The terms of reference of the Committee set up by the Central Government to formulate social security measures have been finalised. To begin with, six subjects have been specified for consideration; they include pensions and allowed benefits for the family, educational facilities for children of Government employees, medical facilities, housing facilities financial security in terms of purchasing power and old age pensions. The recommendations made by the Committee will cover the Central and State Governments' employees as well as all other employed persons.

An eleven member team of the National Productivity Council, which recently toured Britain, United States and Japan for studying the printing industries in these countries, has recommended that printing machinery be manufactured in India with foreign collaboration either in the public or in the private sector.

DELHI LETTER

DELAYS IN DEFENCE BUILD-UP

AIRCRAFT MANUFACTURE BEING REORGANISED

From Our Special Correspondent

NEW DELHI, *31st March*

A TEAM of Soviet engineers has just arrived in India to proceed further with the plans to manufacture M.I.G. supersonic fighter planes in the country. At the same time, the Defence Ministry is engaged in a reappraisal of the organisational set-up which has partly contributed to delays in ordnance production. One of the decisions taken by the Defence Ministry is understood to be the integration of the three organisations concerned with aircraft manufacture—the Hindustan Aircraft Limited, the oldest of the aircraft manufacturing units, the Kanpur Aircraft Manufacturing Depot making the Avro 748 and Aeronautics Limited which is to undertake the manufacture of M.I.G. planes in the Nasik and Orissa factories. The Hindustan Aircraft is also engaged in fields of production other than aircraft.

The Indian Air Force is troubled by the existence of a diverse variety of aircraft it has to service and maintain. The best bet in the long-term reorganisation and re-equipment of the Indian Air Force is now considered to be the HF-24, the plane designed at the Hindustan Aircraft Limited. The advanced version of this supersonic plane is expected to be ready for extensive testing soon. The experts at H.A.L. have had to give up hopes for revamping a Soviet engine to power the Mark II version of HF-24. A Russian engine, which was at one time sought to be tried out for the HF-24 plane, was too heavy and its use would have meant modifications in the engine to make it lighter or radical changes in the design of the air frame of HF-24. The Russians were unable to spare sufficient number of experts to modify their engine in India. With Soviet expertise being lent for the M.I.G. project, the Russians could not at the same time undertake the engine redesign job for H.A.L. Some Russian engines were imported. The problem of finding engine for the HF-24 was the result of the British Bristol abandoning its project to improve its Orpheus engines. With some modifications the Bristol engine is being used on the advanced version of HF-24 but it is doubtful whether these improvements can contribute enough power to enable the HF-24 to reach speeds originally envisaged for the Mark II version. Anyway, the Air Force is said to have ordered the HF-24 in squadron strength.

Along with the manufacture of aircraft another associated problem confronting the Defence Ministry is the provision of a modern weapons system for the Air Force. For the M.I.Gs, the Russians are expected to help set up a third factory, in Hyderabad, to make the missiles. This factory will make air-to-air missiles which may also be used on the HF-24. The Air Force also needs ground-to-air missiles.

Provision of missiles to strengthen Indian defences has been a bone of contention between the Indian Government and the Western aiders. Even before the Chinese attack late in 1962, India had sought missiles from Western sources. The acquisition of missiles became more important strategically after the Chinese onslaught. Original negotiations for missiles fell through because of stiff terms in supplying the armaments to countries which are not tied to Western powers in firm defence alliances. Delhi's hopes that the Western attitude would change following the Chinese attack have been belied. A few days ago, the Defence Minister, Mr. Chavan, gave public expression to the measure of Indian frustration over obtaining military assistance from the West. While explaining to Parliament the shortfall of Rs. 58 crores in defence expenditure, Mr. Chavan said that Rs. 44 crores of the budget allocation had to be surrendered, because foreign aid could not be found for five of the six ordnance factories envisaged. Three hundred thousand men and ten thousand officers had been recruited under the Army expansion programme and work was proceeding on the formation of six new mountain divisions. Each of the mountain divisions needed Rs. 25 crores of outlay on equipment. Six divisions would thus need Rs. 150 crores of equipment. Ammunition and other things for a three-month period would cost another Rs. 7.5 crores each, so that the total needs would be Rs. 200 crores. As against this, the Western assistance in the first year after the Chinese attack was only about Rs. 30 crores.

The West, it would appear, remains to be convinced of the technical capacity of Indians to mount a modern missile defence system. In the circumstances, in the take-off to the missile age, India now expects more help from the Soviet Union. Some of the equipment needed can be fabricated in India but a variety of vital components will have to be imported.

Talks with Japan

According to Transport Minister Raj Bahadur, the long-delayed agreement with the Japanese for collaboration in building the Cochin shipyard will be signed in a few days. Japan lost an ambitious bid to enter the telecommunications field in India through a contract for a cross-bar switching system, but a new big project with which the Japanese are to be associated is the fertiliser factory in Gujarat. About Rs. 12 crores of foreign aid for this project is expected to come from Japan. Japanese firms are understood to have outbid the French for this project. This will be the second big fertiliser factory with which the Japanese will be associated. The Japanese have also pledged foreign aid and collaboration for the Gorakhpur project. The third prestige project on which the Japanese are at work is the Durgapur alloy steel plant.

Labour Unrest

Communal riots in Jamshedpur and Rourkela and communist disruption in the Bhopal Heavy Electricals factory have led to a decision to form an industrial security force which will be under the control of the Centre. The decision was taken at a conference of Chief Ministers of West Bengal, Orissa, Madhya Pradesh and Bihar called by the Union Home Minister. Another reported decision is to amend trade union rules so as to forbid workers of big and essential industrial units from having anything to do with unions other than their own associations. This decision appears to have been taken at the spur of the moment, in view of the crisis in the big industrial plants, and partly on the premise that communist politicians are to blame for the mischief. The patronage extended to I.N.T.U.C. subsidiaries by State administrations and public sector managers has been an issue of conflict in many public sector undertakings, including the Bhopal factory and the Rourkela steel mills. The delays in recognising one union in Rourkela have led to repeated attempts by rival unions to compete for the title of militancy. By the magic of changing a law, the Union Government cannot alter the basic fact of trade union life in the country—close tie-up of trade unions with politics of the Left and the Congress.

The rioting in Rourkela and the curfew which followed resulted in production coming to a standstill in many sections of the steel mills. Blast furnace output fell to 350 tons a day from the normal level of 1,000 tons a day. As long as the army and police precautions continue, Rourkela production may be only thirty per cent of capacity. The German operation team in Rourkela now numbers about 240 and the number of foreigners in Rourkela, including women and children, are around six hundred. The Germans have requested the Government to station troops permanently at Rourkela to ensure the security of the Germans and to guarantee supply of water, electricity and food. Even before the recent communal riots, Rourkela had become a place abounding in scare stories. Some time ago, the area of the water works, on the top of a hill which was a popular park, was placed under rigorous security guard—because of the scare that militant workers may poison the water supply! During the riots, about 40 Americans, who were operating the widestrip mill, were evacuated; but the Germans have stayed on.

Goodlass NEROLAC Paints

What a smooth, glossy appearance Goodlass Nerolac paints give! The colours go on so easily...resist all kinds of weather...bear up under wear and tear...to retain their beauty for years. It's taken decades of research to do it... and now you have the perfect paints... Goodlass Nerolac paints!

PROGRESS OF REFINANCE CORPORATION

QUANTUM OF ASSISTANCE TO INDUSTRY MARKEDLY HIGHER

WITH increasing diversification in the field of its operations, in the range of its activities and in the structure of its advances portfolio, and with the substantial increase in its business, as reflected in the markedly higher sanctions, disbursements as well as outstandings, the hopes and predictions expressed by the Chairman of the Refinance Corporation for Industry Ltd. at the annual general meeting of the Corporation last year have largely come true. Looking back upon the performance of the Corporation during 1963, it is easy to realise that the Chairman was perfectly justified in describing it as the "pivot for extension of facilities for term finance for industry," which has "enabled the commercial banks to meet more and more boldly the financial demands" for a phase of rapid industrialisation.

The progress which the Corporation made during 1961 and 1962 was continued at a greatly accelerated pace during 1963, with the result that the Corporation has at last outrun its available resources. During the year (as the table shows), the Corporation received a record number of 221 applications for refinance from 30 financial institutions for a total sum of Rs. 29.96 crores, as against 88 applications from 20 institutions for Rs. 13.77 crores in the previous year. The refinance was actually sanctioned to 27 financial institutions on 171 applications for a total amount of Rs. 24.09 crores, as against 19 institutions, 73 applications and Rs. 10.63 crores in the previous year.

During the six years of its existence, the Corporation has received in all 423 applications from 37 institutions for a total amount of Rs. 63.81 crores, out of which 336 applications for Rs. 51.21 crores were sanctioned to 32 institutions. Allowing for those sanctions which have been treated as lapsed and those which will not be utilised by the borrowing institutions, the total amount of net effective sanctions at the end of 1963 were Rs. 45.23 crores. In addition, at the end of 1963, there were under consideration 51 applications totalling Rs. 6.36 crores.

Disbursements have also increased substantially during the year: the total amount of refinance disbursed in 1963 was Rs. 13.25 crores, as against Rs. 7.96 crores disbursed in 1962; the total amount disbursed by the Corporation since its inception amounted to Rs. 28.17 crores; since, however, some of the amounts borrowed from Corporations in its earlier years are being repaid by the borrowing institutions, the total amount of loans and advances actually outstanding at the end of 1963 were slightly lower at Rs. 24.71 crores.

It will be observed that 1963 has brought about a record progress in all the branches of the Corporation's activities. The sustained demand on the resources of banks for financing development, the relatively stringent conditions in the money market and difficult conditions in the capital market have resulted in considerable demand for refinance. A comparison of the position of the Corporation at the end of 1962 and 1963 shows that during 1963, the Corporation progressed almost to the same extent as it had done during the first five years of its existence. At the end of 1963, almost all the magnitudes were nearly double those a year earlier.

It is only to be expected that, with such a rapid pace of expansion in its business, the Corporation has run out of its resources. The increased demand for funds from the Corporation necessitated a further drawal of Rs. 11.50 crores from the Government of India, as against the initial allotment of Rs. 26 crores from P.L. 480 funds. This brought the total borrowings of the Corporation under this head to Rs. 22.50 crores, leaving an undrawn balance of Rs. 3.50 crores. The project agreement between the United States Agency for International Development and the Government of India allocating the above resources to the Refinance Corporation was due to expire on 31st October 1963; it was, however, extended for one more year, thus allowing the Corporation to draw the balance of the unutilised funds upto 31st October 1964.

As the Corporation has already drawn the major portion of the allocated amount (leaving a balance of Rs. 3.50 crores only), and since it is already having large outstanding commitments, the Government of India have been requested to arrange for allocation of further P.L. 480 funds. In order to meet its current commitments, the Corporation requires a further sum of Rs. 13.50 crores. The Government of India, we are told, has already assured the Corporation that, in appreciation of the indirect assistance provided by it for the development of industry, the necessary funds will be found for the Corporation. A news item actually announced a couple of months ago that a further allocation of Rs. 25 crores had already been made to the Refinance Corporation out of P.L. 480 funds, but the annual report of the Corporation is silent on this point: perhaps, the necessary formalities are yet to be gone through.

A measure of the usefulness of the Refinance Corporation is very inadequately provided by the total sanctions, disbursements or outstandings. A better idea is provided by the fact that the total aggregate cost of the projects to which the Corporation has sanctioned assistance comes to about Rs. 140 crores. The Corporation's share in implementing these projects, therefore, works out to about 32 per cent.

The lending rate of the Corporation which was 5 per cent from its inception was raised to 5½ per cent from the 14th March 1963, except in the case of medium-term credit for exports (discussed further in a later paragraph). Moreover, having regard to the rise in income and business of the Corporation, the rate of interest payable by the Corporation on its P.L. 480 funds has also been raised from 3 per cent to 4 per cent.

During the year, the gross income of the Corporation almost doubled from Rs. 49.09 lakhs in 1962 to Rs. 96.95 lakhs. The largest element in the income was interest received on loans to financial institutions, banks etc., which rose from Rs. 46.94 lakhs in 1962 to Rs. 95.21 lakhs in 1963. However, there was a steep increase in interest expenses, particularly as a result of larger borrowings from the Government of India at a higher rate. Interest expenses rose from Rs. 22.34 lakhs to Rs. 65.38 lakhs. After meeting all expenses, the net profits were higher at Rs. 29.50 lakhs, as against Rs. 25.57 lakhs in the previous year.

Operations of Refinance Corporation
(Amount in crores of rupees)

	During 1962		During 1963		As at the end of 1963	
	No.	Amount	No.	Amount	No.	Amount
Applications received	88	13.77	221	29.96	423	63.81
Applications sanctioned	73	10.63	171	24.09	336	51.21
Net effective sanctions	—	—	—	—	—	45.23
Refinance disbursed	—	7.96	—	13.25	—	28.17
Refinance outstanding	—	—	—	—	—	24.71
Resources	—	—	—	—	—	31.73
No. of Institutions which applied for refinances	20	—	30	—	37	—
No. of Institutions which were sanctioned refinance.	19	—	27	—	32	—

The allocation of profits shows that the amount provided for taxation has gone up from Rs. 14.28 lakhs to Rs. 17.50 lakhs. Transfers to reserves are lower at Rs. 2 lakhs against Rs. 2.68 lakhs in the previous year. Dividend has been maintained at 4 per cent, absorbing the same amount of Rs. 10,00,000 as in the previous year.

Next, we may consider a diversification in the range of the Corporation's activities in two new fields. Although the scheme for refinancing medium-term export credits came into force on the 1st January 1963, the Corporation has not yet made any significant impact in this regard. Only one application for a total amount of Rs. 10.83 lakhs was received and sanctioned, and the amount disbursed and outstanding was even less at Rs. 7.55 lakhs; the balance of Rs. 3.28 lakhs was yet to be availed of by the borrowing institution.

The scheme covers credit for periods exceeding six months but not exceeding five years. Under the scheme, the refinancing facility will ordinarily be extended to certain specified categories of engineering goods; the list has recently been extended to include X-ray electro-medical equipment and hospital equipment also. An up-to-date list of eligible items shows that the facility is available in respect of 10 items of capital goods, 32 items of producer goods and 6 items of consumer goods.

In accordance with the recommendations of the Study Group on Export Finance, the Corporation refinances such export credits at a concessional rate of 4½ per cent, provided that the banks pass on the benefit of the concessional rate to exporters and do not charge them interest at more than 6 per cent per annum.

With a view to extending the benefits of the scheme to small exporters who may ship goods in instalments against a particular contract, the Corporation has decided to refinance export credits for even less than Rs. 1 lakh (as against the previous minimum of Rs. 1 lakh), provided the relative export contract was for at least Rs. 1 lakh.

The Corporation hopes that further progress will be made in the scheme as soon as banks and exporters become thoroughly acquainted with the benefits available: the Corporation, we are told, is always willing to simplify the scheme and make it more attractive and useful.

Another development which has increased the range of its functions is the effective association of the Corporation with the scheme of the Government of India to guarantee rupee advances made by the banks to private sector collieries in order to help them utilise the World Bank foreign exchange loan of $35 million for importing equipment to raise output. By granting a measure of protection to lending institutions against possible losses, the scheme is intended to enlarge the supply of institutional credit to the collieries. As the "Guarantee Organisation" under the scheme, the Corporation will share losses to the extent of 65 per cent: the Corporation levies an annual charge at the rate of three-quarters of one per cent on the amount of advances sanctioned for providing the guarantee cover.

The scheme started functioning in April 1963 and, during the year under review, 27 applications for Rs. 2.85 crores were received from seven credit institutions. Of these, 22 guarantees for Rs. 2.03 crores were issued. During the year Rs. 2.07 lakhs was received by the Corporation as guarantee fees.

In addition to this diversification in the range of its activities, the Corporation has also diversified its advances portfolio by laying greater emphasis on non-traditional industries like chemicals and chemical products, rubber and paper products, machinery, equipment and metallic industries, though the traditional food and textile industries continued to command the Corporation's attention.

In spite of this increase in business and diversification in range of functions and direction of assistance, the Corporation is at present under a shadow of doubt and uncertainty regarding its own future. The newly proposed Industrial Development Bank is, in due course, likely to take over the entire business of the Refinance Corporation of India. Whether the changeover will largely be procedural or substantial, only the future can tell, but, as the Reserve Bank of India is the boss for both the institutions, it can be justifiably hoped that the efforts and achievements of the Refinance Corporation, which has by now achieved a high degree of maturity, will not receive a setback as a result of the changeover.

MONETARY POLICY IN U.S.

The question as to the appropriate role of monetary policy in the U.S. promises to draw increasing attention in the months ahead, according to the Economic Research Department of the Chase Manhattan Bank. If, as seems possible, the economy enters a period of inflationary pressures later in the year, some changes in monetary policies might become necessary. In fact, some observers believe that the monetary authorities should begin moving gradually in the direction of restraint. At this juncture, it is too early to assess accurately the forces which may be operating later this year. The hope is that the sharp stimulus provided by the tax cut will lead to a moderate but sustained response on the part of consumers, labour unions and business. If so, reasonably small changes in monetary policies could contribute to continued economic growth without inflation through this year and into 1965.

The World Bank has extended the date for utilising the Rs. 16.17-crore loan advanced to Indian private collieries for modernising and expanding production up to the end of September 1965.

BANKS IN INDIA SERVE THE NATION

A PERSPECTIVE ON THEIR ROLE AND ACHIEVEMENTS

IN an imaginatively designed and attractively produced series of pamphlets released last week, the Indian Banks' Association has made an excellent move to project a true image and present a correct picture of the role played by the banks in the national economic progress. The pamphlets outline the progress made by the banks in opening new offices in new and established areas and show how the banks assist the country's economic growth by mobilising deposits and financing defence and development. But more than anything else, the pamphlets provide a proper perspective on the controversial problems of bank finance for small-scale industries and agriculture and disentangle the technical problems of bank ownership and management from the confusion created by recent political discussions. The pamphlets are important not only because they provide the well-known facts regarding banks' performance, but also because they interpret them and, incidentally, explain their significance for the successful working of banking in the private sector. The salient points contained in these phamphlets are outlined in this article.

The Development Decade 1952-62

More than 2,200 new offices were opened by commercial banks in India during the development decade, 1952-62. During the period of brisk progress from 1954, they opened new offices at the average rate of 225 every year. This rapid pace of branch expansion was continued in 1963 also and 255 new offices were opened during the first nine months of the year. The new offices opened during the entire year were as many as 368.

New branches cost a lot of money: money for the building, for the furniture, for the safes and vaults, and for the payment of salaries to the staff and interest to the depositors. Banks spend all this money on new branches for at least five years only after which the branches usually begin to pay their way. Yet, the banks open new branches not only in the metropolitan centres, but also in far-away places in a spirit of service to the nation and in the hope of making reasonable profits in the future.

Mobilisation of Deposits

Both the deposits and the rate of their growth accelerated from a meagre Rs. 130 crores or 3 per cent per annum during the first Plan to Rs. 660 crores or 13 per cent per annum during the first three years of the third Plan. At this rate, the total increase during the entire third Plan may exceed Rs. 1,200 crores.

The spectacular rise of Rs. 1,420 crores (179 per cent) in aggregate deposits of scheduled banks between 1952-63 is the combined result of higher savings out of rising incomes under the planned development and the spread of banking habit: banks have gone into *new areas* and have intensified their efforts to bring *newer classes* of people within the banking fold.

An analysis of the ownership of deposits shows that the largest portion of bank deposits consists of the deposits owned by individuals: it is the personal savings of the common people which provide the largest resources.

Advances

Bank advances increased by about Rs. 1,200 crores during the thirteen years of planning. They have financed the needs of defence and development alike and have grown along with the growth and needs of planning. They have, in fact, served as an instrument of planning. Industrial advances have risen from about one-third in 1951 to about three-fifths in 1963: a detailed analysis of industrial advances shows that, with the growing diversification of our industrial structure, bank credit is also changing its character.

Banks have largely changed over from financing seasonal trade and stock and bullion dealers to financing manufacturing and processing industries: their growing stake in industrial development is reflected in the fact that money advanced every busy season rarely comes back to the same extent in the following slack season. From less than Rs. 430 crores in 1951, bank advances have grown more than four times and have crossed the Rs. 1,800-crore mark according to the latest returns.

Investments

An analysis of banks' investments in Government securities shows that they constitute almost one-third of their total deposit resources and account for 18 per cent of total rupee loans and Treasury Bills of the Government of India. The complaint is often made that banks do not take into account social needs and purposes, or schemes of social development in granting their advances. But, in view of the fact that banks hold depositors' funds in trust and are accountable to them, they cannot make any use of these funds which is inconsistent with their safety. The banks do, however, help the Government liberally by subscribing to its short-term as well as medium-term loans and it is these loans which provide a substantial part of the funds which enable the Government to achieve the social objectives.

Banks help the Government also by means of the taxes that they pay. During the decade 1953-62, the taxes on profits and other taxes and dues to municipalities, local boards, etc., increased from Rs. 3 crores to Rs. 15.61 crores. As a percentage of net profits, they increased from 31 per cent to 54 per cent.

Finance for Small Industries and Agriculture

Scheduled bank advances to small-scale industries have increased by 85 per cent between 1960-62, as against a 10 per cent increase in their total advances. Building up of bank credit depends upon mutual connections and relationships between the banks and their customers. Banks need to satisfy themselves regarding the technical knowledge and capacity for hard and sustained work on the part of borrowers and the quality and marketability of the goods produced by them. It takes time to do this, but since the banks are doing their best to speed up this process, there is no doubt that they will provide increasing finance to small-scale industries from year to year. In fact, a number of banks have announced establishment of separate departments to deal with finance for small-scale industries.

There is one very important aspect of this problem which the Indian Banks Association has failed to bring out in its pamphlets. Since the capacity of small-scale industries to absorb finance is bound to be small, the *amount* of advances granted by banks to them can never be impressive in relation to the advances granted to large and medium industries. But a better idea could be conveyed to the public by giving the *number* of industries assisted under each head, and the liberalisations made in the *technique* of assisting small-scale industries. In order to disprove the criticisms levelled against them, the banks will have to talk more about their work and achievements in this field by giving significant details, as is being done, to some extent, by the State Bank of India.

As regards agriculture, the banks finance adequately a substantial proportion of the movement and marketing of agricultural produce, and plantations. But the problem of financing agricultural production by individuals is a very complex one. Agriculture in India is yet far from assuming a commercial character in spite of fifteen years of the efforts of the Government through planning and concessional finance, and continues to be at the subsistence level on account of the *uncertain* character of agricultural operations, the small size of the farms, dependence on the uncertain monsoon and great shortage of fertilizers. In these circumstances, unusually large risks are involved in financing individual agriculturists. Economic strength of agriculturists consists of two elements, both of which are absent at present in India: firstly, a farmer must have the *ability* to repay the advance which he has obtained from a bank. He may be *willing* to work hard and to repay the loan, but, as long as his production has to depend upon uncertain weather, a bank cannot be sure of his ability to repay a loan. A system of crop and cattle insurance may do much to make him creditworthy. Secondly, the agriculturist often lacks a marketable title to the land which he cultivates.

Further, the resources of joint-stock banks consist largely of the money deposited by a large number of individuals of small means. This money is held by the banks in trust. In the case of the funds of policyholders held in trust by the Life Insurance Corporation of India, the need to utilise them with the utmost care and circumspection has been recognised universally by all, including the Government and Parliament. The same considerations apply to the money of depositors held in trust by banks. Neither the L.I.C. nor the commercial banks can be asked or allowed to evade their basic responsibility of investing the funds entrusted to them only in such fields and on such terms as would fully satisfy proper standards of security and fair yield. Deterioration in the quality and standards of credit granted by joint-stock banks will only defeat the purpose of credit by inflicting heavy losses upon the depositors of banks on account of bad debts, without improving the economic condition of the borrowers.

The foregoing analysis does not mean that agricultural production should go without credit: it only suggests that, until the direct efforts of Government and of the co-operative and other specialised machinery established by it, succeed in improving the economic conditions of the agriculturists, commercial banks, which do not enjoy the special facilities and concessions made available to the co-operative and other machinery, and which are responsible for the safety of the money of the depositors, must be very cautious in lending money to agriculturists for their farming operations.

Readers will recall here that the clear understanding required of the problem of bank lending to agriculturists and small industrialists was discussed at some length on page 82 of *Commerce* dated 18th January 1964.

Ownership and Management

Much confusion has been created in the public mind on the question of ownership and management of banks and the Indian Banks Association has done well to put matters straight. Banks are different from mere moneylenders, on the one hand, who advance mostly their *own* funds at rates of interest of their choice and keep their earnings and from trading companies, on the other, which employ shareholders' equity for creating fixed capital assets.

The banks need the equity capital and retained reserves for bearing all the risks and creating confidence among depositors, so as to be able to attract deposits. Banks perform the essential function of mobilising the resources of the nation, and it is a tribute to the ability and integrity of their managements that, with the paid-up equity capital and reserves of Rs. 83 crores at the end of 1962, they were able to mobilise resources amounting to more than Rs. 1,900 crores.

A large number of shareholders own the joint-stock banks, but the stake and importance of depositors in the banking system *vis-a-vis* the shareholders are quite clear. During 1962, the depositors of the Indian scheduled banks were paid more than Rs. 44 crores out of the gross earnings of Rs. 120 crores, whereas the residual amount available for distribution to their shareholders, after meeting administrative expenses, wages and bonus to staff, and taxes and after making transfers to reserves, etc., was hardly Rs. 4.90 crores. This meant that the return to shareholders on their paid-up capital and retained reserves worked out to less than 6 per cent, subject to tax. The return to the owners of deposits, including current deposits, on which no interest is paid in any country as they are repayable on demand, was 2.3 per cent, but they obtained, in addition, facilities for payments by cheques and other benefits that holders of bank accounts enjoy. Further, while the funds of depositors are liquid, the equity capital held by shareholders is locked up and has to meet the risks of enterprise.

The interests of depositors are paramount in the minds of the bankers; and the entire banking system, including the practices, procedures and policies of banks, the Reserve Bank of India and the Deposit Insurance Corporation are oil geared for the purpose of protecting the interests of the depositors. Hence, the question who owns the banks is outdated and irrelevant. The modern and relevant one is whose interests do they regard as paramount? And there is no doubt about the answer.

The management of a bank is circumscribed in various ways by the regulatory powers, supervisory functions and directive authority of the Reserve Bank of India. It is within the framework of control and regulation that bank managements have to carry out their responsibilities for the successful and profitable functioning and development of banks.

In the face of such extensive regulations (details of which are given in the pamphlet) over the functioning of banks, it is wrong to say that the power and authority for managing the banks are concentrated in the hands of the directors of banks. The directors consist of men of eminence who have made their mark in various fields like industry, business, and professions and their varied experience, mature judgment and insight into the working of different kinds of trade and industry are available to the banks

in the formulation of their policies and in the conduct of their business. The criticism that bank directors are interested in industrial and trading companies as their directors or otherwise, ignores the fundamental point that but for these connections the quality of the bank directors and their usefulness to their banks would be very poor indeed.

The series of brochures under the title "Indian Banking Serves the Nation" follows two earlier publications of the Indian Banks' Association: "Should Banking Be a State Monopoly in India" and "Banks in India—Their Achievements and Burdens." The image of bankers and their deliberations behind tightly closed doors is slowly giving way to active public relations. The Indian Banks' Association deserves to be complimented for having picked up the courage to educate public opinion on the role the banks are playing in the economic development of the country.

PROGRESS OF STATE BANK OF MYSORE ENCOURAGING

Encouraging progress has been made by the State Bank of Mysore (General Manager: Mr. R. P. Nanda, Bangalore) during the year ended 31st December 1963. Its gross income has gone up by over Rs. 21 lakhs to Rs. 166.46 lakhs, with Rs. 19 lakhs of the increase coming out of banking business proper. At the same time, expenses, too, have been higher by as much as Rs. 20 lakhs. Interest paid has gone up by Rs. 9 lakhs, staff expenses by Rs. 8 lakhs to Rs. 51.60 lakhs and other expenses by Rs. 3 lakhs to Rs. 13.32 lakhs, consequently, the Bank has earned only a slightly higher profit of Rs. 18.85 lakhs as compared with Rs. 18.41 lakhs in 1962. The appropriation to the reserve fund remains unchanged at Rs. 4.50 lakhs. But bonus to staff has claimed Rs. 20,000 more at Rs. 4.30 lakhs. Further, a sum of Rs. 25,000 (as against nothing in the previous years) has been set apart for staff welfare fund. The return on the 100-rupee shares has been maintained at 10 per cent per annum, subject to tax. The surplus carried forward is Rs. 23,968, as against Rs. 43,681 brought in.

The Bank's progress in the past four years is compared in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Interest and discount earned	140.89	123.61	104.56	86.81

Cash	14.2	15.4	11.9	6.9

† Subject to deduction of tax.
‡ Unencumbered portion only.
Note:—Accounts for 1960 are for 10 months from March to December.

The Bank's working during the year shows a further improvement. The year-end figure of deposits is higher at Rs. 27.17 crores as compared with Rs. 25.91 crores at the end of 1962, though the increase is less as compared with the growth of roughly Rs. 3 crores recorded in that year. Advances, which had receded from Rs. 13.15 crores to Rs. 12.98 crores in the previous year, have improved substantially to Rs. 14.93 crores. The credit ratio at 54.9 per cent, though higher by 4.8 per cent over the year, is still lower than 57.2 per cent in 1961 and 62.3 per cent in 1960. Investments have dropped from Rs. 10.88 crores to Rs. 10.54 crores and, as a ratio to deposits, stand at 38.7 per cent, as against 41.9 per cent a year before. Cash balances, lower by Rs. 10 lakhs at Rs. 388.10 lakhs, are more than one point down at 14.2 per cent in terms of ratio to deposits. The balance-sheet total, which had jumped up from Rs. 27.72 crores in 1961 to Rs. 31.32 crores in the previous year, has moved up further to Rs. 32.79 crores during the year under review.

The Bank extended its agency business to four additional centres, bringing the total number of branches doing Government business to 42. The number of branches increased by seven to 69. In addition, under the Scheme of Amalgamation, the Ramdurg Bank Ltd., having one office at Ramdurg, was taken over by the Bank with effect from 16th November 1963. The State Bank's subsidy for reimbursing losses incurred during the year at the branches opened under the expansion programme is Rs. 4.16 lakhs (Rs. 2.24 lakhs a year before), which has been taken into account in the year's profit.

The Bank's advances to small-scale industries recorded a small increase during the year. Assistance was afforded to 151 units, accounting for a total limit of Rs. 84.46 lakhs, as against 136 units with a total limit of Rs. 84.15 lakhs as at the end of 1962. The outstandings amounted to Rs. 35.65 lakhs, as against Rs. 47.58 lakhs. Advances against warehouse receipts dropped sharply from Rs. 28.69 lakhs to Rs. 15.12 lakhs due to seasonal fluctuations. The total of credit limits granted to co-operative institutions declined slightly from Rs. 88.84 lakhs to Rs. 81.88 lakhs, but the outstandings fell sharply from Rs. 54.05 lakhs to Rs. 7.87 lakhs because of non-utilisation of the sanctioned limits to a fuller extent.

A SIGNIFICANT YEAR FOR SYNDICATE BANK

The year 1963 has been a very significant and eventful one for the newly named Syndicate Bank Ltd., formerly the Canara Industrial and Banking Syndicate Ltd., according to its Chairman, Dr. T. M. A. Pai. He says in his annual statement to shareholders that, during the year, the Bank has been able not only to reach new heights under deposits, advances and gross and net income, but also to extend its activities to other important fields. One of the "momentous" events was the Bank's entry into foreign exchange business from the end of April after obtaining a licence from the Reserve Bank during that month. The experiment made in 1962 of opening an all-women's branch proved successful enough to encourage the Bank to open three more of such branches during 1963. Finally, in pursuance of the Reserve Bank's policy of merging small uneconomic units with the economic ones in order to strengthen the banking structure in the country, the Bank has taken over three more banks, namely the Citizens Bank Ltd., the Pollachi Town Bank Ltd. and the Coimbatore Sri Kannikaparameshwari Bank Ltd.

While the foregoing accounts speaks of the continuing enterprise of the Bank, its progress during the year under review has also remained enviable. Its gross income has recorded a sharp rise from Rs. 198.79 lakhs to Rs. 261.76 lakhs and its profit, after meeting all expenses and providing for depreciation, has jumped up from Rs. 30.33 lakhs to Rs. 39.92 lakhs. The higher profit has meant an increase in the tax provision from Rs. 12 lakhs to Rs. 14.78 lakhs. But still the net profit at Rs. 25.14 lakhs shows a substantial improvement over Rs. 18.33 lakhs a year before. Out of this profit, Rs. 9.08 lakhs (as against Rs. 6.50 lakhs in the previous year) have been carried to reserves. The bonus to staff has claimed Rs. 2 lakhs more at Rs. 5 lakhs. But, in spite of these higher appropriations, the Directors have been able to maintain the dividend on the increased capital following the issue of 500,000 "B" class shares in 1962 at a premium of one rupee per share. The amount of profit distributed as dividend has, therefore, increased from Rs. 6.60 lakhs to Rs. 9.83 lakhs.

The following comparative table brings out the progress made by the Bank in the past four years:

(In lakhs of rupees)

	For the year ended 31st December

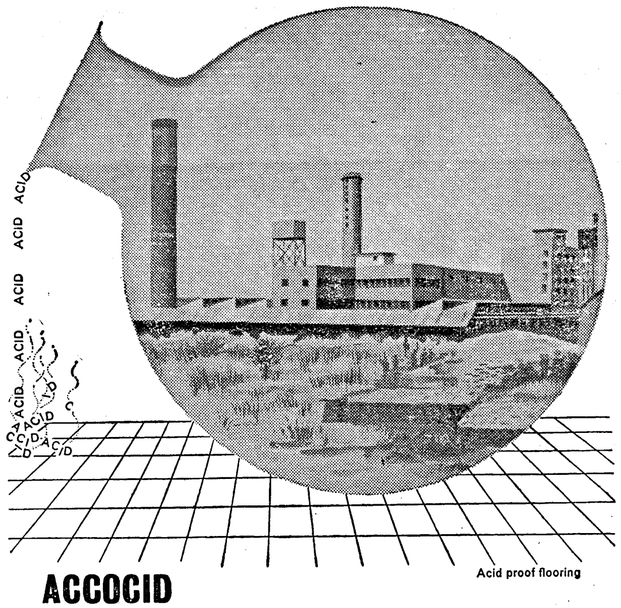
ACC. 1095 EVEREST



Acid proof flooring

ACCOCID
—ACC's acid-proof cement resists:

- ALL INORGANIC & ORGANIC ACIDS
- CORROSIVE CHEMICALS & SOLVENTS
- MINERAL OILS & GREASES
- TEMPERATURES UP TO 700°C.

ACCOCID has good load-bearing capacity and effects good direct bonding to glass, wood, ceramics and metals. Supplied in two parts — a powder and a liquid — ACCOCID is ideal for use in chemical industries.

NEW INTEGRATION MOVES IN TEXTILES

MODIFICATION OF OTTAWA AGREEMENT URGED

From Our Special Correspondent

MANCHESTER, *24th March*

MANCHESTER LETTER

HINTS of new moves to integrate not only the individual firms within the Lancashire cotton textile trade but whole sectors of textiles, quite apart from cotton, are contained in the annual report of the British Spinners' and Doublers' Association. This organisation, which has for long acted as a spearhead of opinion on cotton trade affairs, came out forcibly last year in calling for the abandonment of the Cotton Board in its present form. Although the current report uses a less belligerent tone, it is clear that important developments are ahead.

The need for a central body of the type represented by the Cotton Board, able to speak with authority on behalf of the whole cotton industry, is now widely accepted, says the report. But as the time for the next quinquennial review of the Board, scheduled to take place in 1965, draws nearer, "the question of the revision of its constitution requires the most earnest study." Pointing out that the views expressed by the Association last year were focussed entirely on the Board as representing the cotton industry, the report adds that the position is now more complicated. "The cotton, man-made fibres and silk industries have come much closer together in their central organisations and a still more widely based body for the whole textile industry has also been suggested. This long-term possibility should not be left out of account."

Commonwealth Trade Provisions

Few annual surveys presented by trade associations provide so much detail as that drawn up by the British Spinners' and Doublers' Association. The report not only covers the many facets of industrial influences but also records the events of the year and the actions taken by organisations which have a bearing on the trade position.

As a result, the document sometimes contains news which has not previously been released, such as the various activities of the Cotton Board in relation to the vexed issue of Commonwealth preference. It is scarcely surprising to learn that the official representatives of the industry are pressing the Government to initiate talks to modify the Ottawa Agreement or that amendments are being sought to the Commonwealth content system to restrict the quantity of duty-free cotton goods entering British ports, but most traders will welcome the intimation that representations of this kind are being made.

The source of origin of textile goods is another controversial aspect of imports; in this connection, efforts are being made to curtail quota evasion by the use of such methods as third countries providing points of transhipment or the processing of yarn and cloth in such a way as to hide their true identity. At the moment, certificates of origin are only required where duty-free or preferential treatment is involved, but the Cotton Board is keen to see all imported textiles so designated.

Closer Government Link

The more sympathetic attitude adopted by the British Government towards Lancashire cotton is also the subject of comment in the report. The industry has established an understanding that its representatives should meet the President of the Board of Trade at regular intervals, while detailed cases are discussed from time to time with specific departments of the Board of Trade.

The part played by the Government in the negotiations with India and Hong Kong on categorisation, in securing a limitation arrangement with Portugal, and in dealing promptly with the threat of imports from Macao and Korea are instances which support the view that those in office are now more attuned to the problems of textiles. On the Hong Kong agreement, which provides the basis for subsequent arrangements with other countries, the Association says that a valuable principle has been established which should go a long way towards preventing a concentration of imports on one category, causing undue damage to an individual sector of the United Kingdom textile industry.

A year ago, the report mentioned the introduction of a system of productivity comparison in which firms in the industry were being invited to participate. The fourth quarterly results have lately been collated, containing information supplied by about 52 mills. From the returns received, it is apparent that a number of mills have improved their productivity throughout the past year, it is stated. Participation in an international productivity comparison has been suggested, but, in order to join in such an exercise, 60 per cent of the spindles installed must be represented. Consideration, says the report, is currently being given to this matter.

Cost of Re-equipment

In a little over three months, the reorganisation scheme which was launched in 1959 will be finally completed. At the beginning of July, all new plant to qualify for the Government grant has to be installed; not until then will it be possible to gauge the full extent of the re-equipment carried out under the State-aided arrangement which was set in motion nearly five years ago.

Reasonable estimates, however, can now be made as to the expenditure likely to be incurred by the trade and by the Government in modernising Lancashire's mills. The latest figure puts the total spending under the Cotton Industry Act at about £57 million. On this basis, the Government liability would be some £14¼ million. The sum of £7,245,994 had actually been paid out in re-equipment grants at the end of last month. Within this total distribution by the Government, the spinning section had received £3,512,342, doublers £145,390, weaving section £3,049,277, and finishers £538,983.

Only a few outstanding payments have yet to be made on account of the scrapping programme which was carried out towards the end of 1959 and early in 1960. Most firms have received due compensation, but legal arguments are still proceeding in isolated cases which makes it impossible to give a final figure. According to the Board of Trade, the best available estimate of the cost to Treasury funds is £11,700,000. Of this, the spinning section has received approximately £6 million, the doubling section £239,000, weaving £4,280,000 and finishing £1,140,000.

More Cotton Supplies

Another record output was achieved in the countries administered by the British Cotton Growing Association in the 1962-63 season. Despite a fall of more than 300,000 bales from the peak long-staple production in the Sudan in the previous season, increases in the growth of American types in nearly all the other countries resulted in a net overall gain of some 85,000 bales.

In Uganda, an increase of 177,000 bales was recorded, but this represented no more than a recovery from the poor crop harvested in 1961-62 following unprecedented rainfall. The rise of 122,000 bales in the Nigerian crop, however, came close to breaking the record production achieved two years previously. Another country to maintain its impressive record was Tanganyika where cotton growing has been rapidly expanding recently.

In spite of the very encouraging picture thus presented, the report insists that there is still tremendous scope for improving yields through better methods of cultivation and the wider use of insecticides. These, it points out, would enable the farmer to maintain and increase his income, while expanding overall cotton production so necessary to the developing countries.

Pressure on Prices

Prices during 1963 were generally depressed, partly through the lower rates ruling for raw cotton, but mainly because of the substantial arrivals of low-cost imports from abroad. At all events, the comparative figures indicate a fresh fall in basic values and only in 1959 were quotations at as low a level. The official analysis of prices published by the Board of Trade bears out these statements. Based on the index figure of 100 calculated on the levels ruling in 1954, the comparative returns are as follows:

	Raw cotton	Cotton yarn	Spun rayon yarn	Cotton cloth	Rayon fabric
1955 ..	95.9	98.5	95.1	98.2	97.1
1956 ..	95.1	101.1	95.3	96.8	97.1
1957 ..	90.7	100.6	99.6	98.1	100.2
1958 ..	77.6	93.8	98.3	95.2	100.6
1959 ..	68.6	85.8	94.0	90.0	*104.9
1960 ..	75.0	99.5	99.5	103.7	112.0
1961 ..	74.8	98.8	99.1	106.6	114.8
1962 ..	73.2	90.4	91.8	*98.8	112.8
1963 ..	71.4	89.3	94.6	95.3	111.1

* Revised series.

The one section where an increase took place last year was spun rayon yarn, as, in this direction, the mills were able to secure more favourable terms. Apart from adjustments made in the basis in other directions, a further lowering of quotations took place in both raw cotton and cotton yarn, while cloth values declined by approximately 1½ per cent covering both cotton and man-made fibres.

FAIR PRICE SHOPS FOR WORKERS

EMPLOYERS OPPOSED TO COMPULSION

THE time-limit fixed for the implementation of the decision taken at the last meeting of the Standing Labour Committee, held on 27th December 1963, that consumer stores/fair price shops should be set up by employers in at least 95 per cent of the undertakings employing 300 or more workers within a period of two months, that is, by 29th February 1964, has already expired. The latest available data show that the number of establishments having consumer stores and fair price shops is not likely to exceed, say, 60 per cent of the total, as against the target of 95 per cent. According to information furnished at the aforesaid meeting of the Standing Labour Committee, out of 2,600 establishments employing 300 workers or more in the country, 1,213 had already established co-operative stores and 349 fair price shops, bringing the total number of establishments having co-operative stores and fair price shops to 1,562, or about 55 per cent of the total. Assuming that 5 or 10 per cent more had set up co-operative stores/fair price shops since then, the total would still be below the target of 95 per cent. Employers are, therefore, apprehensive that the Government would carry out its threat to resort to legislation to make opening of fair price shops/consumer stores obligatory on them. Notwithstanding this threat, some employers have clearly expressed their inability to comply with the recommendation of the Standing Labour Committee not because they are not in sympathy with the Government's idea but because of certain real and practical difficulties. The Employers' Federation of India has now submitted a memorandum to the Union Ministry of Labour enumerating the difficulties in the way and emphasising that legislation would not be of any help in achieving the objective. The memorandum submits that, from the long-term point of view, the establishment of consumer co-operative stores, in which workers will have a direct interest and stake, is preferable to the establishment of fair price shops and that employers are willing to render every assistance for the purpose, provided the workers concerned evinced interest.

Original Concept

Tracing the origin of the idea of consumer co-operative stores for industrial establishments, the memorandum recalls that it was agreed at the twentieth session of the Indian Labour Conference, held in August 1962, that consumer co-operative stores for workers should be established in industrial undertakings with financial assistance from employers and their participation in the management of such stores. The object of the scheme was to enable workers to purchase all articles of consumption, domestic requirements and the necessaries of life at reasonable prices. The Industrial Truce Resolution adopted in the wake of the declaration of the Emergency also laid down that, whenever necessary, steps should be taken to organise consumers' co-operatives in industrial undertakings. This proposal assumed new urgency in the context of rising prices and the Government's failure to hold the price line. The Standing Labour Committee, therefore, fixed a target for the establishment of fair price shops and a time limit for achieving the target. The Government had also indicated that, if this was not done, legislation would be enacted to make the setting up of consumer stores a statutory obligation as in the case of canteens under the Factories Act. Recalling these developments, the Employers' Federation points out that, while the original idea was that workers should be encouraged to set up co-operative stores (of course, with the assistance of employers) to help themselves, the concept has undergone a complete transformation within a period of about one and a half years. Employers are now asked to set up fair price shops or face legislation. The reason for this change in attitude on the part of the Government, the Federation presumes, is the rising trend of prices and the Government's belief that it could be checked only if fair price shops were set up by industrial units. While not questioning the validity of this belief, the Federation has pointed out the extent to which the tripartite decision has already been implemented and the reasons why it has not been fully implemented.

The Employers' Federation, according to the memorandum, believes that the provision of amenities to workers, whether medical, educational or any other, should be undertaken voluntarily by those employers who can afford it and not by compulsion from the Government. Many employers, it is pointed out, who had the necessary resources, have already provided various facilities including cheap grain shops and stores even before the Government thought of it. For example, the Bombay cotton mill industry has grain shops in 59 member mills and it has had them for the last twenty-five years. Likewise, in the cement industry, units affiliated to the Associated Cement Companies have co-operative stores set up for the benefit of workers. Industries which have developed in separate townships like Jamshedpur, Modinagar, etc., have also opened shops where workers can buy their necessaries at reasonable rates. And, since the declaration of the Emergency and the decision of the Standing Labour Committee, many more industrial undertakings have either set up fair price shops or consumer stores. For example, almost all the jute mills which are members of the Indian Jute Mills' Association have decided to set up consumers' stores or fair price shops. The progress made so far is thus not unsatisfactory. If it is not better than what it is, it is because of certain genuine problems and difficulties. The more important of them are the following:

Practical Difficulties

Workers' Co-operation: If a fair price shop is to be run on a sound basis, it is necessary that a fairly large proportion of the workers should register their names and buy their requirements from the shop. Past experience has clearly shown that, in quite a number of factories, there is a lack of adequate response from workers who are unwilling to purchase at the fair price shops. To give but one recent example, in a large unit employing 2,800 workers, only 13 have registered at the fair price shop. Similar instances can be multiplied from the record of units which have already set up fair price shops. It may be mentioned that workers' unions have seldom come forward to organise consumers' co-operative stores.

The reasons for workers' unwillingness to make their purchases are not far to seek. Some of them are already registered with outside shops. Others may find it inconvenient to purchase their requirements from the mills/factories shops and carry them to their residence which may be far away. In the case of big urban centres, the workers stay far from their places of work, and they would be required to incur additional expense on account of transporting the material to their home. In fact, in one factory, the management was asked by the workers to make home delivery of the goods purchased by them. In another factory, the union itself has written to the management that they give up their 'demand' for a fair price shop, as the workers are staying in faraway places. In such undertakings, workers prefer to get their supplies from shops located near their homes.

Credit Facilities: One of the benefits attributed to fair price shops/consumers stores set up by factories is the credit facility offered by them, as against cash payment in outside shops. The position is just the reverse. In fact, workers do enjoy greater credit facilities from most of the outside shops with whom they have regular dealings and from whom they purchase many items of consumption. Whereas the credit in the case of factory shops is limited to the next pay-day, workers can stretch it to any length of time with private shops. If it became necessary, they may well shift from one shop to another, which is a common practice in our country.

As regards Government fair price shops, workers purchase only a selected few controlled commodities which are not available outside, and the amount of cash needed for such items is not large. On the other hand, in factories, a large number of statutory deductions are made from the wages on account of P.F. and E.S.I. contributions and other benefits or amenities. If grain shop payments are also deducted the size of the take-home pay will be considerably reduced, and the workers will feel that they are not earning enough in spite of their efforts. This, undoubtedly, would have adverse psychological reactions and might possibly invite labour trouble. Most of the industrial units affiliated to the Federation do however provide credit facilities.

Lack of Supplies: Another practical difficulty in the matter of setting up fair price shops is that there is no definite assurances of supplies of essential foodgrains. For example, in West Bengal, employers are not allowed to make bulk purchases of rationed commodities in the open market. In such circumstances, it would be better to augment supplies to existing fair price shops, rather than open new shops in industrial undertakings. If, in spite of the existing uncertainty of supplies, mills or factories are forced to open fair price shops and workers are ordered to transfer their cards from outside shops to the mills' shops, there is every likelihood of hardship to the workers and an uncalled for disturbance of the prevailing pattern of distribution. Such conditions may well be exploited by some trade union leaders to whip up agitation, resulting in disturbance of industrial peace. The logical argument that employers cannot be held responsible for the quality and quantity of foodgrains supplied by Government would not satisfy those bent on agitation.

Apart from these difficulties, which are common to all employers, there are certain special problems faced by comparatively small employers. Some of the undertakings may not be making any profits or may actually be running at a loss. In such cases, it would be unfair and wrong to ask such undertakings to subsidise consumer co-operative stores. Some undertakings may have other problems such as lack of suitable accommodation.

State Governments' Stand

These are not the only difficulties. Fair price shops and consumer stores cannot be set up, unless the State Governments lend a helping hand, and some of the State Governments at least, the Employers' Federation avers, have not been very enthusiastic about it. And they have some good reasons for it too. Thus, it is pointed out, the Kerala Government does not want employers to open fair price shops, because the Government has over 6,200 shops of its own all over the State. A similar stand is said to have been taken by the Madhya Pradesh Government. The West Bengal Government also does not seem to attach much importance to the opening of fair price shops by employers as it considers the influx of refugees and the problem of feeding, clothing and rehabilitating them more urgent.

In view of all these difficulties and problems, the employers' Federation is of the opinion that it would be unwise to force employers by law to open consumer stores/fair price shops. While the Federation concedes that holding the price line is of the utmost importance, it feels that a more effective way of doing so would be to control the prices of essential commodities at source. Control of prices at the retail end, without introducing strict rationing, it points out, would not be effective and is likely to produce serious repercussions.

It is evident from the foregoing account that the Federation is not against the scheme as such but only wants that no unit, which is not in a position to open consumer stores/fair price shops, should be compelled to do so. Obviously, having been a party to the tripartite decision taken at the Standing Labour Committee, it cannot, and probably does not want to, oppose the scheme in principle. It only wants the Government to appreciate the very real difficulties faced by some units and not to force them to establish fair price shops, unless, of course, the Government is prepared to help them overcome the difficulties. From the difficulties cited by the Federation it is evident that the Standing Labour Committee did not carefully consider all the practical aspects of the question of establishing fair price shops. It is to be hoped that the Government would examine the issue afresh from the practical standpoint before proceeding with the matter further.

Within the framework of the general social security, the social services that are part of business concerns' arrangements are of great importance in the Federal Republic of Germany. Industrial firms have complemented or prepared the way for official social policy by a variety of measures and services. It has been estimated that every year more than DM 1,500 million or 2 per cent of the total paid out in wages and salaries, is spent by firms by way of voluntary social services. These comprise health services through works doctors and convalescent homes, the construction of houses, meals at work, staff rooms, sports facilities, holiday bonuses, kindergartens, etc.

NEW COMPANY FORMATIONS

ANALYSIS OF TRENDS IN 1962-63

THE latest annual report on the working and administration of the Companies Act 1956 is for the year ended 31st March 1963. It retains its usual authoritative character in the presentation and analysis of data pertaining to company registrations, inter-company investments, trends in corporate management, companies at work and so on. The data relating to new registrations are particularly comprehensive, providing a comparative picture—State-wise, region-wise, industry-wise, size-wise, etc.—for three successive years, namely, 1960-61, 1961-62 and 1962-63. It may be noted at the outset that the rising trend in the formation of new companies, which was in evidence from 1957-58 to 1960-61, was reversed in 1961-62 when the aggregate number of new registrations was 1,614, as compared with 1,683 in 1960-61. The latest year under review witnessed a further decline in the registration of new companies, the relevant aggregate number being no more than 1,497. But a redeeming feature is that the decline was confined solely to the number of private companies registered. In fact, the decline conceals an increase in the number of public companies registered during 1961-62 (199) and 1962-63 (227). It is, incidentally, noteworthy that the number of public companies registered during 1962-63 was higher than the number registered in any year since the Companies Act 1956, came into force. The relevant aggregates are noted in the following table:

TABLE I

(Capital in crores of rupees)

Year	Public		Private		Total	
	No.	Authorised capital	No.	Authorised capital	No.	Authorised capital
1960-61 ..	153	157.5	1,530	129.6	1,683	287.1
1961-62 ..	199	179.2	1,415	145.7	1,614	324.9
1962-63 ..	227	175.4	1,270	82.2	1,497	257.6

The State-wise distribution of new registrations reveals the continuing trend of new companies being formed mostly in four States, namely, West Bengal, Maharashtra, Madras and Delhi. Table II gives the break-up figures in this connection:

TABLE II

(Capital in crores of rupees)

State	1960-61		1961-62		1962-63	
	No.	Authorised capital	No.	Authorised capital	No.	Authorised capital
West Bengal	431	59.6	392	53.9	327	45.4
Maharashtra	335	88.0	318	72.2	293	72.7
Madras ..	343	57.2	284	21.3	252	32.4
Delhi ..	197	25.2	254	33.5	228	26.0
Other States	377	57.1	366	144.0	387	81.0
Total ..	1,683	287.1	1,614	324.9	1,497	257.5

The region-wise trends, however, reveal a more balanced distribution of new companies. The Eastern region (comprising West Bengal, Bihar, Orissa, Assam, etc.) accounted for 388 new registrations in 1962-63, as compared with 428 in 1961-62. The corresponding figures for the Western region (comprising Gujarat, Maharashtra, Madhya Pradesh) are 371 and 414, for the Southern region (comprising Madras, Andhra Pradesh, Mysore and Kerala) 395 and 391 and for the Northern region (comprising Delhi, Punjab, Himachal Pradesh, Rajasthan and Uttar Pradesh) 343 and 381, respectively. As for the industrial pattern of new registrations, it is seen from the report that, as in previous years, the largest number of companies was registered in 1962-63 for purposes of processing and manufacturing foodstuffs, textiles, leather, metals, chemicals and other goods. The aggregate authorised capital of the new companies in this group amounted to Rs. 191.8 crores or about 74 per cent of the total authorised capital of all new registrations in 1962-63. Figures in respect of all the industrial groups are given below:

TABLE III

(Capital in crores of rupees)

Industrial groups	No. of new companies	Authorised capital
Agriculture and allied activities	26	20.5
Processing and manufacture—foodstuffs, textiles, leather	145	43.3
Processing and manufacture—metals and chemicals	399	101.2
Processing and manufacture—not elsewhere classified	171	47.3
Construction and utilities	30	3.9
Commerce (trade and finance)	419	15.5
Transport, communication and storage ..	171	3.1
Community and business services ..	52	4.6
Personal and other services	53	3.9
Total* ..	1,497	257.6

* The total includes certain categories of companies not shown in the above industrial groups.

The management pattern of new companies reveals a marked preference for the "Board of Directors" form of management. As many as 1,072 new companies registered in 1962-63 proposed to adopt the "Board of Directors" form of management, as compared with 1,063 in 1961-62 and 1,062 in 1960-61. Managing Directors were proposed to be had by 388 new companies in 1962-63, as compared with 515 in 1961-62 and 596 in 1960-61.

The size pattern of new companies in 1962-63 continued to be more or less the same as in previous years. It will be seen from the following table that, in that year, only 87 new companies out of a total of 1,497 had authorised capital of Rs. one crore and above. These 87 included seven Government companies with an aggregate authorised capital of Rs. 19.5 crores:

TABLE IV

Size-group according to authorised capital	1960-61	1961-62	1962-63
Below Rs. 1 lakh	370	402	348
Rs. 1 lakh-Rs. 5 lakhs	566	564	475
Rs. 5 lakhs-Rs. 10 lakhs ..	381	275	292
Rs. 10 lakhs-Rs. 25 lakhs ..	177	194	170
Rs. 25 lakhs-Rs. 50 lakhs ..	47	48	56
Rs. 50 lakhs-Rs. 1 crore ..	53	57	80
Rs. 1 crore and above	89	74	87
Total ..	1,683	1,614	1,497

In the year under review eight Government companies in all were registered with a total authorised capital of Rs. 20.5 crores. Only one of these companies was floated by the Central Government, while the remaining seven companies were floated by the State Governments of Orissa, Maharashtra, Kerala and Rajasthan.

Government and Non-Government Companies

The total number of companies at work in the Indian Union as on 31st March 1963 is placed at 25,524 with an aggregate paid-up capital of about Rs. 2,185 crores. The growth in the number of companies at work and their aggregate paid-up capital are tabulated below:

TABLE V

(Paid-up capital in crores of rupees)

Year	Companies with share capital						No. of companies limited by guarantee and associations not for profit
	Public		Private		Total		
	No.	Paid-up capital	No.	Paid-up capital	No.	Paid-up capital	
1960-61 ..	6,702	945.7	19,447	870.3	26,149	1,816.0	1,169
1961-62 ..	5,971	1,005.3	18,881	968.6	24,852	1,973.9	1,143
1962-63 ..	5,994	1,086.9	19,530	1,098.3	25,524	2,185.2	1,153

The above table provides aggregate figures for all companies—both Government and non-Government. Available break-up figures show that Government companies (that is, companies in the public sector) numbered 160, as on 31st March 1963, with an aggregate paid-up capital of Rs. 786 crores, of which Rs. 735 crores was held by the Central Government, Rs. 46 crores by the State Governments and Rs. 5 crores by private interests. The respective shares of public-sector companies and private-sector companies in the aggregate paid-up capital, as at the end of 1962-63, came to 38 per cent and 62 per cent. Incidentally, it may also be noted that, while the aggregate paid-up capital of all companies (both Government and non-Government) has increased from about Rs. 1,619 crores, as at the end of 1959-60, to Rs. 2,185 crores as at the end of 1962-63, the paid-up capital of Government companies alone has increased from about Rs. 468 crores to Rs. 786 crores during the same period. In other words, of the increase of Rs. 566 crores in the aggregate paid-up capital of all companies during the period, public-sector companies accounted for Rs. 318 crores and private-sector companies only for Rs. 248 crores. It will thus be seen that the public sector has been growing at a faster pace than the private sector.

New Issue Market

The report has also given the findings of an inquiry conducted by the Company Law Administration into the trends in the new issue market during 1962-63. The study related to the method of promotion of public companies, project costs, cost of raising capital, etc. The scope of the analysis was extended to include the details regarding foreign financial participation, institutional financing by way of either loan or subscription to capital, as well as the current trends noticed in underwriting. The number of prospectuses studied during the year was 55 (excluding debenture prospectuses) involving a total issued capital of Rs. 21.7 crores. Of this, nearly 92 per cent (Rs. 19.9 crores) was in equity shares and the remaining eight per cent (Rs. 1.8 crores) in preference shares. The analysis further disclosed that 51.3 per cent of the capital had been issued to the public. The subscription of foreign collaborators amounted to 23 per cent and the amount subscribed by promoters, directors, etc. to 25.7 per cent. The principal institutional contributors during the year were the Life Insurance Corporation of India and the Bihar State Industrial Development Corporation Ltd. The aggregate project cost of the 55 companies covered by the survey amounted to Rs. 45.3 crores. The share capital formed the main source of financing this cost. In fact, 53 per cent of this amount was met by share capital, and a further 30 per cent by loans from banks and financial institutions. The total expenditure incurred by the companies covered by the survey for raising funds from the capital market was about Rs. 87 lakhs which worked out to 4 per cent of the capital issued and 1.9 per cent of the project cost. A substantial amount (Rs. 38 lakhs) was incurred in the form of expenses of issue (excluding underwriting commission and brokerage). Underwriting commission and brokerage payable by the companies was estimated at Rs. 28 lakhs, which is 32 per cent of the total expenses.

Inter-company Loans

One of the chapters in the report deals with inter-company loans and investments. It is seen that, under Section 295 of the Companies Act—which provides that a public company must obtain the approval of the Central Government before it makes loans or gives guarantees for loans to its directors, the relatives of directors, and firms/bodies corporate in which the directors may be interested—the applications approved in 1962-63 were 20, involving an aggregate amount of about Rs. 1.7 crore only, as compared with 17 applications and Rs. 3.1 crores, respectively, in the previous year. As the number of applications received under Section 295 during the last five years has come to only 30 per annum, the report has drawn the reasonable inference that Section 295 has achieved the objective of restraining public companies from diverting their funds for the benefit of their directors or their relatives. Section 370, which enables the shareholders to exercise some measure of control on the utilisation of the corporate funds as it requires the passing of a special resolution before a company (whether public or private) makes any loan to or gives any guarantee on behalf of another company under the same management as the lending company, has also exercised some restraint on the utilisation of corporate funds for inter-company lending.

But the scope of both Sections—295 and 375—is limited and the provisions of these sections, it is said, could be circumvented by manipulation of shareholdings or by the appointment of nominee directors. On a scrutiny of the balance-sheets of certain groups of companies, the report continues, it has been noticed that the method of "circular loans," which has been adversely commented upon by the Commission of Inquiry into the affairs of Dalmia-Jain group of companies, was also adopted by one or two other business groups. The practice adopted by these groups was that companies in affluent circumstances resorted to substantial borrowings to enable them to advance funds to companies which were neither associates of their managing agents nor companies under the same management as defined in the Act. Such non-associate companies, in their turn, advanced loans to other companies in which the managing agents of the companies with good financial position were interested. The last-named borrowing companies again advanced loans to the weaker units of the group, which could not normally expect to obtain financial accommodation from banks and other financial institutions without attracting the provisions of either Section 295 or 370. As the practice of granting such "circular loans" is neither desirable nor in consonance with sound company practice, the question of appropriate remedial measures is at present engaging the attention of the Department.

Inter-company investments are covered by Section 372 which seeks to regulate the investments by a public company or a private com-

KIRLOSKAR CUMMINS LIMITED

SPEECH OF CHAIRMAN, MR. S. L. KIRLOSKAR

DEVELOPMENT REBATE MUST BE CONTINUED

A FERVENT plea to the Union Finance Minister to reconsider his decision to withdraw development rebate allowed on new investments in plant and machinery after 1st April 1966 was put forward by Mr. S. L. Kirloskar, Chairman of Kirloskar Cummins Limited, in his speech at the Second Annual General Meeting of the Company held on Friday, 27th March 1964. The development rebate, Mr. Kirloskar said, was the only attraction under the tax laws to promote new investments in capital equipment. He warned that abolition of this rebate would result in a reduction in initial investment, besides affecting expansion programme, inasmuch as new investments in capital equipment would not be attractive any more. He criticised the powers assumed by the Government for reviewing the judgment of managements of companies in respect of certain matters such as transfers of shares. Nowhere in the industrially advanced countries, he pointed out, had Government the power to sit in judgment over the decisions of managements. Since such interference would rapidly scare away the much needed foreign investment and participation, he urged the Government to maintain a policy of non-interference unless the decision of a Board was *ex facie mala fide*.

The following is the full text of Mr. Kirloskar's speech:

LADIES AND GENTLEMEN,

It is my pleasure to welcome you all to the second annual general meeting of the Company. The Directors' report and the audited statement of accounts for the year ended 30th September 1963 have been in your hands for some time and, now with your permission, I shall take them as read.

Accounts

You will have noticed from the Directors' report that your Company has, during the year under report, incurred a net loss of Rs. 4,39,515.78 after transferring Rs. 7,40,228.73 to unallocated capital expenditure and providing Rs. 40,500.00 for tax. This was expected. It is an unavoidable feature in case of all new enterprises, but, as this is only your Company's second operating year, I do not think there is any reason to be alarmed about this year's loss.

Company's Progress

You will be very happy to note and see for yourselves the completion of the main factory building of which the opening ceremony is to take place tomorrow at the hands of the Hon'ble Shri Y. B. Chavan, the Union Defence Minister, at a function to which you all have been invited.

Some of the machine tools received in the initial stages were installed in the Multipurpose Hall and we had started doing the job work and training our workmen with the aid of these machines. They have now been installed in their proper places in the main factory building. We have received about 75 per cent of the total number of machine tools required, most of which have been installed and have also started operating.

In addition to the main factory building, the annealing shed, cycle stand, H.T. metering rooms and work of water mains is virtually completed. Electrical installation work has also progressed well and the factory is being served with energy from the Maharashtra State Electricity Board. However, the inadequate power supply, due to lack of equipment with the Board, has compelled us to make our own arrangements and purchase a diesel generating set to supplement about 200 kVA. to the power requirements of the factory. Efforts are being made for further power augmentation.

Production

Your Company has received the first import licence for the import of components required for the phased manufacturing programme. The first consignment of a few engines in C.K.D. condition has arrived. As a matter of fact, about six engines, assembled with the utilisation of these parts, are now ready, completely tested and will be shipped in a day or two. It is our main object to achieve maximum indigenous content in the least possible time and we are endeavouring to locate indigenous component suppliers. All necessary help, including technical advice and guidance, is being extended to them for improving their quality and supply of products at lower costs. A supplier visiting programme by our technical staff is being organised to assist the suppliers in maintaining the quality of the sub-assemblies and parts, including pre-supply testing to ensure lowering of rejection percentage. This is a long and continuous process involving considerable efforts, but is the only sure way to develop the Indian sources for the parts required by us.

Our training scheme for technical staff and service personnel has been progressing well. There is, however, a dearth of skilled workers in Poona which only recently became an industrial town, and to overcome this difficulty, your Company has started its own workers' training programme to ensure a steady work force of trained skilled workmen. Also, in order to assist our customers and users of Cummins Engines, schemes are under way to organise service training schools at various centres. This, I am sure, will go a long way in ensuring the proper operation and maintenance of our products.

Industrial Relations

The management have arrived at a settlement with the workers, in the matter of categorisation, wages and dearness allowance. The agreement is for a period of three years and it is hoped from the spirit in which it was reached that cordial industrial relations will be happily maintained during the years to come.

Finances

I refer you to my speech at the last annual general meeting and am happy to inform you that the loan from the Agency for International Development, U.S., has been sanctioned and disbursements have started. Arrangements have also been made with the Company's bankers to ensure funds for working capital when the Company goes in full-scale production.

Sales Prospects

As you are aware, we have been recently licensed to manufacture 60-150 h.p. engines. This, together with our original licensed range, now brings our capacity in the range of 60-800 h.p. and will enable us to probe into a wider range of markets. Our licensed range covers many important fields of application. Negotiations are afoot for our engines for railway, and marine and heavy tractor uses. The field in mining machinery and mechanised irrigation, dredging, power generation, etc., is unlimited. You will agree with me that sales of quality Cummins Engines should present no difficulty.

Share Transfer Fees

A few comments on the proposal of the Government to require limited companies to waive share transfer fees, splitting fees and consolidation fees, would not be out of place here. We have recently received a circular from the Stock Exchange, Bombay, conveying to us the desire of the Government to follow the suit of English companies and abolish the transfer charges by companies on the registration of share transfer. It is, no doubt, desirable that the capital of a company should be spread over as wide a number of shareholders as possible, in preference to concentration of power in a few hands. Reduction or dispensing with transfer fee is aimed at achieving this. As you all know, no company makes any profits in these fees, which are far too small as compared to the clerical work and Board's responsibility involved. Even so, the companies may do away with fees. I may be permitted to point out here that the stamp fee Government is charging for share transfers is very much heavier than the nominal transfer fee charged by companies and, therefore, it would be in the fitness of things for Government themselves to remove the necessity of stamp duty on transfer. This, together with free-of-charge transfers by companies, will really have the desired effect.

Union Budget Proposals

While putting up the budget proposals for the year 1964-65, our Finance Minister focussed on the problems of prices, growth and balance of payments. He also revealed that the most disturbing feature on the economic scene was the rise in the price level. The wholesale price index rose by as much as 7.2 per cent between the end of March 1963 and the end of January 1964, as against 8 per cent for the first three years of the current Plan period. This is, certainly, a grave situation. Though the fact has been attributed to the inadequate rate of growth in agriculture, I feel that this sector alone cannot be blamed for the general rise in prices. It is recognised that the broad pattern of investment is necessary, not only in irrigation works, agriculture, fertiliser plant, power and transport programme, but is also essential in the fields of private industry in order to meet the general rise in demand in our scarcity economy and to meet the rise in prices.

Controls will not give us the desired result. Further investments and increased production in all these fields will alone give us these results. This means stepping up of investment activity as a whole, and a climate has to be created for infusing confidence in the minds of businessmen and the public to invest their funds in the industrial development of the country. No doubt, the Hon'ble Finance Minister has offered a measure of relief to the industries as a whole and has also recognised the need for full use of private capital sources in the world outside to augment the external aid.

The abolition of the Super Tax on all intercorporate dividends is the first step in this direction. The Finance Minister has also suggested amendments to the part of the Income-tax Act relating to foreign technicians, and a change of the basic policy to allow more and more of foreign capital to participate in the industrial development of the country. I feel this would certainly go some way to help more capital participation of foreign companies and thus bring in the much needed foreign exchange and capital investments.

Development Rebate

Welcome as these proposals are, the Finance Minister has, at the same time, created conditions of uncertainty by his pronouncements on the development rebate allowed on new investments in plant and machinery. He has stated that he would like to discontinue the present general availability of development rebate and to confine it to a few selected industries. He has further advised that the continuance of the development rebate in its present form beyond the 1st April 1966 should not be assumed. Government have also proposed to assume power to direct, if they consider it necessary or expedient, that the deduction allowable on account of development rebate shall not be allowed in respect of ships acquired or machinery or plant installed after such date as may be specified in their *Gazette* notification. The development rebate is the only attraction under our tax laws to promote new investments in capital equipment. If it is not continued, it will result in a reduction in the initial investment, besides affecting our expansion programmes inasmuch as new investments in capital equipment would not be attractive any more. I do not think, and many of you will agree with me, that the Indian industry has yet reached a stage where it requires no more encouragement or assistance from Government. I would suggest that this matter be reconsidered on its merits and that the rebate be continued in order to infuse confidence in the minds of the businessmen who are planning to invest in new plant and machinery, either by way of new undertakings or under expansion programmes.

Unnecessary Interference

I would like to offer a few comments on certain powers exercised by Government under the Companies Act, in reviewing the judgment of the management in respect of certain matters. One of these concerns registration of transfer of shares. Under Section 111 of the Companies Act, 1956, Government has the power to review the judgment of the Board of Directors when the latter refuse to register transfer of shares. The Company Law and almost all the Articles of Association of companies contain provisions recognising the right of the Board of Directors, without assigning any reasons, to refuse to transfer any shares. The Stock Exchange also recognises the need for such power; so that whatever agreement we execute with the Stock Exchange provides merely that the Board of Directors may take into confidence the President of the Stock Exchange when such cases arise. Beyond this, nothing more is expected. Normally, almost all transfers of shares are freely allowed and no undue restrictions are placed. However, when the Board is faced with the problem of the best interests of the company *vis-a-vis* the admission of a person who is a known mischief-maker, and apprehends that the admission of such a person as a member, might create difficulties in the proper and smooth running of the company, it is constrained, taking the wider interests of the company, to refuse to accept such a person as a member. In such cases, the person has been given a right under the Company Law to approach the Central Government who, in their turn, sit in judgment on the Board's decision.

The Company Law itself, in my opinion, provides adequate safeguards to the public as well as the company's shareholders. The Board of Directors are the best judges to decide what is harmful and what is in the best interests of the company and, in such cases, unless the refusal to register a share transfer has arisen purely out of personal spite or animus proved beyond doubt, Government should make it a policy to avoid, as far as possible, any interference with the judgment of the Board of Directors in refusing such a person as a shareholder. This would create confidence in the mind of the management. Also, a large number of foreign firms are working in collaboration with industries in India. Many of them have invested large amounts in the industrial sector. Nowhere in the industrially advanced countries have Government the power to sit in judgment upon the management's decision in this behalf. Hence, should it unfortunately be the policy of our Government to look at each such case suspiciously, it would rapidly scare away the much needed foreign investment and participation in our industrial development. Government should, therefore, maintain a policy of non-interference unless the decision of the Board is *ex facie mala fide*.

Indigenous Manufactures and Government Departments

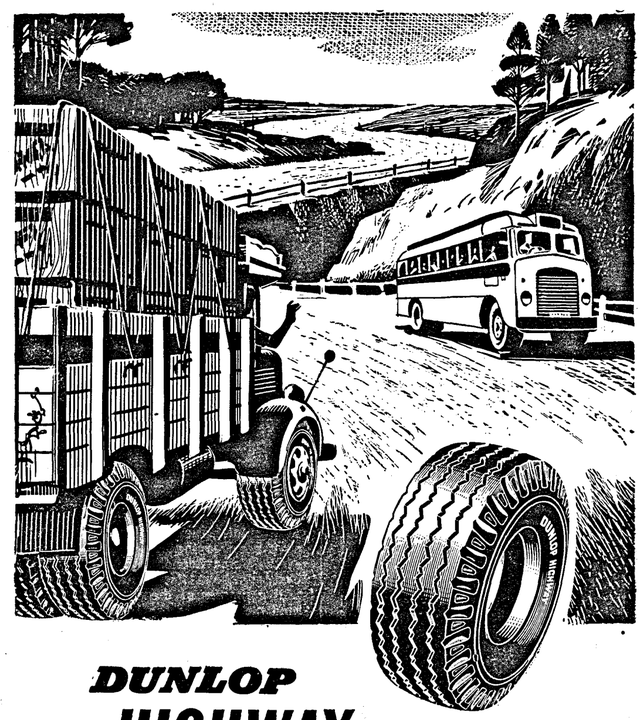
Over the last three Plans, we have been tutored on the need for planning based on priorities and allocation of scarce resources. Government have given priorities to specific industries and have refused their consent to other industries on account of non-availability or scarcity of resources required. Sometimes, even the expansion plans are stalled with a view to conserving existing resources. One of the basic factors behind this policy is the availability of foreign exchange. Government have repeatedly avowed that, while licensing a new industry, they have to take into consideration the existing capacities in the country and the desirability of allowing few new entrants into the same field in order to save foreign exchange. This is well and good as far as it goes. But it has been our experience that many Government departments, without taking into consideration the capacity available in the country or the suitability of the products made in India, go on specifying foreign products for their use. Instances exist where the product has been made in India or was under development and Government departments have plainly recommended the imported item. By this they are merely spending a considerable amount of foreign exchange which, we all know, is very scarce. We not only spend it at the initial stages of import of such items, but continue to do so on import of spares for maintenance, thus incurring a recurring expenditure which cannot be avoided once the initial imports are allowed. This policy has severely affected many industrial units I know of.

Government should urgently look into this matter and should not only encourage our industries by granting adequate protection by means of assistance, tariff rates, etc., but should also formulate a policy of utilising to the maximum extent Indian-made products and not find ways and excuses for importing such products. This applies not only to the immediate requirements but also to the future plans.

Ladies and gentlemen, I have done. I would like to thank first our collaborators and the staff for putting in untiring effort towards the progress of the Company and an early start of production, and, secondly, you, for having attended this meeting.

Thank you.

Note: *This does not purport to be a record of the proceedings of the meeting.*



DUNLOP HIGHWAY for highest mileage on long heavy hauls

The Dunlop Highway Truck and Bus Tyre assures higher initial tread mileage on heavily laden long distance trucks and modern fast buses. And finally, when the tyre is worn smooth, the excellent retreadability of the casing means that it will continue to serve for many more thousands of miles.

AMERICAN LETTER

HOW REAL IS POVERTY IN THE U.S.

MISGIVINGS ABOUT CREEPING SOCIALISM

By N. Pattabhi Raman

NEW YORK, 28th *March*

REPORTS that there is poverty in America are not nasty rumours; nor is the "War Against Poverty" that President Lyndon B. Johnson proclaimed this month a phony, rhetorical war launched in an election year.

The problem of poverty is, indeed, a real one for affluent America. It is evident as one travels through the nation's major urban centres, its small towns or its rural areas. It is seen in the faces of the unemployed and the underemployed; in the sad countenances of the aged who have inadequate social security and far from satisfactory health care; in the angry, hopeless looks of the youth from poor or broken families; in the homes in rural areas that are deteriorating because the small farmer is being squeezed out and cannot afford the costs of maintenance.

Even as poverty is a social reality, the Administration's crusade for "total victory" against indigence is a sincere one, regardless of whether it is adequate in its premises or content. It reflects a genuine concern for the hapless position of some 30 million Americans who live outside the mainstream of American society, getting only the crumbs. "We want a Government . . . that is compassionate, that meets the need of the people for health and for education, and for physical and mental and spiritual strength," President Johnson has said, explaining his Administration's approach to the crusade.

Post-war Image

The image of post-war America has been one of affluence, an image that received subliminal support from John Kenneth Galbraith's *The Affluent Society*. (The Professor's purpose in the book was not merely to emphasise America's affluence, but to pinpoint the unmet needs in education, housing, health, etc.). The reports of poverty could, therefore, come as a shock or might suggest that islands of poverty have just come to surface in a sea of affluence. But such is not the case. Rather what is seen today is a left-over of the wider poverty of the 1930's.

During the height of the Great Depression, President Franklin D. Roosevelt loosely estimated that about one-third of the nation was afflicted with poverty, lacking the income needed to maintain a minimum standard of living. During the Second World War and the Post-war years, the economy expanded impressively and, in spite of periodic recessions and in spite of the sluggish rate of growth since 1957, it is today more prosperous than ever before. Yet the growth in national prosperity—in incomes, in jobs, in the production of a variety of goods and services—has by-passed a segment of the growing population. Thus, while the expansion of the economy during the last 25 years helped to reduce poverty from the level of the Depression years, it has not wiped it out. In the estimation of the Kennedy-Johnson Administration, a fifth of the nation's families still live in want.

According to the President's Council of Economic Advisers, this fifth is constituted by the nine million families (out of a total of 47 million families in the U.S.) which have an annual cash income of less than $3,000. "This is not enough money to maintain a decent standard of living for the family," Walter Lippmann observed recently, discussing the issue. He added: "Though $3,000 a year would be affluence in a village in India, it is harsh poverty in the United States."

Nature of Poverty

The nature of this poverty was explained by President Johnson in a special message to Congress which has to approve his "war" proposals. "It means a daily struggle to secure the necessities for even a meagre existence. It means that the abundance, the comforts, the opportunities they (the poor) see all around them are beyond their grasp. Worst of all, it means hopelessness for the young. The young man or woman who grows up without a decent education, in a broken home, in a hostile and squalid environment, in ill health or in the face of racial injustice—that young man or woman is often trapped in a life of poverty. He does not have the skills demanded by a complex society. He does not know how to acquire those skills. He faces a mounting sense of despair which drains initiative, ambition and energy."

It is against the backdrop of this picture of an affluent society with a significant extent of poverty, of a prosperous economy with underemployed manpower and material resources, that President Johnson declared in his Economic Report to Congress:

> That "new records" in output and employment are not enough;
>
> That 4 million unemployed and 13 per cent idle factory capacity are intolerable;
>
> That the acid test of economic policy is whether we can make full use of our growing labour force and our rising productivity—our full potential.
>
> We have not yet met this test. New high ground is not the summit.

Not all agree that poverty is as extensive as Administration spokesmen and the liberals have been saying it is. Republican members of the Joint Economic Committee of the U.S. Congress have flatly observed, for example: "All estimates of the extent of poverty of the kind presented in the 1964 Economic Report of the President have a systematic upward bias which paints conditions worse than they are."

Critics' Viewpoint

The critics argue that the official yardstick of cash annual income ignores income in kind and liquid assets. (Even if the measure is weighted for these factors, the proportion of poor families is still about the same, according to Leon H. Keyserling, Economic Adviser to President Truman.) They cite surveys to point out that 45 per cent of the families with incomes between $2,000 and $3,000 own their own homes, two-thirds of them mortgage-free; that 40 per cent of the families with incomes less than $3,000 owned cars in 1960; and that 14 per cent actually bought new cars in that year. They also cite a study by a Census Bureau official who reported that, in the severely depressed area of a county in the State of Kentucky, 88 per cent of the homes have washing machines, 67 per cent have television sets, 45 per cent have telephones, and 59 per cent have cars.

On the basis of these findings, the Republican minority in the Joint Economic Committee concluded: "No objective definition of poverty exists. In America, as our standard of living rises, so does our idea of what is substandard. Although too many Americans remain poor, they are better off than the poor of the earlier years and far better off than the poor in other countries around the world."

All this quibbling about a proper definition is, in the final analysis, irrelevant. It does not help the poor Americans of today to be told that they are better off than their forbears (moreover, it is not entirely correct to say so); nor does it help them to know that poor people in other countries have to live in greater wretchedness. That this kind of argument does not satisfy the underprivileged is being made crystal clear today by the Negro Revolution which is shaking the American society to its foundations.

The statistics about home and car ownership are, indeed, misleading. Millions of homes owned by the poor are substandard shacks, and countless homes are falling apart, because their owners cannot afford to keep them up. The distinction between home ownership and rental housing is not, as Keyserling pointed out recently, the distinction between decent housing and indecent housing. According to the 1960 census, about one family in every six which lived in their own "homes" lived nonetheless in unsound housing. And the fact that only one family in every seven with incomes under $3,000 bought a new car indicates that the average age of the cars owned by this income group was very high. A jalopy does not usually indicate affluence, unless it is in the hands of a man who collects vintage cars. Moreover, the car might be a necessity to get to work rather than expendable. Homes and cars notwithstanding, the vast majority of the families with incomes less than $3,000 cannot afford the cost of decent housing, and adequate medical care, and a great many are malnutritioned and suffer from other basic unmet needs.

There are quite a few people in America who, like Senator Barry Goldwater, believe that most of the poor are so because they are lazy or dumb. This is Social Darwinism stated in its most callous form. Apart from lacking in compassion, it ignores the fact that the poor are, in most cases, caught in a vicious circle with no apparent exits.

The Administration recognises this fact. Its goal is not to sweep the poor and the unemployed under the welfare rug, but to break through the vicious cycle of low living standards, low education, low productivity, and impoverishment that causes poverty to persist from generation to generation. It calls for long-term investment in education, health, housing, urban rehabilitation and area redevelopment. It calls also for measures to end the many discriminations that fence in the poor, keeping them in their poverty.

President's Approach

President Johnson explained the Administration's approach in a special message to Congress. The proposed anti-poverty programme "strikes at the causes and not just the consequences of poverty," he said. "The war on poverty," he added, "is not a struggle simply to support the (poor) people, to make them dependent on the generosity of the others. It is a struggle to give people a chance. It is an effort to allow them to develop and use their capacities . . . so that they can share . . . in the promise of this nation. We do this first of all because it is right that we do this. . . . We do it also because helping some will increase the prosperity of all. Our fight against poverty will be an investment in the most valuable of our resources—the skills and strength of our people. And in the future, as in the past, this investment will return its cost manyfold to our entire economy."

This "investment" that the President mentioned is expected to total some $970 million in terms of dollar expenditures. It represents one per cent of the national budget or about two per cent of the defence outlay, and will not require additional revenues since it will be met out of savings in public expenditures instituted by Mr. Johnson.

The anti-poverty programme is expected to be co-ordinated by an Office of Economic Opportunity under the leadership of Robert Sargent Shriver, Jr., who has been an outstanding success as Director of the Peace Corps. It includes many measures that were developed during the days of President Kennedy but which have been languishing in Congressional committees. It will emphasise education and job training and concentrate on young people; it will also support, with experienced men and federal money, economic and social programmes developed by local communities in accordance with local needs. It will seek to mount an integrated, concerted attack, though its administration will be in the hands of several different agencies of the Government.

Is "total victory" in sight? President Johnson himself has stated that the "war" will be a long and arduous one, that it is impossible to do too much too fast, since poverty is deep-rooted and its causes are many and different. For these same reasons, however, there are those who believe that the proposed programme is not massive enough. And then there are those who are opposed to welfarism and Federal Government action; they are suspicious of "creeping socialism" and opposed to many of the proposals in the Administration's anti-poverty programme. All these forces may be expected to surface when Congress debates the issue and its answers.

NEW PRODUCTS AND PROCESSES

Automatic Control of Crossing Barriers

A NEW system of track-circuiting, which can be used to give automatic control of highway crossing installations, has been introduced by Westinghouse Brake and Signal Company Ltd. of Britain. It uses audio-frequency current in the range 1.6 to 3.5 Kc/sec., which is produced by a transistorised transmitter at the beginning of the track section and is picked up by a transistorised receiver unit at the end of the section. When a train enters the section, the output of the receiver releases a D.C. relay which flashes warning lights and lowers the highway barriers. As soon as the train leaves the section, the barriers are automatically raised. On single-track line the use of overlapping track circuits and interlocking relays enables approaching trains to be distinguished from receding trains. No insulated block joints are needed to define the track section, and audio-frequency track-circuiting can be superimposed upon existing track circuits using D.C. or commercial-frequency A.C. current. When two or more audio-frequency track circuits overlap or are adjacent, a distinctive frequency is allocated to each. Up to four frequencies are available. In steam or diesel traction areas simple audio-frequency current is used; in electric traction territory the transmitter and receiver units provide modulation and de-modulation respectively of the audio-frequency signalling currents, the modulated frequency being 21 c/s. This prevents false operation of the relay caused by interference from the traction current.

Recording Wagon Movements

A system for automatically reading and recording the identification numbers of railway wagons moving at speeds up to 100 m.p.h., and for transmitting this information to a distant control room, has been developed by Salford Electrical Instruments Ltd. of Britain. In tests on a busy main line in Britain, during which the equipment operated unattended for several months, wagon movements were recorded 50 miles away with an accuracy of more than 99 per cent, and no incorrect information was recorded. The equipment operates satisfactorily in rain, snow and fog and at temperatures from —20° C to +40° C. A nation-wide system, in which information from many recording points would be correlated by an electronic computer, is being considered by British Railways. Several overseas railways have also shown interest in the system. The equipment consists of a photo-electric scanning device mounted beside the track a nearby cubicle containing storage and transmission equipment; and plates on the side of each wagon with a pattern of bars representing the number of the wagon in code form. As a train approaches the scanning device, a special track circuit lifts a shutter and exposes a beam of modulated light. This light is scattered by the code plates on the wagons, and some of it is picked up by photo-electric cells and converted to electrical impulses representing the wagon number. These are passed to the line-side cubicle, where they are stored until the whole train has passed. They are then transmitted to the central control room together with details of time, location of the unit and direction of motion of the train.

Cryogenic Storage System

A new method of storing compressed helium, required for pressurising propellant tanks in cryogenically fuelled space vehicles, has been devised by engineers of Union Carbide. Utilising the SI vacuum super insulation to provide maximum thermal protection of ultra-cold compressed helium gas, the new system assures optimum system reliability and at the same time reduces the complexity of space launching operations. At present, pressurisation of cryogenic propellant tanks is accomplished by charging the system immediately prior to launching. Helium gas, precooled to about —200° F. (—129° C.) by liquid nitrogen, is charged to a plastic-jacketed titanium sphere at about 3,000 psi. (210 atmosphere). The space between the plastic jacket and the metal sphere is filled with liquid nitrogen to keep the compressed helium gas cool. Union Carbide's new storage system similarly consists of a spherical titanium inner container cooled by liquid nitrogen. However, the nitrogen space is further protected by a super-insulated outer jacket which minimises nitrogen boil-off, thereby preventing pressure build-up caused by heating of the high-pressure helium. A single charge of liquid nitrogen can hold helium temperature at —320° F. (—194.5° C.) for as long as eight days without topping—or as long as may be required if liquid nitrogen losses are replaced.

New Oven for Baking Bread and Confectionery

A Dutch firm has brought out a new oven for baking bread and confectionery. The oven can be loaded from the front and unloaded from both the front and the rear. In the latter case, front loading and rear unloading can be carried out simultaneously, by which means ideal occupancy of the oven is obtained. A second feature of the oven is that it has three tracks, one above the other, so that a variety of products can be baked at the same time. These tracks, which can run both forwards and in reverse, are 4 metres long and one metre wide and can be set at different speeds. The time taken by a loaf to travel from one end of the oven to the other may vary from 55 seconds to 2 minutes. There is an oil burner mounted in the furnace section with a maximum output of 300,000 calories per hour. The oven can also be supplied in a version for solid-fuel firing. The oven is heated by hot-water pipes that run through the furnace section. In these pipes, which have a wall thickness of 5½ m.m. superheated steam is created with a pressure of 40 to 50 atmospheres.

MADURA MILLS COMPANY LIMITED

SPEECH OF CHAIRMAN, DR. RAJAH M. A. MUTHIAH CHETTIAR

WEAVING PROJECT PROGRESSING WELL

THE weaving project of the Madura Mills Company Ltd. has been progressing well. The installation of 450 looms last year, production on which has been satisfactory, has marked the completion of the first phase of the project. The target for the present is 950 looms of which 850 will eventually be erected at Ambasamudram where an up-to-date modern weaving shed is under construction. The additional 500 looms have also been ordered from Picanols of Belgium. The Company has also taken up plans for adding bleaching, dyeing and finishing plants to the mills.

The above information in regard to the expansion plans was given by the Company's Chairman, Dr. Rajah M. A. Muthiah Chettiar, at its Annual General Meeting held at Madurai on Wednesday, 25th March. The following is the full text of Dr. Chettiar's speech:

GENTLEMEN,

The report of the Directors and the audited accounts of the Company for the year ended 31st December 1963 having been circulated in the prescribed manner, I propose with your permission to take them as read.

The country is still in the grip of the Chinese cold war and, although there is at the moment no fighting at the border, the state of emergency cannot be said to have abated. Your Company and its associates continue to play their full part in meeting the defence requirements of the country.

Cotton Supply

The small carry-over of 13.90 lakh bales of cotton which the country had at the beginning of the season 1962-63 caused a certain amount of anxiety and the mills resorted to buying heavily as the crop started moving in. Prices had a tendency to pierce the ceilings. But the system of quality surveys and the supervisory scheme introduced by the Textile Commissioner helped to bring down prices somewhat and I am pleased to be able to say that the purchases made by your Company were at reasonable levels.

Because of import restrictions due to the country's limited foreign exchange resources, there was acute shortage of foreign cottons during the year. However, our production programme of fine counts and of our industrial lines was not impaired to any great extent.

Yarn Prices

There was very good demand for our yarns in inland markets throughout the year. Sales were maintained at a steady level as in the previous year and the revision in the yarn prices which came into force from 7th February 1963 enabled the Company to maintain a satisfactory turnover notwithstanding power cuts for a number of days on a voluntary basis and an enforced 100 per cent cut for a fortnight during June-July. Market prices for all counts of yarn continued to show an upward trend and the Government continued with their scheme of compulsory allocation of a certain percentage of the production to handloom weavers.

The export performance during the year, although satisfactory, shows a slight fall over the previous year. This is mainly due to increasing competition in all overseas markets and the new licensing procedure which came into force during December 1962 for all yarn exports to the U.K. However, there is an encouraging trend in recent months and it is expected that our performance during 1964 will be better than in the year under review.

Looms Project

You will have noticed from the Directors' report that the 450 looms project has been implemented. The year 1963 has thus seen the establishment of the first phase of our weaving project, although only in temporary accommodation at present. Our target for the present is 950 looms, of which 850 will eventually be erected at Ambasamudram where an up-to-date modern weaving shed is under construction. Once again we are placing order with Picanols, Belgium, for the additional 500 looms, out of the Belgian credit negotiated by the Government of India.

So far as the production on the existing 450 looms is concerned, I am pleased to report that in spite of many difficulties a most satisfactory start has been made, both in the export markets, where we have more than met our obligations, and in the inland market, together with considerable defence orders, and it is anticipated that this progress will be maintained during 1964.

The addition of bleaching, dyeing and finishing plants has also been taken up and our application having been recommended by the Textile Commissioner is under consideration by the Government of India. We are hopeful that we shall receive their approval before long.

Results Satisfactory

As for the accounts, you will have noted a change in the presentation of the figures in the Directors' report showing profit of Rs. 80,17,083. You will no doubt agree that the net profit of Rs. 42,79,091 is a marked improvement on last year's figure of Rs. 31,81,355 bearing in mind the increase in the depreciation charge and development rebate reserve. The modernisation scheme and rationalisation of workloads are beginning to show their beneficial results. The Company, with its large capital base, will not be adversely affected by the levy of surtax which has been introduced in the place of Super Profits Tax but the imposition of the dividend tax is indeed an additional burden.

I should like to invite the attention of the shareholders to the net fixed assets position compared with the paid-up capital. In view of the very satisfactory reserve position the disparity could no doubt be righted somewhat by bringing the paid-up capital position rather more into line with capital actually employed, but the penal tax provisions contained in the recent budget act as a deterrent.

Before concluding, I wish to express my appreciation of the efforts of the staff and other employees who have contributed a great deal to these satisfactory results, and with their continued support we can look forward to increasing prosperity.

Note: *This does not purport to be a report of the proceedings of the meeting.*

SEN-RALEIGH LIMITED

CHAIRMAN, MR. ABHIJIT SEN, SAYS DEMAND FOR BICYCLES IMPROVING

EFFICACY OF VOLUNTARY PRICE CONTROL QUESTIONED

IN his statement circulated with the Company's accounts for the year ended 30th September 1963 and presented to the Fourteenth Annual General Meeting held at Calcutta on Tuesday, 31st March 1964, Mr. Abhijit Sen, Chairman of Sen-Raleigh Ltd., appreciated the recent improvement in the demand for bicycles and some of its components after three years of near stagnation but feared that, whilst it might be possible to effect a control on manufacturers' prices voluntarily, there was little possibility of maintaining a voluntary ceiling on dealers' prices in a market where demand far outstripped supply. It may be recalled here that the Tariff Commission had recommended, after withdrawing protection, that prices should be voluntarily controlled at the level of both manufacturers and dealers. Referring to the Company's operations, Mr. Sen said that the expansion of bicycle production, which was now under way, was one of a number of steps necessary for bringing back reasonable profits. On the progress of the scheme for the manufacture of house service meter undertaken by the Company, he said that it had been rather limited.

The following are excerpts from Mr. Sen's statement:

As anticipated in my last statement to you, the year under review turned out to be one of our more difficult ones. In spite of a continuing demand for our products, sales were appreciably lower than in the preceding period as it was not possible to maintain production at desired levels owing to chronic shortages of raw materials, when sections of the factory had to be laid-off for periods extending up to 2-3 months at a time. As a consequence the financial results of the Company for the year have been extremely disappointing. For the first time in some years, your Directors have been unable to recommend payment of a dividend on the ordinary share capital of the Company.

I am sure you would agree with me that in view of the heavy financial commitments ahead of the Company for implementing its expansion schemes about which reference was made in my last report to you, the wisest course for the Company to follow would be to conserve its resources to the fullest extent for the present.

Expansion Programme

Towards the end of the year under review your Company was ready to put into effect this vital scheme for expansion of bicycle production but it was not till the end of 1963 that it was entirely satisfied that the material flow required for such expanded production would be forthcoming. The expansion of bicycle production which is now under way, is one of a number of steps that the Company needs to take to bring back reasonable profits in its operation.

After three years of near stagnation, the demand in general for bicycles and some of its components has once again started looking up. Your Company intends to reap the full benefit of this rise in demand. In some components where the demand has grown to the degree that it is embarrassing for the Company to have to refuse orders even for supplies to other cycle manufacturers, the matter of expanding production is now actively engaging the attention of your Directors.

Progress in the house service meter scheme of the Company has been limited to sending over the first batch of trainees to Associated Electrical Industries Ltd., Manchester, and completing the import application for the plant. It is expected that with the first batch of trainees now actively associated with the planning of the Indian production in the U.K., this scheme will gather necessary momentum.

Tariff Protection

The protection granted to the bicycle industry fell due for review in 1963 and a tariff inquiry was held on the subject in July of that year. After the inquiry, the Tariff Commission recommended that protection be withdrawn in the case of the bicycle industry and this recommendation was accepted by the Government of India. However, to protect the interests of the consumer, the Tariff Commission further recommended that the manufacturers' prices of bicycles be brought under a system of voluntary control, and as this recommendation was also accepted by Government, today bicycle manufacturers cannot increase their prices without reference to Government. A further recommendation sought to establish a ceiling on retail prices of the bicycle. Both these latter recommendations appear inconsistent with the conditions prevailing at the moment. Whilst it may be possible to effect a control on manufacturers' prices voluntarily, there is little possibility of maintaining a voluntary ceiling on dealers' prices in a market where demand far outstrips supply.

After many years of consistent effort on the part of manufacturers, the export performance of the bicycle industry as a whole is showing a satisfactory trend. In common with other manufacturers your Company's exports rose appreciably in the period under review. Orders are now flowing in steadily for the *Balaka* bicycle which was introduced to African and Middle Eastern markets during the year.

A disquieting feature of exports—particularly from the port of Calcutta—is the pilferage that appears to take place at the docks here. Few of the consignments sent out over the last year from Calcutta seem to have escaped pilferage and importers in other countries are now chary of placing orders on Indian manufacturers as a result of this evil. No dealer in a competitive market can be expected to risk losses by ordering on India when he is assured of certain supplies by ordering on other countries. This matter deserves the serious attention of the Ministry of International Trade, as, a remedy to this problem is only possible at Government level and does not lie in the hands of the exporter.

Agreement with Labour

A fresh five-year agreement in replacement of the expiring one has been negotiated with the employees' union and is now in the final stage of drafting. It is hoped that the new agreement would bring in improved operations on the part of the Company and even better relations with its workers.

It was with deep sadness and a sense of personal loss that the news of the sudden demise of Mr. G. H. B. Wilson, in an unfortunate car accident, was received in December. Many of you who also knew him must have felt the loss acutely. Mr. Wilson was a man of rare vision whose interest in the cause of spreading cycling gained for him the soubriquet of "Mr. Bicycle" in his own country—and for India its thriving bicycle industry.

I would extend a welcome to Mr. D. P. Harris, the Works Director of Raleigh Industries Limited, who now joins our Board. The experience Mr. Harris brings to this Board would be of great value to the Company in its efforts to tide over its present difficulties.

We were very pleased to receive a visit from Mr. R. D. Young, the Chairman of Raleigh Industries Ltd. Although fleeting, the visit was extremely helpful, and it is hoped it would be the precursor of many more in future.

Note: *This does not purport to be a record of the proceedings at the Annual General Meeting.*

MITSUBISHI TURBO-GENERATING PLANT

The first unit of a turbo-generating plant utilising exhaust gas from the main diesel engine of a ship has been completed by the Hiroshima Works of Mitsubishi Shipbuilding and Engineering Company Ltd. (Japan). The plant has been developed by Mitsubishi with a view to contributing to economy in ship's operation using diesel engine for main propulsion machinery.

An outstanding feature of the Mitsubishi turbo-generating plant is that it can be simultaneously used with diesel-generators abroad a ship and the changeover from single to simultaneous operation with the diesel-generator can be made automatically. In other words, when a vessel needs electricity over a generating capacity of the turbo-generator, the additional electricity required can be generated by diesel-generators. The first unit is scheduled to be installed on board a 35,000-ton D/W tanker being constructed at the Hiroshima Works for V/O Sudoimport of U.S.S.R.

38th ANNUAL REPORT OF THE DIRECTORS TO THE SHAREHOLDERS

The Directors have pleasure to submit to the Shareholders the 38th Annual Report for the year ending 31st December, 1963. According to the audited Balance Sheet annexed hereto, the net profit of the Bank for the year 1963 was Rs. 39,91,729.85 which, with the balance of profit of Rs. 77,782.15 of the previous year brought forward, comes to Rs. 40,69,512.00.

After providing Rs. 9,00,000 to the Statutory Reserve Fund and Rs. 7,931.60 to Contingent Reserve, a sum of Rs. 31,61,580.40 is available for appropriations. The Directors recommend the following appropriations :—

	Rs.	nP.
To pay a dividend at 20% per annum on 'A,' 'B' and 'C' Class Equity Shares, subject to deduction of tax	9,82,648	56
To pay a dividend at 8.57 per cent per annum on Cumulative Preference Shares of Rs. 100 each and 17.15 per cent per annum on Cumulative Preference Shares of Rs. 10 each, subject to deduction of tax in both cases	1,83,696	99
To provision for taxation	14,78,193	98
To provision for Bonus to Staff	5,00,000	00
To carry forward to next year's account	17,040	57

The Directors have pleasure to state that the total Reserve Fund and other Reserves stand at Rs. 75,25,000 as against Rs. 66,00,000 (inclusive of share premium) last year. The total Paid-up Capital and Reserves (including share premium and advance calls) now stand at Rs. 1,55,83,467.50 against Rs. 1,42,64,986 at the end of last year.

122 Branches of the Bank have been audited by the Statutory Auditor and other Branch Auditors appointed under the provisions of Section 228 of the Companies Act, and besides, regular inspections have been carried out by the Bank's Inspection staff in respect of all Branches including the aforesaid 122 Branches.

Our Director, Sri P. Padmanabha Rao, passed away on the 17th January, 1964. He was one of our most beloved, known for his integrity and wisdom and the Directors place on record his extremely valuable services rendered to the Bank all these 19 years.

The vacancy in the Board of Directors caused by the sad demise of Sri P. Padmanabha Rao has been filled by Sri K. S. G. Haja Shareeff, M.L.A., Madras. The Directors feel that his rich and varied experience will be of immense benefit to the further development of the Bank.

During the year, 3 Banks were taken over by the Bank under schemes of transfer of assets and liabilities. They are : (1) The Citizens Bank Ltd., Robertsonpet, (2) The Pollachi Town Bank Ltd., Pollachi, and (3) The Coimbatore Sri Kannikaparameshwari Bank Ltd., Coimbatore. These have added three Branches to the Bank in the respective places. 13 other Branches were opened during the year 1963 and one in 1964, while 2 Branches were merged with other Branches.

During the year, the Bank was licensed to deal in Foreign Exchange and the business in the first year has been quite satisfactory. This has also helped us to diversify the credit in line with the growth of the Bank and the policy of the Government that is directed at checking the extension of conventional credit.

The change of name decided upon by the Shareholders on 21st September, 1963 has become effective on and from 1st January, 1964 and the Registered Office has been shifted to the Bank's new building at Manipal on that date. The Administrative Office now functioning at Udipi will also be shifted to Manipal ere long.

We have 190 branches as on today. Proposals for further expansion by opening more branches have been made to the Reserve Bank and as and when licences are issued, we will be able to expand further.

The solid and unstinted support of the Staff under their able and energetic Managing Director, the increasing goodwill and co-operation of the Shareholders and the rapidly growing clientele of the Bank, we, trust, will enable us to reach yet another landmark with still greater progress during the current year.

(By authority of the Directors)

AUDITOR'S REPORT TO THE SHAREHOLDERS

I have audited the foregoing Balance Sheet of The Canara Industrial and Banking Syndicate Limited, now named Syndicate Bank Limited as at 31st December, 1963, and the Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns from 62 branches audited by me and 60 branches audited by other auditors and 67 branches exempted from audit, under Exemption granted under Rule 4 of the Companies (Branch Audit Exemption) Rules 1961, Order No. 1(21)-CLVI-63 of Government of India, Ministry of Commerce and Industry, Department of Company Law Administration, dated 7th September, 1963.

The reports on the accounts of the branches audited by other Auditors have been dealt with in preparing my report in the manner considered necessary by me. I report that :—

(a) I have obtained all the information and explanations which, to the best of my knowledge and belief, were necessary for the purpose of audit and have found them to be satisfactory;

(b) The transactions of the Bank which have come to my notice have been within the powers of the Bank;

(c) In my opinion, proper books of account, as required by law, have been kept by the Bank so far as appears from my examination of these books, and proper returns adequate for the purpose of audit have been received from the branches of the Bank;

(d) The foregoing Balance Sheet and Profit and Loss Account, dealt with by this report, are in agreement with the books of account and the returns;

(e) In my opinion, and to the best of my information and according to the explanations given to me, the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies and, on such basis, the said Balance Sheet gives a true and fair view of the state of affairs of the Bank as at 31st December, 1963 and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

9. SHRI D. M. SHANKARAPPA, Merchant, Tiptur. — Directors elected under clause (d) of Sub-Section (1) of Section 25 of the State Bank of India (Subsidiary Banks) Act, 1959.

Report of the Board of Directors to the State Bank of India and the Reserve Bank of India in terms of Section 43 (1) of the State Bank of India (Subsidiary Banks) Act, 1959.

PERIOD COVERED BY THE REPORT: 1st JANUARY 1963 TO 31st DECEMBER 1963

GENERAL

In terms of a Scheme sanctioned by the Central Government under Section 38 of the State Bank of India (Subsidiary Banks) Act, 1959, the business of the Ramdurg Bank Ltd., Ramdurg, was acquired by the Bank with effect from the 16th November, 1963. The consideration payable to the Ramdurg Bank Ltd., in this respect is the surplus of the assets taken over absolutely over the outside liabilities. The other assets, which are not readily realisable, are taken over on a collection basis and further instalments of compensation will be payable as and when these assets are realised. The Bank will be able to meet these commitments from out of its own resources and no additional capital is required.

CHANGES IN THE BOARD OF DIRECTORS

Under Clause (c) of Sub-Section (1) of Section 25 of the State Bank of India (Subsidiary Banks) Act, 1959, the State Bank of India, on 1st March, 1963, nominated Shri V. T. Krishna Moorthy as a Director in place of *Shri Rajendra Prakash Goyal. Also in terms of Sub-Section (2) of Section 26* of the State Bank of India (Subsidiary Banks) Act, 1959, Shri S. M. Ramakrishna Rao and Shri V. H. Channabasaviah, Directors of the Bank appointed under clause (c) of Sub-Section (1) of Section 25 of the Act (ibid) were due to retire on 28th February, 1963 ; they were reappointed as Directors of the Bank under the same Section by the State Bank of India, in consultation with the Reserve Bank of India, with effect from the date of their retirement.

The names of the Directors on the Board of the Bank as on 31st December, 1963, are listed in Annexure-I.

ACCOUNTS

The Balance Sheet and Profit and Loss Account for the year ended 31st December, 1963, as approved by the Board of Directors are annexed—(Annexure-II).

The working of the Bank showed a net profit of Rs. 18,85,287.54 and with the addition of Rs. 43,681.12 brought forward from the previous year, the total amount available for appropriation is Rs. 19,28,968.66 which the Board of Directors has appropriated as under :

	Rs.
Transfer to Reserve Fund	4,50,000.00
Bonus to Staff	4,30,000.00
Staff Welfare Fund	25,000.00
Dividend at 10% (subject to tax)	10,00,000.00
Carried Forward	23,968.66
Rs.	19,28,968.66

The Accounts of the Bank have been audited by Messrs. Fraser and Ross, Chartered Accountants, who were reappointed as Auditors by the State Bank of India in exercise of the powers conferred by Sub-Section (1) of Section 41 of the State Bank of India (Subsidiary Banks) Act, 1959, with the approval of the Reserve Bank of India.

CAPITAL AND RESERVE

The Authorised Capital of the Bank at Rs. 2 Crores and the Issued and Paid-up Capital at Rs. 1 Crore remain unchanged. With the transfer of Rs. 4,50,000.00 from the profits of the year under review, the Reserve Fund of the Bank now stands at Rs. 69,00,000.00.

DEPOSITS AND OTHER ACCOUNTS

The Deposits and other Accounts of the Bank stood at Rs. 27.17 Crores at the end of the year, as against Rs. 25.01 Crores as on 31st December, 1962, and are higher by Rs. 1.26 Crores.

CASH BALANCES AND MONEY AT CALL AND SHORT NOTICE

The Bank's Cash Balance (including Balances with the Reserve Bank of India, State Bank of India and its Subsidiaries) at the end of the year 1963, stood at Rs. 1.93 Crores, as against Rs. 1.83 Crores at the end of 1962. The Balances with other Banks aggregated Rs. 0.09 Crores as against Rs. 0.07 Crores at the end of 1962. The ratio of Cash and Bank Balances to Demand Liabilities was 19.75%. The Money at Call and Short Notice as on 31st December, 1963, stood at Rs. 1.86 Crores as against Rs. 2.09 Crores at the end of 1962.

INVESTMENTS

The Bank's Investments recorded a decrease of Rs. 33.58 Lakhs during the year under review, and as at the end of the year, the Investments at or below the market value stood at Rs. 10.54 Crores, which was 38.80% of Deposits.

ADVANCES

Advances outstanding as on 31st December, 1963, amounted to Rs. 14.93 Crores as against Rs. 12.98 crores at the end of the year 1962 ; the ratio of Advances to Deposits being 54.95% on 31st December, 1963, as against 50.09% at the end of the year 1962.

PROFIT AND LOSS

The income of the Bank for the year amounted to Rs. 1,66,46,057.80 as against Rs. 1,45,29,733.32 for the year 1962. After making the usual and necessary provisions and providing for taxation, the net profit of the Bank amounted to Rs. 18,85,287.54 for the year as against Rs. 18,41,214.96 during 1962. Despite increased earnings there is only a small increase in net profits due to a further rise in establishment charges.

GOVERNMENT AND AGENCY BUSINESS

In terms of the agreement entered into with the State Bank of India and in pursuance of Section 30 of the State Bank of India (Subsidiary Banks) Act, 1959, the Bank has extended its Agency business to four additional centres thus bringing the total number of branches of the Bank conducting Government Business to 42.

BOARD AND EXECUTIVE COMMITTEE MEETINGS

During the year, 7meetings of the Board, and 21 meetings of the Executive Committee were held.

OFFICES OF THE BANK

The Bank had in all 62 offices (59 branches, 3 pay offices) as on 31st December, 1962, including Bangalore Branch. To these, seven branches were added during the current year, excluding upgradation of two pay offices into branches. In addition, under the Scheme of Amalgamation, the Ramdurg Bank Ltd., with one office at Ramdurg, was taken over by the Bank with effect from 16th November, 1963, and a branch of the Bank has started functioning at that centre thereafter. A list of the offices of the Bank as at 31st December, 1963, is given in Annexure-III.

DEVELOPMENTAL ACTIVITIES

(a) Expansion Programme

Seven branches have been opened during the year under report, besides upgradation of 2 pay offices into branches and opening a branch at Ramdurg consequent on the taking over of Ramdurg Bank Ltd. Licences have been obtained from the Reserve Bank of India to open 8 more branches.

In terms of Section 48 of the State Bank of India (Subsidiary Banks) Act, 1959, the subsidy expected to be received from the State Bank of India to reimburse losses incurred during the year by the Bank at the branches opened under the Expansion Programme will be Rs. 4,15,634.00, which has been taken into account in the Profit and Loss Account for the year.

(b) Small-Scale Industries

The Bank's advances to Small-Scale Industries recorded a small increase during the year under review. Assistance was afforded to 151 units, accounting for a total limit of Rs. 84.46 Lakhs as against 136 units with a total limit of Rs. 84.15 Lakhs as at the end of 1962. The outstandings under sanctioned limits as at the end of 1963 were Rs. 35.65 Lakhs as against Rs. 47.58 Lakhs in the previous year.

(c) Warehouses

Advances against Warehouse receipts showed a recession due to seasonal fluctuations. It is expected the the position will improve with the commencement of the busy season. The total outstandings against Warehouse receipts were Rs. 15.12 Lakhs as on 31st December, 1963, as against Rs. 28.69 Lakhs over the same date of the previous year.

(d) Co-operative Institutions

The total of advance limits granted to Co-operative Institutions as at the end of 1963 was Rs. 81.88 Lakhs as against Rs. 88.84 Lakhs as on 31st December, 1962, and the outstandings stood at Rs. 7.37 Lakhs as against Rs. 54.05 Lakhs as at the end of 1962. The decrease represents non-utilisation of the sanctioned limits to a fuller extent.

STAFF

With the opening of new branches and increase in the business of the Bank, the strength of the Staff rose from 1,535 as on 31st December, 1962, to 1,755 as at close of the year under review.

The relationship of the Staff with the management was cordial and co-operative, and the Board of Directors wishes to place on record its appreciation of the services rendered by all categories of the Staff during the year.

By Order of the Board,
R. P. NANDA,
General Manager (Offg.)

Dated 8th January, 1964.
18th Paus, 1885.

REPORT OF THE AUDITORS

We, the undersigned Auditors of the State Bank of Mysore, appointed under Section 41(1) of the State Bank of India (Subsidiary Banks) Act, 1959, do hereby report to the State Bank of India upon the Balance Sheet and Accounts of the Bank as at 31st December, 1963.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Head Office and the Returns submitted by the Branch Managers, which returns have been incorporated in the above Balance Sheet and Accounts, and report (i) that, in our opinion, the Balance Sheet is a full and fair Balance Sheet containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank ; (ii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory ; (iii) that the transactions of the Bank which have come to our notice have been within the competence of the Bank ; (iv) that the Returns received from the Branches of the Bank have been found adequate for the purpose of our audit ; (v) that the Profit and Loss Account shows a true balance of Profit for the period covered by such account ; (vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with Law and (vii) that in our opinion, Books of Account have been kept by the Bank as required by Law.

ECONOMIC TRENDS IN PAKISTAN

PRIVATE ENTERPRISE AND MIDDLE CLASS BEING FOSTERED

By Dr. Anwar Iqbal Qureshi

ECONOMIC ADVISER TO THE GOVERNMENT OF PAKISTAN

WHEN Field Marshal Mohammad Ayub Khan came to the helm of affairs in October 1958, Pakistan's economy was in a very critical condition. The foreign exchange reserves had reached the lowest ebb, prices were constantly rising, exports were declining and financial discipline had nearly disappeared. This sad story has often been repeated and need not be further dwelt upon here.

Pakistan has made considerable progress in the economic field during the last five and a half years and it would be helpful if a brief account of these developments were given.

The present Government of Pakistan has no illusion that its task of economic and social development is an easy one. It is, indeed, extraordinarily difficult. The two halves of Pakistan are separated by over a thousand miles of Indian territory. The one half is an arid land, habitable only because the great Indus river system supplies an irrigation network that is without doubt the most extensive in the world. The other occupies the delta of the Ganges and the Brahmaputra, which carry off the monsoon rains of all North India and the melting snows of the Himalayas.

Our farmlands—and Pakistan is overwhelmingly an agricultural country—are threatened by increasing salinity in the west and by severe cyclones, floods and tidal waves in the east. The country also faces the problem of very rapid growth of its population.

Rate of Progress

The Ayub regime, however, has brought a new hope to the people. The country started from a low economic, technological and educational level, but we are definitely moving upward. Since 1959-60, industrial production has risen by about 35 per cent, agricultural output by about 10 per cent, and the gross national product by about 14 per cent. Government revenues (which include revenue of the Centre as well as of the Provinces) amounted to Rs. 245 crores in 1957-58. These rose to Rs. 405 crores in the fiscal year 1962-63. The estimates for 1963-64 are Rs. 438 crores.

Pakistan's foreign exchange reserves increased from the equivalent of Rs. 72.62 crores in September 1958 to over Rs. 144 crores on 30th June 1963. Increased public confidence is also reflected in the rise of bank deposits, which rose from Rs. 253.10 crores in June 1958 to Rs. 520.64 crores in January 1964. During the same period, bank credit increased from Rs. 122.55 crores to Rs. 447.83 crores.

Money supply which stood at Rs. 536.19 crores in June 1958 increased to Rs. 764.52 crores in January 1964 and prices were stabilised so that the former strict price controls have been almost wholly abolished. For a developing economy, Pakistan has shown a remarkably stable price level during the last several years. The cost of living index for workers in Karachi which stood at 123 in 1957-58 increased only to 131 in January 1964, showing an increase of only eight points in 5½ years.

The Two Plans

The first Plan of the country merely helped the establishment of a sound infrastructure for future industrialisation. There was no sizable addition to the production level, especially in agriculture. The second Plan, started in July 1960, provides for investments of nearly Rs. 2,300 crores and an increase of 24 per cent in national output.

The major reason for the success of the second Plan is the efforts of private enterprise and the Ayub regime has full confidence in it. Private enterprise has been given a good share in the planned development of the country and, out of the total outlay of Rs. 2,300 crores, the share of private enterprise in investments is supposed to be Rs. 838 crores.

Foreign Aid

This rapid progress has been achieved partly with our own efforts and partly with generous and effective help from our friends abroad. Most of our capital goods imports, a part of the raw materials, spare parts and fuel needed by our industries and of the fertilisers and insecticides for our agriculture, and a portion of our food supply are obtained through foreign aid of one sort or another. The consortium of friendly countries organised under the sponsorship of the World Bank has pledged a total of Rs. 762 crores for the first four years of the second Five-year Plan in addition to large quantities of surplus agricultural products, and, of this aid, the United States is contributing more than half.

But the country cannot depend on friends for a long time. If we are to survive and advance as a nation, we must become economically self-sustaining. We must increasingly meet our investment needs from our own savings, our import requirements out of our export proceeds and our growing need for technical skills and management by expanding our own resources of trained manpower; this is what our development plans are designed to accomplish.

A much bigger and comprehensive third Plan is under active finalisation. According to preliminary estimates, the third Plan envisages a total expenditure of Rs. 4,950 crores.

It is also envisaged that the proportionate dependence on foreign aid in the third Plan will be less than the second Plan.

Foreign Trade

An important instrument of economic growth and increasing the production level is the expansion of our foreign trade.

In the past three years, we have followed an increasingly liberal import policy, with a view to allowing our industry and agriculture to work efficiently and develop naturally in response to normal market forces and incentives. It is, however, evident that this policy can be maintained in future only if our exports expand to balance the increase in imports.

The main focus of Pakistan's economic policy at present, therefore, is increasing and diversifying the country's export trade.

Some success has been achieved. Our overall export earnings increased by more than one-third from 1958 to 1963.

Several measures have been adopted to push up exports. The principal ones are the Export Credits Guarantee System and the Export Bonus Scheme. The former is a simple arrangement for insuring Pakistani exporters against risks of loss, not normally covered by conventional insurances, that they might suffer as a result of the foreign importers defaulting on his obligation. Such losses are covered to the extent of 75 per cent for commercial risks and 85 per cent for political risks, the remainder of the loss being borne by the exporter.

The Export Bonus Scheme is too well known by now to require any further comments. It provides incentives to our exporters to compete in the world market. Pakistan's exports increased from Rs. 142.17 crores in 1957-58 to Rs. 203.06 crores in 1962-63.

The imports also increased from Rs. 205 crores to Rs. 381.76 crores. This large increase in imports is due to Government's desire to increase the supply of capital goods and raw materials and also essential consumers' goods.

Competition in international trade at present is very tough. But Pakistani producers in all except a few traditional fields—mostly primary materials like raw cotton, jute, carpet wool, skins and tea—have an especially difficult task. Apart from these traditional exports, whose growth potential is relatively limited, our products are not well known in the world. They have to break into an already highly competitive market and make their way against established suppliers.

Even in sports goods, which have been a speciality of Pakistani craftsmen for many decades, our trade was disrupted after partition because the export contracts were largely in the hands of merchants who went over to India. These contracts have been restored and, in 1962-63, our exports in this category were three times those of 1952-53. For entirely new items, in which there is no tradition of supplies from Pakistan, it is harder to gain a foothold.

But it must be done, and is being done. Jute manufactures, for example, accounted for Rs. 31.3 crores of exports in 1962, over 18 times the 1954 value. Jute is now being used not only as a cheap, sturdy bagging material but also to make handsome household drapes and carpets, and even for dresses and sports jackets.

Pakistan's exports of cotton yarn and piecegoods, which were virtually nil in 1954, amounted to Rs. 19 crores in 1960 and, while their export value fell in 1961 as the Government encouraged a greater supply to the internal market, the trend in 1962 was again upward and foreign exchange to the tune of Rs. 5.10 crores was earned. This increased to Rs. 9 crores in 1963.

Until 1958, practically all the exports of Pakistan were raw materials. As a result of the efforts made by the present regime to promote industrial development of the country, now about Rs. 50 crores, or about 25 per cent, of exports consist of manufactured goods.

Pakistan should intensify her efforts also to promote and improve the traditional products of Pakistani artisans—original rugs, tennis rackets, cutlery, handloom textiles, jewellery and handicrafts of leather, cane, etc., carpet backing jute goods, rice, fish products and copper. But, if she is to achieve a satisfactory balance of trade, an increasing share of our exports must be modern factory-made goods. And major concern must be, first, to produce such goods efficiently and upto high quality standards, and, secondly, to develop wider markets for them.

Regional Groupings

Recent modern economic groupings in several regions present a harmful trend for foreign trade of Pakistan and particularly to growth of exports of manufactured goods.

The European Common Market, if it adopts a consistently liberal import policy, would be a useful instrument of international trade. It is recognised that, in such circumstances, Pakistan's economic progress will gain from progress elsewhere in the world, through the beneficial influence of expanding trade.

If, however, the expansionist purposes of the Common Market are limited to its membercountries and if its principal result for the underdeveloped countries is to narrow down the market for them, it can bring nothing but trouble for Pakistan too.

An inevitable corollary of economic progress is a change in the pattern of production, a shift from less to more complex processes, requiring higher skills and more intensive use of capital. This is true no less of advanced industrial nations than of countries like Pakistan in the early stages of their development.

So it is natural, as the United States, Western Europe and, more recently, Japan continue to advance, that they should gradually give up producing the simpler, more labour-intensive types of manufactures, just as they previously gave up hand-weaving and the village smithy. And it is equally natural that the developing countries should produce more and more simpler industrial goods, not only for their own consumption but increasingly for export, exchanging them for the products of the more advanced countries.

Far-off From Take-off Stage

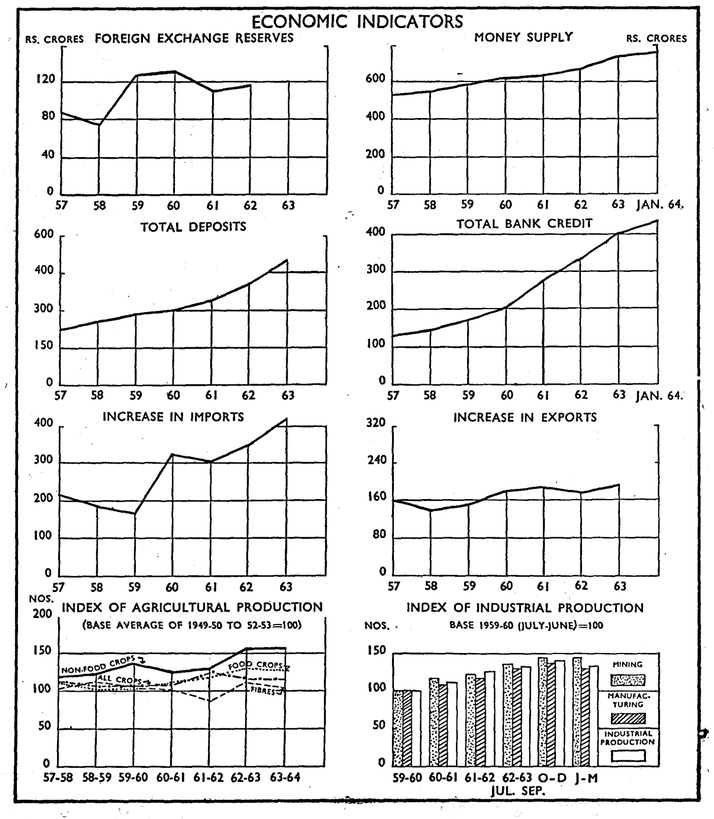
It appears that Pakistan has embarked upon development with stability and has made considerable progress during the last five years. No doubt this is a matter for great satisfaction but we are still far off from the take-off stage. Even when we reach that stage, it would be the first step towards the ultimate goal of providing decent essentials of life to our teeming millions and to build up a self-sustained economy. We have to catch up and we are determined to do it as quickly as we can.

One of the greatest achievements of the Ayub regime is that it has created a healthy climate for investment and has safeguarded the interests of the middle classes by curbing the inflationary tendencies which constitute the worst enemy of the middle classes.

During the last three years, the Government has not only been living within its means, but, in order to increase our own share in the development efforts and to lessen our dependence on foreign aid, we are also now contributing from own revenues to the development budget. Deficit financing has been stopped, inflationary tendencies have been curbed, and, during the last three years, there has been a remarkable stability in the price level.

The Government is also trying its best to foster a healthy middle class and curb the tendencies towards concentration of wealth.

Note: *The views expressed in this article are of the author and not of the Government.*



NEW HORIZONS FOR WORLD TRADE

(By A West German Correspondent)

"THERE are new impulses astir in our world. They are impulses, all of us hope, that will defend our freedoms while enlarging the peace."

The words are those of Mr. Fritz Berg, President of the Federation of German Industries (B.D.I.). He is just now on a tour through the United States of America, meeting Government officials and discussing with businessmen in various cities.

Here is how Mr. Berg defines some "impending changes in the international economic outlook":

The established industrial nations must lead the world away from the economic barriers that have stifled peaceful commerce.

The developing countries expect help in their drive "to forge ahead, to win a bigger share of world markets."

The so-called Communist bloc is no longer, if it ever was, a bloc; various of its membernations, in particular the U.S.S.R. and mainland China, are putting out their own individual economic "feelers" towards the non-Communist nations.

Regarding the economic future of the established industrial nations, the B.D.I. President says the tariff cuts that have been proposed for negotiation this spring in Geneva are predicted on the expectation of "an immense new impulse for business." Concerning Germany's and Western Europe's contribution to this liberalisation, he recommends:

Finding ways to "synchronise the agrarian interests of Europe with the interests of manufacturers," a task similar to that which confronts farm interests and industrial interests in many non-European countries.

Bringing closer together the six nations of the Common Market (E.E.C.) and the seven members of the European Free Trade Association (E.F.T.A.), with "the closest trade relations between the two blocs" and if possible "ultimately a merger."

Regarding the aspirations of the developing nations, Mr. Fritz Berg mentions two specific problems "in this confrontation of the older economies with the world's newest economies":

The question of support for raw material prices;

The question of granting new countries "tariff advantages so they can establish at least basic processing industries of their own."

As for possible new patterns in East-West economic contact, the West German industrial spokesman suggests it is well not to "look at trade with the East through rose-coloured glasses."

Although "geography has made us Germans neighbours of the Eastern countries of Europe," he continues, "we have learned from experience that there are narrow limits on trade with the East" under present Communist bloc commercial practice and economic status. These limits explain why "the share of our West German trade with the East Bloc has been running at only 3.6 per cent."

On the other hand, Mr. Berg notes, the fact that "my country is divided and the world is divided" raises the question: "Can we hope to partly close the division through world trade?" His own answer: At least, as our Governments have suggested, we can hope—and hold the door open."

• • • •

The growth rate of W. German industrial production last year was the lowest among the members of the European Economic Community (E.E.C.). According to preliminary E.E.C. Commission statistics, W. German industrial growth was 3.7 per cent, compared with 5.8 per cent for Italy and 6.5 per cent for France Belgium (based on 1963's first ten months) achieved a 6.2 per cent increase and the Netherlands (first nine months) a 4.1 per cent rise.

W. Germany is sending more mining and chemical products to Germany's Soviet Zone, less iron and steel, machines and agricultural products. Last year turnover in the inter-zonal (Federal Republic-with-Soviet Zone) trade increased 7.6 per cent. This is due to a 14.4 per cent rise of the Soviet Zone's sales in the Federal republic, while W. Germany's sales grew only 0.6 per cent.

I.A.C. STEADILY MOVING TOWARDS A PROSPEROUS FUTURE

RISE IN COSTS, HOWEVER, MUST BE CHECKED

By Our Aviation Correspondent

THE Indian Airlines Corporation, now in its eleventh year of operation, seems to be progressing, if slowly, yet steadily towards a more prosperous future. It was, after all, only some five years ago that the Corporation, after years of heavy losses, began to turn the financial corner. According to the annual report for 1962-63, the balance of operating revenue over expenditure amounted to Rs. 20.91 lakhs. A balance, in fact, which, if still marginal, was nevertheless, three times greater than that of the previous year.

This, perhaps, is the salient feature of the year in question. Other relevant figures show that traffic rose by an overall 12.3 per cent—almost solely attributable to passenger rather than other forms of traffic. Operating revenues rose from Rs. 14.87 crores to Rs. 16.97 crores. Operating expenditure, on the other hand, also rose by the not unsubstantial sum of Rs. 1.19 crore. Thus, while revenue increased by 14 per cent, costs rose by 15.2 per cent—which throws, perhaps, a rather less favourable light on the year's working.

One cannot help but observe, in that regard, a sharp increase in the total number of employees. From 9,562 in 1961-62, the figure rose to 10,075 in 1962-63. A rise of this order would be understandable, of course, had the Corporation, to any significant extent, increased the scope of its operations. This, however, does not appear to be the case. Were this process to continue, any progress towards greater prosperity would soon be halted. The newly appointed general manager seems to corroborate that view. He has been credited with saying that the Corporation's anticipated surplus for 1963-64—estimated at Rs. 35 lakhs—will be almost totally absorbed by salary and wage increases.

The new general manager is also reported to favour the opening up of a number of new rural services run on austerity lines. This, apparently, would mean no free transport to and from airfields, no hostesses, and no catering. There is, no doubt, much to be said for such a plan. On the face of it, this is the obvious way to open up new territory and to bring air transport facilities to districts where a demand exists. Nevertheless, even at fares 33 per cent below present levels—as the general manager hopes—for a very long time to come, these services would be far from self-supporting.

It is indisputable that, at present, the Corporation derives most of its surplus revenue from the trunk routes. It is on these routes that, for the past several years, the demand for air travel has exceeded the capacity provided. Last February, the Corporation introduced jet aircraft with seating capacity double that of the Viscounts. Moreover, in view of the greater productivity of the much faster Caravelle, the capacity now offered on the trunk routes could very easily be further augmented. It is pertinent to observe, in that connection, that, already, on most of the trunk routes, the Caravelles are operating almost up to capacity load factors.

While for some little time yet, the surplus revenue from these routes will have to support secondary routes—and particularly those still operated by Dakotas—that should not be a permanent feature of I.A.C.'s economy. With ten Fokker Friendships already in service, and with Viscounts becoming available for the more important secondary routes, the whole route network should soon become a more or less profitable operation. In other words, the modernisation of the Corporation's fleet combined with the very high overall load factor which the Corporation enjoys, should soon begin to pay dividends. Something more than a purely nominal surplus is now within reach.

It is in this light, possibly, that the general manager is considering widening the scope of the Corporation's activities. Such a course, no doubt, would find considerable support. There is, and there has always been, a popular belief in the scope for so-called feeder services. There are those, too, who feel that such services could profitably be run were present standards in respect of airfields and aids to be relaxed. Frankly, one does not subscribe to either school of thought. One has yet to be persuaded that any real demand for feeder services exists—assuming, of course, that these are run at anything approaching economic fares and freights.

One is inclined to the view, too, that the operation of air transport with sub-standard airfields, aids, and communications, is a dangerous pursuit. The creation of the necessary airfields and aids would be a comparatively expensive undertaking—justifiable only if a reasonable measure of demand is known to exist. Such airfields have got to be located in the right place. To run rural feeder services to this or that locality, simply because an old airfield of sorts exists, is to serve no useful purpose whatsoever. That is the path of least resistance and it leads only to failure.

As an alternative, one suggests, the operation of more popularly priced services on existing routes might well be a profitable undertaking. It has to be recognised that some proportion of present surpluses is derived from successive and substantial fare increases—the last less than two years ago. The Corporation enjoys a complete monopoly. Had it been subjected to competition, fares would be considerably lower than they are today. To that extent, the Corporation has a duty to share any increased prosperity with the public.

Present fares may be within the means of business houses and their representatives, foreign tourists, Government officials, and others travelling on duty. There is, undoubtedly, wide scope for additional traffic at lower fares—and one sees no objection whatsoever to cutting out some of the 'frills' of travel. One notes, in that regard, the present intention to close the night mail service to passengers. These have long afforded a means of air travel to the less affluent. It seems a pity that this should be done. It would be shortsighted on the part of the Corporation were no alternative to be provided.

One has, perhaps, too readily assumed that the Corporation is approaching a period of greater prosperity. That will certainly not be the case, unless very close attention is paid to the rising costs of operation. This is not only a province with which the new general manager is thoroughly familiar, but in which he is an acknowledged expert. If he can only control costs, he might have his cake and eat it too. In other words, if he can sensibly improve the Corporation's productivity rate per employee—now at a low ebb—he might not only be enabled to reduce fares but to open up new territory as well.

ASIATIC OXYGEN LIMITED

CHAIRMAN, MR. B. L. JALAN'S ADDRESS AT ANNUAL MEETING

ECONOMIC OPERATION OF PUBLIC ENTERPRISES SUGGESTED

IF the Super Profits Tax levied last year had its disincentive effects, it is not going to be any different this year with some of T.T.K's proposals. The treatment of bonus shares as capital gains and the imposition of a fresh dividend tax, for instance, are measures which are bound to deter investors. It is a disturbing fact that the country's basic fiscal policy undergoes structural changes almost every year. And the changes, too, are making the multiple-tax system more cumbersome than perhaps anywhere else in the world. In drawing pointed attention to these disquieting trends, Mr. B. L. Jalan, Chairman, Asiatic Oxygen Limited, also dealt with several other related aspects of economic policy in his address at the Annual General Meeting of the Company held at Calcutta on 30th March, 1964. He pleaded, *inter alia*, for economic operation of public enterprises, for elimination of delays in licensing procedures and for reorientation of fiscal policy with a view to inducing higher investment and attracting more foreign capital. Mr. Jalan was particularly critical of the proposal to set up a Monopolies Commission.

The following are extracts from the aforesaid address of Mr. Jalan :

GENTLEMEN,

You would have noticed that the Directors have stated in their report dated the 29th February that our Durgapur factory was commissioned to production in December last. They expected that the Bombay factory, which was undergoing test operations, would commence production by the time the report was in your hands. I am happy to say that the Bombay factory is now in production. The foundation-stones of Madras and Hyderabad factories were laid by the then Chief Ministers of Madras, Shri Kamaraj, and of Andhra Pradesh, Shri Sanjiva Reddy, in August 1963. The Directors reported to you in the annual report that the Madras factory was in an advanced stage of construction and is expected to be in production next month. I am very happy to say that the acetylene plant of the Madras factory has already gone into production.

Most of the technical and administrative personnel have been recruited. Some of the engineers who went abroad for training have returned and others are expected to return by the end of next month after completing their training. Arrangements are being made for another batch of trainees to go abroad. To fulfil the long-felt need of the welding industry, we have started a training scheme for welders and welding supervisors.

Effects of 1963 Budget

While the taxes in the 1963 Budget of the Government of India brought higher burdens on the finances of our subsidiary company, it produced similar effects on the financial results of almost all companies which have, after strenuous efforts, put up a record of efficient and profitable operations. Some basic and important industries which had earlier suffered from teething troubles and now begun to yield fair returns have been hit hard. The Super Profits Tax was, as it were, a tax on efficiency. Our present Finance Minister must be congratulated on the new look which he has sought to give to our fiscal policy. He has so clearly enunciated the basic criteria which should govern our economic philosophy. It is a matter of special significance that these criteria have received approbation from almost all quarters. This demonstrates once again that the economic interests of all the sections of the country are the same and that the economic policy has to be essentially an integrated national policy. It cannot be a sectoral policy.

Public Undertakings

The Finance Minister has very rightly pointed to the urgent need for speedier execution of, and higher return in, the public enterprises. It is very appropriate, in this context, however, to look at the performance of public undertakings. The Government of India has invested in operating public undertakings other than railways about Rs. 1,038 crores. The total sales of these undertakings were Rs. 388 crores. The total gross profit of these concerns, excluding Hindustan Steel, was Rs. 24 crores and net profit Rs. 15.4 crores. The net profit, therefore, was about one-and-a-half per cent. When adjustment is made for the loss of Hindustan Steel, there is an overall loss. This cannot, by any means, be termed as a creditable performance. This does not merely involve the failure to achieve the targets of the Third Five-year Plan but indicates a sizable loss of national wealth. If the increase in national wealth and prosperity is the objective, these figures do point to a moral.

Procedural Delays

The problem of speedier implementation of industrial programmes is inextricably interwoven with governmental procedures and decision-making. It takes a long time from "dream to stream," that is from the day the project is conceived by the entrepreneurs to the day the plant is put on production. The Government's decision-making and licensing procedures contribute a lot to the delays involved. I am glad that this is now being realised by all concerned. And to go into the matter the Government appointed the Swaminathan Committee. The Committee made interim recommendations which are of far-reaching importance and which have been accepted by the Government. These will go a long way in expediting our industrial programmes. The problem, however, is not merely of industrial licensing under the Industries (Development and Regulation) Act. One is confronted with similar difficulties in acquisition and registration of landed properties, obtaining raw materials, fixation of transportation rates and commodity prices, securing approvals for foreign exchange expenditure, capital issues, concluding borrowing arrangements and the like. It needs an overhaul of governmental procedures and not merely a few changes in certain areas only. It may be safely suggested, for example, that issue of exchange permits for travel abroad has to be a lot more expeditious. I realise that some unscrupulous persons do travel abroad for not very legitimate reasons and there must be proper safeguards against this. But there must be no undue restrictions on travel facilities related to development programmes. If prompt and proper sanction for foreign travel is denied to negotiators and project planners, it does a lot of harm to our financial and foreign exchange interests. When the applications are submitted with documentary evidence, I see no reason why the issue of permits should take a long period. When we consider it necessary to streamline procedures and effect economies, we in the field of private industries take assistance from specialised management consultants and experts. To borrow or hire specialised knowledge does not reflect on anybody's dignity or efficiency and should be resorted to with an open mind and frequently. Incentives, monetary and otherwise, should be provided where targets of efficient management are accomplished.

Private Sector's Contribution

In the realm of contributions of private enterprise to the industrial growth, I have recently come across several reports which would appear to suggest that private industry has failed to keep pace with the programmes in the fertiliser industry. If the problems of the project with which I am associated are representative of the industry, I can say without any hesitation that not a day has been lost in putting the project on a sound, economic and practical footing. It would perhaps be interesting to investigate the progress of a large sample of important cases both in the public and private sectors of industry and identify the delays which occur and the precise reasons for such delays. This would lead to more rational economic policy decisions. I do not believe that it serves any purpose to shift responsibility. We all have the same mission.

National Income

The estimates of national income reveal a very interesting picture in this area only. The proportional share of mining, manufacturing and small enterprises was almost constant between 1948-49 and 1962-63 in spite of all the emphasis on industrial programmes. The share of commerce, transport and communications increased by just over one per cent. The decline in the share of the agricultural sector by over five per cent was set off almost wholly by the share of "other services." Government administration constitutes a major part of "other services." The increased share of unproductive services within the industrial and commercial sectors is concealed in the respective shares. In other words, speaking comparatively, the services which do not directly contribute to our productive effort are the only sector which has made progress. These components of our national income demonstrate the need to divert our national effort in alternative directions to achieve a higher input-output ratio which is the key to our real economic progress.

T.T.K's Budget Proposals

The other two worthy objectives of our economic policy which were defined by our Finance Minister and earlier by our Home Minister Shri Gulzari Lal Nanda, related to incentives for industrial growth and inflow of foreign capital. While we have to thank the Finance Minister for several reliefs proposed for the industries, including selective corporation tax relief, one wonders whether the budget proposals will, on the whole achieve these objectives. Great doubts have been expressed, which are reinforced by the prevailing investment climate on the stock markets. The treatment of bonus shares as capital gains and the imposition of a fresh dividend tax are measures which are bound to deter investors while the gains to the national exchequer may be negligible.

What, however, is really disturbing is the fact that our basic fiscal policy undergoes structural changes almost every year. The reintroduction of expenditure tax, the raising of Estate Duty rates to 85 per cent and the uncertainty introduced about the development rebate, are matters which have obviously deterrent effects on the will to save and invest. While it was gratifying to learn that the Finance Minister had promised that he did not propose to make any basic changes in the coming years, there cannot be any doubt that the changes which have been already brought about in our fiscal structure from year to year have been so substantial that one's confidence in our stable fiscal policies is bound to be shaken. Important decisions for large investments cannot be properly made when projected results are completely upset even before the decisions are finally taken and implemented. How is the foreign investor, who has opportunities for profitable investments throughout the world, going to reconcile himself to this kind of insecure financial conditions? It is my firm belief that a stable fiscal policy will be a great contribution in inducing higher investments and attracting a large volume of foreign capital.

Multiple-tax System

In the context of the basic principles of taxation, I hope the question of multiplicity of taxes will soon be examined more thoroughly. The multiple-tax system has a limit, and if it is stretched beyond that limit, decreasing returns are bound to operate. Actuated by the desire to simplify our tax system, the Income-tax Act was overhauled in 1961. And yet, our tax system today is more cumbersome than perhaps anywhere else in the world. In the context of our planned effort, there cannot be any valid argument against controls and taxation, but we must ensure that such controls and taxation do not impinge upon or jeopardise our efforts for balanced and speedier growth. A lot of governmental effort, as well as of the people in private industry, is being wasted in conforming to a complex controlled system. A large army of very brilliant Government officers and industrial planners and managers are engaged today in what might be called "unproductive project development work." We are not too plentifully supplied with such management skill and if we can put this national pool of managerial talent to productive works, the pace of planned effort would be accelerated and the process would become less expensive.

Monopolies Commission

To achieve our well-defined economic objectives, it is, indeed, very difficult to appreciate the proposal for the setting up of a Monopolies Commission. What is a monopoly? A monopoly is a state of market in which one or a couple of sellers control the market and dictate the price. Leaving alone public utilities which are inevitable

(*Continued on page 582*)

UNITED BANK OF INDIA LIMITED

DR. N. N. LAW, CHAIRMAN, NOT IN FAVOUR OF RAISING INTEREST RATES

CLAMOUR FOR NATIONALISATION OF BANKS MEANINGLESS

THE following are excerpts from the speech delivered by Dr. N. N. Law, Chairman, United Bank of India Limited, at the Annual General Meeting of the shareholders of the Bank held at Calcutta on 30th March 1964:

The past year has been a period of significant advance by your Bank. The profit has increased by Rs. 5.19 lakhs or 24.5 per cent. The dividend has been raised to 7½ per cent. This is the third rise in dividend since the amalgamation. Deposits have increased by Rs. 7.9 crores, i.e., 12.2 per cent (as against 10.1 per cent rise in the deposits of all scheduled banks). Seven new branches were opened during 1963 and so far this year two new branches have been opened. The emoluments of the employees have also been further improved.

Another important and significant event that has taken place during the year is the acquisition of a site measuring 57 cottahs—nearly an acre—on Old Court House Street. On this site is proposed to be constructed a new home for the head office of your Bank. The detailed plans for the building are being drawn up by the architects, and it is hoped that construction work will commence during the year.

I do not wish to give you the impression that the results achieved so far should lead to complacence. On the contrary, in view of the mounting operating costs, referred to later in this statement, a greater responsibility has devolved on all of us, the Directors as also the workers, in various spheres and levels in this Bank. A number of steps have been initiated early this year to achieve a wider decentralisation of functions and, as the year progresses, efforts will be made to implement the programme in a phased manner. Our aim should be the attainment of a deposit level of Rs. 100 crores within the next two years, if we are to cater to the increasing credit requirements of the developing economy. I do hope that with the concerted efforts of the workers, shareholders and present and prospective customers, the target may be achieved even earlier than contemplated.

Interest Rates

The biggest task before the Bank today is, therefore, to accelerate the rate of growth, and to meet the growing burden of interest on deposits. We shall try to achieve this by intensifying our efforts, opening more branches and by diversifying our services.

As I speak to you, banks are considering whether a further rise in the rates of interest on deposits is necessary, their attention to this matter having been recently drawn by the Reserve Bank. It seems likely that a further rise will be effected, and such a step will add to the already high operating cost and will consequently tend to step up the lending rates. My view on the lending rates is well known to be against such rise.

To my mind, it should be the aim of the larger banks in the country to be able so to rationalise, at an early date, their lending rates as will bear a reasonable relation with the line and pattern of the largest bank in the country. It should, at the same time, be their aim to remain free from anxiety concerning liquidity. An important method for achieving these ends would be to make concentrated efforts to increase deposit resources through means other than that of raising the interest rates. At the same time, an expedient utilisation of resources has also to be ensured.

In this context, I would like also to refer to the conditions obtaining in the stock exchanges. Ultimate safety and liquidity of bank advances in a growing economy, incapable, due to various reasons, of planning for extinguishment of debts, depend considerably on the ability of borrowers to shift the credit facilities in due course by obtaining equity and long-term finance through the stock exchanges. Apart from the inhibiting taxation, high rate of interest on bank advances stands in the way of the development and expansion of stock exchange services. On this ground also, it would be against the interest not only of the banks themselves, but also of industrial expansion, to encourage a rising structure of interest rates.

However, the present mood seems to be to ignore these implications and to depend on an upward revision of the rates. In that case, since we cannot swim against the current, we shall also have to fall in line, much as I would have wished that the trend were checked.

If the rates have to go up, it would be better to confine the rise to that portion of bank deposits which could be marginally sensitive to interest rates, namely, term deposits for periods over twelve months, and not to cover the whole range of deposits. The incidence of the cost of term deposits can then be somewhat neutralised by reducing the cost of demand deposits, including savings accounts which have virtually become current accounts. One of the ways to do so would be to introduce two types of savings accounts and to reduce the rate on those with very small balances, limiting the frequency of withdrawals in such uneconomic accounts. Adjustments of other service charges may also have to be undertaken.

Small Industries

I am happy to report that further headway has been made by the Bank in the matter of providing finance to the small-scale industries. As you will recall, a separate section was started about two years ago, with a view to processing with special care, such proposals from smaller industrial units as could not straightaway be considered, in the normal course, by our advances department. After the initial experimenting and probing, some tangible progress has now been made and a number of small-scale industrial units have been financed and are being given special service. Steps are now being taken further to expand the activities of this section in the matter of financing small-scale industrial units.

It has been our experience that more than the question of bank finance, the small entrepreneurs are faced with other problems, those relating, for example, to risk capital, marketing, raw materials, power, land, technical know-how, etc. The difficulty that we mostly face in financing these units is the deficiency in financial management. There have been cases where after proper assessment and discussion it was discovered that a good portion of the required development finance could be found from resources within and that only a small advance from the Bank could satisfy their requirements. In some other cases, it was also possible for the Bank to suggest ways and means by which the concerned units could raise finance from other more appropriate agencies or improve their profitability. Our approach, therefore, has been to provide the best possible financial guidance and advice along with the required finance. This is much appreciated by the concerned borrowers.

The most significant issue that developed in the past year relates to the nationalisation of banks. I do not understand the wisdom of this clamour for nationalisation. Take the case of this Bank. The ownership is widely distributed, the management is conducted by people who have risen from the bottom of the ladder, the employees are drawn from the middle class families and number around 4,000. It serves the common man with sincerity and warm friendliness. Could nationalisation make any difference for the better? The only difference it could make, to my mind, it that the profit would then go to the State Exchequer instead of being paid to you as dividend.

The charges levelled by the protagonists of nationalisation are mainly those of concentration of power, of diversion of resources to big industries and of failure to spread in the rural areas. With the recent amendment of the Banking Companies Act, the already existing wide powers of the Reserve Bank of India have been further expanded. It can now remove any director, chief executive or any other employee of a bank and also appoint persons of its choice in place of those removed. It has also been provided that no shareholder can have a voting right in excess of 1 per cent of the total voting rights of all the shareholders of the banking company. With these powers vested in the central banking authority, the talk of concentration of power is not tenable.

In the matter of making advances also, the Reserve Bank has extensive powers to issue directives to all the banks generally, and to an individual bank particularly, in various matters regarding advances, including the maximum amount of advance that may be made to an individual borrower.

If the banks are financing big industrial projects, it is only in accordance with the industrial policy of the nation. In the situation of control in this regard, installation and expansion of big units can only be in accordance with the industrial policy and with the permission of the Government. If, therefore, such projects are vital to economic development, it is only proper that the commercial banks should assist these to the best of their ability. What is really to be regretted is that on account of inadequate growth of deposits, the banks are not always able fully to cater to the requirements of these projects.

As for the question of expansion to the rural areas, it must be remembered that this could not be undertaken indiscriminately. It is a well-known fact that branches in rural or semi-rural areas incur losses for a number of years. The rate of expansion in this sphere, therefore, must be determined by the ability to bear losses. For any economical unit, whether in the public sector or the private, a balance must be struck between that part of its operation which is already economic and that which is, or is for some time likely to remain, uneconomic. Yet, the banks have already been expanding in these areas and during the past few years the coverage that has been extended must, in the circumstances, be considered satisfactory.

While it augurs well that views advocating nationalisation are held by a very small group and that the Government has not endorsed these views, it is imperative that a thorough reappraisal and self-analysis be made by the industry itself with a view to devising ways and means to alter the image of its services to the community. The bankers are conscious of this need. An important step in this regard would be, besides an enlightened collective public relations programme, to develop, with a positive purpose, a wide range of promotional activities with adequate "social content," particularly in assisting growth of self-employment through small-scale industries.

These efforts would no doubt need a lot of pioneering in finance, but that need not deter nor delay any such programme. Further, such activities would attract much more resources to the banking system than what higher rates on deposits are likely to fetch. On the other hand, such dissipation of bank earnings through higher rewards to depositors, by charging more to the people who undertake productive economic activity, increases consumption and adds to the factors distorting the efforts to hold the price line. Bank earnings devoted to the promotion of self-employment will accelerate economic development and go a long way in resisting inflationary pressures.

Development Banks

In this connection, the role that is being played by the development banks in the country comes to my mind. These institutions, while performing very useful services, are dependent, to a very high degree, on the Government for their resources. The resources made available to the Industrial Finance Corporation are interest-bearing, while to State Financial Corporations such funds are not at all made available. Their own attempts to raise resources from the community in the form of increased equity or bonds have not been successful to the extent required. It is true that the conditions prevailing in the country are not yet conducive to the success of attempts by the development banks to raise their own resources. This is, because, in their case the prospects of profits are not only low, but long-term as well.

It would, therefore, be advisable that adequate funds be made available to these institutions in the form of junior capital. At the same time, the commercial banks, which are not in a position to play an unrestricted direct role in providing development finance to industry on a substantial scale, though they are doing their best to provide medium-term loans and working capital might orientate their operations and provide more resources to these specialised institutions. This would be a worthwhile contribution for the commercial banks to make and would help them as to liquidity. Similar contribution could be thought of in the field of agriculture also. It will still be necessary for the development banks, however, to create their own cells for initiating efforts to place their commitments in capital subscriptions and issue of bonds, direct with the public. This again makes the need for activising stock exchanges more urgent.

For assisting the small and medium-scale industrial sector, a number of institutions are now functioning: the State Financial Corporations, the National Small Industries Corporation, the Small Industries Service Institute, the agencies functioning under State Aid to Industries Act, and the Guarantee Scheme operated by the Reserve Bank through the scheduled banks. Perhaps, it may serve the purpose better, if, instead of multiplication of agencies dealing with small and medium-scale industries, a separate single agency is set up for each region, with a combination of all the varieties of functions now performed by these multifarious agencies. Such an institution at the State level would be better equipped to render not only financial assistance, but also services in the form of marketing information, technical and managerial assistance, etc., which these industries so badly need. Through its provision, even if partially, of risk capital to the small entrepreneurs, such an institution would act as a catalytic agent in the capital market, on the lines of the functions performed by the Industrial Credit and Investment Corporation of India at the national level.

General Economy

Coming to the overall economic development in the country, it is being increasingly realised that in recent years the rate of growth has not been up to the desired level and that vigorous steps should be taken to accelerate the tempo of development. A number of steps in this regard have been taken recently in the form of relaxation of capital control, price control, streamlining of licensing procedures, increased resources of the development banks, establishment of the Unit Trust and the Industrial Development Bank. The Finance Minister has also repeatedly emphasised the need for achieving faster growth and for this purpose he is contemplating further measures, over and above the fiscal incentives which in a limited way have been provided for certain industries in the budget.

At the same time, it is equally necessary to establish a measure of continuity of these policies. An illustration of the lack of continuity in policies, which we have so often experienced, is provided by the recent budget proposals concerning the annuity deposit, the expenditure tax and the increases in the rates of wealth tax and estate duty. The essence of a sound fiscal policy in the context of the situation prevailing in the country, is its ability to stimulate investments. An essential ingredient of investment decisions is constituted by reasonable expectations regarding the future course of events. Lack of continuity of policies does weaken such expectations, and set at nought all forecasts and planning so very vital in any industrial operation.

There is another facet of this aspect of expectation or forward projection, and that is psychological. But it plays a very significant part in any human activity. To my mind, what seems to be happening is that, while it is a declared objective to encourage investments and thereby to achieve a higher growth rate, there is not yet the full realisation of the significance of the psychological factor of expectations regarding the future. In the absence of reasonable optimism on this score, no amount of institutional props and persuasion will be adequate to generate the desired degree of economic growth.

What the country needs is an all-pervading atmosphere of development and a climate of self-employment through small and ancillary industries spread all over the country. While fiscal policy, in so far as it had been inhibitive, has undergone certain adjustments, this by itself will hardly be enough. Every region in the country should make a determined and positive bid to generate a real movement for stimulating industrial growth at all levels. An essential step in this respect would be to provide against a degree of risk which is inherent in any pioneering effort. When it is ensured that the community will back up the venture, much will be achieved in orientating the common man to the idea of self-employment through industries. No movement can achieve results without the readiness to pay the price for it.

At the State levels, adequate funds should be found to take care of the financial risks which may develop through such a movement. Bearing the risks at the State level, in this manner, would actually be an investment in the future and will prepare the basic background for self-employment through industrialisation. If, from this point of view, it becomes desirable—which possibly it is—to pool the resources of the development banks operating in a particular region, that also should be done. The budgets of the States should be carefully examined and the impact of each item of expenditure should be analysed to see what proportion of the budget is directly aimed at encouraging self-employment. Provision of adequate funds, as mentioned earlier, would constitute a very small percentage of the total State resources but would go a long way towards fulfilling the goals of economic development.

GOVERNMENT OF INDIA

4 PER CENT. LOAN 1970

ISSUE PRICE Rs. 99.00 PER Rs. 100 (NOMINAL)—REPAYABLE ON 15TH APRIL 1970

4¾ PER CENT. LOAN 1989

ISSUE PRICE Rs. 100 PER Rs. 100 (NOMINAL)—REPAYABLE ON 15TH APRIL 1989

The holders of 3½ per cent. National Plan Loan 1964 and 3 per cent. Loan 1964 have been given the facility of converting their holdings into 4 per cent. Loan 1970 to be issued at Rs. 99.00 per Rs. 100 (Nominal) and repayable at par on 15th April 1970 or 4¾ per cent. Loan 1989 to be issued at Rs. 100 per Rs. 100 (Nominal) and repayable at par on 15th April 1989.

2. The securities of 3½ per cent. National Plan Loan 1964 and 3 per cent. Loan 1964 will be accepted for conversion at par and interest thereon will be paid at the rate of 3½ per cent. and 3 per cent. per annum upto and inclusive of 18th April 1964 and 14th April 1964, respectively.

3. The new securities to be issued by way of conversion will bear interest from 15th April 1964. The interest, which will be paid half-yearly on 15th October and 15th April, will be liable to tax under the Income-tax Act 1961.

4. Applications for conversion will be received during the period 15th April 1964 to 22nd April 1964 (both days inclusive) at :—

(*a*) Offices of the Reserve Bank of India at Bangalore, Bombay (Fort and Byculla), Calcutta, Madras, Nagpur and New Delhi;

(*b*) Branches of the subsidiary banks of the State Bank of India conducting Government Treasury work; and

(*c*) Branches of the State Bank of India at other places in India.

ESTIMATES COMMITTEE ON TRADE

EXPORT PROMOTION WORK MUST BE MORE VIGOROUS THAN NOW

AFTER watching the export trends for full ten years (from 1951-52 to 1960-61), the Planning Commission frankly admitted, in its third Plan report, that the measures for expanding exports, when considered in relation to the underlying factors inhibiting exports, could not be said to have been adequate. Since one of the main drawbacks was that the programme for exports had not been regarded as an integral part of the country's development effort and the Five-year Plans, the Commission had emphasised then that, if a substantial increase in exports was to be achieved, action had to be taken along several directions. In particular, stress was laid on a fourfold approach: (*a*) domestic consumption must be held within reasonable limits with a view to creating surpluses for exports; (*b*) in view of the increasing profits which can be earned in the domestic market once an economy begins to develop, steps to increase the comparative profitability of exports are essential; (*c*) in their cost structure and productivity, the principal industries, especially the export industries, must become competitive as early as possible and a systematic programme to this end has to be pursued within each industry; this is an essential condition for diversifying and for steadily increasing the share of new manufactures and minerals in export trade; industrial licensing policies should also be oriented towards export promotion; (*d*) steps must be taken to mobilise public opinion in favour of exports and acceptance of the burdens involved, to enlist the cooperation of industry and trade in this national effort, to improve Government's own organisation for market research and intelligence, as well as commercial representation abroad, and to enlarge facilities for credit, insurance, etc.

In accordance with the aforesaid fourfold programme of action, several steps have no doubt been taken by the Government of India to stimulate exports. But the measures have met with only limited success. The aggregate exports during the entire third Plan period, according to the mid-term appraisal, will be no more than Rs. 3,610 crores (excluding Goa's share of about Rs. 90 crores), or a shortfall of Rs. 90 crores as compared with the Plan target of Rs. 3,700 crores. The average annual level of exports (including Goa) comes to about Rs. 740 crores, which, it is felt, will have to be stepped up to at least Rs. 1,300-1,400 crores during the fourth Plan period (April 1966-March 1971), if India is to meet its repayment obligations abroad, as well as to finance the increasingly large-scale maintenance and development imports. The additional annual exports thus come to about Rs. 560-660 crores. On the face of it, it may appear extremely doubtful whether an increase of this magnitude can, in fact, be realised. While the doubt is reasonable, the rate of exports can definitely be much higher than at present, provided (*a*) the industrially advanced countries of the West open their gates for Indian goods a little more widely than is the case now—happily there are encouraging signs in this respect—and (*b*) an all-out export drive is launched by the country. The elements of such a drive have been clearly spelt out by the Estimates Committee of Parliament in its forty-eighth report on the Union Ministry of International Trade placed on the table of the Lok Sabha a few days ago.

Cost Reduction

The issue of quality apart, it is the price of a commodity that ultimately determines its competitive capacity in world markets *vis-a-vis* goods exported from other countries. Almost every item of export (barring a few commodities such as sugar and tin) is now having a buyers' market, which means that the need for making export commodities competitive in price is imperative. The Estimates Committee has done well, therefore, in urging Government to give most careful and urgent attention to the problem of cost reduction in various industries and devise a competent machinery to tackle it in a comprehensive manner. There is, however, nothing new this plea in that it has been made off and on for quite some time now. Only two months ago—on 1st February 1964—the Board of Trade, at its meeting held at New Delhi, had called for the immediate establishment of a cost reduction cell in the Planning Commission to undertake commodity-wise and industry-wise cost studies and to suggest measures to bring them down. The appointment of this cell is one thing and the implementation of its recommendations is another. We say this, because, in many cases, the Government has simply pigeon-holed the findings of special committees the deliberations of which have cost the taxpayer not inconsiderable amounts. Take, for instance, the report of the Expert Committee on Cost Reduction Studies (Chairman: Dr. S. K. Muranian) on Cotton Textile Industry. Although this report was submitted nearly seven months ago, no positive action has been taken on it.

Other Facilities

Cost reduction, however important it may be, can be achieved only over a period of time. Meanwhile, the exporting interests, be they manufacturers or actual exporters, need some fiscal relief, transport facilities and freight concessions. The specific measures which the Estimates Committee has made in respect of these are as follows:

Accelerated depreciation must be allowed on fixed assets used in exporting industries.

The recommendations of the Saraiya Committee, which was set up in June last year by the Board of Trade to study the question of incidence of sales taxes on commodities exported from India and to suggest measures for grant of appropriate relief in the interests of export trade, should be processed quickly and suitable action taken to ensure that the exports are not unnecessarily burdened with levies.

(The Mudaliar Committee, too, it may be noted, had clearly urged remission of sales tax entering into export costs and grant of a uniform rebate of, say, 2 per cent. It is a pity that the Estimates Committee has not given its full support to this plea.)

The difficulties experienced by industries and exporters in obtaining drawback of duties on exports must be looked into by the Departmental Committee and they must be resolved in consultation with the representatives of the industries concerned and exporters without any avoidable delay. Every effort should be made to fix the rate of drawback clearly for as many products as possible to facilitate payment.

Decision on the Mudaliar Committee's suggestion for giving drawback of import duties, excise and sales tax at one central point most convenient to exporters must be taken without any avoidable delay.

Vigorous and prompt efforts may be made to complete the comparative studies undertaken by the Freight Investigation Bureau as quickly as possible and necessary steps taken to seek reduction in freight rates, particularly for sensitive commodities.

Urgent measures need to be taken to modernise the cargo handling facilities at the principal ports, so that detention of ships, which has a direct bearing on freight rates, is reduced.

Tramps may be encouraged, so that they can act as a corrective and a check to the Conference system. The Government should also continue to pursue the question of reducing the freight rates with the Conference Lines wherever necessary.

Every one of these suggestions has been repeatedly put forward time and again, but to no purpose. For the Government has not cared to give effect to them. Now that the Estimates Committee, too, has drawn pointed attention to them, it is to be hoped that the authorities will act expeditiously. The record increase of a little less than Rs. 100 crores in exports last year should not engender the feeling that export promotion through fiscal and other incentives is not necessary. It must be remembered that a part of the improvement in exports last year is attributable to the high level of economic activity in the developed countries. In short, it was in keeping with the world trend in general.

Four Interesting Suggestions

The four other interesting suggestions made by the Estimates Committee also merit due attention. First, efforts should be intensified to extend quality control to exports, particularly for engineering goods; a compre-

Foreign Trade Under Five-year Plans
(In crores of rupees)

Financial year ended March	Exports (f.o.b.)	Imports (c.i.f.)	Balance of Trade
First Plan:

* Including Goa, Diu and Daman.
† Excluding Goa, Diu and Daman.
§ Excluding P.L. 480 imports amounting to Rs. 600 crores.

hensive legislation on compulsory quality control and pre-shipment inspection has already been passed. Secondly, speedier action should be taken to establish the Free Trade Zone at Kandla, so that it can make an effective contribution in increasing exports of manufactured goods and products during the current Plan period and act as a model for the establishment of similar zones in Haldia and other promising areas. Thirdly, there is need for continuous vigilance to ensure that the export promotion schemes do not result in abuse. Finally, incentives should be given only to such commodities as would not find an export market on their own and where there is reasonable ground for belief that the exports would, after a time, become self-sustaining.

Since the traditional items of exports continue to be the primary earners of foreign exchange, it is just as well that the Estimates Committee has urged that every effort be made to augment the exports of these items particularly to new markets. It has made a number of useful suggestions covering the exports of important commodities such as oil and oilcakes, jute, mica, engineering goods, handicrafts, hides and skins, leather goods, chemical and allied products, medicinal herbs, forest products, seedlac, tobacco and synthetic stones.

Trade with E. Europe

The Estimates Committee is somewhat concerned to note that India has been facing an unfavourable trade balance with the East European countries for the last two years. The actual adverse balance was to the extent of Rs. 12.95 crores in 1962-63 and Rs. 23.81 crores in 1961-62. Considering that the bilateral agreements with the East European countries are supposed to ensure automatic balancing of India's exports to and imports from each of the countries concerned, the following observations by the Committee are worth recording:

"The Committee suggest that suitable measures may be devised to discourage re-export, if there is any, of Indian goods by East European countries and their sale in other countries at a discount. The Committee would stress the vital importance of collecting and comparing the price data of goods imported from rupee payment countries as well as other centres of supply so as to ensure that no unfair prices are charged for imports by these countries. They suggest that the scope for research studies by the Market Research Cell may be extended so as to cover a larger number of representative imported items. They would also suggest that the result of such studies should be suitably publicised for the information and guidance of all concerned. The Committee suggest that Government may consider the advisability of allowing imports of a limited number of items which are normally imported from East European countries under rupee payment agreements from general currency areas in order to enable the industry and trade to have a fair idea of their comparative price and performance.

"The Committee are glad to note that, in the recent agreements, concluded with Hungary and Czechoslovakia, specific provision has been made about the export of manufactured and semi-manufactured goods. The Committee would suggest that specific provision for export of manufactured and semi-manufactured goods may be made in trade agreements, particularly with rupee payment countries. The Committee would also stress that suitable steps should be taken to show and publicise the Indian manufactured goods in the countries with whom we have bilateral trade agreements so that larger orders for export of manufactured goods can be obtained. While it may not be possible for the Government to associate the representatives of trade and industry in the negotiation of trade agreements, the Committee feel that it might be possible for Government to invite suggestions from important chambers of commerce and industry so that all the cogent suggestions are duly considered and necessary provisions are made in trade agreement."

Commercial Representatives Abroad

Some useful suggestions have been made covering India's export trade with Ceylon, Burma and Nepal, African countries Fiji, Trinidad, etc., and West European countries. Also included are suggestions designed to improve commercial publicity and exhibitions. There is an interesting reference to the set-up of Commercial Representatives abroad which reads thus:

"Out of the total of 44 Commercial Representatives posted abroad, only 13 of them know the language of the country to which they are accredited. Out of these 13 Commercial Representatives, only three are working in non-English speaking countries. It would be a distinct advantage if the Indian Commercial Representative knows the language of the country in which he has to function. The Committee suggest that necessary steps may be taken in this direction without delay. The Committee would stress that, as export and import trade are of basic importance to the country, care should be taken to see that officers who show special aptitude for the work and have adequate knowledge and background are only posted as Commercial Representatives. The Committee would stress that orientation and refresher courses in international trade should be given to the I.F.S. officers so that they are well equipped to discharge fully their responsibilities. The importance and utility of up-to-date and comprehensive market surveys in the promotion of international trade needs no stress. The Committee feel that a survey to be purposeful should contain not only up-to-date and reliable information but bring out pointedly the prospects for Indian exports. They would stress that the staff of the Commercial Sections of the Indian Embassies abroad should be well versed in the technicalities of market research, so that they can produce reports which would be of practical value to Indian industry and trade."

In the task of export promotion, Commercial Representatives ought to play a more dynamic role and the Estimates Committee has done well, indeed, in highlighting this very important aspect.

Imports

While the need for augmenting exports is imperative, it is also important to ensure that imports are confined only to the absolute minimum necessary for economic development. The Estimates Committee has done well, therefore, in devoting quite a bit of its attention to the problems pertaining to imports. But neither its findings nor its conclusions are impressive. Most of them are commonplace. The analysis of the structure of import trade in recent years as made by the Committee reveals that the proportion of capital goods and consumer goods (other than foodgrains) to the total imports has gone up from 13.91 per cent and 7.89 per cent in 1960-61 to 16.18 per cent and 8.46 per cent respectively, in 1962-63, whereas the percentage share of industrial goods has declined from 66.13 (1961-62) to 64.87 and foodgrains from 15.95 (1960-61) to 10.54. It is the considered opinion of the Committee that unless the reduction in the percentage of industrial goods imported into the country is due to substitution of import by indigenous goods, there may be imbalance, resulting in idling of capacity in existing units. Actually, the Committee should have tried to find out the extent to which deficiencies in the import policy of the Government have tended to arrest the pace of economic growth. The increase in the percentage of consumer goods imports is only small, but even this has been dubbed by the Committee as something very undesirable, ignoring the elementary consideration that, in a developing economy of the kind in India, a certain amount of increase in the import of consumer goods is essential for keeping under check artificial increase in prices and for meeting the requirements of growing number of foreign residents in the country. Imports of some consumer goods are also essential for attracting foreign tourists to the country.

Be that as it may, two important suggestions for toning up the import trade mechanism have been put forward by the Committee. They are: 1. Import policy must be announced simultaneously for all commodities, so that the scope for speculation is eliminated. 2. The working of the Chief Controller of Imports and Exports Organisation must be improved considerably with a view to ensuring timely and expeditious disposal of import applications. Besides, the Committee has emphatically urged the Government to check such undesirable and anti-national practices as over-invoicing and under-invoicing of goods as well as to streamline the licensing procedures so that the external grants and credits arranged after hard efforts may be put to effective use.

A seven-member trade delegation (leader: Dr. R. M. Thakkar, General Manager, Industrial and Allied Chemicals), sponsored by the Basic Chemicals, Pharmaceuticals and Soaps Export Promotion Council, Bombay, left India on 30th March 1964 for a tour of some of the African and West Asian countries. The delegation will discuss with trade associations, importers and Government institutions there the possibilities of establishing trade in these products. The countries included in the visit are Kuwait, Iraq, U.A.R., Sudan, Ethiopia, Kenya, Tanganyika, Uganda and Aden. The delegation will also study the possibility of establishing pharmaceutical and chemical industries in the countries with the aid of local capital and labour and the co-ordinated efforts of Indian technicians and industrialists.

DUNLOP EARNS LESS, BUT PAYS MORE

BUDGET PROPOSALS CUT TAX BY Rs. 11 LAKHS

WHEREAS the year 1962 had proved to be an eventful one for the Dunlop Rubber Company (India) Ltd. [Managing Director: Mr. M. L. Bexon, Calcutta], the past calendar year has not been that rewarding in that its gross profit has declined, albeit slightly, for the first time in the past eight years, from Rs. 391.18 lakhs to Rs. 387.52 lakhs, in spite of an improvement in the net turnover (that is, excluding excise duty paid) of about Rs. 2 crores to Rs. 31.28 crores, which is a new all-time peak. In the previous year, the turnover had gone up by Rs. 2.52 crores and the profit by Rs. 42.42 lakhs. The Directors have no particular comment to offer on the year's results. But at the close of last year, the management had noted: "The need for rapidly improving the transport system, particularly road transport, both for development and defence purposes, has received wider appreciation. Meanwhile, the Dunlop have been meeting with the utmost promptness the additional demands suddenly imposed by the emergency."

Some inferences about the Company's working during 1963 can be drawn from these observations of the management. It can be surmised that sales have improved because of the greater demand. On the sales made directly for defence purposes, it may have received lower prices. Besides, higher costs and regulated prices of the Company's principal products also seem to have been responsible for the drop in profit.

The following comparative table gives a clear idea of the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sale proceeds, less excise	31,28.22	29,34.50	26,82.32	25,18.96
Work-in-progress	47.02	41.37	38.05	35.15
Other income	6.38	7.01	7.32	5.88
Materials, finished goods, stores and spares consumed	19,99.87	18,73.12	17,20.02	17,14.33
Staff expenses	414.43	383.16	346.40	307.06
Excise duty paid	945.65	778.33	603.20	527.60
Interest payable	30.60	23.22	24.43	26.89
Other expenses	307.84	274.19	252.93	226.83
Gross profit	387.52	391.18	348.76	264.64
Provision for—				
Depreciation	59.83	60.80	61.39	58.71
Taxation	158.82	234.79	122.62*	81.37
Net profit	168.87	95.59	164.75	124.56
Development rebate reserve	10.25	3.00	7.50	17.00
General reserve	106.15	20.00	62.50	37.50
Dividends—				
Preference 8% guaranteed	2.40	2.40	2.36	2.34
5.5% second	2.20	2.20	2.14	2.13
Ordinary	78.75	67.50	99.00	64.50
	(17.5%)	(15%)	(20%)	(21.5%)
Carry forward	..	25.88	25.39	25.13

Equity shares' market value (in rupees):	1964	1963	1962	1961	1960
High	39.06	39.50	45.00	60.12	49.50
Low	35.56	29.37	32.50	37.87	35.50

Note: (1) The company issued in 1961, 15 lakh equity shares of Rs. 10 each as fully paid bonus shares which ranked for the dividend from that year. (2) From 1959, all dividends have been subject to deduction of tax.
* Does not include Rs. 18.75 lakhs, being the tax on the bonus shares. It is charged to general reserve.

The cost of materials, finished goods, stores and spares consumed has gone up from Rs. 18.73 crores to Rs. 20 crores. Staff expenses have moved up further from Rs. 383.16 lakhs to Rs. 414.43 lakhs. The amount of interest paid has risen from Rs. 23.22 lakhs to Rs. 30.60 lakhs because of larger borrowings on account of increased operations during the year. Other expenses, too, have been higher at Rs. 307.84 lakhs as compared with Rs. 274.19 lakhs in the previous year.

The percentage disposal of the revenue (according to the published figures), with the previous year's comparative figures mentioned in brackets, is shown as: Goods and services 47.50 (49.49); excise, customs duties, taxation, etc., 36.70 (36.58); salaries and wages 8.05 (8.15); bonus and employee benefits 2.15 (2.15); depreciation 1.50 (1.64); dividends to shareholders 2.03 (1.34); and retained earnings 2.07 (0.65).

While the expenses have been higher and the gross profit has declined, the net profit, which had dropped in the previous year from Rs. 164.75 lakhs to Rs. 95.59 lakhs, has recovered more than fully to Rs. 168.87 lakhs due almost entirely to a saving of Rs. 75.97 lakhs in the tax provision amounting to Rs. 158.82 lakhs as compared with Rs. 234.79 lakhs a year before. This reduction has been made possible due to the overprovision of Rs. 24 lakhs in respect of S.P.T. for 1962 (the amount provided being Rs. 63 lakhs), higher development rebate allowances for 1963 (the amount transferred to the reserve being Rs. 10.25 lakhs, as against Rs. 3 lakhs a year before), and a net cut in the burden of taxation of approximately Rs. 11 lakhs as a result of the latest budget proposals. Thanks to the much larger distributable surplus available for the year, the dividend on the Rs. 10 fully paid ordinary shares, which had been cut by five points to 15 per cent in the previous year, on top of reduction by 1½ points in 1961, has been modestly raised to 17.5 per cent per annum, subject to tax. At the same time, the amount carried to general reserve is substantially higher at Rs. 106.15 lakhs as compared with only Rs. 20 lakhs in the previous year. This allocation to the reserve out of the year's profit includes all the available surplus after providing for the year's dividend, whereas in the previous year there was a balance of Rs. 25.88 lakhs as the carry forward.

The Directors are of the view that the authorised capital of the Company should be increased from Rs. 7.50 crores to Rs. 12.50 crores by the creation of 5,000,000 shares of Rs. 10 each for meeting the possible future financial requirements in the light of the expanding nature of its business. In order to retain flexibility in the capital structure of the Company, the new shares have been left unclassified for the present. A resolution giving effect to this proposed increase in capital will come up for shareholders' consideration at their annual general meeting to be held at Calcutta on the 22nd inst.

Out of the present authorised capital of Rs. 750 lakhs, Rs. 520 lakhs have been issued and made fully paid up, comprising Rs. 450 lakhs in equity shares (against Rs. 680 lakhs authorised), Rs. 30 lakhs in 8 per cent guaranteed cumulative preference shares and Rs. 40 lakhs in 5.5 per cent second cumulative preference shares. The capital is backed by Rs. 623.01 lakhs in reserves and surplus. In addition to these "own funds" amounting to Rs. 11.43 crores, the Company has an outstanding debenture liability of Rs. 197.60 lakhs, as against which, on the assets side, there is a debenture stock redemption fund of Rs. 45.44 lakhs. Current assets, book debts and investments total Rs. 14.90 crores and adequately cover current liabilities and provisions shown at Rs. 6.43 crores. The gross block, which expanded during the year from Rs. 11.27 crores to Rs. 12.21 crores, has been written down to Rs. 6.46 crores.

Currently quoted at Rs. 36.50 *cum-div.*, the Rs. 10 fully paid ordinary shares of the Company offer a net yield of 4 per cent per annum.

£600,000 LOAN FOR MUKAND IRON

A secured sterling loan of £600,000 has been sanctioned by the Commonwealth Development Finance Company Ltd. (C.D.F.C.) to the Mukand Iron and Steel Works Ltd. for meeting a part of the foreign exchange requirement of its expansion scheme at Kalwe, Bombay. The Company, which is the largest independent steel re-rolling unit in the country, proposes to set up a new plant for melting steel for producing about 70,000 tons of wire rods annually and to install a continuous casting unit, among the first of its kind in India, for making billets from liquid steel.

(*Concluded from next column*)

ence shares and the balance in ordinary shares. It is backed by reserves and surplus amounting to Rs. 22.14 lakhs. Borrowings, including Rs. 31 lakhs from the I.F.C.I., are shown at Rs. 92.83 lakhs, as against Rs. 95.56 lakhs a year before. Taking the short-term borrowings and current liabilities and provisions alone, the total indebtedness to outsiders works out to Rs. 149.92 lakhs, as against which current assets, book debts and investments aggregate Rs. 193.40 lakhs. The gross block of Rs. 130.15 lakhs (Rs. 123.15 lakhs a year before) has been written down to Rs. 68.14 lakhs.

The General Tyres Ltd., of which the Company is the Managing Agent, commenced trial production in July last and has since gone into production and also commenced marketing automobile tyres and tubes. Both the test results and the initial market reaction have been quite satisfactory. The managed company is presently engaged in stepping up its production by expanding the existing capacity of tyres and tubes from 180,000 units of each to 300,000 units each and of Camel Back to 600,000 kgs.

Currently, the Rs. 10 fully paid ordinary shares of the Company are quoted at Rs. 12.56 *cum-div.* and offer a net yield of 6.8 per cent per annum.

NATIONAL RUBBER MAKES FURTHER HEADWAY

MORE FUNDS FOR EXPANSION

WITH a more than full utilisation of the installed capacity for most of its products and a continued rise in the demand for them, the National Rubber Manufacturers Ltd. (Managing Director: Mr. K. N. Mookerjee, Calcutta) has made further headway during the year ended 31st December 1963. The immediate effect of higher production and improved demand has been felt in gross sales which have exceeded Rs. 457 lakhs, as against the original estimate of Rs. 300 lakhs only as stated in the prospectus at the time of the last issue of share capital in 1957. Further, as a result of the better demand, stocks of finished goods and work-in-progress have shrunk from Rs. 52.57 lakhs to Rs. 42.42 lakhs. The actual turnover during the year marks a new high level representing an increase of 30 per cent over Rs. 352 lakhs in 1962 and of 979 per cent over Rs. 46.62 lakhs in 1951. Net sale proceeds (that is, excluding excise duty paid) have been higher by more than Rs. 91 lakhs at Rs. 429.40 lakhs.

Expenses have no doubt gone up because of the increased operations during the year. The cost of materials and stores consumed has moved up from Rs. 177.21 lakhs to Rs. 261.36 lakhs, staff expenses have expanded by over Rs. 16 lakhs to Rs. 58.49 lakhs and other expenses have risen from Rs. 54.41 lakhs to Rs. 73.14 lakhs. In spite of these increases, however, the profit has recorded an encouraging improvement from Rs. 18.99 lakhs to Rs. 30.36 lakhs. More than one-third of this profit (Rs. 11.80 lakhs, to be precise, as against Rs. 5 lakhs a year before) has gone as tax. Net profit, consequently, shows only a modest rise of Rs. 4.23 lakhs at Rs. 10.64 lakhs. About 50 per cent of the net profit, as against roughly 16 per cent a year before, has been carried to reserves, the aggregate figure being Rs. 5.03 lakhs, as against Rs. 1.46 lakh. At the same time, the dividend on the Rs. 10 fully paid shares has been raised again, this time by two points as against one-and-a-half points a year before, to 10 per cent per annum, subject to deduction of tax. The carry forward is Rs. 58,629, as against Rs. 75,633 brought in.

The Company's progress in the past four years is brought out in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sales, less excise paid	429.40	338.18	256.40	230.99

Ordinary	5.00	4.00	3.25	..
	(10%)	(8%)	(6.5%)	..
Carry forward	0.59	0.76	0.58	0.47

Equity shares' market value (in rupees):	1964	1963	1962	1961	1960
High	13.25	13.87	15.06	16.36	18.62
Low	12.25	10.25	11.12	11.50	12.56

A further expansion of the Company's operations has been found necessary for maintaining the past few years' satisfactory record of progress. The Company has accordingly obtained fresh industrial licences for manufacturing 1.6 million numbers of cycle tyres, 600,000 industrial V-belts and fan belts and 1,200 tons of reclaimed rubber. Licences for the first two items involve a substantial expansion of the existing capacity while the licence for the third item covers manufacture of a new article. Additionally, the Company has been permitted to manufacture P.V.C. conveyor belting within the capacity already licensed and established for transmission and conveyor belting. This expansion will require more funds and the Company has already obtained the necessary sanction for making at par a one-for-one rights issue of the aggregate value of Rs. 50 lakhs in 500,000 ordinary shares. As a first prerequisite to the proposed rights issue, the authorised share capital has already been raised to Rs. 250 lakhs comprising Rs. 200 lakhs in equity shares and Rs. 50 lakhs in preference shares.

The paid-up capital at present stands at Rs. 60 lakhs of which Rs. 10 lakhs are in prefer-

(*Continued in previous column*)

NATIONAL RAYON SELLS MORE, BUT EARNS LESS

EXCISE BURDEN TOO HEAVY

THE performance of the National Rayon Corporation Ltd. (Managing Agents: Messrs. Chinai and Company Pvt. Ltd., Bombay) in the year ended 31st December 1963 is, in many ways, in refreshing contrast with that in the immediately preceding year. Thus, whereas during the previous year, gross sale proceeds had merely crawled up from Rs. 810.42 lakhs to Rs. 827.45 lakhs, those during the year under review have spurted by well over 40 per cent to reach what appears to be an all-time high level of Rs. 11,64.33 lakhs. This total is made up of Rs. 10,52.57 lakhs (as against Rs. 738.25 lakhs) by way of sale of yarn and waste and Rs. 111.76 lakhs (as against Rs. 89.20 lakhs) by that of chemicals and miscellaneous items. In spite of this rise in turnover, the value of closing stocks has remained at the high level of Rs. 155.96 lakhs, as against Rs. 157.98 lakhs a year before (during the previous year closing stocks had advanced fourfold from Rs. 43.02 lakhs). This indicates a sustained activity on the production side matched by a corresponding rise in sales.

Under the impact of these favourable factors, the gross profit of the Company has expanded by Rs. 36.76 lakhs to Rs. 261.78 lakhs but, unfortunately, the profit-margin (ratio of gross profit to sale proceeds) has declined to 22.5 per cent from 27.2 per cent for 1961-62 which itself was lower by about three points than the 1960-61 level of over 30 per cent. There are two reasons why this has been so. First, owing to labour trouble, there was stoppage of work and a consequential loss of production for a protracted period. This must have resulted in raising the unit cost of production, though the situation was mitigated, to certain extent, by the working of the 12 additional spinning frames commissioned in the last quarter of the previous year and by a better average selling price. Second, there has been a disproportionate increase in the excise duty paid, from Rs. 187.59 lakhs to Rs. 289.94 lakhs, and in other expenses from Rs. 310.37 lakhs to Rs. 388.05 lakhs due mostly to a rise in staff expenses and interest charge.

Owing to the improved level of gross profit, the provision for the Managing Agents' commission has naturally advanced from Rs. 6.46 lakhs to Rs. 7.80 lakhs. The transfer to depreciation account has also been stepped up from Rs. 128.40 lakhs to Rs. 132.52 lakhs. It is, however, the provision for taxation that shows the largest percentage rise from Rs. 17.65 lakhs to Rs. 64.10 lakhs, firstly, because of the higher taxable profit, secondly, because of the drop from Rs. 26.10 lakhs to just Rs. 1.90 lakh in the amount withdrawn from the deferred taxation reserve, thirdly, because of the sharp decline in the development rebate claimed for tax purposes and, finally, because of the inclusion of Rs. 2.89 lakhs as the liability under the newly introduced dividend tax of 7.5 per cent. As a result of these heavier prior charges on the gross profit, the net profit has declined for the second successive year to Rs. 57.36 lakhs from Rs. 72.51 lakhs for the year before. Out of this Rs. 9.10 lakhs, as against Rs. 25.10 lakhs last year, have been transferred to the statutory development rebate reserve while preference dividend claims Rs. 9.67 lakhs. The dividend on ordinary shares could, therefore, be only maintained at Rs. 16 per share (subject to deduction of tax) to which level it was lowered last year from Rs. 22 per share. The Directors have, however, decided to issue as rights shares one ordinary share at par for every ten ordinary shares already held. Since the total amount of this issue does not exceed Rs. 25 lakhs, no sanction for it from the Controller of Capital Issues is considered necessary.

The Company's share capital remains unchanged at Rs. 415.81 lakhs, comprising Rs. 174.25 lakhs in preference shares of Rs. 100 each and the balance in equity shares of a like par value, but the reserve complement has risen to Rs. 246.83 lakhs, raising the total of own funds to Rs. 662.64 lakhs from Rs. 655.42 lakhs a year ago. Borrowings, however, have increased by Rs. 60.04 lakhs to Rs. 688.71 lakhs, of which Rs. three crores represent two series of debenture bonds. Current liabilities and provision, on the other hand, are lower at Rs. 182.84 lakhs, as against Rs. 204.16 lakhs a year before, but, even so, outside finance stands improved by Rs. 44.73 lakhs at Rs. 871.55 lakhs.

During the year new assets—including assets under construction—worth Rs. 306.90 lakhs were acquired and this has raised the block account to Rs. 20,31.22 lakhs. On deducting therefrom the depreciation provided so far amounting to Rs. 947.32 lakhs, a net block of Rs. 10,83.90 lakhs is obtained. Investments, current assets and loans and advances aggregate Rs. 444.36 lakhs. Debenture issue expenses yet to be written off stand at Rs. 5.93 lakhs. It will thus be seen that the Company's financial position is pretty tight.

The vicissitudes in the fortunes of the Company during the past four years are clearly brought out in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sale proceeds (gross)	11,64.33	827.45	810.42	717.31

Low	371	295	410	461	347

* After allowing Rs. 1.90 lakh in 1963, Rs. 26.10 lakhs in 1962 and Rs. 12 lakhs in 1961 as withdrawals from deferred taxation reserve. All dividends are subject to deduction of tax.

It will be recalled that, in their report to the shareholders for the year 1961-62, the Directors had stated that, owing to the tremendous increase in the cost of raw materials, wages and other factors of production, it was becoming exceedingly difficult for the industry to continue to abide by the "gentleman's agreement" arrived at in 1957 between the Government and itself, in relation to the basic prices of yarn and, therefore, the Association of Man-made Fibre Industry had approached the Government to permit an increase in basic prices. As a result of this representation, the question was referred to the Tariff Commission in the middle of the year under review. After a considerable amount of work had been done by the Tariff Commission, the inquiry was withdrawn on account of the decontrol on distribution and prices of rayon filament yarn in December 1963. Although the industry has naturally welcomed the decontrol of prices, it is obvious that the extent to which it would be successful in obtaining a fair selling price and margin of profit would be determined by the effects of the further excise duty leviable under the Finance Bill 1964. Under the Bill, the excise duty already payable is being enhanced by 50 per cent thereby augmenting the burden of indirect taxation to which the industry was first subjected in 1956. The considerable increase in this burden since it was introduced can be well seen from the fact that, whereas the duty from 1956 to 1958 on 120 and 150 deniers was 55 nP per kg., successive increases had raised it to Rs. 2.67 per kg. by 1963 and now the addition of 50 per cent would make it Rs. 4.00 per kg.

Commenting on this 627 per cent rise since 1956 in excise duty, the Chairman of the Company, Mr. Kasturbhai Lalbhai, observes, in his statement to the shareholders:

"We are always anxious to make a contribution to the economic development of the country, but are naturally sensitive to the fact that our industry in particular is being subjected to such an unreasonable burden of excise duty. In the past, we have been given to understand that we ought to cheerfully bear more than others as our industry is considered to be capable of bearing more and more levies without the risk of a drop in the demand for its products. If this concept is true, it would follow that the 'demand is inelastic' and that the industry is producing a staple commodity for the basic essential requirements of the community. But, for other purposes, and particularly so when it comes to imposing levies and providing facilities and services for our own requirements, we have often been told that ours is a luxury industry and therefore it is only fair that it be required to bear a greater share of burden and that its requirements be met out of what might be left over after the needs of the basic essential industries have been satisfied. Apart from the very substantial increase in the excise duty, the imposition of the new 7½ per cent tax on dividend will make it increasingly difficult for the Company to assure a reasonable return on the capital employed in the industry."

As regards the Company's various expansion schemes, the tyre cord plant, it will be recalled, went into commercial production by October 1962 after overcoming the initial teething troubles. The quality of the yarn is reported to be acceptable to the tyre manufacturers and the Company is experiencing a gradual increase in demand for the product. In order to encourage the indigenous tyre yarn producing industry, the Government has, since September 1963, curtailed the import of yarn by a third of what was being hitherto permitted and now, for the forthcoming period, the curtailment is likely to be of the order of 50 per cent.

The expanded caustic soda/chlorine plant commenced production towards the end of February and is expected to attain full production soon. As for the pulp project, it was mentioned in the previous year's report that the Agency for International Development had conveyed to the Company its willingness to extend a loan of Rs. six crores and that all other formalities to implement the scheme had been complied with. The Directors now report that, despite the undertaking given by the Government of Mysore that they would be able to supply the Company's requirements of raw materials, the Company's own survey has, however, disclosed that, owing to gregarious flowering of bamboo, the raw materials available would not be sufficient to run the plant at an economic level of activity. It is, therefore, been decided not to proceed with the project for the present.

Currently, the Rs. 100 fully paid ordinary shares of the Company are quoted at Rs. 375 *cum-div.* and fetch, on an *ex-div.* basis, a net return of a little over 3.5 per cent per annum on fresh investment.

ELECON'S SIX PER CENT MAIDEN DIVIDEND

It is encouraging to find that the Elecon Engineering Company Ltd. will be paying a maiden dividend for the year ended 31st December 1963, which is two years after it was converted into a public limited company in November 1961. The rate of dividend on the Rs. 100 fully paid shares is 6 per cent per annum, of which 4.50 per cent is tax-free. The Company, which already had a paid-up capital of Rs. 10 lakhs, issued 50,000 additional shares in April 1962, the last call of Rs. 25 on which was made as late as in May 1963 bringing the paid-up capital to Rs. 60 lakhs.

The maiden dividend marks the encouraging progress made by the Company during 1963, when sales exceeded Rs. 103 lakhs and resulted in a gross profit of as much as Rs. 16.27 lakhs, as against a loss of Rs. 2.27 lakhs made in the previous year. Depreciation has claimed Rs. 4.55 lakhs and taxation Rs. 63,000. A sum of Rs. 4.59 lakhs has been carried to the development rebate reserve. The surplus available after making these appropriations has been utilised to write off fully the previous year's loss and meet the dividend liability which amounts to Rs. 3.60 lakhs, leaving Rs. 62,863 as the balance to be carried forward.

As many as 118 applications covering a total capital issue of Rs. 86.30 crores were received during the last quarter of 1963, as against 125 applications covering Rs. 139.73 crores in the same quarter in 1962. The number of consents actually granted was 95, fourteen for Government companies covering a total of Rs. 36.08 crores and 81 for non-government companies involving Rs. 51.25 crores. Among non-Government companies, consents for equity capital worked out to Rs. 28.69 crores, preference to Rs. 2.97 crores, debentures to Rs. 4.42 crores, bonus to Rs. 3.82 crores and loans, etc., to Rs. 11.35 crores. In the whole of the calendar year 1963, 475 applications were received for Rs. 634.88 crores, as against 506 involving Rs. 429.08 crores in 1962. Of these, consents were given for 410 amounting to Rs. 544.31 crores, as compared with 447 consents for Rs. 381.49 crores.

The new factory of Kirloskar Cummins Ltd., set up by the Kirloskar Oil Engines Ltd. in collaboration with the Cummins Engine Inc., of the U.S., was declared open on Saturday last by Mr. Y. B. Chavan, Union Minister for Defence. The new factory is licensed to manufacture high powered diesel engines in the range of 60 to 800 h.p., which are used for the manufacture of excavators, air compressors, bulldozers, road graders, scrapers, industrial and mining equipment.

The year 1963 was a record year for the British European Airways, for, in that year the Airways carried 5.6 million passengers and made a profit of £3 million. The B.E.A. has a fleet of 13 comets, 20 vanguards, 39 viscounts, 3 heralds, and 3 argosys. It has also taken delivery of the first of 24 new 610 m.p.h. Trident jet airliners. The airline operates on a route network of 36,000 miles, as compared with 11,800 miles in 1949, and serves 76 centres in 29 countries.

The Government of India proposes to permit the Tata Iron and Steel Company and the Indian Iron and Steel Company to expand their capacities during the fourth Plan period, by a million tonnes each to three million tonnes and two million tonnes, respectively, according to Mr. C. Subramaniam, Union Minister for Steel, Mines and Heavy Engineering.

SYNOPSES OF COMPANY REPORTS

Kumergode Estates Ltd.

(*Managing Agents*: Messrs. Peirce Leslie & Co., Ltd., Bunder, Mangalore.)

Thirteenth Annual General Meeting—7th April 1964.

Working Results:

	For the year ended 31st October (In thousand rupees)	
	1963	1962
Income from coffee crop—1962-63 season	6,36	4,46
minor produce—1962-63 season	9	9
Stock-in-trade	1,42	1,17
Gross profit	3,09	1,56
To Managing Agents' remuneration	20	9
Transfer to depreciation	29	32
" provision for taxation	1,23	39
Net profit	1,37	77
Appropriations:		
To taxation for previous year	Nil	18
Transfer to general reserve	40	10
Proposed dividend (Taxable) Ordinary	84*	60†
	(14%)	(15%)
Carry forward	26	13

Market value of ordinary shares (in rupees):	1964‡	1963	1962
High	4.00	4.16	4.60
Low	2.47	2.47	4.00

* On the increased ordinary capital of Rs. 6 lakhs.
† On a paid-up ordinary capital of Rs. 4 lakhs.
‡ Upto 20th March 1964.

Extracts from the Directors' report: *Reserves*: A sum of Rs. 2,00,000 was capitalised from the general reserve for the issue of bonus shares during the year and including Rs. 40,000 transferred from profit and loss account, this year, the General Reserve now stands at Rs. 2,40,000.

Crop and Costs: A total crop of 198.168 metric tonnes was harvested during the year and delivered to the Coffee Board. This has been valued at Rs. 2.25 per point or Rs. 3,209 per metric tonne. A comparative statement of production and costs for the previous 2 years is given below:

Year	Crop (Metric tonnes)	Estate Expenditure per hectare	All-in-cost per hectare
		Rs.	Rs.
1960-61	182.301	1,336	1,652
1961-62	129.778	1,303	1,510
1962-63	198.168	1,470	1,756

The 1961-62 season's crop has been revalued at Rs. 2.26 per point being the final figure declared by the Coffee Board for that season and this is equivalent to Rs. 3,767 per metric tonne including the bonus points awarded for this season on the basis of 10 points on *Arabica Parchment* and 6 on *Arabica Cherry*, when compared with the valuation of Rs. 2.30 per point or Rs. 3,440 per metric tonne adopted last year.

The 1963-64 crop has been estimated at 140 metric tonnes and the all-in-cost of production at Rs. 2,935 per metric tonne.

Capital Expenditure: Rs. 15,620 was spent on capital account during the year. Capital expenditure for the year 1963-64 is estimated at Rs. 17,690.

Accounts in brief as at 31st October 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	6,00,000	Gross block	9,93,124
Reserves and surplus	2,66,055	—Depreciation	2,60,252
Other liabilities	3,22,194		
		Net block	7,32,872
		Current assets	1,85,906
		Investments	21,415
		Cash	2,48,056
	Rs. 11,88,249		Rs. 11,88,249

* Paid-up capital consists of 3,00,000 ordinary shares of Rs. 2 each. Of the above 2,00,000 shares have been issued as fully paid-up by way of Bonus shares through the capitalisation of reserves (including 1,00,000 Bonus shares allotted in 1963).

Kil Kotagiri Tea and Coffee Estates Co., Ltd.

(*Managing Agents*: Messrs. Peirce Leslie & Co., Ltd., Coimbatore.)

Sixteenth Annual General Meeting—18th April 1964.

Working Results:

	For the year ended 31st October (In thousand rupees)	
	1963	1962
Sale proceeds of tea	23,13	24,24
Income from coffee	2,21	3,58
Closing stock of tea	2,53	3,34
Gross profit	9,53	12,34
To Managing Agents' remuneration	61	82
Transfer to depreciation	1,12	1,07
" provision for taxation	3,58	4,85
Net profit	4,22	5,60
Appropriations:		
To provision for Super Profits Tax for 1962	44	Nil
Transfer to development rebate reserve	2	*
" general reserve	60	50
Proposed dividends (taxable) C. Preference	18	18
" " " Ordinary	3,43	4,29
	(20%)	(25%)
Carry forward	29	74

Market value of ordinary shares (in rupees):	1964†	1963	1962
High	5.05	5.88	5.25
Low	4.90	4.75	4.62

*Only Rs. 138. †Upto 27th March 1964.

Extracts from the Directors' report: *Tea*: A crop of 4,62,975 kgs. (1961-62: 5,15,350 kgs.) was harvested at a cost of Rs. 3.89 per kg. The average net price realised for the year was Rs. 5.54 per kg. as compared with Rs. 5.35 per kg. for 1961-62.

Coffee: The crop harvested amounted to 91.156 tonnes (1961-62: 121.819 tonnes).

Extracts from the Chairman's statement: *Future Prospects*: The Company's estates are in good order and the Directors have estimated for the current year a tea crop of 5,00,000 kgs. At the end of February 1964 the Company had harvested 1,17,919 kgs. tea which, though a record crop, is 7,081 kgs. below the estimate for the period due to unfavourable weather conditions. The state is at present experiencing extreme drought conditions and unless the Estates get a reasonable rainfall very soon, it may not be possible to make up the shortfall in the crop.

As regards Coffee the Directors originally estimated the 1963-64 crop at 56 tonnes. *Arabica* stripping is nearing completion. *Robusta* is ripening fast and it now seems probable that the Coffee crop for the year will be in the region of 95 tonnes, made up of 45 tonnes *Arabica* and 50 tonnes *Robusta*. Conditions are favourable for a good crop next year.

The 1964-65 estimate of coffee crop at 105 tonnes are judged on the present cropping wood.

Accounts in brief as at 31st October 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	19,67,076	Gross block	37,05,125
Reserves and surplus	13,70,827	—Depreciation	8,78,832

Proposed dividends (taxable) Preference	1,10	1,10
" " " Ordinary	1,60	2,00
	(8%)	(10%)
Carry forward	1	3

Extracts from the Directors' report: The profit for the year shows an increase of Rs. 50,289 as compared with the results of the previous year. Whilst the dividends from Jute Mills showed a substantial increase, the receipts from the other sections remained more or less constant.

Investments: The Company's portfolio is representative of investments which are quoted on the Calcutta and Colombo Stock Exchanges with the exception of certain shares costing Rs. 7,00,513. The total of the market value of the investments for which quotations are available together with the unquoted investments as valued by Directors exceeds the book value at 30th September 1963 by Rs. 11,02,825.

Accounts in brief as at 30th September 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	44,00,000	Investments	67,82,724
Reserves and surplus	9,64,036	Current assets	98,010
Other liabilities	15,84,772	Cash	68,065
	Rs. 69,48,808		Rs. 69,48,808

*Paid-up capital consists of 24,000—5½ per cent cumulative preference shares of Rs. 100 each and 2,00,000 ordinary shares of Rs. 10 each—out of which Rs. 7.50 per share called up in cash and Rs. 2.50 per share paid-up as capital Bonus by capitalisation of reserves.

Phaltan Sugar Works Ltd.

(*Managing Agents*: Messrs. Mafatlal, Apte and Kantilal Ltd., Bombay.)

Thirty-second Annual General Meeting—Held on 20th March 1964.

Working Results:

	For the year ended 30th September (In thousand rupees)	
	1963	1962
Sale of sugar	1,73,41	1,73,72
Closing stock	Nil	51,22

Transferred from dividend equalisation reserve	Nil	2,50
Transferred from general reserve	Nil	4,00
Appropriations:		
Transfer to general reserve	4,88	Nil
" " dividend equalisation reserve	2,50	Nil
" " taxation (in respect of previous year	Nil	1,56
Proposed dividend (taxable) ordinary	10,00	7,00
	(20%)	(14%)
Carry forward	94	84

Market value of ordinary shares (in rupees):	1964	1963	1962
High	116.00	117.50	133.00
Low	101.00	71.00	82.00

*Includes Rs. 47,000 for agricultural income-tax and Rs. 1,89,000 for Super Profits tax.

Extracts from the Directors' report: The factory commenced sugarcane crushing on 19th October 1962. The sugarcane crushed during the season was 1,23,307 metric tons and manufactured 1,60,949 bags of raw sugar for export with a recovery of 12.97 per cent. The corresponding figures for the previous season were 1,25,378 metric tons cane crushing, 1,50,225 bags production with a recovery of 11.94 per cent. The production has been more by 10,724 bags, despite lesser crushing, mainly due to increase in recovery by 1.03 per cent. This has contributed to the higher profits.

Expansion: The proposed expansion programme could not be completed for 1963-64 season due to the late delivery of some imported machinery, but it is expected to be in time for 1964-65 crushing season.

Acquisition of Assets by the State Government: Pursuant to Maharashtra Agricultural Lands (Ceiling on Holdings) Act, 1961, surplus lands and buildings situated thereon were handed over to the State Government. Provision has been made in the accounts in respect of the value of such lands on the basis as provided in the above Act. This has resulted in loss as shown in the accounts. The value to be received from the Government in respect of buildings taken over has not yet been determined. The payment in respect of lands and buildings is receivable in transferable bonds to be issued by the Government specially for the purpose. Tractors, implements, trailers, furniture, motor vehicles, seeds, fodder, stores and chemicals, live-stock, etc. required for agriculture were also transferred to the Maharashtra State Farming Corporation Ltd. The Company has submitted various bills to the corporation valued at Rs. 24,27,675. Of the above, bills amounting to Rs. 12,38,905 have been more or less settled. Bills for the balance amount namely Rs. 11,88,770 have not been settled. Under the above circumstances the book value of buildings, live-stock, fodder, seeds, stores and chemicals, etc. have been carried forward subject to settlement of the sale price with the Government and the Maharashtra State Farming Corporation Ltd. The profit or loss, if any, resulting therefrom will be adjusted in due course and the quantum of managing agency commission will also be adjusted in accordance therewith.

Season 1963-64: The factory commenced crushing earlier to take advantage of excess production in October 1963 and expects to get rebate of about Rs. 85,000 in excise duty on excess production.

Estate: As per the agreement with the State Government, the Company would appropriate the crop standing on 1981 acres which is being harvested for 1963-64 crushing season.

Accounts in brief as at 30th September 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	50,00,000	Gross block	91,69,008
Reserves and surplus	61,04,675	—Depreciation	45,13,133

Market value of ordinary shares (in rupees):	1964†	1963	1962
High	43.50	44.00	53.75
Low	43.50	40.50	44.00

† Upto 24th March 1964.

Extracts from the Directors' report: During the year under report, the ceiling prices of higher counts yarn were reduced, and the prices of Indian cotton were steadily on the increase. There was practically no parity between the prices of cotton and the selling prices of yarn. There was an overall increase in all expenses. There was a loss of production due to power cut during the months of June and July 1963. Considering all these factors, the Directors consider that the profit earned during the year is satisfactory.

During the year mill worked for 292 days in three shifts with an installed capacity of 37,312 spindles and with an average of 32,959 spindles.

The scheme of rehabilitation, for which the Company obtained the loan of Rs. 20 lakhs from the Industrial Finance Corporation of India has been almost completed. All the new equipments except one set of drawing frames which has been just received, covered by that scheme had already gone into production. The Company is now seized of another partial scheme of modernisation which involves the replacement of the old *Blow-room, Fly frames, Drawing frames, carding engines*, by new ones and replacement of the out-moded drafting arrangements in 32 *Ring*

THE PUNJAB NATIONAL BANK LIMITED

Registered Office:
PARLIAMENT STREET, NEW DELHI

NOTICE

The Transfer Books and Register of Members of THE PUNJAB NATIONAL BANK LTD., will be closed from 14th April to 28th April, 1964, both days inclusive, for the purposes of payment of Final Dividend for 1963 to be declared at the next Annual General Meeting of the Bank. The dividend when declared will be made payable at the Registered Office of the Bank on or after the day succeeding the Annual General Meeting to those shareholders whose names appear on the Register of Members as on 28th April, 1964.

By Order of the Board of Directors,
R. L. TULI
General Manager.

Dated, 27th March, 1964.

THE CENTRAL BANK OF INDIA, LIMITED

Registered Office:

Central Bank Building,
Mahatma Gandhi Road, Fort, Bombay-1

NOTICE

NOTICE IS HEREBY GIVEN THAT THE FIFTY-THIRD ANNUAL GENERAL MEETING of the Shareholders of THE CENTRAL BANK OF INDIA, LIMITED, will be held at the Walchand Hirachand Hall, 4th Floor, Lalji Naranji Memorial Indian Merchants' Chamber Building, 76, Vir Nariman Road, Churchgate, Bombay-1, on Tuesday, the 28th day of April, 1964, at 4-00 p.m. (S.T.), to transact the following business:—

1. To receive, consider and adopt the Report of the Directors and the Audited Accounts for the period ended 31st December, 1963.
2. To declare a dividend.
3. To appoint a Director in place of Mr. Jaykrishna Harivallabhdas, who retires by rotation under Article 92 of the Company's Articles of Association read with Section 256 of the Companies Act, 1956, and who is eligible and offers himself for re-appointment.
4. To appoint a Director in place of Mr. N. M. Wagle, who retires by rotation under Article 92 of the Company's Articles of Association read with Section 256 of the Companies Act, 1956, and who is eligible and offers himself for re-appointment.
5. To appoint a Director in place of Nawab Prince Mukarram Jah Bahadur, who retires by rotation under Article 92 of the Company's Articles of Association read with Section 256 of the Companies Act, 1956, and who is eligible and offers himself for re-appointment.
6. To appoint a Director in place of Mr. Nariman Kaikhushru Karanjia, who retires by rotation under Article 92 of the Company's Articles of Association read with Section 256 of the Companies Act, 1956, and who is eligible and offers himself for re-appointment and, for that purpose, to consider and, if thought fit, to pass the following resolution, of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto, as required by Section 173 of the said Act:—

   "RESOLVED that Mr. Nariman Kaikhushru Karanjia who has attained the age of 66 years and who retires by rotation, be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."

7. To appoint a Director in place of Mr. Akbar Hydari, who was appointed a Director of the Company by the Board of Directors and who ceases to hold office according to the provisions of Article 84 of the Company's Articles of Association and Section 260 of the Companies Act, 1956 and in respect of whom the Company has received a notice in writing proposing his candidature for the office of Director.
8. (*a*) To appoint Auditors to audit the accounts of the Company and such of the Branch Offices of the Company as the Meeting may determine and to fix their remuneration.

   (*b*) To consider and, if thought fit, to pass the following Resolution with or without modification as a Special Resolution:—

   SPECIAL RESOLUTION

   "RESOLVED that pursuant to Section 314 of the Companies Act, 1956, consent of the Company be and is hereby accorded to the appointment of M/s. A. F. Ferguson & Co., a Partnership Firm, one of whose Partners, viz., Mr. Naval Rustomji Mody, is a relative of Sir Homi Mody, a Director and Chairman of the Company, as Auditors of the Company and as such holding an office or place of profit under the Company for the period commencing from the conclusion of this Annual General Meeting held in 1964 to the conclusion of the next Annual General Meeting and for attending to such other work as may be entrusted to the said firm of M/s. A. F. Ferguson & Co. during the period of their appointment by the Board of Directors of the Company."

9. (*a*) To consider and decide which Branch Offices of the Company in and outside India, including any Branch Offices which may be opened hereafter other than those resolved to be audited by the Company's Auditors, shall be audited by persons qualified to act as Auditors and in that connection to authorise the Board of Directors to appoint from time to time in consultation with the Company's Auditors such persons as are qualified for appointment as Auditors of the Company under Section 226 of the Companies Act, 1956, on such terms and conditions and remuneration as the Board may deem fit to audit the accounts of such Branch Offices of the Company.

   (*b*) To consider and, if thought fit, to pass with or without modification, the following resolution for applying for exemption from audit of the accounts of the Company's Branch Offices other than those resolved to be audited respectively by the Company's Auditors and by persons qualified to act as Auditors.

   "RESOLVED that the Board of Directors be and is hereby authorised to apply to the Central Government under the Companies (Branch Audit Exemption) Rules, 1961, for exemption from audit of the accounts for the year ending 31st December, 1964, of all Branch Offices now existing and which may be opened hereafter during the said year ending 31st December, 1964, other than those resolved to be audited respectively by the Company's Auditors and by other persons qualified to act as Auditors in terms of the provisions of Section 228 of the Companies Act, 1956, as amended by the Companies (Amendment) Act, 1960, and to agree to such terms and conditions as the Central Government may prescribe in this behalf, and in the event of such exemption being not granted in respect of any of such Branch Offices, then and in such event the Board of Directors be and is hereby authorised to have the accounts of all or some of such Branch Offices audited by the Company's Auditors and in respect of the remaining Offices if any for which exemption is not granted appoint such persons as are qualified to act as Auditors of the Company, in consultation with the Company's Auditors and on such terms and conditions as the Board of Directors may decide upon from time to time for audit of the accounts of such last mentioned Branch Offices."

10. To consider and, if thought fit, to pass the following Resolution with or without modification as a Special Resolution:—

    SPECIAL RESOLUTION

    "RESOLVED that the sum of Rs. 25 per share remaining uncalled in respect of each of the Ordinary Shares issued or to be issued to the former Shareholders of the Jodhpur Commercial Bank, Ltd., by virtue of the Amalgamation of the said Bank with the Company, shall not be capable of being called up except in the event and for the purpose of winding up of the Company on the same basis as already resolved in respect of the Ordinary Shares of the Company."

11. To consider and, if thought fit, to pass the following Resolution with or without modification as an Ordinary Resolution:—

    "RESOLVED that dividends at the rates declared for each of the respective half-years, be paid on all previous and future allotments of the Bank's Shares in respect of the first distribution of Capital to Shareholders of the Jodhpur Commercial Bank, Ltd., in terms of the Scheme of Amalgamation of the two Banks with effect from 5th September, 1962 (being the date of expiry of the notice already issued in respect of the first Distribution of Return of Capital).

By Order of the Board,

F. C. COOPER,
General Manager.

BOMBAY, 23*rd March*, 1964.

Note:—

A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*a*) The Transfer Books of the Company will be closed from Thrusday, the 9th day of April, 1964 to Tuesday, the 28th day of April, 1964 (both days inclusive).

(*b*) Dividend Warrants for the half-year ended 31st December, 1963, will be posted to the Shareholders at their Registered Address on and after the 14th day of May, 1964. Shareholders are requested to intimate to the Company their change of address, if any, immediately.

(*c*) The Explanatory Statement required under Section 173 of the Companies Act, 1956, has been forwarded to the members of the Company.

MARTIN BURN LIMITED

NOTICE IS HEREBY GIVEN THAT THE Register of Members and Share Transfer Books for Preference Shares in the Company will remain closed from the 9th April to 15th April 1964, both days inclusive, for the purpose of payment of Preference Dividend for the half-year ending 31st March, 1964, on or after the 15th April 1964, to those Preference Shareholders whose names appear on the Company's Register of Members on the 15th April, 1964, or to their mandatees.

By Order of the Board,

L. K. SEN CHOWDHRY,
Secretary.

Registered Office:
12, MISSION ROW,
CALCUTTA-1.
31*st March*, 1964.

COMPANY MATTERS

(*Concluded from page 575*)

Frames by modern drafting system. Orders have already been placed for the *blow room, cards* and drafting materials. The said drafting materials are expected to be received from March 1964 onwards. The cards are due for delivery in 1965. The *Blow Room* ordered on deferred payment system is due for delivery by February/March 1965. The Company has obtained import licences for 4 Nos. high-speed drawing and 9 Nos. can fed interframes on deferred payment system and orders are to be finalised.

Apart from the above, the Board of Directors have resolved to increase the spindleage of the mills by 3,731 spindles as permitted by the Textile Commissioner. Orders for the required machinery have been placed with the manufacturers.

The commitment of the Company in respect of these is about Rs. 17 lakhs. The delivery of the ordered machineries will be only in subsequent years 1965-66. In view of the deferred payments facilities available and cost of the machines having to be incurred from now to 1966, the Company is hopeful of meeting the commitments from its own present resources and future earnings.

Accounts in brief as at 31st December 1963 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ..	15,02,500	Gross block ..	87,81,050
Reserves and surplus	12,19,661	—Depreciation ..	45,36,375
Other liabilities ..	43,84,248		
		Net block ..	42,44,675
		Current assets ..	25,65,636
		Investments ..	1,13,800
		Cash	1,22,298
		Miscellaneous expenditure ..	60,000
	Rs. 71,06,409		Rs. 71,06,409

* Paid-up capital consists of 30,050 Equity shares of Rs. 50 each. Of the above 15,025 shares are allotted as fully paid-up by way of Bonus shares by capitalisation of reserves.

NEWS IN BRIEF

THE State Trading Corporation has secured an order for the sale of 2,000 tons of low-grade tobacco to the Soviet Union. The actual sale price of the tobacco is, however, yet to be finalised.

The coal washery capacity of the Durgapur Steel plant will soon be expanded to supply larger quantities of washed coal. The Associated Electrical Industries has undertaken to supply a part of the equipment for the proposed expansion.

The Central Government has constituted a working group for tobacco, consisting of the State and Union Government representatives, to examine the different aspects relating to long-term production and recommend measures for stabilisation of prices.

The Life Insurance Corporation has extended its "own your Home" scheme to 30 more cities and towns with effect from the 1st inst. in addition to the 20 already covered the scheme. The terms and conditions for the grant of loans remain unchanged.

Work on the industrial instruments manufacturing plant has already begun at Palghat in Kerala. The plant, being built with Soviet assistance, is India's largest instrument making centre. It will manufacture mechanical, hydraulic and pneumatic industrial instruments.

The Government of Maharashtra has appointed a committee to evolve norms of service conditions for Secretaries and other employees engaged in co-operative supervising unions and other co-operative institutions. The Committee has been asked to submit its report within six months.

The thirty-first annual general meeting of the Indian Sugar Mills Association will be held at New Delhi on the 27th inst. Mr. G. M. Modi, President of the Association, will preside over the meeting. The Meeting will be inaugurated by Sardar Swaran Singh, Union Minister for Food and Agriculture.

The Union Government has suspended until further notice the export promotion scheme for woollen textiles and woollen goods (excluding carpets, rugs and druggets) with effect from the 1st inst. No import entitlements will, therefore, be issued against exports of these goods effected on or after the 1st inst.

The twenty-fourth annual conference of the All-India Manufacturers' Organisation will be held at New Delhi on the 24th and 25th inst. Mr. Prabhu V. Mehta, Chairman of the Organisation, will preside over the conference which will be inaugurated by Mr. Lal Bahadur Shastri, Union Minister without portfolio.

A high-power committee headed by Mr. S. S. Khera, Union Cabinet Secretary, is expected to pay a visit to Madras sometime this month to select the site for the proposed oil refinery. The State Government has proposed three sites to the north of the city. The selection of the site is expected to be completed in about a month's time.

The number of commercial vehicles, jeeps and cars produced in India during the calendar year 1963 was 27,521, 8,184 and 15,711, respectively, as against 25,971, 7,597 and 23,326 in the previous year. Production of motor-cycles, scooters, three-wheelers and mopeds aggregated 26,572 as compared with 25,002 units, and the number of diesel engines produced was 55,000 as against 42,645.

Five new mines mechanisation training institutes are expected to be established by the end of the current Plan period at a total cost of Rs. 1.43 crore. The institutes will be located at Bhurkunda, Kurasia, Bhuli, Sitarampur and Bellam Palli. Each institute will impart training to some 320 trainees in mines electrification, mines mechanism, diesel mechanism, mines operators, etc.

The U.S. Department of Agriculture has predicted a 30 per cent rise in agricultural production in India during the period 1963-68. This rate of increase forecast is almost double that actually maintained in the years 1953-62. The Department has stressed the importance of more irrigation and fertilisers facilities, marked improvement in farming methods, and larger credit and marketing facilities.

Twenty million tons of iron ore were produced in India during the year 1963, a record figure which exceeded the actual output of the previous year by more than a million tonnes. Orissa, as usual, was the largest producer, the output amounting to about 6 million tonnes, followed by Bihar with 3.5 million tonnes, Mysore with 2.4 million tonnes and Madhya Pradesh with 2.3 million tonnes.

The cotton textile mills' production in the month of February this year is provisionally placed at 72 million kilograms of cotton yarn and 348 million metres of cotton cloth, as compared with 67 million of kilograms of cotton yarn and 337 million metres of cloth in the same month last year. At the end of February, the composite mills of the cotton textile industry held an estimated cloth stock of 85,000 metric bales as unsold and 170,000 metric bales as sold, but unlifted.

The Fertiliser Corporation of India has decided to open a chain of fair price shops in all its units and divisions at Sindri (Bihar), Nangal (the Punjab), Rourkela (Orissa), Trombay (Maharashtra), Namrup (Assam), Gorakhpur (U.P.) and Korba (M.P.). As many as 16,000 employees of the Corporation will enjoy the benefit of the scheme. The Corporation has invested a sum of Rs. 25,000 towards the working capital of each fair price shop which will be run departmentally on no-profit-no-loss basis.

The States of Maharashtra, Gujarat and Madhya Pradesh have agreed to constitute the Western Regional Electricity Board, with headquarters at Bombay, for planning, generation and distribution of power. Four other such Boards have already been set up for the Southern, Northern, Eastern and north-eastern regions. The Board will chalk out a programme for ensuring integrated operation of power systems in the different States, co-ordinate, overhaul and maintenance, determine periodical generation schedule, and discuss pricing policy.

The permanent Indus Commission, set up under the Indus Waters Treaty, 1960, and comprising a Commissioner each from Pakistan and India, held a six-day meeting at New Delhi from 25th March 1964. This was the thirteenth regular meeting of the Commission. At this meeting, the Commission has drafted its fourth annual report for the year ending 31st March 1964, which will be submitted to the two Governments before 1st June this year. The next meeting of this Commission will be held in Pakistan in May next. Mr. M. A. Hamid, Pakistan Commissioner for Indus Waters, and Mr. H. C. Kalra, Commissioner for Indus Waters, Government of India, lead the respective delegations.

The Santhanam Committee on Prevention of Corruption submitted its report on Tuesday this week to Mr. G. L. Nanda, Union Home Minister. The Committee has suggested that government servants should submit periodical statements stating particulars about their immovable and movable properties other than articles of daily use, such as clothes, utensils, crockery and books, but must cover items like jewellery. It has also recommended that a code of conduct be evolved for ministers in regard to acquisition of property, acceptance of gifts and disclosure of assets and liabilities. It has further proposed that the President should constitute a national panel for investigating complaints of corruption against ministers whenever an allegation is made against a Minister by any 10 members of Parliament or State legislature.

* * * *

From Abroad

The Japanese Keimei Koeki Company has bought 100 tons of Soviet lead. This is third such deal with Keimei during the past six months. The Company has purchased from the Soviet Union 500 tons of zinc and 10 tons of antimony.

The Government of West Germany has increased its credit to Indonesia by DM 30 million to DM 85 million for modernising its railway system. The additional DM 30 million are being given in the form of 35 diesel hydraulic locomotives.

The Board of Governors of the New York Commodity Exchange has voted to reactivate the tin futures contract, in which trading ceased during 1959 due to inactivity. Trading is likely to commence from the 8th of this month. There will be a daily trading limit of eight cents above or below the previous close.

Japanese firms spent as much as £298 million on advertising during 1963, representing an increase of 22.5 per cent over the previous year, according to the Dentsu Advertising Company, Japan's biggest advertising firm. Media-wise, the press remained the most popular, accounting for £112 million of all advertising expenditure, followed by Television (£89 million) and electrical appliances, cameras and office equipment (21 per cent of the total).

The Chiyoda Chamical Company of Tokyo and the Fluor Corporation of Los Angeles (U.S.A.) will jointly design and build an 18,000 barrel-per-day oil refinery in Singapore for the Mobil Refining Company of Malaysia. The cost of the refinery is estimated at $13 million. Most of the specialised equipment and materials to be used in the refinery will be bought in Japan. Construction of the refinery is expected to begin late this year and will be completed before the end of 1965.

Revised estimates for the U.S. balance of payments for the final quarter of 1963 show a deficit of $2,100 million (annual rate). The preliminary estimate was only $1,500 million. The total deficit for the whole of 1963 comes to $3,300 million as against the earlier estimate of about $3,000 million. The wider deficit is attributed to smaller exports of military equipment and larger deposits by foreigners in U.S. bank accounts.

Sweden's industrial output in January was 8 per cent larger than in the same month of last year. The production index touched 337 points, as against 311 in January 1963. The seasonally adjusted index for January was 317, which compares well with 315 recorded for December 1963. Within the overall 8 per cent increase the output of capital goods was up 6 per cent and consumer goods 9 per cent. Iron ore mining and output at the steelwork registered an increase of 12 per cent on January 1963, while timber output was up 14 per cent. Employment in the engineering industry, on the other hand, was 1 per cent lower. All consumer goods branches report higher figures than a year ago. Output in the food industry was up 8 per cent, pulp and paper production 21 per cent and leather and footwear output 2 per cent. Preliminary figures for the textile and clothing industry indicate an increase of 3 per cent.

PERSONAL

MR. J. R. Henshaw, President of the United Planters' Association of Southern India, has been unanimously elected Vice-Chairman of the Tea Board for the year 1964-65.

Mr. Subodh Chandra Mukherjee, a grower-member of the Indian Central Jute Committee, assumed charge on Wednesday this week as Vice-President of the Committee for the year 1964-65.

Mr. Nagendra Singh, at present Additional Secretary to the Union Ministry of Transport, has been appointed Special Secretary to the Ministry of Information and Broadcasting.

Mr. M. C. George, Pro-Manager, First National City Bank, Bombay, has received an international travel award from the National City Foundation of the Bank to visit the U.S. for a period of two months. He will also visit some of the Bank's branches in Asia and Europe.

Mr. Roy I. Jackson of the U.S., the Executive Director of the International North Pacific Fisheries Commission based at Vancouver, has been appointed Director of the Fisheries Division of the Food and Agriculture Organisation. He is expected to assume charge from 1st May next.

Mr. P. A. Narielwala, Director, Tata Industries Private Ltd. and Vice-Chairman of Voltas Ltd., has become the Chairman of Voltas Ltd., with effect from 1st March 1964, in place of Mr. J. D. Choksi, who has relinquished the post from that date. Mr. Choksi will, however, continue as a Director on the Board of the Company.

Mr. C. A. Pitts, Managing Director of Imperial Chemical Industries (India) Private Limited, has been appointed Chairman of the Company, in place of Mr. A. R. Foster who has retired after thirty-one years of service. Mr. A. L. Mudaliar, until recently the Manager of I.C.I. (India)'s Calcutta office, has now been appointed to the Board of the Company.

Dr. W. J. J. Curry, Director and General Manager, Telephone Cables Division of the British Insulated Callender's Cables Ltd., U.K., has been appointed Managing Director of the Indian Cable Company Limited, a B.I.C.C. associated company. Mr. R. E. Beal, Director and Commercial Manager, Telephone Cables Division, has been appointed Acting General Manager of the U.K. Division; he has already taken up these duties.

The U.N.-F.A.O. World Food Programme will help the Government of Formosa in its efforts to reclaim tidal land along the west coast of Taiwan. Some 100,000 hectares of land are to be reclaimed, and used for growing food expected to be enough for 5,000 persons every year. An agreement on food aid was signed with the Government of Taipei recently under which the World Food Programme will supply wheat and butter oil worth $360,000, to be distributed directly to workers as part of their wages. The project involved construction of dykes, irrigation and drainage channels, roads and wind breaks, needing approximately 1.2 million man-days of work. The total cost of the project to the programme would be half a million dollars, including transport, insurance and supervision. Already an expert has been provided by the U.N. Technical Assistance Board and has worked on the project since January last year to plan it.

The 18th German Industrial Fair at Hanover from 26th April to 5th May is expected to put up a record performance, judging from the number of visitors and the volume of industrial goods intended for display. A spokesman of the management of the Hanover Fair has stated that until now as many as 4,412 German and 1,285 foreign firms and 29 different countries have consented to participate. Some more firms are expected to make last-minute decisions, and it is expected that this year's figure will exceed last year's figure of 5,707 participants. The management also expects to attract nearly 2 million interested visitors and buyers to the forthcoming Fair, where one can see products ranging from precision watches to heavy machinery weighing several tonnes and from industrial glass to the finest porcelainware. For the fifth time in succession Hanover will also be the venue of an exhibition, "German Aviation Show," which is to be held in conjunction with the German Industrial Fair from 24th inst. to 3rd May and in which foreign firms are also expected to participate.

The developing countries have increased their exchange of trade with the Soviet Union more than tenfold during the decade 1953-63. The Soviet Union has trade and payments agreement with 35 countries of Asia, Africa and Latin America. Trade with the Socialist States permits the developing countries to receive first-rate equipment and manufactured goods in exchange for their exports. In 1955 these countries purchased 2 per cent of the Soviet exports of machinery equipment, and in 1960 the figure rose to 13 per cent. Among the remarkable changes that have occurred in the foreign trade relations of developing countries, the increased role of the State-owned sector in many young African States, a sector which appears in foreign markets more and more often as a big buyer and seller. Another factor contributing to the progressive elimination of colonial vestiges in economy is the policy of industrialisation which increasingly tells on the pattern of foreign trade of developing nations. Beginning with 1958 their exports of manufactured goods have increased approximately 50 per cent although this has not changed so far the basic agrarian-raw material pattern of their exports.

TREND OF MARKETS

TWO CONVERSION LOANS

(From Our Own Correspondent)

BOMBAY, 1st *April*

The announcement of the first instalment of the Centre's borrowing programme for the current financial year is the outstanding event of the week insofar as the money market is concerned. The programme envisages the offer of two conversion loans against the 3½ per cent National Plan Loan 1964 and 3 per cent Loan 1964, due to mature on 19th April and 15th June, respectively. Of the two loans, one is a short-dated loan running for six years (repayable at par on 15th April 1970) and carries interest at 4 per cent per annum; it will be issued at a discount of Re. 1, that is, at Rs. 99. The other is a long-dated loan running for twenty-five years (repayable at par on 15th April 1989) and carrying interest at 4½ per cent; it will be issued at par, that is, Rs. 100. Subscriptions will be received from the 15th to 22nd of this month, both days inclusive.

The securities of 3½ per cent National Plan Loan 1964 and 3 per cent Loan 1964 will be accepted for conversion at par and interest thereon will be paid at the rate of 3½ per cent and 3 per cent per annum upto and inclusive of 18th April 1964 and 14th April 1964, respectively. The new securities to be issued by way of conversion will bear interest from 15th April 1964. The interest, which will be paid half-yearly on 15th October and 15th April, will be liable to tax under the Income-tax Act, 1961. Applications for new loans will be received at the Offices of the Reserve Bank of India at Bangalore, Bombay (Fort & Byculla), Calcutta, Madras, Nagpur and New Delhi; branches of the subsidiary banks of the State Bank of India conducting Government treasury work; and branches of the State Bank of India at other places in India.

The outstanding amount of the two maturing loans is Rs. 185.51 crores, the 3½ per cent National Plan accounting for Rs. 158.18 crores and the 3 per cent Loan for Rs. 30.33 crores. Assuming that the whole of this outstanding will be converted into new loans, there will remain a balance of Rs. 106.49 crores which will have to be raised, obviously in the form of a cash loan or loans, to reach the Rs. 295-crore target set in the 1964-65 budget of the Central Government. The second instalment of the borrowing programme is likely to be announced sometime in June or July, depending upon the state of the money market.

Market circles have welcomed the higher yield pattern of the new loans. Some ask: could this be taken as an indication of a possible rise in the Bank rate eventually? And some others ask: Will the interest rates on deposits, which are governed by the Inter-bank Agreement, be raised suitably in accordance with the wish expressed by the Reserve Bank? This question was discussed in the City at a meeting of the representative committee of Indian and foreign banks on Saturday, 28th March. Since there was wide divergence of opinion among the members, a decision on the question was deferred to the next monthly meeting of the Indian Banks Association due towards the end of this month.

Meanwhile, the short-term money market continues to present stringent conditions. With a restricted supply of funds and persistent pressure of demand for the same, the inter-bank call rate stayed put at the high level of 6½ per cent throughout. Borrowers are finding it difficult to obtain their requirements. At Calcutta, too, conditions are tight, the call rate standing unaltered nominally at 6½ per cent.

With the prevailing stringency of money, it is not surprising that the 91-day Government of India Treasury Bills continue to elicit poor support. The total amount offered against Bills, tenders for which opened on Tuesday, 31st March, was just equivalent to that invited (and also accepted), namely, Rs. 2 crores. The average rate of accepted tenders moved up again, to 3.000 per cent per annum from 2.750 per cent last week, to which level it had gone up from 2.50p in the preceding week. The Intermediate Treasury Bills sold from 25th to 28th March fetched no more than Rs. 10 lakhs.

India's foreign exchange reserves declined by Rs. 8.36 crores to Rs. 126.28 crores during the week ended 27th March. The decline was shared by both balances held abroad and foreign securities held in the Issue Department of the Reserve Bank, the former receding by Rs. 3.35 crores to Rs. 13.82 crores and the latter by Rs. 5.00 crores to Rs. 112.46 crores. Deposits of scheduled banks decreased by Rs. 4.90 crores to Rs. 76.66 crores, and loans and advances secured by them from the Reserve Bank also decreased by Rs. 14.74 crores to Rs. 84.16 crores. Notes in circulation were lower by Rs. 2.26 crores at Rs. 2,454 crores.

There was a further rise of Rs. 6.32 crores to Rs. 1,802.55 crores in the total credit made available by scheduled banks to their clients during the week ended 20th March 1964. Deposits also rose but by only Rs. 1.02 crore to Rs. 2,432.29 crores. Borrowings from the Reserve Bank went up by Rs. 3.16 crores to Rs. 98.82 crores, including Rs. 46.33 crores (a fall of Rs. 59 lakhs) against usance bills. Investments showed a drop of Rs. 1.32 crore to Rs. 636.74 crores.

The announcement of the issue of conversion loans did not have any perceptible effect on the Gilt-edged market which continued to rule dull, with restricted turnover. 4 per cent 1972 and 1973 loans lost 20 nP and 15 nP, respectively; both were done at Rs. 99. The two maturing loans, against which conversion facilities have been offered (3½ per cent National Plan 1964 and 3 per cent Loan 1964), were quoted at Rs. 99.90 and Rs. 99.60, respectively.

In the foreign exchange market, the banks' selling rate for U.S. dollars improved by 25 nP to Rs. 478.50, while their buying rate continued unchanged at Rs. 475. In New York, the pound sterling was a shade better *vis-a-vis* the dollar, the spot rate gaining 0.020 cent to 279.820-279.840 cents and the three months' forward by 0.10 cent to 279.330-279.350 cents.

SILVER RALLIES

(From Our Own Correspondent)

BOMBAY, 1st *April*

Silver staged a smart rally this week on renewed buying enquiry from Madras and local support. Gold ruled, however, quiet, while sovereign continued to be firm.

Fresh support for silver was attributed to prospects of better demand from the next month onwards when the Hindu marriage season starts. Higher upcountry advices also influenced sentiment. The limited local stock of about 400 bars was yet another factor favouring a rise in prices. The combined effect of all this was felt in the improved daily average offtake of 15 bars against arrivals amounting to 10 bars, as a result of which the price improved from Rs. 254.50 to Rs. 260 and closed today five points higher over the week at Rs. 259.50.

Gold (14-carat), sagged further early in the week from Rs. 63.25 to Rs. 62.50, but later recovered to finish 50 nP higher at Rs. 63.75. Since business was limited, the later recovery seemed to be in sympathy with the trend in silver. Pure gold was unchanged at Rs. 105 and so was sovereign at Rs. 88.

A consignment of 8½ tons of gold bullion arrived in Paris on Friday 27th March from Moscow and was taken to the Bank of France. But in spite of this news the price of gold in London recovered this week from 250s. 7½d. to 250s. 9*d*. to close at 250s. 8½*d*. due partly to Continental buying and partly to the Bank of England restricting supplies of newly mined South African gold at the relatively low levels touched recently. The international price for gold also recovered from $35.00½ to $35.08. Silver prices in New York and London remained firm at their last levels.

The following table shows the trend of prices during the week under review:

	1-4-1964 (closing)	High	Low	25-3-1964 (closing)
SILVER				
Ready (999 fine) ..	Rs. 259.50	Rs. 260.00	Rs. 254.50	Rs. 254.50
GOLD				
Ready (14 carat) ..	63.75	63.75	62.50	63.25
Sovereign	85.00*	—	—	85.00*
London—				
Gold ..	250s. 8½d.	250s. 9*d*.	250s. 8½*d*.	250s. 7½*d*.
Silver Ready ..	111½*d*.	—	—	111½*d*.
Silver Forward ..	111½*d*.	—	—	111½*d*.
New York—				
Silver	129.3 cents	—	—	129.3 cents

N.B.—The quotation for gold 1 per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce. * As on 24-6-1963.

COTTON FUTURES FIRM AT CLOSE

(From Our Own Correspondent)

BOMBAY, 1st *April*

With the expiry of the Jarilla March contract on the 25th March at the ceiling rate of Rs. 798, traders' attention shifted to the remaining contract, namely Jarilla May 1964. The large volume of tenders, aggregating 4,500 bales, issued against the March contract on the last day, and the favourable survey result of the cotton tendered against it induced some easiness in the May contract. There were of course some bullish factors such as the report that cloth stocks with mills at the end of February, the latest month for which figures are available, were at a record low level and the hardening of the ready prices of certain popular varieties following the removal of the restrictions on the movement of Digvijay cotton. The continued delay in issuing the purchase authorisation in respect of the 375,000 bales of U..S. P.L. 480 cotton recently allocated gave rise to the apprehension that this cotton might not be available for consumption during the current season as was earlier expected. The tendering differences in respect of the May contract fixed on 31st March exerted no perceptible influence on prices as it is considered fair to both bulls and bears. The prospect of tenders against the contract would depend on the trend of spot and futures prices and the extent to which the gap between the two is narrowed down by the time the delivery period starts.

Influenced by the aforesaid factors pulling in opposite directions the Jarilla May contract ruled generally steady during most part of the week under review, but finished firm, thanks to short covering and fresh support forthcoming towards the close of the week. The contract, after declining from last week's closing price of Rs. 743 to Rs. 737.50, firmed up Rs. 752.75, before finishing lower at Rs. 750.50.

Traders are anxiously awaiting official permission for trading in the next settlement, namely Jarilla August, to commence. Trading in this contract is expected to begin in the second week of this month, by which time the proposed changes in by-laws will be finalised. The main changes envisaged are the following:

(*a*) Moglai Jarilla, Kaylan, Digvijay (B), 320F, 216F Laxmi (B) and Buri American be made tenderable up to 2/32″ 'off' instead of up to 1/32″ 'off' as at present.

(*b*) Dholleras be made tenderable up to 1/32″ 'off' (there is no tolerance for Dholleras at present.);

(*c*) Cambodia (A) (basic staple 1.1/32″) and Cambodia (B) (basic staple 1″) be made tenderable up to 1.2/32″;

(*d*) Tendering differences for the additional 'off' and 'on' staples permitted for August 1964 delivery be fixed by the Special Committee latest within 14 days from the date of permitting trading in August 1964 delivery on the same basis as adopted for fixing other staple difference for May 1964 delivery, i.e., on the basis of the differences for staples as prevailing on the date of the fixation of tendering differences for May 1964 delivery as per provisions of by-law 55 (*v*)(*b*).

The spot market at Sewri reported better activity. Spinner demand was noted for such popular cottons as L.147, Co2, 197/3, Kalyan and Digvijay. Following the removal of the restrictions on the movement of Digvijay cotton, its price firmed up by Rs. 10 to Rs. 1,235 per candy. If this variety is sold at more than Rs. 1,270 per candy, or at a price exceeding the corresponding spot price in upcountry centres, it is liable to a compulsory survey by the Appeal Committee of the Textile Commissioner.

Export interest in Bengal *Deshi* was conspicuous by its absence. Mill interest in foreign cotton was sustained by the hope that the purchase authorisation in respect of U.S. cotton would be issued soon and that a global quota for import of a substantial quantity of foreign cotton was also likely. But offers from U.S. shippers are few and far between. Limited mill buying was noticed in Sudan and Pima. Mills have also been attracted to East African cotton, thanks to its relative cheapness.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Co2 1,480, Jaydhar 1,015, L.147 1,165. Kalyan 964, Laxmi (Gadag) 1,170.

American 1,245, B.P.52 1,275, Elpaso 1,500.

Crop progress so far indicates that the expectation of a good crop this season would materialise. The current estimate of the crop is around 5.8 million bales, as compared with 5.76 million bales during last season. A prominent firm of cotton traders, Messrs. Patels and Volkarts, Bombay, sums the crop position, as at the end of February last, as follows:

"By the end of February, about 80 per cent of this season's crop had been harvested and the weather factor had ceased to play a major role almost everywhere, except in the South. A reassessment of the crop in the North revealed that the production there had been considerably underestimated. In the Punjab, arrivals during February continued on an unexpectedly large scale, so that crop estimates had to be revised upwards by some 150,000 bales. Some further increases were registered in the central belt. Production estimates on the West Coast have now been reduced to some 75 per cent of last season's final output. The crop movement has so far been abnormally slow. There are still considerable doubts as to the yield and it appears that later pickings will show unmistakable traces of the cold wave that hit this area in January. Down in the South, crop prospects continue to be rather gloomy. The quality of this season's crop in the Westerns and Comptahs (Laxmi/Jaydhar/Farm) is far below normal standards, and a lot of utterly inferior stuff is now coming into the markets. Further South, the absence of seasonal rains is causing some anxiety. The following are present crop estimates, as compared with the final estimates of the previous two seasons:

(In '000 bales of 400 lbs./180 kgs.)

Areas	1963-64	1962-63	1961/62
North	1,425	1,032	1,042
Central belt	2,050	1,963	1,488
West coast	1,460	1,871	1,388
South	853	887	766
Elsewhere	12	12	16
Total ..	5,800	5,765	4,700

Arrivals per end of February, as compared with those at the same time during the previous two seasons, are estimated as under:

(In '000 bales of 400 lbs./180 kgs.)

Area	1963-64	1962-63	1961-62
North	1,366	954	922
Central belt	1,932	1,651	1,187
West coast	400	905	493
South	133	103	95
Elsewhere	6	2	2
Total ..	3,836	3,615	2,699

OILSEEDS DULL

(From Our Own Correspondent)

BOMBAY, 1st *April*

Dull conditions prevailed in the oilseeds market during the week under review. Arrivals from upcountry centres were no doubt small, but they failed to impart strength. For fresh buying support was absent and consequently, both seeds and oils tended to look down, with the exception of groundnut futures which recorded moderate gains on short covering and firm Rajkot advices. Castorseeds encountered selling, following the reported release of castor oil from U.S. stockpiles. Linseeds were easy in the absence of any encouraging news. Cottonseeds moved in sympathy with the general easytone of the market and suffered losses though the losses were minor. The castorseeds March contract went off the board yesterday at Rs. 174 plus a penalty of Rs. 5 for non-deliveries. Including the tenders for 100 metric tons issued on the last notice day (yesterday), the total of tenders issued so far amounted to 725 metric tons. The Linseed March contract was off the board on the same day at Rs. 40.75, with a penalty of Re. 1. Tenders for 50 metric tons were issued yesterday, making a total of 350 metric tons. The Forward Markets Commission, has asked the associations

trading in different oilseeds and cakes immediately to fix maximum price for their current contract at levels not exceeding (the highest price) touched by them so far. This step has been taken to arrest the steep rise in prices of oilcake, *methi*, coriandersseed, mira cake, sesamum cake, *arhar chuni* and *mung chuni* brought about by excessive speculation.

In the groundnut section, the spot Nizam bold, and khandesh quality receded by a rupee each to Rs. 50.50 and Rs. 51.50, respectively. The Groundnut April contract, however, picked up 25 nP to Rs. 239.87. July contract put on 13 nP to Rs. 236.50. Oil ex-mill lost 20 nP to Rs. 19.80. Railway receipt fell by 45 nP to Rs. 19.30. Groundnut oil cake expeller April contract was a shade lower at Rs. 416, while the July contract strengthened by Rs. 2 to Rs. 425 on special support.

The castorseeds June contract lost 87 nP to Rs. 171. Spot Madras began the week at Rs. 34.37 after rising to Rs. 34.50 on Monday, but drifted downward thereafter and closed at Rs. 34 today. Kanpur bold shed 12 nP to Rs. 33. Oil B.S.S. was dull at Rs. 14.60. Oil commercial eased by 10 nP to Rs. 13.95.

Linseed June 1964 contract dropped 44 nP to Rs. 41.06. Bold ready was neglected at Rs. 40.25. Oil ready, however, gained 5 nP to Rs. 16.15 on stray support.

Cottonseed April contract climbed down from Rs. 102.50 to Rs. 97.50. June contract declined by Re. 1.50 to Rs. 104.

The following table shows the closing prices of oilseeds and oils on Wednesday 1st April as compared with those of two previous weeks:

	1-4-1964	25-3-1964	18-3-1964
Groundnuts	Rs.	Rs.	Rs.
April 1964 contract	239.87	239.62	237.50
July 1964 contract	236.50	236.37	—
Nizam bold	50.50	51.50	50.50
Khandesh quality	51.50	52.50	51.37
Oil ex-mill	19.80	20.00	19.65
Oil Rly. Receipts	19.30	19.75	19.35
Castorseed			
March 1964 contract	174.75	176.37	176.00
June 1964 contract	171.00	171.87	172.00
Ready Madras	34.00	34.37	34.37
Ready Kanpur	33.00	33.12	33.12
Oil B.S.S.	14.60	14.70	14.70
Oil commercial	13.95	14.05	14.50
Linseed			
March 1964 contract	41.00	41.00	40.50
June 1964 contract	41.06	41.50	40.87
Bold ready	40.25	40.25	39.87
Linseed oil	16.15	16.10	15.45
Cottonseed			
April 1964 contract	97.50	102.50	103.00
June 1964 contract	104.00	105.50	—

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

YARNS DECLINE

(From Our Own Correspondent)

BOMBAY, 1st *April*

On sufficient supplies and absence of any important buying support, yarns suffered an all-round setback in values during the week under review. The trend was distinctly weak in art silk yarns which closed with further moderate losses. Staple fibre yarns also declined, while, among cotton yarns, certain varieties finished fractionally lower.

In the art silk yarn section, National Rayon 120D sagged from Rs. 12.85 to Rs. 12.78 and Century 75D came down from Rs. 18.83 to Rs. 18.63. Kohinoor, among 2×40 spot staple fibre yarns, suffered a loss of 9 nP at Rs. 9.48. Among cotton yarns, 10s Navsari were lower by 12 nP at Rs. 19.25 and 40s Vasanta by 25 nP at Rs. 38.50.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	1-4-1964	25-3-1964
Art silk yarn (per kg.)—	Rs.	Rs.
National Rayon 120D	12.78	12.85
Century 75D	18.63	18.83
S. I. Viscose 150D	13.88	13.75
Staple fibre yarn (40×2)—		
Kohinoor (per kg.)	9.48	9.57
Century	9.48	9.46
Cotton yarn (per bundle of 10 lbs.)—		
10s Navsari	19.25	19.37
20s Podar	24.25	24.25
32s Hisar	31.50	31.50
40s Vasanta	38.50	38.75
60s Kothari	60.50	61.00
80s Ganesh	83.50	83.50

GOOD C.T.C. TEAS FIRM

(From Our Own Correspondent)

CALCUTTA, 31st *March*

Dusts offerings amounting to 30,207 packages at last week's sales here met with a good general demand, and good C.T.Cs were a strong feature. Medium C.T.Cs were irregular, but the bright teas sold well. Prices of plain orthodox teas eased, while the medium Assams possessing bright liquors were fully firm. Legg-cut teas were also fully firm. The quotations per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust Rs. 6.70 to Rs. 6.80, medium Assam C.T.C. dust Rs. 5.00 to Rs. 5.25, medium Assam dust Rs. 4.60 to Rs. 5.00, legg-cut dust Rs. 4.60 to Rs. 4.90, and plain orthodox dust Rs. 4.20 to Rs. 4.50.

It was noted here that the growing importance of Cochin as a tea auction centre was highlighted in the speech of Mr. B. Irens, Chairman of the Cochin Tea Trade Association, at the Association's annual meeting held recently at Cochin. South Indian tea production in 1963 at 84.8 million kgs. was higher by 4.67 million kgs. over 1962, and represented an increase of 30 million kgs. in the last decade. Tea offered at the Cochin auctions in 1963 showed an increase of 230 per cent in the last decade. Exports through Cochin last year totalled 44 million kgs., an increase of 3 million kgs. over 1962. Mr. Irens said that, although the U.S.S.R. imported 7 million kgs. in 1963 (an increase of 75 per cent over the previous year) most of these consisted of medium and low medium teas. He also expressed concern at the decline in exports to a number of South India's traditional markets, and referred to the need for direct shipping facilities to New Zealand which, he said, was to Ceylon's advantage.

WHOLE LEAF TEAS FIRM

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 25th *March*

Offerings in leaf tea sale No. 12 held here on 24th inst. amounted to 485,000 kgs. Quality in general showed a slight falling away, but the overall selection of teas on offer was quite useful. The market met with good demand, though prices were generally lower. Low medium and medium brokens elicited useful enquiry, but prices for these inclined easier. Similar fannings received less support and were easier, these being the weakest feature of the sale. Good mediums, particularly useful liquoring teas, were sold well. Highgrowns continued in demand and were sold at firm to dearer rates, with brokens attracting better support than their equivalent fannings. Clean black leaf descriptions were sold at around last rates. Unorthodox teas came to a lower market, particularly C.T.C. and legg-cut types. Whole leaf grades were firm with liquoring F.P's selling at dearer rates. Tippy teas were sold readily at fully firm rates.

The quotations (per kg.) were:

	1964	1963
	Rs.	Rs.
Low mediums	4.40-4.90	4.40-4.90
Mediums	4.95-5.50	5.00-5.70
Good mediums	5.60-6.80	5.70-6.60
Nilgiri B.O.P.	6.30-9.00	6.00-9.40

The average price realised in dust sale No. 12 was Rs. 5.52 per kilo, as against Rs. 5.60 a week ago and Rs. 5.46 in the corresponding sale last year.

A total of 175,000 kgs. was offered in dust sale No. 12 held today. The market encountered good general demand. Highgrowns were sold well and fetched last rates seen. All medium descriptions came to a slightly easier market. Unorthodox types were sold well at around last prices.

The average price realised in dust sale No. 12 was Rs. 4.59 per kilo, as against Rs. 4.61 a week ago and Rs. 4.58 in the corresponding sale last year.

Colombo: The market opened to strong and active demand and highgrowns were firm following quality as were best medium B.O.Ps. Low medium brokens advanced by 5 to 15 cents and lowgrowns were 5 to 10 cents dearer. Medium fannings were irregularly dearer, while lowgrown sorts were firm.

London: North Indian and other growths: In Monday's auction, there was good general demand and prices were generally firm at last levels.

Ceylon and South Indians: 25,364 packages were on offer in Tuesday's sale, of which 5,552 packages were from South India. There was good general demand. Ceylons were strong and dearer at the opening of the sale but came to an irregular market at the close. South Indians were firm with improved quality teas being dearer.

METALS EASIER

(From Our Own Correspondent).

CALCUTTA, 31st *March*

The Easter holidays as well as the reluctance of consumers to follow the upward trend led to easier conditions in the Calcutta metal market during the week under review. On the London Metal Exchange, prices recorded a further rise. Fresh arrivals led zinc to ease from Rs. 286 per 100 kgs. to Rs. 280 in Calcutta, but on the L.M.E. spot zinc gained £2½ to £102½, with the 3 months position moving up from £96½ to £96¾. There were reports relating to the question of release zinc from the U.S. stockpile, but the rising trend in London showed that the market was indifferent to the issue. At the same time, there was the report that zinc output in the U.S.A. this year was likely to go up by 9 per cent to 1.035 million tons and that U.S. consumption of slab zinc would increase by 3.6 per cent to 1.14 million tons. U.K.'s consumption of zinc in all forms in January 1964 rose to 33,453 tons, from 28,620 tons in the previous month, while the output there fell slightly to 8,800 tons from 8,317 tons. Imports into the U.K. of slab zinc, however, rose to 18,802 tons from 14,071 tons in December 1963.

Fresh arrivals, in addition to a drop in demand, were also a factor for the recession in the local quotation of tin, which closed at Rs. 3,300 per 100 kgs., as against Rs. 3,350 earlier. In London, spot tin was firm at £1,062 a ton, while the 3 months metal rose from £1,055½ to £1,057. Earlier estimates of the gap of 20,000 tons between consumption and production in 1963 have been confirmed by final figures. Total world output in 1963 was the same as in 1962, i.e. 141,500 tonnes. The output in Indonesia recorded a fall of 4,210 tonnes at 13,100 tonnes, but this was made good by small increases in the Congo, Bolivia, Malaysia, Nigeria, Thailand, and other countries. Total world consumption was 160,800 tonnes, as against 158,900 tonnes in 1962. U.S. consumption at 55,500 tonnes was higher by about 900 tonnes. Japanese consumption rose strikingly from 13,813 tonnes to 15,665 tonnes. At 20,636 tonnes, and 11,100 tonnes, the U.K. and France respectively, recorded small falls. The deficit of 20,000 tonnes was met by releases of stocks by the U.S.A., Italy, and Canada, and also by the exhaustion of the International Tin Council's buffer stocks in London.

Spot copper wire-bars on the L.M.E. rose from £277½ to £284 a ton and 3 months from £275 to £281. Spot cathodes and fire-refined closed at £274 and £267, after opening at £270 and £262, respectively. Spot lead advanced from £80¾ to £82 a ton. After the steady increase in quotations in recent weeks, both lead and copper scrap in Calcutta closed a shade lower than the week's opening rates.

JUTE GOODS SPURT

(From Our Own Correspondent)

CALCUTTA, 31st *March*

Speculative activity in heavy goods futures was the feature of trading in the jute markets during the week under review. As a result, ready heavy goods scored handsome gains, with hessian being only fractionally better. For, although there were shipper inquiries, interest was mostly in non-standard constructions. Reports received from the New York burlap market continued to be dull; here, hessian 40″ 7½ oz. and 10 oz. remained unchanged at 8.75 cents and 11.45 cents per yard, respectively. Figures relating to U.S. burlap consumption for February caused disappointment. Buyers, on behalf of the U.S., showed limited only interest, but, the U.S.S.R. and Argentina accorded greater support than recently. All the same, the volume of business was not as significant as to reflect on prices. Gunny shipments in the week as a whole was poor, and the possibility of further reductions in drafts on the Hooghly river in view of the gradual fall in the water-level, a problem that will be further accentuated in the coming two to three months, caused anxiety.

During the week, figures in respect of gunny despatches from mills last month were available, and these were noted with satisfaction, as, despite the various difficulties in the Calcutta port, exports had risen impressively. Despatches against internal consumption showed a small decline. At 99,100 tonnes, the total of all constructions despatched both for export abroad and for local purposes was higher by 6,700 tonnes, as compared with January 1964 but lower by 3,000 tonnes as compared with February 1963. While carpet backing cloth for export declined by 1,200 tonnes to 5,400 tonnes, sacking and hessian at 18,300 and 37,400 tonnes, respectively, recorded increases of 3,400 tonnes and 3,200 tonnes respectively. Other goods also rose, from 2,500 tonnes to 4,600 tonnes. The net result was that despatches of all goods for export rose significantly by 7,500 tonnes to 66,700 tonnes. However, with hessian at 5,500 tonnes, as against 4,500 tonnes in January, sacking at 22,500 tonnes, as against 24,900 tonnes, and other goods at 4,400 tonnes, as against 3,800 tonnes, the total despatches against local purposes declined by 800 tonnes to 32,400 tonnes.

Another news that also caused satisfaction was the report of increased imports of jute goods into West Germany last year. Of the total imports, it was stated that more than 50 per cent. came from India and Pakistan. As a result, sales of the West German mills the West German Jute Industry Association reported, significantly fell by 40 per cent. Some mills had to curtail production, while others could maintain output only by adding to inventories. Following the liberal import policy, imports of jute goods into West Germany amounted to nearly 70 per cent. of the country's own output, it was stated. When India and Pakistan, with a developing economy can fully meet the need of Europe with cheaper jute goods, it is suggested that Europe should not attempt either to set up more jute mills or increase output of existing mills.

Fibre remained steady during the week. In an attempt to prevent depression, member-mills were asked by the Indian Jute Mills Association to step up purchases of mesta. More interest was, therefore, shown by mills and turnover was moderate. Daily arrivals in terminal markets aggregated 40,000 maunds, as against 50,000 maunds a week ago. The quotations were unchanged as follows: Assam bottoms Rs. 31.50 per maund; northern bottoms Rs. 30.50; and daissee bottoms Rs. 34.00. Conditions in Pakistan markets remained unchanged. It was stated that continued congestion and hold-up in Chittagong and Chalna ports have affected fibre exports from Pakistan this season. Up to the end of February, shipments amounted to only 27.25 lakh bales and, if the existing stalemate continued, it is doubtful whether the figure of last season, namely, 44.38 lakh bales, would be realised. Moreover, purchases by India have fallen much below the last season's level. Up to the end of February, Indian purchases were only 64,000 bales, whereas, during the last season as a whole, exports to India stood at 245,000 bales. However, as a result of the need for Indian mills to improve quality of standard goods and New Delhi's decision to liberalise fibre imports, Pakistan may hope for increased interest being shown by mills in India.

Heavy goods were more active than hessian during the week under review. The trade here would urge measures to counter the effects on India's exports, as a result of the forthcoming trade delegation to Africa being sent by the Pakistan Jute Mills Association. Indian mills have considerable interest in the African markets, and it is to be hoped that the Government of India sees the forceness of the plea of mills to make conditions favourable for a reduction in costs. Pakistan's markets abroad for jute goods at present include the U.K., the U.S.A., Canada, Chile, Argentina, Australia, New Zealand, Germany, the Netherlands, Eire, New Guiana, Bri. Guiana, Costa Rica, Belgium, Singapore, Cyprus, Sudan, East Africa, West Africa, South Africa, Indonesia, Turkey, Burma, Nicaragua, Peru, West Indies, and Uruguay. With plan for stepping up production, it is natural that Pakistan should attempt to increase exports to the markets she has already built up as well as to new ones.

There were occasional inquiries for hessian from the U.S. this week. Argentina also showed interest. The decline in U.S. stocks of burlap at the end of February 1964 by 8 million yards to 283 million yards, despite the

fall in February consumption by 8.6 million yards to 73 million yards, indicated that U.S. purchases in February had been markedly lower. The average consumption for the first two months of this year is thus lower at 77.3 million yards, as against 78.95 million yards in 1963 and 83 million yards in 1962. On Tuesday last, ready B. twills eased from Rs. 111.70 to Rs. 111.65 and ready hessian 40" 10 oz. from Rs. 45.50 to Rs. 45.35. However, on Wednesday, speculation in heavy goods revived in the futures market and, as a result, ready B. twills hardened to Rs. 112.10. In sympathy, ready hessian 40" 10 oz. was firm at Rs. 45.40. On Thursday, with prices at Rs. 112.50 and Rs. 45.50, respectively, steadier conditions were in evidence. The market remained closed since Friday on account of holidays, and the feature after re-opening yesterday was the steadiness in hessian following keen Russian interest. Ready 40" 10 oz. hessian closed better at Rs. 45.65. However, in the absence of adequate interest, B. twills were quiet at Rs. 112.15.

SHEEP SKINS FIRM

(From our Own Correspondent)

MADRAS, *30th March*

Arrivals of stocks from the tanneries to the Madras market were of moderate volume and the clearance was fair at unchanged prices. Export trading was restricted and there was good call for fifths selection in medium weight cow hides and top marks in buff calf. Importers were apathetic to Madras offers of other types of hides and calf. Demand from East European countries was non-existant.

The tanned skins market was firm. There were good enquiries for light weight goat lower selections and all grades in 8/9 lbs. average, in superior marks and some orders were placed for shipment. Demand from American buyers was patchy. As regards sheep skins, primes and semi-primes were held firm, and so were middle class tannages on steady Continental demand. Prices in the raw centres for goat and sheep skins ruled firm due to the competitive buying of the E.I. Tanners.

In the London public sales held on 23rd March, attendance of buyers was poor and only a small quantity of goat and sheep skins was sold at prices on par with the current Madras quotations.

The following are the quotations for all round lots in the local market, per lb.:

Tanned cowhides, 8/8½ lbs. average Rs. 2.20 to 2.25, buff hides 12/13 lbs., average Rs. 2.00 to 2.06, and buff calf 1½/2 lbs., average Rs. 3.50 to 3.55.

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, *30th March*

After ruling quiet during the major part of the week, foodgrains turned steadier in the week-end. Harvesting of *rabi* grains is in full swing and new grains will reach markets after a few days. The latest reports indicate that rice crop this time would be a bumper one. It is expected to be of the order of 36 million tons, nearly two million tons more than the record crop so far of 34 million tons in 1961-62. Wheat output is expected to be 11 million tons.

After an early decline, wheat prices improved by Rs. 1 to 1.50 per quintal according to quality due to the meagre stock position. Arrivals from rural areas were also small. Wheat average quality was quoted at Rs. 58.25 to Rs. 60.50 and farm at Rs. 64.50 to Rs. 67.75 a quintal. At the fair prices shops, imported wheat was being sold around Rs. 43 per quintal. Rice prices, however, were subdued because of slack demand coupled with better sales through fair price shops. Local stocks were poor. Week-end prices were :—Rice basmati superior Rs. 93.77 to Rs. 96.45, sela basmati Rs. 91.09 to Rs. 93.77, mainpuri Rs. 62.96 to Rs. 66.31, ramajwayan Rs. 72.34, raimunia Rs. 77.70 and gadda Rs. 64.39 a quintal.

Gram prices hardened in the week-end on better buying enquiry. New gram reached the market from Madhya Pradesh and was quoted at Rs. 58.94 while local produce was quoted at Rs. 57.60 a quintal. Old stocks were reported negligible. Barley and bejhar prices sought lower levels at Rs. 40 to Rs. 40.50 and Rs. 41 to Rs. 41.50, respectively, per quintal. Maize prices advanced in the week by Rs. 1.50 per quintal due to the poor supply position in the face of good demand and ranged between Rs. 41 and Rs. 44.50 per quintal according to quality. Arrivals of juwar commenced during the week from Madhya Pradesh and were quoted a little lower at Rs. 39.75 to Rs. 41.25 a quintal while guwar was unchanged at Rs. 54.92 to Rs. 56.26 a quintal. Bajra and other coarse grains were listless.

A depressed trend was witnessed in the pulses market, barring peas. Arrivals of new crop peas mounted to 1,000 maunds, but prices improved fractionally, as dara was in demand from mills and the farm variety received outside inquiries. Prices were Rs. 45 to Rs. 45.75 for dara and Rs. 46.75 to Rs. 47.75 per quintal for the farm quality. Arhar prices ruled unchanged at Rs. 60 to Rs. 64.30 a quintal according to quality. Urd and moong eased slightly due to poor buying support. Urd was quoted at Rs. 66.98 to Rs. 72.34 and moong between Rs. 73.68 and Rs. 81.78 a quintal. Masoor prices also drifted lower due to arrivals from M.P. Other dals also tended to ease. Week-end prices were :—Peasdal Rs. 51.50, arhardal Rs. 72.34 to Rs. 77.70, urddal Rs. 80.38, moongdal Rs. 85.74, masoor Rs. 62.96 to Rs. 64.30, masoordal Rs. 80.38 and gramdal Rs. 64.30 a quintal.

"KHANDSARI" SUBDUED

(From Our Own Correspondent)

HAPUR, *30th March*

Sugar prices were steady during the week, as the supply position continued restricted. Most of the factories in Meerut area have closed their production season, while those in Muzaffarnagar and Rampur districts, where the supply of cane has improved with the closure of all *khandsari* units under the State Government's orders of 24th March, are not likely to continue their crushing operations for long. As against the controlled prices of Rs. 125 per quintal, sugar was quoted in the open market at Rs. 160 to Rs. 165 a quintal.

Khandsari prices were subdued during the earlier part of the week on reports that the export announcement regarding the commodity might be delayed, as the U.P. Government and the trade had not been able to come to some agreement. But later, east U.P. support resulted in prices making up earlier losses. Stocks of *khandsari* were reported sufficiently high and, at Muzaffarnager stocks were around 2.8 lakh maunds. *Khandsari* production has closed from 24th March, but the production is still being continued from *rab*. Week-end prices were :—*Khandsari* inferior Rs. 100 to Rs. 120, medium Rs. 122.50 to Rs. 132.50, superior Rs. 135 to Rs. 140. The prices of *Khandsari* during the corresponding period last year were Rs. 88.41 to Rs. 107.17 a quintal according to quality.

Gur turned steadier during the week-end thanks to good buying support in the face of poor arrivals which averaged about 750 mds. daily. Local *gur* stock was around 24,000 quintals. Export permits for the current month were reported for a smaller quantity and stockists were anxious, as with the change of season, quality of *gur* in stocks would deteriorate. Sowings of cane is still being done and the land vacated from *rabi* grains is being used for such sowings. Week-end prices here (in Rs. per 40 kilogram) were: Pansera superior 26.50, average 26 balti 27 and shakker 27 to 29.

In the Muzaffarnagar market *gur* prices, which had recorded heavy losses last week, turned steady, as bulk permits were received for export to consuming States of Rajasthan, Gujarat, Punjab, M.P. and Maharashtra. Arrivals averaged 5,000 mds. daily and the total during the current season was around 12.30 lakh mds., the corresponding figure last year being 14.38 lakh maunds. Latest prices (in Rs. per 40 kilogram) were : chaku 27 to 29, pansera 24.50 to 25.62, laddoo 27.50 to 28.

PEPPER SPURTS

(Messrs. Parekh and Co.)

BOMBAY, 1*st April*

Last week's improvement in Malabar black pepper was extended this week. Prices shot up to a new high on heavy short-covering and in view of the pyramiding by successful bulls. Ungarbled at the origins spurted from Rs. 310 to Rs. 345. Garbled improved from Rs. 320 to Rs. 360. May delivery touched a new level of Rs. 390 from Rs. 340. Ready, in Bombay, was lifted to Rs. 190 per 50 kgs. within three days. *Chaitra* went off the board at Rs. 350 while *Vaisakh* was boosted to Rs. 410, with sellers scarce as outsiders took up several contracts at higher prices. Business in forward was stopped within an hour after the opening of the market, as the maximum advance per day allowed by the Forward Market Commission was reached. In the advancing market, the growers at the origin are getting reserved sellers, while shorts are scrambling for supply. Business of more than 500 tons was reported with New York at advancing prices from $0.37 to $0.40.

The future outlook depends on the trading policy of Indonesia and with the movement of shipments of Lampong from Sumatra. The size of the new crop of Sarawak will also have its say in the future trend of world prices. After Easter holidays, Singapore opened firm, black pepper having reached a new high level of $ (M) 132½. Though stocks in Singapore are reported to be small, the shippers there are offering to New York at about the parity of $0.38/39. Spot in New York, spurted to $0.40, as there was shortage of unhedged stock to be delivered against the forward sales to the grinders. Confrontation policy by Indonesia against Singapore seems to have proved a blessing in disguise to Indonesia, as shipment and offers from that country are improving and becoming more business-like to meet overseas requirements. Stock position of Lampong in Indonesia is a mystery but, as smuggling and export to Singapore is totally stopped since October last, some quarters have opined that the stock of Lampong may be sufficient to meet the requirements of the world before the advance of the new crop of Lampong and Muntok.

BANKING

(Concluded from page 552)

The total deposits of the Bank have expanded from Rs. 32.65 crores to Rs. 45.49 crores, a rise of Rs. 12.84 crores as compared with Rs. 8.02 crores in the previous year. The increase includes Rs. 61 lakhs in 1963 and Rs. 12 lakhs in 1962, being the deposits of the banks taken over in the two years. Advances, including bills discounted, have improved by over Rs. 9 crores from Rs. 18.27 crores to Rs. 27.83 crores. Investments and cash balances put together aggregate Rs. 21.43 crores, as against Rs. 16.43 crores at the end of 1962. The Bank's paid-up capital (including advance calls) stands at Rs. 80.58 lakhs and its reserves at Rs. 75.25 lakhs. However, with another call of Rs. 2.50 per share on the 500,000 "B" class shares issued in 1962 having fallen due on 31st March 1964, the paid-up capital will have increased by Rs. 12.50 lakhs this year. The final call on these shares will fall due in March next, when the paid-up capital will exceed Rs. 1 crore. It is the policy of the Bank's Directors to build up steadily the reserves also, so that the percentage of capital and reserves to deposits can be maintained. At the end of the year under review, this ratio stood at about 3.3 per cent.

The Bank has, in tune with its resources, endeavoured to help every deserving industry by providing short-term and medium-term credit. It has felt the need for creating a separate industrial finance department for giving special attention to the financing of industries. A number of industrial concerns in the co-operative sector in several States have also been financed by the Bank. During the year, the Bank opened 16 new branches out of which two are in Goa. Together with the three banks merged during the year, it has so far taken over 15 big and small banks.

ASIATIC OXYGEN LIMITED

(Concluded from page 569)

monopolies and the operations of which are severely controlled, are there any monopolies in India in the correct sense of the term? The basic fact is that, owing to limited markets and the extreme dearth of managerial skill, there was in many industries not enough scope for a very large number of competing units. When markets expanded, more units came into existence. A careful and comprehensive survey of our industrial development would fully corroborate the fact that, depending on the raw material availabilities and dimensions of the market, the number of units in each industry has been growing. Such growth has taken place in spite of the size of units continuing to be uneconomic. There is no monopoly in India outside the field of public utilities unless we include public-sector monopolies, such as the monolithic Life Insurance Corporation, Fertiliser Corporation of India and the like. Now, if there are no monopolies, there is no scope for a Monopolies Commission. This proposal is understandable when one has to consider the necessity to satisfy the more vocal sections of the public which is concerned with very superficial consideration of ideological catch phrases. Nevertheless, such attempts do detract from the laudable objectives which our Finance Minister has defined in his budget speech.

Note :—*This does not purport to be the proceedings of the Annual General Meeting.*

NEW COMPANY FORMATIONS

(Concluded from page 555)

pany which is the subsidiary of a public company in the shares or debentures of other bodies corporate. In the year under review, 60 applications, involving an aggregate amount of Rs. 7.3 crores by way of inter-corporate investments, were approved by the Government. As in the previous year, the majority of approved applications related to investments by existing companies in new companies formed for setting up industrial undertakings licensed by the Government. In a few cases, where companies had sought *ex-post facto* approval to investments already made, the applications were rejected and the companies advised to dispose of the investments within a specified period.

The report has finally given some instances of unsound company practices observed during the year under review. For instance, there were some cases where the management took undue advantage of its position and authority. In one case, two directors of a private company bought in their own names residential plots, while the purchases had in fact been financed by the Company. Another company secured a loan of several lakhs of rupees from a firm in which all of its five directors were interested, and the rate of interest charged on the loan was as high as 12 per cent per annum. Allotment of shares before the minimum subscription had been raised, withholding of the sale proceeds of company's assets, refund of share capital by way of loans and special resolutions under Section 314 with retrospective effect were other unsound practices detected in the case of some companies during the year.

EMPLOYEES' PROVIDENT FUND

The question of continuing the grant of assistance to members of the Employees' Provident Fund or their nominees/heirs from the special reserve fund, which was created in September 1960, in cases where the employers fail to deposit provident fund contributions will be reviewed at the twenty-fourth meeting of the Central Board of Trustees to be held at Chandigarh on 4th April, 1964 under the chairmanship of Mr. N. N. Chatterjee, Joint Secretary of the Union Labour and Employment Ministry. Till 31st December, 1963, a sum of Rs. 29.83 lakhs had been advanced from the special reserve fund to the members or their nominees/heirs. The Board will also review the working of the Employes' Provident Funds Scheme since its last meeting, as also the progress in constructing office buildings and staff quarters for various regional offices. It will also review the working of the Act and the Scheme in public sector undertakings.

Till the end of December 1963, over 24,800 establishment were covered under the Employees' Provident Funds Act, 1952, and the benefits of contributory provident fund were being enjoyed by about 38.80 lakh workers. Over Rs. 487 crores had been collected by way of provident fund contributions of which about Rs. 142 crores were paid back to the subscribers by way of final settlements of claims, advances for house building purposes, financing of insurance policies, etc. The balance of about Rs. 345 crores was invested in Government securities.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P. O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I—Interim Dividend. CR.—Cum. Right. XR.—Ex. Right.

Shares :—If a company has different classes of shares—as for example : 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up' per share.

Accounts :—Figures in the Accounts Closed column represent the months or the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

NATIONALISATION OF BANKING

THE socialism preached by Prime Minister Nehru has encouraged all and sundry to advocate from time to time nationalisation of some business or other. Several professional politicians in the Congress Party have sought to improve their prospects by a vigorous advocacy of extension of State ownership. The latest victim of this political opportunism is banking. Originally, the demand for nationalisation of banks was confined to communists and some of the socialists. Later, a few backbenchers in the Congress Party began to support this demand. In the past two years, some of the more influential members of the Congress Party also joined this crowd and gave a big boost to the campaign for nationalisation of banks. In the latter half of last year and early this year, the demand was pressed hard and strongly voiced in and outside Parliament by a substantial number of Congressmen, despite the Government's firm and unequivocal decision against it. The campaign is still being kept up, though on a slightly lower key. Knowledgeable circles are of the view that the danger of nationalisation of banks has by no means passed. A significant point to be noted here is that the Government of India has not categorically stated that it is against nationalisation of banking in principle and for all time to come. It has only observed that the present time is not opportune for this step. By implication this means that it is not opposed to nationalisation in principle and may do so when it suits it.

There is the rub, for, so long as the Congress Party is not opposed to nationalisation of banks in principle, it is bound to be subjected to pressure tactics by leaders who are out to capture power for themselves. Unfortunately, nationalisation seems to be popular with the general public and employees of banks, thanks to the consistently anti-capitalist and anti-rich propaganda carried on by the Congress Party, too. The absence of unity among businessmen and their failure to win the support of even middle-class employees in the middle and lower echelons have lent a considerable measure of strength to this propaganda. Consequently, those leaders who are urging early nationalisation of banking are in a more favourable position than their confreres who are opposed to it. For the same reason, the task of successfully educating public opinion against nationalisation is a hard one. Nevertheless, it must be performed by the bankers as best as possible with the zeal, zest and tenacity of a missionary. At the same time, every endeavour must be made to get the communists and fellow travellers out of the unions of bank employees. This may prove to be more difficult than educating public opinion but that is no reason for not attempting it. There is n

banks, over which the State has enormous influence. The Postal Savings Bank is also there, trying to capture the deposits of small savers in every nook and corner of the country. In the sphere of term lending, the State has the dominant share, with all the development banks either owned and/or controlled by it. The entire life insurance and a good part of general insurance, both of which are a part of the capital market, are in the hands of the Government. Even the I.C.I.C.I. cannot be said to be completely free from Government domination. The latest intrusion by the State into the sphere of capital market is the Unit Trust. Thus, the State is there everywhere in India, in commercial banking, in deposit banking, in term-lending, in export finance and in investment banking. On top of it, the State drains away the bulk of the incomes and savings of individuals, as well as of corporations, through high rates of taxation and compulsory deposits. The State's hold on the financial front and over the money and capital markets in India is, in short, virtually complete, perhaps more complete than in France or in Italy where, too, a part of the banking sector is State-owned. It must also be borne in mind, in this connection, that controls over commercial banks in this country are all-pervading and more sweeping than in any other country in the free world. This journal is giving away no secret when it says that commercial banks in this country are quite subservient to the Reserve Bank. None of them dares to disregard the latter's wishes, let alone directives. No central banking institution in the free world can find a more docile crowd of banks than those in India.

The contention that domination of the State over French banking has not prevented the growth of private enterprise in France or restrained the inflow of foreign private capital into that country is true to a great extent. But the State domination there is of a different type than that proposed in this country. What is demanded here is wholesale nationalisation of banks, with no scope whatever for the private sector banks, whether national or foreign. In addition, there is no hostility towards private enterprise in France as there is among the advocates of nationalisation in this country. Nor are there such cries as those that rend the air here almost daily alleging monopoly capitalism, concentration of economic power, etc., and advocating ceiling on agricultural land, urban incomes and wealth, etc. Nor is taxation in France so heavy as it is in this country. The French are a highly mature people and their socialism is of a practical variety, instead of the paper variety that is in vogue in this country. This is true also of their planning, the success of which has been phenomenal. So if India is to copy France in regard to banking, let it do so in regard to all other aspects of economy, including planning, as well.

It would be incorrect to say, as some critics maintain, that democracy in France has not suffered as a result of socialisation of banking. Till 1958, when General de Gaulle took over, France was the sick man of Europe, with Governments coming and going in quick succession. That political instability in France in the post-war era had reached dangerous levels and that it was on the verge of civil war on more than one occasion are well-known facts. Equally well known is the fact that before General de Gaulle took charge of the Government of his country, he got the French Constitution drastically changed, vesting in the President of France dictatorial powers. It is an irrefutable fact that France today is under a dictatorship, albeit a constitutional and benevolent one. The type of dictatorship that may conceivably follow wholesale nationalisation of banking in India will not necessarily be of the current French type. It could very well be of the East European or Chinese variety. If the advocates of nationalisation of entire banking in this country think that banking "reforms" in France provide them an argument in their favour, they are sadly mistaken. Surely, one cannot put forward a more effective argument against it.

NATIONAL MARITIME DAY

IT was on the fifth of April 1919, when Mahatma Gandhi launched his *satyagraha* movement against the Rowlatt Act, that India's epic struggle for freedom commenced in all its solemnity. That very day, India's first passenger vessel, s.s. *Loyalty*—which, incidentally, was also Scindia's first ship—sailed from Bombay to U.K. ports, as if to signify the nascent shipping industry's loyalty to the national cause. The event also signified, by implication, disloyalty to the British *raj*, for it was with the connivance of that *Raj* that powerful foreign shipping interests had virtually killed the shipping companies organised by such pioneers as Mr. J. N. Tata, Mr. V. O. Chidambaram Pillai and others in different parts of the country between 1860 and 1914. But their pioneering spirit was not so easily stifled, for it was bequeathed to newer stalwarts like Mr. Narottam Morarjee and Mr. Walchand Hirachand who incorporated the Scindia Steam Navigation Company on 27th March 1919. It thus came about that the glorious revival in modern conditions of a traditional industry marked the beginning of a new era in India's maritime history. In a sense, an even more glorious era might be said to have begun a couple of years ago, when the country's shipping crossed the coveted million-ton mark. It is true that this growth was far short of what had been optimistically envisaged in the initial years of independence. Nor was it adequate for meeting the country's requirements. Nevertheless, considering the various handicaps (including an excessive spirit of nationalism among some stalwarts) from which the country was suffering, this was by no means an insignificant achievement. What is, however, more significant is the fact that the growth in national tonnage is continuing, bringing to the fore new entrepreneurs with a new dynamism of their own. It is in this context that the celebration, on the 5th instant, of the first National Maritime Day under the auspices of the Indian National Steamship Owners' Association has been invested with more than ordinary significance.

This week, which may well be called National Maritime Week, has seen some stock-taking in respect of the shipping industry. From the Government side, this stocktaking has been briefly done by Mr. Raj Bahadur, Union Minister for Transport. In his estimate, the country's mercantile marine has now gone well beyond the 1.5-million-ton mark, if the firm orders already placed for construction or acquisition of more vessels is taken into account. The growth of tonnage so far has been so encouraging that the Government has begun to think in terms of a possible 2.5-million-ton target for the end of the current Plan. This target, it is said, will include orders already placed for new constructions or acquisitions. It is not only the present and prospective growth of tonnage as such but also its balanced character that is important. That the national fleet is, and will continue to be, more balanced than ever before is clear from the fact that bulk carriers of the latest type, large-size super-tankers and modern fast liner ships, have been, and are being, increasingly acquired.

Thanks to such expansion, Indian shipping today carries about 18 per cent of foreign trade in terms of cargo handled, as compared with only nine per cent three years ago. The saving in foreign exchange is considerably more than 18 per cent of the country's total freight bill. That is not all, for new opportunities for young men have opened up and employment prospects for seamen have vastly increased in the merchant navy. The working conditions of all seafarers, officers and workers, are also being substantially improved not only because they deserve to be treated well but because they render essential services in a merchant navy which is the country's second line of defence. A related aspect of the growth of Indian shipping is the steadily increasing accent on national shipbuilding. The Government's decisions to set up a second shipyard at Cochin and to double the production at the existing Hindustan Shipyard at Visakhapatnam are noteworthy in this connection. With the implementation of these decisions in the years to come, a further forward step will have been taken in the direction of self-reliance in shipbuilding so as to meet indigenously the growing tonnage requirements of Indian shipping.

The Chairman of the National Shipping Board, Mr. C. H. Bhabha, has also appraised the situation in his own inimitable way. According to him, "India's merchant fleet happens, at present, to be at a crucial, though not critical, period of its career." "One can almost say," he continues, "that the 'take-off' stage is very nearly in sight." Paying a tribute to all those who have rallied round the Government "in this great adventure of building up a good merchant fleet under the Indian Flag," Mr. Bhabha has, at the same time, expressed the hope that the Government would readily indent on all sincere private efforts, evaluate them in an impartial and fair manner and give due recognition, as well as assistance, to them. Considering the fact that there is a sizable public sector represented by the Shipping Corporation of India Ltd. which is planning to expand its fleet from the present level of 221,000 g.r.t. to 500,000 g.r.t. in the next few years, one might readily recognise the relevance of Mr. Bhabha's gentle advice to the Government.

It has been given to Sumati Morarjee, President of I.N.S.O.A., to trace, in dignified tones, the history of India's modern shipping which owes its present position to the collective efforts of innumerable persons during the last 40 years. Although she is a leading representative of the private sector in shipping, it is characteristic of her that she has welcomed the emergence of a public sector in that field as "a symbol of happy and harmonious association of the national economic forces." It is her fervent desire that this national sector (covering both Government and private shipping companies) should build and buy in due course the additional tonnage to carry at least 50 per cent of the country's total overseas trade. But she has not chosen to dwell on the financial and other requirements of the shipping industry in the context of her ardent desire. Even Mr. M. A. Master, whose tireless and dedicated service in the cause of national shipping has been appropriately recognised and praised during this National Maritime Week, has skipped over this aspect. It is, however, possible to figure out, from what little he has said on the financial cost of expansion so far, that the objective of building up a merchant navy of the size required to carry 50 per cent of India's progressively expanding overseas trade is not an unattainable ambition in the foreseeable future, given certain prerequisites. The relevant passage in Mr. Master's speech at Bombay on the 5th instant is as follows:

> "The country . . . feels obliged to the Government for implementing the policy, recognised all over the maritime world, of making finance available, at a comparatively low rate of interest, for the acquisition of additional tonnage. From such data as are available, I find that from the beginning of planned economy till the end of last year, the total sum sanctioned, including the sum of a little over Rs. 20 crores allotted to the Jayanti Shipping Company, would come to nearly Rs. 81 crores. The tonnage acquired would be 96 ships of a little over 700,000 g.r.t. Indian shipowners have risen equal to the occasion and shown the necessary initiative, courage and faith for developing Indian tonnage, as they themselves have acquired, at considerable sacrifice, 46 vessels of nearly 245,000 g.r.t., at a cost of a little over Rs. 22 crores under the deferred payment system. *Shipping can thus take satisfactory strides in its onward march, when there is intelligent understanding and willing co-operation between the people and the Government.*" (Italics ours.)

Mr. Master's optimism is, however, rather restrained. While he has rightly implied the need for continued Government assistance, he seems to have recognised only partially the capacity of the private sector in shipping to display resourcefulness and enterprise in acquiring new ships, provided it does not allow itself to be swayed by the outmoded cult of *Swadeshism*. The fact that a new entrant like the Jayanti Shipping Company has built up a total tonnage exceeding 400,000 d.w.t. in the course of just three years is an eloquent proof of the adage: "Where there is a will there is a way." Surely, this Company's achievement is not wholly due to Government's financial assistance, substantial though such assistance has been. One hopes that the other new entrant, Ratnakar Shipping Company Ltd. (Managing Agents: Birla Gwalior Pvt. Ltd.), might display similar enterprise and augment the country's fleet in quick time. For their part, the established companies can ill afford to sit back, dazed by the spectacular growth of newer entrants. They should summon to their aid the pioneering spirit of their founders and canalise it in a new dynamism appropriate to the spirit of the times. That way they can not only add significantly to the national tonnage but also enhance their financial potentialities in terms of freights and profits. There must be an early end to the situation where 17 Indian shipping companies (Jayanti excluded), representing 88 per cent of the country's tonnage, make a meagre net profit of just under Rs. three crores in relation to their fleet cost of about Rs. 120 crores. The first National Maritime Day, which they have just celebrated, would have been in vain if it had not made them aware of their continuing responsibility for the growth of Indian shipping by adopting realistic attitudes.

MARKET GOSSIP

Problem Of Reviving Capital Market

FULL forty days have passed since T.T.K.'s taxation proposals were announced. This is a long enough period for assessing their impact with a high degree of certainty. They have failed to revive the capital market. On the contrary, they have effectively killed whatever improvement that had taken place in the last quarter of 1963 and in the first two months of 1964 in the hope that T.T.K. would give some tangible concessions in the heavy burden of both direct and indirect taxes. The hope has been belied. Sweet words and harsh action have characterised his budget this year, confirming, once again, that T.T.K. is an unpredictable person. It would be a good thing, indeed, if he could confirm this impression further by substantially amending his proposals in favour of taxpayers when the Finance Bill and the Bills allied to it come up for discussion in the Lok Sabha next week.

The following are the minimum concessions necessary for reviving the capital market:

1. The dividend tax should be made applicable only to excess dividends. If this is found too complicated, he should give a rebate to the companies on the amount transferred to reserves and retained in business.

2. Taxation of bonus shares at the hands of shareholders by treating them as capital gains on a notional basis should be abolished and the *status quo* should be continued.

3. The rate of Annuity Deposits should be halved and their return should be exempted from taxation. The best thing to do will be to abandon the entire scheme, as it involves compulsion which is repugnant to the principles enshrined in the Constitution.

4. The incidence of Estate Duty must be made reasonable and human.

5. The exemption limit for wealth tax should be kept unchanged at Rs. two lakhs.

6. Small companies with a paid-up capital of Rs. 10 lakhs or a turnover of Rs. 20 lakhs whichever is higher should be exempted from the mischief of Section 104 (old Section 23A) of the Income-tax Act.

7. As a matter of principle, all changes in taxation should be made applicable to the current year and not to the previous year. The present system in India is most inequitable and unscientific. It makes it difficult for businessmen to plan their profit-margin in advance and upsets all their calculations.

The foregoing suggestions do not constitute any extravagant demand on the Exchequer. If implemented, they will surely stimulate the pace of economic growth, generate more employment opportunities and ultimately bring larger revenues to the Government. It requires a lot of political courage for the Finance Minister of a Government dominated by doctrinaire socialists to act on these lines. It is to be hoped that T.T.K. has it in abundant measure. He knows as much as this writer does that it is only through more production can genuine socialism be introduced into this country and that, in a mixed economy of the type chosen for India, increase in production at the desired rate can be achieved only through adequate incentives to investors and entrepreneurs.

Foreign Private Capital

What are the conditions that will be conducive to attract foreign private capital to underdeveloped countries and stay there? Answering this question, Sir Duncan Oppenheim, Chairman of the British-American Tobacco Company Ltd., which is operating in India through the Imperial Tobacco Company, says in his statement to the shareholders of the Company:

> "We appreciate the difficulties that the developing countries have to face in financing development programmes which are essential if they are to improve their standards of living. It is all too easy, however, for Governments to treat taxation of company profits as a ready source of income capable of unlimited expansion and to lose sight of the fact that unreasonably high rates of company and personal taxation, while providing much needed finance in the short-term, must inevitably discourage the overseas capital which these countries need to attract if they are to attain their objectives. The growing practice of imposing additional taxes on dividends either upon the shareholder or upon the company itself is to be deprecated, particularly when, as in some recent instances, these taxes have been imposed at specially high rates on dividends paid to non-resident shareholders. This is a form of discrimination which is immediately discouraging to the flow of risk capital and the consequences of such a policy do not take long to show themselves.
>
> "The increasing deficit in the balance of payments of developing countries, taking into account inter-governmental aid, exports and all other available measures, can only ultimately be met by substantial investment of private capital, the demand for which is higher now than it has ever been. The chances of attracting it depend very much on the commercial, fiscal, monetary and administrative policies of the country requiring it, for—being a scarce commodity—it will flow to the places which show the best promise of net profitability as a reward of efficiency and enterprise. The availability of pioneer and other concessions to new investors will not in itself be effective in attracting overseas capital, if the prospect is that taxation will be too onerous when the pioneer period expires. Thus, the maintenance of a reasonable level of taxation on existing investments is as essential for a country wishing to attract foreign capital as is the assurance of political stability, fair and non-discriminatory treatment and freedom to remit dividends and to repatriate capital eventually. Indeed, I regard excessive taxation, whether in the form of excise duties or in the form of profits taxation as a greater threat to the Group's expansion in the developing countries than the political risks that have attracted so much attention in recent months."

Growing Strength Of Synthetic Fibres

There are two trends in man-made fibres which signify greater progress for the industry and more intense competition with natural fibres. These are the rising trend of production and declining trend of prices. Both these trends are reflected in the output and trend of prices of terylene, the polyester fibre produced by Imperial Chemical Industries Ltd., London. Terylene belongs to that group of organic polymeric materials (plastics fibres and films) which constitute the most important area of growth of I.C.I., as also the largest single field of research and development activity of the Company.

Far more than the concentration of research and development activity, it is the successive cuts in prices that give synthetics a shot in the arm in its competition with natural fibres. Since the beginning of this year, I.C.I. has cut the prices of its fibres thrice, the latest cut, ranging from 5 per cent to 27 per cent in prices of high tenacity terylene industrial yarns, having been made on the 2nd inst. It was hardly a month ago that the company had reduced the price of its polypropylene fibre, making it one of the cheapest synthetic fibres available in the U.K. Before that, that is, in January last, the company had cut the prices of terylene staple fibre, bringing them below the published domestic prices of any other major polyester fibre manufactured in the world at that time.

The I.C.I. has indicated, even while announcing the earlier two cuts, "its intention to support the textile trade by making high quality yarns available at the lowest possible price." The Company had also explained that the price reduction was possible because of economies in production. While this may be largely true, it cannot explain the three successive reductions in fibre prices in the short period of three months. The price reduction is an indication of the increasing competition in synthetic fibres market. But, whatever be the reason, the declining trend of prices of man-made fibres, coupled with more intensive research and development effort—the I.C.I. alone is spending on these a good part of the proposed £100 million for capital projects this year—constitute a challenge and danger to natural fibres, including cellulosic fibres.

Refinance Corporation

A remarkable feature of the working of the Refinance Corporation for Industry brought out by Mr. P. C. Bhattacharyya, Chairman of the Corporation, in his speech at the sixth annual general meeting held at Bombay this week, is that refinance sanctioned and disbursed by the Corporation last year (that is, calendar year 1963) was nearly equal to the cumulative total of the amounts sanctioned and disbursed since the Corporation's inception till the end of 1962. Thus, the Corporation sanctioned refinance of over Rs. 24 crores last year, as against the cumulative sanctions of Rs. 27 crores till the end of 1962 and disbursed refinance of well over Rs. 13 crores, as against the cumulative total of Rs. 15 crores during the previous four years from 1959-62. As Mr. Bhattacharyya pointed out, the stringency in the capital market may have contributed, to some extent, to this development but the spurt in sanctions and disbursements indicates that the Corporation has now got into stride.

Apart from refinance sanctioned and disbursed, there are other indications that a wider sector of institutions and industries is now being benefited by the operations of the Corporation. Last year, 27 financial institutions were sanctioned refinance, as against 19 in 1962. As many as eight out of the fifteen State Financial Corporations, including the Madras Industrial Investment Corporation, received assistance from the Corporation, especially at a time when these institutions found it difficult to approach the investing public for funds with their bonds and debentures.

Along with the extension in the coverage of financial institutions, there has also been a welcome diversification in the range of industries, loans to which have been refinanced by the Corporation. A large part of the Rs. 24 crores refinance sanctioned by the Corporation last year related to industries which had claimed the major share of the assistance from the Corporation in the previous years. Even so, there have been a number of new entrants in the field such as coal, which accounted for 5 per cent of the sanctions last year and chemical products, which accounted for 7 per cent of the total. Manufacture of paper and paper products accounted for 6·4 per cent of the sanctions in 1963, as against an insignificant amount in the previous years. Another industry added to the list last year was transport equipment which accounted for 5.3 per cent of the refinance sanctioned in that year. Textiles, however, continued to be the predominant industry group and its share of the refinance sanctioned rose from 17 per cent of the total up to end of 1962 to 29 per cent of the total in 1963.

An important point to be noted is that, in 1962, one half of the refinance sanctioned by the Corporation related to the refinancing of loans given by financial institutions to set up new manufacturing units, the other half being for modernisation, expansion and renovation of existing industrial units. As compared with this, upto the end of 1961, only 28 per cent of the aggregate amount sanctioned had represented refinancing of loans for setting up of new industrial units. Although the momentum of the shift in the direction of assisting new enterprises witnessed in 1962 could not be maintained in 1963, nearly 45 per cent of the refinance sanctioned was in respect of establishing new industrial units. This slow-down is, perhaps, a reflection of the change in the state of the capital market which has prompted existing industrial ventures to go in more for term finance from banks and other financial institutions, instead of raising fresh share capital (preference and equity alike) from the market.

The tendency of industry to rely increasingly on institutional finance is revealed by certain other indicators as well. The projects for which the Corporation sanctioned finance last year involve a capital outlay of Rs. 71 crores. Of this, owned funds, including share capital and reserves, are estimated to provide about Rs. 33 crores and term-advances from banks and other financial institutions Rs. 32 crores, the balance of Rs. 6 crores being loans from miscellaneous sources. Thus, almost one half of the outlay on the projects refinanced last year is being met by term advances from institutions, three-quarters of which has been provided by the Refinance Corporation.

The Corporation has also done considerable spade-work for handling a new type of business, namely, the refinancing of medium-term export credit. In fact, a small beginning has already been made. The Corporation has decided to charge a concessional rate of 4½ per cent for refinance of medium-term export credit. It is also ready to consider application for comparatively small amounts, in order to help the growing class of small exporters to secure accommodation from banks. There is plenty of scope for expansion of this business, because banks themselves are certain to increase their business in view of the encouraging trend of exports.

While the performance of the Corporation last year has thus been commendable, its future prospects would depend on the trend of investments and the growth of the economy. There is no doubt that, if the various targets laid down in the third Plan were to be reached, investments would have to be stepped up considerably in the next two years. In view of the continuing sluggishness of capital markets due to a variety of reasons, this would mean vastly increased demand on the resources of the entire range of financial institutions. The proposed Industrial Development Bank, in particular, will have a crucial role to play in expanding and co-ordinating the assistance extended by financing institutions, including banks, in the field of industrial finance. A Bill to set up the Bank has already been introduced in Parliament. One of the provisions of the Bill is that the Government may at a future date authorise the Bank to take over the Refinance Corporation. The *rationale* of this clause, according to Mr. Bhattacharyya, is that both the Bank and the Corporation will be engaged in broadly identical type of business. Considering the operations of the Corporation, what the Development Bank will be taking over is, as Mr. Bhattacharyya put it, "not an infant institution which would still need to be nursed by the Government but one that has attained an enviable stature within a few years of its coming into existence, and has set up vital lines of communications with financial institutions which would be valuable to the new Bank."

Tourism

It is a reflection of the wide gap between tall talk and actual performance that foreign exchange earnings from tourism have hardly shown any perceptible improvement in the past few years. While countries like Italy and Australia have wiped out their entire trade deficit and built up large reserves of foreign exchange through tourism, India, which ought to earn more than most countries of the world from tourism, is just scraping up a meagre Rs. 20 crores a year. The third Plan allocated Rs. 8 crores (Rs. 3.50 crores in the Central sector and Rs. 4.50 crores in the States sector) for development of tourism. Of the Centre's share of Rs. 3.50 crores, actual expenditure during the first three years of the Plan (1961-62 to 1963-64) amounts to only Rs. 86.14 lakhs or 25 per cent of the allocation. And, in terms of physical targets, actual achievement is less than 20 per cent of the target. It is unlikely that the record of the State Governments is any better. This trend in the utilisation of funds for development of tourism is meaningful in the context of the statement made by Mr. Raj Bahadur, Union Minister for Transport, that the fourth Plan allocation for tourism will depend upon the performance in the field during the current Plan period. Mr. Raj Bahadur, who was inaugurating the Western Zonal Tourist Advisory Committee at Bombay on the 6th inst., said that there was great scope for developing tourism and increasing foreign exchange earnings from the present level of Rs. 20 crores per annum to, say, Rs. 50 crores. There is, of course, scope for developing tourism, but only if the authorities concerned become fully alive to the need for it and start doing things efficiently and expeditiously. And considering the trend of utilisation of funds and actual achievements, it looks as though a good percentage of the Plan allocation would remain unutilised, unless, of course, something remarkable is achieved during the remaining two years of the Plan.

The disturbing thing about tourism in India is that there has been a decline in the flow of tourist traffic to this country as also tourist earnings. The Government itself felt constrained to

TREND OF SHARES

RECOVERY AT CLOSE

(From Our Own Correspondent)

BOMBAY, *9th April*

AFTER some initial weakness, equities staged a promising recovery from yesterday, with Dalal Street providing the lead on short-covering by some principal operators. Sentiment took a turn for the better on renewed speculation over some likely relief in the tax proposals. Market circles here believed that the Finance Minister would find it inevitable to concede some relief if the investment climate were to be improved and expected him to announce the concessions on the 17th inst. which would be after the start of the Lok Sabha debate on the Finance Bill. In fact, in a memorandum sent to the Union Finance Minister, a large number of members of the Bombay Stock Exchange made a renewed plea for a reassessment of the budget proposals, especially on the capital gains tax on bonus shares, the dividend tax and the estate duty, because these drastic tax measures in particular had created a gloomy atmosphere in share markets by driving away investors and even forcing disinvestment. The members also pointed out that, should the present situation continue for some time more, their staff and jobbers would run the risk of being unemployed.

The aforesaid optimism about some tangible relief in tax proposals might be nothing more than wishful thinking. But the fact is that some of the principal sellers have thought it prudent to cover a part of their sales while the going is good. But activity has been confined only to speculative counters and has been largely on account of the professional operators. Fresh support continues to be poor. Moreover, the recovery, though promising has by no means been a decisive one, as market leaders have rallied by only a few points above the post-budget low levels. Finally, the slightly improved sentiment has been discernible only on the Bombay Stock Exchange, whereas the Calcutta and Madras Stock Exchanges seem to be marking time.

While the expectations of tax reliefs changed sentiment, the recent sizable institutional support for "blue chips" also began to show its favourable impact. An additional factor was some further encouraging corporate news during the week. Particularly welcome was the decision of the Directors of the Century Spinning and Manufacturing Company Ltd. to recommend a final dividend of 18 per cent for 1963 and to make a rights issue of preference shares, rather than equity shares as anticipated, of a small value of Rs. 25 lakhs and offer it to the existing preference shareholders in the proportion of one share for every five shares held. The Company's results for 1963 showed a smart rise in gross profit from Rs. 366.87 lakhs to Rs. 477.61 lakhs and in sales from Rs. 17.10 crores to Rs. 22.25 crores. Kohinoor Mills reported for 1963 a record profit of Rs. 96.40 lakhs, that is, Rs. 15.29 lakhs more than in 1962, following an increase in sales from Rs. 7.61 crores to Rs. 9.55 crores. Sales of Jessop and Company during the year ended 31st October 1963 reached a record figure of Rs. 14.72 crores, representing an increase of Rs. 1.90 crore over the previous year, but its gross profit increased by only Rs. 11.96 lakhs to Rs. 198.48 lakhs. The dividend on the 10-rupee ordinary shares has been raised, as is already known, from 8.58 per cent to 10 per cent per annum.

Political factors continued to exercise the minds of operators. However, there was a change in their assessment of the impact of the release of Sheikh Abdullah on the political scene. Unlike last week when they entertained extreme fears, marketmen were reconciled to the view that the Kashmir leader's release would encourage communal harmony and result in a favourable settlement of the Kashmir issue. This change, based also on the expected restraint and mature attitude to be shown by the Sheikh after his release, explained to some extent the improvement in market sentiment this week. But the Indo-Pakistan Home Ministers' talks did not particularly enthuse marketmen, especially after it was known today that they had run into rough weather because of Pakistan's stubbornness on the eviction issue.

* * * *

Steel shares on Dalal Street found ready buyers on the publication of higher production figures of T.I.S.Co. and I.I.S.Co. for the last month, which made the total for the year 1963-64 look quite impressive. T.I.S.Co.'s production of pig iron in March amounted to 131,600 tonnes, of steel ingots to 152,900 tonnes, and of saleable steel to 128,400 tonnes, as against 118,600 tonnes, 139,000 tonnes and 109,100 tonnes in the previous month, bringing the totals for the year to 1,811,200 tonnes, 1,891,700 tonnes and 1,506,400 tonnes, as against 1,766,000 tonnes, 1,799,300 tonnes and 1,412,700 tonnes, respectively, in 1962-63. I.I.S.Co.'s production of pig iron in March amounted to 113,069 tonnes, of steel ingots to 89,766 tonnes, and of saleable steel to 78,624 tonnes, as against 103,411 tonnes, 80,243 tonnes and 66,435 tonnes in the previous month, bringing the total for the year to 1,237,000 tonnes, 1,027,000 tonnes and 810,000 tonnes, as against 1,291,825 tonnes, 1,002,038 tonnes and 795,119 tonnes, respectively, in 1962-63. Both Tata Steel Ordinary and Indian Iron recorded good gains, the former of Rs. 2.25 to Rs. 148.50 and the latter of 28 nP to Rs. 24.88.

Among others, Century improved by as much as Rs. 19.50 to Rs. 630.50 and National Rayon closed higher at Rs. 367 ex-right as compared with Rs. 375.50 cum-right last week. Standard made a good recovery from Rs. 654 to Rs. 669 and so did Indian Dyestuff from Rs. 296.25 to Rs. 306.25. T.E.L.Co. were well supported up to Rs. 364, as against Rs. 299.25 last week and Hindustan Motors gained 24 nP to Rs. 18.52. But cash scrips still failed to evoke support and finished with minor changes, though the speculative T. Maneklal jumped up by Rs. 55 to Rs. 565.

* * * *

Forward shares on the Calcutta Stock Exchange presented a mixed show. Thus, Indian Aluminium recovered 44 nP to Rs. 31.94 and Texmaco 20 nP to Rs. 28, but Birla Jute slipped back by Re. 1.25 to Rs. 30.87. Dunlop showed a loss of 25 nP at Rs. 36.12. In the cash section, Textiles and Coals were quiet, but Jutes were lower, especially Alliance and Burnagore at Rs. 120 and Rs. 213, as against Rs. 122.50 and Rs. 214, respectively, last week. Engineering issues were dull and, in the Miscellaneous section, Balmer Lawrie declined from Rs. 260 to Rs. 259, Goodyear from Rs. 27.37 to Rs. 25.87 and Rallis from Rs. 119.50 to Rs. 118.

* * * *

The trend was still weak on the Madras Stock Exchange, though a couple of cleared shares, like Consolidated Coffee and Aluminium Industries, recorded moderate gains. Thus, Ouchterlony Valley were 40 nP lower at Rs. 4, S.I. Viscose shed three points to Rs. 125.50, Mettur Chemical moved down by 27 nP to Rs. 13.38 and Tube Investments lost four points to Rs. 210.

SCOTTISH INDIAN MACHINE TOOLS LTD.

Voltas Ltd. and Scottish Machine Tool Corporation Ltd. of Glasgow have joined hands to promote a new venture, called Scottish Indian Machine Tools Ltd., for manufacturing machine tools in this country. This new Company, incorporated in February last, will manufacture guillotine shears, punches, plate bending rolls and other items of plate and bar working machinery. The plant, to be located at Thana near Bombay, is expected to go into production by the middle of next year. Although the plant's capacity cannot be estimated precisely in view of a variety of machine tools to be manufactured, the production, in terms of values, is expected to be about Rs. 60-70 lakhs in the first stage. Voltas Ltd., which has been the sole distributor in India for *Scottish* machine tools since May 1959, will function in the same capacity for the new Company.

The authorised capital of the Company is Rs. 1 crore, all in equity shares of Rs. 100 each. Out of this, it will issue a capital of Rs. 64 lakhs, of which 40 per cent (Rs. 25.60 lakhs) will be subscribed for by the Glasgow firm for financing the import of plant and machinery, 30 per cent (Rs. 19.20 lakhs) will be subscribed by Voltas Ltd. and its associates, and the balance of 30 per cent will be offered for public subscription sometime later this year.

Scottish Machine Tool Corporation Ltd. is a combine of five Scottish firms of high standing which amalgamated in 1937. The five firms have between them specialised over many years in various types of machine tools as well a heavy duty machinery for shipyards and structural shops. The combine has been annually exporting 40 per cent of its output and found India as one of its principal customers. It concluded in 1958 an agreement with Cooper Engineering Ltd. for manufacturing *Loudon* planers under licence. Certain types of machine tools to be manufactured by the new company are already being made in India. But they are mechanically operated tools, whereas those to be made by the Company will be hydraulically operated.

The Rs. 5-crore project of the Rajasthan Vinyl and Chemical Industries, an associate company of the D.C.M. Group, situated at Kota in Rajasthan was declared open on Sunday last by Mr. Humayun Kabir, Union Minister for Petroleum and Chemicals. The plant, set up in collaboration with two Japanese firms, will have a daily production capacity of 50 tons of caustic soda, 40 tons of calcium carbide and 20 tons of P.V.C. and series of P.V.C. compounds.

THE FERTILIZER CORPORATION OF INDIA LIMITED

(TROMBAY DIVISION)

ADMINISTRATIVE BUILDING, CHEMBUR, BOMBAY-74 (AS)

SPO/Sales/64

Synthetic Methanol of minimum 99.85 per cent purity will be produced in India for the first time at the Trombay Division of the Fertilizer Corporation of India Limited in the year 1965. The sale price of Methanol ex-factory at Trombay would be comparable to the landed price of imported Methanol of the same standard. The overall demand of Methanol in the country is expected to be much more than the facilities now set up. The Fertilizer Corporation of India Limited's Trombay Division is now prepared to enter into firm contracts with prospective customers for sale of Methanol beginning from September 1965. **The prospective customers are requested to register their firm demands for the last four months of 1965 and for the calendar year 1966 with the Senior Purchase Officer at the above address.** Request for registration should state the firm demands and express willingness of the party concerned to enter into firm commitment within a period of two months. Subject to the overall needs of the country, request for export of limited quantities of Methanol in 1965-66 from recognized exporters also will be considered.

SOMEONE, SOMEWHERE WANTS POWER GENERATED AND DISTRIBUTED

And AEI goes into action

Power is the prime mover. In today's society, the generation and distribution of power is essential for industry and the home. AEI leads in the field of power generation—steam, gas, hydro and nuclear. AEI generators are at work in projects all over India. Some have produced power for more than 25 years; others, like the giant sets at Bhakra, are relatively new. And AEI equipment—transformers to step power up and down, switchgear to make and break the current, protective equipment to safeguard plant—make sure that the right voltage is available in the right place. Wherever in use, AEI equipment for power generation and distribution has won a reputation for top quality, high performance and long life.

Punjab's first, Punjab's latest...

Punjab's first major power project lies high in the Himalayan foothills at Jogindernagar. The Shanan Power House was commissioned in 1932 and was a pioneering feat (among other things, a 14,000 foot tunnel was bored through the base of a mountain to get water to the power house!). Four AEI generators at Shanan produce 48,000 kW of power; they have been generating for more than thirty years and engineers reckon they are good for more than another ten. Original life expectancy: 25 years. AEI also features prominently in India's premier irrigation and power project at Bhakra. Here, a straight

gravity dam (the world's tallest) has tamed the river Sutlej. India's largest generators—AEI made—are located in the Left Bank Power House. Each has a capacity of 90,000 kW. They produce power for cities, industries and far-flung villages in the Punjab, Rajasthan and Delhi.

The first Dossa to be cooked by electricity in Madras owes a lot to AEI

In Madras State, AEI generating equipment is being used by most of the power stations on the state grid. The Basin Bridge Power Station—the first thermal unit in Madras—has AEI turbo-alternators of a total capacity of 27,500 kW. More than 25 years old, they are still giving yeoman service. At Singara Power House high in the Nilgiris, seven AEI generators produce 70,000 kW of power. This was the first hydro-electric station in Madras and most of the ancillary

equipment—high and low tension switch gear and transformers—was supplied by AEI. At Mettur, on the Cauvery river, four AEI generators, switchgear and transformers produce and control a power potential of 40,000 kW.

Power travels long distances

Over mountain tops and through the deepest valleys, over hundreds of miles of all types of terrain. Power can be transmitted more cheaply at higher voltages. AEI transformers at the power station push up the voltages while those at the sub-station step it down for use in factories and homes.

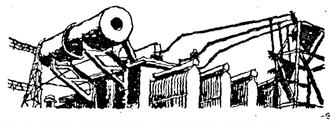
The range of AEI equipment for this purpose includes transformers, rotary converters, motor generators, circuit breakers, rectifiers, switchgear, relay and control boards and ancillary equipment. AEI equipment for the distribution and control of electric power is at work in receiving stations and sub-stations all over the country.

40 years is a responsible age

AEI's activities in India date back about forty years and include contributions to the steel works at Durgapur, the 720 mile oil pipeline in Assam and the heavy electrical project at Bhopal. AEI has been manufacturing electrical equipment in India for over twenty years and a wide range of products is now serving the needs of industry and the home.

We don't usually indulge in name-dropping, but...

In our case it's justified. AEI is no newcomer. Its origins go back *more than sixty years.* Today, Associated Electrical Industries Limited embraces such famous names as British Thomson-Houston, Metropolitan Vickers, Siemens Edison Swan, Henley's, Ferguson Pailin, Birlec and Hotpoint.



WORLDWIDE, AEI OPERATES 60 FACTORIES AND EMPLOYS 100,000 PEOPLE. IT PRODUCES EVERYTHING ELECTRICAL FROM LILLIPUTIAN TRANSISTORS TO THE WORLD'S BIGGEST TURBINE GENERATORS.

Principal Products

Steam and gas turbines and generators • Hydro-electric generators • Marine propulsion equipment • Electric drives for rolling mills and mine winders • Electric furnaces • Traction and railway signalling equipment • Transformers and switchgear • *Power and telephone* cables • Motors and their control gear • Electronic apparatus and radar equipment • Particle accelerators, electron microscopes and mass spectrometers • Industrial controls, instruments and meters • Semiconductor devices and power rectifiers • Private and public telephone exchanges and other telecommunication equipment • Lamps and lighting fittings • Heating equipment • Electro-medical apparatus • Nuclear power station equipment • Domestic appliances.

HOW TO ERADICATE CORRUPTION

IN pursuance of a recommendation made by the Committee on Prevention of Corruption (Chairman: Mr. K. Santhanam, M.P.) in its interim report, the Union Government, it will be recalled, decided in December last to set up a Central Vigilance Commission with the aim of preventing corruption among public servants. The State Governments, it was then stated, were also expected to follow suit by constituting similar vigilance commissions for dealing with their employees. That independent commissions of the kind might tackle the problem of corruption at the administrative level more effectively than departmental vigilance divisions and units seemed to be the Government's expectation. That the proposed vigilance set-up, by itself, would not produce the desired results in the absence of simultaneous steps to deal with corrupt politicians and bribe-givers was, however, clear to non-official observers then. These observers may now be gratified to find that, in its final report tabled in the Lok Sabha last week, the Santhanam Committee has proposed remedies for the disease of corruption at every level. Their gratification may be all the greater because many of the remedies suggested by the Committee are realistic, though somewhat drastic.

There is no doubt that the Committee has provided a fairly accurate diagnosis of the disease of corruption in all branches of economic, social and political activity. The basic causes of corruption, according to the Committee, can be traced to the loss of business integrity following war-time controls and scarcities, the post-war craze for money, the inflationary spiral in the wake of planned modernisation and the multiplicity of administrative processes entrusted to an unequal corps of public servants and a fall in their standards of integrity. It is not known whether the Committee has examined the effects of punitive rates of taxation on the integrity of both taxpayers and tax collectors. But it is a well-known fact that excessive taxation has gravely undermined public morality. The Committee hits the nail on the head when it says that the cumbersome controls, procedures and practices have encouraged dishonest operations, such as the system of "speed money." The scope for corruption, it continues, is greater and the incentives to corrupt stronger at those points where substantive decisions are taken in matters like assessment and collection of taxes, determination of eligibility for licensing, grant of licences and permits, ensuring utilisation of licences, giving of contracts, approval of works and acceptance of supplies. In matters of control, licensing and permits, the discretionary powers exercised by Government servants leave scope for harassment, malpractices and corruption. In other words, the "licence-quota-permit *raj*," as Rajaji would describe it, has been responsible for the growth of corruption. But, then, what is the remedy for a situation in which economic planning *necessarily* involves controls, licences, quotas and permits? To do away with planning altogether would be to throw out the baby with the bath water and that would be a remedy worse than the disease. As a developing economy requires some kind of planning or direction, the most that can be done is to minimise the need for personal discretion on the part of administrators and ministers in matters involving control and regulation.

The Santhanam Committee has, therefore, done well to recommend that the Government should devise a system of administration of controls and regulations in which the need for personal discretion would be reduced to the minimum even at the risk of losing perfection. This should not be too difficult, for other countries, according to the Committee, have devised suitable methods of control over the exercise of discretion. These could be studied and an appropriate system evolved in relation to the basic principles in India's constitution and jurisprudence. At the same time, possible association of recognised trade organisations in licensing and allocations may have the effect of discouraging such malpractices and corruption as would otherwise flow from the evaluation and discretion of individual officers and ministers. Here, again, the Committee has done well to recommend that ways and means of enlisting the co-operation of trade associations in the matter of granting licences and allocating scarce goods should be explored. The Committee's further suggestions, in this connection, are that membership of a recognised trade organisation should be a necessary condition of eligibility for obtaining a licence or a permit and that the association concerned should screen the capacity of the applicants and their past performance and make recommendations to the licensing authority accordingly. These are, indeed, practical suggestions. But they will be worthwhile only if (1) detailed controls are reduced to the barest minimum, and (2) the trade associations concerned play fair, eschewing such corrupt practices as favouritism and nepotism.

There is a widespread impression that some sections of the business community act in collusion with ministers or legislators and wrest illegitimate advantages from the administration. If this impression gains further ground, it will undermine popular faith in the efficacy and fairness of democratic institutions. What is more, the honest public servant, the honest minister, the honest legislator, the honest businessman, the honest trader and the honest citizen in every walk of life would all feel frustrated and become increasingly cynical if the devious ways of dishonest men are not countered at every turn. Unless the honest men, who are invariably penalised, know that the Government is absolutely *determined* to eliminate corruption and that deterrent punishment would be meted out to the dishonest, they would not take the trouble of exposing the guilty and proving their guilt. At the same time, there would be need for protecting the innocent against wild or unsubstantiated allegations calculated to defame them. In view of these considerations, it would be eminently desirable to bring certain economic offences, involving corruption, within the purview of the Indian Penal Code. If the offender is to be punished for his guilt, the accuser must have the fullest opportunity to substantiate his allegation. If, on the other hand, an innocent man is unfairly accused of an offence, he must have the fullest opportunity to establish his innocence. The overhauling of the Indian Penal Code, suggested by the Santhanam Committee, should be done in such a way as to provide for fair and full trials in all cases involving trafficking in licences and permits, profiteering, black marketing and hoarding.

As far as specific corruption charges against Union or State Ministers are concerned, the Committee has laid down a procedure for investigating them promptly and thoroughly. The machinery to be constituted for the purpose would be an *ad hoc* committee of three (one of them with a high judicial status), selected by the President out of a national panel constituted by him on the advice of the Prime Minister. The Prime Minister or the Chief Minister, as the case may be, it is envisaged, should refer any formal allegation made by any ten legislators against a minister to the *ad hoc* committee as a matter of convention. If the committee advises that a regular case be registered against a minister or that a commission of inquiry be appointed, the minister concerned should resign and remain out of office till the completion of the proceedings. The Committee has further recommended that he should be dismissed and also rendered ineligible for holding a similar or any elective office, if found guilty of corruption. The suggested procedure for punishing a corrupt minister seems to be healthy and necessary, for there has been no uniformity in the erstwhile methods of inquiry adopted by the Prime Minister. Likewise, the Committee s suggestion that the ministers against whom allegations are made through the press or otherwise should, as a rule, institute legal proceedings for criminal defamation, is perfectly sound. The idea here is that, if the minister concerned were innocent, he would be duly cleared of the charges. That, incidentally, would restrain the tendency of a section of the press to air wild and irresponsible allegations. If, however, the minister concerned is unwilling to take legal action for defamation, it may have to be presumed, in the absence of irrefutable proof of his integrity, that he is not above suspicion. In that case, according to the Committee, the minister concerned would have to go out of office. This is, indeed, a salutary principle.

To deal effectively with offences involving corruption, after they have been committed would, of course, go some way towards minimising the future incidence of such offences. But it would be much better to *prevent* the commission of offences as much as possible. It is in this context that some of the recommendations of the Santhanam Committee would seem to be even more significant. The preventive methods proposed by the Committee cover administrative reform and adherence to code of conduct. Administrative reform here would involve the avoidance of cumbersome procedures in dealing with matters of public importance in economic ministries where the temptations to stray away from integrity are greater. The codes of conduct proposed for public servants and ministers would contain, among others, provisions regarding acquisition of property, acceptance of gifts and disclosure of assets and liabilities. The code of conduct proposed for legislators would have to be approved by Parliament or the State Legislatures concerned and treated as a matter of privilege. If a breach is established in their case, suitable action, including termination of membership, should follow. As for the conduct of political parties which can participate in increasingly expensive elections only by raising the required funds on a large scale, the remedy suggested by the Committee would involve a total ban on all donations to them by incorporated bodies. This is, indeed, a controversial recommendation. There is nothing new about it. Nevertheless, in view of the fact that the experience in the last two general elections has not been happy, the suggestion deserves to be carefully considered before being rejected. Equally important is the Committee's recommendation that political parties should maintain regular accounts of their receipts and expenditure and publish them after due auditing by outside professional auditors and that failure on their part to do so would be a disqualification for contesting elections. Only care must be taken to ensure that this condition does not place the independent candidates at a special advantage over organised political parties.

LABOUR POLICY

A vigorous defence of the Government of India's labour policy was made by Mr. D. Sanjivayya, Union Minister for Labour and Employment, in his inaugural address to the thirty-first annual session of the All-India Organisation of Industrial Employers held at New Delhi on the 2nd inst. Mr. Sanjivayya sought to answer point by point the criticisms made by Mr. D. C. Kothari in his presidential speech, reviewed in these columns last week. Labour policy, the Minister pointed out, had to aim at achieving not merely the limited purpose of better relations between management and workers but had also to conform to the broader national objective of securing social justice consistent with the needs of national development. None can take objection to this view and Mr. Kothari certainly did not contradict it when he said that labour policy had *also* to serve the limited purpose of promoting better relations between management and labour. In fact, acceptance of the need for labour policy to serve a wider national purpose was clearly implied in Mr. Kothari's statement. What he emphasised was that, in the pursuit of the national objective, the immediate and limited, but no less important, objective should not be lost sight of.

Mr. Sanjivayya did not share Mr. Kothari's despondency over the prevailing climate of industrial relations. He quoted statistics of the number of man-days lost in 1963 to prove that the situation was better than in 1962. Thus, according to him, the number of man-days lost in 1963 was less than half of that for 1962. This, in his opinion, was a measure of the extent to which voluntary agreements like the Code of Discipline and the willingness of all concerned by and large to abide by them have been successful, in spite of severe strains. This conclusion of Mr. Sanjivayya, though supported by the statistics of man-days lost, is not entirely correct. It is true that, judged by the fall in the number of man-days lost, there has been a perceptible improvement in industrial relations since the Emergency was declared in November 1962. But what Mr. Kothari pointed out and expressed concern about is the deterioration in the position after the first four months since the declaration of the Emergency and this has been conceded even by Mr. G. L. Nanda, Mr. Sanjivayya's distinguished predecessor. In fact, the entire session of the last Indian Labour Conference was devoted to an examination of this question. That the situation has not improved much is evident from the growing industrial unrest even in establishments engaged in defence production. The strike in such a vital undertaking in the public sector as the Heavy Electricals Ltd., Bhopal, and the shut-down of the plant that followed as a sequel to it, is a clear indication that things are not as happy as Mr. Sanjivayya makes them out to be. It is noteworthy that the shut-down was ordered by the management, because it apprehended danger to the plant at the hands of the Communist-controlled Heavy Electrical Servants Trade Union. And this is not an isolated instance. There have been strikes and threats of strikes in other undertakings in both the public and private sectors which only goes to confirm the fact that respect for the Industrial Truce Resolution has decidedly waned now. It is this disturbing trend to which Mr. Kothari rightly drew attention and Mr. Sanjivayya would be taking a grave risk, if he were to be complacent about it.

Commenting on the attitude of employers towards arbitration, Mr. Sanjivayya said that they should try to overcome their mental hesitations and take a risk, as they do in their business, by resorting to arbitration. What the Minister seems to have forgotten is that the mental hesitations of employers are not just subjective fears but certain genuine apprehensions born of an objective assessment of the conditions prevailing in the country with reference to their suitability for the adoption of voluntary arbitration. It would indeed be foolhardy to switch on to voluntary arbitration without making sure that the conditions for its successful working are fulfilled at least to some extent. There is a lot that the Government itself can do to encourage voluntary arbitration, as distinct from compulsory adjudication.

On the question of wages, Mr. Kothari had made the significant point that, if wages were not related to productivity, economic growth would ultimately be adversely affected. His observations in this regard are worth recalling:

> "If the wage rate exceeds the reasonable limit and is not related to productivity, it will inflate prices, restrict the savings capacity of the corporate sector, slow down production and induce unemployment or at least limit the generation of employment opportunities. Therefore our approach to the wage problem has to fall in with the requirements of economic growth which has to be based on long-term considerations, however disheartening this may appear, rather than be influenced by fanciful concepts."

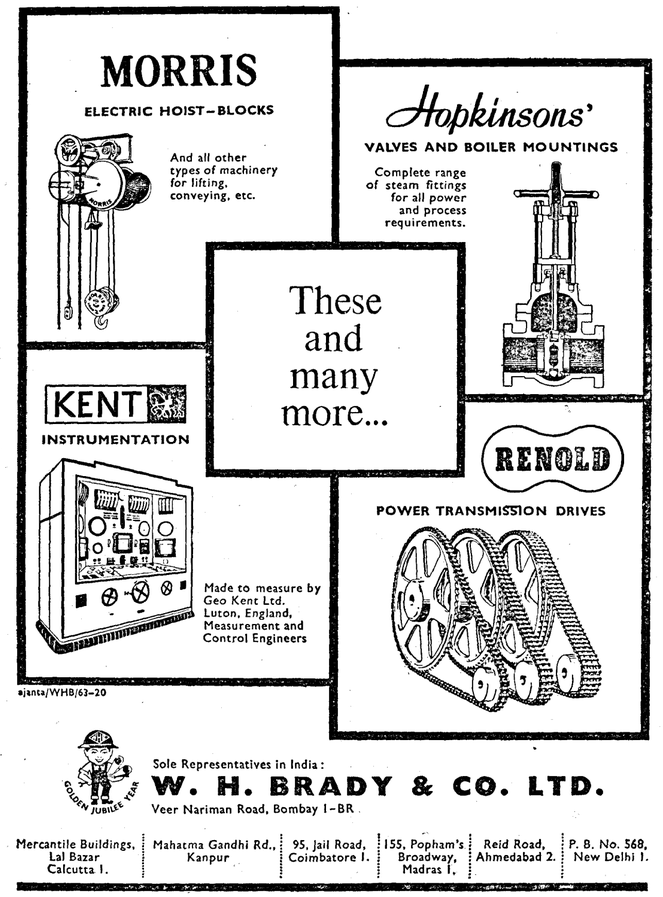
This is a sound economic principle which it would be dangerous to ignore. Mr. Sanjivayya seems to think that the wage policy followed in this country embodies this principle but he may not find many who share his view. His contention that the question whether high wages have led to high prices is arguable does not answer the more pertinent question whether or not labour has had a fair share in the functional distribution of the national income.

AN IDEAL RURAL CO-OP. STORE

Down South, in the district of Tanjore, a rural co-operative consumer store, which was organised nineteen years ago, has been functioning so well that it bids fair to be an equal of the Triplicane Urban Co-operative Stores functioning in Madras City and its suburbs. Known as the Chandrasekarapuram Co-operative Stores Ltd., this venture in consumer co-operation handles a variety of essential commodities like groceries, handloom and mill cloth, kerosene, chemical fertilisers, bicycles, cement, iron and steel. Its membership has increased to 3,600 now from a mere 101 in 1945 and its turnover to about Rs. 60 lakhs from just Rs. 15,000 in its first year. This is, indeed, remarkable progress for a co-operative store which is mainly rural, having six branches in villages and only one in the town of Kumbakonam. But that is not all, for the store, with its share capital of about Rs. 75,000, has been increasingly prosperous in terms of its profit-making capacity, dividend distribution and reserve creation. For instance, its gross profit and net profit were Rs. 3,07,459 and Rs. 82,837 respectively, in 1962-63, as compared with Rs. 907 and Rs. 691 respectively, in 1944-45. It had accumulated in its reserve and other funds as much as Rs. 2,85,106 by 1962-63. And it had also declared dividends at the rate of four per cent every year from 1944-45 to 1949-50 and at 6¼ per cent per annum consistently thereafter.

A healthy feature of the activities of this store is that it is not wedded to the profit-making goal to the exclusion of all other considerations. In fact, it has been pursuing a uniform price policy in consonance with the principle of chain stores and seeking to hold the prices of essential commodities at a reasonable level by buying in bulk and at the most favourable time. If still its profits are steadily going up, it is because of the progressively larger turnover. With a dedicated board of management which lays down the broad policies and a competent and contented staff of 130 employees, the store, it is no wonder, is growing from strength to strength. If co-operative societies of this kind spring up and function at a high level of integrity in the rural areas, there will be no difficulty in entrusting the distribution of scarce but essential commodities to them. But that is a long way off and currently the retail trader, with his fair and unfair practices, reigns supreme over the length and breadth of the country.

The Planning Commission's working group on power price policy, which submitted its report recently, has recommended that power rates should be fixed on an *ad valorem* basis, according to which the rates of power payable by industries will have to be higher. It has also suggested, among other things, a ceiling for the electricity duties levied in States, and a duty which should not exceed two per cent of the total capital employed by an electricity board. The Government is not, however, likely to take any decision till the end of the current year, by which time the report of the Committee of Ministers, appointed at the State Ministers' conference in January this year, will have submitted its report.



AMERICAN LETTER

BACKGROUND TO INDUSTRIALISTS' VISIT NEXT WEEK

ADMINISTRATION KEEN ON PROMOTING PRIVATE INVESTMENTS

By N. Pattabhi Raman

NEW YORK, 4th April

NEXT week, that is, the one beginning from 12th April, a delegation of American industrialists will be in New Delhi to explore at first hand the opportunities for, and the problems and procedures of, making profitable investments in India. The fact that such a power-packed delegation is making a visit is, in part, a reflection of the keen interest of the U.S. Government in enlarging the participation of American private enterprise in India's industrial development.

It was President Eisenhower's State visit to India five years ago that first helped to focus serious attention on India as a serious site for U.S. business investments, even though two oil companies had come in quickly after our independence. Impressed by the potential of India's economy and the earnestness of its leaders and people, the General declared in New Delhi on 13th December 1959: "One thing I assure you. From now on I shall be quick to speak out on every possible occasion that India is becoming one of the great investment opportunities of our time—an investment in the strengthening of freedom, in the prosperity of the world."

This was followed early in 1960 by a 2½-day conference on "Investing and Operating in India"; it was sponsored by the American Management Association and very well attended. Those were the days when Mr. G. D. Birla was trying desperately to get some action from the Export-Import Bank of the U.S. on his proposal to set up an integrated aluminium factory at Rihand, U.P., in collaboration with the Kaiser Aluminium and Chemical Corporation of California. He was apparently nettled by the red-tape involved. So, when he heard several Americans at the A.M.A. conference complain about New Delhi's frustrating red-tapism, he quipped: "If our Government moves like an ox cart, your Government moves like a drowsy camel!"

Private Enterprise Division

The ascension of John Fitzgerald Kennedy to the presidential *gadi* in January 1961 raised the U.S. Government's interest in India's economic development by several degrees. Mr. Kennedy had a better appreciation of India's strategic importance to the freedom of Asia than the foreign policy advisers of the predecessor Government. Moreover, he was keenly interested in promoting the flow of U.S. business capital and know-how into the less-developed countries. During his short regime, tax measures to divert the flow of American private long-term capital from the mature to the less-developed economies were devised. Too, the activities of the Private Enterprise Division of the U.S. Agency for International Development (A.I.D.) were stepped up in their scope and vigour.

Within the last three years, the Private Enterprise Division has successfully developed an Investment Survey Programme under which the A.I.D. agrees to finance upto half the cost of investment surveys or feasibility studies undertaken by prospective investors. If the study results in an actual investment project, the investor pays its full cost. In 1963, A.I.D. participated in the financing of 60 surveys by companies wishing to explore new investment opportunities in less-developed countries—a significant rise from the five surveys authorised in 1962. The Private Enterprise Division has also established recently a Businessmen's Information Centre within A.I.D. to publicise investment opportunities abroad and to provide information on assistance available to private investors from A.I.D. Most important of all, it has expanded its programme of specific risk guarantees covering convertibility, expropriation or war risk. From the inception of the programme through December 1963, 778 guarantee contracts valued at $1,400 million had been written for specific political risks.

Under President Lyndon Johnson, the Administration is pursuing with equal determination the policy of promoting U.S. private investments in the less-developed lands. In fact, President Johnson appears to be placing greater reliance on this policy, as he indicated in his foreign aid message a few weeks ago. Picking up a Kennedy proposal, he has asked Congress to approve what is called the Less-Developed Country Investment Act. The proposed Act would allow a U.S. investor to receive a tax credit against his total tax liability equal to 30 per cent of his investment in the developing countries. It would also permit a credit on reinvested earnings in excess of 50 per cent of the total earnings if they remain at work in the developing countries concerned. The President has also asked for additional funds for the Investment Survey Programme and the Risk Guarantee Programme. He has, moreover, proposed an Executive Service Corps to mobilise the technical and managerial skills of American business for assisting economic development overseas. The suggested Executive Service Corps would operate outside the Government, as a private programme, working with local groups in the less-developed countries, but it would be assisted by A.I.D. as appropriate.

Against this background, it was no surprise that the visit of the high level delegation of U.S. businessmen to India received full blessings from the White House. The visit was vigorously sponsored by Ambassador Chester Bowles; and, in Washington, Under-Secretary of State Franklin Delano Roosevelt, Jr., spent hours on the telephone persuading executives of leading business corporations as to why they ought to take a closer look at India *now*. Between Bowles and Roosevelt, the "drowsy camel" apparently got the heave-ho, for, in spite of private bets against the possibility of the trip coming off now, they managed, in a short time, to get the busy, higher echelon executives of some 28 corporations to land in New Delhi in hot, dusty April for serious talks. This was public enterprise at its private best.

B.C.I.U. Inc.

The Business Council for International Understanding, Inc., the organisation through which invitations were formally issued to the visiting executives to come-see what India has to offer, has for several years now been seeking to secure a larger role for private enterprise in America's foreign aid programme. It is quite appropriate, therefore, that the present delegation should carry its banner. For a factor that has put the U.S. Government behind the delegation's visit—and generally the efforts to enlarge the flow of private capital to the developing countries—is the serious trouble facing foreign aid in the United States Congress. (Conversely, this factor has been responsible also for the recent efforts of the Indian Government to improve the climate for foreign investment.) Also, the U.S. Government realises the contribution that the private sector can make in the transfer of advanced technical knowledge and managerial know-how to the new nations. Moreover, American participation in the industrial development of the poorer lands will, it is expected, assist U.S. industry in competing successfully in their present and potential markets. Thus, Senator Hubert Humphrey, the majority whip in the upper chamber, strongly endorsed the proposed tax credit for investment in the under-developed countries by saying: "We need a tax credit for investment in less-developed countries if we are to compete successfully in world markets with other countries, as well as promote new investment which can augment U.S. Government funds in helping developing countries to become self-supporting." He prefaced his remark by noting that some European countries—particularly West Germany—already allow tax credit on investments in the less-developed areas of the world.

Reactions To T.T.K.'s Budget

The delegation's visit has been adroitly timed to focus attention on the recent efforts of the Indian Government to stimulate the rate of growth of the economy and widen the scope for foreign business participation. This should help. For, even though several new joint venture agreements have been concluded by U.S. and Indian companies over the past two years, the Chinese attack and the subsequent budget with its Super Profits Tax did cause misgivings in the minds of many prospective investors. Finance Minister T. T. Krishnamachari's statements intended to reassure the private sector on its role, his definition of socialism, his efforts to streamline investment procedures and his recent budget proposals designed to enhance the attractiveness of India as a site for foreign investments have, taken together, caused some excitement and aroused the interest of many who had receded to the sidelines. As some bankers tell me, several companies which had put off consideration of investment in India are again making a close probe of the situation. Indeed, many companies have sent off their executives to India for making on-the-spot appraisals. In these circumstances, the visit of the high level delegation should help to dramatise the renewal of serious interest. It might conceivably also lead to new large investments and reinvestments in industries of critical importance to India. The only industry that seems unlikely to benefit from the delegation's visit is the tourist industry, for, even though the distinguished visitors will likely spend valuable dollars in the country and bolster the Asoka Hotel's business, there is none among them that is interested in building new hotels in India.

Investment Centre

It is appropriate too that the delegation's host in India is the Indian Investment Centre. The activities of the Centre's New York office, under the inspired direction of Mr. M. Gopala Menon (who was formerly a very popular Consul General here), have indeed helped to minimise the many misunderstandings of Indian policies and to create a better awareness of the opportunities for profitable American investment offered by India. Through a "key city" programme, and through other effective techniques of disseminating information, Mr. Menon and his associates have reached potential investors in Cleveland, Pittsburgh, Boston, Chicago, San Francisco, Los Angeles, Seattle and other centres which have industries needed by India. In New York, the Centre worked closely with the American Management Association in organising a 2½-day seminar on "Investing and Operating in India" last year; a repeat performance is scheduled for this June.

The Centre has achieved modest results so far, but, ultimately, it can succeed only to the extent the policies of the Indian Government and the developments in the Indian economy permit. The visit of the B.C.I.U. delegation should, therefore, help in assessing the effectiveness of the Government's strengthened measures to attract foreign capital. The echoes of the Delhi dialogue will be heard for a long time to come.

BIGGER SHIPS CARRY MORE OIL THROUGH SUEZ

The main flow of oil shipments through the Suez Canal, from south to north, continues to swell steadily. In 1963, a total of 133 million tons went through, an increase of 6.7 per cent over 1962; it included nearly 120 million tons of crude oil, now forming 90 per cent, as compared with 89 per cent, of oil shipments in this direction. More than half total shipments came from Kuwait, which sent over 60 million tons; the next largest source was Iran, with more than 31 million tons, nearly 15 per cent more than in 1962. The U.K. remained the leading destination, but took less than the 31 million tons taken in 1961 and 1962, while more went to Italy, 24 million tons; France, 16.5 million; and Belgium, 7.9 million (more than double the 1961 and 1962 shipments mainly as a result of a sharp increase in the share of Iran and Kuwait in Belgium's crude oil imports).

Southbound shipments fell again, by nearly 10 per cent, owing to the further diminution in shipments of Russian oil to Egypt. The U.S.S.R., however, continued to furnish about 80 per cent of total shipments from north to south. Japan remained by far and away the most important recipient, taking over half of the total southbound shipments, almost exactly the same quantity as in 1962. Also, India, China and Ceylon all took more than in the previous year.

The average size of tankers continues to rise; while the total number transiting rose by 2.6 per cent to 9,676 last year, their net tonnage rose by 7 per cent to 152,366,000 tons. Since the end of February 1964, vessels with a maximum draught of 38 ft. may go through from south to north. Although other dimensions may affect transit possibilities, this means that, in general, tankers up to 55,000 dwt. should be able to go through fully loaded. The limit for ships going southwards is 37 ft.

Transit toll receipts for the first six months of 1963, according to the National Bank of Egypt, were equivalent to $81.2 million, some 8 per cent above those for January-June 1962. Nearly two-thirds were paid in sterling and a little under one-quarter in U.S. dollars; the currencies next in importance were Italian lire and Deutschemarks.

GENEVA—PLATFORM FOR LIQUIDITY REFORMERS

By Questor

FROM the point of view of the underdeveloped countries, the U.N. conference on trade and development in Geneva is an opportunity to form a common front and demand from industrialised countries the assistance they need if the gap in living standards is ever to be narrowed. The industrialised countries, however, too concerned with their own differences to regard themselves as a single group, may well be tempted to assume that a conference of 1,500 delegates dealing with themes which are no longer fresh is bound to be unfruitful.

There is a risk that their proposals will be designed to serve their individual propaganda purposes rather than to solve the real problems at issue. The conference may seem, when it breaks up, only to have hardened the division between the rich north of the world and the poor south.

Western Governments will inevitably have different national reactions to the various proposals which will be put forward by underdeveloped countries and which have already been summarised by the secretary-general of the conference, Dr. Prebisch. Those which produce a surplus of raw materials and foodstuffs will be strongly in favour of international schemes to force up their prices. They will also probably be in favour of the suggestion that primary producers should be compensated internationally for a worsening of their terms of trade—claiming, however, that those who import their products and benefit from lower prices should provide most of the compensation.

Western Governments will be much less inclined to support the more far-reaching proposal that rich countries should cease protecting their producers against the simpler manufactures and semi-manufactures which are the first stage in industrialisation and the poor countries' only chance of increasing their export incomes significantly. When it comes to talk of increased aid, however, all will be at one: the amount they can afford to supply untied, they will argue, is a function not of their relative wealth but of their balance-of-payments position.

Looked at from the point of view of the underdeveloped countries, who naturally tend to regard the rich as a single group, this argument is no more than a feeble excuse for selfishness. The plain fact, from their point of view, is that the rich can well afford to provide more to help them. Some of this help may have to be provided at the expense of consumption, but some can come from institutional changes which would enable the economic machine to work continuously at full capacity. The balance-of-payments argument, they contend, is a demonstration that the West is not willing to make even the minor sacrifice to feed the hungry involved in an improvement of the present financial system.

There is, I think, some force in this contention. Some Western Governments, though ready in principle to devote a larger share of their national product to some form of aid, feel that the risk of upsetting the foreign balance prevents them from doing so. Others, with a strong payments position, feel that they should not spend more on aid than their neighbours. The result is that the total provided is smaller than it need be and that a large part of this is wastefully tied to national exports rather than made available through international institutions skilled in getting 100 cents of value out of every dollar.

The alternative, obvious to all but those trained to think only in terms of short-range national advantage, is to increase greatly the resources at the disposal of international lending bodies—and primarily, since the World Bank's lending conditions are becoming too stiff for most borrowers to meet, those at the disposal of the International Development Association. But there seems to be little hope at the moment of achieving a rapid increase in I.D.A.'s funds—the U.S. Congress, for example, is grumbling about the small increase negotiated last year—by means of voluntary contributions. If anything ambitious is to be done, it will have to be by means of a change in habits and institutions.

A good many plans have been suggested from time to time for improving the liquidity of the international system. Any of these, to the extent that they enabled industrialised countries to operate closer to full capacity without fear of running into payments trouble, could encourage the flow of aid. But one plan in particular, that proposed by Mr. Maxwell Stamp, would do this directly: the International Monetary Fund, he has suggested, should be allowed to print international money and hand it over to I.D.A. for long-term lending to those who seemed able to make best use of it.

It is obvious that some sort of limit would have to be imposed on the credit-creating discretion of the Fund. It is obvious, too, that countries whose productive resources were already fully occupied would have to be allowed freedom to refuse Fund certificates—though few countries would probably be anxious in practice to fight inflation by rejecting export orders. But the sacrifice of sovereignty which each country would have to make, given these limitations, would be extremely small. The poorer countries, who count for little at the meetings of the Fund itself, have a chance at Geneva to ask why it is not being made.

LESSONS FROM A COUP

There is usually an economic explanation to be found for a *coup d'etat*, and the Brazilian revolt is no exception. The immediate cause of the uprising against President Goulart appears to have been his stated intention to press through, despite the reluctance of Congress, a programme which included not only the widening of the franchise and the legislation of banned left-wing parties but land redistribution and the nationalisation of land whose value was enhanced by the construction of roads and railways. In the background, however, lay the difficulty of pulling up the country into industrialisation by its own bootstraps without exacting greater sacrifices from the wealthier members of the community than they were ready to make.

The striking feature of the Brazilian economy to the outsider is the persistence of rapid inflation. This has always been a problem, but, in the three years since President Goulart took office, it has been particularly acute: the cost of living rose by 42 per cent in 1961, 55 per cent in 1962, and 81 per cent in 1963—so far this year it looks like rising by 100 per cent.

This inflation is a direct result of heavy deficit financing aimed at pushing through industrialisation, made heavier even than it need be by the prevalence of tax evasion. The Brazilians themselves find this degree of inflation more tolerable than the outsider would at first suppose and have evolved a means of living with it—though the wealthy, who prefer to invest in property than to wait for the relatively slow fruits of investment in industry, seem to find it easier to live with than do urban workers.

But the official justification for inflation is that it is an inevitable consequence of the rapid dash for industrialisation, faster growth, and economic independence. During the Kubitschek period, the argument gained some plausibility: even the enormous resources devoted to the creation of Brasilia seemed an arguably sensible investment in the country's will to work for the great future which always seems to be just round the corner.

During the last two years, however, despite the accelerated rise in prices, Brazil's national product has risen by only 3.7 per cent and 2.0 per cent—not enough even to keep up with the rise in population. Radical reformers (and President Goulart was under considerable pressure from the left as well as from the right) claimed that the policy of rapid industrialisation could succeed only with the help of social reforms designed to produce a mass market for industrial products.

Even if such reforms had been acceptable, however, I doubt whether Brazil could have managed to go it alone much longer. President Kubitschek left the country with a huge legacy of short-term foreign debt, the refinancing of which has become more difficult as Brazil's economic position has worsened. President Goulart, indeed, had made some progress—though not so much as he claimed—towards solving the problem of the $1,300 million of debt due in the remaining two years of his presidency, and his chance of success had been somewhat improved by the hardening of coffee and sugar prices. He had approached the Organisation for Economic Co-operation and Development rather than the U.S., Brazil's chief creditor, and means of spreading the burden are currently under discussion by the "Hague Club" of countries concerned.

But even if a means of refinancing can be agreed, repayment will inevitably place a considerable strain on Brazil's foreign balance in the years ahead. The real problem lies in the fact that foreign countries are no longer investing on any scale. The net inflow of foreign capital during the first half of last year amounted to no more than $5 million, and Brazil has not yet drawn up the plan of social change which would entitle it to sizable U.S. aid under the Alliance for Progress.

This new shyness to invest in Brazil is not due merely to loss of faith in the country's future or to the difficulty for a foreigner, of living profitably with inflation. It is also due to a Profit Remittance law, the regulations of which were published at the beginning of 1964. This new law lays it down that no more than 10 per cent of the foreign capital invested in a Brazilian firm may be repatriated in any year without the excess being deducted from registered investment. Reinvested profits, moreover, cease to be counted as foreign capital and become ineligible for remittance abroad.

These restrictive positions are the result of left-wing agitation (there has been simultaneous agitation against foreign ownership of firms in particular sectors of the economy) which President Goulart has found it easier to meet than the demands for land reform. It is understandable—the same thing happens in every developing country, particularly when development runs into trouble—but it is destroying Brazil's chance of living up to its national expectations. The relatively rapid growth of output during 1956-61 was largely a result of an unprecedented surge of foreign investment, which has now all but come to a stop.

I believe that the Hague Club might reasonably ask for changes in this law as a condition of the suggestions it will soon be making for refinancing Brazil's short-term foreign debts. It might also reasonably insist that the political consequences of such changes might be offset by the introduction, whatever the colour of the Government, of social reforms which would qualify Brazil for aid under the Alliance for Progress.

GUIDE TO RIVER THAMES

London, the capital of the United Kingdom and a world market for almost all commodities, owes its commercial look to that perennial river, "The Thames," which majestically flows through it. It is said that the Thames is the "Gateway to the Seven Seas" and that ships of every size and tonnage, with the exception of the *Queen* class, can be safely and speedily accommodated in its port. Over 57 million tons of merchandise in imports and exports are carried on the river Thames annually and between 900 and 1,000 ships enter or leave the Port of London every week. To acquaint one with the busy life of the river port, a *Commercial Guide to the River Thames* has been brought out recently. (Publishers: Pyramid Press Ltd., 41, Streatham Hill, London, S.W. 2, Pages: 232. Price not mentioned.) The directory has been compiled with the co-operation of the Port of London Authority.

The purpose of this publication is to give guidance to all those who use the river for commerce and recreation and to give tidal information on the reaches between the Nore and Teddington. The book has been divided into four parts. The first part traces vividly the history of the river. The second contains articles on the organisation, local authorities such as the Baltic Mercantile and Shipping Exchange, Customs and Excise Department, Lloyd's of London, Lloyd's Register of Shipping, National Dock Labour Board, Port of London Authority, the London Provision Exchange, etc. The details and plans of the docks of the Port of London and an itinerary of the river Thames from the Nore to Teddington form the third part of the directory. The itinerary, in turn, gives details of riverside features, principal buildings on the waterfront, factories, jetties, docks, wharfs and other installations with their ownership. The last section is a useful commercial directory which provides, in alphabetical order, addresses of commercial houses and associations.

GERMAN BANKING AND ECONOMY

ABUNDANT LIQUIDITY—ABSENCE OF CONTROL

THE *miracle years* and the unprecedented growth of German economy and, as a consequence of German banking are things of the past: now they face harder times and testing circumstances. The difficult business conditions have ended the era of easy and automatic growth and has led to stiffer competition both in the country and in the various branches of banking operations. The provisional annual figures of National Accounts for 1963 promptly published by the Federal Statistical Office and competently supplemented by the calculations of the Bundesbank* show that economic growth continued in the Federal German Republic during 1963 at a somewhat slower rate. The real gross national product rose by 3.2 per cent during the year, as against 4.2 and 5.4 per cent in 1962 and 1961, respectively. The slowing down of growth rate took place largely in the first half of 1963, primarily due to weather-induced shortfalls in output, but also due to cyclical factors which led to hesitations in many sectors of the economy. The rate of growth, however, quickened during the second half of 1963 and the rise in productivity was somewhat faster, probably due, above all, to fuller employment of capacities in those industries which showed unutilised capacities in the previous half-year.

Reckoned at current prices, the gross national product amounted to DM377 billion in 1963, as against DM355 billion in 1962 which corresponds to a rise of 6.2 per cent in 1963 as against 8.8 per cent in 1962.

Simultaneously with the general slowing down of economic growth, the rise in prices also slowed down during 1963. The 'price index' for the national product, which reflects the total increase in the price of domestic productive activity rose in the year under review by 2.9 per cent, as compared with 4.4 and 4.3 per cent in 1962 and 1961, respectively. The slower rate of increase in prices was the result not only of a smaller rise in costs, but also of the fall in demand. Wage cost per unit of national product increased less than before, the rise in productivity outpacing the rise in wages and salaries. On the demand side, investments in fixed assets showed the smallest increase: the rise in equipment investments was slower than that in building investments. Private consumption exceeded the previous year's amount by 5.4 per cent, as against 9.1 per cent growth in 1962. The total wealth formation in 1963 was higher at DM62 billion, as against DM59 billion in 1962, but the 4 per cent growth in the rate of wealth formation was smaller than that of gross national product at current prices.

The outlook has, however, been changing and the upward tendencies are again predominating- the scene somewhat more than they did in the period up till autumn of 1963. The revival has proceeded from the increase in domestic enterprises' investment and a rise in foreign demand, which quickened in the last months of 1963, particularly as a result of smaller degree of inflation in Germany than in the neighbouring countries. The economic situation at the beginning of 1964 thus presents some parallels with that in 1959, when the previous cyclical upswing had begun, though, in some sectors, the upward tendencies may be less marked. This revival has resulted in a rapid—though by no means strong as yet—reaction in the price trend; prices which were largely stable uptill the middle of last year have again been generally upward since autumn.

The main factor in this revival is the persistent rise in foreign demand, though domestic economic activity has increased only partially. The sharp increase in foreign demand has brought to the fore the danger of again overstraining the available factors of production. The measures taken by the Bundesbank in March 1964 to stem the inflow of foreign exchange and offset the rising German surplus will be outlined towards the end of this article.

The domestic credit expansion, which always exerts the strongest expansive influence upon the "volume of money," was once again greater in 1963 than in the preceding years. Excluding the special credits granted by the Bundesbank to the Federal Government for fulfilling its obligations towards I.M.F. and other international agencies (credits, which do not affect the internal money circulation, but merely lead to opposite foreign exchange movement at the Bundesbank), the credit expansion by reporting credit institutions to non-bank customers amounted to about DM26 billion in 1963, as compared with about DM23 billion each in 1962 and 1961. In this expansion, short-term lending was a relatively large element: but the expansion was not in the short-term credits to private enterprises. The quicker growth was mainly due to the fact that, towards the end of 1963, the Federal Government made greater use of cash advances from the Bundesbank. At DM1.1 billion, the Bundesbank's share in short-term credit expansion was almost twice as large as in the previous year.

As in the previous years, however, most of the credit expansion was in the banks' medium term and long lending to domestic non-bank non-Government customers. Such lending, namely bank credit to the private sector, increased by DM19 billion in 1963, as against DM18 billion in 1962 and DM16 billion in 1961.

The process of domestic credit expansion was however accompanied by a still higher and considerable increase in monetary capital formation at the banks from domestic sources. Inclusive of the shorter term time deposits, the capital formation amounted to DM21 billion, as compared with DM20 billion in 1962 and DM19 billion in 1961. An increasing share in the capital formation has been taken by the growth in the savings bank deposits and the transfer of bank-held Government bonds to non-bank private customers.

Since the increase in bank credit to the private sector during 1963 was more than offset by domestic monetary capital formation, banks' contribution to domestic "net money creation" was appreciably smaller than in the preceding years—being only DM2 billion as against DM4 billion in each of the previous two years. This slower rate was, of course, a reflection of the slower growth of the economy and the national income, but it also reflected the reappearance of balance of payments surplus. The expansive influences exerted by external payments situation on domestic money supply were considerably stronger in 1963 than in the two previous years and, as it now appears, have been considerably intensified since the beginning of this year.

With the balance of payment surpluses mounting and considerable expansion in money supply and bank resources, the tendencies to relaxation were already in evidence since the summer of last year. The money market was relatively liquid even in December 1963. The free liquidity reserves of banks have continued to increase in recent months. Among the various factors that caused the liquidity reserves of banks to rise during recent months, the foreign exchange accruals have been of particular importance. The central authorities' cash disbursements also put additional funds into the banking system during the fourth quarter of 1963, though they no longer did so in January 1964. Movements in notes and coins in circulation, however, produced contrary effects: they reduced bank liquidity in the last quarter of 1963 but increased it in January 1964. On the whole, therefore, the relaxing influence has predominated and eased the liquidity. As a result, banks' drawings on their liquidity reserves held in the form of "mobilisation paper" were relatively small, and their rediscount quotas at Bundesbank were little used.

Throughout the major portion of 1962 and 1963, German bankers enjoyed considerable freedom of action: they faced many problems no doubt, but none of them as a result of any intervention in their activities by the authorities. Throughout 1962 and till late in 1963, the discount rate, money market rates and minimum reserve ratios remained unaltered.

But things are changing now. Germany is considerably worried about the inflationary effects of the continuously rising external surplus and has recently taken measures to curb the influx of unwanted dollars and foreign exchange. The growing and continued strength of the Deutschmark since the revaluation has made it a problem currency of Europe, since its very "strength acts as a magnet on any temporarily weak currency," and leads to external surpluses. The recent measures taken by the Bundesbank, therefore, have a twofold aim—first, to increase the attraction of the German capital market for foreign borrowers and secondly to diminish the attractiveness of German bonds to foreign investors. As far as the short-term funds are concerned, the Bundesbank has banned the payment of interest on time deposits of foreign nationals and has increased the minimum reserve ratios to the highest permissible levels for bank deposits belonging to foreigners. Additional incentive has also been provided to the banks to invest abroad, by exempting them from the increased reserve requirements to the extent they invest abroad.

Before concluding, we may note two sources of uneasy discontentment for the German banking institutions, now fiercely competing with each other: the first is the demand of the public savings banks to be allowed to raise their deposit rates; this is opposed by the private commercial banks for fear of stiffer competition and by the Bundesbank for fear of upsetting the entire interest rates structure and aggravating external payments position by increasing the surpluses. The second is the demand by several banks and credit institutions, which are excluded from the Federal Loan Syndicate consisting of 81 banks under the leadership of the Bundesbank, for being allowed to participate in the lucrative business of negotiating and placing the Federal loans on the market. The member-banks of the Syndicate, however, have little desire of relinquishing their monopoly and Bundesbank is unlikely to favour the formation of a rival syndicate. Fierce competition, therefore, continues to govern the relationship between German credit institutions.

* The information and statistics are largely based on January and February 1964 issues of the *Monthly Report of the Deutsche Bundesbank*.

ANOTHER YEAR OF GROWTH FOR CENTRAL BANK

NUMBER OF SHAREHOLDERS NEAR 25,000

THE past year has been quite a profitable one for the Central Bank of India Ltd. (General Manager: F. C. Cooper, Bombay), the biggest among the joint-stock commercial banks in the private sector. Notwithstanding the sharp rise in expenses, the profit margin registered a perceptible improvement, thanks to the expansion in business and higher rates of interest on advances. The larger turnover was facilitated by an impressive growth in deposits. The disclosed profit at Rs. 180.26 lakhs for the year ended 31st December 1963 is better by Rs. 9.30 lakhs over that for 1962 and exceeds the previous record high attained in 1961 by a comfortable margin of about Rs. 7 lakhs. The largest slice of the profit—as much as Rs. 85 lakhs—has gone to the staff, Rs. 75 lakhs by way of bonus and Rs. 10 lakhs by way of transfer to gratuity fund. The shareholders' share remains unchanged, with the rate of dividend being maintained at 20 per cent per annum. A sum of Rs. 40 lakhs has been added to the Reserve Fund, bringing up the total reserves to Rs. 520.42 lakhs, a level which is Rs. 204.32 lakhs above the paid-up capital of Rs. 316.10 lakhs.

The Bank's growth in the past four years is depicted in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Interest and discount earned	12,47.72	11,34.57	10,16.45	840.27
Commission, exchange and brokerage	253.52	230.05	196.00	167.78
Other income	12.20	11.99	10.76	9.74
Interest paid	666.53	599.47	526.35	433.98
Staff expenses	518.55	459.04	403.17	365.89
Other expenses	121.12	127.62	103.45	78.64
Depreciation	18.48	10.43	7.49	6.24

Dividend	63.28 (20%)*	63.01 (20%)*	63.00 (20%)*	64.26 (D.18.4% +B.2%)*
Carry forward	0.91	0.93	23.37	18.61

	As at 31st December			
	1963	1962	1961	1960
Capital	316.10	315.37	315.00	315.00
Reserves	520.42	477.57	413.09	368.09
Deposits	250,78.91	236,06.09	220,19.47	199,52.09
Borrowings from other banks	847.02	886.14	615.34	15,76.50
Advances	187,71.68	175,44.62	160,99.54	150,78.22
Investments	66,17.29	65,86.21	58,79.94	56,60.06
Cash	24,89.35	20,38.26	23,91.09	22,69.68
Balance-sheet total	317,61.15	296,99.63	272,58.53	267,84.57
Ratio to deposits of—	%	%	%	%
Advances	74.8	74.3	73.1	75.5
Investment†	26.3	25.1	25.4	21.4
Cash	9.9	8.6	10.9	11.3

* Subject to deduction of tax. † Unencumbered portion only.

The first feature that attracts one's attention is the continuing growth in deposits, though the rate of expansion is somewhat lower than in the preceding two years. Thus, in 1961, they had gone up by approximately Rs. 21 crores and in 1962 by Rs. 16 crores, but in 1963 it was only about Rs. 14¼ crores. It is common knowledge that the pace of growth in deposits of scheduled banks as a whole in 1963 was, in terms of amount, substantially larger than in the previous year (Rs. 279 crores, as against Rs. 233 crores). The Bank has not shared this general trend. This is not surprising because of the acute competition for deposits not only from other banks but also from corporate bodies. Nevertheless, it is significant that the Bank's total deposits have exceeded the Rs. 250-crore mark. In another respect, too, the experience of the Central Bank has been at variance with the general trend. The increase in demand deposits of all scheduled banks was greater in 1963 than in 1962 and 1961. In the case of the Central, however, of the Rs. 14¼ crores (approximate) increase in total deposits, the bulk was in fixed and savings deposits, the share of current deposits being only about Rs. 1.50 crore, from Rs. 70.26 crores to Rs. 71.88 crores. Fixed deposits grew from Rs. 122.02 crores to Rs. 127.03 crores (that is + Rs. 5 crores) and savings from Rs. 43.78 crores to Rs. 51.88 crores (that is + Rs. 8 crores).

As at the end of the year under review, about 75 per cent of deposits remained advanced to trade, industry and others, their respective shares being 39.34 per cent, 42.23 per cent and 18.43 per cent, respectively. A little over 26 per cent was in investments in gilt-edged securities and a little less than 10 per cent in cash. On the whole, the ratio of liquid assets to deposits was higher than a year before. Readers can get an idea of the exact amount of these three principal portfolios of assets from the table. It will be noted that, as in the case of deposits, the rate of increase in advances in 1963 was a little slower than in 1962, though substantially greater than in 1961. In this respect, too, the Bank's experience differs from that of scheduled banks as a whole; bank credit in 1963 rose by a larger sum of Rs. 153 crores, as against Rs. 146 crores in the previous year.

Considering that investments in gilt-edged securities also represent contribution to the expansion of the country's economic activity, albeit through the public sector, the Central Bank has been fully living upto the conception of banking as "a productive force." Defining this conception, an apt quotation on the inside front cover page of the Bank's latest annual report says:

"The judicious operations of banking enable the community to convert its dead stock of idle money into active and productive stock—into materials to work upon, into tools to work with, and into provisions and subsistence to work for—into stock which produces something for the members of the community as well as for the country."

As part of its attempts to perform the functions of a banker in a modern economy, the Central opened a few more branches during the year under review, the total number of branches at the end of 1963 being 366, as compared with 359 a year before and 343 in 1961.

The number of shareholders of the Bank is pretty large, being as many as 24,828 (as at 31st December 1963), of which 24,729 are individuals and 99 corporate bodies. The former account for 79.41 per cent of the total number of shares, of which 39.52 per cent are in the hands of 22,981 investors holding one to 100 shares and 12.35 per cent in the hands of those (1,047) possessing 101 to 200 shares. Among the corporate bodies, the L.I.C. must be holding a sizable block of shares. These points about the ownership of the Bank are of special importance at present, consequent on the consistent propaganda by some influential politicians and trade union leaders in favour of nationalisation of banks in the private sector. Another significant point to be noted in this connection is that, of the total income of the Bank, emoluments to staff take away 39 per cent, interest paid to depositors 44 per cent and net profit only 8 per cent. What is more, a good part of the proportion constituting net profit is ploughed back through additions to reserves.

INDIAN BANK FARES WELL

The progress made by the Indian Bank Ltd. (Secretary: Mr. G. S. Sundaram, Madras) during the year ended 31st December 1963 has been satisfactory in terms of income earned, profit made and also business put through. The balance-sheet total, indicating the growth of business, has expanded, again, by about Rs. 8 crores from Rs. 59.06 crores to Rs. 67.87 crores. Gross income has gone up from Rs. 284.21 lakhs to Rs. 320.57 lakhs. The entire increase has been in income realised from the banking business proper, because receipts from other sources have actually dropped from Rs. 5.05 lakhs to Rs. 4.48 lakhs. On the expenses side, the amount of outward interest has increased from Rs. 123.01 lakhs to Rs. 141.49 lakhs, staff expenses from Rs. 105.31 lakhs to Rs. 116.67 lakhs and other expenses from Rs. 37.83 lakhs to Rs. 42.34 lakhs. Notwithstanding these increases, the profit, after depreciation and taxation, has improved to Rs. 17 lakhs from Rs. 15.25 lakhs to which level it had receded in the previous year from Rs. 22.12 lakhs in 1961.

This improvement has enabled the Directors to restore the one per cent cut imposed in the previous year in the return to shareholders, bringing it up to 15 per cent per annum, subject to tax, including the interim dividend of 5 per cent and the bonus of 2 per cent paid earlier. The amount of profit distributed as dividend and bonus to shareholders has, therefore, increased by Rs. 1.12 lakh to Rs. 13.32 lakhs. The appropriation to reserves has also been raised from Rs. 3.10 lakhs to Rs. 3.50 lakhs. The carry forward at Rs. 1.62 lakh is slightly higher as compared with the previous year's surplus of Rs. 1.44 lakh brought in.

The following table compares the Bank's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960

* After providing for taxation. § Unencumbered portion only.
† Subject to deduction of tax. *N.D.*—Not disclosed.

An outstanding feature of the balance-sheet under review is that deposits at Rs. 49.88 crores (as against Rs. 44.04 crores a year before) closely approximate Rs. 50 crores. This is quite significant, since, on reaching the mark of Rs. 50 crores of deposits, the Bank will acquire the status of a "big bank" under the Inter-bank Agreement governing the rates of interest on deposits, which will deprive it of the "privilege" allowed only to "medium banks" of paying one-eighth of one per cent more than the "standard rates" of interest for attracting deposits. The expansion of deposits during the year has been all round: from Rs. 16.09 crores to Rs. 18.31 crores in fixed deposits, from Rs. 4.99 crores to Rs. 6.89 crores in short-term deposits, from Rs. 8.32 crores to Rs. 8.92 crores in savings deposits and from Rs. 14.63 crores to Rs. 15.75 crores in current accounts.

In spite of this satisfactory accretion of deposits, the Bank has been unable to meet the demand for credit from its clients without a recourse to borrowings, the outstanding amount of which at the end of the year is, however, lower at Rs. 292.12 lakhs as compared with Rs. 353.57 lakhs at the end of 1962. The bulk of the available funds during the year is represented on the assets side in advances the total of which has risen from Rs. 30.38 crores to Rs. 34.79 crores and stands, as a ratio to deposits, one point higher at 69.9 per cent. Investments have come down slightly from Rs. 14.61 crores to Rs. 14.40 crores and their ratio to deposits has dropped by two points to 24.5 per cent. But, as against this, the cash-deposits ratio has improved from 12.5 per cent to 13.6 per cent because of the larger cash of Rs. 678.99 lakhs at the end of the year as compared with Rs. 552.23 lakhs at the end of 1962. The aggregate liquidity ratio has thus moved down by only about a point to 38 per cent. The ratio of "own funds" to deposits works out to 3.6 per cent, as against 4 per cent a year before.

JUMP IN DEPOSITS OF CANARA BANK

A notable feature of the working of the Canara Bank Ltd. (General Manager: Mr. P. S. Nayak, Mangalore) during the past calendar year is the jump in its deposits from Rs. 50.88 crores to Rs. 72.37 crores. This accretion of roughly Rs. 22 crores, or over 44 per cent, in deposits far exceeds the increase of a little more than Rs. 13 crores recorded in the previous year. However, apart from the continued support of the public, it is due very much to the takeover of four banks during the year, as against the merger of none in the previous year, which only goes to illustrate the soundness of the practice of allowing small banks to merge with big ones in order that banking structure may be strengthened. The four banks absorbed during the year are Sree Poornathrayeesa Vilasom Bank Ltd., Tripunithura, the Aarmad Bank Ltd., Tiruchirapalli, the Cochin Commercial Bank Ltd., Cochin, and the Pandyan Bank Ltd., Tirumangalam.

This rather sudden growth in deposits has been accompanied with a sharp rise in advances from Rs. 26.92 crores to Rs. 42.27 crores as compared with from Rs. 20.39 crores to Rs. 26.92 crores in the previous year resulting in a more than five-point rise in the credit ratio from 52.9 per cent to 58.4 per cent, as against a contraction of over one point in the previous year. The average credit ratio has also gone up from 59.1 per cent to 59.8 per cent during the year. Investments—the other source of income—have also increased from Rs. 17.79 crores to Rs. 20.63 crores, though, as a ratio to deposits, they stand much lower at 28.5 per cent (because of the larger growth in deposits during the year) as compared with 34.9 per cent a year before. Cash balances are better by about Rs. 4 crores at Rs. 12.48 crores, their ratio to deposits moving up from 16.8 per cent to 17.2 per cent. Finally, the balance sheet total has jumped up from Rs. 66.16 crores to Rs. 96.17 crores.

The end result of this very satisfactory working during the year is a handsome rise of Rs. 81 lakhs to Rs. 345.87 lakhs in the gross income; of this rise, about Rs. 78 lakhs have come from banking business proper and Rs. 3 lakhs by way of earnings from other sources. The amount of outward interest has increased from Rs. 116.32 lakhs to Rs. 148.88 lakhs, of staff expenses from Rs. 86.60 lakhs to Rs. 112.51 lakhs, and of other expenses from Rs. 35.95 lakhs to Rs. 51.71 lakhs. The provision for depreciation has also been raised substantially from Rs. 5.42 lakhs to Rs. 8.29 lakhs. Nevertheless the profit after tax shows an improvement of Rs. 3.90 lakhs to Rs. 24.48 lakhs in contrast to the slight setback of some Rs. 66,000 suffered in the previous year. Reserves, including development rebate reserve, have got Rs. 9.03 lakhs, that is, Rs. 3.53 lakhs more than in the previous year. Bonus to staff has claimed Rs. 1.11 lakh more at Rs. 6.25 lakhs. The dividend on the Rs. 50 fully paid ordinary shares has been maintained at 15 per cent per annum. But since it is payable on a higher equity capital of Rs. 86 lakhs following the issue of 50,000 shares at a premium of Rs. 15 per share in October last, it absorbs a slightly larger sum of Rs. 9.15 lakhs as compared with Rs. 8.29 lakhs a year before.

In the following comparative table is summarised the Bank's progress since 1960:

(In lakhs of rupees)

	For the year ended 31st December

† To inner reserves. * Subject to deduction of tax.

The growth in deposits has been all round. Thus, fixed deposits have increased from Rs. 23.96 crores to Rs. 32.68 crores, savings deposits from Rs. 10.20 crores to Rs. 15 crores and current accounts from Rs. 16.72 crores to Rs. 24.69 crores. Thanks to this satisfactory improvement in deposits, the Bank has once again avoided borrowing from other banks. During the year, the Bank opened branches at 15 places. One more manager of the Bank was deputed for training with the Deutsche Bank in Germany.

RATIONALISATION IN KANPUR TEXTILE MILLS

PROBLEM STILL HANGING FIRE

By Dr. J. L. Rastogi

ONE of the important reasons for the tense industrial relations in Kanpur has been the introduction of rationalisation in cotton textile mills. Since the problem is not of recent origin, one may recall here the post-war developments so that readers may set the right perspective. Immediately after the war, the U.P. Labour Enquiry Committee, 1946 conducted a detailed enquiry and emphasised the need for standardisation of work-load and musters. The question of rationalisation was to be discussed in its final report which could not be submitted due to the sad death of Mr. Nimbkar, the Chairman of the Committee. In 1950, individual schemes of rationalisation prepared with the aid of the Technical Sub-Committee of the Employers' Association of Northern India were submitted to the Government of U.P. by the textile mills of Kanpur. The Government wanted these schemes to be examined by industrial experts. Therefore, Messrs. Ibcon Ltd. were entrusted with the task of scrutinising these schemes. The State Government also appointed Dr. Bansi Dhar, its own specially trained rationalisation expert, to study and improve upon the schemes submitted by Messrs. Ibcon Ltd. According to his report, the number of workmen rendered surplus due to rationalisation was to be much smaller than according to the estimates of Messrs. Ibcon Ltd. The proposals were circulated among the interested parties which, however, could not be accepted. Dr. Bansi Dhar's proposals were again considered at a Tripartite Conference held at Naini Tal in June 1954 in which an assurance was given by the employers that there would be no unemployment among permanent, temporary and substitute workers. A seven-man committee was set up to supervise the work of introducing rationalisation in textile mills of Kanpur, consisting of three representatives of labour, three of employers and the Labour Commissioner as the Chairman. However, the employers failed to supply the requisite data regarding the working of different cotton mills and workers' representatives began to resign as a protest. Therefore, the Committee had to be dissolved.

The task of introducing rationalisation was left to mutual agreements between different units and their employees. The Labour Commissioner was only to look after the reasonableness of wages paid to workers and the working conditions in different mills. Some of the mills started with rationalisation which was opposed by workers/unions. A dispute arose between Kanpur Textiles Ltd. and its employees on the question of reorganising ring-frames and work-load of doffers. A notice of strike was served on 11 textile mills of Kanpur by Suti Mill Mazdoor Sabha on 8th April, 1955 and, consequently, a strike broke out from 2nd May 1955, involving a large number of workmen. It was one of the biggest strikes in any of the cotton mills in India and continued for 80 days. It was, however, withdrawn on 20th July 1955 followed by the appointment of the Kanpur Textile Mills Rationalisation Enquiry Committee under the chairmanship of the retired Justice Bind Basni Prasad to reconsider the entire matter, work out details of the broad set-up of the decisions taken at Naini Tal Tripartite Conference and to formulate schemes of rationalisation for the following seven textile mills of Kanpur:

1. The Elgin Mills Co. Ltd.
2. The Kanpur Textiles Ltd.
3. The Kanpur Cotton Mills Ltd.
4. The Swadeshi Cotton Mills Co. Ltd.
5. The Muir Mills Co., Ltd.
6. The Atherton West Co., Ltd.
7. The J. K. Cotton Spinning and Weaving Mills Co. Ltd.

The Kanpur Textile Mills Rationalisation Enquiry Committee analysed the viewpoints of both the parties in detail and tried to arrive at an agreeable solution. It came to the conclusion that rationalisation was in the public interest and fears of labour on this count were not always true. Rationalisation proposals under enquiry were restricted only to weavers, ring piecers and ring doffers. But it was also agreed that the employers would be free to introduce it in other categories too by modernisation, mechanisation or elimination of processes after acquiring the approval of the State Government or other authorised agency for the purpose, provided that such a scheme did not involve any unemployment and increase in work-load. For efficient performance, the Committee emphasised and recommended proper regulation of physical, operational and mechanical working conditions and standardisation of duties and work-loads for the above three categories. It also recommended a fair share to labour from the increased productivity specially where the living wage standard was still to be achieved or workers' contribution was important in enhancing the earning capacity of the concern. Linking of workers' remuneration to actual performance was preferred and standard rates were prescribed for the above three categories of employees. Improvement in wages and dearness allowance was also recommended. Moreover, the Committee tried to estimate the number of workers to be rendered surplus by any such scheme and considered ways and means of absorbing them. The cases of clerks, and temporary and casual workers were separately dealt with. Besides, it recommended a two-tier machinery to keep a continuous watch so that such of the recommendations of the Committee as were accepted by the Government were observed by employers and employees alike.

Similarly, a one-man committee, headed by Mr. Bind Basni Prasad, was appointed to make recommendations on schemes of rationalisation in the remaining three cotton textile mills of Kanpur i.e. J. K. Cotton Manufacturers Ltd., Lakshmiratan Cotton Mills Co., Ltd., and New Victoria Mills Co. Ltd. Implementation of the recommendations of these Committees was held up due to the appointment of the Central Wage Board for Cotton Textile Industry. However, the dispute on the question of rationalisation continued. Employers decided to go ahead with their schemes while workers/unions opposed them. Ultimately, the representatives of employers and employees of 10 Kanpur cotton mills agreed to refer the question to the arbitration of Dr. Sampurnanand, the then Chief Minister of Uttar Pradesh in August 1961. Besides the categories of weavers, ring piecers and ring doffers, individual mills submitted their schemes for rationalisation of 10 more categories:

1. Finisher scutchers
2. Cards: Card-boys/tenters
3. Draw frame tenters
4. Slubbing tenters
5. Simplex tenters
6. Inter tenters
7. Roving tenters
8. Doffers (speed frames)
9. Winders
10. Doublers.

Sampurnanand Award

Dr. Sampurnanand went into various aspects of the problem and gave his own Award in August 1962. The Award laid down the basic wages of weavers, ring piecers and ring doffers, and also of card tenters, draw frame tenters, slubbing tenters, simplex tenters, roving tenters, speed frame doffers and high speed winders according to the work performed by each. But for want of adequate data, it failed to give its findings relating to grey and colour winders, inter tenters, doublers and finisher scutchers. Under the Award, the fall-back wages of the categories covered were to be the average of the preceding three months' basic wages which would also include the increase granted on the recommendation of the Central Wage Board for Cotton Textile Industry and 'personal wage,' if any. The Sampurnanand Award also prescribed the dates from which various parts of this recommendation were to be operative. However, it did not allow adjustment of personal wage against the wages fixed for rationalised working and the wage increase recommended by the Central Wage Board. According to the Award, the merger of 75 per cent of the dear food allowance and of the wage increase were also not to be taken into account in fixing piece-rates in textile mills of Kanpur.

The Sampurnanand Award laid down in detail the standards of physical, operational and mechanical working conditions for weavers, ring piecers and ring doffers working on rationalised basis, but, in the absence of detailed information about the existing conditions in the mills and due to difference in conditions from one mill to another, it failed to lay down any exact standards of these relating to the other categories. The task was left to the Supervisory Committee.

The Award accepted the fulfilment of the standards of physical, operational and mechanical working conditions as an essential pre-condition and recommended that "no extension of rationalisation would be permissible until the standards of physical working conditions have first been satisfied and the operational working conditions, excepting with regard to 6" lift pirns for which the time limit of three and a half years from the date of application of this Award has been allowed, have been met." So far as the portions of departments already rationalised were concerned, the Award prescribed one year from the date of its commencement for satisfaction of standards of physical conditions, three months for the satisfaction of standards of operational conditions and six months for the satisfaction of standards of mechanical working conditions. It also provided that, "if any mill does not fulfil those conditions within the time-limit prescribed in this Award and as might have been extended by the Supervisory Committee, the Committee shall have the power to direct the mill concerned to derationalise such portion or portions of the department wherein the working conditions so laid down have not been fulfilled."

With regard to the filling of posts in permanent musters, the learned Arbitrator recommended that, after job requirements had been stabilised following satisfaction of standards of physical, operational and mechanical working conditions, the number of vacancies should be ascertained, and "after setting off the number of posts held by permanent hands, the remaining vacancies, according to the job requirements, will be filled in by substitutes in order of seniority with due regard to efficiency." However, if the standards of physical, operational and mechanical working conditions were not attained within the prescribed time, the vacancies would not be allowed to remain unfilled indefinitely and, on the expiry of such period, these would be filled in from the substitutes of class I in order of seniority with due regard to efficiency. For absorbing the surplus labour as a result of rationalisation, the Award recommended the following modes:

"(1) Vacancies caused by natural wastage in rationalised categories should not be filled in but would be set off against the labour rendered surplus by rationalisation and there should be no fresh recruitment till the completion of rationalisation in the category.

(2) Third-shift working.

(3) Transfer to similar jobs in the same factory.

(4) Transfer to the same job from one factory to another.

(5) Expansion of the existing units so as to make them balanced.

(6) Training within industry and appointing the workman to the job for which he has been trained.

(7) Seven-day working where it becomes necessary to absorb surplus labour on account of rationalisation effected amongst the categories covered in this Award subject to the conditions laid down."

In order to avoid confusion, the Sampurnanand Award recommended that the percentage of substitutes to permanent strength of weavers on rationalised working should be 20, and that of other categories covered by the Award, 17-25. Besides, it permitted Sunday working for certain purposes and under certain conditions, and fixed the number of paid and unpaid holidays. It also fixed the age of superannuation of industrial workers at 60 years.

The Sampurnanand Award also suggested a gratuity scheme for Kanpur cotton mill workers. Under the scheme, gratuity would be payable to every workman or to his nominees in the event of his death before payment or to his legatee if no nomination had been made, at the rate of one month's consolidated wages for each year of continuous service, reduced by the total of the employers' contribution to the Employees' Provident Fund Scheme, subject to a maximum of eight months' consolidated wages or Rs. 1,000 whichever is higher. However, if a workman was dismissed for serious and wilful misconduct, the amount of gratuity otherwise admissible to him might be reduced by a sum not exceeding two months' consolidated wages, subject to the payment of a minimum amount of gratuity equivalent to one month's consolidated wages.

The Sampurnanand Award also recommended the setting up of a two-tier machinery to supervise the enforcement of the Award and for dealing with the matters arising therefrom. The machinery at the industry level, the Award recommended, should comprise representatives of employers and employees with an independent person as chairman, and at the mill level should be bipartite, comprising the representatives of the employers and the employees of the mills concerned, nominated occupation-wise.

Implementation Unsatisfactory

Since the publication of the Sampurnanand Award in August 1962, efforts are being made to implement it. However, the progress in this regard has not been satisfactory. Although a Supervisory Committee has been constituted consisting of three employers' and three employees' representatives and the Labour Commissioner has been opted as its Chairman, it has failed to safeguard the interests of labour properly. Such an undesirable state of affairs has arisen because the Supervisory Committee has not been properly constituted. According to the Sampurnanand Award, an independent person, unanimously agreed upon by the representatives of employers and employees, was to be the Chairman of the Committee. Election of the Labour Commissioner as the Chairman has frustrated the very spirit of the Award, as he has failed to take an impartial view of affairs. Again, labour has not been properly represented on the Supervisory Committee. The two employees' representatives have been nominated by the I.N.T.U.C. and Rashtriya Textile Mazdoor Union respectively. However, due to internal rift in leadership, Suti Mill Mazdoor Sabha failed to name its representative on the Committee. Therefore, its representative had to be nominated by the Labour Commissioner. The representation of I.N.T.U.C. on the Supervisory Committee cannot be justified as it has no affiliate in Kanpur textile industry. The second one is represented by a Housing and Welfare Adviser to the Labour Commissioner. Even the Suti Mill Mazdoor Sabha does not have the same representative character since the withdrawal of non-communist members from it.

According to the Sampurnanand Award, Mill Committees are to be an important adjunct of the machinery for supervision of introduction of rationalisation in textile mills of Kanpur. Although Mill Committees were to be formed by the end of January 1964, these have not been appointed so far. However, steps are being taken for the formation of Mill Committees under the Award. For this purpose Rashtriya Textile Mazdoor Union has been recognised for all the mills, while Suti Mill Mazdoor Sabha for all the mills except Swadeshi Cotton Spinning and Weaving Mills, for which the Industrial Employees Union has been recognised for nominating workers' representatives on respective Mill Committees.

The net result of the absence of Mill Committees and the representative Supervisory Committee has been that rationalisation has been introduced at the discretion of the employers/managements and not in consultation with workers' representatives/unions. The former have read and interpreted various recommendations of the Award to suit their own conveniences and requirements, perpetuating exploitation and dissatisfaction.

Recommendations of the Sampurnanand Award relating to wages have not been fully and properly implemented. According to the Award, ring piecers are to be paid on piece-rate basis.

As has been accepted even by the Employers' Association of Northern India, Kanpur, in its reply to the memorandum of Suti Mill Mazdoor Sabha of 29th October 1963, only five out of ten cotton textile mills of Kanpur have been paying them on piece-rate basis. However, even in these the rates have been so fixed that they get much less than prescribed by the Award. Again, these wages are paid only to those minding two sides, and the workers who are working more than 200 spindles but on one side have been denied the benefits of the Award wages. "In case of weavers as well the basic wage rates given in the schedule have not been applied in case of two-loom weavers, although the Award makes it clear that upto two looms the workmen will be paid the Standard Rates and on 'three-loom system five-sixths of the Standard Rates' and on 'four-loom system three-fourths of the Standard Rates.'"[1] So far as ring doffers are concerned, the employers have tried to deflate the number of spindles doffed by taking additional work from them, e.g. as bobbin carriers, bobbin cleaners, wastemen, sweepers etc. While calculating the average number of spindles doffed, doffers performing ancillary work are also included, thus reducing the number of spindles doffed per doffer. No doubt the duties of ring doffers given in the Award are not exhaustive and they have been performing the above duties even before the Award was given. But the method of calculation cannot be justified as the total number of spindles doffed should be divided by the number of workmen doing actual doffing and others should be paid at the average rate. Implementation of wage rates in additional seven categories is also unsatisfactory.

So far as standards of physical, operational and mechanical working conditions are concerned, while there has been a slight improvement in physical conditions, nothing has been done either to enforce the standards recommended for weavers, ring piecers and ring doffers, or to fix these standards for the remaining categories. The net result has been that workers are doing rationalised tasks without any substantial improvement in working conditions.

The payment of gratuity under the Award has also been unsatisfactory. 597 cases have been brought to the notice of the Department of Labour in which managements in various cotton mills of Kanpur have not paid gratuity to the workers within 90 days as required under the Award. Even the method of calculation of gratuity adopted by the employers has been the most unscientific and illogical, particularly for daily rated workmen. The total wages earned by such workmen irrespective of the number of days worked in the previous 12 months have been taken to be their annual earnings for the purposes of calculating gratuity. Thus, even the days on which they were absent or on authorised leave have been included for this purpose though they did not earn even a single nP on these days.

In spite of the clear recommendation of the Award relating to the filling of posts in permanent musters, so far nothing has been done to implement this part of the Award. Still a large number of substitutes and temporary workers are working against permanent posts. Thus, they are being denied benefits of permanency, security of service, leave with wages, lay-off compensation, provident fund facilities etc.

The net result of unsatisfactory implementation of the Sampurnanand Award has been that, instead of reducing tension it has increased so much that an emergency had to be declared to prevent any flare up in this period of national emergency.

Measures Suggested

The problem of rationalisation in textile mills of Kanpur now concentrates round the implementation of the Sampurnanand Award. In order to gain full co-operation of the employers and workers/unions in the task, the Supervisory Committee should be reconstituted. It should be truly representative and its chairman should be some impartial man who is interested neither in employers/managements nor in workers/unions. Labour representation should be given to more representative unions to gain the confidence of workers in functioning of the Supervisory Committee. The Chairman should conduct the proceedings of the Committee without exercising any pressure on either group. Besides, Mill Committees, as recommended by the Sampurnanand Award, should immediately be constituted to supervise implementation of the Award at the unit level and receive complaints regarding its non-implementation.

The employers and trade unions should give up their hostile attitude towards each other and the recommendations of the Award should be considered in their true perspective. Efforts should be made to get its implementation without loss of time. The wages of weavers, ring piecers, ring doffers, card tenters, draw frame tenters, slubbing tenters, simplex tenters, roving tenters, speed frame doffers and high speed winders whose jobs have been rationalised, should immediately be changed over to piece-rate basis as recommended by the Sampurnanand Award where they are still paid according to time rates. The Supervisory Committee should also fix wages of the remaining rationalised categories on the basis of work performed by each without loss of time. Even workers who are performing more than the standard task should be paid at a higher rate, if not on rationalised rates.

The standards of physical, operational and mechanical working conditions should have been attained according to the time allowed by the Award, but, as these have not so far been fulfilled, the Supervisory Committee should, according to the recommendation of the Award, order derationalisation of such sections/departments in which these are still lagging behind. However, the entire question should be reconsidered and the Supervisory Committee should allow a little more time for attaining the standards of physical, operational and mechanical working conditions with regard to weavers, ring piecers, ring doffers, etc. The task of supervision of their provision in specified time should be left to the individual Mill Committees. The Supervisory Committee should also lay down in clear words the necessary physical, operational and mechanical working conditions relating to the other categories and provide for suitable phasing for fulfilment of these.

The vacancies lying unfilled should no longer remain so and the employers should immediately be required to fill these from among the substitute workers of class I in order of seniority with due regard to efficiency without loss of time, as they have failed to fulfil their obligations with regard to the attainment of requisite standards of working conditions. In absorbing surplus personnel, the modes recommended by the Sampurnanand Award should be strictly adhered to.

So far as gratuity is concerned, it should be properly calculated and immediately paid to all those who have not so far been paid. However, even full implementation of the Sampurnanand Award would not make the task of rationalisation of cotton mills in Kanpur complete. Besides modernisation and work-load reorganisation, steps should be taken to streamline production, management, transport and marketing.

What is needed for the success of rationalisation is proper and adequate publicity of the concept, need and benefits of rationalisation, particularly among the rank and file of workers to remove their misconceptions relating to it. In this regard, trade unions can play a constructive role. They should not oppose rationalisation so long as suitable conditions are provided for its introduction. Generally, the problem of unemployment is connected with rationalisation, particularly when it involves certain amount of modernisation. But it is only of a temporary nature and ultimately such conditions would crop up automatically as would compensate more than the waste by offering greater employment in varied fields. Even during the temporary phase, the problem of surplus labour is not insurmountable and much of the difficulty can easily be redeemed by taking remedial measures as recommended by the Sampurnanand Award.

Sometimes it is said that rationalisation and modernisation lead to an increase in work-load. But it is not necessarily so. Work-load does not depend on the number of machines an operative handles but on the number of operations performed. So far as the number of operations remains the same, in spite of the increased number of machines to look after, the work-load cannot be said to have increased. Thus, in order to reduce much of workers' opposition to rationalisation, work-load should be expressed in terms of number of operations to be performed in each job and employees should be made operation-conscious rather than machine-conscious. In order to shed workers' fear of exploitation, work-loads and musters should be scientifically determined with the help of time and motion studies in association with workers' representatives.

Again, in order to enlist the full co-operation of employees in the task of rationalisation, they should be given, besides standardised wages, a share from savings due to it. No doubt, rationalisation involves a certain amount of extra cost in providing suitable conditions, but such expenditure is more than proportionately offset by the savings in labour costs due to reorganisation of work-loads. From the resulting gain a share can easily be afforded to workers, in order to induce them to accept the new order and to raise their living standards and efficiency.

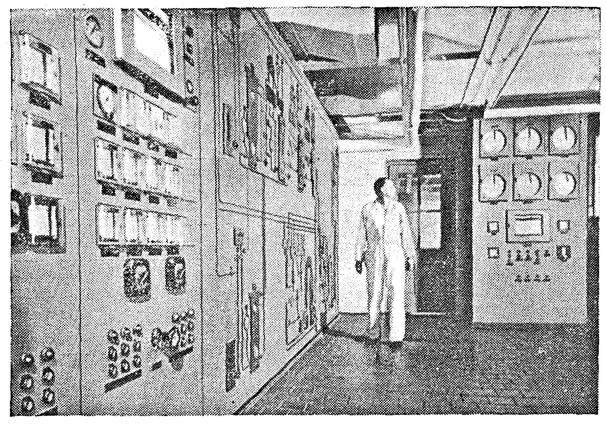
TREATING WOOL

A dry chlorination plant for the non-shrink treatment of wool, developed by a British firm, Power Installations Ltd., Bradgate Street, Leicester, England, has a capacity of 65 c.ft. and can handle between 150 and 450 lb. of woollens per one-and-a-half hour cycle. The plant, by operating under vacuum conditions, treats the inside parts of the most tightly packed forms of wool as satisfactorily as the outside. The dried wool is unswollen and it is not possible for the chlorine molecule to penetrate to the centre of the fibre so that the reaction is restricted to the surface. The plant, which is suitable for treating scoured wool, tops, yarn, knitted fabrics, garments, piece goods and half hose, is said to have the following advantages: the strength and other properties of the fibres are unimpaired, dry chlorinated tops give a yarn of equal strength with 25 per cent less twist, a high degree of non-feltability is obtained, there is no loss of weight during treatment, and the control of the process does not require a trained chemist.

A new permanent finish for all-wool cloth has been developed by a century old firm of cloth-workers in London, F. Farr and Co. Ltd., Golden Square, London, W. 1. It is claimed that the "finish"—named Everlast—will endure through the natural life of the cloth and is unaffected by tailoring, steaming, pressing or dry cleaning. First used on cloth made from Scottish lambswool for the manufacture of casual wear, the process has resulted in better shape retention and has eliminated the pilling action (balling up of fibres) common to such cloth.



Look what you get with —

HONEYWELL instrumentation

Far more than just instruments, you get a complete control system, custom designed for your specific needs, by men who know your processes..

You get expert, interested assistance every step of the way, with your initial planning and long after your instruments are installed. Blue Star assume full responsibility for the engineering, installation and start-up of your system.;

You get training for your instrument technicians in the most up-to-date maintenance methods at the tuition-free Blue Star-Honeywell Instrumentation Education Centre at Bombay.

You get prompt, competent service from your nearest Blue Star office and immediate replacement of emergency repair parts.

These are but some of the plus-values that comprise Instrumentation by Honeywell...and they apply regardless of whether you buy a single instrument, a replacement part or a complete control system.

Sold and serviced in India exclusively by

EXTENDING CONTROL OF COTTON BOARD

IMPORTS FROM CHINA LARGER

From Our Special Correspondent

MANCHESTER, 31st *March*

MANCHESTER LETTER

PROPOSALS aiming to bring users of man-made fibres in the Lancashire cotton trade into full membership of the Cotton Board have been laid before Parliament under a draft order. Announcing this, the Board of Trade said the steps—which also extend into the silk trade—had been taken after consultation and in agreement with the appropriate representative organisations and trade unions.

"No changes are planned at the moment in the constitution or functions of the Cotton Board or its name," said a spokesman.

The Cotton Board Order 1948—which set up the Cotton Board as a Development Council—has already been amended four times. Under the last amending Order in 1961, the man-made fibre users agreed to pay a levy to the Cotton Board for the first time. This was fixed at 11 per cent of the total levy raised, and the amount—about £45,000—is used to finance, in part, the Shirley Institute, for the industry's research centre.

Changes in Industry's Structure

The move reflects changes which have been taking place in the structure of the industry for some years. Increasingly, the "traditional cotton" industry has used man-made fibre in its spinning, weaving and finishing. The first practical signs were the amalgamation of the separate trade associations.

This has made it increasingly difficult for the Cotton Board to draw a clear line, and the levy arrangements have been extremely complex, inflexible and difficult to implement. Most firms now process man-made fibres in some form.

Under the proposals, the functions of the Cotton Board will cover the whole of the industry, and all firms in the trade will be assessed for levy charges on the same basis, whichever fibre is used. This includes spinning, doubling, weaving, finishing and converting. It excludes made-up goods and the throwing of silk.

Subject to approval by Parliament, the Order will come into operation during May and the first levies calculated on the new basis will be charged in October.

Export-Import Trading

No important change in the pattern of exports and imports is yet apparent during 1964, apart from the rising trend of arrivals of man-made fibre goods. Figures issued by the Board of Trade for the two months ended February show a further reduction in exports of cotton cloth, a slight fall in trade in cotton yarn and thread, but further gains in overseas operations in both man-made fibre yarns and cloth.

Combined shipments of cotton and man-made fibre piecegoods are a little lower than in 1963, as cotton fabrics have slipped back from 37,494,000 yards to 32,345,000 yards, while the improvement in man-made fibre goods has been from 11,449,000 yards to 14,010,000 yards. At the same time, it is worth noting that shipments of man-made fibre cloth so far this year are nearly twice as large as in 1962 and undoubtedly the future performance by this section must be closely observed.

On the other hand, the disposal of man-made fibre yarns abroad has for a long time been far in excess of the comparable trade in cotton yarn and thread. In the first two months of 1964 shipments were 14,797,000 lbs., while the exports of equivalent cotton yarn were only 3,356,000 lbs. Cotton spinners are virtually maintaining their position, while producers of man-made fibre yarns are steadily forcing the pace.

On the imports side, the inroads made by foreign competitors are still intensive. Only in the case of cotton yarn and thread have smaller arrivals been reaching British ports so far this year, the figure being 6,739,000 lbs. against 6,939,000 lbs. in 1963.

Cotton grey cloth imports show little change at 93,604,000 yards against 92,027,000 yards, but purchases of finished cotton fabrics have risen from 27,551,000 yards to 32,074,000 yards. Marked increases, however, have taken place in arrivals of man-made fibre goods, yarn and thread imports rising from 1,911,000 lbs. to 4,131,000 lbs. and cloth from 9,814,000 yards to 14,625,000 yards.

Among the suppliers of cotton grey cloth, an interesting point is that India, Pakistan and Hong Kong have all provided smaller quantities than in the first two months last year. China has, however, sent a fractionally larger volume than Hong Kong.

In the two months, arrivals from India were 35,909,000 yards against 36,961,000 yards; from Pakistan 11,065,000 yards against 14,380,000 yards; from Hong Kong 10,304,000 yards against 13,674,000 yards; and from China 10,389,000 yards against 6,254,000 yards. It should be pointed out, however, that according to the existing quota arrangements, most of the Chinese cloth now being purchased is for the improvement trade, as there are strict limitations against imports for retention in the home market.

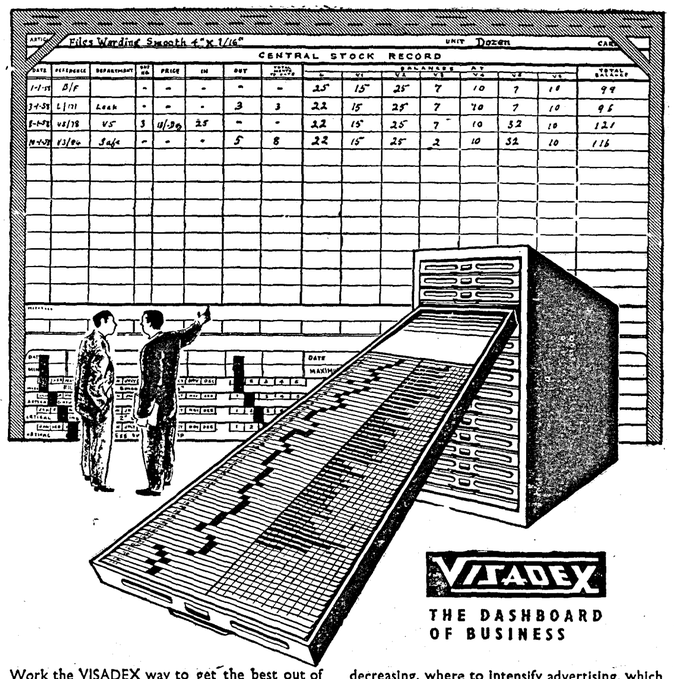
Promotion for cotton goods is a subject on which a great deal of time has been spent in recent years. The outcome, however, has by no means satisfied those who support the project in principle nor those who are dubious about the advantages of spending large sums of money on what they regard as a waste of effort.

During the trial period while the Cotton Board was involved in organising general trade promotion, members of the producing sections of the industry felt that much of the money was, in fact, being expended on encouraging the sale of imported fabrics, in the absence of suitable labelling to show which goods were actually being spun, woven, and finished in this country. Arguments as to how the numerous complications in this issue could be overcome have never reached a satisfactory conclusion.

The annual report of the British Spinners' and Doublers' Association expresses the fear that the lack of general promotion of cotton goods may have adverse repercussions, particularly on account of the large sums being spent by industries producing and consuming other fibres. In view of the possibility of constitutional changes within the Cotton Board, however, the whole subject may have to be looked at from a new angle. The Association points out that the Board will be unlikely to continue its activities in this sphere other than by the continuation of its Colour, Design and Style Centre.

Several organisations are deeply concerned with this problem, including the International Cotton Advisory Committee and the International Federation of Cotton and Allied Textile Industries. At the same time, such bodies have varying interests. Some merely wish to stimulate the sale of raw cotton as opposed to other fibres, while spinners, weavers, finishers and merchants recognise the more comprehensive nature of textiles in the modern world, aided by the extensive blending which is now regularly carried out in practically all mills.

Even among the protagonists of raw cotton, there are those who wish to limit the propaganda to the promotion of their own particular varieties. It has been suggested that, as an interim measure, consuming countries should each raise a fund, to be collected by spinners, to be used within their own territories, based on a percentage of the invoice value of each bale used. The British Spinners' and Doublers' Association, says the report, is not inclined to favour this system, but will continue to be represented at international discussions on the subject.



VISADEX
THE DASHBOARD OF BUSINESS

Work the VISADEX way to get the best out of your men, machines and materials.

VISADEX can tell you what you need to know at a glance. VISADEX offers you a fluent indexing system by which records are kept on cards, while colour signals spotlight what things are in stock or needed, whether production is ahead of or behind schedule, sales are increasing or decreasing, where to intensify advertising, which department requires more personnel, who owes you and how much . . . VISADEX, in short, affords greater control at less cost, besides keeping records secure.

Our VISADEX Representative will be happy to show you, without obligation, how simple VISADEX is to operate—*either with Card Pockets or Brass Card-holders*—and how easily it can meet your specific requirements.

TRAINING INDUSTRIAL ENGINEERS

COLLABORATION BETWEEN INDUSTRY AND ACADEMIC INSTITUTIONS URGED

THANKS to the unceasing efforts of the National Productivity Council, the I.L.O. Productivity Mission, the Productivity Centre and other bodies, there is at present greater awareness of the need for achieving higher levels of productivity in Indian industries. Higher productivity is not merely a function of greater effort by workers, though this is important, but also of better organisation of work. For the output of a worker depends largely on how the work situations have been organised for him, that is, whether: (1) he has been given the correct instructions about his work, (2) the materials and equipments are properly arranged for him, (3) the methods specified are effective and safe, (4) the environmental conditions are peaceful and conducive to the work, (5) his service conditions and procedure for recognition of merit are scientifically devised and protected from prejudice and nepotism and a host of other things which are necessary to get the best out of the men, machines and materials employed in the production process. In other words, productivity depends on the management of the work and worker. This is the task of industrial engineering, a term which could be more precisely defined as "the application of basic scientific and engineering knowledge and certain analytical techniques to the methods of operating an organisation in industry and other appropriate fields." It requires investigation into the economic advantages of one policy against another and implementation of the most suitable procedure for raising productive efficiency. In order to achieve this end, performance and costs need to be checked constantly. Industrial engineering is then a staff activity of management and is concerned with decisions on what to produce, the design of the product, standardisation, the influence of cost analysis on methods of production, the investigation of these methods, planning and control of production, calculation of what is the most efficient machinery for the job on hand, layout of plant and handling of materials, time study, motion study, incentives, methods of calculation of wages, suggestion schemes and industrial relations. Industrial engineering is thus as wide in scope as it is crucial in raising productivity.

Broad-based Scheme Necessary

In view of the importance of industrial engineering, the Institute of Industrial Engineers (India) did well in selecting industrial engineering education and training as the subject matter for discussion at the Institute's Annual Convention held at Bombay this week. In order to achieve a perceptible improvement in productivity, a much more broad-based training scheme in the principles of industrial engineering than is available at present is called for and the Convention served to focus attention on this important aspect of the productivity movement. The Institute, it may be noted, is a professional body of industrial engineers. Its objects are, *inter alia*, (1) to promote better understanding and appreciation of the techniques of industrial engineering practice, (2) to provide facilities for inter-change of ideas in the field of industrial engineering, and (3) to foster and assist education and research in industrial engineering.

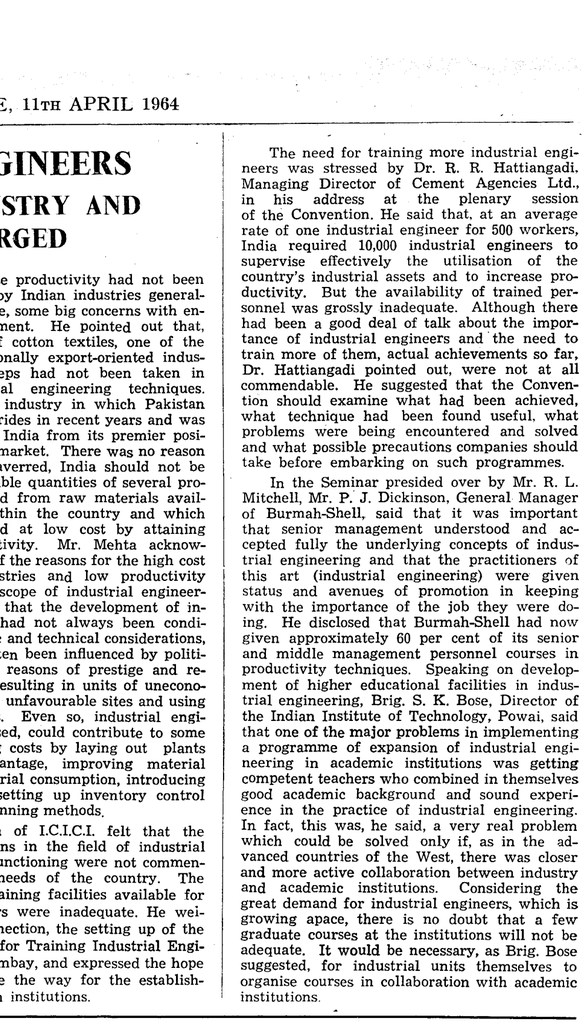
The Convention was inaugurated by Mr. G. L. Mehta, Chairman of the Industrial Credit and Investment Corporation of India. A notable feature of the Convention was the holding of seminars on six selected subjects pertaining to industrial engineering, in which some of the country's topmost industrial engineering experts participated. The Seminar was presided over by Mr. R. L. Mitchell, Chief of the I.L.O. Management Development and Productivity Mission in India.

Inaugurating the Convention, Mr. G. L. Mehta put the problem of productivity in the proper perspective when he said that productivity was not merely a measure of progress but a condition of survival. He urged industrialists to realise the necessity of employing industrial engineering for cutting costs and raising productivity. Industrial engineering, he pointed out, could help in developing a systematic and co-ordinated attitude to planning not only in small units but also in big ones. It could also help in creating awareness that all planning has to be directed towards the optimum utilisation of resources. Mr. Mehta regretted that the urgency to increase productivity had not been fully appreciated by Indian industries generally, except, of course, some big concerns with enlightened management. He pointed out that, even in respect of cotton textiles, one of the oldest and traditionally export-oriented industries, adequate steps had not been taken in applying industrial engineering techniques. Jute was another industry in which Pakistan had made rapid strides in recent years and was trying to dislodge India from its premier position in the export market. There was no reason why, Mr. Mehta averred, India should not be able to export sizable quantities of several products manufactured from raw materials available in plenty within the country and which could be processed at low cost by attaining maximum productivity. Mr. Mehta acknowledged that some of the reasons for the high cost structure of industries and low productivity were beyond the scope of industrial engineering. He conceded that the development of industries in India had not always been conditioned by economic and technical considerations, and that it had often been influenced by political considerations, reasons of prestige and regional pressures, resulting in units of uneconomic size, located at unfavourable sites and using wasteful processes. Even so, industrial engineers, he emphasised, could contribute to some extent in reducing costs by laying out plants to the best advantage, improving material handling and material consumption, introducing wage incentives, setting up inventory control and production planning methods.

The Chairman of I.C.I.C.I. felt that the several organisations in the field of industrial engineering now functioning were not commensurate with the needs of the country. The educational and training facilities available for industrial engineers were inadequate. He welcomed, in this connection, the setting up of the National Institute for Training Industrial Engineers at Powai, Bombay, and expressed the hope that it would pave the way for the establishment of more such institutions.

The need for training more industrial engineers was stressed by Dr. R. R. Hattiangadi, Managing Director of Cement Agencies Ltd., in his address at the plenary session of the Convention. He said that, at an average rate of one industrial engineer for 500 workers, India required 10,000 industrial engineers to supervise effectively the utilisation of the country's industrial assets and to increase productivity. But the availability of trained personnel was grossly inadequate. Although there had been a good deal of talk about the importance of industrial engineers and the need to train more of them, actual achievements so far, Dr. Hattiangadi pointed out, were not at all commendable. He suggested that the Convention should examine what had been achieved, what technique had been found useful, what problems were being encountered and solved and what possible precautions companies should take before embarking on such programmes.

In the Seminar presided over by Mr. R. L. Mitchell, Mr. P. J. Dickinson, General Manager of Burmah-Shell, said that it was important that senior management understood and accepted fully the underlying concepts of industrial engineering and that the practitioners of this art (industrial engineering) were given status and avenues of promotion in keeping with the importance of the job they were doing. He disclosed that Burmah-Shell had now given approximately 60 per cent of its senior and middle management personnel courses in productivity techniques. Speaking on development of higher educational facilities in industrial engineering, Brig. S. K. Bose, Director of the Indian Institute of Technology, Powai, said that one of the major problems in implementing a programme of expansion of industrial engineering in academic institutions was getting competent teachers who combined in themselves good academic background and sound experience in the practice of industrial engineering. In fact, this was, he said, a very real problem which could be solved only if, as in the advanced countries of the West, there was closer and more active collaboration between industry and academic institutions. Considering the great demand for industrial engineers, which is growing apace, there is no doubt that a few graduate courses at the institutions will not be adequate. It would be necessary, as Brig. Bose suggested, for industrial units themselves to organise courses in collaboration with academic institutions.



PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

Better than anything before — Plastic covering for your floor!

NEW VYNATILE
PLASTIC TILES

Beautiful designs! Superb value!

Amazing... the wonderful qualities of VYNATILE! It's the exciting new surface for floors today. Strong, flexible and beautiful VYNATILE has a superb, smooth finish... looks distinctive on any floor. Its varied patterns and colours will match any decor, and VYNATILE is sealed on floors to last for years and years. Ideal for offices, shops, restaurants, showrooms, banks, theatres, homes and hospitals!

Choose new VYNATILE in 3'x3' sheets ...in thicknesses of 1.5 mm. and 2 mm. Or ask for it in any economical size. Better still, take it as tiles to fit into your scheme of things.

VYNATILE...better in so many ways!

- Exceptionally durable. Won't crack, scratch, break or rot. Absorbs noise and shock!
- Attractive on any surface—concrete, wood, steel or tile!
- 28 delightful colours and patterns to choose from!
- Dust, grease, spilled drinks and food can be cleaned away in seconds. Just wipe with a damp cloth!
- Its hard-wearing, flexible surface gives excellent under-foot comfort!
- Professionally laid for lasting value!

BI-BI-3

THE INDIAN BANK
(ESTABLISHED
LIMITED, MADRAS
1907)

Registered Office: **INDIAN CHAMBER BUILDINGS, ESPLANADE, MADRAS-1.**

DIRECTORS' REPORT

(To be submitted to the Shareholders of the Bank at the Fifty-seventh Annual General Meeting of the Bank to be held at the Registered Office of the Bank at Indian Chamber Buildings, Madras-1, on Friday, the 17th April, 1964, at 4 p.m.)

The Directors have the pleasure to submit the Balance Sheet and the Profit and Loss account of the Bank for the year ended 31st December 1963. The Auditors' Report is also annexed.

2. The Net Profit of the Bank for the year, after providing for taxes, amounts to Rs. 17,00,155.06 and together with the sum of Rs. 1,43,787.37 carried from the previous year's account makes a tottal of Rs. 18,43,942.43.

3. Out of this sum, the Directors have made the following interim appropriations :—

	Rs. nP
An interim dividend at the rate of 5 per cent and a bonus of 2 per cent *(subject to deduction of tax)* was paid which absorbed	6,22,000.00
Transferred to Reserve Fund under Section 17 of the Banking Companies Act, 1949	1,50,000.00
The Directors now recommend that the following further appropriations may be made :—	
To pay a final dividend of 5 per cent and a bonus of 3 per cent (subject to deduction of tax) thereby making the dividend and bonus for the year amount to 15 per cent.	7,10,000.00
To transfer to Reserve Fund under Section 17 of the Banking Companies Act, 1949	1,70,000.00
To carry forward	1,61,942.43
TOTAL	18,43,942.43

4. The Directors are glad to state that the business of the Bank during the year under report continues to show satisfactory progress.

5. The Bank Rate was raised from 4 to 4½ per cent with effect from 2nd January 1963.

6. Offices of the Bank were opened at Guindy (Madras), Poonamallee (Chingleput Dt.), Tirunagar (Madurai), and King's Circle (Bombay) during the year.

7. By Order of the Central Government under Section 45 of the Banking Companies Act, 1949, the Bank of Alagapuri Ltd., P. Alagapuri, was amalgamated with the Bank from the 14th August 1963. From that date, the offices of the Bank of Alagapuri Limited at P. Alagapuri and Kulitalai are functioning as offices of the Bank.

8. Sri R. K. Venkatachalam resigned his seat on the Board on 1st August 1963. In his place Sri T. Chengalvaroyan was co-opted as a Director.

9. In accordance with Articles 92 and 93 of the Articles of Association of the Bank read with Section 256 of the Companies Act, 1956, Directors, Rao Bahadur T. S. Kachapikesa Mudaliyar, Kumararajah M. A. M. Muthiah Chettiar of Chettinad, Dr. P. V. Rajamannar and Sri T. Chengalvaroyan retire this year by rotation and they, being eligible, offer themselves for re-election.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of The Indian Bank Limited as at 31st December 1963 and also the above Profit and Loss Account of the Bank for the year ended on that date with the books of accounts of the Head Office and Branches other than those in Malaysia, the accounts of which were audited by auditors qualified under the laws of that country.

The Balance Sheet and the Profit and Loss Account have been drawn up in accordance with the provisions of Section 29 of the Banking Companies Act, 1949 read with Section 211 of the Companies Act, 1956.

We report that :—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit and they have been found to be satisfactory.

(b) The reports on the accounts of the branches in Malaysia audited by the other Auditors have been taken into consideration in making this report.

(c) The returns received from the branch offices of the Bank have been found adequate for the purposes of our audit.

(d) The transactions of the Bank as have come to our notice have been, in our opinion, within the powers of the Bank.

(e) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956 in the manner so required for Banking Companies.

(f) In our opinion,
(i) the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December 1963,
(ii) the Profit and Loss Account gives a true and fair view of the Profit and Loss for the year ended that date and shows a true balance of Profit for the period covered by the audit ; and
(iii) Proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books ; and

(g) The Bank's Balance Sheet and the Profit and Loss Account dealt with by the Report are in agreement with the books of accounts and returns.

DIRECTORS' FIFTY-EIGHTH ANNUAL REPORT

TO THE MEMBERS,

The Directors hereby present their 58th Annual Report and Audited Statement of Accounts for the year ended 31st December, 1963.

After making the usual and necessary provisions including provision for taxation, the balance is Rs. 24,65,552.54 (inclusive of last year's carry forward of Rs. 53,368.72) which the Directors have determined to dispose of as follows :—

	Rs.	nP.
(i) To Statutory Reserve Fund	8,25,000	00
(ii) To Outstanding Charges and Sundries for payment of Bonus to Staff	6,25,000	00
(iii) To Special Reserve	10,15,552	54
Rs.	24,65,552	54

The Directors recommend that payment of dividend at 5.56% (less Companies Tax) on 5% Cumulative Preference Shares amounting to Rs. 58,520 and dividend at 15% (less dividend tax) on Equity Shares amounting to Rs. 9,15,000 be made out of the sum allocated to Special Reserve.

The Advance/Deposit ratio of your Bank continued to be favourable being on the average 59.8%, the corresponding figure for scheduled Banks as a whole being 71.1%.

During the year new branches were opened at New Delhi; Panjim, Vasco-da-Gama (Goa); Triplicane, Guindy, Villivakkam (Madras); Fraser Town, Jayanagar, Town-Hall, Rajajinagar, Annigeri, Gajendragad and Bhadravati (Mysore State); Guntur (Andhra) and Colaba, Bombay (Maharashtra).

Also during the year the assets and liabilities of the following Banks were taken over :—

(1) Sree Poornathrayeesa Vilasom Bank Limited, Tripunithura.

(2) The Aarnad Bank Limited, Tiruchirapalli.

(3) The Cochin Commercial Bank Limited, Cochin.

(4) Pandyan Bank Limited, Tirumangalam.

One more Manager was deputed for training in Germany, and we are thankful to the Deutsche Bank for the training facilities provided which they have been generously doing over the past several years.

The Administrative Office building at Bangalore was completed in June 1963 and was inaugurated by the State Governor, His Highness Sri Jayachamarajendra Wadiyar, to whom the Directors are deeply grateful.

Your Directors are glad to report of the very successful Equity Share Issue in 1963 which was heavily oversubscribed, and thank the Members for their ready response.

The Directors thank all Shareholders, Customers and Staff for their co-operation during the year.

(By Order of the Board)

AUDITORS' REPORT

We have audited the foregoing Balance Sheet of the Canara Bank Limited, as at 31st December, 1963 and Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated the Returns from forty branches audited by us, one hundred and fourteen branches audited by other Auditors and eighty six branches exempted from audit, audited by persons otherwise qualified for appointment as Branch Auditors, who are employees of the Bank, under exemption granted under Rule 4 of the Companies (Branch Audit Exemption) Rules, 1961, Order No. 1 (13)-Cl., VI/63 Government of India, Ministry of Commerce and Industry, Department of Company Law Administration, dated 22nd June 1963 as amended By Order No. 1 (13)-Cl., VI/63 Government of India, Ministry of Finance, Department of Revenue (Company Law Division), dated 21st December, 1963.

The reports on the accounts of the branches audited by other Auditors have been dealt with in preparing our report in the manner considered necessary by us.

We report that :

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of audit and have found them to be satisfactory;

(b) The transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) In our opinion, proper books of account, as required by Law, have been kept by the Bank so far as appears from our examination of those books, and proper returns adequate for the purpose of audit have been received from the branches of the Bank;

(d) The foregoing Balance Sheet and Profit and Loss Account, dealt with, by this report, are in agreement with the books of account and the returns;

(e) In our opinion, and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies and, on such basis, the said Balance Sheet gives a true, and fair view of the state of affairs of the Bank as at 31st December, 1963 and the Profit and Loss Account gives a true and fair view of the Profit for the year ended on that date.

THE CENTRAL BANK OF INDIA, LIMITED

Registered Office: CENTRAL BANK BUILDING, MAHATMA GANDHI ROAD, BOMBAY 1.

(ESTABLISHED 1911)

SIXTY-NINTH REPORT OF THE BOARD OF DIRECTORS

GENTLEMEN,

The Directors beg to place before the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1963.

The Net Profit for the year amounts to Rs. 1,89,26,426.88 (previous year Rs. 1,79,95,826.83), which, together with the sum of Rs. 93,249.88 (previous year Rs. 23,36,733.88) brought forward from the previous year's account, amounts to .. .. Rs. 1,90,19,676 76

The following appropriations have been made :—

An ad-interim dividend was paid for the half-year ended 30th June 1963 at the rate of Rs. 2.40 per share, subject to tax on 12,61,736 shares	Rs.	30,28,166 40
Amount transferred to Reserve Fund	,,	40,00,000 00
Amount transferred to Special Reserve	,,	34,00,000 00
Amount transferred to Staff Gratuity Fund	,,	10,00,000 00
Amount provided for Bonus to Staff	,,	75,00,000 00
	,,	1,89,28,166 40
To carry forward to next year's account	,,	91,510 36
	,,	1,90,19,676 76

The Directors recommend to the Shareholders payment of a final dividend as follows :—

To pay the balance of final dividend for 1962 and interim dividend for 1963 to the former shareholders of the Jodhpur Commercial Bank, Ltd., to whom the shares of the Central Bank of India Ltd. have been or remain to be allotted	Rs.	12,641 37
To pay a final dividend for the half-year ended 31st December 1963 at the rate of Rs. 2.60 per share, subject to tax on 12,64,385 shares (making in all 20% gross for the whole year)	,,	32,87,401 00
	,,	33,00,042 37

The Bank's business during the year showed satisfactory progress. One Branch, 8 Sub-Branches and 3 Pay Offices were opened during the year at various centres, and 2 Branches and 3 Pay Offices were closed down as they were found to be unremunerative.

As Shareholders were informed in the Directors' Report of the previous year, with the nationalisation of Banks in Burma, the business of our Rangoon Office was taken over by the Government of Burma on 23rd February, 1963. Since then, the major portion of the assets and liabilities of our Branch there has been taken over by the Banking Business Nationalisation Committee, People's Bank No. 1, and only a few outstanding items remain to be settled, such as fixation of the compensation relating to some properties taken over by the Burmese Authorities, settlement of the Provident Fund liabilities of the staff of our erstwhile Rangoon Office and outstanding tax matters.

In the previous year's Report, the attention of the Shareholders had been drawn to the increase in the Capital structure of the Company which had taken place on account of the implementation of the Scheme prepared by the Reserve Bank of India and sanctioned by the Central Government for the amalgamation of the Jodhpur Commercial Bank, Ltd., with our Bank. Accordingly, 618 Ordinary Shares of our Bank were allotted during the year under review to such Shareholders of the Jodhpur Commercial Bank, Ltd., as had opted for the Company's Shares.

BALANCE SHEET AS AT 31st DECEMBER, 1963

CAPITAL AND LIABILITIES	Rs.	nP	Rs.	nP

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of The Central Bank of India, Ltd., as at 31st December 1963, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of the 171 branches audited by us 47 branches audited by other auditors and the unaudited returns, from 148 other branches not visited by us, in respect of which the Central Government has made an order granting exemption from audit pursuant to section 228 of the Companies Act, 1956.

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of these books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank not visited by us ;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(e) The reports on the accounts of the branches audited by other auditors have been forwarded to us and the same have been considered in preparing our report ;

(f) In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts read along with the notes appearing thereon give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1963 and the Profit and Loss Account gives a true and fair view of the Profit, for the year ended upon that date.

BOARD OF DIRECTORS

A further allotment of Shares of our Company will have to be made to the Shareholders of the Jodhpur Commercial Bank, Ltd., who have not exercised the option to receive cash and have accordingly become entitled to shares of equivalent value of our Company.

As you are aware, an Extra-Ordinary General Meeting of the Shareholders of our Company was held on 16th December, 1963, and their sanction was obtained to a further issue of Share Capital on certain terms and conditions. Pursuant to the Resolutions passed at the said Extra-Ordinary General Meeting, Letters of Offer for the new Shares have been issued to the Shareholders and the Directors trust that the Shareholders will subscribe to the new Shares within the prescribed period.

Mr. Akbar Hydari was invited to join the Board as an additional Director. Under Article 84 of the Articles of Association, and section 260 of the Companies Act, 1956, he holds office only upto the date of this Annual General Meeting, but *is eligible and offers himself for re-appointment.*

Mr. Nariman K. Karanjia resigned his office as Managing Director of the Company on 29th October, 1963. The Board have placed on record their deep appreciation of the ability, devotion and industry with which he served the Bank for as long a period as 45 years, and particularly during the time he worked as General Manager and later as Managing Director of the Company. He has left behind him a record of outstanding achievement and progress and it is a matter of satisfaction that his advice and guidance will still be available as a Director of the Bank.

On the retirement of Mr. N. K. Karanjia as Managing Director of the Company, the Board appointed Mr. F. C. Cooper, who was working as Deputy Manager for a long time, as General Manager of the Company.

During the year, one of your Directors, Mr. Nani Ardeshir Palkhivala, resigned his seat on the Board on 27th November, 1963, on his joining the Central Board of the Reserve Bank of India. The Board place on record their appreciation of the valuable services rendered by Mr. Palkhivala during the time he was associated with the Company.

Four of your Directors, Mr. Jaykrishna Harivallabhdas, Mr. Nityanand Mangesh Wagle, Nawab Prince Mukarram Jah Bahadur and Mr. N. K. Karanjia, retire under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and are eligible and offer themselves for re-appointment.

Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

The attention of the Shareholders is again drawn to the Directors' Report of the previous year regarding the dissolution of the Bank's Subsidiary, the Depositors' Benefit Insurance Co., Ltd. The necessary Certificate from the Ministry of Finance, Government of India, allowing the dissolution of the Subsidiary Company has not yet been received.

H. P. MODY, *Chairman.*

BOMBAY, 23rd *March*, 1964.

Statement Pursuant to Section 212 of the Companies Act, 1956

(a) The Bank's interest in its Subsidiary, The Central Bank Executor & Trustee Company, Limited, as at 31st December, 1963, comprised 2,000 shares of the face value of Rs. 1,000 on each of which Rs. 500 per share has been paid-up.

(b) The undistributed balance of profit of the Subsidiary Company as at 31st December, 1963, after a transfer of Rs. 30,000 to General Reserve, amounted to Rs. 533.88 which has been carried forward in the accounts of the Subsidiary.

(c) The net aggregate amount of Rs. 11,76,822.50 received as dividends from the Subsidiary Company for its previous financial years, since its inception as a Subsidiary Company, have been dealt with in the Profit and Loss Account of the Bank in the relevant years.

H. P. MODY, *Chairman.* C. H. BHABHA, *Vice-Chairman.*
D. M. KHATAU, CHIMANLAL B. PARIKH, JAMSETJEE JEJEEBHOY, } *Directors.* S. KHAMBATA, N. M. WAGLE, MUKARRAM JAH, N. K. KARANJIA.

BOMBAY, 23rd *March*, 1964.

BUSINESS NEWS FROM EUROPE

PHOTOGRAPHIC INDUSTRY: MERGERS TO MEET COMPETITION

ITALY—E.F.T.A.—ISRAEL—LABOUR

By Our Special Correspondent

FIERCER competition in the European photographic goods markets, aggravated by increased penetration of Japanese products, is causing a wave of company mergers and technical tie-ups. One of the chief factors behind the mergers seems to be the need of the big photographic companies to have the closest possible working relationships with chemical manufacturers. This need is considered largely to account for the effective merger of Agfa of West Germany (a subsidiary of the giant Bayer Chemical concern) and Gevaert of Belgium. These two companies—whose get-together through a twin parent and operating company arrangement is to be effective from mid-summer—will have around 12 per cent of the total Western world photo market, as compared with the American-controlled international Kodak group's 40 to 50 per cent. On the face of it, Europe seems set for a period of even fiercer competition in the photographic markets, particularly as the largest British concern, Ilford (with the backing of the huge I.C.I. chemical group) is now launching a major sales drive there.

Through a tie-up with the Swiss chemical company, CIBA, Ilford will build a factory at Lyons in France and be in a better position to develop widespread European sales outlets. This is also the aim of Japanese camera companies now taking a close look at the European market with a view to setting up subsidiaries there. The Japanese interest—from Olympus Optical, Minolta Camera and Mamiya Optical—may herald a big move by photographic companies into Europe where the market is considered all set for a period of further steady sales growth.

Japanese companies are not alone in seeking a slice of the European market: at least one big American concern is shopping round for a major European tie-up. Recent strong rumours have suggested that Minnesota Mining and Manufacturing (3-M), the giant United States company with widespread interests in photocopying machines and other office aids, is seeking an agreement with Ferrania, the Italian photographic concern. Ferrania is now virtually the only European photographic major not having a close alliance with a chemical group. Any move by other European companies to buy the Italian firm, however, might provoke a closer alliance of Ferrania with one of Italy's large chemical concerns. There now appears to be little chance, however, of a 3-M bid for the moment. As a result 3-M is faced with either expensive development of a European photo subsidiary or an agreement with another European photographic concern, unlikely since only Ferrania is now unattached.

Now that most of the European photographic market is in the hands of a small number of large companies, many analysts think that the way is open for a prolonged bout of fierce competition. Kodak, for instance, is unlikely to ignore the bid of Agfa-Gevaert for a bigger share of the market. What form the competition will take is difficult to foresee, but a certain amount of price-cutting seems inevitable, particularly in the fastest-growing sectors, such as colour film.

Due to their widespread interests, Agfa-Gevaert, British and German Kodak, Ferrania and Ilford export a high percentage of their output, mostly to Europe itself, since photo markets in other parts of the world are only at an early stage of development. Ilford, for example, exports more than half of its total output and expects the proportion to increase. For all these companies export opportunities outside Europe appear bright, notably in Africa where camera use is likely to increase rapidly during the next five years. In Asia, the going for European companies is becoming increasingly tough, because of Japanese competition in the photo-materials and equipment market. In the camera market, European and North American companies are now considered unable to compete with Japanese products either in price or, in an increasing number of cases, in technical refinement.

A further factor behind the merger drive is likely to be that of complementary production. While major firms like Kodak and Ilford are already, broadly speaking, integrated, with a large output of both filmstock and equipment, some European concerns have tended to be specifically angled towards either film or camera output. In the new Agfa-Gevaert link-up, for instance, Agfa, though linked to Bayer, has on the whole been known for its camera side, while Gevaert features largely as a producer of stock.

E.E.C.: Too Little Financial Co-operation?

Italy's current balance of payments crisis highlights what many outsiders regard as a singular lack of financial co-operation between Common Market countries. Even now, when Italy is in real need of financial help, Common Market countries are estimated to be contributing only about one-third of the 1,000-million-dollar international credits designed to halt the runaway Italian inflation. Almost half the money is being provided by the United States through the Export-Import Bank and the Agricultural Credit Corporation.

Many European economists are puzzled about why West Germany and France—respectively with the world's second and third largest gold and dollar reserves—did not take earlier action to help Italy. The arguments in favour of some form of concerted European action are based on three main factors:

1. Both France and West Germany have benefited greatly from the surge in Italian imports which has itself brought on the balance of payments crisis.

2. Similarly, these two countries, and in fact other Common Market members as well, have gained large amounts of Italian capital that have fled the country in recent months.

3. Raising money to help Italy would have been a useful means of building a stronger Common Market capital market structure.

The last opportunity seems to have been lost. The moment of real crisis for Italy may be receding. In a recent speech Dr. Guido Carli, Governor of the Bank of Italy, said that none of the international credits had been drawn so far and a new inflow of foreign exchange had already taken place. Reserves still stand at 2,750 million dollars, excluding the international credits.

But the Common Market's failure to help Italy over her troubles is by no means the only indication of a go-it-alone attitude among the Six on financial matters, as illustrated by Euro-dollar issues arranged on the London market in recent months by Belgium and Italy. These operations might conceivably have been handled by Common Market capital markets or even at official level by Governments. The difficulties in E.E.C. capital markets are considered partly to be an indictment of the European Investment Bank which was set up by the Common Market to promote mutual aid in the financial field. Though the Bank has made a certain amount of capital available for supporting new development in backward areas, it is evident that its funds are much too small to deal with any sizable crisis such as Italy has experienced.

Yet another somewhat puzzling aspect of the credits given to Italy is the absence of participation by the International Monetary Fund. Normally, the I.M.F. would be the source of two-to-five-year credits, in order to meet situations which the Italians now find themselves in. Italy has in any case automatic access at the I.M.F. to 225 million dollars which comprise its existing net creditor position *plus* a gold tranche. This ignoring of Fund credits is thought in some quarters to show that the I.M.F. funds, already under strain due to drawing of United States dollars and pressure on Japanese yen and Dutch guilders, may not have sufficient finance available to help Italy.

At their current monthly meeting, the Common Market Finance Ministers may make moves to strengthen E.E.C. co-operation in the financial field. At the meeting, M. Rene Marjolin, E.E.C. Commission Vice-President, is likely to propose a whole range of measures to deal with the current inflationary problem. M. Marjolin is generally expected to seek greater power for the Commission in co-ordinating economic and financial policies. But he may meet opposition from Italy to proposals to deal with inflation in other E.E.C. countries, which might bring even more troubles to Italy. The Italian agrument could well be that priority should for the moment be given to the most seriously pressed country, namely, Italy itself.

Heart-searching in E.F.T.A.

The European Free Trade Association, well ahead in its internal tariff-cutting programme and a success in other ways, is nonetheless the object of a good deal of heart-searching ahead of this year's Kennedy Round.

The questions at issue in the seven E.F.T.A. capitals concern the Association's very existence. They turn on these factors:

(1) E.F.T.A., which has deliberately eschewed an external common tariff—so as to leave an opening to the Common Market for its members—now faces the possible imposition of large Kennedy Round tariff cuts on top of its own recently accelerated programme of dismantling.

(2) Britain which, statistically, at least, bears about half the burden of E.F.T.A. development, is preoccupied with both domestic economics and politics and with her future world role—factors which may knock the cornerstone out of the Association.

(3) A major hazard for the Association remains: all eyes are still on Brussels and there is a feeling, now reviving in Austria, Switzerland and some Danish circles, that E.F.T.A. is a poor substitute for the Common Market. This feeling would obviously be heightened by a new British application to join E.E.C.

Against this background, there is a growing feeling within the Association that it should aim for wider markets and like the "Six" extend its field of action to common economic and social policies. For the future, new fields are already being investigated. An E.F.T.A. Economc Development Committee has been set up to aid development generally, though Britain as the major partner—having over half the population and almost half the total trade—is again likely to have to shoulder the larger part of the burden of this committee.

In the continental member-countries it is increasingly felt that E.F.T.A.'s future would be made easier by certain knowledge that Britain was putting her whole soul into it. In the present state of party politics in Britain, this is probably too much to ask this year. The feeling that Britain is interested in E.F.T.A. only until she can make another application to join the Six will not be dispelled—or confirmed—until after the general election.

The European Free Trade Association is now two years ahead of schedule in its task of reducing tariffs. Industrial tariffs among members will now be abolished by the end of 1966. Tariff levels were reduced at the end of last December to 40 per cent of the November 1959 level and by the end of this year they will be reduced a further 10 per cent to 30 per cent. In addition, progress has also been made in the non-industrial field through special trade agreements. In particular, Denmark has made a number of them, especially with Britain, to cover her agricultural produce. At the time of the founding of E.F.T.A., agricultural products were not included in the provisions to cut tariffs.

As tariffs have been progressively cut, trade among E.F.T.A. members has increased. In 1960, trade among the seven members (Finland only became associated the next year) grew by 15 per cent. For the next two years, it tended to level off, but, by the first half of 1963, it had resumed its upward trend again and put on another 7.5 per cent. On top of this, the percentage of E.F.T.A. countries' exports going to member-countries has been steadily rising. From 17.9 per cent in 1959, it went up to 19.9 per cent in 1962 and 21 per cent last year.

British exports have contributed greatly to this trend. The value of exports of manufactures to E.F.T.A. was 39 per cent greater in 1962 than in 1959 and imports were up by 43 per cent. Engineering products accounted for nearly half the value of these exports. British exports to E.F.T.A. have, in fact, been growing (with the exception of those to Denmark) faster than to the rest of the world as a whole.

Israel and the Six

The Common Market, which has lately favoured special trade agreements rather than associateship for outside countries, has decided to offer such an agreement to Israel. Negotiations with Israel, which had earlier debated Common Market associateship, began late in 1962 but broke down last June over terms which the Israelis considered derisory. Since then, the special trade pact procedure has gained a precedent in an agreement between the Six and Iran; and now Lebanon is to be offered most-favoured-nation arrangements. But the establishment of the procedure is thought unlikely to preclude further hard bargaining between the Europeans and Israel.

Last year, the Six put forward highly limited proposals for tariff and quota concessions on imports of Israeli grapefruit, certain fertilisers and bathing suits. This was turned down by the Israelis, who wanted comprehensive market access for farm products—notably their leading export, citrus; concessions on other items made only in Israel; and duty-free entry for goods processed in Israel from materials of Common Market origin. Although even M. Jean Rey, European Foreign Relations Commissioner, admitted that what had so far been offered to Israel was "not particularly far-reaching," the Six remain in a politically difficult position because of Israeli competition with products from Italy and from Common Market associates in North Africa.

The Common Market Council of Ministers has now agreed to widen the offer to Israel, although the basically selective nature of the tariff concessions does not seem to have been altered. The Six will now add to the original list eggs—intermittently important to Israel exports—tyres, a wider range of clothing and certain metal goods, all of which will receive a 20 per cent preference for three years. Israel is expected to bargain over the tariff list clause by clause—and seems in a stronger position than a year ago to do so, because of expanding exports outside Europe.

East Europe's Common Market

The administrators of COMECON—Eastern Europe's common market, now planning another stage of integration—appear to be reaching a compromise with those countries which have lately disputed their role in it. The dispute turned on specialisation which, as originally planned seven or eight years ago, would have meant that Rumania, Bulgaria and Hungary would have been the Soviet bloc's main agricultural suppliers, Russia, East Germany and Czechoslovakia the industrial sources, particularly of capital goods, and Poland, a mixed economy of agriculture, consumer industries and mining. A particular difficulty, however, was that the smaller southern countries, notably Rumania, objected to being cast in a permanent agricultural role. Rumania in particular has lately, like Italy after the war, been rapidly developing industry from a very small beginning.

What is now being discussed in COMECON is, basically, the original plan, but, judging by reports of the talks, Rumania and Bulgaria will now in fact get some "official" COMECON industry. This would largely be consumer industry transferred from Czechoslovakia and East Germany, which between them are likely to need between 50,000 and 60,000 extra workers for big steel projects in the next year or so. Apart from Russia itself, these two countries are to form the bloc's main, heavy engineering base. Most of Czechoslovakia's mass-production footwear industry—based on the old pre-Communist Bata complex—will go to Poland, where it will provide needed employment in some areas. Poland, on the other hand, will leave the making of cars to Czechoslovakia, Russia and East Germany, and it is likely that the marginal amount of vehicle building and assembly in other European communist countries will also cease.

The Unemployed Millions

At least 10 million people in the world, who can normally expect a regular wage, will be out of work for significant periods this year through no fault of their own—despite a distinct tendency, at least in the industrialised West, for unemployment to decline. Even this figure, the only reasonably documented estimate, almost certainly grossly understates the problem of the jobless. It is based on conditions in only 35 of the more important nations and, in a country such as India, which on this basis admits to unemployment of only 2.66 million of its 440 million population, the situation in the vast, shifting community of subsistence and other non-monetary labour is left out of account. Less secure estimates put total world unemployed—among those normally capable of producing and supporting themselves—at nearer 30 million; 50 or even 100 million has also been hazarded by some economists.

Of the figure of 10 million unemployed, over half are in the 13 most important Western countries—5.3 million; and of this figure just over five million are unemployed in the United States, Britain, Canada and Italy. The key feature here is the concentration of unemployment in three of the world's most industrialised countries. Italy can be set aside, since she has been exceptionally successful in bringing her level of unemployment down over the last ten years. In 1956, it was 1.84 million; by last November it had fallen to just over 400,000. The last time it was over a million was in 1959. That the other three have been unable to cure a level of unemployment ranging from Britain's two per cent to America's 5.5 per cent could have serious consequences for all other countries trying to industrialise. Some economists say this implies that once a certain level of industrialisation had been reached—and this is the trend in the world—basic labour absorption tends to slow almost to a standstill and, with automation, more unemployment can be expected. The one experience that stands out against this trend is the way West Germany has managed to overcome the problem. Broadly, as industrialised as Britain and the United States, it has still managed to absorb millions of immigrants from East Germany and keep unemployment down to 0.5 per cent.

Position in Communist Countries

From the figure of world unemployment is, of course, excluded the entire Communist bloc. China is thought to have countless millions effectively unemployed; there must also be some (though probably a lot less) unemployment in Russia, Czechoslovakia and the others, if only to maintain the mobility of labour. But Communist economics refuses to accept the premise of unemployment and, consequently, says that it does not exist there. The true position of the level of employment in a communist society may be mirrored by Yugoslavia, an economy similar in many respects to those behind the Iron Curtain. And yet Yugoslavia currently admits to having one of the highest levels of unemployment in Europe—7 per cent average in the first eight months of last year (though declining to 4.8 per cent in August).

Apart from Britain, most other European countries have a marked shortage of labour. The latest figures available show that France has 0.3 per cent of her working force unemployed, Germany 0.5, Norway 0.7 and Sweden 0.8. Even Belgium, where a "freedom-of-the-labour-market" policy might be expected to have produced a relatively high rate of unemployment, has managed to contain it to 1.6 per cent. Switzerland has managed to achieve as near full employment as is compatible with an advanced country: last November, only 263 people were registered as being unemployed.

In the more advanced countries the most urgent coming problem concerns labour substitution. Automation, technical advances and the concentration of the working population increasingly on a small number of large urban conurbations are providing their own problems. Apart from the question of resettling men displaced by machines, whole areas are being left in an industrial vacuum. At the same time, the rise of technology is seriously affecting industrial craftsmanship. It is creating a surplus of unskilled and semi-skilled men; it is bypassing the need for craftsmanship, so that, in future, there are likely to be fewer craftsmen and more semi-skilled men—who will in turn later find their jobs affected by growing technology.

How Many Days Off?

World discussion of a fixed Easter and a British experiment in setting the August Monday holiday at a more propitious time—four weeks later than usual—look like raising important issues in Europe about statutory days off for industrial and commercial workers. Behind the discussion are such major developments as the economic integration of Europe, growing road congestion because of booming car ownership and the disturbance of industry and commerce by massive national shut-downs.

The lowering of frontiers to trade and investment is expected to mean that European

CHANGES IN RUSSIAN OIL EXPORTS

PRESENT RESPITE MAY ONLY BE TEMPORARY

THE Russians are clearly finding it difficult to pursue an energetic oil export drive in the Western world, and at the same time meet all their own requirements and those of countries in Eastern Europe. *Soyuznefteexport*—the Soviet Union's oil export agency—has lately been less aggressive in its selling tactics than in the past, and it is now confirmed that, last year, as in 1962, oil shipments from the Soviet bloc to the free world as a whole again rose at the comparatively modest rate of nine per cent. They thus reached around 32 million metric tons.

As is shown in the accompanying table, Soviet bloc exports to the free world have nearly trebled since 1958, but, whereas the annual increases in 1958-61 averaged five million tons, they have since gone down to about half that figure, and the decline is even more marked if expressed in terms of annual percentage increases. Also, in the past two years, the expansion of the Soviet bloc's deliveries has only just kept pace with the expansion of the free world's oil supply outside North America, while the share of these exports in Communist countries' own production remained virtually stable at around 14-15 per cent. slightly over half of last year's oil exports from the Soviet bloc consisted of products—mainly black oils—but crude oils accounted for most of the year's increase. About nine-tenths of the exports are from the U.S.S.R. itself, and most of the remainder from Rumania.

Western Europe

The main purpose of these oil shipments, from the point of view of the Soviet bloc, is to pay—directly or indirectly—for imports of industrial products, and Western Europe is, logically, the main target of this trade. Indeed, last year's over-all increase in Soviet bloc shipments was exclusively absorbed by West European countries. In all, they took some 12 million tons of crude from Russia, and some 13 million tons of products from Russia, Rumania, and other East European countries. These Russian deliveries accounted for nearly five per cent of Western Europe's crude oil imports, and for over a quarter of the supplementary imports of products from outside the area.

Italy, followed by Western Germany, has been for several years the largest importer of Soviet bloc oil, and the recent Russo-Italian trade agreement foreshadows further gradual increases over the next few years. Soviet bloc oil accounted last year for 16 per cent of all Italian imports, while the proportion in Western Germany was about eight per cent; the E.E.C. Commission considers 10 per cent to be the maximum consistent with the maintenance of national security. Two smaller countries—Finland and Iceland—depend on Communist sources for the great bulk of their supplies; Sweden depends on such sources for nearly one-fifth of her imports, and Greece for nearly 30 per cent. Austria and Yugoslavia are mainly supplied from their indigenous oilfields, but their supplementary imports come largely from the Soviet bloc, though Austria will change to Western sources after the completion of the projected pipeline from the Adriatic Sea.

The share of Soviet bloc oil in the supply of the other West European countries is relatively small, but there are only two countries in the area—the Netherlands and Ireland—where there have lately been no, or virtually no, imports from the bloc. In contrast, Soviet bloc deliveries to France and to Denmark increased sharply during 1963, and the Governments of both countries seem to favour some further increase. In Belgium, an independent group has recently come out with a project for a new 2,000,000-ton refinery, half of whose crude oil is to be purchased from the U.S.S.R.

Japan

Outside Europe, Japan is now the free world's largest importer of Soviet bloc oil, though deliveries in 1963 fell below the level of 3,000,000 tons established in 1961, and maintained in 1962. The current trade agreement foresaw deliveries of 3,500,000 tons for last year, to be followed by rather higher deliveries this year, but Russian price offers have apparently not been sufficiently tempting for Japanese importers to take up the envisaged quantities.

Soviet bloc deliveries of crude and products to developing countries (excluding Cuba) showed last year a modest increase to 3,560,000 tons, but they remained somewhat below the peak of 1958-59. The two main purchasers five years ago have since reached a high degree of self-sufficiency; one of them—Argentina—ceased buying Russian oil as long ago as 1960, while the other—Egypt—has gradually reduced its purchases. Deliveries to Egypt in 1963 were some 500,000 tons lower than previously anticipated.

The gap left by these two countries has been largely filled by higher deliveries to Brazil, India and Ceylon. The current trade agreement of the U.S.S.R. with Brazil foresees further substantial increases in oil deliveries—to 1.5 million tons this year, and between two and three million in 1965. The future course of the Russo-Indian oil trade, however, is now in doubt as *Soyuznefteexport* apparently insists on substantial price increases in any future supply contracts. In Ceylon, the internal requirements of about 600,000 tons a year are now to be primarily supplied from Communist sources, though officials of the State-owned Petroleum Corporation have recently blamed the U.S.S.R. and Rumania for not fulfilling their contractual obligations on time, and thus causing serious local supply difficulties. A somewhat unusual agreement has recently been concluded with the Syrian State Oil Agency, under which *Soyuznefteexport* will supply 280,000 tons of diesel fuel, partly in exchange for 70,000 tons of gasoline.

Prospects

What are the prospects for the future? The Russians will no doubt increase their own output of petroleum products year by year, but the advances in 1964 and 1965 are likely to be rather slower than in the past. At the same time, there is now a growing pressure of demand inside the bloc, in connection with the partial completion of the COMECON pipeline, the build-up of petro-chemical plants, and the general efforts to raise standards of living. But—while it may become increasingly difficult for the Russians to spare rising quantities of crude and products for the export trade—oil certainly continues to be a highly convenient lever in their international trading and, with the Soviet bloc's growing import requirements, the export trade with the Western world must continue to have a high priority even when the allocation of scarce resources is involved. Significantly, the Russians are now reported to have warned the other COMECON countries that they may be unable to honour in full their undertakings for crude oil deliveries through the new pipeline, in view of the need to maintain a substantial export trade with the free world.

It is always difficult to interpret the intentions of the Russian authorities, but it would seem, on balance, that this year, and perhaps in 1965, the oil deliveries from the Soviet bloc will expand at a similar rate as in 1962 and 1963, with the share of Russian oil in the supply of the free world remaining, once again, more or less unchanged. It is possible, however, that, after 1965, with a further growth in their own crude oil production, the Russians will aim at a more rapid expansion of their trade, and that they may then resume the aggressive trading tactics which until recently had such an unsettling effect on international oil markets. The present respite from this aggressiveness is welcome, but it would be wrong to regard it as permanent.

Meanwhile, the unexpected slow-down in the delivery schedules to the COMECON countries seems to have caused disappointment in some of the capitals of Eastern Europe, where the promised Russian oil deliveries have been an integral part of recent economic planning. It has often been pointed out in these columns that arrangements for oil imports from the U.S.S.R., for all their superficial attractions, always contain an element of risk, because they can be easily curtailed for reasons of political and economic expediency. The stoppage of all Russian oil deliveries to Israel during the Suez crisis is one example of this dangerous trading habit, but the recent experience of China shows that the risks are just as real for Communist as for non-Communist trading partners of the U.S.S.R. It now looks as though the same lesson, in a less drastic form, is also being demonstrated in Communist Eastern Europe.—*By arrangement with Petroleum Press Service.*

THE BANK OF MAHARASHTRA LIMITED

COMMISSION TO SPELL OUT BANKING POLICY WANTED

CHAIRMAN, MR. V. P. VARDE'S SUGGESTION AT ANNUAL GENERAL MEETING

A SUGGESTION that a commission consisting of eminent economists and bankers should be appointed to decide the policy and pattern of banking most suited to the country was made by Mr. V. P. Varde, Chairman of the Bank of Maharashtra, in his speech at the Annual General Meeting of the Bank held at Poona on the 2nd inst. Mr. Varde made this suggestion while commenting on the absence of what he called a "well-defined policy and pattern of banking in India." While on the one hand Mr. Varde commented, small banks were given to understand that they had an important role to play in the economy, they were being discouraged, on the other. A commission was, therefore, needed to define the role of small banks. The following are some extracts from Mr. Varde's speech:

GENTLEMEN,

Banking in 1963 maintained its progress as before and the total deposits with scheduled banks have grown to the extent of Rs. 2,250 crores against Rs. 2,000 crores in 1962. This is about 12½ per cent as against 12 per cent for the last year. Demand for bank credit was also on the high side and the advances of the scheduled banks went upto Rs. 1,700 crores by the end of the year.

Unhealthy Competition

Like last year, the increase in deposits was mainly due to the increased supply of currency which is at present around Rs. 2,480 crores. This was inevitable because of last year's programme for defence and development. But the increase would have been still more if all the budgetary resources that were sanctioned could have been spent by the Government. Nevertheless, it is becoming increasingly clear that the demands for funds are growing faster than the rise in the aggregate resources of the money market. The pace of industrial growth in India, in spite of various difficulties encountered by entrepreneurs, is so fast, that banks are unable to supply even reasonable bank credit for productive purposes. Because of the rigid tax structure with its bias for social justice, the uncertainty regarding restrictions that may be placed by the Government on acquisition and accumulation of wealth and the mounting cost of living, deposits are not increasing as fast as they should have been. Some banks are, therefore, becoming more and more aggressive to attract deposits by unhealthy competition and offering unremunerative services. In the wake of rising costs, this type of competition will not, I am afraid, lead to healthy results as far as the Indian banking system as an industry is concerned, though it may help a few banks at the cost of others. Any step, such as an increase in deposit rates or any free-of-cost facility will have, therefore, to be judged by all the banks jointly from the point of its impact on Indian banking, especially in view of the cry for "Nationalisation of Banks." This implies that the banking units, whatever might be their individual size and strength, must not only think collectively but also act jointly and lend support to each other.

Nationalisation of Banks

I am sure you would expect me to say a few words on the "Nationalisation of Banks." This Bank was started with some social objectives and not merely as a banking company for the economic, industrial, and social development of Maharashtra which was and is still economically and industrially backward. It was not started by industrialists for the benefit of their industries. The ownership and control was not and is not even today vested in a few hands. If the objectives for which the Bank was established can be better served by nationalisation, I for one and my Board will not only not object to it, but, on the other hand, welcome it. But my experience and the experience of small and promising young men who desire to enter the industrial and business field is that centralised, State-owned or State-sponsored, monopoly institutions do not serve their purpose and the red-tape and long-drawn procedures defeat the very objective for which the Government starts new corporations. I am, therefore, firmly against the nationalisation of banks.

I am not convinced by the arguments advanced for the nationalisation. The main ones are: there has been concentration of economic power in a few hands; the managements are utilising the funds at their disposal for granting loans to their concerns for big industries; small-scale and medium-sized industries are not getting the attention and advantage of banks; the banks do not help the social objectives of the Five-year Plans of the country; and the banks are not lending for agricultural production.

As regards the concentration of economic power, it would not be correct to charge the banks for it since the voting power of a person in a banking company was restricted to maximum 5 per cent of the total voting strength until recent times and now it has been further reduced to 1 per cent. The real danger, if banks are nationalised, will be of the economic and political power being concentrated in the hands of the ruling political party to the disadvantage of the common man for whose interest the clamour for nationalisation of banks is apparently made.

Financing Agriculture

The country requires both big industries as well as small, and even if the banks are nationalised the big industries will require to be financed in a big way. If big banks neglect the small man the way is to take steps to satisfy his needs by creating organisations to suit his requirements. If the grievance is that the banks are utilising the funds not for legitimate production or for the objects of the Plan, then the Reserve Bank, as a central banking authority, has ample powers to pull them up. It is hard to believe that the central banking authority cannot take action. In fact the Reserve Bank, in its various reports, has stated that the Indian banks, by and large, have worked on very sound lines. For a few erring banks, the remedy, suggested is worse than the disease. Regarding financing of agricultural production, the commercial banks in the first instance have not adequate funds to meet the demands of commercial and industrial sector and, secondly, it is not possible for them to grant crop loans as our agriculturists are scattered in villages. On that account, after a careful study by the Agricultural Credit Survey Committee appointed by the Reserve Bank, a well integrated scheme has been evolved on the co-operative basis for crop loans. I do not think commercial banks should encroach and hamper the growth of the co-operative movement, which is in the best interest of peasants. In fact, a similar integrated structure requires to be planned and built up for commercial and industrial sector in the country for rapid economic and industrial development. What is required is cool thinking and a sound economic decision and not a political one.

Small Banks Need to be Encouraged

I have expressed more than once that neither the Planning Commission, the Government or the Reserve Bank has placed before the country a well-defined policy and pattern of banking in India. While statements are made at high levels that small banks have an important role to play, no concrete step has been taken to implement these suggestions. On the other hand, small banks are not given any significance or advice for their development on sound lines; instead, they are discouraged. If large and small-scale industries must grow side by side, I am of the opinion that there should be small banks also working side by side with big banks and the latter, not in competition with the smaller, which should work as the feeder or subsidiary banks in an integrated structure for the benefit of the country. Therefore, a co-related structure has got to be evolved. The current philosophy seems to be "every one for himself and devil take the hindmost."

My suggestion therefore is that this subject should be fully and carefully studied by a Commission consisting of eminent economists and experienced persons of international repute in banking and industry. It should decide the banking policy and the pattern which is best suited for this country. After this study, if the Government comes to the conclusion that nationalisation is the only way, no one will have any objection. In that case, I shall, however, suggest that, instead of having one centralised bank for the whole country with its numerous branches all over, the banking pattern should be State-wise. Every State should have its own bank with the State Bank of India, functioning as its apex only, with no branches except at State capitals, to help and guide the respective State banks. If that is done Maharashtra can expect to get a proper deal in economic expansion; otherwise, new-comers in the industrial field in Maharashtra will have every reason to fear that their interests will be adversely affected if a centralised unit is established on an all-India basis.

All-round Progress

Coming to our own affairs, I am sure, you have carefully gone through the balance-sheet and the profit and loss account. The Bank has been able to maintain its all-round progress as usual. The Board decided to issue in July last fresh shares of the face value of Rs. 50 lakhs. This was the largest single issue of capital made by the Bank since its inception and it was offered to the present shareholders. I am happy to say that the issue was oversubscribed. To facilitate the members to take up the shares to which they were entitled, the amount was made payable in small instalments.

As per our declared policy of strengthening our reserves as much as possible, we have added this year more than 40 per cent of the net profits, i.e. Rs. 4 lakhs to the general reserve. Our total reserves, exclusive of the newly created dividend reserve, will stand at Rs. 30.90 lakhs. Our own funds now are Rs. 91.20 lakhs as against Rs. 76.55 lakhs last year. Deposits which were around Rs. 19 crores two years ago, are now in the vicinity of Rs. 30 crores as against Rs. 24.71 crores in 1962. The rise in our deposits during the year was 20 per cent as against 12½ per cent in the deposits of all scheduled banks. I am grateful to the shareholders and the general public for their confidence in this institution.

You will have also noticed on the liabilities side that we have started utilising the services of the Refinance Corporation for Industry Ltd. With the resources thus augmented, we shall be in a position to give more and more help for medium-term loans needed by industries newly established or planning expansion. You are already aware that our bank is helping the small and medium-scale industries for their genuine needs for working capital or medium-term finance for many years. We are appointed by the Maharashtra State Government to loan to small-scale industries even upto a period of ten years and I am pleased to announce that recently the limit for such loans under State-Aid to Industries Rules has been raised by the Government from Rs. 10,000 to Rs. one lakh.

Looking to the other side of the balance-sheet, you will note that we have maintained high liquidity as usual. Our investments in Central and State loans stand at Rs. 11.81 crores, as against Rs. 8.24 crores last year, showing an increase of 43 per cent. We have also subscribed to the debentures of Municipalities, Electricity Boards, and shares of Financial Corporations, thus taking our due share of responsibilities in assisting the citizens and the common man (private sector) through the organised activities of the public sector. The ratio of our investments to deposits is 45.10 per cent and out of this again the ratio of Government and Trustee securities, as mentioned above, to total investments is 94.40 per cent.

Underwriting

We have also started underwriting, directly and indirectly to a limited extent, shares of various industrial concerns, more particularly the enterprises in the underdeveloped parts of Maharashtra. Our total investment in industrial concerns by way of shares and debentures is 5.6 per cent of our total investments. This is a field of activity which is very vital to the economic growth but at the same time no bank can afford to have an unbalanced investment portfolio. Your Bank has pursued the middle course and is confident that this branch of its activity will broaden as its resources continue to broaden.

In the matter of advances, we have been continuously giving priority to the small and

NIZAM SUGAR FACTORY LIMITED

CHAIRMAN, MR. V. K. RAO, REVIEWS INDUSTRY'S PROBLEMS

INCENTIVE FOR MORE PRODUCTION EXPLOITED FULLY

IN the course of his speech at the Twenty-sixth Annual General Meeting of the Nizam Sugar Factory Ltd., held at Hyderabad on 30th March 1964, Mr. V. K. Rao, Chairman of the Company, reviewed the problems of sugar industry in the country. Stating that the problems had continued to multiply, he explained how, within eighteen months, the Government's policy had changed from restriction in production to inducement for increased output. He said, however, that the incentive allowed at the commencement of the current season, by way of a rebate in excise duty to the extent of 50 per cent on the additional sugar production over the previous year, had been taken full advantage of by the Company and had resulted in a rebate of Rs. 3.96 lakhs. Mr. Rao said that the rehabilitation and modernisation of the Company's plants had become inescapable for more efficient working and referred, in this context, to the creation of a rehabilitation reserve of Rs. 9 lakhs.

The following is the full text of Mr. Rao's speech:

I have great pleasure in welcoming you to the twenty-sixth annual general meeting of the shareholders of the Nizam Sugar Factory Limited. The Directors' report and the audited accounts for the year ending 30th September 1963 have been in your hands for some time. The comments of the Comptroller and Auditor-General of India thereon under Section 619(4) of the Companies Act, 1956 could not be posted to you along with the audited accounts, as they had not been received by then from the Comptroller and Auditor-General of India. The comments were posted to you subsequently and must have reached you some time back. With your permission, I shall consider the Directors' report, audited accounts and the comments as read.

Industry's Problems Multiply

I shall now briefly review the important developments that have taken place in the sugar industry since the last annual general meeting. The problems of the sugar industry continue to multiply. As a result of the record production of nearly 30 lakh tonnes in the year 1960-61 and the consequent crisis of surplus and the fall in sugar price, the Government of India by an ordinance curtailed the production of sugar in the year 1961-62 by 10 per cent of the previous year's production. This resulted in a lower production in the year 1961-62 to the tune of 27.2 lakh tonnes. In the year 1962-63, the production further decreased to 21.5 lakh tonnes, the main reason being less area brought under cane cultivation as a result of the ordinance promulgated in the year 1961 and also due to large-scale diversion of cane for *gur* and *khandsari* manufacture. The increase in the internal demand and the export commitments further contributed to the general shortage of sugar in the country. Thus, in 1963, we saw again an acute shortage of sugar throughout the country and the reintroduction of controls by the Government.

In order to boost production, the Government of India, at the commencement of the current season, offered an incentive by way of rebate in excise duty to the extent of 50 per cent on the additional sugar production over the previous year's figures for the period 1st July to 31st October 1963. Thus, within 18 months, the Government's policy changed from restriction in production to inducement for increased output.

In am glad to say that your Company has taken full advantage of this inducement and has earned a rebate of Rs. 3.96 lakhs.

Price of Cane

The price of sugarcane has been fixed on the basis of quality this year also. As mentioned in the Chairman's speech last year, since the recovery of the optimum period was taken as the basis, it has resulted in the fixation of a higher price than the real value of sugar content in the cane. There was again an upward revision in the minimum price for cane in the year 1962-63 to Rs. 46.60 and further increase in the year 1963-64 to Rs. 53.70 per tonne. The Government of India have also announced a still further increase in the price of cane for the 1964-65 season. However, no corresponding increase in the ex-factory price of sugar has been fixed by the Government of India.

I shall now proceed to review the working of your factory. During the year under review, 575,420 tonnes of cane was crushed producing 59,901 tonnes of sugar with a recovery of 10.4 per cent, as against 600,267 tonnes of cane crushed producing 57,566.5 tonnes of sugar with a recovery of 9.59 per cent of the previous year. The factory commenced crushing operations on 19th October 1962 and the season came to a close on 24th April 1963. The duration of the season was 188 days, which was shorter by 34 days than the previous season. This was due to crushing of 24,847 tonnes of cane less than in the previous year. Nevertheless, on account of the slightly higher recovery, there was an increase in the output of sugar from 57,566.5 tonnes to 59,901 tonnes. The factory farms produced and supplied 237,917 tonnes of cane as against 239,282 tonnes in the previous year. Your Company made a gross profit of Rs. 78,65,747, as against Rs. 52,26,136 in the previous period of 15 months ending 30th September 1962. The increase in gross profit this year as compared to the previous period is mainly due to better recovery per cent of 10.4, as against 9.59 obtained in the previous period and saving of additional three months' expenditure, which was incurred in the previous period. Deducting Rs. 19,26,147 towards depreciation (including development rebate of Rs. 52,500) and Rs. 25,00,000 for taxation, the net profit is Rs. 34,39,600 which exceeds the net profit of the previous period by Rs. 14,67,252.

Results Satisfactory

I am glad to say that the results of the year under review are satisfactory. Sugar sales during the year were 857,941 bags as against the previous period's sale of 645,342 bags. Your Company has incurred a loss of Rs. 17.9 lakhs on the export quota of 122,710 bags allotted to it.

Your Directors have recommended payment of dividend on preference shares in terms of Preference Shares (Regulation of Dividends) Act, 1960. In the case of ordinary shares, your Directors have recommended a slightly higher dividend of Rs. 5 per share of Rs. 25 fully paid, subject to deduction of tax, as against Rs. 4.50 recommended last year.

The rehabilitation and modernisation of both the plants have become inescapable for more efficient functioning. For the first time, therefore, your Directors propose to create a rehabilitation reserve for which a sum of Rs. 9 lakhs has been transferred as a nucleus to be built up to a substantial reserve in the years to come.

Agricultural Operation

The agricultural operation account this year shows a profit of Rs. 25,12,626, as against Rs. 15,18,600 in the previous period. The increase in profit to the tune of about Rs. 10 lakhs is mainly due to the enhanced cane price of Rs. 46.60 per tonne this year, as against Rs. 43.40 per tonne of the previous year and the overall savings of about Rs. 3 lakhs in the cost of cultivation. The cost of cultivation per acre for the year under review is Rs. 1,430, as against Rs. 1,523 in the previous year, and the cost per tonne works out to Rs. 36.21, as against Rs. 37.36 in the previous year. The yields have been maintained almost at the same level as that of the last year. The working results of the plantation department are no doubt satisfactory but there is considerable scope to improve both the quality of cane and the yields. This needs mechanisation of all the operations to the maximum extent possible. But due to lack of adequate number of tractors, so far we have not been able to cover the entire acreage by machines. I am glad to say that the Company has ten more medium horse-power tractors and has also secured an import licence for two 100 h.p. tractors. With the addition of ten more 100 h.p. tractors, we shall be able to mechanise all the operations of our entire estate. Our present fleet consists mostly of tractors purchased from Disposals. We hope to reduce operation costs considerably with the replacement of these old tractors by new ones.

The working results of the confectionery plant show a loss of Rs. 1,05,661, as against Rs. 2,47,477 in the previous period. The production of confectionery goods was 501.75 tonnes during the year, as against 247.27 tonnes during the previous period. There has been a substantial increase in the sale of confectionery goods this year, reducing the loss to Rs. 1,05,661. Sale of confectionery this year reached a figure of 499 tonnes valued at Rs. 12.73 lakhs, as against the figure of 246.76 tonnes valued at Rs. 6.09 lakhs of the previous period, and during the year 1963-64, for the period of five months, the sales have touched a figure of 302.5 tonnes valued at Rs. 7.16 lakhs. I am glad to inform you that, in spite of keen competition, this line is now picking up and we can reasonably hope for further improvement during the years to come.

Silver Jubilee

I have pleasure in informing you that the silver jubilee celebrations of the Company were held on 25th February 1964, when Dr. N. Sanjeeva Reddy graced the occasion. The management took advantage of these celebrations to acknowledge the loyal and valuable services rendered to the Company by the officers and workers and the cordial relations between the workers and the management; also the role played by the local cane growers in building up the prosperity of the Company.

The management-labour relations during the period were satisfactory. Construction of 260 two-room tenements has been completed. These tenements have been occupied by the workers. The Company is taking up construction of another 200 two-room tenements under the subsidised industrial housing scheme.

I regret to inform the shareholders about the sad demise of Mr. I. Ramchandra Rao, I.A.S., one of the Directors on the Board of the Nizam Sugar Factory Limited.

Before I conclude, I would like to express my thanks to my colleagues on the Board of Directors for their abiding interest in the affairs of the Company and to the officers, staff and workers of all ranks for their continued co-operation, loyalty and efficient service.

Note: *This does not purport to be a record of the proceedings at the Annual General Meeting.*

BUSINESS NEWS FROM EUROPE

(*Concluded from page 617*)

businessmen will be increasingly irked by the absence of foreign colleagues due to statutory holidays. But the settling of, say, universal Common Market one-day holidays would again raise the issue of industrial disruption—as well as that of religious feeling between the Protestant and Roman Catholic areas of the Continent.

At present, practices vary widely. The average British worker's five to six public holidays a year compare unfavourably with continental Europe. Germany has an average of 10 to 13, Belgium 10, Italy 16 to 17, Luxembourg 10, Holland six to seven and France five (though the real number is nearer 16. France does not recognise certain holidays as statutory).

Europe as a whole compares unfavourably with the Spanish-speaking countries, such as Spain itself (25 holidays), Argentina (30 plus Holy Week), the Dominican Republic and Peru (22 each).

The average annual holiday in France is three weeks (a week more than in Britain) which is not exceptional by European standards. Some Italians get 32 days' paid holidays a year and some Germans 31. The average in these countries, though, is nearer three weeks.

CANARA BANK LIMITED

MERGERS HAVE STRENGTHENED BANKING IN THE SOUTH

CHAIRMAN, MR. K. P. J. PRABHU, ON NEW RESPONSIBILITIES

ADDRESSING the shareholders of the Canara Bank Limited at the Annual General Meeting held at Mangalore on 20th March 1964, the Chairman, Mr. K. P. J. Prabhu, dwelt at length on the issue of merger of small banks with the Bank during 1963. Mr. Prabhu said that, apart from enabling the Canara Bank to expand the sphere and range of its activities, the mergers had also helped to strengthen significantly the banking system of the South. Referring to the additional responsibilities arising out of the mergers, he promised the shareholders that the Bank would discharge them to the best of its ability. The Bank had already been paying more attention, he said, to the development of the newly taken over branches by grouping them for facilitating supervision and development work.

The following is the full text of Mr. Prabhu's speech:

The year 1963 was yet another year of continued progress for the Bank. There was all-round improvement in deposits, advances, investments and profits, despite the stresses and strains which the banking system had to face during the year.

Our deposits registered an impressive rise of 42.3 per cent and stood at Rs. 72.37 crores at the end of the year. This compares favourably with the increase of 10 per cent registered by the entire banking system during the year. The increase in the deposits of our Bank was made possible by the efforts of our old as well as new branches, as also of the branches of the banks taken over by us during the year. We have now a network of 239 branches spread all over South India as well as in some of the important cities of the North.

During the year, we took over the selective assets and the outside liabilities of the S.P.V. Bank, the Cochin Commercial Bank, the Aarnad Bank and the Pandyan Bank. The merger of Pandyan Bank with us has been hailed as the biggest merger in recent years. Apart from enabling our Bank to expand the sphere and range of activities, these mergers have also helped to significantly strengthen the banking system of the South.

Additional Responsibilities

The management is aware that this increase in the activities of the Bank and in prestige have cast additional responsibilities on them. Many of the taken over branches are situated in relatively small places where banking habits have yet to develop fully. We have reason to be happy that the task of developing these areas has fallen on us, and we shall endeavour to fulfil this task to the best of our ability.

We intend concentrating more attention on the development of the newly taken over branches. To begin with, we have grouped these branches so as to facilitate supervision and development work. The branches in each group have been placed under a senior and experienced officer who is designated District Supervisor. Besides guiding the branch managers generally, he would survey the area, assess the potential and take steps to develop business in accordance with the local conditions obtaining. Our efforts along these lines will be intensified during the current year. You will be glad to know that, in this task, we will have the benefit of the experience of two of the erstwhile directors of the Pandyan Bank, Mr. P. V. Mackay and Mr. P. C. M. Ganapathy, who have joined our Board on our invitation.

Additional Capital

As you are aware, additional equity capital of Rs. 25 lakhs was issued during the year to existing shareholders and staff. The response was encouraging and the issue was oversubscribed. With this issue, the entire authorised capital of the Bank, amounting to Rs. 1 crore, stands paid up. In view of the need to strengthen the capital structure further, a proposal to increase the authorised capital to Rs. 2 crores is being placed before you for consideration.

Ownership of Shares

You will be interested to know that the pattern of ownership of the shares of our Bank has not only become broadbased but has also changed significantly in favour of smaller shareholders. Thus, between 1952 and 1963, the total number of shareholders increased by 3,955. Against this, the number of shareholders owning 50 shares and below increased by 3,327. At the end of 1963, the shareholders owning not over 50 shares each accounted for 87 per cent of the total number of shareholders.

Reserves

I would like to invite the attention of the shareholders to the fact that the Bank has strengthened the reserves further during the year, and the reserve fund now stands at Rs. 1 crore, that is, at a level equal to the paid up capital.

Advances

The increasing role played by the Bank in the industrial development of the country is reflected in the marked rise in advances to Rs. 42.27 crores at the end of 1963 (against Rs. 26.93 crores at the end of 1962). The composition of advances has changed from a predominantly commercial type to industrial-*cum*-commercial type, with increased participation in term advances to industries. Another notable feature of our advances has been that we are catering more and more to the small-scale and medium-sized industries thus fulfilling a national need by helping a vital sector of the economy. Contrary to the view expressed in certain quarters that banks have a preference for the bigger parties, I would like to assure you that our Bank has, within the framework of safety and liquidity, always tried to give all manner of assistance to the smaller entrepreneurs.

Foreign Exchange Business

There has been a substantial increase in our turnover of foreign exchange business and the Bank has been steadily improving its share in the financing of the country's foreign trade.

Working Results

The increase in business turnover, following the taking over of four smaller banks this year, is reflected in a sharp rise of earnings to Rs. 345.87 lakhs (Rs. 264.87 lakhs last year). However, there was also a marked rise in operating costs with the result that the net profits witnessed only a moderate improvement to Rs. 24.12 lakhs (Rs. 20.58 lakhs for the previous year). The main factor behind the higher level of expenses is the addition to the number of branches and staff consequent upon the taking over of four banking units, not to mention the fifteen new branches opened by the Bank during the year. I am sure that as the potential of these branches is further realised, these branches will make a significant contribution to the Bank's earnings.

New Administrative Office Building

An important event during the year was the inauguration of our new Administrative Office building at Bangalore. The magnificent structure, which embodies latest architectural and functional innovations, has been designed to meet the growing needs of our Bank.

Expansion of Training Facilities

In view of the substantial expansion of our activities resulting from the take-over of four more banks during 1963, we have need for a larger number of trained officers. We have therefore taken steps to provide facilities for a senior training course at the Administrative Office, Bangalore. The first training course has already commenced and a large number of officers from the erstwhile Pandyan unit partake the course with some officers from our older branches. The training facilities for the junior course have also been expanded. A special training programme has been arranged at Madurai, after the take-over of the Pandyan Bank, for the newly taken over employees. I hope these facilities will enable our newer staff members to equip themselves better for shouldering greater responsibilities, besides giving them a good knowledge of our system of accounting.

Staff

I am glad to report that the employee-management relations witnessed a distinct change for the better. The representatives of the management and the union were able to reach an agreement on the promotion policy to the satisfaction of both parties. I trust this will mark the beginning of a new era in employee-management relations.

Before I conclude, I would like to make a passing reference to the prevailing controversy about nationalising banks. The Government being committed to a mixed economy in the achievement of democratic socialism, the inevitability arises of allowing the private banking sector to play its parts in the financing of the private sector in production and distribution. In the welter of political pressures, an under-current of this thought is discernible from responsible quarters. Even as it obtains now, the banking industry is in practice a regulated industry. Already one-third of the banking industry is in the public sector. A complete State monopoly of banking would eliminate the healthy competition now obtaining not only between the State banks and the banks in the private sector, but also between the banks in the private sector, and thus remove the only source of incentive for higher efficiency and better service.

MACHINERY MANUFACTURING INDUSTRIES

PROGRESS DURING 1963 REVIEWED

THE Department of Heavy Engineering in the Union Ministry of Steel, Mines and Heavy Engineering has now under its control the development and regulation of several engineering industries. These are: (i) Heavy engineering equipment for all industries such as automobiles, boilers, internal combustion engines and steam and water turbines, electrical generators, transformers, switchgear and motors, (ii) all industrial machinery for jute, sugar, cement, chemical and other manufacturing plants, (iii) machine tools, and (iv) agricultural and earth-moving machinery. The Department is also responsible for the control of some public sector projects, namely, Heavy Electricals (India) Ltd., Heavy Engineering Corporation Ltd., Hindustan Machine Tools Ltd. and processing of the Heavy Structurals Project, the Pumps and Compressors Project and the Ball and Roller Bearings Project. In its latest annual report, that for 1963-64, the Department has provided a comprehensive review of production trends and other developments in the industries under its charge. A table accompanying this article gives figures of production in different engineering industries in 1962 and 1963.

Industrial Machinery

The level of output of sugar machinery during 1963 was about the same as in 1962, that is, Rs. 6.5 crores worth. According to the Department, capacity established in this industry will be adequate for some time to come. The present installed capacity, it is said, can take care of 14 new standard plants of 1,000/1,200 tons size and the equivalent of nine plants by way of expansion and replacements. As many as 15 complete plants manufactured indigenously have gone into production and five more are under completion. It is claimed that the foreign exchange content of a plant of 1,000/1,200 tons capacity, valued at Rs. 84 lakhs, has been brought down to Rs. 14 lakhs in 1963.

In the textile machinery manufacturing industry, capacity established is not adequate to meet the requirements of the textile industry, as the Department itself has admitted. These requirements have been estimated at Rs. 310 crores for the third Plan period. It is far from satisfactory that even from the capacity already established, which is of the order of Rs. 44 crores a year, production during 1963 was only Rs. 18 crores. It is expected that production may go up to Rs. 26/27 crores by 1965-66. One of the reasons for the present low level of production is stated to be shortage of foreign exchange for the import of components. Incidentally, imports of textile machinery are at present of the order of Rs. 20 crores per year.

There are now 72 firms licensed for the manufacture of chemical and pharmaceutical machinery and the total licensed capacity is about Rs. 24 crores worth of machinery per annum. Sufficient progress seems to have been made in the manufacture of complete plants for producing sulphuric acid, superphosphates, caustic soda and equipment for water treatment. In addition, items like pressure vessels, distillation stills, crystallisers and evaporators required by the chemical industry are being increasingly supplied by indigenous manufacturers. The output of chemical and pharmaceutical machinery in 1963 was to the tune of Rs. 5.4 crores, as compared with Rs. 4.6 crores in the previous year.

As for tea processing machinery, it is gratifying to know that the entire range of such machinery is now being produced in the country. The industry continues to make good progress and production during 1963 was about the same as in 1962, that is, Rs. 1.7 crore.

In the cement machinery manufacturing industry, the capacity existing and in sight, is considered to be adequate for the foreseeable future. Seven manufacturers, it is said, are capable of producing complete cement plants. They would be able to manufacture and supply eight to ten plants of 600 tons capacity per day by 1965-66. In 1963, however, the industry's output was of the value of only Rs. 70 lakhs.

Four units have been licensed for the manufacture and installation of complete coal washery plants, for which the estimated demand is about Rs. 5 crores a year. It is expected that the four firms would be able to meet the demand at the rate of four or five complete washeries per annum. As for coal mining machinery, there are eight units in the private sector, capable of manufacturing such items as haulages, coal cutters, conveyors and winders. In addition to the coal mining machinery plant established at Dugapur in the public sector, the Government has proposed to set up a second unit, this time with Polish collaboration.

Production of dairy equipment during 1963 was only about Rs. 41 lakhs, though the aggregate annual licensed capacity of four units in production is about Rs. 2.5 crores.

The production target for paper machinery is Rs. 6.5/7.0 crores worth of machinery per annum to be reached by 1965-66. As against this, the capacity already licensed amounts to an aggregate of Rs. 24 crores. But the industry produced equipment worth Rs. 1.2 crore only in 1963. The output of printing machinery is still meagre, being only Rs. 5 lakhs in 1963, although the demand therefor is estimated at Rs. 7.3 crores per annum for the current Plan period. Only one firm is manufacturing printing machinery now. Ten more firms have been licensed and the total approved capacity at present is Rs. 5.6 crores.

The boiler manufacturing industry for which the third Plan capacity target is Rs. 29 crores, has at present 10 units. These have been licensed for the manufacture of different types of boilers ranging from small package type to high pressure, high temperature thermal power station boilers. Of these 10 units, six are in production now. In addition to these, there are six firms which have been licensed for the manufacture of boiler mountings. Out of these six, four are at present in production. The total output of boiler and boiler mountings in 1963 came to Rs. 2.9 crores. In the public sector the factory under construction at Trichy is for the manufacture of thermal power station boilers. The Department expects that this public sector plant, designed for an annual capacity of Rs. 18 crores, will go into production next year.

Conveyors of different types are being manufactured by 22 firms with an aggregate licensed capacity of Rs. 6.7 crores per annum. They produced conveyors worth Rs. 1.5 crore in 1963. As for reduction gears, their output in 1963 was of the order of Rs. 85 lakhs, as compared with Rs. 32 lakhs in the previous year.

In the building and constructional machinery field, substantial capacity is claimed to have been created for the manufacture of stone crushers, concrete mixers, asphalt mixers and tar boilers. During 1963, the production of these items was Rs. 2.0 crores, as compared with Rs. 1.7 crore in 1962.

Machine Tools and Small Tools

It is recorded in the Department's report that the total number of units manufacturing machine tools was 65, with an aggregate installed capacity of about Rs. 19 crores, by the end of 1963. Most of these units have been working to full capacity and several of them on three-shift basis. Production of machine tools and accessories in the public sector and private sector units together rose substantially from Rs. 11.8 crores in 1962 to Rs. 16.9 crores in 1963. In the year under review, the output of small tools, hand tools, grinding wheels and other allied items also increased considerably, as will be seen from the table. It is expected that during the current year production of jigs and fixtures and other tooling equipment would commence and that this would facilitate larger production from the machine tools already installed.

Automobiles and Ancillaries

The output of commercial vehicles, jeeps and cars in 1963 as compared with 1962, was as follows:

Type of Vehicle	1962 Nos.	1963 Nos.
Trucks	25,971	27,521
Jeeps	7,597	8,104
Cars	23,326	15,711
Total ...	56,894	51,336

It will be seen from the above figures that, while there was a decline in the production of cars, there was some increase in the output of commercial vehicles and jeeps. The reason for the steep decline in the production of cars was the cut in the allotment of foreign exchange for importing components, parts and raw materials. The accent has continued to be on the expansion of capacity for manufacturing commercial vehicles. During the year, for instance, expansion of capacity of the Hindustan Motors and the Premier Automobiles for the manufacture of commercial vehicles was sanctioned. The Standard Motor Products of India Ltd. was permitted to manufacture one-ton trucks, while Bajaj-Tempo Ltd. was permitted to increase their capacity for three-wheelers and also take up the manufacture of four-wheeler Tempo vehicles. Ashok Leyland's scheme for the manufacture of 10 ton capacity chassis was also agreed to during 1963. Efforts, it is said, are being made to achieve 90 per cent indigenous content in the manufacture of motor vehicles by the end of this year.

In the "automobile ancillaries" sector, production in 1963 was of the order of Rs. 25 crores, as compared with Rs. 16 crores in 1962. It is claimed that capacity has been established for almost all the ancillary items. The ancillary industry is gearing up to meet the automobile industry's requirement of original equipment, thereby enabling it to achieve 90 per cent indigenous content. Besides, production in the ancillary industry is expected to meet the replacement demand for spare parts to a greater extent than at present.

The total production of motor cycles, scooters, three-wheelers and mopeds during 1963 was of the order of 26,572 as compared with 25,002 in 1962. It is claimed in the report that satisfactory progress has been made by this sector of the automobile industry. Production is likely to increase in the current year, as two manufacturers licensed for mopeds will commence production shortly.

Some noteworthy official statements pertaining to other industries in the group of "automobile and other allied industries" are highlighted below:

1. The diesel engines industry, which used to concentrate on single-cylinder small horse-power engines to cater to the needs of agriculturists for fitment on pumps, has begun to produce of late multi-cylinder diesel engines too. These latter engines are suitable for fitment on agricultural tractors, air compressors, fork lift trucks and large-capacity pumps. The project licensed for the manufacture of Cummins diesel engines for application on earth-moving machinery is being implemented. It is expected that, by 1965-66, the entire requirements of diesel engines for all applications will be met by the indigenous industry.

2. Practically all the demand for pumps is now met out of indigenous production, excepting for special type of pumps for handling acids, chemicals corrosive liquids, etc. The indigenous industry is also now building large pumps required for urban water supplies and sewage disposals.

3. Production of tractors during 1964 will be nearly trebled, as most of the capital goods required for the licensed units will have been received before the end of the year. To meet the growing demand for tractors, it has been decided to licence one or two more units in this field.

Electrical and Other Engineering Industries

In the field of electrical engineering industries, the Department deals only with such items as transformers, switchgear, electric motors and generators. There was an overall increase in the output of these items, as will be seen from the table. Items relating to heavy mechanical engineering industries like steel structurals and railway wagons and the ones relating to metallurgical industries such as steel castings and forgings also showed an overall increase in production during 1963.

In steel structurals, the present licensed capacity is about seven lakh tons per annum. While there is enough capacity for general structural items, larger capacity, it is said, is needed for heavy structurals like bridge-girders, power house structurals, etc. Efforts are being made to sponsor further capacity to fill this gap. In steel pipes and tubes, the target capacity of nine lakh tons per annum under the third Plan is already fully covered. Further licensing of capacity in this field is, therefore, being carefully regulated. In steel castings, the present aggregate installed capacity is 58,840 tonnes per annum, while production is about 48,000 tonnes. It has been planned to have a total capacity of about 300,000 tonnes by 1965-66. To what extent this will materialise is not clear. As of now, 12 new units are being established, and these will come into production in 1964-65. But total production, it is estimated, may not exceed 65,000 tonnes per annum in that year. In the steel forgings industry, there are now 39 units with an aggregate capacity of 56,000 tonnes per annum. Their present output is 54,000 tonnes per annum. A total capacity of 216,000 tonnes, including the existing capacity, is being sponsored for licensing. In cast iron pipes, the aggregate installed capacity is of the order of 269,000 tonnes per annum. Their output in 1963 was 202,000 tonnes. The total capacity planned for licensing in this field is 941,000 tonnes during the Plan period. An additional capacity of only 30,000 tonnes would, however, be in production this year. In the field of wagon building, 15 units are now in production. As against the estimated annual requirement of 33,500 railway wagons for the third Plan period, the units in the private sector produced 20,000 wagons and the railway workshops about 6,400 in 1963. Production could have been more but for the shortage of matching steel, castings and electrodes. The position is, however, expected to improve in 1964.

Heavy Engineering Corporation

The Heavy Engineering Corporation Ltd., Ranchi, is responsible for four projects, namely, (i) Heavy Machine Building Plant, Ranchi, (ii) Foundry Forge Plant, Ranchi, (iii) Heavy Machine Tool Project, Ranchi, and (iv) Coal Mining Machinery Project, Durgapur. Of these, the first is being built, with Soviet aid, for the manufacture of 80,000 tonnes of machinery per annum. Three shops in this Plant—block for auxiliary department, block for building maintenance and box making department and block for storing rough forgings and castings—were completed during 1963 and handed over for operational use. In addition, the erection of equipment in the diesel locomotive department, oil and chemical stores, weighbridge, coke ovens, by-product equipment department and medium and small machinery departments has been in progress. Materials and operating equipment, valued at Rs. 18.7 crores, for the Plant have been ordered from the U.S.S.R. Against this, the value of materials and equipment received so far is Rs. 11.10 crores. Pilot production has commenced in certain departments in recent months. The production programme for 1964-65 will cover relatively simpler items, such as structurals and cranes, required for the Heavy Electricals at Hardwar and the Heavy Machine Tool Plant at Ranchi.

The Foundry Forge Plant, which is being established with Czechoslovak aid, is also gradually coming up after a delayed start. According to the Department's report, fabrication of structurals is in progress and structural erection work has commenced in the grey iron foundry. The erection of equipment in the grey iron foundry, woodworking shop, gas producer plant, boiler house and oxygen plant is in progress. A part of the woodworking shop has been in operation since July 1963. Pilot production of non-ferrous casting is likely to commence shortly.

In the Soviet-aided Coal Mining Machinery Project, the installation of equipment seems to be progressing fairly well now. The production programme for 1964-65 covers some items like pumps, conveyors and booster fans. The National Coal Development Corporation has already sent a firm order for the supply of 10 conveyors.

Work on the Czech-aided Heavy Machine Tools Project commenced only during 1963. At present it is only the work relating to levelling and grading of the site that is nearing completion. Civil work is yet to commence. Plant and equipment, too, are yet to be received from Czechoslovakia.

Heavy Electricals

The British-aided Bhopal Heavy Electricals Plant, which has recently been shut down because of labour trouble, might not have achieved fully its 1963-64 production target of Rs. 7 crores worth of electrical equipment. It will be recalled that the Plant produced equipment valued at Rs. 3.1 crores only in 1962-63. It is doubtful whether even the 1964-65 target of Rs. 10.2 crores would be achieved. The only good news about the Bhopal Plant is that its expansion project for the manufacture of steam turbines at an estimated cost of Rs. 11.5 crores has been under way.

The Czech-aided Heavy Power Equipment Project, Ramachandrapuram (Andhra Pradesh), is still marking time, for civil work is yet to commence in right earnest. In these circumstances, it is not clear how the plant can go into production next year. The Czech-aided High Pressure Boiler Plant, Tiruchirapalli, is also in its initial stage of construction. But the official expectation here, too, is that it would commence production next year. The Soviet-aided Heavy Electrical Equipment Project at Hardwar is yet to progress beyond the stage of site levelling.

Hindustan Machine Tools

The Hindustan Machine Tools Ltd. at Bangalore produced 1,483 machines, valued at over Rs. 6 crores, in the period April-December 1963, as compared with 1,120 machines, valued at Rs. 4 crores, in the corresponding period of 1962. In 1962-63 as a whole, the Company manufactured 1,615 machines valued at Rs. 6.7 crores, earned a profit (before taxes) of about Rs. 2.2 crores and declared a dividend of 10 per cent. Production figures for the whole of 1963-64 are not yet available.

H.M.T.'s Pinjore factory in the Punjab commenced production in October 1963. This factory is designed to produce 1,000 machine tools, valued at Rs. 5 crores, per annum by 1966-67. Two machine tool factories are being set up by H.M.T. as part of its expansion programme. One of these is at Kalamassery in Kerala and the other at Hyderabad. It is expected that the Kerala factory might go into production by the end of this year and the Hyderabad factory by the end of next year.

The H.M.T. Watch Factory produced 80,000 watches in the April-December 1963 period, as against the 1963-64 target of 130,000 watches (nearly half of them with a 54 per cent indigenous content).

The Company's Industrial Estate at Bangalore has at present 28 working units. Many of these, however, are only in the initial stages of production.

Proposed Projects

The Heavy Structurals Project and the Heavy Plate and Vessels Project, which were to have been taken up as a single integrated project with British aid, have been rephased because of non-availability of British credit. The Government now proposes to take up implementation of the heavy structural works in the first instance. But the necessary foreign exchange resources are yet to be located. The Pumps and Compressors Project, which is to be set up with Soviet aid, has not yet progressed beyond the stage of project reporting in which the Russians are still engaged. The Ball and Roller Bearings Project, which is also to be set up with Soviet aid, is in a very preliminary stage, for the Russians are yet to prepare a techno-economic feasibility report thereon.

MERGER PUT OFF

The move to merge the Indian Oil Company with the Indian Refineries Ltd., both belonging to the public sector, in the light of the recommendations of the Estimates Committee, will be delayed by several months. Actually, the merger was to have taken place during this month. But several impediments have now cropped up, and these will have to be successfully cleared. It is felt that the new organisation cannot be evolved without taking into account the likely risk of temporary breakdowns in marketing and contractual obligations which at present are inter-dependent. Besides, the Central Government will have to make sure that the proposed merger will not result in an undue diminution in the revenue of the State Governments concerned.

However, the merger, an E.N.I. prototype in India, if effected, is expected to result in, inter alia, economies in marketing, a saving on overheads and simplification of sales tax problems for the venture. The benefits of such a merger will also be reflected in the cost structure in the long run. The integrated organisation will be known as the Indian Oil Corporation, with a single board of management.

Indian Oil Blending Ltd., a partnership Company of the Indian Oil Company with the Mobil Petroleum Company Inc., which is putting up two blending plants (one in Calcutta and the other in Bombay) will continue as such, for Indian Oil will be the sole distributors for the blended lubricants.

OUTPUT OF SELECTED ENGINEERING INDUSTRIES

(1 lakh=100,000)

Industry	Accounting unit	1962 No. of units	1962 Production	1963 No. of units	1963 Production*
I. Industrial Machinery:					
Sugar mill machinery	Rs. lakhs	15	643	16	650
Industrial boilers	"	6	262	8	280
Tea processing machinery	"	7	165	10	172

Mobile cranes	Nos.	1	23	1	33
Industrial trucks	Nos.	1	82	1	107

* Actual production in January-September 1963 plus estimated production for October to December 1963.

NEW PRODUCTS AND PROCESSES

Soot Remover

A MATERIAL has been developed recently by Nitroglyserin A.B. in Sweden. It is called Forfol and is used to facilitate the easy removal of soot and other combustion products from boilers and furnaces. The material is put into the furnace and releases a brownish vapour. This passes through the combustion chamber and loosens products that might stick hard to surfaces and decrease efficiency. When cleaning is necessary the products fall away. Supplied in packets, all that is necessary is to throw the required number into the furnace, provided this is already hot enough, that is, at a minimum of 110° Centigrade.

Natural Insecticides

Agricultural research scientists at the University of Wisconsin in the U.S. continue to discover insecticidal chemicals in natural food crops. Last year they found one in turnip roots, then in cabbage and other brassica-type plants. A new one is found in the edible parts of parsnips. It is called myristicin. The discovery of these chemicals may point the way to natural insecticides that cannot be toxic to animals. Practical success will depend on many factors such as cost and availability. If the chemicals can be synthesised, this will be a tremendous step forward.

Thermoelectric Metal

A novel compound with exceptional properties for the economic conversion of heat into electricity has been developed by the Plessey Group at its Allen Clark Research Centre, Caswell, Northamptonshire. Its basis is iron disilicide, a compound of iron and silicon. The conversion efficiency is somewhat less than that of inter-metallic compounds developed elsewhere, but doped iron disilicide is comparatively cheap, can be constructed into thermoelectric piles simply and is remarkably robust. A direct gas flame can be used on it without noticeable corrosion or loss of efficiency. The iron disilicide heavily doped with cobalt makes an n-type semiconductor and with aluminium a p-type semiconductor. These form the two components of a thermojunction. As they are basically the same compound there is no difficulty of unequal thermal expansion, and the material is highly resistant to oxidation. It is stable over a working range of 150 degrees C. to 650 degrees C. The elements are fabricated together by powder-metallurgy techniques, with thin layers of ceramic material between as insulator except where the metallic contact is required. There is no need therefore for metallic straps or brazing. Junctions have been tested up to 1,000 hours. The power-to-weight ratio is about 3 watts per pound. Devices of practical use include a fan driven by the element in a gas fire to ensure much more convector circulation of air. Possibilities are seen for electricity generation in satellites.

Glass Fibres from Pumice Stone

Russian scientists at the Armenian Academy of Sciences have developed a range of glasses from which high-grade glass fibres have been drawn and made into fabrics for the manufacture of laminated plastics, using volcanic tuff and pumice stone as the raw materials. The simplified method eliminates the use of large quantities of costly materials like potash and boric acid normally used in glass melting. Fibres 5-7 and 15-30 microns in diameter were drawn from ceramic or platinum crucibles in which the glasses were melted. Since the raw pumice has already been melted in the volcanic activity associated with its formation, the raw material of the new technique is already semi-fabricated into glass. Thus melting is simplified and fuel consumption reduced. Microelements present in the pumice and tuff are also claimed to enhance the properties of the product. Fibre strengths were high and fully satisfied the demands of glass-plastics technology. Four components are needed to make staple and continuous fibres from the cheap volcanic waste products: pumice stone, dolomite, siliceous material and soda ash.

Hydraulic Pump

Claimed to be more compact and lower in cost than units of comparable performance, a new variable-delivery hydraulic pump is being produced by a British firm, Mobax Ltd., Wigmore Street, London, W. 1. It is unusual in conception in that the inlet and outlet ports are radially rather than axially disposed to the axis of rotation. No thrust occurs between the rotating piston block and the port areas, eliminating a source of friction which would otherwise impair efficiency and cause undue wear. A practical advantage of this arrangement is stated to be that little effort is required to vary output by adjusting the camplate, and response to control actuation is immediate and precise. The pump has a maximum capacity of 26 gallons per minute.

Glue Process

A glue process, which eliminates wire stitching, has been developed by a British firm, Cox and Sharland (Engineering Division) Ltd., 193, Portswood Road, Southampton, England, for leaflet and pamphlet production. Benefits claimed for the new system include: the elimination of a production operation; an operating speed of up to 15,000 sheets per hour; less bulk in the spines of leaflets, permitting the trimming of larger quantities at a time, and enabling heads and feet to be trimmed by slitters on folding machines, eliminating guillotine trimming. The system consists primarily of a small pressure vessel in which is placed a capsule or collapsible bag of glue, so arranged that glue, at a controlled pressure and completely isolated from the air, is supplied to an applicator. The applicator is mounted with its nozzle in light contact with the sheets of paper. It draws a thin line of glue during the folding operation. Accuracy is determined by the detector heads of the control box. The control box is fully transistorised and works on a 24-volt supply from a built-in transformer. When the leading edge of the paper to be glued passes under the sensing head of the detector, an impulse to the applicator permits the release of a stream of glue which is cut off when the trailing edge passes under the detector.

Convertible Passenger-seat

A new design of passenger seat is to be introduced by British European Airways in its new 610 m.p.h. Trident jet service. It is convertible, in a matter of two or three minutes, from first to tourist class accommodation standards. B. E. A. say "the ability to alter the proportion of seats available—almost from flight to flight—according to the changing pattern of traffic offering could have the effect of substantially increasing airline passenger load-factors."

Automatic Lubrication

A high speed lubrication system for dies in forging presses is being produced by a British firm, JACO Engineering Co. Ltd., Export Division, Hammond House, High Street, Upnor, Rochester, Kent. It is an automatic system which sprays the die with every stroke of the press and, as it can replace hand spraying or moving arm sprays, it allows faster output. The part of the equipment mounted on the machine is a simple mixing block for the lubricant and spraying air, one block for each half of the die. For intricate set-ups, the lubricant can be piped through the tool bed and brought out at any point that suits the die shape. For die changing, quick release couplings are fitted which allow disconnection of the spray units in a few seconds.

Hoists on Monorail

A British company, Herbert Morris Ltd., Loughborough, Leicestershire, England (Agents in India: W.H. Brady & Co. Ltd., Brady House, Veer Nariman Road, Bombay-1) which specialises in the manufacture of cranes and overhead lifting equipment has adapted the monorail principle to cabin-manned overhead travelling hoists. Three electric hoists have already been installed by the company in the pulp unloading bay of a large paper mill. The hoists are 1½ tons capacity and can travel along their rolled steel runways at a speed of 440 ft. per minute. They are fitted with two motors, one for lifting and one for traction, and power is supplied by conductor bars attached to the runways through sliding shoes fitted to the hoists. The operator in his cabin has an unobstructed view of the work he is performing, and, since he moves with the load, can operate efficiently in complete safety. These hoists, which can run on curved tracks, can also be "switched" on to different rails, thus permitting great flexibility of operation.

Automatic Gasoline Vending Machine

The Shibuya Industry Company (head office in Nagoya) recently placed on sale the Auto Printer Gasoline Meter. The meter automatically issues a printed sheet with the date, number and gasoline volume supplied. At the same time, it is provided with a device that makes duplicates. Furthermore, it can record the sales amount in addition to issuing recorded sheets. It also records the sales in cash and those conducted on a credit basis. The meter's register works in close agreement with the total meter, the sales volume and the volume of gasoline in the underground tank is easily registered, considerably economising personnel expenses. At present, the company intends to turn out 50 to 60 machines per month.

MAHINDRA AND MAHINDRA ACTIVE

10,000 JEEPS BY YEAR-END

SET against the backdrop of national emergency, the production performance of Mahindra and Mahindra Ltd. (Chairman: Mr. Keshub Mahindra, Bombay) in the year ended 31st October 1963 has been commendable. The Directors say, in their report for the year, that not only was the Company able to increase production but it was also able to complete deliveries for Defence ahead of schedule. Further, within the span of one year, the Company has reached a stage of producing 50 per cent more than it was geared to produce in November 1962. Now it has a capacity to produce 10,000 jeeps by the end of 1964 (originally, this capacity was expected to be reached roughly two years hence), the only proviso being availability of adequate foreign exchange. The indigenous content of the vehicle has also been approximately raised to 80 per cent and it is hoped that, with a matching performance by the ancillary producers, the goal of 90 per cent will be achieved in the near future. Production of utility vans and trucks was curtailed during the year, because of limited availability of foreign exchange.

Sales, under Government control for urgent and emergency requirements, showed a slight increase from 8,053 units to 8,150 units. But their pattern changed significantly. While jeep sales increased from 6,549 to 7,448, station wagon and truck sales recorded a considerable drop. No supplies were made to the Company's network of distributors—the position has changed slightly since January last, when the Government allowed a certain portion of production to be marketed through the dealer organisation. Sales of spare parts recorded an appreciable rise and it is anticipated that this trend would continue. The machine tool sales division showed an increase in turnover. The steel division booked orders for 201,700 tonnes, including despatches of indigenous steel made from the controlled stock yard in Calcutta and Bombay.

The following table gives a clear idea of the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st October			
	1963	1962	1961	1960
Sale proceeds*	15,02.78	13,88.95	15,42.28	13,64.16
Other income and credits	45.22	44.28	45.45	42.01
Stock of finished products and work-in-progress	186.41	188.03	184.47	185.20
Materials, stores and tools consumed	12,18.24	10,81.13	12,58.81	11,38.63
Staff expenses	164.29	139.20	126.78	107.15

Preference	4.49	4.49	4.49	4.49
Ordinary	22.34 (12.5%)	18.22 (12.5%) + B.2.5%)	19.80 (12.5%)	16.50 (12.5%)
Carry forward	0.16	0.81	2.58	1.11
Equity shares' market value (in rupees):	1964	1963	1962	1961	1960
High	17.52	19.00	22.24cm	23.52	27.75
Law	15.76	15.60	16.48xR	18.24	19.48

* Includes cost of vehicles capitalised Rs. 2.58 lakhs (1962), Rs. 2.88 lakhs (1961) and Rs. 1.73 lakh (1960).

Total sale proceeds have jumped up from Rs. 13.89 crores to Rs. 15.93 crores, surpassing the previous record of Rs. 15.42 crores made in 1960-61. Gross profit, which had improved by about Rs. 9 lakhs to Rs. 104.44 lakhs in the previous year has expanded by a bigger sum of more than Rs. 16 lakhs to Rs. 120.54 lakhs during the year under review. This growth in profit is particularly encouraging, in view of the fact that no jeep was sold for civilian use. In this context, the Directors' comments on the results are worth noting. They say:

> "The financial results show that profit before depreciation, taxation, bonus and development rebate has recorded an increase of approximately 21 per cent against which the turnover has gone up by 15 per cent. It has been possible to achieve these results through rigid management and technical controls over the operations of the Company. The policy of training skilled technical and managerial personnel within the Company has made available technicians who respond readily to improved methods for achieving greater productivity."

The net profit which had been higher by only a little more than Rs. 1 lakh at Rs. 42.46 lakhs in the previous year, has increased quite substantially to Rs. 51.38 lakhs during the year under review. Out of this, Rs. 3.36 lakhs (Rs. 3.87 lakhs a year before) have been carried to development rebate reserve, Rs. 14 lakhs (Rs. 3.50 lakhs) have been credited to general reserve and Rs. 7.84 lakhs have been set apart for creating a reserve for surtax and dividend tax, as against Rs. 11.26 lakhs set apart in the previous year for creating a reserve for S.P.T. The ordinary dividend has been maintained at Re. 1.25 per share, but since there is a higher *pro rata* dividend of 88 nP, as against 26 nP in the previous year, on the 660,000 right shares issued in 1962 in the proportion of one-for-two at a premium of Rs. 2.50 per share, the total amount required for dividend distribution has gone up from Rs. 18.22 lakhs to Rs. 22.34 lakhs. In recommending this dividend, the Directors have taken into account the pressing need for liquid funds for meeting the Company's expansion programme at Kandivli, where it is proposed to consolidate and integrate all the plants presently engaged in producing jeeps components. The construction work in this regard has already commenced and it is anticipated that the new facilities will be in operation early next year.

A brief review of the working of the associated companies may now be given.

Steady progress has been maintained by Mahindra Ugine Steel Company Ltd. which has been established for producing alloy steels. Negotiations for a long-term loans in foreign currency and rupees have been finalised with the different institutions. The Company made a public issue in early January this year and the response was not unsatisfactory. The plant at Khopoli is expected to be in production by the end of 1966.

The International Tractor Company of India Ltd., formed for manufacturing tractors, will enter the capital market this year. The factory, under construction at Kandivli, will commence production by the end of 1964.

Machinery Manufacturers Corporation Ltd. continues to show steady progress and has achieved a higher level of production of carding and diesel engines.

Turnover of Mahindra Owen Ltd. has increased from Rs. 79.37 lakhs to Rs. 93.12 lakhs in 1962-63, resulting in more profitable operations. The first phase of its expansion programme has been carried out and the second phase, entailing the installation of plant and machinery, will be completed by next September.

Recording a substantial increase in sales and production in the second operational year, Mahindra Sintered Products has declared an initial dividend. Its current working has been better. It has been licensed to manufacture structural parts which will considerably enhance the scope and range of production.

Mahindra Engineering Company Ltd. continues to make steady progress. An expansion programme has been submitted to the Government.

Otis Elevator Company (India) Ltd. continues to show improvement in turnover and profit. Its expansion programme, which will enable it to manufacture higher quality and medium speed equipment, will be completed sometime next year.

Turner Hoare and Company Ltd. has acquired indigenous agencies in order to offset lack of imports. Besides, it has obtained Government's approval for manufacturing clutches. Production is expected to start in the current year.

Dr. Beck and Company (India) Ltd. has been well established with the electrical industry. Its production and sales have been higher. It has also launched successfully the programme for manufacturing resins.

The current year's prospects for the Company appear to be encouraging. Sales of vehicles during the four months of the current year have been higher than those for the corresponding period of last year. Steel bookings have progressed satisfactorily. However, the present trend of increases in raw material prices, salaries and wages and the costs of components bought from ancillary producers are sources of constant worry to the Directors, particularly because the end-price of the vehicle is controlled by the Government.

The Company's paid-up capital, including Rs. 55 lakhs in two types of preference shares, has increased from Rs. 220 lakhs to Rs. 252.98 lakhs following a second call of Rs. 5 per share made during the year under review on the 660,000 shares issued in 1962. The capital is backed by reserves and surplus amounting to Rs. 114.16 lakhs. During the year, the Company issued 6.5 per cent debentures redeemable between 1965 and 1975 of the value of Rs. 50 lakhs to the L.I.C. and Rs. 30 lakhs to the I.C.I.C.I. Ltd. against the loans received from them for the jeep expansion programme. It also secured a foreign exchange loan of Rs. 3.22 lakhs from the I.C.I.C.I. These and larger bank borrowings have raised the total of secured loans and advances from Rs. 318.05 lakhs to Rs. 568.97 lakhs. Taking only bank borrowings and advances and current liabilities and provisions shown at Rs. 448.37 lakhs, the total short-term indebtedness to outsiders works out to Rs. 934.12 lakhs, as against which current assets, book debts and investments aggregate Rs. 12.04 crores. The gross block of Rs. 229.65 lakhs (Rs. 201.55 lakhs a year before) has been written down to Rs. 139.68 lakhs. Capital expenditure in progress has been shown separately at Rs. 13.88 lakhs, machinery and equipment on hand and in transit at Rs. 16.39 lakhs and construction material on hand at Rs. 10.25 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 16.76 *cum-div.* and offer a net yield of 6.3 per cent per annum.

BRADY ENGINEERING MAINTAINS DIVIDEND

Notwithstanding certain difficulties encountered in procuring some essential imported raw materials, the Brady Engineering Company Ltd. (Managing Agents: Messrs. W. H. Brady and Co. Ltd., Bombay) has made further progress during the year ended 31st December 1963. Sale proceeds which have been on a continuous upward move for the past few years and had improved during 1962 by 7.2 per cent from Rs. 27.90 lakhs to Rs. 29.92 lakhs have jumped up by as much as 30 per cent to Rs. 38.95 lakhs during the year under review. The gross profit, too, is correspondingly higher at Rs. 11.26 lakhs, as against Rs. 9.80 lakhs, but the rate of increase over the previous year works out to only 14.9 per cent or, approximately, a half of that of the turnover. The reason for the slower rate of increase is to be found in other expenses which have expanded by no less than 55.7 per cent, from Rs. 9.16 lakhs to Rs. 14.26 lakhs during the course of the year.

In consonance with the rise in gross profit, the provision for Managing Agents' commission has moved up from Rs. 0.84 lakh to Rs. 0.93 lakh though that for depreciation is fractionally lower at Rs. 1.29 lakh as against Rs. 1.31 lakh a year ago. It is, however, the provision for taxation that has increased by leaps and bonds from Rs. 3.90 lakhs for 1962 to Rs. 6.37 lakhs for the year under review (including Rs. 46.983 for the sur-tax) and has consequently been instrumental in depressing the net profit from Rs. 3.75 lakhs to Rs. 2.67 lakhs. Adding to this Rs. 0.17 lakh brought forward and Rs. 1.28 lakh withdrawn from taxation reserve, the Directors have utilised Rs. 0.87 lakh in providing for taxation in respect of past years and have credited a further Rs. 1.01 lakh to reserve. They have also maintained the dividend at Rs. 9 per share or 11.25 per cent subject to deduction of tax. This claims Rs. 2.25 lakhs as before but leaves a negligible carry forward of Rs. 641, as against Rs. 16,853 brought in.

The following comparative table reveals the steady progress made by the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Proceeds of engineering works	38.95	29.92	27.90	16.25
Stock of finished goods	2.64	3.02	..	..
Materials and stores consumed	16.07	13.98	11.05	6.50
Other expenses	14.26	9.16	7.15	5.41
Gross profit	11.26	9.80	9.70	4.34
Managing Agents' commission	0.93	0.84	0.84	0.34
Provision for—				
Depreciation	1.29	1.31	1.19	0.94
Taxation	6.37	3.90	3.70	1.32
Net profit	2.67	3.75	3.97	1.74
Transfer from reserves and provisions	1.28	..	0.10	0.10
Items relating to past years	0.86	0.39	0.35	..
To reserves	1.01	1.44	1.25	0.28
Dividend	2.25 (11½%)	2.25 (D.8½% + B.2½%)	2.25 (D.8½% + B.2½%)	1.37 (6½%)
Carry forward	0.06	0.17	0.49	0.19
Market price of ordinary shares (in rupees:	1964	1963	1962	1961	1960
High	..	100.50	120.00	96.00	97.00
Low	..	90.50	94.00	70.00	70.00

It will be remembered that the main manufacturing activity of the Company centres around the production of pulley blocks and lifting equipments. Since an appreciable proportion of parts of these are made from imported carbon steel the Company's capacity to manufacture the output of these at the highest possible level naturally depends on adequate allocation of foreign exchange for the import of raw materials. During 1962, the production of pulley blocks and lifting equipments had increased considerable over that in the preceding year. But in the year under review the production had to be curtailed owing to a sizable cut in the import licences of load chains for the pulley block. However, the Company successfully completed the second automatic bread plant and also a part of biscuit oven. With the experience gained, it is now in a position to undertake the fabrication of complete biscuit ovens. It is also negotiating with Byramjee Jeejeebhoy Pvt. Ltd., who are associates of its Managing Agents, for the purchase of land admeasuring 20 acres at Borivli near Bombay for its expansion programme.

There has been no material change during the year under review in the Company's financial position which continues to be satisfactory. The share capital, all in equity shares of Rs. 100 each, on which Rs. 80 per share have so far been called up, stands unchanged at Rs. 19.99 lakhs, though reserves, excluding the amount of Rs. 2.25 lakhs earmarked for the payment of dividend, have gone down to Rs. 5.53 lakhs from Rs. 5.96 lakhs a year ago. Current liabilities and provisions, on the other hand, have risen by Rs. 4.07 lakhs to Rs. 17.83 lakhs. These, however, are fully covered by current assets, loans and advances standing at Rs. 30.01 lakhs. The net block is lower at Rs. 13.35 lakhs as against Rs. 14.02 lakhs and has been arrived at by reducing the gross block of Rs. 25.49 lakhs by Rs. 12.14 lakhs which is the amount of depreciation provided so far.

The Rs. 80 paid ordinary shares of the Company are currently quoted at Rs. 100 *cum-div.* The net return on a fresh investment at the *ex-div.* price works out to 7.8 per cent.

METAL SCRAP TRADE CORPORATION

A corporation, known as the Metal Scrap Trade Corporation, with an authorised capital of Rs. 2 crores and a subscried capital of Rs. 30 lakhs, is to be set up by the Government of India soon. The new trading body will work independently of the State Trading Corporation. The Corporation will have its registered office at Calcutta and regional offices at Bombay and Madras, with a resident director at each of these centres. The main objects of the Corporation are to protect, purchase, process, convert, market, import and export ferrous and non-ferrous metal scrap. It will also support, protect, maintain or increase the export trade in scrap by undertaking market studies, sending out trade missions overseas and conducting local and foreign publicity. A unique feature of the Corporation is that there will be scope for equal participation in it by scrap traders as well as furnace owners. The subscribed capital will be shared equally by the Government through the Minerals and Metals Trading Corporation and by members of the Steel Furnace Association and the Iron and Steel Scrap Association of India.

GRATIFYING EXPORT PERFORMANCE OF HINDUSTAN LEVER

EXPANSION SCHEMES BEING PURSUED

THE most striking feature of the financial results of the Hindustan Lever Ltd. (Chairman: Mr. P. L. Tandon, Bombay) for the year ended 31st December 1963 is a further rise of Rs. 3.96 crores to a new peak of Rs. 54.26 crores in its net sales turnover (that is, excluding the excise duty paid). That this improvement exceeds the increase of Rs. 3.68 crores recorded in the previous year is in itself a satisfying thing. But what is more significant about this improvement is the fact that the bulk of it (Rs. 3.11 crores, to be precise) is on account of export sales amounting to Rs. 5.12 crores as compared with Rs. 2.01 crores in 1962 and only Rs. 74 lakhs in 1961. This significant increase in sales abroad is said to have helped the Company earn the necessary incentive licences for importing essential raw materials, without which the rate and quality of its production would not have possibly been maintained.

Two factors—the relatively low prices of groundnut oil during the 1962-63 season and the expeditious administering of the incentive schemes—are said to have worked in favour of the much higher export sales during the year. Total soaps sales have also recorded a satisfactory rise, with *the non-soapy* detergent *Surf* making good progress. Toilet preparations have met with greater demand. But the year under review has proved a difficult one for *vanaspati* owing to the price control imposed since the last (1963-64) budget and the Government's order to stop small size packs on the grounds of a tin-plate shortage. With the pea crop again suffering from frost, dehydrated vegetables sales have been affected. Cattle and poultry feeds sales have, however, been extended to other areas of Maharashtra and Gujarat.

The table below compares the performance of the various products during the year with that in the previous three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Soaps, detergents and toilet preparations ..	2,830.73	2,484.82	2,374.52	2,092.76
Vanaspati, margarine and other foods ..	2,587.40	2,469.62	2,306.43	2,234.88
Glycerine and other by-products, animal fooding stuffs and oils ..	536.61	430.98	310.87	284.22

In spite of the encouraging growth in sales, gross profit has suffered a setback from Rs. 520.87 lakhs to Rs. 496.24 lakhs. The Directors have made a pointed reference to a reduction in profit on *vanaspati* sales because of difficulties in production and divergence of part of the capacity for the *Lotus* brand for meeting the demand for exports and for hardening oils for soap making. They have also referred to imports of copra and palm oils through incentive licences from exports but at substantially higher costs because of the high losses incurred on the export of refined and raw groundnut oil. This means that the very factor, namely, improved export performance, which has largely boosted the turnover has, however, been responsible for the setback in profit, though for this not the Company but the producers and distributors of the raw materials are to blame.

The net profit has, however, increased from Rs. 200.55 lakhs to Rs. 225.18 lakhs because the tax provision has been lower at Rs. 225.92 lakhs as compared with Rs. 282.35 lakhs a year before, which is exclusive of surtax or S.P.T. liability. With the expansion plans in hand, the amount carried to development rebate reserve has been raised from Rs. 4.10 lakhs to Rs. 6.50 lakhs. As is already known, the Directors have stepped up the dividend on the 10-rupee shares from 12 per cent to 14 per cent per annum, the entire increase having come in the final dividend of 80 nP as against 60 nP a year before. The increase has, however, been modest, considering that, in the previous year, there had been a sharp cut of 14 points. The balance left after providing for the dividend is Rs. 89.18 lakhs as against Rs. 96 lakhs in the previous year. Out of this balance, a reserve has been created of Rs. 56.50 lakhs for meeting surtax liability estimated at Rs. 49 lakhs and dividend tax liability estimated at Rs. 7.50 lakhs, and the surplus of Rs. 33.22 lakhs (including Rs. 54,000 brought in from the previous year) has been taken to general reserve. Out of the previous year's balance, Rs. 70 lakhs had been set apart for creating a reserve for S.P.T. and from the surplus of Rs. 43.72 lakhs (including Rs. 17.72 lakhs brought in) Rs. 43.18 lakhs had been carried to general reserve. Since the actual S.P.T. liability in respect of the previous year is known to have been Rs. 50 lakhs, the excess amount of Rs. 20 lakhs under the specific reserve has now been added to general reserve. The new surtax, coupled with the new dividends tax, is hardly an improvement for the Company over the old S.P.T., since the net saving, as the finance Bills stand at present, is under Rs. 10 lakhs. The incidence of surtax, the Directors state, still falls heavily on an efficient use of capital.

The much better export performance during the year, has led the Company to form a wholly-owned subsidiary, Indexport Ltd., which has been recognised by the Government as an export house. This new company will concentrate its energies upon a world-wide export of products manufactured by the Hindustan Lever. At the same time, wherever it is advantageous and there is potential, it will place its marketing and export skills and know-how at the disposal of third parties.

It will be recalled that last year, because of the uncertain profitability and the disturbed condition of the capital market after the budget, the Directors had decided to put off the *rights* issue of 285,725 shares at a premium of Rs. 25 per share. The time limit for making this issue has since been extended by the Controller of Capital Issues to February 1965. In the meanwhile, the Company has obtained a further foreign exchange loan of Rs. 60 lakhs from Unilever Ltd. in addition to the Rs. 20 lakhs loan announced in the Company's last report for enabling it to proceed with the expansion projects. The progress on these projects is summarised below:

The Etah dairy, with its associated milk collecting centres spread over the neighbouring countryside, will come into operation by the middle of this year. By that time a bigger dehydrated vegetable plant will also have been installed in the Ghaziabad factory for use outside the pea season for a variety of new products. A new unit for making cattle feeds is also to be installed in this factory. Extensions to the Shamnagar factory, consequent on the purchase of a plant, are under way. A part of the additional capacity for hardening oils will be commissioned in the next few months. A plant for the manufacture of nickle catalyst is proposed to be installed in the Bombay factory, while a licence for installing a non-soapy detergent plant for manufacturing *Surf* and similar products in the Garden Reach factory has been obtained. The modernisation of the Bombay and Garden Reach soaperies by the installation of new plant is expected to be completed next year.

The following comparative table gives a clear idea of the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sale proceeds, less excise..	5,425.58	5,029.90	4,662.38	4,305.14
Other income ..	19.09	26.42	20.38	19.72
Cost of raw materials consumed	3,863.12	3,549.06	3,273.84	3,004.52
Other expenses	1,014.47	1,341.31	1,267.80	1,124.64
Including:				
Staff expenses	401.81	382.69	358.24	296.41
Excise duty	545.61	355.52	329.44	306.72
Gross profit	496.24	520.87	470.55	502.07
Provision for—				
Depreciation	45.14	40.73	39.40	35.33
Taxation	225.92	282.35	192.76	208.00
Net profit	225.18	200.55	238.39	258.74
Provisions written back ..	..	4.50	..	..
Development rebate reserve	6.50	4.10	5.30	5.00
Provision for gratuity ..	5.87	3.27	7.58	4.22
Provision for contingencies	8.22	..	..	..
Dividend	115.41 (14%)	98.92 (12%)	144.82 (20%)	144.82 (20%)
Retained in business ..	89.18	96.00	80.69	104.70
Equity shares' market value (In rupees):	1964	1963	1962	1961	1960
High	42.00	47.50	74.00	59.70	46.00
Low	35.00	33.50	41.50XR	41.50	35.98

Largely due to the financing of exports at the year-end, the Company has closed the year under review with a net overdraft of Rs. 118 lakhs as against Rs. 36 lakhs at the beginning of the year. The foreign exchange loan of Rs. 25 lakhs granted for the Etah dairy project by the I.C.I.C.I. Ltd. will be drawn fully by the end of June next. The Company has already started to draw against the Unilever foreign exchange loans. The total short-term indebtedness amounts to Rs. 666.30 lakhs (as against Rs. 535.73 lakhs a year before) and is well covered by current assets aggregating Rs. 13.86 crores. Long-term borrowings have gone up from Rs. 2.97 lakhs to Rs. 18.74 lakhs, because the loan from the I.C.I.C.I. Ltd. has increased from Rs. 2.97 lakhs to Rs. 15.35 lakhs and a sum of Rs. 3.38 lakhs has come from the Unilever Ltd. The paid-up capital, unchanged at Rs. 824.36 lakhs, is backed by a capital reserve of Rs. 62.62 lakhs and revenue reserves and surplus amounting to Rs. 420.22 lakhs. The gross block, which expanded from Rs. 752.41 lakhs to Rs. 930.46 lakhs in the year under review, has been written down to Rs. 598.65 lakhs. Trademarks and goodwill are valued separately at Rs. 6.23 lakhs. Investments in subsidiary companies have increased from only Rs. 3,000 to Rs. 1.03 lakh.

Currently quoted at Rs. 35.10 *cum-div.* (final), the Rs. 10 fully paid shares of the Company offer a net yield of 3.2 per cent per annum.

KAMANI ENGINEERING REPORTS ENCOURAGING RESULTS

Notwithstanding certain difficulties encountered in procuring essential raw materials which obviously curtailed the output of factory products, the Kamani Engineering Corporation Ltd. (Managing Agents: Messrs. Kamani Brothers Pvt. Ltd., Bombay) has been able to report quite encouraging working results for the year ended 30th September 1963. Total sale proceeds, including those of manufactured products and agency goods, and the receipts from erection work undertaken, have advanced by over 10 per cent from Rs. 465.46 lakhs to Rs. 513.25 lakhs while the gross profit has risen, though somewhat modestly, from Rs. 39.11 lakhs to Rs. 41.83 lakhs. Impressive as these results are, there is, however, actually a decline in the profit margin, that is, the ratio of gross profit to sale proceeds from 8.4 per cent to 8.1 per cent, even though other income has increased by Rs. 3.77 lakhs to Rs. 15.10 lakhs. The chief factor responsible for this decrease appears to be the sharp rise in staff and other expenses from an aggregate of Rs. 143.77 lakhs to Rs. 163.31 lakhs but an equally important factor—and one which is discussed more fully below—is the decline in the output of factory products.

With the increase in the level of gross profit and the decline of Rs. 1.46 lakh to Rs. 6.55 lakhs in the provision for depreciation, the Managing Agents' commission has increased from Rs. 2.66 lakhs to Rs. 3.04 lakhs. The provisions for taxation has risen quite sharply from Rs. 15.00 lakhs to Rs. 21.50 lakhs, claiming nearly two-thirds of the pre-tax profit as against a little over 53 per cent previously. With the essential provisions generally higher, the net profit has gone down by Rs. 2.70 lakhs to Rs. 10.74 lakhs. From this, Rs. 5.52 lakhs as against Rs. 6.02 lakhs last year, have been credited to reserves and a further amount of Rs. 0.69 lakh has been set aside to meet the preference dividend liability in respect of the year. It will be recalled that, though in their report for the year ended 30th September 1962 the Directors had recommended an ordinary dividend of 9.5 per cent subject to deduction of tax, an additional dividend of 2.5 per cent, also subject to deduction of tax, was subsequently distributed out of the Super Profits Tax reserve created during the year. The total dividend for that year had thus actually amounted to 12 per cent subject to deduction of tax. The same dividend is recommended now and, if sanctioned, will absorb Rs. 5.40 lakhs as previously.

The steady progress made by the Company during the past four years is well mirrored in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th September			
	1963	1962	1961	1960
Sale proceeds.. ..	513.25	465.46	268.68	236.90

High	15.00	14.76	17.52	20.52	20.56
Low	14.00	11.52	13.76	13.76	10.76

Note:—All dividends are subject to deduction of tax.

There is very little change in the financial position of the Company as reflected in its balance-sheet as at 30th September 1963. The share capital remains unchanged at Rs. 59.98 lakhs—made up of Rs. 13.00 lakhs in preference shares of Rs. 100 each and the balance in equity shares of Rs. 10 each—while reserves are slightly higher at Rs. 14.22 lakhs as against Rs. 12.04 lakhs. Secured loans have declined by Rs. 25.86 lakhs to Rs. 76.31 lakhs but current liabilities and provisions have risen from Rs. 134.43 lakhs to Rs. 195.54 lakhs. On balance, therefore, outside interest has advanced from Rs. 236.60 lakhs to Rs. 271.85 lakhs. However, this is fully covered on the assets side by the total of investments, current assets and loans and advances which aggregates Rs. 304.57 lakhs as against Rs. 265.82 lakhs a year before. Net assets are a shade lower at Rs. 41.48 lakhs; this figure has been arrived at by reducing the gross block of Rs. 85.37 lakhs by the accumulated amount of depreciation of Rs. 43.89 lakhs. Additions to the block account during the year amounted to Rs. 6.40 lakhs, as against Rs. 20.10 lakhs in 1961-62.

The production of galvanised and painted steel structures during the year under review was at a little lower level than last year; the tonnage being 18,940 as compared with 20,363. The slight fall in production was mainly due to difficulties encountered in obtaining the necessary steel and zinc, owing to emergency conditions existing during the year.

The position regarding orders was satisfactory. Orders on hand for towers and structures at the end of the year were 46,156 tonnes, as against 34,810 tonnes a year before and for erection of transmission line, the pending orders were 2,000 km. During the year under review, the Company continued its vigorous and extensive efforts to maintain its export targets. All the pending orders for export were successfully completed. Another order for the supply of 132 kV. transmission line towers for the Nigerian Government is currently under execution. Since the close of the year, the Company has been successful in obtaining two larger orders, aggregating 3,460 tonnes from the National Power Corporation of Philippines. These orders were secured in the face of very severe international competition. The working of the agency department remained satisfactory. Very large orders for supply of H.T. insulators were executed during the year and the turnover of business again increased by more than 25 per cent over last year's figures.

The Research and Development Department continued their valuable work in the field of development of improved tower designs. The Research and Testing Departments have successfully carried out tests on several new tower designs and further tests are being carried out according to programme. It is expected that the results of these tests would make valuable contribution in the economy of the weights of towers, structures and production costs.

During the preceding year, the Company was granted a licence for substantial expansion of its existing capacity from 1,500 to 2,000 tons per month for transmission line towers and another for the fabrication of heavy structurals to the extent of 500 tons per month and high tensile units of both to the extent of 500 tons per month. The Directors now report that planning has reached an advanced stage for implementing this expansion programme in Rajasthan.

The current market quotation for the Rs. 10 fully paid ordinary shares of the Company is Rs. 14.24 *cum-div.* On an *ex-div.* basis, the net yield per annum works out to 7.2 per cent.

BOMBAY DYEING DOES WELL, DESPITE HEAVY ODDS

PROFIT BETTER—DIVIDEND UNCHANGED

IN spite of the continuance of the voluntary price control adopted by the cotton textile mills at the suggestion of the Government in 1961, and sluggish trading conditions in the internal cloth market, the Bombay Dyeing and Manufacturing Company Ltd. (Managing Agents: Messrs. Nowrosjee Wadia and Sons [Private] Ltd., Bombay) has been able to report encouraging results for the year ended 31st December, 1963. Thus, the realisation from the sale of cloth, yarn, waste, dyes, and chemicals has advanced by over 11.3 per cent from Rs. 15.16 crores to what seems to be an all-time high of Rs. 16.88 crores while the gross profit is higher at Rs. 179.48 lakhs, as against Rs. 147.79 lakhs for the year before. This improvement is certainly cheerful, since it has enabled the Company to more than fully recoup the ground lost during the preceding year but what makes it more heartening is that the ratio of gross profit to sale proceeds has risen from 9.8 per cent to 10.7 per cent. The main factors behind this betterment is obviously the increase in production as reflected in the higher turnover as also in the rise of about Rs. 40 lakhs to Rs. 293.70 lakhs in the value of closing stocks of finished goods.

The increase in gross profit has naturally been accompanied by an increase in the provision for the Managing Agents' commission from Rs. 4.79 lakhs to Rs. 7.57 lakhs and in that for taxation by as much as Rs. 14.60 lakhs to Rs. 38.40 lakhs. Of this latter figure, Rs. 2.84 lakhs represent the liability under the new tax of 7.5 per cent leviable on the amount distributed as dividend during the year. The provision for depreciation is likewise larger, but only moderately so, at Rs. 81.61 lakhs as against Rs. 80.43 lakhs for the previous year. Notwithstanding these higher prior charges, the net profit has risen by Rs. 13.13 lakhs to Rs. 51.90 lakhs. Out of this, a sum of Rs. 16.80 lakhs has been transferred to the statutory development rebate reserve, while a small sum of Rs. 15,000 has been credited to the general reserve. The amount credited to reserves this year is admittedly lower than that during any of the three preceding years, but then it has also to be noted that there has been no withdrawal from the reserves this year, as against Rs. 25.10 lakhs in 1962 and Rs. 14.45 lakhs in 1960. The dividend, however, has once again been maintained at 14 per cent, subject to deduction of tax, and is made up of an interim distribution at the rate of 4 per cent and a final dividend of 10 per cent, both subject to deduction of tax. This claims, as before, Rs. 35.14 lakhs, leaving Rs. 48,236 as carry forward as against Rs. 67,586 brought in.

A clearer idea of how the Company has fared during each of the past four years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sale proceeds (gross)	16,88.30	15,16.16	13,59.18	11,27.58

Carry forward	0.48	0.68	0.70	0.66
Market price of ordinary shares (in rupees):	1964	1963	1962	1961	1960
High	65.30	64.50	72.20	71.90	72.70
Low	60.00	56.00	58.80	58.50	60.40

During the year under review, the Company continued to concentrate more on the production of bleached, dyed, printed, and finished goods, with a view to improving its earning capacity. It introduced special finishing process such as mercerising, sanforizing, "Tebelizing" and "Hecowa," the last named having been introduced for the first time in India. The introduction of these processes is expected to enable the Company to be in a better position *viz-a-viz* its competitors both in India and abroad. In fact, it appears to have paid fairly good dividends during the year under review itself. For, notwithstanding the difficult trading conditions in the home market and the restricted offtake of cloth and yarn, the Company's designs gained further in popularity and the retail trade through its shops increased by 40 per cent over the previous year. It will be recalled that, during 1962, the improvement was of the order of 30 per cent over 1961. Export markets showed some revival of demand, particularly during the latter half of the year, though competition from Japan, Hong Kong, China, Portugal and Siam continued to be felt. While the exports by the Company, measured in linear yards, dropped by five million, the bulk of them was in wide width sheetings and, consequently, earnings were slightly better than in 1962, being Rs. 4.95 crores or an average of Rs. 1.32 per linear yard, that is, 20 nP per yard higher. The Company thus continued to maintain its position as the largest exporter from India in 1963, its share in value being 12.1 per cent of the total exports of cloth from this country.

In 1963, a sum of Rs. 3.71 lakhs was spent on the construction and extension of buildings of the Spring and Textile Mills and New Bleach Works and new machinery worth Rs. 105.53 lakhs was installed. The main loom shed of the Spring Mills is now complete with 2,048 automatic looms under one roof. In the card rooms, all the Within drawframes and the majority of the Rieters speed frames are working and the rest will be installed before the current year is out. More combers have been ordered out for delivery in October to meet the demand for finer fabrics. Unluckily, the bottleneck in the supply of ring frames from the National Machinery Manufacturers Ltd. persists, because of that company's long order position and consequently the Company is unable to get these machines fast enough to complete its renovation programme. For the Textile Mills 26 automatic looms have been ordered and the "Lantor" blanket plant. The jaquard towels manufactured by the Company are reported to have been very popular and, with the new blanket made from synthetics, it should be possible for the housewife to buy all her requirements from the Company. Additional finishing capacity has been installed in the New Bleach Works and the Company proposes to launch its new Terylene-cotton suitings upon the market in an ever-increasing volume. An additional heat setting and dyeing range has been ordered for this purpose. The number of installed spindles at the Company's Spring and Textile Mills has thus increased to 196,796 and that of looms to 3,736, of which 2,166 are automatic.

Financially, the Company is in good shape. The share capital exclusively in ordinary shares of Rs. 25.00 each continues to stand at Rs. 250.98 lakhs but reserves—excluding the amount likely to be withdrawn for dividend payment—have advanced from Rs. 383.43 lakhs to Rs. 400.19 lakhs. Borrowings however have increased by Rs. 84.90 lakhs to Rs. 592.03 lakhs while current liabilities and provisions are higher at Rs. 261.02 lakhs as against Rs. 245.30 lakhs a year ago. Inclusive of the additions of Rs. 112.90 lakhs, the gross block stands at Rs. 13,87.18 lakhs, but, on deduction therefrom of Rs. 768.55 lakhs being the depreciation provided to date, a net block of Rs. 618.63 lakhs emerges. Investments, mostly unquoted, are carried in the books at a cost of Rs. 44.51 lakhs. Current assets and loans and advances amount to Rs. 841.08 lakhs in the aggregate.

As regards the outlook for the current year, Mr. Neville N. Wadia, Chairman, says:

"1964 is bound to be one of strains and stresses. Costs, particularly cotton which cost us almost Rs. 100 per candy more in 1963, are still rising at an alarming rate, but, as far as our Company is concerned, I can only say that we are well equipped in every sense, as any of our competitors, to face whatever is in store."

Currently, the Rs. 25 fully paid ordinary shares of the Company are quoted at Rs. 60.50 *cum-div.* On an *ex-div.* basis, the net yield works out to 4.8 per cent per annum.

PREMIER CONSTRUCTION PAYS MORE

Heartening, indeed, is the performance of the Premier Construction Company Ltd. (Managing Agents: Messrs. Walchand and Company Pvt. Ltd., Bombay) during the year ended 31st December 1963, being essentially a holding company, its fortunes depend upon the working of its associates. The Company, as is common knowledge, is the majority shareholder in three Walchand group enterprises, namely, the Hindustan Construction Company Ltd., the Indian Hume Pipe Company Ltd., and the Acme Manufacturing Company Ltd., besides having a substantial stake in two other companies in the same group, that is the Walchandnagar Industries Ltd. and Cooper Engineering Ltd. In addition, it holds no fewer than 3.24 lakh ordinary shares of the Scindia Steam Navigation Company Ltd. which are carried in its book at a cost of Rs. 72.92 lakhs. As a result of the considerable improvement in the working of all these companies and the dividend receipts from them, the net dividend income of the Company has advanced by no less than 32.3 per cent from Rs. 18.98 lakhs to Rs. 25.12 lakhs, while other income from works bills share in agency commission of Walchandnagar Industries Ltd. and other sources is correspondingly higher at Rs. 10.99 lakhs as against Rs. 7.89 lakhs in the year before. Consequently, the total income has risen from Rs. 26.87 lakhs to Rs. 36.11 lakhs and has been responsible for lifting the gross profit by as much as Rs. 7.23 lakhs to Rs. 23.84 lakhs. A notable feature of the year's working is that, since expenses are higher by less than 15 per cent from Rs. 10.82 lakhs to Rs. 12.30 lakhs, the profit-margin (ratio of gross profit to total income) is larger by 4.4 points at 66 per cent.

In spite of the rise in gross profit, the provision for the Managing Agents' commission has been stepped down from Rs. 0.25 lakh to Rs. 0.21 lakh because of adjustments relating to prior years while that for depreciation is lower at Rs. 0.63 lakh as against Rs. 0.67 lakh a year ago. The net profit has, therefore, jumped up from Rs. 15.69 lakhs to Rs. 23 lakhs. With a larger sum thus available, the ordinary dividend has been substantially raised from 30 per cent to 46⅔ per cent both subject to deduction of tax.

The following comparative table synoptically presents the results of working of the Company during each of the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Gross income	36.11	26.87	22.77	23.14
Work-in-progress at close ..	1.08	1.05	0.49	0.93
Expenses	12.30	10.82	7.16	4.16
Gross profit	23.84	16.61	15.77	18.59
Managing Agents' remuneration	0.21	0.25	0.25	0.06
Provision for—				
Depreciation	0.63	0.67	0.41	0.36
Taxation	..	..	1.90	1.79
Net profit	23.00	15.69	13.21	16.38
Withdrawal from reserves ..	..	..	3.13	..
To reserves	1.38	0.11	..	1.67
Dividends—				
Preference	4.09	4.09	4.09	4.54
Ordinary	18.20 (46⅔%)	11.70 (30%)	11.40 (33⅓%)	10.13 (45%)
Carry forward	..	0.67	0.89	0.13
Market price of ordinary shares (in rupees):	1964	1963	1962	1961	1960
High	196	172	202	285	384
Low	157	118	105	179	285

The singlemost important item on the assets side of the Company's balance-sheet is, of course, the investment portfolio. During the year, under review, there was no change in the cost of this portfolio which therefore continues to stand unchanged at Rs. 272.04 lakhs, made up of Rs. 42.61 lakhs in unquoted investments, such as equity shares of the Hindustan Construction Company Ltd. and equity and preference shares of the Acme Manufacturing Company Ltd., and the balance of Rs. 229.43 lakhs in quoted investments with a market value as at 31st December 1963 of Rs. 251.09 lakhs (as against Rs. 260.04 lakhs a year ago). Current assets and loans and advances amount to Rs. 46.98 lakhs (Rs. 41.46 lakhs), while the net block is worth Rs. 8.21 lakhs (Rs. 8.83 lakhs). Since no new assets were acquired during the year there has been no change in the gross block account shown at Rs. 11.69 lakhs. The share capital also stands unchanged at Rs. 120.25 lakhs comprising Rs. 81.25 lakhs in preference shares and Rs. 39 lakhs in equity shares of Rs. 30 each. Reserves have edged up from Rs. 128.01 lakhs to Rs. 128.40 lakhs. Although borrowings have declined from Rs. 49.02 lakhs to Rs. 46.39 lakhs, current liabilities and provisions (including that for dividend) have risen by Rs. 7.13 lakhs, due obviously to the higher dividend, so that the aggregate of outside funds works out to Rs. 78.58 lakhs as against Rs. 74.08 lakhs a year before.

The Rs. 30 fully paid ordinary shares of the Company are currently quoted at Rs. 180 *cum-div.* and fetch, on the *ex-div.* price a net return of 6.6 per cent per annum on fresh investment.

THE BOMBAY DYEING AND MANUFACTURING COMPANY LIMITED

NOTICE

THE EIGHTY-FIFTH ANNUAL GENERAL Meeting of The Bombay Dyeing and Manufacturing Company, Ltd. will be held at the Registered Office of the Company, Neville House, Ballard Estate, Bombay-1, on Wednesday, the 29th April 1964, at 4-30 p.m., to transact the following business:—

1. To adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1963.

2. To sanction the declaration of a Dividend.

3. To appoint a Director in the place of Mr. Maneklal Premchand who retires by rotation, and being eligible, offers himself for re-appointment; and to consider and, if thought fit, to pass the following Resolution, of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company from some Members, and is hereby given to the Members:—

"RESOLVED that, pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Mr. Maneklal Premchand, who has attained the age of 74 years and who retires by rotation and is eligible for re-appointment, be and he is hereby re-elected a Director of the Company, and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

[The relative Explanatory Statement under Section 173 of the Companies Act, 1956, is annexed to this Notice.]

4. To appoint a Director in the place of Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation, and being eligible, offers himself for re-appointment; and to consider and, if thought fit, to pass the following Resolution as a Special Resolution in respect of which Special Notice, as required by Section 261 of the Companies Act, 1956, has been received by the Company from some Members, and is hereby given to the Members:—

"RESOLVED that, pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation and is eligible for re-appointment, and who is an Executive and Officer of Messrs. Nowrosjee Wadia and Sons (Private) Ltd., the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company."

[The reasons which make the above Resolution necessary have been set out in the Explanatory Statement under Section 173 of the Companies Act, 1956, annexed to this Notice.]

5. To appoint a Director in the place of Mr. N. K. Petigara who retires by rotation, and being eligible, offers himself for re-appointment.

6. To appoint Auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting, and to fix their remuneration.

SPECIAL BUSINESS

7. AND for the purpose of considering, and if thought fit, to pass (with or without amendment as may be permissible), the following Resolutions as Special Resolutions and/or Ordinary Resolutions as specified below:—

(a) ORDINARY RESOLUTION

"RESOLVED that, pursuant to the provisions of Section 310 of the Companies Act, 1956, and subject to the approval of the Government of India being obtained, the remuneration payable to a Director of the Company be and is hereby increased from Rs. 100 to Rs. 250 for each meeting of the Board or of a Committee of the Board attended by him."

(b) SPECIAL RESOLUTION No. I

"RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, and subject to the approval of the Government of India being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. Bombay Ring Travellers Co. Ltd., Bombay, (who are or may be deemed to be 'associates' of the Managing Agents of the Company)—subject to any amendments as may be suggested by the Government of India and accepted by the Board of Directors of the Company and by Messrs. Bombay Ring Travellers Co. Ltd.—to be operative for a period of five years as from the date of this Meeting, unless determined previously by three months' notice given by either side to the other, in respect of the supply or rendering to the Company by Messrs. Bombay Ring Travellers Co. Ltd., of services by way of undertaking repair work and precision jobs of grinding, milling, etc. of castings and machinery parts in their Tool Room, and services of an ancillary or auxiliary nature as also in respect of services to be rendered to them by the Company such as hiring to them trucks belonging to the Company: subject to the conditions that the prices or rates to be paid by the Company shall be reasonable and/or approved of by the Directors of the Company, and that all payments to be made to the Company by Messrs. Bombay Ring Travellers Co. Ltd. shall be made within one month from the date of the supply or *rendering* of any service by the Company to Messrs. Bombay Ring Travellers Co. Ltd."

(c) SPECIAL RESOLUTION No. II

"RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. Bombay Ring Travellers Co. Ltd., Bombay, (who are or may be deemed to be 'associates' of the Managing Agents of the Company) to be operative for a period of five years as from the date of this Meeting unless determined previously by three months' notice given by either side to the other, in respect of the purchases from Messrs. Bombay Ring Travellers Co. Ltd. of wire healds, rings and ring travellers, and other machinery, articles and things required by or useful for the textile industry which are manufactured and/or dealt in by them, and in respect of the sale or supply to them of any property or any article produced, dealt in or owned by the Company; subject to the conditions that the prices of such products shall be reasonable and/or approved of by the Directors of the Company, and that all payments to be made to the Company by Messrs. Bombay Ring Travellers Co. Ltd. shall be made within one month from the date of the sale or supply of any property or any article by the Company to Messrs. Bombay Ring Travellers Co. Ltd."

(d) SPECIAL RESOLUTION No. III

"RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, and subject to the approval of the Government of India being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. N. S. Guzder & Co. Private Ltd., Bombay, (who are or may be deemed to be 'associates' of the Managing Agents of the Company)—subject to any amendments as may be suggested by the Government of India and accepted by the Board of Directors of the Company and by Messrs. N. S. Guzder & Co. Private Ltd.—to be operative for a period of five years as from the date of this Meeting unless determined previously by three months' notice given by either side to the other, in respect of the purchases from Messrs. N. S. Guzder & Co. Private Ltd., of kapas, cotton and cotton seeds, and such other goods required for the textile industry in which they trade or do business or may trade or do business, as well as in respect of the sale or supply to them of any property or any article produced, dealt in or owned by the Company: subject to the conditions that the prices of such kapas, cotton and cotton seeds, and such other goods as aforesaid shall be such as are reasonable and/or approved of by the Directors of the Company and that all payments to be made to the Company by Messrs. N. S. Guzder & Co. Private Ltd. shall be made within one month from the date of the sale or supply of any property or any article by the Company to Messrs. N. S. Guzder & Co. Private Ltd."

(e) SPECIAL RESOLUTION No. IV

"RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. N. S. Guzder & Co. Private Ltd., Bombay, (who are or may be deemed to be 'associates' of the Managing Agents of the Company), to be operative for a period of five years as from the date of this Meeting unless determined previously by three months' notice given by either side to the other, in respect of purchases from Messrs. N. S. Guzder & Co. Private Ltd., of kapas, cotton and cotton seeds, and such other goods required for the textile industry in which they trade or do business or may trade or do business, as well as in respect of the sale or supply to them of any property or any article produced, dealt in or owned by the Company: subject to the conditions that the prices of such kapas, cotton and cotton seeds, and such other goods as aforesaid shall be such as are reasonable and/or approved of by the Directors of the Company and that all payments to be made to the Company by Messrs. N. S. Guzder & Co. Private Ltd. shall be made within one month from the date of the sale or supply of any property or any article by the Company to Messrs. N. S. Guzder & Co. Private Ltd."

(f) SPECIAL RESOLUTION No. V

"RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, and subject to the approval of the Government of India being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. G. Claridge & Co. Ltd., Bombay, (who are or may be deemed to be 'associates' of the Managing Agents of the Company)—subject to any amendments as may be suggested by the Government of India and accepted by the Board of Directors of the Company and by Messrs. G. Claridge & Co. Ltd.—to be operative for a period of five years as from the date of this Meeting unless determined previously by three months' notice given by either side to the other, in respect of Messrs. G. Claridge & Co. Ltd. rendering services by way of any work of or in relation to printing, embossing, engraving, etc., of, and supplying, stationery, labels, forms, certificates, coupons, folders, books, cartons, calendars, and other ancillary jobs, subject to the conditions that the prices or rates to be paid by the Company shall be reasonable and/or approved of by the Directors of the Company."

(g) SPECIAL RESOLUTION No. VI

"RESOLVED that the Articles of Association of the Company be and are hereby altered in the manner following:—

(a) In Article 15, for the words "or (upon paying Re. 1 in respect of each certificate) to several certificates", the words "or to several certificates either without payment of fees if the Directors so decide, or on payment of such fees (not exceeding Re. 1 for each certificate) as the Directors shall prescribe", shall be substituted.

(b) The existing Article 54 shall be substituted by the following Article:—

'54. *Fee on Transfer or Transmission.*—

(1) The Directors shall have discretion (which they may exercise from time to time and for any period of time) not to charge any fee in respect of the transfer or transmission of a share.

(2) Subject as above, a fee not exceeding 25 naye paise per share may be charged in respect of the transfer or transmission to the same party of any number of shares of any class, subject to such maximum on any one transfer or transmission as may from time to time be fixed by the Directors. Such maximum may be a single fee payable on any one transfer or one transmission of any number of shares of one class, or may be on a graduated scale varying with the number of shares comprised in one transfer or transmission, or may be fixed in any other manner as the Directors in their discretion may determine, generally or in any individual case.'"

The Explanatory Statement under Section 173 is annexed in respect of the above Resolutions.

The drafts of the contracts referred to in Special Resolutions Nos. I, II, III, IV and V are open for inspection by any Member at the Registered Office of the Company on all working days from 10.30 a.m. to 1.00 p.m.

By Order of the Board,
NOWROSJEE WADIA & SONS (PRIVATE) LTD.,
NEVILLE N. WADIA,
Director,
Managing Agents.

BOMBAY, 12*th March* 1964.

Notes:—

THE MILLOWNERS' ASSOCIATION BOMBAY

NOTICE IS HEREBY GIVEN THAT THE ANNUAL GENERAL MEETING of the MEMBERS of the MILLOWNERS' ASSOCIATION, BOMBAY, will be held in the rooms of the Association (Second Floor, Elphinstone Building, Veer Nariman Road, Fort, Bombay) at 11.30 a.m. on Thursday, the 23rd April 1964, to transact the following business:—

1. To receive and adopt the Committee's Report and Statement of Accounts for the year 1963;
2. To appoint Auditors of the Association's Accounts for the current year and to fix their remuneration;

AND any other business that may be brought forward.

By Order of the Committee,
R. L. N. VIJAYANAGAR,
Secretary.

BOMBAY, 13*th April* 1964.

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Register of Members and Share Transfer Books for Preference Shares in the Company will remain closed from the 16th to 22nd April, 1964, both days inclusive, for the purpose of payment of Preference Dividend for the half-year ended 31st March, 1964, on or after the 1st May, 1964, to those Preference Shareholders whose names appear on the Company's Register of Members on the 22nd April, 1964, or to their mandatees.

By Order of the Board,
MARTIN BURN LTD.,
S. GUPTA,
Managing Director,
Managing Agents.

Registered Office:
12, MISSION ROW,
CALCUTTA-1.
3*rd April*, 1964.

BANK OF MAHARASHTRA

(*Concluded from page* 619)

medium-scale industries. In doing so, we mainly take into consideration the technical ability, integrity of the borrower and the soundness of the scheme and not so much the physical assets. This has resulted in many small industrialists coming to us. During the last 28 years, we have always tried to assist a person who can make creditworthy use of funds lent to him and increase the country's production. Our experience is encouraging. On 31st December 1963, the total number of borrowers was 8,690. Out of them borrowers who were lent upto Rs. 5,000 were 6,190, i.e. 71.1 per cent and borrowers from Rs. 5,000 to Rs. 10,000 accounted for 10 per cent, their number being 865.

You will be glad to note that our bank has a pronounced tendency to take care of small promising entrepreneurs. This is because of the social objectives accepted by the bank since its inception. This Bank was established for the economic, industrial and social development of the country, more particularly of Maharashtra, with due regard to the safety of its depositors. As I told you last year, we are striking a balance between our activities in the different regions of the State, namely, Marathawada, Konkan, Vidarbha and Western Maharashtra.

Branch Expansion

In 1963, we have opened nine new branches out of which two are in industrial estates at Poona and Thana, two in Goa, two in Bombay and three at other centres. We have also received permission to open branches at Mazagon, Virar and Mulund in and around Bombay. To enable us to man the various new offices with trained staff, we have now started a full-time training scheme for new entrants, junior officers and senior officers. The senior officers are also deputed from time to time to sister institutions for training.

During the year under report, Mr. D. K. Sathe, one of the founder members, resigned on grounds of health and Mr. M. B. Jambhekar resigned on account of pressure of work of Kirloskar Foundation.

The Board co-opted Mr. M. L. Apte and Mr. V. S. Vaidya on the Board. Both are young, energetic and experienced businessmen.

During the year under report, our relations with the staff continued to be cordial. I thank them all for their continued co-operation, but for which the progress of the institution would not have been so satisfactory.

Thanking you.

Note: *This does not purport to be a record of the proceedings at the Annual General Meeting.*

There's nothing formidable about our Agent. Any little problem you bring up, has his most careful personal attention. What's it you'd be wanting? To open a current or savings bank account? Purchase or sell securities? Periodical remittances? Safe custody of investments? Your wish is his command.

And you don't have to have an appointment either. Just walk in and see him. Who knows, he might offer you a cigar!

PRIVATE IMPORTS FALL, GOVERNMENT IMPORTS RISE

RECENT TRENDS ANALYSED

A RISE in Government imports and a fall in imports on private account are among the significant trends in India's import trade in recent years. According to provisional official statistics, Government imports rose from Rs. 363.3 crores in 1961-62 to Rs. 463.5 crores in 1962-63 but private imports fell from Rs. 638.3 crores to Rs. 625.9 crores in the same period. In the first half of 1963-64, Government imports accounted for Rs. 284.5 crores, as against Rs. 214.3 crores in the corresponding period of the preceding year while private imports stood at Rs. 310.3 crores as compared with Rs. 322.5 crores.

Government imports consist mainly of food, capital equipment, iron and steel, railway stores, communication stores and other items like non-ferrous metals, fertilisers and mineral oils. Food obviously has been the major item, absorbing Rs. 98 crores in the first half of 1963-64, as against Rs. 79.6 crores in the similar period of 1962-63. The trend in food imports in recent years is shown below:

	Rs. crores
1957-58	165.3
1958-59	150.7
1959-60	150.1
1960-61	213.2
1961-62	117.0
1962-63	166.4
1963-64 (first half)	98.0

The sharp increase in food imports in 1962-63 and 1963-64 is due to the decline in domestic production of cereals. Official sources attribute the fall in output to unfavourable weather conditions such as excessive rains, prolonged droughts, cold wave, inadequate winter rains, etc., but those who are closely acquainted with the facts know that agricultural production need not have suffered so severely if the problem had been tackled properly in a co-ordinated manner. Ever since the attainment of independence, India has continued to depend heavily on imported foodgrains and the time has come to reduce drastically these imports by increasing indigenous production as rapidly as possible.

Capital equipment for Government projects absorbed Rs. 133 crores in 1962-63, as against Rs. 102.3 crores in 1961-62. In 1958-59, imports in this category were valued at Rs. 144.2 crores. The high level of imports is, of course, inevitable in a developing economy but at the same time, efforts have to be made continuously to increase the production of capital goods. In the case of railway stores and communication stores, for example, there has been a fall in imports on account of higher indigenous production. The value of railway stores imported fell from Rs. 7.4 crores in the first quarter of 1963-64 to Rs. 5.1 crores in the second quarter. Their total import in 1962-63 was Rs. 27.9 crores, as against Rs. 50.3 crores in 1957-58 and Rs. 51.8 crores in 1958-59. The import of communication stores rose from Rs. 3.4 crores in the first quarter of 1963-64 to Rs. 4.1 crores in the second quarter, but, in the full year 1962-63, the imports were much lower at Rs. 14 crores, as against Rs. 30.3 crores in 1957-58.

TABLE I: **Trend of Imports on Government Account**
(Value: In crores of rupees)

Item	1957-58	1962-63	1963-64* (April-Sept.)
Food	165.3	166.4	98.0
Capital equipment for Government projects	104.7	133.0	98.1
Iron and steel	49.7	24.7	9.6
Railway stores	50.3	27.9	12.5
Communication stores	30.3	14.0	7.5
Others (including non-ferrous metals, fertilisers, metals, mineral oils, etc.)	137.2	97.5	58.8

* Preliminary

TABLE II: **Trend of Imports on Private Account**
(Value: In crores of rupees)

Item	1957-58	1962-63	1963-64* (April-Sept.)
Food, drink and tobacco	27.9	25.6	9.8
Drugs and medicines	15.6	6.5	2.4
Paper, paperboard and newsprint	12.1	7.6	3.4
Electrical goods	24.8	19.7	10.8
Mineral oils etc.	79.9	80.4	44.7
Cotton—raw and waste	19.2	55.9	24.5
Jute—raw and waste	6.4	2.7	1.3
Chemicals	21.8	43.0	18.1
Dyes and colours	14.4	10.3	4.1
Iron and steel	82.7	52.3	25.4
Other metals	33.5	38.7	18.5
Textile yarns (including textile fabrics)	26.7	12.5	5.0
Machines	166.2	137.7	70.5
Vehicles including locomotives	35.7	33.7	15.2
Ships, aircrafts and parts	4.7	3.1	0.9

* Preliminary

As regards private imports, there has been a continuous decline from Rs. 638.3 crores in 1961-62 to Rs. 625.9 crores in 1962-63, and from Rs. 322.5 crores in the first six months of 1962-63 to Rs. 310.3 crores in the corresponding period of 1963-64. The large items among private imports are machinery, mineral oils, raw cotton, iron and steel, chemicals and metals other than steel.

In recent years, there has been a significant reduction in imports of drugs and medicines from Rs. 15.6 crores in 1957-58 to Rs. 6.5 crores in 1962-63, paper and paper board from Rs. 12.1 crores to Rs. 7.6 crores and textile yarns from Rs. 26.7 crores to Rs. 12.5 crores.

Among items the import of which has substantially increased are cotton—raw and waste from Rs. 19.2 crores in 1957-58 to Rs. 55.9 crores in 1962-63 and chemicals from Rs. 21.8 crores to Rs. 43.0 crores. The import of commodities like mineral oils has remained more or less unchanged at around Rs. 80 crores per year.

The import statistics of India do not seem to receive careful and detailed scrutiny, because, firstly, for the past many years, stringent import control has been imposed and, secondly, it is believed that, in a country engaged in intensive industrialisation, a continuous increase in imports is essential and inevitable. While the latter statement is no doubt true, it is also important to ensure that the foreign exchange is spent in the most efficient and economical way, so that the indigenous industries can function to full capacity and production can be stepped up steadily. A detailed scrutiny of import statistics, both on Government and private accounts, may still reveal scope for economy and saving of foreign exchange. A few years ago, it was reported that the Federation of Indian Chambers of Commerce and Industry had undertaken such a detailed study but it is not known how far it has progressed.

TWENTY-FIRST SESSION OF G.A.T.T.

The twenty-first session of the Contracting Parties to the General Agreement on Tariffs and Trade was held at Geneva from 24th February to 20th March 1964, under the chairmanship of Mr. J. H. Warren, Assistant Deputy Minister, Department of Trade and Commerce of Canada. Much of the work of the session was concentrated upon the trade problems of the less-developed countries. At their meeting in May 1963, it will be recalled, the Ministers had recognised that there was need for the General Agreement to be expanded in order to reflect more accurately the activities and responsibilities of the G.A.T.T. in relation to the trade and economic development problems of the less-developed countries. For this purpose, the Committee on the Legal and Institutional Framework of G.A.T.T. in relation to the Less-Developed Countries was set up. This Committee presented to this session its report which includes the draft of a proposed additional chapter to the G.A.T.T., to cover trade and development. A large number of Contracting Parties took part in the discussion of this report and all stressed the importance, significance, and encouraging character of the results so far achieved in relation to the future work of the Contracting Parties in connection with the problems of the trade and economic development of the less-developed countries. In summing up the discussion, the Chairman stated that the Contracting Parties had noted:

1. That there is agreement that it is appropriate and timely to incorporate in the General Agreement, provisions which would (a) adequately reflect the activities already undertaken by the Contracting Parties with respect to trade problems related to the economic development of the less-developed countries; (b) provide the necessary legal and institutional basis for the future functioning of the Contracting Parties with respect to these matters.

2. That there is also agreement that such provisions should be incorporated in a separate chapter on trade and development.

3. That on a number of provisions to be incorporated in the chapter there is agreement, in some, the outstanding issues appear to be largely a question of more precise drafting, whilst on others more substantial issues remain.

4. That the United Nations Conference on Trade and Development will shortly be considering the relevant or related matters.

The Chairman also noted the agreement of the Contracting Parties to pursue, through the Legal and Institutional Committee, discussions on the proposed draft chapter with a view to resolving outstanding issues.

The Committee should prepare the text of a protocol for amendment of the General Agreement and consider the possibility of providing for a declaration for the provisional application of the chapter pending entry into force of the amendment protocol. The Committee should present a report to the Council not later than 30th September 1964.

The Council, in the light of the report submitted to it by the Committee, will submit appropriate recommendations to the session of the Contracting Parties to be held not later than mid-November 1964 with the intention that Governments of Contracting Parties should be prepared to reach final agreement.

The Ministers at their meeting in May 1963 had suggested that one of the measures that should be studied to further the trade and development of less-developed countries was the accordance of preferential treatment to the semi-manufactured and manufactured goods exported by the less-developed countries. They had further agreed that a working group should be established to study the following proposals: "(a) the granting of preferences on selected products by industrialised countries to less-developed countries; and (b) the granting of preferences on selected products by less-developed countries to all other less-developed countries."

The discussion on this working group's report showed a general appreciation of the fact that the various proposals which had been submitted to the group involved complex and difficult questions which required careful consideration. In summing up the discussion the Chairman stated that the Contracting Parties had formally taken note of the report of the working group. On the basis of this report, it appeared that there was a broad measure of agreement that, following the preliminary examination, in accordance with the ministerial directive of May 1963, of the question of the granting of preferences by industrialised countries for the manufactured and semi-manufactured products of developing countries, and the exchange of preferences by developing countries with each other, "there are sufficient possibilities in such arrangements to warrant a more detailed study of the terms and conditions on which such preferences might be envisaged". In this connection, the Contracting Parties have noted that there are considerable divergencies of opinion between Contracting Parties as to the terms, conditions and procedures which would be appropriate to govern any such preferential arrangements, and accordingly, in view of the importance of these matters, invite Governments to give them early consideration.

The Chairman also noted that there was agreement to instruct the Council to reconvene the Working Party on Preferences at the earliest date that the Council deems, in the light of further examination by Governments, that its work can be usefully resumed. In this connection the Council should bear in mind the desirability of so arranging these further discussions that a further report from the Working Party on Preferences might be submitted to the Council in time to enable the Council to make a submission to the session of the Contracting Parties to be held not later than mid-November 1964.

The Contracting Parties reviewed the progress which had been made under the Action Programme which had been adopted by Ministers at their meeting in May 1963 and in connection with the other activities which had been initiated in the G.A.T.T. as a result of directives received from Ministers. Apart from the question of preferences and the Legal and Institutional Framework of the G.A.T.T., to which reference has already been made above, much work has been done in the G.A.T.T., particularly by Committee III, in connection with the proposed study of development plans of less-developed countries and the fostering of their export potential, the establishment of trade information and promotion services, and arrangements for closer co-operation with international agencies, particularly lending agencies in connection with the development of this export potential.

In addition to these activities, the Action Committee itself, which is initiating and co-ordinating further positive measures to help developing economies to strengthen their production potential and export capacity, submitted a report to the session. The Committee has met on three occasions since its inception in September 1963. Although, during the discussion, the progress that had been made in the elimination of barriers to the exports of the less-developed countries was welcomed, there was still a number of hard-core restrictions on products which are of great importance for the economic development of certain less-developed countries. The Action Committee noted that, with one or two exceptions, all industrialised countries were now granting duty-free entry to tea and tropical timber. Furthermore, in certain important markets, duties on a number of other products had been suspended at the beginning of 1964. In the course of discussion in the session, a strong appeal was made to Contracting Parties to exercise the necessary political will and to give the additional impetus and directives required for the implementation of the Action Programme. The Contracting Parties also discussed problems concerning trade in tropical products. It was agreed that these problems could be usefully considered during the Kennedy round and that it would be appropriate to seek mutually advantageous solutions to problems in this important sector of the trade of less-developed countries in the course of these negotiations.

The Contracting Parties heard a report by the Executive Secretary in his position as Chairman of the Trade Negotiations Committee on the preparations for the Kennedy round of trade negotiations, during the course of which he emphasised that the preparations had been taken to the point where the opening of the negotiating stage proper could be expected with confidence on 4th May 1964 as scheduled. The major industrialised countries emphasised that they considered that one of the major objectives of the negotiations should be the attainment of a significant contribution to the trade of less-developed countries and it was agreed that full consideration would be given to the problems involved at an early date by the special sub-committee set up for this purpose. There is a strong expectation that the negotiations will make an important contribution towards meeting the trade problems of the less-developed countries.

WORLD DAIRY OUTPUT

The upward trend in world milk production was checked during 1963, and total output in the main dairying countries is estimated at slightly less than in 1962. Butter production also fell in most countries, as a reduction in milk output is normally accompanied by a more than proportionate decline in the quantity used for butter. European production of milk was adversely affected by the bad weather last winter and by a 2 per cent decline in herds. Milk production is estimated to have declined by nearly 1 per cent in 1963 in the United States, and there has also been a fall due to feed shortages in the U.S.S.R. and Eastern Europe. In contrast, production records were established in both Australia and New Zealand during the 1962-63 season. The overall drop in European butter output caused some increase in average prices. On the London Provision Exchange, both New Zealand butter and Australian butter are 20s ($2.80) a cwt. higher than they were a year ago and Danish butter is nearly 40s. a cwt. higher. These developments have stimulated international trade, and total butter exports are estimated to have risen in 1963 by 30,000 tons, to 525,000 tons.

SYNOPSES OF COMPANY REPORTS

Killick Industries Ltd.

(*Managing Director*: Mr. A. N. Haksar, Bombay.)

Sixteenth Annual General Meeting—29th April 1964.

Working Results:

	For the year ended 30th November (In thousand rupees), 1963	1962
Gross profit	19,08	27,07
Transfer to depreciation	2,60	2,72
" " development rebate reserve	15	15
" " provision for taxation	6,32	10,60
Net profit	10,01	13,59
Appropriations:		
Transfer to general reserve	75	7,50
Proposed dividend (taxable) equity	9,37 (71%)	6,25 (5%)
Carry forward	0	18
Market value of equity shares (in rupees):	1964	1963 1962
High	90.00	95.00 96.00
Low	81.50	75.00 83.50

Extracts from the Directors' report: *Investments*: During the year, the Company acquired 2,000 equity shares in Filtrona India Limited for which a sum of Rs. 2,00,000 has been paid. The Company was also allotted 10 bonus shares in Khatau Makanji Spinning and Weaving Company Limited.

John Baker and Sons: During the year sales amounted to Rs. 67.16 lakhs against Rs. 50.09 lakhs in the previous year. With its turnover going up by approximately thirty per cent the improvement in the working results of this Division both from *Steel Files* and *Glacial Acetic Acid* has continued. Despite an increase in costs which were beyond the control of the management, e.g., higher import duty on certain steel sections, emergency risk insurance and higher interest rates, the Division's results were better than in the previous year. A small quantity of files continued to be exported. Protection to the steel files industry was withdrawn from 1st January 1964.

Managed Companies: *The Ahmedabad Electricity Co., Ltd.* (31-3-1963): The C-3 Project was completed according to schedule. Of the two 200,000 lbs./hour Boilers one was commissioned in January 1963 and the second one in February, 1963. The 30 M.W. *Turbo-Alternator* Set itself was commissioned in May, 1963.

Filtrona India Limited (30-9-1963): with effect from 10th May, 1963, this Company became a public Company pursuant to the provisions of Section 43A of the Companies Act, 1956. The construction of the factory at Chandivali is virtually completed, plant has been installed and production of *Filter Rods* has commenced.

The Company has been appointed Managing Agents of The Thana Electric Supply Company Private Limited for a period of five years with effect from 1st April, 1964, by a Resolution passed at an Extraordinary General Meeting of that Company held on 27th November, 1963. The Central Government has accorded its approval to this appointment.

Subsidiary Companies: *Killick, Nixon & Co., Ltd.* (31-7-1963): The improvement in this subsidiary company's affairs continued during the year and substantial progress was made in its trading activities as well as in the development of its Engineering Works, which has resulted in a satisfactory profit. The current year's working to date is equally encouraging and it is expected that the entire loss brought forward from earlier years will shortly be wiped off.

Killick Caribonum Ltd. (30-6-1963): Despite strenuous efforts to improve the working of this company, which resulted in an increase in turnover, the year ended on an unsatisfactory note largely as a result of increased costs.

A. R. Haseler Ltd. (30-9-1963): As anticipated last year, the results of this subsidiary for the year ended 30th September, 1963, were most encouraging and the entire carried forward loss has been cleared. This progress is expected to continue.

Killick Slotted Angles Ltd. (*Period from* 30-8-1962 to 31-8-1963): The results of this subsidiary for its first year of working show a loss. However, production and sales which commenced towards the middle of the year are continuously improving and hold forth good promise. Import of additional plant is being undertaken.

Snowcem India Limited (31-1-1963): The results of this company continued to be encouraging and there was a further increase in turnover. Increased excise duty and sales tax and the introduction of the Super Profits Tax, however, adversely affected the surplus available for appropriation. The proposal to replace the Super Profits Tax by a Sur-tax on profits is expected to give some small relief.

Accounts in brief as at 30th November 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,24,95,600	Gross block	58,96,593
Reserves and surplus	50,66,342	—Depreciation	26,33,822
Other liabilities	1,49,91,824	Net block	32,62,771
		Block-in-progress	6,24,715
		Current assets	1,18,27,823
		Investments	1,63,14,245
		Cash	24,212
	Rs. 3,25,53,766		Rs. 3,25,53,766

* Paid-up capital consists of 1,24,954 equity shares of Rs. 100 each. Amount paid-up on shares forfeited is Rs. 200.

G. Claridge and Co., Ltd.

(*Managing Agents*: Messrs. W. H. Brady & Co., Ltd., Bombay.)

Forty-fourth Annual General Meeting—22nd April 1964.

Working Results:

	For the year ended 31st December (In thousand rupees), 1963	1962
Gross income	58,64	52,75
Income from printing, binding, etc.	56,73	51,31
Closing work-in-process	5,35	4,49
Gross profit	9,33	9,34
To Managing Agents' remuneration	85	80
Transfer to depreciation	2,22	1,46
" " development rebate reserve	44	63
" " provision for doubtful debts	20	Nil
" " provision for taxation	3,34	3,20
Net profit	1,78	3,25
Transfer from reserve for taxation	1,10	Nil
" " other reserves	10	3,04
Other credit adjustments	91	19
Appropriations:		
Transfer to provision for taxation in respect of previous years	42	34
Transfer to reserve for taxation	Nil	1,10
" general reserve	3,47	3,60
Proposed dividend (taxable) equity	*	1,93
	(15%)	(15%)
Carry forward	(a)	(b)
Market value of equity shares (in rupees):	1964†	1963 1962
High	225.00	200.00 375.00
Low	198.75	180.00 216.25

* The dividends for 1963 will be paid out of the general reserve and will absorb Rs. 2,40,000.
(a) Only a sum of Rs. 356.30.
(b) Only Rs. 840.32.
† Upto 2nd April 1964.

Extracts from the Directors report: If the proposals of the New Finance Bill are accepted this year, this Company, being a Company in which the public are not substantially interested, will have unfortunately to pay 10 per cent more of the taxable income for super-tax, also the dividend paid last year will attract a tax of 7½ per cent. The provision for taxation has been made taking into consideration the above factors.

New machinery to the value of Rs. 3,03,051 was installed during the year.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	16,00,000	Gross block	37,31,620
Reserves and surplus	21,98,829	—Depreciation	22,28,948
Other liabilities	13,90,897	Net block	15,02,672
		Current assets	33,77,442
		Investments	500
		Cash	3,09,112
	Rs. 51,89,726		Rs. 51,89,726

* Paid-up capital consists of 16,000 Equity shares of Rs. 100 each. Of the above shares —9,558 shares held by the holding company—Messrs. W. H. Brady & Co., Ltd

Henley Cables India Ltd.

(*Chairman*: Mr. A. D. Shroff. *Managing Director*: Mr. P. H. Scrine.)

Registered Office: Henley House, Ballard Estate, Bombay-1.

Works: Hadapsar Industrial Estate, Poona-1.

Fourth Annual General Meeting—29th April 1964.

Extracts from the Directors' report for the year ended 31st October 1963: Without providing depreciation the loss for the year was Rs. 3,46,300 (loss of Rs. 7,86,922 in 1962 after providing Rs. 2,49,261 for depreciation). Sales of the Company's products during the year were to a value of approximately Rs 62.34 lakhs. Consumption during the year did not reach earlier expectations and consequently the value of stocks at the end of the year was substantial. Profitability was affected by the Government's arrangements in regard to the changeover from copper to aluminium conductors, and by the necessity to use indigenous, instead of imported, P.V.C. Compound.

The cash credit facility of Rs. 20 lakhs afforded by the Company's Bankers and secured by the hypothecation of the Company's moveable assets in the year 1961-62 was increased during the year to Rs. 25 lakhs. This facility has, since the end of the year, been increased by a further Rs. 7 lakhs. The limit of the loan of Rs. 45 lakhs against equitable mortgage of the Company's fixed assets was also increased during the year to Rs. 50 lakhs.

During the year the Company received an import licence for additional plant to a value of approximately Rs. 7 lakhs. This plant, the majority of which will be shipped during March 1964 will enable the Company to increase its range of cables.

An import licence is awaited for plant to a value of approximately Rs. 23.70 lakhs for the manufacture of *Winding Wires* and *Covered Copper Strips*. Construction of the factory building for this expansion scheme commenced towards the end of 1963. The Directors have under consideration the question of the provision of the balance of sterling funds required for this expansion. In regard particularly to rupee requirements the Directors are considering a rights issue of 1 for 4 existing shares held and an application is accordingly being submitted to the Controller of Capital Issues.

Both sterling and rupee capital requirements for this scheme will necessitate an increase in borrowing and the Directors are taking the opportunity at the forthcoming annual general meeting of obtaining the shareholders' sanction to an increase in borrowing powers to cover the possibility of loans exceeding the paid-up capital of the Company.

In 1962-63 the Directors, with the shareholders' approval, appointed Voltas Limited as sole selling agents for the products carrying the '*HENLEY*' and/or '*ARGOSY*' marks. The intention to appoint Associated Electrical Industries (India) Private Ltd. as sole selling agents for the products carrying the "*AEI*" mark was mentioned in the Company's third annual report.

Accounts in brief as at 31st October 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,07,33,000	Gross block	1,12,60,709
Other liabilities	1,08,02,166	—Depreciation	3,04,395
		Net block	1,09,56,314
		Block in progress	4,07,158
		Current assets	66,75,988
		Investments	22,46,470
		Cash	96,432
		Miscellaneous expenditure	45,805
		P.L. % Deficit	11,06,990
	Rs. 2,15,35,166		Rs. 2,15,35,166

* Paid-up capital consists of 1,07,330 equity shares of Rs. 100 each.

Shivrajpur Syndicate Ltd.

(*Managing Agents*: Messrs. Killick Industries Ltd., Bombay.)

Sixtieth Annual General Meeting—22nd April 1964.

Working Results:

	For the year ended 30th November, (In thousand rupees) 1963	1962
Sales	37,18	52,71
Closing stock	23,39	29,50
Gross) loss	—3,40*	—13,10*
Transfer to provision for depreciation	4,45	5,23
" " " for retiring gratuities	64	1,68
Appropriations to dividend, etc.	Nil	Nil
Total loss carried forward	—23,64†	—20,24‡
Market value of equity shares (in rupees):	1964(a)	1963 1962
High	21.48	27.00 47.50
Low	15.48	15.52 21.52

* Loss after providing for depreciation and retiring gratuities.
† Includes loss brought forward.
‡ Includes Rs. 8,590 on account of New Share Capital issue expenses and loss brought forward of Rs. 7,04,525.
(a) Upto 3rd April 1964.

Extracts from the Directors' report: The sharp fall in the output during the year under review resulted from a further reduction in the scale of mining operations in the opencast workings. It was unfortunately necessary to retrench 325 staff and labour in June 1963.

Shipments and deliveries also registered a fall, compared to last year, the difference being over 19,000 tonnes, with the result that the sales realisation amounts to Rs. 37,18,257 compared to Rs. 52,70,707 for the previous year. The slight improvement in the average realisation price was due to the delivery of a larger quantity of *High Grade Ore*.

Output and Shipments:

	1961-62	1962-63
Output : Tonnes	46,186	25,826
Shipments : "	55,406	36,267

Export Control of Manganese Dioxide: Quota restrictions for export of *Manganese Dioxide* were removed with effect from 22nd April 1963. There is no quota restriction for export of *Manganese Ore*.

Relinquishment of Mining Leases: In view of the poor demand for the Company's *Ore*, steps have been taken to surrender two of the mining leases, namely, the Shivrajpur 'North' Lease and the Banankua Lease with effect from 1st November, 1964.

Railway Freight Rates: The revised railway freight rates which came into force with effect from the 1st April, 1963, as reported in the previous year, have resulted in an increase of about Rs. 3.20 per tonne in the freight rate for the Company's ores.

Trading Conditions and Future Prospects: As *Manganese Ore* is a surplus commodity at present, and as better grade ores are available at competitive prices in countries much closer to the important consuming centres, foreign buyers did not show any interest in buying the Company's ores during the year under review. However, local demand for the ore improved towards the latter part of the year and sales involving fairly substantial quantities were effected, thereby enabling the Company to dispose of a large portion of the accumulated stock although the price factor was most disappointing.

Although many barters involving export of *Manganese Ore* have been recently concluded, the demand for the Company's ore for servicing such barters has so far been disappointing and there seems to be little hope of any appreciable improvement in the position in the foreseeable future.

Accounts in brief as at 30th November 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	21,00,000	Gross block	99,40,647
Reserves †	37,61,142	—Depreciation	51,84,720
Other liabilities	43,00,732	Net block	47,55,927
		Current assets	50,78,650
		Investments	3,03,200
		Cash	13,907
	Rs. 1,01,51,874		Rs. 1,01,51,874

* Paid-up capital consists of 2,10,000 equity shares of Rs. 10 each. Of the above shares 1,05,000 shares are allotted as fully paid-up by way of bonus shares by capitalising a part of the general reserve.
† After deducting Rs. 23,63,858 being the debit balance in the profit and loss account.

NEWS IN BRIEF

COAL worth Rs. one crore has accumulated in Madhya Pradesh because production has outstripped demand.

The number of individual and Hindu undivided families in the country having a 'net wealth' of over Rs. 20 lakhs is placed at 597. Of these, 125 persons have a 'net wealth' of over Rs. 50 lakhs.

The Provisional figure of effective arrears of income-tax, as on 31st December 1963, amount to Rs. 192.99 crores. All possible steps provided for in the Income Tax Act are being taken to recover the arrears.

India exported textile goods worth Rs. 67.50 crores during the calendar year 1963, as against Rs. 59.80 crores in the previous year. Exports were stepped up despite the fact that India faced competition from South-East Asia, Africa and China.

The Indian Oil Company will take over the management of the Koyali refinery in Gujarat after the completion of the procedural formalities now under way, according to Mr. P. A. Gopala Krishnan, Chairman of the Company.

The Life Insurance Corporation has agreed to earmark Rs. 12 crores for financing the establishment of assisted industrial estates during the third Plan period. Six industrial estates have been offered loans totalling Rs. 25,35,487 of which Rs. 1,14,000 has been disbursed.

The claim of the dye-stuffs industry for continuance of protection beyond 31st December 1964, has been taken up for investigation by the Tariff Commission. A questionnaire, in this connection, has been prepared by the Commission for producers, importers and consumers.

The Government of Bihar is keen on having a Rs. 30-crore fertiliser plant at Barauni when the Indian Oil refinery there goes into production. The Government is also reported to be exploring the possibilities of a petro-chemical complex in the neighbourhood of the refinery.

The Government of India is considering a proposal to grant the Refinance Corporation for Industry a second and supplementary line of credit upto Rs. 25 crores. Till the end of 1963, the corporation received application for loans of Rs. 63.81 crores and sanctioned Rs. 51.21 crores. Its resources had been supplemented by loans,

India's iron ore exports reached a peak of 4.18 million tonnes during the year 1963-64, as against 3.74 million tonnes in the previous year. Japan was the biggest importer with an impressive figure of 23.73 lakh tonnes, followed by Czechoslovakia with 7.06 lakh tonnes and Rumania with 4.98 lakh tonnes.

Over five million acres of land were distributed by the Union Government till November 1962 among landless labourers, and the cost of distribution came to Rs. 3 crores. Rajasthan led all the other States; having distributed 1.29 million acres, followed by Andhra Pradesh (1.06 million acres). Kerala made the lowest distribution of 17,000 acres.

A pilot project in spray irrigation is to be launched by the Union Government in water scarcity areas. This method of irrigation, it is claimed, will result in the saving of at least a third of the irrigation water for the country. An officer of the Central Water and Power Commission is expected to leave on a study tour of the countries where spray irrigation is in use.

The Emergency Risks (Goods) Insurance Scheme and the Emergency Risks (Factories) Insurance Scheme have been modified to provide for an automatic extension, by three months from 1st April 1964, of the policies issued under these two schemes. No premiums will be charged and no fresh applications will be necessary for the renewal of these policies.

The Central Government is making efforts to commence early production of alloy and special steels in two public sector projects at Durgapur and Bhadrawati. In addition, the Bhilai steel plant is planning to produce about one lakh tonnes of special steel. The possibility of setting up a cogging mill to cog any special or allow steel ingots, which might be possible to make in the existing electric furnaces in the country, is also being considered.

A project report on the mining scheme for the annual production of 2.4 lakh tons of pyrites ore from Amjhore mines has been prepared by the Indian Bureau of Mines and is being considered by a committee of experts appointed for the purpose. The Pyrites and Chemicals Company has initiated preliminary action for implementing the mining scheme on the basis of this planned target for production. Tenders have been invited for the purchase of essential machinery for the production of 400 tons of ore per day to begin with.

The Tea Board has sanctioned adequate financial assistance for six tea producing co-operatives to be started soon in Nilgiris district, according to Mr. R. Venkataraman, Madras Minister for Industries. The co-operatives will benefit small tea growers. Each factory is expected to cost about Rs. 6 to 8 lakhs. Under this scheme, the small tea growers, instead of selling all the plucked tea leaves to big estate owners as is the current practice for want of factory facility, can cure it in their own co-operative factories and market the product.

The U.S. A.I.D. authorities, it is reported, are against mingling any of their aid projects with the projects of Russian and East European countries in India. In this connection, the A.I.D. mission has reportedly claimed a refund of Rs. 2 lakhs in respect of Barauni thermal power project as they argue that the constructions raised by the rupee loans are used as facilities for the Polish generator stationed there. The Union Government is investigating the claim and taking steps to avoid such difficulties in future. The U.S. A.I.D. authorities also aver that no product produced in any of the projects financed by them should directly feed projects financed by the Communist countries.

The fourth coke oven battery of the Bhilai steel plant, built at a cost of Rs. 3 crores, will be inaugurated on the 13th inst. by Mr. C. Subramaniam, Union Minister for Steel, Mines and Heavy Engineering. This is the first such battery to be built under the Bhilai Steel Plant expansion scheme. Under this scheme, the annual production capacity is being raised from one million tonnes to 2.5 million tonnes of ingots. The battery comprises 65 ovens and its output will be about four lakh tonnes of coke per annum. It is also expected that another coke oven battery, one blast furnace, two open hearth furnaces, one turbo-generator and a slag granulation plant will all be commissioned before the end of the current year.

The Government of India has decided to allow Indian nationals returning from East African countries for permanent settlement in this country to import their motor vehicles free of duty on two conditions. One, the motor vehicle so imported must have been in the possession of the repatriate for over three years and (2) he will have to execute a no sale bond for five years after importing the car into the country. However, those vehicles which are not coming under the purview of this concession will have to pay duty and customs clearance permits would be granted for not more than one such vehicle per family. Where the repatriate is not in a position to pay duty there will be no objection to his handing over the vehicle to the S.T.C. on the usual terms.

The Pyrites and Chemicals Development Co. Ltd. has under examination a project for the production of elemental sulphur from pyrites ore. A process has been located in Finland is at present under study and discussion. A delegation headed by Mr. N. N. Kashyap, Joint Secretary, Ministry of Petroleum and Chemicals, which had gone to Finland, has returned recently. Members of the delegation discussed with Messrs. Outokumpu Oy., the newly developed technical process with reference to its suitability for the production of elemental sulphur from Amjhore pyrites ore. The company has also under examination the global tenders for setting up a sulphuric acid plant at Sindri. The production of sulphuric acid from Amjhore pyrites ore is a distinctly separate project and the proposed 400-ton plant will meet the partial requirements of the Sindri fertiliser factory and the Bihar State superphosphate factory. The sites for the sulphuric acid factory and the colony at Sindri have been selected. According to the present estimates, the plant is likely to be commissioned in early 1966.

PERSONAL

MR. G. A. Sharma, I.A.S., took over as the General Manager of the B.E.S.T. Undertaking *vice* Dr. B. G. Ghate, I.A.S., who relinquished his office on the 2nd inst.

Mr. Chinubhai Chimanbhai and Mr. Harshavadan Mangaldas have been elected President and Vice-President, respectively, of the Ahmedabad Millowners' Association for the year 1964-65.

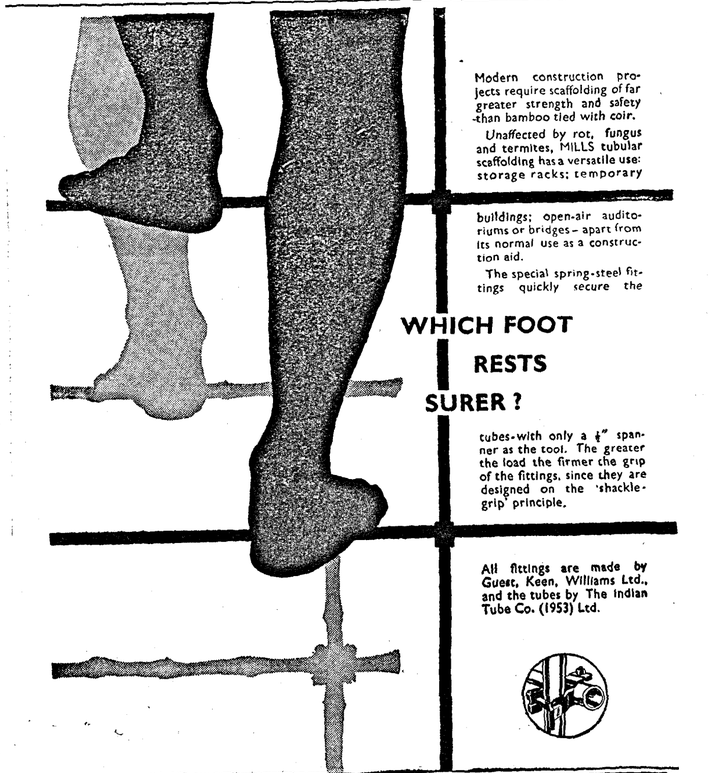
Mr. Tulsidas Kilachand, Chairman, Bank of Baroda and Mr. B. K. Dutt, Managing Director of the United Bank of India, have been elected Chairman and Deputy Chairman, respectively, of the Indian Banks' Association for the year 1964.

Mr. J. R. Armstrong of Richardson and Cruddas Ltd. has been elected Chairman of the Indian Engineering Association (Western Region) for the year 1964-65. Mr. F. A. Jasdanwalla of the Indian Standard Metal Company Ltd., has been elected Deputy Chairman.

Mr. F. Edwards, a Technical Adviser to Messrs. W. H. Brady and Company Ltd. and in charge of Belapur Company Ltd., has retired from the service of the House of Bradys, with effect from 31st March 1964, after being with them for forty years. Mr. Edwards, who was Chairman of the Deccan Sugar Factories Association for a number of years and a member of the Committee of the Bombay Millowners' Association, will be sailing for England on 17th April 1964.

From Abroad

The British Overseas Airways Corporation, which has been carrying its own insurance risk on its big jet fleet for the past year and the risk on its non-jet fleet for a longer period, has, from the 1st inst. started placing 50 per cent of the flight and normal ground risks for its V.C. 10 and Boeing 707 jet airliners with Lloyd's and company underwriters. This outside insurance, however, excludes B.O.A.C.'s Comet fleet and its remaining Britannia and DC7 non-jet aircraft. The Company first began to consider carrying its own insurance on aircraft hulls in 1961 after underwriters increased premiums on jet aircraft, following a larger number of jet crashes. Now, it is a fact that the insurance market's premiums on jets have been falling over the past year and this also attracted the Company's attention.



TREND OF MARKETS

NO CHANGE IN MONEY

(From Our Own Correspondent)

BOMBAY, 8th April

There are as yet no signs of abatement of the seasonal pressure of demand for credit. Banks are still experiencing difficulty in meeting the requirements of trade and industry. In the Inter-bank section, there are more borrowers than lenders. The rate for day-to-day money remains unchanged at the peak level of 6¼ per cent. Some borrowers are even prepared to pay a ¼ per cent more if sizable funds are available on understanding that it can be kept for more than a day. Competition for term deposits continues to be keen at the maximum rates prescribed under the Inter-bank Agreement. There have been no new developments in regard to the future of this agreement. With the Chairman and the Vice-Chairman of the Indian Banks' Association having left for Teheran to attend a conference of Asian bankers, no fresh move is likely in this direction until they return which may be some time in the fourth week of this month.

The Treasury Bill results for the week under review are colourless. The amount of tenders invited for 91-day Bills was as usual Rs. 2 crores. The amount offered, as also the amount accepted, was the same. The average rate of accepted tenders, too, remain unchanged at 3 per cent per annum. Sales of 91-day Intermediate Treasury Bills from 1st to 4th April fetched a meagre sum of Rs. 75,000, as compared with Rs. 10 lakhs in the previous week and nil a fortnight before. Sales of both the types of Bills are being continued.

The Reserve Bank's statement for the week ended 3rd April 1964, as compared with that for the preceding week, discloses a sharp rise of Rs. 48.96 crores in notes in circulation. This is not surprising, considering that, in the first week of every month, there is always a large increase in money supply consequent upon payment of bills, salaries and wages. A perceptible fall of Rs. 9.22 crores is seen under loans and advances to scheduled banks, bringing their total down to Rs. 74.94 crores, of which a little less than half—Rs. 42.76 crores, to be precise—is against usance bills. Foreign assets held by the Reserve Bank at Rs. 125.58 crores show a fractional fall of Rs. 70 lakhs.

The scheduled banks' statement for the week ended 27th March 1964 reveals a rise of Rs. 12.02 crores in bank credit pushing up the total of this portfolio to a record high of Rs. 1,814.57 crores. Deposits have gone up by Rs. 1.46 crores, the total being Rs. 2,443.75 crores. Investments are better by Rs. 3.02 crores at Rs. 639.76 crores and so also the cash balances by Rs. 7.73 crores at Rs. 147.53 crores.

The Gilt-edged market is listless, with hardly any turnover worth mentioning. Although some 10 days have elapsed since the terms of the two new conversion loans were announced by the Centre, there has been no downward adjustment in the prices of the existing Central loans or State loans. The only exceptions are 3 per cent 1966-68 4 per cent 1969, both of which have lost 5 nP to stand at Rs. 90.25 and Rs. 90.35 respectively. There has actually been a gain of 5 nP in 3 per cent 1986 Conversion Loan which is being sustained by support from the Reserve Bank.

In the foreign exchange markets of the world, the £ sterling ruled fully steady *vis-a-vis* the U.S. dollar, with a fractional improvement of 0.020 cent in the spot section, the latest rate being 279.840-279.860 cents per £. Three months' forward, however, was a little quiet, the latest rate at 279.320-279.340 cents being 0.010 cent lower than that a week ago. In the local market, the banks' selling rate for U.S. dollars improved by 25 nP to Rs. 478.50, while the buying rate continued to remain unchanged at Rs. 475 per 100 dollars.

SILVER IRREGULAR

(From Our Own Correspondent)

BOMBAY, 8th April

Silver displayed an irregular trend this week and lost a part of the gains scored in last week's rally. Gold ruled steadier, in contrast, and closed with moderate gains. Sovereign remained firm.

The start itself in silver was quiet and prices dropped in the mid-week but edged up again towards the close. This two-sided movement was due to support drying up at higher levels but reappearing at setbacks. The strong statistical position (with the local stock estimated at only 400 bars) and prospects of better demand from the next month also arrested any big fall in values. The metal opened unchanged at Rs. 259.50 and sagged to Rs. 255.50 by Monday the 6th inst. From Tuesday, it tended to recover and today it finished at Rs. 257.50, that is, two points lower over the week.

Fourteen-carat gold opened 25 nP lower at Rs. 63.50, but it closed today higher at Rs. 64.25 as compared with Rs. 63.75 last week. Pure gold gained Re. 1.50 to Rs. 106.50. Sovereign was unchanged at Rs. 88.

The price of gold in London moved within a penny and finished one-half penny lower at 250s. 8d. The international price for gold also eased from $35.08 to $35.07¼.

The sterling area's reserves of gold and convertible currencies rose by £12 million to £950 million last month. This is the best single monthly increase since last June. But, despite the rise in Bank Rate and the improved February trade figures, the reserves have failed to make up all the £17 million lost when sterling was under pressure in February.

On a re-examination of the existing position, the Government has decided that manufacturers of rolled gold, gold, gold plated or gold covered ornaments should be treated on par with manufacturers of gold ornaments. Accordingly, they will be licensed as "dealers," says a Press note issued on the 2nd inst., and this will enable them to make use of gold obtained by the melting of ornaments or primary gold purchased from persons who had given the necessary declaration under the Gold Control Rules.

With such availability of gold for them, manufacturers of rolled gold, gold plated or gold covered ornaments will no longer be treated as "industrial users" and no permit will be issued to them to purchase gold sold by the Hatti Gold Mines. Parties manufacturing such ornaments are directed to apply to the Superintendent of Central Excise concerned for a dealer's licence if they are not already in possession of such a licence.

The Regional Office of the Gold Control Administrator, Laxmi Building, Pherozshah Mehta Road, Fort, Bombay-1 will issue permits for April-June 1964 quarter for the purchase of gold by industrial users falling in the approved categories on the same basis as for the December 1963 to March 1964 period. Gold will be sold to permitholders through the local head offices of the State Bank of India at Bombay, New Delhi, Madras and Calcutta, and the offices of the State Bank of India at Varanasi, Hyderabad, Agra, Surat, Masulipatnam and Amritsar. Applications for permits should be sent so as to reach the Regional Office not later than 31st May 1964. For the quarter April-June 1964, the price of gold has been fixed by the Hatti Gold Mines Co. Ltd. at Rs. 110 per 10 grammes.

The following table shows the trend of prices during the week under review:

	8-4-1964 (closing)	High	Low	1-4-1964 (closing)
SILVER				
Ready (999 fine) ..	Rs. 257.50	Rs. 259.50	Rs. 255.50	Rs. 259.50
GOLD				
Ready (14 carat) ..	64.25	64.25	63.50	63.75
Sovereign	85.00*	—	—	85.00*
London—				
Gold	250s. 8d.	250s. 8½d.	250s. 7½d.	250s. 8½d.
Silver Ready ..	111½d.	—	—	111½d.
Silver Forward ..	111½d.	111½d.	111½d.	111½d.
New York—				
Silver	129.3 cents	—	—	129.3 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (35.73 tolas). London and New York quotations are per ounce. * As on 24-6-1963.

COTTON FUTURES REACT

(From Our Own Correspondent)

BOMBAY, 8th April

The firmness witnessed towards the close of last week gathered further momentum during the first part of the week under review. Towards the close, however, a reaction set in, thanks to profit-taking and bull liquidation which wiped out the earlier gains. The earlier firmness was influenced by the fear that, in view of the firmness of spot prices, tenders against the maturing May 1964 contract would be lower than the 7,100 bales tendered against the March contract. The apprehension that, in view of the delay in issuing the purchase authorisation for P.L. 480 cotton, mills would find it increasingly difficult to meet their demand for long-staple cotton imparted strength to the market. Although the crop is expected to be a good one there is at present a shortage of better quality cotton. The position would only be aggravated if import of U.S. cotton is delayed further. These considerations induced heavy buying which resulted in a spurt in prices. The Jantila May contract rallied from the week's opening rate of Rs. 755.75 (per three quintals) to Rs. 761.25, the highest level touched by the contract so far, on Monday the 6th inst. This high level, however, attracted profit-taking and some long liquidation and the contract reacted to Rs. 750 at close, showing a net loss of Rs. 5.75 over the week.

In the spot market at Sewri, mill demand for ready cotton was largely confined to better quality cotton like Co2, L.147, and Digvijay which are said to be short supply, in spite of a good crop. Prices were well maintained.

Export demand for Bengal Deshi from Japan and the Continent has yet to revive. Enquiries from shippers were few and far between. The Deshi crop this season is estimated at 575,000 bales. Together with the carryover stocks of the order of 37,000 bales, total supply of this variety during the season aggregates 612,000 bales. Mill consumption of Deshi cotton during the current season is expected to be higher but notwithstanding this and after taking into account the quantity already allowed for export, no less than 100,000 bales are expected to be available for export. However, the Government of India is reported to be considering a proposal to stop export of raw cotton and to use it instead for the manufacture of finished goods which could then be exported later to earn more foreign exchange.

Mill buying in foreign cotton continues to be confined largely to American cotton. With the arrival in the City this week of the Chairman of the Uganda Lint Marketing Board, prospects for successfully concluding the negotiations for imports of 30,000-40,000 bales of Uganda cotton have improved. Importers are keenly awaiting the outcome of the talks that are now in progress. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Ganganagar 780, L. 147 1,250; Co2 1,550; Gadag Laxmi 1,280; American 1245 1,360; B.P. 52 1,340; Sudan (on sample) 1,475.

Traders are awaiting the cotton price policy for the next season (1964-65) which is expected to be announced in a fortnight. Although the possibility of a revision in the floor and ceiling prices of cotton is generally ruled out, the consensus of opinion is that the Government would make some adjustment in the price schedule with a view to giving farmers sufficient incentives for growing better quality cotton even with the existing maximum and minimum prices.

BLACK PEPPER DECLINES

(Messrs. Parekh and Co.)

BOMBAY, 7th April

During the earlier part of the week under review the bullish fervour in Malabar black pepper continued unabated and prices both in ready and forward sections firmed up. Ready ungarbled rose to Rs. 378, while garbled was in demand at Rs. 390, but the growers were reserved sellers. May delivery at Cochin touched a new high at Rs. 416 while Vaisakh delivery in Bombay rose to Rs. 432.

New York is reported to have bought some afloat parcels at $0.42 while nearly shipment was under bid from New York importers at $0.41 without result, Malabar parity being round about $0.42. With advancing market, grinders demand is broadening in U.S.A., but sellers there were tight as they could not replace with a margin from the origins. What little stock New York dealers had was already hedged in forward sales to grinders. In the later part of the week, however, there was a corrective reaction. As a result, the prices in forward in Vaisakh delivery at Bombay climbed down to Rs. 315. May delivery at Cochin also reacted to Rs. 398/400, though ready both in ungarbled and garbled was fairly steady as the growers were holding for higher prices in view of the prospective fair-sized enquiries from the East European countries.

As Indian Government have included black pepper in their list of commodities to be purchased by the East European countries under the fresh trade agreements with them, there is a possibility of a larger export of Malabar pepper to these countries this year. But it would be noted that larger sales to rupee payment countries is not likely to improve the country's balance of payment position as sales of Malabar pepper to hard currency areas do.

Singapore was firm, black pepper having reached a new high of $(M)1374. Spot in New York improved from $0.40 to $0.43 under pressure of buying by grinders who usually buy in rising market. The future trend of the market depends upon the prospect of new crop of Sarawak, Lampong and Muntong and the future selling policy of Indonesia which is now reported to be reorganising its policy of direct sales without help of third parties who were until recently pocketing a major part of the profit. As under-cutting by Singapore and Indonesia has now stopped, there are chances of Malabar black pepper firming up with the development of fresh buying by U.S.A.

Ready pepper in Bombay was quoted at Rs. 200 for 50 kilos.

ART SILK YARNS RECOVER

(From Our Own Correspondent)

BOMBAY, 8th April

A small recovery in art silk yarns on revival of buying enquiry at lower levels featured trading this week in the yarn market, where other sections were dull and generally unchanged. Turnover was small, as buyers were disinclined to extend commitments in view of the general expectations of a relief in the additional excise duty on yarns.

In the art silk yarn section, National Rayon 120D improved from Rs. 12.78 to Rs. 12.94 and S.I. Viscose 150D gained by 29 nP to Rs. 14.17, but Century 75D sagged further from Rs. 18.63 to Rs. 18.41. Spot 2×40 staple fibre yarns were practically unchanged in quiet trading. Cotton yarns also were steady, though 80s Ganesh slipped back from Rs. 83.50 to Rs. 83.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	8-4-1964	1-4-1964
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	12.94	12.78
Century 75D	18.41	18.63
S. I. Viscose 150D	14.17	13.88
Staple fibre yarn (40×2)—		
Kohinoor (per kg.)	9.48	9.48
Century	9.46	9.48
Cotton yarn (per bundle of 10 lbs.)—		
10s Navsari	19.25	19.25
20s Vodar	24.25	24.25
32s Hisar	31.50	31.50

CASTOR IN LIMELIGHT

(From Our Own Correspondent)

BOMBAY, 8th April

In refreshing contrast to the last week's dull conditions, the oilseeds market turned firm and active during the week under review. Castor futures, neglected for quite sometime, were in the limelight, as prices rose sharply on strong shipper support. Cottonseeds were an exception to the general trend and continued to rule weak.

On reports of increased inflow of the new crop, castor seeds were easy on Friday, but subsequently, the prices made a swift recovery. The main reasons for the bullish inspiration were: (1) the recent encouraging reports from the export front, (2) the sudden change in the political situation in Brazil (which is the main castor producing country in the world) and the consequent rise in

the world price of castor oil and (3) consequent shipper support and short-covering. Shippers were optimistic that, in view of the uncertain political situation in Brazil, the U.S. and the communist countries will turn to this country for their requirements of castor oil. In fact, about 600 tons of oil were stated to have been sold to Russia at around Rs. 1,450 per ton f.o.b.

Groundnuts were firm on renewed support from upcountry centres and higher spot advices. It was rumoured that the S.T.C. had sold about 1,500 tons of groundnut oil to Burma against import of rice and this led to covering in groundnuts. The maturing contract hovered between Rs. 239.50 (Rs. 240.50), as against the official ceiling of Rs. 241. Linseeds, were also firm in sympathy with castor seeds and groundnuts and on higher mustard seeds advices from North India.

Castor June began the week at Rs. 171.87, as against the previous close of Rs. 171 and advanced gradually to Rs. 174 by yesterday. It closed today at Rs. 173.75, that is Re. 1.75 higher over the week. Spot Madras gained 50 nP to Rs. 34.50 and the Kanpur ready rose by 37 nP to Rs. 33.37. After early easiness, Oil B.S.S. rose to finish higher at Rs. 14.80, as against Rs. 14.60 last week. Oil commercial also moved up by 15 nP to Rs. 14.10.

In the groundnut section, the April 1964 contract gained 63 nP to Rs. 240.50. The July contract also closed higher at Rs. 237.87, as against last week's close of Rs. 236.50. Spot prices, too, improved further with Nizam bold and Khandesh quality picking up a rupee each to Rs. 51.50 and Rs. 52.50 respectively. Oil ex-mill rose by 30 nP to Rs. 20.10 and railway receipt by 55 nP to Rs. 19.85. Groundnut oilcake expeller April contract was up by Rs. 2 to Rs. 418 and the July contract edged up by 25 nP to Rs. 425.25 on the news of purchase of groundnut extractions by Poland and East Germany.

Linseed June jumped up by 63 nP to Rs. 41.69. Bold ready hardened by 50 nP to Rs. 40.75. Oil ready put on 10 nP to Rs. 16.25.

Cottonseeds April contract declined by 50 nP to Rs. 97 and the June contract lost a rupee at Rs. 103.

The following table shows the closing prices of oilseeds and oils on Wednesday 8th April as compared with those of two previous weeks:

	8-4-1964	1-4-1964	25-3-1964
Groundnuts	Rs.	Rs.	Rs.
April 1964 contract	240.50	239.87	239.62
July 1964 contract	237.87	236.50	236.37
Nizam bold	51.50	50.50	51.50
Khandesh quality	52.50	51.50	52.50
Oil ex-mill	20.10	19.80	20.00
Oil Rly. Receipts	19.85	19.30	19.75
Castorseed			
March 1964 contract	—	174.75	176.37
June 1964 contract	173.75	171.00	171.87
Ready Madras	34.50	34.00	34.37
Ready Kanpur	33.37	33.00	33.12
Oil B.S.S.	14.80	14.60	14.70
Oil commercial	14.10	13.95	14.05
Linseed			
March 1964 contract	—	41.00	41.00
June 1964 contract	41.69	41.06	41.50
Bold ready	40.75	40.25	40.25
Linseed oil	16.25	16.15	16.10
Cottonseed			
April 1964 contract	97.00	97.50	102.50
June 1964 contract	103.00	104.00	105.50

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

• • • •

The free licensing for export of linseed and coconut oilcakes by all shippers, without any restriction on maximum shipment by an individual shipper, has been continued with effect from the 1st inst. Export of these items will be allowed to all permissible destinations. The unutilised balance of the quotas for the period 1963-64, has been treated as having lapsed.

ORTHODOX TEAS EASY

(From Our Own Correspondent)

CALCUTTA, *7th April*

With exports for the season having been completed and stockists having nothing to offer, tea did not figure in this week's loadings on liners. However, forward enquiries for space are becoming keener and the first arrivals of new tea from upcountry centres are expected some time in the next month. The news that New Zealand has abolished customs duty on bulk tea and that both New Zealand and Australia have freed tea imports has been received with satisfaction. Tea can now compete with other soft drinks in these countries on an equal footing.

While new planting in India has not been progressing satisfactorily as a result of various difficulties, it is noted that in this respect also, as in propaganda in foreign countries, Ceylon has stolen a march over India. Gardens in Ceylon have already completed planting in some 6,000 acres, and the Government subsidy to gardens has been a considerable encouragement. It is reported that most of the new plantings have been done by strains of high yields. It is expected that, when plucking commences in about five years' time, the yield may work out to about 5,500 lbs. per acre per year. This would mean a fair reduction in costs of production, thus raising the competitive strength of Ceylonese tea in foreign markets.

In West Bengal, progress towards expansion has been delayed following the enactment of the West Bengal Estates Acquisition Act, which by implication places some restrictions in regard to renewal of licences. The West Bengal Government desired to settle the question of surplus land before leases were renewed. The Tea Board was against "resumption" of vacant land suitable for tea. In view of this stalemate, much delay was caused before tea gardens in West Bengal could benefit from the Tea Board's plantation finance scheme of 1962. As a result of the Tea Board's intervention, gardens in West Bengal, getting financial assistance from the Tea Board, are now permitted to expand.

At the internal sales held in the last week, dusts on offer totalled 30,397 packages. There was a good and general demand. Legg-cut teas were a strong feature and met with useful support, but orthodox kinds eased. Medium C.T.Cs were absorbed well, but occasionally their prices were lower by 10 nP to 20 nP. Good C.T.Cs were in good demand. The quotations per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust Rs. 6.20 to Rs. 6.80, medium Assam C.T.C. dust Rs. 5.00 to Rs. 5.25, legg-cut dust Rs. 4.60 to Rs. 5.00, medium Assam dust Rs. 4.50 to Rs. 5.00 and plain orthodox dust Rs. 4.10 to Rs. 4.50.

• • • •

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *2nd April*

In the dusts tea sale No. 13 held here today 158,000 kgs. were offered. There was strong general demand. All mediums encountered good support and were sold at firm rates. Highgrowns were also well supported and were sold readily at around last rates. Unorthodox descriptions shared in the general trend of the market.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"Sale No. 14: 494,000 kgs. offered. Good general demand. Low mediums and mediums about steady. Good mediums easier, particularly brokens. Highgrowns lower. Unorthodox unchanged."

JUTE GOODS STEADY

(From Our Own Correspondent)

CALCUTTA, *7th April*

Jute goods and raw jute were steadier during the week under review on increased support. Firmer advices form New York burlap market also assisted sentiment. There, the 40" 7½ oz. spot hessian improved from 8.75 cents a yard to 8.85 cents, while the 10 oz. hessian, after being higher at 11.50 cents, returned to the opening rate of 11.45 cents. Although port difficulties continued to restrict offtake, some shipments held over from February last took place in the last month. Moreover, shipments in March were also considered satisfactory for the month as a whole. Accordingly, the trade anticipated a fall in goods in stock with mills as at the end of March. Fair enquiries continued to be received from the U.S.S.R. The U.S. and Argentina also showed interest. In heavy goods, interest from Australia and the Continent has revived.

The need for further relaxation of control as well as measures to expand raw jute exports was emphasised by Mr. J. R. Modi, when he addressed the annual meeting of the Calcutta Hydraulic Press Association held here recently. While he welcomed the abolition of the raw jute export duty and the Government of India's acceptance of raw jute exports as part of official policy, he said that at present business was confined to the rupee-payment countries. He regretted that even in the case of these countries, supplies had been denied on occasions. If only the Government accorded timely and necessary assistance, the trade was hopeful that fibre exports could be increased. In fact, the trade thinks that fibre imports from Pakistan can be entirely financed from earnings on fibre exports. In view of the shortage of the superior grades, Mr. Modi was all out for continuing the quality restrictions on export. Until recently fibre exports used to be licensed on the basis of a fixed overall quota, but the Government has rightly abolished this in favour of licensing on an *ad hoc* basis. In addition to rupee-payment countries, other countries are also eager to import raw jute from India. However, the trade has pointed out that Pakistan is able to offer superior fibre at a lower rate. This explains why fibre exports from India are at present confined to the rupee-payment countries. If the Government revises the minimum prices having regard to quality and cost to the cultivator, the trade is hopeful of finding export outlets for all the surplus fibre. Unless fibre exports are increased, it is feared that the problem of surplus will become more and more stupendous in the coming years. Mills in India do not need as much inferior fibre as they are forced to buy now under the compulsory purchase quota issued by the Jute Commissioner month after month.

Mr. William A. Nugent, vice-President of the U.S. Burlap Council, and the I.J.M.A.'s representative in the U.S.A., who was in Calcutta recently, expressed optimism in regard to burlap consumption in the U.S.A. The trade here has noted with satisfaction that production of carpets alone in the U.S.A. has increased by 10 per cent, although it is a fact that mills in India have increased production of the carpet-backing cloth much faster than U.S. demand. Mr. Nugent said that quality of output should not be sacrified for quantity. For, he said that there was ever present the threat from substitutes in markets, like the U.S.A., which are fastidious and sophisticated. Mr. Nugent also spoke about the importance of competitive prices. Referring to the difficulty being experienced by buyers in the U.S.A. in regard to settlement of arbitration proceedings, he said that, as a result of his discussions, the Calcutta Jute Fabrics Shippers Association had now agreed to recognise mutually acceptable surveyors. The arbitration committee in Calcutta would accordingly consider the findings of such surveyors in the United States.

During the week; fibre prices were firm. Mills completed the purchase quota of 430,000 bales issued for the five-weeks ended 4th April. Arrivals in the week declined to 30,000 maunds a day as against 40,000 maunds a day in the last week. The continuance of the dry weather and absence of early rains are preventing cultivators from preparation of land for sowing. The sowing is likely to be delayed. Mills were interested to buy the superior grades, and not all offers of the poorer varieties could meet with response. The quotations were as follows: Assam bottoms Rs. 32.00, daisee bottoms Rs. 34.50, and northern bottoms Rs. 31.00.

Conditions in the fibre markets in Pakistan continued unchanged. Although conditions in the Chalna port improved, interest shown by shippers was at a low ebb. In the season as a whole, small shippers have been able to do good business because of the facility accorded to them to sell £2 below the E.P.C. minima. The overseas buyers are naturally buying from the small shippers, and as a result the big shippers would soon become small shippers, and *vice-versa*! Some rains were reported in certain districts of Pakistan, where work in connection with preparation of land for sowing has, therefore, commenced. E.P.C. registrations in the first half of the last month showed that India bought a quantity of 4,098 bales after a long period of absence. Other countries that bought fibre from Pakistan in the period included the U.K., the U.S.A., West Germany, Japan, France, Portugal, Poland and Egypt.

In the goods market, there were more inquiries this week. However, actual business that took place was confined to small quantities. Nevertheless, quotations were firm. The likelihood of a further increase in the U.S. consumption of burlap this year was noted with satisfaction. The emphasis given by the Government of India to increased agricultural output has also been noted with encouragement. In all likelihood, internal consumption of heavy goods would increase strikingly. The trade also looks forward for more export of goods in this year. Mills are also encouraged in as much as conditions are such as to enable them to continue the current enhanced rate of production, unhindered. However, it may be pointed out that if only the Government of India follows a more realistic policy with regard to fibre prices, exports of goods can be pushed up to such a satisfactory level that there would be no longer a problem of surplus fibre as at present.

On Tuesday last, keen activity in the futures market led ready B. twills and ready hessian 40" 10 oz. to rise up to Rs. 112.65 and Rs. 45.75 from Rs. 112.15 and Rs. 45.65 respectively. On the following day, the prices gained further to Rs. 112.95 and Rs. 46.00. Sentiment was assisted by a good number of overseas inquiries, although business that took place was limited. At this stage, selling pressure set in in the futures market, and this was followed by ready B. twills declining to Rs. 112.20 and hessian 40" 10 oz. to Rs. 45.65, on Thursday. Government bought about 1,500 bales of B. twills and at lower rates overseas buyers showed interest in both hessian and heavy goods constructions. Soon liveliness returned to the market, and on Friday business was done with Government involving 4,400 bales of B. twills against April delivery. B. twills improved to Rs. 112.50 and in sympathy hessian 40" 10 oz. hardened to Rs. 45.85. Over the week-end, scattered business with overseas buyers took place. Also there was more activity in the futures market. As a result, ready B. twills improved to Rs. 112.95 and hessian 40" 10 oz. to Rs. 46.00. During yesterday quietness returned and prices eased to Rs. 112.35 and Rs. 45.75 respectively.

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, *7th April*

Although consumer interest was at a low ebb, metal prices here remained firm during the week under review. The announcement of the import policy for 1964-65, which is practically a continuation of the previous policy and does not aim at easing the acute shortage of non-ferrous metals, influenced sentiment. Established importers had hoped that the Government would increase their quota of copper scrap, copper unwrought and zinc spelter or unwrought, but these quotas have been maintained at 66⅔ per cent and 30 per cent, respectively. The withdrawal of the 10 per cent quota granted last year to established importers in respect of zinc scrap, zinc dross, zinc ashes, zinc granulation, zinc dust, zinc wrought, including wire rods, sections and sheets has contributed to hardening of the price in respect of zinc scrap. The extrusion industry has learnt with satisfaction that licences for the import of brass rods and tubes to actual users will only be granted, provided it is shown on production of that indigenous manufacturers are unable to meet demand. Another change in the import policy is the withdrawal of the restriction on the use of licences for the import of non-ferrous semis and alloys for the import of rod, wire strip and foil of copper and silver alloys.

On the London Metal Exchange, the steady rise in spot copper wire-bars from £296¼ a ton to £303 was a feature of the week. There was also the news of possible Chilean attempts to nationalise the U.S.-owned mining facilities in Chile. The 3-months' wire-bars on the L.M.E. closed £7½ higher on balance at £299. Spot cathodes and the fire-refined metal closed at £290 and £284, as against £283 and £275, respectively, in the opening. Demand on London was heavy, and it was thought that not all the current buying was against current consumption. The possibility of a steady uptrend forced consumers to increase their stocks. Earlier, several producing firms announced an increase in prices. The Noranda Sales Corporation Ltd. of Canada increased its domestic price from 31.50 cents a lb. to 32.75 cents. A similar rise was also announced by the International Nickel Company of Canada Ltd. which at the same time raised its export price from 29¼ cents to 30¼ cents. Union Minieres fixed the new price at 33,450 Belgian francs a ton, representing an increase of 1,100 francs.

As a result of recent arrivals, the stock position of tin in India has recorded an improvement. This is noted in the easing of the price from Rs. 3,250 per 100 kgs. to Rs. 3,100. In London, spot tin eased from £1,041 a ton to £1,033. The decline was attributed to the realisation that the price had advanced to an unreal level, and, with increased output as well as the new release policy of the U.S.A., it was apparent that the time had come for a break in the price. It was significant that referring to the U.S. decision to release 12,000 tonnes of tin in the twelve months to March next, Mr. H. W. Allen, Chairman of the International Tin Council, told the Council's fourteenth meeting held at London last month that the U.S.A. had accepted the two principles put forward by the Council, viz. that disposals should be aimed to bridge the gap between production and demand, and that releases should be so regulated as to lead to the adequate development and growth of a healthy tin mining industry.

Lead in Calcutta was firm at Rs. 270 per 100 kgs. The firmness reflected the depleted stocks in the face of good demand. Spot lead in London closed at £81, after opening at £81½ a ton. The decline followed a fall in demand. A similar decline was recorded in spot zinc on the L.M.E. closing at £102. In the beginning of the week, the backwardation was £5¾, but the gap gradually thinned to £3¼ a ton. Zinc in Calcutta ruled firm at Rs. 272 per 100 kgs. Utensil copper scrap rallied from Rs. 660 per 100 kgs. to Rs. 680 on good offtake on account of upcountry consumers after the recent holidays.

"KHANDSARI" RALLIES

(From Our Own Correspondent)

HAPUR, *6th April*

Sugar continued steady, as the supply position tightened but following the 5 per cent cut in the monthly quota of the State. In the open market, it was quoted at Rs. 160 to Rs. 165 a quintal. Most of the factories here in Meerut and Muzaffarnagar region have stopped their crushing operations and others would close by the third week of this month. The I.S.M.A. has again suggested to the Union Government to fix a higher minimum cane price for the 1964-65 season and, in order to ensure increased cane plantings, to announce immediately the revised cane prices.

After early quiet conditions, *khandsari* prices hardened with the superior quality advancing by Rs. 5 a quintal. Other qualities also improved in sympathy. The U.P. Government has still not finalised its scheme regarding the export of the commodity. Production in some areas in the Muzaffarnagar region was still being continued from *rabi*. Week-end prices of (in Rs. per quintal) were:—Inferior 100 to 120, medium 122.25 to 132.50, superior 135 to 145 and *boora* 155 to 160. The corresponding prices last year were Rs. 88.41 to Rs. 108.51 per quintal.

Ready *gur* turned steadier on the receipt of import permits from Gujarat and other consuming States. *Shakker* also improved by Re. 1.50 per 40 kilogram on better buying support. Daily arrivals of *gur* were poor at 400 to 500 mds. and stocks declined at the week-end to 22,000 quintals. The land recently vacated from *rabi* crops is now being used for cane sowings. Week-end quotations (in Rs. per 40 kilogram) were:—Pansera superior 27 to 27.25, average 26.50 to 26.75, *dara* 26, *balti* 26.50 to 26.75 and *shakker* 27.50 to 28.50.

After an early slight fall as export permits for the month of March had been exhausted, *gur* and *shakker* prices rallied in the Muzaffarnagar market in the week-end on revival of buying enquiries at lower levels. Arrivals during the week totalled around 30,000 mds. bringing the total so far during the current season to 12.61 lakh maunds. Stocks with the trade were now put at 5.50 lakh maunds. Week-end prices (in rupees per 40 kilogram) were:— Chaku 26.50 to 28.25, ladoo 27 to 28, pansera 25 to 26, khurpapar 26 to 26.50, rusket 15 to 17.25, *shakker* 28 to 33, *gur* masala 26.50 to 27.75 and dana minja 35 to 38.

FOODGRAINS DRIFT LOWER

(From Our Own Correspondent)

HAPUR, *6th April*

Excepting wheat, which was steadier in the open market on meagre stocks left with the trade because of the present being the fag-end of the season, foodgrains sought lower levels thanks to a better supply position. Harvesting of *rabi* grains, including wheat, is in full swing and arrivals of the new produce would soon increase. The Government is selling a big quantity of wheat, flour and rice through the network of fair price shops and this has helped to check the rising trend in prices.

Wheat prices rose by Rs. 2 to Rs. 3 per quintal according to quality because of the shortage of superior quality wheat in the open market. The average quality was quoted at Rs. 58.50 to Rs. 62.50 and the farm produce at Rs. 64.50 to Rs. 67.50 a quintal, as against the controlled price of Rs. 43. Old stocks were reported negligible. Rice eased by Re. 1.34 to Rs. 2.67 per quintal, as stockists turned sellers because of slack demand. Arrivals were better and the supply position at the fair price shops was satisfactory. Week-end prices were:—Rice *basmati* superior Rs. 93.77 to Rs. 96.45, *sela basmati* Rs. 91.09 to Rs. 93.77, *ramajwayan* Rs. 77.70, *raimunia* Rs. 78.38 and *gadda* Rs. 64.30 a quintal.

Gram prices also tended to ease in the week-end as arrivals were heavy from Punjab and M.P. Prices declind by Rs. 2.50 to Rs. 4 per quintal. New gram was quoted at Rs. 53.58 and the local produce at Rs. 52.92 a quintal. Barley and *bejhar* drifted lower to Rs. 37.50 to Rs. 38 and Rs. 38 to Rs. 38.50, respectively, per quintal on increase arrivals of the new crop in the open market. Maize was unchanged at Rs. 41 to Rs. 43.75 per quintal. *Juwar* was quiet due to arrivals from M.P., while *guwar* was stationary in limited trading. *Juwar* was quoted between Rs. 39.25 and Rs. 40.25 and *guwar* between Rs. 53.58 and Rs. 54.92 a quintal. Other coarse grains were listless.

In the pulses section, the trend was mixed. Peas were steady, but others registered a downward trend. Peas were in demand from both local and outside dealers and hardened by Re. 1 to Re. 1.50 per quintal, with *dara* quoted at Rs. 43.75 to Rs. 45 and farm at Rs. 46.25 to Rs. 47.50 a quintal. Arrivals were around 1,000 a day. *Arhar* was quiet at Rs. 61 to Rs. 65.64 a quintal according to quality. *Masoor* eased sharply by Rs. 4 a quintal to Rs. 56.87 to Rs. 64 on increased arrivals. *Urd* and *moong* also sought lower levels in slack demand and prices ranged between Rs. 64.30 and Rs. 71.62 and between Rs. 72.34 and Rs. 80.38, respectively, per quintal. Other sections were listless. Week-end prices were: Peas *dal* Rs. 48.75, *arhar dal* Rs. 72.34 to Rs. 77.70, *urd dal* Rs. 80.38, *moong dal* Rs. 85.74, *masoor dal* Rs. 80.38 and gram *dal* Rs. 61.62 a quintal.

POOR TRADING IN KIPS

(From Our Own Correspondent)

MADRAS, *6th April*

Export trading in kips this week was dull, as importers offered strong resistance to the prices offered from origin. Despite price reductions offered in cow hides, cow calf and buff calf, buyers did not show interest. Trading was selective with emphasis on low selections in medium weight cow hides and lights in cow hides and calf. Arrivals of stocks from the tanning centres were on the usual scale and clearance was restricted.

Sales for shipment were patchy in the skins section also, on account of the stiff prices quoted by the tanners. Tanners, on the other hand, were not able to buy raw skins at economic prices, the raw skins markets ruled firm.

Shipments (in bales) during the last month were: 1,500 tanned cow hides, 242 cow calf, 929 buff calf, 432 goat, and 391 sheep skins to the U.K. ports; 33 cow calf, 18 buff calf, 735 goat, and 438 sheep skins, besides 1,180 cases pickled and chrome goat, to the Continental ports; one cow calf, 5 buffs, 76 buff calf, 435 goat, 20 sheep skins and 12 cases pickled and chrome goat to the U.S.A. ports; and 24 goat and 429 sheep skins to Japan.

BANKS' CONTRIBUTIONS TO CAPITAL OF UNIT TRUST

The response received by the Unit Trust of India from scheduled banks and certain classes of financial institutions in respect of contribution to its initial capital has been quite generous. The contributions, the last date for which was 31st March 1964, came from as many as 32 institutions and ranged from Rs. 50,000 to Rs. 25 lakhs per institution. The contributing institutions happen to be both large and small, and Indian and foreign. Since the total amount received exceeded Rs. 1 crore reserved under the Act for such institutions, the Board of Trustees of the Unit Trust, at their meeting held at Bombay on Monday the 6th inst., decided to accept contributions up to Rs. 3 lakhs per institution in full and refund the excess amount.

ESSO DEBENTURES

The Esso Standard Refining Company of India Ltd. will redeem at part today (Saturday) a portion of its ten-year 5¼ per cent Rs. 400 lakhs debentures by a draw of lots to be carried out by Mr. G. L. Mehta, Chairman of I.C.I.C.I. Ltd. This redemption of debentures represents the first return to Indian investors of long-term funds lent to the Company for the construction of the refinery. It may be noted here that the debentures in question are repayable in five annual instalments of Rs. 80 lakhs each.

The British Insulated Callender's Construction Company Ltd. has received an order valued at nearly £300,000 from the International Industries Ltd., Karachi, for the installation of an overhead line and two sub-stations for the Karachi Electric Supply Corporation Ltd. in West Pakistan. This double circuit 132-kV. line will run from the Korangi thermal power station to the Queen's Road sub-station, Karachi, a route distance of 32 miles.

Notice

DALMIA CEMENT (BHARAT) LIMITED
DALMIAPURAM

NOTICE IS HEREBY GIVEN THAT THE Registers of Members and Share Transfers will remain closed from the 1st May to 21st May, 1964, both days inclusive, except for recording the share transfers received before the closure of the Registers. The dividend for the year 1963, when declared, will be payable to those shareholders whose names would appear in the Register of Members as on 21st May, 1964.

By Order of the Board,

S. C. AGGARWAL,
Secretary.

Dated: 30*th March*, 1964.

MARKET GOSSIP

(Concluded from page 595)

appoint a high-powered *ad hoc* committee to inquire into the causes for the drop in tourism and to suggest measures for increasing tourist traffic by at least 20 per cent per annum during the next three years as compared with the 4.8 per cent increase over the 1962 figure registered last year. The Committee, which was headed by Mr. L. K. Jha, Secretary to the Department of Economic Affairs, made an exhaustive study of tourism and made more than a hundred recommendations for ensuring better facilities for tourists by way of better and more hotel accommodation, transportation, publicity material, entertainment, relaxation of prohibition, speedy confirmation of air reservations and opening of more tourist offices overseas. A major recommendation of the Committee was that one or more autonomous bodies should be set up in the public sector to handle activities of a commercial character connected with tourism. The Government has accepted this recommendation in principle and many other recommendations of the Committee. Almost all the measures recommended by the Committee for simplification of immigration, and customs regulations applicable to tourists has been accepted and implemented by the Government and the possibility of further simplification of certain customs procedures is also under consideration. It has also been decided to constitute an Air Customs Pool of officers specially trained to handle the present-day fast-moving traffic and in particular foreign visitors. The question of creating a central cadre of immigration staff is also being considered. Special arrangements are being made to ensure that tourists are able to obtain without any difficulty liquor permits with all-India validity from Indian embassies abroad or immediately on arrival in India. Among other measures being taken are: (1) a special fund will be created in order to give subventions to the Indian Airlines Corporation for operating air services to out-of-the-way tourist centres which would not normally be undertaken on purely commercial considerations; (2) a larger number of I.A.C. stations would be linked with teleprinter lines with a view to providing speedier confirmation of bookings; (3) improvements will be carried out on terminal buildings at the principal airports and new buildings will be put up wherever necessary; (4) a master plan will be prepared for the development of tourist areas; (5) two more tourist offices, one in Tokyo and the other in Chicago, will be opened in the next financial year; and (6) a standing committee of the main departments concerned with tourism will be set up to review inadequacies in facilities and arrangements and to examine the complaints brought to the notice of the Department of Tourism. All these proposals are sound and should help India to attract more tourists, provided they are implemented vigorously. Action is what is badly required and not paper plans.

The proposed Tourist Corporation would be a useful and effective body if it were to concentrate its activities in those fields where private efforts have so far been inadequate. Hotel construction is one such field where there is plenty of scope for the Corporation to make substantial contribution by putting up new hotels on its own or in collaboration with reputed foreign hoteliers. An important point that needs to be borne in mind in this connection is the great deficiency in medium-sized hotels which provide the tourist clean lodging and healthy food at reasonable rates. It is wrong to think that all foreign tourists are millionaires out on a spending spree. People belonging to the middle class with modest means account for a large and growing share of the world tourist traffic and their requirements should be kept in view when creating facilities for tourists. The Tourist Corporation should give proper lead and direction in such matters. Care should, however, be taken to ensure that the Corporation's activities do not result in unnecessary duplication of work or lead to wasteful competition with existing agencies.

Stainless Steel Razor Blades

It is like the Biblical legend of the puny David humbling the mighty Goliath with his sling and arrow. When stainless steel safety-razor blades were introduced in the U.S. two years ago by Wilkinson Sword, nobody would have seriously thought that the mighty Gillette Company, which controlled about 70 per cent of the North American market for blades, would be seriously affected. But stainless steel blades have cut into the market traditionally dominated by pure steel so sharply and has in fact revolutionised the market to such an extent that even Gillette has now had to start assessing the damages to its traditional steel blades. Mr. Boone Gross, Chairman of the Gillette Company, has already conceded that the Company's sales have been adversely affected by "a significant increase in competitive capacity in the razor blade business", particularly in the stainless steel field," and has also indicated that profits would be significantly lower this year. Gillette no doubt saw the revolutionary potential of the stainless steel blade, which is said to remain serviceable for six months, and brought out its own stainless steel blade last year. But it was months behind its principal competitors, namely, Eversharp and American Safety Razor Company, which had closely trailed Wilkinson. The latter two companies have been able to increase substantially their share of the blade market and report higher sales turnover and profit. Gillette, not to be outsmarted, is now making a determined bid to capture its lost market, but, if and when it succeeds, it would have been achieved, not with pure steel blades but with stainless steel blades.

AN ACT OF GOD IN LOK SABHA

IT is encouraging to find that the callous manner in which the Congress Party, under the leadership of Mr. Jawaharlal Nehru, has been amending the Constitution, as if it were a piece of ordinary law, has met with successful opposition this week, forcing the Government to restrain its hands. Most of the amendments to the Constitution have been made to nullify the decisions of the Supreme Court and High Courts holding several laws passed by Parliament and State legislatures *ultra vires* the Constitution. This has given rise to the impression that the Government has been subverting the highest tribunal in the country and treating the sacred Constitution as a mere scrap of paper. The seventeenth and eighteenth amendments to the Constitution mooted at an interval of less than a year are the latest actions of the Government that have brought, deservingly, of course, much discredit to it. Both have now been thrown out, though in different ways. Both represented a slap, as it were, to the judiciary and contempt for the Constitution. The seventeenth amendment, introduced in May last year, sought to legalise scores of expropriatory land laws enacted by State legislatures, laws that had failed to stand the test at High Courts and the Supreme Court when challenged by the aggrieved owners of land.

Even as this amendment was on the anvil, the Government brought in the eighteenth amendment late last week (on 24th April), with the object of obtaining immunity for itself against any claims for damages for detentions under the Defence of India Rules. Following a recent decision of the Supreme Court in regard to the fundamental rights conferred by Part III of the Constitution, the Government found that it might be confronted with a large number of claims for wrongful detention, etc., once the emergency came to an end. The Government wanted to cover its position by amending Article 359 (which empowers the President to make an order suspending the right to move any court for the enforcement of rights conferred by Part III when a proclamation of emergency is in operation) with retrospective effect. The Government's contention is that, "when remedies are barred during an emergency, the rights for the exercise of which the remedies are barred must also be deemed to be suspended." This amendment is, in fact, less dangerous than its predecessor, for the worst sufferers of the proposed abridgement of the freedoms conferred by Part III will be the Communists and the extreme leftists. Yet all Opposition parties joined hands and severely protested against it, and staged a walk out when the Bill was introduced in the Lok Sabha, with the help of the votes of the majority party. But some of the top Congress leaders themselves were opposed to this move and, when there was a serious threat of opposition from the members of the ruling party itself, better counsel prevailed with the Government and a decision was taken to withdraw the amendment Bill. Apparently even Congressmen thought that the removal of protection in question (given by Part III of the Constitution) might one day recoil on themselves. But what is significant about this episode is that it is a reflection, though a faint one, of the growing aversion to any further watering down of the rights guaranteed to individuals in the Constitution. The people are undoubtedly getting tired of the Congress Party's frequent attempts to tamper with the Constitution and circumvent the inconvenient decisions of the Supreme Court.

While the eighteenth amendment was withdrawn after deliberation and in recognition of the old adage that "discretion is the better part of valour," the seventeenth amendment failed just before its adoption through an accident. But this accident looks like an act of God, for an accident of this nature seldom happens. Incidentally, a similar one had occurred nine long years ago when the seventh amendment to the Constitution pertaining to reorganisation of States (on linguistic lines) was under consideration. Every one who had reasoned against the seventeenth amendment had given up hope, as it was certain that the Congress Party, with its large majority and the support of Communists and extreme Socialists, would get the Bill through. The time for voting, however, came when the attendance in the House was thin, with a large number of Congressmen otherwise busy in the lobbies. The electric bell, intended to alert the members on voting, failed to ring. The automatic device for recording of votes also failed to function and had to be abandoned in favour of voting by ballot. The result was that 206 votes were for and 19 against the amendment, but the majority was insufficient by 50 votes to fulfil the first condition for amending the Constitution—namely, a simple majority of the total (510) membership of the House—though it was sufficient to satisfy the second condition, namely, a majority of two-thirds of the members of the House present and voting. Accordingly, the Speaker declared that the motion was not carried. Why did the bell and the mechanical contrivance refuse to function? It is, of course, purely sentimental to say that Providence willed it that way. But it is quite a popular sentiment in this country.

The technical, and purely accidental, defeat is, however, unlikely to deter the Government from reintroducing the Bill after a time. Although quite a few members of the Congress Party itself are critical of the measure, they do not have that courage of conviction to vote against their party. The Communists and Socialists are all for it. Only the Swatantra Party and a few independents are opposed to the amendment, but inside the House they are in a small minority. Nevertheless, the loss of face suffered by the Congress on the ill-thought-out eighteenth amendment and the interval between now and the revival of the seventeenth amendment provide a chance for rousing public opinion against this outrageous assault on the freedom of farmers to own land. The main amendment made by the Select Committee to the effect that no land below the ceiling for personal cultivation (as distinguished from ceiling on ownership) can be requisitioned by a State Government except by paying market value both for the land and structures thereon, if any, is not a significant concession, for it ignores many practical difficulties. Besides, there is nothing to prevent a State Government from lowering the level of ceiling itself. If the amendment is revived and put through, the *ryotwari* landowners, big and small, will be completely at the mercy of political demagogues, growth of agricultural production and productivity will suffer a serious setback, and the country will be made safer still for Communism to flourish.

THE SAME OLD PROBLEM

IT is, indeed, the misfortune of sugar industry, rather of the vast numbers of sugar consumers, that something or other goes wrong with its economy time and again. The industry itself cannot, of course, disown completely any blame for its ills, but it is the bungling of the Governments (Central and States) that is largely responsible for the sorry plight of the industry today. How else is one to explain the lack of consistent, rational policies governing the prices of cane and sugar, regulation of cane supplies, production of sugar, *gur* and *khandsari*, and their distribution? Things would certainly have been very much different had only Mr. Rafi Ahmed Kidwai been alive and been in charge of sugar industry. Mr. Kidwai's approach to the problems of the industry was dynamic and realistic, but, before he could give a concrete shape to his ideas and implement them, destiny took him away. His successors, Mr. Ajit Prasad Jain and Mr. S. K. Patil, failed to summon political courage to carry out the policies initiated by Mr. Kidwai. The result is that the consumer continues to pay unconscionably high prices for sugar and, even at such high prices, he is not able to obtain his requirements fully and easily.

Judged against this background, it is certainly refreshing to find that Mr. Swaran Singh, the present Union Minister for Food and Agriculture, has lately brought to bear upon his task (in relation to sugar industry) a freshness of mind and approach. Mr. Swaran Singh, while inaugurating the annual meeting of the Indian Sugar Mills Association at New Delhi on Monday this week, expressed his determination to secure an equitable adjustment of cane supplies among the three users, namely, sugar mills, *gur* producers and *khandsari* industry. Considering that the quantity of sugarcane actually harvested year after year is considerably more than is needed to enable the sugar mills to utilise their crushing capacity to the maximum extent possible, this should not be difficult. But the total production of sugarcane is, more often than not, inadequate to cover the country's growing requirement of all types of sugar. Accordingly, in the absence of any control on the production and prices of *gur* and *khandsari*, large-scale diversion of cane supplies away from sugar mills is almost a regular phenomenon. Unless such diversion is checked, there is no hope of attaining optimum sugar (white) production. There is ample evidence in Mr. Swaran Singh's speech that he too is fully seized of this problem and that something more effective than has been the case so far would be done in the ensuing season (commencing on

1st November 1964) to ensure adequate supplies of cane for the sugar mills. Here is a relevant quotation from his speech:

"I have no doubt whatsoever that rigid control of one of the users of cane (that is, the sugar mills) and the comparative immunity from control and regulation of others (that is the *gur* and *khandsari* producers) are not going to solve the problem. We have to make a more realistic and comprehensive approach to the entire problem of cane utilisation and, in that process, it is quite clear to me that we can do so *only at the sacrifice of some of our cherished sentiments and prized emotions.* (Italics ours.) This is a problem to which I and my officers are devoting attention and I hope that, in the near future and perhaps well before the next season, we shall have made an attempt to present the problem in its true perspective and to seek its solution."

Implied in the italicised words above is an appeal to the politicians not to launch any agitation on behalf of the *gur* and *khandsari* producers against the move to regulate cane supplies. Such regulation is necessary as much to step up sugar production in mills to the desired level as to reduce the overall loss of sugar in *gur-khandsari* making. This aspect was impressively highlighted by Mr. G. M. Modi, the retiring President of the Association.

It is just not enough if the sugar mills are assured of adequate cane supplies. Of vital importance is the need for a realistic price policy. The prices fixed for sugar, as Mr. Modi rightly pointed out, should be such as would provide fully for the cost of production and leave sufficient funds with mills to pay reasonable dividends and to set apart adequate funds for rehabilitation and modernisation. There may be room for contesting the statement of Mr. Modi that the uneconomic price structure generally allowed to the sugar industry has undermined its financial stability, since it may not hold good with equal force in respect of all factories and all regions. But one cannot dispute the fact that the profitability of the industry in the North, in particular, is lower than that of its counterpart in other areas. The I.S.M.A.'s study of the financial results of the Northern sugar companies for the year 1962-63, which Mr. Modi quoted, shows that, out of the 52 companies owning 60 mills chosen for the study, more than 38 per cent incurred losses, 10 per cent made nominal profits below Rs. 1 lakh and 8 per cent made profits between Rs. 1 lakh and Rs. 2 lakhs. The average profit per factory was just Rs. 85,000. The gross profit as a proportion of capital employed worked out to only 6.9 per cent and the net profit as proportion to sales was a miserably low figure of 0.5 per cent.

In view of the poor profitability, the sugar industry is finding it exceedingly difficult to finance its expansion and modernisation programmes either from out of its own resources or through outside capital. It is, therefore, gratifying to hear from Mr. Swaran Singh that there is no intention on the part of anyone to deny the industry its legitimate costs according to the existing formula or any other more equitable system that may be devised in future as a result of enquiries relating to costs that have been or may be undertaken. And reassuring is his further statement that he would try to secure some tax concessions for the sugar industry, though he did not commit himself in any way. Thus, alluding to the I.S.M.A. President's plea for including the sugar industry in the list of industries which are allowed a rebate in corporate tax and sur tax on profits, Mr. Swaran Singh said: "I can assure you that I shall have this matter examined and will try to secure a reconsideration of the issue, if it is warranted." The claim of the sugar industry to this concession is justified especially because the development of this industry has a direct impact on the agricultural economy and because it produces a commodity which, besides meeting the requirements of the domestic market, has a vast potentiality to earn much-needed foreign exchange through exports.

Mr. Swaran Singh was not, however, convincing when he defended the Government's decision to set up a Sugar Marketing Board. How untenable are the arguments he adduced in support of the decision will be evident from a perusal of the following extract of his speech:

"... though these eight years (since the Gopalkrishnan delegation submitted its report) may have been full of periodic fluctuating fortunes, they have been years in which, under the impact of our Plans, economic conditions have acquired a certain degree of stability. So far as the sugar industry is concerned, the consumption of sugar appears to have settled down to a set pattern. The exports have become a necessary feature of the industry and, so far as the policies of the Government are concerned, in regard to cane development and the extent of sugar production to be achieved, along with the need for utilisation of by-products, there is neither any element of uncertainty nor any confusion of ideas. In fact, Government considers that the distribution system of the industry has at times been such an uncertain factor in the economics of the country, particularly with its very divergent costs of production, and its impact on the consumer that only a suitable organisation like a Sugar Marketing Board can introduce a lasting factor of orderliness and discipline.

"Instead of apprehending any harmful consequence to flow from the operation of such a body, an assembly of seasoned industrialists like yours should be able to see in it a guarantee of your receiving an adequate price for your production without having to do anything about its distribution. Moreover, it should be easy to see that the system of distribution through this body would be a better instrument for the adjustment of interests between the industry and the consumer than the periodic system of controls to which the industry has had to accustom itself from time to time and about which the industry has expressed its disfavour in no uncertain terms. I would, therefore, like the industry to reconcile itself to the coming into being of this organisation and to see in it an instrument of its well-being rather than an agency of harm or injury."

That Mr. Swaran Singh should have taken this stand on the Marketing Board after hearing the pertinent observations of the I.S.M.A. President is regrettable. It is unnecessary to go into this issue again, since it was discussed in detail only last week (*vide* page 695 of *Commerce*). We would, however, repeat that, in the present circumstances, there is no justification whatever for creating a special State monopoly for marketing sugar. If, however, it is the intention of the Government to prevent artificial scarcity and rigging up of prices due to malpractices on the part of industry and trade, the objective can be fulfilled in other ways. Mention, for instance, may be made of the building up of a buffer stock in sugar by the Government. Such a buffer stock, together with the creation of conditions necessary for ensuring steady expansion of sugar production, will obviate the need for establishing a Marketing Board, the result of which would be a further rise in sugar prices. It is a pity that Mr. Swaran Singh and his colleagues have ignored the age-old maxim, "First thing first." In the case of sugar industry, the "first thing" is more production at a lower price. If such production is achieved, distribution of sugar will take care of itself.

ANOTHER P.L. 480 DEAL?

IT was in April 1958 that Mr. Ajit Prasad Jain, the then captain of the Union Ministry of Food and Agriculture—that graveyard of ministerial reputations—told the Lok Sabha that, "in a developing economy, self-sufficiency in food becomes an ever-receding ideal." That the Minister's utterance was something in the nature of a prophecy was not quite apparent at the time. And so the New Delhi Correspondent of this paper, commenting on Mr. Jain's speech, wrote bitterly then: "This is a strange theory. It is all the more strange because it passes one's comprehension how an expanding economy, if it is really expanding, cannot involve an adequate expansion in food production." Six years have since passed—a period during which the economy has generally developed further, irrigation and power facilities have expanded, fertiliser production has advanced and aids for agriculture have increased. But the tragedy of it is that the food problem, like the country's poor, continues to be with us and the goal of self-sufficiency remains as elusive as ever, bearing out, of course, the truth of Mr. Jain's prophecy but without, at the same time, invalidating the Correspondent's query. It is this tragedy that has just been brought out in full relief by the report from New Delhi that the U.S. Secretary of State, Mr. Orville Freeman, who had a round of discussions last week with ministers and officials on the food situation, has assured the Indian Government of a continuous flow of P.L. 480 foodgrains at the rate of about four to five million tons per annum over the next three years.

Mr. Freeman's reported assurance is, of course, welcome in the context of virtual stagnation in the field of agricultural production for the third year in succession, as also in the context of the need for keeping a large buffer stock and for restraining, if not reversing, the uptrend in prices. That this country should also feel grateful to the United States for its timely offer to supply foodgrains under a new P.L. 480 agreement need hardly be over-emphasised. But, having said this, one must ask whether this kind of *ship-to-mouth existence has not* already undermined, to some extent, the nation's economic morale and bred supine complacency on the agricultural front. It must also be noted here that India continues to rely on P.L. 480 cotton to clothe its growing population. What a shame this country should continue to depend upon American charity for food and clothing! And for how long is this humiliating state of affairs going to be tolerated? Surely, somewhere a line must be drawn and the Union Government should tell the States firmly and bluntly that the proposed P.L. 480 agreement will be the last in the series of such agreements and that they should promptly avail themselves of the grace period of three years (1965-68) for reactivating their agricultural programmes so as to achieve self-sufficiency by the middle of the fourth Plan. It is not meant to suggest here that there should be self-sufficiency in the narrow sense of producing all the food required, even if it involves diversion of lands suitable for non-food (commercial) crops to food crops. What is relevant here is that, in a situation of agricultural self-sufficiency in the broad sense, it may be possible to produce and export more agricultural raw materials to finance some food imports, if and when necessary.

A firm and final deadline for achieving self-sufficiency, unlike the one "fixed" by Prime Minister Nehru to correspond to the end of the second Plan and the one "fixed" bravely by Mr. S. K. Patil, Union Minister for Food and Agriculture, in 1960 to correspond to the end of the third Plan—is absolutely necessary to impart a sense of urgency and dynamism to the nation's agricultural effort over the next three years. There must be no further occasion for critics to say, as they did in 1960 when Mr. Patil negotiated a P.L. 480 deal covering 17 million tons of foodgrain imports over a period of four years, that the element of certainty in food imports for three or four years at a stretch has bred complacency at the administrative and public levels and militated against the requisite effort on the production front. That success in this direction would depend not only on the scale of water, fertiliser, seed and other physical supplies but on more efficient administration and purposeful co-ordination of agricultural programmes needs to be emphasised again and again. It is also necessary to emphasise here that land reforms of an expropriatory nature should be abandoned forthwith and positive encouragement provided to individual initiative and talent. The present brain drain on rural areas must be checked by making it attractive for educated, intelligent farmers to play an active part in raising agricultural production instead of migrating to towns and cities in search of assured employment.

There is, of course, another side to the question of possible continuance or discontinuance of P.L. 480 imports. This is the moral aspect. Any loan, whatever be its legal conditions, does involve the moral obligation to repay. Where the loan covers food, the moral obligation involved is still greater for the simple reason that the food so lent (or virtually given away?) has assuaged the hunger of millions of people. But it may not be always easy for the nation to discharge this moral debt to the United States in the fluid conditions of world politics. That the United States does not seek to take undue advantage of our dependence on it even for food is, of course, true. But that is beside the point. As a benefactor, the United States may not consciously expect any gratitude in return. It is, however, our own national self-respect that is involved. Besides, if political circumstances should ever dictate an attitude that differs in vital respects from that of the United States, it would lead to angry reactions in that country—reactions which would be more natural in the case of food loans (including grants) than in the case of other development loans. The vital difference between these two types of loans is that, while the latter will be repaid over a period of time in dollars, the former (even to the extent of loaned rupee counterpart funds realised from the sale proceeds of P.L. 480 commodities) may have to be ultimately written off unless, of course, there is a metamorphosis in the status of the rupee from a weak and soft currency into a strong hard currency like the dollar or the sterling, or the D-mark. For all practical purposes, therefore, P.L. 480 imports are overwhelmingly in the nature of a moral commitment rather than a material or legal commitment. It need hardly be added that an indefinite prolongation of such a situation would distort national attitudes in both India and the United States and interfere with the healthy development of relations between them. The only way in which this situation can be ended is to achieve agricultural self-sufficiency at least by the middle of the fourth Plan. If the proposed next P.L. 480 deal can be turned to good account by using the imported food directly or indirectly in the production of more domestic food, all would be well for this country and its agriculture.

MARKET GOSSIP

"Grapes Are Sour"

THE adverse reactions of Mr. T. T. Krishnamachari to the failure of stock exchanges to respond to his taxation proposals designed to promote economic growth with socialism are understandable. Ever since his return to the Finance Ministry last year, he has been emphasising the importance of capital market and the need for reviving the confidence of investors. He has also taken quite a few steps in that direction. The stock exchanges reacted to them favourably, as and when they were announced. But he has let down the markets by presenting a set of tax proposals which are inconsistent with the expectations caused by his pre-budget statements on incentives, profit-motives, etc., and part A of his budget speech. They have naturally to readjust themselves to the realities of the situation.

Now that share markets have not welcomed his budget by staging a boom, he is disappointed with them and says in effect that he can get on with the task of economic development of the country without them. This attitude of his is not dissimilar to that of the fox in Æsop's well-known fable which tried in vain to get at some grapes that were beyond its reach.

Mr. Krishnamachari is indulging in a lot of bravado when he says that, if investors do not come forward to support the capital issues of the private sector adequately, the Government can help them through its institutions; that, if the private sector is unable or unwilling to take up the projects allotted to them, the public sector will step in and do the job; that plenty of foreign capital will be forthcoming, as he has offered them attractive incentives; and that the L.I.C. and Unit Trust are there to act as the countervailing instruments against the money power in the private sector. Every one realises that he is squeezing a lot of money out of the public through taxes and compulsory savings, that he has the power to create money and that he has a firm hold over the private sector. But money and power alone cannot produce goods. Brains also is needed. That is exactly what is in short-supply in India, in general, and in the public sector, in particular. This will (*a*) slow down the pace of economic growth, instead of accelerating it, (*b*) lead to an unbalanced financial structure in the corporate sector, and (*c*) increase the country's dependence on foreign capital and foreign brains to a greater extent than is good for the future health of this country. Ministers of Mr. Nehru's Government have often indulged in such bravado as the one displayed by T.T.K. this week. And the result is that the country is weak both politically and economically.

No impartial observer, however, can attribute the debacle in share markets exclusively to the budget. It is also due, to a substantial extent, to the failure of several private sector projects to come up to expectations. It would be a half-truth to say that their failure is due to defects in Government's policies, because grave mistakes have been made by the promoters (domestic and foreign alike) not in one stage but in many stages. Synthetic rubber, rayon and synthetic fibres, fertilisers, paper, ceramics, tyres, glass, cables, chemicals, metals, industrial gas and plastics, to mention only some, are the industries in which the private sector has not lived up to the promises held out at the time of issuing prospectuses. The depreciation in the value of investments made in these industries is so high that it has dampened the enthusiasm of investors for new issues. It would also be wrong to jump to the conclusion that, as a result of the latest budget, the share markets would remain depressed for ever, for economic expansion is continuing, employment and savings are increasing, though not at the rate planned for and necessary. As a result of larger turnover, there is bound to be a steady, though not spectacular, growth in corporate profits, a part of which will be passed on to shareholders sooner or later. All these things will gradually push up the equities in value. At the ruling prices, many first class equities (as, for instance, Union Carbide, G.K.W., Indian Oxygen, Indian Aluminium, Alkali Chemical, Dunlop Rubber and Voltas) appear to be reasonably attractive. It may pay investors with stout hearts and surplus funds to pick them up.

Management Development

An enterprise, an industry or even the economy of a country, for that matter, can only be as efficient as the managers who run them. In fact, one of the most decisive factors determining industrial growth is the level of management expertise obtaining in a country, the degree of awareness, on the part of managers, of technology and modern management methods. Managers, unlike poets, painters or musicians, are not born; they are made, rather trained. How Hindustan Lever Ltd., one of the largest and best-managed concerns in India, trains and develops its managers is the theme of Mr. P. L. Tandon's stimulating address (published in full on pages 758-59) to the shareholders of the Company at the annual general meeting held at Bombay this week. This year's speech of Mr. Tandon is, in fact, complementary to that of last year, wherein he had described how the Company was being managed. Both these speeches taken together not only provide the shareholders an insight into the dynamics of management of the Company but also constitute a remarkable public relations effort, in so far as they project the image of Hindustan Lever as a progressive, efficient and expanding enterprise, which selects and trains its managers with scrupulous regard for professional skill, efficiency and integrity.

In recent years, much attention has been devoted to training managers in the country. Consequently, management development has been rapid, according to Mr. Tandon. Even so, only the fringe of the problem has been touched. How big is the problem is indicated by Mr. Tandon by a simple calculation. Some two million jobs have to be created in each year of the third Plan. Even assuming that 2 per cent of these would be managerial jobs, no less than 40,000 new managers would be required every year. This is no small task, the more so when it is remembered that a manager must not only possess a basic discipline such as engineering, accountancy or marketing, but should be given training in how to be a manager, to develop the skills and attitudes of management.

It would be redundant to describe here the complex process of management development in Hindustan Lever so lucidly explained by Mr. Tandon. But it is necessary to draw attention to the importance the Company attaches to training managers, the purposes of its management development programme, and the principles and policies followed in respect of selection, training and promotion of managers, for they provide a model for other companies. Management development is for Hindustan Lever, according to Mr. Tandon, a complex of activities the purpose of which is to ensure three things. First, to anticipate the Company's requirements of managers over the next five years. Secondly, to select, recruit and train men and women to fill these requirements. Thirdly, to develop attitudes and values in individuals that prepare them to meet their responsibilities.

Management development in Hindustan Lever has many outstanding features. But four are specially noteworthy. First, management development, like other vital matters such as capital expenditure, budgeting, annual estimates, and operational plans, is the responsibility of the Board. This indicates how much value and importance the Company attaches to building up a team of efficient managers. They are, as Mr. Tandon himself puts it, the Company's "most valued investment." Secondly, contrary to what some people imagine, selection of candidates to be trained as managers is based entirely on merit and not on the social background of the candidate or other factors. "We like poise and ease," admits Mr. Tandon, "but we put no premium on background as a veneer." Thirdly, the Company does not regard age as a determining or particularly important factor in entrusting managers with high responsibilities; in fact, age seldom enters its calculations. "We would be disappointed," says Mr. Tandon, "if, with the opportunities that are constantly opening up in a growing and decentralised concern like ours, he (the manager) were not able to receive his first shot of a senior independent charge in his early 'thirties." The fourth outstanding feature is that promotion in the managerial cadre is always and invariably based on merit, irrespective of age or length of service. Defending this practice, Mr. Tandon says: "We frankly believe in the logic of the best man for the job, because only then will the job be done best." But evaluating merit is not an easy job, admits Mr. Tandon. With Hindustan Lever merit evaluation is a constant process consisting of progress reports, thorough training, personal contacts by the seniors, job evaluation, etc., all of which help ensure an unbiased and objective judgment.

It will thus be seen that much thought and care have gone into the evolution and implementation of the management development programme in Hindustan Lever. The principles on which it is based are sound and well-tried ones and, judging from the high degree of success attained by the Company in its operations, they seem to have yielded the desired results. It is to be hoped that Hindustan Lever's endeavour in management development will be a source of inspiration and guidance for other enterprises in the country.

Cess On Coffee Exports?

All coffee that is exported from India will have to bear a special levy (cess, as we call it in this country) of about 71 nP (15 cents) per bag (of 60 kilograms), if the International Coffee Organisation's proposal is finally accepted by the 58-nation Coffee Council which is now in session at London. The proposed levy will be made available to the Executive Board of the Organisation for financing its over 7-million-dollar-a-year campaign to promote coffee drinking throughout the world. Since a similar levy will be imposed by the other coffee producing and exporting countries as well, it will not have any impact on the competitive position of Indian coffee in world markets. On the other hand, the coffee promotion campaign of the I.C.O. will greatly benefit India by widening the demand for coffee the world over. Much will, however, depend on the trend of coffee production in this country. The current season's coffee output is estimated at 64,000 tonnes, against which domestic consumption is running at about 40,000 tonnes. The available surplus for export after providing for reasonable running stocks in pipelines is, therefore, not very much more than the quota allotted to India under the International Coffee Agreement. This factor underlines the urgency of giving suitable encouragement to coffee growers to augment output, reduce cost and improve quality.

The decision to launch a world-wide campaign to boost coffee consumption was taken by the I.O.C. Executive Board at its meeting held at London last week-end. Two other decisions were also taken. One was the extension of the time limit, from 1st June to 1st October next, for fulfilling the condition that importing countries should insist on all coffee shipments being accompanied by certificates of origin. The other was postponement, from 30th June to 31st December, of the date-limit for the ratification of the World Coffee Agreement by countries which have not yet done so. No decision was, however, taken on the question of fresh quota increase, as the consumer-countries were unable to agree on the working or the scope of such an increase. The only consolation was that the discussions were held in a more relaxed climate than at the previous meeting held early in March. At that meeting, the Executive Board raised the aggregate basic export quotas of member-countries for 1963-64 to 48.12 million bags; the effective increase after allowing for shortfalls is estimated at 2.3 million bags. A substantial part of this increase has been in favour of Ethiopia; India, too, has received a small increase in its quota, though not as much as it had asked for. The Board also appealed to countries to adjust the production of coffee to the level needed for domestic consumption, exports and stock purposes, as specified in Articles 51 and 52 of the Agreement. Such adjustment was considered necessary to avoid further need for recourse to Article 60 in regard to export quotas. Since the increase in basic export quotas was announced, world coffee prices have drifted downward. Uganda Robusta grade coffee (July delivery) in the London market is currently standing at £15-8-10 per cwt., as against the high of £16-16-0 before the increase in quotas was announced.

Sales Tax On Export Goods

The Saraiya Committee's recommendations for relief in sales tax on export goods clearly uphold the exporters' contention that, like other indirect taxes, sales tax, too, has inflated selling prices and affected export drive. The incidence of sales tax, the Committee notes, works as a built-in handicap to the development of exports, as the smallest price difference at the time of finalising a foreign contract determines its award in the highly competitive international markets where the trend has clearly set in favour of buyers. While conceding the obvious, the Committee has gone a stage further than the Mudaliar Committee, which it followed in June last year, in suggesting the adoption of a rational basis for granting relief in tax, as against the latter's *ad hoc* recommendation to allow a uniform rebate of 2 per cent. It has also approached the subject methodically by treating separately the two tax laws: the local sales tax laws enacted by different States in respect of local, or what are called 'intra,' sales, and the Central Sales Tax Act of 1956 applicable to inter-State sales.

With regard to the first, the Committee has urged the adoption of the Bombay system (as prevalent in the States of Maharashtra and Gujarat) which exempts from payment of tax two sales prior to the "sale in the course of export." Acceptance of this basis, the Committee feels, would obviate the need for widening the definition of "sales in the course of export" as contained in Section 5(1) of the Central Sales Tax Act. Exporters have found the existing definition much narrower than that adopted, for instance, by the Supreme Court of the United States in a number of cases. If any non-maritime State finds it administratively difficult to introduce this basis, it should adopt, as an alternative, a system of set-off or rebate on commodities actually exported. In either case, however, relief should be accorded in respect of at least two sales prior to the "sale in the course of export." As for Central sales tax, the Committee has recommended that the vendors in the State of origin should be granted a rebate of sales tax on sales resulting in exports by the State of origin. Instead of being called upon to pay the tax initially and claim the rebate later, the dealers, it is suggested, should be allowed to make an adjustment in their returns and to produce proof of actual export in support of the rebate during assessment, the concession by way of exemption or rebate being restricted to exporters having an annual turnover of Rs. one lakh who should be enlisted by the Central Government under a statutory regulation. In the case of sales by exporters who are not on the registered list, refund of tax actually paid may be allowed on proof of export, if exemption or rebate is not given.

The Committee has also considered the question of relief in sales tax on raw materials, components, etc., entering the process of manufacturing goods for export. It no doubt favours the grant of refund or rebate on a readily ascertainable basis in the same proportion as the value of goods produced to that of goods exported. Since, however, the implementation of this suggestion is somewhat unworkable in respect of Central sales tax, the Committee wants *ad hoc* relief to be given at the rate of one per cent of the f.o.b. value of manufactured and processed goods. For "unexpected and incalculable" elements entering into the prices of other goods, an *ad hoc* relief at half per cent of the f.o.b. value of goods exported has been recommended.

An important suggestion made by the Committee pertains to goods where 80 per cent or more of the indigenous production is exported. In its opinion, the complicated administrative processes for levy, collection refund, set-off, etc., can be avoided, if all sales of such commodities are exempted from sales tax, provided the loss of revenue is comparatively insignificant. This

concession, it is said, should be extended even to two sales prior to consignments abroad which eventually result in sales in a foreign country.

The effect of its recommendations on State revenues has not been ignored by the Saraiya Committee. It has urged the Centre to give adequate compensation to ensure that the commitments of States for development are not adversely affected. This will mean an additional burden on the Centre, but foreign trade is the Centre's, and not strictly the States', responsibility. It has rejected the pleas for enacting a uniform sales tax law for all States and for replacing States' sales tax by a Central excise. For, according to it, the experience of States with such replacement already carried out in respect of cotton textiles, tobacco and sugar has not been uniformly happy in the absence of a satisfactory formula for distributing the receipts of this nature among the more populous States with backward economy and those where the *per capita* consumption of goods so taxed is much larger.

Within its terms of reference, the Saraiya Committee has done a good job and its report, which will be studied by the Board of Trade at its meeting in New Delhi on Tuesday next week, merits serious consideration. The Government of India will do well to bear in mind the statement of the Committee that its recommendations, since they have been formulated as mutually related parts of a consistent scheme, should be considered together in their entirety.

World Sugar And India

The world sugar markets, after experiencing a downward trend for sometime, have picked up strength again of late. Raw sugar in London is currently quoted at £67½ per ton, as against £62 per ton five weeks before, though this rate is well below the high of £91½ touched in mid-January last. The recent recovery in prices may not be appreciable, but all available indications point to the possibility of the recovery gathering further momentum in the next few weeks. Italy and France (several operators in France are said to have sold sugar forward without covering themselves completely) are expected to enter the markets soon with offers to buy sizable quantities of sugar. The other important large-scale buyers of sugar are likely to be Burma, Ceylon and Portugal. On the supply side, Brazil and the Dominican Republic, where sugar has recently been produced, are rather sitting tight without pressing sales. And the U.S., it is said, may offer them favourable prices for political as well as commercial reasons.

It is, however, not so much these factors as the latest assessment of the trends in world sugar economy made by the F.A.O. that justifies the hope of firmer prices. The aggregate world sugar production in the current season (September 1963-August 1964) is no doubt estimated higher by 2.5-3.0 million tons at about 53 million tons, as compared with the previous season. But a reduction of four million tons in stocks during 1962-63 means less sugar for the third successive season. While consumption of sugar is beginning to level off—the total actual consumption in the free world during 1963 is put at 41.5 million tons (raw value), two per cent higher than in 1962—stocks will be reduced further before the 1964-65 beet sugar arrives in the market. The F.A.O., therefore, expects the average prices of sugar to remain "very high" during the year 1964, though, in the second half, a decline may occur in view of increased production in the coming season. Increased plantings for the 1964-65 sugar beet harvest are expected in Europe this spring, encouraged by higher prices to growers in several countries, though, in all cases, weather will play a major role in the final output. As for cane sugar, the outlook for coming years, according to the F.A.O., is one of increased production in a number of countries, including Australia, India, Mexico, South Africa and Southern Rhodesia.

There may be a temporary decline in sugar prices now and then, but one can reasonably expect the prices to rule fairly high for sometime to come. India can certainly maintain and improve its position as an exporter of sugar at a handsome profit provided it is in a position to supply sugar in the form in which it is wanted abroad and at competitive prices. Countries like Japan, Canada and the U.S. prefer raw sugar. During the last season (1962-63), it will be recalled, about forty factories in India produced nearly 260,000 tonnes of raw sugar and the rate of output is said to have slackened in the current season. Now that sugar export has become a normal feature of the Indian sugar economy, the mills will do well to ponder the statement of Mr. Swaran Singh at the I.S.M.A. annual meeting this week that export of raw sugar is in the industry's own interest and that the industry "will see the wisdom of making sacrifice of profit during the initial period of build-up of export."

The Supersonic Race

President Johnson's announcement last week that it will not be possible to meet the 1st May deadline which had been set for the selection of contractors to build supersonic jets is generally regarded as portending a major setback in the U.S. supersonic programme. The reason for this, according to the President, is that none of the three companies which submitted airframe designs, namely, Boeing, Lockheed Aircraft and North American Aviation, has met the complete specifications for supersonic jets laid down by the Federal Aviation Agency, the body responsible for co-ordinating the supersonic transport programme. One of the criterions not fulfilled is that the aircraft must be capable of economic operation. The designs submitted also do not meet the Agency's minimum range-payload requirement for a supersonic jet capable of carrying a 30,000-lb. load for a distance of 4,000 miles.

The present hitch, namely, the absence of an acceptable design for the supersonic jet, clearly threatens to put the U.S. still further behind Britain and France in the supersonic race. Already the Concord project, which is a joint Anglo-French venture, is 18 months ahead of the American supersonic programme in design and any further delay in the latter would result in the Concord jets being introduced on world air routes at least two years before the American aircraft. This lead has far-reaching commercial implications. For those airline companies, which were reluctant to place advance orders for Concord aircraft, pending a more precise idea of what the American programme was to be, and how much time it would take to manufacture an American supersonic jet, would now be inclined to turn to Concord. A rush of further orders for Concord is now expected. But the queue for Concord is already pretty long, with those who hesitated to go in for it at first standing far behind. Air-India is one of them. Its first choice was the American supersonic jets. In fact, it has already made a firm booking for three such aircraft. The requisite deposits for the aircraft have been placed with the Federal Aviation Agency. It is now reported to be considering the advisability of securing delivery positions for Concord, presumably because of the delay in the U.S. project. It is pertinent to remember, in this connection, that the U.S. project calls for the solution of technical problems far more intractable than that of the Anglo-French project. This is because the U.S. has gone in for a much larger and faster machine with a spread of 1,650-2,000 miles per hour, as compared with the Concord's 1,450 miles per hour. Consequently, it has taken on a much bigger and more complex technical problem than that being tackled by France and Britain.

COROMANDEL FERTILISERS LTD.

Coromandel Fertilisers Ltd., a joint venture of California Chemical Company, U.S., International Minerals and Chemical Corporation of Illinois, U.S., and E.I.D.-Parry Ltd., will enter the capital market on the 11th inst. with a public issue of Rs. 3.95 crores in equity shares of Rs. 10 each. The subscription list will close on the 22nd inst., or earlier, but not before the 14th inst. The Company, with an authorised equity capital of Rs. 8.50 crores, is issuing shares worth Rs. 8.48 crores, in addition to those of the value of Rs. 1 lakh already subscribed and paid up. Out of the present issue of Rs. 8.48 crores, shares worth Rs. 1.16 crores have already been allotted to the promoters for consideration other than cash who have also agreed to subscribe for additional shares worth Rs. 3.37 crores, while the balance amount of Rs. 3.95 crores is sought to be offered to the public. The entire public issue has been underwritten.

The Company has been licensed to set up at Visakhapatnam a new industrial undertaking for the production of complex fertilisers and urea, with a capacity for producing ammonium sulphate of various grades equivalent to 365,000 tonnes a year in terms of 20-20-0 and 16,500 tonnes per year of prilled urea. The plant is expected to go into production in the last quarter of 1966.

The capital outlay on the project is estimated at Rs. 32.47 crores, which will be met by the share capital issue of Rs. 8.49 crores, loans from the Ex-im. Bank and the A.I.D. of Rs. 21.24 crores, and bank borrowings of Rs. 2.74 crores. Mr. H. V. R. Iengar is the Chairman of the Company. The Board comprises Mr. Bharat Ram, Mr. John Quincy Cope, Mr. Charles Stuart Dennison, Mr. John K. John and Mr. Luther Leo Powell, who is the Managing Director.

TREND OF SHARES

A SMART RALLY

(From Our Own Correspondent)

BOMBAY, *29th April*

EQUITIES staged a smart rally this week recovering almost all the ground lost after the announcement of tax reliefs on 17th April. The change for the better started from Dalal Street, where the entangled principal bull operator was said to have offered to the L.I.C. about 35,000 Tata Steel Ordinary shares at last week's lowest rate of Rs. 143 and succeeded thereafter, together with a leading industrialist-operator, in pulling the market out of the rut in the course of the three holidays which came after the settlement on 22nd April. Although a complete surprise, this manœuvre from the bull camp was clearly planned for the post-settlement holidays and had the desired effect in a market which had been well liquidated and rather excessively oversold before the settlement. When it opened for the new account on Monday (27th April), the market had already recovered most of the lost ground on the principal buyer's rigging up the prices and forcing the main bear operators to cover their sales which they had made last week.

Sentiment during the holidays was also influenced by the highly encouraging statement of the Chairman of the National Rayon Corporation Ltd., Mr. Kasturbhai Lalbhai, about the Company's current working and future outlook, at its annual general meeting held at Bombay on Thursday, 23rd April. Mr. Lalbhai's statement was well received by the market, particularly because National Rayon had been among the worst sufferers in last week's shake-out. He said that the average monthly output of tyre cord, which had been 95 tonnes during 1963, had risen to 164 tonnes in the first three months of 1964 and would improve further to 225 tonnes after next July. The production of caustic soda would rise to 20,000 tonnes from 11,802 tonnes last year, after the expansion programme was completed. The cost of production of the Company's rayon yarn was the lowest at Rs. 8.81 per kg., as compared with Rs. 9.26 to Rs. 11.59 in the case of other companies. The Company had been able, for the time being, to pass on the additional burden of excise duty to its customers.

Another piece of encouraging corporate news was Century Mills' 1963 report which was released to the Press yesterday. A significant point from the report is that the Company's shareholders will be offered a portion of the share capital of a new company to be formed for implementing a Rs. 4-crore nylon project. The bonus issue has been deferred, in view of the provisions contained in the Finance Bill 1964. The Company's caustic soda plant is expected to go into production within a couple of months. Import licence for additional 18 spinning machines for the rayon unit has been received and the machinery would go into production in the first quarter of 1965. The Company has made a representation to the Government for restricting further import of tyre cord yarn because, with the tyre manufacturers still allowed to import half of their requirements, the industry finds it difficult to sell all its production of tyre cord.

Replying to the Rajya Sabha debate on the Finance Bill on Monday (27th April), the Finance Minister adversely commented on the stock markets for having created an unfavourable climate for economic expansion. "The Government does not care," he warned, "if the stock markets are damped down by operators who do not take kindly to the budget, nor does it mind if groups of people with money power react adversely to the present economic policies. The Government is fully confident of seeking alternative means to get the resources and push the economy forward." Ordinarily, a statement of this nature would have shaken the markets. But this has been ignored, for there is no substance in it.

* * * *

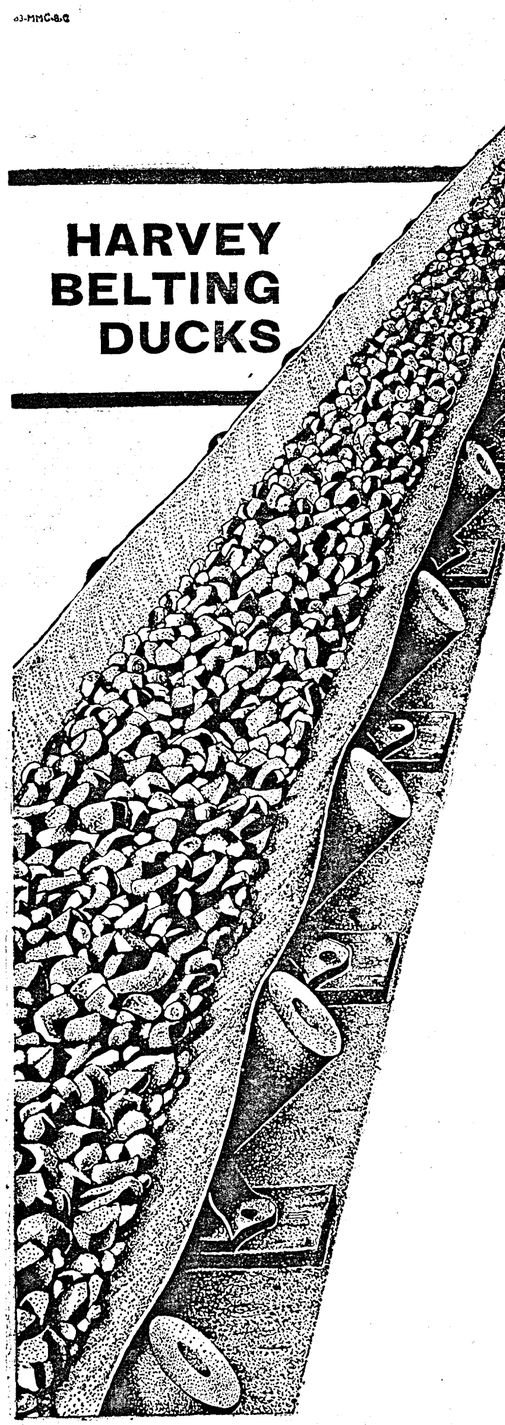
During the three working days from Monday this week, Dalal Street consolidated the sharp gains scored in the preceding week and even added some more in leading counters. Steel shares were in the limelight, with Tata Ordinary closing Rs. 6.25 higher at Rs. 149.50 and Indian Iron 88 nP higher at Rs. 24.80. Century spurted by Rs. 34.50 to Rs. 612 and National Rayon by Rs. 40.30 to Rs. 366.50 *ex-div.* Miscellaneous and Engineering issues also recorded sizable gains. Thus, Bombay Burmah rose by Re. 1.40 to Rs. 59 and Scindia by Re. 1.24 to Rs. 14.96. T.E.L.Co. recovered by as many as 16 points to Rs. 300 and Voltas showed a gain of Rs. 5.50 at Rs. 257.50. The much depressed Indian Dyestuffs rallied from Rs. 261.25 to Rs. 277.50. Cash scrips were quiet, though SLM-Maneklal appreciated by 15 points to Rs. 167.

* * * *

Forward shares registered a considerable improvement on the Calcutta Stock Exchange. Birla Jute rose from Rs. 30 to Rs. 31.75, Dunlop from Rs. 35.62 to Rs. 37.06, Indian Aluminium from Rs. 30.81 to Rs. 32.44, Kesoram from Rs. 25 to Rs. 26.50 and Texmaco from Rs. 27.05 to Rs. 28.35. Cash shares failed to follow the trend in cleared section, and, in fact, jute shares weakened further, with Bally and Budge Budge shedding four points each to Rs. 238 and Rs. 137, respectively. Bengal Coal receded from Rs. 245 to Rs. 239. Miscellaneous shares, however, made a small recovery, particularly American Refrigerator which gained Re. 1.37 to Rs. 6.37 and Rallis India which gained Rs. 4 to Rs. 122.

* * * *

Selected Plantings and Textiles recovered on the Madras Stock Exchange, while others closed quiet to steady. Thus, Consolidated Coffee closed 35 nP higher at Rs. 21.65 and Coffee Lands 13 nP higher at Rs. 17.25. S.I. Viscose were Rs. 3.50 higher at Rs. 123.50 and Madura 40 nP higher at Rs. 33.60. Aluminium Industries rallied from Rs. 20.65 to Rs. 20.90.



KEEP VITAL PRODUCTS ON THE MOVE!

In any industry you can think of, Harvey Belting Ducks can (and do) play a vital role. They are widely used in the manufacture of Conveyor Belts—which keep essential products on the move in mines, quarries and factories—and Transmission Belts for a variety of power drives.

Today Harveys' Madura Mills are India's largest producers of industrial fabrics. Through the years they have built up a reputation for unbeatable quality that has made Harvey Belting Ducks the first choice of leading manufacturers.

Harveys can weave industrial fabrics to a variety of specifications ... however rigid. They have the men, machines and knowhow to produce a range of quality Belting Ducks, and other fabrics like Canvases and Tyre Cords. Recently Harveys expanded their industrial weaving capacity. They can now meet all your requirements in this field... to your complete satisfaction.

BUNGLING IN COKING COAL

IT was originally estimated in the third Plan that the steel plants and merchant cokeries would require about 27 million tons of metallurgical (coking) coal per annum by the end of the Plan. In this connection, the Plan provided for an annual output of 23 million tons of strongly coking coal and four million tons of weakly coking coal, as against their actual production of 13 million tons and two million tons, respectively, in 1960-61. The targets were laid down on the basis that a part of the requirements of metallurgical industries would be met by blendable coal (that is, weakly coking or semi-coking coal). The idea here was to reduce the consumption of strongly coking coal by blending it with some weakly coking coal and thereby conserve the limited reserves of the former. What is, however, important to note is that the production target for metallurgical coal as such, be it strongly coking or weakly coking, was originally fixed at 27 million tons, involving an additional output of 12 million tons in all per annum by the end of the Plan and that too mostly in the private sector.

The collieries in Raniganj and Jharia have presumably been carrying out their costly expansion plans—costly because deep-mining of coking coal, especially of superior grades, involves stowing, mechanisation, etc. in the belief that the target for additional production was a firm one. Although the output of coking coal in 1962-63 was only about 17 million tons, as compared with 15 million tons in 1960-61, it has presently reached the level of about 18 million tons and may be *normally* expected to go up further in accordance with the expansion schedules of collieries. But the *normal* trend is just sought to be reversed by the authorities on the ground that the requirements of steel plants and merchant cokeries are only about 12.5 million tons per annum at present. The Coal Controller's reported order, banning the release of coking coal to non-essential consumers, is stated to be in pursuance of the policy for conservation of coking coal. This justification, however, seems to be a cover for the Government's inability to get the steel expansion projects (including the proposed Bokaro plant) under way according to schedule.

The collieries concerned are understandably worried, for the sudden production cut imposed by the order would have serious repercussions on the level of employment and on company finances. As many as 50,000 men, it is feared, may have to be laid off in the Jharia field alone. The expansion assumptions on which the large borrowings of collieries in the last two or three years have been based would also be upset. The collieries, which have been encouraged by the Government itself to implement expansion plans, should not obviously be penalised now because the estimated demand for coking coal from the expanded steel plants and the proposed Bokaro plant in the public sector would not materialise as per schedule. Of course, the case for restricting the output of coking coal may be as good as that for possibly slowing down the production of inferior non-coking coals, too, at a time such as this when the coal supply situation in general is distinctly easy. But, in our view, this is only a passing phase, for the pace of demand for coal is bound to accelerate later this year or early next year when industrial production, in general, and steel production and thermal power generation, in particular, will be at a higher level.

So much so, it would be more prudent not to interfere with coal production for the purpose of having some short-term relief from an excess of supply in relation to demand. In the case of coking coal, the production of which used to be pegged until 1960, the re-imposition of ceiling limits would militate against long-term expansion plans for producing as much as 40 to 45 million tons of such coal by 1970-71 to meet the then likely demand. If the railways are instructed to consume coking coal to the extent that its production is surplus to the requirements of essential consumers and if inferior non-coking coals are used to a greater extent in power generation and in sugar factories (which now burn bagasse as fuel, thereby denying it for possible paper pulp manufacture), there would be no need for restricting the production of either coking coal or, for that matter, even non-coking coal. The railways, it will be recalled, absorbed the surplus in coking coal during the second Plan period. They can do so at the present juncture, too, for dieselisation and electrification have not advanced greatly so far. Likewise, expansion of thermal power output and use of bagasse in paper manufacture, though not quite relevant from the immediate point of view, would lead to larger consumption of inferior coals in due course. Another solution would be exports; rather than allow stocks to accumulate, the Government should encourage producers to explore export markets. This would be a welcome opportunity to earn more foreign exchange. Instead of thinking on these and other positive lines, it is strange that the Government is resorting to shortsighted and negative expedients like restriction on production and downward revision of targets merely for getting over temporary difficulties.

IMPORT TRADE

About one-twelfth of the aggregate foreign trade of India (imports and exports together) is currently being handled by the State Trading Corporation. If the "indirect trade" undertaken by private traders is excluded, the Corporation's share in the total trade comes to about five per cent. Although this share can by no means be considered significant, one cannot dispute the fact the share of State trading through S.T.C. and its associates is steadily expanding and that too much emphasis is being placed by the powers-that-be on the Corporation's activities and its capacity to serve the country. Such emphasis is clearly wrong, for the Corporation does not, as Mr. J. H. Forman, the retiring Chairman of the Calcutta Import Trade Association, stated in his speech at the annual meeting held at Calcutta on Friday last week, provide specialists in specialised lines, nor does it know individual industrial requirements and it cannot appreciate the technical demands of individual industries. It would, therefore, be better to acknowledge these limitations and utilise the services of the Corporation purely for negotiating international barter deals, especially with countries where trade is in Government hands. Actually the Corporation was established just for this purpose, but it has expanded its tentacles so much that it has, instead of supplementing private trade channels, begun supplanting them in many spheres. And, what is worse, in several cases, the Corporation merely acts as a middleman and collects its commission without providing any service. Quite candidly, Mr. Forman observed: "Ready-made organisations which can cope with the special requirements of industry are already available in this country. To ignore the facilities which exist would be grossly wasteful."

Whether it is the S.T.C. or the private trade, Mr. Forman did well to denounce anyone who takes advantage of market conditions without contributing to industry and the development of the country. The activities of such persons must be curbed effectively, as, otherwise, the community suffers the impact of artificial shortages and rigging up of prices. But there are several genuine established importers who acknowledge their duty not only to their overseas principals but also to their customers in the country. These importers, according to Mr. Forman, should be given the fullest support and encouragement. The importance of established importers has been well recognised by no less a body than the Estimates Committee of the Lok Sabha. In its latest report on foreign trade, the Committee said that the established importers continued to play a useful part in the import trade, particularly for items for which after-sales service was required and where goods were needed to be imported in small quantities by diverse consumers.

Mr. Forman was critical of some of the terms and conditions attached to Government tenders. In many instances, these conditions, he said, operated unfairly against importers. He did appreciate the need for exercising extreme caution when dealing with public funds, but emphasised that conditions imposed should be in accordance with normal trade practice. In particular, he regretted the tendency among Government departments to decide tenders strictly on price basis. Mr. Forman's plea that price and quality should both be taken into account in deciding tenders and that the Government must take a more charitable view of problems which adversely affect the trade is relevant. Equally relevant is his plea to the customs authorities to interpret rules more in accordance with the spirit and intention than is done at present. And there is considerable force in his contention that, if a sense of urgency is lost in a plethora of procedural formalities, the eventual waste of public funds is considerably more than anything which might have been achieved by way of increased revenue through an ambiguous interpretation.

BAGASSE FOR PAPER

The private sector, it is said, has not found it possible so far to pursue approved schemes, such as the ones licensed in Assam, for the manufacture of long-fibred pulp for use in paper production. This is the reported finding of a working group of the Planning Commission. The main reason adduced for the private sector's inability to develop large-scale pulp production is that, with its low margin of profit, the industry has not attracted enough capital. Another equally important reason is the fact that the estimated resources of bamboo became non-available owing to the unexpected flowering of bamboo over vast areas in Assam and Mysore. The working group has, therefore, recommended that one or two large-scale pulp mills, with a capacity of 300 tons per day each, be established in the public sector for catering to the pulp requirements of particularly the small-scale sector of the paper industry. Whether the public sector would be in a position to take on itself the responsibility for producing pulp for ordinary paper is the question. Considering that, in several industries, the public sector's performance has been marred by delays in execution, inefficient technical management slow progress of production, labour unrest, and so on, it would be well for the country and the exchequer if that sector could operate the established enterprises efficiently before taking on itself more responsibilities.

Pulp manufacture for the paper industry could thus be conveniently left to the private sector. But an important condition here is that raw material supplies should be guaranteed on the required scale. As bamboo and other fibrous wood for pulp making are relatively scarce in the country, something must be done to utilise most of the bagasse from sugar factories in the manufacture of pulp. No doubt a start has been made in the use of this excellent raw material for the manufacture of paper and paper-board in some parts of the country, especially in Mysore and Madras. But, by and large, most of the bagasse is now burnt away as fuel in the sugar factories. It is stated that there is considerable difficulty in arranging an adequate quantity of bagasse for the paper industry on account of the reported reluctance of sugar industry to switch over completely to the use of coal. If sugar factories can be assured of adequate and timely supplies of coal and also assisted to effect suitable modifications in their boiler equipment for burning that fuel, diversion of bagasse from its present less valuable use as fuel to the more valuable purpose of pulp making should not be difficult.

Only, in this connection, a fair price must be determined for this bagasse, so that the sugar industry may be in a position to finance its requirements of coal from the sale proceeds of bagasse. As inferior non-coking coals would be suitable for burning in boilers and as these are available in relative abundance now, and the railways, too, have the capacity for transporting them, the case for making most of the bagasse available for pulp making is unassailable. The working group's recommendation that urgent attention be given to the problems attendant on the switchover to an alternative fuel in sugar factories is thus unexceptionable. But, in our opinion, the problems should be tackled in such a way that (i) the sugar industry would find it easy to switchover completely to coal or furnace oil and profitable to sell the bagasse, (ii) the coal industry and the railways could ensure timely and adequate supplies of coal to sugar factories, and (iii) the private sector would be encouraged to establish pulp manufacture on the basis of assured supplies of bagasse at a reasonable price. The Government should lose no time in doing this, for the biggest single problem facing the paper industry is the raw material shortage.

PRODUCTIVITY AND LABOUR IN INDALCO

A pertinent point raised by Mr. H. V. R. Iengar, Chairman of the Indian Aluminium Company Ltd. (Indalco), Calcutta, in his speech at the twenty-sixth annual meeting of the shareholders of the Company held this week, relates to productivity. Low productivity, Mr. Iengar averred, is an important factor preventing a reduction in cost of production so necessary for maintaining the competitive capacity of Indian goods and holding the price line. A study made by Indalco revealed a very unfavourable comparison between its own plants and plants of similar size abroad. Mr. Iengar did not suggest that the comparison necessarily reflected adversely on the efforts of workers. Productivity or production per employee, he conceded, is influenced by a large number of factors other than the efforts of workers alone, such as the degree of mechanisation, size of the productivity unit, adequacy of raw material supplies and transport production planning, management and scientific knowledge and so on. Each of these aspects, he submitted, should receive close attention and scrutiny if productivity were to be improved.

An important influence on productivity is the human factor involved in labour-management relations. Referring to this, Mr. Iengar said that it was imperative to secure the co-operation of unions and workers to achieve higher standards of productivity. Indian Aluminium Company's experience, according to Mr. Iengar, in this respect has been very encouraging. There has been significant increases in productivity, following the understanding reached between the management and the workers' union. The latter has also recognised the necessity for increasing productivity further and rationalising work standards. Particularly noteworthy is the fact that the union has agreed to make every effort to man the proposed new smelter, having a capacity of 30,000 tonnes, with the existing staff. This is, as Mr. Iengar proudly put it, "a significant step, demonstrating an enlightened trade union attitude." Both the management and union deserve to be congratulated on setting an example of responsible management and constructive unionism worthy of emulation by others. Indalco has already a creditable record of maintaining good labour relations. It is one of the very few companies in the country where collective bargaining has been developed into an effective instrument to settle industrial disputes and which has an enviable record of cordial labour-management relations. It is noteworthy that the Company's plant at Belur has an exceptional record of non-participation in "general" strikes over the past ten years, inspite of nearby Calcutta's propensity for such strikes.

Mr. Iengar's comments on industrial relations, in general, and the attitudes and postures of management and labour in India are worth careful study by workers, management and the Government. In a democratic society, he pointed out, industrial disputes were bound to occur and such disputes were invariably resolved in the course of time. The most enduring way of solving these disputes, however, was through collective bargaining and mutual consent and yet these processes, he added, were becoming increasingly ineffective and slow in this country. Such delay or procrastination did a great deal of damage to the industry as well as workers and, in the majority of cases, the delay hardly improved the bargaining position of either of the parties but only contributed to wastage of national effort. Mr. Iengar wanted both workers and employers to train themselves to negotiate in good faith. Exaggerated demands in the hope that an understanding would be reached somewhere at the half-way point should be eschewed. There should be sufficient appreciation of the fact that a correlationship existed between wages, production and costs. The methods which the parties pursued, Mr. Iengar emphasised, should be based on goodwill, scientific approach and regard for public interest. The Indalco Chairman was confident that, if these considerations were kept in view, a tradition of healthy mutual negotiations would be established in the country and would prove beneficial to both industry and the workmen.

Views on the problem of human relations as affecting productivity in industry, Mr. Iengar went on to add, seemed to be stratified. The Government, trade unions of different political persuasions and different employers' organisations had taken up somewhat rigid attitudes and positions. While Mr. Iengar was not sure of what could possibly be a solution to the problem, he felt that it called for a fresh study by a body like the National Productivity Council because of its tradition of joint approach to problems of productivity. Mr. Iengar disclosed that the management of Indalco had discussed the problem—not as one affecting the Company but as concerning Indian industry generally—with the N.P.C. and had also offered to finance upto Rs. one lakh a research project on the subject. Indalco's attitude and approach to the problem of productivity and labour relations are, as is evident from the foregoing observations of its Chairman, enlightened and constructive. They are really a model for others to follow.

Notice

BRITISH PAINTS (INDIA) LIMITED

32, Chowringhee Road, Calcutta

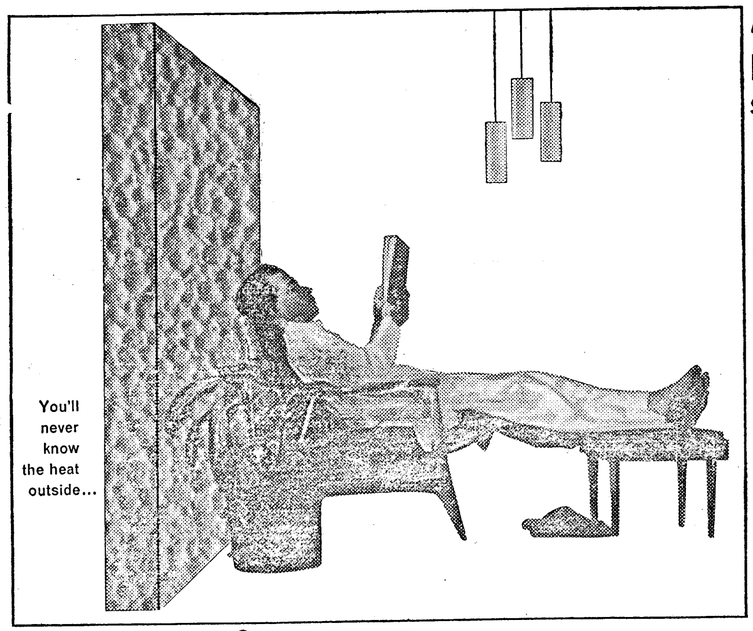
THIS IS TO NOTIFY THAT THE BOARD of Directors of this Company has recommended the payment of a Final Dividend of 7½ per cent subject to deduction of Income Tax on the Equity Share Capital of the Company held by Members as on date of the next Annual General Meeting.

The proposed Final Dividend of 7½ per cent together with the Interim Dividend of 7½ per cent paid on 2nd December, 1963 makes a total of 15 per cent payable out of the profits for the year ended 31st December, 1963.

By Order of the Board,

S. R. ROY,
Director Secretary.

Dated at Calcutta,
24th April, 1964.



Thermocole® keeps your room so cool!

THERMOCOLE is foamed polystyrene: The lightest rigid insulation material. Its closed cells provide an effective barrier against heat, noise and moisture.

THERMOCOLE is versatile. It is ideal for insulating roofs, walls and floors in all kinds of buildings. One inch of THERMOCOLE insulates better than four feet of concrete!

THERMOCOLE false ceilings are very attractive. It is excellent for fabricating light-weight insulating partitions and doors.

THERMOCOLE is feather-light, yet strong, durable and easy to work with. It cuts structure and labour costs. Efficiency with economy—that's the insulation THERMOCOLE provides.

DELHI LETTER

CHAVAN'S SEARCH FOR DEFENCE AID

BRITISH AND U.S. VIEWS AT VARIANCE

From Our Special Correspondent

NEW DELHI, 28*th April*

AS the snows melt in the Himalayas, the Indian Defence Ministry sees a massing of troops across the borders on a scale heavier than in the days preceding the big Chinese attack on the north-east frontier region in October 1962. The concentration, according to official sources, is also heavy in the Chumbi Valley which borders the kingdoms of Sikkim and Bhutan. In Bhutan early this month, plotters having close ties with Chinese agents, had nearly succeeded in a coup which may have taken Bhutan away from the course of keeping close to Delhi, a policy established by the assassinated Prime Minister, Mr. Jigme Dorji. Quick action by the young Maharaja appears to have checked the Chinese-abetted plot from running its full course. Now the Maharaja of Bhutan is understood to be discussing with Indian officials ways to streamline the defence and security set-up in the Himalayan kingdom.

The British are reported to be scoffing at the Indian Defence Ministry's assessment of Chinese massing and threats. They seem to try to "assure" the Indian Government that China is in no position to launch any attack, because of difficulties in oil supplies, spare parts for military aircraft and arms factories and all that—arguments which are somewhat parallel to those put forward by many people in Britain before the war as to why Hitler would be unable to launch big campaign. Defence Minister Chavan's aim, in his mission to the United States and Britain in the latter half of May 1964 will be to try to convince the Western friends of the correctness of the Indian assessment of the Chinese threat. The British continue to be reluctant to commit themselves to a policy of assistance which would help in the long-term defence build-up in India. They favour year-to-year doles of aid. The Americans, on the other hand, are somewhat convinced of the long-term defence needs. In discussions with officials in Washington, Mr. Chavan and his aides will suggest the various lines in which the Americans can help India's five-year defence plan. The United States has already agreed to help in the erection of an ordnance factory. Chances of British aid for arms factories are considered remote.

The Defence Ministry recently confirmed that the Hindustan Fighter-24 (HF-24) designed and built at the Hindustan Aircraft factory in Bangalore will soon be on operational duty with the air force. (See also Delhi Letter in *Commerce* dated 4th April 1964, on page 549.) The HF-24 will be more versatile than the MIG-21 which is to be manufactured with Soviet assistance. The HF-24 is faster than the MIG-21 which has a speed of Match 1.7 and it will have a longer range than the MIG's 450 nautical miles. The negotiations with Russia for the manufacture of an advanced version of MIG's are still hanging fire.

Atomic Programme

As in jet aeroplane manufacture, India has joined the select 'plutonium' set also, with the inauguration of the plant in Bombay a few days ago. But the Indian Atomic Energy Commission's ambitions to do more in the field on its own have received a minor setback as a result of conditions imposed during negotiations with the Americans for the erection of the first atomic power plant in the country at Tarapore. After studying international tenders, the Indian authorities gave a letter of intent to the American General Electrical Company towards the end of 1962. But not all the difficult details of negotiations which the American Government have been got over yet. First there was the problem of safeguards under the International Atomic Energy Agency which India at one time considered to be an infringement on sovereign rights of underdeveloped nations. Delhi had to make a compromise on this issue. After many months of negotiations over the $80 million credit offered by the American Government, the Agency for International Development (A.I.D.) has imposed conditions which ensure that all purchases outside India for the project will be made in the United States and there will an American consultant firm to supervise the project. The head of the Indian Atomic Energy Commission, Dr. Homi Bhabha, was not particular in having a foreign consultant at all. The 380 Megawatt nuclear station is now expected to be ready some time in 1968. It is also understood that the Atomic Energy Commission has agreed with Rajasthan Government's proposals that the second Indian nuclear power station, to be sited at Rana Pratapsagar, should have a capacity of 400 mW., or double the capacity originally suggested. The Canadians are aiding this project.

Relief in Food Prices

Foodgrain prices have been crashing in North India, following the restrictions on interzonal movement of wheat imposed by the Ministry of Food and Agriculture a few days ago. Early this year, customers in Delhi had to pay up to Rs. 30 a maund of wheat, the highest since independence. In the main foodgrain market in Delhi, farm wheat is now selling at Rs. 50 a quintal, as compared with more than Rs. 85 early this year. The Punjab farmers had been sending their new crop mostly to areas outside Delhi and the Punjab, but the ban on movement has forced them to send the grain from the new harvest into markets in Delhi and the Punjab. The best quality wheat is now available in the retail market in Delhi at Rs. 20 a maund and inferior variety wheat at a little over Rs. 16 a maund. This means a fall of more than Rs. 10 per maund from prices early this year.

* * * *

BOKARO PLANT

The programme for the Bokaro plant is taking more confusing turns. Some days ago, Steel Minister Subramaniam announced that he was confident of Soviet assistance for the Bokaro plant. It had also been announced that international tenders for equipment for the plant would be called in a few months and that firms in the United States, France, Japan and Germany were planning to form consortiums to submit the tenders.

If the Soviet willingness to come in with aid for building the Bokaro plant is to be pursued, the strategy to be followed will be to ask Dastur and Company to divide the equipment needs into two categories, those to be supplied without tender by the Soviet Union and those to be bought on the basis of international tenders. The Russians are also understood to have proposed rapid expansion of the Ranchi heavy engineering plant to increase the indigenous capacity to manufacture steel mills equipment.

In talks with Indian Ministers and officials, Mr. Orville Freeman, U.S. Secretary of Agriculture, emphasised the role of fertilisers in increasing foodgrains production. The Indian Food Minister's talks with the American official made it clear that the Indian Government and the Planning Commission have abandoned the hopes for foodgrain self-sufficiency slated for the end of the third Plan period. For some years to come, Delhi wants American gift supplies at the rate of between four and five million tons a year. This in effect means acceptance of the views held by Mr. S. K. Patil before he left the Food Ministry—views which led to his clash with the Planning Commission.

Twenty-five Congress Members of Parliament have also appealed to the Food Ministry to continue the emphasis laid by Mr. S. K. Patil on remunerative returns for the farmers. These M.Ps want prices fixed for all varieties of grain over a five-year period, 1965 to 1970. The M.Ps also ask for a high-level committee to fix the prices. The minimum prices sought by the farm lobby, however, are high—Rs. 25 per maund for high-quality wheat, Rs. 28 for rice, Rs. 18 for *bajra* and Rs. 15 for *jowar*.

One of the important collaboration deals finalised during the visit to Delhi of the team of American businessmen was for a fertiliser factory at Visakhapatnam. It is understood that the Indian Government will approach the A.I.D. for increased funds for the erection of several fertiliser factories.

A TIN WORM FOR THE AUTOBAHN

Motorists have named this strange structure the "tin worm," as its strange accordeon shape actually does resemble a crawling worm. The tin construction is being tested on the green strip of the Autobahn (express highway) near Hagen (West Germany). It is planned to offer protection from headlights of approaching cars. Unlike the previous anti-dazzle screen that was continually uprooted by strong side-winds, this new construction has been built to withstand even the strongest winds. The motorist is protected from the bright lights of approaching cars without losing sight of the entire stretch of road. This system is unsuited for long stretches of road, however, as the continual view of the not overly attractive "tin worm" tends to make most drivers nervous.

LONDON LETTER

GRASPING THE COMMONWEALTH NETTLES

(From Our Own Correspondent)

LONDON, 25*th April*

THE Prime Minister announced this week that he has convened a Conference of Commonwealth Prime Ministers for the second week in July. He has allocated two days for "economic matters" and only one day for the "world situation" and only "time" (so far) for discussions on thorny problems such as Southern Rhodesia. South Africa is part of the "world situation" and a somewhat firmer agenda will have to emerge by the time the Conference opens if Sir Alec Douglas-Home's hopes for it are to be realised.

For the British Prime Minister is determined to eradicate the impression given in a highly controversial series of articles which appeared recently in the London *Times* by "A Conservative"—generally supposed to have been one of the Ministers who refused to serve under Sir Alec. These articles put forward extreme right-wing viewpoints (declaring, indeed, that defeat at the coming election would give time for the Tory Party to refresh itself at the springs of its traditional faith) among which the Commonwealth was written off. Sir Alec instead wants to accept the challenge of what the Commonwealth means today and to discover agreement on specific co-operative action. He has seen the danger in the viewpoint of "A Conservative" and is going to demand fundamental reappraisal by his party in the hope that some clear orientation will ensue.

Bridging the Gap

In an electioneering speech made at the end of this week, the Prime Minister proclaimed that the modern Commonwealth (19 States in all in every continent) is to become "a going concern and an influence in the modern world." It is to bridge the gap between races and colours, between wealth and poverty. How? By marshalling Commonwealth resources for technical assistance and education, thus showing the practical advantages—political and economic—of this modern Commonwealth.

Then, in later years (this is to be inferred both from his electioneering speech and from conference interview) the Prime Ministers might tackle the political problems within the Commonwealth which, on Sir Alec's own admission, exist and must be resolved in the interests of world progress. Small wonder that this allocation of priorities—technical and educational aid first and political problems "later on"—has caused many eyebrows to lift here. Does he really think, it is asked, that most of the 19 members (especially the newer) will be prepared to chat happily about economic co-operation, while the great issues that concern international politics are left to one side?

Obviously the Commonwealth can do enormous good to its members, if the better off seriously divert resources to the development of the less well off. But co-operation is effective only so long as the spirit is there and surely the conference will do more harm than good to the future of such co-operation if the tough issues are avoided. The balance of opinion is that, if Sir Alec tries to make headway primarily on an economic task and ignores the reefs of southern Africa in particular, he will come to grief. The Prime Ministers' Conference does present opportunities; the Commonwealth has great potentialities for mutual assistance, but the problems which obsess its members must *all* be faced—not ignored because they are very difficult.

Economic Sanctions Against South Africa

The report of the international conference recently held in London to consider the feasibility of applying economic sanctions against South Africa, has had a mixed reception—even among that great majority who believe that the Commonwealth should bridge the racial gap. It is accepted that effective sanctions (that is supported by the Common Market countries, North America and Japan) could hurt South Africa. Between one-quarter and one-fifth of that country's total income is derived from foreign trade and sanctions on capital equipment, oil and gold would be devastating. The gold suggestion is particularly interesting, but a blockade would be difficult to impose and the startling thought has emerged that, if gold could be demonetised, then could South Africa's market collapse. It would be extraordinary if international currency reform were indeed to be hastened by a

(*Continued on page* 774)

REASSESSMENT OF RUSSIAN GOLD

By Questor

WE all tend to exaggerate the size and importance of the unknown, and the fact that the Russians prefer not to disclose the size of their gold reserve has led in the past to some interesting exaggerations. I have heard it suggested, for example, that Russia is accumulating vast reserves of gold in the hope of being able, when circumstances are suitable, to disrupt overnight the delicate machinery of the West's financial system.

The Central Intelligence Agency, in a report made public at the beginning of this year, went to the opposite extreme. It estimated that Russia's reserve of gold amounted to less than $2 billion and that its annual production amounted to only $130 million, considerably less than the average level of its sales to the West over the past eight years.

These estimates were dismissed promptly by dealers in the London gold market, who suspected that the main object of the C.I.A. was to suggest that Russia would be seriously weakened if the allies refused to trade with her on long-term credit. They pointed out that Russia had always been extremely conservative in financial matters—apart from the U.S., for example, she is the only major country which still insists on gold backing for the note issue—and that a large and successful prospecting programme had been taking place in Siberia. Whatever the actual size of her reserve, they claimed, it was unreasonable to suppose both that it was extremely small and that she was selling to the West, year in year out, a good deal more than her newly-mined output.

This scepticism was only confirmed by the size of the grain purchase programme set off by the failure of last year's harvest. Russian gold sales have tended in the past to average some $200 million a year. Last year, however, they jumped—according to Mr. Dillon, as well as to the London gold market—to over $500 million. This increase came in very handy for the pool of central banks which now exists to keep the London gold price within reasonable limits. Over 1963 as a whole, the pool managed to accumulate no less than $600 million of gold; and the U.S., which received half of this surplus, was able to keep its gold loss to the lowest figure recorded since 1957.

A fact which has received rather less notice so far is that Russian gold sales are likely to be at least as large this year as they were last. Sizable selling took place in mid-March, and sporadic sales have taken place since in various European centres: the total to date is estimated to be well over $100 million and perhaps nearer $200 million.

The market, moreover, has been uneasy recently because of rumours that another bout of heavy selling is imminent. These rumours are entirely reasonable. It is true that the Russians, annoyed by the condition that 50 per cent of U.S. wheat sales should be carried in high-cost U.S. shipping, have contracted to buy a good deal less of it than was originally proposed and may now prefer to watch the progress of their own harvest before ordering more.

But they have, in fact, ordered $130 million of U.S. wheat, which has still to be delivered and paid for. Something like half of their Canadian and Australian purchases (worth rather more than $500 million and $100 million respectively) is to be delivered and paid for in the first half of 1964. And they have, on top of the cost of the grain, to meet sizable freight charges. It is not inconceivable, therefore, that their gold sales to meet the grain bill will, without any additional orders in the U.S., have to be even larger this year than they were last year.

Even in the short term, this is a welcome prospect. There is a risk that the exchanges will come under some pressure this autumn and that the central bankers will have a more difficult time of it than they had last year. Any addition that Russia makes to the exiguous pool of international liquidity will be extremely useful. But there is at least a possibility, it seems to me, that she may continue to make a more useful contribution than in the past even when she succeeds in getting her agriculture into better shape and obviating the need for massive imports of grain.

The fact is that the Western financial system is still based on gold and looks like remaining that way, whatever gradual improvements are made, for some time to come. But the supply of gold is unlikely to expand more rapidly than at present while the price is fixed and only the richest ores are profitable to work. A very high proportion of current output, moreover, comes from South Africa and may at some time become vulnerable to sabotage. A new source of supplies would be a blessing.

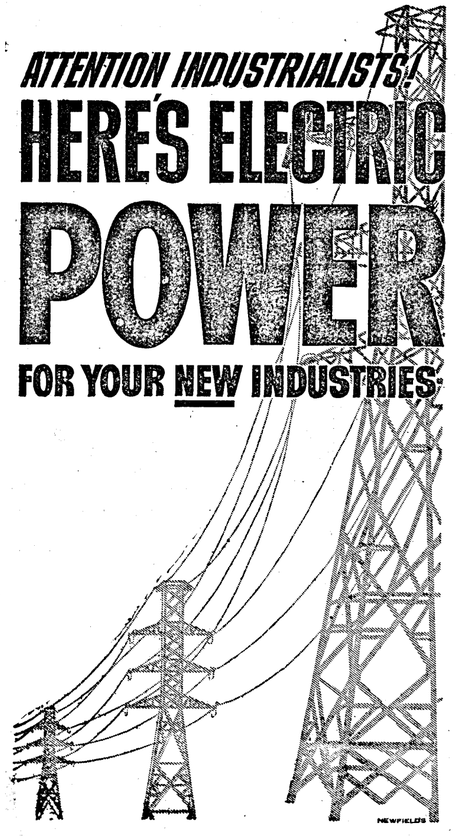
According to one suggestion I have seen, however, Russia made important gold discoveries in Eastern Siberia as far back as 1956. These were left unexploited so long as there seemed to be better uses for capital and labour. But now, it is said, they are being opened up and Russian gold production in 1964-65 is scheduled to amount to $1,000 million, more than twice the output rate estimated by the C.I.A.

It may be that production costs are extremely high and that this is an emergency measure to be dropped when the need for foreign exchange is no longer urgent. But the Russians, with their artificial exchange rate and their new worry about pricing principles, cannot be too precise about costing. If, as seems likely, they now want to trade more extensively with the West, they may also decide to produce more gold and to use it more freely for settling their international transactions. It is conceivable, in fact, that—far from cunningly subverting the Western financial system—they may now contribute a larger share towards propping it up.

STABLE U.S. LABOUR COSTS

Labour costs per unit of output rose barely at all in the U.S. between 1957 and 1962, as compared with a rise of 14 per cent in Japan, 17 per cent in the U.K. and 26 per cent in Germany, according to a Labour Department study contained in the April *Monthly Labour Review*. The 1957-62 increase in the U.S. unit labour costs covering all manufacturing employees was 1 per cent or 3 per cent depending on whether output is measured on the basis of physical production estimates prepared by the Federal Reserve Board or estimates of Gross National Product originating in manufacturing prepared by the Bureau of Labour Statistics and the Commerce Department's office of business economics.

Despite over-full employment and steadily increasing wages, West Germany experienced only a moderate cost of living rise in the past year as compared with other industrial economies. The cost of living rose from January 1963-64; in Italy by 6.5 per cent, France by 4.8 per cent, West Germany by 2.6 per cent, U.K. by 1.9 per cent and the U.S. by 1.6 per cent.



AND EVERYTHING ELSE YOU CAN ASK FOR

Your new industry needs a lot of electric power. The U.P. State Electricity Board is proud of its ability to keep pace with industry's growing demand.

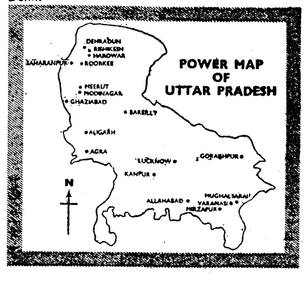
The following are some of the major power projects in U.P.'s Third Five Year plan

Rihand Hydro-electric Project	2,50,000 KW Completed 1962
Harduaganj, Stage I	60,000 KW Completed May '62
Harduaganj, Stage II	30,000 KW Completed Mar.'64
Matatila Hydro-electric Scheme	30,000 KW Scheduled Dec. '64
Yamuna Hydro-electcic Scheme, Stage I	85,000 KW Scheduled June '65
Kanpur Thermal Expansion	64,000 KW Scheduled Aug. '65
Obra Thermal	2,50,000 KW Starting Oct. '65
Yamuna Hydro-electric Scheme, Stage II	2,00,000 KW Scheduled Dec. '69

A trunk grid of 2,20,000 volts is being constructed to interconnect all the power stations and lines of 1,32,000 and 66,000 volts will branch off from this trunk grid for taking constant electric power to the following important industrial centres :-

Ghaziabad-Modinagar-Meerut - Connected by rail and road with the whole of India. Home of the well known Modi Group of Industries - can also be the home of your industry. Industrial sites are offered by the U.P. Industrial Corporation, Kanpur.

Aligarh - Only 16 miles from the Harduaganj Thermal Power Station - assured of ample and constant supply of electric power. 84 miles from Delhi.



Dehra Dun - Home of the Yamuna Hydro-electric Schemes, Stages I, II, III and IV. Unlimited forest produce and limestone of high purity at hand.

Saharanpur-Roorkee-Hardwar-Rishikesh - offer big scope for industries, particularly those ancillary to the Antibiotics Factory at Rishikesh and the Heavy Electricals Factory at Hardwar. Close to rich extensive forests.

Bareilly - Home of the Synthetic Rubber Industry, Camphor Industry, Turpentine and Rosin Industry and the Match Industry and developing rapidly as a major industrial centre.

Agra - Main tourist attraction in India and growing industrial centre - conveniently connected with the whole country by rail (both broad gauge and metre gauge), road and air.

Kanpur - Already the most important industrial centres in Northern India. Seat of many technical training institutions. Connected with the whole country by rail, road and air.

Lucknow - Seat of the U.P. Government and a growing industrial centre. Industrial area developed by the U.P. Industrial Corporation, Kanpur. Served by rail, road and air.

Allahabad and Naini - Quick movement of goods between Calcutta and Allahabad assured by electric traction. Land, water and power available in plenty.

Varanasi-Mughalsarai Area - Another industrial area which is growing rapidly. Conveniently connected by rail, road and air with the rest of the country.

Mirzapur District - Home of three major power stations - Rihand, Obra Thermal and Obra Hydel. Rich in limestone deposits and producing large quantities of aluminium and caustic soda. Coal available from nearby Singrauli Coalfields.

Gorakhpur - A large Fertiliser Factory being set up here by the Government of India - also seat of the Madan Mohan Malviya Engineering College and the Government Technical Institute. Important centre of sugar production.

This advertisement is issued for the information of industrialists throughout the country by the

U.P. STATE ELECTRICITY BOARD

COUNCIL HOUSE, LUCKNOW

who will be happy to answer enquiries and furnish any further information which may be required.

FEDERAL RESERVE SYSTEM IN U.S.

ENQUIRIES INTO THE STRUCTURE AND PROCEDURES

THE fiftieth anniversary of the Federal Reserve System, the unique federal central banking authority of the United States which was established in 1914 " to furnish an elastic currency, to afford means of rediscounting commercial paper and to establish a more effective supervision of banking," has provided yet another occasion and a timely opportunity for a comprehensive review of the aims and achievements of the System. Such studies and reviews are not a novelty in American banking, for enquiries are conducted every year by various committees of the Congress, in the belief that any gain made in the knowledge of the banking system will be beneficial. But this year's broad research activities of the Housing Banking and Currency Committee under the chairmanship of Mr. Wright Patman in the field of finance are something special, because the current enquiries cover a wide range, from commercial banking to the Federal Reserve and also include Government's lending and credit-insuring activities. Moreover, in addition to holding hearings, the Committee's staff has organised several special studies, and a large group of Government and University economists has been retained to undertake some major research assignments.

The original mandate under which several powers (financial and monetary) were delegated by the Congress to the newly established Federal Reserve System was modified in a major way by the Banking Acts of 1933 and 1935 and the Employment Act of 1946 and by the more recent international arrangements. These changes reflect social and political changes, but in addition, there have been major modifications in the powers and structure of the System, in the scope and complexity of credit and financial markets, in the institutional arrangements that transmit Federal Reserve policy, and in the mechanisms and weapons through which it operates. Studying these changes and answering the question how far the Federal Reserve has fulfilled its purpose, two university economists, Mr. Karl Brunner and Mr. Allan H. Meltzer,* have raised two basic questions: (1) What are the Federal Reserve's conceptions and ideas of the monetary mechanism and how do they affect the objectives and the manner of operating the available policy instruments? (2) Are these concepts relevant to the actual financial conditions and the real nature of the monetary process?

No Critical Examination

The authors come to the conclusion that most of the concepts of the Federal Reserve that guide policy are based on judgment, personal experience, or direct observation, but few, if any, have been critically examined, fully articulated or compared with alternative conceptions. This has led to *inappropriate* policy decisions, *incorrect* evaluation of the events of money and financial markets, and choice of *inadequate* instruments or targets for policy actions. These failures of the Federal Reserve System have rendered monetary policy less successful and meaningful in carrying out the Congressional mandate that would otherwise be.

According to the authors of this study, *tone, feel, credit* and *liquidity*, the four concepts that play a dominant role in the Federal Reserve thinking and discussions of the monetary mechanism, are vague and elusive concepts, which are inadequately defined and have varying meanings in different contexts. As a result, the Federal Reserve is able to give a very inadequate explanation of the response of the money supply to changes in rediscount rates, reserve requirements and open market operations. In fact, the authors find that the Federal Reserve's view of the factors influencing the money supply has very little relation to the annual changes in the stock of money and that the Federal Reserve is hardly able to exercise any decisive influenced on the money supply and much less over bank credit.

Another criticism of the Federal Reserve relates to its attitude: it is organised and operated in a way that gives undue importance to week-to-week, day-to-day, even hour-to-hour changes in the money and security markets and it often looks at its problems from the point of view of an individual banker, rather than that of a regulating authority for the monetary and economic system. In effect, this means that the perspective of the Federal Reserve is so restricted that it misses the wood for the trees.

The authors further trace the evolution of the important and dominant role played by movements of free reserves in the thinking of Federal Reserve, and to the inadequacy of this concept as the tool of monetary analysis. Movements of free reserves often precede rather than follow the decisions of the Federal Open Market Committee (F.O.M.C.). The result is that F.O.M.C. is reduced to a body that ratifies changes in policy, rather than one that initiates such changes. Moreover, the members of F.O.M.C. are heavily dependent on the manager of the System Open Market Account for interpretations of the market trends and events and are unable to assess adequately his operations or appraise their meaning.

The authors of this critical review of the Federal Reserve have pointed out that they have drawn up an outline of an alternative conception of the monetary process which includes or modifies several important features of the monetary mechanisms that are excluded from or incorrectly incorporated in the prevailing Federal Reserve views, and have suggested administrative changes for making policy and conducting operations. But these changes and suggestions have not been released so far. The authors make it clear that they are in favour of retaining many of the excellent features of the present Federal Reserve operations, particularly their ability to judge turning points, but they want these judgements to be backed up by appropriate action, and for this purpose they have suggested changes in policy-making procedures and reorganisation of the F.O.M.C. and the Federal Reserve System itself.

The authors recognise that it is easy to be wise after the event and have not therefore levelled their criticism against any particular action. They have not, for instance, asked the question : " Was the monetary policy adequate?", for which there may be an easy answer now. But they have gone to the roots of the matter, and tried to assess the deficiencies and achievements of policy-making arrangements by asking the more important questions like " Are the policy-making procedures adequate ?" or " Does the Federal Reserve have adequate and timely information to enable it act promptly ?" or " Does the F.O.M.C. or the Board of Governors of the Federal Reserve have adequate understanding of the mechanism of monetary policy?". The main answer which the authors give to these questions on the basis of the evidence they have collected is that, even after 50 years, the Federal Reserve has not yet provided a rational foundation for policy-making.

Reaction of Governors

The Governors of the Federal Reserve have welcomed these enquiries and have an open mind on them ; yet they have a different viewpoint regarding the merits of the structural arrangements of the existing System. While conceding that it has made mistakes, they feel that, in its half century of existence, covering boom, crash and depression within a generation of two world wars, the system has experienced failures as well as successes, and has learnt from its experience. Mr. William McChesney Martin, Jr., Chairman of the Board of Governors of the Federal Reserve System, testifying before a House Sub-committee, said three months ago that " we can find considerable satisfaction in the extent to which the Federal Reserve System has accomplished its objectives."

The System has achieved the goal uppermost in the mind of its creators by providing an elastic currency: moreover, the structure of the System has clearly demonstrated its adaptability to changing conditions—it is " a structure that places trusteeship over the creation of money in a body that is insulated from shortsighted pressures for the abuse of that power ; one that combines the advantages of regional units with central supervision and co-ordination." The regional system has enabled a close touch to be maintained with developments throughout the country and has made for flexibility.

The most important example of the process of evolution is provided by the development of open market operations as a method of supplying or absorbing bank reserves, the base on which bank credit vests in the U.S. The original purpose of allowing the Federal Reserve Banks to make investments was to make them financially self-supporting : but the combined operations of the 12 regional banks through a single board have evolved gradually into a major tool of monetary policy. Even at present, the Federal Reserve System is breaking new ground in establishing a network of currency interchange arrangements with European Central banks as a means of protecting the dollar and strengthening the balance of payments.

That the Federal Reserve itself has given considerable thought to the aims and achievements of the System is apparent from the fact that the Chairman of the Board of Governors of the Federal Reserve has himself suggested a change in the " real bills " doctrine of the existing legislation, according to which it is assumed that the supply of money and credit would automatically respond to changing needs of the economy, if the Federal Reserve Bank credit was based on short-term, self-liquidating, " real bills," drawn to finance production or distribution of goods. Experience has, however, shown, that this reliance on agriculture, industrial or commerical paper arising out of actual transactions—" eligible paper," as it has been described—could blow up the currency and credit disproportionately during inflationary times and constrict them unduly in depression times. Moreover, modern industry and trade have need for new and more flexible forms of credit.

Scope for Widening Eligibility

Today, the member-banks can borrow from the Federal Reserve against the collateral of U.S. Government obligations or eligible paper; but the Federal Reserve is of the opinion that current eligibility requirements exclude a large volume of perfectly sound paper which could serve as a basis for Federal Reserve credit. If the member-banks are forced to borrow against these technically 'ineligible' paper but satisfactory to the Federal Reserve, they must pay a penalty rate of interest, ½ of 1 per cent higher than the normal rate of borrowing. The Board of Governors and the Federal Reserve Banks believe that a revision of law is desirable to eliminate existing restrictions on the eligible paper, in order that the Reserve Banks may be in a position to perform promptly and efficiently one of their principal responsibilities—the extension of appropriate credit assistance to member-banks, and thereby enable the latter to meet the legitimate credit needs of the economy.

The suggestions of the Patman Committee for the abolition of the Board of Governors and F.O.M.C. and to make the Secretary of the Treasury the Chairman of the new Board were analysed by " Questor " in *Commerce* dated 18th April 1964, *Vide* page 645). The Federal Reserve feels that monetary policy should be directed towards gearing money supply and credit to the needs of the economy as a whole and not to the needs of the Treasury and, while cordial and close relations are essential between the Treasury and Board, the proposed changes would be regarded by many as a step toward nationalisation.

As regards the abolition of F.O.M.C. the Federal Reserve's stand is that the present arrangements promote System-wide understanding of complex credit problems of different regions, and closer relations between Presidents of the Federal Reserve Banks and the Board in the determination of the System's policies. The present arrangements have also produced a body of capable and qualified men. The Federal Reserve Banks are therefore strongly against any reorganisation of the System that will make " the monetary authority of the U.S. virtually a bureau of the Treasury and a vassal of the President," to quote a congress representative.

The debate on the Federal Reserve thus continues, but only a beginning has been made. Although Mr. Pitman has made a bold bid to change the Federal Reserve System, knowledgeable observers believe that he is unlikely to succeed in a big way. Proposals and counter-proposals, studies and conclusions will continue to be debated for a long time to come, and, in the ultimate analysis, they will provide considerable enlightenment on the structure and operations of the Federal Reserve. It may not be possible to agree with the provoking view that, even after 50 years, the Federal Reserve has failed to provide a rational foundation for policy-making, but bold enquiries and challenging conclusions now being aired are bound to add to one's knowledge of the Federal Reserve System, what it is and how it works. They may also result in certain amendments to the Federal Reserve Act.

* Mr. Brunner is from the staff of University of California at Los Angeles and Mr. Meltzer is from Carnegie Institute of Technology. The conclusions of their research are produced in *Banking*, the journal of American Bankers' Association, March 1964.

This announcement is not a Prospectus. Persons interested in full details are requested to obtain copies of the Prospectus, which are available from the Company's Registered Office and from the offices of the Company's Bankers, Brokers, Underwriters and Registrars and Transfer Agents hereinafter mentioned.

COROMANDEL FERTILISERS LIMITED

coromandel gromor

(Incorporated in India under the Companies Act, 1956, on 16th October 1961 as a company limited by shares).

Registered Office : 66, Rashtrapathi Road, Secunderabad, Andhra Pradesh.

EXISTING AND PROPOSED ACTIVITIES OF THE COMPANY

The Company was incorporated with the objects set out in its Memorandum of Association, the main objects being the manufacture, refinement and preparation at or in the vicinity of Vishakhapatnam, Andhra Pradesh, of all classes and kinds of fertilisers and of chemicals and industrial and other preparations arising from, or required in the manufacture of, any kind of fertiliser and the purchase, sale and distribution throughout India and elsewhere of all such classes and kinds of fertilisers, chemicals, industrial and other preparations.

The Company was incorporated as a private company on 16th October 1961 and by virtue of the provisions of Section 43A of the Companies Act, 1956, it became a public company on 10th April 1964. Thereafter the Articles of Association of the Company have been so revised as to comply with all requirements of a public company and those of The Stock Exchange, Bombay.

The promoters of the Company are

(1) California Chemical Company of 200 Bush Street, San Francisco, California, U.S.A.;

(2) International Minerals & Chemical Corporation of 5401 Old Orchard Road, Skokie, Illinois, U.S.A.; and

(3) E.I.D.-Parry Limited of Airwork House, Piccadilly, London, W.1., England. Head Office: Dare House, Madras.

An Industrial Licence No. L/18(1)4/61 Ferts. dated 6th March 1961 as amended by letters dated 12th June 1961 and 23rd March 1964 has been issued to the Company by the Central Government for the establishment at Vishakhapatnam of a new industrial undertaking for the production of complex fertilisers and urea with a capacity of producing ammonium phosphate of various grades equivalent to 365,000 metric tonnes per year in terms of 20-20-0 and 16,500 metric tonnes per year of prilled urea.

LOCATION OF THE INDUSTRY

The Company's fertiliser plant will be located in the Vishakhapatnam Port Area, Andhra Pradesh.

A Lease of a suitable area of land in the Vishakhapatnam Port Area for the Company's plant admeasuring approximately 500 acres (including the strip from the existing harbour) has been negotiated with the Vishakhapatnam Port Trust for a period of 50 years commencing on 1st July 1964, renewable by mutual consent for a further period of 49 years.

An Agreement with the Vishakhapatnam Port Trust has also been negotiated regarding a wharf to be constructed in the Vishakhapatnam Harbour for use by the Company.

PROBLEMS OF COTTON MILL INDUSTRY

RATIONAL PRICE POLICY AND SPEEDY MODERNISATION URGENT

THE persistently rising trend of population, the improvement in purchasing power in the hands of the people and the need for earning foreign exchange through exports continue to exert an upward pressure on the demand for cotton textiles, which constitute an essential item of consumption. Unless earnest efforts are made from now alone to meet this pressure, the time may come when India will be faced with a serious shortage of cloth, leading to inflation of price and setback in exports. Such a development would be tragic indeed. It can surely be avoided if only the planners and the powers-that-be care to ponder the observations of the Presidents of four regional Millowners' Associations, namely, Bombay, Saurashtra, South India and West Bengal, at their annual meetings held recently, as well as of Mr. Krishnaraj M. D. Thackersey, a doyen among millowners, who inaugurated the meeting of the Saurashtra Millowners' Association. All of them have highlighted the series of disquieting factors confronting the cotton mill industry and offered constructive solutions for the same. In particular, stress was laid on the urgent need for a rational price policy and speedy modernisation.

While there has been an expansion in the cotton mills' weaving capacity—the number of looms actually in place went up by 3½ per cent in 1963—the production of cloth has tended to decline and that when stocks with mills have been greatly depleted. The total of these stocks (both sold and unsold) at the end of February last was just 345 million yards, as against 451 million yards a year before. The actual output is said to be currently running at an annual rate of no more than 4,800 million yards, as against the 4,837 million yards produced in 1963 and the all-time peak output of 5,317 million yards in 1957. The decline in cloth production is attributed to four main factors (*a*) marginal supply conditions relating to cotton, especially long-staple cotton; (*b*) underutilisation of spindle capacity and substantially bigger underutilisation of loomage in the third shift; (*c*) slow progress in the matter of utilising the spindles already licensed, owing to difficulties in raising internal capital resources, delay by indigenous textile machinery manufacturers in supplying card engines and ring frames, and foreign exchange shortage for import of textile machinery; and (*d*) the tendency on the part of some composite mills to sell large quantities of sized yarn in beams to powerlooms due to relative profitability.

Two Major Handicaps

All these handicaps notwithstanding, the mill industry would have been able to maintain a markedly higher output but for the two handicaps to which Mr. Radhakrishnan R. Ruia, Chairman of the Millowners' Association, Bombay, drew attention. In the first place, as a result of the virtual freezing of the mill cloth prices since January 1961, the return on many types of cloth has proved to be unremunerative. Secondly, the reservation of a good percentage of *dhotis* and *saris* for production in the decentralised sector has militated against any expansion of mill activity. If mill production is to increase, the obvious course to follow, as Mr. Ruia rightly pointed out, is to release the industry from needless restraints and controls, so that it may be free to turn out as much cloth as is demanded by the consumer and in all the varieties he wants. "Removal of price control," to quote him, "will stimulate higher production, which, *ipso facto*, will bring down the prices of many sorts except, perhaps, of those whose prices are at present artificially kept at a low level. Plentiful production and easy availability at reasonable prices is a goal that will win universal approbation. In the opinion of Mr. D. C. Kothari, Chairman of the Southern India Millowners' Association, there is hardly any need for continuing the voluntary scheme of price control.

It is, indeed, deplorable that the Government of India should compel the mill industry to continue its voluntary price regulation scheme which, as Mr. T. P. Chakravarti, President of the Bengal Millowners' Association, stated, is practically unworkable today. The prices fixed under the scheme bear no relation whatever to the production costs of mills. Since the scheme was introduced in September 1960, there has been an increase in the prices of cotton, chemicals, stores and other accessories, rise in coal freight and electricity charges, enhanced provident fund contributions and heavier wage bill on account of the Wage Board's recommendations and higher dearness allowance necessitated by increase in consumer price index numbers. What is worse, the 1964-65 budget proposals, it is said, have saddled the textile industry with an additional tax burden of Rs. 6.95 crores annually. All these factors, according to Mr. Chandulal Vardhan Shah, President of the Saurashtra Millowners' Association, justify an upward revision of cloth and yarn prices by about 16 to 20 per cent.

An Alternative Suggested

The Government, however, is opposed to any move to raise the prices of textiles further on the ground that such a move will burden the common man with a further increase in his cost of living. The anxiety of the Government is understandable, but it cannot be stretched too far to ignore the realities of the situation. Has the Government not allowed some industries—sugar, paper, coal and steel, for instance—to put up the prices of their products in order to compensate to some extent at least for the increase in production costs? Why should the cotton mill industry alone be made an exception? If, however, the Government is still not inclined to concede the plea of millowners, it can at least accept the latter's suggestion for earmarking a certain percentage of the total cloth production for standard varieties widely used by the common man, the prices of which should be fixed, and permitting the industry to sell the finer varieties of cloth at higher prices. This suggestion, it may be noted here, was put forward by the representatives of mill industry at their meeting with the Deputy Chairman of the Planning Commission at New Delhi last week-end. The millowners, of course, took care to add that the Government should undertake to lift the production of standard cloth, as they did not want to take the risk of being loaded with unwanted stocks.

Other Measures

A rational price policy apart, the cotton mill industry's spokesmen have urged the adoption of several other measures to improve the conditions in the industry. Here are a few of these which Mr. C. V. Shah suggested:

1. So far as expansion of spindleage is concerned, permission has been extended to all units to expand them to 25,000 spindles. Regarding the expansion of the weaving shed, such a general permission is absolutely necessary. Expansion in loomage should be permitted to 500 looms at least.

2. Automisation, as far as possible, should be permitted without laying down any conditions for compulsory export, etc. Impossible conditions sometimes retard automisation which is necessary for both quality production and reduction in the cost structure.

3. There are certain labour legislations which also impede speedy automisation. Under the Bombay Industrial Relations Act, the consent of the labour unions is necessary even for replacement of plain looms by automatic looms. Such pieces of legislation should suitably be amended.

4. Rationalisation, in proper cases, should be allowed, especially when new and automatic machinery is installed, and the surplus workers may be allowed to be retrenched after paying the retrenchment compensation and other dues. Too much emphasis and importance should not be given to the recommendations of the 15th Indian Labour Conference in such matters.

5. Consumer price index number should be worked out, by the State Government, for all big centres, where textile mills and other industries are located so as to bring to an end the unnatural and unscientific linking of dearness allowance with a nearer bigger industrial centre.

6. In all fairness, in calculating the wage to a worker, the entire wage packet that he receives should be taken into consideration and the different elements that constitute his wage packet should depend upon the capacity of the industry to pay.

7. Various imposts on the industry such as handloom cess must go now. Handloom cess should not be continued for all times to come. The system of collecting excise duty on cotton textiles should be simplified and as far as possible, the duty should be levied at one stage only. Adequate relief in excise duty is the need of the day and, if the Government, in the present circumstances, cannot go further, it must at least withdraw the duty on yarn proposed in the Central budget this year.

8. In the realm of bonus, the old Full Bench formula of the Labour Appellate Tribunal may be continued with the clarifications made by the Supreme Court rather than creating a confusion by adopting the impracticable recommendations of the Bonus Commission.

9. The industry should be given a rebate in corporation tax and surtax as has been announced in the case of other basic important industries.

There is, of course, nothing new in these suggestions, inasmuch as they have been made time and again by the millowners. And, generally speaking, the suggestions are unexceptionable. But it is difficult to agree with the plea of Mr. Shah that the wage structure at all points should be frozen at the present level for some years to come till the country's economy gets strengthened by higher production at reduced cost. For the plea is unrealistic. Any move to freeze wages when inflationary forces continue to be at work throughout the economy is fraught with dangerous consequences. Is Mr. Shah prepared for a similar freeze in the prices of the goods he produces as a millowner?

Expansion and Modernisation

Be that as it may, the need for allowing the mills to expand their capacity was stressed by all the millowners. Mr. Krishnaraj Thackersey urged that the restrictions on the expansion of loomage must be relaxed further, so that most of the mills could become composite units and attain the required balance between spindles and looms. It was conceded, he said, that, in order to become an economic unit, a mill needed 500 looms (non-automatic) and 25,000 spindles. This spindle-loom balance, he added, would enable the mills not only to produce more but to produce it economically and efficiently. Even more important, according to Mr. Krishnaraj, was the need for modernisation. He observed:

"Between 1952 and 1960, as many as four independent studies were made of the textile industry and they all emphasised the need for modernisation. Unfortunately, foreign exchange and other difficulties have slowed down the pace of modernisation and, by and large, the industry continues to work with old machinery. The few mills which have succeeded in modernising themselves, wholly or partly, have shown how the result has been beneficient in all directions—the workers get higher wages and are not displaced and the quality of the product becomes superior. In a highly competitive export market, the textile industry cannot hope to make headway or even hold its own unless it uses machines which its competitors use. As in the case of cotton, so also in the case of machinery, it would be a pity, if the process of modernisation were not speeded up to enable the industry to assume the leadership that is waiting for it."

Barring a few exceptions, the vast majority of cotton mills continue to work with machinery and equipment installed many years ago. These have outlived their utility, resulting in sub-standard production and high costs. Unless there is speedy rehabilitation, modernisation and rationalisation, there is no hope of the industry being in a position to weather the growing competition in the world textile markets. Automatic looms, high speed spindles and improved processing machinery are the order of the day in the rest of the world.

The mill industry, Mr. Ruia declared, should be encouraged to import such modern and up-to-date machinery as are not produced within the country or are produced only on a limited scale. Only thus will the industry be able to install the additional spindles and looms sanctioned under the third Plan for raising its output. Urging the drawing up of a regular programme of machinery imports, he said: "Such a programme should include imports for purposes of renovating and modernising the textile machinery. This is a costly undertaking, but there can be no escape from it, if we are to attain efficiency and economy in production, so indispensable for promoting exports."

There are some mills which are too old and uneconomic. These have to be weeded out, for it would be a wrong economic policy to perpetuate their existence through offer of subsidies either directly or indirectly. Mr. Krishnaraj was quite right when he said:

"Full utilisation of current investment implies, among other things, the weeding out of uneconomic units. There are various industries in which uneconomic units sponsored and promoted from a wrong ideological approach have created almost insurmountable problems in regard to efficient and economic production and competitiveness in the export makets. We must realise that, if the economy is to expand and to work efficiently and economically, there can be no getting away from the economies of scale. Wherever possible, therefore, uneconomic units should be amalgamated into viable units."

Cotton

Whatever be the pace of progress in the sphere of rehabilitation, modernisation and rationalisation, cotton is, and will continue to be, the major problem of the textile industry. The current rate of cotton production (5.7 million bales in 1963-64) is well below what is

(*Continued on page 765*)

TEXTILE STOCKBUILDING ALREADY?

MACHINE ACTIVITY AT A HIGH LEVEL

From Our Special Correspondent

MANCHESTER 21*st April*

MANCHESTER LETTER

INDEPENDENT observers of the textile industry's progress who base their ideas on theoretical and statistical information are very conscious of the swings of fortune which have followed a regular pattern through the years—changes which have been strongly marked in the last two decades. In consequence, it is scarcely surprising that, in the midst of the current apparent activity and prosperity, warning voices have already been raised. The latest statistical review published by the Cotton Board is, perhaps, the prelude to further comments about what the future holds.

The volume of orders received by converters in the final quarter of 1963 was well in excess of any likely level of offtake, the review states. This, coupled with the fact that converters have substantially increased their own commitments—their purchases of imported cloth were particularly heavy in the fourth quarter of 1963—suggests that the industry may soon be in a stockbuilding phase, if it is not so already.

While stockbuilding in itself is by no means to be condemned, an accumulation of supplies can present substantial problems to firms which are put in the position of holding goods in anticipation of their customers requiring their products at some unspecified future date. While it is essential that distributors should be given the choice of the type of goods they can obtain, too great a dependence on offering a wide selection has created stock-loss selling in the past and has been a fundamental reason for financial difficulties arising.

Longer Order-books

At the same time, the Cotton Board document which assesses conditions in 1963 is by no means pessimistic in tone. Order-books have lengthened still further in the early months of this year, it reports, and stocks of finished products held by the mills have been further reduced. Stocks of cloth held by weavers, converters and grey cloth importers are estimated to have fallen by about 90 million square yards in the 18 months to the end of last year.

Retail sales of clothing have shown a marked improvement since August last, a factor which has had a particular bearing on the recovery in activity. By volume, these were about 6 per cent greater than in the second half of 1962 and the improvement has been maintained this year. Prices have advanced slightly, says the report, but margins are still "very slim."

The February production figures sustained recent patterns in that yarn output per working day was nearly 2 per cent higher than in the previous month, in spite of a fall of 400 in the number of workers employed. Over the last 12 months, production of spun man-made fibre yarn has made a 20 per cent gain, with a particularly large increase in carpet yarns. In the cloth section, output per working day went up by 4 per cent as compared with January.

High Machine Activity

Taking 1963 as a whole, the weekly average of spindles in place was 6,680,000 ring equivalent, a decrease of nearly 1,300,000. Of these, 5,810,000 ring equivalents were running, an average of 87 per cent of machine activity. During the year, the rate increased steadily from 84.7 per cent in the first quarter to 91 per cent in the final three months.

The number of spindles working two shifts remained almost static throughout the year at around 1,450,000, despite the decline in the actual plant working. Three-shift operation continued to increase, from 280,000 spindles in the first quarter to 430,000 spindles in the final months. Evening shifts were also introduced on a larger scale, until 1,430,000 spindles were so engaged at the end of the year.

Machine activity in the weaving section was not quite as intensive as in spinning, but, by the final quarter, the rate had reached 87.8 per cent. In the Lancashire area, the number of looms running was 106,800 out of 121,700 in place. The average rate of activity during the year was 86 per cent and the number of fully automatic looms was 42,500 out of 125,900 in place.

Bad farming was losing countries millions of pounds' worth of raw cotton, said Lord Derby, President of the Empire Cotton Growing Corporation at the annual meeting in Manchester. He said that efforts were now being made to prevent this loss. Progress had often been slow in the past, and the losses involved made it necessary to stress at every level the gap between yields obtainable experimentally and the crop which the individual farmer actually produced.

Most of the countries in which the Corporation's staff were working were now independent, continued Lord Derby. "We can feel gratified that it has been possible to move smoothly to a position of partnership." With independence comes an enhanced sense of the urgency of developing natural resources, amongst which agriculture is in most cases predominant," he added.

The Corporation offered a pattern of technical assistance of the "greatest value" to developing countries. Stressing the importance of a flexible policy to meet changing conditions, Lord Derby said that it was realised that, in the long run, the overseas countries must provide their own scientists, but the supply was still short. The Corporation staff, while continuing their research work, were likely to be called increasingly to give the benefit of their experience to those who would follow them.

Cotton Union's Loss

A little Lancashire textile trade union which decided to become a "Good Samaritan" has revealed that digging deeper into its purse has helped to run it into a loss of nearly £21,000 in a year. Mr. James Whitworth, General Secretary of the 5,000-strong Operative Spinners' Amalgamation—once known as the "mill aristocrats' union" because its mule-spinner members were the top-paid men of Lancashire—stated at his Manchester headquarters: "We are assuming a responsibility which ought to be the employers."

Because of the many mill closures and the "scant consideration" shown by employers towards redundant workers, the union decided to double its compensation cash for sacked workers from £10 to £20. "This was one of the main reasons for the loss," said Mr. Whitworth. "Most of our members were getting no compensation at all."

A spokesman for the British Spinners and Doublers Association observed at Manchester recently: "It is true that the industry has no central agreement on redundancy payments, but the fact remains that mills do make compensation payments when they can afford to do so. But some mills going out of business just haven't got the money."

PROGRESS OF AIR CUSHION VEHICLES ENCOURAGING

SOMETHING FOR INDIA TO THINK ABOUT

By Our Aviation Correspondent

QUITE recently, a certain London newspaper, renowned for the sobriety of its news presentation and the weight of its views, published an advertisement featuring an air cushion vehicle—a Westland Hovercraft. Any commercial firm, of course, can advertise its wares in any section of the press. The fact that this advertisement appeared in this particular newspaper, therefore, does not, necessarily, prove anything. Nevertheless, it does seem, however illogically, to provide the air cushion vehicles (A.C.V.) with a mantle of sober reality and the promise of a serious commercial future.

When this correspondent last wrote on the subject of air cushion vehicles (*Commerce* 30th March 1963), the article concluded with this paragraph: "Whilst interest—even a great deal of interest—is undoubtedly being shown, what the British industry now requires are some concrete orders. ... So far, some £2 million have gone into hovercraft development. In comparison with the development cost of even a single small airliner, that is not, of course, a large sum of money. The time must be approaching, however, when there will be hesitation to incur further development charges, unless and until something more concrete than interest is forthcoming. ... This, then, must be a crucial period for hovercraft projects. Will the sales 'break-through' come in time?"

One can hardly designate present events as a "sales break-through." Yet the existing situation is far more favourable than it was. For instance, Vickers Armstrong, one of the principal manufacturers of hovercraft, have negotiated an important agreement with the Republic Aerospace Corporation of the U.S.A. whereby the VA-3 has been shipped on loan to Republic for certain evaluation trials. Westlands, as the result of a specific order placed by the Ministry of Aviation, have completed the SR-N3. This is a military version of the SR-N2 and is now undergoing trials with the British Joint Services Trial Unit. Military interest runs high and it seems reasonably certain that orders will result. Westlands have also completed a smaller commercial hovercraft, SR-N5, and a production line of ten has been laid down.

Public Company To Be Formed

Perhaps, the most interesting development of all, however, is the formation of a public company to operate hovercraft. Initially, this company proposes to run a car-*cum*-passenger ferry service across the Solent—presumably between Southampton and Cowes—and, thereafter, to undertake similar ferry services "over any waterway where such operations would be profitable." Negotiations have already been opened with both Westlands and Vickers for a hovercraft of about 150 tons to be completed by the spring of 1967. Both firms have signified their ability to fulfil such an order.

Westlands, as it happens, have already designed a hovercraft of this description—the SR-N4. The specific motive of that design was to interest the British Government in a hovercraft service, or services, across the English Channel as an alternative to the proposed cross-Channel tunnel. The SR-N4 brochure which Westlands have produced is, consequently, slanted towards that particular objective. Since this hovercraft may now be the one selected by the new company, its characteristics and leading particulars may be of interest.

The SR-N4 has a designed weight of 150/160 tons and a disposable load of from 60 to 75 tons. It is to be powered by four Bristol Siddeley Marine Proteus engines, each rated at 3,400 s.h.p. The interior layout is designed to accommodate both passengers and motor vehicles. If passengers alone are carried, there will be accommodation for a maximum of 660. A typical combined load would be 228 passengers, 15-18 private cars, and three motor coaches. Each SR-N4 is estimated to cost £1.5 million and, assuming utilisation of the order of 900 hours per annum, the combined total of direct and indirect costs of operation are estimated at £500 per hour.

How do the economics of such a hovercraft compare with those of existing means of air and surface transport? That—since, technically, the building of such a hovercraft now presents no difficulty—is the crucial question. Nor is it particularly easy to answer. Westlands have included in their estimate the cost of building, maintaining, and manning 'hoverports' for a specific cross-Channel service. They do indicate, however, that those and other indirect costs amount to about 55 per cent of the total. On the assumption, then, that the direct cost of operation is about £230 per hour, and assuming a normal speed of 70 knots, the direct operating cost appears to be in the neighbourhood of £2 8*s*. per hovercraft/mile or nine pence per ton/mile. Assuming passengers only, the rate per passenger/mile is a shade in excess of one penny. If these estimates are anywhere near the truth, they indicate a most attractive commercial proposition.

Weather Worthiness

In addition to its economics, however, the sea-going, cross-Channel hovercraft must be able to operate in most conditions of wind and weather. Judged by their experience with the SR-N2, and wind-tunnel experiments with a model of the SR-N4, Westlands estimate that the latter will be capable of 70 knots in seas of 4-5 feet—typical conditions for the English Channel during 90 per cent of the year. In more adverse conditions with seas running to 6-8 feet, the estimated speed is 45-50 knots. In the most adverse conditions—and these prevail, on average, during two to three days per year—with winds of 45 knots and seas up to 13 feet, the hovercraft will still be able to operate but at a much reduced speed of 15-20 knots. If these predictions are fulfilled, the SR-N4 will compare very favourably with present cross-Channel ferry steamers.

Besides its apparently attractive economics, and its satisfactory sea-going qualities, the great advantage of the hovercraft is its ability to make transition from sea to land. Independent of tide conditions, it is thus able to operate from bases located outside the normally congested areas of existing ports. It is claimed, in fact, that a hoverport, with all attendant facilities, can be sited almost anywhere along coast-lines or rivers above high-water mark. To all appearances then, the truly commercial hovercraft has now almost materialised—and, what is more to the point, perhaps, is about to sell. If at present unpredictable, the influence it will have on future transportation is hardly likely to be unimportant.

One has always thought, in that context, that the air cushion vehicles could have many applications in India. With a coastline of great length and not over-liberally supplied with natural harbours, and with vast river systems where bridges and made-roads are few and far between, the A.C.V. could, surely, fulfil very many useful purposes. Nor, one reminds oneself, is there any reason why A.C.Vs should not be designed and produced indigenously. It may not be out of place to quote, once again, from an article which one wrote in August 1962 and which concluded with these words: "The development of the A.C.V. may not be so spectacular as space exploration, or the manufacture of supersonic aircraft, but, so far as the masses are concerned, it is likely to prove infinitely more beneficial and rewarding. What an opportunity for such undertakings as H.A.L. or the Hindustan Shipyard, jointly or severally ... to build up what is certain to become a large-scale and important industry."

An agreement has been signed between Air-India, Aden Airways and East African Airways concerning the operation of a combined pattern of services, on a pool basis, covering routes between East Africa and India. The agreement is subject to the approval of the respective Governments.

After a careful study of the route and the potential market, it was decided that closer co-operation was needed between the three airlines, both in the interests of the travelling public as well as the airlines participating, by pooling each others resources, to offer the travelling public the most frequent and convenient spread of services.

Over 100 Years of Banking in India

NATIONAL AND GRINDLAYS BANK LIMITED

(Amalgamating National Bank of India Limited, Grindlays Bank Limited and the Eastern Branches of Lloyds Bank Limited)

Registered in London under the Companies Act of 1862 on the 23rd March, 1866. The Liability of Members is Limited.

Bankers to the Government in Aden, Kenya, Uganda and Zanzibar.

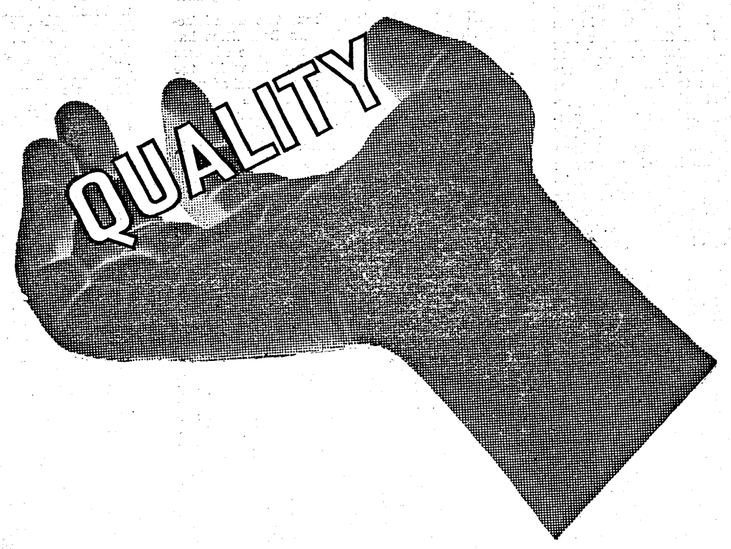
THE AUTOMOBILE INDUSTRY . . . .

strives to raise the standard of



The Indian Automobile Industry is still in its infancy. During its short period of development, it has achieved a high percentage of indigenous content. In the case of a car such as the Hindusthan Ambassador, this indigenous content has now reached approximately 80%, comprising a large number of components produced not only by Hindustan Motors but also by numerous newly created Indian ancillary industries.

The creation and development of these new industries have been, and continue to be, a difficult and costly process. These infant industries are confronted with considerable problems, such as the paucity of experienced technicians and skilled labour, high costs of production because of low volume, high prices and inadequate supplies of raw materials as and when required, foreign exchange limitations for imports of modern and multipurpose equipment, etc. Despite these handicaps, their achievement to-date is noteworthy. Obviously, however, these young industries cannot be expected to attain, in such a short time, a standard of quality comparable to that reached by the older and more highly developed foreign industries.

It is reasonable to anticipate that with rising production volume, modernized methods and greater experience, in addition to the manufacturers' and ancillary suppliers' earnest endeavour to strive for better quality and rigid inspection, the standard of the Indian-made motor vehicles will soon compare favourably with that of foreign manufacture. The responsibility for improving quality must be shared by both the vehicle manufacturers and the ancillary suppliers.

EMPLOYMENT IN RURAL AREAS
PROGRESS OF PLAN PROJECTS POOR

INDIA'S surplus manpower problem has been a source of persistent anxiety to planners in the context of certain statistical magnitudes. With the second Plan's back-log of nine million wholly unemployed and 15 to 18 million underemployed persons and the estimated addition of 17 million to the labour force over the third Plan period, the problem has no doubt been very much in their minds. They have accordingly provided for the generation of additional employment opportunities under the third Plan. But these opportunities, even if they *fully* materialise, would take care of only 14 million unemployed and underemployed persons. If even these limited opportunities are not *fully* created according to plan, the problem may be expected to assume alarming proportions in the fourth Plan period. It is in this context that some of the third Plan programmes designed for massive employment creation would have to be appraised from time to time. The idea here must be to find out whether these programmes are progressing well enough to provide the employment opportunities expected of them. That such an appraisal has just been done by the Estimates Committee in respect of the "rural works programme" which, as envisaged in the third Plan, should "provide work for an average of, say, 100 days in the year for about 2.5 million persons and, if possible, more" in the last year of the Plan, is indeed gratifying.

But one's gratification is only over the exercise of appraisal as such and not over its findings which are anything but flattering to the administrators of this important programme. The Committee's central finding is that this programme, with its twin objectives of additional employment-creation and utilisation of rural manpower resources "for the rapid economic development of the country," has lagged far behind its target. It is, indeed, surprising to learn that, out of the provision of Rs. 6.5 crores made for the first three years of the programme, only Rs. 1.8 crore had been spent by 30th June 1963. So much so, the total employment generated by the programme from its inception to 30th June 1963 amounted to no more than 10 million man-days (about 100,000 persons). This achievement may be compared with the Plan's target of finding employment for about 100,000 persons for 100 days in the first year, 400,000 to 500,000 persons in the second year and about a million in the third year. It may be that, with the estimated increase in cumulative expenditure to Rs. 5.5 crores by the end of 1963-64 in about 800 projects, the employment potential would increase appreciably. But, even then, the total number of men benefiting by these projects would be just under 280,000 only in a year on the basis of 350 men per project. This is patently too small a number to make an impact on the rural employment situation. Nor is the impact of the programme on the rural economy quite significant in terms of creation of remunerative community assets like link roads, wells and other minor irrigation and soil conservation works. The main reason for this limited progress so far is the *ad hoc* manner of implementation, with its uncertainties of scope and criteria for grants.

What is to be done about this unsatisfactory situation? The Estimates Committee has made some sensible suggestions. One of them is that integrated block plans, in which the rural works programme can be dovetailed with the programmes undertaken by the Community Development agency and other departments, should be evolved. Such integration or co-ordination is very necessary, for there is already the trend of overlapping and, in certain cases, even of counteracting in the prevailing pattern of related programmes like the rural works programme, local development scheme, rural industries projects, public co-operation scheme, village volunteer force and labour bank. The Committee has specifically recommended that a working group be set up to suggest ways and means of co-ordinating these schemes and of implementing efficiently such an integrated programme. Among the other recommendations made by the Committee are the following:

(1) As the present pattern of Central financial assistance in the form of 50 per cent loan and 50 per cent grant would make the rural works projects available mostly to the richer areas and not to the depressed or poorer areas with their high incidence of unemployment, it would need to be re-examined with a view to evolving a more workable pattern. (2) Employment surveys should be carried out not only before selecting the areas for rural works projects but also at regular intervals thereafter. (3) The normal limits for allotment of funds should be Rs. 50,000 per scheme and Rs. 2,00,000 per project (block). (4) The possibility of entrusting, as an experimental measure, the execution of rural works schemes to voluntary agencies, or of enlisting their collaboration, should be examined. (5) As the piece-rate system of wages ensures better output and reduces the need for supervisory staff, every effort should be made to extend it to as many rural works projects as possible. (6) The Planning Commission should be relieved of the responsibility for programme implementation in so far as the rural works projects are concerned. These should be handled directly by some suitable administrative ministry.

All these recommendations are calculated to improve the programme and its implementation. Some of them could be examined by the proposed working group, while some others could be accepted straightway for action.

The Estimates Committee has done well to re-emphasise the employment generation and asset-creation objectives of the rural works and other related programmes and to suggest some practical measures for making these objectives more easily attainable. These are good in so far as they go. But they may not be quite adequate for the ends in view. It is in this context that the Government would do well to examine the feasibility of the idea, recently canvassed by the U.S. Ambassador (Mr. Chester Bowles), of intensive village development with possible American assistance. Incidentally, the proffered assistance can conceivably take two forms, namely, (*a*) provision of technical aid and some dollar assistance for meeting marginal foreign exchange requirements, and (*b*) provision of assistance in kind for labour-intensive projects under Title II of P.L. 480. As both Indians and Americans have by now acquired a fund of experience in rural development in this country, further collaboration between them on the ideational and technical planes should be easier. If the different programmes of rural development are properly co-ordinated and American assistance in the form of foodgrains is made available for paying wages partly in kind, there can be no doubt that a more massive impact on the rural employment situation, as well as on the rural economy, in general, and agricultural production, in particular, will be made. The fourth Plan, one hopes, will make up for all the time and opportunity lost in the wide field of rural manpower utilisation.

JAPAN EXPORTS KNOW-HOW TO AUSTRALIA

The Nissan Chemical Industries, Ltd. has concluded talks on the export of Nissan techniques for manufacturing liquid phosphoric acid to I.C.I. Australia-New Zealand Company, a sister chemical company of the British I.C.I. The liquid phosphoric acid is made from iron ore and sulphuric acid is to be used in highly efficient chemical fertilisers. The export of this kind of technical know-how is the first of its kind in Japan. With the adoption of the Nissan method by I.C.I., one of the foremost chemical manufacturers in the world, the Japanese company has been encouraged to export its technology even to highly developed countries.

With the conclusion of talks on the import of technology from Nissan, the I.C.I. Australia-New Zealand Company intends to set up a new chemical fertilisers manufacturing plant in Melbourne. The manufacturing equipment produces liquid phosphoric acid based on the Nissan method capable of turning out 200 tons daily.

ALUCOIN aluminium . . .

is at your service by offering various new Sales Service products :—

Alucoin Aluminium Ingots, Alloys, Billets, Bars • Plates, Plain & Corrugated Sheets, Coils, Circles • Extruded sections in numerous shapes & designs • ACSR & AAC of all types • FOIL (Plant under construction).

JAPAN'S IRON AND STEEL INDUSTRY

RAW MATERIAL IMPORTS WHOLLY FINANCED BY STEEL EXPORTS

THE rapid progress of Japan's iron and steel industry, which is based predominantly on imported iron ore and coking coal, in the post-war era is a subject of absorbing interest. It has proved that, if a country has the know-how and capacity in other respects, it can produce all the steel it wants at competitive cost, even if it is greatly deficient in basic raw materials. In 1962, for instance, the pig iron output of 18.0 million tonnes was the highest ever registered in that country; it was 13.6 per cent higher than the previous year's record of 15.8 million tonnes. But crude steel output in that year at 27.5 million tonnes was lower, as compared with 28.3 million tonnes in 1961. It may, however, be noted that way back in 1953 crude steel production was of the order of only 7.7 million tonnes. Even as recently as in 1958, the production was no more than 12.1 million tonnes. It is noteworthy that only 48 per cent of the steel output was contributed by open hearth furnaces in 1962, as compared with 60 per cent in the previous year. The fact that L.D. converters were responsible for 31 per cent and electric furnaces for 21 per cent of steel output in the year under review is something remarkable. As for rolled (finished) steel production, hot-rolled ordinary steel accounted for 20.0 million tonnes and hot-rolled special steel for 1.5 million tonnes in 1962, as compared with 19.6 million tonnes and 1.5 million tonnes, respectively, in 1961. The investment requirements in the industry in the period April 1962-March 1963 totalled as much as 220 billion yen ($611 million), of which nearly 89 per cent was spent on installations under construction and about five per cent on the newly started installations.

Iron Ore Supplies

The aforesaid facts have been gleaned from *Japan's Iron and Steel Industry* 1963 (Publishers: Tokyo Foreign Service, Central Post Office Box 1157, Tokyo. Price U.S. $5.00 by ordinary post and $8.00 by air mail for Asia. This publication is notable for its comprehensive coverage of all aspects of the Japanese steel industry. Of particular interest to India, which is exporting iron ore to Japan, is the section devoted to raw materials and fuels. It is seen from this section that the industry's iron ore consumption in 1962 amounted to 23.0 million tonnes, of which indigenous ores accounted for only 1.3 million tonnes and imported ores for as much as 21.7 million tonnes. Japan's imports of iron ore from different sources may be noted from the following table wherein the figures for 1963 have been taken from *Yawata News* of March 1964:

TABLE I

Japan's Imports of Iron Ore

(In million tonnes)

Country	1963		1962		1961	
	Quantity	Per cent of total	Quantity	Per cent of total	Quantity	Per cent of total
Malaya	6.7	25.8	5.9	28.1	6.1	30.3
Peru and Chile	6.0	23.2	5.0	23.7	4.4	2.7
Brazil	0.5	1.9	0.4	2.1	0.4	1.9
India : Goa	3.0	11.5	2.4	11.4	3.2	16.1
Rest of India ..	2.8	10.8	1.7	7.9	1.4	7.1
Philippines	1.4	5.5	1.3	6.3	1.2	5.8
Canada	1.9	7.3	1.3	6.3	1.0	5.0
U.S.A.	1.8	7.0	0.8	3.9	0.9	4.3
S. Africa	0.6	2.3	0.7	3.2	0.5	2.4
South Korea	0.6	2.3	0.4	1.8	0.4	2.2
Other sources	0.7	2.4	1.2	5.3	0.6	3.2
Total ..	26.0	100.0	21.1	100.0	20.1	100.0

It will be seen from the above figures that Japan's iron ore imports from India (including Goa) together amounted to 23.2 per cent of its total ore imports in 1961. But the percentage came down to 19.3 in 1962 and 22.3 in 1963. That this declining trend may be due to Japan's effort in recent years to diversify its sources of ore supply will be seen, *inter alia*, from the following review of major ore transactions in 1962 in *Japan's Iron and Steel Industry* 1963:

Brazilian ore: Japanese steel circles initiated a contract with the Rio Doce company in Brazil for a 15-year long-term iron ore import. The contract covered 50 million tons of Rio Doce iron ore to be shipped during the 15-year period from 1st April 1966 to 31st March 1981. The Fe assay is 66.67 per cent and the size of ore is 1/2 inch. *This contract is considered significant in that it broke the extreme gravitation to Indian ore in the Japanese steel industry.* (Italics ours.)

Indian ore: Japanese steel circles initiated a contract with India, covering the import of 11,350,000 tons of iron ore during the five-year period beginning in fiscal 1964. Japanese steel circles are now participating in the development of two new iron mines in India, Rourkela and Bailadila. The Rourkela mine is scheduled to start shipment in 1965, and the Bailadila mine is now under study.

Chinese ore: A Japan trade mission visited Communist China in October 1962. Taking advantage of this occasion, the steel circles talked with Chinese officials on steel transactions with Japan, but no effective agreements resulted. However, an agreement was made to negotiate later on the import of iron ore by Japan in exchange for the export of steel products from Japan after 1966.

Australian ore: According to the report by the first iron mine investigation team despatched to Australia in June 1962, there are promising mines of high grade ore for Japan and satisfactory port facilities are available for employing large type ore carriers.

Coking Coal and Steel Scrap

The Japanese iron and steel industry is heavily, if not predominantly, dependent on imports of coking coal and steel scrap. The relevant figures are given below:

TABLE II

Supplies of Coking Coal and Scrap

(In million tonnes)

	1963		1962		1961	
	Imports	Indigenous	Imports	Indigenous	Imports	Indigenous
Coking coal.	9.4	Not available	9.3	6.4	8.2	6.5
Iron and steel scrap	4.6	,,	3.6	10.7	7.0	11.4

A break-up of the sources from which Japan imports steel scrap shows that the United States is the leading supplier. That country accounted for 2.7 million tonnes (74.1 per cent) and India for just 147,000 tonnes (4.0 per cent) out of the total of 3.6 million tonnes of steel scrap imported by Japan in 1962. Of Japan's scrap imports of 4.6 million tonnes in 1963, the United States accounted for 73.2 per cent and India for 6.6 per cent. Japan also imports a substantial quantity of pig iron from other countries. In 1963, for instance, pig iron imports amounted to 1.6 million tonnes, representing an increase of 8 per cent over 1962. According to *Yawata News*, the increase in pig iron imports was due largely to arrangements with such countries as the Soviet Union, under which pig iron was received in exchange for Japanese steel products. Pig iron imports from the Soviet Union alone totalled 640,000 tonnes in 1963, accounting for 41 per cent of total imports of this commodity.

Export Earnings

All in all, it is remarkable that Japan's iron and steel industry, which depends so much on imported iron ore, coking coal, steel scrap and pig iron, is growing from strength to strength. Although these raw material imports, as of 1963, have a combined value of $770 million, actual foreign exchange payments are stated to be less, since the figure given includes freightage on domestic carriers. Japan's imports of raw materials, it is noteworthy, are more than fully covered by its steel exports which, as of 1963, have been estimated at about $1,000 million. A fourth of the total steel exports of about 4.5 million tonnes goes to the United States, while the balance goes to several other countries, including U.S.S.R., Thailand, India, Indonesia, Philippines Malaya, Formosa, South Korea and Hongkong. According to *Yawata News*, the steel industry's foreign exchange balance is sizably in the black even after taking into account the industry's raw materials other than the aforesaid four items. It is stated that, with Japan's imports of iron ore increasing from year to year, it will seek to increase its steel exports to nations supplying the ore. This does not seem to be an unreasonable expectation, considering that Japan has extended, and continues to extend, economic assistance in various forms to foreign countries for the development of ore mines. Incidentally, among the mine development projects in foreign countries receiving large-scale Japanese assistance are those for the Rourkela and Bailadila mines in India and for the expansion of port facilities in the Goa region.

EUROPEAN STEEL INDUSTRY

The Organisation for Economic Co-operation and Development (O.E.C.D.) has recently published a comprehensive review of the state of the iron and steel industry, particularly in its member-countries during the years 1962 and 1963. Besides its customary review, the publication provides a thorough analysis of demand, production and factors affecting production—in particular, capacity, raw material supplies, prices, transport and labour costs—and of investment, international trade and prices.

The part which deals with the situation of the European iron and steel industry says that the progress during the years under review was slow, as compared with the vigorous growth noticed in 1960. However, the member-countries witnessed continued expansion in their economies. There was also an improvement in the pace of expansion, the report continues, but it was less evident in the case of major steel-consuming industries, including the capital goods industries.

Turning to steel output, the report points out that apart from a few exceptions, steel output declined in member-countries in 1962, and there were few signs of any recovery in the first half of 1963. The demand for steel, on the whole, remained steady. Industry-wise, while the demand for steel from the automobile and building industries remained buoyant, it fell considerably in the capital goods industries.

On the investment side, the average level of investment declined quite markedly, following the uncertainty of the current economic trend, the sluggishness of demand, the existence for most products of temporarily unused capacity and the persistent weakness of prices.

There was a sharp increase in competition on both home and export fronts, during the two years under review. In 1962, for instance, though the international trade in terms of volume increased, the European countries were losing ground as suppliers of steel on the world market, with the result that there was quite a considerable fall in export prices and internal prices. In 1963, the problem turned out to be so acute that actually some countries began to consider measures to protect their markets. As for the supply of raw materials, there was no problem at all during these years but, in the field of manpower, the industry had to face such problems as training and regarding owing to the increasingly rapid pace of technological change.

AUTOMOBILE AND MODERN TRANSPORT

The automobile industry in India is a comparatively young and growing industry. It provides jobs for thousands and has given birth to and encouraged many ancillary industries. The industry's fortunes are intimately linked up with the growth and development of roads and road transport. The problems that beset this industry, its role in the national economy, and the many technical developments that take place in the world of automobile industry in India and abroad are sought to be recorded in a new pictorial monthly magazine, the *Automobile and Modern Transport* (Editor: T. K. G. Nair. Published by Puran Singh Sahni, 12, Sukh Sagar, Hughes Road, Bombay-2. Single copy Re. 1.25), now published. In the inaugural number under notice, there are a number of articles discussing rail, road, sea and air transport problems. In an interesting article on transport and economic development, Dr. P. A. Nair, traces the growth of transport in general, and of Indian railways in particular. Most of the statistical data presented by him are, however, out-of-date. The problems of highway financing are discussed by Dr. P. S. Lokanathan, Director-General of the National Council of Applied Economic Research. The number also contains, *inter alia*, a buyers' guide, a legal section explaining points of interest to motorists, facts and figures of the transport industry and a personality page featuring, in the current issue, Mrs. Sumati Morarjee, President of the Indian Shipowners' Association.

MILLER DYNAMO LIGHTING SETS

The world-famous Miller dynamo lighting sets for cycles are now being produced in India. Recently the T. I. Miller Ltd., a subsidiary of Tube Investments of India Ltd., in collaboration with Messrs. H. Miller and Company Ltd., Birmingham, U.K., commenced production of cycle dynamos at its Ambattur factory near Madras. The British Manufacturers claim to be the oldest manufacturers of this type of dynamo lighting set. The special features of "Miller" lighting set are the eight pole dynamo, full bright nickel and chromium finish, and vacuum and metallised reflector. A distinct advantage of this type of lighting set for slower moving vehicles is that it provides even and brilliant lighting which will help in reducing the number of accidents during nights. Another notable feature of its manufacture is that all the parts, excepting the magnet and a special washer, are produced indigenously. At a later stage, the manufacturers intend to produce different types of lamps for mopeds, scooters and motor cycles.

NEW PRODUCTS AND PROCESSES

Jute Sticks for House-roofing

ONE of the products that the versatile jute fibre and fabric can make is the asphalted roofing felt, well-known to the building industry in India and abroad. Scientists working on chemical technology in the Indian Central Jute Committee's Technological Research Laboratories (T.R.L.) have shown that a roof lining (ceiling) or the roof itself can be built from a far less expensive and easily available material, the jute stick. Originally, asbestos or organic fibres were used in the manufacture of roofing felts. Now cellulosic fibres obtained from wood or other fibrous materials are being largely substituted for the purpose. In India, asphalted roofing is generally made from fibre boards, mostly imported. The T.R.L. has indicated that the pulp obtained from jute sticks can be used up to 54 per cent in the composition of the finished board. The other ingredients are waste paper and hosiery cuttings. The pulping process employed is the digestion of jute sticks in 5 per cent lime solution, followed by refining in a disc refiner. The boards obtained from the pulp are first to be saturated with soft bitumen, then coated with a hard asphalt and finally surfaced with usual powdered mineral matters. The roofing boards containing jute stick pulp as the major component have, on test, compared favourably with the imported boards. The asphalted roofing board extends the utility range of jute sticks, for long treated as waste material. The other industrial uses of the jute sticks already commercially established by the T.R.L. are in the manufacture of newsprint, printing and writing paper, box boards, card boards, and hard boards.

Radioactive Gases for Brain Study

A method of using radioactive gases for measuring the circulation of blood through the human brain has been developed by the Swedish scientist Dr. David Ingvar, of the Neurological Clinic of Lund, in co-operation with Dr. Niels Lassen of Copenhagen. The gases are injected through the carotid artery and their movements in the brain are registered by five radiation counters. By studying the speed with which the gases move in the blood, the scientists can ascertain whether the circulation is normal or subnormal and localise defects. The new method, which was first tried out on animals, is said to be practically painless to the patient. It is expected to provide valuable information about a large number of illnesses pertaining to the vessels of the brain and make it possible to measure the size and location of abnormal processes and thus be a guide for brain surgery and post-operative treatment.

Radiational Vulcanisation of Rubber

A general-purpose canyon—an installation for studying radiation-chemical processes—has been put up in Obninsk, U.S.S.R., claimed to be the city of the world's first atomic power station. A new method of radiational vulcanisation of rubber was tested there. The experiments have shown that the durability of automobile tyres is enhanced by 20 per cent after irradiation. The canyon, a special chamber together with a storage where isotope sources may be kept, is housed in a building with thick concrete walls which offer excellent protection. Reactor-used heat-radiating elements and cobalt are now used as such sources. They are lifted from the storage to the chamber on distant command with the help of a special carrier. The irradiator of the required form, thus brought to the place, envelopes tyres or any other object of irradiation.

The experiments with tyres are said to have demonstrated the advantages of this highly promising method of radiational vulcanisation.

According to Mr. Vladimir Karpov, one of the designers of the installation, by using nuclear radiation useful chemical processes which will require no heat or catalysers could be initiated.

There is every ground to believe that some of these processes may serve as a basis for a new progressive chemical technology, the scientist said. A deeper study of these processes requires bigger installations.

Cored-wire Welder

A completely new-self-contained welding system, specially designed for high-speed, high-quality welding with flux-cored wires, is now available from Union Carbide Corporation of New York. It features a new heavy-duty power supply, positive-action wire-feeding unit, and a special 500-amp capacity, air-cooled torch. The cored-wire welder comes mounted on a free-wheeling cart which is designed to carry two gas cylinders and all other necessary accessory equipment. For maximum operating convenience, the control unit provides a single, oversize vernier-type dial for selecting speed of wire from 90 to 425 inches (22.86 to 108 m.) per minute. A heavy-duty mechanical governor accurately maintains speed to within 3 per cent, independent of variations in load or line voltage. All operator adjustments are accessible through a single door on the control unit; all circuitry may be reached through a second access door. The entire unit is of rugged construction for long-life use.

Positive, non-slip wire feeding is guaranteed by spring-loaded pressure rolls supplied in either a two-roll or a four-roll system. A series-wound motor, driving through two stages of gear reduction, is dynamically braked to a dead stop to prevent wire overrun.

Standard equipment with the new welder is a completely new power supply—the VI-500A—designed to the requirements of cored-wire welding. Operating on 440-volt, 3-phase, A.C., it is rated to deliver 500 amps on 100 per cent duty, and up to 675 amps on 60 per cent duty. Operating voltage can be adjusted while the power is on by pushing a " dead-set " button which de-energises the output terminals.

Electrode for Electrical Discharge Machining

An inexpensive graphite electrode material for electrical discharge machining has been developed by Union Carbide Corporation. A high-density, easily machinable material, the new grade EM-3 electrode sells for only about one-third the price of other comparable materials, and yet provides higher metal removal rates, lower wear rates, and less tapering than other materials. Grade EM-3 electrodes are produced in cylinders up to 0.492 inches (1.25 mm.) in diameter and 12 inches (30.5 cm.) long. The largest graphite electrode material available to the electrical discharge machining industry is the new grade EM-4 developed by Union Carbide. It is produced in various sizes up to blocks 9 by 20 by 24 inches (22.86 by 50.80 by 60.96 cm.), and preliminary tests show it to have characteristics closely approximating those of grade EM-3.

Analogue Computer

How does a jet aircraft, which exists only on the drawing board, react to pressure on the control column during a blind landing ? This complicated and apparently insoluble problem can be solved exactly with the aid of one of the most astonishing developments of the electronics industry, the analogue computer. At the same time, expensive tests are obviated. Experts believe that analogue computers will soon belong to the indispensable aids found in engineering offices. The basis for the operation of this electronic robot is given by differential equations which can be utilised to describe dynamic processes mathematically. The computers incorporate a large number of separate computing elements, each of which is fitted with a complicated electronic circuit. Now these circuits permit building up a structural picture of the technical problem to be investigated. The variable quantities are now represented by voltages, which can be measured by display units. The behaviour of these voltages provides the solution to the questions.

Robot Lumberman

Canadian lumbering companies are convinced that two amazing machines now under development will work a revolution in the north woods. It is another case of automation foreshadowing the end of that colourful figure, the lumberman and his axe. One of the machines, called the "feller-skidder," moves into the woods on bulldozer tracks, shears off trees with its 40-foot circle and pulls them to the roadside. There the second machine, track-mounted, will take the trees, remove branches and bark, cut the trunks into eight-foot lengths and stack them neatly on trucks. Each machine is operated by one man, and the saving in labour costs is considerable.

Vaccine for Trachoma

An international research team reports development of an experimental vaccine that prevents a major strain of trachoma, the leading cause of blindness in the world. The World Health Organisation estimates 500 million persons, one-sixth of the world's people, are afflicted with the disease. The high potency vaccine culminates five years of work at the U.S. Naval Medical Research Unit on Formosa and at the University of Washington at Seattle by three American researchers and a Chinese investigator, Dr. San-Pin Wang. The report of their work was made public by the American Medical Association at its headquarters in Chicago. " With the demonstration that vaccine can prevent infection, there is hope for the eradication of this disease, " says Dr. J. Thomas Grayston, University of Washington doctor who headed the team. The search for an effective vaccine against trachoma began after F.F. Tang of Peiping first isolated the virus that causes the disease in 1957. Since then the virus has been readily isolated in a number of world laboratories. Dr. Grayston's group experimented with a number of vaccines before developing a highly purified vaccine that produces immunity. The vaccine produced resistance to the disease, first in laboratory animals and later in human volunteers, as evidenced by a buildup of antibodies in the test subjects. Anti-body response is the standard doctors use to determine the efficacy of a vaccine.

Revolutionary Telescope

A revolutionary Canadian telescope is fixing the stars with greater accuracy than ever before. Designed and built at the Dominion Observatory in Ottawa, Ontario, the Mirror Transit Telescope is a complex of servo-mechanisms, electronics and special recording cameras. Its twin north-and-south pointing telescopes are rigidly aligned along the meridian on massive concrete foundations. Into these telescopes the light from stars being observed is reflected by an 11-inch diameter fused quartz mirror which is flat to within one-tenth of the wavelength of visible light. Operated by remote control so that the body heat of an attendant astronomer will not interfere with its extraordinary precision, the mirror transit telescope is photographically recording data of vital importance in the fields of astrophysics, celestial navigation, missile guidance, space travel and the determination of time to an incredible exactness.

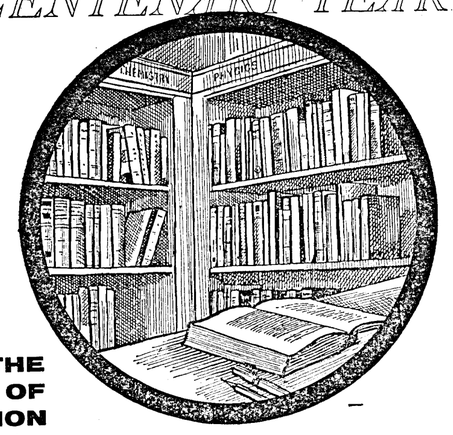
The Spare Tyre in the Tyre

Automobile and truck drivers need no longer fear flat tyres. A West German firm has now developed a tyre with built-in emergency qualities. An elastic and resistant foam rubber support resembling a second inner tyre has been inserted inside the tubeless, air-filled tyre. This supporting tyre prevents the outer tyres collapsing or being squashed if the air suddenly escapes. Even if one of the front tyres goes flat, the vehicle is not brought out of balance. The driver of a heavy truck is able to continue at the wheel for a considerable distance without doing further damage to the outer tyre. The flat tyre can then be changed when the driver finds a suitable place to park his truck without hindering traffic and where the necessary implements for changing a tyre are available.

Electric Painting Machine

The Asahi Chemical Industry Co., Ltd., one of the largest chemical makers in Japan, has placed on sale the "Handy Plasterer," a portable electric "painting" machine. It is a device used to blow sub-atomic particles of crushed stones and fibres onto a binding-agent-coated cloth by making use of 60,000 volts. This machine was developed for painting the surface of "silikalsüs," light-weight concrete material. Technical know-how was imported from the Soviet Union and industrial production is to start in the near future. It will be available for plastering buildings, block processing and sandpaper manufacturing. The company intends to turn out 100 machines by next March for sale.

BIRD'S CENTENARY YEAR



PAPER FOR THE EXTENSION OF EDUCATION

"Education is the most important single factor in achieving rapid economic development . . . ", reports the Planning Commission. To spread education, paper is a vital requirement. The Bird-Heilgers Group, one of the largest manufacturers of a wide range of quality paper, is helping in this task with an ever-increasing supply for books, journals, charts and other needs of education.

Deploying the skills acquired over a hundred years, the Bird-Heilgers Group is making important contributions to the economy . . . through planned diversification and expansion.

B2/BRD-9A

FRENCH LESSON FOR INDIAN PLANNING—II

By "Bharani"

ALTHOUGH regional development received some attention in the preceding plans, it was made a major principle of French planning only during the fourth Plan. The Moselle region was chosen during the first Plan for special action, but this remained an isolated experiment. As far back as 1951-52, the green books had dealt with this question and, by 1961, the social and economic condition of the neglected regions of France was brought to public notice by a series of well written studies. In 1962, the *Plan for Regional Development*, dealing with problems and methods, was published and it is being increasingly recognised in France that progress, in real and human terms, in people's lives could come only through a regional approach in planning.

Regional Planning

The new importance given to regional planning since the fourth Plan may be seen in the following activities of the Government:

(1) *Administrative Organisation*: Since 1962, the regional organisations and the administrations concerned have been collaborating with the Planning Authority and the Inter-Ministerial Committee for Regional Action in the execution of Regional Programmes. The Regional Committees of Economic Development will participate in the work of the Plan through the Inter-Departmental Conference which will present the order of priorities for regional action to the Planning Authority. There is also the National Commission for Regional Development attached to the Planning Authority.

(2) *Regionalisation of Accounts*: The directives of the Government to the planners and the various ministries to "regionalise" their account and the series of measures envisaged to enforce the programme of regional development, are something new in economic planning. The Manpower Commission and various other organisations have made exhaustive studies of the disequilibrium of employment, growth and income as between different regions.

French National Accounts will be more and more regionalised and from now on, sectoral decisions will be examined with reference to their regional consequences. The experience of the fourth Plan in this field is bound to pave the way for more effective action in the future plans.

(3) *Programme of Study*: An impressive programme of regional studies is being organised with the collaboration of universities, regional and professional organisations and Government departments. This is expected to go a long way towards the development of the science of regional economics still in its beginnings and the establishment of a body of relevant information in view of centralised action.

(4) *Public Investments*: The first line of action of the Government is to develop communications, higher education, vocational training, scientific research centres and urban equipment in the most underdeveloped regions of France. Many laws were passed in the beginning of 1963 to implement Government programmes of regional development. Between 1962 and 1965, a dozen major State establishments, including military and research centres, will have been shifted to selected regions in France.

(5) *Financial and Other Incentives*: The French State has announced a scheme of financial assistance to 15 selected regions. Thus the regions of Britanny, South West and the Pyrennees will receive a more than normal share of public investments in the coming years. The French State also has experimented with a system of "special contracts" with industrial enterprises. Under this scheme, the State provides housing and recreational arrangements for the personnel, vocational training, industrial and commercial facilities and road connections before the actual installation of the factory.

(6) *Active Intervention*: Experience of the last ten years has shown that many of the incentives—low interest loans, subsidies, fiscal advantages—designed to encourage location of industries in neglected regions did not bring the expected results. Often the entrepreneurs did not find these incentives sufficiently attractive.

The new policy of the French State is to enforce regional development through a law which compels all new industrial locations to obtain sanction from a newly constituted organisation charged with the execution of the Plan's intentions regarding regional development. Thus, the State, armed with powers of direct intervention in industrial location, is now in a position to practise a policy of incentives *plus* coercion for industrial participation in regional development.

French Criticisms of the Plan

Although the plan as such has not been mixed up in political polemics, certain criticisms have been levelled against its working: that it was submitted too late to Parliament, that the members of the modernisation commissions did not have sufficient authority, that the Government is more concerned with the annual budget than with the implementation of the Plan, that agriculture has been neglected (3 per cent of the wheat producers deliver 35 per cent of the harvest, and 25 per cent of farms account for 70 per cent of the gross product value of French agriculture). The leftists are not happy with the fact that the Plan is not an instrument for total change to their liking, and the extreme right dislikes State involvement in investment under any circumstance.

Professor Fançois Perroux, in his book on the fourth Plan, points out that the Plan's power is effectively reduced by the freedom allowed to the monopolies of France. He pretends that a real redistribution of the fruits of progress may be attained only through the speedy correction of traditional inequalities—the power of money, on the one hand, and the small people, on the other.

It is interesting to note that the preface to this book was written by Pierre Masse, Chief of the Planning Authority, who holds that the Plan in a democratic country can only envisage a line of action in harmony with the political choice of the people in the elections. In other words, the technicians of planning are obliged to respect the evolutionist-reformist will of the people, as seen in their political preferences. If the people want more revolutionary planning, let them send to Parliament, deputies of a different kind and in numbers large enough to occupy seats of power.

It is important to realise that Professeur Perroux, the critic of the French Plan, is himself a member of the Economic and Social Council, and that, as professeur of the university, he is not obliged to be silent on what he thinks about the Plan. In spite of his criticisms, he is forced to admit: "It would be too much to pretend today that the Plan is an institution for social dialogue and collective creation. But it would be depriving it of its energies and its great possibilities to say that it cannot become so in future."

Reforms in Indian Planning

So far as India is concerned, a wider representation, as in France, to the various economic interests of the country in a renovated Planning Commission will be more in line with the democratic way of life, and will add to the efficiency of Indian planning. The problems of a mixed economy in the democratic set-up call for a very alert administration for efficient working. This surely is lacking in India; our Government is in need of criticism, and much more than that provided by the Public Accounts Committee. As it is, policy action lags far behind the fast moving realities of production and trade, because the administration is immoderately addicted to fixed ideas. An exchange of ideas in all freedom within a renovated Planning Commission will help the Government to get a better idea of the basis for sound policy action. For the success of a plan is in the rapidity with which difficult problems are solved and, to this end, democratisation of the Planning Commission could play a useful role. The commerce of ideas will surely tone down the violence of many criticisms, and governmental, industrial, agricultural and trade union interests will have a better idea of the limits and possibilities of our economic resources. In fact, many settled ideas will get corrected at least at the higher levels.

Many recent developments indicate that the Government has lost illusions on many counts. The ministers for finance, steel, international trade, and education have recently given evidence of realism by doing away with many useless administrative routines. Ours is one of the very few Governments in the world that has openly admitted the existence of corruption and, what is more, wants to do something about it. The importance of this should not be minimised; it must be counted among the many victories of democracy in a difficult climate.

One of the significant things that happened to the Planning Commission was the entry of Ashoka Mehta who has seen fit to end his long wandering in the political wilderness. Indian planning has gained by opening its doors to a man who considers planning as a non-party job. The creation of broadbased commissions or study groups on the French model is not outside the possibilities of the Government. In India, where a single majority party is holding power—as wanted by the electorate in all freedom—it will not be easy to effect changes on the French model; but even a small beginning in this direction will go a long way towards putting Indian planning on a business footing. The French say that all "the living forces of the nation" find a voice in their planning machinery—in the sub-commissions and study groups. India, too, is full of complaining people, and every group has many reasons for discontent.

Regional discontents too call for solutions at the right time if they are not to lead to difficult situations later. At present, regional needs have not been codified in view of centralised action. The time has come for taking this subject away from the agitators by giving them membership in a Regional Studies Commission which could go into this question in all serenity. The National Council of Applied Economic Research has made exhaustive techno-economic surveys of different States, but the Planning Commission is far from having evolved any criteria or the right machinery for action on this front.

In India the three plans were purely Government effort; the fourth Plan will gain more coherence by wider consultations. The Ashoka Mehta example deserves to be extended, and the Government will be the first to gain by admitting new talent and welcoming voices conformist and dissident alike. The place of Prof. Shenoy and Mr. Masani should be in the Planning Commission and not outside it, and their quarrel should be with Professors V. K. R. V. Rao and Mahalanobis rather than with the Government. The idea of the Plan as a national effort will become a living reality only through a wider representation to the different articulate, educated and interested opinions in the country in the deliberations of our Planning Commission.

VISADEX

THE DASHBOARD OF BUSINESS

Work the VISADEX way to get the best out of your men, machines and materials.

VISADEX can tell you what you need to know at a glance. VISADEX offers you a fluent indexing system by which records are kept on cards, while colour signals spotlight what things are in stock or needed, whether production is ahead of or behind schedule, sales are increasing or decreasing, where to intensify advertising, which department requires more personnel, who owes you and how much... VISADEX, in short, affords greater control at less cost, besides keeping records secure.

Our VISADEX Representative will be happy to show you, without obligation, how simple VISADEX is to operate—either with Card Pockets or Brass Card-holders—and how easily it can meet your specific requirements.

KAMANI ENGINEERING CORPORATION LIMITED

"COMPANY HAS ATTAINED A STATE OF SUSTAINED GROWTH"

CHAIRMAN, MR. R. H. KAMANI, OPTIMISTIC ABOUT FUTURE

A NOTE of optimism about the prospects for the Kamani Engineering Corporation Ltd. was struck by its Chairman, Mr. R. H. Kamani, in his speech at the Eighteenth Annual General Meeting of the Company held at Bombay on Thursday, 23rd April 1964. The Company, Mr. Kamani claimed, had already attained a state of sustained growth and it looked forward to continuing enjoyment of the fruits of investment and faith of shareholders in the Company. He made special mention of the increasing demand for transmission towers and disclosed that the Company had launched in Rajasthan an expansion scheme which, when completed within two years, would greatly assist in meeting the demands of northern regions, besides helping it to increase exports. He alluded to the various difficulties experienced in the execution of export orders and urged the grant of high priority to steel for export orders and concessional prices.

The following is a summary of Mr. R. H. Kamani's speech:

Welcoming the shareholders, Mr. Kamani presented the Directors' report, audited profit and loss account and the balance-sheet and proposed them to be adopted.

It was a matter of great satisfaction for Mr. Kamani and the Directors that the Company had attained a state of sustaining growth and it could look forward to continuing enjoyment of the fruits of the investment and faith of the shareholders in the Company. He found that the new tax proposals were to a certain extent favourable to the basic industry, as in case of this Company to whom a tax relief of 10 per cent in income-tax and super-tax and of 20 per cent in surtax was available under these proposals. The latest concessions granted by the Finance Minister allowed an additional depreciation of 50 per cent on the major portion of the plant and equipment which were normally working on three shifts.

Company's Working

Mr. Kamani, deviating from the usual practice of specifically pointing out details of the accounts already included in the Directors' report, the balance-sheet and the profit and loss account, highlighted all round improvement in matters of profits and sales which were the *highest* in the Company's history. The profits before providing for the depreciation and the Managing Agents' remuneration had increased from Rs. 36.38 lakhs to Rs. 41.84 lakhs which recorded a rise of nearly 14 per cent. The profits had risen in previous two years from Rs. 24.80 lakhs by more than 68 per cent, which has enabled the Directors not only to increase the dividend from 9 per cent to 12 per cent in 1962-63 and to maintain 12 per cent but also to add to the reserve fund a further amount of Rs. 9 lakhs, in spite of their considerably increased burden of taxation during the same period.

Raw Materials

Referring to the raw materials position, the Chairman stated that, as a result of emergency, a very large portion of indigenous steel was being diverted towards high priority defence requirements which made the supply position more difficult than ever. Certain categories of steel had been decontrolled recently on the recommendation of the Raj Committee in the hope that it would help ease the supply position. It had, however, inevitably resulted in some confusion and difficulties in supply as also in steep rise in prices. The Joint Plant Committee appointed on the Raj Committees' recommendation had twice increased the prices and at present the Indian steel prices were the highest in the world. Mr. Kamani could not overemphasise the need for stabilising these prices at a reasonable level, as they had a very great effect on the economy of the country.

Mr. Kamani further pointed to the difficulties regarding timely delivery of matching sections which were being felt for the last two decades and he earnestly hoped that the Joint Plant Committee and the main producers would adjust the production programme to the demands of the industry. He also hoped that the export-oriented industry like this, would get steel at concessional prices as was the case in every exporting country in the world. Further, the Raj Committee had recommended import of certain quality of steel, particularly some special sections, to ensure timely availability of matching sections keeping the prices at a reasonable level. Mr. Kamani hoped that this recommendation would be implemented. He further suggested that the industry should be given regular quotas to import such matching sections on the basis of individual fabricating capacity and that the Government should permit exchange of controlled categories of steel amongst factories in order to ease to a certain extent the difficulties of getting timely supply of urgently needed steel sections. He also felt that the ultimate effect of the implementation of the Raj Committee report will be in the interest of the country and of advantage to this Company.

Transmission Line Towers and Structures

Mr. Kamani expected the demand for transmission line towers and structures to increase in direct proportion to the rapid increase in generating capacity of electric power, which was expected to be raised from 5.7 million kw. in 1961 to 23 million kw. in 1971. He, however, cautioned that the installed capacity, including the newly licensed capacity, was more than the prospective demand in 1971, and any addition to the existing capacity would be detrimental to the economy of the industry.

'Tractamount' Road Roller

In view of the increased demand, the factory had undertaken a programme of increased production of the improved model of 'Tractamount' rollers and it was proposed to add some new items of implements to this line of manufacture.

Erection

The Chairman was happy to report to the shareholders that the Company had completed five major transmission lines totalling to about 600 miles in five States, namely, Gujarat, Orissa, West Bengal, Andhra Pradesh and Mysore, and that it was a matter of considerable achievement that 240 miles of 132 kV trunk lines for Dhuvaram power station in Gujarat and 100 miles of 132 kV lines in Orissa passing through extremely difficult terrain were completed in record time. Construction works were going on in full swing all over the country—in Andhra, Assam, Bihar, Gujarat, Maharashtra, West Bengal, etc.

Mr. Kamani informed that three power generating sets for Trisuli hydro-electric project in Nepal were supplied and a transmission line was being constructed for the project. This was a gift to the Government of Nepal from the Government of India.

Yet another notable achievement, as mentioned by Mr. Kamani, was the contract for the installation of a ropeway with a big haulage capacity of 450 tons per hour, secured from Indian Iron and Steel Company, Ltd., in collaboration with the leading German firm of Pohlig. It would be one of the largest ropeways in the world and would be operating over a distance of 40 miles. The civil engineering work on this project had already started and the project was expected to be completed by end 1966. The orders on hand for supply of towers and erection were at present about 30 per cent more than during the previous year.

Expansion

In order to meet the increasing demand for towers, as also to retain the foothold in export market, our expansion scheme had been launched in Rajasthan which is expected to be completed within the coming two years, when the capacity would increase by 30,000 tons per annum, and would greatly assist in meeting the demands of the northern regions like Rajasthan, the Punjab, Uttar Pradesh, Madhya Pradesh and adjoining territories, besides helping increase in exports. The Government had already given clearance to the Company's application for import of necessary machinery and plants of the value of Rs. 45 lakhs. It was rather early to indicate the profitability of the scheme, but Mr. Kamani assured the shareholders that the expansion programme would involve no reduction in the amount to be distributed as dividend and would be to the best advantage of the Company. Once the production started, the profits would proportionly increase.

Railway Electrification

The first contract for railway electrification in the Eastern Zone having been completed, the Company had participated in tenders for similar work in other zones and there were good hopes for securing further substantial business, Mr. Kamani reported.

Exports

In the country today, Kamanis were the only exporters of transmission line towers and other structures and, in spite of numerous difficulties, all the pending orders were successfully completed. The order from the Nigerian Government for 132 kV transmission line towers was under execution. Mr. Kamani was sure that the shareholders would be happy to learn that two large orders valued at over Rs. 28 lakhs had been secured from National Power Corporation, Manila (Philippines), in spite of keen competition from well-known international firms, including the Italian and the Japanese. These orders, when completed during the current year, would bring the total export efforts of the Company to approximately Rs. 88 lakhs.

Referring to the various difficulties felt by the Company in execution of export orders, the Chairman commented that it was a difficult and unattractive proposition, as timely delivery of matching sections, shipping space at reasonable rates, facilities of pre-financing, etc., were not available. In order that quick delivery and longer credits demanded by foreign indentors be met, he suggested that higher priority should be given to steel for export orders and concessional prices should be charged, as was being done all over the world. He earnestly hoped that the Government would seriously consider these suggestions in order that not only the export level is maintained but also be substantially raised during the coming years.

Research

Various types of structural designs to effect economy in weights had been evolved, as a result of which Kamanis were the first in India to design, supply and erect 450 ft. high masts for All India Radio.

Agency Business

The Agency business has shown good results with an increase of about 25 per cent over last year's, mainly due to very large orders for insulators. Recently the Company was awarded an order for three power generating sets for hydro-electric power station for Kuttiadi project in Kerala.

Lahore Assets

Mr. Kamani referred to the Directors' report and stated that necessary legal proceedings had been instituted for the recovery of the Company's property in Lahore, as the same had been released from the Custodian of Evacuee Property, Pakistan, and he was hopeful of getting it back.

The Chairman attributed the progress achieved by the Company to the sincere efforts and willing co-operation of the workers and the members of the staff as also encouragement received from time to time from the Central and State Governments and the backing of the shareholders and thanked them for the same.

Note: *This does not purport to be a report of the proceedings of the Annual General Meeting.*

JESSOP AND COMPANY LIMITED

WAGON WORKS BEING REBUILT WITHOUT DISLOCATION

CHAIRMAN, MR. A. K. CHANDA, ON FURTHER MODERNISATION

THE need for modernising and expanding the existing works of Jessop and Company Ltd., so that it could meet the growing demand for its manufactures, was stressed by the Chairman, Mr. A. K. Chanda, in his annual statement to shareholders presented at their Thirty-second Annual General Meeting held at Calcutta on 29th April 1964. Mr. Chanda referred, in this context, to the rebuilding of the wagon works, which had been in progress, without affecting current progress and which would, on completion, add to the existing facilities for fabricating steelwork. He disclosed that steps were being taken to purchase a suitable site and complete other arrangements for initiating the expansion programme within the current year. But he added that the phasing of the programme would have to be planned after carefully considering the Company's financial position, the impact of taxation on its earnings and the possibility of securing both financial and technical foreign collaboration.

The following is the full text of Mr. Chanda's speech:

The Board of Management's report and accounts for the year ended 31st October 1963 are being circulated with this statement. Your Board feels that the practice introduced last year of incorporating the Chairman's statement in the report should be continued, as it gives the shareholders a comprehensive up-to-date picture of the Company's affairs.

The conditions in which an emergency had to be declared have not improved greatly and the need for strengthening our defence and developing our defence production remains as insistent as ever. The resources of your Company have been mobilised to increase its output generally with an accent on production of defence stores.

Your Company has had this year the unique distinction of having completed 175 years of engineering activity conducted from its premises at 63, Netaji Subhas Road, which now houses the head office. To mark the occasion, it is proposed to hold a simple function at the Dum Dum works, on a suitable date, in the near future.

Record Sales

Sales reached, in the year under review, a new record of Rs. 1,472.00 lakhs, against Rs. 1,282.00 lakhs in the previous year, an increase of 14.82 per cent. This was reached in spite of yet another crisis in the supply of electric power which restricted output for over two months. Credit for this achievement goes to the staff and workmen. I am sure you would join me in expressing our appreciation to them and our continued faith in them for maintaining the pace of progress.

Profit, Taxation and Dividend

The detailed working results and provisions for taxation are given in the report of the Board of Management. It will be seen that, after providing for all taxation, and depreciation, the profit will be Rs. 76.83 lakhs as compared with Rs. 65.42 lakhs for the previous year.

Despite increased earnings and larger profits, the ways and means position of the Company continues to be difficult. We had to ask the State Bank for additional accommodation to the extent of Rs. 1 crore only thus increasing our cash credit account No. 1 to Rs. 3.75 crores. In this situation, it would be imprudent to make a large distribution of profits. Nevertheless, your Board considers that some improvement in the rate of dividend should be made, and accordingly recommends that the rate of dividend should be increased to ten per cent. We expect to maintain this return in the coming years.

Production Increased

With the commissioning of the new road roller works at the end of February 1963, a determined effort was made to increase production from the previous years' output of 250 to 350. We succeeded in reaching a production of 320. Had not powercut, shortage of steel, etc., impeded our effort, we would have undoubtedly succeeded in reaching the target. Conditions remaining reasonably normal, we expect to reach a figure of 450 in the current year. It is gratifying to note that the indigenous content of our rollers has now reached the percentage of 97.

Production of electric multiple unit coaches for Bombay and fully furnished metre-gauge coaches were maintained at the levels programmed. Plans for re-equipping the works for all-welded production of coaches have also been finalised, but we do not expect that, due to the difficulties in obtaining delivery of specialised plant and equipment, we will be able to effect the changeover until April 1966. Additional orders for the riveted types of coaches have, however, been assured to us for the interim period.

The output of "BOX," "TPR," "O" and "CR" type wagons has improved and it is planned to concentrate the production of "BOX" wagons in the rebuilt wagon works from May 1964. This will free capacity in the structural works which is badly needed for our other activities.

Steps are in hand further to raise the output of electric overhead travelling cranes, wharf cranes and sluice gates.

The fabrication and erection of the vertical wheel gates for the Kosi barrage has been largely completed, except for the wiring of the gates for remote control. This work cannot be taken in hand until the special building to house the equipment has been completed by the project authorities.

The output of fabricated structural steelwork showed little improvement due to the continued shortage of matching steel; but I am happy to tell you that there has been a marked improvement in the supply position over the last four months. If this improvement is maintained, there will be a corresponding increase in production from April 1964.

A start has been made in the present mechanical works to produce high speed cold sawing machines, and saw sharpeners, and we expect to market these by June 1964. We also hope to have a 6'-0" arm structural radial drilling machine in production by October 1964. These machines, I am proud to say, have been completely designed by us.

Future Demand

With the rising tempo of industrial activity, there is a growing demand for the manufactures of your Company which we cannot meet fully within our existing production facilities. This reassures us, however, of continuing demands which will fill our order books for many years to come. We do not, however, contemplate this situation with satisfaction. We have to gear ourselves to greater effort and larger production to play our role in the national economic growth. With this purpose in view, we have already undertaken the modernisation and expansion of our existing works.

Modernisation and Expansion of Dum Dum Works

The rebuilding of the wagon works is now in its final phase, and as I mentioned earlier, we should be able to concentrate manufacture of "BOX" wagons in this works with effect from May 1964. I should add that this rebuilding programme has been planned and executed without interruption to current production for which credit is due to the co-operative spirit of our workers at Dum Dum.

One of the two 80'-0" assembly bays in the structural works has been completed and commissioned while the second bay is expected to be completed by April 1964. These bays will greatly add to the existing facilities for fabricating steelwork. The larger availability of matching steel should make it possible to utilise fully the capacity created.

Further Expansion

I regret to say that negotiations for the purchase of a suitable site for the expansion of our production, both in range and volume, have not progressed as we expected. But we are hopeful that we would be able to get possession within the current year and also complete other arrangements for initiating the expansion programme. I should, however, sound a note of warning. Our financial position, the impact of taxation on our earnings, the possibility of securing foreign collaboration, both financially and technically, are factors which require careful study and analysis and would naturally determine the phasing of our planned programme.

Labour Relations

I regret to say that we experienced continuous labour trouble throughout 1963. We were obliged to take action on illegal strikes in the mechanical, coach and road roller works, when the managers and staff were detained. The situation was handled with firmness and determination. As a result, there has been an improvement in production since December 1963.

Labour unrest has unfortunately been widespread throughout the engineering industry in West Bengal and we have not remained unaffected by this disaffection. It is disturbing that, in spite of generous production and profit-sharing bonus schemes which this Company has introduced and which enable the lowest paid employee of the Company, the *mazdoor*, to earn Rs. 120.00 a month, there is agitation, engineered no doubt by a small number of militant workers, which affects both production and their earnings by intermittent stoppage of work.

We continue to pursue a progressive employment policy and we trust our labour will realise and appreciate that increased productivity means increased earnings and amenities for them. We hope that the change of wind noticeable in December will hold to bring prosperity to us all.

Absenteeism

The high rate of absenteeism continues to be a major problem. The average at Dum Dum is 16 per cent; but after the *Puja* holidays, this reaches 30 per cent for a period of six weeks seriously disrupting all production programmes. This malady of absenteeism, together with the generous leave and holidays granted, compels the management to increase the labour force unnecessarily, adding to the cost of manufacture, reducing the profitability of the Company and therefore the earnings of workers themselves.

Electric Power Shortage

The general power shortage prevalent in the Calcutta area developed into a serious crisis in the beginning of May 1963, when one of the 50 MW. generators at the C.E.S.C's Cossipore power station broke down. This crisis lasted till end-May 1963, during which period extensive load-shedding and occasional total interruption of supply were enforced. The supply position once again deteriorated in early August 1963, when the C.E.S.C. had to reintroduce load-shedding, this time on account of shortage of water in the Rihand dam.

This sustained spell of acute scarcity of power has affected our production in no small extent.

It was not until the commissioning of the new 50 MW generator at New Cossipore in November 1963, that some improvement in the supply position became noticeable. Arising from this, and also from the prospect of a 75 MW generator at Durgapur being commissioned in the first quarter of 1964, we may perhaps now look forward to a period of assured and uninterrupted power supply.

The maximum demand recently sanctioned to us is just sufficient for our present needs, but we will undoubtedly require further increase to cope with the expansions in hand.

Matching Steel

The shortage of matching steel continues to be the greatest single obstacle to increased production, and a disproportionate amount of time is spent by senior staff in progressing supplies, and arranging substitutions. There has been a welcome change in the last few months as a large tonnage of steel has been received, both indigenous and imported, to match the accumulations of the last two years. It is difficult to say whether this pattern of improved supplies can be maintained in view

(*Continued on page* 765)

MAHINDRA AND MAHINDRA LIMITED

SIGHTS FIXED ON MORE AMBITIOUS TARGETS

CHAIRMAN, MR. KESHUB MAHINDRA, ON NEW PROJECTS UNDER WAY

THE varied manufacturing activities of the enterprises promoted by Mahindra and Mahindra Limited were succinctly reviewed by its Chairman, Mr. Keshub Mahindra, at the Eighteenth Annual General Meeting of the Company held at Bombay on 23rd April 1964. He also referred to the new projects under way for the manufacture of alloy steels and tractors. The assured loyalty of the Company's labour force, the steady accumulation of reserves and the continuing process of expansion—all these figured in the Chairman's review.

The following is the full text of Mr. Mahindra's speech:

LADIES AND GENTLEMEN,

It is a proud privilege for me to be addressing you for the first time and to be able to extend to you a warm welcome to the eighteenth annual meeting. In their report to you, your Directors have expressed their deep feelings at the sad and sudden death of our Founder-Chairman, the late Mr. K. C. Mahindra. Many of you in this room, who knew him intimately over the years, will agree with me that his greatness lay in his sensitivity towards people —which produced in all of us a deep sense of affection for him. He looked forward to meetings such as these, for they provided him an opportunity to share his thoughts with you on many issues. His speeches were the products of a mind which had a unique appreciation of knowledge and a remarkable gift of language and judgment. His appraisals invariably germinated food for thought.

Company's Growth

Today I can think of no better way of paying adequate tribute to his memory and to the memory of the late Mr. J. C. Mahindra than to narrate to you the story of the growth of your Company. It was in 1945 that our late Chairman, together with his brother, laid the foundations of your Company. The first ten years were spent in formulating long-term objectives, procuring talent, laying down sound management controls and training technical and managerial personnel. This was the time spent in exploring and choosing. Financial resources were being harnessed for the period of growth. These were the foundations laid for establishing manufacturing industries basic to the country's economic development. The record of the last eighteen years bear testimony to their zeal, devotion and tireless efforts.

Machinery Manufacturers Corporation was the first venture with public participation. This Company was formed with the object of manufacturing carding engines for the textile industry. The history of this Company may be known to many of you. In the years that followed, serious setbacks had to be faced and met. The lack of a well-defined protective policy, as well as initial resistance to an indigenously manufactured product, aggravated the situation. It is, therefore, of considerable satisfaction that, after years of struggle for survival, today the Company continues to be the largest producer of carding engines in the country. After fifteen years of operation, the maiden dividend was declared two years ago. It was perhaps this experience which made the founders hesitate initially in inviting public participation in our new ventures.

Capacity for Jeep Production

Over the years a wide range of products were chosen for manufacture. The Automobile Division, which forms the principal activity of the Company, now has an installed capacity to manufacture 10,000 jeeps per year. This has been possible through an association with a large group in the U.S.A. and we have the privilege of having their President on our Board of Directors. The dependence on imports for components is fast diminishing and, with continuing progress in the field of ancillary production, it is anticipated that an indigenous content of 90 per cent will soon be achieved. The division is fully staffed with skilled technicians, and through its intensive training programmes for operators and engineers, it is to a great extent self-generating in its requirements of personnel. New factories are under construction at Kandivli, and it is envisaged that well integrated units will be ready for occupation by early next year.

New Projects

Recognising the advantages of linking substantial investment with the procurement of technical "know-how" from abroad, your Company promoted a number of other units which today serve our economy. In partnership with organisations in the U.K., various companies were formed to manufacture a range of products such as trailers, sintered products, air-cooled diesel engines, water meters and instruments. In collaboration with a German firm, a company was formed to produce synthetic resins, enamels and varnishes, while in association with an American company a unit has been set up to produce elevators.

Steel has always played an important role in the affairs of your Company, and while the import of steel sustained the Company during its formative years, a need was felt to establish a manufacturing unit in the country. To this end, in collaboration with a leading French firm, a company has been floated for the manufacture of alloy steels. This, as you are all aware, is a large project involving considerable capital outlay. A second large project is the manufacture of tractors in collaboration with one of the largest corporations in the U.S.A. This Company has been formed and shares will be offered to the public in the course of this year.

Looking back, it was in 1955 that shares were offered to the public for subscription. At that time the Company was privately owned by the family. Before the public issue, an offer was made to all employees of the Company, who had five years' service or more, to participate in the share capital. It is gratifying to remember that nearly all employees took advantage of the offer.

The first public issue was made with an offer of about Rs. 47 lakhs of capital. The response from the investing public was overwhelming. Over the years, there have been two further rights issues, incidentally both were oversubscribed, bringing the capital of the Company to the present level of Rs. 253 lakhs. And the number of shareholders has increased from 1,860 to over 5,500 today.

Loyalty of Labour

While the role of capital is not to be underestimated, it is labour which gives it a meaning in industry. I think of labour in its integrated sense, embracing all members of an industrial enterprise, whatever their functions. Without the effort of labour to plan and to execute, capital remains stagnant. Corresponding with the increase of capital, our own labour strength in the parent Company has increased from 1,200 in 1955 to nearly 5,000 today. Labour in the Company looks to the future for increased earnings, for opportunities to better their way of living and for chances of promotion. Over the last four years, over 800 vacancies have been filled through promotions from within—sufficient assurance that ample opportunities exist in your Company for advancement. Better pay, good service conditions and a share in the prosperity of the Company have been the benefits accrued to labour. In response, the Company has their assured loyalty and a desire and enthusiasm to meet the ever-growing need for better skill and more productivity.

In all our varied manufacturing activities, we have always laid emphasis on quality control and I can say that the quality of our products has ensured consumer satisfaction. Nor does our responsibility end with the sale of the product—the importance we have given to after-sales service has instilled a sense of confidence in the consumers, which must reap rich dividends in the future.

Growing Reserves

It is your faith and confidence that has made possible this growth. Great care has been exercised by your Directors to ensure fair and reasonable dividends. Keeping in mind the need for liquid funds for expansion and diversification, your Directors have favoured a stable policy of dividends. The operations of the Company over the years have fully justified expectations, reflected in the profits earned from year to year. The shareholders enjoy an added sense of security that the reserves of the Company have increased to Rs. 80 lakhs while the investment portfolio stands at Rs. 63 lakhs. In conformity with the views expressed by many of you, a modest beginning was made in offering you shares in the new steel company. I hope that, with continuing growth, there will be further opportunities for you to invest in new companies or in the expansion of the existing units—so that you may share in the prosperity of your Company—a share which rightly belongs to you.

Plans for the Future

The economy has reached a difficult stage in its development. The country through the Five-year Plans is in the process of reappraising the methods by which desired social objectives can be achieved. You may well ask whether this transitional period will have any effect on our industrial philosophy. I can only answer you by affirming that practically every unit in the group is in the process of expansion and that we have our sights fixed on more ambitious targets in the future. We would be failing in our duty if we did not continue to contribute to the growth of the community to which we belong. In these endeavours we do not doubt that there will be vast difficulties. The large commitments we have already undertaken are a measure of the confidence we have in the future.

In reminiscising over the past, I may have taxed your patience. The encouraging and guiding hand of the late Chairman is no longer with us. I am, however, fortunate in having the wise counsel of my colleagues on the Board which will make my task less burdensome. I have the loyalty of our employees and I hope your confidence. I am sure that you would like to join me in welcoming our two new Directors, Mr. Iengar and Mr. Hydari—they need no introduction from me.

You will be glad to know that for the five months of the current financial year, that is, to the end of March 1964, our operations in all divisions of our Company have been satisfactory. Production of jeep vehicles averaged 900 vehicles per month and deliveries have kept pace with this production. The Steel Division has maintained its rate of booking and the Machine Tool Division anticipates a considerable volume of business during the year. I would not like to conclude before thanking all the staff for their loyalty and devotion to work during the year.

I thank you.

CALCUTTA-1, 22*nd April*, 1964.

BANGALORE WOOLLEN, COTTON AND SILK MILLS CO. LTD.

INCREASED GOVERNMENT DEMAND PROMPTLY MET

SANCTION FOR MORE CAPACITY TO BE UTILISED, SAYS CHAIRMAN

THE past calendar year was an exceptional one for the Bangalore Woollen, Cotton and Silk Mills Company Ltd., due to the very considerable demands from the Government, said Mr. D. W. Law, Chairman of the Company, at the Eighty-first Annual General Meeting held at Bangalore on 27th April 1964. But the Company met the Government's requirements within the specified time by working substantial portions of its machinery on three shifts. This, Mr. Law said, resulted, however, in a reduction of output of *Cotswol* and some cotton cloth to the disappointment of many of the Company's faithful customers. Referring to the Government's permission granted to mills in the latter part of 1963 to increase their loom capacity by 10 per cent and their spindleage by 7.5 per cent, Mr. Law said that the Company intended to take full advantage of that sanction and had under consideration a comprehensive expansion and modernisation programme.

The following is the full text of Mr. Law's speech:

GENTLEMEN,

I have pleasure in welcoming you to the eighty-first annual general meeting of the Bangalore Woollen, Cotton and Silk Mills Company Ltd. The Directors' report and the accounts for the year 1963 having been in your hands for the prescribed period, I shall, with our permission, take them as read.

Trading Conditions and the Home Market

The year under review was exceptional due to the very considerable demand for your Company's products by the Government and, since the cloth concerned, *Angola*, is an expensive one, the Government's demand had the effect of increasing the gross value of sales of all qualities to over Rs. 8.5 crores. Substantial portions of the mill machinery worked on three shifts in order to complete the Government's requirements within the specified time. As a result of this preoccupation, the output of *Cotswol* and cotton qualities was reduced and we had perforce to disappoint many of our faithful customers.

In the cotton section, selling prices continue to be controlled and thus the only method of maintaining margins is to increase efficiency and effect economies wherever possible, in spite of the rising cost of spare parts and vital stores.

Last year, I mentioned that *Varsity*, a "Terylene"-woollen suiting, which was introduced towards the end of 1962, had made satisfactory progress, and I am glad to confirm that the future envisaged for this cloth twelve months ago has materialised, and as soon as raw materials and manufacturing capacity permit, production will be further increased.

The silk section, although small, continues to play its part and make its contribution to the prosperity of the Company. As usual, difficulties were experienced in procuring raw materials and it is to be hoped that the silk supply position will be better this year.

Exports

Active steps are being taken to improve exports both of union and cotton fabrics but, unfortunately, Ceylon, which until 1961 had been one of the best of overseas markets, has been forced to curtail imports, thus affecting your Company's exports of cotton piecegoods to that island.

Trading conditions in Malaya have also not been encouraging, but exports of *Cotswol* and *Angola* to various markets, including the U.S.A., Canada and the U.S.S.R., were not inconsiderable and I hope, in 1964, business with these countries will still further develop. The United Kingdom is also showing an interest in these two cloths and recent reports from our sales staff indicate there are prospects for both cotton piecegoods and union fabrics in certain European countries and in West Africa. The necessity to export and to earn foreign exchange has our constant attention.

Cotton

The 1962-63 Indian cotton crop was most encouraging and the carryover at the end of the season improved to 19½ lakh bales, which was better by 5 lakh bales than in the previous year. The Government, in September 1963, suspended the compulsory survey scheme introduced in the previous season because the current season commenced with a larger carryover and crop progress was encouraging. It is estimated that the 1963-64 commercial crop will approximate to 58 lakh bales, which is satisfactory, but with mill consumption increasing, quite apart from the installation of additional spindles and looms, the supply position is not without its difficulties. The long-term solution to the country's ever-increasing demand for cotton is to improve the yield per acre. Both Central and State Governments are aware of this necessity and efforts are being made in this direction by further utilisation of fertilisers and the scientific development and distribution of seed cotton.

Improvements

The 34 additional looms, expected during 1963, duly arrived and have been installed, thus completing the union establishment. Conversion materials ordered to modernise parts of the carding and spinning departments have arrived and by the end of the year, negotiations with the labour association in connection with our modernisation plans in these departments were well advanced.

Several new machines for improving the efficiency of the dyehouse were installed, thus enabling this important section of the mill to keep up-to-date and to operate in an economical manner.

The changeover from coal to oil-firing was finally completed on 28th May 1963. The difference in the appearance of the mill now that coal is no longer used is most marked. The cleanliness resulting from oil-firing has already had its effect both on morale and on the quality of your Company's products. The cost of oil-firing the boiler is only fractionally higher than when coal was used.

General

Included in the profit and loss account under the heading "provision made in previous years no longer required" is a sum of Rs. 6,75,184. This figure represents the excess provision for the cost of electrical energy between 1955 and March 1963, when the rate at which your company was charged by the Mysore State Electricity Board and its predecessors was in dispute. This excess provision is, therefore, shown as income in the 1963 accounts. I am glad to report that a fresh electrical energy agreement with the Mysore State Electricity Board, which is valid for five years, was signed on the 30th September 1963.

Financial Position

The Company's financial position continues to be excellent, which is as well because the cost of our expansion and modernisation plans, which will be implemented during the next few years, is considerable.

Shareholders will notice that the accounts, with the permission of the Government, have been drawn up this year in a more modern form which is designed to present at a glance the salient features regarding the Company's financial position. Details have been relegated to notes and schedules.

Dividend

A final dividend of Rs. 18 per share has been recommended, bringing the total ordinary dividend for the year to 24 per cent gross, which is 6 per cent more than for 1962. Your Board considers that, on the year's results, this increased dividend is justified, but would draw shareholders' attention to the need to conserve funds for expansion and modernisation.

Future Prospects

It is to be hoped that this year there will be some relaxation in the price control of cotton piecegoods enabling mills to recoup some of the increasing costs of raw materials and stores, for, as you know, mills' selling prices have been pegged since the end of 1960. During the latter part of 1963, it was announced that mills would be allowed to increase their loom capacity by 10 per cent and their spindleage by 7½ per cent. Your Company intends to take advantage of this announcement and a comprehensive expansion and modernisation programme is under active consideration. World techniques in textile machinery manufacture have recently advanced so rapidly that there is a danger of new equipment becoming outdated soon after it is installed. The choice of which machine to purchase, provided the necessary foreign exchange is available, is thus a most important factor which is receiving the most careful consideration for, apart from the assistance the indigenous textile machinery manufacturing industry can give, it will be necessary to purchase the latest and most up-to-date equipment from overseas in order that your Company, and the cotton textile industry as a whole, can compete effectively in export markets.

Labour

It gives me pleasure to report that the cordial relations which have existed between the management and labour in these mills in the past, continued throughout the year, but once again excessive absenteeism has been a factor affecting production and this serious social problem is retarding the country's advance due to the many man-hours lost.

Acknowledgment

Once again I am confident you will wish to join me in expressing a tribute to all the officers, staff and employees without whose efforts the satisfactory results achieved would not have been possible.

During the year, your Company suffered by the deaths of Mr. Bennett and Mr. Nagesha Rao, both officers of considerable experience, whose services we had enjoyed for many years.

At the end of March this year, my colleague, Mr. R. E. McLellan, who was the Director in immediate charge of your Company since 1958, retired after over 30 years' service with the Binny Group. I would like to place on record our appreciation of his contribution to this Company over this long period during which your Company has progressed from strength to strength. Mr. McLellan has fully earned his retirement and I wish him and his wife all happiness in the future.

In conclusion I would like to express my gratitude to my colleagues on the Board for their loyal support and co-operation throughout the year.

MANAGEMENT DEVELOPMENT IN HINDUSTAN LEVER

MR. P. L. TANDON, CHAIRMAN, EXPLAINS THE COMPANY'S SYSTEM

SELECTION, TRAINING, PROMOTION, ALL SCIENTIFICALLY DONE

THE Annual General Meeting of Hindustan Lever Ltd. was held at Bombay on Tuesday, 28th April 1964. In his address to the shareholders on this occasion, Mr. P. L. Tandon, Chairman, explained at great length the scientific manner in which the Company estimates its requirments of managers well in advance, selects the necessary personnel, trains them and promotes them, so that the best men may be found to perform the executives' jobs in the best possible manner. The following is the full text of Mr. Tandon's speech:

Even more than capital and raw materials has a rapidly developing economy to think of its resources of management. For ultimately how well the economy grows will depend upon the calibre of its managers and their attitudes. We, in India, have been fortunate in this respect. Growth of trained management has been rapid and much attention has been paid to this need, and how big is the problem may well be judged from a simple calculation. Out of two million jobs estimated to be created in each year of the third Plan, even at a ratio of 2 per cent of them being managers we shall need to train 40,000 new managers every year. This is, indeed, no small task, more so when it is considered that a manager not only must possess a basic discipline such as engineering, accountancy or marketing but to be really effective also receive training in how to be a manager: we have to develop in him besides his function the skills and attitudes of management.

We have always been conscious of this task, and how we view it and what we do about it is the subject of my speech today, as I feel you may be interested in knowing something about this most important aspect of our Company.

A Strong Tradition

Although founded by the genius of one man, our parent company has always been professionally managed. This has been a strong tradition with us and one we have valued in Hindustan Lever. We have always bestowed a lot of care on the proper selection, training, development and promotion of men and women; we have looked ahead at our needs, foreseeable and unforeseeable, and tried to provide for them before they arise. Nearly twenty years ago, as an instance, we appreciated the need for Indianising our management, and the process was handled with care but with boldness till it ceased to need any further impetus some years ago. Over twenty years ago, we began our Management Trainee selection scheme, which over the years has with attention and assimilation of new techniques improved until today it stands high by international standards. Opportunity for men from the general staff to rise to management has been another of our conscious efforts.

We have today 341 managers, of whom 178 or 52 per cent have risen from the ranks; a total of 11 or 3.2 per cent are expatriates; our selection and training department in 1963 recruited 26 managers and put through training courses 25 managers as well as 17 non-management staff; 5 from the staff were promoted to management. Our management strength forms 5.2 per cent of our total employees. Although essentially a manufacturing and marketing company, we have 27 women managers, who interestingly possess a diversity of specialised skills like psychology, operational statistics, scientific research, accountancy and home economics.

Management development with us is a complex of activities whose purpose, simply stated, is to ensure three things. First, to anticipate our requirements over the next five to ten years; second, to select, recruit and train men and women to fill those requirements; third, to develop attitudes and values in individuals that prepare them to meet their responsibilities at the standards we consider desirable. All this, ultimately, like capital expenditure, budgetting, annual estimates and operational plans, is the responsibility of the Board, assisted by the active participation of all our managers and operated by the Personnel Department, which has a member on the Board.

Management Forecasting

It takes time to make managers, especially to befit them for higher responsibilities; but we do not believe in age as a determining or even a particularly important factor, in fact it seldom enters our calculations. It is our experience that it takes about ten years to prepare a young manager to take over senior responsibility. If he has the ability and responds to development, with the opportunities that are constantly opening up in a growing and decentralised concern like ours, we would in fact be disappointed were he not able to receive his first shot of a senior independent charge in his early thirties. For all this much forward planning is necessary, especially where the future winners are concerned, for they have to be picked, groomed and trained for twenty years or more. And we may lose some in the process.

The instrument of forecasting is the Management Review which is prepared every year for the next five years. It is much like the Cash Forecast. It evaluates in terms of managers the needs of our business which will arise out of expansion, new projects, new products and organisational changes. This need is then equated with our internal resources, what will be generated by way of promotions from the staff to management, the losses that are likely to occur through retirements and losses through anticipated and unexpected separations. The exercise ultimately throws up our net requirement, which in a growing country and an expanding business must happily be always on the plus side.

The advantages of this exercise are three. In analysing our needs we make sure that they are genuine and not Parkinsonian; and in quantifying them we know when they are likely to arise and how we will meet them. Otherwise, it can easily become a case of people retiring or new vacancies arising without their having been provided for well in advance. We begin thinking of the replacement of retiring men some years ahead of the event. Men are nominated and tried, more so for senior positions. Planned transfers and cross-postings are also a part of development, often into functions different from their original skill or training. The third and important advantage is that the promotion potential within the firm gets carefully looked at. As it is the first priority to promote from within, each department, in stating its needs, will carefully consider how it can meet them from its own resources.

The Management Review is normally brought up to date every year, but sometimes circumstances may need an *ad hoc* study. Its preparation and follow-up, like the Cash Flow, keep our management resources under constant study.

Selection and Recruitment

The Five-year Plan is reduced to an annual operating plant of recruitment and the Board is kept in touch with its progress. Every quarter a statement of the total strength of the Company is prepared showing staff in each category, retirements, separations, promotions and recruitment, and this is examined by each department, its director and finally by the Board.

From where do we get our managers? First, always, we look within. Who is ready to be made a manager and who is ready to move up? The process of following initial selection of staff with a good original record, observation, training and grooming should ensure a regular flow from within and a ladder for the men and women with the right qualities to climb to the higher levels.

Secondly, we recruit young trainees, fresh from the universities with good degrees in humanities or sciences for the general side, in engineering and technology for production, qualified accountants for finance and audit. Experience may help, but we primarily look for a good mind and a likely ability to possess and develop the set of attitudes that we consider important for our business. These may be called "management-like qualities"; not easy to define but meaningful when they are there, and the cause of management failure when they are missing.

We resort to direct recruitment when it is necessary. In actual practice, this is mostly confined to specialists as in our agricultural operations, animal feeding-stuffs, research, economics, statistics, engineering, medical and legal fields where we do not have specialist resources within the Company. But sometimes even in non-specialist jobs if we have not got a suitable qualified person, rather than lower the standard we will go outside.

Despite all the care we take in selecting, 20 per cent of our trainees do not make the grade. This may sound a high proportion and is costly, but one we would not like to see reduced through a sacrifice in our standards or through over-caution. These are young men who are basically able and well qualified but have either not taken to business or have not developed the attitudes we need. The answer perhaps lies in a keener follow-up on our part; to carefully isolate these attitudes; to try and build them into our training and of course to ensure that those training the trainees are themselves conscious of them. This is a task that we are now attending to. Were I to attempt defining them I would say that they are, positively and negatively, a dedication to our business, keenness for achievement without a desire for power for its own sake, a deep social sense, and ability to get on with the job without wasting time on the frills. In short, we prefer solid ability to just virtuosity. I am, of course, taking for granted the usual qualities of intelligence, industry, integrity, self-confidence, etc. We like poise and ease but put no premium on background as a veneer. We have also managed to be respected by those who recommend candidates to us, for we will carefully look at everyone who knocks on our door because we are anxious to take in talent, but we make no concessions to influence.

Some Interesting Features

Some interesting features of our selection procedure may be worth mentioning. All applications—and we receive nearly 1,000 for every person selected—are screened for conforming to basic requirements of age and qualifications. Those who meet the requirements are sent a printed application form which, apart from details of the school and university career and any jobs held, asks for some data that would throw up academic and extra-curricular interests and hobbies, ideas about this career and any leadership experience at school and college. These are again screened by experienced persons, and the promising candidates are invited for a preliminary interview at the head office or one of our branches. Those who show promise are then invited to our head office at Bombay for final selections, which are held in two parts.

In the first part of final selections, a group of six to eight candidates is brought together to a conference table and given a choice of subjects and a case study which they discuss in the presence of four senior managers, who however only act as observers. The group is "leaderless" and has to organise its own discussion and provide opportunity to each member to display his qualities of mind as well as leadership and being led. Our consulting psychologist, who knows us and our requirements well, is also present at these group discussions, which he follows up with an interview at which each candidate is put through some psychological tests.

In the second part of final selections, the most promising candidates are put up before a senior board of at least two directors, the Personnel Director and some senior managers. From this group we finally select and offer appointments to as many as reach our standards, though we are always willing to take some risk with otherwise promising material. This must account for some of our losses. I should like to add that we try to make our selection procedure as objective and impartial as possible, particularly so that it leaves those who are not selected with a feeling that the process was fair. Secondly, the psychologist has not a decision-making function; his role is confined to the use of technical methods of assessing such aspects of personality requirements as are relevant to the job. The information that is gained through his tests is considered along with other impressions formed of the candidate. The psychologist's opinions are helpful to the selection Board but not decisive. All opinions of the psychologist are treated as confidential.

We find from experience that the group method of selection has several advantages. It provides for greater scope for studying the different aspects of a candidate's personality. A group can be given certain tasks which cannot be given to an individual. The men are seen together and are therefore easier to compare. Rejection is also less painful in a group method, and although the unsuccessful may not always agree with the decisions of the selectors, group inter-action will usually make it abundantly clear as to who stands out. In fact the candidates, when questioned individually, will usually pick the right ones themselves. Lastly, the procedure is economical.

Training

Whatever the methods and techniques followed in the selection procedure, personal interviews, group discussions, psychological tests, etc., selection is only the first stage in the total process of acquiring and developing managers. After selection begins our real task.

Training is given individually and on the job. We have found from experience that young intelligent trainees do not like to spend months in circulating around the various departments of the Company watching how others do their job; instead they like to get down to a job themselves and so our training programme is now job-oriented. Also, this is the best way of judging their performance and potential at an early stage. After a very quick familiarisation programme lasting only about four weeks in a Division, they are put to work in it. Let us take the marketing side, which absorbs the largest number of trainees. The young man will go into the field and work under a salesman for a month, after which he will work independently as a salesman for three to four months. He then works under a sales supervisor for a month and then independently as a supervisor for another three months or so. By now he has been "blooded" and can hold his own in the field. The men who work under him later should recognise that behind what he expects them to do lies experience and ability to do it himself, and well. After this spell of about nine months in the field he works in a junior management capacity in branch administration where he learns to deal with the field work from the office end. After some months of this he is seconded to a sales manager and helps him run an area. At the end of one and half years of all this training he is given his first managerial responsibility and appointed an Area Sales Manager. From then on he will go as far as he deserves.

All through the training his seniors devote a good deal of their time and attention to his progress, and the Board constantly receives reports on his progress. His Director will meet him regularly, and the Chairman occasionally. The progress reports are discussed in detail in a committee of the Vice-Chairman, his own Director and the Personnel Director. His training finished, a recommendation will be put up for confirming him in the covenanted grade of management; and the Chairman will usually personally hand him the covenant. He is from now on the Company's most valued investment, and we are deeply disappointed at our occasional failures, though they have to be faced in the interests of the Company as much as for his own sake.

Training never really stops. We have designed our own courses, principally to give the managers a broader picture of our operations and its environments and to sharpen their managerial skills. These courses are always residential and there they meet men and women from other sides of our business. The courses can be general or functional, as in marketing, finance, O. & M. To many of them we invite as participants men from our associate Unilever companies in Africa and Asia. We also send our managers to courses, seminars and conferences held outside the Company to provide the stimulus of meeting people from other organisations and particularly from Government and its undertakings. We send them to the Administrative Staff College at Hyderabad, the new Institutes of Management of Calcutta and Ahmedabad, the regional and the All India Management Associations, the National Productivity Council and to other more strictly functional courses.

Unilever's training facilities in the United Kingdom and its specialist courses in Australia and America are also open to us. We have also sent men to Henley and Havard. Lastly, we send a few men every year to the United Kingdom for specialised training with Unilever companies in that country and on the Continent.

We find all this training, carefully planned for both its content and timing, an integral part of the growth of a manager. It has to be judiciously controlled though, to stop it from becoming a fad. Each name for outside training is examined carefully by the Board and each manager is made to realise that he can get out of a course only in proportion to what he himself puts in.

A very useful aspect of training is the encouragement we give to our managers to accept various extra-mural responsibilities. In a developing economy, it is natural that demands should be made on our managers by Government and other organisations and it is only right that we should make our contributions in the fields in which we have special knowledge or experience. We are, therefore, always prepared to help as long as the demands made on us are consistent with the priorities and requirements of our own business. We believe that this kind of assistance is to mutual advantage and, in the ultimate analysis, we gain as much from such efforts as we give, because it adds to the knowledge and experience of our managers.

Promotion

Promotion is always and invariably on merit, irrespective of age or length of service. We frankly believe in the logic of the best man for the job, because only then will the job be done best. But evaluating merit is not an easy task. We, therefore, do not leave such evaluation entirely to the time when the need for promotion arises but make it a continual process, so that, when the time comes, it is quite obvious who the man is; in fact, normally, he has already been groomed for it. Evaluation with us is a constant process, consisting of progress reports, thorough training, personal contacts by the seniors and by annual personnel reports, discussions at the monthly Board meetings, job evaluations, short lists of promising men: all this helps to ensure unbiassed and objective judgment.

How do our managers respond to this system which takes away the crutch of "automatic" promotion? They accept it implicitly when they join us and, in fact, they often tell us that they regard this as one of the best reasons for joining us. The system, which they themselves will have the responsibility to operate, assures a fair assessment, and cases of unfair promotions are almost unknown. There may be two views on a quick or unexpected promotion but nearly always the sense behind the decision soon becomes obvious. The capable rise rapidly, so that they don't lose the fine cutting edge; some are inevitably left behind—arithmetic must work inexorably, for after all the shape of a management structure must be pyramidical. Those left are well looked after and have a very useful function in which their interest is kept alive through training and sometimes a change of job. In fact it is not that many are left behind but that some must get further and faster. To use an American phrase: There cannot be all "Chiefs and no Indians" (the American kind).

You may have noticed that I have frequently mentioned the Board in connection with selection, training and promotions of managers. This indicates not the control the Board exercises over these processes but the interest it takes in what I have already referred to as our most valuable asset. Management Development, as I have tried to describe it, is an integrated operation which has a quality of wholeness like marketing or manufacturing; and not merely the application of a series of isolated techniques. How well we grow, how sucessfully we meet the challenges will depend in the end on how well we select and prepare each man for his job and inculcate the right attitudes. I have tried to present to you the thinking and practice on this subject, but let me be clear. We are, of course, aware that what we are trying to do can be improved upon. To effect such an improvement is our constant endeavour.

Note: *This des not purport to be a report of the proceedings of the Annual General Meeting.*

Notices

THE CENTURY SPINNING AND MANUFACTURING COMPANY LIMITED

Registered Office:
Industry House, Churchgate Reclamation Bombay

NOTICE IS HEREBY GIVEN THAT THE Sixty-seventh Annual General Meeting of the Shareholders of the Company will be held on Wednesday, the 27th May 1964, at 4.30 p.m., at Industry House, Churchgate Reclamation, Bombay, to transact the Ordinary and Special Business mentioned in the Notice which is being posted to the shareholders along with the Explanatory Statement required under Section 173 of the Companies Act 1956, the Balance Sheet, Profit and Loss Account and the Directors' Report for the year ended 31st December 1963.

N.B.—A Member entitled to attend and vote is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member.

NOTICE is also given that the Register of Members and Transfer Books of Equity Shares of the Company will be closed from Saturday the 2nd May 1964 to Friday the 22nd May 1964, both days inclusive.

The Directors have recommended payment of a final Dividend of Rs. 18 per equity share (subject to deduction of tax under the Income Tax Act) for the year 1963, to be paid out of the Dividend Equalisation Reserve.

The Dividend when sanctioned will be made payable at the United Commercial Bank Ltd., Churchgate Reclamation Branch, Bombay, from 3rd June 1964, to those shareholders whose names stand on the Register on 22nd May 1964, to whom dividend warrants will be posted.

By Order of the Board,

R. S. VENKITESWARAN,
Secretary.

BOMBAY, 21*st April* 1964.

THE BENGAL FLOUR MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Annual General Meeting (being the one hundred and thirtieth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on TUESDAY, 19TH MAY, 1964, at 3.30 p.m., to consider the Accounts of the Company for the year ended 31st December, 1963, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 2ND MAY, 1964 to 19TH MAY, 1964, both days inclusive.

By Order of the Board,

BALMER LAWRIE & Co. LTD.,

D. MANSON,
Managing Director,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 13*th April*, 1964.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

THE INDIAN ALUMINIUM COMPANY LIMITED

COST OF ELECTRIC POWER MUST BE KEPT STEADY

CHAIRMAN, MR. H. V. R. IENGAR, DRAWS ATTENTION TO A DEPLORABLE TREND

PRESIDING over the Twenty-sixth Annual General Meeting of the shareholders of the Indian Aluminium Company Ltd., held at Calcutta on 27th April 1964, Mr. H. V. R. Iengar, Chairman, drew attention to an important element of cost which had a direct bearing on the price of the Company's products and over which the management had no control, namely, the supply and cost of power. Since electricity was a major raw material for the aluminium industry, Mr. Iengar pointed out, producers sought to enter into long-term contracts with suppliers of electricity (State Governments, in the case of Indaluco) to ensure continued supply of power at reasonable rates. It was, therefore, obvious, Mr. Iengar emphasised, that the sanctity of such contracts should be preserved not only as an act of faith but also for sound economic reasons. But there was a tendency on the part of State Governments to levy duty on electricity consumption which had the effect of increasing the contracted price for electricity. Deploring this tendency, Mr. Iengar said that legislative powers, where they seek to vary or abrogate contractual relations, should be used, if at all, with great discretion and in the real interest of the community at large and never as an expedient to raise some additional revenue.

The following is the full text of Mr. Iengar's speech:

I have pleasure in welcoming you to the Twenty-sixth annual general meeting of the Company.

I think it will be in accordance with both the pattern set by tradition for Chairmen's speeches and with my own conception of what such speeches should contain if I adopted as a general theme today the responsibility of an organisation such as Indaluco in the developing economy of our country. But I would like first to deal with our performance in 1963.

New Levels of Sales and Earnings

As industrialisation of the country proceeds, the market for our products continues to grow, and large areas of demand remain unsatisfied or undeveloped. In these continually favourable conditions, and benefiting from the completion of increases in capacity undertaken in previous years, the Company achieved new levels of sales and earnings in 1963. The total value of sales at Rs. 138.9 million was 32 per cent higher than in 1962; gross profit improved to Rs. 38.2 million from Rs. 24.0 million, and net profits were also markedly higher at Rs. 16.0 million, compared with Rs. 12.6 million for 1962. The latter increase was achieved despite the higher tax charges in 1963 which reflected a reduction in development rebate, the impact of Super Profits Tax, and the company tax incurred in respect of the bonus issue. Taken together, all these figures are evidence of our sustained growth and amply justify our past investments in new productive units.

Whilst primary aluminium production rose by 10 per cent to over 25,000 tonnes, despite a prolonged power cut in Alupuram which reduced this smelter's output, and to which I will refer again later, there was a sharper increase in production of semi-fabricated products which rose to over 19,000 tonnes, from under 13,000 tonnes in the previous year. This increase in semi-fabricated output was made possible by the expansion at Belur completed in 1962 and by overcoming teething trouble encountered when the new equipment was first put into production. Output from our other plants continues to be very satisfactory.

Capital Issues

To meet part of the capital requirements for the current expansion of the Alupuram smelter, and for the foil mill under construction at Kalwa, the first benefits of which are not expected until 1965, a number of security issues were made during the year. The authorised capital of the Company was increased to Rs. 100 million by the creation of an additional four million ordinary shares, and the issued capital of the Company increased by rights issue of 801,276 new ordinary shares of Rs. 10 each at a premium of Rs. 15.50 per share, part of which is still to be called.

Additionally, a public issue of 7 per cent debenture-stock for Rs. 10 million was made on 11th January 1963, and the Commonwealth Development Finance Company Limited were issued £100,000 sterling debenture-stock on 30th March, completing an issue of £500,000 sterling debenture-stock agreed to in 1962.

Finally, on 30th December, there was a bonus issue of 1,200,889 fully-paid ordinary shares of Rs. 10 each in the proportion of one for four. Whilst this issue did not increase the amount of shareholders' funds employed in the Company, it brought the issued capital more into line with the true shareholders' investment.

On the basis of the results for 1963, and in view of the satisfactory level of activity experienced at the beginning of this year, your Directors felt justified in recommending a total dividend for 1963 of 17½ per cent on the augmented ordinary share capital. Simultaneously, the allocation to general reserve has raised it from Rs. 19.5 million to Rs. 31.5 million.

Effect of the Budget

You will wish to know the immediate effect of the budget proposals on the Company. Allowing for uncertainty of interpretation, the estimated net effect of the proposed changes will reduce the provision for company taxation in respect of 1963 by about Rs. 2 million, which will appear as a credit in the 1964 accounts.

The Company will benefit from the rebates to be allowed against income and super-tax and also against the new sur-tax. The Finance Minister's general policy of encouraging the development of particular industries includes the aluminium industry, and will facilitate future expansions.

We welcome the Finance Minister's intention to continue the development rebate for key industries beyond 1st April 1967. It is important to an industry such as ours in which new productive units require large amounts of capital and relatively long construction periods, to be assured of some stability in the fiscal climate. The Minister's assurance in regard to continuation of development rebate will be helpful from this point of view. Nevertheless, the proposed tax on bonus share issues and the 7½ per cent tax on distributed profits both seem certain to have an adverse effect on the capital market and to make the task of those who find it necessary to raise fresh capital considerably more difficult.

Future Plans

Looking into the future, our Company will continue to make progressive efforts towards supplying metal and fabricated products at reasonable prices, permitting us to pay good wages to our workers and to earn and distribute satisfactory profits. Beyond the pursuit of these interests, however, we feel a further responsibility to make such contribution as we can towards the expansion of aluminium production so badly required in India.

When the emergency arose as a result of the Chinese invasion, Indaluco offered immediately (*a*) to step up the production of aluminium in Alupuram by an extra 5,000 tonnes although, from certain points of view, this was not an ideal location for increased smelter capacity; (*b*) to make special alloys required by the Defence Services; and (*c*) to loan to Government, without any obligation, some highly qualified technical members of the staff, to enable Government to decide on the planning of the industry in the light of the rapidly changed Defence situation. All this was intended to be a measure of short-term assistance. On the long-term, the Company assessed what its place in the economy should be against the background of the requirements of metal in the country in future.

Expansion

On the best assessment we can make the country will require, by the end of the fourth Plan, very much larger quantities of metal than have been planned for at present. Your Directors realised that, if the Company should take its appropriate place in the context of metal required in the future, it should make an earnest effort to expand its operations. Naturally, they hoped that while the siting of new operations would be based, primarily, on the sources of power and of bauxite, it could be so adjusted as to lead to rationalisation of the Company's own transport structure, which, at present, due to historical reasons, is not entirely rational. All the arguments suggested that the Company should concentrate on getting permission from Government to expand on the West Coast.

I am glad to inform shareholders that we have had satisfactory discussions with the Ministry concerned, viz. the Ministry of Steel, Mines and Heavy Engineering, who have now asked us to submit an application for an industrial licence. We are submitting an application shortly. The intention is that, initially, we should put up a smelter with a capacity of 30,000 tonnes, but this will form a nucleus of a much larger scheme of integrated aluminium production on the West Coast.

Two Elements of Cost

Despite the strong demand we foresee, it is obviously desirable that production costs should be brought down, and it is the policy of Indaluco to make every endeavour in this direction. I wish to draw your attention to two elements of cost over one of which the Company has no control and over the other only limited control. The former is a matter of power supply and power costs; the latter of the productivity of labour.

Throughout the first half of 1963, we suffered long spells of power cuts at our Alupuram smelter, which resulted in a loss of 950 tonnes of metal production. In 1961 and 1962, similar power cuts had resulted in a loss of 150 and 400 tonnes respectively. There had been intermittent power cuts at Alupuram even before this period but we had reasons to believe that with the augmentation of power-generating facilities in the State there would be no recurrence of such power cuts. But the situation appears to be worsening. The extent of the 1963 power cut was more severe than any in the previous years and in the current year also a 25 per cent power cut has been enforced from February which has further been increased to over 40 per cent from March. These interruptions in power supply not only seriously affect production but cause technical dislocations which take considerable time and expense to remedy. Consequently, costs go up. However, we have an assurance from the Kerala Government that every effort is being made to increase generating capacity further and it is expected that, by the end of 1965, the necessity to impose power cuts will be obviated to a great extent.

There is also the tendency on the part of State Governments to levy duty on electricity consumption, which has the effect of increasing the contracted price for power. As electricity is a major raw material for the aluminium industry, aluminium producers seek to enter into long-term contracts with suppliers of electricity (State Governments, in our case) to ensure continued supply of power at rates which may sustain the industry on a long-term basis. It is, therefore, obvious that the sanctity of such contracts should be preserved not only as an act of faith but for sound economic reasons. Without belittling the omnipotence of the legislature, it seems necessary to point out that legislative powers, where they seek to vary or abrogate contractual relations, should be used, if at all, with great discretion and in the real interest of the community at large; never as an expedient to raise some additional financial resource.

Productivity Low

Apart from power cuts, an important factor which is preventing a reduction in costs is low productivity in India. A study which I had had made some time ago showed very unfavourable comparisons between our own plants and similar-sized plants overseas. I am not suggesting that the comparisons necessarily reflect adversely on the efforts of workers. Production per employee is influenced by a large number of factors other than the efforts of workers. Such other factors would include mechanisation, size of the productivity unit, adequacy of raw material supplies and transport, production planning, management and scientific knowledge and so on. My submission is that each of these aspects should receive close attention and scrutiny, for thus only can we achieve internationally competitive standards of productivity and maximum economies of production.

An important influence on productivity is the human factor involved in management-labour relations. Last year, in my address to you, I had mentioned that it was imperative that we secure the co-operation of trade unions and industrial workers in order to achieve a standard of productivity which is comparable to those outside India. Your management has been unsparing in its efforts to develop such standards of productivity. I have pleasure in informing you that, following the understanding we have reached with the Union in Hirakud, there has been significant improvement in production and efficiency. I am also happy to inform you that our Alupuram Union has recognised the necessity for further increasing productivity and rationalising work standards and has agreed with the management to make every effort to man the new smelter with the existing personnel, as far as possible. I consider this a significant step demonstrating an enlightened trade union attitude.

"Negotiate in Good Faith"

In a democratic society, industrial disputes are bound to occur and it is common knowledge that such disputes are invariably resolved in course of time. It is also obvious that the most enduring way of resolving these disputes is through collective bargaining and mutual consent. And yet I find these processes becoming increasingly ineffective and slow. Sometimes a great deal of damage is done both to the industry and the workers by such procrastination. In the majority of cases, the delay hardly improves the bargaining position of either of the parties and only contributes to a national wastage of effort. It seems that both sides must train themselves to negotiate in "good faith." Exaggerated demands in the hope that an understanding would be reached somewhere at the "half-way point" should be eschewed. There should be sufficient appreciation of the fact that a co-relationship exists between wages, production, and costs. Collective agreements are, no doubt, the results of give-and-take but the methods which the parties pursue should be based on goodwill, a scientific approach, and must demonstrate a regard for the public interest. I feel that if these considerations are kept in view, a tradition of healthy, mutual negotiations will be established in the country and will prove beneficial both to industry and the workmen.

Rigid Postures

On this problem of human relations as affecting productivity in industry views appear to have become stratified. The different parties concerned, viz. the Governments, both the State and the Union Governments, the trade unions of different persuasions, and different employer organisations have taken up positions involving some rigidity of posture. It may be that a solution has to be many-sided; it may involve re-thinking on the part of all three parties. It seems necessary that a fresh look should be given to see where a break-through is possible. A solution may arise out of a fresh study of the problem by a body such as the National Productivity Council which, happily, has a tradition of a joint approach to problems of productivity by trade unions, employers and Government, with the assistance perhaps of outside experts. Your management has discussed the problem—not as a problem affecting Indaluco but as affecting Indian industry generally—with the National Productivity Council and has also offered to finance a research project up to a lakh of rupees. I hope something useful will emerge out of our discussions with the N.P.C.

Tribute to Former Chairman

Before I conclude, I have to make reference to a sad fact, of which I am sure all of you are aware. Mr. K. C. Mahindra, who was at the helm of the Company's affairs for over twelve years, died on 31st October 1963. As an industrialist, a philanthropist, and an elder statesman, Mr. Mahindra was well known throughout India and many obituaries have been written mentioning these traits. Your Company's relations with him were, however, more intimate. He guided the policies of your Company and set the pace for its continued growth and for its high standards of efficiency. In many of his addresses before you, he pledged the Company's resources to the development of the aluminium industry in India. In his last address to you, he made a prophetic observation. Referring to the expectation that India would reach the stage of a self-sustaining economy by the end of the Fourth Plan, i.e. 1971, he said: "In our own sphere of industrial operations, I make bold to state that the Indian Aluminium Company would reach this stage five years ahead; I mean that expectations are that your Company would by 1966-67 achieve sufficient strength to stand on its own and generate enough technique, enough management, and enough resources to follow through further expansions." Probably, his hopes have already been realised, but let us, in mourning his loss, resolve to fulfil all his expectations through dedicated service to the Company, the industry, and the country.

Finally, I wish to thank on your behalf the management and all the employees of the Company—the staff and the workers—for their efforts and co-operation which contributed to the satisfactory results of 1963.

Note: *This does not purport to be a record of the proceedings of the Annual General Meeting.*

COMMERCE (1935) LTD.

SPEECH OF CHAIRMAN, MR. J. M. MEHTA

THE Twenty-ninth Annual General Meeting of Commerce (1935) Limited was held at Bombay on Wednesday, 22nd April 1964. Addressing the meeting, Mr. J. M. Mehta, Chairman of the Company, held out the hope that the year 1964 would be a more favourable one. He disclosed that the Company had undertaken the publication of two well-known diaries which were hitherto being published in England.

The following is the full text of Mr. Mehta's speech:

GENTLEMEN,

I have great pleasure in welcoming you to the twenty-ninth annual general meeting. The Directors' report and the audited accounts of the Company for the year ended 31st December 1963 have been in your hands for some time and, with your permission, I will consider them as read. I shall, however, briefly review the working results.

Judged against the background of growing competition, a sustained improvement in the gross earnings of the Company is, you will agree, a matter for satisfaction. Revenue from subscription has registered a slight decline, but this has been compensated by a notable increase in income from advertisements. There has been a rise in establishment (staff) expenses, and the tax liability, too, has become heavier, as, under the Finance Bill 1964, the Company has to pay 10 per cent (or an additional Rs. 10,400) more than in the previous year. In spite of this, I am happy to report that the distributable profit is adequate to maintain dividend at the previous year's level, as well as to transfer a small amount to general reserves.

Prospects

As for prospects, I expect that the year 1964 would be more favourable for the Company. New subscribers are being enrolled and revenue from advertisements is likely to maintain its upward trend. I must particularly mention, in this connection, the move of the management to undertake the publication of two well-known diaries, namely, *Textile and Engineering Diary of India and Pakistan* and *India and Pakistan Wool, Hosiery and Fabrics*, which were hitherto published by Messrs. John Worrall Ltd., Oldham, England. The contract for acquiring the publishing rights by your Company in respect of the diaries has recently been finalised with the British firm and the Reserve Bank's sanction to remit part consideration obtained. The 1965 editions of the diaries will be published early next year. The publication of the diaries by us will, I hope, augment the earnings of the Company and also result in a saving for the country of much needed foreign exchange.

Simultaneously with the aforesaid proposal, the management is making renewed efforts to increase the circulation of the journal and to gather larger advertisement revenue by making the journal more popular.

Before concluding, I wish to express my appreciation of the good work done by the staff headed by the Editor, Mr. Rayan, during the year and, with their continued support, we can look forward to increasing prosperity.

G. CLARIDGE & CO. LTD.

MODERN MACHINES BEING INSTALLED

CHAIRMAN, MR. P. S. MISTRY'S STATEMENT

THE management of Messrs. G. Claridge and Company Limited is trying to do its utmost to modernise the press by installing modern machines from time to time. This assurance was given by Mr. P. S. Mistry, Chairman, in the course of his speech at the Forty-fourth Annual General Meeting of the Company, held at Bombay on Wednesday, 22nd April 1964. It was the installation of new machines, he said, that had enabled the Company to increase the turnover, in the face of keen competition.

The following is the full text of Mr. P. S. Mistry's speech:

GENTLEMEN,

I am very glad to welcome you to our forty-fourth annual general meeting.

The annual report is in your hands for some time now and you must have noticed that, during the year, the management has once again installed new machinery to modernise the press. Amongst the new machines that have been installed are:

Roland Favorit Offset Press,
Polygraph Casing-in Machine,
Book Sewing Machine, and
Polygraph Wire Feeder Stitcher Machine.

Thus you will observe that the management is trying to do their utmost to modernise the press by installing modern machines from time to time, although you will agree with me that it is extremely difficult to get import licences due to foreign exchange shortage.

It is the installation of new machines which has made us stand against all the market competition and increase our yearly turnover without which, in view of heavy wage bill and rising cost of paper and materials, the results would not have been as satisfactory as outlined in the report.

We have definitely maintained quality of our work and could class ourselves as one of the leading presses in this country, and this has been once again proved by winning State Awards as follows:

Two—First class prizes

Two—Second class prizes

A certificate of merit for the exhibit of greeting cards from the Bengal Printers Association.

These are in addition to the number of prizes that we have to our credit in the past.

Last year in my speech, I touched on the problem of accommodation which had become very acute at that time and—I said that the management were examining alternative site for further expansion. In this direction, I may inform you that we have temporarily shifted one portion of our press at a vacant room within the Empire Dyeing and Manufacturing Company Limited premises, but ultimately we shall have to give due consideration for a suitable site to accommodate our press, if further expansion is contemplated.

You must have already noticed from the Directors' report you have in your hands that, since the new Finance Bill has now been accepted, your Company, being a company in which public are not substantially interested, will have to pay unfortunately 10 per cent more of the taxable income for supertax besides the dividend paid last year will attract a tax of 7½ per cent. Provision for taxation has been made taking into consideration all these factors.

Lastly, I hope that this year will eventually turn out to be better as compared with 1963.

BUCKINGHAM AND CARNATIC COMPANY LIMITED

CHAIRMAN, MR. D. W. LAW, EXPLAINS FALL IN EXPORTS

PLANT AND EQUIPMENT TO BE MODERNISED FURTHER

RESTRICTED import policies adopted by Ceylon, disappointing demand from Malaya and Burma, establishment of their own textile industries by the erstwhile satisfactory export markets and popularity of mixed fabrics, especially Terylene/cotton blend, were cited as the reasons for the fall in foreign exchange earnings from Rs. 1.64 crore to Rs. 1.17 crore of the Buckingham and Carnatic Company Ltd., during 1963 by Mr. D. W. Law, Chairman of the Company, in the course of his speech at the Forty-third Annual General Meeting held at Madras on Tuesday, the 28th inst. Mr. Law, however, added that, in an endeavour to find new outlets, the members of the Company's sale staff had made extensive tours of overseas markets. The Chairman also referred to plans for a progressive modernisation and expansion of the Company's plants, which were under the Directors' active consideration. He referred, in particular, to the intention to install modern, high speed machinery for increasing productivity and reducing costs as part of the plan to step up the export business.

The following is the full text of Mr. Law's speech:

GENTLEMEN,

It is my pleasure to welcome you to the forty-third annual general meeting of the Buckingham and Carnatic Company Ltd. Since you have had an opportunity to study the Directors' report and the accounts for the year ended 31st December 1963, I shall, with your permission, take them as read.

Trading Conditions and the Home Market

Gross sales once more exceeded those of the previous year emphasising the continued demand for your Company's products and indicating that output was maintained at a satisfactory level. Sales would have been still higher if the mills had not lost the equivalent of 10 days' production in June due to a stay-in strike. The additional turnover has not resulted in a higher margin of profit, as costs have risen and selling prices for the home market are still controlled. The effect of increasing costs cannot, therefore, be offset by greater margins and the present margins can only be maintained by greater efficiency in plant operation and economy in the use of stores.

Exports

Foreign exchange earnings unfortunately show a marked fall when compared with 1962. Export sales total Rs. 1.17 crores, as against Rs. 1.64 crores in the previous year. The Ceylon market, once the major market for your Company's products, again did not come up to expectations due to restrictive import policies and the acute shortage of foreign exchange. As in the previous year, demand from Malaya and Burma was also disappointing and at the moment there are no prospects of the Burma market improving. Efforts are being made to obtain a greater share of the Malayan trade where for so many years your Company's cloths have been in constant demand.

Other erstwhile satisfactory export markets are commencing to establish their own textile industries, thus affecting Indian mills. In an endeavour to find new outlets, members of the Company's sales staff have made lengthy journeys overseas and it remains to be seen whether their efforts will bear fruit. Initial reactions are encouraging.

There is no doubt that cotton/mixture fabrics (especially teryfene/cotton blends) which are easier to wash and require little or no ironing, have made their mark in the more sophisticated export markets, thus reducing the demand, to an extent, for conventional cotton piecegoods. Your Company is making progress with such mixture fabrics, but whether export business will result is problematical.

Indian mills can only continue as major exporters if they can lower their costs, improve their quality and cater for changing fashion demands more quickly.

Cotton

The 1962-63 Indian cotton crop was very good and the carryover at the end of August 1963 improved to 19½ lakh bales as compared with 14¼ lakh bales at the end of August 1962. In September 1963, the Government suspended the compulsory survey scheme introduced at the beginning of the previous season, because the current season started with a larger carryover and the progress of the crop was encouraging.

We now know that the 1963-64 cotton crop is a good one, and at present it is estimated at around 58 lakh bales. Quantitywise, the crop is up to expectations, but with the all-India mill consumption figures proving to be very much higher than expected, the supply position is by no means easy, particularly as additional spindles and looms are being installed in various parts of the country. As a result, raw cotton prices are high.

To make good the shortage of this essential raw material, it is most important that urgent measures are taken to improve the overall yield of cotton per acre, which continues to be well below that of other major cotton growing countries, and the stage has now come when intensive and scientific farming must be undertaken. The Central and State Governments are alive to this problem, and it is hoped that before the end of the Third Five-year Plan a substantial improvement in the quality and quantity of cotton grown in India will have been achieved.

Financial Information

The financial position of your Company continues to be strong, though owing to unusually heavy deliveries of cotton during the last two months of the year, the Bank overdraft was substantially higher than at the close of 1962. Your Board are now actively considering ways and means of financing the substantial programme of modernization and expansion to which I shall refer later in my speech. It may be necessary for outside aid to be obtained, the extent of the financial burden possibly being beyond the Company's internal resources.

The usual amount of Rs. 5 lakhs has been allotted to the debenture redemption fund bringing the total amount now set aside to Rs. 60.44 lakhs.

Shareholders will notice that the accounts, with the permission of the Government, have been drawn up this year in a more modern form which is designed to present at a glance the salient features regarding the Company's financial position. Details have been relegated to notes and schedules.

Labour

Last year, I made a reference to the settlement reached with representatives of labour on the rationalisation of the spinning departments and to the negotiations for rationalisation in other departments which were then in progress.

In May 1963, after the settlement on rationalisation in the spinning departments had been in operation for over two months, a settlement was reached before the Labour Commissioner on the reorganisation of the engineering department and the revision of wages of the workers therein. This settlement was based on the award of the Industrial Tribunal, Madras, in respect of textile mills in Coimbatore and Madurai and was in some ways more favourable to our workers than the award of the Industrial Tribunal. However, implementation was obstructed by an unrecognised union which incited the workers of the engineering department, who had gained substantial benefits from the settlement, to stage an illegal stay-in strike. Despite this obstruction, the productive departments of the mills were kept working for over two weeks. When this unrecognised union failed in its attempt to bring the mills to a standstill, other minor unions stepped in and brought about an illegal stay-in strike in the spinning departments, and the Company was obliged to close the mills. With the Government's help, however, and the co-operation of the vast majority of the workers, who were anxious to work, the mills resumed operations some days later.

The regrettable state of affairs that results from inter-union rivalry was also seen in many textile mills in Coimbatore immediately after the bonus dispute had been settled through the good offices of the Chief Minister of Madras—and I hope that steps will soon be taken by the Government to eliminate the threat to industrial peace presented by the uncurbed activities of minority unions.

Barring the unfortunate closure of the mills in June last year, I am glad to report that industrial relations have been generally satisfactory. Absenteeism, however, showed no significant improvement.

During the year, an agreement was reached with labour whereby an enhanced retirement gratuity becomes payable. The total estimated liability not provided for amounts to Rs. 1.20 crores. Provision will be made out of profits for liabilities accruing in future which are estimated at about Rs. 5 lakhs per annum while the question of meeting out of reserves payments in respect of past services, is now receiving consideration.

The report of the Bonus Commission has recently been released and I can only say that the majority report is unrealistic and unsympathetic to the needs of industries in a developing economy. If this country's Five-year Plans are to prosper, the need to rehabilitate and modernise existing plant and machinery and to ensure a return on capital sufficient to attract the investing public, both at home and from overseas, cannot be disregarded. The majority report of the Bonus Commission makes no provision for rehabilitation or modernisation as a prior charge when arriving at the distributable surplus before granting bonus—and even the rate of return on capital, which was considered to be fair and reasonable by the Labour Appellate Tribunal in 1950 has, in effect, been reduced. The representative on the Commission of the employers in the private sector has submitted a minute of dissent with regard to these particular issues, and I hope that Government will give due weight to it before taking action on the Commission's report.

Development

In common with many textile mills in India, much of our machinery is old and your Directors have under active consideration plans for the progressive modernisation and expansion of the plant. Particular attention is being given to the modernisation of certain dyehouse processes and to the provision of increased capacity for generating process steam.

In order to increase the Company's export business it is intended to install modern, high speed machinery, so as to increase productivity and reduce costs. Imported textile machinery is necessary for this purpose and it is hoped that the Government will assist the Company to obtain such machinery by releasing the foreign exchange required.

Dividend

Your Directors have again recommended a final dividend of Rs. 12 per share bringing the total ordinary dividend for the year to 18 per cent gross. The increased dividend paid for 1961 and 1962 has thus been maintained, but I would again remind shareholders of the need to conserve funds and would point out that in paying a total dividend of 18 per cent for the year, the transfer to general reserve has been reduced from Rs. 8 lakhs in 1962 to Rs. 2.50 lakhs this year.

Future Prospects

In 1964, costs again are expected to rise but as against this, the Emergency Insurance Fund levy is unlikely to be the burden it was in 1962 when it cost your Company over Rs. 8 lakhs.

The Tariff Commission appointed to investigate the industry's selling prices has not so far issued its report. As each day passes there is a stronger case for permitting mills to raise their selling prices and it is to be hoped that the representations made to Government by the textile industry will be listened to with sympathy.

Acknowledgment

The results achieved, in spite of the loss of production in June, are due to the continuing loyalty and endeavours of the officers and staff of your Company who, as I said last year, in spite of fresh problems and complications have continued to serve with that efficiency and steadfastness which we have come to expect. You will no doubt wish to join me in thanking them for their services during 1963.

In conclusion, I would like to record my thanks to my colleagues on the Board for their loyal support and co-operation.

Note: This document does not purport to be a report of the proceedings of the General Meeting.

CONCENTRATION OF ECONOMIC POWER

SOME COMMENTS ON DR. RAO'S NOTE

By R. L. Varshney
LUCKNOW UNIVERSITY

IN his recent note, Dr. V. K. R. V. Rao has given top priority to limiting the size of individual enterprises in the private sector with a view to establishing an egalitarian society. Dr. Rao overlooks the fact that industrial units should be sufficiently large to ensure economies of scale and, in many cases, the requirements of modern technology are such that there is no alternative to bigness. The Chairman of the Premier Automobiles stated some time back that the prices of automobiles manufactured in his unit could be reduced by Rs. 1,000 per car, if the unit was allowed to increase its capacity from 10,000 cars to 20,000 cars per year. Moreover, the Government of India already gives a positive preference to new enterprises and, as far as possible, licences are diverted away from larger business houses. This policy of the Government of India has been strongly criticised by the World Bank Team which has pointed out that the policy of encouraging the establishment of small- and medium-sized units in the private sector in preference to large ones has been an important factor aggravating industrial costs in India. The Ministry of International Trade is also reported to have urged the licensing of sufficiently big units in export industries, in order to ensure economical production and lower costs.

Dr. Rao has emphasised in his note, that the existence of a large private sector promotes concentration of economic power and influence, and the primary object of his recommendation for limiting the size of individual enterprises seems to be to prevent such concentration. The facts are different. The Government has already got enormous powers to control every form of activity in the private sector, whether it be trade or industry, production or distribution, finance or management. The Government is in a position, if it likes, to prevent not only any abuse of economic power but also to direct production and distribution of goods according to desired ends. If there is concentration of economic power, it only proves that the Government is not properly enforcing the powers that it already enjoys over the private sector.

Another method to avoid the possibilities of concentration of economic power is to promote what is called Corporate Democracy by jealously safeguarding the interests of shareholders. The Government should see that ownership of shares is widely diffused. There is already a trend towards this direction which has to be encouraged. A survey of ownership of shares, published in the Reserve Bank of India Bulletin, May 1962, showed that 70 large-sized companies, having a paid-up capital of Rs. 1 crore or more, had 207,000 shareholders. The Companies Act may also be suitably amended to provide that at least two-fifths of the directors would be elected by the shareholders themselves from outside the controlling group by means of a single transferable vote to ensure proportional representation to the minority interests. This would have a salutary effect, inasmuch as the directors would be put on their guard and would not be in a position to do anything against the interests of the company very easily. There is also evidence to show that the shareholders are not a docile lot as they are supposed to be. At the recent annual general meetings of the Premier Automobiles and the Automobile Products of India, the directors did not have an easy go and a poll was demanded on a number of issues.

While Dr. Rao talks of concentration of economic power, he overlooks the evils of concentration of economic power in the hands of the State. An industrialist who wants to start some project has to get the approval of some Government authority or other at every stage right from the commencement of the project. As a result, economic power is being gradually concentrated in the Government and the Government is in a position to determine the nature and direction of economic activity. And concentration of economic power along with political power in the hands of a small group of politicians and bureaucrats is worse than the concentration of economic power in the hands of a few businessmen who could be controlled by the State. The former is infinitely more dangerous to the working of democracy than the latter.

Mere regulation of consumption of essential commodities will not ensure their availability to all sections of the society. In fact, there is a limit beyond which the consumption of essential commodities does not increase with every increase in income. It is the consumption of articles of luxury that increases proportionately with an increase in incomes. And to control their consumption, excise duties may be levied on articles of luxury, or ostentatious expenditure can be checked by the imposition of an expenditure tax. In order to ensure availability of essential commodities to all sections of society, what is required is an all out effort to increase production of food and cloth—not of superfine cloth but of a few varieties of standardised cloth for mass consumption. The problem is not one of distribution but of production.

Dr. Rao has not made clear the special steps he wants to be taken for the benefit of the weaker sections of the community. The weaker sections are interested in an assured supply of food and cloth at reasonable prices. In a sense, our planning is a dismal failure, inasmuch as we have not been able to achieve any sustained growth in our food production. Instead of having large dams for irrigation, we should have a crash programme of minor irrigation works so that our agriculture may become independent of vagaries of nature. To ensure availability of cheap cloth to the masses, the Government should ask the textile mills to produce standardised varieties of shirting, longcloth, dhotis and saris for mass consumption on a large-scale. In order to provide equal opportunities to the weaker sections, a programme of compulsory free education should be introduced at least upto the high school standard. Education is an area where there is an urgent need of nationalisation.

Dr. Rao has rightly emphasised that regulatory measures suggested for private enterprise should not hamper either production or efficiency or the free flow of foreign capital and technical assistance. It may be noted that Socialism is not an end in itself but only a means to an end—improvement of the standard of living of the masses. And this requires that State should do only what people are not willing or competent to do.

Dr. Rao has emphasised the difficulties in getting personnel of the requisite quality and competence for the public sector as also the difficulty of retaining them for long when it does get it. This itself speaks of the high efficiency of the private sector and its capacity to pay high wages to its personnel. Why not make service conditions in the public sector more attractive? If the private sector can pay better, why cannot the public sector do so? It is common knowledge that service conditions in the public sector are not as ideal as they should be.

Dr. Rao refers to the enormous patronage which the existence of a large private sector gives to the few hundred top leaders of business and industry in appointment, purchases, sales and advertisement. Do the Ministers not take advantage of this patronage? It is common knowledge that many a Minister has been able to get his kith and kin employed in the private sector on fat salaries. The basic question is that the nation lacks in such essential qualities as honesty and integrity. There is no guarantee that the people who are asked to make appointments or take decisions in the matters of sale, purchase and advertisements in the public sector would be more honest than those in the private sector. Nay, in the public sector, profit-motive that ensures efficiency would also be absent. Public money is nobody's money. Naturally, the decisions would be more reckless. Moreover, the power to bestow favours in the hands of a few Ministers and bureaucrats is more dangerous than that in the hands of thousands of businessmen.

THE NATION'S BUDGET — covers all activities concerning the welfare and security of the citizens. It reflects the pre-planned economy which is the nation's target. The responsibility of expenditure and income coming true — balancing the budget — is shouldered by Government. In our democracy, this responsibility is shared by us all.

YOUR BUDGET — therefore has to be planned and balanced too. Our individual budgets ensure unhampered progress and welfare in our domestic sphere. This has a salutary effect on the nation's economy.

AND THE BANK — assists you through its manifold activities to balance your budget — and the nation's budget too!

CENTRAL BANK OF INDIA LIMITED

MR. HOMI MODY DEFENDS AGREEMENT ON DEPOSITS

CRY FOR NATIONALISATION OF BANKS DEPLORED

THE Inter-Bank Agreement on maximum rates of interest on deposits was defended by Mr. Homi Mody, Chairman of the Central Bank of India Limited, in his speech at the Fifty-third Annual General Meeting of the Bank held at Bombay on Tuesday, 28th April 1963. The Agreement, Mr. Mody, declared, had been working satisfactorily and had helped in keeping down the general cost of deposits for the banking industry as a whole and in preventing unhealthy competition. He described as unfortunate the move of some banks to opt out of the Agreement and urged every effort to check it. He also deplored the cry raised in ill-informed quarters for the nationalisation of banks and hoped that "the ghost would soon be laid at rest." There was no substance in the contention, he said, that bank shares were concentrated in the hands of only a few persons, giving them undue power. Citing the instance of his own Bank, he revealed that nearly 93 per cent of the total shareholding ranged from one share to one hundred shares.

The following is a summary of Mr. Homi Mody's speech:

"On the whole, it would be correct to describe the year under review as one of economic stagnation," observed Mr. Homi Mody. There was a decline of a little over 3 per cent in the total agricultural production, the setback in the main cereals like rice and wheat being as much as 7.5 per cent, which, viewed against the background of a relentless growth in the population, was a matter for much concern. Mr. Mody said that this could not be allowed to be explained away by casual references to natural phenomena. The fault really lay in the doctrinaire land policies forced on the country, mainly for ideological reasons. Some hundreds of crores of rupees had been spent in the last ten years on community development and extension projects. That they should have yielded next to no results indicated the failure of both planning and execution.

Although industrial production had recorded an improvement of about 8.5 per cent, it was less than the rate of increase envisaged in the third Plan. The growth of national income was feeble and halting and there was an upward pressure on the general price level. The mid-term appraisal of the third Plan had come as a rude reminder of the basic defects of Government's planning policies. Undue concentration on heavy industry, Mr. Mody remarked, had become an obsession with the architects of our Plans and had imposed on the common man a heavy burden of privations, which he was required to put up with in the present, in the fond hope that some day his progeny would enjoy the fruits of his sacrifices.

Fresh Tax Burdens

Turning to the budget of the Central Government, Mr. Mody recalled how at the last annual general meeting he had emphasised that any scheme of fresh taxation based on the grossly inaccurate estimates, which were being presented annually to Parliament, could not but be unfair and oppressive. Last year's figures, he said, told the same old tale, an estimated deficit of Rs. 16 crores having been converted into a surplus of Rs. 88 crores! Yet, every budget ignored this trend and proceeded to levy fresh burdens on the helpless taxpayers. Meanwhile, Government's administrative expenditure, not all of which could be considered productive, mounted, and inflation and the resultant fall in the real value of the rupee continued to inflict greater and greater hardship on the common man.

When the present Finance Minister assumed office, much was expected of him and it was believed that he would make a realistic approach to the whole scheme of taxation and give substantial reliefs. Instead, the present budget proposals merely rectified some anomalies, put the income-tax rate structure on a somewhat more scientific basis, leaving the totality of the burden alone and actually increasing it by Rs. 40 crores, of which the share of the corporate sector was estimated to be Rs. 11 crores. It is impossible to understand how the economy of the country could recover and how the capital market which had dried up could ever come to life in these conditions. "When one comes to the specific proposals for taxation," observed Mr. Mody, "one does not need to be an economist to appreciate the dire consequences of some of the burdens the Finance Minister is seeking to impose. The grand design is becoming clear—the further crippling of the private sector and the elimination, by rapid stages, of whatever remains of the much-abused capitalist class, to which India owes so much of her economic development. He would, indeed, be a very foolish person who will not see in these drastic socialist moves a grave threat to the stability and progress of the country."

Banking Trends

Dealing with the monetary and banking spheres, Mr. Mody referred to the impressive increase of Rs. 430 crores in the volume of money supply with the public. Scheduled banks' deposits had also increased by Rs. 210 crores to touch Rs. 2,252 crores at the end of the year, the major portion of such increase being accounted for by demand deposits. Similarly, scheduled bank credit, which stood at Rs. 1,422 crores in December 1962, expanded by as much as Rs. 158 crores during the year under review. To enable the banking system to meet the ever-increasing demand for credit from all sectors of the economy, the Reserve Bank found it necessary, at the commencement of the current busy season, to liberalise the borrowing quotas allowed to scheduled banks. Unfortunately, this facility turned out to be short-lived. The pace at which scheduled banks' advances have moved upwards has been so rapid that the Reserve Bank has now thought it necessary to apply the axe somewhat ruthlessly. Not only have the basic borrowing quotas been reduced, but the rate of interest has been so stepped up on each successive slab that the effective cost of the total borrowings from the Reserve Bank has risen substantially. Coming as it has done, when the busy season has reached the highest peak, this action has placed the banks in a difficult position.

The suggestion made by the Reserve Bank that, in their efforts to mobilise deposits, banks should re-examine the pattern of interest rates had created a controversy in banking circles. The Inter-Bank Agreement on maximum rates of interest on deposits and been working satisfactorily and had helped to keep down the general cost of deposits for the banking industry as a whole and in preventing unhealthy competition. In such a context, the present suggestion of the Reserve Bank, though well-meant, had already given rise to a move on the part of some banks to opt out of the Agreement. This was an unfortunate development, observed Mr. Mody, and it was necessary that every effort should be made to check it. The Indian Banks' Association would shortly be meeting at the highest level to thresh out the differences of opinion that had arisen.

Nationalisation Cry

Mr. Mody then referred to the cry raised in ill-informed quarters in this country for the nationalisation of banks. It was satisfactory to note, Mr. Mody said, that the spokesmen of Government have expressed their opposition to this move for nationalisation which had found little public support, and he hoped that the ghost would soon be laid at rest. He recalled how a similar threat of nationalisation which banks in Great Britain faced in 1934 was successfully met by the united opposition of the chairmen of all the major joint-stock banks. Mr. Mody warned that, if any move was initiated in this country to nationalise banks, it would have, among other things, a profoundly disturbing effect upon foreign aid and foreign participation in our various industrial projects, whether in the public or the private sector. Indian banking was already under the rigid control of the Reserve Bank, and the recent amendment of the Banking Companies Act had only added to its many fetters. Incidentally, it seemed to be extraordinary that legislation of such a far-reaching character should have been rushed through Parliament by Government with the help of its cast-iron majority, without any worthwhile consultation with the interests primarily concerned.

Referring to a note published recently on the interlocking of directorships of banks and other companies, Mr. Mody felt that no right-thinking person could agree with the inference drawn by the author that it had the effect of consolidating corporate power as against the State and society. The safeguards that existed at present against concentration of economic power in the hands of a few were more than adequate, and there was no justification for forging fresh weapons so far as banks were concerned. If there was anything that the note had brought out, it was the unpalatable fact that we had in this country only a limited number of persons possessing all-round business experience and financial standing. It would be foolish to prevent banks from utilising this available talent. There was also no substance in the contention that bank shares were concentrated in the hands of only a few persons, giving them undue power. So far as the Central Bank was concerned, out of a total of 24,828 shareholders, the individual holding of as many as 23,030, that is, nearly 93 per cent, ranged from one share to one hundred shares only.

Mr. Mody denied the sweeping charge levelled against commercial banks that they were not responsive to the financial requirements of small-scale industries and pointed out how the Central Bank, for instance, had been increasingly engaged in financing small-scale industries and had every intention of supporting this sector of the economy.

Financing Agriculture

Referring to the complaint that commercial banks had neglected to provide direct term-credit to agriculturists, Mr. Mody explained that this allegation failed to take account of the basic facts concerning the role of commercial banking and the inherent deficiencies in the general set-up of our rural economy. In India, agriculture had been looked upon more as a means of subsistence than as an economic or commercial proposition. Some of the factors which stood in the way of Indian commercial banks venturing into the field of farm credit were the diversity of inheritance laws and land tenures in various regions, the fragmentation and uneconomic size of individual holdings, the incapacity or unwillingness of the vast majority of agriculturists to keep regular and separate accounts and the absence of a scheme of crop insurance. Where agricultural activities like plantations had been organised on business lines, the larger Indian banks did not hesitate to finance them. He also pointed out that commercial banks had been providing finance on a substantial scale to agriculturists for marketing their produce, which was quite an important economic function. Commercial banks were likely to evince greater interest in medium-term agricultural credit, now that the Agricultural Refinance Corporation had been formed, if they had the backing of crop insurance and provided the State Governments helped them actively in the follow-up and recovery of such advances, as in the case of co-operative institutions.

Bank's Working

Referring to the balance-sheet and the audited statement of accounts of the Bank, Mr. Mody pointed out that, although the total deposits had crossed the Rs. 250-crore mark, the rate of increase was lower than in the previous year, due partly, to the closure of the Bank's Rangoon branch following nationalisation of banking in Burma. The Central Bank's share in relation to the total deposits of all scheduled banks, however, continued to remain at over 11 per cent.

The closing figure of the Bank's advances at Rs. 187 crores represented an increase of over Rs. 12 crores, compared to the previous year. The Bank's share in the total volume of scheduled banks credit was nearly 12 per cent. The demand for bank finance remained relatively subdued till almost the end of December, but, thereafter, it came with a rush, placing the banking system under a heavy strain.

Mr. Mody invited the attention of the shareholders to the fact that the previous year's gap of Rs. 27 lakhs between the market and book value of the Bank's holdings of Government securities which had operated against the Bank had now been converted into a difference of Rs. 75 lakhs in the Bank's favour at the end of the year.

The improvement of Rs. 1.36 crore in the Bank's gross earnings over the previous year had been more or less neutralised by the increase of Rs. 68 lakhs in payment of interest and of Rs. 59 lakhs in staff emoluments, exclusive of bonus. Mr. Mody observed that the rate of increase in salaries and allowances of the staff had been disturbingly high, and expenditure under these heads continued to absorb a large share of the Bank's total earnings, the proportion being as high as 34 per cent in 1963.

Overtime Allowances

Mr. Mody also voiced his concern at the rate at which overtime allowances paid to the Bank's staff were going up in spite of additions to the staff. In Western countries, banks had achieved a considerable measure of advance by modern methods and machinery. In India, apart from the difficulty of importing accounting machines and their components in sufficient quantities, there was a stiff resistance on the part of large sections of bank employees to any attempts at mechanisation. The fear that machines would displace men and result in the retrenchment of staff arose from a short-sighted view. Banking business in India is constantly expanding and acquiring new dimensions and, even if mechanisation was introduced on a substantial scale, there would still be a growing demand for more and more men. Mr. Mody hoped that the staff would give dispassionate consideration to this aspect of the matter and co-operate with the management in introducing new methods so essential for the streamlining of the Bank's manifold operations.

Besides the interim dividend of Rs. 2.40 per share already paid out, it was recommended that a final dividend of Rs. 2.60 per share, subject to tax, be paid out of the special reserve, as was done last year.

Mr. Mody paid a glowing tribute to the services rendered by Mr. N. K. Karanjia who had retired after a long and distinguished career of 45 years. He welcomed Mr. F. C. Cooper who was appointed General Manager on Mr. Karanjia's retirement and wished him a successful term of office. Mr. Mody also expressed his warm appreciation of the very valuable services rendered by the Vice-Chairman, Mr. C. H. Bhabha, in looking after the affairs of the Bank and in developing its business. Mr. Mody ended by observing that "the contribution which a Bank of our size and status can make to the economic growth of the country is immense and, if we continue to enjoy the confidence of the business community and if all of us give of our best to the service of the institution, we have every hope that the Central Bank will long continue to occupy the proud position it holds in the banking system of the country."

JESSOP AND COMPANY LIMITED

(*Concluded from page 755*)

of our foreign exchange difficulties. It is only when the output of our steel mills overtakes the demand that we would be assured of balanced supplies and the harassing problem of scarcity which impedes production will disappear.

Priorities for Fabricated Structural Steel Work

The demands for fabricated steelwork for the expansion of the existing steel plants in both the public and private sectors, the building of the Bokaro steel plant, railway bridges, heavy electrical and hydro-electrical projects are so great that unless these projects are properly phased, it will not be possible for the existing medium and heavy structural units to design, prepare working drawings and fabricate in accordance with their programmes of requirements. It is, in my opinion, most essential that an order of priority should now be established and steel supplies arranged to suit the fabrication programme of projects with higher priority to avoid all-round confusion.

Decontrol of Steel

As you are aware, except for flat products, which will continue to be in short supply for some years to come, steel has been decontrolled with effect from March 1964, both with regard to price and distribution. This has immediately resulted in an increase in prices of decontrolled sections but we hope that the prices will gradually stabilise at lower levels without affecting the economics of our production.

Board of Management

The Government has been pleased to appoint Mr. E. W. Isaacs as a member of the Board of Management, with effect from the 16th December 1963. Mr. Isaacs was previously member, Engineering, Railway Board, and we are very fortunate to have obtained his services. I know you will all join me in welcoming him to the Board.

Apprentice Training School

The apprentice training school is functioning satisfactorily. Encouraged by this, we have embarked on an expansion of the basic training workshop already established.

I trust you will find this recountal of our plans, programmes and prospects encouraging and agree with the management that we should look to the future with faith and confidence.

Note: *This does not purport to be a record of the proceedings of the Annual General Meeting.*

TEXTILES

(*Concluded from page 744*)

actually needed to meet the industry's requirements fully. In order to ease the cotton supply position, the Government of India is considering a proposal that about five per cent of the raw material required by the mills should consist of staple fibre. Alluding to this move, the Chairman of the Bombay Millowners' Association earnestly pleaded that the proposal be given the most earnest consideration and adopted only after a full trial was given to it. In this connection, he emphasised that the cloth so produced should be acceptable to the consumer from the point of view of its service, life and quality. Mr. Ruia also wanted the Government to examine the question whether staple fibre could be produced in sufficient quantities to meet the combined needs of the art silk and cotton mill industries. Incidentally, he referred to the growing popularity of polynosic fibre. This fibre, according to him, has gained a good deal of popularity in the U.K., the U.S. and Japan and is being used in an increasing volume as a blend with cotton. The cloth produced from blended yarn is claimed to be durable and of soft texture.

While the scope for utilising the polynosic fibre to supplement cotton may be explored, there is no getting away from the urgent need for taking all possible measures to boost cotton production. Mr. Krishnaraj was quite forthright in his remarks on this subject. He said:

"It would be most disappointing, if we were pessimistically to throw up our hands and say that India would never be able to produce all the cotton that she needs and that, therefore, she should seek an alternative in man-made fibres. Is it really conceivable that, with the rising population and the increasing standard of living which is naturally our objective, we will be able to clothe the population adequately by freezing the cotton harvest at its present level and hoping to make up the progressively increasing deficit by man-made fibres? Does it stand to reason that we should fail to exploit to the full the natural advantages which we have in the case of cotton and run after man-made fibres in which we shall always remain behind the advanced countries in respect of both quality and costs, because of their leadership in scientific and technological advance? To do so would be to run away from challenging opportunities into escapist by-paths, and I have yet to know of an instance where escapism has led to the solution of a problem. The purposeful boldness of which I have spoken has no place for such escapism. On the other hand, it signals a call to the authorities to go all out in increasing the production of cotton, thereby enabling the country to reap a rich harvest of foreign exchange."

India possesses all the conditions for growing more cotton. The per-acre yield in India is very poor as compared with what is obtained in other countries. The all-India average yield is less than 100 lbs., as against about 450 lbs. in the U.S. and 550 lbs. in Egypt. The actual yield can definitely be stepped up from this low level through a more systematic and extensive use of fertilisers and irrigation facilities. Excellent results, we are told, have been secured on demonstration plots set up at the research centres at Sirsa in the Punjab and Coimbatore in Madras where the average yields obtained are as high as 670 lbs. and 588 lbs. There is no reason in theory why the achievements in experimental farms should not be feasible on a commercial scale. If the agricultural departments of Central and State Governments will have to shake off their lethargy and play a vigorous part and if fertilisers, water, and credit are made available promptly and adequately, a substantial increase in cotton production should be feasible. But every one who has anything to do with cotton has known these answers for several years past. And yet production of cotton has not been going up at the pace at which it ought to, having regard to the country's requirements of textile fibres. Accordingly, one must be judicious enough to recognise what is feasible in the conditions prevailing in this country and not in theory. By all means, let no effort be spared for increasing the production of cotton. But, at the same time, there is no point in shutting one's eyes to realities and taking an ostrich-like attitude. Moreover, one has to concede that, all over the world, including the U.S., the largest cotton producing country in the world, the use of man-made fibres is growing apace. India cannot hope to escape this universal trend. There may be differences of opinion as to the types of man-made fibres that will appeal to consumers. But that is entirely a different question.

COTTON TEXTILE EXPORTS

It is now obvious that the Government of India's export goal under the third Plan will fall far short of attaining the 800 million yards desired by 1965. Moreover, Indian mill men, in order merely to hold their own on the export market, have found it necessary to cut prices to compete with more daring fabric producers in many other countries. Indian fabric exports last year aggregated just 531,150,000 yards, a bare 4.5 per cent higher than 1962—but well below the 582,440,000 yards exported in 1961. Pricewise, the situation was even more bleak. The 1963 exports were worth a total of Rs. 41.2 crores, only 3.3 per cent greater than in 1962. Looked at another way, the price per yard of these cotton fabric exports has been going down—and down: from 80 nP in 1961 to 79 nP in 1962 and to 77 nP in 1963.

Viewed thus, the Planning Commission's support for rehabilitating and modernising the textile mills and the Central Government's various efforts to stimulate exports through tax incentives and other means seem destined to fail—unless mill men quickly accept the twin challenge that is facing them. The first challenge lies in the undisputed trend in today's world textile markets toward the finer, higher quality varieties. Last year, for instance, fine and superfine cotton exports represented 10.4 per cent of the export total, as compared with 8.6 per cent in 1962 and 6.9 per cent in 1961. The second challenge is the growing potentiality of foreign markets to absorb—and to demand—quality cotton apparel. Exports of apparel rose impressively last year to Rs. 2.538 crores from only Rs. 16.5 lakhs in 1962. Obviously, the more Indian finishing and labour that Indian mills put into a textile before it is exported, the higher the export price will be, and the more the Government will earn in much-needed foreign exchange. It also means, of course, more jobs. And it means higher profits, since mills will have a higher selling price on which to base their quotations to foreign buyers.

One of the reasons why the Indian Government values the assistance the 'Sanforized' trademark offers in stimulating exports—and the way in which fabrics labelled 'Sanforized' are helping the mills to meet the twin challenge that faces them—have become apparent from statistics that have just been made public. Thus, although total exports of Indian cottons have been on an irregular decline, shipments of 'Sanforized'-labelled fabrics to a wide number of foreign countries have enjoyed a steady rise. Indian mills last year exported a total of 10,324,609 yards of 'Sanforized'-labelled fabric. This was 31.2 per cent higher than 1962, and the 1962 figures were 41.07 per cent greater than 1961. Of great importance to the Indian economy is the fact that exports of 'Sanforized'-labelled fabric were worth, on a per yard basis, nearly twice as much as the export price of all cotton fabrics. Last year, the value of 'Sanforized'-labelled fabric exports averaged Re. 1.33 per yard. This compares with the 77 nP per yard general figure mentioned previously.

Contacts which the Sanforized Company has in 49 countries on all five continents have helped Indian exporters to register this enviable record, as most licensees of the 'Sanforized' trademark and most garment manufacturers recognise. In recent months, for example, garment manufacturers were notified of overseas buyers interested in securing garments made of 'Sanforized'-label fabric in Aden, Zanzibar, Dohu, Jeddah, Mauritius, Kuwait, Kampala, Suva, Karachi, Tripoli, London, Adelaide, Nicosia, Valletta, Trinidad, Nargeisa, Dire Dawa and Gothenburg. The Sanforized Company's world-wide experience in textiles has led it to suggest a number of ways for Indian textile exporters to meet the export challenge and improve their own and their country's foreign currency earnings. Among the important rules to promote exports that Indian mill men might adopt are these:

Wherever necessary, establish an office abroad for a permanent representative who should know the local market and can report on its needs to his home office.

Wherever practicable, mills or groups of mills join to export or to share an export agent for particularly hard-to-crack foreign markets. If for competitive reasons, such a union is impracticable, a number of mills could unite to acquire an individual contract. (Over a million yards of 'Sanforized' fabric were recently exported by several Indian mills against a single East German commission).

Wherever pertinent, executives with high salesmanship qualifications should be placed at a senior level to help in guiding the sales activities of the company. Mill managers, financial directors, and other key personnel are rarely skilled in effective salesmanship as well which is a specialised full-time task in itself.

HIGHER PRODUCTION THROUGH BETTER PLANT UTILISATION

T.C.M. EXPERT INDICATES SCOPE

IT is common knowledge that the critical shortage of foreign exchange is one of the most important limiting factors in regard to raising industrial output in India. In this context, maximisation of production per plant assumes special importance. To the extent that a given plant is made to yield greater output, the country will be able to show a larger industrial production for the same outlay. It has been estimated that many Indian plants can increase their output substantially by a little or no increase in investment in fixed assets by better utilisation of the existing plant capacity. This will not only increase production and employment but will also make for higher profit for the individual enterprises concerned. The experience of Western countries can offer little guidance in the matter of plant utilisation, because of the radical difference in the structure of costs and socio-economic factors obtaining in India and the advanced countries of the West. An attempt to find out patterns of plan utilisation in India that are strikingly different from those obtaining in foreign countries has been made by Mr. Morris J. Solomon, a T.C.M. expert, till recently, attached to the Indian Statistical Institute, Calcutta. His findings and recommendations have been now published in book form* under the auspices of the Institute. In this book the author not only discusses the problem of achieving better plant utilisation from the point of view of individual plants and indicates the role the Government should play but he has also drawn up a blueprint for action. The idea presented in this book were set out in a paper on "Patterns of optimum plant utilisation in India," published by the Institute in its series of "Studies Relating to Planning for National Development." According to the author, there are a number of plants in the country now working along the lines suggested by him.

Ample Opportunities

The author starts from an examination of the economics of plant utilisation. The economics of cost and revenue of industrial units in the country, according to him, make an intensive use of plant especially favourable. He takes a typical Indian manufacturing enterprise as one which has a relatively large overhead and is making some profit. When a firm, which can sell its entire production, as almost all Indian firms are in a position to do, at the existing prices, and whose variable costs remain strictly proportional, increases its output through better plant utilisation, its profit increases disproportionately. For example, if the overhead costs are 30 per cent of the total sales (which is not unusual for Indian plants) and variable costs are 60 per cent of the total sales, a 50 per cent increase in output and sales will bring a 200 per cent increase in profit if the variable cost is proportional to output and the price remains unchanged. Many industries in India, especially the newer industries, can sell all they can make at the existing price. There are, therefore, ample opportunities for increasing output with proportional or less than proportional increase in variable cost.

One of the fundamental conditions in India, according to Mr. Solomon, is the scarcity of capital as compared with people. This reflects itself in machinery having a high value relative to the remuneration of the worker. If the value of machinery is expressed at a monthly rental value and the ratio of this monthly value to the monthly remuneration of the operator is computed, one gets a measure of the relative importance of machinery. This ratio is startlingly different in India, as compared with the U.S., as will be seen from the following table:

Monthly costs of a specific machine in India and the U.S.

	Monthly rental value	*Monthly remuneration of operator*	*Ratio of rental value to operator's remuneration*
India	Rs. 2,200	Rs. 150	14.7
U.S.A.	$ 465	$ 300	1.6

It will be seen from the above table that the ratio of monthly rental value to monthly compensation of operation is radically different in India, as compared with the U.S., reflecting a relatively low wage in India. Obviously, with such differences in cost, widely different patterns of staffing and plant utilisation would be warranted in the two countries.

As many as eight approaches to increased plant utilisation are suggested by the author. They are: (1) multi-shift operation, (2) reduction of machine waiting, (3) staggered lunch periods and use of relief men, (4) speed-up of pace of labour through use of incentives with provision for rest periods, (5) preventing idle time due to absenteeism, (6) speed-up of pace of machines, (7) more intensive use of machines through sub-contracting, (8) removal of structural bottlenecks through process or plant modification.

The most straightforward method for increasing production with a fixed plant is the use of more than one shift. Where capital investment is heavy, even if there is no restriction on additional investment by financial limitations or Government policy, multiple-shift operation, according to Mr. Solomon, would be extremely profitable. Contrary to popular belief, he is of the view that the efficiency of the third shift can be fully as good as the first shift, provided shift supervision is in competent hands. Even if the productivity per man or machine is lower, the gain can be substantial, according to the author. A remedy could be found for almost all the difficulties that arise when a plant works third shift. For example, if there is difficulty about quality, one can have tighter inspection, better supervision, special incentives, better lighting with the additional cost of these generally being far less than the value of the increased production. Another measure that can increase production is seven-day operation. Of course, it may require the staggering of days off which may be opposed by workers. It may also require somewhat greater flexibility in management. Multiple-shift operation and seven-day operation do impose greater burdens on management. They, therefore, require excellent co-ordination.

Reduction of Machine-waiting

Explaining the second approach, namely, reduction of machine waiting, the author points out that machine waiting is expensive, particularly if machines are costly and if capacity is not limited by demand or raw material shortage. A reduction in the idling time of machines is likely to be the most productive kind of improvement, especially if it requires merely organisational changes. Examining the causes for excessive idle machine time and suggesting remedies, the author gives many instances. For example, the time the operator is away from the machine for personal reasons is, strictly speaking, the time the machine is waiting for the operator. In order to overcome this loss of productive power, the management should think of measures that involve social relations of the operators as well as technical aspects. The most promising approaches to reducing time that the machine waits for the operator are: staggered lunch periods, use of relief men and speed up of pace of labour through incentives with provision for rest periods. It was found from a study of the distribution of time of five critical hand-fed machines in a Calcutta plant that has a reputation for excellent management, that machines were waiting for operators about 25 per cent of the time. In this particular case an increase in output of these five machines would permit a corresponding increase in output in the whole complex production line without any increase in fixed investment. It is usually practicable and profitable under Indian conditions to convert the time in which the machine waits for the operator into productive time. It is often economical to eliminate such waiting by resorting to more intensive staffing. Instead of one man per machine, it is desirable to have, say, three men assigned to two machines. Such staffing permits the uninterrupted operation of each machine during the lunch period, which itself may be staggered and spread over, say, two hours, with liberal rest periods for each man.

Speed-up of the pace of work is equally important in securing better utilisation of machines. An effective method for speeding up of the pace of work is to introduce a sound incentive payment system. Most Indian firms, which have introduced incentive payments, have been able to obtain a 30 per cent increase in output almost immediately. Where incentive payments have failed to obtain an increase in production, there has generally been a doubt about the good faith of the employer. A combination of suitable incentives and more intensive staffing could especially be effective in increasing plant utilisation.

Speed-up the pace of machines is, it may be noted in passing, a complementary measure. Engineers who have observed Indian industries at close quarters have noted that the pace of machines is often far slower than it need be. This is due largely to deficiency in technical know-how caused by inadequate training. Another reason is the difficulty of obtaining tools and spare parts, especially those that have to be imported.

Prevention of idle time due to absenteeism is equally important. The average rate of absenteeism in plants is as high as 13 per cent in some plants, while the loss of production due to absenteeism is no less than ten per cent. Where total production depends on the uninterrupted flow of all segments, absenteeism is very disruptive. An important measure that can be effective for year-round absenteeism, suggests the T.C.M. expert, is the maintenance of a pool of operators in sufficient number who are capable of filling many different places in the plant to eliminate the loss from such absenteeism.

The foregoing suggestions assume that the fixed plant is unchanged. In many situations, it is possible to increase output by a change in the process of manufacture or by a modification in plant. The most frequent phenomenon is a chain of processes in which total production can be increased substantially if one or a few links are strengthened. By a suitable study of the existing process, the weak links can be identified and the cost of remedial action estimated. Continuous process industries such as chemicals, oil refining and steel production are particularly suitable for this type of analysis and action. The analytical methods of such operation research have been used with great success in these industries in the more developed countries.

Role of Government

Squeezing more production out of existing capacity, which is what more effective utilisation of plant capacity involves, can yield high profits to Indian business. The community as a whole will also benefit immensely. Certainly, this is a development where the needs of society and the interest of the individual fully coincide. Granting that there is good scope in individual enterprises for this kind of activity, the fact remains that, in certain areas of industry, full utilisation is dependent on, or is conditioned by, Government action. For example, many industries in India have installed capacity which is considerably in excess of raw material supply and/or demand. This is a failure of the licensing process. An exception to this is where the indivisibilities and economies of scale are such as to make it more economical to immediately install a larger capacity and operate at less than full capacity for same period rather than do without or employ a decidedly inferior technology. But even such a case implies a failure to arrange for export of the product that could be produced at a very marginal cost.

The implication for practical policy of this is, according to the author, that the licensing authority must frankly recognise that, quite frequently, existing producers can expand production at a fraction of the foreign exchange cost that it would take a new producer to do. Indeed, in many cases, the existing producers need little or no foreign exchange for fixed plant to increase their production while a new producer needs an entirely new plant. In making this suggestion, the author does not mean to suggest that the problem of monopoly should be ignored. But surely, as he points out, there are effective methods for dealing with it other than using foreign exchange when it can be avoided. This is, indeed, a very pertinent suggestion, but one that is being ignored by the Government of India for political and ideological reasons. Consequently, a lot of capital is being wasted in this country.

UNION CARBIDE REPORTS IMPRESSIVE RESULTS

FINANCES AND PROSPECTS ENCOURAGING

A SMART rise in sale proceeds and the gross profit to what can surely be called all-time high levels, and a 2¼ point increase in the dividend are the outstanding features of the results of Union Carbide India Ltd. (Chairman: Mr. J. R. Galloway, Calcutta) for the year ended 25th December 1963. The improved results have been attributed by the Directors to the growing demand for the Company's plastics and chemicals and the increased sales of batteries and zinc products. The turnover, after allowing for excise duty, has expanded by almost 14 per cent from Rs. 10.94 crores to Rs. 12.63 crores, while the gross profit has risen by as much as Rs. 81.60 lakhs to Rs. 332.04 lakhs. The profit-margin (ratio of gross profit to sales) has thus improved from about 20 to 23 per cent even though other expenses, in the main unrelated to the actual level of output or sales, have continued to be on an upward move. Fortunately, the same level of improvement has been maintained in the net profit too, which has risen from Rs. 64.86 lakhs to Rs. 103.47 lakhs, notwithstanding the substantially enlarged prior charges. The provision for depreciation, for example, shows but a marginal increase from Rs. 56.39 lakhs to Rs. 58.82 lakhs but that for taxation is bigger by about 50 per cent at Rs. 169.75 lakhs, as against Rs. 129.19 lakhs for the year before. Of this, normal corporate tax claims only Rs. 139.35 lakhs, while the newly created sur tax has subjected the taxable profits to a further burden of Rs. 30.40 lakhs. From the resulting net profit and the amount brought forward from the previous year, as much as Rs. 74.55 lakhs (as against Rs. 67.80 lakhs last year) have been ploughed back in the form of reserves, leaving an amount of Rs. 33.43 lakhs for payment of ordinary dividends in respect of the year. With a view to facilitating the payment of a somewhat bigger dividend and also to leaving a larger "net" amount in the hands of the shareholders, the Directors have withdrawn Rs. 10.50 lakhs from the tax-exempt reserve. An interim dividend of 75 nP per share subject to deduction of tax was already paid during 1963. The Directors have now proposed a final dividend of 75 nP per share, only half of which will be subject to deduction of tax. The total dividend distributed will, therefore, amount to Rs. 42.00 lakhs as against Rs. 35.00 lakhs last year, leaving Rs. 1.93 lakh as carry forward as against Rs. 4.44 lakhs brought in.

The rapid progress made by the Company during the past four years is well reflected in the following comparative figures:

(In lakhs of rupees)

	For the year ended 25th December			
	1963	1962	1961	1960
Sales (gross)	14,33.08	12,26.10	950.12	822.67
Other income	5.27	6.52	4.46	8.07
Closing stocks of finished goods	112.79	103.81	101.10	78.79
Excise duty	170.31	132.59	95.63	71.10
Raw materials and stores consumed	538.67	461.22	385.61	324.10
Goods for resale	10.87	28.88	45.64	30.69
Other expenses	499.25	467.30	342.15	312.85
Gross profit	332.04	250.44	183.65	168.82

Market price of ordinary shares (in rupees): 1964	1963	1962	1961	1960
High	42.81	44.62	57.00	57.75	59.00
Low	29.87	29.00	43.00	44.12	37.94

In spite of raw material shortages and restriction on the use of electricity and gas, the two battery plants situated at Calcutta and Madras managed to operate on a multiple-shift basis and record levels of production were achieved at each location. Operations at the Eveready Flashlight Company's plant at Lucknow were normal and output was in line with sales demand. The range of products manufactured at the plant was, however, broadened to include several new models of flashlights and industrial components for outside customers. The Metals and Ores Company operated multiple shifts throughout the year and attained the highest annual production of processed zinc since its installation. The production of organic chemicals and polyethylene at the Company's plant at Trombay was satisfactory throughout the year, despite difficulties with respect to the supply of industrial alcohol, which is the primary raw material for the manufacture of these products. Higher operational efficiencies were obtained through process and equipment improvements developed and put into effect during the year under review.

With improved production and higher demand, it is but natural that the sales effected by the Company's various divisions should have increased. The sales, for example, of the consumer products division which is primarily responsible for the marketing of dry batteries and flashlights, were again at an all-time high, though the pattern of growth was somewhat uneven. The division introduced for sale during the year 'C' size batteries of the popular red top construction along with two new types of flashlight cases. The Industrial Products division which handles the sale of polyethylene and chemicals manufactured at Trombay, achieved record turnover for these products during 1963, thanks to the continued heavy demand for polyethylene resins as well as for wide polyethylene film. A substantial quantity of special film was also manufactured and supplied for defence requirements. Demand for the various chemicals manufactured by the Company in most cases exceeded the available supply. Sales of zinc products to customers also showed an increase. During the year polished photo-engraver plate of an improved quality was introduced and received wide acceptance by the trade. Efforts to develop overseas markets were aggressively pursued and, as a result, export-sales increased by approximately 24 per cent over 1962. Various finished products and processed materials were sold to customers in North and South America, the Middle East, South East Asia and Africa.

During the year, a sum of Rs. 27.80 lakhs, as against Rs. 33.80 lakhs, was spent as capital expenditure for new plant and equipment and the replacement of existing facilities. The major expenditures incurred were Rs. 12.30 lakhs on improvements in manufacturing facilities at the existing battery plants, Rs. 8.10 lakhs on further expansion of facilities at the Metals and Ores Company's plant, and Rs. 3.32 lakhs on the new carbon and midget electrode plant presently under construction at Calcutta.

Considerable preparatory work on the last mentioned project has been completed and construction work has now commenced. It is anticipated that the unit will commence production during the latter part of 1964 with full capacity output being realised during 1965. Engineering and design work on the major expansion of polyethylene and chemicals manufacturing facilities at Trombay was also carried on. Field construction will start during the first half of the current year and the expanded plant may be in production in 1966.

Capital expenditure in connection with this expansion and other new manufacturing facilities will, in the aggregate, exceed Rs. 9.00 crores over the next two years. This will be partly met from internal resources, partly through the rights issue of 840,000 shares already made to existing shareholders at a premium of Rs. 4.00 per share in the ratio of three shares for every ten shares held, and partly by long-term borrowings. Two major loans have already been finalised—a dollar loan of Rs. 3.65 crores from the Export-Import Bank of Washington and a loan of Rs. 2.16 crores from the Agency for International Development. Both these loans are repayable over a ten-year period commencing in 1966.

The Company's financial position is quite healthy. The share capital, unchanged at Rs. 280.00 lakhs, all in equity shares of Rs. 10 each, is supported by as much as Rs. 383.47 lakhs in reserves and surplus. As against this position, outside interest aggregates Rs. 560.67 lakhs comprising Rs. 142.06 lakhs in secured loans—of this Rs. 50.00 lakhs are in the form of 6.5 per cent debentures—Rs. 135.52 lakhs in unsecured loans mainly from the Union Carbide group of U.S.A. and Rs. 283.09 lakhs in current liabilities and provision. The loans and liabilities, however, are fully covered on the assets side by the total of current assets, investments and loans and advances standing at Rs. 679.23 lakhs. During the year under review, new assets worth Rs. 28.30 lakhs were acquired, excluding plant and buildings awaiting completion. As a result the block account has increased to Rs. 744.38 lakhs. This has been written down to Rs. 481.13 lakhs which together with Rs. 32.78 lakhs under capital work-in-progress gives a total net block of Rs. 515.91 lakhs.

The present market quotation for the Rs. 10 fully paid ordinary shares of the Company is Rs. 30.62 *cum-div.* On these, the net yield at the *ex-div.* price works out to 4.3 per cent per annum.

Reynolds Metals Company, U.S., has reported current year's first quarter earnings at $7.59 million, showing a 50 per cent increase over $5.05 million in the comparable 1963 quarter. Sales have totalled $145.05 million, a gain of 13 per cent over $127.86 million recorded in the first quarter of 1963. Net income has equalled 39 cents a share (against 24 cents in the first quarter of 1963) on the 16,518,369 shares outstanding.

SHREENIWAS COTTON'S PROFIT SPURTS

DIVIDEND RAISED SLIGHTLY

WITH a barely 9 per cent increase in gross sales from Rs. 472.42 lakhs to Rs. 513.67 lakhs, the Shreeniwas Cotton Mills Ltd. (Managing Agents: The Marwar Textiles [Agency] Ltd., Bombay) has been able to show a big improvement of over 38 per cent in its gross profit from Rs. 62.44 lakhs to Rs. 86.51 lakhs during the year ended 31st December 1963. The spurt in profit contrasts with a decline of more than Rs. 20 lakhs recorded in the previous year even though the turnover had expanded further by Rs. 24.55 lakhs. Whereas the previous year's setback in profit had been attributed by the Directors partly to the payment of an additional Rs. 11 lakhs by way of gratuity and retrenchment compensation to introduce rationalisation in the various departments of the mills, the recovery during the year under review, in spite of a continuous and steep increase in costs, is said to have been due primarily to the improved efficiency brought about by the planned programme of modernisation and renovation carried out over some years past. Another reason for the recovery is the big drop in closing stocks from Rs. 77.91 lakhs to Rs. 53.69 lakhs (the lowest in the past five years or so). Significantly, again, if the excise element were to be excluded from sales turnover—it was Rs. 125 lakhs as against Rs. 73.72 lakhs in the year before—the net sale proceeds show a slight setback from Rs. 398.70 lakhs to Rs. 388.67 lakhs. The Directors, however, state that the year's turnover and profit have been the highest since the Company's inception in 1934 and that the results compare quite favourably with those of any progressive unit in the textile industry.

The improved results, attained chiefly through modernisation and renovation, have benefited the workers, too, inasmuch as the average earnings per operative have increased further from Rs. 2,967 to Rs. 3,010 during the year. At the same time, the total of staff expenses, which in the previous year had got inflated on account of the payment of Rs. 11 lakhs by way of gratuity and retrenchment compensation, has come down from Rs. 157.53 lakhs to Rs. 145.90 lakhs. With the essential provisions being higher, especially the one for taxation which has gone up by Rs. 10.10 lakhs to Rs. 23.50 lakhs, the net profit shows an increase of only Rs. 8.84 lakhs to Rs. 30.94 lakhs. Nonetheless this increase has enabled the Directors to restore a part—one-third, to be precise—of the six-point cut to 14 per cent in the ordinary dividend, which had been imposed in the past year following a setback in profit and an increase in the paid-up capital to Rs. 100 lakhs by the issue of 10,000 new shares of Rs. 100 each at par in May 1962. At 16 per cent, the dividend for the year under review is thus higher by two points. At the same time, against a depletion of Rs. 1.63 lakh in the reserves position made in the previous year, they have been able to plough back as much as Rs. 8.50 lakhs during the year under review. The surplus carried forward is Rs. 48,276, as against Rs. 51,723 brought in.

The following table compares the Company's progress since 1960:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sale proceeds of cloth, yarn and waste	513.67	472.42	447.87	447.30

SYNOPSES OF COMPANY REPORTS

Murphulani (Assam) Tea Co., Ltd.

(*Secretaries & Treasurers :* Messrs. Andrew Yule & Co., Ltd., Calcutta.)

Annual General Meeting—13th May 1964.

Working Results :

	For the year ended 31st December (In thousand rupees)	
	1963	1962
Sale proceeds of tea	10,10	17,11
Closing stock of tea	2,87	1,31
Gross profit	2,95	6,31
To Secretaries and Treasurers' commission	15	41
Transfer to depreciation	85	90
To depreciation underprovided on block assets sold	5	Nil
Transfer to provision for taxation	1,02	3,06
Net profit	83	1,94
Excess tax provision written back	25	Nil
Appropriations :		
Transfer to general reserve	35	80
,, ,, development rebate reserve	1	2
Proposed dividends (taxable) Preferred	46 (23.33%)	61 (30.63%)
ordinary	31 (17½%)	44 (25%)
Carry forward	35	36

Extracts from the Directors' report : The taxation provision is calculated in accordance with the provisions of the 1964 Finance Bill.

The preferred ordinary dividend of Rs. 2.313 per share, which it is recommended should be paid, includes the additional dividend to which these shares are entitled under the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

Rainfall for the year of 199 cms. compared with an average of 204 cms. for the previous 10 years but extremely dry conditions obtained during the first part of the year. Mainly for climatic reasons, a crop of only 1,695 quintals was secured as against 1,714 quintals in 1962.

A high standard of manufacture was maintained throughout the season, and, although the crop sold at Rs. 6.82 per kg. as compared with Rs. 8.41 per kg. the previous year, the reduction represents much less favourable market conditions, and not a decline in the quality of teas produced.

Capital expenditure during the year totalled Rs. 2,04,373, of which the construction of a new fermenting room, staff and labour housing and expenditure on the extension of the tea area each represent approximately one-third of the total. Planting conditions towards the end of 1963 were more favourable than last year, and an extension of 4.85 hactares was put out.

Estimates for the current season have been framed for a crop of 1,800 quintals. In the light of crops actually secured in the past, this figure is considered more realistic than the estimate of 2,000 quintals for 1963. Given reasonable climatic conditions, it is hoped that the current year's estimate will be exceeded.

Accounts in brief as at 31st December 1963 are as under :—

Liabilities	Rs.	Assets	Rs.
Capital*	3,75,000	Gross block	23,57,605
Reserves and surplus	10,02,404	—Depreciation	9,95,523
Other liabilities	8,60,460	Net block	15,71,032
		Current assets	5,97,274
		Investments	2,993
		Cash	66,515
Rs.	22,37,864	Rs.	22,37,864

* Paid up capital consists of 20,000 Preferred Ordinary shares of Rs. 10 each and 17,500 Ordinary Shares of Rs. 10 each. Of the above 12,500 ordinary shares of Rs. 10 each are allotted as fully paid up Bonus shares through capitalisation of general reserve.

Raipur Manufacturing Co., Ltd.

* Only a sum of Rs. 211.

Extracts from the Directors' report : The rate of contribution to the Provident fund for employees, has been raised from 6¼ per cent to 8 per cent with effect from 1st December 1963. The dearness allowance has been raised owing to its linking with a revised cost of living index. The Bonus Commission appointed by the Central Government has made several recommendations for determining bonus, one of which is for accepting the total wage paid to the employees as a base for determining bonus. This is a departure from the base of basic wages hitherto adopted. This will increase the quantum of bonus. All these factors will increase the manufacturing cost in the coming years.

The Budget proposals for the year 1964-65 have raised the excise duty on yarn used in the production of cloth and also imposed a dividend tax related to the total amount of dividend paid. This will be an additional burden.

During the year, a sum of Rs. 38,46,722 has been spent on buildings and installations of machinery and equipments on Mill's reorganisation and renovation programme. The main items covered by this expenditure are the additions and alterations to the buildings and 33 *Ring Frames*, 48 *NMM-Ruti Automatic Looms*, 1 *High Speed Yarn Singeing machine*, *High Draft Conversion materials* for 5 *Ring Frames* and materials for the *Humidification* and *Ventilation Plants*. In the modernisation programme, the installation of 30 *Ring Frames* and 48 *NMM-Ruti* automatic looms was completed and 2 shifts working of all these *Ring Frames* and looms started in the last quarter of the year under review.

The installed capacity of the Mill is 36,612 *Ring Spindles*, 1,708 *Doubling Spindles*, 592 *Ordinary Looms* and 96 *Automatic Looms* with complete *Dyeing* and *Bleaching Plants*.

Accounts in brief as at 31st December 1963 are as under :—

Liabilities	Rs.	Assets	Rs.
Capital*	60,00,000	Gross block	2,20,37,606
Reserves and surplus	91,09,788	—Depreciation	1,03,95,212
Other liabilities	74,45,461	Net block	1,11,42,394
		Current assets	91,99,358
		Investments	20,51,008
		Cash	1,62,489
Rs.	2,25,55,249	Rs.	2,25,55,249

* Paid up capital consists of 5,000—4½ per cent. cumulative preference shares of Rs. 100 each; 5,000—4½ per cent 'B' class redeemable cumulative preference shares of Rs. 100 each and 50,000 ordinary shares of Rs. 100 each. Of the above shares, all 10,000 preference shares and 45,000 ordinary shares have been allotted by way of fully paid up Bonus shares by way of capitalisation of reserves.

Jawahar Mills Ltd.

(*Managing Agents :* Messrs. Umaiyambika & Co., Salem.

Twenty-seventh Annual General Meeting—14th May 1964.

Working Results :

	For the year ended 31st December (In thousand rupees)	
	1963	1962
Sales	1,21,93	99,51
Closing stock	21,00	38,71
Gross profit	12,43	15,22

Transfer to depreciation	3,99	3,66
,, ,, provision for taxation	3,00	5,47
Net profit	4,79	5,22
Appropriations :		
To payment of Bonus for prior years	1,47	2,38
,, donations and charity	2	15
,, electricity charges for prior years	4	Nil
,, income tax for prior years	63	Nil
Transfer to development rebate reserve	79	11
Proposed dividends (taxable) equity	2,03 (12%)	2,03 (12%)
Carry forward	4	24
Market value of equity shares (in rupees):	1963†	1962
High	12.63	13.25
Low	9.58	12.63

† Upto 24th April 1964.

Extracts from the Directors' report : On 31st December 1962, there was a stock of finished goods to the extent of Rs. 21,70,987. As the finished goods are valued at market rate, the profit on sale effected in the year of account has been taken credit for in 1962 itself. Therefore, in the year of account though the turnover has increased from Rs. 98,30,327 to Rs. 1,20,69,658, no profit accrued to the Company in respect of Rs. 21,70,987 during the year of account. As on 31st December 1963, the stock of finished goods was only Rs. 5,92,005. The fall in the profit is mainly due to the aforesaid reason. Further, foreign cotton had to be purchased at a very high rate from other mills, owing to the insufficiency of the import quota granted to the Company.

Accounts in brief as at 31st December 1963 are as under :—

Liabilities	Rs.	Assets	Rs.
Capital*	16,91,930	Gross block	92,35,702
Reserves and surplus	15,77,031	—Depreciation	54,03,783
Other liabilities	57,34,805	Net block	38,31,919
		Current assets	47,29,793
		Investments	39,300
		Cash	4,53,654
Rs.	90,54,666	Rs.	90,54,666

* Paid up capital consists of 3,38,386 equity shares of Rs. 5 each. Of the above 2,44,386 equity shares are allotted as fully paid up Bonus shares by capitalisation of reserves.

Bombay Oxygen Corporation Ltd.

(*Managing Agents :* Messrs. Ruia Chinai & Co. Private Ltd., Bombay.)

Third Annual General Meeting—11th May 1964.

Extracts from the Directors' report for the year ended 31st December 1963 : Inauguration : Smt. Vijayalakshmi Pandit, Governor of Maharashtra formally inaugurated the oxygen plants on 6th June, 1963.

Progress : Oxygen and Acetylene Cylinders have been received from abroad. The trial runs of the Acetylene Plant commenced on 10th March 1964. The commissioning of this plant was delayed due to non-availability of cement and A.C. Sheets in time and other unavoidable circumstances. As the Government approval for the engagement of the German Technicians was delayed for a long time, the erection of the acetylene plant was taken up by the Company's own technicians. The German Technicians have come only for checking the erection work done by the Company's technicians and putting the plant for trial production and for handing it over. They have been thoroughly satisfied with the way the erection work has been carried out and to that extent the technical staff deserve praise. The output of the oxygen gas was 1,60,439 cubic meters during the year. The Oxygen Plants could not be run at full capacity because the acetylene plant was not ready. All these teething troubles are being overcome and the Directors are confident that the working for the current year will be far better.

The Industrial Licence for the manufacture of Welding Electrode is expected to be received shortly. The Company has been appointed as one of the distributors of Burmah-Shell for marketing *Liquid Petroleum Gas* which is used with oxygen gas for light cutting, flame and other similar uses.

Accounts : During the year a sum of Rs. 1,79,066 has been transferred to "Expenses During Construction Account," making the total of such expenditure to Rs. 8,31,437. As the factory went into production during the year under report this entire expenditure has now been capitalised and allocated to various heads of accounts. Depreciation amounting to Rs. 3,14,124, (inclusive of Rs. 28,480 for the previous years) has been provided in accordance with the provisions of Section 205(2) (*b*) of the Companies Act, 1956. A sum of Rs. 1,54,272 has been brought forward to which Rs. 597 being the excess provision for taxation in respect of previous years has been added. Against this the adjustments shown above have been made leaving a loss of Rs. 2,03,863 which is being carried over to next year's accounts.

The development rebate amounts to Rs. 11,60,730 which has not been provided for in the accounts due to the loss.

Accounts in brief as at 31st December 1963 are as under :—

Liabilities	Rs.	Assets	Rs.
Capital*	1,48,74,750	Gross block	97,77,580
Other liabilities	6,87,283	—Depreciation	3,14,124
		Net block	94,63,456
		Block in progress	11,04,239
		Current assets	10,73,007
		Cash	35,05,564
		Miscellaneous expenditure	2,10,904
		P.L. % Deficit	2,03,863
Rs.	1,55,62,033	Rs.	1,55,62,033

* Paid up capital consists of 1,50,000 equity shares of Rs. 100 each. Calls in arrears amount to Rs. 1,25,250.

Savamalai Estates Ltd.

(*Secretaries & Treasurers :* Messrs. Peirce Leslie & Co., Ltd., Coimbatore.)

Thirty-fourth Annual General Meeting—16th May 1964.

Working Results :

	For the year ended 30th November (In thousand rupees)	
	1963	1962
Income from coffee crop	9,35	5,21
Closing stock	80	1,05
Gross profit	2,38	1,62
To Secretaries and Treasurers' remuneration	16	11
Transfer to depreciation	28	27
,, ,, provision for taxation	91	62
Net profit	1,03	62
Transfer from general reserve	Nil	2
Appropriations :		
Proposed dividend (taxable) equity	96 (17½%)	83 (15%)
Carry forward	7	8
Market value of equity shares (in rupees):	1964†	1963	1962
High	4.50	4.55	4.00
Low	4.45	3.50	3.66

* Only Rs. 699. † Upto 24th April 1964.

Extracts from the Directors' report : Crop : The coffee crop harvested was 243.314 tonnes (1961-62—206.926 tonnes) and this has been valued at Rs. 2.25 per point.

Future Prospects : The Directors originally estimated the 1963-64 crop at 245 tonnes, of which 65 tonnes was *Arabica* and 180 tonnes *Robusta*. Present indications are that the Company may harvest over 300 tonnes made up of about 86 tonnes *Arabica* and about 214 tonnes *Robusta*. It is estimated that this crop will be harvested at an estate cost of Rs. 1,603 per tonne and an all-in cost of Rs. 1,794 per tonne.

Accounts in brief as at 30th November 1963 are as under :—

Liabilities	Rs.	Assets	Rs.
Capital*	5,50,170	Gross block	9,98,960
Reserves and surplus	3,29,033	—Depreciation	2,15,317
Other liabilities	2,78,300	Net block	7,96,086
		Current assets	1,59,558
		Investments	1,001
		Cash	2,01,758
Rs.	11,58,403	Rs.	11,58,403

* Paid up capital consists of 2,75,085 equity shares of Rs. 2 each. Of the above shares, 1,33,390 shares were allotted as fully paid up by way of Bonus shares through capitalisation of reserves.

COMPANY AFFAIRS

(*Concluded from previous page*)

erected and the remaining 5,000 will be installed before the end of the current year. The Government has allowed the Company another 6,700 spindles which have been ordered and will be put up during the next year. It is also proposed to raise the combing capacity by erecting three Whittin's combing machines. Plans are also under consideration to install more automatic looms. The total addition to machinery during the current year is expected to be about Rs. 48 lakhs.

Following a steady switch-over to finer counts over the past few years, the pattern of cotton consumption of the Company has changed substantially and foreign cotton now constitutes about 80 per cent of its total consumption. The Directors state that the Company is fully covered in respect of foreign cotton for the current year. They believe, however, that, with a threefold increase in the excise duty on finer counts of yarn in the current year's budget and a further rise in the cost of production of textile mills in Bombay owing to the burden of higher dear food allowance, privilege leave and casual leave to workers, the industry's earnings would be affected if the selling prices of cloth were to be pegged at the present levels.

The Company's paid-up capital, including Rs. 4.80 lakhs in 4 per cent, tax-free, redeemable cumulative preference shares of Rs. 100 each, is unchanged at Rs. 104.80 lakhs. It is supplemented by Rs. 95.34 lakhs in reserves and surplus. The loan capital, comprising Rs. 39.72 lakhs in 6.5 per cent (1970) debentures and the rest in bank loans, has receded slightly from Rs. 161.99 lakhs to Rs. 160.25 lakhs. Taking only the banks and current liabilities and provisions, the total short-term, indebtedness to outsiders amounts to Rs. 251.30 lakhs, as against which current assets, loans and advances aggregate Rs. 220.05 lakhs and investments, including Rs. 9.38 lakhs in immovable property, stand at Rs. 91.22 lakhs, out of which Rs. 67.94 lakhs are in quoted shares and securities which command a market value of Rs. 95.89 lakhs. The gross block, which has expanded during the year from Rs. 275.65 lakhs to Rs. 319.35 lakhs, has been written down to a net value of Rs. 179.15 lakhs.

Currently, the Rs. 100 fully paid ordinary shares of the Company are quoted at Rs. 242 *cum-div.* and offer a net yield of 4.1 per cent per annum.

NEWS IN BRIEF

INDIA imported last year (1963) 4.56 million tonnes of foodgrains worth about Rs. 183.60 crores.

The report of the German technical team on measures to run the Rourkela steel plant more efficiently has just been received by the Government of India.

The Central Government has decided not to extend the Employees Provident Funds Act 1952 at this stage to smaller establishments employing less than 20 persons.

Following mumerous representations, the Union Government has extended the last date for payment of compulsory deposits up to the end of June next.

The State Trading Corporation is importing textile spinning, weaving preparation, weaving and finishing textile machinery worth about Rs. 10 crores from the United Kingdom.

The Union Government has decided to set up a single integrated Corporation to manage the various aircraft production projects under the Union Defence Ministry.

The Indian Bureau of Mines has estimated the reserves of iron-ore and manganese-ore deposits in Goa at 525 million tonnes and six million tonnes, respectively. The reserves of ferro-*genous manganese* are placed at ten million tonnes.

The State-owned Heavy Electricals plant at Bhopal has been authorised to issue further capital amounting to Rs. 3 crores for financing its civil engineering works, purchase of transport vehicles, machinery and equipment, training of engineers, etc.

It is proposed to install a coal gasification pilot plant at the Regional Research Laboratory at Hyderabad. The data furnished by this plant may help later in establishment of large commercial plants for utilising low grade coal by gasification.

Work on the Koyali Oil refinery is progressing according to schedule. The first phase of production would begin by the end of this year. The capacity of the refinery is one million tons which is expected to be doubled by the middle of 1965.

The Union Minister for Labour and Employment, Mr. D. Sanjivayya, has requested the Chief Ministers of States to revise as expediously as possible the minimum rate of wages wherever they are less than a rupee per day at least a rupee.

The question of continuing the managing agency system will come up before the Union Government within next three months and also before the Monopolies Commission, according to Mr. R. C. Dutt, Chairman of the Company Law Board.

The Madras Government has constituted a technical committee to draw up a list of medium and small-scale industries which could be based on the by-products of Neyveli lignite. A laboratory to carry out research in this regard has already been opened by the Neyveli Lignite Corporation.

The Ford Foundation has made a grant of $954,800 to the Union Ministry of Home Affairs for improving the means of collecting and analysing population statistics. The new grant is proposed to be used for establishing a Central Unit for research and training in improved means of collecting population statistics. Pilot population research units will be set up in seven States.

The Government of India is thinking of putting up at Dehra Dun a pilot plant for producing sugar from sugar beet. The experiments conducted so far indicates that sugar content in beet is about 15 per cent. There are, however, practical difficultics in the processing of sugar. Moreover, sugar beet is not grown as a commercial crop anywhere in India.

A three-year *trade agreement* has been concluded for the first time between the Governments of India and South Vietnam. Under the agreement, India will export engineering goods, machinery—particularly paper, sugar, oil mill and tea processing machinery—chemicals and pharmaceuticals, and jute products in exchange for commodities such as rubber and timber.

The Union Ministry of Petroleum and Chemicals is believed to have tentatively decided to set up three medium sized refineries at Tuticorin, Kandla and Marmagoa by the end of the fourth Plan. The three refineries are likely to be commissioned only during the fifth Plan period, though construction work will start in the third year of the fourth Plan.

Thanks to the studies on coal petrography and coal constitution conducted at the coal Fuel Research Institute of Jealgora, it has now been found possible to feed steel plants in the mixed coal. This practice will ensure economy in the use of coking coal for blast furnaces. The Durgapur steel plant, it is learnt, will shortly take up mixed charging of coal by altering the existing crushing practice.

The voluntary *amalgamation* of small colliery units with larger units has made little headway owing to the poor enthusiasm shown by small colliery owners. Stating this, Mr. C. Subramaniam, Union Minister for Steel, Mines and Heavy Engineering, disclosed in the Lok Sabha recently that this Government was considering the question of bringing about compulsory amalgamation of small mines.

Several recommendations have been made by the Union Ministry of Petroleum and Chemicals bearing on development prospects of petro-chemicals industry. These include, *inter alia*, constitution of a special Cabinet sub-committee to keep under review the entire field of petroleum and petro-chemical development, setting up of a high-level permanent technical working group to advise the Government on this sector of the economy, and inter-corporate structure for the industry likely to be most suited to a proper organisation of the industry.

An official delegation, led by Mr. Y. T. Shah, Joint Secretary, Union Finance Ministry, left this week for Prague to discuss with the Government of Czechoslovakia the items and conditions of the second line of credit recently offered by it. The credit is for financing a number of projects in the heavy engineering field, including further expansion of factories for heavy power equipment and for boilers at Hyderabad and Tiruchi. These projects, together with the foundry forge and the heavy machine tools project at Ranchi, are already being implemented by utilising the first credit of Rs. 23.1 crores.

A high power inter-ministerial board with a full-time Chairman, *is proposed to set up to co-ordinate* various activities for achieving the target of 25 to 30 million tons of iron ore export by 1972 and for meeting the internal demand of iron ore, according to Mr. Manubhai Shah, Union Minister for International Trade. The board will consist of secretaries or other senior officials of the Ministries of Mines, Railways and Transport for co-ordinating all relevant development activities such as mining, highways, railways, loading and other facilities at the ports. The Chairman of the board will have the status of a Secretary or Additional Secretary to the Government. The board will report periodically to the Cabinet, the Planning Commission and the Ministries concerned.

With the development of the drugs and pharmaceuticals industry in India, imports have been declining steadily. The total value of drugs and pharmaceuticals actually imported in the financial year 1963-64 was no more than Rs. 5.22 crores, as against Rs. 9.24 crores in 1962-63 and Rs. 11.30 crores in 1961-62. The total production (in terms of value) of pharmaceuticals has increased from Rs. 11 crores in 1948 and Rs. 85 crores in 1958 to Rs. 100 crores in 1962. With the commissioning of the three public sector plants of the Indian Drugs and Pharmaceuticals Ltd. and a few more in the private sector, the industry is bound to achieve the third Plan target of Rs. 175 crores. Establishment of adequate capacities to meet the Plant targets has already been approved.

Imports of stainless steel cuttings of defectives are not allowed against import licence or licences for "*prime stainless steel sheets*" issued by the Controller from his licensing offices in Calcutta, Bombay, Madras and New Delhi. The facilities allowed in the Controller's public notice of 6th December 1963, for imports of tool and alloy steel are not applicable to the import licence for "prime quality stainless steel sheets plates strips circles." However, as the standards of stainless steel sheets have not yet been fixed up in the country and standard dimensions differ from country to country, import of prime quality steel sheets shall be according to the standards of the country from which the import would be made.

* * * *

From Abroad

China maintained its position as the chief buyer of Pakistan cotton in 1963-64, the quantity actually purchased being 302,815 bales as compared with 76,382 bales in the previous year.

Two leading Japanese construction firms, Kashima and Taisei, have signed a $14 million contract for an office building in Djakarta. This building will be the tallest one in Indonesia.

The maximum rate of interest on trading bank overdrafts has been raised by ½ per cent to 7 per cent in Australia, as a further measure to check the fast rate of economic expansion. The next stage in the Government's programme is expected to be a rise in the long-term bond rate on new Federal loan.

A 32-member Dutch Economic Misson (Leader: Mr. Sidney J. Van den Bergh, Chairman of Holland's Central Chamber of Trade Promotion) is now on its way to Communist China, to explore the possibilities of increasing trade between China and Holland. The Mission has been invited by the China Council for the Promotion of International Trade.

Industrial output in Russia during the first quarter of 1964 was higher by about 8 per cent over the same quarter last year. The percentage increase was 20 in fertiliser production (5.5 million tons) 50 in herbicides and insecticides, 26 in synthetic resins and plastics (171,000 tons), 14 in artificial and synthetic fibres (86,300 tons), 10 in tyres, 8 in agricultural machinery, 12 in chemical equipment and electric power, and 7 in coal and steel.

Under a decree published recently, importers in Italy will be required to pay for goods imported within 30 days of their arrival in the country. Previously, payment had to be effected within 360 days. The Government has introduced restrictions on payments for imports of durable consumer goods, including cars. Other imports affected by the decree are refrigerators, washing machines, other domestic electric household appliances, radio and television sets, motor cycles, cine cameras, etc.

Jamaica and the F.A.O. World Food Programme have agreed on food aid worth nearly $1 million for a watershed management project on the island. Jamaica had asked for aid to protect the catchment areas of its rivers from losses caused by successive periods of droughts and floods coupled with improper use of land. It plans to grow trees on non-agricultural land, build minor engineering works on rivers and streams, and to start planned farming on land suited to agriculture. Initially, work would begin in two areas. One is the Cane river watershed of about 2,600 hectares and the other is the Upper Rio Minho watershed of about 8,800 hectares. Food aid—more than 2,000 tons of wheat and maize flour, dried and canned fish and meat, cheese, skimmed-milk powder, butter oil and pulses—supplemented by local food, would provide rations for 14,100 persons for two years. It would compensate for the temporary loss of output resulting from the change in land-use methods and held to improve family health and working efficiency. The cost of food to the World Food Programme is $868,000 shipment, insurance and supervision raise the total cost to $957,000.

A loan equivalent to $3.1 million has been made by World Bank to Peru for the construction of a new port at Paita. The Bank of America, New York, Fidelity-Philadelphia Trust Company, Grace National Bank of New York, and the Royal Bank of Canada Trust Company, New York office are participating in the loan, without the World Bank's guarantee, for a total of $160,000 representing the first four maturities which fall due between April 1968 and September 1969. The loan is for a term of 25 years and bears interest at the rate of 5¼ per cent per annum, including the 1 per cent commission which is allocated to the Bank's special reserve. Amortisation will begin in March 1968.

The Government of Pakistan has floated the National Shipping Corporation with an authorised capital of Rs. 25 crores and an issued capital of Rs. 1.60 crore. Of the issued capital, the Government has subscribed Rs. 40 lakhs, leaving Rs. 1.20 crore for public subscription in both East and West Pakistan. The Corporation will operate initially a fleet of 10 cargo vessels, but all fresh acquisitions of ships needed for expansion of mercantile fleet will accrue to the Corporation except those already committed to existing companies for replacement. The Corporation has already commenced operations on the U.K. continent route with three vessels; it will expand to other international routes subsequently.

Production of special steels for a number of key industries in Britain including those manufacturing automobiles, aircraft and machine tools, has been adversely affected by a world-wide shortage of molybdenum. In an effort to ease the situation, the Board of Trade has asked the Treasury to sanction a temporary suspension of all import duties on the material. Meanwhile, attempts are being made to persuade the U.S. Government to release some supply from its stockpiles. Imports of molybdenum from Commonwealth countries are duty free, whereas those from E.F.T.A. countries are charged at 13½ per cent. Small quantities are available in Finland, Norway, Mexico, Chile and Canada, as a by-product of copper production in some cases. The British Steel companies are also said to be trying to secure supplies from these countries as well as from Russia.

World consumption of oil rose by 8 per cent to 1.215 million as compared with a rise in production of 7 per cent to 1.248 million tons during 1963, according to the Statistical Review of the World Oil Industry. These figures are in contrast to the average figures for the last five years which show that comsumption and production have been rising at the same time. The bulk of the rise in output has come from the Middle East which contributed over 30 million tons more than in 1962. Shipments from Libya was more than doubled to 21 million tons and the U.S. produced 14 million tons more. The fastest rise in consumption took place in Japan where demand for oil showed a 28 per cent gain to 61 million tons. E.E.C. countries took 24 million more tons, over 15 per cent more than last year.

PERSONAL

MR. G. D. Birla, a leading industrialist, has left for Europe and the U.S. on a business tour.

Mr. S. K. Handoo, a Director of Voltas Ltd., has been appointed Chairman of the Scotish Indian Machine Tools Ltd., a subsidiary of Voltas Ltd., Bombay.

Dr. N. V. Rajkumar, at present Ambassador of India in Senegal, has been appointed India's Ambassador to Poland. He is expected to assume charge in July next.

Mr. K. Padmanabhan, General Sales Manager, The Dunlop Rubber Co. (India) Ltd., has been appointed Sales Director of the Company.

Mr. Nawab Sigh, a former Secretary to the Union Ministry of Information and Broadcasting, has been appointed Chairman of the Punjab State Electricity Board.

Mr. Chandrakant T. Shanghvi and Mr. Jhamandas Thakurdas Talreja have been elected President and Vice-President, respectively, of the Bombay Sugar Merchants' Association Ltd., for the current year.

Mr. P. V. Mackay of Madura Mills has been elected Chairman of the Southern India Millowners' Association for the year 1964. Mr. S. R. P. Ponnuswamy Chettiar and Mr. G. R. Govindarajulu have been re-elected Vice-Presidents.

Mr. Ramdas Kilachand has been elected President of the Bombay Oilseeds and Oils Exchange Ltd., for the current year. Mr. Chandulal Kasturchand and Mr. Gokulchand J. Agrawal have been elected senior Vice-President and Vice-President, respectively.

Mr. A. L. Mudaliar of Imperial Chemical Industries (India) Private Ltd. and Mr. A. Fernie, of the Indian Cable Company Ltd. have been elected Chairman and Vice-Chairman respectively, of the Calcutta Import Trade Association for the year 1964.

Mr. Russell De Young, President, Goodyear Tyre and Rubber Company (U.S.), has been appointed Chairman and Chief Executive Officer of the Company *vice* Mr. E. J. Thomas who relinquished the post recently after 48 years' service. Mr. Thomas will, however, continue to be a Director and Chairman of the Executive and Finance Committee of the Board of Directors. Mr. Victor Holt, Executive Vice-President, will succeed Mr. De Young as the new President of the Company.

UNION BANK OF INDIA LIMITED

CHAIRMAN, MR. DEVJI RATTANSEY, ON CREDIT CURBS

EXPANSION THIS YEAR MAY EXCEED Rs. 350 CRORES

THE reversal of the Reserve Bank's credit policy from one of liberalisation to one of stringency within four months from the start of the current busy season was appreciated by Mr. Devji Rattansey, Chairman of the Union Bank of India Ltd., in the course of his speech at the Forty-fifth Annual General Meeting of the Bank, held at Bombay on 20th April 1964. Indeed, Mr. Rattansey said that, while the later revision might have caused embarrassment to banks because it came at the peak of the busy season, the early relaxation came to many as a surprise. He welcomed the revival of credit curbs and promised that his Bank would fully abide by them in view of the pretty sharp rise in bank credit during the current busy season. If the present trend which already showed an increase of Rs. 330 crores to a little over Rs. 1,800 crores continued, he stated, the total credit expansion during 1964 might well exceed Rs. 350 crores, or even Rs. 375 crores.

The following is the full text of Mr. Rattensey's speech:

GENTLEMEN,

I have great pleasure in welcoming you to this forty-fifth annual general meeting of the shareholders of the Bank. The Directors' report for the year ended 31st December 1963, together with the audited balance-sheet and profit and loss account as at that date, have been in your hands for some time and with your permission, I take them as read.

The business of the Bank, as the balance-sheet and profit and loss account disclose, showed satisfactory progress.

The deposits of the Bank which stood at Rs. 42.62 crores at the end of the year 1962 increased to Rs. 52.00 crores at the end of the year under review—an increase of approximately 22 per cent.

Cash on hand and balances with banks together with our investments in Government and other trustee securities, in all aggregating Rs. 22.10 crores, bear a liquidity ratio of 42.50 per cent to the total deposits. The Bank's investments in Central and State Governments and other trustee securities stood at Rs. 13.18 crores, as against Rs. 10.10 crores in the previous year. Of these 84 per cent of the securities mature within five years and 93 per cent within ten years.

R.B.I.'s Credit Policy

The Reserve Bank of India rate, which was increased from 4 to 4½ per cent on 2nd January 1963, remained unchanged during the year. However, during the period under review, the Reserve Bank of India thrice changed its policy of credit controls.

Following the Chinese aggression in October 1962, amongst the various steps taken by our monetary authorities to ensure stable economic conditions both for the development and defence of the country, was the imposition of a ceiling on the accommodation given by the Reserve Bank of India to commercial banks, at 100 per cent of their statutory reserves, that is, just 3 per cent of a bank's total deposits. The borrowings in the first two slabs of 25 per cent each was at 4 per cent and 5 per cent respectively and the balance at 6 per cent. In January 1963, the Bank Rate was increased by ½ per cent and a two-tier system of borrowing was introduced whereunder the borrowing in the fist slab of 50 per cent was at the Bank Rate and in the second slab at 6 per cent. Accommodation over this limit was permitted only with the previous approval of the Reserve Bank and that too at a penal rate. At the beginning of the current busy season, the monetary authorities liberalised the policy of credit controls and raised the ceiling on accommodation to commerial banks to 150 per cent of their statutory reserves.

At a time when the price situation in the country was disturbing, industrial production was more or less stagnant and progress of agricultural production was far from satisfactory, this liberalisation in the credit policy came to many as a surprise. Indeed, within a short period of four months, the monetary authorities had to revise their liberal credit policy and to reduce the quota of borrowings by commercial banks from the Reserve Bank from 150 per cent to 100 per cent of their statutory reserves. Banks have now also been advised to reduce their clean advances to sectors other than industrial units, to re-examine their advances portfolio, and to give all necessary financial assistance to the industrial sectors in order to boost the production of essential commodities and goods, as also for the defence and exports. This revision of policy at the peak of the busy season is likely to cause embarrassment to banks as they may be compelled to reduce the commitments already made by them on the basis of the previous policy.

Present Trend Inflationary

During the current busy season, scheduled banks' credit expanded by about Rs. 330 crores and stands today a little over Rs. 1,800 crores. If the present trend continues, the total credit expansion during 1964 may exceed Rs. 350 crores, or even Rs. 375 crores. We have assured the Reserve Bank of India that we will follow their advice and implement their suggestions both in letter and spirit, for we appreciate and fully share the apprehensions of our monetary authorities that, under the existing conditions, any further increase in bank credit and particularly in clean advances is likely to be utilised for the purpose of hoarding and speculation in commodities which, in turn, will exert a strong inflationary pressure on the price line.

Your Bank's advances at the end of the year 1963 stood at Rs. 31 crores. Out of these, finance to industries actually accounted for nearly 50 per cent and of foreign trade 20 per cent. In certain quarters, attempts have been made to create an impression on the general public that advances by big and medium-size banks are made only to big parties having influence and pull with the Directors of the bank. This is far from correct. In the case of your Bank, the total advances of Rs. 31 crores was spread among nearly 5,000 borrowers. Of these, borrowers under Rs. 10,000 constituted 44 per cent and under Rs. 25,000, 65 per cent.

Your gross income increased by Rs. 48 lakhs from Rs. 2.23 crores to Rs. 2.71 crores this year. This increase was, however, offset to a large extent by increase under various heads of expenditure.

Expansion

During the year, your Bank opened ten new branches. In pursuance of our policy of widening our representation, we have, since the year 1954, opened 65 branches and our deposits during this period have increased from Rs. 5.88 crores to the present figure of Rs. 52 crores and the advances from Rs. 3.83 crores to Rs. 31 crores. I am happy to report that we continue to receive encouraging response from the public, both at the old and new branches. This manifestation of public confidence in our institution is as much due to its old standing and inherent strength as it is to the efficient and prompt service rendered by us. In furtherance of their programme of planned expansion, your Directors have decided to open during the next two years 30 more branches of which ten will be in areas not yet served by any bank.

The main difficulty encountered in our expansion programme has been the lack of availability of trained personnel. To overcome this difficulty, we have, as stated at the last annual general meeting, started our own staff training college in Bombay and have appointed as its principal, Mr. R. S. Khambatta, who had then just retired as the principal of the Bankers' Training College of the Reserve Bank of India. I am happy to inform you that this college, which has on its staff besides Mr. Khambatta, three trained and experienced full-time tutors, has been doing excellent work. Senior officers from head office and upcountry branches are also invited by the Principal to talk to the trainees and thus give them the benefit of their knowledge and experience. The benefit of training is imparted both to the local and upcountry members of our staff and so far four senior courses and two intermediate courses have been successfully completed. About 113 members of our staff have so far attended these courses, each of eight to ten weeks' duration. At the intermediate course, promising clerks and supervisors are also given the benefit of training. Residential accommodatoin for upcountry trainees is provided by the Bank and much care is taken to ensure that the trainees devote their time and attention to studies.

Demand for Nationalisation

During the last few months, the demand for nationalisation of banks, a pet slogan of the Communists, has received vociferous support from several leaders of the Congress Party. No logical reasons, however, have been put forth by these advocates of bank nationalisation, as to why they consider the functioning of banks in the private sector to be against the larger interests of the country's economy and likely to retard its economic growth. We congratulate our capable and practical Finance Minister, Mr. T. T. Krishnamachari, on the very convincing manner in which he argued against the case for nationalisation of banks. He rightly pointed out that merely diverting the resources from private sector to public sector will not be a solution to our problems. What is required to meet the claims of defence and development was the enlargement of the pool of available resources.

The Congress Party, which has been in power since the advent of independence, has adopted a pattern of mixed economy for the economic development of our country and both public and private sectors have been assigned important roles in our Five-year Plans. In both the first and second Five-year Plans the private sector exceeded the various targets fixed for it, and I have no doubt that, despite several difficulties, it will fulfil its obligations in the third Five-year Plan also. In this "success" story of the private sector, banks have played a very significant role.

Bank Deposits

The total deposits of the scheduled banks which were under Rs. 800 crores at the end of 1952 were slightly over Rs. 2,200 crores at the end of 1963, i.e. an increase of over Rs. 1,400 crores, within a period of 11 years. During this period, bank advances went up from Rs. 430 crores to nearly Rs. 1,700 crores by the end of January this year and the share of advances to industries also increased from 36 per cent to more than 57 per cent. In a ten-year period, 1952-62, whereas the national income increased by 47 per cent, money in supply by 65 per cent and currency in circulation by 71 per cent, the overall bank deposits increased by over 150 per cent. At the same time, more than 2,200 branches were opened by commercial banks during the period 1952-62 and the number of towns lacking in banking facilitise was reduced from 1,830 to 990.

If the private sector is expected to play an increasingly important role in the development plans of this country, it is very necessary to allow financing institutions like banks to function in that sector. The Indian banks have also played a significant role in financing the foreign trade of this country. The banking structure in this country is held in high esteem by the advanced countries of the West and to a very large extent, the credit for the healthy trend in the Indian banking system, goes to the Reserve Bank of India for the important role it plays as inspector, guide and friend of banks in this country. For effective supervision and control, the Reserve Bank of India has been given very wide powers under the recently enacted, the Banking Laws (Miscellaneous Provisions) Act, 1963. These act as a salutary safeguard and check against any abuse of authority by those in control of banks in the private sector.

Tax Proposals

A lot has already been said about the various tax proposals in the budget for 1964-65, as presented to Parliament, and I do not intend to discourse at any length on them except on the Sur-Tax on profit which has replaced Super Profits Tax. Sur-Tax on profit on the whole is fairer and less harsh, but it is as bad in theory and equally worse in practice as the Super Profits Tax. In the last year's debate on the budget proposals, Mr. Morarji Desai in his final summing up, had assured the House that if, as some critics had suggested, the effect of the Super Profits Tax was to retard the development and the growth of the corporate sector,

Notice

THE WESTERN INDIA MATCH COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-first Annual General Meeting of the Shareholders of the abovenamed Company will be held at the Registered Office of the Company at Indian Mercantile Chambers, Nicol Road, Ballard Estate, Bombay, at 4 p.m. on Tuesday the 2nd day of June 1964, to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December 1963.
2. To declare a dividend.
3. To appoint a Director in the place of Mr. Dharamsey M. Khatau, who retires by rotation and is eligible for re-appointment and offers himself accordingly.
4. To appoint a Director in the place of Mr. Tulsidas Kilachand, and associate of the Managing Agents of the Company, who retires by rotation and is eligible for re-appointment and to consider and if thought fit to pass the following resolution as a Special Resolution, of which special notice as required by Section 261 of the Companies Act 1956 has been received by the Company:—

   "RESOLVED that Mr. Tulsidas Kilachand, who is an associate of the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company."

   The reason why the above resolution is necessary is that Mr. Tulsidas Kilachand is an associate of your Managing Agents, the Swedish Match Company, being a Director of the Assam Match Co. Ltd., which is a subsidiary company of your Managing Agents and since your Managing Agents are authorised to appoint a Director or Directors on the Board of your Company Mr. Kilachand's appointment requires a special resolution under Section 261 of the Act.
5. To appoint the Company's Auditors and also Auditors for the Branches and to fix their remuneration.
6. To consider and, if thought fit, to pass, with or without amendment as may be permissible, the following resolution as a Special Resolution:—

   "RESOLVED that, pursuant to the provisions of Section 360 and other applicable provisions, if any, of the Companies Act 1956 the Company hereby approves of a contract or arrangement, upon the terms and conditions of the draft Agreement initialled by the Chairman for the purpose of identification and placed before this meeting, being entered into with the Swedish Match Company, the Managing Agents of the Company, for the hire of supply and sale to the Company, as the case may be, of certain machinery required for the manufacture of wax matches.

   PROVIDED that so far as the said draft Agreement relates to the supply or rendering of any service other than that of a managing agent this Resolution shall be subject for its effectiveness to the approval of the said Agreement by the Central Government, with full and complete liberty and power to the Board of Directors of the Company to agree to such modifications, alterations and amendments in the form, language or terms of the said Agreement as may be necessary to meet any requirements of the Central Government in that behalf.

   The material terms of the contract proposed to be entered into relating to the hire or supply and sale of the said machinery by the Swedish Match Company to the Western India Match Company Limited (hereinafter referred to as "the Company") are as follows:—

   A. The Swedish Match Company agrees to supply to the Company taper Drawing Machine, Frame Filling Machine, type MAV, Outer Box Machine, type Vulcan, Veneer Scoring Machine, type Vulcan, Box Filling Machine, type ROV, and accessories and spare parts suitable for wax match manufacture. The total price (which shall be subject to abatement by the amount of the rent paid by the Company to the Swedish Match Company as aftermentioned) shall be Swedish Crowns 1,94,650 (approximately equivalent to Rs. 1,79,732 at the current rate of exchange) f.o.b. Gothenburg, Sweden.

   B. The machinery will be shipped from Gothenburg to Bombay and the freight, marine and transportation insurance will be paid by the Company in rupee currency. The Company shall also bear and pay the cost of insurance against all usual risks (including war risks) so long as the machinery remains the property of the Swedish Match Company and is in the possession or under the control of the Company.

   C. The machinery will be rented or hired to the Company by the Swedish Match Company for a period of five years from the date of the proposed Agreement at an annual rent of Swedish Crowns 19,465 (approximately equivalent to Rs. 17,973 at the current rate of exchange) being at the rate of 10 per cent of the f.o.b. Gothenburg, Sweden, price of the said machinery, namely, Swedish Crowns 1,94,650 (approximately equivalent to Rs. 1,79,732 at the current rate of exchange).

   D. After the expiry of the said period of five years if the Company desires to continue the manufacture of wax matches, the Company will pay to the Swedish Match Company the said f.o.b. Gothenburg, Sweden, price of the machinery, namely, Swedish Crowns, 1,94,650 (approximately equivalent to Rs. 1,79,732 at the current rate of exchange) after deduction of the rent, if any, which may already have been paid by the Company to the Swedish Match Company.

   E. According to Government directions, as stated in the Ministry of Commerce and Industry's letter No. 37(3)/63 Chem IV dated 20th June 1963, the rent and/or price of the said machinery shall only be payable out of foreign exchange earned by the Company by the export out of India of wax matches. If the rent and/or purchase price of the machinery cannot be paid wholly by the Company either on account of foreign exchange not having been earned by the export of wax matches as aforesaid or on account of any other exchange restrictions the Company will be bound to return the machinery to the Swedish Match Company at the expense of the Company on a c.i.f. Gothenburg, Sweden, basis as soon as possible after the expiry of the said period of five years. If the Company decides to discontinue the manufacture of wax matches at any date prior to the expiry of the said period of five years the Company shall be entitled at the cost of the Company to return the machinery at such earlier date to the Swedish Match Company."
7. To consider and, if thought fit, to pass, with or without amendment as may be permissible, the following resolution as a Special Resolution:

   "RESOLVED that the following words be and are hereby deleted from Article 16 of the Company's Articles of Association:—

   "If any member shall require additional certificates, he shall pay for each such additional certificate such sum not exceeding Rupee one as the Directors shall determine."

   "FURTHER RESOLVED that Article 18 be and is hereby deleted."

   "FURTHER RESOLVED that sub-para (*a*) of Article 41 reading as follows be and is hereby deleted:—

   "a fee not exceeding four annas per share is paid to the Company in respect thereof."

   "FURTHER RESOLVED that the letter (*b*) of sub-para (*b*) of Article 41 be deleted."

The Transfer Books of the Company will be closed from the 18th day of May 1964 to the 5th day of June 1964 both days inclusive.

By Order of the Board,
SVEN GOTHBERG,
Executive Director.

15th April 1964.
INDIAN MERCANTILE CHAMBERS,
NICOL ROAD, BALLARD ESTATE,
BOMBAY.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

The dividend when sanctioned will be payable at par at all Indian offices of the Central Bank of India Ltd. on and after the 8th day of June 1964 to those shareholders whose names stand on the Register on the 2nd day of June 1964 and warrants will be posted in due course to each shareholder at his registered address. Shareholders are kindly requested to notify immediately any change of address.

A copy of the Explanatory Statement issued under Section 173 of the Companies Act 1956 relative to the items of special business set out in the aforesaid Notice has been forwarded to the members of the Company along with the Notice.

UNION BANK OF INDIA LIMITED

(*Concluded from previous page*)

which was a surer source of revenue than an increase in the rate of taxation on it, then this measure would not be justified and that he would be the first person to ask the House to repeal it. The effect of the Super Profits Tax on the capital market are too well known to need any further comments. In a democratic set-up, the fiscal policy is the collective responsibility of the Cabinet and so long as the same party remains in power, a successor in office is expected and morally bound to honour the assurances given to the House by his predecessor. Our worthy Finance Minister, Mr. T. T. Krishnamachari, since his return to office, has on several occasions stressed the need for stimulating the economic growth and reviving capital market. The object of the budget proposals, as officially stated, is to infuse confidence in the capital market, provide a stimulus for developments of basic industries and promote building up of corporation reserves and growth of personal savings. However, as a result of the new tax proposals, the corporate sector will have to bear an additional burden of over Rs. 25 crores. The cumulative effect of Sur-Tax on corporate profits, dividend tax, capital gains tax on bonus shares, exorbitant increase in the rates of capital gains tax, gift tax, estate duty and annuity deposit scheme at all levels of income over Rs. 15,000 is to reduce the pool of savings and runs contrary to the disclosed objectives. The conditions prevailing in stock exchanges all over the country clearly indicate that the new tax proposals have adversely affected the morals of the capital market.

With a view to encouraging broader and wider dissemination of share ownership and promoting public savings into joint stock enterprises, the Government of India made several suggestions to the joint stock companies at the beginning of the year. Your Directors have already implemented these suggestions and, as a result, have decided not to charge any registration fees on the Company's shares lodged for transfer or transmission or splitting or consolidation fees for sub-division or consolidation of shares in denominations of the market unit of trading.

I have to report with deep regret the sad death, on 25th September 1963, of Mr. M. S. Captain, a Director of the Bank since its very inception. Mr. Captain rendered very meritorious services extending over a period of 37 years, to the Bank. He was a Founder-Director and Chairman of the Board since 1939 to 1956 when he resigned on account of his old age and indifferent health. Your Directors have recorded their appreciation of the valuable services rendered by Mr. Captain in directing the destinies of the Bank during his long tenure of office.

You are requested to re-elect three of the Directors, Mr. Jal H. Mehta, Mr. Devji Rattansey and Mr. Ratilal Nathalal, who under the provisions of the Companies Act 1956, retire by rotation and being eligible offer themselves for re-election.

You are also required to appoint auditors for the ensuing year.

Before I conclude, I should like, on behalf of the Board of Directors and on your behalf, to record our appreciation of the valuable services rendered by our Local Advisory Committees at Calcutta, Ahmedabad, Coimbatore and Gauhati and to thank our General Manager, Mr. F. K. F. Nariman, for his very able stewardship of the Bank and the conscientious discharge of his heavy responsibility during the year. Our thanks are also due to the senior executives and other officers and members of the Bank's staff at the head office and branches for their good work throughout the year.

Note: *This does not purport to be a report of the proceedings at the Annual General Meeting.*

TREND OF MARKETS

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, *28th April*

This week's review of the short-term money market covers only four working sessions, as Friday the 24th inst. was a holiday (*Mahavir Jayanthi*) and as we are going to press a day earlier in view of Maharashtra Day on the 1st May. During this brief period, the market presented a steady trend. The supply of, and the demand for, funds were well balanced and borrowers could easily obtain their requirements. The inter-banks call rate for both renewals and fresh money remained unchanged at 5½ per cent throughout. Similar conditions prevailed at Calcutta, the call rate there being 5½ per cent.

The money market is eagerly awaiting the outcome of the meeting of leading bankers which will be held later in the week to consider whether or not the interest rates on deposits should be revised upward in the light of the views expressed by the Reserve Bank. These rates, as readers are aware, are fixed under the Inter-Bank Agreement as follows:

(*a*) *Category I* (banks with deposits above Rs. 50 crores and exchange banks): 3 to 30 days (inclusive) 3 per cent, 31 to 60 days (inclusive) 3½ per cent, 61 to 90 days (inclusive) 3½ per cent, 91 days and over but less than 12 months 3½ per cent, 12 months 4 per cent.

(*b*) *Category II* (banks with deposits of more than Rs. 25 crores but upto and including Rs. 50 crores): ¼ per cent higher than the rates for Category I.

(*c*) *Category III* (banks with deposits of more than Rs. 10 crores but upto and including Rs. 25 crores): ¼ per cent higher than the rates for Category I.

The view, expressed so often by this journal, that the present structure of interest rates in the country is not realistic and that it must be revised suitably seems to have been borne out in a way by the response to the two conversion loans, 4 per cent 1970 and 4½ per cent 1989. Although the conversion facilities offered were attractive, subscription lists had to be kept open till the close of business on the last day fixed, that is, the 22nd April, and, even then, the total amount subscribed at Rs. 141.52 crores was well below the actual aggregate outstandings of Rs. 188.51 crores in respect of the 3 per cent loan 1964 and 3½ per cent National Plan loan 1964. Of the amount converted, a little over half, Rs. 71.78 crores to be precise, was in 4 per cent 1970 and the balance, Rs. 69.74 crores, in 4½ per cent 1989. The bulk of the subscription must have been from the Reserve Bank which held a sizable portion of the holdings of these loans.

The two new loans were nominally quoted at the prices at which they were issued: 4 per cent 1970 at Rs. 99 and 4½ per cent 1989 at Rs. 100. Business put through in other Central and State loans was limited, with values generally maintained at their last week's levels. 3½ per cent 1967, however, attracted support and spurted by 45 nP to Rs. 100. 3 per cent 1964 also eliicted some enquiries and gathered 20 nP to Rs. 63.35.

There was a further small rise of Rs. 3.91 crores to Rs. 1,843.27 crores in the total credit made available by scheduled banks to their clients during the week ended 17th April 1964. There was also at the same time an increase of Rs. 2.68 crores to Rs. 2,480.59 crores in deposits. Borrowings from the Reserve Bank, as a consequence, declined by Rs. 3.63 crores to Rs. 65.15 crores, of which those against usance bills accounted for Rs. 26.87 crores, a drop of Rs. 2.96 crores. Investments were higher by Rs. 1.09 crore at Rs. 624.75 crores, while cash balances showed a fall of Rs. 2.15 crores, the total being Rs. 142.29 crores.

In the foreign exchange market, the banks' buying and selling rates for U.S. dollars were unaltered at Rs. 475 and Rs. 478.25 per $100, respectively. In New York, the pound sterling firmed up further *vis-a-vis* the dollar, the spot rate rising by 0.110 cent to 279.980-280.020 cents and the three months' forward by 0.060 cent to 279.440-279.480 cents.

FURTHER RISE IN GOLD

(From Our Own Correspondent)

BOMBAY, *28th April*

A further rise in gold featured the trading in the bullion market this week. Sovereign, too, edged forward. But silver came in for a narrow market and managed to close steady.

Fourteen-carat gold struck a new high of Rs. 67.75 in the current upward trend on Saturday, 25th April, after it had opened unchanged at Rs. 66.50 two days before. Later in the week, it moved narrowly to close a shade lower than the week's best level at Rs. 67.25. These further gains were attributed to a better buying enquiry from jewellers. Pure gold, which had shed a part of the recent gains last week by reacting from Rs. 116 to Rs. 112, steadily rose to Rs. 118 by today. Sovereign was 50 nP higher at Rs. 90.

Silver commenced one point lower at Rs. 260 and, after reaching Rs. 261 yesterday, finished at Rs. 260.50 today, 50 nP lower over the week. The daily average arrivals were unchanged at 10 bars, as against which the offtake averaged 12 bars.

The international price for gold recovered smartly from $35.06½ to $35.08¼ on a substantial demand from Zurich and due to the policy of the Bank of England to restrict supplies of the newly-mined South African gold at the lower levels in the last two weeks on reports of Russian sales. Russian selling in the past month or so is believed to total at least $100 million. The bulk of earlier sales, in March, is believed to have found its way into the International Gold Pool. The spot rate in London experienced a reversal of the downward trend to close one-quarter of a penny higher over the week at 250s. 7½d. Silver prices in New York and London ruled firm at last week's levels.

An American company, the Texas Gulf Sulphur, has struck in Timmins (Ontario, Canada) one of the largest and richest ore bodies ever discovered in North America. The precise size of the newly-found ore bodies has not been yet established, but they are believed to contain at least 25 million tons of copper, zinc and silver, worth many hundreds of millions of pound sterling.

The following table shows the trend of prices during the week under review:

	28-4-1964 (closing)	High	Low	22-4-1964 (closing)
SILVER				
Ready (999 fine) ..	Rs. 260.50	Rs. 261.00	Rs. 260.00	Rs. 261.00
GOLD				
Ready (14 carat) ..	67.25	67.75	66.50	66.50
Sovereign	85.00*	—	—	85.00*
London—				
Gold	250s. 7½d.	250s. 7½d.	250s. 7d.	250s. 7d.
Silver/Ready ..	111½d.	—	—	111¾d.
Silver Forward ..	111½d.	—	—	113¾d.
New York—				
Silver	129.3 cents	—	—	129.3 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce. * As on 24-6-1963.

COTTON FUTURES EASY

(From Our Own Correspondent)

BOMBAY, *28th April*

The cotton futures market ruled distinctly easy during the short week (of only four trading days) under review. The easiness was particularly pronounced in the Jarilla May contract which was subjected to heavy selling pressure, resulting in a sharp break in prices. Liquidation of "long" positions in May induced by the reported unwillingness of some to weigh over cotton, which might be tendered against the contract from 1st May onwards, was responsible for the easiness. The switchover of purchases from the May to the August contract also imparted weakness to the former. Local and upcountry operators appeared as sellers while buyers were reserved. Consequently, both the contracts suffered a sharp setback. The fall in prices would have been more marked but for the support, forthcoming at lower levels, which was induced by the relative steadiness of spot prices and the apprehension that the continued delay in issuing the purchase authorisation for P.L. 480 cotton might result in scarcity of cotton in the coming months.

The Jarilla May contract, which opened the week at Rs. 751 per three quintals, after rising to Rs. 753.50 on Saturday, the 25th inst., reacted sharply to Rs. 740 yesterday. The contract declined further to Rs. 734.25 today but recovered to close at Rs. 738.50. The August contract depicted more or less the same pattern. After commencing the week at Rs. 736 the contract reacted, declining to Rs. 729.50 yesterday and further to Rs. 728 today. The finish was, however, a shade higher at Rs. 730.50.

Activity in the spot market at Sewri was subdued. Stray mill buying was reported in such varieties as L.147 197/3, Digvijay, Hubli Laxmi, Co2, and Wagad. Demand for foreign cotton centred on American and East African varieties. Egyptian cotton also attracted the attention of some mills in anticipation of a global import quota announcement. Importers are also eagerly awaiting the issue of the purchase authorisation for American cotton. Export interest in Bengal *Deshi* was dormant.

The announcement of the cotton policy for the next (1964-65) season is considered imminent. It is expected in some quarters that the ceiling prices for some varieties at least would be raised.

The Committee of the Indian Cotton Mills' Federation, which met at Bombay this week, felt that the question of increasing cotton production in the country must be tackled with particular urgency. It, therefore, appointed a sub-committee to consider the part the Federation can play in educating the farmer into the ways of increasing the per acre yield of cotton. The sub-committee will also prepare a representation for submission to the Government setting out the need to prepare and implement a special plan to make the country self-sufficient in cotton in the quickest possible time.

The following are the latest available quotation—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Ganganagar 810; Wagad 900; Hubli Laxmi 1,180; Nagar Co2 1,150; American 1,250; Busoga 1,370; Elpaso 1,635.

MARGINS IN GROUNDNUT OILCAKE RAISED

(From Our Own Correspondent)

BOMBAY, *28th April*

The highlight of the week in so far as the oilseeds market is concerned was the announcement of the Forward Markets Commission's decision to stiffen the special margins in groundnut oilcake, in view of the continued rise in prices. On Thursday the 23rd inst., the Commission directed the recognised associations at Bombay, Saurashtra, Adoni and Hyderabad to collect special margins at a higher rate of Rs. 100 per tonne (as against Rs. 50 previously), whenever the futures prices of groundnut oilcake (expeller) for April and July deliveries exceeded Rs. 450 per tonne at Bombay, Rs. 6.55 per 15 kg. in Saurashtra and at parity levels at Adoni and Hyderabad. The margins, it was said, should be paid on the long open position of every member and each of his clients taken separately. The free limit of 300 tonnes granted to every member and the exemption from special margins granted to exporters was, however, left unaltered.

The special margins in forward groundnut oilcake, it will be recalled, were first announced on Saturday the 18th inst. Despite the margins, prices shot up, the July 1964 delivery touching the ceiling rate of Rs. 450 on Wednesday last week. Even after the doubling of margin rate on Thursday, the contract continued its upward march and touched as high as Rs. 455.50 today.

But for the above development, the oilseeds market ruled dull. The firmness noted in the past three weeks abated, as there was lack of follow-up support. Groundnuts were easy due to slightly improved arrivals from growing centres. Castorseeds moved both ways on conflicting rumours regarding imposition of margins, the trend towards the close being easy following bearish advices from the castor oil market in London. Linseeds were also easy, thanks to larger arrivals and decline in mustardseeds prices. Cottonseeds were dull.

In the groundnut section, the April contract moved up from the last week's closing of Rs. 240.75 to Rs. 240.87, just 13 nP below the official ceiling of Rs. 241. The July contract shed 32 nP to Rs. 239.37. Nizam bold ready was steady throughout at the opening level of Rs. 54, but closed higher by 25 nP to Rs. 54. Khandesh Quality gained 25 nP to Rs. 54.75. Oil ex-mill, however, declined by 20 nP to Rs. 21. Railway receipts lost 25 nP to Rs. 20.70.

Castorseeds June opened the week hesitant at Rs. 176.37, as against the previous close of Rs. 176.62, but improved to Rs. 177.12 on Saturday. Thereafter, it moved down and closed at Rs. 175 today. Spot Madras was neglected at Rs. 34.50. Kanpur bold, however, eased by 13 nP to Rs. 33.37. Oil B.S.S. and Oil Commercial lost 10 nP each to Rs. 14.80 and Rs. 14.10, respectively.

Linseeds June slipped by 12 nP to Rs. 42.50. Bold ready picked up a rupee to Rs. 44.25 on special support. Oil ready gathered 25 nP to Rs. 18.

Business put through in cottonseeds was limited. The June contract was nominally quoted at Rs. 105.

The following table shows the closing prices of oilseeds and oils on 22nd April as compared with those of two previous weeks:

	28-4-1964	22-4-1964	13-4-1964
	Rs.	Rs.	Rs.
Groundnuts			
April 1964 contract	240.87	240.75	240.62
July 1964 contract	230.37	239.62	238.75
Nizam bold	54.00	53.75	52.25
Khandesh quality	54.75	54.50	53.00
Oil ex-mill	21.00	21.20	20.35
Oil/Rly. Receipts	20.70	20.95	20.05
Castorseed			
June 1964 contract	175.00	176.62	175.12
Ready Madras	34.50	34.50	34.37
Ready Kanpur	33.37	33.50	33.25
Oil B.S.S.	14.80	14.90	14.80
Oil commercial	14.10	14.20	14.10
Linseed			
June 1964 contract	42.50	42.62	42.19
Bold ready	44.25	43.25	41.25
Linseed oil	18.00	17.75	16.75
Cottonseed			
April 1964 contract	—	99.00	98.50
June 1964 contract	105.00	104.50	104.00

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

YARNS FEATURELESS

(From Our Own Correspondent)

BOMBAY, *28th April*

Trading in the yarn market this week was featureless in the absence of any important demand against comfortable supplies. The tone of the market was steady.

Excepting Century 75D which recorded sizable gains from Rs. 18.41 to Rs. 18.83 a kilo, art silk yarns were quiet, with National Rayon 120D finishing 7 nP higher at Rs. 12.98 and S.I. Viscose 150D closing unchanged at Rs. 14.30. Among 2 x 40 spot staple fibre yarns, Kohinoor retraced all the ground lost last week by rallying from Rs. 8.93 to Rs. 9.50, but Century turned a shade easy from Rs. 9.42 to Rs. 9.39. Cotton yarns were steady at last levels.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	28-4-1964	22-4-1964
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	12.98	12.91
Century 75D	18.83	18.41
S. I. Viscose 150D	14.30	14.30
Staple fibre yarn (40 x 2)—		
Kohinoor (per kg.)	9.50	8.93
Century	9.39	9.42
Cotton yarn (per bundle of 10 lbs.)—		
10s Navsari	19.12	19.12
20s Parkash	26.00	26.00
40s Vasanta	38.50	38.50
60s Kothari	68.00	68.00
80s Ganesh	83.00	83.00

DULL TRADING IN KIPS

(From Our Own Correspondent)

MADRAS, *27th April*

Trading in the local kips market this week was dull as most of the tanners had left for their homes in the upcountry to celebrate the *Id*.

Inquiries for export were patchy in both the kips and skins sections. Arrivals of kips were moderate and prices were unchanged. Offtake by shippers and for local consumption was small. The tone of the market was bearish.

As regards skins, there was no appreciable change in demand and prices. Tanned goat skins ruled quiet and sheep skins steady to firm.

In the raw skins market, prices of goat skins remained steady and of sheep skins firm. Enquiries for the export of raw and pickled goat skins from East European countries were negligible. Sellers, too, did not readily come forward to make offers, as they felt that the standard expected by the buyers could be supplied for the price offered at present.

Nominal prices quoted in the market for all round lots per lb. were:—Tanned cow hides 8/8½ lbs. average Rs. 2.20 to Rs. 2.25, buff hides 12/13 lbs. average Rs. 2.00 to Rs. 2.06, and buffcalf 1½/2 lbs. average Rs. 3.40 to Rs. 3.50.

TEAS ADVANCE

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *24th April*

A much smaller quantity amounting to only 370,000 kgs. was offered in tea sale No. 16 held here on Tuesday the 21st inst. Quality continued to be good but was often barely maintained. Good general demand prevailed throughout the sale, with better support for fannings grades. A few selected highgrown brokens were sold at firm to dearer rates, though, generally, these again came to a lower market. Similar fannings evoked useful support at only slightly lower levels. Good medium descriptions were sold readily, but their prices were lower with quality. Medium and low medium brokens were fully firm; where quality had declined, prices ruled easier. Fannings in these categories realised better prices. Black leaf descriptions, plainest sorts and tippy teas registered advances in price, while competition for whole leaf grades was again strong. Unorthodox kinds were irregular with their fannings inclined dearer.

The quotations (per kg.) were:

	1964	1963
	Rs.	Rs.
Low mediums	4.40-4.90	4.40-4.70
Mediums	4.90-5.40	4.70-5.30
Good mediums	5.40-6.20	5.35-6.00
Nilgiri B.O.P.	5.80-9.80	5.60-7.80

The average price realised in sale No. 16 was Rs. 5.37 per kilo, as against Rs. 5.30 a week ago and Rs. 5.16 in the corresponding sale last year.

A total of 159,000 kgs. was offered in dust sale No. 16 held today. There was very strong and active demand. Highgrowns came to a irregular market. All medium descriptions elicited strong enquiry and were dearer. Black leaf types followed the dearer trend of the market. Unorthodox varieties were sold at fully firm rates.

The average price realised in dust sale No. 16 was Rs. 4.82 per kilo, as against Rs. 4.78 a week ago and Rs. 4.63 in the corresponding sale last year.

Colombo: The market strengthened after a quiet opening and light liquoring highgrowns were considerably easier while others were firm. Mediums were a little dearer, but lowgrowns were easier.

London: *North Indian and other growths*: In Monday's sale, there was strong demand with brighter Assams dearer, but the plainer ones were barely steady. All other varieties were firm.

Ceylon and South Indians: In Tuesday's auction, there was again good demand at firm to dearer rates.

As we go to press Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale No.* 17: 408,000 kgs. offered. Good demand. Low medium and medium brokens fully firm, occasionally dearer. Fannings inclined easier. Good mediums barely steady. Highgrowns again lower. Unorthodox steady."

GOOD DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, *28th April*

Good demand featured last week's internal sale of dust tea, when offerings totalled 29,654 chests. All clean C.T.C. teas were steady, and the smaller and brighter teas were buyers' favourites. Prices of fibrous teas, however, gave way. Plain orthodox teas were shown less attention, but the brighter teas were in good demand. Leggcut teas met with steady support. Quotations (in rupees) per one kg., inclusive of excise duty, were: Good Assam C.T.C. dust 6.30 to 6.80, medium Assam C.T.C. dust 5.00 to 5.30, legg-cut dust 4.60 to 5.00, medium Assam dust 4.50 to 5.10 and plain orthodox dust 4.10 to 4.30.

A special supplemental sale for leaf was also held last week, when offerings amounting to 3,213 chests met with good demand.

The new season's tea has already started reaching here. Arrivals have so far been from the Darjeeling area. Advance booking of shipping space is gathering momentum. The first export sale of the new season has been fixed for 18th May. Meanwhile, dusts sale of the 1963-64 season will continue up to the end of May. An increase in the crop for North East India has been forecast; but, as the new season is approaching, the earlier optimism in regard to marketing prospects is yielding place to caution. This is so, because crop prospects in most producing countries are believed to have improved, while, in view of the inroad from other beverages and soft drinks, world consumption of tea has been improving at a rate slower than expected. This emphasises the need to increase the proportion of quality output to the total and at the same time to build up a steady expanding internal market for dusts.

Excluding China and the U.S.S.R., the world output of tea in 1963 totalled 667 million kgs., as against 667.7 million kgs. in 1962. While the largest increase of 8 million kgs. was recorded in Ceylon, the largest decline of 7.7 million kgs. was recorded in Indonesia. Pakistan's crop rose by 1.5 million kgs. and the South Indian by 2.6 million kgs. East Africa showed an increase of 0.8 million kgs., while Portuguese East Africa showed a loss of 0.8 million kgs. At 255.12 million kgs. the North Indian crop fell by 6.32 million kgs. Despite the fall in crop, prices realised here for leaf and dusts were lower. Several gardens were affected by the red spider blight, and shortage of fertilisers and inadequate transport facilities.

JUTE QUIETLY STEADY

(From Our Own Correspondent)

CALCUTTA, *28th April*

Quietly steady conditions were in evidence in both jute goods and raw jute during the week under review. Although advices from the New York burlap market continued to lack liveliness—the spot 7½ oz. hessian easing from 8.70 cents a yard to 8.65 cents and the 10 oz. hessian from 11.50 cents a yard to 11.45 cents—the fact that U.S. burlap stocks at 272.6 million yards towards the close of last month showed a substantial fall of 10.9 million yards led to the expectation that U.S. buyers would soon enter the market for replenishment. It was also noted that U.S. burlap consumption at 74.4 million yards in March showed a small rise of 1.4 million yards, though it was well below the 84.7 million yards consumed in March last year. The average monthly consumption in the first three months of this year was only 76.4 million yards, as against 80.56 million yards a year before and 80.3 million yards two years before.

These figures have caused some concern, but, since U.S. industrial activity is on the increase, it is to be hoped that the shortfall in consumption would be made good in the coming months. At the same time, purchases by the U.S.S.R. and Argentina have so far been satisfactory. The rapid fall in U.S. stocks of burlap becomes significant considering that the stocks at the end of March of last year aggregated 304.0 million yards (160.4 million yards spot and 143.6 million yards afloat). The U.S. buyers believe that, since mills in India continue to operate at the present enhanced rate of production having regard to the heavy stocks of fibre with them as well as to prospects of a bumper crop having become brighter as a result of good showers in recent weeks, they would be able to cover their requirements at any time they desire.

In heavy goods during the week, Government continued to be a prominent buyer. Shipping was satisfactory, and jute goods derived benefit from lack of competition by tea for ready shipping space. However, new crop tea had already started arriving in and, as such, tea shipments were expected to be resumed earlier than usual. At one time during the week, the existing shipping difficulties stood the danger of becoming aggravated further as a result of the threatened strike by a section of the lighterage personnel; however, the strike was postponed to allow time and an opportunity for the Government to make an inquiry.

Against the background of shipping difficulties, the figures relating to gunny despatches for exports and internal consumption in the month of March 1964 pleased the market. At 79,900 tonnes, total exports rose substantially by 13,200 tonnes as compared with the previous month. Hessian advanced by 4,400 tonnes to 41,800 tonnes, sacking by 4,100 tonnes to 22,400 tonnes, carpet backing cloth by 1,300 tonnes to 7,700 tonnes, and miscellaneous constructions by 3,400 tonnes to 8,000 tonnes. The despatches against internal consumption at 27,700 tonnes showed a fall of 4,700 tonnes. Hessian fell by 400 tonnes, sackig by 3,300 tonnes, and miscellaneous goods by 1,000 tonnes. This fall was more than made good by the rise in exports, so that the total offtake at 107,600 tonnes was higher by 8,500 tonnes, the highest since December 1962, exports the highest since August 1963. The decline in offtake for internal consumption last month is not considered to be of any consequence, since a drop is usual at this time of the year. It should be noted that, in the twelve months ended March 1964, internal consumption aggregated 328,000 tonnes, showing a marginal rise of 15,100 tonnes. Although hessian at 46,000 tonnes fell by 2,400 tonnes, the fall was more than made good by the rise in the offtake of sacking and miscellaneous goods amounting to 245,900 tonnes and 36,900 tonnes, respectively. It is expected that, in the current year, internal consumption would be of the order of 400,000 tonnes. The optimism is born of the official emphasis and the measures taken to increase output of foodgrains and commercial crops. Industrial activity would also rise.

During the week under review, fibre prices were unchanged as follows: Assam bottoms Rs. 31.50; northern bottoms Rs. 30.50; and daissee bottoms Rs. 33.50. Arrivals in the agencies averaged 40,000 maunds a day, most of which was mesta and other inferior varieties. Sellers were keen for business, but mills were inclined to pick up only the better grades. Sellers of off-grades were inclined to lower their quotations to secure business. However, business in mesta was hard to find. The weakness is likely to accentuate in view of recent good rains having improved crop prospects. In all likelihood, the new crop will be earlier than last year. In the first week of this month, jute co-operatives purchased 160,700 maunds of jute from jute districts where prices had tended to fall. The Statewise purchases were: Andhra 50,000 maunds, Orissa 30,000 maunds, West Bengal 25,500 maunds, Assam 24,000 maunds, Bihar 20,000 maunds, U.P. 6,200 maunds and Tripura 5,000 maunds.

Although only routine business took place in jute goods during the week, prices improved fractionally as a result of expectations of increased offtake. Ready B. twills improved from Rs. 113.50 to Rs. 113.80 and ready hessian 40" 10 oz. from Rs. 45.55 to Rs. 45.60. The market remained closed on 23rd and 24th April. A quiet trend pervaded yesterday, and some business in B. twills for ready delivery on Government account was the only feature. B. twills returned to Rs. 113.50 and, in sympathy, ready hessian 40" 10 oz. receded to Rs. 45.45.

Notice

THE PUNJAB NATIONAL BANK LIMITED

NEW DELHI

NOTICE IS HEREBY GIVEN THAT THE NEXT Annual General Meeting of the Shareholders of the Punjab National Bank Limited, New Delhi, will be held at the Registered Office of the Bank, Parliament Street, New Delhi, on Monday, the 18th May, 1964, at 4.00 p.m. Notice of the Meeting setting out the ordinary and special business to be transacted thereat and the Explanatory Statement attached therewith will be sent by post to the Shareholders at their registered adddresses.

By Order of the
Board of Directors,
R. L. TULI,
General Manager.

N.B.

1. The Transfer Books and the Register of Members of the Company will remain closed from 14th April to 28th April, 1964 (both days inclusive).

2. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member. Such proxies on the form should reach the Registered Office of the Company at least 48 hours before the time fixed for the Meeting.

3. The dividend when declared will be made payable, subject to the provisions of the Articles of Association of the Company, at the Registered Office of the Company on or after 29th May, 1964, to those shareholders whose names stand on the Register of Members as on 18th April, 1964, and in respect of the shares tanding in their names as on that date.

4. Shareholders are requested to intimate the change of address, if any.

5. The date of the Annual General Meeting is 18th May, 1964, and not 11th May, 1964, as published earlier.

FURTHER GAINS IN METALS

(From Our Own Correspondent)

CALCUTTA, *28th April*

On active demand lead, zinc and copper scrap advanced during the week under review, but, as a result of a further improvement in the stock position, tin eased further. The trend on the London Metal Exchange and in the U.S. markets, was firm.

Utensil copper scrap rose from Rs. 680 per 100 kgs. to Rs. 690. On short supplies and upcountry consumers' eagerness to cover their requirements. On the London Metal Exchange, spot copper wirebars opened at £316 a ton, and after rising to £317½, closed lower on balance at £313. Demand from outside was reported heavy, but sellers were reluctant to enter into commitments. There were conflicting reports about the question of nationalisation of the U.S.-owned mines in Chile. According to one source, the Chilean Government did not favour any idea of taking over foreign-owned copper mines, but the Presidential candidate, Senator Salvador Allende, was said to favour nationalisation and payment of compensation in accordance with international agreements which had been accepted by the Chilean Congress. Meanwhile, there was the encouraging news of the Australian Copper Producers' Association having cut the price of copper by £(A)20 a ton to £(A)320 in accordance with the overseas producer price. The cut was made on the plea that there was the need for a competitive and stable price and that not much copper changed hands at the L.M.E. price equivalent to £A400. On the L.M.E., spot cathodes and the fire-refined metal opened at £302 and £296 and eased to £291 and £290, respectively.

Virgin lead in Calcutta shot up from Rs. 295 per 100 kgs. to Rs. 300 on good demand. Spot lead in London closed higher at £83¼ a ton, after having been initially lower at £82¼. Spot zinc touched as high a rate as £114¼ a ton, after opening at £108. Backwardation was almost static at £3¼, as against £3¼ earlier. The local price spurted from Rs. 287 to Rs. 292 per 100 kgs. Spot tin closed higher on balance at £1,052 a ton, as against the opening of £1,044. The rise was attributed to a possible limitation of sales of grade 'A' from U.S. stockpiles. A rising trend was reported from Singapore. In view of the good stock posi-

tion here, however, the difference between the local and international prices was narrowed slightly.

WHEAT RALLIES

(From Our Own Correspondent)

HAPUR, 27*th April*

After a further decline early this week, wheat prices rallied near the close following a decline in the new crop arrivals. However, contrary to earlier predictions, wheat crop has been fairly satisfactory though producers are still unwilling to rush supplies to the market. Wheat prices in Delhi and other centres continued lower due to the zonal restrictions on the movement of wheat. Coarse grains here were steady due to poor arrivals.

Wheat prices fell by Rs. 2 to Rs. 5 per quintal in the early part of the week but recovered by Rs. 2 a quintal in the week-end on consumer demand. Arrivals averaged 1,000 maunds daily. The average quality was quoted between Rs. 51.50 and Rs. 53.50 and the farm produce at Rs. 57.50 to Rs. 62.50 per quintal. At fair price shops wheat was sold at Rs. 43 a quintal. Rice prices hardened by Re. 1.34 to Rs. 3.50 per quintal according to quality on poor supply and meagre stock with the trade. Week-end prices were: Rice *basmati* superior Rs. 93.77 to Rs. 96.45, *sela basmati* Rs. 91.09 to Rs. 93.77, *manipuri* Rs. 68.32, *ramajwayan* Rs. 77.70, *raimunia* Rs. 80.38 and *gadda* Rs. 68.32 per quintal.

Gram improved Re. 1.50 to Rs. 2.50 per quintal on rumours of a likely ban on export from Punjab, Rajasthan and M.P. The local produce was quoted at *Rs. 54.92* and the *Punjab quality* at Rs. 53.50 per quintal. Barley and *bejhar* gained on a better outside buying enquiry. Barley was quoted at Rs. 40 to Rs. 41.76 and *bejhar* at Rs. 40 to Rs. 41.25 per quintal. Maize was quiet at Rs. 41 to Rs. 43 per quintal in slack trading. *Guwar* held steady, but *juwar* sought higher levels in sympathy with other grains.

A firm trend was witnessed in pulses. Peas prices advanced by Rs. 4.50 a quintal to Rs. 48.75 to Rs. 51.75 for the *dara* quality and Rs. 52.75 to Rs. 55 per quintal for the farm variety on brisk buying support from Madras, Bengal, Bombay and Bihar coupled with local millers' buying. Daily arrivals averaged about 2,500 maunds. *Peas dal* also improved to Rs. 55 a quintal. Small arrivals of new *arhar* were lifted at higher prices of Rs. 69.66 to Rs. 72.50 a quintal for conversion into *dali Urd* and *moong* registered further gains at Rs. 67.50 to Rs. 73.78 and Rs. 77.70 to Rs. 89.75, respectively, per quintal. *Masoor* also hardened to Rs. 67.50 to Rs. 72.50 per quintal due to small arrivals. Other sections ruled firm: *Arhar dal* Rs. 75.02 to Rs. 80.38, *moong dal* at Rs. 91.09, *urd dal* at Rs. 80.38, *masoor dal* at Rs. 82.50 and *gram dal* at Rs. 61.62 per quintal.

SUGAR FIRM

(From Our Own Correspondent)

HAPUR, 27*th April*

On persistent shortage and steady demand crystal sugar prices firmed up to Rs. 160/165 a quintal in the open market. In the Muzaffarnagar market, too, the prices were higher as the supply position did not improve.

After remaining steady in the earlier part of the week, *desi khandsari* recorded handsome gains on brisk buying support from east U.P. and stockists from Rajasthan who entered the market in anticipation of issue import permits in that State. Moreover, the U.P. Government was said to have asked the Centre to allow export of 25,000 tons of *khandsari* to other States. As a result, prices improved by Rs. 7.50 a quintal. Week-end prices (in rupees per quintal) were: *Desi khandsari* inferior 117.50 to 130, medium 135 to 140 and superior 147.50 to 155.

Ready *gur* was firm on good buying enquiry from Gujarat and Rajasthan against import permits. The week's offtake was heavy at 20 wagon-loads, while daily average arrivals were restricted to 250 maunds and the local stock dwindled to 15,000 quintals. *Shakker*, too, was much in request and, with the stock being poor, prices improved. Week-end prices (in rupees per 40 kilogram) were: *Pansera* 29.25, average 28.75, *balti* 28.50, *kotha* dry-wet 27.50 and *shakker* 31 to 33.

PEPPER RECOVERS

(Messrs. Parekh and Co.)

BOMBAY, 29*th April*

After ruling weak owing to liquidation by weak bulls, Malabar black pepper remained steady during the latter part of the week, in view of unwillingness to press sales at lower levels on the part of growers and holders. Ready garbled, after touching the lowest at Rs. 330, improved to Rs. 345. Ungarbled rallied from Rs. 320 to Rs. 330. May delivery at Cochin ring improved to Rs. 354, after touching the lowest at Rs. 338.

Local market also improved due to short coverings. *Vaisakh* delivery, after touching the lowest of Rs. 363, improved to Rs. 385 and *Jeth* delivery to Rs. 397.

Singapore remains steady at $(M)130 for black and $(M)155 for white.

New York remains quiet at $0.38 under pressure from Indonesia. Though demand from grinders is reported to be slack, dealers in general are expecting buying by grinders during some time in May.

Ready in Bombay is now quoted at Rs. 180 per 50 kilos, the lowest being Rs. 175.

LONDON LETTER

(Concluded from page 740)

desire of the great economic powers to discipline the producer of three-quarters of the world's gold output!

South Africa is a market for less than 2 *per cent of British exports* and, though it is a vast repository of British overseas investment, the freezing of this for a time could be accepted. But would it be "for a time"? The Government do not wish to apply economic sanctions; the Opposition have declared against them. And could they be effective even if the requisite number of nations joined in? The Afrikaners' main virtue is stubbornness! But there are other measures short of full economic sanctions which could be applied and which would amply demonstrate the U.K.'s identity of outlook with the African and Asian countries. First is the imposition of a full arms embargo: on this, the Prime Minister and Mr. Wilson clashed in Parliament this week, for the Prime Minister insists on shipping arms which "are not for internal use"—he sees no incongruity between this attitude and his expectation of fruitful Commonwealth co-development. Second, the U.K. could speak out much less equivocally than it has done in condemnation of apartheid and at the same time give all necessary assistance to the protectorates. And, of course, the British Government should use its influence in every possible way to resolve the racial problem—in short, give a lead to the other members of the U.N., instead of appearing to drag its feet.

On the matter of Southern Rhodesia, again, the British Government could take care to move with the opinion of the other members of the Commonwealth. For this coming Conference is expected to demonstrate the proposition that, sometimes, economic progress must follow and not precede political progress.

INDIA "A GOOD BET FOR THE FOREIGN INVESTOR"

Western firms and others interested in investment in India can gain an up-to-date view of the prospects, difficulties and advantages of taking part in India's development as the result of a detailed report just completed in London by an *Indian economist*, Mrs. Anila Graham. Calcutta-born Mrs. Graham, who lives in Britain, prepared her report following an extensive tour of India during which she interviewed Ministers and officials of the Government of India, leading Indian industrialists, officials of chambers of commerce, and independent economic consultants. Her conclusions take into account the provisions of the recent Indian budget.

Mrs. Graham, who has established her own market research organisation in London, believes that the investor who goes into India will find rich rewards. But he must be forearmed against a number of possible pitfalls. "Although the foreign private investor in India has a number of difficulties and frustrations to face—and it would be foolish to overlook or minimise them—investing in India," she declares, "is a calculated risk worth taking." "There is no doubt at all," she adds, "that, with the appointment of the new Finance Minister, there has been a distinct improvement in the climate for private investment in India. *The Government* is willing to open its doors wider to foreign capital—not only in the private sector but also in the public sector—as long vate sector but also in the public sector—as long as this investment fits into the framework of India's Five-year Plans and places no undue burden on the precarious balance-of-payments situation. ...

"In the latest Budget, a number of new concessions have been introduced which will benefit *the foreign investor* and provide concrete proof that, as far as the Government of India is concerned, there is definitely a place for foreign private investment. ... There appears to be little doubt that India, with her growing, protected market of over 450 million people, is certainly a good bet for the foreign investor. ..."

Mrs. Graham, who is a grand-daughter of W. C. Bonnerji, first President of the Indian National Congress, is married to an Englishman. She is an economics graduate of Calcutta and London Universities, a Fellow of the Royal Statistical Society, and a member of the British Market Research Society.

London observers note with interest that many of the arguments advanced by Mrs. Graham in favour of private investment in India link-up with reflections on the same theme by the British Chancellor of the Exchequer, Mr. *Reginald* Maudling, a few months ago. At a dinner held in London on the occasion of Republic Day, he drew attention to the potential of India's economy, which he described as "quite staggering." The Chancellor went on to say that he believed there would be "a *tremendous development*" in the coming decades in trade between India and Britain, and that by the end of this century India could become the most important market for British products. He expressed the hope that, before then, a volume of Indian investment would also be building up in Britain as a counterpart of British investment in India. This remark, London observers feel, contains in it the seeds of a fruitful suggestion, namely that private investment *involving two countries, even if at very different* stages of development, could well be ultimately a valuable two-way traffic.

Notices

THE INDO-BURMA PETROLEUM COMPANY LIMITED

Registered Office:

Gillander House, Netaji Subhas Road, Calcutta 1

NOTICE IS HEREBY GIVEN THAT THE Fifty-sixth Annual General Meeting of the Members will be held at the Registered Office of the Company on Tuesday the 26th May, 1964, at 11.00 a.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1963.
2. To sanction the declaration of a dividend.
3. To appoint a Director in place of Mr. P. Sen Gupta who retires by rotation and, being eligible, offers himself for reappointment.
4. To consider and, if thought fit, to pass the following Resolution for which a Notice as required by Section 257(1) of the Companies Act, 1956, has been received by the Company:—

   As an Ordinary Resolution

   "Resolved that Mr. D. Manson be and is hereby appointed a Director of the Company."
5. To consider and, if thought fit, to pass the following Resolution for which Special Notice as required by Section 261(2) of the Companies Act, 1956, has been received by the Company:—

   As a Special Resolution

   "Resolved that Mr. A. K. Gupta who is an employee of Messrs. Steel Brothers and Company Limited the Managing Agents of the Company be and is hereby appointed a Director of the Company."
6. To appoint Auditors including Branch Auditors and to fix their remuneration.

Notice is hereby given that the Ordinary Register of Members of the Company will be closed from the 7th May, 1964 to 26th May, 1964, both days inclusive.

By Order of the Board,
STEEL BROTHERS AND COMPANY LIMITED,
Managing Agents.

24th April, 1964.

Notes: (1) A member entitled to attend and vote at this Meeting is entitled to appoint a Proxy to attend and, on a poll, to vote in his stead. Such proxy need not be a member.

(2) An Explanatory Statement concerning items 4 and 5 as required by Section 173(2) of the Companies Act, 1956, has been posted to Members.

MADURA MILLS COMPANY LIMITED

Registered Office:

New Jail Road, MADURAI

NOTICE IS HEREBY GIVEN THAT IN connection with payment of interest to Debenture Stockholders, the Debenture Stock Transfer Register of the Company will be closed from 16th to 30th May, 1964, both days inclusive. It is recommended that:

1. All persons holding debenture stock on blank transfers should immediately arrange to have the stock registered in their own names, as the Company will pay interest only to the person(s) in whose name the stock stands on the date of payment of interest.
2. Stockholders desiring interests to be paid to Banks or other Mandatees should register the mandates with the Company before 16th May, 1964.
3. Intimation of any change of address should be given to the Company immediately.

A. & F. HARVEY LTD.,
Managing Agents.

MADURAI, 23*rd April*, 1964.

Note.—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities; repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Including Defence Savings Banks Deposits upto 1954-55. F—No sales from June 1, 1957. G—Old series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 9 marked 'E' are not included. J—Commenced from 2nd January 1959. N.B.—Five-year prize bonds were issued from 1st April 1960 and the total outstandings amount to Rs. 20.22 crores. Fifteen-year Cumulative Time Deposits commenced from June 1962—the outstandings at the end of Jan., 1964 amount to Rs. 51 lakhs. Twelve-year National Defence Savings Certificates commenced from 16th November 1962 and the outstandings at the end of Jan., 1964 amount to Rs. 137.34 crores. Ten-year Defence Deposit Certificates were issued from 10th November 1962 — the outstandings at the end of Feb., 1964 amount to Rs. 27.40 crores. Five-year Premium Prize Bonds were issued from 1st January 1963 and outstandings at the end of Dec., 1963 amount to Rs. 5.49 crores.

A new series of premium prize bonds, 1964 was issued since January 1st 1964. The outstandings at the end of Jan., 1964 was Rs. 17 lakhs.

* Progressive net repayments at the end of period since 15th Aug., 1947.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P. O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. CR.—Cum. Right. XR.—Ex. Right.

Shares :—If a company has different classes of shares—as for example : 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up' per share.

Accounts :—Figures in the Accounts Closed column represent the months or the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

SOVIET AID FOR BOKARO

THE long uncertainty that had surrounded the Bokaro Steel project ever since it was known that the eagerly sought U.S. aid would not be forthcoming, has at last ended. The Government of U.S.S.R. has agreed to comply with the Indian Government's request for help for implementing this major project. The Russian Government's decision was briefly announced in the Lok Sabha by the Union Steel Minister, Mr. C. Subramaniam, significantly enough on May Day, a day that commemorates the victory of proletariats' revolution. The announcement was greeted by the House with acclamation and has since been widely welcomed in the country. Apparently, the Government of India has been negotiating with its Russian counterpart for quite sometime, even while exploring the possibilities of fulfilling the project with the help of an Indian consultant and supplies of machinery and equipment obtained from various countries through global tenders. Experience in the construction of three public sector plants had shown that the latter approach was fraught with many difficulties and that the best course would be to entrust the responsibility to one single authority, as in the case of Bhilai and Durgapur plants. It was this realisation that induced the Government to seek U.S. help for Bokaro. The Government was even prepared to give a large measure of freedom to the U.S. agency during the period of construction and the initial operation of the plant, so that the difficulties encountered at Rourkela could be avoided and the smooth working of the Bokaro plant ensured. If it was found extremely difficult to co-ordinate the activities of a score of German firms supplying the equipment for Rourkela, one could easily imagine how much more difficult it would be to co-ordinate the work of suppliers from a large number of countries, such as the U.S., the U.K., Germany, Japan and Czechoslovakia. It would take several years for the project to be completed on this basis. The cost, too, would be very much higher than on the basis of a turn-key job. The Government of India, therefore, did well in seeking Russian aid and deserves to be congratulated on the success of its endeavour.

The temptation to attribute Russia's willingness to help India implement the Bokaro project to cold war politics is understandable. But this appears to be a facile assumption. It must be remembered, in this connection, that Russian consent has been given only long (7½ months) after India had withdrawn its specific request to the U.S. Government. If Russia wanted to score over the U.S. in the cold war in this theatre, it could have offered its aid to India with a flourish immediately after it became clear that American aid would not be forthcoming. The fact that Russia did not do so and that an interval of nearly eight months had to elapse before its consent could be had suggests that the Soviet authorities must have carefully examined the feasibility of the project and satisfied themselves about its economic viability. Another point to be borne in mind is that they have agreed to assist India in Bokaro only upto the first stage (1.5 million tonnes ingot) of the project, as against its attempt to get U.S. help for the whole project providing for a capacity of four million tonnes ingot. So at the moment one can be sure of only partial fulfilment of the Bokaro Plan. It remains to be seen how the balance (as much as 62.5 per cent) of this plan will be completed. Since there is plenty to be done now even in regard to the first stage, it is unnecessary to indulge in the exasperating task of finding aid for the remaining stages now. There is time enough for doing that exercise.

Product-wise, Bokaro is a more complicated project than Bhilai, where Russian help has been a tremendous success much to the discomfort of German, British and the U.S. firms that have participated in the other steel projects. The Germans, in particular, used to contend that Rourkela was a more modern, sophisticated plant than the Russian plant at Bhilai and that, whereas Rourkela was producing more expensive steel, Bhilai was turning out only simple products (for details vide our Delhi Letter in this issue.) Now, in undertaking to construct the plant at Bokaro which will be producing more or less the same products as Rourkela, the Russians have secured an opportunity to demonstrate to the world that they could outshine the free world in successfully implementing a complicated project as well. Nowadays, no one doubts the Russian skill for fabricating, erecting and operating the most modern type steel plants, though such doubts prevailed in the early 'fifties. It is true that the other Russian-aided industrial projects have not been as successful as the Bhilai, but one does not know to what extent the Russians can be blamed for this. Anyhow, the experience at Bhilai is a more pertinent factor in this context than that elsewhere.

A feature of Soviet aid to India is that it is confined only to projects in the public sector and that the great majority of them belongs to the category of heavy industries. An advantage which the Soviet Union has over the democratic countries in rendering such aid is that it can easily assemble the experts needed to execute the projects undertaken by it and direct them there. The democratic countries, however, cannot do so. The Governments of these countries cannot conscript technicians and experts. The foreign companies that are collaborating in the projects have to compete for the necessary manpower in the open market. As there is full employment in almost all the countries, a heavy price has to be paid to get men of the right type and quality. One must bear in mind this fundamental difference when the cost and progress of Soviet-aided projects are compared with those of projects coming up with the help of democratic countries.

The failure of U.S. aid to materialise was not due to any lack of support from the U.S. Administration. It is a well-known fact that, while the late Mr. Kennedy and Prof. Galbraith did their best, the majority of U.S. Congressmen were strongly opposed to their efforts. It was the doctrinarism of U.S. Congress, namely, U.S. taxpayers' money shall not be used to further socialism and State-ownership of industries in the free world, that proved an irremovable stumbling-block. The events during the past eight months have produced nothing that calls for a change in our view that, in blocking U.S. aid to Bokaro, the U.S. Congressmen were extremely shortsighted. They have only helped the cause of international communism and played into the hands of Mr. Khrushchev who believes in peaceful penetration. They have provided enormous strength to the communists and fellow-travellers in this country.

There is no doubt that, in seeking and accepting Soviet help for Bokaro, the Government of India has taken a big political risk. The larger the quantum of Soviet aid, the greater the chances for communism to grow. It must be said to the credit of the Russians that they have loyally stood by the Nehru Government. But it is also true that the Communist Party has grown in strength and controls a large section of workers in rural and urban areas alike. The first political objective of Soviet aid is to ensure that the recipient countries remain non-aligned, free from the influence of Western powers. The second objective is to see that they follow socialist policies, progressively reducing the scope for the private sector in the mixed economy followed by them. It would not be wrong to infer that T.T.K.'s anti-rich budget for 1964-65 may have gone a long way in inducing the Soviet authorities to render aid to Bokaro. And the third objective is to see that the domestic politicians who are in sympathy with its goals enjoy adequate freedom for utilising the instruments of democracy (such as Parliament, the Press, the fundamental right to preach, to do business, and to own property, etc.) for furthering the cause of communism. None of these objectives of the present Soviet regime has been experiencing any impediments in this country. In giving free scope for them, the Goverment of India is playing with fire, not unconsciously but deliberately, in the confident hope that the people's attachment to democracy is strong enough to reject communism as a way of life. Whether its hope is justified or not time alone can tell.

One may ask: Why take the risk? Why walk on a razor's edge? The answer is that there is not much choice. If vigorous efforts are not made to expedite the pace of economic growth, the galloping population itself will engender a favourable climate for the spread of communism. The Government of India did its best to obtain help for Bokaro from the U.S. but failed for no fault of its own. It c

THE MAHALANOBIS REPORT

TWO related issues, it will be recalled, figured prominently in the Lok Sabha debate on the Draft Outline of the third Plan in September 1960—the issues pertaining to the distribution of additional incomes generated under the first two Plans and the improvement, if any, in the levels of living. Although the Draft Outline itself seemed to imply, in describing the real benefits and opportunities that had materialised under conditions of planning, that a wider and more equitable distribution of income had probably taken place, it did not seek to appraise the changes in money incomes, as well as in real incomes and levels of living, in detailed statistical terms. The need was thus felt for a systematic and dependable appraisal of the diffusion of Plan benefits and additional incomes. It was in recognition of this need that the Prime Minister then announced the constitution of a committee under the chairmanship of Prof. Mahalanobis of the Indian Statistical Institute.

This Committee, which was called the "Distribution of Income and Levels of Living Committee," was charged by the Planning Commission with the task of (i) ascertaining the extent to which the operation of the economic system had resulted in concentration of wealth and means of production, (ii) reviewing changes in levels of living during the first and second Plan periods, and (iii) studying recent trends in the distribution of income and wealth. The Committee was also expected to identify the gaps in statistical and economic data which were germane to a penetrating study of this kind. For its part, this journal had then expressed the hope that the Committee might not reach any sweeping conclusions on the basis of "imperfect and incomplete" data and that it might be possible to establish statistically that the continued existence of the few rich did not militate against the betterment of the poor. But these hopes and expectations remain largely unfulfilled to-date, for the Committee, after more than three years of labour, has submitted only the first part of its report dealing with the trends in distribution of income and wealth and concentration of economic power. As the second part, dealing with the question of changes in levels of living, as also the question of gaps in available statistics and economic data, is yet to be drawn up, it may be premature to judge the worth of the Committee's contribution to the continuing debate on economic disparities and Plan benefits. But, judging from some vague, indefinite or contradictory findings in the first part of the report, one may be justified in wondering whether the Committee has been, or will ever be, in a position to do full justice to its assignment.

The Committee's findings regarding income distribution, for instance, are by no means definite and positive. According to it, the available estimates, presumably those contained in a Reserve Bank study (*vide* article entitled "Pattern of Income Distribution in India: 1953-54 to 1956-57" in the *Reserve Bank of India Bulletin* of September 1963), seems to suggest that the degree of inequality in income distribution is not higher in India than in some other developed or underdeveloped countries. The relevant finding of the Reserve Bank study is that "the pattern of income distribution in India is more or less similar to that in some of the developed countries and is more even than that in some of the underdeveloped countries and the pre-1930 pattern in some of the developed countries." Particularly revealing are the following percentage shares of the bottom 20 per cent and the top 20 per cent in personal income in India and in some advanced countries:

	Bottom 20%	Top 20%
India	8.0	42.0
United Kingdom	5.4	44.5
West Germany	4.6	48.0
The Netherlands	4.2	49.0
Denmark	3.4	47.0
Sweden	3.2	46.6
United States	4.8	45.7

Thanks to the adoption of several additional measures of egalitarian or redistributive taxation and the enforcement of liberal wage awards, tenurial and tenancy reforms involving redistribution of agricultural income, etc., since the beginning of the second Plan, the pattern of income distribution in India must now be more even than that in some of the advanced countries with their redistributive taxes and social security measures. And yet the Mahalanobis Committee, presumably basing its finding on inadequate data, has reached the vague conclusion that "there does not seem to have been any significant change in the overall distribution of incomes, though there has been a slight probable increase in inequality in the urban sector and some reduction in inequality in the rural sector." When, as the Committee itself says, "the growth in income of employees has generally kept pace with the growth in average income per employed person for the country as a whole," and the taxation on urban incomes has also risen steeply over the same period, the inference must be that income disparities in the urban sector have decreased to some extent.

In fact, a recent study by the Tax Research Unit of the Union Finance Ministry has shown that the lower and middle income groups have increased their share of total income and that the gap in incomes has been reduced to some extent between 1953-54 and 1961-62. It is particularly significant that public expenditure and income-tax together have brought about a 30 per cent reduction in the coefficient of income concentration. An unofficial comparative estimate prior to the Union Budget for 1964-65 was to the effect that the incidence of income-tax on earned incomes above Rs. 25,000 was much greater in India than in several advanced countries like Canada, Britain, West Germany, France, Japan and the United States. It would thus appear that such heavy taxation on personal incomes has probably reduced inequality in the urban sector over the last decade.

The Committee, while seeking to make out that the continued inequality in income distribution is due largely to the concentration of wealth, has again reached some conclusions on the basis of imperfect data. As it has itself admitted, available data in regard to wealth distribution are fragmentary. Still, in the light of such inadequate data, it has chosen to give the finding that the degree of inequality in wealth distribution is greater than that in income distribution. Whatever be the pattern of distribution of personal wealth, there is no definite indication in the Committee's report whether the pattern has changed for the better or for the worse over the period under study. Thanks to the operation of fiscal measures on personal wealth and inherited estates and of land reform measures, there must have been a substantial reduction in the concentration of wealth. But this the Committee has not acknowledged, for, according to it, the available data merely reveal "the existence, at the end of ten years of planning, of a considerable degree of inequality in the distribution of economic assets and consequent concentration of economic power in the hands of a numerically small section of the population" (italics ours). In the light of the Committee's own analysis of the sectoral distribution of the country's reproducible wealth, the italicised words represent a finding of dubious validity, besides being misleading. This is how the Committee has analysed the relevant data:

"According to estimates, the total value of reproducible wealth at the end of March 1950 and at the end of March 1961 was of the order of Rs. 17,086 crores and Rs. 32,164 crores, respectively.... A rough grouping of the data... indicates that the household (personal) sector accounted for 71 per cent of tangible wealth in 1950, while the shares of the organised private sector and the Government sector were 12 per cent and 17 per cent, respectively. In 1961, the respective shares were: households—60 per cent, organised private business—15 per cent and Government sector—25 per cent."

Where thus the share of the Government sector in the country's reproducible wealth had increased relatively at the expense of both household and private business sectors and absolutely from Rs. 2,905 crores in 1950 to Rs. 8,041 crores in 1961, it would be valid to infer that the concentration of economic power (represented by the ownership of economic assets) in the hands of the State has increased, while that "in the hands of a numerically small section of the population" has correspondingly decreased. As these trends have been more actively promoted since the beginning of the third Plan, it will not be surprising if the Government sector comes to account for anything upto 45-50 per cent of the country's aggregate reproducible wealth by the end of the fourth Plan. Already, according to the latest available data, namely, those for 1963, the aggregate paid-up capital of Government companies, numbering 160, represents about 56 per cent (Rs. 786 crores) of the aggregate paid-up capital (Rs. 1,399 crores) of 25,364 companies in the private sector. These figures do not, of course, reflect all the tangible assets of companies in either sector. But they are nevertheless indicative of the broad trends of increasing concentration of reproducible wealth in the hands of the State and decreasing concentration of such wealth in the hands of organised private business. If, in spite of the "important role" assigned to the private sector in planned economic development and the Committee's own recognition that the logic of industrialisation demands economies of scale and full utilisation of scarce resources, the rate of growth of organised private business is getting slower year after year, why raise the bogey of concentration of economic power in the private sector?

Any such talk of concentration of economic power and control in a generalised form does not seem to be quite relevant in the context of the commanding or strategic heights from which the State is increasingly exercising control over the economy, in general, and the private corporate sector, in particular. The Government has, therefore, done well recently to set up a commission for inquiring into the extent and effect of concentration of economic power in private hands and the prevalence of monopolistic and restrictive practices in important sectors of activity other than agriculture. It is to be hoped that this Monopolies Commission will examine thoroughly the following findings of the Mahalanobis Committee and establish their validity or otherwise more scientifically and objectively:

1. Though the increasing size of companies by itself is not necessarily an index of growing concentration in ownership of companies, the phenomenon is conducive to greater concentration of control and economic power. However, there is some evidence of an increasing dispersal of ownership as such.

2. The working of the planned economy has contributed to the growth of big companies.

3. The main beneficiaries from bank credit have been the big and medium enterprises.

4. The banking sector itself presents a high degree of concentration.

5. Economy of scale works in favour of big business on purely economic grounds. At the same time, there is no doubt that localised concentration of industry, even if unavoidable on economic grounds, must necessarily result in the accrual and possible exercise of monopolistic power.

6. In the Indian context, it is the concentration of control in the industrial sector as a whole rather than in any one or other particular industry that presents the more menacing aspect of concentration of economic power.

7. In spite of the various countervailing measures taken by the Government so far, there is greater concentration of economic power in the private sector than what could be justified as necessary on functional grounds.

The Committee's findings regarding the corporate sector are based on slender data. For instance, if 20 selected groups had increased their share of all corporate private capital from 29.2 per cent to 32.4 per cent during the eight years ending with 1958, can that be described as a menacing increase in concentration? Again, if in 1960-61, the companies having a paid-up capital of Rs. 50 lakhs and above constituted only 1.6 per cent of the total number of companies but claimed 53 per cent of the total paid-up capital, what is so very alarming in this factual situation? After all, thousands of companies are too small and uneconomic to be of any consequence in organised production. Again, companies with a paid-up capital of Rs. 50 lakhs or even Rs. 100 lakhs cannot be regarded as big in a modern economy. In other parts of the world, they would be described as small and medium-size enterprises. Somehow the Committee seems to share with socialist politicians two undesirable mental fixations, namely, that large size by itself is conducive to monopoly or concentration of economic power and that, if a large-sized industrial enterprise happens to be in the public sector, it cannot be construed as having any monopolistic characteristics. It must, however, be added that the Committee has refrained from stating its categorical conclusions on these issues. It has only posed three questions for further study. These are: (1) How far has the growth of big business been an inevitable part of the process of development? (2) How far can it be justified by economies of scale? and (3) how far is it in conflict with the declared objectives of the Constitution? Surely, the eminent economists who constituted this Committee ought to have been able to find the answers to these straightforward and simple questions. They had sufficient time at their disposal for this purpose. It now remains to be seen whether the Monopolies Commission would care to answer these questions in a systematic manner. There can be no doubt that the answers will show that development has been greatly accelerated by large-scale enterprises in every industry and that greater production, creation of additional employment opportunities and generation of secondary activities have fulfilled some of the more important Directive Principles of State Policy.

MARKET GOSSIP

Finance Commission

THE Government of India has just announced the setting up of the fourth Finance Commission to recommend a scheme of financial devolution between the Centre and the States, covering the five years of the fourth Plan (1966-67 to 1970-71). The Commission will be presided over by Dr. P. V. Rajamannar, a retired Chief Justice of Madras High Court, and consist of four other members: Mr. Mohan Lal Gautam (a former Minister of Uttar Pradesh), Mr. D. G. Karve (a retired Deputy Governor, Reserve Bank of India and authority on Co-operation), Prof. Bhabatosh Datta (Director of Public Instruction, Government of West Bengal), and Mr. P. C. Mathew (Special Secretary, Union Ministry of Finance) who will be the Member-Secretary. The terms of reference of the Commission include, besides the two on which recommendations will have to be made under Article 280(3) of the Constitution, namely, (a) distribution between the Union and the States of the net proceeds of taxes and (b) the principles which should govern the grants-in-aid from the Centre to the States, five additional subjects. They are: (1) The assistance that may be required by way of grant-in-aid under Article 275 to such States as are in need of assistance; (2) changes, if any, to be made in principles governing distribution among States, under Article 269, of the net proceeds in any financial year of estate duty in respect of property other than agricultural land; (3) changes, if any, to be made in principles governing distribution of grants to be made available to States in lieu of taxes on railway fares; (4) changes, if any, to be made in principles governing distribution of the net proceeds of additional excise duties levied in replacement of States sales tax on textiles, sugar and tobacco; and (5) the effect of the combined incidence of States sales tax and Union excise duties on the production, consumption, or export of commodities or products, the duties on which are shareable with the States and the adjustments, if any, to be made in the States' share of Union excise duties as a result of the increase in the States sales tax on such commodities or products over a limit to be specified by the Commission. The Commission is expected to make its report well in time for the preparation of the budget for the year 1966-67.

The terms of reference of the Commission are thus not only comprehensive in coverage but also quite complex in nature, so that the task awaiting the Commission is most unenviable. It is all the more so, because of the competing claims for larger devolution of funds from the Centre that will be put forward by the different State Governments. The Commission, as is only to be expected, will have to make a very careful and detailed assessment of the States' revenue resources during the fourth Plan period other than those to be raised by way of additional taxation. It will also have to examine very carefully the position in respect of the expenditure on the maintenance and upkeep of Plan schemes completed during the third Plan, the moneys required for servicing debt obligations (including the debt to be incurred in the fourth Plan), the specified limits over which the proceeds of estate duty on non-agricultural property can be appropriated by the Centre as adjustment against the repayment of States' debt, and the scope for economy consistent with efficiency to be effected by the States.

There is, of course, no doubt that the Rajamanner Commission will bring to bear upon its task a realistic and competent approach. The question, however, is whether, in spite of its award, Central assistance to States will be on a rational basis and serve the purpose for which it is obviously intended, namely, to bring about a measure of uniformity in the administration and resources of all the States. This question is particularly relevant in the absence of a comprehensive assessment of the tax potential of each State, its tax structure and the levels at which the rates under different heads of levies in the State list should be fixed. The previous Finance Commission (Chairman: Mr. A. K. Chanda), in its report submitted in December 1961, had urged the Government to entrust such an assessment to an independent commission which would naturally take note of the widening gap between resources and functions of the States brought about mainly by the planning process and consider what adjustments, if any, should be made in Union-State financial relations so as to add strength to both the Union and the States. But the Government has simply not cared to give effect to this recommendation. This is, indeed, regrettable.

How important is the Chanda Commission's recommendation will be evident from the financial irresponsibility exhibited by the Governments of practically all States. It will be worthwhile quoting here what the Commission said then:

"Secure in the knowledge that the annual budgetary gap would be fully covered by devolution of Union resources and grants-in-aid, the States are tending to develop, as we have noticed, an allergy to tap resources in the rural sector on many considerations and also a disinclination to make up the leeway in others. They do not also attach the same importance to a proper and adequate control on expenditure in the matter of services and supplies as before. Cadres expand, pay scales get revised upwards, negligence develops in the procurement of supplies and execution of projects in the absence of proper cost control. While there is a close scrutiny of, and consultation on, the contents of the Plan, there is hardly any on the contents of the annual estimates; there is no counterpart at the national level in regard to non-Plan expenditure which is progressively increasing as a result of planning itself."

There is no exaggeration whatever in these observations. How else is one to explain the persistently disquieting position of States' finances, notwithstanding the colossal amounts transferred from the Centre year after year? The Central Government budget for 1964-65 provides for a total transfer to the States of as much as Rs. 1,174 crores (by way of share in taxes and duties, grants and loans), as against Rs. 742 crores in 1960-61, Rs. 424 crores in 1955-56 and Rs. 160 crores in 1951-52. Despite such large-scale transfers, the combined overall deficit of State Governments continues to be quite heavy, the total for the year 1964-65 being about Rs. 42 crores (B.E.). Many States have run down their cash balances in order to cover the deficits. The aggregate closing cash balance of all States at the end 1963-64 was minus over Rs. 70 crores, whereas it was plus Rs. 51 crores in 1951-52. And some States have also taken recourse to heavy unauthorised overdrafts from the Reserve Bank on several occasions. All this despite a huge increase in their debt position. As at the end of March this year, the States owed the Centre as much as Rs. 3,000 crores, in addition to Rs. 656 crores to the public. No wonder Mr. T. T. Krishnamachari exclaimed in his Budget speech: "The financial position of most of the States has been causing me a good deal of concern." The position will continue to be disquieting until and unless the States subject themselves to a high degree of financial discipline, raise additional resources and keep their expenditure within their means.

Depositors In Non-Banking Companies

Competition for public deposits is not confined to banks alone. Many non-banking companies have also joined the run for more deposits from the public. However, not being bound by any agreement limiting the rate of interest payable on deposits, these companies, unlike banks, can and do offer interest rates very much above those given by banks. Some companies in the North and South of this country are said to be offering as much as 9 to 12 per cent on deposits from the public. Deposits from the public with non-banking companies aggregated Rs. 34 crores at the end of 1962-63. The comparatively higher interest rates offered since then must have swelled this total substantially. The Reserve Bank of India recently assumed powers under the Banking Laws (Miscellaneous provisions) Act, 1963, to control and regulate such operations of non-banking companies as are similar to deposit banking. What concrete measures the Reserve Bank proposes to adopt for this purpose are yet not known.

The practice of non-banking companies accepting deposits is not confined to this country. In fact, in many countries of the free world, this has become an established practice and laws have also been enacted to protect the interest of deposits. For instance, in Britain, hire-purchase finance companies depend, to a large extent, on public deposits for funds and hire-purchase finances is big business in that and many others. The Protection of Depositors Act in Britain is specifically aimed at ensuring the safety of deposits made by the public with such companies. In spite of this law, however, some depositors come to grief, as did those of G. and C. Finance Corporation, one of the medium-sized hire-purchase finance houses in Britain, which collapsed recently. It could, of course, be argued that the Act did not come into force until October last and that it could not, therefore, have stemmed the tide of destruction that might well have started in G. and C. Finance Corporation long before, but, even so, it must be borne in mind that the information required to be published under the Act did not contain even a hint of the impending crash. According to London financial commentators, there is little prospect of those who have placed £1.47 million (Rs. 1.96 crore) with the Company on deposits getting a penny of their money back. An official Receiver has now been appointed and, according to him, the Company not only left the depositors' funds more exposed than it should have been but put them in complete jeopardy. Commenting on the "G. and C. Affair," as this event has been called, "Lombard," the well-known columnist of the Financial Times, says: "The important thing from the point of view of those depositing money outside the traditional banking field or planning to do so is that an outlet that looked reasonably safe has proved to be anything but safe."

While calling for the exercise of greater discipline on hire-purchase finance houses by their professional association, namely, Industrial Bankers' Association, "Lombard" has offered the following advice to the Government and the public:

"One would hope that the authorities will now see that it is advisable to extend legislative control over deposit-takers to ensure that all the information that the depositor must have if he is to be able to take proper precautions is brought to light. Otherwise, the protection afforded by the new legislation may also prove to be an illusion. In the meantime, the depositor placing money outside the traditionally safe fields would do well to proceed with greater caution than ever. He should not only follow with the closest attention all the activities of the companies he is leaving his money with. He should also take the precaution of seeing that his monetary eggs are distributed over a number of baskets."

We have a specific purpose in drawing attention to the aforesaid episode in Britain. It is to caution those who are placing their savings in term deposits with non-banking companies, attracted by the high rates of interest quoted by them. They must remember that their status is that of unsecured creditors and the recent amendment to the Banking Companies Act provides them with no protection whatever, should anything go wrong with the companies to which they have entrusted their funds.

"Fools learn from their experience," so goes the saying, "while wise men learn from the experience of others." It is to be hoped that the Government and the public in this country do not want to learn from their own experience.

Both Imports And Exports Up

With the publication of provisional figures pertaining to India's imports and exports for the month of March, data are available for studying the trend of India's foreign trade in the first quarter of the current calendar year (1964). These show that exports have continued to sustain the upward trend witnessed last year. The aggregate exports during the first quarter of the year amounted to Rs. 193 crores, as against Rs. 186 crores in the corresponding quarter of 1963. The extra foreign exchange of Rs. 7 crores earned thus, however, enabled the country to finance only a part of the additional imports aggregating Rs. 28 crores, so that the adverse balance of trade in the first quarter of 1964 was higher at Rs. 73 crores, as against Rs. 52 crores a year before. Be that as it may, the persistent improvement in exports, it would appear, has been spread over practically all the commodities and all destinations excepting Africa. And what is more encouraging is that the improvement has been due primarily to the increase in the volume of goods exported, rather than any fortuitous rise in export prices.

All this should not, however, lull the authorities or industry and trade into complacency. In this connection, readers' attention is invited to the small table on this page. It will be noted therefrom that imports, which had appreciably contracted in the first quarter of 1963 as compared with those in the same quarter of 1962, have shot up again, thereby stressing the need for larger exports. Another point that requires to be noted is that the increase in exports in the quarter under review is only Rs. 7 crores, as compared with Rs. 25 crores in the same quarter of last year. This suggests that the pace of growth is slowing down. Renewed efforts are, therefore, imperative not merely to maintain the present level of exports but also to achieve much better results. Besides the increasingly large imports, India has also to service mounting external debt and to meet the maturing foreign obligations. A further sustained improvement in export trade, however,

India's Foreign Trade
(In crores of Rs.)

	January-March			
	1964	1963	1962	1961
Imports ..	266	238	270	241
Exports ..	193	186	161	162
Balance of trade	—73	—52	—109	—79

presupposes increased production in the industrial, agricultural, plantation and mineral sectors, as well as continuing efforts on export promotion and sales. Both these aspects were impressively highlighted by the Board of Trade when it met at New Delhi on Tuesday the 5th inst. In this connection, the Board made the following useful suggestions:

The recommendations made by the Saraiya Committee on sales tax on export goods must be implemented; a reference to these recommendations was made in our last issue (*vide* page 735).

The recommendations of the Committee on Commercial Arbitration (separately outlined in these columns this week) must be circulated among the various representative organisations of trade and industry for their opinion.

A committee, consisting of a Secretary of the Union Government, representatives of the State Bank of India, tea associations, scheduled banks and others, should be set up to go into the question of finance for the tea industry. The special stress laid on this industry is only as it should be, considering that tea is the country's second largest earner of foreign exchange.

Export programmes for marine products should be prepared in concrete terms by the Ministries concerned.

Businessmen should be given more opportunities to visit and participate in trade fairs and exhibitions abroad, so that they can acquaint themselves with the modern trends in export products; the Reserve Bank should liberalise its foreign exchange policy for such visits and participation.

The Board of Trade did not confine itself merely to the problems lying immediately ahead. It also ventured to take a look at the long-term prospects for exports. The Board noted the Planning Commission's tentative export target of Rs. 1,200 crores for the fourth Plan, with the share of agricultural and agricultural-based commodities shown at Rs. 500 crores, of new manufactures (comprising mostly light engineering goods) at Rs. 150 crores and of all other items at Rs. 550 crores. It did not, however, express any definite opinion on the Commission's estimates. In the course of discussions, several members sought to emphasise that the correct plan strategy for exports would be to have targets which are more realistic than ambitious, since it would be wiser to exceed targets than to have frustrating shortfalls. Emerging from the discussions was a suggestion that a committee be appointed to evolve a strategy for trade with Latin American, African and Asian countries on the basis of reciprocity and mutual benefit, the strategy covering available

DELHI LETTER

RUSSIAN HELP FOR BOKARO WELCOME

A CASE STUDY IN DEVELOPMENT AMBITIONS

By Our Special Correspondent

NEW DELHI, *5th May*

THERE will be few, if any, in this country who will have reservations in welcoming the Soviet decision to step in to fill the breach in Indian development plans caused by the reluctance of the U.S. Congress to underwrite the late President Kennedy's recommendation that the United States help India fulfil a part of her grand steel ambitions. The story of the new steel plant, which is to be located at Bokaro in Bihar, is a case study of the problems that crop up while an underdeveloped country like India tries to force the pace of establishing sophisticated modern and massive industries. Mr. Kennedy's recommendation foundered on the rock of U.S. Congressmen's opposition to projects with a socialistic flavour.

When the Kennedy recommendation on aid to build the Indian steel mills was under hot discussion in the United States in June last year, Mr. C. Subramaniam had said in an interview: "The Bokaro plant will be built *with or without American aid*. We have waited patiently for two years for the Americans to decide on assistance for Bokaro. If any further delay is caused, it will be unfortunate. Expectations all over the country have been aroused about American assistance and if, unfortunately, it is denied, the present climate of good relations between the two countries will be strained. Bokaro has become the symbol or test for American co-operation in Indian development."

In the wake of the Clay report, which firmly opposed the use of American public funds to encourage the growth of socialism or State-run industries in underdeveloped countries, the late Mr. Kennedy said a year ago that it would be "a great mistake" not to help the Bokaro plant provided it were an efficient one; he drew a distinction between a foreign Government expropriating an existing private plant and building a new one and stressed India's need for more steel.

The then U.S. Ambassador to India, Mr. Galbraith, echoing Mr. Kennedy's sentiments, said at that time: "We want to see the tests of efficiency and results rigidly applied. Beyond this it is not our policy to insist dogmatically on any particular design for development. In the past, we have respected India's preference for power development in the public sector. President Kennedy's comment on Bokaro reflects the same attitude regards steel production..." Mr. Galbraith's successor, Mr. Chester Bowles, argued that the Bokaro steel plant would in fact stimulate the private sector and quoted the views of Mr. J. R. D. Tata to substantiate his stand.

All this and more said in support of the Bokaro plant fell on the deaf ears of the majority of American Congressmen who rejected the idea of endorsing funds for a Government steel mill in India. As soon as the U.S. Congress overruled the use of American Government funds to support a steel project in Bokaro—the vote was taken in August last—the Indian Government made haste to withdraw the request for American aid. The withdrawal of the request was motivated by a desire to avoid embarrassing the late Mr. Kennedy who might otherwise have had to make a formal refusal. In the process of the detailed discussions on the Bokaro project, American survey teams visited India and confusion was worse confounded by new questions on the feasibility of the project and the differences between American and Indian experts on costs and other factors.

Tall Talk

The withdrawal of the request for American aid was followed by some bravado on the part of the Indian Steel Ministry which naturally was distressed over the delays which had already taken place. For more than a decade, Bokaro has been talked of as a possible site for a steel plant; it was to provide one-million-ton ingot capacity by the end of the third Plan. As it is, the delay in starting work has grown to at least three years, because of the upset in expectations of American aid. Mr. Subramaniam's immediate reaction after the U.S. Congress decision was to announce that "we should go it alone" as far as possible. The strategy adopted was to try and make use of as much indigenous fabricated materials as possible and order the other equipment through competitive international tenders. There had been rumours all along that the Soviet Union might undertake the task, but, during the past eight months, the endeavour was to try and explore ways of parcelling out the project among various firms who would approach their Governments for credit facilities to enter the tendering for supply of equipment. Early in April, it was reported that firms in the United States, Japan and France were planning to form consortiums to bid for items in the Bokaro contract. The schedule was to make the call for tenders between July and October.

In the process of discussions on handling the Bokaro project, controversies also arose within the Union Government. A powerful group in the Steel Ministry, inspired by Minister Subramaniam, was in favour of Dastur and Company being put in charge of the grand design for Bokaro. The Finance Minister was known to be opposed to taking this plunge. On 13th April last, when attending the heating up of the coke oven plant in the expansion programme of the Bhilai project, Mr. Subramaniam threw the hint for the first time that he was confident that the Russians would help in the construction of Bokaro. Then it was interpreted to mean that the Russians would help with some sections of Bokaro construction and the remaining sections would be up for international tender. Then, on May Day, the Steel Minister made the dramatic announcement that the Russians would underwrite the Bokaro plant and adopt the Bhilai style.

The Soviet offer has been compared to the Russian intervention to help with Egypt's Aswan project when the West withdrew, but the Indian Government is on a more stable political keel than Nasser's administration was at that time. The Soviet plunge into the Bokaro project has solved numerous intricate problems for the Indian Government. The inter-ministerial controversy over the merits in having an Indian consultant is brought to a close and the two southern stalwarts in the Union Cabinet. have that much less reason to get on each other's nerves. Secondly, despite all the tall talk, the going had been hard on Bokaro in trying to go it alone. The task of co-ordinating construction, with equipment to be ordered from numerous firms all over the world, would have been immense. The experience in Rourkela has been bitter enough; there the Indian administrators had failed to co-ordinate effectively the work of several German firms. There has yet been no thorough collation of the possibilities of indigenous fabrication of materials needed for a steel plant. Such an assessment itself, it has been claimed by experts, would take two years. Now the Indian Steel Ministry will have breathing time to study these aspects in planning the fifth mill—in Goa, Salem or Visakhapatnam. Perhaps, the Government will be able to make use of various Western firms in the later steel projects which may be less ambitious in conception than Bokaro to begin with.

Turn-key Basis

The Bhilai style for Bokaro means that the Russians will tackle the one and a half million tonne stage on a turn-key basis. To list the achievements at Bhilai: the plant achieved its target of one million tons first stage production five days ahead of schedule in 1962; in 1963, the plant worked at nearly 110 per cent of capacity; the expansion programme has been going ahead fairly according to schedule; the expansion to 2.5 million tonnes of ingot is now expected to be completed by the end of the current Plan. At Durgapur and Rourkela, the expansion work is a year or more behind schedule and not all the running-in troubles of the first stage have been ironed out.

When lauding the excellent performance of the Bhilai plant, one reservation which has been made by experts is that Bhilai was designed to make simple products—rails and structurals, railway sleepers, rounds and foundry pig iron. In contrast, the Rourkela steel mills, built with West German aid, has a complicated product mix—wide and heavy plates hot rolled sheets, light plates and strips, cold rolled sheets, hot dipped tinplates, etc. Non-Indian experts, including Americans, have complimented the Russians on their training programme which would enable the Bhilai plant to be run soon exclusively by Indian engineers. The German argument has been that, in relation to the sophisticated products and the advanced techniques at Rourkela, which is claimed to have some of the most modern units in Asia, training is a more difficult process. In the construction of the Bokaro plant, the Russians will be in peaceful competition with the Western firms on whether they can deliver the goods and undertake the training of Indians in a better way than the Germans have.

The Russians are expected to send a team of experts either towards the end of this month or early June to discuss preliminary technical details of the Bokaro project. Both the American estimates and Dastur and Company's assessments of the costs may now be safely kept aside.

The Bhilai plant's first stage of one million tons ingot, including the township, cost around Rs. 200 crores, of which about Rs. 65 crores was in rouble expenditure repayable in rupees. The expansion of the Bhilai plant to 2.5 million tonnes ingot is estimated at present to cost Rs. 138 crores, of which about Rs. 55 crores are to be rouble credit. Or, in other words, the total cost of the 2.5 million tonnes (ingots) Bhilai plant may be around Rs. 340 crores, with Rs. 120 crores as the equivalent of the rouble credit. In Rourkela, the cost of the first stage (million tons ingot) was Rs. 234 crores and credits for the construction *plus* refinancing for repayments add up to around DM 1,200 million or more than Rs. 140 crores. The present estimates of the total cost of the Rourkela expansion are Rs. 110 crores and the credits given by the Germans for the expansion so far add up to DM 540 million or around Rs. 65 crores. Accepting these, estimates, the total cost of the 1.8 million tonne ingot capacity at Rourkela may be up to Rs. 350 crores with more than Rs. 200 crores as the foreign aid expenditure. The Bokaro plant 1.5-million-tonne stage will certainly cost more per tonne capacity than the Bhilai plant in view of the fact that Bokaro also will be designed to produce flats as in Rourkela. At one time, a tentative decision seemed to have been taken by the Steel Ministry that all future steel mills would have the L.D. process to make steel. Until now the L.D. process is in use in India only in the Rourkela plant. It is too early to say whether the Russians will make use of the L.D. process at Bokaro. The Russians certainly will be agreeable to making use of more indigenously fabricated equipment, particularly since the largest supplier of such equipment will be the heavy engineering plant established with Soviet technical and financial assistance.

Other Soviet Projects

Talks are also to begin within the next few weeks on Soviet allocations of assistance for the fourth Five-year Plan. Soviet-aided projects other than Bhilai do not have as good a record as the steel mills. The Barauni refinery commissioning has been repeatedly postponed and its cost estimates have also increased. The Koyali refinery project has had a slow start, but, for the Indian Government, the most significant aspect of the Soviet-aided refineries is the fact that the Soviet entry broke some of the resistance on the part of Western oil companies to negotiate "reasonably" with Delhi. The new refineries to come up with Western firms' collaboration in Cochin, Madras and Haldra will be cheaper than the Soviet-assisted refinery projects.

There was some delay with Soviet deliveries of equipment for power plants, but the first stage of the Neyveli power project is now complete. Soviet electrical generating equipment is being used also at Bhakra, Patratu and Korba. The phytochemical project planned to be erected in Kerala had to be abandoned, partly because of faulty calculations in regard to the economics of the project.

One of the more difficult aspects in the use of Soviet aid is the slow rate of utilisation. To some extent, the gap between commitment and use is exaggerated, because the Soviet Union announced her promises of aid for the third Plan towards the end of the second Plan itself. Of the sum of Rs. 383.81 crores of assistance promised by the Soviet Union for projects included in the second and third Plans, no less than Rs. 232.56 crores remained unutilised as of 1st October, 1963. A breakdown of this total shows that, of the Rs. 145.70 crores allocated for second Plan projects and the Bhilai plant alone more than Rs. 33 crores remained unused on 1st October last and of the Rs. 238.11 crores allocated for third Plan projects, Rs. 199.08 crores remained unused.

In the project for the manufacture of MIG 21-supersonic fighter planes, the Indo-Soviet

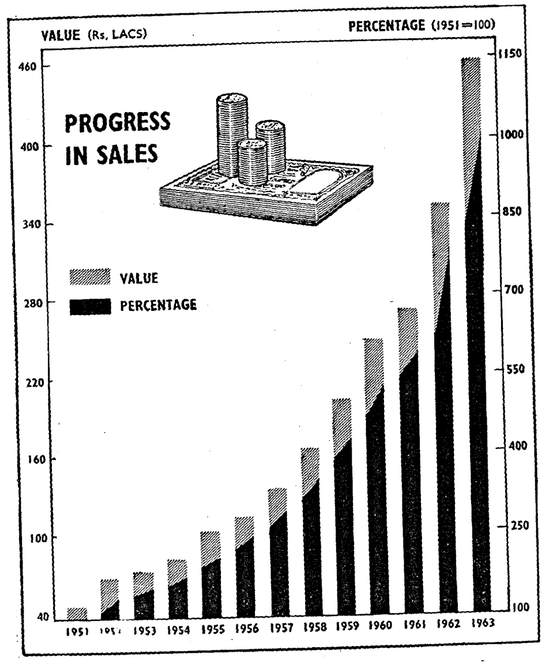
NATIONAL PROGRESS...

On the eve of Independence, NATIONAL RUBBER MANUFACTURERS LIMITED was incorporated. Today, after only 18 years NRM represents the Largest single unit in India, manufacturing industrial and mechanical rubber products.

The wide range of NRM quality products includes:

- Cycle Tyres and Tubes
- Rickshaw Tyres
- Railway Rubber Fittings
- All types of Hoses
- Industrial V-Belts and Fan Belts
- Transmission and Conveyor Belting



SALES PROGRESS

1951—Rs. 46·68 lacs
1963—Rs. 457·09 lacs
Increase 979%

EXPANSION PROGRAMME

NRM will substantially increase the capacity for:

- Cycle Tyres and Tubes
- Industrial V-Belts

NRM's new projects will include:

- PVC Conveyor Belting
- Reclaimed Rubber

NEW ENTERPRISE

NRM has sponsored the first wholly Indian-owned automobile tyre company. Widespread consumer acceptance has proved the quality of its products.

"KENNEDY ROUND"

THE much-talked-of "Kennedy Round" tariff negotiations were formally launched at Geneva on Monday this week under the auspices of the G.A.T.T. The negotiations are called "Kennedy Round," because the U.S. Trade Expansion Act of 1962, proposed by the late President Kennedy, made this round of discussions possible by authorising the President to negotiate tariff reductions by 50 per cent on a linear reciprocal basis. Participating at the negotiations are the official representatives of the 62 G.A.T.T. member-countries, which together account for four-fifths of the aggregate free world trade now running at an annual rate of some $150,000 million. The Kennedy Round is the sixth of a series of G.A.T.T. trade negotiations since the war and by far the most comprehensive. The previous (fifth) session—the Dillon Round—it will be recalled, was held from May 1961 to July 1962 when 4,400 tariff cuts on trade worth $1,900 million—or an average cut of about 20 per cent—were achieved. The Kennedy Round, which has begun after hard pre-negotiations and bargaining for over a year, will review what has been done already and assess the problems ahead in achieving free world trade liberalisation.

Since there are quite a number of difficult obstacles which will have to be overcome before the G.A.T.T. nations can cut tariffs and dismantle other trade barriers, actual progress will take many months; the Geneva talks are expected to spread over at least eighteen months. It is, however, gratifying to hear about the broad agreement already reached on four important guidelines for negotiations. In the first place, the working hypothesis for talks will be a 50 per cent across-the-board cut in tariffs. Secondly, special treatment will be given to items on which the inequality in tariff rates may give a significant trade advantage after an equal and linear cut from a higher tariff rate, although full agreement on an automatic disparity rule has not been reached. Thirdly, the disparity cases calling for special treatment will be held to a strict minimum. And, finally, trade in farm products will form an integral part of the negotiations, though the specific rules for liberalising such trade will have to be worked out.

The broad agreement on the aforesaid guidelines is no doubt a happy augury, but the Kennedy Round will succeed ultimately only if the approval of the different negotiators is not based purely on narrow national interest. The 'if' here is a big one. Provided the G.A.T.T. Contracting Parties act together with dedication and purpose, as President Johnson has aptly put it in his message sent to the opening meeting of the Geneva talks, all can gain and none need lose. Echoing these words, Mr. Christian A. Herter, the chief U.S. negotiator, appealed to the other delegates thus: "Let us use this meeting to dedicate ourselves and our Governments to prompt, effective efforts to settle the issues *quickly* (italics ours). The word "quickly" is significant, for time is pressing and, unless speedy action is launched to ensure a better international division of labour and higher living standards all round, there will be a veritable crisis in world trade in the not-too-distant future.

Although 62 countries are participating in the Kennedy Round negotiations, the success of negotiations will hinge largely on the question whether the U.S. (backed by the U.K. and other E.F.T.A. countries) and the European Economic Community (E.E.C.) will reach agreement on two vital issues pertaining to (a) disparities in industrial tariffs, and (b) trade in agricultural products, besides the question concerning non-tariff barriers. On the first issue, the E.E.C. has categorically rejected the G.A.T.T. Trade Negotiations Committee's proposal that the 50 per cent cut in tariffs should be an offer by all the negotiating parties. It has, however, accepted a counter-proposal drafted by its experts, the details of which are not known at the time of writing (Wednesday the 6th inst.). As for trade in agricultural products, the U.S. continues to insist on securing increased outlets for its agricultural exports, while the E.E.C. is reluctant either to give any guarantees of market access or to lower its protection. Alluding to this difference, the May 1964 issue of the First National City Bank's *Monthly Economic Letter* makes the following interesting observations:

"The grain price issue is pivotal, because the levels within the Common Market will go far toward shaping the future of world commercial trade in basic foodstuffs. Since the E.E.C.'s system of variable import levies means that imports will be permitted only when domestic output falls short of demand, a relatively high price would not only encourage stepped-up output within the E.E.C. but it would cut down purchases of low-priced wheat and feedgrains from the United States and Canada, thus adding to world surpluses. While the United States has been pressing for low grain-price targets as the best way to assure continuing access for its exports to the E.E.C., the Common Market Ministers have so far refused to include grain prices in the G.A.T.T. bargaining. As in this country (the U.S.), political pressures for high farm prices in the E.E.C. make the problem difficult to settle on a rational basis.

"It is, however, believed that commitments about support levels may become part of a world grains arrangement that is being discussed in the G.A.T.T. Cereals Group, a special body assigned to thrash out the complex issues of the grain trade. Since the major participants are already committed to special trade arrangements for grains, a loose type of 'commodity agreement' may emerge as part of any overall deal. While U.S. officials are opposing any arrangement that does not include guarantees of market access, a better solution would be one based on lower prices permitting market forces to work."

Besides the above two issues, conflict between the U.S. and the E.E.C. is also expected when non-tariff barriers come under scrutiny. These barriers cover such things as quotas, customs fees, taxes, import monopolies, valuation procedures, labelling and packaging laws, food and drug regulations, and documentation requirements. The E.E.C. and other exporting countries will urge the U.S. to do away with its "American selling price" method of customs valuation and other regulations and procedures that act as import barriers. India and other developing countries have all along been pressing for the elimination of these barriers, as well as for the abolition of transaction or turnover taxes on imports levied by several countries in Continental Europe.

The plea for an early dismantling of all non-tariff barriers was most emphatically put forward by Mr. K. B. Lall, leader of the Indian delegation to the Geneva talks. He said:

"My country is particularly interested in dismantling the barriers to trade in agricultural products, of which we are substantial producers and which are not so important to domestic producers in advanced economies. It is to be hoped it will be possible to pursue liberal commercial policies in this limited field. Multiplicity of non-tariff barriers has created insoluble difficulties for our exports."

No less forceful was Mr. Lall's plea to industrialised countries to refrain from invoking procedures for exceptions and disparities in respect of manufactured products of interest to developing countries. He made it clear that India could consent to the sacrifice (a substantial reduction in Commonwealth preferences as a consequence of the system of linear cuts) only if it was offered substantially larger trading opportunities in other industrialised countries.

The outcome of the Kennedy Round and the deliberations of the U.N. Trade and Development Conference, it is to be hoped, will pave the way for an orderly expansion of world trade, the benefits of which should be increasingly shared by the vast multitude of developing countries, including India. What these countries really and urgently need are expanded trade opportunities. For it is only through such opportunities that they can accelerate the tempo of economic development with reduced dependence on foreign loans which, as is well known, entail heavy repayment obligations.

GENERAL INSURANCE

A modest rise in net premium income and a further decline in the number of insurers transacting general insurance business in India are disclosed by the latest issue of the *Indian Insurance Year Book*, 1963, just published by the Controller of Insurance. All the data contained in the *Year Book*, however, pertain to the year ended 31st December 1962, though the number of insurers, as at the end of 1963, is also mentioned. There were, as on 31st December 1962, 148 insurers transacting general insurance business, of which 78 were Indian and 70 non-Indian companies. The number declined to 142 as on 31st December 1963, of which 76 were Indian and 66 were non-Indian companies. Thus, two Indian companies and four non-Indian companies ceased to do general insurance business in 1963. Five years ago, at the end of December 1958, there were 184 insurers doing general insurance business in India, of which 91 were Indian and 93 non-Indian. Thus, as many as 42 general insurers disappeared from the general insurance field during the five-year period 1958-63.

While the number of insurers has thus been steadily declining, general insurance business has expanded markedly as is evident from the trend of premium. Thus net premium income in India of Indian and foreign insurers almost doubled from Rs. 18.12 crores in 1957 to Rs. 35.60 crores in 1962. The rise in premium income during the year 1962 alone was of the order of Rs. 3.66 crores. Reflecting this, the index number of general insurance business (base: 1956=100) recorded a rise of 11.2 points in 1962, though it was a little less than the increase of 15.3 points recorded in 1961.

A striking point brought out by the foregoing survey is that, by 1962, the volume of general insurance business was nearly twice as much as that transacted in 1957 and this business was shared by three-fourths of the total number of insurers existing at that time. The average net premium per insurer in 1962 was, therefore, about 2½ times that five years before. But, even so, the average net premium per insurer was too small, being less than Rs. 25 lakhs per insurer, on the basis of a net premium income of Rs. 35 crores of the 148 insurers in the country. This, by any standards, is too low and not conducive to the economic working of the companies nor to taking advantage of the economies of scale which play a large part in reducing the cost of insurance. For instance, a small company, with a premium income of less than Rs. 25 lakhs, cannot hope to undertake big risks, which is necessary in view of the growing number of large and medium-sized industrial undertakings. If the smaller companies were to amalgamate themselves into, say, ten companies, with an average net premium income of at least Rs. 350 lakhs each, there will be ample scope for more economic working, healthier competition and for a reduction in the cost of insurance to the insuring public. With the entry of the L.I.C. into the general insurance market, the need for such amalgamation has become greater, nay, imperative. But to achieve this goal a clearer vision and a bolder approach than have hitherto been displayed by the leaders of general insurance in the private sector are called for. It is high time they realised that the Government would no longer be interested in giving a lead in this direction. Why should it bother itself about these matters, when it has decided to rely on its own concerns for improving and expanding the services rendered by general insurers?

FOOD AND NUTRITION

The Government of India has just constituted a Food and Nutrition Board at the Centre. This is a welcome, though belated step. It is welcome because, in a country like India, better nutrition, which the Board seeks to achieve, holds the key to improving the health of the people. It is belated because the formation of a Nutrition Board to initiate and secure the expeditious and effective implementation of the programme of development and popularisation of subsidiary and protective foods should have been accorded as high a priority as was given to increased food production. Precedence for programmes for improving standards of nutrition would not only have been in accordance with the overall Plan objective of improving the standard of living but it would also have contributed to easing the food supply situation by reducing the demand for cereals, large quantities of which have yet to be imported. In spite of the urgency of the problem no concerted efforts were made during the First and Second Plan periods to improve nutrition, change the food habits of the people, with its excessive preference for cereals, or to create awareness of the problem among the people. It was only in the Third Plan that a modest beginning was made by including in it some schemes for better nutrition. And it is only now, in the fourth year of the third Plan, that the Food and Nutrition Board, which is supposed to co-ordinate and implement the programmes outlined in the Plan, has been set up.

Better late than never. It is in this spirit that the formation of the Board should be welcomed. The Food Secretary to the Government of India is the ex-officio Chairman of the Board. Among the members are the Agricultural Commissioner of the Government of India, the Directors of the Central Food Technological Research Institute, Mysore, the Nutrition Research Laboratory, Hyderabad, the Director-General of the Council of Scientific and Industrial Research and one representative each of the Union Ministries of Community Development and Co-operation and Health. It will thus be seen that the Board consists of the right people. Only it is to be hoped that it will make up for the egregious delay by being dynamic and realistic in performing its functions.

The nature and dimension of the problem of nutrition are too well known to need elaboration. Briefly stated, the problem mainly is that the average Indian diet is poor in protein content and deficient in several vitamins and minerals. Protective foods such as milk, fruits and vegetables, eggs, fish, meat and processed proteins, are invaluable for diversifying the pattern of food consumption and promoting balanced nutrition. Food surveys conducted in the past have shown that the average Indian meal is singularly lacking in these protective and body-building foods. In fact, vitamin deficiency bears particularly harsh on growing children among the poorer sections of the population. The average intake of cereals is between 16.62 ozs. and 16.59 ozs. per adult per day. The average for rural areas is even more at about 17.5 ozs. In a number of instances, the daily intake has been as high as 25 to 30 ozs. per adult. If this dependence on cereals could be reduced by a small percentage, the need for imports of cereals could be proportionately reduced.

In view of the special character of the problem, a programme for improving nutrition should fall under two heads. First, education of the masses in nutrition and, secondly, adoption of measures for meeting the nutritional requirements of vulnerable groups within the community. Information and guidance about nutrition, and the ways and means of preserving the nutritive elements in food and avoiding wrong uses and wastage should be disseminated through as wide a medium as possible but preferably through demonstrations and the efforts of voluntary social service organisations. Special short-term training in nutrition should also be given to such persons as doctors, nurses, health visitors and school teachers who constantly come in contact with the masses. To carry out such programmes not only is there need to equip better the public health nutrition services at the Centre and the States but there must also be the closest co-ordination between the programmes at the State and Central levels. Efforts must also be made to secure a rapid increase in the production of protective foods in the country.

PAPER INDUSTRY

Under the third Plan, the paper and paperboard industry has been assigned a target of 820,000 tons for capacity, as against 410,000 tons in the last year of the second Plan. It is heartening to know from Mr. M. L. Zutshi, Chairman of the Indian Paper Makers' Association, that the industry is well on the way to achieving its capacity target. According to his estimate, the aggregate installed capacity of about 550,000 tons in 1963-64 will go up to 695,000 tons in 1964-65 and further to 765,000 tons in 1965-66. If the approved expansion of some of the existing mills through installation of balancing equipment also materialises, the industry will have an aggregate capacity of as much as 885,000 tons—something in excess of the target —by the end of the current Plan. But the growth of production so far would seem to suggest that the third Plan target of 700,000 tons therefor may not be achieved. In fact, the Planning Commission's mid-term appraisal itself has recently forecast a likely production achievement of no more than 580,000 tons in 1965-66. It may also be recalled, in this connection, that actual production in 1963 (broadly corresponding to the third year of the Plan) was only 465,000 tons. As for newsprint, which has separate targets for capacity (150,000 tons) and production (120,000 tons), the position will be much worse. Unless the three newsprint schemes licensed in the private sector come to fruition, the target capacity will not be achieved. The prospects are that none of them will fructify before the target date. Actually one of the two schemes based on bagasse is stated to have been abandoned. There are only two schemes in the field now—one based on bagasse and the other on Himalayan fir and spruce. As both these schemes are yet to be given practical shape, newsprint production in the last two years of the Plan may only continue at the present level of just under 30,000 tons per annum. As a matter of fact, the mid-term appraisal itself has estimated the likely output in 1965-66 at just 28,000 tons. All in all, therefore, there will be huge shortfalls in the Plan's production targets for paper (including paper board) and newsprint.

Two principal factors are responsible for these shortfalls. One of these pertains to raw materials and the other to selling prices. As for raw materials, there is to date no improvement in the difficult situation faced by the industry. Mr. Zutshi's presidential speech at the latest annual general meeting of the Indian Paper Makers' Association is noteworthy, in this connection, for its exhaustive treatment of this problem. The continuing difficulties mentioned by him are: (i) the refusal of some States to lease forests to paper mills not situated within their geographical boundaries; (ii) the reluctance of some State Governments to grant long-term leases of forest areas to paper mills; (iii) the frequent tendency of State Governments to put their forests to public auction and force the mills to compete with sundry contractors; (iv) lack of reliable information about the exact availability of forest produce suitable for being used as raw material for paper making; and (v) lack of a uniform basis for charging royalty which presently ranges from Re. 1.25 per ton to Rs. 30.00 per ton of bamboo. Mr. Zutshi's plea is that, in view of these difficulties which arise largely from the lack of uniformity in State Governments' policies, a central authority should be established for laying down the principles and basis of supply of forest produce to paper mills. This is no doubt a reasonable plea and the Central Government should persuade the States to follow a uniform policy. Only some special concessions will have to be shown to relatively underdeveloped States wanting to attract industries.

The raw material problem has its short-term and long-term aspects. As the conventional raw materials like bamboo and grasses are not quite sufficient to meet the requirements of the paper industry in the immediate future, something must be done as a matter of priority to make available to the industry at least half of the three million tons of bagasse which is now burnt away as fuel in the sugar factories every year. How this can be done has been indicated by this journal in its issue of 2nd May 1964 (*vide* note entitled "Bagasse for Paper" on page 738). If 1.5 million tons of bagasse can thus be released for the paper industry and, if at the same time, one million tons of grass, straws, jute stalks, waste paper and rags can be systematically collected, the aggregate annual supplies of fibrous raw materials, including the estimated two million tons of bamboo, would come to about 4.5 million tons. The availability of that much raw material every year would mean an annual output of about 1.5 million tons of paper, paper board and newsprint on the basis of an average requirement of three tons of raw material for one ton of paper. But all these estimates have relevance only to the next six or seven years. If the estimated raw material requirement of 10 million tons for ensuring a *per capita* paper consumption of 7 kg. by 1980 is to be met, a long-term policy for conserving forests and for planting bamboo, as well as short and long-fibred trees, should be evolved without delay and brought into force. Incidentally, Mr. Zutshi is critical of the present tendency to base the manufacture of rayon grade pulp or dissolving pulp on bamboo as it is, in his view, a waste of resources to use bamboo for the production of such pulps. His contention is that bamboo is not an ideal raw material for this purpose. This is a technical issue which is best resolved by appropriate research scientists. But Mr. Zutshi's plea that the long-term development of forest resources *vis-a-vis* the requirements of the paper industry should be taken up as a whole is unexceptionable.

The other factor which is slowing down the rate of expansion in paper production is price control. Although the Government has recently abolished price control on paper boards, it has chosen to keep intact the control on the selling prices of paper. The industry's case for a higher return on employed capital, as well as for full neutralisation of cost increases from time to time, has been cogently and impressively reiterated by Mr. Zutshi in his speech, *vide* page 806 of this issue. But is this the right solution to the problem? An alternative would

be to reduce the taxes and levies that have been heaped on paper, as though it were a luxury. The Finance Minister will, however, turn round and say that any such relief will benefit only middlemen, for, in the sellers' market prevailing in paper, there is no certainty that there would be a fall in the prices paid by consumers. The logic behind this argument is convincing. The best solution, in our opinion, would be to decontrol writing and printing paper as well, without any special protection for the Government, too, as a privileged consumer. Such protection, it may be noted in passing, has only led to a tremendous waste of paper in Government departments. The present control on paper prices offers no protection to non-Government consumers, as there is no machinery to enforce it at the consumer end. Besides, it has led to a fall in the quality of paper and is placing a premium in the hands of dishonest producers, while penalising the honest ones. To let the prices find their own level would be to enable the industry to cover the cost increases fully and earn more reasonable profits so that the much-needed ploughback for the expansion of existing units can take place. The Exchequer, too, could get a larger revenue, if its tax collectors were vigilant enough to discover cases of under-invoicing. After all, a large part of the profits that should legitimately go into the books of producers is now swelling the quantum of unaccounted money. What is more, the expectation that new units would mainly account for the planned expansion in paper production has been largely belied. It is, therefore, obvious that the older established units, with their proved capacity for expanding production even within the limits imposed by price control and raw material availability, should be encouraged to go forward with their expansion plans. One of the most effective ways of providing such encouragement would be to abolish the existing price control on paper. The risk of a possible immediate increase in open market prices can well be taken in the hope that they will find their fair level in due course in the wake of increased production, improvement in quality and competition among producers.

CONTROL ON FOODGRAIN DEALERS

At the sixth convention of foodgrain dealers, organised by the Federation of All-India Foodgrain Dealers' Associations at New Delhi on the 3rd instant, Mr. Hasham Premji, President, took the stand that the price-line could be held only if more was produced from year to year and that the foodgrains trade should not be made a scapegoat for the failure of State Governments in implementing the grow-more-food programme. Mr. Premji's emphasis on greater production, though quite appropriate in itself, nevertheless struck one as a cover for the trade's failure to restrain the unconscionably steep increase in rice and wheat prices at the end of last year and in January this year. Surely the trade made no attempt then to subject itself to voluntary restraints in the same way as it had done in the closing months of 1962, following the declaration of emergency. In a way, therefore, the absence of self-regulation by the trade was an invitation to the Government to impose control on dealers. The recent promulgation of the "Foodgrain dealers licensing order" was thus an inevitable, albeit unfortunate, development.

It goes to the credit of the Government that, in response to the trade's representations, it has sought to liberalise some of the more stringent provisions of the licensing order. Thanks to such liberalisation, the trade, too, seems to be veering round to co-operation with the Government in implementing the regulatory measures. As much has been acknowledged by the Union Minister for Food and Agriculture in the Lok Sabha this week. But the trade continues to be unhappy over the requirement that quarterly returns of prices, sales, stocks and profits should be submitted to the authorities. While the trade no doubt appreciates the Government's anxiety to keep a close watch on the stock position in the difficult months ahead, it holds the view that profit-margins could be more easily worked out from the dealers' sales tax and income-tax returns. The requirement regarding separate quarterly returns, it is contended, would compel the traders to spend as much as seven crores of rupees every year on an elaborate accounting system. Considering the fact that there are 600,000 foodgrain dealers, having an aggregate turnover of about Rs. 2,000 crores, it would be patently cumbersome and unwieldy to get quarterly returns from all of them. Even if wholesalers alone are ultimately required to submit these returns, it will still be a burdensome operation to analyse them and obtain a reliable picture of earnings with their fluctuations from quarter to quarter. Apart from that, how is the Government going to ensure the genuineness of the figures given in the returns? If a dealer indulges in profiteering, he would not be so gullible as to disclose it in his statement, quarterly or otherwise. This country will have to be a police State to unearth the black-marketeers' undisclosed wealth.

If the Government is particular about keeping a close watch on the movement of foodgrains and stock position, it can as well call for simple stock returns from dealers every quarter or even every month. As profit-margins and maximum prices for foodgrains, according to the Government's present thinking, are going to be fixed in due course in consultation with the associations of dealers, the idea of quarterly returns of purchases, sales and profits can be conveniently abandoned. The Government's stubborn stand is that, unless these returns are submitted, it would not be in a position to know at what prices foodgrains are being sold and what profits are being made. This is a very unrealistic stand for reasons just mentioned.

INDIA'S AID TO NEPAL

Indian assistance committed for the development of Nepal now comes to about Rs. 40 crores. Aid under the formal agreements adds up to Rs. 27 crores. India offered Rs. 4.3 crores to Nepal even before Nepal launched her first Development Plan in 1956. The total Indian commitments for Nepal's first Five-year Plan were Rs. 10 crores, but, during this period, Nepal suffered from foreign aid indigestion and about Rs. 4 crores of Indian aid remained unspent. Indian contributions to the second Plan are an initial Rs. 10 crores plus Rs. 3 crores for the Sonauli-Pokhara road which was promised by Mr. Nehru after his talks with King Mahendra in Delhi in August last year. Not included in the formal aid agreements are Rs. 4 crores being spent on the Chatra canal, which forms part of the Kosi project, Rs. 3 crores spent on Tribhuvan Rajpath and the amounts which will be spent for Nepal's benefit in the Gandak and Kosi projects.

The Gandak project, which has now got moving with the laying of the foundation-stone for the barrage by King Mahendra, was originally suggested by the late Dr. Rajendra Prasad as early as in 1947 when he was Food Minister. Negotiations over the Kosi and Gandak projects gave rise to numerous controversies, with the communists in Nepal being among the louder critics. According to the Nepalese critics, the agreements on the Kosi and Gandak projects would mean surrender of sovereignty to some extent by Nepal to please India. The initial negotiations for the Gandak agreement were started when Mr. Tanka Prasad Acharya was the Prime Minister of Nepal. He appeared to be helpful, but, once he was removed from office, he started India-baiting, the favourite hobby of all politicians out of power in Nepal. Mr. Acharya later became an acid critic of the Gandak project. During his three-month premiership, Dr. K. I. Singh, too, began by being enthusiastic over the Gandak project, but no sooner he went out of office than he joined the opposition to the scheme.

With King Mahendra's blessing, the Rs. 52-crore project is now off to a good start, after Delhi made some changes in the agreement, to soothe critics who talked of infringement of Nepal's sovereignty. The barrage across the Gandak will also provide a road link between the eastern and western wings of Nepal, ensuring all-weather communications. The project will irrigate about 27 lakh acres in Bihar State, seven lakh acres in Uttar Pradesh and one and a half lakh acres in Nepal. According to the initial calculations, India will provide Rs. 230 lakhs worth of irrigation facilities for Nepal and another Rs. 350 lakhs worth of benefits to Nepal through the powerhouse and transmission lines. The irrigation benefits alone will lead to an increase in Nepal's crops to the extent of Rs. one crore per year.

After numerous initial difficulties, the Rs. three-crore Trisuli hydel project is also progressing. Troubles over availability of labour are reported to have been overcome. After the disappointments over Chinese-aided projects (except the road to Tibet), King Mahendra has been anxious for speedy execution of Indian-aided schemes. Nepal has also opened her doors to foreign private investors and several concessions are available for Indian businessmen for the mere asking.

LONDON LETTER

THE PATTERN OF TRADE

EXPORTS PICK UP

(From Our Own Correspondent)

LONDON, *2nd May*

AFTER all the surprises that the ups and downs of British trade have given ever since those chilling January figures, we are now able to piece together the totals for the first three months only to find nothing dramatic but some encouraging and a few cautioning signs. The first encouraging sign is that exports moved ahead fairly strongly in the first quarter after their hesitation in the last quarter of 1963. Allowing for seasonality, they rose 2 per cent over the previous quarter (and were 9 per cent more than a year before). Moreover, each month did better than the preceding one, with March showing a record £373 million. These figures are especially encouraging, because one might have expected domestic demand to have diverted goods from exports; but even manufactures (the most vulnerable item) were £3 million a month or one per cent more than in the previous quarter. Engineering goods continued to expand and exports of cars were 18 per cent up on the year. Semi-manufactures, which had been declining in the previous quarter, have since held firm.

The cautioning sign is that the markets for development of exports are narrowing. Exports to the Common Market, for instance, seem to have been flat since the middle of last year, though the pattern between the various countries is by no means identical, France and Italy showing some recent decline, Germany showing stability and the Benelux countries some improvement. Overall, however, it seems obvious that the tariff protection of the Common Market is having its influence.

Nevertheless, exports to Western Europe as a whole are £5 million a month up on the previous quarter and this reflects the growth of British exports to the E.F.T.A. countries. This is, indeed, the brightest feature of the export picture, but there are obvious limitations to how far trade between this group of countries can expand. Meanwhile, E.F.T.A. has certainly justified the Government's hopes that it would counterbalance the deleterious effects of being excluded from the European Economic Community.

The other encouraging market has been the Commonwealth, which, after a small fall in the last quarter of 1963, showed a £4 million per month improvement this year. Australia and New Zealand accounted for most of this growth. On the other hand, exports to North America, the bright star of 1963, turned down sharply. Elsewhere, too, the trend of exports was weak, with the gains of 1963 being held at best.

Imports have risen more strongly than exports. The upturn since the turn of the year has been the most notable feature, this being 7 per cent up on the previous quarter and no less than 21 per cent up on the year. The recent increases are a result of stockpiling and to that extent should tail off. Partly also they reflect higher prices and these may also be halted. The average monthly figure for the quarter was some £450 million against the £356 million per month of exports—both figures on the traditional basis of exports f.o.b. and imports c.i.f. This crude balance of nearly £100 million per month is reduced to £35 million per month, if both figures are put on the same basis—but even so, there is a running deficit on visible trade at the annual rate of £400 million—two or three times as wide a gap as there should be, if the U.K. is to continue making her capital investment contribution to the developing countries.

The reason for the steep rise in this first quarter is to be found largely in industrial materials and finished manufactures—a term which covers two large tankers, items not likely to be frequently repeated. Industrial materials have risen £12 million per month as compared with the previous quarter (7 per cent), yet this rise was no more than shown by each of the two preceding quarters over their predecessors. Basic materials and semi-manufactures which showed special increases were timber and chemicals. Oil imports also moved up. Imports of finished manufactures rose even more steeply, being 20 per cent up on the previous quarter, but the increase was mostly in capital goods and so reflects the rising volume of industrial investment. One-third of the increase was in the aforementioned tankers, the rest was mainly machinery, though consumer goods also showed a strong rise.

One may expect that, in the present second quarter of the year, the trade gap will narrow somewhat, unless exports receive some setback. The most cautionary feature of all the figures is, however, that no dramatic improvement can be looked for while the general tempo of business is upwards, unless some opening for very much increased exports can be found. That the physical market is there in the under-developed countries cannot be doubted and we are driven back to the conclusion that the most important issue facing this country and the developing countries is an expansion of world credit to release the productive energies of the manufacturing nations. Yet there is no sign yet that the international monetary authorities have other than pedestrian proposals for ending the credit stringency.

WHEN A BANK IS NOT A BANK

By Questor

WHAT is a bank ? At the moment the question is one for the bankers as much as for students of banking. The growth of a multitude of financial institutions round the edge of "*banks proper*"—or old style banks—has convinced many a practitioner that the time for re-definition has come. It is not a question of *word-chopping* but profits and just now Canada illustrates the problem neatly.

Canada has only eight chartered banks and the Canadian Parliament has had to consider only two applications for a charter in the past fifty years. Now, however, it is faced with no less than four—one of them from a company headed by a recent Governor of the Bank of Canada, Mr. James Coyne—and more may well be on the way. A structural change in the financial *system is plainly taking* place.

What is happening, in fact, is that trust companies—'*near-banks*,' as they are often called—are beginning to realise that the present structure is obsolete. They have always attracted savings deposits from the general public by offering a rate of interest slightly higher than that offered by the banks proper, but they have usually, until recently, been small concerns with only a few branches. The company in which Mr. Coyne is interested, however, first broke ground by opening more than a dozen branch offices in Toronto during its first year of operations and then *discovered*—so blazing a trail for others to follow—that there was nothing in the law of Canada to prevent it from applying for a charter and developing into a full-blown bank.

It is unlikely that this particular trust company will gain much advantage from being first in the queue or that the Canadian Parliament will take any decision quickly. A Royal Commission, headed by Chief Justice Dana Porter, has been looking into the whole operation of the Canadian banking system for two years past and its recommendations have only just been published. It seems unlikely that the Government will have made up its mind about them in time for the decennial revision of the Bank Act which is due to be completed by end-June—some kind of temporary extension of existing charters seems likely.

The object of the Commission was to decide whether the chartered banks were justified in claiming exemption from the various restrictions imposed on their freedom of action over the years and whether the ability of the Bank of Canada to regulate credit was being restricted by the growth of competing institutions, acting in practice very much like banks but free from orthodox bank controls. The scope of its inquiry was broad enough to include not only banks but loan, trust and hire-purchase companies.

It has now come out with sweeping recommendations designed to remove arbitrary distinctions and to create a wider and more competitive Canadian banking system. The chartered banks, it suggests, should have the traditional interest-ceiling on their deposit rate removed and be free to lend on mortgages and other types of collateral.

On the other hand, the Minister of Finance should have power to ban the common fixing of deposit and lending rates by banks and to encourage competition by regulating interlocking directorates, mergers, share acquisitions, and so forth (which might affect First National's holding of Canadian Mercantile which became its subsidiary in October last); inner reserves, moreover, should be disclosed fully. At the same time—and here's the nub—the newer banking institutions should be free to engage in all the lending operations open to the chartered banks. Competition between new and old is to be free: and the prestige advantage of a charter may not seem, if the Porter recommendations are carried through, worth the legal trouble it involves.

These recommendations are going to interest bankers in most developed countries. Financial patterns are constantly changing with circumstances; one type of institution suddenly begins to attract deposits more successfully than another or to engage in a non-traditional form of leading business. Old habits and conventions suddenly become uncomfortable and the taste for competition spreads. Official regulations then begin to seem inequitable and become unpopular.

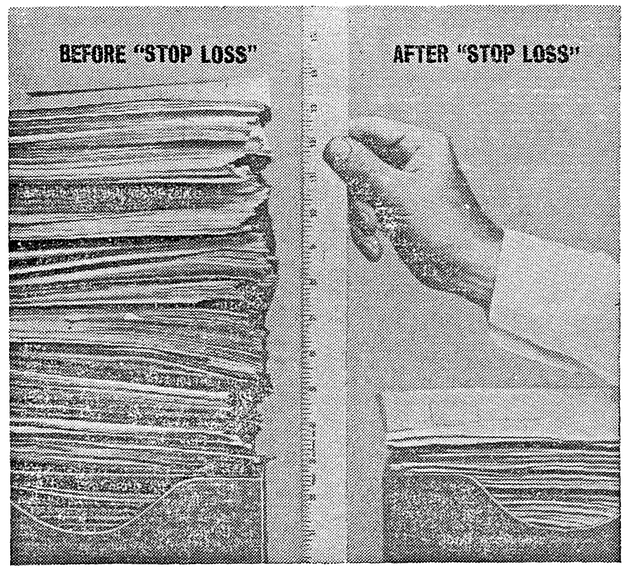
But two sorts of official regulation affecting banks and other financial institutions need to be distinguished. The first is older and more widespread: it includes rules imposed to ensure that banks do not run too many risks, or combine too closely, or charge too high a rate of interest. When new types of institution gradually emerge which are *not subject to these rules*, the old banks have every reason to complain. If financial operations have to be regulated in the public interest, the law should be kept up to date with circumstances.

The second sort of regulation is a product of the growth of central banks, in the modern sense of the term, with a responsibility to control the degree of liquidity of the economy. This includes not only open-market policy but (sometimes, and in some countries) open directives on lending policy; it is usually aimed, for reasons of practical necessity, primarily at the established banks.

This sort of regulation, which affects not only the use but the actual *availability* of funds, is even more unfairly discriminatory than the first and has led, in several cases, to the rapid growth of new financial institutions at the expense of the established banks. But it is not only unfair, it is in one sense inefficient: with the growth of these new financial institutions the effectiveness of orthodox *monetary policy* has steadily decreased.

The only answer, so far as I can see, is to impose liquidity requirements on all financial institutions, according to their kind, of the sort which are common in the case of banks. But, in the nature of the case, these requirements will be based on the needs of monetary policy rather than on conventional notions of financial prudence and may have to be constantly revised. Once a central bank is forced to interfere at all drastically with the free working of the economy, it is bound to get more and more deeply involved.

Under a commercial agreement concluded between the Government of Israel and the European Economic Community, the rates of import duty on 25 Israel products have been reduced. The reduction actually effected is 40 per cent for grape fruit, 33⅓ per cent for avocado, and 20 per cent for glass, various textile products and aluminium pipes.

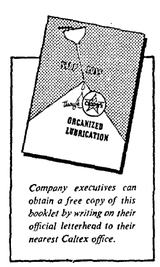


Caltex "STOP LOSS" reduces your paper work by 10% to 60%

If your purchase order costs are anywhere near today's high industry average, it can pay you to look into Caltex's "Stop Loss" Programme. You'll find numerous ways to reduce purchasing department time and expense.

Too often, purchasing costs rise because each department in a plant specified the lubricants it wants without reference to the purchases of other departments. This duplication results in a flood of purchase orders . . . rising clerical costs . . . paper backlogs.

Caltex "Stop Loss" is a complete plan for organizing and centralizing lubrication on an efficient basis. There is no other programme like it. "Stop Loss" will help eliminate interdepartmental duplication, limit inventories to actually needed lubes, and reduce the number of lube purchase orders issued each month by 10% to 60%.



Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

CALTEX (INDIA) LIMITED BOMBAY • NEW DELHI • CALCUTTA • MADRAS

CAL.SL.G.3/64

DEPOSIT INSURANCE IN INDIA

A MODEST EXPERIMENT THAT NEEDS GREATER ATTENTION

TWO years of working of the Deposit Insurance Corporation have confirmed the impression that the Corporation operates on a modest scale. The total number of deposit accounts with the functioning banks covered under the scheme of deposit insurance has increased from 7,058,000 at the end of December 1961 to 8,587,000 at the end of September 1963—the latest date for which data are available—but the number of such accounts with balances not exceeding Rs. 1,500 for which insurance cover is provided, were only 5,542,000 and 6,652,000, respectively, at the two dates. The ratio of these accounts to the total number of accounts has, however, progressively fallen from 78.5 per cent to 77.5 per cent over the two years. Further, although the total deposits assessable to premium have gone up from Rs. 1,694 crores to Rs. 2,107 crores during the period, the total of the amounts of first Rs. 1,500 or less in each of the accounts has gone up from Rs. 392 crores to Rs. 500 crores only, the ratio of the latter to the former rising only fractionally from 23.1 per cent to 23.7 per cent. Thus, while more than three-fourths of the total *number* of accounts are covered by deposit insurance under the present scheme, the coverage in terms of *amounts is less than* one-fourth of the total deposits. There is thus a clear case for increasing the total amount payable by the Corporation to any one depositor in respect of his deposit in a functioning bank in the same capacity and in the same right from the present maximum of Rs. 1,500 to at least Rs. 3,000, in the first instance, and to the entire balance eventually.

When the Corporation commenced its working, 287 banks were registered as insured banks, but during the first two years of its existence, a number of registrations were cancelled and, at the end of 1963, there were only 250 banks registered as insured banks. The main reason for the fall in the number of insured banks is the voluntary or compulsory amalgamation of banks and transfers of assets and liabilities of banks. Even with these 250 banks, the Corporation seems to find it difficult to collect and process information, so that the analysis of the coverage of insurance and all other particulars are given only up to September of each year, although the financial year of the Corporation coincides with the calendar year. It is possible that part of the delay is because of the dependence of the Corporation upon the Reserve Bank of India for its sources of information, but even the Reserve Bank of India, with all its statutory powers finds it difficult to collect prompt and accurate information, particularly from the large number of non-scheduled banks. One further finds that, for the year 1963, even the September-end information is not yet released to the public, though the Annual Report on the working of the Corporation has already been supplied to the members of Parliament more than two weeks ago. Our request to the Corporation for a copy of its latest annual report has met with negative response so far. Our comments and analysis have therefore, perforce, to depend upon the version reported in the daily Press. The Deposit Insurance Corporation could do a lot better by improving its public relations and by providing up-to-date information on its activities.

Metropolitan Bank

The leisurely pace with which the Deposit Insurance Corporation works is illustrated further by its handling of the claims of the depositors of the former Metropolitan Bank Ltd., which has since been amalgamated with the United Industrial Bank Ltd. A moratorium was imposed on the Metropolitan Bank early in October 1963. Later, it was reported, several legal difficulties arose in the way of amalgamating it with the United Industrial Bank, and a proposal was being seriously considered to amalgamate the Metropolitan, a scheduled bank, with three or four other non-scheduled banks. When public opinion in West Bengal took strong objection against the *principle* of imposing a moratorium on a *scheduled* bank and amalgamating it with *non-scheduled* banks, the scheme of amalgamation with United Industrial was somehow pushed through; however, the United Industrial Bank gave credits to the depositors of the former Metropolitan Bank to the extent of only 70 per cent of the deposits to each depositor having a deposit up to Rs. 1,500 and advised them that the balance of 30 per cent of the deposits would be payable on receipt of the insured amount from the Deposit Insurance Corporation. Although the amalgamation was effective from February 1964 and although all deposits up to Rs. 1,500 are fully insured, the insured amount or such portion of the insured amount for which the Corporation is liable has not been paid till the end of March 1964, and one is not aware whether it has since been paid. It may be, that the Deposit Insurance Corporation has its own administrative difficulties or procedural problems, or that it has to wait for the list of depositors to be received, but such delays defeat the very purpose of deposit insurance and cause avoidable hardships to depositors, especially the smaller ones.

During the two years, registration of 37 banks were cancelled by the Deposit Insurance Corporation in accordance with Section 13 of the Deposit Insurance Corporation Act, 1961. The liability for payment of insured amount, however, arose only in three cases—two in 1962 and one in 1963. As disclosed by the First Annual Report of the Corporation, the Unity Bank Ltd. was amalgamated with the State Bank of India with effect from 20th August 1962, and the licence of the Bank of China for carrying on banking business was cancelled with effect from the 2nd November 1962, but it has not been possible in either case to make payment of the insured amounts before the due dates, that is, within five months, because the transferee bank in the former case and the liquidator in the latter case had failed to submit an up-to-date and duly certified list of depositors within three months of the effective date as required by the Act. Since the full text of the Second Annual Report is not available to us till the time of going to press, it has not been possible for us to ascertain whether the lists have since been received and payments have been made. No information is similarly available in respect of the third bank—the Bank of Algapuri Ltd.

Funds

The moneys of the Deposit Insurance Corporation are to be held in two separate funds, the Deposit Insurance Fund to which all premium income and interest accrued on the investments of the Fund are to be credited and the General Fund to which capital and reserves and interest on investments are to be credited: the former Fund is to be utilised for meeting claims and the latter for meeting current expenses and for making advances to Deposit Insurance Fund, if need be.

The net accretion to the Deposit Insurance Fund by way of premia and interest income, after making provision for estimated insurance losses during the year ended December 1963, was a little larger at Rs. 109.86 lakhs as compared with Rs. 92.84 lakhs in the previous year. The fund stood at Rs. 202.70 lakhs at the close of the year as against Rs. 108.84 lakhs at the end of the previous year. The ratio of the Fund to the total deposits assessable to premium at the end of September 1963 rose to 0.10 per cent from 0.05 per cent a year ago. Similarly, the ratio of the Fund to the total insured deposits rose to 0.40 per cent from 0.20 per cent a year ago. If the Deposit Insurance Corporation is to depend only upon its premium and investment income for building up the Fund to impressive proportions, it will obviously take a long time and the Corporation is unlikely to adopt an enterprising attitude, so long as it does not feel fortified by a strong resources position. It is worth examining how far a sizable, long-term, interest-free loan to the Deposit Insurance Fund can affect its outlook and attitude favourably.

After meeting all the expenses, the General Fund earned a net interest income of Rs. 2.31 lakhs during 1963, as against Rs. 2.84 lakhs in 1962; the details of the gross income, and expenses for 1963 are not yet available, but it can be safely presumed that the expenses must have gone up substantially. After appropriating a sum of Rs. 0.30 lakh to the investment reserve (Rs. 0.60 lakh previous year), the balance of Rs. 2.01 lakhs was transferred to general reserve to take it up to Rs. 4.25 lakhs.

MITSUI BANK MAKES FURTHER PROGRESS

During the year ended 30th September 1963, the Mitsui Bank Limited (Chairman: Mr. Kiichiro Satoh) achieved satisfactory business results which are reflected in the all round and substantial increase in the balance-sheet turnover, operating earnings and net profits of the Bank. The balance-sheet total rose by 21 per cent from (Yen=Y) Y908,141 million to a record Y1,099,274 million. This rise in turnover is largely the result of a 34 per cent increase in deposit liabilities of the Bank from Y502,717 million to Y673,704 million and a 33 per cent rise in loans from Y312,841 million to Y410,330 million on the assets side.

This one-third increase in the business turnover is very inadequately reflected in the 7 per cent rise in operating earnings from Y33,038 million for the half-year ended 30th September 1962 to Y35,367 million for the half-year ended 30th September, 1963. Almost half of the increase in earnings was the result of higher income from interest earned on loans and discounts, which has gone up from Y21,782 million to Y22,758 million. Investment income has also increased from Y3,652 million to Y4,177 million. Most of the increase in interest income under both the heads took place in the first half of the year, because as a result of two successive lowerings of money rates in March and April 1963, and sizable sales of securities to the Bank of Japan in response to the open market operations, only small gains could be made in the second half of the year.

Almost half of the increase in expenses namely, Y1,152 million, was on account of interest paid on deposits, during the half-year ended 30th September, 1963, reflecting the rapidly increasing savings bank deposits. With the low money rate policy of the Government, however, the cost of borrowing was steeply lower at Y7,466 million, as against Y10,267 million in the corresponding half-year of the previous year. Salaries and allowances were higher by Y441 million at Y2,771 million—as a result of the increase in employees on its pay roll. With the expansion of business scale and increase in branch offices, the Bank is constantly in need of larger personnel. As the Chairman of the Bank has pointed out in his report, the new recreation and training centres for the staff are certain to contribute greatly to the physical and mental training of the Bank's staff and to the eventual elevation of the managerial efficiency.

As compared with a meagre increase of Y107 million in the net profit for the half-year ended 30th September 1962, the net profit for the latest half-year have risen substantially from Y1,509 million to Y2,110 million, in spite of a steep increase in taxes from Y199 million to Y1,245 million. Other business expenses were also higher because of the increased volume of business and expansion of branch network.

In spite of higher net profit, the dividend was maintained at 9 per cent per annum. The largest part of the increase in profit was absorbed by the transfers to legal, special and taxation reserves, total allocations to which were 57 per cent higher than in the corresponding half-year of the previous year.

The combined results for the two half-years ended 30th September, 1963, as compared with the corresponding half-years of 1962 are shown below, so that readers may have an idea as to how the Bank fared during the full two years:

In millions of yen

	1962-63	1961-62
Total income	62,260	55,575
of which:		
Interest on bank credit	45,502	41,269
Return on investments	8,159	6,982
Fees and commissions	2,901	2,417
Other earnings	4,232	3,735
Interest paid	37,675	36,537
Salaries and allowances	5,140	4,450
Other operating expenses	8,713	7,356
Net profit	3,869	3,009

Although the growth in the Bank's deposits was satisfactory, particularly in response to the "Mitsui Housing Deposit Scheme" started by the Bank since the autumn of 1962, the loan operations were largely uneventful because the revival in production activity in the Industrial sector was comparatively gradual, reflecting the slow tempo of business recovery and the absence of investment enthusiasm. Nevertheless, as a result of a long spell of tight money, there was an acute shortage of cash on hand in many corporate enterprises who had a strong desire to restore their liquidity. Moreover, the demand for credit by small businesses in their effort to improve their competitive power was equally brisk. In these circumstances, the loans extended by the Bank during the year increased, as already shown, substantially.

An agreement between the Government of India and the Export Credits Insurance Corporation of Canada for a loan to India of $37 million to cover foreign exchange portion of a $74-million Atomic Power Plant to be erected at Ranapratap Sagar Project in Rajasthan was signed at Ottawa last week-end. Operations are expected to commence in 1970. It will help India meet power requirements of rapidly developing areas in Rajasthan. Foreign exchange portion of the project is being financed under special credits allocated by Canadian Government to India under World Bank and Aid India Consortium. Repayment terms are on overall credit period of 20 years including five years' grace. The rate of interest is fixed at six per cent per annum. The Department of Atomic Energy will act as prime contractors and will be responsible for erection of the station. Engineering and Consulting services will be provided by the Atomic Energy of Canada Limited. Montreal Engineering Company Ltd. has been appointed by the Indian Department of Atomic Energy as Canadian Engineers for the project and will also act as procurement agent for purchases made in Canada. Capital equipment to be supplied by Canadian manufacturers includes major nuclear components, turbo-generators, switch-gear and sub-station equipment. Half of initial uranium fuel charge will also be supplied from Canada.

The International Finance Corporation has agreed to provide loan and share capital amounting to $350,000 to a company in Honduras for financing a new integrated leather tannery. The total funds required for erecting the tannery and providing initial working capital are estimated at $760,000. This is I.F.C.'s first investment in Honduras. The Corporation's commitment consists of a $295,000 loan and subscription to 1,100 shares in common stock, each with a par value of Lempiras 100, for the equivalent of $55,000. The remaining funds, totaling $410,000 of share capital, have been raised from private investors, mainly Honduran businessmen. The tannery will be located on the outskirts of San Pedro Sula, a major population centre.

AMERICAN LETTER

FIVE-YEAR OLD LABOUR-MANAGEMENT DISPUTE SETTLED

PRESIDENT JOHNSON'S NOTABLE ACHIEVEMENT

By N. Pattabhi Raman

NEW YORK, *2nd May*

"COME now, let us reason together." President Lyndon B. Johnson, who frequently cites biblical passages to drive a point home, is fond of using these words of the prophet Isaiah in trying to bring about compromises between divergent positions. The amazing thing is that he uses them with success so often: his years of leadership in the U.S. Senate were notable particularly for his ability to forge agreements among divided forces. Now, in settling a frustrating, five-year old labour-management dispute in the railroad industry, he has scored a spectacular success.

The dispute arose because the railroad companies—there are some 195 major carriers in the U.S.—wanted to change the work rules to reflect advances in technology and operational techniques. The five railroad labour unions, covering engineers, trainmen, firemen, conductors and switchmen, opposed the contemplated changes in the work rules, because they threatened to eliminate about 50,000 jobs. Job opportunities in the railroad industry have already dwindled: today total employment is only 800,000 as compared with 2 million in 1920 and 1.4 million shortly after the Second World War. There has been a parallel decline in the number of operating employees represented by the five unions: now they cover about 200,000 employees only, as compared with more than 800,000 in 1947. Both job security and union security were thus at stake. The relatively high level of unemployment in the country as a whole further stiffened the resistance of the unions to the job-eliminating changes in the work rules.

Neither side was willing to yield and there was little bargaining. Actually, collective bargaining in the railroad industry had lost force over a period of years as both management and unions fell into the habit of relying on the Government to make the critical decisions in their mutual affairs. In this dispute, moreover, the unions appeared keen on having a settlement imposed from outside, so that they could disclaim responsibility for presiding over the liquidation of their members' jobs.

Compulsory Arbitration

The dispute dragged on year after year, despite the efforts to solve it made by the administrations of three Presidents and several labour-relations experts and mediators known for their trouble-shooting skills. The fact that the problems involved were among the most difficult to come to a bargaining table in the U.S. also did not help the situation any. Several times, there was the threat of a nation-wide railroad strike—a strike which the late President Kennedy had declared would be "intolerable." Finally, racing the clock to beat a strike deadline, the U.S. Congress passed an emergency Bill last year providing for the compulsory arbitration of the two principal issues in the dispute, involving the jobs of firemen and trainmen. This was the first law providing for compulsory arbitration in a time of peace. It looked like a cross on the burial place of collective bargaining in the railroad industry.

Last month, tactical moves by the unions and counter-moves by the railroad companies again led to a situation in which a nation-wide railroad strike appeared inevitable. Actually, a strike was set for the midnight of 9th April. The economy, it seemed, would receive a hard blow. For the proposed strike would have put 6 million workers off their jobs and would have decreased the gross national product by about 13 per cent—four times the largest in any post-war recession. It would also have led to a rise in prices.

With only a few hours to the deadline, President Johnson intervened forcefully. He summoned the negotiators for the railroad companies and the unions to the White House, called on them to exercise statesmanship, cajoled them, pressured them, pleaded with them, appealed to their patriotism and, finally, made them agree to a 15-day postponement of the showdown. "I am not here to bury collective bargaining," he told them. "I am here to preserve it." He called on two of the nation's top labour-management mediators to assist Secretary of Labour Willard Wirtz in bringing about a meeting of minds. Finally, on 22nd April, an agreement was hammered out. The companies appeared likely to balk at the last moment, but Mr. Johnson brought to bear all the pressure available to him as President of the country and got their consent to the pact. The agreement was due a great deal to the skill of the mediators, including the Secretary of Labour. But it was also a great personal triumph for President Johnson.

The question arises: how did President Johnson manage to succeed in bringing about a settlement, while President Kennedy had failed last year? One part of the explanation is that the circumstances were materially different. The referral of the key manpower issues to arbitration last year had somewhat narrowed the area of dispute. The railroad companies had already won an award from the arbitration panel, permitting them to eliminate thousands of jobs through the process of not filling those that became vacant. This meant that, when the process was completed, they would save an estimated $317 million on payroll. To gain the full benefit as quickly as possible, they wished to end the friction with the unions. Also, in anticipation of the savings, they were willing to concede to a degree the union demands for higher wages.

President's Approach

But the changed circumstances were not the only reason. If that were so, a settlement would have been reached even before the White House intervened. This points to the role actually played by the President: his intervention made the vital difference. Having decided to intervene, Mr. Johnson would not accept defeat. Frankly emotional, he appealed to the sentiment of the company and union negotiators. Initially, seeking a 15-day truce period to work things out, he told the union men: "I am your President. All I want is for you to give me a chance. Just give me a chance. I want you to come into my office and tell me you'll do this for me." Towards the end of the mediation efforts, he addressed himself to the presidents of the railroad companies in a similar fashion. "I hope you realise," he said, "that, if you say no to this proposal, then I accept that. That is the kind of country this is. There can't be any question of disrespect or disloyalty." He did not, however, leave it there, for he added quickly: "You know how strongly I want a settlement. I don't know now what I will do if there isn't one."

His approach, now soft, now strong, worked. Perhaps, the key to the President's success in this difficult endeavour is his personality.

The late President Kennedy was a liberal who had arrived at that position by the path of reason. While not lacking in warmth, his approach essentially intellectual. This was apparently a dominant factor in his difficulties with the business community. The anti-intellectual impulse is characteristic of America, in general, but it is particularly pronounced among business leaders. They could not easily trust the Bostonion, because his youthful energy and incisive intellectualism were "different." And whatever confidence they had was washed away when Mr. Kennedy savagely attacked the steel industry's leaders for their sudden—and abortive—attempt to raise prices.

Stress on Education

President Johnson, too, is by and large a liberal. Explaining his position recently, he said: "I hope I'm progressive without being radical. I want to be prudent without being reactionary." He is committed to the late President's policies and programmes. But he does not have the intellectual's stoop of the shoulder. He views liberalism in highly personal terms, in terms, for example, of unemployed men and women, hungry children, idle factories, what will a dollar buy and so on. He places great importance on education, because it enabled him, a "tenant farmer's son who ate rabbits during the depression to keep from going hungry," to become the President of the United States. Unlike Mr. Kennedy, whose wit was sophisticated and dry, he is apt to poke his head into a conference room and ask: "Hi ya fellows, how ya doing?" In fact, he did just that, while the railroad company and union negotiators were at a meeting in a White House room adjoining his office.

Apparently, this difference in the personalities of the two explains, at least in part, why they have had different types of responses from the business community. Today, a large cross-section of the business community seems happy with Mr. Johnson. Perhaps, the fact that the economy is prospering and that no Republican with an acceptable political platform is a likely presidential winner are also contributing to this feeling.

Also, President Johnson has made an effort to win the confidence of the business community. Initially, his appeal came for support to the man who had taken over charge of the nation's affairs in a moment of tragedy. Subsequently, he has tried to allay the business community's instinctive suspicions about having a Democrat in the White House. "We will not harass or persecute you," he told a blue-ribbon group of business leaders gathered at the White House for an official dinner. "We want to help you.... So... I say banish your fear, and shed your doubts and renew your hopes. We have much work to do together." Even those businessmen who dislike some of his policies seem to like his personality, his approach. Mr. Johnson certainly passed his railroad test with flying colours.

PAN AMERICAN AIRWAYS

A 35 per cent increase in spring and summer transatlantic traffic for Pan American Airways, stimulated by new low fares which came into effect on 1st April, has been predicted by Willis G. Lipscomb, Vice-President, Traffic and Sales. Advance bookings for these periods, according to Mr. Lipscomb, are the heaviest in the airline's history. Pan American will provide 222 flights between Europe and the United States each week to handle the record traffic flow. He has also predicted that 2½ million persons would fly across the Atlantic during 1964 on scheduled airline services, as compared with the record of 2,165,044 who made the flight last year.

In addition to the new low fares, Mr. Lipscomb has cited among 1964 travel stimulants the steady climb in business travel, the heaviest calendar of events in Europe's history, the World's Fair in New York, and the increasing impact of the U.S. Travel Service's "Visit U.S.A." campaign. The new transatlantic fares include a broad range of reductions and provide the lowest fare levels in history for unrestricted individual travel at any time of year. The new fare programme includes a $190 reduction in first class roundtrip jet clipper travel and a $100 reduction in the roundtrip economy class fare for all but 10½ weeks of the peak summer season.

For travellers flying to Europe between 22nd May and 3rd August, the roundtrip New York-London fare will be reduced from the present $499.70 to $484.50. During most of this period, 21-day excursion fares at $300 roundtrip New York-London will be offered. Also, group fares at $325 roundtrip New York-London will be available for 25 or more persons travelling together.

Notice

THE RAYALASEEMA MILLS LIMITED

Registered Office and Factory

Rayanagar, ADONI, P.O.
KURNOOL DISTRICT

NOTICE

NOTICE IS HEREBY GIVEN THAT THE EIGHTEENTH ANNUAL GENERAL MEETING of The Rayalaseema Mills Limited, will be held at the Registered Office of the Company at Rayanagar, Adoni, on Friday the 12th June 1964, at 2-30 p.m. (S.T.), to transact the business, details of which are contained in the notice that will be sent to each member individually in respect of the above Annual General Meeting.

The Share Transfer Books and Register of Members of the Company shall remain closed from 29th May 1964 to 19th June 1964 (both days inclusive).

By Order of the Board,

For THE RAYALASEEMA MILLS LIMITED,

Per Pro RAYALASEEMA AGENCIES,

(Sd.) M. SOMAPPA,
Managing Partner,
Managing Agents.

ADONI,
5th May, 1964.

Note:—Any member entitled to attend and vote at the meeting is entitled to appoint a proxy and a proxy need not be a Member.

MAN-MADE FIBRES IN BRITAIN

INTER-FIBRE COMPETITION GETTING KEENER

FAR-REACHING changes in the structure and character of the British man-made fibre industry and the man-made fibres market seem to be under way. A significant event which portends the changes is the proposed dissolution of the joint ownership of British Nylon Spinners Ltd. (B.N.S.) by I.C.I. and Courtaulds. The latter company will transfer its 50 per cent holding in B.N.S. to I.C.I. in exchange for I.C.I.'s 37.5 per cent holding in Courtaulds acquired through the sensational take-over bid of two years ago. Thus, the B.N.S., which was so far jointly owned by the I.C.I. and Courtaulds on a 50.50 basis, will become a wholly-owned subsidiary of I.C.I. Courtaulds, according to its Chairman, Sir Dallas Bernard, will simply cancel the I.C.I.'s holding by reducing its equity capital by 37½ per cent. There is speculation in London that this action might be followed later by a scrip issue, that is, issue of bonus shares.

What does the "divorce" between the two giants, I.C.I. and Courtaulds, which, between them, control 90 to 95 per cent of the market for man-made fibres in Britain, signify? More competition could reasonably be expected to emerge. Already there are signs of competition getting keener. For one thing, now that Courtaulds will no longer be connected with British Nylon Spinners, it will have no hesitation in going in for the production of nylon 6, a synthetic fibre, on its own. Of course, there was no legal agreement which prevented Courtaulds from making nylon of its own outside B.N.S., but, because of its connection with the latter company (B.N.S.), perhaps felt commercially inhibited to produce something which was already being produced by one of its partly-owned subsidiaries. This inhibition will not be there now and Courtaulds will, therefore, feel free to produce nylon 6. An authoritative statement to this effect has already been made by the Company. Courtaulds is not new to the field of nylon 6. It has already a nylon 6 plant at Spondon which it inherited when it bought British Celanese in 1957 and it has put a good deal of money in nylon outside the U.K.—in the U.S., Canada and Sweden. The U.S. plant has a capacity of 20 million lbs. of nylon per year and the Canadian plant 12 million lbs.

Courtaulds is not the only company planning increased nylon production in the U.K. B.N.S., which at present produces 120 million lbs. of nylon 66 a year, is expanding its capacity by as much as 50 per cent. It is in fact planning to penetrate the Continental market, especially Germany, in spite of its established preference for nylon 6. Actually, there is little difference between the two types of nylon, that is, nylon 6 and nylon 66. Only, the former is popular in the U.S. and on the Continent, while the latter is favoured in the U.K. In addition to Courtaulds and B.N.S., another company, namely, British Enkalon, which, like Courtaulds, has opted for nylon 6, is increasing its plant capacity from 4.5 million lbs. to 7 million lbs. Chemstrand, another firm which imports nylon 66 from U.S., is putting up an 18 million capacity plant in Scotland. Thus, with Courtaulds, B.N.S. and other leading nylon manufacturers in other countries, nylon producing capacity is expanding fast—a "nylon explosion," in fact.

On the Offensive

Competition is not confined to the different types of nylon alone. In fact, all man-made fibres are on the offensive. The total output of man-made fibres in the U.K. last year increased to 553 million lbs., as compared with 480 million lbs. in 1962. At this level, man-made fibres exceeded the deliveries of wool and cotton taken separately. The production figures for the first quarter of the current year indicates that the trend is gathering momentum. Thus, production during the first quarter was as much as 203 million lbs., 30 million lbs. more than the figure for the corresponding quarter of last year. Even the output of regenerated fibres such as rayon is increasing significantly. It is, nevertheless, true to say that the synthetics are leading others in terms of speed of expansion. Output of synthetic fibres in Britain has jumped up from 134 million lbs. to 205 million lbs. during the three-year period 1960-63.

The synthetic fibres group includes, apart from nylon, acrylics polyesters and a host of still newer fibres such as polyethylene and polypropylene. In fact, competition between synthetic fibres themselves rather than between synthetics and natural fibres such as wool and cotton is the feature of the fibres market at present. This does not, of course, mean that the natural fibres are not affected by man-made fibres. In fact, the former are steadily losing ground and it will not be very long before man-made fibres (mainly synthetic, as distinct from cellulosic) can perhaps claim, in terms of quantity, too, to be the premier apparel fibre of the world.

NEW COTTON STRAIN FOR ANDHRA PRADESH

A new strain of white linted cotton known as "Cocanadas White" has been evolved as a result of intensive research and field trials spread over the last nine years. This variety, technologically named "741," has now been released for general cultivation in the Guntur, Nellore, Krishna, East and West Godavari and Visakhapatnam districts as well as parts of Kurnool district in Andhra Pradesh and will bring to farmers raising this new strain an additional income of Rs. 227 per hectare.

Research on the "Cocanadas White" was conducted under a scheme sponsored and financed by the Indian Central Cotton Committee in collaboration with the Andhra Pradesh Government. The new strain, it is said, has definite advantages, mainly of a higher yield, over the C.2, the existing coloured cotton now being cultivated in the Cocanadas tract. This region has the distinction of being the only tract in the world which grows a coloured, linted cotton on a commercial scale. The cotton grown here has a reddish brown tinge of varying intensity and was in demand in the U.K. and other European countries in pre-war years when it used to be grown over an area of about 150,000 acres. However, since 1940, the demand from abroad for this coloured cotton had declined resulting in appreciable drop in its acreage. The present production of about 9,000 bales of 400 lbs. each is consumed chiefly by the mills in Andhra Pradesh and Madras, apart from the small quantity utilised for extra factory purposes such as hand spinning, etc.

There are three cottton sowing seasons in the Cocanadas tract: (1) early or *kharif* season (June-July), (2) mid-season (August), and (3) late or *rabi* season (September). The coloured cottons, including the improved strain C.2, are better suited for late sowing. Much scope is said to exist in this tract for extending the cultivation of cotton as a mixed crop with other crops like groundnut, *sejja, korra,* dry paddy, etc., which are grown over an area of more than 1,000,000 acres. However, as these crops are sown early, the coloured cottons, which are long in duration, are ill-suited for mixed cropping as they give poor yields when sown early. Thus, for want of a suitable short duration cotton strain, capable of giving high yields when sown early in the season, the practice of growing cotton mixed with other crops could not make any headway in this area. As the possibility of evolving such a strain existed more in the white linted group than among the coloured cottons and also as the demand for coloured cotton had dwindled, the Indian Central Cotton Committee recommended, as early as in 1954, that future work on cotton improvement in this tract should be centred on white linted varieties. A breeding scheme for the purpose was also sponsored by the Committee in association with the State Department of Agriculture in April 1955.

Trials

Trials conducted under the scheme with different species of cotton under the three sowing seasons, indicated that while *arboreum* proved to be more adaptable and disease-resistant than *hirsutum* and *herbaceum* cottons, it was somewhat difficult to breed a single strain for the different sowing periods. White, linted types were found to be suitable only for early sowings while, for late sowings, coloured cottons continued to be the most suitable. Amongst the different white linted varieties, 741, a pure line selection from the Akola type, B.5, proved to be the most outstanding. In trials conducted on the Government farms for a period of five years from 1958-59 to 1962-63, strain 741 recorded 83 per cent increased lint yield over the coloured cotton strains. In similar trials conducted on cultivators' holdings for three years from 1960-61 to 1962-63, the average yield recorded by strain 741 was 50 per cent more than that of C.2. In quality, as assessed from tests at both the technological laboratory and mills, the two strains were almost on par, the H.S.C. being 29's. The relative economic characters of the two strains are as under:

	741	C.2
Average yield of *kapas* in Kgm. per hectare	442	295
Average yield of lint in Kgm. per hectare	168	89
Average staple length in 32nd of an inch	26	27
Ginning percentage	38	30
Highest standard count	29	29
Average blowroom loss %	5.1	6.2
Average cash value per hectare (rupees)	522	295

In view of its outstanding superiority in yield, the Indian Central Cotton Committee, at its meeting held in March 1964, recommended the release of this new 741 strain for general cultivation in the Cocanadas tract.

Pure seeds of this strain are at present being multiplied at the Agricultural Research Station, Lam, and will be available for general distribution shortly. This new high-yielding strain, suitable for early sowing either as a pure or as mixed crop will, it is expected, generate interest amongst the farmers to increase the area under cotton in this tract, particularly under mixed cropping conditions.

WORLD TRADE IN COTTON

Stronger demand and the relative low stock position of net importing countries are responsible for a significant increase in world cotton trade this season, according to the International Cotton Advisory Committee. Indications are that international trade in cotton could exceed 17 million bales, against 15.9 million in 1962-63, I.C.A.C. says in its April review of the world cotton situation. World consumption is expected to reach 48 million bales this season.

The recently-passed cotton legislation should provide a stimulus for expanded U.S. consumption during the remainder of the season. In the U.K., stronger domestic demand has pushed the consumption rate above last season's level. On the Continent, however, mills are consuming cotton at a slightly lower rate than a year ago in the aggregate. Mill consumption in India is continuing at a record level and consumption in Japan during the first six months of this season was almost seven per cent ahead of the comparable period of 1962-63.

EXPORT TRADE IN TEXTILES

MAN-MADE FIBRE CLOTH SHIPMENTS RISE

From Our Special Correspondent

MANCHESTER, 28*th April*

MANCHESTER LETTER

SUMMARISING the situation in world trade in cotton piecegoods, the *Statistical Review* issued by the Cotton Board underlines the decline which has taken place since 1960 and the further decrease last year, which was of the order of 4 per cent. Shipments of man-made fibre fabrics in 1963 were about 2 per cent below the comparatively high figures of the previous year, but the fall in this section was more than accounted for by the sharp drop in Japan's overseas trade.

Although detailed returns only gradually seep through from foreign countries and some later adjustments are necessary when the final figures are received, the tables presented in the survey offer a good guide as to the experience of the different countries in disposing of their products abroad. The recent conversion of British exports in terms of quintals as well as square yards helps the process of comparison and the accompanying table gains in value in consequence.

While the major influence last year was undoubtedly the substantial reduction in shipments of cotton and allied textile goods from Japan, there was little change in the general situation. The order of exporting countries by volume remained largely unaltered, although the gap between Hong Kong and the United States has narrowed somewhat.

Partly because a more accurate comparison can now be drawn between the performance of the various European countries and partly by their basic similarity, the section dealing with quintals has a special significance. France and Germany head the list, as in 1962, but, from the local aspect, the rise in Britain's position from fifth to third place is an extremely favourable feature.

A glance at the returns shows that this change is entirely due to the big rise in exports of man-made fibre cloth from this country. It is, in fact, one of the most important movements disclosed in the whole table and its continuation could lead to a drastic reassessment of the whole Continental system of trading in such goods.

Although France's lead in the European sector has been cut by the thrusting West German textile industry, the gains made by Britain, Portugal and Spain should not be discounted. The other chief supplying areas, such as Italy, Belgium and the Netherlands, maintained their position as compared with 1962 without any marked change in the totals.

The cotton Board's survey dealing with Western Europe says that, as in most of the rest of the world, the man-made fibres have been making gains at cotton's expense. Prospects for 1964, it says, seem reasonably good, with well filled order books and lower stocks in the Dutch and Belgian mills.

Sections of the industry for their own purposes tend to break down particular aspects of trading which nevertheless have considerable significance for their counterparts in other branches. The Cotton and Rayon Merchants' Association, in reports covering its numerous activities, goes into some detail about the proportion of imported cloth in relation to total production in recent years.

Introducing the topic, the grey cloth section report points out that, because of the trend of trade and largely due to the price factor, many grey cloth merchants have been forced to seek supplies from sources outside the United Kingdom in order to continue the services to converters which they have provided for so many years.

The merchants, it declares, go to an infinite amount of trouble to locate mills, sometimes by force of circumstance overseas, where they can obtain the most economical production for the cloths required by converters. In addition, they provide a pool of grey cloth ready and coming round to assist converters to keep their lines continuously in supply or to meet sudden demands.

Dealing with cotton grey cloth only, the report contains figures showing that the ratio between imports and total production rose sharply between 1958 and 1960 from 19 per cent to 31 per cent but has since remained practically unchanged, the 1963 proportion being 32 per cent. Of the 483 million square yards of cotton grey cloth imported last year, 344 square yards or 71 per cent came from Commonwealth countries. This ratio is the same as 1958, the peak arrivals from Commonwealth sources being 76 per cent in 1959 and the lowest recorded in recent years being 54 per cent in 1961.

During the last three years, however, the pattern of imports from countries outside the Commonwealth has changed very considerably. A sharp reduction has taken place in purchases from Japan, Spain, Yugoslavia, Formosa and the United States. Japan has lost much of the British "improvement" trade to other countries, but the recent imposition of restrictions on supplies from other areas has been responsible for cutting down imports after initial inroads have been made.

To illustrate the trend where major changes have occurred actual figures of cotton grey cloth arrivals in 1961 and 1963 respectively are as follows (in thousand square yards):

Japan 60,016 (14,627), Formosa 30,480 (5,207), Spain 44,711 (6,252), France 14,766 (6,450), United States 18,939 (602), Yugoslavia 18,791 (4,824).

According to the report of the converters' section, purchases of grey cloth in 1963 were about 16 per cent higher than in the previous year. The quantity of loom-state cotton material, especially supplies woven abroad, was particularly large during the final quarter of 1963.

Of the 153 million square yards of finished cloth imported in 1963, Commonwealth countries supplied 49 million square yards, E.E.C. countries 63 million square yards, and E.F.T.A. countries 18½ million square yards. In comparison with 1962, the largest increases were proved by India and Portugal, each sending additional quantities in excess of 7 million square yards.

Quite apart from grey and finished cotton cloth arriving from abroad, a considerable quantity of made-up goods was also imported. This was estimated last year as the cloth equivalent of 98 million square yards, of which over 80 per cent came from Hong Kong.

In the man-made fibre section, total supplies of cloth available last year included 10 per cent arising from imports, a slightly less proportion than in 1962. This, says the report, is rather surprising in view of the relatively high tariff on man-made fibre fabrics.

PASSPORTS TO WORLD TRADE

Three Banks have merged. Separately, they have large assets, a fine tradition and a wealth of experience. United, they offer a comprehensive service in all matters affecting business between India and any part of the world. Their advice and help are your surest "passports" to profitable trade with those areas.

THE ANDHRA BANK LIMITED

(Established 1923)

Registered Office: **11/526, Cantonment Road, Masulipatnam**

DIRECTORS' REPORT

The Directors have the pleasure in submitting the 40th Annual Report together with the Audited statement of Accounts for the year ended 31st December, 1963. The Auditors' Report is also annexed.

The net profit of the Bank for the year, 1963 amounted to Rs. 8,70,478.40 after making payment of one month's pay as Bonus to staff. Adding to this a sum of Rs. 3,244.87 nP., brought forward from the previous year's account and Rs. 70.80 nP., being the excess dividend provided for the year, 1962, the total amount available for appropriation comes to Rs. 8,73,794.07 nP. Appropriations already made out of this amount and those we propose to make are detailed below.

Appropriation made:	Rs.	nP.
Transfer to Reserve Fund under Section 17 of the Banking Companies Act, 1949 ..	2,10,000	00
Provision for Taxes	3,25,000	00
Appropriations now proposed:		
To pay a dividend at 8 per cent. per annum (Subject to Tax) for the year, 1963 ..	3,34,000	00
Carry forward *to the next year's Account*	4,794	07
Total ..	8,73,794	07

We are happy to record another year of progress.

The Official rate of the Reserve Bank of India changed from 4 per cent. per annum to 4½ per cent. per annum with effect from 3rd January, 1963.

The Bank opened branches at Vetapalem, Venkatagiri, and Mahaboobnagar during the year, under review. Another branch was also opened at Adoni during January, 1964.

The Administrative Office of the Bank has been shifted from Masulipatnam to Hyderabad during the year under review.

The scheme of amalgamation of Bharatha Lakshmi Bank Ltd., with the Andhra Bank Ltd., has been approved by the shareholders of the respective Banks and the permission of the Reserve Bank of India is awaited.

Sri Batchu Venkateswarlu who had been a Director of the Bank since 1953 and who rendered valuable services to the Institution passed away in August, 1963.

In the vacancy caused by his demise, Sri K. L. N. Prasad of Vijayawada was co-opted as a Director.

Under Article 94 of the Bank's Articles of Association read with Section 256 of the Companies Act, 1956, M/s. T. Veerabhadrarao, R. Venkatrama Reddy, and S. Ramachar will retire by rotation and under Section 262 (2) of the Companies Act, 1956, Sri V. Parthasarathy will also retire from his Office. The retiring Directors, being eligible, offer themselves for reappointment.

You are also requested to appoint Auditors to hold Office till the conclusion of the next Annual General Meeting and fix their remuneration.

By Order of the Board,
K. S. DUTT,
Chairman.

HYDERABAD, *28th March*, 1964.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of The Andhra Bank, Limited, as at 31st December, 1963, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, with the books of account of the Head Office and Branches.

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank ;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(e) in our opinion and to the best of our information and according to the explanations given to us the said accounts read along with the notes appearing thereon give the information required by the Companies Act, 1956, in the manner so required for Banking Companies and on such basis the said Balance Sheet gives a true and fair view of the state of affairs of the Bank as at 31st December, 1963 and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

INDIA AND WORLD TEA SITUATION

QUALITY AND PRICE WILL INFLUENCE TREND OF MARKETS

WILL there be a large world surplus of tea in the next few years? This question has continued to exercise the minds of tea planters the world over. Opinion is sharply divided: one section of planters—we will call them pessimists—believes that a large world surplus would definitely emerge, whereas there is another section—we will call them optimists—which not only discounts such a possibility but actually anticipates a deficit in supplies. Those who fear a surplus point to two important developments. In the first place, thanks to technological progress, tea production has been steadily rising year after year in producing countries and, at the same time, new and previously unconsidered areas are being brought under tea cultivation. Secondly, many other beverages are making inroads into the traditional tea-drinking markets. The "optimists" are not unaware of these developments, but they point to the persistently rising population in several parts of the world and the improvement in the living standards of the masses in several underdeveloped countries both of which, in their view, will continue to exert an upward pressure of demand for tea.

Time alone will tell whether it is the "pessimists" or the "optimists" that will prove correct. There is, however, no denying the fact that quality and price will considerably influence the trend of world tea markets both in the immediate future and in the years to come. Messrs. Forbes, Ewart and Figgis (Private) Ltd. of Cochin, in their latest *Tea Review* (1963), have done well, therefore, in urging that the tea producers in India must be quality-conscious and that their product must be able to compete with any other tea producing area. To continue to compete in markets throughout the world, the quality of tea produced, they say, must be of the highest standard possible. "It is only the top quality product," to quote them, "that will be able to hold its own ... and any indifferent quality tea is exposed to grave economical risks." The advice is wholesome and pertinent, especially because it is given by a firm which itself has been prominent in tea export business for the past several years now.

Improvement in quality and reduction in production costs entail large-scale rehabilitation of uneconomic tea areas. Rehabilitation involves, as Mr. W. S. Massey, the retiring Chairman of the Nilgiri-Wynaad Planters Association, very aptly remarked at the annual

meeting held recently, (*a*) the stringent uprooting of all useless "passenger" bushes in a programme of replacement, (*b*) the intensive "infilling" of other areas with quick-yielding, high-yielding material from V.P. clonal stock and/or carefully selected imported seed, and (*c*) sound manurial application and extensive cultivation of economic tea. Such rehabilitation, he said, would have to be resorted to vigorously within the all-India plan of increased production. In this connection, Mr. Massey alluded to the other competitive countries—for instance, Africa—where the production capacity is designed or geared to sound methods, organisation and machinery and stated that, as compared with this, the plantation industry in India might be said to be an old model. The lessons learnt and the production technique evolved over a hundred years of planting in India (and Ceylon), he added, were finding fruition in other producing countries today. Pleading for unstinted help from all who are concerned either directly or indirectly with the working of the tea estates, Mr. Massey observed:

"May I plead here that much of our assumed reserve forest land be given back to us? Where are we otherwise?

"One item that will highlight the general adversity we face in our planned economy is the recently restricted import of the polythene industries granules restricting the availability of polythene bags or polythene sleeves which play a large part in our modern nursery development work within our estates today. We have had to turn over to polythene bags or sleeves in order to develop our young nursery plants and raise them efficiently for the job they have to perform in the field, the means of the reed or bamboo basket made from material once grown in our own reserves, having been largely taken away from us. Six months ago, polythene bags then available of the minimum size and gauge required for their purpose were Rs. 28 per thousand. Today, if you can get them and many suppliers have no stock at all, these bags are Rs. 60 per thousand.

"Add to these difficulties that I have sketchily mentioned, the complex labour and administrative difficulties of the plantation manager and his staff he experiences today in his trying to cope with the trammels of bureaucratic procedure that chains him to his office desk for hours during the day (and often at night) when he should be organising and training his workers in the nurseries, field, and factory, toward the object of

increased output in good quality produce and you get a unique set-up of conditions that are obstructive and adverse to successful achievement of our plantation objectives that might be difficult to imagine exists in any other industry within or outside India.

"I can only appeal to all those whose sphere of influence can effect our daily work as planters. Give the planter, manager and his assistants more time without hindrance or obstruction in the field and the factory of his estate in order that he may directly come to grips during most of his working day with the field requirements in the raising of his crops in this all-out drive for increased production on which our prosperity and our very survival in the future depends."

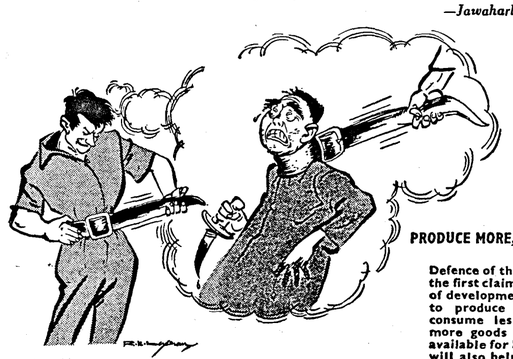
The difficulties enumerated by Mr. Massey may appear to be ordinary, but it is such difficulties that are hampering the efforts of several tea gardens to step up production. The need for removing these difficulties forthwith is urgent. And equally urgent is the need for suitable tax incentives and other measures of assistance designed to encourage the estates to grow more and more of quality tea at an economic cost. Increased production of tea is as much in the interest of export promotion as in that of domestic consumption which, according to the *Tea Review*, has shown a continuous and healthy rise during the last few years. The *Review* does not see how the increase in internal offtake can be halted and feels that it will, in fact, continue to persist. A healthy domestic market, incidentally, strengthens the position of the tea industry to compete effectively in world markets. Speaking of exports, the *Review* makes the following observations:

"Some disappointment was expressed over the fact that Great Britain was not able to enter into the Common Market as had been hoped, but the countries of the E.C.M. have, in most cases, made considerable concessions over the imports of tea in either reducing or abolishing import duties. We do not think that the increase of tea consumption in these countries will show a considerable expansion in the near future, but, nevertheless, some increase is hoped for and this should help to boost exports. Much is now being done through propaganda to try and stimulate interest in tea drinking throughout the world. The Tea Board have opened several new tea centres last year and we hope that increased and vigorous propaganda will help to encourage the buying of tea from India."

Looking back on the calendar year 1963, the *Review* points out that the tea industry in South India has much to be thankful for an increase in production, a fair level of prices, and, what is most important to any industry, stability of price level and demand. One of the reasons for the stable market throughout, according to the *Review*, was the fact that North India did not produce the quantity expected and it was, therefore, thought that, despite the increase in production in Ceylon, there might be a marginal shortage of tea towards the end of the year. Although this was not actually the case, the market in Cochin was kept fairly buoyant by this thought. Increased and substantial offerings on the Cochin market would be to the benefit of the trade as a whole; this was borne out during 1963. Towards the end of the year, larger quantities of tea were being offered weekly in Cochin. Although there was a slight easing off in values towards the end of the year, the quantity available was readily absorbed with interest being shown both by export buyers and the internal trade. There is no doubt that the additional quantity on offer attracted more orders from overseas. The Kerala sales tax amounting to 5 per cent has dissuaded many producers from offering their tea on this market and unfortunately it will continue to do so. The market in Cochin probably also benefited to a small degree from the disruptions caused in the tea trade in Ceylon during the second half of the year.

South India continues to be one of the highest yielding tea areas in the world and the total production figure for 1963 is estimated at 195.3 million lbs., as against the 1962 total of 185.0 million lbs. Given favourable growing conditions, this figure is likely to be exceeded again. A total of 95.8 million lbs. was sold in auction in Cochin during 1963, an increase of about 9 million lbs. over 1962, and accounting for almost the entire increase in production. Over the last ten years, the percentage of production sold through the Cochin auctions has risen from 22.8 to 49.

Freedom is in peril, defend it with all your might
—*Jawaharlal Nehru*



PRODUCE MORE, CONSUME LESS

Defence of the country has the first claim on the fruits of development. We have to produce more, but consume less and make more goods and services available for Defence. This will also help keep prices in check. Avoid all extravagance and waste.

YOUR AUSTERITY IS INDIA'S STRENGTH

DA64/P2

ANNOUNCEMENT

This is not a prospectus but only an announcement of the proposed issue of the capital. Interested persons may obtain copies of the prospectus from the Company's Registered Office, Bankers, Brokers, and Underwriters.

THE KUTCH SALT AND ALLIED INDUSTRIES LIMITED

(Incorporated as a Private Limited Company on 22nd November, 1950, under the Indian Companies Act, 1913 and converted into a Public Limited Company on 28th March, 1963).

Registered Office:

48, PROSPECT CHAMBERS ANNEXE, 5TH FLOOR, DR. DADABHOY NAOROJI ROAD, FORT, BOMBAY-1.

EXISTING AND PROPOSED ACTIVITIES

The Company was incorporated on 22nd November, 1950, as a Private Limited Company in the then State of Bombay with objects as stated in its Memorandum of Association and in particular to deal in all kinds of properties and to carry on the business of manufacturing salt, its by-products and brine chemicals and install and run other allied and chemical industries in connection therewith.

The Company's salt works at Jakhau (Kutch) went into production in the year 1952. With a view to expanding the activities, the Company had acquired on lease approximately 4,000 acres of land adjoining to the Major Port Kandla for manufacture of salt.

LOCATION OF INDUSTRY

The Company has one salt works at Jakhau in the District of Kutch.

The second salt works of the Company has been situated at the Major Port Kandla on the Nakti Bridge parallel to the railway line and the National highway leading to Kandla Port.

BOARD OF DIRECTORS

1. **Shri Bhawanji A. Khimji,** Chairman; Industrialist; 297, Sir Balchandra Road, Matunga, Bombay 19.

2. **Shri Babubhai M. Chinai, M.P.;** Industrialist; St. James Court, Netaji Subhas Road, Bombay 1.

3. **Shri Madanmohan R. Ruia;** Industrialist; 96, Nepean Sea Road, Bombay 6.

4. **Shri Arvind Narottam Lalbhai;** Mill Agent; Pankore Naka, Ahmedabad.

5. **Shri Dayanand Chandulal Kothari;** Industrialist; Kothari House, No. 3 Kothari Road, Nungambakham, Madras.

6. **Shri Railal M. Gandhi;** Industrialist; Fulchand Niwas, Chowpatty, Bombay 7.

7. **Shri Laxmichand Lalji;** Merchant; Madhu Kunj, 24, Ghodbunder Road, Andheri, Bombay 58.

8. **Shri Javerchand Padamsi;** Merchant; Krishna Kunj, Sewree Wadala Road, Bombay 19.

9. **Shri Bhawanji Narsey;** Merchant; 209-A, Vincent Road, Bombay 19.

MANAGING AGENTS

Messrs. Madhukant Hiralal & Co.

48, Prospect Chambers Annexe, 5th floor, Dr. Dadabhoy Naoroji Road, Fort, Bombay 1.

SHARE CAPITAL

AUTHORISED CAPITAL

5,00,000 Shares of Rs. 10/- each Rs. 50,00,000

ISSUED, SUBSCRIBED AND PAID-UP CAPITAL

1,25,000 Equity Shares of Rs. 10/- each Rs. 12,50,000.

(Of the above shares 2,500 shares were issued to the Promoter of the Company Shri Nayak Jethabhai, as fully paid-up without payment being received in cash pursuant to contract by the Company with him.

No underwriting commission or brokerage has been paid or is payable in respect of these shares.)

PRESENT ISSUE

1,25,000 Equity Shares of Rs. 10/- each offered at par for public subscription Rs. 12,50,000.

DATES OF OPENING AND CLOSING OF SUBSCRIPTION LIST

The Subscription list will open at the commencement of banking hours on 18th May, 1964 and will close at the close of banking hours on the 30th May, 1964 or earlier at the discretion of the Directors provided that the subscription list will not in any event be closed earlier than the close of the banking hours on the 22nd May, 1964.

APPLICATION FORMS

Application forms along with copies of the prospectus can be had from the registered office of the Company or from the underwriters/bankers/brokers whose names and addresses are given below:—

UNDERWRITERS

1. THE INDUSTRIAL FINANCE CORPORATION OF INDIA, Reserve Bank Building, Parliament Street, New Delhi.

2. THE INDUSTRIAL CREDIT & INVESTMENT CORPORATION OF INDIA LTD., ICICI Building, 163, Backbay Reclamation, Bombay-1.

For **The Mitsui Bank Ltd.,**
Y. SHINOHARA,
Manager.

AUDITORS' REPORT

We have audited the attached Balance Sheet of the Bombay Branch of The Mitsui Bank Limited, as at the 31st day of December, 1963 and also the annexed Profit and Loss Account of that Branch of the Bank for the year ended on that date.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to Sub-sections (1) and (2) of Section 211 and Sub-section (3) of Section 227(b) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are therefore drawn up in accordance with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

(a) we have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purposes of our audit;

(b) in our opinion, proper books of account as required by law have been kept by the Branch so far as appears from our examination of those books;

(c) the Balance Sheet and Profit and Loss Account of the Bombay Branch of the Bank dealt with by this report are in agreement with the books of account;

(d) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts subject to the note thereon, give the information required by the Companies Act, 1956, in the manner so required for banking Companies and on such basis the said Balance Sheet, drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are therefore drawn up in accordance with Forms A and B of the Third Schedule to the Banking Companies Act, 1949, gives a true and fair view of the state of affairs of the Bombay Branch of the Bank as at 31st December, 1963, and the Profit and Loss Account gives a true and fair view of the profit of the Branch for the year ended upon that date.

BUSINESS NEWS FROM EUROPE

GERMANY'S EMBARRASSING SUCCESS

OIL IS FAST DISPLACING COAL—TRADE RELATIONS WITH RUSSIA IMPROVING

From Our Special Correspondent

WEST Germany's export surplus has now reached such proportions that if it goes on growing at its present rate it could threaten the economic stability of the Common Market.

The problem first arose towards the middle of last year, a crucial turning point for the German economy. During 1962 and the first half of 1963, surpluses on the current account of the balance of payments had been offset by substantial deficits on invisible account. But a surge of exports in the last quarter led to a surplus for the three months of £187 million (524 million dollars), the largest ever, and the invisibles deficit was swamped by the surplus on current account. The result was a surplus for the year on all trading of £88.4 million (247.5 million dollars).

The favourable balance of payments was helped by a decrease of imports at the same time. Wages rose by a slower rate (seven per cent) than the average in 1960-62 (nine to 11 per cent) and some prices were allowed to rise by the Government—rents, heating, for instance.

At the same time, there was also a heavy inflow of long-term capital. It has been suggested that this occurred because West German rates were out of line with those in the rest of Europe. While they are on paper higher, in practice they are not thought to be generally out of line and it is probable that the inflow of capital has been attracted by the stability of the German economy at a time when the economies of her competitors—France, Italy, Switzerland, the Netherlands, Britain—are all affected by actual or incipient inflation.

There appears to be no end to the problem of surplus exports, though the first measures have been taken to make Germany less capital-attractive. In January exports were still rising rapidly, by some 28.7 per cent, as compared with January 1963, while imports went up by only 15.1 per cent. The trade surplus for the month was almost £60 million (168 million dollars), as compared with £10 million (28 million dollars). And, in the final quarter of last year, the inflow of new export orders was 24 per cent higher than in the corresponding period of 1962.

Others Blamed

The West German authorities tend to lay the blame for their own export surplus squarely at the feet of their neighbours and claim that, if inflation has not got such a hold in France and Italy, their problem would not be so serious. They point out that, whereas 44 per cent of additional exports went to these two countries last year (while imports from them were lower), only 7.5 per cent more went to North America. This appears to many to be an ingenuous explanation. But it has led to the paradox that Germany is an export surplus nation with an inflow of long-term capital. Consequently, Germany is neither playing her part in maintaining international liquidity nor is she helping sufficiently to provide capital facilities for the developing countries. Failure on both counts is now causing concern among a wider circle than merely the Common Market.

West Germany claims that her dilemma is that, if she takes measures to cure her export surplus, she will only aggravate the problem of the inflow of capital, and *vice versa*. But, last month, she took the first steps to make the country less attractive in which to invest. Interest payments to non-residents can now be taxed at source. A host of well-meaning advice has been offered to Germany on how to cure her malaise, none of which appears to have been acted on and little of it appreciated. She could inflate, though it is only fair to point out that her disequilibrium has come about because she has been able to combat inflation rather better than her neighbours. She could also reduce her rates of interest. Even if it can be proved (as Germans attempt to do) that bond rates are no higher than elsewhere, they ought, in fact, to be lower, since the German economy is such an attraction in itself. She could also withdraw development-aid grants tied to export deliveries and reduce tariffs on imports from third countries (the latter might be difficult in the context of the Common Market). Lastly, she could revalue. At this, German financiers throw up their hands in horror. They remember the difficult time after the 1961 revaluation. But it is probably thought to be the best course considering the rest of the world as a whole.

Energy: Oil's Growing Role

The amount of European energy supplied from oil is expected to equal that from coal by next year. After that oil should become increasingly more important as a source of supply and coal will decline proportionately. The relegation of coal to a second place has virtually taken place in the last 13 years. In 1950, coal was by far the most important source of energy and, in the European Economic Community alone, it was the source of 74 per cent of all supplies. By 1962, the share had fallen to 48.3 per cent and this year's estimate is 43 per cent.

Although coal output has varied considerably since the war, the level of production is now around 230 million tons in the Common Market, roughly the same as in 1950. With imports, consumption rises to around 250 million tons. Thus, the drop in coal content of energy supplies is explained not by a direct transfer to oil so much as the inability of the coal industry to meet the increased demand for energy. This is a trend that has become apparent in other industrial economies since the war. The increased demand for energy is expected to reach 568.5 million tons of coal-equivalent this year. With new sources of output in the Middle East and North Africa as well as buoyant supplies from the Americas, oil has been in a particularly good position to meet the increased demand.

The result has been that, from supplying the energy industry with a mere 10 per cent in 1950, oil is expected to reach 40 per cent this year, as compared with 34 per cent in 1962. In 1962-63, oil actually rose by 16.3 per cent and, while it will be almost impossible to maintain this rapid rate of increase, it is expected that the increase will be at least 10 per cent in 1963-64. The increased use of oil is particularly noticeable in Europe's secondary industries and also in domestic use, where its cleanliness and ease of handling make it a more than adequate substitute for solid fuels. Transport, steel making and power stations are also expected to consume more this year.

The same trend is also apparent in Britain, though oil has a harder fight to capture the market since coal is a favoured industry. Coal has been making a quite remarkable comeback, too, under energetic leadership of the nationalised industry. Exports reached a six-year peak last year, with over seven million tons and output has been climbing back to the 200-million-ton level after falling heavily from 1958's 215.8 million-ton figure. In spite of this, oil deliveries have increased by almost 50 per cent in five years, from 37.1 million tons to 55.7 million tons and the increase between 1962 and 1963 was 10 per cent.

The main danger that is felt to the continued expansion of oil in energy supplies is the high dependence on imports. Only eight per cent of Europe's supplies are produced locally, most of the rest coming from the Middle East. This is a politically difficult area to deal with and no stability of supplies can be guaranteed. European energy producers are, therefore, glad to see the Middle East content of supplies decreasing. From 77 per cent in 1959, supplies were only 62 per cent in 1962. The rise of North African oil accounts for this.

In the even longer-term, the probability is that oil itself will be displaced by natural gas. So long as natural gas had to be imported, cost kept its growth down. But the Dutch have discovered what is thought to be the second largest natural gas reserve in the world, a field that could be the largest if borings under the North Sea produce as much again. Now that natural gas is cheap to supply, it can be expected to play an increasingly important part in energy supplies as its price comes down and pipelines are laid to take it all over Europe. Its share of the market at the moment is some two to three per cent. This is expected to rise to eight per cent in the next few years. From that base, it is confidently expected that it will make great strides forward. Support for this belief comes from American experience where natural gas now accounts for about 30 per cent of the energy supply. The advantage of the Dutch field is that it is on top of the Ruhr and not much further to industrial northern France.

A Growth Sector in Belgian Textiles

Although output of industrial clothing plays a small role in the Belgian textile industry, it is a sector that is growing rapidly and has the best growth potential. Production has risen from £3.59 million (10 million dollars) in 1959 to £5.08 million (15.2 million dollars) in 1962, the last year for which figures are available, a rise of 41 per cent. This growth is thought likely to continue, because of recent legislation which has made the wearing of protective clothing in industry compulsory. Its probability is enhanced by the fact that there is little opposition to wearing protective clothing among Belgian workers, whether white-collar or manual, and to the fact that there are still a lot of firms which have not complied with the law. This arises not so much from a conscious attempt at evasion as from ignorance of legislation among small firms. In order to meet the increasing demand that is considered likely, there has been a marked increase in investment. There has also been a pronounced trend towards specialisation, so that 55 per cent of the manufacturers of working clothes now produce nothing else.

As far as native Belgian industry is concerned, the danger is that expansion may be curtailed or affected by two factors: substitutes and imports. Most—93 per cent of the men's and 50 per cent of the women's—clothing is made from cotton textiles. Britain and America have demonstrated that the growth of cotton fabrics has been undermined by nylon substitutes. And between 1960 and 1963 imports rose by almost 33 per cent. Although still small by comparison with Belgian output, such a growth could present a long-term threat to the industry.

Trade With Russia

Behind the visit to Britain of a Russian trade delegation seems to lie a change in the trade winds across the Eastern bloc. First, the Czechs visited Britain earlier this year; hard on their heels came a Russian team led by such a senior Government member as the Foreign Trade Minister. Ostensibly, the latest visit has been to renew a five-year Anglo-Soviet trade pact, which expires in June. But the Russians also had £100 million (280 million dollars) to spend.

This is thought to indicate that the Russians, especially, are ready to relax trading restrictions with Europe. Britain has always been Russia's leading Western trading partner and an extension of trade with her could lead to an extension with the rest of Europe. Such an extension, however, would have to be conditional on Russia being given longer credits. It is on this point that the prospect of greater trade would stick in some European gullets.

Britain has granted longer credits on orders worth £100 million to the present trade team—credits ranging from 10 to 15 years in place of the normal five. Not only has this aroused antagonism in America but there has been deep suspicion in Bonn and Paris (though not nearly so much in Rome; the Italians have for some time syphoned Russian oil into Europe). For Britain the advantages of the longer credits are obvious. Two-way trade has increased 50 per cent since the last pact was signed in 1959. Then Britain imported £63 million (176 million dollars) from Russia and sent her £35 million (98 million dollars). Last year, imports had risen to £91 million (255 million dollars) and exports to £64 million. A further expansion will, therefore, depend to some extent on stimulating exports to Russia, though Russia has used the surplus to buy raw materials from the rest of the Sterling Area.

Prospects of Exports to the U.S.

European exports to the United States are expected to increase this year, if the American economy remains as buoyant as the majority of the experts appear to predict. Most of the indicators point to continued growth. Construction is running at a record rate, steel output is currently 77 per cent of capacity, large orders are on the stocks for durables such as machine tools and cars and consumer spending is moving to new heights.

It is the progress in the durables group that is lending such confidence to the outlook. The motor trade, for instance, expects to sell at least eight million cars in the 1964 model year and European manufacturers hope to capture a very much larger section of the market, especially with their small cars and sports models. In the first ten days of April alone, a record 227,403 cars were sold, and this year's output so far, at 2.6 million, is 200,000 better than last year's.

Employment levels are also responding to the new dynamism, though the percentage has not fallen because there has been an increase in the labour force. Employment rose by 0.5 million to 68.5 million and the number of unemployed fell by 0.23 million to 4.29 million. But the increase in the labour force kept the level—5.4 per cent unemployed in March—at the February figure.

The one point that is causing a little concern is the rate of growth of national output. Although it reached a record level of 608,500 million dollars in the first quarter of this year, an increase of seven per cent over the corresponding quarter of last year, the increase was actually lower than in the third and fourth quarters of 1963. This is not causing undue worry, because the check is attributed to a slowing in restocking. Tax cuts, which took effect last month, should pep up both inventories and capital investment as they begin to be felt.

Danger of Inflation in Sweden

Sweden's faster rate of growth this year—it is planned to rise by 4.5 per cent as compared with 1963's 3.5 per cent—will depend to a large extent on the way in which demand can be kept in check. The danger to progress is that inflation will wipe out all the gains made so far. The wages bill rose by some 7.5 per cent between 1962 and 1963 and demand for labour outstrips the supply. The number of unfilled vacancies rose last year while unemployment fell. At the end of 1963 there were 19,812 unemployed as compared with an average of 23,300 in the previous year and 43,300 in the bad first quarter of the year. But wage costs, rising by 8.5 per cent, went up appreciably faster than output, which only increased by five per cent.

Over the year there was a considerable change in the pattern of labour. Agriculture, forestry and manufacturing have been declining industries, while the service sectors and construction have been gathering labour. Agriculture now accounts for less than 10 per cent of the active population as compared with 17 per cent in 1950. The drop in forestry, between 10 and 15 per cent last year, should be reversed this year, but the increase in the service industries is likely to continue.

Foreign Trade: Current account deficit increased last year from 1962's £10.3 million (29 million dollars) to £15 million (42 million dollars) and is expected to double this year. Result was that the gold and currency reserves fell by a small amount to some 800 million dollars.

Monetary Policy: Dearer money has been the trend recently and the Bank rate is now 4.5 per cent, having been moved up half a point twice during 1963. The rise in commercial bank assets was smaller than in 1962, but credit to business and to the construction industry showed a marked increase, although there were indications that this upward trend was levelling off towards the end of the year.

French Dairy Dispute

The French Government, fearing a spread of discontent among dairy farmers over its milk price policy, has decided to increase official stocks of butter. Between now and the end of June, the authorities will seek 36,000 tons of butter to place in cold stores controlled by the Treasury. At issue, basically, is the Government's attempt since last September to curb inflation, partly through an attack on food prices. Despite protests from the producers, the Government last month fixed the milk target price at virtually the same level as that for 1963.

The situation has already led this month to an effective strike of producers in the department of the Ain, in the south-east, a region heavily dependent on the dairy industry. The Government, now seeking to combat a spread of militant action in this region and elsewhere, seems to have a good deal to fear. It cannot afford to give in to the producers and jeopardise the anti-inflation programme; but it cannot ignore the fact that farmers' militancy has forced its hand in the past. Last year, the authorities were prepared to let milk prices go up by about 1.9 per cent. In the event, the producers' guerilla tactics—strikes, roadblocks and so on—forced a total rise in the official target price of just short of 8 per cent. Despite big variations from region to region, average producer prices for milk last year ended up a shade over the target price now envisaged.

Even so, as a *communique* from the National Milk Producers Association (F.N.P.L.) stressed last week, French dairy prices are still "the lowest in Europe of the Six and among all West European countries." The main areas of discontent are now likely to be that between the Alps and the Rhone valley, the important dairy region already affected by the Ain strike; the south-west, where prices are the lowest in the country, partly due to the comparatively recent development of dairying and the backwardness of co-operative marketing and processing facilities; and parts of the Atlantic and Channel coasts, where prices received have lately been persistently below target. Another big grumble in the industry is that the Government's price policy has done nothing to smooth out sharp disparities between the regions. Producer's milk prices vary from well below target in the south-west to about 45 per cent above it in Savoy, the gruyere cheese region.

Feelings are running high. Even before he went to hospital, President de Gaulle had cancelled a visit to Picardy he was due to make recently, allegedly because the Government feared a bad reception from the largely rural electorate. Now the National Federation of Farmers' Syndicates (F.N.S.E.A.) demands, as a priority as soon as the President is fit, a "long-overdue" interview with him on the whole problem of farm prices.

Bigger European Beet Acreage

Early season forecasts from the main Europeans ugar beet areas indicate that acreages sown to the crop are much bigger than the level of last year. Encouraged by relatively high world sugar prices, Western European beet acreage is at 4.76 million acres, it is estimated, 10 per cent higher than in 1963. But, in Eastern Europe, the increase is even more striking. With Russia planting 10.6 million acres, 2.47 million more than last year, total East European beet acreage is forecast at nearly 14 million as compared with 11.5 million in 1963. Providing this summer's weather is good, European beet output is expected to be well above last year. Some estimates put the increase at more than 10 per cent.

All resale price maintenance has been banned in ***Holland***. With a Bill to abolish price maintenance in Britain causing political difficulties, the Dutch decision will be greeted in one country, at least, with great interest. The Dutch measure, which is against collective retail price maintenance (R.P.M.), comes into operation on 15th June. Measures against individual R.P.M. are also under consideration, according to an announcement by the five Ministers concerned with the ending of R.P.M. These would not take the form of a general ban but would apply only to those industries where all, or nearly all, products are sold under R.P.M. The electrical household goods sector is probably one of the more important of these. One of the major reasons adduced by the Dutch for bringing in this measure is to enable the relatively more efficient traders to pass on cost advantages to the consumer. The influence of R.P.M. on retail prices at the moment is thought to be particularly marked.

Britain is pursuing a trade drive in the Middle East to increase her annual £200 million trade with the area. Britain hopes to benefit from the diversification which many of the Middle East countries in the region are undertaking. Both Syria and Iran, for instance, are to introduce more industry into largely agricultural economies. In Iran, oil has already become the largest single element in the economy, providing £100 million (280 million dollars) towards the revenue. In 1961, the latest year for which figures are available, Britain sold £31.6 million (87.4 million dollars) to Iran and took £49 million (137 million dollars) in return, £40 million of which was due to oil. In 1962, British exports to Syria were £8.6 million (24.1 million dollars) and imports £1.8 million (5 million dollars). Industry in Syria accounts for only 15 per cent of national output but planned extensions to public works should extend the irrigation system. To make contacts with the region, Britain has formed a new committee, the Council for Middle East Trade, on similar grounds to its Export Council for Europe and the Western Hemisphere Exports Council.

Belgium is expected to take a big increase in Dutch natural gas during the next few years. The Dutch company responsible for production hopes to sell 3,000 million cubic metres to Belgium for domestic consumption alone in the near future. This is only a quarter of what Holland hopes to sell by 1975, when the target is to capture 10 per cent of the Belgian market. The big expansion of gas on the Belgian market is due to a large-scale conversion to it as a fuel for domestic central heating. At present, this market takes about 3.3 million tons of coal a year and two million tons of oil products. The Dutch hope to supplement their domestic sales with 3,000 million cubic metres of gas to Belgian industry as well, and pipelines are to be laid to make the supply easier. But success in this field depends very much on the price being competi-

COMPANY MEETING

J.K. MANUFACTURERS LIMITED

KANPUR

SPEECH delivered by Shri Hemantpat Singhania, M.L.C., Chairman of the Meeting, at the Twenty-second Annual General Meeting of the Company held on 31st March, 1964.

FRIENDS,

I have great pleasure in welcoming you to the annual general meeting of the Company. The report of the Directors and the statement of Accounts for the period ended on 30th September, 1963, have been with you for some time, and I shall, with your permission, take them as read.

I am happy to say that your Company has been able to keep a steady progress in spite of the fact that there has been a continuous rise in the prices of cotton and stores, wages and other expenses, including amenities to the workmen, and as such in spite of the improvement in the turnover which has reached Rs. 1.82 crores as compared to Rs. 1.67 crores of the corresponding preceding year, there has been a slight fall in the profits.

Ours being mainly a spinning mill, the Company has to export its production according to the export scheme envisaged by the Central Government and in these exports the Company has to undergo losses which could not be helped in order to attain the desired development in the Third Five-Year Plan for earning foreign exchange.

According to the fiscal policy of the Central Government as announced in the Budget proposals, there will be no hope of securing any benefits for your Company but rather it will add some burden and thereby will affect the profits of the Company.

During the year under review, the relations between management and labour were quite healthy but on account of the present trend of labour in the city of Kanpur conditions in general are fraught with dangerous possibilities.

Your Directors have already taken in hand the renovation and modernisation of the plant and machinery and it is hoped that they would be pursuing it according to the availability of plant and machinery. During the year under reference, your Company has put in a sum of approximately Rs. 6 lakhs for modernisation.

During the year we have redeemed debentures to the tune of Rs. 3 lakhs and debentures worth Rs. 6 lakhs remain to be redeemed at Rs. 3 lakhs per year in the two succeeding years.

Viewed from all angles, the Directors consider that the results obtained during the year are satisfactory and we are in a position to pay bonus to our employees and also recommend dividends for distribution to the shareholders on almost identical lines as those of the preceding year.

In the end I may say that we owe our progress to the officers and the staff and the agents of the Company and we have to thank them all for their efforts. I am also grateful to you, gentlemen, who have shown a keen interest in our endeavours and who have been inspiring us. We hope to go ahead with our progress.

N.B.—*This does not purport to be a record of the proceedings of the Annual General Meeting.*

INDIAN PAPER MAKERS ASSOCIATION

IMMEDIATE SUBSTANTIAL RISE IN PAPER PRICES URGENT

CHAIRMAN, MR. M. L. ZUTSHI'S SPEECH

IT is of the utmost importance that a substantial increase in the prices of paper is sanctioned without any further delay: Thus said Mr. M. L. Zutshi, Chairman of the Indian Paper Makers Association, in his speech at the Annual General Meeting of the Association held at Calcutta on Thursday, 30th April 1964. The present price policy, Mr. Zutshi declared, had adversely affected the industry's profitability and retained earnings. For the policy, he said, did not adequately cover the further rises in the cost of production since the last price increase in June 1962. That increase, according to him, was very inadequate, as it did not even cover the rise in costs over the previous two and a half years and, in practice, the increase averaged to a low figure, because of the 7½ per cent rebate paid by the industry to its distributors and of the substantial supplies that had to be made to Government at the old rates. Mr. Zutshi reviewed the trends in paper production and consumption in India and pointed out that the future expansion programme of the industry had to be ambitious. The industry, he added, would have to depend more and more on indigenous sources for its requirements of raw materials and machinery.

The following is the full text of Mr. M. L. Zutshi's speech:

I would like to welcome Government's decision last December abolishing price control on paper boards. I also equally welcome recent budget proposals granting concessions in the matter of excise duty to new units and mills engaged in expanding their productive capacities. I convey to the Finance Minister the industry's appreciation and gratitude for these concessions.

Four years ago, when I had the privilege of addressing from this chair, I referred to the problems then facing the paper industry. Whilst it goes to the credit of the industry that production of paper and paper boards during these four years increased from approximately 298,000 tonnes in 1959 to 465,000 tonnes in 1963, an increase of nearly 56 per cent, it is with regret that I have once again to refer to the same problems. If the paper industry has to expand at a more rapid rate, as it must, and make its contribution to the economic prosperity of the country, it is of the utmost importance that all impediments retarding its growth are eliminated as soon as possible.

We have just completed the third year of the third Five-year Plan. At the beginning of the third Plan, the production of paper and paper boards was just over 350,000 tonnes with an installed capacity of 410,000 tonnes, as against the targets of 350,000 tonnes for production and 450,000 tonnes for capacity. At the end of 1963, the production of paper and paper boards amounted to 465,000 tonnes with an installed capacity of over 549,000 tonnes. With the completion of some expansion schemes and new projects which are under implementation, an additional capacity of nearly 145,000 tonnes is expected to materialise during the year 1964-65. A further capacity of 70,000 tonnes is expected to become available during 1965-66. Government have also in principle approved expansion of the capacities of some of the existing mills by installation of balancing equipment and this expansion is likely to bring into being a further capacity of about 120,000 tonnes. If this additional capacity of 120,000 tonnes materialise by 1966 the industry would have achieved the third Plan target capacity. As for production, a part of the installed capacity would not become productive by the end of the third Plan and the target of 700,000 tonnes may not be achieved in 1966.

Newsprint

Indigenous production of newsprint has increased to 30,000 tonnes and there are likely to be further nominal increases only by the end of the third Plan period. The target production of 120,000 tonnes with a capacity of 150,000 tonnes will not, therefore, be achieved and, for a few years more, India will continue to depend largely on imports of newsprint. Out of the three licensed schemes in the private sector, two are based on bagasse and one on Himalayan fir and spruce. One of the bagasse schemes is reported to have been abandoned. Fir and spruce are conventional raw materials for newsprint and it is expected that from out of Himalayan woods a quality of paper, matching imported newsprint, will be produced. To meet the existing demand of newsprint and to save at least a part of the foreign exchange now being utilised for the import of newsprint, it is of great importance that the licensed schemes are given practical shape as soon as possible.

Out of the increased production of 300,000 tons to 350,000 tonnes during the period only 20 to 25 per cent will be accounted for by new units, the major contribution, therefore, will come from existing units and their expansion programmes. The earlier expectation that the increase in production would be mainly accounted for by new units has proved unrealistic. During the last fifteen months, numerous licences for new small and big mills have been revoked. The paper industry is a capital-intensive industry. According to the latest estimates, for every ton of annual production in a new mill to be built up from scratch, an investment of approximately Rs. 3,800 is required. A new mill of 100 tons per day capacity would thus need a capital outlay of approximately Rs. 11 crores. On the other hand, the capital outlay on the expansion of existing units can be as low as Rs. 2,000 per ton of annual production and this leads to the obvious conclusion that it is in the national interest to create facilities making it possible for existing units to expand, if possible, continuously.

Selling Prices

During the first and second Plan periods, the paper industry made commendable progress and fulfilled its targets for capacity and production. This satisfactory performance of the industry during these two Plan periods became possible because of the ability of the industry to plough back for rapid expansion a major portion of the reasonable profits it earned during the period. This trend, however, was reversed during the third Plan period owing to the policy of the Government in the matter of fixation of selling prices.

The last enquiry into the selling prices of paper and paper boards was held during 1958-59 and the prices recommended by the Tariff Commission came into operation on 1st January 1960. Apart from the fact that the prices recommended by the Tariff Commission denied the industry its financial requirements for rehabilitating its obsolete and worn-out plant, machinery and equipment, even the return allowed on employed capital was far from adequate. Subsequent events conclusively showed that the new price structure also did not provide a reasonable cushion for absorbing cost increases. With the spiral rise in the costs of raw materials, chemicals, stores and increases in wages, the prices fixed by the Tariff Commission became absolutely unrealistic and it was clear that, unless prices were increased, the industry would find it difficult to plough back a part of its dwindling profits into business and attract fresh capital. It was in June 1962, nearly 2½ years after the acceptance by the Government of the Tariff Commission's recommendations, that a price increase of Rs. 60 per tonne was sanctioned. This increase was very inadequate, as it did not even cover the rise in costs over the previous 2½ years. In practice, this increase averaged to a lower figure because of the 7½ per cent rebate paid by the industry to its distributors and the fact that substantial supplies had to be made to Government consumers at the old rates.

Production Costs Rise

Since the last price increase in June 1962, there have been further rises in the cost of production. The industry has submitted detailed representations to the Government for an upward revision of the existing prices. I do not propose to refer in detail to the industry's case for a price increase. While I hope that these representations are receiving the sympathetic consideration of the Government, I would like to point out that delays in announcing price increases place a heavy strain on the industry. The industry has placed facts and figures before the Government showing the adverse effects of the present price policy, particularly on the industry's profitability and retained earnings. It is, therefore, of the utmost importance that a substantial increase in the prices of paper is sanctioned without any further delay.

So long as Central and State Governments' levies and the prices of raw materials, chemicals, stores and maintenance items continue to fluctuate it will often be necessary to revise the prices of the finished product. During the last four years, there have been steep increases in the costs of all these variable factors and, if the present is an indication of the future, it would appear that these increases will continue to take place in the years to come. Any price increase now sanctioned by the Government cannot, therefore, hold good for any length of time and the industry sooner or later will have to ask for further price increases. As matters stand, the representations now pending before the Government for price increase have already become out of date, because there have been substantial further increases since the submission of the said representations.

It is not a happy feature that an increase in the selling prices of end products should become possible only after a long drawn process. I am of the view that price increases should be automatic and it should not be difficult to evolve a formula in terms of which paper prices could be revised as soon as costs of production tend to vary beyond agreed limits.

High Levies

Why are the selling prices of indigenous papers considerably higher than the international prices? The reasons are not far to seek. Central and State levies on paper represent approximately 15 per cent of the ultimate cost to the consumer. Costs of raw materials and major chemicals which account for 40-50 per cent of the cost of production are higher in this country by at least 50 per cent. It is the practice in foreign countries for paper mills to produce their basic chemicals and generate their own electricity. It is not unusual for paper mills to have their own extensive plantations and, above all, the normal size of the productive units is very much larger thereby bringing down the overhead costs. On the other hand, in this country, paper units suffer, because they are comparatively very small in size, have to depend upon the State Governments for the supply of their main raw materials for which they pay excessive royalties and, in many cases, they purchase their essential chemicals at a price almost twice what it would cost, if the chemicals were manufactured in their own chemical plants. While I shall later refer to the raw material problem of the paper industry, I would like to point out that it is of extreme importance that paper mills are not called upon to pay high royalties for forest produce. It is also equally important that paper mills are encouraged to install their own chemical and power generating plants. Future planning should also provide that the size of the paper units is sufficiently large making it possible to achieve a considerable reduction in overheads.

Consumption

After thirteen years of planned development, while the indigenous production has more than quadrupled itself, the *per capita* consumption of paper has just exceeded 1 kg. or nearly 2½ lbs. This is, indeed, a very low *per capita* consumption. Assuming the industry achieves the target production of 700,000 tonnes by the end of the third Five-year Plan, the *per capita* consumption during 1966 would increase to nearly 1.66 kg. So, after fifteen years of planned development, India will continue to remain dismally far behind not only the advanced countries of the West but also some of the less industrially developed countries of Asia. The goal today, therefore, for the not too distant future should be to achieve a *per capita* consumption comparable with that presently prevailing in European countries, which translated in terms of production would amount to nearly 40,000,000 tonnes. By today's standards, this is a frightening figure, but this is the challenge facing the industry and I have no doubt that, given the necessary facilities and assistance, the industry will meet it successfully.

The future programme of expansion of the paper industry, therefore, has to be ambitious. The industry will have to depend more and more on indigenous sources for its requirements of raw materials and machinery. It is, therefore, of paramount importance that the scope of manufacture of pulp and paper mill machinery in this country is enlarged and manufacturers are given all the facilities to expand their capacities to be able to meet India's needs over the decades to come.

A pulp mill, based on bamboos, for the manufacture of rayon grade pulp has already come into production at Kozhikode. Another scheme for setting up a paper grade pulp mill at Dangs is in the course of being implemented. There are six schemes licensed for the manufacture of dissolving pulp from bamboo and hardwoods. It would appear that bamboo is not an ideal raw material for the manufacture of dissolving pulp. I would, therefore, strongly urge that resources of bamboo should be reserved for the manufacture of paper grade pulp only.

It is well known that there is an imbalance between the existing pulping and machining capacities. If more pulp were available, the production of paper on the existing machines could be somewhat increased. Quite a few paper schemes mainly based on bagasse have already been licensed. It is quite likely that more schemes mainly based on short fibres will be licensed in future. These schemes when implemented would need long-fibred pulp as would mills based on long fibres need short-fibred pulp to boost up production. It is, therefore, of the utmost importance that a few large-size pulp mills are built up based on raw materials still available in the country. A suitable place in Assam, where large resources of bamboo exist, could be a site for one such mill. Similarly, in Jammu and Kashmir, large resources of long-fibred woods are available and a pulp mill based thereon could provide wood-pulp needed all over the country.

Raw Materials

There has been no improvement in the difficult situation faced by the industry in respect of its requirements of raw materials. I would like particularly to refer to the following:

(*a*) Some of the State Governments are continuing to refuse leases of forests to mills not situated within their geographical boundaries. This has resulted in many mills finding it difficult to obtain raw materials from their traditional sources. There are recent instances of some State Governments having refused leases to mills which were previously situated within their boundaries but which, as a result of States re-organisation, became parts of the neighbouring States. There are also instances of renewal of leases of areas worked by mills for a number of years having been refused to them, because the mills did not happen to be situated in the State concerned.

(*b*) There is reluctance on the part of some of the State Governments to grant long-term leases of forest areas to paper mills. Both the Planning and Tariff Commissions have recommended that the leases of forest areas should be granted to paper mills on a long-term basis. Apart from the fact that a long-term lease ensures adequate supplies of raw materials to the paper industry, such an arrangement also results in the paper mills taking sustained interest in the future growth and preservation of the forests. It is known that, wherever a policy on these lines has been adopted, the yield has steadily increased on account of the scientific working of the forests by the paper mills. In fact, areas worked by paper mills provide a striking contrast to those worked by contractors who motivated by their immediate gains work them ruthlessly, often in contravention of silvicultural rules.

(*c*) There is no uniform basis for charging royalty. Royalties vary from Re. 1.25 to Rs. 30 per ton of bamboo. Paper prices are fixed by the Government and, considering the fact that on an average three tons of raw material are required for one ton of paper, the wide variation in royalty puts at a disadvantage mills which unfortunately have to pay high royalties.

(*d*) Quite often, State Governments prefer to put their forests to public auction and insist on the paper mills acquiring the same in competition with sundry contractors. There is no appreciation on the part of the State Governments that, for every ton of paper produced, the national exchequer earns by way of excise duty nearly Rs. 300 and this works out to nearly Rs. 100 per ton of raw material. Thus, however small the royalty paid by the mills may be, for every ton of forest produce acquired by them the Government gets nearly Rs. 100 in the form of excise duty. There can, therefore, be no comparison between the royalty paid by the paper mills and the royalty paid by a contractor, for, however high the royalty paid by the contractor may be, it can only be a small part of what the paper mills ultimately pay to the Government.

Forest Leases

Some time ago, at the instance of the Development Council for Paper, Pulp and Allied Industries, it was recommended to the State Governments to grant long-term leases of forests to paper mills and a basis for the determination of royalty was suggested. I am not aware of any State having adopted this basis. So long as forests continue to be State-controlled, it seems difficult that a uniform approach can be enforced in the matter of long-term leases and fixation of reasonable royalties. From the point of view of industry, it is a matter of importance that a Central authority with power to lay down the principles and basis of supply of forest produce to industrial consumers is brought into existence. Perhaps placing forests on the concurrent list would be the immediate answer.

Unfortunately, information about the exact availability of forest produce suitable for being used as raw material for paper making is not available. There has been no scientific survey of Indian forests and, for many areas, even working plans do not exist. However, from the information now available, it would appear that raw material resources conventional now, that is, bamboo and grasses, are hardly enough to meet the present and the immediate future requirements of the paper industry. The known existing resources of bamboo in the country are expected to provide at the most two million tons per annum to the paper industry. Out of the total availability of about three million tons of bagasse in the sugar factories, about 1½ million tons can reasonably become available for paper manufacture, that is, if the problem of providing alternate fuel for sugar factories is solved satisfactorily. Another one million tons of other fibrous raw materials, that is, grass, straws, jute stalks, waste paper and rags, are likely to become available, if measures for their organised collection are intensified. Even if industrial and ecoomic progress during the next twenty years up to the end of the sixth Plan were to be slow, and as has been estimated by the Development Council, *per capita* consumption in 1980-81 would increase to 7 kg. only, the industry would need by the end of the third Plan 2¼ million tons of fibrous raw material and by the end of the fourth, fifth and sixth Plans 4.2 million tons, 7.2 million tons and 10.0 million tons, respectively. On the other hand, if the pace of industrial and economic development is accelerated beyond the present expectations and in the course of the next twenty-years *per capita* consumption increases to 20/21 kg., the industry would be needing by 1980-81 roughly 30 million tons of fibrous raw material. It is, therefore, obvious that, for the expansion of the paper industry beyond the fourth Plan, the known existing raw material resources will not be sufficient and fresh resources will have to be either located or created.

Raw materials for the expansion of the paper industry in the fourth Plan have in the main to be forest produce and to some extent agricultural residues. As you know, bamboo is generally a four-yearly crop. Some of the hardwoods planted in some of the southern States attain maturity within 10-12 years. Fir and spruce need a rotation of 180 years, though, by adopting scientific means of regeneration, it is possible to reduce the cycle to 90-100 years. The future production of paper in India will be of varied types and qualities suitable for being used for writing, printing, packaging and industrial purposes. More and more emphasis will have to be laid on quality and a stage will be reached when long-fibred pulp will be needed not merely as a prop to short-fibred pulp but for the production of papers with special characteristics and strength properties. Considering the fact that it will take 100 years for some of the trees planted to be ready for being pulped, it is of the utmost importance that steps are taken now to ensure that, in the decades to come, sufficient quantities of short and long-fibred raw materials become available for the manufacture of the then varied pulp requirements.

It is of vital importance that, as a first step, a survey to establish the exact quantitative availability of forest produce capable of being used as raw material for paper-making is undertaken. Recent experience in the Punjab would indicate that photogrammetic methods of survey give quick and accurate results. I, therefore, welcome the decision of the Government to have a pre-investment survey of the forest resources of some of the States conducted under the ægis of the United Nations Special Fund. I hope that the photographs of the selected areas will be flown this year making it possible for the results of the survey to be available by the end of 1965. I hope that, in the immediate future, similar surveys on an all-India basis will be undertaken so that exact information about forest produce becomes available before the end of the current Plan.

Bamboo Plantation

I submit that now is the time to draw out long-term programmes for the plantation of bamboo and short- and long-fibred trees. I would earnestly request the Government to make specific financial provisions for the drawing out and execution of such programmes. So long as forests continue to be Government-owned, it seems to me doubtful that paper mills can take up plantation on a very large scale. Plantations of bamboo and wood species have to form a part of the overall programme of afforestation. Particular species of wood suitable for paper-making may be most advantageously grown as an under-storey, for instance, to teak. The development of forest resources *vis-a-vis* the requirements of the paper industry, therefore, has to be taken up as a whole.

Paper mills are generally having an anxious time so far as their requirements of consumable stores are concerned. For production of 700,000 tonnes to be achieved at the end of the third Plan, at the modest level of present allotment of Rs. 40 per tonne, the industry will need foreign exchange to the extent of Rs. 280 lakhs. I need not repeat that the present allotment hardly makes it possible for the mills to have in stock any wires, felts and spares to meet emergencies and quite often mills have had to resort to air-freighting. There is also the problem of new units whose initial requirements of furnishings and stores are generally higher. If the paper industry has to produce to the maximum extent of its installed capacity, it is of utmost importance that mills are allowed to hold a buffer stock of wires, felts and consumable stores. I would, therefore, urge that a generous policy is followed in the matter of allotting foreign exchange to the mills for the import of their consumable stores and machine furnishings.

NEW PUBLICATIONS

The Economics of Take-off Into Sustained Growth. By W. W. Rostow. Published by Macmillan and Co., Ltd., London. Pages : 482. Price : Sh. 63.

PROF. W. W. Rostow hardly requires any introduction to readers of economic literature. As a modern economist, he has very few equals. This book under review, *The Economics of Take-off Into Sustained Growth*, edited by him, is a record of the proceedings of a conference of economists held by the International Economic Association a little more than two years ago. The Conference was an assembly of historians, specialising on particular nations; and theorists, statisticians and experts on the functional aspects of economic growth. They answered, each from his own perspective, the question: "Is the concept of take-off useful, misleading or wrong?" These contributions, in fact, form the subject matter of this book. As such, it is of great value to the economists of India. It is so, particularly because, in this country, one hears so much every day about the establishment of socialism and the speeding up of economic growth.

Prof. Rostow's theory of "take-off" flows directly from the form of sectoral analysis he developed in "The Process of Economic Growth," first presented at the I.E.A. Conference in 1955. According to him, "take-off" is the period when a society begins regularly to absorb new production functions in a setting where the direct and indirect consequences of this new mode of behaviour yield a more or less regular increase on output *per capita*. He defines it in two steps. "First, it is the period in the life of an economy when, for the first time, one or more modern industrial sectors take hold, with high rates of growth, bringing on not merely new production functions but backward and lateral spreading effects on a substantial sale." Secondly, "for a take-off to be said to have occurred, the economy must demonstrate the capacity to exploit the forward linkages as well, so that new leading sectors emerge as the older ones decelerate. "It is this demonstration of the capacity to shift from one set of leading sectors to another which distinguished abortive industrial surges of the transition period from a true take-off. This functional requirement has determined that the take-off be defined as embracing, say, a 20-year interval."

According to Prof. Rostow, economic growth now is essentially a sectoral progress. It is rooted, he maintains, in the progressive diffusion of the production functions modern technology can provide. Again, growth is an aggregative concept in that it consists in a regular expansion of output per head. It is also the result of an interacting process, involving the economic, social and political sectors of a society, including the emergence of a corps of entrepreneurs who are psychologically motivated and technically prepared regularly to lead the way in introducing new production functions into the economy. There are, of course, certain pre-conditions for a take-off which is preceded by a transitional stage and followed by self-sustained growth.

However, in propounding his theory of "take-off," Prof. Rostow was stirring up a hornet's nest. An impressive array of economists stood up at the conference, challenging the various facets of his theory. But it must be said to his credit that Prof. Rostow answered all of them, and convincingly too. His treatment of the theory is masterly and it will, undoubtedly, be of immense value to India's planners.

Besides Prof. Rostow's main topic, namely, "Leading sectors and the Take-off," the book contains a 22-page chapter by Prof. Simon Kuznets of Harvard University, the world-famous seat of economic learning. Prof. Kuznets' piercing analysis of the theory of take-off is commendably enlightening. There are, in this book, other illuminating and informative papers on the economic take-off in the U.S.A., Britain, Germany, France, Japan, etc. The papers on Germany and Japan particularly are highly interesting inasmuch as they depict the various stages of progress of these two countries which were worst hit by the Second World War.

The paper on "Population Growth and the Take-off Hypothesis," by Prof. Harvey Leibenstein of the University of California, is another relevant topic in the book for an Indian reader. It goes without saying that the population element is one of the most important factors to be reckoned with, while dealing with economic growth. There are many who maintain that population growth is an exogenous and autonomously determined variable that represents a hurdle to *per capita* growth. Prof. Leibenstein maintains that this view is not consistent with the take-off hypothesis. Empirical evidence, according to him, suggests that almost all countries, including the most backward, do have a positive rate of net investment, at least on the average over periods, such as decades. In fact, the rise in population can be conducive to economic growth. For example, entrepreneurs invest in anticipation of demand and population growth signifies an expansion of demand.

There is an argument that in a backward economy the ones who invest and save are likely to be the same people. The vast majority in a backward economy does not save anything at all. Entrepreneurs save because of their desire to invest. Thus, an economy that behaves in this fashion would not grow in the absence of population growth. This contention Prof. Leibenstein is not prepared to accept *in toto*. It is hard to believe, he says, that *gradual* development would not take place in an economy with a constant population. There could be other factors which could stimulate economic growth. Viewed in this light, one can see that what has happened in India during the post-independence period is an expansion of the economy without growth in *per capita* income. India's planners should find Prof. Leibenstein's elucidation of this aspect thought-provoking.

Prof. D. C. Hague has done an admirable job in summing up the rather rigorous debate. He has given an impressive resume of the various arguments, without harming the substance. However, it must be said that one is apt to find this book too academic. It cannot be otherwise, especially because the very purpose of the book is to establish a theory which has different meanings to different countries.

Fiscal Policy and Inflation in Post-War India 1945-54. By K. Venkatagiri Gowda. Publishers : Rao and Raghavan, Clock Tower Square, Mysore, Pages : 306. Price : Rs. 27.50.

The word "inflation" means an abnormal increase of the currency. In economics, it means too much money chasing too few goods. In other words, inflation generally is a situation where the purchasing power of the consumer is in excess of what it normally should be in a healthy economy. One of the obvious results of this phenomenon is a rise in prices. In present-day India, this inflationary trend is very much manifest. Hence, a serious study of the problem of inflation, like Mr. Venkatagiri Gowda's book, should be regarded as a welcome venture.

By now, it should be clear to all students of Indian economics that post-war India's—Free India's—budgets have been governed more by social objectives than by financial considerations. Viewed from this angle, Mr. Gowda's study of post-war India's fiscal policies and the phenomenon of inflation is both revealing and useful. His book, though originally written as a doctoral thesis, gives even an ordinary reader a clear idea about this dreaded economic disease called "inflation."

Divided into eight long chapters, the book discusses in detail the effects of fiscal-monetary policies on the functioning of the economy as a whole and, in particular, on the behaviour of macro-variables and their aggregative relationships in a static setting. The method Mr. Gowda has chosen is called "macro-economic analysis." This approach is directly concerned with the relations among large statistical aggregates, such as income, total consumption, total saving and total investment. The author, in his defence of this method, says: "To understand such relations is in effect to understand the behaviour of the economy as a whole. The macro-economic method of investigation not only enriches our understanding of the functioning of the economy as an aggregative whole but also throws useful light on the practical problems of economic stabilisation both in the short run and in the long run." Whatever be the flaws of this method, it must be said to Mr. Gowda's credit that his method of analysis is certainly devoid of ambiguity. The chapter on the "Mechanics of Inflation" in particular bears ample testimony to this.

Stressing the effects rather than the causes, Mr. Gowda prefers for a definition of inflation the following statement: "Inflation is a situation in which money incomes are rising at a much faster rate than real incomes." The implication is that, unless rigidly suppressed, prices are also rising, so that an inflationary situation is characterised by both rising money incomes and prices. The author has, with the help of tables and graphs, systematically analysed inflation, indicating its primary causes, how it behaves and also how "the process comes to an end, if at all." In this chapter, Mr. Gowda has also explained at length the methods by which inflation can be controlled, though he is aware that there are no set and standardised methods of control which suit all countries. Hence, he only discusses the methods of control with reference to the special circumstances obtaining in the Indian economy. The chapter on "Fiscal Policy and Inflation" has a special attraction in that it is the most revealing one from the point of view of Government policies. In this chapter, the author describes the behaviour of the budget as a whole and each of its components in the period under study to assess the role it played in the inflationary process. The chapter is divided into six sections, each dealing with a particular aspect of the subject, such as estimates of the budget deficit, its inflationary effect, impact of the budget on consumption and investment expenditures, effect of the budget on the supply of money, its influence on price level and a critical discussion of the fiscal policy.

Mr. Gowda has given an expert treatment to the question of fiscal-monetary policy and the balance of payments. In a separate chapter, he has described with refreshing clarity the various effects —income effect, price effect and monetary effect— of the country's fiscal policy. The last chapter, "Summary and Conclusions," is a resume of the author's arguments. The other topics discussed in the book are: Statistical indicators of inflation: public debt policy and inflation; and monetary policy and inflation. Despite its brilliant coverage of the subject, the book suffers from want of adequate statistical data. This the author himself admits. All the same, the book is worth reading and it has immense use to all students of India's economic growth.

Indian Labour Movement—A Survey. By P. C. Malhotra. Publishers : S. Chand and Co., New Delhi. Pages : 218. Price : Rs. 5.

The Indian labour movement is not so small as can be easily concised into 218 pages of a small textbook-size publication, which Mr. Malhotra's work actually happens to be. But it is the approach which really makes a book, and the author here has rightly avoided unnecessary description while concentrating on the treatment of the subject as a scientific study and an integral part of India's planned economy. His work is not only a piece of recorded events but also a review of the present-day labour problems and their solutions in the country, which lends it a great deal of topicality and interest.

Mr. Malhotra's approach leads him to argue that India's labour cannot find solutions to its problems through a new labour party. In fact, he is satisfied with what the ruling party is already doing in the field and thinks that, as long as it keeps up with the political and economic objectives and implements its promises to the masses, it can sustain itself in power. "The labour issue," he contends, "may cease to be a basis of party alignment." What is already being done officially needs to be backed up with measures at the level of industrial economy. The author advocates industrial democracy and regards management councils, workers' education, collective bargaining, labour co-partnership and profit-sharing as instruments for achieving that goal. Again, at the level of industrial economy, he wants no political or ideological considerations to be brought into play. The only consideration, according to him, should be betterment in the lot of labour.

His long career as a teacher and his vast experience gained as a member of various labour committees have helped him approach the subject in a rational and disciplined manner. He has also reviewed problems relating to labour productivity, industrial relations, manpower planning, trade unionism, labour legislation, workers' participation in management, I.L.O., agricultural labour social security and the Government's labour policy. The book carries at the end useful appendices on industrial relations, role and responsibility of trade unions, social effects of industrialisation, economic indicators and share of private and public sectors in national accounts. A select bibliography further enhances the usefulness of the book.

Statistics—An Introductory Analysis. By Taro Yamane. Published by Harper and Row, 49 East, 33rd Street, New York 16, N.Y. Pages: 734.

In its simplest definition, statistics is concerned with the theory of collecting, tabulating and analysing numerical data. In every field of economic life and business, increasingly complex numerical data arise as a means of expressing information quantitatively. It is not always easy or even simple to describe and present numerical data in a comprehensive form, let alone to analyse, understand and interpret them. Like every other science, discipline or trade, statistics has its own kit of tools which must be learnt and mastered before it can be used appropriately, intelligently and fruitfully for assessing the significance of any set of data.

This simple and elementary textbook of modern statistics covers a wide field and goes to the roots of the theory by emphasising the "why" rather than the "how." Traditional statistical methods of describing and presenting data are competently dealt with in chapters on frequency distribution, measures of location and dispersion.

The next step after description is the statistical inference—the theory of probability. This involves grasping of new and subtle concepts, but the discussion is lucid and clear and the traditional objective approach, as well as the more recent subjective approach, has been well presented.

The inference must next be tested, the extent of error estimated and long-term trends projected. The discussions on testing of hypothesis, sampling and estimation techniques, and the analysis of index numbers, time series, linear regression and correlation are remarkable both for the excellence of exposition and for bringing out the contrast between traditional orthodoxies and the latest developments in applying the subjective approach to statistical problems.

The text clearly falls into two parts—the elementary introductory statistics for undergraduate levels and the more complicated matters for the advanced students. But the language throughout is non-technical and the text is extensively illustrated. The textbook will help any student or reader develop a thorough understanding of analytical statistics.

How to Start Small-Scale Industries. By H. R. Aiyer. Published by Hind Kitabs Ltd., 32-34, Vir Nariman Road, Bombay-1. Pages : 126. Price : Rs. 6.

In our country's economic set-up small-scale industries play a significant role. They are mainly labour-intensive industries and, as such, they help in relieving unemployment to some extent. In Western countries and in Japan, on the other hand, they supply nearly 60 per cent of the components required by large industries, thereby aiding the latter's growth.

The Union Government has defined all industrial units, with a capital investment of not more than Rs. 10 lakhs each, as small industries. The scope afforded by them has attracted many an entrepreneur but they seem to find the formalities and procedures, to be followed and fulfilled while starting such an industry, difficult to understand. In this context, the book under review, which is meant to educate the lay entrepreneur on the aforesaid formalities and procedures, is most welcome.

The author has discussed, in thirteen chapters, the loan facilities, banking facilities and Government aid offered for small industries. He has reviewed the prospects and scope for small industries according to industrial needs. The part played by various organisations, such as the Small-scale Industries Board, Small Industries Service Institutes, National Small Industries Corporation Ltd., and Small-scale Industries Development Corporation in providing financial assistance, hire purchase of machinery, technical knowhow and marketing and sales facilities, has been succinctly dealt with in the book. The author has also made a special study of the importance of small-scale industries in defence production. The chapter on industrial estates makes interesting reading. The author has completed his account by describing the position of small industries in Western countries. On the whole, this book will be a useful guide to all those interested in starting small industries.

THE AUTOMOBILE INDUSTRY . . . .

needs the users' co-operation

Even the best of machines has its frailties. A motor vehicle is an intricate piece of mechanism. It requires a certain amount of care in its operation and in its maintenance.

Every automobile manufacturer gives to the purchaser a warranty against faulty material and defective workmanship. The manufacturer's warranty does not, and cannot cover any assemblies or components which have been subject to misuse, negligence or accident.

In order to maintain a car in its most efficient and economical running condition, regular and thorough servicing is essential, including not only periodical lubrication, oil changes, etc., but also regular mechanical maintenance. In the case of Hindustan Motors, each new car delivered is accompanied by a Maintenance Voucher Book providing 3 free services and subsequent maintenance services at nominal cost. Purchasers are urged in their own interest to make regular use of these services offered by the manufacturer's dealers ; owners will thus protect the substantial investment represented by the car they purchased.

The Automobile manufacturers are often blamed for defects which are beyond their control. They appeal to the users of their products for full co-operation in the matter of upkeep of their vehicles.

WANTED: A FLEXIBLE SUGAR POLICY

MARKETING BOARD NO ANSWER TO PRODUCTION PROBLEMS

MR. G. M. MODI'S PRESIDENTIAL ADDRESS AT I.S.M.A.'S ANNUAL MEETING

IN his presidential address delivered at the Thirty-first Annual General Meeting of the Indian Sugar Mills Association held at New Delhi on 27th April 1964, Rai Bahadur Seth G. M. Modi said:

The food and agricultural sector of which sugar is an integral part embodies efforts and aspirations of a vast majority of our people. In the matter of Plan priorities also, which reflect the country's basic approach towards planned economic development, this sector has been accorded highest priority. The problem of food and agriculture is really complex. Land, which has been neglected for years together without replenishing its fertility, has to be exploited. Our agricultural operations at present are mainly dependent on the vagaries of nature. Only 16 per cent of the land is irrigated and production mainly depends on the bounty or fury of nature. In these days of scientific development, we should not merely be exposed to the mercy of nature but should take positive steps to provide adequate supply of water, fertilisers, drainage etc. The funds earmarked for the development of agriculture and irrigation over the first, second and third Plans have not been fully utilised. This is not desirable because, for development of agriculture and irrigation, foreign exchange hardly presents any problem and all requirements in this behalf can be met from internal resources.

Cane Development

Cane development has also suffered, especially in the North due to dependence on weather conditions. There is urgent need for provision of adequate water supply in sugarcane areas through tube-wells. The rate of supply of water from the tube-wells at present works out to nearly Rs. 70 per acre in U.P. against Rs. 32 for supply of water through canals. This high rate has prevented the growers from taking full advantage of the tube-wells already installed by the State Government. Cost of chemical manure being about Rs. 46 per bag, its utilisation is beyond the reach of cultivators. The price should be reduced through an appropriate subsidy by the Government. Adequate drainage facilities should also be provided.

The basic problems of cane development have been with us for all these years but have remained unsolved. Without effective participation of the Central Government, this problem may not be satisfactorily solved. Since sugar is a Central subject, it is most appropriate that larger and direct responsibility is assumed by the Government of India in the matter of cane development also to ensure quick results. The Central Government's participation in the intensive cane development schemes initiated in U.P., Bihar and the Punjab is welcome.

Smaller Units

Most of the existing factories were put up during 1932-33 with a daily cane crushing capacity of 600 to 800 tonnes and their subsequent progress has been entirely dependent on the availability of quality cane. Since cane cost accounts for 70 per cent of the cost of sugar production, such of the factories as were fortunately placed in the matter of cane supplies expanded their plants, while others located in areas of cane shortage have been marking time and have not been able to keep pace with the general development. They continue to be small-size units with higher cost of production and are sometimes classified as uneconomic. Cane yields per acre and sucrose content continue to stagnate around the level obtaining when the factories were put up. Functioning under such handicaps, if some factories have not been able to expand, it is hardly desirable to call them uneconomic or obsolete. While revising the price for the current season on the basis of actual working results of factories, Government should take into account the uneconomical working of the small units and compensate them adequately. The taking over of such units by the Government will not solve the problem. Provision for rehabilitation of such units in the price structure itself, as allowed in the case of cement factories, should solve their problems.

It is estimated that sugar output in the current season 1963-64 will be around 26 lakh tonnes which is less than what we need and had hoped for. Last year though sugar production was only 21.6 lakh tonnes, due to a very large carry-over of 10 lakh tonnes from the preceding season, it was possible to export about five lakh tonnes and also distribute internally about 26 lakh tonnes; but the carry-forward stocks at the end of last year were very nominal being barely 1.5 lakh tonnes.

Government, therefore, rightly decided upon various measures to maximise sugar production during the current season. Cane price was generally raised to Rs. 1.75 per maund and factories in *gur* competition areas were authorised to pay a minimum cane price of Rs. 2 per maund. Rebate in excise duty was granted to factories to enable them to start early and this concession also applied for the remaining part of the season. Simultaneously, Government also imposed restrictions on inter-State movement of *gur* and *khandsari* and assumed powers to regulate cane supplies principally to the factories. This integrated policy embracing the three sweetening agents was indeed boldly conceived.

Initially the aforesaid measures had their desired effect on *gur* and *khandsari* prices which tended to decline. By November 1963, as many as 129 factories had started against 86 during the corresponding period last year and production was higher by 70,000 tonnes. But, as the season progressed, *gur* and *khandsari* prices again resumed their upward trends and the failure of winter rains and drought in certain areas of the North caused damage to the standing cane. There was large-scale diversion of cane from factory areas to *gur* and *khandsari* and it is estimated that the industry lost about five to six crore maunds of cane as a result of such diversions. It is appreciated that the Food Ministry has been vigilant and has taken prompt measures from time to time to enable the factories to connteract competition from *gur* and *khandsari*. In March 1964, factories in U.P. were authorised to raise cane price by another -/6/- per maund. This helped the factories, particularly those in certain districts of West U.P., to prolong their crushing operations for some time and produce an additional output of about 50 to 60 thousand tonnes of sugar.

The measures taken by the Government have a limited impact and are not broad-based. They do not provide a lasting solution to the problem of securing equitable distribution of available cane supplies among the three users. For this, it is essential that the factories should be ensured freedom and flexibility in their working comparable to that enjoyed by *gur* and *khandsari*. Since the factories have no resources of their own, this freedom and flexibility to factories is possible only through an appropriate sugar policy by Government.

Sugar Marketing Board

The setting up of a Marketing Board in sugar will perpetuate controls on the sugar industry and will upset the parity between the alternative users of cane which would inevitably affect sugar output adversely. The conditions under which a Sugar Marketing Board operates in Australia are basically different from Indian conditions. In Australia, sugar factories consume all the available cane and there are no alternative users. Moreover, here we have wide disparities in the operating conditions of factories and, consequently, evaluation of their costs will not be simple. Its creation would result in a shaded market for the industry and will destroy all initiative to improve efficiency and the quality of sugar. With its restrictive effects on production, the interests of consumers will also suffer and they will be required to pay higher prices. It will also sap initiative in the industry for expansion and extension which will again go to hamper production in the long run. The Indian Sugar Delegation which visited Australia and Indonesia in 1955 recommended that the question of setting up a Central Body for sugar should be postponed until economic conditions reached a certain degree of stability. Conditions prevalent today are far from stable and do not justify the introduction of the Marketing Board.

Cost Increases

An economic price structure is equally important for maintaining production and ensuring development of the industry. The Government are adopting the regional Tariff Commission Cost Schedules for computing control rates. Costs have gone up in diverse ways since the preparation of the schedules on the basis of the cost data for the season 1957-58. Unless all such cost increases are taken into account and provided for fully in the cost structure, the industry cannot be assured of a fair price. The Indian Sugar Mills Association has submitted a detailed memorandum to the Government with necessary data in support of each item of cost where increases have taken place. Government should examine the data expeditiously to be able to provide for the same in the price finally fixed for the current season 1963-64. This is of vital importance to the industry.

Low Profitability

The uneconomic price structure generally allowed to the industry has undermined its financial stability. The level of profits presently accruing is far from satisfactory. The Reserve Bank Study published in its monthly *Bulletin* of June 1963, the Analysis of 1962-63 Financial Results of a large number of sugar companies in the North and the *Financial Express* Index Number of Equities reveal that the sugar industry is making extremely meagre profits by any standards. It is beyond the means of factories to set apart adequate funds for rehabilitation, expansion etc. Were it not so, we would not be confronted with the acute problem of small units. Adequate profits must be assured to the industry.

Sugar Exports

The emergence of India as a sizable exporter of sugar in the world market has been a most welcome feature of the sugar economy in recent years. Sugar exports are no more conducted merely to balance demand and supply within the country. They form an important part of our export drive to earn foreign exchange. In 1963 about five lakh tonnes were exported and the foreign exchange earnings are estimated to be over Rs. 32 crores. Raw sugar was produced in the country only last year. The immediate success that we achieved in producing raw sugar is indeed heartening. About 40 factories produced nearly 2.60 lakh tonnes in the last season and most of it was shipped to Japan, U.S.A. and Canada. We are now recognised as important suppliers of raw as well as white sugar.

In the current year, however, there is likely to be a setback in the export performance. This is entirely due to lower production in the country. It is likely that our total exports this year may be less than three lakh tonnes although the world sugar market has been quite firm for sometime past and this is the best opportunity for us to earn the maximum amount of foreign exchange. This slight setback is, however, a temporary phenomenon and, with production increasing appreciably in the years to come, exports would be stepped up to at least five lakh tonnes per year, if not more.

Future Prospects

Bright prospects lie ahead of the sugar industry. Demand for sugar in the country is continuously rising. During the third Plan period, the rate of increase in demand has been placed at one lakh tonnes per annum, while during the fourth Plan it is expected to go up to two lakh tonnes. In keeping with this increasing demand, the Development Council has placed the fourth Plan production target at 45 lakh tonnes and there are indications that this may further be stepped up to 50 lakh tonnes. We have a vast export market to absorb surplus output and the industries dependent on sugar for raw materials, such as alcohol-based industries, are steadily progressing.

In the above context, it is regretted that, while the Finance Minister has allowed certain important industries a rebate in corporate tax, sugar has not been included in the list of industries in whose case this concession would be applicable. This concession must be allowed as development in this industry has a direct impact on the agricultural economy and sugar is a sizable foreign exchange earner.

Next Season's Sugar Policy

Government should announce the next season's sugar policy as early as possible. Cane price for the next season has already been announced and it is hoped that the Government would give favourable consideration to the request for authorising the factories in the Northern and Central regions to pay a minimum price of Rs. 2 per maund as in the current season. Equally necessary is the announcement of Government's policy with regard to other connected matters like early start etc. This would facilitate prior planning which is so necessary to achieve the best results.

SUGARCANE YIELD IN MAHARASHTRA

Sugarcane yield in Maharashtra has not suffered as a result of the State Farming Corporation taking charge of sugar farms from private sugar factories. Stating this in the Rajya Sabha the other day, Mr. A. M. Thomas, Union Minister for Food, said that the Corporation had undertaken additional cultivation in 8,200 acres of land. The per-acre yield would be known only when the entire crop was harvested. According to information supplied by the Maharashtra Government, there was no deterioration in yield. Compared to other States, the per-acre yield of sugarcane was higher in Maharashtra; the yield averaged 40-50 tons. When asked whether the Maharashtra Government was also going to form cane zones, Mr. Thomas said that the Union Government had advised it to allocate zones for each factory so that availability of sugarcane could be ensured.

MARTIN BURN LOOK BACK TO OVER

180 YEARS OF SERVICE TO INDIA

...to be able to compute this service by decades, not by years alone...to recall that our creed has consistently been the development of our country's resources through engineering and allied enterprises...to take pride in planning that makes the many units in our organization fall into a rational and complementary group and each one a leader in its particular field, a position which some of them, early pioneers in India, held even in the last century. For us looking back is a worthwhile proposition—an incentive to *move forward.*

AMONG THE COMPANIES IN THE MARTIN BURN GROUP ARE:

THE INDIAN IRON & STEEL CO. LTD.: With a million ton integrated steel plant at Burnpur, the largest foundry in the Commonwealth at Kulti and its own collieries and iron ore mines, IISCO has an enviable record in production efficiency.

BURN & CO. LTD., HOWRAH WORKS: Pioneers in foundry practice in India, in structural steelwork fabrication and the manufacture of rolling stock—the origins of the Company go back to the year 1781.

BURN & CO. LTD., REFRACTORY & CERAMIC GROUP: Apart from stoneware pipes and chemical stoneware, the works of this group—eight in number and located in four states—manufacture nearly all types of refractories to meet the requirements of India's steel industry, power undertakings, railways, ordnance factories—in fact, any industry requiring refractory material for the maintenance of furnaces.

THE INDIAN STANDARD WAGON CO. LTD., SANTA: The oldest Indian unit started for the specific purpose of manufacturing railway rolling stock—has been mainly responsible for building up the wagon building industry. Also manufactures springs, forgings, pressings and stampings for heavy industry as well as automotive components.

THE HOOGHLY DOCKING & ENGINEERING CO. LTD.: Established in 1819, the Company has a shipbuilding yard, a dry dock and extensive workshops at Salkia.

ROBERT HUDSON (INDIA) LTD: A premier concern in its own field, the Company devotes itself to all types of light railway engineering—has important connections with the mining industries.

RAILWAY COMPANIES: Some of the first feeder railways in India, with six systems in four states.

ELECTRIC SUPPLY COMPANIES: Pioneers again in the generation and distribution of domestic power in India—serve 45 towns in Uttar Pradesh and Madhya Pradesh.

THE VAUGHAN BURN CRANE COMPANY LTD.: A collaboration with The Vaughan Crane Company Ltd. of Manchester... Hand operated and electric overhead travelling cranes and chain pulley blocks.

ASIAN CABLES CORPORATION LIMITED

CHAIRMAN, MR. GIRDHARLAL B. KOTAK, REVIEWS PROBLEMS OF CABLE INDUSTRY

SOME of the important factors, which adversely affected the business of Asian Cables Corporation Ltd., during the year ended 30th September 1963, were enumerated by Mr. G. B. Kotak, Chairman of the Company, in his speech at the Fourth Annual General Meeting of the Company held at Bombay on 30th April 1964. Mr. Kotak was, however, happy to disclose that the Company had made a successful debut in the export market and that efforts were being made to increase exports. The following are extracts from Mr. Kotak's speech:

FRIENDS,

Last year, I spoke to you that the Company was expected to show better results in the year under report. That expectation has been largely fulfilled. Though we have not been able to show the plus side in the profit and loss account, we have been able to progress very much farther than last year. With the receding threats of aggression on our country's northern borders, conditions in the market which were so depressing last year, have been reviving.

You must have noticed that the Company has made a small loss of Rs. fifty-nine thousand (actual Rs. 58,962), during the year under report after providing for depreciation amounting to Rs. six lakhs (actual Rs. 5,99,702), as against the loss of Rs. 11,52,448 last year. Your Directors are aware that the Company could have shown better results. But, as they have briefly mentioned in their report, a number of factors combined together and had a cumulative effect on the working of the Company. I would like to refer to this not as an excuse, but with sincere intention to keep the shareholders informed of difficulties which a nascent industry has to face.

Factors Beyond Control

The large-scale Chinese invasion in October 1962 on our motherland created panicky conditions in the market and the demand suddenly slumped. The impact of this continued to be felt throughout the major part of the year under report when the economy of the country was under heavy strain.

The retardation of progress in the generation of power during the first three years of the third Five-year Plan restricted the creation of demand. But the Plan is now gathering momentum and it is expected that it will catch up with the target in the fifth year of the Plan.

While the prices of cables remained unchanged, the rise in the manufacturing costs due to increases in prices of raw materials used in manufacturing also restricted the margin of profit.

The substitution of aluminium for copper in majority of cable lines, has, to an extent, slowed down the sales. There is a natural resistance from the customer to the new metal. This switch-over has naturally affected the flow of sales.

These are some of the important factors on which the management had no control, but which influenced the sales and profit margin on our products. However, it would be observed that by their very nature, these difficulties were of temporary character and if I may so put it, "clouds are clearing away."

During the year the Company's products had been registered with the Government, and D.G.S. & D. have now put our cables on the Rate Contract at par with the leading manufacturers who have been in this field for a long time. This is indeed very encouraging. During such short existence of our Company, we are fortunate to serve almost all types of clients in all parts of the country.

Entry into Export Markets

An interesting feature of the Company is the entry into the export field. Inspite of many handicaps, the Company has made a beginning in exporting our cables. Efforts are being made to increase the export. For this purpose, the Company exhibited the goods manufactured, in foreign exhibitions at Moscow, Kuwait, and Leipzig. One of your Directors, Mr. S. H. Kotak, has represented our Company in these exhibitions and he has been able to get results by securing substantial orders.

I am very happy to declare that the collaborators have since made full payments of Rs. 53,64,200 towards their contribution, much earlier than the first call notice was issued. My special thanks are due to them on this account, as this amount has proved to be very useful towards foreign payments to machinery suppliers, pending receipt of actual import licence and sanction of loan by the Industrial Credit and Investment Corporation of India Ltd. But for this timely assistance by our collaborators, we would not have been able to book the orders for machinery at a price which is about 15 per cent to 20 per lower than the prevailing price today; this has also enabled us to get priority in delivery of the machinery.

Expansion of Capacity

You will be happy to know that the Government has been pleased to grant to your Company during the year under review, licence for expanding the capacity of magnet wire manufacture from 360 to 1,200 tons per annum. The Company has also received a new licence for the manufacture of 500 tons per annum of paper and cotton covered winding wires and strips. We have already applied to the Government for the licence to import the equipment required for the expansion, and the import licence is expected soon. Such increased capacity is expected to improve profitability of your Company.

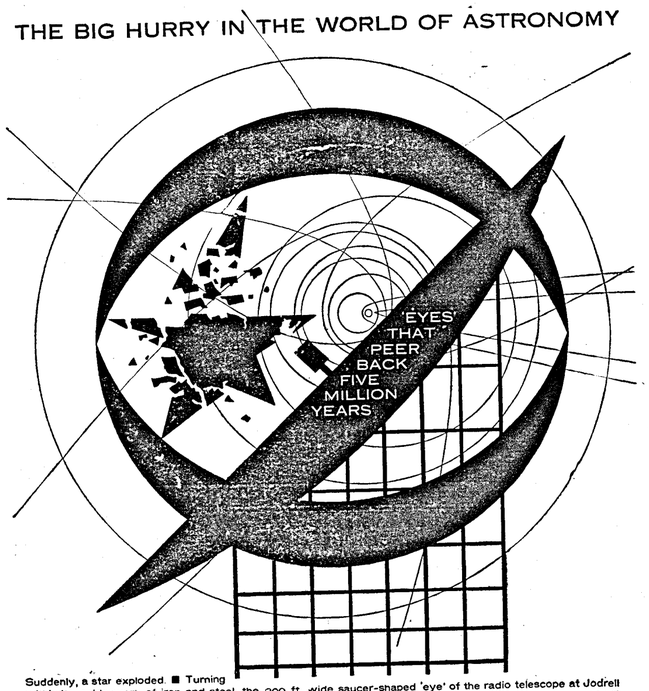
The building construction programme of factories for power cable and magnet wire is in full swing, and is expected to be completed by middle of July this year. No time lag is expected between the receipt of equipment and completion of the factory buildings. We expect the trial runs by the end of this year.

The Industries Commissioner, Government of Maharashtra, has already accorded his sanction for granting us additional supply of one lakh gallons of water per day. All preliminary arrangements for getting the supply are now complete and it is expected that this additional supply will be made available to us just when we go into production. The Tata Hydro-electric Power Supply Company Ltd., from whom we get our supply, have also, on recommendation from the Government, agreed to supply us necessary additional power.

Incidentally, I may be permitted to make mention of the sad incident which occurred last year in Dallas in the United States—the assassination of President Kennedy. I refer to this not merely because we have American collaborators, but we, Indians, have always abjured violence in any form, and, in our history, we have experienced the pangs of sorrow when the Father of the Nation, Mahatma Gandhi, fell to the assassin's bullet. In the strife-ridden world of today, the late President Kennedy proved himself as a "stabilising factor."

I am really thankful for the assistance rendered by the financial institutions like the Industrial Credit and Investment Corporation of India Ltd., the Industrial Finance Corporation, and our bankers, for their timely assistance and help whenever required. I must thank the Managing Directors and other Directors also for standing as guarantors to these institutions for the loans advanced by the financial institutions; this in itself is a considerable contribution besides the able management of the Company.

Note: *This does not purport to be the record of the proceedings of the Fourth Annual General Meeting of the Company.*



Suddenly, a star exploded. ■ Turning within its spiderwork of iron and steel, the 200 ft. wide saucer-shaped 'eye' of the radio telescope at Jodrell Bank looked deep into black space and recorded: the star had exploded FIVE MILLION YEARS AGO! ■ Peering so deep into space as to question time itself such radio telescopes are revealing to us the breathtaking, even frightening, dimensions of space and time, gathering astronomical data that are making space travel a fast nearing reality. ■ Into the fashioning of the 2000 ton Jodrell giant went the most advanced technique and knowledge of welding and gas cutting. ■ It is this precise knowledge of industrial gas and its diverse applications that Indian Oxygen affords Indian industry.

INDIAN OXYGEN LIMITED IOL

IOC-47A

THE BRADY ENGINEERING COMPANY LTD.

EXPANSION PLAN OUTLINED

U. K. FIRM TO PARTICIPATE IN EQUITY CAPITAL

THE progress made by the Brady Engineering Company Ltd. in implementing its programme for manufacturing within the country chains, electric hoist blocks, overhead cranes, etc., was outlined by Mr. Pallonji S. Mistry, Chairman of the Company, in his speech at the Eighteenth Annual General Meeting of the Company held at Bombay on 28th April 1964. The working of the Company during the first quarter of the current year has also been satisfactory, according to Mr. Mistry. The following is the full text of his speech:

GENTLEMEN,

I have great pleasure in welcoming you all to this eighteenth annual general meeting of the Company.

The Directors' report and the accounts for the year ended 31st December 1963 have been with you for sometime. In accordance with our usual practice, I shall take them as read.

Sales in the year under review reached a record of Rs. 38,94,000 against Rs. 29,92,000 in the previous year. This was reached in spite of a sizable cut in the import licences of load chain which restricted output of pulley blocks.

Profits Up

The detailed working results and the provisions for taxation are given in the report of the Directors. The profit, prior to taxation, was Rs. 9,00,000 and it exceeded the previous year's profit by nearly Rs. 1.51 lakhs. The Directors consider these results satisfactory.

The higher provision of Rs. 6,37,000 for taxation is partly due to larger taxable profit and partly to income-tax and super-tax on the year's profit having been calculated with reference to the rates contained in the Finance Bill of 1964. It takes into account the increased rate of super-tax at 35 per cent on the assessable income, owing to the Company being such in which "public is not substantially interested." The provision also includes tax on dividends paid in 1963 at the rate of 7.5 per cent and surtax in terms of the Companies (Profits) Surtax Bill, 1964 both of which impose a heavy tax burden on the Company's profits.

Modernisation

As mentioned in the Directors' report, the Company is negotiating for the purchase of a suitable site for the expansion and modernisation of your existing works. I am hopeful that we would be able to get the possession of the required land within the current year and also complete other arrangements for initiating the expansion programme.

Negotiations to manufacture hand and load chains, electric hoist blocks and electric overhead cranes in collaboration with Herbert Morris of U.K. are on the verge of being finalised. Herbert Morris have also agreed to participate in the equity capital of the Company.

The working of the Company during the three months of the current year has been satisfactory. I shall, however, sound a note of warning that the availability of imported load chains and other essential imported components will greatly determine our current year's production. The decontrol of steel from March 1964 except for flat products has resulted in an increase in prices of decontrolled sections.

Now, gentlemen, before I put the resolution for the adoption of Directors' report and the accounts I would invite you to ask for any information in connection with the business and accounts and I will do my best to answer your questions.

Note: *This does not purport to be a record of the proceedings at the Annual General Meeting.*

W. H. BRADY AND COMPANY LTD.

RESTRICTIVE IMPORT POLICY HITS BUSINESS

STATEMENT OF CHAIRMAN, MR. PALLONJI S. MISTRY

ADDRESSING the shareholders of Messrs. W. H. Brady and Co., Ltd. at their Fifty-first Annual General Meeting, held at Bombay on 28th April, 1964, Mr. Pallonji S. Mistry, Chairman of the Company, pointed out that the trading operations of the Company last year were adversely affected by the progressively restrictive import licensing policy of the Government. Mr. Mistry, however, expressed satisfaction at the progress made by the managed companies. The following is the full text of Mr. Mistry's speech:

I have pleasure in welcoming you all to this fifty-first annual general meeting of the Company.

The accounts and the Directors' report for the year ended 31st December 1963 have been in your hands for some time and, with your permission, I shall take them as read.

I regret to say the year under review had been a difficult one. The trading operations of a company such as yours are greatly affected by Government's progressively restrictive import licence policies. As stated in the Directors' report, certain items of textile machinery were banned for imports which adversely affected our indenting business from which source we used to earn substantial commission. All efforts are, however, being made to acquire distributorship of indigenously manufactured products.

Successful Year

Commenting on the working of the managed companies I am pleased to report that The Brady Engineering Company Ltd. had again a very successful year in 1963. Both the production and profits of this Company were higher than the previous year. The working of G. Claridge & Company Ltd. should be considered satisfactory, taking into account the keen competition it has to meet, together with the high cost of paper and also the increased D.A. which this Company had to pay on account of a settlement arrived at with the workers' union. Though the working of the sugar companies was satisfactory, the profits of the Belapur Company Ltd. were affected by the impact of agricultural income-tax. Gangapur Sugar Mills showed some improvement in the season 1962-63, despite the short supply of sugarcane. This shortage has been accentuated in the current season and consequently the factory had to be closed in the early part of the season, as a result of which this Company will show a loss in the current year. I am happy to say that the performance of Special Steels Ltd. has substantially improved. This Company declared a maiden dividend of 4½ per cent on its equity capital for the year ended 30th June 1963 and, due to higher profits, our Company earned Rs. 93,770 as Secretaries and Treasurers' commission in the year of account. This Company has an elaborate plan of expansion and has accomplished a substantial portion of its expansion programme during the current year and has also successfully manufactured new types of wires particularly galvanised ACSR core wires for the manufacture of ACSR conductors. The working of this Company during the current year reflect further improvement on the previous year's performance and it is expected that the result for the year ending 30th June 1964 will show considerably higher profits.

Dividend Higher

As will be seen from the profit and loss account, the Company has earned a large extraneous profit amounting to Rs. 26,42,955 from the sale of its entire investment in the Empire Dyeing and Manufacturing Company Ltd., which has enabled the Company to declare a higher dividend.

As mentioned in the report, the Directors have agreed to the appointment of the Company as the Secretaries and Treasurers of United Motors (India) Ltd., subject to the approval of the Central Government. This Company's activities will expand considerably owing to their appointment as the dealers for Tata-Mercedes-Benz trucks and spare parts for the district of Greater Bombay and some other districts in the State of Maharashtra. The appointment of your Company as Secretaries and Treasurers of United Motors (India) Ltd. will prove beneficial to the Company.

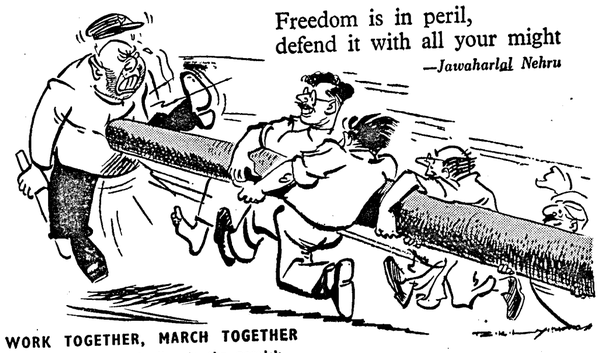
You will have noticed from the Directors' report that the Company had to pay a large sum by way of additional bonus for 1961 and 1962 and also adjustment of wages and dearness allowance. This has not only affected the profits of the year under review but the substantial rise in the dearness allowance and adjustment in wages will increase the overheads and as such will affect the future profits of the Company.

Effect of Budget

As regards the 1964 Budget proposals, I am pleased to say that your Company fortunately is not much affected although the 10 per cent increase in the super-tax payable by "companies in which public is not substantially interested," is applicable to your Company, the impact of this additional impost will be toned down by the abolition of super-tax on inter-corporate dividends, from which your Company derives a fair income. For the year under review, the Company will not attract any liability in respect of surtax in terms of the Companies (Profits) Surtax Bill, 1964.

I will be pleased to answer any queries which the shareholders may have to ask on the report and accounts before I ask you formally to adopt them.

Note: *This does not purport to be a record of the proceedings at the Annual General Meeting.*



WORK TOGETHER, MARCH TOGETHER

A nation's strength lies in the people's discipline, in their marching together and in their working together.
Unity and concerted effort are the only way to meet the challenge to our freedom.
Preserve unity; work resolutely.

STRENGTHEN INDIA'S DEFENCE

DAS/47.4

DESALINATION OF SEA WATER

DUAL-PURPOSE PLANTS LIKELY TO COME INTO VOGUE

SEVERAL countries, besides the United States, seem to be increasingly interested in the undoubted possibilities of converting sea water into fresh water for industrial and drinking purposes. Of these countries, particular mention may be made here of Israel, Cyprus and Hong Kong where serious attempts are already being made to establish large-scale water desalting plants. Down south, in Madras too, the State Industries Minister, Mr. R. Venkataraman, recently indicated that the feasibility of setting up a sea water conversion plant to ease the water-supply problem in the city would be actively explored. Here, in Bombay, the Maharashtra Government has just requested the Municipal Corporation to explore the possibility of undertaking a pilot project for the desalination of sea water. In view of these developments, it would be useful to review from time to time the progress in what bids fair to be an important public-utility industry.

The latest development in this field is the dismantling of the sea water conversion plant at San Diego (California) for transfer to the beleaguered U.S. naval base at Guantanamo in Cuba. It is expected that before the end of July next, the San Diego plant will be providing about a third of the 2.5 million gallons of fresh water needed by the naval base every day. The balance of the daily requirement will come eventually from two new desalting plants to be constructed by Westinghouse Electric. A 15,000-kilowatt electric power plant will also form part of the Westinghouse project for desalting sea water in the naval base.

As far as Southern California is concerned, the loss of the San Diego plant will soon be made good by an improved version of conversion plant. At the same time, this part of the United States will also benefit by a step-up in research and development in the field of sea water conversion. The White House Office of Science and Technology has, in this connection, advocated that, by 1975, Southern California be equipped with a nuclear plant that would turn out between 500 million and 800 million gallons of fresh water per day for catering to the needs of a population of between three million and six million and would, at the same time, generate one million to one-and-a-half million kilowatts of electric power. The proposed plant, which is to be powered by nuclear energy, would involve a capital cost of $850 million (approximately Rs. 408 crores). Similar facilities have also been suggested for Arizona, off the Texas Gulf Coast, and for New York City.

Cost of Conversion

Thanks to the Kennedy Programme for research and development in this field, it is already possible to convert salt water into fresh water by a number of processes. But the processes are still not cheap, for the cost of production of fresh water from the San Diego and Freeport (Texas) plants has worked out to as much as $1.00 to $1.25 (that is, Rs. 4.80 to Rs. 6) per 1,000 gallons, as compared with the cost of about 20 cents (0.96 nP) per 1,000 gallons from conventional sources. So much so, the existing salt water conversion plants in the United States are treated as subsidised pilot development projects. If, however, plants with a minimum capacity of about 500 million gallons per day can be established and nuclear power harnessed to double-purpose projects which will generate electricity, too, the cost of converted water is bound to come down. In fact, the experts believe that, by 1975, it will be possible to buy such converted water for 30 cents per 1,000 gallons—a rate which would then be competitive with that of water from conventional sources.

It will be of further interest for readers to know that the International Atomic Energy Agency (I.A.E.A.) has been actively interested in the field of sea water conversion. Its expert panel on desalination reviews developments periodically. The Agency has recently issued a technical report on "Desalination of water using conventional and nuclear energy." This report points out, at the outset that 60 per cent of surface land in the world is in "extremely arid, arid or semi-arid zones" which already support some 150 million people. These people need fresh water for domestic and industrial purposes. Certain overpopulated areas, too, according to the report, must choose between procuring water at relatively high cost from remote catchments and having a water scarcity. There are also special localities, such as some islands, which have little or no ground water. Some of these places have been purifying salt water on a small scale for many years now.

The I.A.E.A. report has listed as many as 40 existing sea water conversion plants round the world. These plants, most of which have come into operation within the last decade, use conventional power. It is claimed that they are giving good results and that water can now be produced conventionally at less than one dollar (Rs. 4.80) per thousand gallons. According to the I.A.E.A. report, this cost is acceptable to many municipal and industrial uses. But larger units are certainly possible, and these should be more economical than the existing plants with capacities of less than 1.5 million gallons a day. Estimates in the case of possible installations with capacities of 30 million gallons a day or more suggest that the cost of water could be between 30 and 50 cents per 1,000 gallons, depending on fuel costs.

Use of Nuclear Energy

Nuclear power, says the I.A.E.A. report, could be applied to any of the leading desalination methods by supplying heat or electricity to operate the process. Development of still larger sea water conversion plants, it is said, will favour the use of nuclear reactors which must be of large capacity, if they are to supply energy more cheaply than do conventional sources of power. Dual-purpose plants, producing water and electricity, would undoubtedly have economic advantages. The I.A.E.A. report, therefore, considers it "certain that nuclear energy has an important role in this application." But it also adds that studies and demonstrations will have to be carried out further, especially in the field of dual-purpose plants, before firm costs can be determined.

NEYVELI THERMAL STATION

The thermal power station of the State-owned Neyveli Lignite Project, built with Soviet collaboration, attained its full first-stage capacity of 250 M.W. last week when its fifth 50 M.W. unit went into operation. The first stage was thus completed within two years of the commissioning of the first 50 M.W. unit of the station in 1962. During 1963 alone, three units of 50 M.W. each were commissioned. The power generated upto the end of March 1964 amounted to 1,288 million units, of which 996 million units were fed into the Madras State power grid. The station is now being operated by about 300 qualified Indian engineers.

It has just been decided to raise the capacity of the station to 400 M.W. before the end of the third Plan period by adding one more 50 M.W. unit and 100 M.W. unit. The total cost of this expansion, including rupee expenditure to be incurred on Civil works, is estimated at Rs. 18 crores. Accordingly a contract has been signed between the Neyveli Lignite Corporation and the Technoprom-Export of the Soviet Union for the supply of equipment, machinery and materials worth Rs. 7.75 crores for the expansion programme. Under the contract, equipment for the sixth 50 M.W. unit will be delivered by the third quarter of this year and for the 100 M.W. unit by the last quarter of 1965. The erection of these units, which will be done by Indian technicians under the technical supervision and guidance of Soviet specialists, is expected to be completed by the end of the third Plan period.

The Neyveli power station will ultimately be expanded to a capacity of 600 M.W. by the addition of two more 100 M.W. units. Incidentally, it will be recalled that the Neyveli Station is one of the nine thermal and hydro-power stations which are being set up with Soviet collaboration for an aggregate capacity of more than 2.5 million kw.

Notice

INDUSTRIAL CONTAINERS LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Sixth Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on TUESDAY, 26TH MAY, 1964 at 3.45 p.m., to consider the Accounts of the Company for the year ended 31st December, 1963 and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 12TH MAY, 1964 to 26TH MAY, 1964, both days inclusive.

By Order of the Board,
BALMER LAWRIE & Co. LTD.,
D. MANSON,
Managing Director,
Secretaries.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 20*th April*, 1964.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

CALCUTTA PORT TRUST

For the Calcutta Port Trust the financial year 1962-63 proved to be a remarkable one in that it recorded an all-round improvement not only in revenue receipts but also in other activities, such as passenger and cargo traffic and port development. During the year under review, the revenue receipts amounted to Rs. 16.97 crores, as compared with Rs. 15.06 crores in the previous year. The revenue increase was mainly due to an increase of as much as 10 per cent in the total traffic handled. The expenditure during the year aggregated Rs. 16.45 crores, as compared with Rs. 14.23 crores in 1961-62. Thus, the year closed with a surplus of Rs. 52.27 lakhs in the revenue account.

The Port handled during the year imports and exports of 5.480 million tons and 4.723 million tons, respectively, as against the corresponding imports and exports of 4.884 million tons and 4.418 million tons in 1961-62. The number of passengers who embarked from the Port was 10,923, as against 16,580 in the previous year, while those who disembarked numbered 8,942, as against 12,266. There was also a small increase in the number of vessels that entered the Port, from 1,806 to 1,821. The income derived from the port railway increased from Rs. 200.67 lakhs in 1961-62 to Rs. 249.82 lakhs in 1962-63.

The year saw the installation of electric cranes at berths in Dock No. 1, Kidderpore Docks, as also the construction of a 30-tonne and 60-tonne floating crane, a salvage-cum-despatch vessel, a tea warehouse at Lybian Depot, and a research vessel, ancillary craft, etc., for the hydraulic department.

Last but not the least, the Government of India sanctioned the acquisition of nine square miles of land for the new dock and allied requirements of the Haldia project.

U.K.'S SECOND NUCLEAR POWER PLAN

The second British nuclear power programme, just announced in London, envisages another 5,000 megawatts of nuclear power capacity by 1975. The programme is due to begin in 1970 and four power stations are likely to be built during the six years upto 1975. Two stations of 1,000 M.W. capacity, with two reactors each, will be completed during the first four years. Two more stations, one of 2,000 M.W. and the other of 1,000 M.W., will be constructed by the end of 1975.

The present nuclear power programme is due to be completed in 1968-69 and will bring nuclear power capacity in commercial stations up to nearly 5,800 M.W. from nine stations. The intention of the British Government is that orders should be placed for new stations in time for the second programme to flow smoothly on from the first. But, according to Sir William Penney, Chairman of the Atomic Energy Authority, the programme of 5,000 M.W. may prove to be on the small side and a larger one may be grafted on to it, once firm information is obtained about the economics of various reactor systems.

EUROPE'S FUTURE POWER NEEDS

The seventh general report of the European Atomic Energy Community (Euratom) has just predicted that from the beginning of the next decade it will be more economical to equip power stations in Europe with nuclear reactors than with fuel-oil or high-quality coal-fired boilers. Electricity consumption in the Community, it is estimated, will rise by 7 per cent per annum during 1965-70 and by 6.5 per cent in 1970-75. Atomic energy will, at least from 1975, put a halt to the rise in dependence on fuel imports which are likely to increase to 47 per cent of the total fuel used by 1970.

The report, besides dealing with the progress of research on power reactors in the four Euratom establishments, has described the work that has gone into the problem of nuclear ship propulsion. It is claimed that in the spring of 1963, the first objective of the Euratom-Fiat-Ansaldo contract was attained when the decision was made that the forced-circulation pressurised-water reactor was the most promising.

CONTINUOUS CASTING

Steel manufacturers in several countries are increasingly employing the continuous casting plants for the production of billets and slabs, according to "The Concast Group" of West Germany. Recently, the Group received orders from the United States for three of their "Model S" machines—one two-strand machine for Soule Steel Company of San Francisco, and two two-strand machines for Florida Steel, Tampa, Florida. All these machines will be designed for a billet size ranging from 3 sq. inches to 5 sq. inches. The Concast Group, incidentally, is capable of building machines which are simpler in design, require less space and can be installed in a much shorter time.

NEW PRODUCTS AND PROCESSES

Resin Treatment for Cotton Fabrics

COTTON textiles, especially used in the manufacture of tentage and canvas are subjected to degradation by micro-organisms, sunlight and other weathering agencies. The Defence Research Laboratory, Kanpur, has developed a process which imparts to cotton fabrics resistance against weathering degradation under different climatic conditions in India and effective microbial and ultra-violet light degradation, thereby enhancing the life of cotton fabrics.

The treatment developed at the Research Laboratory has the following advantages, it is claimed: (*a*) The treatment can be applied to cotton textiles and also both on plain and water repellent closely woven fabrics. (*b*) The treatment is resistant to micro-organisms, ultra-violet light and outdoor weathering exposure. (*c*) The treatment does not appreciably affect the water repellency, flexural rigidity and air and water vapour permeabilities. (*d*) The treatment does not colour the fabric in any way and is considered suitable particularly for fabrics used under alpine conditions. (*e*) The treatment is considered practicable with the existing facilities available with the industry (both large scale and cottage industry).

Urea and commercial formalin (40 per cent) are mixed at room temperature and the resultant solution is diluted with water to the required concentration. The pH of the liquor is brought down to the desired level by the addition of tartaric acid. The fabric to be treated in freed of sizing materials and other impurities and soaked in the liquor for 20-25 minutes and padded through the padding mangles giving 3-4 ends, the pressure on the roller being adjusted to leave a hold up of 100 per cent resin solution on the fabric. The treated fabric is then air dried and finally baked at 150°C. In the case of heavy fabrics closely woven fabrics the soaking is carried out till slight haziness-milkiness appears in the resin solution. The treatment can be applied to various cotton textiles (particularly to tentage fabric, newar and cordage) in protecting against damage by natural agencies during outdoor weathering exposure under different climatic conditions in India and in storage.

The process has been worked on the laboratory scale and the field trials were conducted by exposing the panels and made up tents (I.P. 40 lbs.) manufactured from urea-formaldehyde resin (12° Tw.) treated fabric at different climates in India. It has been found that the treatment is quite effective against weathering degradations (micro-organisms, sunlight and other natural agencies) and enhances the life of the fabric threefold. All the raw materials are indigenously available and the approximate cost of treatment is 40 nP per sq. yard.

Watch Oil

Watch oil is essential for the lubrication of watches, clocks, timepieces and any instrument having clock-like mechanism. At present there is great shortage of good quality watch oil and the requirements have to be met by imports. The Defence Research Laboratory (Materials), Kanpur, has developed a process for the preparation of watch oil. The ingredients are blended in predetermined proportions in small batches and straightway bottled. The product has been found to be satisfactory against defence specification and also U.K. Watch Oil Specification No. CS 2692 and U.S. Army Specification No. 2-47B. At present there is no production of watch oil in the country and the entire requirements are met through imports. The process has been developed at laboratory scale and elaborate trials were conducted through various E.M.E. Workshops. The Workshops have given a satisfactory report. For the last three years the Army is using the product manufactured at the Kanpur Laboratory and there has not been any adverse report. One of the raw materials, namely, Tricresyl Phosphate, will have to be imported while others are indigenously available. No special plant and machinery is required as the process involves only blending of various ingredients. The cost of production of material is estimated at Rs. 2.50 per 15 ml.

New Formulation to Kill Cockroaches

Cockroaches (*Periplaneta americana Linn*) are a source of infection and impart obnoxious roachy smell to the objects over which they walk. Hence their control is very essential and investigations were undertaken to develop a new bait for their easy control. New formulations have been developed which are said to be cheap, simple and highly effective. The formulation can be used quite effectively against cockroaches in infested places like storehouses, buildings and godowns. The process has been worked on the laboratory scale and the findings have been confirmed by laboratory-*cum*-user trials and it has been found that the formulation is quite effective for the control of cockroaches. All the raw materials used in the formulation are indigenously available. No special plant and machinery is required. Only simple equipments like an ordinary balance, motar and pestle and packing materials and facilities are required.

'Dry' Non-return Valves for Gas Pipelines

A Dutch firm has brought out a non-return or check valve that provides a complete safeguard against back-flow of gas in a pipe. The valve satisfies the test specifications laid down by the Gas Institute of the Association of Gas Board Operators in collaboration with the Central Inspectorate of Labour. The operating principle of the valve is based on the gas flow being shut off by a diaphragm. The valve is capable of arresting back-flow of gas in a gas line at pressures between 5 m.m. water column and 6 kgf/c.m2. These check valves can be supplied for six different pipe diameters ranging from ¾ to 2 inches, namely for flow rates corresponding to 1.6 to 22 m3 an hour. The non-return valves are capable of withstanding any pressure surge likely to occur in the section of pipe between valves and burners. They can be used with gas/air burners, e.g. for soldering and hot-firing applications, with gas/air/oxygen burners in glass-blowing works and laboratories, with gas/oxygen burners for soldering, cutting and hot-firing, with industrial burners for furnaces, etc. The gases referred to here include illuminating gas, colliery gas, blast-furnace gas, butane and natural gas, but not acetylene. So long as the valve is in the open position, pressure loss in the pipe is extremely slight, i.e. not more than 5 m.m.w.c. measured at a pressure of 60 m.m. w.c. on the inlet side of the non-return valve.

Heat-treatment Bath

A fluidised bath designed basically for laboratory use at temperatures of up to 600°C. has been developed in Britain by Techne (Cambridge) Ltd., Duxford, Cambridge, England. It is said to be particularly useful for tempering most types of steel; for the secondary hardening of high-speed tool steel; the treatment of steel wire or strip; annealing of brass and cast irons; the refining of hot forgings in duralumin or zinc and the hardening of beryllium copper. It consists of a stainless steel cylindrical vessel with a full-diameter porous plate at the bottom. Three-sheathed immersion heaters, each of 1 kw., are mounted across the vessel. Fail-safe switches are fitted into each of the heater circuits to cut off the electrical current if the air supply fails. Graded refractory materials are supplied as the fluidising medium, and the air can be from a mains line or suitable compressor pump. The outer container is of treated mild steel.

Welding Equipment

Welding equipment based on a simple rectifier, delta-connected to three single-phase transformers, has been developed by a British company, British Federal Welder and Machine Company Ltd., Dudley, Worcestershire. The new machine exploits the advantages of direct current for the welding process and imposes a fully-balanced load on the three-phase mains supply throughout the welding time which is determined by present controls on the machine. As the A.C. part of the secondary circuit is limited to the short-circuit connections to the rectifier, the power factor can be as high as 0.95 lagging. An important advantage of this D.C. system is that since the welding current is determined by the resistance of the secondary circuit and is independent of changes in impedance, long-throat machines operate as efficiently as short-throat ones. Another advantage is that as the machines are sensitive to resistance the welding current is to a great extent self-regulating and adjusts itself to the changing conditions during each weld and in various applications. A range of controls are available to cover any standard or special application.

Leak Detector

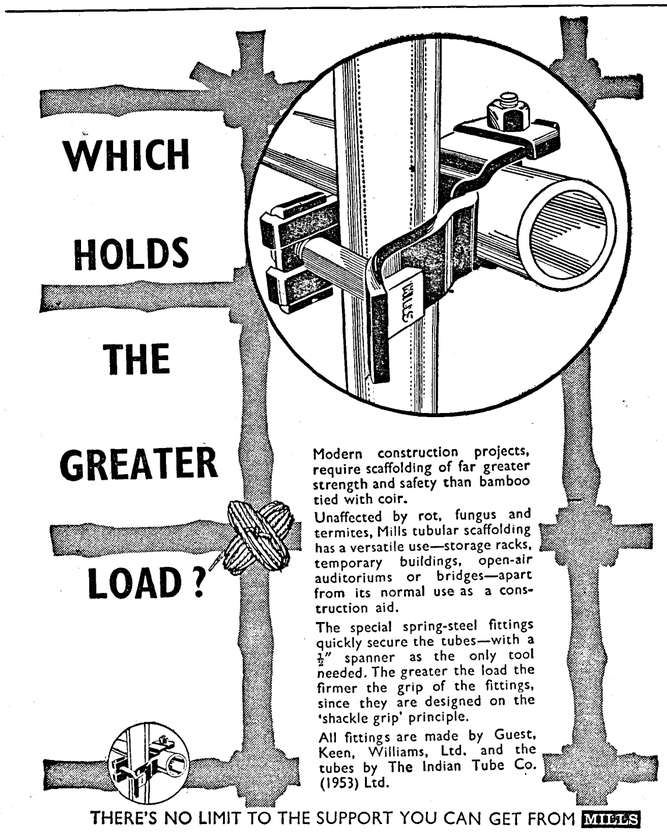
A spectrometer detector which can leak-test small sealed components, such as transistors and capacitors, at a rate of over 1,000 an hour is being produced by a British firm. The only manual operation necessary is feeding the loading turret at the front of the machine. The device under test is passed through a series of nine stages, including evacuating chambers and air locks on each side of the testing chamber, which is permanently connected to the mass spectrometer leak detector. The stages are separated by specially designed transfer valves which isolate each stage from the next and act as transfer gates. A memory circuit is arranged to store the information from the test stage and this actuates a mechanism to sort the devices as they leave the stack.

Electronic Eye

A robust electronic eye which can "see" in the dark is now available in Britain. The manufacturers, E.M.I. Electronics Ltd., Hayes, Middlesex, England, claim this device is the first of its kind in the world and should have a wide application for picture-taking at night or for any industrial process where a low level of light needs to be recorded. It consists of an electronic tube, 12 in. long and 3¾ in. diameter, which multiplies the strength of the available light a million times. It gives a circular picture of 2 in. diameter visible to the naked eye, but which can again be magnified by a television camera to fill the screen of a normal television set or any number of such sets.

Power Triodes

Two new power triodes which are claimed to be more efficient, more rugged and to have a longer life than previous models are now being produced by a British firm, English Electric Valve Co. Ltd., Chelmsford, Essex. The new triodes were developed primarily for use in dielectric and induction radio frequency heating equipment, but are also suitable for communications equipment. The maximum anode dissipation for continuous operation with forced-air cooling is 500W for one and 800W for the other. For certain low duty cycle operation the anode dissapations may be increased to 1000W and 1,500W respectively. Both valves can be operated to full ratings at frequencies up to 50 Mc/s.



Modern construction projects, require scaffolding of far greater strength and safety than bamboo tied with coir.

Unaffected by rot, fungus and termites, Mills tubular scaffolding has a versatile use—storage racks, temporary buildings, open-air auditoriums or bridges—apart from its normal use as a construction aid.

The special spring-steel fittings quickly secure the tubes—with a ½" spanner as the only tool needed. The greater the load the firmer the grip of the fittings, since they are designed on the 'shackle grip' principle.

All fittings are made by Guest, Keen, Williams, Ltd. and the tubes by The Indian Tube Co. (1953) Ltd.

THERE'S NO LIMIT TO THE SUPPORT YOU CAN GET FROM MILLS

MANPOWER PLANNING AND POLICY IN U.S.

FINDINGS OF O.E.C.D. STUDY

"OF all the resources for development, perhaps the most fundamental at the present time is trained manpower." In these words, the authors of India's third Plan emphasised the paramount importance of manpower in economic development. The extent of trained manpower and training facilities available constitutes a major determinant of the pace of economic growth. This pace could be judged by the rate at which labour force is absorbed in productive employment. The third Plan lays considerable stress on manpower planning. In manpower planning, the economy has to be viewed as a whole and the entire range of facilities and possibilities available in all undertakings, whether public or private, should be deemed to be at the service of the nation. Present and future personnel requirement in each field has to be carefully estimated over a long period. This calls for improved statistical information and development of techniques of manpower assessment, so that the necessary estimates can be made with reasonable accuracy and a comprehensive picture of the economy as a whole be built up. Manpower planning is thus an integral part of general economic planning. The primary objectives of manpower planning are two: first, to fix the overall employment target on the basis of a total labour force forecast and a general economic forecast of what can be achieved and, second, to study the future relationships of supply and demand for specific categories of manpower with a view to bringing about an adjustment between the two. Simultaneously with the increase in the importance of manpower planning, the techniques of manpower research and planning have also to be improved. In fact, a whole area of research in manpower planning is opening up and the methodologies and techniques of assessing the relationship between manpower supply and demand are being evolved.

It is a measure of the importance Indian planners attach to manpower planning that an Institute of Applied Manpower Research was established by the Government of India. In order to conduct research on manpower problems and to provide, *inter alia*, a broad perspective of the requirements of trained manpower in different sectors of the economy, arrange for facilities for advanced training in manpower planning, develop methods for training and building up the existing workforce, evolve methods for identifying and developing talented persons and, generally, secure the most effective utilisation of the country's human resources. The Institute is thus expected to help in evolving a clear-cut and scientific manpower policy which is conspicuous by its absence in this country.

Broad Guidance

The policies and programmes followed by the advanced countries of the West should provide some broad guidance as to the lines on which manpower planning should proceed, though, it must be conceded, the socio-economic framework in which development has to take place in the underdeveloped countries is far different from that in the advanced countries. In this context, a report on manpower policy and programme in the U.S., just published by the O.E.C.D., throws some interesting light on how the U.S. plans in advance its future manpower requirements. The report, which deals with manpower trends, problems, programmes and policies in the U.S., is the second in a series of such studies undertaken by the O.E.C.D. with a view to drawing attention to the means used by member-countries of the O.E.C.D. to solve their manpower and social problems. The authors of the study on the U.S. are Mr. B. Zoeteweij, Assistant Economic Adviser, I.L.O., Dr. W. R. Dymond, Assistant Deputy Minister, Canadian Department of Labour, and Mr. Nils Kellgren, Economic Adviser, Royal National Labour Market Board of Sweden.

The American labour market, according to the O.E.C.D. study, will, in the next few years, have to face a high level of unemployment together with a considerable increase in the working population. During the last five years, an average of 6 per cent of the active population of the U.S. was unemployed, while many workers were obliged to work part-time or were underemployed because of an inadequate expansion of the labour market. Two factors were of outstanding importance in the recent increase in unemployment. These were (1) the reduction of the general growth rate and (2) a simultaneous transfer of activity from the goods-producing sectors to the sectors supplying services. The general growth rate of the economy during the last five years was much lower than that of the previous decade. Thus, it was 2.9 per cent a year during the period 1958-62, as compared with 3.8 per cent per annum during the decade 1947-57.

Unemployment

Along with the slowing down in the rate of growth, the structure of unemployment underwent a considerable change. The percentage of total workforce employed in the production of goods fell from 51 per cent in 1947 to 46 per cent in 1957 and 42 per cent in 1962. This trend was accompanied by a relative decline in manufacturing employment where the number of workers dropped by half a million since 1957. In agriculture, because of the sharp increases in farm productivity, employment declined at an average rate of 200,000 workers a year for the last 15 years. From 8.3 million in 1947, the level of employment in agriculture has dropped steadily to 5.2 million in 1962. Half a century ago, one American in three made his living by working in a farm; today only one in ten does so.

As regards the future, probably the most important single factor that will determine the trend of labour force will be the rate of growth of workers, according to the O.E.C.D. study. Between 1960 and 1970, 26 million young workers will enter the labour force, nearly 40 per cent more than in the 'fifties. It is expected that 13 million new jobs will have to be found before 1970 to cover the needs of the expanding workforce alone. If, therefore, the U.S. were to achieve full employment with satisfactory economic growth in the next few years, the authors of the O.E.C.D. study point out, it will have to rely more on an active manpower policy which will increase the mobility and adaptability of workers to new jobs. Education has indeed reached a very high standard in the U.S. From 1940 to 1959, the average number of school years completed for the labour force as a whole increased from nine to twelve. The percentage of workers, who had graduated from high schools rose from 32 to 51 and the percentage of college graduates grew from 5.7 to 9.7 per cent. Nevertheless, in the experts' opinion, an expansion, diversification and improvement in educational facilities appear to be still necessary. It is so because the rapid increase in the need for skilled or trained manpower, the lack of training in certain groups which prevents them from keeping up with the advancing technology, the high unemployment rate among the untrained or less trained workers, and the high number of young persons who "drop out" from school at an early age, all these swell the number of workers joining the labour force without the requisite training.

State Aid

A project for the revision of educational programmes is now under consideration, as are several measures considered necessary for the improvement of the still inadequate vocational training facilities. Another form of aid to the unemployed is the Federal State Employment Service System which was set up following the Wagner-Peyser Act of 1933. Since then, 1,900 offices have been set up throughout the nation. The staff of the service system has been increased by 4,700, or about one-third, since May 1961. The potentiality of this employment service has not been fully realised, according to the O.E.C.D. study. It is also the opinion of the O.E.C.D. experts that it is necessary to expand the services for recruitment and placement of workers, as a considerable number of jobs remain unfilled, despite the present high level of unemployment.

Recent events have also brought to the forefront the problem of adaptation of workers to new techniques confronting employers and the unions in the U.S. and the advantages which can be got from collective bargaining when trying to solve these problems. The U.S. Government has already launched a series of different programmes, the object of which is to reduce chronic unemployment in areas where it existed for the last five years. The Area Development Act of 1961 confirms the move towards a readaptation of the unemployed. This law contains clauses covering occupational training programmes aimed at people who are unemployed or underemployed in an economically underdeveloped or unfavoured area. The Area Development Act was completed in 1962 by the Manpower Development and Training Act which considerably extended Federal activities in the field of occupational education and readaptation. The important place given to continued and active manpower policy as a factor of economic growth can be better understood, the O.E.C.D. study points out, if it is remembered that the U.S. has adopted the growth target of 50 per cent set by the O.E.C.D. for the decade 1961-70. An active manpower policy is regarded as very important for achieving this target.

MEDIATION AND ARBITRATION IN W. GERMANY

The concept that management and employees are a team has helped make the Federal Republic of Germany one of the most strike-free of the nations that guarantee free collective bargaining. But there was an exception to this record of industrial peace last spring. It came in the form of an extensive strike and lockout in the metalworking trades. Public opinion was quick to ask: "Isn't there a better way to settle such disputes?"

On 12th May, a document is to be signed that suggests the answer is yes.

An accord has been initialed by representatives of union and management on mediation and arbitration procedures in the metalworking industry. This pact does not commit the partners to agree—as they are forced to "agree" in totalitarian countries. It commits them to try to settle disagreements in ways short of expensive industrial war. If collective bargaining breaks down, mediation will not await the say-so of the disputants. It will go into action automatically. The heart of the new system is to be the regional mediation board. A network of them is to be set up immediately. Each will have two representatives each from union and management, plus an impartial fifth member as chairman.

A board will meet secretly. It can make decisions by a simple 3-2 majority. No member may refuse to vote.

The board may first try to get the disputing partners to agree. Failing this, the board itself must recommend a settlement covering all disputed points. And the mediation is to be wound up promptly—within 22 working days after the breakdown of collective bargaining. Most future industrial disputes, it is hoped, will be localised, thanks to the regional pattern of the boards.

LABOUR SURVEY TECHNIQUES

With the etsablishment of the Labour Bureau at Simla in 1946, the foundation for research on labour problems in this country was firmly laid. The Bureau has since then been conducting research into a wide range of problems with a view to providing guide-lines and furnishing data for the formulation of labour policy. Promotion of research and dissemination of labour intelligence has been the Bureau's main function and, in pursuance of this, it has published many studies and reports which have certainly helped to illuminate certain dimly-lit corners of labour problems in the country. One of the Bureau's more recent publications is a pamphlet on labour survey techniques (*Labour Survey Techniques* published by the Labour Bureau, Union Ministry of Labour and Employment, Pages: 279. Price: not mentioned). It is a collection of seven papers discussing different aspects of labour policy. The publication is in fact complementary to the Bureau's earlier publication entitled *Labour Research* wherein the methods and techniques and procedures for the conduct of labour surveys were only briefly touched upon. These are discussed in fuller detail in the volume under notice. It would, in our view, be found useful to all those individuals and organisations engaged in research on labour problems who can benefit from the experience of the Bureau and the techniques evolved by it.

INDUSTRIAL DISPUTES IN MAHARASHTRA

As compared with 1962, the year 1963 witnessed fewer time losses due to industrial disputes in Maharashtra State. Thus the total number of working days lost last year aggregated 927,649 as compared with 1,078,068 in 1962. The number of workers involved, directly or indirectly, were also lower at 234,323, as against 288,948 in the previous year. The number of disputes were, however, higher in 1963 at 553, as compared with 504 in 1962. The following table indicates the monthly trend of industrial disputes, number of workers involved and man-days lost:

Industrial Disputes

	No. of disputes	No. of workers involved	No. of working days lost
January	31	7,138	10,747
February	28	3,693	12,034
March	42	14,371	38,001
April	37	7,768	30,965
May	53	15,584	74,749
June	56	13,797	59,822
July	57	23,624	76,975
August	34	36,919	250,213
September	36	8,142	42,788
October	60	15,669	72,927
November	51	7,364	66,851
December	68	79,254	191,577
Total ..	553	234,323	927,649
1962	504	288,948	1,078,068

As will be seen from the above table, August and December 1963 were the worst months during last year, the number of working days lost having been the highest at 250,213 in August and 191,577 in December.

INDIA'S SHARE IN PAKISTAN'S IMPORTS SMALL

GOOD SCOPE FOR IMPROVEMENT

ALTHOUGH India's total exports in 1963 recorded a rise of over Rs. 100 crores as compared with those in the previous year, our exports to Pakistan actually declined. In fact, according to Pakistan's foreign trade statistics, India's imports into that country have steadily fallen from Rs. 12.07 crores in 1961 to Rs. 10.42 crores in 1962 and to Rs. 9.26 crores in 1963. The trend is shown in the following figures:

Pakistan's Import Trade and India's share therein

(In crores of rupees)

Year	Total	India	% share
1961..	305.63	12.07	3.95
1962..	351.49	10.42	2.96
1963..	422.71	9.26	2.19

Pakistan's exports to India rose from Rs. 11.33 crores in 1961 to Rs. 18.93 crores in 1962 but declined to Rs. 13.89 crores in 1963, the fall in terms of percentage being to 7.01 in the last year from 10.02 in 1962. The recent trends are shown here:

Pakistan's Export Trade and India's share therein

(In crores of rupees)

Year	Total	India	% share
1961..	190.48	11.33	5.90
1962..	188.95	18.93	10.02
1963..	198.31	13.89	7.01

A detailed analysis of Pakistan's foreign trade statistics show that India's share in the import of many principal commodities is very small. For example, in the five months ended November 1963, Pakistan imported machinery of all kinds valued at about Rs. 36 crores, of which India's share was only Rs. 28 lakhs. In the same period, Pakistan imported transport equipment worth about Rs. 23 crores, electrical goods for Rs. 4.90 crores, artificial silk yarn for Rs. one crore and cotton twist yarn and thread for Rs. 46 lakhs. But India had absolutely no share in these imports. The import of drugs and medicines amounted to Rs. 4.10 crores and India's share was a meagre Rs. 5,45,000. Chemicals valued at nearly Rs. 3.3 crores were imported during the period under review and India's share did not amount to even Rs. 2 lakhs. A statement showing Pakistan's imports of principal commodities and India's share therein in July-November, 1963 as compared to the similar period of 1962, is shown below:

Imports of Principal Commodities into Pakistan

(Value in thousand rupees)

	July-November 1963		July-November 1962	
	Total Imports	India's share	Total imports	India's share
Chemicals ..	32,944	197	26,594	350
Drugs and medicines ..	41,680	545	34,320	1,257
Machinery of all kinds	363,222	2,844	466,579	2,385
Transport equipments.	233,093	..	137,647	..
Dyeing and Tanning substance	26,724	1,104	26,147	826
Electrical goods ..	49,361	..	39,020	..
Artificial silk yarn ..	10,206	..	8,535	..
Cotton piecegoods ..	1,125	339	782	7
Cotton twist, yarn and thread	4,646	..	5,464	..
Iron and steel and manufactures thereof	261,081	417	164,178	1,302
Non-ferrous metal and manufactures thereof	37,037	90	37,995	366
Petroleum and petroleum products ..	109,546	..	..	..

So far as Pakistan's export to India is concerned, the most important item is fish. In July-November 1963, the value of total fish exported by Pakistan was Rs. 3.70 crores, out of which India's share was nearly Rs. 3.00 crores. The other items of exports from Pakistan to India are raw jute, raw cotton, raw hides and skins, etc. In most of these commodities, India's share was negligible as would be seen from the table in the next column.

The export of raw jute and raw cotton from Pakistan to India was rather substantial until recently. In the full year 1961, for instance, Pakistan exported to India raw jute valued at over Rs. 5 crores and raw cotton worth Rs. 11 lakhs. In the subsequent period, however, India's offtake of these items has gone down largely because of higher domestic production.

There are two important reasons why India has not been able to obtain a bigger share in Pakistan's imports. In the first place, certain specific items required by Pakistan were not available from India for export and this was particularly true of iron and steel manufactures. Secondly, the requirements of Pakistan in respect of iron and steel products, chemicals, machinery and various other goods are obtained through imports from other countries almost entirely under tied loans.

Moreover, Pakistan has recently entered into a number of barter trade agreements, and these too have resulted in a lower offtake of Indian goods. For example, the barter trade agreement between U.S.S.R. and Pakistan, signed in August 1963, provides for the exchange of goods valued at Rs. one crore. It stipulates that U.S.S.R. would supply railway sleepers for Pakistan's Western Railway of the value of Rs. 50 lakhs against the supply of raw jute by an equal value by Pakistan.

According to another trade agreement with Russia signed in September last year, Pakistan would import one lakh tons of cement from U.S.S.R. for East Pakistan at a fixed price of 114 shillings per ton by chartered ships and 127 shillings per ton by liners in exchange for raw jute for equal quantity.

Similarly, under the barter trade agreement with China signed last year, China would supply Pakistan with one lakh tons of cement against the import of raw jute by an equal value from Pakistan. The total value of commodities to be exchanged on each side is envisaged at Rs. 75 lakhs. The barter agreement with Czechoslovakia, concluded in October 1963, stipulated the exchange of commodities worth about Rs. 15 lakhs each side. Pakistan has agreed to export 15,000 tons of chrome ore to Czechoslovakia and will import a number of items including Skoda motor cars and spare parts.

Exports of Main Commodities from Pakistan

(Value in thousand rupees)

Commodities	July-November 1963		July-November 1962	
	Total exports	India's share	Total exports	India's share
Raw jute	293,054	1,054	332,435	15,429
Raw cotton	121,215	..	81,238	30,765
Raw wool	20,705	..	30,551	..
Raw hides	2,990	2,724	2,335	2,078
Raw skins	13,901	1,138	15,962	1,416
Raw hides and skins ..	1,508	688	1,231	632
Cotton twist yarn and thread	7,078	..	2,446	..
Cotton fabrics	18,923	..	17,890	..
Fish excluding canned fish	36,891	29,237	38,212	30,259
Jute bags	81,949	..	80,176	..
Jute fabrics	52,134	..	48,401	..
Jute yarn	229	..	..	..
Rope and twine	1,130	..	933	..
Sports goods	5,460	..	5,897	..

So far as India is concerned, it may be recalled that, on 1st September 1963, a trade agreement was signed with Pakistan, providing for payment in sterling as against the special rupee payment arrangement under the trade agreement of 1960. The protocol stipulates the supply by India of 130,000 tons coal per month and 50,000 tons of stone boulders per year against the supply of raw jute, including jute cuttings, and raw cotton by Pakistan, according to India's requirements.

This brief survey shows clearly two things. In the first place, the economic boycott of Pakistan as a protest against its treatment of minorities, as suggested in certain quarters in this country, cannot work and that it will actually prove detrimental to India's interests. Secondly, it should be possible for India to increase its exports to Pakistan to a much higher level, provided it is able to supply the specific types of commodities required by that country.

Pakistan's Third Five-year Plan (1965-70) envisages a gross expenditure of Rs. 4,950 crores, of which East Pakistan's share is Rs. 2,550 crores and West Pakistan's share Rs. 2,400 crores. The main objective of the Plan is to increase national income by 30 per cent. About 30 per cent of the outlay has been earmarked for industry, 13 per cent for agriculture, 37 per cent for economic infrastructure and 20 per cent for social overheads. India's industrialisation in the coming years will also be intensified further. In the circumstances, there should normally be scope for more trade between the two countries.

INDO-U.S. TRADE

BOOM IN U.S. ECONOMY WILL HELP

THE U.S. economy in recent months has shown signs of vigorous growth in many directions. The gross national product in 1964 is expected to be of the order of $622 billion. Steel production in the current year is estimated at between 114 million and 120 million tons. The reduction in personal and corporate taxation, it is felt, will give a powerful fillip to savings and investment. As a well-known American magazine recently observed, "the American people, as a whole, are in excellent financial shape. After deducting debts, their savings—cash in the bank, stocks and bonds, equity in insurance and pensions—total nearly $ one trillion."

The prosperous conditions of the U.S. economy will benefit India by increasing the demand for a variety of Indian products. In fact, in 1963, the U.S. imports of Indian goods rose sharply to $273 million (upto November) from $232 million in the corresponding period of the preceding year. The import of jute manufactures went up from $112 million in January-November 1962 to $141 million in the corresponding period of 1963 and cotton fabrics from $8 million to $12 million. Other items like hides and skins, coffee and tea and meat products also recorded an improvement in export. The trend, according to U.S. statistics, is shown below:

U.S. Imports from India (Selective Commodities)

(In thousands of U.S. dollars)

Articles	Jan.-Nov. 1962	Jan.-Nov. 1963
Meat fresh, etc.	459	881
Fish fresh, etc.	5,147	3,403
Hides crude	5,435	5,323
Fruits, nuts fresh	24,765	22,844
Cocoa, coffee and tea	14,347	14,667
Spices	7,927	3,563
Sugar and honey	12,818	12,594
Essential oils	1,444	861
Cotton fabrics	8,246	12,640
Miscellaneous fabrics	112,821	141,400
Minerals crude	5,530	4,504
Ores and base metals	5,758	5,079
Total including other articles	232,000	273,428

The total imports into the U.S.A. in the eleven months January-November 1963 were valued at $15,512 million, as compared to $14,900 million in the same period of 1962. The table below shows the U.S. imports month by month with India's share:

U.S. Imports (January-November 1963)

(In thousands of dollars)

Period	Total U.S. imports	Imports from India	Imports from India as % of total
January	1,139,227	16,097	1.40
February	1,367,003	31,851	2.33
March	1,418,157	26,038	1.83
April	1,456,891	25,766	1.79
May	1,438,482	27,979	2.00
June	1,327,636	22,733	1.73
July	1,504,052	26,934	1.80
August	1,480,154	25,905	1.76
September	1,374,860	21,305	1.53
October	1,576,612	26,407	1.67
November	1,427,804	22,408	1.58
Total (January-November) ..	15,511,778	273,428	1.76

India's share in the U.S. imports continues to be small but it appears that, if determined efforts are made by Indian exporters, the results will be more gratifying. It is true that competition from substitutes and from other countries is becoming more keen. Even so, the expanding economy of the U.S. does provide immense scope for our exports both of traditional and non-traditional items.

As regards jute goods, for instance, the U.S. last year accounted for about 35 per cent of India's hessian shipments and its consumption in that year amounted to 912 million yards, a post-war record. Referring to the export prospects, particularly of carpet backing cloth, the President of the Indian Jute Mills Association recently observed that these would depend mainly on three things:

"First, on the extent to which a good average quality of jute backing can be guaranteed, in order to combat the aggressive interest of producers of substitute materials; second, on our ability to ensure orderly marketing of jute carpet backing through the established distribution channels and not allow this speciality product to become an ordinary bazar commodity; and, third, on the prospect of price stability and not cheapness of jute backing, the former being an important determinant of production planning and costing in the tufting industry. One might add, as an aside, that this applies with equal force to all industries using Indian jute products in any form."

(*Continued on page 828*)

WIMCO'S PROFIT LOWER

DIVIDEND, HOWEVER, MAINTAINED

COST inflation and the Government's persistent refusal to permit the mechanised match manufacturing units to expand their capacities beyond what they are today, despite shortage of supplies to consumers, have made a big dent in the profit-margin (ratio of gross profit to gross sales) of the Western India Match Company Ltd. (Executive Director: Mr. Akbar Hydari, Bombay) for the year ended 31st December 1963. Thanks to the satisfactory working of factories, the total realisation from the sales of products before adjusting for the excise duty paid and recovered has increased to Rs. 19.75 crores from Rs. 18.76 crores for the year before, but the gross profit has slumped from Rs. 176.00 lakhs to Rs. 157.37 lakhs. The profit margin has thus been brought down from 9.4 per cent in 1962 to 7.9 per cent for the year under report. Commenting on this feature of the year's operations, the Directors observe:

"Your factories worked satisfactorily during the year and sales were good. On account of increased cost of production, particularly rising price of timber, which is our main raw materials, the profits of the year, however, are less than for the previous year. We could not make up for higher costs by increased production, as our installed capacity is restricted by Government to what it is today and we have reached the peak production possible with our present equipment. In spite of shortage of supplies, which our competitors, the subsidised cottage industry, have not been able to make good, Government do not seem to be willing to reconsider their policy to allow the mechanised sector of the industry to expand its capacity."

Despite the decrease in gross profit, the provision for Managing Agents' commission is raised by Rs. 3.17 lakhs to Rs. 16.39 lakhs and, the provision for depreciation is also marginally higher at Rs. 22.51 lakhs as against Rs. 21.87 lakhs. The profit prior to taxation, as a consequence, is lower at Rs. 118.47 lakhs, as compared with Rs. 140.91 lakhs a year before. As the provision for taxation is only moderately smaller by Rs. 2.85 lakhs at Rs. 65.75 lakhs, the net profit stands reduced by Rs. 19.59 lakhs or about 27 per cent to Rs. 52.72 lakhs. After transferring out of this Rs. 9.10 lakhs to reserves, the Directors have proposed an ordinary dividend of Rs. 16 per share (subject to deduction of tax)—same as that paid in the past four years.

The working results of the Company for the past four years are presented synoptically in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sales (gross)	19,75.46	18,76.47	18,03.68	18,34.16
Other income	16.77	16.87	13.27	13.40
Closing stocks of finished goods	11.22	8.78	9.72	21.66
Raw materials consumed	297.06	283.56	272.12	260.91

The financial position of the Company is eminently satisfactory. The share capital, unchanged for the past number of years, stands at Rs. 275 lakhs in equity shares of Rs. 100 each and is backed by reserves aggregating as much as Rs. 299.08 lakhs. Borrowings from banks or other sources are conspicuous by their absence, while current liabilities and provisions totalling Rs. 188.79 lakhs are covered 2.6 times by current assets, investments and loans and advances altogether amounting to Rs. 487.25 lakhs. It is interesting to note that more than a third of the current assets of Rs. 411.67 lakhs is made up by cash balances alone which as at 31st December 1963 stands at Rs. 157.67 lakhs. Inclusive of the additions of Rs. 29.68 lakhs during the year, the gross block has risen in value to Rs. 540.45 lakhs and, on deduction of Rs. 268.42 lakhs as the accumulated amount of depreciation, yields a net block of Rs. 272.03 lakhs. Capital work-in-progress as at the date of the balance-sheet is valued at Rs. 5.59 lakhs, so that net fixed assets total Rs. 277.62 lakhs or less than half of 'own' funds.

With the continued restriction on the increase in the installed capacity beyond what it is today and a steady corrosion of profit margins owing to cost inflation, the only way open to the Company to augment its profits is to diversify. This fact was realised quite some years ago when a paper mill was established at Calcutta to manufacture paper. The mill worked satisfactorily during the year, but it has still to depend on imported pulp. Negotiations with possible indigenous suppliers of pulp, however, continue. A further step in diversification was taken two years ago when a project for the manufacture of salt and certain other chemicals, such as potassium chloride, which is a raw material for manufacture of potassium chlorate, was taken in hand.

This process of branching out is now to receive a further impetus. It is a fairly well-known fact that domestic sources of match timber are fast dwindling and that the Company had been in continuous search for alternate materials but with no tangible gains so far. It has now decided to undertake the manufacture of wax match sticks from wax paper. The raw materials required are paper and paraffin both of which are available indigenously. The only drawback of the scheme is that the special machinery required for the manufacture of wax sticks is not available in India. Fortunately, however, the Managing Agents, that is the Swedish Match Company, have agreed to help the Company by furnishing free of charge drawings for some of the machinery and equipment which can be manufactured in India and to supply certain other machines which are necessary for producing wax sticks but cannot be manufactured in India, under special arrangements. Accordingly, the Managing Agents will supply these machines valued at Rs. 1.80 lakh on a rental or hire basis for a period of five years at an annual rent equivalent to 10 per cent of the f.o.b. price of the said machines. If, after the expiry of the said five years, the Company desires to continue the manufacture of wax matches, the Company will pay to the Swedish Match Company the full f.o.b. price of the machinery, namely, Rs. 1.80 lakh after deduction of the rent, if any, which may already have been paid by the Company for the hire of the machines. According to the Directors of the Company, the rent and/or price of the machinery shall be payable only out of the foreign exchange earned by the Company through exports of wax matches. If the purchase price of the machinery cannot be paid wholly by the Company either on account of foreign exchange not having been earned by exports of wax matches or on account of any other exchange restrictions, the Company will be bound to return the machinery at its expense on a c.i.f. basis. The Directors anticipate that this latter eventuality may not arise, as they expect a reasonably good export demand for wax matches. They, therefore, propose to proceed with the setting up of a pilot plant.

Currently the Rs. 100 paid ordinary shares of the Company are being quoted at Rs. 258.50 *cum-div.* On an *ex-div.* basis, the net annual return on a fresh investment works out to 5.2 per cent.

(Concluded from next column)

existing units suggest that the Directors are taking a reasonably optimistic outlook for the Company.

The present paid-up capital of the Company is Rs. 74.68 lakhs, all in equity shares of Rs. 10 each. It is backed by reserves and surplus amounting to Rs. 52.01 lakhs. Secured loans of Rs. 103.94 lakhs comprise debenture and long-term loans of Rs. 52.23 lakhs and bank borrowings of Rs. 51.71 lakhs. These bank borrowings and current liabilities bring the total short-term indebtedness to Rs. 113.18 lakhs which is easily taken care of by current assets, book debts and investments amounting to Rs. 178.02 lakhs. The gross block of Rs. 203.66 lakhs (Rs. 174.19 lakhs a year before) has been written down to a net value of Rs. 135.95 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are quoted at Rs. 14.87 *cum-div.* and offer a net yield of 5.7 per cent per annum.

JAYA SHREE TEXTILES FARES WELL

NEW CAPITAL TO BE ISSUED

FAIRLY encouraging progress has been made by Jaya Shree Textiles and Industries Ltd. (Secretaries and Treasurers: Messrs. Birla Brothers [Private] Ltd., Rishra, West Bengal) during the past calendar year. Net proceeds of sale of its products (that is, after excluding returns, rebate and excise duty paid) have improved further from Rs. 209.04 lakhs to Rs. 279.69 lakhs and the gross profit has increased from Rs. 42.85 lakhs to Rs. 55.62 lakhs. The figures of turnover and profit earned during the year are more than double those recorded in 1960.

The Directors report that the working of the flax plant during the year was satisfactory, because it had substantial orders for defence and had, therefore, no difficulty in obtaining imported raw materials. But because of non-delivery and undue delay in the supply of some of the imported and also indigenous machinery, the cotton spinning mill at Rishra could not achieve full production. However, with the commissioning of this mill since then and the gradual improvement in its working, the cotton weaving department of the Company has become self-sufficient.

The following table shows at a glance the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sales, less returns, rebate and excise paid	279.69	209.04	164.84	120.54

(In rupees):					
High	16.97	17.44	18.06	19.19	19.81
Low	14.56	12.81	14.50	13.87	12.12

The net profit for the year, after making moderately higher essential provisions in line with the improvement in gross profit, shows an impressive increase of roughly Rs. 7 lakhs from Rs. 16.42 lakhs to Rs. 23.31 lakhs. Over 65 per cent of this profit, or Rs. 15.93 lakhs, as against 56 per cent or Rs. 9.85 lakhs a year before, has been ploughed back to reserves, while the dividend on the 10-rupee ordinary shares has been maintained again at 10 per cent per annum. This conservative appropriation policy underlines the need for building up internal resources for financing development plans.

The new schemes which the Company has on hand are as follows:

Increase in the capacity of the cotton mill at Rishra from 15,200 spindles installed at present to 25,000 spindles. This expansion is expected to be completed within one year at a cost of about Rs. 50 lakhs. The Company has also been licensed to install in this mill 164 looms.

Permission for setting up 50 looms in the flax mill at Rishra has also been received and the necessary orders are being placed. Moreover, this mill's existing plant is being gradually modernised.

The insulator project is under implementation. Machinery for a high tension insulator plant, ordered with "Technoexport" of Czechoslovakia, is expected to arrive by the end of 1964. Meanwhile, the construction of buildings has started.

Land for setting up a cotton mill at Midnapore has been purchased and the construction of buildings has started. But the necessary licence for importing the machinery has still not been received and, as a result of this delay, the mill is unlikely to go into production before the end of 1965.

In order to finance these schemes, the Directors have decided to raise additional capital. For the present, new equity capital of Rs. 24.59 lakhs is to be raised by offering one for three right shares to the existing shareholders at par. This issue has been sanctioned by the Controller of Capital Issues. The Company has also received permission for making a preference share issue of Rs. 24.59 lakhs and a debenture issue of Rs. 22 lakhs. These new schemes and the satisfactory working of the

(Continued in previous column)

PROGRESS OF CENTURY SPINNING

PROFIT MARGIN RISES—RESERVES STRENGTHENED

THE setback suffered by the Century Spinning and Manufacturing Company Ltd. (Managing Agents: Messrs. Birla (Gwalior) Private Ltd., Gwalior) in 1962—due, of course, to the peculiar circumstances prevailing then—has fortunately proved short-lived and the Company has been able to report fairly encouraging results for the year ended 31st December 1963. With the commissioning of the tyre-cord plant in May 1963, maintenance of working efficiency, and the generally high level of production in both textile and rayon units, the total sales realisation has spurted by over 30 per cent from Rs. 17.10 crores to Rs. 22.25 crores. Thanks to this spurt, the gross profit has risen quite handsomely, by Rs. 117.86 lakhs to Rs. 447.72 lakhs, though cost of production has continued to increase on all fronts. An encouraging feature of the year's working is that the costs of raw materials and stores consumed, which had increased somewhat abnormally in the preceding year, have once again been brought under control; they account for 44 per cent of the sales proceeds less excise duty, rebate, etc., same as in 1961 which was by far the most profitable year in the recent past. The benefit of economy in these costs has, however, been neutralised to a great extent by the sharp rise of Rs. 93.30 lakhs to Rs. 687.98 lakhs in other expenses. Even so, the profit margin (ratio of gross profit to sales) has gone up from 19.1 per cent to 20 per cent.

It is but natural that the increased gross profit has attracted a higher provision for the Managing Agents' commission, namely, Rs. 13.46 lakhs, as against Rs. 9.78 lakhs. Similarly, the provision for taxation has been stepped up from Rs. 87.00 lakhs to Rs. 112.00 lakhs and that for depreciation from Rs. 110.61 lakhs to Rs. 177.24 lakhs due obviously to the commissioning of the rayon tyre-cord plant. The essential provisions together absorb as much as Rs. 302.70 lakhs, representing roughly 70 per cent of the gross profit, so that the resulting net profit is only Rs. 145.02 lakhs, as against Rs. 122.47 lakhs for the preceding year and Rs. 151.38 lakhs for 1961. Out of this, the Directors have transferred Rs. 57.85 lakhs to the statutory development reserve and Rs. 0.59 lakh to other reserves, besides setting aside Rs. 10.71 lakhs for the payment of preference dividend in respect of the year. It will be recalled that, earlier in the year, an interim ordinary dividend of 12 per cent subject to deduction of tax had been paid; this had claimed Rs. 30.59 lakhs. The Directors now propose a final dividend of Rs. 18 per share, so as to make a total dividend of Rs. 30 per share (subject to deduction of tax), which is the same as that distributed in the previous three years. The total dividend claims Rs. 76.47 lakhs. The different appropriations have not left anything to be carried forward, as against the Rs. 29,000 brought in.

The vicissitudes in the fortunes of the Company during the past four years are well brought out by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sales (gross)	22,25.35	17,09.87	16,39.66	13,45.86

Market price of ordinary shares (in rupees)	1964	1963	1962	1961	1960
High	709	698	632	740	544
Low	577	497	545	440	425

In the beginning of this year, it may be noted here, the Directors announced their decision to issue to equity shareholders, subject to the sanction of the Central Government, bonus shares of Rs. 100 each credited as fully paid up by capitalising a sum of Rs. 50.98 lakhs, partly from the share premium account and partly from the general reserves. At the same time, it was clearly stated that the Company would not pay any further dividend on the equity shares for 1963. The consent of the Central Government has already been received, but the decision to issue bonus shares has been deferred for the time being, in view of the provisions contained in the Finance Bill 1964. The Directors, however, propose to issue to the holders of preference shares right preference shares of Rs. 100 each at par in the proportion of one such share for every five shares held. The new shares will be redeemable at par on 1st December 1973 and will rank *pari passu* with the existing preference shares, besides carrying the same rate of dividend.

The implementation of the various expansion and diversification schemes of the Company made further progress during the year. The tyre-cord plant went into production in May 1963 and attained the full rated capacity soon thereafter. The quality of the yarn is reported to be highly satisfactory, being equal to that of the super tyre-cord manufactured by the technical collaborators themselves. Practically all the leading tyre manufacturers in India are now patronising the product. Since the restriction on imports is only partial and tyre manufacturers are being permitted to import about 50 per cent of their requirements, certain difficulties are being experienced by the industry in selling its total output. A strong representation has, therefore, been made to the Government to restrict the import of tyre-cord yarn further.

Work is in progress on the installation of a rayon grade caustic soda plant with a daily capacity of 30 tons. As anticipated by the Directors a year ago, construction of buildings to house the plant has been completed and erection of machinery is in full swing. The plant is expected to go into production by about the middle of this year. Meanwhile, the Company has secured an import licence for 18 more spinning machines for the rayon unit and orders have already been placed for their import. These machines are likely to go into production during the first quarter of 1965. As regards the project for the manufacture of nylon yarn, the Directors point out that, because of various factors, it will not be practicable for the Company to implement this project. It is, therefore, proposed to form a new Company and, to this end, a provisional agreement has been entered into between the Company and Messrs. Algemene Kunstzijde Unie N.V. of Holland and Vereinigte Glanzstaff—Fabriken A.G. of West Germany. The agreement, *inter alia*, provides that a certain portion of the capital of the new company will, in the first instance, be offered to the shareholders of the Company.

The financial position of the Company is satisfactory. The share capital remains unchanged at Rs. 379.91 lakhs comprising Rs. 125.00 lakhs in preference shares of Rs. 100 each and the balance in equity shares, also of Rs. 100 each. The reserves, however, stand higher at Rs. 489.76 lakhs, as against Rs. 431.62 lakhs a year ago.

As for the prospects for current year, the Directors express themselves as follows:

"The outlook for 1964, especially for textile section, does not appear to be as satisfactory as it should be. In the first place, the cost of imported raw materials like cotton, and caustic soda has gone up. Secondly, considerable increase in the wage bill of the textile industry has taken place due to additional paid holidays and revised basis for payment of D.F.A. There has also been an increase in the employers contribution to provident fund from 6¼ per cent to 8 per cent. All these will add considerably to the manufacturing cost. This apart, the excise duty on rayon yarn, higher medium fine and superfine cloth and yarn, as also on chemicals, has been considerably increased, leading thereby to heavy burden on both textile and rayon industries."

On the eve of the budget this year, the price of the Rs. 600 paid equity shares of the Company stood at the highest price since 1962, namely, Rs. 709. During the landslide in share values which commenced with the publication of the budget proposals, the price was hammered down to Rs. 577 *cum-final div.* At present, it stands somewhat improved to Rs. 613 *cum-final div.* On *ex-div.* basis, the scrip fetches a net return of about 4 per cent per annum on a full year's dividend.

Notices

STEEL CONTAINERS LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Sixth Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on TUESDAY, 26TH MAY, 1964 at 3.30 p.m., to consider the Accounts of the Company for the year ended 31st December, 1963 and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 12TH MAY, 1964 to 26TH MAY, 1964, both days inclusive.

By Order of the Board,
BALMER LAWRIE & Co. LTD.,
D. MANSON,
Managing Director,
Secretaries.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *20th April*, 1964.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

MADURA MILLS COMPANY LIMITED

Registered Office:
New Jail Road, MADURAI

NOTICE IS HEREBY GIVEN THAT IN connection with payment of interest to Debenture Stockholders, the Debenture Stock Transfer Register of the Company will be closed from 16th to 30th May, 1964, both days inclusive. It is recommended that:

1. All persons holding debenture stock on blank transfers should immediately arrange to have the stock registered in their own names, as the Company will pay interest only to the person(s) in whose name the stock stands on the date of payment of interest.
2. Stockholders desiring interests to be paid to Banks or other Mandatees should register the mandates with the Company before 16th May, 1964.
3. Intimation of any change of address should be given to the Company immediately.

A. & F. HARVEY LTD.,
Managing Agents.

MADURAI, *23rd April*, 1964.

JESSOP AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT IN compliance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, the Board of Management has sanctioned the payment of an Interim Dividend on 5 per cent Cumulative Preference Shares for the half-year ending 30th April 1964, at the rate of Rs. 3.25 per share subject to deduction of tax in accordance with the Finance Act currently in force.

The Preference Share Transfer Register will be closed from 19th May 1964 to 23rd May 1964 both days inclusive.

Dividends will be paid only to the Shareholders whose names are registered in the Books of the Company on the 23rd May, 1964 or to their Mandatees.

By Order of the Board,
K. S. BASU,
Secretary.

63, NETAJI SUBHAS ROAD,
CALCUTTA, *28th April*, 1964.

ATUL PRODUCTS' PROFIT DOWN AGAIN

DIVIDEND JUST MAINTAINED

THE continued sluggishness in the market for dyestuffs, which failed to respond favourably to price reduction, scarcity of raw materials, which affected the level of output, and the general tendency for manufacturing costs to rise have once again caused a big dent in the profit-margin of the Atul Products Ltd. (Managing Agents: Messrs. Lalbhai Sons and Company, Ahmedabad) for the year ended 31st December 1963. Thanks, however, to an improvement in the performance of the pharmaceutical division, the turnover has risen, though modestly, from Rs. 414.83 lakhs to Rs. 427.86 lakhs. Even so, the gross profit has heavily gone down from Rs. 123.38 lakhs to Rs. 95.49 lakhs. As will be seen from the accompanying four-year comparative table, for the third year in a row the gross profit has declined and, what is worse, the rate of decrease has gathered momentum from year to year. Thus, in 1961, which was the first year of recession, the gross profit declined by Rs. 9.87 lakhs; in 1962, it lost another Rs. 25.73 lakhs; and the decrease during 1963 works out to Rs. 27.89 lakhs. In terms of profit-margin (ratio of gross profit to turnover), the decline is from 29.7 per cent in 1962 to 22.3 per cent in 1963. The figure was as high as 35.6 per cent in 1960 which, by all counts, was the best year on record for the Company.

Owing to the fall in gross profit and the increase of Rs. 8.02 lakhs to Rs. 34.26 lakhs in the provision for depreciation, the provision for Managing Agents' remuneration has gone down from Rs. 6.73 lakhs to Rs. 4.79 lakhs and that for taxation has been exactly halved, from Rs. 34 lakhs to Rs. 17 lakhs. The resulting net profit, therefore, is Rs. 38.44 lakhs, as against Rs. 56.41 lakhs for the year before, that is, a drop of Rs. 17.97 lakhs or about 33 per cent. After adding to this the sum of Rs. 3 lakhs withdrawn from reserves and the amount brought forward from the preceding year, the Directors have credited Rs. 6.90 lakhs to development rebate reserve. In other words, the net amount conserved is about Rs. 3.50 lakhs, as against Rs. 23.42 lakhs in the past year. The balance of profit available is just sufficient to maintain the dividend at 12 per cent per annum.

Low	300.00	294.00	415.00	429.00	428.50

The market for dyes continued to remain dull throughout the year under report and even a reduction in prices had no effect on the demand. On the production side, too, difficulties regarding procurement of raw materials persisted and a large number of them had to be purchased at prices higher than those prevailing in the previous year. Even then, the desired level of output could not be attained. Fortunately, the Company had better sales of pharmaceuticals, despite the loss of business in Aureomycin and Achromycin due to the commencement of manufacture of these drugs by Cynamide India Ltd. for whom the drugs used to be manufactured so far. The Company was, however, able to effect larger sales of other drugs and the total sales of pharmaceuticals for the years were, therefore, very nearly the same as for the year 1961.

The various diversification and expansion project taken in hand a few years ago made good progress. The Bon acid plant commenced operations in April 1963 and worked satisfactorily throughout the year. This made the Company nearly self-sufficient in the manufacture of naphthol dyes, though the plant could not be run to full capacity, owing to unfavourable market conditions for dyes. The carbon dioxide plant, which is a part of the Main Bon acid plant, also worked satisfactorily and the Company could utilise the surplus capacity of this plant by sale to outside parties. The existing sulphuric acid plant worked well and fully. The equipment for an extension of this plant as well as that for the manufacture of chlorosulfonic acid are at site and are being erected.

The erection of the caustic soda plant was completed by the end of 1963 and trial runs were carried out in January of this year. The plant was formally inaugurated in February 1964. There were, of course, some teething troubles but these are being overcome and it is expected that the plant will be able to give the designed quantity of caustic soda, caustic potash, sodium sulfide, etc., by June 1964. Since the country as a whole is at present short of caustic soda and there exists a growing demand for chlorine and hydrochlorine acid, no difficulties are anticipated in using the plant to its full rated capacity. In order to put to good use the chlorine coming from the caustic soda plant, the scheme for the manufacture of dicalcium phosphate has now been taken in hand. The building to house the plant is under construction and orders for equipment have been placed. The plant, it is hoped, will be ready by the end of 1964, but, meanwhile, arrangements are being made to manufacture the product in some quantity in a pilot plant which will go into operation shortly. As for the manufacture of other chlorinated products, an application has been made to the authorities concerned for licences for the import of equipment.

The building for the naphthalene intermediates plant is reported to be nearly 75 per cent completed. Consignments of foreign equipment have started to arrive and deliveries of indigenous equipment are expected to commence soon. Unfortunately, there have been considerable delay in securing import licences for foreign equipment for the fast colour bases plant. As a result, the ordering out of the equipment has been delayed. The Company has, however, started placing orders, while work on the construction of buildings for the plant has already commenced.

As regards the scheme for the manufacture of urea formaldehyde resins and intermediates for sulfa drugs in collaboration with Ciba Ltd., Switzerland, which has been entrusted to the subsidiary Cibatul Ltd., the Directors say that the building to house both these plants are in hand and almost all the machinery for the urea formaldehyde resins plant would be at the site by June this year and that the plant may go on stream in the first quarter of 1965. Similar progress has not been made in the case of the sulfa drugs intermediates plants, but it is hoped that the schedule of progress will be stepped up and the plant might be ready for commissioning by the end of 1965.

During the year, the Company issued one lakh ordinary shares of Rs. 100 each at a premium of Rs. 25 per share. Out of this amount of Rs. 125 per share, a sum of Rs. 50 (including the premium of Rs. 25 per share) was called up during the year under review itself. This has raised the paid-up capital of the Company to Rs. 324.69 lakhs entirely in equity shares of Rs. 100 each. This is supported by Rs. 184.04 lakhs in reserves and surplus, giving the total of own funds at Rs. 508.73 lakhs. As against these, however, finance from external sources aggregates as much as Rs. 728.91 lakhs, comprising Rs. 250.86 lakhs loan from the Central Government Rs. 338.86 lakhs loans from banks and other institutions including the Investment Credit and Investment Corporation of India and Rs. 146.93 lakhs current liabilities and provisions, including the proposed dividend. With the additions of the order of Rs. 95.64 lakhs during the year, the gross block has risen to Rs. 754.10 lakhs, as against which depreciation provided so far is Rs. 206.14 lakhs. This gives a net block of Rs. 547.96 lakhs. Investments, predominantly in shares of subsidiary or associated companies, are carried in the books at a cost of Rs. 202.51 lakhs. Current assets, loans and advances altogether amount to Rs. 486.97 lakhs. It will thus be seen that the Company's resources are fully stretched.

The Rs. 100 fully paid shares of the Company are currently quoted at Rs. 302 *cum-div.*, at which rate they fetch a net annual return of about 3.3 per cent.

Notices

THE PEERMADE TEA COMPANY LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE 26th Annual General Meeting of the Shareholders will be held at the Registered Office of the Company at Chavadi Parambu, North Commercial Canal Road, Alleppey, at 3 p.m. on Wednesday, the 3rd June 1964, to transact the following business:—

1. To receive and adopt the Audited Accounts and Balance Sheet for the year ended 31st December, 1963, and the Report of the Directors and Auditors.
2. To declare a dividend.
3. To elect Directors.
4. To appoint Auditors.
5. To consider, and if thought fit, to pass the following resolution as a Special Resolution:—

"RESOLVED that the following Article be substituted in place of Article 50 of the Articles of Association of this Company:—

'On a show of hands, every shareholder present in person shall have one vote; and on a poll, every shareholder present in person or by proxy or attorney shall have one vote for every share held by him.'"

The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under items 5 above is being posted to all members.

The transfer books of the Company will be closed from 20th May 1964 to 3rd June 1964, both days inclusive.

Any member unable to attend personally is entitled to appoint any person (whether a member or not) as his proxy to attend and vote instead of himself, subject to the provisions of Section 176 of the Companies Act, 1956. Such proxy should reach the Registered Office of the Company at least 48 hours before the time fixed for the meeting.

By Order of the Board,
THE PEERMADE TEA COMPANY LTD.,
Per pro ASPINWALL & Co. (TRAVANCORE) LTD.,
C. PRABHAKARAN,
Secretaries.

ALLEPPEY, *30th April*, 1964.

Note: The dividend, if declared, will be paid on or after 1st July 1964 to those shareholders whose names appear in the Company's books on the 3rd June 1964 or to their mandatees.

JENSON AND NICHOLSON (INDIA) LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of Members of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Thursday, 21st May, 1964 at 11 a.m., for the following purposes:—

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December, 1963 and the Balance Sheet as at that date.
2. To declare Dividends.
3. To appoint Auditors and fix their remuneration.

Appropriations:		
Transfer to development rebate reserve	17	2
" " general reserve	1,79	2,91
To interim dividend (taxable) Ordinary	1,80	1,20
	(15%)	(10%)
Proposed final dividend (taxable) ordinary	1,80	1,80
	(15%)	(15%)
Total dividend per cent	[30%]	[25%]
Carry forward	Nil	Nil

Extracts from the Directors report: *Operations*.—Although restrictions on electrical power continued during the year, the milling output was higher than in 1962. Controls on extractions continued to be in force and a modified permit system of distribution of products was re-introduced. The flour milling industry in West Bengal was declared a "public utility" service for the purposes of the Industrial Disputes Act, 1947 and employment in the Company became subject to certain provisions of the Defence of India Rules.

The profit earned for the year showed a satisfactory increase, and after providing for the Company's liability to tax under the Companies (Profits) Surtax Bill 1964 and for the proposed tax on dividends distributed, the Board has recommended the payment of a final dividend which together with the interim dividend represents an increase in the total distribution as compared with last year.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	12,00,000	Gross block	30,22,354
Reserves and surplus	31,52,123	—Depreciation	35,10,354
Other liabilities	10,17,505	Net block	4,12,000
		Current assets	30,83,550
		Investments	7,500
		Cash	9,66,578
	Rs. 53,69,628		Rs. 53,69,628

* Paid-up capital consists of 1,20,000 ordinary shares of Rs. 10 each. Of the above, 48,000 shares are allotted as fully paid Bonus shares, by way of capitalisation of revenue reserve.

Polson Ltd.

(Managing Agents: Messrs. Polson Agencies Private Ltd., Bombay.)

Twenty-fifth Annual General Meeting—29th May 1964.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1963	1962
Sales of butter, ghee, coffee and other products	1,77,55	1,67,97

Market value of equity shares (in rupees):	1964‡	1963	1962
High	190.00	184.00	198.00
Low	180.00	173.00	176.00

* Includes Rs. 19,704 being adjustment for the preceding year.
(a) Only Rs. 200.
† Includes a Jubilee dividend of Rs. 2.00 per share taxable.
‡ Upto 29th April 1964.

Extracts from the Directors' report: This year again has been a very good year for the sale of butter. Unfortunately, the same cannot be said for the sale of the Company's Coffee. The principal export market for Polson's French Coffee was Burma, but due to restrictions imposed by the Government of Burma the Company cannot export, for sale, coffee to Burma. Chicory is an essential ingredient required for producing French Coffee. The Government imposed a ban on import of Chicory from abroad. This has resulted in a sudden and steep rise in the price of Chicory as Chicory produced in India does not meet with our country's requirements. The price of raw coffee also has gone up very considerably during the year. It has, therefore, become impossible for the Company to produce French Coffee at the price as in previous years and this has necessitated increase in sale price of the Company's product which also has come in the way of its sales.

From October 1963, the Company started marketing tea under two brand names—Polson's Premier Tea and Polson's Popular Tea. Further varieties of Tea in different packages to suit consumer's demands are being introduced.

As the sale of the Madras Branch was not increasing to the satisfaction of the Directors, and also in view of its unsatisfactory working, the Madras Branch was closed and Messrs. Byramshaw & Co., Madras, have been appointed as sole selling agents for the sale of the Company's products for the areas originally served by the Madras Branch.

75 Years of Foundation and Silver Jubilee of the Incorporation of the Company:—As the shareholders are aware the Company has completed 75 years of the Foundation and 25 years of its Incorporation. The story of the growth and development of the Company is an epic of faith, perseverance and courage of its Founder late Seth Pestonji Edulji Polson.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	47,00,000	Gross block	73,26,445
Reserves and surplus	22,43,257	—Depreciation	34,40,714
Other liabilities	31,21,928	Net block	38,85,731
		Current assets	40,55,565
		Investments	7,177
		Cash	14,56,712
		Miscellaneous expenditure	60,000
	Rs. 1,00,65,185		Rs. 1,00,65,185

* Paid-up capital consists of 20,000—6 per cent cumulative redeemable preference shares of Rs. 100 each and 27,000 Equity shares of Rs. 100 each. Of the above, 10,280 preference shares and 12,855 equity shares are allotted as fully paid-up Bonus shares by way of capitalisation of reserves.

Southern Structurals Ltd.

(Managing Director: Mr. N. Ranganadhan, Madras.)

Seventh Annual General Meeting—20th May 1964.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1963	1962
Proceeds of Railway wagons	1,16,55	1,50,37
Proceeds of structural contracts	97,16	10,01
Closing work-in-process	15,42	5,16
Gross profit	27,44	15,29
Transfer to depreciation	4,27	3,60
" " development rebate reserve	1,35	60
" " provision for taxation	12,42	Nil
Net profit	9,40	11,09
Appropriations:		
To adjustment of loss brought forward	Nil	7,42
To write off preliminary expenses, brokerage, etc.	41	41
Transfer to general reserve	3,00	Nil
Proposed dividend (taxable) Equity	5,66	3,00
	(9%)	(6%)
Carry forward	59	26

Extracts from the Directors' report: *Capital*: During the year under review, out of the 3,00,000 equity shares, which the Company had offered as rights shares, only 1,60,604 were taken up. The reason for many members not exercising their rights is directly traceable to the Budget for 1963, which totally upset the market, the recovery of which has been very slow. The Company collaborators, the Metropolitan-Cammell Carriage & Wagon Co. Ltd., Birmingham, however, readily took up their equity rights.

Towards the close of the year, conditions in the market appeared to be slightly less unfavourable and there was a certain amount of guarded optimism about the 1964 Budget. In this, again, the investing public was sorely disappointed.

At the moment, of writing this report, the paid-up capital stands at Rs. 67,06,040. The Board feels that it is not only necessary that the balance of Rs. 13 lakhs should be raised immediately, but that they should also seriously consider issuing the Rs. 20 lakhs worth of preference shares by the beginning of July, 1964, so that the Company does not suffer through inadequacy of funds.

Buildings and Machinery: Additions during the period under review aggregated to Rs. 11,98,343. Some of the items of machinery received had not been installed at the end of the year, but they are now well on the way to being brought into commission.

On 31st December 1963, the sum standing to the credit of the Company's account with the Midland Bank Ltd., London, awaiting appropriation against purchases, was £14,365-9-8.

Review of Work Done in 1963: There was a certain amount of disappointment over the outturn of railway wagons during the year. Though the programme started with considerable promise, shortages were experienced later in regard to a number of items, which prevented the Company from stepping up the turnover. For instance, the Company was faced with a scarcity in plates and sheets in which a good part of its requirements had to come from imports in the ordering of which there was some delay on the part of the Railway Board. There was also considerable trouble in getting some of the components, more particularly steel castings, from suppliers in Bengal, where there was a breakdown in the supply of electric energy for some time. In addition, urgent needs of Defence were given priority to the detriment of civil requirements. Furthermore, towards May/June, 1963, there was a serious shortage of electrodes which continued up to the end of the year. Whatever quantities were available, were diverted to high priority Defence jobs. Another factor, which militated against the maintenance of even level production at a fairly high level, was shortage of gas, caused partly because of Defence needs and partly due to a long strike in the works of one of the producers. Then again, the Company had the recurring feature of a cut in electric energy during the middle of the year, though of short duration. Due to these several reasons, the outturn of wagons did not exceed Rs. 116.5 lakhs in value.

On the structurals side, the Company's performance was very much better—thanks to the Avadi project being given the highest priority. The pace of fabrication, which had been gradually built up, enabled the Company to deliver 830 tonnes of structurals in the month of April, 1963,—a figure, which the Directors are informed, has not been surpassed by any fabricator in the South, so far. The total value of bills submitted to the end of the year for structural supplies and erection, mostly for the Defence project, was a little over Rs. 97 lakhs. In the light of this experience, the Directors estimate today the Company's annual structural capacity at very near 10,000 tonnes. The Directors are, accordingly, applying to Government to raise our licensed capacity to this figure.

Finance: During the year, the Company repaid to the Madras Industrial Investment Corporation Ltd., the sum of Rs. 3.75 lakhs. The debt to this Corporation at the end of the year stood at Rs. 20,84,962 which, according to the terms of the Company's agreement, will be liquidated over the next 7 years. Should there be further delay in being able to raise the balance of the issued capital, the Company will have to seek the assistance of this Corporation for a further loan to meet the requirements of mid-term finance.

Further Plans: The Company has taken up, in earnest, a scheme for manufacturing cranes of different types. In this connection the Company had an offer from one of the best-known continental suppliers of cranes to provide their designs and technique covering fabrication of cranes ranging from 10 tonnes to 200 tonnes capacity.

The Company also had a similar offer from a British firm in respect of the manufacture of special types of derricks, both stationary and mobile. This subject too is now receiving the Directors' attention.
