flow of imports, have just decided to raise their steel tariffs—averaging around six per cent previously—to the Italian level of nine per cent by 15th February. The unified external tariff for steel (albeit at a higher level), now being evolved by the Community, is sought to be justified on two grounds. One is that steel imports into the Community have increased from 2.5 million tonnes in 1961 to 4.7 million tonnes in 1963. The other is that steel imports, being priced as low as £42 a ton on an average, have had an adverse effect on the steel price level within the Community whose producers, faced with falling prices and profits, have begun to go slow on new investment plans. Whatever be the justification for this tariff move, there can be no gainsaying that it would have an impact, both real and psychological, on the world steel trade, in general, and the steel exports made by Britain, Austria and Sweden, in particular, to the Community. The higher tariff barrier would also tend to deflect some exports to the United States, where tariffs average only about six per cent.

The United States, while it is strongly opposed to any tariff move that might spoil the atmosphere for lowering trade barriers in the "Kennedy Round" G.A.T.T. negotiations scheduled to begin in May next, is nevertheless inclined to support some kind of international anti-dumping agreement. But it is by no means clear whether that country would bless the proposed Community move—something more drastic than any anti-dumping measure—to convene a world conference of leading producing countries to evolve ways and means of harmonising the terms of international competition and thereby stabilising the steel trade on the lines of world agreements already in operation for wheat, coffee and cotton textiles. A section of non-official American opinion, represented by the *Monthly Letter* of the First National City Bank (New York), has, however, refused to share the alarm felt in some European quarters, as will be seen from the following quotation:

"While price-cutting and aggressive tactics in world markets are bound to be troublesome, they arise out of the progressive changes going on in the world as nations press their efforts to achieve economic growth and higher standards of living. How successful they are will largely determine how fast they will grow as export markets for industries in the United States and the Common Market.

"It would be a pity, therefore, if efforts should be diverted toward stifling world competition in steel, when industrial nations have so much to gain from expanding international trade. Though the European Coal and Steel Community's tariff action comes at an inopportune time, this should not distract us from the main goal of lowering tariff barriers in the forthcoming G.A.T.T. negotiations."

This is indeed a wholesome piece of advice to the Common Market countries which, while continuing to export some 14 million tonnes of steel per annum, seem to be unduly worried over steel imports amounting to just a third of that export quantity. The United States, whose steel imports amount to some eight million tonnes per annum now, as against the meagre two million tonnes it exports, is, on the other hand, inclined to take a less alarmist view of the world steel situation and to adopt a more liberal approach towards international competition. Here is one more instance of the United States and the European Economic Community not seeing eye to eye on trade and tariff matters.

AGRICULTURAL PROGRAMMES

The last meeting of the National Development Council, it will be recalled, decided to set up a high-level board at the Centre to co-ordinate all administrative actions connected with agricultural production programmes. With the constitution of this board—called the Central Agricultural Production Board—a renewed sense of urgency seems to be in evidence on the agricultural front. The States have followed suit by setting up co-ordination committees both at the Ministerial level (with the Chief Minister as Chairman) and at the Secretariat level (with the Chief Secretary as Chairman) to co-ordinate the work of all departments in matters connected with agricultural production. These committees have been urged to meet frequently for giving constant and sustained attention at the highest level to agricultural problems. The Central Board's decision to have detailed discussions with the State Governments on problems pertaining to programme implementation has also been followed up by regional agricultural conferences. Two of them, one covering the Western Region and the other covering the Southern Region, were held in the course of the past 10 days. As administrative deficiencies and organisational bottlenecks have been usually blamed for tardy progress in the implementation of agricultural programmes, there can be no doubt that administrative co-ordination at the State level, as also between the Centre and the States, would make for quicker and more efficient action all round.

The co-ordination committees at the State level and the regional conferences between the States and the Central Agricultural Production Board may, therefore, be expected to go some way towards streamlining the organisational structure at the higher levels. But, unless similar co-ordination is effected at the district, block and village levels in all the States, orders from above will not be easily translated into practical plans of action. The Centre may take a series of steps to make available more credit and physical requisites for agriculture and each State Government may broadly allocate them to the various districts. But, in the final analysis, it is only administrative and organisational efficiency at the district, block and village levels that can ensure the prompt availability of aids to farmers at the beginning of each agricultural season. The decisive part will thus have to be played by the block organisation, covering a certain number of villages, in each district. To say this is not to detract from the aid-giving roles of the Central and State Government, for, in the absence of adequate aids and allocations of physical requisites, the block organisation, by itself, cannot be expected to achieve much.

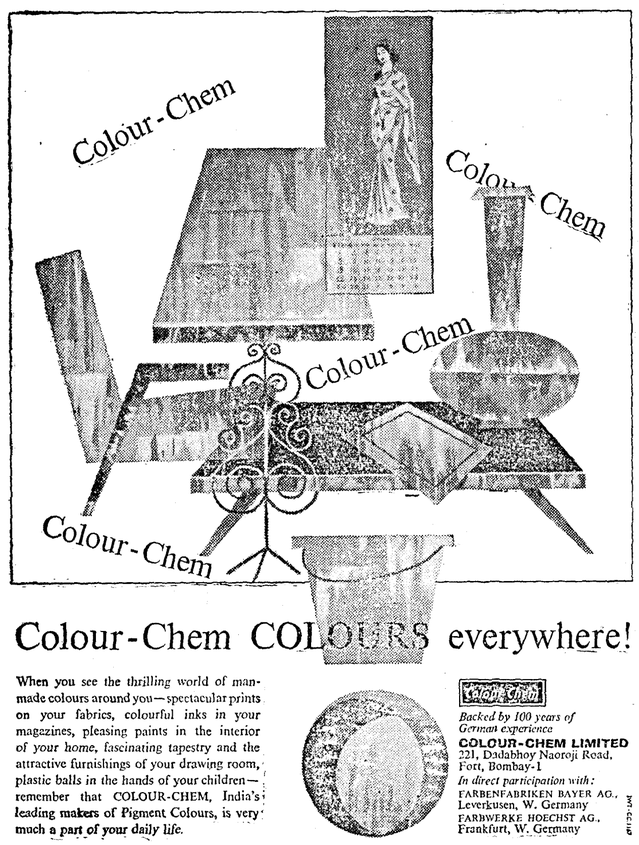
It is in this context that some of the practical arrangements discussed or approved at the Western and Southern Regional Conferences on Agricultural Production seem to be quite timely—timely because the 1964-65 season will begin in a few months' time from now. Particularly noteworthy are the decisions taken at the conference of the Southern Region covering the States of Madras, Mysore, Andhra Pradesh and Kerala. One of these is to the effect that co-operative societies should be strengthened, more immediately in the intensive cultivation areas (package programme districts), so as to link credit to production programmes and marketing. Another decision is that, wherever possible, credit might be extended in kind. The two decisions, if earnestly implemented, would ensure more adequate and timely credit for agricultural purposes. The conference of the Western Region, covering the States of Maharashtra, Gujarat and Madhya Pradesh, has also taken a decision to strengthen the co-operative structure with a view to ensuring prompt and adequate supply of credit. The detailed discussions, at both the conferences, on improving the supply and distribution of fertilisers, organic manures, improved seeds, pesticides and plant protection equipment (both of which the Centre has undertaken to make available in time and at more reasonable prices) iron and steel and cement for agricultural purposes also seem to have been on practical lines. If more effective distribution arrangements result from these discussions, the results thereof should be in evidence in the next agricultural season.

INDO-U.K. ECONOMIC TIES

The British Chancellor of the Exchequer, Mr. Reginald Maudling, did not at all indulge in any crystal gazing when he declared at London the other day that India could become the most important market in the world for British goods by the end of the present century and that, before then, Indian Investment would commence flowing into Britain as a counterpart of British investment in India. This statement, which Mr. Maudling made in his speech at a dinner meeting organised by the Indian Journalists Association in London, may sound rather optimistic in view of India's present difficulties. But Mr. Maudling's confidence will doubtless be shared by anyone in India and abroad who has cared to have a knowledge of this country's great potential. "Staggering" was the word he used to describe the potential of India's economy. Saying that the trade and financial links between India and Britain are, by tradition, "very close and strong," he observed:

"Britain's investment in India is of the order of £330 million, or more than that of all other countries together. We provide a market for almost a quarter of India's total export sales and India, in return, provides a market of large and growing importance for British exports. At the moment, Indian market is limited very strictly by shortage of foreign exchange, but this time will pass.... I believe there will be a tremendous development over the next few decades in trade between our two countries."

Britain's assistance to India in meeting its development problems, Mr. Maudling went on to explain, took three forms: First, direct Government-to-Government aid (financial and technical; second, private investment which is of immense importance; and, third, trade the importance of which is increasingly recognised. A very pertinent point that Mr. Maudling stressed was that development plans such as India's "cannot be fully successful, unless they lead to vigorous expansion of exports." Such expansion, however, presupposes the willingness of other countries, more especially the developed countries, to buy more and more from India. Reassuring, therefore, is the statement of Mr. Maudling that Britain would continue to play its part in facilitating opening of markets for Indian exports. In regard to cotton textiles, he no doubt made it clear that Britain could no longer accept imports without any limit, since about 40 per cent of its domestic consumption was already being taken by imports and the indigenous industry was only half the size it was ten years ago, but he wanted the other developed countries, too, to buy more from India. He said: "If only the other industrialised nations had been prepared to accept imports on a similar scale, how different would the position of India have been today." In their own enlightened self-interest, the prosperous people in the northern hemisphere should help their less well placed fellowmen in the southern hemisphere, for, once the latter's living standards improve, the trade between the two hemispheres can expand at a faster pace to the mutual benefit of both.



DELHI LETTER

FRENCH DECISION AND INDIA

UNWISE TO JUMP TO ADVERSE CONCLUSIONS

From Our Special Correspondent

NEW DELHI, 4th February

IN the current turmoil over the French decision to recognise Communist China, a spokesman of the External Affairs Ministry has chosen to use only a cryptic remark—untimely. Probably the present-day compulsions of Indian foreign policy do not allow him to go beyond it and be a little more specific which would indicate in some way at least, the actual feelings of the Government of India. A threadbare discussion of the political consequences of the French action is already on. But, understandably enough, the usual extroverts on economic policies have kept themselves in leash so far about its possible effects on our foreign trade and economic relations, particularly in relation to the Common Market.

There is no gainsaying the fact that economic consequences of the French decision will be tremendous for this country. Close on the heels of this announcement has come a report from Paris that the French have decided to call off a projected trade delegation visit to India. The delegation was earlier reported to have drawn up a rather longish itinerary covering a number of countries in South and South-East Asia. It is not yet known if the entire tour programme has been given up or only a suitable adjustment made in it to avoid a touch down at Palam.

The reasons adduced for this change in the programme are twofold. First, the French industrialists feel that the chances of raising the Indo-French trade from the current level of 120 million francs annually, are remote. Secondly, they are reluctant to associate themselves with any trade delegation at present since all the French aid through the Consortium are pledged to specific projects.

Wise Policy

Be that as it may, the Indian side seems to have adopted the wise policy of not jumping to conclusions. Despite the political developments and reports of the Chinese desire to purchase French heavy machinery while offering to sell to France goods which India now exports to that country at "competitive" prices (in other words, at "cut-throat" rates, it is gratifying to note that those who have the good of India at heart, have withheld comments till further clarification of the situation. For, it will be a foolhardy attempt to forget the existing Indo-French economic ties just because certain nuances of the French foreign policy does not appeal to us at the present moment. The list of French-assisted projects and services in India is quite substantial.

The Indian Airlines Corporation's all-jet domestic service has been made possible by the introduction of the French-manufactured Caravelles on the trunk routes. The I.A.C. has already acquired three Caravelles out of the French credit sanctioned, and is to start negotiations for securing a fourth one.

The Indian Air Force's acquaintance with French aeronautics occurred quite a few years ago with the purchase of sub-sonic jet fighter Ouragons (Toofanis). Recently Alizes and Alouette helicopters have been supplied to the I.A.F. along with a signed agreement to manufacture Alouette III helicopters in India.

Direct Aid

France has so far provided, through the Aid India Club, a total aid of U.S. $70 million plus bank credit of U.S. $10 million for private sector firms, for the first three years of the current Plan. Indian authorities feel that, in view of the French aid being pegged at a low level all through these years, there is hardly any possibility of its taking a sharp turn upward in the near future.

If one were to look for a French personality in the industrial projects now going up in this country, the one qualifying item will be the fertiliser factory at Nangal, in which the major French associates were the Saint-gobian. Among other French participants in Indian industrial projects are: Krebs and Co. for supply of chemical plants and a zinc smelter at Udaipur, Empacel for paper mills, Fives Lille for cement and sugar plants, NEYRPIC for turbines for hydro-electric project at Maithon, Koyna, Bhadra and Sharavathi, CITRA for dry dock at Bombay for the Indian Navy, Ets Bauchet and Co. for the photofilms factory at Ootacamund, Delle and Schneider-Westinghouse for electrical equipment for several State Electricity Boards, Barbier Benard and Turenne for lighthouse equipment. Besides, the French Petroleum Institute has helped us in setting up a similar organisation for the Oil and Natural Gas Commission; and the French experts from the Societe Nationale des Chemins de fer have been advising the Indian Railways on a mammoth electrification programme for the last four years. Recently, experts from the Electricity de France have been advising the Indian Union and States power authorities on the problems of high-voltage transmission and the creation of inter-State power grids. The National Coal Development Corporation has secured the services of engineers, foremen and workers from Charbonnages de France for an experimental project to use a new method of coal extraction. The world-famous Renault has recently signed up with a private Indian firm for the manufacture of agricultural tractors. Renault has been an active collaborator for several years at the initial stages of the Hindustan Machine Tools.

A matter for concern, however, has been the running deficit against India in her trade with France. The total trade between the two countries is on the low side and has been continuously going down, as the table below shows:

(In crores of rupees)

	1960-61	1961-62	1962-63
Indian exports to France ..	7.6	7.9	8.5
Indian imports from France ..	19.9	16.0	13.0
Balance against India ..	12.3	8.1	4.5

In addition, the difficulties that India faces in regard to her trade with the European Economic Community, apply to her trade relations with France as well. This is particularly true of France because of that country's preferential trade relations with the former French colonies in Africa, the majority of which have now become associate members of the E.E.C. and the export products of which are competitors with those of India. In respect of the manufactures and semi-manufactures in which India has a definite edge over the former French colonies, quota restrictions and various other barriers like duties, enforce a severe check on the possibility of increasing our exports to France. One cannot say with any definiteness if France would not shift its present policy of aid and trade with India in favour of China, but that seems very unlikely.

(Concluded from next column)

March election (still a possibility) and so began to sell. Those who are selling out now are a bit late, although the sellers' market will probably continue until the institutional investors, who have much tougher nerves than most, feel that it is time for them to come in. So what we are witnessing is the latter part of an inevitable but not serious speculative movement, equally operative in the sterling field.

Investment dollars are the highway to "Labour-free" foreign stocks. Such currency is very limited and a demand for foreign stocks quickly sends it to a premium emphasising a weakness of sterling. The authorities have felt no call to intervene in this market which they could only do by liquidating some form of reserves. The lesson is that students of the British economy should not be misled by movements in limited markets at the moment highly vulnerable to political speculation. But the advantage of all this activity now is to spread the effects so that by the time an election comes and if a Labour Government is returned market movements are likely to be limited in time and extent. And the panicky seller will do well to remember that the really big operators have discounted everything beforehand and are simply waiting to mop up the smaller ones who think that the bottom is going to fall out of the investment world. Mr. Wilson and his colleagues, while no slaves to traditional thinking, are very concerned to keep clear of financial and exchange crises which would interfere with their development plans for the economy.

LONDON LETTER

MR. MAUDLING TAKES A CHEERFUL VIEW

REAL REASON FOR SETBACK IN STOCK MARKET

(From Our Own Correspondent)

LONDON, 1st February

TODAY, the Chancellor of the Exchequer danced gaily through all the bright things that can be said about the British economy. The occasion was the quarterly meeting of the National Production Advisory Council on Industry and this underlining of Britain's vigorous and sustained expansion was intended to concentrate thinking by both sides of industry on how such a happy state of affairs could be prolonged, instead of dissolving in tears of inflation.

The Chancellor began cautiously by saying that it looked as if 1964 would be better than 1963, a statement which aroused neither surprise nor interest. And then he went over the various economic indicators: the rate at which industrial orders are coming in, increase in stockbuilding, continuous decline in unemployment, steady expansion prospects for exports, steady rise in consumer spending—without (and this is important) any great rise in consumer credit, or hire-purchase finance.

Output was rising at between 5 and 6 per cent per annum and the Chancellor considered that there was still slack in the economy to be taken up before awkward strains developed: employment could still increase, more overtime could still be worked, but there was a likelihood that shortages in skilled labour would appear in particular industries. When this happened and as the slack in the economy became fully taken up so would expansion slow down. It seems that what the Chancellor really wanted to rub in was that this slowing down, rather than the present time, would be the danger point. For the pressure for more rises—whether of wages and salaries, profit margins or prices—would then be at its maximum. The increase in money incomes could not, over the period, exceed the hoped-for continuous 4 per cent per annum which remained the long-term "Neddy" target.

So Mr. Maudling is still looking with a troubled eye at the danger of unchecked rises in incomes and prices and, so far, both sides of industry are not of a mind as to how the danger should be met. "Neddy," incidentally, will have met yet again by the time these words are read. And management will look for some response to the olive branch it put out at the previous meeting that management should do all it could to keep prices in check.

Yet, while the Chancellor was enthusing about the prosperity of the nation in Whitehall, back in the City the tickertapes were recording a further one per cent overall drop in equities on a week of ups and downs. The quick commentators were blaming it all on Mr. Wilson, who, in his speech in the steel and coal county of South Wales a week ago, stressed the intention of the Labour Party to tax capital gains seriously and to shift some of the burden of taxation from individuals to companies and from undistributed to distributed profits. But then none of this is very new. The Labour Party have not only just now produced their ideas on redistributive taxation and anyway last week in the stock markets was rather better than the previous three. For equity prices have now slid some 6 or 7 per cent since their peak on the second day of the New Year.

Investors indeed have for some time had to take into account the possibility of a change of Government and with that a stiffening of fiscal policies. They are also aware that Mr. Wilson and his fiscal advisers believe in stimulating and not stifling British industry and commerce and are not therefore likely to take sadistic measures which will simply hold back investment and enterprise. But a Labour Government, while generous to the entrepreneur, as, for example, in applying lower taxes to profits ploughed back into the business than to those distributed, will be harder on the investor as such in the matter of capital gains (where this country is less radical than the U.S.A.) and distributed profits. This means that careful stock market operators decided some time ago that the market was really quite high enough with the possibility of a

(Continued in previous column)

EXCHANGE RATES: FIXED AND UNFIXED

By Questor

THE many different schemes which have been put forward for improving the international monetary system can be divided quite simply into two classes. One class contains the single proposal that exchange rates should be set free to fluctuate more or less freely against one another according to circumstances. The other contains the many other proposals—ranging from credit-creation by an international super-bank to a moderate increase in I.M.F. quotas—designed to make the present system of semi-fixed exchange rates workable.

Economists, if I may generalise, tend to be in favour of flexible exchange rates, bankers and other practical men in favour of fixed exchange rates. Both sides can readily find theoretical arguments in favour of their prejudice, and discussion between them is seldom fruitful.

The situation is changed, if one begins by admitting that it can be a great advantage to have a single fixed currency in a given area, sweeping away the assumption that such areas should always be defined by national frontiers and inquiring what sort of area can benefit most from possessing a common currency. This is the approach adopted by Dr. R. I. McKinnon of Stanford in a useful paper, contained in the current review of the *Banca Nazionale del Lavoro*. If it seems academic, it must be remembered that the European Economic Community is consciously attempting to reach the sort of economic unity which the States of the U.S. achieved some time ago.

Dr. McKinnon begins by pointing out that the larger the size of a developed economy, the less its dependence on conditions in the outside world is likely to be. As trade between members of the E.E.C. increases, the group becomes more important than the individual members of it. If individual exchange rates were to fluctuate, there would be a tendency to adopt the strongest member currency as a common standard; if confidence in fixed rates persists, the emergence of a common currency is inevitable. The E.E.C. has managed to move rapidly towards integration during the past few years, because all its members have gained, though in varying degrees, from the persistent U.S. deficit.

Once the balance of payments between the Six themselves becomes seriously upset, however, the Community will undergo its first serious test. Financial markets are so little developed and financial nationalism is still so strong that violent shifts in national interest rates may be needed to induce offsetting movements of capital—shifts so violent as to be unacceptable in the context of domestic economic policy.

Common Currency and Common Monetary Policy

This, of course, is why the European Commission is trying so hard at present to get member-Governments to see the importance of financial free trade. But, if it is successful in achieving this and in protecting the E.E.C. from the danger of dissolution, complete economic integration will not be far off. Each member-Government will have resigned its right to rig the market in its own favour. Not only will exchange rates be fixed but there will be a common rate of interest: the way will be clear to the establishment of a common Community currency and a common Community monetary policy.

The E.E.C. has yet to face this choice between dissolution and complete integration. Dr. McKinnon, assuming that it—and much of the rest of Europe—eventually adopts a common currency, proceeds to consider the proper relationship between the European and North American systems. The main feature of both these areas is that they are large and largely self-sufficient: outside trade would be of relatively small importance. In these conditions, he suggests, the currencies of the two areas might well be left to float against one another (with official intervention to smooth out random fluctuations); this would leave the authorities with maximum freedom to tailor their economic policies to domestic needs and would have little effect either on trade or on direct investment between the two areas.

The idea of two fixed-exchange blocs in Europe and North America, with a floating rate between the two, was proposed last summer by the Brookings Institution as a possible alternative to the adoption—more and more unlikely—of one of the more ambitious plans for improving the present international monetary system. If the E.E.C. succeeds in solving the problems which lie ahead of it and in merging six currencies into one, it is quite likely that such a system will come into being: it would suit both the U.S. and the E.E.C.

The collapse of the idea of an international monetary authority would be a serious embarrassment only to those industrialised countries (Japan, Canada, Britain and the larger countries of the sterling area) which felt disinclined to integrate their economies with either of the large blocs—or with that of the Soviet bloc, which might well become a third member of such a system.

It is at this point that politics takes over from finance and that Governments have to make impossibly difficult decisions. Canada may not be able to escape the logic of its geography indefinitely; Australia may have to go in with the U.S., because it cannot stand alone, Japan to choose between the U.S. and Asia, Britain between the U.S. and Europe. The fact that sterling is still an important international currency and that the Commonwealth is still a valuable political grouping serves only to distract attention from the fact that this choice will eventually have to be made—unless the E.E.C. collapses altogether.

MORE ORDERS FOR CONCORD SUPERSONIC AIRLINER

Orders for four more Concord supersonic airliners have been placed by B.O.A.C. and Air France, bringing the total to eight each. Progress of the Concord project—shared between the British Aircraft Corporation and Sud Aviation of France—is such that additional orders are now possible, according to a joint statement issued at the conclusion of talks between Sir Giles Guthrie, Chairman of B.O.A.C. and Mr. Joseph Roos, President of Air France. Orders for Concords from world airlines now total as many as 35.

The Concord has been designed for a speed of about 1,500 m.p.h. and will carry 100 passengers.

MORE ON BRITISH BANKERS' ANNUAL STATEMENTS

BIDDING FOR DEPOSITS—LIQUIDITY RATIO

CONTRARY to the long tradition and custom, the 1963 annual statements of British bank chairman have mainly been devoted, as was rightly remarked by our London Correspondent last week, to a discussion of banking problems. Year after year, for many years, these bankers used to review the state of the nation, the conditions of business, international economic trends and problems of fiscal and monetary policy; paradoxically enough, it was customary for them to cover almost every aspect of domestic and world economy, except banking itself, apparently because they did not wish to see their problems discussed, even in the most general terms, on a public plane. Even when they spoke of their individual bank's affairs, they confined themselves to outlining in a colourless fashion the salient features of the Directors' report and statement of accounts for the year under review. There was, of course, a slight departure from this pattern last year, in that Lord Monckton, Chairman of the Midland Bank, discussed the most controversial issue in British banking, namely, whether banks should compete for deposits.

But this year almost all bank chairmen have followed the lead given by Lord Monckton. In doing so, they must have apparently been encouraged by the initiative taken by the Bank of England Governor, Lord Cromer. It will be recalled that Lord Cromer himself had advocated, in a dinner given by Martins Bank in April last, competition among banks for deposits and a vigorous drive for gathering more deposits. Many bankers did not like it, some were even irritated, but they have all shown in this year's speeches that they are shedding their conservatism and are prepared to discuss the real problems confronting them. All the eight bank chairmen (of Barclays, Midland, National Provincial, Lloyds, Westminster, Martins, Williams Deacon's and District) have given the pride of place to a lively discussion of the question of competition for deposits, a question that was lightly ignored last year.

Pros and Cons

As is only to be expected, the bankers do not agree among themselves. Sir John N. Nicholson (Martins Bank) is convinced that, since deposits are not keeping pace with the growth of the economy, sooner rather than later the British bankers will have to become competitors in the open market if they are to play their full part. He is not content to rely solely on the increase in deposits as a result of Government's deficit financing, but wants to face the "steadily growing" and "ever-widening" circle of competitors outside the banking field and *bid* for the *money*, even though that may involve a general rise in the rates of interest to be charged on bank credit. Even for bringing the wage-earners and small savers within the banking system, he feels that no amount of advertising will help, unless it is accompanied by the offer of an attractive rate of interest on deposits. He meets the argument that this step would push up the cost of bank credit by pointing out that the rate of interest charged by banks on their advances today is "obviously below that of the free market."

Mr. Herald Peake (Lloyds Bank) is equally outspoken and prepared to face the issues when he says that the time is approaching when, in order to maintain their stocks of raw material, the banks might find it *necessary* to pay higher rates of interest for time deposits, but he draws consolation from the fact that, even if the lending rates had to be jacked up as a result, the cost of bank accommodation would *still* continue to be lower than abroad.

Lt.-Col. Marshall Brooks (District Bank) and Sir Eric A. Carpenter (Williams Deacon's Bank) have their own reservations and confine themselves to a disinterested statement of facts without showing their preferences one way or another. To both of them this matter raises very 'complex' issues and cannot be considered in isolation from the lending rates.

Mr. Duncan Stirling (Westminster Bank) and Lord Monckton (Midland Bank) do not conceal their opposition to competing for deposits by paying higher rates for them, though the former is more outspoken of the two. Lord Monckton is content with flashing a red light—the ramifications of higher rates for deposits and advances will extend far beyond the banking system into the whole field of economic policy. Mr. Stirling, however, clearly declares that it would be unrealistic to pay dearly for obtaining deposits. His vehement opposition to higher deposit rates is probably the result of lower profits of his bank for 1963. But, in any case, he is convinced that there is no pool from which *new* money could be drawn into the banking system. He goes back to the pre-Radcliffe proposition that the overall amount of money is determined by Government policy and nothing that banks do can increase or diminish it.

Mr. John Thomson (Barclays Bank) is apparently agreeable to competition, but is not prepared to pay more than the banks can afford. He also raises three other points—namely, that somebody will have to bear the cost of more expensive money, that the Government can take countermeasures if banks attracted deposits at the cost of money going to the Government and that the higher cost will not be confined to the *additional* money, but will also apply to some of that which banks already have. Although Mr. Thomson is willing to raise the price of money for "deposits in large quantities" when the time comes, or when the circumstances justify, he is emphatic that it would be bad both for customers and banks to charge too high a rate of interest on advances, even if the customers were willing and able to afford them and however safe and technically desirable the solution may prove to be.

All this debate on competitive bidding for deposits among the bankers at the highest level has been carried on with the knowledge that the Treasury does not approve of the type of competition advocated by the Bank of England's chief. It is difficult to say whether the Treasury's opposition is based upon the wasteful economic effects of competition or upon the undesirable social implications of the higher structure of interest rates; but the whole position is summed up by Sir Carpenter (Williams Deacon's Bank)—the various suggestions are "receiving the active consideration," even after more than two years of the continuing debate! Even Lord Monckton could do no better than saying that "discussions are continuing."

Majority Not in Favour

One thing is, however, clear: the majority of bankers are not impressed by the arguments that the growth of deposits have lagged behind the growth of G.N.P. as well as the growth of their competitors' deposits, and have countered them by pointing out the markedly rapid growth in recent years in the number of customers using the banks and in the turnover of their funds handled by banks. This growth in banking habit, as Lt.-Col. Brooks has taken pains to point out, is not only due to the expansion in the economy generally, but also to a change in the attitude of the general public to the banks, fostered by bank advertising and efforts. Banks have most actively promoted the use of their services by many more people. Mr. Stirling has further pointed out that, between 1951 and 1963, as against a rise of 99 per cent in G.N.P., 29 per cent rise in bank deposits and 73 per cent in currency in circulation, bank clearings rose by 175 per cent. The inference is clear that relatively more transactions are being put through the banking system against a relatively small stock of money within it.

While conceding that banks, in their own, as well as national, interest, cannot be indifferent to the possibility of their deposits being insufficient to finance nation's trade and industry, Mr. Stirling points out that the problem is not so simple as is thought by those who advocate higher rates of interest on deposits. The main point that he makes in this connection is that banks' deposit rates are not fixed arbitrarily but are related to the use of money which is dependent upon the liquidity ratio and other controls imposed by the authorities upon banks. He not only highlights the well-known fact that by maintaining a stronger liquidity than their competitors, banks are better able to meet their liabilities to their depositors, but also underlines the less known and less appreciated fact that even the banks' competitors, who do not maintain strong liquidity but bid for deposits, themselves rely upon the liquidity of the banks in times of need.

Not Yet

Reading between the lines, the overall impression one gets from the annual statements of British bankers is that they are reluctant to compete for deposits by offering a price incentive just at this stage: they recognise that the issue may become more relevant in future, but, for the present, they seem to be satisfied with the substantial contribution of *personal* deposits to the growth of deposits. "The trend is strong at present and is likely to have a greater influence in the future," says one chairman. Similarly, the bankers seem to place a great reliance on the scope that *still* exists for sound lending. Banks' present lendings are pretty well spread and most of the banks have found that personal loans have been a very successful innovation. Thus, while the "discussions are continuing," banking business goes on briskly. But the bankers would not take the blame for indecision: "inaction and indecision are by no means the same thing," declares Mr. Thomson.

All the British bankers have welcomed the lowering of the liquidity ratio from 30 per cent to 28 per cent and some of them see no objection, indeed, to working towards a still lower ratio, since almost every one of them had at some time or other during the last autumn, shown a lower ratio: but thanks to window-dressing, they are all able to say that their year-end *actual* liquidity ratio is above 30 per cent. Bankers, nevertheless, agree that the lower ratio will be *most* helpful in the ensuing tax-gathering season.

Question of Costs

The British bank chairmen have also the factors contributing to rising operating and administrative costs from various points of view. One of them is a major change—at once inevitable and desirable—which is coming over British banking. The increasing number of accounts derived from ever-widening sections of society like the wage-earners and other smaller men are relatively more expensive and yet they are welcome to the bankers, because it gives them a chance, as well as stimulus, to develop their services in such a way as to match the increase in their business. Bankers are also conscious that, in order to offer a useful and friendly service to the wage-earners, revision of hours of business can no longer be postponed. But, once again, the bankers have not discussed all the implications of this problem. They merely mention it to show that they are aware of its existence, and that a decision will be taken in due course.

Staff costs and problems are a dominant factor in a service organisation, and banking is not an easy occupation in which to make accurate measurements of productivity. Banks, therefore, place great emphasis on recruiting the right type of people and giving them intensive training. Mr. Thomson, for example, addresses the young people of right ability and offers them tasks "worthy of their mettle" within the Barclays Group. Bank recruitment programmes are assuming particular importance, because banks are reaching a stage when the staff recruited in large numbers in 1920's for the delayed expansion during the First World War will soon reach the age of retirement. Lord Monckton has talked about training schemes for swift promotions for eligible youngsters. The District Bank chairman has given details of his bank's training facilities which are undoubtedly necessary for the maintenance of a high standard of service.

Further, all the bank chairmen have given extensive details of the progress, achievements and plans in the field of the employment of computers and electronic data processing machines. The outcome will be, says Mr. Stirling, that a progressively smaller proportion of bank's work will be repetitive and manual and more of it will be supervisory and administrative. Mr. Thomson, however, strikes the right note when he says that, though electronic brains will achieve great powers of discernment, it is impossible that they will displace human judgment.

Great Train Robbery

Last year's great train robbery in Britain, involving the cash of many banks, has prompted bank chairmen to comment on the security arrangements in their own banks and the extent of risk insurance cover obtained by them for cash movements as well as protection provided by them to their staff. Similarly, the value of the abolition of stamp duty on cheques for the promotion of banking habit has been stressed by some of the chairmen.

The trend towards closer international monetary and banking co-operation is reflected in Lord Monckton's statement, who, naturally enough, has been unable to resist the temptation to devote almost half of his statement to the new innovations of Midland in extending its organisation across the frontiers. The changing pattern of world trade and finance has opened the way for further initiative in banking. Midland has moved along two paths: (i) by establishing a new link with banks operating in Africa, Australia and Canada through a new bank—Midland and International Banks Ltd., and (ii) by arriving at a closer understanding with leading banks in Belgium, Holland and West Germany. Midland has thus found ways of deepening co-operation over a wide range, without destroying the existing "happy business relationship" with other banks. Midland believes that the two paths of progress they have followed are wide with room enough for development.

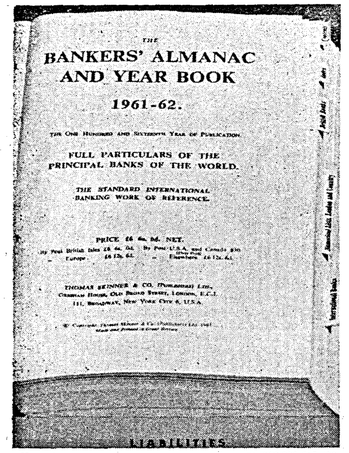
Most bank chairmen have ended their speeches with high hopes and rising expectations of prosperity for British economy and banking. Mr. Duncan Stirling, however, is alone in striking a note of caution; it is wise, says the Westminster Chairman, to remember that discretion is most needed when expectations are highest. His concern, at times amounting to obsession, with costs, earnings, profitability, need to build up inner reserves and discretion is understandable if one realises the great mystery of its lower profits in spite of a larger increase in advances in the past year.

NATIONAL SAVINGS REACH ALL-TIME HIGH

Net collections in small savings in the first nine months of the current financial year upto the end of December 1963 reached an all-time record of Rs. 71.16 crores, the figure for the corresponding period in the previous year being no more than Rs. 30.27 crores. The collections also exceeded the previous peak of Rs. 59.75 crores touched in 1960-61. Every State has contributed to the all-time peak reached during April-December 1963. Maharashtra leads with Rs. 14.47 crores, West Bengal coming next with Rs. 14.26 crores, followed by Bihar with Rs. 6.39 crores and Uttar Pradesh with Rs. 6.30 crores.

Sales of national defence certificates yielded a net amount of Rs. 42.39 crores, as against Rs. 30.17 crores in the corresponding period of 1962-63. Defence deposit certificates have improved from Rs. 4.44 crores to Rs. 12.20 crores. Net deposits with post office savings banks have also improved by Rs. 18.39 crores. Yet collections in cumulative time deposit accounts now are at Rs. 72 lakhs per month, the collections during the nine months being Rs. 6.14 crores.

Apart from the net collections in small savings, total sales of premium prize bonds during 1963 amounted to Rs. 5.73 crores. By volume of sales, the collections were almost equally distributed in the Rs. 5 and Rs. 100 denominations. In the sale of prize bonds, Maharashtra came first with Rs. 2 crores. West Bengal accounted for Rs. 48 lakhs, Gujarat for Rs. 42 lakhs and Madras for Rs. 38 lakhs. In Delhi, Maharashtra and West Bengal, the total sales of Rs. 100 denominations premium prize bonds were highest while, in Andhra Pradesh, Madhya Pradesh, Mysore and Rajasthan, the sales of bonds of the Rs. 5 denomination were higher.



A GREAT BANK?

How do you judge the world's great banks? Deposits are one way. The Mitsubishi Bank's deposits of well over eight hundred billion yen* tell part of the story. For the rest, speak to the world bankers who respect Mitsubishi and the business leaders who prefer to deal with it. The Mitsubishi Bank can make your dealing with Japan easier and faster.

FINANCE FOR SMALL SCALE INDUSTRY? NOT A DIFFICULT PROBLEM

Are you having financial difficulties in running your plant? Or is it that you want additional raw materials to manufacture more—or some money to keep your plant running till you get enough from your sales?
Or it might be that you want a machine or two, to increase your production or to raise your status as a small scale industrialist.
Why not take your problem to the State Bank Agent who will be glad to assist you in all matters connected with your industry? Your security for finance is not the main consideration—what the State Bank seeks is your sincerity and capacity to produce more.
With over 1500 offices throughout the country **THE STATE BANK OF INDIA AND ITS SUBSIDIARIES** are at the nation's service.

PRICE STAMPING OF MILL CLOTH

BHARAT CHAMBER'S PLEA FOR ABOLITION NO SOLUTION

THE Cotton Textile Price Stamping Scheme has been in operation for over three years now. The Scheme, it will be recalled, was introduced in 1960 by the Indian Cotton Mills Federation purely as a voluntary form of price control collectively agreed to by all the mills with the specific object of curbing the upward trend of mill-made cotton piecegoods prices. Since the enforcement of the Scheme, there has been a controversy as to the utility and effectiveness of the Scheme. The actual working of the Scheme has been criticised severely on the score that correct prices are not being stamped at all, that a number of mills are charging prices higher than those fixed by the Committee of Millowners by changing slightly the construction of piecegoods, that the wholesale traders actually encourage mills to stamp higher prices so that they could get a bigger margin in their favour and that, taking advantage of scarcity of popular varieties of cloth, some mills are collecting extra money over and above the stamped prices. Just a few days ago, this writer went to a retail shop to buy a pair of *dhoti* and he was told that he could get it only at a price which was Rs. 4 above the stamped price of Rs. 26 per pair. Similarly, the prices quoted for some other varieties of cloth were also higher than the stamped prices. When questioned, the shop-keeper said that the wholesale dealer from whom he bought the goods always collected premia, since the mills themselves demand 'on' money.

Some of the defects inherent in the Stamping Scheme and the various abuses that have crept into the Scheme in wholesale and retail trade have been well brought out by the Bharat Chamber of Commerce, Calcutta, in a note submitted to the Review Committee (Chairman: Mr. R. Doraiswamy, Textile Commissioner) which is currently examining the working of the Scheme. The Committee, incidentally, is expected to submit its findings in about two weeks. The Bharat Chamber has made a scathing attack on the Scheme which, it says, has largely been ineffective in serving the interests of industry and trade, on the one hand, and the consumers, on the other. The Chamber's assessment of the whole position is as follows:

"The inherent unsoundness of the Scheme becomes apparent when visualised against the background of the fact that, for the purpose of price stamping of mill cloth, prices are fixed on the basis of the prices obtaining in a particular month of 1959 which, from all practical considerations as well as under the fast changing circumstances, can hardly be regarded as a rational basis for such fixation. With varying cost structure of the cotton mill industry, fixation of prices of cotton cloth on the basis of prices obtaining in 1959 seems unrealistic.

Consumers' Interests Ignored

"The Scheme of Price Stamping has been instrumental in straining the relations between the industry and trade, on the one hand, and between the wholesale and retail trade, on the other. In view of the pressing consumer demand, while the trade is keen to obtain supplies of popular varieties of cloth, the mills are unable to meet such supplies mainly due to inadequacy of production. Again, the mills are reported to have dumped on the wholesalers unpopular varieties of cloth, along with inadequate supplies of the varieties in high demand. The wholesalers naturally find themselves in a predicament to dispose of the supplies of the cloth having very low demand, but they, in their turn, have to pass on such supplies to the retailers in a more or less like manner. The inevitable outcome of these processes is observed in the widespread prevalence of 'cross-section' sale at different stages. The circumstances become compelling for the retailers to procure unpopular varieties of cloth which ensures more reasonable margin of profit and to push the sale of such varieties to the consumers, regardless of the contrary direction of demand. In such a situation, the consumers do not get what they actually want at a fair price, or, in other words, there is scant regard all round for both consumer demand and preferences.

"The operation of the Scheme, instead of contributing to standardisation of production and quality control, has resulted in a distorted production pattern of cloth with little regard for changing consumers' needs and preferences. In fact, the absence of standardisation and the results therefrom are clearly in evidence from the contemporary market condition under which, while the varieties with very low demand are available in relative abundance, there is scarcity of popular varieties. Many mills have resorted to large-scale variation of sorts and qualities of their production without any tangible benefit either to the consumers or to the trade. As a matter of fact, such tendencies in production pattern only aggravates the existing imbalance between the production pattern and consumption trends.

"The operation of the Scheme has brought about a virtual disruption of normal channels of marketing and distribution and, in consequence, the *bona fide* section of trade has suffered. This section cannot afford to risk its status and goodwill by realising higher prices for the popular items to make good the loss on the unpopular ones. As a result, new channels have cropped up without permanent affiliation to the textile trade. Regardless of the proved efficiency of the normal trade channels in marketing and distribution, there is an increasing tendency on the part of the mills to take over the marketing either themselves or through their associated agencies. The scheme of channeling distribution through consumers' co-operative stores has not also benefited the consumers in all cases, for instances are not wanting when supplies of cloth are available to the consumers at prices less than those stamped on cloth below which the consumers' co-operatives are not in a position to sell. It is, therefore, clear that the operation of the retail stores established by the mills as well as the consumers' co-operatives has failed to serve the interest of the consumers in the best possible manner desirable.

"The core of the problem bolls down to the fact that there exists a positive imbalance between production and consumption trends. The need is, therefore, imperative to secure a better balance between the changing consumption demand and the pattern of production. In order to achieve this objective, it is necessary to concentrate on increasing the production of cotton cloth keeping in view the consumers' tastes and preferences.

"In regard to the problem of cloth prices, the Chamber would like to point out that mill-made cloth is no longer the determining source of supply to meet the consumption needs of the people. In fact, there are other competing sources of supply like handlooms, powerlooms, artsilk and rayon and hosiery. From practical and commercial point of view, it does not seem to be prudent to resort to price and production regulation of mill-made cloth and thereby to diminish its competitive capacity *vis-a-vis* products from other sources.

"In view of the fast changing consumers' tastes and preferences, the need is clearly for production of appropriate varieties of cloth as also for increasing the aggregate production with adequate standardisation of qualities. It is, indeed, difficult to make price regulation successful on an item of mass consumption like cloth on any permanent basis. Once the production trend exhibits an all-round increase and diversification in consonance with divergence in consumption demand, the necessity of imposing any price regulation should hardly arise.

"The Chamber feels that the whole background of the Price Stamping has undergone considerable change and, in the light of the changing circumstances relating to both production trends and consumption pattern, the sooner the Scheme is scrapped altogether the better for both industry and trade as well as the consumers. The Scheme has clearly failed to achieve any desirable purpose during the last three years of its operation. There is reason to believe that, if conditions are created for all-round increase in production of wide range of varieties and an element of competition is infused by allowing free play of market forces, the prices of cloth will stabilise at a level both fair and reasonable which might well be below the level of prices ruling under the Price Stamping Scheme. If there is sufficient consumption-orientation of production planning and the marketing channels can be kept wide, the need for continuing the Price Stamping Scheme with all its unnecessary restraints can well be dispensed with without detriment to any section involved in its operation.

"The Chamber feels confident that the Review Committee will apply its mind and devote its mature judgment to the issues raised in respect of the Price Stamping Scheme for recommending its abolition. Such abolition will be in tune with the recent abolition of price control on sixteen other industrial products."

Counsel of Despair

The series of criticisms levelled against the Stamping Scheme by the Bharat Chamber are, by and large, valid. And it may be difficult to disagree with the finding that the primary objective behind its introduction, namely, curbing the upward trend in prices, has not been realised. There are several instances of some mills having raised prices by making minor changes in the texture of the fabrics. Almost all the popular varieties of 1959, it is stated, are now appearing in a changed form with higher prices. On an average, the current prices are said to be higher by at least 20 per

REORGANISATION OF COTTON INDUSTRY

FINISHERS ADVOCATE HORIZONTAL MERGERS

From Our Special Correspondent

MANCHESTER, 28*th January*

IN the face of many declarations to the contrary, only a bold man still sticks up for the traditional horizontal structure of the Lancashire industry against the protagonists of vertical arrangement, which seems to get the support of nearly all the "big guns" these days. The annual report of the Finishing and Allied Trades Section of the Manchester Chamber of Commerce, however, "goes out on a limb" in taking a different line.

MANCHESTER LETTER

"The fashionable view that vertical integration is the answer to all Lancashire's problems ignores the unpretentious and deep-seated virtues of the horizontal system," it declares. Technically, the report adds, the finisher who specialises in a limited range of fabrics and whose whole capital is absorbed by the plant required for this type of finishing probably has an advantage over the large vertical organisation whose finishing plant is a relatively small part of the whole.

Nor has it ever been established, the report contends, that vertical integration incorporating finishing plant has the desired effect of reducing finishing costs. On the other hand, the benefit of controlling all aspects of a fabric's construction and the regularity of its flow between processes can be quite significant.

Attempts have been made by the organisations in the textile finishing trade to encourage horizontal mergers in the belief that the greatest weakness of the present system lies in the excessive number of individual units in operation. An enquiry merger service has been set up by the piece dyeing section, inviting those firms which consider themselves to be too small for modern trading conditions to contact others in a similar position with a view to horizontal amalgamations.

Protective Adjustments?

The finishers may be, to some extent, the "odd men out" in the industry on this point, but they echo the views of many when opposing the outlawing of price arrangements, which now seems more of a probability following the Government's apparent determination to ban resale price maintenance. The textile trade still smarts under the whip of earlier legislation which effectively halted its attempts to control its own destiny on the price front. The report under consideration calls for the incorporation of a limited number of protective adjustments "to prevent isolated companies from debasing the whole economic structure of an industry for a variety of obscure reasons which rarely have any lasting beneficial effect even on themselves."

Quoting the case of a finishing trade unit with a 90 per cent interest in one type of processing and only 10 per cent in another, the author of the survey observes that severe under-cutting can be carried out in the minor process in an attempt to inflate turnover without affecting the major line. The secondary trade, however, is probably another company's major activity, provoking the latter into retaliation by cutting in on the other process at price levels which barely make any contribution to overheads.

"Multiply this many times over, and it is not long before many segments of the industry are operating at levels which hardly permit adequate expenditure on research and development, and on industrial welfare generally," the report adds. Although most companies survive this type of competition, it undoubtedly slows down the rate of progress, inflicts a feeling of instability on staffs and operatives alike, and quality becomes a border-line problem instead of a desirable objective in itself.

Time for Decisions

Since the drastic scrapping programme carried out in Lancashire nearly four years ago was completed, more than 100 mills have closed down without the Government aid which was then offered. The reasons for these decisions have varied, but most managements have blamed the incidence of foreign competition and the growing arrivals of goods from abroad, which have resulted in so much price disruption. The redundancy scheme was, of course, closely linked to the re-equipment project which is now on its final six months if the Government's financial grant is to be obtained. Those firms which have hesitated in taking steps towards greater modernisation are now being faced with a series of difficult decisions.

Arising from this state of affairs, the directors of Fothergill and Harvey have openly admitted that without re-equipment the old-style spinning mill cannot compete effectively with those in which the most modern plant has been installed. As a result, their Green Vale mill at Littleborough is to be closed and the Company's yarn requirements are to be obtained from other sources in Lancashire.

The official statement announcing this decision said that costs of production in a mill which had not been brought up to modern standards must put the Company at a disadvantage in selling its output of cotton drill. There must be many more firms, especially the smaller independent units which have already discovered this stark economic fact.

If the industry as a whole is to prosper, it is to be hoped that they, too, will recognise that only by modernisation and a continual process of re-equipment can efficiency be maintained. The system of "the weakest going to the wall" may be a hard doctrine, but the opportunity to take a much easier way out was offered in 1959. The clock cannot be put back at this stage.

Efficiency Contrasts

Comparisons between the rate of efficiency achieved by the leading combines in the trade and smaller units have not always been in favour of the large groupings. Yet recent declarations from at least two of the major concerns seem to refute this argument so far as the current rise in productivity is concerned.

A few weeks ago, Sir Cuthbert Clegg claimed that productivity in the units of Combined English Mills (Spinners) had been raised by 25 per cent since the beginning of the re-organisation scheme. Now Mr. Roger Lee, on behalf of the Lancashire Cotton Corporation, reports a 20 per cent improvement. The Cotton Board's average figure for the spinning industry as a whole suggests a gain of 15 per cent, so that, if these two combines alone have done so much better, there must be quite a number of other firms whose results drag down the average.

Half on Shifts

Similarly, the spread of shift working shows some individual variations. Towards the end of last year, the number of running spindles on shift was said to be about one-third of the total, but Mr. Lee indicates that the L.C.C. figure is now almost 50 per cent of yarn production. Within the Corporation, employment in the year to the end of October fell by 3 per cent, but production was raised by 6 per cent.

In addition to the two general wage increases, which were conceded to spinning and weaving operatives between October 1962 and July 1963, further advances were negotiated at local level for departments where redeployment has taken place. Mr. Lee, in his annual statement, points out that such increases are always accompanied by worthwhile reductions in the labour costs of production. "We believe that the concentration of productive capacity will continue," he declares, "and that higher levels of activity in the remaining mills will bring material reductions in costs."

Indian cotton, rayon and nylon display at the second Bangkok Industrial Trade Fair was opened on 31st January 1964 by the Minister for Economic Affairs of the Royal Thai Government. On visiting the Indian pavilion, the Minister expressed appreciation for the Indian fabrics and praised their display.

Over 15,000 visitors went to the Indian pavilion during the first four hours. The Fair will continue till the 16th of this month.

NEED FOR A LONG-TERM SUGAR POLICY

PROF. D. R. GADGIL'S VIEWS ANALYSED

"RETHINKING on sugar policy urgent": When we gave this heading to our first editorial last week, we had, of course, very much in mind the immediate objective of securing as high a level of sugar production as possible in the current season. But we made it clear at the same time that the next objective should be to evolve a long-term policy for the development of sugar industry. One may be provoked to ask: If the inclusion of sugar industry under the Five-year Plans with fixation of targets for installed capacity and production of white sugar, investment in the industry, sugarcane production, *gur* and *khandsari* output does not constitute the elements of a long-term policy, what else does? Apart from the question whether the five years covered by the development programme really represent a sufficiently long period, there is no denying that even the five-year programme has not actually been implemented on a five-year basis. Such a statement may no doubt appear strange, but it is a fact. Even a cursory glance through the pages of sugar industry's history during the thirteen years of planning will reveal that the sugar policy of the Government has all along been one of expediency and short-term solutions. Indeed, the history of sugar, as a leading sugar millowner once remarked, is one of control, decontrol, recontrol, partial control and control again. Consequently, the trend of sugar production has been highly erratic and the country at present is faced with a critical supply situation.

The need for a long-term sugar policy was never so urgent as it is today. The domestic demand for sugar is expanding rapidly, in view of the continuously rising population, increasing purchasing power and changing dietetic habits of the people. There is then the importance of earning the badly needed foreign exchange through sugar exports the scope for which is excellent, thanks to the distinct firmness of world sugar markets. If the sugar industry is to cater to the rising demand for both domestic consumption and exports at an economic price, it is imperative that the official sugar policy should be shaped by long-term considerations. The importance of such a policy has been most forcefully and impressively highlighted by one of India's leading economists, Prof. D. R. Gadgil, in the course of a special article contributed to the *Opinion* of Bombay. Prof. Gadgil, who has been intimately connected with the development of co-operative sugar factories in Maharashtra, is no doubt aware that it is not possible, at any point of time, to make confidently a full projection of the situation for the next, say, ten years and to hold rigidly to such projection irrespective of the subsequent changes in the situation. But he believes that, even when full allowance is made for the element of uncertainty and the need for readiness to adapt oneself to emerging situations, no effective planning is possible without a long-term base for policy.

Two Main Objectives

This journal itself has been repeatedly emphasising the need for a long-term sugar policy aiming at the continuous support for (*a*) the expansion of sugarcane cultivation and (*b*) the increase in white sugar (as distinct from brown sugars such as *gur* and *khandsari*) production. It is these objectives which have also been strongly emphasised by Prof. Gadgil. The relevant extract from his article is as follows:

"In relation to the first aim, it does not appear necessary to adopt any novel measure. The present relative prices of sugar appear sufficient to establish the desirable secular trend in the increase in area under sugarcane. In addition, it is necessary to undertake special intensive effort for the improvement of yields and quality of cane. The programmes in this behalf must be separately planned and must particularly distinguish between areas where present performances are highly unsatisfactory and where they are relatively satisfactory. In relation to the production of sugar, it is necessary to have a long-term policy of steadily increasing capacity and not to be deterred by events in individual years in the pursuit of this policy. The limiting consideration in this regard appears now to be the production capacity of domestic producers of machinery for the manufacture of sugar. It is important to plan for a steady annual increase in the capacity of the sugar industry from the point of view of also keeping the manufacturers of sugar plants in steady employment."

It is true that the past thirteen years have witnessed a marked rise in the sugar industry's capacity which has almost doubled since 1950-51 to 2.85 million tons (as of 1962-63) and that the quantity of sugar produced, too, has gone up significantly—from 1.12 million tons in 1950-51 to 2.99 million tons in 1960-61, though it was lower at 2.16 million tons in 1962-63. But the rise in sugar production has not been appreciable enough to keep pace with the increase even in minimum requirements for both domestic consumption and export, not to speak of the violent fluctuations in the year-to-year levels of output. Whatever capacity that exists in the sugar industry at present and whatever additional capacity that will be added in the coming years can doubtless be utilised fully, if only the industry is assured of regular, adequate supplies of cane at an economic cost. It is the absence of such supplies that interferes with the crushing operations of sugar mills. In other words, a steady increase in the output of sugar is interrupted either because of a bad season or because of a specially large diversion of cane to production of *gur* or *khandsari*.

Cane Supply Regulation

Policy cannot, of course, directly deal with seasonal conditions, but there is no reason why, as Prof. Gadgil has aptly stated, it should not be possible to bring about and maintain an appropriate distribution of cane supply between *gur* and *khandsari* producers, on the one hand, and manufacturers of sugar, on the other. "We require today," to quote the Professor, "a common production plan for *gur*, *khandsari* and sugar." He recalls how the usual instrument of variable excise has so far been used by the Government in implementing common production plans in respect of some other commodities and regrets that sugarcane distribution has not yet been visualised as a problem of this type. The result is that, whereas sugar manufacture is subjected to extremely heavy taxation in terms of excise and other cesses, the production of *gur* and *khandsari* is almost entirely free. What is worse, there is no uniform policy in this matter and the measures, especially in relation to *gur* manufacture, vary from State to State. Appropriately enough, Prof. Gadgil has explained at some length the two-fold relation between the prices of *gur* and sugar. His explanation is as follows:

"In the first instance, movements in the price of sugar appear to affect directly movements in the price of *gur*. Not only are the movements of the two sets of prices in the same direction but also the ranges of variations are largely similar. Further, in most movements, sugar prices appear as leaders. Secondly, the supply of sugarcane for manufacture of *gur* is, to a considerable extent, affected by the relation between the prices of *gur* and the prices that the manufacturers of sugar pay to producers of sugarcane. The relation between these two, established at any time, is likely to be disturbed by two sets of contrary movements; either by a slump in the price of *gur* or by a sharp rise in the retail price of sugar, inducing an equally sharp rise in the price of *gur* which rise is, however, not reflected in the price offered by manufacturers of sugar to producers of sugarcane. In view of these established relations, it is impossible for the Government to neglect the problem of prices of gur. If, because of inadequate supply of sugarcane, the production of sugar becomes low, prices at retail of sugar increase; an increase in the price of sugar forces upward the price of *gur* which, by making *gur* more profitable to producers of sugarcane, further affects the supply of sugarcane to sugar manufacturers. Thus, a vicious circle is set up which it is difficult to break through."

There is, of course, nothing new in these observations, for everybody knows that the level of *gur* prices invariably influences the quantity of cane crushed by the sugar industry in any given period of time. Even so, Prof. Gadgil has done well to lay stress on this issue, lest it should continue to receive scant attention. In this connection, the learned Professor has urged the Government to realise that its ideas relating to the proper price level for *gur* must be allowed to influence the policy relating to the price of sugar at the retail level. It further follows, according to him, that the Government must have a controlling device through which it can regulate not only the variations in the price of *gur* but also the relative profitability for cane producers of manufacturing *gur* at given prices for it. In his considered opinion, the usual practicable device is a tax element which could ultimately affect the price obtained for sugarcane. Prof. Gadgil has not indicated the nature of this device or the range of its applicability. He has merely emphasised that the policy aims he has in view are: "Some uniformity in regulatory policy relating to *gur* price and production and the ability to bring about a measure of parity in producers' prices of cane for any type of end-product without, at the same time, permanently forcing high the level of *gur* prices."

Even after the problem of *gur* is satisfactorily tackled as described above, one cannot assume that there will be a steady increase in the total production of sugar. It would be safer to assume that sugar production will continue to be subject to considerable variations. Prof. Gadgil has accordingly done well to urge the policy-makers to tackle the problem of adjusting a fluctuating supply to demand. Quite realistically (from the point of view of India's need for expanding and diversifying its exports), he has suggested that the country should aim at a fairly large and increasing volume of sugar exports. The establishment of facilities for production of raw sugar and the initial success that has attended this step offer, in his opinion, a proper base for the building of export policy. To quote him again:

"A long-term export policy assumes a minimum quota of production for export. It is only on the basis of such a quota that long-term contracts for exports of sugar can be negotiated. However, the operation of such a policy requires ability to project, well in advance of any season, the supply of and demand for sugar in the internal market. Only if this is done can the export market, above the minimum, serve somewhat as a cushion in relation to domestic supplies. Also this is necessary for a plan of rational and specialised production of raw sugar. It may be assumed that, with established relations and some long-term contracts, the international market will be able to absorb Indian exports with a given degree of variability. It is obvious that one must be prepared to experience somewhat large variations in prices received in this market. These may, however, average out fairly in the long run.

"Even with the development of an export market, supplies available in the internal market will not be fully under control and, given the unpredictability of internal demand, the relation between internal demand and supply may be subject to severe strains in particular years. This means that the long-term policy for sugar must provide for the creation of a distributive agency which is able to manage, within limits, the fluctuations in the relation of internal demand to supply from year to year. And this must be built up as a normal enduring mechanism. In the absence of such mechanism to deal with annual variations, a steady implementation of a consistent long-term policy will not be possible.

"I should like to emphasise that all that I have suggested here requires the creation of no new machinery, the adoption of no new policy measures or the imposition of no new restraints or regulations. Control over sales by manufacturers of sugar has been in continuous operation for years. Ex-factory prices of sugar have been often under formal or informal control. There is also currently in operation throughout the country some system or systems of distribution of sugar to the ultimate consumer and an attempt in the direction of creating an efficient structure for the distribution of sugar. Not only has the policy been made in the short-term but agencies have been created at short notice and for short-terms. The hasty implementation of *ad hoc* decisions and their quick abandonment has led to great loss of time and money and has left no lasting effects. . . .

"Another important aspect of long-term policy is the need for providing adequate penalties and incentives within the policy for efficient production and economic operation. It is possible to point to a large number of aspects of present short-term arrangements which disregard this aspect. Only a carefully framed and consistent long-term policy can properly provide for these and this should be done as soon and as effectively as possible."

The chief merit of a long-term policy for sugar, covering not merely the production of white sugar, *gur* and *khandsari* but also sugar exports and cane growing, lies in the avoidance of considerable wastage of cane and maximum production of quality white sugar at an economic cost. A larger and larger part of the available cane supplies ought to be utilised for producing white sugar *vis-a-vis gur* and *khandsari*, inasmuch as the making of the latter items entails loss of much sugar, since the recovery of sucrose is considerably less. Every hundred tons of cane crushed by a sugar mill give, even on a conservative estimate, four-fifths more sugar than could be obtained if the same hundred tons were converted into *gur* or *khandsari*. And, to the extent more sugar is produced and to the extent attention is concentrated on measures designed to enhance the productivity of cane leads (both quantitatively and qualitatively), the recourse to additional area for growing sugarcane will be reduced, the area so released being used for growing foodgrains and other crops.

In any scheme for expansion of sugar industry in the coming years, due importance ought to be attached to the areas which are ideally suited to cane growing. Surely, there is, as Prof. Gadgil has rightly averred, considerable scope for improving per-acre yield and quality of cane and, with systematic efforts in this direction, the production of cane *in the more* favoured areas in the country will be on a level of efficiency comparable with the more advanced areas anywhere in the world. Experience with the sugar mills established lately in the last decade which Prof. Gadgil has also cited shows that, with some efforts in the direction of increased efficiency, the cost of sugar production in India will compare favourably with that of the most established older sugar producers and exporters in the world.

SUGAR ECONOMY AT A GLANCE

(In thousand metric tons)

	1950-51	1962-63	Percentage change
Sugar production	1,118	2,160	+ 93.2
Sugar consumption	1,070	2,500	+133.6
Gur production	3,305	2,935	— 8.1
Gur consumption	3,254	N.A.	..
Area under sugarcane (thousand acres).	4,214	5,489	+ 30.3
Total cane yield	57,079	91,505	+ 60.3
Per-acre yield (tons)	14	17	+ 21.4
Cane used for sugar production ..	11,147	22,000	+ 97.4
Percentage share in total cane yield ..	20.0	24.0	+ 20.0
Recovery per cent. (average)	10.03	9.82	— 2.1

N.A.—Not available.

The State of Maharashtra is ideally suited to sugarcane cultivation. Both the per-acre yield and the recovery per cent in sugar are much higher than in States like Uttar Pradesh and Bihar where the sugar industry is highly concentrated. The Government of India will do well to give active assistance to the existing sugar mills in this State to expand their capacities, besides allowing also the setting up of new units where there are no sugar mills at present and where supplies of cane are plentiful. Any policy which accords preferential treatment to certain States will no doubt evoke strong protest from U.P., Bihar and some other States. And one can also expect considerable political pressure from these latter States. But the planners and the powers-that-be should boldly fight out such pressure. For, otherwise, the speedy and healthy growth of sugar industry will be stifled and the interests of consumers, who have sacrificed not a little to the industry's development all these years, will continue to be neglected. What is wanted is a long-term realistic policy for sugar, in the place of the present policy which is shaped almost exclusively by short-term considerations. By attempting to sketch the elements of such a policy, Prof. Gadgil has certainly initiated public discussion on this important subject. It is to be hoped that others interested in this subject will follow up this lead.

TRENDS IN PETROLEUM IN INDIA

DEMAND RISING—SELF-SUFFICIENCY IN CRUDE NOT IN SIGHT

MULTITUDES of people, multiplying needs, and a shortage of the means to fulfil them typify the Indian scene, and the resulting pressures on the oil industry are no different from the rest. Demand for petroleum products is expected to exceed 16 million tons by the end of the third Five-year Plan in 1966, as compared with about 9 million tons today, and, by the end of the fourth Plan in 1971, it may approach 30 million tons. Imports to satisfy requirements on this scale would entail an intolerable drain on foreign exchange; the authorities, long conscious of the problem, have launched a big programme of refinery building, and are carrying out exploration in several parts of the sub-continent. But the desire to have everything done by the State itself has simply underlined the inevitable shortage of capital and know-how and the Government is now taking steps to enlist the co-operation of private foreign enterprise, at least in refinery construction. For its part, private foreign enterprise shows signs of becoming reconciled to working through undertakings in which the Government takes an equal or even a majority participation.

Refineries All Round

Four refineries exist in the private sector: the old-established 400,000-ton Digboi refinery of Assam Oil (Burmah Oil Company), the 2½-million-ton Esso refinery at Bombay, Burmah-Shell's 3½-million-ton refinery, also at Bombay, and that of Caltex, one million tons, at Visakhapatnam on the east coast, giving a present total for private refining capacity of 7½ million tons.

To balance this, in pursuance of the policy designating oil as a sphere in which the public sector should have a controlling interest, the Government embarked in 1958 upon construction of wholly owned State refineries. Gauhati in Assam, 750,000 tons, has been built with Rumanian assistance and the Russians are building Barauni in Bihar, 2 million tons, and Koyali near Baroda in Gujarat, 2 million tons. Gauhati was opened in 1962 but throughout has averaged far below capacity, owing to various difficulties—bottlenecks in handling deliveries of crude from the fields (Nahorkatiya and Moran) and in getting products away from the refinery (a products pipeline to Siliguri is due for completion in August of this year), trouble with the kerosine-treating unit, and, recently, failure of the water supply owing to a change in the course of the always shifting Brahmaputra river. The Barauni refinery was scheduled for completion early last year, but unusually heavy rains and labour troubles have caused delay; the first one-million-ton distillation unit is now expected to come on stream in April and the second later this year. At Koyali, construction has barely begun and completion of the full capacity of two million tons is hardly likely before 1965. The three public sector refineries would then have a total capacity of 4¾ million tons, but the Government intends eventually to expand them, Gauhati to one million tons, and Barauni and Koyali to three million tons each, which would bring the total to 7 million tons.

A New Pattern

Last year, an important agreement was reached with the U.S. independent Phillips Petroleum for construction of a 2½-million-ton refinery at Cochin, Kerala, in which the Government will have a 51 per cent interest, Phillips 25 per cent and the remaining 24 per cent will be offered to the Kerala State Government and to private Indian investors. This enables the Government to call on the resources and experience of foreign enterprise, while retaining a controlling interest. Again, eventual extension of capacity by one million tons is foreseen.

The enthusiasm of the Government for building refineries is not yet at an end: one of 2½ million tons capacity is now projected at Madras in southern India. Companies which have expressed interest include Burmah Oil in conjunction with Shell International, E.N.I., Esso, Gulf, Caltex, Phillips, Pan American, and German and Japanese firms. Some have already submitted definite offers on which negotiations are proceeding. Esso has proposed a 2½-million-ton refinery, together with ammonia, lubricants and asphalt plants, in which it would have a 49 per cent interest and the Government 51 per cent. This bears out the probability that the Indian Government is unlikely to entertain any offer which gives it less than the majority participation it negotiated with Phillips.

Lastly, for the more distant future, a refinery is envisaged at Haldia near Calcutta. This is an area of heavy consumption where the need for capacity is clearly apparent and here again the private refining companies with marketing in India are likely to show interest. Burmah-Shell and Esso some time ago offered to extend the capacity of their existing plants, but the former Oil Minister, Mr. Malaviya, set his face adamantly against any expansion of the private sector. The new Minister of Petroleum and Chemicals, Mr. Humayun Kabir, and the Minister of State, Mr. O. V. Alagesan, while not changing the policy that public ownership should have the controlling interest in refining, are more inclined to judge proposals on their merits, and on whether additional capacity proves to be necessary—all this depending on the progress made with the refineries in the public sector.

With new refineries along the west of India at Koyali and Cochin, expansion at Bombay would not be so pressing. But a shortfall in total capacity, for the Indian market as a whole, may well arise. The total capacity of existing private refineries and those under construction in the public sector will be 14¾ million tons by 1966 against an expected demand level of at least 16 million tons. Another 6½ million tons will be added by the extension envisaged at Gauhati, Barauni, Koyali and Cochin and the new capacity at Madras, but demand will meanwhile have expanded still further; it is expected to reach 24 million tons by 1969, and 30 million by 1971.

INDIA: ESTIMATED CONSUMPTION OF PETROLEUM PRODUCTS

(Thousand metric tons)

* Based on figures for January-September.

As more products become available from the new State-owned refineries, the State marketing organisation, Indian Oil Company, which was set up in 1959, will extend its operations still further and hopes to become the largest marketer in a few years. It has a big programme of construction, including bulk intsallation and service stations. But I.O.C. is not aiming at the exclusion of the major foreign marketing companies, Burmah-Shell, Esso and Caltex, who are also investing in new facilities. Supplies from the various refineries are being made available to distributing companies other than affiliates through purchase or exchange.

Awkward Demand

In 1963, the growth of consumption slackened somewhat, the increase being less than six per cent, as compared with nine or ten per cent in recent years. Motor gasoline consumption, always comparatively small in view of the widespread poverty, was depressed, owing to the extreme shortage of cars and the higher personal taxation imposed in the last budget which hit the car-owning section of the population. The raising of duties on diesel oil and kerosine at the same time adversely affected consumption of these products. The inflationary trend of prices of goods in general and the rise in the cost of living, in particular, have cut down demand for petroleum products, since the more people have to spend on food and clothing the less they have over, even for near-necessities like kerosine.

The pattern of demand diverges from that of possible refinery yields, a problem which weighs more heavily on a public sector refinery than on that of an affiliate of an international company which may be able to dispose of products through its outlets in other countries. Thus Burmah-Shell exports about 130,000 tons a year of surplus motor gasoline from Bombay and Esso also disposes of all the products of its Bombay refinery not absorbed by the local Indian market. Clearly, ability to get rid of surplus products—and thereby earn or save foreign exchange for India—is a factor to be taken into consideration in negotiations for the construction of future refineries.

As more refineries are built more naphtha will become available. But it is hoped that more uses will be found for it locally. For example, Burmah-Shell are already supplying some naphtha to a fertiliser plant, and, with the increasing emphasis being laid on agriculture in the Five-year Plans, more fertiliser plants are planned. Projects for industries based on the manufacture of other chemicals from petroleum, including plastics, synthetic rubber, fibres, and detergents, are in various stages of planning. A survey of these possibilities, taking into account feedstocks available from refineries and natural gas resources, was made for the Indian Government by Dr. Henny of the French Institut du Petrole, whose report submitted last year is being studied. Regulations governing the establishment of a number of industries, including petrochemicals, are being liberalised.

The surplus of fuel oil is likely to fade away as industrialisation and electrification progress. But imbalance between domestic

(e) Production foreseen for Ankleshwar 2 million tons a year.

BARODA RAYON CORPORATION LIMITED

SPEECH OF CHAIRMAN, MR. BABUBHAI M. CHINAI

THE following is the speech delivered by Mr. Babubhai M. Chinai, Chairman (in the absence of the Chairman of Board of Directors, H. H. Fatehsinhrao P. Gaekwad), the Baroda Rayon Corporation Ltd., at the Fifth Annual General Meeting of the Company held on 1st February 1964, at Udhna (Surat):

GENTLEMEN,

It gives me great pleasure to welcome you all this morning to the fifth annual general meeting of your Company and to place before you for adoption the Directors' report and audited accounts for the year ended 30th September 1963. These were circulated and have been in your hands for quite some time and with your permission I take the same as read. I shall not repeat the several salient points regarding the working of the Company set out in the Directors' report. I shall confine myself to making a few general observations and refer to some of the latest developments and aspects.

Teething Troubles Over

First of all I feel proud to mention that within a few months after we started commercial production we got over most of our teething troubles and, in fact, made a progress in production and in quality achievement to expectation. Indeed, our production per day is nearly nine tonnes of rayon yarn on our average denier near 120. This has been achieved against our rated capacity of 6.25 metric tonnes per day on 100 denier basis. This satisfactory progress is the result of our attaining special speed and efficiency in comparison with those connected with the rated capacity.

The plant is now run entirely by our officers and men and all foreign technicians left long ago. We have been successfully manufacturing finer deniers of yarn such as 55, 60 and 75 along with other usual deniers such as 100, 120 and 150. The Company would also be producing dull yarn within a couple of months so as to cater to the pressing demands for such yarn also. Our quality is also now received with general satisfaction and in a few deniers it can stand comparison with any other product in the country and even imported yarns. We have been specially gratified that our production of 55/12 denier has been welcomed as second to none by the *jari*-making trade of Surat and elsewhere. We have steadfastly kept the Asahi quality as our standard for achievement. This standard is fully vindicated by the rayon yarn of your Company in point of strength as well as of lustre.

Industry's Progress

Our achievement in production is our fitting contribution to the country's productivity effort. In the wake of the Chinese aggression the need has been accentuated to work hard, produce more and export more. Despite the uncertain climate of the emergency, the man-made fibre industry in India has continued advancing to the third Plan target of viscose filament rayon of 76 million lbs. per year. With a little under 5 million lbs. in 1951, the national output of viscose rayon in a decade increased to over 47 million lbs. in 1961 and 57 million lbs. in 1962; it bids fair to attain 70 million lbs. in 1963. Several rayon manufacturing units have been set up with expansion projects on the anvil in almost every one of them. The increased production of rayon yarn saves crores of rupees of foreign exchange, provides raw material required for the medium and small-scale art-silk and *jari* industry, conserves India's slender foreign exchange resources by reducing the import bill on staples, yarns and fabrics. The future demand for rayon yarn, as for other fibres, natural or synthetic, is ever-increasing and abundant. For, the third Plan targets are based on certain assumptions of *per capita* cloth requirement and the total rate of Indian population growth. As has been manifest, the population growth has been faster than anticipated in the Plan so that actual requirements for all fabrics and cloths are still abundant. Under the circumstances, whatever expansions can be readily and economically undertaken to balance existing units are all doubly justified. It is my hope and prayer that Government would look upon our expansion proposals for an additional viscose line, for some additional frames (eight of them already industrially sanctioned), for a balancing plant for caustic soda, etc. in the light of the established need of the country. As the President, Dr. Radhakrishnan, crisply declared at the inauguration of our rayon plant in December 1962, rayon if viewed as a luxury is a luxury of the poor, but since the luxury of yesterday often becomes a necessity of today, rayon has fast become a necessity for the country's overall clothing programme, and for conserving foreign exchange resources.

Export Promotion Scheme

The one important raw material which is at present imported for the rayon industry is wood-pulp and the necessary foreign exchange for it is found by what is called the Export Promotion Scheme. Under the Scheme, the spinners are required to supply about a third of their total production by earmarking first quality product in certain deniers to manufacturers of export fabrics. The foreign exchange entitlement earned by the manufacturers of fabrics is then adjusted against the import of wood-pulp by the rayon industry. The subsidy thus imposed by the Export Promotion Scheme on the sale of yarn causes the spinners to pay 50 per cent more for the import of its wood-pulp as raw material. This is a heavy burden on the rayon industry, which happens to be singularly selected for such treatment in the matter of foreign exchange under the A.I.D. programme, among all industries in the country, and which is thus subjected to unmerited drain on its resources, while paying, at the same time, very heavily to the Central and State Governments through the recently increased excise and other taxes. I would, therefore, request the Government in all earnestness and humility that they should relieve the industry from the Export Promotion Scheme and provide it with the modicum of foreign exchange required for the purchase of wood-pulp.

The report of the Directors has made a reference to the Tariff Commission having been entrusted with the duty of fixing fair prices for the rayon industry. In the wake of the recent orders of the Government decontrolling the prices of rayon, reference to the Tariff Commission has almost been shelved. Nevertheless, I may mention that before the decontrol orders, the Cost Accountant of the Tariff Commission fully surveyed our unit and its costing and the data available with him would no doubt reinforce my request for taking the rayon industry outside the Export Promotion Scheme, as suggested above.

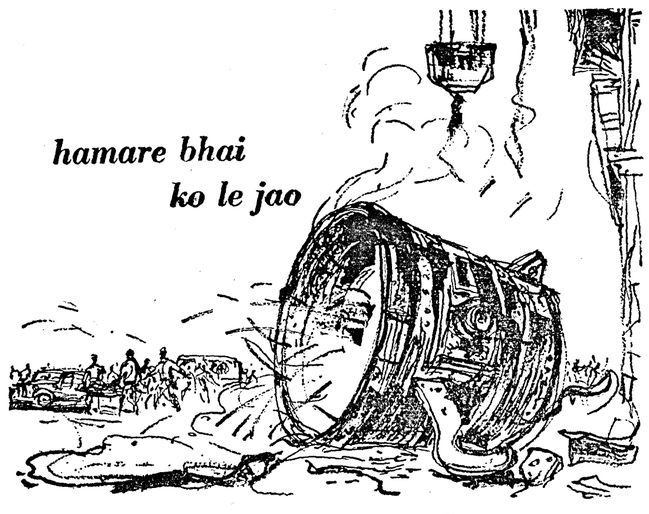
Amenities for Staff

Apart from labour housing referred to in the report various amenities and employee services have been provided by your Company. The Company is running a canteen and also counter services in the plant. Free milk is provided in departments affected with acidic atmosphere as also free clothing or clothing allowance. Transport facilities are provided for the colony staff to supplement the State Transport bus services. Our bus also serves as a school bus for the children of the staff, who attend various schools in Surat. A full-time medical practitioner with necessary staff and dispensary is in attendance. Outdoor and indoor games have been arranged including cricket and volley-ball.

Now that teething troubles are over and conditions have fairly stabilised, I would like to record our sincere appreciation of the good work of all our present staff and workers whose efforts, under the stewardship of our chief executive, Mr. N. K. Dravid, have enabled us to achieve satisfactory results by the end of the first year.

Thank you.

Note: *This does not purport to be a record of the proceedings at the Annual General Meeting.*



It happened some years ago in the steel melting shops at the Jamshedpur works. A large ladle, carrying 75 tons of molten iron, suddenly crashed to the ground with a deafening noise from an overhead crane. The spattering sparks and red-hot metal seriously injured a number of brick-layers working at what seemed to be a safe distance. The air was rent with the frenzied shouts of the men and the hissing of steam.

The first ambulance could remove only five of the injured to the hospital. General Manager Keenan could take only three more in his car. He chose the three who had a better chance of survival than the rest. One of these men, a Hindu worker, however, refused to go. "Do not take me away", he said. Disregarding his own agony, he feebly nodded towards a half-burnt Muslim colleague, and said: "*Hamare bhai ko le jao.*" As Keenan recalls, "The Hindu who was in pain and danger of death remembered, not that the Mohammedan was of a different faith, but that he was his brother."

This feeling of comradeship, born of the common bond of labour, is the spirit that characterises Jamshedpur, where industry is not merely a source of livelihood but a way of life.

CALCUTTA'S TRAFFIC PROBLEM APPALLING

FEASIBILITY OF CIRCULAR RAILWAYS

By Som Nath Chatterjee

THE magnitude of Calcutta's transport problem may be well imagined from a simple observation of Dr. B. C. Roy, the late Chief Minister of West Bengal:—

"There was a time when many including myself thought that Central Avenue had a lot of space with its continuous 70 ft. width. Little did we apprehend then that, in 1962, the space for moving vehicular traffic would be cut down to 40 ft., the parked cars being the intruders."

Indeed, Calcutta's traffic problem is really appalling because the volume of its vehicular traffic is annually increasing by roughly 10 per cent, road mortality also being alarmingly increased in the same ratio. (According to an estimate, 275 people, including 189 pedestrians, died in one year in street accidents). Be it noted here that, according to a survey made by C.M.P.O., on an average week day, in Howrah Bridge area alone about 507,899 people and 43,371 vehicles cross the bridge, the details of which are given below:—

	No. of people	*No. of vehicles*
Trams	.. 113,787	1,907
Buses	.. 207,235	4,226
Other fast vehicles ..	.. 41,080	22,481
Slow vehicles	.. 22,354	14,757
Pedestrians	.. 123,443	..
Total	.. 507,899	43,371

Hazardous Growth

Calcutta's traffic problem has become acute because its roads are not built to suit a particular volume of traffic which is often done in developed countries. The sad state of the very narrow Strand Road is a grim reminder in this connection. One wonders how our city planners fail to understand that, as a city grows, business tends to grow at one or more centres and so the people have to be transported from and to their homes every day.

Again, Calcutta's growth has not been at par with its growth as an industrial and commercial centre. Due to this, the City has never been properly linked with its suburbs. Because of this, two problems have emerged. Firstly, there is no highway which can link up this City with the southern and eastern parts of India. Only the G.T. Road connects Calcutta with its north-western industrial area. But, for at least 30 miles in Calcutta's industrial belt, this G.T. Road is narrow and heavily congested, making traffic movement slow and causing road accidents to increase. Secondly, communication inside the city is again highly unsatisfactory. A large number of daily passengers, at least five to six lakhs, come to Calcutta to attend offices from suburbs. For them, existing travel facilities at Howrah and Sealdah stations—offered by the Calcutta Tramways and State Buses—to reach Dalhousie Square are extremely inadequate. Besides these, the abnormal pressure of population in Calcutta due to partition and the lack of facilities for quick movement from one part of the City to another, especially from the circumference to the centre, have aggravated the problem further.

The above problems indicate that Calcutta is heading towards a serious crisis and that immediate steps should be taken to face the disaster. True, the magnitude of the problems and their heavy financial implications make the same formidable. Yet, we must remember that Calcutta is the nerve centre of All-India: it is linked up with the interest of India as a whole. So, in any event, we shall have to face this challenge in our national interest.

World Bank Mission's Concern

Little wonder, therefore, that Calcutta's traffic problems attracted the attention of the World Bank Mission. Little wonder, again, that the Mission was shocked to find that no provision had been made for Calcutta's improvement and thus forced to make the following observation:

"In the Mission's view, one of the most dangerous weaknesses in the Plan is the continued neglect of the problems of urban development of Calcutta. If this is to be remedied it is essential, first, that the Central Government should accept the direct and special financial responsibility for the improvement of the conditions in the City; and, second, that the provincial and municipal authorities should co-operate in establishing an effective body to carry through an enlarged programme of municipal reconstruction and improvement."

Towards the Solution

Any modern town planning worth the name to become successful must provide adequately for day-to-day growth of traffic and transportation needs. Also, future needs must not escape one's attention because any traffic and/or transportation plan must not remain content with present conditions but also look ahead to meet the future needs. The C.M.P.O., quite aware of this, is trying hard to prepare a plan to serve the Greater Calcutta area for the next 25 years bearing in mind the socio-economic and other changes that may be effected in the intervening period.

Finance

But finance is the main hurdle in the way of achieving the above objective. About the financial burden, it is interesting to note the observations of the World Bank Mission here:—

"The Mission got the impression that the Corporation of Calcutta has neither the power nor the financial resources to cope with the staggering problems faced in the City. The annual municipal revenue is restricted to the paltry sum of about Rs. 85 million—a good deal less than in Bombay which is a smaller city. The Government of India tends to regard these problems as wholly the concern of the Government of West Bengal, which, in turn, is struggling with many other difficulties and must respond to a legislature that inadequately represents the interests of the urban areas. The very magnitude of the challenge that Calcutta presents to the conscience and political commonsense of those in authority no doubt in part explains the inadequacy of the responsibility. *Everybody admits that more ought to be done about it. Nobody is ready to do it.*" (Italics mine.)

Circular Railways

The proposal to construct a new bridge across the Hooghly is a very right step in traffic and transport development plans. This will indirectly contribute towards urban improvement schemes. This bridge would be capable of carrying the loads of buses, lorries and other heavy vehicles besides the railway trains. All we need today is to introduce fast-moving and frequent electric train services upto Dalhousie Square point, so that from the farthest point of Greater Calcutta's radius the working population can reach its place of business within an hour's time And, if an underground railway system is impracticable for the purpose, then separate rail tracks for suburban services as in Bombay be laid for frequent and quick movements.

It is worth mentioning here that the Railway Board has already ordered its experts to examine the proposal of the West Bengal Government for having circular railways around Calcutta. And this will be the first study about the technical feasibility of a scheme aimed to solve the problem of overcrowding in Calcutta's public transport system.

The views of the C.M.P.O. deserve further consideration. To relieve the present traffic congestion, the Secretary of C.M.P.O. has already stressed the urgent need for extending local trains as far down as Hastings. He has further argued that the proposed satellite towns would also tackle this overcrowding problem.

The Port authorities, of course, have a mixed feeling about the circular railways. They apprehend that this project is a difficult one because it would result in the demolition of some jetties around the Strand Road, acquisition of large tracts of costly landings in some parts of Calcutta as also the pulling down of some buildings.

Some difficulties no doubt stand in the way of introduction of Circular Railways. Yet this project stands firm on these grounds: (a) Calcutta's population is fastly increasing and its dispersal is not always possible; (b) besides West Bengal, people from all parts of India are attracted to this City of Job Charnock; and (c) in spite of this mounting population, no concrete steps have been taken up till now to ease the traffic congestion. Circular railways will be a complete answer to these problems. It will not be a costly project if the existing lines of Port Commissioners are used.

MR. SOLVEEN ON ROURKELA

The profits of the Rourkela steel plant will be far greater than those of the other two steel plants—Bhilai and Durgapur. The smooth flow of production at Rourkela depends upon a steady output and the proper maintenance of the installations.

Public criticism, making out that Rourkela does not stand up well in comparison with the other two plants, is due to lack of technical knowledge of steel production, because the technical layout of Rourkela, with its most modern equipment and with its diversity of flat and further finished products, does not allow a comparison. Rourkela is the only steel plant in India which employs the L.D. process, the most advanced technical method of steel production, the method followed by the advanced steel-producing countries of the world. This process helps to produce with one converter in about 30 to 40 minutes the same amount of melted steel which is obtained in about seven hours under the open-hearth furnace process. It is obvious that this profitable process needs more care and training than the open-hearth process employed in Bhilai as well as in other steel plants here.

Furthermore, Rourkela is producing flat products like sheets of varying grades of thickness, while the other plants are producing heavy products such as rails and bars. The prices of the flat products turned out at Rourkela range from Rs. 750 to Rs. 1,450 per ton, whereas the prices of the products of the other two steel plants in the public sector range from Rs. 500 to Rs. 600 per ton. From this, the advantage of Rourkela should be obvious.

These points regarding the Rourkela steel plant, the foremost Indo-German project for India's economic development, were made by Mr. W. Solveen, a high-ranking official of the Federal Government in Bonn and a specialist on Rourkela, at a Press conference in New Delhi.

Having led a delegation of steel experts which examined the working of the Rourkela plant two years ago and recommended measures to allay fears about it and to improve the operation of the steelworks, Mr. Solveen is thoroughly acquainted with all problems of the project. About two years after the submission of his recommendations, Mr. Solveen recently paid a visit to Rourkela and studied the present situation in the working of the plant. Later, in New Delhi, he conveyed his impressions to the Minister for Steel, Mines and Heavy Engineering and the Secretary of the Ministry and expressed the hope that the management at Rourkela would take further suitable action to ensure the satisfactory maintenance of the plant.

At his Press conference Mr. Solveen also made the following points:

The Rourkela plant having already reached its rated capacity, attention should now be paid to the improvement of quality, so that the finished products could conform to international standards. This will depend upon the smooth flow of production at the plant. The first pre-condition for such flow is that the plant should be maintained with care, a basic stock of spare parts being piled up. The Chief Superintendent of Maintenance of the plant has prepared a list of these spare parts, which require a supply of foreign exchange amounting to about DM 9.5 million. The subject is now before the Government of India. Unless the basic stock is maintained there is always a danger of breakdown of the plant and consequent disturbance of production. Besides, additional provision should be made for the replacement of spare parts involved in current wear and tear. The cost of these parts will be paid to the Government of India by Hindustan Steel Limited.

Reiterating the conditions for the successful maintenance of the plant, Mr. Solveen said that the first condition was the availability of a basic stock of the necessary spare parts. The second condition was that restlessness among Rourkela's labour force should be stopped.

MOTOR VEHICLES PRODUCTION IN JAPAN

The Japanese automobile industry witnessed a boom in 1963 when the production of motor vehicles recorded new high levels. During the year under review the output of motor vehicles of all categories rose by 29.6 per cent to 1,283,533 units, according to the Automobile Industrial Association. The production of passenger cars alone recorded a handsome rise of 51.7 per cent over the previous year to 407,830 units. The reason for this expansion in production has been attributed to strong demand in both domestic and export markets.

To revert to the category-wise production data. Truck production rose by 21.4 per cent to 862,782 units, while bus production recorded an increase of 15.3 per cent to 12,902 units. The production of passenger cars, each with a cylinder capacity of 360 c.c. or more, amounted to 330,038 units, whereas the production of midget cars, each with a capacity of less than 360 c.c. aggregated 77,772.

During the year, Toyota turned out 318,495 units, Nissan Motors 268,315. Isuzu Motors 79,457, Prince Motors 53,756 and Hino Motors 38,493.

NEW PRODUCTS AND PROCESSES

New Asbestos Tile

THE Semtex Ltd., London, has developed a new asbestos tile and will display the tile at CARPEX 64 fair to be held at London during the last week of the month. Called *Semfloor* 65, this is a flexible vinyl asbestos tile of high durability and is considered particularly suitable for 'heavy-traffic' areas in the home. Available in fourteen colours with marble effect, the tile measure 9"x9" and is priced at 11d. each. Semtex will also be displaying sponge rubber carpet-underlay in two grades and two new colours in the range of SELFLAY tiles bringing the total number of colours in this range to 14.

Rotary Engine With Many Applications

A new rotary internal combustion engine with a new planetary geometry has been developed by Mr. Finn Jernaes, a Norwegian engineer of Kristiansand, southern Norway. The engine is claimed to have no cooling, lubricating or sealing problems while developing its power very smoothly because its layout provides for three ignitions per revolution instead of the single ignition cycle of the conventional Wankel engine. The engine has a central oval rotor moving within a triangular system of combustion chambers. It is expected to be applicable to pumping operations, compressors, steam engines and hydraulic machinery.

Mercury Columns Test Turbines

Steam turbine testing has been made easy by the production of a mercury column on a commercial basis by the C.F. Casella and Company of London in collaboration with the Divisional Efficiency and Test Department of the Central Electricity Generating Board. It is available as a short-range model (26-31 inches of mercury) and a long-range model (15-31 inches), and is intended for the accurate measurement of vacuum conditions in condensers of steam turbines. Normally used to conduct tests on new plant, or pre-overhaul and post-overhaul routine heat consumption test, the column can be used in conjunction with a barometer to find absolute pressure or back-pressure in the condenser. It may also be used to find low temperature pressure differentials.

Heat Camera Used in Diagnosis

Pain-free medical diagnosis is now possible with a new device called the Pyroscan, developed by S. Smith and Sons, London. The device is in effect an electronic heat camera yielding a picture of the infra-red radiation emitted by the body's surface. The pictures thus produced show at a glance the presence of any abnormalities and form a guide to a wide range of pathological conditions. Equipment produced in the United States, it is claimed, takes 15 minutes and more to make the same type of picture that the Pyoscan turns out in 20 to 30 minutes. Research is in progress to improve still further on this performance.

Car Travel Measured to a Millimetre

Engineers at the Thornton Research Centre, Cheshire, of Shell Research have invented an instrument called a printing speed meter which can measure the distance a car travels to within one millimetre and estimate the time taken to travel this distance to within a ten-thousandth of a second. The heart of the device is a small wheel that rotates about an extension of the stub axle of a non-driven car wheel. The outside of the wheel carries 1,543 axial grooves and as each one passes the knife edge of an electro magnetic pick-up a voltage is generated. Each revolution of the wheel produces 1,543 cycles of alternating voltage, that is, each time the car moves one millimetre (0.039 inch) one cycle is generated. By counting the number of cycles, the distance travelled is determined to that degree of accuracy. To measure speed, the number of cycles generated in ¼ second is recorded.

Inflatable Vehicle Rafts

Motor vehicles transportable on water by means of inflatable rafts or bags are the latest development reported from the R.F.D. Company, of Godalming, U.K. makers of inflatable craft for the services. The company works in co-operation with the Fighting Vehicles Research and Development Establishment of the War Department. A special vehicle, adequately waterproofed and fitted with flotation bags, has been developed. This is normally towed, and trials have taken place. An alternative is a complete inflatable pontoon with steel channels to take the wheels and act as a ramp when one end is deflated on land. On very calm water a Land Rover so mounted can transport itself by the movement of the wheels on the pontoon, but it is proposed that a propeller be fitted to the shaft of the engine to make the whole selfpropelling. Discussions are going on with Rover to see if water-proofing kits could be made to enable Land Rovers to be used with flotation bags only.

Butter Oil from Whole Milk

The Alfa-Laval process of "straight through" production of butter oil from wholemilk or cream —dispensing with the need of first making butter, then melt it down—has been introduced in Australia, according to Alfa-Laval of Sweden, who developed this method. A plant with a capacity of 900 kgs. of finished butter oil per hour is now in operation at the Foster (Victoria) factory of the South-Eastern Milk Products Co-operative Company. The wholemilk is first separated to a 35 per cent butterfat cream which is then flash pasteurised. The cream is fed to the so-called Clarifixator in which it is concentrated and the cream emulsion is broken. The oil, containing 85 per cent butterfat, is subsequently fed to the fat concentrator where further concentration takes place and oil is discharged containing 0.4 per cent moisture. The skim milk from the clarifixator, although containing a very small fat percentage, is further centrifuged to recover the remaining butterfat. The butter oil is then heated to 200° F and flashed into a vacuum chamber where partial cooling and final dehydration takes place. After further cooling in a plate heat exchanger the butter oil is ready for packing. Advantages of the "straight through" system, Alfa-Laval claims, are increased capacity or through-put, reduction of fat losses, and further economies in steam and water consumption.

Textile Printing Rollers

Textile printing rollers made by centrifugal castings are substantially cheaper and technically superior to the conventional solid copper or sand-cast copper rollers, claim the Sheepbridge Stocks Ltd., England, the manufacturers. Because of the nature of the casting process, centrifugally cast rollers are naturally free from air holes and are perfectly balanced. This results in great saving on machining, which is minimal in comparison to that required by sand-cast rollers, and no wastage in terms of rejects. In addition, the method gives a 15 per cent increase in tensile strength in comparison to sand-cast metal, and, since the ends of the rollers are closed with high strength bushes, they are much stronger as the sand-cast roller ends. The rollers, after use, need only to be skimmed off and the copper surface replaced in an electrolytic plating vat. This enables standard roller sizes to be supplied and maintained, and saves printers from maintaining large stocks of solid copper rollers.

Wool Dyes

A new range of dyes, which will make it possible for the textile industry to produce woollens with greater light and wet-fastness than in the past, have been perfected by Imperial Chemical Industries Ltd. Millbank, London. The makers have already developed dyes which react chemically with cellulosic fibres, such as cotton and rayon, and synthetics, but the new range is said to be the first in the world which will combine chemically with wool. The agents in India for dyes are Imperial Chemical Industries (India) Ltd., Calcutta.

Aluminium Alloy Cable

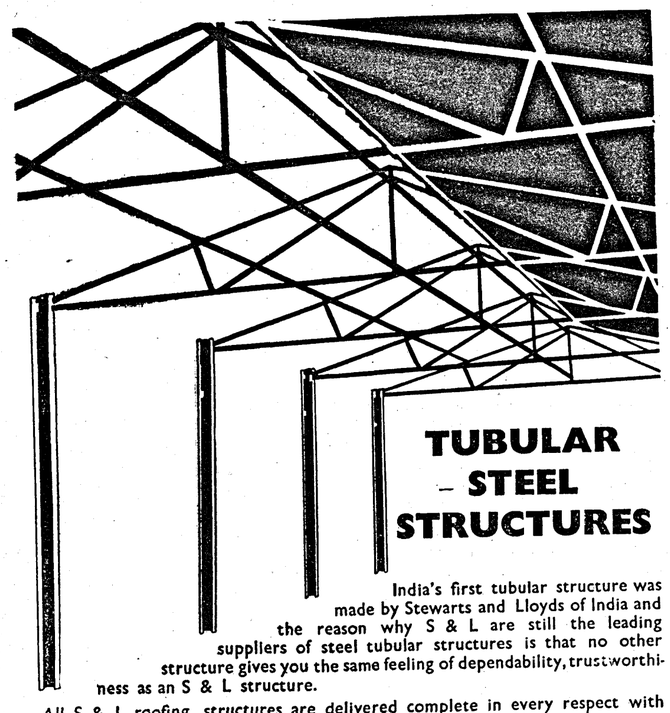
The Kaiser Aluminium and Chemical Corporation, 300, Lakeside Drive, Oakland 12, California, U.S., has found that special combinations of aluminium and alloy strands, to make overhead cables for electricity transmission, provide greater flexibility in design. The new conductor cable is called ACAR, standing for aluminium conductor alloy reinforced. With a strength-to-weight ratio equivalent to steel-reinforced aluminium cable of the same diameter, ACAR has better electrical conductivity. Alternatively a smaller cable can be used, it is claimed, for the same current capacity. The alloy conductors as strengtheners are not limited to the core. They can be stranded in any combination. A comparison in weight shows that 1,000 feet of the Company's steel-reinforced cable weighs 1,094 lbs. whereas the same length of ACAR of the same diameter weighs only 870.4 lbs. Elimination of the steel in a cable has an additional advantage in the cable's resistance to corrosion.

New Typewriter Keyboard

The Max-Planck-Institute for Work Physiology in Dortmund, West Germany, is presently testing a proposed new typewriter keyboard suggested by a group of German engineers. The advantages of this innovation are obvious to any person who spends any time at the typewriter. The new keyboard does not have four straight rows, as present machines, but is divided into a right and a left field. The keys correspond to the anatomic factors of hands and finger-tips and are thus arc-formed. This enables each of the different fingers to reach the keys without any trouble. No more energy is needed than when using an electric typewriter. The entire keyboard is not placed in a horizontal position but at a 30° angle. The increase of certain illnesses such as infected hand tendons and tendon-sheaths prompted the engineers to develop the new typewriter. Doctors are convinced that a new keyboard would lead to a considerable decrease in illnesses due to strained hands.

Instrument for Making Glass Knives

A precision apparatus for making the high-quality glass knives needed for cutting the ultra-thin sections used by electron microscopists has been developed by LKB-Produkter, Stockholm. Called the KnifeMaker, it is claimed to be the first device of its kind. The apparatus accepts glass strips up to 38 mm. wide and 7 mm. thick and produces, from strips with smooth regular sides, knives with much straighter edges than those usually obtained with manual methods. To score the glass the instrument uses a sintered tungsten carbide wheel. For each fracture, the scoring and breaking is done in succession without removing or repositioning the glass, a principle which contributes to the high reproducibility. The KnifeMaker can be adjusted quickly to break knives with any scoring angle between 40° and 55°.



India's first tubular structure was made by Stewarts and Lloyds of India and the reason why S & L are still the leading suppliers of steel tubular structures is that no other structure gives you the same feeling of dependability, trustworthiness as an S & L structure.

All S & L roofing structures are delivered complete in every respect with trusses, purlins, columns, hook bolts for roofing and all necessary studs, nuts and washers.

Write today for your requirement of these sturdy and dependable tubular steel structures.

I.L.O. ON WORLD LABOUR SITUATION

REAL WAGES BETTER ONLY IN FIVE COUNTRIES

THE world labour situation in 1963 followed the pattern of previous years: continued improvement in industrialised countries, and a generally stagnant situation in the developing countries. Such is the picture that emerges from the statistical data released by the International Labour Office. In the industrialised countries, the overall level of employment is rising and unemployment (except in a few cases) is diminishing; weekly hours of work are going down; money wage increases generally exceed rises in consumer prices despite the fact that prices have been increasing at an accelerating rate in most cases.

Figures relating to the developing countries are spotty. Nevertheless, the available data show that the workers in these countries continue to suffer from widespread unemployment and underemployment, often accompanied by price increases reaching as high as 40, 80 or even over 100 per cent. The gap between the situation of workers in industrialised and developing countries is thus widening.

The total number of employed persons reached new record levels in 1963 in almost all of the industrialised countries. Employment in manufacturing continued to increase, except in a small number of European countries and in Argentina. In several countries, however, the rate of increase was somewhat slower than in 1962. In the industrialised countries, workers in agriculture and in mining continued to move into other economic sectors.

Unemployment was, as in previous years, unevenly spread in the world. As a result of favourable conditions, it has fallen in a number of countries (most of the industrialised countries of Europe and Japan), virtually to a rock-bottom level. In fact, many European countries have had to cope with a shortage of manpower; this problem was particularly acute in the Federal Republic of Germany and in Switzerland. Scattered and incomplete data from the developing countries indicate that unemployment and especially underemployment remained at a very high level, largely as a result of the increasing population.

Rise in Prices

The rise in consumer price was slightly more rapid in 1963 than in the previous year in most of the countries surveyed; however, in one country out of five the rise slackened. The sharp price increases observed in previous years continued their upward spiral in several developing countries, especially in Latin America. In Brazil, prices more than doubled between 1960 and 1962 and the increase over the past 12 months reached 80 per cent. In Colombia, following the devaluation in October 1962, retail prices rose early in 1963 and, from January to November, increased by more than 40 per cent. Similarly, in Chile, the rise has exceeded 40 per cent over the past 12 months. In Indonesia, the seriousness of the price situation was illustrated by the fact that from September 1962 to September 1963, prices more than doubled, reaching a level more than 13 times that of 1958.

Money wages increased in virtually all the countries for which data were available. In most cases, the rise in money wages was greater than the rise in consumer prices. As a rule, average weekly earnings did not increase as much as hourly earnings—an indication of a shorter working week. The earnings of women workers increased faster than the earnings of men workers in most of the European countries for which separate statistics were available.

Employment

These general remarks can be spelled out a little more fully as follows:

As in previous years, the general level of employment went up in all countries for which figures were available, with the exception of Finland and the United Kingdom, where very slight declines were recorded. In June 1963, the total number of employed persons in the United States went above the 70 million mark for the first time. Behind this general advance, however, the trends varied from country to country and were different in the various sectors of economic activity.

Employment in agriculture fell off still more in most countries. The decline was particularly perceptible in Austria, Czechoslovakia, France, the Federal Republic of Germany, Italy, the Netherlands and the United States. In France, over a period of eight years, one farmer out of four left the land. In the Federal Republic of Germany, more than 100,000 wage-earners have moved out of agriculture and into other sectors of the economy since 1960. On the other hand, employment continued to rise in the Socialist sector of agriculture in Bulgaria, Hungary, U.S.S.R. and Yugoslavia. This increase was, however, less marked than in the other economic sectors.

The number of miners diminished by 5 to 10 per cent between 1960 and 1962 in the United States, France, the United Kingdom, Japan and the Federal Republic of Germany. The decline was more than 10 per cent in Canada and about 20 per cent in Belgium.

Employment in manufacturing increased in most of the countries for which data were available. It was up 7 per cent in Israel, 6 per cent in Yugoslavia and 5 per cent in Rumania. In Canada and the United States, and also in Bulgaria and Poland, the rate of increase was lower than in 1962. Hungary, Ireland and Italy also reported tangible increases.

In certain countries, on the other hand, employment in manufacturing fell off. In Argentina, for example, the decline that began in 1955 continued: a drop of 14 per cent between June 1962 and June 1963 brought the number of workers to a level of 30 per cent below that of 1955. In Europe, decreases were reported from Austria, Denmark, Finland, the United Kingdom and Sweden. The loss neared 4 per cent in Denmark and Finland but was less than 2 per cent in the other countries.

Unemployment

An exceptionally rigorous winter resulted in a sharp increase in the number of unemployed in almost all the industrialised countries of Europe during the first two months of 1963, but unemployment then dropped to the very low levels reported in preceding years.

In Italy, unemployment as a chronic phenomenon is now confined to a few areas in the south. The number of unemployed, which had gone down by 45 per cent during the previous three-year period, dropped by a further 17 per cent in 1963. In October of last year, it stood at 413,000 or 2 per cent of the labour force. The lower unemployment figure could be attributed in part to the coming into force of law extending the period of compulsory education. In Belgium, the drop in unemployment that had begun in 1959 brought the number of unemployed to a level lower than any recorded since 1947. In France, the Netherlands, Greece, Sweden and Yugoslavia, unemployment at the end of 1963 was less than it had been at the end of 1962, in Austria, the Federal Republic of Germany and Ireland the level of unemployment remained virtually unchanged. In most of these countries, a large proportion of the registered unemployed were, in fact, pensioners or workers difficult to employ for reasons of health. Unemployment has virtually ceased to exist in Luxembourg and Switzerland.

In Canada, unemployment has in general been going down since August 1961; in September 1963, it was at the lowest level recorded since 1959 and, in November 1963, the number of unemployed stood at 303,000, the lowest level for November since 1956. In Chile and Puerto Rico, and also in Australia and New Zealand, there has been considerable improvement in the unemployment situation.

In the United Kingdom, where unemployment has increased since September 1961, numerous lay-offs resulting from the rigours of winter brought the number of unemployed in February 1963 to a figure not previously reached since the war—933,000, or 4 per cent of the labour force. Between February and July, the number of unemployed dropped considerably, and, in October-November 1963, the total was slightly lower than in the corresponding period of 1962, even though it remained above the 500,000 mark.

In the United States, the unemployment figures showed a drop in 1962, the average for that year being lower by some 800,000 than the average for 1961. There was an increase in unemployment in 1963, however, the level averaging out to 5.7 per cent. of the manpower.

In Japan, the seasonal rise in unemployment occurring in March was higher in 1963 than in 1961 and 1962, but the number of unemployed subsequently fell during the following months to the very low level of the previous year. In Spain, unemployment increased from 5,000 to 99,000 between October 1962 and October 1963. In Finland, during the same period unemployment rose from 20,000 to 29,000.

Consumer Prices

Consumer prices increased in almost all the 101 countries for which data were available; in most of them, the rate of increase was higher in 1963 than in 1962.

Rises of more than 10 per cent occurred in 10 countries—Argentina, Brazil, Chile, Colombia, Congo (Leopoldville), Indonesia, Iceland, Laos, Mauritania and South Korea. Prices increased 5 to 10 per cent in 19 countries and territories—Aden, Cameroon, Congo (Brazzaville), Dominican Republic, Ecuador, Finland, France, Gabon, Gibraltar, Israel, Italy, Japan, Peru, Philippines, Spain, Turkey, Uganda, South Viet-Nam and Yugoslavia. In almost 30 countries the rises were between 2 and 5 per cent, and in about 40 countries they were less than 2 per cent. Four countries reported a drop in consumer prices; they were Burma, Nigeria, Tanganyika and the United Arab Republic.

Money Wages and Real Wages

Statistics on wages were available from about 30 countries only. In all but one, average money wage increased, the range being from 0.6 per cent in the Philippines (non-agricultural sector) to 39.7 per cent in Colombia (Manufacturing).

Money wages in manufacturing increased by more than 20 per cent in 4 countries—Argentina, Chile, Colombia and Yugoslavia. Increases exceeding 10 per cent but less than 20 per cent occurred in 5 countries—Italy, Israel, Japan, Mexico and South Korea. In 9 countries—Belgium, Finland, France, Federal Republic of Germany, the Netherlands, Norway, Philippines, Puerto Rico and Sweden—money wages were between 5 and 10 per cent higher in 1963 than in 1962. Money wages increased from 2 to 5 per cent in Bulgaria, Canada, Ireland, Hungary, Poland, Puerto Rico, the United Kingdom and the United States. Low rates of increase (between 1 and 2 per cent) were reported from Australia, China (Taiwan) and New Zealand. In Czechoslovakia, the average level of wages was 1 per cent less during the first six months of 1963 than during the corresponding period of the previous year.

As a result of the continuous rise in consumer prices, real wages have often increased much less than money wages, and in 8 of the countries for which figures are available—Argentina, Austria, Ceylon, Chile, China (Taiwain), Czechoslovakia, Philippines, South Korea—the purchasing power of the workers actually diminished; this drop amounted to less than 5 per cent everywhere except in Chile and South Korea. Real wages increased by more than 5 per cent in 5 countries—Belgium, the Federal Republic of Germany, Italy, Mexico and Yugoslavia. In Canada, real weekly earnings increased by 1.6 per cent between August 1962 and August 1963, and in the United States by 2.8 per cent from October 1962 to October 1963. On the other hand, the increase in real wages did not exceed one per cent in Australia, Denmark, France, Japan and New Zealand.

SOCIAL SECURITY IN W. GERMANY

A German Correspondent in Cologne writes:

Before the German Parliament in Bonn is a controversial *Sozialpaket*—literally, "social package." The controversy is not over whether Germany should continue its pioneering efforts to provide social security, but how. The package contains the biggest social legislation in years, and correspondingly is immensly expensive. It would:

1. Continue wages during illness for all wage-earners. (All working people now receive a full six weeks' pay while off the job in case of illness. But while white collar employees get paid directly through their employers, wage earners receive part of sick benefits from sickness insurances, part from employers. The "social package" aims at reframing of this legislation, making employers pay the full amount of sick wages also for wage earners);

2. Increase family allowances that are aimed at helping families with children.

3. Grant more liberal provisions concerning health insurance.

For almost a century, Germany has been a "welfare State" to a considerable degree. In the past, voices have been raised to criticise the "paternalism" that is potential in any State-run system of social security. Now it is not the State alone, but also W. German industry, that is in danger of adopting a paternalistic role.

U.S. AID TO INDIAN AGRICULTURE—I

BASIC APPROACH TWOFOLD, OVERALL DEVELOPMENT OF LAND AND ITS YIELD

By Dr. S. Chandrasekhar

DIRECTOR, INDIAN INSTITUTE FOR POPULATION STUDIES, MADRAS

THE picture of the Indian peasant and his plight, reflecting the overall backwardness of Indian agriculture, have been drawn only too often. He is incredibly poor in terms of income, and this poverty is both a cause and a consequence of his station in life. He is illiterate and suffers from poor health. He lives in a squalid mud hut devoid of hygiene and sanitation. His food, despite the fact he is the primary producer, is coarse and least nutritious. He is in chronic debt to the State, the landlord when there is one or the local moneylender. The monetary demands made on him by his social and religious obligations—marriages, festivals and funerals—accentuate his financial misery.

Secondly, the land he cultivates is in an equally miserable condition, unless he is fortunate enough to own a part of the fertile and irrigated part of the land. Through the years, thanks to the steady growth of population and the traditional Hindu laws of inheritance, the holding has been fragmented and subdivided into numerous uneconomic patches. Over the years, the land has been cultivated in such a primitive and unscientific fashion that it has lost much of its inherent fertility. The land has been giving for centuries without receiving anything in return. The monsoon determines the peasant's destiny, and, whether there is a drought or a deluge, it is the land that suffers. And, when the monsoon fails, famine stalks the land. Thus, his crop is in a large measure a gamble in the rains. Then, there is the problem of erosion. Crop rotation is not the common rule. In some areas, there are no fertilisers, natural or artificial.

Thirdly, the relation between the cultivator, his land and animals and human society—the whole ecological set-up—does not brighten the picture. The types of land tenure, despite recent progressive legislation, range from near agrarian slavery and share cropping to peasant proprietorship. Landless tenancy seems to be the lot of the majority of the world's farmers, and India is no exception. There are the inevitable difficulties of rural credit to cover the cost of not only seeds, ploughs, manure, fertiliser, cattle and fodder, but also marriages and funerals.

Not Insoluble

These are some of the problems, and the necessary reforms and solutions are well known. These problems, however, are not insoluble. They can be met by a concerted attack with the aid of soil conservation, afforestation, irrigation, better implements, better seeds, the use of organic and inorganic fertilisers, better control of pests, fewer but better livestock, the consolidation of holdings and the creation of rural credit facilities. The implementation of these apparently simple reforms would require nothing short of a social and economic revolution in the countryside, but without such a revolution the Indian farmer will never come up to American, Danish or Swedish standards of productivity. And to accomplish this we must multiply the effort involved in the transformation of a single peasant by several hundred millions.

All efforts at agricultural development in the underdeveloped countries can be grouped under two broad categories. These are: (1) Those measures that contribute towards an increase in the yield per acre and, (2) those that help to bring new land under cultivation.

To take the former first. The yield per acre and the yield per head of agricultural population differ rather widely from country to country and between regions within a country. It is largely a question of the condition of the soil, climate, rainfall and the technological stage of the art of farming. The differences in yield per acre between, say, the United States and India are impressive and understandable, in view of the great cultural and technological differences between these two countries. There are some significant differences between the Asian countries themselves. For example, Japan raises twice as much food crops as China per acre, and China's yield is nearly double that of India. If the yield per acre in each of these countries is taken to be representative of the average fertility of the land, the differences in output become all the more striking, since there are no major institutional or technological differences in farming practices between India, China and Japan. The problem here is to make an acre in India yield as much as an acre in Japan and eventually to make it yield as much as an acre in the United States, Canada or Sweden.

Even in a country of advanced agricultural practices such as the United States, the last word on agricultural development has not been said. Recently, Dr. Charles E. Kellogg, of the United States Department of Agriculture, asserted that the yield per acre in the United States could be considerably increased and that American farmers are not yet making full use of the materials and techniques readily available to them, such as improved machinery, fertilisers, better seed varieties, etc. How the adoption of hybrid corn has increased the yield per acre in the United States corn belt by as much as a fifth is well known. If this can be done on lands where yields are already high, it should be possible to do at least as well in such low yielding areas as India. A comparison of the yields per acre and *per capita* in India and a few other countries shows the very low productive capacity of both farmers and land in India:

An International Comparison of Food Crop Yields, 1950

Country	Percentage of world production	*Per capita* lbs.	Per acre lbs.
Rice—			
India	19.6	185	1,048
Burma	3.6	686	1,216
China	31.8	..	2,248
Japan	7.9	818	3,321
Wheat—			
India	3.8	3	593
Australia	3.6	1,484	909
Canada	7.5	1,832	979
U.S.A.	24.9	538	1,079
Pakistan	2.3	100	733
Rawsugar(cane and beet)			
India	15.7	33	3,063
Cuba	20.0	2,622	4,567
U.S.A.	5.2	25	3,701
Mauritius	1.2	1,956	6,132
Pakistan	5.2	31	3,100

The foregoing figures indicate the rather unsatisfactory position of India in world agricultural production. The *per-capita* yield (probably due to the large population) as well as the per-acre yield are comparatively low. But the soil cannot be blamed, if we look into the figures (in the table below) of agricultural production during the last decade when relatively better methods of cultivation were adopted and more fertilisers employed:

Index Numbers of Agricultural Production

(1949-50=100)

Group	1950-51	1955-56	1960-61
All crops	96	117	135
Food crops	91	115	131
Other crops	106	120	142

Despite heavy fluctuations from year to year, there is an unmistakable evidence of improvement in India's agricultural yield. The cumulative rate of growth was about 3.5 per cent per annum and was much higher than in any previous decade. The preceding decade produced an average annual yield of foodgrains of 50 million tons which was being increased year by year and reached as much as 76 million tons by 1960-61. These figures strongly suggest that with intensive cultivation, and more chemical fertilisers, greater irrigation facilities, the cultivated land in India is capable of yielding much more than it does at present.

Now for the measures which help to bring new land under the plough. Of course, in one sense, there is no "new" land as such in an ancient country like India with centuries of cultivation or habitation. But, according to the official statistics of the pattern of land utilisation of India, some land is still available, land termed "cultivable but uncultivated." Of course, this land is not fertile or easily accessible and favourable for ready settlement. This is no doubt marginal and near-barren land that demands more than the usual investment that makes land yield. But, in view of the country's persistent food shortage, no land other than fallow and forest can be left uncultivated no matter what the investment needed in the long run. The following table shows the pattern of land usage in India according to the official cadestral surveys:

Pattern of Land Utilisation in India, 1950

Category	Area in thousand acres	Percentage o classified area
Classified area	614,610	..
Unclassified area	196,199	..
Gross area	810,372	..
Net area sown	266,372	43.3
Current fallows	18,171	3.0
Under forests	93,143	15.2
Not available for cultivation	96,024	15.6
Other uncultivated land excluding current fallows	98,400	16.0

American aid to Indian agriculture revolves around these two basic approaches for the overall development of land and its yield. One is to bring all the available cultivable and near-cultivable land under the plough and the second is to make the cultivated land yield double or treble if possible in consonance with such investment on land as is possible. This twin approach could transform Indian agriculture within a reasonable time from a losing, pathetic, traditional way of life into a commercial, economic and successful proposition.

All Embracing

American assistance, from both the Government and the Ford Foundation, to Indian agricultural development has been all embracing in the sense that it has touched almost every major area of rural reconstruction. However, only a few significant projects in India's overall agricultural development will be examined here. An exhaustive survey of all aspects of American aid to Indian agriculture will be rather voluminous; nor is it necessary for our purpose. A few selective projects considered here reveal how the aid has been crucial in attacking certain fundamental defects in Indian agriculture.

Of the total American aid that has come to India since the latter's independence, over one half has been in the form of P.L. 480 Food for Peace Commodities. In 1962, the total amount

TABLE A:—*Value of American Agricultural Commodities Covered by Agreements with India*

	Dollars (millions)	Rupees equivalent (crores)
India Wheat Loan of 1951	189.7	90.3
Section 402 of Mutual Security Act (P.L. 665).	67.8	32.3
Public Law 480, Title I:		
First agreement of August 29, 1956	354.5	168.8
Second agreement of June 23, 1958	55.3	26.3
Third agreement of September 26, 1958	259.8	123.7
Fourth agreement of November 13, 1959	297.9	141.9
Fifth agreement of May 4, 1960	1,389.8	662.3
Sixth agreement of May 1, 1962	39.3	18.7
Seventh agreement of November 26, 1962.	46.6	..
Eighth agreement	5.1	..
(Total of all eight agreements: $2,428.3 million=Rs. 1,156.3 crores)		
Public Law 480, Title II	4.9	2.3
Miscellaneous relief grants	5.5	2.6
Public Law 480, Title III	116.8	55.6
Total	2,813.0	1,314.8

TABLE B:—*Composition of Agricultural Commodities Covered by U.S. Agreements with India**

Commodity	Unit	Quantity stipulated in agreements	Quantity imported by India through June 1961
Wheat and flour:			
Wheat Loan of 1951	Ton	2,000,000	2,000,000
Section 402 of Mutual Security Act	,,	636,000	636,000
Five agreements under U.S.-P.L. 480, Title I	,,	26,400,000	13,230,000
U.S.-P.L. 480, Title II	,,	10,000	10,000
Total wheat and flour	,,	29,046,000	15,876,000
Rice:			
U.S.-P.L. 480, Title I	,,	1,580,000	630,000
U.S.-P.L. 480, Title II	,,	10,000	10,000
Total rice	,,	1,590,000	640,000
Corn and sorghum (U.S.-P.L. 480, Title I)	,,	832,000	832,000
Total foodgrains	,,	31,468,000	17,357,000
Cotton:			
Section 402 of Mutual Security Act	U.S. bale	86,000	86,000
U.S.-P.L. 480, Title I	,,	1,150,000	1,150,000
Total cotton	,,	1,236,000	1,236,000
Tobacco (U.S.-P.L. 480, Title I)	Ton	4,000	4,000
Non-fat dry milk:			
U.S.-P.L. 480, Title I	,,	24,000	24,000
U.S.-P.L. 480, Title II	,,	4,000	4,000
Total non-fat dry milk	,,	28,000	28,000
Soyabean oil (U.S.-P.L. 480, Title I).	,,	3,000	3,000

* This table does not include commodities imported under Title III of U.S.-P.L. 480 and "miscellaneous relief grants" given to India in 1951.

Source: *Food for Peace* (Madras, U.S.I.S., 1962).

of these American-supplied agricultural commodities is the equivalent of 160 pounds of foodgrains for every man, woman and child in in India, amounting to some thirty rupees for every inhabitant in India.

This impressive agricultural aid has come to India through the following agreements:

(*a*) India Wheat Loan of 1951.

(*b*) Section 402 of Mutual Security Act (Public Law 665).

(c) Public Law 480; Titles I, II and III.

The two tables A and B published on previous page present the various commodities received by India and their value in dollars and rupees under each of these agreements.

Almost two-thirds of all American assistance to India since the fiscal year 1951 comes under the heading of agricultural commodities, or the Food for Peace Programme as it is called now. The first instance of American aid extended to India was a grant of $4.5 million to purchase American foodgrains to tide over a food shortage in India during August 1950. The grant was made under authorisation of the China Area Aid Act of 1948.

When India's food shortage became more critical early in 1951 and India requested more assistance, the American Congress passed the India Emergency Food Aid Act of 1951 and approved under this legislation the first loan to India in June 1951. Under this legislation, a loan of $189.7 million (Rs. 90.3 crores) was given to India to finance the purchase of two million tons of wheat from the United States. The loan, with interest at 2¾ per cent per annum, is repayable in dollars. However, the Act provided that the first five million dollars, representing interest, were to be made available to India for the rehabilitation and development of Indian universities and institutions of higher learning. The India Wheat Loan Educational Exchange Programme began in 1954 under the administration of the United States Information Service. The amount available has been spent on the provision of books and scientific equipment to Indian university libraries and laboratories and the exchange of American and Indian educators and scholars.

In 1955, the Mutual Security Act (Public Law 665) was so amended that a portion of the technical and financial aid to India would be supplied in the form of agricultural commodities. Under Section 402, wheat and cotton worth $67.8 million (Rs. 32.3 crores) were supplied to India during the U.S. fiscal year 1955-57. This comprised some 636,000 tons of wheat and 18,000 long tons of cotton. The rupee proceeds from the sales of these commodities were to be spent on certain mutually agreed development projects. Of these proceeds, Rs. 40 million have been earmarked for a number of technical cooperation missions, both for the visits of Indians to the United States and for the salaries of American technical personnel in India. Besides this, Rs. 198 million were credited to the Rihand Dam Project.

Under this Act, the American Government also assists private American aid by paying the ocean freight for relief shipments of non-surplus agricultural commodities. As of the beginning of 1960, American philanthropic and voluntary agencies had purchased $5,700,000 worth of supplies and equipment and shipped to India at the expense of the American Government.

The Agricultural Trade Development and Assistance Act, enacted in July 1954, did not come into operation in southern Asia until U.S. fiscal year 1956. Under Title I of U.S. Public Law 480*, as the Act is popularly called, the President is authorised to sell agricultural commodities for foreign currencies (not necessarily surplus agricultural commodities, for the foreign purchasers may buy from the most advantageous source in the United States). Title II permits the free donation of supplies by the President to foreign countries to meet famine and other urgent relief requirements. Title III

*Section (*d*) under Title I allows a portion of the local currency sales proceeds to be set aside for buying goods and services for friendly countries. United States "triangular trade" transactions include purchases for India of fertilisers with Japanese yen, French francs, and Italian lira, and electrical goods and clay products from Japan. These products are resold in India and the sales proceeds contribute towards supporting U.S. operations in India (total $6 million).

permits two very different uses of American agricultural commodities:

(*a*) for bartering in exchange for strategic and other raw materials, and

(*b*) for donation to non-profit, voluntary agencies which assist needy persons both in and outside the United States. The Cooley amendment to P.L. 480 sets aside 25 per cent of the sales proceeds under Title I for loans to private industry.

India signed her first agreement with the United States under P.L. 480, Title I in August 1956. The total value of commodities actually imported under this first agreement was $354.55 million. A second agreement for wheat and other grains valued at $55.28 million was signed in June 1958; a third only three months later came to $259.81 million worth of supplies; a fourth agreement in November 1959 involving 2,997,000 metric tons of wheat, 210,000 metric tons of rice, 350,000 bales of cotton, 226 metric tons of tobacco and 100,000 metric tons of coarse grains, was valued at $29,787 million. The fifth agreement, was "the biggest agricultural commodities agreement ever signed between any two countries." The agreement was concluded in May 1960 and will supply India during the course of four years with 16 million tons of wheat and one million tons of rice. The total value of the fifth agreement comes to $1,370 million, raising the grand total value of Indian imports from the United States under these five agreements to $2,337 million. Three more agreements have been signed under Title I, bringing the total value to $2,428.3 million.

Under Title II, India has received donations for relief in the emergency years of 1956 and 1957 of 10,000 tons each of wheat and rice and 3,000 tons of non-fat, dry milk powder, with a total value of $4.9 million (Rs. 2.3 crores). In October 1961, India received a gift of 1,250 short tons of powdered milk for her flood victims.

As of 31st August 1961, India has been donated $161.8 million worth of foodgrains, milk powder and other agricultural commodities, which have been distributed to the poor and needy through voluntary agencies.

Through the Co-operative for American Relief Everywhere (C.A.R.E.), the American people donated Rs. 3 crores in 1961-62 to assist the School Mid-day Meals Project in Madras State. When Ambassador Galbraith handed a consignment of milk powder from the first C.A.R.E. shipment over to the Chief Minister of Madras State he addressed those assembled for the ceremony as follows:

"There can be little question that a noon-day meal does more to insure school attendance than the most efficient officers.... It is good that we have light in our lamps. It is even better that we have light in our children's eyes. I hope that those who look at the power plants and transmission lines of the Five-year Plans will also spare a glance for children who are better fed and better read as the result of the progressive vision of the people of Madras."

Over one million school children studying in 27,000 schools in Madras State receive free lunches under this programme. According to Dr. Allan Kline, the Director of C.A.R.E. in India, the programme is the largest of its kind in the world.

In October 1961, the American Ambassador inaugurated a similar project for free lunches in Kerala State schools; he announced at that time that American commodities will also be made available to schools in the Punjab. Since then, C.A.R.E. school feeding programmes have also been initiated in the States of Andhra Pradesh and Rajasthan. Thus, some four million school children are benefited by the Programmes in the five States.

An important difference between India's purchase of foodgrains under P.L. 480 and normal commercial purchases is that the purchase is made out of funds subsequently placed at India's disposal by the United States. Eighty-seven per cent of the sale proceeds under P.L. 480 are used to help the economic development of India. One-third of the proceeds are given as grants; a larger portion is loaned to the Indian Government for development projects, and 6.9 per cent of the total is loaned to private industry. The remaining eighth of the total supports the U.S. Government agencies in India.

(To be continued)

Announcement of Public Issue

(This announcement is not a Prospectus)

Bajaj-Tempo LIMITED

Registered Office: Bombay-Poona Road, Chinchwad, Poona.

EXISTING AND PROPOSED ACTIVITIES:

The company was manufacturing about 1000 Tempo Hanseat three-wheeler vehicles per year, which are in use as pick-up trucks, delivery vans, autorikshas, refuse trucks, oil tankers etc. Production of these vehicles is now proposed to be increased to 4000 per year.

The company has now been licensed to manufacture in the same capacity Tempo Viking four-wheeler vehicles.

Both for production of Tempo Hanseat three-wheeler and Tempo Viking four-wheeler collaboration agreements have been entered into with Messrs. Vidal & Sohn Tempo-Werk GMBH, Hamburg-Harburg, West Germany.

LOCATION OF THE INDUSTRY:

The company has acquired about 118 acres of land on Bombay-Poona Road, Chinchwad (Dist. Poona). Construction of factory building is in progress and is expected to be completed by March 1964.

The manufacturing operations of the company are at present located partly at 126 Ghodbunder Road, Malad, Bombay, and partly at the new factory site mentioned above.

BOARD OF DIRECTORS:

1. **Shri Ramkrishna Bajaj** Chairman *Bhagwati Bhuvan,* Carmichael Road, Bombay-26.	..	Industrialist Director of: Bajaj Electricals Limited Batala Engineering Co., Ltd. Hind Rectifiers Limited Radio & Electricals Ltd. Matchwel Electricals (India) Ltd. — etc.
2. **Mr. Curt Gebser** Am Radeland 125, Hamburg-Harburg (West-Germany).	..	Engineer
3. **Mr. Rolf Bacher** Nurenbergstrasse 30, Weissenburg/Bayren (West-Germany).	..	Engineer
4. **Shri Charat Ram** 15, Kitchener Road, New Delhi.	..	Industrialist Director of: Delhi Cloth & General Mills Co. Ltd. Jay Engineering Works Ltd. Bharat Ball Bearing Co. Ltd. Industrial Finance Corporation of India. Amar Dye Chemicals Ltd. Indian Drugs & Pharmaceuticals Ltd. — etc.
5. **Shri R. P. Nevatia** Pitale Prasad, Worli Seaface, Bombay-18.	..	Industrialist Director of: Mukand Iron & Steel Works Limited Batala Engineering Co. Ltd. Raza Buland Sugar Co. Ltd. Pulgaon Cotton Mil's Ltd. — etc.
6. **Shri N. K. Firodia** **Managing Director** 243 Sion-Matunga Road, Bombay-22.	..	Industriallst Director of: Godavari Sugar Mills Limited Kaycee Industries Ltd. Oriental Power Cables Ltd. Matchwel Electricals (India) Ltd. — etc.

		No. of shares	Nominal value in Rs.
a)	**AUTHORISED CAPITAL** Equity shares of Rs. 10 each ..	10,00,000	1,00,00,000
b)	**ISSUED, SUBSCRIBED AND PAID UP** Equity shares of Rs. 10 each fully paid ..	1,45,935	14,59,350
c)	**PRESENT ISSUE** Equity shares of Rs. 10 each at par ..	6,52,710	65,27,100
OUT OF THE PRESENT ISSUE:			
A.	Offered as Right shares to the existing shareholders resident in India and fully subscribed.	1,85,000	18,50,000
B.	Reserved for allotment against supply of Machinery, Plant and Equipment etc.		
	(i) Messrs. Vidal & Sohn Tempo-Werk GMBH.	1,69,000	16,90,000
	(ii) Mr. Rolf Bacher Weissenburg/Bayren (West Germany)	8,710	87,100
C.	**Now offered to the public for subscription in cash**	**2,90,000**	**29,00,000**

TERMS OF PAYMENT:

On application Rs. 3

Balance Rs. 7 in three calls at intervals of not less than three months as may be decided by the Directors. No call shall exceed Rs. 3 per share.

UNDERWRITERS:

1. **The Central Bank of India Ltd.,** Mahatma Gandhi Road, Bombay-1.
2. **Devkaran Nanjee Banking Co. Ltd.,** Horniman Circle, Bombay-1.
3. **Messrs. Harbans Singh Mehta & Co.,** 32 Regal Building, Parliament Street, New Delhi. & **Messrs. Raja Ram Bhasin & Co.,** A 320, Defence Colony, New Delhi.
4. **Shri Birdhichand Choadhry,** Domalguda, Hyderabad.
5. **Messrs. P. Roy Company,** 3/8 M. M. Road, Junction Panchkuin Road, *New Delhi*-1.

BANKERS TO THE ISSUE:

The Central Bank of India Ltd., Mahatma Gandhi Road, Fort, Bombay.

The United Commercial Bank Ltd., Dr. D. N. Road, Bombay-1.

Devkaran Nanjee Banking Co. Ltd., Horniman Circle, Bombay-1.

BROKERS:

BOMBAY:

Messrs. Mahadevia Brothers, Old Stock Exchange Building, Dalal Street, Bombay-1.

ASHOK LEYLAND LIMITED

ANNUAL SPEECH OF CHAIRMAN, DR. A. RAMASWAMI MUDALIAR

SPEECH delivered by Dr. A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), Chairman, Ashok Leyland Limited, to the shareholders at the Fifteenth Annual General Meeting of the Company held on 27th January 1964 at Ennore, Madras.

GENTLEMEN,

I have great pleasure in extending to you a cordial welcome to the fifteenth annual general meeting of your Company.

The Directors' report, audited balance-sheet and profit and loss account for the year ending 30th September 1963, have been circulated to you and, with your permission, I shall take them as read.

You will have read in the profit and loss account that sales for the 1962-63 year were a little in excess of Rs. 10.92 crores, which is 16 per cent less than the corresponding figure for 1961-62, when sales were approximately Rs. 13 crores. This reduction does not represent any reduction in the demand for your Company's products. On the contrary, there is every indication that it will be some time before increased output can meet a demand greatly in excess of the Company's ability to supply. But the 1962-63 year was one in which there were continuous difficulties regarding the availability of materials required for the manufacture of chassis and engines. It is appropriate that I should acquaint you with some of these difficulties, which have made it a serious problem to maintain profitable trading.

Exchange Handicap

A shortage of foreign exchange available for allotment to the automobile industry, for the import of raw materials not available in India and for finished and semi-finished components not yet manufactured in your factory or not available from Indian ancillary manufacturers, caused shortages which resulted in serious reductions in output. In October 1962, these shortages resulted in the output for the month being no more than 46 chassis, against productive capacity for 300, and for ten days the chassis assembly line was inoperative. Similar circumstances in February 1963 made it impossible to produce any chassis at all for the whole of that month. A severe cut in the total foreign exchange allotted to your Company for the whole year under review, which it was impossible to counteract in the time available by reducing the imported content of a 'Comet' chassis, made it necessary to reduce deliveries of imported materials and this in turn resulted in overseas suppliers being required to discontinue shipments. Unavoidable delays in the re-establishment of supplies at a later stage, had a most adverse effect on our ability to maintain production schedules.

Because reductions in the amounts of foreign exchange available for the import of materials from overseas was anticipated, your Company has made strenuous efforts to increase the indigenous content of its products. To this end it has been the policy to make maximum utilisation of raw materials and semi-finished materials such as castings and forgings available from Indian sources of supply. Messrs. Ennore Foundries Ltd., a subsidiary company, has been able to meet our demands for grey iron and for aluminium castings, but it has been difficult to obtain adequate supplies of steel castings, malleable iron castings and forgings. It will be appreciated that on occasions a decision to delete a component from import, replacing import by supply from an ancillary manufacturer, may involve unexpected difficulties, despite all the precautions which are taken to ensure that the corresponding indigenous component shall be satisfactory. Should the indigenous component be defective in any way after import has been discontinued, stocks may be completely exhausted before the defects can be eradicated; and, in that event, production can become seriously curtailed for a period. Such difficulties occurred on two occasions during the 1962-63 year, but steps have been taken to obviate a recurrence in future.

By June 1963, most of the year's difficulties having been overcome, production returned to normal. But in late June-July a shortage of electricity, necessitating an 80 per cent cut in the supply to your factory, resulted in a complete shut down of production for 12 days.

Higher Production

Summarising what is a tale of woe, your Company was only producing chassis from the assembly line for approximately three-quarters of the available working days during the year. Output for the year had conditions been normal, would have been not less than 3,200 chassis. The actual output was only 2,411 chassis. This unavoidable failure to maintain production at a high enough level is reflected in the financial returns from the sale of your Company's products which has been referred to. However, I am happy to be able to advise you the material stock position has improved and the output of chassis and engines has become established at a steady and satisfactory level. It is anticipated the output will reach a figure of 15 chassis per working day in the near future, with an increase to 17 chassis before the end of this financial year. During the first three months of the current year the deliveries of chassis to our customers have been nearly twice the number delivered in the corresponding period of the 1962-63 year.

You are aware that your Company has been engaged in an expansion programme designed to increase production to 6,000 'Comet' chassis per annum, to increase the manufacture of spare parts and at the same time to increase the indigenous content of your products. You will have noted in Schedule 'D', included in the balance-sheet, that during the year 1962-63 additional buildings and plant and machinery to a value of approximately Rs. 96.7 lakhs have been added to your fixed assets. The corresponding total addition for the two years ending 30th September 1961 and 30th September 1962 was Rs. 237 lakhs approximately. That is, the total expenditure on buildings, plant and machinery incurred for the implementation of the expansion programme has exceeded Rs. 3.33 crores. Because skilled labour has had to be trained from men with no previous engineering experience, supervisors also have had to be trained, machine tool deliveries have frequently been behind schedule and production has had to be maintained while installing new machine tools and moving others to make room for them, the expansion project has represented a major problem; and it will not be completed for another five to six months. In the meantime, your Company has had to maintain profitability in the face of underutilisation of installed capacity, heavy depreciation and interest charges on machines installed but initially not fully utilised and a degree of out-of-balance production. These are problems inescapable and inevitable during major expansion projects and your managers and executives and the workmen whom they supervise accept them as such. While I have no doubt you will be disappointed that it has not proved possible for the usual dividend to be maintained for the 1962-63 year, when you may well have looked forward to an improvement rather than a reduction from 8 per cent to 7 per cent, I suggest that in relation to the financial burden of the expansion programme occurring during a year in which reduced output became unavoidable, it has not been an entirely unsatisfactory year from the financial point of view. Unless any unforeseen difficulties arise, you can look forward to your Company benefiting from the results of its past labours and during 1963-64 the endeavour will be made to produce over 3,600 'Comet' chassis, possibly 4,000; and to reach a steady monthly output exceeding 400 per month before the year-end.

Indigenous Content

You will necessarily be interested in knowing the extent to which the 'Comet's' indigenous content has been increased. To maintain output at a level which will ensure adequate profitability in the context of a continuing shortage of foreign exchange, it is obviously necessary for the maximum effort to be made to reduce the import of the materials required for the manufacture of chassis. The current indigenous content is 79 per cent in relation to the Company's latest application for licences, involving foreign exchange allotment, for the import of materials and components from overseas. That is, the value of the imported content of a chassis will be 21 per cent of the value of a complete chassis; and this figure will be progressively reduced to 10 per cent during the next 18 months. It will be your Directors' aim so to balance the increase both of the number of chassis produced and of the indigenous content of a chassis that the latter will reach the desired figure of at least 90 per cent, while the former will ensure an increase in revenue in keeping with the additional expenditure on plant and machinery installed to manufacture new components in your factory.

Plans have been completed for the manufacture at your factory of additional components including engine camshafts, engine timing gears and rear axle differential pinions; and for the purchase of additional semi-finished and finished materials from Indian ancillary manufacturers. These steps are designed to increase the indigenous content to not less than 90 per cent.

Your Directors decided recently that it was desirable to alter the method used in your Company to calculate annual allotments to depreciation. From its inception the Company has used what may be called the "reducing book balance" method which is covered by Section 205(2) (a) of the Companies Act. In this method the value of assets is reduced annually by a fixed percentage which is deducted from the previous year's book value. It has the disadvantage that over the terms of years during which an asset reduces to scrap value, the early depreciation allotments are high and reduce progressively year by year. Consequently, when new plant and machinery is installed depreciation charges are at their highest when full utilisation may not have been established and output is consequently below the level which will eventually be achieved. The alternative method of depreciation allotment which may be called the "straight line" method is arbitrarily to take 5 per cent of the installed value of plant and equipment as the scrap value: and to credit depreciation fund with an equal amount annually, being 95 per cent of the installed value divided by the numbers of years taken to represent the period during which the asset will reduce to scrap value. The new method, which is authorised by Section 205(2) (b) of the Companies Act, has been introduced with effect from 1st October 1962; and no change has been made in the amount credited to depreciation for the years up to the 30th September 1962.

Concurrently with the expansion of your Company's output facilities, Ennore Foundries Ltd. are also providing for the installation of additional equipment which will enable them to double their output of castings, thus ensuring that all demands on them will be met adequately. You will have noted that as at 30th September 1963, your Company's investment in Ennore Foundries Ltd. was Rs. 23,72,990 out of a total issued and subscribed capital at that date of Rs. 94,92,000, the balance being held by Leyland Motors Ltd. and its nominees.

Export Prospects

Your Company is continuing its efforts to establish an export trade. It is not easy to secure business in overseas markets because it is necessary to compete not only with other manufacturers in India, Europe and the U.S.A., but also with Leyland Motors who offer chassis similar to those produced at Ennore. It is only possible to secure orders, therefore, if the Ashok Leyland specifications, quality, after-sales service and prices are comparable to those of competitors. With the assistance of Leyland Motors, a start has been made in the establishment of an export market; and todate 66 'Comet' chassis have been sold to the Ceylon Transport Board, this including an order for 41 chassis secured during the 1962-63 year. It is confidently anticipated that the reputation which has been earned in Ceylon will assist in the task of extending sales to other overseas markets.

I am pleased to be able to inform you that the Government of India has recently approved the inclusion of a new model in your Company's range of products. Based on the Leyland 'Beaver' chassis a range of heavy duty chassis are to be produced at Ennore which will provide for the following types of vehicles:

(i) A passenger chassis suitable for double-deck coachwork, similar to the Leyland 'Titan'.

(ii) A passenger chassis suitable for maximum duty single-deck coachwork, similar to the Leyland 'Tiger'.

(iii) A 4 x 2 goods chassis similar to the Leyland 'Beaver'.

(iv) A 6 x 4 goods chassis similar to the Leyland 'Hippo'.

When a demand develops, as it is likely to do, the engines, clutches, gearboxes, front axles, rear axles, steering gears, etc., which will be produced at your factory for the above range of vehicles, will be susceptible of incorporation in a 4 x 4 version of the 'Beaver' and a 6 x 6 version of the 'Hippo' chassis. This means that facilities will be created for the production of a range of chassis which, including the 'Comet,' will eventually provide for gross train weights from 12 tons up to 32 tons.

In connection with the 'Beaver' Project, it is proposed initially to install capacity for the production of 2,000 chassis per annum. But planning will be so executed that the new buildings, plant and machinery can ultimately be expanded to provide for an output of 5,000 chassis per annum. The Leyland Motor Corporation has indicated its readiness to continue investing in the Company's equity in regard to any additional capital which will have to be issued in order to implement this project. Leyland's investment would be utilised as heretofore for the purchase of plant and machinery in the United Kingdom.

Leyland's Co-operation

In all the expansion programmes that I have envisaged, we have had the ready co-operation of Leyland Motors, not merely in financial contribution, but what is more important, in their active assistance in the technical aspects of the expansion. Directors of Leyland Motors and senior executives have maintained their periodical visits to your factory. Mr. Stokes spent some time at your factory in March and Mr. West in February and December 1963, reviewing the progress made and giving valuable advice to the management; and Mr. R. K. Robinson, Production Engineer, Leyland Motors, spent a considerable time at your factory in January and March 1963, giving most useful and valuable guidance to our production staff. These visits have enabled the management to organise and regulate our productive capacity better and I am sure I am voicing your wishes when I convey to the Leyland Directors and technical staff, our thanks for all their assistance.

Sir Henry Spurrier, owing to indifferent health has ceased to be the Chairman of the Leyland Motor Corporation, but he continues to take interest in Ashok Leyland and in Leyland Motors activities in England and particularly in India, in his capacity as President of the Leyland Motor Corporation. We hope and pray that he will be restored to normal health and we shall continue to have guidance from his great experience.

Sir William Black has been appointed as Chairman of the Leyland Motor Corporation and Mr. D. G. Stokes as Managing Director and Deputy Chairman of Leyland Motor Corporation. Mr. West is Chairman of Leyland Motors Ltd. I have had personal contact with all these distinguished gentlemen, more than once when I was in England, and I can assure you of their deep interest in your Company and of their genuine appreciation of the progress that it has made.

Our relations with our employees have remained cordial throughout the year and the results which we have obtained in a very difficult year, were in no small measure due to the hardwork and loyal service of the officers, staff and workpeople of your Company. I would like to convey on your behalf and on mine, our appreciation of their good work and our thanks for their loyal co-operation. I am not formally repeating myself if in this year's speech also, I refer to the work of the Managing Director, Mr. Collins, whose devotion to duty and absorbing interest in the progress of the Company have been most notable. His inspiring leadership has had no small effect on the work of other officers, staff and the workers in the factory.

Note: *This does not purport to be a record of the proceedings at the Annual General Meeting.*

KOTHARI'S ECONOMIC GUIDE & INVESTORS' HAND BOOK OF INDIA

(INCORPORATING THE INVESTORS' ENCYCLOPÆDIA)

25 years of useful service to the investing public, financiers, economists, students and the layman—a Book with an International circulation among the people who count in economics and industry.

Financial and other particulars on more than 3,500 industrial establishments—taxation measures—incentives and relief factors for foreign collaborators—surveys of economic development—special articles by industry's leading men and persons in authority—information on licensing and collaboration, Gold Control, personal savings etc., etc.

Classification of Sections with thumb index:

Banks	Public Sector
Engineering	Shipping
Insurance	Sugar
Investment Trusts	Cotton Textiles
Jute	Vegetable Oil
Mining & Chemical	Government Securities
Miscellaneous Companies	General Information
Paper	and a Supplement
Plantings	Taxation

Illustrated with Charts, Maps and Graphs covering industrial development.

An authoritative 3,000-page compendium circulated among leaders of industry and public life—fully revised, enlarged and re-edited every year—a publication unique in its kind and therefore a "must" on YOUR table.

Testimonials from all over the world fill a separate booklet which can be had free on request.

PRICE: Rs. 50 (postage & packing **Rs. 10** exclusive) Overseas: **£6 or $17** (post free by surface-mail)

GROWTH OF CEMENT INDUSTRY RELATIVELY SLOW

FINANCIAL TRENDS NONE TOO ENCOURAGING

THE Indian cement industry, which belongs to the group of capital-intensive industries of basic importance, has been predominantly concentrated in the private sector. Its output increased from a mere 1.2 million tons in 1937 to about 3.2 million tons in 1951 and 8.1 million tons in 1961. This growth of production, however, was by no means spectacular over such a long period of 25 years. In fact, it was relatively modest, considering that the actual production in 1961 represented just two-thirds of the second Plan target of 12 million tons. Several factors have been responsible for this comparatively slow growth of the industry. First and foremost is the factor of pricing which has been subjected to statutory or informal regulation since 1942. As the largest consumer of cement in the country, the Government has been directly interested in keeping cement prices at moderate levels. So much so, the industry has not seen even one prosperous year as in the case of some other industries in the post-war period. The following findings of a painstaking study (*Financial Trends and Productivity in the Cement Industry*), edited and published by Dr. K. R. Paymaster, for the Association of Indian Trade and Industry (Bombay), bear out that the industry has not had the opportunity to accumulate reserves to the same extent as other industries:

"In 1960, the cement industry's accumulated reserves (excluding capitalised reserves) and premium on shares were about 42 per cent of its ordinary paid-up capital (including bonus shares), as against 132 per cent in iron and steel, 121 per cent in the case of paper, 116 per cent in sugar, 114 per cent in cotton textiles, 97 per cent in jute textiles and 56 per cent in electricity. If bonus shares issued against the capitalisation of reserves are regarded as reserves, instead of paid-up capital as has been done above, these percentages would be still higher in the case of industries other than cement and electricity. The electricity industry, being a public utility, is governed strictly in respect of its rating, which limits the scope of profits and the creation of reserves. The cement industry capitalised during the period only Rs. 36 lakhs worth of reserves, against much larger capitalisation in the case of other industries except electricity, and it capitalised premium on shares worth Rs. 1.75 crore. Cement companies' reserves and capitalised reserves as percentage of paid-up capital (excluding bonus shares) in 1961 were 650 in the United Kingdom, 146 in the United States of America and 106 in Japan, as against 28 in India."

Inadequate Reserves

The Association's study, covering 32 manufacturing plants with gross assets of the value of Rs. 123.5 crores and accounting for about 90 per cent of national cement production in 1961, has driven home the point that capital-intensive industries like cement must have a sound reserve position. Reserves, as the study has rightly emphasised, provide capital funds not only directly, but also indirectly by making investment in equity capital more attractive and by improving the borrowing position of the company. But the scale of reserve accumulation in the industry appears to be inadequate in relation to its capital requirements. The reserves (Rs. 14.94 crores) accumulated during the period covered by the study have been a little more than two-fifths of the amount of depreciation accumulated, and less than half of the amount of paid-up capital (Rs. 40.92 crores, including Rs. 36 lakhs of bonus shares issued against capitalisation of reserves and Rs. 1.39 crores of premium on shares, also capitalised) in 1961. The break-up of accumulated reserves is as follows:

		Rs. crores
1.	Reserves earmarked against future contingencies and liabilities	3.00
2.	Rehabilitation and replacement reserves	2.67
3.	Development rebate	4.82
4.	*Surpluses:*	
	(a) General reserve	3.75
	(b) Capital reserve	1.19
	(c) Profit and loss account balance	—0.49
	Total ...	14.94

Thanks to this unsatisfactory reserve position, the industry has had to rely heavily on debentures and loans since 1954 for its development programme. It may be noted, in this connection, that debentures and loans have increased from Rs. 3.24 crores in 1954 to Rs. 24.59 crores (a little more than half of this representing institutional loans) in 1961, that is, by more than seven times, whereas the net block has increased by just 2.6 times from Rs. 20.70 crores to Rs. 55.28 crores. The issue of bonus shares against the capitalisation of profits in the cement industry has also been negligible, as compared with the issues made by other leading Indian industries and by the cement industry in the U.K. and the U.S.A. Incidentally, the study's findings on the capitalisation of reserves by several American and British cement companies may be read with interest in this context:

"Many foreign companies had accumulated huge reserves during the post-war years, and had issued bonus shares on a large scale against the capitalisation of such reserves. For example, the world's largest cement producer, the Associated Portland Cement Manufacturers Ltd., who controls about 65 per cent of the U.K.'s production capacity, issued bonus shares at the rate of one for every one in 1953, three for every two held in 1956, one for every four held in 1959 and one for every two held in 1961. Its ordinary paid-up capital in 1961 was £43,179,701, of which £34,559,900 or a little more than three-fourths was made up of bonus shares. Another British Company, the Tunnel Portland Cement Company, the second largest group in the U.K., made three bonus issues in the fifties, one for one in 1950 and 1954 each, and one for five in 1957. Some cement companies in the U.S.A. also made generous issues of bonus shares (stock dividends). To give an extreme example, the holders of shares in the Penn-Dixie Cement Company, who had a share of the face value of $1.00, received between 1948 and 1961 bonus shares at the rate of one for every twenty in 1955 and 1956, besides handsome cash dividends every year; and in 1961, this company had capitalised and accumulated reserves worth over twenty times its paid-up capital issued for cash. The $1.00 share of this company could be sold in the open market at $40.00 in 1957. The other leading American companies covered by this study, namely, Alpha Portland Cement, Consolidated Cement, General Portland Cement, Lehigh Portland Cement and Lone Star Cement had in 1961 accumulated reserves and capitalised reserves between one to three times their ordinary paid-up capital issued for cash.

"Three leading U.K. companies had accumulated and capitalised reserves in 1961 worth over 6 to 13 times their ordinary paid-up capital issued for cash. The market prices of the ordinary shares of these U.S. and U.K. cement companies were very high. As against this, no Indian company had accumulated reserves equal to its ordinary share capital, and the shares of no Indian cement company was quoted on the Indian stock exchanges in 1961 at even double the face value, which was quite common in the case of old as well as new companies in other industries."

The Association's study has drawn pointed attention to the fact that cement shares have not been as popular with Indian investors as the shares of certain other industries. Consequently, the prices of cement shares have remained subdued during recent years. This is not surprising, for all the relevant indicators bear out the relatively low profit-making capacity of the industry. For instance, the margin of profit (that is, net profit after depreciation and tax) expressed as a percentage of net sales, has come down from 22.7 in 1937 to 7.0 in 1961. Expressed in another way, the industry's net profits, expressed as per cent of net worth (that is, owned funds or, in other words, shareholders' funds, as distinct from borrowed funds), have fallen from 10.4 in 1956 to 7.9 in 1960, whereas in all industries taken together they have increased from 8.8 to 10.8. Specifically, in comparison with several leading industries, the cement industry's level of profitability in 1960 was lower, as will be seen from the following figures:

Net Profit as Per Cent of Net Worth

Industry	1956	1960
Cotton textiles	8.3	13.3
Iron and steel	14.6	10.5
Engineering	9.7	12.9
Cement	**10.4**	**7.9**
Sugar	10.1	11.5
Paper	6.2	9.4
Vegetable oil	4.0	10.7
Chemicals	6.3	13.1
Matches	8.0	13.1
Electricity	6.8	8.8
All industries (including others) ..	8.8	10.8

The shareholders' immediate concern is with the amount of dividends they receive. Here, too, the cement industry's performance has been disappointing, for dividends as per cent of net sales have declined from 18.4 in 1937 to 6.2 in 1961. According to the study, no cement company has been able to maintain a rate of dividend of 10 per cent or more over a reasonable period.

Productivity Trends

The Association's study is also notable for its examination of productivity trends in the industry. Productivity in India is very low in comparison with the state of affairs in other countries. The total number of man-hours required per ton of cement output in 1961 was, for instance, 1.10 in Japan, 1.17 in Belgium and 1.24 in the U.S., whereas the Indian average was more than ten times that of the United States. Although Indian productivity is thus very low, it should be said to the credit of the industry that it has maintained a steady upward trend in productivity since 1949. In fact, the index number of productivity (output per man-day) has risen from 100 in 1949 to 301 in 1961. This rising trend has been due to the increase in the average size of cement plants from 93,000 tons in terms of installed capacity in 1946 to 276,000 tons in 1961. The increase in the degree of mechanisation and the increase in the average installed capacity per plant, both of which point to higher overall capital intensity, have thus had a favourable effect on productivity.

But, according to the study, money wages have increased relatively more than productivity. The exact finding, in this connection, is that, while productivity, as measured by tons produced per manday in 1959 was 264 per cent of that in 1946, wages (including other benefits) per worker per day in 1959 were 387 per cent of those in 1946. The percentage distribution of the "net value added by manufacture" has been increasingly favourable to employees, as will be seen from the following figures:

	1947-56 Per cent	1957-61 Per cent
Employees' remuneration ..	56.3	65.1
Managing Agents' remuneration ..	7.1	4.6
Shareholders' earnings (dividends and retained profits)	36.6	30.3

On the basis of these figures the study has reached the conclusion that employees have benefited more than managing agents and shareholders from such increase in productivity as has taken place in the Indian cement industry. This is a point that should be borne in mind by the public before it is moved by the plea for nationalisation of cement industry by some interested politicians and trade union leaders.

RALLIS INDIA STAGES A COME-BACK

DIVIDEND RAISED—RESERVES STRENGTHENED

AN impressive come-back has been staged by Rallis India Ltd. (Chairman: Mr. Badridas Goenka, Calcutta) during the year ended 31st August 1963. Its sales, which had declined from Rs. 19.09 crores to Rs. 17.91 crores in the previous year, have risen by 20 per cent to Rs. 21.55 crores during the year under review and its gross profit has improved considerably to Rs. 79.56 lakhs, or by nearly 60 per cent, from Rs. 49.75 lakhs to which level it had dropped in the previous year from Rs. 58.45 lakhs for the year ended 31st August 1961. Consequently, the dividend on the 100-rupee ordinary shares has been raised from 8.5 per cent to 10 per cent per annum, subject to tax. Simultaneously, reserves and provisions have got as much as Rs. 25.83 lakhs, as against a bare Rs. 8,000 a year before, though this is after obtaining Rs. 12.77 lakhs by way of withdrawals and write-backs, as against Rs. 5.25 lakhs in the past year. It may be pointed out here that, in the previous year, the withdrawal had become necessary because of the past bonus liability amounting to Rs. 5.93 lakhs, whereas, during the year under review, it has become due largely because of excess provision for depreciation made in previous years.

The progress made by the Company during the past four years is brought out in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st August			
	1963	1962	1961	1960
Sale proceeds	21,54.55	17,91.12	19,09.01	18,08.43

* Gross dividend for the six years ended 31st August 1960.

The year 1961-62 had proved difficult for the Company's trading division, especially in respect of cotton because of the small size of domestic crop and the resultant control of the price, which had reduced both the volume of business and the margin of profit. In contrast, all the divisions of the Company, particularly the pharmaceutical and merchanting divisions, are said to have fared much better during 1962-63, the year under review. This explains the improvement in the overall financial results.

In line with the general improvement, the net profit has gone up by over Rs. 13 lakhs from Rs. 22.51 lakhs to Rs. 36.24 lakhs, in spite of the tax burden rising substantially from Rs. 21.97 lakhs to Rs. 37.11 lakhs, because of the larger gross profit. But, besides the general improvement in results, two other special factors have also contributed to the increase in net profit. One is that the year's profit has attracted no S.P.T., because the Company had a deficiency to bring forward from the previous year; but for this the tax burden would have been higher by Rs. 4.50 lakhs. But taking advantage of the substantial increase in gross profit, the Directors have set apart Rs. 2.50 lakhs for S.P.T. reserve, apparently for meeting future liability on this score. The other factor is that the Directors have adopted a more reasonable policy in regard to providing depreciation on fixed assets for reasons explained below:

"The Directors considered the Company's policy in regard to depreciation of fixed assets and concluded that the method of calculation adopted in previous years was unnecessarily severe and had, over the years, resulted in an excessive charge against profits of more than Rs. 12 lakhs. It was, therefore, decided to recalculate the depreciation *ab initio* at the rates and on the basis laid down for income-tax purposes and to adopt that method of calculating depreciation in the current and future years. This has resulted in the sum of Rs. 12.40 lakhs being brought back to the credit of profit and loss appropriation account. The charge for depreciation in respect of the year ended 31st August 1963 on the new basis is Rs. 6.21 lakhs. If that basis had been adopted in the previous year, the amount would have been Rs. 4.54 lakhs instead of Rs. 5.27 lakhs as charged in the accounts of that year."

The Company's subsidiaries did not do well during the year under review; the aggregate of dividends received from them declining from Rs. 15.77 lakhs to only Rs. 2.69 lakhs.

Ralliwolf, for instance, suffered in production and profit because of delay in receiving imported components. Rallifan started the year with good prospects, but fell a victim of industrial strife of a purely political nature, as a result of which the factory was virtually idle for the last three months of the year. The factory is now working normally. Ralli-Hoyland was again faced with an unsatisfactory market for its main products, namely, umbrella ribs, and, in order to minimise the losses, it curtailed production drastically. Means are being sought to find other and more profitable work for this subsidiary. Higher prices for cotton and the unchanged selling prices of yarn reduced the profit of Hemalatha Textiles. The spindleage of this subsidiary is being expanded, in order to make the mill a more economic production unit, and the work on this expansion and also on the modernisation of the plant is proceeding satisfactorily. Ralli Chemicals commenced production, but because of some unavoidable teething troubles and erratic arrivals of the essential raw materials could work at only half its normal capacity and therefore incurred a trading loss. Development of the market for its output has, however, been well up to expectations and the future prospects are considered favourable.

The Company's paid-up capital, as at 31st August last, amounts to Rs. 300 lakhs, including Rs. 75 lakhs in 6 per cent taxable, cumulative preference shares of Rs. 100 each, and is backed by reserves and surplus aggregating Rs. 41.52 lakhs, excluding Rs. 26.35 lakhs shown under dividend reserve for meeting the year's dividend liability. Secured bank loan has come down from Rs. 238.30 lakhs to Rs. 186.94 lakhs and, together with current liabilities and provisions (including the dividend liability for the year) amounting to Rs. 188.12 lakhs, brings the total indebtedness to outsiders to Rs. 375.06 lakhs, as against which current assets, loans and advances are shown at Rs. 454.60 lakhs. Investments in subsidiaries have increased from Rs. 73.73 lakhs to Rs. 88.26 lakhs, but the net figure of amounts due from them has been lower at Rs. 39.23 lakhs as compared with Rs. 48.26 lakhs a year before. Other investments have increased from Rs. 22.13 lakhs to Rs. 30.14 lakhs. The gross block of Rs. 166.51 lakhs (Rs. 155.03 lakhs a year before) has been written down to Rs. 103.69 lakhs.

Currently quoted at Rs. 130 *cum-div.*, the Rs. 100 fully-paid ordinary shares of the Company offer a net yield of 5.7 per cent per annum.

COMPANY NEWS AND NOTES—SPECIAL NUMBER

The *Company News and Notes*—a fortnightly published by the Company Law Division, Department of Revenue, Ministry of Finance, which is useful to those who wish to keep themselves informed of developments pertaining to company law, in particular, and the corporate sector, in general, has made its 1st January 1964 issue a special number. There are six special articles, the first two of which deal with the provisions relating to sole selling agency arrangements and marketing arrangements in vogue in the automobile industry in the country. Dr. Raj K. Nigam, who has the company on the tip of his fingers and an authority on corporate data, and Mr. N. C. Chaudhuri, Research Officer of the Department, have successfully traced the growth and structural pattern of joint-stock companies in the third article. The fourth discusses succinctly the aspects of financing of small-scale industries and the fifth is devoted to an examination of the objects clause in the Memorandum of Association. The last one provides a comparative study of the provisions dealing with the annual meetings and accounts in the Indian Company Law and about twenty other countries.

Besides these, the number has also reproduced the Finance Minister's speech in Parliament on the Companies (Amendment) Bill as reported by the Select Committee and the Unit Trust Bill. The study on the finances of Government companies during the year 1961-62, published in the Reserve Bank *Bulletin*, has also been appropriately highlighted.

JAPANESE CORPORATE SECTOR

Leading companies of Japan have recovered from the effects of the tight money programme adopted by the Government in September 1961. Their results for the half-year ended March 1963 showed the first signs of gradual improvement along with the recent business recovery. The improvement was carried further in the next half-year period ended October 1963. The pace of recovery was not necessarily the same by industry. In the heavy industry group, most heavy electric machinery manufacturers reported smaller profits for the second half-year term and were forced to cut dividends. In contrast, steel manufacturers in general registered larger sales and fatter profits. Even taking into account such variations in sales and profits of different companies, the business year which ended in the autumn of 1963 can be regarded as a term marking a favourable turn in the fortunes of Japanese companies.

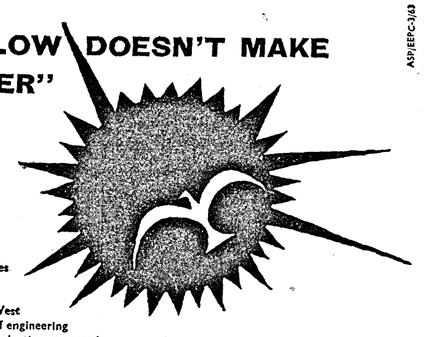
A detailed study of the corporate sector in Japan is contained in *Japan Company Directory* 1964 which compares the results of individual companies in different industries for the half-year ended March 1963 with those for the immediately two preceding half-year terms. The Directory is comprehensive, as it gives, besides the results, data on the companies' financial position and also its standing in the industrial group. Its other sections, such as Who's Who in Japanese business, Government and affiliated organisations and business associations make it a good reference work for those who have or wish to have dealings with Japan, the most developed country in Asia.

BHASKAR TEXTILE MILLS LTD.

Bhaskar Textile Mills Ltd., which proposes to install a textile mill with 15,000 spindles at Jharsuguda, Orissa, will enter the capital market shortly with a public issue of Rs. 21 lakhs, comprising Rs. 14 lakhs in equity shares and Rs. 7 lakhs in 9.5 per cent cumulative preference shares redeemable after 12 years. The entire issue has been underwritten. The Company's promoters, Directors and their friends have subscribed for shares worth Rs. 14 lakhs.

The Company has obtained the requisite licences for its project and placed orders for imported as well as indigenous plant and machinery. Construction of the building is going apace and the plant is expected to be commissioned in the third quarter of this year. The total outlay on the project has been estimated at Rs. 109 lakhs. Calcutta's well-known businessman, Mr. Surajmal Mohta, heads the Company's Board. He is also the Managing Director of Shree Bhawani Cotton Mills Ltd., which owns a mill with a complement of 24,000 spindles at Abohar, Punjab.

"ONE SWALLOW DOESN'T MAKE A SUMMER"



ASP/EEPC-3/63

There is a market for quality Indian products abroad. During 1962 engineering goods worth Rs. 11 crores were exported to various countries, including highly industrialised countries like the U.K., U.S.A. and West Germany. But our present export of engineering goods is hardly 2 per cent of total production compared to exports by industrialised countries accounting for 25 to 50 per cent of their total production. You can help the country tide over its foreign exchange crisis by boosting your exports. We can give you advice that will facilitate your exports.

Develop Export Consciousness

ENGINEERING EXPORT PROMOTION COUNCIL, India Exchange (7th Floor), Calcutta-1.

VOLTAS TAKES A BIG STRIDE

MORE FUNDS FOR AMBITIOUS EXPANSION

THE progress made by Voltas Ltd. (Managing Director: Mr. R. F. S. Talyarkhan, Bombay) during the year ended 31st August 1963 is the most impressive in its nine-year career, more particularly so because it follows the first setback in profit recorded in the previous year. It is, therefore, even more satisfying to learn from the Chairman, Mr. J. D. Choksi, that the Company has now reached a stage from which there is no going back. His observation, which has as much bearing on the proposed expansion schemes as it has on the present working, can be taken to mean that an investor in Voltas can look forward to good growth prospects. Indeed, Mr. Choksi says, the shareholders "can claim a fair share of our success, for they have given us, through the years, much encouragement and support."

The results for the year under review show a sharp rise in proceeds of sales and services from Rs. 27.16 crores to Rs. 32.42 crores and a good recovery in gross profit to Rs. 183.49 lakhs from Rs. 129.60 lakhs to which level it had dropped in the previous year from Rs. 148.63 lakhs for the year ended 31st August 1961. But, as the Directors point out, the Company has benefited only to a minor extent from this improved performance, as the bulk of the profit has gone as tax. The income-tax and corporate tax liability for the year is estimated at Rs. 94 lakhs (Rs. 71 lakhs a year before) and for meeting it a taxation reserve of this amount has been created out of the profit. This leaves a net profit of Rs. 79.10 lakhs (Rs. 48.53 lakhs a year before). This is, however, without any provision in the accounts for S.P.T. for the year under review. The liability on this score has been provisionally estimated by the Income-tax Department at Rs. 13.21 lakhs, but, since it is still to be exactly determined, an additional sum of Rs. 26 lakhs has been transferred to taxation reserve. This transfer has been deliberately kept large because the profit for the year under review will also be subject to such measures and rates of taxation as may be proposed in the forthcoming Central Budget.

The overall tax liability (calculated at 1963 rates) would absorb, average over the two years 1961-62 and 1962-63, as much as approximately 65 per cent of the pre-tax profit. Referring to this huge tax burden, Mr. Choksi says: "A tax system, so devised as to leave to the shareholders of a company, rich and poor alike, 35 per cent of the profits for the dividends (on which again taxes will be payable at rates applicable to individuals rising to 87 per cent), rehabilitation and expansion *plus* contingencies can only lead ultimately to a negation of democracy in which private enterprise can play a worthwhile role." It is mainly because of this heavy tax burden that the Directors have been obliged, in spite of the much better results, to leave the dividend for the year under review unchanged at 14 per cent per annum, subject to tax.

The following comparative table gives an idea of the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st August			
	1963	1962	1961	1960
Proceeds of sales and services ..	32,42.24	27,16.32	25,72.59	19,86.46
Other income	4.77	5.41	16.97	15.99
Closing stocks	670.33	716.74	680.18	802.43
Cost of sales and services	26,67.17	22,34.62	21,06.58	15,90.74
Other expenses	391.90	357.52	334.35	285.19
Gross profit	183.49	129.60	148.63	126.09
Depreciation	10.39	9.07	6.97	5.68
Taxation	94.00	71.00	66.50	60.00

Dividend	35.70	35.70	35.70	33.15
	(14%)	(14%)	(14%)	(13%)
Carry forward	..	2.92	3.79	4.25

Equity shares' market value (in rupees):	1964	1963	1962	1961	1960
High	269.00	276.50	315.00	319.00	307.00
Low	260.00	219.00	223.00	247.00	183.00

* Net profit before super profit tax. The provision for reserves includes Rs. 26 lakhs for super profit tax and other possible tax liability.

Unlike 1961-62, the year under report benefited from the somewhat shorter delivery periods resulting into the finalisation of a substantially higher volume of business. Besides, in all sectors of production—except standard airconditioning units which suffered from cuts in the allocation of foreign exchange for imported components—the output increased steadily throughout the year. In the case of core drills and three-throw pumps, production was 50 per cent more and the indigenous content in both the cases rose to 88 per cent. The component requirements for 1963-64 in these two instances have been fully covered and the entire output scheduled for this period has already been sold. Production of electric motor starters increased by 60 per cent during the year. The tooling for the manufacture of another model of motor starters is nearing completion. Progress made in the manufacture of diamond drill bits and mining accessories during the year was satisfactory.

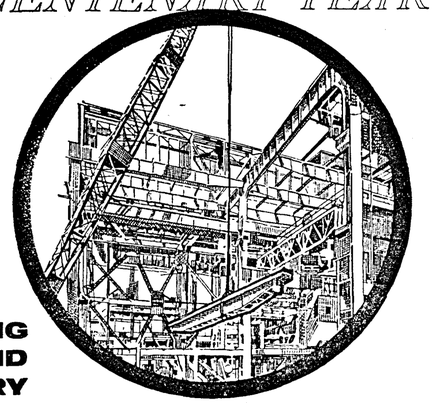
The Company is in the process of setting up at Panchpakhadi, near Thana, an up-to-date factory for manufacturing a wide range of airconditioning and refrigeration equipment, mining equipment, materials handling equipment, electrical equipment, etc., for which it is negotiating for collaboration with leading manufacturers abroad. This ambitious expansion is expected to cost Rs. 3.30 crores. The additional funds are to be made available through the recently floated debenture issue of Rs. 1 crore (this was oversubscribed), a rights issue of Rs. 1.27 crore to the existing shareholders in the proportion of two new shares for every five shares held at a premium of Rs. 25, and the balance amount out of internal resources and bank borrowings. According to the Chairman, once the Company is able to manufacture compressors required for the airconditioning industry, it will have gone a long way towards meeting the backlog of demand created by import restrictions and the additional defence, industrial and domestic requirements. After airconditioning, the Company's manufacturing activities will be largely concentrated on materials handling and mining equipments and other joint venture projects.

The Carrier Corporation has allowed the Company to make airconditioning equipment. The industrial licence has been obtained. Negotiations for a foreign exchange loan for plant and machinery for this project are expected to be concluded shortly and preparatory work for manufacturing compressors and airconditioning equipment at the Thana works is well in hand. The Company holds a licence for making small size domestic refrigerators. It has obtained satisfactory results on experimental prototypes and is making preparations for starting regular production. For the power factor correction capacitor project, a foreign exchange loan has been obtained from the I.C.I.C.I. and orders have been placed abroad for capital equipment. Some other schemes are also under negotiation and will mature soon.

While the Company's sales have increased by 100 per cent in the last four years, its paid-up capital base has remained unchanged since 1956 at Rs. 255 lakhs all in equity shares of Rs. 100 each. The capital is, however, supplemented by reserves and surplus amounting to Rs. 234.27 lakhs, excluding Rs. 94 lakhs in the taxation reserve for meeting the year's liability and Rs. 36 lakhs shown under dividend reserve also for meeting the year's liability. Borrowings are shown at Rs. 437.02 lakhs. These and current liabilities and provisions (including the year's tax and dividend liabilities) bring the total indebtedness to outsiders to Rs. 16.80 crores, as against which current assets, book debts and investments aggregate Rs. 20.32 crores. At Rs. 130.36 lakhs, the net block compares with a gross block of Rs. 179.12 lakhs (Rs. 149.52 lakhs a year before) on which a total depreciation of Rs. 48.75 lakhs has been provided so far. Capital work-in-progress is shown separately at Rs. 7 lakhs.

Currently, the Rs. 100 fully paid ordinary shares of the Company are quoted at Rs. 265.50 *cum-div.* and offer a net yield of 3.8 per cent per annum.

BIRD'S CENTENARY YEAR



ENGINEERING TO AID INDUSTRY

The expansion of industry depends largely on the timely supply of engineering products and services.
The Bird-Heilgers Group, with water treatment, coal washeries, castings and structurals, refractories, pneumatic equipment, springs and research, is playing a significant role in providing basic requirements for a wide variety of industries.

Deploying the skills acquired over a hundred years, the Bird-Heilgers Group is making important contributions to the economy . . . through planned diversification and expansion.

NEWS IN BRIEF

THE Life Insurance Corporation of India has agreed to give a loan of Rs. 12 crores to the Punjab State Electricity Board for its rural electrification programme.

A special meeting of the Board of Trade is scheduled to be held at New Delhi on the 28th inst. to consider the subjects included in the agenda for the World Trade Conference which is due to begin at Geneva on 23rd March next.

The Union Government is examining seriously the question of nationalising the 49,000 rice mills in the country with a view to ensuring fair prices for both producers and consumers, according to Mr. S. D. Mishra, Union Deputy Minister for Community Development and Corporation.

The Minerals and Metals Trading Corporation has fixed an export target of 25 to 30 million tons of iron ore to be attained at the end of the fourth Plan, as against the anticipated export of 16 million tons (including six million tons from Goa) in 1965-66.

The Government of Madras has set up an *ad hoc* committee to study the problems of cashew cultivation and industry in the State. The Committee has been asked to examine the scope for establishing large-scale cashew plantations with special emphasis on improvement of yield and quality.

It is reported that the Oil and Natural Gas Commission is negotiating with the oil firms of the U.S., the U.K., Japan and some other countries for collaboration in the Rs. 72-crore petrochemical project in Gujarat. The Central Government will contribute 51 per cent of the capital, the balance representing the combined share of foreign collaborators and Indian investors. The foreign exchange component of the project is put at about Rs. 48 crores.

Licences for the substantial expansion of a number of textile mills in various States have been recently granted by the Government of India. Licences have also been given for setting up new mills, including a few in the co-operative sector. The new mills are expected to be located at Bellary (Mysore), Mahe (Kerala), Kanpur (Uttar Pradesh), Indore (Madhya Pradesh), Nasik and Latur (Maharashtra) and Gingee and Tiruvellore (Madras).

The Union Government has rejected the suggestion put forward by leading chambers of commerce for declaring the Haldia port area as a free-trade zone. The principal reason for the rejection is said to be administrative. Similar proposals have been received from 28 other areas and the Union Government's future course of action will be determined in respect of these proposals on the basis of experience at Kandla port which will be used as a free port.

Exports of mica under any form other than fabricated mica, mica waste, mica scrap and factory cutting, and mica splittings on consignment basis have been banned with effect from the 1st inst. Shipments of mica of any variety other than the fabricated mica, however, will be permissible from that date only, if irrevocable letter of credit, without recourse to the extent of at least 90 per cent of the invoice value of the goods, has been opened in favour of exporters.

A three-man delegation, headed by Mr. R. Doraiswamy, Textile Commissioner, has left for Washington to negotiate a new quota for exports of textiles to the U.S., beginning from 1st April next; the other members of the delegation are Mr. B. G. Kakatkar, Secretary-General of the Indian Cotton Mills Federation, and Mr. H. A. Sujan, Director-General of the Textile Export Promotion Council. The 15-month term of the present quota is due to expire on 31st March 1964. The quotas cover four varieties of textiles, namely, carded drills, twills, satins, and some varieties of sheets and garments. The present quota of 37.5 million square yards, which was fixed at the 1962 level of exports following the U.S. Government's invocation of the market disruption clause of the G.A.T.T. Textile Agreement, is considered to be inadequate.

The Unit Trust of India, set up under the Unit Trust of India Act 1963, has been established with effect from the 1st inst. with its Head Office at Bombay. Mr. R. S. Bhatt, Executive Director of the Indian Investment Centre, and Mr. V. G. Pendharkar, Economic Adviser to the Reserve Bank of India, have been appointed Chairman and Executive Trustee, respectively, of the Trust. The other members of the Trust are: Dr. B. K. Madan (Executive Director, Reserve Bank of India), Mr. N. M. Wagle (Managing Director, Greaves Cotton and Company, Ltd.), Mr. B. Mitter (Managing Director, Andrew Yule and Company), Mr. P. Brahmayya (Chartered Accountant of Madras), Mr. S. D. Srinivasan (Managing Director, Life Insurance Corporation of India), Mr. N. A. Krishnan (Managing Director, State Bank of India), Mr. H. T. Parekh (General Manager, Industrial Credit and Investment Corporation of India) and Mr. R. L. Tuli (General Manager, Punjab National Bank).

From Abroad

Sweden has raised its bank rate with effect from 30th January 1964 to 4½ per cent from 4 per cent to which level it had been raised from 3½ per cent in June last year.

The revolutionary Government of Burma has decided to nationalise general insurance early next year. All insurance companies, national and foreign, have been asked to wind up their business by 31st January 1965. The Union of Burma Insurance Board has already started underwriting all general insurance with effect from the 1st inst.

Under an agreement reached recently at Karachi between the Governments of the U.S. and Pakistan, the former will provide the latter with an interest-free long-term loan of $750,000 for financing imports of spare parts, servicing equipment and maintenance of consultant service for the Rechna Doab tube-well project.

The citizens of West Germany are now drinking far more tea than has been consumed in the former German Reich. Between 1954 and 1963 alone, *per capita* consumption increased from 90 grammes to 127 grammes. Experts believe that a part of the increase is due to the fact that West Germans are using more tea to prepare a cup of tea.

The West German Economics Minister, Kurt Schumuecker, will study more thoroughly the problem of German imports of textiles in the next few weeks. This is the result of complaints made by the domestic textile industry as well as by overseas suppliers. Meanwhile, the Federal Economics Ministry has found out that a large proportion of imported textiles is being bought by German manufacturers for further processing.

Following the continued upsurge of international demand for diamonds, the De Beers Central Selling Organisation, which handles some 80 per cent of world production of precious stones, is contemplating to increase the price of gems by 10 per cent. This move is the second within a year, the last increase of 5 per cent in prices having been effected in March 1963. The oversupply of certain qualities of small gems is no longer considered to be a problem.

The Government of Saudi Arabia is considering a proposal to set up an iron and steel plant at Hedjaz in Western Saudi Arabia with an annual capacity to produce 45,000 tons of iron bars, joints, wires and sheets, with a provision for increasing capacity to 60,000 tons. The Government will allocate about £5.8 million to cover the cost of building the first stage of the plant. Nine international firms are reported to have offered technical assistance and collaboration.

The Government of Canada has formally adhered to the International Monetary Fund's general arrangements to borrow. The maximum commitment of the Government of Canada is $200 million, bringing the total commitments received to $6,000 million. The ten countries participating in the borrowing arrangements have undertaken to lend their own currencies to the Fund up to certain stated amounts, if this should become necessary to forestall or cope with an impairment of the international monetary system. The arrangements entered officially into force on 24th October 1962 by which time eight countries had notified the Fund of their adherence.

The Governments of Pakistan and Yugoslavia have recently concluded an agreement under which Yugoslavia will provide credits to Pakistan and will accept repayment over a number of years in the form of primary commodities, manufactured goods and semi-manufactured articles. The first part of the agreement covers exchange of equivalent quantities of goods and commodities for one year, with Pakistan exporting jute, cotton and manufactured goods and Yugoslavia exporting motor cars, scooter equipment, cables, marine engines and typewriters. The second part covers the construction by Yugoslavia of 200 wells in exchange for specified grades of jute for two years and the third part covers an offer of a further credit of $10 million.

PERSONAL

MR. T. P. Singh has taken over charge as the Secretary to the Planning Commission.

Mr. William Warnock, Ireland Ambassador in Switzerland, has been appointed the First Ambassador of Ireland in India.

Mr. S. P. Puri, Director of the Allahabad Bank Limited, has been appointed Chairman of the Board of Directors of the Bank.

Mr. Justice P. B. Gajendragadkar was sworn in as the Chief Justice of India on the 1st inst. in the place of Mr. Justice B. P. Sinha who has retired.

Mr. K. P. Goenka, Chairman and Managing Director of Duncan Bros. Co., Ltd., has been elected President of the Federation of Indian Chambers of Commerce and Industry for the year 1964-65.

Mr. J. Charanjiva, who recently retired from Burmah-Shell service, has joined the Brady Group as Personnel Adviser with effect from 1st January 1964 and has been appointed to the Board of Directors of Commerce (1935) Ltd.

Prof. K. T. Merchant, Principal of the Sydenham College of Commerce and Economics, has been appointed a Director of the East India Cotton Association by the Union Government.

Mr. N. S. Pande, Joint Secretary, Union Ministry of Finance, has been appointed a Director of the State Trading Corporation and the Mines and Minerals Trading Corporation.

Mr. Roland Pierott, Assistant to the Bank of America's President at the Head Office in San Francisco and co-ordinator of international activities, has been appointed Executive Vice-President of the Bank of America.

Mr. Harish Chandra Mahindra, Executive Director of Mahindra and Mahindra Ltd. and Chairman of Indian and Eastern Engineering Company Ltd., has been elected Chairman of the Mahindra Ugine Steel Company Ltd.

Dr. Yves Dunant, head of the World Marketing Division of Sandoz and a senior Director of Sandoz (Basle), is on a brief visit to this country. During his stay, he will meet some Central Ministers and officials of the Industry and Health Ministries.

SATHE BISCUIT & CHOCOLATE CO., LTD. POONA-2.

Notices

THE SOUTH KARANPURA COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE MEMbers of the above-named Company that the Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, at 10.45 a.m. on Friday, the 28th February, 1964, for the following purposes:—

1. To consider and adopt the Audited Accounts of the Company for the year ended 31st August, 1963 and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To appoint a Director in the place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS:

5. To consider and if thought fit, to pass with or without modification the following resolution which will be proposed as a special resolution.

"That Article 161 of the Articles of Association of the Company be amended deleting the word 'three' in line 4 and substituting therefor the word 'six'."

The Share Transfer Register of the Company will be closed from 14th February, 1964 to 28th February, 1964 both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LTD.,
Secretaries and Treasurers.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA, *30th January*, 1964.

Notes: (a) A member entitled to attend and vote at this Meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 15th March, 1964, to those Shareholders so entitled whose names appear in the Company's Book on the 28th February, 1964 or to their mandatees. No application for Dividend Warrants will be necessary.

(c) The relative explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the Special Business set out above is being sent to all members.

THE SOUTH KARANPURA COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF Directors held on Thursday the 30th January, 1964, the following Dividend was recommended for declaration at the Annual General Meeting to be held on Friday the 28th February, 1964, subject to deduction of Tax.

On Ordinary Shares at 2½ per cent per annum.

By Order of the Board,
BIRD & CO. (PRIVATE) LTD.,
Secretaries and Treasurers.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA, *31st January*, 1964.

EASTERN INVESTMENTS LIMITED

THE BOARD OF DIRECTORS HAS DECIDED to recommend to the forthcoming Annual General Meeting of the Members of the Company the following Final Dividends for the year ended 31st December, 1963, subject to deduction of tax—

On the taxable cumulative Preference Shares @ 4.1625 per cent per annum less Interim dividend @ 2.08 per cent already paid.

On the Issued Ordinary Shares @ 10 per cent per annum.

By Order of the Board,
BIRD & COMPANY (PRIVATE) LTD.,
Secretaries.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA, *29th January*, 1964.

MADURA MILLS COMPANY LIMITED

Registered Office:
New Jail Road, MADURAI

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Company will be held in Pandyan Building, West Veli Street, Madurai, on Wednesday, the 25th March, 1964, at 3.30 p.m. The Share Transfer Books will be closed from 21st February to 20th March, 1964 both days inclusive.

1. All persons holding shares on blank transfers should immediately arrange to have the shares registered in their own names, as the Company will pay any dividend declared only to the person(s) in whose name the share stands as on 20TH MARCH, 1964.
2. Shareholders desiring dividends to be paid to Banks or other Mandatees should register the mandates with the Company before 21st February, 1964.
3. Intimation of any change of address should be given to the Company immediately.

A. & F. HARVEY LIMITED,
Managing Agents.

MADURAI,
30th January, 1964.

TRENDS IN PETROLEUM IN INDIA

(*Concluded from page 204*)

supply and demand will still persist, owing to the disproportionately large demand for middle distillates. India must continue to import kerosine and diesel oil, which hitherto have come mostly from the Persian Gulf, although Russian products are imported by the State-owned marketing organisation.

The Size of the Search

What are the chances of filling the proliferating refineries with indigenous crude? This would produce a far more considerable saving in foreign exchange than the substitution of crude imports for products. But exploration so far has only yielded potential production of about five million tons a year.

Present output comes from two regions. In Assam, the old Digboi field of Assam Oil (Burmah Oil) produces about 300,000 tons, all refined at Digboi which also receives some crude from the Nahorkatiya and Moran fields of Oil India, in which the Indian Government has a 50 per cent share. Crude from these newer areas already feeds the Gauhati refinery and production will rise to three million tons a year when the Barauni refinery comes into operation. A 720-mile pipeline from the fields to Barauni *via* Gauhati is complete.

Some fresh exploration has at last been possible in Assam since Oil India was granted in January 1963 a new 1,290 square mile licence in the Dum Duma district. The joint venture company has a £1½ million six-well drilling programme; the first well, at Tinali near Moran, has been drilled to 12,586 feet and is now being tested, and the second, at Bogapani, near Nahorkatiya, was begun on 20th December and is below 3,000 feet. Other locations in Upper Assam are on the way.

Apart from an unsuccessful search in West Bengal by Stanvac between 1953 and 1960, all other exploration has been reserved for many years to the Indian Government's Oil and Natural Gas Commission. The O.N.G.C. works with the help of equipment and technicians provided by the U.S.S.R. under a long-term aid agreement. A credit agreement was also concluded with E.N.I. in 1961, permitting the Italian company to carry out various oil operations. The French Institut du Petrole have provided some technical assistance, through a Petroleum Institute at Dehra Dun, where the headquarters of the O.N.G.C. are situated.

The Oil and Natural Gas Commission has been most successful in Gujarat. It has discovered an oilfield at Ankleshwar, now producing at an annual rate of 730,000 tons a year. The crude goes by rail to the Bombay refineries but when Koyali refinery is completed it is hoped to raise output to 2 million tons. A gas field has been found at Cambay. E.N.I. will build a pipeline network in this area, comprising a crude line from Ankleshwar to Koyali, a products line from Koyali to Ahmedabad, gas lines from Ankleshwar to Uttran and Baroda, and from Cambay to Dhuwaran. Exploration drilling has been carried out elsewhere in Gujarat: at Kalol, Sanand, Waravel, and Bareja near Ahmedabad, and Olpad and Kosamba near Ankleshwar; hydro-carbons have been encountered at several of these places, but it is not yet known if they are of commercial significance. Wells are to be drilled around here near Navagaon, on the island of Aliabet and offshore in the Gulf of Cambay.

The O.N.G.C.'s exploration in other parts of India has not so far yielded any important discoveries. In Assam, four wells at Rudrasagar in the Sibsagar district had encountered oil at mid-1963, but one nearer Sibsagar was dry; one is drilling at Lakwa. In the Punjab, a well at Jawalamukhi found gas a few years ago but another was dry and so were wells at Adampur, Hoshiarpur and Janauri; another deep test will now be drilled near Jawalamukhi. Other areas where exploratory or structure drilling is planned include the Cauvery Basin —a well early this year at Karaikal—Jaisalmer in Rajasthan, Purnua and Raxaul in Bihar and on the Andaman Islands. E.N.I. will drill for O.N.G.C. on a contract basis probably in the Ganges valley. The Indian Government has been considering the possibilities of exploration in Iran, but, in view of the shortage of foreign exchange, it is difficult to see how this could be undertaken.

A Heavy Task

The O.N.G.C. is certainly making great efforts. But the job is too big. Although Central India is not sedimentary, the subcontinent is vast and the extent of the potentially oil-bearing basins around the peninsula and in the northern plains and Himalayan foothills is estimated at 400,000 square miles. With the best will in the world, a Government organisation must spread itself very thin or concentrate on very few spots.

Expenditure on exploration and production in the third Plan (1961-66) was originally put at Rs. 115 crores, afterwards raised to Rs. 202 crores (one crore of rupees: £750,000). The Planning Commission in a *Mid-term Appraisal of the third Plan*, published in November 1963, estimated that about Rs. 147 crores had been spent and that a substantial part of the programme would remain to be carried over into the fourth Plan, to run from 1966-71. For this, the Oil and Natural Gas Commission has submitted proposals entailing a total outlay of Rs. 230 crores. If arrangements could be made to supplement the efforts of the Oil and Natural Gas Commission by private outside help in exploration, as is being done for refining, so much the better. India has so *much to do with its money.—By Special arrangement with Petroleum Press Service.*

LABOUR

(*Concluded from page 208*)

Industry does not want this role. On the contrary, it hopes for a social-security system with a minimum of employer interference and a maximum of individual freedom.

What then is the problem? Take, for example, the sick-pay part of the "social package." Workers off the job on sick leave have nearly doubled in recent years: from an average of 3.9 per cent (of those workers who receive sick benefits through insurance organisations) in 1951 to fully 6.35 per cent in 1962.

Total expenditures of insurance organisations established by law (including not only cash payment to sick workers, but also costs of medical and dental care, medicines, hospital treatment, etc.) have not merely doubled since 1951, but have shot up more than fivefold.

Far from evading its legitimate responsibilities towards helping to meet sick benefits, industry wants to pay—but in a business-like way; in a way that is calculable, like other expenses, in advance.

Specifically, industry would like to hand over its sick-pay contributions, in a pre-set amount, based on statistical estimates, directly to the insurance organisations. These agencies in turn would "cover" a worker and his family while the employee was off the job.

This is not a question of bargaining with the ill; it is a question of a firm's remaining economically viable, so that the ill will have a job to come back to.

It is hard enough for a big industry to operate with an unknown expense ahead. Imagine the situation of a small business—of, for example, a master craftsman who has a staff of four or five persons.

Confront him with an epidemic of influenza, all his workers out at once, and direct sick-benefit payments out of his own pocket could well bankrupt him.

Thus, the issue is not whether wage-earners and their families should be helped through hard times; that principle was established decades ago. The big question is whether the individual employer shall dole out benefits or whether workers shall have a right to apply directly to an insurance agency that is set up to do the job.

248 Pages

These pages of **COMMERCE ANNUAL NUMBER 1963** contain as many as 46 feature articles on a wide variety of subjects of topical importance contributed by eminent economists, administrators, businessmen and experts. The subjects covered include planning and development, agriculture, industry, trade, banking, finance, taxation, labour, transport, and economic trends in Britain, West Germany and the U.S. The Number contains also our customary comprehensive reviews of trends in the different sectors of the Indian economy, besides all the major markets. Here are the exact **CONTENTS** of the Annual Number:

LEADING ARTICLE:

TREND OF MARKETS

CALL RATE UP

(From Our Own Correspondent)

BOMBAY, *5th February*

Conditions in the short-term money market turned tighter during the week under review, the inter-bank call rate for both renewals and fresh money jumping up by ½ per cent to 5¾ per cent. There was a persistent increase in the demand for bank credit, while the supply of floating funds was on a much reduced scale. Borrowers had, therefore, to look around for accommodation. They could, of course, obtain their requirements but at higher rates. Turnover of funds was quite large. The Calcutta market, too, ruled pretty tight and there was no change in the call rate which stood throughout at the high level of 5¾ per cent, though some scattered business was put through at 5½ per cent.

Perhaps because of the stringency in the money market, there were no sales of 91-day Intermediate Treasury Bills during the period from 29th January to 1st February, though they were on offer. Undeterred by this lack of response, the Reserve Bank has announced that these Bills would continue to be an offer during the period 5th February to 8th February. The 91-day Treasury Bills under the tender system had the same experience as last week. The total amount offered at Rs. 2 crores was just equivalent to that invited; the whole of it was accepted at Rs. 2.325 per cent per annum, same as last week.

India's foreign assets improved by a further Rs. 14 lakhs to Rs. 111.86 crores during the week ended 31st January 1963. The entire increase was in balances held abroad which stood at Rs. 9.40 crores. The foreign securities held in the Issue Department of the Reserve Bank were unchanged at Rs. 102.46 crores. Deposits of scheduled banks rose by Rs. 1.28 crore to Rs. 79.89 crores. At the same time, loans and advances to them went up by Rs. 6.79 crores to Rs. 36.08 crores, including Rs. 13.14 crores (a rise of Rs. 3.30 crores) made available against usance bills. Notes in circulation declined by Rs. 5.47 crores to Rs. 2,391.71 crores.

A further rise of Rs. 17.01 crores (to Rs. 1,669.90 crores) in the total credit made available by scheduled banks to their clients occurred during the week ended 24th January. Since their deposits also increased albeit by a smaller amount of Rs. 10.91 crores to Rs. 2,438.29 crores on top of the accretion of Rs. 18.47 crores in the preceding week, borrowings from the Reserve Bank declined by Rs. 3.29 crores to Rs. 28.75 crores, of which those against usance bills accounted for Rs. 10.35 crores, a drop of Rs. 1.86 crore. Investments receded by Rs. 2.33 crores to Rs. 684.75 crores.

On Thursday, 30th January, the Reserve Bank of India resumed the sale at par of 4½ per cent 1973 Central Government Loan. Sales had been suspended since 15th January, as the interest on the loan was due for payment on 22nd January. But for this development, the Gilt-edged market continued to rule dull. Business put through was meagre, with no change in the quotations for most of the loans.

In the foreign exchange market, the banks' selling rate for U.S. dollars was unchanged at Rs. 478.50 per $100, whereas their buying rate eased by 25 nP to Rs. 475. In New York, the pound sterling was irregular *vis-a-vis* the dollar. Thus, the spot rate picked up 0.030 cent to 279.800-279.830 cents, while the three months' forward eased by 0.010 cent to 279.540-279.570 cents.

• • • •

The total cash contributions brought into the central account of the National Defence Fund at New Delhi till the close of business on 31st January 1964 amounted to Rs. 58.04 crores. Of this amount, a sum of Rs. 28 lakhs came from Britain and Rs. 63 lakhs from other countries. In addition, contributions in gold and gold ornaments amounted to 2,279,489 grammes, approximately equivalent to 195,496 tolas.

REACTION IN BULLION

(Form Our Own Correspondent)

BOMBAY, *5th February*

The recent spurt in bullion prices came to a halt this week. After opening firm, the market reacted to close around the week's lowest levels due mainly to the withdrawal of support from hoarders and partly also because of some increase in arrivals in silver.

The reaction was led by silver which dropped from Rs. 269—a new all-time peak touched on Thursday, 30th January—to Rs. 262 yesterday and closed today five points lower over the week at Rs. 263 per kilo, following the marked decline in the daily average offtake from 30 bars to 20 bars, as against which arrivals increased from 15 bars to 18 bars. The decline in offtake was said to be mainly due to the withdrawal of support from the Akola party. Besides, local offtake was also limited.

Pure gold, traded unofficially, was quoted initially at Rs. 120. But as the week progressed, it declined to Rs. 113, as against Rs. 118 a week ago. Sovereign also shed a point at Rs. 87. Fourteen-carat gold opened 25 nP higher at Rs. 69.75, but sagged to close at the week's lowest level of Rs. 66.

The international price for gold was a shade lower at $35.08 as compared with $35.08¼ last week, with the ready quotation in London also moving down from 250s. 9¼d. to 250s. 9d. Silver in New York and London was unchanged at the last levels.

The U.S. may soon have to reduce the silver content of its coinage and perhaps eliminate it, according to Samuel Montagu and Company. Pointing out in its monthly *Silver Market Letter* that U.S. Treasury stocks were reduced by about 180 million ounces to some 1,500 million ounces during last year, the firm says that the extent of the withdrawals is surprisingly heavy and tends to show that steps must be taken before long to lessen the drain. Consumption of silver in U.S. coinage in 1963 amounted to 111.30 million ounces, out of the total non-Communist world consumption of 247 million ounces in industry and 172.2 million ounces for coinage. The U.S. Treasury is now the only dependable source capable of covering the large gap between production and consumption.

The following table shows the trend of prices during the week under review:

	5-2-1964 (closing)	High	Low	29-1-1964 (closing)
SILVER	Rs.	Rs.	Rs.	Rs.
Ready (996 fine) ..	263.00	269.00	262.00	268.00
GOLD				
Ready (14 carat) ..	66.00	69.75	66.00	69.50
Sovereign ..	85.00*	—	—	85.00*
London—				
Gold ..	250s. 0d.	250s. 9d.	250s. 8½d.	250s. 9½d.
Silver Ready ..	111¾d.	—	—	111¾d.
Silver Forward ..	111¾d.	—	—	111¾d.
New York—				
Silver	129.3 cents	—	—	129.3 cents

* As on 24-6-1963.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce.

COTTON FIRM

(From Our Own Correspondent)

BOMBAY, *5th February*

Trading in cotton Jarilla March futures contract came to a standstill this week from yesterday afternoon, as the contract had risen by Rs. 10 over last Saturday's closing level of Rs. 762.25, which is the weekly permitted price rise once the rate exceeds Rs. 765. Unofficially, the contract was quoted higher still at Rs. 776, though it had been slightly easier around Rs. 773 early this morning. The distant May contract was quoted today at Rs. 761, as against the closing of Rs. 749 on Saturday the 1st inst. and of Rs. 748 on Wednesday last week.

The trend was reactionary on Thursday, 30th January, in the light of the last week's official intervention to arrest the rising spot prices and also because of the F.M.C.'s warning to the E.I.C.A. (issued on the same day) against unhealthy speculation, which, it was said, had caused a strident rise in the futures quotations. On liquidation by the principal operator, both the futures contracts turned easy on that day. This reactionary trend did not, however, last long, as the Board of the E.I.C.A., while advising prominent members to prune outstandings in futures to bring down values to a reasonable level, also decided unanimously to protest against the Textile Commissioner's order, freezing movement of Digvijay cotton from Gujarat so that the upward trend in spot prices might be checked, on the ground that the farmers had already suffered a heavy loss because of the damage to the crop on account of the cold spell and frost and that, therefore, lower prices would act as a disincentive to increased production. This attitude of the E.I.C.A. to the official intervention revived the bullish sentiment which was bolstered up during the week by Maharashtra's Chief Minister, Mr. V. P. Naik's statement on Sunday the 2nd inst. that the State Government was opposed to the fixation of *ad hoc* prices by the Union Government for cotton, as such prices did not relate to the cost of production and did not ensure fair prices to the cultivators for their produce. This open divergence in the attitude of the State and Central Government authorities to the cotton price issue led to further nervous bear covering in futures and emboldened the principal bull operator to hold on to his outstanding position of some 50,000 bales, irrespective of the F.M.C.'s warning to the E.I.C.A. The result was the sharp and unchecked rise in values during the week.

The trend during the week under review is indicated below:

(In rupees per three quintals)

	29-1-64	*High*	*Low*	5-2-64
Jarilla March ...	760.25	772.25	756.00	772.25
Jarilla May ...	748.00	761.00	744.50	760.50

Mill demand for spot cotton at the Sewri market was concentrated on Kalyan, L 147, CO2 and 197/3, prices of which, as a consequence, hardened further. Digvijay however, was, quoted about five points lower. The following were the spot prices—in rupees per candy of 784 lbs.—of some of the varieties:

Dhangadhra CO2 1,345, Akot L 147 1,240, Amravati 1,235, Chopda 1,085, Devalgaon 1,205 and Laxmi (new) 1,200.

A Press note issued by the Textile Commissioner today says that the terms, conditions and procedure for the import of cotton from the U.S. under the M.M.T.C./C.C.C. barter deal (1963) for about $38-42 million, covering the value of about 300,000 bales of cotton, have been finalised.

In the import section, Pima Karnak was traded at Rs. 1,625 c.i.f. March and Sudan XP3L at Rs. 1,530 c.i.f. March. In the export section, Japan was said to be switching over to Pakistan Deshi varieties, as Bengal Deshi prices here were believed to be prohibitively high.

The Indian Central Cotton Committee has commended the adoption of improved practices for raising the per acre yields of cotton in the rain-fed Vidharbha tracts. Its programme for improved cultivation contains details about preparatory tillage, manures and manuring, seeds and sowing, intercultivation and controls of pests and diseases. Its experiment on the Amravati demonstration plot produced 1,244 kgs. of *kapas* per hectare, as against the traditional output of 463 kgs. The seed tried was an improved American variety, namely B-147. The gain in profits was Rs. 377 per hectare.

President Johnson asked Congress on 31st January to enact legislation for enabling U.S. cotton to meet competition from foreign cotton and man-made fibres. The present programme providing a two-price system, he said, met the needs of neither the grower, the handler, the cotton mill nor the consumer. He remarked that, whereas the grower price support programme held U.S. cotton above world price levels, the foreign buyers obtained the cotton at world prices through the operation of the Government export subsidy to growers.

ART SILK YARNS EASY

(From Our Own Correspondent)

BOMBAY, *5th February*

Art silk yarns and staple fibre yarns ruled distinctly easy during the week under review, while cotton yarns registered a hardening trend following good support at higher levels. The easiness of art silk yarns was due to fears of sizable sales at reduced rates by spinners and decline in premium on import licences. Reports from consuming centres also were not encouraging. In sympathy with art silk yarns and on rumours that several South Indian mills had bought the entire quantity of imported staple fibre remaining unutilised with the Government, staple fibre yarns tended to move down. The rumours of a possible replacement of excise duty on staple fibre by a lower rate of duty on yarn also imparted weakness. Cotton yarns, however, met with enlarged buying enquiries, thanks to encouraging advices from upcountry centres and firmness of raw cotton.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	5-2-1964	29-1-1964
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	11.55	11.68
Century 75D	18.35	18.44
S. I. Viscose 150D	12.91	12.91
Staple fibre yarn (40/2)—		
Kohinoor (per kg.)	9.48	9.55
Century	9.50	9.66
Cotton yarn (per bundle of 10 lbs.)—		
10s Navsari	19.37	19.50
20s Podar	24.50	23.87
32s Madura	32.50	32.50
40s City	37.50	36.75
60s Finlay	76.25	76.25

Exports of Rayon and Synthetic Fabrics

The pace of improvement in the overseas offtake of Indian rayon and synthetic fabrics was somewhat checked during the calendar year 1963. The actual increase in shipments in that year was only two million metres, as against the rise of over 16 million metres recorded in 1962 and of 31.23 million metres in 1961. The total quantity of fabrics actually shipped in 1963 is estimated at 85.67 million metres, as compared with 83.76 million metres in 1962 and 67.35 million metres in 1961. The figure of 85.67 million metres, incidentally, is the all-time peak level of exports. While the pace of increase in shipments slowed down during 1963, the average export price realised by rayon and synthetic fabrics was slightly higher at Re. 1.09 per metre, as against Re. 1.08 in 1962 and 94 nP in 1961. The total foreign exchange earned by these fabrics during 1963 amounted to about Rs. 9.34 crores, as compared with the Rs. 9.11 crores earned in 1962 and Rs. 6.32 crores in 1961. The most important markets for the fabrics are Singapore, Iraq, Aden, Canada, Ceylon, Sudan, Rhodesia and Nyasaland, and Kenya. The quantities—in million metres—actually bought by these countries in 1963 with figures in brackets giving the previous year's shipments, are: Singapore 17.15 (15.21); Iraq 5.93 (4.66); Aden 4.51 (3.05); Canada 3.70 (1.47); Ceylon 3.67 (8.34); Sudan 3.16 (3.25); Rhodesia and Nyasaland 4.00 (5.69); and Kenya 2.01 (0.57).

CASTORSEEDS ADVANCE

(From Our Own Correspondent)

BOMBAY, *5th February*

The oilseeds market depicted an easy trend in the first three sessions of the week under review, but staged a recovery on Monday and the recovery persisted in the subsequent two sessions also. Early in the week, both seeds and oils encountered selling, while fresh buying support was lacking. Consequently, values moved down. On Monday, however, the sentiment of the market improved, thanks to reports of unfavourable weather conditions in the principal growing areas. These reports induced good bull support which led to a recovery in prices. The recovery gathered momentum yesterday and today following persistent short-covering and absence of selling pressure. The groundnut section witnessed a reversal of the last week's upward trend in the earlier sessions, as the supply position improved, following good arrivals, while buying by crushers and *vanaspati* interests was on a reduced scale. In the latter sessions of the week, however, prices registered a rise as a result of short covering, good demand from upcountry centres and firm advices from the cotton market. The report that the State Trading Corporation had bought some 20,000 tonnes of groundnut oil (at Rs. 2,050-Rs. 2,060 per tonne in new drums on f.o.b. basis) to be shipped to Burma and that it would be covering an equal quantity also for shipment to Burma, too, imparted strength. Castorseeds continued to be buoyant, owing to hectic bear-covering and fears of damage to new crop from the recent cold spell. Linseeds were cheerful, following the upsurge in prices of mustard seeds in North Indian markets. Cottonseeds were firm.

The groundnut January 1964 contract went off the board at the ceiling price of Rs. 236 per 250 kg. on 30th January. The April contract began the week at Rs. 235.12 and after declining to Rs. 234.37 on Friday, recovered to close at Rs. 236.25 today. The net rise over the week was Re. 1.13. Ready Nizam bold and Khandesh quality changed hands at Rs. 48.50 and Rs. 49.25, respectively, same as last week. Oil ex-mill lost 25 nP to Rs. 19 and railway receipts 15 nP Rs. 18.80.

The castorseeds March 1964 contract jumped up by Rs. 2.87 to touch a new high of Rs. 174.62 today. June contract gathered Re. 1.75 to Rs. 174.75. Ready Madras picked up 31 nP to Rs. 34.62. Ready Kanpur strengthened by 25 nP to Rs. 33.50. Oil B.S.S. however, was quoted low at Rs. 14.80 as against Rs. 14.95 last week. Oil commercial shed 10 nP to Rs. 14.20.

In the linseed section March 1964 contract rose by Re. 1.13 to Rs. 38.44. The June 1964 contract opened the week at Rs. 38.31 and closed at Rs. 39.56, thus gaining Re. 1.25 over the week. Bold ready was unchanged at last week's level of Rs. 37.50. Linseed oil hardened by 20 nP to Rs. 15.50.

Business put through in cottonseed futures was limited. The April 1964 contract moved narrowly both ways before closing at the last week's level of Rs. 102.

The following table shows the closing prices of oilseeds and oils on Wednesday 5th February as compared with those of two previous weeks:

	5-2-1964	29-1-1964	22-1-1964
	Rs.	Rs.	Rs.
Groundnuts			
January 1964 contract	236.00	236.00	230.50
April 1964 contract	236.25	236.00	231.75
Nizam bold	48.50	48.62	46.87
Khandesh quality	49.25	49.37	47.62
Oil ex-mill	19.00	19.25	18.40
Oil Rly. Receipts	18.80	18.95	18.20
Castorseed			
March 1964 contract	174.62	171.75	167.62
June 1964 contract	174.75	173.00	169.50
Ready Madras	34.62	34.25	33.25
Ready Kanpur	33.50	33.25	32.25
Oil B.S.S.	14.80	14.95	14.70
Oil commercial	14.20	14.30	13.90
Linseed			
March 1964 contract	38.44	37.31	36.94
June 1964 contract	39.56	38.50	37.94
Bold ready	37.50	37.50	38.00
Linseed oil	15.50	15.30	15.60
Cottonseed			
April 1964 contract	102.00	102.00	100.00

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

KIPS FIRMER

(From Our Own Correspondent)

MADRAS, *3rd February*

Business in E.I. kips this week continued difficult. Cow calf and buff calf remained firmer. In the tanned goat skins section, business done was small owing to high prices, whereas, in tanned sheep skins, primes and semi-primes continued to attract buyers. Best middle class sheep skins ruled firmer on steady inquiries from abroad.

SPURT IN MEDIUM TEAS

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *30th January*

A total of 468,000 kgs. was offered in tea sale No. 4 held here on the 28th inst. Quality in general showed a further seasonal improvement and there were a few useful mediums on offer. The market opened to strong general demand. There was useful support for low medium and medium brokens which were firm to dearer. Similar fannings were better supported and often sold at dearer rates. Among good mediums, those with improved quality evoked keen competition and registered an advance up to 20 nP. Highgrowns also continued in good demand and generally were sold at dearer rates with buyers following quality. Clean black leaf descriptions were also firm to dearer. Unorthodox descriptions were sold well at around last rates. Whole leaf grades were strong, particularly orange pekoes, whereas there was useful inquiry for a small selection of tippy teas on offer.

Quotations (per kg.) were:

	1964	1963
	Rs.	Rs.
Low mediums	4.55-4.95	4.25-4.65
Mediums	4.95-5.30	4.70-5.00
Good mediums	5.40-6.10	5.10-5.80
Nilgiri B.O.P.	5.40-9.40	5.75-9.90

The average price realised in sale No. 4 was Rs. 5 per kilo, as against Rs. 4.93 a week ago and Rs. 5.10 in the corresponding sale last year.

A lesser quantity of 241,000 kgs. was offered in dust sale No. 4 held today. There was good general demand. The few highgrowns on offer were sold at generally dearer rates. All mediums were sold well at usually slightly enhanced rates, except Travancores which fetched valuations. Residuals were the weakest feature of the sale and were frequently taken up at a discount. There was strong competition for unorthodox kinds which were dearer all round.

The average price realised in dust sale No. 4 was Rs. 4.55, as against Rs. 4.52 a week ago and Rs. 4.23 in the corresponding sale last year.

Colombo: Just over 6½ million lbs. were offered this week. The market opened to strong general demand with all liquoring brokens dearer except plainest mediums. Similar fannings, however, were irregular but often about steady, while lowgrown brokens tended 3-5 cents dearer with their fannings advancing 10-20 cents.

London: North Indian and other growths: In Monday's auction, there was good general demand at firm rates.

Ceylon and South Indians: As many as 27,174 packages were offered in Tuesday's sale, of which 8,640 packages were from South India. There was good general demand. Both Ceylons and South Indians elicited useful inquiry and were sold at fully firm to dearer rates.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No. 5*: 480,000 kgs. offered. Good demand. Low mediums and mediums firm. Good mediums and highgrowns dearer. Unorthodox easier."

DEMAND FOR TEA GOOD

(From Our Own Correspondent)

CALCUTTA, *4th February*

Active trading was in evidence in the export and internal tea sales held here last week. Despite high stocks in Great Britain, bidding was lively at the last week's sales held at Mincing Lane. But the trade does not consider the outlook as encouraging, in view of the strong competition from other producing countries, mainly Ceylon and East Africa, which enjoy advantages from lower costs of production.

Despite lower output, Indian tea exports realised Rs. 132 crores, representing a substantial increase of Rs. 8.4 crores over 1962. The average price realised here for leaf so far this season is lower at Rs. 5.36 per kg., as against Rs. 5.44 for the comparative previous period. The average price for dusts has also declined from Rs. 4.90 a kg. to Rs. 4.85. North-Indian tea exports up to the 15th of last month were slightly lower at 282.16 million lbs. as compared with 292.60 million lbs. in the corresponding previous period. But the output in North India has also dropped to 562.44 million lbs. from 576.39 million lbs. in 1962.

That the dividend outlook for tea companies for 1963 is less encouraging is reflected in the poor support accorded to tea shares on the Calcutta Stock Exchange. Dividends already announced are lower than those for 1962. While production and selling prices in 1963 have fallen, the unit cost of production has increased owing to increased labour charges and higher prices for stores. The industry's satisfactory export performance is attributed to the tax concession allowed in the last budget.

The forthcoming Central budget is hopefully looked forward to by investors. The industry's capacity to attract private capital is linked with the marketing outlook. The industry has also stressed that the internal market in India should be exploited more vigorously, as other beverages, such as cold drinks, are gaining in popularity and it is feared that Indian tea is not getting a proper share from the improving standard of living of industrial workers. The revival of internal campaigns has, therefore, been urged.

Leaf offerings at the export sale totalled 71,442 packages which met with strong general demand. Keen competition was offered to whole leaf grades, which, as a result, were fully firm; the few tippy teas on offer, however, recorded an easy trend. Darjeelings met with increased seasonal support and hardened. Medium and secondary C.T.Cs were in good demand, with the brighter liquoring teas realising higher prices on keen competition. Best C.T.Cs also advanced, and brokens were ahead of the corresponding fannings. Legg-cut teas, though in good demand, recorded an irregular trend. Plain orthodox teas and "teas for prices" were fully steady. Medium kinds were firm and the brighter liquoring teas were higher. However, plain teas, especially B.O.Ps eased. The quotations per one kg., inclusive of excise duty, were: Best Assam C.T.C. B.P. Rs. 5.90 to Rs. 6.20, best Assam C.T.C. fannings Rs. 580 to Rs. 6.10, clean plain pekoe Rs. 5.10 to Rs. 5.40, medium Assam C.T.C. fannings Rs. 5.10 to Rs. 5.40, medium Assam C.T.C. B.P. Rs. 5.40 to Rs. 5.70, plain B.P. Rs. 4.55 to Rs. 4.65 and plain fannings Rs. 4.50 to Rs. 4.65.

At the internal sale, dusts offerings aggregating 31,657 packages met with good general demand. A strong feature was the bright liquoring Assams, while all plain orthodox teas were steady. Legg-cut teas hardened. Medium C.T.Cs met with good demand, and prices for the small and powdery teas rose. Good C.T.Cs were firm, with small lots registering a hardening tendency. The quotations per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust Rs. 6.20 to Rs. 6.70, medium Assam C.T.C. dust Rs. 5.10 to Rs. 5.30, legg-cut dust Rs. 4.90 to Rs. 5.10, medium Assam dust Rs. 4.70 to Rs. 5.10 and plain orthodox dust Rs. 4.50 to Rs. 4.70.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, *4th February*

The metal market ruled steady during the under review. Noting encouragingly the significant rise in India's exports in 1963 to Rs. 785 crores from Rs. 687 crores in 1962, the trade looked forward to relaxation in the import policy relating to essential raw materials, including base metals. The forthcoming Central budget is, therefore, awaited with interest. Having regard to the fact that the exising installed capacity in regard to copper and copper alloys semi-manufactures is not being fully used due to paucity of imported base metals and that the country spends consider-

Mercantile Buildings, Lal Bazar Calcutta 1. | Mahatma Gandhi Rd., Kanpur | 95, Jail Road, Coimbatore 1. | 155, Popham's Broadway, Madras 1. | Reid Road, Ahmedabad 2. | P. B. No. 568, New Delhi 1.

able foreign exchange in importing semi-manufactures to meet essential industrial requirements, the plea of the industry for sufficient supplies of inputs is modest and must be met. When the semi-manufactures industry is not even able to meet internal demand in full, it cannot be blamed for lack of initiative on its part in exporting the products to neighbouring countries. The Government should consider fixing special import quotas for base metals and actual users must be asked to export the production against special quotas. This would not only lead to increased production within the country but also bring in valuable foreign exchange.

Advices from the London Metal Exchange and the Far Eastern markets continue steady. It was reported that sellers of copper in London restricted their activities in view of the uncertainty arising from the troubled African situation and the strike threat in Chile. Spot copper wire bars opened at £240¼ a ton and, after gaining to £240¾, closed at £239¾. In Calcutta, utensil copper scrap rose from Rs. 635 per 100 kgs. to Rs. 640. While the fall in free stocks of copper on the L.M.E. has led to hopes that Rhodesian mines would resume full production, it should be noted that demand from the U.S.S.R. has been on the increase. While that country increased copper output in the decade to 1961 from 225,000 tons to 600,000 tons, the consumption in 1961 was 716,000 tons.

Tin, in London, closed at £1,035 a ton, as against the opening rate of £1,041. The General Services Administration is scheduled to review the long-term stockpile releases programme shortly. If the weekly quota were increased, it is felt that the maintenance of the world price at the current level would be difficult. The industry in Malaysia is willing to increase production, if it is assured of a fair price. Tin, in Calcutta, was firm at Rs. 3,300 per 100 kgs. Spot zinc, in London, opened at £92¾ a ton and, after being higher at £93¾, closed at £93¼. Spot lead closed higher on balance at £79, as against opening of £78¾.

JUTE GOODS MOVE DOWN

(From Our Own Correspondent)

CALCUTTA, *4th February*

While raw jute ruled steady during the week under review, goods moved down. Although, following the announcement by the Indian Jute Mills Association of the annulment of the Working Time Agreement as from the 1st of this month, the reaction that set in proved temporary, dullness soon returned, as the I.J.M.A.'s decision was interpreted bearishly on closer examination by the trade. The aim of the Agreement, which has been in force now since a number of years, was to adjust the production of mills from time to time in accordance with demand. It had operated satisfactorily in the days of acute shortage of fibre and again in the period of slackness of overseas demand for gunnies. During the last two years, however, the Agreement though it was in force in paper, was not taken recourse to, in view of the availability of domestic fibre in abundant quantities, coupled with the revival of overseas demand.

The outlook for hessian is considered bright. In recent weeks, purchases of hessian have been satisfactory and indications are that the U.S.A., the U.S.S.R. and Argentina have commenced purchases for replenishment of stocks. It is felt that, with limited availability of fibre fit for manufacture of hessian, mills would not be able to increase supplies to the full extent of demand and, as such, there is no fear that the abolition of the Working Time Agreement would lead to a glut in hessian supplies. The trade, however, is not at all optimistic about the outlook for sacking goods. With the advantage of about Rs. 400 a ton in cost of production over Indian mills, Pakistan has expanded its market overseas by driving out the Indian product to the extent possible. Pakistan's ability to export as much sacking as it produces is not at all affected by the existence of the working time agreement or otherwise. Its abolition, however, has only highlighted the trade's attention to the stark reality of the difficulty to push Indian heavy goods in overseas markets.

Fibre, as stated at the outset, ruled steady during the week under review. The Jute Commissioner, Mr. G. C. L. Joneja, has fixed the compulsory purchase quota of mills for February at 540,000 bales, as against 760,000 bales for the previous month. Of this quota, the I.J.M.A. mills have been allotted 500,000 bales. In an attempt to complete the January quota, mills had increased their purchases earlier in the week. These purchases, coupled with the mis-belief that the abrogation of the Working Time Agreement would lead to expansion of mills' capacity—mis-belief because the installation of additional capacity in terms of both spindles and looms requires the prior approval of the Jute Commissioner, and Government's known policy is against any such expansion at any rate in the near future—led fibre prices to rise above the minimum levels. Assam bottoms rose from Rs. 30 to Rs. 30.50, daisee bottoms from Rs. 33.50 to Rs. 34 and northern bottoms from Rs. 29.09 to Rs. 29.50. Prices in the agencies were above Calcutta's parity and sellers, though eager for business, declined offers below quoted rates. Since marketing of more than 60 per cent of the crop has been completed and the price support measures are working so very well, there would no longer be a problem of sagging prices for the rest of the season. Mills are keenly awaiting the considerations which would weigh with the Government in fixing the fibre prices for the new season.

During the week, despite good inquiries from overseas, prices declined. This was attributed to the abrogation of the Working Time Agreement, as it was wrongly believed that this would lead to a glut in supplies. Further, dull reports were received from the New York burlap market where the duty paid 40" 7½ oz. hessian fell to 9.05 cents a yard from 9.15 cents and the 10 oz. to 11.80 cents from 11.95 cents. In the Calcutta market, there were indications of imminent purchases by the U.S.S.R. and the probable quantity against February-September deliveries was believed to be 280 million yards. Interest was also in evidence on behalf of both the U.S.A. and Argentina. Demand from the U.S. led to scattered deals. On Tuesday last, covering business in both hessian and sacking was a feature, and thus ready B. twills were steadier at Rs. 113.05 and ready hessian 40" 10 oz. at Rs. 48. However, prices soon declined and, on Wednesday, the downward movement was marked, in view of lack of business. B. twills thereupon eased to Rs. 112.70 and hessian 40" 10 oz. to Rs. 47.60. At lower levels, activity in the futures market was on a modest scale. When mills turned sellers for both near and forward positions, prices declined further on Thursday to push down B. twills to Rs. 112.30 and hessian 40" 10 oz. to Rs. 47.20. Due-date selling pressure from holders led to a sharp decline in prices on Friday (31st January), despite scattered deals in hessian on overseas account. Hessian 40" 10 oz. eased to Rs. 46.50 and B. twills to Rs. 111.60. Quiet conditions marked trading over the week-end, when prices eased to Rs. 46.25 and Rs. 111.55, respectively. Keen activity in futures was a feature of trading yesterday, ready B. twills advancing to Rs. 113.40 and hessian 40" 10 oz. to Rs. 47.10.

"KHANDSARI" HARDENS

(From Our Own Correspondent)

HAPUR, *3rd February*

The sugar supply position continued restricted and the bulk consumers had to meet their requirements from the open market at Rs. 155 to Rs. 158 a quintal, as against the controlled prices of Rs. 123 to Rs. 126 a quintal. Production of sugar in West U.P. has been satisfactory, but from mid-January factories have been facing cane shortage due to keen competition from *gur* and *khandsari* manufacturers. The industry circles do not expect the production this season to exceed 25.30 lakh tons.

Desi khandsari prices displayed a hardening trend during the week, as the State Government's proposal to arrange controlled distribution of and regulate prices seems to have fizzled out. Punjab and Rajasthan stockists continued to be good buyers and consequently prices of different qualities improved sharply by Rs. 3 to Rs. 10 per quintal. The State Government has once again declared that exports of the commodity to other States would not be allowed. Units manufacturing *khandsari* were buying cane up to Rs. 5.80 per quintal in Muzaffarnagar area, as against Rs. 5.36 fixed for them. The inferior quality was quoted at Rs. 105 to Rs. 115, medium at Rs. 120 to Rs. 135 and superior at Rs. 140 to Rs. 143.50 per quintal.

Ready *gur* recorded a steadier trend on encouraging support from stockists. *Balti* quality arrivals were being loaded for other centres where permits have been received. *Pansera* quality was much in request from East U.P. Daily arrivals here averaged 2,000 to 2,500 maunds and stocks were fast mounting. But permits for the current month are expected to be issued shortly. Weekend prices here were:—*Balti* Rs. 27 to Rs. 27.50, *pansera* superior Rs. 27.75, *dara* Rs. 27.25 and *shakker* Rs. 27.50 per 40 kilograms.

FOODGRAINS IMPROVE

(From Our Own Correspondent)

HAPUR, *3rd February*

Excepting rice which was subdued on larger arrivals, foodgrains registered a firm trend during the week under review on fears of heavy damage to the standing *rabi* crops due to the cold spell and frost in the past ten days. The U.P. Government has asked its District Magistrates to assess the damage and arrange relief where necessary. Absence of winter rains have also adversely affected the *rabi* crops and, according to an official of the State Agriculture Department, crop prospects are far from satisfactory.

Wheat improved Rs. 2.50 per quintal to Rs. 56.25 to Rs. 58.29 for the average quality and Rs. 60 to Rs. 62.50 for the better farm produce. Prices might have risen still further but for the heavy sales of imported wheat and wheat flour through fair-price shops. Local stock of wheat left with the trade are small and the new crop will reach the market only in April. Week-end rice prices were:—*Basmati* superior Rs. 93.77 to Rs. 96.45, *sela* Rs. 91.09 to Rs. 93.77, *mainpuri* Rs. 61.62, *ramajwayan* Rs. 75.03, *raimunia* Rs. 79.04 and *gadda* Rs. 58.94 a quintal.

Gram prices hardened upto Re. 1 per quintal to Rs. 50.37 to Rs. 50.75 per quintal during the week on firm Punjab advices and inadequate stocks. Maize also advanced by 50 nP. to Re. 1.50 per quintal on brisk consumer demand. Stocks with the trade have been fast declining and are now around 14,000 quintals. Prices were quoted at Rs. 37 to Rs. 40 per quintal. Barley and *bejhar* improved in sympathy, while *juwar* and *guwar* remained steady. Week-end prices were: Barley Rs. 39.50 to Rs. 40.50, *bejhar* Rs. 40.50 to Rs. 41.50 *juwar* Rs. 47.56 to Rs. 48.23, *guwar* Rs. 48.23 to Rs. 48.90 and oats Rs. 50.94 to Rs. 60.28 a quintal.

Pulses were steady on fears of heavy damage to the standing crops of peas and *arhar* by frost. Peas improved by 66 nP to Re. 1 per quintal, with the dara quality quoted at Rs. 46.25 to Rs. 47.25, the farm quality at Rs. 48.50 to Rs. 50 and peas *dal* at Rs. 52.50 a quintal. *Arhar* moved up by Re. 1.34 with the average quality quoted between Rs. 58.94 and Rs. 60.28 and the superior stuff at Rs. 61.62 to Rs. 63.63. *Arhar dal* was traded at Rs. 69.75 to Rs. 80.25 per quintal. *Urd* moved up fractionally to Rs. 61.62 to Rs. 69.66 per quintal according to quality on the poor stock position, and *urd dal* was quoted at Rs. 75.02. Week-end prices in other sections were: *Moong* Rs. 72.34 to Rs. 77.70, *moong dal* Rs. 80.38, *massor* Rs. 61.62 to Rs. 66.98, *massor dal* Rs. 74.50 and *gram dal* Rs. 54.50 per quintal.

TEXTILES

(Concluded from page 200)

cent over the 1959 levels at which the prices were supposed to have been pegged. Even so, the Bharat Chamber's advocacy of the abolition of the Scheme is counsel of despair. It can be adopted, if one can be certain that it will bring about a quick increase in production, thereby raising the supply of cloth well above the demand. At the moment, the prospects of this positive outcome are remote. Accordingly, some controls are better than no controls. There is no reason why the Price Stamping Scheme should not serve the consumers' interests, if the defects in it were removed and if it were enforced properly? It is the failure of authorities to enforce the Scheme effectively, to modify the price schedules promptly and periodically to allow for the increases in costs, and to create consumer vigilance bodies all over India that has been responsible for the unsatisfactory working of the Scheme.

It is, therefore, gratifying to learn that the plea for complete abolition of the Scheme has not found favour with the Doraiswamy Committee. Instead, the Committee is reported to have in mind several measures designed to remove the defects in the Scheme and to enforce it properly and efficiently. A specific recommendation that the Committee is expected to make covers the system of stamping prices under which the mills will be required to stamp three prices, namely, ex-mill price, wholesale price (by adding 8 per cent of the ex-mill price and excise duty) and retail price (which leaves a margin of 10 per cent of the ex-mill price and excise duty). Currently, the retail price is being worked out by adding 18 per cent to the ex-mill price (exclusive of excise duty). Another specific recommendation that the Committee is expected to make pertains to the setting up of a Screening Committee to scrutinise complaints in respect of the working of the Stamping Scheme. While it remains to be seen whether these recommendations will be accepted, it is necessary to ensure that the ex-mill prices stamped on piecegoods should not only cover adequately the production costs but also leave a decent margin of profit to the mills. The prices fixed in respect of the majority of categories over three years ago have long ceased to be realistic, thanks to the increases in the different elements of the mills' cost structure, especially raw cotton prices, wage bill, prices of coal, chemicals and fuels, transport and taxation.

Viewed thus, it is, indeed, unfortunate that the Tariff Commission is reported to have recommended a schedule under which the cloth prices will generally be lower than even the ex-mill prices fixed in 1960. The very fact that the Commission's report was submitted over a year ago renders the recommendations out-of-date. It is ironical that the Government has not yet published the Commission's report, and that the contents of the report are being allowed to be pinched by a section of the Press in bits and parts. Nor has the Government taken a decision one way or other on the Commission's recommendations. The various increases in production costs that have occurred in the past two-three years and the prospective additional burden imposed by the implementation of the Lakdawala Committee's recommendations *must* be taken into account and the ex-mill prices be revised suitably. Otherwise, the mill industry will, sooner or later, find itself once again in a deep crisis and the Government will be compelled to take recourse to some drastic remedies to correct the situation. Such a contingency can be avoided, if the Government acts now and here.

Notice

THE GWALIOR SUGAR COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will remain closed from the 18th to 29th February, 1964, both days inclusive, in connection with the Annual General Meeting of the Company to be held on the 29th February, 1964 at the Registered Office of the Company at Dabra (Madhya Pradesh).

By Order of the Board,

For THE GWALIOR SUGAR COMPANY LIMITED,

Y. BAHADUR,
Secretary.

Note.—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities; repayments, however include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1955. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Including Defence Savings Banks Deposits upto 1954-55 F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 9 marked 'R' are not included. J—Commenced from 2nd January 1959. N.S.—Five-year price bonds were issued from 1st April 1960 and the total outstandings at the end of Nov., 1963 amount to Rs. 29.22 crores. *Fifteen-year* Cumulative Time Deposits *commenced* from June 1962—the outstandings at the end of Oct., 1963 amount to Rs. 40 lakhs. Twelve-year National Defence Savings Certificates *commenced* from 15th November 1962 and the outstandings at the end of Oct., 1963 amount to Rs. 112.22 crores. Ten-year Defence Deposit Certificates were issued from 10th November 1962—the outstandings at the end of Nov., 1963 amount to Rs. 22.51 crores.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P. Q.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I—Interim Dividend. CR.—Cum. Right. XR.—Ex. Right.

Shares :—If a company has different classes of shares—as for example : 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up' per shares.

Accounts :—Figures in the Accounts Closed column represent the months or the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

FORMULA FOR BONUS DEFECTIVE

THE performance of the Bonus Commission has been disappointing. It has confirmed the grave misgivings of employers voiced at the time the Commission was appointed. To some extent, Mr. Gulzarilal Nanda, the then Union Minister for Labour, is responsible for the extremely unsatisfactory outcome, because the terms of reference to the Commission themselves were defectively drawn up. It was for the Government to decide, as a matter of policy, whether or not the bonus element in a worker's emoluments should be linked to his performance. The defects in the present system of paying bonus had been impressively presented to both the public and the Government before the Commission was set up. It had been shown time and again that the efficient and inefficient workers, the conscientious and indifferent workers, the hardworking and lazy workers, all got the same rate of bonus, that, where bonus was made payable industry-wise, the workers of badly managed companies and soundly managed ones alike got placed on par, that bonus unrelated to performance was not conducive to improving productivity and that the system prevailing in this country was a crude one, not obtaining in any of the progressive nations in the world. The Union Labour Ministry turned a deaf ear to all these arguments and contented itself with the vague remark that there was nothing in the Commission's terms of reference to consider any alternative proposals to the prevailing method of reward for workers. Even from the somewhat lengthy summary of the Bonus Commission's recommendations circulated by the *Press Trust of India* early this week, it is not clear whether the Commission seriously considered any alternative proposals and, if it did, on what grounds it rejected them. All that is mentioned is that, in the opinion of the Commission, it would be neither desirable nor feasible "to abolish this long-standing system" or to replace it "by an annual bonus linked with production or productivity." This conclusion appals us, for it implies that there is no room for a scientific rationalisation of the present wage structure which is a product of a series of *ad hoc* decisions based on short-term considerations and expediency and under which inefficiency is placed on a par with efficiency, if not at a premium. In adopting this stand, the Bonus Commission seems to have taken the line of least resistance and one that will be popular with the mass of workers, trade union leaders and politicians for whom vote-catching methods have immense appeal even if they are not in the larger interests of national economy.

There is nothing original in the formula evolved by the Bonus Commission. It is only a refinement of the basis followed in some of the existing awards or agreements between employers and workers. What is worse, the refinement is detrimental to investors and excessively biased in favour of workers. It is also not in tune with the realities of the situation. Thus, the Commission has fixed the return on equity capital at no more than 7 per cent when even first class companies cannot raise debentures at that rate and have to pay 9 to 10 per cent on cumulative redeemable preference shares. It is true that the dividend on ordinary shares can be higher than 7 per cent, as the surplus available for distribution to equity shareholders will be a little larger having regard to the return allowed on reserves and the balance of profit not meant for workers. But the return allowed on reserves is no more than 4 per cent and of the surplus shareable between workers and investors, as much as 60 per cent is earmarked for the former and, on the remaining 40 per cent, there are many other calls such as S.P.T. (Super Profits Tax), gratuity for workers, rehabilitation allowance on fixed assets, transfers to reserves (which no prudent company can ignore) and bonus for supervisors and officers. When adequate allowance is made for all these essential provisions, the balance will not be adequate to remunerate the equity capital at a rate that will be consistent with the risks involved, the sacrifices made in the past and the waiting inevitable in the first few years of new enterprises, and sufficient to attract fresh capital in a market where the competing demands are far in excess of available savings. The differentiation made by the Commission between paid-up capital and reserves for purposes of return reflects its failure to improve upon the irrational formula adopted in the past awards on bonus. There is no justification whatever for giving reserves a lower rating than that accorded to paid-up capital. Actually, the reserves deserve to be treated higher, as they reflect the self-restraint and prudence exercised by the risk-bearing shareholders in order to safeguard the future of their companies and thereby those of workers also. In this respect, the Commission has behaved no better than the theoretical socialists who adorn the seats of power in this country. The least the Commission could have done was to follow the Tariff Commission's basis of adopting one rate (which has been 10 per cent in the case of most industries) for both paid-up capital and reserves. No wonder that Mr. N. Dandekar, who served as the employers' representative on the Bonus Commission, refused to be a party to the ill-conceived formula framed by the majority of his colleagues on the Commission.

The Commission's rationale for excluding Super Profits Tax, gratuity for workers and rehabilitation allowance for purposes of calculating the profit to be shared between workers and investors does not seem to be reasonable. The statutory rate of depreciation is inadequate in the context of high cost of plant and machinery and the need for maintaining the competitive capacity of Indian industries through prompt modernisation. It is, of course, understandable if the Commission did not want to give complete freedom to employers in this respect, lest such should be misused. But it could have allowed a certain percentage for this purpose. It must be remembered, in this connection, that the older industrial units have borrowed heavily from such institutions as the I.F.C. or N.I.D.C. and the I.C.I.C.I. for modernisation and expansion. Several of them have raised debenture capital from the market. All these loans can be repaid only from retained profits. S.P.T. and gratuity are clear statutory liabilities and ought to have been added to deductible items. It is common knowledge that the definition of super profit for purposes of S.P.T. is itself unfair and that there has been strong pressure on the Government to drop this inequitable levy.

In giving to workers the lion's share of the distributable surplus, which itself is to be arrived at on the basis of a formula quite unfair to investors, and in linking the actual bonus to individual workers to the total of both basic wage and dearness allowance, the Bonus Commission has ignored the improvements that have taken place in recent years in the workers' emoluments, consequent upon the awards of Wage Boards, enhanced fringe benefits and larger dearness allowance. Surely, the workers'

among a crucial section of employees. Managements will find this proposition unworkable and may have to make suitable adjustments in the salaries of these employees, if they cannot pay bonus out of the share of profit meant for investors. The Commission has been perfectly right in principle in not including the bonus payable to high paid supervisory and managerial staff drawing a salary of over Rs. 1,600 within the share meant for employees; only, it has set apart far too much for the latter. Accordingly, managements may have to step up the salaries of these staff too.

The recommendations of the Commission, however, are not without some redeeming features. One of them is the device suggested for ensuring a certain amount of stability in the payment of bonus in lean years also. This is sought to be done by placing a ceiling (at 20 per cent of wages and dearness allowance drawn in a year) to the bonus payable to a worker and a minimum of 4 per cent. If the surplus available to workers under the Commission's formula is more than the amount required to pay the maximum bonus, it has to be carried forward to be set off in succeeding years upto a maximum period of the next four years. Similarly, where the surplus available is inadequate to cover the minimum 4 per cent, the deficiency should be carried forward and set off against the surplus in succeeding years upto a maximum period of four years. It is, however, not clear as to what would be the position if there are surpluses or deficits after four years. Supposing a company has enough surplus left in the bonus equalisation fund at the end of four years after paying the maximum bonus in each of the four years, can that surplus be credited to shareholders? Another redeeming feature is a six-year exemption to new units. A third one is the provision that public sector units which compete with those in the private sector must also pay bonus according to the Commission's formula. Notwithstanding all this, there is no doubt that the formula has been excessively weighted in favour of employees and that its cumulative effect on the growth of investments in the private sector will be adverse. The Commission's recommendations must, therefore, be suitably modified by a tripartite body; if this approach fails, the whole question must be considered *de novo* by another, more broadbased, commission.

THE RAILWAY BUDGET

IT has been consistently good going for the Indian Government Railways since the beginning of the third Plan which will soon be entering its fourth year. In their case, the Plan involves an aggregate outlay of Rs. 1,580 crores, and the estimated capital expenditure of about Rs. 900 crores in the first three years and Rs. 360 crores proposed to be spent in 1964-65 will leave just Rs. 320 crores to be incurred in the last year. That a third of the aggregate cost of the Plan will have been met from the Railways' own resources, including the sums annually set apart for depreciation, is indeed a sound aspect of their capital budgeting. Their current finances, too, seem to be in better shape now, for the "gross traffic receipts" increased by 36 per cent from Rs. 457 crores in 1960-61 (last year of the second Plan) to Rs. 622 crores in 1963-64 (Revised Estimate). Of course, over the same period, "ordinary working expenses," too, increased by about 25 per cent from Rs. 313 crores to Rs. 393 crores. But, as against this, it must be noted that (1) appropriation to the depreciation reserve fund increased from Rs. 45 crores to Rs. 80 crores, (ii) the net revenue, out of which payment to General Revenues in lieu of the tax on passenger fares and dividend to them on account of the Railways' capital-at-charge are paid, went up by more than 50 per cent from Rs. 88 crores to Rs. 133 crores, and (iii) the net surplus or profit creditable to the development fund was also well above Rs. 30 crores per annum during most of the period. If it had been possible to achieve a measure of economy in "ordinary working expenses," the ultimate surplus might have reached a more substantial level of, say, Rs. 40 to 50 crores a year, as, in fact, it did in 1962-63 with its net profit of Rs. 42 crores. Still, the fact remains that the Railways' financial performance, judged either by the level of "net revenue" or by that of "net profit," was quite satisfactory in the last three years, as will be seen from the table on page 268, showing "receipts" and "expenditure" of Indian Railways. This table, incidentally, provides a detailed comparative picture of Railway finances since 1960-61. That the Revised Estimates for 1963-64 have placed gross and net traffic receipts, as well as net revenue and net profit, at higher figures than in the original Budget for the year may also be noted from the table.

That, in short, is the background to the Railway Budget for 1964-65, presented by Mr. H. C. Dasappa, Minister for Railways, in the Lok Sabha on the 11th instant. The Budget estimates "gross traffic receipts" at Rs. 668 crores (including Rs. 11 crores expected to accrue from the proposed two per cent general increase in the existing supplementary charge on goods freight rates and from the proposed minor adjustments in these rates), as against Rs. 622 crores in 1963-64 (Revised). Thus the estimated increase in gross receipts is about Rs. 46 crores—an increase broadly reflecting the continuing financial prosperity of the Railways. But it is rather disquieting that, in spite of this handsome increase, the estimated net surplus of Rs. 31 crores for the year will be less than the corresponding surplus of Rs. 38 crores in 1963-64 (Revised). As the expenditure chargeable to the development fund is steadily increasing from year to year in view of the greatly increased and increasing capital-at-charge, it is doubtful whether the estimated surplus of Rs. 31 crores creditable to that fund in 1964-65 will be quite adequate. This doubt arises because the Railway Minister himself has admitted that even the larger surplus of Rs. 38 crores in 1963-64 (Revised) "is just about adequate."

What expenditure items will be responsible for lowering the net surplus in spite of a big increase of Rs. 46 crores in gross traffic receipts may now be examined. The principal increases, as compared with 1963-64, on the expenditure side will be as follows:

	Rs. crores
(1) Increase in ordinary working expenses	21
(2) Additional appropriation to depreciation reserve fund ...	3
(3) Appropriation to pension fund	19
(4) Additional dividend to General Revenues	8
Total ...	51

It will thus be seen that even the increase of Rs. 46 crores in receipts will not fully cover the increase on the expenditure side. That explains why the net surplus in 1964-65 will be less than in the previous year. Of the aforesaid four items of increase, the last three are justifiable. The additional appropriation to the depreciation reserve fund is not large, considering the increasing capital-at-charge; if anything, the addition seems to be modest in the context of the increasing cost of replacements chargeable to the fund. The appropriation to the pension fund, which is being set up for the first time on the Railways, has been elaborately justified in the Railway Minister's Budget speech. This has become something unavoidable, for many Railway employees, who have hitherto preferred to continue under the Railway Contributory Provident Fund Scheme of retirement benefits, are now expected to opt for pension with its enhanced benefits in lower-rated pensions sanctioned from October 1963 and with the improvement in the family pension scheme with effect from January 1964. It has been computed that the actual cost of pensions, which at present is of the order of three crores of rupees per annum on account of the relatively few pensionable staff, will progressively rise to higher and higher levels till it reaches an amount of Rs. 38 crores per annum. Since a sum of Rs. 30 crores would need to be paid into the fund each year from now on to finance, and fully cover, liabilities on account of the ordinary, invalid and family pensions of ten lakhs of railway employees, the *ad hoc* contribution of Rs. 19 crores to the new fund seems to be a reasonable and necessary provision at this stage.

As for the additional dividend to General Revenues, the enhanced rate of 4.50 per cent (as against 4.25 per cent in 1962-63) on capital provided by the Government upto the end of 1963-64 and the still higher rate of 5.75 per cent to be paid on capital made available from 1st April 1964 would necessarily involve, in relation to the increase in capital-at-large, a bigger quantum of dividend. Incidentally, the most salutary development is the acceptance by the Railways of the Government's proposal that 5.75 per cent interest should be paid on new capital. The Railway Minister has recognised that the higher rate is wholly appropriate, considering the increased cost of raising capital and the still higher rate of interest on some of the foreign loans made available to the Railways. If the next Railway Convention Committee, which is to review the rate of dividend in 1965, applies the enhanced rate to all capital made available since the beginning of the third Plan, it will be an even more salutary development. The Railways will then be freed of the charge that they have been receiving an indirect subsidy in the form of a lower rate of interest payable by them. At the same time, a higher rate of interest on capital may make for greater efficiency and economy on the Railways on the operation and expenditure sides.

The only item in which the Railway Minister could have made an attempt to restrain the increasing expenditure is "ordinary working expenses." With greater operational efficiency and fuel economy, it should not have been too difficult to limit the estimated increase in working expenses to a figure lower than Rs. 21 crores. It is true that the increases in indirect taxes under the 1963-64 General Budget have added to the cost of materials and stores consumed by the Railways in the course of their current operations. The various staff benefits, recently sanctioned by the Government, have also contributed their share to the rise in working expenses. Even after allowing for these factors, there seems to be some scope for effecting a measure of economy through higher productivity and operational efficiency. This possibility does not seem to have been seriously explored, and the Federation of Indian Chambers of Commerce and Industry is, therefore, right in pointing out that operational efficiency is not improving. If the estimate of working expenses had been less by, say, Rs. 5 to 6 crores and if, at the same, the gross traffic receipts had been estimated a little more liberally so as to yield Rs. 5 to 6 crores more, the entire addition of Rs. 11 crores to the freight bill could have been avoided.

The downward adjustment in the classification of certain high-rated commodities and the rationalisation of coal freight, it may be noted in this connection, have been effected in such a way as to yield an additional Rs. 3.5 crores, while the general increase of two per cent in the supplementary charge on goods freight, including coal freight, is expected to yield a further Rs. 7.5 crores. As the Railway Minister has sought to revise the coal freight rates for long distances in such a manner as to make them conform more nearly to the cost of its haulage, the cost of coal to industrial consumers in areas far away from the Bihar-Bengal coalfields is bound to go up to some extent or other. The Federation's criticism is that the Railway Minister should have waited for the final report of the World Bank's team on coal transport. As this team has closely studied the coal transport problem and its related aspects, including freight rates, the Federation's criticism is not unwarranted.

In any case, the stock argument of the Railways that additional funds are necessary to augment rail capacity for moving all the traffic offered is not applicable to the present situation. The Railway Minister himself has pointed out that, while the Railways moved 18.3 million tonnes more in 1962-63 than in 1961-62 and expect to move 15 million tonnes more in 1963-64 than in 1962-63, there is considerable surplus (unutilised) capacity, particularly in respect of line capacity and specialised rolling stock designed to meet the specific needs of coal, ore and steel plant traffic. This, of course, will only be a passing phase, for the likely increase in agricultural production in the 1963-64 crop year and in industrial production in the current year and the rising trend in exports, particularly of ores, will substantially add to the volume of traffic to be handled by the Railways in the coming years. It may well be that the Railways will reach or even exceed the 1964-65 freight traffic target of 211 million tonnes, representing an increase of 17 million tonnes on the estimated traffic of 194 million tonnes in 1963-64. The Railway Minister's hesitancy to forecast confidently whether that extra traffic of 17 million tonnes will, in fact, materialise suggests that he is rather overcautious. Apparently, it is this doubt that has led to a certain under-estimation of goods traffic receipts, even as his assumption of just two per cent increase in passenger traffic over 1963-64—an assumption that does not seem to be quite valid in the context of the phenomenal growth of suburban traffic—has involved some under-estimation in coaching receipts too. All this only goes to show that the proposed addition to the freight bill could have been avoided without any detriment to the soundness of Railways' finances.

MARKET GOSSIP

Welcome Move By World Bank

FROM the point of view of India and a host of other developing nations, the World Bank's decision to liberalise its lending policies is most welcome. The credit for this goes to Mr. George Woods, President of the Bank. Exactly four and a half months ago—at the Bank's last annual meeting held on 30th September 1963—he conceded the need for improving the terms of the Bank's loans in favour of borrowers. On Friday the 7th inst., the Bank actually put into effect one of the series of liberal lending policies unfolded by Mr. Woods at that meeting. On that day, the Bank announced a $45-million loan to Columbia for financing a large hydro-electric development programme on the Nare River. The terms of the loan differ from those in vogue hitherto in three important respects. In the first place, the period of the loan is longer, 35 years, as against the maximum period of 25 years so far. Secondly, the grace period has been extended, the amortisation of the loan beginning only after five years (in April 1969 to be precise), as against the usual three years for power projects. And, finally, the rate of interest charged is distinctly lower, being 5¼ per cent (including the one per cent commission which is allocated to the Bank's special reserves), as compared with 6 per cent charged by the Bank on 20-year or 25-year loans.

The liberalisation of the terms of World Bank's loan policy is of considerable significance to the developing countries many of which are nearing the limit of the amounts they can borrow on the Bank's terms of interest and repayment, though their ability to absorb external finance remains pretty high. Since quite a number of countries are already faced with the problem of heavy service charges on foreign loans, they cannot naturally afford to go on adding to their external debt, leading inevitably to a decline in Bank's business. In a way, this was indicated by the sharp fall of 50 per cent in the new loans made by the Bank which in the year ended June 1963 aggregated no more than $449 million, as against $882 million in the previous year. Many financial experts, including the former President, Mr. Eugene Black, had warned that the Bank's operations might tend to decline because several recipient countries could not add to their external debt. This warning and the World Bank's own assessment have together inspired the move of the Bank to liberalise its loan policy.

Share Transfer Fees

Share transfer fees are now fast on their way out. The T.I.S.Co. is the latest to join the list of companies belonging to such progressive managements as Mafatlals, Jardine Hendersons, Bird-Heilgers and Parrys, which have already dropped the practice of collecting such fees from investors. The T.I.S.Co.'s decision is effective as of 10th February and has prompted Shree Niwas Cotton Mills to follow suit. Among the Birla group of companies, Texmaco and Hindustan Motors have already abandoned the practice and the Century Spinning and Manufacturing Company is expected to fall in line soon. New companies seeking listing of their shares on the Bombay Stock Exchange are now required not to charge share transfer fees.

More than a year ago, the Committee of Presidents of Stock Exchanges asked companies to drop the practice, because it had proved tedious and irritating. The amount involved is a trifle—for instance 25 nP per share in the case of the T.I.S.Co. But determining and paying it according to the different practices followed by different companies, such as per share, per transferee deed and per scrip certificate, has become very irksome for stock brokers. To companies, too, the procedure has appeared rather clumsy and confusing. Perhaps, the trouble would be worthwhile, if the income were to be sizable. But, in fact, 75 per cent of them are found to be collecting less than Rs. 2,000 per annum. Even T.I.S.Co., with the widest shareholding and fastest change in ownership, netted in only Rs. 94,000 during the year ended 31st March 1963.

In abandoning the practice, the Indian companies are following their counterparts in the U.K., where, however, the transfer fees average roughly 2s. 6d. Incidentally, in that country, every transfer means an issue of a new share certificate and not a mere endorsement on the old certificate in favour of the new buyer as is done in this country.

Now that progressive company managements have taken the lead in forgoing share transfer fees, irrespective of the income companies derived therefrom, it will be a fitting gesture from the Government if it reduces the stamp duty on transfer of shares, which is now 75 nP per every Rs. 100 worth of shares, in order to help widen ownership of companies. It is encouraging to hear that the authorities of the Bombay Stock Exchange have decided to make a plea on these lines to the Government.

Unit Trust Begins Work

The Union Trust of India has begun functioning in Bombay from the 1st of this month under the stewardship of Mr. R. S. Bhatt (Chairman), aided by Mr. V. G. Pendharkar (Executive Trustee); the inaugural meeting of the Trust's Board of Trustees was held on Tuesday the 11th inst. The primary objective of the Trust, as readers are aware, is twofold: to stimulate and pool the savings of middle and low-income groups and to enable them to share the benefits and prosperity of the rapidly growing industrialisation in the country. This twofold objective is sought to be achieved through a threefold approach: first by selling units of the Trust among as many investors as possible in the different parts of the country, then by investing the sale proceeds, together with the Trust's own funds—the Trust has an initial capital of Rs. 5 crores—in industrial and corporate securities, and finally by paying dividends to those who have bought the units of the Trust.

Since the launching of the Unit Trust is a maiden venture, a great deal of preparatory work will necessarily have to precede the actual country-wide sales of the Trust's units and the entry into the market for buying securities. But such work should not take an unduly long time. It is, therefore, gratifying to be told by Mr. Bhatt that the Trust would try to expedite these matters as early as possible. And reassuring is his statement that the sale of units would be organised in a smooth manner and that the Trust would build up a sound portfolio with a spread over a wide range of securities so as to obtain maximum return consistent with security of capital. It remains to be seen how exactly these assurances will be fulfilled. The task before this monopoly organisation is an enormous one. It is easy to list the difficulties confronting it but not the suggestion of solutions.

The income-tax and super-tax concessions in respect of dividends from unit holdings, expectations of handsome dividends and the low face value of units (not less than Rs. 10 and not more than Rs. 100) will doubtless encourage the people to invest in the units of the Trust. Much will, of course, depend on the Trust's arrangements for selling its units and the trend of equity values. In his opening statement to the Board, Mr. Bhatt said that it would be necessary to take the assistance of banks, L.I.C. and the agents for national savings scheme. One, however, wonders whether the banks and the L.I.C. offices, which are busy with their own activities, will take much interest in selling the units, unless the commission offered is worthwhile. Even so, they cannot be expected to go from door to door canvassing sales. The country-wide sales of units can be organised successfully if, besides the banks, L.I.C. and agents for national savings schemes, the Trust also appoints trustworthy agents in the various parts of the country on an attractive commission basis.

India And Sugar Abroad

There is now no doubt at all that the 3.3-million-ton sugar production target fixed for the current (1963-64) season will not be hit. Mr. Swaran Singh, Union Minister for Food and Agriculture, who was talking loudly about the successful attainment of the target, stated in the Lok Sabha on Tuesday this week that the actual output of sugar would at best be no more than 2.9 million tons. Even here, he preferred not to be categorical or assertive, for he used the words "likely to be." The figure of 2.9 million tons, incidentally, is much higher than the most optimistic estimate of the spokesmen of sugar industry, namely, 2.6 million tons. Even assuming that Mr. Swaran Singh will prove correct—a rather frail assumption—the sugar supply position is bound to be pretty tight during the remaining months of the season. The frank indirect admission by Mr. Swaran Singh that there would be a shortfall of 400,000 tons in the target fixed for the season clearly suggests that the Governments, Central and State, have not been successful in taking effective measures either to compel cane growers in the areas of sugar mills to deliver a substantial quantity, if not all, of their crop to mills or to regulate production of *gur* and *khandsari* in these regions.

The failure of the powers-that-be to learn from past experience and to create the necessary conditions for maximising sugar production—they know full well what these conditions are—cannot but be described as most deplorable, especially when vast opportunities are present to earn sizable foreign exchange through exports. It is true that there has been a further sharp fall in world sugar prices, the latest available c.i.f. London quotation for raw sugar being £77 per ton, the lowest level since early October last, as against £80 a week before and £94 four weeks before. But the fall is only temporary, as it is attributed to the resale of a cargo of raw sugar by Japan, rumours of further sales and publication of better European beet crop estimate. While there may be some improvement in the world statistical position, it is felt that the supply-demand imbalance "is almost certain to remain" and that prices "would become firmer in the not-too-distant future." India will do well to take note of this assessment and spare no efforts to achieve as large an exportable surplus of sugar as possible. The task involved is by no means difficult; only the authorities at both Central and State levels must have the will to address themselves to this task in right earnest without being influenced by political considerations.

Russia: World's Largest Soap-maker

Of all countries in the world, the Soviet Union is the largest soap-maker. In 1962, it produced more than 1.50 million tons, a quantity exceeding the combined production of 15 countries of Western Europe (1.36 million tons) and Oceania (118,000 tons), according to the latest issue of the *Coconut Situation* published by the U.N. Food and Agriculture Organisation. The data furnished in this F.A.O. publication relate to soap production in 62 countries. They show that, during the five years from 1958 to 1962, soap production in the Soviet Union steadily increased from 1,365,000 tons in 1958 to 1,513,000 tons in 1961 and exceeded that total by 150,000 tons in 1962. Production in North America, on the other hand, steadily declined over the same five years, falling from 700,000 tons in 1958 to 607,000 tons in 1961 and 599,000 tons in 1962. Production in Western Europe fell from 1,473,000 tons in 1958 to 1,380,000 tons in 1962. In the rest of the world, soap production was still generally rising in the developing countries but falling in industrialised countries such as Japan and Australia.

Explaining the different trends in soap manufacture, an official of the F.A.O. points out that the Western industrialised countries, especially in North America and Western Europe, are using more and more detergents made from synthetics, while, in the U.S.S.R., the synthetic industry has been developing only in the past few years. Although the Soviet Union's soap production figures include synthetic detergents, these are said to account for only a small proportion (less than five per cent) of the total soap production. Thus, soap production in the Soviet Union is rising, whereas that in the Western countries is falling. On a *per capita* basis, the total production of soap and synthetic detergents is currently of the order of 15 kg. in the United Kingdom, 12 kg. in the United States, 10 kg. in France, 7 kg. each in Western Germany and the U.S.S.R., and 5 kg. in Japan.

Statistics relating to the use of coconut oil and other fatty ingredients for soap, margarine and shortening in about 16 countries show that tallow and greases constitute the largest components of soap in all countries. The alternative components are coconut oil, palm oil, marine oils, soya bean oil, other vegetable oils and animal oils.

Struggle For Deposits

It is not in India alone that commercial banks are engaged in a struggle for deposits to meet the persistently rising credit requirements of their clients, for such a struggle is on in other countries too. In the U.S., for instance, commercial banks, numbering more than 13,000, are encountering stiff competition—never before, it is said, was competition so intense as it is at present—from institutions like mutual savings banks and savings and loan associations. Thus, between 1946 and 1963, the aggregate deposits of commercial banks have gone up by just 110 per cent (or $150 billion), whereas commercial paper and bankers' acceptances have risen by as much as 2,000 per cent ($9.5 billion), credit union deposits by 1,500 per cent ($7.5 billion), savings and loan shares by 975 per cent ($83 billion), deposits in mutual savings banks by 165 per cent ($28 billion) and short-term Government obligations by 50 per cent ($28 billion).

Certain aspects of the competition for deposits, along with some of the misconceptions surrounding them, have been lucidly explained in an interesting article contained in the January-February issue of *Business in Brief* published by the Chase Manhattan Bank, New York. In considering the issue of competition for deposits as between commercial banks and other financial institutions, the article has examined the viewpoints of the banking system as a whole and of individual commercial banks. An important finding of the study is that the growth of financial institutions such as mutual savings banks has, by facilitating the flow of funds through the economy, contributed to the rapid post-war increase in the velocity of circulation of money. Another important finding is that the increased holdings of such assets as mutual savings bank deposits on the part of individuals may exercise an expansionary effect on the economy by pushing consumer spending and borrowing upward. Since such pressures cannot easily be restrained by the Federal Reserve System, as it has no control over these financial agencies, the article says: "It (the Federal Reserve System) must, therefore, bear down doubly hard on commercial banks by restraining their deposit growth. It is for this reason that many observers have suggested that a more equitable and efficient system would result, if the monetary authorities were given direct control over non-commercial bank financial intermediaries."

So far as individual commercial banks are concerned, it is pointed out that what matters is not the way in which changes in competitive situation affect the financial community in general but rather the manner in which they affect their own position. The article has arrived at the following three interesting conclusions:

1. Since all the banks in the system, working individually, will tend to take similar action in response to the forces of the market, the effort to meet competition from individual savings and loan associations or mutual savings banks will lead to a more competitive structure of rates on time money generally.

2. Banks will find that a larger proportion of their deposits are going into the expensive time form.

3. The remaining demand deposits will turn over more rapidly, making them more costly.

Century's Bonus Issue

For quite some time now, a bonus share issue by the Century Spinning and Manufacturing Company Ltd. had appeared to be a possibility. It had seemed a near certainty after the Company's announcement a fortnight back of its ambitious diversification plan, as it was presumed that, before proposing a rights issue for financing the new schemes, the Directors would create the right climate for it by announcing first a bonus issue. The Directors' decision of Friday last week to offer the shareholders one bonus share for every five shares held has thus met the market's expectations as witness the spurt in the Company's shares from Rs. 692.50 to Rs. 710 in the after-close kerb deals on that day, which occurred in spite of the Directors recommending no final dividend (against Rs. 18 for 1962) for the year ended 31st December

DELHI LETTER

ISSUES RAISED BY MR. NEOGY

SEVERAL SACRED COWS INVOLVED

(From Our Special Correspondent)

NEW DELHI, 11*th February*

ON the day of the Railway Budget, which has announced *no* increase in passenger fares, it is relevant to recall the remarks of an eminent American economist on the Indian transport system. The American economist, who has made several visits to India and has ably presented the case for increased assistance, thought that the Indian Government was unnecessarily concerned over passenger traffic. According to him, the railways should make passenger traffic unpopular, instead of subsidising it from funds earned from goods traffic. The American jocularly even suggested making departure times of trains in the dark midnight or early morning hours so as to dissuade people from undertaking avoidable journey; he also wanted only wontonly brief stoppages at wayside stations. Of course, an Indian politician told the economist of the threat of reaction by violence in India which could stop any train for as long as the crowds wanted!

Mr. K. C. Neogy, until recently Chairman of the Committee on Transport Policy and Co-ordination, did not want to go to the fantastic ends urged by the American economist. But, for the past four and a half years, ever since he accepted the chairmanship of the Committee, Mr. Neogy had pressed for a study of the economics of railways so as to try and evolve a sensible and economically sound transport policy. In New Delhi's big instrument of transportation for rapid industrial development, costing has been given a back seat. After the overcentralisation and the merger of the various railways and the adoption of the single rate policy, it would be difficult now to make any sort of quick unit cost calculations. Cost and profit calculation is simple in the case of lorry traffic. On the railways, there is also a distinct disinclination to attempt costing. Specific costing on railways may be nearly impossible because of the variety of traffic and goods —as the French who have made a serious attempt have found out. The French, however, are trying to evolve an average unit cost for various types of traffic but in India, as one expert quipped to this correspondent, the average costing has been taken to its most absurd limits. The social obligations of the railways, unconnected with financial results, have gained overriding importance in this country after independence. Before independence the railways in India consisted of numerous semi-autonomous units each of which had the freedom to vary rates based on various economic and traffic considerations. Even in those days coal was treated as a special category with uniform rates. The railways today have a dominantly political role to perform, whether serving the interests of electorally-strong passenger pressure groups or lobbyists from among exporters or meeting regional needs. Apart from direct subsidies now openly given as rebates to exporters, there are cross-subsidies like the broad-gauge subsidising metre-gauge and goods traffic subsidising passenger carriage costs.

As the only non-official on the transport committee, Mr. K. C. Neogy had no doubt an unenviable task. The official members had their primary jobs, and work on the committee for them was at best a part-time excursion in which they spoke within the narrow briefs provided by the respective Ministries or Departments they represented. The States, with their autonomous highway rights enshrined in the Constitution, did not take kindly to the Committee's queries which they did not care to answer for a long time. It needed the Prime Minister's personal intervention at one stage to persuade the State Chief Ministers to instruct their colleagues to co-operate with the work of the Committee.

After spelling out the numerous difficulties in going ahead with the Committee's work in its interim report, Mr. Neogy had, been pressing upon Central Ministers for the addition of non-official economists to the Committee, so that it could explore intensively some of the economic aspects which should govern a co-ordinated transport policy covering railways, roads and waterways. Such a close investigation would perhaps have hurt many sacred cows and pricked some precepts which have become fundamental to Government planning. Anyway, the powers-that-be, even at some of the highest levels, were disinclined to let the Committee go ahead towards its logical objectives.

World Bank Comes In

The World Bank came into the picture slyly and indirectly. Way back in 1957, as the big prospective lender to the Railways, the World Bank had proposed an examination of transport policies. The Government of India, on its part, did not exhibit much enthusiasm for the Bank's suggestion; Delhi did not turn down the suggestion either. If the Government of India had accepted the Bank's offer in 1957, Indian representatives would have been on the investigating committee on a position of equality. The terms of the investigations would have been respectable and not humiliating as in the present World Bank investigation. Even a small country like Argentina has bargained successfully for equal status on the committee investigating its transport problems. The present World Bank investigation, which will not be thorough, was initiated after a backdoor entry. The original agreement was for a study of the coal freight problems.

Mr. Neogy implied in his statement last week that the World Bank's investigators had enlarged the scope of the inquiry, exploiting the vagueness of the agreement the Government signed. The Indian Government does not have an honourable status in its association with the investigating committee. The Indian representative whom the Bank has agreed to tolerate on the steering committee had to be approved as acceptable by the Bank which also *insisted* that the representative should come from the private sector. As a major creditor who is also making an almost unilateral investigation of a vital national sector, the World Bank is now in a position to lay down policies unpalatable to Delhi. If the Bank does not do it, it will certainly be not because the country's administrators played any part in preventing such an embarrassment. It is debatable whether the creditor is capable of such an act of grace. The realisation that the World Bank was making an almost parallel inquiry was naturally the last straw for Mr. Neogy. For some time, he is known to have been in correspondence with the Prime Minister and others on the sorry state of affairs.

World Trade Talks

An Asian concert on what to do at the U.N. World Trade Conference will take place early next month at Teheran, on the occasion of the annual conference of E.C.A.F.E. Mr. Manubhai Shah, Minister for International Trade, will take part in the consultations among developing E.C.A.F.E. countries on the broad strategy to be pursued at the Geneva conference. Mr. Shah may not be taking part in the E.C.A.F.E. conference proper. The Teheran meeting will take the Inter-Asian conversations a stage further from the decisions taken at a conference in Manila a few months ago.

"Away with all trade barriers to developing countries' exports"—that will be the key slogan. India is also a little impatient with the ways of G.A.T.T., which, according to Mr. Manubhai Shah, has "served the purpose for which it was formed." Mr. Shah is convinced of the need to modernise G.A.T.T. and expand its scope. There are many undeveloped as well as developed countries which have not been admitted into the G.A.T.T. club. The Soviet Union, for instance, is keen to join, although there is one school of thought that Russia may wreck G.A.T.T. Mr. Manubhai Shah does not subscribe to this point of view. If G.A.T.T. cannot be reformed, he would support the idea of a new trade organisation which will be more broad-based.

RAISING YIELD OF OILSEEDS

In view of the setback in oilseeds production during 1962-63 despite an increase in the area under cultivation, the question of raising the per-acre yield of oilseeds naturally formed the theme of the presidential speech of Mr. A. D. Pandit, Special Secretary in the Union Ministry of Food and Agriculture, at the 17th annual general meeting of the Indian Central Oilseeds Committee held at Hyderabad on Thursday last week. The drive for attaining this objective has to be two-pronged —better agricultural practices and intensive cultivation, the adoption of which Mr. Pandit emphasised. Agencies aiding the cultivator are found to have been lagging in providing the necessary credit, fertilisers and insecticides at the right time. Why and how they lagged should be studied, said Mr. Pandit, by the State Directors of Agriculture. Groundnut being the major crop, it must receive greater attention so that wide fluctuations in the aggregate oilseeds production are minimised.

The-Ford-Foundation-assisted package programme for concentrated use of all resources—technical advice, fertilisers, insecticides, etc.,—on selected areas will be extended, according to Mr. Pandit, from the present 170,000 acres in the districts of Gujarat, Maharashtra, M.P., Madras and U.P. to a million acres in different parts of the country by the end of the third Plan. This will be done in accordance with the Government's policy of greater intensive cultivation of important commercial crops.

MARKET GOSSIP

(Concluded from previous page)

1963. The rights issue is expected to follow after the budget.

The proposed bonus issue will mean capitalisation of Rs. 50.98 lakhs (including Rs. 20.62 lakhs standing in the share premium account) out of reserves aggregating Rs. 431.62 lakhs. This amount is slightly higher than the Rs. 45.88 lakhs which would have been required had the final dividend been maintained at the 1962 level. It must, however, be remembered that, whereas payment of dividend will mean distribution of the Company's resources, issue of bonus shares will result in a conservation of resources, thereby facilitating the implementation of the Company's expansion plan. The Directors' proposal is, therefore, on sound lines. It is true that the bonus issue will involve a tax liability of Rs. 6.38 lakhs, assuming that the bonus tax will not be raised in the budget. But this is an inevitable price and is worh paying, especially in view of the need for rectifying the imbalance between the Company's capital structure and its block account. Even after the bonus issue, the Company's paid-up capital (including Rs. 125 lakhs in preference shares) will rise to no more than Rs. 430.88 lakhs, as against the net block, as at 31st December 1962, of Rs. 10.09 crores.

It will be recalled that, in October 1961, the Company had capitalised Rs. 50.98 lakhs from reserves for a one-for-four bonus issue. Earlier, that is, in January 1960, it issued two right shares for every three shares held at a premium of Rs. 20 per share.

TREND OF SHARES

STEADIER SENTIMENT

(From Our Own Correspondent)

BOMBAY, 13*th February*

A SLIGHTLY steadier sentiment developed on the stock exchanges during the week under review on bear covering and renewed professional support. Steel shares, supported on prospects of decontrol towards the close of this month, and some leading speculative counters were noticeably higher. But trading was slow and not particularly exciting, as the general tendency was cautious in view of the uncertainties associated with the ensuing budget. For the same reason, higher levels attracted some mild but steady realising. Nevertheless, over the week as a whole, the majority counters closed with small gains and the market finished on a note of subdued optimism.

Favourable corporate news, prospects of decontrol of steel, the healthy technical position of the markets and, finally, the budget being still three weeks hence would appear to have been the factors which emboldened professional buyers to lend fresh support. As for the budget, the general expectations were that it would be a constructive one. This feeling gained further ground in the light of the plea made by the F.I.C.C.I. President, Mr. Bharat Ram, for a review of the tax policies in order to reduce the burden on industry. The broadening enquiry for cash scrips also contributed to the steadier sentiment. The Bonus Commission's report, limiting the reurn on capital at 7 per cent and on reserves at 4 per cent and recommending 60 per cent of the available surplus profit be set apart for workers, did not upset market men much, as they were inclined to believe that the proposals would be amended in favour of investors. Likewise, the unencouraging trend which the Security Council debate over Kashmir took for this country had also no depressing influence on market sentiment.

* * * *

Steel shares were in the limelight on Dalal Street. Both Tata Steel Ordinary and Indian Iron rose smartly from Rs. 145 to Rs. 148 and from Rs. 24.76 to Rs. 25.35, respectively, on strong support influenced by their attractive levels and prospects of decontrol of steel. After spurting from Rs. 692.50 to Rs. 710 in Friday's unofficial deals on the news of a one-for-five bonus share issue, Century turned gradually lower in the subsequent official sessions to close today at Rs. 697.50, as against Rs. 685 a week ago. National Rayon staged an impressive recovery from Rs. 417.50 to Rs. 434.50 on both bear covering and fresh support induced by expectations of better working for the year ended 31st December 1963. Bombay Dyeing, Kohinoor, Svadeshi and Standard showed, however, small gains.

The Miscellaneous section followed the general trend. T.E.L.Co. closed with a gain of five points at Rs. 296.25, Voltas of Rs. 4.50 at Rs. 273.50, Bombay Burmah of 40 nP at Rs. 61.20 and Hindustan Motors of 44 nP at Rs. 19.16. On encouraging reports about the outlook for shipping companies, Scindia recorded a further smart rise of Re. 1.04 to Rs. 15.24. Indian Dyestuff spurted by Rs. 16.25 to Rs. 337.50. A.C.C. were Re. 1.25-higher at Rs. 147.50 and Belapur showed a gain of five points at Rs. 234. In the cash section, Colour-Chem were marked up by Rs. 17.50 to Rs. 377.50, SLM Manekla1 by Rs. 9.50 to Rs. 207, Sandvik by Rs. 9 to Rs. 182 and Synthetics by Rs. 8.50 to Rs. 109.

* * * *

Leading forward shares recorded moderate gains on the Calcutta Stock Exchange. Birla Jute and Indian Aluminium were both up by 44 nP to Rs. 34.05 and Rs. 29.75, respectively. Burrakur and Guest Keen improved by 25 nP each to Rs. 16.31 and Rs. 26.87, respectively. Kesoram gained 19 nP to Rs. 27.75 and Texmaco 20 nP to Rs. 27.70.

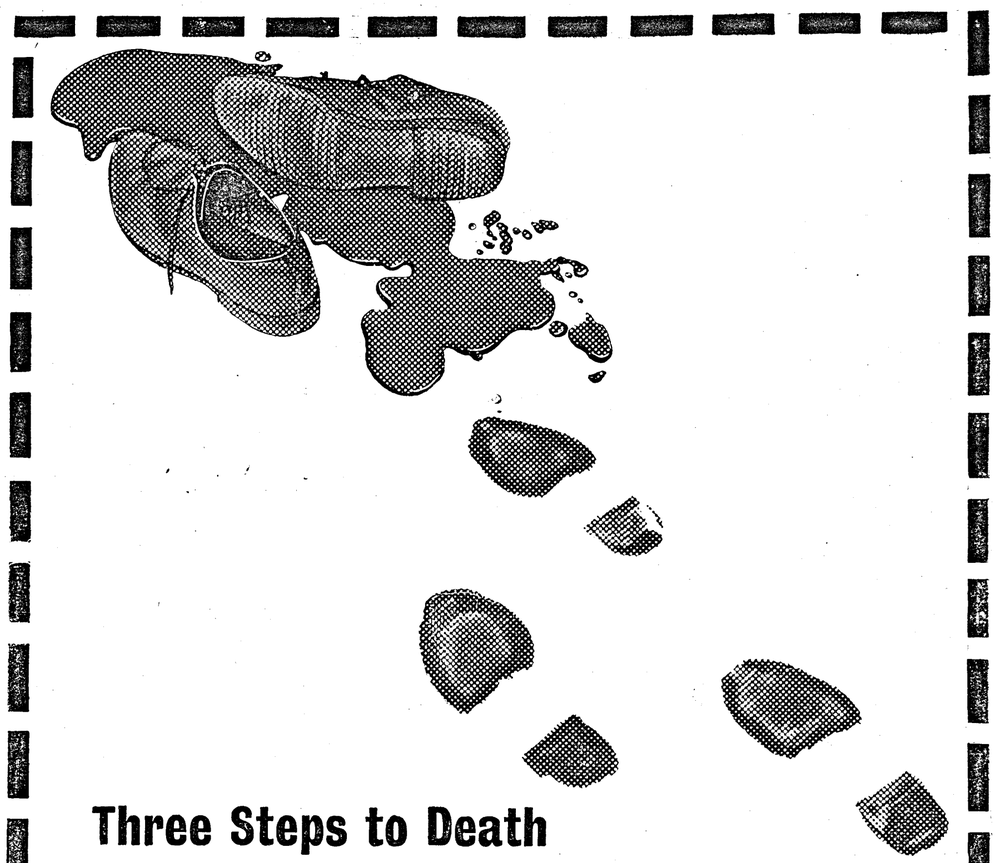
In the cash section, Jayshree, among Textiles, recorded an impressive rise from Rs. 15.37 to Rs. 16.06. Bengal Coal closed two points higher at Rs. 255. Excepting Budge Budge which dropped by three points to Rs. 137, Jute shares were steady. In the Engineering section, Burn closed four points higher at Rs. 206 and others showed small gains. Miscellaneous issues were generally well held, but National Tobacco slipped back from Rs. 12 to Rs. 11.25 and Indian Oxygen declined by 55 nP to Rs. 25.70. Paper shares were quoted higher, especially Bengal at Rs. 27.25, as compared with Rs. 26.50 last week, and Ballarpore at Rs. 16.87, as compared with Rs. 16.56.

* * * *

Equities presented a mixed show on the Madras Stock Exchange. Thus, S.I. Viscose rose by Rs. 8.50 to Rs. 141.50 and Travancore Rayon by Re. 1.25 to Rs. 25.25, and, in the Miscellaneous section, Aluminium Industries gained 47 nP to Rs. 18.87 and Mettur Chemical 40 nP to Rs. 12.80, while E.I.D. and United Breweries dropped by 25 nP each to Rs. 37.50 and Rs. 33, respectively.

INDIAN JOURNALISTS' GUIDE

The third issue of *Indian Journalists' Guide* (Chief Editor: Mr. M. R. Pai, pp. 92, price Rs. 2) which is brought out every year by the students of the Bombay College of Journalism, carries some interesting articles written by eminent names, which are primarily aimed at giving students of journalism an insight into the field of press and public relations. Mr. Frank Moraes gives a brief outline of the role of the Press in emergency, Mr. V. K. Narasimhan comprehensively reviews the prospects and problems of the Indian Press from 1963 to 1973 and Mr. Aubrey Mendieta explains what public relations is. The publication wears a neat, though not a particularly imaginative, appearance.



Three Steps to Death

1. Crossing the road carelessly
2. Walking with back to traffic
3. Stepping out on a road from behind a parked vehicle

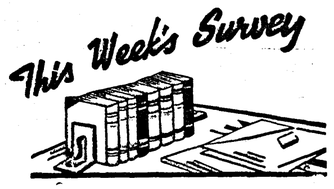
Three simple steps.
To death or disaster.
Next time
you're using the road,
watch your step.
One false move,
and you may not live
to make another.

* Cross the road carefully. Where there's a marked Pedestrian Crossing, use it.
* Where there's no pavement, walk facing the Traffic.
* Never step out on a road from behind a parked vehicle.

BURMAH-SHELL

Road Safety is a matter of life...and death

Alyars BS. 433D



COAL INDUSTRY

THERE has been in evidence for some time now the disquieting trend of a fall in demand for low-grade coals and, consequently, of a pretty large accumulation of pithead stocks. With production currently running at the rate of just 67 million tonnes, as compared with the reduced target of 90 million tonnes for 1965-66, and with about five million tonnes of accumulated stocks at the pitheads at present, the situation is rather depressing for the industry. Perhaps this is only a passing phase and the industry may soon be in a position to correct the imbalance between the demand for and the supply of low grade coals. Two developments seem to be encouraging in this connection. One is that the Union Minister for Steel and Mines, Mr. C. Subramaniam, has just told the representatives of the industry that the Government will not give any subsidy or inducement in future for encouraging the use of any substitute fuel like furnace oil and that steps would be taken to bring about such changes in the production pattern as would solve the twin problem of a glut in low-grade coals and of scarcity in higher grades of coal. It will be recalled in this context that Mr. Darab C. Driver, President of the Coal Consumers' Association of India, had pleaded some months back for restricting the production of low-grade coals with the aid of a suitable subsidy from the Government. Whether or not the Government adopts this particular approach, it may be expected to do something to balance production in relation to demand by taking into consideration the factor of quality, as it is already seized of the problem.

Any move to bring about an increase in the output of high-grade coals should involve a prompt decision on the question of coal prices. The Government, happily, is now considering the report of an official committee which has submitted its report on coal price increase. Mr. C. Subramaniam has even held out the hope that the Government would take a decision on the report before the end of this month. The industry's hope is that the price increase would be substantial enough to sustain the incentive for higher production of superior grades which involve deep and difficult mining. An increase in the price of metallurgical coal is most certainly called for as much to neutralise the cost increase and provide an incentive for modernisation as to conserve such coal for the most essential purposes. Whether the price differential between higher grades and lower grades will be made wide enough to discourage consumers, who can make do with inferior coals, from seeking to procure high grade coal, however, remains to be seen. Likewise, whether the industry's demand for increased depreciation allowance, depletion allowance and stowing subsidy will be conceded also remains to be seen, for the Minister has given no definite promise in this regard. Whatever decisions are finally taken by the Government, the industry hopes that they will be such as to restore confidence in its profitable performance and enable the collieries to achieve the third Plan target.

TRAFFIC CONGESTION IN BOMBAY

Greater Bombay, which covers a total area of 186 square miles with a population of more than 4.1 million and a third of all factories in Maharashtra State, handles about 20 million tons of seaborne cargo in a year and has as many as 80,000 vehicles on its roads. The City's misfortune is that it has only one land route to the mainland, that is, via Bombay-Thana Road with its two bridges on Thana creek. Traffic congestion in these circumstances has been an acute problem for the City. It is to relieve this congestion to some extent that the Eastern Express Highway and the Western Express Highway have been under construction at an estimated aggregate cost of Rs. 6.2 crores. With the inauguration, on the 8th instant, of the 15-mile long Eastern Express Highway running through the Bombay Corporation limits, the pressure on the Bombay-Thana Road, which feeds the three National Highways emanating from Bombay (namely, Bombay-Agra Road, Bombay-Poona-Bangalore Road and Bombay-Ahmedabad-Delhi Road), will be greatly relieved. As this Highway bypasses the congested parts of the suburbs and has several special features for facilitating uninterrupted movement, its express character may be expected to be maintained.

The 15-mile long Western Express Highway, which is intended to relieve the traffic congestion on the Bandra-Ghodbunder Road (on the western side of the Western Railway line in Greater Bombay), is yet to be completed. It will run parallel to the Ghodbunder Road, but on the eastern side of the Western Railway. When this highway is completed and the missing links of 35 miles between Ghodbunder and Manor and the Bassein creek bridge project are constructed, at an estimated cost of Rs. 3.3 crores in all, the Bombay-Ahmedabad-Delhi National Highway will constitute a second land route from Bombay to the mainland. Again, when another Thana creek bridge, recently taken up for construction, at a cost of Rs. 4.1 crores, for shortening the distance between Bombay and Poona by 14 miles, and the proposed five link roads (estimated to cost Rs. 3.3 crores) between the two Express Highways are completed in the next few years, all the three National Highways will come to have separate feeder roads, and the traffic congestion on the Bombay-Thana Road and the Ghodbunder Road will be considerably reduced too, as all through traffic will be completely diverted to the Express Highways and the existing roads will be used only for local and suburban traffic. This may not be a complete solution to the problem of traffic congestion within Greater Bombay. But it certainly represents a good beginning, though the aggregate cost of even that beginning works out to about Rs. 17 crores.

TEA INDUSTRY

It is somewhat surprising that the problems of tea industry, which is India's second largest earner of foreign exchange, evoked scant attention at the recent meeting of the Board of Trade held at Calcutta. Is such scant attention due to the feeling that, since the export performance of the industry has been quite encouraging of late, its problems today are not so pressing as they were before? If so, it is a pity. It is true that the aggregate value of tea actually exported in the calendar year 1963 was markedly higher at Rs. 132 crores, as against about Rs. 124 crores in the previous year. And it is also true that the average export price fetched by tea was higher at Rs. 6.10 per kg., as against Rs. 5.83 in 1962 to which level it had declined from Rs. 6.02 in 1961. The improvement in average price, however, was not due to any significant expansion in the quantum of exports and it was only a sympathetic reaction to the general increase in world prices. In terms of quantity, tea exports recorded only a marginal rise of two million kg. (to 216 million kg.), whereas they had gone up by eight million kg. (to 214 million kg.) in the previous year. In fact, even in Britain, India's single largest market for tea and the world's biggest tea drinking country, tea is gradually losing ground for coffee. In the London auctions, the average quotation for tea in 1963 was actually a shade lower at 4s. 2.65*d*. per lb., as compared with 4s. 5.80*d*. in 1962. Since the beginning of 1964, the trend has been downward, the mid-price of quality tea in January having fallen from 5s. 9*d*. to 5s. 3*d*. a pound and that of plain tea from 3s. 4*d*. to 3s. 2¼*d*. All these data thus indicate the stiff competition that exists in world tea markets. The problem of Indian tea is, therefore, one of quality and price as much as quantity. It was precisely to this problem that Mr. S. P. Sinha, Chairman of the Indian Tea Association, drew pointed attention when he addressed the recent annual meeting of the Association's Dooars Branch held at Binnaguri. Here are his notable observations:

"It is no use exporting more if the price correspondingly drops. Every encouragement should, therefore, be given to the production of more and more quality tea, for which there is always a profitable world market. To achieve this object, it is essential to encourage the producer to expand and to replant, and to replant not on recently uprooted areas where the soil may be tired, but on virgin soil, and with the best modern methods from tried and tested stock of high quality, and at the same time to maintain and rehabilitate his factory with the best modern machinery and equipment. At present, the Government neither allow any depreciation for tax purposes on our tea bushes nor do they allow the cost of either extensions or replanting on virgin soil as a revenue charge. This is a quite intolerable burden to place on expansion or rehabilitation, and is one of the main reasons for slow progress. One could make out a good case in the national interest for subsidising the expansion of an export industry. How much more is there a case for relieving it of penal taxation."

Replantation, replacement of old and outdated machines, and better irrigation facilities are the three "must" for successfully meeting the growing competition in world tea markets, quantitatively, qualitatively and price-wise. Recognising these "musts," the Government of India advanced a sum of Rs. 9 crores to the Tea Board for being distributed as loans to tea gardens, Rs. 5 crores for replanting and Rs. 2 crores each for machinery replacement and irrigation facilities. It is, however, disquieting to hear that only a small portion of this amount has actually been sent during the last three years. This slow progress is attributed to the Tea Board's insistence on evidence of creditworthiness before giving loans to tea gardens. The industry has pointed out that, while the creditworthy estates are able to undertake the development activities by taking recourse to their own resources, it is the poorer gardens which are unable to finance any rehabilitation programme out of their own resources and, therefore, need assistance. In regard to irrigation of tea gardens, little progress has been reported, thanks to the absence of any assessment of the water needs of gardens and the sources from which the needs could be met.

The grant of loans for housing plantation labour has also not made much headway, as the question of the security to be furnished by the tea estates for loans under that scheme has not been finalised. A mortgage on the land on which housing schemes are carried out or on the houses built under such schemes has not been found practicable, as the first charge on the fixed assets of the gardens is held by the scheduled banks advancing the working capital. There is no legal provision for a continuing second charge on the same assets and the gardens often have to enter into *pari passu* arrangements with financing institutions other than the Government. The Government, therefore, thinks that the only practical way out is to route its own housing loans through the Tea Board which already holds the second charge through the *pari passu* arrangements. Meanwhile, the Assam Government has convened a high-level conference for early next month to discuss the problems of the tea industry, with particular reference to its finance. The representatives of various institutions now engaged in tea finance (including banks), Tea Board and the industry have been invited to help the Government in evolving a long-term programme for the industry.

The series of complaints levelled against the Tea Board by the industry are now being considered by a committee recently appointed by the Assam Government. The Committee began its sittings on the 5th of this month. The findings of the Committee, it is to be hoped, will lead to a reorientation of the Tea Board's developmental loan programme so as to ensure speedier and effective improvement in the conditions of tea gardens.

BUSINESSMEN'S PROBLEMS

By a strange coincidence, the Western regional conference of the Federation of Indian Chambers of Commerce and Industry (F.I.C.C.I.) and the third quarterly meeting of the All-India Manufacturers' Organisation (A.-I.M.O.) were held at Bombay on the same day, that is, Saturday the 8th inst., albeit at different places; the two meetings began at the same time, that is, 11 a.m. And, by a strange coincidence, again, the President of the F.I.C.C.I., Mr. Bharat Ram, and the Chairman of the A.-I.M.O., Mr. Prabhu V. Mehta, were absent, but their speeches were read at the meetings. The common theme of both the addresses pertained to the factors responsible for the slow pace of economic growth in India and the measures needed to accelerate the pace.

Emerging from the speeches of Mr. Bharat Ram, Mr. Prabhu Mehta and other leading spokesmen of the business community are four disquieting factors which continue to hamper speedier industrial growth. There is, first of all, paucity of foreign exchange, inadequate supply of power and shortages of raw materials, etc. Secondly, the multiplicity of laws, controls and regulations on trade, commerce and industry, by smothering initiative and enterprise, are seriously impeding production. Administrative bottlenecks, procedural delays and ideological obsessions constitute the third disquieting factor. And, finally, there is the high rate and complex system of taxation, Central and State. How serious is the impact of these factors is evident from the persisting large-scale underutilisation of capacity in several industries, ranging from 20 to 60 per cent. Unless, therefore, energetic action is taken here and now, the overall increase of 70 per cent in industrial production envisaged in the third Plan will simply not be attained. Mr. Prabhu Mehta was quite right when he said that "the fuller utilisation of existing installed capacity alone (italics ours) will be of considerable help in achieving the target" (of industrial production fixed to be achieved by 1965-66).

There is, of course, nothing new in the above statement, inasmuch as it has been repeatedly emphasised by several others, including this journal. But only there is as yet no firm indication of concrete action. Appropriately enough, the A.-I.M.O. Conference adopted a resolution urging the Central Government to give priority in the allocation of foreign exchange to existing industries for import of essential raw materials and components, instead of creating new capacity in the same fields. The Government was also called upon (*a*) to encourage foreign equity investment in all possible ways; (b) to convert the external assistance already obtained but lying unutilised into untied credit to the extent it is possible and obtain maximum external assistance for non-project imports; (c) to maximise export earnings by granting more liberal tax concessions, facilitating fuller utilisation of the installed capacity of export industries through adequate supply of essential raw materials and components, and freely allowing expansion of exporting industrial units; and (d) work out for selected industries import substitution in respect of components, raw materials and equipment. A pertinent suggestion made by Mr. G. L. Mehta, Chairman of the Industrial Credit and Investment Corporation of India, who inaugurated the A.-I.M.O. meeting, was that a survey should be made to assess the availability and *suitability* (italics ours) of indigenous raw materials and components so as to encourage indigenous production. The word "suitability" has been italicised advisedly only to stress that the indigenous goods must compare favourably as far as possible with the imported items in respect of quality and price, as, otherwise, the cost of production will be higher and the quality inferior. Another pertinent suggestion of Mr. Mehta pertained to the development of indigenous techniques and association of technicians with projects from the very beginning. Even in cases of foreign technical collaboration, he rightly pointed out, stress should be on development of local talent and skill.

The relaxation of controls in respect of industrial licensing and capital issues and abolition of price controls over sixteen commodities were widely welcomed at the A.-I.M.O. meeting, as well as at the regional conference of the F.I.C.C.I. Emphasis was laid at both the meetings on the need for relaxing controls and administrative regulations in other sectors too. The A.-I.M.O. meeting specifically mentioned elimination of unnecessary restrictions on import licensing, speedier refund of customs and excise duties in the case of exports, and relaxation of controls on prices and distribution of cement, iron and steel, etc. It is these measures which are urgently required to speed up the rate of industrial production and exports.

TUNNEL TO LINK BRITAIN AND FRANCE

"The construction of a rail Channel Tunnel is technically possible and, in economic terms, it would represent a sound investment of the two countries' resources." In these simple words, the British Minister of Transport, Mr. Marples, announced in the House of Commons on the 6th inst. the British and French Governments' joint decision to go ahead with a rail Channel Tunnel estimated to cost £160 million. When this project is implemented, there will not only be a railway link between the British Isles and the Continent but also a road link, as the tunnel is designed to carry both forms of land traffic. Why a rail-*cum*-road tunnel across the English Channel in these days of supersonic aircraft, hovercraft and hydrofoils? This could be the natural question, particularly from the people of this country, considering that the project is estimated to cost a fabulous sum of Rs. 213.33 crores.

There are three good reasons in support of the proposal. One is that the traffic across the Channel has multiplied manifold, and undersea and surface transport has now been accepted as the basis for such traffic, as opposed to air transport. Secondly, the existing cross-Channel facilities will cost many times more on maintenance and improvement than the expense a tunnel will involve. Lastly, a tunnel will mean additional income and also saving for the British Railways.

The Continental motoring boom has resulted in the number of cars carried across the Channel more than doubling itself in the past five years, and the trend still remains upwards. The freight traffic now is five times the pre-war level, even though Britain is still not a member of the Common Market. The ageing cross-Channel facilities cannot be strained much now to cope with this steady increase in traffic. In fact, some of them—for instance Dover train ferries—are already working at full capacity at peak periods. Further, their maintenance, improvement and extension that will become necessary over the next 50 years will involve a massive investment of £1,100 million, whereas a tunnel can serve the same purpose, with better service, for £400 million. The British Railways will earn £1 million a year from the proposed tunnel and save an extra £2 million on operating costs.

In spite of these impressive reasons, nobody, except a few speculators on the London Stock Exchange, is said to have got excited over the official decision to construct the Tunnel. This is because the decision itself has not come as a surprise, for studies in recent years had clearly indicated the inevitability of constructing a tunnel as the best solution for effectively handling the problem of rapidly expanding traffic between the Continent and the British Isles. It was also evident that, as the cost of this project was pretty heavy, Governments alone could finance it. It may be recalled here that proposals made in the past by private companies did not fructify. Indeed, the Channel Tunnel project has a hoary history. It dates back to 1802, when the idea was first proposed by Napoleon's engineers. Thereafter, many unsuccessful attempts were made on both sides of the Channel. In 1830, plans were made only to be rejected because of the cost. Forty-two years later, a French Tunnel Company was formed but nothing came out of it. Military objections prevented work on the scheme of the Submarine Railway Company, which was formed in Britain in 1881 and later became the Channel Tunnel Company, after it had bored a tunnel a mile out to sea. A £32-million project prepared by the Ramsay Macdonald Government in 1930 was defeated in the House of Commons. A Channel Study Group of British, French and American interests was set up in 1957 to examine the possibilities of a tunnel, and in 1960 construction firms proposed that a bridge be built instead of a tunnel. But Anglo-French officials who examined counter-proposals for a cross-Channel link reported last year that a tunnel would cost less than half the expenditure on a bridge. The present official proposal stems from the recommendations of the Anglo-French working group.

On the question of finance, the joint working group was of the view that the magnitude of investment was so high that the raising of necessary funds might present difficulties, more especially because of the uncertainties involved in assessing the future profitability of the enterprise. Further, the likely return on share capital would be considerably less than the minimum which the promoters considered necessary for the placing of their shares. It is in the light of this recommendation of experts that Mr. Marples said: "At the present stage of the discussions, the two Governments have not yet decided whether there is a role—and if so in what form—for the participation of private equity capital in the enterprise. This, together with the fact that private finance would require Government guarantees, must inevitably affect the final decision. Whatever happened, the two Governments would fully control any operating company."

Besides financial considerations, major technical, legal and organisational problems will have to be settled before starting the project. On the technical side, another geological survey will become necessary and it will have to be decided whether the Tunnel should be a bored one or an immersed tunnel in a tube laid in a dredged trench on the sea-level. The terminal rail stations would be sited between Ashford and Folkestone (17 miles from the sea) on the English side and near Calais (just over four miles inland) on the French side, the total dis-

LONDON LETTER

LOOKING TOO FAR AHEAD

(From Our Own Correspondent)

LONDON, *8th February*

WHEN all the chairmen of the joint-stock banks had finished their speeches, they had all, with one exception—and one expression of indifference—affirmed that the big problem facing them was whether to charge more for their loans and offer more to their depositors. In the boom conditions of trade the country is now enjoying, it is clear that the cost of bank credit is not a determining factor on whether to proceed with a given investment or not (some industrialists have recently argued that it never is a determining factor); so now would be a right time to introduce such a change of policy. But whether because of the ambiguous views of the Bank of England, or their own lack of agreement on the precise degree of change, the banks are still holding back and still bemoaning the extent to which investment money is bypassing them to go direct to finance houses and building societies. Quite a number of bankers hold the view that to have 50 per cent of deposits tied up in advances is quite enough, anyway, and that by no means should any further deposits be more than half devoted to advances. Some others again take a contrary view and argue that there is no need to raise rates—more advances could be made at the cost of a reduction in investments.

Both these views are clearly limited of course: the ratio of advances could, technically, be raised; on the other hand, if the banks are to keep their pre-eminent position in British finance, they should move with the times and offer realistic competitive rates to depositors even if this in the end means some increase in the cost of the accommodation they grant. Just at the moment, the banks are a little on the defensive against hints from official quarters and from commentators that they are not being markedly progressive. Only the Midland Bank is pretending to ignore such criticism by showing that, even if it cannot be more progressive than its sister banks at home, it can make up for this by spreading its wings overseas. So it has built up a consortium with three main European banks for the development of its business both in Europe and overseas.

In spite of the view that the cost of bank credit is not a determining fact in investment, cost nevertheless governs availability. So the generally restrictive effect on business of dearer money is not in question. For this reason the Bank of England began some time ago to discuss with the Treasury whether the time was coming for the Bank Rate to be stepped up. The imminence of a General Election and of the crest of an economic boom are now driving speculation on how the economy ought to be managed and on what might happen to exaggerated lengths.

As your correspondent pointed out three weeks ago, the Chancellor is anxious to do nothing yet to imperil industrial progress; he is also determined not to follow in the footsteps of his stop-go predecessors; and, yet, there is uncertainty on what will happen if electoral speculation combines with a trade weakening of sterling to precipitate a flight from the pound. At present the talk about such a situation developing does no harm except to occupy a good deal of time, but if it continues to grow at the rate of recent weeks it could become mischievous. Too much preoccupation with a problematical future can achieve little except to hasten on the evils which might otherwise be avoided.

Gold Reserves

The January gold reserves rose by 6 million pounds. all of it attributable to a genuine current account surplus. But, as Mr. Maudling himself keeps on saying, without incomes restraint, costs will rise and, if Europe does indeed head towards recession, British exports will begin to fall and a deficit develop on the current balance of payments. Meanwhile, the U.K. goes on investing overseas beyond her true earned surplus out of the proceeds of extra earnings by the sterling area. So, in due course, sterling will become less inherently stable. If speculation against the pound does then develop in a big way, how far will the help of European bankers be available? The U.K. has, of course, its mutual support arrangement with the U.S.A. for $500 million, but will this be adequate? And there is the I.M.F.—but what will the I.M.F. do if the long-term position of sterling is not considered sound?

Such is the tenor of the pessimistic arguments. Clearly by interpolating enough "ifs" a most alarming situation can be conjured up. And even though this might be a year ahead, by brooding on it sufficiently it will advance to our own doorsteps. There is some inclination on the part of his political opponents to blame the Chancellor of the Exchequer for letting such unhealthy forebodings develop. But nobody wants to see any restriction *now*; Mr. Maudling does not want to hear the cry go up "Selwyn Lloyd again" (though oddly enough the Leader of the Opposition, Mr. Wilson is credited with being quite ready to follow an equally tough line financially, should he be put into power and find a sterling crisis on his hands) and the most that can be said against him is that he is not revealing the precise steps he would take if and when restriction becomes necessary. But it is not reasonable to criticise him for this, nor for the fact that, in spite of his pleading the unions have refused—at this week's N.E.D.C. meeting—to sign any incomes policy statement. The Chancellor is not required to reveal his armoury **(or lack of it!) in advance** of the time of using it and his difficulty with the unions is political.

But one point does emerge out of all the discussion on the future of sterling. That is that trade and commerce still—in spite of all the developments of international banking—stand to be sacrificed on the alter of hot-money speculation. It is the fear of what speculation may do to sterling that is behind the arguments about the Bank Rate and the techniques of avoiding inflation. The unfortunate Chancellor cannot be left alone to deal with his problems when (and if) they arise. He is being asked to worry about them now, because the tides of monetary movements are as strong and as beyond control as the tides of the sea. In the absence of effective international action to cope with this problem, it is being said that the Opposition is preparing a British (and possibly a sterling area) protection plan. This could be no more than a partial and temporary solution: the need for international co-operation on this issue is more urgent than ever.

SURVEY

(Concluded from previous page)

tance to be covered by the tunnel being some 44 miles.

The £80 million and odd investment on the Tunnel which will be Britain's share will have to be fitted into the five-year forward programme announced by the Government for capital outlays. Further, the Tunnel will naturally increase the attraction of the South-East England for companies wishing to export to Europe to site their factories there. This poses a direct challenge to the British Government's policy of developing North East and Scotland. The challenge can be met by linking the Tunnel with a highly efficient network of road and rail services. But this will raise the cost of the project far above the estimates for the Tunnel alone. Since building the Tunnel would take six or seven years, the project will have meaning only if it is carried out without eliminating any vital building project in the next five years. A practical issue will be whether the Tunnel should be run by the British and French Railways or whether there should be a separate operating company. The project will eventually need legislation and an Anglo-French treaty.

Reacting to the news, Mr. Leo d'Erlanger, Chairman of the British Channel Tunnel Company and a member of the Channel Study Group, exclaimed: "I am very, very glad that our proposals have been accepted in principle." The proposal has been broadly welcomed by the Export Council for Europe and the British Road Federation. But the Road Haulage Association said that it was dismayed by the decision "which seems to take insufficient account of most of the alternatives to a railway tunnel that have been put forward and is based on far too low an estimate of the amount of traffic that would use a suitable Channel link." Apparently, what the Association means is that the proposed undersea link will not be adequate to take care of the future traffic, even though it will have a capacity of 3,600 vehicles an hour in each direction and cut down the train journey from Paris to London, now taking seven hours on the *Golden Arrow*, to four and a half hours.

CAN MONETARY POLICY BE INTERNATIONALISED?

By Questor

IT is an odd thing that international financial co-operation seems to be more difficult to arrange in the field of interest rate policy than almost anywhere else. Governments may agree to peg their exchange rates, to waive their right of converting foreign currency earnings into gold, or to increase (within strict limits) their contributions to international credit-giving bodies. But on interest rates, whatever lip-service they pay to international co-operation, they reserve the right of independent action.

This is partly due to the fact that any conflict between internal and external objectives of policy is likely to be concentrated most acutely in the monetary sector. Many countries still possess neither the readiness nor the institutional machinery to employ fiscal policy as a flexible economic regulator. It is also due to the connected fact that monetary policy, in most countries, is the special preserve of the central bank. Central banks are commonly regarded as the champions of honest money against the profligacy of Governments and reserve to themselves the right of taking monetary action as their instincts instruct them. An apparent conflict between two Governments about monetary policy is quite likely to reflect a conflict, open or concealed, between each Government and its own central bank.

Something like this seems to be happening at the moment between the U.S. and Europe. Last summer, when U.S. short-term rates were rising quite rapidly, there was some apprehension in London that we should be forced to follow suit to check a disturbing movement of investment funds across the exchanges. The situation has now changed completely. Several European countries have already raised their discount rates to meet the overheating of their economies and the steep ensuing rise in prices.

None of these rises is likely to be particularly important in its effect upon the international movement of short-term funds, but Mr. Dillon has now informed Congress that any increase in U.S. short-term rates is less likely to be the result of domestic inflation than of a rise in rates in Britain or Germany. The U.S., he said, would use its influence to ensure that Europe made use of fiscal rather than monetary policy in meeting the threat of inflation.

This open hint of Government-on-Government pressure, however, conceals certain internal differences of opinion. Nobody in the U.S., for example, may pay much attention to Mr. Patman's renewed attempt to have the Federal Reserve System subordinated to the overriding aims of Government. But there are other Texans besides Mr. Patman prejudiced in favour of cheap money. And President Johnson in his economic message, though acknowledging that monetary policy should be flexible enough to meet a revival of inflation he did not expect, proclaimed that it would be absurd to stimulate the economy with tax cuts and simultaneously to cancel out the stimulus by tightening money. I am not saying that anybody is right or wrong but I am suggesting that there is probably a difference of opinion between the Treasury and the central bank. Mr. Martin, after all, has (quite reasonably) refused to give Mr. Patman's Banking Committee an assurance that interest rates will not rise if the tax cut results in inflation.

The same internal difference of opinion, or rather of instinctive predilection, exists in Britain too. The Government's expressed aim is to keep the economy growing at an average rate of 4 per cent a year. For some months past, it has been reacting vigorously to stimulus and growing considerably faster than this; reserves of skilled labour are drying up, bottlenecks are causing trouble in certain key industries, wages and prices are beginning to rise—not yet at a European pace, perhaps, but uncomfortably fast. The Government has been faced for some time past with the necessity of taking steps to moderate the rate of growth.

Its reasons for moving slowly are not entirely political—though the fact that an election is due to be held soon is certainly relevant. It is anxious that businessmen should not slip back into the way of assuming that every rise in demand is promptly followed by severe restrictions. It does not want to strangle at birth the recovery in business investment which seems likely to get under way during the next few months; and it believes that insufficient allowance may have been made in the past for the fact that booms, given time, tend to cure themselves without heavy intervention. Action will be taken, but it wants to choose its own timing delicately.

The Bank of England, however, would probably have preferred to raise the discount rate some time ago. The fact that it has not done so can be explained by the strength of the sterling exchange-rate or, more plausibly, by the fact that the Bank is nationalised and therefore bound in the last resort to give way to a determined Treasury. Mr. Dillon's broadside, fired at a time when the Treasury is beginning to share the Bank's feelings about the need for restraint, may be awkward for both of them. Everybody in London is uneasily aware of the fact that sterling may run into trouble later in the year and that U.S. co-operation may then be useful. On the other hand, nobody cares to gamble very much on the belief that the U.S. will be either ready or able to help Britain out completely if the trouble is serious. Even the Labour leader, Mr. Harold Wilson, has declared that he is ready to modify the cheap money prejudices of his party and raise short-term rates sharply if the worst comes to the worst. International co-operation, clearly, has scarcely got beyond its teething troubles.

CAR OUTPUT IN ITALY

Italian motor production has topped a million vehicles for the first time. Of this output in 1963, one firm, Fiat, alone accounted for 950,000 vehicles, 275,000 of which were exported. For the Fiat company, 1963 was a record year. Total sales reached £537 million (1,504 million dollars), £89 million (249 million dollars) more than 1962. Italy's other smaller producers, Alfa Romeo, Lancia and one or two others, helped to take output comfortably over the million mark. But severe competition in the home market, aggravated by possible over-production in the European motor industry, is now making it more difficult for the Italian industry to clear the increased output.

CENTRAL BANK FOR EASTERN EUROPE

MANY DIFFICULTIES IN ITS WAY

THE International Bank for Economic Co-operation, modelled on the West European O.E.C.D., began its operations on 1st January, 1964. The decision to establish a joint bank of member-States was taken by the Executive Committee of COMECON (Council for Mutual Economic Assistance) in the autumn of 1963—in implementation of the basic policy of the Council consisting of the First Secretaries of Party Committees and the Prime Ministers of Eastern bloc (Soviet) countries, defined earlier in the summer of 1962. This basic policy requires the introduction of new measures and organisational improvements to increase the effectiveness of the Council.

The Bank will perform a variety of functions, but it now looks as if it will not—at least in its first business year—achieve its statutory objective of stimulating trade between COMECON countries. It will also assist in the granting of joint credits to developing countries, participate in financing Eastern bloc capital projects and help establish commercial relations (the nature of which is as yet undefined) with Western countries. In the near future, it will also be concerned primarily with extending short-term credits to COMECON countries in order to achieve greater balance in the payments between the intra-bloc countries, as was pointed out by the Chairman of the Executive Committee of COMECON and the Director-General of the Polish Ministry of Finance. The Hungarian Minister of Finance, moreover, does not rule out a future expansion of its activity. But, obviously, the prerequisites in the trade policies of the member-countries necessary to enable the Bank to fulfil its purpose do not exist. The Bank's first objective will, therefore, be to create or facilitate the creation of these prerequisites.

Settlement of Trade Claims

In the past, the settlement of outstanding trade claims between Eastern bloc countries has been effected by means of overdraft credits—comparable to the 'swings' in East-West settlement. There are however two differences between the two. Firstly, while in the intra-bloc trade an annual bilateral settlement of outstanding claims is insisted upon, the East-West arrangements allow trade deficits of considerable size to persist for years. Secondly, while the former necessarily results in an exchange of goods, the swings have at times been allowed to be converted into longer-term credits.

This bilateral clearing and the necessity of an annual settlement pose serious obstacles in the way of international trade among the Eastern bloc countries. They are aware of these handicaps, since, according to their own statistics, they transacted only about 12 per cent of world trade in 1962 although their share in world industrial output was more than double—38 per cent, to be precise. The lead of the Western countries in foreign trade and in international economic co-operation and division of labour has prompted Eastern bloc countries to enhance the effectiveness and strength of their foreign trade.

To this end, the COMECON countries supplemented their bilateral trading with some multilateral clearing facilities in 1957. The system was not, however, very effective, because (i) the reciprocal non-interest bearing credits to each other were limited to 3 per cent of the value of export trade of the country concerned, and (ii) there were technical difficulties in, and strong opposition to, diversion of goods from bilateral channels into multilateral arrangement.

As a result of this failure, fresh multilateral clearing system was introduced over a year ago for all non-commercial payments. Although this system has not operated long enough to allow any judgment, it has paved the way for a multilateral clearing of *all* outstanding reciprocal claims of Eastern bloc countries. All such claims will now be converted into a freely transferable foreign exchange rouble with a gold content of 0.987412 gram as unit of account. The aim of these new arrangements is to achieve equilibrium in the balance of payments of each member-country *vis-a-vis* the Eastern bloc *as a whole* and not *vis-a-vis* each country, as under the older bilateral arrangements. The result will be that the balance of trade of each country may show claims against one country and liabilities against another. In order to achieve the long-run equilibrium, credits may be extended to member-banks on lines similar to those of the former European Payments Union.

The proposed Eastern bloc payments union is, however, different from the present European Monetary Agreement (E.M.A.), in that *all* payments transaction within the Eastern bloc area are subject to clearing arrangements, whereas, under E.M.A., the clearing mechanism is limited to those countries whose currencies *still* need some kind of support. Administration of E.M.A. clearing arrangements is entrusted to another Bank—the Bank for International Settlement—as a trustee, but the COMECON countries preferred to have their own separate Bank for the purpose.

Capital Resources

This then (the administration of multilateral clearing arrangements) is the main function of the International Bank for Economic Co-operation of the Eastern bloc. It has a capital of 300 million roubles (equivalent to $330 million). This is a modest amount, but the Bank's lending activities will be on a moderate scale and loans will have to be repaid within a year's time. During 1964, only 20 per cent of this capital will be raised, and the quota of individual countries will be fixed in accordance with the volume of their trade. The Soviet Union will contribute about 40 per cent of capital and Poland about 9 per cent.

There are, however, several fundamental doubts regarding the practical usefulness of the new Bank, as distinct from its theoretical aims, according to Dr. Kurt Wessely, Centre of Eastern Studies, Vienna, in a paper contributed to *Creditanstalt-Bankverein*, Austria. The most important of these doubts are two: how far trade among nationally *planned* economics can be reorganised as to put the new multilateral clearing mechanism to use, and how far realistic exchange rates will be evolved by adjusting the existing official rates to the real purchasing power of the currencies concerned.

As regards reorganisation of trade, the continued existence of price distortions is the main difficulty and obstacle. Principles and directives for the establishment of stable and mutually profitable prices in intra-bloc trade—laid down in 1958—have not been applied in practice so far: and this is likely to pose formidable difficulties in the way of the newly created Bank.

The difficulties encountered in establishing stable prices at an agreed uniform level among Eastern bloc countries spring from the concept of reciprocal trade as is understood there. According to the views of Eastern economists, trade between any two countries must not only be kept in equilibrium but must also be subordinatede to the national plans of the trading partners concerned. The greater the care in planning trade transactions and the closer the adherence to the preconceived national trade plans, the better for the national economy. This tying of foreign trade to bilateral and pre-arranged barter transactions—while in harmony with the principles of a planned economy—offers fewer advantages than the adherents of centralised planning are prepared to admit. Among the Western nations, having multilateral clearing arrangement and progressive removal of barriers, foreign trade has made rapid progress, and some form of international co-operation and division of labour has been achieved to the mutual advantage of all the countries concerned. So long as the Eastern bloc countries are not convinced of the advantages of subordinating their national plans and of evolving a co-ordinated area-wide uniform plan for specialisation in production and trade, no improvement in liberalisation of trade or in establishment of realistic level of intra-bloc prices is likely. The introduction of area-wide plan—the solution most in accord with principles of Socialist economies—has been talked about much and the desirability has been accepted in principle, but it has not yet been achieved. In fact, the endless discussions on the form that such centralised planning should take and the resistance by some Eastern bloc countries against such planning has delayed for over a year even such a relatively minor decision as that of establishing a joint bank.

Rates of Exchange

Just as the price reform has evaded a solution as a result of strong nationalistic tendencies, similar problems of adjusting the official rates of exchange to the internal purchasing power of currencies as well as maintaining reasonable standards of value between them have remained unsolved. So long as the official exchange rates differ substantially from the purchasing power of individual currencies at home, the introduction of genuine convertibility is ruled out in effect. Any such convertibility would either have to be based on realistic rates of exchange, or, if allowed to function freely, would soon bring official exchange rates in line with the actual purchasing power of each currency.

There is no evidence, however, that the Eastern bloc Governments are anxious to accept or introduce these changes: they are in fact eager to preserve the myth that the purchasing powers of their currencies *do* in fact correspond to the official par-values of their currencies in terms of gold.

As a result of these two obstacles—absence of realistic price-levels, and exchange rates which conform to the official plans of individual countries rather than to the needs of the Eastern bloc countries as a whole—there will be less scope for activity by the International Bank for Economic Co-operation than had been expected when the project was first announced.

Does your wife have an upturned palm?

"Gimme! Gimme! Gimme!" I hear it all the time. What is one to do? It's hard to be hard on the family! But there's an emergency on, and the pay-packet has to be stretched till the end of the month—including the payment to the life insurance people.

Sometimes I dearly feel I should like to chuck in my life insurance. But when things get too bad I look at it this way: "If my poor wife is finding it hard to manage *now* it's going to be terrible if I and my income are suddenly not there. With my policy kept going, there will be a roof over their heads, food on their table and clothes on their backs. Also money for the schooling."

My life insurance cheque goes in tomorrow. And the next time my wife extends her hand, I'll shake it firmly and give her a big smile... And that will be that!

ASP/LIC-E-34

STATE BANK OF BIKANER AND JAIPUR

The State Bank of Bikaner and Jaipur, which is the name by which the State Bank of Bikaner is called since 1st January 1963 when it took over the State Bank of Jaipur, has made encouraging progress during the year ended 31st December 1963. Its gross income has increased from Rs. 209.24 lakhs to Rs. 229.73 lakhs, out of which Rs. 173.37 lakhs (Rs. 154.93 lakhs a year before) is by way of interest and discount and Rs. 49.66 lakhs (Rs. 44.53 lakhs) is by way of commission, exchange and brokerage. On the expenditure side, interest paid has gone up modestly from Rs. 91.15 lakhs to Rs. 95.33 lakhs and so also other expenses from Rs. 24.17 lakhs to Rs. 25.86 lakhs, but staff expenses have jumped up from Rs. 83.02 lakhs to Rs. 94.38 lakhs. After allowing Rs. 3.83 lakhs (Rs. 3.41 lakhs in the previous year) for depreciation, the profit stands higher at Rs. 10.33 lakhs as compared with Rs. 7.49 lakhs a year before. Out of this profit, Rs. 2.10 lakhs have been carried to the reserve fund and Rs. 25,000 to the staff welfare fund and a sum of Rs. 3.20 lakhs has been provided as bonus to staff. The rate of dividend on the 100-rupee ordinary shares is 6 per cent per annum. The aggregate distribution by way of dividend amounts to Rs. 4.80 lakhs, leaving a surplus of Rs. 10,340 to be carried forward.

As at the end of the year under review, deposits aggregate Rs. 30.76 crores as against Rs. 30.93 crores at the end of 1962. This slight setback is in contrast to the record expansion in the deposits of banks as a whole in the past year. The deposits have been supplemented by recourse to borrowings from other banks, the year-end outstanding on which account is Rs. 1.46 lakh, as against *nil* a year before. Advances show a fairly moderate increase from Rs. 14.10 crores to Rs. 15.39 crores and, as a result, the credit ratio has expanded from 45.5 per cent to 50 per cent. Investments have also improved from Rs. 10.32 crores to Rs. 10.82 crores and the ratio of the unencumbered portion of investments to deposits has gone up from 33.3 per cent to 35.1 per cent. Cash balances total Rs. 875.80 lakhs (Rs. 840.08 lakhs a year before) and, as a ratio to deposits, stand higher at 28.5 per cent as compared with 27.1 per cent in the previous year.

Foreign exchange business handled by the Bank during the year is said to have been satisfactory. The Bank continued to handle Government cash business under an agreement with the State Bank of India. Currency chests of the Reserve Bank's Issue Department were established at eight centres, bringing the total number of these centres to 66. Under its expansion programme, the Bank opened during the year branches at eight places in Rajasthan. But it also closed some of the overlapping branches following the take-over of the State Bank of Jaipur and transferred the branches at Baroda and Jamnagar to the State Bank of Saurashtra in accordance with the policy of rationalisation of branches of State-owned banks. The year-end figure of branches therefore increased by only one from 124 to 125.

The total credit limits sanctioned by the Bank to small-scale industries aggregated Rs. 1.87 crore on 31st December 1963 and covered 207 units. The outstanding advances in these accounts amounted to Rs. 68.18 lakhs. Sanctioned limits in respect of advances to co-operative institutions stood at Rs. 14.58 lakhs at the end of the year and advances against warehouse receipts aggregated Rs. 24.25 lakhs.

Not Wilde in his wildest imagination could have discerned this similarity in attitude. But there it is—both we and our clanking Canterville ancestor, have Pure Protection in mind. We, of course, do a better job of it, FLEXIBLE ALFOIL PACKAGING—so very much superior to anything known in the Middle Ages, or for that matter in 1963. Nothing can get past flexible foil packs; not germs, not odours, not even that ingenious man the unscrupulous retailer who has but a simple thought, adulteration. That's why reputable manufacturers of pharmaceuticals, confectionery and cosmetics insist on Alfoil protection for their products.

IMBALANCE IN WORLD ECONOMY WIDENING FAST

F.A.O. EXPERT ABLY PRESENTS CASE OF DEVELOPING NATIONS

ALTHOUGH the need for solving the pressing foreign exchange problems of the hundred or so of the developing countries had come to be recognised quite some time ago, it was not until recently that these problems received practical consideration in international discussions. The chief factor that had for long hindered such practical consideration was the absence of a sufficiently comprehensive framework of reference in quantitative terms. Two years ago, however, this lacuna was made good by the U.N. General Assembly by setting up economic growth for the United Nations Development Decade. The U.N. Study, it will be recalled, assumed a hypothetical growth rate of five per cent per annum by 1970 for the total gross domestic products of the developing countries taken as a whole and, on this assumption, it estimated the group's combined imports from the rest of the world by 1970 at $41,000 million (at 1959 prices), or about twice the 1959 volume, besides the debt service charges and other net service cost amounting to $8,000 million (a rise of $4,000 million over 1959). The total thus came to $49,000 million. After taking into account the foreign exchange earnings of $29,000 million (+$8,000 million over 1959) through normal exports and inflows of foreign aid and other net capital transfers aggregating $9,000 million (+$4.000 million over 1959), the U.N. Study put the gap on both current and long-term capital accounts at not less than $11,000 million in 1970, unless new means could be found for reducing it.

An Understatement

The aforesaid projections, we are told, are being recalculated by the U.N. Secretariat and they may undergo some revisions in the light of the criticisms made by a powerful, responsible section of opinion which feels that the problem as set out in the U.N. study is an understatement and that, since the magnitude of the problem is more considerable than that assumed by the study, it requires speedy, energetic and effective global solution. To this section belongs Dr. Gerda Blau, F.A.O.'s Director for Special Studies. Dr. Blau presented two highly stimulating and thought-provoking papers on new directions of world trade at the Chatham House Conference held at Bellagio (Italy) in September last. The first paper, which inquired into some of the principal reasons for the contrast between early post-war hopes and limited achievements in the field of international commodity arrangements, was published by the F.A.O. in the same month, whereas the second paper entitled "Commodity Export Earnings and Economic Growth" was published only on the 29th of last month. Since it is the second paper which is of practical importance—the first was more or less a historical record—it is proposed to analyse here the views of the author.

The Crucial Dilemma

The crucial dilemma facing the developing countries has been impressively highlighted by Dr. Blau thus:

"The high degree of economic dependence of the underdeveloped countries on their traditional exports of a limited range of primary products should be lessened eventually by the progressive development and diversification of their economies. Meanwhile, however, the very process of economic growth and diversification of these countries will inevitably continue to depend in large measure, in any case within the course of this decade, on the possibilities of expanding earnings of foreign exchange from these very same traditional exports for which, in many cases, the outlook in major markets, namely, those of the high-income developed countries, is indifferent or poor. This is the crucial dilemma facing the Governments of the underdeveloped countries in their economic relations with the rest of the world and in the shaping of their own national development programme."

The growth problem of the developing countries is aggravated particularly by the peculiar nature of the economy of these countries. Dr. Blau has drawn attention, for instance, to the rapid rate of population increase, namely, an average of 2½ per cent a year, and says that the five per cent average rate for overall growth assumed in the U.N. Study would merely allow for a growth rate of 2½ per cent in *per capita* income. Further, mention is made of the significance of large agricultural component in the export earnings of the vast majority of underdeveloped countries which results from the fact that agricultural exports have expanded at slower rates in volume and suffered from sharper declines in prices than nearly all other products. Mention is also made of the deterioration in the terms of trade of these countries, thanks to the adverse price trends for primary products since 1954. The importance of bearing this point in mind in considering the possible effects of changes in trends and policies will be evident from the following few facts:

The traditional exports of primary products of predominantly agricultural origin account at present for 90 per cent of the combined foreign exchange earnings of countries of Africa, Asia (excluding Japan), and Latin America from their total exports to the rest of the world. These earnings include the sale of oil (mineral) which benefits only a few of the less-developed countries but accounts for more than one-quarter of the primary export earnings for the group as a whole. If oil-exporting countries are excluded, more than 80 per cent of the total primary export earnings of the developing countries are accounted for by agricultural products. Earnings from agricultural exports have increased at slower rates and suffered from sharper declines in unit prices than the exports of nearly all other products. In addition, many countries are vulnerable, because they depend on one or two commodities for a large part of their exchange earnings. Agriculture earns 94 per cent of total export proceeds for Burma and the Sudan, with rice contributing 69 per cent in Burma and cotton and groundnut 70 per cent for the Sudan. In Brazil, Costa Rica, Ecuador, Honduras and Panama, coffee, cocoa and bananas provided from 64 to 92 per cent of all exports, 71 per cent for bananas alone in Panama. In Ghana, cocoa earns 66 per cent of the total exchange. In Pakistan, jute and cotton earn 63 per cent of the total foreign exchange. In Ceylon, 98 per cent of all exports is earned by agriculture and 82 per cent by tea and rubber.

Main Policy Interests

The main policy interests of the developing exporting countries are summed up under four main heads. In the first place, these countries are obviously interested in expanding the total value, not merely the volume, of their sales. Secondly, they are interested in the average levels of their earnings over a number of years more than in short-term effects and the levels of earnings in terms of import purchasing power, not just in money terms. Thirdly, they prefer trade to aid. This, to them, is not merely a moral issue but also a practical one, since they like to be in control both of the channels for obtaining the funds and of decisions concerning the uses to which they are put. Moreover, enlarged programmes of aid, unless obtained on a grant basis, add to the burden of debt servicing charges which is already a matter of serious concern to several developing countries. And, finally, they want predictability even more than stability. There are possible ways of cushioning, at least in some measure, the ill-effects of the absence of short-term stability, but, if predictability is lacking, programming for development becomes impossible.

Dr. Blau does admit that the Governments and public opinion in their high-income importing countries have become increasingly aware of the seriousness of the trade problems of the low-income countries and that they want to help them. And he also admits that they are becoming increasingly aware of the "inadvisability" of problems of trade, aid and economic growth. But, at the same time, he notices certain conflicting forces inherent in the process of shaping policies within one country or a group of countries. Explaining these forces, the learned Doctor observes:

"The sections of Government and public opinion, which are mainly concerned with international economic relations and, in particular, with the need to assist the process of economic growth in underdeveloped countries, have come to live under the shadow of improved quantitative knowledge of the extent of poverty and of the size of the problem calling for solution. Being conscious of the pledges made by their countries for effective assistance towards the attainment of growth targets, and of the wide gulf that still remains despite large programmes of aid, they want to find *some* ways of making the attainment of these targets more probable than on present evidence it would appear to be. At the same time, they want to do so not merely by means of alternatives which, dollar for dollar, mean the least burden of social cost to the community as a whole, but they also see some considerable political advantage and convenience in choosing alternatives which are not likely to rouse too much opposition from the vocal interests in the community. As it happens, however, of the main alternatives open to them those which might seem the most preferable on grounds of economic rationale, that is, in terms of social cost to the high-income community as a whole, are also often likely to rouse the strongest opposition from *some* vocal interests in the community and the least support from others.

"This again is not an accidental phenomenon, but inherent in the structure of a high-income community which tends to become *relatively* less concerned with the possible burden of higher prices paid by its consumers (particularly since the change in import unit values is reflected only very partially in the prices paid by consumers at retail level) and more concerned with the particular interests and social rights of its producers. The latter claim that full mobility in the interests of economic adjustment need not be fully implemented in a high-income society which can afford the luxury of placing a higher value on social considerations and on the advantages to producers and workers of established forms of activity and environment."

The case of support to agriculture in the developed countries is cited as the most striking manifestation of the aforesaid phenomenon, but there are many others. Take, for example, the influence of vocal sectoral interests which oppose the relaxation of restrictions on imports of cheap manufactures from underdeveloped countries. Dr. Blau has done well, indeed, to show that the opposition is not valid. The expansion of such trade, he rightly observes, could provide a considerable net gain to the importing community and would not necessarily have to mean a hardship to domestic industries, since such imports usually represent a very small share of total production and consumption of the products concerned in the importing country. Moreover, special hardships to particular industries, in his opinion, could be met and, in some cases, are being met, by means of special programmes of national adjustment assistance.

Measures of Assistance

The F.A.O. expert has examined a few possible types of policy measures which the industrialised importing countries could adopt to help the developing countries. It is, for instance, pointed out that a reduction in agricultural protection and support in both importing and high-income agricultural exporting countries may benefit $6,000 million worth of agricultural exports, or one-third of all exports from developing countries. The incidence of this measure will naturally fall on agricultural producers whose supports are reduced. Again, if there is a regulation of the expansion of synthetic raw materials (as, for instance, synthetic rubber), it will ease trade conditions for $6,500 million worth (50 per cent) of the value of agricultural exports from the developing countries. The cost of such a measure will be borne by the entire community in the countries importing raw materials. The two measures suggested by Dr. Blau are:

Commodity agreements aimed at raising prices by setting quotas for the exports of developing countries will effect $3.300 million, or 24 per cent of total exports. These are mainly coffee, cocoa and tea for which no home-produced close substitutes are available in the high-income importing or exporting countries. The incidence of higher prices will have to be borne by the ultimate consumers.

Import levies, imposed in industrialised countries and refundable to underdeveloped exporting countries, may benefit $7,000 million worth, or 55 per cent of the total exports from the developing countries. The incidence of such a measure will be on the consumers in importing countries. It must, however, be stressed that the net benefit to the developing nations will depend on the effects of such levies on prices paid in world markets; these effects vary from commodity to commodity, depending on conditions of supply and demand. An important category concerns exports, from the less developed countries, of commodities for which lower duties are imposed in importing countries for goods in a raw state than in processed form. A number of countries, for instance, charge higher duties for vegetable oils and textiles than for oilseeds and fibres. In one way or another, such differential duties affect 80 per cent or more than $10,000 million worth of all primary exports from the developing countries.

International Action

The problem of the developing countries is so stupendous that no one set of measures can, by itself, make a sufficiently large contribution to the problem calling for solution. Dr. Blau has accordingly called for a more comprehensive framework than that provided now by "largely haphazard and unco-ordinated approaches to the problems of trade, aid and aided trade," a framework for international action and adjustment assistance in both high-income and low-income countries to narrow the estimated huge gap of $11,000 million by 1970. Some of the elements of such a programme, it is suggested, may be as follows:

1. Greatly improved international arrangements for the sharing of knowledge of national development programmes and prospects, and thus to give each country a definite understanding of external conditions to be faced.

2. Partial compensation to primary-exporting countries for losses in export earnings caused by falls in the prices of their exports.

3. International commodity agreements as a means of maintaining export earnings and also of providing an instrument of improved international programming of production, consumption and trade.

4. Lessening of obstacles to trade and consideration of special measures such as import levies in industrial countries refundable to the exporting countries.

5. Formulation of a new set of international principles to correlate trade, aid and aided trade.

This lucid analysis of Dr. Blau puts the whole problem of the trade needs of developing countries in its correct perspective. The importance of foreign trade for the economic development of developing countries, as the U.N. *World Economic Survey* 1962 aptly stated, stems from the fact that, in most of them, production for export and trade constitute a preponderant part of their total economic activity. This aspect and their heavy dependence on imports of machinery, heavy equipment and other essential goods that are strategic to lifting the levels of productive investment for accelerated economic growth must be recognised without any reservation by the developed countries, one and all. How can the developed countries expect the developing countries to pay for the expanding needs of imported supplies, unless they are also enabled to augment their foreign exchange earnings by stepping up export wares? This is the crucial question. The deliberations of the forthcoming U.N. Conference on Trade and Development (due to begin at Geneva on 23rd March and expected to last upto 15th June) and the Kennedy round of multilateral negotiations (commencing on 4th May) will, surely, be in vain, if they fail to result in the enunciation of concrete measures designed to ensure a free and full flow of manufactured goods, semi-processed items and other commodities from the developing countries into the expanding markets of the richer nations.

FEB. 4, 1954 **FEB. 4, 1964**

Ten years ago, Japan Air Lines inaugurated a new concept in international air travel—classic Japanese hospitality and service with all the modern dependability of Douglas' latest DC-6Bs.

Today with a fleet of 16 DC-8 and 880M Couriers we continue to practise this concept in 16 countries of the world.

We now fly two routes between Europe and the Orient: the Polar route to Tokyo and the 'Silk Road' serving Cairo, Karachi and Calcutta ...we offer greater service throughout Southeast Asia than any other airline...and our transPacific service between Tokyo and the U.S.A. has increased sixteenfold.

So now, on our tenth anniversary, we offer our sincere thanks to all our friends in India whose appreciation of JAL's unique service has contributed so much to our growth.

FINAL TEXTILE TRADE FIGURES

MAN-MADE FIBRE CLOTH EXPORTS RISE MARKEDLY

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, *4th February*

IT takes an exceptional December to sway the fortunes of British imports or exports to such an extent that the annual returns show any marked change from the figures already shaping themselves during the course of each year. In 1963, the pattern of overseas trade in cotton and allied goods was already well established and, despite a substantial rise in grey cloth imports during the month as compared with December 1962, the final figures were much as had been widely forecast.

From Lancashire's viewpoint the most encouraging feature was the fact that the joint exports of cotton and man-made fibre cloth were higher than in the previous year, notwithstanding a further modest reduction in shipments of purely cotton goods. The time has certainly come to recognise that combined figures, extending into the man-made fibres field, should be the criterion, as they already are when production returns are scrutinised. For a number of years, export sales of man-made fibre yarn have far outstripped those spun from raw cotton. Even the recent addition of thread in the official figures leaves the cotton sector's exports at only a quarter of those of man-made fibre yarn.

Ratio Narrows

On the cloth side, the reversal of roles is not so marked, although exporters of man-made fibre fabrics have regained some ground from the low point of 1961. The ratio has narrowed, but cotton cloth shipments are still nearly three times as much as those from the man-made fibre section. These and other comparisons are illustrated in the accompanying table below. This shows how exports generally, with the exception of man-made fibre yarns, have shrunk since the post-war peak in 1949, while imports have gathered strength, especially in the last five years.

Giving pride of place once more to the shippers of man-made fibre goods in view of their achievements, the most notable feature of the destinations is the big rise in trade with countries not shown separately by the Board of Trade. Sales to areas shown under the heading of "other foreign countries" or "other Commonwealth countries" represented just over half the total shipments of 80 million square yards. New Zealand succeeded South Africa as the chief importer, taking 6,464,000 yards, followed by South Africa with 5,881,000 yards, the Irish Republic 5,511,000 yards, Sweden 4,746,000 yards and Hong Kong 4,182,000 yards. Well down the list is the former leader, Australia, now a market of some 2,400,000 yards.

A similar situation has arisen in the sale of man-made fibre yarns abroad where "other foreign countries" have taken nearly 20 million lbs. and "other Commonwealth countries" 4 million lbs. out of the total exports of 81 million lbs. In this section, Australia, by a slim margin, remains the chief importer with 6,713,000 lbs., followed closely by Sweden with 6,647,000 lbs., the Soviet Union 5,386,000 lbs. and South Africa 5,324,000 lbs.

Cotton yarn and thread exports in 1963 were about, 1,300,000 lbs. lower at 20,604,941 lbs. Australia was the biggest taker with 4,240,000 lbs., but shipments were down by nearly 2 million lbs. Exports to Canada were over 300,000 lbs. up at 3,066,000 lbs. and those to New Zealand remained steady at 2,057,000 lbs.

Unrecognisable Returns

Compared with the fantastic export figures of 50 years ago, the 1963 cotton cloth shipments table is scarcely recognisable. Only seven outlets absorbed more than 10 million yards of fabric, led by South Africa, whose takings were 29,195,000 yards, an increase of some 2,500,000 yards.

Earnings from exports of cotton yarns and manufactures in 1963 totalled £43,845,517, as against £46,483,280 in the previous 12 months. Those from man-made fibres goods were £47,884,797, as against £38,838,643.

Cost of Imports

To complete the picture, the cost of imports of cotton goods last year was £61,394,229, as against £57,231,674, but this compared with the peak expenditure of £72,539,996 on imports in 1961. The value of man-made fibre goods imported into this country in 1963 was £23,405,371, as against £17,908,734 in 1962.

The major change in the import situation was the increase of more than 50 million yards in arrivals of foreign grey cloth. These totalled 483,486,000 yards during the year and were made up mainly of purchases from the three well-established sources within the Commonwealth. India supplied 184,627,000 yards a rise of 34 million yards; Pakistan stepped up shipments from 37,892,000 yards to 56,326,000 yards, but arrivals from Hong Kong were over 14 million yards lower at 84,744,000 yards.

Marked variations occurred in supplies sent from Europe; French purchases were almost halved at 6,658,000 yards, Portugal increased shipments from 15,352,000 yards to 26,614,000 yards, while Spain sent only 6,252,000 yards, against 13,522,000 yards. Chinese cloth imports rose from 21,937,000 yards to 36,127,000 yards, but much smaller supplies were sent from Japan at 14,627,000 yards, as against 25,722,000 yards. There was a rise of nearly 10 million yards in purchases from undesignated "other foreign countries."

Only a limited increase took place in imports of finished cotton fabric, the total being some 9 million yards higher at 152,722,000 yards. The two major suppliers were again Hong Kong with 27,217,000 yards and Belgium 25,839,000 yards. Other sources from which goods were obtained were India 16,664,000 yards, Western Germany 15,610,000 yards, Portugal 11,309,000 yards and the Netherlands 11,262,000 yards.

No Longer Despondent

Not only the employers but the trade unions in the Lancashire cotton industry are now painting a brighter picture of present conditions and future prospects. The despondency of the first nine months of last year, "which had almost permeated everyone," has given way to hope for the future, says Mr. Joseph King, Secretary of the Cardroom Workers' Amalgamation, in his latest quarterly report to members.

The reasons for the change in circumstances are varied, as is well known. Depleted stocks, the categorisation of imports, the closure of more mills leaving more trade for those remaining, are factors which account to some extent for the improved state of trade. "If some stability could be maintained for a reasonable period of time, the industry would be afforded the opportunity of improving its productivity and competitive role with further installations of the technically developed, new high speed, high productive machinery available," says Mr. King.

Textiles are major earners of Foreign Exchange— the label 'Sanforized' can help increase Cotton Exports!

Over 3500 years ago, textiles headed India's list of exports; Arab dhows carried them to Persian Gulf ports and they were sold in the markets of Greece and Rome. Everywhere, Indian fabrics were richly prized and highly priced. Today, they are still major earners of foreign exchange—and will earn more in the future as Indian mills produce increasing quantities of better quality, finished cloths and new foreign markets are tapped. The label 'Sanforized' can be of tremendous help in the sale of Indian cottons abroad. Recognised the world over, this trademark is known and trusted by millions of consumers in 49 countries as denoting a uniform standard of shrinkage control. In India, the label 'Sanforized' has helped to improve the quality and enlarge the variety of cotton fabrics. In the markets of the world, the label 'Sanforized' can be of inestimable benefit by helping to build bigger, more profitable textile exports.

'SANFORIZED' REGD TD MK

Issued by Cluett, Peabody & Co., Inc (Incorporated in the U.S.A. with limited liability) proprietors of the registered trademark 'SANFORIZED'. The trademark proprietors use the trademark 'SANFORIZED', or permit its use by authorised registered users, only in respect of tested fabric which meets the trademark proprietors' strict requirements as to residual shrinkage.

UNION EXCISE AND THE EXCHEQUER

TASK BEFORE T. T. K.

(By A Special Correspondent)

AS in previous years, the Union Finance Minister is likely to resort heavily to excise duties in his forthcoming budget for raising additional resources. Although the revenues of the Government of India in the current fiscal year have been remarkably buoyant, the increasing demands on account of development and defence will call for more taxation; and since direct taxation has already reached very high levels, the Finance Minister will have to turn to indirect taxation, particularly excise duties.

The gross Central excise revenue has recorded an enormous increase from Rs. 50.09 crores in 1948-49 to Rs. 696.32 crores (estimated) in 1963-64; and the number of commodities subjected to excise has gone up from 15 to 67 in the same period. These items include raw materials and intermediates like soda ash, caustic soda, glycerine, coal tar dyes and coal tar derivatives, zinc, glass and glassware, cement, steel ingots, pig iron and tin plate; necessities like kerosene, cotton cloth, sugar and matches; and luxuries like motor vehicles, refrigerators, rayon, etc.

The growing importance of excise to the Exchequer is clearly brought out in the accompanying table.

Mr. T. T. Krishnamachari has indicated that the excise revenue might rise to Rs. 2,500 crores per year by the end of the fourth Five-year Plan. It seems certain, therefore, that excise duties will figure prominently in the next budget.

The Finance Minister, however, has to exercise considerable caution in resorting to excise. Capital goods, intermediates and raw materials do not offer much scope, if we are to keep down the costs of industrial production. Fresh levies on articles of necessity may push up prices and cause distress to the great majority of the people. Moreover, the Finance Minister, in selecting the items, has to consider the question of cost and convenience in the collection of revenue.

The Central Excise Reorganisation Committee has, in this connection, made some suggestions for the guidance of the Finance Minister. The Committee, by its terms of reference, was not called upon to comment on the selection of commodities or the principles on which they should be made; nevertheless, the Committee has made some observations in this regard "to facilitate decision by Government."

The principles enunciated by the Committee are summed up in the following paragraph:

"It seems to us, therefore, that each proposal for a new levy should be carefully considered. The main criterion should be whether its yield would be commensurate with the administrative problems it would create. The psychological effect of bringing more and more commodities under excise levy should also not be underestimated. We suggest that, having regard to all these considerations, it would be best if the possibility of increasing the levels of existing levies is explored before the imposition of new levies is considered. We fully appreciate that it may not be possible or advisable to increase the rates of duty on some commodities, but there should be room, from time to time, for increasing the duty on others. In such a scheme, to the extent feasible, the cost of collection would, on the one hand, be maintained at a reasonable level, and on the other, the effectiveness and efficiency of the collecting agency would be greatly enhanced."

Excise duties have been used for a variety of purposes—for raising revenue, for curbing consumption, for conserving foreign exchange, for encouraging the small-scale units, etc. These objectives have not in all cases been achieved effectively and sometimes serious anomalies have resulted and production has suffered. It remains to be seen how exactly Mr. Krishnamachari is going to make his choice in the matter of levy of excise duty.

Growth of Excise Revenue

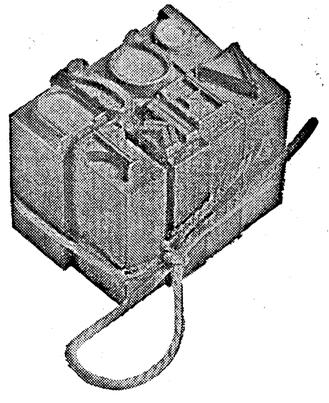
U.S. LOAN FOR BEARINGS PROJECT

The U.S. Agency for International Development (U.S.-A.I.D.) has authorised a loan of $4.30 million (Rs. 2 crores) in favour of the National Engineering Industries Ltd. of Jaipur. The credit will meet the foreign exchange cost of erecting a new tapered roller bearings plant, with an annual capacity of 1,100,000 bearings, and of expanding the capacity of the Company's existing ball-bearing and straight roller bearing plants by 2,400,000 bearings per annum. This production programme, to be implemented in collaboration with Messrs. Federal Mogul Bower Bearings, Inc., a major U.S. manufacturer in the field, is expected to result in a net annual saving of Rs. 1 crore (52 million) in foreign exchange for the country.

The loan will bear interest at the rate of 5¾ per cent per annum and will be repayable in ten years, including a grace period of two years. In order to reduce the impact of the repayment on the country's balance of payments, the loan agreement provides for the Company to make repayment in rupees on the above schedule to the Government of India which, in turn, will repay the principal to the U.S. Government in dollars in instalments spread over 40 years, including a ten-year grace period.



CAN YOU MAKE
A GOOD IMPRESSION?

Yes—on paper!
In fact, it's easy if
the paper looks sparkling...
is receptive to inks... has
high surface strength,
uniform calibre
and good dimensional

In Hospitals, Factories, Schools, Public places...

PUT AN END TO THE DANGERS OF

SUDDEN DARKNESS

In hospitals sudden darkness can be a danger to life. Emergency lighting is the obvious safeguard—and that's where Keepalite comes into its own. Keepalite is an automatic emergency lighting system employing lead-acid storage batteries which are automatically triggered into operation by the actual mains failure. Modern methods of control and 'trickle' charging mean that Keepalite equipment has outstandingly long life and requires minimum of maintenance. That's why architects everywhere specify Keepalite as sure inexpensive protection for hospitals, factories, schools, banks and public places.

REPORT OF THE AUDITORS

TO THE STATE BANK OF INDIA:

We, the undersigned auditors of the State Bank of Bikaner and Jaipur, appointed under Section 41(1) of the State Bank of India (Subsidiary Banks) Act, 1959, report on the Balance Sheet and Accounts of the Bank as at 31st December, 1963.

We have examined the foregoing Balance Sheet of the State Bank of Bikaner and Jaipur as at 31st December, 1963, and the Profit and Loss Account of the Bank for the year ended upon that date with the Accounts relating thereto of Head Office and with the Returns submitted and certified by the Branch Agents, which Returns have been incorporated in the foregoing Balance Sheet and Accounts.

We report that :—

(i) in our opinion the Balance Sheet is a full and fair one, containing all the necessary particulars and is properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank ;

(ii) where we have called for any explanation or information such explanation and information have been given to us and have been found satisfactory ;

(iii) the transactions of the Bank which have come to our notice have been within the competence of the Bank ;

(iv) the Returns received from the Branches of the Bank have been found adequate for the purpose of our audit ; and

(v) the Profit and Loss Account shows a true balance of profit for the year covered by such Account.

(INCORPORATING THE INVESTORS' ENCYCLOPÆDIA)

25 years of useful service to the investing public, financiers, economists, students and the layman—a Book with an international circulation among the people who count in economics and industry.

Financial and other particulars on more than 3,500 industrial establishments—taxation measures—incentives and relief factors for foreign collaborators—surveys of economic development—special articles by industry's leading men and persons in authority—information on licensing and collaboration, Gold Control, personal savings etc., etc.

Classification of Sections with thumb index :

Banks	Public Sector
Engineering	Shipping
Insurance	Sugar
Investment Trusts	Taxation
Jute	Cotton Textiles
Mining & Chemical	Vegetable Oil
Miscellaneous Companies	Government Securities
Paper	General Information
Plantings	and a Supplement

Illustrated with charts, maps and graphs covering industrial development.

An authoritative 3,000-page compendium circulated among leaders of industry and public life—fully revised, enlarged and re-edited every year—a publication unique in its kind and therefore a " must " on YOUR table.

Testimonials from all over the world fill a separate booklet which can be had free on request.

PRICE: Rs. 50 (postage & packing **Rs. 10** exclusive) Overseas: **£6 or $17** (post free by surface-mail)

(Owing to high cost of publication only a few copies are available and it would assist our being of service if you mail your order today)

BUSINESS NEWS FROM EUROPE

DETROIT LAUNCHES EXPORT DRIVE

REVOLUTION IN RETAIL TRADE—RUSSIA TO BUY LESS FROM GERMANY

By Our Special Correspondent

THE booming European motor industry, successful in the United States market, may soon face significant competition for the first time in the reverse direction. The success of the bigger American cars in this year's Monte Carlo rally—the leading one took second place—is thought in London to foreshadow a big drive to push direct exports of United States models in the European market.

Detroit's direct exports now take a tiny share of the market—about one per cent in Britain, perhaps a little more in continental Europe—and they seem unlikely to command a mass sale in the foreseeable future. But American sales agents in London say they will now aim specifically at establishing a foothold with compacts in the £1,500-£2,000 (4,200-5,500 dollar) class where European production is not very comprehensive.

Europe is now the world's fastest growing car market, and scope for second-car sales is increasing. In 1953, 5.7 million cars were sold in America, as compared with 1.2 million in Europe. By last year, the United States had increased its domestic sales to 7.4 million units, while European sales had risen to 5.2 million. The conditions are, therefore, considered right for an American invasion. But winning a footing in Europe will not be easy. Five of the countries concerned—Germany, Britain, France, Italy and Sweden—are, together with the United States, the world's leading car producers.

At last month's Brussels Motor Show, the American Ford Company, together with its British and German offshoots, took up a third of the floor space and exhibited 125 vehicles. Last year Chrysler, one of America's Big Three and the fastest expanding of them all, bought final control in Simca, the French producer. Chrysler were thought to be anxious not only to consolidate local manufacturing facilities inside the Common Market but also to secure, for direct sales of American models, the distribution outlets which Simca controlled.

American Motors, the comparatively small but fast-growing concern which pioneered the compacts in the United States, is also pushing its European business hard, particularly for the Rambler models. In Britain, its target is 100 distributors. In order to get into Britain more cheaply, it is exporting right-hand drive models from its Canadian plant, thereby benefiting from the lower tariffs applied by Britain on Commonwealth goods.

Twofold Aim

Behind the American sales drive is thought to be a twofold aim: to cash in on the European boom and to offset rising foreign car competition in the United States. Volkswagen, for instance, expects to sell more than 300,000 cars in the U.S. this year; Britain's B.M.C. hopes to double its sales of the MG 1100 to well over 50,000 units; France's Renault and Britain's Rootes Group also hope to sell more.

At the same time a share in the European market would help Detroit with finance. General Motors already draws about 7 per cent (about £36 million or 102 million dollars) of its net annual income from its controlling interest in Britain's Vauxhall, Germany's Opel and the Australian GM-Holden affiliate. Ford draws 9 per cent (£15 million or 43.5 million dollars) from Dagenham, Cologne and Australia. Chrysler also draws 9 per cent annually (£0.4 million or 1.2 million dollars) from its foreign holdings.

In order to make headway, the biggest obstacle to be overcome is the level of tariffs in Europe. In Britain, imported cars have to climb a 24 per cent barrier (except those from the Commonwealth, 16 per cent; or E.F.T.A., 12 per cent). Lower, but still discouraging, barriers exist elsewhere in Europe. Service centres and dealer outlets also have to be worked up. In spite of these difficulties, the Americans have made an encouraging start. Chryslers are doing well in Scandinavia and Switzerland and have been building up a dealer network throughout Europe. General Motors are reported to be selling best in the Benelux countries, Germany and Switzerland. The less "flashy" cars now being produced in America are thought likely to stand a greater chance of success in Europe; so will the growth of the two-car family.

German-Soviet Trade Falters

Trade between Russia and West Germany, which has expanded steadily since 1955 despite difficulties, looks like meeting its first setback soon. Russia has decided not to renew a three-year trade agreement she has had with West Germany. The decision is thought to have been taken because of the economic difficulties Russia herself is now experiencing as she attempts to produce more consumer goods.

In order, to relieve the pressure, she had asked West Germany to grant her credit terms longer than the usual five years. But West Germany, under strong pressure from the United States, which remains committed to a policy of not making Russia's economic path any easier, has refused to co-operate. Consequently, Russia will find it more difficult to provide in return the consumer goods West Germany is prepared to take and will have to rely on traditional Russian primary exports such as timber and (in normal conditions) farm produce.

West Germany is now the second largest European trader with Russia after Britain and her trade has prospered in spite of the "Hallstein doctrine" which precludes her entering into diplomatic relations with any country that recognises the East German regime. From a two-way total of £19 million (53 million dollars) in 1955, trade between the two countries rose to £107 million (300 million dollars) in 1961. But there was already a slight setback last year when the total for the first 11 months, at £119 million (333 million dollars), was £9 million down as compared with the comparable period of 1962.

Picking up the threads are going to be increasingly difficult as the Common Market becomes more established. Under the Market condition, West Germany will find it more difficult to take unilateral decisions after the end of 1965 on importing agricultural produce—from Russia or any other outside country.

Swiss Curb on its World Banker Role

Drastic anti-inflation plans announced in Switzerland, although in the nature of a domestic credit squeeze, are likely to have a profound impact on the country's traditional role of banker to the world. One of two draft Government decrees would ban the payment of interest on all foreign capital entering Switzerland after the beginning of this year, and bar or limit foreign investment in Swiss equity, real estate and mortgage securities. Another decree would limit all but essential building—and, by implication, halt the huge influx of foreign workers who now make up nearly 30 per cent of Switzerland's labour force.

The importance of the first measure, interpreted as a specific move to shut out foreign capital, is that these funds have lately provided a considerable and fast-rising proportion of the small Swiss economy's money supply. But the influx is now too great to be absorbed by relending for domestic investment. The resultant cheap money situation is leading not only to serious profligacy in capital, particularly building, expenditure—among other things attracting the tide of foreign labour—but also to an import boom, payments difficulties and general overheating of the economy. Cost of living in Switzerland increased by more than four per cent last year and is still rising at about that rate, and 1963 ended with a record foreign trade deficit of at least 25 per cent.

Swiss central bankers, on the ground that the economy is too small to support the franc as an international currency, have been loth to take the course normally adopted by a major money market with a flush of funds; namely to relend abroad. The National Bank's unease on this score was already shown last year when it expressed displeasure that an international loan floated outside Switzerland was denominated in Swiss francs. The present harsh measures are considered the only alternative to this course, after following the failure of voluntary schemes of credit and loan restraint over the past year or so.

The Shops Get Larger

Spurred on by rising consumer demand and the need to keep down overheads, a widespread movement towards larger shops and stores is gaining ground rapidly in Europe. This movement, slow to take hold outside Britain in the decade after the war, is now universal throughout Continental Europe. It is especially marked in West Germany where there has been a rapid increase in the volume of sales by large department stores and supermarkets. Between 1958 and 1962, the volume rose by 41 per cent. In 1961-62 alone it rose by 9 per cent.

"Large-store sales in France and the Netherlands rose by 32 per cent in the five years and by 6.5 and 5.5 per cent, respectively, in 1961-62. Belgium, still short of supermarkets, lagged behind, with a growth of 14 per cent in the five-year period and 1.5 per cent in 1961-62. Germany's lead is further emphasised by the number of supermarkets it now has. There is a supermarket there for every 2,300 people, as compared with one to every 22,800 in Belgium.

Total turnover has also been rising rapidly. In Germany, the index of all retail turnover stood at 159 in 1960 (1954 equals 100) and 188 by the end of 1962. By November of last year, it had leaped to 223. This figure masked an even sharper rise in household goods and clothing, increasingly the province of the large multiple and department retailer, where the indices were 262 and 238, respectively.

In Britain, weekly turnover by multiple retailers rose by seven per cent in the year to November 1963, that by independent retailers by only three per cent. The increasing divergence between the performances of the multiples and the independents is particularly marked in food, where the chains and department stores gained nine per cent, as against the small shops' three per cent; and in durables, where the gains were 11 and five per cent respectively. European business now reports a very similar trend in many parts of the Continent.

In France, department-store turnover last year exceeded that of all other shops and sales rose twice as fast as in any other type of shop. Last year, 116 new supermarkets were opened, as compared with 72 new ones in 1962 and 86 in 1961. The share of the supermarkets in total turnover is still modest—£200 million (560 million dollars) which represents only 2.5 per cent of the food trade. There is plenty of room for expansion in France, in Italy, where the largest chain has only 93 shops, and in Switzerland. In Germany, department store chains and retail co-operatives are taking an increasingly larger share of the market and last year the largest chain store increased its turnover by some 10 per cent above the £200 million of 1962, which was itself an 11 per cent rise on 1961.

Internationalisation

Another future trend looks like being more internationalisation in shopkeeping. A Belgian store, for instance, has opened a branch in Paris and half a dozen others in the rest of France. A British tailoring chain is opening two shops in Paris and has acquired supporting manufacturing facilities in France. A further possibility is for a chain retailer or producer to arrange outlets for its goods through an existing chain in another country. This has already happened with a major British store which markets certain lines through Italy's largest chain.

As stores grow larger, it is also likely that there will be a different emphasis on the goods they sell. Certain lines, such as radios and television sets, are reaching saturation point. But, in each country, there are lines of goods that are moving very slowly at the moment yet could easily become the normal "domestic appliances" of the future. Growth goods are likely to include tape recorders, movie cameras, typewriters, electric floor polishers, electric toasters, and dishwashers. All these goods, according to a recent survey, are only possessed to a very small degree throughout the Common Market and Britain, as compared with ownership of them in the United States.

Other domestic appliances, long normal in American homes, are not very much in evidence in some countries. For instance, vacuum cleaners are only found in seven Italian homes in every 100 and 40 Belgian homes. West Germany has a transistor set in only 12 per cent of homes and the Netherlands in 16 per cent. Italy is also short on washing machines, where they turn up in only 8 per cent of households.

Turkey's Plan in Peril

After only a year, Turkey's Five-year Plan is in danger because of the country's apparent inability to check a rapid rise in imports. The trade gap widened to £229 million (640 million dollars) last year, as compared with £86 million (240 million dollars) in 1962 and £24 million (69 million dollars) in 1958. Strenuous efforts to increase exports and investment have been endangered by this rise. But, in spite of measures to restrict imports, it is expected that this year's gap will be at least as much as 1963's.

The guarantees which have to be lodged against import licence applications have been raised by a half to 30 per cent for "quota" goods and by larger amounts for other, less essential imports. At the same time, a renewed drive is being made to sell more abroad and to cover the deficit with invisible earnings, though not with conspicuous success.

Turkey is troubled by a rapidly increasing population (3 per cent a year), poor agriculture and political instability. If it is to finance a £2,365 million (6,620 million dollars) investment programme by the end of the Plan in 1967, it will have to undertake fiscal reform, curb imports more severely and stimulate production. None of these, on present showing, will be easy.

In the first half of 1963, Turkey's exports were running at an annual rate of £124 million (348 million dollars), £12 million (33 million dollars) less than in 1962. Only with Italy was there a favourable trade balance in the first eight months of last year. A big drive is now on to attract more tourists. The reserves, supported by aid, have dropped only some 14 million dollars to 213 million in the last year. But they are more than 60 million dollars below the 1958-61 average.

West Germany Excelled by Japan in Cameras

Japan, photographic industry of which has been making its biggest-ever foreign sales drive, is confident that it has now overtaken West Germany as the world's greatest exporter of cameras. Final 1963 figures will not be available for some time, but Japanese exporters are almost certain that the drive has paid off. By September, exports were running at an annual rate of £20 million (56 million dollars) comprising 1.7 million units, as compared with sales of £16.4 million (46 million dollars) made up of 1.4 million units in the whole of 1962.

Estimates are that sales will have risen by 20 per cent in 1963. This is only just over half the previous year's rise (38.4 per cent), but it would have been enough to have overtaken Germany. Japan's biggest market in Western Europe has now become West Germany itself; at least, three major Japanese firms have made a concentrated attack on this market during the year. But the rest of Europe has not been ignored and sales drives have been held in Belgium, the Netherlands, Sweden and Britain. The result in Britain has been to push Japanese camera sales there up dramatically. At the end of October, sales, at £3.1 million (8.7 million dollars), were almost 50 per cent higher than during the whole of 1962 (£2.2 million—6.2 million dollars).

Two factors have been behind this sales drive: home demand has started to contract and sales resistance has been encountered in America for the first time. The United States has always been the major market for Japanese cameras since it started exporting seriously in 1953. In 1962 some 45 per cent of all exports went there. But this is believed to have fallen by as much as 5 to 10 per cent in 1963 and Europe has now almost certainly replaced America as the Japanese photographic industry's major growth market.

Russia Claims Perennial Wheat

Russian scientists claim to have developed a new wheat strain for planting all the year round. Following intensive tests over the past two winters, Russian scientists say that the new strain represents a real break-through. So far, they claim, no country has developed a really winter-resistant single year wheat. But the new wheat has not so far given output per acre comparable to other strains though Russian scientists expect to boost its yield in the near future. In any event, the new wheat is expected to play a prominent part in developing production in the colder north-eastern part of the Soviet Union.

Bigger West German Farm Subsidies

West German Government subsidies to farmers increased sharply last year, it is officially announced in Bonn. Total subsidies, at £300 million were 14 per cent above the previous year's total of £263 million. This was a much faster increase than the total West German Government subsidy bill which reached a total of £2,000 million last year, 10 per cent above the 1962 level. Nor are there any signs that subsidies to West German farmers, who are among the least efficient in Europe, will be reduced significantly in the near future. An important factor is likely to be the interim arrangement for Government-paid, Common Market-financed support for German cereals farmers who will receive lower prices when the Market's common grain policy comes into operation.

* * * *

European butter output has fallen to well below the normal seasonal level. The fall is most marked in the main butter exporting countries—Denmark and the Netherlands—and total West European production in the final quarter of 1963 shows a three per cent fall on the comparable period of the previous year. So far, however, lower output has had little effect on prices mainly due to increased supplies from Eastern Europe, the United States and Australia. Higher French milk output is also helping to keep prices down. Only Belgium is experiencing rising prices and in France and Italy prices have even fallen a little below normal. Another major factor in the relative stability of the European butter market is stagnating demand in several countries due to higher ruling prices since 1961. Last year, West European butter sales rose by only a marginal one per cent compared with four per cent during 1961.

* * * *

Norway's merchant fleet, recovering its pre-war position as the world's third largest, increased last year by a net figure of 157 ships totalling 1.7 million tons. A feature of current expansion is the exploitation of world demand for tanker and other specialised tonnage. It is announced in Oslo that Norwegian fleet acquisitions in 1963 included 44 tankers of 911,000 tons and 34 bulk carriers of 556,000 tons. At the start of the year Norway's fleet consisted of 2.836 ships totalling 13.64 million tons. Almost half the total tonnage—6.92 million tons—comprised tankers, though they made up only about a sixth of the total number of ships—528. New ships which joined fleets in the year came to 2.5 million tons, the largest amount of new tonnage ever delivered in a single year. The extent to which the industry is booming can be seen from the fact that 106 ships were sold abroad during the year and also that orders were placed for new ships totalling 4.1 million tons d.w., of which tankers accounted for nearly 75 per cent. This means that there are now orders for about 7 million tons of vessels including two 130,000-ton tankers ordered late last month by Sigval Bergesen from Japan. The average size of the tanker on order is 57,000 tons and of the dry-cargo ship 19,000 tons.

Notice

MADURA MILLS COMPANY LIMITED

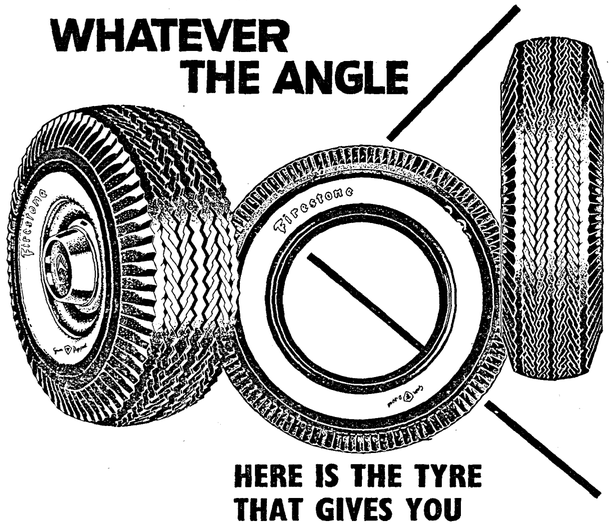
Registered Office:
New Jail Road, MADURAI

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Company will be held in Pandyan Building, West Veli Street, Madurai, on Wednesday, the 25th March, 1964, at 3.30 p.m. The Share Transfer Books will be closed from 21st February to 20th March, 1964 both days inclusive.

1. All persons holding shares on blank transfers should immediately arrange to have the shares registered in their own names, as the Company will pay any dividend declared only to the person(s) in whose name the share stands as on 20TH MARCH, 1964.
2. Shareholders desiring dividends to be paid to Banks or other Mandatees should register the mandates with the Company before 21st February, 1964.
3. Intimation of any change of address should be given to the Company immediately.

A. & F. HARVEY LIMITED,
Managing Agents.

MADURAI,
30th January, 1964.



NEW PRODUCTS AND PROCESSES

Computer Controls Steel-making

A NEW computer called OSCAR (Oxygen Steel-making Computer and Recorder) has been developed in Britain by Associated Electrical Industries (A.E.I.) Automation Ltd. for more accurate control of oxygen steel-making processes. From input data on the required weight, analysis and temperature of steel and from other data relating to plant variables, OSCAR, it is claimed, calculates and commands the correct charge-weight of scrap, ore, lime and oxygen. There are two types of OSCAR computer, analogue and digital. The analogue computer acts as an efficient calculating machine and provides the operator with controlling data more quickly and accurately than is possible with the tables and graphs now used. The digital computer, on the other hand, can automatically control the whole process from data fed into it by sensing devices.

Glass Hypodermic Syringe

The traditional type of hypodermic syringes has been in use for a great many years now. It consists of a glass cylinder with a soldered metal tip, a top and a metal piston. Naturally, details of construction have been continually perfected and technological developments have made it possible to improve numerous manufacturing operations without however the basic model having been modified to any fundamental extent. But it has long been known that syringes of this type present certain defects inherent in their design. An interesting novelty in this field was introduced in 1954 when a Swiss firm launched on the market a cylindrical syringe with an interchangeable glass. Today, another Swiss firm has recently produced the first all-glass hypodermic syringe with a removable tip, called "Lubrix." The main advantage of this innovation is its strength. In addition, the tip and the tube being two separate parts, in case of damage, only the tube need be replaced, and that at a very moderate price. Owing to the precision of the different parts, it is quite unnecessary to number the tubes and the pistons as previously. "Lubrix," it is claimed, is easy to clean and the risks of contamination are very small owing to the fact that there is no soldered joint. The Teflon tip with a metal cone has been chosen, thanks to its non-adhesive property. Finally, all normal methods of sterilisation are possible: hot air up to 200°C. the syringe should be sterilised without dismantling.

Multi-contact Plug System

Everyone knows just how indispensable electric plugs are nowadays. But previously with this system it had never been possible to go much above a nominal strength of 10 A. Owing to the increased power of so many machines, it had become vitally important to design a system capable of handling higher strengths. The problem has now been solved by a Swiss firm, with its Multi-contact system. The socket consists of a sleeve cut out of a brass bar. This sleeve comprises a series of contact wires forming a slightly convex cylindrical envelope. The elasticity of the wires guarantees excellent contact with the plug on a multitude of lines distributed over the whole surface of the contact pin. The smallest model, with a contact pin measuring 2 to 3 mm in diameter, is designed for connecting currents up to 25 A. The models with contact pins 35 mm in diameter can handle up to 1,000 A, while certain models with pins 100 mm in diameter are designed for currents up to 4,000 A. The increased temperature corresponding to the abovementioned strengths of current does not go above 45° C for standard type plugs. Certain models however are designed to stand temperatures up to 200° C.

Portable Electric Power Units

A Kr. 7 million (£500,000) order for an undisclosed number of portable electric power units has been placed by the Swedish Army with Hägglund and Söner, mechanical and electrical engineering company. The petrol driven engine units will principally be used for feeding radio equipment. Weighing only 75 kg., the portable power plant can be carried by two men. It is designed for both A.C. and D.C., the latter principally intended for charging accumulators. In A.C. operation the plant has a maximum rating of 1.5 kVA, at simultaneous load for A.C. and D.C. the rating is 1.35 kW. Engine and generator are direct-coupled and the unit, including petrol tank, is enclosed in a frame of light steel tubes for protection in handling and transport. The lower part of the frame is shaped as two runners to facilitate transport. The plant can be started up both manually and electrically, in the latter case also by means of remote control.

Spongy Metal for Seals

Spongy metal coatings are used by the Wall Colmoney Corporation of Detroit, U.S., as a seal for rotating parts which because they warm up in use, expand. The sponge is an alloy of iron, chrome and nickel which can be deposited in layers up to ¼ inch thick. It is then treated to produce good anti-friction qualities. The coating was developed primarily to seal the blades of gas and steam turbines and high temperature pumps. As the blades expand, the sponge is compressed and the seals remain tight. The sponge coating can operate at temperatures up to 2,000 degrees F.

Safety Container for Solvents

Small containers for carrying inflammable solvents, such as those used for degreasing, are now being made by Ets. Butin-Gillet, Rue des Martyrs, Paris, 9e. They are meant for use in place of buckets or open pans, which are often used for the odd cleaning or degreasing job and which create a fire hazard. The containers hold four litres, but only a small quantity of the solvent is available for use at any one time. This is contained in a small oval well at one end of the container and into which a sponge or rag can be dipped. If the can is overturned only the contents of the well are spilled. Emptying of the can is by means of an air valve which has been designed so that it cannot be accidentally operated. The container is especially suitable for use in confined areas.

Dual-purpose Roof Ventilator

A new roof ventilator is said to be the first to provide fully weatherproof ventilation in normal use and, in the event of fire, an unobstructed, funnel opening for the exhaust of smoke and heat. The ventilator, developed by the Colt Ventilation and Heating Ltd., Surrey, England, in collaboration with the Department of Scientific and Industrial Research, can be controlled pneumatically or by cable.

Stockings Made of Polypropylene

Polypropylene fibre is being used for women's stockings by the National Plastics Products Company, of Odenton, Maryland, U.S. The Company claims that it is the first new fibre in sheerhosiery since the introduction of nylon. The company uses a 15-denier monofilament fibre for the leg yarn and 50-denier multifilament yarn in tops, heel and toe. The stockings are intended to be sold for $1.65 a pair.

Nail Driver

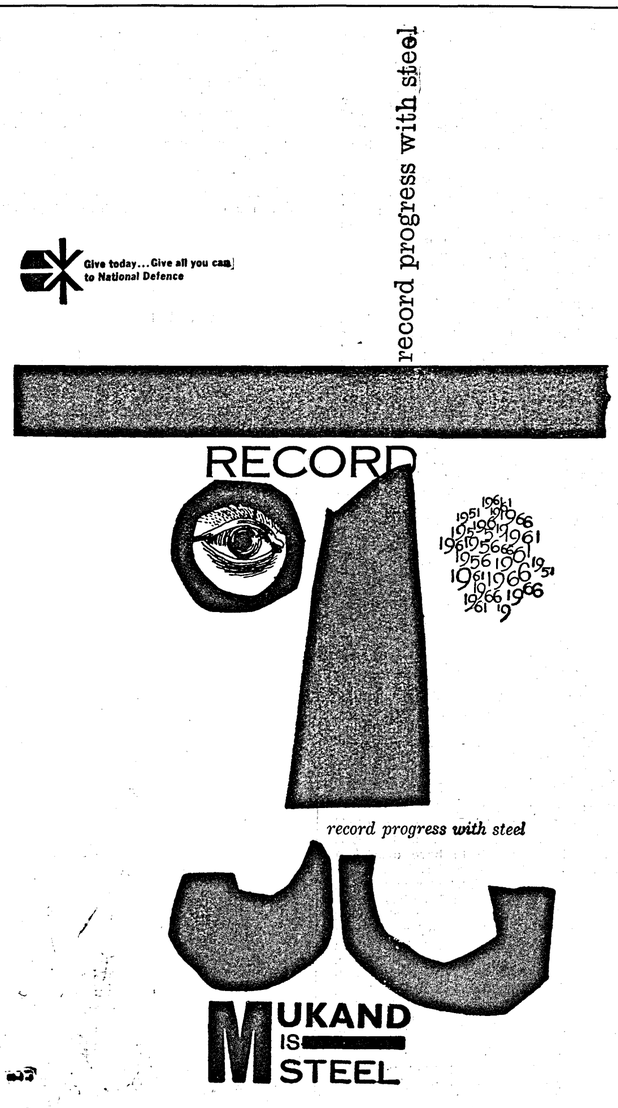
Designed to drive diamond pointed brad nails into the hardest of materials is a new nailer marketed by Lawtons of Liverpool, Lawco House, Liverpool. Suitable for use in assembling small boxes or crates, pinning beech or plywood for hardboard fixing or for pinning mortice and tenon joints or dowels, the tool is air-operated, weighs 6 lbs. and will take five sizes of brads. Also introduced by the same company is the Model G heavy-duty, retractable anvil, stapling machine. This is designed for cartons and the staples used vary between ⅞ to one inch and 1⅛ and 1⅜ inches. The machine is portable and weighs under 20 lbs.

Cartridge Filling Machine

A Norwegian Engineer, Mr. Hans Hiorth, associated with the Norsk Spraengstofindustri, Toldbodgaten, Oslo, Norway, is said to have designed and built a cartridge filling machine which is stated to be able to fill up to 240 cartridges per minute. Explosive compounds in powder form are fed to the machine which fills the cartridge cases with the help of compressed air. There are no moving parts in the system, which is claimed to be safer than more conventional ones.

Inflatable Rubber Bladder for Mine Safety

An inflatable rubber closing bladder for mine shafts to protect the men who do repair work in mines from falling rock has been developed by Trelleborgs Gummifabrik, Sweden's large rubber product manufactures. The device was designed in collaboration with various Swedish mining companies. Usually, wooden structures have long been used for this kind of protection. Besides being a very time-wasting process, the wooden bulwark is often difficult to fit in a shaft with irregular surfaces. The rubber bladder, on the other hand, is easy to install and to remove. It is simply lowered into the shaft and then inflated. Since the rubber conforms to the contours of the pit walls and thus seals the shaft more efficiently than any hitherto known device, the men beneath it can no longer be injured by falling rock. The bladder can also be installed in a fraction of the time required to construct a wooden bulwark.



ECONOMIC AND BUDGETARY TRENDS

INDIAN MERCHANTS' CHAMBER'S REVIEW

FOR the first time a representative commercial body—the Indian Merchants' Chamber, Bombay—has attempted a "Pre-Budget economic survey and review of budgetary trends." This is analogous to the usual *Economic Survey* which the Finance Ministry releases at the time of presentation of the Union Budget. The Chamber's survey, being a non-official effort, bears a certain distinctive stamp. This is evident from its interpretation of trends and its accent on issues requiring examination. It would be very interesting to study on what points this non-official survey and the official survey agree or disagree. But such a comparative study is not immediately possible, for the official *Economic Survey* will not be available before 29th February 1964 when the Union Budget is due to be presented to Parliament. The most that is possible, pending the availability of the official *Survey*, is to present and examine the findings of the Chamber's *Survey* alone here.

The first part of the Chamber's publication deals with the state of the economy as it has actually developed so far under the third Plan. Here, luckily, the Planning Commission's recent mid-term appraisal of the Plan has come in handy for the authors of the Chamber's *Survey*. The Commission's appraisal, it will be recalled, had pointed out that, in the first two years (1961-62 and 1962-63) of the Plan, the annual rate of increase in national income was only 2.5 per cent, as compared with the Plan's target rate of 6.0 per cent per annum. The Chamber has noted, in this connection, that the annual rate of growth in the remaining three years of the Plan would have to be substantially higher at over 8.0 per cent, if the national income in the last year, that is, 1965-66, is to be 30 per cent more than in the last year of the second Plan. Since the agricultural sector, which contributes about 50 per cent to national output, has not performed well in the first three years of the Plan and the agricultural programmes (covering irrigation, soil conservation, improved seeds, fertilisers and plant protection) have not produced the targeted results, the overall rate of economic growth during the Plan period is bound to be correspondingly lowered.

Industrial Production

But that is not all, for the performance of the industrial sector, too, has been disappointing. The actual increases of 6.5 per cent and 8 per cent, respectively, in 1961-62 and 1962-63 in industrial production have been much lower than the target rate of 14 per cent per annum laid down for the third Plan period. The Planning Commission's mid-term appraisal itself has pinpointed the likely shortfalls in the targeted outputs of several industries. The Chamber, for its part, has drawn attention to the existence of large unutilised capacities in a whole range of key industries and consumer goods industries. If the industrial production targets mentioned in the third Plan are to be attained, the rate of industrial growth will have to be doubled in the next two years. But, then, any such increase, in its opinion, will be determined by the removal of factors responsible for slow progress, namely, delays in implementation, impediments to better utilisation of capacity, deficiencies in the supply of raw materials and components. Even in the fields of power and transport, where there has been some improvement on account of the additional investments, the position will not be quite comfortable, unless it is improved in the light of industrial requirements following fuller capacity utilisation for which the Chamber has rightly pleaded.

Referring to the investments so far under the third Plan, the Chamber has given the finding that the high level of investment has produced a low rate of return on account of the industrial and agricultural slack. Taking the public sector, for instance, the Centre's investment on Plan projects has risen from Rs. 430 crores in 1960-61 to about Rs. 690 crores in 1962-63 (Revised estimates) and Rs. 840 crores in 1963-64 (Budget). Central assistance to States for capital formation has increased from Rs. 252 crores in 1960-61 to about Rs. 430 crores in 1962-63. In the private sector of industries, aggregate investment in the first two years of the Plan, estimated on the basis of the data available on capital issues, bank and other industrial credit to industry, imports of capital goods, etc., seems to be more or less of the order envisaged in the Plan. Such high levels of investment, accompanied by an expansion in money supply at a rate higher than the increase in agricultural and industrial production, have led to inflationary pressures. The pressure on domestic prices has been particularly serious in the last two years, namely, 1962-63 and 1963-64.

It had, of course, been expected that such factors as population growth, rise in money incomes and enlargement of the investment programme would lead to additional demand for essential consumption goods. And it was in relation to this expected increase in demand that the targets for agriculture and consumption goods industries had been fixed. But the slow progress towards the attainment of these targets and the defence offtake in the period of the Emergency have aggravated the shortages in supply. The impact of these shortages on prices has not been mitigated or neutralised by buffer stock operations, regulation of distribution agencies, control of prices, fiscal measures, and so on. As the continuing pressure on prices is indubitably derived from continuing shortages in supply, the authors of the Chamber's *Survey* have done well to underline the need for a rapid increase in the production of essential commodities to ensure price stability.

Balance of Payments

The Chamber's *Survey* is more notable for its treatment of the balance of payments situation than for its analysis of production and price trends. After pointing out that, in spite of some improvement in export earnings in the last two years, the basic payments position continues to be one of serious pressure on foreign exchange resources, the authors of the *Survey* have estimated the foreign exchange requirements of the last three years of the third Plan in the following paragraphs:

"On account of the shortfalls in production capacity in the case of steel, tea, oilseeds, and cotton, the present estimates of total export earnings for 1963-64 are Rs. 740 crores and this may rise to over Rs. 800 crores in 1965-66, including exports from Goa which were not previously included in the estimates. The total export earnings for the five years of the Plan are expected to be Rs. 3,700 crores, the target fixed in the Plan. It must be noted that, as compared to 1962-63, the net outflow on invisible transactions would increase in the last three years of the Plan because of larger interest payments on Government account, placed at Rs. 100 crores. The net outflow on capital transactions would also rise and is now estimated at Rs. 400 crores over this period, accounted for mainly by larger repayments on Government account and to the International Monetary Fund. From the estimated export earnings of Rs. 2,300 crores, an amount of Rs. 500 crores will have to be provided for to meet the outflow. It is only out of the balance that provision could be made for the maintenance of imports and for payments that will fall due for project imports against commitments entered into upto March 1963 and estimated at Rs. 100 crores.

"In the next two years, 1963-64 and 1964-65, the non-project imports are expected to be increased substantially, firstly, because of the increased activity associated with defence effort and, secondly, due to growth of production in a number of industries depending on import requirements. Broadly, the requirements of non-project imports during the three years are placed at Rs. 2,400 crores. This would leave a gap between the available foreign exchange resources (excluding external assistance) and the payments in respect of items mentioned above (of Rs. 700 crores) which can be only met by disbursements of non-project external assistance. Assuming that some amount of non-project assistance from Rs. 180 crores available as on March 1963 would spill over to the fourth Plan, the non-project assistance required during 1963-64 to 1965-66 may amount to Rs. 650 crores. According to the Consortium meeting of 1963, about two-fifths of the total of Rs. 510 crores agreed to, that is, about Rs. 200 crores would probably be in the shape of non-project assistance. Taking credit for this amount for the year 1963-64, the additional commitments of non-project assistance for the two years 1964-65 and 1965-66 would amount to Rs. 450 crores."

On the basis of this analysis, the authors of the *Survey* have framed some sensible demands. One is that non-project assistance for providing spares, components and raw materials must be assured in order that industrial production might be maintained at the optimum level. Secondly, a firm assessment of our foreign exchange commitments should be made on the basis of advance action in the implementation of projects. And, thirdly, projects taken on hand should be designed to strengthen the balance of payments by increasing exports and replacing imports; care must be taken to ensure that these projects themselves do not call for excessively large foreign exchange costs.

Budgetary Analysis

The second part of the Chamber's publication has dealt with the budgetary trends and policies in a critical manner with particular reference to Plan outlays by the Centre and the States together. The total Plan outlay for the period 1961-64 is Rs. 4,200 crores (estimated), representing 56 per cent of the five-year outlay of Rs. 7,500 crores in the public sector. It is now expected that, subject to availability of resources, the total third Plan outlay in the public sector will be Rs. 8,000 crores. This would mean that a balance of Rs. 3,800 crores would have to be found in the last two years of the Plan. The additional demand on resources on account of defence is also there. Moreover, the level of expenditure on non-Plan items continues to be at a level higher than what was originally visualised. The Chamber's *Review*, however, has not attempted to estimate defence expenditure and non-Plan, non-development expenditure for the five-year period as a whole.

The *Review* has, on the other hand, provided an estimate of additional tax receipts for the third Plan period as under:

	Rs. crores
(1) Additional yield due to greater buoyancy in tax receipts at 1960-61 rates of taxation ...	800
(2) Aggregate yield of Central tax measures (including changes in railway freights and fares and postal rates) introduced in the first three years of the Plan ...	1,900
(3) Aggregate yield of tax measures introduced by the States in the first three years of the Plan ...	500
Total ...	3,200

It will be recalled, in this connection, that the third Plan had visualised additional taxation at an aggregate of Rs. 1,710 crores (Rs. 1,100 crores at the Centre and Rs. 610 crores in the States) for the Plan period as a whole. Thanks to the buoyancy in normal tax receipts and the large additional tax effort, the proportion of tax revenue to national income is now expected to exceed 14.0 per cent, as compared with the 11.4 per cent visualised in the Plan.

Additional Taxation

It would appear that additional taxation of a larger magnitude than what had been originally envisaged would make up for the expected shortfalls in receipts under some other heads. The contribution of Central enterprises (other than railways and posts and telegraphs), for instance, is not likely to touch the targeted level of Rs. 300 crores. The contribution of railways over the five-year period would, however, exceed the Plan estimate of Rs. 100 crores by about Rs. 50 crores. Market borrowings, which have been of the order of Rs. 525 to Rs. 550 crores in the first three years, may also be expected to exceed the Plan target of Rs. 800 crores (Rs. 475 crores for the Centre and Rs. 325 crores for the States). But it is by no means certain that the small savings target of Rs. 600 crores will be achieved, for the aggregate collections in the first three years are only about Rs. 300 crores. As for external assistance (other than under P.L. 480) which has been estimated at Rs. 1,800 crores for the Plan period, it has come to only Rs. 782 crores in the first three years. Whether the balance (more than Rs. 1,000 crores) will be forthcoming in its entirety in the last two years is rather doubtful. But the I.M.C.'s *Review* seems to be optimistic on this score. Under the head "deficit-financing," the actuals of the first three years would amount to Rs. 580 crores, as compared with the five-year target of Rs. 550 crores. If further deficit-financing is resorted to in the last two years, it may only mean that the massive additional taxation will have been largely eaten up by non-Plan, non-development expenditure. It may not be surprising if the final picture relating to such expenditure in the third Plan period turns out to be much worse than in the second Plan period. But a redeeming feature would, of course, be that a substantial proportion of non-development expenditure is on account of defence.

The Chamber's *Review* has next highlighted several disquieting budgetary trends. It has, for instance, criticised the tendency to underestimate revenue receipts, particularly since the beginning of the second Plan. Actual receipts in the second Plan period, it will be

(*Continued on page 264*)

STATE FINANCIAL CORPORATIONS

WORKING GROUP'S REVIEW AND SUGGESTIONS

THE business of the State Financial Corporations has recently gained some momentum, but their total performance has been much below expectations, considering the size of private industrial investment proposed in the third Plan. The State Financial Corporations Act empowers them to assist concerns by granting loans, subscribing to debentures and underwriting issues of shares and debentures as well as by guaranteeing loans from other sources. But, by and large, they have confined themselves to loans only. Therefore, the Eighth Conference of State Financial Corporations (1961) recommended the setting up of a Working Group to review their working and to suggest ways and means of improving their usefulness. Accordingly, a group of 10 members was set up in June 1962, with Mr. K. C. Mittra of the Reserve Bank as Chairman, representatives of three State Financial Corporations, the Industrial Finance Corporation of India, the Industrial Credit and Investment Corporation of India Ltd., the State Bank of India and of commercial banks as members and Dr. A. K. Banerji of the Reserve Bank as member-Secretary.

In the report which was submitted to the Reserve Bank on 6th February 1964, the Group has made certain important recommendations to promote the growth of these Corporations to the stature of development banks for assisting medium- and small-scale industrial undertakings. The extent of assistance provided by these Corporations depends naturally on the size of their funds. The two major sources of funds are seen to be share capital and market borrowings by debentures; deposits and reserves were relatively insignificant. There is thus need to take steps for a more effective mobilisation of funds: by way of share capital, deposits, bonds as also other additional sources of finance. "If the S.F.Cs are to seriously develop their business," observes the report, "particularly underwriting and gradually also equity financing, they would need to have a stronger capital base to absorb shocks of possible losses."

Deposit Gathering

According to the Group, despite Government guarantee of dividend and principal in respect of the Corporations' shares, the response from financial institutions has not been encouraging, which may be due largely to the dividends, currently fixed at 3-4 per cent, not being sufficiently attractive. It thus considers that a higher rate of dividend would attract funds from private sources and reduce the dependence of these institutions on the State and the Reserve Bank. To encourage the public to keep deposits with these Corporations, the Group has suggested deposit receipts issued by them to be made assignable to third parties and such assignment to be made free of stamp duty, and that every Corporation may be permitted to accept deposits up to *twice* instead of one time its paid-up capital. It has also suggested that the Corporations may join together for an intensive all-India campaign to advertise their various activities to the public.

While bonds have been the major source of funds, the holdings of such bonds are not sufficiently broad-based. For the relatively small sums for which investors have been approached so far, namely, Rs. 15.3 crores, they have depended mainly on the Life Insurance Corporation of India and the State Bank of India. In view of the growing need for raising resources through bonds, the Group has suggested that these bonds may be made more attractive to different types of investors if their maturity pattern is biased in favour of shorter periods; thus, there may be bonds of medium- as also medium-long maturities—the former for banks and individuals and the latter for bodies like the L.I.C. and Trusts. The Group holds that, though the L.I.C. has been an important contributor to these bonds so far, its holdings are small in relation to the long-term investible funds at its disposal. It considers, hence that there is a case for the L.I.C. to make available to these Corporations lines of credit, up to about 2-3 per cent of its total investments, to enable them to draw funds against bonds according to their requirements. The Group has further recommended that the Government may agree to some part of the large annual flow of resources to provident funds to be invested in these bonds and treat bonds and deposit receipts of these Corporations as approved securities under Section 11(2) (b) of the Income-tax Act, so that investments in them by charitable institutions may be exempted from income-tax.

While these suggestions are designed to augment the flow of funds from existing sources, the Group stresses the need for larger direct assistance by the Government or the Reserve Bank; the Government should provide for loan assistance to them as to the Industrial Finance Corporation and the Industrial Credit and Investment Corporation of India. Alternatively, the Reserve Bank should create a special fund, "National Industrial Credit (Long-term Operations) Fund," on the analogy of the National Agricultural Credit (Long-term Operations) Fund to serve as a standby for supplementing their resources.

Investor-Participation

With a fortified resources position, the Group envisages these Corporations to burgeon into development agencies for assisting rapid industrialisation. As yet they have played a small part in financing long-term capital needs through debentures, and they cannot participate directly in industrial equities. The importance of these functions cannot be overemphasised if these institutions are to fulfil their role. To broaden existing and potential investor-participation in industry, the Group has stressed the need for equity and debenture financing and recommended the necessary amendment of the State Financial Corporations Act. The Corporations could make a beginning by participating in equities of seasoned enterprises in collaboration with the Industrial Finance Corporation and the Industrial Credit and Investment Corporation of India which would enable them to build up the necessary expertise.

The industry-wise analysis of Corporations' advances, done on a uniform pattern for all Corporations for the first time, revealed that a few traditional industries like food manufacturing (including cold storage) and textiles absorbed a good part of their assistance, while, with a few notable exceptions, they shield away, from the newly developing industries. Viewed against the background of even such limited measure of diversification of the country's industrial structure that has been recently attained, they have not contributed significantly to this achievement. Perhaps the reasons are stress on adequacy of security, excessive caution in loan policies, lack of technically qualified persons on the staff to appraise proposals from the less well-known sectors of industry, and the fact that these Corporations had no foreign exchange resources to back up on their own loan proposals involving exchange.

The report has, therefore, highlighted the need for a reorientation of their criteria for assessment of loan applications. In the words of the Working Group, "more concern with the earning prospects and less with security will open the way to help deserving enterprises, particularly new ones which may not be able to provide conventional security but have an acceptable scheme and are managed by competent persons." It has thus been recommended that Section 25(2) of the State Financial Corporations Act, which requires that the loans should be "sufficiently" secured, may be amended so as to provide that due regard shall be had *primarily* to the prospects of the operations of an industrial concern and the accommodation shall be secured to the extent which may be considered by the Board to afford reasonable protection.

According to the Group, the provision of finance is only a part of the functions of State Financial Corporations. They should also be equipped to provide guidance and assistance in fostering projects, steer different schemes until they fructify and equip themselves fully to undertake post-credit services.

Working Results

Coming to their working results, the report observes that the net impact of the heavy burden of taxes and guaranteed dividends *vis-a-vis* low earnings has been that these Corporations have built up meagre reserves and are weighed down by a subvention liability of over Rs. 1.6 crores. "But the financial position in which many of them find themselves today and which they are likely to experience for some more years is not one that can be allowed to continue with equanimity." The Group points out that such a situation would not have developed, if that part of gross profits which is required to pay guaranteed dividends—which is really of the nature of an expense item—had been exempted from tax when the institutions were set up. As a decade has elapsed and a few State Financial Corporations can now pay dividends without subventions, it has suggested a variant of this concession to benefit the Corporations without involving Government in any greater loss of revenue than at present, viz. the stepping up of the tax exemption limit in respect of credits to the special reserve account, introduced by the Finance Act, 1961, from 10 per cent to 25 per cent, subject to the same overall limit of such credits, that is, up to the paid-up capital. In addition, it has also suggested (i) that the State Governments and the Reserve Bank may surrender their entire dividends on the shares of these Corporations for being credited to the special reserve fund up to a ceiling of 25 per cent of the paid-up capital rather than 10 per cent as at present and the subvention liability should be written off. The State Financial Corporations, on their part, may try to evolve an appropriate multiple rate structure tailored to the risk-rating of the loan propositions, their size, period, etc., instead of charging a standard rate; also they may adjust their present lending rate to allow them a margin of at least 2½ per cent.

CHAIRMAN'S STATEMENT

VOLTAS LIMITED

MR. J. D. CHOKSI STRIKES A NOTE OF OPTIMISM

THE following is the statement by Mr. J. D. Choksi, Chairman, Voltas Limited, circulated to the Members of the Company, with the annual report for the year 1962-63:

It gives me great pleasure to report excellent results for this ninth year of our operations. We have now reached, I think, a stage from which there is no going back. Our problems have increased, but so have our achievements. The shareholders can claim a fair share of our success for they have given us, through the years, much encouragement and support. We shall need both these at the present moment.

Funds for Expansion

As you know, a proposal for a rights issue will be placed before the annual general meeting for approval. The capital structure has remained unchanged since 1956 when it was increased to Rs. 255 lakhs. This latter sum, along with profits retained in the business have supplemented our cash credit facilities from banks and have sufficed so far to provide the Company with the funds needed for its expanding volume of trade. Our sales have increased by 100 per cent in the last four years, and as the expansion in our manufacturing activities has taken concrete shape with the start of construction of our new factory at Thana, the demand for fresh funds has become inevitable. Pioneers, as we are, in the field of air conditioning, we propose to carry forward our manufacturing plans in this field to a further stage of self-sufficiency. Once we are able to manufacture the compressors required by this industry, the Company will have gone a long way towards meeting the backlog of demand created by import restrictions and the additional requirements of the defence forces, of Government and industrial undertakings and offices, to say nothing of growing requirements for "comfort cooling." After air conditioning, our manufacturing activities will be largely concentrated on materials handling and mining equipment and in other joint venture projects in which your Company is interested and will participate as promoters, shareholders and selling agents.

Finance has, accordingly, to be provided for the manufacturing unit, and for shares in the joint ventures and finally for working funds. The Directors' report indicates steps taken for procurement of the additional funds which include a rights issue to shareholders. I think shareholders will agree with me that the terms of issue (which require the approval of the Controller of Capital Issues) are reasonably attractive.

The tax demand on last year's profits, in spite of the additional reserves provided to meet it in the Company's accounts, proved to be substantially higher than anticipated. On the same scales this year's taxes work out to approximately 65 per cent of the profits. A tax system, so devised as to leave to the shareholders of a company, rich and poor alike, 35 per cent of the profits for dividends (on which again taxes will be payable at rates applicable to individuals rising to 87 per cent), rehabilitation and expansion plus contingencies can only lead ultimately to a negation of democracy in which private enterprise can play a worthwhile role. The only justification for such measures would be when the nation is in a state of dire peril. We can only hope, that notwithstanding the heavy burdens on the national exchequer, the impact of these self-defeating tax measures will be substantially curtailed in the Finance Bill of 1964, bringing some relief to trade and industry and placing them in a better position to develop and expand and so meet the challenge of the Plans.

Let me now carry a stage further the main theme of my statement last year. In any marketing activity, the customer is king, and customer satisfaction is the axis on which the sphere of marketing revolves. Voltas, in conforming to the criteria of dynamic marketing has, therefore, assigned as important a role to its service, as it has to its sales.

After-sales Service

Essentially, Voltas' trading operations are in themselves an economic service to the community, since they ensure the equitable distribution of goods at fair prices on a nationwide basis. Yet over and above Voltas' actual selling activities are the services it renders before and after sales. It is this complementary aspect of our marketing functions that I would like to describe.

While it is our practice to offer such presales information and advice of a technical nature as enables a customer to choose equipment or materials that are profitable to his venture, the greater part of the Company's services comes after sales; Voltas' after-sales service is now a by-word in the country. This reputation has been achieved over years of careful planning and execution. It is our strong conviction that after-sales service is an important phase of the whole plan of marketing. After-sales services, if adequate, create continuous customer goodwill and confidence and stimulate repeat orders and establish brand loyalties.

After-sales service, in the widest sense, is any service rendered to a customer after the transaction of sale is made. It is any service performed after an order is booked or after a formal agreement to sell and buy has been reached. Basic after-sales services include good packing, quick deliveries at the customer's convenience, timely presentation of invoices that are easy to read and understand, courteous methods of collecting outstandings and a helpful attitude in settling claims which may arise.

The Company's technical after-sales services mainly cover quality guarantees to keep machinery or equipment sold in workable condition for a pre-determined time at the total or partial cost of the supplier, manufacturer or distributor. The cost of these obligations is substantial. But the Company tries to render that type of service as is close to the requirements of the customer.

Training to Staff

Many of you are familiar with the Voltas Crystal room air conditioners and, as you know, air conditioning for comfort-cooling enters into the personal life of people. To ensure that our clients enjoy the comforts of air conditioning without interruption, our services are so organised as to enable a telephone call requesting service to be attended to without appreciable delay in most centres of the country. You will realise what this means in a city like Bombay, where there are 15,000 air conditioners that require service by the Company and in which Voltas' air conditioning and refrigeration division receives about 200 calls a day. As much thought and planning must go into the devising of an after-sales service system as is accorded to a production plan. Consequently, the Company has to provide for an adequate number of trained servicemen, for suitable equipment and facilities and sufficient working capital as would be provided in any large-scale activity in an industrial or business organisation.

To provide for this and, at the same time, to maintain a high standard of service, the Company has its own training schemes to feed its service force. Every six months, about 40 trainees receive basic training at our Chinchpokli Works and are then absorbed by the various divisions for more specialised and on-the-job training.

On a wider scale, where the Company's clients are project authorities, Voltas' after-sales service assumes even greater significance. As many of you are aware, your Company supplies giant machines like bulldozers, excavators and cranes that are used for the larger projects of the nation. The standing charges and operating cost of any one of these machines vary from Rs. 50 to Rs. 250 per hour. One can fairly visualise the extent of the loss to the nation in the event of a breakdown of such machinery. In most cases, the Company's service staff not only erect these machines at project sites, but also train the customer's own works forces to take over their maintenance and working with a minimum loss of time and efficiency.

Obtaining Spare Parts

Another aspect of after-sales service is the assistance a customer receives in obtaining spare parts. Severe import licence restrictions make it impossible for us to maintain our own stocks of spare parts at levels which we consider fully adequate for customer requirements. However, in many ways, we assist customers, including Government projects, in obtaining import licences for essential parts and in storing and distributing them. The Company's own inventory of spare parts contains 80,000 items, representing an investment of over Rs. 2 crores with an organisation of close on 175 persons. The Company goes a step further in ensuring customer satisfaction by assisting its dealers in establishing their own service schemes and service stations and by training their personnel.

The costs of after-sales have to be controlled if these are not to run away with profits. But judicious expenditure in after-sales service is in the best interests of good business. After-sales service acts as a market builder. When the services prove satisfactory, the Company's reputation and that of its products are enhanced and a wider market created through customer satisfaction and goodwill. Moreover, after-sales service helps the Company to watch continuously the performance of a product and to gauge market reactions. It provides a feedback service on which to base the development of better products.

The Maligned Middleman

Twenty-three per cent of the Company's staff are directly or indirectly assigned to various forms of service. This alone will give a measure of the importance we attach to this aspect of marketing. In the present phase of national development, in which most items of equipment are in short supply, the importance of keeping installed equipment in working order can easily be assessed. We hear much these days about the necessity of nationalising the import and distribution trades of this country. Few of the radical 'nationalisers' may be aware of the obligations and services that are involved in importing and distributing technical equipment and machinery such as I have tried to outline in this statement. The oft-maligned "middleman" may appear in a different light if the service aspects of distribution and marketing are properly understood.

I should like to close this statement by expressing the appreciation of the Board and all of you for the excellent services performed by the organisation as a whole during the year.

Note: *The above statement is not a report of the proceedings of the Annual General Meeting which will be held on the 27th February* 1964.

MEN BEHIND THE EXPORT DRIVE

NEED FOR PUBLIC RECOGNITION

By A Special Correspondent

COMMENTING on the mid-term appraisal of the Third Five-year Plan, the Federation of Indian Chambers of Commerce and Industry remarked that taxation was the only sphere where the achievement had exceeded the target. Now it looks as if the target will be exceeded in respect of exports also. The Ministry of International Trade has estimated that exports in 1963-64 will reach a record level of Rs. 780 crores, or even more if postal exports are also included in the overall calculation, as against the actual exports, inclusive of re-exports, of Rs. 715 crores in 1962-63.

If the Ministry's estimates prove correct, it is certainly a creditable achievement. For nearly a decade, India's export trade had remained somewhat stagnant and it is, therefore, gratifying to be told that the country has done very well in the most important and difficult sphere of export.

Mr. K. B. Lall, India's Ambassador in Brussels, once remarked that it was the British importer who had forged the trade connections with India. He added that the Indian exporter had little to do with the flow of Indian goods into Britain. The exporter did not sell his wares—it was the British importer who bought them. India's Trade Commissioner in Bonn also observed sometime ago that the credit for exporting Indian goods to West Germany must go not to Indian exporters but to the foreign importers who skimmed the globe for supplies required for the maintenance of the German economy.

Export Effort

Whatever might have been the position in the past, it cannot be denied that, recently, Indian businessmen have been making determined efforts to increase exports and earn more foreign exchange. Credit for bringing about this welcome improvement in export should go, in a large measure, to Mr. Manubhai Shah, the Union Minister for International Trade. Mr. Shah has shown considerable drive and enthusiasm in his work. Mainly on his initiative a series of measures have been adopted in recent years with a view to giving a powerful fillip to our exports. Export control has been considerably relaxed, the system of inecntives has been made more effective, cost reduction studies have been taken up, export promotion councils and commodity boards have been strengthened, and a number of other important steps have also been adopted to stimulate exports.

While the Ministry of International Trade and other economic ministries deserve our gratitude, it must be admitted that praise is due to our industrialists and businessmen also as they have played a notable part in the export trade. It is unfortunate that the Government of India has not evolved any scheme for public recognition of the services of those businessmen who have a remarkable record of export to their credit.

Special Incentive

The Board of Trade, at its second meeting held at Calcultta in July 1962, expressed the view that it would be desirable to provide an incentive in the form of recognition of outstanding work and performance of merchant-exporters and manufacturer-exporters in different export items. It suggested that suitable criteria might be evolved carefully, which might be varied from commodity to commodity. The factors that would be taken into account in framing the criteria would include extraordinary performance in terms of value of exports, introduction of Indian products in difficult markets, conduct of research and market studies and also provision of after-sales service for promotion of exports. The total number of awards per year might be of some limited number. The idea was to formulate the scheme in such a way that every exporter should be able to qualify for public recognition in the form of export medals, certificates and merits of honour for export performance.

It is not known why this scheme was not proceeded with. The Government of India awards honours to those who distinguished themselves in various fields—administration, diplomacy, army, police, education, music, sports, etc. There is no reason why excellence in exports also should not be singled out for public recognition. The need for achieving a continuous increase in exports remains as urgent as ever and it is wrong to allow people, who creditably acquit themselves in this field, to remain unknown, unhonoured and unsung.

While on the one hand those who display dynamism in export should be honoured, the persons who continue to indulge in malpractices of one type or another should be dealt with strongly, so that India's fair name in world markets will not get tarnished. Although the number of instances of malpractices in export trade may not be large in relation to the total volume of our trade, it should be noted that even a few cases will suffice to harm the country's reputation. As an official committee has observed: "India is on its way to be an exporting nation; and, unless Indian businessmen inspire confidence in their dealings in the minds of their overseas buyers, all efforts and all measures of export promotion would fail. Offenders could be put on black list which should mean their debarment from receiving any incentives or consideration in this respect."

Task Formidable

While the export performance for the current year is a matter for congratulation, it should not be allowed to create complacency. The task before us is formidable. Competition for Indian goods, both traditional and non-traditional, is becoming more and more acute while our own costs of production also tend to go up steadily owing to various factors beyond industry's control. In such circumstances, the utmost effort should be made to ensure that all obstacles to exports are removed and every encouragement is given to those engaged in this vital work. While fiscal and other incentives have their own value, official or public recognition of outstanding export performance will also go a long way towards encouraging those already in the export trade to do better and to persuade others to enter the export field and serve the country.

CONSUMER PROTECTION IN U.S.

In a bid to save the American housewives from fraud, false advertisements, deception and other harmful mean practices in the market place, President Johnson has asked Congress for legislation to protect the interests of consumers. In a message sent to the Congress on the 5th inst., President Johnson has urged the Congress to strengthen the Government's authority to assure the purity and safety of consumer goods like food, cosmetics and pharmaceuticals. The President does concede that the Administration is already vested with authority to deal with such anti-social elements, but he emphasises that something more should be done. The six major proposals which he has put forward cover the following:

1. Extend inspection authority over foods, patent medicines, cosmetics and therapeutic devices;

2. require that cosmetics be tested and proved safe before they are marketed;

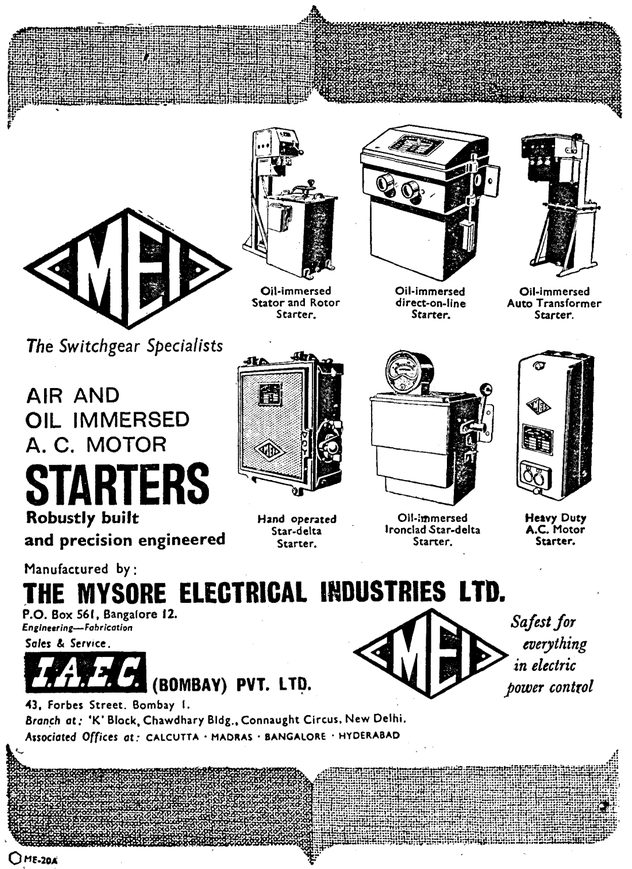
3. pass laws to eliminate deceptive or confusing packaging and labelling of food and other commodities;

4. strengthen present laws to require a greater burden of proof by manufacturers that pesticides are safe;

5. require all lenders to disclose to borrowers in advance full details of the annual rate of interest they must pay; and

6. compel full disclosure of information regarding the purchase of the "over-the-counter" stocks and securities.

Commending these proposals for the acceptance of the Congress, the President says: "Far too long the consumer has had too little voice and too little weight in Government. ... The American housewife—the major American consumer—cannot help but feel confused, and too often unheard, as she seeks the best value for the hard-earned dollar she spends."



U.S. AID TO INDIAN AGRICULTURE—II

AGRICULTURAL UNIVERSITY IN U.P. MODELLED ON LAND-GRANT COLLEGES

By Dr. S. Chandrasekhar

DIRECTOR, INDIAN INSTITUTE FOR POPULATION STUDIES, MADRAS

A MAJOR barrier to Indian agricultural development through the years has been the absence of education in the latest agricultural and allied sciences at the rural peasant level where it is most needed. Indian education has been largely classical and literary under the British; and, when agricultural colleges were established, they catered to the city youths who desired to become white-collared officers in the State Government Agricultural Departments—officers notoriously unwilling to soil their hands and far removed from the dirt-farmers in the rural areas. Hence, the latest developments in agricultural knowledge remained with the educated administrators and their files and manuals and did not percolate to the tiller of the soil. American aid to Indian agriculture has sought to rectify this serious drawback in Indian agricultural development by helping found Agricultural Universities modelled after the American Land-Grant colleges. The first such university to be established in India is the Uttar Pradesh Agricultural University at Rudrapur which opened its portals to the first batch of students in 1960. The importance and relevance of such agricultural universities in the present context of Indian agricultural development can be appreciated when the historical background that brought the American Land-Grant colleges into existence becomes better known.

A hundred years ago, when the United States of America was in the throes of a civil war (1862-65) in the cause of Negro freedom and the stability of the union, the country was predominantly agricultural, much as India is today. Nearly 80 per cent of the population was rural and an average farmer produced enough for two people (today an average American farmer produces enough for 25 people). The yield per farmer and per acre was small, storage difficult and expensive and the farmer's *per capita* income was relatively low.

American college and university education then was patterned after that of Europe, much as Indian education is patterned after the British. It was a classical education which had little to offer to the practical problems confronted by the farmer and the artisan. Industrialisation of America had hardly begun. Agricultural knowledge was traditional and handed down from generation to generation. It was not considered dignified enough to have a curriculum and syllabus fit to be taught in a college. This empirical and commonsensical agricultural knowledge was useful but without scientific content inadequate to the needs of developing agriculture in a vast country.

The American farmer and his representatives in the Congress protested against the then existing formal classical education and demanded educational institutions where scientific agricultural knowledge would be imparted. In response to this request, Senator Justin S. Morril of Vermont introduced the necessary legislation. The Morril Act, that is the Land-Grant Act, received the assent of President Lincoln in 1862. This Act "provided for the grant of land to each State on the basis of 30,000 acres for each member of Congress. The land thus granted was to be sold and the proceeds invested in Government bonds at five per cent interest. The income thus secured was to be used for:

'the endowment, support and maintenance (in each State) of at least one college where the leading object shall be, without excluding other scientific and classical studies.... to teach such branches of learning as are related to agriculture and the mechanic arts in such manner as the legislatures of the States may prescribe, in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions in life'."

After a quarter century, the United States passed the Hatch Act of 1887, by which Agricultural Experiment stations were established throughout the country. The Land-Grant colleges, which number 68 today, working in close association with the Experiment Stations, became responsible for the co-ordination of all agricultural research activities throughout the country.

And about half a century after the establishment of the Land-Grant colleges, the U.S. Government appropriated large sums of money for extension work in Agriculture and Home Economics by passing the Smith-Lever Act in 1914. The Land-Grant colleges brought science to agriculture and made farmers as scientific and well-informed about farming as possible. The Agricultural Experiment station demonstrated the latest knowledge in making agriculture as productive as possible. And last, this combined knowledge was brought to the home and the kitchen. The present extremely high level of productivity in agriculture and the high nutrition standards of the people—apart from the countless gadgets that bring comfort and convenience to the American homes and kitchens—are the product of these three vital innovations.

And it is this rewarding and cumulative experience that the United States Government is now sharing with India, when it helped to set up the first Agricultural University in Rudrapur in Uttar Pradesh.

The development of agricultural universities in India on the model of American Land-Grant colleges goes back in a sense to 1948. During that year, the Government of India appointed the Indian University Education Commission to report on and suggest reforms in university education to meet India's current and future needs. The Commission studied the Land-Grant college and recommended its adoption in India. Consequently, the Governments of the United States and India signed a Programme Agreement in April 1954, popularly known as 028, to co-operate on this matter.

In 1955, an Indo-American team of prominent agricultural educationists was organised to study the agriculture, veterinary colleges and research institutions in India and the United States. They recommended a programme directed towards the establishment of a few leading agricultural institutions where teaching, research and extension education are fully co-ordinated to meet the diverse requirements of agricultural development in India.

In 1956, Dr. H. W. Hannah of the University of Illinois prepared a "Blueprint for a Rural University in India." The Uttar Pradesh State Legislature enacted a law establishing the U.P. Agricultural University in 1958. The University was inaugurated in July 1959, marking a new era in Indian university education by the introduction of the American Land-Grant college pattern of education in India.

This is the first university in India where many of the American procedures have been introduced. Students learn the theory of agriculture and then put what they have learned into practice on the 16,000-acre farm attached to the university. Students have an opportunity to earn while they learn. That most valuable lesson—the dignity of labour, particularly manual and physical labour—is inculcated. There are no peons (*chaprasis*) on the campus to run errands, for the *students* run their own errands. Students operate as postal clerks, telephone operators, farm workers, laboratory helpers and do many odd chores in the poultry, dairy and other departments of the university.

The Agricultural University is the first institution in the country to offer an integrated programme in agricultural education, research and extension work, incorporating the best and the latest in American educational policy and technique. The university has also adopted many of the American academic procedures. These are the course, credit, advisory systems along with frequent quizzes (tests). The student is not judged by a simple comprehensive examination at the end of his whole course—an examination that decides his fate. As in American universities, the curriculum is broken up into separate courses, each of which is attended separately and examined separately. Different courses are for different credits, ranging from one to four. The more credits a student obtains the greater the scholastic progress towards the completion of the curriculum. The needs for completion of the entire course of studies for the degree are not expressed in terms of a number of years, as in other Indian universities, but in terms of the number of credits required and completed. Therefore, a bright student can obtain the degree earlier than an average student. The gifted and the below-average together need not plod on for a required number of years.

The U.P. Agricultural University has several constituent colleges. They are the College of Agriculture, College of Veterinary Medicine, College of Agricultural Engineering and Technology and a College of Basic Sciences and Humanities. It is proposed to add three more colleges—a College of Home Science, a Postgraduate college and an Agricultural Teacher Training Programme.

The American financial assistance to the Agricultural University has taken three major forms: (1) by providing American professors to the university and sending Indian professors to the United States for advanced training in a variety of disciplines; (2) by making dollar grants for the supply of scientific equipment to the various laboratories. These include: animal cages for cats, rabbits etc., balances, barometers, centrifuges, distilling apparatus, electronic tubes, forceps, heating ovens, incubators, microscopes, refrigerators, sterilisers, transformers and many other instruments and implements. The total amount of books and equipment now available in India is about $600,000; (3) by meeting the non-recurring (capital) expenses of the university. The rupee expenses are met by *grants* from the sale proceeds of agricultural commodities supplied to India under U.S. Public Law 480 and Section 402 of Public Law 665.

The United States Government envisages that the total American aid to the Rudrapur University from the beginning of the project in June 1960 to October 1965 will amount, by way of grants, to:

Dollar financing	...	$1,532,000=Rs.	72,92,000
Rupee financing	...	$4,800,000=Rs.	2,21,42,000
Total dollar and rupee grants	... ...	$6,322,000=Rs.	3,01,42,000

That is, the total anticipated American aid to the Rudrapur university will thus amount to a little over Rs. 3 crores by 1965.

The U.P. Agricultural University serves today both as a model and as a pioneering institution for other States to set up similar agricultural universities. Already two or three States (the Punjab and Rajasthan) have set up their own agricultural universities. Other States are on the way to passing enabling legislation to set up similar agricultural universities. It is hoped that, before the end of the third Five-year Plan, every State in the Union will have its own Agricultural University, eventually solving the twin problems of agricultural education and production.

(To be continued)

THE METTUR CHEMICAL AND INDUSTRIAL CORPORATION LIMITED

Registered Office: Mettur Dam R.S.

INTERIM DIVIDEND NOTICE

THE BOARD OF DIRECTORS HAVE declared an interim dividend of 3 per cent free of tax on each old 6 per cent tax-free preference share in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, and 6.25 per cent subject to deduction of tax on each old equity share for the year 1963-64.

The Directors have also resolved that the new 9.3 per cent cumulative preference shares (subject to tax) and the new equity shares allotted on 27th January 1964 will be paid the dividend for the year 1963-64 at the time of declaration of the final dividend for the year 1963-64.

The Dividend Warrants will be posted to shareholders on or after 16th March, 1964.

The Register of Members and share transfer books of the Company will remain closed from 3rd March 1964 to 16th March 1964 (both days inclusive).

By Order of the Board,
SESHASAYEE BROTHERS PRIVATE LTD.,
Managing Agents.

METTUR DAM R.S.,
5th February, 1964.

SMART RISE IN ALKALI'S PROFIT

NEARLY 40 PER CENT OF IT PLOUGHED BACK

A SMART recovery in gross profit from Rs. 112.79 lakhs to Rs. 157.84 lakhs, which wipes out about two-thirds of the setback of Rs. 69.05 lakhs suffered in the previous year, is the most striking feature of the considerably better results of the Alkali and Chemical Corporation of India Ltd. (Secretaries: I.C.I. (India) (Private) Ltd., Calcutta) for the year ended 30th September 1963. Sales have surpassed the previous year's record figure of Rs. 695.15 lakhs to Rs. 813.36 lakhs and the profit (before tax), having increased from Rs. 71.72 lakhs to Rs. 110.87 lakhs, stands, as the percentage of total net assets employed in business, at 11.1 as against 8.3 a year before. After claiming development rebate and relief under Sections 84 and 101 of the Income-tax Act, 1961 amounting to Rs. 48.01 lakhs (Rs. 17.22 lakhs a year before), the tax liability on the profit for the year is estimated at Rs. 33.50 lakhs, as against Rs. 27.22 lakhs in the previous year.

Net profit, after tax, amounts to Rs. 77.37 lakhs, that is, Rs. 36.87 lakhs more than in the previous year. Nearly 40 per cent of it has been ploughed back to reserves, the aggregate figure being Rs. 30.23 lakhs, as against Rs. 1.10 lakh a year before. An interim dividend of 75 nP per share, subject to deduction of tax, was paid in May 1963. With the final dividend at 75 nP, the total for the year has been maintained at Re. 1.50 per share. The dividend absorbs Rs. 46.50 lakhs, leaving Rs. 5,671 as the surplus to be carried forward, as against Rs. 1.37 lakh brought in.

The following table compares the year's results with those for the previous three years:

(In lakhs of rupees)

	For the year ended 30th September			
	1963	1962	1961	1960
Sales, less rebate	813.36	695.15	662.53	539.89
Other income	13.59	8.11	7.26	5.03
Closing stocks	120.09	183.22	175.21	79.58
Purchase of finished goods	..	19.34	89.86	..
Manufacturing expenses ..	467.87	455.48	375.31	292.51
Other expenses	138.11	123.66	118.41	113.55
Gross profit	157.84	112.79	181.84	162.43
Provision for—				
Depreciation	46.97	41.07	40.56	33.12
Taxation	33.50	27.22	52.50	25.00
Net profit	77.37	44.50	88.78	104.32
Income as percentage of net capital employed*	11.1%	8.3%	19.2%	17.9%
Transfer from reserves and provisions	..	5.32	2.55	12.83
To reserves	30.23	1.10	43.00	78.00
Dividends—				
Preference	2.01	2.01	2.01	2.01
Ordinary	46.50 (15%)	46.50 (15%)	46.50 (15%)	37.20 (12%)
Carry forward	0.06	1.37	1.16	1.34

Equity shares' market value (in rupees):	1964	1963	1962	1961	1960
High	33.00	39.50	52.52	44.25	38.25
Low	30.75	28.50	37.50	29.81	22.60

* Income before taxation, but after depreciation, as percentage of total net assets employed in business.

The improved financial results have essentially followed the encouraging production trend during the year. Polythene production, for instance, reached a record level and, as regards paints and pretreatment chemicals, the concentration was on the higher quality products for which there is an increasing market. Further, the new rubber chemicals plant was commissioned and manufacture of the first range of products established during the year. The chlorine, caustic soda and H.C.I. plants achieved a higher output, particularly in the case of hydrochloric acid. But the profitability of these products was restricted by rising costs of power and salt and the unchanged selling prices because of the Government control. Finally, in the insecticides section, a further increase in output from the "Gammexane"/BHC technical unit was recorded during the year.

It may, however, be noted here that both production and the volume of products sold had expanded sizably in the previous year too; only sales realisation and profit had failed to reflect that expansion because of the reductions that had to be made in selling prices of polythene and paints in order to meet competition. The marked rise in sales and profit during the year under review gives cause to believe that the selling prices were not cut further. Besides, the profit seems to have gone up also because of a general decline in the overall costs as can be seen from the following figures (the previous year's comparable figures are given in brackets) showing how the Company distributed every 100 nP during the year:

Materials and services 43 (45), staff expenses 11 (12), other manufacturing and administrative expenses 4 (5), depreciation 6 (6), freight and transport charges 2 (3), selling expenses 8 (9), interest paid 3 (1), excise duty 9 (9), taxation 4 (3), shareholders' dividends 6 (7) and retained in business 4 (*nil*).

Referring to the Company's expansion programme, the Directors state that construction of the new intermediate density polythene plant is nearing completion and production is expected to start shortly, though full utilisation of the capacity will be dependent upon sufficient alcohol becoming available. Design and ordering of a new resin plant have been completed. It is anticipated that this and the associated equipment for achieving an increase in the paints production capacity will be installed by the end of this year. This plant will also enable adoption of more modern methods of paint manufacture. Intensive methods have been made by the Company to increase its exports. Its representatives visited last year a large number of markets in the Far East and South-East Asia. Exports during the current year are expected to exceed those recorded last year.

The Company's paid-up capital is unchanged at Rs. 341 lakhs, including Rs. 31 lakhs in 5 per cent cumulative preference shares of Rs. 100 each. It is backed by reserves and surplus amounting to Rs. 226.39 lakhs. Bank borrowings have increased from Rs. 278.10 lakhs to Rs. 382.02 lakhs and, together with current liabilities and provisions shown at Rs. 234.90 lakhs, bring the total indebtedness to outsiders to Rs. 616.92 lakhs, which exceeds the total of current assets, book debts and investments by a sizable figure of Rs. 237.34 lakhs. This rather heavy indebtedness is explained by the net addition of Rs. 197.42 lakhs to fixed assets, bringing the gross block to Rs. 839.01 lakhs, which has been written down to Rs. 592.48 lakhs. Together with capital work-in-progress at Rs. 212.24 lakhs, the total net block is shown at Rs. 804.73 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 31.62 *cum-div.* (final) and give a net yield of 3.4 per cent per annum.

I.F.C. INVESTMENT IN FORT GLOSTER

The International Finance Corporation of Washington has agreed to provide, jointly with the Continental International Finance Corporation, a subsidiary of the Continental Illinois National Bank and Trust Company of Chicago, loan and share capital amounting approximately to $1.20 million (the equivalent of Rs. 57 lakhs) to the Fort Gloster Industries Ltd. for its Rs. 4-crore expansion and diversification programme. The I.F.C.'s investment will consist of a loan of $812,000, repayable in 14 semi-annual instalments, beginning in April 1967, and the purchase of 10,000 new equity shares of the Company for a total subscription of approximately $400,000. These shares will form part of the 41,500 right shares of Rs. 100 each to be issued by the Company at a premium of Rs. 90 per share, the remainder of which will be offered by it to its existing shareholders. Additional resources for the Company's programme will come from a Rs. 59.50-lakh loan from the I.C.I.C.I. Ltd., out of which Rs. 37 lakhs will be in foreign exchange from the resources made available to it by the World Bank.

The expansion programme is expected to take shape next year. Concurrently, the Company is engaged in modernising its jute manufacturing facilities and installing new equipment for the production of wide hessian for meeting the rising demand for jute backing for tufted carpeting in the United States.

(*Concluded from next column*)

turbo alternator set from Messrs. Siemens of Germany. Once this turbo alternator set is under operation, which is expected to be by October this year, the Company will have electrified a large section of its factory for obtaining a considerable improvement in the quality and quantity of sugar produced.

The financial position of the Company is sound. Its paid-up capital, unchanged at Rs. 30 lakhs, comprises Rs. 12.50 lakhs in 5 per cent, tax-free, redeemable cumulative preference shares of Rs. 100 each and Rs. 17.50 lakhs in equity shares of Rs. 10 each. This capital is backed by reserves and surplus amounting to Rs. 16.84 lakhs. Secured bank loans have receded from Rs. 23.40 lakhs to Rs. 6.33 lakhs. These loans and current liabilities and provisions bring the total indebtedness to outsiders to Rs. 24.80 lakhs, as against which current assets, book debts and investments aggregate Rs. 41.32 lakhs. The gross block of Rs. 58.27 lakhs (Rs. 58.01 lakhs a year before) has been written down to Rs. 22.14 lakhs and, together with other assets and machinery, the net block is shown at Rs. 30.32 lakhs.

BHOPAL SUGAR SKIPS DIVIDEND

PROSPECTS DEEMED BETTER

THE dividend record of the Bhopal Sug Industries Ltd. (Managing Agents: Messr A. H. Bhiwandiwalla and Co. (Bomba (Private) Ltd.) has been spoiled further durir the year ended 30th September 1963, as tl Directors have proposed no return on both pr ference and ordinary shares. Since the prefe ence shares are cumulative, the dividend liab lity, which amounted to Rs. 79,125 in the pr vious year, is now in arrears. The rate of div dend on the 10-rupee ordinary shares progre sively declined in the four years ended 30t September 1962 from 25 per cent to 3 per ce per annum, subject to tax. The last tax-fre dividend for the year 1957-58 was 20 per cen that is, 2.50 per cent more than the net dividen for the year 1958-59. In view of this progre sive pruning of the rate of dividend, the mark value of the Company's ordinary shares ha moved down in stages from Rs. 29.25 in 19 to Rs. 12.88 in the current year, though it is sti moderately above the shares' face value Rs. 10.

The dividend for the year under review ha been skipped because higher costs of increase operations have resulted in a disproportionat increase in profit. The quantity of cane crush ed went up by 9 per cent, but production sugar increased by only 5.6 per cent followin the fall in the average recovery from 9.54 pe cent to 9.22 per cent due to the effects of ur favourable monsoon and the damage caused b pyrilla to the available supplies of sugarcan These natural shortcomings hit the productio of cane on the Company's farms and resulte in the cost of production exceeding the rat fixed by the Government for cultivators to th extent of Rs. 80,000. Since such an increase i not allowable for income-tax assessment, it ha led to the Company's requiring to provide proportionately higher amount for income-ta in the aggregate provision of Rs. 95,000, a against *nil* in the previous year. In view of al this, gross profit has gone up only slightly fron Rs. 3.91 lakhs to Rs. 4.12 lakhs, while the ne profit has actually sagged further from som Rs. 70,000 to Rs. 22,000, in spite of the sub stantial improvement in sale proceeds fron Rs. 82.30 lakhs to Rs. 118.14 lakhs.

The net profit has been supplemented b withdrawals from reserves and other adjust ments and the total available for disposa amounts to some Rs. 45,000, out of whic Rs. 29,730 have been provided for cane develop ment council commission for 1959-60, som Rs. 10,000 have been carried to reserves and th balance of Rs. 4,361 has been carried forward.

The following table gives an idea of th progress made by the Company in the past fou years:

(In lakhs of rupees)

	For the year ended 30th September			
	1963	1962	1961	1960
Sale proceeds	118.14	82.30	85.30	61.71
Other income	1.08	0.39	0.45	0.56
Closing stocks	13.19	42.56	38.51	33.58

Ordinary	..	0.52 (3%)	2.62 (15%)	3.94 (22.5%)
Carry forward	0.04	0.02	0.02	0.93
Cane crushed (tonnes)	92,351	84,510	95,695	73,773
Sugar production (bags) ..	85,180	80,630	87,623	73,320
Recovery (per cent)	9.22	9.54	9.16	10.11

Equity shares' market value (in rupees):	1964	1963	1962	1961	1960
High	13.00	14.80	21.24	29.00	29.25
Low	12.88	12.88	20.00	23.76	24.00

Future prospects for the Company are deemed better by the Directors. They state that the Company has gone in for a programme of modernisation and expansion and has already commissioned from the year under review some of the new machinery which had been ordered earlier. The process of modernisation is continuing. Meanwhile, the Directors have arranged an exchange loan of Rs. 3.38 lakhs from the I.C.I.C.I. for purchasing one 1,280-kw.

(*Continued in previous column*)

THE MODERN COMPANY AND RULE OF LAW—I

ECONOMIC AND NON-ECONOMIC POWER

By D. L. Mazumdar, I.C.S.

[The author, Mr. D. L. Mazumdar, I.C.S., has been associated with the reform of Company Law in India for a long time. As the Secretary of the erstwhile Department of Company Law Administration, he has worked hard in developing the administrative framework from almost scratch for giving effect to Independent India's first comprehensive and integrated Company Law of 1956. He has also studied the working of Corporate Law not only in the U.K. but also in most of the free countries in the world. He has thus a unique knowledge of the corporate system and corporate sector and is eminently qualified to speak and write on the subject. Early this month (3rd and 4th February), Mr. Mazumdar delivered two lectures on the "Modern Company and the Concept of Rule of Law" under the auspices of the Prasaranga Directorate of the Mysore University. In these two lectures, which we are publishing in a series of three articles beginning from this issue, the author has (1) traced the historical growth and development of the modern joint-stock company or the corporation from its earliest stages; (2) analysed the impact which this historical process has produced on the structure of company or corporation laws in the Western countries; (3) examined the adequacy of the existing company laws in the light of current facts about the structure and behaviour pattern of the modern company; and (4) briefly dealt with the objects underlying the Companies Act, 1956 in the light of the new norms of the responsibilities of corporate management. In both the lectures, the author is primarily concerned with the analysis of a new sociological situation represented by the emergence of the modern company, avoiding judgment on the new developments.—ED.]

THE joint-stock company, or the corporation as it is called in some parts of the world, is such a pervasive institution in modern society that the authority and powers attaching to it appear to persons who may be concerned with its management or to operators, in the market place dominated by this institution as something intrinsically belonging to this form of organisation. Yet, the truth is that the modern joint-stock company or corporation has come to its present position only after a long process of historical growth and development, which has not only progressively influenced its structure and behaviour pattern but has also basically determined its changing relationship to the rest of the society in which it has functioned. In order to appreciate fully the role and significance of the modern corporation in the present-day society, it is important for enquiring minds to know the main stages in the evolution of the historical process, and to view the developments in this field in their proper perspective.

The concept of the corporation as a self-governing economic organisation is basically as old as the trade guilds of the ancient and medieval times. In our country, mention is found of these inchoate trading corporations in the *Artha Sastra*, and in some of our other earlier literature on the organisation and work of our ancient polity, fragmentary as such reference is. In the Western world, the concept of corporation appears to have been well-established in law at the beginning of the middle ages, when this concept was applied to acclesiastical bodies, local civic units like boroughs and to craft and mercantile guilds, which between them embraced the most dominant institutions in the economic organisation of society in those days. Later on, the concept was extended to the organisation of specialised vocations and professions. By this time, the legal rights and liabilities of the corporation had also been broadly defined. Its principal distinctive features—namely, its right of survival beyond the lives of its members, and its capacity to hold property, to sue and to be sued—had become already well-recognised in law and administrative practice, and its right to regulate the affairs of its members had also been conceded. But the exercise of these rights and powers were subjected to careful supervision by the specific terms of the grant of corporation status to these guilds.

The Beginning

By the middle of 16th century, this authority to confer corporate status passed on to the representative assemblies, wherever they existed. It was at this time that the corporate form of organisation was used for the first time to set up national mercantile organisations of the type of the well-known Chartered Companies of 16th, 17th and early 18th centuries of which the East India Company was the best known in this part of the world. This was the real beginning of the modern joint-stock company, for, it was in these chartered companies that the old legal concept of the corporation was fused with the economic devices of joint-stock trade. What was formerly only a convenient legal institution created by law to promote and further self-governing bodies primarily concerned with civic, craft or professional business, confined to well-defined territorial limits, became a powerful economic and financial institution whose activities often extended beyond the limits of the incorporating State and which possessed the authority not only to administer the privileges, conferred by royal or parliamentary grants among its members but also the right to use them for the benefit of the institution, within the limits of the charter granting it those privileges.

It is not necessary, in this context, to dilate on the social and economic factors which led to this far-reaching change in the character and dimensions of the corporation. The important point to note is the shift in the centre of gravity of the internal power exercised by these mercantile chartered corporations. Whereas in the case of the old civic, craft or professional guilds, their governing bodies were democratically constituted and were concerned primarily with regulating the affairs of the members of the guilds and their relations with outsiders, the new chartered companies or corporations represented by the national mercantile bodies, which were generally engaged in foreign trade or colonisation, were run by a relatively few men, who were the promoters of these bodies and whose main function was to further the objects for which these corporations had come into being, and not so much to regulate the affairs of their members in their dealings among themselves or with outsiders.

Two Major Factors

Two major factors brought about a further transformation of the joint-stock company or the corporation, both in its internal structure and in its mode of operation. The first was the series of technological revolutions sparked off by the invention of the steam engine at the end of the 18th century and ending with the invention of the internal combustion engine towards the end of the 19th century. The second was the social and political enfranchisement of the middle classes which might be said to have been brought about in most of the Western countries of the world between 1830 and 1860. To cut short a long story, the combined effect of these two major developments in the technological and sociological fields was to alter, basically, the character of the national economies of the Western countries.

The autarchic mercantilist economic policies of the 17th, 18th and the early 19th centuries rapidly gave way to the classical liberal economic policies, which, in the socio-economic circumstances of that era, opened the door wide to private enterprise in a manner which could be hardly dreamt of in the earlier centuries. The impact of these far-reaching changes on the growth of the modern joint-stock company and the generalised corporation laws which were to follow was profound. In part, the liberation of the national economies of the Western countries from their earlier mercantilist cast was greatly facilitated by the emergence of the multi-purpose corporation based on the generalised corporation laws enacted in these countries about the middle of the 19th century. The ease with which this form of organisation could be set up and the structural elasticity and operational freedom which it enjoyed rendered it eminently suitable for widespread use for carrying on economic activities on a large scale.

The momentous legal invention of the concept of limited liability cleared the ground for the increasing financial participation of large numbers of people of relatively limited means in the new enterprises organised through these joint-stock companies. By the second half of the 19th century, the joint-stock company or the corporation had already become the standard and dominant form of organisation for carrying on industry and commerce in all the Western countries. As an acute student of the subject has observed: "What had been a rare, privileged entity existing at the will of the sovereign, exercised deliberately for great ends of policy, became, in the course of hardly half a century's development—from 1800-1850—a form of organisation available almost of right to easily qualified people feeling the need for it.... Like its near relative the *contract*, the corporate charter was now freely available on condition that it was used for business or trading purposes."

The rapid rise in domestic trade and industry, leading to an equally rapid rise in the volume and diversity of international trade progressively enlarged the sphere of the joint-stock company and the scope of its activities, so much so that the turn of the 19th century and the beginning of the 20th witnessed the emergence of a large number of international companies or corporations, whose fields of activity crossed the frontiers of the national states and embraced many different countries. This growth in the size and complexity of the modern joint-stock companies and the progressive extension of their sphere of activity lifted them out of their original, historical, economic setting as mere legal institutions for the production and marketing of goods and services, and placed them almost at the centre of the economic life of the modern community. The growth in the scale of business and their complexity also automatically increased the economic power exercised by the corporations. This power was not, by any means, confined to the volume of goods or services which the corporations produced or to the proportion of their turnover to the national aggregate of goods and services. It extended to wage rates, working conditions, and other terms of labour-management, relationship not only in individual corporations, but also increasingly in the rest of the organised economic sector of the country where the norms laid down by the big corporations set the pattern for others to follow.

Similarly, the price policy of the individual big corporations influenced the course of prices in the industries to which they belonged and indeed set the general price pattern in all connected industries. The consumption pattern of the community was similarly influenced both by the price and the production policies of these corporations. Likewise, the investment policies of the big corporations through their borrowing programmes and capital issues to the public affected the responses of investment markets, while the methods adopted by them for financing and refinancing their investments largely determined the terms and conditions on which capital could be obtained by other seekers of it.

The marketing systems adopted by these corporations affected the work and fortunes of thousands of whole-salers and retailers, who earned their living by selling the products of the industries under the management of these corporations. The ramifications of the economic power of the modern corporation can be easily imagined from this brief recital. The big joint-stock companies or corporations are, indeed, the pace-setters in all these different areas of the organised sector of the economic life of the modern community.

Quantification of Power

It is usual in current literature on the economics of modern corporations to attempt to quantify their economic power by relating their scope and activity to the entire corpus of the economic activities of the country. The indicators generally used for this purpose are the amount of capital invested in these corporations, the number of share-holding interests in them, their aggregate turnover; the proportion of this turnover to the gross national product of the community; the total capital assets of these companies; the share of these assets to the aggregate productive capital of the community; the contributions which companies make to the revenues of the State; the number of workers employed by these companies; the proportion of this number to the total gainfully employed population, etc. Figures relating to these indicators are readily available in the technical literature on this subject in the advanced countries of the world. In this country a detailed factual survey on this subject was made in the former Department of Company Law Administration about four years ago and several subsequent surveys have brought these figures reasonably up-to-date.

In the foregoing paragraphs, an attempt has been made to indicate the nature and extent of

SYNOPSES OF COMPANY REPORTS

Waverley Jute Mills Co., Ltd.

(*Secretaries and Treasurers*: Messrs. McLeod and Co., Ltd., Calcutta.)

Working Results:

	For the year ended 31st May (In thousand rupees)	
	1963	1962
Sale of jute	Nil	1,03
,, ,, loom hours	8,73	9,13
Gross profit	10,96	7,85
To Secretaries' and Treasurers' remuneration ..	79	55
Transfer to depreciation	24	21
,, ,, provision for doubtful debts ..	Nil	29
,, ,, ,, taxation	7,00*	4,50
Net profit	2,93	2,30
Excess provisions written back	9	76
Appropriations:		
Transfer to general reserve	1,50	1,00
Proposed dividends (taxable) preference ..	86	86
,, ,, ,, ordinary ..	75	1,50
	(30%)	(60%)
Carry forward	58	66

Market value of ordinary shares (in rupees):	1963	1962	1961
High	10.00	7.02	5.50
Low	5.50	3.90	3.00

* Includes Rs. 2,10,000 for super profits tax.

Extracts from the Directors' report: As in previous years this Company sold loom hours to other units within the McLeod Group at current market rates.

At the commencement of the year under review, the Food Department, Government of India, continued to rent godowns and part of the main mill building for storage of foodgrains. As the lease with Government was short term and due to expire in December 1962, and as it was probable that the Government of India would vacate the premises at any time resulting in loss to the Company, the Kelvin Jute Company Limited was requested to take on lease the remaining portion of the mill for construction of their Broad Loom Division. This they agreed to do and, on the Food Department, Government of India vacating the premises on the 31st August 1962, the entire mill area was given on lease to Kelvin Jute Company Limited with effect from 1st September, 1962, at a monthly rent of Rs. 40,000.

Accounts in brief as at 31st May 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	10,00,000	Gross block	81,07,250
Reserves and surplus..	10,27,655	—Depreciation ..	46,38,438

Market value of ordinary shares (in rupees):	1963	1962	1961
High	27.12	25.37	24.62
Low	21.37	20.00	20.75

* Includes Rs. 3,27,151 for super profits tax.

Extracts from the Directors' report: The report for the year preceding the one under review concluded by alluding to the uncertainties then before us. Fortunately, many of those uncertainties were resolved into conditions which were not unfavourable to this Company's operations and the outcome was a result for the year on which the shareholders would wish to congratulate all concerned: workers at all levels and the Company's Agents in all quarters.

The previous year too there was reference to loss of potential production because of the labours' impatience with the law's processes and by reason of bureaucratic delays. It is a pleasure to report that neither of those adverse factors were experienced to any extent this year and to record particularly the swift relief received from official quarters when such was particularly needed to avoid slowing down our export programme.

During the year, the policy of improving production facilities at the factory has been continued effectively, the existing plant has been maintained to prime condition and the installation of a small bleaching plant has been completed. By the end of this financial year, the Company may have confirmation of the potential profitability of that particular new venture. Bleaching of lac on a commercial scale has hitherto been confined to countries enjoying milder weather than Calcutta's: if the technicians, with the freely given help of the Company's Agents for U.S.A. have succeeded in overcoming that handicap, India will for the first time be in a position to export bleached lac.

Accounts in brief as at 31st August 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	30,00,000	Gross block	46,09,374
Reserves and surplus..	46,40,089	—Depreciation ..	29,12,654

	(15%)	(30%)
Carry forward	3	70

Market value of ordinary shares (in rupees):	1963	1962	1961
High	30.37	32.50	30.97
Low	26.00	28.06	14.87

Extracts from the Directors' report: The Factory started crushing on the 9th November 1962 and continued till the 6th February 1963. The total quantity of sugarcane milled during this period was 9,48,798 quintals with an average recovery of 9.54 per cent, as compared with 11,80,303 quintals and 10.35 per cent respectively during previous season. This was the shortest season in recent years as supply of cane from cultivators was much reduced due to high *gur* prices and also due to less plantation. As a result of compulsory reduction of 10 per cent in sugar production introduced by the Government during the previous year the cultivators reduced their acreage under sugarcane. Moreover, more cane was diverted for *gur* production. This condition was common in the whole of North India, resulting in a drop in total Indian sugar production from 2.70 million tons in 1961-62 to 2.16 million tons in the year under review.

The Factory's total production of molasses was requisitioned by the West Bengal Government for supply to distilleries in the State at a rate of Rs. 2.68 per quintal.

Efforts are being made to acquire the assets of Shree Radha Krishna Sugar Mills Ltd. (in liquidation) at Beldanga and a sum of rupees one lac has already been paid to the present occupier. Further necessary action is being taken in this regard.

The factory has, up-to-date, crushed a total quantity of 6,43,061 quintals of sugarcane with an average sugar recovery of 9.62 per cent.

Accounts in brief as at 31st August 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	20,59,820	Gross block	92,71,546

* The dividend for 1963 will be paid out of the dividend reserve.
† Only Rs. 497.

Extracts from the Directors' report: The Company has been granted an Industrial Licence for the expansion of its manufacturing capacity to 4,000 units per year. Under the Licence, the Company is allowed to manufacture four-wheeler *Tempo Viking* vehicles within the said capacity.

Industrial Finance Corporation of India has sanctioned a loan of Rs. 50 lakhs (Rs. 25.70 lakhs in DM and Rs. 24.30 lakhs in rupees) for the expansion project. The Chief Controller of Imports has issued import licences for Rs. 42,59,500 for import of machinery, plant and equipment for the expansion project.

Adjoining to the land already acquired, additional about 18 acres of land has been purchased by private negotiations.

Construction of the factory building has well progressed and is expected to be completed by March 1964.

The Company has received the consent of the Controller of Capital Issues for the issue of additional capital of Rs. 65,27,100. Shares of the face value of Rs. 18,50,000 were offered to the existing shareholders resident in India and have been fully allotted. Shares of the face value of Rs. 17,77,100 would be issued to Messrs. Vidal and Sohn Tempo-werk, and Mr. Rolf Bacher against supply of machinery, plant and equipment. Shares of the face value of Rs. 29 lakhs would be offered for public subscription very soon.

The Company has received the consent of the Controller of Capital Issues to capitalise Rs. 4,86,450 from the general reserve and issue bonus shares on the basis of one share for the two shares held by the shareholders, whose names stood in the register of members of the Company on 28th December 1963 and accordingly the bonus shares have been issued and allotted.

Co-operation between the Company's collaborators, Messrs. Vidal and Sohn Tempo-werk GMBH, and this Company remained cordial during the year.

Accounts in brief as at 30th September 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	9,72,900	Gross block	31,08,657
Reserves and surplus..	14,18,846	—Depreciation ..	6,06,311
Other liabilities ..	47,86,549		
		Net block	24,12,346
		Block in progress ..	5,97,031
		Other assets	52,949
		Current assets ..	40,73,693
		Cash	42,266
Rs.	71,78,295		Rs. 71,78,295

* Paid-up capital consists of 97,290 equity shares of Rs. 10 each fully paid up.

Ruby Rubber Works Ltd.

(*Managing Agents*: Ruby Industries (Private) Ltd., Changanacherry, Kerala).

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1963	1962
Sale of finished goods	50,19	34,57
Closing stock	12,37	9,99
Gross profit	2,76	2,51
To Managing Agents' remuneration	17	15
Transfer to depreciation	1,02	1,05
,, ,, provision for taxation	45	35
Net profit	1,12	96
Appropriations:		
To expenses and brokerage written off ..	5	5
Transfer to development rebate reserve ..	17	2
Proposed dividends (taxable) preference ..	50	50
,, ,, ,, equity ..	40	40
	(41%)	(41%)
Carry forward	2	2

Extracts from the Directors' report: In keeping with the development programme launched last year, new sales depots were opened at Cuttack, Hyderabad and Bhopal. Sales promotion work was vigorously pursued and sales turnover reached Rs. 50,18,862 as against Rs. 34,57,457 for the previous year recording an increase of more than Rs. 15,00,000.

The closing quarter of the financial year almost coincided with the power cut in Kerala, which considerably affected production. Following the lifting of the power cut practical steps were taken to maximise the output.

The profit earned has not in fact been in tune with the higher turnover of business chiefly on account of the larger investment on heavy excise duty that was paid during the year under review. Increased cost of raw materials and chemicals and the higher rate of duty paid on carbon black and other chemicals that were imported.

As anticipated in the report submitted last year, the demand for cycle tyres and tubes grew steadily, and thanks to the development and research work pursued by the Company's technicians, the existing machinery has been geared up for the maximum production of quality tested materials. Acute shortage was experienced in the case of bead wire rings used in cycle tyre manufacture. This problem has been partially solved by the arrangements recently completed towards the local fabrication of the rings from steel wire purchased from the Indian markets. With the recent grant of licences to import a small quantity of steel wire, the position is expected to be favourably stabilised, at least, for the coming six months.

In respect of the Bangalore Establishment, it may be mentioned that production was actually started after considerable delay caused mainly on account of the time taken to secure power connection. Considerable initial expenditure as well as overhead charges were incurred for the Bangalore factory. However, in the review of the general accounts production and sale in respect of Bangalore for a period of about three months alone representing the fag-end of the financial year have been incorporated. Naturally, therefore, the quantum of profit registered by the Company has to be viewed against this background also. Incidentally, it may also be added that the Company has by appropriate special resolutions decided to sell the Bangalore branch business and assets to the Manimala Estates Ltd. and the sale is pending completion of certain formalities.

Accounts in brief as at 30th June 1963 are as under:

Liabilities	Rs.	Assets	Rs.
Capital*	13,05,625	Gross block	25,20,152
Reserves and surplus..	52,736	—Depreciation ..	6,87,612
Other liabilities ..	26,75,931		
		Net block	18,32,540
		Current assets ..	19,35,946
		Investments	1,40,000
		Cash	1,92,947
		Miscellaneous expenditure ..	22,850
Rs.	41,24,292		Rs. 41,24,292

* Paid-up capital consists of 49,882—10 per cent. taxable cumulative preference shares of Rs. 10 each and 89,016 equity shares of Rs. 10 each. Amount paid up on shares forfeited is Rs. 5,645.

NEWS IN BRIEF

THE Central Tapioca Board is considering the grant of a five per cent subsidy on exports of tapioca. The subsidy is expected to give a fillip to increase production of tapioca.

Air-India has placed orders for three American supersonic airliners. A sum of $300,000 has already been paid as deposit to book delivery position with the U.S. Federal Aviation Agency.

Under a deal signed between the Union Government and the Australian Wheat Board at New Delhi last week-end, the latter will supply India 171,000 tons of wheat before the end of June next.

The Export-Import Advisory Council will meet at New Delhi on the 26th and 27th inst., instead of on 2nd and 3rd March next as originally scheduled. The change in dates has been necessitated in view of the visit of the Minister for International Trade to Teheran during the first week of next month.

The final all-India estimate of the jute crop for the season 1963-64 (July-June) puts the current year's area and production at 2.13 million acres and 5.91 million bales (of 400 lbs. each), respectively, as against the partially revised estimate of 2.10 million acres and 5.41 million tons for 1962-63. The yield per acre thus works out to 1,110 lbs., as compared with 1,028 lbs. in the previous year.

The hundred-year old Peifce, Leslie and Company, a well-known managing agency firm of South India having interests in several plantation industries, cashew nut industry and export-import business, has decided to become a rupee concern in due course. Necessary arrangements and formalities are in progress. It is stated that Bangurs, a leading Calcutta firm of financiers, have agreed to become partners in the proposed rupee company.

The Bokaro Steel Limited—the public sector company for setting up the Bokaro steel plant—will have an eight-man Board of Directors, with Mr. N. N. Wanchoo, Secretary, Department of Iron and Steel, Ministry of Steel, Mines and Heavy Engineering, as the Chairman. Mr. K. M. George, now Chief Engineer of the Central Engineering and Design Bureau of Hindustan Steel Limited, will be the Managing Director.

The freight rates of steamers engaged in the West bound trade between Malabar Coast ports and Aden and Red Sea ports will be enhanced by 7½ per cent with effect from 1st April next, according to the Malabar Coast Continental Conference. The proposed increase is considered inescapable in view of the steady rise in operating costs which the lines are not able to absorb. This is the first rise effected since the Aden and Red Sea freight rate agreement was concluded in 1958.

It has been decided to suspend, with effect from 31st March next, the provisions relating to the need for taking a permit from the Textile Commissioner's Office for transporting cloth or yarn by rail from Greater Bombay or from Ahmedabad. The manufacturers and dealers intending to transport cloth or yarn from the aforesaid places to any place in India are required to contact the appropriate railway authorities direct for allocation of wagon space, etc.

The State Trading Corporation of India has signed a Rs. 10-crore (£7.5 million) contract with Messrs. Platt Bros. (Sales) Ltd. of Oldham in Britain for the supply of the most modern textile machinery items for 17 mills in India. The items include cardroom spinning and doubling machinery (valued at approximately £5 million) such as the Company's latest high speed machinery (that is high production cards, century combers, globe draw frames and super spinning ring frames) and a new range of blow room machinery.

The Hyderabad Asbestos Cement Products Ltd. has discovered, in collaboration with the Johnson Manvillie Corporation of New York, a fibrous mineral, an essential raw material for asbestos manufacture, in Chibasa area, 80 miles from Jamshedpur. The Company proposes to undertake detailed exploration by means of core drilling upto a depth of 300 feet. It has applied to the Bihar Government for the lease of an extensive area in the Chibasa district. The project is stimated to cost about Rs. 6 crores. Asbestos fibre is a scarce mineral now found only in three countries, namely, Canada, Russia and Southern Rhodesia.

As many as 48 Bills were passed by Parliament in 1963. Nineteen Bills are pending before it. In addition, as many as nine Bills will be presented in the current session of Parliament. These nine Bills are: (1) The Companies (Amendment) Bill; (2) the Indian Crop Insurance Bill; (3) The Standards of Weights and Measures (Amendment) Bill; (4) The Indian Railways (Second Amendment) Bill; (5) Bill to repeal the Bombay Co-operative Societies Act, 1925, as applicable to the Union Territory of Delhi and to extend the Punjab Co-operative Societies Act, 1961, with certain modifications to Delhi; (6) The Foreign Exchange Regulation (Amendment) Bill; (7) The Constitution (Eighteenth Amendment) Bill; (8) The Benaras Hindu University (Amendment) Bill; (9) The Aligarh Muslim University (Amendment) Bill.

From Abroad

The Ceylon Government has banned holiday travel abroad until September next, in a bid to meet the foreign exchange crisis.

The Common Market Commission has increased the rates of duty on slaughtered chickens imported into the Common Market from 20 pfennings (about 4d.) to 25 pfennings (about 5d.) per kg. with effect from the 10th inst.

The Government of Yugoslavia will be sending shortly an economic delegation to India, Burma and Cambodia to hold talks on matters relating to trade, investment, and scientific, technical and other aspects of economic co-operation.

The U.S. Senate passed last week-end the tax cut Bill which will reduce income-tax for 80 million Americans and 550,000 corporate tax payers to the tune of $11,600 million. The average reduction for individuals would be 20 per cent.

The Government of Ceylon has decided to introduce measures to control sales of textiles in the private sector, to regulate prices and to prevent hoarding of textiles by private trade. An official Bill giving effect to these measures is expected to be introduced in Parliament shortly.

The final details of categorisation of cotton textile imports have been settled between Britain and the Hong Kong textile industry, according to Mr. Edward Heath, Secretary of State for Industry, Trade and Regional Development and President of the Board of Trade.

The results of a referendum organised among the staff and employees of the six-nation European Economic Community show that 87 per cent of them are prepared to go on strike for higher pay. The E.E.C. Council of Ministers has rejected the demand for a rise of 8 per cent in their pay packets and maintained its decision to grant only a two per cent rise.

The twentieth conference of the United Nation's Economic Commission for Asia and Far East (E.C.A.F.E.) is scheduled to be held at Teheran from 2nd to 17th March next. Some 600 delegates from 28 countries are expected to attend the conference which will discuss, among other things, the question of the construction of a trans-Asian road from Indonesia to Turkey.

Australia's wool clip for 1963-64 is expected to reach a record of 1,751 million lbs., according to a forecast made by the Australian Woolgrowers' and Graziers' Council, the Bureau of Agricultural Economics and the National Council of Wool Selling Brokers. This forecast figure is 13 million lbs. more than an earlier forecast made by the same group of experts in July 1963. It is also 3 per cent higher than Australia's previous record wool production which was 1,699 million lbs. produced in 1961-62.

The Government of Jamaica has formed a consortium for constructing a £900,000-steel plant. The Consortium called the Caribbean Steel, consists of Jamaican, American and Canadian interests. It has agreed to make available one-third of the equity to the public of Jamaica. The plant will have an annual ingot production capacity of 30,000 tons and rolling mill capacity of 60,000 tons on three-shift basis. The Government, on its part, has guaranteed duty-free imports of scrap and protection against dumping.

The deliveries of filament yarn and staple fibres in Britain stole a march over those of cotton during the year 1963, according to the British Man-made Fibres Federation. The actual deliveries of man-made fibres to various uses" (excluding exports) aggregated 555 million lbs., as against 480 million lbs. in 1962, while consumption of raw cotton amounted to just 487 million lbs., as against 485 million lbs., and that of raw wool was 471 million lbs., as against 456 million lbs.

PERSONAL

MR. Nawab Singh, Secretary to the Union Ministry of Information and Broadcasting, has taken over charge as the Secretary to the Ministry of Works, Housing and Rehabilitation.

Mr. S. G. Pothan, Financial Adviser and Chief Accounts Officer of Western Railway, assumed charge as the Chairman of the Railway Service Commission, Bombay, this week.

Mr. H. D. Cayley, Deputy General Manager and General Manager-designate of the National and Grindlays Bank Limited, who is at present touring India, arrived in Bombay on the 11th inst. He will be in the City till the 16th inst.

Mr. N. J. Nair and Mr. Pranlal Bhogilal have been elected President and Vice-President, respectively, of the Association of Merchants and Manufacturers of Textile Stores and Machinery, India, for the year 1964-65.

have no leave and retirement benefits which the salaried people generally have."

A professional man — like a lawyer or a doctor—who is on his own, will not enjoy leave with pay; nor will he have a provident fund or a pension upon which to depend after retirement. He will have to create, by regular and adequate savings during his active professional life, his own "funds"—House building fund", "Retirement fund", "Family Vacation fund" etc. It is a good idea to have separate Savings Bank Accounts for each purpose with THE BANK OF INDIA LTD.

THE BANK OF INDIA LTD.

T. D. KANSARA, General Manager

B/C/163

THE MODERN COMPANY AND RULE OF LAW—I

(*Concluded from page 261*)

the direct and indirect economic power exercised by the modern joint-stock companies or corporations in the organised sector of the socie.y in which they function. Dominant as this economic power is, specially in slowly developing countries like ours, no less significant is the non-economic power enjoyed and exercised by them, although, in popular discussion on this subject, this aspect of the economic power exercised by the modern companies is usually overlooked. As an acute American observer of the corporation scene remarks:—"Economic power is not the whole story, however, not perhaps even its most important part. Concern with the modern corporation is intensified to the extent that its activities have necessarily ramified beyond the economic sphere of production of goods and services.... Across a widening range of activity, the large corporations have become principal factors. They are the chief agencies of privite research. They are the hope of fund raisers for institutions of higher learning and the principal consumers of the products of those institutions. Their advertising supports newspapers and sponsors T.V. programmes. They are a leading, if not *the* leading purveyor of influence and pressure on public officials in Washington and State capitals.... It follows that, in these spheres and others, they bear large responsibility for the quality and tone of American life.... This attribution of responsibility is not a token of hostility to the large private corporation. What has been said amounts to no more than that the great corporation is the dominant non-governmental institution of modern American life. The university, the labour union, the church, the charitable foundation, the professional association —other potential institutional centres—are all, in comparison both peripheral and derivative."

Apart from the reference to the hope of fund raisers and to the T.V. programmes, discerning observers of the Indian scene will notice how closely this American analysis corresponds to the known facts about the non-economic power equally exercised by big corporations in this country. To say this again is not to pass judgment, but to recognise the emergence of a new sociological institution, namely, the modern corporation.

In the Western countries, it is only during the last 15 or 20 years that this aspect of the working of the corporations has received any worthwhile notice, and it was not till some nine or ten years ago that the practical businessmen and the operators in the market place in those countries recognised the pervasive quality of non-economic power which the corporations were unwittingly exercising on the life of the community in which their activities were carried on!

In our country, it is only very recently that this fact has been recognised by the theoreticians of our economic system. There is, however, still very inadequate appreciation of this situation even by the most farseeing of business leaders. Yet it is on the recognition of the modern corporation, not merely as a convenient legal device for the production of goods and services on a large scale, but in its true present-day character as a new sociological institution, embodying a system of non-governmental power that any adequate and comprehensive economic and social philosophy about the modern corporation can be built up. It must, nevertheless, be said to the credit of the theoreticians of our economy that, shortly before Avadi, they perceived the emergence of this new system of power represented by the modern corporation, and the impact which it was likely to produce on our life and our Government of the day, and had the pre-vision to take note of this factor when they formulated their proposals for the enactment of the new Company Law between the years 1952 and 1955. How this recognition, vague as it was, affected the course of our corporation law is a theme to which I shall turn in the concluding portion of this paper. In the next following section, I propose to analyse very briefly the broad changes in the character of corporation laws which were brought about in the Western countries by the gradual emergence of the modern corporation into its present position of status and strength from the early days of the medieval guilds.

(*To be continued*)

ECONOMIC AND BUDGETARY TRENDS

(*Concluded from page 255*)

recalled, exceeded budget estimates by Rs. 260 crores, while the excess in the first three years of the third Plan would amount to as much as Rs. 500 crores. It has given several other findings also and made critical comments as follows:

(1) The general trend of an increase in the share of non-tax revenue has no doubt been in evidence. But the actual percentage share of non-tax revenue has been invariably less than the estimate because of the disappointing performance of Central undertakings.

(2) The incidence of import duties of a revenue nature has been increasing. A disquieting trend, in this connection, is that items like machinery, iron and steel, etc., which have a bearing on the tempo of industrialisation, have to bear the brunt of import taxation.

(3) Export duties, particularly on vegetable oil and coffee, do not seem to have contributed to the stabilisation of their prices.

(4) A major part of the additional taxation imposed in the last three years would be realised from commodity sources. It has been estimated that the ratio of taxes and duties to ex-factory price now works out to 40 per cent in paper, 65 per cent in sugar, 60 to 65 per cent in cement, 50 to 55 per cent in steel and 40 to 65 per cent in cotton cloth. The rate of excise duty on kerosene has gone up from 41.79 nP per kilolitre in 1948 to 183.20 nP per kilolitre in 1963. Railway freight rates, too, have been progressively enhanced. The effect of indirect taxes on the price structure would have to be seriously examined, for, in the prevailing economy of scarcity, taxation has become an inflationary force.

(5) The proportion of expenditure on "civil administration" to total revenue expenditure has increased from 16.0 per cent in the first Plan to 22.5 per cent in the second. It has increased further in the first three years of the third Plan. So has non-Plan, non-development expenditure in general.

(6) The total debt obligations of the Union Government at the end of the third Plan would be about Rs. 13,600 crores. The gap between interest-yielding assets and interest-bearing obligations was as much as Rs. 1,300 crores at the end of the second Plan. This gap is widening year after year.

(7) The rate of utilisation of foreign aid in the first two years of the third Plan was only 30 per cent of authorisations, as compared with 50 per cent in the first two Plan periods. The implications of the lower rate of utilisation in a period of accelerated growth would have to be carefully examined.

(8) The performance of public-sector undertakings from the point of view of returns has been disappointing. The net profit on capital employed in 28 running concerns has declined from 5.7 per cent in 1961-62 to 4.6 per cent in 1962-63.

(9) The performance of the States in resource mobilisation has not come up to expectations, with the result that the Centre has to provide additional funds for them.

(10) Capital formation in the corporate sector in recent years has been relatively low, averaging about Rs. 59 crores a year. In this connection, the effect of taxation on the resources available in the private sector should be examined.

(11) The contribution of private industry through various measures of taxation has increased greatly over the years. But, at the same time, there has been a decline in the profitability of the corporate sector. While there has been a rise in the wage bill, the increase in profits has fallen short of the additions to capital. (These findings in the Chamber's publication have not been fully supported by statistical data.)

(12) The income-tax data for the period 1953-54 to 1960-61 show that the distribution of income for all individuals has shifted in favour of persons earning less than Rs. 5,000 per year and against higher-income brackets. In view of this trend and the decline in the profitability of the corporate sector, the position in regard to direct taxation and the rate of growth in savings and resources available for capital formation should be reviewed.

These findings, as also the issues raised for possible study, are generally on the lines made familiar by leading organisations of businessmen. Many of them seem to be *prima facie* valid. The private sector's anxiety over the state of Central and State finances is certainly shared by the wider public. If the former looks forward to better financial management in the public sector and, consequently, to lesser burdens on corporate enterprise, the latter would very much like to have some relief from the heavy additional taxation that has been imposed in recent years. If non-development expenditure (other than on defence) can be substantially reduced and if, at the same time, public enterprises can be made to yield more surpluses and plan projects can be executed more economically, the burdens on the taxpayer, in general, and the corporate sector, in particular, may become more bearable. That the present depressing situation cannot be remedied overnight is, of course, true. But a beginning in the direction of remedying the situation can be made at least in the forthcoming Union Budget, if only the Finance Minister so wills it.

Notices

EASTERN INVESTMENTS LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above named Company that an Annual General Meeting of the Company will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 4.00 p.m. on Wednesday, the 11th March, 1964, for the following purposes:—

1. To adopt the Profit and Loss Account of the Company for the year ended 31st December, 1963, and the Balance Sheet as at that date together with the Directors' and Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint Directors in the place of retiring Directors.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

5. To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as a special resolution:

"That Article 159 of the Articles of Association of the Company be amended by deleting the word 'three' in line 4 and substituting therefor the word 'six'."

The Share Transfer Registers of the Company will be closed from 26th February, 1964 to 11th March, 1964, both days inclusive.

By Order of the Board,
BIRD & COMPANY (PRIVATE) LIMITED,
Secretaries.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA, *29th January*, 1964.

Notes:—

(*a*) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(*b*) The Dividends if declared, will be paid on or after 23rd March, 1964, to those shareholders so entitled whose names appear in the Company's books on the 11th March, 1964, or to their mandatees. No application for dividend warrants will be necessary.

(*c*) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of Special Business set out above is being sent to the Shareholders.

EMPIRE JUTE COMPANY LIMITED

TREND OF MARKETS

SILVER SAGS FURTHER

(*From Our Own Correspondent*)

BOMBAY, *12th February*

Silver sagged further this week under the pressure of arrivals, but gold, especially the 14-carat material, rallied to close steady after early setback.

The recent sharp rise in prices brought in a further inflow of the white metal during the week, while support remained conspicuous by its absence. The daily average arrivals improved from 18 bars to 20 bars, while the offtake contracted further from 20 bars to 15 bars. Consequently, the price declined from Rs. 262 to Rs. 254.50.

In contrast, 14-carat gold, which after opening one point lower at Rs. 65 had dipped to Rs. 61 on Friday the 7th inst., rallied to Rs. 66.50 by Monday on Delhi buying. Today, it was quoted at Rs. 66.25, as against Rs. 66 a week ago. Pure gold receded early this week from Rs. 113 to Rs. 109, but later recovered slightly to close at Rs. 111.

The international price for gold eased this week from $35.08½ to $35.07⅞ and the ready quotation in London also moved down from 250*s.* 9*d.* to 250*s.* 8¾*d.* Silver in New York and London remained firm at the last levels.

The following table shows the trend of prices during the week under review:

	12-2-1964 (closing)	High	Low	5-2-1964 (closing)
SILVER	Rs.	Rs.	Rs.	Rs.
Ready (999 fine) ..	255.00	262.00	254.50	263.00
GOLD				
Ready (14 carat) ..	66.25	66.50	61.00	66.00
Sovereign	85.00*	—	—	85.00*
London—				
Gold	250*s.* 8¾*d.*	250*s.* 9*d.*	250*s.* 8¾*d.*	250*s.* 9*d.*
Silver Ready ..	111¾*d.*	—	—	111¾*d.*
Silver Forward ..	111¾*d.*	—	—	111¾*d.*
New York—				
Silver	129.3 cents	—	—	129.3 cents

* As on 24-6-1963.

N.B.—The quotation for gold is per 10 grams (about 0.35 tolal and that for silver is per kilogram (35.73 tolas). London and New York quotations are per ounce.

STRINGENCY IN MONEY

(*From Our Own Correspondent*)

BOMBAY, *12th February*

Stringency in the short-term money market persisted throughout the week under review. The supply of funds available was too inadequate to meet the increased demand for credit. Indeed, borrowers continued to look around for accommodation. The position was rendered worse by the reported withdrawal of funds by a bank which was drawing on its Reserve Bank quota at 4½ per cent but lending at a much higher rate; the withdrawal is believed to have followed a directive from the Reserve Bank. Consequently, the inter-bank call rate for both renewals and fresh money rose by a further ¼ per cent to touch the high level of 6 per cent. Conditions in the Calcutta market were equally stringent, the call rate rising from 5¾ to 6 per cent.

The prevailing conditions are reflected in (*a*) the sharp rise of Rs. 50.19 crores to Rs. 2,441.90 crores in notes in circulation during the week ended 7th February and (*b*) the increase of Rs. 13.05 crores to Rs. 49.13 crores in loans and advances given by the Reserve Bank to scheduled banking.

In view of the persistent stringency in the money market, the response to the 91-day Government of India Treasury Bills continued to be poor. The total amount offered against tenders for Rs. 2 crores which were opened on Tuesday the 11th inst. was Rs. 2 crores only; the whole of this was accepted. The average rate of accepted tenders was higher at Rs. 2.340 per cent per annum, as against Rs. 2.325 a week before. The Intermediate Treasury Bills, too, evoked poor response, the amount of tenders actually sold from the 5th to 8th inst. being no more than Rs. 70 lakhs; last week, it will be recalled, there were no sales at all of these Bills.

The Reserve Bank of India has lowered the ceiling on bank advances against rice and paddy by 10 per cent, in view of the higher prices of rice prevailing at present as compared with the position a year ago. In the course of a Press *communique* issued on Monday the 10th inst., the Reserve Bank says:

"The ceiling limits for each two-month period commencing from January-February 1964 in respect of advance against paddy and rice, including advances against warehouse receipts, have been fixed at levels equivalent to 90 per cent of the average aggregate levels of such credit maintained in the corresponding period of 1962. A further ceiling, which will be within this overall ceiling limit, in respect of advances other than those against warehouse receipts is fixed at 90 per cent of such level of advances in the corresponding two-month period in 1962. The continuance of this special feature is intended to ensure that the control has no undue impact on advances against warehouse receipts. Again, in the interests of a steady and orderly growth of the warehousing activity in the country, advances against receipts of such warehouses as were established by the Central and State Warehousing Corporations on or after 1st January 1961 are completely exempted from the purview of the directive. It may be recalled that, previously, this concession was given only to warehouses opened on or after 1st April 1962. Provision is also made in the directive for the continuance of the additional credit limits enjoyed by banks operating in Punjab and Orissa. The provisions relating to 'other foodgrains (excluding wheat)' as set out in the earlier directive are continued, for the present, without any change."

There was a further notable increase of Rs. 9.67 crores to Rs. 121.53 crores in India's foreign assets during the week ended 7th February 1964. The whole of the increase was in balances held abroad which amounted to Rs. 19.07 crores. The foreign securities held in the Issue Department of the Reserve Bank were unaltered at Rs. 102.46 crores. As against the rise of Rs. 3.65 crores to Rs. 83.54 crores in deposits of scheduled banks with the Reserve Bank, the total of loans and advances obtained by them from the lender of last resort went up, as already stated, by as much as Rs. 13.05 crores.

The total credit made available by scheduled banks to their clients spurted again by Rs. 18.90 crores to Rs. 1,688.80 crores during the week ended 31st January. The rise was much more than the addition of Rs. 4.95 crores (to Rs. 2,441.24 crores) to the deposit portfolio of banks, so that the banks had to rely greatly on borrowings from the Reserve Bank. The total outstanding borrowings were higher by Rs. 7.10 crores at Rs. 35.85 crores, of which those against usance bills accounted for Rs. 13.63 crores, a rise of Rs. 3.28 crores. Investments declined by Rs. 1.20 crore to Rs. 683.55 crores.

Trading in the Gilt-edged market was a dull and drab affair again. Buyers were scarce, with interest confined only to a few short-dated loans. Since offers were also scarce, the volume of transactions was small, with values remaining almost unchanged at last week's levels. State loans were dull and Corporation loans were neglected.

In the foreign exchange market, there was no change in the banks' buying and selling rates for U.S. dollars which stood at Rs. 475 and Rs. 478.50 per $100, respectively. In New York, the pound sterling eased a little *vis-a-vis* the dollar, the spot rate declining by 0.010 cent to 279.790-279.820 cents and the three months' forward by 0.040 cent to 279.500-279.530 cents.

COTTON BUOYANT

(*From Our Own Correspondent*)

BOMBAY, *12th February*

Buoyancy in cotton futures continued unabated this week, in spite of the requisitioning of Digvijay cotton by the Textile Commissioner in Gujarat and the resultant drop in the mills' scramble for cotton in the spot market. With the principal bull operator exercising a firm hold on the maturing March contract, prices improved further in the course of the week on bear covering and absence of selling. The distant May contract reached the stipulated ceiling of Rs. 764.75 for the week ended 8th February on Friday the 7th inst. The next day, it eased to Rs. 761.75 and, on Monday the 10th inst., it was quoted initially lower at Rs. 761.50, but rallied to close at Rs. 765.75. It rounded off the week today at Rs. 769, that is Rs. 8.50 higher over the week, after it was bid up to Rs. 770. The March contract, which closed on Monday at the weekly fixed ceiling of Rs. 782.25, was unofficially quoted higher today at Rs. 787.

The trend during the week under review is indicated below:

(In rupees per three quintals)

	5-2-64	*High*	*Low*	12-2-64
Jarilla March ...	772.25	782.25	780.00	782.25
Jarilla May ...	760.50	770.00	761.50	769.00

The Textile Commissioner started requisitioning Digvijay cotton in Gujarat on Friday the 7th inst. at the instance of the Indian Cotton Mills Federation. According to trade sources, about 1,000-1,200 bales have been requisitioned so far. In view of the official requisitioning, mill demand showed signs of gradual decline. This decline was also due to the beginning of Laxmi and Jayadhar arrivals. At a meeting at Ahmedabad on the 10th inst., cotton growers criticised the requisitioning of cotton by the Textile Commissioner. The meeting appealed to the textile industry to desist from using its influence over the Government "for exploiting the unorganised mass of cotton growers," when half of the Digvijay crop still remained unsold.

Activity in the Sewri spot cotton market was confined to selected lots of CO2, L 147 and 197/3. Among imported cottons, Pima and higher grade Sudan attracted stray attention. The following are the spot prices—in rupees per candy of 784 lbs.—of some of the varieties:

Kapadvanj 1,261, Morvi CO2 1,390, A.P. CO2 1,741, Amalner 1,075, Akola L 147 1,218, Nagar 975 and Wagad 918.

YARNS EASY AGAIN

(*From Our Own Correspondent*)

BOMBAY, *12th February*

The yarn market depicted a distinctly easy trend during the week under review. Art silk yarns encountered selling, thanks to low offtake by consuming interests and increased supplies. There were reports of some stock accumulations in certain centres. Staple fibre yarns were dull in the absence of any encouraging development. Cotton yarns were also dull. The handlooms and powerlooms were said to be buying quantities just sufficient to meet their day-to-day requirements.

The market was thick with rumours that the Government of India might concede the plea of rayon spinners for abolishing the concessional rate at which the weaving mills are now obtaining yarn supplies. The special export promotion scheme for rayon textiles, it will be recalled, imposes an obligation on spinners to supply the manufacture-exporters of rayon fabrics art silk yarns at substantially concessional rates in exchange for the surrender of 30 per cent of incentive import entitlement earned by exporters. In support of the plea for withdrawal of concession, it is pointed out that, in view of the downward trend of prices that has set in since the decontrol was announced, the spinners are finding it difficult to continue sales of yarn at concessional rates and that, in the absence of fixed prices, there is no basis for working out these rates. The plea has, however, been opposed by the exporting interests. The opposition is based on the following grounds:

The withdrawal of concession will affect the competitive capacity of India's rayon textiles in the world market. Currently, India is exporting about Rs. 1.25 crore worth rayon goods every month. Export earnings of this order would mean that shippers are lifting about Rs. 20 crore worth of goods in terms of internal prices. The fall in exports would have a depressing effect on the prices of rayon fabrics in the Indian market. Eventually prices of rayon yarns are bound to suffer.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	12-2-1964	5-2-1964
Art silk yarn (per kg.)—	Rs.	Rs.
National Rayon 120D	11.68	11.55
Century 76D	18.28	18.35
S. I. Viscose 150D	12.91	12.91
Staple fibre yarn (40/2²)—		
Kohinoor (per kg.)	9.35	9.48
Century	9.35	9.50
Cotton yarn (per bundle of 10 lbs.)—		
10s Navsari	19.37	19.37
20s Podar	24.50	21 50
32s Madura	32.00	32.50
40s City	37.50	37.50
60s Finlay	76.25	76.25
80s Mahindra	93.00	93.00

GOAT SKINS FIRM

(*From Our Own Correspondent*)

MADRAS, *10th February*

Trading in E.I. kips was a shade better this week. Single tannage semi-premiums lights fetched 71/61/51 and medium fifths were in demand at 45*d.* In tanned cow calf, fourths were in good request. Buffcalf remained quiet, with stray export business. The U.S.A. kept out of the market for buffcalf, but the U.K./Continent buyers came to the rescue of the tanners. In superfine goat skins, the trend remained steady to firm due to the well sold forward position of the tanners. Semi-prime and prime sheep skins were steady, whereas best middle classes remained very firm on good inquiries from Japan.

The recently held Indian Leather Fair has proved a big success, and the trade has proposed to hold the Fair every year.

Total shipments from Madras last month were: 1,572 bales cow hides, 272 bales cowcalf, 855 bales buffcalf, 589 bales goat and 508 bales sheep to the U.K.; 163 bales cow hides, 43 bales cowcalf, 5 bales buffs, 52 bales buffcalf, 618 bales goat, 265 bales sheep and 10 cases of pickled goat to the Continent; 50 bales buffs, 117 bales buffcalf, 229 bales goat and 6 cases of pickled goat to the U.S.A.; and 24 bales goat and 275 bales sheep to Japan.

SPURT IN OILSEEDS

(*From Our Own Correspondent*)

BOMBAY, *12th February*

An impressive rise in prices of linseeds and castorseeds characterised the trading in the oilseeds market during the week under review. The rise in linseed futures followed hectic buying by bulls who were induced by reports of a further swift increase in mustard seed rates in North Indian markets. The mustard crop in North India, it was said, had been damaged considerably by the recent cold spell and frost. Latest estimates put the total production at no more than 600,000 tons. Heavy purchases by shippers also imparted strength to linseeds. Castorseeds met with excellent support, especially from operators who had diverted their attention away from groundnut futures. In sympathy with castorseeds and linseeds, coupled with short-covering, groundnuts tended to move up. Cotton seeds, too, were quoted higher on bullish advises from the cotton market.

Following the directive issued by the Forward Markets Commission, the Bombay Oilseeds and Oils Exchange has issued a stern warning to its members against illegal option dealings (*Teji-Mandi*). A supervisory committee has been appointed by the Exchange to deal with such tradings. Some of the big operators in the market have been asked to submit their books for a check-up by the committee. The committee, it is said, has been given powers to penalise any member who has indulged in such dealings.

The Groundnut April 1964 contract began the week distinctly firm at Rs. 237.12, as against the previous close of Rs. 236.25, and swiftly advanced to touch Rs. 238.12 today, the highest level for the past two years. This rate was, however, still below the ceiling of Rs. 241 (inclusive of the penalty of Rs. 5) fixed by the F.M.C. Nizam bold ready spurted by a rupee to Rs. 49.50. Khandesh quality put on Re. 1.37 to Rs. 50.62. Oil ex-mill advanced by 75 nP to Rs. 19.75. Railway receipts gained a like amount to Rs. 19.55.

In the castorseeds section, the March 1964 contract opened the week on a hesitant note and moved downward from Rs. 174.62 on Wednesday last week to Rs. 173.75 on Monday, before recovering to close at Rs. 176 today. June 1964 contract jumped up from Rs. 174.75 to Rs. 177.25. Ready Madras picked up 38 nP to Rs. 35. Oil B.S.S.

hardened by 30 nP to Rs. 15.10 and commercial by 15 nP to Rs. 14.35. Linseed March 1964 Contract was quoted at Rs. 40.50 today, as against Rs. 39.56 last week end. June 1964 contract increased by Re. 1.44 to Rs. 41. Bold ready rose by a rupee to Rs. 38.50. Oil ready strengthened by 35 nP to Rs. 15.85.

There was a handsome gain of Rs. 3 to Rs. 105, in the cottonseed April Contract.

The following table shows the closing prices of oilseeds and oils on Wednesday 12th February as compared with those of two previous weeks:

	12-2-1964	5-2-1964	29-1-1964
Groundnuts	Rs.	Rs.	Rs.
January 1964 contract	—	236.00	236.00
April 1964 contract	238.12	236.25	236.00
Niram bold	49.50	48.50	48.62
Khandesh quality	50.62	49.25	49.37
Oil ex-mill	19.75	19.00	19.25
Oil Ily. Receipts	19.55	18.80	18.95
Castorseed			
March 1964 contract	176.00	174.62	171.75
June 1964 contract	177.25	174.75	173.00
Ready Madras	35.00	34.62	34.25
Ready Kanpur	33.87	33.50	33.25
Oil B.S.S.	15.10	14.80	14.85
Oil commercial	14.35	14.20	14.30
Linseed			
March 1964 contract	40.50	38.44	37.31
June 1964 contract	41.00	39.56	38.50
Bold ready	38.50	37.50	37.50
Linseed oil	15.85	15.50	15.30
Cottonseed			
April 1964 contract	105.00	102.00	102.00

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms, Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

PEPPER FUTURES IMPROVE

(Messrs. Parekh and Co.)

BOMBAY, 12*th February*

During the past fortnight, Malabar black pepper prices improved, despite poor enquiries from New York where most of the dealers tried to bear the market to force the reserved sellers at the origin to lower the prices. The improvement in Bombay was the result of sizable speculative purchases in *Chaitra* and *Vaisakh* by Gujarat interest. Merchants dealing in small seeds and spices in Gujarat seem to have turned their attention to Malabar pepper, thinking possibly that its present prices are pretty low. Their purchases were about 400 tons.

Ungarbled, at Cochin, moved between Rs. 262.50 and Rs. 271. Garbled fluctuated between Rs. 272 and Rs. 277. The February delivery oscillated between Rs. 282 and Rs. 286. March was neglected, except for some sporadic speculative purchases.

Black pepper, in Singapore, improved to $(M)115, and white to $(M)157½. There is scarcity of supply of white in Singapore. Spot in New York, after climbing down to $0.31¼, improved to $0.32½ in view of grinders' demand.

In Bombay, the ready price remained unchanged at Rs. 150, but *Chaitra* recorded rose from Rs. 312 to Rs. 321 and *Vaisakh* from Rs. 322 to Rs. 332.

UNORTHODOX TEAS EASIER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 6*th February*

A slightly larger quantity amounting to 480,000 kgs. was offered at tea sale No. 5 held here on Tuesday the 4th inst. A useful selection of improved quality teas was on offer. Demand was not quite strong, following less widespread export interest. The best highgrowns generally came to a lower market, though a few lines were sold well, but the lesser Nilgiris were often dearer with quality. Improved low medium descriptions were sold readily at firm to dearer rates, with buyers closely following quality, but, where no improvement was noticeable, prices were firm. The brighter low mediums also followed a dearer trend, but others in this category often shared slightly in prices. Plainest and black leaf brokens were firm, but Middle East type fannings were not so strong. Whole leaf grades, particularly liquoring sorts, were sold well, but there was only a limited selection of tippy teas available. Unorthodox teas came to an irregular and often easier market.

Quotations (per kg.) were:

	1964	1963
	Rs.	Rs.
Low mediums	4.55-5.00	4.25-4.65
Mediums	5.10-5.50	4.70-5.00
Good mediums	5.30-6.30	5.10-5.80
Nilgiri B.O.P.	5.50-10.10	5.75-11.10

The average price realised in sale No. 5 was Rs. 5.08 per kilo, as against Rs. 5 a week ago and Rs. 4.97 in the corresponding sale last year.

In dust sale No. 5 held today, 259,000 kgs. were offered. The market met with strong general demand. All mediums elicited useful enquiry and were sold at fully firm to dearer rates. A limited quantity of highgrowns was on offer and these were sold at irregular rates. Clean black grainy descriptions attracted keen competition and were the strongest feature of the sale. The poorest and milled descriptions, however, were inclined lower. Unorthodox received useful support and were quoted firm.

The average price realised in dust sale No. 5 was Rs. 4.60 per kilo, as against Rs. 4.55 a week ago and Rs. 4.27 in the corresponding sale last year.

Colombo: There was good general demand. Best liquoring descriptions, although easier at the beginning of the sale, closed dearer. Uva brokens advanced by 10 to 15 cents, while lowgrowns were firm.

London: North Indian and Other Growths: In Monday's sale, there was less demand. C.T.C. Assams eased by 1*d.* to 3*d.* Orthodox and other teas, particularly those valued below 4d., were steady.

Ceylon and South Indians: In Tuesday's sale, offerings amounted to 24,459 packages, of which 7,254 packages were from South India. There was fair general demand. South Indians were fully firm, while Ceylons were about steady, but plainer types were easier.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 6: 533,000 kgs. offered. Fair demand at irregular rates. Low mediums and mediums barely steady. Good mediums dearer with quality. Highgrowns irregular. Unorthodox and black leaf lower."

TEAS EASY

(From Our Own Correspondent)

CALCUTTA, 11*th February*

Demand at the last week's tea export sales fell. But that did not surprise the trade, because overseas buyers had already lifted a sizable quantity in the past few weeks. In fact, tea stocks, in the United Kingdom, increased to 169 million lbs. in the week ended 31st January from 166 million lbs. in the previous week. Because of the good statistical position, bidders in Mincing Lane were less active last week and this led to heavy withdrawals of the North Indian offerings. C.T.C. Assams eased by 1*d.* to 3*d.* per lb. according to quality, but good plain teas and orthodox Assams were well supported.

Tea consumption in the United States is said to be on the increase, with instant tea enjoying good prospects. Coffee is a strong competitor with tea in the U.S.A., because it can be prepared instantly. The trade has noted reports that Ceylon's higher production in 1963 was at the cost of quality.

The Central Government has made available to the Tea Board a sum of Rs. 9 crores and the Board has been asked to provide loans to gardens for replantation, replacement of machines, and for augmenting irrigational facilities. The total loans under these heads should not exceed Rs. 5 crores, Rs. 2 crores and Rs. 2 crores, respectively. A good portion of this sum is lying with the Tea Board, because of its insistence that gardens requiring loans should submit proof of creditworthiness. The gardens needing external finance for replacement, extension and improvement of production, state that, it is because they are unable to provide their own funds for these purposes, that they require advances from outside sources. A committee of the Assam Government has now taken up the complaints of the Assam tea industry against the Tea Board in this regard.

The plight of the industry in Cachar is pitiable. Tea bushes in most gardens have already outlived their usefulness, and the gardens are handicapped by lack of funds to undertake replantings, which are now required to be done on a wide scale. Further, the tax structure has hit the industry in Cachar hard. Since most of the tea produced in Cachar finds its way to the internal market, the industry in this district has not only not benefited from the abolition of the export duty but has also paid dearly for the increase of 20 per cent in the excise duty. Presiding recently over the annual meeting of the Sulma Valley Branch of the Indian Tea Association, Mr. C. M. Shaw referred to the loss which Cachar gardens had sustained in view of the excise duty increase and pleaded for tax relief. Mr. Shaw said that the Assam Government's decision to improve substantially the specifications for labour quarters would mean increasing the housing costs by more than 50 per cent. Referring to the Wage Board, which is yet to make its final recommendations, Mr. Shaw declared that the Cachar gardens were not in a position to shoulder any more burden, and that any increase in wages should be on the condition of a compensatory increase in productivity.

Leaf on offer at the last week's export sales totalled 69,363 packages. Demand was less general than usual and prices eased. Medium C.T.Cs eased by 10 nP to 30 nP. The few very best C.T.Cs hardened, but others in this category eased. Secondary types were irregularly easier, but some of the brighter liquoring teas were dearer. Legg-cut teas were in good demand. Plain orthodox teas and "teas for price" were about steady. Bright mediums were in good demand, but the plainer liquoring teas eased. Whole leaf grades also eased, but the tippy teas were dearer. Darjeelings met an appreciating market. The quotations per one kg., inclusive of excise duty, were: Best Assam C.T.C. fannings Rs. 5.70 to Rs. 6.10, Best Assam C.T.C. B.P. Rs. 5.80 to Rs. 6.20, medium Assam C.T.C. B.P. Rs. 5.30 to Rs. 5.60, clean plain pekoe Rs. 5.10 to Rs. 5.40, medium Assam C.T.C. fannings Rs. 5.10 to Rs. 5.40, plain B.P. Rs. 4.55 to Rs. 4.65 and plain fannings Rs. 4.50 to Rs. 4.65.

Dust offerings at the last week's internal sales totalled 31,917 chests, which met with good demand. Plain orthodox teas were unchanged at last levels, but the brighter mediums hardened. Leggcuts were fully steady. Medium C.T.C.s eased but the smaller and brighter teas rose. Good C.T.Cs were a strong feature. The quotations per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust Rs. 6.20 to Rs. 6.70, medium Assam C.T.C. dust Rs. 5.10 to Rs. 5.30, legg-cut dust Rs. 4.90 to Rs. 5.10, medium Assam dust Rs. 4.70 to Rs. 5.10 and plain orthodox dust Rs. 4.50 to Rs. 4.70.

Demand for the 74,338 packages of leaf offerings at yesterday's export sales was fair. Darjeelings hardened following an improvement in quality, but whole leaf grades eased. "Teas for price" were about firm, but plain brokens and fannings eased. Medium orthodox teas also eased, but the brighter teas in this category were well held. Medium C.T.C. brokens were taken at lower rates and fannings proved difficult of sale. The best C.T.Cs also eased, but brokens received more support than fannings in the same category. Legg-cuts gained higher prices. The quotations per one kg., inclusive of excise duty, were: Best Assam C.T.C. fannings Rs. 5.50 to Rs. 6.10, Best Assam C.T.C. B.P. Rs. 5.60 to Rs. 6.20, medium Assam C.T.C. B.P. Rs. 5.20 to Rs. 5.40, clean plain pekoe Rs. 5.00 to Rs. 5.40, medium Assam C.T.C. fannings Rs. 4.95 to Rs. 5.15, plain B.P. Rs. 4.55 to Rs. 4.65 and plain fannings Rs. 4.50 to Rs. 4.65.

JUTE GOODS MOVE NARROWLY

(From Our Own Correspondent)

CALCUTTA, 11*th February*

Although a good number of inquiries was received from overseas buyers this week, actual business that took place in jute goods was limited and so movement of prices was narrow. In raw jute, mills were hesitant buyers, but prices were maintained steady at around minimum levels. A feature of trading was that, even in mesta, sellers, though they were eager for business, were disinclined to discount quotations.

Advices from the New York burlap market continued to be discouraging. For the 40" 7½ oz. hessian there fell from 9.00 cents to 8.55 cents a yard, and the 10 oz. remained changed hands at 11.75 cents a yard. U.S. enquiries for hessian, however, continued to be received at Calcutta. Interest was also shown by both the U.K. and the Argentina. It was hoped that, in the coming months, the U.S.S.R. and other East European countries would show steady interest. Apropos the optimum of Mr. G. C. L. Joneja, Jute Commissioner, in regard to jute goods exports realising the third Plan target of 900,000 tons this year, the trade felt that, if only fibre prices in India came down to the level of those in Pakisan and prices of goods reduced to that extent, overseas demand for sacking and hessian would increase impressively. If the Indian mills are to meet the competition offered by the Pakistan industry in overseas markets, it is needless to say, a reduction in the cost of production in India is imperative. In this context, the news of the possibility that jute sticks can be used as raw material in the manufacture of card-boards, box-boards, post-cards and a variety of cheap writing papers, has been well received. Already two paper mills near Calcutta consume jute sticks for pulp-making, and the Technological Research Laboratory of the Indian Central Jute Committee has done well in circulating the details of the processes involved in converting jute sticks to pulp. It is to be hoped that more and more paper mills begin to use jute sticks. The fact that India is short of coniferous wood for pulp making supports the assumption that, before long, indigenous jute sticks, the production of which is estimated at two million tonnes a year—these are mostly used as firewood now—would have a commercial market. The Government, while fixing fibre prices, should take into consideration the returns which the farmer is capable of receiving now from jute sticks. It is thought that the farmer has been able to lower his costs as a result of increased output also. It is on the economic price for fibre that rests the possibility of increasing exports of goods.

By fixing fibre prices lower than in India, Pakistan has been able to expand its overseas markets for goods, and thus increase production. The Pakistan mills were thus able to increase fibre purchases in the six months to December last to 1,368,000 bales from 1,065,000 bales in the corresponding previous period. The average monthly input of mills in Pakistan rose from 146,000 bales to 162,000 bales. Output of mills has increased substantially to a total of 170,000 tons in the six months. The trade here urges that it is time for action in India to enable the Indian industry to regain its overseas markets for sacking lost to Pakistan. Since India produces a higher proportion of fibre fit for sacking manufacture, it goes without saying that a depression in the fibre market can be avoided if India succeeds in exporting a greater quantity of heavy goods than now. Against the background of the terrific expanding capacity of Pakistan mills, it would be only timely action in India that would ensure India's due share in overseas markets. Since fibre fit for hessian manufacture is in short supply, such fibre commands a premium over minimum prices, while, on the other hand, thanks to the several price support measures, the inferior fibre fit for the manufacture of heavy goods are maintained at the minimum levels. The disparity between these two price levels has been brought to the attention of the Government several times. The only way by which a solution to this problem can be found is by lowering prices of fibre at least in respect of the lower grades. Such a measure would also lead cultivators to pay greater attention to quality.

The further fall in fibre arrivals in this week to 60,000 maunds a day from 100,000 maunds a week ago was reflected in steady conditions in the fibre market during the week under review. It was in consideration of the lower rate of arrivals that the Jute Commissioner fixed a lower quota for this week. As and when mills complete the February quota, the quantity bought by both mills and the Jute Buffer Stock Association this season will total 6.26 million bales, or 84 per cent of the season's estimated crop. In view of this position, holders who have been left with stocks which are mostly of the inferior varieties are not inclined to discount quotations. They feel confident that, for the rest of this season, they would be able to realise the minimum prices. The trade has noted reports from East Pakistan, that the Pakistan Government's jute policy, which has driven away 300 Indian traders, has not led to any benefit to jute growers. It is stated that the withdrawal of buying support on such a mass scale has led to dullness in the fibre market. In fact, overseas demand of fibre has alsc fallen. Thus fibre exports from Pakistan in the six months to December last fell to 2,462,972 bales from 2,725,773 bales in the corresponding previous period. A factor for the fall in overseas demand for Pakistan fibre is the increased exports of jute goods from both Pakistan and India. Continental spinners have complained that their margin of profit has shrunk, in view of the keen competition from Pakistan and India. Noting the expectation of a very large increase in the jute industry's fibre requirements in the five-year period ending 1970-71, according to the latest issue of the *Jute Bulletin*, issued by the Indian Central Jute Committee, the trade feels that the fibre output target of ten million bales (8 million bales of jute and 2 million bales of mesta) as provisionally fixed for the fourth Plan period will lead to marketing problems, if, in the meantime, adequate steps are not taken to expand India's export of heavy goods.

Although actual business passing in goods was limited in the week under review, the expectation that January output of mills would show a decline in view of disturbed working conditions in the month prevented quotations from falling. Also, more interest from the U.S.A. and the U.S.S.R. was anticipated. On Tuesday last, although steadiness marked trading, the higher levels soon attracted profit-taking, and ready B. twills fell to Rs. 113.10 from Rs. 113.40 on the day previous. Ready hessian 40" 10 oz. eased from Rs. 47.10 to Rs. 46.85. On the following day, speculative activity in the futures market led to a rise in quotations. At the rise, mills sold as much as they could for forward positions; however, overseas buyers did not respond. Before the close of the day, prices fell and hessian 40" 10 oz. and B. twills were firm at Rs. 46.95 and Rs. 113.35, respectively. Quiet conditions prevailed on Thursday, and prices were marked down at Rs. 46.85 and Rs. 113.20, respectively. Demand for hessian was modest, and mills on Friday sold for deliveries up to December. Hessian 40" 10 oz. was firm at Rs. 46.80, but B. twills eased to Rs. 113.00. Over the week-end, it was announced that goods in stock with mills as at the end of January 1964 aggregated 120,900 tons, showing a substantial rise of 8,600 tons as compared with the previous month. The rise in stocks against the background of the belief of a fall in production caused disappointment, and B. twills declined to Rs. 112.60 and hessian 40" 10 oz. to Rs. 46.50. With prices at Rs. 112.65 and Rs. 46.60, conditions remained quiet yesterday.

SUGAR STILL AT PREMIUM

(From Our Own Correspondent)

HAPUR, 10*th February*

Sugar ruled quietly steady during the week at Rs. 155 to Rs. 158 per quintal in the open market, as against the controlled price of Rs. 121.34 to Rs. 126 per quintal. The supply position continued restricted. Most of the factories in Meerut and Muzaffarnagar districts were faced with a shortage of cane supplies, which was attributed to the inadequate enforcement of Government's orders. It was alleged that many *khandsari* units were crushing more than double the permitted quantity of cane and were buying cane at some centres up to Rs. 5.80 per quintal, as against Rs. 5.36 being the prices paid by sugar factories. According to the industry sources, the Government has failed to prevent unauthorised manufacture of *gur* and *khandsari* and also their export.

After early losses, *desi khandsari* rallied on revival of demand from stockists in Punjab and Rajasthan. Prices advanced by Re. 1.34 to Rs. 5 per quintal according to quality. Week-end prices were:—*Desi* inferior Rs. 105 to Rs. 120, medium Rs. 132 to Rs. 135, *superior* Rs. 140 to Rs. 145, crystal Rs. 145 and *boora* Rs. 155 to Rs. 160 per quintal.

After ruling quiet in the earlier part of the week in the absence of buying urges due to non-receipt of import permits, *gur* prices improved fractionally in the week-end, as some permits were received. Daily arrivals averaged 2,500 to 3,000 maunds and the local stock was around 14,000 quintals. Total arrivals so far have been estimated around 144,000 quintals as against 127,000 quintals last year. Week-end prices were:—*Gur* superior pansera Rs. 26.25 to Rs. 26.50, average Rs. 26, *dera* Rs. 25.50, *balti* Rs. 26.75 and *shakker* Rs. 27.50 to Rs. 28.50 per quintal.

Divergent trends were noticed in the *gur* market last week at Muzaffarnagar. After early steadiness, *gur* prices sought lower levels in the absence of import permits, while *shakker* and *rusket* varieties registered heavy gains on brisk buying by stockists.

WHEAT RISES FURTHER

(From Our Own Correspondent)

HAPUR, 10*th February*

Firm conditions continued in foodgrains and pulses. This week, as absence of winter rains and heavy frost in the past fortnight adversely affected *rabi* crops. The dwindling stock position also acted as a bullish factor. The U.P. Government is, however, anxious to check this rising trend and more fair price shops are being opened.

Wheat hardened by Re. 1.50 to Rs. 2.50 per quintal according to quality on better local and outside buying enquiry in the face of declining stocks. The average quality was now placed between Rs. 58.75 and Rs. 60.75 and the farm produce between Rs. 62.50 and Rs. 65 a quintal. Local wheat stocks, left with the trade were nominal and crop prospects were uncertain. Rice was steadier on good demand and poor arrivals. Prices advanced by Re. 1.34 to Rs. 2.67 per quintal, as the local stocks were still meagre. Week-end prices were:—Rice *basmati* superior Rs. 93.77 to Rs. 96.45, *sela* Rs. 91.09 to Rs. 93.77, *mainpuri* Rs. 63.63, *ramajwayan* Rs. 75.02, *raimunia* Rs. 79.04 and *gadda* Rs. 60.95 per quintal.

Gram improved by 67 nP to Re. 1.34 per quintal on firm Punjab advices coupled with the declining stocks position. The Punjab quality was quoted at Rs. 53.58 and the local produce at Rs. 52.92 a quintal. Local gram stocks also declined to 4,000 quintals. Maize moved up by 67 nP to Re. 1.50 per quintal on brisk consumer demand with the average quoted at Rs. 37.50 to Rs. 38.50 and superior at Rs. 40 to Rs. 41.25 per quintal. Stocks drifted lower to 13,000 quintals. *Juwar* and *guwar* prices were also steadier in sympathy with the other grains.

Firm conditions were witnessed in pulses on poor crop precspects for peas and *arhar* due to the heavy frost. Peas improved by Re. 1 per quintal to be quoted at Rs. 46.50 to Rs. 48.50 for the *dara* quality and Rs. 50.50 to Rs. 52.50 a quintal for the farm quality. *Arhar* advanced up to Rs. 4 per quintal to Rs. 60 to Rs. 61.62 for the average quality and Rs. 62.96 to Rs. 63.63 per quintal for the superior quality. *Urd* and *moong* also registered further gains on good demand. *Urd* was placed between Rs. 64.30 and Rs. 69.66 and *moong* at Rs. 76.68 to Rs. 79.66 per quintal. *Masoor* and other *dal* prices also tended to rise in sympathy with other *dals*.

COPPER AND TIN SPURT

(From Our Own Correspondent)

CALCUTTA, 11*th February*

The feature of this week's trading in the metal markets was the substantial rise in the prices of copper and tin on the London Metal Exchange. It is apparent that world consumption of copper has risen above production and the only way out is to raise production. While the Rhodesian Selection Trust Group has already announced the removal of all restrictions on production with immediate effect, it remains to be seen how far production can be raised in view of the continued political troubles in Africa. The exhaustion of producers' free stocks held in London is now being felt more and more.

In an attempt to combat the price rise on the London Metal Exchange, the R.S.T. Group had announced its intention to offer copper to its customers at £236 per long ton instead of the L.M.E. settlement price. But the continued rise in the price shows that the initiative has not yet been wrested from speculators. It is felt that confidence cannot be regained, until there has been substantial proof of a rise in production and producers build their stocks in London. It is significant that a prominent producer, the Union Miniere due Haut. Katanga, recently stated that its production in 1964 would not be significantly larger than in 1963, when its output totalled 270,000 long tons. Making this forecast, the quarterly report of the firm referred to the social tension in Katanga leading to labour problems and technical difficulties, thus hampering the Company's output. The Company's output last year was lower by 25,000 tonnes as compared to 1962. The Company made available last year all its production for sale.

On the London Metal Exchange, steady demand raised spot copper wire bars from £241¾ a ton to £245¼. But the three months' metal rose only moderately from £243½ to £246½. Spot cathodes rose from £232½ to £236½, and three months from £235 to £239. Spot fire-refined hardened from £231 to £235½, and the three months from £232 to £237½. Spot tin opened at £1,060 a ton and closed substantially higher at £1,079. Three months' tin closed at £1,064, after opening at £1,054½. It is felt that only increased releases from the U.S. stockpiles would stem the rise in tin. Although production of tin this year is expected to rise under the influence of the improved marketing outlook, it may not meet the increased level of demand. Spot zinc closed at £93 a ton, after falling to £91½ from £94. Spot lead closed lower on balance at £78¼ a ton, as against the opening rate of £79¼.

The Wage Boards for iron ore, limestone and dolomite mines have recommended interim relief for workers in these industries amounting to Rs. 7.80 per month with effect from 1st January 1964. The Government of India has accepted the recommendations and requested the employers to implement them as early as possible. About 100,000 workers are expected to benefit from the recommendations. The minimum emoluments of unskilled workmen in these industries will be raised to Rs. 2.50 per day or Rs. 65 per month, according to the Boards' recommendations. The emoluments should include the basic wage, dearness allowance, cash food subsidy and/or the value of food concessions in cash or in kind, but not bonus. The increase that the minimum paid workman should get in the case of mines where grain concessions are in vogue should be worked out and this amount paid as interim wage increase. In the case of workmen whose total emoluments were between Rs. 100 and Rs. 150 p.m., the interim wage increase would be Rs. 10.40. In the case of those with emoluments above Rs. 150 p.m., it would be Rs. 13. The recommendation would apply to all workmen, time-rate and piece-rate, as defined in the Industrial Disputes Act, as also workmen employed by or through contractors.

WEEK'S STOCK EXCHANGE TREND

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CVIII. No. 2757 BOMBAY, 22nd FEBRUARY 1964 PRICE Rs. 2

FINANCES OF MAHARASHTRA

NO one need be surprised that Mr. S. K. Wankhede, Finance Minister of Maharashtra, who presented the budget for 1964-65 to the State Assembly on Wednesday this week, has not only not proposed any fresh taxes but actually given some tax concessions and relief to Government staff (in the form of enhanced dearness allowance), both together costing the exchequer Rs. 2.50 crores. For Mr. Wankhede himself (in 1961-62) and Mr. S. G. Barve (in 1962-63 and 1963-64) had levied new taxes of sizable magnitude calculated to yield an extra revenue that more than covered the third Plan target of additional taxation fixed for the State. Again, the circumstances today are different from those a year ago. Then, the State budgets were governed by the stresses of the emergency caused by Chinese aggression and the growing strains caused by rising Plan outlays. Now, the high level of prices and oppressive cost of living have vitiated the atmosphere for imposing fresh taxes, which, at the level of States, could only be of a nature as would aggravate the inflationary forces. There is, of course, the land revenue which does not suffer from this disadvantage. But this source can be touched only if the State Governments are prepared to face the consequent political unpopularity in rural areas. The Government of Maharashtra is obviously not prepared to take this risk. Be that as it may, the necessity for making a large provision for civil defence has lessened to a considerable degree and there is the justifiable hope of a more liberal Central assistance in the coming year's last year, the scope for this assistance had been circumscribed by the prevalence of the emergency in an active form. What is more, the general buoyancy of revenues of Maharashtra State also has greatly helped Mr. Wankhede. Yields from taxation newly introduced in the first three years of the third Plan are, one is told, much better than had been anticipated before. Thanks to the vigour and enterprise displayed by Mr. Wankhede's Cabinet colleague, Mr. Homi J. H. Taleyarkhan, there has also been a substantial increase in the State's share in small savings collections which have registered a remarkable improvement. The State Government's recent drive to recover arrears of loans and taxes, too, has yielded substantial results. Due to all these factors, the Maharashtra Government, besides meeting its existing commitments, has also made available to various departments sizable additional allocations without having to draw, as originally apprehended, upon its reserves.

How buoyant is the revenue position of Maharashtra Government will be clearly evident from a look at the accompanying table giving a summary of budget estimates for the coming (1964-65) year, as compared with the revised and budget estimates for the current (1963-64) year and the previous year. The estimates show that the revenue receipts in 1964-65 will go up by Rs. 14.24 crores. Actually, the increase may be much more marked, as Finance Ministers have always a weakness for underestimating revenue receipts. In the budget for the current year, for instance, Mr. Barve had taken credit for an increase of Rs. 15.53 crores in revenue as compared with 1962-63 (revised), whereas the increase is now expected to be no less than Rs. 29 crores. Similarly, the capital transactions reveal a surplus of Rs. 1.44 crore, as against the huge deficit of Rs. 17 crores expected earlier. Consequently, the overall deficit of Rs. 16.95 crores has turned out to be a handsome surplus of Rs. 6.87 crores, even after the appreciable rise (+Rs. 24.05 crores) in expenditure over the level that had originally been anticipated (+Rs. 15.89 crores). On the basis of this experience, it may be safely inferred that, as against the overall deficit of Rs. 9.83 crores which Mr. Wankhede anticipates in 1964-65, there may, in fact, be a surplus, even assuming that actual expenditure will be higher than the budget estimate of Rs. 187.94 crores. It is apparently for this very reason that Mr. Wankhede has preferred a budget which, while being free from fresh taxes, actually affords some relief to the common man.

It is, indeed, commendable on the part of the Finance Minister to have chosen food, clothing and drugs for the purpose of tax concessions, though one would wish that the concessions had been a little more liberal. The exemption limit for sales tax on meals served in hotels, restaurants and canteens is proposed to be raised from Re. 1 to Re. 1.50. This concession will certainly give a distinct relief to the thousands of persons depending entirely on hotels, especially in Bombay City, provided the hoteliers do not play any mischief. The innumerable (and increasing) users of ready-made garments will also benefit as a result of the proposed upward revision in the sales tax exemption limit from Rs. 5 to Rs. 10 per piece. As for medicines, the rate of sales tax on preparations containing 12 per cent or more of alcohol is to be reduced by half to 15 per cent and drugs containing less than the aforesaid quantity of alcohol will be subjected only to a general sales tax at 3 nP in the rupee, as against the total tax of 5 nP at present. The other welcome proposals are: (*a*) grant of a conditional rebate equal to sales tax on diesel oil consumed in agricultural operations, (*b*) concession in water rates in the relatively backward areas, (*c*) relief for Government pensioners, (*d*) additional dearness allowance for Government staff, and (*e*) grants-in-aid for raising the dearness allowance payable to secondary teachers of non-Government schools and municipal employees.

MAHARASHTRA BUDGET AT A GLANCE

(In crores of rupees)

	1964-65 (Budget)	1963-64 Revised	1963-64 Budget	1962-63 (Revised)
Revenue	188.45	174.21	160.66*	145.13
Expenditure	187.94	168.78	160.62	144.73
Revenue surplus	0.51	5.43	0.04	0.40
Capital transactions	—10.34	+ 1.44	—16.99	+ 0.99
Overall position	— 9.83	+ 6.87	—16.95	+ 1.39
Plan outlay	111.50	97.20	81.25	72.40

* After taking into account additional tax proposals.

The buoyancy reflected in the revenues of the Maharashtra Government has enabled its Finance Minister to step up further the provision for Plan outlay. The total amount actually earmarked for 1964-65 is Rs. 111.50 crores, as against the revised estimate of Rs. 97.20 crores for 1963-64 and Rs. 72.40 crores actually expended in 1962-63. Including this provision, the total outlay for the first four years of the third Plan will come to Rs. 350 crores, representing over 72 per cent of the aggregate Plan outlay of Rs. 485 crores. The Maharashtra State can certainly take pride for the splendid performance concerning the implementation of the Plan projects. The performance is reflected in the significant rate of economic growth recorded during the last few years. The most striking evidence of this growth, as Mr. Wankhede stated, is that, between 1955-56 (end of first Plan) and 1962-63 (second year of third Plan), the State's income at 1955-56 prices has gone up by over 39.5 per cent from Rs. 1,004 crores to more than Rs. 1,400 crores. The rate of increase in *per capita* income has, however, been slower —the actual income has risen by 17.5 per cent from Rs. 292 to Rs. 343—because of the persistently rising birth rate and declining death rate which itself is evidence of the improvement in living standards. It may be noted, in passing, that the improvement in the State's income is largely due to the vigorous growth of industries in the private sector. The Maharashtra Government will, therefore, do well not to initiate or support such economic policies as are not conducive to the optimum rate of growth of the private sector industries. If one is tempted to strike this note of caution here, it is because one finds that both the Chief Minister of Maharashtra, Mr. V. P. Naik, and the Maharashtra Provincial Congress Committee have been harping on nationalisation of banks as a must for reaching the goal of democratic socialism, whatever it may mean. This journal has no doubt that more nationalisation will only mean more misery for the masses.

From the statistical data furnished in the Finance Minister's speech, as well as in the *Economic Review* released along with budget papers, one finds that the State of Maharashtra is today producing more foodgrains and commercial crops and generating more power than, say, five or six years ago. A distinct improvement has also been noticeable in the number of factories working, employment and production of goods. Notable, too, is the improvement in the fields of communications, education and health. The road milcage, for instance, has risen from 33,800 km. in March 1956 to 43,000 km. in March 1963, the number of students from 3.64 million in 1955-56 to 5.87 million in 1962-63 and the number of hospital beds from 16,000 in 1957 to 24,000 in 1962. This improvement in Maharashtra's economy, creditable though it is, should not, however, engender any sense of complacency among the Ministers, the officials and the powers-that-be. Such a sense of complacency, we are happy to note, is absent in the Finance Minister's budget speech. On the contrary, the Minister has clearly indicated that the State has yet to go a long way towards bringing to a "reasonable level" the general standard of living throughout the State. Gratifying, indeed, is his assurance that the Government would assess the progress of the current Plan schemes and reshape them where necessary, imparting wider dimensions or an increased pace of implementation. And reassuring also is his statement that the Government is fully determined to achieve an average *per capita* daily availability of 18 ounces of foodgrains (as

against the present average of about 15.4 ounces) by the end of the fourth Plan (1970-71), if not much earlier.

Considering the widespread unrest that has developed lately over the disturbing price situation, it is just as well that Mr. Wankhede should have drawn pointed attention to the urgent problem of holding the price line. Despite some of the measures taken by the Government, retail prices in urban areas went up, even according to the imperfect and unrepresentative official price indices, by seven per cent during the calendar year 1963, the prices of foodgrains alone having risen by nine per cent. Mr. Wankhede has not indicated what further concrete steps his Government proposes to take. All that he has said is this: "If the public co-operates in minimising avoidable consumption, thus increasing the savings potential of the people generally, the State shall have gone a long way towards mitigating the hardships and bringing pernicious price trends under control." Public co-operation is no doubt needed, but what is more urgently required is a merciless pruning of unproductive and wasteful Government expenditure. There is no evidence of this overdue reform in Mr. Wankhede's Budget. Besides effecting economy in expenditure, the State Government must also give all possible encouragement and assistance for increasing and maintaining production (industrial as well as agricultural) at the highest level possible.

PHARMACEUTICAL DRUGS

THE growth registered by India's pharmaceutical and drugs industry since Independence has been truly phenomenal. This may be readily gauged from the fact that the value of its output was as much as Rs. 100 crores in 1962-63, as compared with a mere Rs. 10 crores in 1947-48. Another impressive measure of the industry's growth is provided by the variety of its products ranging from anaesthetics to vitamins. Within this wide range are to be found antibiotics like penicillin and tetracycline, anti-diabetic drugs, anti-dysentery drugs, anti-leprosy drugs, anti-pyretics like aspirin and sodium salicylate, anti-T.B. drugs, hormones, liver extracts, drugs of vegetable origin like caffeine and quinine, sulpha drugs, bismuth salts, calcium lactate, calcium gluconate, ether, tetanus serum and tranquilizers. Thanks to such diversified production, the growing popularity of modern medicine and the ever-increasing demand for drugs, the units already existing and under construction, in both the public and private sectors, may be reasonably expected to achieve the production target of Rs. 175 crores per annum by the end of the third Plan. The confidence with which Mr. O. V. Alagesan, Minister of State in the Union Ministry of Petroleum and Chemicals, has just looked forward to the achievement of the third Plan target may be noted in this connection. The Minister, who spoke at the meeting of the reconstituted Development Council for Drugs and Pharmaceuticals held at New Delhi on the 19th instant, has also confirmed that the rapid rise in the output of the industry has enabled the country to reduce imports of finished preparations to a negligible amount. Incidentally, according to the latest available figures, the value of medicinal and pharmaceutical products imported in the whole of 1963 was just Rs. 6.0 crores, as compared with about Rs. 7.5 crores in 1962. The progressively decreasing imports reflect the country's progress towards self-sufficiency in this field.

The pharmaceutical industry, with its aggregate capital investment of Rs. 70 crores (of which a fourth is foreign capital) in about 125 large and 1,600 small establishments and its working force of 100,000 (including 4,000 technicians) is no longer in the preliminary stage. Its advanced character is borne out not only by the wide variety of drugs it produces and the increasing proportion of indigenous raw materials it uses, but also by the contribution that international organisations like the W.H.O. and the U.N.I.C.E.F., the Government of India, indigenous private capital and reputed firms belonging to the U.S., the U.K., West Germany and Switzerland have made to its growth. But it has still some way to go before it can claim to be in a state of self-sustaining growth, for several basic raw materials are yet to be manufactured in the public and private sectors. The Hindustan Organic Chemicals Ltd., in the public sector, which is to meet the raw material requirements of dyestuffs, drugs and plastics industries, for instance, has not had a smooth sailing so far, as the Minister himself has admitted. Since its programme of production is in the process of being reorganised, it will be some time before it begins to supply adequately some of the organic intermediates required for drugs manufacture.

The petro-chemical industry, which, too, can provide a whole range of other organic intermediates for the drugs industry, is yet to be organised on a large scale in the public sector. The Government's proposals for setting up a petro-chemical complex in Gujarat are still in the talking stage. At least the private sector could have gone ahead in this field by now, had Esso's proposals been approved. The Government can yet make amends for past delay and encourage private enterprise to establish petro-chemical units in the areas of existing, as well as proposed, refineries. Till such time as both the sectors are in a position to meet all the raw material requirements of the growing pharmaceutical industry, imports of intermediates would have to be adequately assured to actual users. It has been rightly urged by the industry, in this connection, that the import of any raw material should be banned only after its indigenous production has equalled the country's requirement. While it is broadly true that, with the integrated development of the chemical industries in the country, the raw material demands of the drugs industry will be increasingly met, the Government's policy must, at the same time, be geared more speedily and purposefully to the task of licensing large-scale units in the private sector, too, for the manufacture of intermediates. That way alone can the country make up for the time and opportunity lost in the pursuit of a doctrinaire objective to concentrate the manufacture of basic intermediate chemicals in the public sector.

In any case, the public sector, which is already manufacturing some essential drugs in the Hindustan Antibiotics plant at Pimpri, has enough projects on hand. The current expansion plans of the Hindustan Antibiotics itself are quite substantial, covering as they do the production of 84 M.M.U. of penicillin per annum (as against 60 M.M.U. at present) and 90 tonnes of the anti-T.B. drug, streptomycin, per annum (as against the present 45 tonnes), in addition to several other drugs like hamycin, dermostatin and vitamins. Another public-sector undertaking, namely, the Indian Drugs and Pharmaceuticals Ltd., which is establishing three units with Soviet aid—one for the manufacture of antibiotics at Rishikesh, another for the production of synthetic drugs at Hyderabad and the third for the manufacture of surgical instruments at Madras—is yet to complete them. Already the establishment of these units has been considerably delayed. If the present schedule is adhered to, the Rishikesh and Hyderabad units will commence trial operations by the middle of 1966 and the Madras unit by mid-1965. These three units, when in full production, will account for an aggregate annual output valued at about Rs. 31 crores—Rs. 20 crores by way of antibiotics, Rs. 9 crores worth of synthetic drugs and intermediates and Rs. 2 crores worth of surgical instruments. In all, therefore, the public-sector units (including the Hindustan Antibiotics) will account for about a fifth of the third Plan production target of Rs. 175 crores for the pharmaceutical industry. If the public sector contributes its allotted share fully, it will be a great achievement, indeed, in the field of formulations where private enterprise has always been pre-eminent.

But, from the way in which these projects are being implemented, it looks as though a substantial part of the public sector's third Plan commitments will be fulfilled only in the fourth Plan period. Therefore, if the public sector decides not to take on itself more responsibilities in this field in the fourth Plan period, it will be a very wise decision indeed. Then, the private sector can confidently go ahead with its foreign collaboration arrangements so as to bring the technological talent and research resources of world-renowned pharmaceutical firms to this country in a larger measure than at present. If one knows how greatly the predominant private sector in India's pharmaceutical industry has benefited by foreign collaboration, one will appreciate the immense scope for further progress in the same direction. Mr. Alagesan's own testimony, quoted below, is eloquent in this connection:

> "Modern units have been set up (in the private sector) for the production of a wide range of antibiotics . . . and synthetic drugs. . . . Many of these basic manufacturing units are monuments of progress in the field of chemical technology, carrying out highly intricate and hazardous chemical reactions. Several of them have obtained technical collaboration from manufacturers in the U.S.A., Switzerland, the U.K., West Germany, Italy, etc. With their entry, benefits of advanced research and technology achieved in foreign countries have become available and young engineers and chemists of this country have received training in the research and manufacturing establishments abroad.
>
> "For the processing of pharmaceuticals, large capacities have been established. Latest techniques utilising machinery of high precision are being adopted. Considerable care and attention is being paid to maintain high standards of hygiene. Indian pharmaceutical manufacturers have done investigational work and evolved methods for making the products suitable for tropical conditions, which are even being adopted by foreign manufacturers for products being marketed by them in other tropical countries."

All these remarkable achievements, to which the Minister has testified, are mostly those of large-scale units which alone are in a position to avail of foreign collaboration, do continuous research, maintain standards of quality and reliability, market the products efficiently and achieve economies in production costs. It is, indeed, a pity that hundreds of small-scale units have been allowed to operate in this field without the manifest advantages of superior technical know-how, abundant capital and continuous research. No wonder, therefore, many of them have been producing spurious or sub-standard drugs. Rigorous drug control alone may not be adequate to deal with the innumberable small producers. A two-pronged approach would be necessary in this connection. First, all further encouragement to small-scale units should be stopped. And, secondly, the existing small units should be enabled to benefit from the work of the research laboratory which is proposed to be set up by the Indian Drug Manufacturers' Association, presumably with assistance from the Government. Unless stability studies on various sensitive pharmaceuticals which get easily decomposed in tropical conditions are carried out, regular quality control laboratories in different centres are established and clinical trials on new products manufactured by the industry are systematically conducted by the proposed research laboratory, the menace of spurious, counterfeit and sub-standard drugs will continue.

Fuller encouragement to large-scale units and discouragement to small enterprise as much as possible will thus make for better health in an industry which caters to the health of the people. For the rest, adequate raw material availability, which will ensure optimum utilisation of capacity, and economies of large-scale production with the help of modern, automatic equipment may be expected to result in lower costs and correspondingly lower prices in due course. Exports, which account for just under a crore of rupees now, could also be expected to increase in that situation. Till then, however, official control of drug prices would have to be sufficiently flexible and imaginative, so that all legitimate increases in the costs of raw materials, labour and packing materials could be fully compensated. Care must be taken to ensure that measures intended for curbing profiteering do not result in penalising the honest producer.

BRITAIN'S "BRAIN DRAIN"

THE controversy that has been raging in Britain for quite some time over what has come to be known as the "brain drain" gained a fresh momentum last week. It is a sequel to the disquieting disclosure that British scientists and engineers have been migrating in considerable numbers to the United States and Canada where facilities and opportunities for research as well as for material advancement are undoubtedly greater. There are several estimates in this connection. One is that one in every seven or eight taking doctorates in science in a year goes to the United States. The National Science Foundation (Washington) has just estimated that, as against the arrival of 100 British chemists, physicists and mathematicians as immigrants into the U.S. in the 1956-57 fiscal year, the number had risen to 171 by 1960-61 and still further to 241 by 1962-63. But, according to the Foundation, immigration of British scientists and engineers, taken together, had moved up only from 842 to 912 per year over the six-year period. A third estimate, that of the U.K. Association of University Teachers, has it that Britain lost to other countries in the academic year ended September last some 160 university staff (professors, readers, senior lecturers, etc.), of whom about 60 (largely scientists) went to the U.S. The Association's estimate, however, is not complete, for it is based on a survey of only 70 per cent of university staff other than research workers. Yet another estimate is that of Lord Shawcross, according to whom there were 120 or 130 scientists with Ph.D. degrees and also some very able people in occupations other than science in the total of 26,000 British citizens who emigrated to the U.S. last year.

All these estimates, though they differ from one another in some ways, confirm the large proportion of professors and researchers in science (pure and applied) in Britain's "brain drain."

It would be interesting to examine the factors responsible for this flight of British scientific talent to the United States in particular. According to the Washington Correspondent of *The Financial Times* (London), conversations with scientists arriving from Britain have revealed that higher salaries and better research facilities in the U.S. are the two principal factors involved in decisions to cross the Atlantic. Salaries in the U.S., even for the average scientists, are stated to be at least double those in the U.K. And opportunities for promotion are also said to be much better in the U.S. In addition, as *The Financial Times* has reported, university researchers have been attracted by an American system under which any piece of required equipment can be readily obtained, whatever its cost. This may have been a decisive factor in the emigration of physicists, in particular, who generally require highly complex equipment. Two latest instances of leading British physicists about to leave for the U.S. may be highlighted in this connection. The decision of Dr. John Pople (head of the Basic Physics Division of the National Physical Laboratory) to take up a post in the Carnegie Institute of Technology, Pittsburg, has been prompted by the consideration that, in his area of research in molecular physics, on the borderline between physics and chemistry, much more is going on in the U.S. Another leading physicist, Professor Maurice H. Pryce of Bristol University, is likewise going to the U.S. in search of fresh fields and pastures new. There is also the instance of a public attack on "bad Treasury decisions" by Professor F. Hoyle whose work in radio-astronomy has been delayed and frustrated. These and other earlier instances, incidentally, bear out the following conclusions of the Special Committee of the Institute of Physics and the Physical Society in its recent report:

1. University physicists in Britain still receive emoluments which are only about two-thirds of what their colleagues in industry or Government research are getting. A University department head is far poorer than a senior industrial scientist in Britain and *a fortiori* in the U.S.

2. While new buildings are generously provided with grants, for some reason many departments are finding it difficult to obtain authority to purchase essential instruments costing a few thousands of pounds.

3. With specialisation the order of the day, targets in many research projects are such that, without modern and often expensive equipment, they will just not be attainable. It is not sufficient to say that research funds will eventually be made available, because, where the project is one with an immediate industrial application, the chances are that a team working in parallel in the U.S. will not be hampered and will reach its objective and patent the results well ahead.

These conclusions explain the whole movement of scientists—from universities to research establishments and thence to the U.S. The Association of University Teachers, too, has just explained that, though the factor of salaries carries weight with many staff, at least as important are the research facilities, the ancillary help, and the financial provision for research which makes planning without too much worry possible. Increases in grants, it is stated, have so far been too small and too slow to recapture the goodwill of many university scientists dispirited by a long struggle for money, space and equipment. As Mr. J. Grimond, the Liberal Leader, has said in this connection, British scientists do not seem to have forgotten the treatment of universities and research in the years between elections. The Conservative Government's complacent approach to the "brain drain" problem and the Labour Opposition's move to make political capital out of it seem to be rather amusing at the present time when several scientists in physics, chemistry, physiology and medicine have announced their intention of working in the U.S. Apparently they have no faith in the promises of either political party. But their flight from Britain is bound to drive home the lesson that, unless that country treats its scientists and researchers as generously as the U..S and the U.S.S.R. treat theirs, it cannot hope to be on par with the two latter nations in all-round scientific and technological advance.

MARKET GOSSIP

Pre-Budget Guesswork

THE stock exchanges are calm and confident that the Central Budget which T.T.K. will be presenting to Parliament a week from now will not be unfavourable to investors. The Unit Trust of India has already started investing its initial capital in a wide range of equities and in some select preference shares. Reports in the market of its operations suggest that the U.T.I. is picking up sound scrips offering good yields and that there is a scarcity of sellers. There are no signs of either aggressive buying or selling by speculators. It remains to be seen whether activity will flare up in the interval between the time of writing (Thursday afternoon) this piece and the presentation of the budget.

Naturally, many guesses are being made in the market about the forthcoming taxation proposals. This is a normal feature of pre-budget days. A general assumption is that the need for fresh taxation is markedly less than that a year before. T.T.K. himself has given rise to some optimistic hope in the closing months of 1963. Another general assumption is that the tax proposals will not be a listless affair and that, on the contrary, one should be prepared for a considerable revamping of the fiscal policy and pattern. A third general assumption is that, in effect, T.T.K.'s proposals will hit the top income group hard, while being merciful to the corporate sector, lower income group and middle classes; those with incomes over Rs. 40,000 per year may be called upon to carry a bigger load of taxes. The hatred towards S.P.T. is so much that every one in the market believes that it will be jettisoned. Market circles, however, are less sure of the alternative to S.P.T. Some believe that T.T.K. will jump at the alternative suggested by the leaders of business community last year, namely, a straight increase in the rate of corporate tax. If he does so, it is to be hoped that he will bear in mind the case of small and medium-sized companies.

The main elements of speculation in market circles about the tax proposals are as follows:

1. The wealth tax will be increased rather steeply.

2. The Estate Duty will be enhanced, especially in the slabs over three lakhs of rupees.

3. The tax on capital gains too will share the same fate.

4. The rate of tax deduction on dividends at source may be raised from 30 nP to 45 nP.

5. The rate of taxation on unearned incomes also will be higher.

6. A higher rate of depreciation may be allowed on indigenous plant and machinery.

7. Indirect taxation on raw materials and intermediate products may be reduced in the case of many items and abolished in the case of some.

The first five guesses make sense in the context of the background to the Bhubaneshwar resolution on democratic socialism. The sum total of these proposals is to accelerate the pace of reducing the number of rich people in this country. The fourth one will also serve the additional purpose of checking tax evasion to some extent. It is said that there are many in this country who are holding their investments in *benami* names and are content with the net dividend they get in their hands. They do not simply bother to claim the refund from the tax authorities by showing the dividends in their tax returns and submitting the refund vouchers. By raising the deduction at source, the Finance Minister can straightaway penalise, so the argument runs, such tax evaders, without hurting the honest investors.

Unearned Income

If the fifth item in the above list proves to be true, it will further penalise those who have been prudent enough to save and invest in productive channels. The retired persons, as well as those who have put in many years of service and passed their middle age, will be the worst sufferers. These persons have worked hard, spent less, saved more and put their savings in economic activities that have added to the wealth of the nation. The income they get from such investments is treated as unearned and taxed at a higher rate than that applied to current earned incomes. This is not an equitable method of taxation. It would become doubly inequitable, if the present incidence of tax on all unearned income were to be uniformly enhanced as is rumoured now. What the type of unearned income described here deserves is substantial relief and not fresh burden. Surely, it is unjust to treat the income from self-earned investments on par with the income derived from inherited wealth for purposes of taxation. A person who has worked hard all his active life, earned by the sweat of his brow and set aside a part of his income for enjoying his retirement in comfort and security and for ensuring that, after him, his family does not suffer from pecuniary difficulties, merits a certain measure of consideration, sympathy and encouragement. His income is not the same as the income of a person living lazily on the savings of his forefathers. In fact, one would go further and say that even the income obtained by a person from his or her parents' self-earned property should be treated as earned income for purposes of tax. In other words, it is only the unearned incomes of the second generation that should be subjected to a rate higher than that applicable to earned incomes. It is to be hoped that the Central Board of Revenue and the Finance Minister will do justice to assessees of the type mentioned above.

The sixth guess in our list is apparently based on the ground that indigenous plant and machinery are more expensive than the imported ones and, therefore, a handicap to the manufacturers employing the former who have to export their goods in competition with foreign manufacturers. Another rationale for it is that it will serve as an inducement to entrepreneurs to go in more and more for domestic capital goods and reduce the pressure on the limited supply of foreign exchange.

The seventh guess too is an intelligent one, in that it neatly fits in with the need for reversing the cost inflation which has gained considerable momentum since the last budget.

Bank Rate

For a short while on Friday the 14th inst., there was a strong rumour that the Bank rate might be raised sharply on budget day or soon thereafter. Having regard to the prevalence of widespread inflation in the country, as is evident from the continuing rise in prices (as well as wages) and the steep increase in money supply in recent months, one can easily give credence to this rumour. If the Bank rate is raised to, say, six or seven per cent, it will give a shock to the whole economy and restrain the spentthrift practices of politicians, businessmen and people in general. A high Bank rate, coupled with fiscal concessions to investors, will help the country's economic development with stability by restoring value to the money and encouraging people to save. Such a policy will also impress the foreign countries, the World Bank and the I.M.F. and encourage them to give more assistance. If inflation is allowed to go on at the present rate, it will surely discourage the members of Aid-India Club due to meet at Paris next month.

Besides raising the Bank rate, the authorities should also quickly unload on the market large quantities of wheat out of the P.L. 480 stocks in order to arrest and reverse the markedly upward trend in wheat prices since October last. Mere issue of threats against traders and sermons to consumers will not be of much avail.

T.T.K.'s persistent emphasis on the need for unearthing unaccounted money has also been partly responsible for the vigorous price inflation in the country. It seems to have given great impetus to the flight of black money into all sorts of goods (not excluding dry fruits, almonds and dates), precious stones, houses, flats and furniture. Instead of talking about this subject as he has done, T.T.K. should have promptly acted, taking the culprits by surprise. Apparently, his difficulty must have been the absence of know-how and a firm plan. In that case, silence would have been the best thing, until the course of action had been decided upon. By giving notice of his intentions several months in advance, the Finance Minister has only made his task doubly difficult. Those who have made black money are usually a clever lot. They must have by now been careful enough to tuck away that money beyond the reach of T.T.K. Any measures that he now takes to catch the sinners will probably have to be such as to hurt the honest and innocent investors also. The question that he will have to consider carefully is whether he should penalise all for the sins of a few.

Date With Bokaro

Mr. N. N. Wanchoo, Secretary to the Department of Steel, who is also the head of the firm to handle the Bokaro project, left for Tokyo yesterday as the head of a delegation of officials and technicians from I.I.S.Co., T.I.S.Co., Hindustan Steel, the Heavy Engineering Corporation and Heavy Electricals. The Wanchoo delegation's brief includes probing Japanese steel-makers' willingness to take part in the construction of the Bokaro plant. The Government is still toying with the date of 1967-68 as the target for the completion of the first stage of Bokaro. This stage is now placed at a capacity to make 1.5 million tonnes. The Steel Ministry will soon have to give up the delusion that the project will be possible at this speed.

Despite the reportedly different views of the Finance Minister, the Steel Minister still holds on to the plan of Dastur and Company being the consultants for Bokaro. Inspired reports last week mentioned that French firms were taking an interest in Bokaro and one observer described the reports as a well-timed palliative offered to soothe Indian sentiments which have been hurt by the timing of the French recognition of Peking and de Gaulle's forays into South Asian neutralisation adventures. Not to be outdone, the Americans, negotiations with whom fell through despite the late President Kennedy placing his prestigious support behind the Bokaro plan, also indicated revival of interest in Bokaro. The fact of the matter is that the major steel groups in various countries which are capable of supplying equipment are interested. Such interest is natural in view of the size of the project. Mr. C. Subramaniam, Union Minister, and Mr. P. C. Sethi, Deputy Minister for Steel, Mines and Heavy Engineering, told the Lok Sabha that specific offers were still to emerge. Those interested were France, West Germany, Japan, Belgium, the United States and Czechoslovakia. The Soviet Union and Britain were not mentioned as among those who were interested yet. The tenders may go out in six or seven months. The Bokaro first stage cost, as worked out by Dastur and Company, is about Rs. 360 crores for 1.5 million tonnes. This will

DELHI LETTER

SLOW TAKE-OFF IN "MIG" PLANS

A CASE-STUDY OF PROJECT DELAYS

From Our Special Correspondent

NEW DELHI, 18*th February*

THE project for the manufacture of a supersonic plane to strengthen air defences was certainly one on which the Government had emphasised the need for rapid implementation, even before the Chinese assault on India. If the plans for making MIG fighter planes with Soviet assistance and projects for a network of modern ordnance factories could themselves be delayed so long, the slow pace of several purely economic development projects need not be surprising. The plans for the ordnance factories were announced immediately after the Chinese attack in October 1962. The initial agreement in principle on the manufacture of MIG planes was made even earlier, about the middle of 1962. Yesterday, Mr. K. Raghuramiah, Minister for Defence Production, told a questioner in the Lok Sabha that he "was not aware of any perceptible or avoidable delay" in the Soviet-aided MIG project! At the same time, all that he could say as being done in the construction stage was the start of civil works on the Nasik factory which would make the engines. The frames will be made in Koreput, in Orissa, and discussions are still to take place on the missiles and electronics side of the supersonic air force project. A factory to make these equipment will probably be sited in Hyderabad.

Reports, some weeks ago, that the MIG project was being abandoned, emanated from the difficulties over the financial aspect of the deal. The terms are harsh—a high rate of interest with a seven-year repayment period—and the Finance Ministry at one stage is said to have considered *the deal too expensive*. The current phase of talks with Russians will hammer out the financial details but New Delhi appears to have given up hopes of reducing the harshness of the financial terms. On the other hand, New Delhi probably has made an advance in negotiations for persuading the Russians to make some alterations in the design so as to improve the fighter plane's night performance for one thing. The structural changes, on which the Russians are said to have agreed to work, will mean that the MIG version to be made in India will be superior to the MIG-21. The British and the Americans are unwilling to equip the Indian Air Force with supersonic planes. Mr. Raghuramiah himself told Parliament that talks had not taken place with any country other than Russia on supersonic planes.

The New Oil Horizons

Essentially, the oil policy is claimed to be a continuation of that evolved by Mr. K. D. Malaviya, but the overtones are different and there is no longer the dogmatic assertions on the "evil nature" of the international companies. The Government still holds on to the need for primacy for the public sector, but there has in recent weeks been an exhibition of pragmatism on the part of both the oil companies and the Government. Two years ago, when this correspondent discussed with oil companies' representatives the question of their discrimination in the attitude towards India as compared with that to Japan, the oilmen said that one of the basic reasons for the more liberal approach to Japan was the size of the Japanese market. The new horizons opening in India, where the demand for petroleum products is far outstripping earlier expectations, is probably one reason for the change in the attitudes on both sides. The pattern will now be of partnership between the Government and the companies, first initiated by the Burmah Oil Company in the Oil India deal and now pursued by Philips Petroleum for the Cochin refinery whose share issue has just been announced. The character of the public sector in the oil industry is changing and there is competition among foreign companies. When some years ago Mr. Galbraith privately advocated oil firms' partnership with the Government, it is said some oil companies would have nothing of that kind. The most welcome feature today is the competition among numerous foreign oil firms to be in partnership with the Government. The French and the Italian entry into the field also helped to impress on the established firms that the partnership plans are sensible.

Another new and welcome feature is the series of conversations the Government of India has been having with Kuwait, Iran and Iraq. The Middle Eastern oil producers also are entering a new phase, in which they are keen to have direct approaches to the big developing markets for crude, instead of going through the intermediary Western oil firms. Japan made a dent in the Western monopoly in the Middle East by entering into arrangements for crude production. The Japanese call this crude production "yen oil," because no foreign exchange is involved. The talks between Indian officials and Kuwait, Iranian and Iraqi officials have raised hopes. The proposals for the Oil and Natural Gas Commission exploring Iranian offshore prospects involves many complications, because India is not technically competent yet to take up the exploration on its own. It is whispered about that Iran and Kuwait are willing to sell crude to India direct at prices lower than those charged by foreign companies.

Russians Peeved

In the case of Russians, one version is that Moscow has been cut up as a result of India not accepting its offer to increase supplies of petroleum products. An escalator clause of a heavy discount for rapidly increased purchases was dangled before Delhi but Delhi did not swallow the bait. Following this has come the Soviet demand for increased prices for the petroleum products it supplies to India. The Indian Oil Company is also growing up to present an image other than one purely devoted to distribution of Soviet and completely public sector products. In the I.O.C. distribution pattern, Russian products will be mixed up with those from plants having American and other foreign investment flavour.

While the Koyali and Barauni refineries will come up with Soviet technical and financial assistance, one flaw in the Soviet image is the enormous delay, though the Indian Government has not yet come out with any open expression of displeasure of the Soviet bloc ways. Such criticism of Soviet bloc ways are out of question and the Government has soft-pedalled its disappointments in Nunmati where the Rumanian technicians partly contributed to the mass. At Barauni, too, the Soviet designing of the refinery does not make enough provision for the manufacture of a range of by-products. In fulfilling the petro-chemical dreams which are emerging as part and parcel of the oil development plans, a tie-up with the Soviet bloc will recoil on India since the Russians themselves are backward in the field. Petro-chemicals are a sector in which the Russians, according to Mr. Khrushchev, hope to make progress in the decade of the 'sixties.

The Cost of Malaviya

There was a tendency to interpret Mr. Humayun Kabir's first announcement on the Haldia refinery plans as a sop to his home State. But the delay in initiating plans for a Calcutta refinery is in fact an indictment of Mr. Malaviya and his manipulations, because technical reports had several years ago favoured a Calcutta, close-to-shore, location rather than Barauni. Mr. Malaviya's preoccupation with dogma and presentation of low statistics on demand and targets are now recoiling on the national economy. A Planning Commission panel recently worked out figures which show how careless the planners themselves were while calculating the oil targets and demand projections in the Third Plan itself.

In the draft outline of the Third Plan, the estimates of demand for petroleum products were 9.96 million tons in 1965. The Oil Advisory Committee's estimates, incorporated in the Third Plan document, was 11.723 million tons. The total production in the country in 1965 was placed at 7.923 million tons. (Pages 482-84 of the Third Plan document). In the mid-term appraisal of the Third Plan (page 136) the Planning Commission gives the figure for end of Plan demand of 16.9 million tonnes of petroleum products. Programmes in hand may raise the total refining capacity to a little less than 18 million tonnes in 1966 if the projects go ahead according to present plans. But a later study by the Planning Commission places the best possible production rate at around 16 million tonnes by 1966—a hope not held outside the Government. But the dismal prospects revealed in the Planning Commission study are that there will be immense shortages in a variety of products, particularly lubricants, kerosene and furnace oil. The new study (see accompanying tables) is unrealistic in projecting production figures for 1971. While it can legitimately project the demand for petroleum products in 1971, placed around 30 million tonnes, it is amusing to find it projecting a production total and break-up; between now and 1971, surely there is enough time to plan in detail so as to meet the requirements in 1971. But so far as production patterns are concerned, it is prudent to limit oneself to the next few years on the basis, of projects already under way.

PETROLEUM PRODUCTS

Estimated Requirements as in Third Plan Document

(In million tons)

End products	1965 demand estimates		Total output in 1965	Deficit (—) or surplus (+)
	In draft outline	Oil Advisory Committee estimates made in March 1961		
Kerosene	2.2	2.66	1.282	—1.378
High speed diesel ..	1.8	2.607	1.578	—1.029
Motor spirit	1.3	1.123	1.537	+0.414
Aviation turbine fuel ..	0.3	0.408	0.189	—0.219
Aviation spirit ..	0.06	0.053	0.010	—0.043
Furnace oil	2.2	2.753	1.930	—0.823
Light diesel oil ..	0.7	0.872	0.719	—0.153
Bitumen	0.7	0.828	0.514	—0.114
Jute batching oil ..	0.1	0.080	0.047	—0.033
Lubricants	0.5	0.409	0.071	—0.338
Other products ..	0.1	0.130	0.046	—0.084
Total ..	9.96	11.723	7.923	—4.214 +0.414

Requirements in 1966 as estimated by Planning Commission Study Group now

(In million tons)

	Demand	Production	Surplus(+) or deficit (—)
Naptha and motor spirit ..	1.714	2.895	+1.181
Kerosene and aviation turbine fuel	4.160	3.043	—1.117
Diesel oils	3.850	4.281	+0.431
Furnace oil	4.500	4.310	—0.190
Lubricants	0.480	0.071	—0.409
Bitumen	0.620	0.861	+0.241
Total ..	15.324	15.461	+1.853 —1.516

Mr. Kabir has set up a working group to study the various international offers on the Madras and Haldia refineries. The group is being asked to submit a report in six or seven weeks. After weeding out proposals which were not made in detail, the companies that remain in the field are: Shell, Esso, Caltex, ENI, Philips, Mobiloil, Japan Gasoline and a West European consortium. Japan is anxious to enter the field in India because any success in India will be an advertising point for the Japanese industry in negotiations with other developing countries. Japan already has a partnership with the Indonesians in the oil industry and the Japanese are said to be planning oil ventures in Malaysia. Mobiloil has a public sector lobbyist in the Indian Oil Company which is a partner in a venture with Mobiloil for manufacturing lubricants on a small-scale out of imported base oil.

The Petroleum and Chemicals Ministry has also made administrative arrangements to start processing the plans for petro-chemicals. This branch of oil industry received scant attention in the third Plan but is likely to have the pride of place in the fourth Plan. Mr. Krishnamachari heralded the prospects some weeks ago at a meeting in Bombay and the dream document is one prepared by the French expert, Dr. Henney. The petro-chemical industry is one in which Mr. Krishnamachari's open-door plan for foreign investment may come into play. According to the French expert, the Indian needs for chemicals possible from a petroleum base may be as high as Rs. 150 crores by 1971. The estimates of needs by the end of the third Plan are Rs. 50 crores worth. The French estimates of total investment are more than Rs. 500 crores. Nearly two-thirds of this investment may be needed in foreign exchange. The French expert suggested five petro-chemical structures—in Bombay, Calcutta, Gujarat, Barauni and South India.

No Automobility

Wanted one lakh cars a year: actual production 15,711 in 1963! Both the wish and the reality are official, from a statement by Mr. C. Subramaniam, Minister for Steel and Heavy Engineering. Between the lack of enterprise of Indian manufacturers and the lack of forceful action by the Government, the consumer has been left to suffer. Mr. Subramaniam sees no hope of relief to the car buyer until the rate of production reaches a level of 50,000 a year or more. The Government claims that liberal foreign exchange allocations have been made to help the Indian manufacturers increase the indigenous content to 90 per cent. Mr. Subramaniam has given notice that this target should be reached by the end of the calendar year, but the Planning Commission thinks the increase in use of indigenous equipment to the 90 per cent level will take place only by about the end of the current Plan. The planners also do not think that the industry will be able to achieve even the modest targets fixed for it in the third Plan—a total of one lakh vehicles—trucks, cars and jeeps.

Answering questions in Parliament, Mr. Subramaniam did not elaborate on the surprise announcement by Mr. Nehru some time ago that the Government may enter the automobile industry. According to Mr. Subramaniam, the Government has not revised its stand on keeping the small car project in cold storage. (The Minister's statement was vague enough to merit two contradictory headlines in Delhi newspapers. One said: "No revival of small car project." Another read: "Small car project not given up.")

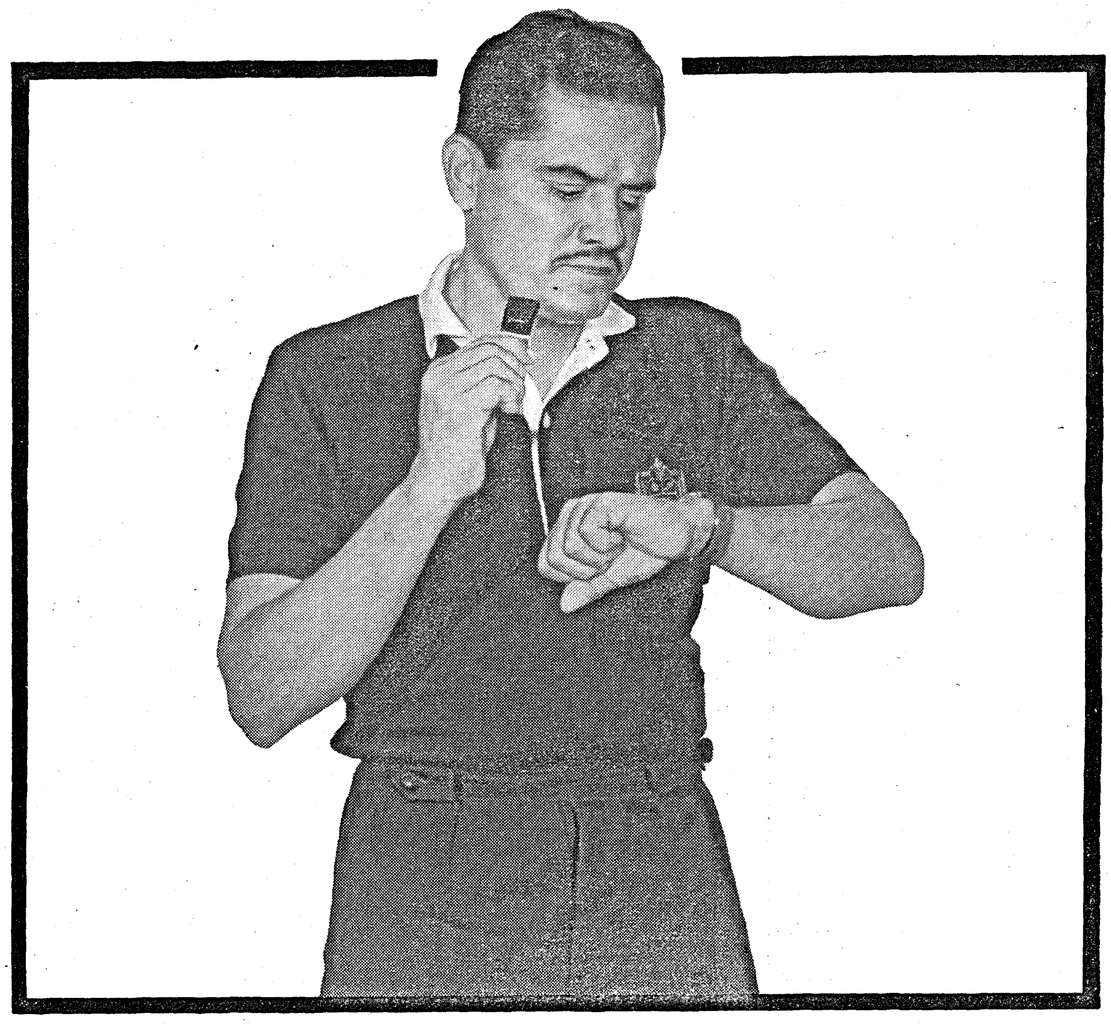
According to Mr. Subramaniam's statement, the percentage of foreign components in the three types of cars made in India varies widely. Last year, Standard used 39.82 per cent of imported components, Ambassador 23.09 per cent and Fiat 35.90 per cent. In terms of C.I.F. value excluding import duty, the use of imported components was Rs. 2,723 worth in Standard, Rs. 1,730 worth in Ambassador and Rs. 2,000 worth in Fiat. Another point which became clear was that the cost of indigenous manufacture was higher than the value of comparable imported components.

BRAKES INDIA LTD.

The factory of Brakes India Ltd.—a joint venture of South India's pioneering industrial group of T. V. Sundaram Iyengar and Sons and Girling Ltd. of the U.K.—located at Padi, six miles from Madras, was declared open on Saturday last by Mr. K. Kamaraj, Congress President. The Company's plant, estimated to cost Rs. 2.50 crores, is claimed to be the first fully integrated project in the country equipped to manufacture a wide range of brake equipment for all makes of motor vehicles made in India. It may be noted here that there have been various improvements in the brake equipment, from mechanically operated to hydraulic-operated or air-assisted systems for reducing the physical effort of the driver in applying brakes. The Company will start with a very high indigenous content of 85 per cent and raise it to 95 per cent within the next three years.

The factory is situated on a 30-acre plot, with an initial covered area of 80,000 sq. ft. with plenty of room for expansion in future. The construction started, according to the Company's Chairman, Mr. T. S. Rajam, in August 1962 and, within 16 months of turning the first sod, the factory has been made ready to commence manufacturing operations.

A whistle blows, it's a penalty...and referee Vaidya's decision is always correct!



On the field, he's an athletic, fast-moving figure. Watching the ball carefully. Keeping an eye out for infringements—fouls, off-sides. His decisions are never questioned, for Vaidya is respected by players and spectators alike. Not so long ago, he was a crack football player. He was chosen to represent India at the Olympics, but an accident kept him out. Today, he referees with skill, intelligence and good judgment...qualities which Vaidya brings to bear on his work as Technical Foreman at Burmah-Shell's Lub. Oil Blending Plant at Bombay.

'RECIPES' FOR OVER 300 LUBRICANTS

'Every engine and moving part,' says Vaidya, 'needs lubricating oil.' And it's Vaidya's job to supervise the blending of over 300 grades of lubricants. With the help of his colleagues, he ensures strict quality control in production so that the oils are on specification.

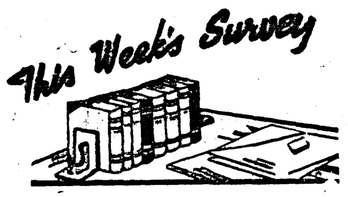
TODAY, AS EVER, PEOPLE LIKE VAIDYA ARE WORKING FOR YOU

'Work must be balanced by physical exercise and relaxation,' says Vaidya. 'That's why I play football and bridge.'

Vaidya and people like him—at all levels of responsibility—are Burmah-Shell. Today, as ever, they—are hard at work...working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

BURMAH-SHELL

BURMAH-SHELL are People in the service of the People



FUEL EFFICIENCY SERVICE

IT has been estimated that fuel accounts for anything from 10 to 40 per cent of the total cost of manufacture in several industries. Greater efficiency in its utilisation, so as to minimise waste, will make for some reduction in cost. If, for instance, a 10 per cent reduction in the consumption of coal can be achieved by more efficient utilisation of that fuel, it would mean a saving of about Rs. 38 crores a year for the country as a whole. This estimate, made by two British experts who visited India some time ago, is based on the 10 per cent saving that can be secured by adopting a few simple "first-aid measures" and by stimulating fuel efficiency consciousness in industry. Of course, still greater saving is possible and this, according to the British experts, could average 25 per cent of the coal consumed in the factories visited by them. Since, however, the effort to attain that level of saving (that is, 25 per cent) might involve substantial modifications in plant and equipment and, consequently, additional capital outlays, the immediately practical thing would only be to aim at a saving of at least 10 per cent through inexpensive and elementary fuel efficiency measures. If industry is suitably guided on these measures by technical experts belonging to a nationwide service, it is bound to appreciate the tremendous scope for fuel economy and ultimately go in for advanced techniques, involving modernisation of boilers, furnaces, etc. when the existing equipments fall due for replacement. It is precisely to provide such guidance that the National Productivity Council has just established, at the instance of the Government of India, a fuel efficiency service in the area presently covered by the Council's Bombay Regional Directorate.

The new service, which was initiated on the 15th instant in the Bombay industrial area, the first zone chosen for the purpose, is intended (i) to promote fuel-consciousness in industry, (ii) to assist industry in adopting proper techniques of fuel utilisation, (iii) to provide in-plant consultation service for advising on fuel efficiency problems, (iv) to undertake fuel efficiency surveys in order to locate and identify fuel efficiency problems and suggest remedial measures, (v) to train personnel in the skills, procedures and techniques of efficient fuel utilisation, (vi) to provide testing and analysis facilities, and (vii) to collect and disseminate information on fuel efficiency.

The N.P.C. Service, which would ultimately deal with all kinds of fuel, will be directing its attention to coal, to begin with. It will deal with all aspects of fuel utilisation, including handling and combustion of fuel and generation, transmission and utilisation of steam and heat. And it will also deal with all types of machinery and equipment consuming fuel and heat, such as boilers, cupolas, furnaces and kilns. While the service will ultimately cover all techniques and measures for increasing fuel efficiency, its stress in the initial stages will be on "first-aid measures" which industry could readily understand and implement with little or no capital investment. Such measures will cover improved operation and maintenance of boilers and other fuel-consuming plant and equipment, improvement of lagging, prevention of steam leakage, trapping and air-venting, effective instrumentation, sensible adjustment of pressure and temperature and use of economisers, heat exchangers, improved stokers and recording instruments. These elementary measures will take very little time to study and may be expected to produce quick results.

The Fuel Efficiency Service, it is gratifying to note, will be advised on its organisational, technical and operational requirements by a high-level standing committee manned by representatives of the National Productivity Council, Coal Board, Railway Board, Central Water and Power Commission, Ahmedabad Textile Industry's Research Association, Central Fuel Research Institute, Indian Institute of Technology, South Indian Steam Users' Association and Indian Institute of Petroleum. Its three-fold service relating to in-plant survey and advice, training and information will be provided by fuel efficiency engineers. When its activities come to cover all parts of the country, a big forward step will have been taken not only in the campaign for conserving good quality coking coal for metallurgical purposes and for increasing the use of low-grade coal by adopting improved fuel burning techniques, but also in the campaign for higher productivity all round. Much is rightly expected of this practical service, modelled on the National Industrial Fuel Efficiency Service of the U.K. On its effectiveness and popularity in the Bombay area will depend its rapid extension to the other parts of the country, especially to the southern, northern and north-western parts, where the need for economic utilisation of coal is paramount because of the great distances that separate them from the coal-producing areas.

MR. C. H. BHABHA ON PLANNING

In a crisp and sarcastic address to the Bombay Rotarians on Tuesday this week, Mr. C. H. Bhabha, Vice-Chairman of the Central Bank of India Ltd., highlighted quite a few important points on the results of India's exercise in democratic economic planning. One was the inflation in the size and cost of the Planning Commission. He said:

"The Planning Commission was, at the beginning, a small compact high-powered body, costing the country only a few lakhs of rupees a year; but, today, it is a vast organisation functioning from a huge structure called the *Yojana Bhavan* and costing the Indian exchequer no less than a few crores a year. It should really and truly be said that, apart from anything else, this institution has proved to be an avenue of employment for a particular type of civil servants, for some devoted followers of the party in power who had to be rewarded for some reason or other, and for a special species of experts and professors who could not make much headway in their own spheres of activity. . . . The one outstanding result noticeable to all intelligent people of this country (however) is that it has worked out some grand basic ideas for inspiring great hopes of the future to our countrymen. At times, the Planning Commission has, because of the nature of its constitution and composition, also assumed itself to be a super Government and voiced, in advance, the efforts and expectations of our national leaders."

Like all inflation, the one in the Planning Commission has thus done more harm than good. The saying that "too much advice is bad" or "too many cooks spoil the broth" is adequately demonstrated by India's performance in planning. How has this performance been? Mr. Bhabha devoted the bulk of his speech to this question. His analysis brought out the following points:

Poor pace of industrial growth; 9 per cent in the first Plan, 8 per cent in the second Plan and 6-7 per cent in the first two years of the third Plan. This compares unfavourably with the growth recorded by Italy, West Germany, Japan and even some of the South American countries.

The contribution of agricultural products to national income in terms of percentage is about the same as 14 years ago. It is also somewhat disheartening to find that, even now, despite all the grand schemes and plans, 71 per cent of the total working population of our country is engaged in agriculture—a percentage which was about the same 14 years ago. It would be relevant to mention here, by way of a contrast, that in the U.S. only 9 to 10 per cent of the total working population is engaged in agriculture and the production from these efforts satisfies not only the needs of the community in that country, but also leaves large surpluses which form an important item of their export list. . . . The daily *per capita* caloric consumption in India today is no more than 1,800 calories, as compared with the barest minimum needed of 2,500 calories per day per head and 3,000 to 3,500 calories consumed per head per day in the U.K. and the U.S.

Speaking frankly, Mr. Bhabha averred that the whole approach of the powers-that-be to agriculture was "most casual, unrealistic and irresponsible." Notwithstanding all the large advertised efforts and the great amounts expended during the last 15 years or so, "it is somewhat disheartening," commented Mr. Bhabha, "to find that we continue to be in the same unhappy position in regard to both agricultural production and prices that we were in 15 years ago and that we may continue to be so for the next decade or two, if some immediate and radical changes are not made by our leaders in their thinking, emphasis and policy." This is a perfectly valid observation and so also his emphasis on the need for concentrating efforts for increasing the productivity of land. One may complain that there is nothing new in the remarks of Mr. Bhabha, but that is not his fault, because, as he himself said, the same old problem persists.

The next issue to which Mr. Bhabha drew the attention of Rotarians was rising population and unemployment. "The baby boom," he scarcastically remarked, "is the only boom that is of a continuing nature in this country." After quoting data on population, he pointed out that, with population going up at the rate of 8 million a year, the prospect of a better material existence in India, even if all the targets of production were hit, "would be only an ever receding feature in the economic landscape of our country." The half-hearted manner in which the planners have been tackling the population problem was exposed by Mr. Bhabha by contrasting the amounts earmarked in the Five-year Plans for family planning and for development of khadi and village industries. It may be recalled here that, as against Rs. 3 crores and Rs. 27 crores provided for family planning in the second and third Plans respectively, khadi and village industries have been allotted a total outlay of Rs. 82.4 crores and Rs. 92.4 crores, respectively. Nearly 75 per cent of the latter amount is for khadi alone, of which no less than Rs. 32 crores have been set apart for Ambar charka, though the ability of even this supposedly improved means of production to provide gainful employment in rural areas is doubtful. No wonder the employment goals in the third Plan also have gone awry. It has been estimated in the mid-term Plan review that, at the end of the third Plan period, there will be an unemployment of no less than 17 million, as against 9 million and 5.3 million at the end of the second and first Plans, respectively.

WORLD TRADE GAP

Just last week, we described, in the course of a special article on page 244, how the imbalance in world economy was widening fast. We recalled then the finding of the U.N. study (1962) that the combined external payments gap (on both current and long-term capital accounts) of developing countries by 1970 could well be about $11,000 million and referred to the opinion expressed by some to the effect that the U.N. finding was an understatement and that the magnitude of the problem was more considerable than that assumed by the study. This view, which was impressively highlighted by the F.A.O.'s Director for Special Studies, Dr. Gerda Blau in September 1963 (*vide* our article last week), has now been strongly endorsed by no less a person than Dr. Raul Prebisch, the Secretary-General of the forthcoming U.N. Conference on Trade and Development, in a special report prepared for the Conference scheduled to begin at Geneva on the 23rd of next month. Whereas the U.N. study of 1962 had estimated the overall payments deficit of developing countries at $11,000 million, Dr. Prebisch expects the trade gap (between the developing and industrialised countries) alone to reach as high as $20,000 million by 1970, unless suitable action is taken. In just one sentence, he forcefully presents the case for firm, energetic and speedy international action:

"It is imperative to build a new order with a view to solving the serious problems of trade and development besetting the world, especially the problems that affect the developing countries."

The widening world trade gap, while it hampers the efforts of developing countries to speed up their rate of economic growth, constitutes a danger to the prosperity of the developed nations themselves, for trade is, after all, a two-way traffic. The solution to the problem has thus to be sought on an international plane; the haphazard and uncoordinated approach that has been adopted so far will not be adequate. Without mincing words, Dr. Prebisch observes that the problems of the world are now dealt with in a fragmentary fashion and not as part of a general problem of development which must be tackled on various fronts with clearly defined objectives. The G.A.T.T. (the General Agreement on Trade and Tariffs, to give its full name), though it has important achievements to its credit, has not been as effective for the developing countries as for the developed. Indeed, the general trends in the world trade, as a recent G.A.T.T. report itself pointed out, continue to be most favourable for the latter and unfavourable for the former. Out of the total world trade amounting to $138.5 billion in 1962, the combined share of the developing countries was negligible, being no more than $50.5 billion. The developing countries have been adversely affected in both ways: loss in the value of exports and rise in the prices of industrial products imported from the developed countries. The relevant extract from the G.A.T.T. report is given below:

"The rate of increase of foreign currency earnings of the developing countries is utterly unsatisfactory and beneath the average achieved by the advanced countries. This adverse element applies to all the developing countries except for the producers and exporters of oil. Besides this, industrial expansion in the developing countries, notwithstanding all the favourable aspects and consequences, also causes a considerably greater demand in power sources and raw materials which provokes extraordinary difficulties for those countries."

Emerging from these telling facts is the question as to why the G.A.T.T. has not been an effective instrument for expanding world trade on a stable and healthy footing. There seems to be three important reasons. According to Dr. Prebisch, one is that agreements and other activities related to primary commodities are negotiated largely outside the G.A.T.T. and are not subject to co-ordinated action. Secondly, the communist countries have remained outside the G.A.T.T.'s scope. And, finally, the G.A.T.T. is far from universal, having only 61 full and 13 associated members, as compared with the 123 nations and agencies (to be represented at Geneva). The Soviet bloc, it may be noted here, has been pressing for the establishment of an international trade organisation as a specialised agency of the U.N., but the Western nations continue to be cool towards this plea. If the plea were to gain much support at the Geneva Conference, the question would arise whether the objective should be achieved by immediately establishing a new organisation or by proceeding gradually or by stages. In the considered opinion of Dr. Prebisch, if a new system is worth introducing at all, the margins of preference in international trade should provide inducements that are clearly adequate in relation to the magnitude of the problem. The optimum would be the grant of free entry to imports from developing countries. For the members of the Common Market and the E.F.T.A., "this would simply mean granting to the developing countries treatment not less favourable than they are prepared to give one another."

Some of the measures designed to improve conditions in world trade were clearly spelt out by Mr. Manubhai Shah, Union Minister for International Trade, in the course of a Press interview at New Delhi a few days ago. These included the following:

1. Stable and remunerative prices must be ensured for primary products, raw materials and minerals.

2. Non-tariff barriers should be dismantled.

3. All quantitative restrictions and internal duties, which impede the free and full flow of manufactured goods, semi-processed items and other commodities of the less developed countries into the expanding markets for the richer nations, should be removed.

4. With the advent of higher technology, mechanisation and automation, there is no justification for the developed countries to adopt differential tariffs which militate against the entry of manufactured goods of the developing countries into their markets.

In commending these, Mr. Manubhai Shah has certainly espoused the cause not merely of India but of the developing countries as a whole. The Geneva Conference, it is to be hoped, will succeed in paving the way for a steady reduction in the growing gulf between the richer nations and the developing countries.

INVESTMENT CLIMATE

Much of what Mr. G. L. Mehta, Chairman of the Indian Investment Centre, said about the factors influencing investment climate in the country at a Press conference held here on Friday last week to mark the completion of the third year's working of the Centre has been reiterated by the Press and spokesmen of the private sector from time to time. But it is always refreshing to hear Mr. Mehta even on a much discussed subject. His views on the subject in question, expressed with that amicable candour and frankness so peculiar to him, have a special relevance now that there has been some awakening and awareness on the part of the Government at the hands of T.T.K. Disagreeing with the pessimists, Mr. Mehta maintained that there had been a revival of investment inquiry from abroad, particularly from the U.S., in the past four or five months, which is the period approximating the second term of Mr. Krishnamachari as the Finance Minister. He appreciated the Government's efforts for achieving better co-ordination among ministries and for reducing administrative delays and referred, in this context, to the appointment of the Swaminathan and Rao Committees. He defended industrial licensing and fixation of priorities, both of which foreign investors found to be tedious, as something inevitable to planning. He claimed that, by and large, foreign investors considered the profitability of industries in India to be higher than in many other countries. He surely knows their mind better than many others, because of his intimate contacts with a large number of them in his capacity as the Chairman of both the I.C.I.C.I. and the Investment Centre.

If India compares favourably with many other countries in respect of industrial profits, what are the factors that have neutralised this advantage and made the foreign investors reticent? Mr. Mehta cited two: political developments—the Goa action and the Chinese aggression, for instance—and the controversial Super Profits Tax imposed in the last budget. Foreign investors do not find, according to Mr. Mehta, income-tax rates on companies in India prohibitive and are, in fact, impressed with the various incentives provided in the tax laws for development. But they are chagrined by S.P.T., particularly because of its effect on new enterprises after their first five years. They find the personal income-tax rates a great handicap, inasmuch as the non-technical foreign staff do not enjoy the concessions allowed to the technical personnel. Besides, the recent politically-motivated economic actions in the neighbouring countries like Ceylon and Indonesia, have also engendered caution among foreign investors. In this context, Mr. Mehta observed, the cry for nationalisation of banks in India even by some topmost leaders, had definitely proved a deterrent to the inflow of foreign private capital.

It will thus be seen that it is not as much the state of the economy as the recent political happenings and the political angle given to fiscal and economic measures that have been restraining foreign investors from playing a role similar to the one they played in Japan and Germany after the war. It will, however, be folly to draw the conclusion from this that all is well with the state of our economy. Far from it; the Government itself has admitted that. While it remains to be seen whether the Government will rectify errors in economic policy, it can at least straightaway dispel uncertainties arising from the demand for more nationalisation and State trading by being categorical in its observations. Encouraging participation of foreign private capital in public sector projects can be a way out. A further beginning in this direction has already been made with the Cochin Refineries Ltd. and the Finance Minister is anxious to attract more of foreign private capital, apparently because he too seems to share the growing view that, in future, foreign Governmental aid will tend to diminish. There are even reports that the Union Government would not mind accepting foreign private capital for the Bokaro steel project.

A good piece of advice to Indian entrepreneurs seeking foreign collaboration was also given by Mr. Mehta. He wanted them to be well equipped with the organisation and knowledge necessary for taking full advantage of such collaboration, as otherwise foreign collaborators might take advantage of their ignorance and charge higher prices and supply inferior machinery and know-how. However, new and small entrepreneurs, he found from experience, had shown a greater degree of care in framing and implementing collaboration agreements than some of the old well-established entrepreneurs. This is an encouraging trend, in that it shows that the younger generation of entrepreneurs are hard-working, painstaking and keen on building a reputation for themselves. Another piece of advice given by Mr. Mehta to Indian entrepreneurs is also worth being recorded here. It is to the effect that they should employ more and more of indigenous talent, techniques, materials and machinery, and know-how, and stop being helplessly dependent always on foreign collaborators for technical skill.

Notice

CHITAVALSAH JUTE MILLS COMPANY LIMITED

ANNUAL GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will be closed from 27th February, 1964 to 12th March, 1964, both days inclusive.

By Order of the Board,
McLEOD & Co., LTD.,
S. HOCKLEY,
Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA-1.
12th February, 1964.

BRITISH ECONOMIC VOLUNTEERS ABROAD

Despite the increasingly large-scale technical assistance rendered by the various United Nations agencies, Governments and private organisations, the speedy economic growth of underdeveloped countries continue to be hampered by shortage of trained manpower and know-how. It is, therefore, gratifying to learn that both the U.S. Administration and the British Government are contemplating to give a boost to the programme of sending volunteers with professional skill and experience to work in developing countries. The U.S. Congress has already voted enough money for raising the strength of the Peace Corps from 7,000 to 10,000 by September next and President Johnson is now asking for a further authorisation covering an additional 4,000 by September 1965. As for Britain, Mr. Robert Carr, Secretary for Technical Co-operation, disclosed in the House of Commons the other day that the Voluntary Service Overseas (V.S.O.) programme would be expanded in the current and next year. It is proposed, it is said, to raise the number of volunteers to be sent overseas from 550 at present to 1,300 in 1965. The number in 1958 when the V.S.O. was first begun was a bare 16. Special emphasis is being laid on professional skill, whereas, until recently, the majority of volunteers consisted of persons who had no special qualifications beyond goodwill and readiness to try their hands at anything. Out of the proposed 1,300-strong V.S.O. next year, graduates alone are expected to number 1,000, as against no more than 250 at present; the rest will comprise school-leavers and industrial apprentices.

Both the British Government and the voluntary societies which recruit qualified young people for overseas work are playing a notable role in expanding the V.S.O. The Government has decided to extend more liberal financial support to the V.S.O. by contributing 75 per cent of the costs involved, as against 50 per cent. Consequently, Government's total contribution in 1965 is put at £650,000, as compared with the anticipated total of £270,000 in 1964. On their part, the voluntary societies propose to arouse a high degree of public interest and support. A new body, called the Council for Volunteers Overseas, is being set up, with the Duke of Edinburgh as President, to advise the voluntary societies and the Lockwood Committee on policy questions affecting the programme. The members of the Council will include Sir John Lockwood, Chairmen of participating voluntary societies, representatives of education and industry, and past volunteers who have returned to Britain. The Council will thus consist of competent persons and one can hope that the V.S.O. programme will be implemented more energetically and vigorously. It is on this hope apparently that the British Government has turned down the idea of establishing a separate Government agency, similar to the American Peace Corps.

The British Government's move to help expand the activities of the V.S.O. is commendable. In answer to a query on the impact of V.S.O. on Britain, Mr. Robert Carr said: "The more young people who pack their bags and go abroad for a while, the better. I don't think their going abroad is bad for Britain and it is certainly good for the countries they go to." Considering the wide gap that exists between available technical manpower and actual requirements in underdeveloped countries, it is regrettable that the aforesaid move of the British Government has been criticised by some members of the Opposition. These members will do well to peruse the understanding editorial of *The Guardian* a few days ago. In that editorial, this liberal-minded paper said: ". . . if the movement (Voluntary Service Overseas) is to be given the higher status now promised to it, then it ought to be built up on a higher scale than is now envisaged." This, indeed, reflects the enlightened opinion of quite a powerful section of the Press in Britain to which the people of the underdeveloped nations must be thankful.

STAKE-IN-THE-NATION BONDS?

By Questor

THE British have to live up to their tradition of respect for democratic Government. Not only do we tax personal incomes at a rate which would be ridiculed in many countries (we have a native distinction between dishonest evasion and decent, legal avoidance) but we have an enormous national debt. This debt serves the liquidity requirements of a wide range of financial institutions, from banks to life assurance companies and pension funds, and the Government has been able to go on increasing it despite a secular increase in prices.

For some years past, it is true, people have been pointing out that long-term investment in fixed-interest stocks may mean a loss of real capital; equities have become fashionable; the yield on industrial stocks is some way below the yield on fixed-interest Government stocks with more than a few years of life.

The main demand for medium and long-dated Government stocks comes from pension funds and life assurance companies, which have long-term obligations to meet in money terms and are not prepared to risk too much of their money in equities and land. But their prejudices, too, are changing. And if the Government suddenly found it necessary to float a large amount of stock—not to meet a normal budget deficit, but (for example) to recompense the landlords whose land will have to be taken over for city redevelopment—it might have to pay a rate of 6 per cent or more.

It is in this situation that a young British economist, Alan Day, has suggested that the Government should offer a new kind of obligation, with an interest rate not fixed but tied to the level of national income—a "stake in the nation." It would rank as an equity in the eyes of the investor and could be offered at an appropriately low initial yield: 2½ per cent today might become 3 per cent in five years and 4 per cent in ten. To avoid the danger of either over- or under-subscription, it could be offered initially to small savers through public institutions. It would become an important element in Government finance only gradually.

There are obvious theortical advantages in such a scheme. The preference of long-term investors, private and institutional, has gradually been shifting from the superficial security of Government stocks guaranteed in money terms to that of the balanced portfolio of equities—the mutual fund principle—which is sound in real terms. It has become more difficult to sell long-term bonds, except in intervals of deflation, and the authorities have a proper prejudice against borrowing short and increasing the liquidity of the economy to an extent which later defies control. If they are to borrow much more, they need a new instrument.

A stock linked with the Gross National Product would certainly help to restore the balance between public and private finance. It would prevent the country's largest borrower—one which may have to raise big additional sums in the near future to finance plans for urban renewal—from leaning entirely on the weakest part of the market for capital. It would prevent the Government's appetite for capital from forcing up interest rates in competitive sectors of the economy. And it would enable the monetary authorities at long last to influence the behaviour of stock prices as well as that of bond prices.

But there are several practical questions one wants to put before approving an economist's brainwave of this kind. First, is the "share in the country" to be measured in real or money terms? If in money, it is equivalent to the index-bonds with which several Governments have already experimented; they have been justifiably frowned on, Mr. Day says, because they imply a deliberate acceptance of inflation—though he also says that the expectation of inflation is justified.

But if the value of national bonds is to be measured in real terms, one comes up against the fact that the G.N.P. of a developed country (which spends more and more on services) is likely to grow a good deal more slowly than the price of an intelligently chosen portfolio of ordinary shares in manufacturing industry. G.N.P. bonds would become an alternative investment, therefore, not for small savers but for life assurance companies and pension funds—and they would at once cut down their purchases of long-term bonds.

The basic fact is that any Government has to borrow as cheaply as possible, and that it does this, in a developed economy, by meeting the investment needs of the main financial institutions. These institutional needs may be above or below the Government's demand at any particular time. It can seek to attract a higher proportion of the country's savings, if there is a particularly large bulge in its capital spending plans, by competing with equities. But, unless there is a date on the G.N.P. stock—and Mr. Day does not mention this—the 2½ per cent yield on issue could easily become 26 per cent in 60 years' time, even at constant prices.

Is any Government, however socially profitable the projects financed by this borrowing, going to find such a rate, or the prospect of it, tolerable? There may be a place—why not?—for G.N.P. bonds, but I doubt whether any responsible Government would ever raise more than a small proportion of its total credit in this form.

SWATANTRA ON PLANNING

Mr. M. R. Masani, General Secretary, Swatantra Party, writes:

I have read with interest and appreciation the stimulating front page article in your issue of February 8 entitled "Swatantra Party's Economic Policy."

There is one point in your article on which I would like to take you up. You allege that all along our Party "has only been talking in broad, general terms" and urge that "it must come down to brass tacks." You then go on to say that "it will have to draw up a counter-plan on the assumption that it will be in power one of these days."

There are two difficulties in the way of what you suggest. The first is that no Opposition in any parliamentary democracy is expected to place before the country an alternative budget or an alternative plan to that of the Government of the day but only an alternative policy or approach. Secondly, the Swatantra Party does not believe in "a plan" in the sense of having one comprehensive Five-year Plan of the nature that is current in the Soviet Union and our own country but in the methods of democratic planning such as those adopted by Monnet planning in France and the N.E.D.C. in England, where there is no one plan for the country's economy as a whole.

The Swatantra Party has certainly suggested a concrete alternative approach the resolution entitled "The Swatantra Alternative" adopted at the National Convention in Bangalore, the proceedings of which you have reviewed, stating clearly that our pattern of planning would provide for the following:

"(*a*) a proper order of priorities starting with the increase in production and the provision of elementary necessities such as pure drinking water, food, clothing and shelter and employment;

(*b*) a reallocation of the role of State and Free enterprise so that the State may perform its proper function of providing the infra-structure through the provision of roads and railways, efficient communications, facilities for the peasant such as irrigation and easy credit, cheap electric power and education, both technical and general; while all other economic activity should normally be left to competitive enterprise;

(*c*) the incentive of legitimate gain under conditions of competition among producers;

(*d*) the elimination of monopoly in both State and Free sectors so as to provide maximum efficiency and service at minimum cost to the consumer;

(*e*) reducing to a minimum governmental controls and regulation to foster economic expansion and minimising corruption;

(*f*) the maintenance of stable prices through the observance by Government of measures of monetary discipline;

(*g*) the revision of policies relating to taxation including land revenue so as to foster saving, investment and employment opportunities; and

(*h*) remunerative prices for agricultural producers."

In my own speech in Parliament during the debate on the Mid-term Appraisal of the Third Plan on December 5, 1963, I had gone even further and had anticipated your suggestion in regard to showing "how much steel, fuel, power, etc., will be required to provide the basic amenities needed by the people." I had pointed out that our production of foodgrains would have to be doubled from 80 million tons in 1960-61 to 160 million tons in 1975-76 if the elementary needs of nutrition were to be met and that simultaneously the cloth production would have to be doubled from 9 million to 18 million yards in 1975-76. I had gone on to point out that even providing a minimum of Rs. 30 per month for the satisfaction of the basic needs of food, clothing, shelter and other basic needs of living would entail a *per capita* income of Rs. 540 a year in 1975, in place of the present *per capita* of Rs. 330. I had then gone on to argue that, in order to achieve this objective, our rate of growth would have to go up from the present miserable 2 per cent to 7 or 8 per cent a year. Finally, I had shown how such a rate of growth had been achieved in countries like West Germany, Japan and the Republic of China by the application of the Swatantra Party's policies of family farming in agriculture and competitive free enterprise with essential minimum controls in the field of industry and trade.

LONDON LETTER

STATE SPENDING GOES UP

(From Our Own Correspondent)

LONDON, *14th February*

THE British Budget is to be produced in two months' time—which makes a March election most unlikely. The expenditure estimates for the coming year have been published this week and show a rise of 6.7 per cent over the estimates prepared a year ago, but, since the current year's estimates have in fact been exceeded, the new figures are only some 5 per cent higher than the rate of current spending. The increase is divided between civil (rather more than half) and military expenditure. It is in fact running at much the same rate as the increase in national productivity—with the sobering thought to be added that it is unlikely to be diminished when national productivity begins to run at a more modest level.

Thus State spending continues to take a rising share of the national income. The following table analyses the main heads of spending, comparing current rates with those now estimated for the year ahead:

(In million £s)

	Current estimates 1963-64		Estimates 1964-65	
Defence	1,991		2,126	
External relations	202	2,193	199	2,325
Economic Services:				
Roads and transport	350		340	
Employment, industry, trade	93		105	
Industrial research	112		125	
Agriculture, fisheries, etc.	420	975	373	943
Community and Social Services:				
Housing, etc.	116		127	
Arts	8		9	
Law and order	130		139	
Education	198		229	
Health and welfare	746		796	
Children's services	261		272	
National insurance benefits and assistance	575		584	
Grants to Local authorities not specially allocated	821	2,855	887	3,043
Administration, etc.		249		238
Total		6,272		6,549

Too much must not be read into these figures by students of Government policy, because large sums are spent by the local authorities, on the social services and roads for instance, partly out of the unspecifically allocated grants from the Central Government and partly out of money they raise directly from rates levied on householders. Nevertheless they are good indications of what the Government is prepared to spend money upon directly. And on such figures the Government remains open to the criticism that it does not allocate anything like enough to the economic services, in particular industrial research and roads. They also show that defence still absorbs over one-third of the budget—a horrifyingly large proportion.

Research Expenditure

For some reason Government Departments seem unable to break away from traditional thinking on research (though industrial firms in this country are open to the same criticism) and consider an 11 per cent increase in the current rate of spending as evidence of large-handedness (the Department of Scientific and Industrial Research gets another £4 million; the Medical Research Council another £1.5 million, and the Agricultural Research Council another £0.75 million). These are paltry sums compared with what is, for instance, spent in the U.S.A. (as a proportion of national income) and concern is at last being created in this country by what is called the "brain drain"—the flow of top scientists and research workers to the U.S.A. and Canada. It is even being feared that the Astronomer Royal may pack up his bags and go because he complains he is made to use a British computer which will not do his sums as well as an American model. Nearly one-seventh of the annual crop of Ph.D's (mainly science doctorates) emigrate to the U.S.A. where they get better facilities as well as better pay and much higher social status.

In connection with the rise in Government and national expenditure and the growth of the British economy, the Director-General of the N.E.D.C. has had some pertinent things to say about the need for more planning of the allocation of resources and spending power. He demands more responsible behaviour from both sides of industry and points out the need for "a general climate of opinion, making responsible action a normal attitude." Modern economic life, he claims, needs "a new economic

HARVEY FABRICS ARE THE FIRST CHOICE OF LEADING CYCLE TYRE MANUFACTURERS

Tough, durable Harvey cotton tyre fabrics provide the sinews for the finest cycle-rickshaw and cycle tyres. That's why they are the first choice of leading tyre producers such as Dunlop, National Rubber Manufacturers, Oriental Rubber Industries and Cosmos India Rubber Works. Harveys' Cotton Cycle Tyre Cord Warp Sheet, Cotton Cycle-Rickshaw Warp Sheet and Cotton Cycle Bead Wrapping Sheet are extensively used by the industry.

Harveys' Madura Mills are today India's largest producers of Industrial fabrics. Through the years they have built up a world-wide reputation for consistently high quality. They have the men, machines and knowhow to produce a wide range of industrial fabrics like Tyre Cords, Belting Ducks, Light and Heavy Canvases and Filter Cloths.

What's more, Harveys can weave industrial fabrics to *your* specifications—however rigid. Recent expansion at Madura Mills, with the installation of up-to-date high speed looms and precision machinery, have further increased Harveys' weaving capacity. They can now meet all your requirements in industrial fabrics... to your complete satisfaction.

WORKING GROUP'S REPORT ON S.F.Cs—I

A CRITICAL APPRAISAL

THE lucid and business-like report of the Working Group on State Financial Corporations, set up by the Reserve Bank of India a year and a half ago, is notable for a pointed and thorough analysis of the problems and difficulties faced by the 15 corporations (including the Madras Industrial Investment Corporation Ltd., M.I.I.C., for short) in the various fields of their operations and the solutions tried by them, during the short period of their existence varying from three years in the case of Gujarat, and Jammu and Kashmir S.F.Cs to a decade in the case of Punjab S.F.C., and fourteen years in the case of the M.I.I.C. For the purpose of evaluating the role of the S.F.Cs and M.I.I.C. (the word 'corporations' wherever used in this article, refers to all the S.F.Cs as well as M.I.I.C.) in financing industries, the Working Group has reviewed their working in the light of their policies and procedures, and examined their organisational, legal, financial and other difficulties; it has also suggested ways and means of improving the usefulness of the corporations for accelerating growth and development of industries, particularly small-scale industries.

The review and the remedies deal with the resources and their utilisation, as well as with the management, staff and the working of the corporations. Attention has, for the first time, been focussed on the problems and the achievements of the corporations *as a whole*. Although this approach has several limitations as the institutions surveyed have been set up at different times and have been functioning in differing environments, it has its merits in assessing the role of the corporations as *a movement*.

The report of the Working Group, a summary of which was published in our last issue, is, therefore, notable for the perspective from which the review has been made and remedies have been suggested. The analysis of the problems has been done well within the terms of reference of the Group: yet, rather than confining itself within a narrow and formal interpretation of the terms, the Group has, fortunately, taken a broader view and looked upon the corporations, not merely as lending institutions, but also as development banks. There is an important difference between the two. Development banks are an instrument of development and planning, which could bring to bear on their activities a wider vision of social welfare than that of pure lending institutions, which may be primarily concerned with the rate of return they may obtain on the finance provided by them.

New Industries Neglected

The Working Group has analysed the policies and procedures concerning the loans and advances of the Corporations in great detail. One of the most important is the industry-wise analysis of the corporations' advances, done on a uniform pattern for the first time. As pointed out by the Group, viewed against the background of even the limited measure of diversification of industrial structure that has been attained by India since independence, these corporations have in no way contributed significantly to that achievement. With a few notable exceptions, the corporations have largely kept themselves aloof from newly developing industries. One of the reasons for this is that all the States do not offer comparable facilities to the newly developing industries but even where such facilities are available, other factors have been responsible. A basic factor is the understandable (though not justifiable) inclination of the management of the corporations to finance industries wherein the processes of production are relatively simple and which do not require a very detailed scrutiny of the proposals at an advanced level by technical experts. This preference itself may be the result of (*a*) the lack of technical personnel to appraise the proposals from newly developing non-traditional industries; and (*b*) the desire to confine activities to safer traditional industries, rather than to undertake risks of financing non-traditional lines of manufacture, particularly with their meagre resources and the deadweight of more than a crore of rupees worth subvention liabilities to the State Governments.

As the several Reserve Bank studies on the finances of joint-stock companies (including both private limited and small public limited companies) indicate, capital formation has largely been taking place in industries in the transport equipment, machinery, electrical, chemical, pharmaceutical and paper industries, but the corporations have (with a few exceptions) largely devoted their resources to food and textile groups of industries. The Working Group has laid great emphasis on the desirability of corporations diverting more resources to industries with a marked growth potential. Such a shift is all the more necessary, because most of the assistance provided by corporations goes not to public limited companies (27 per cent), but to proprietary (12 per cent), partnership (27 per cent) and private limited (31 per cent) concerns which are generally small and the rate of growth of which is often slow. At the end of 1962, of the total loans outstanding, 26 per cent were given to large-scale units, and 46 per cent to medium-scale and 28 per cent to small-scale units. One of the reasons for the marked success and growth of the Industrial Finance Corporation of India and the Industrial Credit and Investment Corporation of India is their selection of industries with a higher growth rate, and the corporations could usefully learn a lesson from them.

Early Viability Must be Aimed

One of the objectives in enacting the S.F.Cs Act to set up these State-level corporations was to cater to the needs of medium and small-scale units and the intention was to accommodate concerns other than public limited companies also. It may, therefore, appear strange at first sight, to be critical of these very aspects of S.F.Cs activities and suggest a change in favour of fast growing industries and units, particularly large-sized public limited companies: in fact, there is evidence to suggest that, since April 1962 (when the ceiling on the size of individual loans by S.F.Cs was raised from Rs. 10 lakhs to Rs. 20 lakhs), the S.F.Cs. have been taking advantage of this relaxation and have sanctioned sizable amounts to relatively large-scale concerns. But one has to remember that the corporations have to increase their turnover more than proportionately to their administrative costs if they are to attain viability at an early date. If their lendings to large-scale and fast-growing industries increase their profitability and internal reserves, they would ultimately be in a better position to serve the needs of small and non-traditional industries than they are at present. It has been well realised by the Working Group that to restrict the activities of the corporations only to small-scale or medium-scale units that lack a growth potential, is to condemn them to a permanent form of disability. If it is desired to draw forth their best efforts in developmental and promotional activities, it is necessary to allow them to diversify their own activities and to earn enough returns on their strictly commercial lendings in order to enable them to compensate for their activities in the less profitable but socially more desirable fields.

Explaining the genesis of the corporations, the report of the Working Group goes on to say that, even though the assistance provided by the corporations is gaining momentum in the last year or two, their joint performance so far has been much below expectations. Considering the size of the private sector investment totalling Rs. 1,250 crores, under the third Plan, the resources amounting to Rs. 34 crores provided by the Corporations at the end of March 1963 constitute a very small proportion indeed. In fairness to the corporations, however, it may be pointed out that they do not provide the entire capital resources of any unit or project, but supplement the resources raised from the capital market, the commercial banks and internal resources. A more appropriate measure of the role and contribution of the corporations would be provided by the *total* amount of investment which the Rs. 34 crores provided by the corporations has sustained. It is rather surprising that this measure of performance is absent from the otherwise comprehensive statistical data and analysis contained in the report of the Working Group. Inspite of this lacuna, however, there is hardly any doubt that the recommendations of the Working Group for removing the impediments in the working of the corporations will have to be implemented immediately and in the right spirit, if the unduly restrictive nature of the existing provisions of the statute governing the corporations are not to prevent a quick expansion in the range and volume of the corporations' activities.

There are a number of agencies and institutions apart from the corporations which are intended to fill the gaps in the structure of financial institutions in the country, for the supply of term finance to industry in the private sector. While there is much in common among the various institutions, there are also important differences in regard to their capital structure, ownership of shares, extent and nature of Government control and methods and field of operations. This also raises the question of co-ordination of their policies and activities, on which the Working Group has laid particular stress. It is necessary, the Group points out, to assure necessary and sufficient conditions for the effective functioning of corporations and to see that no institution overshadows the growth of another and that each has its specific field to serve. One of the basic aims of the corporations was to make institutional finance available to small units, and a ceiling on maximum accommodation to any single unit was laid down. Several other institutions were, however, set up to assist small industries, namely, the National Small Industries Corporation Ltd. (to provide initiative and help to them to improve their technique of production), State Small Industries Corporations and State Industrial Development Corporations (to establish and manage industrial estates and to assist and finance the promotion, establishment and execution of medium-sized undertakings).

A Dubious Suggestion

The Working Group is of the opinion that, while these institutions have been of great value and assistance to the small and ancillary units, they have affected the business of the S.F.Cs. It is pointed out, for example, that the procedures of N.S.I.C. are more simple than those of S.F.Cs, and their facilities, particularly hire-purchase schemes, are more liberal and convenient. The Working Group has made various suggestions to restrict the scope and activities not only of N.S.I.C., S.S.I.Cs and S.I.D.Cs but also those I.F.C. and I.C.I.C.I., in order that S.F.Cs may thrive: that N.S.I.C. should hand over its hire-purchase machinery to S.F.Cs and should act as a mere clearing house for information, that I.F.C. and I.C.I.C.I. should informally undertake not to entertain applications for foreign exchange loans below an agreed figure and that the Government should provide foreign exchange resources to S.F.Cs, that S.S.I.Cs and S.I.D.Cs should not normally provide direct loans but should provide only marketing facilities and undertake promotional functions only. It has also been suggested that senior officers of N.S.I.C. may help the S.F.Cs in operating hire-purchase machinery functions, and that, where the size of applications is so small to make them uneconomic, either the Government may give a direct subsidy to S.F.Cs or S.S.I.Cs may help the former to handle such applications.

While the need for co-ordination in order to avoid overlapping and facilitate joint operations is paramount and while the need to improve the usefulness of the corporations is equally urgent, the Working Group appears to have taken an attitude of doubtful merit in suggesting restrictions in the scope and activities of other institutional agencies, so that the corporations may prosper. In a developing country, there is vast scope for initiating, promoting and assisting development projects and the S.F.Cs will be able to make their own real contribution, if they are so developed and organised as to operate in a free and enterprising manner. Spoon-feeding the corporations even after a decade of their existence, in the manner suggested by the Working Group, will not only harm the other institutions doing good work, but will also cripple the initiative and creative enterprise of the corporations themselves.

Technical Assistance

The Working Group has drawn pointed attention to the fact that almost all the corporations have avoided recruiting even the minimum technical personnel necessary for appraisal, follow up and supervision of projects during the currency of the loan. The small scale of the operations of the corporations does not, of course, justify the appointment of full-time technicians, but the present practice of making use of the technical personnel of the State and Central Governments involves considerable delays and is not conducive to obtaining best results. In order to obviate these difficulties, the short-term remedy suggested by the Group is to prepare panels of engineers, industrial economists and accountants who are already employed in the industrial sector, and to utilise their services and advice on payment of fees on an approved scale. Such an arrangement could, however, provide only a temporary solution. Accordingly, the Working Group's long-term suggestion for establishing an independent all-India technical and economic evaluation organisation with branches at important centres to serve the evaluation needs not only of S.F.Cs but also of the other lending institutions like I.F.C., I.C.I.C.I., and even the State Bank of India and other commercial banks merits careful consideration.

Another aspect of this problem is that of providing adequate training and orientation to the staff of the corporations themselves. Industrial financing is a new and still developing field and much pioneering work of evolving sound techniques and attitudes of term-lending has yet to be done. The report of the earlier Working Group on Appraisal of Applications for Term Loans has made a beginning in this direction, but it is important to give orientation courses to the Managing Directors and other senior officers of the corporations.

The Working Group's recommendations for transforming the corporations into full-fledged development banks for small-scale and medium-sized industries are reserved for study in a separate article which will be published in our next issue.

STATE BANK OF INDORE'S PROGRESS SATISFACTORY

Satisfactory progress has been made by the State Bank of Indore (General Manager: Mr. G. S. Srivastava, Indore) during the year ended 31st December 1963. Its gross income has gone up from Rs. 66.06 lakhs to Rs. 76.09 lakhs, out of which Rs. 63.56 lakhs (Rs. 56.34 lakhs a year before) is by way of interest and discount and Rs. 10.90 lakhs (Rs. 8.18 lakhs) is by way of commission, exchange and brokerage. Outward interest has moved up from Rs. 33.38 lakhs to Rs. 35.99 lakhs and other expenses, including staff expenses amounting to Rs. 25.46 lakhs (Rs. 20.12 lakhs a year before), have increased from Rs. 26.89 lakhs to Rs. 33.75 lakhs. Profit, after allowing Rs. 82,001 for depreciation as against Rs. 64,536 in the previous year, shows a slight improvement from Rs. 5.14 lakhs to Rs. 5.53 lakhs. Out of this, a sum of Rs. 1.20 lakh (Rs. 1.10 lakh in the previous year) have been carried to the reserve fund, while bonus to staff has taken up Rs. 1.60 lakh (Rs. 1.48 lakh). In addition, Rs. 25,000 have been credited to staff welfare fund. The dividend on the 100-rupee shares has been maintained at 8 per cent per annum, subject to tax. It absorbs Rs. 2.80 lakhs, leaving Rs. 45,844 as the surplus to be carried forward, as against Rs. 78,066 brought in.

The following table compares the Bank's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Interest and discount earned	63.56	56.34	48.69	46.67
Commission and exchange	10.90	8.18	6.99	6.44
Other income	1.60	1.54	1.04	1.03
Interest paid	35.99	33.38	29.29	24.92
Expenses	33.75	26.89	20.25	21.54
Depreciation	0.82	0.65	0.57	0.55
Profit	5.53	5.14	6.61	6.78
To reserve fund	1.20	1.10	4.08	1.37
To gratuity fund	..	..	..	0.40
,, staff welfare fund	0.25	..	..	..
Bonus to staff	1.60	1.48	1.45	1.27
Dividend	2.80	2.80	2.80	..
	(8%)	(8%)	(8%)	
Carry forward	0.46	0.78	1.02	2.74

	As on 31st December			
	1963	1962	1961	1960
Paid-up capital	35.00	35.00	35.00	35.00
Reserves	14.00	12.80	11.70	7.61
Deposits	12,69.90	11,90.39	10,85.97	884.23
Borrowings from banks	..	..	..	113.32
Advances	787.61	704.96	615.11	684.30
Investments	399.11	380.89	306.76	305.70
Cash	169.36	178.22	239.58	69.31
Balance sheet total	14,77.30	13,65.70	12,55.35	11,38.85
Ratio to deposits of—	%	%	%	%
Advances	62.0	58.7	56.6	77.3
Investments	31.4	31.8	28.2	21.7*
Cash	13.3	14.9	22.1	7.8

* Unencumbered portion only.

Taking the year-end figures, deposits have expanded by only Rs. 70.51 lakhs to Rs. 12.70 crores, as against the increase of Rs. 113.42 lakhs to Rs. 11.99 crores a year before. In spite of this limited increase, borrowings from banks appear as *nil* in the balance-sheet. Advances, which had improved by Rs. 89.85 lakhs to Rs. 704.96 lakhs in the previous year, have risen further by Rs. 82.65 lakhs to Rs. 787.61 lakhs over the year under review. Investments show an addition of Rs. 18.22 lakhs to Rs. 399.11 lakhs; the increase is, however, *one-fourth of the figure of Rs. 74.13 lakhs noted in* the previous year. With both advances and investments turning out to be higher and deposits showing a limited growth, the aggregate cash balances have naturally shrunk from Rs. 178.22 lakhs to Rs. 169.36 lakhs, and, as a ratio to deposits, dropped from 14.9 per cent to 13.3 per cent.

The number of branches went up from 30 to 34 during the year. The State Bank's subsidy covering full losses in respect of new branches opened after 4th March 1959 is expected to aggregate Rs. 1.60 lakh for the year (Rs. 90,000 a year before) and has been included in the profit and loss account.

Government cash business and agency functions continued to be transacted at the Bank's offices. Currency chests of the Reserve Bank's Issue Department were established and Government cash business was also undertaken at three more centres, bringing the total number of centres to 10 at the end of the year. In addition, arrangements to assume these functions at two more branches are complete.

The number of small-scale units assisted by the Bank rose from 55 to 64 during the year, the limits sanctioned and in force for them went up from Rs. 34.68 lakhs to Rs. 46.37 lakhs and the amount outstanding from them as at the end of the year was Rs. 18.97 lakhs in 1963, as against Rs. 17.22 lakhs in 1962. Six co-operative units (as against eight a year before) were sanctioned limits aggregating Rs. 15 lakhs (Rs. 11.45 lakhs) and the year-end outstandings from them totalled Rs. 5.82 lakhs (Rs. 3.79 lakhs). Credit facilities against warehouse receipts were utilised at 12 centres (nine in the previous year), with the number of accounts unchanged at 101 for a slight increase in limits sanctioned from Rs. 24.63 lakhs to Rs. 25 lakhs and also in balance outstanding from Rs. 4.77 lakhs to Rs. 5 lakhs.

The year closed with 886 persons on the staff (including 67 temporary seasonal appointments) as against 791 in 1962 (including 38 temporary seasonal appointments). A staff training school was started at the head office from 11th February 1963.

The Government of Colombia has entered into a new stand-by arrangement with the International Monetary Fund, which authorises drawings upto $10 million in the next twelve months. The new arrangement succeeds a one-year stand-by arrangement amounting to $52.5 million which expired on 13th January 1964. Colombia drew the equivalent of $48.5 million under that arrangement and its outstanding drawings on the Fund currently total $115 million. The new stand-by arrangement will provide support for the continued application of the Government's policies. It is expected that these policies will be directed towards the establishment of monetary stability, thereby providing the conditions for an acceleration of public and private investment consistent with the maintenance of an approximate balance of payments equilibrium.

KOTHARI'S ECONOMIC GUIDE & INVESTORS' HAND BOOK OF INDIA

(INCORPORATING THE INVESTORS' ENCYCLOPÆDIA)

25 years of useful service to the investing public, financiers, economists, students and the layman—a Book with an international circulation among the people who count in economics and industry.

Financial and other particulars on more than 3,500 industrial establishments—taxation measures—incentives and relief factors for foreign collaborators—surveys of economic development—special articles by industry's leading men and persons in authority—information on licensing and collaboration, Gold Control, personal savings etc., etc.

Classification of Sections with thumb index :

Banks	Public Sector
Engineering	Shipping
Insurance	Sugar
Investment Trusts	Taxation
Jute	Cotton Textiles
Mining & Chemical	Vegetable Oil
Miscellaneous Companies	Government Securities
Paper	General Information
Plantings	and a Supplement

Illustrated with charts, maps and graphs covering industrial development.

An authoritative 3,000-page compendium circulated among leaders of industry and public life—fully revised, enlarged and re-edited every year—a publication unique in its kind and therefore a " must " on YOUR table.

Testimonials from all over the world fill a separate booklet which can be had free on request.

PRICE: Rs. 50 (postage & packing **Rs. 10** exclusive) Overseas: **£6 or $17** (post free by surface-mail)

U.P. LETTER

U.P. FINANCES BASICALLY SOUND

RISING PRICES POSE A SERIOUS PROBLEM

From Our Special Correspondent

LUCKNOW, 19*th February*

ALTHOUGH the U.P. Government's Budget for 1964-65 shows a deficit of Rs. 11.59 crores, with the estimated revenue receipts at Rs. 223.84 crores and the revenue expenditure at Rs. 235.43 crores, the State Government's finances are basically sound and the budgetary position shows a satisfactory trend. If the revenue receipts and expenditure on account of the Plan schemes are excluded, the total revenue and the revenue expenditure in 1964-65 would amount to Rs. 202.64 crores and Rs. 190.82 crores, respectively, thus leaving an actual surplus of Rs. 11.82 crores in the revenue Budget. It is thus on account of the revenue expenditure on the third Plan that the U.P. Budget shows a sizable deficit, which was only to be expected and could not be taken as a sign of weakness in the State Government's finances. As against the estimated revenue expenditure of Rs. 44.61 crores on the Plan projects, the revenue surplus in the Budget (excluding the Plan outlay) of Rs. 11.82 crores and the expected Central subvention of Rs. 21.20 crores provide a total of Rs. 33.02 crores, thus leaving a revenue deficit of Rs. 11.59 crores in the 1964-65 State Budget.

It is also worth noticing that, although the budget estimates for 1962-63 showed a deficit of Rs. 13.35 crores and the budget estimates for 1963-64 showed a deficit of Rs. 4.97 crores, the year 1962-63 actually closed with a small surplus of Rs. 1.33 crore while the revenue deficit in 1963-64, according to the revised estimates, is not likely to exceed Rs. 1.22 crore, which might be still further reduced as actual figures are available. There is, therefore, no justification to take an unduly gloomy view of the estimated deficit of Rs. 11.59 crores in the 1964-65 Budget.

It might be mentioned here that additional taxation in 1962-63 was expected to yield a revenue of Rs. 4.57 crores but the actual increase in revenue from additional taxation was only of the order of Rs. 4.44 crores. In spite of this shortfall in revenue from additional taxation, the budget showed a small surplus as the total revenue receipts were higher and the total revenue expenditure slightly lower than was originally estimated.

The same story was repeated in 1963-64 when the receipts from additional taxation turned out to be smaller than was expected. On account of strong public opposition, the Government had to withdraw the proposed surcharge on land revenue estimated to have yielded a revenue of Rs. 2.68 crores. The other measures of additional taxation also did not yield as much revenue as was expected and in the revised estimates for 1963-64 credit is taken only for Rs. 1.06 crore of revenue from additional taxation as against Rs. 1.99 crore originally estimated. If the deficit of Rs. 1.22 crore in the budget for the current financial year, as indicated by the revised estimates, persists it would be covered by a transfer from the revenue reserve fund.

No Fresh Taxation

In view of this past history of U.P. finances, it was quite natural for the U.P. Finance Minister not to propose in his budget speech any additional taxation measures to cover the revenue deficit of Rs. 11.59 crores in the 1964-65 Budget. The Finance Minister indicated that every effort would be made to increase the State Government's revenue by a speedy recovery of tax arrears and by tightening up the measures to prevent tax evasion. There is also some scope for economy in public expenditure, especially on the non-Plan outlay. But, if the deficit continues and fresh taxation becomes necessary, the taxation proposals would be announced in the future. The U.P. Finance Minister, however, does not appear to be unaware of the fact that the people's taxable capacity in Uttar Pradesh has been almost exhausted on account of additional taxation by the Central and State Governments and the local bodies. The recent increase in the costs of living of the people due to an inflationary rise in the price level has still further reduced the people's capacity to bear additional taxation.

Out of the total capital outlay of Rs. 97.48 crores in 1964-65, the Plan projects account for Rs. 75.82 crores. In fact, the total Plan outlay in the Budget year would be of the order of Rs. 122.22 crores, but, since some of the money would be found by the State Electricity Board from its own resources, the U.P. Government's budget for 1964-65 makes a provision for only Rs. 120.43 crores. The Central assistance in the shape of loans is expected to be Rs. 76.72 crores, but this level of Central assistance is considered inadequate by the U.P. Government and the State Finance Minister has expressed the hope that the Central Government might increase the loan assistance at least by Rs. 2 crores. The Central Government has its own limitations, but, in view of the fact that Uttar Pradesh is still an underdeveloped region and that the eastern districts of U.P. in particular pose a serious problem to the State Government, the request of the U.P. Finance Minister deserves the Government of India's and the Planning Commission's sympathetic consideration.

Agricultural Production

The U.P. Budget for 1964-65 provides substantial outlays for the construction of roads, increasing the power potential and industrial development of the State, but the main emphasis is on increasing agricultural production and on social security measures for Government servants and teachers. In order to increase agricultural production, it has been provided that the outlay on the distribution of fertilisers would be increased from Rs. 12.5 crores to Rs. 17.86 crores, irrigation facilities would be increased by developing small private irrigation works, by introducing an extension service for irrigation, and by more fully developing the minor irrigation works, and by encouraging the cultivators to utilise the available irrigation facilities more fully by introducing a two-part system of irrigation tariffs. It is proposed to launch package programmes in selected districts to increase the production of rice, *jowar*, pulses, potato, cotton, rapeseed, mustard seed and sugarcane. These measures would undoubtedly help, but agricultural production in U.P. continues to be low, and the achievements of agricultural planning have been below target, mostly because of certain defects in organisation and the administrative set-up and, unless they are removed, it is not likely that agricultural production would increase very much. The U.P. Government is not unaware of this aspect of the matter, as the Chief Minister, Mrs. Suchita Kripalani, recently announced that an agricultural production commissioner-*cum*-secretary would be appointed at the State level to co-ordinate the working of all the Government departments dealing with agricultural production. At the district level, agricultural production officers would be appointed with the same object in view. If these officers are able to co-ordinate the work properly, it would certainly help in increasing agricultural production, but that is still a big 'if.'

The increase in old age pensions by Rs. 5, from Rs. 15 to Rs. 20 per month, an increase of Rs. 5 per month in the pension rates of certain categories of Government servants, an increase in the upper limit of salary for admissibility of dearness allowance from Rs. 450 to Rs. 850 per month, a provision for payment of gratuity equivalent to six months' basic salary to the dependents of teachers of junior and senior basic schools and higher secondary schools and some categories of temporary Government servants in case of death are to be welcomed. They would to some extent reduced the hardship of these people. But it is doubtful whether the Government was justified in increasing expenditure on social security measures which, while they would not materially alleviate the condition of the persons concerned, would materially increase Government's non-Plan outlay.

Prices

The biggest single problem in U.P. at present is that of preventing the prices of wheat, rice, pulses, vegetables, milk and other food articles from rising. The prices of a vast variety of goods in U.P. markets continue to rise in spite of all the efforts which the Government appears to be making to hold the price line. Mr. Kamlapati Tripathi told the Legislative Assembly on 13th inst. in the course of his budget speech that the number of fair-price shops has been increased, the entire production of *atta* by mills in the State has been earmarked for sale through fair-price shops, fair-price shops opened in the rural areas for the distribution of sugar would also sell wheat and *atta*, and larger supplies of wheat, *atta* and sugar would be made available to the fair-price shops. But, in spite of all these measures, the prices keep on rising, inflicting unbearable hardships on the people. It appears that the quality of *atta* and wheat made available at the fair-price shops is poor and the quantity made available is much smaller than the demand, with the consequence that most people are forced to buy a good part of their requirements in the open market, thus adding to the inflationary rise in prices. This winter Uttar Pradesh passed through a severe and protracted cold wave and frost, which have damaged from 25 to 75 per cent of *rabi* crops of wheat, pulses, and sugarcane. The frost has not only damaged food crops but also fruits and vegetables the prices of which have increased unduly in all the U.P. markets. The expectations of lower production in 1964-65 has increased the tendency to the hoarding of foodgrains by the consumers, cultivators and middlemen. This has also added to the inflationary rise in prices.

Notice

DALMIA IRON AND STEEL LIMITED

NOTICE IS HEREBY GIVEN THAT THE Eighth Annual General Meeting of the Company will be held at the Registered Office of the Company at Rajgangpur (Dist: Sundergarh, Orissa State) on Wednesday the 25th March 1964, at 3 p.m., to transact the following business:—

1. To receive and consider the Directors' Report, the Auditors' Report and the Audited Statement of Accounts for the year ended 30th September 1963.
2. To declare dividend.
3. To elect a Director in place of Shri Mohanlal Goenka who retires by rotation and is eligible for re-election.
4. To elect a Director in place of Shri N. C. Roy who retires by rotation and is eligible for re-election.
5. To elect a Director in place of Shri J. P. Kejriwal who was appointed as an Additional Director on 29th April 1963 and who holds office as such upto the date of the Eighth Annual General Meeting. Notice has been received from a shareholder under Section 257 of the Companies Act, 1956 proposing his candidature for the office of Director.
6. To appoint Auditors and to fix their remuneration.

By Order of the Board of Directors,

For DALMIA IRON & STEEL LIMITED,
K. NATH & CO.,
Secretaries.

30*th January* 1964.

Notes:—

(*a*) Every shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a shareholder. The proxies should, however, be deposited at the Registered Office of the Company not later than 48 hours before the commencement of the meeting.

(*b*) The Register of Members and Share Transfers of the Company will remain closed for accepting Share Transfer Applications from 10th March to 25th March 1964, both days inclusive.

(*c*) The dividend when sanctioned will be paid to those shareholders whose names would appear in the Register of Members on 25th March 1964. Dividend Warrants are expected to be posted by 20th April 1964.

(*d*) Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 for item No. 5 of the Agenda is being forwarded to the members of the Company.

NEW TEXTILE PACT WITH HONG KONG

CATEGORY-WISE CEILINGS ON IMPORTS

From Our Special Correspondent

MANCHESTER, 11*th February*

MANCHESTER LETTER

A NEW agreement has been reached with Hong Kong on the question of categorisation of cotton textile exports to Britain. The British Cotton Board said here that the new arrangement, together with similar ones being negotiated with other exporting countries, was "a practical and constructive step towards greater stability in the British domestic market." Praising Hong Kong for the "realistic and co-operative attitude" shown in the negotiations, the Board said that the agreement should inspire greater confidence and provide a firmer basis for the future. Details of the arrangement have been sent to the main sectional associations in the Lancashire cotton industry, and it is hoped that an announcement would be made shortly about negotiations on the categorisation issue with India.

Summarised as far as possible, the Hong Kong deal sets out the 34 categories into which all exports from the Colony to this country will in future be classified. They consist of three for yarn, 15 for piecegoods, and 16 for made-up garments. No immediate change is contemplated in the current ceilings agreed in October 1962, which will last until the end of next year. Under these, annual shipments are contained within a level of 80 million square yards of loom-state cloth, 30 million yards of finished piece goods, and the equivalent of 85 million yards of made-up goods, provided the total of the first two does not exceed 100 million yards.

Transitional Phase

With the exception of corduroy and velveteens and handkerchiefs, the basis on which the categorisation scheme is established is the shipments made during the calendar year 1963, but the arrangement is to be so phased that 1964 is to be a transitional year in which only half the existing cotton goods quotas will be affected by categorisation. Next year, the whole of the annual quota will be subject to complete categorisation.

The categories themselves are split into those regarded as supersensitive, sensitive and non-sensitive. Among the first are such items as drills, twills, jeans, sateens, gabardines and poplins in piecegoods, and mens' and boys' coats, waistcoats, trousers, slacks, shorts, shirts, jeans and rainwear among the garments. In each case, the new controlled level will be 115 per cent of Hong Kong's 1963 export performance.

In the "sensitive" sector are all categories of goods in which shipments from the Colony during 1963 exceeded three million square yards or the equivalent, as well as corduroys and velveteens, yarn dyed fabrics and handkerchiefs, which are to be specially treated. The permitted level in these cases will be 130 per cent of the 1963 shipment rate. Other "non-sensitive" categories, at present not subject to further restrictions, will become "sensitive" if shipments this year reach the 3 million yard mark, although such cases will probably be considered jointly by representatives of the Cotton Board and Hong Kong.

An overall limitation of 6,300,000 lbs. is already imposed on shipments of cotton yarn from the Colony. It has now been agreed that not more than 81½ per cent of the total may be shipped annually as folded yarn and not more than 5 per cent as processed yarn.

Although individual traders may feel that some aspects are not altogether to their advantage, the introduction of the system of categorisation at least adds a defensive weapon to Lancashire's somewhat empty armoury. Despite the change of Government policy on the question of imports and the apparent support from Whitehall, it cannot be denied that the British team has all along been negotiating from weakness; any semi-security which can be obtained for the different sections is not to be treated lightly.

Few in Difficulties

A further reduction in the number of company liquidations in the Lancashire textile trade occurred in 1963, continuing the trend which has been evident since the numerous reorganisations which were brought about by the redundancy programme in 1960. Last year, 41 cases of voluntary liquidation were reported, as against 84 in 1962 and 93 in 1931. No compulsory liquidations were enforced, as against one in each of the two past years, nor were there any creditors' voluntary liquidations, as against one in 1962 and six in 1961.

The members' liquidations, announced after declarations of solvency and in which all creditors were paid in full, concerned 10 manufacturers, one spinning and weaving firm, one doubler, six finishers, 21 merchants and agents and two miscellaneous textile traders. Although no bankruptcies were reported in 1933, receivers were appointed in five cases, two of which were manufacturers, and one each designated as spinners and weavers, merchants and agents, and miscellaneous traders.

Reversing the trend of the last year or two, more new textile company registrations were recorded, there being 67 new firms, as against 50 in 1932, 87 in 1961 and 149 in 1960. The nominal capital involved was substantially higher this year at £1,554,000, as against £652,800 in the previous year. Sixty out of the 67 new registrations concerned merchants and agents and five miscellaneous traders. The other two were a manufacturing company and a doubling concern.

More Records for Machinists

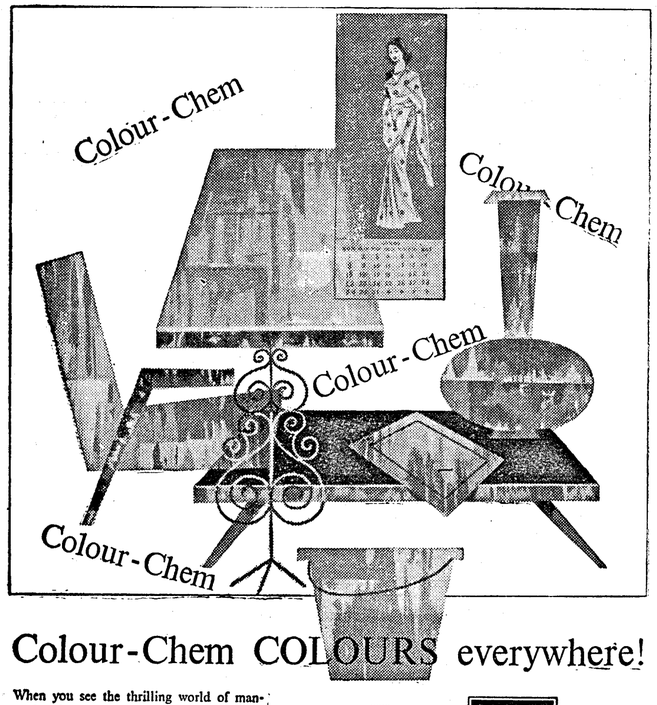
Once again, the makers of textile machinery have hit the jackpot as far as earning foreign currency for Britain is concerned during the past year. Exports in 1963 set up a further record, being valued at £66,558,573, as against the former peak in 1962 of £65,046,192. The actual volume of shipments showed a marginal decline at 1,587,363 cwt., as against 1,603,026 cwt. Recent comparative annual figures have been 1,536,795 cwt. in 1961; 1,343,778 cwt. in 1960 and 1,118,668 cwt. in 1959. The average price obtained for British textile plant per cwt. has steadily increased from around £25 in 1955 to £35 in 1958, £40 in 1961 and £42 in 1963.

Pakistan became the leading importer of British textile machinery last year, absorbing 186,249 cwt., an increase of nearly 30,000 cwt. Neighbouring India, the former chief market, took 159,512 cwt., as against 171,555 cwt. and a big increase in shipments to South Africa occurred from 65,912 cwt. to 112,941 cwt. The other important buyers of plant were the Soviet Union, the takings of which fell from 94,001 cwt. to 72,872 cwt. Egypt showed a substantial rise in purchases from 26,282 cwt. to 75,801 cwt. Australia took 63,417 cwt., Italy 61,074 cwt. and the United States 60,213 cwt.

Sales of machinery for extruding man-made fibres increased from 11,399 cwt. to 33 972 cwt., but plant for preparatory processes to spinning cotton and staple fibre moved off on a slower scale, with shipments of 82,719 cwt., as against 117,413 cwt. A further drop occurred in exports of machinery for spinning and twisting cotton and staple fibre, from 139,533 cwt. to 73,885 cwt. Exports of looms with automatic weft replenishing mechanism rose from 119,043 cwt. to 138,986 cwt. and other looms also showed an expansion in shipments, from 49,861 cwt. to 69,817 cwt.

TEASELING MACHINE FOR MAN-MADE FABRICS

Technical advances made in equipment designed for textiles occupies an important position in all matters affecting man-made fibres. The Establishments Scholaert of France constructors of finishing machines, has built the largest teaseling machine at present available on the world market. The problem lies in processing very wide fabrics, which were customarily processed using natural teasels, since these were woollen fabrics, whereas, in the case of man-made fibre fabrics, any increase by using former had become impossible. A teaseling machine had to be built employing one-piece rollers five metres wide without any intermediate support, so as to provide an unbroken line of 24 teasels equipping the machine from one side to the other. This large teaseling machine, which is operating in a very big English concern, is providing every satisfaction and all vibration and bending is eliminated through its design. Verified production figures reach almost five times those obtained using natural teasels giving, at the same time, a much more even finish.



Colour-Chem COLOURS everywhere!

When you see the thrilling world of man-made colours around you—spectacular prints on your fabrics, colourful inks in your magazines, pleasing paints in the interior of your home, fascinating tapestry and the attractive furnishings of your drawing room, plastic balls in the hands of your children—remember that COLOUR-CHEM, India's leading makers of Pigment Colours, is very much a part of your daily life.

FEDERAL INCOME-TAX IN THE U.S.

IS THERE A BETTER ALTERNATIVE?

By Stanley W. Surrey
ASSISTANT SECRETARY, U.S. DEPARTMENT OF THE TREASURY

THE question of alternatives to Federal income taxation is becoming a rather fashionable topic for discussion these days. To be sure, 1963 marked the golden (50th) anniversary of the Federal income-tax and some may complain that it is somewhat unbecoming to discuss the possible demise of the income-tax on such an occasion.

But even a golden (50th) anniversary should not stand in the way of critical analysis. For a tax system cannot remain static. It must be continuously examined and shaped to make it responsive to national needs and an appropriate force in achieving national goals.

Searching discussion and analysis by informed observers are therefore imperative if we are to gain the insights that guide the way to rational decisions.

Among the substitutes for the present income-tax that are being discussed are the value added tax as an alternative to the corporate income-tax, broad-based excise taxes as alternatives to income taxation, and an expenditure tax as an alternative to the individual income-tax.

The general implication of all this appears to be that our income-tax structure is so defective that progress in tax policy can lie only in new and different taxes. Yet are matters really in such a state, and can it be said that our income-tax serves us so poorly?

After all, the income-tax is efficient, in that it raises about $70,000 million annually. The personal income-tax reaches 100 million individuals, about 86 per cent of our adult population. It deals each year with 60 million individual returns and 1.2 million corporate returns, with more than 25 million refund claims, and yet accomplishes all this with commendable efficiency in the light of the tremendous volume of communication between Government and the public that is involved.

Moreover, it achieves these results through a system of voluntary compliance and with an administrative force that is quite small in relation to the population.

Stress on Equity

But while efficiency is an indispensable requirement, it is not, of course, the final criterion of a tax system. We also ask that our tax system meet a rather high standard of fairness. We have been, perhaps, more insistent on this concept of equity than many other countries.

Such a standard, however, is not easy to meet, dealing as we are with a forced exaction from millions of people and with rules which necessarily cannot be cut to every pattern. Moreover, concepts of what is fair, what is equitable and inequitable, are not simple, observable facts. Yet it does not appear anyone is urging the possible alternative taxes on the ground that they are decidedly more fair than the income-tax, or even defending them as no less fair.

Finally, in any tax system, just as a balance must be struck between efficiency and equity, so it must be struck between equity and the achievement of certain national goals.

Employment and Growth

One of our important goals is full employment and greater growth. If a tax system is to contribute to achievement of this goal, it may have to contain certain structural features, such as incentives to investment, which will result in a different allocation of tax liabilities and thus some shift in tax equity.

But here again, has it been shown that, as a structural matter, reliance on an income-tax to raise our revenues is incompatible with achieving these growth goals and that incentives to investment that may be needed cannot be devised within an income-tax framework? Or, to put it differently, can it be clearly shown that the alternative taxes are decidedly superior in this respect? One can suspect that a request for even a modest degree of proof on these matters would likely go unsatisfied.

These few kind words for the income-tax—it is, after all, its golden (50th) anniversary—do not mean that all is well with that tax. For while we can defend its place in the Federal tax structure, we can at the same time recognise its defects and problems.

It should be clear that any mass tax—be it an income-tax, sales tax, value added tax, manufacturers excise tax—will always have its imperfections. And there will always be disputes as to whether this or that solution is the answer, especially since the solution usually lies not in the realm of objective and universal observation, but in the realm of political and social judgment.

A Criterion

Fifty years of debate on the income-tax have at least made us aware of the problems under that tax and possible lines of improvement. These years of debate have also made it clear that much of the difficulty arises from the need to keep our tax system continually responsive to an ever changing society and economy.

Our problem today is not that of improving the Revenue Act of 1913 and its successors as these measures would apply to the United States of 1913—our problem today is that of applying the income-tax to the United States of 1964 and the years ahead.

It may well be that the Revenue Act of 1913 seemed as good an answer to the problems of 1913 as some of the alternative taxes now being discussed look today. Yet, if we were to adopt any of these alternatives today, it is inevitable that 10 years from now it would be enmeshed in issues and debate as future tax commentators sought to adapt it to their society—to eliminate its imperfections, if you will.

Thus, the fact that the income-tax has its full share of problems and controversy does not support the view that the tax should be abandoned. Rather, it is a sign that we are engaged in the proper and necessary task of keeping that tax responsive to our present needs. The important question is what we are doing about the problems we face. I submit that much is being accomplished—and that there is still some hard work ahead.

In sum, on the 50th anniversary of the income-tax, it would be appropriate to pay a tribute to that tax by renewing our efforts to improve its structure and the contribution it can make to our national tax policy.

THE MAJOR EVENT IN THE ENGINEERING CALENDAR

Don't miss it!—the outstanding engineering exhibition of the year... Don't miss it!—your finest opportunity to see and compare, under one roof in London's vast Olympia, the newest products of the world's leading makers of machine tools and allied equipment... Don't miss it!—the chance of talking over your own production problems with the world's most experienced production engineers.

It's a show of immense interest and value to everyone concerned in fast, accurate, economical production—a *live* show in every sense of the word! All the machines will be powered and many will be working on actual production runs.

Exhibits include:—
Metal cutting machine tools
Metal forming machine tools
Engineers' small tools
Gauges and measuring equipment
Testing equipment
Electronic control gear
Power hammers
Woodworking machinery

Why not combine your visit to the exhibition with a holiday in Britain? And see London at its gayest—at the peak of the London 'Season'!
So make your plans and get your travel agent to reserve your hotel accommodation *without delay.*

INTERNATIONAL MACHINE TOOL EXHIBITION 1964

Olympia
London, England
June 25 – July 9

(Sundays excepted)

● *For further information regarding the Exhibition, please write to the address below.*

Organised by THE MACHINE TOOL TRADES ASSOCIATION, 25-28 BUCKINGHAM GATE, LONDON, S.W.1

This is AEI today

LARGEST SUPPLIER OF ELECTRICAL EQUIPMENT TO INDIA

...and among the world's major manufacturers of electrical equipment. AEI's origins go back more than 60 years. Today, Associated Electrical Industries Limited embraces such famous names as British Thomson-Houston, Metropolitan Vickers, Siemens Edison Swan, Henley's, Ferguson Pailin, Birlec and Hotpoint.

60 factories... 100,000 employees
The Commonwealth's largest electrical manufacturer, AEI has 60 factories and 100,000 employees the world over—

engaged in every field of electrical activity. AEI is the centre of five main groups controlling twelve product divisions and all subsidiary companies. Each division offers specialisation in design, production, sales and service *plus* the vast research, development and financial resources of AEI as a whole.

40 years is a responsible age
AEI's history in India dates back forty years and includes association on such massive projects as the heavy electrical factory at Bhopal, the Durgapur steel works, and the Bhakra dam project.

The AEI factory in India has been supplying industry and the home with a wide range of electrical equipment since the 1930s. The range now includes furnaces, motors, motor control gear, transformers, switchgear, fans and lighting fittings. The famous MAZDA lamps are also marketed in India by AEI.

It's great to be No. 1!
In India and abroad, AEI has a succession of 'firsts' to its credit. Punjab's first major power project at Joginder-

nagar uses AEI equipment. India's largest generators, installed at Bhakra, are made by AEI. Assam's 720 mile oil pipeline—India's most ambitious scheme of its kind—will use AEI equipment. AEI built the world's first jet engine, powered the first gas turbine ship, developed Britain's first electron microscope and constructed the first ever water-cooled generator.

Planning 6,000 futures
AEI's training scheme is the most comprehensive in the electrical industry. More than 6,000 apprentices are

training at AEI factories in the U. K. They come from all over the world. In India, AEI has advised on the establishment of a training school at Bhopal. It is attached to Heavy Electricals (India) Limited and can train 3,000 men at a time. 250 AEI U. K.-trained engineers are now working at Bhopal; another 150 Bhopal-destined engineers are training with AEI U.K. In addition, 500 Indian engineers have taken their training in AEI's U. K. factories. This is a record believed to be unsurpassed by any other electrical engineering company operating in India.

What could AEI be doing with 700 Scientists?
AEI spends over 6 crores of rupees annually on research and development. More than 700 scientists are employed

in extensive laboratories attached to the main AEI groups in Britain. This vast complex of laboratories and personnel has one ultimate aim: to benefit the man in the street by effectively contributing to progress in electrical science and technology.

AEI PRODUCES EVERYTHING ELECTRICAL FROM LILLIPUTIAN TRANSISTORS TO THE WORLD'S BIGGEST TURBINE GENERATORS

Principal Products

Steam and gas turbines and generators • Hydro-electric generators • Marine propulsion equipment • Electric drives for rolling mills and mine winders • Electric furnaces • Traction and railway signalling equipment • Transformers and switchgear • Power and telephone cables • Motors and their control gear • Electronic apparatus and radar equipment • Particle accelerators, electron microscopes and mass spectrometers • Industrial controls, instruments and meters. Semiconductor devices and power rectifiers • Private and public telephone exchanges and other telecommunication equipment • Lamps and lighting fittings • Heating equipment • Electro-medical apparatus • Nuclear power station equipment • Domestic appliances.

ASSOCIATED ELECTRICAL INDUSTRIES LIMITED
Represented in India by
ASSOCIATED ELECTRICAL INDUSTRIES (INDIA) PRIVATE LIMITED, 13, Rajendra Nath Mukherjee Road, Calcutta 1.

AEI Largest Supplier Of Electrical Equipment To India

B2-AP-11

DEMAND FOR RUBBER RISING FAST

NEW IMPORT POLICY CRITICISED

THANKS partly to the efforts of the Rubber Board and partly also to the efforts of planters themselves, the doubts once expressed about the successful fulfilment of the third Plan production target of 45,000 tons fixed for natural rubber have completely been belied. Indeed, the target, according to the latest available indications, is expected to be exceeded by a comfortable margin; the estimated actual output in the last year of the third Plan, that is, 1965-66, is not less than 50,000 tons. The estimate seems to be quite a realistic one, considering the markedly high rate of production lately: about 35,000 tons in 1963-64 (estimate based on the actual output in the eight months from April-November 1963), as against the 32,239 tons actually produced in 1962-63 and 27,446 tons in 1961-62.

The gap between the estimated output of 35,000 tons in 1963-64 and the anticipated output of 50,000 tons in 1965-66 is, of course, pretty wide, being 15,000 tons. But one can expect it to be easily filled, as witness the observations of Dr. Rama Varma, Chairman of the Rubber Board, at the forty-sixth meeting of the Board held at Kottayam recently. While only a little over 200,000 acres are currently under tapping out of the total planted area of 361,142 acres, more new areas, according to him, will come under tapping in the coming years and the rising trend of production will thus be maintained. Even the yields in the existing areas themselves could be considerably augmented by better cultural practices. Although this aspect has been repeatedly stressed, the progress actually achieved is depressing. The average yield of rubber per acre of tappable area in 1962-63 was no more than 155 kg., as against 149 kg. in 1961-62, 148 kg. in 1960-61 (last year of second Plan) and 135 kg. in 1955-56 (last year of first Plan). It will be interesting to note here that the average per-acre yield of rubber obtained in Malaya is as much as 440 kg.; the pre-war average of Malaya was only 125 kg. And clones are now being tested that yield about 1,500-1,600 kg. per acre. It may not be possible to obtain such a high yield in India, at any rate not in the next few years, but the yield could be well above what is obtained at present. The Rubber Board has, therefore, done well in deciding to extend the subsidy paid for manures, etc., to planters having upto ten acres (as against upto five acres at present), to supply free of cost planting materials to holders having upto ten acres and to meet 25 per cent of the cost of copper for spraying.

Plea not Justified

While the aforesaid decision and some of the other measures taken by the Rubber Board are welcome, there is still a lot more that the Board can do—and ought to do—in helping the growers to raise the productivity of their lands, quantitatively and qualitatively. Instead of concentrating attention on developmental activity, it is somewhat strange that the Board should have thought of entering into import business in natural rubber. At its recent meeting, the Board adopted a resolution urging the Government to ban imports of rubber direct by rubber goods manufacturers. The Government should, the resolution said, issue import licences to the Board and authorise it to allocate the imported rubber among consumers. The Board's plea for monopoly import licensing is not well substantiated. When once the overseas sellers of natural rubber come to know about the creation of such monopoly in India, they will naturally put up their prices. It is commonsense that the bargaining power as a buyer of actual consumers and established importers is always stronger than a monopoly buyer. Besides the increase in imported cost, the rubber goods producers may also have to bear an additional cost, since the Board will include its import and distribution charges to the selling prices of rubber. It is to be hoped that the Government of India will bear this point in mind and reject the Rubber Board's plea.

There is also no justification in the plea of the Rubber Board not to issue more licences for starting new synthetic rubber plants. The fear expressed by the Board that the interests of the plantation industry would be adversely affected if more such plants were set up is exaggerated, what with the rapid pace at which the demand for rubber is rising, following the expansion and development of the rubber manufacturing industry. The total demand for rubber at the end of the third Plan (1965-66) is expected to be of the order of 170,000 tons, as against the estimated aggregate output of 80,000 tons (50,000 tons of natural rubber and 30,000 tons of synthetic rubber expected to be produced at the Bareilly (U.P.) plant of the Synthetics and Chemicals Ltd.), leaving a gap of 90,000 tons. The total demand forecast for 1970-71 is still higher at 300,000 tons, so that there will be ample room for growers of natural rubber to expand their activities without fear of excessive competition from domestic synthetic production.

Three important aspects will, however, have to be borne in mind by the Government in licensing additional capacity for synthetic rubber production. First of all, it is necessary that the quality of synthetic rubber must be consistent and variable to meet the needs of consumers. Secondly, the synthetic rubber industry should have high power salesmanship backed by first rate technical service. And thirdly—this is a very important point—the price of synthetic rubber should be economic.

An Arbitrary Decision

If special emphasis is laid on the aforesaid three aspects, it is because of the rather sorry predicament in which the synthetic rubber manufacturing company is finding itself today. This Company, it is said, is experiencing difficulty to sell its product and, consequently, almost half of the total installed capacity is lying idle. The Company has, therefore, brought pressure on the Government to do something in the matter. The latter has accordingly decided to link the grant of import licences for natural rubber to the purchase of indigenous synthetic rubber. This decision, however, has evoked a strong protest from rubber goods manufacturers. In a communication addressed to the Government, the Indian Rubber Industries Association declares that the decision is arbitrary, most objectionable, unfair and detrimental to the interests of the industry. The Association does concede the need for conserving foreign exchange and the necessity to encourage indigenous products to the maximum extent possible, but points out that the way in which the synthetic rubber produced at the Bareilly plant is being forced on the industry is unrealistic and ill-conceived. It would have been better, it says, if the Government had called a conference of rubber goods producers to ascertain the products in which synthetic rubber (S.B.R.) can be used and the maximum proportion of the same in various products. Attention is drawn here to the fact that the proportion of S.B.R. in rubber goods varies from product to product and from nil to 70 per cent. Attention is also drawn to the fact that the Bareilly plant produces only three grades of styrene butadene rubbers, whereas the industry has been using several grades not manufactured in the country. Further, the prices of S.B.R. are said to be very much higher than those of not only natural rubber but also of the idea one was given to understand when the project was launched. And, what is more, apprehensions are expressed to the effect that the Government's decision would lead to a rush for the purchase of indigenous natural rubber, causing an increase in its prices which have now been decontrolled.

The criticisms of the Association appear to be broadly valid, as they appeal to commonsense. Before taking a decision, the Government should have ascertained the views of the rubber manufacturing industry. No industry, after all, will bother to import raw materials from abroad—with all the cumbersome import licensing procedures and regulations—if it can get the same easily within the country itself. The best thing to do would be to refer the matter to the Tariff Commission and this the Government has just done.

The rubber goods manufacturing industry, as already stated, has expanded considerably in the past few years, not only in terms of capacity installed and actual output but also in terms of the range of production which has been diversified, as the accompanying table shows. The pace of expansion is bound to be accelerated in the coming years, in keeping with the rising demand for the various rubber goods following the implementation of development programmes, not to speak of the prospects of exports. It is clear, therefore, that the scope for augmenting production of both natural rubber and synthetic rubber is pretty vast and there is no question of any serious competition developing between the two in the foreseeable future.

WORLD RUBBER POSITION

The world rubber markets are currently ruling distinctly easy, the latest available quotation for natural rubber at London being less than 20d. per lb., as against 24d. a year ago. The easiness is due to the comfortable statistical position in respect of both natural and synthetic rubbers. The aggregate world consumption of rubber in the calendar year 1964 is no doubt expected to be well above that in 1963, the estimate made by the Natural Rubber Bureau (Washington D.C.) being 4.65 million long tons, representing a rise of 130,000 tons as compared with the 4.52 million tons believed to have been actually consumed in 1963. But this rise is expected to be more than covered by a marked increase in the available supply. The total supply is put at 4.79 million tons, an increase of 200,000 tons over the 4.59 million tons estimated for 1963. The improvement in available supply is attributed entirely to the appreciable expansion in production from 4.50 million tons in 1963 to 4.70 million tons in 1964, whereas deliveries from stockpiles are expected to decline slightly from 92,500 tons to 90,000 tons. These estimates do not include allowance for the synthetic rubber produced in Eastern Europe and China. The table below indicates the trend of natural rubber and synthetic rubber production and consumption in the most important countries:

(In thousand long tons)

	Natural rubber		Synthetic rubber	
	1964	1963	1964	1963
Production: world total ..	2,150	2,110	2,550	2,390
Of which:				
U.S.A.	..	..	1,630	1,570
Malaysia	890	845	..	..
Indonesia	600	620	..	..
Rest of world ..	660	645	920	820
Consumption: world total ..	2,200	2,200	2,450	2,317
Of which:				
U.S.A.	440	451	1,330	1,299
Japan	205	193	140	120
U.K.	165	168	160	142
W. Germany	145	146	160	143
France	120	123	130	118
Others	1,125	1,116	630	495

It will be seen from the above figures that, while the world consumption of natural rubber in 1964 is expected to be maintained at the previous year's level of 2.2 million tons, that of synthetic rubber is expected to be markedly higher at 2.45 million tons, as against 2.32 million tons. A large part of the increase is accounted for by the U.S. which is the world's biggest consumer of synthetic rubber. The use of stereo synthetic rubbers of the type now being incorporated into the treads of passenger car and truck tyres, it is said, will continue to increase in the U.S. during the current year, with most of this gain coming at the expense of general purpose rubber.

RUBBER GOODS MANUFACTURING INDUSTRY AT A GLANCE

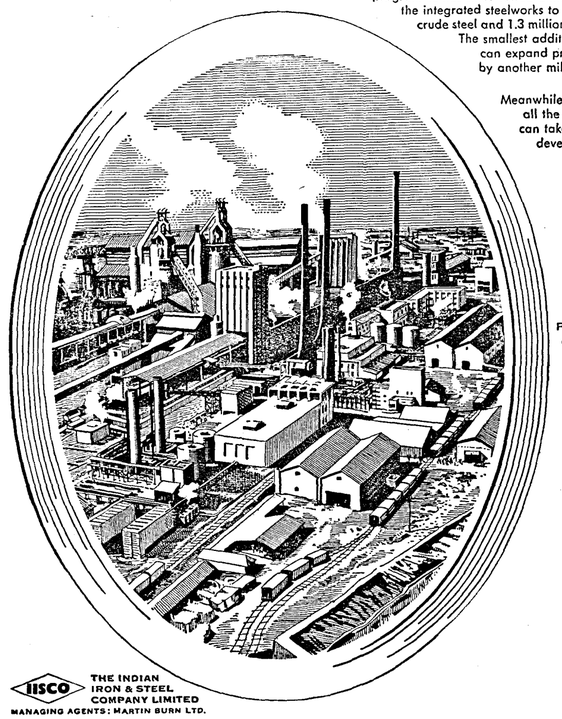
BURNPUR —A PORTRAIT IN STEEL

A busy steeltown. Alive to the problems of the day, prepared for the challenge of tomorrow. Thousands live and work here day and night. All of them think in terms of steel—and more steel, for India.

Yet less than ten years ago, the rated annual capacity at Burnpur was about half a million tons of crude steel and a similar quantity of pig iron. A two-step expansion programme has since raised annual production at the integrated steelworks to 1 million tons of crude steel and 1.3 million tons of pig iron. The smallest additional capital cost can expand production further, by another million tons of steel if need be.

Meanwhile, IISCO steel—in all the shapes that steel can take—serves India's developing economy.



IISCO FACES THE FUTURE WITH CONFIDENCE

Agricultural Situation In India

A monthly journal presenting a factual and integrated picture of the agricultural and food situation in India, against an appropriate background.

This journal, issued by the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, has as its regular features:

- A monthly newsletter surveying the latest development in the field.
- Authoritative special articles on topics of current interest.
- Extensive information on events and trends in India and abroad.
- Reviews of production and prices of various commodities.
- A comprehensive satistical section.

Commanding a wide and influential readership in India and abroad, *Agricultural Situation In India* is an invaluable guide to students of agricultural economics, business executives and administrators.

Annual subscription .. .. Rs. 24.00 or 37 sh.

Available from:

1. The Manager of Publications, Civil Lines, Delhi-8.
2. The Secretary to the High Commissioner for India, "India House," Aldwych, London, W.C.2.

INDIAN LABOUR JOURNAL

Issued monthly by the Government of India, Ministry of Labour and Employment, Labour Bureau, Simla, contains up-to-date information relating to labour in India, e.g., summaries of reports and enquiries; Labour legislation, summaries of important awards, legal decisions and collective agreements, labour news from States covering labour welfare and living conditions, statistics of industrial disputes, absenteeism, employment—service, wages and earnings, cost of living, retail and wholesale prices, trade unions, etc. In addition to these, the quarterly issues of the Journal contain special articles on subjects of labour interest.

Rates of Subscription: Rs. 24 per annum and Rs. 2 per copy.

Available from:

The Manager of Publications, Civil Lines, Delhi-8.

RAMTIRTH BRAHMI OIL

Special No. 1. Registered.

An Invaluable hair tonic for the prevention of dandruff and falling hair. It is manufactured scientifically with many precious ingredients, which cools brain, improves system and brings sound sleep. Most ideal for body massage. Useful to every one in all seasons.

Available Everywhere.

INCIDENCE OF RAILWAY ACCIDENTS

KUNZRU COMMITTEE'S RECOMMENDATIONS BEING IMPLEMENTED

NOT all railway accidents, which usually number several thousands (*vide* table in this article) in a year, may be serious. But it is the "serious" ones, resulting in loss of life or limb or substantial damage to property, that attract immediate public notice and criticism. Thanks to such criticism and the earnest effort of Railway Administrations to ensure a safer service, the incidence of serious accidents, if not of all accidents, seems to have perceptibly declined in the last one year. In 1963-64, for instance, upto December 1963 there were only five serious accidents in which 12 persons in all were killed, eight grievously injured and 53 slightly injured and the cost of damage to railway property was Rs. 2.4 lakhs. As no serious accidents have been reported since the beginning of 1964, it is ten to ten that 1963-64 will be reckoned as a much safer year for railway travel than either 1961-62 or 1962-63. It will be recalled, in this connection, that 1961-62 witnessed as many as 15 serious accidents in which 120 persons in all were killed, 92 seriously injured and 399 slightly injured and the cost of damage to railway property was Rs. 15.1 lakhs. The corresponding figures for 1962-63 were 14 accidents, 187 persons killed, 121 seriously injured, 383 slightly injured and Rs. 23.4 lakhs by way of damage to railway property.

While the Railway Ministry, in its latest review of accidents, has recorded, with some pride, the improvement in respect of serious accidents in the current year, it has also brought out that two out of the five such accidents in 1963-64 (upto December 1963), as compared with five out of the fourteen in 1962-63 and eight out of the fifteen in 1961-62, were due to the failure of the railway staff. That the negligence or irresponsibility of the railway staff is the biggest single factor responsible for collisions and derailments is seen from the Ministry's publication. Of course, only a few collisions and derailments are usually in the nature of serious accidents. For instance, in 1962-63 the "serious" collisions numbered just six out of 103 collisions investigated and the "serious" derailments just five out of 1,338 derailments investigated in that year. But the more disquieting point here is that 99 out of those 103 collisions and 917 out of those 1,338 derailments were caused by the element of human failure. This only repeats the conclusion arrived at by similar studies in the past that human failure is responsible for the majority of such accidents. Of course, as far as derailments are concerned, besides human failure, the other factor causing their occurrence is the failure of mechanical equipment which accounted for 12 per cent of the total number of derailments in 1962-63.

Preventive Measures

What have the Railway Administrations done in the last one year to deal with this element of human negligence? It will be recalled here that the Railway Accidents Committee (Chairman: Mr. H. N. Kunzru), in its first report submitted by the end of 1962, had recommended several practical safety measures. The Railway Board has accepted most of the Committee's recommendations and begun to implement them. For instance, as a sequel to one of the recommendations, safety organisations have been set up on all the Railways with the primary object of conducting educative propaganda among the railway staff, particularly those entrusted with train operation duties, both individually on a man-to-man basis through personalised contact and appeal, and collectively on a mass scale through the media of brochures, films, posters, seminars, etc. to inculcate safety consciousness amongst them. The Railway Board has also been implementing, by stages, the Committee's recommendation that all locomotives be fitted with speed recording instruments to enable drivers to observe speed restrictions. It is expected that the process of equipping all passenger locomotives with speedometers will be completed by December 1964. Action has also been initiated on the other recommendations pertaining to maintenance of track and rolling stock, signalling and interlocking devices, etc. In particular, signalling and interlocking improvements are being carried out, by stages, at a number of stations to provide an increased measure of safety.

The State Governments have also been requested to share the cost of manning about 1,200 unmanned level crossings on the basis of results of the traffic census recently undertaken by the Railways. The fact that several accidents (168 in 1962-63) involve the running of trains into road traffic at level crossings underlines the need for co-operation from the States. It is noteworthy, in this connection, that some of the State Governments have accepted the Railway Board's proposals and that, thanks to their co-operation, steps have been taken to man as many level crossings in these States as possible. Whistle boards at adequate distances are also being provided at the rail approaches of unmanned level crossings on either end and the State Governments concerned have been requested to provide the necessary road signs on the road approaches of unmanned level crossings. At the 'manned level crossings, too, the Railways have been instructed to carry out frequent and thorough supervision of the working of the gatekeepers. As there are 19,000 unmanned and 12,600 manned public level crossings on the Indian Railways, the problem of ensuring greater safety at these crossings is certainly stupendous. It is to be hoped that all the State Governments, which are responsible for roads and road transport, will co-operate fully with the Railways in this regard. Their co-operation is all the more necessary because two out of every three level crossing accidents take place at unmanned crossings, for road users do not exercise proper vigilance before crossing the railway track.

The second and final report of the Kunzru Committee, which was submitted at the end of 1963, has suggested further measures to ensure safety. One of these is that the Railway

RAILWAY ACCIDENTS

Type of accident	1961-62	1962-63
Collisions	143	131
Derailments	1,513	1,439
Train wrecking	10	8
Trains running into road traffic at level crossings	160	168
Fires in trains and at stations	258	284
Failure of engines	3,355	3,308
Failure of rolling stock	1,749	1,877
Failure of permanent way	262	277
Attempted train wrecking	101	110
Trains running over cattle	1,270	1,194
Trains running into other obstructions	68	67
Miscellaneous	295	256
Total	9,184	9,119

Inspectorate, now under the administrative control of the Union Transport Ministry, should be reorganised. The Inspectorate, if the Committee's suggestion is accepted, will become a commission of railway safety, headed by an experienced and technically qualified officer of the rank of General Manager. And it is to have a technical wing which will assist it in carrying out inspection, audit checks on the maintenance of tracks, rolling stock and operating practices and inquiries into serious accidents. It is also envisaged that the Commission's annual reports should be placed before Parliament and that its inquiries should be open to the public. This particular recommendation, involving the constitution of a commission of railway safety, is subject to the approval of Parliament.

Further Steps

Another recommendations in the final report of the Kunzru Committee is to the effect that a railway level crossing fund, on the lines of the Canadian grade crossing fund, be created to expedite protective measures. The fund is to draw contributions from the Railways, the Union Transport Ministry and the State Governments. This suggestion is already being pursued by the Railway Board with the States, some of which have agreed to share the cost. The Kunzru Committee, noting that a majority of accidents are due to human failure, has recommended that manpower committees should be set up on each railway to assess in advance the staff requirements and that the existing facilities for training of the staff should be fully utilised. It has also given the finding, in this connection, that "rapid" promotions have "diluted" the standard of experience and quality of the supervisory staff. Here is an implied criticism of the kind of staff recruitment and promotion policy which has not been wholly free from caste, communal or other extraneous considerations. It is significant that the Committee itself has referred to "intervention from outside at different levels." Presumably such intervention has been in evidence in matters relating to recruitment, promotion, responsibility and disciplinary action. So long as the human element is of overwhelming importance in the matter of ensuring railway safety and preventing accidents, the need for recruiting or promoting competent and conscientious personnel, irrespective of caste, communal, or parochial considerations, to responsible posts on the operational side and training them adequately need hardly be over-emphasised.

RAILWAY ELECTRICAL ENGINEERING IN BRITAIN

The Chief Electrical Engineer of British Railways, Mr. S. B. Warder, in the course of his Presidential address to the Institution of Locomotive Engineers, London, held recently, made some thought-provoking references to the state of electrical engineering *vis-a-vis* railways. He described some important research and development projects in that field.

In Britain, the 25-kv. A.C. overhead system, according to Mr. Warder, has been chosen as an ideal one for the future. As many as 1,300 miles of track have been electrified during the last five years and a further 750 miles are expected to be completed by 1966. There are some ninety 3,300-h.p. A.C. locomotives and over 500 (950 h.p.) multiple unit train sets in service. The interesting features of the A.C. locomotives include, among other things, high-voltage tap-charging, a single pantograph and a main transformer, a smoothing choke and a traction motor. The traction motors are 4-pole machines which give the required performance without field weakening; they are nose-suspended with roller-bearing axle suspension and resilient gears. To reduce mechanical vibration still further, limited resilience can be introduced between axle suspension bearings and the motor frame. Rheostatic braking is provided and will later be combined with mechanical braking on a single control handle so as to minimise wear of brake blocks.

The high-voltage tap-charging has been adopted after intensive experiments. However, a modified low-voltage tap-charging system has also recorded outstandingly high tractive effort in recent tests. The latest four-car multiple-unit trains consist of battery driving trailer, motor coach, plain trailer and driving trailer. The four axle-mounted traction motors have two rates of acceleration, namely, a 1.1 m.p.h./sec. and a 0.9 m.p.h./sec., the lower rate being used for bad weather conditions. Silicon cells are used in the main rectifier assembly and voltage is controlled by means of electro-pneumatic tapping contactors. Fluorescent lighting, installed throughout, is supplied from static inverters which incorporate controlled silicon rectifiers (now known as thyristors) in place of the conventional transistors.

Mr. Warder has drawn attention to the more modern developments in overhead line equipments. Presently, the 25-kv. ceramic insulators are fitted with arcing rings which collect the arc and lead it innocuously to the extremities of the horns. But the modern insulators are based on glass-reinforced plastics with good insulating properties, high strength and low weight. These have been tried and found to give 3½ years' satisfactory service. He also dealt with the latest developments in the railway electric engineering field.

The most important development in railway electrical engineering according to Mr. Warder, is probably the advent of semi-conductor devices such as the thyristor (controlled silicon rectifier). As long as thermionic valves were an essential part of electronic equipment, it was reasonable they should be excluded from locomotives. Now that reliable solid state devices are available, electronic techniques with their minute currents can be used for control circuits. The thyristor can replace electro-magnetic devices like transductors with savings of bulk and weight, and by using thyristors in the main rectifier bridge regenerative braking is possible.

There is also a passing remark in Mr. Warder's address to the feasibility of driverless trains that are controlled by electronic equipment. Though they will result in savings of manpower and the possibility of greater safety, automatic control has yet to be proved an economic proposition and as efficient as a human driver in getting the best performance from the traction equipment in all circumstances.

NORTH CALCUTTA SUBURBAN RAILWAY

British Insulated Callender's Cables Limited has completed the overhead equipment on the North Calcutta suburban railway electrification scheme. A full electric service is now in operation over the 46-mile route between Sealdah and Ranaghat and the branch line to Bongaon. A total of 280 track miles is involved.

Most of this contract is on the line which runs north from Calcutta to Ranaghat which is on the east bank of the Hooghly River. For the first 23 miles to Naihati the line has four tracks running through the congested jute mill area. From Naihati to Ranaghat the line is double track. The associated line, comprising 55 miles of track, branches off from Dum Dum Junction to Bongaon. To complete operations in this area, three further single track sections, Ranaghat-Shantipur, Ranaghat-Krishnagar and Naihati-Bandel, are also being electrified.

Since the inception of India's Railway electrification programme in 1958, B.I.C.C. has been awarded a total of ten contracts valued at over £8 million and covering over 1,500 track miles. The Calcutta scheme is the first suburban railway in India to be equipped for 25 kV. a.c. electrification.

NEW PRODUCTS AND PROCESSES

Ultrasonic Cleaning Equipment for Watches and Jewellery

AN electrical engineering concern, N. V. Philips' Gloeilampenfabrieken, Eindhoven (Holland) has brought out an apparatus for cleaning watch parts, jewellery, etc. rapidly and spotlessly. It consists of an ultrasonic generator that can be connected to a cleaning bath or drum. The high-speed ultrasonic treatment is basically a percussive motion of approximately 21,000 vibrations a second caused by cavitation phenomena in the cleaning fluid. This cavitation (the successive creation and implosion of thousands of tiny vacuum bubbles) has an effect similar to a vigorous brushing-out of the most minute nooks and crannies of the jewellery, without causing any damage. In this way watch parts can be completely rid of old oil residues and dust particles. The apparatus takes up little space and is very simple to operate. The generator is simply connected to the light mains. At full load the power consumption of the generator is 125 watts. The dimensions of the generator are 262 x 330 x 178 mm. and it weighs about 10 kg. It can be used in combination with cleaning baths with effective volumes of 1 and 2½ litres.

Pocket-size Television Set

A pocket-size television set is expected to be marketed soon in West Germany. With the entry of this television set, TV-programmes will no longer be gazed at on the screens of TV-sets but on extremely thin fluorescent screens that can be hung on the walls. Furthermore, only one receiving set will henceforth be needed to serve several screens placed in different rooms. Three dimensional colour-TV with stereophonic sound will certainly exist within the next 25 years. And here a novelty for movie-fans: in the next few years, every quality receiver will have a built-in tape recorder that can store and reproduce television scenes as reliably as a tape-recorder records radio programmes. West German television universally believe that the coming motto will be "small, smaller, smallest." TV cameras weighing less than a pound will be developed. A jockey could carry one during a race enabling the audience to experience the race from the horse's back. Laser rays would take the place of co-axial cables and would be able to transmit programmes from city to city and country to country. Intercontinental transmissions would continue to be sent via TV-satellites, of course. The most daring prediction says that TV-technology will not stop at the TV-screen but that the future foresees electric picture waves. They are to enter directly into the visual centre of the brain where they will induce normal visual impulses. It is hoped that this method will enable the blind to "watch" television.

Compacted-volume Meter

To determine the compacted volume (minimum volume of granular and powdered substances) an instrument works the Instrumenten-en Apparatenfabriek 'Veca,' Wageningen, Holland has developed a compacted-volume meter which is simple to operate and can be used in the chemical industry and allied sectors, such as detergents, cattle feedingstuffs, pharmaceuticals, paint and dairy produce. The meter consists of a rectangular casing measuring 255 by 190 mm. at the bottom and 210 x 190 mm. at the top, and 130 mm. high. On top of the case two plastic measuring cylinders can be placed, each 210 mm. high. Each measuring cylinder holds 100 cc. and is graduated from 1 cc. per gram to 3 cc. per gram. Read-off error is 0.1 cc per gram. Each meter is supplied with three weights, namely, one of 1 oz. and two compaction weights of 2 ozs. each. The latter fit accurately into the measuring cylinders. The powder is compacted and deaerated as follows: 28.35 g of the powder to be measured is weighed out and placed in the cylinder. On top of the powder a 2-ounce compacting weight is placed. By pressing a control button, which doubles as a control light, the driving mechanism is started up; the object of this mechanism is to raise the two measuring cylinders to a given height and then allow them to fall back freely. This up-and-down motion, coupled with the effect of the compacting weight, rapidly tamps down the powder. The built-in counter automatically trips the mechanism after 100 strokes. The compacted volume can then be read off from the calibrated graduation on the measuring cylinder in cc/g. Since the meter is provided with two measuring cylinders, two samples can be examined simultaneously. For cleaning, the cylinders can be removed from the apparatus by a simple movement of the hand. Cylinders with other graduations can be supplied to order. This compacted-volume meter can be used to ascertain whether a fabrication process is proceeding as planned (e.g. whether the powder manufactured is not too coarse or too fine in composition) and to design the most suitable packaging. The meter is suitable for connection to light mains of 110-220 volts, 50 c/s.

Tough Motor

No degree of overload can cause heating sufficient to damage the winding insulation of a new electric motor designed by the Crompton Parkinson Ltd., London, for the toughest working conditions. Thermostatic protectors are embedded in the overhang of the windings, and so "sense" the heat at its source. Their operation is directly related to the safe temperature of the insulation. If an overload occurs, the protectors automatically switch off the motor as soon as the heat reaches the safe maximum temperature for which they have been set. When the motor has cooled down a little, it can be re-started even though the overload is still on. It will soon stop again, but there will be no damage however long the overload continues. Stalls and persistent attempts at starting against an impossible load—two common hazards when motors are being used by the unskilled—cannot harm the new motor.

Spray Gun

A spray gun designed to operate on a limited amount of compressed air, is being produced by Alfred Bullaos and Sons Ltd., Staffordshire, England. It has an air consumption of 5 c.ft. a minute at 60 lbs. per square in. and can be used with compressors from ½ h.p. Ideally suited to touching-up and motor body repair work, it will produce a finely atomised spray pattern 6 to 8 in. wide. The one-piece construction of the gun and cup lid make it easy and comfortable to handle. The flow of the material is controlled from the back while a control on the side of the gun adjusts the spray pattern from round to maximum fan width with all intermediate patterns.

Extractor

An overhead, swinging-arm extractor developed by J. P. Udal Ltd., Birmingham, England, for use with press tools is claimed to have an extraction rate of 20 components a minute at full stroke, and as many as 35 a minute at shorter strokes. It is designed for presses with work sections 8¼ in. to 108 in. wide between uprights. Two other models, for presses up to 36 in. and up to 186 in. are being developed. The extractor saves space, since it is mounted on the crown of the press and not on the floor, and time, since the jaw can move in and extract the component as soon as the upstroke of the press has left enough clearance. The operation of the extractor is electro-pneumatic. It works on a timing device fitted to the crankshaft of the press. As the press ram rises, the pneumatic jaws of the extractor move in, grip the component, and lift it out of the die. The arm then swings out, the jaws release the component, and the arm returns to repeat the cycle.

Solvent Recovery System

A British system for the recovery of carbon disulphide (CS_2) from factory exhaust gases is to be exhibited in the form of a pilot plant at the International Chemical Engineers Congress at Frankfurt this June. Designed and developed by chemical engineers of Courtaulds Ltd., the British textile firm, the system, known as "Landmark," has been operating successfully for the past three years at the Company's rayon factory at Holywell in North Wales. The most interesting technical feature of the 'Landmark' project is the use of very large fluidised active carbon beds for the recovery of CS_2 in a continuous and fully automatic operation. The system operates in a steel structure 170 ft. high containing a large vertical duct, an absorber, a stripper/dryer and carbon circulating and regeneration system. The CS_2 laden gas is blown up the large duct into the absorber where it fluidises several beds or layers of active-carbon which absorb the chemical. Instead of being static, the carbon moves continuously through a series of perforated trays and downwards, from tray to tray into the stripper/dryer which removes the CS_2 by steam. The carbon disulphide is then condensed and passed to an underground storage tank ready for returning to the viscose factory.

Transistorised Warning Lamp

A transistorised warning lamp that operates automatically without attention for up to four months has been developed by The Serve Mechanism Company, 505, Lygon Street, East Brunswick, N11, Victoria, Australia. This lamp has been approved by the traffic and construction authorities and is now available for export. Enquiries have already been received from Africa, South-East Asia, Central and South America and the Pacific area. The unit, called the Electrodyne, gives a continuous or flashing beam (whichever is preferred) as a warning light on road and construction work or stationary vehicles. It cannot be opened or operated by unauthorised persons. Its all-welded steel case resists dampness and shields the contents from driving rain, shock, condensation, vibration and direct sunlight. When switched from manual operation to automatic, that is on at night and off during the day, the Electrodyne operates for two to four months on two six-volt latern batteries; is not affected by artificial light, such as street lamps and car headlights, because its photo-electric cell is sensitive only to day-light. The unit operates in ambient temperatures from 25 to 110 degrees Fahrenheit (which can be improved if required) giving a beam diameter of upto 40 feet at a distance of 200 feet. The Electrodyne weighs 4½ lbs. without batteries and is 13" high, 8" wide and 4½" deep.

Grinding Hard Materials

Extremely hard materials can be ground into powder in a fluid energy mill built by Trost Jet Mill Division of the George W. Helme Company of Helmetta, New Jersey. Problems of wear on grinding surfaces do not arise as particles of the material to be ground are fed into jets of fluid which are directed to collide in an impact chamber. Collision of the particles breaks them up even more and the powder is taken off in a normal dust collector. The larger remaining pieces are re-circulated into the steams for another pass through the impact chamber.

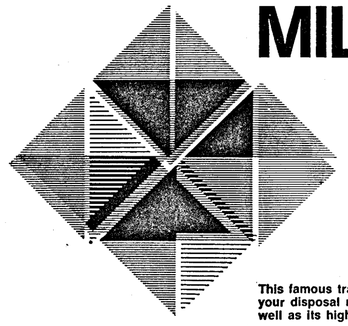
Checking the Hardness of Steel

Hardness of steel strip may be tested continuously without halting the production line by testing the magnetic permanence of the metal. A system built by Assembly Products, Inc. of Chesterland, Ohio, has already been installed by one major American steel mill. The system works on the principle that the amount of magnetism which steel will retain is directly related to its hardness. The moving strip passes first under a magnetic head which erases any previous stray magnetic fields. A second head produces a spot of magnetism every five inches. A third head downstream measures the magnetism retained, giving the hardness reading. The checking device is said to keep a continuous record of the hardness in coils as much as five miles long, showing which parts may require annealing. In its first application the system is checking strip .007 to .015 inch thick. Zinc, oil or paint on the surface are said not to affect the validity of the readings.

Adhesive Cable

A twin-core electric cable that sticks to all smooth surfaces—including metal, plastics or concrete—has been put on the market by Mr. H. Freimann, of Zurich. Called "Calux-Flex," it is intended to appeal especially to the do-it-yourself householder and consists of a flat flex coated on one side with an adhesive layer protected by paper, which is stripped off before use. The adhesive is non-setting, so that the flex can easily be removed. It requires additional fastening only at points where it leaves the wall or ceiling to join a light, bell, telephone, or other apparatus. The flex is at present available only in Switzerland and has been passed for mains voltage by the Swiss Electro-technical Association.

MILAN FAIR



This famous trade fair of worldwide appeal puts at your disposal more than forty years of experience as well as its highly organized

INTERNATIONAL TRADE CENTRE

At the Milan Fair the pick of world production is shown by 14,000 exhibitors from eighty-four different countries. You will find their products systematically classified in well-planned pavilions rising several storeys high and spread over a display area of 600,000 square yards. Escalators, fast lifts and other forms of rapid transport will make your visit a refreshing, pleasant and profitable one. The Milan Fair holds the secret of good business, as four million visitors who go there every year would tell you.

VISIT THE MILAN FAIR FROM 12 TO 25 APRIL 1964

AMERICAN CHALLENGER TO CONCORDE

THREE PROPOSALS UNDER CONSIDERATION

By Our Aviation Correspondent

WHEN this correspondent last wrote on the subject of the supersonic transport (*Commerce*, 12th October 1963), the Anglo-French project (The Concorde) was comparatively well advanced and the United States had still to take a decision on the shape, size and performance of the airliner to be developed. Indeed, at that stage, it had not even decided whether or not to undertake such a project. The Federal Aviation Agency (F.A.A.), it may be recalled, had issued to leading aircraft and engine manufacturers a "request for proposals"—an invitation, in other words, to tender for the project. The replies to that request were due to be submitted to the F.A.A. before 15th January of this year.

Three aircraft manufacturers—Boeing, Lockheed, and North American—have now submitted their proposals. These are currently under scrutiny and evaluation by a mammoth Committee, appointed by the F.A.A., of more than 200 technicians. The Committee's recommendations are expected before the end of May. In the meantime, however, the F.A.A. has released a few details of the basic features of each manufacturer's design.

That of Boeing, for example, features an aircraft of 430,000 lbs. all-up weight, accommodating 150 passengers and capable of a range of 3,500 nautical miles at a speed of Mach 2.7 (about 1,850 miles per hour). Lockheed propose a slightly heavier aircraft of 450,000 lbs. and able, moreover, to accommodate 218 passengers; the designed speed is Mach 3 (about 2,000 miles per hour). North American, while stepping up the weight still further to 480,000 lbs., aim for a speed of Mach 2.65 with accommodation for 187 passengers and a range of 3,480 nautical miles.

The most significant differences, however, are to be found in the approach which each manufacturer has made to the basic problem. That problem, of course, is to reconcile the requirements—wing area and shape—for supersonic speed with those for subsonic speed. Moreover, the SST has not only to handle efficiently at subsonic speed—at which it will probably have to fly at all altitudes below 40,000 feet—but to be equally tractable on the approach, landing, and take-off, at speeds which will enable it to operate from existing airports. There are, no doubt, many ways of attaining those ends, but, at present, probably only two alternatives are practical—the delta-shaped, swept-back wing as used on the Concorde or some form of variable geometry wing.

The latter alternative was suggested some time ago by Dr. Barnes Wallis. Writing on this in *Commerce* in 1962, your correspondent said that "by far the most attractive solution is offered by the variable geometry wing. This simply means, of course, a wing, the shape or angle of which can be changed in flight. Take-off, landing, and subsonic flight, can thus be undertaken with a wing suitable for those functions. The necessary alteration of angle can then be made for supersonic flight. The principal difficulty is to devise a mechanism which will be 100 per cent efficient and yet light and strong enough to sustain the tremendous forces to which it will be exposed. It is claimed that this has been done by Dr. Barnes Wallis, a very notable and ingenious British designer. ..."

It is now intriguing to learn that Boeing have used the variable geometry wing in their design. The other two designs—those of Lockheed and North American—both incorporate the fixed, swept-back, delta wing as does the Anglo-French Concorde. All three vary, of course, in concept but the principle remains the same. So much, then, for the details so far released. As has always been anticipated, all the American designs represent a significant advance on the Concorde; all are superior in capacity, range, and speed. Apart from Boeing's hitherto untried variable geometry wing, the most ambitious project appears to be that of Lockheed. A speed of Mach 3, and capacity more than double that of the Concorde, is certainly to set the sights at a very high mark.

Several vital questions now remain to be answered. Which of the three designs, for instance, will be selected? There is always the possibility, of course, that, in order to enable manufacturers to submit more detailed information, the F.A.A. may postpone, for twelve months or so, any final decision. In view of the market situation—which could be vitally affected by a delay of this nature—such a course now seems improbable. To date, in spite of present uncertainty as to the shape and performance of the American SST, this, it is interesting to note, has secured more customers than the Concorde. Air-India, for instance, has recently reserved three places in the American queue—and Mr. J. R. D. Tata has always proved himself to be a very astute and farsighted judge. It seems far more likely, in the circumstances, that at least one of the three designs will be selected for immediate development.

Almost as important is the second question—when can the American SST be in service? The Concorde is due to fly in 1967 and to enter airline service in 1971. All the American designs, it will be observed, feature speeds well in excess of Mach 2.2. This latter represents about the limit for construction with conventional aircraft materials. The Americans will have to use titanium or special steels. It was thought, at one time, that this factor—coupled with various other complex problems related to high Mach numbers—would be sufficient to ensure the Concorde a lead of two to three years. That is now considered to be less certain. At most, it has been suggested, the Concorde will secure a lead of one year to eighteen months and, having regard to the enormous productive resources of the American industry, if one of the less ambitious designs is selected, even that lead may be substantially reduced.

On the other hand, however, there still remains, so far as the United States is concerned, the question of development finance. The original proposal envisaged Government aid to cover 75 per cent of the estimated $1,000 million cost of development. This, one gathers, has proved to be far from attractive to the industry. The latter has been pressing for an arrangement more in keeping with the highly speculative nature of the project. Lockheed, for instance, is reported to estimate that finance of the order of $8,000 to $10,000 million will be required during the first seventeen years of development and construction. These are prodigious figures—and will be reflected, of course, in the selling price of the end-product. At present, this is estimated to be $17.23 million. The Concorde, at $10 million, seems comparatively small beer!

How do the experts compute the competitive value of the Concorde *vis-a-vis* its American challenger? Opinions vary and, at this stage, of course, it is a very open question. The Concorde is a comparatively modest project which must present far fewer problems than those—many, probably, as yet unforeseen—which the Americans will encounter. If one can properly compare a supersonic airliner with a tortoise, the contest between the Concorde and the American SST might conceivably be likened to the fabled race of the tortoise and the hare. Both pose scientific and industrial problems of great complexity, but the smaller, slower, and altogether less ambitious Concorde might yet still steal a march on its fleet opponent.

STATE BANK OF INDORE—*(Contd.)*

Profit and Loss Account for the year ended 31st December, 1963

Year ended 31-12-1962 Rs.	EXPENDITURE	Year ended 31-12-1963 Rs. nP
33,37,832	1. Interest paid on Deposits, Borrowings, etc.	35,99,311.82
20,11,578	2. Salaries and Allowances and Provident Fund and Gratuity Fund Contributions	25,46,480.03
6,610	3. Directors' Fees and Allowances	5,178.73
1,94,153	4. Rent, Taxes, Insurance, Lighting, etc.	2,18,840.22
4,384	5. Law Charges	19,818.49
1,18,123	6. Postage and Telegrams	1,22,296.43
5,000	7. Auditors' Fees	5,000.00
64,536	8. Depreciation on and Repairs to the Bank's Property	82,001.63
2,17,293	9. Stationery, Printing, Advertisement, etc.	2,19,775.24
Nil	10. Loss from Sale of or Dealing with Non-Banking Assets	Nil
1,32,186	11. Other Expenditure	2,36,091.56
5,14,439	12. Balance being Net Profit subject to provision for Bonus to Staff ..	5,52,778.84
66,06,139	Total .. Rs.	76,08,573.14

Year ended 31-12-1962 Rs.	INCOME (Less provisions made during the year for bad and doubtful debts and other usual or necessary provisions)	Year ended 31-12-1963 Rs. nP
56,33,656	1. Interest and Discount	63,55,662.39
8,17,815	2. Commission, Exchange and Brokerage	10,99,703.65
1,178	3. Rents	3,171.00
Nil	4. Net Profit on Sale of Investments, Gold and Silver, Land, Premises and Other Assets (not credited to Reserves or any particular Fund or Account)	Nil
Nil	5. Net Profit on Revaluation of Investments, Gold and Silver, Land, Premises and Other Assets (not credited to Reserves or any particular Fund or Account)	Nil
6,951	6. Income from Non-Banking Assets and Profit from Sale of or Dealing with such Assets	195.40
56,903	7. Other Receipts (the previous year's figure includes *inter alia* Locker Rents which this year have been included in Item No. 2 above)	6.00
89,636	8. Subsidy Receivable	1,59,834.70
66,06,139	Total .. Rs.	76,08,573.14

PARTICULARS OF REMUNERATION RELATING TO THE GENERAL MANAGER

	Rs. nP
1. Salaries	12,510.00
2. Allowances	5,004.00
3. Sitting Fees	Nil
4. Bonus	Nil
5. Employer's Contributions to Provident Fund, Pension Fund or any other Superannuation Fund	3,425.52
6. Payments by way of Gratuities, Pensions or otherwise, in excess of the Employer's Contributions and Interest thereon	Nil
7. The monetary value of any other benefits or perquisites	*4,463.50
8. Total of items (1) to (7)	25,403.02
9. Salary and Allowances of the General Manager as stated in the Profit and Loss Account of the previous year	22,937.12

REPORT OF THE AUDITORS TO THE STATE BANK OF INDIA

We have examined the foregoing Balance Sheet of the State Bank of Indore as at 31st December, 1963, and also the Profit and Loss Account of the Bank for the year ended on that date with the Accounts relating thereto of Head Office and with the unaudited Returns submitted and certified by the Agents, which Returns have been incorporated in the above Balance Sheet and Accounts.

We report that :—

(i) in our opinion the Balance Sheet is a full and fair one, containing all the necessary particulars and is properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank;

(ii) where we have called for any explanations or information such explanations and information have been given to us and have been found satisfactory;

(iii) the transactions of the Bank which have come to our notice have been within the competence of the Bank;

(iv) the returns received from the Branches of the Bank have been found adequate for the purpose of our audit; and

(v) the Profit and Loss Account shows a true balance of profit for the year covered by such account.

Chartered Accountants.

INDORE, 23*rd January*, 1964.

THE MODERN COMPANY AND RULE OF LAW—II

NEW CONCEPT OF MODERN CORPORATION

By D. L. Mazumdar, I.C.S.

WHEN corporate status was conferred on the medieval civic, craft or trading guilds, the intention was to endow them with some limited powers of self-government. The object of these powers was to enable the guilds to administer the privileges conferred by corporate status among their members in an equitable manner, to enforce discipline among the members in the exercise of privileges, and to regulate the relationships as between them as well as between them and the outsiders who might have dealings with them. Since the grant of corporate status at this stage was limited to certain specified objectives, the terms and conditions of the grant were relatively simple and easily enforced. The fact that these guilds operated within circumscribed territorial and fairly well-defined functional limits rendered adequate oversight of their activities within the framework of their franchise relatively easy.

The mercantilist corporations of the 17th and 18th centuries were also entrusted with equally precise functions but these functions had little in common with the functions of the medieval guilds. These functions were basically intended to subserve the ultimate objects of the mercantilist economic policies of the newly emerging national States of that period, and were largely concerned with the development of foreign trade and the exploitation of foreign resources. Partly because of this and partly because the members of these corporations were related to one another primarily as contributors to the capital of these corporations, and not in the integral manner in which the members of medieval guilds were connected with one another, the idea of self-government by guild members as a whole lost its reality.

Basis of Royal Charters

The royal or parliamentary charters which conferred corporate status on these mercantilist corporations were granted only on grounds of high policy after careful scrutiny and assessment of the objects likely to be achieved by the grant of such status in the context of the national economic and social policies of the States concerned. Secondly, severe limitations were imposed on the size and the activities of these corporations. This was sought to be justified by the monopoly rights conferred on them, and also by the political necessity of preventing such corporations from developing into so many *imperia in imperio*.

The other provisions of the charters of these corporations usually dealt with their internal organisation, but they were not usually spelt out in detail, nor did the regulations provide for any clear-cut allocation of authority as between the different organs of the corporations. The dominant principle underlying the charters granting corporate status to the national mercantilist corporations of the 17th and 19th centuries appeared to have been to hold them to the activities specially authorised by charters. As long as the managers of these corporations kept themselves within the strict limits of the object clauses of these charters, nothing else seemed to matter much. There was little attempt in these charters to regulate the relations of the members of the corporations *inter se*. This was undoubtedly a source of considerable risk to those who entered into contracts with these corporations, but, in the earlier stages of these national mercantilist corporations, these risks appear to have been subordinated to the paramount necessity of achieving the object targets set out in their charter.

With the emergence of the corporations formed under the general corporation laws enacted in the Western world about the middle of the 19th century, the basic pre-supposition of the *ad hoc* corporation laws of the earlier medieval and mercantilist periods underwent a major change. At first, the general laws of incorporation which supplanted the individual charters of the earlier mercantilist period contained many of the restrictions which it was usual to include in them. In the light of the changed economic circumstances and the prevailing socio-economic philosophy in the middle of the 19th century, many of these restrictions ceased to have any functional significance and were clearly out of tune with the temper of these times. It is not, therefore, surprising to find that these earlier generalised laws soon gave way to the traditional pattern of corporation laws which was evolved in the Western countries in the second half of the 19th century and which were to be eventually copied by countries like ours, which had adopted the Anglo-American model in this field.

Basically, this new pattern of corporation laws was evolved round the underlying concepts of the law of contract. Within this theoretical framework, it was primarily for the parties which had combined to set up corporations to determine the limits of their respective duties and responsibilities. This fundamental change in the legal character of the corporation meant the abandonment of the effort to subject business decisions to review by the State either through the processes of the courts or by direct executive control through the restrictive provisions of the incorporating charters as in the case of those constituting the mercantilist corporations of the 17th and 18th centuries.

The Primary Sources

If one were to make a hurried synoptic survey of the development of corporation laws in the Western countries during the last hundred years, particularly in the Anglo-American segment of it, one might summarise the findings by saying that the three primary sources from which the traditional corporation laws derived their sustenance were:

(*a*) first, in the field of law, the law of contract which has been described as the "most powerful stream of 19th century legal growth";

(*b*) secondly, in the economic field, the principles of *laissez faire* which held sway throughout the Western world from about the middle of the 19th century to the beginning of the 20th;

(*c*) thirdly, in the socio-political field, the model provided by the liberal democracies of the 19th century of the mid-Victorian type in England and of the Jacksonian type in the United States of America.

These different strands of law, economics and politics combined to provide the model for the so-called shareholder's democracy of the traditional joint-stock company as embodied in the generalised corporation laws of this period.

Practical Consequences

It is not necessary in this context to go into a detailed analysis of the nature of the influence exerted on the concept of the joint-stock company by these three major streams of thought. The practical consequences of the model on legislative and judicial thinking for nearly a century were clear. By and large, it was considered that the internal relations between the members of the joint-stock company or the corporations, and between them and outsiders were governed by the principles of contract and, as long as these principles were observed, it was reasonable to assume that the interest of the individual members and the enterprises to which they belong were well-protected. Agreements or arrangements entered into in violation of these principles would, to that extent, be voidable or void, depending on the relevant facts and circumstances, and, where guilty intention was established, the penal laws would of course be attracted. Apart from these aberrations or deviations, which would no doubt involve civil or criminal liability as the case might be, there should be no reason to interfere with the judgment of "willing buyers and willing sellers," and business decisions were best left to those who were in a position to take them.

The so-called economic principles of *laissez faire* were thought to ensure that "the greatest good of the greatest number" could be secured by agreements and arrangements freely entered into by sane adults, and "the invisible hand of competition" could be depended upon to bring about the necessary adjustment and accord between the activities of corporations and the interests of the society. The political model of 19th century democracy gave respectability to the concept of the so-called shareholder's democracy. This structure of corporate management was thought to ensure self-government and also to solve the two basic problems of corporate management, namely, its legitimacy and accountability. The management of the corporations were supposed to derive their legal and moral authority for the powers which they exercised from the fact that they owed their office to the suffrage of the shareholders, and they were also deemed to be accountable to the shareholder-electorate, inasmuch as, by the requirement of the corporation laws, they had to render an account of their stewardship to this electorate at least once a year. This was the grand politico-economic model of the self-governing joint-stock corporation which was embodied in the corporation laws of the Western countries for nearly a hundred years from the middle of the 19th century.

Our company law in the past, which was wholly based on the English law, except, in regard to a few topics dealing with some of our special institutional features in the corporate field, was also based on this traditional Western model. The principal legal levers on which the framework of this prototype rested were:

First, a set of elaborate provisions designed to ensure the protection of shareholders through a system of disclosure of the so-called "essential" facts relating to the formation and working of a joint-stock company;

secondly, a string of provisions laying down the procedure for decision-making in those areas of management, where the views of the members of a corporation had to be expressed;

thirdly, a series of provisions intended to safeguard the rights of creditors and others, outside the corporations who might have had dealings with these companies;

fourthly, several provisions dealing with the so-called accountability of management to the shareholders, through the audit of company accounts by qualified auditors and an *expose* of the stewardship of the management at the annual general meetings of companies;

fifthly, provisions for investigation into the affairs of companies in certain special circumstances;

sixthly, an elaborate system of procedural requirements relating to the dissolution of corporate status, and the disposition of corporate assets and liabilities; and

lastly, punitive provisions against proved malpractices and offences, involving guilty intention.

As long as the aforesaid objects were achieved, there was little else for the traditional

corporaiton laws to do so far as the regulation of corporate affairs was concerned.

Self-governing Democracy

This version of the joint-stock company or the corporation as a self-governing democracy in miniature, functioning within the framework of the provisions of the traditional corporation laws might have had some distant relevance to the small and medium-size companies, consisting of a relatively small number of shareholders with a significant financial stake in them, and possessing a fairly intimate knowledge of the business of these enterprises which was relatively simple and largely localised. But this version was soon destined to be rendered out of date by the emerging reality of the modern joint-stock company. The character of this structural change has been described by a keen American student of corporate history thus:

> "As scale expanded, the shareholder was less and less the capitalist, risking funds and exercising supervisory authority over a business with whose physical and financial workings he had informed and sophisticated acquaintance. He became an investor, separated in time and understanding, insulated by distance and the proxy machinery from the business activities of the enterprise which used his money. Suffrage was exhausted of reality, since it was neither informed nor organised. Despite the forms of electoral control, management became in all but rare instances, an automatic self-perpetuating oligarchy, in Adolph Berle's phrase. The reality of internal corporate structure had changed from democratic to bureaucratic."

This fundamental change in the internal structure and functioning of the modern joint-stock company or the corporation had rendered the traditional framework of company or corporation laws largely antiquated and otiose. Sociologically also, the emergence of the modern corporation as a system of economic and non-economic power, from its original historical character as a convenient legal device for the production and marketing of goods and services exposed the inadequacies of the existing systems of corporation laws for dealing with the problems created by the new situation. The new problems which confronted company lawyers, company administrators and the theoreticians of the subject were how to legitimise the use of this rapidly growing volume of non-governmental power and to subject the exercise of this power to a new concept of the Rule of Law applicable to the use of this type of power.

These problems emerged in an acute practical form in the Western countries after the Great Depression of the 'thirties, and led to a great deal of new thinking on this subject in law, economics, political science and sociology. Our struggle for freedom and our preoccupation with the militant politics of those years effectively prevented us from participating in this new thinking or from drawing lessons from the legal and administrative reforms in this field which were being attempted in some of the Western countries. Even in those countries, it was not till the end of the Second World War that the full effect of the new thinking was felt in intellectual circles.

A New Philosophy

Meanwhile, a rapid rise in the standard of corporate methods and practices, largely following from World War II, and the growth of a new professional managerial class, which the war effort itself had encouraged and fostered, gave rise to a new philosophy of the social responsibilities of business, which was avidly taken up by the leaders of the trade and industry in the Western countries. This development, in my opinion, largely accounts for the tardy growth of a new system of corporation law based on the new concept of the modern corporation as a system of power.

In other words, it seems to me that the urgency of structural changes in the legal and administrative systems relating to the corporations was not felt, because the behaviour pattern of company management which was still functioning within its old legal-administrative framework had undergone a rapid transformation. The manner in which an organisation functions often masks the defects of its structure; and it may well be that the growth of a pragmatic social philosophy in the Western countries relating to corporate behaviour may have largely made good the deficiencies of an out-of-date legal and administrative system.

But, in the developing countries of the world, where the traditional forms of organisations have not yet felt the winds of change, and have not been activated to a new behaviour pattern, as in the Western countries, the need for legal and administrative engineering to supplement the corrosive action of slow-moving ideas becomes urgent. Even in the Western countries, it is being increasingly recognised in academic and other thinking circles that corporation laws must build into their structure a new concept of responsibility in respect of the exercise of power by corporate management. Unfortunately, even in those countries legal and administrative technology has not yet advanced to a stage where it can be used for engineering purposes to rebuild the structure of their corporation laws or to recast the operative provisions contained in them in a manner that could enlist the general agreement of all those who are connected with their administration or enforcement.

Law of Corporate Responsibility

The need for a developing law of corporate responsibility is nevertheless urgent—particularly in the developing countries of the world where corporate management and practice, over large areas of the corporate sector, have yet to be modernised and adequately informed by the values of a co-operative and responsible society. In the field of Government and constitutional law, where the central problem has been always the control of governmental power, the need for relating the exercise of this power to a broadly accepted conception of public interest has been well recognised for well over a hundred years in all the Western democratic countries. In the jargon of constitutional and administrative lawyers, this is described as the enforcement of the Rule of Law. For historical reasons, this concept has, however, been used in the past only in the context of the regulation of governmental power.

The emergence of the modern corporation as a system of significant non-governmental power would seem to call for an extension of this concept to the exercise of non-governmental power not only by the modern corporations but also by other non-governmental institutions or authorities which may possess similar power and may be in position to use it, in socially significant ways, in large sectors of the life of a modern community. It may be argued plausibly that, in many developing countries, the modern joint-stock company or corporation may not have yet become a centre of significant non-governmental power and that till such centres are recognised and identified in those countries, the need for regulating the powers of the modern corporations or of subjecting them to the new concept of the Rule of Law applicable to them may not arise in practice. As I visualise the new law of corporate responsibility, it must, by its very nature, grow with the development of the society; but the structure of this new law should be such that it can readily absorb the developments in the concept of standards of responsibility. This means that the structure and processes of the new company or corporation laws should be so designed and geared as to offer reasonable assurance that, as soon as a joint-stock company or a corporation becomes a source of significant power, its management would not be free to exercise this power arbitrarily but would be enjoined to use it in a manner that can be rationally related to the legitimate purposes of the society.

The major practical problems which would confront the engineers of the new corporation laws would be: the contents of the new Rule of Law in its application to the modern joint-stock company or corporation; the nature of the new institutional structures which would need to be built into the existing corporational laws in conformity with the requirements of this new Rule of Law; the instruments of policy which would need to be fashioned in order to enforce this new concept of the Rule of Law.

These are some of the basic questions which jurists and administrators would have to answer if the new concept of the Rule of Law in its application to the joint-stock company or corporation is to become as much of a reality as the older concept of the Rule of Law was a reality in its application to the use of governmental power.

MONTHLY ECONOMIC REVIEW OF U.K.

PRODUCTION AND INVESTMENT EXPANDING

BANKS' ROLE IN THE CURRENT REFLATION

By W.T.C. King
EDITOR, *THE BANKER, LONDON*

THE latest batch of economic indicators in Britain continues the now familiar story of expansion: the rising activity that set in after the hard winter of 1962-63 still goes on, and may even have accelerated a little in recent months. Industrial production, as shown by the seasonally corrected index, rose to the new peak of 123 (1958=100) in November, compared with the low point of 113 touched at end-1962 and early 1963 (ignoring the weather-distorted figure of 109 for January 1963). If calculated on three-monthly average, this index now shows an advance at the annual rate of just over 6½ per cent compared with the final quarter of 1962.

Aggregate national output, which can be gauged only from the quarterly national income estimates, has of course risen rather more slowly than this, but significantly faster than in previous years. Gross national product, valued at current prices, had reached £6,443 million by the third quarter of 1963, compared with £6,189 million and £5,991 million in the similar quarters of 1962 and 1961, respectively. Corrected for seasonal influences and for price fluctuations, these figures show an advance at an annual rate of 4 per cent—by comparison with the fourth quarter of 1962, whereas the average rate of advance over the previous three years had been perceptibly under 3 per cent.

Pattern of Expansion

The pattern of the expansion, as the Treasury has recently pointed out in its *Bulletin for Industry*, has lately been broadening. Total fixed investment began rising during the summer and there are "strong indications" that additions to stocks had begun to turn upwards before the end of the year. Consumer spending, which is of course the biggest sector, accounting for well over half of all national expenditure, was substantially higher in the second half of the year than at the beginning. It seems, indeed, to have played a somewhat larger part in the whole process of expansion than was at first supposed. Total consumer outlay, taken at constant prices and seasonally adjusted, rose by 2½ per cent both in the second and third quarter of last year.

To judge from the monthly statistics of retail trade, this expansion is continuing. The corrected monthly index had in October slipped back one point from the peak of 110 (1961=100) reached in August-September, but, in December, it made a two-point rise to a new high of 111. Hire-purchase business has been expanding steadily, but its growth has fallen far short of the spectacular surge experienced in the last major phase of reflation—that of 1958-60. By end-1693, total outstanding hire-purchase debt had reached £954,000,000, as compared with £883,000,000 at the low point in November 1962.

Unemployment

The most up-to-date indicator of all is, of course, that relating to unemployment: the latest count of workers unemployed took place at mid-January, and showed an increase, over the preceding five weeks, of 40,800 in the total for Great Britain. Over one-quarter of this movement was, however, attributable to the increase in workers "temporarily stopped" in consequence of the major strike, now ended, at a South Wales steel plant, whilst the increase in adult workers registered as wholly unemployed was some 16,000 less than the normal seasonal movement.

Accurate seasonal smoothing of the statistics is admittedly more than usually difficult at this time of year, but after allowing for that, it still appears that the true rate of unemployment was falling faster in December-January than it had done since about the middle of 1963, though the trend has been downwards throughout. The unadjusted total of unemployment at mid-January was fractionally over 500,000, equivalent to 2.2 per cent of the labour force.

Among the forward-looking indicators, the most heartening are those relating to private industrial investment. The efforts made to stimulate an upturn in this important sphere at last seem on the point of showing positive results in terms of actual work done. Orders placed on the engineering industries have been rising strongly for some time, while home orders for machine tools, which had been rather obstinately lagging, have at last shown a substantial advance.

Private Investment

The forecasts made by private industrialists themselves have also been revised significantly upwards. The Board of Trade's latest survey of investment intentions shows that companies in the manufacturing, distributive and service industries expect in the aggregate to spend about 10 per cent more on fixed investment in 1964 than in 1963, whereas their similar estimate made last summer put the likely expansion at under 5 per cent.

If the rise in private investment really does get strongly under way in the near future, along with rising demands for stock-building, the big question will be whether, or for how long, the economy can accommodate these demands without undue stress, side by side with the continuing rise in consumer outlays, in public sector investment and—it is to be hoped—in exports. Objective measurement of available capacity as an aid to answering any such question has to be admitted to be virtually impossible—if only for the reason that, in the short run, the only underutilised resources that are effectively available are those that match the particular pattern of current demand.

In this field where statistical resources are scanty, any well-based studies are greatly to be welcomed, and one such study has lately come from the National Institute of Economic and Social Research. A sample inquiry into the metal-using industries has suggested that firms in the mechanical and electrical engineering industries and firms producing miscellaneous metal products have in the aggregate increased their output in 1963 to 3 per cent above that for 1962 (but to a level 5-6 per cent higher at end-1963 than at the beginning), and that, allowing for additions to productive capacity, this will have raised their average level of capacity utilisation from a little under 80 per cent at end-1962 to 82 per cent at end-1963.

These same firms expect to increase their total output in 1964 by 9 per cent over the total for 1963, and if these expectations are realised it is estimated that the average level of capacity utilisation would be raised by the year-end to 85-86 per cent. This would probably be virtually the effective limit, since the survey points out that roughly this same ratio marked the peak of activity at the top of the last cycle in the engineering industry, in 1961.

Role of Banking System

A notable feature of this current phase of reflation, by contrast with the reflation of 1958-60, is the very different role that has been played by the banking system, and by credit influences in general. In the earlier phase, a large part of the motivating force seemed to come from the ending of the credit squeeze—by which was mainly meant the freeing of the banks from so-called "directive" controls over their lending, for the first time since the beginning of World War II. The prospective ending of those controls in the summer of 1958 provided the opportunity and the signal for the banks' entry into hire-purchase finance, by taking up participations in the leading finance houses—a movement that gave a great impetus to hire-purchase business as soon as the official controls over the terms of hire-purchase contracts were relaxed.

Similarly, when the official restraint "by request" over the volume of bank advances came to an end, the banks plunged into an uncharacteristically aggressive search for new advances business. For the first time for many years it was advertised to the world that the big banks were anxious to lend. The upshot was a huge surge forward in the advances figures. In the 16 months to end-1959, aggregate net advances of the clearing banks, excluding their lendings to the nationalised industries, rose by fully 45 per cent to some £2,700 million—a rate of growth previously experienced only in the short-lived boom that followed World War I.

Some people supposed that, in 1962, when the banks were for the second time freed from informal "directive" restraints over the scale of their lendings (new "requests" had been made to them in mid-1961), the consequence might again be a massive surge of new lending. These suppositions were, however, never well-founded.

Boom in Bank Lendings

To a large extent the boom in bank lendings in 1958-60 represented a once-for-all readjustment of a pattern of lender-borrower relationships that had been unnaturally distorted by almost 20 years of controls that had discriminated against the big deposit banks as compared with other types of credit-givers. Chiefly because of the tight restraint on the big banks, they had become "underlent" by traditional standards, with the ratio of their advances to their deposits at little over 30 per cent, and the ratio of their investment portfolios correspondingly swollen, at around 33 per cent. Hence it was possible for them to increase the aggregate of their lendings without adding similarly to their aggregate resources—by realising large quantities of investments instead. But this, too, was a once-for-all adjustment. At the beginning of the reflation of 1962-63 the advances ratio was not far short of 47 per cent and the investments ratio was little more than 16 per cent.

For both these reasons the scope for additional bank lending was much more limited than it had been in 1958. Any large growth in bank advances would, it was clear, require a more nearly corresponding rate of growth in the aggregate of bank resources. In fact, the increase in advances in the 15 months to end-1963 had been large by any standards save those of 1958-59, but it was at less than half the rate attained then. It amounted to £525,000,000, equivalent to just over 15 per cent, raising the total (still excluding the loans to nationalised industries) to almost £3,900 million.

Not surprisingly, this slower rate of growth in advances by comparison with the last phase of reflation has been accompanied by a faster rate of increase in bank deposits. In the 12 months to mid-December 1963 the net deposits of the clearing banks rose by £412,000,000, to £7,721 million, or by 5.9 per cent. This compared with an increase of 4.1 per cent in 1962 and one of 5.7 per cent in 1959, and was the fastest rate of credit expansion since the extraordinary spurt during the ultra-cheap money drive immediately after the end of World War II. But, in spite of this, credit creation in this reflation has probably to be regarded as a secondary rather than a primary force.

I.M.F. STANDBY CREDIT TO CHILE

The International Monetary Fund has entered into a new standby arrangement with the Government of Chile which authorises drawings up to $25 million in the next twelve months. The new arrangement will provide continued support for the Government's policy of establishing conditions of monetary stability as a basis for further economic growth. It replaces a one-year standby arrangement amounting to $40 million which expired on 14th January 1964. Drawings under that arrangement amounted to the full $40 million available to Chile. The country's outstanding drawings on the Fund now amount to $106 million.

BACKGROUND TO FORTHCOMING TARIFF CONFERENCE

POINT OF VIEW OF EUROPEAN COMMON MARKET

THE tariff negotiating plan to be drawn up as part of the preparations for the trade negotiations provided for in the resolution adopted by the G.A.T.T. Ministerial Meeting on 21st May 1963 must establish, in addition to the general rule of linear reduction of duties, a special rule for handling "sensitive" cases of disparity.

The difficulties so far encountered in solving this problem have brought it rather prominently into the public eye, and the numerous commentaries on it give rise to some confusion and various misunderstandings as to its real meaning and scope. An objective examination of the origin, background and factual terms of this problem should throw light on the confusion and clear up misunderstandings.

Not an Invention of the Community

Since it was signed on 30th October, 1947, the General Agreement on Tariffs and Trade has provided the setting for a certain number of conferences* aimed, first at putting an end to the tariff war and, secondly, at progressively reducing tariff barriers between the Contracting Parties.

It is instructive to study the changing procedures followed in these negotiations. Three phases can be distinguished:

(*a*) The traditional approach;

(*b*) The 1960-62 negotiations, known as the Dillon round;

(*c*) The coming trade negotiations.

The traditional approach consisted in each Contracting Party normally negotiating every concession it offered with the Contracting Party which was its main supplier of the product in question. Any concession granted to a Contracting Party was *ipso facto* extended to all the others under the most-favoured-nation clause. Thus, the results of originally bilateral negotiations were treated as results to be applied multilaterally.

The negotiations, therefore, proceeded on a product-by-product and country-by-country basis.

From the 1950-51 Torquay Conference onwards, it became increasingly clear that some industrial countries whose tariffs were lower initially than those of the other countries found it difficult to go beyond a certain point, whereas the tariffs of the others continued to be effective after the reductions agreed to. The problem of disparities between the tariffs was posed and it led the product-by-product method of negotiation to a dead end.

Various suggestions were made for overcoming these difficulties. In 1952, the Benelux countries presented a plan providing for a prior reduction of the high tariffs, so that the negotiation could then proceed on tariffs of comparable level. In 1953, France proposed the Pflimlin Plan which was for an automatic reduction of 30 per cent in three years (10 per cent per annum), at the same time lopping the peaks above certain levels and, conversely, setting minimum figures below which the duties would not be reduced. These plans were not accepted.

The Dillon Round

However, the 1960-62 negotiation—the Dillon round—was a first turning point. This negotiation sprang from a combination of two factors: first, the power granted to the United States Administration by the 1958 Act on trade agreements to negotiate reductions in existing duties of up to 20 per cent and, secondly, the proposal of the European Economic Community to negotiate the binding of the 20 per cent reduction which had served as the basis of calculation for the approximation of the national tariffs towards the common external tariff in accordance with the decision of 12th May, 1960 to speed up the customs union.

The Community further proposed that this 20 per cent reduction should be effected by the linear method but only Great Britain in part accepted this proposal, the other Contracting Parties having stated their preference for the product-by-product method.

The Dillon round was a transitional form of negotiation, sometimes product by product, and sometimes linear. The linear approach was first tried out there, but the results were disappointing: the imbalances between the tariff structures of the various countries no longer permitted the low tariff countries to obtain for their export products sufficient advantages to ensure reciprocity.

It then became clear that the method of negotiating product by product on the main supplier principle was no longer effective.

The G.A.T.T. Ministerial Meeting in November 1961 recognised this fact and for the future advocated the linear formula. By the Trade Expansion Act, the United States Congress gave the Administration powers to negotiate tariff reductions of up to 50 per cent in this way. The Community greeted the passing of this Bill as a manifestation of the readiness of its chief trading partner to create the indispensable conditions for a successful joint effort. It was now possible to carry out an exercise in tariff disarmament on a scale hitherto unknown. The resolution of 21st May 1963 opened the road to this new negotiation.

The Factual Situation

If we feel that negotiating methods must change, we must have an idea of what is needed for fresh progress. Old prejudices and habits of thought must give way to a fresh approach. Long-established concepts inevitably change in context and content. In particular, the reciprocity principle can no longer be thought of only in narrow terms of the comparative value of the concessions actually exchanged, but rather in terms of balance and comparability of the situations to be attained. A dynamic and forward-looking concept of reciprocity must be substituted for a static concept which has been outpaced by the onward march of tariff reduction.

If progress on these lines were to prove impossible, the problem of disequilibrium between tariff structures, i.e. the problem of disparities, would bring the method of linear reduction in its turn to a dead end, for the need to get round this problem by the expedient of exceptions would inevitably whittle down the scope and content of the negotiations.

A statistical comparison of the E.E.C. common external tariff, the United States tariff and the United Kingdom tariff amply demonstrates where the disequilibrium between the tariff structures lies. The C.E.T. (the Common external tariff of the Common Market) is lower than the other two tariffs; it is less dispersed and it includes fewer highs and lows. For instance, only 5 per cent of the C.E.T. duties are above 25 per cent, as against 28 per cent of the U.S. duties and 30.75 per cent of the United Kingdom duties. Above 35 per cent duty, the proportions are as follows: 0.05 per cent in the C.E.T., as against 10.4 per cent in the U.S. tariff and 1.8 per cent in the United Kingdom tariff. It is clear that a straightforward reduction of 50 per cent would considerably aggravate the effect of this disequilibrium, for it would bring a very high proportion of the C.E.T. down to an extremely low or *nil* level of protection, whereas the U.S. tariff would continue to afford a much larger measure of protection.

Community's Fear

The Community considers that such a situation would make reciprocity impossible and, furthermore, might gravely endanger its own development, in view of the growing deficit on its trade balance with the United States ($3,000 million in 1963) and the fact that this unequal protection would expose Community markets to the heavy pressure of exports from third countries, particularly those with extremely low cost prices.

The resolution adopted by the Ministers on 21st May 1963 offers all the necessary elements for dealing adequately with the problem of disparities. It defines in harmonious and balanced fashion the principles which should serve as a basis for the negotiation. Along with the general rule of substantial linear reduction, it recognises the existence of the problem of disparities, lays down the principle of handling this by a special rule—also of automatic and general application—whose effect must be to reduce sensitive disparities in trade. It furthermore poses the problem of countries whose tariffs have a lower general incidence and which might thereby be faced with a problem of reciprocity.

A Confusion

Studies with a view to implementing this resolution, particularly in the matter of pinpointing sensitive disparities and drawing up the special rule to be applied to them, have run into certain difficulties. There is a fairly widespread tendency to attribute these difficulties to the fact that the Community has raised the problem of disparities. This is tantamount to confusing the problem with the solution.

The chief difficulty is the problem facing the small European countries which fear that, for them, the narrowing of disparities may impair the advantages which the application of the general rule would ensure them in access to the Community market, the chief outlet for their exports.

The problem is a real one, but, if it exists, this is not because the Community wishes to resolve the question of disparities but because attempts at adjustment can be in one direction only. In fact, two solutions are possible to make this adjustment: either the low duties follow the general rule and the high duties come down more, or the high duties follow the general rule and, in this case, the low duties are reduced less. However, the working hypothesis of a 50 per cent reduction chosen for the general rule coincides with the limit of the mandate to reduce duties conferred by the Trade Expansion Act and therefore leaves no choice but to apply the second solution.

Nevertheless, the Community wishes to do everything in its power to mitigate the effects of this situation, whose inevitable implications it recognises, although it cannot accept responsibility for them.

T.W.A.'S EARNINGS AT A NEW HIGH

The Trans World Airlines' earnings and revenue reached new highs during the year ended 31st December 1963. Gross operating revenue climbed to $475.84 million (approximately Rs. 226.02 crores), showing an increase of $72.81 million (Rs. 34.58 crores), or 18.1 per cent, over the 1962 record figure of $403.03 million (Rs. 191.44 crores). Net earnings, after adjusting the previous year's debit balance of $5.70 million (Rs. 2.71 crores), amounted to $19.69 million (Rs. 9.35 crores), and worked out to a per share earning of $2.94, as against the loss of $0.85 a year before.

Describing 1963 as "the year in which T.W.A. made its dramatic turnaround," the President, Mr. Charles C. Tillinghast, Jr., said that the Airlines regained profitability as the result of the public's acceptance of its superior service during the year. Mr. Tillinghast observed: "We have achieved new highs in performance standards and have offered time-saving conveniences which have scored well with segments of the public, particularly the American businessman." System operating expenses for the year amounted to $435.65 million (Rs. 206.93 crores), that is, 10 per cent more than in 1962. Because of the carried forward loss from 1962, the Airlines would pay no Federal income-tax for the year 1963. In the current year, however, it would incur a substantial tax liability. Last year's cargo revenue came to $52.24 million (Rs. 24.81 crores), that is, 16.9 per cent more than in 1962. The improvement resulted from the Airlines' new marketing strategy. In December last, T.W.A. inaugurated the only through-plane all-cargo jet flights serving major cities in the U.S. and also extended the service to the E.C.M. countries in the following month.

The major improvements in the operations during 1963 include: domestic total revenue passenger miles 5,334,317,000 (up 19.3 per cent over 1962), international total revenue passenger miles 1,681,935,000 (up 39 per cent), system total revenue passenger miles 7,016,251 (up 23.95 per cent), domestic passenger boardings 6,221,534 (up 14 per cent), international passenger boardings 555,906 (up 32 per cent), domestic cargo ton miles 114,116,000 (up 20.5 per cent), and international cargo ton miles 73,691,000 (up 14.2 per cent).

New forms of State assistance to local industry in Norway are outlined in a Government report on the activities of the District Development Fund. The proposed measures cover guidance and subsidies for plant relocation. The Fund will get larger funds for loans, subsidies and stock subscription in new industrial enterprises as a means of strengthening the economy of lagging districts, if the proposals are approved by the Storting (Parliament). One of the key proposals calls for abolishing the Fund loan guarantee department and utilisation of its capital of about £3.35 million for loans. The Fund would thus be able to extend loans, grant subsidies, and subscribe to shares for altogether £20.25 million, including present commitments. It is presumed that the State would take over guarantees made by the Fund whose guarantee activities would henceforth be based on a State guarantee authority. An increase of £3.5 million to £15 million maximum is proposed in the Fund guarantee possibilities, with losses to be covered by the money allocated to the Fund. The Government plans the establishment of a public subsidy agreement to cover moving expenses for enterprises relocating in development areas and expansion of the technical and economic guidance service for industry.

INDIA IN SUDAN'S FOREIGN TRADE

KEEN COMPETITION FROM MANY COUNTRIES

LIKE many other developing countries, Sudan too is on the road to industrialisation. Sudan has a wealth of under-exploited resources, to develop which a National Development Plan (1961-62 to 1970-71) has been launched with the objective of increasing national income from Sudan £350 million* or £30 *per capita* to £560 million (or £37 *per capita*) in 1970-71. Apart from light industry which is developing fast, basic projects such as dams for irrigation and hydro-electric power have also been accorded priority in the plan.

Sudan's economy in recent years has moved forward nearly twice as fast as the annual population increase. The Gross National Product amounting to £395.5 million in 1962 was 3 per cent up on planned level and 12 per cent up on 1960-61. This was entirely due to agriculture, other sectors showing only 3-6 per cent rise on 1960-61.

Sudan's balance of payment has been showing deficit on current account, the deficit being bridged up by loans and credits from abroad. In 1962, this deficit stood at £20.7 million, and the deficit on merchandise account amounted to £9.6 million.

Sudan's exports which constitute the main income of the exchange sector fluctuate from year to year due mainly to fluctuations in world demand for her exports and also due to their prices, particularly of cotton and seed, which in 1961 accounted for 56 per cent of the value of her domestic exports. Gum-arabic occupies second place (10 per cent) followed by groundnuts (9 per cent) and sesame (7 per cent). The remaining 18 per cent comes from agricultural products such as millet, beans and livestock products. Sudan's *imports* are more diversified than her exports. In 1962, food products, beverages and tobacco accounted for nearly 14 per cent, textile products for about 17 per cent, machinery and other capital goods for 50 per cent and fuel for about 6 per cent.

The U.K. is the leading trade partner of Sudan, supplying 28 per cent of the country's imports, and importing 20 per cent of its exports. India which occupied second place in Sudan's trade with a share of about 10 per cent in imports as well as exports, was relegated to third position in 1961 by West Germany with a marginal difference. The failure of the traditional buyers of Sudan cotton to lift all the cotton crop, especially since 1957, tempted the Sudanese Government to look for markets elsewhere, and thus led to bilateral trade agreement and barter dealings with a number of Communist Countries.

Sudan's two-way trade with India attained a new high of Rs. 26.13 crores in 1962-63 (Imports, Rs. 17.11 crores; exports Rs. 9.02 crores) against previous high of Rs. 25.78 crores in 1959-60, (Imports, Rs. 10.31 crores; Exports, Rs. 15.47 crores). The high level of trade in 1962-63 being due to record level of our imports in that year, Indo-Sudan balance of trade showed a record deficit of Rs. 8.09 crores in that year as against record surplus of Rs. 5.16 crores in 1959-60 as a result of peak level of our exports in that year due to Sudan's imports of tea from us on an almost monopoly basis.

The rise in the value of our imports from Sudan in 1962-63 was solely due to our higher imports of cotton which amounted to 48,900 tons worth Rs. 16.7 crores, as against 23,700 tons valued at Rs. 10.18 crores in 1961-62 and 18,200 tons valued at Rs. 8.62 crores in 1960-61. Our imports of cotton constitute more than 90 per cent of our total imports from Sudan. In 1962-63, cotton accounted for 98 per cent of our total imports from Sudan. The other significant item of our import though a minor one is gums, resins and lac, the imports of which amounted to Rs. 40 lakhs in 1962-63 as against Rs. 32 lakhs in 1961-62 and Rs. 74 lakhs in 1960-61.

India's exports to Sudan exhibit an erratic trend as Sudan is a highly competitive market. Our exports of traditional goods that is, tea, cotton piecegoods and jute goods predominate in this market, accounting as they do for 90 per cent of our exports to Sudan. During 1962-63, the export value of these three items together accounted for Rs. 8 crores out of our total exports of Rs. 9 crores. India's exports of principal commodities to Sudan during the last three years are shown in the table at the bottom of the page.

* One Sudan £=287.156 U.S. cents.

Sudan, with a population of about 12 million people and vast land area (about three-fourths size of India) is predominantly an agricultural country. It is only in the last few years that the country has turned seriously to industrialisation. Sudan's economy is now progressing rapidly. Although Britain continues to maintain its predominant position accounting as it does for 20-30 per cent of its imports and exports, other Western countries, that is Western Germany, U.S.A., Italy, etc., have increased their share of the market, notably through development projects.

With the acceleration of the tempo of development, Sudan will soon be self-sufficient in sugar, card-board footwear and to some extent in textiles also. The almost complete convertibility of European currency in Sudan has permitted a wide measure of liberalisation of imports. The great majority of consumer goods are under open general license, the main exceptions being the commodities produced locally. Capital goods, spare parts and raw materials can be imported freely. There is no tariff discrimination except some preferential duty rates granted to U.A.R. particularly on textiles and yarn. In view of all these facts, Sudan is becoming a highly competitive market with price as the main consideration. The market in Sudan is expanding enormously. Apart from traditional goods, there is scope for expanding our exports of non-traditional goods also. A brief analysis of Sudan's major items of imports from our angle of export promotion is given in the following paragraphs.

India is the biggest supplier of tea to Sudan. The following trade statistics showing imports of tea into Sudan during the last three years illustrate this:

(Quantity in tons ; value in £ '000)

	1960		1961		1962	
	Quantity	Value	Quantity	Value	Quantity	Value
India	4,227	1,747	5,991	2,467	6,039	2,127
Kenya and Uganda ..	836	290	2,210	839	2,547	818
China	..	..	1,141	245	..	..
Total (including others) ..	5,092	2,044	9,377	3,563	8,642	2,958

Sudan's imports of tea in 1961 increased by 84 per cent in quantity and 25 per cent in value, but in 1962, there was a drop both in quantity and value, 8 per cent in quantity and 17 per cent in value. India has maintained its leading position, with quantity showing an upward trend throughout inspite of Sudan's imports being slightly lower in 1962 compared with 1961. Imports from China which were sizable in 1961 disappeared in 1962. What is rather disturbing is the fact that competition from Kenya and Uganda is intensifying. Their tea is more black in colour (thus suiting the taste of the Sudanese) and their prices are competitive with India. Moreover, due to proximity of Kenya and Uganda, quicker supplies can be ensued from them. Therefore India has to be on the alert in this potential market.

This is an important item of Sudan's imports accounting for a little over 10 per cent of her total imports in 1962. During the last three years, Sudan's imports of cotton piecegoods increased from £8.1 million in 1960 to £8.9 million in 1961 and to £9.2 million in 1962, whereas her imports from India show a declining trend throughout, having declined from £4.1 million in 1960 to £2.9 million in 1961 and to £1.99 million in 1962. Till 1961, India had the first place in imports of cotton textiles into Sudan, Egypt coming as a distant second. Now Egypt has stolen a march over India and has secured first position in 1962 with her share aggregating to 5,630 tons worth £2.6 million, as against India's 5,065 tons worth £1.99 million. The decline from India is due to keen competition from Japan, U.A.R. and East European countries as may be seen from the following trade statistics:

Imports of Cotton Textiles into Sudan

(Quantity in tons ; value in £ '000)

	1960		1961		1962	
	Quantity	Value	Quantity	Value	Quantity	Value
India	9,600	4,113	7,749	2,933	5,065	1,988
Egypt	2,593	1,824	4,079	2,033	5,630	2,629
Japan	271	252	1,132	1,099	1,935	1,623
East Europe	986	440	2,230	877	3,172	1,211
U.K.	327	426	113	152	241	241
Pakistan	241	82	751	270	791	216
China	473	173	1,692	478	1,029	343
Total (including others) ..	15,822	8,138	19,637	8,944	19,377	9,226

U.A.R. enjoys preferential treatment for their export of cotton textiles to Sudan, besides having bilateral and payments agreements. East European countries have also got similar bilateral and payments arrangements. All these factors have militated against India's exports of cotton piecegoods to Sudan.

Imports of 'Grey' continue to constitute the bulk of imports of cotton piecegoods into Sudan, though of late there has been some decline due to increase in home production and competition from abroad. India, which was by far the most important exporter of 'Grey' till 1961, was relegated to second position with value reduced by about 50 per cent over 1961. The following statistics showing imports of 'Grey' into Sudan illustrate this position:

(Quantity in tons ; value in £ '000)

	1960		1961		1962	
	Quantity	Value	Quantity	Value	Quantity	Value
India	7,578	2,606	6,840	2,132	3,922	1,099
Egypt	806	336	2,235	899	3,439	1,194
Pakistan	241	82	751	270	791	216
East Europe	473	189	1,232	438	1,306	443
China	457	173	1,692	478	1,029	343
Total (including others) ..	10,070	3,395	14,558	4,871	12,470	3,978

Egypt has throughout increased its share both in value and quantity, securing first position in 1962 in value, although in quantity India's exports were more than Egypt. Apart from Egypt, other countries like Pakistan, China and East Europe have intensified their competition. Although in 1962 unit value of imports from India was below all other countries except Pakistan, India's exports have suffered decline in face of increase in the shares of other countries. The increase in case of Egypt and East European countries is presumably due to barter and payments agreement with these countries.

In 1962 Egypt has captured first position in Sudanese market in all varieties except 'Dyed in Yard.' Japan leads even Egypt in 'bleached,' 'Dyed in the piece' and 'Printed' varieties, thus securing first position in these varieties in 1962 in Sudan. India's position in Sudan in 1962 was first in 'dyed in yard,' second in 'grey,' a distant third in 'bleached' 'dyed in the piece' and 'printed.'

India's prospects for increasing its exports of cotton piecegoods to Sudan are not quite promising, unless it takes some special steps as, for example, some barter and payment agreement or linking of its imports of cotton from Sudan to its export of textiles to them.

India is almost the sole supplier of jute goods to Sudan. Sudan's imports of jute goods increased from £1.4 million in 1960 to £1.7 million in 1961 and to £2.7 million in 1962. Imports from India went up from £1.3 million in 1960 to £1.6 million in 1961 and to £2.6 million in 1962. Gunny bags constitute the major item of import, other minor items being hessian cloth and bags. Pakistan is likely to come up in this market. India should keep a keen watch.

Artificial silk piecegoods constitute another item, of which Sudan's imports are substantial, being as high as £2.0 million in 1962, as against £2.5 million in 1961 and £1.8 million in 1960. Japan is by far the largest exporter, accounting for nearly 50 per cent. China ranks a distant second and India comes third. Imports from Egypt which decline from £0.50 million in 1960 to £0.10 million in 1960 increased to £0.11 million in 1962, though imports from India and Japan declined in 1962 as compared with 1961. East European countries also increased their share in 1962 which presumably is due to their barter agreements. The following statistics show this position:

(Quantity in kilos 000 ; value in £000)

Countries	1960		1961		1962	
	Quantity	Value	Quantity	Value	Quantity	Value
Egypt	497	513	126	107	162	114
China	536	307	1,160	599	963	438
India	293	228	396	191	396	159
Japan	255	213	2,145	1,455	2,087	1,145
East European countries .	530	303	127	66	200	80
Total (including others) ..	2,303	1,755	4,039	2,547	3,794	2,040

India has so far been the largest supplier of essential oils to Sudan, imports into which fell from £93,418 in 1960 and £155,000 in 1961 to £88,228 in 1962. India's share, however, continued to rule at about 85 per cent.

India's share in footwear (rubber) which is small has displayed a declining trend, having gone down from £15,981 in 1960 to £2,337 in 1961 and £983 in 1962. Sudan's imports of this item also declined from £0.89 million in 1960 to £0.61 million in 1961 and £0.45 million in 1962. Japan and East European countries are the leading exporters of this item.

India's exports of traditional goods are gradually losing ground in Sudan. It is, therefore, necessary to promote exports of non-traditional goods which have good scope in Sudan in view of the development programme going on there.

India's exports of engineering goods to Sudan increased from Rs. 4.8 lakhs in 1961 to Rs. 7.6 lakhs in 1962. Electric fans alone accounted for exports of Rs. 2.2 lakhs in 1961 and Rs. 3.6 lakhs in 1962. Exports of auto-parts increased from Rs. 77,000 in 1961 to Rs. 1.16 lakh in 1962. Sewing machines and parts, bolts and nuts, C.I. manhole covers, G.I. buckets, tin containers, fluorescent tubes and fittings were some of the other item exported in 1962. Apart from these items, there is scope for export of several other item like diesel engines, railway track materials, cycles, agricultural machinery and implements, insecticides, etc.

With Sudan having a deficit on its balance of trade, the possibility of increasing India's exports to that country depend almost entirely on imports of cotton from it. The Sudanese are somewhat sensitive on this subject and feel that India's imports of cotton should be based entirely on consideration of price and quality.

India was the principal importer of cotton from Sudan in 1962. Of late, Germany, U.S.S.R. and Italy have also increased their purchases and so are able to capture a larger share of Sudan's trade.

Our import policy in respect of cotton is non-discriminatory and our import quotas are issued on a global basis. The rupee payment arrangement with Egypt are not meant in any way to discriminate against Sudan. India's imports of cotton from Egypt and Sudan during the last three years are given below:

(Quantity in '000 tons ; value in Rs. crores)

Year	Imports from Sudan		Imports from Egypt	
	Quantity	Value	Quantity	Value
1960-61	18.2	8.62	21	10.64
1961-62	23.7	10.18	20	10.28
1962-63	42.9	16.70	20	9.38

It will be seen from the *above* that in 1962-63 Indian imports of cotton from Sudan were much higher than those from Egypt, being more than double in quality and a little less than double in value.

Gum-arabic is another item which India imports from Sudan which is the world's biggest producer of this commodity accounting for 80-85 per cent of world supplies. Moreover, Sudanese gum is of superior quality. India could consider meeting its increased import demand from this source.

Sudan is an open market where almost all countries of the world are free to trade. Even after making allowance for Sudan's purchases from aid-giving countries, there is scope for increasing India's exports to that country. Competitive prices, sound business practices, vigorous salesmanship, publicity and after-sale service are fundamental requirements for an export drive in this market.

Principal Items of Exports to Sudan

(Value in Rs. lakhs)

	Unit	1960-61		1961-62		1962-63

ELGIN MILLS' PROFIT DECLINES AGAIN

EXPANSION AND MODERNISATION PROGRAMME WELL UNDER WAY

FOR the second successive year—that is the one ended 30th September 1963—the Elgin Mills Company Ltd. (Secretaries and Treasurers: The British India Corporation Ltd., Kanpur) has been compelled to report an erosion in its profit margin (ratio of gross profit to sales), due to factors entirely beyond its control. Sales excluding excise duty have, of course, risen in common with those of other textile units in the country, from Rs. 630.67 lakhs to Rs. 722.55 lakhs, but the profit margin has declined to 9.4 per cent from 13.5 per cent which was itself lower by 1.5 points than the 1960-61 *high* level of 15 per cent. This setback is attributed by the Directors to the considerable rise in the prices of cotton, increased labour costs and general rise in the prices of all stores, while the prices obtained for finished goods could not be increased due to the voluntary price control on cotton textiles. Moreover, substantial defence orders received from the Government have had to be executed on marginal profit to the Company. And, what was worse, in line with the general decline in exports of cotton textiles from India, there was a drop in exports sales following keen competition in foreign markets, though, fortunately, the Company exceeded the quantum prescribed under the compulsory export scheme. Whereas the cost of raw materials and stores consumed rose proportionately to sales from Rs. 372.60 lakhs to Rs. 411.55 lakhs, staff expenses increased by Rs. 20.63 lakhs to Rs. 176.30 lakhs and other expenses almost doubled from Rs. 58.68 lakhs to Rs. 104.45 lakhs.

In consonance with the reduction in gross profit and as a result of the increase from Rs. 11.27 lakhs to Rs. 14.04 lakhs in the provision for depreciation, the remuneration payable to the Secretaries and Treasurers has gone down from Rs. 3.96 lakhs to Rs. 3.23 lakhs. The provision for taxation, however, is less by Rs. 12.50 lakhs at Rs. 23 lakhs. No provision for Super Profits Tax has been found necessary on account of the large capital expenditure incurred during the year and the consequent substantial depreciation and development rebate available for the Company. On making these essential provisions, the resulting net profit is Rs. 27.48 lakhs, as against Rs. 34.61 lakhs a year ago. After adding to it the Rs. 2.21 lakhs withdrawn from past provisions and the amount brought in from the preceding accounting period, the Directors have transferred Rs. 18.09 lakhs (Rs. 21.69 lakhs), to reserves, of which Rs. 8.59 lakhs (Rs. 2.19 lakhs) have been credited to the statutory development rebate reserve. The preference dividend for the year claims, as before, Rs. 1.41 lakh and the unchanged ordinary dividend of 17.5 per cent absorbs Rs. 11.03 lakhs. The carry forward is only Rs. 5,435, as against the Rs. 89,499 brought in.

The working results of the Company for the year under review is set forth in the following comparative table with those for the past three years thrown in juxtaposition for the sake of comparison:

(In lakhs of rupees)

	For the year ended 30th September			
	1963	1962	1961	1960
Sales less excise duty	722.55	630.67	581.54	399.76
Other income	10.24	14.12	15.24	18.11
Closing stocks of finished goods	139.84	114.68	84.87	57.59
Raw materials and stores consumed	411.55	372.60	353.38	225.50
Salaries, wages and benefits ..	176.30	155.67	133.78	97.03
Other expenses	104.35	58.98	50.71	37.67
Gross profit	67.75	85.34	87.19	63.49
Remuneration to Secretaries and Treasurers	3.23	3.96	4.12	4.27
Provision for—				
Depreciation	14.04	11.27	9.57	5.65
Taxation	23.00	35.50	31.75	24.50
Net profit	27.48	34.61	41.75	29.07
Withdrawals from provisions ..	2.21	1.89	6.06	..
Expenses relating to past years.	..	2.28	0.52	..
To reserves	18.09	21.69	34.93	20.24
Dividends—				
Preference	1.41	1.41	1.41	2.34
Ordinary	11.03 (17.5%)	11.03 (17.5%)	11.03 (17.5%)	14.49 (23%)
Carry forward	0.05	0.89	0.81	0.89

Market price of ordinary shares (in rupees) :	1964	1963	1962	1961	1960
High	23.00	23.62	26.05	22.12	22.69
Low	21.56	17.00	19.09	18.37	17.00

Note.—All dividends are subject to deduction of tax. Those for 1960 relate to two years, viz. 1959 and 1960. Dividends for 1959 were declared but not paid.

It will be recalled that the Directors had informed, in their previous report, that the Company had received a licence for the installation of 12,000 spindles and that the preliminary work in this connection was then in hand. They now state that the work connected with the installation of these spindles is proceeding satisfactorily and it is hoped that these spindles will go into production by the end of September this year, that is, towards the close of the current operating year of the Company. Further, a general permission has been given by Government to all cotton textile mills in the country to install additional spindles to the extent of 7½ per cent of their existing total spindleage. Under this scheme, the Company is allowed to install a further 6,500 spindles; preliminary work in connection with this installation has already been taken in hand, besides the implementation of the programme of renovation and modernisation of mills No. 1 and No. 2 as referred to in the previous report. Since the end of the year under review, further commitments of capital expenditure amounting to Rs. 2.20 lakhs have been made. The total estimated liability on contracts remaining to be executed on capital account as at 30th September is Rs. 62.22 lakhs, as against Rs. 66.60 lakhs a year ago.

There has been no change in the paid-up share capital of the Company which stands at Rs. 78.20 lakhs. Of this, Rs. 15.20 lakhs only are in two classes of preference shares of Rs. 160 each and the balance in ordinary shares of Rs. 10 each fully paid. Reserves excluding the amount earmarked for payment of dividend aggregate Rs. 220.98 lakhs, so that the equity per share works out to slightly more than Rs. 45, as against the present market price of Rs. 21.75. Borrowings have expanded very naturally from Rs. 76.25 lakhs to Rs. 147.58 lakhs through current liabilities and provisions (including the provision for dividends) have declined somewhat to Rs. 112.26 lakhs.

The spurt in bank and other loans however, is, fully reflected in the addition of Rs. 44.38 lakhs during the year to the block account which has on that score now risen to Rs. 291.88 lakhs. On deducting therefrom Rs. 179.78 lakhs as the depreciation earned to-date, the net block works out to Rs. 112.10 lakhs, besides capital work-in-progress valued at Rs. 8.20 lakhs. Current assets and loans and advances amount to Rs. 353.26 lakhs and provide a large enough cover for current liabilities and loans put together. Investments are carried in the book at a cost of Rs. 86.46 lakhs. But a major portion of these, or Rs. 61.16 lakhs to be exact, are in shares of Shree Madhav Mills Ltd, a subsidiary which is still in voluntary liquidation. A further Rs. 23.78 lakhs are locked up as investment in Calico Processes Ltd., another subsidiary, the financial position of which too is none too sound.

The present market quotation for the Rs. 10 paid ordinary share of the Company is Rs. 21.75 *cum-div*. The net annual return on *ex-div*. basis works out to a little less than six per cent.

INDIAN INVESTMENT CENTRE'S PROGRESS GOOD

The progress made by the Indian Investment Centre during the three years to 31st December 1963 has been good. It has helped fructify 57 projects, involving a total capital outlay of Rs. 50 crores, for setting up a variety of industrial enterprises in the country in collaboration with foreign firms. Foreign equity participation in these projects is of the order of Rs. 5.50 crores. Fifteen more cases of foreign collaboration have either been submitted to the Government or are likely to be submitted shortly. In addition, 85 proposals are in varying stages of negotiation between Indian and foreign parties.

Of the 57 approved joint ventures, 31 have been from the U.S., eight from the U.K., five from Japan, four from West Germany, three from France, two each from Canada and Belgium, one from Switzerland and one from Poland for setting up a consultancy firm. Thirty-five of these projects involve both technical collaboration and financial participation, while 22 relate to technical collaboration only. They cover a very wide range of industries, from heavy earthmoving machinery, steel forgings, alloy steel and ball bearings to wood working machinery, sanitarywares, poultry equipment and naphthols and bases.

The advisory committee of industrial experts appointed by the Centre submitted two reports last year, one on raw materials for chemical and process industries and the other on machinery and machinery parts, giving valuable information on location and lags in these fields. The reports, now submitted to the Government, have been used by the Centre to draw up a list of industries in chemical and engineering fields which offer fresh investment opportunities to Indian and foreign

STORY OF PHILLIPS PETROLEUM

AS EXCITING AS OIL FIND

THE story of Phillips Petroleum Company, collaborator and 25 per cent partner in the Government-controlled Cochin Refineries Ltd., is as exciting as oil find. This Bartlesville firm in Oklahoma, U.S., started in 1917 as a producer of crude oil and natural gasoline, when holdings of oil and gas leases of two brothers—Frank and L. E. Phillips who had begun purchasing leases in 1903—had expanded to such an extent that it seemed advisable to incorporate them. A Delaware charter issued to the new company listed its assets at $3 million. There were only 27 employees, including all classifications from Frank Phillips, the president, to the "roustabouts." The Company ended 1962 with assets of $1.7 billion, net income of $107 million, and more than 25,000 employees.

The net income of the Company for 1962, however showed a setback of $6.80 million over the year, though gross income had gone up from $1.23 billion to $1.26 billion. Net income per share declined from $3.31 to $3.11. But dividends paid per share increased from $1.70 to $1.85 (the aggregate amount required for this purpose rising from $58.40 million to $63.60 million) and favourably compared with $1.20 paid for 1952, which is the adjusted comparative rate after a two-for-one stock split in 1956. The addition to the earnings employed in the business was $43.35 million to $747.29 million in 1962, as against $55.37 million to $703.94 million in 1961. Inclusive of these earnings, the total capital base stood at $1.21 billion on 31st December 1962, as against $1.16 billion a year before. Capital expenditure during 1962 was $156.30 million and long-term debt at the end of the year (including amount due within one year) was $240.10 million, as against $131.90 million and $260.40 million, respectively, in 1961. Total assets showed an increase of $49 million in 1962. On the operations side, crude oil and natural gas liquids produced—in net barrels daily—improved from 285,000 in 1961 to 298,000 in 1962, and so did crude oil refined from 238,000 to 263,000 and petroleum products sold from 423,000 to 472,000, but natural gas sold or consumed—in cubic feet daily—suffered a setback from 2,843 million to 2,609 million.

Phillips is the leader in at least seven rapidly growing aspects of the oil industry and occupies a unique position in others. It leads the petroleum industry as a producer of natural gas liquids, seller of natural gas, producer-marketer of liquefied petroleum gases, manufacturer of polyolefin plastics and nitrogen fertilisers, supplier of raw materials to the rubber industry and in atomic energy activities. It is ranked near the top among oil companies. Its reserves of crude oil, condensates and natural gas liquids are high in relation to its size. It has probably the most diversified line of products of any oil company, including crude oil, natural gas, natural gasoline, motor fuels, lubricating oils, aviation gasoline, jet fuels, diesel oils, liquefied petroleum gases, synthetic rubber, ammonia, nitrogen fertilisers, furnace carbon black, butadiene, ethylene, benezene, solvents, plastics and materials for synthetic fibres.

This growth of Phillips in 45 years from a small producing company to one of America's most diversified petroleum companies has been attained in three stages, the first up to 1926 which saw expansion of reserves and production, the second up to 1938 when diversification, integration and further expansion occurred, and the third since the War which has seen fast expansion under the leadership of Mr. K. S. Adams.

The success of its engineers and chemists had pushed Phillips into first place as producer of natural gas liquids within seven years of its coming into being. In 1925, a few leases were acquired in the Texas Panhandle, an area which eventually marked one of the great chapters in the Company's advancement. Today, its activities—centred around Phillips, Texas (named after Frank Phillips)—embrace all the four stages of integration in the oil business —production, transportation, manufacturing and marketing. The Alamo refinery, located north of Borger, Texas, was purchased by Phillips in 1927. In 1930, Phillips acquired the assets of the Independent Oil and Gas Company, a merger which added extensive properties strategically located for broadening the Company's position in the industry. The post-war growth rates of natural gas and petrochemicals industries touched off a chain reaction of Phillips projects which not only had to be superimposed upon normal expansion in the more conventional petroleum segment of the Company's business but required much added expansion. In the ten years following the War, Phillips grew faster than any of America's largest oil companies. The growth has followed the Company's many pioneering advancements, with an aggressive research and development programme. The 4,270 active U.S. patents owned by Phillips at the end of 1962 ranked it second in the oil industry and ninth among all American industrial corporations. It also owned 1,993 patents in other countries.

In the 1940's, Phillips began searching for oil and gas in other countries and now has interests in large reserves in Venezuela, Canada and the Middle East. In 1957, it participated in acquisition of new Venezuelan concessions, part of them in Lake Maracaibo, one of the world's most prolific oil producing regions. The Company's net crude and gas liquids production in Venezuela in 1962 averaged 35,900 net barrels daily. It has interests also in large exploration permits in the Algerian Sahara, where four large gas-condensate fields were discovered in 1960 and 1961 and an important oil discovery was made early in 1963. Oil was also found in one of the several extensive concessions in Libya in 1962. Besides, the Company is exploring for oil and gas in British Honduras, Spain and Australia.

The association of Phillips Petroleum with the Cochin Refineries Ltd. marks its entry in the field of oil in India and follows its collaboration with Phillips Carbon Black Ltd. for manufacturing carbon black and relative by-products. Cochin Refineries has an authorised capital of Rs. 15 crores in equity shares of Rs. 100 each. It is issuing a capital of Rs. 700 lakhs, of which Rs. 357 lakhs (51 per cent) will be taken up by the Government of India, Rs. 175 lakhs (25 per cent) by Phillips Petroleum, Rs. 14 lakhs (2 per cent) by Duncan Brothers and Company Ltd., and Rs. 50 lakhs by Kerala Government, Rs. 46 lakhs by the L.I.C.; the balance of Rs. 58 lakhs are now offered to the public. The public issue has not been underwritten, but Phillips has agreed to take up, without charging any commission, any shares that are not subscribed to by the public. Subscription lists will open on Monday the 24th inst. and close on the 27th inst.

The refinery will have an initial capacity of 2.5 million tons, but it is designed to go up to about 3 million tons per annum. It is expected to go on stream in the fall of 1965 and reach full capacity by the end of that year. The entire project is estimated to cost Rs. 22.75 crores.

NEW STANDARD ENGINEERING CO., LTD.

A capital goods licence worth Rs. 41.63 lakhs —the highest value so far for the Company—has been obtained by the New Standard Engineering Company Ltd. for purchasing machinery and equipment for its foundry and machine shop from the Polish firm of Cekop on rupee payment. Seventy per cent of the cost will be paid on a deferred basis, on which interest will be charged at 4.50 per cent per annum. For raising a part of the necessary funds, the Directors have made the first call of Rs. 25 per share, payable before 31st March 1964, on the 25,000 new shares of Rs. 100 each, which were issued as right shares at a premium of Rs. 20 per share in November 1962 and on which Rs. 45 (including the premium of Rs. 20) were paid per share by 31st March 1963.

The first consignment of the new machinery, which included 50-ton cranes and sand reconditioning plants, will arrive next month and the total shipments will be completed during the year. The installation of this machinery will raise the capacity of the Company's new foundry to 30,000 tons of grey iron castings per annum and place the Company among the few manufacturers in the country who make 30-ton single castings.

(Concluded from next column)

of one-for-five. This offer of rights was made on 31st August 1963 for cash at par. With this issue, the total issued and subscribed capital amounts to Rs. 60 lakhs, as against the balance sheet figure of Rs. 49.97 lakhs, which is backed by Rs. 16.12 lakhs in reserves and surplus. Borrowings, including Rs. 79.23 lakhs shown under secured loans, amount to Rs. 82.62 lakhs and, together with current liabilities and provisions, bring the total indebtedness to outsiders to Rs. 117.50 lakhs. As against this, current assets, book debts and investments aggregate Rs. 145.96 lakhs. The gross block, which expanded during the year from Rs. 49.16 lakhs to Rs. 55.92 lakhs, has been written down to Rs. 37.04 lakhs.

Currently, the Rs. 100 fully paid ordinary shares of the Company are quoted at Rs. 118 cum-div. and offer a net yield of 6.3 per cent per annum.

PAPER PRODUCTS' PROFIT LOWER

BUT PROSPECTS BETTER

UNLIKE 1961-62, the year ended 31st July 1963 has proved unexciting for the Paper Products Ltd. (Chairman and Managing Director: Mr. Sardari Lal Talwar, New Delhi). Its net proceeds of sales (that is, excluding freight, discount, rebate, etc.) which had risen by Rs. 37.13 lakhs to Rs. 150.54 lakhs in 1961-62 have edged up by only Rs. 2.53 lakhs to Rs. 153.07 lakhs during the year under review. Gross profit, at Rs. 18.01 lakhs, is actually lower by Rs. 3.83 lakhs over the year. This setback contrasts with the improvement of Rs. 6.18 lakhs registered in the previous year. Taxation has claimed Rs. 8.16 lakhs (including Rs. 1.27 lakh for S.P.T. in respect of the previous year), as against Rs. 9 lakhs a year before, and depreciation has absorbed Rs. 4.32 lakhs, as against Rs. 3.91 lakhs.

Net profit, after these provisions, amounts to Rs. 5.56 lakhs, that is, Rs. 3.37 lakhs lower than in the previous year. Because of this setback in net profit both the amount transferred to reserves and the rate of dividend have been adversely affected. The appropriation to reserves amounts to only Rs. 65,140, as against Rs. 3.70 lakhs a year before. The rate of dividend on the 100-rupee shares has been reduced further from 18 per cent to 10 per cent per annum, subject to tax. Another reason for the cut in the dividend is the fact that the 16,000 new equity shares of Rs. 100 each which had been offered to the public for cash at par in the previous year are eligible for dividend on a *pro rata* basis for almost the whole of the year under review. In view of this, the aggregate amount to be distributed to shareholders by way of dividend has dropped only slightly from Rs. 5.22 lakhs to Rs. 4.90 lakhs.

The Company's progress in 1962-63 is compared in the table below:

(In lakhs of rupees)

	For the year ended 31st July		
	1963	1962	1961
Sales, less freight, discount and rebate	153.07	150.54	113.41

Equity shares' market value (in rupees):	1963	1962	1961
High	126.00	..	..
Low	109.00 XR	..	..

The dislocation in the market caused by the Chinese aggression and delay in deliveries of raw materials from indigenous sources and also in the grant of licences for imported raw materials are the factors, according to the Directors, which hampered the growth in sales during the year. Profit has been affected by increased production costs, without there having been a corresponding increase in sales.

Sales during the current year are said to be experiencing some improvement. The Company has also been making efforts to develop export markets in the Middle East, East Africa and South East Asia. The commissioning into production of the paper mill at Roha (near Bombay) in January last is expected to strengthen the position in regard to the supply of the main raw material which, in turn, is likely to reflect better results. The Government has approved of the Company's scheme for expanding the manufacturing facilities at its Thana plant to cover new lines, such as printing and conversion of cellulose and plastic films, waxed papers and laminates thereof. The capacity envisaged for these items is 6,600 tons per annum. Another proposal from the Company for manufacturing greaseproof and glassine papers in the paper mill at Roha has also been approved by the Government.

During the year, the authorised capital of the Company was doubled to Rs. 1 crore by the creation of another 50,000 equity shares of Rs. 100 each. Since the close of the year, the Company has allotted a further 10,000 equity shares to the existing shareholders on the basis

SYNOPSES OF COMPANY REPORTS

Empire Jute Co., Ltd.

(*Managing Agents*: Messrs. McLeod and Co., Ltd., Calcutta.)

Annual General Meeting—29th February 1964.

Working Results:

	For the year ended 31st July (In thousand rupees)	
	1963	1962
Sales of gunnies and jute caddis	1,78,11	1,61,54
,, loom hours	2	13
Closing stocks	37.15	32.98
Gross profit	20.58	12.07
To Managing Agents' remuneration	1.57	88
Transfer to depreciation	3.87	3.55
,, provision for taxation	9.40*	4.80
Net profit	5.74	2.84
Excess provisions written back	Nil	25
Refund of income-tax	81	Nil
Provision for doubtful debts written back	6	Nil
Appropriations:		
Transfer to development rebate reserve	51	39
,, general reserve	2.50	Nil
Proposed dividends (taxable) preference	91	91
ordinary	2.25 (15%)	1.88 (12½%)
Carry forward	85	40

Market value of ordinary shares (in rupees):	1964	1963	1962
High	16.00	18.25	20.00
Low	10.00	14.00	14.31

* This includes Rs. 1,05,743 for super profits tax.

Extracts from the Directors' report: The Company's Mill continued to work in accordance with the working time agreement of the Indian Jute Mills Association whereby the 5 per cent sealed loomage was discontinued as from 23rd December 1962 and working hours of the registered complement were increased from 48 to 49 per week with effect from 17th June 1963. The actual number of looms in operation varied with purchases of loom hours by the Company and on an average during the year under rev ew 340 looms worked in double shift 96 hours per week. Due to power cuts, working hours had repeatedly to be adjusted but despite this only a total of 7¼ working hours was lost due to sudden load-shedding.

Modernisation of Mill machinery cont'nued and 1 *Finisher Drawing* and 5 *Sacking Weft Sliver Spinning Frames* were installed.

There was an industrial disput'e regarding rationalisation and workload of the Preparatory Department which resulted in favour of the Company o'herwise Labour relations were satisfactory.

With the Pakistan Jute Industry making further inroads into the world's markets and the slackening of foreign demand there has been lower prices for goods and with these factors, together wi'h the implementa'ion of the recommendations of the Jute Wage Board, it is not anticipated that the outlook for the current year will be so satisfactory.

Accounts in brief as at 31st July 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	25,00,000	Gross block	1,21,66,078
5% debentures	8,80,970	—Depreciation	86,25,776
Reserves and surplus	43,06,305		
Other liabilities	65,27,255	Net block	35,41,202
		Block in progress	5,93,000
		Current assets	91,28,014
		Investments	7,26,534
		Cash	2,29,200
	Rs. 1,42,19,050		Rs. 1,42,19,050

* Paid-up capital consists of 10,000—7 per cent. cumulative preference shares of Rs. 100 each and 1,50,000 ordinary shares of Rs. 10 each.

Presidency Jute Mills Co., Ltd.

(*Secretaries and Treasurers*: Messrs. McLeod and Co., Ltd., Calcutta.)

Annual General Meeting—29th February 1964.

Working Results:

	For the year ended 31st July (In thousand rupees)	
	1963	1962
Sales of gunnies manufactured	1,25,50	1,31,60
,, ,, ,, purchased	15,37	6.90
,, ,, jute	3	62
,, ,, loom hours	16	67
Closing stocks	22.30	21.33
Gross profit	10.02	10.03
To Secretaries' and Treasurers' remuneration	59	61
Transfer to depreciation	2.73	2.77
,, provision for taxation	4.70*	3.55
Net profit	3.30	3.99
Excess provisions written back	4	1
Appropriations:		
Transfer to development rebate reserve	4	17
,, general reserve	1.00	1.00
Proposed dividend (taxable) ordinary	2.50 (10%)	2.50 (10%)
Carry forward	17	37

Market value of ordinary shares (in rupees):	1964	1963	1962
High	5 50	5 87	6 56
Low	5.12	4 25	4.65

* Includes Rs. 18,000 in respect of the previous year.

Extracts from the Directors' report: During the year, the hours of work remained constant but the number of looms in operation varied with the purchase of loom hours by the Company and in accordance with the working time agreement of the Indian Jute Mills Association. The 5 per cent sealed loomage was discon'inued on the 23rd December and working hours of the registered complement were increased from 48 to 49 per week with effect from the 17th June 1963. An average of 235 looms worked in doub'e shift 93 hours per week during the year under rev'ew and at the time of writing 284 looms are so working.

Due to power cuts, working hours had repeatedly to be adjusted but despite this only a total of 11 working hours was lost due to sudden load-shedding.

Modernisation of Mill machinery is to continue but during the year only one *Sacking Weft Sliver Spinning Frame* was installed. Orders for a further 3 *Sacking Weft Drawing Frames* and 5 *Sacking Weft Spinning Frames* have been placed with Messrs. James Mackie and Sons Ltd.

Labour relations were satisfactory and a few minor disputes were settled at b.-partite level. The Apprentices Act, 1961 has been imp.emented and amendmen's to several other Acts have given more favourable conditions to certain employees.

Trading conditions were favourable throughout the year but foreign demand has since slackened and the ou'look for the current year is not expected to be so satisfactory especially with lower pr'ces for goods and increases in workers wages by implementing the recommendations of the Jute Wage Board.

Accounts in brief as at 31st July 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	25,00,000	Gross block	1,08,88,905
Reserves and surplus	13,32,057	—Depreciation	84,46,448
Other liabilities	64,53,125		
		Net block	24,42,457
		Current assets	60,16,893
		Investments	0,11,915
		Cash	2,64,512
	Rs. 93,35,782		Rs. 93,35,782

* Paid-up capital consists of 5,00,000 ordinary shares of Rs. 5 each fully paid in cash.

Gwalior Sugar Co., Ltd.

(*Managing Agents*: Sir J. P. Srivastava and Sons (Madhya Bharat) Private Ltd.)

Annual General Meeting—Dabra—29th February 1964.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1963	1962
Sales—sugar	1,14.21	94.70
,, —molasses	25	49
Closing stock	33.52	57.07
Gross profit	4.39	2.22
To Managing Agents' remuneration	50	50
Transfer to depreciation	1.47	1.38
,, provision for taxation	58	33
Net profit	1.34	1
Transfer from dividend equalisation reserve	Nil	91
Appropriations:		
Transfer to development rebate reserve	39	Nil
To additional price payable to cane growers	1.50	Nil
Proposed dividends (taxable) R.C. preference	Nil	52
,, ,, C. preference	Nil	39
,, ,, ordinary	Nil	Nil
Carry forward	5	10

Extracts from the Directors' report: The total quantity of cane crushed during the year was 8,14,734.95 quintals (21,82,871.47 maunds) as against 10,82,134.10 quintals (28,99,288 maunds) in the previous year. Although the availability of cane for crushing, and therefore the ou'put, was considerably reduced as compared to the previous year, the recovery showed a marked improvement from 8.88 per cent of the previous year to 9.62 per cent during the season.

This Company has been actively pursuing the various representations that have been made to the Sta'e Government for adequate rel'ef from Sugarcane Cess/Purchase Tax. The State Government has now taken a more sympathetic view of the Company's case for relief in this behalf and has accorded a remission of Rs. 52,906.14 in the liability for cess for the year 1960-61. The Directors also note with satisfaction that as a result of renewed representations the Government has allowed the Company some time within which to make payments of the cess liability admitted by the Company.

With effect from 17-4-1963 the Central Government fixed a price of Rs. 108.95 nP per quintal for IST grade D. 29 for Madhya Pradesh Sugar Fac'ories. This price was substantially lower than the price of Rs. 112.23 nP per quintal allowed in January 1961 on a voluntary basis, and the higher sell'ng prices realised in the earlier months of the season. It is regretted that despite the industry's representation based on cogent reasons, the Central Government declined to increase the unremunerative price fixed for the production of the year and ignored the increased cost of produc'ion, higher cane transportation charges and the incidence of Cess, obta'ning in the State of Madhya Pradesh. The low price fixed for the sugar sold after 17-4-1963 resulted in a substantially lower rea'isation from sales and has appreciably reduced the profits of the year.

In the accounts of the year under review the loss reflected on sugar delivered for export amount'ed to Rs. 2,79,972.00 against Rs. 4,01,720.00 in the prev.ous year.

The Directors have to report that satisfactory progress has been maintained in the implementation of the scheme for expansion of the factory capacity.

The cultivators' cane crop in the Cane zones of the factory has also suffered very greatly because of failure of rains in 1962 and almost the entire crop has been wiped out. The Company's factory is, therefore, faced with a grave and difficult position in the season 1963-64 and there is little prospect that there will be sufficient quantity of cane available even for minimum crushing to permit factory working during the current year.

Accounts in brief as at 30th June 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	27,08,900	Gross block	51,55,816
Reserves and surplus	13,90,770	—Depreciation	35,39,060
Other liabilities	55,81,438		
		Net block	16,16,756
		Block in progress	7,24,810
		Current assets	54,60,127
		Investments	13,60,000
		Cash	5,70,415
	Rs. 97,41,103		Rs. 97,41,103

* Paid-up capital consists of 15,939 equity shares of Rs. 100 each; 6,750—7 per cent. redeemable cumulative preference shares of Rs. 100 each and 5,000—7 per cent. cumulative preference shares of Rs. 100 each.

South Karanpura Coal Co., Ltd.

(*Secretaries and Treasurers*: Messrs. Bird & Co., (Private) Ltd., Calcutta.

Annual General Meeting—28th February 1964.

Working Results:

	For the year ended 31st August (In thousand rupees)	
	1963	1962
Sales	48.27	42.54
Closing stock	1.11	1.40
Gross profit	5.26	4.08

Market value of ordinary shares (in rupees):	1964	1963	1962
High	8.50	10.12	12.81
Low	8.50	6.87	8.31

Extracts from the Directors' report: Raising and Despatches: 218,160 tonnes of coal were raised and 220,693 tonnes despatched compared with 208,133 tonnes raised and 206,787 tonnes despatched during the previous year.

Transport: The improvement in transport briefly reported last year, has been maintained throughout the year as a result of which pit head stocks were considerably reduced.

World Bank: Ninety per cent of the equipment ordered from overseas against the World Bank Loan, has been received. The balance should arrive during the next two to three months.

Accounts in brief as at 31st August 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	17,50,000	Gross block	57,60,323
Reserves and surplus	11,80,057	—Depreciation	25,84,592

		Block in progress	25,040
		Current assets	23,67 357
		Investments	32,220
		Cash	4,514
	Rs. 56,07,802		Rs. 56,07,802

* Paid-up capital consists of 1,75,000 ordinary shares of Rs. 10 each.

COMPANY AFFAIRS

(Concluded from page 295)

entrepreneurs. The list is under the Government's consideration. The Centre has also initiated two industrial surveys, one on machine tools in co-operation with the National Council of Applied Economic Research and the other on process control and mechanical measuring instruments in co-operation with the technical wing of the National Industrial Development Corporation. Both these surveys are likely to be completed by April next. These surveys will determine the specific items which need to be produced in the country as early as possible. More surveys on these lines are expected to be initiated this year.

Publicity and information have not been neglected by the Centre. It has published by now six industrial fact sheets on high priority industries, namely, steel castings, steel forgings, ball bearings, HT and LT insulators, industrial furnaces and printing machinery, and has some more of them under preparation. Its *Monthly Newsletter*, delayed because of the emergency, has started appearing from this year. Its New York office has been doing some good publicity and considerable spadework has been done for promoting greater participation by American interests in India's industrial development.

One of the outstanding activities of the Centre is to hold seminars. These are attended by a large number of American businessmen who pay $120-125 each to find out for themselves facts and figures about the Indian economy from top executives of American firms which already have collaboration arrangements with entrepreneurs in this country as well as from some leading Indian spokesmen who address the seminars. The question of opening an office in Europe has been considered by the Centre for quite some time. Some definite progress in that direction was made last year after its technical adviser, Mr. J. P. Bourdrez, visited the Continent. He has favoured Brussels as the ideal place for a European office because of its being the "capital" of the E.E.C. In the alternative, he has recommended that two offices may be opened, one at Frankfurt and the other at Paris. The matter has been taken up with the Government.

FINAL CALL NOTICE

THE BOARD OF DIRECTORS IN THEIR meeting held on 24th January, 1964 have decided to call the balance sum of Rs. 2 per share on 5,60,000 Equity Right shares of Rs. 10 each allotted on 27th January, 1962 thus making the shares fully paid up with effect from 1st May, 1964. Notices to shareholders are under despatch. The amount is payable upto 30th April, 1964, either by a Demand Draft or cheque drawn on a Delhi or New Delhi bank or by Money Order to the Company's Bankers, the National and Grindlays Bank Limited, H-Block, Connaught Circus, New Delhi. **No amount is to be sent to the Company direct.** Interest at the rate of 9 per cent per annum shall be chargeable with effect from 1st May, 1964 on all amounts remaining unpaid in terms of this call till the date of actual payment.

By Order of the Board,

P. L. JAITLY,
Secretary.

February 10, 1964.

NEWS IN BRIEF

THE Annual General Meeting of the Indian Jute Mills Association will be held at Calcutta on 20th March, next.

The State-owned Shipping Corporation of India has placed orders for the construction of four 13,400-ton coal carriers with a Yugoslav shipyard.

As many as 1,758 engineering graduates were seeking work through employment exchanges at the end of December last.

The Mahalanobis Committee on the distribution of National income is expected to be placed before Parliament during the current session. The Committee will be submitting its report before the end of this month.

In a bid to stimulate exports of lemongrass oil, of which stocks are accumulating, the Union Government has decided to do away with the system of fixing statutory floor prices for the export.

A two-member delegation sponsored by the Marine Products Export Promotion Council left for Burma, Hong Kong and Singapore on a two-week tour, to explore the possibilities of boosting exports of Indian dried prawns and fish.

The Central Government has sent copies of the Bonus Commission's report to all State Governments, according to Mr. R. K. Malaviya, Union Deputy Minister for Labour and Employment. A decision would be taken on the report only after receiving the views of these Governments.

The existing mechanised cargo handling facilities in the major ports such as fork lifts, tractors, mobile cranes and jitney motors, are being augmented according to requirements. The possibilities of providing modernised bulk handling equipment at different ports are also under the active consideration of the Government of India.

During the calendar year 1963, India imported from Russia goods worth Rs. 58.16 crores and exported to it goods valued at Rs. 48.57 crores. The main items of imports were equipments of power, elecricity, construction earth-moving, drilling and geological prospecting and machine tools.

It is reported that the Government of India has asked the Tariff Commission to enquire into indigenous synthetic rubber prices, following a representation from the Indian Rubber Industries Association regarding the high prices of SR. The current prices per kg. are Rs. 4.05 for S.B.R. and Rs. 3.75 for oil-extended S.B.R.

The Union Ministry of Petroleum and Chemicals has proposed the name of Dr. V. K. R.V. Rao, a member of the Planning Commission, to mediate in the dispute between the Oil and Natural Gas Commission and the Gujarat Government. The Gujarat Government has agreed to his being the arbitrator.

The Central Government is understood to have decided to appoint a second wage board for the textile industry. It is said that the Union Labour Ministry has already selected the Chairman and other preliminaries such as composition of the Board and terms of reference are being finalised.

A Corporation with an initial capital of Rs. 5 crores to take a sizable share of all new steel work construction in the public sector, is being formed. It will support the available contract ability in the country, reduce construction costs and conserve skills in the specialised fields of steel work construction.

The Public sector Barauni refinery is expected to go into production by April or May next, according to Prof. Humayun Kabir, Union Minister for Petroleum and Chemicals. Of the total production target of 30 million tons, 20 to 22 million tons of oil are to be produced in the public sector refineries. At present, public sector produces only one million tons of oil and the contribution of private sector is eight million tons.

The Minerals and Metals Trading Corporation has concluded agreements with the Governments of Czechoslovakia and East Germany for the sale of 30,000 tons of iron ore valued at Rs. 8.31 lakhs and 10,000 tons valued at Rs. 4.86 lakhs, respectively. The Corporation also signed a contract for the sale of 170,000 tons of iron ore to Rumania.

The Sub-committee appointed to go into the question of high production cost in Kolar Gold Mines has recommended the amalgamation of two of the three mines and Centralisation of purchases, certain workshop, civil engineering and sanitary services. It has also recommended a voluntary retirement scheme with normal retirement benefits, alternative employment near about the Kolar Gold Fields to as many workers as possible and phased retrenchment of the remaining surplus workmen.

The National Live Stock Committee is being dissolved, following the decision of the Union Government to entrust the functions relating to the organisation of All-India and Regional Cattle shows to the Indian Council of Agricultural Research, and to transfer to the State Directorates of Animal Husbandry functions relating to the purchase of livestock for export to foreign countries. The entire staff as well as the entire assets and liabilities of the aforesaid committee will be taken over by the I.C.A.R.

The overall demand in the country for scooters, motor vehicles, three-wheelers and mopeds is estimated at 60,000 per annum by 1965-66. Production of these vehicles has been steadily going up in recent years—it came to 26,579 units in 1963, as compared with 25,040 in 1962. According to the Union Minister for Steel, Mines and Heavy Engineering, between 35,000 and 40,000 vehicles in this category are expected to be produced in 1964.

A foreign exchange credit of Rs. 14 crores has been sanctioned by the Union Government for the proposed Rs. 33-crore fertiliser and chemical complex of the Gujarat State Fertiliser Company. The credit is expected to be made available from out of the Japanese and French loan commitments under the Aid India consortium. The Company is expected to enter the capital market towards the end of April next to raise Rs. 15 crores (Rs. 12 crores in equity and Rs. 3 crores in preference capital). The State Government will be a minority partner with a contribution of Rs. 7.35 crores. The State Government and the directors have already subscribed Rs. 2 crores.

A new series of Rs. 1,000 and Rs. 5 Reserve Bank of India notes will be issued shortly. While the design will remain unchanged, the new notes will bear the signature of the present Governor, Mr. P. C. Bhattacharyya and also the authentic renderings of the value in 14 Indian languages on the reverse. Some minor changes have also been incorporated on the reverse. Except for these changes, the new notes will, in all other respects, be similar to the existing ones. Notes with the emblem of Asoka Pillar and bearing the signature of Mr. H. V. R. Iengar or Mr. B. Rama Rau will continue to be legal tender.

The production of sugar in the current season upto 7th February 1964 was 15.27 lakh tonnes, as against 13.23 lakh tonnes, 12.13 lakh tonnes and 13.86 lakh tonnes, in the corresponding periods of 1962-63, 1961-62 and 1960-61, respectively. This information was given in the Rajya Sabha on Monday this week by the Union Minister for Food, Mr. A. M. Thomas. Regarding the expectation of sugar output during the current season, Mr. Thomas said that the season was still on and it was difficult to give at this stage any precise estimate of production during the whole of the season. There was no proposal, he stated, to increase the minimum price of cane.

The discovery of gas in the second test well at Bogapani and the selection of a site for a third test well near Namrup in Upper Assam are the highlights of the exploratory drilling undertaken by Oil India Limited under a Rs. 2-crore programme which will continue throughout 1964 and 1965 in its exploration licence areas in Dum Duma, upper Assam and Ningru, N.E.F.A. The first test well at Tinali, however, has been abandoned as a dry ho'e. Oil India plans to drill at least four more test wells in 1964-65 in these areas. Seismic surveys, which were resumed in September 1963 after the monsoon, have already covered most of the Dum Duma area and the party will be moving soon into the Ningru concession in N.E.F.A.

The Posts and Telegraphs Department has formulated a new scheme, extending the payment of overtime allowance to several additional categories of employees. The new scheme, which will come into force from the 1st of next month, provides for the grant of overtime allowance to staff in post offices, mail-motor organisation, call-duty staff in the engineering branch like sub-inspectors, line-men etc., supervisory staff other than gazette officers and staff in divisional and administrative offices who were hitherto not entitled to such allowance. As a result of the introduction of the new rules, more than 100,000 employees will become eligible for overtime allowance. For working on Sundays, weekly off-days and holidays, overtime at higher rates has been provided for. The overtime rate for postmen for working on holidays will be doubled from Re. 1 to Rs. 2. The new rules provide that the maximum limit of overtime in any employee's case in a month should not normally exceed 70 hours.

• • • •

From Abroad

A Pakistan Trade delegation is to leave for Malaysia shortly to explore the possibilities of selling Pakistan cotton and setting up a jute mill in Malaysia.

The number of working days lost in Switzerland as a result of strikes in 1963 was 70,700 as against only 1,386 in 1962. This is the highest figure since 1947. It is also stated that in no year since 1954 have losses of man-days amounted to much more than 2,000 days.

The Indonesian People's Industry Ministry has assumed control over the Anglo-Dutch Unilever Company, following the bid of the Communist-dominated workers' Association to take over the Company last month. Most British and semi-British estate holdings in Indonesia are also now under a degree of Government supervision.

The Thyssen-Huette, one of the big steel companies in West Germany, has now acquired majority interest in the Phoenix Rheinrohr, its sister steel concern. With this acquisition, the Company has now become the largest steel unit in Germany and one of the biggest in Europe. Now the two companies will have a production programme covering almost the full range of rolled products.

The Toyo Rayon Company of Japan and the B.X. Plastics of Britain have concluded an agreement under which the British firm will provide technical 'know-how' and build a £1.58-million polystyrene plant at Iwakuni in Western Japan. The plant will have a production capacity of about 17,000 tons of polystyrene per annum. It is expected to be completed by March 1965. The engineering work for the plant will be carried out by the Power Gas Corporation.

The Bank of England is contemplating to split its Central Banking Information Department into two separate departments with effect from the beginning of next month. One of them, called the Overseas Department, will look after overseas matters and exchange control, while the other, called the Economic Intelligence Department, will deal with the Bank's economic services, including the preparation of the *Quarterly Bulletin*.

Oil companies operating in Sahara will not be allowed to transfer cash from Algeria without prior approval, according to Mr. Bachir Boumaza, Algerian Minister for Economic Affairs. Negotiations on the issue are going ahead with the Government of France, which is the majority shareholder in most of the oil companies. Last year, legislation was passed restricting all cash transfers to France, but it has not yet been applied to oil companies.

The construction work of Canada's heavy water plant at Glace Bay in Nova Scotia is expected to start on 1st July next and production by 1st July 1966. An agreement covering the project has been reached between the Deuterium of Canada and the Crown-owned Atomic Energy of Canada. The capacity of the plant is put at 200 tons per annum. Much of the initial financing of the plant estimated to cost about $30 million will be provided by the Nova Scotia Government-owned Industrial Estates.

Kenya has become a member of the International Monetary Fund, the World Bank, the International Finance Corporation and the International Development Association. Kenya's quota in the Fund is placed at $25 million, its subscription to the capital stock of the World Bank is 333 shares with a total par value of $33.3 million, its subscription to the capital stock of I.F.C. is $184,000; and its subscription to the resources of the I.D.A. is $1.68 million.

A comparison of per-hour costs of industrial labour in the Common Market nations (including wages, employer's contribution to social security and other compulsory or voluntary social benefits) shows that, inspite of steep rises in wages in France and Italy last year, costs remain highest in West Germany. The actual cost per worker-hour in 1963 (in DM) was 5.10 in West Germany, 4.50 in France, 4.20 in Belgium, 4.00 in Italy and 3.65 in the Netherlands.

Foreign exchange earnings from tourism in Norway, not including transportation income, will probably total £25.3 million, marking an actual increase of £3.7 million over the previous year. As the annual increase in the period 1957-62 averaged £1.88 million, tourist income has thus been doubled in six years. Foreign visitors also spend a lot of money on travel in Norway. According to the Travel Association estimates this transportation income rose to £4.9 million last year. On the basis of official figures income from tourism should be close to £30.25 million. Adding non-classified foreign exchange earnings, which in large measure are connected with travel, last year's total tourist income was nearly £35 million.

A co-operative fund of solidarity has been set up in Prague at the Central Council of Co-operatives with the objective of helping to consolidate co-operation with co-operatives in the developing countries. The new office will subsist on voluntary contributions by Czechoslovak co-operatives. Among its activities will be the publication of foreign-language literature, organisation of seminars, schooling, etc. It will also provide for ten three-and-a-half year scholarships in Czechoslovakia for students of Algeria, Mali, Morocco, Tunisia and Cambodia. During the year 1963, Czechoslovak co-operatives sponsored visits by 217 persons of the emerging countries. Nearly 100 studied the organisation and activities of co-operatives for three to six months periods, 30 attended an international seminar on co-operative planning and 15 scholarship-holders are studying at colleges and vocational schools in the country.

PERSONAL

MR. Maneck Dalal, Regional Manager for Air-India in Britain, has been elected Chairman of the Foreign Airlines' Committee.

Dr. Guenter Drath of Krupp-Industriebau, Essen, has assumed charge as the General Superintendent of the Rourkela Steelworks.

Mr. S. K. Handoo has been appointed Chairman of the Board of Directors of the General Electric Company of India Private Ltd.

Mr. C. R. Kamani of Kamani Metallic Oxides Ltd. and Mr. S. S. K. Gosh have been elected President and Vice-President, respectively, of the Indian Zinc Oxides Manufacturers' Association for the year 1963-64.

Mr. John B. Hanna has taken over charge as the Managing Director of Esso Standard Refining Company of India, Ltd., vice Mr. Jesse C. Howard who has been appointed President of the P.T. Stanvac, Indonesia.

Mr. H. T. Parekh, General Manager of the Industrial Credit and Investment Corporation of India Ltd., has left for Caracas (Venezuela) to attend the first International Meeting of Financial Institutions for Development which began on the 17th inst. under the auspices of the Corporation Venezolana de Fomento.

TREND OF MARKETS

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, 19th *February*

That the short-term money market continues to rule stringent is not surprising at all. With the busy season in full swing, there is persistent pressure of demand for credit from industry and trade. But the supply of floating funds is rather tight. And so the borrowers in the inter-bank section are finding it difficult to obtain their requirements except by paying high interest charges. The inter-bank call rate for both renewals and fresh money, as a consequence, continues to be maintained at the peak level of 6 per cent. Conditions at Calcutta are also equally stringent, the call rate standing throughout at the same level.

The rate of interest for short-term deposits, however, remain unchanged at the ceilings prescribed under the inter-bank agreement. There is no move among banks to alter them. For purposes of ready reference, the ceilings are quoted below:

(*a*) Category I (banks with deposits above Rs. 50 crores and exchange banks): 3 to 30 days (inclusive) 3 per cent, 31 to 60 days (inclusive) 3½ per cent, 61 to 90 days (inclusive) 3¾ per cent, 91 days and over but less than 12 months 3¾ per cent, 12 months 4 per cent.

(*b*) Category II (banks with deposits of more than Rs. 10 crores but upto and including Rs. 50 crores): ¼ per cent higher than the rates for Category I.

(*c*) Category III (banks with deposits of more than Rs. 10 crores but upto and including Rs. 25 crores): ¼ per cent higher than the rates for Category I.

Thanks to the prevailing tight money conditions, the 91-day Government of India Treasury Bills continued to evoke limited support, apparently from special sources. The total amount offered against tenders for Rs. 2 crores, which were opened on Tuesday the 18th inst., was just Rs. 2 lakhs higher. The amount accepted, however, was only Rs. 2 crores, the average rate of accepted tenders being unchanged at Rs. 2.340 per cent per annum. The Intermediate Treasury Bills, too, elicited only small enquiries. The amount of tenders actually sold from the 12th to the 14th inst. was no more than Rs. 99.75 lakhs which was, of course, higher than the Rs. 70 lakhs fetched in the previous week.

India's foreign assets improved by a further Rs. 1.82 crore to Rs. 123.35 crores during the week ended 14th February. The improvement was entirely in balances held abroad which amounted to Rs. 20.89 crores. The foreign securities held in the Issue Department of the Reserve Bank were unchanged at Rs. 102.46 crores. Loans and advances to scheduled banks went up by Rs. 13.09 crores to Rs. 62.22 crores, including Rs. 23.93 crores (+Rs. 4.34 crores) given against usance bills. Deposits of scheduled banks showed a small fall of Rs. 22 lakhs to Rs. 83.31 crores. Notes in circulation increased by Rs. 9.29 crores to Rs. 2,451.19 crores.

A further increase of Rs. 23.69 crores to Rs. 1,712.49 crores in the total credit made available by scheduled banks to their clients was recorded in the week ended 7th February. Since, at the same time, their deposits fell by Rs. 13.11 crores to Rs. 2,428.13 crores, the banks were compelled to approach the Reserve Bank for accommodation. Their actual borrowings spurted by Rs. 11.32 crores to Rs. 47.17 crores. More than half of this increase was accounted for by borrowings against usance bills, the total outstandings of which as on 7th February stood at Rs. 20.43 crores, as against Rs. 13.63 crores a week before. The banks were also compelled to sell a part of their investments which declined by Rs. 27.43 crores to Rs. 656.11 crores.

The Gilt-edged market continued to rule dull and quiet. Due to tight money conditions, institutional support was at a low ebb. Business put through was, therefore, restricted with values of both Central and State loans moving narrowly. An idea of the poor interest evinced in the market can be had from the following quotations for a few select Central Government loans:

	Latest available	*A month ago*	*End-December 1963*
	Rs.	Rs.	Rs.
3 % 1986	63.40	65.60	65.65
2¾ % 1976	83.50	83.50	83.50
3 % 1970-75	90.25	90.05	90.20
3½ % 1968	98.10	98.10	98.10
3 % 1964	99.55	99.50	99.50
6½ % 1977 Gold Bonds ...	118.00	118.00	118.00

In the foreign exchange market, the banks' selling rate for U.S. dollars advanced by 25 nP to Rs. 478.75 per $100. Their buying rate also rose by a similar amount to Rs. 475.25. In New York, the pound sterling weakened *vis-a-vis* the dollar, the spot rate receding by 0.170 cent to 279.610-279.650 cents and the three months' forward by 0.160 cent to 279.330-279.370 cents.

SILVER RECOVERS

(From Our Own Correspondent)

BOMBAY, 19th *February*

On reports that silver prices had hit a new all-time peak on the London metal market on Monday the 17th inst., spot silver in the local market staged a swift recovery during the week under review. It recovered almost the whole of the Rs. 14.50 which it had lost in the past two weeks or so after touching a new all-time peak of Rs. 269 on 30th January. It opened quiet at Rs. 254.50 and, after spurting to Rs. 263 on Saturday the 15th inst., it rose smartly to Rs. 268.50 by yesterday and closed the week 13 points higher at Rs. 268. The improvement was caused by the withdrawal of supplies later in the week when the daily average arrivals amounted to 12 bars as against 20 bars earlier. The offtake was, however, unchanged at 15 bars.

Gold maintained a steady tone. The fourteen-carat variety was well held till Monday around the last week's closing level of Rs. 66.25, but later it eased slightly to close at Rs. 64.50. Pure gold was unofficially unchanged at Rs. 109, while sovereign moved up from Rs. 85 to Rs. 86.

Both spot and forward silver rose by one-eighth of a penny to 111¼d. and 111¾d. an ounce, respectively, on the London market on Monday, but today they shed this gain to close unchanged over the week at 111⅜d. and 111½d. The rise in prices was caused by a time-lag in getting supplies from New York and was, therefore, not expected to be maintained. New York spot silver showed no change. Ready gold, in London, moved up from 250s. 8¾d. to 250s. 10d. The dollar price for gold was $35.07⅛, as against $35.07⅞ last week.

The following table shows the trend of prices during the week under review:

	19-2-1964 (closing)	High	Low	12-2-1964 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (996 fine) ..	268.00	268.50	254.50	255.00
GOLD				
Ready (14 carat) ..	64.50	66.50	64.50	66.25
Sovereign ..	85.00*	—	—	85.00*
London—				
Gold ..	250s. 10d.	250s. 10d.	250s. 8¾d.	250s. 8¾d.
Silver Ready ..	111¼d.	111¾d.	111⅛d.	111¼d.
Silver Forward ..	111⅛d.	111¾d.	111⅛d.	111¼d.
New York—				
Silver ..	129.3 cents	—	—	129.3 cents

*As on 24-6-1963.

N.B.—The quotation for gold is per 10 grams (about 0.35 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce.

COTTON REACTS

(From Our Own Correspondent)

BOMBAY, 19th *February*

Cotton futures developed a reactionary trend this week on selling induced by fears of sizable tenders in the maturing March contract. The tendering differences, fixed by the special committee of the E.I.C.A. on Friday the 14th inst., were at the ceiling rates (in view of the spot prices being generally around the ceilings) for all cottons, except Laxmi A, Gaorani, Cambodia C and RG Punjab American 216F in the case of which they were considerably below such rates. Scope for tenders was seen in these four varieties, especially in Laxmi, in view of the fact that its arrivals had just started. Tendering differences apart, sentiment was also influenced by the steady withdrawal of mill buying in the spot market and the resultant (and also because of the Textile Commissioner's requisitioning of cotton) fall in spot prices. The easiness in the spot section was more pronounced in Digvijay and Kalyan which had led the rise in prices following keen buying support from mills. The statement by the former Finance Minister, Mr. Morarji Desai, at Ahmedabad on Monday the 17th inst. that the Central Government had under consideration "necessary changes" in the cotton policy failed to quieten apprehensions that some more drastic measures were in the offing to bring down cotton prices. The proximity of the budget also affected the sentiment, as with it revived the talk of finding ways to arrest the effect of black money on soaring commodity prices. In the light of all this, the principal bull operator in the March contract at last came out to liquidate a part of his holdings, which induced some others to go short in both March and May deliveries. From its last week's unofficial quotation of Rs. 787, the March contract was sold down to Rs. 771 yesterday.

The trend during the week under review is indicated below:

(In rupees per three quintals)

	12-2-64	*High*	*Low*	19-2-64
Jarilla March ...	782.25	783.00	771.00	777.50
Jarilla May ...	769.00	770.25	756.50	760.00

There was not much activity in the Sewri spot market during the week. Mills limited their purchases to L 147, Co2, 197/3 and Kalyan. Stray business was reported in African and Sudan cottons. Spinner interest was seen also in American cotton, but any bulk deal was not reported. The following are the spot prices—in rupees per candy of 784 lbs.—of some of the varieties:

Amravati L 147 1,255, Nagar Co2 1,765 to 1,751, Manavadar hybrid 2 250 f.o.r. Coimbatore, Bodeli 1,201 and Nandgaon 1.051.

ART SILK YARNS EASY

(From Our Own Correspondent)

BOMBAY, 19th *February*

Art silk yarns ruled easy during the week under review, despite fears of reduced arrivals as a result of lower output in one of the popular mills due to labour troubles. For there were reports that stocks in consuming centres continued to be quite large. Imported yarns were firm, owing to good demand. Staple fibre yarns, however, tended to look up, thanks to reduced supplies and good offtake. Cotton yarns were also easy on bearish advices from the cotton market following resistance from consumers many of whom were said to have postponed purchases in expectation of a cut in excise duty.

The Government of India has still not made up its mind on the issue of withdrawing the concessional rate at which the manufacturer-exporters of art silk fabrics are getting art silk yarn supplies from spinners. The weaving interests, it is reported, have made a strong representation urging the authorities not to concede the spinners' plea for withdrawal. If, however, the plea were conceded, the Government should, it is pointed out, either ask the spinners to give a cash subsidy or to raise the incentive entitlement under the export promotion scheme in order to compensate shippers for the loss resulting from the withdrawal of the concessional rate. These proposals have been firmly opposed by spinners. The Government seems to prefer a solution mutually agreed upon between the spinners and weavers.

Traders in yarn have noted the reported recommendation of the Tariff Commission for fixing the dealers' margin at 1½ per cent plus expenses. This margin is considered to be meagre, for the normal trade channels operate through four stages before reaching consumers. The Yarn Merchants Association and Exchange has sent a communication to the Union Minister for Industries urging him to fix the margin at a much higher level than that suggested by the Tariff Commission.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	19-2-1964	12-2-1964
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	11.66	11.66
Century 75D	18.25	18.25
S. I. Viscose T 150D	12.91	12.91
Staple fibre yarn (40×2)—		
Kohinoor (per kg.)	9.46	9.35
Century	9.37	9.35
Cotton yarn (per bundle of 10 lbs.)—		
10s Navsari	19.37	19.37
20s Podar	24.25	24.50
32s Madura	32.00	32.00
40s Ely		37.50
60s Finlay	76.25	76.25
80s Gossk	83.00	83.00

KIPS FEATURELESS

(From Our Own Correspondent)

MADRAS, 17th *February*

Trading in E.I. kips remained dull this week due to *Ramzan* holidays. Arrivals of tanned cow hides were moderate and the clearance was restricted. Cow calf and buff calf ruled quiet. In the tanned skins section, superfine goat skins ruled a shade easy whereas sheep all classes advanced further.

CASTOR MOVES DOWN

(From Our Own Correspondent)

BOMBAY, 19th *February*

Oilseeds and oils recorded all round gains on persistent bull support early in the week under review, but drifted downward in the later sessions owing to profit-taking at higher levels and stale bull liquidation. Over the week, prices were higher except in the case of castorseeds, the prices of which were well below these prevailing a week ago. The marked setback in castorseeds followed nervous selling pressure on reports of large new crop arrivals from Andhra Pradesh—the average rate of arrivals from Nizamabad alone was said to be 4,000-5,000 bags per day—and expectations regarding early arrivals from Gujarat. Lack of encouraging export enquiry for castor oil also affected the sentiment. The groundnut section ruled steady, with prices tending to look up. There were no special developments worth noting. Demand from crushers and *Vanaspati* manufacturers was well maintained. Linseed futures began the week firm on higher advises from the mustard seeds markets in North India, but the firmness gave way to a distinctly easy trend in the subsequent session. The easiness was due to reports that the Punjab Government was proposing to take action to curb rise in prices of rape seeds, easier advices from Delhi and expectation of new crop arrivals within a fortnight. Spot linseed and linseed oil, however, met with good buying support and scored handsome gains, following the reported extensive damage to the sarsom crop during the recent cold wave. In sympathy with the general trend cotton seeds moved up and touched a new high level today.

It is reported that the question of commencing forward trading in groundnut July and September contracts is now being actively considered by the Forwards Markets Commission. The actual date of commencement of trading is, however, not known. Nor is there any indication at what levels would the ceilings be fixed. Trade circles are inclined to feel that the ceiling rate should be fixed at Rs. 275, in view of the distinct firmness of the spot market and the prevailing inflationary trends.

The Groundnut April 1964 contract opened the week firm at Rs. 238.37, as against the previous close of Rs. 238.12, and after declining to Rs. 237.50 on Friday the 14th inst., recovered subsequently and closed at Rs. 238.12 today. Bold Nizam spurted by 37 nP to Rs. 49.87. Khandesh quality gained 13 nP to Rs. 50.75. Oil ex-mill picked up 25 nP to Rs. 20. Railway-receipt put on 20 nP to Rs. 19.75.

The castorseed March 1964 contract was marked down from Rs. 175.87 to Rs. 172.62. The June Contract fell by Rs. 4.25 to Rs. 173. Ready Madras lost 44 nP to Rs. 34.56. Kanpur dropped 25 nP to Rs. 33.62. Oil B.S.S. was neglected at Rs. 15.10. Oil commercial, however, hardened by 10 nP to Rs. 14.45 on special support.

In the Linseed section, March 1964 contract sagged by 25 nP to Rs. 40.25 over the week. June 1964 contract shed 38 nP to Rs. 39.87. Oil ready, however, strengthened by 50 nP to Rs. 16.35.

The cottonseed April 1964 contract opened the week at Rs. 105.50 but lost a rupee on the very next day, that is, Thursday. It, however,

improved thereafter to close at Rs. 106, today, thus wiping off the earlier loss.

The following table shows the closing prices of oilseeds and oils on Wednesday 19th February as compared with those of two previous weeks:

	19-2-1964	12-2-1964	5-2-1964
	Rs.	Rs.	Rs.
Groundnuts			
January 1964 contract	—	—	236 00
April 1964 contract	238 12	238 12	236 25
Nizam bold	49 87	49 50	48 50
Khandesh quality	50 75	50 62	49 25
Oil ex-mill	20 00	19 75	19 00
Oil Rly. Receipts	19.75	19.55	18.80
Castorseed			
March 1964 contract	172 62	176 00	174 62
June 1964 contract	173 00	177 25	174 75
Ready Madras	34 56	35 00	34 62
Ready Kanpur	33 62	33 87	33.50
Oil B.S.S.	15 10	15 10	14.80
Oil commercial	14.45	14.35	14.20
Linseed			
March 1964 contract	40 25	40 50	38.44
June 1964 contract	40 62	41 00	39.06
Bold ready	39 87	38 50	37.50
Linseed oil	16.35	15.85	15.50
Cottonseed			
April 1964 contract	106.00	105.00	102.00

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

MEDIUM TEA DEARER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *13th February*

A total of 533,000 kgs. was offered in tea sale No. 6 held here on 11th inst. Quality generally showed a further improvement and there was a useful selection of highgrowns on offer. The market met with fair general demand at irregular rates. Low medium and medium brokens evoked fair enquiry and were about steady, while similar fannings were often inclined easier. Good mediums elicited keen competition and the majority of these were sold at dearer rates with buyers following quality. A few best lines of highgrowns were sold well, while others were irregular. Clean black leaf brokens were about steady, but Middle East type fannings received less support than last week and came to a lower market. Whole leaf grades were often dearer, whereas teas of unorthodox manufacture were generally lower. A slightly larger quantity of tippy teas of offer met with fair support.

The quotations (per kg.) were:

	1964 Rs.	1963 Rs.
Low mediums	4.55-5.00	4.20-4.65
Mediums	5.10-5.50	4.70-5.00
Good mediums	5.30-6.30	5.10-6.00
Nilgiri B.O.P.	5.70-9.80	5.75-13.40

The average price realised in sale No. 6 was Rs. 5.20 per kilo, as against Rs. 5.08 a week ago and Rs. 5.03 in the corresponding sale last year.

In dust sale No. 6 held today, 187,000 kgs. came under the hammer. The market again met with strong general demand. The few highgrowns on offer were sold at fully firm to dearer rates. All medium descriptions were sold readily, particularly the brighter kinds which tended slightly dearer. Residuals were stronger than in previous week's sale and generally realised firm prices. Unorthodox types were a strong feature of the sale and sold well.

The average price realised in dust sale No. 6 was Rs. 4.64 per kilo, as against Rs. 4.60 a week ago and Rs. 4.23 in the corresponding sale last year.

Colombo: Just under 6 million lbs. were offered this week. There was strong and active demand with the Russian buyer operating. As a result, medium and highgrown brokens were considerably dearer. Low medium and low grown descriptions also shared in the general rise in price. Fannings were dearer following improving quality.

London: *North Indian and other growths*: Demand was restricted in Monday's sale and Assam C.T.C. teas were up to 4d. easier, following the seasonal decline in quality. Orthodox teas, however, held their value. The poorer dooars sorts also followed a lower trend.

Ceylon and South Indians: A total quantity of 24,072 packages was offered in Tuesday's sale, of which 6,294 packages were from South India. The market met with fair general demand. South Indians were firm, but Ceylons inclined easier.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire us as follows:

"*Sale No. 7*: 453,000 kgs. offered. Good demand, low medium and medium brokens tending dearer. Similar fannings easier. Good mediums stronger and dearer. Highgrowns dearer with quality. Unorthodox barely steady."

LESS DEMAND FOR TEA

(*From Our Own Correspondent*)

CALCUTTA, *18th February*

Less demand was again a feature of trading at the tea export sales held here yesterday. Weak conditions were also in evidence in the dusts sales held last week. The shortage of shed berths and lighters meant difficulty for shippers. It being the tag-end of the season, tea shipments have already fallen. Until the new crop starts arriving, tea will be a poor space finder in loaders. Overseas demand in the early sales of the new season is expected to be less active than usual because the importing countries are believed to have built substantial stocks which can make them indifferent to early sales. Tea stocks in the U.K. rose to 169.78 million lbs. in the week ended 7th February from 163.73 million lbs. in the previous week. In the sales held at Mincing Lane last week, C.T.C. Assams were a strong feature and its price rose by 2*d.* a lb.

The trade has enthusiastically noted reports stating that the Tea Board's promotional organisation at Brussels has been vigorously active since October last and has adopted several novel methods to popularise Indian tea among Europeans. Hot tea has been freely served at airports, playing grounds and petrol-filling stations. Although it takes time for those accustomed to other drinks to change their habits and take to tea, the trade here would urge the early development of selling organisations in the European Common Market countries. In the early period of such organisations, only development work can take place. It is necessary that the Government should give due importance to this aspect and sanction the necessary foreign exchange to such trade organisations as would like to develop trading centres in the E.C.M.

Tea production in South India in 1963 is estimated to have increased to 188.5 million lbs. from 181.1 million lbs. in 1962. Thus, the increase in South India makes up for part of the shortfall in output in North India. Considering that total production in India in 1963 was only 760 million lbs., it is unlikely that the target of 900 million lbs. will be realised by 1965. Several gardens are capable of increasing their output of dusts which are mostly consumed within the country. The fact that in 1963 internal consumption was only 280 million lbs., as against 300 million lbs. in 1961, is a strong deterrant for these gardens to raise output.

Tea gardens desiring to improve quality and thereby raise the proportion of their quality output are handicapped by lack of finance. Government loans are provided, but the high rate of interest is a deterrent for gardens to enable this facility. Further, there are several formalities which in practice are very difficult to fulfil. In the circumstances, the industry feels that if measures are taken to increase internal consumption, the industry can not only increase output but improve their own finances for development plans. Despite increased costs of production and lower production in 1963, it is to the credit of the industry that it increased exports to 491 million lbs. as against 472 million lbs. in 1962, 450 million lbs. in 1961, and 430 million lbs. in 1960. Although this gradual rise has been impressive, there is evidence suggesting that India has not been able to secure an adequate share in the increase in overseas consumption.

In the dusts sales held here last week, offerings totalled 32,409 packages, which met with less demand. The weakest feature was orthodox teas, prices of which eased. Legg-cut teas were absorbed at prices which were 15 nP lower. In C.T.Cs, clean medium teas eased, and the fibrous teas could be pushed only at a substantial discount. Good C.T.Cs were irregular. The quotations (in rupees) per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust 6.20 to 6.70, medium Assam C.T.C. dust 5.00 to 5.25, legg-cut dust 4.85 to 5.00, medium Assam dust 4.60 to 5.10, and plain orthodox dust 4.40 to 4.60.

Easier conditions prevailed at yesterday's sale when offerings totalled 53,457 packages. C.T.Cs recorded an irregular trend, but were generally easier except for the best bright liquoring brokens. Fannings, however, were difficult of sale. Legg-cut teas eased by 5 to 15 nP. "Teas for price" and plain brokens and fannings met with support at lower rates. Other orthodox kinds were irregularly easy. In whole leaf grades, the better sorts were a poor feature. However, Darjeelings were in good demand. The quotations (in rupees) per one kg., inclusive of excise duty, were: Best Assam C.T.C. B.P. 5.40 to 6.20 (nominal), best Assam C.T.C. fannings 5.30 to 5.70 (nom.), clean plain pekoe 5.00 to 5.40, medium Assam C.T.C. B.P. 5.00 to 5.20, medium Assam C.T.C. fannings 4.80 to 5.00, plain plannings 4.40 to 4.60, and plain B.P. 4.40 to 4.60.

METALS FIRM

(*From Our Own Correspondent*)

CALCUTTA, *18th February*

The firm trend in metal prices on the London Metal Exchange emphasised not only the rising trend in world consumption of copper and tin but also the shrinking supplies of zinc. During the week under review, spot zinc in London rose from £93¾ a ton to £99¼, with the three-months' metal improving from £92¾ to £93¾. Thus, while the spot price added £4¾, the forward position hardened by only £1. Demand for zinc from the car manufacturing and steel industries has progressively increased both in the U.K. and the U.S.A., and supplies of the prime western and special grade are in acute shortage. In Calcutta, the price ruled steady, and the fall in arrivals highlighted the shortage.

Spot copper wire-bars in London rose from £246½ a ton to £248, cathodes from £239 to £241, and the fire-refined metal from £236 to £240, with their respective three-months' positions improving from £248 to £249½, from £243 to £243½, and from £239½ to £240. In Calcutta, acute shortage prevailed and scrap supplies were difficult to be located. Virgin copper imports into India in December last totalled only 4,447 tonnes, as against 6,984 tonnes in the previous month. Zinc imports were also lower at 3,823 tonnes, as against 9,435 tonnes. Tin imports were only 331 tonnes as against 354 tonnes, and lead imports 1,900 tonnes, as against 2,531 tonnes. These figures easily explain the firm trend in the market. Spot tin in London closed at £1,077 a ton, after opening at £1,081, while spot lead remained unchanged at £79½ a ton.

JUTE GOODS MARKED DOWN

(*From Our Own Correspondent*)

CALCUTTA, *18th February*

The announcement of a substantial increase in jute goods stocks with mills at the end of January despite decreased production in that month affected sentiment. The announcement, coupled with lack of adequate interest among overseas buyers, brought about a sizable fall in prices of heavy goods. The fall in hessian prices was, however, less marked. Easier conditions also prevailed in the fibre market, and a contributory cause had been the release of the final crop estimate for 1963-64 according to which the crop is now believed to be higher than the partially revised estimate.

Concern is felt among traders over the existence of unsatisfactory conditions in the Calcutta port. Incoming vessels are being delayed in view of shortage of shed berths. Last week, several incoming ships had to be detained at the sandheads. This meant delay in departure of loaded ships too. Mills are naturally worried in regard to fulfilment of contracts in accordance with guaranteed delivery dates. Not only has there been a fall in the number of overseas inquiries this week, but the mills also have been unable to effect as much shipments as they would desire. This state of affairs, developing closely on the heels of an increase in stock, has naturally caused anxiety.

Output of mills in January fell to 101,600 tonnes from 107,300 tonnes in December 1963. While hessian, sacking and carpet backing cloth fell by 3,900 tonnes, 2,300 tonnes and 700 tonnes, respectively, to 42,600 tonnes, 41,400 tonnes and 8,200 tonnes, miscellaneous goods rose by 1,200 tonnes to 9,400 tonnes. The decline in output was due partly to the fall in working hours and partly to rise in absenteeism as a result of the disturbed working conditions in the month. Despite the total fall of 5,700 tonnes in output, goods in stock with mills aggregated 120,900 tonnes, thus showing a rise of 8,600 tonnes as compared with December 1963. The largest increase, that is, 4,100 tonnes, was in hessian, while miscellaneous goods rose by 2,500 tonnes, sacking by 1,500 tonnes, and carpet backing cloth by 500 tonnes. Stock at the beginning of January was 112,300 tonnes. Adding production, the total availability in the month was 213,900 tonnes. The stocks at the end of January being 120,900 tonnes, it follows that demand was for only 93,000 tonnes. It may be noted that the mention of output and stock details relating to carpet backing cloth as a separate item from this month is in recognition of the growing importance of this construction in the export market. It is estimated that, if the backlog of shipments of January is completed this month, stocks should show a welcome decline. Internal despatches were also curtailed last month, as a result of temporary restrictions on railway booking.

The jute mill industry is surprised at its inclusion for application of the Bonus Commission's recommendations on which Government's decision is expected in the near future. For it is only a few months since the Wage Board's decision has become operative. The award is in force up to the end of 1967. In accordance with the Wage Board's award, mills have already paid a fortnight's wages as bonus. Since the Bonus Commission has stated that its formula in regard to payment of maximum and minimum bonus based on profits shall apply to the jute industry unless workers and mills agree to another arrangement, it is to be hoped that, in so far as the Wage Board's award is binding on employers and employees alike, payment of bonus as per the Board's award signifies agreement by both the parties and that, this being so, the jute industry should be spared from the Bonus Commission's recommendation at least for the period the award is effective, that is up to the end of December 1967. Mills look forward to the Central Labour Ministry's views in this regard. They have also become concerned over the resolution recently passed by the Jute Workers' Federation. For the resolution has sought a guarantee from mills that no reduction should be made in the variable dearness allowance of Rs. 32.50. This demand is surprising, because the Wage Board, while fixing the dearness allowance at Rs. 32.50 on the basis of a price index number of 425 (base year 1939=100), stipulated a rise or fall in the allowance by 20 nP for rise or fall for every point. It is equally surprising that the resolution of the Jute Workers' Federation has also demanded a guaranteed minimum wage for piece-rate workers without regard to all other factors including power and raw material difficulties. How unjustified and irrelevant this demand is will be evident from the fact that, in the last two years in view of the abundant supply of fibre, mills have removed all restrictions on output. The working time agreement, according to which mills' output remained connected with availability of fibre and the existence of demand of goods, has already been abrogated. The loss of output as a result of power shedding in the last two years had meant a rise in production costs but workers had not been affected at all.

It is regrettable that workers are attempting to put up demands so soon after the coming into operation of the award of the Wage Board, on which workers, employers and Government were represented. At a time when the industry is straining all its efforts to increase production and export more, it is unfortunate that workers are attempting to spread dissatisfaction among themselves. The implementation of the Wage Board award has meant an increase of Rs. 30 per tonne in cost of production. This has further strengthened the keen competition already shown by the Pakistan industry. Nevertheless, mills in India have shouldered this extra burden in the hope that there would be peace at least until the duration of the award and that there would be a chance for workers to show an increase in productivity. Workers should realise that it is on the success of the efforts now being made by the industry to boost exports that their as well as the industry's future depends. By raising output, mills in India can reduce costs of production as a result of economies of scale, and thus attempt to recapture the export markets already lost to Pakistan. However, output can be raised only if peace among workers prevailed and mills had thought that, by implementing the Wage Board's award, workers would rest content.

Dull conditions were in evidence in the raw jute market during the week under review. Although sellers were keen for business, buyers were reserved. This led to discounted offers, and Assam bottoms eased from Rs. 31.00 to Rs. 30.00 a maund and northern bottoms from Rs. 30.00 to Rs. 29.50. However, the superior varieties remained unchanged, daissee no-bottoms continuing to quote at Rs. 34.00. The small increase in arrivals also affected sentiment. This increase, coming as it did after the release of the final jute crop estimate, was taken as significant. For the final estimate put the crop at 5.91 million bales and the area at 2.13 million acres, thus showing increases of 504,000 bales or 9.3 per cent and 27,000 acres or 1.3 per cent as compared with the previous year. The yield per acre rose from 1,028 lbs. to 1,110 lbs., a rise of 8 per cent. Mill stan markets, despite a fall in arrivals, continued dull. For the coming season, the East Pakistan Government has, like last year, prohibited jute cultivation in the five-mile border belt. The ban will not affect the Tripura border where quality jute is grown. The areas where no substitute crop can be grown have also been omitted from the scope of the ban. In the prohibited area, however, each cultivator can grow jute on half an anna of his basic area, subject to a maximum of one-fourth of a *bigha*, in order to meet his domestic requirements.

The substantial fall in the price of B. twills, from Rs. 112.65 to Rs. 110.00 was the feature in the goods market during the week under review. On Tuesday last, sentiment continued to be affected by the earlier announcement of a substantial increase in stocks with mills. With ready B. twills at Rs. 112.65 and hessian 40" 19 at Rs. 46.70, quotations were nominal, as the market remained closed on Tuesday last. On the following day, sentiment was aided by rumours of a Government order for B. twills involving a substantial quantity. B. twills recovered to Rs. 112.75 and, in sympathy, hessian 40" 10 oz. hardened to Rs. 46.75. The feature on Thursday was heavy selling in the futures market. This took ready B. twills down to Rs. 111.00 and hessian 40" 10 oz. to Rs. 46.30. The Government showed interest for small quantities of B. twills at this stage. On Friday, ready B. twills dropped further to Rs. 110.40, but hessian 40" 10 oz. improved to Rs. 46.40. The market was closed on Saturday, and yesterday's reopening was marked by extreme dullness. At the lower levels, however, there was some buying support. B. twills closed quiet at Rs. 110.00 and hessian 40" 10 oz. at Rs. 45.95.

FOODGRAINS ADVANCE

(*From Our Own Correspondent*)

HAPUR, *17th February*

The firm trend in foodgrains continued unabated this week as prices touched new heights on dwindling stocks and grim prospects of *rabi* crops due to the failure of winter rains and heavy frost and cold spell in the last week of January. Control has been imposed on the prices of wheat flour and a strict watch is being kept on the overall food situation in the State.

Wheat rose by Rs. 2 to Rs. 4 per quintal on encouraging buying while stocks were dwindling fast. The average quality was quoted at the week-end at Rs 62.50 to Rs. 64.50 and the farm produce at Rs. 65.50 to Rs. 67.50 a quintal as against the last year's corresponding prices which were much lower at Rs. 40.19 and Rs. 43.50 per quintal, respectively. Rice was steadier on fairly good demand and poor supplies. Stocks left with the trade were reported nominal. Latest prices (in rupees) were: Rice *basmati* superior 93.77 to 96.45, *sela basmati* 91.09 to 93.77, *mainpuri* 63.63, *ramajwayan* 77.70, *raimunia* 79.04 and *gadda* 60.93 per quintal.

Gram improved by Rs. 2 to Rs. 2.50 per quintal on higher Punjab advices coupled with the poor stock position. The Punjab quality was placed at the week-end at Rs. 56.26 and the local produce at Rs. 55.50 a quintal, the corresponding prices last year were Rs. 41.53 per quintal. Maize prices hardened by Rs. 2 to Rs. 3 per quintal according to the quality to be quoted between Rs. 38.75 and Rs. 39.75 for the average quality and between Rs. 41.75 and Rs. 43.75 per quintal for superior. Stocks ran down to 5,000 quintals. Barley and *bejhar* prices moved up to Rs. 41 to Rs. 42 and Rs. 42.50 to Rs. 43.50 per quintal, respectively. *Juwar* and *guwar* also sought higher levels on lower stocks. *Juwar* was quoted between Rs. 51.50 and Rs. 52.50 and *guwar* between Rs. 52.50 and Rs. 53.50 per quintal. Oats, *methi* and other coarse grains were steady.

Pulses, too, were firm due to poor crop prospects of peas and *arhar* and nominal stocks left with the trade. Peas *dara* was quoted at Rs. 48 to Rs. 50 and farm quality at Rs. 51 to Rs. 53 per quintal, *Arhar* average quality improved by Re. 1 to Rs. 61.62 to Rs. 62.96, farm superior was higher at Rs. 63.63 to Rs. 66.98. *Urd* was quoted at Rs. 66.98 to Rs. 71 and *moong* at Rs. 73.73 to Rs. 81.25 per quintal. *Masoor* and other *dals* also ruled firm. Week-end prices (in rupees) were: Peas *dal* 53.75, *arhar dal* 75.02 to 81.05, *urd dal* 80.38, *moong dal* 85.74, *masoor* 61.62 to 66.98, *masoor dal* 74.50 and gram *dal* 60.28 per quintal.

"KHANDSARI" SPURTS

(*From Our Own Correspondent*)

HAPUR, *17th February*

Sugar prices were almost stationary at Rs. 155 to Rs. 160 per quintal. The factories here, in West U.P., continued to face cane shortage as it was being diverted for the manufacture of *gur* and *khandsari*. While the Government is still hopeful of attaining this season's production target of 3,000,000 tons of sugar, the industry expects the output to be not more than 2,500,000 tons. Controlled prices here were Rs. 121.34 to Rs. 126 a quintal or Re. 1.23 to Re. 1.26 per kilogram.

Khandsari advanced by as much as Rs. 10 a quintal on brisk buying support from stockists in Punjab and Rajasthan. Production was still in full swing, as cane supplies were adequate. The manufacturing units were reported to have increased their cane purchasing prices to Rs. 6.15 per quintal in some areas, as against Rs. 5.36 being paid by sugar factories. Week-end prices were:—*Desi* inferior Rs. 120 to Rs. 135.50, superior Rs. 145 to Rs. 155, crystal Rs. 150 to Rs. 155 and boora Rs. 155 to Rs. 162 per quintal.

Ready *gur* advanced by about Rs. 2 per 40 kilogram on receipts of permits from consuming States. The export quota for Meerut region for the current month was reported to be higher and demand was brisk. Daily arrivals averaged 2,500 to 3,000 maunds and the local stock was estimated around 15,000 quintals. Total arrivals of *gur* during the current session were put at 147,000 quintals. Sowings of cane for the next season has commenced and an increase in the acreage has been arranged this time. Week-end prices were:—Ready *gur pansera* superior Rs. 27.50, average Rs. 27, *balti* Rs. 26.75 and *shakker* Rs. 29 to Rs. 32 per quintal.

LONDON LETTER

(*Concluded from page 276*)

morality." Of course, like all dedicated economists and backroom boys, he cannot consider the political requirements of such an economic morality—and political parties have a way of different approaches to questions of economic morality, while stolidly affirming similar aims.

On the question of growth rate the Neddy chief confirmed that the annual report now being prepared would show that the U.K. was advancing at an exceptionally fast rate (about 5 per cent per annum over the past year or more), but that it would be towards the end of the year when a difficult period would be reached which would determine whether the U.K. would in the long-term maintain the necessary rate of growth or else slide back into the doldrums.

The Government of Turkey will draw the equivalent of $21.5 million during the period of 15th February to 31st December 1964, under a stand-by arrangement concluded with the International Monetary Fund. The new arrangement replaces a stand-by arrangement for the same amount which expired at the end of 1963. The resources made available by that arrangement were fully drawn and the member's outstanding drawings of the Funds now total $52.5 million. The new arrangement will give support to the Turkish reserve position in the event of temporary shortfalls in foreign exchange earnings or delays in the inflow of external assistance. There will continue to be close contact between the Fund and the Turkish Government.

The Reserve Bank of India has brought out a Telegu edition of the English original of 'Reserve Bank of India—Functions and Working,' translated by Prof. B. Sarveswara Rao of Andhra University. The publication traces the historical evolution of central banking in India and brings out the various changes that have taken place in the structure of the Bank as well as in the scope of its functions since its establishment in April 1935. Copies of the Telegu edition priced at Re. 1 per copy can be obtained from the Administrative Officer, Economic Department, Reserve Bank of India, Post Box No. 1036, Bombay-1, and from the Manager, Reserve Bank of India, Madras and the Manager, Reserve Bank of India, Hyderabad.

Notice

THE BANK OF INDIA LIMITED

Registered Office:

70/80, Mahatma Gandhi Road, BOMBAY-1

By Order of the Board of Directors,

T. D. KANSARA,
General Manager.
The Bank of India Ltd.

BOMBAY,
18th February, 1964.

His blood has saved many lives

Way back in 1935, at Jamshedpur's Main Hospital, a man lay dying. Only a transfusion of blood could save him. In those days, most people thought that blood donation permanently damaged health. But a young man came forward and voluntarily gave his blood to sustain the ebbing life. Between 1935 and 1955, the same man freely gave his blood no less than 40 times—on an average twice a year—for victims of industrial accidents, to save men critically ill.

This extraordinary man is T. S. Balam, a typist with Tata Steel at Jamshedpur, a happy, healthy family man of 50. Although he still wants to donate blood, doctors decline his offer in view of his advancing years.

Inspired by the selfless example of men like Balam, many, many others in the steel town have donated blood. No less than 20,000 employees of Tata Steel have had their blood tested and grouped, while many more are coming forward regularly for testing and grouping... to help prevent avoidable deaths... to save families from sorrow and ruin.

This is yet another instance of the fellow-feeling, born of the indivisible bond of labour, that binds together the steelmen in Jamshedpur, a city where industry is not merely a source of livelihood but a way of life.

ABBREVIATIONS. N—Nominal. (f) Income-tax free. * Loans held entirely by the Trustees. † Bombay State Transport.
A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable.
†† Rate of Interest reduced from 6 to 3 per cent with effect from 1st June 1944. ‡ Rate of Interest reduced from 6† to 4 per cent with effect from 1st April 1938.
f—Interest free for first 12 years. i—Interest free for first 7 years. J—Ex Eleven Instalments but inclusive of accrued interest.
M—At the option of the Government after three months' notice. K—On September 1986 or later at the option of the Government after three months' notice.
**—Liability taken over by Madhya Pradesh. @ Total amount invested in Gold Bonds up to 15th February 1963.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P. O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. CR.—Cum. Right. XR.—Ex. Right.

Shares :—If a company has different classes of shares—as for example : 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up' per share.

Accounts :—Figures in the Accounts Closed column represent the months or the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Insurance include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

Notice

THE INDIA SUGARS AND REFINERIES LIMITED

NOTICE OF ANNUAL GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT THE Thirtieth Annual General Meeting of the Company will be held at the Registered Office of the Company at Hospet (Bellary District), on Monday, the 16th March 1964, at 4 p.m., to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Accounts for the year ended 30th September 1963.

(2) To declare a Dividend on Preference Shares.

(3) To declare a Dividend on Ordinary Shares.

(4) To elect a Director in place of Lt. Col. H.H. Maharaja Manabendra Shah of Tehri Garhwal, M.P., who retires by rotation and is eligible for re-election.

(5) To elect a Director in place of Shri Madanlal Somani who retires by rotation and is eligible for re-election.

(6) To appoint Auditors for the year 1963-64 and fix their remuneration.

(7) To pass the following Resolution with or without modification as Ordinary Resolution:—

RESOLVED that the consent of the Company be and is hereby accorded for the appointment of the Hospet Sugar Syndicate, Hospet, as Sole Selling Agents to the Company for a period of five years from 1st January 1964 on the terms as found in the Agreement subsisting between them and the Company and dated 28th January 1964.

The Register of Members of the Company will be closed from March 10, 1964, to March 16, 1964, both days inclusive.

By Order of the Board,
Per pro THE INDIA SUGAR AGENCIES PRIVATE LTD.,
C. D. CHOUDHARY,
Managing Agents.

BOMBAY,
January 27, 1964.

Notes:—(1) A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself and such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the Meeting.

(2) The Dividends, when declared, will be payable on or after April 15, 1964, to those shareholders whose names are on the Register of Members on March 16, 1964, or to their mandatees.

(3) Shareholders are requested to notify the Company of any change in address.

EXPLANATORY STATEMENT

as required under Section 173 of the Companies Act, 1956

Item No. 7: Ordinary Resolution

This Resolution requests your sanction for the appointment of the Hospet Sugar Syndicate, Hospet, as Sole Selling Agents to the Company for a period of five years from 1st January, 1964, as such a Resolution is necessary for appointment under Section 294 of the Companies Act, 1956. You are aware that Amalgamated Commercial Traders Private Limited were our Sole Selling Agents till 31st December 1963 and the Agreement with them terminated on that date. The Board af Directors have decided not to renew the Agreement with them, and have, in their place, appointed the Hospet Sugar Syndicate as Sole Selling Agents. The Agreement, among other things,

(i) Provides for the payment of a Commission of Rs. 1.34 nP per bag of 100 kilos of manufactured Sugar;

(ii) Provides for a deposit of Rs. 1,00,000 with the Company which will carry interest at 7 per cent during the currency of the Agreement;

(iii) Further stipulates that the Sole Selling Agency is only for Sugar, and Sugar alone, and not for any other products of the Company such as Molasses, Spirit, etc.

(iv) Is to subsist for a period of five years in the first instance with a provision of three months' notice on either side for termination for breach of any condition.

None of the Directors of the Company or its Managing Agents are interested in the above Selling Agency Company. The above Agreement is kept open for inspection at the Registered Office of the Company during office hours on working days from now on until the date of the Meeting.

MARKET GOSSIP

(*Concluded from page* 271)

work out to about Rs. 2,400 per tonne capacity in the first stage. The only comparable steel plant is Rourkela which also is designed to make flat products—the line of manufacture for Bokaro. The Rourkela plant cost Rs. 2,340 per tonne capacity.

Banks In U.K. To Close On Saturdays?

It looks as though banks in Britain will be completely closed for business on Saturdays, instead of working upto 1 p.m. as is the case now. A firm decision to this effect is expected to be reached by bankers possibly within the next three months, but certainly before the end of the year (1964). It is possible that they may agree even before the General Elections in order to win the support of bank employees for the Conservative Party. It is significant, in this connection, that the Committee of London Clearing Bankers, which rejected the idea three years ago, has now announced that the question is being urgently considered by it. The Committee has examined the possibility of launching pilot schemes, involving change in banking hours that would include experimental closing on Saturday mornings in some areas, and come to the conclusion that little fresh-information would be gained from such experiments. In its opinion, the time has come, instead, to concentrate on examining from all angles the practicability of a general Saturday closing of banks, combined, as may be appropriate, with other changes in opening hours. There will be further consultations between banks and the representatives of their staff with the object of reaching "an early conclusion." A similar move has been announced by the Committee of Scottish Bank General Managers which has decided to investigate the legal and practical issues involved in Saturday closing, together with an extension of banking hours on other days.

The U.K. banks' move to close on Saturdays has been justified on the score that it is in keeping with the general trend practically the world over. No bank, it is said, works on Saturdays in Austria, Belgium, Luxembourg, France, Germany, Italy, Holland, Canada, Australia, New Zealand, the U.S. (most States), and Sweden (from April to September). And banks in Switzerland have already decided to toe this line at the end of June next. It is, however, not so much the world trend as the intense pressure from employees that seems to have prompted the British bankers' move to go over to a five-day week. Here is what the Chairman of Barclays Bank, Mr. John Thomson, said the other day: "If it is inevitable that our staffs do not come to the Bank on Saturday mornings, or some of them, then it is much better to face up to all the implications now rather than keep putting it off.... people in most countries have learned how to adjust themselves to Saturday bank closing."

The proposed closing of banks on Saturdays has, however, been stoutly opposed by a section of opinion in Britain. To this section belongs the *Financial Times*, London. This contemporary of ours has characterised the move as a retrograde step. Its opposition is on three grounds. One, Saturday morning is the time when a lot of people make most use of their bank; those who bank locally but travel to town to work often have only Saturdays in which to transact their bank business. Two, Saturday is also an extremely busy shopping day and one when there is an active demand for cashing cheques. And, three, if banks are not open then, the case for maintaining money on deposit with a bank becomes considerably weaker. The Post Office Savings Bank, with branches all over the country and staying open until 5.30, becomes one of several alternatives which look more convenient than a commercial bank.

The banks are not unaware of these aspects; only they appear to be rather helpless. Lest the move should have a disquieting impact on the business of banks, the *Financial Times* has suggested either closure on Monday or a six-day week with five-day shifts. The latter alternative will definitely raise staff costs and thus bank charges. Another possibility, according to it, is to keep the present opening hours but to have, on Saturday, a skeleton service merely for the purpose of cashing cheques.

Steel mills in the United Kingdom are reported to be now working at peak production levels, thanks to the end of craftsmen's strike in South Wales. Steelmakers believe that an upward revision of 24.5 million tons for the current calendar year is now possible. Demand, according to them, has not only improved but also spread over a wide range of industry's products so that extra production facilities continue to be created.

TREND OF SHARES

QUIET, BUT STEADY

(From Our Own Correspondent)

BOMBAY, *20th February*

ON the proximity of the budget, trading in equities became featureless this week, with bulls and bears exercising great caution in extending their commitments. Values opened around the last week's improved levels, dropped in the mid-week on some profit-taking, but rallied slightly at close on stray short-covering. The tone at the close was quiet, but steady. There were clearly no signs of any pre-budget liquidation or selling pressure as yet, because the general feeling was that the budget would be favourable to investors. Sellers were restrained by the entry of the Unit Trust of India the operations of which, it was felt, would reduce the scope for short-selling. The political scene also showed signs of some immediate relaxation in that Pakistan failed to nail down India on Kashmir in the Security Council debate. Moreover, there was some speculation over possible direct talks between India and China on the border dispute, in the wake of the joint *communique*, issued in Rangoon day before yesterday at the end of the five-day official visit of the Chinese Premier, Mr. Chou En-lai, to Burma. Finally, the corporate news remained encouraging.

Following a sizable increase in turnover from Rs. 10.50 crores to Rs. 13.89 crores and also in gross profit from Rs. 3.40 crores to Rs. 5.06 crores for the year ended 31st December 1963, the Directors of the Indian Aluminium Company Ltd. have maintained the total dividend for the year at 17.5 per cent (including 10 per cent final announced this week) on the increased capital as raised in November 1962 by the issue of one-for-five right shares at a premium of Rs. 15.50 per share. The net profit of the Company has, however, gone up only moderately from Rs. 126.30 lakhs to Rs. 159.80 lakhs because the year's tax provision (including S.P.T.) has been as much as Rs. 214.50 lakhs, as against Rs. 52.50 lakhs in the previous year. The increase in the volume of sales and profit during 1963 was due largely to the extra output obtained from the production facilities commissioned during 1961 and 1962. The Company is now engaged in the construction work pertaining to the expansion of the smelting capacity at Alupuram to 10,850 tonnes of aluminium ingot per annum and the establishment of an aluminium foil rolling mill at Kalwa (Maharashtra) with a capacity of 2,500 tonnes per annum. These new production facilities are expected to be commissioned by 1965. Moreover, initial steps have been taken for a further expansion of the Alupuram smelter to 15,850 tonnes, as licensed during 1963, and for installing a rod mill for converting this additional output of 5,000 tonnes ingot into electric conductor rods.

The Directors of the Phaltan Sugar Works Ltd. have recommended a higher dividend of 20 per cent for the year ended 30th September 1963 as compared with 14 per cent for the previous year. The increase has followed a substantial improvement in gross profit from Rs. 12.70 lakhs to Rs. 33.65 lakhs, in spite of sale proceeds remaining unchanged at Rs. 1.73 crore. The net profit has increased from Rs. 3.74 lakhs to Rs. 13.92 lakhs. The tax provision has quadrupled from Rs. 4.87 lakhs to Rs. 16.28 lakhs.

* * * * *

The principal, informed and influential operators on Dalal Street continued to hold on to their long positions and lent some support to the market after it had declined in the mid-week on profit-taking. Prices, therefore, rallied to close with minor variations over the week.

Scindia, which gained 96 nP to Rs. 16.20, was in the limelight, due to heavy buying by some operators. Steel shares met with ready support and, while Tata Ordinary finished 75 nP lower at Rs. 146.50, Indian Iron showed a gain of 10 nP at Rs. 25.35. T.E.L.Co. staged a good recovery from the mid-week low of Rs. 291.75 to Rs. 299.25, but eased again to round off the week at Rs. 296.50 as against Rs. 296.25 last week. Century moved both ways to close Rs. 4.50 lower at Rs. 693, but National Rayon were in demand and gained Rs. 3.50 to Rs. 432.50. Hindustan Motors closed weak at Rs. 18.28, as against Rs. 19.16 a week ago.

* * * * *

The two-point spurt in Indian Aluminium to Rs. 31.75 featured trading on the Calcutta Stock Exchange. Among other cleared shares, Dunlop Rubber and Orissa Cement gained 62 nP each to Rs. 37.62 and Rs. 14.31, respectively, and Birla Jute appreciated by 56 nP to Rs. 34.81 and Guest Keen by 50 nP to Rs. 27.37. In the cash section, Elgin, among Textiles, showed an improvement of 44 nP to Rs. 22.19. But Bengal Coal finished one point lower at Rs. 254. Among Jute shares, Fort Gloster declined from Rs. 279 to Rs. 276, but Nuddea closed Re. 1.25 higher at Rs. 62.25. Bengal Chemical shed three points to Rs. 95. Miscellaneous issues followed the general trend, with Indian Oxygen rising by Re. 1.30 to Rs. 27, Rallis by Rs. 2.50 to Rs. 132.50 and Sen-Raleigh by Re. 1.37 to Rs. 15.12.

* * * * *

Selected Miscellaneous and Textile shares recorded some gains in an otherwise dull trading on the Madras Stock Exchange. Dalmia Cement rose from Rs. 12.62 to Rs. 13 and Mettur Chemical from Rs. 12.80 to Rs. 13.25. Madura gained 50 nP to Rs. 36 and Travancore Rayon 40 nP to Rs. 25.65, as against which S.I. Viscose shed Re. 1.50 to Rs. 140.

CEMENTATION CO. GETS BIG CONTRACT

A contract worth Rs. 1.07 crore (nearly £800,000) for developing the Jitpur and Chasnalla collieries in Bihar State has been awarded to the Indian branch of the Cementation Company Ltd. The contract covers the sinking of three 17-foot-diameter concrete-lined shafts to depths of nearly 1,300 ft. at the Chasnalla colliery and the deepening of the existing three shafts at the Jitpur colliery. It is to be carried out for the Indian Iron and Steel Company Ltd., with the International Construction Company Ltd as the consulting engineers.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."

GOVERNMENT'S ECONOMIC SURVEY

A MAN of ideas and action. That is how Mr. T. T. Krishnamachari, Union Minister for Finance, has come to be known in the mercantile world. Not always has this quality of his been an advantage to him or to the economy as a whole. There were occasions in the not distant past when he had acted as a bull in a china shop. Fortunately, he has been working in an exemplary manner since his return to the Cabinet after his self-imposed five-year exile. He has effected many refreshing changes in the Government's policies and programmes, albeit without yielding any substantial and tangible gains to taxpayers. It remains to be seen whether this remark will become obsolete by this week-end, when his budget proposals will be public knowledge. In the meantime, he has provided one more instance of his originality in making available to Parliament and the public the Government's *Economic Survey* (1963-64) a week in advance of the Budget, instead of along with the Budget as has been the case ever since this annual feature was commenced in 1958 as a background paper for the Budget. This is a welcome departure. Members of Parliament and the Press are the greatest beneficiaries of this action, in that they have been given the perspective to the forthcoming Budget sufficiently in advance.

An outstanding impression that one gets of the *Economic Survey* covering the current (1963-64) fiscal year is that it is more factual and less critical as compared with its predecessors. It is cautious in the assessment of the unfavourable aspects of the economy and optimistic about the future. The difficulties confronting the country are only just noted and not stressed, whereas the bright aspects are boldly highlighted. To avoid pessimism and to be cheerful even in adversity are commendable qualities, provided that spirit does not lull one into complacency or encourage underestimation of difficulties. It is to be hoped that the Finance Minister is fully seized of the extremely uncomfortable price situation, the disappointing performance of agriculture, the inadequate industrial growth, the poor supply position of raw materials and stores and spares for a large variety of industries and the mounting volume of unemployment. The Budget is being keenly looked forward to for proof of his awareness of these difficulties.

The problem of accelerating the economic growth was there even at the time of preparing the last Budget. But it was not adequately recognised by the then Finance Minister who allowed himself to be overwhelmed by the needs of the emergency created by Chinese aggression. The error was soon realised and some concessions were given from time to time. They have, however, been inadequate and the results of some of them, as, for instance, simplification of licensing procedures and exemption of some commodities from price control can only be seen in the coming months. Meanwhile, the marked deterioration in the price situation, as well as the steep rise in bank credit and money in circulation since the commencement of the current marketing season has been a source of considerable concern. The price problem is dominating all others and the *Economic Survey*, it must be said to the credit of its authors, has devoted a good many pages to a detailed analysis of production and price trends and to a recital of measures taken to stimulate both agricultural and industrial production. Only, their presentation lacks the perspective, with the result that the seriousness of the situation has not been clearly brought out. This is what we propose to do now. In 1963, the general price level had registered a net rise of 8.4 per cent, as compared with only 2.1 per cent in 1962. In fact, the rise recorded last year was the steepest since the commencement of Five-year Plans. If the position is compared with the last year of the first Plan (1955-56), it is seen that, on an average, prices have risen at the rate of 5.8 per cent per annum. What is disturbing about this price trend is that prices of food articles have risen at a much faster pace, the annual rate of increase since the commencement of the second Plan being 7.2 per cent. In other words, the domestic purchasing power of the rupee has gone down roughly by 45 per cent since the commencement of the second Plan. The fall in the rupee's purchasing power of food articles is even bigger, being no less than 58 per cent. The Finance Minister must reflect on the implications of these cold facts to the common man before deciding on the level of capital outlays and other expenditure for the next fiscal year.

This is by no means the end of the story on price trends. The inflationary pressure is not only widespread but still gathering momentum, with no signs of early abatement. Prices of wheat, which had remained relatively stable until September last, have been jumping up week after week since then. Between 31st August 1963 and 8th February 1964, they have gone up by no less than 30 per cent. It is true that rice prices have gone down by some 6 per cent during these months, but they are still at a prohibitively high level and, what is more, they are tending to look up again. It is now admitted by the Government that the extremely severe cold wave in January-February this year has adversely affected the cash, as well as food, crops and one must be prepared for the current crop year being not as good as one had hoped. At the same time, money supply and bank credit are expanding faster than warranted by either the increase in the supply of goods or the rise in price levels. Since the commencement of the current busy season, money supply has expanded 70 per cent faster than in the corresponding period of the previous busy season. The rise in bank credit so far has been more than twice the increase in the same period of 1962-63 busy season and has already exceeded the increase witnessed in the whole of last busy season. Further, the railway freight rates have been increased; even though the increase is only marginal, it is going to be inflationary in effect. The prices of cement, steel and several other basic commodities subject to price control are due for an upward revision. The story of sugar, *gur* and *khandsari* is well known; suffice it to say that consumers cannot hope to get any relief in the coming months. Notwithstanding the decontrol of prices of sixteen manufactured goods, their supply is unlikely to expand so much as to neutralise the rise that has already taken place in their prices. Prices of foodgrains, non-ferrous metals, and

certain other raw materials which India has to import are also going up in world markets and this in turn will add to the cost of production of many of our industries. So, in the face of all these facts, one fails to see how the price levels in the current year are going to be kept under control. The *Economic Survey* provides no convincing answer to this question which vitally affects the pocket of the common man. All that it has to say is this:

"... there is ... need for continuing vigilance in regard to prices. The current trend of wholesale and consumer prices reflects the growing pressure, to some extent inevitable in a developing economy, on supplies of foodgrains and other essential commodities. Not only is the consumer demand increasing, but, with the rising standard of living, there is a shift in the pattern of consumption from coarse grains to rice and wheat and from coarse and medium cloth to fine and superfine cloth and art silk and rayon fabrics. While the ultimate solution to the price problem lies only in an increase in production, and an undue proliferation of controls of a kind which may impede growth must be avoided, continued action will be needed to avoid excess demand and to strengthen the framework of governmental regulation over the processes of distribution."

As a general statement, the foregoing quotation is unexceptionable. In fact, the qualification made to the application of controls reflects refreshing realism. While some rise in prices is inevitable in a developing economy, the extent of rise that has been taking place in this country is far too much and definitely inimical to economic growth itself. Some drastic measures to reverse the present price trend are urgently called for. Otherwise, the situation will get out of control. It is not understandable as to why the Government has been hesitating to use the stocks of P.L. 480 wheat to bring down the prices of wheat. What are these stocks meant for, if they are not to be used as an insurance against rise in food prices? Similarly, the Bank rate weapon is meant to be wielded vigorously in exactly a situation such as the present one.

There are many observations in the *Economic Survey* with which one will readily agree. To give some instances:

"There has been increasing recognition of the fact that, while a measure of control over basic items in short supply is necessary in a planned economy, it is equally important to ensure that basic industries secure returns adequate to finance expansion and to attract capital which would otherwise go into non-priority industries. Apart from this, controls in actual operation over a long period do not always serve the purposes for which they were set up, so that a continuing examination of the operation of controls is an important task of policy.

"... the accent of monetary policy will also necessarily have to be on realistic interest rates which reflect adequately the real cost of capital to the economy.

"... in the ultimate analysis, a lasting solution to India's major economic problems can be sought only within the framework of a rapidly expanding economy. The need for accelerating the pace of growth has become all the greater in the context of substantially larger defence requirements. At the same time, the acceleration of economic growth must be achieved in an environment of reasonable stability of prices if the levels of living at the most vulnerable points in the society are to be protected and raised and if the economy as a whole is to be freed progressively from dependence on external assistance.

"... that an expanding agricultural economy is essential to progress in other spheres is generally recognised. Without agriculture making its proper contribution, it would be difficult to secure the desired increase in national income, in savings or in exports; nor could costs and prices be held down to let development proceed smoothly. The success of an agricultural programme, however, depends ultimately on what happens at the farm level, on whether or not adequate arrangements exist to provide the individual farmers with the knowledge, the resources and above all the incentives needed for additional production.

"... with the rate of population increase approaching what is a very high level by any standards, the family planning programme has assumed the greatest of urgency and importance.

"The overall picture is one of promise of rising growth rates in the basic fields of industry, though these rates at present are somewhat below the expectations in the Plan. It will be necessary in the months and years to some to strengthen the forces which contribute to higher levels of growth not only in industry but also, and more fundamentally, in agriculture."

The point is that there is nothing new in these observations, some of which sound hollow in the light of experience during the last eight years and the renewed cry for more nationalisation and Statism heard at Jaipur and Bhubaneshwar. Nevertheless, their reiteration is welcome as evidence of the Government's appreciation of the basic issues. But if one is to share its optimism, voiced in the *Economic Survey* under review, one requires more solid evidence in the form of pragmatic action.

CHITTARANJAN LOCOMOTIVE WORKS

THE first of November 1950 was a red-letter day in India's Railway history, for it was on that day that the first W.G. broad-gauge locomotive steamed out of the assembly line of the Chittaranjan Locomotive Works, one of the earliest public enterprises to be established in the post-independence era. Thanks to the sustained efforts since then to diversify production and expand the capacity of that premier locomotive manufacturing plant, the country is heading towards self-sufficiency in broad-gauge steam locomotives. Noteworthy in this context is the fact that the Chittaranjan Works, which produced in all 1,179 W.G. locomotives (meant for hauling goods trains) in the 11-year period from 1950-51 to 1960-61, turned out as many as 431 W.G. locomotives and 53 W.P locomotives (meant for hauling fast mail and express passenger trains on the main lines) in the period from 1961-62 to 1963-64 (up to January 1964). In all, therefore, 484 units have been produced up to the end of last month under the third Plan, as against the aggregate requirement of 840 broad-gauge steam locomotives for the Plan period as a whole. At this rate of progress in production, it may not be surprising if the third Plan target of 840 such locomotives for the Chittaranjan Works comes to be slightly exceeded. This is a matter on which the public can share its profound joy with the Estimates Committee of the Lok Sabha. In its forty-fourth report, released this week, the Committee, incidentally, is glad to note that the outturn of the Chittaranjan Works is in accord with its capacity and the Plan target.

But that is not all, for the Chittaranjan Works has also been manufacturing its own boilers for the locomotives. That it has produced an aggregate of 1,524 boilers (some being spares) since 1962-63 and up to January 1964 is, indeed, heartening, for their indigenous manufacture is an organic part of the drive for self-sufficiency in steam locomotives. What is more, the Chittaranjan Works has also begun to manufacture broad-gauge electric locomotives in the third Plan period. The output of these locomotives up to January 1964 is 22 units (21 D.C. and 1 A.C. and is expected to aggregate 107 units of A.C. type in the Plan period, as against the total requirement of 244 for that period. Although the production of electric locomotives will thus fall short of the Railways' demand during the current Plan period, it should not be overlooked that capacity is being currently developed for the manufacture of 72 electric locomotives per annum at an estimated capital cost of Rs. 2.26 crores, of which Rs. 1.79 crore will have been incurred by the end of 1964-65.

If this scheme for the provision of facilities for the manufacture of electric locomotives can be expedited, it will be very good indeed, for, as the Estimates Committee itself has pointed out, steam locomotives are on the way out all over the world. The Committee, incidentally, has gone so far as to suggest that it would only be appropriate, if, from now onwards, a long-term and well-planned scheme for the conversion of the Chittaranjan Works to the manufacture of electric locomotives (both broad-gauge and metre-gauge) were drawn up and implemented to make India self-sufficient in electric traction. That the Chittaranjan Works (including its locomotive, boiler and steel castings section but excluding the electric locomotive section) will have involved an aggregate capital outlay of more than Rs. 21 crores upto the end of 1964-65 may be noted in this connection. The suggested conversion of the Works to the manufacture of electric locomotives may involve an additional capital outlay. But that is an aspect on which the Estimates Committee has not dilated, presumably because the whole proposition is not only of a long-term character but one involving a major policy decision. Further, the extent to which electric locomotives can and should replace steam locomotives is a highly debatable question. In other parts of the world, steam locomotives have been replaced chiefly by diesel locomotives and only partly by electric engines. India's capacity for expanding production of electric power is limited and the supply of high speed diesel oil is dependent upon imports involving precious foreign exchange. The country, however, has plenty of coal and steam locomotives are thus ideally suited from the point of view of availability of fuel and capital. It can, therefore, do with them for several years to come.

The Committee's other findings and recommendations are immediately more relevant. For instance, the finding has been given that, while the Chittaranjan Works has been able to execute the orders for the manufacture of W.G. locomotives promptly, there has been a time-lag of three years between the placement of order and the commencement of production in the case of W.P., W.T. and W.L. locomotives. The Committee's view, in this connection, is that, as the Chittaranjan Works has now gathered sufficient experience in the manufacture of steam locomotives, every effort should be made to reduce the time-lag between the receipt of order for a new type of locomotive and its execution and delivery. A related recommendation is to the effect that, as W.G. and W.P. locomotives have distinct uses and are not precisely interchangeable, the requisite number of each type should be produced, as originally scheduled, within the overall target of 840 broad-gauge steam locomotives for the third Plan period. The Committee has also given the finding that the Chittaranjan-manufactured locomotives compare favourably, in performance and price alike, with the ones which used to be imported from abroad. The Railways, it has added, "can justifiably be proud of having brought down the unit cost of manufacture from Rs. 7,94,000 in 1952-53 to Rs. 4,31,000 in 1962-63." The average unit cost here excludes proforma dividend. That the reduction in unit cost has been due to fuller capacity production will be clear from the following figures:

(In rupees)

	1952-53	1962-63
No. of locos produced	33	163
Labour cost	25,000	23,000
Cost of materials	302,000	243,000
Overheads	467,000	165,000
Total (excluding proforma dividend)..	794,000	431,000
Proforma dividend	128,000	46,000
Total (including proforma dividend)..	922,000	477,000

The Ministry of Railways, however, is not quite confident that it would be possible any longer "to hold the cost line under the impact of increase due to governmental action and general increase in the prices of raw materials and components." The incentive system of wage payment, which has been in operation in the Chittaranjan Works since 1954-55, seems to have contributed its share to higher productivity for, while the annual locomotive output has been stepped up by 87 per cent and the boiler output by 167 per cent, there has been only a two-third increase in the strength of staff. But higher productivity, which has so far absorbed the various increases in prices, would seem to have reached its optimum limit now. The public, however, may be gratified to know that the present unit cost of the indigenous locomotive is substantially less than the former landed price of Rs. 4,85,000 to Rs. 5,25,000 (excluding customs duty) of an imported locomotive of the same type. But this price comparison is rather misleading, for, with the dwindling output of steam locomotives in the Western countries, their unit costs may have correspondingly increased. As for the cost (Rs. 12 lakhs) of A.C. electric locomotive manufactured by the Chittaranjan Works, it is about the same as that of an imported locomotive. According to expert opinion quoted by the Estimates Committee, the cost should work out to no more than Rs. 10 lakhs—a figure much below the present cost of an imported electric locomotive. It may be expected that the Chittaranjan Works will progressively bring down the cost to that level of Rs. 10 lakhs per unit, for, as the Committee itself has acknowledged handsomely, the management is fully alive to the need for continuously improving the design and manufacturing processes with a view to improving efficiency and reducing cost.

In short, the Estimates Committee has highlighted the commendable production performance of the Chittaranjan Works. But its appraisal would have been more balanced if it had examined the unit's performance from the financial angle too. In the absence of details regarding provision for depreciation, allocation to reserves, net profit, and so on, it is difficult to figure out whether the unit is a paying concern like the Hindustan Machine Tools, for instance, in the public sector. It is, however, known from the C.S.O.'s *Principal Public Sector Undertakings in India* that the Chittaranjan Works had accumulated reserves to the tune of Rs. 5.7 crores by the end of 1960-61 against a total subscribed and paid-up capital of Rs. 21.7 crores by that year. As no separate figure for depreciation has been given, it is not possible to say whether it is included in the figure for reserves and, if so, whether it is adequate. Nor is it possible to conclude whether the return on capital employed is reasonable, for the profit figure is not to be found even in that publication.

MARKET GOSSIP

Khadi Commission Severely Indicted

THE Public Accounts Committee (Chairman: Mr. Mahavir Tyagi) may not have said, in its nineteenth report presented to the Lok Sabha on Monday this week, much about the affairs of the Khadi and Village Industries Commission that is already not known, but the way in which it has indicted the Commission is refreshing. Although severe criticisms have been levelled against the Commission by responsible persons in the Press and on the platform for quite sometime now, they do not seem to have had any effect. And so the Commission goes on functioning in the same old way, completely unmindful of its sins of omission and commission. The blame for this lies as much with those who hold the reins of the Commission as with the Government of India itself which it is that gives to the Commission crores of rupees every year for the specific purpose of encouraging the development of khadi and village industries. Since the Government also has not cared to ensure the satisfactory working of the Commission, the Public Accounts Committee has done well in strongly urging the need for a "fresh look at, and a new approach to, the policy." It is to be hoped that the Committee's call will not be in vain.

Out of over Rs. 49 crores advanced as loans by the Government to the Commission upto the end of March 1962—the amount will be markedly higher if the loans granted in the years 1962-63 and 1963-64 are included—about Rs. 20 crores were due for repayment in October 1962. But not a naya paisa has yet been repaid and, according to the Tyagi Committee, there is no possibility of the huge loans being repaid even in the next thirty or forty years! Worse still is the fact that the Commission has not paid even the interest on loans obtained from the Government and, here again, the Government continues to give annual subsidies to the Commission to enable it to pay interest. The Public Accounts Committee is, therefore, quite right in saying that the term "loan" is a misnomer and that the whole transaction virtually amounts to a grant.

Why has the Commission not been able to repay any portion of the large amounts of loans obtained from the Government? The answer is simple. The Commission has failed to utilise the funds at its disposal in a businesslike manner. The conditions of repayment of loans advanced by the Commission to various bodies have often been relaxed and the period for which funds are committed is grossly underestimated. The Public Accounts Committee has pinpointed these defects and condemned the extravagance indulged in by another body which also receives from the Government crores of rupees every year, namely, the Central Social Welfare Board. Just one instance cited by the Committee will suffice:

The Board had spent upto the end of March 1963 a sum of Rs. 86.26 lakhs on purchase of 588 jeeps (besides 18 station wagons, one car, 219 trailers and other accessories). Of these, 86 jeeps were remaining unutilised. About 248 jeeps were rendered surplus when the projects for which they were intended were closed down and 59 jeeps were transferred to voluntary organisations and three to Government organisations. Local audit revealed that log books were not being maintained properly. In many cases, the purpose of the journey was not indicated and, as such, the picture is one of extravagance.

Such instances are in galore not merely in the Khadi and Village Industries Commission and the Social Welfare Board but in a number of other similar bodies set up with noble objectives in view. The Public Accounts Committee has certainly done a signal service in highlighting the series of defects and irregularities and in urging prompt action to remove them. It has made three specific recommendations. First, the Government of India should closely examine all proposals for loans, including the period of their utilisation, before sanctioning them and to insist that loans should be treated by the loanee as loans and not as grants. Secondly, further loans must not be made available until utilisation certificates for the earlier loans are furnished. Thirdly, a serious view should be taken of the diversion of funds for unauthorised projects.

These are, indeed, very pertinent recommendations which ought to govern the grant of loans and grants made available by the Central Government to the various bodies. When the Government is so merciless about collecting its dues from individuals and private sector institutions, it should similarly be merciless in so far as semi-Governmental bodies are concerned. The public pays taxes by making a sacrifice and one of the rewards for such sacrifice lies in utilising the taxpayers' money for the greatest good of the greatest number, and not frittered away on wasteful and unproductive programmes.

Opposition To Cotton Controls

Cotton growers and traders in Gujarat are up in arms against the Textile Commissioner. They are strongly opposed to the recent ban on the movement of cotton from certain districts of Gujarat and the reintroduction of requisitioning by the Textile Commissioner of certain varieties as a sequel to the sharp spurt in their prices, especially in those of Digvijay. In fact, cotton traders in Broach even appointed an action committee to get the control measures lifted. It was also proposed to challenge the constitutional validity of the Textile Commissioner's action and also not to co-operate with him, directly or indirectly, in requisitioning cotton. What is more, as a protest against the alleged "arbitrary and irrational" action of the Textile Commissioner, ginning factories in Broach closed down and it was only after the State's Minister for Agriculture gave the assurance that a satisfactory solution would be found that the strike by ginners was withdrawn.

The State Government of Gujarat has promised traders and growers to take up the issue with the Government of India. The Chief Minister, Mr. Balwantrai Mehta, is reported to have stated that some of the steps taken by the Textile Commissioner created great discontent among growers and traders of cotton in the State and that it could jeopardise the State's plan for increasing cotton output. The State Government, he said, viewed this development with great concern.

Undaunted by the opposition, the Textile Commissioner is vigorously pursuing the requisition drive. So far over 2,000 bales are reported to have been requisitioned at the request of mills. Meanwhile, representatives of co-operative societies, which seem to be spearheading the current agitation, have directly aproached the Indian Cotton Mills' Federation with a proposal for supplying 50,000 bales of cotton (obviously at prices not above the ceiling) to mills in need of cotton. Presumably, this proposal is aimed at forestalling requisitioning of cotton by the Textile Commissioner. The terms of the proposals such as the price, the mode of delivery, the quality of cotton offered are not known; nor is the Federation's reaction to the proposal, though it is understood that a meeting of the representatives of the Federation and the co-operative societies was held in the City last week.

These developments, coupled with the requisitioning of cotton by the Textile Commissioner, seem to have had a salutary effect on prices which have tended to decline. The fall in prices could be attributed to mills withdrawing from the market partly because they have covered their immediate requirements and partly because the earlier fear of damage to the crop by the cold wave is considered by knowledgeable sources to have been somewhat exaggerated. These sources still think that, in spite of the cold wave, the crop this season would at least be equal to last season's output of 5.7 million bales. The adverse turn in weather and the delay in arranging for import of adequate quantities of cotton in the context of rising mill consumption (mills consumed a record 526,000 metric bales of cotton during December 1963, bringing total consumption during the first four months of the season to 2.02 million bales, as against 1.66 million bales in the same period last season) did alter, to some extent, the supply situation in respect of cotton, but, with a little forethought and imagination, the authorities could have prevented the spurt in cotton prices in Gujarat and obviated the need to reintroduce the irksome control measures which have met with so much opposition. As soon as prices tended to firm up, following the cold wave, the authorities should have restricted mill buying, instead of waiting for prices to pierce the ceiling. The psychological effect of the delay in arranging for imports should also have been foreseen by the authorities. But once prices pierce the ceiling, whatever the reason for it, there is no alternative for the Textile Commissioner but to have recourse to controls, however unpopular and inconvenient they may be. And any opposition to measures taken to enforce the ceiling should be seriously dealt with. One of the arguments put forward by the co-operative societies against requisitioning of Digvijay cotton at the ceiling prices is that the present ceiling price does not reflect the intrinsic worth of cotton. Whether or not the ceiling price of a particular variety is fair in comparison with the price of other varieties is an entirely different issue. Once the ceilings are fixed, the Government is bound to see that prices do not rise above them and it should not brook any interference with enforcing the ceilings. But the psychology of shortage generated by the setback to the crop in some areas and the delay in imports, which are primarily responsible for the rise in cotton prices, could be removed only by speeding up imports and judiciously regulating the marketing of the crop.

India Begins Repaying I.M.F. Credit

More than two and a half years after India obtained a credit of $250 million (Rs. 119.04 crores) from the International Monetary Fund, the Union Government has begun repaying the credit. After we went to press last week (Friday the 21st inst.), the Government announced that it had arranged to refund to the I.M.F. a sum of $25 million (Rs. 11.90 crores) being the first instalment of the amount drawn from the Fund on 1st August 1961. Under the terms of the drawal, it will be recalled, repayment of the entire credit has to be completed by the end of July 1965. Failure to do so will attract penal rate of interest. Some time in the middle of 1961, India approached the I.M.F. with a request for credit facilities because of the compelling circumstances prevailing then. The promised flow of long-term aid from foreign countries had lagged behind its requirements. And, what was worse, its own foreign exchange reserves (excluding gold) had shrunk to the nadir, the total of these assets as of 7th July 1961 standing at the low level of Rs. 109.55 crores. India's request was immediately conceded by the I.M.F. which provided the equivalent of $250 million in six foreign currencies: $110 million (Rs. 52.38 crores) in U.S. dollars, $60 million (Rs. 28.57 crores) in pound sterling, $45 million (Rs. 21.43 crores) in Deutsche marks, $15 million (Rs. 7.14 crores) each in French francs and Italian lira, and $5 million (Rs. 2.38 crores) in Japanese yen.

Even after fully utilising the aforesaid credit, India's foreign exchange reserves continued to decline; the total in the week ended 28th December 1962 was no more than Rs. 96.78 crores. The reserves no doubt recovered subsequently to Rs. 119.47 crores in the week ended 24th May 1963, but fell back again to Rs. 101.52 crores in the week ended 5th July. In view of this decline and following large-scale payments for imports, uncertainty regarding export earnings, lack of definiteness in regard to the exact amount and nature of foreign aid, and anticipated setback to inflow of overseas banking capital, the Government of India approached the I.M.F. for a standby credit of $100 million (Rs. 47.6 crores) which was made available early in July last year; the credit is effective for one year from August 1963. Since then, however, there has been a distinct improvement in the reserves; the total in the week ended 14th February was Rs. 123.35 crores, a rise of Rs. 21.83 crores since 5th July 1963. The improvement has been the cumulative result of a substantial rise in export earnings, some saving in imports and grant of untied loans by the Governments of some friendly countries for financing maintenance imports. Since these factors have considerably reduced the pressure on India's balance of payments, not only has the standby credit of $100 million not been drawn but the Union Government has found it possible to pay the first instalment of the $250-million credit secured from the I.M.F. in 1961.

Another Sizable Untied Loan From U.S.

The U.S. is one country which has granted to India untied loans on a substantial scale. The total of such loans for the first two years of the third Plan was $406 million (Rs. 193.26 crores) out of the U.S. commitment of $980 million for these years. The U.S. commitment in respect of the third year (that is 1963-64), announced in July last, is $455 million, of which the share of untied loan is $225 million (Rs. 107.10 crores). An agreement covering this dollar loan was signed at New Delhi on Monday this week between the Governments of India and the U.S. The loan will help India greatly in financing a wide range of maintenance imports: steel, non-ferrous metals, lubricants, fertilisers, machinery and machine parts, sulphur, rubber, tyre cord, carbon black, caustic soda, D.D.T., chemicals, vehicle parts and other components. The imports of these items will enable a number of existing industries to utilise a part of the capacities which have continued to lie idle for sometime now. The bulk of the commodity imports financed out of this loan (approximately 80 per cent) will be for the needs of private industry. It is expected that over 6,000 individual licences will be issued under the loan. Although the loan is to be utilised for making purchases only in the U.S. market, India will certainly have the "freedom and flexibility" to buy in the U.S. whatever is needed for the development of the economy.

†, Unadjusted for gold revaluation by Rs. 77.8 crores.

Share Transfer Fees

The number of companies which have so far agreed to abolish share transfer fees has already become quite large. On the Calcutta Stock Exchange alone, which has the largest number of listed companies among all the stock markets in the country, they totalled 189 on the 20th inst., and, since then, their number must have gone up further. Considering that the move to abandon the practice of collecting the fees is fast catching up, the stage of there being no company left which is still charging the fees may soon be reached. The suspension of the practice, it may be noted, is for the benefit of the shareholding community and provides welcome relief to stockbrokers from tiresome and unprofitable work.

The waiving of transfer fees is now being insisted on as a condition precedent to the grant of enlistment on the Calcutta Stock Exchange. The same is the case with the Bombay Stock Exchange. While this has no doubt inflated quickly the number of companies taking no fees, it is interesting to find that the list of such companies on the Cal-

SWATANTRA PARTY'S ECONOMIC POLICY

AN ELUCIDATION FROM RAJAJI

IN reply to our comments on the economic policy of the Swatantra Party, published in our issue of 8th February, 1964, Mr. C. Rajagopalachari, the founder-leader of the Swatantra Party, writes as follows :

Enclosing a cutting of his editorial comments on the proceedings of the Swatantra Convention held at Bangalore in the first week of this month, the editor of *Commerce* writes asking me to write up a concrete plan prepared in detail from the Swatantra angle. The favourable view he takes of our programme entitles him to ask for such expanded elucidation, as is possible, for a party in Opposition to give. But it is perhaps unreasonable to ask for a regular budget to be prepared by a new party without the assistance of full data as to resources and requirements from Government secretariats. Reasonable or otherwise the demand may be, it is certainly not possible for me to comply with such a request. What we want is, however, clear enough, as clear as our criticism of what is now going on. We want the aims of socialism, namely, that the living conditions of the poor should be made much better, to be fulfilled in reality and not merely sounded in empty slogans. We want industrialisation to come more effectively and extensively to the rescue of unemployment. We want the production of the basic necessities of life in our country to be increased, so that the problem of scarcity in this respect should no longer remain unsolved. We want more prosperity within the limits of the potentialities of our nation, so that there may be more satisfactory and more even distribution of it at all layers of the social body. We want these things to be done without incitement of class conflict. This would be possible only if production is considerably increased through sustained encouragement of those who have to work in various ways and contribute their savings to this purpose. We want national resources to be computed and national investments planned thereupon, without succumbing to the ruinous temptation of gigantism. The cold war having changed its pattern, we should not depend on foreign aid being available beyond the limits of repayment.

If these principles have to be put in concrete figures and terms, we require all the official data that are available to the Government and the services of its secretariats. In all seriousness, I say that, if we are put in a position of responsibility, we can clear the stables and produce what the editor of *Commerce* demands. Of course, there is bound to be the hangover of things already done or half-done but that cannot be avoided in democracy. That incubus must be allowed for in every case.

Once a licence is obtained for the investment of heavy capital and the organisation of an industrial unit, it is absurd to hamper the task of the organisers and add to the cost of production by putting hurdles in the way of getting all the materials and the machinery necessary, from time to time, for the industry to be started and maintained in efficient condition. But ask any industrialist now enjoying the blessings of the permit-licence-quota *raj* and he will tell you his tale of delay, losses and frustration. All this must stop. Capital and enterprise can be attracted and kept at a high level of efficiency and production, if this suicidal policy of multiplicity of permits and taxes is given up. Let us tax profits as they come and in due measure. Let us not hurt ourselves by delaying and adding to the cost of production by ordering various levies, hurdles and taxes at all the stages of production. There is no need to complicate the tax structure this way. Imports from foreign countries will be taxed—we cannot help it—by the exporting nation. But why should we needlessly add our taxes to imports of material and machinery and increase the cost of the production which we deliberately plan, over and above levying an adequate tax on the end profit. The present policy makes industrial products needlessly too costly for our own internal consumption, and reduces all chances of export.

The burden placed now on the poor and lower middle classes is intolerable and must be removed. There should be no indirect taxation on the necessities of life; every levy which raises the cost of living of these classes should be withdrawn. There should be no " land revenue " levy under *Swaraj* in India. That item of taxation should be put in the limbo of forgotten things. It has no place in independent India struggling to produce foodgrains in adequate measure. Only a fee for registration of proprietorship and transfers should be charged and no tax on farming as such or on farming income, so long as our farming industry has not improved so as to become really taxable. Every little is a great and significant fraction of the miserable *per capita* income of our peasantry. The rupee earned by our poor people must be more effectively protected from falling in real value which a wiser management of our affairs can certainly prevent. This is intimately related to the general lines sketched here regarding national resources, and investments and borrowings.

The policy of raising money on basing the structure of taxation on the shoulders of the numerous poor, on the ground that a comparatively light burden on each head of a vast population will bring in a substantial total, must be completely given up. Our poor are in the position of the camel who awaits only the last straw to break his back. Only those who can be taxed, according to immemorial practice, should be taxed and not others, directly or indirectly.

And these taxpayers, too, should be taxed in such measure only as will leave undamaged the zest for life and work, and for saving and investment; not as now, completely frustrated and drifting without enthusiasm for life or industry, and without a sense of security or certainty. This will of course greatly reduce the till for public expenditure. As against this, what is left over will be living seed for national prosperity and will bring into active operation the urge at the higher levels of our national life for increased industrialisation. In natural sequence, the national till will be augmented so that the State can spend more money on the services required for national life in general, and for equalising the amenities of life for all. This is the healthy way to attain the stated objects of socialism and not the way of torture and the killing of the sense of freedom and the way of national bankruptcy—which is the road we have been taking under the Statist regime. Gigantism must be avoided as an evil, and its disappearance should not be looked upon as a loss resulting from the pruning here advocated. What gigantism we have been already committed to, and on which investments have been heavily made, the giving up of which would cause heavy loss, would have to be suffered as an unavoidable inheritance of folly.

The slogan of " go back to the village " is contradictory of the policy of increasing industrialisation. It is not a slogan which will now receive any response. The rural population is pouring into the big cities where alone there are industries which offer possibilities of employment to the more adventurous sections of rural workers. This has created the too well known slums of our cities and the horribly neglected villages. Instead of the futile, belated and meaningless cry of " go back to the village " where you can give them no employment, what we should aim at is to bring into being many more small industrialised areas spread all over the country. Let us create as many industrial towns as we can in each district of a State, instead of concentrating the industrial workers in the principal cities only. A new pattern of urbanisation on this principle must replace the present drift. Then the slums will gradually disappear of their own accord. We can then look after the working population better than we do now, giving them good drainage and sanitation, and good drinking water and good housing. Work will increase all over each State and absorb a much larger part of the rural population, automatically leading to all-round equalised prosperity and amenities of life. The whole face of the country will be altered. We cannot ever give good housing, good drainage and sanitation, and healthy drinking water to our vast population if we do not have a scheme of medium size urbanisation such as herein sketched.

The concrete pattern emerging out of this will provide us with a proper basis for external borrowing. Borrowing will be easier. Our potential friends would gladly help in that respect if the picture herein drawn is adopted and put in concrete dimensions and terms.

Our foreign policy is not an item that can be placed in a separate chamber. Our defence services should be strong and reliable and well equipped. But we cannot, without firm foreign alliances, be strong enough to deter aggression or remove the fear of aggression from abroad. If this and its favourable financial consequences be fully realised and a correct foreign policy shaped and put in action, our defence budget need not so greatly eat into our tax resources, squeezed out to the detriment of national life. A sensible foreign policy will itself be a national asset of great significance, both in itself and in its potential capacity for deterrence and developing a sense of security.

If the principles advocated here are given a fair chance to be worked out, the poor will immediately feel emancipated and lifted up from distress. The atmosphere will be cleared, the barbed wire entanglement of Statism will go, and people will breathe freedom. All this can be converted into concrete details and figures and a plan can emerge, not a twenty-year-long fable divided into four alluring parts, but a clearly chalked out scheme adhering to the democratic way of annual budgets and established practice of securing yearly legislative sanction.

MARKET GOSSIP

(Concluded from previous page)

cutta Stock Exchange includes numerous old and established units. Fifty-three of the 189 companies are engaged in miscellaneous industries, 47 in the tea industry, 26 in jute and 25 in coal. There are also two banking companies, the United Bank of India and the United Commercial Bank, which do not collect share transfer fees. The Dena Bank in Bombay, it will be recalled, has also just given up the practice.

World Sugar And India

The world sugar market has tended to move up again after a temporary setback for 4-5 weeks. Sugar in London is currently standing at £80 per ton (c.i.f.), as against £77 a fortnight ago. The rising tendency is likely to gather momentum in the coming weeks; it is expected that the sugar price may even exceed the peak of £105 touched early in November last. This expectation seems to be justified, what with the persistent statistical shortage of sugar on a world-wide basis, the improved estimates of the West European beet crop notwithstanding. The aggregate running stocks of sugar are now said to be about nine million tons below those held in 1960-61, whereas there is continued pressure of demand for current production. Soviet Russia, according to a recent report from the Continent, will emerge as a large buyer of sugar in the not-too-distant future. For this country is unlikely to secure enough sugar from Cuba to satisfy its domestic needs, let alone supplying any sugar to Afghanistan and Finland which normally make all their purchases from Russia. These two countries have, therefore, been compelled to buy sugar elsewhere.

Considering the excellent prospects that exist for sugar exports, it is a pity that sugar production in India continues to lag behind demand (for both internal consumption and sales abroad). The total quantity of sugar actually produced in the first three months of the current (1963-64) season was no more than 1.39 million metric tons, as against the 1.20 million tons produced in the corresponding period of 1962-63. Assuming that the same rate of increase, namely, 16 per cent, is maintained in the remaining months of the season, the total output for the season will be around 2.5-2.6 million tons, representing a shortfall of 700,000-800,000 tons as compared with the original production target of 3.3 million tons and the subsequently revised target of 2.9 million tons for the current season. The Government of Uttar Pradesh must, therefore, be warmly complimented on its latest decision to forgo the purchase tax of 19 nP payable by sugar mills in western part of the State on cane bought from cultivators, provided an equal amount is paid by the mills to growers over and above the minimum price of Rs. 2 per maund. Besides forgoing the tax, the U.P. Government has also decided to contribute half the excess price paid by mills to cultivators. These steps will surely help sugar mills secure larger quantities of cane and produce more sugar. If similar steps are taken by Governments in other States, the total sugar production in the whole of the current season will doubtless be somewhat higher than the current trade estimate of 2.6 million tons.

Tin Shoots Up

Never in the past thirteen years had the world price of tin been at such a high level as it is today, the latest available London quotation for cash tin being £1,145½ per ton (the revised ceiling price fixed under the International Tin Agreement is only £1,000); a year ago, it stood at £805½. In just one week, the price has jumped up by £69½. The sudden spurt has occurred, despite the announcement by the U.S. General Services Administration, which administers the tin stockpile releases, that it is lifting the ceiling on the weekly tin sales from the present limit of 600 tons. Actually, the announcement has given a further boost to tin price because it is felt that the stocks held by the Administration are small (2,765 tons) and that these will be bought up by U.S. dealers before the end of next month. This quantity is considered to be too insufficient to cover the estimated wide world gap of about 20,000 tons, since industrial demand for tin the world over continues to rise at a much faster rate than production. It thus looks as though, to quote the *Straits Times* of Malaya, "neither the U.S. General Services Administration nor the International Tin Council has confronted the consequences of the present tin shortage."

MULTIPLE KEY CURRENCY SYSTEM

U.S. TAKES A SIGNIFICANT STEP TOWARDS IT

By A Special Correspondent

SINCE late last year, according to newspaper reports, the U.S. Treasury and the Federal Reserve System have been buying sizable amounts of Italian Lire and adding them to the U.S. foreign exchange reserves. Total purchases to date approximately amount to $100 million and purchases are apparently likely to continue.

Until now, the U.S. authorities have never held foreign currencies as a part of regular official reserves of the country. Their decision to hold the Lire in official reserves at the present time is obviously dictated by the difficulties through which the Italian currency is passing at present. It implies that the U.S. authorities will in due course acquire other important currencies for holding as a part of regular official reserves. This must, therefore, be considered one of the most dramatic developments in the international monetary system during recent years.

Basle Arrangements

In the recent past, there have been two other developments of great importance in the international monetary system. The Basle arrangements have helped to support sterling over two or three very critical situations since 1960. The system of currency swaps, which the U.S. authorities have set up during the last year or two, has been used effectively on more than one occasion, notably after the assassination of President Kennedy.

The Basle arrangements and the system of currency swaps are, however, both reversible arrangements intended to deal with temporary crises. Assistance provided under the Basle arrangements must be repaid within a reasonable period of time. If repayment cannot be made, longer term arrangements become necessary. The U.K., for instance, turned to the International Monetary Fund in 1961, when assistance under the Basle arrangements remained outstanding for too long a period. Any currencies under the currency swaps are also supposed to be returnable within very short periods of time. They can be useful to deal with sudden acute crises which are not expected to last or to give time to make longer term arrangements when exchange market crises arise suddenly. Here also, the implication is that recourse will be had to the International Monetary Fund if currencies drawn under the swap arrangements cannot be returned within an extremely short period, a period which would in general be counted in weeks.

These two types of arrangements have, therefore, added to the depth of the system and provided defences which could be used in emergencies of various time dimensions. They have not added, however, to the width of the system, which is another way of saying that they have not added to its basic strength. These arrangements have not added to the capacity of the international monetary system to finance international payments arising in the course of normal operations. They have not provided a mechanism by which international reserves would increase at a somewhat faster pace than they do at present.

A Fundamental Break

The new development is of greater significance than either of these earlier developments for exactly the reason that it marks a fundamental break with the existing monetary system. As the process initiated by the U.S. acquisition of Italian lire is carried to its logical conclusion, the international monetary system will be transformed. It will change from a *dual* key currency system—with dollars and sterling as the two-key currencies—into a multiple key currency system based on the currencies of the major industrial countries of the world.

In order to appreciate the significance of this change, it is necessary to realise that a key currency country is able, under normal circumstances, to finance a deficit in its external payments not by an outflow of reserves (a reduction in reserve assets), but by an expansion in short-term liabilities. Other countries, however, have to finance their deficits invariably by reducing their reserves. A key currency country can thus conduct its internal policies independently of balance of payments considerations for quite some time, while other countries have to adjust internal policies to the needs of the balance of payments situation at an early stage.

These assymetrical features of the international monetary system obviously produce inequities as between different countries. They do not, however, always operate favourably to the long-term interests of the key currency countries. When a stage is reached at which other countries are no longer willing to acquire additional amounts of the key currency for their reserves, they may insist on payment in gold and in some cases may even demand conversion of existing stocks of the key currency in their reserves into gold. This may happen exactly at the stage at which continuous postponement of measures to rectify the key currency country's balance of payments has made its external payments situation extremely unresponsive to normal policies. It may then be forced to take extreme measures to bring about an improvement in a situation which need never have arisen.

Implications

These features of the system have wider implications to international liquidity. As long as the key currency country continues to have deficits which are financed by an increase in the short-term liabilities of the key currency country, international reserves continue to grow at a faster pace than the growth in the world's monetary stocks. However, as soon as other countries start insisting on payment in gold or the key currency country balances its external payments and perhaps even achieves a surplus, the situation changes radically. International reserves can then grow only by the amount of accretion to monetary gold stocks or may even grow by less than this amount. In extreme circumstances, international reserves may even start contracting.

An increase in the number of key currencies has often been suggested as a solution to this problem. If there are a number of key currencies, world monetary reserves can continue to grow steadily so long as some key currency country has a deficit. It can be assumed that swings in international payments will put different countries into deficit at different times. Provided all the major industrial countries are given the status of key currencies, therefore, there can be complete assurance about a continuous growth in world monetary reserves over and above the annual accretions to world monetary gold stocks. If this does not prove to be true over any given short period, it is so because all the key currency countries are in external balance at the same time. Over such a period, the need for reserves would clearly be much smaller than usual, so that this possibility, remote as it is, need cause no anxiety.

Privileges and Responsibilities

The transition from the dual key currency system to the multiple key currency system would give the new key currencies most of the privileges and some of the responsibilities of the existing key currencies. The countries concerned would be able to finance some part of their deficits by increasing their short-term liabilities. There would be less need than hitherto for them to take immediate action to deal with balance of payments difficulties. As such action generally has the effect of reducing the overall volume of trade, this would mean that the new system would be consistent with greater stability in the volume of trade as well as in its geographical and commodity pattern. It is apparent that this would facilitate a more rapid growth in world trade.

Many of the major industrial countries have now built up strong currencies, capable of taking their place in the ranks of the world's key currencies. Having accepted some time ago, the responsibilities of Article VIII of the International Monetary Fund—the article providing for *de jure* convertibility of a currency for all current transactions—these currencies have the right to be given the status of key currencies. The representatives of these countries have been demanding this status for their currencies during their negotiations with U.S. representatives on measures to assist the dollar in its difficulties.

In an article written two years ago, the U.S. Secretary of the Treasury, Mr. Roosa, had said that the United States would be willing to hold the currencies of other major industrial countries once the U.S.A. had achieved a surplus in its balance of payments. There was some doubt about whether the United States would actually redeem this pledge. Its decision to acquire Italian Lire (plural of Lira) at this stage is, therefore, of special significance. It will reassure the other major industrial powers about the intentions of the United States, particularly since the U.S.A. is far from having achieved a surplus in its balance of payments. Italy is, at present, facing serious difficulties in its balance of payments. The U.S. action will help that country to make smoother progress towards balance than would otherwise have been possible. In the process, the Italian Lira will have taken the first step towards becoming a key currency. Other currencies are bound to follow suit. The process of development of a multiple key currency system can be said to have begun.

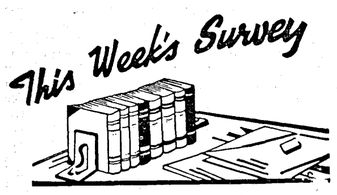
There can be no Real Strength Without Development



THE STRATEGY OF PLANNING

THE business community in India, it is well known, has always been in agreement with the Government on the broad objectives of planning, namely, eradication of poverty through increasing production and provision of fuller employment opportunities. But it does not conceal the fact that it has sometimes differed from the planners on the strategy and methods of planning for economic development. In other words, while the planners and the business community have been agreed on the "ends," they have not always seen eye to eye with each other on the "means." Broadly speaking, the latter has found fault with the former for their doctrinaire or ideological approach to several development issues, claiming, in the same breath, that its is a pragmatic approach. As "pragmatism" comes naturally to businessmen with their hard-headed realism, it is no wonder that Mr. G. D. Somani, President of the Indian Merchants' Chamber, reiterated the other day the need for a pragmatic approach without going into the semantics of the issue of democratic socialism. Mr. Somani, who delivered the presidential address at the Fifty-sixth Annual General Meeting of the Chamber, held at Bombay on the 21st instant, uttered a note of warning in this connection. The warning was that, unless the strategy and tools of development were devised in a realistic and practical manner, they might not only defeat the very objectives of planning but also strike at the values of democracy and the country's constitution. That was indeed a friendly warning to the planners whose mid-term appraisal (of the third Plan) itself has lent urgency to the effort for increasing agricultural and industrial production. As dogmas are generally unrelated to realities, they cannot possibly go well with practical measures to increase production urgently all round.

The I.M.C. President's address is particularly notable for its discussion of the Plan strategy and the elements of a possible constructive economic policy. While on the subject of Plan strategy, Mr. Somani conceded that it was too late in the day to think of changing the heavy-industry-oriented technique. But it would still be possible, in his view, to aim continuously in future at striking some balance between producer goods and consumer goods industries. A degree of consumption orientation, he rightly said, would be necessary to provide some continuous increases in the living standards. But, at the same time, he could not ignore the need for giving greater attention to some basic or strategic industries which were lagging behind. In this context, Mr. Somani welcomed the recommendations of the Swaminathan Committee for speeding up licensing procedures, especially in 22 key industries, in many of which there was need for establishing additional capacity so as to promote self-sustaining growth. On economic policy in general, Mr. Somani had a number of constructive things to say. Removal of vexatious controls on some commodities other than the recently-decontrolled ones, reorientation of the banking system so as to serve industrial development to a greater extent than at present, elimination of the more serious fiscal drags on capital formation and inflow of private foreign capital, and an end to the ideological prejudice against growth of profits in the private sector—these, in short, are the crucial elements of the "constructive economic policy" suggested by him.

It was, indeed, gratifying that Mr. Asoka Mehta, Deputy Chairman of the Planning Commission, who addressed the Chamber's meeting, recognised the wisdom behind Mr. Somani's plea for an end to the ideological prejudice against growth of profits. He did not mince words when he said that the country needed both a high rate of investment and a high enough rate of profit on the investments made. Adequate margins of profits, he continued, would enable us to make larger doses of investment and would also help identify efficient use of the inputs. He was, therefore, of the view that, in the modern sectors of our economy, including those publicly owned and operated, a 10 per cent rate of return would have to be insisted upon. This heartening approach on the part of Mr. Mehta to profits in both the private and public sectors was, however, accompanied by his not-so-heartening statement that the rate of investment would be significant only if the marginal rate of saving was high and that the impact of such a policy would necessarily fall more on the higher income groups. The development process itself, as also redistributive taxation, would, in his view, have to be such as to restrain the growth in the level of living of the upper classes. Particularly relevant, in this connection, were his references to the growing share of the public sector in the gross national product of some advanced countries and to the need for reducing inequalities of consumption. This is what he said:

"There is a natural concern on your part over the rising burden of taxes. Leaving aside the need to meet the sharp increase in our defence requirements, one should recognise the secular tendency towards increase in the share of Government in the gross national products of a country. Even in countries that take pride in their free economy, the share has steadily grown, and is now quite substantial. In the U.S.A., that share went up from 10 per cent in 1929 to 27 per cent in 1960. It is interesting to find that more than half of the new jobs created since 1950 in the U.S.A. are in the public sector. In West Germany, the share accruing to the Government is even higher—in 1960 it was 32 per cent. If the social security contributions and the taxes for equalisation of war damages were included, the public hand in West Germany had taken, in 1960, full 42 per cent of the gross national product. Irrespective of the ideologies of a country and apart from the particular social philosophy of the rulers concerned, the share of national income accruing to the Government keeps rising, because it is an inescapable element of economic development.

"By accelerating the development process, to the extent possible, and through redistributive efforts, to the extent necessary, care will have to be taken to see that the people at the base of the pyramid of income-distribution achieve greater proportionate gains. In order that the poorest segments of the population may have the needed minimum level of consumption, the degree of inequality of consumption will have to be much less than it is at present. The relative differentials between the consumption of the richest one-fifth and the poorest one-fifth will require, in the course of development efforts, to be narrowed down considerably. It is estimated that, while in the next decade the average consumption of the poorest fifth of the population will have to be doubled, that of the top 20 per cent can be allowed to increase only by 30 per cent. To state the same thing differently, the lowest segment must get an increase of about 40 per cent in the level of living per Plan period, while the benefits at the top echelons have to be considerably lower. Only then can the basic consumption be widely shared."

So without using socialist jargon to justify the growth of the public sector or the adoption of egalitarian tax measures, Mr. Asoka Mehta has pleaded precisely for the things that socialists have always canvassed, but with the refreshing difference that he has recognised the need both for an economic return on investment (whether public or private) and for a measure of improvement in the level of living of even the upper classes. His socialist approach seems to be such as to make it less frightening. To what extent it can be leavened by pragmatism is a matter for study by the business community and the Planning Commission alike.

RAILWAY DEBATE IN LOK SABHA

Since the Railway Budget for 1964-65, presented to the Lok Sabha on the 11th instant, had proposed no increase in fares, one might have thought that the third class passenger would not figure prominently in the subsequent debate. Or one might have expected the Lok Sabha members to thank the Railway Minister for his decision not to increase fares. But, actually, when the three-day debate on the budget began last week, that expectation was belied, for a member of the Congress Party pleaded for an immediate reduction of Rs. 5 per 1,000 kilometres in third class fares. That, he said, would demonstrate that the railways did not always think in terms of upward revision only. Some Opposition members, too, later demanded a marginal reduction in fares in view of the "rosy picture" of railway revenues. There was thus nobody to plead for an increase in the relatively low level of fares so as either to secure more revenues or to discourage unnecessary travel as much as possible. Those members who criticised the two per cent general increase in the supplementary charge on goods freight rates and demanded its withdrawal would have been on stronger ground if they had highlighted the uneconomic level of passenger fares and the extent to which the better results of the goods transport section were making up for the poorer results of the passenger services. That the estimated additional revenue of about Rs. 11 crores from the budget proposals could as well be secured from higher operational efficiency and economies in ordinary working expenses was not sufficiently stressed by any speaker. Nor did anybody summon the courage to suggest that a suitable increase in passenger fares would have been preferable to a freight increase which was bound to raise industrial costs to some extent or other.

The debate in the Lok Sabha was thus disappointing insofar as it pertained to fares and freights. But it was somewhat fruitful in another respect. The need for a co-ordinated transport policy covering rail, road and inland water transport was, for instance, appropriately emphasised by several members. To what extent the railways were adopting an obstructionist or non-co-operative attitude in the matter of road-rail co-ordination was, however, not examined by those members who pleaded for such co-ordination. The fact that the railways had been seeking to attract some high-rated goods traffic from road transport in order to compensate their carriage of low-rated goods on an ever-increasing scale was overlooked in this connection. In fact, the present budget itself has introduced some freight adjustments so as to reduce the rates on certain high-rated commodities which probably go by road now. It would thus appear that the railways continue to think more in terms of road-rail competition than in terms of road-rail co-ordination. The familiar bias in favour of new uneconomic lines to open up backward regions, without any thought for the possibilities of more economic transport services, say, by road, was also in evidence in the speeches of some members. This, in a way, contradicted the approach of those who wisely, though not cogently, pleaded for a co-ordinated transport policy which would secure the right combination of transport services at the lowest cost to the economy.

L.I.C.'S FOURTH VALUATION

The critics of L.I.C.'s third valuation report, published two years ago, will be happy to note that their criticism of the ultra-conservative and stringent basis adopted by the Actuaries of the Corporation has not been entirely lost on the Corporation. For the Corporation's Actuaries have liberalised, albeit slightly, the basis of the fourth valuation, covering the fifteen-month period ended 31st March 1963, the results of which have been just published. By doing so, they have indirectly admitted that the basis of the previous valuation was unduly stringent, especially because this liberalisation is not the result of any significant improvement in the yield on the Corporation's investments or expenses. In fact, the Corporation's experience in regard to expenses was adverse, as compared with that in the period covered by the previous valuation.

As a result of the liberalisation, the Corporation has been able to declare on its policies a slightly higher bonus of Rs. 17.50 per thousand sum assured per annum on Whole Life Assurances and Rs. 14 per thousand sum assured per annum on Endowment Assurances, as compared with Rs. 16 and Rs. 12.80, respectively, at the last valuation. As in the previous valuation, proportionate bonuses have been declared for participating policies of the erstwhile private insurers in accordance with the regulation regarding classification of policies for differential bonus. According to this regulation, participating policies of the erstwhile private insurers and the Corporation are classified into 25 groups. Each group is allotted an index number which varies from 49 to *nil*, with the Corporation having a key index of 10.

While the increase in bonus, which works out to 9.37 per cent, is welcome, it could have been more had the Corporation's Actuaries taken a more rational and realistic basis for the valuation. An examination of the basis adopted by the Actuaries for the present valuation will indicate how excessively conservative their assumptions are, notwithstanding the marginal concession made in assuming, for the present valuation, a fractionally higher rate of interest of 3 per cent, as compared with 2.875 per cent for the last valuation. To assume a rate of interest of 3 per cent, in a period of rising interest rates, when even Government securities fetch, on an average, 4 per cent interest, is being needlessly and unduly cautious. It is true that the rate of interest realised by the Corporation during the valuation period was lower at 4.08 per cent, as compared with 4.14 per cent earned during the preceding biennium. But this figure does not truly reflect the yield position, because, as the Actuaries themselves have pointed out in their report, during the last three months of the valuation period (namely, January, February, March 1963), comparatively few declarations of dividends on ordinary and preference shares are made. (Incidentally, the valuation is for a period of 15 months, due to a change in the accounting year of the Corporation from January-December to April-March.) Further, there is no reason to suppose that the Corporation will not fare better in future, considering that the era of high interest rates has come to stay and that there are now more opportunities for the Corporation to switch over its investments to higher interest-bearing securities than before.

The trend of mortality, the second important factor to be taken into account in valuation, has also been favourable. There is nothing to warrant the conclusion that the favourable experience so far witnessed will not continue. In fact, even at the time of the last valuation, investigations had indicated that, as compared with the mortality basis used in L.I.C.'s premium rates and the 1959 valuation, the actual mortality experience during 1961 of major I.H.O. Units and certain selected Divisions was very favourable. Data pertaining to the remaining Divisions, except one, available since then have, it is said, confirmed this favourable experience. Indeed, one of the proud achievements of the Congress Party ever since it assumed office is the sharp fall in the death rate in the country. Even Prime Minister Nehru has advanced this achievement as one of the benefits of planned economic development. In spite of all this, the Corporation's Actuaries have continued to adopt the same mortality table for the present valuation as for the previous one, namely, the Modified Oriental (1925-35) Ultimate Mortality Table. The reason given by them for this decision is as follows:

"While, in our opinion, the 1961 mortality experience of the Corporation represents the current mortality experience of assured lives in India, we would like to wait till the results of the detailed mortality investigation for the period 1961-64, which the Corporation has already taken in hand, become available, before making any change in mortality basis used in the valuation."

The extent to which the Oriental (1925-35) Ultimate Mortality Table is out of date is indicated by the fact that the investigation into the mortality experience during the year 1953-54 showed that the actual deaths during the period were only 45 per cent of those expected on the basis of the Oriental (1925-35) Ultimate Mortality Table. It is true that the Modified Oriental (1925-35) Ultimate Mortality Table, used in the present and previous valuations, is a lighter mortality table, reflecting, to some extent, the improvement in mortality experience. But even then, actual mortality experience at present is bound to be far more favourable than the one assumed in the modified table. In fact, it is this encouraging trend in mortality, coupled with the higher interest realisation indicated, that constitute the main justification for adopting a more liberal basis for valuation than what the L.I.C.'s Actuaries have chosen to do. The only factor which cautions against a too optimistic view is the rising trend of expenses. The renewal expense ratio of 14.13 per cent in the current valuation is higher than the average expense ratio of 13.66 during the previous biennium (1960-61). But by making the valuation basis unduly stringent because of this one factor, the Corporation is giving itself an indirect inducement to be complacent about expenses.

While the Corporation has thus chosen to be unduly conservative about bonuses, it has increased the dividend paid to the Government. Thus, the Government's share in the surplus revealed by the valuation amounts to Rs. 1.32 crore (for the fifteen-month period), as compared with Rs. 1.72 crore, as for the previous vaulation. Thus, the Government's share, expressed as yield per cent per annum on its investment in the L.I.C., works out to 20.57 per cent, as compared with 15.95 per cent during the biennium 1960-61. The increase in dividend works out to nearly 33 per cent, whereas such in bonus is less than 10 per cent. If the Government were serious about its profession to make life insurance both popular and cheap, so that a wider section of the people can enjoy its benefits, it should have allowed the L.I.C. to be a little more liberal to the existing policyholders. An attractive rate of bonus has two distinct merits. First, it will, to some extent, make good the erosion in the real value of the sum assured at maturity. Secondly, it will induce more people to take out life insurance policies and thereby directly contribute to achieving one of the primary objectives of nationalisation of life insurance.

FOUR STATE BUDGETS

Four striking features mark out the budget estimates of the Andhra Pradesh, Bihar, Orissa and West Bengal Governments for the coming (1964-65) financial year. They are buoyancy of revenues, the persistently rising tendency of expenditure, especially development expenditure, larger provision for Plan outlay, and firm proposals designed to give relief to Government employees in the form of higher dearness allowance, more liberal pensions, etc. There is, however, one difference: whereas the budgets of Andhra, Bihar and Orissa contain no fresh measures of taxation, that of West Bengal includes three new measures together yielding an additional annual revenue of Rs. 190 lakhs (Rs. 100 lakhs from land reforms, Rs. 50 lakhs from increase in registration fee, and Rs. 40 lakhs from higher stamp duty on transfer of immovable properties and similar transactions). The Chief Minister of Bihar, who also holds the finance portfolio, has, of course, made it clear that fresh resources have to be tapped through taxation, loans, and more economical operation of commercial and semi-commercial Government schemes. Could he not have spelled out the specific proposals he has in mind in the budget speech itself, instead of deferring the issue to a later date? Perhaps, he is awaiting a clear indication of the assistance from the Centre (loans and grants) in the Union budget that is to be presented to Parliament on Saturday (29th February) evening.

The following table shows at a glance the budgetary position of the four States, as well as the quantum of Plan outlays fixed for 1964-65, as compared with those (budget and revised) for the current (1963-64) year:

(In crores of rupees)

	1964-65 (Budget)	1963-64 (Revised)	1963-64 (Budget)
Andhra Pradesh:			
Revenue	136.00	129.05	118.36
Expenditure	135.85	126.74	118.26
Revenue surplus (+) or deficit (—)	+0.15	+2.31	+0.10
Plan outlay	75.54	55.27	55.27
Bihar:			
Revenue	107.27*	N.A.	87.80
Expenditure	106.76*	N.A.	85.50
Revenue surplus (+) or deficit (—)	+0.51*	N.A.	+2.30
Plan outlay	78.92	N.A.	50.50
Orissa:			
Revenue	74.53	70.41	67.59
Expenditure	78.45	71.01	67.15
Revenue surplus (+) or deficit (—)	—3.92	—0.60	+0.44
Plan outlay	61.70	N.A.	29.50
West Bengal:			
Revenue	135.52	128.64	117.06
Expenditure	129.91	120.83	109.79
Revenue surplus (+) or deficit (—)	+5.61	+7.81	+7.27
Overall budgetary position	—2.58	—2.03	—10.72
Plan Outlay	77.05	70.60	64.53

* The estimates cover the consolidated fund.
N.A.—Not available.

It will be seen from the above figures that buoyancy of revenues is expected to be well maintained during the coming year. The actual increase (as compared with the revised estimate for 1963-64) anticipated is Rs. 7 crores in the Andhra and West Bengal budgets and over Rs. 4 crores in the Orissa budget. Revenue estimates in respect of Bihar are not available. Expenditure, too, shows a persistent tendency to rise, the expected actual rise being Rs. 9 crores in the Andhra and West Bengal budgets and Rs. 7 crores in the Orissa budget.

The revenue surplus is small in the case of Andhra (+Rs. 15 lakhs) but is pretty large in respect of West Bengal (+Rs. 5.61 crores). The Orissa budget shows a big revenue deficit of Rs. 3.92 crores. The overall surplus in the consolidated fund of Bihar is Rs. 51 lakhs. The revenue surplus of Andhra is, however, fictitious, in that it will, it is said, be converted into a deficit of Rs. 1.79 crore as a result of an extra expenditure of Rs. 1.94 crore needed to cover the increase in dearness allowance to low-paid employees drawing a monthly salary of upto Rs. 300 and extension of compensatory allowance to taluk headquarters with effect from 1st April 1964. Adjusting the revenue surplus of Rs. 5.61 crores in the West Bengal budget against the capital deficit of Rs. 8.19 crores, there remains an overall deficit of Rs. 2.58 crores. The major part (Rs. 1.90 crore, to be precise) of this deficit is to be covered by the three fresh tax measures mentioned earlier and another Rs. 11 lakhs will be drawn from the opening cash balance, with the result that there is an uncovered deficit of Rs. 57 lakhs. The Chief Minister of Orissa, Mr. B. N. Mitra, who is also in charge of finance, has stated that, though it had been his earnest endeavour to present a balanced budget, it was not possible to do so, in view of the large commitments and the need for improving the living standards of the people. He has justified his decision not to impose fresh taxation by saying that, since the *per capita* income in the State is very much lower than other States, the capacity of people to bear any further increase in the tax burden is limited.

Large provisions, as already stated, have been made in all the four State budgets for Plan outlay. The amount actually earmarked is Rs. 72.54 crores in Andhra, Rs. 78.92 crores in Bihar, Rs. 61.70 crores in Orissa and Rs. 77.05 crores in West Bengal.

The outlay of Rs. 72.54 crores in the case of Andhra is to be met to the extent of Rs. 43.05 crores from Central assistance, the balance of Rs. 29.49 crores being raised through the usual methods of open market borrowings, better collection of existing taxes and economies in current expenditure. Incidentally, the Government of Andhra has decided to sell its investments in industries located outside the State and make the funds available to the Industrial Development Corporation for the promotion of specific projects. It is also considering the question of disposing of its minority holdings in such undertakings as the Azam Jahi Mills. This is undoubtedly a wise decision and the time for implementing it is opportune. The original object in making these investments was to give an impetus to the economic development of the region. By cashing the investments in well developed industrial units, the State can use the resources for establishing new units.

As against the Plan outlay of Rs. 78.92 crores fixed for the year 1964-65, the Bihar budget provides for only Rs. 75.17 crores. Even this provision, according to the State's Chief Minister, cannot stand, unless additional resources are in sight, because additional non-Plan expenditure may have to be incurred to implement such decisions as the State Government may take on the recommendations of the Pay Revision Committee. "As it is," to quote him, "we shall have to consider ways of augmenting our resources even for the next year to raise finances required for the Plan and non-Plan expenditure and in the following years, which will be the last year of the third Plan."

The Plan outlay of Rs. 61.70 crores shown in the Orissa budget includes a sum of Rs. 4.3 crores to be expended on the schemes of the State Electricity Board. The Deputy Chairman of the Planning Commission recently indicated that accelerated Central assistance would be only to the extent of Rs. 5.2 crores and asked the State Government to reduce the Plan outlay accordingly. Alluding to his suggestion, Orissa's Chief Minister has said that, with considerable difficulty, it has been possible for him to limit this expenditure (of Rs. 61.7 crores). He has accordingly requested the Planning Commission to restore the cut in accelerated assistance.

About half the total Plan outlay of Rs. 77.05 crores in the case of West Bengal is expected to be met by way of Central assistance (Rs. 38.80 crores). The balance of Rs. 35.78 crores is to be financed from out of the State's own resources. The Government proposes to raise a loan of Rs. 7 crores from the market during the year 1964-65 to finance the development schemes. The State Electricity Board will also raise a loan of Rs. 3 crores for expenditure on its schemes. So far this has been the only State Government to state specifically the amounts it proposes to obtain from the capital market. As readers are aware, in the coming fiscal year, the States will have to approach the capital market directly, as the Centre is in no mood to repeat again the experiment (tried last year for the second time) of borrowing for the States together and distributing the amount to them.

The Committee on Transport Policy and Co-ordination, set up on 22nd July 1959, with Mr. K. C. Neogy as Chairman who resigned recently, has been reconstituted with Mr. Tarlok Singh, Member of the Planning Commission, as Chairman. The other members of the Committee are: Mr. R. L. Gupta, Principal, Administrative Staff College of India, Hyderabad, Mr. S. Ranganathan, Secretary of the Union Ministry of Industry, Mr. Kripal Singh, member (transportation) Railway Board, Mr. L. K. Jha, Secretary, Department of Economic Affairs, Ministry of Finance, Mr. G. V. Ayyar, Secretary, Ministry of Transport and Dr. I. G. Patel, Mr. K. L. Luthra, Director, Transport Division, Planning Commission, will be the Secretary. The work of the Committee is expected to be completed in four or five months.

LONDON LETTER

CONFRONTATION

MR. MAUDLING'S DILEMMA

(From Our Own Correspondent)

LONDON, 22nd *February*

ELECTIONEERING has caught hold of every aspect of the national life and, even when the Board of Trade chooses January (what better than the first month of the year?) to bring in its up-to-date method of calculating the trade balance, it is accused of playing politics. The truth is the nation this week was in a highly confused state of what is going on in the economy. Last week-end, rumours were afoot—based on the well-known fears of the Chancellor of the Exchequer about a coming wage-cost inflation—that the balance of payments would be taking a turn for the worse earlier than expected. The B.B.C. tried to arrange for the Chancellor of the Exchequer to meet his shadow opposite number in a television interview in what was termed a "confrontation"—a continental expression now infiltrating the English language in a false meaning, in place of the simple "meeting." But the Chancellor said he was too busy at present. The Prime Minister appeared on television later and said the economy was fine and never doing better—there was nothing to worry about at all.

However, the next day, the Board of Trade published the trade figures for January which showed the worst trade balance for one month of recent years. The Chancellor then said he would have his "confrontation" with his shadow opposite next week. In the meantime this week has ended with that half of the nation which follows economic affairs really worried. The "confrontation" between them and the balance of payments is taking place now.

All the economic indicators except these unfortunate January figures are good. The index of industrial production ended last year with a rise of 10 per cent per annum over the last quarter and a rise also of 10 per cent over the figure twelve months previously. The average rise between 1963 and 1962 was 7 per cent, but the average rise over the past two years was only 3 per cent. This sort of improvement did not look like a temptation of providence.

Unemployment

Unemployment this month has dropped under the half-million level and, though the absolute figure seems high, it is dropping at a time of the year when usually it goes up and the general trend during the winter months has been far better than estimated. The signs here point to a coming overemployment, but no one could say that point had yet been reached.

Retail prices have risen one per cent over the past three months and 2 per cent over the past year—but wage-rates have risen more than twice as much.

Everyone has been looking forward to this as a good year—what then has gone wrong with the trade figures?

Trade Gap

In January, exports and re-exports were £341 million, a drop of £30 million on the fourth quarter 1963 average and worse than any time last year, except the summer months. But imports c.i.f. rose to the astonishing figure of £506 mn.— about £100 mn. worse than last year's average figures. Indeed, the crude trade gap was £165 mn., quite enough justification for alarm and despondency. But this was the occasion chosen by the Board of Trade to catch up with reality and to point out that these crude trade gap figures were all wrong. The visible trade gap should be struck after converting the import figures to an f.o.b. basis. Moreover, because of seasonal factors and the varying number of working days, figures should only be compared on a "seasonally adjusted" basis. Thus, in the published figures, there is no trade gap of £165 mn., but "only" one of £72 mn.—the seasonally adjusted figure of the true visible balance. Of course, the Board's calculations are quite correct and it is admirable that they are at last giving a clearer picture to the layman, but, because of the context of events, the Board is being accused of "cooking" the figures for political reasons. Which shows how jittery everyone is becoming.

However, politics apart, the January visible adverse balance was as big as that for the *whole* of 1962 and half as large again as that for the *whole* of 1963. Reproduced in each of the succeeding months, it would give a trade deficit (after allowing for invisible income) for 1964 of £700 mn. or worse. Of course, such figures are so fantastic that one must suspect special factors governing the January figures (last October had an adverse visible balance of £2 mn., November had £19 mn. and December had £13 mn.—a quarterly average of £12 mn. per month). Thus, the expectation is that the February figures will show a surplus.

But, however much one may discount the January figures, the adverse balance cannot be eliminated. It is far too big. Something is getting out of joint and the suspicion is that the anticipated import boom has come along both more quickly and more strongly than even in Mr. Maudling's nightmares.

This has led to a general disposition to commiserate with the Chancellor for now being landed with a most unenviable task. He has a duty to keep his party as popular as possible till the election and he himself had wanted that to be in March. Now he cannot avoid his other duty to the nation to take steps in his April budget to anticipate a balance of payments crisis. His task is to keep production and employment high, without a heavy adverse trade balance. That means cutting the top off spending to avoid inflationary pressure on prices and wages. He must control the economy without damping it down. He is being urged to put Bank Rate up and to raise indirect taxation as a "regulator." But whatever he does must not look like an emergency "stopping" of the economy or he will doom his party at the election. Will he have the courage and will he be allowed to apply the necessary controls early and gently?

LETTER TO THE EDITOR

LAKDAWALA COMMITTEE REPORT

The Publicity Officer, Millowners' Association, Bombay, writes:

Your editorial of 8th February 1964, entitled "An Unwise Decision," has come as a great surprise to us. Your attack on the employers, and more particularly on this Association, concerning their attitude to the Lakdawala Committee Report and the State Goverment's action on it is evidently based on a perfunctory study of the issues involved, as you yourself admit that you did not have the full text of the Committee's recommendations when you wrote your editorial.

It is unnecessary to remind the Editor of a specialised journal like *Commerce* that the capacity of the industry to pay is a crucial consideration when giving higher wages to the workers. This, indeed, is the practice invariably adopted by the Industrial Court in its awards. At the meeting of the Standing Labour Committee, held on 27th December 1963, the then Union Minister for Labour, Mr. Nanda, urged that the matter relating to dearness allowance should be settled through negotiation between employers and workers. If no agreement could be reached through negotiation, then the parties should seek to arrive at a settlement through arbitration.

This is precisely what the employers, including the millowners, of Bombay suggested to the State Government. They urged that, before sanctioning a higher dearness allowance on the basis of the readjusted consumer price index, as recommended by the Lakdawala Committee, the Government should refer the whole issue to the arbitration of a High Court Judge. But their very valid plea for such action was ignored. If the procedure, recommended by no less a person than Mr. Nanda, had been adopted, it would have given an opportunity to the cotton mill industry of Bombay to prove that any sharp increase in the dearness allowance was clearly beyond its capacity to pay, what with the almost unlimited calls that were being made upon its resources. The industry would also have demonstrated that the system of linking the dearness allowance to the ever-rising index number would inevitably aggravate its financial embarrassment.

One cannot resist the feeling that the Bombay cotton mill industry is being treated as the Cinderella of the country's industrial sector. No burdens are considered too heavy to be imposed on it. By a stroke of the pen, its liabilities have been enhanced by more than Rs. 5 crores a year—a staggering sum indeed. Like the rest of the industry, the Bombay cotton mills are required to make a bigger contribution to the workers' provident fund scheme with effect from December 1963. The other additional liabilities arise from the grant of more leave facilities to the workers by an award of the Industrial Court and the rise in the dearness allowance following the Lakdawala Committee's recommendations.

There is no basis for the assumption that the industry is capable of bearing such burdens. The study of industrial profits, published by the Reserve Bank of India, disproves the belief about the mill industry's abounding prosperity. As the Bank's analysis of company finances for 1961 reveals, the cotton textile industry was able to secure good returns due to "substantially improved offtake." It further discloses that "the larger income of the companies through higher sales was, however, accompanied by a continued rise in their manufacturing expenses."

One of the reasons for the rise in costs was the increase in the wage bill. To quote the Reserve Bank Bulletin again: "Among the other major items of expenditure, salaries and wages (including bonus) of the 1,333 companies rose by Rs. 29 crores or by 7.5 per cent as against an increase of 9.5 per cent, for 1,001 companies in 1960. As in the previous year, the share of the cotton textile industry was the largest, accounting for Rs. 8.5 crores or 29 per cent of the total rise." As the largest textile centre in the country, Bombay had to bear a big part of this burden.

The point for consideration is whether it is prudent to add to cost inflation by continually increasing the burdens on the industry. Your contention that the increased dearness allowance will put up the price of Bombay mill cloth by "*less than two naye paise per metre*" *overlooks* the fact that Indian cloth is already being priced out of the world market. And the Bombay mills account for more than 50 per cent of the country's export trade in textiles. Again, the existence of the voluntary price control scheme prevents the mills from passing on the additional burden to the domestic consumer. This being the position, it is wrong to belittle the complaint of the industry about its growing burdens.

While, on the one hand, the Central Government appoints an expert body to recommend the means for lightening the burdens on the export industries, on the other the State Governments saddle them with additional liabilities. Instead of pleading for a more rational export policy, you have unfortunately chosen to bark up the wrong tree.

The charge against the millowners about the alleged manipulation of cloth prices is ill-informed and baseless. It is well-known that revised prices are approved by the regional committees and require the sanction of the Textile Commissioner before they are introduced.

While apologizing to you for the length of this reply, we cannot conceal our disappointment at the stand taken by you on the vital issue under discussion. Instead of publishing such an ill-considered editorial, you would have worthily upheld the great traditions of your journal for balanced writing if you had presented your views on the question without passion or prejudice.

• • • •

[*In the article in question, we made no "attack" on employers, in general, and the Bombay millowners, in particular. We only gave a piece of advice to them, which, in substance, is that they must move with the times. If ability to pay is an important consideration with employers, the ability to exist at least in tolerable living conditions is an equally vital consideration with workers. If our suggestion to Bombay millowners is distasteful to them, it does not necessarily mean that our article is ill-considered. The main issue is whether or not the Lakdawala Committee has been fair in correcting and "modernising" an old and out-of-date basis of compiling the cost of living index. The arguments of the Millowners' Association on this issue are not convincing to us. In the last 18 years, there has not been a single burden pertaining to workers which has not been opposed by the millowners on the ground that it is unbearable. Yet the cotton mill industry is alive and kicking, especially in Bombay.*

This writer, as a consumer, knows to his cost to what extent the so-called gentlemen's agreement on cloth prices has protected consumers. We dare say that the Publicity Officer of the Bombay Millowners' Association, too, must be aware of this, unless he has been clothing himself and the members of his family with gift parcels.—ED.]

POINTS OF PROGRESS IN LATIN AMERICA

By Questor

IT is likely to be some time yet before the six members of the European Community get down to serious discussion about the establishment of a common currency. The fact, therefore, that the economic ministers of that other Common Market—the Central American one comprising Guatemala, Honduras, El Salvador, Nicaragua and Costa Rica—were able to meet in mid-February to discuss the merging of their five national currencies seems all the more striking evidence of the progress being made towards economic integration in a much less sophisticated part of the world.

The very fact that the economies of these countries are relatively undeveloped—they are only now reaching the stage of industrialisation reached in other parts of Latin America several decades ago—has helped them to move forward together. The clearing house for payments within the region is working well, good progress has been made with trade liberalisation, and inter-regional trade in 1963 was about a third higher than in 1962.

That economic integration in Central America should be proceeding successfully after several unsuccessful attempts at political unification is an encouragement to those who are pressing for a similar but much more ambitious operation in Latin America generally. It has been suggested, in fact, that the Central American five (together with any neighbours which may join them) might eventually become a single member of the Latin American Free Trade Area. L.A.F.T.A. (its members are Argentina, Brazil, Chile, Colombia, Ecuador, Mexico, Paraguay, Peru and Uruguay) was established by the Treaty of Montevideo in 1960 and came into operation in mid-1961. The abolition of tariffs on internal trade is proceeding steadily and has created little real difficulty.

But it is also producing as yet relatively little benefit to the area. The scope for expanding traditional trade—mainly foodstuffs and raw materials—is severely limited both by the size of national markets and by national programmes of agricultural development. A major expansion in internal trade, it is generally realised, must depend on manufactured goods. But this raises serious practical problems, since the members are at different stages of development and have different national interests to protect. Argentina, Brazil and Mexico are much more industrialised than the rest; Ecuador and Paraguay are so far behind that they can be allowed special measures of protection. The other four, however, are in a transitional state, and it will not be easy to establish a satisfactory mechanism for dealing with them.

It is becoming accepted, in fact, that L.A.F.T.A. in its present form is not sufficiently ambitious to enable its members to overcome their economic difficulties and that some much closer variety of economic and social unification may be necessary. It is for this reason that more and more attention is being paid to the experience of integration recently acquired by the European Community. For example, a good deal of discussion is still going on about the desirability of establishing a payments union, which would imply credit facilities between central banks and might eventually lead to a common currency. The very useful part played by the European Payments Union after the war is brought forward as an argument in support of this.

This trend is also apparent in the development of financial relations with the rest of the world. Latin American economists—notably Sr. Herrera, the President of the Inter-American Development Bank—have been stressing that the best use will be made of development aid only if it is distributed regionally rather than nationally. They have also suggested that the initial failure of the Alliance for Progress lay in the fact that it was not a regional alliance but a collection of bilateral agreements. The U.S. agreed last autumn that a new co-ordinating committee (headed by a Latin American) should be set up to submit to Washington a regional programme of projects deserving assistance. Since then, however, the attitude of the Congress towards foreign aid of all kinds seems to have become noticeably stiffer.

It is for this reason, perhaps, that Latin America is looking more towards Europe for development capital. The growth of interest is mutual: European businessmen and Governments are taking a growing interest in Latin America. An international investment company is being formed to channel U.S. and European private capital into the area, in consultation with the I.A.D.B., which may serve a valuable role in the future. Several Latin American countries know from hard experience that the financing of industrialisation on short-term credits can aggravate rather than ease their balance of payments problems. The establishment of export industries financed by foreign investments rather than loans is a more fruitful approach, provided that fears of economic domination, on the one side, and expropriation, on the other, can be removed.

Europe can well afford to take over from the U.S. a larger share of the burden of foreign aid. Her new interest in Latin America can be of mutual benefit, particularly if the bulk both of public development and private investment can be channelled through regional bodies like the I.A.D.B. The idea of economic integration, which is catching on more successfully among economists and businessmen than among politicians, will become more popular if regional organisations are seen to be doing a job which national Governments are unable to do. And there is a good chance that European funds will be channelled through such organisations.

Latin America is going to have a good deal to say for itself at the forthcoming U.N. Trade Conference at Geneva. A joint policy statement has already been drafted for submission to the conference which demands special trade concessions for underdeveloped countries. And the conference has been convened, it is worth remembering, by Dr. Prebisch, who for 15 years headed the U.N. Economic Commission for Latin America.

STATE FINANCIAL CORPORATIONS—II

THEIR WORKING AS DEVELOPMENT BANKS FAVOURED

IN the first instalment of this article last week, we considered some important aspects of the review made and remedies suggested by the Working Group on State Financial Corporations in order to improve the usefulness of the Corporations for facilitating accelerated development of industries. The article largely dealt with the prospects for the S.F.Cs. It is now proposed to review the suggestions for promoting S.F.Cs as regional development banks—a new perspective which gives meaning and significance to the wide variety of recommendations of the Working Group.

The recommendations fall into two broad groups: First are those that are concerned with the task of increasing the resources of the corporations; it has for long been known that lack of adequate resources—both rupee and foreign exchange—have imposed limitations not only upon the quick expansion of the volume and activities of the corporations, but also upon the development of the full range of a wide variety of functions and diversification in their business operations. The second group of recommendations deals not only with the utilisation of these new resources, but also with the changes necessary in the attitudes of the corporations towards prospective borrowers. This task involves technical, as well as organisational, problems and relaxations in the unduly restrictive provisions of the statute governing the working of the corporations, consistent with the safety and profitability of their resources. All pioneering ventures are full of risks and hazards, and the new tasks expected of the corporations—laying firm foundations of sound principles and good procedures—in evolving techniques of industrial financing appropriate in the circumstances and realities of the country, are sure to offer a challenging task.

The Working Group has looked upon the corporations as a unique set of institutions bearing close resemblance to development banks set up in foreign countries, though there are significant differences mainly in the environment in which they have to function—they have to foster industrialisation in the small-scale and medium sized sectors along the general lines of planned economic development. The original idea of a separate industrial corporation for each province goes back to the early thirties, when the Central Banking Enquiry Committee reported—those were the times when Indian enterprise was making a debut on the industrial scene, but the Indian capital was stagnating.

Wide Range of Functions

Development banks the world over offer a variety of patterns in their organisation, ownership and operations, and S.F.Cs are a part of the pattern, though unique in their own way. A very considerable range of their functions is influenced both by the State Governments under the law governing the corporations and by the socio-economic features of the underdeveloped economy. These State-sponsored statutory institutions largely employ the official funds supplied by the State Governments or the Reserve Bank with the additional liability upon the States for a guarantee of the principal, dividend and interest: with so much financial stake, it is hardly surprising that the States have a considerable say not only in matters of policy but also in the management of the corporations, through nomination of directors, managing directors and chairmen, through the issue of directions to auditors of S.F.Cs for special audit, and through the issue of instructions based on the detailed inspections of the corporations by the Reserve Bank. The corporations have special powers for recovery of loans to industries which they have financed, but there are limitations upon their dealings with many industrial activities such as housing, trading, some service industries, plantations, etc. It is as a natural consequence of this set-up that the statutory requirements for an adequate security have been rather strictly interpreted.

The Working Group has rightly pointed out that, in many ways, the S.F.Cs are in their embryonic stage: one of the reasons for their lack of resources is that they have yet to develop organic links with the rest of the capital market in order to ensure a free flow of resources (as also of expertise) between themselves and the latter.

At the end of March 1963, the total resources of S.F.Cs amounted to Rs. 34 crores—Rs. 14 crores owned and Rs. 20 crores borrowed. Having regard to the size of owned resources, the borrowed resources are inadequate. The Working Group points out that the *character* of borrowed funds also left much to be desired: unlike many other development banks both in India and abroad, the corporations had no foreign exchange resources, and did not obtain any long-term loan from the Government at concessional rates. The Working Group has done well to emphasise the importance of these sources of funds for developing the corporations and their activities. The Group has also suggested a relaxation in the borrowing limits of the corporations from 10 times to 15 times the paid-up capital and reserve funds. Stronger capital base and larger internal reserves are essential for absorbing the shocks of likely losses as a result of the new lines of business and types of activities, like underwriting and equity financing that may be developed by the corporations. According to the Working Group, a higher rate of dividend and improved marketability of the corporations' shares would certainly attract more capital from private institutional sources such as the scheduled banks and insurance companies (whose share holding at the end of March 1963 was 33 per cent), and reduce their dependence upon the State. For the purpose of enabling the corporations to build up their reserves, the Group has (1) suggested that the States and the Reserve Bank may forgo their share of dividends, (2) proposed further liberalisation of tax concessions and (3) pleaded for a writing off of the accumulated subvention liability.

Price of Deposits

All these recommendations are good so far as they go; but they do not go far enough. The Working Group, therefore, attaches great importance to the corporations' ability to raise deposits from the public as well as from Local bodies, municipalities, etc. Raising funds by deposits is a more convenient and economical way of avoiding the considerable overhead expenses associated with bond issues. The acceptance of deposits with its steady inflow of funds is advantageous over the raising of funds in bulk by bond issues. Moreover, the deposits have also the advantage of flexibility in the rates of interest. In order to encourage the growth of deposits with the corporations, the Group has made several recommendations for permitting the corporations to receive deposits up to twice their paid-up capital, for making deposit receipts assignable without charging stamp duty and for an all-India centralised publicity campaign. But the most important of them are that the State Governments should guarantee all deposits and that the corporations may be allowed to pay up to 25 nP per cent per annum more interest than that paid by the medium-sized banks under the Inter-Bank Agreement. This recognition of the efficacy of higher interest rates in attracting more deposits by the Working Group is quite refreshing at a time when the bankers are still reluctant to move away from their self-imposed traditions: it is nevertheless odd that, once having recognised the efficacy, they should have regarded the rates of interest offered by the M.I.I.C. "rather high," in spite of its outstanding performance in raising deposits to the tune of Rs. 8 crores. The accompanying Table I shows the rates of interest on deposits fixed under the Inter-Bank Agreement, those paid by M.I.I.C. and those proposed by the Group: they strongly suggest that having broken away from the Agreement rates (although it is described as a "closer relationship" with it), the Working Group should have gone all the way with M.I.I.C. rather than the half-way house of its recommendations.

TABLE I—*Rates of Interest on Deposits*

Period	Rates of interest on deposits per cent.		
	Under Inter-Bank Agreement*	Paid by M.I.I.C.	Proposed by Working Group for Corporations
Up to 1 year	3.75	4.50	4.12
Between 1-2 years ..	4.00	4.75	4.37
2-3 years	4.25	5.00	4.62
3-4 years	4.25	5.25	4.62
4-5 years	4.50	5.50	4.87
Over 5 years	5.00	5.50	5.37

* These are standard rates. Medium banks (deposits between Rs. 25 and Rs. 50 crores) and small banks (deposits between Rs. 10 and Rs. 25 crores) can pay ¼ per cent. and ½ per cent. above the standard rates.

With these additional resources, what are the corporations expected to show? They will naturally increase the volume of their loan assistance to the small-scale and medium-sized industries: but the test of usefulness of a development bank lies only partly in the *volume* of its assistance. A development bank is not meant to provide the entire finance required for development, but to supplement the other sources, by supplying such marginal amounts that would fill the gap and to act as catalysts by providing incentives for mobilisation of larger resources from other sources. Thus, more important than the volume of direct assistance provided by the corporations are the total amount of capital contributed by *other* sources for every rupee supplied by the corporations, and the *number* of enterprises they assist, particularly, the number of new projects and new entrepreneuces they foster.

Thus, as development banks, the corporations will have so take a keener interest in *new* ventures and assist the would-be entrepreneurs in the preparation of suitable projects, especially in relation to their financial and commercial aspects, but also in relation to their technical aspects, so as to launch such prospective industrialists on an industrial career. For this purpose, the corporations will have to associate themselves with official and non-official agencies which undertake research and surveys with a view to uncovering fresh investment opportunities.

Security Requirements

Relaxation of security requirements and criteria by the corporations has been the most important suggestion of the Working Group in order to enable the corporations to undertake greater risks of development banking. The statutory requirements of a *sufficient* security has in the past led the corporations to obtain maximum security and to adopt a rigid attitude, thus reducing the range of flexibility and forcing them to exercise excessive caution. In this connection, a number of practical suggestions made by the Group for freeing liquid assets from mortgage charge, for a more realistic valuation of securities, for removal of difficulties of title to land in certain areas, etc., are bound to be very useful: but much more important than these specific suggestions is its emphasis on the need for a change in the attitude of the corporations towards the borrowers and security. According to the Group, the corporations, in their financing decisions, should lay more stress on the prospective profitability of the project to be financed than on security. If they are convinced that the project is economically viable, technically sound and the borrower is a man of character and integrity, a less rigid attitude regarding the nature and extent of security and margin requirements may be adopted.

Emphasis on security and assets is important and necessary: under the best of the conditions and in spite of the best intentions, judgments *do* go wrong at times, and without an appropriate security, the corporations would have nothing to fall back upon. But the security should be regarded as a safety net in the circus arena: its very presence is enough to the operators: its use hardly becomes necessary. No good bank manager relies solely upon his security, for he knows that the decision to enforce a security is bound to bring distasteful consequences both to the lender and the borrower. Security is the remedy of the last resort: more and more, lending institutions have come to rely upon the prospects—the running and earning capacity. The "going concern" approach which guides the bank managers providing working capital loans, has much greater relevance and usefulness to term-lending operations.

Challenging Task

This change of attitude does not involve a total abandonment of all caution: it only means that calculated risks can and must be taken. Every banker knows that calculated risks, taken at some crucial moments in the past on the basis of sound judgment and discretion, have nurtured some of the accounts which have grown into his best customers today. Risk bearing is a part of the term-lending business: the Working Group has boldy faced this problem and has pointed out that, unless the corporations face the challenging task of promoting rapid industrialisation and meet promptly and adequately the changing needs of a growing economy, their story will be a story of lost opportunities.

The main aim of the corporations should, therefore, be to see that the units they assist grow to become viable in due course. The capital resources of the country are too scarce to be wasted on inefficient units. The corporations should, therefore, equip their staff and management not only for the purpose of appraising term-loan applications with imagination, vision and promptitude, but also for providing post-credit services, particularly, to ensure that the borrower makes use of the latest and most modern productivity techniques and knowledge. In fine, the corporations should not regard themselves as mere suppliers of credit; they should cultivate an integrated approach towards the problems of development.

Finally, the integrated approach must be supplemented by a diversification in the activities of the corporations themselves. Although a major part of their operations will necessarily be in the form of lending, as development banks, the corporations must provide capital in such forms as may be required. Debenture-financing, equity-investment and underwriting are significant fields of activities which involve a much closer form of relationship that require continuous and intimate knowledge of each other as well as of capital market. Greater interest and activities by the corporations in these directions will, in addition to meeting the needs of the particular industries financed, broaden the existing and potentional investor participation in industry and thus help the capital market of the country to develop and grow.

NATIONAL AND GRINDLAYS BANK LTD.

The Directors of the National and Grindlays Bank Ltd have recommended a final dividend for the year to 31st December 1963 of 7 per cent, less English income-tax at the rate of 7s. 9d. in the pound, payable on 3rd April next. Together with the interim dividend paid on 4th October 1963, it brings the total for the year to 14 per cent, less tax. The total for 1962 was 16 per cent, as, with the final dividend of 7 per cent, the Directors had also recommended payment of a centenary bonus of 2 per cent, less tax.

STATE BANK OF SAURASHTRA

PROGRESS SATISFACTORY

SATISFACTORY progress has been made by the State Bank of Saurashtra (*General Manager*: Mr. S. C. Nagar, Bhavnagar) during the year ended 31st December 1963. Its gross income has gone up from Rs. 83.48 lakhs to Rs. 102.11 lakhs, and the bulk of the increase has come from interest and discount earned aggregating Rs. 83.70 lakhs, as against Rs. 69.60 lakhs a year before. Expenses, too, have increased considerably, especially staff expenses which have moved up from Rs. 26.50 lakhs to Rs. 34.41 lakhs. In spite of this, however, the declared net profit has improved to Rs. 5.18 lakhs from Rs. 4.74 lakhs to which level it had dropped in the previous year from Rs. 7.16 lakhs the year before.

The transfer to reserve fund, out of the year's profit, has been maintained at Rs. 2.50 lakhs. But the provision for bonus to staff has been raised from Rs. 2.10 lakhs to Rs. 2.65 lakhs and a sum of Rs. 25,000 has been carried to staff welfare fund. These appropriations leave a surplus of Rs. 47,119 which is carried forward, as against Rs. 69,256 brought in.

The following comparative table indicates the progress made by the Bank in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960*
Interest and discount	83.70	69.60	65.84	46.96

Cash	332.11	107.01	137.85	152.66
Balance sheet total	19,26.82	18,44.52	16,58.56	18,66.97
Ratio to deposits of—	%	%	%	%
Advances	44.6	59.2	53.6	56.2
Investments†	46.3	38.9	43.7	40.7
Cash	21.1	7.2	10.1	11.4

* For a period of eight months only.
† Unencumbered portion only.

It will be seen from the table that advances have dropped sharply during the year from Rs. 884.59 lakhs to Rs. 700.36 lakhs and the credit ratio has declined by more than 14 points. This is, however, the year-end position, and the setback, according to the Directors, is due mainly to a corresponding fall in the borrowings of the Land Mortgage Bank. The ratio of average advances to average deposits shows only a minor setback from 49.53 per cent to 48.97 per cent.

Deposits as at the end of the year are substantially higher at Rs. 15.71 crores, as compared with Rs. 14.94 crores a year before. With this expansion, borrowings from other banks have receded from Rs. 119.80 lakhs to Rs. 96.37 lakhs, and this entire amount (as against only Rs. 50.92 lakhs a year before) is by way of unsecured loans. Since advances are said to have fallen only near the close of the year, the total of cash balances has more than trebled from Rs. 107.01 lakhs to Rs. 332.11 lakhs and, as a ratio to deposits, stands at 21.1 per cent, as against only 7.2 per cent a year before. Investments show an increase of some Rs. 26 lakhs to Rs. 727.94 lakhs, but, since their entire total is unencumbered as against a part of it in the previous year, their ratio to deposits has jumped up from 38.9 per cent to 46.3 per cent. The Bank's paid-up capital of Rs. 100 lakhs remains unchanged. With the transfer of Rs. 2.50 lakhs from the year's profit, the reserve fund now stands at Rs. 62.50 lakhs. The ratio of these "own funds" to deposits works out to a satisfactory figure of 10.3 per cent.

During the year, the Bank took over Government work at 12 more branches and established currency chests at 11 more branches, bringing the total to 31 and 30 branches, respectively. It also opened small coin depots at four centres. It will shortly be establishing currency chests and conducting Government work at one more centre, namely, Gondal.

The total number of offices of the Bank at the end of the year stood at 73, as against 67 a year before, and comprised 45 branches and 28 pay offices, as against 37 branches and 30 pay offices in the previous year. Efforts are being made to obtain suitable buildings at Dwarka and Ranavav where new branches are proposed to be opened. The question of upgrading the three pay offices at Mangrol, Vanthali and Vadia is also under consideration. A branch of the Bank is due to be opened shortly at Ahmedabad.

The number of small-scale units assisted by the Bank rose from 66 to 89 and the total limits sanctioned to them went up from Rs. 43.41 lakhs to Rs. 53.71 lakhs. Progress in this field is expected to improve after a field survey, now in progress, is completed. Special facilities in respect of discount and collection of cheques and drafts and remittance of funds continued to be extended during the year on concessional terms to the District Co-operative and Land Mortgage Banks. Further, the Bank also maintained its support to the Land Mortgage Bank by subscribing to its debentures and by granting advances against such debentures. The Bank's holdings of the Land Mortgage Bank debentures increased during the year from Rs. 78.18 lakhs to Rs. 89.18 lakhs. The number of warehouses of the Gujarat State Warehousing Corporation and the Central Warehousing Corporation within the operational jurisdiction of the Bank increased during the year from three to ten and the total credit limits sanctioned against warehouse receipts rose sharply from Rs. 5.58 lakhs to Rs. 18.08 lakhs.

It is reported that rumours are circulating in the Bombay markets to the effect that it is the intention of the Government of India to demonetise notes of the denomination of Rs. 100. These rumours, according to Mr. P. C. Bhattacharyya, Governor of the Reserve Bank of India, are entirely baseless.

National Income of India

Financial year ended March	National Income (Rs. crores)		*Per Capita* Income (Rs.)		Index Numbers of National Income (1948-49=100)		Index Numbers of *Per Capita* Income (1948-49=100)

Notes:—

1. Production figures relate to agricultural year, July-June; 1951 figures correspond to 1950-51, and so on for subsequent years. These estimates upto the year 1955-56 are adjusted with 1956-57 revised production as the base. Figures for 1956-57, 1957-58, 1958-59 and 1959-60 are based on Revised Estimate, for 1960-61 and 1961-62 on Partially Revised Estimate and for 1962-63 on Final Estimate of *production*.
2. Net production has been taken as 87.5 per cent, of the gross production, 12.5 per cent, being provided for seed requirements, wastage and non-food purposes.
3. Population figures relate to mid-year and exclude Sikkim. For the years 1951 to 1962, these are as framed by the office of the Registrar General of India. Figures for 1963 are estimates.

* Provisional.

COLLECTIVE BARGAINING IN INDIA

AN ANALYSIS OF THE CAUSES FOR ITS POOR USE

THE labour policy as laid down in the Five-year Plans envisages only a marginal role for the State in labour-management relations. The accent, at least in theory, is on settlement of all disputes between labour and management by mutual negotiation and collective bargaining. "The workers' right of association, organisation and collective bargaining," the authors of the First Plan emphatically assert, "is to be accepted without reservation as the fundamental basis of the mutual relationship." The State is expected to come into the picture only when the parties fail to establish a basis for a mutually beneficial relationship. Reiterating this principle, the authors of the third Plan say: "When the efforts of the parties fail to secure an amicable settlement of industrial disputes, the Government have assumed powers of intervention." It is thus clear that encouragement of peaceful settlement of industrial disputes through mutual negotiation and collective bargaining is the corner stone of the labour policy. But has Government's policy conformed to this principle? This question could be answered only by assessing the actual role played by collective bargaining in settling industrial disputes.

A recent study of 142 collective agreements reached in various industries carried out by Employers' Federation of India came to the conclusion that, "as a factor in the determination of wages and working conditions of industrial workers, the influence of collective bargaining can be considered marginal." What are the reasons for this poor use of collective bargaining? Has State intervention helped or hindered collective bargaining? How can collective bargaining be encouraged and strengthened? How gaining be encouraged and strengthened? These and other related questions have been ably analysed in a paper on the problems of collective bargaining presented by Mr. P. N. Krishna Pillai, Personnel Manager of the Indian Aluminium Company Ltd., Calcutta, at the fourth annual conference of the Indian Institute of Personnel Management which concluded its three-day session at Jamshedpur this week. Mr. Pillai has been a keen observer of industrial relations and has had practical and intimate knowledge of labour problems. His observations are as perceptive and penetrating as they are objective.

Merits of Collective Bargaining

The author of the paper starts with two posers: (1) Is collective bargaining the best method for achieving industrial peace? (2) What has been the experience of industrial concerns practising collective bargaining? Dealing with the first question, the author lists the merits of collective bargaining as compared with other methods of settling industrial disputes. To quote him:

"First, a mutually negotiating relationship in industry contributes to better understanding and initiative. The parties that negotiate an agreement do so with internal knowledge of industry. Secondly, in the process of collective bargaining, there is the recognition of the status of workers and their organisation which is one of the major psychological factors in motivating the work people. Thirdly, the parties, as already stated, have a sense of participation in decision-making regarding terms and conditions of employment. Fourthly, the process of collective bargaining ushers in an attitude of mind on both employers and workers to understand each other's points of view. Fifthly, industrial administration in a concern with collective bargaining relationship has to be qualitatively superb and this leads to better management practices in all spheres. Above all, the genuine co-operation of workers to achieve higher productivity can be gained only by mutual understanding through a process of collective bargaining"

These are only a few of the superior advantages claimed for collective bargaining. Although collective bargaining implies respect and regard for trade unions and signing of a comprehensive agreement regarding wages, hours of work and conditions of employment, it is much wider in scope. Apart from laying down wages and conditions of service, an agreement usually provides for continuous joint consultation through joint consultative bodies like the Works Committees and Production Committees. The heart of any contract jointly negotiated is a grievance procedure for settlement of day-to-day problems. The recognition of unions and consequent partnership in negotiation and consultation infuse a sense of responsive co-operation in them. The Unions become strong organisationally and financially as a result of the new status achieved through collective bargaining. Joint consultation and joint participation in decision-making in various spheres create an identity of interest. Both employers and employees realise in such a situation that, after all, it is the prosperity of the enterprise that is the source of their security, sustenance and advancement. It will thus be noted that collective bargaining benefits not only workers but also employers.

In other democratic countries, Mr. Krishna Pillai points out, recognition of the status of unions and the achievement of the results through collective bargaining have their origin in the recognition of each others' strength by both employers and trade unions. This realisation is, however, possible only in a situation where the workers have the freedom to strike and employers have the freedom to lock out. This trial of strength has, after some time, instilled in their minds respects for each others point of view and a belief in the policy of co-existence for the good of the organisation as a whole. In such a climate, collective bargaining took deep root in industries. Although Government controls and minimum labour legislation existed in those countries, every effort was made by the State to make mutual negotiation between employers and employees a working reality.

Three Types of State Intervention

In India, however, things have been different. The State believes and rightly too, according to the author of the paper, that it is not advisable to give the employers and trade unions such unfettered rights. Therefore the State decided to step in in the interest of preventing work stoppages which might undermine planned development on which it has embarked. State intervention is in three ways: (1) through conciliation and compulsory adjudication machinery, (2) through labour legislation, and (3) through decisions taken by tripartite bodies. Even in countries where collective bargaining has fully developed, these three types of State intervention do exist. Then why is it that collective bargaining has not strengthened in India, though it is the sheet-anchor of policy? The reason, according to the author of the paper under review, is simple. It is that, while in other countries conciliation, arbitration legislation and formulation of national labour policies, are ever subject to the paramount goal of achieving industrial peace through mutual employer-employee negotiation and internal settlement of differences, in India all these place, in some way or other, obstacles in the way of achieving this goal. In the U.K., for example, even during the war years, when compulsory adjudication was legally obligatory, the stress was on voluntary negotiation and collective bargaining. Compulsory adjudication was only a stand-by. Here, in India, unfortunately, it is the other way round, points out Mr. Pillai. He goes on to point out that the conciliation machinery conceived in this country is itself an instance in point. In countries where voluntary joint negotiations are the pattern of industrial relations, this machinery is pre-eminently intended to help the parties to achieve the objective. No conciliation takes place before the parties exhaust the procedure laid down for joint negotiation or consultation. In India, on the other hand, no uniform pattern has been evolved for the working of the conciliation machinery in the various States. While in some excellent traditions are being built up, in some others the approach is to a great extent legalistic and even authoritarian. This is not conducive to the promotion of collective bargaining. In the U.K., the conciliation services even help the parties in unorganised industries to set up joint industrial councils to facilitate collective bargaining. In the Labour Management Relations Act of the U.S., it is specifically laid down that Federal Mediation and Conciliation Services are constituted only to help collective bargaining. If the conciliation machinery in India is properly guided, it can be a source of strength for the development of collective bargaining rather than a source of weakness as it is at present in many States: A tradition should be built up that conciliation services will not intervene in industrial disputes, unless voluntary negotiation fails. It should also be the duty of conciliation officers to build up the machinery needed for collective bargaining at the industry and plant level.

Adjudication

The same is true of the second type of State intervention namely, compulsory adjudication. As a result of compulsory adjudication, many an industrial practice not considered healthy elsewhere has, avers Mr. Pillai, developed in this country. It has been so, because in adjudication persons not concerned with industry lay down standards of behaviour. There are instances where courts have interfered in industrial relations with their own theories as to how production or incentive bonus should be distributed to the various categories of workers and staff. But, as Mr. Pillai rightly argues, these are matters which vary from industry to industry and require, for a satisfactory solution, deep knowledge of the internal working of the industries concerned. Similarly, in various spheres of industrial activity, outside agencies, having no knowledge of the internal working of enterprises, have imposed principles and practices which are not helpful in fostering good employer-employee relations.

This does not mean that Mr. Pillai argues that industrial Courts and Tribunals do not perform any useful role. What he suggests is that they should be properly guided, so that their decisions would not hamper the growth of free and bona fide collective bargaining. He suggests, for instance, that courts and tribunals should decide issues submitted to them for disposal purely on merits and should not take judicial notice of what transpired at the direct negotiation or conciliation stage. If they do, he maintains, the parties will be averse to placing all the cards on the table at the negotiation or conciliation stage and to making reasonable adjustments by way of give and take, which is the very essence of real negotiation or conciliation.

Labour Legislation

The third method of State intervention is through legislation. Every country is duty-bound to undertake minimum legislation to protect the workers from exploitation. Even in countries where industrial relations are dominated mainly by collective bargaining, there are laws to guarantee the right of association, to lay down minimum working hours, to protect women and children working in factories and to extend certain types of social security. But, in India, there has been a plethora of labour laws—an over dose of legislation which has sapped the strength and initiative of trade unions. Though it is the proclaimed policy of the Government to encourage collective bargaining, the use of this method has been made difficult by the interposition of legislation in almost every sphere which are normally covered by collective bargaining elsewhere. Because of this, says Mr. Pillai, the legal minimum especially in such fields as wages, has tended to become the maximum in some industries. On the other hand, some of the conditions fixed by legislation in respect of non-wage items such as leave, over-time, retrenchment compensation, lay off, etc., are the maximum in vogue even in highly industrialised countries. And employers find it difficult to modify this position in the course of joint negotiation. Moreover, there is, according to Mr. Pillai, a wrong belief in this country that every new labour law is a sign of progress and States, therefore, vie with one another to enact more and more laws. Consequently, the initiative and opportunity for deciding the terms and conditions of employment by mutual negotiation is stifled. It is Mr. Pillai's view that, as a result of this policy, it is the workers who lose more than the employers.

Employers Too at Fault

The Government, the author of the paper hastens to add, is not solely to be blamed for this state of affairs. Employers are also at fault. Indian employers, he points out, have yet to realise that trade unions is an institution to be given equal status with their own organisations and that collective bargaining and joint consultations are the proven methods of achieving industrial peace. When the State steps in to lay down by legislation terms and conditions of service, progressive employers and trade unions get penalised. In justification of this conclusion, Mr. Pillai observes:

"In a few companies practising collective bargaining by which productivity has increased and the workers are benefited, they have agreed, by mutual consent, that bonus should not be linked to profits over which workers have no control but it should be linked to productivity. These agreements have worked satisfactorily for quite a long time. The recent findings of the Bonus Commiss'on are likely to disturb this state of affairs, as far as these organisations are concerned. Even if the regulations in this regard stipulate that such agreements are not to be tampered with, the trade unions concerned will have the inclination to ask for profit-sharing bonus as well. They may claim this over and above the present productivity bonus. Thus, progressive employers, who have shown

REPORT OF THE AUDITORS TO THE STATE BANK OF INDIA

We, the undersigned auditors of the State Bank of Saurashtra, appointed under Section 41(1) of the State Bank of India (Subsidiary Banks) Act, 1959, report on the Balance Sheet and Accounts of the Bank as at 31st December, 1963.

We have examined the foregoing Balance Sheet of the State Bank of Saurashtra as at 31st December, 1963, and the Profit and Loss Account of the Bank for the year ended upon that date with the Accounts relating thereto of Head Office and with the Returns submitted and certified by the Branch Managers, which Returns have been incorporated in the foregoing Balance Sheet and Accounts.

We report that :—

(i) in our opinion the Balance Sheet is a full and fair one, containing all the necessary particulars and is properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank;

(ii) where we have called for any explanation or information such explanation and information have been given to us and have been found satisfactory;

(iii) the transactions of the Bank which have come to our notice have been within the competence of the Bank;

(iv) the Returns received from the Branches of the Bank have been found adequate for the purpose of our audit; and

(v) the Profit and Loss Account shows a true balance of Profit for the year covered by such Account.

Dated, 3rd February, 1964.

initiative and who have endeavoured to settle matters with the work people consistent with the declared policy of the Government, namely, through collective bargaining, will be penalised by the action of the State in this regard. A company which wants to introduce a pension scheme for the workers hesitates to do so due to present retirement benefits stipulated by legislation and the talk of future legislation on the subject.

Steps to Encourage Collective Bargaining

The solution for this dilemma in labour relations, in Mr. Pillai's opinion, is to go slow on further legislation. Instead, the State should take positive steps to encourage collective bargaining. Specifically, he suggests the establishment of joint negotiating bodies, on the model of the Joint Industrial Councils of the U.K., in such industries as textiles, jute, plantations, and mining where employers and employees are well organised, for industry-wise negotiation. The State should induce both sides of the industry to form such joint-negotiating machinery in all well-organised industries.

The intervention by tripartite bodies to lay down uniform pattern even for matters of detail is also not conducive to strengthening collective bargaining, according to Mr. Pillai. Tripartite bodies such as the Indian Labour Conference should confine themselves and laying down broad national policies in the field of labour relations rather than evolving uniform pattern for all industries.

In addition to the obstacles in the way of strengthening collective bargaining mentioned above, there is another factor which has contributed to the slow growth of collective bargaining. This is the weakness of trade unions. In fact, this is a vicious circle. Weak trade unions weakens collective bargaining and weak collective bargaining weakens trade unions. It is the experience of all democratic countries, and it is valid in India also, that trade unions do not grow into healthy agencies under the shade of too much State intervention or spoon-feeding. Another factor that tends to weaken collective bargaining is inter-union rivalry and the State has not taken any legislative step to resolve this problem. It has not, for various reasons, been willing to adopt the democratic method of determining the majority union by a plebicite and to assign to such unions the status of bargaining agent. However, under the Code of Discipline, criteria for recognition of unions have been evolved, and a procedure for verification of membership laid down, which, if faithfully implemented, would help to minimise some of the problems of multiplicity of unions. But this has not been done. The position obtaining at present is that any union can claim to speak for the workers as a whole and, what is more, even a minority union can raise a dispute and take it up to the Supreme Court. It should therefore be laid down, the author of the Paper suggests, that agreements freely negotiated with recognised unions under the Code of Discipline shall be binding on all workers for a specified period.

In conclusion, Mr. Pillai points out that, since collective bargaining is the only proven method so far evolved for bringing forth willing co-operation and promoting understanding between workers and employers, so essential for ensuring higher productivity and better standards of performance, employers should, in enlightened self-interest, if for no other reason, take the lead in encouraging collective bargaining between themselves and their workers, no matter what the Government does.

NEW LIGHT ON PRICE RISES

A West German correspondent writes as follows:

"Prices" are a number one topic for the consumer of any country. The recent rather dramatic price rises in some important industrialised nations—like France, Italy and the Netherlands—have been watched closely in the Federal Republic of Germany which has its own price problems. How big are they? There is an authoritative answer at hand, based on over a decade of analysis by Germany's central, independent Bundesbank. This is the price story that emerges:

In the 15 years or so since the free part of Germany adopted its present "hard" currency, the cost of living index has risen, according to the Federal Statistical Office, by 22 per cent, or about 1.3 per cent yearly. During that period, significantly, there were price *falls* that helped to counteract the overall rise. These price reductions occurred exclusively among industrially produced goods. Thus, the price index for two important categories of manufactured goods—clothing and household appliances—was lower by an average 11 per cent in 1963 than the comparable average in the second half of 1948. Another important example: Prices for goods and services connected with motorised transportation—the automotive industry—are also below the level of 15 years ago.

Nor were these and many similar price cuts put through at the expense of the workers. On the contrary, costs of wages and services have steadily risen. Industry has been able to roll back its prices because of technical innovations and increased efficiency.

It is true that many families are spending a bigger part of their budget on industrial goods than previously, but the money is buying higher quality, and a range of goods that most people did not dream of possessing in 1948. The rise in the quality of German-made automobiles is one clear example. Another is the switchover by millions of families from the bicycle of 1948 to the family car (in some cases, cars) of today.

Throughout the past years, German and most West Europeans businessmen were trying to fill a permanent excess demand. That, in turn, led to competitive bidding for labour. This situation, combined with unions' demands for ever-higher wages and shorter hours, still presents the economy with a major problem in operating costs.

What is ahead? On the positive side of the ledger, there is hope that the United States and some other industrially important nations will soon manage to solve their balance of payments problem. In turn, there will then be less external inflationary pressure on nations, among them Germany, which have had a chronic balance of payments surplus, with its resultant effect on prices. On the negative side, however, this "imported inflation" now threatens to be replaced in Germany by what economists have called "internal price-raising impulses."

To counteract these impulses, it is not enough to keep producers' prices steady, as W. German industry up to now has managed to do. Needed too are a wise credit and fiscal policy and a wage and salary policy that permits the whole economy to remain productive, to compete and to grow.

RISING PRODUCTIVITY OF COTTON MILLS

MORE STABILITY IN BOTH PRODUCTION AND MANPOWER LIKELY

From Our Special Correspondent

MANCHESTER, *18th February*

MANCHESTER LETTER

SEASONAL influences generally obscure the picture of activity in Lancashire mills during the final month of each year, as some fall in output and manpower must be expected due to the holidays. The figures for 1963, however, reflect a more satisfactory situation than some of their predecessors in recent years and allow for some guarded optimism about the future. The major point is that total yarn production last year slightly exceeded the aggregate for the previous 12 months—the first time this has happened since 1957.

That a sharp improvement took place in the second half of 1963 is clearly apparent. In the first six months of the year, cloth production was nearly 60 million yards down on 1962, yet the final total showed a reduction of only 38 million yards. Yarn production recovered sufficiently in the second half of the year to wipe out a 7½-million-lb. fall by June and achieved an increase of more than 3½ million lbs. over the full year. Detailed comparisons are as follows:

	Total 1963	Total 1962	1st half 1963	1st half 1962
Cloth (million yds.)				
Cotton	1,014.13	1,047.37	518.20	566.06
Man-made	491.19	492.87	254.06	265.23
Mixtures	69.14	72.37	36.09	39.05
Total ..	1,574.46	1,612.61	809.25	868.29
Yarn (million lbs.)				
Cotton	394.63	392.23	199.51	203.91
Spun rayon	87.85	83.14	44.12	43.42
Mixtures	339.09	36.59	19.12	19.16
Waste	94.06	99.04	47.82	51.56
Total ..	615.63	611.90	310.57	318.05

The fall in cloth production can be attributed almost entirely to the smaller volume of cotton material woven, as output of man-made fibre fabrics and mixtures was only marginally down on the previous 12 months. In the spinning section, however, cotton yarn output was maintained after dropping back slightly early in the year.

These figures must be viewed against the background of the curtailment of the labour force and the obvious improvement in the utilisation of manpower by modernisation of machinery and redeployment. The number of operatives on employers' books at the end of the past four years is shown below:

	Total	Spinning	Waste spinning	Doubling	Weaving
Dec. 1960 ..	184,790	71,580	7,250	16,080	89,880
,, 1961 ..	169,520	63,620	6,910	13,340	85,510
,, 1962 ..	151,270	59,100	6,770	15,790	75,629
,, 1963 ..	142,300	52,900	6,530	12,370	70,599

The Cotton Board understandably attributes the reversal of the recent more favourable employment trend in December to holiday interference. Unfortunately the fall in the labour force wiped out the gains made in the two previous months, but it is reasonable to predict that the current strength of demand and the rate of machine activity will call for additional labour in 1964. More stability in both production and manpower seems likely to follow the widespread use of better methods of working in many mills.

Developments in Bolton

Almost coinciding with the annual output returns for 1963 was a further reiteration of the rise in productivity in the industry, so widely publicised in recent months. Mr. R. W. Greenhalgh, Chairman of the Bolton Master Cotton Spinners' Association, reported an increase in production per spindle of more than 100 per cent as compared with 1951. This shows, he told the annual meeting, that member-firms are not only re-equipping but that they are also utilising their plant more efficiently.

That the industry is becoming more capital-intensive is no revelation after the numerous figures quoted in the past six months to prove that staffing and modernisation is proceeding in accordance with the latest principles. A great deal has been done during the past year, Mr. Greenhalgh asserted.

Spinning capacity in the area consists very largely of modern or modernised ring frames working considerably in excess of the normal week. Developments in ring frame drafting systems have revolutionised processing methods, and similar developments in blowing room and cardroom machinery have made it possible to increase production and to produce high quality yarns.

Costings Probe

On prices—always a sore point with cotton traders—Mr. Greenhalgh referred to the examination of costing techniques now being carried out by a special committee of the Cotton Board. The object of the inquiry, he said, was to emphasise the importance of correct costing and to produce figures which would be of value in any future discussions with the Board of Trade. Although the Restrictive Practices Court outlawed the price regulation system in force in spinning and doubling a number of years ago, it might still be argued, he said, that cotton spinning was a special case which could justify special action. A situation existed where about 25 per cent of domestic consumption was supplied by duty-free goods from Commonwealth countries sold at prices well below those at which a well run modern Lancashire mill could produce an equivalent yarn.

"In effect, Government policy means that on the one hand we are called on to make a major contribution to Commonwealth relations, and on the other we are prevented from dealing in a sensible and reasonable manner with the situation thus created," Mr. Greenhalgh declared.

Nearly ten years have elapsed since the Liverpool cotton market was reopened after its wartime closure and the post-war decision of the Government to retain State trading in the raw material. In the meantime, various changes have been introduced in the system of operating the futures contracts with the object of trying to broaden the basis of business. Outside influences, notably the tight control now exercised by Governments in the various producing countries, have interfered with the former free flow of trading in the raw material. Dealings inevitably have diminished to an extent which must be disheartening to operators.

Spot markets are just as much concerned with these developments as futures, although the shipment of raw cotton still remains an important business for merchants and agents. In view of the wider number of growths now being grown and transported, the knowledge required by importers is probably greater than in the past, whether they are employed by spinning firms or as independent raw cotton distributors.

For some time, the spot quotations issued by the Liverpool Cotton Association have included a large number of nominal prices, which have made the lists somewhat unrealistic. Now the Association has revised its table of "official values," and has annotated the prices accordingly. Values, it states in its daily raw cotton report, are determined by the appropriate quotation committee, on spot ex-warehouse terms, based on evidence of sales and/or offers of reasonable quantities of cotton being available ex-warehouse or quay, afloat or for prompt shipment.

The main change in the list concerns a revision in the character of American cotton, which has been transferred from "fair" to "good," resulting in a rise of 50 points in those grades still shown ranging from good middling to low middling. In other growths, the number of quotations has been severely curtailed, so that only one price is now available for Sudan Sakel, two for Peruvian, four for Brazilian, and one for Pakistan.

BUSINESS NEWS FROM EUROPE

INTEREST RATES UNDER MICROSCOPE

WEST GERMANY HEADING FOR A NEW WORLD TITLE

From Our Special Correspondent

A BELGIAN move this month to raise Bank rate one-quarter per cent to 4¼ per cent for four-month public bills is symptomatic of a general rise in European central bank rates outside Britain. With economies booming, few central banks are now holding out against a general movement that has taken rates to at least 4 per cent in the last seven months. At the end of last month, Sweden moved her Bank rate up half a point to 4½ per cent. Earlier, at the start of the month, the Netherlands had also gone up half a point to 4 per cent. And the Belgian move has taken her Bank rate up half per cent since last summer. Canada and France have also joined in the movement, both lifting their rate half a point to 4 per cent. The only country to swim temporarily against the tide has been Austria, which reduced its rate ½ per cent to 4½ per cent before going back to 4½ per cent.

The major exceptions to the general movement have been Denmark, West Germany, Switzerland and Britain. Although Switzerland plans to tighten measures against the inflow of foreign long-term capital and some forms of domestic credit, it has consistently maintained a basic cheap money policy and has not moved its Bank rate from 2 per cent since 1959. West Germany has kept Bank rate at 3 per cent, since her problem has been to get the economy moving again after the 1961 revaluation. Only Denmark has remained markedly above the 4 per cent level at 5½ per cent. There have already been moves in Britain to get the rate raised from its present 4 per cent, in order to exercise a restraining influence on the boom and protect sterling but the British monetary authorities are believed to have been strongly influenced by the American Treasury's desire to avoid a short-term interest-rate war.

Two Schools

Such a move, the British monetary authorities feel, would attract hot money to London and undermine last summer's American measures—so far successful—to cure the serious deficit in her balance of payments. In return, the Americans are believed in London to be willing to continue support for sterling. Whether a British move up would undermine the American policy depends on the role that Bank rate is believed to play. On this, there are now two distinct schools of thought.

The first holds that the primary function of Bank rate is internal, though it admits that there are international ramifications. This view would appear to have gained ground in Europe since most Bank rates are around 4 per cent (the exceptions are Italy and Norway, both at 3½ per cent).

The second school of thought holds that the external impact of interest rates is becoming the important one and that changes in Bank rate should be made only to combat external movements of capital. This would appear to be the reasoning behind the American decision to ask Britain to hold fast. This line of thought is believed by many economists to be nearer the facts than the former. Short-term shifts in rates of interest would then be no longer regarded as an appropriate weapon of short-term economic control. It is felt that, while increases can have a restrictive effect in dampening down economies, albeit arbitrary, reductions do not necessarily get economies moving again.

One of the serious disadvantages of a rise in interest rates is that it will not help to cure any of the serious structural deficiencies that are all too apparent in European capital markets. This the Americans are pointing out to European central banks, especially the German, French and Italian. They feel that all three should reorganise their own houses, so that industry need not go outside the country to raise so much equity capital.

The development of the Euro-dollar market since 1957 should have gone some way towards achieving this aim. But most of the Euro-dollar market appears to be working from London: five of the last major flotations on London in the last two months have been for dollars. These loans—for Copenhagen, Norway, Milan among others—have come to London because there is no way of raising the necessary capital at home.

Within the next year or two, West Germany may supplant the United States as the world's number one exporting nation. As it is only five years ago that she pushed Britain down into third place, this would be a meteoric rise; but it is increasingly thought to be a feasible one. America's share of total world exports has been declining. Then years' ago it was 30 per cent; last year, it was only just over 20 per cent, while Germany commanded just under 20 per cent.

That Germany should now be in such a position is considered to be largely due to her success inside the Common Market. The Six now takes 37 per cent of her exports and, in spite of a fall in exports to the rest of the world, her rate of increase to her five Market partners has been so great that, on aggregate, she has come within striking distance of the United States' performance. Last year, for instance, West Germany's exports rose by more than 10 per cent and her trade surplus nearly doubled from 1962's £315 million (782 million dollars) to £540 million (1,522 million dollars).

Inflation and generally rising prices in France and Italy have helped this development, though the expansion of the British and American economies has also contributed. West Germany's car sales now outstrip those of all other foreign models in the United States, for example. The high level of demand for German goods has restored the D-mark to its former place as the prize European currency, a place it relinquished with the revaluation of 1961. Money is flowing to Germany and, with the Swiss having taken strong action to stop just such an inflow gaining the upper hand there, the German authorities appear to be happy to let the situation run its course. Much of this inflow has been long-term capital attracted by the 6 per cent interest rate. Ineffectual attempts to get the rate down to 5½ per cent (itself thought to be still too high) are not likely to halt the flow.

In itself a high inflow of long-term capital is unlikely to be a disadvantage. But Germany is also running a balance of payments surplus and the combination of the two has led the Organisation for Economic Co-operation and Development, in a report on the Federal Republic, to criticise the management of the economy. In the first 10 months of last year, Germany increased her trade surplus by over £100 million (280 million dollars), as compared with the same period of last year. The O.E.C.D. report showed that such a performance, when set beside the pattern of the economy over the past four years, is not a good thing for world trade. Yet the rate of growth has been steadily declining. From 8.8 per cent in 1960 it went down to 5.4 per cent in 1961, 4.4 per cent in 1962 and an estimated 3 per cent last year.

It is the manufacturing industries—machinery, electrical equipment, iron and steel, shipbuilding, and building and construction—that have slowed down growth. The reason for this is largely that Germany suffered from a severe shortage of labour during the past two or three years, a shortage aggravated by the supply from East Germany drying up when the Berlin Wall was built.

Wait and See

Unlike the Swiss, the German authorities appear to be taking a "wait-and-see" attitude over the growth of long-term capital imports. Since the economy appears to be set for a handsome rate of growth this year, reversing the recent trend, world liquidity is not going to be helped by German inability or unwillingness to tackle the problems presented by the inflow of capital.

If Germany turns out to have the good year predicted, no little part of it will be due to the heavy investments that have taken place in industry over the past two or three years. Gross fixed asset formation in machinery and equipment increased by 11.5 per cent in 1961 and 5.8 per cent in 1962. Although it dropped to 1.5 per cent last year, by then the basis had been laid for this year's surge forward. The increase in economic activity is expected to be about 4 per cent this year. Although this is not dramatically above last year's 3 per cent, most of 1963's improvement was made in the second half of the year and it would appear that the boom got well under way then.

Rumania Wins

A Rumanian shopping spree in Western Europe is thought to mean that Rumania has won a long battle with the Soviet Union over the direction of the economy. The Soviet Union, through COMECON (the East European common market), wanted to see Rumania concentrate on supplying raw materials or semi-manufactures to the more industrialised economies of Czechoslovakia, East Germany and Russia herself.

The Rumanians would have none of this. They wanted to industrialise as fast as possible (they could already point to an economic growth rate of 15.8 per cent, the fastest in Europe), feeling that to concentrate mainly on primary products would hold them back. Their aim was to catch up with the industrialised countries before the turn of the century.

Hints that the Rumanian view had prevailed came at the end of last year, with a trade mission to China to sell oil and agricultural machinery, a £140 million (392 million dollar) agreement with Yugoslavia to build a hydro-electric scheme on the Danube frontier between the two countries and an Italian trade mission to Rumania.

Now several Rumanian missions are moving around Europe. In Britain, there recently have been, or soon will be, five in all. One has come to investigate power-station equipment; another, electric and diesel locomotives and telephone equipment. The rest have been looking for machinery for light industry, metallurgical products and chemical plant. Before moving to Britain, the mission investigating metallurgical products visited Stockholm. And another team has been to Paris looking at French equipment.

The important point is that all these trade missions are looking for capital equipment. It is believed that this can only mean one thing—that Rumania is now set to industrialise as fast as it can and that the more dogmatic COMECON proposals for the conduct of its economy have been overthrown.

Airports Move with the Times

A steady rise in intra-European air traffic and the prospect of supersonic flight are forcing airport authorities to ensure that their facilities are efficient and up to date. This factor is behind a French decision to build a new £70 million (196 million dollar) airport outside Paris to replace Le Bourget. In the second quarter of 1963, intra-European passenger traffic amounted to 2,562 passenger-kilometres, an increase of 8.1 per cent over the corresponding quarter of 1962. This followed an increase of more than 9 per cent in the first quarter.

London airport, the busiest in Europe, handled 15 per cent more passengers in 1963 than in 1962, some 8.18 million in all. As compared with as recent a year as 1959, the traffic passing through the airport has doubled.

The French decision to replace Le Bourget with the new Paris-Nord terminal is only one of the many schemes on hand in Europe. By the time Paris-Nord is ready in 1970, both Frankfurt and Amsterdam will have completed large-scale reconstruction programmes. Already the fastest growing airport in Europe, Frankfurt intends to cater to the increasing traffic with a £22 million (61 million dollar) programme. Amsterdam by 1966 will have spent £25 million (70 million dollars) on a programme that will make the airport four times the area of London's and give it a whole new complex of buildings.

In the past two years, Stockholm and Copenhagen have opened new airport terminals and at all of them new ways of handling passengers, building on American experience, are being tried.

London at the moment lags in this development. A new terminal building is to be added, but there are currently no plans for modernisation comparable with anything going on in Europe.

Morocco's Fresh Start

Although Morocco's first Five-year Plan had to be abandoned at the half-way stage in 1962, she is now making another big effort to raise her industrial capacity. A new Three-year Plan, started this year, gives top priority to industrial projects. Four new factories, including one of the largest chemical complexes in Africa, are planned to be in production before the end of the period.

The chemical combine at Safi represents an investment of £20 million (56 million dollars) and almost all its annual turnover of £7.5 million (21 million dollars) will be exported. Since this is about 5 per cent of total Moroccan exports its contribution to the economy will be significant. The limiting factor in expanding productive capacity is the shortage of capital. The chemical project is being jointly paid for by Moroccan and foreign capital, but already slim Moroccan finances are now seriously strained by an inability to raise more long-term money from abroad.

Morocco looks to France for most of its aid, but the United States has been well in the picture, too. With the help—primarily—of these two, at least eight other industrial projects are scheduled to be started during the Plan.

In order to ensure that the Three-year Plan is more successful than its predecessor, most of the targets have been scaled down. A previous growth plan of 6.2 per cent a year has become a more feasible 3.4 per cent. But the new plan assumes at least £50 million a year in foreign loans. Since only £20 million a year came from this source previously, the new Plan is still considered vulnerable on this score. A World Bank mission to Morocco is being closely watched for results.

Denmark: Steadier Growth Ahead

With the inflation which gripped it in 1961 and 1962 in check, Denmark looks like expanding more steadily this year, according to the Organisation for Economic Co-operation and Development. (O.E.C.D.). The main factors to which the more stable situation is attributed are: direct action on wages, price and profits, and a policy of dearer money.

From an index of 104 at the end of 1960 (July 1957=100), prices shot up to 110 by the end of 1961 and 120 by the end of 1962. By April 1963, the index had reached 123, but since then it has levelled out at around 121.

Although the rise in the rate of production has slowed down to 2 per cent in 1963 and in gross national product also to 2 per cent (as compared with an average of 4.8 per cent in 1960-62), the balance of payments position has improved significantly. After deficits amounting to £50 million (140 million dollars) between 1960 and 1962 inclusive, there was a surplus of £35 million (98 million dollars) in the first half of 1963. This year should see a step forward, according to O.E.C.D., and a growth rate of 4 per cent is envisaged in productivity. The curbs on domestic demand are being relaxed to help achieve this and last year's balance of payments performance indicate a strengthening demand for Denmark's industrial exports.

Incomes in Denmark were some 7 to 8 per cent higher in 1963 than in 1962, but real incomes were a little different because of increased taxation. The price index was stable in the second half of 1963 after an 8 per cent rise the previous year.

Industrial exports have lately done far better than agricultural. Since 1960, there has been a steady growth of between 11 and 14 per cent in industrial exports, but the best year for agricultural exports was 1963, when they rose by 9 per cent. Before that, there had been a 3 per cent rise in 1960, an equal fall in 1961 and a 4 per cent rise in 1962.

Topical Briefs

West Germans now have the shortest working week in Europe—and look like having to work even fewer hours in 1964. Between 1955 and 1963, the number of hours worked in German industry dropped by 9.8 per cent. In metal working and engineering, some 3.5 million workers now enjoy a 41¼-hour week, while the printing industry is down to 42 hours. Two million building workers are to get a 42-hour week in April and in the shoemaking industry the 41-hour week will be introduced in July. The Institute of German Industry, however, sees dangers involved in this trend. The country now has five jobs waiting for every employee, it states, and a further cut in the working week is bound to increase the strain on the labour market. By comparison with Germany's 9.8 per cent cut in hours in eight years, Britain has shortened its average working week by 5.2 per cent, Switzerland by 4.2 per cent and the United States by 0.5 per cent. The opposite trend is at work in France, where the working week increased by 2.5 per cent, in Italy (up 1.8 per cent) and in Japan (up 0.9 per cent).

• • • •

Yugoslavia's success as a holiday centre—last year brought in revenue of £24 million (66 million dollars)—is resulting in a speed-up of State investment in tourism. In Croatia, which includes most of Dalmatia on the Adriatic coast and is the main holiday centre, about £12.5 million (35 million dollars) will be invested. This part of the country is to get most of the investment, because it brings in two-thirds of the country's tourist income. The investment will provide for hotels with, in all, 7,000 beds and about 2,000 camp-bed accommodations as well as new restaurants, shops, a chain of motels and better transport facilities. In Opatija an annexe to the main hotel is to be built to provide 280 beds and another, old, hotel renovated; a beach development, to be completed by 1965, will cost £350,000 (1 million dollars). Some 40 per cent more tourists visited Yugoslavia last year than in 1962, almost all from West Germany, Austria, Britain, France and Italy.

• • • •

Japanese machine-tool exports to Russia may rise rapidly in the near future. In 1962, the Japanese sold just under £ one million (2.5 million dollars) worth of machine tools to Russia, and even this was a 17-fold increase over 1960, when exports were minimal. But after talks in Moscow between the President of the Japanese Metal-Working Machine Tool Association and the Soviet authorities, an annual figure of £18 million (50 million dollars) has been set for exports in the near future. If the Japanese manage to get such an important footing in the Russian market, exports from Western Europe, particularly German, British and Italian, are likely to be seriously affected. The chances of success are rated highly by Japanese exporters. They have made a study of the market and found it "full of possibilities." In return, the Russians are expected to sell machinery to the Japanese.

• • • •

Italy, seriously perturbed about currency smuggling, is to try to plug the loopholes. Much of the smuggling takes the form of passing bank notes into Switzerland which are then repatriated into Italy and held on external account for Italians, but in the name of a Swiss bank. If the economy deteriorates, the money can then easily be "re-exported" to Switzerland. Last year, the rate of smuggling almost certainly doubled over 1962. From £270 million (766 million dollars) it rose to £509 million (1,425 million dollars) in the first 11 months of 1963. It is thought that the outflow has slowed this year, but the political uncertainty over the future of the Centre-Left coalition is thought likely to result in a good deal of money continuing to cross the border. One remedy, to tighten up customs supervision, is not considered easy on an Alpine border as difficult to police as that between Italy and Switzerland.

France is likely to sell about one million tons of cereals to Poland in the next four years. In order to help Poland over immediate supply difficulties, France is to increase this year cereal shipments from the 200,000 tons agreed under a trade pact signed in 1962 to 600,000 tons. Then, under a new trade agreement, Poland will buy 400,000 tons a year between 1965 and 1967. About 250,000 tons of this will be breadgrain, the remainder feed barley and maize.

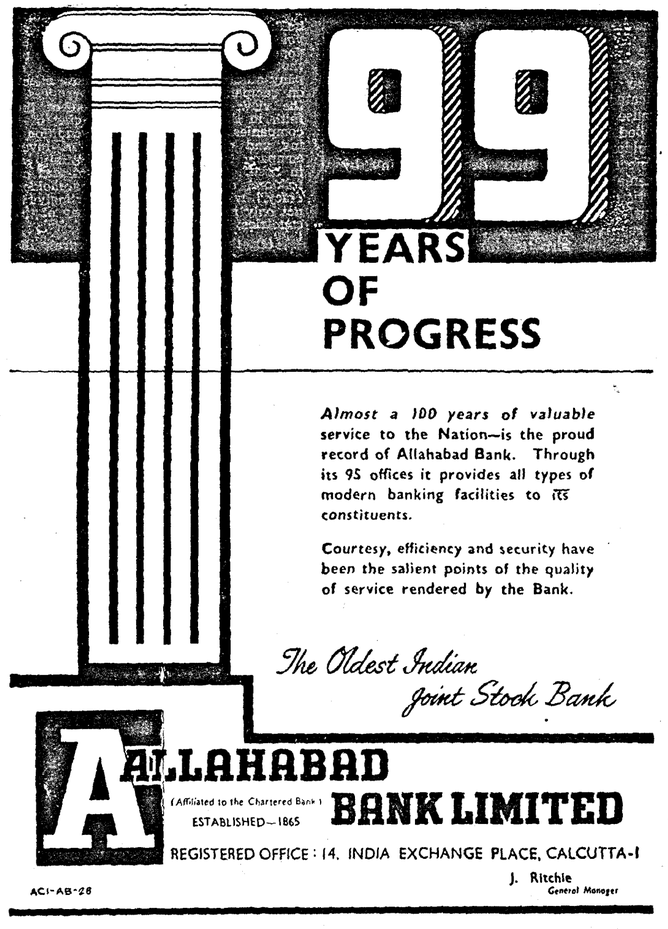
The official rehabilitation of an obscure, though influential, agronomist called Williams may turn out to have more than curiosity value for *Russia's* hard-pressed agriculture. Williams, a Russianised Welshman active early this century, was a passionate advocate of crop rotation—and long made the kind of impact on Russian farming that Coke made on British. But, with Mr. Khrushchev's rise as the guiding light of Soviet agricultural policy, the Williams rotation system was rejected in favour of continuous usage of land for arable or pasture. Khrushchev personally attacked the system as recently as a year ago. At an important agricultural session of the Communist Central Committee this month, however, Farm Minister Mr. Ivan Volovchenko conceded that, in some areas, the rotation of crops with grass leys was not a waste. Many students of Soviet agriculture believe that blanket application of directives against the Williams system, imposed some years ago, may have been responsible for the recent decrease in cattle fodder output.



THE MODERN COMPANY AND RULE OF LAW—III

INDIA CAN CLAIM TO BE A PATH-FINDER

By D. L. Mazumdar, I.C.S.

IF one were to speculate on the course of future developments in the field of corporation laws, one might hazard the guess that the developing law of corporate responsibility must contain, among others, the following basic elements:

(i) It may have to define the principal "little publics" to which corporate management should be held responsible, besides their traditional constituencies, namely, the shareholders and the creditors. These other "little publics" might include the workers, the consumers and the general public as such;

(ii) The law should spell out in general terms, the nature of the new conception of justice, in the dealings between corporate managements and their new "little publics." This exercise may involve the incorporation of some substantive provisions, distantly resembling the Directive Principles of State policy in our Constitution, roughly indicating the nature of the responsibility which corporate management may have to bear in future in dealing with its new "little publics."

(iii) The law may have to lay down with some precision the procedure which must be followed in future by corporate management in their dealings with their "little publics," so that new substantive provisions of the law defining the new conception of justice may be duly enforced; and

(iv) The law may have to provide for the reorganisation and reinforcement of the existing judicial machinery for the administration of the new substantive provisions incorporated in it.

These developments would call for a high legal and administrative engineering skill on the part of all those who may be concerned with the making of laws and their administration in this complex socio-economic field.

The 1956 Act

I now propose to comment briefly on the objects underlying the Indian Companies Act, 1956, as amended by subsequent Acts and its broad structure in the light of the analysis contained in the earlier sections of this series.

The Companies Act of 1956 was assailed at its birth from many different quarters. It was criticised as a long, prolix and needlessly complicated document. Fault was found with it because of the alleged involved procedures prescribed in it, the extensive powers given to shareholders and the Central Government with the object of subjecting decision-making by management in several areas to their approval. In particular, exception was taken to several substantive provisions which not only attempted to regulate the formation and working of companies but also to impose on company management certain 'norms' as regards their conduct and behaviour pattern, specially in areas where their interest might come into conflict with their duties to the corporations and the shareholders. Special objection was taken to the provisions of the Act regulating the remuneration of the top managerial *elite*, and several traditional practices regarding company finance and company investment.

At the instance of the then Finance Minister (Shri T. T. Krishnamachari) these criticisms were referred to an Expert Committee, presided over by Shri Viswanath Sastri, an eminent jurist and lawyer. The report of the Committee showed that many of the structural defects and deficiencies of the Act were exaggerated by people in authority as well as in the market places who were anxious to denigrate the Act, for reasons best known to them. As regards the length and prolixity of the Act of 1956, the Viswanath Sastri Committee which undertook a detailed examination of this complaint observed as follows:

"Though the number of sections in the Indian Act exceeds those of its English counterpart, still it will be found that the volume of printed matter of both the Acts is approximately the same, the English Act having relegated to schedules several provisions found in the body of the Indian Act. It was presumably the intention of the legal draftsman, who drafted the Bill, as well as the then Finance Minister who piloted the Bill in Parliament, that the enactment should be a self-contained, complex and exhaustive exposition of the law governing joint stock companies in India. Whatever might be our view... we have, in deference to the unanimous views of those whom this legislation primarily concerns, not attempted to re-write the Act or upset its arrangement of topics dealt with by it."

Apart from this fact, the complaint was found to be based on inadequate appreciation of the nature and scope of the new Act. It was overlooked that, for the first time in its history, the Companies Act of this country had attempted to relate company management and company practice to some of the accepted basic economic and social values of the community, albeit only marginally, as indeed it was enjoined to do by Parliament and the Government of the day. This could not be achieved merely by the enunciation of a string of provisions, containing a recital of aims and objects but also called for structural and procedural changes in company management which had to be broadly indicated in the Companies Act. Be that as it may, the subsequent administration of the Act dispelled many of the earlier fears and apprehensions, and company managements in this country have already learnt to live with the Act. Nevertheless, after the lapse of nearly a decade or so, it is fair to admit that the Act does now appear to have been, essentially, an amalgam of traditional and modern thinking on corporate matters, which by its very nature, could not be expected to produce a streamlined measure.

Basic Aims

The more important of the basic aims and objects underlying the Act were:

(*a*) first, a desire to deal more effectively with large-scale company malpractices; and, in particular, with the malpractices and irregularities of managing agents, an institution which has coloured popular thinking on companies and the Companies Act in this country more than any other feature of our corporate system;

(*b*) secondly, a desire to ensure to the shareholders of a company a larger and more effective voice on its management. In part, this desire appears to have been prompted by the expectation that increasing shareholders' control over company affairs might provide a more effective check on company offences and malpractices. In part, the view was also a reflection of the popular faith in the democratic functioning of joint-stock companies, not only as a pre-condition of widening and deepening the habit of investment in company stocks and shares but also as a good in itself. This trend of thought was part of the folklore of the so-called "shareholders' democracy," which is still disconcertingly widespread not only in this, but also in many of the Western countries;

(*c*) thirdly, a desire to integrate the working of corporate enterprises with the larger social interests of the community. The Act of 1956 did not attempt to indicate the contents of these larger interests, nor to articulate by any positive direction or guidance, the adjustment of company practice, in significant areas with the requirements of social policy. It is, however, possible to discern from several operative provisions of the Act that these larger social interests centred round the problems of (*a*) reduction in the concentration of economic power; (*b*) reduction of inequalities in incomes; and (*c*) extension of the area of democratic decision-making.

It may be worthwhile to touch on the provisions of the Companies Act of 1956 dealing with these issues. For, it is these provisions which constitute the special features of our new Companies Act, and distinguish it from its predecessors in this country as well as from the traditional pattern of corporation laws in the Western countries. It is in these special provisions that we discover the first faint glimmerings of the awareness that the modern company or corporation is not merely a legal economic device for the production and marketing of goods and services but is a new sociological institution, exercising a volume of significant non-governmental power. If this power is not to be used irresponsibly, but is to be related to the legitimate purposes of the society, in furtherance of its accepted economic and social aims, it is essential that the use of such power should be subject to a measure of regulation, and should conform to a new concept of justice and responsibility in corporate management, providing the judicial foundation for the new Rule of Law in this field to which I have referred earlier.

Concentration of Power

Among the provisions of our Companies Act which deal with the problem of concentration of power, reference need be made to only the more important of them. These are:

Section 89 of the Act which provides for the compulsory termination of disproportional excessive voting rights enjoyed by the management in several companies, by reason of their ownership of certain categories of stocks or shares carrying special voting rights, and prohibits the issue of such stocks and shares in future.

Section 275 of the Act which provides that no person can be a director of more than 20 companies.

Section 293 which imposes several restrictions on the powers of directors.

Section 316 which limits the number of companies of which a person may be appointed managing director to only two.

Section 332 which provides that no person can be managing agent of more than 10 companies in future.

Section 368 which, for the first time, unequivocally places managing agents under the supervision and control of the directors. The powers of the former *vis-a-vis* directors are defined specifically in a schedule attached to the Act.

Further the power of the managing agents to nominate directors on the boards of the managed companies is regulated in Section 377 of the Act.

Several other sections of the Act are designed to control undesirable concentration of economic power at the hands of the management of companies, arising from the inter-company financial transactions carried out either through inter-company loans or inter-company investments. It is not necessary to prolong this list, but the sections to which a reference has been made illustrate the intention of Parliament to reduce concentration of economic power in the hands of the management, and to render the exercise of such power somewhat more responsible in future than it was in the past.

Managerial Remuneration

As regards the provisions of the Act intended to reduce inequalities of income through the regulation of managerial remuneration, all that they seek to do is to prevent the management of companies from helping themselves to excessive remuneration at the cost of shareholders and on a scale which would appear to be clearly out of step with comparable levels of remuneration in other fields of activity. Parliament appears to have been motivated by the fact that, under the conditions obtaining before the enactment of the Act of 1956, management had virtually a free hand in fixing their own remuneration. Several sections of the Act deal with the subject and constitute a body of provisions, which is, perhaps, unique in company legislation of any country. Reference need be made only to more operative provisions on this subject. Section 198 of the Act prescribes an overall maximum managerial remuneration coupled with a minimum managerial remuneration in the absence of profits or in the event of their inadequacy. Sections 309 and 310 of the Act impose limitations on the remuneration of paid directors. Section 348 limits the commission earned by the managing agents to a maximum of 10 per cent of the net profits of a company. Power has been taken in all these sections to deal with cases in which strict enforcement of the prescribed maxima might either cause undue hardship or create avoidable disincentives. In conformity with the thinking underlying these sections, Section 356 regulates the earnings of management from other sources, particularly in cases where the services rendered by them are not commensurate with the rewards claimed by them. Similarly, Section 360 of the Act regulates the contracts for the supply of goods and services by the managing agents to the companies under their management.

All these provisions of our new Companies Act have been the subject of much comment not only in this country but also abroad. They have been attacked on the ground that it is for shareholders to fix the remuneration of the management of companies and that administrative interference with managerial remuneration may be arbitrary, and may adversely affect the incentives to effort and risk-taking. And yet perceptive observers of the corporate scene in this as well as the Western countries have always recognised the fact that this problem of managerial remuneration or compensation, as it is called in some of the latter countries, provides a classic example of the unregulated use of corporate power, in the sphere of decision-making which calls for some effective measures of internal or external control. In a fairly well-publicised and in many ways a standard book on the current methods and practices of corporate management in the U.S.A., called "The American Stockholders," the financial commentator of a well-known Philadelphia journal attempted an analysis of the social consequences of the inevitable erosion of shareholder power over corporate management. "Executives," he commented, "had become an over-privileged class in a democratic society." The gravamen of his charge was that, "with the restraining hand of shareholders atrophied, a tax-sheltered managerial *elite* was inexcusably setting its own extravagant compensation, and that the most serious consequences of this policy was not the diversion of corporate funds to personal use, but the impact which unduly high executive reward had upon the rest of society." In the light of this comment from a well-informed and sober critic of corporate methods and practices in this field, the provisions of our Companies Act of 1956 relating to managerial remuneration may well be said to blaze a new trail in thinking on the problems of corporate management in modern society.

Democratisation of Management

On the subject of democratisation of company management, it is not necessary to say much in the present context. This has been the traditional approach of company reformers in this as well as in the other Western countries of the world. In this, they have been influenced, as, indeed, we were in this country in the years before the enactment of the Companies Act, 1956, by the historical model of the evolution of political democracy. On the assumption that the extension of shareholders' franchise would enlarge their controlling powers over the management, company reformers in many countries have pleaded for greater shareholders' control over decision-making by company management. This was the dominant line taken by the pioneers of the Bombay Shareholders' Association and other comparable organisations which followed the lead of the former in the 'forties and 'fifties. To quote the somewhat trenchant observations of a realistic student of corporate affairs, Prof. Bayliss Manning of the Yale University, "They put their faith in what they called Corporate Democracy —a shimmering conception fusing good old American free enterprise with good old American Jacksonianism. Apostles of this ideology offer a fully developed programme to cure our corporate ills. The nostrums of Corporate Democracy have a vaguely familiar quality; more disclosure: greater mass attendance at shareholders' meetings; more policy issues on the ballot for shareholder vote; cumulative voting; more pre-, during and post-meeting reports, preferably in colour; machinery for submitting shareholder proposals to vote, etc...." "Altogether," Prof. Manning concludes, "the tenets of Corporate Democracy have served us little; and it is predictable that they will serve us less and less as public stock-ownership grows.... 'Peoples' capitalism and Corporate Democracy' are slogans with an inverse relationship. Each expansion of the first undermines the second."

This is not to say that shareholders' democracy does not function or that shareholders have no control whatsoever over company managements. The disclosure requirements of company or corporation laws, and increased powers to shareholders as in our Companies Act, 1956, if wisely exercised, may sometimes produce a healthy effect upon managerial conduct. As has been said, "no prophylaxis is so effective as sunlight, and to the extent that corporate democracy implies disclosure, it deserves credit." But it would be unrealistic not to recognise the fact that shareholders' democracy serves at best a limited purpose. For the disclosure of facts, even at regular intervals, is not the same thing as decision-making by a so-called shareholders' democracy. This is not to suggest that the latter exercise is either desirable or feasible, but it is vital for a proper understanding of company processes and of the role of the modern corporation to appreciate this basic fact. Without such understanding, the real character and significance of the modern company or the corporation as a system of power will be missed, and improvisation, so often erroneously confused with pragmatism, will continue to bedevil legislative, administrative and judicial thinking and attitudes towards the corporate sector. Even from the limited technical point of view of long-term corporate efficiency, and the capacity of the modern company or corporation to attain a *sustainable* high rate of economic growth, the place of these intricate, centralised economic-administrative structures in the social and economic set-up of the community must be fully grasped and appreciated by the professional managers who run them, as well as by the organs of the State.

Commendable Awareness

The special features of our new Companies Act to which I have referred in the foregoing paragraphs, clearly indicate that its framers had a reasonably comprehensive, though somewhat imprecise, awareness of the sociological implications of the larger company or the corporation in the Indian context, and that they were grappling with the difficult problem of building up appropriate institutional structures, within the framework of the traditional company law handed down to them. This effort led them to introduce several administrative and legislative innovations into the body of the old law. I am free to admit that these innovations surprised many practical men in business, in the professions and also in the Administration, and may have caused pain to some of them who could not easily get out of the traditional cast of their thinking on this subject. And yet the fact is being more and more recognised in learned circles in this country and abroad that our new Companies Act was the first to attempt to translate into institutional terms a few of the implications of the modern company as a system of power. The Indian Companies Act may well claim to have been a path-breaker in this still inadequately explored field.

That this is no idle claim will be clear from the fact that, broadly speaking, there are only three ways in which business power in the capitalist societies, whether of the pure or mixed variety, can be regulated and kept controlled as much in its own interest as in the interest of society. First, economic policy and administrative action can help to promote and develop competitive markets. Secondly, voluntary institutions like those in the City of London or official agencies like the S.E.C. in the U.S.A. or the erstwhile Department of Company Law Administration in India, outside the companies or corporations, can do a great deal to regulate and channelise decision-making along directions that would also subserve the public interest. Thirdly, appropriate institutions can be built into the structure of company and corporation laws, so that they may provide the checks and balances needed for the responsible exercise of power. Whereas in the Western countries, traditionally, policy-makers and administrators have relied more on the first alternative, in the very different circumstances of our country, and in view of our urgent and pressing need for integrated balanced growth and development, we have preferred to depend more on external controls and a net-work of institutional checks and balances written into our new Companies Act of 1956.

Any attempt at comparative assessment of the relative merits of these different approaches is hardly likely to be rewarding. But one thing seems to be reasonably clear. In this country as well as in the Western countries all the three alternative possibilities are likely to be increasingly explored in the future, not in isolation from but in close juxtaposition to one another. As an American observer has recently pointed out:

"A combination of the increase of direct regulation of some of the economic choices of powerful firms, with an increase in public criticism, and perhaps even institutionalised public discussion of the choices which are not explicitly controlled, appears probable. Such a programme will, in effect, do, by a formal mechanism and systematically, what is currently being done in a somewhat haphazard way by congressional investigations. On the whole, it is this which has been the active front. The development of mechanisms which will change the internal organisation of the corporation, and define more closely and represent more precisely the interests to which corporate management should respond, and the goals towards which they should strive, is yet to begin, if it is to come at all."

The Indian Companies Act, 1956 has already made such a beginning, and to this extent may justifiably claim to be a piece of pioneering legislation.

This is not to suggest that the Act of 1956 embodies in its corpus all the essential elements of the new concept of the Rule of Law applicable to the corporate field, or that it is a perfectly well-knit and rounded statute. On the contrary, as has been already mentioned there is much "dead wood" of traditional thinking in several provisions of the Act which needs to be cut out, just as several other sections embody the dogmas and pet nostrums of a bygone age. Even so, all in all, the Indian Companies Act, 1956 brings a relatively new outlook and attitude to bear on company management, which is much closer to the reality of the modern company or the corporation as a new sociological institution than any other system of company or corporation law in the Western democracies.

U.S. AID TO INDIAN AGRICULTURE—III

SOIL CONSERVATION, IRRIGATION AND FERTILISERS

By Dr. S. Chandrasekhar

DIRECTOR, INDIAN INSTITUTE FOR POPULATION STUDIES, MADRAS

MR. George McGovern, Director of the American Food for Peace Programme, observed, in a recent (February 1962) tour of India: "This is a stirring moment in the long history of friendly relations between India and the United States.... Today India has emerged as a great independent world power.... It has one of the most far-reaching plans for the development of its people and resources. In that plan, I am proud to say that American wheat and rice have played a vital part. Of the $4,000 million in the U.S. aid that has come to India since independence, over one half has been in the form of P.L. 480 Food for Peace commodities."

The total tonnage of foodgrains in the P.L. 480 programme and earlier agreements such as the Wheat Loan of 1951 provide for the supply to India of over 31 million tons. The total amount of these American-supplied agricultural commodities is the equivalent of 160 pounds of foodgrains for every man, woman and child in India.

And now we come to *grants* to agriculture, a double form of aid, since the money is derived from the sales of food greatly needed in India to prevent inflation of food prices. Such projects as the U.P. Agricultural University, Dairy Development, Soil and Water Conservation, and Exploration of Groundwater Resources have all benefited from P.L. 480 grants.

The third Five-year Plan includes the establishment of fifty-five new milk supply projects. The United States has provided equipment for a milk processing plant and three milk collection centres near Amritsar (the Punjab); three rural creameries at Aligarh (U.P.), Barauni (Bihar), Junagadh (Gujarat), pasteurising and bottle plants at Bhopal (Madhya Pradesh) and Trivandrum (Kerala), and for the Greater Calcutta Milk supply schemes at Balgachia (W. Bengal). P.L. 480 funds (Rs. 3.6 crores) have been allocated to 15 milk projects and will cover the entire estimated cost for two years of India's third Five-year Plan. A number of American dairy experts have also been made available for Dairy Development in India by the U.S. Technical Co-operation Mission.

Soil Erosion

Soil erosion is a serious problem confronted by Indian agriculture. Soil conservation has countless benefits. By proper soil conservation, the amount of silt filling up the reservoirs of river valley projects can be reduced and the useful life of reservoirs greatly increased. Through soil conservation, floods can be controlled and moderated and soil erosion prevented; and timber and fuel resources increased. A grant of Rs. 2 crores from P.L. 480 funds will meet the estimated expenditure during the first two years of the third Plan for conservation of 1,140,000 acres in the various catchment areas. It is estimated that 15 million acres of the 37 million acres under the various river valley projects will require soil conservation. American advisors have been assigned to the Central Conservation Board of the Ministry of Food and Agriculture, as well as to seven other research and training centres to advise Indian authorities in these areas.

India today uses about 20 per cent of the annual availability of the underground water supply for irrigation. The Technical Co-operation Mission, has allocated $18,644,842 for the construction of 3,000 tubewells in Uttar Pradesh, Bihar and Punjab States, the dollars being used for technical assistance and specialised equipment needed for the projects. (A tubewell, it may be noted in parenthesis, is about 300 feet deep and 16 inches in diameter, and powered by an electric or diesel pump. It can irrigate about 300 acres a year). Under a second T.C.M. agreement, 287 exploratory wells were sunk in various States with the aid of $4 million worth of United States equipment and with U.S. assistance in the training of a large number of Indian personnel. Furthermore, as of 31st October 1961, a grant of Rs. 80 lakhs (8 million rupees) was made available from P.L. 480 funds to cover the cost of 200 exploratory tubewells in the first two years of the third Five-year Plan.

River Valley Projects

The bulk of P.L. 480 Loans have been made to twelve River Valley Projects which will develop power resources and provide irrigation in the nine States of Andhra Pradesh, Bihar, Bombay, Madras, Mysore, Orissa, Rajasthan and Uttar Pradesh. These projects are expected to provide 1,400,000 kw. of power as well as abundant water for the irrigation of more than 11 million acres. Besides the Rs. 5.9 crores in grants, the projects have been given loans of Rs. 124.1 crores from P.L. 480 funds, raising the total to Rs. 130 crores.

In addition to P.L. 480 rupee loans and grants, the U.S. A.I.D. Mission has supplied $70,000 worth of technical assistance to river valley projects and a grant of $14 million for the purchase of heavy construction equipment. The U.S. Development Loan Fund has also extended a credit of $32.4 million to the river valley projects. A brief examination of a few of these projects is necessary to obtain an idea of the significance of these projects in the overall development of Indian agriculture.

The Kosi is Bihar's "river of sorrow." It causes considerable damage to life and property by continually changing its course. Flowing through one of the most densely populated areas of the country, the river's

U.S. Aid to River Valley Projects

Name of Project	Amount in crores (Rs.)
Chambal (Rajasthan)	27.1
Hirakud (Orissa)	4.6
Damodar Valley (Bihar, West Bengal) ..	7.5
Mahi Right Bank Canal (Bombay) ..	2.0
Kakrapara (Bombay)	3.0
Nagarjunasagar (Andhra)	29.5
Kosi (Bihar)	17.0
Bhadra (Mysore)	7.0
Tungabhadra (Andhra Pradesh) ..	7.1

Kundah (Madras)	7.6
Koyna (Bombay)	11.4
	130.0

wandering torrents destory many lives and devastate the land and crops during virtually every monsoon season.

A project has been designed in three stages to harness the river's unruly floods and channel them to irrigate some one and a half million acres of parched land. First, a barrage, completed in June 1962, was built across the Kosi about three miles above Hanuman-nagar in Nepal. The second unit of construction embankments 150 miles long have been completed, and the Eastern Kosi Canal is now being built to take from the Hanuman-nagar Barrage. When the entire project is completed, Kosi's turbulent waters would not only have been controlled but would contribute to the fertility of the soil.

The Damodar Valley Project has been designed to some extent on the lines of the famous Tennessee Valley Authority (T.V.A.) in the United States. The D.V.A. has drawn freely from the experience of T.V.A. both in construction and design. It consists of (1) three thermal power stations, one at Bokaro (Bihar), another at Durgapur (West Bengal) and a third at Chandrapura (Bihar),—the last two being financed entirely by American loans—four storage dams, an extensive power transmission grid, and an irrigation barrage at Durgapur. The Durgapur barrage will irrigate nearly one million acres. From P.L. 480 funds Rs. 7.5 crores have been loaned to the Damodar Valley Project. The tallest and largest masonry dam in the world is being built at Nagarjunasagar in Andhra Pradesh across the Krishna river with the help of a loan of Rs. 29.5 crores from P.L. 480 funds. The reservoir will have the largest storage capacity of any in India (9.3 million acre feet) and will render the irrigation of some 20.6 million acres possible. It is estimated that, as a result of this irrigation project, the increased food is likely to be around 800,000 tons.

At Hirakud in Orissa State, the world's longest main stream dam has been built across the river Mahanadi. The United States has granted a loan of Rs. 9.8 crores towards the construction of this dam. The reservoir will contain 6.6 million acre feet of water and it will be possible to irrigate some 570,000 acres in the Sambalpur and Bolangir districts in Orissa State.

Fertilisers

A P.L. 480 loan has also been extended to the Government-owned Trombay Fertiliser Factory in Bombay. Rs. 13.4 crores are expected to meet the local costs of the plant, which will begin operating in a year's time. The factory's production of 97,500 tons of urea and 254,000 tons of nitrophosphate fertilisers will save India about Rs. 12 crores of foreign exchange now being spent on imports of fertilisers. The factory has also been credited $30 million from the U.S. Development Loan Fund for the import of equipment. (This is the only direct contribution of the D.L.F. to agriculture. Also to be considered, however, are loans extended to India for the import of steel to be used in the public and private sectors—steel essential to agricultural projects).

Technical Co-operation Mission

Apart from the $4.5 million grant to meet India's food crisis in August 1950 and the Wheat Loan of 1951, the history of U.S. aid to India begins in fiscal year 1951 with activities of the Technical Co-operation Mission. The primary purpose of technical aid is to increase productivity by developing India's human resources. Through joint projects, initiated by the Government of India and approved by the Ministry of Finance and the U.S. Technical Co-operation Mission (now the U.S. A.I.D. programme), Indians acquire technical knowledge and skills and organisational experience in both India and the United States of America.

The Government of India contributes towards rupee costs involved in the projects, such as the cost of local construction, domestic transport, salaries of American personnel in India, or Indians sent abroad (not the international travel expenses) for training. On the request of the Indian Government, the United States contributes American experts in a training, demonstration or advisory capacity for specific technical and economic projects in the Indian development programme. The United States also provides training facilities for Indians either in America or other countries outside of India. And a limited amount of supplies and equipment is provided when necessary for demonstrations and training purposes by American technicians in India.

In the eleven years since the programme began (fiscal years 1952-62), the United States has sent a total of 1,593 technicians and experts to India. Over one-third of these were sent for projects in agriculture and natural resources. In the same period of time, over 3,000 Indians have gone abroad for training, and, of these, 846 have been studying agriculture. Since these numbers can only touch the fringe of India's needs, "training of trainers" has been emphasised in recent years. The Uttar Pradesh Agricultural University, which I have already described, comes under this heading.

The importance of fertilisers for India's agricultural output can hardly be exaggerated. India's overworked, land-kerchief plots of land have a very low yield per acre. Their yield in relation to those of China and Japan is expressed by the ratio 1 : 2 : 3. Much of the best natural fertiliser, cowdung or cattle manure, is used for fuel. In 1951 India's Sindri Fertiliser plant was still nascent, but since then it has made rapid strides. Within the First Five-year Plan the plant was producing 300,000 tons of nitrogenous fertilisers, and production is expected to reach one million tons during the third Plan; production of phosphatic fertilisers is expected to increase from 67,000 tons in 1960 to 400,000 tons by the end of the third Plan (1966). Under the Indo-American aid programme, fertilisers were imported and distributed to farmers; the sales proceeds were credited to a separate fund for the acquisition of certain types of fertilisers for demonstration purposes and for a survey of the Sindri plant in order to expand it. A contract for expansion of the plant has been entered into by the Government of India.

While fertilisers are important, attention must also be paid to the soil to be fertilised and the seeds to be planted. The All-India Soil Testing Service has been sponsored by the Technical Co-operation Mission from the very beginning; twenty-four laboratories are now in operation, and demonstrations are given to agriculture extension workers in various training centres. Two three-month courses were held on the use of atomic energy for agriculture at the Indian Agricultural Research Institute. The American conservation experts assigned to the Central Conservation Board of the Ministry of Food and Agriculture at New Delhi have already been mentioned in connection with soil conservation. The Americans have introduced hybrid seed for maize and sorghum, and the T.C.M. has assisted in the setting up in Coimbatore of a collection of 1,200 varieties of sugarcane available in the world. Thus, all known sugar protoplasm is available to Indian plant breeders. Each year since 1955, T.C.M. has tested American hybrid seeds in the Punjab and other States and has shown through these tests that food production can be increased.

Under the Third T.C.M. project agreement between India and the United States, $556,000 was obligated for plant protection and locust control. Co-ordinated locust control plans are carried out on a regional as well as national scale by the United Nations Food and Agriculture Organisation. While India receives aid from America and the United Nations, India in her turn also aids other countries in fighting the locust with her experts.

India's Central Anti-locust Unit has many skilled entomologists and they attack locusts swarms with many techniques—both ancient and modern. The Indo-American project augmented existing facilities by supplying jeeps, power sprayers and wireless communication sets. Then the project was expanded to cover other forms of plant protection so that in 1954 fumigrants were provided for a demonstration of protecting grain in storage.

India's irrigation programme has received T.C.M. assistance through its participation in tube-well, river valley development and ground water exploration projects. Another project (Water Resources Survey and Minor Irrigation) received $414,000 to purchase equipment outside India for use in surface water studies. In order to collect basic data on rainfall, stream flow, underground water, etc., a survey was made in areas of the States of Hyderabad, Madhya Pradesh and Maharashtra, and the equipment necessary for such a survey was provided; current metres, sounding reels, sump pumps, casing pipe, heavy earthmoving equipment, etc.

A project in Agricultural Information Production and Training was designed mainly to provide equipment for the All-India Agricultural Information Programme, which employs about 15,000 (in 1956) village extension workers in Community Projects. They need reference material and audio-visual production and teaching aids to relay information on the latest findings in agriculture to the villagers. Support was also extended to the Indian Council of Agricultural Research, which is the centre for co-ordinating and supervising the agricultural information programme.

For the improvement of India's cattle, T.C.M. provided assistance to 78 out of 150 artificial insemination centres *extant* in India in 1959. T.C.M. now concentrates on advising for better nutrition and more efficient marketing of cattle in 600 key villages. T.C.M. advised in the laying out of grazing management projects; and an adviser was assigned to the Ministry of Food and Agriculture to help organise village cattle markets and larger market centres. For these $348,000 have been obligated through June 1961. In order to help improve the quality and quantity of swine, two technicians and some equipment have been contributed to the project by T.C.M.

T.C.M. contributions towards poultry improvement include the importation from the United States of 30,000 day-old chicks and 8,640 hatching eggs. These birds now serve as the basic breeding stock on State poultry farms, which in turn supply poultry to the demonstration centres. Equipment has also been furnished to five regional farms and 300 development centres in the State.

(Concluded)

[*Note*: This and the first two instalments of this series on U.S. Aid to Indian Agriculture, published in *Commerce* dated 8th and 15th February 1964, form part of a book entitled *American Aid and Indian Economic Development* which the author will be publishing shortly.—ED.]

Shalimar Industrial Finishes

Shalimar Paints offer you a wide range of industrial finishes, ready-made or specially formulated for stoving, air-drying, dipping and spraying; litho varnishes and stand oils, fire-resistant paints, epoxide chemical-resistant paints, wire enamels and insulating varnishes and compounds. Like every Shalimar product, Shalimar Industrial Finishes bring you the sum of four decisive elements—resources, research, know-how, quality-control—that guarantee superior quality and performance.

PRODUCTION OF MACHINE TOOLS

INDUSTRY'S PERFORMANCE HEARTENING DESPITE DIFFICULTIES

FOLLOWING the declaration of national emergency in October 1962, the Government of India, it will be recalled, exhorted the machine tool industry (in both public and private sectors) to step up its production by 30 per cent, so as to meet the increased defence demands. The industry rose to the occasion and even surpassed the Government's expectations by producing graded machine tools to the aggregate value of Rs. 15.6 crores in 1963, as compared with Rs. 10.7 crores in 1962 (about 49 per cent of it in the private sector and 51 per cent in the public sector). It is even more remarkable that the industry's output in the last year represented as much as 55 per cent of imports, as compared with 41 per cent in 1962 and 30 per cent in 1961. From the accompanying table, which contains these figures, it will also be seen that, while imports of machine tools increased from Rs. 2.5 crores in 1950 (the year preceding the advent of planning) to Rs. 28.2 crores in 1963, indigenous production, too, rose from a mere Rs. 0.3 crore to Rs. 15.6 crores. Thanks to this rapid growth of the industry, domestic production as a percentage of imports also increased from about 12 in the former year to 55 in the latter. That, in short, is a measure of the industry's progress over the last 13 years.

Remarkable as this achievement is, it is still not adequate in relation to the country's needs. Mr. S. L. Kirloskar, President of the Indian Machine Tool Manufacturers' Association, who addressed the Seventeenth Annual General Meeting of the Association held at Ludhiana on the 22nd instant, highlighted, in this connection, the ever-growing demand for machine tools and the consequent need for accelerating the tempo of development of the industry. But the desired progress, in his view, would depend on the removal of certain difficulties confronting, in particular, the private sector of the industry. The difficulties mentioned by him, as also the suggested solutions, are contained in the following paragraphs.

Continuing Problems

1. The attitude of the Government, particularly that of the Defence Department, seems to point towards a "closed door policy." This is suggestive of an attitude of doubt and distrust towards the private sector. The Defence Department's proposals are not constructive and positive. The industry, therefore, finds it difficult to develop new lines of manufacture to suit the Department's specifications. If there is proper liaison and understanding between the Association and the Department, the former could advise its member-firms to undertake the manufacture of those special types of machine tools the Defence Services require. But the Government should also, at the same time, give the industry all possible incentives and help, including monetary grants.

2. At present the machine tool industry, which demands skill, technical know-how and circumspect entrepreneurs, has to be content with a relatively low margin of profit. All the capital it needs is, therefore, not forthcoming. If the industry's potential is to be stimulated, the Government's taxation policy should provide some incentives for attracting more capital.

3. The Government has recently laid down that new manufacturing units in the industry should commence production with an indigenous content of about 80 per cent. This condition is too difficult to fulfil at the initial stage itself. The Government should not insist on this 80 per cent indigenous content as an irreducible minimum, if it expects the industry to increase production rapidly.

4. Cumbersome formalities and frustrating procedural delays are involved in negotiating and implementing foreign collaboration schemes. Inordinate delays are experienced in securing financial assistance, foreign currency loans from industrial finance corporations and import licences under D.L.F. for c.k.d. components. The restrictions on royalty payment also act as a disincentive to many foreign collaborators, because the yield on investment is unattractive. Foreign collaboration should, therefore, be encouraged in the machine tool industry by liberalising royalty payments. A top limit of 7½ per cent royalty and a duration of ten years, with the option of renewal for another ten years, have been suggested by Mr. Kirloskar in this connection.

5. With its substantial increase in production, the industry requires correspondingly increasing quantities of essential raw materials like alloy steel, foundry grade pig iron, coke and miscellaneous engineering items. However, the supply position of foundry grade pig iron continues to cause anxiety. About 51 per cent of the additional licensed capacity for machine tools has not been covered by foreign exchange allocation. As a result, during the last two years, the industry had to give up as many as 14 new production schemes. The need for giving the industry priority in the allocation of essential raw materials is self-evident.

6. The I.S.I. tests of standards for the various types of machine tools sometimes serve more as a hindrance than as an incentive for the production of more and better types of machine tools. Indian manufacturers who are already working in collaboration with foreign firms have found it very difficult to change over from one standard of performance to another. As the I.S.I. charts are prepared with greater emphasis on theoretical considerations than on practical aspects, manufacturers are unnecessarily saddled with standards which

Graded Machine Tools—Production and Imports
(In crores of rupees)

Year	Imports (value)	Indigenous production (value)	Indigenous production as per cent of imports
1950	2.49	0.29	11.5
1951	2.50	0.47	18.9
1952	2.21	0.44	20.1
1953	3.13	0.44	14.1
1954	3.86	0.47	12.2
1955	5.29	0.68	12.8
1956	8.37	1.08	12.9
1957	14.64	2.35	16.0
1958	14.42	3.41	23.6
1959	16.33	4.16	25.5
1960	20.94	5.86	28.0
1961	24.22	7.33	30.3
1962	26.04	10.74	41.2
1963	28.21*	15.57†	55.2

* Estimated on the basis of 11-month figures.
† Estimated on the basis of 9-month figures.

cannot be conformed to in practice. The Government should, therefore, consult the Association before new I.S.I. standards of tests are enforced.

At least two of the industry's difficulties—one pertaining to pig iron supply and the other pertaining to foreign exchange allocation—may not be as acute in the coming years as in the recent past. It is gratifying to know, in this connection, that the Planning Commission is just surveying the industry's requirements of pig iron by grades for the next two years. There is reasonable hope that the Commission will make a realistic appraisal of the industry's needs, so that its planned production may not be delayed or hampered. As for foreign exchange, the Association itself has noted in its latest annual report (that for 1962-63) that the Government is now giving sympathetic consideration to the industry's requests for foreign exchange, particularly for capital goods, balancing equipment and components. It is expected that the Government will grant, without delay, the minimum foreign exchange required by manufacturers for their development and expansion programmes.

Plans of Some Individual Units

The industry's expansion programmes, incidentally, are and will be based, to a large extent, on the development work which has been under way in several units for manufacturing new and more advanced types of machine tools. The activities of different units in this field last year may be usefully reviewed here, for they reflect the sustained enthusiasm of the industry for designing and manufacturing a wide range of new types of machine tools to cater to the diverse needs of engineering and other industries. *The Investa Machine Tools and Engineering Company Ltd.*, for instance, has completed the designing of its new RD-32 Model radial drilling machine. A prototype of this model is shortly expected to be ready. *Cooper Engineering Ltd.* is to expand its manufacture of shaping machines. It is also planning to manufacture a big batch of heavy duty planing machines. This firm has also commenced the progressive manufacture of slotting machines. *Hindustan Machine Tools Ltd.* in the public sector has developed a new turret lathe of 225 mm. centre height and 63 mm. spindle bore with electro-magnetic pre-selection of feeds and speeds. *G.G. Dandekar Machine Works Ltd.* has just put on the market its 12" swivel type machine vice. *Batala Engineering Company Ltd.* has planned the manufacture of hydraulic open-side planers in three sizes. It has also completed the first prototype of a geared head lathe of its own design. In the *New Standard Engineering Company Ltd.* the range of pneumatic power and drop stamp hammers has now been increased upto 20-cwt. capacity. The Company has also planned the development of nibbling machines, section benders, screw and pipe threading machines. It has successively manufactured (i) electric induction furnaces for melting non-ferrous metals, (ii) ductless type electric induction furnaces for the manufacture of special grey iron and some iron and copper alloys, and (iii) electrically and manually operated overhead travelling cranes.

The *P.S.G. Industrial Institute* has developed a new range of lathes suitable mostly for production and for training purposes. This lathe is compact and easy of operation. All the driving units are mounted inside the pedestal. This machine has got the advantage of obtaining back gear for speed production and feed gear reversing by shifting levers on the head stock front. It replaces the conventional method of engaging the pin in the bull gear, by which accidents are possible. This safety arrangement is provided by keeping all the gears separately in a closed oil chamber. *Heroes Engineering Works Private Ltd.* has now introduced into the market 'Heroes' brand universal milling machines and 'Heroes' brand all-geared lathes in sizes 6 ft. and 6½ ft. *The Hyderabad Allwyn Metal Works Ltd.* has developed a thirty-six-inch throat all-cut metal cutting band saw machine. It has many special features and is constructed to handle large production jobs and, also, small intricate works involving high precision and flexibility. *Kulkarni Foundries Private Ltd.* has recently placed on the market tumbling barrels, blowers and geared laddles, which have unique design features, specially suited to Indian conditions. It has secured an industrial licence for the manufacture of rotary oil-fired furnaces and three-phase direct arc electric furnaces in collaboration with foreign firms. The development work on these items would, shortly, be undertaken.

Textile Machinery Corporation Ltd. has taken up the manufacture of Texmaco-Ward No. 3C Capstan lathe and its component parts in accordance with the phased manufacturing programme approved by the Development Wing. *Steel Plants Private Ltd.* has developed a new type of heat treatment furnace for annealing, carburising and hardening of small components on production basis. This is most suitable for small components like bicycle chains, small rings, balls, small castings, etc. which do not get deformed due to rotation of the retort. *Supercrafts Private Ltd.* has completed the designing of an all-geared high-speed tool room lathe, and the prototype is expected to be ready by the end of 1964, subject to the availability of imported taper roller bearings. A taper turning attachment for its H.S. model heavy duty lathe is in the designing stage and is expected to be manufactured and marketed by the middle of 1964. *C.R. Sonalkar Factory* has under development 4-jaw independent lathe chucks from 18" to 22" diameter, 3-jaw scroll operated concentric chucks from 5" to 12" diameter; 3-jaw rack type concentric chucks and plug gauges. *Ashok Manufacturing Company Private Ltd.* has developed and started production of carbide tool grinding and lapping machines complete with diamond lapping wheel and oscillating tables. *Mediratta Engineering Corporation* has included 42" and 48" diameter 4-jaw independent dog chucks in its present range of production programme. *National Machine Tool Industries* have started manufacturing self-centering true chucks Taylor type, 10" diameter of Grade I specifications, in addition to the regular production of various types and sizes of Grade I chucks.

Mr. Subramaniam's Reply

The Union Minister for Steel, Mines and Heavy Engineering, Mr. C. Subramaniam, who spoke at the Association's meeting, regretted that there was not sufficient new investment in the machine tool industry whose products

(*Continued on page 339*)

NEW PRODUCTS AND PROCESSES

Paints Reinforced with Nylon

PAINTS and varnishes reinforced with nylon produced by Badische Anilin and Soda Fabrik, Ludwigshafen and Henkel and Cie., Dusseldorf, Henkelstrasse 67, West Germany, are now being marketed by a number of German companies. Resistance to cracking is one of the main advantages claimed and they can be applied by brush or spray in a single operation.

Handling Scrap Materials

Combined magnets and grabs have been introduced by the Ohio Electric Manufacturing Company for use in scrap metal yards where mixed ferrous and non-ferrous metals must be handled. A big magnet in the centre of the unit picks up their on scrap while four grab arms close around non-magnetic material. The magnet itself is wound of aluminium strip said to make it lighter than conventional copper-wound magnets. The company is a division of the Howell Electric Motor Company of 409, N. Roosevelt Street, Howell, Michigan.

Hard Coating for Steel

A hard coating for steel which will withstand temperatures in the 500 to 900 degrees Centigrade range is claimed to have been developed by a Japanese chemist, Mr. Takeichi Oshima, 136, Idogaya-Nakamachi, Minami-ku, Yokohama. He says that the coating containing sodium metasilicate and other metal salts is ideal for use on components subjected to high temperatures such as engine exhaust pipes, electric heaters, gas burners and stoves. It is also said to have good stability when in contact with salt water and oil and to react well to bending.

Paper Dissolves in Water

Paper which dissolves in water in a few seconds has been developed by the Gilbreth Company of 3,939, Germantown Avenue, Philadelphia, Pennsylvania. It is made of inter-locking fibres which disengage when dropped into water; the warmer the water, the more quickly the paper dissolves. In addition to its uses for handling secret information which must be destroyed easily, the paper may also find a use as a water-soluble packaging material. Each sheet, costing about 5 cents, can be written on in the usual way.

Portable Refrigerator

Latest of the luxuries for holidaymakers and those who enjoy picnics is a portable electric refrigerator which will operate even while being carried along a country path. It has been introduced by Norcold Inc. of 16,200, Maple Avenue, Gardena, California, and is powered by a battery slug from the shoulder. The cooling unit operates on two volts and can also be plugged into mains power or the cigarette lighter in a car. The battery weighs 18 lbs. and is said to be able to operate the refrigerator for 50 hours without recharging. The 2-cubic foot refrigerator maintains an internal temperature of 70 degrees Fahrenheit below the outside temperature.

Makes More Coke

A way of manufacturing coke using coking coal mixed with non-coking coal briquettes is claimed by Bergwerksverband G.m.b.H., Dortmunder Strasse 151, Essen, Germany. The company states that up to 50 per cent increases in coke production is possible using the same quantity of coking coal. Coal is mixed with 7 per cent (by weight) of pitch and compressed into briquettes. These are then mixed with coking coal and coked at about 1,150 degrees C. to give a coke suitable for use in cupola or blast furnaces.

Synthetic Fibre Blanket

Blankets made of a synthetic fibre, which give more warmth on a weight for weight basis, were shown in London recently at the International Hotel and Catering Exhibition. Made from a fibre known as "ulstron," which has been used previously for making long-life fishing nets, the manufacturers, The Imperial Chemical Industries Ltd., London, claim that a lighter blanket from "ulstron" can give as much warmth as a standard woollen blanket and is much easier to wash.

"Universal" Machine Tool

A 'Universal' machine tool which can be used for a variety of turning, cutting, boring, milling and grinding operations has been developed by A. H. Croucher Ltd. Holybourne, Alton, Hampshire, England. It is designed for use in manufacturing situations where capital is restricted and labour supply short and may have special relevance for new industries in developing countries. For precision and general work, the machine can be quickly set for varying operations.

Process of Nylon

Great interest has been shown by industrial concerns in Russia and Japan in an improved method of making nylon developed by the Weizmann Institute in Israel. The new process is the result of five years' work in the Plastics Research Laboratory, led by Dr. David Vofsi, the Scientific Director of the Institute. Some stages of the production process are claimed to be simpler than with existing varieties, and the nylon appears to have a higher melting point and to be more resistant to radiation. Nylon has, of course, been made for many years in the United States and Europe, mostly from cyclohexane. While it was known that nylon may also be produced by telemerisation, which involved combining carbon tetra-chloride and ethylene, neither the Americans nor the Europeans were much interested, because of the large sums invested in the conventional process. The Japanese, the Russians and the Israelis, on the other hand, had no nylon industries and decided it might be better to make nylon by telemerisation than by the traditional methods. The Weizmann Institute innovations include several important improvements in the telemerisation process, particularly with the initiating mechanism. Initiators which were developed are said to be cheaper, safer and better. They have also improved other steps in the process and cut down erosion.

Water Tap

Ten per cent of household water requirements can be saved by a new kind of water tap, which turns off and on by itself when needed. It took Mr. Alfred Gursky, of Israel an immigrant electronics engineer, three years to perfect. The tap is operated by a new type of proximity-sensitive unit, which the inventor says is easy to build, foolproof, and relatively inexpensive to mass-produce. It turns on the water as soon as a hand or any other object is brought close to it and shuts itself off as soon as the object is removed. It can put an end to running taps during dish-washing, shaving, or even taking a shower and will be particularly useful for operating theatres. The proximity device can be housed in any type of plastic container and used for opening refrigerator doors and similar purposes.

Diesel-powered Platform Truck

All types of platform trucks are increasingly used for rationalising transport operation within and outside the grounds of industrial enterprises. Based upon its considerable experience in manufacturing several special types of such transport equipment, an Austrian enterprise Messrs. Jenbacher-Werke, Jenbach, Tirol, Austria (Europe), has developed a diesel-powered platform truck complying with the most up-to-date requirements. It is designed for hauling loads of 3 to 6 tons within the plant grounds and in public traffic. The simplicity of operation, its high starting acceleration and its high traction power as well as a platform of most adequate dimensions are claimed to be its most characteristic features. The vehicle is powered by a water-cooled four-stroke 43 h.p. Diesel Engine with 3,500 r.p.m. A hydro-dynamic gear secures easiest control. The speed is regulated steplessly, without a hand level, simply by means of a foot lever. Maximum speed is 47 km/h (with a load of 3 tons) for other uses a maximum speed of 20 to 30 km/h is foreseen, even in case of a 6-ton load, according to local conditions. The loading platform measuring 2,330 x 1,500 mm. is calculated for the transport of big-sized cargoes. For the transport of long items, a lateral loading platform measuring 3,650 x 480 mm. has been provided. The series-produced vehicle is equipped with all necessary lighting fixtures. On request, either a stable or a collapsible seat for an assistant may be provided and a driver's cabin added.

Better Pipe Protector

A new flame-retardant pipe insulation jacket suitable for indoor or outdoor service has been developed by the Glas Mesh Co., Westtown, Pa, U.S.A. The jacket is called "Glas Mesh 303H." It is made of "hypalon" synthetic rubber calendared to glass mesh or other backing, the jacketing resisits moisture vapour transmission and ozone. It is easy to handle, install and maintain and retains colour in brightest sunlight. The material is expected to last for ten years or more.

Dial-type Light Dimmer for Lighting Effects

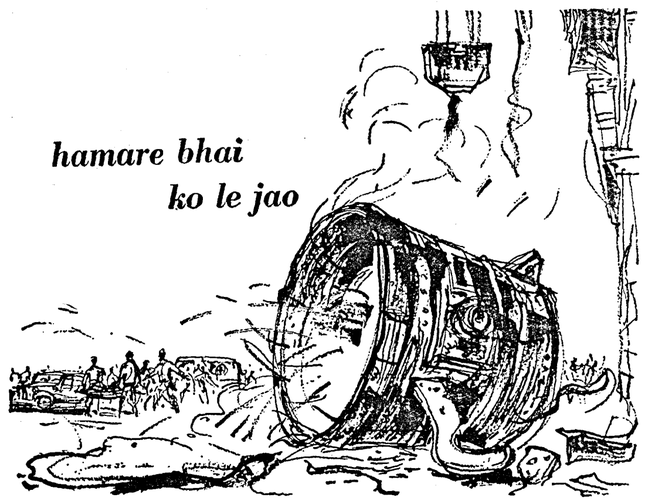
A variety of lighting effects can be achieved with new electronic light dimmer produced by the Hunt Electronics, Dallas, U.S. It is designed to replace most standard type switches, unit is easily installed, records only the degree of lighting dialed on electric meter. Use of "Teflon" TFE-fluorocarbon resins guards against shorting out or insulation failures.

New Vision in Vinyl

Deep Soft Warington, Du Pont's latest expanded vinyl-upholstery pattern, combines warmth and richness with durability and ease of maintenance. Brocade-like pattern is available in eight colour-co-ordinated shades. Among those offering new material are La-Z-Boy Chair, Monroe, Mich, and Sam Moore Furniture Industries, Bedford, Va.

Ball-point Adhesive Applicator

New ball-point adhesive applicator that seals narrow and wide citrus carton flaps intermingled save more than 50 per cent in adhesives costs, says the developer, Sunkist Growers Inc., Ontario, California. Applicator's seal of 'Viton' fluoro-elastomer does not swell in adhesive solvents, allows free operation of ball in close tolerance of chamber, provides positive closing when not in use. Seals are made by Stillman Rubber Division, Electrada Corporation Culver City, California.



It happened some years ago in the steel melting shops at the Jamshedpur works. A large ladle, carrying 75 tons of molten iron, suddenly crashed to the ground with a deafening noise from an overhead crane. The spattering sparks and red-hot metal seriously injured a number of brick-layers working at what seemed to be a safe distance. The air was rent with the frenzied shouts of the men and the hissing of steam.

The first ambulance could remove only five of the injured to the hospital. General Manager Keenan could take only three more in his car. He chose the three who had a better chance of survival than the rest. One of these men, a Hindu worker, however, refused to go. "Do not take me away", he said. Disregarding his own agony, he feebly nodded towards a half-burnt Muslim colleague, and said: "*Hamare bhai ko le jao.*" As Keenan recalls, "The Hindu who was in pain and danger of death remembered, not that the Mohammedan was of a different faith, but that he was his brother."

This feeling of comradeship, born of the common bond of labour, is the spirit that characterises Jamshedpur, where industry is not merely a source of livelihood but a way of life.

JAMSHEDPUR
THE STEEL CITY

The Tata Iron and Steel Company Limited JWTTN 5350R

GLASS, REFRACTORIES AND CERAMICS

PRODUCTION EXPANDS—QUALITY IMPROVES

GLASS, refractories and ceramics play a notable part in the industrial economy of India, as in any other developed country. They are essentially feeder industries catering to the needs of basic industries like iron and steel, chemicals, pharmaceuticals and drugs, automobiles, etc., and also provide materials for construction, sanitation, electric generation and many diverse applications. The combined annual turnover of the three industries now is estimated at as high as Rs. 50 crores, as against only a few crores of rupees some years ago. All the three industries have registered a marked expansion in both capacity and production. Further, a number of articles are now being produced for the first time in this country. There has also been a perceptible improvement in the quality of products manufactured. Thanks to such appreciable expansion and production, the dependence on imports has been reduced to a considerable extent, with the saving of a sizable amount of foreign exchange. And, what is more, attempts have been made to export some of the items. The credit for all this should go in a large measure to the untiring efforts of the industries themselves. Even so, one has to admit that the Development Council for Glass and Ceramics has been actively working and contributing to the solution of the basic problems of the industries concerned. This fact was clearly acknowledged by Mr. Nityanand Kanungo, Union Minister for Industry, in his speech at the inaugural meeting of the reconstituted Council held at New Delhi last week. Mr. Kanungo was gratified that the Council had played a great role already and was looking forward to making a greater contribution to India's industrial progress in the years to come.

Glass and Glassware

The past few years have witnessed, as already mentioned, a notable expansion in the production of glass and glassware, the total quantity actually produced during the calendar year 1963 being 250,000 metric tons, representing a rise of 150 per cent as compared with the 100,000 tons produced in 1953. The expansion is accounted for by all the sub-groups, namely, sheet glass, bottlewares, glass shells, laboratory glassware, thermos flasks, and miscellaneous glassware, as the accompanying table shows. Opthalmic glass and lenses, as readers are aware, are proposed to be manufactured in the public sector at Durgapur in collaboration with the U.S.S.R. Government. Although the agreement covering this project was signed between the Governments of the two countries quite some time ago, the plant, which will have a capacity of 300 tons per annum, is expected to go into production only in the beginning of fourth Five-year Plan. The reasons for the protracted delay in the commissioning of this plant are not known. The failure of Mr. Kanungo to throw some light on the project is rather conspicuous. Be that as it may, the other items which are likely to be produced for the first time in India, according to Mr. Kanungo, are glass fibre, as well as improved types of laboratory glassware, glass insulators and plate glass. Encouragement has been given for the production of small items such as tubes and rods for thermometers, syringes and instruments, and glass chattons "with the sole idea that all types of glass and glassware would be made in India by the close of the third Plan" in order to meet the rising domestic requirements and exports.

It is, indeed, a matter for satisfaction that, in a short span of ten years, the capacity of the refractory industry has trebled, from 300,000 tons to 900,000 tons. And the industry is confident of achieving in time (that is, by 1965-66) the third Plan targets fixed for it, namely, 2.0 million tons capacity and 1.5 million tons production. The products of the industry are mainly fire-clay refractories, silica bricks and sillimanite refractories in diverse shapes and sizes. Small quantities of chrome and insulating bricks are also produced. The principal consumer of refractories is the iron and steel industry. The demand arises from both operational needs and constructional purposes in building up new capacity. The destiny of the refractory industry, is, therefore, vitally linked, as Mr. Kanungo said, with that of the steel industry. Considering the large-scale expansion programme contemplated for the steel industry, the demand for the products of refractory industry is bound to go up markedly in the coming years.

The importance of ceramics industry cannot be stressed too strongly. Mr. Kanungo very aptly remarked that the amazing versatility of this industry enables it to serve not only in the industrial but also in the domestic fields of consumption. The scope for the expansion and development of the industry is pretty vast, what with the rapidly rising trend of demand for high and low tension insulators which are required in connection with the power development and posts and telegraphs programmes. The demand can be met successfully only if production is maintained at the highest level possible. Such production presupposes the availability of basic raw materials like china-clay required for the ceramics industry. The Development Council has done well, therefore, to take up this question in hand. Complementing the Council, Mr. Kanungo observed:

"I am sure that, in the very near future, we would create agencies for supplying basic raw materials of the required type and at reasonable prices. This in itself will be a step forward towards improved quality and standardised production. The role played by I.S.I. in formulating standards for various items of glass and ceramics and their raw materials is praiseworthy. I will urge you all to adopt the standards at an early date."

The glass, refractory and ceramics industries are certainly fortunate in having abundant availability of all the major raw materials required from indigenous sources. Nevertheless, there is a wide gap between installed capacity and actual production. Full capacity utilisation may not be possible, but the existence of idle capacity in many sections calls for close scrutiny; the percentage of capacity lying unutilised is said to be of the order of 40 in table and pressedware, 43 in lampware, 29 in scientific glassware, 74 in thermos flasks, and 71 in miscellaneous items. The three problems facing the industries are shortage of technical manpower of proper and adequate competence, low productivity, and lack of facilities for training within the industry. It was just as well that Mr. Kanungo emphasised that these problems should be examined in more detail by the Council in due course. Pertinent, indeed, is his call to large factories to develop their own nucleus research departments which can work in close collaboration with the Central Glass and Ceramic Research Institute. The Institute, he said, would be happy to render assistance to the industries for the asking. It is to be hoped that the industries would take full advantage of this important national laboratory. While foreign technical collaboration for manufacturing new items is welcome, it is, as Mr. Kanungo rightly pointed out, important that indigenous technical know-how is developed fully, so that the country's dependence on foreign technical know-how is minimised at an early date.

Fourth Plan Targets

Although the production of glass and glassware has risen notably in the past three years, it is felt that there will be serious shortfalls in the fulfilment of targets fixed to be achieved by the end of the third Plan (1965-66). The panel appointed by the Development Council has accordingly pruned the targets to more realistic levels; the revised targets are not known. In view, however, of the continuously rising trend of demand, the panel has suggested liberal targets for the different sections of the industry for the fourth Plan (to be achieved by 1970-71). The target recommended for flat glass (including sheet glass and wired-figured-rolled glass), for instance, is 32.0 million square metres, as against the actual capacity of 13.4 million square metres (in May 1963). The targets for glass shells and vacuum flasks are 300.0 million and 6.8 million, as against the capacity of 68.3 million and 4.1 million, respectively, in May 1963. As compared with the capacity existing in May 1963, the target fixed for laboratory glass is higher by 8,600 tons at 20,400 tons. The other targets are 430,000 tons for bottles, 112,500 tons for table and pressedwares, and 47,000 tons for lampware; the capacity as of May 1963 in regard to these items is not known. The item "miscellaneous glassware" is proposed to be dropped for the purpose of fixing the fourth Plan target. Glass-mineral wool, fibre glass products, heat-resisting glassware, crystal glass, glass insulators, glass carboys, glass block-tiles and fluorescent tubes will continue to be treated as "non-planned" items, the development of which being watched by the Director-General of Technical Development, keeping in view their demand and export potentialities.

Judging by the rapid rate at which the domestic demand for the different products made from glass has been rising, the fourth Plan targets recommended by the Development Council's panel are not at all ambitious. Nor are they difficult of fulfilment. Only the conditions necessary for the successful achievement of targets have to be created by the planners and the powers-that-be. In licensing additional capacity, consideration must be shown for economics that can be achieved through large-scale manufacture and locational advantages. The authorities should not allow ideology to stand in the way of permitting existing units to expand and diversify their manufacture. Considering that the *per capita* production of glass in India is very low (about a lb., as against 90 lbs. in the U.S.), the glass industry has certainly a vast growth potential. Only, care must be taken to ensure that its growth is along sound and modern lines and that the industry's requirements of raw materials, packing and transport are also simultaneously attended to. Planning will lose all meaning if this fundamental condition is not fulfilled.

PROTECTION FOR TITANIUM DIOXIDE

Only one firm in India manufactures titanium dioxide, and that is the Travancore Titanium Products Ltd. of Trivandrum in Kerala. Messrs. Nowrosjee Wadia and Sons of Bombay were given some time in 1961 a licence to put up a factory with a capacity of 4,400 tons. A new company, called Botannium Ltd., was formed to install a plant in suburban Bombay, but, following difficult business conditions and lack of confidence in the investment market engendered by the 1963-64 budget, the Directors decided last year not to proceed with the project. Towards the close of 1963, it was stated that the Company had decided to retain the technical know-how concerning the project for five years. Titanium dioxide industry has been enjoying tariff protection for over ten years and protection is due to expire by the end of December next. The industry has pleaded for extending the period of protection. The plea is now being examined by the Tariff Commission which held a public inquiry at Bombay on Thursday last week. The representatives of the producer, the sole selling agent, consumers and their associations, importers and Government departments were present at the inquiry.

Thanks largely to tariff protection, the Travancore Titanium Products Ltd. has considerably expanded both its capacity and production during the last six years. The annual capacity

Agricultural Situation In India

A monthly journal presenting a factual and integrated picture of the agricultural and food situation in India, against an appropriate background.

This journal, issued by the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, has as its regular features:

- A monthly newsletter surveying the latest development in the field.
- Authoritative special articles on topics of current interest.
- Extensive information on events and trends in India and abroad.
- Reviews of production and prices of various commodities.
- A comprehensive statistical section.

Commanding a wide and influential readership in India and abroad, *Agricultural Situation In India* is an invaluable guide to students of agricultural economics, business executives and administrators.

Annual subscription .. .. Rs. 24.00 or 37 sh.

Available from:

1. The Manager of Publications, Civil Lines, Delhi-8.
2. The Secretary to the High Commissioner for India, "India House," Aldwych, London, W.C.2.

INDIAN LABOUR JOURNAL

Issued monthly by the Government of India, Ministry of Labour and Employment, Labour Bureau, Simla, contains up-to-date information relating to labour in India, e.g., summaries of reports and enquiries; Labour legislation, summaries of important awards, legal decisions and collective agreements, labour news from States covering labour welfare and living conditions, statistics of industrial disputes, absenteeism, employment—service, wages and earnings, cost of living, retail and wholesale prices, trade unions, etc. In addition to these, the quarterly issues of the journal contain special articles on subjects of labour interest.

Rates of Subscription: Rs. 24 per annum and Rs. 2 per copy.

Available from:

The Manager of Publications, Civil Lines, Delhi-8.

DALMIA IRON'S PROGRESS GOOD

DIVIDEND SAME—RESERVES GET MORE

FAIRLY encouraging progress has been made by Dalmia Iron and Steel Ltd. (Managing Director: Mr. Ghanshyam Kejriwal, Rajgangpur, Orissa) during the year ended 30th September 1963. The results show improvement not only in sales, as was the case in the previous year, but also in gross profit. Total sales realisation which had expanded by Rs. 38 lakhs in the previous year has gone up further by Rs. 35.34 lakhs to Rs. 216.87 lakhs during the year under review. Gross profit which had remained practically unchanged at Rs. 33.65 lakhs in the previous year has risen to Rs. 40.09 lakhs. Since both the essential provisions have been raised a little—the one for depreciation from Rs. 10.71 lakhs to Rs. 13.36 lakhs and the other for taxation from Rs. 7.50 lakhs to Rs. 8.75 lakhs—the net profit shows an increase of only Rs. 2.54 lakhs to Rs. 17.18 lakhs.

The dividend on the 10-rupee ordinary shares has been maintained at one rupee per share, subject to tax. The sum it absorbs, namely, Rs. 8 lakhs, is to be drawn out of the dividend equalisation reserve to which a higher amount of Rs. 10 lakhs has been transferred from the year's profit. This excess credit of Rs. 2 lakhs to the dividend equalisation reserve and appropriation to other reserves bring the total amount conserved in business to Rs. 11 lakhs, as against Rs. 8 lakhs a year before. The surplus carried forward is, however, only Rs. 6,868, as against Rs. 1.09 lakh brought in.

The following comparative table gives a clear idea of the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1963	1962	1961	1960
Sale proceeds	216.87	181.53	143.52	129.78
Closing stock	21.99	34.98	40.93	34.19
Other income	0.78	1.14	1.49	0.95
Materials consumed	59.64	57.65	50.40	57.72
Other expenses	104.93	85.41	87.82	64.99
Gross profit	40.09	33.65	33.11	19.87
Provision for—				
Depreciation	13.36	10.71	10.50	8.10
Taxation	8.75	7.50	1.50	
Net profit	17.98	15.44	21.11	11.77
Transfer to reserves	11.00	8.00	8.00	4.00
Dividend	8.00	8.00	8.00	4.00
	(10%)	(10%)	(10%)	(10%)
Carry forward	0.07	1.09	1.65	9.04

Equity shares' market value (in rupees):	1964	1963	1962	1961	1960
High	11.87	11.81	12.44	11.06	13.44
Low	11.12	10.00	10.50	9.69	10.06

Until February 1963, when the power supply position improved with the installation of an extra feeder by the Calcutta Electric Supply Corporation Ltd. and the revised allocation of power by the West Bengal Government, the No. 2 three-ton arc furnace which had been commissioned in November 1962 continued to run up to only 33 per cent of its rated capacity. In spite of this serious limitation, the production of grinding media increased further from 3,560 tonnes to 4,481 tonnes and so did that of steel castings from 1,006 tonnes to 1,760 tonnes. The production figures would have been higher still but for technical difficulties in importing equipments from France for attaining the rated capacity of steel casting at 3,600 tonnes and of grinding media at 6,000 tonnes per annum. The Company is now trying to import the equipments from the U.S. under D.L.F. and will be placing the orders soon. In the meantime, it has purchased some indigenous equipments and ordered a third arc furnace which is expected to be put into operation by July next, as additional power for it has already been sanctioned by the West Bengal Government.

The output of spun iron pipes dropped sharply to 14,349 tonnes from 18,475 tonnes to which level it had improved in the previous year from 15,207 tonnes the year before. This setback, which occurred in spite of the increase in the plant's capacity to 45,000 tonnes per annum during the year, has been attributed by the Directors to the reduction in the Company's pig iron quota from 20,000 tonnes to 16,000 tonnes per annum. Because of the shortage of pig iron, the plant was closed twice and workers were laid off for a considerable time during the year. Since the Government has given topmost priority to the pig iron industry and is also envisaging import of pig iron, the Directors anticipate that not only the cut in the quota might be restored but the quota itself might be increased in the near future.

The Company entered into an annual rate contract on 31st December 1962 with the Director-General of Supplies and Disposals, Government of India, for the supply of spun iron pipes which constitute the major portion of the pipes it produces. It, therefore, terminated the selling agencies of all the agents from 1st April 1963.

The financial position of the Company is fairly sound. The paid-up capital, unchanged at Rs. 80 lakhs, is backed by reserves and surplus amounting to Rs. 43.07 lakhs. Borrowings have come down from Rs. 75.45 lakhs to Rs. 60.80 lakhs and, along with current liabilities and provisions, bring the total indebtedness to outsiders to Rs. 114.62 lakhs, as against which current assets, book debts and investments aggregate Rs. 112.33 lakhs. The gross block of Rs. 174.25 lakhs (Rs. 139.75 lakhs a year before) has been written down to Rs. 123.17 lakhs and, together with capital expenditure in progress, the net block is shown at Rs. 125.36 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 11.87 *cum-div.* and offer a net yield of 6.2 per cent per annum.

COMPANY NEWS FROM EUROPE

A. L. Marshall of Nottingham, a British manufacturer of mechanical material-handling equipment, is to enter the South African market under licence with Technical Construction T.I. of Springs, Transvaal, an associate of Britain's Tube Investments group.

The Le Tourneau-Westinghouse group in Australia has won a £1.2-million ($3.3 million) contract to supply 92 earth-moving machines to the Egyptian General Desert Development Organisation.

A.E.C., the British vehicle builders, showed three new lorry and bus models at the Amsterdam International Commercial Vehicle Exhibition in conjunction with R.S. Stokvis En Zonen and Auto Industrie Verheul.

Mackay Radio, a subsidiary of the giant American International Telephone and Telegraph Corporation, has applied for permission to lay two transatlantic cables from France to the United States.

French aircraft firms have just finished a sales drive in New Zealand. The intention is to seek replacement of the British Canberra bomber in the Royal New Zealand Air Force by the Mirage 3.

Plans are now under discussion for the Netherlands, West Germany, France and Italy jointly to sponsor and build the Dutch Fokker F-28, a twin jet, 60-seater, medium-haul aircraft.

The first French-designed Mirage supersonic fighter assembled in Australia has been handed over to the Royal Australian Air Force.

A Liberian mining company has ordered nine-cylinder diesel engines from the Swiss firm Sulzer for a new thermal power station.

Renault cars are to be assembled in Chile soon.

DISC FILTER FOR COAL WASHERIES

The first disc filter for coal washeries produced by the New Standard Engineering Company Ltd. at its Byculla works was released for despatch by Maharashtra's Minister for Finance, Mr. S. K. Wankhede, on Friday the 21st inst. The disc filter, manufactured according to the technical specification and design of Messrs. Dorr-Oliver (India) Ltd., has been made with 85 per cent. indigenous material. This is considered as a major step forward in conserving valuable foreign exchange for the country, considering that demand for disc filters will rise with the Government's plans for increasing output and improving quality of coal. There are at present seven coal washeries working in the country and, besides their expansion, five more coal washeries are expected to be completed during the remaining period of the third Plan. The Company has orders on hand for completing 12 rotary disc filters which would mean a saving of about Rs. 30 lakhs in foreign exchange. Its first disc filter will be sent to Karhanpur, Bihar.

(*Concluded from next column*)

tion are shown at Rs. 26,595. The paid-up capital of Rs. 37.50 lakhs is supplemented with reserves and surplus amounting to Rs. 46.02 lakhs, after excluding Rs. 7.50 lakhs in general reserve required for meeting the year's dividend liability and Rs. 22.25 lakhs in taxation reserve provided for meeting the year's tax liability. With borrowings at Rs. 10 lakhs and current liabilities and provisions shown at Rs. 51.26 lakhs, the total indebtedness to outsiders works out to Rs. 61.26 lakhs, as against which there are current assets, book debts and investments aggregating no less than Rs. 154.74 lakhs.

The Rs. 12.50 fully paid ordinary shares of the Company are currently quoted at Rs. 29 *cum-div.* and offer a net yield of 6.4 per cent per annum.

CHANGDEO SUGAR FARES PRETTY WELL

DIVIDEND CUT RESTORED

WITH a record quantity of cane crushed at 126,678 tonnes yielding 146,131 bags of sugar in 1962-63 (as against 114,951 tonnes and 134,446 bags in 1961-62) and sale of the entire production within the year at favourable controlled rates, Shree Changdeo Sugar Mills Ltd. (Managing Agents: Messrs. A. H. Bhiwandiwalla and Co. (Bombay) (Private) Ltd.) has fared pretty well during the year ended 30th September 1963. Sale proceeds of sugar and molasses have shot up from Rs. 138.84 lakhs to Rs. 201.43 lakhs. Gross profit has spurted from Rs. 27.11 lakhs to Rs. 40.47 lakhs. Both sales and profit would have been higher still had the average recovery of sugar not dropped from 11.71 per cent to 11.56 per cent. Net profit, after making the essential provisions and taking into account the net capital profit (of Rs. 7.04 lakhs) on sale of fixed assets, has doubled from Rs. 10.71 lakhs to Rs. 20.25 lakhs. In commemoration of the silver jubilee—the Company has just completed 25 years of existence—the Directors have already declared, by way of an interim, a dividend of Rs. 2.50 per share of Rs. 12.50 (fully paid). This is the dividend for the year and it compares favourably with Re. 1.50 per share paid for 1961-62. It may be noted here that the year's dividend, amounting to 20 per cent per annum, is lower as compared with 23-1/5 per cent paid for the year 1958-59.

The dividend for the year under review will absorb Rs. 7.50 lakhs. But no separate provision has been made in the year's accounts to cover this liability, as it is to be met out of general reserve to which is carried a much larger sum of Rs. 20.98 lakhs. In addition to this appropriation to general reserve, a sum of Rs. 3.50 lakhs has been set apart for the rehabilitation reserve. The net addition to reserves, after making allowance for the dividend liability, thus works out to Rs. 16.98 lakhs, as against only Rs. 3.07 lakhs a year before. This is only as it should be in view of the large capital profit made in the year under review. The surplus to be carried forward is Rs. 41,152, as against Rs. 1.39 lakh brought in.

The following comparative table mirrors the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1963	1962	1961	1960
Sale of sugar and molasses	201.43	138.84	117.55	110.27
Other income	2.12	1.04	1.75	2.12

Managing Agents' commission	2.40	1.48	1.58	1.38
Provision for—				
Depreciation	2.61	2.02	2.78	3.43
Taxation	22.25	12.00	9.90	7.35
Profit on sale of fixed assets	7.04			
Net profit	20.25	10.71	13.19	12.06
Tax refund and other adjustments	3.25*	0.29		0.22
Transfer to reserves	16.98	3.07	5.34	6.83
Dividend	7.50	4.50	7.50	7.50
	(20%)	(12%)†	(20%)	(20%)
Carry forward	0.41	1.39	0.96	0.62
Total cane crushed (tonnes)	126,678	114,951	120,988	100,606
Sugar produced (bags)	146,131	134,446	141,145	111,717
Recovery of sugar (%)	11.56	11.70	11.62	11.40

Equity shares' market value (in rupees):	1964	1963	1962	1961	1960
High	29.50	30.00	27.75	29.50	34.50
Low	27.25	18.00	21.48	23.72	28.25

* Originally proposed by the Directors at 20 per cent. per annum, but reduced to 12 per cent. at the annual general meeting held on 7th March 1963. The excess provision, being Rs. 3 lakhs, adjusted in the next year's accounts.

The Company exported during the year 23,567 bags of sugar (17,149 bags a year before) at a loss of Rs. 5 lakhs (Rs. 3.32 lakhs). Since its factory has a capacity below the accepted economic minimum, the Directors have applied to the Government for extending the capacity.

Following the enactment of the Maharashtra State Land Ceiling Act, the Company handed over to the State Government land declared as surplus and its other agricultural assets. The assets were worth more than the value paid by the Maharashtra State Farming Corporation and a settlement was arrived at 10 per cent below the valuation certificate. But pending finalisation of the issue, such assets are shown separately in the balance sheet at Rs. 2.48 lakhs. Profit arising from the sale has amounted to Rs. 7.04 lakhs (after adjusting the transfer of net capital gain of Rs. 1.08 lakh to capital reserve) and has been credited to the year's profit and loss account. The gross block of the Company is valued in the books at Rs. 76.39 lakhs (Rs. 90.83 lakhs a year before) and is written down to Rs. 17.04 lakhs. Building, machinery, etc., under construc-

SYNOPSES OF COMPANY REPORTS

Eastern Investments Ltd.

(*Secretaries*: Messrs. Bird & Co. (Private) Ltd., Calcutta.)

Annual General Meeting—11th March 1964.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1963	1962
Income—by dividends and interest on investments	14,40	11,94
Gross profit	13,83	11,22
To Secretaries' remuneration	6	6
Transfer to provision for taxation	4,85	3,96
Net profit	8,92	7,20
Net profit on sale of investments	1,14	18
Excess tax provision written back	Nil	1,72
Appropriations:		
Transfer to general reserve	1,14	18
To dividends (taxable) preference	1,04	1,04
" " ordinary	7,69	9,23
	(10%)	(12½)
Carry forward	1,51	1,32

Market value of ordinary shares (in rupees):	1963	1962
High	153.00	147.00
Low	126.00	127.00

Extracts from the Directors' report: Investments.—The Company's portfolio is representative of investments which are quoted on the Calcutta Stock Exchange with the exception of certain shares costing Rs. 1,00,765 for which no quotations are available. The total of the market value of the investments for which quotations are available together with the unquoted investments as valued by the Directors, exceeds the book value at 31st December, 1963, by Rs. 51,73,263.

General Reserve.—Rs. 1,14,505 representing the net profit made on sale of investments during the year has been added to this account.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,01,89,000	Investments	1,78,16,453
Reserves and surplus	66,63,053	Current assets†	26
Other liabilities	9,70,359	Cash	5,933
	Rs. 1,78,22,412		Rs. 1,78,22,412

* Paid-up capital consists of 76,890 ordinary shares of Rs. 100 each and 25,000—5 per cent taxable cumulative preference shares of Rs. 100 each.

† Represents interest accrued on investments.

Automobile Products of India Ltd.

(*Managing Agents*: Technical Services (Private) Ltd., Bombay.)

Fourteenth Annual General Meeting—Held on 27th January 1964.

Low	6.00	7.24 XR

* Loss after providing for Managing Agents' remuneration and depreciation.

† Debit balance carried forward after including previous year's loss brought forward and debit adjustments in respect of previous years.

Extracts from the Directors' report: The last and final instalment of Rs. 6 lakhs received from Messrs. Premier Automobiles Ltd., in connection with the cancellation of the Company's licence to manufacture *Meadows Diesel Engines* has been, as in the previous years, taken to the capital reserves.

The Company held a provision for retiring gratuity of Rs. 7,40,845 as on 31st July, 1962, which has been converted into a reserve during the year. After adjusting payments and further amount set aside out of the profits during the year, this reserve stands at Rs. 8,65,640. Thus the capital and Revenue Reserves stand at Rs. 47,68,715.

The year's results have been encouraging and reflect the efforts made to improve the working of the Company.

In the context of defence and development of the country, exports have assumed a more significant role. Messrs. Innocenti, S. G., the Company's Associates in Italy, have been kind enough to grant the Company limited export rights under the U.S. Aid Programme, under which the Company exported in July, 1963, 76 *Scooters* valued at about Rs. 89,904 to Bangkok. A further lot of 40 *Scooters* was exported under the same scheme in November, 1963. The quality and standard of the *Lambretta* exported were reported to stand favourable comparison to the Italian product. The Directors are glad to report that the Company has started receiving enquiries for the export of 3-*Wheelers* as well.

Messrs. Innocenti, S.G., have again been very sympathetic towards the Company in the matter of revision of royalty terms. When the Company made further representations to them and placed before them the Company's difficulties and problems, they very kindly have agreed to further substantially reduce the royalty payable to them by the Company. As recently as in October, 1961, they had granted us a reduction in the rates of royalty payable to them as per the Company's collaboration agreement with them.

Government of India were pleased to grant this Company permission to expand its licensed manufacturing capacity in *Brake Linings* from 180 tonnes to 500 tonnes per annum.

Against the right issue of equity shares for Rs. 25,00,000 in 1961-62, the Company has not made any further allotment in addition to the allotment of 89,720 shares mentioned in the Directors' last report.

Negotiations with Industrial Finance Corporation of India for an additional loan of Rs. 25 lakhs have been concluded and the Corporation has sanctioned a loan of Rs. 5 lakhs in Indian currency, Rs. 10 lakhs in Deutsche Marks and Rs. 10 lakhs in U.S. Dollars. After the formalities are completed, the Company will be able to draw upon the same and import machinery, which will be utilised for augmenting the indigenous content of the Company's products to as nearly 90 per cent as possible.

Out of the existing two mortgage loans aggregating to Rs. 50 lakhs from the Industrial Finance Corporation of India, after deducting the repayments made, a balance of Rs. 36 lakhs is outstanding as on date.

The third instalment payable towards the cost of machinery imported against deferred payments in 1961 from Italy on the guarantee given by the Industrial Finance Corporation of India, was duly paid on 31st March 1963. The last and final instalment of Rs. 7.75 lakhs fell due on 30th November 1963 and was paid. Thus the deferred payment loan remains discharged in full as on date.

The Company purchased in May 1963, 8,629 sq. yds. of vacant land adjoining the Company's premises.

The Bombay Municipal Corporation has offered the Company a compensation of Rs. 20 per sq. yd. for 9,345 sq. yds. of land acquired from the Company for widening the Bombay-Agra Road and Bhandup Station Road. The Company is taking steps to get the said rate revised on a higher and more equitable basis. Meantime it will take steps to obtain an interim compensation without prejudice to its rights for a higher amount.

Accounts in brief as at 31st July 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	79,43,500	Gross block	2,07,25,564
Reserves	47,68,715	—Depreciation	74,23,578
Other liabilities	2,65,13,275		
		Net block	1,33,01,986
		Block in progress	12,172
		Current assets	2,16,94,273
		Investments	2,000
		Cash	98,627
		P.L. a/c deficit	41,16,432
	Rs. 3,92,25,490		Rs. 3,92,25,490

* Paid-up capital consists of 28,000—5 per cent redeemable cumulative preference shares of Rs. 100 each; 5,000—6 per cent (free of tax) redeemable cumulative second preference shares of Rs. 100 each; 4,20,000 equity shares of Rs. 10 each fully called up and 89,720 equity shares of Rs. 10 each—Rs. 5 per share called up. Calls in arrears (equity) amount to Rs. 5,100.

Alliance Jute Mills Co., Ltd.

(*Secretaries and Treasurers*: Messrs. McLeod and Co., Ltd., Calcutta.)

Annual General Meeting—Held on 25th February 1964.

Working Results:

	For the year ended 31st May (In thousand rupees)	
	1963	1962
Sales—manufactured goods	2,46,66	2,71,09
" —goods purchased	87,65	38,35
" —jute	Nil	45
" —loom hours	1,29	Nil
Closing stock	78,63	63,98

Excess provisions written back	8	33
Appropriations:		
To adjustment of loss brought forward	Nil	3,86
Transfer to development rebate reserve	2,00	1,98
" contingency reserve	16,00	Nil
Proposed dividends (taxable) preference	*	2,34†
" " ordinary	*	3,00
	(12½%)	(10%)
Carry forward	1,06	58

Market value of ordinary shares (in rupees):	1964	1963	1962
High	135.00	164.00	142.00
Low	135.00	90.00	92.00

* Dividends for 1963 are to be paid out of the contingency reserve

† Preference dividend for two years 1961 and 1962.

Extracts from the Directors' report: With reference to the Auditors note regarding the non-provision of tax in the accounts, the Directors advise that no specific provision has been made, as this will be appropriated from the contingency reserve when the liability is determined.

The Mill operated 620 looms, on an average, 96 hours per week on a double shift basis. The actual number of looms working varied as a result of the recommendations of the Indian Jute Mills Association to reduce the sealed loomage from 9 per cent to 5 per cent on 2nd July 1962, and from 23rd December 1962, the sealing of looms was discontinued. In the interests of production while modernisation continued, loom hours were sold on a profitable basis.

Further modernisation of the Preparing and Spinning Departments has been carried out; 5—2nd *Drawings*, 9 *Finisher Drawings* and 13 *Sliver Spinning Frames* having been installed. 3 *Herackle Sewing Machines* were also added to the complement.

With another year in which raw jute supplies have been plentiful, purchases have been made on Buffer Stock Account in addition to normal purchasing. Quotas issued by the Jute Commissioner have also been taken up.

Labour relations have not been satisfactory and this has had an adverse effect on production. During the period 24th July to 8th August 1962, a strike took place. Loom hours lost were subsequently recovered and put to the credit of the Company by the Indian Jute Mills Association.

With the substantial fall in overseas demand, prices for manufactured goods have been much lower and it is not anticipated that the current year's profits will be so satisfactory, especially with the implementation of the recommendations of the Jute Wage Board.

Accounts in brief as at 31st May 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	45,00,000	Gross block	1,72,09,661
Reserves and surplus	27,10,439	—Depreciation	1,14,76,789
Other liabilities	1,04,47,320		
		Net block	57,32,872
		Block in progress	32,000
		Current assets	1,13,67,020
		Investments	2,11,000
		Cash	3,14,867
	Rs. 1,76,57,759		Rs. 1,76,57,759

* Paid-up capital consists of 15,000—6 per cent. cumulative preference shares of Rs. 100 each and 30,000 ordinary shares of Rs. 100 each. Of the above, 15,000 ordinary shares are allotted as fully paid up by way of bonus shares—issued out of capitalisation of profits.

Nellimarla Jute Mills Co., Ltd.

(*Secretaries and Treasurers*: Messrs. McLeod and Co., Ltd., Calcutta.)

Annual General Meeting—29th February 1964.

Working Results:

	For the year ended 31st July (In thousand rupees)	
	1963	1962
Sales—gunnies	1,50,40	1,90,57
" —jute	1,84	5,36

Transfer from general reserve	50	Nil
Appropriations:		
To forfeited dividends paid	1	Nil
Transfer to development rebate reserve	1,03	8
" general reserve	Nil	2,50
Proposed dividends (taxable) preference	39	39
" " ordinary	1,31	3,94
	(5%)	(15%)
Carry forward	35	61

Market value of ordinary shares (in rupees):	1964	1963	1962
High	11.81	13.00	12.94
Low	11.75	10.50	9.31

* This includes Rs. 70,200 for super profits tax in respect of previous year.

Extracts from the Directors' report: In accordance with the working time agreement of the Indian Jute Mills Association the Company's Mill worked to the maximum capacity. The number of looms in operation varied with purchases of loom hours together with utilisation of the Company's own accumulated loom hours during the year under review. The 5 per cent sealed loomage was discontinued on 23rd December 1962 and working hours of the registered complement increased from 48 to 49 per week with effect from 17th June 1963. An average of 230 looms worked in double shift 96 hours per week and, with this loomage, the Mills produced a record tonnage during the year.

Modernisation of machinery in the preparing and spinning departments has continued and resulted in increased efficiency.

Trading conditions were fair throughout the year, but they are not expected to be so satisfactory during the current year as a result of the Company having implemented the recommendations of the Jute Wage Board and with additional competition in the South India market.

Accounts in brief as at 31st July 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	31,25,000	Gross block	80,96,895
6½% debentures	5,00,000	—Depreciation	46,01,106

		Block in progress	20,924
		Current assets	76,02,316
		Investments	8,77,574
		Cash	5,24,361
	Rs. 1,25,20,963		Rs. 1,25,20,963

* Paid-up capital consists of 5,000—6 per cent. cumulative preference shares of Rs. 100 each and 2,62,500 ordinary shares of Rs. 10 each. Of the above shares 1,87,500 ordinary shares are allotted as fully paid up by way of bonus shares by capitalisation of reserves.

ENGINEERING

(*Concluded from page 334*)

had a ready and protected market and were not subjected to price control. Recognising that the capital requirements of the industry were quite large, he advised the manufacturers to submit to the Government schemes which could be executed jointly by both the public and private sectors. As the demand for machine tools is expected to grow rapidly to nearly Rs. 100 crores a year in the fourth Plan period and the lack of fresh investment in the industry is retarding its fuller growth, the Minister's advice seems to be both timely and realistic. It is also in consonance with the current trend of joint-sector projects in the field of petroleum refining. The Association would do well to pursue this idea, study the trends of growth in the industry and submit suitable proposals to the Government. The Minister's understanding approach to the industry's problems—as evidenced by his offer (i) to help manufacturers to establish proper liaison with other ministries, (ii) to hold quarterly meetings between his Ministry and the Association for sorting out the industry's problems, (iii) to consider, on merits, and proposal for the manufacture of more intricate kinds of machine tools in which the indigenous content might have to be lower than 80 per cent in the first instance, and (iv) to examine the feasibility of common raw material dumps—augurs well for the future of the industry.

Notices

THE BANK OF INDIA LIMITED

Registered Office:

70/80, Mahatma Gandhi Road, Bombay-1

NOTICE

THE FIFTY-EIGHTH ANNUAL GENERAL Meeting of the Shareholders of The Bank of India Ltd. will be held at the Registered Office of the Company at 70/80, Mahatma Gandhi Road, Bombay-1, on *Thursday*, the 26th day of March, 1964, at 4 o'clock in the afternoon, to transact the following business:—

(1) To receive the Report of the Directors and the audited Balance-Sheet and Profit and Loss Account for the year ended 31st December, 1963.

(2) To declare a Dividend.

(3) To elect a Director in the place of Mr. Ramniwas Ramnarain, who retires by rotation, is eligible and offers himself for re-election.

(4) To elect a Director in the place of Mr. Bhagvandas C. Mehta, who retires by rotation, is eligible and offers himself for re-election.

(5) To elect a Director in the place of Mr. N. K. Petigara, who retires by rotation, is eligible and offers himself for re-election.

(6) To elect a Director in the place of Mr. Jaisinh Vithaldas, who retires by rotation, is eligible and offers himself for re-election.

(7) To appoint Auditors and to fix their remuneration.

SPECIAL BUSINESS

To consider and if thought fit to pass, with or without amendment, the following resolutions as Ordinary Resolutions:—

(8) RESOLVED that:

(a) The accounts for the year 1964 of the branches of the Company at Amritsar, Bhopal, Bombay, Dehu Road, Delhi, New Delhi, Gwalior, Hyderabad, Indore, Jabalpur, Jaipur, Jamshedpur, Jullundur, Kalyan, Kanpur, Kota, Ludhiana, Margao, Nagpur, Patna, Poona, Sholapur, Thana, Varanasi and Vasco-da-Gama (including any branches at the said places or any of them which may be opened hereafter) shall be audited by the Company's Auditors, Messrs. A. F. Ferguson & Co. and Messrs. S. B. Billimoria & Co., Chartered Accountants, in such manner as may be arranged between themselves.

(b) The accounts for the year 1964 of the branches of the Company in India at places other than those specifically provided for (including any branches at such places or any of them or at any other place in India which may be opened hereafter) shall be audited either by the Company's Auditors, Messrs. A. F. Ferguson & Co. or Messrs. S. B. Billimoria & Co., or by persons qualified for appointment as auditors of the Company under Section 226 of the Companies Act, 1956, as may be decided upon by the Board of Directors and that the Board of Directors be and they are hereby authorised from time to time to appoint one or more qualified auditors for audit of the accounts of the said branches or any one or more of them as they deem fit, in consultation with the Company's Auditors, and to fix the respective terms and conditions of appointment and the remuneration of such auditors.

(c) For the audit of the branches referred to in the foregoing resolutions Messrs. A. F. Ferguson & Co. and Messrs. S. B. Billimoria & Co. shall be respectively paid such remuneration (over and above the remuneration they may receive as the Company's Auditors) as the Board of Directors may fix.

(d) The accounts for the year 1964 of the branches of the Company in countries outside India (including any branches which may be opened hereafter) shall be audited by persons qualified to act as auditors of the accounts of each such branch in accordance with the respective laws of the country in which such branch is situate and that the Board of Directors be and they are hereby authorised from time to time to appoint one or more qualified persons for audit of the accounts of the said branches outside India or any one or more of them as they deem fit, in consultation with the Company's Auditors, and to fix the respective terms and conditions of appointment and the remuneration of such auditors.

(e) The Board of Directors be and they are hereby authorised to exercise all such powers and to do all such acts, deeds and things as may be deemed necessary by them for the purpose of giving effect to these resolutions.

(9) RESOLVED that the Company's Auditors shall be entitled at such times as may be agreed upon between themselves to visit for any one of them, at least once in every calendar year, every branch in India and all or any of the branches outside India for test inspection and that a report on such test inspection shall be submitted to the General Manager of the Company and that for such work the Auditors shall be paid all out-of-pocket expenses that they may incur for travelling, board and lodging and otherwise and that such payments shall be in addition to the remuneration fixed for the said Auditors.

By Order of the Board of Directors,
T. D. KANSARA,
General Manager,
The Bank of India Ltd.

BOMBAY, *20th February*, 1964.

A Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member. The instrument appointing a proxy and the power of Attorney, if any, under which it is signed should be deposited at the Registered Office of the Company not less than forty-eight hours before the time for holding the aforesaid Meeting as provided by Article 79 of the Company's Articles of Association.

Note:—(a) The Transfer Books of the Company will be closed from Friday, the 6th March, 1964, to Thursday, the 26th March, 1964, both days inclusive.

(b) The Dividend, when sanctioned, will be payable on and from Tuesday, the 31st March, 1964, to those Shareholders whose names are on the Register of Members on 26th March, 1964.

(c) Dividend Warrants will be posted to Shareholders at their registered addresses. Early intimation should be given to the Company of any change of address.

(d) The explanatory Statement as required under Section 173 of the Companies Act, 1956, has been forwarded to the members of the Company.

WALCHANDNAGAR INDUSTRIES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifty-sixth Annual General Meeting of the Company will be held at the Registered Office at Construction House, Ballard Estate, Fort, Bombay, on Tuesday the 24th March, 1964 at 4-30 p.m. (S.T.), for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 30th September, 1963.
2. To declare Dividends on Preference and Equity Shares.
3. To appoint a Director in place of Shri Maneklal Premchand who retires by rotation and who is eligible for re-appointment and to consider and, if thought fit, to pass the following resolution in respect of which a Special Notice as required under Section 281 of the Companies Act, 1956, has been received by the Company:—

"Resolved that pursuant to the provisions of Section 281 and other relevant provisions, if any, of the Companies Act, 1956, Shri Maneklal Premchand who has attained the age of 74 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

4. To appoint a Director in place of Shri Phoolchand R. Gandhi who retires by rotation and is eligible for re-appointment.
5. To appoint a Director in place of Shri V. M. Meswani who retires by rotation and is eligible for re-appointment.
6. To appoint Auditors for the current year and to fix their remuneration.
7. To consider and, if thought fit, to pass the following resolution with or without modifications:—

"Resolved that pursuant to provisions of Section 294 and other relevant provisions, if any, of the Companies Act, 1956, the Company hereby approves of the appointment of Messrs. Indo Berolina Industries Private Limited, Bombay, as sole selling agents for the Republic of India for sale of equipment and machinery for chemical and other allied industries except sugar, cement and paper plants manufactured by the Company on the terms and conditions contained in the Agreement of appointment dated 24th December 1963 valid initially for a period of one year from 1st of January 1964 and thereafter shall remain in force for a further period of four consecutive years unless terminated by either party by three months' notice after the completion of the first year period."

8. To consider and, if thought fit, to pass the following resolution with or without modifications as a Special Resolution:—

"Resolved that pursuant to Section 360 and other applicable provisions, if any, of the Companies Act, 1956, the Company hereby approves of and consents to the arrangements and/or contracts being entered into with Messrs. Super Tool Company Private Limited and Messrs. Super Coil Spring Manufacturing Company, who are the Associates of Messrs. Walchand & Company Private Limited, the Managing Agents of the Company for sale, purchase, or supply of any property moveable or immoveable and/or any product provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable and provided further that for any property or product supplied or sold the said Associates shall make payments to the Company within one month of supply or sale."

The Transfer Books of the Company will remain closed as from Saturday the 8th February, 1964 to Thursday the 27th February, 1964 (both days inclusive).

By Order of the Board,
S. S. BORKAR,
Secretary.

Registered Office:
CONSTRUCTION HOUSE,
BALLARD ESTATE, FORT,
BOMBAY, *5th February*, 1964.

(3) Explanatory Statement as required by Section 173 of the Companies Act, 1956 has been separately sent to all members of the Company.

UNITED BANK OF INDIA LIMITED

Registered Office:

United Bank Buildings

4, CLIVE GHAT STREET, CALCUTTA-1

NOTICE

NOTICE IS HEREBY GIVEN THAT THE next Annual General Meeting of the shareholders of UNITED BANK OF INDIA LIMITED will be held at the hall of the Academy of Fine Arts at Cathedral Road, Calcutta 16, on Monday, the 30th March, 1964, at 11 a.m., to transact the following business:—

1. To receive the Directors' Report and Audited Accounts for the year ended 31st December, 1963;
2. To declare a Dividend;
3. To elect a Director in place of Dr. N. N. Law, who retires but offers himself for re-election and to consider and, if thought fit, to pass the following resolution as an Ordinary Resolution:

"Resolved that Dr. N. N. Law, who has completed 76 years of age be and is hereby elected and appointed a Director of the Company and it is specifically declared that the age limit of Directors prescribed under Section 280 of the Companies Act 1956 shall not apply to him."

Special notice of intention to propose the foregoing resolution has been received by the Company.

4. To elect a Director in place of Dr. S. B. Dutt, who retires but offers himself for re-election and to consider and, if thought fit, to pass the following resolution as an Ordinary Resolution:

"Resolved that Dr. S. B. Dutt who has completed 69 years of age be and is hereby elected and appointed a Director of the Company and it is specifically declared that the age limit of Directors prescribed under Section 280 of the Companies Act 1956 shall not apply to him."

Special notice of intention to propose the foregoing resolution has been received by the Company.

5. To elect a Director in place of Nawab Sir K. G. M. Faroqui who retires but offers himself for re-election and to consider and, if thought fit, to pass the following resolution as an Ordinary Resolution:

"Resolved that Nawab Sir K. G. M. Faroqui, who has completed 67 years of age be and is hereby elected and appointed a Director of the Company and it is specifically declared that the age limit of Directors prescribed under Section 280 of the Companies Act 1956 shall not apply to him."

Special notice of intention to propose the foregoing resolution has been received by the Company.

6. To elect a Director in place of Sri S. N. Ray who retires but offers himself for re-election.
7. To appoint Auditors and fix their remuneration.

AS ORDINARY RESOLUTION

To consider and, if thought fit, to pass the following resolution as Ordinary Resolution:—

8. "By virtue of the discretion vested in the General Meeting by Section 228(3) of the Companies Act, 1956 as amended in 1960, it is hereby resolved that the accounts of the Branch Offices of the Bank in India as well as outside India (including any branch which may be opened hereafter either in India or outside) may be audited otherwise than by the Company's Auditor and it is further resolved that the Directors be and are hereby authorised to appoint from time to time persons qualified for appointment as auditors of the Company for audit of accounts of such branch offices in consultation with the Company's Auditor and pay them such remuneration as the Directors may decide."

AS SPECIAL RESOLUTION

To consider and, if thought fit, to pass the following resolutions as Special Resolutions:—

9. (A) Resolved that with effect from March 30, 1964, each of the Directors shall be entitled to remuneration as hereunder:
   (i) For every meeting of the Board attended, not exceeding Rs. 250.
   (ii) For every meeting of any Committee of Directors attended, (a) Chairman not exceeding Rs. 150, (b) other Directors not exceeding Rs. 100.

   (B) Resolved that Article 111 of the Company's Articles of Association be and is hereby altered by substituting therein for the words "Rupees One hundred" the words "Rupees Two hundred and fifty."

10. Resolved that the consent of the Company pursuant to provisions of Section 314 of the Companies Act as amended in 1960 be and is hereby accorded to the fitting in of the undermentioned Officers who are relatives of Directors of the Company at the salary in the grade and scales of pay mentioned against their names together with the usual allowances, benefits, amenities and facilities applicable to other Officers in the respective grade and scales of pay occupying similar posts.

1. Sri Jagat Surhid Datta	140-6-182-11-281-13-307-15-322-E.B.-15-337-16-369-18-405 Fitted at Rs. 405.	Dr. S. B. Dutt
2. Sri Prasanta Ranjan Mullick ..	Do. Fitted at Rs. 353.	Sri K. C. Das

By Order of the Board,
M. SEN SARMA,
Chief Manager.

Dated, Calcutta, the 21st February, 1964.

Note: (i) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY *TO ATTEND AND VOTE INSTEAD OF HIMSELF* AND THE PROXY NEED NOT BE A MEMBER.

(ii) The Transfer Books of the Company will remain closed from Thursday, the 12th March, 1964 to Monday, the 30th March, 1964 (both days inclusive).

(iii) The dividend, when sanctioned, will be payable on and after the 16th April, 1964 to those shareholders whose names stand on the Register on the 30th March, 1964 and who are entitled to participate in the distribution of dividend in terms of Article 149 of the Company's Articles of Association.

(*iv*) Dividend Warrants will be posted to shareholders at their registered addresses or in accordance with their mandates. Such mandate and intimation of any change of address, if not *already given, should be given to the Bank* early in time.

The explanatory statement required under Section 173 of the Companies Act, 1956 has been forwarded to the members of the Company.

THE STATE BANK OF INDIA

NOTICE

THE NINTH ANNUAL GENERAL MEETING of the Shareholders of the State Bank of India will be held at the Bank's Local Head Office at Apollo Street, Bombay, on Thursday, the 12th March 1964, at 4 p.m. (Standard Time), for the transaction of the following business:—

To receive the Central Board's Report, the Balance Sheet and Profit and Loss Account of the Bank made up to the 31st December 1963 and the Auditors' Report on the Balance Sheet and Accounts.

B. VENKATAPPIAH,
Chairman.

STATE BANK OF INDIA,
CALCUTTA, *the 17th January* 1964.
27th Pausa 1885 (*Saka*).

CALTEX OIL REFINING (INDIA) LIMITED

NOTICE IS HEREBY GIVEN THAT THE Register of the Company's 5¼ per cent Debenture Stocks 1966-70 will be closed for transfers from 18th March 1964 to 31st March 1964, both days inclusive.

R. N. CHETTUR,
Secretary & Treasurer.
State Bank of India,
Agents for Caltex Oil Refining (India) Ltd.,
for the management of the Debenture Stocks.

STATE BANK OF INDIA,
MUNICIPAL LOANS SECTION,
APOLLO STREET, FORT,
BOMBAY, *2nd March* 1964.

MARTIN BURN LIMITED

NOTICE

AT A MEETING OF THE BOARD OF Directors held today the Directors have recommended payment of a gross dividend for the year ended 30th September, 1963, of 25 per cent, or Rs. 2.50 per share, on the Ordinary Share Capital, subject to deduction of tax at the appropriate rates. This dividend awaits sanction by the shareholders at the Annual General Meeting to be held on Monday, the 30th March, 1964.

The Ordinary Share Register and Transfer Books of the Company, will be closed from the 16th March, 1964 to 30th March, 1964, both dates inclusive, and the dividend if sanctioned will be paid on or after the 1st April, 1964, to those shareholders whose names appear on the Register of Members on the 30th March, 1964.

By Order of the Board,
MARTIN BURN LIMITED,
L. K. SEN CHOWDHRY,
Secretary.

Registered Office:
12, MISSION ROW,
CALCUTTA-1.
DATED *21st February*, 1964.

NEWS IN BRIEF

THE Central Government has approved of Rs. 146.7 crores for various programmes in the agriculture sector during the year 1964-65, as against the final approval of Rs. 127.5 crores for 1963-64.

With a view to expediting the work on the second shipyard at Cochin, the Union Ministry of Transport has set up a Committee to examine the technical report prepared by the Mitsubishi group of Japan.

Co-operative marketing societies in the jute producing States have procured 127,000 maunds of jute under the price support scheme, upto 8th February 1964. The maximum amount of purchase has been made in Andhra Pradesh.

The export quota of 21,389 tonnes fixed for Indian coffee for the year 1963 under the International Coffee Agreement has been fulfilled. Actually, an additional quantity has been exported to non-quota countries.

The Government of Uttar Pradesh has offered to forgo the purchase tax of 19 nP payable by sugar mills in Western U.P. on cane brought from cultivators, provided an equal amount is paid by factory owners to growers over and above the minimum price of Rs. 2 per maund.

Exports from the Kandla free trade zone are expected to begin in the latter half of 1965. The physical execution of the development works will start in April next and the types of industries to be set up will be decided after a scrutiny of applications which are now in the process of being invited.

The Gujarat Cotton Control Act, 1963, received the assent of the President. The Act seeks to consolidate and amend the law relating to the regulation and prohibition of the cultivation of any variety of cotton, mixing of the prohibited variety of cotton with other cotton, and possession of use of, or trade in, the prohibited variety of cotton in Gujarat.

Nine new schemes together, accounting for a production capacity of about Rs. 5.9 crores worth of printing machinery per annum have been approved by the Central Government. The schemes are in addition to the existing installed capacity of Rs. 84 lakhs a year. The Government has decided to set up a standing panel for the industry, with representatives of industry, Government and technical experts to foster the rapid development of the industry.

A proposal to manufacture family planning accessories in the public sector is under consideration. Meanwhile, the Union Government has issued licences to private manufacturers for producing 92.55 million rubber contraceptives per annum. Three more schemes have also been approved with a combined annual capacity of 242.98 million pieces, 41.4 million foam tablets, and 460,000 tubes of contraceptive jellies and pastes.

If the tests now being undertaken on a prototype power tiller were to prove successful, large-scale manufacture of these tillers to the extent of 30,000 per annum would be taken up in the public sector. The revised official estimate of the requirements of power tillers and small tractors by 1965-66 is of the order of 40,000 to 50,000, as against the Planning Commission's official estimate of 17,000. Two firms have been licensed to manufacture small tractors/power tillers, the total capacity involved being 27,000 per annum.

In order to avoid wastage in future and to conserve paper in the country, it has been decided to discontinue the free supply of inland money order forms to the public, with effect from 1st March next. These forms will be sold at 3 nP each from that date and will be impressed with the date stamp of the post office, before sale. Further, it has been decided that the price so charged should be refunded by granting a corresponding rebate in the commission charged at the time of booking the money orders. There will thus be no additional charge on the senders of money orders.

The Rs. 2-crore streptomycin plant with an annual capacity of fifteen tons, set up by the Synbiotics Ltd., a Sarabhai Group Concern, was inaugurated at Baroda on Sunday this week. Among the range of bulk drugs manufactured by the Company are isoniazid, saccharin, niacinamide, vitamin B_{12} and diiodohydroxy quinoline. This is the only company in the country manufacturing all the three antibiotics, namely, penicillin, tetracycline and streptomycin. It has also plans to take up the production of other antibiotics like amphotericin and enter the field of corticosterivids manufacture. The total outlay of the plant and equipment is put at Rs. 70 lakhs, including a foreign exchange component of Rs. 40 lakhs.

An irrigation practices seminar for the Near East and South Asia region is scheduled to be held at New Delhi from 2nd to 14th March next. It will be inaugurated by Sardar Swaran Singh, Union Minister for Food and Agriculture. The seminar will discuss farm layout, distribution, drainage and salinity; institutional development, education and on-the-job training, small projects, project planning and research. Participants will present reports showing the progress of agricultural development in their country, particularly since the last irrigation practices seminar held in 1962 and the follow-up action taken on its recommendations. Technical papers will also be read and discussed. India is playing host for the seminar which has been convened by the U.S. Agency for International Development.

A team of three U.S. experts is expected to arrive in India shortly to advise the Central Government on measures to conserve and maximise water resources. The team consists of Mr. Ellis Hatt, an experienced engineer, Mr. Norman Tripp, assistant director of the division of flood prevention and river basin programme of the U.S., and Mr. John Spencer, consultant aid, Washington, Jordan and Brazil. It will review the present policies affecting watershed management, dam construction and management of water distribution and drainage system within a watershed. It will also assess the ability of the various organisations to undertake the planning and implementation of projects within a watershed. The team will visit Andhra Pradesh, Bihar, Himachal Pradesh, Madras, Mysore, the Punjab, Rajasthan, Uttar Pradesh and West Bengal. The projects to be studied and reviewed include Damodar Valley, Machkund, Kundah, Tungabhadra, Chambal, Bhakra-Nangal and the Rajasthan canal. It is expected to submit its report in three months' time.

* * * *

From Abroad

France's gold and foreign exchange reserves rose by $23.9 million to $4,480.8 million during the month of January 1964, the average monthly rise during the whole of 1963 was just $70.5 million.

The Government of Indonesia has no intention of taking over foreign oil companies operating in that country, according to the Department of Basic Industries and Mining.

No more "luxury cars" costing over £800 are to be allowed into Ghana, according to a Ministry of Trade spokesman. The ban will particularly affect American cars and Mercedes Benz.

The Government of Argentina has sold 350,000 tons of wheat to Communist China for £24 15s. f.o.b. per ton. The sale has been rendered possible by the relatively abundant harvest of slightly over seven million tons of wheat during the year 1963.

The World Bank draft of an international convention on settlement of investment disputes is now being discussed by legal experts at Geneva. The draft, which covers conciliation as well as arbitration, will go for final consideration to the fourth experts' meeting to be held at Bangkok in April next.

The U.S. Atomic Energy Commission has recommended the development of nuclear power programmes for American outerspace missions at a cost of over $1,000 million. It has also broadly endorsed the experimental project of the systems for nuclear auxiliary power with an outlay of $100 million annually.

The final estimate of the Pakistan's tea crop for the season 1963-64 places the total yield at 55 million lbs. which represents an increase of 5.8 per cent over last year. The area under tea during 1963-64 is put at 84,000 acres, as against 81,000 acres in 1962-63.

The High Authority of the European Coal and Steel Community has allotted loans aggregating DM 100 million (525 million) to six European steel concerns and two mining companies for helping rationalisation and modernisation. The loans have been secured in West Germany through a group of Land Central Banks.

The F.A.O. Cocoa Study Group's Committee of Statistics, which met at Rome last week, has placed the production of world cocoa during the 1963-64 season at no more than 1.16 million tonnes, as against the revised estimate of 1.17 million tonnes in 1962-63. The grindings are estimated at 1.23 million tonnes, as compared with 1.16 million tonnes.

The Japanese Trade Ministry is contemplating to lift quota restriction on lead and zinc imports with effect from 1st March next instead of 1st April. The move is said to be a sequel to the recent sharp rise in the world prices of these commodities. In order, however, to protect domestic manufacturers against foreign competition, it is proposed to raise tariff on some items.

A U.S. Senate Sub-committee is now investigating the waivers granted by the Maritime Commission to permit foreign flag ships to carry American wheat to Soviet Union. The investigation is indirectly linked to the international Longshoremen's union's boycott of the shipments and their insistence that at least half of the wheat be carried in U.S. bottoms.

The U.S. House has unanimously passed its largest authorisation Bill in history—$16,900 million—for defence procurement, research and development. The Bill includes a provision of $92 million for research on a manned bomber and a manned interceptor plane. This provision aroused a debate in the House because the Secretary of Defence, Mr. McNamara, did not ask for it.

PERSONAL

MR. N. S. Worah and Mr. B. M. Vyas have been elected Chairman and Vice-Chairman, respectively, of the Western India Minerals Association, Bombay, for the current year.

Mr. William J. Drew, a career U.S. Foreign Service Officer, has assumed charge as Commercial Officer at the American Consulate General, Bombay. He succeeds Mr. Raymond Becker.

Mr. J. V. Patel of New Standard Engineering Company and Mr. Bharat G. Doshi of Cooper Engineering Company have been elected President and Vice-President, respectively, of the Indian Machine Tools Manufacturers' Association.

Mr. A. D. Ogilvie of Andrew Yule and Company has been elected President of the Bengal Chamber of Commerce and Industry for the year 1964-65. Mr. H. K. S. Lindsay of the Metal Box Company of India has been elected its Vice-President.

Mr. K. S. G. Haja Shareef, Chairman of the Estimates Committee of the Madras Legislative Assembly and partner of the K. P. V. Shaik Mohamed Rowther and Co., Madras, has joined the Board of Directors of the Syndicate Bank Ltd.

Dr. Abdul Karim Al-Ali, the Iraqi Minister of Planning, arrived in Bombay on 22nd inst. on a 13-day State visit to this country. During his stay in India, he will visit Bangalore, Hyderabad, Calcutta, Bhilai, Bhakra-Nangal, Agra and Delhi. He will go round various industrial establishments in these places and meet industrialists and planners.

New Zealand's wool growers are to pay a levy of 84 pence a pound (23s. 6d. a bale) on the wool they sell in the coming season as their contribution to the International Wool Secretariat's promotion and research programme. A further 54 pence a pound (15s. a bale) from the Wool Commission's interest earnings completes New Zealand's full commitment to the I.W.S. budget.

Under an agreement reached between the U.S. Kaiser Aluminium and Chemical Corporation and Standard Magnesium and Chemical Company, the former will acquire the assets of the latter. Accordingly, the Standard Magnesium will receive between 222,000 and 272,000 shares of Kaiser common stock. The shareholders of the Standard Magnesium will be given seven shares of Kaiser common stocks for each 50 shares of Standard Magnesium held.

The aggregate world tonnage of merchant ships launched during 1963 amounted to 8.54 million G.R.T., as against 8.38 million G.R.T. in 1962, according to the Lloyd's Register of Shipping. Of this total, the share of Japan alone was 2.37 million G.R.T. West Germany accounted for 970,579 G.R.T., Britain for 927,649 G.R.T., Sweden for 887,738 G.R.T., Italy for 492,176 G.R.T. and the U.S. for 294,427 G.R.T.

The Governments of West Germany and Iran have recently signed an agreement to promote and guarantee investment in each other's countries. It will come into force after its ratification by the Parliaments of the two countries. In the meantime, Germans will be entitled immediately to cover new German investments in Iran against political risk such as expropriation. No safeguard is built against nationalisation. But it is laid down that, in case of nationalisation, there must be adequate and transferable compensation.

The new American-Turkish Foreign Trade Bank, a joint venture of the Bank of America with 25 per cent holding and the Turkiye Is Bankasi (Turkey's largest banking institution) with the remaining 75 per cent holding, is expected to function in three or four months' time. The Bank will specialise in export and import financing with its head office at Istanbul and a branch at Izmir. An initial capital of £T10 million will be augmented by the release to the Bank of £T20 million from U.S. aid counterpart (Cooley) funds.

A bill permitting the U.S. cotton textile mills to buy American cotton at a lower price than now available to foreign textile manufacturers has been approved by the U.S. Senate Agricultural Committee. The legislation, if adopted by the Congress, will apply between 1964 and 1967. Under the present two-price system, a subsidy of 8.5 cents per lb. is paid to exporters. Foreign mills will also benefit by this, as the subsidy is deducted from the domestic support price of 32.5 cents per lb.

The Government of Sudan has been authorised by the I.M.F. to draw in pounds sterling equivalent to $5.45 million. The drawing is intended to support the efforts being made by the Sudanese authorities to overcome a balance of payments deficit. New measures include cuts in Government expenditure and increases in taxation. Sudan has made two earlier drawings on the Fund, one for the equivalent of $5 million in September 1958 and another for the equivalent of $1.25 million in November 1959. Since then, both of these drawings have been fully repaid.

TREND OF MARKETS

MONEY SLIGHTLY BETTER

(From Our Own Correspondent)

BOMBAY, 26th February

Conditions in the short-term money market improved slightly during the week under review. The supply of funds available was somewhat better, while the demand for it was comparatively less. Borrowers, therefore, found no difficulty in obtaining their requirements. Only they had to pay high interest charges. The inter-banks call rate for both renewals and fresh money was maintained throughout the week at 6 per cent. Business put through at this rate was quite large. Calcutta, however, reported persistent stringency, with borrowers over at 6 per cent.

The improvement in the tone of the money market is reflected in (a) the sharp fall of Rs. 16.88 crores to Rs. 2,434.31 crores in notes in circulation during the week ended 21st February; (b) drop of Rs. 9.61 crores to Rs. 52.61 crores in borrowings of scheduled banks from the Reserve Bank; and (c) a small rise of Rs. 3 lakhs to Rs. 2.3 crores in the total amount offered against the 91-day Government of India Treasury Bills, tenders for which opened on Tuesday the 25th inst., the amount accepted, of course, equalled the amount invited, namely, Rs. 2 crores. The average rate of accepted tenders was a little higher at Rs. 2.350 per cent per annum, as against Rs. 2.340 per cent. The Intermediate Treasury Bills, however, evoked poor support. The amount of tenders actually sold from the 19th to 22nd inst. was Rs. 20 lakhs, as against Rs. 99.75 lakhs a week before and Rs. 70 lakhs two weeks before.

There was a drop of Rs. 2.54 crores to Rs. 120.81 crores in India's foreign exchange reserves during the week ended 21st February. The whole of this drop was in balances held abroad which amounted to Rs. 18.25 crores. The foreign securities held in the Issue Department of the Reserve Bank were unchanged again at Rs. 102.46 crores. Deposits of scheduled banks declined by Rs. 3.05 crores to Rs. 80.27 crores. Loans and advances obtained by them from the Reserve Bank, as already stated, receded by Rs. 9.61 crores to Rs. 52.61 crores, of which the share of those against usance bills was Rs. 23.24 crores, a fall of Rs. 69 lakhs.

There was a further rise of Rs. 19.91 crores to Rs. 1,732.40 crores in the total credit made available by scheduled banks to their clients during the week ended 14th February. Since, at the same time, their deposits declined by Rs. 3.68 crores to Rs. 2,424.45 crores, the banks had to take recourse to larger borrowings from the Reserve Bank. The total of these borrowings went up by Rs. 16.27 crores to Rs. 63.44 crores, including Rs. 24.72 crores (+Rs. 4.29 crores) against usance bills. Investments, too, declined by Rs. 6.29 crores to Rs. 649.82 crores.

Thanks to poor institutional support, the Gilt-edged market put on a subdued appearance. Turnover was limited, with most of the Central and State loans remaining unchanged at last week's levels.

In the foreign exchange market, the banks' buying rate for U.S. dollars rose by 25 nP to Rs. 475.50 per $100, while their selling rate was unaltered at Rs. 478.75. In New York, the pound sterling weakened again vis-a-vis the dollar. The spot rate eased by 0.100 cent to 279.520-279.550 cents and the three months' forward by 0.090 cent to 279.250-279.280 cents.

* * * *

The total cash contributions brought into the Central account of the National Defence Fund till the close of 14th February amounted to Rs. 58.10 crores. In addition, contributions in gold and silver aggregated 2.281 million grammes and 1.170 million grammes, respectively.

COTTON FUTURES DECLINE

(From Our Own Correspondent)

BOMBAY, 26th February

The cotton futures market, after having ruled fairly steady early in the week, turned easy towards the close. The steadiness was due partly to the downward revision of tendering differences in respect of 216F cotton made by the Special Committee of the East India Cotton Association. This was bullishly interpreted as likely to reduce the volume of tenders against the maturing March contract. The decline in ready prices, following the withdrawal of mills from the spot market, however, imparted weakness to the market which turned easy towards the close. Reports of requisitioning by the Textile Commissioner, in spite of stiff opposition to the control measures, coupled with the news of an upward revision of the crop to 5.9 million bales, unnerved bulls who rushed to liquidate. Consequently, there was a sharp drop in prices on Tuesday, the 25th inst., the fall being as much as Rs. 6.50 in the case of the March contract and Rs. 6.25 in respect of the May contract, in one day. A modest recovery of a technical nature was, however, evident today, but the closing rates were still below last week-end quotations.

The following table indicates the trend of prices of the contract during the week:

(In rupees per three quintals)

	25-2-64	High	Low	19-2-64
Jarilla March ...	771.50	782	771	777.50
Jarilla May ...	751.25	763.50	750.50	760

Trading in spot market at Sewri was dull, despite the tendency of prices to decline. Obviously, mills are not inclined to buy in a falling market. The Textile Commissioner has removed the obligation on the part of mills to buy a minimum quantity of Cambodia 'A' and 'B' cotton. This commission was introduced to ensure larger offtake of this cotton at reasonable prices. But as the prices of these varieties have become steady at or around the ceilings, the Textile Commissioner has decided to remove the compulsion. Following this the prices of Cambodia cotton declined.

Export demand for Bengal Deshi continued to be restricted and prices eased, thanks to the prospects of a good crop of Bengal Deshi during the season. In fact, estimates of Bengal Deshi crop during the season have been revised upwards from 475,000 bales to 550,000 bales. In the import section, prices of Sudan cotton hardened. Shippers are reported to be reluctant to make offers because of the scarcity of higher grade Sudan cotton. Prices of East African cotton, in contrast, tended to decline. Mills are awaiting the announcement of a global import quota for foreign cotton.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Kalyan 965; Amravati 1,235; Buri 1,215; Manavadar Co2 1,518; Sudan (on sample) 1,635; B.P.52 1,300 and Jinja 1,210.

SILVER DOWN AGAIN

(From Our Own Correspondent)

BOMBAY, 26th February

Last week's recovery in silver could not be carried further this week for want of support at higher levels. In fact, the price moved down again by as much as seven points to Rs. 251 on the first day (Thursday) itself. It dropped further to Rs. 250 on Saturday, but steadied up thereafter to finish at Rs. 261. The daily average offtake declined from 15 bars to 10 bars, while arrivals remained unchanged at 12 bars. The offtake shrank, as speculative buying abated after it was known that silver in London had shed the gain of one-eighth of a penny which it had scored last week.

Gold opened slightly lower but improved to close a shade higher over the week. The 14-carat material rallied from Rs. 63 to Rs. 65 on better offtake by jewellers. Pure gold was traded one point higher at Rs. 110, but sovereign was unchanged at Rs. 86.

Silver in New York and London continued firm at last week's closing levels. Ready gold, in London, moved up further from 250s. 10d. to 251s. The international price for gold also improved from $35.07½ to $35.07½.

The following table shows the trend of prices during the week under review:

	26-2-1964 (closing)	High	Low	19-2-1964 (closing)
SILVER				
Ready (996 fine) ..	Rs. 261.00	Rs. 266.50	Rs. 259.00	Rs. 263.00
GOLD				
Ready (14 carat) ..	65.00	65.50	62.25	64.50
Sovereign ..	85.00*	—	—	85.00*
London—				
Gold ..	251s. 0d	251s. 0d.	250s. 8½d.	250s. 10d.
Silver Ready ..	111½d.	—	—	111¼d.
Silver Forward	111½d.	—	—	111¼d.
New York—				
Silver	129.3 cents	—	—	129.3 cents

* As on 24-6-1963.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (35.73 tolas). London and New York quotations are per ounce.

ART SILK YARNS IMPROVE

(From Our Own Correspondent)

BOMBAY, 26th February

Art silk yarns staged a moderate improvement this week on some revival of enquiry from consumers which seemed to have been prompted by fears that the excise duty on yarn might be raised in the next budget. But actual business put through was limited, as, for the same reason, sellers were reluctant to part with the goods. Staple fibre yarns were easier. Cotton yarns continued quiet.

The proposal of withdrawing the concessional rate at which the manufacture-exporters of art silk fabrics are getting art silk yarn supplies from spinners was discussed at a meeting held here yesterday between the representatives of the Union Ministry of Industry and those of the art silk industry and export trade. The meeting did not, however, reach any final decision.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	26-2-1964	19-2-1964
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	12.17	11.66
Century 75D	18.41	18.28
S. I. Viscose 150D	12.01	12.01
Staple fibre yarn (40 x 2)—		
Koninoor (per kg.)	9.42	9.46
Century	9.24	9.37
Cotton yarn (per bundle of 10 lbs.)—		
10s Navsari	19.37	19.37
20s Podar	24.25	24.25
32s Hiser	35.00	35.00
40s Mahindra	42.00	42.00
60s Finlay	76.25	76.25
80s Gokak	85.00	83.00

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 26th February

The easy trend noted in the oilseeds market towards the closing sessions last week gathered momentum during the week under review. For bull liquidation was persistent, while fresh buying support was lacking. Groundnut futures were subjected to selling pressure on rumours of a possible rise in Bank rate. The usual pre-budget nerveousness also acted as a damper. Absence of any facility for switching over transactions from the near to distant position, too, restrained operators from extending their commitments either way. The spot section ruled easy despite restricted offerings from upcountry centres and firmness of foodgrains in North India. Traders noted reports that Russia had extended its interest beyond castor oil for the first time to Indian groundnut extractions and H.P.S. groundnuts. About 3,000 tonnes of H.P.S. and 10,000 tonnes of extractions were believed to have been bought by Russia in the past three or four days. This news, however, did not have any effect. Castorseeds continued to move down on apprehensions of new imposts in the forthcoming budget, lack of follow-up support, absence of overseas enquiry for oil, and new crop arrivals from Gujarat and Andhra. The outstanding position in the maturing (March 1964) delivery was estimated at 75,000 candies. In sympathy with groundnuts and castorseeds linseeds drifted lower, with the exception of spot linseed which elicited some buying support and ruled firm. Cottonseeds were distinctly subdued.

The groundnut April 1964 contract began the week at Rs. 237.62, as against the previous close of Rs. 233.12 and receded to Rs. 236.87 on Saturday. After recovering to Rs. 237.37 on Monday, the contract declined again to Rs. 237.37 today. The net loss over the week was 75 nP. Nizam bold ready lost 25 nP to Rs. 49.62. Khandesh quality was neglected at Rs. 50.75. Oil ex-mill shed 25 nP to Rs. 19.75. Railway receipts fell by 40 nP to Rs. 19.35. The groundnut oilcake expeller April 1964, however, jumped up from Rs. 395 to Rs. 399 per ton, following news that the Soviet Union had evinced interest in Indian oilcakes.

Castorseed March 1964 contract was well supported on the opening day of the week at Rs. 173.50, as against the previous close of Rs. 172.62. But it lost ground in subsequent session and touched a low of Rs. 171.25 today. June contract sagged by 50 nP to Rs. 172.50. Oil Ready Madras declined by 19 nP to Rs. 34.37 and Kanpur ready by 50 nP to Rs. 33.12. Oil B.S.S. was quoted lower at Rs. 14.85 today, as against Rs. 15.10 last week, while oil commercial put on 40 nP to Rs. 14.85 on special support.

In the linseed section, March 1964 contract shed 50 nP to Rs. 39.75. June 1964 contract eased by 18 nP to Rs. 40.44. Oil ready fell by 25 nP to Rs. 16.10. In contrast to the generally sagging market, Linseed Bold ready strengthened by 38 nP to Rs. 40.25.

The cottonseed April 1964 contract receded from Rs. 106 to Rs. 104.50.

The following table shows the closing prices of oilseeds and oils on Wednesday 26th February as compared with those of two previous weeks:

	26-2-1964	19-2-1964	12-2-1964
	Rs.	Rs.	Rs.
Groundnuts			
April 1964 contract	237 37	238.12	238 12
Nizam bold	49 62	49.87	49.50
Khandesh quality	50 75	50 75	50.62
Oil ex-mill	19.75	20.00	19.75
Oil Rly. Receipts	19.35	19.75	19.55
Castorseed			
March 1964 contract	171.25	172.62	176.00
June 1964 contract	172 50	173.00	177.25
Ready Madras	34 37	34.56	35.00
Ready Kanpur	33 12	33.62	33.87
Oil B.S.S.	14 85	15.10	15.10
Oil commercial	14.85	14.45	14.35
Linseed			
March 1964 contract	39.75	40 25	40.50
June 1964 contract	40.44	40 62	41.00
Bold ready	40.25	39 87	38.50
Linseed oil	16.10	16.35	15.85
Cottonseed			
April 1964 contract	104.50	106.00	105.00

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

BLACK PEPPER FIRM

(Messrs. Parekh and Co.)

BOMBAY, 26th February

Malabar black pepper ruled firm during the week, with prices advancing here as well as at the Coast, in view of the constant purchases by shorts for covering their sales to East European countries and on the Bombay ring. Conflicting reports regarding the shaky ceasefire in North Borneo proved a supporting factor. Heavy purchases done by Gujarat interests in Bombay during the last fortnight were responsible for the shortage of contracts in both Chaitra and Vaisak. Encouraged by their success in bolstering prices, the bull speculators became more aggressive. They continued to buy at every advance. Some of the Gujarat merchants were said to have liquidated their long positions in Chaitra and Vaisak with profit. This is likely to enable them to support the market should it once again go down in the near future. Exporters who sold a sizable quantity to East European countries were continuous buyers, as they had to ship the goods in the steamers lying at the ports.

Ready ungarbled rallied from Rs. 266 to Rs. 283 with sellers reserved. Garbled was in request at Rs. 290, the lowest being Rs. 278. March delivery surged forth from Rs. 290 to Rs. 304. May delivery opened at Rs. 302 and was supported by the bulls at every advance, the highest paid being Rs. 318. At the time of writing, however, May is quoted at Rs. 309. Spot in the U.S.A. seesawed between $0.32 and $0.33½. Malabar black pepper was neglected by New York dealers as they were getting Lampong black direct from Indonesia at about $0.30½. If Indonesia continues to undersell India in the coming months, it is possible that Malabar may go down as soon as the East European countries withdraw as buyers, because

inland prices cannot be maintained, unless supported by fairsised foreign demand.

Singapore remained strong during the week, the highest for black and white being $(M)117½ and $(M)162½, respectively.

The future of Malabar pepper appears uncertain, inasmuch as the prices thereof are outpriced because of the inland high prices bolstered by bull speculators. On the Bombay ring, *Chaitra* improved from Rs. 320 to Rs. 330. *Vaisak* is quoted at the time of writing at Rs. 338, the highest being Rs. 342. Ready Malabar was quoted at Rs. 308 with demand good to fair.

QUALITY TEAS IMPROVE

(Messrs. Forbes, Ewart and Figgis Private Ltd.)

COCHIN, *20th February*

A total of 453,000 kgs. was offered in tea sale No. 7 held on the 18th inst. Quality again showed a further improvement and there was a useful selection of attractive quality teas at all elevations. Good general demand was in evidence and prices were generally firm and dearer with quality. Low medium and medium brokens were keenly competed for and were sold at dearer rates following quality, while similar fannings were barely steady. Good mediums were again well supported and the majority of these were sold at fully firm levels. Best liquoring highgrowns were irregular and generally barely steady, although selective lines were sold well. The lesser sorts, however, encountered keen competition and were sold readily at enhanced rates following quality. Black leaf teas generally maintained their value, while whole leaf grades particularly liquoring flowery pekoes were generally dearer. Teas of unorthodox manufacture were sold at about last rates.

The quotations per kg. were:

	1964	1963
	Rs.	Rs.
Low medium	4.50-5.10	4.30-5.80
Mediums	5.15-5.70	4.80-5.20
Good mediums	5.50-6.80	5.30-6.00
Nilgiri B.O.P.	6.50-10.40	6.00-11.70

The average price realised in sale No. 7 was Rs. 5.36 per kilo, as against Rs. 5.20 a week ago and Rs. 5.20 in the corresponding sale last year.

In dust sale No. 7 held today, 193,000 kgs. were offered. The market met with good general demand. All mediums evoked good enquiry and were sold at firm to dearer rates. Residual kinds were well competed for and were the strongest feature of the sale. A small selection of highgrowns on offer sold well at fully firm rates. There was good enquiry for unorthodox descriptions also which were fully firm.

The average price realised in dust sale No. 7 was Rs. 4.63 per kilo, as against Rs. 4.64 a week ago and Rs. 4.39 in the corresponding sale last year.

Colombo: There was fair general demand. Best and plainest highgrowns were slightly dearer, while others were lower. Lowgrowns came to a firm market.

London: *North Indian and other growths*: There was good but irregular demand. Poorer sorts were fully firm to dearer.

Ceylon and South Indians: Offerings in Tuesday's sale amounted to 25,739 packages. Of this quantity, 8,154 packages were from South India. Better liquoring South Indians were firm while others were irregular and easier. Ceylons elicited good demand.

As we go to press, Messrs. Forbes, Ewart and Figgis Private Ltd. wire as follows:

"Sale No. 8: 472,000 kgs. offered. Useful demand. Low medium and medium brokens 10 to 15 nP easier. Similar fannings neglected. Good mediums 20 nP lower. Highgrowns irregular and lower. Unorthodox steady."

LEGG-CUT TEAS DECLINE

(From Our Own Correspondent)

CALCUTTA, *25th February*

The trend at yesterday's export sale and last week's internal sale remained easy, in spite of good demand. Considering that, despite the lower crop in this part of the country, the average prices realised so far for leaf and dusts have been lower than in the last season, the dividend outlook for tea companies for 1963 is less encouraging. The average price of leaf has been lower at Rs. 5.42 per kg., as against Rs. 5.52 previously, and that for dust has been only Rs. 4.85 as against Rs. 4.92.

The industry believes that it has driven home its unquestionable case for relief in excise duty and is, therefore, eagerly awaiting budget day. It has pleaded, ineffectively so far, for merger of the numerous State levies into Central taxes, which would make not only the task of collection easier but also spare the industry the trouble of submitting numerous returns to different authorities. The industry also expects relief in Super Profits Tax.

The denial by the Union Minister for Industry that Indian tea exports had gone up at the expense of internal consumption has caused surprise. It is common knowledge that North Indian tea output registered a fall in 1963, and although output in South India was higher than in 1962, the difference only partially erased the loss of North India. In 1963, tea exports had gone up visibly, and the Government spokesmen have often referred to this achievement in recent weeks. If, despite lower output, exports have gone up, the only possible inference is that internal consumption has suffered. The trade points out that it is because of the suspension of all internal campaigns internal consumption is gradually going down and this is regrettable especially when the standard of living in the country is improving. This is not to say that the people are taking to soft drinks less and less. Substitutes, such as cool drinks, green coconuts, cocoa, ovaltine, chocolate cream, etc., are slowly eroding the tea market.

Dusts on offer at last week's internal sales totalled 32,065 chests, which met with good general demand. Orthodox teas met with ready demand, while legg-cut teas met with less demand. Medium C.T.Cs eased in an irregular trend, but good C.T.Cs were well supported. The quotations (in rupees) per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust 6.20 to 6.70, medium Assam C.T.C. dust 5.00 to 5.25, legg-cut dust 4.85 to 5.00, medium Assam dust 4.60 to 5.10 and plain orthodox dust 5.40 to 4.70.

Leaf offerings at yesterday's export sale totalled 69,750 packages, which met with only fairly general demand. Prices eased. Although well supported, whole leaf grades eased. The few Darjeelings on offer were sold readily. Legg-cut teas gave way by 40 nP. "Teas for price" and plain brokens and fannings eased up to 20 nP. Other orthodox teas were also sold at lower rates; however, a few of the clean and bright liquoring fannings tended steady. Good demand met the very few best C.T.Cs but the balance eased from 20 to 40 nP. Fannings were subjected to withdrawals. The quotations (in rupees) per one kg., inclusive of excise duty, were: Best Assam C.T.C. fannings and best Assam C.T.C. fannings not quotable, clean plain pekoe 4.90 to 5.30, medium Assam C.T.C. fannings 4.60 to 4.80, medium Assam C.R.C. B.P. 4.80 to 5.00, plain B.P. 4.25 to 4.50 and plain fannings 4.25 to 4.50.

FURTHER SPURT IN JUTE GOODS

(From Our Own Correspondent)

CALCUTTA, *25th February*

Following clear indications that the jute mills would not be able to purchase all the remaining portion of the lower grade crop, dull conditions prevailed in the fibre market during the week under review, whereas the goods market steadied up, with both hessian and heavy goods registering handsome gains. The market for hessian became lively on the news of increased consumption of burlap in the U.S. during the month of January. Although overseas business in sacking was paltry, internal buying, especially on Government account, played up sentiment. The upward movement of prices would, indeed, have been more pronounced but for the continued difficulties which experienced by shippers at the Calcutta port. It is unfortunate that a cut in drafts in the river restricted movement of ships this week, thus accentuating the already disturbed conditions arising from the shortage of shed berths and lighters.

It is noted that, at the present rate of increased consumption—625,000 bales a month—mills would require about 3.75 million bales for six months, that is, up to the time the new crop would be ready for marketing. Stocks with mills at the end of January aggregated 3.32 million bales and those with the Jute Buffer Stock Association amounted to 775,000 bales. It is, therefore, felt that the mills would be able to produce at the current rate of enhanced production, even if they do not buy any more fibre. What is now mostly available for sale is inferior fibre, which mills need not buy. This situation brings to the forefront the need to accelerate the efforts now being made to find an export outlet for India's surplus fibre. During the week under review, sellers were keen for business and discounted quotations for lower grades. It is apprehended that the March quota which the Jute Commissioner would issue to mills would be higher than the February quota, so that there would be no undue selling pressure on holders of lower grades. The higher grades are practically exhausted, but what is still left is believed to be in stronger hands. If the quota for March is increased and mills are forced to buy a greater proportion of the inferior grades, not only would the mills have to block funds but such blocking would also be on fibre of questionable quality. Considering that the superior grades had realised prices higher than the minimum levels, it is felt that the present recession in lower grades should not be given undue importance. Further, it is argued that a small recession in prices of the poorer grades on the eve of the sowing time would make the cultivators cautious and pay more attention to the growth of quality fibre, which is what is needed, if mills should succeed in building up more markets in specialities and hessian.

Earlier indications that Argentina would lift a greater quantity of hessian this year have been strengthened by reports of increased farm output in that country. Purchases by the U.S.S.R. have also shown that increased shipments to that country are also likely. In the midst of this encouraging trend, it is pleasant news to the market that burlap consumption in the U.S. jumped to 81.6 million yards last month from 77 million yards in December 1963. Burlap stocks at the end of January showed a welcome decline of 3.8million yards at 290.2 million yards. Such an encouraging trend gives rise to the hope that consumption in the U.S. this year would be higher than in 1963. Further, the tempo of economic activity in that country has increased. The market has in particular noted reports that the U.S. President was one of the "New Dealers" behind the scene in the Roosevelt Administration. It is, therefore, felt that the ability of Indian mills to export hessian will only be circumscribed by production. This reinforces the need to improve the quality of the next crop, as better quality fibre is required for the production of hessian and specialities. It is, therefore, to be hoped that the authorities would not get perturbed by the dull conditions in the fibre market. For this should pave the way for a better crop. If prices are slightly below the minimum levels, the cultivators do not stand to lose considering that their costs of production have come down as a result of the bumper crop and their indifference to quality. It is to be hoped again that the Central Supervisory Body for Jute, which met here last week and held preliminary discussions on the area to be sown in jute and mesta, devises measures whereby quality of the forthcoming crop would show a distinct improvement.

As stated, prices of lower grade fibre during the week under review were slightly below the minimum levels. Mills were purchasers of selected lots only, and they are believed to have already covered the February quota in full. Hence they showed indifference to offers made by sellers who were anxious to find business in the poorer qualities discounted rates. The fact that a good portion of the outstanding crop of the lower grades is in the hands of weak holders added piquancy to the dull trend.

Although the increase in stocks of goods with mills and the difficulties being experienced by shippers at the Calcutta port caused anxiety, prices improved during the week. For the long-term outlook was considered to be good. The figures in respect of despatches of goods from mills in January released in this week made poor reading. The total of despatches of all descriptions for both export and internal consumption was only 92,400 tonnes at which the fall as compared with December was 13,400 tonnes. Export offtake aggregated only 59,200 tonnes, as against 71,400 tonnes, while local despatches at 33,200 tonnes marked only a small decline of 1,300 tonnes. While hessian and sacking for export fell to 34,200 tonnes and 14,900 tonnes from 43,200 tonnes and 17,900 tonnes, respectively, carpet backing at 7,800 tonnes showed a small increase. Other goods at 2,500 tonnes recorded a slight decline. Despite these figures, the price trend of the week was encouraging. The news of an increase in U.S. consumption raised prices on Wednesday, but selling pressure from bears erroded into gains. Thus, ready hessian 40" 10 oz. closed lower on balance at Rs. 45.60 on that day. B. twills were quietly steady at Rs. 109.75. However, excepting for some business in B. twills with Government, trading was dull. On Thursday, prices gained following local covering on short accounts. Hessian 40" 10 oz. hardened to Rs. 46.05, while B. twills remained unchanged at Rs. 109.75. At this stage, more interest was shown in B. twills by Government and, as a result, B. twills gained to Rs. 110.35 on Friday. In sympathy, hessian 40" 10 oz. rose to Rs. 46.15. Over the week-end, prices were steady at Rs. 110.25 and Rs. 46.20, respectively. Overseas interest was insignificant yesterday. With B. twills quoting at Rs. 109.85 and hessian 40" 10 oz., quotations eased. Mills, however, were sellers for forward positions.

SIZABLE GAINS IN METALS

(From Our Own Correspondent)

CALCUTTA, *25th February*

Under the influence of buoyant advices from foreign markets and against the background of continued shortage in the country, metal prices have recorded sizable gains this week.

Tin here rose from Rs. 3,280 per 100 kgs. to Rs. 3,300. On the London Metal Exchange, spot tin opened at £1,089 per ton and rose steadily to as high a rate as £1,145. The three months' metal rose from £1,079½ to £1,127. Continental demand on London was hectic and sellers were very much restrained. As a result of the hardening price trend, the tres world production this year is expected to rise by about 7,500 tons to 149,000 tons. At the same time, consumption is expected to go up by 5,000 tons to 159,000 tons. Thus, the shortage will be about 10,000 tons. An acute shortage can only be avoided if the U.S. General Services Administration continues to release tin from the strategic stockpile. However, the world shortage being quite pronounced, the possibility that the U.S.A. may curtail releases or abandon them altogether cannot also be ruled out.

Spot zinc, in London, gained from £101 a ton to £103 and the three months' from £94⅝ to £97½. Although world production of zinc is also expected to rise, no surplus is anticipated. The price in Calcutta rose by ten points to Rs. 296 per 100 kgs. The need for India to import zinc from sources other than the United States has been stressed by the industry. Presiding over the annual meeting of the Indian Zinc Oxide Manufacturers' Association held here recently, Mr. D. P. Kajaria stated that at present Indian imports of zinc are mostly confined to the U.S. under D.L.F. licences. The U.S. price of zinc is much higher. Moreover, difficulty has been experienced to locate timely supplies from the U.S. He urged licensing of imports from other countries too, as in that case the country could be enabled to import a higher quantity for the same value of D.L.F. licences. He also pleaded for the introduction of the annual licensing scheme for the zinc oxide industry to enable it to broadbase production plans.

Utensil grade copper scrap was higher at Rs. 680 per kg. Even with the rise, supplies could hardly be located. On the London Metal Exchange, the price continued to rise, and in this week, spot copper wire-bars reached as high as £262 a ton as against the opening quotation of £2463. The three months' rate gained from £248½ to £264. Spot cathodes rose from £240 to £256 and the fire-refined metal from £239 to £252. The opening quotations for the three months' position for these two metals were £242½ and £240 and closing quotations were £260 and £255. With world consumption of copper having increased, producers are expected to raise production this year. But, even after the expected increase in production, the shortage is not expected to be entirely wiped out. Such a reasoning explains why consumers are in a hurry to cover their requirements on London. The London price is, therefore, rising.

Virgin lead, in Calcutta, rose by a few points to Rs. 230 per 100 kgs. In London, the spot quotation gained from £80¾ a ton to £82¼ and the three-months' from £81½ to £83¾. Although the free world output of lead is expected to rise this year by 85,000 tons, the increase in demand for consumption would total 50,000 tons. This means that stocks depleted in 1963 can be replenished only in part. This explains the rise in world market prices.

POOR TRADING IN KIPS

(From Our Own Correspondent)

MADRAS, *24th February*

Arrivals of kips from the tanneries this week were moderate and clearance for export was slow and for inland trade poor. Export demand for ordinary marks was negligible. Top marks in cow hides were in demand at prices which did not interest the tanners, as they had sufficient orders up to the next month. The cowcalf market was better. Export enquiries were for lower selections in lighter averages, good marks. Shipment demand for buffcalf was patchy, with prices ruling weak, as American importers did not evince interest, and tanners, who had expected large trade from the U.S.A. in the new year, seemed slightly perturbed.

Tanned goat skins ruled steady, but the undertone was weak. Importers seemed to be waiting for prices to decline, but tanners were willing to shade their prices for only light weights. Tanned sheep skins—primes and semi-primes—remained quite firm, but turnover was small. There was good call for lower selections in lighter weights of middle class sheep skins, and prices in the local market were put up by the sellers. As the arrivals were not good, shippers were not keen to make large sales. Raw goat skins were easy.

FOODGRAINS FIRM

(From Our Own Correspondent)

HAPUR, *24th February*

Firm trend continued in the prices of all foodgrains and pulses this week. The dwindling stock position and poor *rabi* crop prospects due to the absence of winter rains and heavy frost and cold spell in the end of January were the main influencing factors. The U.P. Government is very anxious to check this rising trend in prices and, besides urging the Centre to supply heavy quantity of wheat immediately, it has imposed control on the prices of wheat flour. The Centre has assured all help to the State.

The farm quality wheat rose by Rs. 2 to Rs. 66.75 to Rs. 68.75 per quintal. Demand was brisk and the stock was nominal. The average was placed between Rs. 62.75 and Rs. 65.75. Wheat crop prospects are not at all encouraging due to the recent adverse weather. A steadier trend was also witnessed in rice. Prices advanced by Re. 1.34 to Rs. 4 per quintal according to quality, as arrivals were poor and stocks, too, were meagre. Week-end prices were:—Rice *basmati* superior Rs. 96.45 to Rs. 99.13, *sela basmati* Rs. 93.77 to Rs. 96.45, *mainpuri* Rs. 68.32, *ramajwayan* Rs. 80.38, *raimunia* Rs. 83.06 and *gadda* Rs. 65.64 a quintal.

Gram also improved sharply up to Rs. 2.67 per quintal on good buying enquiry in the face of dwindling stocks. The Punjab quality was quoted at Rs. 58.94 and the local produce at Rs. 57.60 a quintal. Stocks left with the trade were nominal. *Barley* and *bejhar* also sought higher levels on reports of heavy losses to the crops. *Barley* was quoted at Rs. 42 to Rs. 42.50 and *bejhar* at Rs. 43 to Rs. 43.50 a quintal. Stocks were negligible.

Firm conditions continued in pluses on reports of heavy losses to the standing *peas* and *arhar* crops due to frost. *Peas* improved by Rs. 2 per quintal at Rs. 52 to Rs. 53 for the *dara* quality and Rs. 53 to Rs. 55 for the farm variety. *Arhar* ranged between Rs. 62.96 and Rs. 66.98 per quintal according to quality. *Urd* and *moong* prices registered gains due to the poor supply position and were quoted at Rs. 66.98 to Rs. 72.34 and Rs. 72.34 to Rs. 80.38 per quintal, respectively.

"GUR" STEADIER

(From Our Own Correspondent)

HAPUR, *24th February*

The sugar supply position continued tight this week. The production trend in the current season has slightly improved and production upto the 7th inst. amounted to 15.27 lakh tons, as against 13.23 lakh tons in the corresponding period last year. But, although the Government circles still hope that sugar production might touch 30 lakh tons industry sources expect that it would not be more than 25 to 26 lakh tons. Factories here in West U.P. have restricted their working, and some are likely to close the season by the end of current month. *Gur* and *khandsari* manufacturers were buying cane upto Rs. 6.20 a quintal, as against Rs. 5.36 per quintal paid by sugar factories. The prevailing open market prices of sugar here were between Rs. 158 and Rs. 162, as against the controlled prices of Rs. 125 a quintal.

Demand for *khandsari* was quite good during the early part of the week. Prices therefore ruled steady. But, after the mid-week, demand turned slack, as it was reported that U.P. Government was not likely to permit export of the commodity. Rumours were also current that the Government might impose controls to curb the rise in prices. Prices, therefore, declined upto Rs. 5.50 a quintal. Latest prices were:—*Khandsari desi* inferior Rs. 110 to Rs. 135, superior Rs. 145 to Rs. 150, *crystal* Rs. 145 to Rs. 150 and *boora* Rs. 155 to Rs. 160 a quintal.

Steadier conditions prevailed in the *gur* market on better buying enquiry from the consuming areas of Gujarat, Rajasthan and Bengal. Arrivals during the week were around 3,000 to 3,200 maunds daily and local stocks amounted to 19,000 quintals. Total arrivals during the season so far are estimated around 155,000 quintals, while the corresponding figure last year was 130,000 quintals. *Gur* prices hardened by Re. 1 per 40 kilogram to Rs. 28 to Rs. 28.25 for the superior variety Rs. 27.50 to Rs. 28 for the average quality and Rs. 27 to Rs. 27.25 a quintal for *balti*.

INDUSTRIAL DIAMONDS

The use of diamonds in industry is of relatively recent origin. Miners began to realise the industrial utility of diamonds only from the late 1920s and early 'thirties when, in order to minimise stoppages in long, repetitive machine runs, the harder, longer-lasting tungsten carbide tool was developed and diamond was found to be the ideal material for machining tungsten carbide. Demand for carbide tools rose in the Second World War and along with it rose the demand for industrial diamonds also. The subsequent development of new hard materials brought about an increase in abrasive machining with diamond impregnated wheels. Diamond proved a most efficient lathe tool for many non-ferrous metals and alloys too soft to grind, such as brass, copper and gold, and also for plastics and rubber compounds which, because of their highly abrasive nature, wear out carbide and steel tools. But for diamond the recently developed ultra-hard ceramics, plastics and rare metal alloys could not have been fabricated or formed economically.

Economic diamond fields were first discovered in India in the seventeenth century and in Brazil in the eighteenth, but by the middle of the nineteenth century their yield became negligible. African deposits, now accounting for 90 per cent of the world's production of natural diamonds, were first found in 1869. In 1953, the research engineers of A.S.E.A. in Sweden synthesised the diamond for the first time. It could have been synthesised earlier, for the theory of subjecting carbon to ultra high pressures and temperatures had been known for over 150 years. But here again technological limitations came in the way. Once the synthetic process was evolved, commercial exploitation did not take long. Today, synthetic industrial diamond grit is made even in South Africa and Eire by Ultra High Pressure Units Ltd., a subsidiary of De Beers, and in the U.S., Sweden, Japan and Russia. Synthetics have one advantage over natural diamonds in that new, highly capital-intensive projects dependent on an assured supply of industrial diamond grit can be easily undertaken, as there is no question of relying on output from countries easily susceptible to political uncertainties.

The diamond tool industry itself and the three diamond research laboratories of De Beers are making intensive research for evolving better ways of using diamonds in industry. Meanwhile, industrial consumption, which was some 5 million carats in 1939, is expected to rise this year to more than 30 million carats, or nearly six tons (a carat is 1/142nd of an ounce), valued at over £40 million. Weightwise, industrial consumption of diamonds is about three-quarters of world production.

BROKER—OR DIRECTOR

Stockbrokers in the United States are likely to be disqualified for holding the office of directors of companies the shares of which they deal in. The limitation will apply precisely to those of their fraternity who make a market in a particular stock which is traded over the counter, that is, on forward basis. To put it in the light of conditions prevailing on stock markets in this country, the *restriction* will be on those stockbrokers who act as jobbers in different cleared shares.

This action is being contemplated by members of the House Commerce Sub-committee which is considering legislation dealing with trading in securities. It is obvious that the Sub-committee feels that, being on the Board of the company the shares of which he specialises in, a broker will have inside information which is not available to the general public and will, therefore, be in a position to exploit the situation to that extent. The only way out is that he either remains a broker, or a director, of the same company.

In this country, too, there are many stockbrokers who enjoy the same position their counterparts in the United States hold. Indeed, of late, some of them have emerged also as promoters of companies. It may, perhaps, be argued that an economy which is still underdeveloped and requires many more *entrepreneurs* cannot afford to exclude easily anybody from their ranks. But still the fact remains that in stockbrokers' becoming *entrepreneurs* also, there is the possibility of their enjoying the best of the two worlds—market and industry—to the disadvantage of the general investing public. This is, however, possible even otherwise, as, witness the case of "house brokers," that is, those who are the chief brokers to directors and managing agency houses.

"INDUSTRIAL AND ENGINEERING ANNUAL—1963"

This Annual (Editor: Mr. N. K. Somani, Eves Weekly Private Ltd., Apollo Street, Bombay 1. Price: Rs. 5) contains a number of *interesting articles on a wide range of subjects*, including agriculture and plantations, mining, textiles, engineering, management, oil, chemicals, transport, marketing, advertising, insurance and banking. A special section is devoted to the review of economic developments in certain selected States, namely, Maharashtra, Gujarat, West Bengal, Mysore and Madras. The foreign section highlights the economic aid received by this country from Britain, Soviet Union and Poland. The articles published in the Annual have been contributed by leading economists, administrators, businessmen and experts.

TREND OF SHARES

BUDGET-EVE BOLDNESS

(From Our Own Correspondent)

BOMBAY, *26th February*

THE eve-of-the-budget trading in equities during the week under review was an exercise in boldness. The exercise was, however, made less striking and simpler by the presentation of the current fiscal year's *Economic Survey* by the Finance Minister to the Lok Sabha on Friday the 21st inst., which, with its emphasis on growth in spite of (or rather because of) failings during the year, really brought about a marked change in sentiment. The publication of the *Survey* coincided with another realistic and purposeful statement by the Planning Commission's Deputy Chairman, Mr. Asoka Mehta, at the Indian Merchants' Chamber's 56th annual general meeting in Bombay, stressing the need for a higher rate of economic growth than had been achieved so far and for devising measures to ensure that the gains of development accrued where they were intended. Set against this backdrop, the stock markets were led further to believe that the next budget, with whatever uncertainties that go with it, would possibly be not a bad one from the investor's point of view. They worked themselves up to face the budget boldly, with fairly sizable gains sprinkled all over the list on strong support from influential operators. Rumours today that the Bank Rate might be stepped up by one-to-one-and-a-half per cent were ignored by knowledgeable people on the ground that, in view of the active rate of interest for the private sector being some 3 per cent above the present Bank Rate of 4.5 per cent, the Government would resist any temptation of raising the rate, as it would be the first and only victim of any increase.

It may, however, be noted here that, if the optimism about the budget has been strengthened *by the Economic Survey*, the fears of a higher Bank Rate have also stemmed from the same report. It is clearly stated therein that the accent of monetary policy will necessarily have to be on realistic interest rates which reflect adequately the real cost of capital to the economy. This can well mean that the Bank Rate might be raised suitably. A higher Bank Rate will also be justified as a means to check inflationary pressures which may be aggravated by the heavier capital expenditure envisaged for the next fiscal year. Any sharp increase in the rate, as is feared now, will however, have, a depressing effect on stock markets.

Today's fears of a rise in the Bank Rate did not come true. Consequently, some of the leading counters on Dalal Street were marked up in after-the-close deals. T.E.L.Co., Century and National Rayon were quoted at Rs. 316, Rs. 706 and Rs. 443, as against their official closing levels of Rs. 312.50, Rs. 701 and Rs. 438.50, respectively. Steel shares were slightly higher; Tata Ordinary at Rs. 150.50 and Indian Iron at Rs. 25.00. Hindustan Motors improved by 24 nP to Rs. 20.20. This renewed strength in kerb, after slight easiness during the day's official trading, clearly underlines the market's robust optimism about the next budget.

* * * *

A firm tendency was in evidence on Dalal Street on Saturday itself, when the market was closed because of the settlement on the previous day. On Monday, values firmed up further. But the next two days saw a slight recession in values on scattered profit-taking.

Scripwise, Steels, selected Textiles and Miscellaneous issues made a good show. Tata Ordinary gained Rs. 3.75 to Rs. 150.25 and Indian Iron 50 nP to Rs. 25.85. Century finished eight points higher at Rs. 701. National Rayon six points higher at Rs. 438.50 and Standard 23 points higher at Rs. 805. T.E.L.Co. recorded an impressive rise of 16 points to Rs. 312.50 and Hindustan Motors of Re. 1.68 to Rs. 19.96. Voltas were marked up by Rs. 8.25 to Rs. 282. Digivijay Cement improved by Rs. 5.50 to Rs. 187 and A.C.C. by Rs. 4.50 to Rs. 152.50. Among Dyes and Chemicals, Indian Destuff jumped up from Rs. 332.50 to Rs. 352.50, and Colour Chem, in the cash section, gained Rs. 6.25 to Rs. 386.25.

* * * *

Leading forward shares on the Calcutta Stock Exchange, like Dunlop, Indian Cable, Kesoram and Orient Paper recorded gains exceeding one point. Among others, Birla Jute closed ~~full~~ one point higher at Rs. 35.81 and Texmaco showed an improvement of 85 nP to Rs. 28.50. Indian Aluminium, which had spurted last week by two points, added further 37 nP to Rs. 32.12.

In the cash section, Bharat Commerce, among Textiles, finished Re. 1.50 higher at Rs. 23.50 and Bowreah Re. 1.25 higher at Rs. 24.62. Equitable Coal moved up from Rs. 22.75 to Rs. 23.62. Among Jute shares, Alliance dropped from Rs. 135 to Rs. 130, but India showed a gain of 82 nP to Rs. 15.69. Engineering shares were generally higher, with Burn rising by 20 points to Rs. 326, Alkali Chemical appreciated by three points to Rs. 34.50. Miscellaneous issues recorded a fairly good improvement, with Goodyear, Indian Oxygen and Rallis India conspicuously firm at Rs. 30.75, Rs. 29.87 and Rs. 136, as against Rs. 28.50, Rs. 27 and Rs. 132.50, respectively, last week.

* * * *

Interest broadened on the Madras Stock Exchange during the week and some of the market leaders staged an impressive rise. Thus, among Textiles, Lakshmi improved from Rs. 131 to Rs. 137, Travancore Rayon from Rs. 36 to Rs. 36.75 and S. I. Viscose from Rs. 140 to Rs. 143.50. Likewise, in the Miscellaneous section, Mettur Chemical jumped up by 60 nP to Rs. 13.85 and Dalmia Cement by 50 nP to Rs. 13.50. Among Sugar shares, Cauvery were Re. 1.50 lower at Rs. 103.50, but others closed steady to firm.

DELHI LETTER

THIRD BAD YEAR IN FOOD

EMPHASIS ON CONTROLLING TRADERS

From Our Special Correspondent

NEW DELHI, *25th February*

ONLY two months ago, spokesmen of the Food and Agriculture Ministry were trying to paint rosy prospects on the food front this season. The mid-term appraisal by the Planning Commission hoped that, with the prospects envisaged for the current crop, the lag which has been observed for two years might be overcome and a higher level of agricultural output reached. But it is now officially admitted that the food situation will be bad for the third year in succession. The summer and winter setbacks to the food crops were something over which the Government had no control. Mr. Swaran Singh naturally is angry with the foodgrain dealers who have let down the administration through the current food year—first in the eastern zone and more recently in the northern zone where the political repercussions are more close to the seat of central power. Talk of famine in Rajasthan on the scale experienced two decades ago in Bengal is certainly exaggerated because, even allowing for administrative failures the State and the Centre have machinery competent enough to avert any large-scale famine. State legislators have speculated on such fears.

The facts on production of foodgrains are: The final year of the second Plan (1960-61) coincided with the record production of foodgrains, namely, 81 million tonnes, and the first year of the third Plan was not disastrous in that the foodgrain production remained at 81 million tonnes. In 1962-63, the production fell to 78.7 million tonnes as the accompanying table shows. It would be a miracle, according to present reading, if the current season's foodgrain crop were to go back to the record of 81 million tonnes. The climatic factors afflicting food production this season have been the drought in Rajasthan, floods in parts of Uttar Pradesh, cyclone and heavy rain

INDIAN FOOD PRODUCTION

(In million metric tons)

Unit	1960-61*	1961-62*	1962-63†	Percentage change in 1962-63 over 1961-62
Rice	34.2	34.8	32.0	—8
Wheat	11.0	12.0	11.1	—7.5

Index number of agricultural output (1949-50=100) ..	139.7	141.4	136.8	—3.3

Source: *Economic Survey* 1963-64. The figures relate to the year ending June.

* Partially revised estimates. † Final estimates.

in the South, the long cold spell in North India, and the delay in winter rains. Expectations are that the rice crop will be around the 1960-61 level of a little more than 34 million tonnes and the wheat crop may be around 11 million tonnes, lower than the record of 12 million tonnes in 1961-62. Since March 1961, the population has increased by about 40 million to about 480 million. Even if the food production goes back to what was available in the latter half of 1961 the lag in comparison to population increase will be seven per cent.

According to the Food Minister's statistical calculations, there is no valid ground for the spurt in prices, as the Government has pumped into the market 3.8 million tonnes of wheat from stocks. Since the marketable surplus of home production of wheat is said to be only a third of the total output, the fall in supplies to the market from farmers, according to *Krishi Bhavan*, should be only 50,000 tonnes.

The Food and Agriculture Ministry wants to use the big stick to discipline the foodgrain dealers and the conference of State and Central Ministers last week-end was aimed at evolving short-term measures to bring the dealers in line with what is in the interest of the community. As for long-term measures to increase agricultural production, the *new decisions have to wait for* another day. The Economic Advisory Group of the Planning Commission thinks that, in the long-term, the nationalisation of foodgrains trade alone offers a solution to the problem of rising food prices. Tied to this is the problem of assuring remunerative procurement prices to accelerate production on the farms.

The present attempt is procedural—to deal with the shortages in rice, wheat and sugar. The original claims of attaining a level of 3.3 million tonnes production in sugar, dearly adhered to until a few weeks ago by the Food Ministry, have been abandoned and the Government has come round to the industry's projection of 2.6 million tonnes. The Ministry of International Trade is worried whether the country will be able to fulfil the export commitments already made in sugar. The Centre will pursue a strategy of using imported wheat on a larger scale in selected areas. Delhi is worried that the State Governments are not making sufficient use of powers already available for enforcing discipline on foodgrain dealers. The brief for the State Ministers after last week-end's conference is to do homework on details of tightening licensing of dealers and control of profit margins. Along with the imposition of price control, the State Governments may soon have to begin limiting individual purchases. The spectre of a ration card system is still frightening to the administrators. In the meantime, the States have been asked to formulate schemes to take the food administrative measures nearer to the general perspectives defined in the Bhubaneswar resolutions of the Congress.

Advances in Shipping

The shipping sector is one of the few in which there has been a minor miracle during the third Plan period that has gone by. The Transport Minister, Mr. Raj Bahadur, proudly mentio the fact that, during the third Plan, the rate of progress in acquiring tonnage for the Indian merchant fleet has been three times as fast as during the decade of the first two Plans. Mr. Raj Bahadur hopes that the revised target of 1.5 million g.r.t. for 1966 will now be exceeded. The gross acquisition of tonnage was 546,000 g.r.t. between 1951 and 1961. In the period of the third Plan, 542,800 g.r.t. have been added. Against the original target of 1.1 million g.r.t., Indian shipping already has crossed the 1.3-million g.r.t. mark. Two tankers are expected to be delivered from Japan soon. Six bulk carriers were added in the past year and two more carriers from Japan and one from Germany will be arriving. Recent talks with Yugoslavia are likely to lead to Yugoslavia building more ships for Indian lines. Recent successes in acquiring ships on a shoe-string basis, with loans to cover only down payments, have raised hopes for rapid expansion. Under one plan being studied by the Ministry, a self-financing programme with small initial payments would enable the country to add more than a million g.r.t. of bulk carriers by the end of the fourth Plan.

The negotiations with the Japanese on building the second major Indian shipyard in Cochin have run into new difficulties, including interest charges. Talks are to be resumed in Japan early in April.

A subsidiary problem in the development of shipping is the growing shortage of dry docking facilities within the country. Plans for new dry docks in Bombay, Calcutta and Visakhapatnam have been hanging fire for some years. Three of Calcutta's dry docks are seventy-five years old and are such as to preclude any modernisation to accommodate modern vessels. The Calcutta Port Commissioners have suggested a huge dry dock at the new port of Haldia and another at Kidderpore. Priority is also being urged for dry docks at Visakhapatnam and Cochin. Proposals under study include dry docks in Bombay, Madras and Goa during the fourth Plan.

COMMERCE AND INDUSTRY

(Concluded from page 336)

has gone up from 1,830 metric tonnes (anatase grade only) in 1957 to 6,500 tonnes in the first half of 1963. Production, too, has registered an increase, the total quantity actually produced in the calendar 1963 being 4,000 tonnes, as against 1,700 tonnes in 1957. After producing only anatase grade till 1961, the Company started producing rutile grade in 1962. Its present daily capacity of 18 tonnes is, however, being utilised, according to Mr. K. R. P. Aiyangar, Chairman of the Tariff Commission, to produce only anatase grade and the Company plans to divert a part of its capacity to rutile grade after its new sulphuric acid plant is commissioned in April 1964.

Although the titanium dioxide industry has enjoyed, as already stated, tariff protection for over ten years, the plea for extending the period of protection seems to be justified not only for consolidating the progress achieved so far but also for further expansion and development. There is, as Mr. Aiyangar pointed out, scope for considerable expansion "to attain better economic results and cater to the specific demands of the several consuming industries which are also growing." The industries include paint, rubber, linoleum, leather and leather polish, plastics, soap, printing *ink, paper, rayon, ceramics,* electrodes, textiles, vitreous enamels, cosmetics and other industries. The total estimated requirements of titanium dioxide in 1963 are put at about 8,500 tonnes, whereas actual production was only 4,000 tonnes which was less than the capacity of 6,500 tonnes (in the first half of 1963). In view of the continuously rising trend of consumption, the Government of India has given to the Kerala Company a licence for installing an additional capacity of 18,000 tonnes.

In the present stage of the development of this industry, it is, as Mr. Aiyangar rightly stressed, incumbent on the producer as a protected industry to make careful, planned and sustained efforts to raise efficiency and reduce costs through improvement of production processes and utilisation of by-products, where possible. The industry has also great potential to build up an export market. Mr. Aiyangar did well, therefore, in urging the industry to make full use of its natural advantages and the growing internal demand and take effective steps "for the attainment of sufficient strength to stand on par with its counterparts abroad."

WEEK'S STOCK EXCHANGE TREND

THE following quotations indicate the trend of transactions on the Bombay Stock Exchange during the week ended 26th February 1964:

TAX PROPOSALS DISHEARTENING

IN presenting the Government of India's Budget for 1964-65, Mr. T. T. Krishnamachari, Finance Minister, has spoken more or less like a leader of the Swatantra Party but acted like a member of the Ginger Group of the Congress Party. His realisation of the need for accelerating the rate of economic growth is only in words and most of his actions on the fiscal and administrative fronts are contradictory to his pronounced objectives of restoration of confidence in the capital market and encouragement to entrepreneurs. It seems that, as a result of his Budget, the growth of doctrinaire socialism will be faster than the growth of the economy as a whole. Inspired by the Bhubaneshwar brand of democratic socialism, he has descended heavily on the rich. The incidence of all the existing redistributive taxes in his armoury (Estate Duty, Gifts Tax, Capital Gains Tax and Wealth Tax) has been sharply enhanced and the much condemned Expenditure Tax has been reintroduced. The levels at which these taxes operate have also been lowered, thereby bringing even persons of modest means within the net of anti-rich taxes. The reliefs given in income-tax and super-tax payable by individuals are illusory, since what is given with one hand is taken away with the other. The net gain to the corporate sector as a result of the complicated and complex changes in the taxes applicable to it is not appreciable and cannot in any case be enjoyed by investors except by paying a penalty to the Exchequer. In effect, therefore, the new taxation proposals have failed to enthuse the stock exchanges.

Mr. Krishnamachari has no doubt worked hard to give meaning and content to the Bhubaneshwar resolution on socialism through his Budget Those of his party-men who say that he has favoured the private sector and retarded the progress of socialism are certainly doing an injustice to him. Indeed, thanks to the bold measures introduced by Mr. Morarji Desai not only last year but also in the previous four years, the revenues are so buoyant and the third Plan target for taxation has been exceeded so perceptibly that there is no case whatever for any additional taxation. On the contrary, there is a strong case for reducing the tax burden, especially as some of the third Plan industrial projects for the public sector and the Defence projects for which funds were raised have not materialised, as will be seen from our summary of the Budget on pages 382 and 383. It is true that expenditure in certain other directions has been higher than expected. Even so, the revised estimates of both revenue and capital expenditure in the current year are well below the budgeted figures. Consequently, instead of the expected revenue deficit of Rs. 16.26 crores, there is a revenue surplus of no less than Rs. 88.34 crores. Similarly, the overall gap has narrowed down from Rs. 181 crores to Rs. 135 crores. There is no reason to assume that this buoyancy will not continue in the coming year. An addition of Rs. 40.27 crores to the tax revenue through new taxes which the Finance Minister has now announced is unnecessary from the financial point of view. It is not suggested that this sum could have been found through deficit financing. The gap could have been narrowed by economising expenditure and by putting off some of the projects that can wait for the fourth Plan. By avoiding most of the new direct taxes, the Finance Minister could have provided a real stimulus to the economy. That would have been a small price, indeed, considering the benefits that would accrue to the economy as a whole. But this is too much to expect from the Finance Minister of a Government which regards a person with Rs. 10 lakhs as a multimillionaire and one with Rs. one lakh as a millionaire and subjects them to a variety of penal taxes.

The philosophy behind the so-called multipurpose fiscal policy of the Government, as enunciated by Mr. Krishnamachari, clearly ignores a universal human character, namely, to work hard, earn more and save more not only for oneself but also for one's heirs. The effect of excessive rate of Estate Duty on savings exceeding Rs. 10 lakhs and the application of high rates of Wealth Tax, combined with prohibitive rates of Gifts Tax, will be to throw cold water on the enthusiasm of entrepreneurs who can and are willing to take big risks and establish big industries. These taxes will either drive out talent from the country or engender a sense of exasperation, neither of which is good for a country that is short of entrepreneurial skill and has a long way to go for attaining the status of a developed economy. Such fiscal measures may give a sense of satisfaction to those who believe in a social philosophy which has no bearing on the realities of the situation or who believe that that is the only way of keeping communism out of the country. But, apart from the fact that they constitute a flagrant attack on the fundamental right to hold property, there is an inherent danger in them, namely, that, by slowing down the rate of economic growth, they may actually enhance the prospects of communism coming to power, for, after all said and done, none can get away from the fact that only through a rapid economic development of the country can the standard of living of the common man be bettered and not through a redistribution of the riches of a few hundred or a few thousand people.

All that was necessary for T.T.K. to do, in the light of his own approach to the Budget as reflected in Part A of his long speech and in the *Economic Survey* published last week, was to abolish the Compulsory Deposit Scheme for all, as well as the Super Profits Tax, and to rationalise the excise duties from the point of view of bringing down the price level which has gone up by over 8 per cent in one year. That, however, would have been a dull exercise for the dynamic mind of T.T.K., whose ambition is to do something grand. He had himself raised hopes of various nature among various types of people. If he had presented a pedestrian budget of the type mentioned above, he would have, while pleasing the investors and entrepreneurs, sorely disappointed the socialists in his camp. The latter he cannot afford to do, as it may cost him his ministership. But at the same time he has had to do something that would keep the private sector going. This explains the contradictions in his budget and the meagre concessions given by him in a roundabout way.

In the sphere of personal taxation, no tangible relief has been given in income-tax and super-tax, except for those with incomes upto Rs. 5,000. For those with incomes over Rs. 15,000, the position has actually been made worse by introducing the Annuity Deposits Scheme discussed at some length on page 351. It would have been much better had he continued the C.D.S. for them, if the Finance Minister had felt he could not afford to give it up for all. By lowering the exemption limit for Wealth Tax from Rs. 2 lakhs to Rs. one lakh, he has brought a large section of middle class within the mischief of this annual capital levy. The exemption of a house or a flat upto a value of Rs. one lakh, provided it is used by the assessee as his residence, is a welcome gesture, but not many will be in a position to avail themselves of this concession. By offering this concession, the Finance Minister has doubtless provided an inducement to people to invest a part of their savings in housing, instead of putting all of them in stocks and shares. Even this advantage, however, is not without a snag, in that the incidence of Capital Gains Tax on real estate has been pushed up sharply and kept at levels higher than those applicable to stocks and shares. Here is an instance to show that what appears to be a gain in the short-term may be neutralised in the long-term. There are many such instances in the latest tax proposals.

A reference has already been made to Estate Duty, Gifts Tax and Expenditure Tax. The increase in the cumulative incidence of all these redistributive taxes, coupled with the revival of Expenditure Tax, will further encourage tax evasion, tax avoidance and corruption at various levels of the economy. The Government is, of course, taking further measures to deal with these evils. This, however, is a case of remedy being worse than the disease, for the administrative machinery itself will get corrupted further. There is already too much corruption in the country and an aggravation of the evil will seriously undermine the basis of democracy. The wide powers sought to be taken by the Finance Minister for search and seizure and for the removal of secrecy provisions in the Income-tax Act themselves provide evidence of this danger. He is only making a vicious circle more vicious and providing a paradise for scandal-mongers and blackmailers.

In the sphere of corporate taxation, the Finance Minister has yielded some ground in favour of investors. The abolition of S.P.T. and the introduction of Surtax have meant a net gain for the vast majority of companies. The extent of gain may vary from company to company, but there is a gain all the same. Nevertheless, there is room for some refinement; if this is carried out, the Surtax will be less intolerable than S.P.T., though, in principle, it, too, is an objectionable tax, as it penalises efficiency and honesty in corporate management. The withdrawal of Super-tax on inter-corporate investment is another welcome concession and so are the series of measures designed to improve the position for foreign private investment, unfortunately nullified to some extent by the revival of Expenditure Tax, a fiscal measure not in vogue in any part of the developed economies in the free world

from which such capital and technical know-how have to be attracted. The special 20 per cent rebate on Super-tax, as well as on Surtax, for companies engaged in the generation and distribution of electricity and in certain specified basic, as well as essential, industries (cement, steel, aluminium, tea and rubber, etc.) is a thoughtful innovation, which is in consonance with the Finance Minister's observations in Part A of his speech. This encouragement to basic industries was long overdue. The reduction in the amount of tax to be deducted at source from 30 to 20 per cent is also a good relief to companies and shareholders alike.

But as against these favourable changes, there are two highly unfavourable ones. One is the tax at 7½ per cent on all equity dividends and the other is the extension of Capital Gains Tax to bonus shares in the hands of shareholders, even though such shares may not be sold and the profit on them realised. Both the taxes are most inequitable and add to the burden of multiple taxation so widely prevalent in the country. Their imposition in particular is sharply in conflict with the Finance Minister's repeated assurance that he would work for the revival of confidence in the capital market. One can understand his desire to discourage payment of excessively large dividends by subjecting that part of the dividend which is excessive to a penal tax of the kind proposed by him. But it is patently unfair to tax all equity dividends, whether they are small, or big, reasonable or unreasonable. Surely, a company must be allowed to distribute at least a minimum of 10 per cent on the paid-up capital and reserves without attracting the dividend tax.

The inclusion of bonus shares on a notional basis for purposes of Capital Gains Tax constitutes a heavy blow to investors, especially as the incidence of Capital Gains Tax itself has been raised. It must be noted here that, when a company issues bonus shares, it pays a tax of 12½ per cent, even though the issue is out of taxed profit. There are many features in this tax that are detrimental to investors. The effect of this expropriatory taxation on investors, especially big investors, will be so terrible that there will hardly be any issue of bonus shares in future. And, if bonus shares cannot be issued, there will be an imbalance between the paid-up capital and block account and there will be no point in ploughing back profits. If higher dividends are paid, instead of issuing bonus shares, the companies will have to pay out large amounts by way of dividend tax year after year. They will also not be able to conserve the profits to the extent they should. Further, high dividends will provoke labour to demand bigger bonuses. Issue of bonus shares also helps broadening of shareownership, for quite a number of the recipients of such shares invariably sell a part or whole of them and use the sale proceeds for diversifying their investments. The supply of equities in the market thus increases and provides opportunities for new investors to enter the scene at a reasonable price. This healthy influence of bonus issues will tend to wane hereafter. In short, there can be no better method of discouraging investments in equities than these two taxes. Surely, T.T.K. is not a person who can be unaware of all these points. Why then has he imposed them? The explanations given by him are not convincing. Is his real aim to provide some indirect support to the newly formed Unit Trust? Whatever be the reason, he should withdraw the unfair method he has adopted for taxing the bonus shares for purposes of capital gains and amend the tax on dividends on the lines mentioned above.

FINANCE MINISTER'S ECONOMIC PERSPECTIVE

WHILE introducing the Central Government's Budget for 1964-65, the Finance Minister, Mr. T. T. Krishnamachari, said that he would confine himself in the first part of his speech to those aspects of the *economic situation and perspective* which were relevant to his proposals. His interpretative analysis of the *economic situation* on this occasion was all too brief for two reasons. The first reason was that the *Economic Survey* had been presented to Parliament a week in advance of the introduction of the Budget. And the second reason was that the Finance Minister had made a fairly comprehensive statement in December last on the economic situation. What little he had to say in this connection now was organically related to the *economic perspective* which he sought to develop at greater length in his speech—a perspective that is significant more from the long-term point of view than from the short-term one. But the short-term is also a part of the long-term, and so the Finance Minister's short-term perspective on at least three inter-related problems, namely, those pertaining to prices, money supply and agricultural growth, also points to the long-term direction of his economic policy with its central goal of "growth with *a reasonable degree of* stability," as distinct from the more conservative goal of "growth with stability."

The idea that a certain amount of price rise is an inevitable accompaniment of accelerated development has led T.T.K. to size up the *economic situation* in the way he has done. In his view, "the increase in wholesale prices of the order of 8 per cent over the first three years of the current Plan period cannot be considered *large* (italics ours) by any standards, and particularly against the background of the sizable step-up in outlays under defence and development." But, in the same breath, he has added that "the fact that the general index of wholesale prices rose by as much as 7.2 per cent between the end of March 1963 and the end of January 1964 is certainly a cause for great concern." T.T.K. almost seems to think that an average annual price rise of about three per cent, which was also the annual rate of increase in the 11-year period from 1953-54 to 1963-64, is not "large" and that a higher rate of increase, say, six or seven per cent in a year is just "unhealthy," but not alarming. It is just possible that the Finance Minister might consider an average annual price rise of, say, five per cent as quite safe and "reasonable" in the circumstances of increasing defence and development spending. But all this annual average increase in price levels over a period of five to ten years has some meaning only if there are prospects of any substantial fall in prices in a year or two. As was shown in our last issue, there are no encouraging indications in this respect. This country is long past the stage of "creeping inflation" and the consequences are going to be pretty serious for every one.

With his nebulous stand on the question of creeping inflation, it is no wonder that T.T.K. has laid greater emphasis on the explanation that the rising trend in prices is *essentially* due to the inadequate rate of agricultural growth in recent years, than on the volume of deficit-financing and the accelerated monetary expansion in the same period. Of course, it is true that agricultural shortfalls have rendered the chronically scarce supplies of food and some raw materials scarcer still and pushed up their prices. But these price increases have not come about in isolation. They have resulted as much from deficit-financing and monetary expansion as from greater scarcity. As far as scarcity and rising prices are concerned, the situation in the next two years may or may not be remedied by the short-term expedients of intensified agricultural effort in selected districts and of regulation of distribution and prices. But it can certainly be remedied, albeit partially, by greater monetary discipline and a sound fiscal policy. Here, unfortunately, T.T.K. has preferred to take a rather half-hearted stand, for he has merely stated that "the preservation of a *reasonable* (italics ours) degree of stability in the months to come will call for a reduction in the volume of deficit financing in the coming year" and that "the overall rate of monetary expansion in the economy will also call for a careful watch." So far as fiscal policy is concerned, he has only made things worse by being parsimonious in providing incentives and by introducing new complications in the pattern of taxation.

To allow prices to rise by stages, whether for good reasons or bad, and then seek to restrain "effective demand" (that is, demand backed by purchasing power) by dealing drastically with incomes does not seem to be as effective an anti-inflationary approach as it is made out to be. From the long-term point of view, the kind of "lessons" that T.T.K. has drawn from the experience of recent years would seem to indicate that, by and large, it is real incomes, and not prices, that are going to be kept under *greater* restraint. The following passage in the Finance Minister's speech is relevant in this context:

"Treating the problem of growth as an isolated factor and promoting growth by stepping up investment from the sources available within and without the country, without a corresponding policy for the incomes generated in the process, would only stimulate inflation. Similarly, a price policy which disregards the dynamics of growth, or the impact on investment decisions, cannot but be self-defeating in the same way as a price policy which is not co-ordinated with a corresponding policy in regard to wages. It is now generally agreed, for example, that trying to keep agricultural prices too low for producers may defeat the objective of raising agricultural production. But if this is the case, one cannot, at the same time, try to keep agricultural prices low for all consumers, or adopt a wage policy in which most wage-earners are compensated for the increase in agricultural prices. Nor can one succeed in raising resources for defence or development by taxation if each such effort leads to price increases which are passed on all along the line. These are, I think, a few lessons which have emerged from our experience in the recent past, which deserve to be borne in mind in framing budgetary and other policies for the period ahead."

In the above passage, there is no indication that *excessive* credit creation (represented by the aggregate indebtedness of the public and private sectors to the banking system) year after year would decline in importance as a means of stepping up investment. This is not surprising, for T.T.K. has subsequently stated that the country cannot afford to postpone making new investments in development or to slow down the completion of schemes which have already been taken up. So "created money" in its broadest sense will continue to be one of the internal sources of financing fresh investment. As a consequence, the built-in inflationary potential of such forced development will continue to be there as a necessary evil. But some redeeming features of the investment policy spelt out by T.T.K. should not be overlooked. The Finance Minister has laid down clearly, in this connection, that (i) sufficient attention should be given to the fullest exploitation of the facilities already created by investments under the Plan, (ii) the choice of specific projects and programmes in the fields of irrigation, fertiliser production, power, transport and basic or heavy industry should be governed hereafter by the criterion of "greatest benefit in relation to cost," (iii) there is need for speedier execution of projects for earning better returns from the investments that are being made and (iv) the private sector should have adequate resources to expand in the fields assigned to it. All these four elements of T.T.K.'s approach to investment and development are indeed commendable from the point of view of securing higher outputs in relation to inputs and of thereby restraining prices to some extent.

The first one should involve, for instance, optimum utilisation of the irrigation potential already created and fuller capacity production in the new industries established in both the public and private sectors. While optimum irrigation utilisation would call for the construction of more field channels in the commanded areas of major and medium projects, fuller capacity production in industries would require an adequate supply of both imported an indigenous raw materials, spares and components. As for the second element, T.T.K. has admitted that the present arrangements for the choice of specific projects and programmes after a detailed examination of the technical and economic aspects of practical alternatives leave much to be desired, adding that it is his intention to strengthen this aspect of the work of his Ministry during the months to come. Although T.T.K. has not given specific examples, it is possible to think of a whole range of practical projects and programmes promising the greatest benefit in relation to the cost they entail. Extensive renovation of silted-up irrigation tanks, construction of big or small, *katcha or masonry, wells, cultivation* of green manure as a catch crop, adoption of anti-erosion and soil conservation measures and rural afforestation, greater emphasis on road transport development, fertiliser production in the private sector with foreign collaboration, expansion of petroleum refineries and establishment of petro-chemical industries in the private sector, further thermal power generation in areas not far away from coalfields, and so on, are some of the practical alternatives that come to one's mind in this connection.

Regarding the third element in the proposed investment policy, T.T.K. has expressed the forthright view that enterprises in the public sector should make profits large enough to yield a good dividend to the Exchequer, besides enabling them to build up reserves for future expansion. In his considered view, the public sector can thus expand without adding unduly to the tax burden. As for the private sector's requirements, the Finance Minister has recognised the need (a need not fully met in the present Budget) for generating more savings in the hands of corporate bodies through appropriate fiscal and pricing policies and also for canalising into priority industries the possible savings from restraints on low-priority industries and speculative transactions in commodities and urban housing and house-sites. What is more, he has emphatically declared that foreign private investment in the shape of equity capital should be more actively welcomed, for such investment not only brings with it technical know-how and managerial skills but has also the special advantage of not adding to the heavy and growing burden of debt repayment.

Even in regard to the political demand for curbing "concentration of economic power and growth of monopolies," T.T.K.'s approach is refreshingly realistic. He has put the whole thing in a new light by distinguishing clearly *ownership* from *control* and control from *management*. The popular belief that the ownership of industries in the private sector is concentrated in a few hands is only partially true, for (a) the L.I.C. is now a significant shareholder of many of the larger industrial and banking units in the country, (b) investment by individuals, many of them of modest means, has been increasing and (c) co-operative ownership and the Unit Trust programme are being promoted to disperse the ownership of industry. In spite of this diffused ownership, control is no doubt concentrated in a relatively few hands. But, then, these few hands themselves have been under the close control of the powers-that-be and even more so since the latest changes in the Banking Companies Act and the Companies Act designed precisely to dilute such concentration. But the day-to-day running of an industrial enterprise is not a matter of control but of management—a professional and technical job in which the Government cannot and should not interfere. This, in short, is what T.T.K. has said about ownership, control and management in the private sector, and there is nothing very disquieting about it at all. The proposed Monopolies Commission need not, therefore, cause any undue apprehension in business circles. Its enquiry relating to ownership and management may all be to the good, for it will authoritatively highlight the relevant data relating to the undoubted diffusion of ownership and the emergence of a large number of entrepreneurs—big, medium and small. But if it also brings to light data on unfair devices and practices detrimental to sound economic growth and public interest, it simply cannot be helped, and the parties indulging in such practices might have to accept reforms and restraints with grace in the interest of political amity

DELHI LETTER

BUDGET OF A TECHNOCRAT

FINANCE MINISTRY IN ASCENDANCY

From Our Special Correspondent

NEW DELHI, *3rd March*

WHEN the Finance Minister, Mr. T. T. Krishnamachari, presented the Union budget to the Lok Sabha on Saturday in his high-pitched voice which sometimes rose to a squeak, the trio of "Kamarajed" stalwarts—Mr. Morarji Desai, Mr. Jagjivan Ram and Mr. S. K. Patil—sat huddled together on a bench in the second row. For the time-consuming routine of the Central budget speech, one would have imagined that Mr. Krishnamachari would make efforts to clear his throat, but, just before he went to Parliament, Mr. Krishnamachari was photographed putting some eye drops to clear his vision! There certainly was an attempt on Mr. Krishnamachari's part to explain what he visualised for the economy; Mr. Krishnamachari did an exercise in economic and administrative theorising in the first part of his speech. If Mr. Morarji Desai felt upset, he did not exhibit any visible reaction to the way in which his successor in the Finance Ministry was picking up and throwing away several Morarjian pebbles which had cluttered up the economic path. Part A of Mr. Krishnamachari's speech appeared to be aimed at presenting a direction of advance for the Government, but Part B was disappointing in comparison. There was no doubt that the juggling Mr. Krishnamachari was able to indulge in, for balancing revenue and growth demands, was possible because of the revenues which had been dug up by his predecessor. Mr. Desai had used the pick-axe with considerable force and it was left to Mr. Krishnamachari to try level the ground for growth.

Last year, Mr. Desai was governed by the solitary motive of as much as possible for defence and it did not matter to him who got hurt in the process of the Government acquisition of funds in a big way. Between the objective of everything for defence he prescribed and the taxation measures he implemented, Mr. Desai was able to present a direct connection. But in Mr. Krishnamachari's budget, the connection between Part A and Part B was not obvious on a first look. Building the superstructures on the foundation and the massive frame laid by Mr. Morarji Desai, Mr. Krishnamachari no doubt could apply himself to the task of embellishment. Mr. Krishnamachari himself confessed that the task of revamping the fiscal structure was beyond any Finance Minister's capacity in a single financial year. Some housecleaning has been done in rearranging the tax furnishings. The revival of the expenditure tax is probably a return to the application of a personal fad. The replacement of the Compulsory Deposit Scheme by an Annuity Deposit is not very much of a refinement. The raising of the floor for compulsory savings to earnings over Rs. 15,000 a year could have been done within the framework of the C.D.S. itself.

Police Powers

The able executive and administrator that he is Mr. Krishnamachari exhibited his mastery of the short-term approach. The buoyancy in revenues created by the Morarjian measures enabled Mr. Krishnamachari to create a record of allotting more than Rs. 2,000 crores under the main heads of income and expenditure in the revenue and capital budgets. The annual allocation for the Plan also approaches the level of Rs. 2,000 crores. It needed some courage to declare that part of the deficit would be made up by better tax collection than ever before. It seems that Mr. Krishnamachari has borrowed a leaf from the police book in his pursuit of tax evaders. Teams of officials under the Board of Revenue are likely to make spot checks all round the country to make visual estimates of incomes of people in industry and business and the professions. They will make a report on persons who ought to pay taxes but who are not yet on the Income-tax lists. Like the traffic policeman with a quota of challans, these officials will be given targets. The abolition of the secrecy clause may help the process of increased tax collection.

Mr. Krishnamachari's views on the problem of income disparities are that he can wait for another day to tackle it. The announcement of the Commission to investigate monopolies was a straightforward submission to the behest of the Finance Minister's patron, Congress President Kamaraj. The Finance Minister is not concerned with the Mahalanobis Committee investigations on concentration of wealth. In the budget speech itself, Mr. Krishnamachari has belittled the concept of concentration of ownership, and, as for concentration of management, the Minister's trend of thinking is to encourage managerial enterprise. The Mahalanobis Committee report is not expected to contain any recommendations in its first part which is ready. Anyway, Mr. Krishnamachari is known to be contemptuous of the whole inquiry by the Mahalanobis Committee.

Mr. Krishnamachari has made it clear that his thesis is one of operating through fiscal controls. Political demands for other forms of control fail to impress Mr. Krishnamachari who said: "Fiscal measures can be used much more effectively than controls which lead to abuses. . . . Reliance on price controls is only appropriate where it is possible to exercise check on distribution and consumption as well, in other words, where there can be some form of rationing."

Mr. Krishnamachari's grant of concessions to firms in fourteen basic industries is an attempt to shift the direction of investment to some extent by promising more returns. In other words, he prefers fiscal inducement for industrialisation on desired lines, rather than purely the dictates of licensing and prescriptions by planners.

Planning Commission

An important development which may take place in the coming months will be a change in the role of the Planning Commission and the recovery of the Finance Ministry under Mr. Krishnamachari as the major administrative force for economic development. The Planning Commission is considered by some to have attained its performance peak in the preparation of the Third Five-year Plan. As Deputy Chairman, the late Mr. V. T. Krishnamachari, because of his background, was interested in handling administrative details. The illness of Mr. Nehru and his withdrawal from the day-to-day affairs is one reason for the ascendance of the Finance Ministry. With Mr. Nehru unable to give as much attention to planning as before, the Planning Commission chairmanship is likely to become mere decorative. In fact, already some of the initiative has gone to the Cabinet Secretary. When Mr. V. T. Krishnamachari was Deputy Chairman, Mr. Nanda, as Planning Minister, was something more than a mere link between Yojana Bhavan and Parliament. For some time, Mr. Nanda combined the functions of Planning Minister and the Commission's Deputy Chairmanship. Mr. Bhagat, as Minister for Planning, has the role of co-ordinator and public relations man for the planners. Mr. Bhagat is also Mr. Krishnamachari's aide in the Finance Ministry. The present Deputy Chairman of the Planning Commission is not much interested in the traditional form of administrative business; Mr. Asoka Mehta, perhaps, wants the Planning Commission to become more of a brains trust. This situation has provided Mr. Krishnamachari the opportunity to give his Ministry a commanding height from which to operate. His predecessor, Mr. Morarji Desai, had been indifferent to many aspects of planning, but Mr. Krishnamachari is in the thick of it.

Mr. Krishnamachari has the reputation of being given to intense personal prejudices in his relations with people in all walks of life, the civil service included. But a handful of top civil servants look up to Mr. Krishnamachari as the king among administrators. To quote a senior diplomat, most Ministers preside over their departments; Mr. Krishnamachari runs his with a will of his own. In his more leisurely days as Coordination Minister, Mr. Krishnamachari has had time to evolve a special sort of relationship with various senior officials. The departure of the renouncers under the Kamaraj Plan gave more opportunities to Mr. Krishnamachari, whose fingers now probe the inner reaches of almost every Ministry.

As the battle for succession is being silently fought in the inner group of politicians, a select set of civil servicemen *plus* T.T.K. are likely to have a field day. The top officials who regard Mr. Krishnamachari highly are also in key positions. Among them are Mr. Ranganathan, Mr. Bhoothalingam, Mr. L. K. Jha and Mr. S. S. Khera. The Cabinet Secretary has also emerged as a theoretician for the public sector.

MARKET GOSSIP

ANNUITY DEPOSITS

THE Annuity Deposits Scheme (A.D.S. for short) that takes the place of the existing Compulsory Deposits Scheme in the Finance Bill 1964, is basically similar in principle, scope and mode of assessment to C.D.S. The Annuity Deposits Scheme, like the C.D.S., is not a tax but a compulsory loan to Government repayable with interest. Another point of similarity is that, like the C.D.S., the Annuity Deposits Scheme is applicable only to persons falling within a specified salary range. But the income level at which the Annuity Deposits Scheme becomes applicable is very much above that of the C.D.S. Thus, while the C.D.S., as it is in force at present, is applicable to all income-tax payers, only persons with annual income of over Rs. 15,000 come under the purview of the Annuity Deposits Scheme. There is also some difference in regard to the mode of repayment. While deposits under the C.D.S. are repayable after five years with interest, deposits under the Annuity Scheme will be repayable in ten annual equated instalments of principal and interest (currently fixed at 4 per cent per annum but can be changed by the Government later, if it wants to) commencing from the year succeeding the year of payment. The annuity deposits will be chargeable to tax as the income of the depositor for the year in which it is due to be paid, though the amount of annuity deposits, which an assessee is liable to make for an assessment year, will be allowed as a deduction in computing his assessable income for that assessment year. In the case of C.D.S., however, the repayments are not added to the income and the tax collected on the total, though it was not allowed to be deducted from the assessable income in respect of the year for which it was made. In effect, the interest on C.D.S., which is 4 per cent per annum compound, same as that now fixed for the Annuity Deposit, is tax-free whereas that on the latter is not.

Against the background of these main points of similarity and differences between the two schemes, the salient features of the Annuity Deposits Scheme may now be examined. Persons liable to pay annuity deposits are individuals who are citizens of India, Hindu undivided families, unregistered firms, associations of persons (other than co-operative societies) and "judicial" persons, excluding corporations established by a Central or State Act. The amount of the annuity deposits will be calculated on the "adjusted total income" of the assessees at the following rate:

Income per annum Rs.	*Percentage of adjusted income*
15,000 ...	*Nil*
15,001—20,000 ...	5
20,001—40,000 ...	7½
40,001—70,000 ...	10
70,000 and above	12½

An assessee whose total income includes any gratuity may, at his option, deposit an additional amount of 50 per cent of such gratuity. Musicians, authors, artists, playwrights may also, at their option, deposit an additional amount of 15 per cent of their income.

The adjusted income of an assessee will be arrived at by deducting from the total income any past arrears of salary, balance in a provident fund account transferred to the credit of an employee participating in a recognised provident fund and any share of income from an unregistered firm or association of persons where such firm or association is liable to make an annuity deposit. For the assessment year 1964-65, for which the Scheme is applicable, any salary income earned during the financial year 1963-64 will also be excluded from the total income for determining the amount of annuity deposits required to be made in respect of that year. This is because salary income earned during the financial year 1963-64 is assessable for the year 1964-65 under the provisions of the Finance Act, 1963 and as such will be subject to C.D.S.

In calculating the advance tax payable under the Income-tax Act, the advance annuity deposit which an assessee is liable to make will be deducted from his income subject to payment of advance tax. Likewise, in calculating the amount of tax required to be deducted at source from salary income, the amount of annuity deposits calculated in respect of that income at the rates prescribed in the Finance Act will be deducted, whether the deposit has actually been made or not. In respect of the income assessable for the assessment year 1964-65, annuity deposits are required to be made at the time when the tax is payable, but not later than 31st March 1965 in any case.

Any arrears of annuity deposits are recoverable like arrears of taxes. If a person fails to make the annuity deposit in due time, he will be liable to pay a stiff penalty which may be as much as 50 per cent of the amount he was liable to deposit.

In spite of the compulsion involved in it, the Annuity Deposits Scheme has not attracted the critical attention that C.D.S. did. This is obviously because the relief felt at the withdrawal of the C.D.S. was so great that some of the none-too-happy features of the Annuity Deposits Scheme has escaped public attention. The fact that the latter is applicable only to those with annual incomes of over Rs. 15,000 (whom the Finance Minister perhaps considers as "affluent") is also one of the reasons why the Scheme has escaped popular attention. A closer look at the Scheme, however, shows that it is not as harmless and readily acceptable as is imagined. In fact, it is likely to impinge more harshly on those who are liable to pay annuity deposits than the compulsory deposits. For the rate of annuity deposits, ranging from 5 to 12½ per cent of adjusted income, is

TAXATION OF NON-RESIDENTS

PROVISIONS OF LATEST FINANCE BILL ANALYSED

By Homi Merwanji Damania, M.Com., F.C.A.

THE success of our third Five-year Plan depends upon the size of the foreign private investment which supplements Indian capital in developing industrial production. Due to our limited capital resources, we have to depend predominantly on foreign capital or foreign aid for the industrialisation of our agrarian economy. The Government of India has been and is extremely anxious to attract and encourage foreign capital and technical know-how. According to the recent finding of the National Council of Applied Economic Research, the total burden of taxation on foreign investors is highest in India and acted as a disincentive to foreign investment. It recommended to the Finance Ministry certain tax reliefs for foreign investors and technicians, so that foreign capital might be ensured a reasonable return which will result in the revival of interest of foreign investors in India.

It is against this background that the Finance Bill, 1964 has given several concessions and exemptions to foreign investors. However, with the reintroduction of expenditure tax, the concessions to foreigners working in India can be regarded only as a token relief.

The Finance Bill, 1964 offers tax reliefs to non-residents by way of proposed amendments to Sections 9, 10(4) and 10(6) of the Income Tax Act, 1961.

(1) *Proposed Amendment to the Explanation to Section* 9(1) *of the Income Tax Act,* 1961

Upto the assessment year 1963-64, no income was deemed to accrue or arise in India to a non-resident through or from operations which were confined to the purchase of goods in India for the purpose of export, provided the following two conditions were satisfied:

(*a*) That the non-resident had no office or agency in India for this purpose; and

(*b*) that the goods were not subjected to any kind of manufacturing process before being exported from India.

It is now proposed by the Finance Bill that a non-resident importer need not satisfy the above two conditions to qualify for the exemption and that the non-resident can now establish an office or an agency in India for buying goods in India for the purpose of export and can even subject such goods to manufacturing process before they are exported from India. This is an important concession given by the Finance Bill which would encourage the promotion of exports from India. Thus, a non-resident henceforth will not be liable to tax on any income derived by him in India from purchasing goods which are exported by him outside India.

(2) *Section* 10(4) *of the Income Tax Act,* 1961

Sub-clause (4) of Section 10 grants exemption from tax to non-residents on interest or on premium on the redemption of any bonds issued by any industrial undertaking or a financial corporation in India under a loan agreement with the International Bank for Reconstruction and Development or the Development Loan Fund of the U.S.A. which is guaranteed by the Central Government. Similarly, exemption from tax is also granted in respect of interest/income or from premium on the redemption of any bonds issued by the Central Government under a loan agreement between the Central Government either with the International Bank for Reconstruction and Development or with the Development Loan Fund of the U.S.A. By this amendment it is now further proposed to make a provision exempting a non-resident from tax on income from securities approved by the Central Government by issuing a notification in this behalf in the official *Gazette*. This would encourage a flow of foreign investments in approved securities notified by the Central Government.

(3) *Section* 10(6) *of the Income Tax Act,* 1961

By the proposed amendment to sub-clause (vii) (*a*) and by inserting sub-clause (ix) after sub-clause (viii) of Section 10(6), the scope of two existing concessions in respect of tax holiday enjoyed by certain categories of foreign technicians is extended. At present, under Section 10(6) (vii) of the Income Tax Act, 1961, certain categories of foreign technicians whose contracts of service were approved by the Central Government before the commencement of their service enjoy exemption from tax on their salary income for a period of three years. In the absence of prior approval, the tax exemption in case of foreign technicians was limited to one year. It is now proposed that the tax exemption will be available to all foreign technicians for three years, provided sanction of the Central Government is obtained either before the commencement of their service or within one year of their arrival in India. This would benefit foreign technicians, since it would be possible now to claim this exemption even when such technicians are brought at short notice without obtaining prior approval of the Central Government to their contract of service.

The period of exemption commences from the date of the arrival in India of the foreign technician for the purpose of the technical assignment for which exemption is claimed. Thus, if he had visited India previously on, say, a private tour, that would not be considered as an "arrival in India." This viewpoint is now clarified by the proposed amendment discussed above and it is submitted that any contrary view will not be correct.

By the introduction of sub-clause (ix) after sub-clause (viii) of Section 10(6) of the Act, it is also proposed to extend the exemption from tax to foreign teachers and professors coming to India on approved programmes for a period of three years from their date of arrival in India for rendering service as professors or teachers in any university or educational institution in India. In case they continue to remain in employment in India after the expiry of three years and the tax on their salaries is paid by the university or other educational institution concerned, the foreign teachers and professors can continue to receive tax-free salaries for a further period of two years. The foreign teacher and professor in either case will have to satisfy the following conditions:

(i) that he was not resident in any of the four financial years immediately preceding the financial year in which he arrived in India; and

(ii) his contract of service is approved by the Central Government—

(*a*) on or before the 1st October 1964 in case his service has commenced before the 1st April 1964;

(*b*) before the commencement of his service or within one year of such commencement in any other case.

This concession would encourage the flow of foreign teachers and professors to Indian universities and other educational institutions which would improve the standard of education in our country.

Other Exemptions and Concessions

I. *Exemption of inter-corporate dividends from super-tax:* It is proposed to provide that companies (whether Indian or foreign) shall not be liable to pay super-tax on any income by way of dividends received by them from an Indian company or a company which has made the prescribed arrangements for the declaration or payment of dividends within India. This is an important concession granted by the Finance Ministry which would benefit foreign companies having share-holding in Indian companies and it is expected that this concession will encourage in future foreign investments in Indian companies. It is felt that this concession was long overdue, since taxation of dividends in the hands of companies in reality amounted to double taxation.

Under the First Schedule—Part I—Paragraph D of the Finance Bill, 1964 the rate of income-tax prescribed is 15 per cent (and not 25 per cent) on dividends received by a foreign company from an Indian company in which the public are not substantially interested and which is wholly or mainly engaged in the business of generation and distribution of electricity or of manufacture or production of any one or more of the articles specified in the list in Part IV of the Schedule. On the other hand, dividends from all other companies received by a foreign company would be taxed at a flat rate of income-tax of 25 per cent instead of a variable figure of tax ranging from 25 to 50 per cent. It is felt that a rebate of income-tax of 10 per cent is proposed to be given on dividends received by a foreign company from Indian private limited companies engaged either in generation or distribution of electricity or in production or manufacture of goods, since it is the policy of the Government to encourage foreign equity participation in the public sector on a minority basis.

II. *Rebate of tax to resident individuals of foreign nationality on amount spent for education of children in a foreign country:* It is proposed to provide a rebate of income-tax and super-tax to resident individuals who are not citizens of India on the amount spent by them out of their assessable income for the full-time education of dependent children below 21 years of age in a university or any other educational institution outside India. The maximum amount qualifying for the rebate would be Rs. 2,000 per annum for each such child upto two children (viz., Rs. 4,000) or 25 per cent of the total income, whichever is less. It may be noted that this exemption would not be available to a non-citizen resident individual, if such child has an independent income, because it would not then be regarded as a dependent child.

It is felt that this concession will give fillip to foreigners, since many of them desire to keep their school-going children in their own country. In the U.K., there is a similar exemption fixed at £150 per child for children's education.

III. *Reduction in the rate of tax on Technical Service Fees:* If these are paid in India, they would be liable to Indian tax where services are rendered by foreign technicians in India. Upto now the rate of tax was 63 per cent, whereas tax on royalty payments to foreign collaborators, on or after 1st April 1961, was 50 per cent. It is now proposed that fees for engineering services would now be taxed at the rate of 50 per cent (the same rate at which royalties were being taxed) instead of 63 per cent. The existing anomaly has been set right by the Finance Bill, 1964, since upto now the concession of 50 per cent was available only in respect of royalties and not in respect of other types of service fees.

IV. *Exemption from Annuity Deposits:* The Annuity Deposits Scheme is as compulsory as the Compulsory Deposits Scheme was in respect of individuals who are citizens of India. However, all individuals who are not citizens of India are exempted from making annuity deposits under the Finance Bill, 1964.

Branch Companies

Upto now a foreign company operating in India through a branch was taxed at the rate of 63 per cent. However, under the Finance Bill, 1964 the Government has proposed to increase the rate of tax from 63 per cent to 65 per cent on branch companies which had head offices abroad to which all profits were remitted. This would now further discourage foreign companies from operating in India through its branches.

Rate of Tax

1. *Tax payable by a Non-resident Individual:* A non-resident individual will now be required to pay on his Indian income excluding interest payable on income-tax-free Central or State Government securities the income-tax and surcharge of 29.37 per cent plus the super-tax at 19 per cent or the actual super-tax payable on the total income, as if he were a resident, whichever is greater. The tax burden would now be 48.37 per cent against 49 per cent for the assessment year 1963-64.

2. *Tax payable by Non-resident Companies:* A non-resident company is one which is not an Indian company and which has not made the prescribed arrangements for the declaration and payment of dividends within India. Under the Finance Bill, 1964, a non-resident company would, subject to what is stated below, have to pay tax on its total Indian income at a flat rate of 65 per cent (i.e. income-tax at 25 per cent and super-tax at 40 per cent) against 63 per cent prescribed by the Finance Act, 1963.

Moreover, a non-resident company under the Finance Bill, 1964 will have to pay tax on the following types of income at the prescribed rates as under:

Particulars of income	*Rate of income-tax* %	*Rate of super-tax* %	*Total taxes* %
(*a*) On dividends received from a private limited company (Section 104 companies) which is wholly or mainly engaged in the business of generation and distribution of electricity or of manufacture or production of any one or more of the articles specified in the lists in Part IV of this Schedule..	15	*Nil*	15
(*b*) On dividends received from any other Indian company or any company which has made the prescribed arrangements for the declaration and payment of dividends within India	25	*Nil*	25
(*c*) On royalties payable by an Indian concern pursuant to an agreement entered with it on or after 1st April 1961 and which has been approved by the Central Government ..	25	25	50
(*d*) On technical services fees received from an Indian company pursuant to an agreement made by it with the Indian concern *after 29th February* 1964 and which has been approved by the Central Government	25	25	50
(*e*) On interest received from income-tax-free securities issued by a State Government or the Central Government	*Nil*	40	40

While concluding, I am tempted to make the following suggestions for creating a favourable climate for foreign investments:

(*a*) Not to increase the proposed super-tax rate from 25 per cent to 35 per cent for companies other than those in which the public is substantially interested.

(*b*) The tax holiday for foreign technicians be extended from five to seven years.

(*c*) The exempted period of six months for foreign technicians who are experts in "industrial or business management techniques" be extended to three years to fall in line within the period of three years which is applicable to other foreign experts, teachers and professors.

(*d*) The restriction by which the tax exemption is denied to a foreign technician, if he has been a resident in any of the four financial years immediately preceding the year in which he arrives in India should be abolished.

(*e*) Actual expenses incurred on medical treatment of an individual who is not a citizen of India, his wife and his dependent children should be allowed to the maximum extent of Rs. 5,000 per annum.

(*f*) Where the income of a non-resident individual is only from dividends and/or interest on securities on which tax is deducted at source at maximum rates, it is suggested that in such cases the filing of income-tax returns should not be compulsory.

(*g*) Pamphlets should be published and circulated amongst the Embassies and Legations abroad clearly specifying the liability of foreigners under the Indian tax law and also containing the various tax concessions to which they would be entitled to.

(*h*) The provisions of Section 92 read with rules 10 and 11 of the Income Tax Rules, 1962 give sweeping powers to the taxing authorities which may affect adversely the interest of foreigners in case such powers are not exercised judiciously. It is suggested that the rules 10 and 11 should be amended forthwith.

(*i*) Individuals who are not citizens of India should not be subjected to the proposed levy of expenditure tax.

I.D.A. IN U.S. CONGRESS

If only 21 more members of the U.S. House of Representatives had joined the 188 members who voted in favour of the Administration's Bill seeking to raise an additional U.S. contribution of $312 million to the International Development Association (I.D.A. for short), instead of supporting the motion to refer it back to the House Banking and Finance Committee, the embarrassment caused to the Administration would have been avoided. The Bill has now been virtually shelved, in that it usually takes a long time for the Committee to consider such bills. So the Executive Directors of the I.D.A. have found it necessary to extend the last date for notification of contributions by member-countries by four months, that is, up to the end of June next; Sunday the 1st inst. was the deadline fixed originally.

The I.D.A. credits are made on terms bearing less heavily on the balance of payments of recipient countries than do conventional loans. They are free of interest—only a service charge of ¾ per cent is levied—and repayable over a long period of fifty years. With the rejection of the U.S. Government's proposal for an extra subscription of $312 million to the I.D.A., the combined pledges of sixteen other member-countries together amounting to $438 million have become ineffective and that when the I.D.A. has no more than $100 million in its till to disburse. Replenishment of I.D.A.'s financial resources is urgent to a degree. But, alas, the U.S. House of Representatives has dealt a severe blow to a key instrument for multilateral aid. The action of the House has been deplored by Mr. Dean Rusk, U.S. Secretary of State, and it is gratifying to learn that the Administration will spare no efforts to get the Bill back to the floor of the House and have it approved.

SURTAX ON COMPANIES

SALIENT FEATURES OUTLINED

By C. C. Dalal, B.Com. (Hons.), F.C.A.

THE Union Finance Minister, while introducing the budget proposals for the year 1964-65, has recommended the Companies (Profits) Surtax Bill, 1964. On going through the various clauses of the Surtax Bill, one finds that it is nothing else but a substitute for Super Profits Tax Act, 1963, with few modifications.

Scheme of the Bill

There is no material difference in the essential features of the Scheme of Surtax Bill and the existing Super Profits Tax Act. This Bill, as well as the Super Profits Tax Act, imposes a special tax on companies (other than which have no share capital) on their excess profits. For the purpose of understanding the computation of profits chargeable to surtax, it is necessary to understand the terms, "chargeable profits," and "capital employed."

Chargeable Profits

The Surtax Bill has defined the chargeable profits in the same manner as the Super Profits Tax Act, 1963, with the following changes:

Under the Super Profits Tax Act, 1963, a deduction of an amount equal to ten per cent of the reduced total income was permitted, provided the prescribed conditions were fulfilled. This deduction has been completely withdrawn from the Companies (Profits) Surtax Bill, 1964.

Under the Super Profits Tax Act, 1963, deduction was permissible of income-tax and super-tax payable by the Company excluding income-tax and super-tax payable on any income chargeable under the head "Capital Gains," the income of Life Insurance Business and Compensation or other payment referred to in clause (ii) of Section 28 of the Income-tax Act, 1961. The Surtax Bill contemplates to give a further deduction of tax on dividends from an Indian company and an amount equal to the amount by which the rebate of super tax admissible to the Company under the provisions of the Annual Finance Act is, under the provisions of the said Act, reduced with reference to an amount of dividend distributed by the company during the previous year relevant to the assessment year.

Since the capital base has been widened so as to include debentures and other items, the amount of any interest payable by the company on its debentures or moneys referred to in the following para shall be added back to the chargeable profits.

Computation of Capital

It must be said to the credit of the Finance Minister that he has tried to take a realistic view of capital employed in a company. For this purpose, he has sought to include in the capital base over and above the paid-up share capital and reserves the following:

(i) Debentures, if any, and

(ii) (*a*) Moneys borrowed from the Industrial Finance Corporation of India or Industrial Credit Investment Corporation of India or any other financial institution notified by the Central Government;

(*b*) moneys borrowed from a banking institution under an agreement providing for the repayment of such moneys during a period of not less than 10 years;

(*c*) moneys borrowed from any person in a country outside India for the creation of any capital asset in India.

As a result of the above classification, deposits taken by companies from individuals and other private bodies, as well as borrowings from banks for working capital, will not be allowed to be included for the purpose of computing the capital base for surtax.

It has now been expressly made clear that any amount standing to the credit of any account in the books of the company as on first day of the previous year relevant to the assessment year which is of the nature of items enumerated hereunder shall not be regarded as a reserve for the purposes of computation of the capital of a company:

(i) Surplus i.e. balance in profit and loss account after providing for proposed allocations, viz., dividend, bonus or reserves;

(ii) proposed additions to reserves; and

(iii) sinking funds.

Where after the first day of the previous year relevant to the assessment year the capital of the Company is increased by any amount during that previous year on account of increase of paid-up share capital or issue of debentures or borrowing of any moneys or is reduced by any amounts on account of reduction of paid-up share capital or redemption of any debentures or repayment of any such moneys, such capital shall be increased or reduced, as the case may be, by sum which bears to that amount the same proportion as the number of days of the previous year during which the increase or reduction remained effective bears to the total number of days in that previous year.

Statutory Deduction

"Standard Deduction" under the Super Profits Tax Act, 1963 has been replaced by "Statutory Deduction" under the Surtax Bill, 1964 with some important and useful changes. The standard deduction admissible under the Super Profits Tax Act, 1963 was 6 per cent of capital base or Rs. 50,000 whichever is greater whereas under the Surtax Bill, statutory deduction is at 10 per cent of the capital base or Rs. 2,00,000 whichever is greater.

To my mind, this is a very justifiable provision. This will keep so many companies out of the purview of surtax. Thus, a private company having a profit of less than Rs. 5,00,000 will not come under the clutches of surtax.

Rates of Surtax

It is very wise on the part of the Finance Minister to levy a uniform rate of surtax on chargeable profits under the Surtax Bill unlike under the Super Profits Tax Act, 1963, where there are two slabs. Moreover, the Finance Minister has also sought to reduce the quantum of surtax to 40 per cent on chargeable profits after deducting statutory deduction. The levy of surtax at a uniform rate will, to a certain extent, make easy the calculation of profits for the purposes of Section 349 of the Companies Act, 1956.

It is gratifying to note that an Indian company or a company which has made the prescribed arrangements for the declaration and payment of dividends within India shall be entitled to a rebate calculated at 20 per cent of that part of the surtax which is attributable to any profits derived by it from the business of the generation and distribution of electricity or of the manufacture or production of any one or more of the articles specified in the list contained in the Third Schedule. It also provides that the Central Government may, by issue of a notification in the official *Gazette*, exclude any articles from or add any item to the said list for the purposes of an assessment for any assessment year subsequent to the assessment year 1964-65.

In view of the above far-reaching modifications, it is hoped that good many companies will fall out of the ambit of surtax, which in turn will lead to the development of corporate sector and revive the capital market.

Deficiency

The Surtax Bill has removed the important provisions relating to deficiency contained in Section 5 of the Super Profits Tax Act, 1963. I think this is really a "deficiency" in the Surtax Bill.

Under the Super Profits Tax Act, 1963 deficiency is allowed to be carried forward and set off against the net chargeable profits of the three assessment years immediately following. The absence of such a provision under the Surtax Bill is likely to cause genuine hardships to some companies.

Appeals and Revision Provisions

The provisions regarding assessment, collection and revision and appeals remain more or less the same as under the Super Profits Tax Act, 1963. However, it would not be out of place to point out a lacuna in clause 17(4)(c) of the Surtax Bill, 1964, which states that the Commissioner shall not revise the order which has been made the subject of an appeal to the Appellate Tribunal. It is possible to visualise a case where the Income-tax Officer has preferred an appeal against the order of the Appellate Assistant Commissioner of Income-tax and the assessee has made a revision petition to the Commissioner of Income-tax. Since the order of Appellate Assistant Commissioner of Income-tax has been made the subject of an appeal to the Appellate Tribunal, the Commissioner of Income-tax will have no power to revise the order. In such circumstances, the assessee will be denied the remedy under the Act.

I am quite sure it was never the intention of the legislature to cause such hardships and as such it is hoped that a suitable proviso may be inserted to clarify the situation.

The exclusion of Section 243 from clause 18 of the Companies (Profits) Surtax Bill, 1964, will unnecessarily delay the granting of refund of surtax paid in excess of provisional assessment or on reduction in appeal.

In clause 9 of the Surtax Bill, the word "deliberately" has been omitted, with the result that the Income-tax Officer will have wide powers for the imposition of penalty.

To my mind, this is not an accidental omission but a deliberate omission with far-reaching repercussions.

In view of the broad capital base for the purpose of surtax, many companies falling under the Super Profits Tax Act, 1963, will be out of the ambit of the Surtax Bill.

Long-term deposits from individuals and other private bodies should be discouraged by companies as the same are not included for the purpose of computing the capital base for surtax.

There are fair chances for the capital market to revive and, with a few modifications in the Surtax Bill, it would be possible to attract foreign investments to a large extent.

Conclusions and Suggestions

For the betterment of the economy and fulfilment of Five-year Plans, I am tempted to make the following suggestions to amend the Surtax Bill, which I am sure will create a healthy capital market suitable both to the investors and entrepreneurs:

1. The provisions relating to deficiency as contained in Section 5 of the Super Profits Tax Act, 1963, should be incorporated in the Surtax Bill.

2. The deposits taken by the Companies from individuals and other private bodies for a period exceeding one year should be allowed to be included in the capital base for surtax.

3. The period for repayment of moneys borrowed from banking institutions to be included in the capital base for surtax to be reduced to five years from the proposed ten years.

4. The debt for deferred payment for the purchase of machinery, etc., should be allowed to be included in the capital base for surtax.

5. A suitable provision be made in the Surtax Bill so as to give companies the right of appeal against a provisional assessment; otherwise, the companies will be left with no remedies.

Notice

BOMBAY POTTERIES & TILES LTD.

NOTICE IS HEREBY GIVEN THAT THE Thirtieth Annual General Meeting of the Company will be held at the Registered Office of the Company, United India Building, Sir Pherozshah Mehta Road, Fort, Bombay-1, on Wednesday the 25th March, 1964, at 4-00 p.m. (S.T.), to receive and adopt the Directors' Report and the Audited Balance Sheet and Profit and Loss Account of the Company for the year ending 30th September 1963, declare Dividends on First and Second Preference Shares and Ordinary Shares, to elect Directors in place of those retiring by rotation, to appoint Auditors and to consider, and, if thought fit, to pass, with or without modification, two Ordinary Resolutions as per Notice dated 4th January 1964 which, together with the Explanatory Statement thereto and Report of the Directors and Auditors and the Audited Accounts, has been circulated to the members individually.

NOTICE is also hereby given that the Register of Members and the Share Transfer Books of the Company will remain closed from 4th March 1964 to 1st April 1964, both days inclusive.

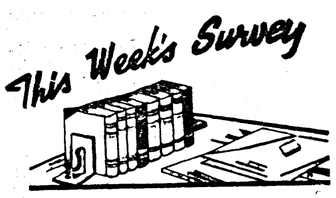
A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY OR PROXIES TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER OF THE COMPANY.

Dated at Bombay this 4th day of January 1964.

By Order of the Board,

H. RAMAKRISHNAN,
Secretary.

Registered Office:
UNITED INDIA BLDG.,
SIR P. M. ROAD,
FORT, BOMBAY-1.



STEEL DECONTROL AT LAST

AFTER months of consideration and consultation the Union Government has just decided to abolish, with effect from 1st March 1964, statutory controls over the price and distribution of most categories of steel accounting for about two-thirds of the entire production of iron and steel. The items which will continue to be controlled are pig iron, ingot moulds and bottom plates, billets and tin bars, plates, sheets and wide strip, skelp, tin plates, hoops and their respective defectives. Indents for these controlled categories will have to be backed as hitherto, by quota certificates, and the existing controlled and registered stockists will continue to function for some time in respect of such categories. The Government has also sanctioned, with effect from 1st March 1964, an average increase of Rs. 30 per tonne in the main producers' sale prices of the controlled categories. In this connection, the category-wise revised sale prices, as compared with the previous sale prices, may be noted in the following table:

(Rupees per tonne)

Controlled category	Previous sale price		Revised sale price as on 1-3-1964	
	Untested	Tested	Untested	Tested
Billets	504	537	505	550
Tin bars	473	503	547	592
Skelp	775	819	786	831
Black sheets	813	857	832	877
G.C. sheets	925	925	940	985
Plates	742	789	767	812
H.R. strips	775	819	786	831
C.R. strips	855	899	876	921
C.R. sheets	893	937	916	961
Cotton baling hoops ..	956	..	991	..
Jute baling hoops ..	900	..	915	..
Coir baling hoops ..	1,054	..	1,089	..

As far as the decontrolled categories are concerned, there will be free trade in them, but their ex-works prices will be regulated voluntarily by the main producers. Such self-regulation will, however, be the responsibility of a Joint Plant Committee which has just been set up, with the Iron and Steel Controller as Chairman and representatives of the main producers (in both the public and private sectors) and the railways as members. It is envisaged that this Committee should announce and list the ex-works prices (including base prices and extras) of the decontrolled categories. A fixed element of equalised freight is to be added to these ex-works prices. While the revised prices of decontrolled categories, which will come into effect from 1st April 1964, are yet to be announced by the Joint Plant Committee, a list of adjusted prices—adjusted to cover equalised freight and increases in excise duties—has been announced for the interim period of one month from 1st to 31st March 1964.

As freight equalisation has been entrusted to the Joint Plant Committee and statutory price control over the bulk of steel production has been abolished, the operations of the Steel Equalisation Fund will be discontinued except insofar as they relate to previous transactions. In consequence, there will no longer be any distinction between sale prices and retention prices in the case of both controlled and decontrolled categories. The Joint Plant Committee will also be responsible for the production planning of both controlled and decontrolled categories on the basis of the priorities determined from time to time by the Government with reference to urgent and essential needs. Incidentally, bulk allocations of steel for priority purposes will be made by a steel priority committee, with the Secretary of the Department of Iron and Steel as its chairman. So far as re-rollers are concerned, they will be virtually free from all control as they are mostly engaged in the rolling of non-flat products which have been decontrolled. The price and distribution of billets used by re-rollers will, however, continue to be controlled, in order to enable them to continue in production and compete with the main producers. The sale prices of re-rolled products are to be announced and listed by the Steel Re-rolling Mills' Association itself.

The Government's decisions regarding controlled and decontrolled categories, announced in the Lok Sabha on the 2nd instant by Mr. C. Subramaniam, Union Minister for Steel, Mines and Heavy Engineering, have been taken mainly in the light of the recommendations made by the Raj Committee on Steel Control last year. The Minister has claimed, *inter alia*, the following merits for the Government's measures:

(1) Recognition of the right of all to trade in steel would lead to the infusion of fresh blood into the iron and steel trade which has hitherto been a closed shop, thereby ensuring healthy competition and better service to the consumer.

(2) Abolition of the three-column price structure for categories now decontrolled has the advantage that market conditions will henceforward exercise a healthy influence on the relative prices of the categories and also determine these prices.

(3) The trader would have the satisfaction and advantage that distribution policies would hereafter be determined by men from the industry who know the market and its changing demand-supply conditions better.

(4) The formation of the Joint Plant Committee is calculated to ensure that production problems would be *largely* solved by the producers themselves. The producers can hereafter lay down suitable policies on their own and produce such sections and categories as are wanted by the market.

(5) As the producers can fix their own prices for decontrolled categories, future prices may be expected to reflect truly both demand conditions and production costs.

(6) From the consumer's point of view, the advantage of the new system is that from now on he can directly approach any re-roller in his area and obtain his requirements of decontrolled categories with the minimum of red-tape. Any consumer can now indent for his requirements of decontrolled categories directly on the main producers through the Joint Plant Committee.

The initial reactions of traders, re-rollers and main producers in the private sector may also be noted here. The trade has generally welcomed decontrol as a step in the right direction. The Steel Re-rolling Mills' Association of India, too, has warmly welcomed decontrol. It is also happy over the continuation of statutory price control on billets supplied to re-rollers. But, according to the Association, the advantages of this policy will be nullified if re-rollers are denied a voice in the Joint Plant Committee's announcement and listing of prices of those finished products which are common to both main producers and re-rollers. While the Association has described the uniform price of steel at all railheads as a commendable thing, it has regretted, at the same time, that the freight equalisation principle has not been applied to the re-rolling industry. The grievance of re-rolling industry, in this connection, is that the effect of freight equalisation for the exclusive benefit of main producers would be that the same products will fetch for them a higher conversion charge than in the case of re-rollers.

The reactions of the two private-sector producers (T.I.S.Co. and I.I.S.Co.) are understood to reflect some misgivings. These pertain to (1) the utility of the Joint Plant Committee which will be dominated by the public-sector producers, (2) the present partial decontrol, (3) the onus of upward revision in the prices of decontrolled categories now falling on the Joint Plant Committee, and (4) the presently sanctioned increase in the prices of controlled categories. The private steel producers are reported to be unhappy because their pleas for total decontrol, for an independent iron and steel board in the place of a joint plant committee, for a prior official increase in the prices of decontrolled categories and for an average increase of Rs. 58 per tonne in the prices of controlled categories have not been conceded. But, then, they seem to have no option but to work the new scheme in co-operation with the public-sector producers and give it a fair trial. As there are marked differences between the approach of the Hindustan Steel Limited and that of the two private-sector producers to the question of costing and pricing, it remains to be seen whether they will pull together in the Joint Plant Committee and make this partial decontrol and self-regulation a success. Whether the consumer will benefit or not will be known only after some months.

FOOD SITUATION GRIM

The situation pertaining to food production, marketed supply and prices seems to be going from bad to worse. While the country's population has increased by 30 million over the last three years, gross foodgrains production has declined from 81.0 million tonnes in 1961-62 to 78.8 million tonnes in 1962-63 and further to an estimated 77.5 million tonnes in 1963-64. As 12.5 per cent of gross production is provided for seed requirements, wastage and non-food purposes, net output figures for these three years are 70.9 million tonnes, 68.9 million tonnes and 67.8 million tonnes, respectively. With production having thus declined, it is no wonder that marketed supplies have correspondingly decreased. In the context of the increase in the aggregate number of mouths to be fed and the increase in purchasing power resulting from rising industrial production and public expenditure, this situation has led to an excessive pressure on relatively scarce supplies, thereby pushing up foodgrain prices generally by 15 to 20 per cent in the last one year. Imports, largely of P.L. 480 foodgrains, which have been ranging between 3.5 million tonnes and 4.5 million tonnes per annum in recent years, have made no appreciable difference to the supply-price equation, for aggregate net availability (net output *plus* imports) has declined from about 74.8 million tonnes in 1961-62 to an estimated 73.3 million tonnes in 1963-64. All this adds up to a pretty grim situation on the food front.

It is not as if this situation has overtaken the country suddenly and unexpectedly. If anything, it has been in the making for the last two years. But it is only now that the powers-that-be have woken up to the gravity of the situation. What they are seeking to do by way of accelerated agricultural development programmes have relevance only to the next two crop years. Even if the proposed additional allocations for agriculture lead to the expected result by way of larger foodgrains production, the additional mouths will be there to swallow up the increase in output, with the result that the country's marginal food shortage, which has necessitated imports year after year since 1951, will continue. There will thus be need for continued imports in the next several years, as the Central Agricultural Production Board, which met at New Delhi last week, has itself recognised. More immediately, it is a question of dealing with the agriculturists, who seem to be in no great hurry to market their recently-harvested produce, and with the foodgrain dealers who seem to be contributing their share to the unusual increase in post-harvest prices. As the Government has clearly ruled out State trading in foodgrains involving large-scale compulsory procurement and displacement of normal trade channels, it has necessarily to adopt, instead, a carrot-and-stick approach towards the producer and the dealer alike.

It is in this context that the Government's new strategy, outlined by Mr. Swaran Singh, Union Minister for Food and Agriculture, in the Lok Sabha on the 2nd inst., would seem to be broadly appropriate. The steps to be taken include enforcement of a new stringent licensing order for wholesalers, fixation of maximum wholesale prices at which the State Governments can requisition stocks, prescription of margins for wholesalers and increased procurement prices in keeping with the actual post-harvest prices. These steps are to be taken in pursuance of the decisions of the recent conference of State Food Ministers and the Central Agricultural Production Board. The State Food Ministers' Conference, it will be recalled, proposed fixation of maximum prices for the major foodgrains and more stringent rules to ensure the trade's compliance. The Board, too, while recognising the need for fair minimum prices for the producer, felt that, in the context of rising prices, it was equally necessary to fix reasonable maximum prices for the benefit of the consumer. The Union Government's present decisions to regulate distribution and prices have thus been taken in consultation with the State Governments which are expected to fall in line and implement them. The present supply-price situation is so bad that a drastic remedy has become inevitable. It is up to the trade to play fair and co-operate with the authorities so as to ensure adequate supplies at the prescribed maximum prices.

FIVE MORE STATE BUDGETS

Budget estimates of five more State Governments for the financial year 1964-65 have been presented since we went to Press last week; the States concerned are Mysore, Madras, Gujarat, Madhya Pradesh and Kerala. The estimates reveal revenue surpluses in the case of Mysore (+Rs. 7 lakhs), Gujarat (+Rs. 5.77 crores) and Kerala (+3.58 crores) and deficits in respect of Madras (—Rs. 3.34 crores) and Madhya Pradesh (—Rs. 68 lakhs). The budgets with revenue surplus do not contain any fresh tax measures, while those with deficits have some. But all the five States provide for relief to Government employees in the form of higher dearness allowance, more liberal pensions, etc., as has been done by the other States. The Gujarat budget actually includes two welcome proposals, one envisaging a reduction in the rate of passenger tax in municipal areas from

five to one per cent and the other pertaining to the grant of one-third of the tax on lands and buildings in urban areas collected in a municipal area to the municipalities concerned.

The table below shows at a glance the budgetary position of the five States in 1964-65 as compared with that for the current (1963-64) year:

(In crores of rupees)

	1964-65 (Budget)	1963-64 (Revised)	1963-64 (Budget)
Mysore :			
Revenue	111.06	103.86	99.12
Expenditure	110.99	101.65	98.02
Revenue surplus (+) or deficit (—) ..	+0.07	+2.21	+1.10
Overall budgetary position	—3.75	—2.73	—7.01
Plan outlay	N.A.	N.A.	51.02
Madras :			
Revenue	137.48	130.98	124.45
Expenditure	140.82	134.00	127.10
Revenue surplus (+) or deficit (—) ..	—3.34*	—3.02	—2.74
Overall budgetary position	—16.24*	N.A.	—0.30
Plan outlay	70.53	68.00	59.80
Gujarat :			
Revenue	94.15	89.77	83.47
Expenditure	88.38	83.94	81.26
Revenue surplus (+) or deficit (—) ..	+5.77	+5.83	+2.21
Overall budgetary position	—3.01	N.A.	—10.06
Capital expenditure	29.44	20.33	20.53
Madhya Pradesh :			
Revenue	107.73	103.08	94.70
Expenditure	108.41	96.99	95.19
Revenue surplus (+) or deficit (—) ..	—0.68	+6.09	—0.49
Overall budgetary position	—8.15	N.A.	—1.00
Plan outlay	65.62	N.A.	50.05
Kerala :			
Revenue	79.58	75.16	71.67
Expenditure	76.00	70.00	70.87
Revenue surplus (+) or deficit (—) ..	+3.58	+5.16	+0.80
Overall budgetary position	—10.30	N.A.	—8.00
Plan outlay	50.01	N.A.	35.09

N.A.—Not available.
* Without the effect of budget proposals covering Rs. 1 crore

The revenue deficit of Rs. 3.34 crores in the Madras budget is proposed to be reduced to Rs. 2.34 crores by means of additional tax measures together yielding a crore of rupees. The rate of sales tax is to be raised from one to two per cent on cotton (at the point of last purchase), cotton yarn (at the point of first sale), cotton waste, cotton yarn waste, art silk yarn and staple fibre yarn. The increase in sales tax on cotton and cotton yarn, in particular, will fetch an additional revenue under the Central sales tax also, the incidence of which is borne by dealers in other States. The Finance Minister of Madhya Pradesh has converted the revenue deficit of Rs. 68 lakhs into a surplus of Rs. 77 lakhs through certain tax measures yielding a total additional revenue of Rs. 1.45 crore. The measures include an increase in the general rate of sales tax from five to six per cent, a tax on urban immovable property, withdrawal of sales tax exemptions from some items, and abolition of exemption from payment of entertainment duty on admission fee of 12 nP and below. Simultaneously with efforts to net in more revenue, the State Government, it is highly gratifying to note, has decided to make an all-out bid to effect a five per cent economy in non-Plan expenditure which is expected to yield Rs. 4 crores. If a similar bid were launched in other States, the ways and means position of Governments, over which the Union Finance Minister expressed much concern in his budget speech, would definitely improve to a considerable extent. With a clear warning implied in Mr. Krishnamachari's statement that the major portion of Central assistance to States would be related to capital expenditure on identifiable projects that are economically sound and generate the resources for repayment of their liabilities, it is to be hoped that the State Governments will keep down expenditure on non-Plan and relatively unimportant projects to the minimum.

The budgets of all the aforesaid five States exhibit buoyancy of general revenues. Thus, as compared with the revised estimates for the current (1963-64) year, the total revenue receipts next (1964-65) year are expected to be higher by Rs. 7.20 crores in Mysore, Rs. 6.50 crores in Madras, Rs. 4.68 crores in Madhya Pradesh, Rs. 4.42 crores in Kerala and Rs. 4.38 crores in Gujarat. Alongside rising revenues, expenditure of State Governments, too, is increasing, the actual increase anticipated being Rs. 11.42 crores in Madhya Pradesh, Rs. 9.34 crores in Mysore, Rs. 6.82 crores in Madras, Rs. 6.00 crores in Kerala and Rs. 4.44 crores in Gujarat. The persistent rise in expenditure is, as is only to be expected, accounted for by both Plan and non-Plan schemes, the share of development expenditure being quite sizable.

Thanks to the marked increase in capital expenditure, the five State budgets disclose heavy overall deficits: Madras Rs. 16.24 crores (without the effect of budget proposals covering Rs. 1 crore), Kerala Rs. 10.30 crores, Mysore Rs. 8.75 crores, Madhya Pradesh Rs. 8.15 crores and Gujarat Rs. 3.91 crores. It is not clear from the Press reports as to how far and to what extent the Finance Ministers of the States propose to cover the overall deficits. The Madras and Kerala Governments, however, have taken credit for open market loans amounting to Rs. 13 crores and Rs. 4 crores, respectively.

The State Governments, as already stated, are facing ways and means difficulties of a disturbing nature, following heavy capital outlays and repayment of loans. In the case of Mysore, for instance, the shortfall in resources for financing the third Plan programme of Rs. 250 crores is expected to be of the order of Rs. 60 crores. The State's Finance Minister has stated that, for the next two years, the Government will have to seek special loan assistance from the Centre. The fulfilment of a Plan significantly larger than originally budgeted for has naturally caused considerable strain on the finances of Madras. But the State's Chief Minister, who also holds the finance portfolio, has assured the Legislature that the difficulties are being overcome with the co-operation of the Planning Commission and the Government of India. The Chief Minister of Kerala has said that, in view of the difficulty experienced in balancing the capital budget, alternative sources are being explored to cover the deficit. If this is not possible, he added, the Government would have to restrict expenditure to the resources available. The maxim "cut the coat according to the cloth" is a sound principle which ought to be adhered to as far as possible in framing the budgets of any Government, for, otherwise, the coat itself may become useless, exposing the wearer for whom it was meant to the chill winds of economic chaos.

NATIONAL INCOME

The latest available estimates of India's national income in 1962-63 are contained in a White Paper, just released by the Central Statistical Organisation. These estimates, like the "quick estimates" for the same year (released in November last), are only preliminary, for they are based on partial data. But they reflect some upward revision, as compared with the "quick estimates." Likewise the revised estimates for 1962-63 may somewhat differ from the latest preliminary estimates for that year, even as the revised estimates for 1961-62, included in the C.S.O.'s paper, are higher than the year's earlier preliminary estimates. Such differences between preliminary and revised estimates or between preliminary and "quick estimates" may sometimes be quite substantial in absolute terms. For instance, according to preliminary estimates, the national income at constant (that is, 1948-49) prices for 1961-62 was only Rs. 13,020 crores. But, according to the revised estimates now available for that year, the national income was higher at Rs. 13,060 crores. Again, according to the "quick estimates" for 1962-63, the national income in that year was Rs. 13,350 crores, whereas, according to the preliminary estimates just available, it stands higher at Rs. 13,370 crores. While year-to-year comparisons of aggregate national income suffer from such limitations, the variations do not seem to be so significant as to vitiate the comparison of *per capita* incomes in the relevant years. It may, therefore, be taken that the *per capita* real income (that is, at 1948-49 prices) of Rs. 294.3 estimated for 1961-62 and that of Rs. 294.7 now estimated for 1962-63 are as good as final figures.

Year	National income in crores of Rs.		*Per capita* income in Rs.	
	At current prices	At 1948-49 prices	At current prices	At 1948-49 prices
1950-51	9,530	8,850	266.5	247.5
1955-56	9,980	10,480	255.0	267.8
1960-61	14,140	12,730	325.7	293.2
1961-62	14,800	13,060	333.6	294.3
1962-63 (Preliminary)	15,400	13,370	339.4	294.7

The most disquieting trend, in this connection, is that *per capita* real income has shown virtually no improvement since 1960-61 when it was at the level of Rs. 293.2. As far as 1963-64 is concerned, the Government's *Economic Survey* has, of course, indicated that the rise

LONDON LETTER

CONTROLLING THE WAVES

BANK RATE RAISED

From Our Special Correspondent

LONDON, 29*th February*

THERE is an old Anglo-Saxon legend of the king, Canute, who so excelled in statecraft that his flattering court attempted to assure him that he could even control the tides of the sea. He had no such vanity himself and rebuked his courtiers by permitting them to make the experiment, which, of course, failed. But, in the course of years, the figure of Canute came to be replaced by the female Britannia whom the national anthem of the seventeenth century claimed did rule the waves. In the last century, the waves of the sea have gradually been replaced in national importance by the tides of business confidence and the waves of crisis. Neither Britannia nor the Governor of the Bank of England had any pretentions to rule these, though the latter went through various traditional motions which had no more immediate effect than that of King Canute waving his hand at the tides. Both King and Governor got their feet wet and though in due time both the tides which they sought respectively to control did retire, only the Governor fancied that his motions—raising the Bank rate—were responsible.

Now in 1964 we are about to witness a calculated and determined attempt by Britannia, her ample robes concealing the familiar form of Mr. Maudling, the Chancellor of the Exchequer, to control the waves of crisis. For Mr. Maudling did this week have his television "confrontation" with his opposite shadow and, in spite of taunts about stop-go policies (he agreed that they were intolerable), refused to be drawn on what he would do, but declared that he would do whateyer was necessary and when the time came he would tell the House of Commons and not the B.B.C. There was only one answer to that—surely the time had come! And, indeed, two days later (and in the opinion of the City one whole week too late) *the familiar figure of the Governor of the* Bank reappeared on the scene to wave up the Bank rate by a whole one per cent (it is now 5 per cent). Plenty of simple folk saw this as the traditional ineffective act of waving back the incoming tide and they may certainly be forgiven for so thinking. But it is much more than this, and the first difference observable was that no announcement was made by the Bank to explain its action. The Bank rate was raised and that was that. It was in fact the Chancellor's first move in his attempt to ensure that Britain's rising prosperity is not again swallowed up in crisis. He seems to have accepted the "Neddy" gospel that a 4 per cent growth rate is of vital importance and that the incipient imbalance in the country's payments must not threaten this long-term objective. *Thus, to control the balance of payments* by cutting back the growth rate and flattening out production would be to fail.

The Government believes that, if it can show that it has found the way to control the waves of crisis and can successfully maintain a steadily rising rate of growth with a low rate of unemployment, it can win back the confidence of the electorate. It, therefore, now becomes possible that the General Election will be postponed to October, in the hope that, by then, the absence of crisis and the maintenance of prosperity will have proved the Government's point. In short, the Government will stand or fall by the Chancellor's success in controlling the economic waves, the task to which he has openly and very publicly set his hand.

His first problem is a deficiency in the balance of payments. The function of Bank Rate in this is secondary but important. It is to prevent any pressure on sterling from such deficiency being intensified by a withdrawal of foreign funds. The City must pull in funds and not lose them. The higher Bank Rate will also have a slight—and it must be very slight—effect in cutting the top off demand. Particularly, by making stock holding more expensive, it should discourage that restocking of materials which has been largely responsible for swollen imports. Thus, it will also tend to correct the deficiency in the trade balance, but it is quite unlikely, in this expanding phase of production, to eliminate it. What else can the Chancellor do? Let a gold drain take place and worry about it afterwards or make arrangements with the International Monetary Fund to strengthen the reserves? This latter course will be far more effective, as it will show preparedness for a payments deficiency—temporary—and a declaration of how it is to be met.

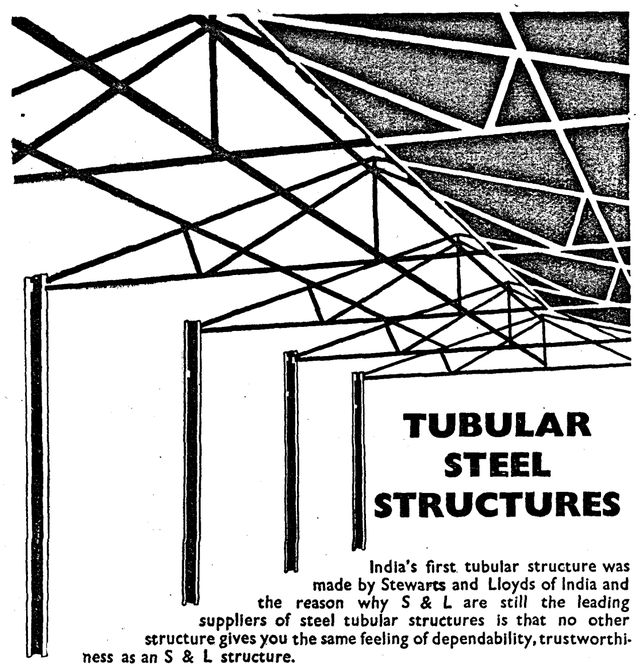
But what the rise in Bank Rate must not do is to interfere with production, apart from stockbuilding. Thus, demand must not be cut back—neither consumer demand nor that for investment goods. Yet these demands will be endangered if prices rise (obvious inflation) or wages rise—leading to price rises. These two dangers require direct action: for the first the most obvious is competition. Already the Government has attacked (in spite of unpopularity from their own supporters) resale price maintenance—the right of manufacturers to fix the retail selling price of their goods—but they have postponed its effect for four months, so that it will not operate on the economy before the Election. They are also due to attack monopolies more seriously—but again this will take time. Yet this enlargement of the fields of competition would be of immense help to the Chancellor at present.

For the second danger there is the much talked of incomes policy. Wages will not be held back unless other incomes can similarly be controlled and there Mr. Maudling is handicapped by the suspicions of trade unions. This present Government may, therefore, fail in its efforts to control the waves not through lack of a policy but through lack of sufficient support from its own ranks to carry through the necessary measures. Then it will fall to its successor to bring the matter to accomplishment. However, the Chancellor is set on his course to control the economic waves and he has some months of grace in which to succeed.

SURVEY

(Concluded from previous page)

in aggregate national income in real terms will be higher than in the first two years of the current Plan. That may be so, for the non-agricultural sectors are likely to contribute, as in 1962-63, relatively more to the increase in national income than agriculture. It may be noted, incidentally, that, according to some latest estimates, grain production in 1963-64 may not reach even the 1962-63 output level of 77.5 million tonnes. If these estimates were to turn out to be true, the aggregate contribution of the agricultural sector to national income in 1963-64 would either decrease, as compared with 1962-63, or, at best, remain at the same level as *in that year. Any increase in the aggregate* contribution of all other sectors, taken together, may not make any appreciable difference to *per capita* income in view of the population in*crease which, in recent years, has been at the* rate of 2.3 per cent per annum or, possibly more, as compared with about 2.0 per cent in the fifties. As the *Economic Survey* itself says, "even a moderate rate of increase in *per capita* incomes can be achieved only if full use is made of the potential for raising agricultural and industrial outputs. In itself, the steady decline in death rates which has been responsible for the higher rate of population growth is a matter for great satisfaction as it signifies an improvement in national well-being which is not fully reflected in—and is indeed obscured by—statistics of *per capita* incomes. Even so, with the rate of population increase approaching what is a very high level by any standards, the family planning programme has assumed the greatest of urgency and importance." The *Economic Survey* has also added significantly that, if agriculture fails to make its proper contribution, it would be difficult to secure the desired increase in national income, in savings or in exports and to hold down costs and prices so as to let development proceed smoothly. In other words, the agricultural development programme and the family planning programme would have to be treated as equally crucial to the national effort for improving real incomes, living standards and general well-being.



TUBULAR STEEL STRUCTURES

India's first tubular structure was made by Stewarts and Lloyds of India and the reason why S & L are still the leading suppliers of steel tubular structures is that no other structure gives you the same feeling of dependability, trustworthiness as an S & L structure.

All S & L roofing structures are delivered complete in every respect with trusses, purlins, columns, hook bolts for roofing and all necessary studs, nuts and washers.

Write today for your requirement of these sturdy and dependable tubular steel structures.

THE ELUSIVE EQUILIBRIUM

By Questor

THE European Commission has for some time past been urging the Six Governments to adopt measures to combat inflation. These range from credit restrictions and the curtailment of public expenditure to voluntary restraint in wage and price increases. Its reason for this prescription lies in the sharp price increases which have been taking place for the past couple of years and the consequent worsening of the Community's balance of payments. Its rationalisation of it is that reserves of unemployed labour, even in Italy, are running out. In Britain, too, where economic expansion is both slower and more recent, it is the rapid drop in unemployment as much as the expected worsening of the trade balance which is causing people to expect official restraint on the growth of demand.

I am not concerned to argue whether or not those who demand restraint are justified: I am only concerned to point out that demands for restraint are spreading and several Governments are soon likely to run into political trouble as a result of their attempts to counter inflation. The centre-left Government in Italy finds itself in a particularly difficult position, because of the antagonism of the business community—that, perhaps, is why the U.S. is taking such pains to bolster up its foreign exchange position. But France, the Netherlands and Britain are all likely before long to run into trouble.

There are two aspects of this situation which I find particularly interesting. The first is the situation inside the European Community. Germany has so far succeeded in cancelling out a large part of the increase in wages with increased productivity, presumably because she is more industrialised than her partners. Her prices at home have risen relatively slowly and her export prices still less: her balance of trade has remained strong, mainly at the expense of other Community members. Her chief anxiety now is about the possibility of restraining inflation in a free-enterprise economy when the partners against whom she has almost no trade barriers are inflating freely.

For the Community as a whole, however, as the Commission realises, the problem is one of restoring balance. If Germany were willing to inflate up to the common level, all would be well: but, quite reasonably, she is reluctant to do so. The others, equally reasonably, are reluctant to restore the balance by depressing growth and holding back prices with the help of sizable unemployment. Currency revaluation is not as readily available as it used to be. Quite apart from the angry haggling between partners likely to precede an agreed change and the disruptive movements of capital and confidence bound to follow a unilateral change, the recent decision to institute a common level of food prices throughout the Community means that revaluation would be largely ineffective. If Germany continues to pile up reserves at the expense of the rest, the only acceptable means of restoring the balance is by encouraging an outflow of German capital.

But this is easier said than done. First, the institutional factors—inadequate accounts, reliance on bank finance, differences of tax law, and so on—which have kept European capital markets small and hindered the international flow of capital will not be removed quickly. Second, the Germans fear inflation and consequently the level of German interest rates is likely to remain relatively high. Third, the German budgetary system is not suited for use as an economic weapon and the obvious methods at the disposal of the Government—export credits, for example—are not really appropriate for use inside the Community. Fourth, it is quite likely that any German attempt to encourage the export of long-term capital will soon be countered by another heavy inflow of speculative funds. In short, the balance of payments inside the European Community is not going to be restored neatly or painlessly. The rapid political progress which has been made while all the members were growing rapidly may soon be put to the test.

The other aspect of this situation is the balance between the U.S. and the rest of the industrialised West. Whatever anxiety the recent troubles of the dollar may have caused the U.S. itself, it has been obvious all along that they were superficial—they could have been cured overnight by drastic cuts in foreign aid, or restrictions on foreign investment, or an increase in the price of gold. The U.S. Administration chose to overcome them more gradually; the result, I think, has shown that the Administration was right and the European bankers wrong. For, although the U.S. deficit is still large, it is no longer the problem it was even a year ago. And the striking fact is that U.S. prices have remained fairly stable during the recent upswing in output: costs per unit of output have been falling for some years while those of Europe have been rising rapidly.

Sooner or later—and probably, I think, sooner, especially if the sense of European unity drives Germany to dabble her toes in inflation—the world will again be suffering from a dollar shortage. This will be of considerable assistance to U.S. diplomacy and of considerable comfort to everyone who believes in the late President Kennedy's grand design for an Atlantic Community. But it also implies a shortage of liquidity and an obligation on the U.S. to accumulate foreign currencies as freely as Mr. Roosa has been promising to do while the dollar was still in trouble.

It would be as well for all of us, I think, while there is still time, to agree on an international unit of account—a reserve currency made up of different national currencies in stated proportions. I did not like the possibility that General de Gaulle might seek to embarrass the U.S. by converting his dollars into gold; I would equally dislike the possibility of the U.S. using an accumulation of francs to embarrass the General.

"The good old days when money went farther" are pretty much a legend, a comparison of German prices then and now indicates. Over a time span 1914-63, in which the average hourly industrial wage rose from DM 0.48 to 3.90—that is, about eightfold—prices for butter rose threefold (from DM 1.20 to 3.75 per pound), for bread by three to five times (from DM 0.20-0.38 per kilogram then to DM 1.02 now), for beef not more than fourfold (from DM 0.68-1.01 per pound then to DM 2.73 in 1963).

INDUSTRIAL DEVELOPMENT BANK

ADDITIONAL RESPONSIBILITIES FOR OVER-BURDENED RESERVE BANK OF INDIA

THE reasons that prompted the Finance Minister to change his original idea of enlarging the scope and functions of the Industrial Finance Corporation of India and converting it into a development bank for actively promoting development of industry, and to set up, instead, a new Industrial Development Bank of India with far-reaching functions and comprehensive scope will continue to be guessed and debated, until he gives an explanation as he probably may when the relevant Bill comes up for discussion in Parliament. But the need for such a central agency to *co-ordinate* the functions and working of the network of special financial institutions providing term finance, other facilities and assistance, and to provide *leadership* to all these institutions for evolving an integrated picture of the institutional framework for industrial finance, was never in doubt.

These institutions, whether Government-owned or privately owned, statutory corporations or limited companies, were set up, at different times and for different purposes at the initiative, and with varying degrees of financial assistance, of the Governments. While many of them have given a good account of themselves and have set new standards of performance, it is now clear, in retrospect, that, at least in some cases, rather ambitious hopes were entertained about their role. Moreover, from an overall review of their working, operations and potentialities during the last decade or so, it has been apparent that overlapping functions is one of their major handicaps. The Industrial Finance Corporation of India, Industrial Credit and Investment Corporation of India and the National Industrial Development Corporation (which recently ceased to provide any fresh credits), let alone the Refinance Corporation for Industry, have parallel fields of work, in spite of each being unique in its own way: the State Financial Corporations, the National and State Small Industries Corporations and the State Industrial Development Corporations (not to speak of direct State-aid to industries and bank advances) are all operating and competing with each other for assisting small and medium industries which offer a limited scope for their operations. The necessity to establish proper relationships among them all and to provide the necessary conditions for their effective functioning, so that none overlaps another and each has its own specific field to serve, can no longer be avoided.

Pattern of the New Bank

The new Development Bank, however, was never thought of merely as a co-ordinating agency: nor are the role and functions of development bank identical with those of a lending institution or a finance house. Essentially and fundamentally, a development bank initiates development projects and helps in raising the *quality* of industrialisation.

The pattern of the proposed Industrial Development Bank of India is as follows:

On paper, it has all the powers and resources that it may need or wish to have, but the real tests of its usefulness are two. The first element in our assessment of its value is the extent to which it is likely to achieve the aims and purposes for which it is being set up; secondly, in our appraisal of its role, it is difficult to resist the question whether one of the existing agencies, the Industrial Finance Corporation of India, for example, could not have been a better, quicker and surer means of achieving them.

The business of the proposed Industrial Development Bank of India will be fivefold:

(a) To refinance:

(i) Long-term loans repayable between 3 and 25 years, given by specified and notified financial institutions to industrial concerns;

(ii) medium-term loans repayable between 3 and 10 years given by scheduled or State co-operative banks to industrial concerns;

(iii) export loans repayable between 6 months and 10 years given by banks or financial institutions.

(b) To grant:

Direct loans or subscribe to the debentures of any industrial concern, with the proviso (on the lines of the latest amendments to the Companies Act) that such loans, advances or debentures could, at the option of the Development Bank, be converted into equity stocks and shares of that concern, if so desired by the Bank.

(c) To subscribe or purchase:

The issue of stocks, shares or bonds of any industrial concern or financial institution or to underwrite stocks, shares, bonds, debentures, etc., of any of them.

(d) To guarantee:

(i) Deferred payment credits for exports;

(ii) loans floated by industrial concerns in the capital market or raised from banks or financial institutions;

(iii) underwriting obligations of banks or finance institutions. And

(e) To undertake:

Marketing and investment research and surveys, or carry out techno-economic studies; to plan, promote and develop industries to fill up gaps in the industrial structure in India, and to provide technical and administrative assistance for promotion, management or expansion of any industrial concerns, or new enterprises, particularly key industries.

The Development Bank will cater to the requirements of *all* industrial enterprises. These are defined widely enough to cover processing, manufacturing or service industries including hotel, transport or shipping, both in the public and private sectors. It will operate on business principles with due regard to public interest.

A unique feature is that, unlike the existing financial institutions, no restrictive provisions regarding the nature and type of security that may be accepted by the Bank have been written into its statute. The Bank will thus be able to exercise considerable degree of discretion and freedom in these matters; in particular, it will be able to accept, discount or rediscount *bona fide* commercial bills or promissory notes directly from the industrial concerns.

Resources

This bold and discretionary freedom has further been reinforced by liberal provision of resources for the Bank: here also, the absence of any restrictive provision distinguishes it from the several statutory restrictions which impose theoretical or practical limits on the ability of the existing financial institutions. The authorised capital of the Bank is Rs. 50 crores with powers given to the Reserve Bank to raise it to Rs. 100 crores subject to the prior approval of the Central Government. The issued capital will initially be Rs. 10 crores, but again the Reserve Bank can increase it from time to time, upto such amount as it thinks fit. Immediately on its establishment, the Bank will receive an *interest-free* loan of the Rs. 10 crores from the Central Government, repayable in 15 equal annual instalments after a period of 15 years from the date of the loan: these terms could further be relaxed at the request of the Bank, if necessary, and the Central Government may, apart from the initial loan, grant such further loans as may be necessary from time to time on the usual terms and conditions.

The Bank will be able to supplement the above initial resources by borrowing from the market on its own bonds or debentures: and it is left to the Bank's discretion whether such bonds and debentures should be issued with or without the guarantee of the Central Government. It is further empowered to obtain from the Reserve Bank:

(i) Normal banking accommodation up to 90 days against trustee securities;

(ii) medium-term accommodation up to five years against the security of *bona fide* bills of exchange or promissory notes bearing two good signatures;

(iii) long-term accommodation out of the National Industrial Credit (Long-term Operations) Fund which is to be set up on the lines of the National Agricultural Credit (Long-term Operations) Fund, in terms of the recommendations of the Working Group on State Financial Corporations. The Fund will be created out of allocations from the profits of the Reserve Bank and will give assistance not only to the Bank but also to other financial institutions.

In addition, the Development Bank is authorised to borrow money from any other source with the approval of the Government: it can also borrow, with similar approval, foreign currency from any bank or financial institution in any foreign country or in any other manner. *Deposits may be accepted from the public for a* period not less than 12 months on such terms and conditions as may be approved by the Reserve Bank. *Above all, gifts, donations, grants or benefactions would be gratefully accepted by the Bank from any other source.* (Italics ours.)

Development Assistance Fund

Apart from the ordinary resources obtained in the above manner and credited to the General Fund, which may be utilised by the Bank at its own discretion for any of the purposes of the Bank, it shall also establish a special Development Assistance Fund, through which the Bank shall assist those industrial concerns which cannot secure loans from other banks or financial institutions in the ordinary course of their business, because the investment involved may be unusually heavy or the rate of return may be unduly low. Such assistance from the special fund shall require the prior approval of the Government; and the primary consideration with the Government in granting the approval will be the priority in the interest of India's industrial development.

Ownership and Management

The Development Bank will be a wholly-owned subsidiary of the Reserve Bank of India; the general superintendence, direction and management of its affairs and business shall vest in its Board of Directors. On the analogy of the Industrial Development Bank Act of Canada, the Board of Directors of the Industrial Development Bank of India will be the *same* as the Board of Directors of the Reserve Bank of India: and the Governor and a Deputy Governor of the latter will be the Chairman and the Vice-Chairman, respectively, of the former. The net profits of the Bank, after the usual and necessary provisions and such other provisions as are normally made by banks, shall be transferred to the Reserve Bank.

Since one of the primary functions of this new Development Bank will be to provide refinance, the Refinance Corporation for Industry now becomes redundant: in the initial stages the Bank shall maintain close co-ordination with the Corporation, but provision is specifically being made in the statute for enabling the new bank to acquire the entire undertaking of the Refinance Corporation for Industry on such date as may be fixed by the Central Government: the acquisition will be made by taking up, against cash payment, all the shares of the Corporation at their face value, so that the Corporation will assume the status of a wholly-owned subsidiary of the Bank. The Industrial Finance Corporation for India will be reconstituted by transferring, at par, the shares of the Corporation held by the Reserve Bank and Central Government to the Development Bank; the Industrial Finance Corporation of India Act will be amended to enable the Development Bank to acquire further shares in the Corporation so as to increase its total holding up to 50 per cent of the paid-up capital of the Corporation. Although the Corporation will continue as an independent institution, several important changes in its structure, organisation, management and working are being made: more than that, provision is being made for the transfer of the entire I.F.C. to the Bank, at some unspecified future date, if such a course is considered necessary by the Bank.

An Overworked Manager

Such then is the shape and pattern of the Industrial Development Bank of India, according to a Bill introduced in Parliament on 27th February, 1964. With two subsidiaries of its own, it will itself be a wholly-owned subsidiary of the Reserve Bank of India, with an *identical* Board of Directors. It was only recently that the Reserve Bank was asked by the Government to enter new fields and to take over additional responsibilities. These relate to the Unit Trust of India and innumerable non-banking and financial institutions, apart from its being a shareholder of a number of other institutional agencies. Even without them, the Reserve Bank was already weighed down by the growing headaches and responsibilities of living up to its duties for strengthening and developing the commercial and co-operative banking structure. One's doubts on its ability to prove equal to these new tasks are based not merely on the difficulties to find trained and talented staff, nor on the cheer effort involved in handling these voluminous non-banking and promotional tasks, which are so different from banking proper: they are trying problems no doubt, and if too much duties are thrust upon the Reserve Bank, it might affect the quality of its supervision upon banking companies and its leadership of the money market, which it has so patiently built up over the last fifteen years. But more than that, the new task of managing and operating an Industrial Development Bank involves evolving new techniques and cultivating different attitudes: the difference between short-term and long-term lending is not one of mere term only. The Board of Directors of the Reserve Bank of India, though competent, skilled and efficient for its normal banking functions, may not be suitable for the tasks of development banking which require entirely different approach, talents, attitudes and enterprise. This remark is in no way a reflection upon the Reserve Bank's Board; only, it is a recognition of the fact that the same set of people cannot be expected to do full justice to the different tasks at the same time.

It is difficult to understand the reasons why the idea of setting up a new bank, rather than converting the I.F.C. into a development bank, has appealed to the Finance Minister. The Chairman of the I.F.C. was quick to respond to the new and challenging tasks. The I.F.C. has already played a significant role in the achievement of one of the major objectives of planning, namely, the establishment of a sound and progressive industrial economy: with the contributions it has made, experience it has gained, and the reserves it has built up, it is fit enough to assume larger and more positive responsibilities. Starting from modest beginnings, it has in fact been gradually assuming the role and functions of a development bank. Moreover, its evolution, in the face of difficulties inherent in a pioneering role, had already entitled it to the status of a senior partner and leader among all the range of institutions dealing with industrial credit. What could have been more natural and easy than converting it into a full-fledged Industrial Development Bank of India?

That the proposed new Industrial Development Bank will have to start on a clean slate is not its only defect: it will have the further disadvantage of owning, guiding and co-ordinating functions of agencies which are far more experienced than itself.

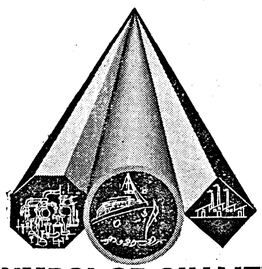
From another aspect, it is difficult to understand the compelling necessity for starting a new bank: the National Industrial Development Corporation, with its ambitious role, had already marked a new phase in the development of industrial banking in the country: one of its main purpose was the formulation of projects for establishing new industries or developing new lines of production: with its emphasis more on the development functions and the I.F.C. with its emphasis on financing functions, the two together would have provided an ideal base for a full-fledged development bank. In fact, more than one Estimates Committee of Parliament had advocated the merger of the two.

Quite apart from the claims of the existing agencies *vis-a-vis* the new Bank, there is another very valid criticism of the new Bank. The existence of a number of different agencies for the provision of industrial finance, each with its own unique role, provided alternatives to the borrowers. The creation of a single centralised agency, with the ultimate intention of acquiring all other agencies, means such a vast concentration of power that it could hardly be conducive to development of industrial banking in the country. Problems of co-ordination are no doubt important, but the demand for industrial finance is growing at a rapid rate, and the existence of several institutions, with incentive of competition, may be a positive aid to their smooth functioning rather than a hindrance. Whatever other advantages the new Industrial Development Bank may bring, it would certainly lack the incentive for adoption of progressive policies and efficient methods, if it were to operate as a vast monolithic corporation, under a management which has too many irons in the fire.

CANARA BANKING CORPORATION LTD.

The declared net profit of the Canara Banking Corporation Ltd. for the year ended 31st December 1963 is slightly higher at Rs. 5 lakhs as compared with Rs. 4.55 lakhs for the previous year. But the ordinary dividend, which is payable on the increased capital of Rs. 25 lakhs as a sequel to the call of Rs. 25 per share having been made during the year on the 25,000 50-rupee new shares issued in 1962, has been reduced from 15 per cent to 12 per cent per annum, subject to tax. With Rs. 15,000 brought in, the total for appropriation is Rs. 5.15 lakhs. Out of this, a sum of Rs. 1.45 lakh (Rs. 1 75 lakh a year before) has been carried to the statutory reserve fund. The dividend on the two types of preference shares absorbs some Rs. 83,000. The ordinary dividend takes away Rs. 2.78 lakhs, as against Rs. 1.97 lakh a year before, leaving some Rs. 9,000 as the surplus to be carried forward. The financial position of the Bank at the end of the year, with the previous year's comparative figures mentioned in brackets, was as follows:

Paid-up capital Rs. 37.43 lakhs (Rs. 30.26 lakhs), reserves Rs. 27 lakhs (Rs. 25.25 lakhs), deposits Rs. 13.27 crores (Rs. 11.61 crores), advances Rs. 6.58 crores (Rs. 5.87 crores) and the total working capital Rs. 16.14 crores (Rs. 14.42 crores).



SYMBOL OF QUALITY

Quality is the key to success and development of industries. Use of quality products reduces cost of production, maintenance and overhead charges. That is why, the demand for N.P.T. products are growing more and more every day. This increasing demand surely proves that N.P.T. stands as a symbol of quality.

RANGE OF PRODUCTS:
Bars—Rounds, Hexagonals, Squares & Flats, Sections, Pipes and Tubes of Brass & Copper including Arsenical Copper, Copper Bus Bars, Strips and various other non-ferrous Semis. N.P.T also roll pure Lead and Electrolytic Zinc Sheets.

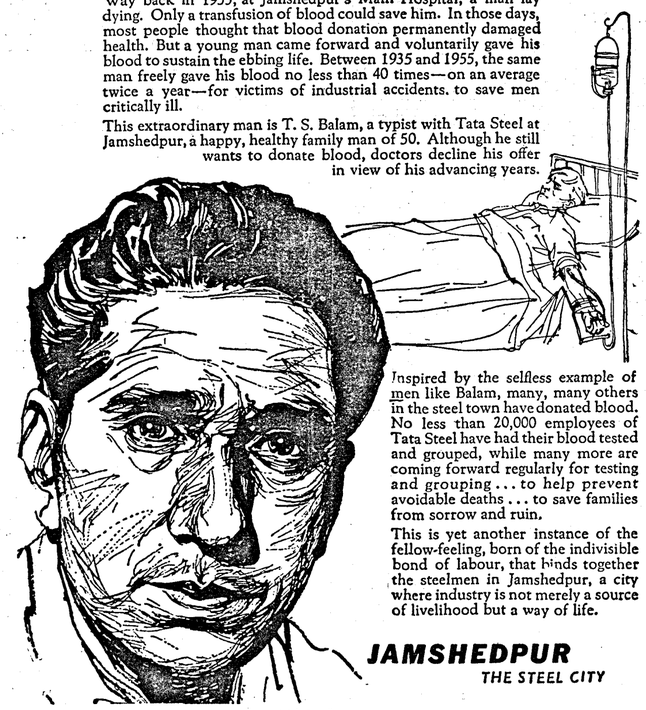
His blood has saved many lives

Way back in 1935, at Jamshedpur's Main Hospital, a man lay dying. Only a transfusion of blood could save him. In those days, most people thought that blood donation permanently damaged health. But a young man came forward and voluntarily gave his blood to sustain the ebbing life. Between 1935 and 1955, the same man freely gave his blood no less than 40 times—on an average twice a year—for victims of industrial accidents, to save men critically ill.

This extraordinary man is T. S. Balam, a typist with Tata Steel at Jamshedpur, a happy, healthy family man of 50. Although he still wants to donate blood, doctors decline his offer in view of his advancing years.



Inspired by the selfless example of men like Balam, many, many others in the steel town have donated blood. No less than 20,000 employees of Tata Steel have had their blood tested and grouped, while many more are coming forward regularly for testing and grouping ... to help prevent avoidable deaths ... to save families from sorrow and ruin.

This is yet another instance of the fellow-feeling, born of the indivisible bond of labour, that binds together the steelmen in Jamshedpur, a city where industry is not merely a source of livelihood but a way of life.

WORLD COTTON CONSUMPTION PICKS UP

LONG-TERM TREND, HOWEVER, NOT FAVOURABLE

AGAINST the background of the declining trend of world cotton consumption during the past three seasons, namely, 1960-61, 1961-62 and 1962-63, the outlook for consumption in the current season (1963-64), which is more than half way through now, having begun on 1st August 1963, shows promise of being more encouraging, allround. This is the conclusion reached by the International Cotton Advisory Committee, Washington, on an assessment of the world cotton consumption prospects in 1963-64 and presented in its latest (January 1964) monthly review. The downward phase of the textile cycle has apparently run its course and, in many countries, there are, according to the Committee, indications of an improvement in the level of cotton textile activity. This is especially true of the U.S., the world's largest consumer and producer of cotton, where cotton intake so far in the current season has been running at a seasonably adjusted rate of about 8.6 million bales (of 478 lbs. each), as compared with 8.4 million bales in the last season. Recent increases in cloth prices, which raised mill margins to the highest levels in three years, and a decline in the ratio of mill stocks of cotton broad-woven goods to unfilled orders, indicate a more favourable situation for increased consumption. There are, however, factors unfavourable to rise in consumption also. The uncertainty surrounding possible changes in the U.S. cotton policy is one such. It may have a dampening effect on cotton consumption in the short-run. Legislation to remove the present price inequity in the purchase of raw cotton by the U.S. mills has been passed by the House of Representatives and it now awaits Senate approval. Competition of man-made fibres is another factor likely to affect cotton consumption adversely. In fact, competition from man-made fibres appears to be the greatest obstacle to expansion of cotton consumption. Any reduction in the domestic prices of raw cotton should, therefore, contribute to a more favourable environment for cotton consumption in the U.S.

According to data published by the *Textile Organon*, production of various categories of man-made fibres during the first three-quarters of 1963 was even more than the relatively high production during the corresponding period of 1962. Thus, production of synthetic fibres was up by 9 per cent, rayon staple by 18 per cent, non-cellulosic staple by 31 per cent, and regular and intermediate tenacity rayon yarn by 2 per cent. Output of acetate filament yarn, however, declined by two per cent during the period.

The increase in man-made fibre production and capacity alike has not reached its peak, either. A recent survey of the producing capacity of the U.S. man-made fibre industry, published in the *Textile Organon*, shows a current total of 2,872 million lbs. annual rate which is expected to increase to 3,454 million pounds in late 1965, an increase of twenty per cent during the next two years.

The trend of *per capita* consumption is even more marked than is shown by the trend of aggregate consumption. Thus, *per capita mill consumption of cotton in 1963 is estimated* at 21.6 pounds, as compared with 25.6 pounds in 1962. Cotton's share of total fibre consumption is estimated to have declined from 59 per cent in 1962 to 57 per cent in 1963. *Per capita* consumption of man-made fibres in 1963, on the other hand, is estimated to have risen to a record high level of 14.2 lbs., which represents a nine per cent increase over 1962.

In W. Europe, the cyclical downswing in cotton textile production during the past two seasons has been aggravated by the continuous increase in production and consumption of man-made fibres. Competition from these fibres has been especially intense in the Federal Republic of Germany but it has also had a decided impact on the textile economics in the U.K., Italy, France, Belgium and the Netherlands. Nevertheless, the long-term trade in cotton consumption in Western Europe is still on the increase. The pronounced upward trend on the Continent has been offset somewhat by the declining trend in the U.K. in the post-Korean period. But the extensive reorganisation and modernisation that has taken place in the recent years, both in the U.K. and on the Continent, has a healthy influence on the textile industry. Taking W. Europe as a whole, prospective increases in cotton consumption in some countries, particularly in the U.K. and France, should more than offset the anticipated small declines in certain other countries, notably the Federal Republic of Germany and Italy and, on balance, in the Committee's opinion, there could be a modest increase for Western Europe as a whole.

In India, it is pointed out, the improved raw cotton supply situation is exerting a favourable influence on consumption. With larger stocks and a continuing high level of production, consumption was running at a record rate during the first three months of the current season and, for the full season, consumption is expected to reach a new peak well in excess of five million bales (of 478 lbs. each). The expansion of cotton textile production in Pakistan has tended to flatten out in recent years and cotton consumption during the present season is expected to stabilise at about the 1962-63 level. The slower rate of growth is apparently associated with difficulties currently being experienced in developing an export market for cotton textiles. The emphasis now seems to have switched over to expanding the world markets for raw cotton.

In Japan, cotton textile production is recovering from the recession of the last two years and consumption during the early months of the season was about 5 per cent above the same period last season. The indicated improvement in the economy is expected to have a favourable effect on domestic demand but, although exports of cotton textiles have shown some improvement recently, Japan continues to face strong competition from other textile exporters, particularly in south East Asia. Cotton is also meeting intense competition from the man-made fibres in that country (the world's second largest producer of these fibres), particularly the non-cellulosics which have continued to expand. Production of non-cellulosic fibres is currently about four times the 1958 rate and is, perhaps, the only sector of the textile industry to expand production during the recent recession.

In the aggregate, the rate of increase in cotton textile production outside the more traditional manufacturing countries which, in earlier years, was important in sustaining the increase in world consumption, has slowed down perceptibly, and, in fact, cotton consumption declined noticeably last season in South America.

All available information, according to the Committee, indicates that cotton consumption is again expanding in the U.S.S.R. and possibly also in Eastern Europe. In the U.S.S.R., the emphasis placed on the production of consumer goods resulted in an increase of over a million bales in the cotton consumption rate between 1955-56 and 1960-61. This high rate was maintained during the past two seasons. The increase in consumption was not matched by an equal increase in raw cotton production and this is perhaps partly responsible for current efforts to expand the production of man-made fibres in that country. If the prospects for a bigger crop were to materialise in Communist China, it would mean a big rise in cotton consumption there. Meanwhile, it is permitting an unusually large volume of cotton imports during the current season, presumably as a safeguard against unforeseen adverse developments in the crop situation.

Considering these global trends, the Committee anticipates that world cotton consumption will probably increase significantly during the current season, thus reversing the declining trend of the past three seasons. On the basis of the present estimates, world consumption, according to the Committee, could increase by more than a million bales. World consumption last season aggregated 45.93 million bales, as compared with 46.69 million bales in 1961-62 and 47.20 million bales in 1960-61. It is, however, unlikely, the Committee maintains, that consumption will increase sufficiently to close the gap between production and consumption and there will almost certainly be a further increment to the already large carryover of raw cotton by the end of the current season. Looking to the longer-term prospects, the Committee concludes that the greatest deterrent to an expansion in world consumption of cotton would be intense competition from man-made fibres. Expenditure on cotton promotion has been small as compared with man-made fibres. However, an increased consciousness of the need for expanded work in this area has led to the organisation of a conference on cotton promotion to be held in Bonn, W. Germany in May next, prior to the plenary meeting of the I.C.A.C. scheduled to be held at the same place. Increased consumer incomes that are resulting from the emphasis on economic development in many countries, the Committee hopes, will have a favourable influence on cotton consumption.

The following is a Statement of Ownership and other particulars about "Commerce," Bombay, as required under Rule 8 of the Registration of Newspapers (Central) Rules 1956.

FORM IV

1.	Place of Publication	'Brady House," Veer Nariman Road, Fort, Bombay
2.	Periodicity of Publication	Weekly
3.	Printer's Name	Mr. John Middleton
	Nationality	British
	Address	Brady's Flats, Block No. 6, Flat No. 6, Sohrab Bharucha Road, Fort, Bombay 1
4.	Publisher's Name	Mr. Eddie Martin Alvares. For the Proprietors, "Commerce" (1935) Ltd.
	Nationality	Indian
	Address	"Ann Niketan," 13 Cheral, Thana
5.	Editor's Name	Mr. Subramanya Venkata Rayan
	Nationality	Indian
	Address	4, Vishranti, Brahmanwada Road, Matunga, Bombay-19

6. Names and addresses of shareholders holding more than one per cent. of the total capital:

Mr. Jal Dorabji Framji, Barry Villa, Owan Dunn Road, Gamdevi, Bombay.

Lady Jerbai Byramjee Jeejeebhoy, Mrs. Homi J. B. Jeejeebhoy, Mr. J. B. Jeejeebhoy, Mrs. Cursetbai J. R. B. Jeejeebhoy, "The Cliffe," Ridge Road, Malabar Hill, Bombay.

Lady Jerbai Byramjee Jeejeebhoy, Mrs. D. N. Jeejeebhoy, Mr. N. B. Jeejeebhoy and Mrs. Cursetbai J. R. B. Jeejeebhoy, "The Cliffe," Ridge Road, Malabar Hill, Bombay.

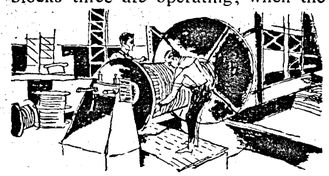
SOMEONE, SOMEWHERE NEEDS ELECTRICAL CONSULTANTS

And AEI goes into action

All the superlatives come to mind. The Bhopal Project for the manufacture of heavy electrical equipment is the largest in Asia and among the biggest of its kind in the world. Its training school is one of the most comprehensive to be found anywhere. When completed, the Bhopal factory will employ about 30,000 people and meet a good part of India's requirements of electrical equipment. India can look to the project with understandable pride. AEI as official consultants, are happy to be associated with it.

East and West meet...

Highly skilled Indian engineers and AEI personnel work shoulder to shoulder at Bhopal, busy making switchgear, transformers, capacitors and traction motors for India's power projects and industry. Of five projected factory blocks three are operating; when the



remaining blocks are complete, production will extend to water and steam turbines, industrial motors and heavy rotating and other plants. The Bhopal factory combines the latest equipment, techniques and quality control measures. It will make a decisive contribution to industrial progress in India, and save vast sums of foreign exchange.

The tiger didn't like it...

...when they cleared away his jungle! At Bhopal, much attention is paid to welfare schemes for workers. A town has arisen on what was very recently thick jungle. There are neighbourhoods, laid out with an eye to space, light and utility. They house executives, clerical staff and workers. The statistics on

welfare read impressively. Over seven thousand homes have been built, 13 hostels, a 75-bed hospital, three dispensaries, three clubs and two auditoriums, including the Assembly Hall of the Training School. This city in miniature has 85 miles of road, a water purification plant, a sewage disposal unit, a modern telephone exchange and 15 cultural associations. The AEI hostel consists of two well-appointed buildings, where 25 AEI engineers from Britain are resident.

What would you do with 3,000 points of view?

The Bhopal training school is a small factory, complete with all departments, a rigid production schedule and a commercial output. The school offers courses to graduates, diploma holders, junior draughtsmen and artisans. About 300 full-time instructors and lecturers work with 3,000 students at a time. Three buildings house school, workshop and laboratories. Already, 4,200 trainees who have passed out are employed at the main factory. In addition, trainees are graduating to projects all over the country...A seat of technical learning has been successfully established at Bhopal.

40 years is a responsible age

The Bhopal project is one of the more recent associations between the Government of India and AEI. In India, AEI's activities date back about forty years and include contributions to the Joginder-nagar power project (Punjab's first), the Bhakra Dam power project (Punjab's latest and India's largest), the steel works at Durgapur and the 720 mile oil pipeline in Assam. AEI has been manufacturing electrical equipment in India for over twenty years and a wide range of products is now serving the needs of industry and the home.

We don't usually indulge in name-dropping, but...

In our case it's justified. AEI is no newcomer. Its origins go back *more than sixty years*. Today, Associated Electrical Industries Limited embraces such famous names as British Thomson-Houston, Metropolitan Vickers, *Siemens Edison Swan*, Henley's, Ferguson Pailin, Hotpoint and Birlec. Worldwide, AEI operates 60 factories and employs 100,000 people. It produces everything electrical from lilliputian transistors to the world's biggest turbine generators.

Principal products worldwide

Steam and gas turbines and generators • Hydro-electric generators • Marine propulsion equipment • Electric drives for rolling mills and mine winders • Electric furnaces • Traction and railway signalling equipment • Transformers and switchgear • Power and telephone cables • Motors and their control gear • Electronic apparatus and radar equipment • Particle accelerators, electron microscopes and mass spectrometers • Industrial controls, instruments and meters • Semiconductor devices and power rectifiers • Private and public telephone exchanges and other telecommunication equipment • Lamps and lighting fittings • Heating equipment • Electro-medical apparatus • Nuclear power station equipment • Domestic appliances.

AEI

AEI Largest Supplier Of Electrical Equipment To India

WEAVING UNITS GET VERY POOR RETURN

CHAMBER PRESIDENT URGES MORE MERGERS

From Our Special Correspondent

MANCHESTER, 25*th February*

SURVEYING the current textile situation in his final address to shareholders as chairman of the large Lancashire Cotton Corporation, Mr. Roger M. Lee gave an encouraging account of the group's prospects and the recent improvement in productivity throughout the trade. He told the annual meeting that the higher levels of activity now being achieved by the Corporation had brought substantial savings in costs, the benefit of which should be seen in the current year's accounts. The increased volume of trade, which occurred in the last weeks of the financial year ended in October, had been maintained, he continued, and marked increases in sales, production and yarn deliveries had been noted in the first quarter of this financial year as compared with the same period 12 months ago.

MANCHESTER LETTER

Margins in yarn prices, said Mr. Lee, were still much too low, but the trend was towards more satisfactory margins, so that a more reasonable return for effort might be obtained in future, but this would take time owing to the substantial volume of orders on hand. Re-equipment and modernisation planned under the Government's reorganisation scheme had enabled the Corporation to achieve considerable increases in productivity and lower wage costs. Reference had recently been made to the Royd Mill at Oldham, where productivity per operative had increased by some 50 per cent and wages costs had been reduced by some 14 per cent, although earnings had increased by some 20 per cent. "This is by no means an isolated instance and illustrates the great efforts which have been made throughout the industry," Mr. Lee added.

Imports

Commenting on the high level of duty-free imports of cotton textiles, mainly from Asiatic Commonwealth sources, he said that it was a great pity that arrivals had reached such levels before the Government had imposed measures of restraint. The firmer attitude, however, belated, was welcome, and the problems were being approached as they arose in a more realistic manner. An example was the categorisation of Hong Kong textile exports to the United Kingdom, and a similar arrangement with India was a possibility.

Mr. Lee, who had already announced his intention to retire from the Board during the course of the current financial year, said that he hoped his successor would be able to report improved results for 1963-64.

Marketing by Mergers

By virtue of his position, the President of the Manchester Chamber of Commerce must, in his annual address, cover a wide range of affairs which concern the city and its commercial interests. In a speech running to more than 7,000 words, there is scope for considerable comment, only a small part of which can be adequately reported. Mr. P. R. Gell, Chairman of Ashton Brothers and Co. and the retiring President of the Chamber, had a number of keenly perceptive views to express on the textile trade in his final message to members. Prices obtainable by weavers had showed a very poor return, he declared, a point which has since been underlined by the financial results of more than one substantial manufacturing group for 1963.

"This can only be due to the fact," said Mr. Gell, "that the weaving industry consists of far too many individual units, each incurring overheads which could better be shared by larger groups. Their sales consist largely of grey cloth to markets over which they have little or no control." The amalgamations lately carried out by the major man-made fibre producers had been well received by the City of London and had undoubtedly done something to improve the image of the industry in financial circles, he contended. "I am quite sure that any amalgamation of similar interests, particularly if it is supported by marketing, can be a tremendous stimulus and with goodwill on both sides can lead to savings and improvements in organisation which were not obvious at the start." He urged all those who felt there was a future for them in the trade and had kept their plant in good shape to take the plunge and get together, even though the pattern of their marketing might at first seem a little obscure.

Sheltering Under G.A.T.T.

On imports, Mr. Gell declared: "Whatever Government is in power next year will surely insist on the maintenance of the present ceilings, but I am equally sure that all exporters to this country will try to establish the highest possible quotas this year." Labour's plan for cotton seemed to place too much reliance on the willingness of other developed countries to take an increasing share of Asiatic products.

The results of this policy of the open door were plain for all to see and the textile industries of other countries could hardly be expected to offer themselves on the sacrificial altar of what the French now called "Manchesterisation." America had provided an example of how to conduct their affairs by continuing to invoke the shelter of the long-term G.A.T.T. arrangement whenever any particular type of fabric import threatened home production.

Earlier, Mr. Gell had discussed the failure of the Common Market negotiations and Britain's link with the Commonwealth. Imports into Commonwealth countries between the periods 1955-57 and 1960-62 had increased by £1,000 million, he pointed out, but, in the same period, Britain's share of the increase was only £40 million.

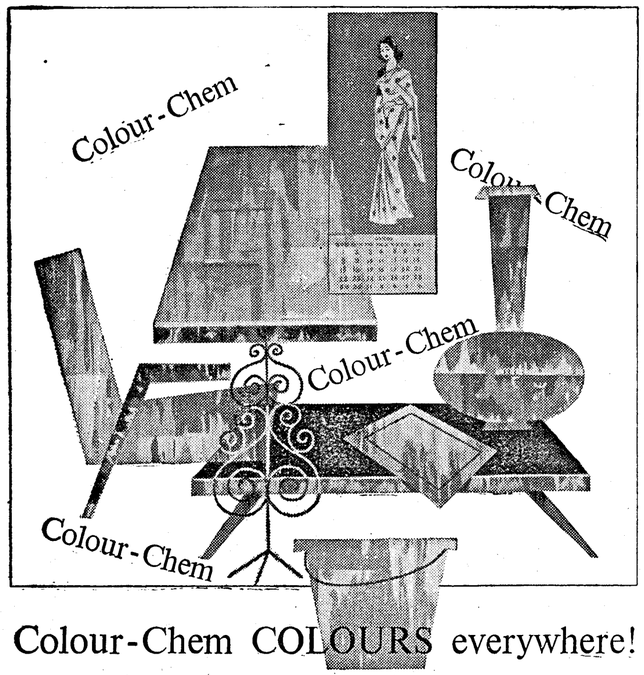
"The recent application by textile manufacturers in Australia to their Tariff Board would, if granted, virtually destroy all cotton textile exports to Australia from this country and so reduce even further our total trade there," he added. "It is to be hoped that the carefully prepared case which the Cotton Board has produced will prevail with the Tariff Board, so that at least something will be left to us in a market which not so long ago held top place in our textile exports."

Citing the dangers facing Lancashire from many different foreign producers, Mr. Gell observed that as one source fulfilled its quota so another source appeared. An example was Macao, the little-known Portuguese possession on the mainland of China not far from Hong Kong. Although exports from Macao to this country only started in the early part of last year, by the end of October a significant quantity of textile goods had arrived, including amongst other things, very nearly half a million men's shirts, at an average price of less than 6s. each.

"The Government has now brought this source of supply under licensing control," Mr. Gell continued, "but a quota on past performance has been established. One cannot help wondering where the next supply will come from. The cloth required to make these shirts would keep approximately 100 looms working three shifts for 12 months, a very useful order for any Lancashire manufacturer."

MOBILE TEXTILE SPINNING LABORATORY

A mobile textile spinning laboratory—a 8½-ton bus set up as a travelling laboratory—has been sent by the SKF Kugellagerfabriken G.m.b.H. of West Germany to its associate in India to demonstrate the possible improvement in quality and production of their own textiles by learning the correct application, operation and maintenance of various SKF specialities for textile machinery. The laboratory is now on a six-to-eight month tour of all the towns and cities of South India where textile mills operate. It will also visit textile institutes and textile research centres *en route*. The textile towns of North and North East India will be covered later. The German expert accompanying the laboratory is expertly guided and assisted by two Indian technicians. With the SKF spintesters and other yarn testing apparatus, which are installed in the bus, spinning tests will be carried out. The spintester is a small electronically controlled test spinning frame where the break draft, total draft, yarn twist and spindle speed can be adjusted steplessly while in operation. The tests carried out on the spintesters will enable the textile industry in India to achieve the very finest results with any raw material at hand.



Colour-Chem COLOURS everywhere!

When you see the thrilling world of man-made colours around you—spectacular prints on your fabrics, colourful inks in your magazines, pleasing paints in the interior of your home, fascinating tapestry and the attractive furnishings of your drawing room, plastic balls in the hands of your children—remember that COLOUR-CHEM, India's leading makers of Pigment Colours, is very much a part of your daily life.

CHAL Oil Fired Double Ended Bogie Loaded Core Drying Oven installed in a reputed steel foundry in India.

WELLMAN INCANDESCENT LOW TEMPERATURE HEAT TREATMENT OVENS

Wellman Incandescent India Ltd., in collaboration with Controlled Heat and Air Ltd., Smethwick—England, are now manufacturing in India industrial ovens for low temperature heat treatment up to a maximum of 450° C.

These ovens cover the whole CHAL range of products. Ovens for Stoving, Tinprinting, Drying, Metal Heat Treatment, Core Plate Varnishing, Maturing as well as Filtration equipment are available.

Wellman Incandescent are also specialists in Mechanical Handling Equipment and have commenced to manufacture progressively many products which hitherto had to be imported.

REVERSES ON ASIAN FARM FRONT

E.C.A.F.E. CALLS FOR REDOUBLED EFFORTS

HUNGER is still Asia's problem No. 1 and the outlook is gloomy for the remaining years of the sixties. Every fourth man in Asia suffers from hunger and many more suffer from malnutrition. In the decade of the 'fifties, food production in Asia improved by a third but the levels of consumption returned to just about what had been achieved on the eve of the last world war. This slow rate of progress was due to the increase in population by twenty per cent during the 'fifties. The conditions have become somewhat more tragic in the years of the 'sixties that have gone by. The programme under the much publicised United Nations Development Decade set a target of doubling the rate of increase in agricultural production in the 'sixties. But, in the early years of the 'sixties, the Asian developing countries have been fighting a losing battle.

The food situation in developing Asia receives the pride of place in the *Economic Survey of Asia and the Far East for* 1963, prepared by the Secretariat of the United Nations Economic Commission for Asia and the Far East. The survey is a basic document now being discussed at the annual session of E.C.A.F.E. which began at Teheran, Iran, on 2nd March. As in recent preceding years, the Secretariat has prepared the *Survey* in two parts, the second part dealing with a country-wide analysis and the first dealing with a special subject. The problems of import substitution and export diversification constitute the special subject for this year. The special analysis discusses Asian industrial and export import problems as something of a curtain raiser for the U.N. Conference on World Trade and Development which is to begin soon in Geneva.

Membership

With the admission of Australia and New Zealand within the regional scope of E.C.A.F.E. last year, the organisation now has twenty-three countries and territories represented as regional members and five as non-regional participants. The non-regional participants are the United States, the Soviet Union, Great Britain, France and the Netherlands. The E.C.A.F.E. Secretariat, in its study, has again reclassified the regional members. Twenty countries and territories come under the list of developing countries. The three excluded from this description are Japan, Australia and New Zealand. The E.C.A.F.E. analysis of the conditions of food production are confined to the developing region.

Between 1955 and 1961, the food production in the developing E.C.A.F.E. region rose at an annual average of 3.6 per cent, but, in the last two years, the increase has come down to half of one per cent. In the last two years, the population increase has averaged 2.4 per cent a year. The E.C.A.F.E. Secretariat mentions India, Pakistan and Korea as the countries where the deterioration in agriculture has been the most marked in the last two years. Food production per head in the last two years declined by seven per cent in India, four per cent in Pakistan and two per cent in Indonesia. The countries of Oceanic Asia (Brunei, Taiwan, Hong Kong, Malaysia and the Philippines) barely maintained food production per head at 1953-57 levels. It is only in Continental South-East Asia (Burma, Cambodia, Laos, Thailand and South Vietnam) that the food supply outpaced population growth. In 1962, these countries reported a slight increase in food production; in 1963, they had a substantial increase which brought their output per head to ten per cent above 1953-57 levels.

Recovery in China

As compared with conditions in 1962, there was a partial recovery in food production in Mainland China. (Mainland China is not a member of E.C.A.F.E., but a brief survey of conditions there is included in the Secretariat report.) Mainland China's food grain production in 1963 is estimated at 190 million tons, as against 170 million tons in 1962. In 1958, China had claimed a record output of 250 million tons of grain. In 1962 itself, China, buying 4.7 million tons of grain from abroad, had become a larger importer of grain than India. In 1963, China increased her foreign purchases.

Pakistan's wheat crop rose by more than two per cent to a record 4.2 million tons in 1963, but East Pakistan floods reduced the paddy crop by more than seven per cent. The output of all cereals taken together fell by four per cent in Pakistan. Indonesia was able to improve her food production by eight per cent in 1963, but imports had still to be heavy, because, for one thing, Government procurement prices were too low to persuade farmers to part with grain to Government agencies. Ceylon and Taiwan had record rice crops, the increase in Ceylon being 12 per cent and the increase in Taiwan being five per cent. Taiwan expected to increase rice exports but Ceylon still needed 500,000 tons of rice imports, or a quantity equivalent to half of its crop.

In Continental South-East Asia, there had been a two per cent fall in food production

Source: E.C.A.F.E. Secretariat Survey.

in 1962. In 1963 the increased production took the output to five per cent above the level in 1961 in this area. Thailand increased rice output eleven per cent to six million tons, Burma by five per cent to 4.9 million tons, Cambodia by 35 per cent to 1.2 million tons and South Vietnam by 13 per cent to 3.4 million tons.

Aggregate regional exports of rice in 1963 were two per cent higher but aggregate regional imports of rice were four per cent higher than in 1962. The developing region's wheat imports rose by ten per cent, although India reduced her wheat imports. Pakistan's wheat imports doubled and Mainland China increased her wheat imports by twenty per cent.

The Development Decade programme which calls for a five per cent increase in national income cannot be fulfilled without a dynamic drive in the agricultural field. Ninety per cent of the region's agricultural production consists of food products and the contribution of agriculture to the national incomes varies from 34-38 per cent in Taiwan to 48-56 per cent in Indonesia and Pakistan. Against this background, the contribution from industrial expansion, however high the percentage increases in manufacturing, is secondary to agriculture to the improvement of the personal fortunes of the Asian people.

Industrial Strides

In 1958, the E.C.A.F.E. region as a whole contributed 7.3 per cent of the world manufacturing output. Excluding Mainland China, only Japan, Australia and India, had substantial manufacturing industries. One half of the region's manufacturing activities are in Japan, one-sixth in Australia and a little less than one-sixth in India. Australia, whose population is one-fortieth of India's, has an industrial output exceeding India's! Between 1958 and 1962, Japan has doubled its manufacturing output, India has raised it by a third and Australia by a little less than a third. The increases in the smaller countries were 40 per cent in South Korea, 63 per cent in Taiwan, 45 per cent in Pakistan and 26 per cent in the Philippines. In the first half of 1963, there was a deceleration of industrial growth. Compared with nine per cent in 1962 and twenty per cent in 1961, Japan's industrial growth came down to a low two per cent in the first half of 1963. This was the result of deliberate Government restrictions to ease balance of payment difficulties caused by a runaway industrial boom.

It was a good export year for many countries, including India. However, Indonesia's exports, which had fallen by 14 per cent in 1962, experienced a further precipitous fall in 1963. The loss in exports was accentuated in the latter half of the year by the Indonesian policy of confrontation which led to a break in the diplomatic and commercial relations with Malaysia. Burma increased her exports by four per cent and imports by six per cent in the first nine months of 1963. South Korea's exports rose by 85 per cent and imports by 41 per cent in the first nine months. The increase in the comparable period was one-seventh for Australia and New Zealand. Pakistan's exports rose by nine per cent and imports by 12 per cent. India achieved a combination of increase in exports and decrease in imports. For Hong Kong, 1963 was a record year for trade and industry. Re-exports rose by nine per cent in the first ten months and exports of local manufactures by 16 per cent. There was big increase of 42 per cent in Hong Kong's exports to Japan, following Japan's import liberalisation.

In Japan

Japan was able to keep up her recent growth of an annual ten per cent in exports through 1963. Big gains were 42 per cent increase in exports of ships, 32 per cent in iron and steel, 27 per cent in metal products and 20 per cent each in chemicals and machinery. But Japan is continuing to have a balance of payments problem, with the growth in industrial production leading to a twenty per cent increase in import of raw materials and 16 per cent increase in import of mineral fuels. There was no fall in exchange reserves, however, thanks to large capital inflow.

Mainland China persists with her policy of publishing no statistics on foreign trade. The peak exports from Mainland China were claimed in 1959. There was a decline of 8 per cent in 1960, a further fall of 25 per cent in 1961 and another eight per cent fall in 1962. China's exports to the Soviet bloc have been progressively diminishing but there has been a small increase in Chinese exports to West Europe and E.C.A.F.E. countries.

Commodity-wise for the E.C.A.F.E. region as a whole, higher prices were obtained during 1963 for sugar, tin, copra, coconut products, tea, dairy products, meat and wool. Quantitatively, there was an increase in exports of cotton, jute, petroleum and iron ore. There was a steep fall in prices of rubber and restrictions on exports of cotton fabrics to Britain and the United States.

The E.C.A.F.E. Secretariat lists three urgent requisities for the progress of the region: 1. redoubling of efforts in agriculture through improved irrigation, fertiliser use and fishing; 2. easing defence expenditures by reducing political tensions; and 3. improvements in export prospects.

Agricultural Situation In India

A monthly journal presenting a factual and integrated picture of the agricultural and food situation in India, against an appropriate background.

This journal, issued by the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, has as its regular features:

* A monthly newsletter surveying the latest development in the field.
* Authoritative special articles on topics of current interest.
* Extensive information on events and trends in India and abroad.
* Reviews of production and prices of various commodities.
* A comprehensive statistical section.

Commanding a wide and influential readership in India and abroad, *Agricultural Situation In India* is an invaluable guide to students of agricultural economics, business executives and administrators.

Annual subscription .. .. Rs. 24.00 or 37 sh.
